Vol. 90 Monday,
No. 147 August 4, 2025

Pages 36373–37372

OFFICE OF THE FEDERAL REGISTER

The **FEDERAL REGISTER** (ISSN 0097–6326) is published daily, Monday through Friday, except official holidays, by the Office of the Federal Register, National Archives and Records Administration, under the Federal Register Act (44 U.S.C. Ch. 15) and the regulations of the Administrative Committee of the Federal Register (1 CFR Ch. I). The Superintendent of Documents, U.S. Government Publishing Office, is the exclusive distributor of the official edition. Periodicals postage is paid at Washington, DC.

The **FEDERAL REGISTER** provides a uniform system for making available to the public regulations and legal notices issued by Federal agencies. These include Presidential proclamations and Executive Orders, Federal agency documents having general applicability and legal effect, documents required to be published by act of Congress, and other Federal agency documents of public interest.

Documents are on file for public inspection in the Office of the Federal Register the day before they are published, unless the issuing agency requests earlier filing. For a list of documents currently on file for public inspection, see *www.federalregister.gov.*

The seal of the National Archives and Records Administration authenticates the Federal Register as the official serial publication established under the Federal Register Act. Under 44 U.S.C. 1507, the contents of the **Federal Register** shall be judicially noticed.

The **Federal Register** is published in paper and on 24x microfiche. It is also available online at no charge at *www.govinfo.gov*, a service of the U.S. Government Publishing Office.

The online edition of the **Federal Register** is issued under the authority of the Administrative Committee of the Federal Register as the official legal equivalent of the paper and microfiche editions (44 U.S.C. 4101 and 1 CFR 5.10). It is updated by 6:00 a.m. each day the **Federal Register** is published and includes both text and graphics from Volume 1, 1 (March 14, 1936) forward. For more information, contact the GPO Customer Contact Center, U.S. Government Publishing Office. Phone 202-512-1800 or 866-512-1800 (toll free). E-mail, *gpocusthelp.com.*

The annual subscription price for the **Federal Register** paper edition is $860 plus postage, or $929, for a combined **Federal Register, Federal Register** Index and List of CFR Sections Affected (LSA) subscription; the microfiche edition of the **Federal Register** including the **Federal Register** Index and LSA is $330, plus postage. Six month subscriptions are available for one-half the annual rate. The prevailing postal rates will be applied to orders according to the delivery method requested. The price of a single copy of the daily **Federal Register,** including postage, is based on the number of pages: $11 for an issue containing less than 200 pages; $22 for an issue containing 200 to 400 pages; and $33 for an issue containing more than 400 pages. Single issues of the microfiche edition may be purchased for $3 per copy, including postage. Remit check or money order, made payable to the Superintendent of Documents, or charge to your GPO Deposit Account, VISA, MasterCard, American Express, or Discover. Mail to: U.S. Government Publishing Office—New Orders, P.O. Box 979050, St. Louis, MO 63197-9000; or call toll free 1-866-512-1800, DC area 202-512-1800; or go to the U.S. Government Online Bookstore site, see *bookstore.gpo.gov.*

There are no restrictions on the republication of material appearing in the **Federal Register.**

How To Cite This Publication: Use the volume number and the page number. Example: 90 FR 12345.

Postmaster: Send address changes to the Superintendent of Documents, Federal Register, U.S. Government Publishing Office, Washington, DC 20402, along with the entire mailing label from the last issue received.

Rules and Regulations

Federal Register
Vol. 90, No. 147
Monday, August 4, 2025

This section of the FEDERAL REGISTER contains regulatory documents having general applicability and legal effect, most of which are keyed to and codified in the Code of Federal Regulations, which is published under 50 titles pursuant to 44 U.S.C. 1510.

The Code of Federal Regulations is sold by the Superintendent of Documents.

DEPARTMENT OF TRANSPORTATION

Federal Aviation Administration

14 CFR Part 33

[Docket No. FAA–2015–4220; Special Conditions No. 33–017–SC]

Special Conditions: CFM International, LEAP–1B Engine Model; Incorporation of Woven Composite Fan Blades

AGENCY: Federal Aviation Administration (FAA), DOT.

ACTION: Final special conditions; request for comments; amendment.

SUMMARY: This action amends Special Condition No. 33–017–SC for the CFM International (CFM) Model LEAP–1B engines. These engines have a novel or unusual design feature associated with the engine fan blades—incorporation of woven composite fan blades. The applicable airworthiness regulations do not contain adequate or appropriate safety standards for this design feature. These special conditions, as amended, contain the additional safety standards that the Administrator considers necessary to establish a level of safety equivalent to that established by the existing airworthiness standards.

DATES: This action is effective on CFM International on August 4, 2025. Send comments on or before September 18, 2025.

ADDRESSES: Send comments identified by Docket No. FAA–2015–4220 using any of the following methods:

- *Federal eRegulations Portal:* Go to *www.regulations.gov* and follow the online instructions for sending your comments electronically.
- *Mail:* Send comments to Docket Operations, M–30, U.S. Department of Transportation (DOT), 1200 New Jersey Avenue SE, Room W12–140, West Building Ground Floor, Washington, DC 20590–0001.
- *Hand Delivery or Courier:* Take comments to Docket Operations in Room W12–140 of the West Building Ground Floor at 1200 New Jersey Avenue SE, Washington, DC, between 9 a.m. and 5 p.m., Monday through Friday, except Federal holidays.
- *Fax:* Fax comments to Docket Operations at 202–493–2251.

Docket: Background documents or comments received may be read at *www.regulations.gov* at any time. Follow the online instructions for accessing the docket or go to Docket Operations in Room W12–140 of the West Building Ground Floor at 1200 New Jersey Avenue SE, Washington, DC, between 9 a.m. and 5 p.m., Monday through Friday, except Federal holidays.

FOR FURTHER INFORMATION CONTACT: Philip Haberlen, Engine and Propulsion Section, AIR–625, Technical Policy Branch, Policy and Standards Division, Federal Aviation Administration, FAA AIR Office, 1200 District Ave, Burlington, MA 01803; telephone (781) 238–7770; email *Philip.haberlen@faa.gov.*

SUPPLEMENTARY INFORMATION: The substance of these special conditions has been published in the **Federal Register** for public comment in several prior instances with no substantive comments received. Therefore, the FAA finds, pursuant to 14 CFR 11.38(b), that new comments are unlikely, and notice and comment prior to this publication are unnecessary.

Privacy

Except for Confidential Business Information (CBI) as described in the following paragraph, and other information as described in title 14, Code of Federal Regulations (14 CFR) 11.35, the FAA will post all comments received without change to *www.regulations.gov,* including any personal information you provide. The FAA will also post a report summarizing each substantive verbal contact received about these special conditions.

Confidential Business Information

Confidential Business Information (CBI) is commercial or financial information that is both customarily and actually treated as private by its owner. Under the Freedom of Information Act (FOIA) (5 U.S.C. 552), CBI is exempt from public disclosure. If your comments responsive to these special conditions contain commercial or financial information that is customarily treated as private, that you actually treat as private, and that is relevant or responsive to these special conditions, it is important that you clearly designate the submitted comments as CBI. Please mark each page of your submission containing CBI as ''PROPIN.'' The FAA will treat such marked submissions as confidential under the FOIA, and the indicated comments will not be placed in the public docket of these special conditions. Send submissions containing CBI to the individual listed in the **FOR FURTHER INFORMATION CONTACT** section above. Comments the FAA receives, which are not specifically designated as CBI, will be placed in the public docket for these special conditions.

Comments Invited

The FAA invites interested people to take part in this rulemaking by sending written comments, data, or views. The most helpful comments reference a specific portion of the special conditions, explain the reason for any recommended change, and include supporting data.

The FAA will consider all comments received by the closing date for comments. The FAA may change these special conditions based on the comments received.

Background

On June 27, 2012, CFM International (CFM) applied for a new type certificate (TC) to include the LEAP–1A and –1C engine models. Additionally, on May 9, 2013, CFM applied for a new TC to include the LEAP–1B engine models. The LEAP engine models are high-bypass-ratio engines that incorporate a novel and unusual design feature—new woven composite fan blades. The woven composite fan blades will have significant differences in material property characteristics when compared to conventionally designed fan blades using non-composite metallic materials.

The FAA issued Special Condition No. 33–017–SC for the LEAP–1B engines with this design feature on October 30, 2015. Special Condition No. 33–017–SC became effective on December 21, 2015 (80 FR 72561, November 20, 2015). The FAA issued TC E00088EN on May 4, 2016. Subsequently, CFM highlighted an error in these Special Condition and submitted a type design change request

on July 18, 2024. The FAA is proposing changes to Special Conditions No. 33–017–SC based on CFM's application.

Type Certification Basis

Under the provisions of Title 14, Code of Federal Regulations (14 CFR) 21.17, CFM must show that the Model LEAP–1B engines meet the applicable provisions of the applicable regulations in effect on the date of application, except as detailed in paragraphs 21.101(b) and (c). The FAA has determined the following certification basis for the LEAP–1B engine models:

Title 14 CFR part 33, ''Airworthiness Standards: Aircraft Engines,'' dated February 1, 1965, with Amendments 33–1 through 33–33, dated September 20, 2012.

If the Administrator finds that the applicable airworthiness regulations do not contain adequate or appropriate safety standards for the LEAP–1B engine models because of a novel or unusual design feature, special conditions are prescribed under the provisions of § 21.16.

Special conditions are initially applicable to the model for which they are issued. Should the TC for that model be amended later to include any other model that incorporates the same novel or unusual design feature, the special conditions would also apply to the other model under § 21.101.

In addition to complying with the applicable airworthiness regulations and special conditions, the CFM LEAP–1B engine models must also comply with the fuel venting and exhaust emission requirements of 14 CFR part 34.

The FAA issues special conditions, as defined in 14 CFR 11.19, in accordance with § 11.38, and they become part of the type-certification basis under § 21.17(a)(2).

Novel or Unusual Design Features

The LEAP–1B engine models will incorporate the following novel or unusual design feature:

The LEAP–1B engine models will incorporate woven composite fan blades. The woven composite fan blades will have significant differences in material property characteristics when compared to conventionally designed fan blades using non-composite metallic materials. Composite material design provides the capability to incorporate multiple load paths and crack arresting features that prevent delamination or crack propagation to blade failure during the life of the blade.

Discussion

The woven composite fan blades are a novel and unusual design feature that require additional airworthiness standards for type certification of the LEAP–1B engine models. The current requirements of § 33.94 are based on single-load path metallic fan blade characteristics and service history and are not appropriate for the unusual design features of the woven composite fan blade found on the CFM LEAP series turbofan engines.

The properties of a composite blade are highly dependent of the composite ply configuration, matrix material, and manufacturing methods. The CFM LEAP engine incorporates 3–D woven resin transfer molding (RTM) technology in the design and manufacture of the blade.

FAA requires that CFM conduct the required material testing per § 33.15 to determine material characteristics that include the effects of defects, manufacturing variations, contamination, environmental effect, and service damage on the material capability and blade life.

Composite material design provides the capability to incorporate multiple load paths and crack arresting features that prevent delamination or crack propagation to blade failure during the life of the blade. The probability of failure that an appropriately designed composite fan blade will fail below the inner annulus flow path line may be highly improbable. The airworthiness regulations of 14 CFR part 33 do not contain adequate or appropriate safety standards for an aircraft engine incorporating these novel or unusual design features *i.e.,* woven composite fan blades, including release of the fan blade under § 33.94(a)(1) at the inner annulus flow path line (only the airfoil) instead of the outermost retention feature.

Instead of blade failure at the outermost retention groove currently required by § 33.94(a)(1), the FAA has determined that a more realistic blade-out test can be achieved with a fan blade failure at the inner annulus flow path line *i.e.,* releasing only the airfoil.

Additionally, the FAA considers any change to the design, manufacturing, materials, or service management to the blade below the inner annulus flow path to be a change that could affect the blade integrity. Therefore, the FAA has determined that the blade must be marked with a part and serial number, and that additional integrity requirements must be applied to the blade below the inner annulus flow path line.

Special conditions are necessary to ensure that the LEAP–1B woven composite design fan blades account for the differences in material properties and failure modes relative to conventional single-load path metallic blades. In addition, different containment requirements may be applied provided CFM shows that the blade design below the inner annulus flow path line provides multiple load paths and/or crack arresting features that prevent delamination or crack propagation to blade failure during the life of the blade.

The FAA, GE, and CFM recently found that the LEAP–1B proposed special conditions as they appeared in the applicable certification issue paper and the published special conditions do not accurately reflect one of the agreed-upon criterion for the proposed woven fan blade composite design. The FAA and CFM intended, as reflected in the compliance data for the LEAP–1B TC and certification issue paper, that the total probability of hazardous engine effects should be accounted for rather than the probability of an individual blade retention system failure as stated in paragraph (e), of the original special conditions. These amended special conditions correct this error in the published special conditions for the CFM LEAP–1B engines and are in line with CFM and FAA's intention.

Paragraph (e) as originally issued for Special Condition No. 33–017–SC reads as follows:

(e) Substantiate that during the service life of the engine, the total probability of an individual blade retention system failure resulting from all possible causes, as defined in § 33.75, will be extremely improbable with a cumulative calculated probability of failure of less than 10^{-9} per engine flight hour.

The new paragraph will now read, (consistent with the TC compliance data and Special Conditions Nos. 33–007–SC, published April 24, 2009, and 33–018–SC, published March 30, 2017):

(e) Substantiate that, during the service life of the engine, the total probability of the occurrence of a hazardous engine effect defined in § 33.75 due to an individual blade retention system failure resulting from all possible causes will be extremely improbable, with a cumulative calculated probability of failure of less than 10^{-9} per engine flight hour.

These special conditions contain the additional safety standards that the Administrator considers necessary to establish a level of safety equivalent to that established by the existing airworthiness standards.

Applicability

As discussed above, these special conditions, as amended, are applicable to the model for which they are issued. Should the TC for that model be amended later to include any other model that incorporates the same novel or unusual design feature, or should any other model already included on the same TC be modified to incorporate the same novel or unusual design feature, these special conditions would apply to the other model as well.

Conclusion

This action affects only a certain novel or unusual design feature on the LEAP–1B engine models.

List of Subjects in 14 CFR Part 33

Aircraft, Aviation safety, Reporting and recordkeeping requirements.

Authority Citation

The authority citation for these special conditions is as follows:

Authority: 49 U.S.C. 106(f), 106(g), 40113, 44701, 44702, and 44704.

The Special Conditions

Accordingly, pursuant to the authority delegated to me by the Administrator, the following amended special conditions are issued as part of the type certification basis for CFM International (CFM) LEAP–1B engine models.

In addition to the airworthiness standards in 14 CFR part 33, effective February 1, 1965, with Amendments 33–1 through 33–33 applicable to the CFM, LEAP–1B engine models:

(a) Conduct an engine fan blade containment test with the fan blade failing at the inner annulus flow path line instead of at the outermost retention groove.

(b) Substantiate by test and analysis, or other methods acceptable to the FAA, that a fan disk and fan blade retention system with minimum material properties can withstand, without failure, a centrifugal load equal to two times the maximum load the retention system could experience within approved engine operating limitations. The fan blade retention system includes the portion of the fan blade from the inner annulus flow path line inward to the blade dovetail, the blade retention components, and the fan disk and fan blade attachment features.

(c) Using a procedure approved by the FAA, establish an operating limitation that specifies the maximum allowable number of start-stop stress cycles for the fan blade retention system. The life evaluation must include the combined effects of high-cycle and low-cycle fatigue. If the operating limitation is less than 100,000 cycles, that limitation must be specified in Chapter 5 of the Engine Manual Airworthiness Limitation Section. The procedure used to establish the maximum allowable number of start-stop stress cycles for the fan blade retention system will incorporate the integrity requirements in paragraphs (c)(1), (2), and (3) of these special conditions for the fan blade retention system.

(1) An engineering plan, which establishes and maintains that the combinations of loads, material properties, environmental influences, and operating conditions, including the effects of parts influencing these parameters, are well known or predictable through validated analysis, test, or service experience.

(2) A manufacturing plan that identifies the specific manufacturing constraints necessary to consistently produce the fan blade retention system with the attributes required by the engineering plan.

(3) A service management plan that defines in-service processes for maintenance and repair of the fan blade retention system, which will maintain attributes consistent with those required by the engineering plan.

(d) Substantiate by test and analysis, or other methods acceptable to the FAA, that the blade design below the inner annulus flow path line provides multiple load paths and/or crack arresting features that prevent delamination or crack propagation to blade failure during the life of the blade.

(e) Substantiate that, during the service life of the engine, the total probability of the occurrence of a hazardous engine effect defined in § 33.75 due to an individual blade retention system failure resulting from all possible causes will be extremely improbable, with a cumulative calculated probability of failure of less than 10^{-9} per engine flight hour.

(f) Substantiate by test or analysis that not only will the engine continue to meet the requirements of § 33.75 following a lightning strike on the composite fan blade structure, but that the lightning strike will not cause damage to the fan blades that would prevent continued safe operation of the affected engine.

(g) Account for the effects of in-service deterioration, manufacturing variations, minimum material properties, and environmental effects during the tests and analyses required by paragraphs (a), (b), (c), (d), (e), and (f) of these special conditions.

(h) Propose fleet leader monitoring and field sampling programs that will monitor the effects of engine fan blade usage and fan blade retention system integrity.

(i) Mark each fan blade legibly and permanently with a part number and a serial number.

Issued in in Des Moines, Washington, on July 30, 2025.

Michael T. Thompson,

Acting Manager, Technical Policy Branch, Policy and Standards Division, Aircraft Certification Service.

BILLING CODE 4910–13–P

DEPARTMENT OF TRANSPORTATION

Federal Aviation Administration

14 CFR Part 33

[Docket No. FAA–2014–0637; Special Conditions No. 33–015–SC]

Special Conditions: CFM International, LEAP–1A and –1C Engine Models; Incorporation of Woven Composite Fan Blades

AGENCY: Federal Aviation Administration (FAA), DOT.

ACTION: Final special conditions; request for comments; amendment.

SUMMARY: This action amends Special Condition No. 33–015–SC for the CFM International (CFM) Model LEAP–1A and LEAP–1C engines. These engines have a novel or unusual design feature associated with the engine fan blades—incorporation of woven composite fan blades. The applicable airworthiness regulations do not contain adequate or appropriate safety standards for this design feature. These special conditions, as amended, contain the additional safety standards that the Administrator considers necessary to establish a level of safety equivalent to that established by the existing airworthiness standards.

DATES: This action is effective on CFM International on August 4, 2025. Send comments on or before September 18, 2025.

ADDRESSES: Send comments identified by Docket No. FAA–2014–0637 using any of the following methods:

- *Federal eRegulations Portal:* Go to *www.regulations.gov* and follow the online instructions for sending your comments electronically.
- *Mail:* Send comments to Docket Operations, M–30, U.S. Department of Transportation (DOT), 1200 New Jersey Avenue SE, Room W12–140, West Building Ground Floor, Washington, DC 20590–0001.

• *Hand Delivery or Courier:* Take comments to Docket Operations in Room W12–140 of the West Building Ground Floor at 1200 New Jersey Avenue SE, Washington, DC, between 9 a.m. and 5 p.m., Monday through Friday, except Federal holidays.

• *Fax:* Fax comments to Docket Operations at 202–493–2251.

Docket: Background documents or comments received may be read at *www.regulations.gov* at any time. Follow the online instructions for accessing the docket or go to Docket Operations in Room W12–140 of the West Building Ground Floor at 1200 New Jersey Avenue SE, Washington, DC, between 9 a.m. and 5 p.m., Monday through Friday, except Federal holidays.

FOR FURTHER INFORMATION CONTACT: Philip Haberlen, Engine and Propulsion Section, AIR–625, Technical Policy Branch, Policy and Standards Division, Federal Aviation Administration, FAA AIR Office, 1200 District Ave., Burlington, MA 01803; telephone (781) 238–7770; email *Philip.haberlen@faa.gov.*

SUPPLEMENTARY INFORMATION: The substance of these special conditions has been published in the **Federal Register** for public comment in several prior instances with no substantive comments received. Therefore, the FAA finds, pursuant to 14 CFR 11.38(b), that new comments are unlikely, and notice and comment prior to this publication are unnecessary.

Privacy

Except for Confidential Business Information (CBI) as described in the following paragraph, and other information as described in title 14, Code of Federal Regulations (14 CFR) 11.35, the FAA will post all comments received without change to *www.regulations.gov,* including any personal information you provide. The FAA will also post a report summarizing each substantive verbal contact received about these special conditions.

Confidential Business Information

Confidential Business Information (CBI) is commercial or financial information that is both customarily and actually treated as private by its owner. Under the Freedom of Information Act (FOIA) (5 U.S.C. 552), CBI is exempt from public disclosure. If your comments responsive to these special conditions contain commercial or financial information that is customarily treated as private, that you actually treat as private, and that is relevant or responsive to these special conditions, it is important that you clearly designate the submitted comments as CBI. Please mark each page of your submission containing CBI as ''PROPIN.'' The FAA will treat such marked submissions as confidential under the FOIA, and the indicated comments will not be placed in the public docket of these special conditions. Send submissions containing CBI to the individual listed in the **FOR FURTHER INFORMATION CONTACT** section above. Comments the FAA receives, which are not specifically designated as CBI, will be placed in the public docket for these special conditions.

Comments Invited

The FAA invites interested people to take part in this rulemaking by sending written comments, data, or views. The most helpful comments reference a specific portion of the special conditions, explain the reason for any recommended change, and include supporting data.

The FAA will consider all comments received by the closing date for comments. The FAA may change these special conditions based on the comments received.

Background

On June 27, 2012, CFM International (CFM) applied for a new type certificate (TC) to include the LEAP–1A and –1C engine models. The LEAP engine models are high-bypass-ratio engines that incorporate a novel and unusual design feature—new woven composite fan blades. The woven composite fan blades will have significant differences in material property characteristics when compared to conventionally designed fan blades using non-composite metallic materials.

The FAA issued Special Condition No. 33–015–SC for this design feature on June 1, 2015. Special Condition No. 33–015–SC became effective on July 9, 2015 (80 FR 32440, June 9, 2015). The FAA issued TC E00089EN on November 20, 2015. Subsequently, CFM highlighted an error in the similar Special Condition No. 33–017–SC for the LEAP–1B engine models and submitted a type design change request on July 18, 2024. Upon review, the FAA determined that Special Condition No. 33–015–SC, which applies to the LEAP–1A and –1C engine models, contained the same error. The FAA is proposing changes to Special Condition No. 33–015–SC based on CFM's application.

Type Certification Basis

Under the provisions of Title 14, Code of Federal Regulations (14 CFR) 21.17, CFM must show that the Model LEAP–1A and –1C engines meet the applicable provisions of the applicable regulations in effect on the date of application, except as detailed in paragraphs 21.101(b) and (c). The FAA has determined the following certification basis for the LEAP–1A and –1C engine models:

Title 14 CFR part 33, ''Airworthiness Standards: Aircraft Engines,'' dated February 1, 1965, with Amendments 33–1 through 33–33, dated September 20, 2012.

If the Administrator finds that the applicable airworthiness regulations do not contain adequate or appropriate safety standards for the LEAP–1A and –1C engine models because of a novel or unusual design feature, special conditions are prescribed under the provisions of § 21.16.

Special conditions are initially applicable to the model for which they are issued. Should the TC for that model be amended later to include any other model that incorporates the same novel or unusual design feature, the special conditions would also apply to the other model under § 21.101.

In addition to complying with the applicable airworthiness regulations and special conditions, the CFM LEAP–1A and –1C engine models must also comply with the fuel venting and exhaust emission requirements of 14 CFR part 34.

The FAA issues special conditions, as defined in 14 CFR 11.19, in accordance with § 11.38, and they become part of the type-certification basis under § 21.17(a)(2).

Novel or Unusual Design Features

The LEAP–1A and –1C engine models will incorporate the following novel or unusual design feature:

The LEAP–1A and –1C engine models will incorporate woven composite fan blades. The woven composite fan blades will have significant differences in material property characteristics when compared to conventionally designed fan blades using non-composite metallic materials. Composite material design provides the capability to incorporate multiple load paths and crack arresting features that prevent delamination or crack propagation to blade failure during the life of the blade.

Discussion

The woven composite fan blades are a novel and unusual design feature that require additional airworthiness standards for type certification of the LEAP–1A and –1C engine models. The current requirements of § 33.94 are based on single-load path metallic fan blade characteristics and service history

and are not appropriate for the unusual design features of the woven composite fan blade found on the CFM LEAP series turbofan engines.

The properties of a composite blade are highly dependent of the composite ply configuration, matrix material, and manufacturing methods. The CFM LEAP engine incorporates 3–D woven resin transfer molding (RTM) technology in the design and manufacture of the blade.

FAA requires that CFM conduct the required material testing per § 33.15 to determine material characteristics that include the effects of defects, manufacturing variations, contamination, environmental effect, and service damage on the material capability and blade life.

Composite material design provides the capability to incorporate multiple load paths and crack arresting features that prevent delamination or crack propagation to blade failure during the life of the blade. The probability of failure that an appropriately designed composite fan blade will fail below the inner annulus flow path line may be highly improbable. The airworthiness regulations of 14 CFR part 33 do not contain adequate or appropriate safety standards for an aircraft engine incorporating these novel or unusual design features *i.e.,* woven composite fan blades, including release of the fan blade under § 33.94(a)(1) at the inner annulus flow path line (only the airfoil) instead of the outermost retention feature.

Instead of blade failure at the outermost retention groove currently required by § 33.94(a)(1), the FAA has determined that a more realistic blade-out test can be achieved with a fan blade failure at the inner annulus flow path line *i.e.,* releasing only the airfoil.

Additionally, the FAA considers any change to the design, manufacturing, materials, or service management to the blade below the inner annulus flow path to be a change that could affect the blade integrity. Therefore, the FAA has determined that the blade must be marked with a part and serial number, and that additional integrity requirements must be applied to the blade below the inner annulus flow path line.

Special conditions are necessary to ensure that the LEAP–1A and –1C woven composite design fan blades account for the differences in material properties and failure modes relative to conventional single-load path metallic blades. In addition, different containment requirements may be applied provided CFM shows that the blade design below the inner annulus flow path line provides multiple load paths and/or crack arresting features that prevent delamination or crack propagation to blade failure during the life of the blade.

The FAA, GE, and CFM recently found that the LEAP–1B proposed special conditions as they appeared in the applicable certification issue paper and the published special conditions do not accurately reflect one of the agreed-upon criterion for the proposed woven fan blade composite design. The FAA and CFM intended, as reflected in the compliance data for the LEAP–1B TC and certification issue paper, that the total probability of hazardous engine effects should be accounted for rather than the probability of an individual blade retention system failure as stated in paragraph (e), of the original special conditions. The design similarity of the fan blade between the CFM LEAP–1B and the CFM LEAP–1A and –1C prompted the need to correct paragraph (e) within both sets of special conditions to ensure proper design. These amended special conditions correct this error in the published special conditions for the CFM LEAP–1A and –1C engines and are in line with CFM and FAA's intention.

Paragraph (e) as originally issued for Special Condition No. 33–015–SC reads as follows:

(e) Substantiate that during the service life of the engine, the total probability of an individual blade retention system failure resulting from all possible causes, as defined in § 33.75, will be extremely improbable with a cumulative calculated probability of failure of less than 10^{-9} per engine flight hour.

The new paragraph will now read, (consistent with the TC compliance data and Special Condition Nos. 33–007–SC, published April 24, 2009, and 33–018–SC, published March 30, 2017):

(e) Substantiate that, during the service life of the engine, the total probability of the occurrence of a hazardous engine effect defined in § 33.75 due to an individual blade retention system failure resulting from all possible causes will be extremely improbable, with a cumulative calculated probability of failure of less than 10^{-9} per engine flight hour.

These special conditions contain the additional safety standards that the Administrator considers necessary to establish a level of safety equivalent to that established by the existing airworthiness standards.

Applicability

As discussed above, these special conditions, as amended, are applicable to the model for which they are issued. Should the TC for that model be amended later to include any other model that incorporates the same novel or unusual design feature, or should any other model already included on the same TC be modified to incorporate the same novel or unusual design feature, these special conditions would apply to the other model as well.

Conclusion

This action affects only a certain novel or unusual design feature on the LEAP–1A and –1C engine models.

List of Subjects in 14 CFR Part 33

Aircraft, Aviation safety, Reporting and recordkeeping requirements.

Authority Citation

The authority citation for these special conditions is as follows:

Authority: 49 U.S.C. 106(f), 106(g), 40113, 44701, 44702, and 44704.

The Special Conditions

Accordingly, pursuant to the authority delegated to me by the Administrator, the following amended special conditions are issued as part of the type certification basis for CFM International (CFM) LEAP–1A and –1C engine models.

In addition to the airworthiness standards in 14 CFR part 33, effective February 1, 1965, with Amendments 33–1 through 33–33 applicable to the CFM, LEAP–1A and –1C engine models:

(a) Conduct an engine fan blade containment test with the fan blade failing at the inner annulus flow path line instead of at the outermost retention groove.

(b) Substantiate by test and analysis, or other methods acceptable to the FAA, that a fan disk and fan blade retention system with minimum material properties can withstand, without failure, a centrifugal load equal to two times the maximum load the retention system could experience within approved engine operating limitations. The fan blade retention system includes the portion of the fan blade from the inner annulus flow path line inward to the blade dovetail, the blade retention components, and the fan disk and fan blade attachment features.

(c) Using a procedure approved by the FAA, establish an operating limitation that specifies the maximum allowable number of start-stop stress cycles for the fan blade retention system. The life evaluation must include the combined effects of high-cycle and low-cycle fatigue. If the operating limitation is less than 100,000 cycles, that limitation must be specified in Chapter 5 of the Engine Manual Airworthiness

Limitation Section. The procedure used to establish the maximum allowable number of start-stop stress cycles for the fan blade retention system will incorporate the integrity requirements in paragraphs (c)(1), (2), and (3) of these special conditions for the fan blade retention system.

(1) An engineering plan, which establishes and maintains that the combinations of loads, material properties, environmental influences, and operating conditions, including the effects of parts influencing these parameters, are well known or predictable through validated analysis, test, or service experience.

(2) A manufacturing plan that identifies the specific manufacturing constraints necessary to consistently produce the fan blade retention system with the attributes required by the engineering plan.

(3) A service management plan that defines in-service processes for maintenance and repair of the fan blade retention system, which will maintain attributes consistent with those required by the engineering plan.

(d) Substantiate by test and analysis, or other methods acceptable to the FAA, that the blade design below the inner annulus flow path line provides multiple load paths and/or crack arresting features that prevent delamination or crack propagation to blade failure during the life of the blade.

(e) Substantiate that, during the service life of the engine, the total probability of the occurrence of a hazardous engine effect defined in § 33.75 due to an individual blade retention system failure resulting from all possible causes will be extremely improbable, with a cumulative calculated probability of failure of less than 10^{-9} per engine flight hour.

(f) Substantiate by test or analysis that not only will the engine continue to meet the requirements of § 33.75 following a lightning strike on the composite fan blade structure, but that the lightning strike will not cause damage to the fan blades that would prevent continued safe operation of the affected engine.

(g) Account for the effects of in-service deterioration, manufacturing variations, minimum material properties, and environmental effects during the tests and analyses required by paragraphs (a), (b), (c), (d), (e), and (f) of these special conditions.

(h) Propose fleet leader monitoring and field sampling programs that will monitor the effects of engine fan blade usage and fan blade retention system integrity.

(i) Mark each fan blade legibly and permanently with a part number and a serial number.

Issued in in Des Moines, Washington, on July 30, 2025.

Michael T. Thompson,

Acting Manager, Technical Policy Branch, Policy and Standards Division, Aircraft Certification Service.

BILLING CODE 4910–13–P

DEPARTMENT OF HOMELAND SECURITY

Coast Guard

33 CFR Part 100

[Docket No. USCG–2025–0576]

Special Local Regulations; Women Swimmin' for Hospicare Eastern Great Lakes COTP Zone

AGENCY: Coast Guard, DHS.

ACTION: Notification of enforcement of regulation.

SUMMARY: The Coast Guard will enforce special local regulations for the Women Swimmin' for Hospicare on August 9, 2025, to provide for the safety of life on navigable waterways during this event. Our regulation for marine events within the Great Lakes Coast Guard District identifies the regulated area for this event in Ithaca, New York. During the enforcement periods, the operator of any vessel in the regulated area must comply with directions from the Patrol Commander or any Official Patrol displaying a Coast Guard ensign.

DATES: The regulations in 33 CFR 100.901 will be enforced for the Women Swimmin' for Hospicare regulated area listed in item 4 in Table 1 to § 100.901 from 6:00 a.m. to 12:00 p.m. on August 9, 2025.

FOR FURTHER INFORMATION CONTACT: If you have questions about this notification of enforcement, call or email MST2 Vladimir Ratikan, Marine Safety Unit Thousand Islands, U.S. Coast Guard; telephone 315–322–8168, email *Vladimir.D.Ratikan@uscg.mil.*

SUPPLEMENTARY INFORMATION: The Coast Guard will enforce special local regulations in 33 CFR 100.901 for the Women Swimmin' for Hospicare regulated area listed in item 4 in Table 1 to § 100.901 from 6:00 a.m. to 12:00 p.m. on August 9, 2025. This action is being taken to provide for the safety of life on navigable waterways during this event. Our regulation for marine events within the Great Lakes Coast Guard District, item 4 in Table 1 to § 100.901, specifies the location of the regulated area Woman Swimmin' for Hospicare which encompasses portions of the Cayuga Lake. During the enforcement periods, as reflected in § 100.901, if you are the operator of a vessel in the regulated area you must comply with directions from the Patrol Commander or any Official Patrol displaying a Coast Guard ensign.

In addition to this notification of enforcement in the **Federal Register**, the Coast Guard plans to provide notification of this enforcement period via the Local Notice to Mariners, and Broadcast Notice to Mariners.

Dated: July 28, 2025.

M. J. Walter,

Captain, U.S. Coast Guard, Captain of the Port Eastern Great Lakes.

BILLING CODE 9110–04–P

DEPARTMENT OF HOMELAND SECURITY

Coast Guard

33 CFR Part 165

[Docket No. USCG–2025–0661]

Safety Zone; Lakeshore State Park, Milwaukee, WI

AGENCY: Coast Guard, DHS.

ACTION: Notification of enforcement of regulation.

SUMMARY: The Coast Guard will enforce the Safety Zone, Lakeshore State Park, Milwaukee, WI on a portion of Lake Michigan in Milwaukee, WI. This action is intended to protect personnel, vessels, and the marine environment from potential hazards created by multiple triathlon swimming events. During the enforcement period listed below, entry into, transiting, or anchoring within the safety zone is prohibited unless authorized by the Captain of the Port Lake Michigan or a designated representative.

DATES: The regulations in 33 CFR 165.929 will be enforced for the Lakeshore State Park regulated area listed in item 2 in Table 4 to § 165.929 from 5 a.m. on August 8, 2025 to 6 p.m. on August 10, 2025.

FOR FURTHER INFORMATION CONTACT: If you have questions about this proposed rulemaking, call or email Lieutenant Commander Jessica Anderson, Sector Lake Michigan Waterways Management Division, U.S. Coast Guard; telephone 414–216–8428, email: *D09-SMB-SECLAKEMICHIGAN-WWM@uscg.mil.*

SUPPLEMENTARY INFORMATION: The Coast Guard will enforce a safety zone regulation in 33 CFR 165.929 for the Lakeshore State Park triathlon swimming events in item 2 in Table 4 to § 165.929 from 5 a.m. on August 8, 2025, to 6 p.m. on August 10, 2025. The regulation for recurring marine events within the State of Wisconsin in item 2 in Table 4 to § 165.929, specifies the location of the regulated area for this event. All vessels must obtain permission from the Captain of the Port (COTP) Lake Michigan, or designated on-scene representative to enter, move within, or exit this safety zone during the enforcement time listed in this notice of enforcement. Vessels and persons granted permission to enter the safety zone must obey all lawful orders or directions of the COTP Lake Michigan or designated representative. Upon being hailed by the U.S. Coast Guard by siren, radio, flashing light or other means, the operator of a vessel must proceed as directed.

In addition to this notification of enforcement in the **Federal Register**, the Coast Guard will provide the maritime community with notification of this enforcement period via Broadcast Notice to Mariners. The COTP Lake Michigan may be reached by contacting the Coast Guard Sector Lake Michigan Command Center at (414) 747–7182. An on-scene designated representative may be reached via VHF–FM Channel 16.

Dated: July 29, 2025.

R.N. Macon,

Captain, U.S. Coast Guard, Captain of the Port, Lake Michigan.

33 CFR Part 165

[Docket Number USCG–2025–0672]

RIN 1625–AA00

Safety Zone; Port Huron Float Down; St. Clair River, Port Huron, MI

AGENCY: Coast Guard, DHS.

ACTION: Temporary final rule.

SUMMARY: The Coast Guard is establishing a temporary safety zone for navigable waters of the St. Clair River in the vicinity of Port Huron, MI. This zone is intended to restrict and control movement of vessels in a portion of the St. Clair River. Though this is an unsanctioned, non-permitted marine event, this zone is necessary to provide for the safety of life on the navigable waters during a float down event near Port Huron, MI.

DATES: This rule is effective from 12 p.m. through 7 p.m. on August 17, 2025.

ADDRESSES: To view documents mentioned in this preamble as being available in the docket, go to *https://www.regulations.gov,* type USCG–2025–0672 in the search box and click ''Search.'' Next, in the Document Type column, select ''Supporting & Related Material.''

FOR FURTHER INFORMATION CONTACT: If you have questions about this rule, call or email If you have questions on this rule, call or email Tracy Girard, Waterways Department, Sector Detroit, Coast Guard; telephone (313) 568–9564, email *Tracy.M.Girard@uscg.mil.*

SUPPLEMENTARY INFORMATION:

I. Table of Abbreviations

CFR Code of Federal Regulations
DHS Department of Homeland Security
FR Federal Register
NPRM Notice of proposed rulemaking
§ Section
U.S.C. United States Code

II. Background Information and Regulatory History

During the afternoon of August 17, 2025, a non-sanctioned public event is scheduled to take place. The event is advertised over various social-media sites, in which a large number of persons float down a segment of the St. Clair River, using inner tubes and other similar floatation devices. The 2025 float down event will occur from approximately 12 p.m. through 7 p.m. on August 17, 2025. This non-sanctioned event has taken place on the third Sunday in August annually since 2009.

No private or municipal entity requested a marine event permit from the Coast Guard for this event, and it has not received state or federal permits since its inception. The event has drawn over 5,000 participants of various ages annually. Despite plans put together by federal, state and local officials, emergency responders and law enforcement officials have been overburdened pursuing safety during this event. Medical emergencies, people drifting across the international border, and people trespassing on residential property when trying to get out of the water before the designated finish line are some of the numerous difficulties encountered during the float down event.

During the 2014 float-down event, a 19-year-old participant died. During the 2016 float down, a wind shift caused thousands of U.S. citizen rafters with no passports to drift into Canadian waters. The current and wind made it impossible for the rafters to paddle back into U.S. waters, necessitating significant coordination with the Canadian authorities. Despite these events, promotional information for the event continues to be published. More than 5,000 people are again anticipated to float down the river this year. No public or private organization holds themselves responsible as the event sponsor.

The Coast Guard is issuing this temporary rule under the authority in 5 U.S.C. 553(b)(B). This statutory provision authorizes an agency to issue a rule without prior notice and opportunity to comment when the agency for good cause finds that those procedures are ''impracticable, unnecessary, or contrary to the public interest.'' The Coast Guard finds that good cause exists for not publishing a notice of proposed rulemaking (NPRM) with respect to this rule because the event sponsor did not notify the Coast Guard with sufficient time to publish an NPRM and immediate action is necessary to protect personnel, vessels, and the marine environment in the St. Clair River. It is impracticable and contrary to the public interest to publish an NPRM because we must establish this safety zone by August 17, 2025.

Also, under 5 U.S.C. 553(d)(3), the Coast Guard finds that good cause exists for making this rule effective less than 30 days after publication in the **Federal Register**. For the same reasons discussed in the preceding paragraph, delaying the effective date of this rule would be impracticable because immediate action is needed to respond to the potential safety hazards associated with a float down event.

III. Legal Authority and Need for Rule

The Coast Guard is issuing this rule under authority in 46 U.S.C. 70034. The Captain of the Port, Detroit has determined that potential hazards associated with a float down event will be a safety concern for anyone in the float down area. The likely combination of large numbers of participants, strong river currents, limited rescue resources, and difficult emergency response scenarios could easily result in serious injuries or fatalities to float down participants and spectators. This rule is necessary to protect personnel, vessels, and the marine environment in the navigable waters within the safety zone during the float down.

IV. Discussion of the Rule

This rule establishes a safety zone from 12 p.m. through 7 p.m. on August 17, 2025. The safety zone will begin at Lighthouse Beach and encompass all U.S. waters of the St. Clair River bound by a line starting at a point on land north of Coast Guard Station Port Huron at position 43°00.416′ N; 082°25.333′ W, extending east to the international boundary to a point at position 43°00.416′ N; 082°25.033′ W, following south along the international boundary to a point at position 42°54.500′ N; 082°27.683′ W, extending west to a point on land just north of Stag Island at position 42°54.500′ N; 082°27.966′ W, and following north along the U.S. shoreline to the point of origin (WGS 84). Entry into, transiting, or anchoring within the safety zone is prohibited unless authorized by the Captain of the Port Detroit or his designated representative. The Captain of the Port Detroit or his designated representative may be contacted via VHF Channel 16. Additionally, no one under the age of 18 will be permitted to enter the safety zone if they are not wearing a Coast Guard approved personal floatation device.

V. Regulatory Analyses

We developed this rule after considering numerous statutes and Executive orders related to rulemaking. Below we summarize our analyses based on a number of these statutes and Executive orders.

A. Regulatory Planning and Review

Executive Orders 12866 (Regulatory Planning and Review) and 13563 (Improving Regulation and Regulatory Review) direct agencies to assess the costs and benefits of available regulatory alternatives and, if regulation is necessary, to select regulatory approaches that maximize net benefits. Executive Order 13563 emphasizes the importance of quantifying both costs and benefits, of reducing costs, of harmonizing rules, and of promoting flexibility.

The Office of Management and Budget (OMB) has not designated this rule a ''significant regulatory action,'' under section 3(f) of Executive Order 12866. Accordingly, OMB has not reviewed it.

This regulatory action determination is based on the size, location, and duration of the safety zone. Vessel traffic will not be able to safely transit around this safety zone which would impact a small, designated area of the St. Clair River for 7 hours. Moreover, the Coast Guard would issue a Broadcast Notice to Mariners via VHF–FM Marine Channel 16 about the zone, and the rule would allow vessels to seek permission to enter the zone.

B. Impact on Small Entities

The Regulatory Flexibility Act of 1980, 5 U.S.C. 601–612, as amended, requires Federal agencies to consider the potential impact of regulations on small entities during rulemaking. The term ''small entities'' comprises small businesses, not-for-profit organizations that are independently owned and operated and are not dominant in their fields, and governmental jurisdictions with populations of less than 50,000. The Coast Guard certifies under 5 U.S.C. 605(b) that this rule will not have a significant economic impact on a substantial number of small entities.

While some owners or operators of vessels intending to transit the safety zone may be small entities, for the reasons stated in section V.A above, this rule will not have a significant economic impact on any vessel owner or operator.

Under section 213(a) of the Small Business Regulatory Enforcement Fairness Act of 1996 (Pub. L. 104–121), we want to assist small entities in understanding this rule. If the rule will affect your small business, organization, or governmental jurisdiction and you have questions concerning its provisions or options for compliance, please call or email the person listed in the **FOR FURTHER INFORMATION CONTACT** section.

Small businesses may send comments on the actions of Federal employees who enforce, or otherwise determine compliance with, Federal regulations to the Small Business and Agriculture Regulatory Enforcement Ombudsman and the Regional Small Business Regulatory Fairness Boards. The Ombudsman evaluates these actions annually and rates each agency's responsiveness to small business. If you wish to comment on actions by employees of the Coast Guard, call 1–888–REG–FAIR (1–888–734–3247). The Coast Guard will not retaliate against small entities that question or complain about this rule or any policy or action of the Coast Guard.

C. Collection of Information

This rule will not call for a new collection of information under the Paperwork Reduction Act of 1995 (44 U.S.C. 3501–3520).

D. Federalism and Indian Tribal Governments

A rule has implications for federalism under Executive Order 13132, Federalism, if it has a substantial direct effect on the States, on the relationship between the National Government and the States, or on the distribution of power and responsibilities among the various levels of government. We have analyzed this rule under that Order and have determined that it is consistent with the fundamental federalism principles and preemption requirements described in Executive Order 13132.

Also, this rule does not have tribal implications under Executive Order 13175, Consultation and Coordination with Indian Tribal Governments, because it does not have a substantial direct effect on one or more Indian tribes, on the relationship between the Federal Government and Indian tribes, or on the distribution of power and responsibilities between the Federal Government and Indian tribes.

E. Unfunded Mandates Reform Act

The Unfunded Mandates Reform Act of 1995 (2 U.S.C. 1531–1538) requires Federal agencies to assess the effects of their discretionary regulatory actions. In particular, the Act addresses actions that may result in the expenditure by a State, local, or tribal government, in the aggregate, or by the private sector of $100,000,000 (adjusted for inflation) or more in any one year. Though this rule will not result in such an expenditure, we do discuss the effects of this rule elsewhere in this preamble.

F. Environment

We have analyzed this rule under Department of Homeland Security Directive 023–01, Rev. 1, associated implementing instructions, and Environmental Planning COMDTINST 5090.1 (series), which guide the Coast Guard in complying with the National Environmental Policy Act of 1969 (42 U.S.C. 4321–4370f), and have determined that this action is one of a category of actions that do not individually or cumulatively have a significant effect on the human environment. This rule involves a safety zone lasting 7 hours that will prohibit entry in a portion of the St. Clair River where the float down event will take place. It is categorically excluded from further review under paragraph L60(a) of Appendix A, Table 1 of DHS Instruction Manual 023–01–001–01, Rev. 1. A Record of Environmental Consideration supporting this determination is available in the docket. For instructions on locating the docket, see the **ADDRESSES** section of this preamble.

List of Subjects in 33 CFR Part 165

Harbors, Marine safety, Navigation (water), Reporting and record keeping

requirements, Security measures, Waterways.

For the reasons discussed in the preamble, the Coast Guard amends 33 CFR part 165 as follows:

PART 165—REGULATED NAVIGATION AREAS AND LIMITED ACCESS AREAS

■ 1. The authority citation for part 165 continues to read as follows:

Authority: 46 U.S.C. 70034, 70051; 33 CFR 1.05–1, 6.04–1, 6.04–6, and 160.5; Department of Homeland Security Delegation No. 00170.1, Revision No. 01.3.

■ 2. Add § 165.T09–0672 to read as follows:

§ 165.T09–0672 Safety Zones; Port Huron Float Down, St. Clair River, Port Huron, MI.

(a) *Location.* A safety zone is established to include all U.S. navigable waters of southern Lake Huron and the St. Clair River adjacent to Port Huron, MI, beginning at Lighthouse Beach and encompassing all U.S. waters of the St. Clair River bound by a line starting at a point on land north of Coast Guard Station Port Huron at position 43°00.416′ N; 082°25.333′ W, extending east to the international boundary to a point at position 43°00.416′ N; 082°25.033 ′ W, following south along the international boundary to a point at position 42°54.500′ N; 082°27.683′ W, extending west to a point on land just north of Stag Island at position 42°54.500′ N; 082°27.966′ W, and following north along the U.S. shoreline to the point of origin. These coordinates are based on World Geodetic System 84.

(b) *Enforcement Period.* This regulation will be enforced from 12 p.m. through 7 p.m. on August 17, 2025. The Captain of the Port Detroit, or a designated representative may suspend enforcement of the safety zone at any time.

(c) *Definitions.* As used in this section, *designated representative* means a Coast Guard Patrol Commander, including a Coast Guard coxswain, petty officer, or other officer operating a Coast Guard vessel and a Federal, State, and local officer designated by or assisting the Captain of Port Detroit in the enforcement of the safety zone.

(d) *Regulations.* (1) In accordance with the general regulations in § 165.23, entry into, transiting, or anchoring within this safety zone is prohibited unless authorized by the Captain of the Port Detroit or his designated representative.

(2) Vessel operators desiring to enter or operate within the safety zone shall contact the Captain of the Port Detroit or his designated representative to obtain permission to do so. Vessel operators given permission to enter or operate in the safety zone must comply with all directions given to them by the Captain of the Port Detroit or his designated representative. The Captain of the Port Detroit or his designated representative may be contacted via VHF Channel 16.

Dated: July 24, 2025.

Richard P. Armstrong,

Captain, U.S. Coast Guard, Captain of the Port Detroit.

DEPARTMENT OF HOMELAND SECURITY

Coast Guard

33 CFR Part 165

[Docket Number USCG–2025–0654]

RIN 1625–AA00

Safety Zone; Lake Michigan, Sheboygan, WI

AGENCY: Coast Guard, DHS.

ACTION: Temporary final rule.

SUMMARY: The Coast Guard is establishing a temporary safety zone for certain waters of Lake Michigan in Sheboygan, WI. This rule is necessary to protect personnel, vessels, and the marine environment from potential hazards associated during a high-speed boat race. Entry of vessels or persons into this zone is prohibited unless specifically authorized by the Captain of the Port, Sector Lake Michigan.

DATES: This rule is effective each day from August 8 through August 10, 2025.

ADDRESSES: To view documents mentioned in this preamble as being available in the docket, go to *https://www.regulations.gov,* type USCG–2025–0654 in the search box and click ''Search.'' Next, in the Document Type column, select ''Supporting & Related Material.''

FOR FURTHER INFORMATION CONTACT: If you have questions about this rule, call or email Lieutenant Commander Jessica Anderson, Sector Lake Michigan Waterways Management Division, U.S. Coast Guard; telephone 414–747–7182, email *d09-smb-seclakemichigan-wwm@uscg.mil.*

SUPPLEMENTARY INFORMATION:

I. Table of Abbreviations

CFR Code of Federal Regulations
DHS Department of Homeland Security
FR Federal Register
NPRM Notice of proposed rulemaking
§ Section
U.S.C. United States Code

II. Background Information and Regulatory History

The Coast Guard is issuing this temporary rule under the authority in 5 U.S.C. 553(b)(B). This statutory provision authorizes an agency to issue a rule without prior notice and opportunity to comment when the agency for good cause finds that those procedures are ''impracticable, unnecessary, or contrary to the public interest.'' The Coast Guard finds that good cause exists for not publishing a notice of proposed rulemaking (NPRM) with respect to this rule because the complete information surrounding the event was not obtained with sufficient time to propose a rule, consider comments, and publish a final rule in time to respond to the potential safety risks associated with this high-speed boat race scheduled for August 8, 2025.

Also, under 5 U.S.C. 553(d)(3), the Coast Guard finds that good cause exists for making this rule effective less than 30 days after publication in the **Federal Register**. Delaying the effective date of this rule for 30 days would be contrary to the public interest by inhibiting the Coast Guard's ability to protect attendees in the navigable waters high-speed boat race.

III. Legal Authority and Need for Rule

The Coast Guard is issuing this rule under authority in 46 U.S.C. 70034. The Captain of the Port Sector Lake Michigan (COTP) has determined that potential hazards associated with the Sheboygan Midwest Challenge would be a safety concern for anyone within the safety zone that is not participating in the event. The purpose of this rule is to ensure safety of vessels and the navigable waters in the safety zone before, during, and after the scheduled event.

IV. Discussion of the Rule

This rule establishes a safety zone which will be enforced each day, from 8 a.m. to 6 p.m., starting on August 8, 2025, and continuing through August 10, 2025. The safety zone will cover certain waters of Lake Michigan with a rectangle shaped racecourse offshore of Sheboygan, WI. The duration of the zone is intended to ensure the safety of vessels and these navigable waters before, during, and after the high-speed boat race. No vessels or persons will be permitted to enter the safety zone without obtaining permission from the COTP or a designated representative.

V. Regulatory Analyses

We developed this rule after considering numerous statutes and Executive orders related to rulemaking. Below we summarize our analyses based on a number of these statutes and Executive orders.

A. Regulatory Planning and Review

Executive Orders 12866 (Regulatory Planning and Review) and 13563 (Improving Regulation and Regulatory Review) direct agencies to assess the costs and benefits of available regulatory alternatives and, if regulation is necessary, to select regulatory approaches that maximize net benefits. Executive Order 13563 emphasizes the importance of quantifying both costs and benefits, of reducing costs, of harmonizing rules, and of promoting flexibility.

The Office of Management and Budget (OMB) has not designated this rule a ''significant regulatory action,'' under section 3(f) of Executive Order 12866. Accordingly, OMB has not reviewed it.

This regulatory action determination is based on characteristics of the safety zone. The safety zone created by this rule will be relatively small, is designed to minimize its impact on navigable waters, and is not anticipated to exceed 10 hours in duration each day the rule is in place. Furthermore, under certain conditions vessels may still transit through the safety zone when permitted by the COTP or designated representative.

B. Impact on Small Entities

The Regulatory Flexibility Act of 1980, 5 U.S.C. 601–612, as amended, requires Federal agencies to consider the potential impact of regulations on small entities during rulemaking. The term ''small entities'' comprises small businesses, not-for-profit organizations that are independently owned and operated and are not dominant in their fields, and governmental jurisdictions with populations of less than 50,000. The Coast Guard certifies under 5 U.S.C. 605(b) that this rule will not have a significant economic impact on a substantial number of small entities.

While some owners or operators of vessels intending to transit the safety zone may be small entities, for the reasons stated in section V.A above, this rule will not have a significant economic impact on any vessel owner or operator.

Small businesses may send comments on the actions of Federal employees who enforce, or otherwise determine compliance with, Federal regulations to the Small Business and Agriculture Regulatory Enforcement Ombudsman and the Regional Small Business Regulatory Fairness Boards. The Ombudsman evaluates these actions annually and rates each agency's responsiveness to small business. If you wish to comment on actions by employees of the Coast Guard, call 1–888–REG–FAIR (1–888–734–3247). The Coast Guard will not retaliate against small entities that question or complain about this rule or any policy or action of the Coast Guard.

C. Collection of Information

This rule will not call for a new collection of information under the Paperwork Reduction Act of 1995 (44 U.S.C. 3501–3520).

D. Federalism and Indian Tribal Governments

A rule has implications for federalism under Executive Order 13132, Federalism, if it has a substantial direct effect on the States, on the relationship between the National Government and the States, or on the distribution of power and responsibilities among the various levels of government. We have analyzed this rule under that Order and have determined that it is consistent with the fundamental federalism principles and preemption requirements described in Executive Order 13132.

Also, this rule does not have tribal implications under Executive Order 13175, Consultation and Coordination with Indian Tribal Governments, because it does not have a substantial direct effect on one or more Indian tribes, on the relationship between the Federal Government and Indian tribes, or on the distribution of power and responsibilities between the Federal Government and Indian tribes.

E. Unfunded Mandates Reform Act

The Unfunded Mandates Reform Act of 1995 (2 U.S.C. 1531–1538) requires Federal agencies to assess the effects of their discretionary regulatory actions. In particular, the Act addresses actions that may result in the expenditure by a State, local, or tribal government, in the aggregate, or by the private sector of $100,000,000 (adjusted for inflation) or more in any one year. Though this rule will not result in such an expenditure, we do discuss the effects of this rule elsewhere in this preamble.

F. Environment

We have analyzed this rule under Department of Homeland Security Directive 023–01, Rev. 1, associated implementing instructions, and Environmental Planning COMDTINST 5090.1 (series), which guide the Coast Guard in complying with the National Environmental Policy Act of 1969 (42 U.S.C. 4321–4370f), and have determined that this action is one of a category of actions that do not individually or cumulatively have a significant effect on the human environment. This rule involves a safety zone lasting 10 hours in duration each day that will prohibit entry into certain waters of Lake Michigan with a rectangle shaped racecourse offshore of Sheboygan, WI. It is categorically excluded from further review under paragraph L60(a) of Appendix A, Table 1 of DHS Instruction Manual 023–01–001–01, Rev. 1. A Record of Environmental Consideration supporting this determination is available in the docket. For instructions on locating the docket, see the **ADDRESSES** section of this preamble.

List of Subjects in 33 CFR Part 165

Harbors, Marine safety, Navigation (water), Reporting and recordkeeping requirements, Security measures, Waterways.

For the reasons discussed in the preamble, the Coast Guard amends 33 CFR part 165 as follows:

PART 165—REGULATED NAVIGATION AREAS AND LIMITED ACCESS AREAS

■ 1. The authority citation for part 165 continues to read as follows:

Authority: 46 U.S.C. 70034, 70051, 70124; 33 CFR 1.05–1, 6.04–1, 6.04–6, and 160.5; Department of Homeland Security Delegation No. 00170.1, Revision No. 01.4.

■ 2. Add § 165.T09–0654 to read as follows:

§ 165.T09–0654 Safety Zone; Lake Michigan; Sheboygan, WI.

(a) *Location.* The following area is a safety zone: All waters of Lake Michigan with a rectangle shaped racecourse offshore of Sheboygan, WI. The area will be bounded by the points beginning at 43°44′54.32″ N, 87°42′5.77″ W; then east to 43°44′54.10″ N, 87°41′3.21″ W; then south to 43°42′26.73″ N, 87°40′54.66″ W; then west to 43°42′27.10″ N, 87°42′10.11″ W; then returning to the point of origin. These coordinates are based on 1984 World Geodetic System (WGS 84).

(b) *Regulations.* (1) In accordance with the general regulations in § 165.23, entry into, transiting, or anchoring within this safety zone is prohibited unless authorized by the Captain of the Port (COTP) Lake Michigan or a designated representative.

(2) This safety zone is closed to all vessel traffic, except as may be

permitted by the COTP or a designated representative.

(3) The ''designated representative'' of the COTP is any Coast Guard commissioned, warrant, or petty officer who has been designated by the COTP to act on his or her behalf.

(c) *Enforcement period.* This section will be enforced each day from 8 a.m. to 6 p.m. each day on from August 8, 2025, through August 10, 2025.

Dated: July 29, 2025.

Rhianna N. Macon,

Captain, U.S. Coast Guard, Captain of the Port Sector Lake Michigan.

FEDERAL COMMUNICATIONS COMMISSION

47 CFR Part 0

[GN Docket No. 25–133; FCC 25–40; FR ID 306252]

Delete, Delete, Delete; Delegations of Authority

AGENCY: Federal Communications Commission.

ACTION: Final rule.

SUMMARY: In this document, the Federal Communications Commission modifies its delegation of authority rules to provide clarity and uniformity regarding the use of delegated authority to adopt rule changes that are exempt from prior notice and comment under the Administrative Procedure Act.

DATES: This rule is effective August 4, 2025.

FOR FURTHER INFORMATION CONTACT: Marcus Maher, Federal Communications Commission, Office of General Counsel. Email: *Marcus.Maher@fcc.gov;* telephone: (202) 418–2339.

SUPPLEMENTARY INFORMATION: This is a summary of the final rule portions of the Commission's *Direct Final Rule,* GN Docket No. 25–133; FCC 25–40, adopted on July 24, 2025, and released on July 28, 2025. The full text of this document is available for public inspection and can be downloaded at *https://www.fcc.gov/document/fcc-deletes-obsolete-telegraph-rabbit-ear-receiver-phone-booth-rules-0.* Alternative formats are available for people with disabilities (Braille, large print, electronic files, audio format) by sending an email to *fcc504@fcc.gov* or calling the Commission's Consumer and Governmental Affairs Bureau at (202) 418–0530 (voice), (202) 418–0432 (TTY).

Procedural Matters

Paperwork Reduction Act. This document does not contain new or modified information collections subject to the Paperwork Reduction Act of 1995 (PRA), 44 U.S.C. 3501–3521. In addition, therefore, it does not contain any new or modified information collection burden for small business concerns with fewer than 25 employees, pursuant to the Small Business Paperwork Relief Act of 2002, 44 U.S.C. 3506(c)(4).

Congressional Review Act. The Commission has determined, and the Administrator of the Office of Information and Regulatory Affairs, Office of Management and Budget concurs, that this rule is ''non-major'' under the Congressional Review Act, 5 U.S.C. 804(2). The Commission will send a copy of this Direct Final Rule to Congress and the Government Accountability Office pursuant to 5 U.S.C. 801(a)(1)(A).

Synopsis

While we intend to use direct final rule procedures at the full Commission level, in recognition of past actions on delegated authority to adopt or repeal some rules without notice and comment, we take this opportunity to reaffirm that all Bureaus and Offices may continue to take such actions in situations that are exempt from the Administrative Procedure Act's (APA's) notice-and-comment requirements, consistent with such actions by Bureaus and Offices historically. To ensure uniformity in this regard and to address what, by historical happenstance, has resulted in varied formulations throughout our rules, we take this opportunity to standardize the delegated authority of Bureaus and Offices to act without notice and comment on matters that fall within the APA's good cause exception and otherwise do not involve new or novel issues. While rule changes adopted via direct final rule procedures are premised on the APA's good cause exception from notice and comment, our action clarifying and unifying the wording of delegations of authority to Bureaus and Offices also relies on a distinct exception from notice and comment under the APA—namely, the notice and comment exception for rules of ''agency organization, procedure, or practice.'' Delegation of authority to Bureaus and Offices bears simply on who within the agency will be acting, and not on issues of substance—thus fitting comfortably within the APA's notice and comment exception for rules of ''agency organization, procedure, or practice.'' In clarifying and affirming the delegated authority as historically used by Bureaus and Offices to adopt rule changes exempt from prior notice and comment under the APA, we find nothing that would cause the delegations at issue here to constitute substantive rules.

Ordering Clauses

It is ordered that the amendments of the Commission's rules as set forth in this document shall be effective upon **Federal Register** publication of the specified amendments to the part 0 rules, which also shall serve as the date of public notice of that action. Because changes to our rules governing delegations of authority involve agency organization, procedure, or practice rather than ''a substantive rule,'' they are not subject to the default requirement that they take effect on or after 30 days after **Federal Register** publication.

It is further ordered that the Office of the Managing Director, Performance Program Management, *shall send* a copy of this *Direct Final Rule* in a report to be sent to Congress and the Government Accountability Office pursuant to the Congressional Review Act, 5 U.S.C. 801(a)(1)(A).

Secretary.

Final Rules

For the reasons discussed in the preamble, the Federal Communications Commission amends part 0 of Title 47 of the Code of Federal Regulations as follows:

PART 0—COMMISSION ORGANIZATION

■ 1. The authority citation for part 0 continues to read as follows:

Authority: 47 U.S.C. 151, 154(i), 154(j), 155, 225, 409, and 1754, unless otherwise noted.

Subpart B—Delegations of Authority

■ 2. Amend § 0.231 by adding paragraph (m) to read as follows:

§ 0.231 Authority delegated.

* * * * *

(m) Notwithstanding any other provision of this section, the Managing Director is delegated authority to adopt changes to rules the Office of Managing Director administers where the rule

changes are exempt from prior notice and comment under the Administrative Procedure Act, 5 U.S.C. 553(b), and where the action on delegated authority is not new or novel.

■ 3. Amend § 0.241 by adding paragraph (n) to read as follows:

§ 0.241 Authority delegated.

* * * * *

(n) Notwithstanding any other provision of this section, the Chief of the Office of Engineering and Technology is delegated authority to adopt changes to rules the Office of Engineering and Technology administers where the rule changes are exempt from prior notice and comment under the Administrative Procedure Act, 5 U.S.C. 553(b), and where the action on delegated authority is not new or novel.

■ 4. Amend § 0.251 by adding paragraph (k) to read as follows:

§ 0.251 Authority delegated.

* * * * *

(k) Notwithstanding any other provision of this section, the General Counsel is delegated authority to adopt changes to rules the Office of General Counsel administers where the rule changes are exempt from prior notice and comment under the Administrative Procedure Act, 5 U.S.C. 553(b), and where the action on delegated authority is not new or novel.

■ 5. Amend § 0.261 by adding paragraph (c) to read as follows:

§ 0.261 Authority delegated.

* * * * *

(c) Notwithstanding any other provision of this section, the Chief of the Space Bureau is delegated authority to adopt changes to rules the Space Bureau administers where the rule changes are exempt from prior notice and comment under the Administrative Procedure Act, 5 U.S.C. 553(b), and where the action on delegated authority is not new or novel.

■ 6. Amend § 0.271 by adding paragraph (j) to read as follows:

§ 0.271 Authority delegated.

* * * * *

(j) Notwithstanding any other provision of this section, the Chief of the Office of Economics and Analytics is delegated authority to adopt changes to rules the Office of Economics and Analytics administers where the rule changes are exempt from prior notice and comment under the Administrative Procedure Act, 5 U.S.C. 553(b), and where the action on delegated authority is not new or novel.

■ 7. Amend § 0.283 by adding paragraph (e) to read as follows:

§ 0.283 Authority delegated.

* * * * *

(e) Notwithstanding any other provision of this section, the Chief of the Media Bureau is delegated authority to adopt changes to rules the Media Bureau administers where the rule changes are exempt from prior notice and comment under the Administrative Procedure Act, 5 U.S.C. 553(b), and where the action on delegated authority is not new or novel.

■ 8. Amend § 0.291 by adding paragraph (j) to read as follows:

§ 0.291 Authority delegated.

* * * * *

(j) Notwithstanding any other provision of this section, the Chief of the Wireline Competition Bureau is delegated authority to adopt changes to rules the Wireline Competition Bureau administers where the rule changes are exempt from prior notice and comment under the Administrative Procedure Act, 5 U.S.C. 553(b), and where the action on delegated authority is not new or novel.

■ 9. Amend § 0.311 by adding paragraph (c) to read as follows:

§ 0.311 Authority delegated.

* * * * *

(c) Notwithstanding any other provision of this section, the Chief of the Enforcement Bureau is delegated authority to adopt changes to rules the Enforcement Bureau administers where the rule changes are exempt from prior notice and comment under the Administrative Procedure Act, 5 U.S.C. 553(b), and where the action on delegated authority is not new or novel.

■ 10. Amend § 0.331 by adding paragraph (k) to read as follows:

§ 0.331 Authority delegated.

* * * * *

(k) Notwithstanding any other provision of this section, the Chief of the Wireless Telecommunications Bureau is delegated authority to adopt changes to rules the Wireless Telecommunications Bureau administers where the rule changes are exempt from prior notice and comment under the Administrative Procedure Act, 5 U.S.C. 553(b), and where the action on delegated authority is not new or novel.

■ 11. Add an undesignated center heading below § 0.347 to read as follows:

Office of International Affairs

■ 12. Amend § 0.351 by adding paragraph (c) to read as follows:

§ 0.351 Authority delegated.

* * * * *

(c) Notwithstanding any other provision of this section, the Chief of the Office of International Affairs is delegated authority to adopt changes to rules the Office of International Affairs administers where the rule changes are exempt from prior notice and comment under the Administrative Procedure Act, 5 U.S.C. 553(b), and where the action on delegated authority is not new or novel.

■ 13. Amend § 0.361 by adding paragraph (d) to read as follows:

§ 0.361 Authority delegated.

* * * * *

(d) Notwithstanding any other provision of this section, the Chief of the Consumer and Governmental Affairs Bureau is delegated authority to adopt changes to rules the Consumer and Governmental Affairs Bureau administers where the rule changes are exempt from prior notice and comment under the Administrative Procedure Act, 5 U.S.C. 553(b), and where the action on delegated authority is not new or novel.

■ 14. Amend § 0.371 by adding paragraph (i) to read as follows:

§ 0.371 Authority delegated.

* * * * *

(i) Notwithstanding any other provision of this section, the Director of the Office of Communications Business Opportunities is delegated authority to adopt changes to rules the Office of Communications Business Opportunities administers where the rule changes are exempt from prior notice and comment under the Administrative Procedure Act, 5 U.S.C. 553(b), and where the action on delegated authority is not new or novel.

■ 15. Amend § 0.391 by adding paragraph (j) to read as follows:

§ 0.391 Authority delegated.

* * * * *

(j) Notwithstanding any other provision of this section, the Director of the Office of Workplace Diversity is delegated authority to adopt changes to rules the Office of Workplace Diversity administers where the rule changes are exempt from prior notice and comment under the Administrative Procedure Act, 5 U.S.C. 553(b), and where the action on delegated authority is not new or novel.

■ 16. Amend § 0.392 by adding paragraph (l) to read as follows:

§ 0.392 Authority delegated.

* * * * *

(l) Notwithstanding any other provision of this section, the Chief of the Public Safety and Homeland Security Bureau is delegated authority to adopt changes to rules the Public Safety and Homeland Security Bureau administers where the rule changes are exempt from prior notice and comment under the Administrative Procedure Act, 5 U.S.C. 553(b), and where the action on delegated authority is not new or novel.

AGENCY: Federal Communications Commission.

ACTION: Final rule.

SUMMARY: In this document, the Federal Communications Commission (Commission or FCC) adopts final rules that update the eligibility criteria for designated entity bidding credits in auctions for licenses in the 1695–1710 MHz, 1755–1780 MHz, and 2155–2180 MHz (AWS–3) bands. The Commission also updates its general competitive bidding rules for categorizing an entity as a small business concern.

DATES: Effective September 3, 2025.

FOR FURTHER INFORMATION CONTACT: Erik Salovaara, Office of Economics and Analytics, Auctions Division, *Erik.Salovaara@fcc.gov* or 202–418–0660, or Lyndsey Grunewald, Office of Economics and Analytics, Auctions Division, *Lyndsey.Grunewald@fcc.gov* or (202) 418–0660.

SUPPLEMENTARY INFORMATION: This is a summary of the Commission's Report and Order and Second Report and Order in GN Docket Nos. 25–70, 25–71, and 13–185, adopted on July 24, 2025, and released on July 25, 2025 (*AWS–3 Report and Order*). I. Introduction

1. Advancing U.S. leadership in wireless is good for the U.S. economy, for U.S. national security, and for ensuring that every American has access to affordable, high-speed service. That is why the Commission is focused on freeing up more spectrum for consumer use.

2. With the *AWS–3 Report and Order,* the Commission moves to satisfy a bipartisan congressional mandate to auction licenses for AWS–3 spectrum in the Commission's inventory. The proceeds from this auction will fund the Commission's ongoing efforts to protect American networks from untrustworthy and insecure foreign equipment.

3. The Commission has held spectrum auctions for roughly 30 years. Auctions assign spectrum licenses to their highest and best use by allowing bidders to reveal their preferences and discover a market-clearing price. Commission auctions have proven a resounding success largely because the Commission has updated its rules to account for the lessons of the past. For example, in 2015, the Commission reformed its rules to protect the integrity of their auctions from fraud, collusion, and manipulation while promoting participation by *bona fide* small businesses and rural providers.

4. The *AWS–3 Report and Order* advances those time-tested objectives. First, the Commission adopts designated entity eligibility requirements for future AWS–3 spectrum license auctions that are in harmony with the requirements used in every 5G auction held since 2015. Updating the AWS–3 rules to match settled practice will give small businesses and rural service providers the predictability they need to participate meaningfully at auction. Next, the *AWS–3 Report and Order* updates the Commission's general part 1 competitive bidding rules for categorizing an entity as a ''small business concern,'' pursuant to the Small Business Runway Extension Act of 2018 (SBREA). In adopting these rules, the Commission rejects arguments from the affiliates of Auction 97 defaulters (whose unwillingness to pay the full amount of their gross winning bids led to significant AWS–3 spectrum sitting fallow in the Commission's inventory for nearly a decade) that the Commission conduct the next auction of AWS–3 licenses under the same rules that enabled the very bidding behavior that led to their defaults in the first place. Finally, the Commission declines to adopt a Tribal priority licensing window in advance of the next AWS–3 auction.

5. Shortly after the Commission adopted the Notice of Proposed Rulemaking in this proceeding (*NPRM*), 90 FR 11931 (March 13, 2025), the Office of Economics and Analytics (OEA), jointly with the Wireless Telecommunications Bureau (WTB), sought comment on proposed procedures for an auction of AWS–3 licenses (Auction 113). The *AWS–3 Report and Order* allows OEA and WTB to establish final procedures for Auction 113 in accordance with the adopted rules and to move forward with that auction.

II. Background

6. In 2014, the Commission adopted service and bidding rules for the auction of AWS–3 spectrum licenses (Auction 97) in the 1695–1710 MHz, 1755–1780 MHz, and 2155–2180 MHz frequencies. Bidding in Auction 97 began in November 2014 and ended in January 2015. Auction 97 raised a total of $41,329,673,325 in net bids, with 31 bidders placing winning bids for a total of 1,611 licenses. Following that auction, certain winning bidders selectively defaulted on winning bids for 197 licenses. In March 2025, the Commission announced that it would conduct a new auction, Auction 113, for the AWS–3 spectrum that remained in the agency's inventory, most of which was available primarily due to Auction 97 defaults.

7. *The Commission Provides Notice in 2014 that All AWS–3 Auctions Would Be Subject to Generally Applicable Rule Changes.* Prior to Auction 97, the Commission provided clear notice that any and all future auctions of AWS–3 spectrum licenses would be subject to generally applicable changes to the part 1 competitive bidding rules. In particular, the Commission determined that any AWS–3 auction would be conducted in accordance with the general competitive bidding rules set forth in part 1, subpart Q of the Commission's rules except as ''otherwise provided in'' part 27.

8. The part 1 competitive bidding rules advance the agency's statutory directive by ensuring that designated entities (DEs), which are small businesses and rural telephone companies, have a meaningful opportunity to access wireless spectrum in FCC auctions. DEs are eligible for auction bidding credits, represented as percentage discounts from their winning bids. Eligibility requirements for DEs are set on a service-by-service basis, the

capital requirements and other characteristics of each particular service establishing the appropriate threshold.

9. The Commission adopted service-specific bidding credits and DE eligibility requirements for the AWS–3 bands prior to Auction 97. The Commission provided a 15% small business bidding credit to entities with average annual gross revenues not exceeding $40 million and a 25% very small business bidding credit to entities with average annual gross revenues not exceeding $15 million. The average gross revenues would be calculated from the preceding three years. These thresholds were consistent with the standardized schedule of DE bidding credits in the Commission's rules at the time. The relevant definitions and thresholds for particular bidding credits were codified in the part 27 AWS–3 service rules. The DE eligibility requirements were modeled after the small business size standards and associated bidding credits that the Commission adopted for the AWS–1 band, based on the belief that the AWS–3 bands would be employed for purposes similar to those for the AWS–1 band.

10. *DISH's DEs Improperly Claim $3.3 Billion in FCC Bidding Credits Intended For ''Very Small Businesses.''* Two participants in Auction 97, Northstar Wireless, LLC (Northstar) and SNR Wireless License Co. (SNR), made extensive use of bidding credits intended for ''very small businesses.'' In total, Northstar and SNR improperly claimed $3.3 billion in credits under the Commission's DE rules. They ultimately placed over $13.3 billion in gross winning bids on 702 of the 1611 licenses in Auction 97, or 43.5% of the available licenses.

11. SNR and Northstar were formed immediately before Auction 97 and funded almost exclusively by a large DISH Network Corporation (DISH). During the course of reviewing long-form applications following Auction 97, the Commission denied bidding credit eligibility for both Northstar and SNR. The Commission determined that the companies were under the de facto control of DISH and therefore were ineligible for the $3.3 billion of DE bidding credits for ''very small businesses.''

12. Because SNR and Northstar were ineligible for the DE bidding credits they claimed, they were required to pay the full amount of their $13.3 billion bid price for those licenses. DISH and its DEs appealed the Commission's determination. The litigation finally came to a close in 2023 when a federal court of appeals upheld the Commission's determination and the Supreme Court declined to grant certiorari.

13. *DISH's DEs Selectively Default on the AWS–3 Licenses They Won.* Northstar and SNR selectively defaulted on winning bids for 197 AWS–3 licenses. Pursuant to the Commission's well-established part 1 rules governing defaults on winning bids, Northstar and SNR became liable for the difference between their winning bids in Auction 97 and the amount of winning bids for licenses accessing the same spectrum in subsequent auctions. Also pursuant to those rules, SNR and Northstar became liable for an additional payment equal to 15% of their own bids or the applicable subsequent winning bids, whichever was less. The upcoming auction of AWS–3 licenses may provide subsequent winning bids that ultimately determine the size of any deficiency payment owed by Northstar and SNR.

14. *The Commission Overhauls its Competitive Bidding Rules and DE Eligibility in Response to Auction 97 Irregularities.* After the close of Auction 97, the Commission became aware of allegations of significant bidding irregularities on the part of SNR and Northstar. The Commission also received numerous complaints about abuses of the DE program beyond the DISH-controlled entities. Commenters alleged that supposedly ''small businesses'' that claimed bidding credits were operating at the direction and control of large, well-financed corporations.

15. In response to these concerns, the Commission in 2015 significantly reformed its competitive bidding rules for future spectrum auctions. The reforms adopted in the *Updating Part 1 Report and Order,* 80 FR 56764 (September 18, 2015), were expressly informed by ''lessons learned'' in Auction 97. Many of the Commission's reforms were intended to expand the range of businesses eligible for DE benefits while simultaneously ending practices that had incentivized larger players to manipulate the DE regime. As the Commission explained, the changes to the part 1 rules were designed to promote auction participation by small businesses while ensuring ''that valuable bidding credits are available only to those Congress intended,'' namely, small businesses and rural providers.

16. Although the 2015 reforms expanded DE eligibility by raising the gross revenue thresholds for small business bidding credits and establishing a new bidding credit for eligible rural service providers, it also took several steps to protect the integrity of the DE program by: (i) prohibiting joint bidding arrangements between applicants; (ii) prohibiting the common control of separate auction applicants; (iii) requiring the establishment, on an auction-by-auction basis, of a maximum total discount of no less than $25 million that a winning eligible DE may receive; and (iv) modifying attribution rules to prevent the unjust enrichment of ineligible entities. These and other reforms resulted in changes to the Commission's part 1 rules, which apply generally to spectrum auctions. While existing service-specific competitive bidding rules, including those for the AWS–3 bands, specified that the part 1 competitive bidding rules would apply to mutually exclusive applications for licenses, the specific provisions related to designated entity eligibility in those services were never updated to reflect the increased gross revenue thresholds and the availability of the rural service provider bidding credit.

17. *Congress Tightens the Definition of ''Small Business Concern'' for Federal Programs.* In the 2018 SBREA, Congress amended provisions of the Small Business Act for defining a ''small business concern.'' In relevant part, the 2018 amendments required federal agencies to treat an entity as a ''small business concern'' only if the agency considered average gross receipts over the preceding five years.

18. In requiring a five-year lookback, Congress sought to more accurately reflect a business's long-term size. Congress also sought to combat fraud and abuse by making it harder for companies to manipulate short-term revenue fluctuations to improperly qualify as ''small.''

19. The 2018 statutory amendments also responded to longstanding criticisms, raised over the years by Congress and agencies like the Small Business Administration (SBA) Office of Inspector General and the Government Accounting Office (GAO), that large firms had exploited loopholes to win preferential contracts and discounts intended for small businesses. Although service-specific small business definitions that the Commission has adopted for bidding credit eligibility since 2019 contain the congressionally mandated five-year lookback period, the Commission has not previously amended any of its prior-existing rules—including prior service-specific rules and the general part 1 rules to conform with the amended Small Business Act's standards.

20. *To Fund Critical National Security Objectives, Congress Authorizes the FCC to Auction AWS–3 Licenses that DISH's DEs Selectively Defaulted After Auction*

97. In the Spectrum and Secure Technology and Innovation Act of 2024, Congress directed the Commission to initiate systems of competitive bidding to grant licenses for spectrum in its inventory in the AWS–3 spectrum bands. Auction proceeds will support the Commission's Supply Chain Reimbursement Program, which reimburses eligible advanced communications service providers for their costs to remove, replace, and dispose of untrustworthy Huawei Technologies Company or ZTE Corporation equipment and services.

21. In February 2025, the Commission issued the *NPRM* as the first step to conduct Auction 113. As the 2015 reforms to the part 1 rules that were adopted in the immediate aftermath of Auction 97 to protect the integrity of Commission spectrum auctions already apply to this auction, the *NPRM* sought to update the part 27 requirements for DE eligibility in AWS–3 spectrum auctions based on the intervening developments proposing to set the average annual gross revenue eligibility requirements for very small and small business bidding credits at $20 million and $55 million, respectively and to incorporate the amended Small Business Act's five-year lookback period for calculating gross revenues. The *NPRM* also proposed to make the rural service provider bidding credit adopted in 2015 available for future auctions of AWS–3 spectrum licenses. These proposals would align DE eligibility requirements for Auction 113 with the requirements used in auctions for 5G-ready spectrum licenses conducted since Auction 97.

III. Competitive Bidding Rules To Be Used for Future Auctions of AWS–3 Spectrum Licenses

22. The Commission affirms that, consistent with its AWS–3 service-specific rules, any future auctions will be conducted using the part 1 competitive bidding rules that are in effect at the time of the auction. For Auction 113, that includes the reforms to the DE rules adopted as part of the 2015 *Updating Part 1 Report and Order* and any other changes that may be effectuated prior to the auction. For example, the Commission is considering a proposal to require auction applicants to make certain certifications as to whether they are owned by, controlled by, or subject to the jurisdiction or direction of a foreign adversary. If such a rule were to be adopted and made effective prior to the deadline for submitting an application to participate in Auction 113, the new requirement could apply to Auction 113 applicants. The Commission has repeatedly found that application of its part 1 competitive bidding rules, as modified by the 2015 Updating Part 1 Report and Order, to individual services serves the public interest. Consistent with that precedent, the Commission finds that conducting Auction 113 using these updated rules would similarly serve the public interest.

A. The 2015 Reforms to the Competitive Bidding Rules Will Apply to Future Auctions of AWS–3 Spectrum Licenses

23. In 2015, the Commission modified its part 1 competitive bidding rules to facilitate competitive entry into the wireless industry by small businesses with capital and operational experience. The Commission sought to ''provide meaningful opportunities to bona fide small businesses and rural service providers to participate in auctions and in the provision of spectrum-based services, and in providing such opportunities, to prevent unjust enrichment.'' While the record in that proceeding supported these changes, some commenters strongly opposed several proposals, but their arguments initially failed to persuade the Commission, which proceeded to modify its rules, and later failed to persuade the U.S. Court of Appeals for the Third Circuit, which upheld certain challenged rules. The Third Circuit found that the Commission, in the *Updating Part 1 Report and Order,* ''not only set forth a policy that is likely to allow continued participation by DEs, but also rationally explained why it expected no significant loss of DE participation.'' Now, in this proceeding, one of the challenging parties seeks to revive those failed arguments. But they are no more persuasive now than they were when the Commission first rejected them a decade ago.

24. New data and the Commission's experience administering auctions over the last ten years prove the success of the modernized DE rules. Publicly available auction results demonstrate that the Commission and Third Circuit accurately foresaw that the rules adopted in 2015 would offer *bona fide* designated entities opportunities to participate in auctions and the provision of spectrum-based services. In every spectrum license auction since, the percentage of winning bidders that are designated entities has remained similar to or has risen higher than the percentage in Auction 97. In six of those eight auctions, the percentage of applicants qualifying to bid that were designated entities was higher than in Auction 97. This data meaningfully demonstrate that, consistent with the Commission's statutory duty, the part 1 rule modifications adopted in 2015 serve the public interest by using bidding preferences to ensure that small businesses and rural telephone companies are given the opportunity to participate in the provision of spectrum-based services. Accordingly, the Commission declines to conduct future auctions of AWS–3 spectrum licenses, including Auction 113, using the outdated rules that are no longer in effect.

25. The Commission is not persuaded by arguments that it may not use competitive bidding rules, including DE eligibility requirements, that differ from those used in Auction 97. Two commenters assert that the use of the current competitive bidding rules and procedures, as amended, for the upcoming AWS–3 auction would undermine robust participation by DEs. This claim is rooted in their fear that the DE eligibility rules adopted by the Commission would reduce the winning net bids in Auction 113 and thereby increase the amount of Northstar's and SNR's deficiency payments. The Commission finds that argument unavailing.

26. As an initial matter, all auctions conducted since 2015 have been conducted under the updated rules in effect at the time, including the increased gross revenue thresholds the *AWS–3 Report and Order* adopts for the AWS–3 service-specific rules. These rules have led to robust participation by small entities and rural providers. The Commission finds that their use in Auction 113 is likely to expand the pool of entities that can potentially qualify for DE bidding credits while still allowing the Commission to ''prevent the unjust enrichment of entities that would be ineligible to receive DE benefits in their own right.''

27. The Commission has, from time to time, updated its auction rules to promote the efficient assignment of spectrum licenses, promote economic opportunity and competition, ensure that innovative technologies can be brought to market, and encourage auction participation by small businesses and rural providers. As demonstrated by the outcomes of auctions held since Auction 97, the reforms adopted in 2015 have served this purpose. The Commission therefore affirms that the updated rules will govern the conduct of Auction 113. As is the Commission's standard practice when adopting auction rules, and as it did in advance of Auction 97, the Commission also gives notice to potential auction participants that future auctions will be subject to any

modifications that it may adopt for its part 1 general competitive bidding rules in the future.

B. Updating Eligibility Criteria for Small and Very Small Business Bidding Credits for Auctions of AWS–3 Spectrum Licenses

28. The Commission adopts the proposal in the *NPRM* to update the AWS–3 service specific competitive bidding rules to align the gross revenue thresholds used to determine eligibility for small and very small business bidding credits with the DE eligibility requirements contained in the part 1 rules and the requirements of the SBREA. For purposes of DE eligibility, a small business is defined as an entity that, together with its affiliates, its controlling interests and the affiliates of its controlling interests, has average gross revenues that are not more than $55 million for the preceding five years, and a very small business is an entity that, together with its affiliates, its controlling interests and the affiliates of its controlling interests, has average gross revenues that are not more than $20 million for the preceding five years. This change will bring the DE eligibility requirements for AWS–3 services in line with the Commission's standardized schedule for small business bidding credits in part 1, subpart Q.

29. In accordance with the schedule of DE bidding credits set forth in part 1, a qualifying small business will continue to be eligible for a bidding credit of 15% and a qualifying very small business will be eligible for a bidding credit of 25%, subject to the bidding credit caps specified in 47 CFR 1.2110(f)(2)(ii).

30. The eligibility requirements that the *AWS–3 Report and Order* adopts harmonize the AWS–3 DE rules with both the part 1 standardized schedule of DE bidding credits and the amended Small Business Act's current five-year average gross receipts benchmark. By updating the AWS–3 DE eligibility requirements to match the requirements that have been used for all other auctions of 5G-ready services since 2015, the Commission provides small businesses and rural service providers with a simple, consistent, and predictable avenue for facilitating access to capital, thereby increasing participation and competition in an AWS–3 auction.

31. In all auctions of licenses likely to be used to provide 5G services in a variety of bands since the part 1 schedule of bidding credits was updated in 2015, the Commission has consistently used the DE business size standards that it adopted. That is, the Commission has used the two larger average gross revenue thresholds and associated bidding credits in the part 1 schedule of bidding credits. The results from these auctions demonstrate that using the two larger size standards to assign bidding credits has provided a real opportunity for bidders claiming eligibility as small businesses to win licenses to provide spectrum-based services at auction. By adopting average annual gross revenue thresholds that are not too high, and thus not overly inclusive, the Commission preserves the effectiveness of DE benefits for the small businesses that are intended to benefit from its DE rules. This proposal received strong support in the record, with the majority of commenters, including those representing small and rural interests, generally supporting raising the average annual gross revenue thresholds as proposed in the *NPRM.*

32. The Commission also adopts its proposals to amend the AWS–3 competitive bidding rules to reflect the five-year benchmark mandated by the amended Small Business Act. Adopting the benchmark will bring the AWS–3 competitive bidding rules into alignment with the Small Business Act, as the Commission has done for all other service specific designated entity requirements since 2019. Simultaneously, the Commission adopts its proposal to codify this requirement in its part 1 standardized schedule of bidding credits such that eligibility for small business bidding credits would be based on an entity's average gross revenues for the preceding five years. The Commission finds that this modification to the part 1 standardized schedule of bidding credits will ensure consistency with the requirements of the Small Business Act in spectrum bands that may be subject to competitive bidding in the future, and it adopts the proposal.

33. One commenter asks the Commission to go beyond its proposal and increase the eligibility threshold beyond the existing part 1 rules. That commenter did not propose any specific thresholds or provide a justification for why auctions of licenses for the AWS–3 spectrum in the Commission's inventory should be treated differently from other auctions for licenses likely to be used to provide 5G services. Based on the Commission's prior experience with bidding credits in spectrum auctions and the lack of service-specific justifications in the record, the Commission is not persuaded that it should adopt small business size standards for AWS–3 spectrum that differ from those used in auctions for other 5G-ready services.

34. Finally, the Commission declines to increase the bidding credit percentages for small businesses and very small businesses and declines to include the 35% bidding credit from its part 1 standardized schedule of bidding credits for entities with not more than $4 million in average annual gross revenues. When determining the amount of bidding credits and who should be eligible for them, the Commission takes care to avoid expanding the scope of DE benefits to a level that may incentivize gamesmanship. The Commission has consistently used only the two largest DE business size standards and associated bidding credits outlined in its part-1 rules when adopting service-specific rules for competitive bidding for spectrum licenses, including in Auction 97. This approach has facilitated the successful participation of many eligible small businesses in Commission auctions over the last decade and has provided uniformity and predictability for designated entities and other bidders as well. The Commission is not persuaded by the limited record before us that AWS–3 spectrum is different in a way that warrants deviating from the rule frameworks that have governed previous auctions. The Commission finds that the bidding credit percentages and thresholds in the part-1 size standards continue to ''provide a simple, consistent, and predictable avenue for facilitating small business participation in auctions.''

Rural Service Provider Bidding Credits for Future Auctions of AWS–3 Spectrum Licenses

35. Consistent with the findings in the *Updating Part 1 Report and Order* and the Commission's approach in other bands where the spectrum is likely to be used to provide 5G services, the Commission adopts its proposal to offer a 15% bidding credit to a rural service provider, as defined in 47 CFR 1.2110(f)(4)(i) and subject to the bidding credit cap defined in 47 CFR 1.2110(f)(4)(ii), that has not claimed a small business bidding credit. Those commenters that addressed this proposal generally supported extending bidding credits to rural service providers in auctions of licenses for AWS–3 spectrum. Permitting bidders to claim a rural service provider bidding credit in Auction 113, a bidding credit that was not available when this spectrum was initially auctioned, will allow a diversity of service providers to compete more effectively for spectrum licenses in rural areas. The Commission finds that adopting this bidding credit

will promote robust participation in Auction 113.

36. Some commenters advocate for increasing the bidding credit percentage for rural service providers so that it matches the percentage provided to very small businesses, generally reasoning that more small businesses will be eligible for the larger bidding credit given the new thresholds that the Commission is adopting, in addition to new entrants. As with calls to increase the bidding credit percentages for small business designated entities, the commenters advocating to increase the bidding credit percentage for rural service providers fail to demonstrate that services particular to the limited number of licenses being auctioned in the AWS–3 band would materially benefit from a larger rural service provider bidding credit. The Commission sees nothing in the record that disturbs its conclusion when it adopted a rural service provider credit that ''rural service providers generally have greater access to capital and infrastructure than other small businesses or new entrants,'' making it appropriate for the rural service provider credit to equal the smallest credit amount available to a small business.

37. The Commission's past experience with the rural service provider bidding credit indicates that the existing part 1 rural service provider bidding credit achieves an appropriate balance of the statutory obligations that the Commission is charged with pursuing, while sufficiently enabling rural service providers to compete for spectrum licenses. Thus, the Commission confirms that the part 1 rural service provider bidding credit standard will apply for auctions of licenses for AWS–3 spectrum as proposed in the *NPRM.*

IV. The Commission Is Not Required To Use the 2014 Competitive Bidding Rules for Auction 113 in 2025

38. The Commission will conduct Auction 113 under the part 1 competitive bidding rules in effect at the time of the auction, and not part 1 rules that were in effect during Auction 97. As the *NPRM* observed, when establishing the AWS–3 service ahead of Auction 97, the Commission ''specified that such licenses would be subject to competitive bidding and that the competitive bidding procedures contained in part 1 of the Commission's rules would apply, unless otherwise specified.'' The current part 1 rules include improvements related to DEs that were adopted in the wake of Auction 97. The Commission's longstanding part 1 rules have led to robust participation by small entities and rural providers. Notwithstanding the assertions of two commenters, nothing in the language of the *AWS–3 2014 Report and Order,* 79 FR 32366 (June 4, 2014), or the part 27 rules indicates that the part 1 rules used in Auction 97 must be used to conduct any and all future auctions of licenses for AWS–3 spectrum.

39. Under the Commission's rules, any auction involving AWS–3 licenses will be governed by the ''general competitive bidding procedures set forth 47 CFR part 1, subpart Q.'' Neither commenter addresses the straightforward application of the text of these rules. Instead, they claim that Auction 113 will be a continuation of Auction 97 and therefore the Commission must continue to use the 2014 part 1 rules in future AWS–3 auctions, including Auction 113. In an attempt to marry Auction 113 to Auction 97, a commenter interprets the words ''subsequent auction'' and ''re-auction,'' that appear in the Commission's rules regarding the consequences of an auction default, to require an ''inextricable link'' between the first auction and the second.

40. In reality, these phrases mean the opposite of what the commenter asserts. The terms ''subsequent auction'' and ''re-auction,'' on their face, refer to a new auction that will offer licenses for spectrum that has been offered but not successfully assigned in a prior auction. In all material respects, Auction 97 has concluded: the Commission has completed the process of competitive bidding, issued licenses to all winning bidders, finished the transition process, and accomplished all other prerequisites to the provision of wireless service for licenses that were successfully auctioned. Bidding in Auction 97 concluded more than a decade ago. The Commission's default rules rely on bids in two auctions of licenses for the same spectrum to determine the consequences of a default in the first one, but this does not suggest that the second auction is a continuation of the first. The Commission is entitled to set the rules of each auction within its statutory parameters. By using the updated part 1 rules, the Commission is able to leverage experience and expertise that it did not have at the time of Auction 97, and indeed leverage its experience in Auction 97 itself, to better promote robust competition and combat fraud in Auction 113.

A. Applying the Current Part 1 Competitive Bidding Rules in Auction 113 Is Not a Violation of Due Process

41. Using the part 1 rules in effect at the time of future AWS–3 auctions is consistent with applicable law and the reasonable expectations of any party involved in Auction 97. Applying current part 1 rules in future AWS–3 auctions is consistent with due process of law. Application of the Commission's rules at the time of the auction is neither a prohibited primary retroactive application nor secondary retroactive application of the rules. Furthermore, one commenter's contention that changes in rules applicable to Auction 97 and a future AWS–3 auction effectively single out the defaulters in Auction 97 for differential treatment ignores their own legal responsibility as defaulters.

42. *Primary retroactivity.* An agency order is impermissible as ''primarily retroactive'' if it alters the past legal consequences of past actions. An order can be primarily retroactive if it (1) increases a party's liability for past conduct; (2) impairs rights a party possessed when he acted; or (3) imposes new duties with respect to transactions already completed.

43. Applying part 1 rules in effect at the time of Auction 113 will not alter ''the past legal consequences for past actions'' taken by Northstar and SNR. To the contrary, the ''past legal consequences of past actions'' by Northstar and SNR were determined by the Commission's rules governing default penalties, which were well established prior to Action 97 and have not changed in any meaningful way since then. It is those rules, not the DE rules, that determines a defaulter's liabilities, rights, and duties.

44. As such, applying part 1 rules in effect when Auction 113 commences would not increase DISH's liability for past conduct by penalizing Northstar and SNR in the form of a larger deficiency payment owed than if the Auction 97 DE rules remained in place. The Commission's default payment rules determine the amounts of Northstar's and SNR's default payment obligations or, in other words, the default payment rules establish the liabilities applicable to the defaulters. Pursuant to the rules, a bidder's obligation to pay its entire bid amount is set when its bid is accepted, and after default, the amount due may be reduced based on the results of a later auction. The amount that a defaulter will ultimately owe is determined by the delta between its winning bid and the winning bid in a subsequent auction,

and if the subsequent winning bid equals or exceeds the defaulted bid, no deficiency payment will be assessed. The bidding rules that are applied in a subsequent auction would not increase DISH's liability for past conduct because the maximum amount of the liability due to its past conduct was established at the time DISH defaulted, and the Commission's rules controlling default payments have not changed. Accordingly, using those rules in a future AWS–3 auction would not increase DISH's liability for past conduct.

45. *Secondary Retroactivity.* A commenter further claims that conducting Auction 113 using the part 1 rules that are in effect at that time would have secondary retroactive effect, making their use impermissible. A change in law that does not result in primary retroactivity nonetheless can still be impermissibly secondarily retroactive. This sort of retroactivity is ''characteristic of a rule having exclusively 'future effect' but affects the desirability of past transactions.'' However, simply having an effect, even if negative, on expectations based on past rules does not make a new rule secondarily retroactive.

46. As a preliminary matter, the commenter could not reasonably rely on a future AWS–3 auction replicating Auction 97, with respect to rules or outcome. At the outset of the AWS–3 service, the Commission gave notice that future AWS–3 auctions would rely on the part 1 rules then in effect, meaning that the participants should never have relied upon the Auction 97 rules being applied in perpetuity. The Commission expressly admonished bidders that any future auction of AWS–3 spectrum, which would determine subsequent winning bid amounts for purposes of default obligations, could be subject to updated rules. Participants in Auction 97 were on notice of potential for changes in the Commission's competitive bidding rules, and they reasonably should have expected the Commission to update or modernize its rules in an auction being held over a decade later. It would be irresponsible for the Commission to ignore the vast changes involving spectrum-based services since Auction 97. As the D.C. Circuit has recognized, ''an agency must be allowed to adjust its policies to changing circumstances, within the framework of the rules it established in advance of the auction.''

47. Moreover, the benefits of applying the revised part 1 rules in a future AWS–3 auction will outweigh the burden claimed by the commenter. Agencies must ''balance the harmful 'secondary retroactivity' of upsetting prior expectations or existing investments against the benefits of applying their rules to those preexisting interests.'' In 2015, the Commission updated the part 1 rules after finding that the rule amendments served the public interest, and evidence in the record shows that DE participation in Commission auctions has been enhanced by those updates. That finding was made in part based on the experience the Commission gained from administering Auction 97, an auction in which the defaults of Northstar and SNR significantly affected the outcome. The actions taken by the Commission in the *AWS–3 Report and Order* further align eligibility criteria for DE bidding credits for AWS–3 spectrum licenses with the Commission's part 1 rules and with the DE eligibility requirements used in auctions for 5G-ready spectrum licenses since Auction 97. The ''amorphous injury'' to Northstar and SNR, a purely speculative decrease in winning bid amounts in Auction 113, is outweighed by the public interest benefits in enhancing bona fide DE participation in spectrum auctions and in harmonizing the competitive bidding rules. In conducting Auction 113 pursuant to the reformed part 1 rules, the Commission is exercising its discretion to balance fairness to losing bidders with the needs of the market and the public interest. Accordingly, there is no impermissible secondary retroactivity.

48. *Disparate Treatment.* In support of its argument that due process requires that Auction 113 be conducted using Auction 97 part 1 rules, one commenter complains that Northstar and SNR would be impermissibly ''singled out'' by the use of modified part 1 rules. This argument is unsupported and unpersuasive. It disregards Northstar's and SNR's own responsibility for improperly claiming bidding credits under the Commission's DE rules in Auction 97. Northstar and SNR, and their guarantors, will be subject to default obligations based on their defaulted winning bids in Auction 97, bids that they won while relying on improperly claimed bidding credits, pursuant to a rule that applied to all other Auction 97 participants. Had any other winning bidder defaulted in that auction, it would have had its final default payment determined just as Northstar's and SNR's will be. The only thing that ''singles out'' Northstar and SNR is that they voluntarily defaulted on winning bids of over $3 billion in Auction 97 after improperly claiming billions in small business bidding credits. The commenter similarly argues that the participants are unique in that any bidders in future auctions outside the AWS–3 band will have fresh, revised expectations based on application of the Commission's post-Auction 97 revisions to its part 1 competitive bidding rules. But this claim ignores that the Commission regularly admonishes potential auction participants that future auctions will also be subject to any modifications that the Commission may adopt for its part 1 general competitive bidding rules in the future.

B. The Commission Provided the Notice and Opportunity for Comment Required by the Administrative Procedure Act

49. The Commission finds no merit in one commenter's contention that it failed to comply with the Administrative Procedure Act (APA). The commenter complains that the Commission's use of a fixed comment period from the release of the *NPRM* rather than from the date of its **Federal Register** publication does not meet APA requirements. The APA requires that notice of regulatory action be published in the **Federal Register** and permits action only after such notice is provided. It does not define the minimum period of notice before a deadline for comments. Commission rules state that ''a reasonable time will be provided'' and that such time will be ''specified in the NPRM,'' without prescribing a specific length of time.

50. The *NPRM* was adopted at the Commission Open Meeting on February 27, 2025, and was released by publication on the Commission's website on February 28, 2025. It set a deadline for comments to be filed by March 31 and for reply comments by April 14. The **Federal Register** published a summary of the *NPRM,* including information about the dates for comments and replies, on March 13, or 12 business days and 18 calendar days prior to the comment deadline.

51. That notice satisfied the requirements of the APA and the Commission's rules and gave interested parties a sufficient opportunity to participate in the rulemaking. The commenter does not claim that the comment period was unreasonably short or that it was prejudiced in any way. In fact, the commenter hired outside counsel and filed 18 pages of comments by the March 31 deadline. Eleven other parties filed comments within this time period, and no party claimed to have been unable to meet a filing deadline or otherwise sought additional time to address the *NPRM.*

52. The Commission are likewise unpersuaded by the commenter's claim

that the Commission violated the APA by ''failing to identify and seek any comment on any issue relating to the inextricable linkage of Auctions 97 and 113.'' The APA requires an agency to publish a notice that identifies ''either the terms or substance of the proposed rule or a description of the subjects and issues involved.'' That notice ''must be sufficient to fairly apprise interested parties of the issues involved, but it need not specify every precise proposal which the agency may ultimately adopt as a rule.'' The Commission satisfied that requirement when it proposed updating the DE rules for Auction 113.

C. Applying Part 1 Rules in Effect at the Time of Any Future AWS–3 Auctions Will Not Breach Any Contractual Duty of the Commission

53. Contrary to two commenters' assertions, changes to the competitive bidding rules do not breach DISH's guaranties. One of the commenters relied on a savings clause in the guaranties, a provision that the guaranties may be enforced to the fullest extent permissible under the laws and public policies in the event that and to the extent that ''the obligations of the Guarantor under this Guaranty shall be adjudicated to be invalid or unenforceable.'' The commenter contends that because changing the bidding credit rules from Auction 97 violates its due process rights, enforcing the guaranties would exceed the savings clause provision of ''permissible'' enforcement. Changes in the Commission's bidding credit rules do not prejudice any rights of the commenter protected by due process and its strained reading of the savings clause fails to prove any breach of the guaranties.

54. The commenter suggests that applying the part 1 competitive bidding rules in effect at the time that the auction takes place is somehow analogous to the government's actions in the Supreme Court case of United States v. Winstar Corp. The Commission find it is not. In that case, the Supreme Court addressed the enforcement of a regulation that contradicted contractual assurances of specific future accounting treatment that a banking regulator had made to induce healthier savings and loan companies to purchase failing financial entities. In contrast, the commenter never received any contractual assurance that future AWS–3 auctions would be conducted under the Auction 97 rules, and the Commission never extended any such assurance. To the contrary, the Commission provided notice that its competitive bidding rules would be subject to future changes.

55. Likewise, the Commission's improvement of its competitive bidding rules does not breach any applicable covenant of good faith and fair dealing. Notwithstanding claims by the commenters the underlying default obligations are set by 47 CFR 1.2104(g) and those liabilities are reflected in the guaranties. The final amount of those obligations will be determined by the applicable subsequent winning bids, not by any of the changes that the Commission has made to the competitive bidding rules since Auction 97 or makes in the *AWS–3 Report and Order.* Whatever the subsequent winning bid amounts, the commenter remains liable for any deficiency regardless of the DE rules, or any other particular rules, in a future auction.

D. Commenter's Pre-Auction Request for Post-Auction Relief Is Not Ripe

56. Finally, two commenters request that, if it does not apply the 2014 part 1 rules in Auction 113, the Commission refrain from requiring any deficiency payments pursuant to 47 CFR 1.2104(g) and from ''enforcing the DISH guaranties.'' Obviously, the Commission has not yet assessed a final default payment for the defaulted bids from Auction 97. Indeed, the outcome of a future auction of AWS–3 spectrum licenses may prove such a request to be unnecessary if the subsequent winning bids are equal to or greater than Northstar's and SNR's prior defaulted winning bids. Thus, the Commission declines to consider the commenters request that it refrain from requiring any deficiency payments pursuant to 47 CFR 1.2104(g) and from enforcing the DISH guaranties'' if it amends the rules as proposed in the *NPRM.*

57. The commenters' request in this regard is similar to that of the petitioner in Mountain Solutions in that the default liability, if any, is not yet ripe. Indeed, the request here is even more premature. In Mountain Solutions, there were subsequent winning bids for seven of the ten licenses involved in the petitioner's defaults. In this case, by contrast, there are no subsequent winning bids with respect to the defaults by the participants. As one commenter observes, at this point, any injury related to deficiency payments and enforcement of the guaranties is speculative and, accordingly, any requests for related Commission action are premature. The Commission therefore does not need to consider any request by the commenters for relief from the obligations of the involved parties under the rules and the guaranties until after the Commission is able to calculate any final payment for the defaults.

V. Tribal Licensing Window

58. In the *NPRM,* the Commission sought comment on the possible use of a Tribal licensing window for Auction 113. After consideration of the comments received in response, the Commission finds that it would not be in the public interest to implement a Tribal licensing window for the inventory proposed for Auction 113.

59. In seeking comment on a possible Tribal licensing window, the Commission noted that the Spectrum and Secure Technology and Innovation Act directs the Commission to use competitive bidding to ''grant licenses for spectrum in the inventory of the Commission as of the date of enactment of this Act in the bands of frequencies referred to by the Commission as the 'AWS–3 bands.' '' The Act also directs proceeds from the auction to the general fund of the Treasury to, among other things, reimburse funds borrowed by the Commission to carry out the Commission's Supply Chain Reimbursement Program. The Spectrum and Secure Technology and Innovation Act also includes a directive for the Commission to ''initiate systems of competitive bidding under section 309(j)'' for these AWS–3 licenses within 18 months of enactment and provision to processing applications and grant licenses notwithstanding the lapse in the Commission's broader authority under 47 U.S.C. 309(j), indicating congressional urgency in moving forward with Auction 113.

60. Within this context, the Commission sought comment on whether a Tribal licensing window for any relevant portions of the limited number of AWS–3 licenses available for auction would be permissible according to the language of the statute. Additionally, the Commission sought comment on the appropriate eligibility requirements to adopt should it offer a Tribal licensing window. The Commission sought comment on the putative benefits of a Tribal licensing window given the bandwidth available for auction and the presence of Federal operations in the band. Finally, the Commission sought general comment on the potential impact of a Tribal licensing window on the process for auctioning these licenses.

61. Numerous Tribal entities and their representatives, including Tribal Governments, a Tribal regulatory entity, a Tribal wireless provider, and public interest groups, filed in support of including a Tribal licensing window in

Auction 113. They argued that adopting a Tribal licensing window would serve the public interest, promote Tribal spectrum access, and support access to communications services in rural, unserved, and underserved areas. In addition, a number of commenters address the eligibility criteria for a Tribal licensing window in Auction 113, referencing previous proceedings where the Commission prioritized Tribal licensing. By contrast, another commenter opposed including a Tribal licensing window in Auction 113, arguing that doing so would not be consistent with the goals of the Spectrum and Secure Technology and Innovation Act, which include auctioning the valuable AWS–3 spectrum, which has ''already been sitting in the Commission's inventory unused for far too long.''

62. The Commission finds that it would not be in the public interest to implement a Tribal licensing window in the context of Auction 113, given Congress's specific directives in the Spectrum and Secure Technology and Innovation Act regarding the inventory to be licensed and the timetable for doing so. Congress was clear in the Spectrum and Secure Technology and Innovation Act that the Commission is to auction all the unassigned AWS–3 spectrum in its inventory as of December 2024, and that the proceeds from the auction are ultimately to be used to reimburse the Treasury for funds deposited in the Spectrum Auction Trust Fund to fill the funding shortfall in the Supply Chain Reimbursement Program and support the removal of telecommunications equipment that poses a risk to national security. What is more, the text of the Spectrum and Secure Technology and Innovation Act reflects the urgent public interest in moving expeditiously to secure American networks from equipment that poses a risk to national security, and in using proceeds from the AWS–3 spectrum auction to achieve that goal. The Commission agrees with the one commenter that conducting a Tribal licensing window, which would remove spectrum prior to the auction from the congressionally specified inventory and could potentially reduce the auction proceeds available for the Supply Chain Reimbursement Program, would not further the public interest goals of the Spectrum and Secure Technology and Innovation Act. Additionally, one commenter argues that an auction of AWS–3 inventory licenses can still benefit Tribes. However, there is disagreement about whether this is true. Another commenter counters that it has seen too many cases where auction winners acquire licenses covering Navajo lands but do not build infrastructure because it is not economically lucrative to do so, or if they do, Navajo lands are the very last areas built out. Although the Commission does not adopt a Tribal priority window for Auction 113, it acknowledges its trust relationship with Tribal Nations, and remains committed to finding ways to address the connectivity challenges facing Tribal Nations.

63. Furthermore, as the commenter suggested, conducting a Tribal licensing window in connection with Auction 113 could further delay the AWS–3 spectrum from being used to provide service. This spectrum has been in inventory for a decade now amidst protracted litigation and the subsequent lapse of the Commission's auction authority. With the Spectrum and Secure Technology and Innovation Act, Congress provided the authority to auction these licenses and established a clear and swift timeline for moving forward. Consistent with the public benefits of this well-established service and as reflected by the legislative action, the public interest mandates prioritizing expeditious licensing. Several commenters claim that implementing a Tribal licensing window would not delay the auction and such a window could even be held simultaneously with traditional bidding to expedite the process. The Commission does not find these arguments compelling. In the Commission's experience with the Tribal priority window in the 2.5 GHz auction, considerable time and resources were required in order to establish and conduct a Tribal licensing window with adequate outreach and support for potential participants. Additionally, the Commission does not find it feasible to hold a Tribal licensing window and bidding simultaneously as it would not allow bidders sufficient time to develop business plans or assess market conditions as required by the Communications Act. Finally, because the Commission declines to adopt a Tribal licensing window, it finds it unnecessary at this time to evaluate the various proposals in the record regarding eligibility criteria for participation in a Tribal licensing window for Auction 113.

VI. Procedural Matters

64. *Paperwork Reduction Act Analysis.* The Office of Management and Budget (OMB) has approved the collection of information in the Application to Participate in an FCC Auction, FCC Form 175, including collecting five years of annual revenue information from applicants for a small business bidding credit and information from applicants for a rural service provider bidding credit. The *AWS–3 Report and Order* does not contain new or substantively modified information collection requirements subject to the Paperwork Reduction Act of 1995 (PRA), Public Law 104–13. Therefore, it does not contain any new or modified information collection burden for small business concerns with fewer than 25 employees pursuant to the Small Business Paperwork Relief Act of 2002, Public Law 107–198.

65. *Congressional Review Act.* The Commission has determined, and the Administrator of the Office of Information and Regulatory Affairs, Office of Management and Budget, concurs that this rule is ''non-major'' under the Congressional Review Act, 5 U.S.C. 804(2). The Commission will send a copy of the *AWS–3 Report and Order* to Congress and the Government Accountability Office pursuant to 5 U.S.C. 801(a)(1)(A).

66. *Regulatory Flexibility Act.* The Regulatory Flexibility Act of 1980, as amended (RFA), requires that an agency prepare a regulatory flexibility analysis for notice-and-comment rulemakings, unless the agency certifies that ''the rule will not, if promulgated, have a significant economic impact on a substantial number of small entities.'' Accordingly, the Commission has prepared a Final Regulatory Flexibility Analysis (FRFA) concerning the possible impact of the rule and policy changes contained in this Order on small entities.

67. As required by the Regulatory Flexibility Act of 1980, as amended (RFA), the Commission incorporated an Initial Regulatory Flexibility Analysis (IRFA) in the *NPRM.* The Commission sought written public comment on the proposals and issues raised in the *NPRM,* including comment on the IRFA. No comments were filed addressing the IRFA.

A. Need for, and Objectives of, the Rules

68. In the *AWS–3 Report and Order,* the Commission updates the DE rules for AWS–3 spectrum bands to enable the Commission to offer licenses for spectrum within those bands that is currently in the Commission's inventory through competitive bidding in the near future. In addition, the *AWS–3 Report and Order* resolves all remaining open issues and also addresses comments from small and other entities that were filed in response to the *NPRM.* Together, the rules that the Commission adopts will further its goal of facilitating the

use of presently fallow spectrum and further advancing the deployment of fifth generation wireless (5G) services by efficiently bringing to auction licenses covering spectrum that is likely to be used to provide 5G services. In addition, these rules will also foster competition in wireless services by facilitating participation in an auction of licenses for AWS–3 spectrum by entities designated by in 47 U.S.C. 309(j)(3) and (4) (the Act) to be given opportunities to participate in spectrum-based services (designated entities or DEs).

69. Specifically, the *AWS–3 Report and Order* adopts rules that provide small businesses and rural service providers with greater opportunities to participate in the provisioning of 5G services by aligning the Commission's outdated, service-specific eligibility requirements for AWS–3 with its current practice. Additionally the *AWS–3 Report and Order* modifies the part 1 size definitions for small business bidding credits so that the length of time over which revenues are averaged for determining bidding credit eligibility is five years, in conformance with the Small Business Act, as amended.

70. Lastly, the proceeds generated from the auctions will bolster another of the Commission's long-standing objectives: protecting U.S. national security by supporting the Commission's Supply Chain Reimbursement Program, which implements the Secure and Trusted Communications Networks Act of 2019 through its reimbursement of eligible advanced communications service providers, some of which are small entities, for their costs incurred through the removal, replacement, and disposal of equipment and services provided by untrustworthy entities such as Huawei Technologies Company or ZTE Corporation.

B. Summary of Significant Issues Raised by Public Comments in Response to the IRFA

71. There were no comments filed that specifically addressed the information presented in the IRFA.

C. Response to Comments by the Chief Counsel for Advocacy of the Small Business Administration

72. Pursuant to the Small Business Jobs Act of 2010, which amended the RFA, the Commission is required to respond to any comments filed by the Chief Counsel for Advocacy of the Small Business Administration (SBA), and provide a detailed statement of any change made to the proposed rules as a result of those comments. The Chief Counsel did not file any comments in response to the *NPRM.*

D. Description and Estimate of the Number of Small Entities to Which the Rules Will Apply

73. The RFA directs agencies to provide a description of, and where feasible, an estimate of the number of small entities that may be affected by the rules adopted herein. The RFA generally defines the term ''small entity'' as having the same meaning under the Small Business Act. In addition, the term ''small business'' has the same meaning as the term ''small-business concern'' under the Small Business Act. A ''small-business concern'' is one which: (1) is independently owned and operated; (2) is not dominant in its field of operation; and (3) satisfies any additional criteria established by the SBA.

74. *Small Businesses, Small Organizations, Small Governmental Jurisdictions.* The Commission actions, over time, may affect small entities that are not easily categorized at present. The Commission therefore describes three broad groups of small entities that could be directly affected by our actions. First, while there are industry specific size standards for small businesses that are used in the regulatory flexibility analysis, in general, a small business is an independent business having fewer than 500 employees. These types of small businesses represent 99.9% of all businesses in the United States, which translates to 34.75 million businesses. Next, ''small organizations'' are not-for-profit enterprises that are independently owned and operated and not dominant their field. While the Commission does not have data regarding the number of non-profits that meet that criteria, over 99 percent of nonprofits have fewer than 500 employees. Finally, ''small governmental jurisdictions'' are defined as cities, counties, towns, townships, villages, school districts, or special districts with populations of less than fifty thousand. Based on the 2022 U.S. Census of Governments data, the Commission estimate that at least 48,724 out of 90,835 local government jurisdictions have a population of less than 50,000.

75. *Licenses Assigned by Auctions.* The Commission's small business size standards with respect to licenses assigned by auction involve eligibility for bidding credits in the auction of licenses for various wireless frequencies. In the auction of these licenses, the Commission may define and adopt criteria for different classes of small businesses. The criteria for these small business classes may be defined in the Commission's rules or may require consultation with the U.S. Small Business Administration, Office of Size Standards. For licenses subject to auction, the number of winning bidders that qualify as small businesses at the close of an auction does not necessarily represent the number of small businesses currently in service. In addition, the Commission does not generally track subsequent business size unless, in the context of assignments or transfers, unjust enrichment issues are implicated.

76. *Wireless Telecommunications Carriers (except Satellite).* This industry comprises establishments engaged in operating and maintaining switching and transmission facilities to provide communications via the airwaves. Establishments in this industry have spectrum licenses and provide services using that spectrum, such as cellular services, paging services, wireless internet access, and wireless video services. The SBA size standard for this industry classifies a business as small if it has 1,500 or fewer employees. U.S. Census Bureau data for 2017 show that there were 2,893 firms in this industry that operated for the entire year. Of that number, 2,837 firms employed fewer than 250 employees. Additionally, based on Commission data in the 2022 Universal Service Monitoring Report, as of December 31, 2021, there were 594 providers that reported they were engaged in the provision of wireless services. Of these providers, the Commission estimates that 511 providers have 1,500 or fewer employees. Consequently, using the SBA's small business size standard, most of these providers can be considered small entities.

77. *Advanced Wireless Services (AWS)—(1710–1755 MHz and 2110–2155 MHz bands (AWS–1); 1915–1920 MHz, 1995–2000 MHz, 2020–2025 MHz and 2175–2180 MHz bands (AWS–2); 2155–2175 MHz band (AWS–3); 2000–2020 MHz and 2180–2200 MHz (AWS–4)).* Spectrum is made available and licensed in these bands for the provision of various wireless communications services. Wireless Telecommunications Carriers (except Satellite) is the closest industry with a SBA small business size standard applicable to these services. The SBA small business size standard for this industry classifies a business as small if it has 1,500 or fewer employees. U.S. Census Bureau data for 2017 show that there were 2,893 firms that operated in this industry for the entire year. Of this number, 2,837 firms employed fewer than 250 employees. Thus, under the SBA size standard, the Commission

estimates that a majority of licensees in this industry can be considered small.

78. According to Commission data as of December 2021, there were approximately 4,472 active AWS licenses. The Commission's small business size standards with respect to AWS involve eligibility for bidding credits in the auction of licenses for these services. For the first auction of AWS licenses, the Commission defined a ''small business'' as an entity with average annual gross revenues for the preceding three years not exceeding $40 million, and a ''very small business'' as an entity with average annual gross revenues for the preceding three years not exceeding $15 million. Pursuant to these definitions, 57 winning bidders claiming status as small or very small businesses won 215 of 1,087 licenses. In the most recent auction of AWS licenses, 15 of 37 bidders qualifying for status as small or very small businesses won licenses.

79. In frequency bands where licenses were subject to auction, the Commission notes that as a general matter, the number of winning bidders that qualify as small businesses at the close of an auction does not necessarily represent the number of small businesses currently in service. Further, the Commission does not generally track subsequent business size unless, in the context of assignments or transfers, unjust enrichment issues are implicated. Additionally, since the Commission does not collect data on the number of employees for licensees providing these services, at this time the Commission is not able to estimate the number of licensees with active licenses that would qualify as small under the SBA's small business size standard.

80. *Satellite Telecommunications.* This industry comprises firms ''primarily engaged in providing telecommunications services to other establishments in the telecommunications and broadcasting industries by forwarding and receiving communications signals via a system of satellites or reselling satellite telecommunications.'' Satellite telecommunications service providers include satellite and earth station operators. The SBA small business size standard for this industry classifies a business with $44 million or less in annual receipts as small. U.S. Census Bureau data for 2017 show that 275 firms in this industry operated for the entire year. Of that number, 242 firms had revenue of less than $25 million. Consequently, using the SBA's small business size standard most satellite telecommunications service providers can be considered small entities. The Commission notes however, that the SBA's revenue small business size standard is applicable to a broad scope of satellite telecommunications providers included in the U.S. Census Bureau's Satellite Telecommunications industry definition. Additionally, the Commission neither requests nor collects annual revenue information from satellite telecommunications providers, and is therefore unable to more accurately estimate the number of satellite telecommunications providers that would be classified as a small business under the SBA size standard.

E. Description of Economic Impact and Projected Reporting, Recordkeeping, and Other Compliance Requirements for Small Entities

81. The RFA directs agencies to describe the economic impact of proposed rules on small entities, as well as projected reporting, recordkeeping and other compliance requirements, including an estimate of the classes of small entities which will be subject to the requirement and the type of professional skills necessary for preparation of the report or record.

82. The Commission expects that the rules adopted in the *AWS–3 Report and Order* will impose new and/or additional reporting or recordkeeping and/or other compliance obligations on small entities as well as other applicants and licensees. These obligations are discussed in greater detail in the *AWS–3 Report and Order.* The Commission believes that these rules assist the Commission in meeting its statutory goals by facilitating the auction, and subsequent use, of unassigned spectrum. Further, the Commission does not believe that the costs and/or administrative burdens associated with the adopted rules will unduly burden small entities. The Commission notes that the rules adopted in the *AWS–3 Report and Order* modify requirements that were in place prior to the last major update to the Commission's competitive bidding rules in 2015 in order to bring them in line with the policies and procedures that have been used in auctions of 5G-ready services since 2015. Therefore, small entities that have participated in Commission auctions since 2015 may already be familiar with such policies and requirements and may have the necessary processes and procedures in place to facilitate compliance, thereby resulting in minimal incremental costs to comply with the modifications adopted in the *AWS–3 Report and Order.*

83. Typically, the auction procedures inform prospective applicants that they should familiarize themselves with the Commission's general competitive bidding rules, Commission decisions regarding competitive bidding procedures, application requirements, obligations of Commission licensees, construction permit holders, and support recipients, and the Commission's service rules for the frequency band available in the auction or for construction permits or universal service support, and that they must be thoroughly familiar with the procedures, terms, and conditions contained in the public notice adopting procedures for the auction. The Commission therefore do not expect that the amended definitions adopted in the *AWS–3 Report and Order* will increase the need for small entities to hire attorneys, engineers, consultants, or other professionals because it does not increase the level of education or due diligence beyond what was required of applicants under the previous competitive bidding rules for the AWS–3 spectrum bands.

84. As mentioned, the *AWS–3 Report and Order* adopts rule changes that will affect reporting, recordkeeping, and/or other compliance requirements for small and other entities. The *AWS–3 Report and Order* amends the Commission's rules related to designated entities eligible for bidding credits for licenses subject to auction in the AWS–3 bands. It adopts the same revenue thresholds that the Commission has used in recent years to determine eligibility for small and very small business bidding credits, which are provided for in the Commission's part 1 standardized schedule of bidding credits. It also amends the AWS–3 bidding credit eligibility criteria to align with the amended Small Business Act's requirement that federal agencies that categorize business concerns that provide services as a ''small business concern'' based on annual average gross receipts only do so if the agency considers such receipts ''over a period of not less than five years.'' Specifically, the Commission adopts a requirement for an entity to have average gross revenues for the preceding five years not exceeding $55 million to be a small business, and such an entity would be eligible for a bidding credit of 15%. To be classified as a very small business an entity would be required to have average gross revenues for the preceding five years not exceeding $20 million and would be eligible for a bidding credit of 25%. The Commission also adopts a rural service provider bidding credit for auctions of licenses for AWS–3 spectrum that has been offered. Lastly, the *AWS–3 Report and Order* modifies

the Commission's general part 1 competitive bidding rules to incorporate the five-year average gross receipts benchmark for the purpose of determining which entities qualify for small business bidding credits for consistency with the Small Business Act.

F. Discussion of Steps Taken To Minimize the Significant Economic Impact on Small Entities and Significant Alternatives Considered

85. The RFA requires an agency to provide, ''a description of the steps the agency has taken to minimize the significant economic impact on small entities including a statement of the factual, policy, and legal reasons for selecting the alternative adopted in the final rule and why each one of the other significant alternatives to the rule considered by the agency which affect the impact on small entities was rejected.''

86. The rules adopted by the Commission in the *AWS–3 Report and Order* reflect its efforts to minimize significant economic impact to small entities where practicable and its consideration of various alternatives in reaching its conclusions. For example, the adopted rules update the competitive bidding rules for the AWS–3 spectrum bands to align with current practices. The Commission considered alternatives that would apply rules that deviated from our prevailing practices. However, by adopting rules similar to the DE rules that have been used in recent auctions of wireless, 5G-ready spectrum, compliance burdens on small businesses will be minimized, as many small businesses will already be familiar with these requirements. As a result, the adopted approach could lessen the compliance costs for small entities who have participated in any wireless spectrum auction since 2015.

87. *Competitive Bidding and Bidding Credits for Small Entities.* The Commission administers bidding credit programs to promote small business service provider participation in auctions and in the provision of spectrum-based services. Based on the Commission's analysis of past auction data, the relative costs of participation are lowered for small businesses that take full advantage of the bidding credit programs. The current DE rules for auctions of licenses in AWS–3 spectrum bands were adopted prior to the last major update to the part 1 competitive bidding rules in 2015. Thus, as mentioned in the prior section, the Commission has modified these DE rules so that they conform with the DE rules set forth in part 1, subpart Q, of the Commission's rules and are consistent with recent auctions. Specifically, the Commission modifies the DE rules for AWS–3 to apply the current part 1 definition of a qualifying ''small business'' and a ''very small business'' and apply the bidding credits for these two categories, and for rural service providers. The Commission also modifies the part 1 size definitions for small business bidding credits so that the amount of time over which revenues are averaged for determining bidding credit eligibility is five years, in conformance with the Small Business Act. The Commission considered comments suggesting it implement larger bidding credits for small businesses. The Commission concludes, however, that the bidding credit percentages adopted in the *AWS–3 Report and Order* will sufficiently enable small businesses seeking to participate in auctions to gain access to capital, thereby fostering their increased participating and competitive in auctions, without incentivizing gamesmanship.

88. In addition, to reduce costs to small and other entities, the Commission provides resources and educational materials to assist all auction participants, including small entities, with understanding the requirements of auction participation, including applying for bidding credits. Small entities and other auction participants may seek clarification of, or guidance regarding, auction procedures, the competitive bidding rules, and any requirements related to the authorizations or support to be made available through the auction from Commission staff prior to each auction's application window. Further, an FCC Auctions Hotline provides small entities one-on-one access to Commission staff for information about the auction process and procedures. Lastly, through the FCC Auctions Technical Support Hotline, the Commission provides a technical assistance resource to small entities and other applicants, on issues such as access to or navigation within the electronic short-form application (FCC Form 175) and use of the bidding system.

G. Report to Congress

89. The Commission will send a copy of the *AWS–3 Report and Order,* including the FRFA, in a report to Congress pursuant to the Congressional Review Act. In addition, the Commission will send a copy of the *AWS–3 Report and Order,* including the Final Regulatory Flexibility Analysis, to the Chief Counsel for Advocacy of the SBA.

VII. Ordering Clauses

90. *It is ordered*, pursuant to the authority found in sections 1, 2, 4(i), 303, and 309(j) of the Communications Act of 1934, as amended, 47 U.S.C. 151, 152, 154(i), 303, and 309(j); the Servicemember Quality of Life Improvement and National Defense Authorization Act for Fiscal Year 2025, H.R. 5009, 118th Cong. Div. D, Title LIV, section 5403, that the Report and Order and Second Report and Order is adopted.

91. *It is further ordered* that the rules and requirements as adopted in the Report and Order and Second Report and Order will become effective thirty (30) days after publication in the **Federal Register**.

92. *It is further ordered* that the Office of the Managing Director, Performance Program Management, shall send a copy of the Report and Order and Second Report and Order in a report to be sent to Congress and the Government Accountability Office pursuant to the Congressional Review Act, 5 U.S.C. 801(a)(1)(A).

93. *It is further ordered* that the Commission's Office of the Secretary, shall send a copy of the Report and Order and Second Report and Order, including the Final Regulatory Flexibility Analysis, to the Chief Counsel for Advocacy of the Small Business Administration.

List of Subjects

Final Rules

For the reasons discussed in the preamble, the Federal Communications Commission amends 47 CFR parts 1 and 27 to read as follows:

PART 1—PRACTICE AND PROCEDURE

■ 1. The authority citation for part 1 continues to read as follows:

Authority: 47 U.S.C. chs. 2, 5, 9, 13; 28 U.S.C. 2461 note; 47 U.S.C. 1754, unless otherwise noted.

■ 2. Amend § 1.2110 by revising paragraphs (b)(1)(i) and (f)(2)(i) to read as follows:

§ 1.2110 Designated entities.

* * * * *

(b) * * *

(1) * * *

(i) The gross revenues of the applicant (or licensee), its affiliates, its controlling interests, and the affiliates of its controlling interests shall be attributed to the applicant (or licensee) and considered on a cumulative basis and aggregated for purposes of determining whether the applicant (or licensee) is eligible for status as a small business, very small business, or entrepreneur, as those terms are defined in the service-specific rules. An applicant seeking status as a small business, very small business, or entrepreneur, as those terms are defined in the service-specific rules, must disclose on its short- and long-form applications, separately and in the aggregate, the gross revenues for each of the previous five years of the applicant (or licensee), its affiliates, its controlling interests, and the affiliates of its controlling interests.

* * * * *

(f) * * *

(2) * * *

(i) *Size of bidding credits.* A winning bidder that qualifies as a small business, and has not claimed a rural service provider bidding credit pursuant to paragraph (f)(4) of this section, may use the following bidding credits corresponding to its respective average gross revenues for the preceding 5 years:

(A) Businesses with average gross revenues for the preceding 5 years not exceeding $4 million are eligible for bidding credits of 35 percent;

(B) Businesses with average gross revenues for the preceding 5 years not exceeding $20 million are eligible for bidding credits of 25 percent; and

(C) Businesses with average gross revenues for the preceding 5 years not exceeding $55 million are eligible for bidding credits of 15 percent.

* * * * *

PART 27—Miscellaneous Wireless Communications Services

■ 3. The authority citation for part 27 continues to read as follows:

Authority: 47 U.S.C. 154, 301, 302a, 303, 307, 309, 332, 336, 337, 1403, 1404, 1451, and 1452, unless otherwise noted.

■ 4. Revise § 27.1106 to read as follows:

§ 27.1106 Designated Entities in the 1695–1710 MHz, 1755–1780 MHz, and 2155–2180 MHz bands.

(a) *Small business.* (1) A small business is an entity that, together with its affiliates, its controlling interests, and the affiliates of its controlling interests, has average gross revenues not exceeding $55 million for the preceding five (5) years.

(2) A very small business is an entity that, together with its affiliates, its controlling interests, and the affiliates of its controlling interests, has average gross revenues not exceeding $20 million for the preceding five (5) years.

(b) *Bidding credits.* A winning bidder that qualifies as a small business as defined in this section or a consortium of small businesses may use the bidding credit specified in § 1.2110(f)(2)(i)(C) of this chapter, subject to the cap specified in § 1.2110(f)(2)(ii) of this chapter. A winning bidder that qualifies as a very small business as defined in this section or a consortium of very small businesses may use the bidding credit specified in § 1.2110(f)(2)(i)(B), subject to the cap specified in § 1.2110(f)(2)(ii) of this chapter.

(c) *Rural service provider bidding credit.* A rural service provider, as defined in § 1.2110(f)(4) of this chapter, which has not claimed a small business bidding credit may use a bidding credit of 15 percent as specified in § 1.2110(f)(4)(i), subject to the cap specified in § 1.2110(f)(4)(ii) of this chapter.

BILLING CODE 6712–01–P

FEDERAL COMMUNICATIONS COMMISSION

47 CFR Parts 1, 24, 63, and 79

[GN Docket No. 25–133; FCC 25–40; FR ID 306663]

Delete, Delete, Delete; Removal of Obsolete Regulations

AGENCY: Federal Communications Commission.

ACTION: Direct final rule.

SUMMARY: In this document, the Federal Communications Commission acts to eliminate certain outdated, obsolete, and unnecessary rules.

DATES: This rule is effective October 3, 2025 without further action, unless significant adverse comment is received August 14, 2025. In the event the Commission receives significant adverse comments, the Commission will publish a timely withdrawal in the **Federal Register** informing the public the provisions of the rule(s) for which adverse comment were received and will not take effect.

ADDRESSES: You may submit comments, identified by GN Docket No. 25–133, electronically or on paper. See **SUPPLEMENTARY INFORMATION** for specific information and addresses for electronic or paper filings.

FOR FURTHER INFORMATION CONTACT: Marcus Maher, Federal Communications Commission, Office of General Counsel. Email: *Marcus.Maher@fcc.gov;* telephone: (202) 418–2339.

SUPPLEMENTARY INFORMATION: This is a summary of the direct final rule portion of the Commission's *Direct Final Rule,* GN Docket No. 25–133; FCC 25–40, adopted on July 24, 2025, and released on July 28, 2025. The full text of this document is available for public inspection and can be downloaded at *https://www.fcc.gov/document/fcc-deletes-obsolete-telegraph-rabbit-ear-receiver-phone-booth-rules-0.* Alternative formats are available for people with disabilities (Braille, large print, electronic files, audio format) by sending an email to *fcc504@fcc.gov* or calling the Commission's Consumer and Governmental Affairs Bureau at (202) 418–0530 (voice), (202) 418–0432 (TTY).

Comment Period and Filing Procedures. Interested parties may file comments on or before the dates provided in the **DATES** section of this document. Comments must be filed in GN Docket No. 25–133. Comments may be filed using the Commission's Electronic Comment Filing System (ECFS). *See Electronic Filing of Documents in Rulemaking Proceedings,* 63 FR 24121 (1998).

- All filings must be addressed to the Commission's Secretary, Office of the Secretary, Federal Communications Commission.
- *Electronic Filers:* Comments may be filed electronically using the internet by accessing the ECFS: *https://www.fcc.gov/ecfs/.*

Paper Filers: Parties who choose to file by paper must file an original and one copy of each filing. If more than one docket or rulemaking number appears in the caption of this proceeding, filers must submit two additional copies for each additional docket or rulemaking number.

- Commercial overnight mail (other than U.S. Postal Service Express Mail and Priority Mail) must be sent to 9050 Junction Drive, Annapolis Junction, MD 20701.
- U.S. Postal Service first-class, Express, and Priority mail must be addressed to 45 L Street NE, Washington, DC 20554.

Procedural Matters

Paperwork Reduction Act. This document does not contain new or

modified information collections subject to the Paperwork Reduction Act of 1995 (PRA), 44 U.S.C. 3501–3521. In addition, therefore, it does not contain any new or modified information collection burden for small business concerns with fewer than 25 employees, pursuant to the Small Business Paperwork Relief Act of 2002, 44 U.S.C. 3506(c)(4).

Congressional Review Act. The Commission has determined, and the Administrator of the Office of Information and Regulatory Affairs, Office of Management and Budget concurs, that this rule is ''non-major'' under the Congressional Review Act, 5 U.S.C. 804(2). The Commission will send a copy of this Direct Final Rule to Congress and the Government Accountability Office pursuant to 5 U.S.C. 801(a)(1)(A).

Synopsis

I. Introduction

Today marks the next step in a bold initiative to modernize the Commission's regulatory framework and pave the way for the next generation of innovation. In this proceeding, we have launched a sweeping review eventually aimed at eliminating outdated rules, reducing unnecessary regulatory burdens, accelerating infrastructure deployment, promoting network modernization, and spurring innovation. Our goal is clear: streamline, simplify, and smartly deregulate across multiple fronts simultaneously to better serve the public and support technological progress.

In initiating this proceeding, we generally sought to identify rules that are outdated, obsolete, unlawful, anticompetitive, or otherwise no longer in the public interest. In today's item, we specifically focus on the repeal of certain rules for which prior notice and comment are unnecessary, but for which we elect to provide an opportunity for input on that assessment. Absent any significant adverse comments in response to this *Direct Final Rule,* these rules will be repealed. Pursuant to the framework established here, direct final rule procedures also can be employed in the future in other scenarios where prior notice and comment is unnecessary under the Administrative Procedure Act (APA). We thus reject commenters' unwarranted concerns that direct final rule procedures will be employed by the Commission outside scenarios where prior notice and comment is unnecessary under the APA. Where deregulation triggers the notice-and-comment rulemaking process required by the APA, the Commission will proceed in that manner, just as it is doing with respect to other deregulatory items this month on which the full Commission will vote.

II. Discussion

Good Cause to Forgo Notice and Comment. Under the APA, when an agency for ''good cause'' finds that notice and public comment ''are impracticable, unnecessary, or contrary to the public interest,'' it need not follow notice and comment procedures before modifying or repealing rules. Prior notice and comment are ''unnecessary'' when '''the administrative rule is a routine determination, insignificant in nature and impact, and inconsequential to the industry and to the public.'''

We have identified 11 rule provisions—covering 39 regulatory burdens, 7,194 words, and 16 pages—that plainly do not serve the public interest any longer because they govern obsolete technology, outdated marketplace conditions, expired deadlines, or repealed legal obligations. Applying the ''good cause'' standard discussed above, we conclude that prior notice and comment are unnecessary before repealing the rules identified in this document.

Direct Final Rule Process. At times when the Commission has found prior notice and comment unnecessary before modifying or repealing rules, it simply adopted the relevant rule change without any additional process. Although we reserve the right to proceed in that manner, we elect in this decision to proceed using what commonly is known as a ''direct final rule'' process. Although the FCC is not bound by the Administrative Conference of the United States' (ACUS's) direct final rule recommendations or the practices employed by other agencies, we have considered them to the extent that they provided a useful point of reference subject to tailoring appropriate to our specific circumstances.

By proceeding through a direct final rule, the Commission chooses to provide *expanded* opportunities for public comment when it is not legally required to do so under the ''good cause'' standard. We thus reject claims that our actions somehow seek to evade the APA or neglect the proper importance of notice and comment. Further, although the Commission has adopted specific rules codified in the Code of Federal Regulations related to notice-and-comment rulemaking procedures, there is no legal requirement that we adopt rules before employing processes permitted by the APA and the Communications Act.

Under a direct final rule process, rule changes are adopted without prior notice and comment, but accompanied by an opportunity for the public to file comments—and if we conclude that significant adverse comments have been filed, the relevant rule changes would not take effect until after a full notice and comment process.

In particular, we will publish this item adopting direct final rules in the **Federal Register**, and allow for comment from interested parties within 10 days of **Federal Register** publication. Although some commenters advocate for a longer comment period such as the 30 day period reflected in ACUS's recommendations, we are not persuaded to adopt such timeframes for this particular direct final rule. Under the APA's good cause exception, we would have been justified proceeding immediately to rule as we have in the past without providing an opportunity for comment, but have elected to employ direct final rule procedures to guide future action. An unnecessarily long comment period would simply represent an unwarranted penalty on the Commission for electing to pursue this approach. And given the discrete number of rules and rationales for repeal implicated in this order, we are not persuaded that a longer comment cycle is needed. That is particularly true where, as here, advocates for groups that might be interested in the rules at issue have shown themselves to already be well aware of the contemplated changes even before adoption of the direct final rule, let alone **Federal Register** publication. In different circumstances in the future, such as where there is a significantly larger number of rules at issue (many or all of which require more involved analyses in support of repeal under the good cause exception), we remain able to adopt longer comment periods if warranted.

Until 10 days after **Federal Register** publication, this shall be a ''permit-but-disclose'' proceeding for purposes of our *ex parte* rules. Because this comment process is directed toward the discrete objective of the direct final rule process, and to avoid unwarranted delay in that process, we prohibit filings addressing the rule changes contemplated in this *Direct Final Rule* more than 10 days after **Federal Register** publication, absent further direction from the Commission published in the **Federal Register**. Up until that date, we find it in the public interest to continue to operate under permit-but-disclosure procedures in this regard, consistent with the status of the *In Re: Delete,*

Delete, Delete proceeding more generally. This both accords with the purpose of the comment process for direct final rules, and is similar (though not identical) to actions the Commission has taken in other contexts to provide a defined end-point for public filings to enable the Commission to focus its attention on the submissions already before it. Although in this instance no filings will be permitted after 10 days from **Federal Register** publication, we create a limited carve-out that allows a petition for reconsideration of this action to be filed 30 days after **Federal Register** publication, consistent with the requirements of section 405(a) of the Communications Act. In the event that a petition for reconsideration is filed, we will subsequently specifically address any comment process associated with such a petition.

The direct final rules will be effective 60 days after **Federal Register** publication. To the extent that the Commission receives comments on these direct final rules, we will evaluate whether they are significant adverse comments that warrant further procedures before changing the rules. In our assessment, we plan to be guided by ACUS's recommendation that ''[a]n agency should consider any comment received during direct final rulemaking to be a significant adverse comment if the comment explains why: a. The [direct final] rule would be inappropriate, including challenges to the rule's underlying premise or approach; or b. The [direct final] rule would be ineffective or unacceptable without a change.'' The touchstone for analysis is whether a comment materially calls into question the conclusion that prior notice and comment is unnecessary under the APA, which is the predicate for use of direct final rule procedures. While we expect the formulation provided by ACUS to be a useful guide for conducting that analysis, our statutory determination of ''good cause'' to forgo notice and comment ultimately represents the critical issue, rather than the particular language used by ACUS.

In the event that we conclude that significant adverse comments have been filed, the Bureaus and Offices responsible for the rules subject to this *Direct Final Rule* will publish a timely withdrawal in the **Federal Register** so that this *Direct Final Rule* does not become effective until any appropriate additional procedures have been followed. If significant adverse comments are filed only with respect to a subset of the rule revision(s) addressed by this *Direct Final Rule,* the pertinent Bureaus and Offices will withdraw the portions of the *Direct Final Rule* that were subject to significant adverse comments. For example, if a significant adverse comment is filed regarding a single rule within a direct final rule addressing multiple rules, we will publish a withdrawal addressing only that rule. We disagree with any suggestion that the Commission may not evaluate what procedural path to take after a particular rule change has been withdrawn. It would be an unwarranted deterrent to the use of direct final rule procedures if, after withdrawing a rule change that was subject to a significant adverse comment, the agency was precluded from relying on procedures that otherwise would have been available but for its initial direct final rule—including not only notice and comment rulemaking, but potentially other procedures such as a new direct final rule, an interim final rule, or some other approach.

In the event that no comments are filed in response to this *Direct Final Rule,* we do not anticipate publishing a confirmation of the effective date in the **Federal Register**, but simply will allow the rule changes to take effect as originally specified. We reject calls to delay the effective date of the rule changes here simply because the Commission does not plan to publish a confirmation notice that rule changes will take effect as contemplated by the *Direct Final Rule.* ACUS recommends merely that agencies ''consider'' a longer effective date where no confirmation notice is published if the *agency* needs to ensure it has adequate time to withdraw the rule in the event it receives significant adverse comments. Thus, the additional time is for the benefit of the agency, not the public. Particularly where we are repealing rules—and thus no regulated entities will be required to come into compliance with new duties—on grounds like those relied upon here, we are not persuaded by generic requests for additional time that a lengthier effective date actually is needed.

Where comments are filed, but none of the comments are significant adverse comments, where warranted by the record the pertinent Bureaus and Offices will issue a Public Notice that will briefly explain why any comments filed were not determined to be significant adverse comments. Although the PN is a document in a non-notice and comment rulemaking proceeding, nothing in that document is required to be published in the **Federal Register** by the Administrative Procedure Act given that the PN is not itself adopting new or modified rules. As a result, the Commission also need not publish the PN in the **Federal Register** to establish the date of ''public notice'' for the PN under § 1.4(b)(1) of the rules—which is limited to documents in rulemaking proceedings ''required by the Administrative Procedure Act, 5 U.S.C. 552, 553, to be published in the **Federal Register**''—and instead the date of public notice of these PNs will be the release date. Although some commenters suggest that the failure to publish this Public Notice in the **Federal Register** stands in contrast to what ACUS recommends, the ACUS recommendation does not contemplate such an explanation being issued at all—let alone one published in the **Federal Register**. Indeed, the ACUS recommendation recognizes even publication of a confirmation notice in the **Federal Register**—let alone an associated explanation—as optional. We thus are not persuaded that it would serve the public interest—including the efficiency goals of this proceeding—to voluntarily elect to publish such Public Notices in the **Federal Register**.

Although the Commission has a history of seeking to eliminate outdated, inappropriate, or otherwise unwarranted regulations, including by actions on delegated authority, we elect to take this step at the full Commission level.

Finally, in specifying the mechanics of the direct final rule process as it will be used by the full Commission, we again rely on the notice and comment exception for rules of ''agency organization, procedure, or practice.'' The procedures to be followed in direct final rulemaking bear simply on how parties will interact with the agency, and not on any substantive duties or obligations. This fits comfortably within the APA's notice and comment exception for rules of ''agency organization, procedure, or practice.''

Although we do not foreclose the possibility of adopting codified rules governing direct final rule procedures in the future, we believe that whether any new procedures are needed to ''best conduce to the proper dispatch of business and to the ends of justice'' most effectively can be discerned based on practical Commission experience, rather than speculation. In the meantime, the use of direct final rule procedures as established by this *Direct Final Rule* will provide a useful tool to proceed with repealing outdated or unwarranted rules where prior notice and comment is unnecessary under the APA.

III. Ordering Clauses

Accordingly, *it is ordered* that, pursuant to sections 4(i), 4(j), 201(b),

and 303(r) of the Communications Act, 47 U.S.C. 154(i), (j), 201(b), 303(r), this *Direct Final Rule is adopted*. Except as specified below, this *Direct Final Rule* shall be effective upon **Federal Register** publication of the rule changes set forth in this document, which also shall serve as the date of public notice of that action.

It is further ordered that the amendments of the Commission's rules as set forth in this document shall be effective 60 days after **Federal Register** publication. In the event that significant adverse comments are filed, we direct the Bureaus and Offices responsible for the rules subject to this *Direct Final Rule* to publish a timely document in the **Federal Register** withdrawing the rule so that the rule change does not become effective until any additional procedures have been followed. In the event that significant adverse comments are filed with respect to only a subset of the rule revisions, we direct the Bureau or Office responsible for such rule revision to publish a timely document in the **Federal Register** withdrawing only such rule so that the rule change does not become effective until any additional procedures have been followed.

It is further ordered that the Office of the Managing Director, Performance Program Management, *shall send* a copy of this *Direct Final Rule* in a report to be sent to Congress and the Government Accountability Office pursuant to the Congressional Review Act, 5 U.S.C. 801(a)(1)(A).

List of Subjects

Marlene Dortch,

Secretary.

Final Rules

For the reasons discussed in the preamble, the Federal Communications Commission amends parts 1, 24, 63 and 79 of Title 47 of the Code of Federal Regulations as follows:

PART 1—PRACTICE AND PROCEDURE

■ 1. The authority citation for part 1 continues to read as follows:

Authority: 47 U.S.C. chs. 2, 5, 9, 13; 28 U.S.C. 2461 note; 47 U.S.C. 1754, unless otherwise noted.

§ 1.789 [Removed and Reserved]

■ 2. Remove and reserve § 1.789.

PART 24—PERSONAL COMMUNICATIONS SERVICES

■ 3. The authority citation for part 24 is revised to read as follows:

Authority: 47 U.S.C. 154, 301, 302a, 303, 309 and 332.

§§ 24.239 through 24.253 [Removed and Reserved]

■ 4. Remove the undesignated center heading ''Policies Governing Microwave Relocation From the 1850–1990 MHz Band (§§ 24.239–24.253)'' before § 24.239 and remove and reserve §§ 24.239 through 24.253.

PART 63—EXTENSION OF LINES, NEW LINES, AND DISCONTINUANCE, REDUCTION, OUTAGE AND IMPAIRMENT OF SERVICE BY COMMON CARRIERS; AND GRANTS OF RECOGNIZED PRIVATE OPERATING AGENCY STATUS

■ 5. The authority citation for part 63 continues to read as follows:

Authority: 47 U.S.C. 151, 154(i), 154(j), 160, 201–205, 214, 218, 403, 571, unless otherwise noted.

§ 63.65 [Removed and Reserved]

■ 6. Remove and reserve § 63.65.

PART 79—ACCESSIBILITY OF VIDEO PROGRAMMING

■ 7. The authority citation for part 79 continues to read as follows:

Authority: 47 U.S.C. 151, 152(a), 154(i), 303, 307, 309, 310, 330, 544a, 613, 617.

§ 79.101 [Removed and Reserved]

■ 8. Remove and reserve § 79.101.

[FR Doc. 2025–14704 Filed 8–1–25; 8:45 am]

BILLING CODE 6712–01–P

Proposed Rules

Federal Register
Vol. 90, No. 147
Monday, August 4, 2025

This section of the FEDERAL REGISTER contains notices to the public of the proposed issuance of rules and regulations. The purpose of these notices is to give interested persons an opportunity to participate in the rule making prior to the adoption of the final rules.

DEPARTMENT OF TRANSPORTATION

Federal Aviation Administration

14 CFR Part 71

[Docket No. FAA–2025–1187; Airspace Docket No. 24–AWP–84]

RIN 2120–AA66

Modification and Revocation of Class E Airspace; Hawaiian Island, HI

AGENCY: Federal Aviation Administration (FAA), DOT.

ACTION: Notice of proposed rulemaking (NPRM).

SUMMARY: This action proposes to modify the Class E airspace area extending upward from 700 feet above the surface (Class E5 700-foot airspace area) at Lihue Airport (LIH), Lihue, HI; Daniel K. Inouye International Airport (HNL), Honolulu, HI; and Ellison Onizuka Kona International Airport, Keahole (KOA), Kailua-Kona, HI, by adding an additional layer of Class E5 airspace extending upward from 1,200 feet above the surface. This proposed addition of controlled airspace would comply with international airspace treaty provisions and satisfy the State of Hawaii's domestic airspace requirements. Additionally, this action proposes to remove the existing Class E5 airspace area that currently encompasses the Hawaiian Islands and extends beyond 12 miles from the shoreline into international airspace. This proposed action would further modify the Class E4 airspace area designated as an extension to a Class D or Class E surface area at KOA and remove the Class E4 airspace area at LIH. These actions support the safe and efficient management of instrument flight rules (IFR) operations at airports within the Hawaiian Islands.

DATES: Comments must be received on or before September 18, 2025.

ADDRESSES: Send comments identified by FAA Docket No. FAA–2025–1187 and Airspace Docket No. 24–AWP–84 using any of the following methods:

* *Federal eRulemaking Portal:* Go to *www.regulations.gov* and follow the online instructions for sending your comments electronically.

* *Mail:* Send comments to Docket Operations, M–30; U.S. Department of Transportation, 1200 New Jersey Avenue SE, Room W12–140, West Building Ground Floor, Washington, DC 20590–0001.

* *Hand Delivery or Courier:* Take comments to Docket Operations in Room W12–140 of the West Building Ground Floor at 1200 New Jersey Avenue SE, Washington, DC, between 9 a.m. and 5 p.m., Monday through Friday, except Federal holidays.

* *Fax:* Fax comments to Docket Operations at (202) 493–2251.

Docket: Background documents or comments received may be read at *www.regulations.gov* at any time. Follow the online instructions for accessing the docket or go to the Docket Operations in Room W12–140 of the West Building Ground Floor at 1200 New Jersey Avenue SE, Washington, DC, between 9 a.m. and 5 p.m., Monday through Friday, except Federal holidays.

FAA Order JO 7400.11J, Airspace Designations and Reporting Points, and subsequent amendments can be viewed online at *www.faa.gov/air_traffic/publications/*. You may also contact the Rules and Regulations Group, Office of Policy, Federal Aviation Administration, 600 Independence Avenue SW, Washington, DC 20591; telephone: (202) 267–8783.

FOR FURTHER INFORMATION CONTACT: Keith T. Adams, Federal Aviation Administration, Western Service Center, Operations Support Group, 2200 S 216th Street, Des Moines, WA 98198; telephone (206) 231–3460.

SUPPLEMENTARY INFORMATION:

Authority for This Rulemaking

The FAA's authority to issue rules regarding aviation safety is found in Title 49 of the United States Code. Subtitle I, Section 106 describes the authority of the FAA Administrator. Subtitle VII, Aviation Programs, describes in more detail the scope of the agency's authority. This rulemaking is promulgated under the authority described in Subtitle VII, Part A, Subpart I, Section 40103. Under that section, the FAA is charged with prescribing regulations to assign the use of the airspace necessary to ensure the safety of aircraft and the efficient use of airspace. This regulation is within the scope of that authority as it would modify Class E airspace to support IFR operations at airports within the Hawaiian Islands.

Comments Invited

The FAA invites interested persons to participate in this rulemaking by submitting written comments, data, or views. Comments are specifically invited on the overall regulatory, aeronautical, economic, environmental, and energy-related aspects of the proposal. The most helpful comments reference a specific portion of the proposal, explain the reason for any recommended change, and include supporting data. To ensure the docket does not contain duplicate comments, commenters should submit only one time if comments are filed electronically, or commenters should send only one copy of written comments if comments are filed in writing.

The FAA will file in the docket all comments it receives, as well as a report summarizing each substantive public contact with FAA personnel concerning this proposed rulemaking. Before acting on this proposal, the FAA will consider all comments it receives on or before the closing date for comments. The FAA will consider comments filed after the comment period has closed if it is possible to do so without incurring expense or delay. The FAA may change this proposal in light of the comments it receives.

Privacy: In accordance with 5 U.S.C. 553(c), DOT solicits comments from the public to better inform its rulemaking process. DOT posts these comments, without edit, including any personal information the commenter provides, to *www.regulations.gov,* as described in the system of records notice (DOT/ALL–14 FDMS), which can be reviewed at *www.dot.gov/privacy*.

Availability of Rulemaking Documents

An electronic copy of this document may be downloaded through the internet at *www.regulations.gov*. Recently published rulemaking documents can also be accessed through the FAA's web page at *www.faa.gov/air_traffic/publications/airspace_amendments/*.

You may review the public docket containing the proposal, any comments

received and any final disposition in person in the Dockets Operations office (see **ADDRESSES** section for address, phone number, and hours of operations). An informal docket may also be examined during normal business hours at the Northwest Mountain Regional Office of the Federal Aviation Administration, Air Traffic Organization, Western Service Center, Operations Support Group, 2200 S 216th Street, Des Moines, WA 98198.

Incorporation by Reference

Class E4 and Class E5 airspace designations are published in paragraphs 6004 and 6005, respectively, of FAA Order JO 7400.11, Airspace Designations and Reporting Points, which is incorporated by reference in 14 CFR 71.1 on an annual basis. This document proposes to amend the current version of that order, FAA Order JO 7400.11J, dated July 31, 2024 and effective September 15, 2024. These updates would be published in the next update to FAA Order JO 7400.11. FAA Order JO 7400.11J, which lists Class A, B, C, D, and E airspace areas, air traffic service routes, and reporting points, is publicly available as listed in the **ADDRESSES** section of this document.

Background

In 2018, the FAA identified that the Class E airspace designation over the Hawaiian Islands extended into international airspace beyond U.S. territorial waters. Although a 2019 amendment (84 FR 24364; May 28, 2019) attempted to address the issue, it was based on a misinterpretation of applicable law and did not fully resolve the error. As a result, the current Class E airspace configuration remains inconsistent with international law. Under the Chicago Convention and customary international law—reflected in the United Nations Convention on the Law of the Sea (UNCLOS) and Proclamation 5928, *Territorial Sea of the United States,* issued by President Reagan in 1988—U.S. territorial waters extend 12 nautical miles from the coastline. Airspace beyond that limit is international and not subject to U.S. domestic designation. Hawaii's eight major islands are separated by distances exceeding 24 nautical miles in some areas, creating gaps of international airspace. The FAA's 2019 rule incorrectly applied the concept of ''archipelagic states'' under UNCLOS to justify connecting the islands with contiguous Class E airspace. However, FAA has since determined that because Hawaii is a U.S. state, it is not an archipelagic state under international law, and therefore is not entitled to such treatment. As confirmed by historical precedent, aircraft transiting between these island groupings enter international airspace when more than 12 nautical miles from the coastline. *See, e.g., CAB* v. *Island Airlines,* 235 F. Supp. 990 (D. Haw. 1964). This notice proposes corrective action to realign the Hawaiian Class E airspace with U.S. jurisdiction and international legal standards, restricting it to airspace over U.S. land and territorial waters.

The Proposal

The FAA is proposing an amendment to 14 CFR part 71 that would modify the Class E airspace extending upward from 700 feet or more above the surface (Class E5 700-foot airspace area) at LIH, HNL, and KOA. Additionally, the FAA proposes to revoke the existing Class E airspace area over the Hawaiian Islands that extends upward from 1,200 feet above the surface (Class E5 1200-foot airspace area) and redefine it in accordance with U.S. territorial boundaries (*i.e.,* limiting the airspace to 12 miles from the state's coastline) to ensure compliance with international airspace sovereignty provisions. Each of the three airports' Class E5 (extending up from 700 feet above the surface) airspace areas would be modified to include an additional layer of Class E5 (extending upward from 1,200 feet above the surface) airspace area, designed to contain the respective island groups' territorial lands and coastal waters. The following discussion provides more detail regarding each of the specific modifications.

First, the LIH Class E5 (700 feet above the surface) airspace area would incorporate an additional Class E5 (1,200 feet above the surface) airspace area encompassing the islands of Kauai and Ni´ihau and the islet of Ka´ula limiting the airspace to 12 miles from the coastline. Additionally, the Class E5 (700 feet above the surface) airspace area should be modified to better contain the very high frequency omnidirectional range (VOR)/tactical air navigation (TACAN) Runway (RWY) 21 instrument approach procedures for LIH, extending upward from 700 feet above the surface within a 4.3-mile radius of the airport extending to the 7.3-mile radius between the airport's 354° bearing clockwise to the 192° bearing. Additionally, the Class E airspace designated as an extension to a Class D or Class E surface area (Class E4 airspace area) should be revoked as arriving aircraft descending through 1,000 feet above the surface are already contained within existing Class D and Class E2 surface areas associated with the airport.

Next, the HNL Class E5 (700 feet above the surface) airspace area would incorporate an additional Class E5 (1,200 feet above the surface) airspace area encompassing the islands of Oahu, Molokai, Lānai, Kahoolawe, and Maui limiting the airspace to 12 miles from the coastline. Additionally, the airport's name should be changed from Honolulu International Airport to Daniel K. Inouye International Airport in the airspace legal description to provide accurate and updated information.

Furthermore, the KOA Class E5 (700 feet above the surface) airspace area would incorporate an additional Class E5 (1,200 feet above the surface) airspace area encompassing the island of Hawaii limiting the airspace within 12 miles from the coastline. The KOA Class E5 (700 feet above the surface) airspace area should also be modified to better contain the VOR distance measuring equipment (DME)/TACAN RWY 17 approach procedures. The amended Class E5 (700 feet) airspace area would extend upward from 700 feet above the surface within the airport's 7.4-mile radius, and within 4 miles either side of the airport's 002° bearing extending from the airport's 7.4-mile radius to 11 miles north. Additionally, the Class E4 airspace area should be modified to better contain the previously mentioned instrument approach procedures, extending upward from the surface within 2.8 miles either side of the airport's 186° bearing extending from the airport's 4.3-mile radius to 5.7 miles south, and within 3.6 miles either side of the airport's 002° bearing extending from the airport's 4.3-mile radius to 9.5 miles north. Lastly, the airport name should be changed from Kona International Airport at Keahole to Ellison Onizuka Kona International Airport at Keahole in the airspace legal description to provide accurate and updated information.

Regulatory Notices and Analyses

The FAA has determined that this proposed regulation only involves an established body of technical regulations for which frequent and routine amendments are necessary to keep them operationally current. It, therefore: (1) is not a ''significant regulatory action'' under Executive Order 12866; (2) is not a ''significant rule'' under DOT Regulatory Policies and Procedures (44 FR 11034; February 26, 1979); and (3) does not warrant preparation of a regulatory evaluation as the anticipated impact is so minimal. Since this is a routine matter that will only affect air traffic procedures and air navigation, it is certified that this proposed rule, when promulgated, will

not have a significant economic impact on a substantial number of small entities under the criteria of the Regulatory Flexibility Act.

Environmental Review

This proposal will be subject to an environmental analysis in accordance with the National Environmental Policy Act (NEPA), 42 U.S.C. 4321, *et seq.,* prior to any FAA final regulatory action.

List of Subjects in 14 CFR Part 71

Airspace, Incorporation by reference, Navigation (air).

The Proposed Amendment

In consideration of the foregoing, the Federal Aviation Administration proposes to amend 14 CFR part 71 as follows:

PART 71—DESIGNATION OF CLASS A, B, C, D, AND E AIRSPACE AREAS; AIR TRAFFIC SERVICE ROUTES; AND REPORTING POINTS

■ 1. The authority citation for 14 CFR part 71 continues to read as follows:

Authority: 49 U.S.C. 106(f), 106(g), 40103, 40113, 40120; E.O. 10854, 24 FR 9565, 3 CFR, 1959–1963 Comp., p. 389.

§ 71.1 [Amended]

■ 2. The incorporation by reference in 14 CFR 71.1 of FAA Order JO 7400.11J, Airspace Designations and Reporting Points, dated July 31, 2024, and effective September 15, 2024, is amended as follows:

Paragraph 6004 Class E Airspace Designated as an Extension to a Class D or Class E Surface Area.

* * * * *

AWP HI E4 Kailua-Kona, HI [Amended]

Ellison Onizuka Kona International at Keahole, HI
(Lat. 19°44′20″ N, long. 156°02′44″ W)

That airspace extending upward from the surface within 2.8 miles each side of the 186° bearing from the airport extending from the 4.3-mile radius of the airport to 5.7 miles south of the airport, and within 3.6 miles each side of the 002° bearing of the airport extending from the 4.3-mile radius to 9.5 miles north of the airport.

* * * * *

AWP HI E4 Lihue HI [Removed]

Lihue Airport, HI
(Lat. 21°58′34″ N, long. 159°20′20″ W)

That airspace extending upward from the surface within that airspace beginning at lat. 21°54′25″ N, long. 159°21′36″ W, thence clockwise to lat. 21°58′15″ N, long. 159°15′42″ W; to lat. 21°55′03″ N, long. 159°12′10″ W; to lat. 21°51′03″ N, long. 159°11′05″ W; to lat. 21°50′34″ N, long. 159°21′50″ W, thence to the point of beginning.

* * * * *

Paragraph 6005 Class E Airspace Areas Extending Upward From 700 Feet or More Above the Surface of the Earth.

* * * * *

AWP HI E5 Lihue, HI [Amended]

Lihue Airport, HI
(Lat. 21°58′34″ N, long. 159°20′20″ W)

That airspace extending upward from 700 feet above the surface within a 4.3-mile radius of the airport, and within an area between the airport's 354° bearing clockwise to the 192° bearing between the 4.3-mile radius and the 7.3-mile radius; and that airspace extending upward from 1,200 feet above the surface within 12 NM of the shoreline of the islands of Kauai, Ni'Ihau, and Ka'ula.

* * * * *

AWP HI E5 Honolulu, HI (Amended)

Daniel K. Inouye International Airport, HI
(Lat. 21°19′07″ N, long. 157°55′21″ W)
Kalaeloa John Rodgers Field
(Lat. 21°18′26″ N, long. 158°04′13″ W)
Honolulu VORTAC
(Lat. 21°18′30″ N, long. 157°55′50″ W)

That airspace extending upward from 700 feet above the surface south and southeast of Daniel K. Inouye International Airport beginning at lat. 21°20′19″ N, long. 157°49′00″ W, thence southeast to lat. 21°16′31.15″ N, long. 157°45′11.19″ W, thence east along the shoreline to where the shoreline intercepts the Honolulu VORTAC 15-mile radius, then clockwise along the 15-mile radius of the Honolulu VORTAC to intercept the Honolulu VORTAC 241° radial, then northeast bound along the Honolulu VORTAC 241° radial to intercept the 4.3-mile radius south of Kalaeloa John Rogers Field, then counterclockwise along the arc of the 4.3-mile radius of Kalaeloa John Rogers field to and counterclockwise along the arc of a 5-mile radius of the Honolulu VORTAC to the Honolulu VORTAC 106° radial, then westbound along the Honolulu 106° radial to the 4-mile radius of the Honolulu VORTAC, then counterclockwise along the 4-mile radius to intercept the Honolulu VORTAC 071° radial, thence to the point of beginning, excluding that portion beyond 12 NM of the coastline, and that airspace beginning at lat. 21°10′25″ N, long. 158°11′22″ W; to lat. 21°16′05″ N, long. 158°14′35″ W; to lat. 21°16′30″ N, long. 158°13′46″ W; to lat. 21°16′50″ N, long. 158°00′00″ W; to the point of beginning; and that airspace extending upward from 1,200 feet above the surface within 12 NM of the shoreline of the islands of Oahu, Molokai, Lanai, Maui, and Kaho'olawe.

* * * * *

AWP HI E5 Kailua-Kona, HI [Amended]

Ellison Onizuka Kona International Airport at Keahole, HI
(Lat. 19°44′20″ N, long. 156°02′44″ W)

That airspace extending upward from 700 feet above the surface within a 7.4-mile radius of Ellison Onizuka Kona International Airport at Keahole, and within 4 miles each side of the 002° bearing of the airport extending from the 7.4-mile radius to 11 miles north of the airport; and that airspace extending upward from 1,200 feet above the surface within 12 miles off the coastline of the Island of Hawaii.

* * * * *

AWP HI E5 Hawaiian Islands, HI [Removed]

That airspace extending upward from 1,200 feet above the surface within 12 NM of the Hawaiian Islands' shoreline beginning at lat. 22°06′28″ N, long. 159°04′39″ W, to lat. 21°46′57″ N, long. 158°14′41″ W, to 12 NM from the shoreline of Oahu. Thence, clockwise along the line 12 NM from and parallel to the shoreline of the State of Hawaii, to lat. 20°30′29″ N, long. 155°53′40″ W, to lat. 20°28′08″ N, long. 155°52′03″ W, to 12 NM from the shoreline of Hawaii. Thence, clockwise along the line 12 NM from and parallel to the shoreline of Hawaii to lat. 20°03′26″ N, long. 156°05′30″ W, to lat. 20°22′48″ N, long.156°18′51″ W, to 12 NM from the shoreline of Maui. Thence clockwise along the line 12 NM from and parallel to the shoreline of the State of Hawaii, to lat. 21°25′19″ N, long. 158°26′08″ W, to lat. 21°44′34″ N, long. 159°15′27″ W, to 12 NM from the shoreline of Kauai. Thence, clockwise along the line 12 NM from and parallel to the shoreline of the State of Hawaii to the beginning.

BILLING CODE 4910–13–P

DEPARTMENT OF THE INTERIOR

Office of Surface Mining Reclamation and Enforcement

30 CFR Part 926

[SATS No. MT–047–FOR; Docket ID: OSM–2025–0007; S1D1S SS08011000 SX064A000 256S180110; S2D2S SS08011000 SX064A000 25XS501520]

Montana Regulatory Program

AGENCY: Office of Surface Mining Reclamation and Enforcement, Interior.

ACTION: Proposed rule; public comment period and opportunity for public hearing on proposed amendment.

SUMMARY: We, the Office of Surface Mining Reclamation and Enforcement (OSMRE), are announcing receipt of a proposed amendment to the Montana regulatory program (hereinafter, the Montana program) under the Surface Mining Control and Reclamation Act of 1977 (SMCRA or the Act). Montana

submitted this proposed amendment to us, on its own initiative, following the passage of Montana House Bill 616 (HB 616) during the 2025 legislative session. Montana proposes several changes to the Montana Code Annotated (MCA) generally related to the option for an permittee to include predictive modeling, along with monitoring data, in its bond release application to prove compliance with approved reclamation plans and allowing Montana to retain a portion of a bond for areas that are contributing suspended solids. This notice also allows for a public comment period and the possibility for a public hearing, if one is requested.

DATES: We will accept written comments on this amendment until 4:00 p.m., Mountain Daylight Time (M.D.T.) September 3, 2025. If requested, we may hold a public hearing or meeting on the amendment on August 29, 2025. We will accept requests to speak at a hearing until 4:00 p.m., M.D.T. on August 19, 2025.

ADDRESSES: You may submit comments, identified by SATS No. MT–047–FOR, by any of the following methods:

- *Mail/Hand Delivery:* OSMRE, Attn: Jeffrey Fleischman, P.O. Box 11018, 100 East B Street, Room 4100, Casper, Wyoming 82602.
- *Fax:* (307) 261–6552.
- *Federal eRulemaking Portal:* The amendment has been assigned Docket ID: OSM–2025–0007. If you would like to submit comments, go to *http://www.regulations.gov.* Follow the instructions for submitting comments.

Instructions: All submissions received must include the agency name and docket number for this rulemaking. For detailed instructions on submitting comments and additional information on the rulemaking process, see the ''Public Comment Procedures'' heading of the **SUPPLEMENTARY INFORMATION** section of this document.

Docket: For access to the docket to review copies of the Montana program, this amendment, a listing of any scheduled public hearings or meetings, and all written comments received in response to this document, you must go to the address listed below during normal business hours, Monday through Friday, excluding holidays. The full text of the program amendment is available for you to read at *www.regulations.gov.* Or you may receive one free copy of the amendment by contacting OSMRE's Casper Field Office: Attn: Jeffrey Fleischman, Field Office Director, Office of Surface Mining Reclamation and Enforcement, 100 East B Street, Casper, Wyoming 82602, Telephone: (307) 261–6550, Email: *jfleischman@osmre.gov.*

In addition, you may review a copy of the amendment during regular business hours at the following location: Attn: Eric Dahlgren, Bureau Chief, Mining Bureau, Montana Department of Environmental Quality, 2401 Colonial Drive, Helena, MT 59601–0901, Telephone: (406) 444–5245 Email: *edahlgren@mt.gov.*

FOR FURTHER INFORMATION CONTACT: Attn: Jeffrey Fleischman, Field Office Director, Office of Surface Mining Reclamation and Enforcement, 100 East B Street, Casper, Wyoming 82602, Telephone: (307) 261–6550, Email: *jfleischman@osmre.gov.*

SUPPLEMENTARY INFORMATION:

I. Background on the Montana Program
II. Description of the Proposed Amendment
III. Public Comment Procedures
IV. Procedural Determinations

I. Background on the Montana Program

Subject to OSMRE's oversight, section 503(a) of the Act permits a State to assume primacy for the regulation of surface coal mining and reclamation operations on non-Federal and non-Indian lands within its borders by demonstrating that its approved, State program includes, among other things, State laws and regulations that govern surface coal mining and reclamation operations in accordance with the Act and consistent with the Federal regulations. *See* 30 U.S.C. 1253(a)(1) and (7).

On the basis of these criteria, the Secretary of the Interior conditionally approved the Montana program on April 1, 1980. You can find background information on the Montana program, including the Secretary's findings, the disposition of comments, and conditions of approval of the Montana program in the April 1, 1980, **Federal Register** (45 FR 21560). You can also find later actions concerning the Montana program and program amendments at 30 CFR 926.15.

II. Description of the Proposed Amendment

By letter dated May 6, 2025 (Administrative Record No. MT–047–01), Montana sent us an amendment to its program under SMCRA (30 U.S.C. 1201 *et seq.*). We found Montana's proposed amendment to be administratively complete on May 7, 2025. Montana submitted this proposed amendment to us, on its own initiative, following the passage of Montana House Bill 616 (HB 616) during the 2025 legislative session.

Montana proposes several changes throughout 82–4–232(6) of the MCA. First, Montana proposes that, in a permittee's application for bond release, the permittee may include other information or methods to demonstrate compliance with its approved reclamation plan, including predictive modeling if it is used in conjunction with monitoring data. Second, Montana proposes that the Montana Department of Environmental Quality (MDEQ) may use a permittees predictive modeling in its review and determination of the permittees bond release application. Third, Montana proposes that MDEQ can retain a portion of a permittee's bond if sediment sampling or predictive modeling demonstrates that disturbed areas eligible for release are contributing suspended solids to streams and runoffs.

Finally, HB 616 adds three contingencies that affect the amended sections above, but that are not codified into the MCA. This includes a ''Severability'' clause that would allow valid parts to remain effective if other parts are found invalid, a ''Contingent Voidness'' clause that would void any portion of the act disapproved by the United States Secretary of the Interior, and an ''Effective Date'' clause, which makes HB 616 effective the date in which it is passed and approved.

The full text of the program amendment is available for you to read at the locations listed above under **ADDRESSES** or at *www.regulations.gov.*

III. Public Comment Procedures

Under the provisions of 30 CFR 732.17(h), we are seeking your comments on whether the amendment satisfies the applicable program approval criteria of 30 CFR 732.15. If we approve the amendment, it will become part of the State program.

Electronic or Written Comments

If you submit written or electronic comments on the proposed rule during the 30-day comment period, they should be specific, confined to issues pertinent to the proposed regulations, and explain the reason for any recommended change(s). We appreciate any and all comments, but those most useful and likely to influence decisions on the final regulations will be those that either involve personal experience or include citations to and analyses of SMCRA, its legislative history, its implementing regulations, case law, other pertinent State or Federal laws or regulations, technical literature, or other relevant publications.

We cannot ensure that comments received after the close of the comment period (see **DATES**) or sent to an address other than those listed (see **ADDRESSES**) will be included in the docket for this rulemaking and considered.

Public Availability of Comments

Before including your address, phone number, email address, or other personal identifying information in your comment, you should be aware that your entire comment including your personal identifying information, may be made publicly available at any time. While you can ask us in your comment to withhold your personal identifying information from public review, we cannot guarantee that we will be able to do so.

Public Hearing

If you wish to speak at the public hearing, contact the person listed under **FOR FURTHER INFORMATION CONTACT** by 4:00 p.m., M.D.T. on August 19, 2025. If you are disabled and need reasonable accommodations to attend a public hearing, contact the person listed under **FOR FURTHER INFORMATION CONTACT**. We will arrange the location and time of the hearing with those persons requesting the hearing. If no one requests an opportunity to speak, we will not hold a hearing.

To assist the transcriber and ensure an accurate record, we request, if possible, that each person who speaks at the public hearing provide us with a written copy of his or her comments. The public hearing will continue on the specified date until everyone scheduled to speak has been given an opportunity to be heard. If you are in the audience and have not been scheduled to speak and wish to do so, you will be allowed to speak after those who have been scheduled. We will end the hearing after everyone scheduled to speak and others present in the audience who wish to speak, have been heard.

Public Meeting

If only one person requests an opportunity to speak, we may hold a public meeting rather than a public hearing. If you wish to meet with us to discuss the amendment, please request a meeting by contacting the person listed under **FOR FURTHER INFORMATION CONTACT**. All such meetings are open to the public and, if possible, we will post notices of meetings at the locations listed under **ADDRESSES**. We will make a written summary of each meeting a part of the administrative record.

IV. Procedural Determinations

Executive Order 12866—Regulatory Planning and Review and Executive Order 13563—Improving Regulation and Regulatory Review

Executive Order 12866 provides that the Office of Information and Regulatory Affairs in the Office of Management and Budget (OMB) will review all significant rules. Pursuant to OMB guidance, dated October 12, 1993 (OMB Memo M–94–3), the approval of State program amendments is exempted from OMB review under Executive Order 12866. Executive Order 13563 reaffirms and supplements Executive Order 12866.

Other Laws and Executive Orders Affecting Rulemaking

When a State submits a program amendment to OSMRE for review, our regulations at 30 CFR 732.17(h) require us to publish a notice in the **Federal Register** indicating receipt of the proposed amendment, its text or a summary of its terms, and an opportunity for public comment. We conclude our review of the proposed amendment after the close of the public comment period and determine whether the amendment should be approved, approved in part, or not approved. At that time, we will also make the determinations and certifications required by the various laws and executive orders governing the rulemaking process and include them in the final rule.

List of Subjects in 30 CFR Part 926

State regulatory program approval, State-Federal cooperative agreement, required program amendments.

Marcelo Calle,

Acting Regional Director, Unified Regions 5, 7–11.

Montana Regulatory Program

AGENCY: Office of Surface Mining Reclamation and Enforcement, Interior.

ACTION: Proposed rule; public comment period and opportunity for public hearing on proposed amendment.

SUMMARY: We, the Office of Surface Mining Reclamation and Enforcement (OSMRE), are announcing receipt of a proposed amendment to the Montana regulatory program (hereinafter, the Montana program) under the Surface Mining Control and Reclamation Act of 1977 (SMCRA or the Act). Montana submitted this proposed amendment to us, on its own initiative, following the passage of Montana Senate Bill 368 (SB 368) during the 2025 legislative session. Montana proposes several changes to the Montana Code Annotated (MCA) generally related to the proposed the addition of a process for operators to correct minor maintenance items. This notice also allows for a public comment period and the possibility for a public hearing, if one is requested.

DATES: We will accept written comments on this amendment until 4:00 p.m., Mountain Daylight Time (M.D.T.) September 3, 2025. If requested, we may hold a public hearing or meeting on the amendment on August 29, 2025. We will accept requests to speak at a hearing until 4:00 p.m., M.D.T. on August 19, 2025.

ADDRESSES: You may submit comments, identified by SATS No. MT–046–FOR, by any of the following methods:

- *Mail/Hand Delivery:* OSMRE, Attn: Jeffrey Fleischman, P.O. Box 11018, 100 East B Street, Room 4100, Casper, Wyoming 82602.
- *Fax:* (307) 261–6552.
- *Federal eRulemaking Portal:* The amendment has been assigned Docket ID: OSM–2025–0006. If you would like to submit comments, go to *http://www.regulations.gov.* Follow the instructions for submitting comments.

Instructions: All submissions received must include the agency name and docket number for this rulemaking. For detailed instructions on submitting comments and additional information on the rulemaking process, see the ''Public Comment Procedures'' heading of the **SUPPLEMENTARY INFORMATION** section of this document.

Docket: For access to the docket to review copies of the Montana program, this amendment, a listing of any scheduled public hearings or meetings, and all written comments received in response to this document, you must go to the address listed below during normal business hours, Monday through Friday, excluding holidays. The full text of the program amendment is available for you to read at *www.regulations.gov.* Or you may receive one free copy of the amendment by contacting OSMRE's Casper Field Office: Attn: Jeffrey Fleischman, Field Office Director, Office of Surface Mining Reclamation and Enforcement, 100 East B Street, Casper, Wyoming 82602, Telephone: (307) 261–6550, Email: *jfleischman@osmre.gov.*

In addition, you may review a copy of the amendment during regular business hours at the following location: Attn: Eric Dahlgren, Bureau Chief, Mining Bureau, Montana Department of

Environmental Quality, 2401 Colonial Drive, Helena, MT 59601–0901, Telephone: (406) 444–5245, Email: *edahlgren@mt.gov*.

FOR FURTHER INFORMATION CONTACT: Attn: Jeffrey Fleischman, Field Office Director, Office of Surface Mining Reclamation and Enforcement, 100 East B Street, Casper, Wyoming 82602, Telephone: (307) 261–6550, Email: *jfleischman@osmre.gov*.

SUPPLEMENTARY INFORMATION:

I. Background on the Montana Program
II. Description of the Proposed Amendment
III. Public Comment Procedures
IV. Procedural Determinations

I. Background on the Montana Program

Subject to OSMRE's oversight, section 503(a) of the Act permits a State to assume primacy for the regulation of surface coal mining and reclamation operations on non-Federal and non-Indian lands within its borders by demonstrating that its approved State program includes, among other things, State laws and regulations that govern surface coal mining and reclamation operations, in accordance with the Act and consistent with the Federal regulations. *See* 30 U.S.C. 1253(a)(1) and (7).

On the basis of these criteria, the Secretary of the Interior conditionally approved the Montana program on April 1, 1980. You can find background information on the Montana program, including the Secretary's findings, the disposition of comments, and conditions of approval of the Montana program in the April 1, 1980, **Federal Register** (45 FR 21560). You can also find later actions concerning the Montana program and program amendments at 30 CFR 926.15.

II. Description of the Proposed Amendment

By letter dated May 6, 2025 (Administrative Record No. MT–046–01), Montana sent us an amendment to its program under SMCRA (30 U.S.C. 1201 *et seq.*). We found Montana's proposed amendment to be administratively complete on May 7, 2025. Montana submitted this proposed amendment to us, on its own initiative, following the passage of Montana Senate Bill 368 (SB 368) during the 2025 legislative session.

Montana proposes to insert a new paragraph at 82–4–251(3) of the MCA establishing a process for an operator to correct a minor maintenance item. If during an inspection of a coal mine the Montana Department of Environmental Quality (MDEQ) determines there is a minor maintenance item to be corrected, MDEQ will issue a ''minor maintenance correction letter'' to the permittee that allows them 14 days to correct the item. A minor maintenance item is defined as a permit violation within the permit boundary that does not create imminent danger or harm to the public or environment, does not necessitate a cessation order, and can reasonably be corrected within 14 days. MDEQ will verify that the item was corrected during the next regular inspection, and, if the permittee fails to correct the issue, MDEQ will issue a notice of noncompliance or an order of cessation. Montana also proposes minor revisions to the naming and numbering within 82–4–251 to accommodate the insertion of new paragraph (3).

Finally, SB 368 adds three contingencies that affect the amended sections above, but that are not codified into the MCA. This includes a ''Severability'' clause that would allow valid parts to remain effective if other parts are found invalid, a ''Contingent Voidness'' clause that would void any portion of the act disapproved by the United States Secretary of the Interior, and an ''Effective Date'' clause, which makes SB 368 effective the date in which it is passed and approved.

The full text of the program amendment is available for you to read at the locations listed above under **ADDRESSES** or at *www.regulations.gov*.

III. Public Comment Procedures

Under the provisions of 30 CFR 732.17(h), we are seeking your comments on whether the amendment satisfies the applicable program approval criteria of 30 CFR 732.15. If we approve the amendment, it will become part of the State program.

Electronic or Written Comments

If you submit written or electronic comments on the proposed rule during the 30-day comment period, they should be specific, confined to issues pertinent to the proposed regulations, and explain the reason for any recommended change(s). We appreciate any and all comments, but those most useful and likely to influence decisions on the final regulations will be those that either involve personal experience or include citations to and analyses of SMCRA, its legislative history, its implementing regulations, case law, other pertinent State or Federal laws or regulations, technical literature, or other relevant publications.

We cannot ensure that comments received after the close of the comment period (see **DATES**) or sent to an address other than those listed (see **ADDRESSES**) will be included in the docket for this rulemaking and considered.

Public Availability of Comments

Before including your address, phone number, email address, or other personal identifying information in your comment, you should be aware that your entire comment including your personal identifying information, may be made publicly available at any time. While you can ask us in your comment to withhold your personal identifying information from public review, we cannot guarantee that we will be able to do so.

Public Hearing

If you wish to speak at the public hearing, contact the person listed under **FOR FURTHER INFORMATION CONTACT** by 4:00 p.m., M.D.T. on August 19, 2025. If you are disabled and need reasonable accommodations to attend a public hearing, contact the person listed under **FOR FURTHER INFORMATION CONTACT**. We will arrange the location and time of the hearing with those persons requesting the hearing. If no one requests an opportunity to speak, we will not hold a hearing.

To assist the transcriber and ensure an accurate record, we request, if possible, that each person who speaks at the public hearing provide us with a written copy of his or her comments. The public hearing will continue on the specified date until everyone scheduled to speak has been given an opportunity to be heard. If you are in the audience and have not been scheduled to speak and wish to do so, you will be allowed to speak after those who have been scheduled. We will end the hearing after everyone scheduled to speak and others present in the audience who wish to speak, have been heard.

Public Meeting

If only one person requests an opportunity to speak, we may hold a public meeting rather than a public hearing. If you wish to meet with us to discuss the amendment, please request a meeting by contacting the person listed under **FOR FURTHER INFORMATION CONTACT**. All such meetings are open to the public and, if possible, we will post notices of meetings at the locations listed under **ADDRESSES**. We will make a written summary of each meeting a part of the administrative record.

IV. Procedural Determinations

Executive Order 12866—Regulatory Planning and Review and Executive Order 13563—Improving Regulation and Regulatory Review

Executive Order 12866 provides that the Office of Information and Regulatory Affairs in the Office of Management and

Budget (OMB) will review all significant rules. Pursuant to OMB guidance, dated October 12, 1993 (OMB Memo M–94–3), the approval of State program and/or AML plan amendments is exempted from OMB review under Executive Order 12866. Executive Order 13563 reaffirms and supplements Executive Order 12866.

Other Laws and Executive Orders Affecting Rulemaking

When a State submits a program amendment to OSMRE for review, our regulations at 30 CFR 732.17(h) require us to publish a notice in the **Federal Register** indicating receipt of the proposed amendment, its text or a summary of its terms, and an opportunity for public comment. We conclude our review of the proposed amendment after the close of the public comment period and determine whether the amendment should be approved, approved in part, or not approved. At that time, we will also make the determinations and certifications required by the various laws and executive orders governing the rulemaking process and include them in the final rule.

Office of Surface Mining Reclamation and Enforcement

30 CFR Part 926

[SATS No. MT–045–FOR; Docket ID: OSM–2025–0005; S1D1S SS08011000 SX064A000 256S180110; S2D2S SS08011000 SX064A000 25XS501520]

Montana Regulatory Program

AGENCY: Office of Surface Mining Reclamation and Enforcement, Interior.

ACTION: Proposed rule; public comment period and opportunity for public hearing on proposed amendment.

SUMMARY: We, the Office of Surface Mining Reclamation and Enforcement (OSMRE), are announcing receipt of a proposed amendment to the Montana regulatory program (hereinafter, the Montana program) under the Surface Mining Control and Reclamation Act of 1977 (SMCRA or the Act). Montana submitted this proposed amendment to us, on its own initiative, following the passage of Montana Senate Bill 365 (SB 365) during the 2025 legislative session. Montana proposes changes to the Montana Code Annotated (MCA) generally related to siltation structures and a proposed exception in the Montana regulation for exceedance of capacity violations if the exceedance is the result of a series of small storms and the operator takes active measures to restore pond capacity as soon as conditions permit. This notice also allows for a public comment period and the possibility for a public hearing, if one is requested.

DATES: We will accept written comments on this amendment until 4:00 p.m., Mountain Daylight Time (M.D.T.) September 3, 2025. If requested, we may hold a public hearing or meeting on the amendment on August 29, 2025. We will accept requests to speak at a hearing until 4:00 p.m., M.D.T. on August 19, 2025.

ADDRESSES: You may submit comments, identified by SATS No. MT–045–FOR, by any of the following methods:

- *Mail/Hand Delivery:* OSMRE, Attn: Jeffrey Fleischman, P.O. Box 11018, 100 East B Street, Room 4100, Casper, Wyoming 82602.
- *Fax:* (307) 261–6552.
- *Federal eRulemaking Portal:* The amendment has been assigned Docket ID: OSM–2025–0005. If you would like to submit comments, go to *http://www.regulations.gov*. Follow the instructions for submitting comments.

Instructions: All submissions received must include the agency name and docket number for this rulemaking. For detailed instructions on submitting comments and additional information on the rulemaking process, see the ''Public Comment Procedures'' heading of the **SUPPLEMENTARY INFORMATION** section of this document.

Docket: For access to the docket to review copies of the Montana program, this amendment, a listing of any scheduled public hearings or meetings, and all written comments received in response to this document, you must go to the address listed below during normal business hours, Monday through Friday, excluding holidays. The full text of the program amendment is available for you to read at *www.regulations.gov.* Or you may receive one free copy of the amendment by contacting OSMRE's Casper Field Office: Attn: Jeffrey Fleischman, Field Office Director, Office of Surface Mining Reclamation and Enforcement, 100 East B Street, Casper, Wyoming 82602, Telephone: (307) 261–6550, Email: *jfleischman@osmre.gov.*

In addition, you may review a copy of the amendment during regular business hours at the following location: Attn: Eric Dahlgren, Bureau Chief, Mining Bureau, Montana Department of Environmental Quality, 2401 Colonial Drive, Helena, MT 59601–0901, Telephone: (406) 444–5245, Email: *edahlgren@mt.gov.*

FOR FURTHER INFORMATION CONTACT: Jeffrey Fleischman, Field Office Director, Office of Surface Mining Reclamation and Enforcement, 100 East B Street, Casper, Wyoming 82602; Telephone: (307) 261–6550; Email: *jfleischman@osmre.gov.*

SUPPLEMENTARY INFORMATION:

I. Background on the Montana Program
II. Description of the Proposed Amendment
III. Public Comment Procedures
IV. Procedural Determinations

I. Background on the Montana Program

Subject to OSMRE's oversight, section 503(a) of the Act permits a State to assume primacy for the regulation of surface coal mining and reclamation operations on non-Federal and non-Indian lands within its borders by demonstrating that its approved, State program includes, among other things, State laws and regulations that govern surface coal mining and reclamation operations in accordance with the Act and consistent with the Federal regulations. *See* 30 U.S.C. 1253(a)(1) and (7).

On the basis of these criteria, the Secretary of the Interior conditionally approved the Montana program on April 1, 1980. You can find background information on the Montana program, including the Secretary's findings, the disposition of comments, and conditions of approval of the Montana program in the April 1, 1980, **Federal Register** (45 FR 21560). You can also find later actions concerning the Montana program and program amendments at 30 CFR 926.15.

II. Description of the Proposed Amendment

By letter dated May 6, 2025 (Administrative Record No. MT–045–01), Montana sent us an amendment to its program under SMCRA (30 U.S.C. 1201 *et seq.*). We found Montana's proposed amendment to be administratively complete on May 7, 2025. Montana submitted this proposed amendment to us, on its own initiative, following the passage of Montana Senate Bill 365 (SB 365) during the 2025 legislative session.

Through SB 365, Montana proposes changes to 82–4–231(10)(k)(ii)(B) of the

MCA. First, Montana proposes to add a requirement that siltation structures must be constructed with the design capacity specified in the Administrative Rules of Montana. The siltation structures must hold the water inflow or runoff from anticipated precipitation events entering the pond, and, if applicable, must also hold the average inflow from the underground mine.

Second, Montana proposes an exemption from an exceedance of capacity violation if the siltation structure is compliant with the design capacity requirements, the pond capacity is exceeded as the result of consecutive small storm events that cumulatively exceed the anticipated precipitation event, and the operator actively works to restore pond capacity as soon as weather and ground conditions permit.

Finally, SB 365 adds three contingencies that affect the amended sections above but are not codified into the MCA. This includes a ''Severability'' clause that would allow valid parts to remain effective if other parts are found invalid, a ''Contingent Voidness'' clause that would void any portion of the act disapproved by the United States Secretary of the Interior, and an ''Effective Date'' clause, which makes SB 365 effective the date on which it is passed and approved.

The full text of the program amendment is available for you to read at the locations listed above under **ADDRESSES** or at *www.regulations.gov.*

III. Public Comment Procedures

Under the provisions of 30 CFR 732.17(h), we are seeking your comments on whether the amendment satisfies the applicable program approval criteria of 30 CFR 732.15. If we approve the amendment, it will become part of the State program.

Electronic or Written Comments

If you submit written or electronic comments on the proposed rule during the 30-day comment period, they should be specific, confined to issues pertinent to the proposed regulations, and explain the reason for any recommended change(s). We appreciate any and all comments, but those most useful and likely to influence decisions on the final regulations will be those that either involve personal experience or include citations to and analyses of SMCRA, its legislative history, its implementing regulations, case law, other pertinent State or Federal laws or regulations, technical literature, or other relevant publications.

We cannot ensure that comments received after the close of the comment period (see **DATES**) or sent to an address other than those listed (see **ADDRESSES**) will be included in the docket for this rulemaking and considered.

Public Availability of Comments

Before including your address, phone number, email address, or other personal identifying information in your comment, you should be aware that your entire comment including your personal identifying information, may be made publicly available at any time. While you can ask us in your comment to withhold your personal identifying information from public review, we cannot guarantee that we will be able to do so.

Public Hearing

If you wish to speak at the public hearing, contact the person listed under **FOR FURTHER INFORMATION CONTACT** by 4:00 p.m., M.D.T. on August 19, 2025. If you are disabled and need reasonable accommodations to attend a public hearing, contact the person listed under **FOR FURTHER INFORMATION CONTACT**. We will arrange the location and time of the hearing with those persons requesting the hearing. If no one requests an opportunity to speak, we will not hold a hearing.

To assist the transcriber and ensure an accurate record, we request, if possible, that each person who speaks at the public hearing provide us with a written copy of his or her comments. The public hearing will continue on the specified date until everyone scheduled to speak has been given an opportunity to be heard. If you are in the audience and have not been scheduled to speak and wish to do so, you will be allowed to speak after those who have been scheduled. We will end the hearing after everyone scheduled to speak and others present in the audience who wish to speak, have been heard.

Public Meeting

If only one person requests an opportunity to speak, we may hold a public meeting rather than a public hearing. If you wish to meet with us to discuss the amendment, please request a meeting by contacting the person listed under **FOR FURTHER INFORMATION CONTACT**. All such meetings are open to the public and, if possible, we will post notices of meetings at the locations listed under **ADDRESSES**. We will make a written summary of each meeting a part of the administrative record.

IV. Procedural Determinations

Executive Order 12866—Regulatory Planning and Review and Executive Order 13563—Improving Regulation and Regulatory Review

Executive Order 12866 provides that the Office of Information and Regulatory Affairs in the Office of Management and Budget (OMB) will review all significant rules. Pursuant to OMB guidance, dated October 12, 1993 (OMB Memo M–94–3), the approval of State program amendments is exempted from OMB review under Executive Order 12866. Executive Order 13563 reaffirms and supplements Executive Order 12866.

Other Laws and Executive Orders Affecting Rulemaking

When a State submits a program amendment to OSMRE for review, our regulations at 30 CFR 732.17(h) require us to publish a notice in the **Federal Register** indicating receipt of the proposed amendment, its text or a summary of its terms, and an opportunity for public comment.

We conclude our review of the proposed amendment after the close of the public comment period and determine whether the amendment should be approved, approved in part, or not approved. At that time, we will also make the determinations and certifications required by the various laws and executive orders governing the rulemaking process and include them in the final rule.

Montana Regulatory Program

AGENCY: Office of Surface Mining Reclamation and Enforcement, Interior.

ACTION: Proposed rule; public comment period and opportunity for public hearing on proposed amendment.

SUMMARY: We, the Office of Surface Mining Reclamation and Enforcement (OSMRE), are announcing receipt of a proposed amendment to the Montana regulatory program (hereinafter, the Montana program) under the Surface Mining Control and Reclamation Act of 1977 (SMCRA or the Act). Montana submitted this proposed amendment to us, on its own initiative, following the passage of Montana House Bill 587 (HB 587) during the 2025 legislative session. Montana proposes several changes to the Montana Code Annotated (MCA), generally related to a new definition of ''Material damage'' with respect to the hydrologic balance, alluvial valley floors, and subsidence and the option for a permit applicant to provide self-collected information related to its determination of probable hydrologic consequences, if an appropriate Federal or State agency cannot provide such information. This notice also allows for a public comment period and the possibility for a public hearing, if one is requested.

DATES: We will accept written comments on this amendment until 4:00 p.m., Mountain Daylight Time (M.D.T.) September 3, 2025. If requested, we may hold a public hearing or meeting on the amendment on August 29, 2025. We will accept requests to speak at a hearing until 4:00 p.m., M.D.T. on August 19, 2025.

ADDRESSES: You may submit comments, identified by SATS No. MT–048–FOR, by any of the following methods:

- *Mail/Hand Delivery:* OSMRE, Attn: Jeffrey Fleischman, P.O. Box 11018, 100 East B Street, Room 4100, Casper, Wyoming 82602.
- *Fax:* (307) 261–6552.
- *Federal eRulemaking Portal:* The amendment has been assigned Docket ID: OSM–2025–0008. If you would like to submit comments, go to *http://www.regulations.gov.* Follow the instructions for submitting comments.

Instructions: All submissions received must include the agency name and docket number for this rulemaking. For detailed instructions on submitting comments and additional information on the rulemaking process, see the ''Public Comment Procedures'' heading of the **SUPPLEMENTARY INFORMATION** section of this document.

Docket: For access to the docket to review copies of the Montana program, this amendment, a listing of any scheduled public hearings or meetings, and all written comments received in response to this document, you must go to the address listed below during normal business hours, Monday through Friday, excluding holidays. The full text of the program amendment is available for you to read at *www.regulations.gov.* Or you may receive one free copy of the amendment by contacting OSMRE's Casper Field Office: Attn: Jeffrey Fleischman, Field Office Director, Office of Surface Mining Reclamation and Enforcement, 100 East B Street, Casper, Wyoming 82602, Telephone: (307) 261–6550, Email: *jfleischman@osmre.gov.*

In addition, you may review a copy of the amendment during regular business hours at the following location: Attn: Eric Dahlgren, Bureau Chief, Mining Bureau, Montana Department of Environmental Quality, 2401 Colonial Drive, Helena, MT 59601–0901, Telephone: (406) 444–5245, Email: *edahlgren@mt.gov.*

FOR FURTHER INFORMATION CONTACT: Jeffrey Fleischman, Field Office Director, Office of Surface Mining Reclamation and Enforcement, 100 East B Street, Casper, Wyoming 82602, Telephone: (307) 261–6550, Email: *jfleischman@osmre.gov.*

SUPPLEMENTARY INFORMATION:

I. Background on the Montana Program
II. Description of the Proposed Amendment
III. Public Comment Procedures
IV. Procedural Determinations

I. Background on the Montana Program

Subject to OSMRE's oversight, section 503(a) of the Act permits a State to assume primacy for the regulation of surface coal mining and reclamation operations on non-Federal and non-Indian lands within its borders by demonstrating that its approved, State program includes, among other things, State laws and regulations that govern surface coal mining and reclamation operations in accordance with the Act and consistent with the Federal regulations. *See* 30 U.S.C. 1253(a)(1) and (7).

On the basis of these criteria, the Secretary of the Interior conditionally approved the Montana program on April 1, 1980. You can find background information on the Montana program, including the Secretary's findings, the disposition of comments, and conditions of approval of the Montana program in the April 1, 1980, **Federal Register** (45 FR 21560). You can also find later actions concerning the Montana program and program amendments at 30 CFR 926.15.

II. Description of the Proposed Amendment

By letter dated May 15, 2025 (Administrative Record No. MT–048–01), Montana sent us an amendment to its program under SMCRA (30 U.S.C. 1201 *et seq.*). We found Montana's proposed amendment to be administratively complete on May 15, 2025. Montana submitted this proposed amendment to us, on its own initiative, following the passage of Montana House Bill 587 (HB 587) during the 2025 legislative session.

Montana first proposes changes to 82–4–203(35) of the MCA. Montana proposes changes to the definition for ''Material damage,'' by removing the previous definition and creating three sub-definitions. The first, paragraph (a), defines ''Material damage . . . with respect to the hydrologic balance outside the permit area,'' as a quantifiable adverse impact from coal mining and reclamation operation on the quality and quantity of surface or groundwater. The adverse impact must preclude any existing or reasonably foreseeable use of water outside the permit area. It further defines a ''quantifiable adverse impact'' as an effect that can be quantified and measured to a significant degree of confidence. Lastly, it states that ''existing or reasonably foreseeable uses of water'' are those beneficial uses recognized in title 75, chapter 5, part 3 of the MCA.

Next, in paragraph (b), Montana defines ''Material damage . . . with respect to an alluvial valley floor'' as degradation or reduction by coal mining and reclamation to water quality or quantity supplied to the alluvial valley floor that significantly decreases its ability to support agricultural activities.

And in paragraph (c), Montana defines ''Material damage . . . with respect to subsidence'' as a functional impairment to surface lands, features, structures, or facilities; a physical change that has significant adverse impact on an affected land's ability to support any current or reasonably foreseeable uses or causes significant loss to production or income; or a significant change in the condition, appearance, or utility of a structure or facility.

In addition to the changes to ''Material damage,'' Montana proposes changes to its permit application requirements in 82–4–222(1)(m). Currently, an operator can receive necessary hydrologic and geologic information from an appropriate Federal or State agency to determine probable hydrologic consequences. Under Montana's proposal, an operator may use information collected on their own when the necessary information is not available from a Federal or State agency.

Finally, HB 587 adds four contingencies that affect the amended sections above, but that are not codified into the MCA. This includes a

''Severability'' clause that would allow valid parts to remain effective if other parts are found invalid, a ''Contingent Voidness'' clause that would void any portion of the act disapproved by the United States Secretary of the Interior, an ''Effective Date'' clause, which makes HB 587 effective the date in which it is passed and approved, and a ''Retroactive Applicability'' clause, which applies the changes made through HB 587 to actions or petitions that are pending but not yet decided on or after the 69th Montana Legislature 2025. The full text of the program amendment is available for you to read at the locations listed above under **ADDRESSES** or at *www.regulations.gov.*

III. Public Comment Procedures

Under the provisions of 30 CFR 732.17(h), we are seeking your comments on whether the amendment satisfies the applicable program approval criteria of 30 CFR 732.15. If we approve the amendment, it will become part of the State program.

Electronic or Written Comments

If you submit written or electronic comments on the proposed rule during the 30-day comment period, they should be specific, confined to issues pertinent to the proposed regulations, and explain the reason for any recommended change(s). We appreciate any and all comments, but those most useful and likely to influence decisions on the final regulations will be those that either involve personal experience or include citations to and analyses of SMCRA, its legislative history, its implementing regulations, case law, other pertinent State or Federal laws or regulations, technical literature, or other relevant publications.

We cannot ensure that comments received after the close of the comment period (see **DATES**) or sent to an address other than those listed (see **ADDRESSES**) will be included in the docket for this rulemaking and considered.

Public Availability of Comments

Before including your address, phone number, email address, or other personal identifying information in your comment, you should be aware that your entire comment including your personal identifying information, may be made publicly available at any time. While you can ask us in your comment to withhold your personal identifying information from public review, we cannot guarantee that we will be able to do so.

Public Hearing

If you wish to speak at the public hearing, contact the person listed under **FOR FURTHER INFORMATION CONTACT** by 4:00 p.m., M.D.T. on August 19, 2025. If you are disabled and need reasonable accommodations to attend a public hearing, contact the person listed under **FOR FURTHER INFORMATION CONTACT**. We will arrange the location and time of the hearing with those persons requesting the hearing. If no one requests an opportunity to speak, we will not hold a hearing.

To assist the transcriber and ensure an accurate record, we request, if possible, that each person who speaks at the public hearing provide us with a written copy of his or her comments. The public hearing will continue on the specified date until everyone scheduled to speak has been given an opportunity to be heard. If you are in the audience and have not been scheduled to speak and wish to do so, you will be allowed to speak after those who have been scheduled. We will end the hearing after everyone scheduled to speak and others present in the audience who wish to speak, have been heard.

Public Meeting

If only one person requests an opportunity to speak, we may hold a public meeting rather than a public hearing. If you wish to meet with us to discuss the amendment, please request a meeting by contacting the person listed under **FOR FURTHER INFORMATION CONTACT**. All such meetings are open to the public and, if possible, we will post notices of meetings at the locations listed under **ADDRESSES**. We will make a written summary of each meeting a part of the administrative record.

IV. Procedural Determinations

Executive Order 12866—Regulatory Planning and Review and Executive Order 13563—Improving Regulation and Regulatory Review

Executive Order 12866 provides that the Office of Information and Regulatory Affairs in the Office of Management and Budget (OMB) will review all significant rules. Pursuant to OMB guidance, dated October 12, 1993 (OMB Memo M–94–3), the approval of State program and/or AML plan amendments is exempted from OMB review under Executive Order 12866. Executive Order 13563 reaffirms and supplements Executive Order 12866.

Other Laws and Executive Orders Affecting Rulemaking

When a State submits a program amendment to OSMRE for review, our regulations at 30 CFR 732.17(h) require us to publish a notice in the **Federal Register** indicating receipt of the proposed amendment, its text or a summary of its terms, and an opportunity for public comment. We conclude our review of the proposed amendment after the close of the public comment period and determine whether the amendment should be approved, approved in part, or not approved. At that time, we will also make the determinations and certifications required by the various laws and Executive orders governing the rulemaking process and include them in the final rule.

Coast Guard

33 CFR Part 110

[Docket Number USCG–2025–0579]

RIN 1625–AA01

Anchorage Ground; Neches River, Port Arthur, TX

AGENCY: Coast Guard, DHS.

ACTION: Notice of proposed rulemaking.

SUMMARY: The Coast Guard is proposing to establish an anchorage ground on the Neches River near Port Arthur, TX. This action is necessary to accommodate increased vessel traffic volume, improve navigational safety for vessels transiting the Sabine-Neches Waterway and provide for the overall safe and efficient flow of vessel traffic and commerce. We invite your comments on this proposed rulemaking.

DATES: Comments and related material must be received by the Coast Guard on or before September 3, 2025.

ADDRESSES: You may submit comments identified by docket number USCG–2025–0579 using the Federal Decision-Making Portal at *https://www.regulations.gov*. See the ''Public Participation and Request for Comments'' portion of the **SUPPLEMENTARY INFORMATION** section for further instructions on submitting comments.

FOR FURTHER INFORMATION CONTACT: If you have questions about this proposed rulemaking, call or email Mr. Douglas G. Hendrix, Marine Safety Unit (MSU) Port Arthur, U.S. Coast Guard; telephone 409–719–5086, email *douglas.g.hendrix2@uscg.mil*.

DHS Department of Homeland Security
FR Federal Register
NPRM Notice of proposed rulemaking
§ Section
U.S.C. United States Code

II. Background, Purpose, and Legal Basis

The Sabine-Neches Waterway is the maritime ''highway'' that supports the movement of more than 128 million tons of cargo each year. This cargo includes natural gas, crude oil, gasoline, jet fuel, chemicals, steel, lumber, grain and many other products. The waterway is vital to the economy of southeast Texas and the United States. The waterway consists of approximately 57 nautical miles of waterway extending from offshore to the Port of Beaumont. The narrowest portion of this waterway is 400-feet in width and approximately 25.5 nautical miles (29.5 statute miles) in length.

The existing channel has not been improved since the mid-1960s while ships have continued to increase in length, beam and draft. Recent expansions in the oil and liquefied gas industries have resulted in increases in the number of docks and vessels operating on the Sabine-Neches Waterway. The combination of increased vessel traffic and their dimensions requires the implementation of operating protocols in order to ensure the safety of all vessel traffic on the waterway.

In 2011, the U.S. Army Corps of Engineers signed the ''Chief's Report'' on a proposed deepening of the Sabine-Neches Waterway. This concluded a nearly 14-year assessment of plans submitted by the Sabine-Neches Navigation District, the local non-federal sponsor for dredging projects, to deepen the waterway from 40 feet to 48 feet. In addition to deepening the channel, the design and assessment phase planned for five anchorage basins for use by deep draft vessels.

In June 2014, the President of the United States signed the Water Resources Reform and Development Act (WRRDA) into law—the final step in the federal approval process. In 2018 federal funds were allocated which permitted the beginning of the construction process and in late 2020 the dredging of Anchorage Basin 1 was completed.

The Coast Guard proposes to establish anchorage ground regulations in order to facilitate use of navigable waterways by both commercial and recreational vessels in Port Arthur, TX. This notice of proposed rulemaking (NPRM) identifies the location of the first anchorage, Anchorage 1, approved by the U.S. Army Corps of Engineers and the Sabine Neches Navigation District (SNND), and solicits comments from interested stakeholders to inform the development of anchorage regulations.

The first anchorage, called Anchorage 1, is located in the river oxbow located approximately 1.8 nautical miles west of the Rainbow Bridge in Port Arthur, TX. Additional anchorage ground locations are still under environmental review.

III. Discussion of Proposed Rule

The Coast Guard is proposing to establish new Anchorage Ground 1, as designed and constructed as part of the Sabine-Neches Waterway Deepening Project. Further, the proposed rule would establish usage requirements to ensure the anchorage is available and used for its intended purpose. Establishing this anchorage in the Code of Federal Regulations (CFR) and defining it on navigation charts would remove ambiguity as to the anchorage's location and intended usage.

The proposed rule would limit usage of the anchorage to commercial vessels greater than 450-feet in length calling on commercial facilities on the Sabine-Neches Waterway. The placement of fixed moorings, piles or stakes would be prohibited. This anchorage would not be intended to be a long-term anchorage. Use of the anchorage would be limited to periods of 48-hours or less unless otherwise authorized by the Captain of the Port MSU Port Arthur (COTP). Additionally, use of the anchorage would be prohibited when the COTP sets Port Condition Zulu. These regulations are necessary to ensure that an adequate anchorage area remains available for the efficient facilitation of commerce. The regulatory text we are proposing appears at the end of this document.

IV. Regulatory Analyses

We developed this proposed rule after considering numerous statutes and Executive orders related to rulemaking. Below we summarize our analyses based on a number of these statutes and Executive orders.

A. Regulatory Planning and Review

Executive Orders 12866 (Regulatory Planning and Review) and 13563 (Improving Regulation and Regulatory Review) direct agencies to assess the costs and benefits of available regulatory alternatives and, if regulation is necessary, to select regulatory approaches that maximize net benefits. Executive Order 13563 emphasizes the importance of quantifying both costs and benefits, of reducing costs, of harmonizing rules, and of promoting flexibility.

The Office of Management and Budget (OMB) has not designated this proposed rule a ''significant regulatory action'' under section 3(f) of Executive Order 12866. Accordingly, OMB has not reviewed it.

This regulatory action determination is based on the historical use of this area for commercial ships and the nearby availability of space for smaller, shallow draft vessels to anchor.

B. Impact on Small Entities

The Regulatory Flexibility Act of 1980, 5 U.S.C. 601–612, as amended, requires Federal agencies to consider the potential impact of regulations on small entities during rulemaking. The term ''small entities'' comprises small businesses, not-for-profit organizations that are independently owned and operated and are not dominant in their fields, and governmental jurisdictions with populations of less than 50,000. The Coast Guard certifies under 5 U.S.C. 605(b) that this proposed rule would not have a significant economic impact on a substantial number of small entities.

While some owners or operators of vessels intending to use the anchorage may be small entities, for the reasons stated in section IV.A above, this proposed rule would not have a significant economic impact on any vessel owner or operator. The anchorage area is not a popular or productive fishing location, nor is it frequented by recreational vessels. Typical surface navigation will not be affected as this area has been historically used as an anchorage area for deep draft ships.

If you think that your business, organization, or governmental jurisdiction qualifies as a small entity and that this proposed rule would have a significant economic impact on it, please submit a comment (see **ADDRESSES**) explaining why you think it qualifies and how and to what degree this rule would economically affect it.

Under section 213(a) of the Small Business Regulatory Enforcement Fairness Act of 1996 (Pub. L. 104–121), we want to assist small entities in

understanding this proposed rule. If the proposed rule would affect your small business, organization, or governmental jurisdiction and you have questions concerning its provisions or options for compliance, please call or email the person listed in the **FOR FURTHER INFORMATION CONTACT** section. The Coast Guard will not retaliate against small entities that question or complain about this proposed rule or any policy or action of the Coast Guard.

C. Collection of Information

This proposed rule would not call for a new collection of information under the Paperwork Reduction Act of 1995 (44 U.S.C. 3501–3520).

D. Federalism and Indian Tribal Governments

A rule has implications for federalism under Executive Order 13132 (Federalism), if it has a substantial direct effect on the States, on the relationship between the National Government and the States, or on the distribution of power and responsibilities among the various levels of government. We have analyzed this proposed rule under that Order and have determined that it is consistent with the fundamental federalism principles and preemption requirements described in Executive Order 13132.

Also, this proposed rule does not have tribal implications under Executive Order 13175 (Consultation and Coordination with Indian Tribal Governments) because it would not have a substantial direct effect on one or more Indian tribes, on the relationship between the Federal Government and Indian tribes, or on the distribution of power and responsibilities between the Federal Government and Indian tribes. If you believe this proposed rule has implications for federalism or Indian tribes, please call or email the person listed in the **FOR FURTHER INFORMATION CONTACT** section.

E. Unfunded Mandates Reform Act

The Unfunded Mandates Reform Act of 1995 (2 U.S.C. 1531–1538) requires Federal agencies to assess the effects of their discretionary regulatory actions. In particular, the Act addresses actions that may result in the expenditure by a State, local, or tribal government, in the aggregate, or by the private sector of $100,000,000 (adjusted for inflation) or more in any one year. Though this proposed rule would not result in such an expenditure, we do discuss the potential effects of this proposed rule elsewhere in this preamble.

F. Environment

We have analyzed this proposed rule under Department of Homeland Security Directive 023–01, Rev. 1, associated implementing instructions, and Environmental Planning COMDTINST 5090.1 (series), which guide the Coast Guard in complying with the National Environmental Policy Act of 1969 (42 U.S.C. 4321–4370f), and have made a preliminary determination that this action is one of a category of actions that do not individually or cumulatively have a significant effect on the human environment. This proposed rule involves establishing anchorage regulations for a newly constructed anchorage area. Normally such actions are categorically excluded from further review under paragraph L59(a) of Appendix A, Table 1 of DHS Instruction Manual 023–01–001–01, Rev. 1. A preliminary Record of Environmental Consideration supporting this determination is available in the docket. For instructions on locating the docket, see the **ADDRESSES** section of this preamble. We seek any comments or information that may lead to the discovery of a significant environmental impact from this proposed rule.

V. Public Participation and Request for Comments

We view public participation as essential to effective rulemaking and will consider all comments and material received during the comment period. Your comment can help shape the outcome of this rulemaking. If you submit a comment, please include the docket number for this rulemaking, indicate the specific section of this document to which each comment applies, and provide a reason for each suggestion or recommendation.

Submitting comments. We encourage you to submit comments through the Federal Decision-Making Portal at *https://www.regulations.gov*. To do so, go to *https://www.regulations.gov,* type USCG–2025–0579 in the search box and click ''Search.'' Next, look for this document in the Search Results column, and click on it. Then click on the Comment option. If you cannot submit your material by using *https://www.regulations.gov,* call or email the person in the **FOR FURTHER INFORMATION CONTACT** section of this proposed rule for alternate instructions.

Viewing material in docket. To view documents mentioned in this proposed rule as being available in the docket, find the docket as described in the previous paragraph, and then select ''Supporting & Related Material'' in the Document Type column. Public comments will also be placed in our online docket and can be viewed by following instructions on the *https://www.regulations.gov* Frequently Asked Questions web page. Also, if you click on the Dockets tab and then the proposed rule, you should see a ''Subscribe'' option for email alerts. The option will notify you when comments are posted, or a final rule is published.

We review all comments received, but we will only post comments that address the topic of the proposed rule. We may choose not to post off-topic, inappropriate, or duplicate comments that we receive.

Personal information. We accept anonymous comments. Comments we post to *https://www.regulations.gov* will include any personal information you have provided. For more about privacy and submissions to the docket in response to this document, see DHS's eRulemaking System of Records notice (85 FR 14226, March 11, 2020).

List of Subjects in 33 CFR Part 110

Anchorage grounds.

For the reasons discussed in the preamble, the Coast Guard is proposing to amend 33 CFR part 110 as follows:

PART 110—ANCHORAGE REGULATIONS

■ 1. The authority citation for part 110 continues to read as follows:

Authority: 33 U.S.C. 2071; 46 U.S.C. 70006, 70034; 33 CFR 1.05–1; Department of Homeland Security Delegation No. 00170.1, Revision No. 01.3.

■ 2. Add § 110.198 to subpart B to read as follows:

§ 110.198 Neches River, Port Arthur, TX.

(a) *Anchorage Basin 1.* The waters adjacent to the Neches River encompassed by a line connecting the following points (NAD83):

Latitude	Longitude
29 59′13.885″	093 54′36.971″
29 59′22.667″	093 54′32.087″
29 59′31.530″	093 54′34.034″
29 59′32.525″	093 54′31.358″
29 59′21.325″	093 54′23.455″
29 59′17.148″	093 54′19.485″
29 59′18.391″	093 54′27.317″
29 59′12.547″	093 54′28.540″

(b) *Regulations.* (1) The anchorage grounds described in paragraph (a) of this section are for short duration use by commercial vessels greater than 450-feet in length calling on commercial facilities on the Sabine-Neches Waterway.

(2) Except when stress of weather or adverse tides or currents make sailing

impractical or hazardous, vessels shall not anchor in the anchorage area for periods exceeding 48-hours unless expressly authorized by the Captain of the Port MSU Port Arthur (COTP) to anchor for longer periods.

(3) The anchor(s) of anchored vessels must be placed within the anchorage area so that no portion of the hull or rigging shall at any time extend outside the boundaries of the anchorage area.

(4) Any vessel anchored in this area shall be capable of moving and when ordered to move by the Captain of the Port shall do so with reasonable promptness.

(5) Fixed moorings, piles or stakes, and floats or buoys for marking anchorages or moorings in place are prohibited.

(6) In an emergency the COTP may shift the position of any unattended vessel moored in or near any anchorage.

Dated: July 22, 2025.

David C. Barata,

Rear Admiral, U.S. Coast Guard, Commander, U.S. Coast Guard Heartland (Eighth) District.

BILLING CODE 9110–04–P

DEPARTMENT OF HOMELAND SECURITY

Coast Guard

33 CFR Part 165

[Docket Number USCG–2025–0223]

RIN 1625–AA87

Security Zones; Tampa Bay: Big Bend, Boca Grande, Crystal River, East Bay, Hillsborough Bay, MacDill Air Force Base, Manbirtee Key, Old Port Tampa, Port Manatee, Port Tampa, Port St. Petersburg, Port Sutton and Weedon Island, FL

AGENCY: Coast Guard, DHS.

ACTION: Notice of proposed rulemaking.

SUMMARY: The Coast Guard is proposing to establish a permanent security zone in the vicinity of Seaport Manatee facilities and ship berths. This action is necessary to enhance safety and protect vessels, facilities, and infrastructure from potential threats. We invite your comments on this proposed rulemaking. This proposed rulemaking would allow for controlled access of authorized vessels and facility personnel within the security zone only.

DATES: Comments and related material must be received by the Coast Guard on or before September 3, 2025.

ADDRESSES: You may submit comments identified by docket number USCG–2025–0223 using the Federal Decision-Making Portal at *https://www.regulations.gov.* See the ''Public Participation and Request for Comments'' portion of the **SUPPLEMENTARY INFORMATION** section for further instructions on submitting comments. This notice of proposed rulemaking with its plain-language, 100-word-or-less proposed rule summary will be available in this same docket.

FOR FURTHER INFORMATION CONTACT: If you have questions about this proposed rulemaking, call or email Lieutenant Ryan McNaughton, Sector St. Petersburg, Ports & Waterways Branch Chief, U.S. Coast Guard; telephone (571) 608–7131, email *Ryan.A.McNaughton@uscg.mil.*

SUPPLEMENTARY INFORMATION:

I. Table of Abbreviations

CFR Code of Federal Regulations
DHS Department of Homeland Security
FR Federal Register
NPRM Notice of proposed rulemaking
§ Section
U.S.C. United States Code

II. Background, Purpose, and Legal Basis

In February 2024, Seaport Manatee requested the establishment of a Coast Guard security zone in vicinity of Seaport Manatee facilities and ship berths to bolster protection of the port. The security zone would enhance safety and protect vessels, facilities, and waterfront infrastructure from potential threats. The security zone would prevent unauthorized access, sabotage, and damage to vessels, infrastructure, and human life. Throughout 2024, the Tampa Bay Harbor Safety and Security Committee (TBHSSC), as well as the Area Maritime Security Committee (AMSC), have discussed and are in concurrence that an additional security zone in Port Manatee would enhance Port Safety and Security, aligning with goals of the Area Maritime Safety Plan (AMSP). The purpose of this rulemaking is to ensure the security of protected vessels, facilities and waterfront infrastructure from potential threats in the vicinity of Seaport Manatee. The Coast Guard may issue security zone regulations under authority in 46 U.S.C. 70051 and 70124.

III. Discussion of Proposed Rule

This rule establishes a permanent security zone in the vicinity of Seaport Manatee facilities and ship berths to bolster protection of the port. Entry into this security zone is prohibited unless specifically authorized by COTP or their designated representative. A designated representative is a commissioned, warrant, or petty officer of the U.S. Coast Guard assigned to units under the operational control of the U.S. Coast Guard Sector St. Petersburg. The regulatory text we are proposing appears at the end of this document.

IV. Regulatory Analyses

We developed this proposed rule after considering numerous statutes and Executive orders related to rulemaking. Below we summarize our analysis based on a number of these statutes and Executive orders.

A. Regulatory Planning and Review

Executive Orders 12866 and 13563 direct agencies to assess the costs and benefits of available regulatory alternatives and, if regulation is necessary, to select regulatory approaches that maximize net benefits. Executive Order 13563 emphasizes the importance of quantifying both costs and benefits, of reducing costs, of harmonizing rules, and of promoting flexibility. This NPRM has not been designated a ''significant regulatory action'' under section 3(f) of Executive Order 12866. Accordingly, the NPRM has not been reviewed by the Office of Management and Budget (OMB).

This regulatory action determination is based on the size and location of the security zone. Vessel traffic would be able to safely transit around this security zone which would impact a small, designated area around Seaport Manatee Piers and facility.

B. Impact on Small Entities

The Regulatory Flexibility Act of 1980, 5 U.S.C. 601–612, as amended, requires Federal agencies to consider the potential impact of regulations on small entities during rulemaking. The term ''small entities'' comprises small businesses, not-for-profit organizations that are independently owned and operated and are not dominant in their fields, and governmental jurisdictions with populations of less than 50,000. The Coast Guard certifies under 5 U.S.C. 605(b) that this proposed rule would not have a significant economic impact on a substantial number of small entities.

While some owners or operators of vessels intending to transit the security zone may be small entities, for the reasons stated in section IV.A above, this proposed rule would not have a significant economic impact on any vessel owner or operator.

If you think that your business, organization, or governmental jurisdiction qualifies as a small entity and that this proposed rule would have a significant economic impact on it, please submit a comment (see

ADDRESSES) explaining why you think it qualifies and how and to what degree this rule would economically affect it.

Under section 213(a) of the Small Business Regulatory Enforcement Fairness Act of 1996 (Pub. L. 104–121), we want to assist small entities in understanding this proposed rule. If the proposed rule would affect your small business, organization, or governmental jurisdiction and you have questions concerning its provisions or options for compliance, please call or email the person listed in the **FOR FURTHER INFORMATION CONTACT** section. The Coast Guard will not retaliate against small entities that question or complain about this proposed rule or any policy or action of the Coast Guard.

C. Collection of Information

This proposed rule would not call for a new collection of information under the Paperwork Reduction Act of 1995 (44 U.S.C. 3501–3520).

D. Federalism and Indian Tribal Governments

A rule has implications for federalism under Executive Order 13132 (Federalism), if it has a substantial direct effect on the States, on the relationship between the National Government and the States, or on the distribution of power and responsibilities among the various levels of government. We have analyzed this proposed rule under that Order and have determined that it is consistent with the fundamental federalism principles and preemption requirements described in Executive Order 13132.

Also, this proposed rule does not have tribal implications under Executive Order 13175 (Consultation and Coordination with Indian Tribal Governments) because it would not have a substantial direct effect on one or more Indian tribes, on the relationship between the Federal Government and Indian tribes, or on the distribution of power and responsibilities between the Federal Government and Indian tribes. If you believe this proposed rule has implications for federalism or Indian tribes, please call or email the person listed in the **FOR FURTHER INFORMATION CONTACT** section.

E. Unfunded Mandates Reform Act

The Unfunded Mandates Reform Act of 1995 (2 U.S.C. 1531–1538) requires Federal agencies to assess the effects of their discretionary regulatory actions. In particular, the Act addresses actions that may result in the expenditure by a State, local, or tribal government, in the aggregate, or by the private sector of $100,000,000 (adjusted for inflation) or more in any one year. Though this proposed rule would not result in such an expenditure, we do discuss the potential effects of this proposed rule elsewhere in this preamble.

F. Environment

We have analyzed this proposed rule under Department of Homeland Security Directive 023–01, Rev. 1, associated implementing instructions, and Environmental Planning COMDTINST 5090.1 (series), which guide the Coast Guard in complying with the National Environmental Policy Act of 1969 (42 U.S.C. 4321–4370f), and have made a preliminary determination that this action is one of a category of actions that do not individually or cumulatively have a significant effect on the human environment. This proposed rule involves a permanent security zone that will extend 50 yards from the shore, seawall, and piers around the ship berths at Seaport Manatee. Normally such actions are categorically excluded from further review under paragraph L60(a) of Appendix A, Table 1 of DHS Instruction Manual 023–01–001–01, Rev. 1. A preliminary Record of Environmental Consideration supporting this determination is available in the docket. For instructions on locating the docket, see the **ADDRESSES** section of this preamble. We seek any comments or information that may lead to the discovery of a significant environmental impact from this proposed rule.

V. Public Participation and Request for Comments

We view public participation as essential to effective rulemaking and will consider all comments and material received during the comment period. Your comment can help shape the outcome of this rulemaking. If you submit a comment, please include the docket number for this rulemaking, indicate the specific section of this document to which each comment applies, and provide a reason for each suggestion or recommendation.

Submitting comments. We encourage you to submit comments through the Federal Decision-Making Portal at *https://www.regulations.gov.* To do so, go to *https://www.regulations.gov,* type USCG–2025–0223 in the search box and click ''Search.'' Next, look for this document in the Search Results column, and click on it. Then click on the Comment option. If you cannot submit your material by using *https://www.regulations.gov,* call or email the person in the **FOR FURTHER INFORMATION CONTACT** section of this proposed rule for alternate instructions.

Viewing material in docket. To view documents mentioned in this proposed rule as being available in the docket, find the docket as described in the previous paragraph, and then select ''Supporting & Related Material'' in the Document Type column. Public comments will also be placed in our online docket and can be viewed by following instructions on the *https://www.regulations.gov* Frequently Asked Questions web page.

We review all comments received, but we will only post comments that address the topic of the proposed rule. We may choose not to post off-topic, inappropriate, or duplicate comments that we receive.

Personal information. We accept anonymous comments. Comments we post to *https://www.regulations.gov* will include any personal information you have provided. For more about privacy and submissions to the docket in response to this document, see DHS's eRulemaking System of Records notice (85 FR 14226, March 11, 2020).

List of Subjects in 33 CFR Part 165

Harbors, Marine safety, Navigation (water), Reporting and recordkeeping requirements, Security measures, Waterways.

For the reasons discussed in the preamble, the Coast Guard proposes to amend 33 CFR part 165 as follows:

PART 165—REGULATED NAVIGATION AREAS AND LIMITED ACCESS AREAS

■ 1. The authority citation for part 165 continues to read as follows:

Authority: 46 U.S.C. 70034, 70051, 70124; 33 CFR 1.05–1, 6.04–1, 6.04–6, and 160.5; Department of Homeland Security Delegation No. 00170.1, Revision No. 01.4.

■ 2. Revise § 165.703 to read as follows:

§ 165.703 Security Zones; Tampa Bay: Big Ben, Boca Grande, Crystal River, East Bay, Hillsborough Bay, MacDill Air Force Base, Manbirtee Key, Old Port Tampa, Port Manatee, Port Tampa, Port St. Petersburg, Port Sutton, and Weedon Island, FL.

(a) *Regulated areas.* The following areas, denoted by coordinates fixed using the North American Datum of 1983 (World Geodetic System 1984) are security zones:

(1) *Security zones for facilities and structures—*

(i) *Old Port Tampa, Tampa, FL.* All waters, from surface to bottom, in Old Tampa Bay encompassed within the following points: 27°51.62′ N, 082°33.14′ W; thence to 27°51.71′ N, 082°32.5′ W; thence to 27°51.76′ N, 082°32.5′ W; thence to 27°51.73′ N, 082°33.16′ W; thence to 27°51.62′ N,

082°33.14′ W, closing off the Old Port Tampa Channel.

(ii) *Sunshine Skyway Bridge, FL.* All waters in Tampa Bay, from surface to bottom, in Cut ''A'' channel beneath the bridge's main span encompassed within the following points: 27°37.30′ N, 082°39.38′ W; 27°37.13′ N, 082°39.26′ W; and the bridge structure columns, base and dolphins. This zone is specific to the bridge structure and dolphins and does not include waters adjacent to the bridge columns or dolphins outside of the bridge's main span. Any vessel may transit through this zone but, may not loiter, anchor, or conduct operations, including dredging, dive operation, surveying, or maintenance, unless otherwise directed by the Captain of the Port. Anyone wanting to conduct these operations must submit a request via email to *WWMTampa@uscg.mil* or contact the Sector Command Center after hours at 727.824.7506.

(iii) *Manbirtee Key, Port of Manatee, FL.* All waters, from surface to bottom, surrounding, surrounding Manbirtee Key, Tampa Bay, FL extending 500 yards from the island's shoreline, in all directions, not to include the Port Manatee Channel.

(iv) *MacDill Air Force Base, Tampa Bay, FL.* All waters encompassed within the following coordinates: 27°51.88′ N, 082°29.31′ W; thence to 27°52.01′ N, 082°28.85′ W; thence to 27°51.48′ N, 082°28.17′ W; thence to 27°51.02′ N, 082°27.76′ W; thence to 27°50.72′ N, 082°27.61′ W; thence to 27°50.33′ N, 082°27.59′ W; thence to 27°49.65′ N, 082°27.73′ W; thence to 27°49.34′ N, 082°27.79′ W; thence to 27°49.10′ N, 082°27.88′ W; thence to 27°48.88′ N, 082°28.10′ W; thence to 27°48.76′ N, 082°28.54′ W; thence to 27°48.87′ N, 082°29.44′ W; thence to 27°49.06′ N, 082°30.39′ W; thence to 27°48.75′ N, 082°31.17′ W; thence to 27°49.16′ N, 082°32.41′ W; thence to 27°49.64′ N, 082°33.04′ W; thence to 27°49.95′ N, 082°32.75′ W; thence to 27°50.09′ N, 082°32.81′ W; thence to 27°50.56′ N, 082°32.75′ W; thence to 27°50.71′ N, 082°32.18′ W.

(v) *Piers, seawalls, and facilities, Port of Tampa and Port Sutton, Tampa, FL.* All waters, from surface to bottom, extending 50 yards from the shore, seawall, and piers around facilities in Port Sutton within the Port of Tampa encompassed by a line connecting the following points: 27°54.15′ N, 082°26.06′ W; thence to; 27°54.46′ N, 082°25.71′ W; closing off all Port Sutton Channel.

(vi) *Piers, seawalls, and facilities, Port of Tampa, on the western side of Hooker's Point, Tampa, FL.* All waters, from surface to bottom, extending 50 yards from the shore, seawall, and piers around facilities on Hillsborough Bay northern portion of Cut ''D'' Channel, Sparkman Channel, Ybor Turning Basin, and Ybor Channel within the Port of Tampa encompassed by a line connecting the following points: 27°54.74′ N, 082°26.47′ W; thence to 27°55.25′ N, 082°26.73′ W; thence to 27°55.60′ N, 082°26.80′ W; thence to 27°56.00′ N, 082°26.75′ W; thence to 27°56.58′ N, 082°26.53′ W; thence to 27°57.29′ N, 082°26.51′ W; thence to 27°57.29′ N, 082°26.61′ W; thence to 27°56.65′ N, 082°26.63′ W; thence to 27°56.58′ N, 082°26.69′ W; thence to 27°56.53′ N, 082°26.90′ W.

(vii) *St. Petersburg Harbor, FL.* All waters, from surface to bottom, extending 50 yards from the seawall and around all moorings and vessels in St. Petersburg Harbor (Bayboro Harbor), commencing on the north side of the channel at day beacon ''10'' (LLNR 24995) in approximate position 27°45.56′ N, 082°37.55′ W, and westward along the seawall to the end of the cruise terminal in approximate position 27°45.72′ N, 082°37.97′ W. The zone will also include the Coast Guard south moorings in St. Petersburg Harbor. The zone will extend 50 yards around the piers commencing from approximate position 27°45.51′ N, 082°37.99′ W; to 27°45.52′ N, 082°37.57′ W. The southern boundary of the zone is shoreward of a line between the entrance to Salt Creek easterly towards day beacon ''11'' (LLNR 24990).

(viii) *Crystal River Nuclear Power Plant.* All waters, from surface to bottom, around the FL, Power Crystal River Nuclear Power Plant located at the end of the Florida Power Corporation Channel, Crystal River, Florida, encompassed by a line connecting the following points: 28°56.87′ N, 082°45.17′ W; thence to 28°57.37′ N, 082°41.92′ W; thence to 28°56.79′ N, 082°45.13′ W; thence to 28°57.32′ N, 082°41.92′ W.

(ix) *Crystal River Demory Gap Channel.* All waters, from surface to bottom, in the Demory Gap Channel in Crystal River, Florida, encompassed by the following points: 28°57.61′ N, 082°43.42′ W thence to; 28°57.55′ N, 082°41.88′ W thence to; 28°57.58′ N, 082°43.42′ W thence to; 28°57.51′ N, 082°41.88′ W.

(x) *Big Bend Power Plant, FL.* All waters of Tampa Bay, from surface to bottom, adjacent to the Big Bend Power Facility, and within an area bounded by the following points: 27°48.08′ N, 082°24.88′ W; thence to 27°48.15′ N, 082°24.96′ W; thence to 27°48.10′ N, 082°25.00′ W; thence to 27°47.85′ N, 082°25.03′ W; thence to 27°47.58′ N, 082°24.89′ W; thence to 27°47.58′ N, 082°24.06′ W; thence to 27°47.62′ N, 082°24.04′ W; thence to 27°47.63′ N, 082°24.71′ W; thence to 27°48.03′ N, 082°24.70′ W; thence to 27°48.08′ N, 082°24.88′ W, closing off entrance to Big Bend Power Facility and the attached cooling canal.

(xi) *Weedon Island Power Plant, FL.* All waters of Tampa Bay, from surface to bottom, extending 50 yards from the shore, seawall and piers around the Power Facility at Weedon Island encompassed by the following points: 27°51.52′ N, 082°35.82′ W; thence along the shore to; 27°51.54′ N, 082°35.78′ W; thence to 27°51.89′ N, 082°35.82′ W; thence to 27°51.89′ N, 082°36.14′ W, closing off the entrance to both canals.

(xii) Seaport Manatee, Manatee County, FL. All waters, from surface to bottom, extending 50 yards from the shore, seawall, and piers around facilities in Seaport Manatee encompassed by a line connecting the following points: 27°37.60′ N, 082°33.77′ W; thence to 27°37.60′ N, 082°33.80′ W; thence to 27°38.33′ N, 082°33.79′ W; thence to 27°38.32′ N, 082°33.52′ W.

(2) *Vessel specific security zones—*

(i) Moving security zones for Cruise Ships and vessels carrying Especially Hazardous Cargos. The following security zones and procedures are established for all waters, from surface to bottom, within a 500-yard radius, as outlined below:

(A) For inbound vessels commencing at Egmont Channel Lighted Buoys ''9'' (LLNR 22270) and ''10'' (LLNR 22275) through to berth.

(B) For shifting vessels from their departure berth to destination berth.

(C) For outbound vessels commencing at berth through to Egmont Channel Lighted Buoys ''9'' (LLNR 22270) and ''10'' (LLNR 22275).

(D) All subject vessels operating in the Captain of the Port St. Petersburg Zone shall follow the reporting requirements in 33 CFR part 160, subpart C.

(E) Any vessel desiring to enter or transit the security zone shall obtain permission from the Captain of the Port St. Petersburg or a designated representative. If permission is granted, all persons and vessels must comply with any given instructions.

(ii) Fixed security zones for moored cruise ships and moored vessels carrying especially hazardous cargos. A security zone is established for all waters, from surface to bottom, within a 200-yard radius around moored cruise ships and moored vessels carrying especially hazardous cargos, as outlined below:

(A) All subject vessels operating in the Captain of the Port St. Petersburg Zone shall follow reporting requirements in 33 CFR part 160, subpart C.

(B) Any vessel desiring to enter or transit the security zone shall obtain permission from the Captain of the Port St. Petersburg or a designated representative. If permission is granted, all persons and vessels must comply with any given instructions.

(C) No vessel may loiter, anchor, or conduct maintenance operations within the security zone, unless otherwise directed by the Captain of the Port St. Petersburg or a designated representative. This includes, but is not limited to dredging operations, dive operations, and surveying. Anyone wanting to conduct these operations must submit a request via email to *WWMTampa@uscg.mil* or contact the Sector Command Center after hours at 727.824.7506.

(b) *Definitions.* As used in this section:

Ammonium nitrate means ammonium nitrate and ammonium nitrate based fertilizers listed as Division 5.1 (oxidizing) materials as defined in 33 CFR 172.101 except when carried as CDC residue.

Captain of the Port (COTP) for the purpose of this section means the Commanding Officer of Coast Guard Sector St. Petersburg.

Captain of the Port St. Petersburg Zone as defined in 33 CFR 3.35–35.

Certain dangerous cargo includes *Division 1.5D* blasting agents for which a permit is required under 49 CFR 176.415 or, for which a permit is required as a condition of Research and Special Programs Administration exemption. This includes ammonium nitrate fuel oil mixture.

Commercial vessels means any tank, bulk, container, cargo, cruise ships, pilot vessels, or tugs. This definition excludes fishing vessels, salvage vessels, dead ship tow operations.

Cruise Ship means the same as defined 33 CFR 101.105.

Designated representative means Coast Guard Patrol Commanders including Coast Guard coxswains, petty officers and other officers operating Coast Guard vessels, and Federal, State, and local officers designated by or assisting the COTP, in the enforcement of regulated navigation areas, safety zones, and security zones.

Especially hazardous cargo means anhydrous ammonia, ammonium nitrate, chlorine, liquefied natural gas, liquefied petroleum gas, and any other substance, material, or group or class in a particular amount and form that the Secretary determines by regulation poses a significant risk of creating a transportation security incident while being transported in maritime commerce.

(c) *Regulations.*

(1) Entry into or remaining on or within the zones described in paragraph (a) of this section is prohibited unless authorized by the Captain of the Port St. Petersburg or a designated representative.

(2) Any changes to the requirements for these regulated areas will be given by Broadcast Notice to Mariners on VHF–FM Channel 22A.

Note to § 165.703(c)(2): A graphical representation of all fixed security zones will be made available through nautical charts via the Coast Pilot.

(3) The Captain of Port St. Petersburg has provisions for escorting especially hazardous cargos as described in this subchapter, but reserves the right to establish additional provisions for any potentially hazardous cargos.

(d) *Enforcement.* Under § 165.33, no person may authorize the operation of a vessel in the security zones contrary to the provisions of this section.

(e) *Waivers.* The Captain of the Port St. Petersburg may waive any of the requirements of this subpart for any vessel, facility, or structure upon finding that the vessel or class of vessel, operational conditions, or other circumstances are such that application of this subpart is unnecessary or impractical for purposes of port safety and security or environmental safety.

Dated: July 23, 2025.

Courtney A. Sergent,

Captain, U.S. Coast Guard, Captain of the Port, Sector St. Petersburg.

BILLING CODE 9110–04–P

DEPARTMENT OF VETERANS AFFAIRS

38 CFR Part 17

RIN 2900–AS31

Reproductive Health Services

AGENCY: Department of Veterans Affairs.

ACTION: Proposed rule.

SUMMARY: The Department of Veterans Affairs (VA) is proposing to reinstate the full exclusion on abortions and abortion counseling from the medical benefits package, which was removed in 2022. Before that time, this exclusion had been firmly in place since the medical benefits package was first established in 1999. VA is also proposing to reinstate the exclusions on abortion and abortion counseling for Civilian Health and Medical Program of the Department of Veterans Affairs (CHAMPVA) that were removed in 2022. We take this action to ensure that VA provides only needed medical services to our nation's heroes and their families.

DATES: Comments must be received on or before September 3, 2025.

ADDRESSES: Comments must be submitted through *www.regulations.gov*. Except as provided below, comments received before the close of the comment period will be available at *www.regulations.gov* for public viewing, inspection, or copying, including any personally identifiable or confidential business information that is included in a comment. We post the comments received before the close of the comment period on *www.regulations.gov* as soon as possible after they have been received. VA will not post on *Regulations.gov* public comments that make threats to individuals or institutions or suggest that the commenter will take actions to harm an individual. VA encourages individuals not to submit duplicative comments; however, we will post comments from multiple unique commenters even if the content is identical or nearly identical to other comments. Any public comment received after the comment period's closing date is considered late and will not be considered in the final rulemaking. A plain language summary (not more than 100 words in length) of this rule is available at *www.regulations.gov,* under RIN 2900–AS31.

FOR FURTHER INFORMATION CONTACT: Dr. Steven L. Lieberman, Acting Under Secretary for Health, Department of Veterans Affairs, 810 Vermont Avenue NW, Washington, DC 20420, (202) 461–0373. (This is not a toll-free telephone number.)

SUPPLEMENTARY INFORMATION: Today, VA is proposing to return VA's medical package and CHAMPVA benefits to where they were on September 8, 2022, before VA issued an interim final rule that removed long-standing restrictions against abortions.

From 1999, when VA established the medical benefits package in 17.38 of title 38, Code of Federal Regulations (CFR) until September 8, 2022, VA's ''medical benefits package'' did not authorize abortion services because they were not ''needed'' medical services under section 1710 of title 38 of the United States Code (U.S.C.). For decades, VA had consistently interpreted abortion services as not

''needed'' medical services and therefore not covered by the medical benefits package.[1]

As a matter of law, it is without question that VA has the authority to bar provision of abortion services through the VA medical benefits package to veterans. From 1999 until 2022 that is in fact what VA did. It was not until 2022 when the VA Secretary reversed this course. The stated reason for doing so was a reaction to a Supreme Court decision, *Dobbs* v. *Jackson Women's Health Organization,* 142 S. Ct. 2228 (2022), that itself was intended to *prevent* federal overreach and return to States control over the provision of abortion services. Yet, the last administration used *Dobbs* to do the exact opposite of preventing overreach, creating a purported Federal entitlement to abortion for veterans where none had existed before and without regard to State law. In doing so, the administration predicted a high demand for VA abortions that never materialized.[2]

The regulatory determination that abortion is not a ''needed'' service for veterans was accepted by every Secretary and Presidential administration for over 20 years. The stated basis for determination that abortions were now a needed service was an anticipated rise in demand as a result of the *Dobbs* decision.

But this conclusion contradicted decades of Federal policy against forced taxpayer funding for abortion. Considerations about whether abortion is ''needed'' for purposes of VA-provided services necessarily involves the question of whether taxpayers should pay for abortion. For nearly fifty years, and across a slew of Federal programs, including Medicaid, the Child Health Insurance Program, TriCare, Federal Employee Health Benefits Program, and others, Congress has consistently drawn a bright line between elective abortion and health care services that taxpayers would support.

VA has never understood this policy to prohibit providing care to pregnant women in life-threatening circumstances, including treatment for ectopic pregnancies or miscarriages, which were covered under the VA's medical benefits package prior to the 2022 IFR.[3] For the avoidance of doubt, the proposed rule would make clear that the exclusion for abortion does not apply ''when a physician certifies that the life of the mother would be endangered if the fetus were carried to term.'' This is also consistent with the pre-2022 regulations for the CHAMPVA program.

No State law prohibits treatment for ectopic pregnancies or miscarriages to save the life of a mother.[4]

Taken together, claims in the prior administration's rule that abortions throughout pregnancy are needed to save the lives of pregnant women are incorrect. The lives of pregnant women will continue to be protected without regard for the previous administration's rule. Thus, prior Administrations recognized that lifesaving procedures would still be performed under the medical benefits package, and this was explicit in the prior versions of the CHAMPVA regulation.

We now turn to address VA's legal authority in more depth.

VA's exclusion against abortion was legally established in 1999 and existed until the 2022 revisions. Under 38 U.S.C. 1710(a)(1) through (3), VA is authorized to furnish hospital care and medical services that the Secretary determines to be needed. VA implements this general treatment authority and the Secretary determines what care is needed by regulation through VA's medical benefits package. See 64 **Federal Register** (FR) 54207, 54217 (October 6, 1999); 38 CFR 17.38. Prior to September 9, 2022, abortions and abortion counseling were excluded from the medical benefits package, with no exceptions. 87 FR 55288 (September 9, 2022).

We believe the 2022 interim final rule was not only inappropriate as a matter of fact but also was legally questionable. The only time Congress has specifically addressed VA's authority to provide abortions was in 1992 in section 106 of the Veterans Health Care Act of 1992 (VHCA), Public Law 102–585, which authorized VA to provide under chapter 17 of title 38, U.S.C., ''[p]apanicolaou tests (pap smears),'' ''[b]reast examinations and mammography,'' and ''[g]eneral reproductive health care'' but excluded ''under this section infertility services, abortions, or pregnancy care (including prenatal and delivery care), except for such care relating to a pregnancy that is complicated or in which the risks of complication are increased by a service-connected condition.''

In 1996, Congress extensively revised Chapter 17. The specific statute, 38 U.S.C. 1710, was changed to cover eligibility for hospital care and medical services, whereas in 1992 it had solely covered hospital and nursing home care. While it is possible that Congress intended the 1992 restriction to continue to apply after the dramatic revisions of 1996, it is also possible to conclude that Congress' intent in 1996 was to provide a new, full, and expansive set of laws governing authorization for VA care.

While the wholesale revision of Chapter 17 in 1996 and the specific limitations of section 106 may limit the continued force and effect of section 106 (as VA argued in 2022, see 87 FR 55289), we need not reach that decision today as our actions fully comply with its abortion exclusion. We discuss these competing legal provisions only to demonstrate that VA's authority to provide abortions is, at least, dubious and, at most, nonexistent. Our decision to restore VA's medical benefits package to its pre-2022 state is consistent with VA's decades-long interpretation of the law, the reversal of which served only to unnecessarily redefine VA's medical benefits package based on politics instead of science. This proposed rule restores VA to its proper role as the United States' provider of needed medical services to those who served, delivered on behalf of a grateful nation.

We now turn to the CHAMPVA health benefits program, which provides medical care to eligible spouses, children, survivors, and caregivers of veterans. Prior to September 9, 2022, CHAMPVA coverage excluded abortions except when a physician certified that the abortion was performed because the life of the mother would be endangered if the fetus were carried to term. These exclusions were previously codified in 38 CFR 17.272(a)(64) and (65). On September 9, 2022, as part of the IFR discussed above that amended VA's

[1] The medical benefits package was established in 1999 based on the comprehensive Veterans Benefits Act of 1997, which established, inter alia, 38 U.S.C. 1710. Until 2022, VA had never interpreted its authority under the 1999 extensive revisions to title 38 as allowing abortions.

[2] As part of the September 9, 2022 IFR and March 4, 2024 final rule, VA estimated that VA would provide abortions to more than 1,000 veterans and CHAMPVA beneficiaries per year. See Regulatory Impact Analysis for Interim Final Rule (2900–AR57) published September 9, 2022, and Final Rule (2900–AR57) published March 4, 2024. *Regulations.gov. https://www.regulations.gov* (last visited July 14, 2025). However, the average number of veterans who receive abortions from VA is 100 per year, and the average number of CHAMPVA beneficiaries who receive abortions from VA is 40 per year, which are significantly lower than the more than 1,000 per year VA previously projected. See the Regulatory Impact Analysis for this proposed rule. *Regulations.gov. https://www.regulations.gov.*

[3] Maternity Health Care and Coordination, VHA Directive 1330.03 (November 3, 2020) available at *https://www.va.gov/vhapublications/ViewPublication.asp?pub_ID=9095.* See also Secretary Denis McDonough, Press Conference, (July 20, 2022), available at *https://www.youtube.com/watch?v=UpFKk5NFhF0* at 52:00:000.

[4] *https://www.justia.com/constitutional-law/50-state-survey-on-abortion-laws/.*

medical benefits package, VA amended the exclusion on abortion and abortion counseling for CHAMPVA to include the rape, incest, and health of the mother exceptions that VA also then authorized under its medical benefits package. In addition, the IFR authorized abortion counseling under CHAMPVA.

VA now proposes to restore the pre-September 9, 2022, abortion restrictions within the CHAMPVA program, just as we are proposing to restore the long-standing restrictions to the medical benefits package.

Under 38 U.S.C. 1781(a), CHAMPVA benefits are provided ''in the same or similar manner and subject to the same or similar limitations as medical care is'' provided by the Department of Defense through its TRICARE (Select) program. 87 FR 55290; 89 FR 15459; 38 U.S.C. 1781(b); *see* 32 CFR 199.1(r), 199.17(a)(6)(ii)(D). VA has established its own specific coverage for CHAMPVA that is similar, but not identical, to TRICARE. See 38 CFR 17.270(b) (defining CHAMPVA-covered services and supplies) and 17.272 (setting forth benefits limitations and exclusions). VA has consistently maintained that ''similar'' does not mean ''identical''. 87 FR 55291; 89 FR 15459. Moreover, the medical care provided under CHAMPVA would be consistent with the care that was provided to CHAMPVA beneficiaries prior to the September 9, 2022, IFR, which VA had long understood and interpreted to be the same or similar care as the care provided under TRICARE (Select).

VA's regulations for CHAMPVA coverage allow medical services that are medically necessary and appropriate for the treatment of a condition and that are not specifically excluded. 38 CFR 17.270(b). This language, while not identical to the ''needed'' requirement for veteran coverage under VA's medical benefits package, is not different in any meaningful way. In short, abortion is not a ''needed'' VA service for the same reasons that it is not ''medically necessary and appropriate for the treatment of a condition'' under CHAMPVA. The changes made by the September 2022 IFR to the CHAMPVA regulation were not medically necessary or appropriate pursuant to 38 U.S.C. 1781(a) and 38 CFR 17.270(b) and must be undone.

VA's legal authority to ''un-do'' the changes made in September 2022 is beyond doubt. This proposal will restore VA's medical benefits package and the CHAMPVA program to their proper, long-standing positions.

Executive Orders 12866, 13563, and 14192

Executive Order 12866 (Regulatory Planning and Review) directs agencies to assess the costs and benefits of available regulatory alternatives and, when regulation is necessary, to select regulatory approaches that maximize net benefits (including potential economic, environmental, public health and safety effects, and other advantages). Executive Order 13563 (Improving Regulation and Regulatory Review) emphasizes the importance of quantifying both costs and benefits, reducing costs, harmonizing rules, and promoting flexibility. Executive Order 14192 (Unleashing Prosperity Through Deregulation) promotes prudent financial management and alleviates unnecessary regulatory burdens. The Office of Information and Regulatory Affairs has determined that this rulemaking would be a significant regulatory action under Executive Order 12866 and would be a regulatory action under Executive Order 14192. The Regulatory Impact Analysis associated with this rulemaking can be found as a supporting document at *www.regulations.gov*.

Regulatory Flexibility Act (RFA)

The Secretary hereby certifies that this proposed rule would not have a significant economic impact on a substantial number of small entities as they are defined in the Regulatory Flexibility Act (5 U.S.C. 601–612). This proposed rule would only impact veterans and CHAMPVA beneficiaries, who are not small entities. Therefore, pursuant to 5 U.S.C. 605(b), the initial and final regulatory flexibility analysis requirements of 5 U.S.C. 603 and 604 do not apply.

Unfunded Mandates

The Unfunded Mandates Reform Act of 1995 requires, at 2 U.S.C. 1532, that agencies prepare an assessment of anticipated costs and benefits before issuing any rule that may result in the expenditure by State, local, and tribal governments, in the aggregate, or by the private sector, of $100 million or more (adjusted annually for inflation) in any one year. This proposed rule would have no such effect on State, local, and tribal governments, or on the private sector.

Paperwork Reduction Act (PRA)

This proposed rule contains no provisions constituting a collection of information under the Paperwork Reduction Act of 1995 (44 U.S.C. 3501–3521).

List of Subjects in 38 CFR Part 17

Administrative practice and procedure, Claims, Health care, Health facilities, Health professions, Health records, Medical devices, Medical research, Mental health programs, Veterans.

Signing Authority

Douglas A. Collins, Secretary of Veterans Affairs, approved this document on July 24, 2025, and authorized the undersigned to sign and submit the document to the Office of the Federal Register for publication electronically as an official document of the Department of Veterans Affairs.

Jennifer Williams,

Alternate Federal Register Liaison Officer, Department of Veterans Affairs.

For the reasons stated in the preamble, the Department of Veterans Affairs proposes to amend 38 CFR part 17 as set forth below:

PART 17—MEDICAL

■ 1. The authority citation for part 17 continues to read as follows:

Authority: 38 U.S.C. 501, and as noted in specific sections.

■ 2. Amend § 17.38 by revising paragraph (c)(1) and removing paragraphs (c)(1)(i) and (ii) to read as follows:

§ 17.38 Medical Benefits Package.

* * * * *

(c) * * *

(1) Abortions and abortion counseling.

* * * * *

■ 3. Amend § 17.272 by:

■ a. Revising paragraph (a)(58).

■ b. Removing paragraphs (a)(58)(i) and (ii).

■ c. Adding paragraph (a)(78).

The revision and addition read as follows:

§ 17.272 Benefits limitations/exclusions.

* * * * *

(a) * * *

(58) Abortions, except when a physician certifies that the life of the mother would be endangered if the fetus were carried to term.

* * * * *

(78) Abortion counseling.

* * * * *

Notices

Federal Register
Vol. 90, No. 147
Monday, August 4, 2025

This section of the FEDERAL REGISTER contains documents other than rules or proposed rules that are applicable to the public. Notices of hearings and investigations, committee meetings, agency decisions and rulings, delegations of authority, filing of petitions and applications and agency statements of organization and functions are examples of documents appearing in this section.

DEPARTMENT OF AGRICULTURE

Submission for OMB Review; Comment Request

The Department of Agriculture has submitted the following information collection requirement(s) to OMB for review and clearance under the Paperwork Reduction Act of 1995, Public Law 104–13. Comments are required regarding; whether the collection of information is necessary for the proper performance of the functions of the agency, including whether the information will have practical utility; the accuracy of the agency's estimate of burden including the validity of the methodology and assumptions used; ways to enhance the quality, utility and clarity of the information to be collected; and ways to minimize the burden of the collection of information on those who are to respond, including through the use of appropriate automated, electronic, mechanical, or other technological collection techniques or other forms of information technology.

Comments regarding this information collection received by September 3, 2025 will be considered. Written comments and recommendations for the proposed information collection should be submitted within 30 days of the publication of this notice on the following website *www.reginfo.gov/public/do/PRAMain.* Find this particular information collection by selecting ''Currently under 30-day Review—Open for Public Comments'' or by using the search function.

An agency may not conduct or sponsor a collection of information unless the collection of information displays a currently valid OMB control number and the agency informs potential persons who are to respond to the collection of information that such persons are not required to respond to the collection of information unless it displays a currently valid OMB control number.

Farm Service Agency

Title: Agricultural Foreign Investment Disclosure Act Report.

OMB Control Number: 0560–0097.

Summary of Collection: The Agricultural Foreign Investment Disclosure Act of 1978 (AFIDA) requires foreign persons to report in a timely manner all held, acquired, or transferred United States agricultural land under penalty of law to the U.S. Department of Agriculture (7 U.S.C. 3501–3508 or Pub. L. 95–460). Collection of AFIDA information was delegated by the Secretary of Agriculture to the Farm Service Agency (FSA). Foreign investors may obtain the FSA–153 form from their local FSA county office or from the FSA internet site to complete the AFIDA Report.

USDA published a 60 day FRN at 90 FR 23026 on May 30, 2025, the agency indicated plans to add new information collection data elements and deploy an electronic web-based FSA 153; however, at this time the agency plan is to deploy the electronic web-based FSA 153 using only the existing information collection.

To the extent USDA plans to move forward with new data elements for this information collection, the agency will seek public notice and comment on any of those new information collection data elements and publish notices in the **Federal Register** accordingly.

Need and Use of the Information: The AFIDA regulation (7 CFR part 781.1–5) requires foreign investors who buy, sell, or hold a direct or indirect interest in U.S. agricultural land to report their holdings and transactions to FSA. The information collected from AFIDA Reports are used in the preparation of an annual report to Congress.

Description of Respondents: Foreign persons as defined in the AFIDA regulation.

Number of Respondents: 4,350.

Frequency of Responses: When foreign purchases or sales of U.S. agricultural land occur, and when changes occur in the foreign person's address, their representative, their citizenship status, or the use of the land.

Total Burden Hours: 2,088.

Rachelle Ragland-Greene,
Departmental Information Collection Clearance Officer.

BILLING CODE 3410–05–P

COMMISSION ON CIVIL RIGHTS

Notice of Public Meeting of the Michigan Advisory Committee to the U.S. Commission on Civil Rights

AGENCY: U.S. Commission on Civil Rights.

ACTION: Notice of public meeting.

SUMMARY: Notice is hereby given, pursuant to the provisions of the rules and regulations of the U.S. Commission on Civil Rights (Commission) and the Federal Advisory Committee Act, that the Michigan Advisory Committee (Committee) to the U.S. Commission on Civil Rights will hold a public business meeting via Zoom. The purpose of the meeting is to continue discussing and potentially voting on the unit policy and procedural rules document, and to begin discussing potential civil rights topics for study.

DATES: Friday, August 22, 2025, from 12:00 p.m.–1:00 p.m. Eastern Time

ADDRESSES: The meeting will be held via Zoom Webinar.

Registration Link (Audio/Visual): https://www.zoomgov.com/webinar/register/WN_saPIFVn5TOixXEG32LdC3w.

Join by Phone (Audio Only): (833) 435–1820 (USA Toll-Free); Webinar ID: 161 249 1593.

FOR FURTHER INFORMATION CONTACT: Mallory Trachtenberg, Designated Federal Officer, at *mtrachtenberg@usccr.gov* or (202) 809–9618.

SUPPLEMENTARY INFORMATION: This committee meeting is available to the public through the registration link above. Any interested members of the public may listen to the meeting. An open comment period will be provided to allow members of the public to make oral comments as time allows. Per the Federal Advisory Committee Act, public minutes of the meeting will include a list of persons who are present at the meeting. If joining via phone, callers can expect to incur regular charges for calls they initiate over wireless lines,

according to their wireless plan. The Commission will not refund any incurred charges. Callers will incur no charge for calls they initiate over land-line connections to the toll-free telephone number. Closed captioning is available by selecting ''CC'' in the meeting platform. To request additional accommodations, please email Sarah Villanueva, Support Specialist, at *svillanueva@usccr.gov* at least 10 business days prior to the meeting.

Members of the public are entitled to submit written comments; the comments must be received in the regional office within 30 days following the meeting. Written comments may be emailed to *svillanueva@usccr.gov*. Persons who desire additional information may contact the Regional Programs Coordination Unit at (202) 809–9618.

Records generated from this meeting may be inspected and reproduced at the Regional Programs Coordination Unit Office, as they become available, both before and after the meeting. Records of the meetings will be available via the file sharing website, *https://bit.ly/43f9RaP*. Persons interested in the work of this Committee are directed to the Commission's website, *http://www.usccr.gov,* or may contact the Regional Programs Coordination Unit at the above phone number.

BILLING CODE P

COMMISSION ON CIVIL RIGHTS

Notice of Public Meeting of the Louisiana Advisory Committee to the U.S. Commission on Civil Rights

AGENCY: U.S. Commission on Civil Rights.

ACTION: Announcement of virtual meeting.

SUMMARY: Notice is hereby given, pursuant to the provisions of the rules and regulations of the U.S. Commission on Civil Rights (Commission) and the Federal Advisory Committee Act, that the Louisiana Advisory Committee (Committee) to the U.S. Commission on Civil Rights will hold a public business meeting via Zoom on Thursday, August 21, 2025 from 10:00 a.m.–11:00 a.m. Central Time. The purpose of the meeting is for SAC members to review and discuss panels for their future briefing meetings regarding involuntary mental health commitments in Louisiana.

DATES: Thursday, August 21, 2025, from 10:00 a.m.–11:00 a.m. Central Time.

ADDRESSES: The meeting will be held via Zoom.

August 21st Business Meeting:

—*Registration Link: https://www.zoomgov.com/j/1607740234*
—Join by Phone (Audio Only) 1–833–435–1820 USA Toll Free: Meeting ID: 160 774 0234

FOR FURTHER INFORMATION CONTACT: Mallory Trachtenberg, Designated Federal Officer, at *mtrachtenberg@usccr.gov* or 1–202–809–9618.

SUPPLEMENTARY INFORMATION: This committee meeting is available to the public through the registration link above. Any interested member of the public may listen to the meeting. An open comment period will be provided to allow members of the public to make a statement as time allows. Per the Federal Advisory Committee Act, public minutes of the meeting will include a list of persons who are present at the meeting. If joining via phone, callers can expect to incur regular charges for calls they initiate over wireless lines, according to their wireless plan. The Commission will not refund any incurred charges. Callers will incur no charge for calls they initiate over land-line connections to the toll-free telephone number. Closed captioning will be available. To request additional accommodations, please email Corrine Sanders, Support Specialist, at *csanders@usccr.gov* at least 10 business days prior to the meeting.

Members of the public are entitled to submit written comments; the comments must be received in the regional office within 30 days following the meeting. Written comments may be emailed to Mallory Trachtenberg, *mtrachtenberg@usccr.gov*. Persons who desire additional information may contact the Regional Programs Coordination Unit at (202) 809–9618.

Records of the meetings will be available via *www.facadatabase.gov* under the Commission on Civil Rights, Louisiana Advisory Committee link. Persons interested in the work of this Committee are directed to the Commission's website, *http://www.usccr.gov,* or may contact the Regional Programs Coordination Unit at *mtrachtenberg@usccr.gov*.

Carbon and Alloy Steel Wire Rod From the Republic of Korea: Preliminary Results of Antidumping Duty Administrative Review; 2023–2024

AGENCY: Enforcement and Compliance, International Trade Administration, Department of Commerce.

SUMMARY: The U.S. Department of Commerce (Commerce) preliminarily finds that POSCO and POSCO International Corporation (PIC) (collectively, POSCO), a producer and exporter of carbon and alloy steel wire rod (wire rod) from the Republic of Korea (Korea), sold subject merchandise in the United States at prices below normal value during the period of review (POR) May 1, 2023, through April 30, 2024. We invite all interested parties to comment on these preliminary results.

DATES: Applicable August 4, 2025.

FOR FURTHER INFORMATION CONTACT: Lingjun Wang, AD/CVD Operations, Office VII, Enforcement and Compliance, International Trade Administration, U.S. Department of Commerce, 1401 Constitution Avenue NW, Washington, DC 20230; telephone: (202) 482–2316.

SUPPLEMENTARY INFORMATION:

Background

On May 21, 2018, Commerce published in the **Federal Register** the antidumping duty order on wire rod from Korea.[1] On April 8, 2019, Commerce revoked, in part, the *Order* with respect to grade 1078 and higher tire cord quality wire rod used in the production of tire cord wire.[2] On June 13, 2019, Commerce revoked, in part, the *Order* with respect to valve spring quality (VSQ) wire rod.[3] On July 5, 2024, in accordance with 19 CFR 351.221(c)(1)(i), we initiated this review identifying POSCO as the sole producer and exporter subject to this review.[4] On July 22 and December 9, 2024, Commerce tolled the deadlines in this administrative proceeding by seven days and 90 days, respectively.[5] On May 5 and June 23, 2025, Commerce extended the deadline for these preliminary results.[6] The deadline to issue these preliminary results is now August 1, 2025. For a detailed description of the events that followed the initiation of this review, *see* the Preliminary Decision Memorandum.[7]

Commerce is conducting this administrative review in accordance with section 751(a)(1)(B) of Tariff Act of 1930, as amended (the Act).

Scope of the Order

The scope of the *Order* includes certain hot-rolled products of carbon steel and alloy steel, in coils, of approximately round cross section, less than 19.00 mm in actual solid cross-sectional diameter. For a complete description of the scope of the *Order, see* the Preliminary Decision Memorandum.[8]

Methodology

Commerce is conducting this review in accordance with section 751(a) of the Act. Constructed export prices are calculated in accordance with section 772 of the Act. Normal value is calculated in accordance with section 773 of the Act.

For a full description of the methodology underlying our conclusions, *see* the Preliminary Decision Memorandum. A list of topics discussed in the Preliminary Decision Memorandum is attached as an appendix to this notice. The Preliminary Decision Memorandum is a public document and is on file electronically via Enforcement and Compliance's Antidumping and Countervailing Duty Centralized Electronic Service System (ACCESS). ACCESS is available to registered users at *https://access.trade.gov.* In addition, the Preliminary Decision Memorandum can be accessed directly at *https://access.trade.gov/public/FRNoticesListLayout.aspx.*

Preliminary Results of Review

We preliminarily determine the following estimated weighted-average dumping margin exists for the period May 1, 2023, through April 30, 2024:

Producer/exporter	Weighted-average dumping margin (percent)
POSCO/POSCO International Corporation[9]	0.51

Disclosure

Commerce intends to disclose its calculations and analysis performed to interested parties for these preliminary results within five days of any public announcement or, if there is no public announcement, within five days of the date of publication of this notice in accordance with 19 CFR 351.224(b).

Public Comment

Case briefs or other written comments may be submitted to the Assistant Secretary for Enforcement and Compliance. Pursuant to 19 CFR 351.309(c)(1)(ii), we have modified the deadline for interested parties to submit case briefs to Commerce to no later than 21 days after the date of the publication of this notice. Rebuttal briefs, limited to issues raised in the case briefs, may be filed not later than five days after the date for filing case briefs.[10] Interested parties who submit case or rebuttal briefs in this proceeding must submit: (1) a table of contents listing each issue; and (2) a table of authorities.[11]

As provided under 19 CFR 351.309(c)(2) and (d)(2), in prior proceedings we have encouraged interested parties to provide an executive summary of their brief that should be limited to five pages total, including footnotes. In this administrative review, we instead request that interested parties provide at the beginning of their briefs a public, executive summary for each issue raised in their briefs.[12] Further, we request that interested parties limit their public executive summary of each issue to no more than 450 words, not including citations. We intend to use the public executive summaries as the basis of the comment summaries included in the issues and decision memorandum that will accompany the final results in this administrative review. We request that interested parties include footnotes for relevant citations in the public executive summary of each issue. Note

[5] *See* Memoranda, ''Tolling of Deadlines for Antidumping and Countervailing Duty Proceedings,'' dated July 22, 2024, and ''Tolling of Deadlines for Antidumping and Countervailing Duty Proceedings,'' dated December 9, 2024.

[6] *See* Memoranda, ''Extension of Deadline for Preliminary Results of Antidumping Duty Administrative Review,'' dated May 5, 2025, and ''Second Extension of Deadline for Preliminary Results of Antidumping Duty Administrative Review; 2023–2024,'' dated June 23, 2025.

[7] *See* Memorandum, ''Decision Memorandum for the Preliminary Results of the Antidumping Duty Administrative Review of Carbon and Alloy Steel Wire Rod from the Republic of Korea; 2023–2024,'' dated concurrently with, and hereby adopted by, this notice (Preliminary Decision Memorandum).

[8] *Id.*

[9] In the 2020–2021 administrative review of the *Order,* we found that POSCO and POSCO International Corporation (PIC) are affiliated and should be treated as a single entity. *See Carbon and Alloy Steel Wire Rod from the Republic of Korea: Preliminary Results of Antidumping Duty Administrative Review; 2020–2021,* 87 FR 33468 (June 2, 2022), and accompanying Preliminary Decision Memorandum, at 5–10, unchanged in *Carbon and Alloy Steel Wire Rod from the Republic of Korea: Final Results of Antidumping Duty Administrative Review; 2020–2021* (October 4, 2022). In the absence of information demonstrating any changes, we are continuing to treat POSCO and PIC as a single entity for purpose of this administrative review.

[10] *See* 19 CFR 351.309(d); *see also Administrative Protective Order, Service, and Other Procedures in Antidumping and Countervailing Duty Proceedings,* 88 FR 67069, 67077 (September 29, 2023) (*APO and Service Procedures*).

[11] *See* 19 CFR 351.309(c)(2) and (d)(2).

[12] We use the term ''issue'' here to describe an argument that Commerce would normally address in a comment of the Issues and Decision Memorandum.

that Commerce has amended certain of its requirements pertaining to the service of documents in 19 CFR 351.303(f).[13]

Pursuant to 19 CFR 351.310(c), interested parties who wish to request a hearing must submit a written request to the Assistant Secretary for Enforcement and Compliance, filed electronically via ACCESS. An electronically filed document must be received successfully in its entirety via ACCESS by 5:00 p.m. Eastern Time within 30 days after the date of publication of this notice.[14] Requests should contain: (1) the party's name, address, and telephone number; (2) the number of participants; and (3) a list of issues to be discussed. Issues raised in the hearing will be limited to those raised in the respective case briefs. Commerce intends to issue the final results of this administrative review, including the results of its analysis of the issues raised in any written briefs, not later than 120 days after the date of publication of these preliminary results in the **Federal Register**, pursuant to section 751(a)(3)(A) of the Act, unless extended.

Assessment Rate

Upon issuance of the final results, Commerce shall determine, and U.S. Customs and Border Protection (CBP) shall assess, antidumping duties on all appropriate entries covered by this review.[15] The final results of this review shall be the basis for the assessment of antidumping duties on entries of merchandise covered by this review and for future deposits of estimated duties, where applicable.[16] Commerce intends to issue assessment instructions to CBP no earlier than 35 days after the date of publication of the final results of this review in the **Federal Register**. If a timely summons is filed at the U.S. Court of International Trade, the assessment instructions will direct CBP not to liquidate relevant entries until the time for parties to file a request for a statutory injunction has expired (*i.e.,* within 90 days of publication).

Pursuant to 19 CFR 351.212(b)(1), if POSCO's weighted-average dumping margin is not zero or *de minimis* (*i.e.,* less than 0.5 percent) in the final results of this review, we will calculate an importer-specific *ad valorem* duty assessment rate based on the ratio of the total amount of dumping calculated for the U.S. sales for a given importer to the total entered value of those sales. If, in the final results, either POSCO's weighted-average dumping margin is zero or *de minimis* within the meaning of 19 CFR 351.106(c)(1), or an importer-specific assessment rate is zero or *de minimis,* we will instruct CBP to liquidate the appropriate entries without regard to antidumping duties.

For entries of subject merchandise during the POR produced by POSCO for which it did not know that its merchandise was destined for the United States, we will instruct CBP to liquidate such unreviewed entries pursuant to the reseller policy,[17] *i.e.,* the assessment rate for such entries will be equal to the all-others rate established in the investigation (*i.e.,* 41.10 percent), if there is no rate for the intermediate company(ies) involved in the transaction.

Cash Deposit Requirements

The following deposit requirements will be effective for all shipments of the subject merchandise entered, or withdrawn from warehouse, for consumption on or after the publication date of the final results of this administrative review, as provided by section 751(a)(2)(C) of the Act: (1) the cash deposit rate for POSCO will be equal to POSCO's weighted-average dumping margin established in the final results of this review, except if the rate is less than 0.50 percent, and, therefore, *de minimis* within the meaning of 19 CFR 351.106(c)(1), in which case the cash deposit rate will be zero; (2) for previously investigated companies not participating in this review, the cash deposit will continue to be the company-specific rate published for the most recently completed segment of this proceeding in which the company participated; (3) if the exporter is not a firm covered in this review, or the underlying investigation, but the producer is, then the cash deposit rate will be the rate established for the completed segment for the most recent POR for the producer of the merchandise; and (4) the cash deposit rate for all other producers or exporters will continue to be 41.10 percent, the all-others rate established in the underlying investigation.[18] These deposit requirements, when imposed, shall remain in effect until further notice.

Notification to Importers

This notice also serves as a preliminary reminder to importers of their responsibility under 19 CFR 351.402(f) to file a certificate regarding the reimbursement of antidumping duties prior to liquidation of the relevant entries during this review period. Failure to comply with this requirement could result in Commerce's presumption that reimbursement of antidumping duties occurred and the subsequent assessment of double antidumping duties.

Notification to Interested Parties

We are issuing and publishing these results in accordance with sections 751(a)(1) and 777(i)(1) of the Act and 19 CFR 351.221(b)(4).

Dated: July 29, 2025.

Christopher Abbott,

Deputy Assistant Secretary for Policy and Negotiations, performing the non-exclusive functions and duties of the Assistant Secretary for Enforcement and Compliance.

DEPARTMENT OF COMMERCE

International Trade Administration

[A–201–830]

Carbon and Certain Alloy Steel Wire Rod From Mexico: Final Results and Partial Rescission of the Antidumping Duty Administrative Review; 2022–2023

AGENCY: Enforcement and Compliance, International Trade Administration, Department of Commerce.

SUMMARY: The U.S. Department of Commerce (Commerce) determines that producers/exporters subject to this review made sales of subject merchandise at less than normal value (NV) during the period of review (POR) October 1, 2022, through September 30, 2023.

DATES: Applicable August 4, 2025.

FOR FURTHER INFORMATION CONTACT: Laurel LaCivita or Matthew Palmer, AD/CVD Operations, Office III, Enforcement and Compliance, International Trade Administration, U.S. Department of Commerce, 1401 Constitution Avenue NW, Washington, DC 20230; telephone: (202) 482–2352 or (202) 482–1678, respectively.

SUPPLEMENTARY INFORMATION:

Background

On November 14, 2024, Commerce published the *Preliminary Results* for this administrative review in the **Federal Register** and invited interested parties to comment.[1] This review covers two mandatory respondents selected for individual examination, Deacero S.A.P.I de C.V. (Deacero) and TA 2000 S.A. de C.V. (TA 2000).

On December 16, 2024, we received a case brief from Deacero,[2] and, subsequently, on December 23, 2024, we received a rebuttal brief from Nucor Corporation and Commercial Metal Company (collectively, Nucor/CMC).[3]

On July 18, 2025, Commerce issued a post-preliminary analysis regarding changes to its differential pricing analysis and established a briefing schedule solely for arguments related to Commerce's new methodology.[4] We did not receive any comments from interested parties.

A complete summary of the events that occurred since publication of the *Preliminary Results* is found in the Issues and Decision Memorandum.[5] Commerce conducted this review in accordance with section 751(a) of the Tariff Act of 1930, as amended (the Act).

Final Successor-in-Interest Determination

Pursuant to section 751(b)(1) of the Act and 19 CFR 351.216(d), when Commerce receives information concerning, or a request from an interested party for a review of, an order which shows changed circumstances sufficient to warrant a review of such order after publishing notice of the review in the **Federal Register**, Commerce shall conduct a review of the determination based on those changed circumstances. While successor-in-interest determinations are often made in the context of distinct changed circumstance reviews (CCRs) to consider the applicability of cash deposit rates after there have been changes in the name or the structure of a respondent, such as a merger or spinoff (successor-in-interest, or successorship, determinations), Commerce has also made successor-in-interest determinations in the context of administrative reviews and investigations.[6]

In this review, TA 2000 identified that it was formerly named Talleres y Aceros S.A. de C.V. (Talleres y Aceros) and made a legal name change through a merger in which TA 2000 S.A. de C.V. became the revised name of the legal entity and provided information necessary to evaluate the statements in support of the successorship claim within the context of Commerce's established criteria.[7] In the *Preliminary Results,* Commerce found that, based on the totality of the circumstances and in the absence of any contradictory information on the record, TA 2000 is the successor-in-interest to Talleres y Aceros, as the change in the company's name was not accompanied by significant changes to its management and operations, production facilities, supplier relationships, and/or customer base.[8] Thus, we preliminarily concluded that TA 2000 operates as essentially the same business entity as Talleres y Aceros, that TA 2000 is the successor-in-interest to Talleres y Aceros, and that TA 2000 should receive the same antidumping duty (AD) cash deposit rate and customs number as its predecessor, with respect to subject merchandise.[9]

No party commented on this determination, and Commerce received no subsequent information or argument to compel reconsideration thereof; therefore, we continue to find TA 2000 to be the successor-in-interest to Talleres y Aceros, and that TA 2000 should receive the same AD cash deposit rate and customs number as its predecessor.

Scope of the Order [10]

The merchandise subject to the *Order* is certain hot-rolled products of carbon steel and alloy steel, in coils, of approximately round cross section, 5.00 mm or more, but less than 19.00 mm, in solid cross-sectional diameter.

For the full text of the scope of the *Order, see* the Issues and Decision Memorandum.

Analysis of the Comments Received

All issues raised in the case and rebuttal briefs that were submitted by interested parties are addressed in the Issues and Decision Memorandum. A list of the issues which parties raised, and to which we respond in the Issues and Decision Memorandum, is attached in the appendix to this notice. The Issues and Decision Memorandum is a public document and is on file electronically via Enforcement and Compliance's Antidumping and Countervailing Duty Centralized Electronic System (ACCESS). ACCESS is available to registered users at *https://access.trade.gov.* In addition, the Issues and Decision Memorandum can be accessed directly at *https://access.trade.gov/public/FRNoticesListLayout.aspx.*

Changes Since the Preliminary Results

Based on a review of the record and analysis of the comments received from interested parties regarding our *Preliminary Results,* we made changes to the preliminary weighted-average dumping margins calculated for Deacero. For detailed information, *see* the Issues and Decision Memorandum.

Final Results of Review

Commerce determines the following estimated weighted-average dumping margins exist for the period October 1, 2022, through September 30, 2023:

Exporter/producer	Weighted-average dumping margin (percent)
Deacero S.A.P.I. de C.V	13.45
TA 2000 S.A. de C.V	18.09

Disclosure

We intend to disclose to interested parties the calculations and analysis performed for these final results within five days of the date of the publication of this notice in the **Federal Register**, in accordance with 19 CFR 351.224(b).

Assessment Rates

Pursuant to section 751(a)(2)(A) of the Act and 19 CFR 351.212(b)(1), Commerce will determine, and U.S. Customs and Border Protection (CBP) shall assess, antidumping duties on all appropriate entries of subject

merchandise in accordance with the final results of this review. Pursuant to 19 CFR 351.212(b)(1), we calculated importer-specific *ad valorem* duty assessment rates based on the ratio of the total amount of dumping calculated for the examined sales to the total entered value of those sales. Where the respondent did not report entered value, we calculated a per-unit assessment rate for each importer by dividing the total amount of dumping calculated for the examined sales made to that importer by the total quantity associated with those sales. To determine whether an importer-specific, per-unit assessment rate is *de minimis,* in accordance with 19 CFR 351.106(c)(2), we also calculated an importer-specific *ad valorem* ratio based on estimated entered values. Where either the respondent's weighted-average dumping margin is zero or *de minimis* within the meaning of 19 CFR 351.106(c)(1), or an importer-specific assessment rate is zero or *de minimis,* we will instruct CBP to liquidate the appropriate entries without regard to antidumping duties.[11]

For entries of subject merchandise during the POR produced by Deacero or TA 2000 for which they did not know their merchandise they sold to an intermediary (*e.g.,* a reseller, trading company, or exporter) was destined for the United States, we will instruct CBP to liquidate unreviewed entries at the all-others rate if there is no rate for the intermediate company(ies) involved in the transaction. The final results of this review shall be the basis for the assessment of antidumping duties on entries of merchandise covered by the final results of this review and for future deposits of estimated duties, where applicable.[12]

Commerce intends to issue assessment instructions to CBP no earlier than 41 days after the date of publication of the final results of this review in the **Federal Register** in accordance with 19 CFR 356.8(a).

Cash Deposit Requirements

The following cash deposit requirements will be effective for all shipments of subject merchandise entered, or withdrawn from warehouse, for consumption on or after the publication date of the final results of this administrative review, as provided by section 751(a)(2)(C) of the Act: (1) the cash deposit rate for the companies listed above will be equal to the weighted-average dumping margins established in the final results of this administrative review; (2) for merchandise exported by producers or exporters not covered in this review but covered in a prior completed segment of the proceeding, the cash deposit rate will continue to be the company-specific rate published for the most recent period; (3) if the exporter is not a firm covered in this review, a prior review, or the original investigation, but the producer has been covered in a prior complete segment of this proceeding, then the cash deposit rate will be the rate established for the most recent period for the producer of the merchandise; (4) the cash deposit rate for all other manufacturers or exporters will continue to be 20.11 percent.[13] These cash deposit requirements, when imposed, shall remain in effect until further notice.

Notification to Importers

This notice also serves as a final reminder to importers of their responsibility under 19 CFR 351.402(f)(2) to file a certificate regarding the reimbursement of antidumping duties prior to liquidation of the relevant entries during this review period. Failure to comply with this requirement could result in Commerce's presumption that reimbursement of antidumping duties occurred and the subsequent assessment of double antidumping duties.

Administrative Protective Order (APO)

This notice also serves as a reminder to parties subject to an APO of their responsibility concerning the disposition of proprietary information disclosed under APO in accordance with 19 CFR 351.305(a)(3). Timely written notification of return/destruction of APO materials or conversion to judicial protective order is hereby requested. Failure to comply with the regulations and the terms of an APO is a sanctionable violation.

Notification to Interested Parties

We are issuing and publishing these final results of administrative review in accordance with sections 751(a)(1) and 777(i)(1) of the Act, and 19 CFR 351.221(b)(5).

Dated: July 29, 2025.

Christopher Abbott,

Deputy Assistant Secretary for Policy and Negotiations, performing the non-exclusive functions and duties of the Assistant Secretary for Enforcement and Compliance.

Chlorinated Isocyanurates From People's Republic of China: Final Results of the Expedited Second Sunset Review of the Countervailing Duty Order

AGENCY: Enforcement and Compliance, International Trade Administration, Department of Commerce.

SUMMARY: The U.S. Department of Commerce (Commerce) finds that revocation of the countervailing duty (CVD) order on Chlorinated Isocyanurates (chlorinated isos) from the People's Republic of China would be likely to lead to continuation or recurrence of countervailable subsidies at the levels indicated in the ''Final Results of Sunset Review'' section of this notice.

DATES: Applicable August 4, 2025.

FOR FURTHER INFORMATION CONTACT: Chris Wedderburn, Trade Agreements Policy and Negotiations, Enforcement and Compliance, International Trade Administration, U.S. Department of Commerce, 1401 Constitution Avenue NW, Washington, DC 20230; telephone: 202–482–1963.

SUPPLEMENTARY INFORMATION:

Background

On November 13, 2014, the U.S. Department of Commerce (Commerce) published the *Order* on chlorinated isos

[11] In these final results, Commerce applied the assessment rate calculation method adopted in *Antidumping Proceedings: Calculation of the Weighted-Average Dumping Margin and Assessment Rate in Certain Antidumping Duty Proceedings; Final Modification,* 77 FR 8101 (February 14, 2012).

[12] *See* section 751(a)(2)(C) of the Act.

[13] *See Order,* 67 FR at 65947.

from China.[1] On April 1, 2025, Commerce published the notice of initiation of the second sunset review of the *Order,* pursuant to section 751(c) of the Act and 19 CFR 351.218(c).[2]

On April 15, 2025, Commerce received a notice of intent to participate in this second sunset review from the domestic interested parties within the deadline specified in 19 CFR 351.218(d)(1)(i).[3] The domestic interested parties claimed interested party status interested party status within the meaning of section 771(9)(C) of the Act and 19 CFR 351.102(b)(29)(v) as a manufacturer, producer, or wholesaler in the United States of a domestic like product.[4]

On May 1, 2025, Commerce received an adequate substantive response from the domestic interested parties, within the 30-day deadline specified in 19 CFR 351.218(d)(3)(i).[5] Commerce did not receive a substantive response from either the Government of China (GOC) or any respondent interested parties to this proceeding. On May 22, 2025, Commerce notified the U.S. International Trade Commission (ITC) that it did not receive an adequate substantive response from respondent interested parties.[6] As a result, Commerce conducted an expedited (120-day) sunset review of the *Order*, pursuant to section 751(c)(3)(B) of the Act and 19 CFR 351.218(e)(1)(ii)(B)(2) and (C)(2).

Scope of the Orders

The product covered by this *Order* is chlorinated isocyanurates from the People's Republic of China. For the full description of the scope of the *Order, see* the Issues and Decisions Memorandum.[7]

Analysis of Comments Received

A complete discussion of all issues raised in this sunset review, including the likelihood of continuation or recurrence of subsidization and the countervailable subsidy rates likely to prevail if the *Order* were to be revoked, is contained in the accompanying Issues and Decision Memorandum.[8] A list of the topics discussed in the Issues and Decision Memorandum is attached as an appendix to this notice. The Issues and Decision Memorandum is a public document and is on file electronically via Enforcement and Compliance's Antidumping and Countervailing Duty Centralized Electronic Service System (ACCESS), which is available to registered users at *https://access.trade.gov.* In addition, complete versions of the Issues and Decision Memorandum can be accessed directly at *https://access.trade.gov/public/FRNoticesListLayout.aspx.*

Final Results of Sunset Review

Pursuant to sections 751(c) and 752(b) of the Act, Commerce determines that revocation of the *Order* would be likely to lead to continuation or recurrence of countervailable subsidies at the following net countervailable subsidy rates:

Producers/exporters	Net countervailable subsidy rate (percent *ad valorem*)
Hebei Jiheng Chemicals Co., Ltd	32.58
Juancheng Kangtai Chemical Co., Ltd	14.11
All Others	17.08

Notification Regarding Administrative Protective Orders

This notice also serves as the only reminder to parties subject to administrative protective order (APO) of their responsibility concerning the return or destruction of proprietary information disclosed under APO in accordance with 19 CFR 351.305. Timely notification of the return or destruction of APO materials, or conversion to judicial protective, orders is hereby requested. Failure to comply with the regulations and terms of an APO is a violation which is subject to sanction.

Notification to Interested Parties

We are issuing and publishing these final results in accordance with sections 751(c), 752(b), and 777(i)(1) of the Act, and 19 CFR 351.221(c)(5)(ii).

Dated: July 30, 2025.

Christopher Abbott,

Deputy Assistant Secretary for Policy and Negotiations, performing the non-exclusive functions and duties of the Assistant Secretary for Enforcement and Compliance.

Appendix

List of Topics Discussed in the Issues and Decision Memorandum

I. Summary

Endangered and Threatened Species; Take of Anadromous Fish

AGENCY: National Marine Fisheries Service (NMFS), National Oceanic and Atmospheric Administration (NOAA), Department of Commerce.

ACTION: Notice of availability.

SUMMARY: Notice is hereby given that NMFS has received applications for renewal of two enhancement permit applications pursuant to the Endangered Species Act (ESA) for hatchery operations rearing and releasing Snake River Fall-run Chinook salmon in the Snake River basin of Idaho. The applications are in the form of two existing hatchery and genetic management plans (HGMPs), and two addendums. This new addendum and the associated prior documents describe programs operated by the Nez Perce Tribe (NPT), Washington Department of Fish and Wildlife (WDFW), Oregon Department of Fish and Wildlife (ODFW) and Idaho Department of Fish and Game (IDFG), and funded by the United States Fish and Wildlife Service (USFWS) through the Lower Snake Compensation Plan (LSRCP), Idaho Power Company (IPC), and the Bonneville Power Administration (BPA). This document serves to notify the public of the availability and

opportunity to comment on an HGMP and associated Addendums on the proposed hatchery programs.

DATES: Comments must be received at the appropriate address (see **ADDRESSES**) no later than 5 p.m. Pacific Time on September 3, 2025. Comments received after this date may not be considered.

ADDRESSES: Written comments should be addressed to the NMFS Sustainable Fisheries Division, 1201 NE Lloyd Blvd., Portland, OR 97232. Comments may be submitted by email. The mailbox address for providing email comments is: *Hatcheries.Public.Comment@noaa.gov.* Include in the subject line of the email comment the following identifier: Comments on the Snake River Fall-run Chinook salmon hatchery permits

FOR FURTHER INFORMATION CONTACT: Andreas Raisch at (503) 230–5405 or by email at *andreas.raisch@noaa.gov*.

SUPPLEMENTARY INFORMATION:

ESA-Listed Species Covered in This Notice

- Chinook salmon (*Oncorhynchus tshawytscha*): endangered, naturally and artificially propagated Snake River Fall-run Evolutionary Significant Unit (ESU) and threatened, naturally and artificially propagated Snake River Spring/Summer-run ESU;
- Sockeye salmon (*O. nerka*): endangered, naturally and artificially propagated Snake River Sockeye ESU;
- Steelhead (*O. mykiss*): threatened, naturally and artificially propagated Snake River Steelhead Distinct Population Segment.

Background

Section 9 of the ESA and Federal regulations prohibit the ''taking'' of a species listed as endangered or threatened. The term ''take'' is defined under the ESA to mean harass, harm, pursue, hunt, shoot, wound, kill, trap, capture, or collect, or to attempt to engage in any such conduct. NMFS may make exceptions to the take prohibitions in section 9 of the ESA for programs that are approved by NMFS under section 10(a)(1)(A) of the ESA (50 CFR 222.308).

The co-managers and funding agencies, including the NPT, WDFW, ODFW, IDFG, LSRCP, IPC, and BPA, have submitted to NMFS applications for two permits, pursuant to section 10(a)(1)(A) of the ESA, for hatchery activities in the Snake River basin. The applications are in the form of two existing HGMPs, an addendum, and a new addendum with updates to those HGMPs.

The addendums and previously submitted HGMPs describe actions involving hatchery activities (with associated monitoring and evaluation) in the Snake River basin. The programs are intended to contribute to the survival and recovery of Snake River Fall-run Chinook salmon in the Snake River basin, and to responsibly enhance fishing opportunity on hatchery-origin returns. The proposed continuation of the program would indicate best management practices to minimize adverse effects on the ESU.

(Authority: 16 U.S.C. 1531 *et seq.*)

Dated: July 30, 2025.

Jennifer Quan,

Regional Administrator, West Coast Region, National Marine Fisheries Service.

RIN 0648–BN96

Deep Seabed Mining: Revisions to Regulations for Exploration License and Commercial Recovery Permit Applications

AGENCY: Office for Coastal Management, National Ocean Service, National Oceanic Atmospheric Administration (NOAA), Department of Commerce.

ACTION: Notice: virtual public hearing.

SUMMARY: NOAA will hold two virtual public hearings, on September 3, 2025, and on September 4, 2025, to receive oral comments on the July 7, 2025, proposed rule for revisions to the Deep Seabed Hard Mineral Resources Act (DSHMRA or the Act) regulations. DSHMRA charges NOAA with the responsibility for issuing licenses for exploration and permits for commercial recovery of polymetallic nodules from the deep seabed in areas beyond national jurisdiction and promulgating regulations necessary to carry out the provisions of the Act. Additionally, the Act requires that NOAA hold a public hearing for proposed changes to the DSHMRA regulations. The July 7, 2025, proposed rule noted that NOAA will hold one virtual public hearing on the proposed changes to the DSHMRA regulations on a date, time, and virtual location to be determined, which will be published in the **Federal Register** and posted on NOAA's Deep Seabed Mining website.

DATES: The virtual public hearings are scheduled for September 3, 2025, and September 4, 2025, from 3 p.m. to 7 p.m. Eastern Time each day.

ADDRESSES: The virtual location for the public hearing and registration requirements are described below:

- *Virtual Hearing Access:* NOAA will conduct the virtual public hearings via Adobe Connect. Each person who wants to attend either virtual public hearing must electronically register by August 29, 2025, 5 p.m. Eastern Time. Attendance at each virtual public hearing will be limited to 1,000 individuals for each of the two dates; therefore, NOAA requests that individuals register and attend only one hearing, on either September 3 or September 4, 2025.
  - To register for the September 3, 2025 hearing, use the following link: *https://noaabroadcast.adobeconnect.com/e64l9m25orba/event/event_info.html.*
  - To register for the September 4, 2025 hearing, use the following link: *https://noaabroadcast.adobeconnect.com/em945xdnvk15/event/registration.html.*

Any person who registers and wants to speak at a virtual public hearing should indicate that they want to speak during registration. Each registered participant will receive an Adobe Connect link for the virtual public hearing.

- *Instructions:* Once the virtual public hearing starts, NOAA will describe the virtual public hearing logistics (described as follows) and provide a brief overview of the proposed rule. NOAA will then start the public comment part of the virtual public hearing and will call on speakers on a ''first come'' basis through the raised hand function of Adobe Connect. NOAA will then unmute the person speaking. Each speaker will have three minutes to speak on the proposed rule, the Regulatory Impact Analysis prepared for the proposed rule, available at *https://www.regulations.gov/docket/NOAA-NOS-2025-0108,* the Paperwork Reduction Act analysis set forth in the proposed rule, and/or the implementation of Executive Order 14294 described below. If a speaker does not respond when they are called on, NOAA will move to the next speaker. At the three-minute mark for each speaker, NOAA will mute that speaker. Speakers cannot allot their time to another speaker. Once all speakers have spoken, or at the scheduled end of the virtual public hearing, whichever is earlier, NOAA will end the virtual public hearing. NOAA retains discretion to extend the virtual public hearing if appropriate and feasible. NOAA will

record each hearing and will include transcripts of the hearings on the public docket for the proposed rule on the regulations.gov website at *https://www.regulations.gov/docket/NOAA-NOS-2025-0108.* The names provided by each speaker will also be published as part of the transcripts.

• The virtual public hearings do not replace the process for submission of written comments. Written comments on the proposed rule may be submitted electronically through the proposed rule's regulations.gov docket at *https://www.regulations.gov/docket/NOAA-NOS-2025-0108.* NOAA will not respond during the hearings to oral comments or questions.

FOR FURTHER INFORMATION CONTACT: Kerry Kehoe, (240) 560–8518, *kerry.kehoe@noaa.gov.*

SUPPLEMENTARY INFORMATION:

I. Background

DSHMRA (30 U.S.C. 1401–1473) charges the NOAA Administrator with the responsibility for issuing to U.S. citizens licenses for exploration and permits for commercial recovery of polymetallic nodules from the deep seabed in areas beyond national jurisdiction. U.S. citizens must obtain appropriate licenses and permits from NOAA before undertaking deep seabed mining.[1]

DSHMRA, which was signed into law in 1980, requires the NOAA Administrator to promulgate regulations as necessary to carry out the provisions of the Act. 30 U.S.C. 1468. NOAA published its DSHMRA exploration license regulations (15 CFR part 970) in 1981, and its commercial recovery permit regulations (15 CFR part 971) in 1989. As described in NOAA's proposed rule, *DSHMRA Proposed Rule 90 FR 29806–29817 (July 7, 2025)* (Docket No. 250630–0118, RIN 0648–BN96), NOAA proposes to add a consolidated exploration license and commercial recovery permit process as well as make changes to other obsolete sections of the license and permit regulations.

The proposed rule includes a request for comments on the Regulatory Impact Analysis/Initial Regulatory Flexibility Analysis (IRFA), also located at the regulations.gov docket, *https://www.regulations.gov/docket/NOAA-NOS-2025-0108,* and on the Paperwork Reduction Act (PRA) analysis set forth in the proposed rule. NOAA also requests comments on the implementation of Executive Order 14294: Fighting Overcriminalization in Federal Regulations, as further detailed in Section III below.

II. Virtual Public Hearings

DSHMRA requires that NOAA hold a public hearing for proposed changes to the DSHMRA regulations. See 30 U.S.C. 1426(a). NOAA has determined that two virtual public hearings are the best way to reach a maximum number of potential public hearing participants. At the virtual public hearings, and after NOAA describes the virtual public hearing logistics and provides a brief overview of the proposed rule, NOAA will enable persons to provide oral comments on the proposed rule, the PRA analysis, the Regulatory Impact Analysis prepared for the proposed rule, available at *https://www.regulations.gov/docket/NOAA-NOS-2025-0108,* and/or the implementation of Executive Order 14294 described below. See the instructions above in the **ADDRESSES** section for the virtual public hearing logistics.

III. Miscellaneous Rulemaking Requirements

Executive Order 14294 Fighting Overcriminalization in Federal Regulations

NOAA hereby provides public notice that it would apply *Executive Order 14294* to any final rule issued regarding the proposed revisions to the DSHMRA regulations. Section 5 of Executive Order 14294 provides, in relevant part, that notices of proposed rulemaking (NPRMs) and final rules published in the **Federal Register**, the violation of which may constitute criminal regulatory offenses, should include a statement identifying that the rule or proposed rule is a criminal regulatory offense and the authorizing statute. In addition, Section 5 states that the regulatory text of all NPRMs and final rules with criminal consequences published in the **Federal Register** after the date of this order should explicitly state a mens rea requirement for each element of a criminal regulatory offense, accompanied by citations to the relevant provisions of the authorizing statute.

The Executive Order defines a ''criminal regulatory offense'' as ''a Federal regulation that is enforceable by a criminal penalty.'' Exec. Order No. 14,294 section 3(b) (90 FR 20363).

DSHMRA establishes that a person subject to the jurisdiction of the United States is guilty of a criminal offense ''if such person willfully and knowingly commits any act prohibited by section 1461 of [DSHMRA].'' 30 U.S.C. 1463(a). Acts prohibited under section 1461 include ''violat[ing] . . . any regulation issued under [DSHMRA], or any term, condition, or restriction of any license or permit issued to such person under [DSHMRA].'' 30 U.S.C. 1461(1).

NOAA will accept and consider public comments regarding the implementation of Executive Order 14294 for any final rule concerning the proposed revisions to the DSHMRA regulations for the duration of the proposed rule's public comment period, including (i) written comments submitted through the proposed rule's *regulations.gov* docket, *https://www.regulations.gov/docket/NOAA-NOS-2025-0108,* and (ii) oral comments provided at the virtual public hearings.

Authority: 30 U.S.C. 1426(a).

Laura Grimm,

Chief of Staff Performing the Duties of Under Secretary of Commerce for Oceans and Atmosphere and NOAA Administrator National Oceanic and Atmospheric Administration.

BILLING CODE 3510–08–P

[1] Mining activities within the U.S. outer continental shelf are governed by the Outer Continental Shelf Lands Act (43 U.S.C. 1331–1356c), which is administered by the Bureau of Ocean Energy Management within the Department of the Interior. The term ''U.S. outer continental shelf'' includes the extended continental shelf in areas adjacent to the U.S. States and is limited to the exclusive economic zone in areas adjacent to any territory of the United States.

DEPARTMENT OF EDUCATION

[Docket No.: ED–2025–SCC–0283]

Agency Information Collection Activities; Submission to the Office of Management and Budget for Review and Approval; Comment Request; National Assessment of Educational Progress (NAEP) 2026 Amendment #1

AGENCY: Institute of Education Sciences (IES), Department of Education (ED).

ACTION: Notice.

SUMMARY: In accordance with the Paperwork Reduction Act (PRA) of 1995, the Department is proposing a revision of a currently approved information collection request (ICR).

DATES: Interested persons are invited to submit comments on or before September 3, 2025.

ADDRESSES: Written comments and recommendations for proposed information collection requests should be submitted within 30 days of publication of this notice. Click on this link *www.reginfo.gov/public/do/PRAMain* to access the site. Find this information collection request (ICR) by selecting ''Department of Education'' under ''Currently Under Review,'' then

check the ''Only Show ICR for Public Comment'' checkbox. *Reginfo.gov* provides two links to view documents related to this information collection request. Information collection forms and instructions may be found by clicking on the ''View Information Collection (IC) List'' link. Supporting statements and other supporting documentation may be found by clicking on the ''View Supporting Statement and Other Documents'' link.

FOR FURTHER INFORMATION CONTACT: For specific questions related to collection activities, please contact Matt Soldner, 202–453–7441.

SUPPLEMENTARY INFORMATION: The Department is especially interested in public comment addressing the following issues: (1) is this collection necessary to the proper functions of the Department; (2) will this information be processed and used in a timely manner; (3) is the estimate of burden accurate; (4) how might the Department enhance the quality, utility, and clarity of the information to be collected; and (5) how might the Department minimize the burden of this collection on the respondents, including through the use of information technology. Please note that written comments received in response to this notice will be considered public records.

Title of Collection: National Assessment of Educational Progress (NAEP) 2026 Amendment #1.

OMB Control Number: 1850–0928.

Type of Review: A revision of a currently approved ICR.

Respondents/Affected Public: Individuals and Households; State, Local, and Tribal Governments.

Total Estimated Number of Annual Responses: 796,937.

Total Estimated Number of Annual Burden Hours: 456,764.

Abstract: The National Assessment of Educational Progress (NAEP), conducted by the National Center for Education Statistics (NCES), is a federally authorized survey of student achievement at grades 4, 8, and 12 in various subject areas, such as mathematics, reading, writing, science, U.S. history, and civics. The National Assessment of Educational Progress Authorization Act (Pub. L. 107–279, title III, section 303) requires the assessment to collect data on specified student groups and characteristics, including information organized by race/ethnicity, sex, socio-economic status, disability, and limited English proficiency. It requires fair and accurate presentation of achievement data and permits the collection of background, noncognitive, or descriptive information that is related to academic achievement and aids in fair reporting of results. The intent of the law is to provide representative sample data on student achievement for the nation, the states, and subpopulations of students and to monitor progress over time. NAEP consists of two assessment programs: the NAEP long-term trend (LTT) assessment and the main NAEP assessment. The LTT assessments are given at the national level only and are administered to students at ages 9, 13, and 17 in a manner that is very different from that used for the main NAEP assessments. LTT reports mathematics and reading results that present trend data since the 1970s. In addition to the operational assessments, NAEP uses two other kinds of assessment activities: pilot assessments and special studies. Pilot assessments test items and procedures for future administrations of NAEP, while special studies (*e.g.,* the Middle School Transcript Study (MSTS), and the High School Transcript Study (HSTS)) are opportunities for NAEP to investigate particular aspects of the assessment without impacting the reporting of the NAEP results.

This request is an Amendment to the initially approved NAEP 2026 Clearance Package (OMB# 1850–0928 v.36) to conduct NAEP in 2026, specifically: (1) Main NAEP operational assessments will include for grades 4 and 8 (first administration of the new frameworks for reading and mathematics), grade 8 (civics and U.S. history); in Puerto Rico, grades 4 and 8 mathematics will be the only subject assessed and will include the new framework; (2) Pilot testing in grades 4, 8, and 12 (reading and mathematics); in Puerto Rico, grades 4 and 8 mathematics will be the only subject assessed.

Some documents in this package will be updated in Amendment #2, which will be posted for a separate 30-day public comment period following the 30-day public comment period for Amendment #1. These packages will contain all final materials to be used for the data collection in early 2026.

As of April 2025, NCES's assurances of confidentiality protections for NAEP 2026 have changed due to recent staffing changes at the Department of Education. NCES has removed the Foundations of Evidence-Based Policymaking Act of 2018, Title III, Part B, Confidential Information Protection (''CIPSEA'') as a confidentiality assurance. However, confidentiality assurances under the Education Sciences Reform Act of 2002 (ESRA) remain in effect.

Ross Santy,

Chief Data Officer, Office of Planning, Evaluation and Policy Development.

Comment Date: 5 p.m. ET 8/20/25.

The filings are accessible in the Commission's eLibrary system (*https://elibrary.ferc.gov/idmws/search/fercgensearch.asp*) by querying the docket number.

Any person desiring to intervene, to protest, or to answer a complaint in any of the above proceedings must file in accordance with Rules 211, 214, or 206 of the Commission's Regulations (18 CFR 385.211, 385.214, or 385.206) on or before 5:00 p.m. Eastern time on the specified comment date. Protests may be considered, but intervention is necessary to become a party to the proceeding.

eFiling is encouraged. More detailed information relating to filing requirements, interventions, protests, service, and qualifying facilities filings can be found at: *http://www.ferc.gov/docs-filing/efiling/filing-req.pdf.* For other information, call (866) 208–3676 (toll free). For TTY, call (202) 502–8659.

The Commission's Office of Public Participation (OPP) supports meaningful public engagement and participation in Commission proceedings. OPP can help members of the public, including landowners, community organizations, Tribal members and others, access publicly available information and navigate Commission processes. For public inquiries and assistance with making filings such as interventions, comments, or requests for rehearing, the public is encouraged to contact OPP at (202) 502–6595 or *OPP@ferc.gov.*

BILLING CODE 6717–01–P

DEPARTMENT OF ENERGY

Federal Energy Regulatory Commission

[Docket No. DI24–4–000]

Paradigm Shift Hydro, LLC; Notice of Declaration of Intention and Soliciting Comments, Protests, and Motions To Intervene

Take notice that the following application has been filed with the Commission and is available for public inspection:

a. *Application Type:* Declaration of Intention.

b. *Docket No:* DI24–4–000.

c. *Date Filed:* December 5, 2023.

d. *Applicant:* Paradigm Shift Hydro, LLC.

e. *Name of Project:* Partridge Peak Energy Project.

f. *Location:* The proposed Partridge Peak Energy Project would be located near the town of Roxbury in Oxford County, Maine.

g. *Filed Pursuant to:* Section 23(b)(1) of the Federal Power Act, 16 U.S.C. 817(b).

h. *Applicant Contact:* Jonathan Petrillo, 270 Bellevue Avenue, PMB #1053, Newport, RI 02840; telephone: (203) 623–4637; email: *jon@paradigmshifthydro.com*.

i. *FERC Contact:* Maryam Akhavan, (202) 502–6110, or *Maryam.Akhavan@ferc.gov*.

j. *Deadline for filing comments, protests, and motions to intervene is:* August 29, 2025.

The Commission strongly encourages electronic filing. Please file comments, protests, and motions to intervene using the Commission's eFiling system at *http://www.ferc.gov/docs-filing/efiling.asp*. Commenters can submit brief comments up to 6,000 characters, without prior registration, using the eComment system at *http://www.ferc.gov/docs-filing/ecomment.asp*. You must include your name and contact information at the end of your comments. For assistance, please contact FERC Online Support at *FERCOnlineSupport@ferc.gov,* (866) 208–3676 (toll free), or (202) 502–8659 (TTY). In lieu of electronic filing, you may submit a paper copy. Submissions sent via the U.S. Postal Service must be addressed to: Debbie-Anne A. Reese, Secretary, Federal Energy Regulatory Commission, 888 First Street NE, Room 1A, Washington, DC 20426. Submissions sent via any other carrier must be addressed to: Debbie-Anne A. Reese, Secretary, Federal Energy Regulatory Commission, 12225 Wilkins Avenue, Rockville, Maryland 20852. The first page of any filing should include docket number DI24–4–000. Comments emailed to Commission staff are not considered part of the Commission record.

k. *Description of Project:* The proposed Partridge Peak Energy Project is a closed-loop pumped storage hydropower facility that would consist of: (1) two artificial reservoirs (upper and lower) each with a storage capacity of approximately 50 acre-feet, formed by two steel storage tanks; (2) two penstocks connecting the upper and lower reservoir tanks, each 3,750-foot-long and 5-foot-diameter; (3) an approximately 50-foot-wide, 50-foot-long, and 25-foot-tall reinforced concrete and steel powerhouse; (4) a single turbine with a generating capacity of 15 megawatts (MW); (5) an approximately 1-mile-long overhead transmission line interconnecting with the existing Central Maine Power system; and (6) appurtenant facilities. The applicant states that the initial fill water for the project would be sourced from commercially available sources and delivered via tanker trucks to the lower reservoir.

When a Declaration of Intention is filed with the Federal Energy Regulatory Commission, the Federal Power Act requires the Commission to investigate and determine if the project would affect the interests of interstate or foreign commerce. The Commission also determines whether or not the project: (1) would be located on a navigable waterway; (2) would occupy public lands or reservations of the United States; (3) would utilize surplus water or water power from a government dam; or (4) would be located on a non-navigable stream over which Congress has Commerce Clause jurisdiction and would be constructed or enlarged after 1935.

l. *Locations of the Application:* This filing may be viewed on the Commission's website at *http://www.ferc.gov/docs-filing/elibrary.asp*. Enter the docket number excluding the last three digits in the docket number field to access the document. You may also register online at *http://www.ferc.gov/docs-filing/esubscription.asp* to be notified via email of new filings and issuances related to this or other pending projects. For assistance, call 1–866–208–3676 or email *FERCOnlineSupport@ferc.gov,* for TTY, call (202) 502–8659.

m. Individuals desiring to be included on the Commission's mailing list should so indicate by writing to the Secretary of the Commission.

n. *Comments, Protests, or Motions to Intervene:* Anyone may submit comments, a protest, or a motion to intervene in accordance with the requirements of Rules of Practice and Procedure, 18 CFR 385.210, .211, and .214. In determining the appropriate action to take, the Commission will consider all protests or other comments filed, but only those who file a motion to intervene in accordance with the Commission's Rules may become a party to the proceeding. Any comments, protests, or motions to intervene must be received on or before the specified comment date for the particular application.

o. *Filing and Service of Responsive Documents:* All filings must bear in all capital letters the title ''COMMENTS'', ''PROTESTS'', and ''MOTIONS TO

INTERVENE'', as applicable, and the Docket Number of the particular application to which the filing refers. A copy of any Motion to Intervene must also be served upon each representative of the Applicant specified in the particular application.

p. *Agency Comments:* Federal, state, and local agencies are invited to file comments on the described application. A copy of the application may be obtained by agencies directly from the Applicant. If an agency does not file comments within the time specified for filing comments, it will be presumed to have no comments. One copy of an agency's comments must also be sent to the Applicant's representatives.

Dated: July 30, 2025.

Carlos D. Clay,

Deputy Secretary.

BILLING CODE 6717–01–P

DEPARTMENT OF ENERGY

Federal Energy Regulatory Commission

[Project No. 2302–101]

Brookfield White Pine Hydro, LLC; Notice of Intent To Prepare an Environmental Assessment

On August 28, 2024, Brookfield White Pine Hydro, LLC (Brookfield) filed a relicense application for the 28.44-megawatt Lewiston Falls Hydroelectric Project No. 2302 (project). The existing project is located on the Androscoggin River in the cities of Auburn and Lewiston and the town of Durham, in Androscoggin County, Maine. The project does not occupy federal lands.

In accordance with the Commission's regulations, on May 15, 2025, Commission staff issued a notice that the project was ready for environmental analysis (REA Notice). Staff intends to prepare a draft and final Environmental Assessment (EA) on the application to relicense the project.[1]

The EA will be issued and circulated for review by all interested parties. All comments filed on the EA will be analyzed by staff and considered in the Commission's final licensing decision.

The Commission's Office of Public Participation (OPP) supports meaningful public engagement and participation in Commission proceedings. OPP can help members of the public, including landowners, Tribal members, and others, access publicly available information and navigate Commission processes. For public inquiries and assistance with making filings such as interventions, comments, or requests for rehearing, the public is encouraged to contact OPP at (202) 502–6595 or *OPP@ferc.gov.*

The application will be processed according to the following schedule. The EA will be issued for a 30-day comment period. Revisions to the schedule may be made as appropriate.

Milestone	Target date
Commission issues Draft EA.	January 13, 2026
Commission issues Final EA.	May 29, 2026

Any questions regarding this notice may be directed to Lauren Townson at (202) 502–8572 or *Lauren.Townson@ferc.gov.*

Dated: July 30, 2025.

BILLING CODE 6717–01–P

DEPARTMENT OF ENERGY

Federal Energy Regulatory Commission

[Project No. 2520–098]

Great Lakes Hydro America, LLC; Notice of Intent To Prepare an Environmental Assessment

On September 30, 2024, as supplemented on January 7, 2025, April 28, 2025, May 7, 2025, June 20, 2025, and July 30, 2025, Great Lakes Hydro America, LLC, licensee for the Mattaceunk Hydroelectric Project No. 2520, filed an application for a temporary variance from Article 403 of the project license. The project is located on the Penobscot River in Aroostook and Penobscot counties, Maine and does not occupy any federal lands.

The licensee is requesting a temporary variance of the required minimum flow and impoundment elevation under Article 403 of the project license to facilitate maintenance activities at the upstream fishway structures and the sluice gate. The variance would entail modification of the required minimum flows to the bypass reach and draw the elevation down to approximately 22 feet below the full pond elevation of 218 feet from approximately early August to late September 2025. On May 12, 2025, the Commission issued a public notice for the proposed variance, accepting the application for filing and soliciting comments, motions to intervene, and protests. The notice established a 30-day deadline, or June 11, 2025, for filing responses to the notice. On June 5, 2025, the National Marine Fisheries Service (NMFS) filed a notice of intervention and comments. No other comments or motions to intervene were received.

In support of the proposed impoundment drawdown, and the subsequent maintenance and repair work, the licensee filed a draft Biological Assessment (BA) on January 7, 2025, which addressed the effects of the proposed action on the Gulf of Maine Distinct Population Segment (GOM DPS) of Atlantic salmon (*Salmo salar*), which is federally listed as endangered under the Endangered Species Act (ESA). The draft BA also evaluated the effects of the proposed action on designated critical habitat for GOM DPS of Atlantic salmon. By letter dated March 20, 2025, Commission staff adopted the draft BA without modification as our final BA, and requested formal consultation with NMFS. Commission staff concluded that the proposed impoundment drawdown, along with the scheduled maintenance and repair work, are likely to adversely affect GOM DPS of Atlantic salmon, and are not likely to adversely affect designated critical habitat for the GOM DPS of Atlantic salmon. Commission staff additionally noted that the Penobscot River in the area of the project facilities is designated as essential fish habitat (EFH) for Atlantic salmon, pursuant to the Magnuson-Stevens Fishery Conservation and Management Act. Therefore, Commission staff concluded that EFH for Atlantic salmon may also be affected by the proposed impoundment drawdown and the subsequent maintenance and repair work. On April 21, 2025, NMFS notified the Commission that all information required to initiate formal consultation is included in the consultation request, BA, or is otherwise accessible for consideration and reference.

The licensee filed supplemental information on April 28, 2025 and May 7, 2025, that discussed debris removal work that would be conducted concurrently with the proposed drawdown. By letter dated May 13, 2025, Commission staff incorporated the supplemental information into the previously filed BA, and requested formal consultation under the ESA with NMFS. Commission staff continued to conclude that the proposed impoundment drawdown, along with the subsequently scheduled maintenance and repair work, and the removal of woody debris, are likely to adversely affect GOM DPS of Atlantic salmon, and are not likely to adversely affect designated critical habitat for the GOM DPS of Atlantic salmon. Commission staff additionally concluded that EFH for Atlantic salmon may also be affected by the proposed impoundment drawdown, maintenance and repair work, and the removal of woody debris.

On July 25, 2025, NMFS filed its biological opinion in response to the Commission's BA. NMFS concluded that the proposed project may adversely affect, but is not likely to jeopardize, the continued existence of the GOM DPS of Atlantic salmon, and is likely to adversely affect, but is not likely to destroy or adversely modify, designated critical habitat for the GOM DPS of Atlantic salmon. NMFS further noted that the proposed action may adversely affect Atlantic salmon EFH. NMFS included in the BO an Incidental Take Statement, which contained one reasonable and prudent measure, six terms and conditions in order to minimize take, and two conservation recommendations.

This notice identifies Commission staff's intention to prepare an environmental assessment (EA) for the project.[1] Commission staff plans to issue an EA by September 10, 2025. Revisions to the schedule may be made as appropriate.

The Commission's Office of Public Participation (OPP) supports meaningful public engagement and participation in Commission proceedings. OPP can help members of the public, including landowners, community organizations, Tribal members, and others to access publicly available information and navigate Commission processes. For public inquiries and assistance with making filings such as interventions, comments, or requests for rehearing, the public is encouraged to contact OPP at (202) 502–6595 or *OPP@ferc.gov.*

Any questions regarding this notice may be directed to Selina Sumi at *selina.sumi@ferc.gov* or 202–502–6892.

Dated: July 30, 2025.

Carlos D. Clay,

Deputy Secretary.

ENVIRONMENTAL PROTECTION AGENCY

[EPA–HQ–OPP–2025–0024; FRL–12473–05–OCSPP]

Pesticide Product Registration; Receipt of Applications for New Active Ingredients (March–May 2025)

AGENCY: Environmental Protection Agency (EPA).

ACTION: Notice of receipt and request for comment.

SUMMARY: This document announces the Agency's receipt of and solicits comment on applications to register pesticide products containing active ingredients not included in any currently registered pesticide products. The Agency is providing this notice in accordance with the Federal Insecticide, Fungicide, and Rodenticide Act (FIFRA). EPA uses the month and year in the title to identify when the Agency compiled the applications identified in this notice of receipt. Unit II. of this document identifies certain applications received in 2023 and 2024 that are currently being evaluated by EPA, along with information about each application, including when it was

[1] For tracking purposes under the National Environmental Policy Act, the unique identification number for documents relating to this environmental review is EAXX–019–20–000–1753693860.

received, who submitted the application, and the purpose of the application.

DATES: Comments must be received on or before September 3, 2025.

ADDRESSES: Submit your comments, identified by the docket identification (ID) number and the *EPA File Symbol* or the *EPA Registration Number* of interest as shown in Unit II. of this document, online at *https://www.regulations.gov.* Follow the online instructions for submitting comments. Do not submit electronically any information you consider to be Confidential Business Information (CBI) or other information whose disclosure is restricted by statute. Additional instructions on commenting and visiting the docket, along with more information about dockets generally, is available at *https://www.epa.gov/dockets.*

FOR FURTHER INFORMATION CONTACT: Each application summary in Unit II. specifies a contact division. The appropriate division contacts are identified as follows:

- BPPD (Biopesticides and Pollution Prevention Division) (Mail Code 7511M); Shannon Borges; main telephone number: (202) 566–1400; or
- RD (Registration Division) (Mail Code 7505T); Charles Smith; main telephone number: (202) 566–1030; email address: *RDFRNotices@epa.gov.*

SUPPLEMENTARY INFORMATION:

I. Executive Summary

A. Does this action apply to me?

This action provides information that is directed to the public in general.

B. What is the Agency's authority for taking this action?

EPA is taking this action pursuant to section 3(c)(4) of the Federal Insecticide, Fungicide, and Rodenticide Act (FIFRA), 7 U.S.C. 136a(c)(4), and 40 CFR 152.102.

C. What action is the Agency taking?

EPA is hereby providing notice of receipt and an opportunity to comment on the applications identified in Unit II. of this document that seek to register pesticide products containing active ingredients not included in any currently registered pesticide products in accordance with FIFRA. Unit II. identifies and provides basic information about applications that are currently being evaluated by EPA. Notice of receipt of these applications does not imply a decision by the Agency on these applications. For actions being evaluated under EPA's public participation process for registration actions, there will be an additional opportunity for public comment on the proposed decisions. Please see EPA's public participation website for additional information on this process (*https://www.epa.gov/pesticide-registration/public-participation-process-registration-actions*).

D. What should I consider as I prepare my comments for EPA?

1. *Submitting CBI.* Do not submit CBI to EPA through *https://www.regulations.gov* or email. If you wish to include CBI in your comment, please follow the applicable instructions at *https://www.epa.gov/dockets/commenting-epa-dockets#rules* and clearly mark the information that you claim to be CBI. In addition to one complete version of the comment that includes CBI, a copy of the comment without CBI must be submitted for inclusion in the public docket. Information marked as CBI will not be disclosed except in accordance with procedures set forth in 40 CFR part 2.

2. *Tips for preparing your comments.* When preparing and submitting your comments, see the commenting tips at *https://www.epa.gov/dockets/commenting-epa-dockets.*

II. Applications To Register New Active Ingredients

A. What information is being provided in this document?

The following information is provided for the applications identified in Unit II.B.:

- EPA File Symbol or Registration number(s);
- EPA docket ID number for the application;
- Name and address of the applicant;
- Name of the active ingredient;
- Product type;
- Proposed uses;
- Date received; and
- Division to contact for that application.

Additional information about the application may also be available in the docket identified for the application.

B. What applications are identified in this document?

EPA received and is providing a public comment opportunity for the following applications:

- *EPA File Symbol:* 5905–AAG. *Docket ID number:* EPA–HQ–OPP–2024–0053. *Applicant:* Helena Agri-Enterprises, LLC., 225 Schilling Blvd., Suite 300, Collierville, TN 38017. *Active ingredient:* Cumyluron. *Product type:* Herbicide. *Proposed use:* Formulation of herbicide products intended for use on golf course turf grass. *Received:* 03/06/2023. *Contact:* RD.
- *EPA File Symbol:* 5905–AAU. *Docket ID number:* EPA–HQ–OPP–2024–0053. *Applicant:* Helena Agri-Enterprises, LLC., 225 Schilling Blvd., Suite 300, Collierville, TN 38017. *Active ingredient:* Cumyluron. *Product type:* Herbicide. *Proposed use:* Golf course turf grass. *Received:* 03/06/2023. *Contact:* RD.
- *EPA File Symbol:* 94430–R. *Docket ID number:* (EPA–HQ–OPP–2024–0283). *Applicant:* WeedOUT, Ltd., c/o Ephi Gur Regulatory Consulting Inc. 2736 S. Evenfall Dr. Yuma, AZ 85635. *Active ingredient:* Herbicide, WDT–1, an irradiated pollen derived from non-glyphosate resistant varieties of Palmer Amaranth (Amaranthus palmeri) at 95%. *Product type:* WeedOUT *Proposed use:* Control of Palmer amaranth. *Received:* 12/20/2023. *Contact:* BPPD.
- *File Symbols:* 102588–R, 102588–U, and 102588–G. *Docket ID number:* EPA–HQ–OPP–2025–0177. *Applicant:* Silvec Biologics Inc. 200 Girard Street, Suite 200, Gaithersburg, MD 20877. *Product names:* Construct CTV-SoD2, Construct CTV-SoD2*, and Construct CTV-SoD2–1. *Active ingredients: Citrus tristeza* virus Expressing Spinach Defensin Protein 2, *Citrus tristeza* virus Expressing Spinach Defensin Protein 2*, and *Citrus tristeza* virus Expressing Spinach Defensin Protein 2–1. *Proposed use:* Plant Protectant. *Received:* 01/08/2024. *Contact:* BPPD.
- *File Symbol:* 103312–R. *Docket ID number:* EPA–HQ–OPP–2025–0211. *Applicant:* Soil Culture Solutions, LLC (d/b/a Soilcea), 3802 Spectrum Blvd., Suite 157, Tampa, FL 33612 *Product name:* CarriCea T1. *Active ingredient:* Loss of function gene ACD2 (Accelerated Cell Death 2) and associated Cas9 protein and gRNA sequence, Loss of function gene Lls1 (Lethal Leaf Spot 1) and associated Cas9 protein and gRNA sequence, and Loss of function gene PLCP (Papain-Like Cysteine Protease) and associated Cas9 protein and gRNA sequence in CRISPR-edited Carrizo rootstock. *Proposed use:* Plant-Incorporated Protectant. *Received:* 11/13/2024. *Contact:* BPPD.
- *File Symbol:* 29964–GA. *Docket ID number:* EPA–HQ–OPP–2025–0074. *Applicant:* Pioneer Hi-Bred International, Inc. 7300 NW 62nd Avenue, P.O. Box 1000, Johnston, IA 50131. *Product name:* COR23134 Soybean. *Active ingredients:* Insecticide; *Bacillus thuringiensis* Cry1B.34.1 protein and the genetic material necessary (PHP90315 T–DNA) for its production, *Bacillus thuringiensis* Cry1B.61.1 protein and the genetic material necessary (PHP90315 T–DNA)

for its production, and *Adiantum trapeziforme var. braziliense* IPD083Cb protein and the genetic material necessary (PHP9035 T–DNA) for its production. *Proposed classification/Use:* Plant-Incorporated-Protectant (PIP) for use in soybean. *Received:* 2/1/2024. *Contact:* BPPD.

• *File Symbol:* 524–AAO. *Docket ID number:* EPA–HQ–OPP–2025–0297. *Applicant:* Bayer CropScience LP. *Product name:* MON 89151. *Active ingredients:* Insecticide—*Bacillus thuringiensis* Cry1Da_7 protein and the genetic material (Vector PV–GHIR529967) necessary for its production, *Bacillus thuringiensis* Cry1B.3 protein and the genetic material (Vector PV–GHIR529967) necessary for its production, and *Paenibacillus spp.* Vip3Cb1.1 protein and the genetic material (Vector PV–GHIR529967) necessary for its production. *Proposed use:* Plant-Incorporated-Protectant (PIP) for use in cotton. *Received:* 12/10/2024. *Contact:* BPPD.

• *EPA Registration Number:* 52991–UO. *Docket ID number:* EPA–HQ–OPP–2025–0209. *Applicant:* Bedoukian Research, Inc., 6 Commerce Drive, Danbury, CT 06810. *Product name:* Bedoukian z-13-Octadecenal Technical Pheromone. *Active ingredient:* MP pheromone—z-13-Octadecenal at 96%. *Proposed use:* MP pheromone that acts as a behavior modifying biochemical pesticide which functions by mating disruption. *Received:* 7/30/2024. *Contact:* BPPD.

Authority: 7 U.S.C. 136 *et seq.*

Dated: July 28, 2025.

ENVIRONMENTAL PROTECTION AGENCY

[EPA–HQ–OPP–2025–0026; FRL–12472–05–OCSPP]

Pesticide Product Registration; Receipt of Applications for New Uses (March–May 2025)

AGENCY: Environmental Protection Agency (EPA).

ACTION: Notice of receipt and request for comment.

SUMMARY: This document announces the Agency's receipt of and solicits comment on applications to register new pesticide products containing currently registered active ingredients that would entail a changed use pattern. The Agency is providing this notice in accordance with the Federal Insecticide, Fungicide, and Rodenticide Act (FIFRA). EPA uses the month and year in the title to identify when the Agency complied the applications identified in this notice of receipt. Unit II. of this document identifies certain applications received in 2023, 2024 and 2025 that are currently being evaluated by EPA, along with information about each application, including when it was received, who submitted the application, and the purpose of the application.

DATES: Comments must be received on or before September 3, 2025.

ADDRESSES: Submit your comments, identified by the docket identification (ID) number and the *EPA File Symbol* or the *EPA Registration Number* of interest as shown in Unit II. of this document, online at *https://www.regulations.gov.* Follow the online instructions for submitting comments. Do not submit electronically any information you consider to be Confidential Business Information (CBI) or other information whose disclosure is restricted by statute. Additional instructions on commenting and visiting the docket, along with more information about dockets generally, is available at *https://www.epa.gov/dockets.*

FOR FURTHER INFORMATION CONTACT: Each application summary in Unit II. specifies a contact division. The appropriate division contacts are identified as follows:

• BPPD (Biopesticides and Pollution Prevention Division) (Mail Code 7511M); Shannon Borges; main telephone number: (202) 566–1400; or

• RD (Registration Division) (Mail Code 7505T); Charles Smith; main telephone number: (202) 566–1030; email address: *RDFRNotices@epa.gov.*

SUPPLEMENTARY INFORMATION:

I. Executive Summary

A. Does this action apply to me?

This action provides information that is directed to the public in general.

B. What is the Agency's authority for taking this action?

EPA is taking this action pursuant to section 3(c)(4) of the Federal Insecticide, Fungicide, and Rodenticide Act (FIFRA), 7 U.S.C. 136a(c)(4), and 40 CFR 152.102.

C. What action is the Agency taking?

EPA is hereby providing notice of receipt and an opportunity to comment on the applications identified in Unit II. of this document that seek to register new pesticide products containing currently registered active ingredients that would entail a changed use pattern in accordance with FIFRA. Unit II. identifies and provides basic information about applications that are currently being evaluated by EPA. Notice of receipt of these applications does not imply a decision by the Agency on these applications. For actions being evaluated under EPA's public participation process for registration actions, there will be an additional opportunity for public comment on the proposed decisions. Please see EPA's public participation website for additional information on this process (*https://www.epa.gov/pesticide-registration/participation-process-registration-actions*).

D. What should I consider as I prepare my comments for EPA?

1. *Submitting CBI.* Do not submit CBI to EPA through *https://www.regulations.gov* or email. If you wish to include CBI in your comment, please follow the applicable instructions at *https://www.epa.gov/dockets/commenting-epa-dockets#rules* and clearly mark the information that you claim to be CBI. In addition to one complete version of the comment that includes CBI, a copy of the comment without CBI must be submitted for inclusion in the public docket. Information marked as CBI will not be disclosed except in accordance with procedures set forth in 40 CFR part 2.

2. *Tips for preparing your comments.* When preparing and submitting your comments, see the commenting tips at *https://www.epa.gov//epa-dockets.*

II. Applications To Register New Uses

A. What information is being provided in this document?

The following information is provided for the applications identified in Unit II.B.:

• EPA File Symbol or Registration number(s);

• EPA docket ID number for the application;

• Name and address of the applicant;

• Name of the active ingredient;

• Product type;

• Proposed uses;

• Date received; and

• Division to contact for that application.

Additional information about the application may also be available in the docket identified for the application.

B. What applications are identified in this document?

EPA received and is providing a public comment opportunity for the following applications:

• *EPA Registration Numbers:* 352–604 and 352–605. *Docket ID number:* EPA–HQ–OPP–2024–0155. *Applicant:* Corteva Agriscience, 9330 Zionsville Road, Indianapolis IN 46268. *Active ingredient:* Famoxadone. *Product type:* Fungicide. *Proposed use(s):* Brassica, leafy greens subgroup 4–16B; leafy greens subgroup 4–16A; celtuce; fennel, florence; fruiting vegetables subgroup 8–10A; fruiting vegetables subgroup 8–10B; leaf petiole subgroup 22B; succulent shelled bean subgroup 6–22C (East of the Rocky Mountains); mango; root vegetables subgroup 1B (except sugar beet); tuberous and corm vegetables subgroup 1C. *Received:* 09/29/2023. *Contact:* RD.

• *EPA Registration Number:* 62719–437 and 62719–442. *Docket ID number:* EPA–HQ–OPP–2024–0202. *Applicant:* Corteva Agriscience LLC, 9330 Zionsville Road, Indianapolis, IN 46268. *Active ingredient:* Methoxyfenozide. *Product type:* Insecticide. *Proposed use (s):* Edible podded bean subgroup 6–22A; edible podded pea subgroup 6–22B; field corn subgroup 15–22C; grain sorghum and millet subgroup 15–22E; pulses, dried shelled bean, except soybean, subgroup 6–22E, except pea, blackeyed, seed and pea, southern, seed; pulses, dried shelled pea subgroup 6–22F; rice subgroup 15–22F; succulent shelled bean subgroup 6–22C; succulent shelled pea subgroup 6–22D; sweet corn subgroup 15–22D; tropical and subtropical, medium to large fruit, edible peel, subgroup 23B. *Received:* 12/18/2023. *Contact:* RD.

• *EPA Registration Numbers:* 100–542 and 100–620. *Docket ID number:* EPA–HQ–OPP–2025–0080. *Applicant:* IR–4 Project Headquarters, North Carolina State University, 1730 Varsity Drive, Venture IV, Suite 210, Raleigh, NC 27606. *Active ingredient:* Prometryn. *Product type:* Herbicide. *Proposed use:* Leeks. *Received:* 12/02/2024. *Contact:* RD.

• *EPA Registration Numbers:* 71512–28; 71512–29. *Docket ID number:* EPA–HQ–OPP–2025–0119. *Applicant:* ISK Biosciences Corporation, 7470 Auburn Road, Suite A, Concord, OH 44077. *Active ingredient:* Tolpyralate. *Product type:* Herbicide. *Proposed uses:* Wheat subgroup 15–22A; barley subgroup 15–22B. *Received:* 12/18/2024. *Contact:* RD.

• *EPA Registration Number:* 8033–20, 8033–135, 8033–141, 8033–36 and 8033–23. *Docket ID number:* EPA–HQ–OPP–2025–0127. *Applicant:* Nisso American Inc. *Active ingredient:* Acetamiprid. *Product type:* Insecticide. *Proposed use:* Dragon fruit, sunflower subgroup 20B, vegetable, legume bean, edible podded, subgroup 6–22A, vegetable, legume pea, edible podded, subgroup 6–22B, vegetable, legume bean, succulent shelled, subgroup 6–22C, and vegetable, legume, pea, succulent shelled, subgroup 6–22D. *Received:* 01/31/2025. *Contact:* RD.

• *EPA File Symbol:* 264–REUA. *Docket ID number:* EPA–HQ–OPP–2025–0075. *Applicant:* Bayer CropScience, 800 N. Lindbergh Blvd., St. Louis, MO 63167. *Active ingredient:* Flumioxazin. *Product type:* Herbicide. *Proposed use:* Over-the-top use on herbicide-resistant cotton. *Received:* 08/29/2024. *Contact:* RD.

• *EPA File Symbol:* 59639–97, 59639–ETT. *Docket ID number:* EPA–HQ–OPP–2025–0075. *Applicant:* Valent U.S.A. LLC, 4600 Norris Canyon Road, San Ramon, CA 94583. *Active ingredient:* Flumioxazin. *Product type:* Herbicide. *Proposed use:* Over-the-top use on herbicide-resistant cotton. *Received:* 08/29/2024. *Contact:* RD.

• *EPA Registration Numbers:* 71711–6, 71711–7, 71711–25, 71711–27, 71711–41, 71711–58, and 71711–69. *Docket ID number:* EPA–HQ–OPP–2024–0071. *Applicant:* Nichino America, Inc., 4550 Linden Hill Road, Suite 501, Wilmington, DE 19808. *Active ingredient:* pyraflufen-ethyl. *Product type:* Herbicide. *Proposed use:* Oat. *Received:* 06/30/2023. *Contact:* RD.

• *EPA Registration Numbers:* 71512–21 and 71512–22. *Docket ID number:* EPA–HQ–OPP–2025–0041. *Applicant:* ISK Biosciences Corporation, 7470 Auburn Rd., Suite A, Concord, OH 44027. *Active ingredient:* Isofetamid. *Product type:* Fungicide. *Proposed use:* Tree nut, crop group 14–12. *Received:* 08/30/2024. *Contact:* RD.

• *EPA Registration Number:* 95699–2. *Docket ID number:* EPA–HQ–OPP–2025–0178. *Applicant:* NewLeaf Symbiotics Inc., 1005 North Warson Road, St. Louis, MO, 63132. *Active ingredient: Methylorubrum extorquens* strain NLS0042. *Product type:* Insecticide. *Proposed use:* Commercial use for pre-plant dip application, foliar application, and aerial application on crops. *Received:* 09/10/2024. *Contact:* BPPD.

• *EPA File Symbol: 1021–2872* and 1021–EONN. *Docket ID number:* EPA–HQ–OPP–2025–0217. *Applicant:* McLaughlin Gormley King Company D/B/A MGK, 7325 Aspen Lane N., Minneapolis, MN 55428. *Active ingredient:* Veratrine (Sabadilla Alkaloids). *Product type:* Insecticide. *Proposed use:* Leafy Greens Crop Subgroup 4–16A, Fruiting Vegetables Crop Group 8–10 and Avocado. *Received:* 03/13/2025. *Contact:* RD.

• *EPA Registration Numbers:* 66222–151 and 11603–77. *Docket ID number:* EPA–HQ–OPP–2025–0148. *Applicant:* Makhteshim Agan of North America, Inc. (d/b/a ADAMA) 8601 Six Forks Road, Suite 300 Raleigh, NC 27615. *Active ingredient:* ethephon. *Product type:* fungicide. *Proposed Use:* Fig. *Received:* 12/19/2024. *Contact:* RD.

• *EPA Registration Number(s):* 70506–514, 70506–602, 70506–603, 91813–79. *Docket ID number:* EPA–HQ–OPP–2022–0455 *Applicant:* UPL Delaware Inc. and UPL NA Inc. 630 Freedom Business Center, Suite 402 King of Prussia, PA 19406. *Active ingredient:* Carboxin. *Product type:* fungicide. *Proposed Use(s):* vegetable, legume, forage and hay, except soybean, subgroup 7–22A; vegetable, legume, pulse, bean, dried shelled, except soybean, subgroup 6–22E; and vegetable, legume, pulse, pea, dried shelled, subgroup 6–22F. *Received:* 12/13/2021. *Contact:* RD.

• *EPA Registration Number:* 95699–1. *Docket ID number:* EPA–HQ–OPP–2025–0258. *Applicant:* NewLeaf Symbiotics, Inc., 1005 North Warson Road, St. Louis, MO 62132. *Active ingredient: Methylorubrum populi* strain NLS0089. *Product type:* Fungicide. *Proposed use:* For use as a pre-plant dip, dry seed treatment, and planter box seed treatment on agricultural food and nonfood crops, including turf in residential and institutional areas. *Received:* 11/14/2024. *Contact:* BPPD.

BILLING CODE 6560–50–P

FEDERAL ELECTION COMMISSION

[NOTICE 2025–06]

Filing Dates for the Tennessee Special Election in the 7th Congressional District

AGENCY: Federal Election Commission.

ACTION: Notice of filing dates for Special Election.

SUMMARY: Tennessee has scheduled special elections on October 7, 2025, and December 2, 2025, to fill the U.S. House of Representatives seat in the 7th Congressional District vacated by Representative Mark Green. Committees required to file reports in connection with the Special Primary Election on October 7, 2025, shall file a 12-day Pre-Primary Report. Committees required to file reports in connection with both the Special Primary and Special General on December 2, 2025, shall file a 12-day Pre-Primary, a 12-day Pre-General and a 30-Day Post-General Report.

ADDRESSES: 1050 First Street NE, Washington, DC 20463.

FOR FURTHER INFORMATION CONTACT: Mr. George J. Smaragdis, Information Division, (202) 694–1100 or (800) 424–9530, *info@fec.gov.*

SUPPLEMENTARY INFORMATION:

Principal Campaign Committees

All principal campaign committees of candidates who participate in the Tennessee Special shall file a 12-day Pre-Primary Report on September 25, 2025; a 12-day Pre-General Report on November 20, 2025, and a 30-day Post-General Report on January 1, 2026. (See charts below for the closing date for each report.)

Note that these reports are in addition to the campaign committee's regular quarterly filings. (See charts below for the closing date for each report).

Unauthorized Committees (PACs and Party Committees)

Political committees not filing monthly are subject to special election reporting if they make previously undisclosed contributions or expenditures in connection with the Tennessee Special Primary or Special General Election by the close of books for the applicable report(s). (See charts below for the closing date for each report.)

Committees filing monthly that make contributions or expenditures in connection with the Tennessee Special Primary or Special General Election will continue to file according to the monthly reporting schedule.

Additional disclosure information for the Tennessee special elections may be found on the FEC website at *https://www.fec.gov/help-candidates-and-committees/dates-and-deadlines/.*

Disclosure of Lobbyist Bundling Activity

Principal campaign committees, party committees and leadership PACs that are otherwise required to file reports in connection with the special elections must simultaneously file FEC Form 3L if they receive two or more bundled contributions from lobbyists/registrants or lobbyist/registrant PACs that aggregate in excess of $23,300 during the special election reporting periods. (See charts below for closing date of each period.) 11 CFR 104.22(a)(5)(v), (b), 110.17(e)(2), (f).

CALENDAR OF REPORTING DATES FOR TENNESSEE SPECIAL ELECTIONS

Report	Close of books [1]	Reg./cert. & overnight mailing deadline	Filing deadline
Campaign Committees Involved in *Only* the Special Primary (10/07/2025) Must File:			
Pre-Primary	09/17/2025	09/22/2025	09/25/2025

Post-General	12/22/2025	01/01/2026	01/01/2026

CALENDAR OF REPORTING DATES FOR TENNESSEE SPECIAL ELECTIONS—Continued

Report	Close of books [1]	Reg./cert. & overnight mailing deadline	Filing deadline
Year-End	12/31/2025	01/31/2026	[2] 01/31/2026

[1] The reporting period always begins the day after the closing date of the last report filed. If the committee is new and has not previously filed a report, the first report must cover all activity that occurred before the committee registered as a political committee up through the close of books for the first report due.

[2] Notice that this filing deadline falls on a weekend or federal holiday. Filing deadlines are not extended when they fall on nonworking days. Accordingly, reports filed on paper by methods other than registered, certified or overnight mail must be received before the Commission's close of business on the last business day before the deadline.

Dated: July 30, 2025.

On behalf of the Commission,

Shana M. Broussard,

Chair, Federal Election Commission.

FEDERAL RESERVE SYSTEM

Change in Bank Control Notices; Acquisitions of Shares of a Bank or Bank Holding Company

The notificants listed below have applied under the Change in Bank Control Act (Act) (12 U.S.C. 1817(j)) and § 225.41 of the Board's Regulation Y (12 CFR 225.41) to acquire shares of a bank or bank holding company. The factors that are considered in acting on the applications are set forth in paragraph 7 of the Act (12 U.S.C. 1817(j)(7)).

The public portions of the applications listed below, as well as other related filings required by the Board, if any, are available for immediate inspection at the Federal Reserve Bank(s) indicated below and at the offices of the Board of Governors. This information may also be obtained on an expedited basis, upon request, by contacting the appropriate Federal Reserve Bank and from the Board's Freedom of Information Office at *https://www.federalreserve.gov/foia/request.htm.* Interested persons may express their views in writing on the standards enumerated in paragraph 7 of the Act.

Comments received are subject to public disclosure. In general, comments received will be made available without change and will not be modified to remove personal or business information including confidential, contact, or other identifying information. Comments should not include any information such as confidential information that would not be appropriate for public disclosure.

Comments regarding each of these applications must be received at the Reserve Bank indicated or the offices of the Board of Governors, Ann E. Misback, Secretary of the Board, 20th Street and Constitution Avenue NW, Washington, DC 20551–0001, not later than August 19, 2025.

A. Federal Reserve Bank of St. Louis (Holly A. Rieser, Senior Manager) P.O. Box 442, St. Louis, Missouri 63166–2034. Comments can also be sent electronically to *Comments.applications@stls.frb.org:*

1. *The Sharon K. Garrett Marital Trust, created under the Sharon K. Garrett Revocable Trust dated November 1, 2000, as amended, Purdy, Missouri; John H. Garrett, Southport, North Carolina, and Jeffrey S. Scott, Purdy, Missouri, as co-trustees; and the Garrett Family Bank Trust, created under the Irrevocable Trust Agreement dated March 20, 2024, Purdy, Missouri; John H. Garrett and Filip J. Garrett, Brookside, Missouri, as co-trustees;* as a group acting in concert, to retain voting shares of Purdy Bancshares, Inc., Monett, Missouri, and thereby indirectly retain voting shares of First State Bank of Purdy, Purdy, Missouri.

Board of Governors of the Federal Reserve System.

Erin Cayce,

Assistant Secretary of the Board.

BILLING CODE P

FEDERAL TRADE COMMISSION

Granting of Requests for Early Termination of the Waiting Period Under the Premerger Notification Rules

Section 7A of the Clayton Act, 15 U.S.C. 18a, as added by Title II of the Hart-Scott-Rodino Antitrust Improvements Act of 1976, requires persons contemplating certain mergers or acquisitions to give the Federal Trade Commission and the Assistant Attorney General advance notice and to wait designated periods before consummation of such plans. Section 7A(b)(2) of the Act permits the agencies, in individual cases, to terminate this waiting period prior to its expiration and requires that notice of this action be published in the **Federal Register**.

The following transactions were granted early termination—on the dates indicated—of the waiting period provided by law and the premerger notification rules. The listing for each transaction includes the transaction number and the parties to the transaction. The grants were made by the Federal Trade Commission and the Assistant Attorney General for the Antitrust Division of the Department of Justice. Neither agency intends to take any action with respect to these proposed acquisitions during the applicable waiting period.

DEPARTMENT OF HEALTH AND HUMAN SERVICES

Food and Drug Administration

[Docket No. FDA–2025–N–2422]

Teva Branded Pharmaceutical Products R&D, Inc., et al.; Withdrawal of Approval of 39 New Drug Applications

AGENCY: Food and Drug Administration, HHS.

ACTION: Notice.

SUMMARY: The Food and Drug Administration (FDA or Agency) is withdrawing approval of 39 new drug applications (NDAs) from multiple applicants. The applicants notified the Agency in writing that the drug products were no longer marketed and requested that the approval of the applications be withdrawn.

DATES: Approval is withdrawn as of September 3, 2025.

FOR FURTHER INFORMATION CONTACT: Kimberly Lehrfeld, Center for Drug Evaluation and Research, Food and Drug Administration, 10903 New Hampshire Ave., Bldg. 51, Rm. 6226, Silver Spring, MD 20993–0002, 301–796–3137, *Kimberly.Lehrfeld@fda.hhs.gov.*

SUPPLEMENTARY INFORMATION: The applicants listed in table 1 have informed FDA that these drug products are no longer marketed and have requested that FDA withdraw approval of the applications under the process in § 314.150(c) (21 CFR 314.150(c)). The applicants have also, by their requests, waived their opportunity for a hearing. Withdrawal of approval of an application or abbreviated application under § 314.150(c) is without prejudice to refiling.

TABLE1—NDAS FOR WHICH APPROVAL IS WITHDRAWN

Application No.	Drug	Applicant
NDA 012674	Hexadrol (dexamethasone), Elixir, 0.5 mg/5 milliliter (mL)	Aspen Global Inc., c/o Lachman Consultant Services, Inc., 1600 Stewart Ave., Westbury, NY 11590.
NDA 012675	Hexadrol (dexamethasone) Tablets, 0.5 mg, 0.75 mg, 1.5 mg, and 4 mg.	Do.
NDA 014694	Hexadrol (dexamethasone sodium phosphate) Injectable, Equivalent to (EQ) 4 mg phosphate/mL, EQ 10 mg phosphate/mL, and EQ 20 mg phosphate/mL.	Do.
NDA 016012	Vivactil (protriptyline hydrochloride (HCl)) Tablets, 5 mg and 10 mg ...	Teva Women's Health, Inc, 145 Brandywine Parkway, West Chester, PA 19380.
NDA 016792	Surmontil (trimipramine maleate) Capsules, EQ 25 mg base, EQ 50 mg base, and EQ 100 mg base.	Do.
NDA 016798	Sinequan (doxepin HCl) Capsules, EQ 10 mg base, EQ 25 mg base, EQ 50 mg base, EQ 75 mg base, EQ 100 mg base, and EQ 150 mg base.	Pfizer Inc, 66 Hudson Blvd. East, New York, NY 10001.
NDA 017516	Sinequan (doxepin HCl) Concentrate, EQ 10 mg base/mL	Do.
NDA 017525	Loxitane (loxapine succinate) Capsules, EQ 5 mg base, EQ 10 mg base, EQ 25 mg base, and EQ 50 mg base; Loxitane (loxapine succinate) Tablets, EQ 10 mg base, EQ 25 mg base, and EQ 50 mg base.	Teva Branded Pharmaceutical Products R&D, LLC, 145 Brandywine Parkway, West Chester, PA 19380.
NDA 017658	Loxitane C (loxapine HCl) Concentrate, EQ 25 mg base/mL	Do.
NDA 017693	Drytec Technetium Tc99m Generator (technetium Tc99m sodium pertechnetate generator) Solution, 830–16600 millicurie (mCi)/generator, and 68–2703 mCi/generator.	GE HealthCare, 251 Locke Dr., Marlborough, MA 01752.
NDA 018110	Thallous Chloride Tl-201 (thallous chloride Tl-201) Injectable, 1 mCi/mL.	Do.
NDA 018920	M.V.I. Pediatric (ascorbic acid 80mg/vial; biotin 0.02 mg/vial; cyanocobalamin 0.001mg/vial; dexpanthenol 5 mg/vial; ergocalciferol 0.01mg/vial; folic acid 0.14 mg/vial; niacinamide 17 mg/vial; phytonadione 0.2 mg/vial; pyridoxine HCl 1 mg/vial; riboflavin 5′-phosphate sodium 1.4 mg/vial; thiamine HCl EQ 1.2 mg base/vial; vitamin A 0.7 mg/vial; vitamin E 7 mg/vial) For Solution.	Hospira, Inc., a Pfizer company, 275 North Field Drive, Lake Forest, IL 60045.
NDA 019240	E–Z Scrub 201 (povidone-iodine) Sponge, 20%	Becton, Dickinson and Company, 75 N Fairway Dr., Vernon Hills, IL 60061.
NDA 019476	E–Z Scrub 241 (povidone-iodine) Sponge, 10%	Do.
NDA 020551	Nimbex (cisatracurium besylate) Injectable, EQ 2 mg base/mL; Nimbex Preservative Free (cisatracurium besylate) Injectable, EQ 2 mg base/mL and EQ 10 mg base/mL.	AbbVie Inc., N Waukegan Rd., North Chicago, IL 60064.
NDA 020655	Alora (estradiol) Extended-release Films, 0.025 mg/24 hour, 0.05 mg/24 hour, 0.075 mg/24 hour, and 0.1 mg/24 hour.	Do.
NDA 020933	Viramune (nevirapine), Suspension, 50 mg/5 mL	Boehringer Ingelheim Pharmaceuticals, Inc., 900 Ridgebury Rd., Ridgefield, CT 06877–0369.
NDA 021071	Avandia (rosiglitazone maleate) Tablets, EQ 2 mg base, EQ 4 mg base, and EQ 8 mg base.	Woodward Pharma Services, LLC, 11705 Boyette Rd., Riverview, FL 33569.
NDA 021290	Zinecard (dexrazoxane HCl) Injectable, EQ 250 mg base/vial and EQ 500 mg base/vial.	Pfizer Inc.
NDA 021591	Riomet (metformin HCl) Solution, 500 mg/5 mL	Ranbaxy Signature LLC c/o Sun Pharmaceutical Industries, Inc., 2 Independence Way, Princeton, NJ 08540.

TABLE1—NDAS FOR WHICH APPROVAL IS WITHDRAWN—Continued

Application No.	Drug	Applicant
NDA 021610	Opana ER (oxymorphone HCl) Extended-release Tablets, 5 mg, 7.5 mg, 10 mg, 15 mg, 20 mg, 30 mg, and 40 mg.	Endo Operations Limited, c/o Endo USA, Inc., 9 Great Valley Parkway, Malvern, PA 19355.
NDA 021625	M.V.I. Adult (ascorbic acid 200 mg/vial; biotin 0.06 mg/vial; cyanocobalamin 0.005 mg/vial; dexpanthenol 15 mg/vial; ergocalciferol 0.005 mg/vial; folic acid 0.6 mg/vial; niacinamide 40 mg/vial; pyridoxine HCl 6 mg/vial; riboflavin 5′-phosphate sodium 3.6 mg/vial; thiamine HCl 6 mg/vial; Vitamin A 1 mg/vial; Vitamin E 10 mg/vial; Vitamin K 0.15 mg/vial) Injectable.	Hospira, Inc., a Pfizer company.
NDA 021773	Byetta (exenatide synthetic) Injectable, 300 micrograms (mcg)/1.2 mL and 600 mcg/2.4 mL.	AstraZeneca AB c/o AstraZeneca Pharmaceuticals LP, 1800 Concord Pike, Wilmington, DE 19803.
NDA 022107	Tekturna HCT (aliskiren hemifumarate and hydrochlorothiazide) Tablets, EQ 150 mg base; 12.5 mg, EQ 150 mg base; 25 mg, EQ 300 mg base; 12.5 mg, and EQ 300 mg base; 25 mg.	Noden Pharma DAC c/o APCER Life Sciences, 111 Town Square Place, Suite 860, Jersey City, NJ 7310.
NDA 022200	Bydureon (exenatide synthetic) For Suspension, Extended-release, 2 mg/vial; Bydureon Pen (exenatide synthetic) For Suspension, Extended-release, 2 mg.	AstraZeneca AB c/o AstraZeneca Pharmaceuticals LP.
NDA 022450	Ofirmev (acetaminophen) Solution, 1000 mg/100 mL (10 mg/mL)	Mallinckrodt Pharmaceuticals Ireland Limited, Mallinckrodt Hospital Products Inc., 675 James S. McDonnell Blvd., Hazelwood, MO 63042.
NDA 022519	Duexis (famotidine and ibuprofen) Tablet, 26.6 mg; 800 mg	Horizon Medicines LLC, 1 Horizon Way, Deerfield, IL 60015.
NDA 050577	Zanosar (streptozocin) Injectable, 1 gram(g)/vial	Teva Pharmaceuticals USA, Inc., 145 Brandywine Parkway, West Chester, PA 19380.
NDA 050693	Zithromax (azithromycin), for Suspension, EQ 1 g base/packet	Pfizer Inc.
NDA 050591	Bactroban (mupirocin) Ointment, 2%	SmithKlineBeecham (Cork) Ltd., Ireland c/o GlaxoSmithKline, 1250 South Collegeville Rd., Collegeville, PA 19426.
NDA 050703	Bactroban (mupirocin) Nasal Ointment, 2%	Do.
NDA 050746	Bactroban (mupirocin) Cream, 2%	Do.
NDA 050797	Zmax (azithromycin) for Suspension, Extended-release, EQ 2 g base/bottle.	PF Prism C.V. c/o Pfizer, Inc., 235 East 42nd St., New York, NY 10017.
NDA 207986	Otiprio (ciprofloxacin) Injectable and Otic Suspension, 6% (60 mg/mL).	ALK-Abelló, Inc. c/o ALK Inc., 135 Route 202/206 Suite 3, Bedminster, NJ 07921.
NDA 208653	Apadaz (acetaminophen and benzhydrocodone HCl), Tablets, 325 mg; EQ 4.08 mg base, 325 mg; EQ 6.12 mg base, and 325 mg; EQ 8.16 mg base.	Zevra Therapeutics, 1180 Celebration Blvd., Suite 103, Celebration, FL 34747.
NDA 209210	Bydrueon BCise (exenatide synthetic) Extended-release Suspension, 2 mg/0.85 mL.	AstraZeneca AB c/o AstraZeneca Pharmaceuticals LP.
NDA 209410	Osmolex ER (amantadine HCl) Extended-release Tablets, EQ 129 mg base, EQ 161 mg base, EQ 193 mg base, and EQ 258 mg base.	Supernus Pharmaceuticals, Inc., 9715 Key West Ave., Rockville, MD 20850.
NDA 212895	Conjupri (levamlodipine maleate) Tablets, EQ 1.25 mg base, EQ 2.5 mg base, and EQ 5 mg base.	CSPC Ouyi Pharmaceutical Co., Ltd. c/o CSPC Conjupro Biotherapeutics, Inc., 302 Carnegie Center, Suite 100, Princeton, NJ 08540.
NDA 214835	Risvan (risperidone) for Suspension, Extended-release, 75 mg and 100 mg.	Laboratorios Farmacéuticos ROVI, S.A. c/o PharmaLex US Corporation, 1 West 1st Ave., Conshohocken, PA 19428.

Therefore, approval of the applications listed in table 1, and all amendments and supplements thereto, is hereby withdrawn as of September 3, 2025. Approval of each entire application is withdrawn, including any strengths and dosage forms included in the application but inadvertently missing from table 1. Introduction or delivery for introduction into interstate commerce of products listed in table 1 without an approved NDA violates sections 505(a) and 301(d) of the Federal Food, Drug, and Cosmetic Act (21 U.S.C. 355(a) and 331(d)). Drug products that are listed in table 1 that are in inventory on September 3, 2025 may continue to be dispensed until the inventories have been depleted or the drug products have reached their expiration dates or otherwise become violative, whichever occurs first.

Dated: July 30, 2025.

Grace R. Graham,

Deputy Commissioner for Policy, Legislation, and International Affairs.

DEPARTMENT OF HEALTH AND HUMAN SERVICES

Food and Drug Administration

[Docket No. FDA–2025–P–0410]

Determination That ROXICET (Oxycodone Hydrochloride and Acetaminophen) Tablet, 5 Milligrams and 325 Milligrams, Was Not Withdrawn From Sale for Reasons of Safety or Effectiveness

AGENCY: Food and Drug Administration, HHS.

ACTION: Notice.

SUMMARY: The Food and Drug Administration (FDA or Agency) has determined that ROXICET (oxycodone

hydrochloride (HCl) and acetaminophen) tablet, 5 milligrams (mg)/325 mg, was not withdrawn from sale for reasons of safety or effectiveness. This determination will allow FDA to approve abbreviated new drug applications (ANDAs) for oxycodone HCl and acetaminophen tablet, 5 mg/325 mg, if all other legal and regulatory requirements are met.

FOR FURTHER INFORMATION CONTACT: Alexander Poonai, J.D., Center for Drug Evaluation and Research, Food and Drug Administration, 10903 New Hampshire Ave., Bldg. 51, Rm. 6213, Silver Spring, MD 20993–0002, 301–796–3600, *alexander.poonai@fda.hhs.gov.*

SUPPLEMENTARY INFORMATION: Section 505(j) of the Federal Food, Drug, and Cosmetic Act (FD&C Act) (21 U.S.C. 355(j)) allows the submission of an ANDA to market a generic version of a previously approved drug product. To obtain approval, the ANDA applicant must show, among other things, that the generic drug product: (1) has the same active ingredient(s), dosage form, route of administration, strength, conditions of use, and (with certain exceptions) labeling as the listed drug, which is a version of the drug that was previously approved, and (2) is bioequivalent to the listed drug. ANDA applicants do not have to repeat the extensive clinical testing otherwise necessary to gain approval of a new drug application (NDA).

Section 505(j)(7) of the FD&C Act requires FDA to publish a list of all approved drugs. FDA publishes this list as part of the ''Approved Drug Products With Therapeutic Equivalence Evaluations,'' which is known generally as the ''Orange Book.'' Under FDA regulations, drugs are removed from the list if the Agency withdraws or suspends approval of the drug's NDA or ANDA for reasons of safety or effectiveness or if FDA determines that the listed drug was withdrawn from sale for reasons of safety or effectiveness (21 CFR 314.162).

A person may petition the Agency to determine, or the Agency may determine on its own initiative, whether a listed drug was withdrawn from sale for reasons of safety or effectiveness. This determination may be made at any time after the drug has been withdrawn from sale, but must be made prior to approving an ANDA that refers to the listed drug (21 CFR 314.161). FDA may not approve an ANDA that does not refer to a listed drug.

ROXICET (oxycodone HCl and acetaminophen) tablet, 5 mg/325 mg, is the subject of ANDA 087003, held by Hikma Pharmaceuticals USA Inc., and initially approved on February 25, 1980. ROXICET is indicated for the relief of moderate to moderately severe pain.

ROXICET (oxycodone HCl and acetaminophen) tablet, 5 mg/325 mg, is currently listed in the ''Discontinued Drug Product List'' section of the Orange Book.

Nostrum Laboratories, Inc. submitted a citizen petition dated February 5, 2025 (Docket No. FDA–2025–P–0410), under 21 CFR 10.30, requesting that the Agency determine whether ROXICET (oxycodone HCl and acetaminophen) tablet, 5 mg/325 mg, was withdrawn from sale for reasons of safety or effectiveness.

After considering the citizen petition and reviewing Agency records and based on the information we have at this time, FDA has determined under § 314.161 that ROXICET (oxycodone HCl and acetaminophen) tablet, 5 mg/325 mg, was not withdrawn for reasons of safety or effectiveness. The petitioner has identified no data or other information suggesting that ROXICET (oxycodone HCl and acetaminophen) tablet, 5 mg/325 mg, was withdrawn for reasons of safety or effectiveness. We have carefully reviewed our files for records concerning the withdrawal of ROXICET (oxycodone HCl and acetaminophen) tablet, 5 mg/325 mg, from sale. We have also independently evaluated relevant literature and data for possible postmarketing adverse events. We have reviewed the available evidence and determined that this drug product was not withdrawn from sale for reasons of safety or effectiveness.

Accordingly, the Agency will continue to list ROXICET (oxycodone HCl and acetaminophen) tablet, 5 mg/325 mg, in the ''Discontinued Drug Product List'' section of the Orange Book. The ''Discontinued Drug Product List'' delineates, among other items, drug products that have been discontinued from marketing for reasons other than safety or effectiveness. ANDAs that refer to ROXICET (oxycodone HCl and acetaminophen) tablet, 5 mg/325 mg, may be approved by the Agency as long as they meet all other legal and regulatory requirements for the approval of ANDAs. If FDA determines that labeling for this drug product should be revised to meet current standards, the Agency will advise ANDA applicants to submit such labeling.

Dated: July 29, 2025.

Grace R. Graham,

Deputy Commissioner for Policy, Legislation, and International Affairs.

BILLING CODE 4164–01–P

DEPARTMENT OF HEALTH AND HUMAN SERVICES

Food and Drug Administration

[Docket No. FDA–2025–P–0477]

Determination That HEPARIN SODIUM 1,000 UNITS IN SODIUM CHLORIDE 0.9% IN PLASTIC CONTAINER (Heparin Sodium) Injectable, 200 Units/100 Milliliters, and Two Other Drug Products Were Not Withdrawn From Sale for Reasons of Safety or Effectiveness

AGENCY: Food and Drug Administration, HHS.

ACTION: Notice.

SUMMARY: The Food and Drug Administration (FDA or Agency) has determined that HEPARIN SODIUM 1,000 UNITS IN SODIUM CHLORIDE 0.9% IN PLASTIC CONTAINER (heparin sodium) injectable, 200 units/100 milliliters (mL); HEPARIN SODIUM 2,000 UNITS IN SODIUM CHLORIDE 0.9% IN PLASTIC CONTAINER (heparin sodium) injectable, 200 units/100 mL; and HEPARIN SODIUM 5,000 UNITS IN SODIUM CHLORIDE 0.9% IN PLASTIC CONTAINER (heparin sodium) injectable, 1,000 units/100 mL under new drug application (NDA) 019042 were not withdrawn from sale for reasons of safety or effectiveness. This determination will allow FDA to approve abbreviated new drug applications (ANDAs) that refer to these products if all other legal and regulatory requirements are met.

FOR FURTHER INFORMATION CONTACT: Madeleine Giaquinto, Center for Drug Evaluation and Research, Food and Drug Administration, 10903 New Hampshire Ave., Bldg. 51, Rm. 6219, Silver Spring, MD 20993–0002, 240–863–8976, *madeleine.giaquinto@fda.hhs.gov*.

SUPPLEMENTARY INFORMATION: Section 505(j) of the Federal Food, Drug, and Cosmetic Act (FD&C Act) (21 U.S.C. 355(j)) allows the submission of an ANDA to market a generic version of a previously approved drug product. To obtain approval, the ANDA applicant must show, among other things, that the generic drug product: (1) has the same active ingredient(s), dosage form, route of administration, strength, conditions

of use, and (with certain exceptions) labeling as the listed drug, which is a version of the drug that was previously approved, and (2) is bioequivalent to the listed drug. ANDA applicants do not have to repeat the extensive clinical testing otherwise necessary to gain approval of an NDA.

Section 505(j)(7) of the FD&C Act requires FDA to publish a list of all approved drugs. FDA publishes this list as part of the ''Approved Drug Products With Therapeutic Equivalence Evaluations,'' which is known generally as the ''Orange Book.'' Under FDA regulations, drugs are removed from the list if the Agency withdraws or suspends approval of the drug's NDA or ANDA for reasons of safety or effectiveness or if FDA determines that the listed drug was withdrawn from sale for reasons of safety or effectiveness (21 CFR 314.162).

A person may petition the Agency to determine, or the Agency may determine on its own initiative, whether a listed drug was withdrawn from sale for reasons of safety or effectiveness. This determination may be made at any time after the drug has been withdrawn from sale, but must be made prior to approving an ANDA that refers to the listed drug (§ 314.161 (21 CFR 314.161)). FDA may not approve an ANDA that does not refer to a listed drug.

HEPARIN SODIUM 1,000 UNITS IN SODIUM CHLORIDE 0.9% IN PLASTIC CONTAINER (heparin sodium) injectable, 200 units/100 mL; HEPARIN SODIUM 2,000 UNITS IN SODIUM CHLORIDE 0.9% IN PLASTIC CONTAINER (heparin sodium) injectable, 200 units/100 mL; and HEPARIN SODIUM 5,000 UNITS IN SODIUM CHLORIDE 0.9% IN PLASTIC CONTAINER (heparin sodium) injectable, 1,000 units/100 mL, are the subject of NDA 019042, held by B. Braun Medical Inc., and initially approved on March 29, 1985. These drug products are indicated as an anticoagulant to maintain catheter patency.

The HEPARIN SODIUM IN SODIUM CHLORIDE IN PLASTIC CONTAINER (heparin sodium) products listed in this document are currently listed in the ''Discontinued Drug Product List'' section of the Orange Book. In the **Federal Register** of March 4, 2005 (70 FR 10651), FDA announced that it was withdrawing approval of NDA 091042, effective April 4, 2005.

B. Braun Medical Inc. submitted a citizen petition dated February 17, 2025 (Docket No. FDA–2025–P–0477), under 21 CFR 10.30, requesting that the Agency determine whether the following drug products were withdrawn from sale for reasons of safety or effectiveness:

- HEPARIN SODIUM 1,000 UNITS IN SODIUM CHLORIDE 0.9% IN PLASTIC CONTAINER (heparin sodium) injectable, 200 units/100 mL;
- HEPARIN SODIUM 2,000 UNITS IN SODIUM CHLORIDE 0.9% IN PLASTIC CONTAINER (heparin sodium) injectable, 200 units/100 mL; and
- HEPARIN SODIUM 5,000 UNITS IN SODIUM CHLORIDE 0.9% IN PLASTIC CONTAINER (heparin sodium) injectable, 1,000 units/100 mL.

After considering the citizen petition and reviewing Agency records and based on the information we have at this time, FDA has determined under § 314.161 that the HEPARIN SODIUM IN SODIUM CHLORIDE 0.9% IN PLASTIC CONTAINER (heparin sodium) products listed in this document were not withdrawn for reasons of safety or effectiveness. The petitioner has identified no data or other information suggesting that these drug products were withdrawn for reasons of safety or effectiveness. We have carefully reviewed our files for records concerning the withdrawal from sale of the HEPARIN SODIUM IN SODIUM CHLORIDE 0.9% IN PLASTIC CONTAINER (heparin sodium) products listed in this document. We have also independently evaluated relevant literature and data for possible postmarketing adverse events. We have found no information that would indicate that these drug products were withdrawn from sale for reasons of safety or effectiveness.

Accordingly, the Agency will continue to list the HEPARIN SODIUM IN SODIUM CHLORIDE 0.9% IN PLASTIC CONTAINER (heparin sodium) products listed in this document in the ''Discontinued Drug Product List'' section of the Orange Book. The ''Discontinued Drug Product List'' delineates, among other items, drug products that have been discontinued from marketing for reasons other than safety or effectiveness. ANDAs that refer to these drug products may be approved by the Agency as long as they meet all other legal and regulatory requirements for the approval of ANDAs. If FDA determines that labeling for these drug products should be revised to meet current standards, the Agency will advise ANDA applicants to submit such labeling.

Dated: July 30, 2025.

Grace R. Graham,

Deputy Commissioner for Policy, Legislation, and International Affairs.

DEPARTMENT OF HEALTH AND HUMAN SERVICES

Food and Drug Administration

[Docket No. FDA–2025–N–1090]

Prescription Drug User Fee Act VII; Independent Assessment of Communication Through Product Quality Information Requests During Application Review; Final Report; Availability; Reopening of Comment Period

AGENCY: Food and Drug Administration, HHS.

ACTION: Notice of availability; reopening of comment period.

SUMMARY: The Food and Drug Administration (FDA or the Agency) is reopening the comment period for the notice of availability entitled ''Prescription Drug User Fee Act VII; Independent Assessment of Communication Through Product Quality Information Requests During Application Review; Final Report; Availability; Request for Comments'' that appeared in the **Federal Register** of May 9, 2025. In the notice of availability, FDA requested comments on the final assessment report. The Agency is taking this action in response to a request to allow interested persons additional time to submit comments.

DATES: FDA is reopening the comment period on the final report published May 9, 2025 (90 FR 19722). Either electronic or written comments must be submitted by September 3, 2025.

ADDRESSES: You may submit comments as follows. Please note that late, untimely filed comments will not be considered. The *https://www.regulations.gov* electronic filing system will accept comments until 11:59 p.m. Eastern Time at the end of August 30, 2025. Comments received by mail/hand delivery/courier (for written/paper submissions) will be considered timely if they are received on or before that date.

Electronic Submissions

Submit electronic comments in the following way:

- *Federal eRulemaking Portal: https://www.regulations.gov*. Follow the instructions for submitting comments. Comments submitted electronically, including attachments, to *https://www.regulations.gov* will be posted to the docket unchanged. Because your comment will be made public, you are solely responsible for ensuring that your comment does not include any confidential information that you or a third party may not wish to be posted,

such as medical information, your or anyone else's Social Security number, or confidential business information, such as a manufacturing process. Please note that if you include your name, contact information, or other information that identifies you in the body of your comments, that information will be posted on *https://www.regulations.gov*.

• If you want to submit a comment with confidential information that you do not wish to be made available to the public, submit the comment as a written/paper submission and in the manner detailed (see ''Written/Paper Submissions'' and ''Instructions'').

Written/Paper Submissions

Submit written/paper submissions as follows:

• *Mail/Hand Delivery/Courier (for written/paper submissions):* Dockets Management Staff (HFA–305), Food and Drug Administration, 5630 Fishers Lane, Rm. 1061, Rockville, MD 20852.

• For written/paper comments submitted to the Dockets Management Staff, FDA will post your comment, as well as any attachments, except for information submitted, marked and identified, as confidential, if submitted as detailed in ''Instructions.''

Instructions: All submissions received must include the Docket No. FDA–2025–N–1090 for ''Independent Assessment of Communication Through Product Quality Information Requests During Application Review.'' Received comments, those filed in a timely manner (see **ADDRESSES**), will be placed in the docket and, except for those submitted as ''Confidential Submissions,'' publicly viewable at *https://www.regulations.gov* or at the Dockets Management Staff between 9 a.m. and 4 p.m., Monday through Friday, 240–402–7500.

• Confidential Submissions—To submit a comment with confidential information that you do not wish to be made publicly available, submit your comments only as a written/paper submission. You should submit two copies total. One copy will include the information you claim to be confidential with a heading or cover note that states ''THIS DOCUMENT CONTAINS CONFIDENTIAL INFORMATION.'' The Agency will review this copy, including the claimed confidential information, in its consideration of comments. The second copy, which will have the claimed confidential information redacted/blacked out, will be available for public viewing and posted on *https://www.regulations.gov*. Submit both copies to the Dockets Management Staff. If you do not wish your name and contact information to be made publicly available, you can provide this information on the cover sheet and not in the body of your comments and you must identify this information as ''confidential.'' Any information marked as ''confidential'' will not be disclosed except in accordance with 21 CFR 10.20 and other applicable disclosure law. For more information about FDA's posting of comments to public dockets, see 80 FR 56469, September 18, 2015, or access the information at: *https://www.govinfo.gov/content/pkg/FR-2015-09-18/pdf/2015-23389.pdf*.

Docket: For access to the docket to read background documents or the electronic and written/paper comments received, go to *https://www.regulations.gov* and insert the docket number, found in brackets in the heading of this document, into the ''Search'' box and follow the prompts and/or go to the Dockets Management Staff, 5630 Fishers Lane, Rm. 1061, Rockville, MD 20852, 240–402–7500.

FOR FURTHER INFORMATION CONTACT: Mahesh Ramanadham, Center for Drug Evaluation and Research, Food and Drug Administration, 10903 New Hampshire Ave., Silver Spring, MD 20993–0002, 301–796–3272, email: *Mahesh.Ramanadham@fda.hhs.gov*.

SUPPLEMENTARY INFORMATION: In the **Federal Register** of May 9, 2025, FDA published a notice of availability with a 30-day comment period to request comments on the document entitled ''Product Quality Information Request Communications Assessment: Final Report.'' FDA requested feedback on: (1) the assessment findings and recommendations, (2) whether certain recommendations are more desirable than others, and (3) other actions FDA and applicants should consider and why.

The Agency has received a request for a 30-day extension of the comment period for the notice of availability. The request conveyed concern that the current 30-day comment period does not allow sufficient time to develop a thoughtful, substantive response to the notice of availability.

FDA has considered the request and is reopening the comment period for the notice of availability for 30 days, until September 3, 2025. The Agency believes that the additional 30-days allow adequate time for interested persons to submit comments.

Dated: July 30, 2025.

Grace R. Graham,

Deputy Commissioner for Policy, Legislation, and International Affairs.

BILLING CODE 4164–01–P

DEPARTMENT OF HEALTH AND HUMAN SERVICES

Food and Drug Administration

[Docket No. FDA–2024–N–5964]

Teva Pharmaceuticals USA, Inc., et al.; Withdrawal of Approval of 23 Abbreviated New Drug Applications; Correction

AGENCY: Food and Drug Administration, HHS.

ACTION: Notice; correction.

SUMMARY: The Food and Drug Administration (FDA) is correcting a notice that appeared in the **Federal Register** on January 15, 2025.

FOR FURTHER INFORMATION CONTACT: Martha Nguyen, Center for Drug Evaluation and Research, Food and Drug Administration, 10903 New Hampshire Ave., Bldg. 75, Rm. 1676, Silver Spring, MD 20993–0002, 301–796–3471, *Martha.Nguyen@fda.hhs.gov*.

SUPPLEMENTARY INFORMATION: The document announced the withdrawal of approval of 23 abbreviated new drug applications (ANDAs) from multiple applicants, withdrawn as of February 14, 2025. The document erroneously included four previously withdrawn ANDAs; ANDA 079075 for Fentanyl Citrate (fentanyl citrate) tablet, Equivalent to (EQ) 0.1 milligrams (mg) base, EQ 0.2 mg base, EQ 0.4 mg base, EQ 0.6 mg base, and EQ 0.8 mg base, held by Watson Laboratories, Inc. (an indirect, wholly owned subsidiary of Teva Pharmaceuticals USA, Inc.), 400 Interpace Parkway, Bldg. A, Parsippany, NJ 07054; ANDA 206155 for Olanzapine (olanzapine) tablet, 2.5 mg, 5 mg, 7.5 mg, 10 mg, 15 mg, and 20 mg, held by RegCon Solutions, LLC, U.S. Agent for Indoco Remedies Ltd., 9920 Pacific Heights Blvd., Suite 250, San Diego, CA 92121; ANDA 206204 for Piperacillin and Tazobactam (piperacillin and tazobactam) injectable, EQ 12 grams (g) base/vial and EQ 1.5 g base/vial, held by Fresenius Kabi USA, LLC, Three Corporate Dr., Lake Zurich, IL 60047; and ANDA 209708 for Mivacurium Chloride (mivacurium chloride) solution, EQ 10 mg base/5 milliliters (mL) (EQ 2 mg base/mL) and EQ 20 mg base/10 mL (EQ 2 mg base/mL), held by Woodward Pharma Services, LLC, 47220 Cartier Dr., Suite A, Wixom, MI 48393. This notice corrects that error. Because ANDAs 079075, 206155, 206204, and 209708 were withdrawn previously in the September 19, 2024 **Federal Register** notice titled ''Allergan, Inc., et al.; Withdrawal of Approval of Nine Abbreviated New Drug

Applications,'' those ANDA withdrawals still have an effective date of October 21, 2024.

Correction

In the **Federal Register** of Wednesday, January 15, 2025 (90 FR 3876), appearing on page 3876, 3877 in FR Doc. 2025–00742, the following correction is made:

On page 3876–3877, in the table, the entries for ANDAs 079075, 206155, 206204, and 209708 are removed.

Dated: July 30, 2025.

Grace R. Graham,

Deputy Commissioner for Policy, Legislation, and International Affairs.

DEPARTMENT OF HEALTH AND HUMAN SERVICES

National Institutes of Health

Center for Scientific Review; Notice of Closed Meetings

Pursuant to section 1009 of the Federal Advisory Committee Act, as amended, notice is hereby given of the following meetings.

The meetings will be closed to the public in accordance with the provisions set forth in sections 552b(c)(4) and 552b(c)(6), Title 5 U.S.C., as amended. The grant applications and the discussions could disclose confidential trade secrets or commercial property such as patentable material, and personal information concerning individuals associated with the grant applications, the disclosure of which would constitute a clearly unwarranted invasion of personal privacy.

Name of Committee: Molecular, Cellular and Developmental Neuroscience Integrated Review; Group Cellular and Molecular Biology of Glia Study Section.

Date: October 16–17, 2025.

Time: 9:00 a.m. to 7:00 p.m.

Agenda: To review and evaluate grant applications.

Address: National Institutes of Health, Rockledge II, 6701 Rockledge Drive, Bethesda, MD 20892.

Meeting Format: Virtual Meeting.

Contact Person: Sung-Wook Jang, Ph.D., Scientific Review Officer, Center for Scientific Review, National Institutes of Health, 6701 Rockledge Drive, Room 812P, Bethesda, MD 20892, (301) 435–1042, *jangs2@csr.nih.gov*.

Name of Committee: Center for Scientific Review Special Emphasis Panel; RFA Panel: High-Priority Research in Tobacco Regulatory Science.

Date: October 16–17, 2025.

Time: 9:30 a.m. to 6:00 p.m.

Agenda: To review and evaluate grant applications.

Address: National Institutes of Health, Rockledge II, 6701 Rockledge Drive, Bethesda, MD 20892.

Meeting Format: Virtual Meeting.

Contact Person: Marilyn Moore-Hoon, Ph.D., Scientific Review Officer, Center for Scientific Review, National Institutes of Health, 6701 Rockledge Drive, Bethesda, MD 20892, (301) 594–9295, *mooremar@mail.nih.gov*.

Name of Committee: Cell Biology Integrated Review Group; Maximizing Investigators' Research Award—D Study Section.

Date: October 16–17, 2025.

Time: 10:00 a.m. to 6:30 p.m.

Agenda: To review and evaluate grant applications.

Address: National Institutes of Health, Rockledge II, 6701 Rockledge Drive, Bethesda, MD 20892.

Meeting Format: Virtual Meeting.

Contact Person: Anne Marie Strohecker, Ph.D., Scientific Review Officer, Center for Scientific Review, National Institutes of Health, 6701 Rockledge Drive, Bethesda, MD 20892, (202) 924–4186, *stroheckeram@csr.nih.gov*.

Name of Committee: Risk, Prevention and Health Behavior Integrated Review Group; Lifestyle Change and Behavioral Health Study Section.

Date: October 16–17, 2025.

Time: 10:00 a.m. to 6:00 p.m.

Agenda: To review and evaluate grant applications.

Address: National Institutes of Health, Rockledge II, 6701 Rockledge Drive, Bethesda, MD 20892.

Meeting Format: Virtual Meeting.

BILLING CODE 4140–01–P

DEPARTMENT OF HOMELAND SECURITY

[Docket No: DHS–2025–0027]

Notice of Availability of a Draft Programmatic Environmental Assessment for the Nationwide Operation of Counter Unmanned Aircraft Systems

AGENCY: Department of Homeland Security.

ACTION: Notice of availability; request for comments.

SUMMARY: The Department of Homeland Security (DHS) announces the availability of a draft programmatic environmental assessment (PEA) and its draft finding that the research, development, testing, and evaluation (RDT&E) of counter unmanned aircraft systems (C–UAS), and nationwide C–UAS operational and training activities will not significantly impact the environment. The draft PEA will inform DHS's decision whether to perform such activities with C–UAS nationwide.

DATES: Comments must be submitted on or before September 3, 2025.

ADDRESSES: The draft PEA and draft Finding of No Significant Impact (FONSI) are available on DHS's website at: *https://www.dhs.gov/ocrso/eed/epb/nepa.*

Comments may be submitted by either of the following methods:

- *Regulations.gov web portal:* Navigate to *https://www.regulations.gov* and search for Docket No. DHS–2025–0027 to submit public comments. Follow the online instructions for submitting comments. All public comments received are subject to the Freedom of Information Act and will be posted in their entirety at this site and available for public viewing. Do not include any information you would not like to be made publicly available.
- *By email:* Emailed comments should be sent to: Jennifer Hass, Acting Executive Director, Energy and Environment Division, at *EED-EP@hq.dhs.gov.*

All comments received may be made publicly available without change, including any personal information provided.

FOR FURTHER INFORMATION CONTACT: Jennifer Hass, Acting Executive Director, Energy and Environment Division, Department of Homeland Security at *EED-EP@hq.dhs.gov* or by phone at 202–834–4346.

SUPPLEMENTARY INFORMATION:

Proposed Action: DHS proposes to perform RDT&E of C–UAS, and conduct operational and training activities to support existing and emerging DHS mission requirements nationwide. C–UAS are a system or device capable of tracking, disabling, disrupting, or seizing control of an unmanned aircraft or unmanned aircraft system (UAS). UAS have become a security concern in recent years due to the ease with which they can aid in intelligence gathering and be used for malicious activities. DHS has been granted statutory authority under the Preventing Emerging Threats Act of 2018 to counter credible threats from UAS to the safety or security of a covered facility or asset, which are designated based on their importance to the security missions of DHS and Components. DHS prepared the subject Draft PEA to streamline the review process and review duplicative, lengthy reviews for repetitive C–UAS actions that may be broadly analyzed given their similar scopes.

The purpose of the Proposed Action is to support ongoing and proposed RDT&E of C–UAS technologies and to deploy C–UAS in operational and training settings to detect, identify, monitor, track, and mitigate (passively and actively) threats posed by UAS, including across the radio-frequency spectrum, using a streamlined approach to environmental analysis and documentation. The Proposed Action is needed to enhance DHS's ability to use C–UAS technologies, monitor emerging threats, protect DHS's missions, and defend the Nation from UAS threats and malicious activity. The use of C–UAS would support existing and emerging mission requirements of the various Components within DHS and facilitate their services and strategies essential to the Nation's security, safety, and emergency response.

The Draft PEA evaluates the potential environmental, cultural, socioeconomic, and physical impacts associated with DHS's Proposed Action.

Alternatives: In addition to the Proposed Action Alternative, which would implement the Proposed Action, DHS considered a No Action Alternative. Under the No Action Alternative, DHS would continue to use C–UAS to counter threats as authorized under the Preventing Emerging Threats Act of 2018 on a project-by-project basis. However, DHS would be limited in its ability to carry out critical mission objectives and respond to potential threats in a streamlined, efficient manner.

Draft Finding of No Significant Impact: The evaluation performed within this draft PEA concludes that no significant adverse impact to the environmental or quality of life is anticipated as a result of implementing the Proposed Action, provided that routine best management practices specified in the draft PEA are implemented.

Request for Public Review: Federal agencies; Tribal, state, and local governments, the public; and other interested parties are requested to provide input or comments on the draft PEA, which will be available for a 30-day public comment period. Comments must be submitted on or before September 3, 2025. For information on how to submit, see the **ADDRESSES** section above. A mailing address to submit hardcopy comments can be provided upon request.

Availability of the Draft PEA: The draft PEA and draft FONSI are available on DHS's website at: *https://www.dhs.gov/ocrso/eed/epb/nepa/public-comment.*

(Authority: National Environmental Policy Act (NEPA) of 1969 (42 U.S.C. 4321 *et seq.*), DHS Management Directive 023–01, rev. 01 (Implementation of NEPA), and DHS Instruction Manual 023–01–001–01, rev. 01 (Implementation of the NEPA).)

Jennifer Hass,

Acting Executive Director, Energy and Environment Division, Office of the Chief Readiness Support Officer, Department of Homeland Security.

BILLING CODE 9112–FF–P

DEPARTMENT OF HOMELAND SECURITY

Transportation Security Administration

Intent To Request Revision From OMB of One Current Public Collection of Information: Critical Facility Information From the Top 100 Most Critical Pipeline Operators

AGENCY: Transportation Security Administration, DHS.

ACTION: 60-Day Notice.

SUMMARY: The Transportation Security Administration (TSA) invites public comment on one currently approved Information Collection Request (ICR), Office of Management and Budget (OMB) control number 1652–0050, abstracted below that we will submit to OMB for a revision in compliance with the Paperwork Reduction Act (PRA). The ICR describes the nature of the information collection and its expected burden. The collection involves critical facility security information.

DATES: Send your comments by October 3, 2025.

ADDRESSES: Comments may be emailed to *TSAPRA@dhs.gov* or delivered to the

TSA PRA Officer, Information Technology (IT), TSA–11, Transportation Security Administration, 6595 Springfield Center Drive, Springfield, VA 20598–6011.

FOR FURTHER INFORMATION CONTACT: Christina A. Walsh at the above address, or by telephone (571) 227–2062.

SUPPLEMENTARY INFORMATION:

Comments Invited

In accordance with the Paperwork Reduction Act of 1995 (44 U.S.C. 3501 *et seq.*), an agency may not conduct or sponsor, and a person is not required to respond to, a collection of information unless it displays a valid OMB control number. The ICR documentation will be available at *https://www.reginfo.gov* upon its submission to OMB. Therefore, in preparation for OMB review and approval of the following information collection, TSA is soliciting comments to—

(1) Evaluate whether the proposed information requirement is necessary for the proper performance of the functions of the agency, including whether the information will have practical utility;

(2) Evaluate the accuracy of the agency's estimate of the burden;

(3) Enhance the quality, utility, and clarity of the information to be collected; and

(4) Minimize the burden of the collection of information on those who are to respond, including using appropriate automated, electronic, mechanical, or other technological collection techniques or other forms of information technology.

Information Collection Requirement

OMB Control Number 1652–0050; Critical Facility Information of the Top 100 Most Critical Pipelines: The Implementing Recommendations of the 9/11 Commission Act of 2007 (9/11 Act) specifically required TSA to develop and implement a plan for reviewing the pipeline security plans and inspecting the critical facilities of the 100 most critical pipeline operators.[1] Pipeline owner/operators determine which facilities qualify as critical facilities based on guidance and criteria set forth in the TSA Pipeline Security Guidelines published in December 2010 and 2011, with an update published in April 2021. To execute the 9/11 Act mandate, TSA visits critical pipeline facilities and collects site-specific information from pipeline owner/operators on facility security policies, procedures, and physical security measures.

TSA collects facility security information during the site visits using a Critical Facility Security Review (CFSR) form. The CFSR looks at individual pipeline facility security measures and procedures.[2] This collection is voluntary. Information collected from the reviews is analyzed and used to determine strengths and weaknesses at the nation's critical pipeline facilities, areas to target for risk reduction strategies, pipeline industry implementation of the voluntary guidelines, and the potential need for regulations in accordance with the 9/11 Act provision previously cited.

TSA visits with pipeline owner/operators to follow up on their implementation of security improvements and recommendations made during facility visits. During critical facility visits, TSA documents and provides recommendations to improve the security posture of the facility. TSA intends to continue to follow up with pipeline owner/operators via email on their status toward implementation of the recommendations made during the critical facility visits. The follow up will be conducted at intervals of 6, 12, and 18 months after the facility visit.

In addition to the voluntary requirements, in May 2021, TSA added mandatory requirements to the collection. In order to address the ongoing cybersecurity threat to pipeline systems and associated infrastructure, TSA issued a Security Directive (SD) applicable to owner/operators of a hazardous liquid and natural gas pipeline or liquefied natural gas facility notified by TSA that their pipeline system or facility is critical. These owner/operators were required to review Section 7 of TSA's Pipeline Security Guidelines and assess current activities, using the TSA Pipeline Cybersecurity Self-Assessment form, to address cyber risk, and identify remediation measures that will be taken to fill those gaps and a timeframe for achieving those measures. The form provided is based on the instrument used for the CFSRs, limited to cybersecurity issues and augmented to address the scope of the SD. The critical pipeline owner/operators were required to report the results of this assessment to TSA within 30 days of issuance of the SD.

TSA is revising the collection to remove the mandatory requirements. All of the owner/operators have satisfied the SD's requirements, and TSA expects that going forward, fewer than 10 owner/operators would respond to the collection annually. In addition, TSA is revising the title of the collection from ''Critical Facility Information *of* the Top 100 Most Critical Pipeline'' to ''Critical Facility Information *from* the Top 100 Most Critical Pipeline *Operators*'' to more accurately align with the statutory requirements. TSA is seeking renewal of this information collection for the maximum 3-year approval period.

To the extent information provided by operators for each information collection is Sensitive Security Information, TSA will protect in accordance with procedures meeting the transmission, handling, and storage requirements of Sensitive Security Information set forth in 49 CFR parts 15 and 1520.

TSA estimates the annual hour burden for the information collection related to the voluntary collection of the CFSR form to be 320 hours. TSA will conduct a maximum of 80 facility reviews each year, with each review taking approximately 4 hours (320 = 80 $\times$ 4).

TSA estimates the annual hour burden for the information collection related to TSA follow ups on the recommendations based on the above CFSRs made to facility owner/operators to be 480 hours. TSA estimates each owner/operator will spend approximately 2 hours to submit a response to TSA regarding its voluntary implementation of security recommendations made during each critical facility visit. If a maximum of 80 critical facilities are reviewed each year, and TSA follows up with each facility owner/operator every 6, 12, and 18 months following the visit, the total annual burden is 480 ($80 \times 2 \times 3$) hours.

The total estimated burden for the entire information collection is 800 hours annually – 320 hours for the CFSR form and 480 hours for the recommendations follow-up procedures.

Dated: July 30, 2025.

Christina A. Walsh,

Paperwork Reduction Act Officer, Information Technology, Transportation Security Administration.

[FR Doc. 2025–14652 Filed 8–1–25; 8:45 am]

[2] The CFSR differs from a Corporate Security Review conducted by TSA in another information collection that looks at corporate or company-wide security management plans and practices for pipeline operators. *See* OMB Control No. 1652–0056 at *https://www.reginfo.gov* for the PRA approval of information collection for these Corporate Security Reviews.

DEPARTMENT OF HOMELAND SECURITY

Transportation Security Administration

Intent To Request Extension From OMB of One Current Public Collection of Information: TSA Canine Training Center Adoption Application

AGENCY: Transportation Security Administration, DHS.

ACTION: 60-Day notice.

SUMMARY: The Transportation Security Administration (TSA) invites public comment on one currently approved Information Collection Request (ICR), Office of Management and Budget (OMB) control number 1652–0067, abstracted below, that we will submit to OMB for an extension in compliance with the Paperwork Reduction Act (PRA). The ICR describes the nature of the information collection and its expected burden. The collection involves gathering information from individuals who wish to adopt a TSA canine through the TSA Canine Training Center Adoption Program.

DATES: Send your comments by October 3, 2025.

ADDRESSES: Comments may be emailed to *TSAPRA@tsa.dhs.gov* or delivered to the TSA PRA Officer, Information Technology, TSA–11, Transportation Security Administration, 6595 Springfield Center Drive, Springfield, VA 20598–6011.

FOR FURTHER INFORMATION CONTACT: Christina A. Walsh at the above address, or by telephone (571) 227–2062.

SUPPLEMENTARY INFORMATION:

Comments Invited

In accordance with the Paperwork Reduction Act of 1995 (44 U.S.C. 3501 *et seq.*), an agency may not conduct or sponsor, and a person is not required to respond to, a collection of information unless it displays a valid OMB control number. The ICR documentation will be available at *https://www.reginfo.gov* upon its submission to OMB. Therefore, in preparation for OMB review and approval of the following information collection, TSA is soliciting comments to—

(1) Evaluate whether the proposed information requirement is necessary for the proper performance of the functions of the agency, including whether the information will have practical utility;

(2) Evaluate the accuracy of the agency's estimate of the burden;

(3) Enhance the quality, utility, and clarity of the information to be collected; and

(4) Minimize the burden of the collection of information on those who are to respond, including using appropriate automated, electronic, mechanical, or other technological collection techniques or other forms of information technology.

Information Collection Requirement

OMB Control Number 1652–0067; TSA Canine Training Center Adoption Application. The TSA National Explosives Detection Canine Program (TSA Canine Program) is a Congressionally-mandated explosive detection canine training program that operates as a partnership among TSA; aviation, mass transit, and maritime sectors; and State and local law enforcement. TSA established the Canine Training Center (CTC) to train and deploy explosive detection canine teams for TSA and for local, State, and Federal agencies in support of daily activities that protect the transportation domain. Canine teams consist of TSA employees, or local/State law enforcement officers, paired with explosives detection canines. These canine teams are trained on a variety of explosives and screening capabilities based on intelligence data and emerging threats. Canine teams are deployed after successfully undergoing a 10- or 12-week training program.

Of the canines purchased by TSA for purposes of the TSA Canine Program, approximately 83 percent graduate from the training program. These canines are continually assessed to ensure they demonstrate operational proficiency in their environment. The corresponding attrition rate is between 15–18 percent. Attrition arises from canines who do not graduate from the training program and those who successfully graduate, but are later assessed as not performing at operational proficiency. The TSA Canine Program typically repurposes 42 percent of the canines eliminated from the program to other Federal, State, and local law enforcement agencies.

Canines that attrit out of the program and are not repurposed for other government-purposes may be placed for adoption. In accordance with the Federal Management Regulations, TSA operates the CTC Adoption Program to find suitable individuals or families to adopt the canines and to provide good homes. Individuals seeking to adopt a TSA canine must complete the CTC Adoption Application.

The CTC Adoption Application is an online application that collects personal information from members of the public to determine their suitability to adopt a TSA canine. TSA uses the information collected to evaluate the individual seeking to adopt a TSA canine against program guidelines developed by the TSA Canine Program. The collection includes information about the individual's household, personal references, and current pet and veterinarian information. In addition, the individual must agree to transport the canine home from the CTC in San Antonio, Texas, and to provide any necessary medical care, including, but not limited to, heartworm and flea preventives, and annual vaccinations, for the duration of the canine's life. TSA also collects an attestation that all information submitted is true.

TSA estimates that annually 300 individuals will complete the adoption application and that it will take approximately 10 minutes or 0.1666 hours. This will give an estimated annual time burden to the public of 50 hours.

Dated: July 30, 2025.

Bureau of Land Management

[A2407–014–004–065516; #O2412–014–004–047181.1]

Proposed Class II Reinstatement of Terminated Oil and Gas Lease NDM 105578, Williams County, ND

AGENCY: Bureau of Land Management, Interior.

ACTION: Notice of lease reinstatement.

SUMMARY: In accordance with the Mineral Leasing Act of 1920, as amended, Sapazi Holdings, LLC and TDB Resources LP filed a timely petition for reinstatement of oil and gas lease NDMT105396602 (NDM 105578) for land in Williams County, North Dakota. The petition was accompanied by all required rentals and royalties accruing from September 1, 2021, the date of termination. No leases were issued that affect these lands. The Bureau of Land Management (BLM) proposes to reinstate this lease because it meets the requirements of the Mineral Leasing Act and BLM regulations and conforms with the existing resource management plan.

FOR FURTHER INFORMATION CONTACT: Samantha Iron Shirt, Section Chief for Fluids Adjudication, BLM, Montana/Dakotas State Office, 5001 Southgate

Drive, Billings, Montana 59101–4669; phone: 406–896–5060; email: *sironshi@blm.gov.*

Individuals in the United States who are deaf, deafblind, hard of hearing, or have a speech disability may dial 711 (TTY, TDD, or TeleBraille) to access telecommunications relay services. Individuals outside the United States should use the relay services offered within their country to make international calls to the point-of-contact in the United States.

SUPPLEMENTARY INFORMATION: The lessee has agreed to the new lease terms:

- Original term and additional conditions of the lease;
- Increased rental of $20 per acre;
- Increased royalty of 20 percent;
- $151 cost of publishing this Notice, and
- $500 cost of administrative fee.

The lease includes the following described lands in Williams County, North Dakota:

NDM 105578

Fifth Principal Meridian, North Dakota

T. 154 N., R. 100 W.,
Sec. 31, lots 3 and 4.

The area described contains 41.90 acres, according to the official plats of the surveys of the said land on file with the BLM.

The lessee has met all the requirements for reinstatement of the lease per section 31(d) and (e) of the Mineral Leasing Act of 1920 (30 U.S.C. 188), as amended. The BLM is proposing to reinstate the lease 30 days following publication of this notice, with the effective date of September 1, 2021, and an extension for 2 years from the date the lease is reinstated in accordance with 43 CFR 3108.23(d), subject to the amended terms and conditions of the lease and the increased rental and royalty rates cited above.

(Authority: 30 U.S.C. 188(e)(4) and 43 CFR 3108.23)

Samantha Iron Shirt,

Chief, Fluids Adjudication Section.

DEPARTMENT OF THE INTERIOR

Bureau of Land Management

[A2407–014–004–065516; #O2412–014–004–047181.1]

Lease for Sale Coteau Properties Company, Freedom Mine Lease-by-Application NDM 111186, Mercer County, ND

AGENCY: Bureau of Land Management, Interior.

ACTION: Notice of coal lease sale.

SUMMARY: Notice is hereby given that Federal coal resources in lands in Mercer County, North Dakota, will be offered for competitive lease by sealed bid in accordance with the provisions of the Mineral Leasing Act of 1920, as amended.

DATES: The lease sale will be held at 10 a.m. Mountain Time (MT) on September 3, 2025.

ADDRESSES: The lease sale will be held in the Main Conference Room of the Bureau of Land Management (BLM) Montana State Office, 5001 Southgate Drive, Billings, Montana 59101–4669. Sealed bids must be submitted to the Cashier, BLM Montana State Office, at this same address.

FOR FURTHER INFORMATION CONTACT: Tessa Wallace, telephone: 406–896–5086; email: *tlwallace@blm.gov.* Individuals in the United States who are deaf, deafblind, hard of hearing, or have a speech disability may dial 711 (TTY, TDD, or TeleBraille) to access telecommunications relay services. Individuals outside the United States should use the relay services offered within their country to make international calls to the point-of-contact in the United States.

SUPPLEMENTARY INFORMATION: This sale is being held in response to a Lease-by-Application filed by Coteau Properties Company. The Federal coal resources to be offered are contained in four tracts located on the following described lands:

Fifth Principal Meridian, North Dakota

T. 145 N., R. 86 W.,
Sec. 2, SE1/4NW1/4, E1/2SW1/4, and SW1/4SW1/4;
Sec. 4, lot 2, S1/2NW1/4, and SW1/4SW1/4;
Sec. 6, lots 3 thru 5 and SE1/4NW1/4.
T. 146 N., R. 86 W.,
Sec. 30, NE1/4SW1/4.
T. 144 N., R. 89 W.,
Sec. 2, N1/2SW1/4, N1/2SW1/4SW1/4, SE1/4SW1/4SW1/4, SE1/4SW1/4, and W1/2SE1/4;
Sec. 12, W1/2.

The areas described aggregate 1,062.92 acres, according to the official plats of the surveys of the said lands, on file with the BLM.

The coal in the tracts have two coal beds, which are designated as the Schoolhouse bed and the Beulah coal bed. Beulah coal bed and its associated splits of the Upper and Lower Beulah and their subordinate splits Upper Beulah 1 and 2, and Lower Beulah 3 and 4 are considered minable. The Beulah bed, or its splits, are present in all 4 lease tracts and ranges in thickness from 10.0 feet to approximately 14.2 feet thick. The tracts are located adjacent to or within Coteau's current mining operation and contain approximately 19.0 million tons of coal. The composite coal quality of the Beulah coal bed and splits are as follows: Heat Content (Btu/lb.) 6,770 Btu/lb.; Moisture 38.11 percent; Ash Content 6.97 percent, Sulfur Content 0.85 percent.

The tracts will be leased to the qualified bidder of the highest cash amount, provided that the high bid meets or exceeds the BLM's estimate of the fair market value (FMV) of the tracts. The minimum bid for the tract is $100 per acre or fraction thereof. The minimum bid is not intended to represent FMV. The authorized officer will determine if the bids meet FMV.

The sealed bids should be sent by certified mail, return receipt requested, or be hand delivered to the Public Room, BLM Montana State Office (see **ADDRESSES**), and clearly marked ''Sealed Bid for NDM 111186 Coal Sale—Not to be opened before 10 a.m. Mountain Time on September 3, 2025.'' The Public Room representative will issue a receipt for each hand-delivered bid. Bids received after 9:30 a.m. MT will not be considered. If identical high bids are received, the tying high bidders will be requested to submit follow-up sealed bids until a high bid is received. All tie-breaking sealed bids must be submitted within 15 minutes following the sale official's announcement at the sale that identical high bids have been received.

Prior to lease issuance, the high bidder, if other than the applicant, must pay the BLM the cost recovery fee in the amount of $206,727.00, in addition to all processing costs incurred by the BLM after the date of this sale notice (43 CFR 3473.2(f)).

A lease issued because of this offering will require payment of an annual rental of $3 per acre, or fraction thereof, and a royalty payable to the United States pursuant to section 7(a) of the Mineral Leasing Act (30 U.S.C. 207(a)) as amended.

Bidding instructions for the tracts offered and the terms and conditions of the proposed coal lease are included in

the Detailed Statement of Lease Sale, with copies available at the BLM Montana State Office (see **ADDRESSES**). Documents in case file NDM 111186 are available for public inspection at the BLM Montana State Office Public Room.

(Authority: 43 CFR 3422.3–2)

Tessa L. Wallace,

Branch Chief, Solid Minerals, BLM Montana/Dakotas.

BILLING CODE 4331–20–P

INTERNATIONAL TRADE COMMISSION

[Investigation No. 337–TA–1356 (Remand)]

Certain Dermatological Treatment Devices and Components Thereof; Notice of Commission Determination Not To Review an Initial Determination Terminating the Remand Proceedings Based on Settlement; Termination of Investigation

AGENCY: U.S. International Trade Commission.

ACTION: Notice.

SUMMARY: Notice is hereby given that the U.S. International Trade Commission (''Commission'') has determined not to review an initial determination (''ID'') (Order No. 71) of the presiding administrative law judge (''ALJ''), granting an unopposed motion to terminate the remand proceedings. The investigation is terminated in its entirety.

FOR FURTHER INFORMATION CONTACT: Panyin A. Hughes, Office of the General Counsel, U.S. International Trade Commission, 500 E Street SW, Washington, DC 20436, telephone (202) 205–3042. Copies of non-confidential documents filed in connection with this investigation may be viewed on the Commission's electronic docket (EDIS) at *https://edis.usitc.gov.* For help accessing EDIS, please email *EDIS3Help@usitc.gov.* General information concerning the Commission may also be obtained by accessing its internet server at *https://www.usitc.gov.* Hearing-impaired persons are advised that information on this matter can be obtained by contacting the Commission's TDD terminal on (202) 205–1810.

SUPPLEMENTARY INFORMATION: The Commission instituted this investigation on April 6, 2023, based on a complaint filed by Serendia, LLC of Lake Forest, California (''Serendia''). 88 FR 20551–52 (Apr. 6, 2023). The complaint, as supplemented, alleged violations of section 337 of the Tariff Act of 1930, as amended, 19 U.S.C. 1337, in the importation into the United States, the sale for importation, or the sale within the United States after importation of certain dermatological treatment devices and components thereof by reason of infringement of certain claims of U.S. Patent No. 9,480,836 (''the '836 patent''); U.S. Patent No. 9,320,536 (''the '536 patent''); U.S. Patent No. 9,775,774 (''the '774 patent''); U.S. Patent No. 10,869,812 (''the '812 patent''); and U.S. Patent No. 11,406,444 (''the '444 patent''). *Id.* at 20551. The complaint further alleged that a domestic industry exists. *Id.* The Commission's notice of investigation named as respondents Sung Hwan E&B Co., LTD. d/b/a SHEnB Co. LTD of Seoul, Republic of Korea; Aesthetics Biomedical, Inc. of Phoenix, Arizona; Cartessa Aesthetics, LLC of Melville, New York; Lutronic Corporation of Goyang-si, Republic of Korea; Lutronic Aesthetics, Inc., also known as Lutronic, Inc. of Billerica, Massachusetts; Lutronic, LLC of Billerica, Massachusetts; Ilooda, Co., Ltd. of Anyang-si, Republic of Korea; Cutera, Inc. of Brisbane, California; Rohrer Aesthetics, LLC of Homewood, Alabama; Rohrer Aesthetics, Inc. of Homewood, Alabama; Jeisys Medical Inc. of Seoul, Republic of Korea; Cynosure, LLC of Westford, Massachusetts; and EndyMed Medical Ltd. of Caesarea, Israel; EndyMed Medical, Ltd. of New York, New York; and EndyMed Medical, Inc. of Freehold, New Jersey (together, ''EndyMed''). *Id.* at 20552. The Office of Unfair Import Investigations (''OUII'') is also participating in the investigation. *Id.*

The Commission subsequently terminated the investigation as to all respondents except for EndyMed. *See* Order No. 26 (Sept. 18, 2023), *unreviewed by* Comm'n Notice (Oct. 16, 2023); Order No. 38 (Oct. 27, 2023), *unreviewed by* Comm'n Notice (Nov. 20, 2023); Order No. 45 (Nov. 15, 2023), *unreviewed by* Comm'n Notice (Dec. 15, 2023); Order No. 47 (Nov. 20, 2023), *unreviewed by* Comm'n Notice (Dec. 15, 2023); Order No. 53 (Apr. 11, 2024), *unreviewed by* Comm'n Notice (May 8, 2024); Order No. 51 (Dec. 13, 2023), *unreviewed by* Comm'n Notice (Jan. 10, 2024); Order No. 64 (Dec.18, 2024), *unreviewed by* Comm'n Notice (Jan. 17, 2025).

The ALJ held a *Markman* hearing on July 13, 2023, and issued a *Markman* Order on October 25, 2023, construing certain disputed claim terms. Order No. 35 (Oct. 25, 2023). The ALJ found the pending claims of the '444 patent, claims 4, 6, and 7, indefinite in the *Markman* Order and did not consider those claims any further in the Investigation. *Markman* (Order No. 35) at 62.

On December 19, 2024, the ALJ issued the final ID finding a violation of section 337 as to claims 1, 9, and 22 of the '836 patent; claims 11 and 16 of the '536 patent; claim 14 of the '774 patent; and claims 5, 13, and 18 of the '812 patent by EndyMed. On February 28, 2025, the Commission determined to review the final ID in part, including the ID's finding that the asserted claims of the '444 patent are invalid for indefiniteness. 90 FR 11433–36 (Mar. 6, 2023).

On June 3, 2025, the Commission determined that EndyMed violated section 337 by reason of importation and sale of articles that infringe asserted claims 1, 9, and 22 of the '836 patent; claims 11 and 16 of the '536 patent; claim 14 of the '774 patent; and claims 5, 13, and 18 of the '812 patent. 90 FR 24292–94 (June 9, 2025). For remedy, the Commission issued a limited exclusion order prohibiting further importation of infringing products and cease and desist orders against EndyMed. *Id.* at 24294.

As to the '444 patent, the Commission determined to reverse and remand the ID's indefiniteness finding for further proceedings consistent with the Commission's opinion and remand order. *Id.*

On July 1, 2025, Serendia and EndyMed filed a joint motion to terminate the remand proceedings based upon settlement. On July 8, 2025, OUII filed a response in support of the motion.

On July 9, 2025, the ALJ issued the subject ID (Order No. 71) granting the motion. The ID noted that ''under Commission Rule 210.21(a)(2), any party may move at any time to terminate an investigation in-whole or in-part with respect to any or all respondents on the basis of a settlement, a license, or other agreement as provided in Commission Rule 210.21(b).'' ID at 1–2 (citing 19 CFR 210.21(a)(2)). The ID further noted that pursuant to Commission Rule 210.21(b), termination of an investigation with respect to one or more respondents on the basis of a license or other settlement agreement requires the motion to contain: (i) the license agreement or other settlement agreements; (ii) any supplemental agreements; (iii) any documents referenced in the motion or attached agreements; and (iv) a statement that there are no other agreements, written or oral, express or implied between the parties concerning the subject matter of the investigation. *Id.* at 2 (citing 19 CFR 210.21(b)). The ID granted the

unopposed motion, finding that it complies with the Commission Rules. *Id.* at 3–5. None of the parties petitioned for review of the subject ID.

The Commission has determined not to review the subject ID. The remand proceedings are hereby terminated. The Commission hereby terminates the investigation in its entirety.

The Commission vote for this determination took place on July 30, 2025. The authority for the Commission's determination is contained in section 337 of the Tariff Act of 1930, as amended (19 U.S.C. 1337), and in Part 210 of the Commission's Rules of Practice and Procedure (19 CFR part 210).

By order of the Commission.

Issued: July 30, 2025.

Lisa Barton,

Secretary to the Commission.

BILLING CODE 7020–02–P

INTERNATIONAL TRADE COMMISSION

[Investigation Nos. 701–TA–776 and 731–TA–1761 (Preliminary)]

Unwrought Palladium From Russia; Institution of Antidumping and Countervailing Duty Investigations and Scheduling of Preliminary Phase Investigations

AGENCY: United States International Trade Commission.

ACTION: Notice.

SUMMARY: The Commission hereby gives notice of the institution of investigations and commencement of preliminary phase antidumping and countervailing duty investigation Nos. 701–TA–776 and 731–TA–1761 (Preliminary) pursuant to the Tariff Act of 1930 to determine whether there is a reasonable indication that an industry in the United States is materially injured or threatened with material injury, or the establishment of an industry in the United States is materially retarded, by reason of imports of unwrought palladium from Russia, provided for in subheading 7110.21.00 of the Harmonized Tariff Schedule of the United States, that are alleged to be sold in the United States at less than fair value and alleged to be subsidized by the government of Russia. Unless the Department of Commerce (''Commerce'') extends the time for initiation, the Commission must reach a preliminary determination in antidumping and countervailing duty investigations in 45 days, or in this case by September 15, 2025. The Commission's views must be transmitted to Commerce within five business days thereafter, or by September 22, 2025.

DATES: July 30, 2025.

FOR FURTHER INFORMATION CONTACT: Nitin Joshi ((202) 708–1669), Office of Investigations, U.S. International Trade Commission, 500 E Street SW, Washington, DC 20436. Hearing-impaired persons can obtain information on this matter by contacting the Commission's TDD terminal on 202–205–1810. Persons with mobility impairments who will need special assistance in gaining access to the Commission should contact the Office of the Secretary at 202–205–2000. General information concerning the Commission may also be obtained by accessing its internet server (*https://www.usitc.gov*). The public record for these investigations may be viewed on the Commission's electronic docket (EDIS) at *https://edis.usitc.gov.*

SUPPLEMENTARY INFORMATION:

Background.—These investigations are being instituted, pursuant to sections 703(a) and 733(a) of the Tariff Act of 1930 (19 U.S.C. 1671b(a) and 1673b(a)), in response to a petition filed on July 30, 2025, by Stillwater Mining Company and the United Steel, Paper and Forestry, Rubber, Manufacturing, Energy, Industrial and Services Workers International Union, AFL–CIO, CLC.

For further information concerning the conduct of these investigations and rules of general application, consult the Commission's Rules of Practice and Procedure, part 201, subparts A and B (19 CFR part 201), and part 207, subparts A and B (19 CFR part 207).

Participation in the investigations and public service list.—Persons (other than petitioners) wishing to participate in the investigations as parties must file an entry of appearance with the Secretary to the Commission, as provided in §§ 201.11 and 207.10 of the Commission's rules, not later than seven days after publication of this notice in the **Federal Register**. Industrial users and (if the merchandise under investigation is sold at the retail level) representative consumer organizations have the right to appear as parties in Commission antidumping duty and countervailing duty investigations. The Secretary will prepare a public service list containing the names and addresses of all persons, or their representatives, who are parties to these investigations upon the expiration of the period for filing entries of appearance.

Limited disclosure of business proprietary information (BPI) under an administrative protective order (APO) and BPI service list.—Pursuant to § 207.7(a) of the Commission's rules, the Secretary will make BPI gathered in these investigations available to authorized applicants representing interested parties (as defined in 19 U.S.C. 1677(9)) who are parties to the investigations under the APO issued in the investigations, provided that the application is made not later than seven days after the publication of this notice in the **Federal Register**. A separate service list will be maintained by the Secretary for those parties authorized to receive BPI under the APO.

Conference.—The Office of Investigations will hold a staff conference in connection with the preliminary phase of these investigations beginning at 9:30 a.m. on Wednesday, August 20, 2025. Requests to appear at the conference should be emailed to *preliminaryconferences@usitc.gov* (DO NOT FILE ON EDIS) on or before noon on Monday, August 18, 2025. Please provide an email address for each conference participant in the email. Information on conference procedures, format, and participation, including guidance for requests to appear as a witness via videoconference, will be available on the Commission's Public Calendar (Calendar (USITC) | United States International Trade Commission). A nonparty who has testimony that may aid the Commission's deliberations may request permission to participate by submitting a short statement.

Please note the Secretary's Office will accept only electronic filings during this time. Filings must be made through the Commission's Electronic Document Information System (EDIS, *https://edis.usitc.gov*). No in-person paper-based filings or paper copies of any electronic filings will be accepted until further notice.

Written submissions.—As provided in §§ 201.8 and 207.15 of the Commission's rules, any person may submit to the Commission on or before 5:15 p.m. on August 25, 2025, a written brief containing information and arguments pertinent to the subject matter of the investigations. Parties shall file written testimony and supplementary material in connection with their presentation at the conference no later than 4:00 p.m. on August 18, 2025. All written submissions must conform with the provisions of § 201.8 of the Commission's rules; any submissions that contain BPI must also conform with the requirements of §§ 201.6, 207.3, and 207.7 of the Commission's rules. The Commission's *Handbook on Filing Procedures,* available on the Commission's website

at *https://www.usitc.gov/documents/handbook_on_filing_procedures.pdf,* elaborates upon the Commission's procedures with respect to filings.

In accordance with §§ 201.16(c) and 207.3 of the rules, each document filed by a party to the investigations must be served on all other parties to the investigations (as identified by either the public or BPI service list), and a certificate of service must be timely filed. The Secretary will not accept a document for filing without a certificate of service.

Certification.—Pursuant to § 207.3 of the Commission's rules, any person submitting information to the Commission in connection with these investigations must certify that the information is accurate and complete to the best of the submitter's knowledge. In making the certification, the submitter will acknowledge that any information that it submits to the Commission during these investigations may be disclosed to and used: (i) by the Commission, its employees and Offices, and contract personnel (a) for developing or maintaining the records of these or related investigations or reviews, or (b) in internal investigations, audits, reviews, and evaluations relating to the programs, personnel, and operations of the Commission including under 5 U.S.C. Appendix 3; or (ii) by U.S. government employees and contract personnel, solely for cybersecurity purposes. All contract personnel will sign appropriate nondisclosure agreements.

Authority: These investigations are being conducted under authority of title VII of the Tariff Act of 1930; this notice is published pursuant to § 207.12 of the Commission's rules.

By order of the Commission.

Issued: July 31, 2025.

Lisa Barton,

Secretary to the Commission.

[FR Doc. 2025–14708 Filed 8–1–25; 8:45 am]

BILLING CODE 7020–02–P

INTERNATIONAL TRADE COMMISSION

[Investigation No. 731–TA–1143 (Third Review)]

Small Diameter Graphite Electrodes From China; Scheduling of an Expedited Five-Year Review

AGENCY: United States International Trade Commission.

ACTION: Notice.

SUMMARY: The Commission hereby gives notice of the scheduling of an expedited review pursuant to the Tariff Act of 1930 (''the Act'') to determine whether revocation of the antidumping duty order on small diameter graphite electrodes from China would be likely to lead to continuation or recurrence of material injury within a reasonably foreseeable time.

DATES: June 6, 2025.

FOR FURTHER INFORMATION CONTACT: Alec Resch ((202) 708–1448), Office of Investigations, U.S. International Trade Commission, 500 E Street SW, Washington, DC 20436. Hearing-impaired persons can obtain information on this matter by contacting the Commission's TDD terminal on 202–205–1810. Persons with mobility impairments who will need special assistance in gaining access to the Commission should contact the Office of the Secretary at 202–205–2000. General information concerning the Commission may also be obtained by accessing its internet server (*https://www.usitc.gov*). The public record for this proceeding may be viewed on the Commission's electronic docket (EDIS) at *https://edis.usitc.gov.*

SUPPLEMENTARY INFORMATION:

Background.—On June 6, 2025, the Commission determined that the domestic interested party group response to its notice of institution (90 FR 11056, March 3, 2025) of the subject five-year review was adequate and that the respondent interested party group response was inadequate. The Commission did not find any other circumstances that would warrant conducting a full review.[1] Accordingly, the Commission determined that it would conduct an expedited review pursuant to section 751(c)(3) of the Act (19 U.S.C. 1675(c)(3)).

For further information concerning the conduct of this review and rules of general application, consult the Commission's Rules of Practice and Procedure, part 201, subparts A and B (19 CFR part 201), and part 207, subparts A, D, E, and F (19 CFR part 207).

Staff report.—A staff report containing information concerning the subject matter of the review has been placed in the nonpublic record, and was made available to persons on the Administrative Protective Order service list for this review on July 24, 2025. A public version will be issued thereafter, pursuant to § 207.62(d)(4) of the Commission's rules.

Written submissions.—As provided in § 207.62(d) of the Commission's rules, interested parties that are parties to the review and that have provided individually adequate responses to the notice of institution,[2] and any party other than an interested party to the review may file written comments with the Secretary on what determination the Commission should reach in the review. Comments are due on or before July 31, 2025 and may not contain new factual information. Any person that is neither a party to the five-year review nor an interested party may submit a brief written statement (which shall not contain any new factual information) pertinent to the review by July 31, 2025. However, should the Department of Commerce (''Commerce'') extend the time limit for its completion of the final results of its review, the deadline for comments (which may not contain new factual information) on Commerce's final results is three business days after the issuance of Commerce's results. If comments contain business proprietary information (BPI), they must conform with the requirements of §§ 201.6, 207.3, and 207.7 of the Commission's rules. The Commission's *Handbook on Filing Procedures,* available on the Commission's website at *https://www.usitc.gov/documents/handbook_on_filing_procedures.pdf,* elaborates upon the Commission's procedures with respect to filings.

In accordance with §§ 201.16(c) and 207.3 of the rules, each document filed by a party to the review must be served on all other parties to the review (as identified by either the public or BPI service list), and a certificate of service must be timely filed. The Secretary will not accept a document for filing without a certificate of service.

Determination.—The Commission has determined this review is extraordinarily complicated and therefore has determined to exercise its authority to extend the review period by up to 90 days pursuant to 19 U.S.C. 1675(c)(5)(B).

[1] A record of the Commissioners' votes, the Commission's statement on adequacy, and any individual Commissioner's statements will be available from the Office of the Secretary and at the Commission's website.

[2] The Commission has found the responses submitted on behalf of GrafTech International Ltd. and Tokai Carbon GE LLC to be individually adequate. Comments from other interested parties will not be accepted (*see* 19 CFR 207.62(d)(2)).

Authority: This review reviews is being conducted under authority of title VII of the Tariff Act of 1930; this notice is published pursuant to § 207.62 of the Commission's rules.

By order of the Commission.

Issued: July 31, 2025.

Lisa Barton,

Secretary to the Commission.

[FR Doc. 2025–14717 Filed 8–1–25; 8:45 am]

BILLING CODE 7020–02–P

DEPARTMENT OF JUSTICE

[OMB Number 1117–1NEW]

Agency Information Collection Activities; Proposed eCollection eComments Requested; New Collection; Title—DEA Voluntary Wellness Program Healthcare Provider Clearance

AGENCY: Drug Enforcement Administration, Department of Justice.

ACTION: 60-Day notice.

SUMMARY: The Drug Enforcement Administration, Department of Justice (DOJ), will be submitting the following information collection request to the Office of Management and Budget (OMB) for review and approval in accordance with the Paperwork Reduction Act of 1995.

DATES: Comments are encouraged and will be accepted for 60 days until October 3, 2025.

FOR FURTHER INFORMATION CONTACT: If you have additional comments especially on the estimated public burden or associated response time, suggestions, or need a copy of the proposed information collection instrument with instructions or additional information, please contact Benjamin Inks, Writer/Editor, Office of Compliance, Policy Administration Section, 700 Army Navy Drive, Arlington, VA 22202, telephone: 571–672–4524, email: *Benjamin.B.Inks@dea.gov.*

SUPPLEMENTARY INFORMATION: Written comments and suggestions from the public and affected agencies concerning the proposed collection of information are encouraged. Your comments should address one or more of the following four points:

—Evaluate whether the proposed collection of information is necessary for the proper performance of the functions of the Bureau of Justice Statistics, including whether the information will have practical utility;

—Evaluate the accuracy of the agency's estimate of the burden of the proposed collection of information, including the validity of the methodology and assumptions used;

—Evaluate whether and if so how the quality, utility, and clarity of the information to be collected can be enhanced; and

—Minimize the burden of the collection of information on those who are to respond, including through the use of appropriate automated, electronic, mechanical, or other technological collection techniques or other forms of information technology, *e.g.,* permitting electronic submission of responses.

Abstract: The collection of information via the DEA–315c form is necessary to determine whether DEA employees are medically cleared to safely participate in physical fitness activities under the Voluntary Wellness Program (VWP). This requirement is both a matter of workplace safety and an essential component of the agency's broader health and wellness initiatives.

Pursuant to DEA Personnel Manual 2792, employees must submit a health assessment completed by a licensed medical professional prior to engaging in VWP activities. This process ensures that participation is medically appropriate based on the individual's current health status and minimizes the risk of injury or exacerbation of existing conditions.

The requirement to collect this information is further supported by administrative directives that promote employee well-being and support the safe implementation of agency-sponsored wellness programs. A copy of the relevant section of DEA Personnel Manual 2792 is attached in accordance with the request.

Overview of This Information Collection

1. *Type of Information Collection:* New.

2. *The Title of the Form/Collection:* Voluntary Wellness Program (VWP) Healthcare Provider Clearance.

3. *The agency form number, if any, and the applicable component of the Department sponsoring the collection:* Form number: DEA–315c. The sponsoring component is the Drug Enforcement Administration.

4. *Affected public who will be asked or required to respond, as well as the obligation to respond:* a licensed medical professional must complete the form prior to the DEA employee being allowed to participate in the VWP.

5. *An estimate of the total number of respondents and the amount of time estimated for an average respondent to respond:* The total or estimated number of respondents for the DEA–315c is 100. The time per response is 45 minutes.

6. *An estimate of the total annual burden (in hours) associated with the collection:* The total annual burden hours for this collection is 75 hours.

7. *An estimate of the total annual cost burden associated with the collection, if applicable:* 0 for the DEA.

TOTAL BURDEN HOURS

Activity	Number of respondents	Frequency	Total annual responses	Time per response (minutes)	Total annual burden (hours)
DEA Form 315c	100	1 × per year	100	45	75
Unduplicated Totals					

If additional information is required contact: Darwin Arceo, Department Clearance Officer, United States Department of Justice, Justice Management Division, Policy and Planning Staff, Two Constitution Square, 145 N Street NE, 4W–218, Washington, DC.

Dated: July 31, 2025.

Darwin Arceo,

Department Clearance Officer for PRA, U.S. Department of Justice.

BILLING CODE 4410–09–P

NUCLEAR REGULATORY COMMISSION

[NRC–2025–0098]

Level 3 Probabilistic Risk Assessment Project Documentation (Volume 8)

AGENCY: Nuclear Regulatory Commission.

ACTION: Draft report; request for comment.

SUMMARY: The U.S. Nuclear Regulatory Commission (NRC) is issuing for public comment a draft report on the Level 3 Probabilistic Risk Assessment (PRA) project; specifically, ''Volume 8: Integrated Site Risk, All Hazards, Level 1, Level 2, and Level 3 PRA.''

DATES: Submit comments by October 3, 2025. Comments received after this date will be considered if it is practical to do so, but the Commission is able to ensure consideration only for comments received on or before this date.

ADDRESSES: You may submit comments by any of the following methods; however, the NRC encourages electronic comment submission through the Federal rulemaking website:

- *Federal rulemaking website:* Go to *https://www.regulations.gov* and search for Docket ID NRC–2025–0098. Address questions about Docket IDs in *Regulations.gov* to Bridget Curran; telephone: 301–415–1003; email: *Bridget.Curran@nrc.gov.* For technical questions, contact the individual listed in the **FOR FURTHER INFORMATION CONTACT** section of this document.
- *Mail comments to:* Office of Administration, Mail Stop: TWFN–7–A60M, U.S. Nuclear Regulatory Commission, Washington, DC 20555–0001, ATTN: Program Management, Announcements and Editing Staff.

For additional direction on obtaining information and submitting comments, see ''Obtaining Information and Submitting Comments'' in the **SUPPLEMENTARY INFORMATION** section of this document.

FOR FURTHER INFORMATION CONTACT: Alan Kuritzky, Office of Nuclear Regulatory Research, U.S. Nuclear Regulatory Commission, Washington, DC 20555–0001; telephone: 301–415–1552; email: *Alan.Kuritzky@nrc.gov.*

SUPPLEMENTARY INFORMATION:

I. Obtaining Information and Submitting Comments

A. Obtaining Information

Please refer to Docket ID NRC–2025–0098 when contacting the NRC about the availability of information for this action. You may obtain publicly available information related to this action by any of the following methods:

- *Federal Rulemaking Website:* Go to *https://www.regulations.gov* and search for Docket ID NRC–2025–0098.
- *NRC's Agencywide Documents Access and Management System (ADAMS):* You may obtain publicly available documents online in the ADAMS Public Documents collection at *https://www.nrc.gov/reading-rm/adams.html.* To begin the search, select ''Begin Web-based ADAMS Search.'' For problems with ADAMS, please contact the NRC's Public Document Room (PDR) reference staff at 1–800–397–4209, at 301–415–4737, or by email to *PDR.Resource@nrc.gov.* For the convenience of the reader, instructions about obtaining materials referenced in this document are provided in the ''Availability of Documents'' section.
- NRC's PDR: The PDR, where you may examine and order copies of publicly available documents, is open by appointment. To make an appointment to visit the PDR, please send an email to *PDR.Resource@nrc.gov* or call 1–800–397–4209 or 301–415–4737, between 8 a.m. and 4 p.m. eastern time (ET), Monday through Friday, except Federal holidays.

B. Submitting Comments

The NRC encourages electronic comment submission through the Federal rulemaking website (*https://www.regulations.gov*). Please include Docket ID NRC–2025–0098 in your comment submission.

The NRC cautions you not to include identifying or contact information that you do not want to be publicly disclosed in your comment submission. The NRC will post all comment submissions at *https://www.regulations.gov* as well as enter the comment submissions into ADAMS. The NRC does not routinely edit comment submissions to remove identifying or contact information.

If you are requesting or aggregating comments from other persons for submission to the NRC, then you should inform those persons not to include identifying or contact information that they do not want to be publicly disclosed in their comment submission. Your request should state that the NRC does not routinely edit comment submissions to remove such information before making the comment submissions available to the public or entering the comment into ADAMS.

II. Discussion

As directed in SRM–SECY–11–0089, ''Options for Proceeding with Future Level 3 Probabilistic Risk Assessment (PRA) Activities,'' the staff is conducting a full-scope multi-unit site Level 3 PRA (Level 3 PRA project) that addresses all internal and external hazards; all plant operating modes; and all reactor units, spent fuel pools (SFPs), and dry cask storage. The reference site for this study contains 2 four-loop Westinghouse pressurized water reactors with large dry containments. The objectives of the Level 3 PRA project are to (1) develop a Level 3 PRA, generally based on current state-of-practice methods, tools, and data, that (a) reflects technical advances since the last NRC-sponsored Level 3 PRAs (NUREG–1150), which were completed over 30 years ago, and (b) addresses scope considerations that were not previously considered (*e.g.,* low-power and shutdown risk, multi-unit risk, other radiological sources); (2) extract new insights to enhance regulatory decision making and to help focus limited NRC resources on issues most directly related to the agency's mission to protect public health and safety; (3) enhance PRA staff capability and expertise and improve documentation practices to make PRA information more accessible, retrievable, and understandable; and (4) demonstrate technical feasibility and evaluate the realistic cost of developing new Level 3 PRAs.

The work performed under this project is being documented as a multi-volume report. The current Level 3 PRA project report (Volume 8) describes the analyses and results for the integrated site risk (ISR) task. The Level 3 PRA project ISR task is a site-specific analysis that consists of the following high-level steps: sitewide dependency assessment; multi-unit (MU) Level 1, Level 2, and Level 3 PRA; and ISR analysis. Multi-unit core damage frequencies (MUCDFs) were developed for all identified multi-unit initiating events (MUIEs). The total MUCDF was approximately 10 percent of the total single-unit core damage frequency, with seismic events being the largest

contributors to MU risk. Due to computational challenges, MU Level 2 and Level 3 analyses were limited to two MUIEs: weather-related losses of offsite power and a large seismic event. The study found that MU consequences for these MUIEs were small compared to the single-unit results. For the final ISR step, a single illustrative scenario was identified that involved potential sitewide dependencies between the reactors and the spent fuel pools and was risk-significant to both the spent fuel pools and the reactors: a large seismic event. Risk results for the illustrative ISR scenario are reported for several consequence metrics, including individual latent cancer fatality risk, collective total effective dose risk, and economic cost. Regardless of the consequence metric, the risk estimated for the illustrative ISR scenario was calculated to be low as compared to the MU and single-source (*i.e.,* single-unit reactor or SFP) results.

III. Availability of Documents

The documents identified in the following table are available to interested persons through ADAMS, as indicated.

Document description	ADAMS accession No.
SRM–SECY–11–0089, ''Options for Proceeding with Future Level 3 Probabilistic Risk Assessment (PRA) Activities,'' dated September 21, 2011.	ML112640419
Level 3 PRA Project, Volume 8: Integrated Site Risk, All Hazards, Level 1, Level 2, and Level 3 PRA (draft for public comment), published August 2025.	ML25149A043

Dated: July 31, 2025.

For the Nuclear Regulatory Commission.

Latonia Enos-Sylla,

Acting Chief, Probability Risk Assessment Branch, Division of Risk Analysis, Office of Nuclear Regulatory Research.

BILLING CODE 7590–01–P

PENSION BENEFIT GUARANTY CORPORATION

Proposed Submission of Information Collection for OMB Review; Comment Request; Annual Reporting (Form 5500 Series)

AGENCY: Pension Benefit Guaranty Corporation.

ACTION: Notice of intent to request extension of OMB approval of information collection.

SUMMARY: The Pension Benefit Guaranty Corporation (PBGC) intends to request that the Office of Management and Budget (OMB) extend approval, under the Paperwork Reduction Act, of a collection of information on Annual Reporting under OMB control number 1212–0057, which expires on March 31, 2026. This notice informs the public of PBGC's intent and solicits public comment on the collection of information.

DATES: Comments must be submitted on or before October 3, 2025 to be assured of consideration.

ADDRESSES: Comments may be submitted by any of the following methods:

- *Federal eRulemaking Portal: http://www.regulations.gov*. Follow the online instructions for submitting comments.
- *Email: paperwork.comments@pbgc.gov*. Refer to OMB control number 1212–0057 in the subject line.
- *Mail or Hand Delivery:* Office of the General Counsel, Pension Benefit Guaranty Corporation, 445 12th Street SW, Washington, DC 20024–2101.

Commenters are strongly encouraged to submit public comments electronically. Commenters who submit comments on paper by mail should allow sufficient time for mailed comments to be received before the close of the comment period.

All submissions received must include the agency's name (Pension Benefit Guaranty Corporation, or PBGC) and refer to OMB control number 1212–0057. All comments received will be posted without change to PBGC's website, *www.pbgc.gov,* including any personal information provided. Do not submit comments that include any personally identifiable information or confidential business information.

Copies of the collection of information may be obtained by writing to the Disclosure Division, (*disclosure@pbgc.gov*), Office of the General Counsel, Pension Benefit Guaranty Corporation, 445 12th Street SW, Washington, DC 20024–2101, or calling 202–229–4040 during business hours. If you are deaf or hard of hearing, or have a speech disability, please dial 7–1–1 to access telecommunications relay services.

FOR FURTHER INFORMATION CONTACT: David Simonetti (*simonetti.david@pbgc.gov*; 202–229–4362), Attorney, Office of the General Counsel, Pension Benefit Guaranty Corporation, 445 12th Street SW, Washington, DC 20024–2101. If you are deaf or hard of hearing, or have a speech disability, please dial 7–1–1 to access telecommunications relay services.

SUPPLEMENTARY INFORMATION: Annual reporting to the Internal Revenue Service (IRS), the Employee Benefits Security Administration (EBSA), and the Pension Benefit Guaranty Corporation (PBGC) is required by law for most employee benefit plans. For example, section 4065 of the Employee Retirement Income Security Act of 1974 (ERISA) requires annual reporting to PBGC for pension plans covered by title IV of ERISA. To accommodate these filing requirements, IRS, EBSA, and PBGC have jointly promulgated the Form 5500 Series, which includes the Form 5500 Annual Return/Report of Employee Benefit Plan and the Form 5500–SF Short Form Annual Return/Report of Small Employee Benefit Plan.

The collection of information has been approved by OMB under control number 1212–0057 through March 31, 2026. PBGC intends to request that OMB extend its approval, without modifications, for 3 years. An agency may not conduct or sponsor, and a person is not required to respond to a collection of information unless it displays a currently valid OMB control number.

PBGC estimates that it will receive approximately 25,000 Form 5500 and Form 5500–SF filings per year under this collection of information for the 2025 Form 5500 Series. PBGC further estimates that the total annual burden of this collection of information for the Form 5500 Series, attributable to PBGC, will be 15,089,hours and that there will be no cost burden.

PBGC is soliciting public comments to—

- evaluate whether the proposed collection of information is necessary for the proper performance of the functions of the agency, including whether the information will have practical utility;
- evaluate the accuracy of the agency's estimate of the burden of the proposed collection of information, including the validity of the methodologies and assumptions used;

• enhance the quality, utility, and clarity of the information to be collected; and

• minimize the burden of the collection of information on those who are to respond, including through the use of appropriate automated, electronic, mechanical, or other technological collection techniques or other forms of information technology (*e.g.* permitting electronic submission of responses).

Issued in Washington, DC.

Hilary Duke,

Assistant General Counsel, Pension Benefit Guaranty Corporation.

BILLING CODE 7709–02–P

PENSION BENEFIT GUARANTY CORPORATION

Proposed Submission of Information Collection for OMB Review; Comment Request; Payment of Premiums; Termination Premium

AGENCY: Pension Benefit Guaranty Corporation.

ACTION: Notice of intent to request extension of OMB approval of information collection.

SUMMARY: The Pension Benefit Guaranty Corporation (PBGC) intends to request that the Office of Management and Budget (OMB) extend approval, under the Paperwork Reduction Act, of a collection of information for the termination premium under its regulation on Payment of Premiums. This notice informs the public of PBGC's intent and solicits public comment on the collection of information.

DATES: Comments must be submitted on or before October 3, 2025 to be assured of consideration.

ADDRESSES: Comments may be submitted by any of the following methods:

• *Federal eRulemaking Portal: http://www.regulations.gov.* Follow the online instructions for submitting comments.

• *Email: paperwork.comments@pbgc.gov.* Refer to OMB control number 1212–0064 in the subject line.

• *Mail or Hand Delivery:* Office of the General Counsel, Pension Benefit Guaranty Corporation, 445 12th Street SW, Washington, DC 20024–2101.

Commenters are strongly encouraged to submit comments electronically. Commenters who submit comments on paper by mail should allow sufficient time for mailed comments to be received before the close of the comment period.

All submissions received must include the agency's name (Pension Benefit Guaranty Corporation, or PBGC) and refer to OMB control number 1212–0064. All comments received will be posted without change to PBGC's website, *www.pbgc.gov,* including any personal information provided. Do not submit comments that include any personally identifiable information or confidential business information.

Copies of the collection may be obtained without charge by writing to the Disclosure Division, (*disclosure@pbgc.gov*), Office of the General Counsel, Pension Benefit Guaranty Corporation, 445 12th Street SW, Washington, DC 20024–2101, or calling 202–229–4040 during normal business hours. If you are deaf or hard of hearing, or have a speech disability, please dial 7–1–1 to access telecommunications relay services.

FOR FURTHER INFORMATION CONTACT: Jose Singer-Freeman (*singer-freeman.jose@pbgc.gov;* 202–701–8073), Attorney, or Monica O'Donnell (*odonnell.monica@pbgc.gov;* 202–229–5507), Attorney, Office of the General Counsel, Pension Benefit Guaranty Corporation, 445 12th Street SW, Washington, DC 20024–2101; If you are deaf or hard of hearing, or have a speech disability, please dial 7–1–1 to access telecommunications relay services.

SUPPLEMENTARY INFORMATION: The Pension Benefit Guaranty Corporation (PBGC) intends to request that the Office of Management and Budget (OMB) extend approval under the Paperwork Reduction Act, of a collection of information under title IV of the Employee Retirement Income Security Act of 1974 (ERISA) and PBGC's premium regulations (29 CFR parts 4006 and 4007).(OMB control number 1212–0064, expires March 31, 2026). This notice informs the public of PBGC's intent and solicits public comment on the collection of information.

PBGC administers the pension plan termination insurance program under title IV of ERISA. Section 4006(a)(7) of ERISA provides for a ''termination premium'' (in addition to the flat-rate and variable-rate premiums under sections 4006(a)(3) and (8)) that is payable for 3 years following certain distress and involuntary plan terminations. PBGC's regulations on Premium Rates (29 CFR part 4006) and Payment of Premiums (29 CFR part 4007) implement the termination premium. Sections 4007.3 and 4007.13(b) of the premium payment regulation require the filing of termination premium information and payments with PBGC.

In general, the termination premium applies where a single-employer plan terminates in a distress termination under section 4041(c) of ERISA (unless contributing sponsors and controlled group members meet the bankruptcy liquidation requirements of section 4041(c)(2)(B)(i)) or in an involuntary termination under section 4042 of ERISA, and the termination date under section 4048 of ERISA is after 2005.

The termination premium is payable for 3 years and the same amount is payable each year. The termination premium is due on the 30th day of each of 3 consecutive 12-month periods. The first 12-month period generally begins shortly after the termination date or after the conclusion of bankruptcy proceedings in certain cases. The termination premium and related information must be filed by a person liable for the termination premium. The persons liable for the termination premium are contributing sponsors and members of their controlled groups, determined on the day before the plan termination date. Section 4007.10 of PBGC's Payment of Premiums regulation requires the retention of records supporting or validating the computation of premiums paid and requires that the records be made available to PBGC.

PBGC uses Form T and its corresponding instructions for paying the termination premium. The existing Form T and its corresponding instructions has been approved through March 31, 2026, under OMB control number 1212–0064. PBGC intends to request that OMB extend its approval of this collection of information for 3 years. An agency may not conduct or sponsor, and a person is not required to respond to, a collection of information unless it displays a currently valid OMB control number.

PBGC estimates that, during the next 3 years, it will receive an average of 1 Form T filing per year. PBGC estimates that the total annual burden for the collection of information will be 5 minutes and $67.

PBGC is soliciting public comments to—

• Evaluate whether the proposed collection of information is necessary for the proper performance of the functions of the agency, including whether the information will have practical utility;

• Evaluate the accuracy of the agency's estimate of the burden of the proposed collection of information, including the validity of the methodologies and assumptions used;

• Enhance the quality, utility, and clarity of the information to be collected; and

• Minimize the burden of the collection of information on those who are to respond, including through the use of appropriate automated, electronic, mechanical, or other technological collection techniques or other forms of information technology (*e.g.* permitting electronic submission of responses).

Issued in Washington, DC.

Hilary Duke,

Assistant General Counsel Pension Benefit Guaranty Corporation.

POSTAL REGULATORY COMMISSION

[Docket Nos. MC2025–1595 and K2025–1587; MC2025–1596 and K2025–1588]

New Postal Products

AGENCY: Postal Regulatory Commission.

ACTION: Notice.

SUMMARY: The Commission is noticing a recent Postal Service filing for the Commission's consideration concerning a negotiated service agreement. This notice informs the public of the filing, invites public comment, and takes other administrative steps.

DATES: *Comments are due:* August 7, 2025.

ADDRESSES: Submit comments electronically via the Commission's Filing Online system at *https://www.prc.gov.* Those who cannot submit comments electronically should contact the person identified in the **FOR FURTHER INFORMATION CONTACT** section by telephone for advice on filing alternatives.

FOR FURTHER INFORMATION CONTACT: David A. Trissell, General Counsel, at 202–789–6820.

SUPPLEMENTARY INFORMATION:

Table of Contents

I. Introduction
II. Public Proceeding(s)
III. Summary Proceeding(s)

I. Introduction

Pursuant to 39 CFR 3041.405, the Commission gives notice that the Postal Service filed request(s) for the Commission to consider matters related to Competitive negotiated service agreement(s). The request(s) may propose the addition of a negotiated service agreement from the Competitive product list or the modification of an existing product currently appearing on the Competitive product list.

The public portions of the Postal Service's request(s) can be accessed via the Commission's website (*http://www.prc.gov*). Non-public portions of the Postal Service's request(s), if any, can be accessed through compliance with the requirements of 39 CFR 3011.301.[1]

Section II identifies the docket number(s) associated with each Postal Service request, if any, that will be reviewed in a public proceeding as defined by 39 CFR 3010.101(p), the title of each such request, the request's acceptance date, and the authority cited by the Postal Service for each request. For each such request, the Commission appoints an officer of the Commission to represent the interests of the general public in the proceeding, pursuant to 39 U.S.C. 505 and 39 CFR 3000.114 (Public Representative). The Public Representative does not represent any individual person, entity or particular point of view, and, when Commission attorneys are appointed, no attorney-client relationship is established. Section II also establishes comment deadline(s) pertaining to each such request.

The Commission invites comments on whether the Postal Service's request(s) identified in Section II, if any, are consistent with the policies of title 39. Applicable statutory and regulatory requirements include 39 U.S.C. 3632, 39 U.S.C. 3633, 39 U.S.C. 3642, 39 CFR part 3035, and 39 CFR part 3041. Comment deadline(s) for each such request, if any, appear in Section II.

Section III identifies the docket number(s) associated with each Postal Service request, if any, to add a standardized distinct product to the Competitive product list or to amend a standardized distinct product, the title of each such request, the request's acceptance date, and the authority cited by the Postal Service for each request. Standardized distinct products are negotiated service agreements that are variations of one or more Competitive products, and for which financial models, minimum rates, and classification criteria have undergone advance Commission review. *See* 39 CFR 3041.110(n); 39 CFR 3041.205(a). Such requests are reviewed in summary proceedings pursuant to 39 CFR 3041.325(c)(2) and 39 CFR 3041.505(f)(1). Pursuant to 39 CFR 3041.405(c)–(d), the Commission does not appoint a Public Representative or request public comment in proceedings to review such requests.

[1] *See* Docket No. RM2018–3, Order Adopting Final Rules Relating to Non-Public Information, June 27, 2018, Attachment A at 19–22 (Order No. 4679).

II. Public Proceeding(s)

1. *Docket No(s).:* MC2025–1595 and K2025–1587; *Filing Title:* USPS Request to Add Priority Mail Contract 914 to the Competitive Product List and Notice of Filing Materials Under Seal; *Filing Acceptance Date:* July 30, 2025; *Filing Authority:* 39 U.S.C. 3642, 39 CFR 3035.105, and 39 CFR 3041.310; *Public Representative:* Elsie Lee-Robbins; *Comments Due:* August 7, 2025.

2. *Docket No(s).:* MC2025–1596 and K2025–1588; *Filing Title:* USPS Request to Add Priority Mail Contract 915 to the Competitive Product List and Notice of Filing Materials Under Seal; *Filing Acceptance Date:* July 30, 2025; *Filing Authority:* 39 U.S.C. 3642, 39 CFR 3035.105, and 39 CFR 3041.310; *Public Representative:* Evan Wise; *Comments Due:* August 7, 2025.

III. Summary Proceeding(s)

None. See Section II for public proceedings.

This Notice will be published in the **Federal Register**.

Jennie L. Jbara,

Primary Certifying Official.

BILLING CODE 7710–FW–P

SECURITIES AND EXCHANGE COMMISSION

[Release No. 34–103597; File Nos. SR–OCC–2025–009]

Self-Regulatory Organizations; The Options Clearing Corporation; Order Granting Approval of Proposed Rule Change by The Options Clearing Corporation Concerning Amendments to OCC's Comprehensive Stress Testing & Clearing Fund Methodology, and Liquidity Risk Management Description (''Methodology Description'') and Clearing Fund Methodology Policy (Together With the Methodology Description, the ''Risk Policies'') To Enhance Its Stress Testing Methodology

July 30, 2025.

I. Introduction

On June 11, 2025, the Options Clearing Corporation (''OCC'') filed with the Securities and Exchange Commission (''Commission'') the proposed rule change SR–OCC–2025–009, pursuant to Section 19(b) of the Securities Exchange Act of 1934

(''Exchange Act'') [1] and Rule 19b–4 [2] thereunder, to enhance its stress testing methodology.[3] The proposed rule change was published for public comment in the **Federal Register** on June 27, 2025.[4] The Commission has received no comments regarding the proposed rule change. For the reasons discussed below, the Commission is approving the proposed rule change (hereinafter defined as ''Proposed Rule Change'').

II. Background

OCC is a central counterparty (''CCP''), which means that, as part of its function, it interposes itself as the buyer to every seller and the seller to every buyer for certain financial transactions. As the CCP for the listed options markets in the United States,[5] as well as for certain futures and stock loans, OCC is exposed to certain risks arising from providing clearing and settlement services to its Clearing Members. Because OCC is obligated to perform on the contracts it clears, even where one of its Clearing Members defaults, OCC is exposed to credit risk [6] and liquidity risk [7] in the form of exposure to a Clearing Member's trading activities. OCC manages such risk, in part, by performing daily stress testing [8] that covers a wide range of scenarios.[9]

OCC groups its stress testing scenarios into different categories, including Sufficiency Scenarios, Adequacy Scenarios, Sizing Scenarios, and Informational Scenarios.[10] OCC states that its current Sufficiency Scenarios are variations of historical scenarios that attempt to replicate historical events under current market conditions.[11] These scenarios are designed to measure OCC's potential exposure to a Clearing Member Group's portfolios relative to OCC's resources so that OCC can determine whether to call for additional or different collateral.[12]

Adequacy Scenarios allow OCC to assess whether collected resources are adequate to cover OCC's risk tolerance of a 1-in-50 year statistical market event over a two-year lookback, while sizing scenarios help OCC size its financial resources.[13] Finally, OCC uses Informational Scenarios to monitor and assess the size of OCC's prefunded financial resources against a wide range of stress scenarios for informational and risk monitoring purposes.[14] Informational Scenarios are used for risk monitoring and informational purposes, and not used to determine the size and composition of OCC's financial resources, but OCC's Risk Committee may approve adjustments that recategorize an Informational Scenario as an Adequacy, Sufficiency, or Sizing Scenario.[15]

II. Description of the Proposed Rule Change

The Proposed Rule Change would make three groups of changes related to OCC's stress testing methodology in its Risk Policies. First, it would recategorize certain Informational Scenarios as Sufficiency Scenarios, while conversely also recategorizing certain Sufficiency Scenarios into Informational Scenarios. As a result, six recategorized scenarios would be promoted to determine potential calls for additional collateral as Sufficiency Scenarios. Eight current Sufficiency Scenarios, meanwhile, would be demoted and no longer used to determine such calls. Second, the Proposed Rule Change would modify the sample list of stress scenarios in the Methodology Description [16] to streamline and more clearly present the sample of scenarios codified in the document and would add detail to OCC's Rules outlining circumstances under which OCC could require Clearing Members to contribute additional collateral due to the results of Sufficiency Scenarios. Third, OCC proposes to amend language in its Risk Policies related to scenario calibration to more clearly describe cadence and implementation. Such differences are described in more detail below.

A. Recategorization of Scenarios

As stated above, OCC is proposing to recategorize certain scenarios that are part of its Risk Policies.[17] OCC's Methodology Description lists a subset of the Sufficiency Scenarios that have been implemented in OCC's stress testing system.

OCC proposes to promote six Informational Scenarios to Sufficiency Scenarios. OCC also proposes to demote eight historical Sufficiency Scenarios to Informational Scenarios. Four of the Informational Scenarios that OCC proposes to promote to Sufficiency Scenarios are sector-specific scenarios. The proposed sector-specific scenarios are hypothetical scenarios that apply price shocks based on a corresponding sector exchange-traded-fund's return during the selected time period. These would become OCC's first sector-specific Sufficiency Scenarios. OCC states that the proposed sector-specific scenarios yielded exposures that were generally in line with its current, most impactful Sufficiency Scenarios.[18]

The other two Informational Scenarios that OCC proposes to promote to Sufficiency Scenarios represent the most extreme market rally and decline moves in 2020. OCC has already implemented Sufficiency Scenarios related to extreme 2020 market moves under its waterfall approach.[19] The two scenarios now proposed for promotion

[16] The Methodology Description describes the Comprehensive Stress Testing & Clearing Fund Methodology and Liquidity Risk Management Description that OCC uses to analyze the adequacy of its financial resources and to challenge its risk management framework. *See* Exchange Act Release No. 100147 (May 15, 2024), 89 FR 44752, 44753 n.5 (May 21, 2024 (File No. SR–OCC–2024–006).

[17] *See* Notice, 90 FR at 27740.

[18] *See* Notice, 90 FR at 27741. *See also* Securities Exchange Act Release No. 90827 (Dec. 30, 2020), 86 FR 659 (Jan. 6, 2021) (File No. SR–OCC–2020–015). OCC provided data and analysis concerning the proposed rule change in a confidential exhibit to File No. SR–OCC–2025–009, including the performance of the proposed scenarios relative to existing scenarios.

[19] *See* Notice, 90 FR at 27741 n.11. For OCC's waterfall approach, the actual return of the risk factor during the historical event is used as the price shock, if available. If unavailable, a proxy market return from a corresponding sector is used as the price shock. Finally, if data is unavailable for both actual and sector returns, the price shock is determined by the beta of the risk factor to its assigned risk driver multiplied by the corresponding risk driver shock (the ''risk driver beta-derived price shock''). The beta is the sensitivity of the price of a security relative to the price of the risk driver. *See* Notice, 90 FR at 27741 n.10.

would complement OCC's existing Sufficiency Scenarios by directly applying a risk driver beta-derived price shock instead of using the waterfall approach.[20] OCC found that the proposed scenarios yielded exposures that were consistently higher than those generated by the corresponding Sufficiency Scenarios and were comparable to overall peak Sufficiency Scenario exposures.[21]

OCC states that the proposed rule change would enable OCC to test the sufficiency of its financial resources under a wider range of relevant stress scenarios and respond quickly when OCC believes additional financial resources are necessary.[22] OCC would also be able to measure the exposure of OCC's Clearing Fund to the portfolios of individual Clearing Member Groups to determine whether to call for additional resources.[23]

As stated above, OCC also proposes to demote certain Sufficiency Scenarios to Informational Scenarios. These eight scenarios attempt to replicate historical events that occurred between 1974 and 2008, but using current market conditions. OCC states that these scenarios consistently ranked the lowest in terms of shortfalls generated and had no impact on the amount of financial resources OCC collected from its members.[24] OCC states that proposed changes would avoid unnecessary complexity in OCC's stress testing methodology by removing superfluous Sufficiency Scenarios.[25]

B. Streamlining the Methodology Description

As stated above, OCC also proposes to streamline the sample of scenarios it presents in its Methodology Description.[26] To do this, OCC proposes three specific changes. First, OCC proposes to change the format of its ''Clearing Fund Sizing and Stress Testing'' section within its Methodology Description into a narrative from the current list-format. OCC also proposes to make conforming changes to the Liquidity Stress Testing section. The proposed changes would allow OCC to add new scenarios approved through its internal governance processes.

Second, OCC proposes changes to clarify its authority to size the Clearing Fund. OCC establishes the size of its Clearing Fund to cover losses arising under a 1-in-80 year hypothetical market event.[27] OCC's Clearing Fund Methodology Policy allows the Stress Testing Working Group (''STWG'') to recommend that a 1-in-90 year event be used in OCC's Sizing Scenarios, subject to applicable governance requirements.[28] OCC proposes to clarify in the Methodology Description that OCC can size the Clearing Fund in accordance with a standard that exceeds a 1-in-80 year event, if the STWG, Management Committee, and Risk Committee determine a more extreme scenario is necessary.

Finally, OCC proposes to replace references to specific Informational Scenarios in its Clearing Fund Methodology Policy with a more general description of such scenarios. The Clearing Fund Methodology Policy already affords the STWG the authority to approve both the creation and retirement of Informational Scenarios. OCC proposes to describe the Informational Scenarios, but to remove references to specific scenarios entirely. Informational Scenarios have no impact on the amount of financial resources collected from OCC's members. Because these specific scenarios are not needed to understand how the model currently works, do not impact model results, and are subject to change from time to time based on market conditions, OCC does not believe that they need not be maintained in its rules.[29]

C. Cadence and Implementation

As stated above, OCC has also proposed additional changes regarding cadence and other administrative matters.[30] In this regard, OCC's proposal generally consists of three larger categories of changes. First, OCC proposes to change how frequently it is required to calibrate stress scenarios. Currently, OCC's Methodology Description requires OCC to calibrate scenarios annually and to review them quarterly. OCC's practice, however, is to recalibrate scenarios at least quarterly.[31] OCC proposes to amend the Methodology Description to require quarterly recalibration. Relatedly, OCC proposes changes regarding who determines whether more frequent calibration is required. The Methodology Description currently states that either OCC's Quantitative Risk Management team (''QRM'') or STWG determines that updates are necessary. OCC proposes to amend the Methodology Description consistent with its current practice for STWG to make such determinations.[32]

Second, OCC proposes changes to the Comprehensive Stress Testing Methodology to document two missing entries from the list of key tenors for computing volatility, specifically adding 1-week and 2-week tenors. OCC states that these entries were inadvertently excluded from previously approved changes made by OCC in connection with enhancements to its modelling approach for implied volatility.[33]

Finally, OCC proposes to correct errors in the Methodology Description. The Liquidity Stress testing section of the Methodology Description currently states that OCC adheres to a Cover 2 standard for liquidity stress testing. OCC proposes to correct the Methodology Description to state that OCC adheres to a Cover 1 standard for liquidity stress testing, which is OCC's practice. OCC also proposes changes to resolve typographical errors, such as grammatical changes and updating the list of references in the Methodological Description.

III. Discussion and Commission Findings

Section 19(b)(2)(C) of the Exchange Act directs the Commission to approve a proposed rule change of a self-regulatory organization if it finds that such proposed rule change is consistent with the requirements of the Exchange Act and the rules and regulations thereunder applicable to such organization.[34] Under the Commission's Rules of Practice, the ''burden to demonstrate that a proposed rule change is consistent with the Exchange Act and the rules and regulations issued thereunder . . . is on the self-regulatory organization ['SRO'] that proposed the rule change.'' [35]

The description of a proposed rule change, its purpose and operation, its effect, and a legal analysis of its consistency with applicable requirements must all be sufficiently detailed and specific to support an affirmative Commission finding,[36] and

[20] OCC previously promoted Informational Scenarios that take a beta derived price shock approach to complement existing scenarios that rely on a waterfall approach for scenarios related to extreme market moves in 2008. *See* Securities Exchange Act Release No. 100147 (May 15, 2024), 89 FR 44752 (May 21, 2024) (File No. SR–OCC–2024–006).

[35] Rule 700(b)(3), Commission Rules of Practice, 17 CFR 201.700(b)(3).

[36] *Id.*

any failure of an SRO to provide this information may result in the Commission not having a sufficient basis to make an affirmative finding that a proposed rule change is consistent with the Exchange Act and the applicable rules and regulations.[37] Moreover, ''unquestioning reliance'' on an SRO's representations in a proposed rule change is not sufficient to justify Commission approval of a proposed rule change.[38]

After carefully considering the Proposed Rule Change, the Commission finds that the Proposed Rule Change is consistent with the requirements of the Exchange Act and the rules and regulations thereunder applicable to OCC. More specifically, the Commission finds that the Proposed Rule Change is consistent with Section 17A(b)(3)(F) of the Exchange Act,[39] and Rules 17ad–22(e)(4) [40] and 17ad–22(e)(7) [41] as described in detail below.

A. Consistency With Section 17A(b)(3)(F) of the Exchange Act

Section 17A(b)(3)(F) of the Exchange Act requires, among other things, that a clearing agency's rules are ''designed to promote the prompt and accurate clearance and settlement of securities transactions, . . . derivative agreements, contracts, and transactions, . . . [and] to assure the safeguarding of securities and funds which are in the custody or control of the clearing agency or for which it is responsible.'' [42]

As discussed above, the proposed changes would allow OCC to (1) promote existing Informational Scenarios to Sufficiency Scenarios. Specifically, OCC would implement its first sector-specific Sufficiency Scenarios, as well as variations on existing Sufficiency Scenarios focused on extreme market moves in 2020. Once these scenarios are promoted to Sufficiency Scenarios, they would be used to determine whether it is necessary to call for additional margin intra-day or to increase the size of the Clearing Fund intra-month. By elevating these Informational Scenarios to Sufficiency Scenarios, OCC creates a wider range of stress scenarios. Similarly, OCC's proposed clarification regarding its existing authority to size the Clearing Fund would support OCC's ability to consider additional, more conservative scenarios when determining the resources to collect from its members. Having a wider range of stress scenarios should, in turn, increase the likelihood that OCC will have sufficient collateral on hand to address a default without resorting to loss mutualization through the use of non-defaulting Clearing Members' contributions to the Clearing Fund. Because it avoids loss mutualization, the Proposed Rule Change is consistent with the safeguarding of securities and funds which are in OCC's custody or control. While OCC also proposes demoting certain Sufficiency Scenarios, the data provided by OCC, which the Commission has reviewed and analyzed, demonstrates that such demotion would not impact the financial resources OCC collects from members.

OCC also proposes to amend the Methodology Description by transitioning its scenario list to a narrative format and removing certain scenarios as outlined above. OCC has also proposed correcting certain errors, including to address typographical and grammatical errors, and to add certain tenors used for computing volatility which OCC failed to update in the policy as part of a prior rule filing. By streamlining the scenarios it presents in its Methodology Description, making minor edits, and correcting errors, OCC's proposed changes would help ensure that its Methodology Description document remains clear and effective so that the requirements under this document continue to be carried out properly. Similarly, the proposed changes to OCC's Clearing Fund Methodology Policy to reflect current practice will help ensure that document remains clear and effective.

Based on the Commission's review of the record, and for the reasons described below, the changes described above are consistent Section 17A(b)(3)(F) of the Exchange Act.[43]

B. Consistency With Rule 17ad–22(e)(4) Under the Exchange Act

Rule 17ad–22(e)(4) requires, in part, that a covered clearing agency establish, implement, maintain and enforce written policies and procedures reasonably designed to effectively identify, measure, monitor, and manage its credit exposures to participants and those arising from its payment, clearing, and settlement processes, including by (i) to the extent not already maintained pursuant to Rule 17ad–22(e)(4)(i), maintaining additional financial resources at the minimum to enable it to cover a wide range of foreseeable stress scenarios that include, but are not limited to, the default of the participant family that would potentially cause the largest aggregate credit exposure for the covered clearing agency in extreme but plausible market conditions,[44] and (ii) testing the sufficiency of its total financial resources available to meet the minimum financial resource requirements under Rules 17ad–22(e)(4)(i) through (iii) under the Exchange Act.[45]

The Proposed Rule Change is consistent with Rule 17Ad–22(e)(4)(iii) because it clarifies the authority provided under OCC's rules to allow OCC to rely on more conservative stress scenarios when sizing its Clearing Fund. Allowing OCC, subject to internal governance, to rely on more conservative sizing scenarios increases the likelihood that OCC will foresee a wider range of stress scenarios and maintain sufficient financial resources to cover its exposures in such scenarios.

The Proposed Rule Change is consistent with Rule 17Ad–22(e)(4)(vi) because it effectively broadens the scope of stress scenarios that OCC conducts to test the sufficiency its financial resources. As described above, OCC's Sufficiency Scenarios are designed to measure OCC's potential exposure to a Clearing Member Group's portfolios relative to OCC's resources so that OCC can determine whether to call for additional or different collateral. Expanding the scope of stress scenarios against which OCC monitors its financial resources would increase the likelihood that OCC maintains sufficient financial resources at all times. This Proposed Rule Change would expand the scope of stress scenarios by promoting six Informational Scenarios to Sufficiency Scenarios. This expansion could result in the collection of additional resources available for resolving a member default, which, in turn, would increase the likelihood that OCC maintains sufficient financial resources at all times. OCC also proposes to demote a set of existing Sufficiency Scenarios, but the data provided by OCC demonstrates that such demotion would not impact the financial resources OCC collects from members. Accordingly, the Proposed Rule Change is consistent with Rule 17ad–22(e)(4)(iii) and (vi) under the Exchange Act.[46]

[45] 17 CFR 240.17ad–22(e)(4)(vi).

[46] 17 CFR 240.17ad–22(e)(4)(iii) and (vi).

C. Consistency With Rule 17ad–22(e)(7) Under the Exchange Act

Rule 17ad–22(e)(7)(vi) requires, in part, that a covered clearing agency establish, implement, maintain and enforce written policies and procedures reasonably designed to effectively measure, monitor, and manage the liquidity risk that arises in or is borne by the covered clearing agency, including measuring, monitoring, and managing its settlement and funding flows on an ongoing and timely basis, and its use of intraday liquidity by, at a minimum, determining the amount and regularly testing the sufficiency of the liquid resources held for purposes of meeting the minimum liquid resource requirement under Rule 17ad–22(e)(7)(i) under the Exchange Act.[47]

As discussed above in the context of credit stress testing, OCC has proposed changes to effectively broadens the scope of stress scenarios that it conducts to test the sufficiency its resources. Expanding the scope of stress scenarios against which OCC monitors its resources would allow OCC to test the sufficiency of its liquid resources under a wider range of stress scenarios. Also, as noted above, the proposed demotion of certain existing Sufficiency Scenarios would not impact the resources OCC collects from its members. The effective expansion of Sufficiency Scenarios would increase the likelihood that OCC maintains sufficient liquid resources at all times.

Additionally, OCC has proposed changes to more accurately document its current practices both with regard to calibrating scenarios at least quarterly and meeting a Cover 1 standard for liquidity. The change with regard to calibration would not impact OCC's current practices, but would ensure a higher frequency of calibrations going forward than is required under the current Methodology Description. The change to a Cover 1 standard for liquidity is merely an error correct that improves the accuracy of OCC's rules.

Accordingly, the Proposed Rule Change is consistent with Rule 17ad–22(e)(7)(vi) under the Exchange Act.[48]

IV. Conclusion

On the basis of the foregoing, the Commission finds that the Proposed Rule Change is consistent with the requirements of the Exchange Act, and in particular, the requirements of Section 17A of the Exchange Act[49] and rules 17ad–22(e)(4) and (e)(7) thereunder.[50]

It is therefore ordered, pursuant to Section 19(b)(2) of the Exchange Act,[51] that the Proposed Rule Change (SR–OCC–2025–009) be, and hereby is, approved.

For the Commission, by the Division of Trading and Markets, pursuant to delegated authority.[52]

Sherry R. Haywood,

Assistant Secretary.

SECURITIES AND EXCHANGE COMMISSION

[Release No. 34–103595; File No. SR–CboeBZX–2025–077]

Self-Regulatory Organizations; Cboe BZX Exchange, Inc.; Notice of Designation of a Longer Period for Commission Action on a Proposed Rule Change, as Modified by Amendment No. 1, To Amend the Rule Governing the Invesco Galaxy Ethereum ETF To Permit Staking

July 30, 2025.

On June 9, 2025, Cboe BZX Exchange, Inc. (''BZX'') filed with the Securities and Exchange Commission (''Commission''), pursuant to Section 19(b)(1) of the Securities Exchange Act of 1934 (''Act'')[1] and Rule 19b–4 thereunder,[2] a proposed rule change to amend the Invesco Galaxy Ethereum ETF to permit staking. On June 23, 2025, the Exchange filed Amendment No.1 to the proposed changes, which replaced and superseded the original filing in its entirety. The proposed rule change, as modified by Amendment No. 1, was published for comment in the **Federal Register** on June 27, 2025.[3]

Section 19(b)(2) of the Act[4] provides that within 45 days of the publication of notice of the filing of a proposed rule change, or within such longer period up to 90 days as the Commission may designate if it finds such longer period to be appropriate and publishes its reasons for so finding or as to which the self-regulatory organization consents, the Commission shall either approve the proposed rule change, disapprove the proposed rule change, or institute proceedings to determine whether the proposed rule change should be disapproved. The 45th day after publication of the notice for this proposed rule change is August 11, 2025. The Commission is extending this 45-day time period.

The Commission finds it appropriate to designate a longer period within which to take action on the proposed rule change, as modified by Amendment No. 1, so that it has sufficient time to consider the proposed rule change and the issues raised therein. Accordingly, the Commission, pursuant to Section 19(b)(2) of the Act,[5] designates September 25, 2025, as the date by which the Commission shall either approve or disapprove, or institute proceedings to determine whether to disapprove, the proposed rule change, as modified by Amendment No. 1 (File No. SR–CboeBZX–2025–077).

For the Commission, by the Division of Trading and Markets, pursuant to delegated authority.[6]

Sherry R. Haywood,

Assistant Secretary.

SECURITIES AND EXCHANGE COMMISSION

[Release No. 34–103596; File No. SR–NASDAQ–2025–056]

Self-Regulatory Organizations; The Nasdaq Stock Market LLC; Notice of Filing of Proposed Rule Change To Adopt Generic Listing Standards for Commodity-Based Trust Shares Under Proposed Rule 5711(d)

July 30, 2025.

Pursuant to Section 19(b)(1) of the Securities Exchange Act of 1934 (''Act''),[1] and Rule 19b–4 thereunder,[2] notice is hereby given that on July 30, 2025, The Nasdaq Stock Market LLC (''Nasdaq'' or ''Exchange'') filed with the Securities and Exchange Commission (''SEC'' or ''Commission'') the proposed rule change as described in Items I and II below, which Items have been prepared by the Exchange. The Commission is publishing this notice to solicit comments on the proposed rule change from interested persons.

I. Self-Regulatory Organization's Statement of the Terms of Substance of the Proposed Rule Change

The Exchange proposes to amend Rule 5711(d) to adopt generic listing standards for Commodity-Based Trust Shares (as defined below).

The text of the proposed rule change is available on the Exchange's website at *https://listingcenter.nasdaq.com/rulebook/nasdaq/rulefilings,* and at the principal office of the Exchange.

II. Self-Regulatory Organization's Statement of the Purpose of, and Statutory Basis for, the Proposed Rule Change

In its filing with the Commission, the Exchange included statements concerning the purpose of and basis for the proposed rule change and discussed any comments it received on the proposed rule change. The text of these statements may be examined at the places specified in Item IV below. The Exchange has prepared summaries, set forth in sections A, B, and C below, of the most significant aspects of such statements.

A. Self-Regulatory Organization's Statement of the Purpose of, and Statutory Basis for, the Proposed Rule Change

1. Purpose

The Exchange proposes to amend Rule 5711(d) to adopt generic listing standards for Commodity-Based Trust Shares.[3] Effectively, the proposed rule change will allow the Exchange to approve the listing and trading of certain qualifying exchange-traded products (''ETPs'') that physically hold commodities like precious metals and digital asset commodities on the Exchange without the need to submit a proposed rule change with the Commission for each new product.[4]

Under the Exchange's current rules, a proposed rule change must be filed with the SEC for the listing and trading of each new series of Commodity-Based Trust Shares.[5] The Exchange believes that the proposed generic listing rules, as described below, will facilitate efficient procedures for ETPs that would be eligible under these rules. Consistent with Exchange-Traded Fund Shares, Index Fund Shares, and Managed Fund Shares listed under the generic listing standards in Rules 5704, 5705(b), and 5735, respectively, series of Commodity-Based Trust Shares that meet the proposed standards in Rule 5711(d) would be permitted to be listed and traded on the Exchange without the Exchange being required to submit a rule filing pursuant to Section 19(b) of the Act.

Background

Rule 5711(d) currently sets forth rules related to the listing and trading of Commodity-Based Trust Shares.[6] The term ''Commodity-Based Trust Shares'' is currently defined in Rule 5711(d)(iv)(A) as a security:

- that is issued by a trust that holds (a) a specified commodity[7] deposited with the trust, or (b) a specified commodity and, in addition to such specified commodity, cash;
- that is issued by such trust in a specified aggregate minimum number in return for a deposit of a quantity of the underlying commodity and/or cash; and
- that, when aggregated in the same specified minimum number, may be redeemed at a holder's request by such trust which will deliver to the redeeming holder the quantity of the underlying commodity and/or cash.

All Commodity-Based Trust Shares listed and/or traded pursuant to Rule 5711(d) (including pursuant to unlisted trading privileges) are subject to the full panoply of Exchange rules and procedures that currently govern the trading of equity securities on the Exchange.[8] In addition, Rule 5711(d)(vi) currently provides for the criteria that Commodity-Based Trust Shares must satisfy for initial and continued listing on the Exchange. Specifically, on an initial listing basis, the Exchange establishes a minimum number of Commodity-Based Trust Shares required to be outstanding at the time of commencement of trading on the Exchange.[9] On a continued listing basis, the Exchange would consider the suspension of trading in or removal from listing of such series under any of the following circumstances: [10]

- If following the initial 12-month period following commencement of trading on the Exchange, the Trust has more than 60 days remaining until termination and there are fewer than 50 record and/or beneficial holders of Commodity-Based Trust Shares;
- If following the initial 12-month period following commencement of trading on the Exchange, the Trust has fewer than 50,000 receipts issued and outstanding;
- If following the initial 12-month period following commencement of trading on the Exchange, the market value of all receipts issued and outstanding is less than $1,000,000;
- If an interruption to the dissemination of the value of the underlying commodity persists past the trading day in which it occurred or is no longer calculated or available on at least a 15-second delayed basis by Nasdaq or one or more major market data vendors during the Regular Market Session (as defined in Nasdaq Rule 4120);
- If an interruption to the dissemination of the Intraday Indicative Value persists past the trading day in which it occurred or is no longer made available on at least a 15-second delayed basis;
- If a series of Commodity-Based Trust Shares is not in compliance with any statements or representations included in the applicable rule proposal under Section 19(b) regarding: (a) the description of the reference assets or trust holdings; (b) limitations on the reference assets or trust holdings; (c) dissemination and availability of the reference asset or intraday indicative values; or (d) the applicability of Nasdaq listing rules specified in such proposals;
- If any of the requirements set forth in Rule 5711(d) are not continuously maintained; or

[3] The Exchange is working on a separate rule proposal to add quantitative metrics as additional eligibility criteria for the generic listing of Commodity-Based Trust Shares that it plans to file subsequent to this proposal.

[4] As discussed later in this filing, Commodity-Based Trust Shares will also be expanded to allow for the ETP to hold not just physical commodities, but also commodity-based assets like commodity futures and securities.

[5] Currently, the SEC has approved a number of spot bitcoin and spot ether ETPs, including ETPs that hold both spot bitcoin and spot ether. *See e.g.,* Securities Exchange Act Nos. 99306 (January 10, 2024), 89 FR 3008 (January 17, 2024) (Self-Regulatory Organizations; NYSE Arca, Inc.; The Nasdaq Stock Market LLC; Cboe BZX Exchange, Inc.; Order Granting Accelerated Approval of Proposed Rule Changes, as Modified by Amendments Thereto, To List and Trade Bitcoin-Based Commodity-Based Trust Shares and Trust Units) (''Spot Bitcoin ETP Approval Order''); 100224 (May 23, 2024), 89 FR 46937 (May 30, 2024) (Self-Regulatory Organizations; NYSE Arca, Inc.; The Nasdaq Stock Market LLC; Cboe BZX Exchange, Inc.; Order Granting Accelerated Approval of Proposed Rule Changes, as Modified by Amendments Thereto, To List and Trade Shares of Ether-Based Exchange-Traded Products) (''Spot ETH ETP Approval Order''); and 101998 (December 19, 2024), 89 FR 106707 (December 30, 2024) (Self-Regulatory Organizations; The Nasdaq Stock Market LLC; Cboe BZX Exchange, Inc.; Order Granting Approval of a Proposed Rule Change, as Modified by Amendment No. 1, To List and Trade Shares of the Hashdex Nasdaq Crypto Index US ETF and Granting Accelerated Approval of a Proposed Rule Change, as Modified by Amendment No. 1, To List and Trade Shares of the Franklin Crypto Index ETF, a Series of the Franklin Crypto Trust) (''Dual Bitcoin and Ether ETP Approval Order'').

[6] The Commission approved Nasdaq Rule 5711 in Securities Exchange Act Release No. 66648 (March 23, 2012), 77 FR 19428 (March 30, 2012) (SR NASDAQ 2012–013) (''Approval Order'').

[7] The term ''commodity'' is defined in Section 1a(9) of the Commodity Exchange Act. *See* current Rule 5711(d)(iv)(B).

[8] *See* Approval Order, *supra* note 6, at 19450.

[9] *See* current Rule 5711(d)(vi)(A).

[10] *See* current Rule 5711(d)(v)(B).

• If such other event shall occur or condition exists which, in the opinion of Nasdaq, makes further dealings on Nasdaq inadvisable.

As noted above, the current process for listing and trading new series of Commodity-Based Trust Shares requires that the Exchange submit separate proposed rule changes with the Commission before listing these ETPs.[11]

Proposal

The Exchange now proposes to amend Rule 5711(d)(i) to specify that the Exchange may list and/or trade Commodity-Based Trust Shares pursuant to Rule 19b–4(e) under the Act (''SEC Rule 19b–4(e)''). SEC Rule 19b–4(e) pertains to derivative securities products,[12] and provides that the listing and trading of a new derivative securities product by a self-regulatory organization (''SRO'') is not deemed a proposed rule change, pursuant to paragraph (c)(1) of Rule 19b–4 if the Commission has approved, pursuant to section 19(b) of the Act, the SRO's trading rules, procedures and listing standards for the product class that would include the new derivative securities product and the SRO has a surveillance program for the product class. As noted above, this is the current method pursuant to which Exchange-Traded Fund Shares, Index Fund Shares, and Managed Fund Shares are listed under Rules 5704, 5705(b), and 5735, respectively, if they meet the requirements of such rules.

As proposed in Rule 5711(d)(i), the Exchange would continue to submit a rule filing pursuant to Section 19(b) of the Act to permit the listing and trading of Commodity-Based Trust Shares that do not meet the standards set forth in Rule 5711(d) on an initial or a continuing basis. For example, if the components of a Commodity-Based Trust Share included a commodity that does not meet the eligibility requirements described in proposed Rule 5711(d)(iv) below, the Exchange would file a separate proposed rule change pursuant to Section 19(b) of the Act to permit the listing and trading such Commodity-Based Trust Share.

In proposed Rule 5711(d)(iii)(A), the Exchange proposes to amend the definition of Commodity-Based Trust Shares. Specifically, Commodity-Based Trust Shares will mean a security that:

• is issued by a trust, limited liability company, partnership, or other similar entity (''Trust'') that, if applicable, is operated by a registered commodity pool operator pursuant to the Commodity Exchange Act, and is not registered as an investment company pursuant to the Investment Company Act of 1940, or series or class thereof;

• is designed to reflect the performance of one or more reference assets or an index of reference assets, less expenses, and other liabilities;

• in order to reflect the performance as provided in proposed Rule 5711(d)(iii)(A)(2), is issued by a Trust that holds (a) one or more commodities or commodity-based assets as defined in proposed Rule 5711(d)(iii)(C), and (b) in addition to such commodities or commodity-based assets, may hold securities, cash, and cash equivalents;

• is issued by such Trust in a specified aggregate minimum number in return for a deposit of (a) a specified quantity of the underlying commodities, commodity-based assets, securities, cash, and/or cash equivalents, or (b) a cash amount with a value based on the next determined net asset value per Trust share; and

• when aggregated in the same specified minimum number, may be redeemed at a holder's request by such Trust which will deliver to the redeeming holder (a) the specified quantity of the underlying commodities, commodity-based assets, securities, cash, and/or cash equivalents, or (b) a cash amount with a value based on the next determined net asset value per Trust share.

As proposed, the definition of Commodity-Based Trust Shares will be amended in a number of ways. First, Commodity-Based Trust Shares could be issued, as proposed, by a trust, limited liability company, partnership, or other similar entity. Second, whereas Commodity-Based Trust Shares are currently based on underlying commodities only, the Exchange proposes that these ETPs could hold underlying commodities, commodity-based assets, and securities, provided that the ETP would not be able to hold securities or cash equivalents to the point where it could be considered an investment company pursuant to the Investment Company Act of 1940. The Exchange believes this flexibility with respect to the structure of the entity issuing Commodity-Based Trust Shares and the holdings underlying such Shares would benefit both issuers and the investing public, and would facilitate the availability of additional types of Commodity-Based Trust Shares. Third, the definition would make clear that the Commodity-Based Trust Share will not be actively managed and will instead be passively managed in that it will reflect the performance of one or more reference assets held in the Trust's portfolio or an index of reference assets that the Trust tracks.[13]

Proposed Rule 5711(d)(iii)(C) defines the term ''commodity-based asset'' as any of commodity futures, commodity options, or commodity swaps.

Proposed Rule 5711(d)(iii)(D) defines the term ''cash equivalent'' as short-term instruments with maturities of less than three months as follows:

• U.S. Government securities, including bills, notes, and bonds differing as to maturity and rates of interest, which are either issued or guaranteed by the U.S. Treasury or by U.S. Government agencies or instrumentalities;

• certificates of deposit issued against funds deposited in a bank or savings and loan association;

• bankers' acceptances, which are short-term credit instruments used to finance commercial transactions;

• repurchase agreements and reverse repurchase agreements;

• bank time deposits, which are monies kept on deposit with banks or savings and loan associations for a stated period of time at a fixed rate of interest;

• commercial paper, which are short-term unsecured promissory notes; and

• money market funds.

Proposed Rule 5711(d)(iii)(E) defines the term ''net asset value'' as the value of Commodity-Based Trust Shares that is used in computing periodically the current price for the purpose of creation and redemption of Trust shares and is an amount which reflects the current market value of the assets held by the Trust less expenses and liabilities.

Proposed Rule 5711(d)(iii)(F) defines the term ''designated contract market'' as a board of trade or exchange that has been designated as a contract market under Section 5 of the Commodity Exchange Act and operates under the regulatory oversight of the Commodity Futures Trading Commission (''CFTC'') pursuant to Section 5 of the Commodity Exchange Act.

Proposed Rule 5711(d)(iii)(G) defines the term ''exchange-traded fund'' or ''ETF'' as an open-end management investment company or a unit investment trust as defined in Section 4(2) of the Investment Company Act of

[11] *See* current Rule 5711(d)(iii).

[12] 17 CFR 240.19b–4(e). As provided under SEC Rule 19b–4(e), the term ''new derivative securities product'' means any type of option, warrant, hybrid securities product or any other security, other than a single equity option or a security futures product, whose value is based, in whole or in part, upon the performance of, or interest in, an underlying instrument. When relying on Rule 19b–4(e), SRO must submit Form 19b–4(e) within 5 business days of trading a new derivative securities product.

[13] Proposed rule changes for previously-listed series of Commodity-Based Trust Shares have also been passively managed. *See supra* note 5.

1940 or series or class thereof, the shares of which are listed and traded on a national securities exchange, and that has formed and operates under an exemptive order under the Investment Company Act of 1940 or in reliance on an exemptive rule adopted by the Securities and Exchange Commission.

Proposed Rule 5711(d)(iii)(H) defines the term ''Intraday Indicative Value'' as the estimated indicative value of a Trust share based on current information regarding the value of the Trust's underlying assets.

Proposed Rule 5711(d)(iii)(I) defines the term ''market price'' as (1) the official closing price of a Trust share; or (2) if it more accurately reflects the market value of a Trust share at the time as of which the Trust calculates current net asset value per share, the price that is the midpoint between the national best bid and national best offer as of that time.

Proposed Rule 5711(d)(iii)(J) defines the term ''premium or discount'' as the positive or negative difference between the market price of a Trust share at the time as of which the current net asset value is calculated and the Trust's current net asset value per share, expressed as a percentage of the Trust share's current net asset value per share.

Proposed Rule 5711(d)(iv) will set forth the eligibility requirements that the holdings of Commodity-Based Trust Shares would have to meet on an initial and, with the exception of proposed subparagraph (A)(3) described below, on a continuing basis. Proposed subparagraph (A) therein would set forth the eligibility requirements for the Trust's commodity or commodity-based asset holdings. Specifically, each commodity or commodity that underlies a commodity-based asset held by the Trust must fall into at least one of the following categories in proposed subparagraphs (A)(1)–(3):

- (1) the commodity trades on a market that is an Intermarket Surveillance Group (''ISG'') member; provided that the Exchange may obtain information about trading in such commodity from the ISG member; [14]
- (2) the commodity underlies a futures contract that has been made available to trade on a designated contract market for at least six months; provided that the Exchange has a comprehensive surveillance sharing agreement, whether directly or through common membership in ISG, with such designated contract market; [15] or
- (3) on an initial basis only, an exchange-traded fund designed to provide economic exposure of no less than 40% of its net asset value to the commodity lists and trades on a national securities exchange.[16]

The proposed eligibility requirements for the commodity or commodity-based asset components held by the Trust in proposed Rule 5711(d)(iv)(A)(1) and (2) are intended to ensure that the Exchange can monitor trading activity in the underlying commodity market or CFTC-regulated futures market through a comprehensive surveillance sharing agreement, thereby facilitating the monitoring for fraud and manipulation. The eligibility requirement in proposed Rule 5711(d)(iv)(A)(3) is intended to cover underlying commodities that are already substantially investible through existing ETFs, and to prevent regulatory arbitrage between ETPs registered under the Securities Act of 1933 and ETFs registered under the Investment Company Act of 1940. Overall, the Exchange believes that the foregoing criteria will help ensure fair and efficient markets.

Proposed subparagraph (B) of proposed Rule 5711(d)(iv) would set forth the eligibility requirements for the Trust's security holdings. Specifically, if the Trust holds any securities, each security held by the Trust would need to meet the criteria of Rule 5735 (Managed Fund Shares), Sections (b)(1)(A) and (B), or if the security is a listed option, trades on an ISG market. Sections (b)(1)(A) and (B) of Rule 5735 presently set forth the standards for a Managed Fund Share portfolio that holds equity securities and fixed income securities, respectively. Section (b)(1)(A) defines equity securities to be U.S. Component Stocks (as defined in Rule 5705); Non-U.S. Component Stocks (as defined in Rule 5705); Exchange Traded Derivative Securities (as defined in Rule 5735(c)(6)); and Linked Securities (as defined in Rule 5710). Section (b)(1)(B) defines fixed income securities to be debt securities that are notes, bonds, debentures, or evidence of indebtedness that include, but are not limited to, U.S. Department of Treasury securities (''Treasury Securities''), government-sponsored entity securities (''GSE Securities''), municipal securities, trust preferred securities, supranational debt and debt of a foreign country or a subdivision thereof, investment grade and high yield corporate debt, bank loans, mortgage and asset backed securities, and commercial paper. As proposed, the Trust's securities holdings must either be an equity security or a fixed income security, as defined in Rule 5735(b)(1)(A) and (B), respectively, and meet the listing standards thereunder, or if the security holdings are listed options, they trade on an ISG market.

Proposed Rule 5711(d)(v) will require the Trust to prominently display certain information on its public website to promote transparency. Specifically, the following information must be available on the Trust's public website, free of charge:

- Before the opening of regular trading on the Exchange, for the Trust's commodities, commodity-based assets, securities, cash, and cash equivalent, to the extent applicable:
  - ticker symbol;
  - identifier;
  - description of the holding;
  - the quantity of each commodity, commodity-based asset, security, cash, and cash equivalent held; and
  - percentage weighting of the Trust's assets.
- The Trust's current net asset value per share, market price, and premium or discount, each as of the end of the prior business day.
- A table showing the number of days the Trust's shares traded at a premium or discount during the most recently completed calendar year and the most recently completed calendar quarters since that year (or the life of the Trust, if shorter).
- A line graph showing the Trust share's premiums or discounts for the most recently completed calendar year and the most recently completed calendar quarters since that year (or the life of the Trust, if shorter).
- The Trust share's median-ask spread, expressed as a percentage rounded to the nearest hundredth, computed by:
  - identifying the Trust share's national best bid and national best offer as of the end of each 10 second interval during each trading day of the last 30 calendar days;
  - dividing the difference between each such bid and offer by the midpoint of the national best bid and national best offer; and

[14] ISG is comprised of an international group of exchanges, market centers, and market regulators that perform front-line market surveillance in their respective jurisdictions. *See https://isgportal.org/web/isg.* A list of ISG members is available at *https://isgportal.org/public-members.*

[15] As it relates to digital assets, this criteria would currently cover, for example, CME Bitcoin futures, CME Ethereum futures, and Coinbase Derivatives Litecoin futures. Both the CME and Coinbase Derivatives are presently ISG members, and both are also designated contract markets registered with the CFTC that trade these digital asset-based futures contracts.

[16] For example, as it relates to digital assets, a number of ETFs already provide over 40% exposure to digital assets like Solana and XRP like the Volatility Shares Solana ETF and Volatility Shares XRP ETF.

○ identifying the median of those values.

• Liquidity risk policies and procedures as described in proposed Rule 5711(d)(vii).

• The Trust's methodology for the calculation of its net asset value.

• The Trust's trading volume for the previous day; and

• The Trust's effective prospectus, in a form available for download.

Other than the proposed liquidity risk policies and procedures, which will be discussed further below, the proposed website disclosure requirements discussed above are based on previous proposed rule changes for specific series of Commodity-Based Trust Shares.[17]

Proposed Rule 5711(d)(vi) will specify that the Trust may not seek, directly or indirectly, to provide investment returns that correspond to the performance of an index, benchmark, or reference value by a specified multiple, or to provide investment returns that have an inverse or multiple inverse relationship to the performance of an index, benchmark, or reference value, over a predetermined period of time.[18]

Proposed Rule 5711(d)(vii) will specify the disclosure requirements for liquidity risk policies and procedures. In particular, if a Trust has on a daily basis less than 85% of its assets readily available to meet redemption requests, the Trust must have written liquidity risk policies and procedures reasonably designed to address the risk that it could not meet requests to redeem shares issued by the Trust without significant dilution of remaining shareholders' interest in the Trust. Such policies and procedures must be periodically reviewed (with such review occurring no less frequently than annually) by the Trust and must address the following, as applicable. For purposes of proposed Rule 5711(d)(vii), an asset is deemed not readily available to meet redemption requests if it is segregated, pledged, hypothecated, encumbered or otherwise restricted or prevented from being liquidated, sold, transferred, or assigned within one business day. Proposed subparagraphs (A)–(C) will specify what must be addressed in these written policies and procedures:

• The Trust's investment strategy and liquidity of the Trust's assets during normal and stressed conditions, including use of derivatives and whether the investment strategy is appropriate for effective and efficient arbitrage.

• Holdings of cash and cash equivalents, as well as borrowing arrangements and other funding sources.

• Percentage and description of the Trust's assets that are segregated, pledged, hypothecated, encumbered, or otherwise restricted or prevented from being liquidated, sold, transferred, or assigned.

The disclosure requirements around liquidity risk in proposed Rule 5711(d)(vii) are intended to cover situations such as staking by the Trust of its digital assets, particularly if the staked amount exceeds 15% or more of the Trust's assets on any given day and such staked assets are not readily available for redemption requests within one business day. In particular, the proposed disclosure requirements would ensure that the Trust develops policies and procedures around how the Trust would mitigate risks for failure to fulfill redemption requests, and to provide information to the investing public with respect to such policies and procedures.

Proposed Rule 5711(d)(viii), which is currently Rule 5711(d)(vi), will set forth the proposed initial and continued listing requirements for Commodity-Based Trust Shares.[19] For the initial listing standards in proposed Rule 5711(d)(viii)(A), the Exchange will continue to establish a minimum number of Commodity-Based Trust Shares required to be outstanding at the time of commencement of trading on the Exchange.[20] In addition, the Exchange proposes to add that all Commodity-Based Trust Shares shall have a stated investment objective, which shall be adhered to under normal market conditions.[21]

For the continued listing standards in proposed Rule 5711(d)(viii)(B), the Exchange will specify that it will maintain surveillance procedures for Trust shares listed under proposed Rule 5711(d).[22] The Exchange's existing continued listing requirements will remain substantively unchanged except as noted below. The Exchange also proposes to add two additional continued listing requirements within proposed Rule 5711(d). As amended, proposed Rule 5711(d)(viii)(B) would provide that the Exchange would consider suspension of trading in, and would initiate delisting proceedings under the Rule 5800 Series of, such series under any of the following circumstances:

• if following the initial 12-month period following commencement of trading on the Exchange: (1) the Trust has more than 60 days remaining until termination and there are fewer than 50 record and/or beneficial holders of Commodity-Based Trust Shares; (2) the Trust has fewer than 50,000 Trust shares issued and outstanding; or (3) the market value of all Trust shares issued and outstanding is less than $1,000,000;[23]

• if an interruption to the dissemination of the value of the underlying reference asset(s) or index persists past the trading day in which it occurred or is no longer calculated or made widely available on at least a 15-second basis from a source unaffiliated with the sponsor or the Trust;[24]

• if an interruption to the dissemination of the Intraday Indicative Value persists past the trading day in which it occurred or is no longer made widely available to all market participants at the same time on at least a 15-second basis during the Regular Market Session;[25]

• the net asset value is not calculated at least once daily or made widely available to all market participants at the same time;[26]

• the information as set forth in proposed Rule 5711(d) is no longer being disclosed in accordance with the website disclosure requirements of proposed Rule 5711(d)(v);[27]

• the Exchange submits a rule filing pursuant to Section 19(b) of the Securities Exchange Act of 1934 to

[17] *See supra* note 5. These website disclosure requirements are also based on SEC Rule 6c–11.

[18] The Exchange notes that this prohibition on leveraged and inverse ETPs mirrors the representations made in proposed rule changes for spot bitcoin and spot ether ETPs. *See supra* note 5.

[19] The Exchange will delete current Rule 5711(d)(v) (Designation of an Underlying Commodity) as the substance of that rule is already set out in proposed Rule 5711(d)(i).

[20] *See* proposed Rule 5711(d)(viii)(A)(1).

[21] *See* proposed Rule 5711(d)(viii)(A)(2).

[22] *See* Approval Order, *supra* note 6, at 19450.

[23] *See* proposed Rule 5711(d)(viii)(B)(1), which is the same listing requirement in current Rule 5711(d)(vi)(B)(1) except the Exchange is replacing the reference to ''receipts'' with ''Trust shares.''

[24] *See* proposed Rule 5711(d)(viii)(B)(2), which is substantially similar to the listing requirement in current Rule 5711(d)(vi)(B)(2) except the Exchange is proposing to replace the reference to ''commodity'' to ''reference asset(s) or index'' to be accurate about what the Trust tracks and to align with the changes to the definition of Commodity-Based Trust Shares described above. The Exchange is also modifying the rule text to more closely align with the halt language proposed in proposed Rule 5711(d)(ix)(A)(1), as discussed later in this filing.

[25] *See* proposed Rule 5711(d)(viii)(B)(3), which is substantially similar to the listing requirement in current Rule 5711(d)(vi)(B)(3), except the Exchange is modifying the rule text to more closely align with the halt language proposed in proposed Rule 5711(d)(ix)(A)(2), as discussed later in this filing.

[26] *See* proposed Rule 5711(d)(viii)(B)(4). This is new language that aligns to the representations generally made in 19b–4 rule filings for Commodity-Based Trust Shares. *See supra* note 5.

[27] *See* proposed Rule 5711(d)(viii)(B)(5). This is new language that aligns to the representations generally made in 19b–4 rule filings for Commodity-Based Trust Shares. *See supra* note 5.

permit the listing and trading of Commodity-Based Trust Shares that do not otherwise meet the standards set forth in proposed Rule 5711(d) and such series of Commodity-Based Trust Shares is not in compliance with any statements or representations included in the applicable rule proposal under Section 19(b) regarding: (a) the description of the index, reference assets or trust holdings; (b) limitations on the index, reference assets or trust holdings; (c) dissemination and availability of the index, reference asset or Intraday Indicative Values; or (d) the applicability of Nasdaq listing rules specified in such proposals; [28]

- if any of the requirements set forth in proposed Rule 5711(d) are not continuously maintained; [29] or
- if such other event shall occur or condition exists which, in the opinion of Nasdaq, makes further dealings on Nasdaq inadvisable.[30]

As is the case today, upon termination of a Trust, the Exchange requires that Commodity-Based Trust Shares issued in connection with such Trust be removed from Nasdaq listing. A Trust may terminate in accordance with the provisions of the Trust prospectus, which may provide for termination if the value of the Trust falls below a specified amount.[31]

The Exchange proposes to delete current Rule 5711(d)(vi)(C)–(E), which presently sets forth certain requirements for the trust issuing Commodity-Based Trust Shares and its trustee. With the proposed changes in proposed Rule 5711(d)(iii)(A)(1) discussed above to broaden the types of entities that could issue Commodity-Based Trust Shares, the Exchange believes that the current provisions in Rule 5711(d)(vi)(C)–(E) are no longer appropriate and seeks to ensure that proposed Rule 5711(d) will be applicable overall to the entities specified in proposed Rule 5711(d)(iii)(A)(1).

Proposed Rule 5711(ix) will set forth trading halt provisions. Specifically proposed Rule 5711(ix)(A) will provide that the Exchange may halt trading during the day in which the interruption to the following occurs. If the interruption persists past the trading day in which it occurred, the Exchange will halt trading no later than the beginning of the trading day following the interruption. If Commodity-Based Trust Shares are trading on the Exchange pursuant to unlisted trading privileges, the Exchange will halt trading as specified in Equity 4, Rule 4120(b). In particular, the Exchange may halt trading in the following circumstances specified in proposed subparagraphs (1)–(3):

- the value of the underlying reference asset(s) or index is not made widely available on at least a 15-second basis from a source unaffiliated with the sponsor or the Trust.[32]
- the Intraday Indicative Value is not made widely available to all market participants at the same time on at least a 15-second basis during the Regular Market Session; [33] or
- the information as set forth in proposed Rule 5711(d) is not being disclosed in accordance with the website disclosure requirements of paragraph (v) above.

Proposed Rule 5711(d)(ix)(B) will provide that if the Exchange becomes aware that the net asset value is not disseminated to all market participants at the same time, it will halt trading in the Commodity-Based Trust Shares until such time as the net asset value is available to all market participants.[34] In addition, trading in the Commodity-Based Trust Shares will be halted under the conditions for Limit Up-Limit Down trading pauses in Rule 4120(a)(12) and for market-wide circuit breakers under Rule 4121.

Proposed Rule 5711(x) will set forth certain firewall requirements. Proposed Rule 5711(x)(1) will provide that if the value of a Commodity-Based Trust Share is based in whole or in part on an index that is maintained by a broker-dealer, the broker-dealer shall erect and maintain a ''firewall'' around the personnel responsible for the maintenance of such index or who have access to information concerning changes and adjustments to the index. Proposed Rule 5711(x)(2) will provide that any advisory committee, supervisory board, or similar entity that advises an index licensor or administrator or that makes decisions regarding the index composition, methodology, and related matters must implement and maintain, or be subject to, procedures designed to prevent the use and dissemination of material, non-public information regarding the applicable index.[35] Proposed Rule 5711(x)(3) will provide that if the Trust is affiliated with any entity that has the ability to influence the price or supply of a commodity, or a commodity underlying a commodity-based asset, held by the Trust, the Trust shall (i) implement and maintain a ''firewall'' between any such entity and the Trust, (ii) have written policies and procedures designed to prevent the use and dissemination of material, non-public information regarding the Trust; and (iii) have written policies and procedures designed to prevent fraudulent, deceptive or manipulative acts, practices, or courses of business with respect to the Trust and such commodity. Proposed Rule 5711(x)(3) is a new requirement that is intended to cover instances where, for example with respect to a digital asset-based Commodity-Based Trust Shares, the Trust is affiliated with the protocol's developer or foundation, in which case there must be a firewall in place to prevent fraud and manipulation.

The Exchange will also renumber current Rule 5711(d)(vii) (Limitation of Nasdaq Liability) and (viii) (Market Maker Accounts) to proposed Rule 5711(d)(xi) and (xii). The Exchange also proposes to amend the Market Maker Accounts provision in current Rule 5711(d)(viii) (renumbered as proposed Rule 5711(xii)) to replace references of ''related commodity futures or options on commodity futures, or any other related commodity derivatives'' with the proposed defined term ''commodity-based asset,'' and make other clarifying changes throughout this provision.

The Exchange also proposes to amend the commentary to Rule 5711(d) by first deleting Commentary .01, which currently provides that a Commodity-Based Trust Share is a Trust-Issued Receipt that holds a specified

[28] *See* proposed Rule 5711(d)(viii)(B)(6), which is substantially similar to the listing requirement in current Rule 5711(d)(vi)(B)(4) except the Exchange is proposing to clarify that this requirement applies only in the context of a Commodity-Based Trust Share that is subject to the representations made in its individual 19b–4 filing instead of the generic listing standards proposed in this rule. The Exchange is also proposing to add references to ''index'' throughout this provision and to capitalize ''Intraday Indicative Value.''

[29] *See* proposed Rule 5711(d)(viii)(B)(7), which is the same listing requirement in current Rule 5711(d)(vi)(B)(5).

[30] *See* proposed Rule 5711(d)(viii)(B)(8), which is the same listing requirement in current Rule 5711(d)(vi)(B)(6).

[31] *See* proposed Rule 5711(d)(viii)(B), which will be the same as current Rule 5711(vi)(B) except the Exchange is proposing to delete an errant reference to ''entity.''

[32] This proposed provision is based on previously approved rule changes for specific series of Commodity-Based Trust Shares, and on Nasdaq's trading halt rules in Equity 4, Rule 4120(a)(9). *See supra* note 5.

[33] This proposed provision is based on previous proposed rule changes for specific series of Commodity-Based Trust Shares, and on Nasdaq's trading halt rules in Equity 4, Rule 4120(a)(9). *See supra* note 5.

[34] This proposed provision is based on previous proposed rule changes for specific series of Commodity-Based Trust Shares, and on Nasdaq's trading halt rules in Equity 4, Rule 4120(a)(10). *See supra* note 5.

[35] The proposed firewall requirements in Rule 5711(d)(x)(1) and (2) are substantively similar to those included in Rule 5704 (Exchange Traded Fund Shares) and 5705(b) (Index Fund Shares).

commodity deposited with the Trust. With the proposed changes to expand the definition of Commodity-Based Trust Shares in proposed Rule 5711(d)(iii)(A) as described above, the Exchange is deleting Commentary .01 to avoid potential confusion. With the deletion of Commentary .01, current Commentaries .02 and .03 will be renumbered as Commentaries .01 and .02 with no changes. The Exchange also proposes to add as new Commentary .03 a general provision that requires an issuer of Commodity-Based Trust Shares to notify the Exchange of any failure to comply with the continued listing requirements.

The Exchange believes that the proposed standards would continue to ensure transparency surrounding the listing process for Commodity-Based Trust Shares. Additionally, the Exchange believes that the proposed eligibility standards for the generic listing of Commodity-Based Trust Shares, many of which track existing representations made in the Approval Order and in the proposed rule changes for already-listed Commodity-Based Trust Shares, are reasonably designed to promote a fair and orderly market for such products.[36]

In support of this proposal, the Exchange represents that: [37]

- the Exchange's surveillance procedures are adequate to continue to properly monitor the trading of Commodity-Based Trust Shares in all trading sessions and to deter and detect violations of Exchange rules. Specifically, the Exchange intends to utilize its existing surveillance procedures applicable to derivative products, which includes Commodity-Based Trust Shares, to monitor trading in Commodity-Based Trust Shares;
- the issuer of a series of Commodity-Based Trust Shares will be required to comply with Rule 10A–3 under the Act for the initial and continued listing of Commodity-Based Trust Shares; and
- prior to the commencement of trading of a particular series of Commodity-Based Trust Shares, the Exchange will inform its members in an information circular (''Information Circular'') of the special characteristics and risks associated with trading the Commodity-Based Trust Shares, including the procedures for creations and redemptions of Commodity-Based Trust Shares; suitability requirements under Nasdaq General 9, Section 10; how information regarding the IIV and NAV is disseminated; the risks involved in trading the Shares during the pre-market and post-market sessions when an updated IIV will not be calculated or publicly disseminated; the requirement that members deliver a prospectus to investors purchasing newly issued Shares prior to or concurrently with the confirmation of a transaction; and other trading information. The Information Circular will also discuss any exemptive, no action and interpretive relief granted by the Commission from any rules under the Act.

2. Statutory Basis

The Exchange believes that its proposal is consistent with Section 6(b) of the Act,[38] in general, and furthers the objectives of Section 6(b)(5) of the Act,[39] in particular, in that it is designed to prevent fraudulent and manipulative acts and practices, to promote just and equitable principles of trade, to remove impediments to and perfect the mechanism of a free and open market and a national market system, and, in general to protect investors and the public interest.

The proposed rule change is designed to perfect the mechanism of a free and open market and, in general, to protect investors and the public interest because it would facilitate the listing and trading of additional Commodity-Based Trust Shares, which would enhance competition among market participants, to the benefit of investors and the marketplace. Specifically, after more than 13 years of the current process, whereby the Exchange is required to file a proposed rule change with the Commission for the listing and trading of each new series of Commodity-Based Trust Shares, the Exchange believes it is appropriate to codify certain rules within Rule 5711(d) that would generally eliminate the need for separate proposed rule changes. The Exchange believes that this would facilitate the listing and trading of additional types of Commodity-Based Trust Shares that have investment strategies similar to other Commodity-Based Trust Shares already approved for listing and trading, thereby creating greater efficiencies in the listing process for the Exchange and the Commission. In this regard, the Exchange notes that many of the standards proposed for Commodity-Based Trust Shares are based on previous proposed rule changes for specific series of Commodity-Based Trust Shares.[40]

As discussed above, the Exchange is proposing to amend the definition of Commodity-Based Trust Shares in a number of ways. First, Commodity-Based Trust Shares could be issued, as proposed, by a trust, limited liability company, partnership, or other similar entity. Second, whereas Commodity-Based Trust Shares are currently based on underlying commodities only, the Exchange proposes that these ETPs could be based on underlying commodities, commodity-based assets, and securities, provided that the ETP would not be able to hold securities to the point where it could be considered an investment company pursuant to the Investment Company Act of 1940. The Exchange believes this flexibility with respect to the structure of the entity issuing Commodity-Based Trust Shares and the holdings underlying such securities would remove impediments to and perfect the mechanism of a free and open market, as well as promote competition, by promoting the listing and trading of additional types of Commodity-Based Trust Shares, to the benefit of all market participants.

With respect to the proposed eligibility criteria in Rule 5711(d)(iv)(A), the proposed rule text introduces specific criteria that each commodity or commodity-asset based component of Commodity-Based Trust Shares must meet. The proposed criteria are designed to prevent fraudulent and manipulative acts and practices and to protect investors and the public interest for the reasons that follow. As discussed above, the proposed eligibility requirements in Rule 5711(d)(iv)(A)(1) and (2) are intended to ensure that the Exchange can monitor trading activity in the underlying commodity or CFTC-regulated futures market through a comprehensive surveillance sharing agreement, thereby facilitating the monitoring for fraud and manipulation. The eligibility requirement in proposed Rule 5711(d)(iv)(A)(3) is intended to cover underlying commodities that are already investible through existing ETFs, indicating a level of market acceptance and liquidity. In addition, the proposed eligibility requirement is intended to prevent regulatory arbitrage between ETPs registered under the Securities Act of 1933 and ETFs registered under the Investment Company Act of 1940. Overall, the Exchange believes that the foregoing criteria will help ensure fair and efficient markets. By including multiple routes to eligibility with verifiable and objective metrics, the Exchange believes that its proposal will ensure flexibility

[36] *See supra* note 5. *See also* Approval Order, *supra* note 6, at 19450–19451.

[37] The Exchange made similar representations in the proposed rule changes for already-listed Commodity-Based Trust Shares and in the Approval Order. *See supra* note 5 and 6.

[38] 15 U.S.C. 78f(b).

[39] 15 U.S.C. 78f(b)(5).

[40] *See supra* note 5.

for product innovation while maintaining robust investor protections.

With respect to the proposed public website disclosure requirements in Rule 5711(d)(v), the Exchange notes that proposed rule changes approved by the Commission for already-listed series of Commodity-Based Trust Shares have similarly included disclosure requirements with respect to the Trust's holdings and valuation metrics.[41] These requirements will promote transparency to the benefit of all market participants, and would align with modern ETF-style disclosures in SEC Rule 6c–11.

With respect to the public website disclosure requirements for liquidity risk, the Exchange believes that the proposed requirement will promote just and equitable principles of trade and protect investors by ensuring that the Trust develops policies and procedures around how the Trust would mitigate risks for failure to fulfill redemption requests, and to provide information to the investing public with respect to such policies and procedures. As noted above, this provision would be triggered in situations including where the Trust stakes 15% or more of its assets on any given day, where, for example, such staked assets are not readily available for redemption requests within one business day.

The Exchange believes that the new firewall requirements in proposed Rule 5711(d)(x) are consistent with the Act because they are intended to mitigate potential conflicts of interest and the misuse of material non-public information by affiliated entities, which will protect investors and the public interest. In addition, Commodity-Based Trust Shares will continue to be subject to the full panoply of Exchange rules and procedures that govern the trading of equity securities on the Exchange.

In addition, the Exchange believes that the proposed changes to the Market Maker Accounts provisions in proposed Rule 5711(d)(xii), as discussed above, are consistent with the Act because they are intended to better align the rule text therein with the proposed changes to add a new defined term for ''commodity-based asset,'' and to make other clarifying changes. The proposed changes are intended to promote clarity, specificity, and better readability, and are not intended to alter the substance of the current rule. The Exchange believes that the proposed changes will bring transparency and clarity to its Rulebook.

The Exchange believes that the proposed rule change is designed to prevent fraudulent and manipulative acts and practices because Commodity-Based Trust Shares will be listed and traded on the Exchange pursuant to the initial and continued listing criteria in Rule 5711(d). The Exchange has in place surveillance procedures that are adequate to properly monitor trading in the Commodity-Based Trust Shares in all trading sessions and to deter and detect violations of Exchange rules and applicable federal securities laws. The Exchange or FINRA, on behalf of the Exchange, or both, will communicate as needed regarding trading in the Commodity-Based Trust Shares with other markets and other entities that are members of the ISG, and the Exchange or FINRA, on behalf of the Exchange, or both, may obtain trading information regarding trading in the Commodity-Based Trust Shares from such markets and other entities. In addition, the Exchange may obtain information regarding trading in the Commodity-Based Trust Shares via the ISG, from other exchanges that are members or affiliates of ISG, or with which the Exchange has in place a comprehensive surveillance sharing agreement.

The Exchange also believes that the proposed rule change would fulfill the intended objective of Rule 19b–4(e) under the Act by allowing Commodity-Based Trust Shares that satisfy the proposed generic listing standards to be listed and traded without separate Commission approval. However, as proposed, the Exchange would continue to file separate proposed rule changes before listing and trading of Commodity-Based Trust Shares that do not satisfy the criteria described above.

For these reasons, the Exchange believes that its proposal is consistent with the Act.

B. Self-Regulatory Organization's Statement on Burden on Competition

The Exchange does not believe that the proposed rule change will impose any burden on competition not necessary or appropriate in furtherance of the purposes of the Act. Instead, the Exchange believes that the proposed rule change would facilitate the listing and trading of additional types of Commodity-Based Trust Shares and result in a significantly more efficient process surrounding the listing and trading of such ETPs, which will enhance competition among market participants, to the benefit of investors and the marketplace. The Exchange believes that this would reduce the time frame for bringing Commodity-Based Trust Shares to market, thereby reducing the burdens on issuers and other market participants, and promoting competition. In turn, the Exchange believes that the proposed rule change would make the process for listing Commodity-Based Trust Shares more competitive by applying uniform listing standards with respect to Commodity-Based Trust Shares.

C. Self-Regulatory Organization's Statement on Comments on the Proposed Rule Change Received From Members, Participants, or Others

No written comments were either solicited or received.

III. Date of Effectiveness of the Proposed Rule Change and Timing for Commission Action

Within 45 days of the date of publication of this notice in the **Federal Register** or within such longer period up to 90 days (i) as the Commission may designate if it finds such longer period to be appropriate and publishes its reasons for so finding or (ii) as to which the Exchange consents, the Commission shall: (a) by order approve or disapprove such proposed rule change, or (b) institute proceedings to determine whether the proposed rule change should be disapproved.

IV. Solicitation of Comments

Interested persons are invited to submit written data, views and arguments concerning the foregoing, including whether the proposed rule change is consistent with the Act. Comments may be submitted by any of the following methods:

Electronic Comments

- Use the Commission's internet comment form (*https://www.sec.gov/rules/sro.shtml*); or
- Send an email to *rule-comments@sec.gov.* Please include file number SR–NASDAQ–2025–056 on the subject line.

Paper Comments

- Send paper comments in triplicate to Secretary, Securities and Exchange Commission, 100 F Street NE, Washington, DC 20549–1090.

All submissions should refer to file number SR–NASDAQ–2025–056. This file number should be included on the subject line if email is used. To help the Commission process and review your comments more efficiently, please use only one method. The Commission will post all comments on the Commission's internet website (*https://www.sec.gov/rules/sro.shtml*). Copies of the filing also will be available for inspection and copying at the principal office of the Exchange. Do not include personal identifiable information in submissions; you should submit only information

[41] *See supra* note 5.

that you wish to make available publicly. We may redact in part or withhold entirely from publication submitted material that is obscene or subject to copyright protection.

All submissions should refer to file number SR–NASDAQ–2025–056 and should be submitted on or before August 25, 2025.

For the Commission, by the Division of Trading and Markets, pursuant to delegated authority.[42]

Sherry R. Haywood,

Assistant Secretary.

BILLING CODE 8011–01–P

SECURITIES AND EXCHANGE COMMISSION

[Release No. 34–103589; File No. SR–CboeBYX–2025–021]

Self-Regulatory Organizations; Cboe BYX Exchange, Inc.; Notice of Filing and Immediate Effectiveness of a Proposed Rule Change To Amend Its Fees Schedule To Increase the Monthly Fee for 10 Gb Physical Ports

July 30, 2025.

Pursuant to Section 19(b)(1) of the Securities Exchange Act of 1934 (''Act''),[1] and Rule 19b–4 thereunder,[2] notice is hereby given that on July 17, 2025, Cboe BYX Exchange, Inc. (the ''Exchange'' or ''BYX'') filed with the Securities and Exchange Commission (''Commission'') the proposed rule change as described in Items I, II, and III below, which Items have been prepared by the Exchange. The Commission is publishing this notice to solicit comments on the proposed rule change from interested persons.

I. Self-Regulatory Organization's Statement of the Terms of Substance of the Proposed Rule Change

Cboe BYX Exchange, Inc. (the ''Exchange'' or ''BYX Equities'') proposes to amend its Fees Schedule. The text of the proposed rule change is provided in Exhibit 5.

The text of the proposed rule change is also available on the Exchange's website (*http://markets.cboe.com/us/equities/regulation/rule_filings/BYX/*) and at the Exchange's Office of the Secretary.

II. Self-Regulatory Organization's Statement of the Purpose of, and Statutory Basis for, the Proposed Rule Change

In its filing with the Commission, the Exchange included statements concerning the purpose of and basis for the proposed rule change and discussed any comments it received on the proposed rule change. The text of these statements may be examined at the places specified in Item IV below. The Exchange has prepared summaries, set forth in sections A, B, and C below, of the most significant aspects of such statements.

A. Self-Regulatory Organization's Statement of the Purpose of, and Statutory Basis for, the Proposed Rule Change

1. Purpose

The Exchange proposes to amend its fee schedule relating to physical port connectivity fees.[3]

By way of background, a physical port is utilized by a Member or non-Member to connect to the Exchange at the data centers where the Exchange's servers are located. The Exchange currently assesses the following physical connectivity fees for Members and non-Members on a monthly basis: $2,500 per physical port for a 1 gigabit (''Gb'') circuit and $7,500 per physical port for a 10 Gb circuit. The Exchange proposes to increase the monthly fee for 10 Gb physical ports from $7,500 to $8,500 per port. The Exchange notes the proposed fee change better enables it to continue to maintain and improve its market technology and services and also notes that the proposed fee amount, even as amended, continues to be in line with, or even lower than, amounts assessed by other exchanges for similar connections.[4] The Exchange also notes that a single 10 Gb physical port can be used to access the Systems of the following Affiliate Exchanges: the Cboe BZX Exchange, Inc. (options and equities), Cboe EDGX Exchange, Inc. (options and equities platforms), Cboe EDGA Exchange, Inc., and Cboe C2 Exchange, Inc., (''Affiliate Exchanges'').[5] Notably, only one monthly fee currently (and will continue) to apply per 10 Gb physical port regardless of how many Affiliate Exchanges are accessed through that one port.[6]

2. Statutory Basis

The Exchange believes the proposed rule change is consistent with the Securities Exchange Act of 1934 (the ''Act'') and the rules and regulations thereunder applicable to the Exchange and, in particular, the requirements of Section 6(b) of the Act.[7] Specifically, the Exchange believes the proposed rule change is consistent with the Section 6(b)(5)[8] requirements that the rules of an exchange be designed to prevent fraudulent and manipulative acts and practices, to promote just and equitable principles of trade, to foster cooperation and coordination with persons engaged in regulating, clearing, settling, processing information with respect to, and facilitating transactions in securities, to remove impediments to and perfect the mechanism of a free and open market and a national market system, and, in general, to protect investors and the public interest.

[42] 17 CFR 200.30–3(a)(12).

[1] 15 U.S.C. 78s(b)(1).

[2] 17 CFR 240.19b–4.

[3] The Exchange initially filed the proposed fee changes on July 3, 2023 (SR–CboeBYX–2023–010). On September 1, 2023, the Exchange withdrew that filing and submitted SR–CboeBYX–2023–013. On September 29, 2023, the Securities and Exchange Commission issued a Suspension of and Order Instituting Proceedings to Determine whether to Approve or Disapprove a Proposed Rule Change to Amend its Fees Schedule Related to Physical Port Fees (the ''OIP'') in anticipation of a possible U.S. government shutdown. On September 29, 2023, the Exchange filed the proposed fee change (SR–CboeBYX–2023–014). On October 13, 2023, the Exchange withdrew that filing and submitted SR–CboeBYX–2023–015. On December 12, 2023, Exchange filed the proposed fee change (SR–CboeBYX–2023–018). On December 12, 2023, the Exchange withdrew that filing and submitted SR–CboeBYX–2023–019. On February 9, 2024, the Exchange withdrew that filing and submitted SR–CboeBYX–2024–006. On April 9, 2024, the Exchange withdrew that filing and submitted SR–CboeBYX–2024–012. On June 7, 2024, the Exchange withdrew that filing and submitted SR–CboeBYX–2024–021. On August 29, 2024, the Exchange withdrew that filing and submitted SR-CboeBYX–2024–032. On October 25, 2024, the Exchange withdrew that filing and submitted SR–CboeBYX–2024–039. On December 18, 2024, the Exchange withdrew that filing and submitted SR–CboeBYX–2024–049. On February 14, 2025, the Exchange withdrew that filing and submitted SR–CboeBYX–2025–003. On March 13, 2025, the Exchange withdrew that filing and submitted SR–CboeBYX–2025–006. On May 9, 2025, the Exchange withdrew that filing and submitted SR–CboeBYX–2025–012. On July 7, 2025, the Exchange withdrew that filing and submitted SR–CboeBYX–2025–019. On July 17, 2025 the Exchange withdrew that filing and submitted this filing.

[4] *See e.g.*, The Nasdaq Stock Market LLC (''Nasdaq''), General 8, Connectivity to the Exchange. Nasdaq and its affiliated exchanges charge a monthly fee of $16,500 for each 10Gb Ultra fiber connection to the respective exchange. *See also* New York Stock Exchange LLC, NYSE American LLC, NYSE Arca, Inc., NYSE Chicago Inc., NYSE National, Inc. Connectivity Fee Schedule, which provides that 10 Gb LX LCN Circuits (which are analogous to the Exchange's 10 Gb physical port) are assessed $22,000 per month, per port.

[5] The Affiliate Exchanges are also submitting contemporaneous identical rule filings.

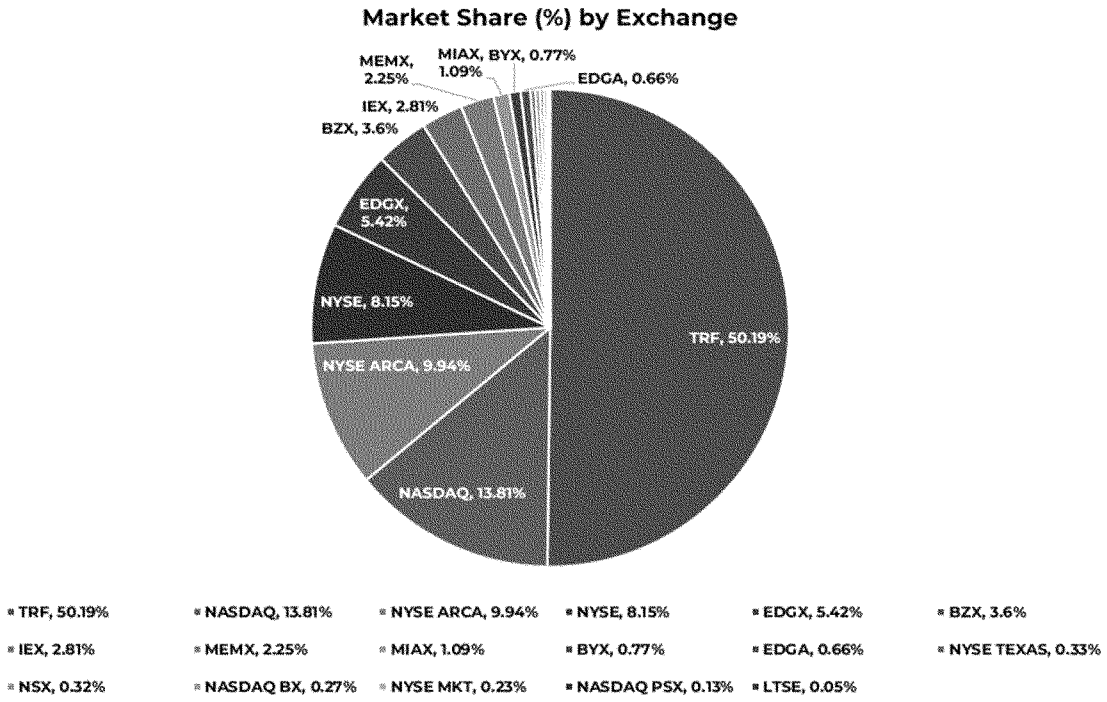
[6] The Exchange notes that conversely, other exchange groups charge separate port fees for access to separate, but affiliated, exchanges. *See e.g.*, Securities and Exchange Release No. 99822 (March 21, 2024), 89 FR 21337 (March 27, 2024) (SR–MIAX–2024–016).

[7] 15 U.S.C. 78f(b).

[8] 15 U.S.C. 78f(b)(5).

Additionally, the Exchange believes the proposed rule change is consistent with the Section 6(b)(5) [9] requirement that the rules of an exchange not be designed to permit unfair discrimination between customers, issuers, brokers, or dealers. The Exchange also believes the proposed rule change is consistent with Section 6(b)(4) [10] of the Act, which requires that Exchange rules provide for the equitable allocation of reasonable dues, fees, and other charges among its Members and other persons using its facilities. This belief is based on various factors as described below.

The Exchange believes the proposed fees are reasonable as they are lower than the amounts assessed by equities exchanges for analogous market access connections and which were similarly adopted via the rule filing process and filed with the Commission. The Exchange further notes that other the exchanges that offer similar pricing for similar or the same connections have a comparable, or even lower, market share as the Exchange, as detailed further below. Indeed, the Exchange has reviewed the U.S. equities market share [11] for each of the sixteen equities markets utilizing total shares traded in 2025 through July 2, 2025, as set forth in the following graph:



More specifically, the Exchange notes that the proposed physical port fee of $8500 per month, per physical port, is comparable to fees charged by at least three other exchanges with similar market share. Indeed, two of these exchanges—Nasdaq BX (''BX'') and Nasdaq PSX (''PSX'')—have less market share than BYX yet charge higher monthly fees for their competing products. These comparisons are summarized in Table 1:

TABLE 1

Exchange	Market share (%)	Monthly fee per port
BYX Equities	0.77	Proposed $8500 for each 10 Gb Physical Port Connection.
Nasdaq BX	0.27	$11,000 for each 10 Gbps Fiber Connection. $16,500 for each 10 Gbps Ultra Fiber Connection.
Nasdaq PSX	0.13	$11,000 for each 10 Gbps Fiber Connection. $16,500 for each 10 Gbps Ultra Fiber Connection.

The Exchange believes its proposal is reasonable as it reflects a moderate increase in physical connectivity fees for 10 Gb physical ports and its offering. As amended, the proposed 10 Gb physical port fee continues to be less than the fees charged by both BX [12] and PSX,[13] even though BYX Equities maintains greater market share than BX and PSX, both individually and collectively. Specifically, despite having more market share (0.77%) than that of

[9] *Id.*

[10] 15 U.S.C. 78f(b)(4).

[11] Market share is the percentage of volume on a particular exchange relative to the total volume across all exchanges and indicates the amount of order flow directed to that exchange. High levels of market share enhance the value of trading and ports. The Exchange's calculation of market share also excludes auction volume on both NYSE and Nasdaq, as the benefits of NYSE's and Nasdaq's comparable access connections (*e.g.,* reduced latency) are not realized for transactions executed in their opening and closing auctions, which are instead executed at specific, codified times of the trading day. Accordingly, the Exchange believes that traded volume in NYSE's and Nasdaq's opening and closing auctions are not relevant for comparative purposes.

[12] *See* Nasdaq BX (''BX'') rulebook, General 8, Connectivity to the Exchange, available at: *https://listingcenter.nasdaq.com/rulebook/BX/rules/BX%20General%208/Fiber%20Connection%20to%20the%20Exchange/EQUALS/#position.*

[13] *See* Nasdaq PSX (''PSX'') rulebook, General 8, Connectivity to the Exchange, available at: *https://listingcenter.nasdaq.com/rulebook/phlx/rules/Phlx%20General%208.*

BX (0.27%) and PSX (0.13%), BYX's proposed $8,500 per month for each 10 Gb physical port connection is still $2500 less than BX's and PSX's 10Gbps fiber connection fee ($11,000), and $8000 less than BX's and PSX's 10 Gbps Ultra Fiber connection fee ($16,500). Furthermore, by purchasing one physical port on BYX Equities, a Member gains access to each of BYX Equities' Affiliate Exchanges (for both equities and options), providing them connectivity to nearly 11% of the equities market.[14] While BX and PSX connectivity provide similar access to Nasdaq Stock Market, LLC's (''Nasdaq'') other markets, a 10 Gb physical port fee on BYX Equities is still comparatively lower than that assessed for access to BX, PSX, and Nasdaq.[15]

TABLE 2

Exchange	Market share (%)	Monthly fee per port
BYX Equities	0.77	Proposed $8,500 for each 10 Gb Physical Port Connection.
MIAX	1.09	$8,000 for each 10 Gigabit ULL Connection.

The Exchange also notes that the equivalent offering from MIAX Pearl (''MIAX''), which is $8,000 per port per month for its 10 Gigabit ULL connection.[16] While the Exchange's proposed 10 Gb physical port fee of $8500 is $500 more than that of MIAX and MIAX maintains greater market share than BYX, the Exchange again reiterates that unlike MIAX, a single physical 10 Gb physical port connection offers Exchange Members access to each of BYX's Affiliate Exchanges (for both equities and options) and the monthly price does not change based on the number of exchanges a Member is connected to. In this case, examining only the Exchange's equities Affiliate Exchanges, as demonstrated in the chart above, a participant could purchase a single physical port from the Exchange and access nearly 11% of the U.S. equities market, in contrast to purchasing a single port from MIAX Pearl and accessing only around 1% of the U.S. equities market.

B. Self-Regulatory Organization's Statement on Burden on Competition

The Exchange does not believe that the proposed rule change will impose any burden on competition that is not necessary or appropriate in furtherance of the purposes of the Act. The proposed fee change will not impact intramarket competition because it will apply to all similarly situated Members equally (*i.e.,* all market participants that choose to purchase the 10 Gb physical port). Additionally, the Exchange does not believe its proposed pricing will impose a barrier to entry to smaller participants and notes that its proposed connectivity pricing is associated with relative usage of the various market participants. For example, market participants with modest capacity needs can continue to buy the less expensive 1 Gb physical port (which cost is not changing) or may choose to obtain access via a third-party re-seller. While pricing may be increased for the larger capacity physical ports, such options provide far more capacity and are purchased by those that consume more resources from the network. Accordingly, the proposed connectivity fees do not favor certain categories of market participants in a manner that would impose a burden on competition; rather, the allocation reflects the network resources consumed by the various size of market participants—lowest bandwidth consuming members pay the least, and highest bandwidth consuming members pays the most.

The proposed fee change also does not impose a burden on competition or on other Self-Regulatory Organizations that is not necessary or appropriate. As described above, in establishing its proposed fee change the Exchange compared its proposed fee increase to that of competitor exchanges' analogous offerings. As noted above, the proposed fee of $8500 is less than that of both Nasdaq BX and Nasdaq PSX, despite both Nasdaq markets maintaining lesser market share than BYX. Moreover, while BYX Equities' proposed $8500 10 Gb physical port fee is $500 more than MIAX's $8000 per month 10 gigabit ULL connection fee, the Exchange again reiterates that the purchase of a single 10 Gb physical port connection provides BYX Equities Members with access to all of BYX Equities' Affiliate Exchanges (both equities and options); *i.e.,* a single 10 Gb physical port connection provides BYX Equities Members with access to nearly 11% of the U.S. equities market, while a single 10 gigabit ULL connection on MIAX provides a MIAX user with access to less than 2% of the U.S. equities market.

C. Self-Regulatory Organization's Statement on Comments on the Proposed Rule Change Received From Members, Participants, or Others

The Exchange neither solicited nor received comments on the proposed rule change.

III. Date of Effectiveness of the Proposed Rule Change and Timing for Commission Action

The foregoing rule change has become effective pursuant to Section 19(b)(3)(A) of the Act[17] and paragraph (f) of Rule 19b–4[18] thereunder. At any time within 60 days of the filing of the proposed rule change, the Commission summarily may temporarily suspend such rule change if it appears to the Commission that such action is necessary or appropriate in the public interest, for the protection of investors, or otherwise in furtherance of the purposes of the Act. If the Commission takes such action, the Commission will institute proceedings to determine whether the proposed rule change should be approved or disapproved.

IV. Solicitation of Comments

Interested persons are invited to submit written data, views and arguments concerning the foregoing, including whether the proposed rule change is consistent with the Act. Comments may be submitted by any of the following methods:

Electronic Comments

- Use the Commission's internet comment form (*https://www.sec.gov/rules/sro.shtml*); or
- Send an email to *rule-comments@sec.gov.* Please include file number SR–CboeBYX–2025–021 on the subject line.

[14] 0.77% (BYX) + 3.60% (BZX) + 5.42% (EDGX) + 0.66% (EDGA) = 10.45%.

[15] For $8500 per month, BYX Members gain access to approximately 11% of the market. For $16,500 a month, Nasdaq members gain access to approximately 14.21% of the market: 13.21% (Nasdaq) + .27% (BX) + .13% (PSX) = 14.21%.

[16] *See* MIAX Pearl Equities Fee Schedule.

BILLING CODE 8011–01–P

SECURITIES AND EXCHANGE COMMISSION

[Release No. 34–103587; File No. SR–OCC–2025–005]

Self-Regulatory Organizations; The Options Clearing Corporation; Order Approving Proposed Rule Change, as Modified by Partial Amendment No. 1, by the Options Clearing Corporation Concerning Modifications to OCC's Recovery and Orderly Wind-Down ("RWD Plan")

July 30, 2025.

I. Introduction

On April 17, 2025, the Options Clearing Corporation ("OCC"), filed with the Securities and Exchange Commission ("Commission"), pursuant to Section 19(b)(1) of the Securities Exchange Act of 1934 ("Exchange Act" or "Act")[1] and Rule 19b–4 thereunder,[2] a proposed rule change to amend its RWD Plan. On April 28, 2025, OCC filed Partial Amendment No. 1 to the proposed rule change.[3] The proposed rule change, as modified by Partial Amendment No. 1 (hereinafter "Proposed Rule Change"), was published for comment in the **Federal Register** on May 7, 2025.[4] On June 17, 2025, pursuant to Section 19(b)(2) of the Exchange Act,[5] the Commission designated a longer period within which to approve, disapprove, or institute proceedings to determine whether to approve or disapprove the Proposed Rule Change, until August 5, 2025.[6] The Commission has not received any comments on the Proposed Rule Change. For the reasons discussed below, the Commission is approving the Proposed Rule Change.

II. Description of the Proposed Rule Change

OCC is a central counterparty ("CCP"), which means it interposes itself as the buyer to every seller and seller to every buyer for financial transactions. As the CCP for the listed options markets in the U.S., as well as for certain futures, OCC is exposed to certain risks arising from its relationships with its members. OCC maintains various tools for managing such risks.[7] OCC also maintains tools to manage the risk of liquidity shortfalls and credit losses that exceed its routine risk management tools.[8] OCC describes such tools and the governance related to them in its RWD Plan.[9]

OCC is proposing a series of changes to its RWD Plan. One set of changes are intended to achieve compliance with the Commission's recently adopted content requirements for recovery and wind-down plans of covered clearing agencies ("CCAs"), including new Exchange Act Rule 17ad–26.[10] The other set of changes were identified during OCC's annual review of the RWD Plan.[11] Both sets of changes are described in greater detail below.

A. Proposed Changes Related to the New Recovery and Wind-Down Rule

OCC proposes the following categories of changes to its RWD Plan to comply with Rule 17ad–26: (i) identifying staffing roles necessary to support OCC's core services; (ii) replacing the term "critical services" with the term "core services"; (iii) addressing service providers for core services; (iv) identifying details regarding the triggering of the RWD Plan; (v) specifying the timing in which OCC will provide notice in the event it considers implementing the recovery or orderly wind-down plan; and (vi) establishing requirements related to testing the recovery and orderly wind-down plan.

1. Staffing Necessary To Support Core Services

OCC's RWD Plan does not currently contain a list of key staff by department. OCC proposes changes to its RWD Plan to identify staffing roles necessary to support OCC's core services.[12] Specifically, OCC proposes adding a new section in Chapter 3 titled Key Staffing Roles. The Key Staffing Roles section lists a number of functions that support OCC's core services, including Business Operations, Corporate, Corporate Finance, Financial Risk Management, and Information Technology.[13] Under these support functions, OCC lists key staffing roles necessary to support its core services in the event of a recovery or wind-down.[14]

To analyze how staffing roles necessary to support core services would continue in the event of a recovery or wind-down, OCC proposes changes to a section in Chapter 5 titled "Targeted Reductions in Force."[15] Specifically, OCC proposes text indicating that, while staff reductions

[1] 15 U.S.C. 78s(b)(1).

[2] 17 CFR 240.19b–4.

[3] Partial Amendment No. 1 corrects an error in OCC's original narrative description of the proposed rule change. The amendment also modified the Exhibit 5 to File No. SR–OCC–2025–005 to accurately mark the proposed changes against the currently effective RWD Plan and makes conforming changes to the narrative description of the proposed rule change.

[4] Securities Exchange Act Release No. 102962 (May 1, 2025), 90 FR 19346 (May 7, 2025) (File No. SR–OCC–2025–005) ("Notice").

[14] Proposed Chapter 3 also provides that a single employee may be able to perform multiple key staffing roles.

[15] *See* Notice, 90 FR at 19351.

would be an attempt to limit OCC's expenses, Management's primary responsibility is retaining key staffing roles such that OCC is able to continue providing core services. The proposed RWD Plan notes that OCC's Management may need to offer additional compensation to retain key staff while simultaneously reducing other staff during a wind-down and that OCC adjusts its staffing estimate for resolution cost to account for retention bonuses.

2. Replacing ''Critical Services'' With ''Core Services''

To align with the language the Commission uses in its rules, OCC proposes replacing ''critical services'' with ''core services'' throughout the RWD Plan.[16] OCC also proposes a change in Section 1.2 of the RWD Plan to indicate that OCC has identified its core payment, clearing, and settlement services based on CPSS–IOSCO[17] and FSB[18] guidance on the identification of critical services. OCC stated that the purpose of this change is to improve clarity and consistency with terminology in Commission rules.[19]

3. Service Providers for Core Services

The Proposed Rule Change describes service providers for core services, specifies which core services each service provider supports, and addresses how OCC ensures that service providers for core services would continue to perform in the event of a recovery and during an orderly wind-down. OCC proposes adding a new section to the RWD Plan titled Service Providers for Core Services.[20] This new section provides that OCC's Board is responsible for the oversight of service providers that provide core services for OCC, including the review of risk assessments for current vendors and approving terms for new vendors that will provide core services for OCC. The proposed section also includes a table identifying service providers that support core services, including vendors, financial market utilities, banks, liquidity providers, and liquidation agents. The proposed table identifies the type of service provider, the service provider's name, OCC's relationship with the service provider, and which core service the service provider supports.[21] OCC also proposes adding a footnote indicating that OCC maintains multiple relationships with some service providers.[22]

OCC proposes to eliminate existing references to ''Tier 1 Vendors'' because OCC would no longer categorize vendors in such a way. Instead, OCC would, in some instances, refer to such vendors as service providers for core services and make additional changes conforming the RWD Plan to this proposed replacement.[23] OCC also proposes replacing references to Tier 1 Vendors with text providing that in addition to the service providers for core services referenced in the RWD Plan, OCC maintains an extensive list of other service providers supporting OCC, which list may be obtained from OCC's Third-Party Risk Management Department upon request.[24] In this provision, OCC also proposes to replace reference to the RWD Plan Supporting Information with reference to OCC's Third-Party Risk Management Department. The list of additional vendors supporting OCC is dynamic. OCC proposes this change to minimize the risk that the ever-changing, additional vendor information becomes outdated.[25] OCC also proposes additions and replacements throughout Chapter 2 indicating that the Service Providers for Core Services section of the RWD Plan lists information including the names of certain subsets of core service providers. OCC proposes these changes because the list of service providers for core services was relocated from the RWD Plan Supporting Information into the RWD Plan.[26]

As noted above, OCC proposes to add a new section to the RWD Plan that would include a table referencing types of service providers. There, liquidation agents and escrow banks are listed as types of core service providers. In connection with this change, OCC also proposes conforming updates to Chapter 2 of the RWD Plan to reference and describe these categories of core service providers.[27] The proposed changes would add liquidation agents to a list of third-parties with which OCC has interconnections and add a new section to the RWD Plan titled ''Interconnections with Liquidation Agents.''[28] This new section would specify that OCC has financial and operational interconnections with liquidation agents and that liquidation agents may be charged with the duty of winding up the affairs of a defaulting Clearing Member.[29] The new section explains further that OCC has several risk management tools available to re-establish a matched book after a Clearing Member default, including open market transactions executed by OCC's Liquidation Agent (*i.e.,* liquidation of the defaulter's portfolio). Separately OCC proposes adding a new section related to escrow banks (*e.g.,* ''Interconnections with Escrow Banks'') and, where relevant, revising the title of a section of the RWD Plan to reference escrow banks.[30] The RWD Plan would further be updated to state that OCC has financial and operational interconnections with escrow banks and that OCC's Escrow Deposit Program allows a customer of an OCC Clearing Member to use cash deposited with the Escrow Bank as supporting collateral backing Escrow Deposits. It would further note that each customer must enter into a Tri-Party Agreement with the Bank and OCC in order to use cash as collateral.

OCC also proposes modifying and relocating the ''Key Agreements to be Maintained'' section of the RWD Plan to align its RWD Plan more closely to the Commission's recovery and wind-down rule.[31] The relocation is also designed to acknowledge that it pertains to both recovery and wind-down rather than solely to wind-down.[32] The relocated section would also state that a list of key agreements is available upon request as indicated in the RWD Plan Supporting Information. Similarly, the proposed

[16] *See Id.* at 19349. OCC also proposes adding a new footnote 1 to the RWD Plan explaining the switch from ''critical services'' to ''core services'' and clarifying that this replacement does not affect OCC's identification of those services.

[17] Committee on Payment and Settlement Systems of the Bank for International Settlements and the International Organization of Securities Commissions.

[18] Financial Stability Board.

[19] *See* Notice, 90 FR at 19349. OCC also proposes deleting the text ''have provided'' from this passage for grammatical reasons. *Id.*

[20] *See Id.*

[21] OCC's core services are clearance and settlement services and pricing and valuation services. *See Id.*

[22] *See Id.* at 19352. The RWD Plan would also provide that additional information related to OCC's service providers for core services, as well as a more extensive list of service providers supporting OCC, is available and may be obtained from OCC's Third-Party Risk Management Department upon request. Separately, OCC proposes removing Clearing Members and exchanges from a list of ''Critical External Interconnections'' that are necessary for OCC to provide core services because OCC does not believe these types of third-parties qualify as service providers.

[23] *See Id.* at 19348, 19350. OCC proposes replacing one reference to ''Tier 1 vendor'' with the word ''vendor.''

[24] *See Id.* at 19349–50.

[26] *See Id.* at 19352.

[27] *See Id.* at 19351.

[28] *Id.*

[29] *Id.* at 19351–52.

[30] OCC also proposes to add escrow banks and liquidation agents to a list of ''Critical External Interconnections'' that are necessary for OCC to provide core services.

[31] *See* Notice, 90 FR at 19350.

[32] The section currently resides in Chapter 5 of the RWD Plan, which focuses solely on wind-downs.

changes would indicate that OCC's critical external interconnections are essential to OCC's continued provision of core services and that it is imperative that OCC maintains them ''during a recovery or wind-down'' rather than ''during the execution of the WDP.'' Currently, the RWD Plan discusses material adverse change clauses only in the wind-down context. OCC proposes to broaden the discussion in the RWD Plan to indicate that agreements with Exchanges and Service Providers for Core Services do not contain material adverse change (''MAC'') clauses or similar provisions that would permit the counterparty to terminate the agreement and discontinue the provision of services in the event of a recovery or during a wind-down.[33] Finally, OCC proposes removing text that currently indicates that each OCC interconnection with a particular Clearing Member, settlement bank, or custodian bank relationship is not necessarily critical to OCC's provision of critical services, given the number of institutions within each category upon which OCC relies, because OCC believes that the text to be removed does not align with the service providers for core services list or the Commission's recovery and wind-down rule.[34]

4. Triggering OCC's Implementation of the RWD Plan

The Proposed Rule Change describes the process that OCC uses to monitor and determine whether the criteria that could trigger its implementation of the RWD Plan have been met. OCC proposes a new ''Trigger Monitoring'' section of the RWD Plan, which would provide that trigger monitoring is performed through several processes at OCC.[35] The proposed language explains that the monitoring of specific triggers (*i.e.,* triggers related to Credit Loss, Liquidity Loss, Operational Disruption, and General Business Loss) is prescribed in specific policies and their underlying procedures.[36] For example, the language ties the Credit Loss trigger to the Default Management Policy, the Liquidity Loss trigger to the Clearing Fund Methodology Policy, the Operational Disruption trigger to the Technology Operations Policy, and the General Business Loss trigger to the Capital Management Policy (''CMP'').[37] The Proposed Rule Change provides that the relevant support function lead or delegate, as prescribed in the underlying policy or procedures, is responsible for notifying OCC's Crisis Management Team of a breach of any of the Recovery Triggers.

5. Notice of Implementation of the Recovery or Orderly Wind-Down

OCC proposes changes to the RWD Plan aimed at informing the Commission as soon as practicable when OCC is considering implementing a recovery or orderly wind-down. Currently, in the context of a recovery, the RWD Plan indicates that OCC's General Counsel is responsible for notifying the Commission, the Federal Reserve Bank, and the CFTC (and the FDIC, to the extent applicable) of the occurrence of a Recovery Trigger Event. OCC proposes to require such notification ''as soon as practicable when OCC is considering the implementation'' of a recovery. Similarly, OCC proposes new language that would require the responsible staff to notify regulators as soon as practicable when the Board of Directors' is considering the decision to enact a wind-down.[38]

6. Testing OCC's Ability To Implement the RWD Plan

OCC proposes changes to its RWD Plan to require testing of OCC's ability to implement the plan at least every 12 months, which is not part of the current RWD Plan.[39] The amended RWD Plan would note that the Risk Management Framework and Default Management Policy govern such testing and that the results of such testing would be reported to OCC's Board. OCC's proposed changes also would require participation by participants and in some instances stakeholders,[40] and outline the roles and responsibilities related to testing (*e.g.,* review of results by OCC's Management Committee or the Working Group incorporating into the RWD Plan any lessons learned from workshops or testing).[41] Further, OCC proposes adding that the Risk Committee's review of the RWD Plan, as well as any subsequent recommendation to OCC's Board, considers revisions to the RWD Plan informed by testing results.[42]

B. Proposed Changes Related to the Annual Review Process

The Proposed Rule Change would also make several changes to the RWD Plan that were identified during OCC's annual review process.[43] These changes relate to OCC's organizational structure; the alignment of provisions within the RWD Plan with each other, OCC's Rules, and other policies; the RWD Plan's hypothetical scenarios; and other corrections, clarifications, and updates to the RWD Plan.

1. Changes to OCC's Organizational Structure

OCC proposes changes to reflect its current organizational structure and the duties associated with specific roles within OCC's management.[44] Such changes include reflecting that the Chief External Relations Officer[45] and the Chief Clearing and Settlement Services Officer are a part of OCC's Management Committee.[46] The Proposed Rule Change would also reflect OCC's transition to a non-Executive Chairman governance structure given that the Executive Chairman role no longer exists at OCC.[47] Due to this organizational structure, OCC also proposes replacing the term Executive Chairman with Chairman in several provisions in the RWD Plan.[48] OCC also proposes to replace throughout the RWD Plan the title Chief Legal Officer and General Counsel with General Counsel and Corporate Secretary to align with OCC's current organizational structure.[49]

OCC proposes changes to Chapter 3 that would update, add, remove, and relocate the names of departments and support functions to align with OCC's current organizational structure.[50] For example, OCC proposes to note that the Exams Department currently resides within the Compliance support function, where it was moved from the

[33] *See* Notice, 90 FR at 19350. Additionally, the RWD Plan would indicate that OCC's Legal Department will review key agreements to determine whether any renewals or expirations of such agreements will occur during the expected duration of the wind-down and counsel the business accordingly. Separately, OCC proposes to more concisely describe OCC's Material Agreements Policy, which pertains to the periodic review of agreements with Exchanges and service providers for core services.

[49] *See Id.* at 19348.

[50] *See Id.* at 19353.

Legal support function. Similarly, OCC proposes moving the Business Continuity Department from the Security Services support function to the Business Operations support function and the Corporate Communications Department from the External Relations support function to the Human Resources support function.[51] The proposed changes would also update department ratings.[52] Finally, OCC would correct a reference to the number of support functions necessary to deliver OCC's core services by replacing the number 12 with 11 to reflect OCC's determination that 11 support functions have been identified as necessary to deliver OCC's core services.[53]

2. Aligning the RWD Plan Internally and With OCC's Rules and Policies

OCC proposes several changes to its RWD Plan to align its provisions with each other and with OCC's Rules and policies.[54] For example, OCC proposes to amend certain hypothetical scenario titles to ensure that they are internally consistent within the RWD Plan.[55] To ensure consistency with OCC's Board Charter, which uses the term RWD Plan instead of Recovery and Resolution Plan, OCC also proposes to replace a current reference in the RWD Plan to Recovery and Resolution Plan with a reference to RWD Plan.[56]

OCC proposes a number of changes to align the RWD Plan with the Capital Management Policy, including replacing references to Equity in the RWD Plan with Liquid Net Assets Funded By Equity (''LNAFBE'') [57] and defining Minimum Corporate Contribution within the RWD Plan as the minimum level of OCC funds maintained exclusively to cover credit losses or liquidity shortfalls and is determined by the Board from time to time, which is the definition used in the CMP. Consistent with OCC Rule 1006(e)(i) and the CMP, the revised RWD Plan would explain that OCC may use certain corporate resources to address non-default losses, default losses, or both.[58] Because OCC proposes adding text discussing its tools in the event of a non-default loss, default loss, or both, OCC also proposes adding text clarifying that, in the event of an operational loss, contribution of Excess LNAFBE and EDCP Unvested Balance are not subject to heightened governance or further Board approval.[59] OCC also proposes to replace a general reference to OCC's Replenishment Plan with a more specific reference to OCC's Operational Loss Fee in the context of enhanced risk management and recovery tools. Further, OCC proposes to remove language stating that implementation of a clearing fee change would more likely happen if shareholders' equity fell below 110% but remained above 90% of OCC's Target Capital Requirement, because this text is outdated.[60] OCC replaces the deleted text with the more general statement that implementation of a clearing fee change would more likely be based on the thresholds in OCC's CMP. OCC proposes the more general language to reduce the risk of the RWD Plan becoming inaccurate due to future changes to the CMP.[61]

For consistency with OCC Rule 1002, OCC proposes inserting ''minimum'' before ''cash Clearing Fund'' to provide that temporary increases in the minimum cash Clearing Fund requirement must be reviewed by the Risk Committee as soon as practicable, and in any event within 20 days of the decision to increase.[62] Finally, OCC proposes changes to more accurately describe the process for use of the Clearing Fund and EDCP Unvested Balance pursuant to Rule 1006.[63] As proposed, the RWD Plan would (i) state that OCC pays deficiencies (rather than losses) from the Clearing Fund, for consistency with OCC Rule 1006(b); [64] (ii) no longer state that, to borrow from the Clearing Fund, OCC must first determine that it is unable to borrow or otherwise obtain such funds on acceptable terms on an unsecured basis, because OCC's rules no longer require this; and (iii) consistent with OCC Rule 1006(h), clarify that replenishment of the Clearing Fund would not be required until a borrowing is deemed a charge against the Clearing Fund.

3. Scenario Changes

The RWD Plan identifies four hypothetical scenarios that could threaten OCC's viability as a going concern and describes how OCC would respond to each scenario.[65] OCC proposes changes to these scenarios that it states would (i) update referenced numbers throughout all detailed scenarios and (ii) provide more granular information regarding assumptions and details to make each scenario more realistic.[66] Such changes include adding regulatory notification as an action that may be taken in each scenario, removing information that OCC believes is no longer relevant,[67] relocating information within a scenario to clarify the timeline,[68] adding language to avoid ambiguity in scenario assumptions,[69] revising information regarding assumptions and details in the scenarios,[70] updating timelines within the scenarios,[71] and improving the scenarios' flexibility.[72] OCC believes the proposed changes identified during its annual review process, including those related to hypothetical scenarios, improve the accuracy of the Plan by

[51] *See Id.*

[52] OCC's RWD Plan contains department ratings based on whether a department is necessary to deliver OCC's Core Services and the speed with which a department's failure would impact OCC's Core Services.

[53] As a result of the Corporate Communications Department moving to Human Resources, External Relations would no longer be designated as a critical support function. OCC proposes changes reflecting its current critical support functions. *See* Notice, 90 FR at 19353.

[61] *See Id.*

[62] *See Id.*

[63] *Id.*

[64] *See Id.*

[65] *See Id.* at 19347.

[66] *See Id.* at 19355. For example, OCC proposes, for scenario 1, to characterize the first draw after the Clearing Member default as a borrowing from the Clearing Fund rather than a proportionate charge to the Clearing Fund and unvested EDCP Balance to align with OCC's approach to firm-wide default tests. *See id.* at 19355–56.

[67] *See Id.* at 19356 (describing removal of two provisions from day 2 of scenario 1 related to the satisfaction of assessment and replenishment obligations that OCC asserts are no longer applicable in the event of a realistic scenario).

[68] *See Id.* at 19357 (describing the relocation of ''DTC confirms they are experiencing an outage and are working on the problem'' and ''DTC has no ETA on resolution and does not expect to be resolved by the end of the processing day'' in scenario 3 to an earlier section of the scenario).

[69] *See Id.* at 19356–57 (adding ''due to the large number of Clearing Members settling through Bank A and the extensive manual payment instructions that go along with enacting alternative settlement, the OCEO authorizes extension of settlement until the close of Fedwire'' to specify OCC's existing expectation in writing.)

[70] *See Id.* at 19357 (proposing revisions to scenario 3 reflecting that in a realistic scenario OCC would respond to Clearing Member inquiries regarding the validity of their collateral but would not proactively address collateral validity).

[71] *See Id.* at 19356 (proposing to extend scenario 1 to last 22 days rather than 21 to account for the initial draw in scenario 1 being a borrowing from the Clearing Fund rather than a proportionate charge to the Clearing Fund and unvested EDCP Balance.

[72] *See Id.* (revising scenario 2 to assume that ''more than'' 25 Clearing Members settle through Bank A).

incorporating the most up to date information within the Plan so that OCC can reasonably anticipate and prepare for the possibility of a recovery or wind-down.[73]

4. Other Corrections, Clarifications, and Updates

The Proposed Rule Change would make a series of other corrections, clarifications, and updates to provisions that do not address the scenarios.[74] Proposed corrections include (i) adding the word ''not'' to correct a statement about Wind-Down trigger events that, as proposed, would state that such a trigger event would occur when, during OCC's recovery efforts, OCC determined that recovery efforts have *not* been, or are unlikely to be successful,[75] (ii) correcting inaccurate references to the ''Bank On-Boarding and Off-Boarding Procedure'' by replacing them with references to the ''Settlement Bank Failure Procedure,'' [76] and (iii) in the context of stock loan terminations, replacing an inaccurate reference to increasing the size of the Clearing Fund with a more accurate statement about the need to communicate termination of the stock loan programs in a timely and appropriate manner.[77]

Proposed clarifications include (i) updating discussion of service level agreements to note that OCC maintains such agreements with certain (as opposed to all) vendors,[78] (ii) removing a redundant list of Critical Support Functions,[79] (iii) replacing ''LNAFBE greater than 110% of the Target Capital Requirement'' with ''Excess LNAFBE'' throughout the RWD Plan,[80] (iv) expanding the groups that receive notifications of certain incidents in a scenario, (v) revising the RWD Plan to acknowledge that, following a merger in wind-down, OCC may not be the only surviving entity,[81] and (vi) amending a scenario description to acknowledge the assumption that Clearing Members would be able to both send and receive wire funds to and from back up settlement banks.[82]

Proposed updates include (i) removing reference to the Jersey City Business Center because that facility no longer exists,[83] (ii) adjusting the number of staff working in critical support functions,[84] (iii) revising data related to potential reductions in force in the context of a wind-down,[85] and (iv) replacing ''CMT Leader'' with ''Crisis Management Coordinator'' throughout the RWD Plan to reflect the accurate name of the title of the role at OCC.[86]

OCC also proposes to remove outdated data and reduce the need for future updates by replacing a specific statement regarding member affiliated banks in the bank credit facility [87] with the general statement that the amount of the commitment of each bank is capped to limit the risk posed by any single bank counterparty.[88] Relatedly, OCC would update the RWD Plan to reflect that the list of eligible collateral for the facility was expanded beyond just the components of the S&P 500.[89] The Proposed Rule Change would make similar corrections, clarifications, and updates to those described above throughout the RWD Plan.[90]

III. Discussion and Commission Findings

Section 19(b)(2)(C) of the Act requires the Commission to approve a proposed rule change of a self-regulatory organization if it finds that the proposed rule change is consistent with the requirements of the Act and the rules and regulations thereunder applicable to the organization.[91] Under the Commission's Rules of Practice, the ''burden to demonstrate that a proposed rule change is consistent with the Exchange Act and the rules and regulations issued thereunder . . . is on the self-regulatory organization ['SRO'] that proposed the rule change.'' [92] The description of a proposed rule change, its purpose and operation, its effect, and a legal analysis of its consistency with applicable requirements must all be sufficiently detailed and specific to support an affirmative Commission finding,[93] and any failure of an SRO to provide this information may result in the Commission not having a sufficient basis to make an affirmative finding that a proposed rule change is consistent with the Exchange Act and the applicable rules and regulations.[94] Moreover, ''unquestioning reliance'' on an SRO's representations in a proposed rule change is not sufficient to justify Commission approval of a proposed rule change.[95]

After carefully considering the Proposed Rule Change, the Commission finds that the Proposed Rule Change is consistent with Section 17A(b)(3)(F) of the Act,[96] Rule 17ad–22(e)(3)(ii),[97] and Rules 17ad–26(a)(1), (2), (4), (7), and (8) thereunder, as described in detail below.[98]

A. Consistency With Section 17A(b)(3)(F) of the Act

Under Section 17A(b)(3)(F) of the Act, OCC's rules, among other things, must be designed to promote the prompt and accurate clearance and settlement of securities transactions.[99] Based on a review of the record, and for the reasons discussed below, OCC's proposed rule change is consistent with Section 17A(b)(3)(F). Based on a review of the record, and for the reasons discussed below,[100] OCC's changes are consistent with the promotion of prompt and accurate clearance and settlement of securities transactions. Accordingly, the Proposed Rule Change is consistent with the requirements of Section 17A(b)(3)(F) of the Act.[101]

B. Consistency With Rule 17ad–22(e)(3)(ii)

Rule 17ad–22(e)(3)(ii) requires that OCC ''establish implement, maintain and enforce written policies and procedures reasonably designed to maintain a sound risk management framework for comprehensively managing legal, credit, liquidity, operational, general business, investment, custody, and other risks that arise in or are borne by the covered clearing agency, which includes plans

for the recovery and orderly wind-down of the covered clearing agency necessitated by credit losses, liquidity shortfalls, losses from general business risk, or any other losses.[102]

As described above, OCC proposes changes relating to OCC's organizational structure; the alignment of provisions within the RWD Plan with each other and with OCC's Rules and policies; the RWD Plan's hypothetical scenarios; and other corrections, clarifications, and updates to the RWD Plan. For example, OCC proposes changes to reflect its current organizational structure such as identifying the Chief External Relations Officer and the Chief Clearing and Settlement Services Officer as members of the Management Committee and replacing references to an Executive Chairman because that role no longer exists at OCC.[103] Separately, OCC proposes several changes to its RWD Plan to ensure that it is both internally consistent and consistent with other OCC Rules and policies, such as OCC Rule 1006 and the CMP.[104] The proposed changes also would update data and provide more granularity in the hypothetical scenarios described in the RWD Plan [105] and make various other corrections, clarifications, and updates designed to further strengthen and clarify the RWD Plan.[106]

These proposed changes will make the information provided in the RWD Plan more accurate and useful; provide a more accurate and usable playbook for OCC or source of information for a resolution authority; reduce the risk that the RWD Plan contains inaccurate or stale information; and support OCC's ability to use risk management and recovery tools effectively to bring about a recovery by clarifying which tools may be most effective for different situations or needs. As such, these changes would provide a more up-to-date and useful set of information for the relevant authorities to carry out any needed recovery and resolution planning more expeditiously.

Accordingly, the Proposed Rule Change is consistent with the requirements of Rule 17ad–22(e)(3)(ii) under the Act.[107]

C. Consistency With Rule 17ad–26(a)(1) Under the Act

Rule 17ad–26(a)(1) requires OCC's RWD Plan to ''identify and describe the covered clearing agency's core payment, clearing, and settlement services and address how the covered clearing agency would continue to provide such core services in the event of a recovery and during an orderly wind-down, including by identifying the staffing roles necessary to support such core services; and analyzing how such staffing roles necessary to support such core services would continue in the event of a recovery and during an orderly wind-down.'' [108] Based on a review of the record, and for the reasons discussed below, OCC's proposed rule change is consistent with Rule 17ad–26(a)(1).

As described above in section II.A.1, OCC's proposed changes identify staffing roles necessary to support core services. Staffing roles do not refer to specific personnel or employees, but instead, positions, roles, or personnel functions that are necessary for the continuation of core services. OCC's proposed changes list key staffing roles necessary for OCC to continue providing its core services in the event of a recovery or wind-down. The Proposed Rule Change also analyzes how staffing roles necessary to support core services would continue in the event of a recovery and during an orderly wind-down. For example, the proposed changes would indicate that, during a wind-down, OCC's Management may need to offer additional compensation to retain key staff while simultaneously reducing other staff. Similarly, OCC proposes replacing ''critical services'' with ''core services'' throughout the RWD Plan to align the RWD Plan with the text of Rule 17ad–26(a)(1).

Accordingly, the Proposed Rule Change is consistent with the requirements of Rule 17ad–26(a)(1).[109]

D. Consistency With Rule 17ad–26(a)(2) Under the Act

Rule 17ad–26(a)(2) requires OCC's RWD Plan to ''identify and describe any service providers for core services, specifying which core services each service provider supports; and address how the covered clearing agency would ensure that service providers for core services would continue to perform in the event of a recovery and during an orderly wind-down, including consideration of its written agreements with such service providers and whether the obligations under those written agreements are subject to alteration or termination as a result of initiation of the recovery and orderly wind-down plan.'' [110] Based on a review of the record, and for the reasons discussed below, OCC's proposed rule change is consistent with Rule 17ad–26(a)(2).

As described above in section II.A.3, OCC's proposed changes describe service providers for core services and specify which core service each service provider supports. Specifically, OCC proposes adding a section to the RWD Plan that would contain a table identifying service providers that support OCC's core services. The proposed changes also identify the type of service provider, the service provider's name, OCC's relationship with the service provider, and the specific core service the service provider supports.

The proposed changes also address how OCC would ensure that service providers for core services would continue to perform in the event of a recovery and during an orderly wind-down, including consideration of OCC's written agreements with such service providers and whether the obligations under those written agreements are subject to alteration or termination as a result of initiation of the recovery and orderly wind-down plan. Specifically, the proposed changes would revise the RWD Plan to specify that OCC drafted its written agreements with service providers in a manner that acknowledges and helps ensure that service providers can continue to perform their services during a recovery or wind-down event. For example, the Proposed Rule Change would indicate that agreements do not contain MAC clauses or similar provisions that would permit the counterparty to terminate the agreement and discontinue the provision of services in the event of a recovery or during a wind-down. The Proposed Rule Change also would acknowledge the need to consider the maintenance of key agreements in both recovery and wind-down rather than solely wind-down.

Accordingly, the Proposed Rule Change is consistent with the requirements of Rule 17ad–26(a)(2).[111]

E. Consistency With Rule 17ad–26(a)(4) Under the Act

Rule 17ad–26(a)(4) requires OCC's RWD Plan to ''identify and describe criteria that could trigger the covered clearing agency's implementation of the recovery and orderly wind-down plans and the process that the covered clearing agency uses to monitor and determine whether the criteria have been met, including the governance arrangements applicable to such

[102] 17 CFR 240.17ad–22(e)(3)(ii).
[103] *See supra* Section II.B.1.

[105] *See supra* Section II.B.3.
[106] *See supra* Section II.B.4.
[107] 17 CFR. 240.17ad–22(e)(3)(ii).
[108] 17 CFR 240.17ad–26(a)(1).
[109] 17 CFR 240.17ad–26(a)(1).
[110] 17 CFR 240.17ad–26(a)(2).
[111] 17 CFR 240.17ad–26(a)(2).

process.'' [112] Based on a review of the record, and for the reasons discussed below, OCC's proposed rule change is consistent with Rule 17ad–26(a)(4).

As described above in Section II.A.4, OCC's proposed changes support the identification of relevant governance arrangements by clearly identifying the relevant internal policy document governing the process for monitoring each trigger and adding a new Trigger Monitoring section to the RWD Plan that generally describes the four triggers that OCC relies upon to determine whether it is appropriate to implement the RWD Plan.

Accordingly, the Proposed Rule Change is consistent with the requirements of Rule 17ad–26(a)(4).[113]

F. Consistency With Rule 17ad–26(a)(7) Under the Act

Rule 17ad–26(a)(7) requires OCC's RWD Plan to ''require the covered clearing agency to inform the Commission as soon as practicable when the covered clearing agency is considering implementing a recovery or orderly wind-down.'' [114] Based on a review of the record, and for the reasons discussed below, OCC's proposed rule change is consistent with Rule 17ad–26(a)(7).

As described in section II.A.5 above, OCC proposes to add language to the RWD Plan requiring that OCC's General Counsel notify the Commission, among others, as soon as practicable when OCC is considering the implementation of a Recovery Trigger Event. The proposed changes would also require responsible staff to notify regulators as soon as practicable when the Board of Directors' is considering the decision to enact a wind-down.

Accordingly, the Proposed Rule Change is consistent with the requirements of Rule 17ad–26(a)(7).[115]

G. Consistency With Rule 17ad–26(a)(8) Under the Act

Rule 17ad–26(a)(8), in part, requires OCC's RWD Plan to ''include procedures for testing the covered clearing agency's ability to implement the recovery and orderly wind-down plans at least every 12 months, including by requiring the covered clearing agency's participants and when practicable other stakeholders to participate in the testing of its plans; . . . providing for reporting the results of such testing to the covered clearing agency's board of directors and senior management; and specifying the procedures for, as appropriate, amending the plans to address the results of such testing.'' [116] Based on a review of the record, and for the reasons discussed below, OCC's proposed rule change is consistent with Rule 17ad–26(a)(8).

As described in section II.A.6 above, OCC proposes to add language to the RWD Plan to require testing of OCC's ability to implement the plan at least every 12 months and state that the Risk Management Framework and Default Management Policy govern such testing. OCC's proposed changes also would require participation by participants and in some instances stakeholders in testing, and outline the roles and responsibilities related to testing (*e.g.,* review of results by OCC's Management Committee). Further, the Proposed Rule Change would require that testing results are reported to OCC's Board and senior management. OCC's proposed changes would also require the Risk Committee to annually review and consider for an approval recommendation to the Board any revisions to the RWD Plan informed by testing results.

Accordingly, the Proposed Rule Change is consistent with the requirements of Rule 17ad–26(a)(8).[117]

IV. Conclusion

On the basis of the foregoing, the Commission finds that the Proposed Rule Change is consistent with the requirements of the Act, and in particular, Section 17A(b)(3)(F) of the Act,[118] Rule 17ad–22(e)(3)(ii),[119] and Rules 17ad–26(a)(1), (2), (4), (7), and (8).[120]

It is therefore ordered pursuant to Section 19(b)(2) of the Act that the proposed rule change (SR–OCC–2025–005) be, and hereby is, approved.[121]

For the Commission by the Division of Trading and Markets, pursuant to delegated authority.[122]

SECURITIES AND EXCHANGE COMMISSION

[Investment Company Act Release No. 35701; File No. 812–15600]

Gemcorp Commodities Alternative Products Fund, *et al.*

July 30, 2025.

AGENCY: Securities and Exchange Commission (''Commission'' or ''SEC'').

ACTION: Notice.

Notice of application for an order under sections 17(d) and 57(i) of the Investment Company Act of 1940 (the ''Act'') and rule 17d–1 under the Act to permit certain joint transactions otherwise prohibited by sections 17(d) and 57(a)(4) of the Act and rule 17d–1 under the Act.

SUMMARY OF APPLICATION: Applicants request an order to permit certain business development companies (''BDCs'') and closed-end management investment companies to co-invest in portfolio companies with each other and with certain affiliated investment entities.

APPLICANTS: Gemcorp Commodities Alternative Products Fund, Gemcorp Capital Advisors LLC, Gemcorp Capital Management Limited, Gemcorp Commodities Trading SA, Gemcorp Commodities Global DMCC, Gemcorp Fund I Limited, Gemcorp Multi Strategy Master Fund SICAV SCS and Gemcorp Strategic Capital Solutions Fund II Limited.

FILING DATES: The application was filed on July 9, 2024, and amended on March 20, 2025, May 5, 2025, July 11, 2025 and July 25, 2025.

HEARING OR NOTIFICATION OF HEARING: An order granting the requested relief will be issued unless the Commission orders a hearing. Interested persons may request a hearing on any application by emailing the SEC's Secretary at *Secretarys-Office@sec.gov* and serving the Applicants with a copy of the request by email, if an email address is listed for the relevant Applicant below, or personally or by mail, if a physical address is listed for the relevant Applicant below. Hearing requests should be received by the Commission by 5:30 p.m. on August 29, 2025, and should be accompanied by proof of service on the Applicants, in the form of an affidavit or, for lawyers, a certificate of service. Pursuant to rule 0–5 under the Act, hearing requests should state the nature of the writer's interest, any facts bearing upon the desirability of a hearing on the matter, the reason for the request, and the issues contested. Persons who wish to be notified of a

hearing may request notification by emailing the Commission's Secretary at *Secretarys-Office@sec.gov.*

ADDRESSES: The Commission: *Secretarys-Office@sec.gov.* Applicants: Sophia Maudslay, Gemcorp Capital Management Limited, 2nd Floor, 1 New Burlington Place, London W1S 2HR, United Kingdom; George M. Silfen, Alston & Bird LLP, 90 Park Avenue, New York, NY 10016, *george.silfen@alston.com.*

FOR FURTHER INFORMATION CONTACT: Anna Sandor, Senior Counsel, or Adam Large, Senior Special Counsel, at (202) 551–6825 (Division of Investment Management, Chief Counsel's Office).

SUPPLEMENTARY INFORMATION: For Applicants' representations, legal analysis, and conditions, please refer to Applicants' fourth amended application, dated July 25, 2025, which may be obtained via the Commission's website by searching for the file number at the top of this document, or for an Applicant using the Company name search field, on the SEC's EDGAR system. The SEC's EDGAR system may be searched at *https://www.sec.gov/edgar/searchedgar/companysearch.html.* You may also call the SEC's Office of Investor Education and Advocacy at (202) 551–8090.

For the Commission, by the Division of Investment Management, under delegated authority.

Sherry R. Haywood,

Assistant Secretary.

SECURITIES AND EXCHANGE COMMISSION

[Release No. 34–103593; File No. SR–Phlx–2025–32]

Self-Regulatory Organizations; Nasdaq PHLX LLC; Notice of Filing and Immediate Effectiveness of Proposed Rule Change To Amend Options 7, Section 9, B, Port Fees

July 30, 2025.

Pursuant to Section 19(b)(1) of the Securities Exchange Act of 1934 (''Act'') [1], and Rule 19b–4 thereunder,[2] notice is hereby given that on July 23, 2025, Nasdaq PHLX LLC (''Phlx'' or ''Exchange'') filed with the Securities and Exchange Commission (''Commission'') the proposed rule change as described in Items I, II, and III, below, which Items have been prepared by the Exchange. The Commission is publishing this notice to solicit comments on the proposed rule change from interested persons.

I. Self-Regulatory Organization's Statement of the Terms of Substance of the Proposed Rule Change

The Exchange proposes to amend Phlx's Pricing Schedule at Options 7, Section 9, B, Port Fees, in connection with a technology migration.[3]

The text of the proposed rule change is available on the Exchange's website at *https://listingcenter.nasdaq.com/rulebook/phlx/rulefilings* and at the principal office of the Exchange.

II. Self-Regulatory Organization's Statement of the Purpose of, and Statutory Basis for, the Proposed Rule Change

In its filing with the Commission, the Exchange included statements concerning the purpose of and basis for the proposed rule change and discussed any comments it received on the proposed rule change. The text of these statements may be examined at the places specified in Item IV below. The Exchange has prepared summaries, set forth in sections A, B, and C below, of the most significant aspects of such statements.

A. Self-Regulatory Organization's Statement of the Purpose of, and Statutory Basis for, the Proposed Rule Change

1. Purpose

Phlx is planning a technology migration commencing in November 2025.[4] As part of this technology migration, Phlx members and member organizations will need to acquire new ports to connect to the new technology platform to accommodate the symbol migration plan.[5] Specifically, members and member organizations will need to utilize both existing or ''legacy'' [6] ports and ''new'' [7] ports during the technology migration rollout which will occur over a 5 week period on a symbol-by-symbol basis.[8] Phlx currently assesses no fees for any pre-production [9] ports acquired in anticipation of a technology migration to enhance participation in testing. However, pre-production ports will become production ports [10] once Phlx begins the technology migration in November 2025.

At this time, Phlx proposes certain pricing for ''duplicate'' [11] ports during the technology migration. Phlx will not assess the SQF Port,[12] SQF Purge Port,[13] and CTI Port [14] fees in Options 7,

[1] 15 U.S.C. 78s(b)(1).

[2] 17 CFR 240.19b–4.

[3] The Exchange filed SR–Phlx–2025–29 on July 15, 2025. On July 23, 2025 the Exchange withdrew SR–Phlx–2025–29 and replaced it with this rule change.

[4] *Seehttps://www.nasdaqtrader.com/MicroNews.aspx?id=OTU2025-6.*

[5] Phlx plans to migrate to the new platform on a symbol-by-symbol basis over multiple weeks. *See id.*

[6] A ''legacy'' port refers to a port that was subscribed to by a Phlx member or member organization prior to the technology migration and connects to the existing technology platform.

[7] A ''new'' port refers to a port acquired for the Phlx technology migration and would connect to the new technology migration.

[8] For example, once the technology migration commences in November 2025, new ports will be utilized to enter order and quote for symbols that have migrated to the new platform and existing ports will be utilized to enter orders and quotes that have not yet migrated to the new platform. Once the 5 week rollout is complete, or a longer period as the Exchange may designate for the rollout, the Exchange would sunset the ports, on a defined date, that are connected to the current environment.

[9] A pre-production port may be used for port connectivity testing purposes only and is not connected to the Exchange's match engine that is currently in production for the execution of interest. A pre-production may *not* be used to enter an order or quote for execution or otherwise send a message through a pre-production port that would be acted upon by the Exchange. Testing means the dates designated by the Exchange for user acceptance testing and final confidence tests.

[10] Production ports are used to submit quotes and orders for execution in the Exchange's match engine.

[11] The term duplicate means the type and quantity of their legacy ports. For example, a Phlx member organization with 3 legacy SQF Ports, 1 legacy SQF Purge Port, 1 legacy FIX Port, and 1 legacy CTI Port on October 1, 2025 could request the equivalent quantity and type of new ports (3 SQF Ports, 1 SQF Purge Port, 1 FIX Port, and 1 CTI Port) for the new environment at no additional cost.

[12] ''Specialized Quote Feed'' or ''SQF'' is an interface that allows Lead Market Makers, Streaming Quote Traders (''SQTs'') and Remote Streaming Quote Traders (''RSQTs'') to connect, send, and receive messages related to quotes, Immediate-or-Cancel Orders, and auction responses into and from the Exchange. Features include the following: (1) options symbol directory messages (*e.g.,* underlying and complex instruments); (2) system event messages (*e.g.,* start of trading hours messages and start of opening); (3) trading action messages (*e.g.,* halts and resumes); (4) execution messages; (5) quote messages; (6) Immediate-or-Cancel Order messages; (7) risk protection triggers and purge notifications; (8) opening imbalance messages; (9) auction notifications; and (10) auction responses. The SQF Purge Interface only receives and notifies of purge requests from the Lead Market Maker, SQT or RSQT. Lead Market Makers, SQTs and RSQTs may only enter interest into SQF in their assigned options series. Immediate-or-Cancel Orders entered into SQF are not subject to the Order Price Protection, the Market Order Spread Protection, or Size Limitation in Options 3, Section 15(a)(1), (a)(2) and (b)(2), respectively. *See* Options 3, Section 7(a)(i)(B).

[13] An SQF Purge Interface only receives and notifies of purge request from the Market Maker.

[14] Clearing Trade Interface (''CTI'') is a real-time clearing trade update message that is sent to a member after an execution has occurred and contains trade details specific to that member. The information includes, among other things, the following: (i) The Clearing Member Trade Agreement or ''CMTA'' or ''OCC'' number; (ii) Exchange badge or house number; (iii) the Exchange internal firm identifier; (iv) an indicator which will distinguish electronic and non-electronically delivered orders; (v) liquidity indicators and

Continued

Section 9, B for any new SQF Ports, SQF Purge Ports, and CTI Ports, which are duplicative of legacy SQF Ports, SQF Purge Ports, and CTI Ports, acquired as part of the migration from November 1, 2025 through December 31, 2025 (''Transition Period''). Phlx will continue to assess the SQF Port, SQF Purge Port, and CTI Port fees in Options 7, Section 9, B for legacy SQF Ports, SQF Purge Ports, and CTI Ports during the Transition Period including new SQF Ports, SQF Purge Ports, and CTI Ports. As of January 1, 2026, Phlx will assess the SQF Port, SQF Purge Port, and CTI Port fees in Options 7, Section 9, B for all new and legacy SQF Ports, SQF Purge Ports, and CTI Ports to which they subscribe. Phlx members and member organizations may return legacy SQF Ports, SQF Purge Ports, and CTI Ports in December 2025 to avoid any fees. The legacy SQF Ports, SQF Purge Ports, and CTI Ports would no longer be necessary after the Transition Period.

Today, Phlx assesses a FIX Port Fee of $650 per month per mnemonic [15] Today, Phlx does not assess fees for FIX Ports if there is not a mnemonic associated with the FIX Port. During the Transition Period, Phlx will not assess FIX Port fees to members and member organizations for mnemonics on new FIX Ports if the mnemonics existed on legacy FIX Ports on October 1, 2025.[16] Once the Transition Period has ended, the Exchange would assess a FIX Port Fee based on each mnemonic associated with new and legacy FIX Ports. Phlx members and member organizations may return legacy FIX Ports in December 2025 to avoid any fees. The legacy FIX Ports would no longer be necessary after the Transition Period.

Phlx will assess the port fees for new OTTO [17] Ports and new FIX Drop [18] Ports commencing on November 1, 2025. Phlx adopted new OTTO Ports and OTTO Port Fees and FIX Drop Ports and FIX DROP Port Fees as part of the Exchange's technology migration.[19] There are no existing legacy versions of these ports.

Finally, Phlx proposes to sunset legacy FIX Ports, SQF Ports, SQF Purge Ports, and CTI Ports on February 27, 2026, after which time these ports will no longer be available.

The duplicate new SQF Ports, SQF Purge Ports, and CTI Ports and duplicate mnemonics that are being offered at no cost will allow members and member organizations time to test ports to the new environment as well as provide continuous connection to the Exchange's match engine during the migration.[20] During the Transition Period, members and member organizations will be required to utilize their new ports on the new platform for symbols that have migrated to the new platform, while continuing to leverage legacy ports for symbols that have not yet migrated to the new platform.[21] During the Transition Period, Phlx members and member organizations would be assessed only for legacy ports and mnemonics on legacy FIX Ports and would not be assessed for the new ports which are duplicative of the legacy ports or the duplicate mnemonics. Phlx members and member organizations may acquire additional legacy ports during the Transition Period or additional mnemonics that are not utilized on legacy FIX Ports and would be assessed the charges for those additional ports and mnemonics. Phlx members and member organizations will be assessed fees for new OTTO ports and new CTI Ports as they are not offered today and are optional.

The technology migration does not require Phlx members and member organizations to acquire additional ports or any new ports that are being offered, rather the technology migration requires a new port to connect to the new environment. Phlx members and member organizations may also elect to obtain fewer ports as only one order entry port is required to submit orders and only one quoting port is required to submit quotes.[22] The technology migration is 1:1 and therefore would not require a member or member organization to acquire an additional quantity of new ports, nor would it reduce the total number of ports needed to connect to the match engine. This proposal is not intended to impose any additional fees on any Phlx member or member organization. Rather, this proposal is intended to permit a Phlx member or member organization to utilize the new environment with the same type and quantity of legacy ports, at no additional cost, during the Transition Period.

Phlx will sunset legacy FIX Ports, SQF Ports, SQF Purge Ports, and CTI Ports on February 27, 2026.

2. Statutory Basis

The Exchange believes that its proposal is consistent with Section 6(b) of the Act,[23] in general, and furthers the objectives of Sections 6(b)(4) and 6(b)(5) of the Act,[24] in particular, in that it provides for the equitable allocation of reasonable dues, fees, and other charges among members and issuers and other

transaction type for billing purposes; and (vi) capacity. *See* Options 3, Section 23(b)(1).

[15] A ''mnemonic'' means an acronym comprised of letters and/or numbers assigned to member organizations. A member organization account may be associated with multiple mnemonics. See Options 1, Section 1(b)(29). A mnemonic is necessary to utilize a FIX Port.

[16] If a member had 6 mnemonics associated with a legacy FIX Port and obtained a new FIEX Port and associated 8 mnemonics with the new FIX Port, the member would be assessed 2 FIX Ports Fees for the for the new ports.

[17] As proposed, ''Ouch to Trade Options'' or ''OTTO'' is an interface that allows member organizations and their Sponsored Customers to connect, send, and receive messages related to orders, auction orders, and auction responses to the Exchange. Features include the following: (1) options symbol directory messages (*e.g.,* underlying and complex instruments); (2) system event messages (*e.g.,* start of trading hours messages and start of opening); (3) trading action messages (*e.g.,* halts and resumes); (4) execution messages; (5) order messages; (6) risk protection triggers and cancel notifications; (7) auction notifications; (8) auction responses; and (9) post trade allocation messages. OTTO will be located in the Exchange's revised rules at Supplementary Material .03 of Options 3, Section 7. The Exchange will assess an OTTO Port fee of $400 per port, per month, per mnemonic, subject to a monthly cap of $4,000. *See* Securities Exchange Act Release No. 102337 (February 4, 2025), 90 FR 9267 (February 10, 2025) (SR–Phlx–2025–05) (Notice of Filing and Immediate Effectiveness of a Proposed Rule Change To Adopt a New OTTO Protocol),

[18] FIX DROP is a real-time order and execution update message that is sent to a member after an order has been received/modified or an execution has occurred and contains trade details specific to that member. The information includes, among other things, the following: (i) executions; (ii) cancellations; (iii) modifications to an existing order; and (iv) busts or post-trade corrections. FIX Drop will be located in the Exchange's rules at Options 3, Section 23(b)(3). The Exchange will assess a FIX Drop Fee of $500 per port, per month, per account number. *See* Securities Exchange Act Release No. 90 FR 8818 (February 3, 2025) (SR–Phlx–2025–04) (Notice of Filing and Immediate Effectiveness of a Proposed Rule Change To Adopt a FIX Drop Port and Related Fees).

[19] *See* Securities Exchange Act Release Nos. 102337 (February 4, 2025), 90 FR 9267 (February 10, 2025) (SR–Phlx–2025–05) (Notice of Filing and Immediate Effectiveness of a Proposed Rule Change To Adopt a New OTTO Protocol); and 102296 (January 28, 2025), 90 FR 8818 (February 3, 2025) (SR–Phlx–2025–04) (Notice of Filing and Immediate Effectiveness of a Proposed Rule Change To Adopt a FIX Drop Port and Related Fees).

[20] Members would contact Market Operations to acquire ports for the technology migration.

[21] *See supra* notes 3 and 4.

[22] Phlx does not assess fees for the market data ports. *See* Options 7, Section 9, B(iii). Phlx members and member organizations may acquire any number of market data ports at no cost.

[23] *See* 15 U.S.C. 78f(b).

[24] *See* 15 U.S.C. 78f(b)(4) and (5).

persons using any facility, and is not designed to permit unfair discrimination between customers, issuers, brokers, or dealers.

The proposed amendments to Options 7, Section 9, B to permit Phlx members and member organizations to acquire a second set of SQF Ports, SQF Purge Ports, and CTI Ports and duplicate mnemonics for new FIX Ports, at no cost, as part of the technology migration are reasonable because they will permit Phlx members and member organizations to migrate to the new platform without a pricing impact. Specifically, the proposal is intended to permit Phlx members and member organizations to migrate their legacy FIX Ports, SQF Ports, SQF Purge Ports, and CTI Ports to new ports at no additional cost during the Transition Period. This proposal will allow Phlx members and member organizations to test their ports and maintain continuous connection to the Exchange's match engine during the migration.

The proposed amendments to Options 7, Section 9, B to permit Phlx members and member organizations to acquire a second set of SQF Ports, SQF Purge Ports, and CTI Ports and duplicate mnemonics for new FIX Ports, at no cost, as part of the technology migration are equitable and not unfairly discriminatory because no Phlx member or member organization would have a pricing impact as a result of this proposal provided the Phlx member or member organization did not obtain additional new ports beyond the number of duplicate legacy ports or additional legacy ports for SQF Ports, SQF Purge Ports, and CTI Ports beyond the quantity and type the member or member organization had on October 1, 2025, additional mnemonics for the new FIX Ports beyond those that exist on legacy FIX Ports as of October 1, 2025, or new optional OTTO or CTI Ports. No Phlx member or member organization would be assessed a fee for the new second set of ports for SQF Ports, SQF Purge Ports, and CTI Ports provided they acquired a new second set of ports commiserate with the type and quantity of ports they subscribed to as of October 1, 2025. No Phlx member or member organization would be assessed a fee for the new FIX Ports provided they did not acquire mnemonics beyond those that exist on legacy FIX Ports. Any Phlx member or member organization obtaining additional legacy ports, beyond the current type and quantity of ports they have as of October 1, 2025, would be assessed the fees noted in Options 7, Section 9, B as applicable.

Phlx will sunset legacy FIX Ports, SQF Ports, SQF Purge Ports, and CTI Ports on February 27, 2025 for all members and member organizations. Starting January 1, 2026, the Exchange would assess the SQF Port, SQF Purge Port and CTI Port Fees in Options 7, Section 9, B for all SQF Ports, SQF Purge Ports and CTI Ports that all members and member organizations continue to subscribe to after the Transition Period. Starting January 1, 2026, the Exchange would assess a FIX Port Fee based on each mnemonic associated with new and legacy FIX Ports for all members and member organizations. The proposed amendments to Options 7, Section 9, B to assess a FIX Port Fee based on each mnemonic associated with new and legacy FIX Ports and to assess SQF Port, SQF Purge Port and CTI Port Fees once the Transition Period has ended is reasonable because legacy FIX Ports, SQF Ports, SQF Purge Ports and CTI Ports would no longer be necessary after the Transition Period and Phlx members and member organizations may return legacy FIX Ports, SQF Ports, SQF Purge Ports and CTI Ports in December 2025 to avoid any fees. The Exchange would need to reacquire all legacy FIX Ports, SQF Ports, SQF Purge Ports and CTI Ports from Phlx members and member organizations to sunset the legacy platform. Assessing fees will encourage Phlx members and member organizations to return their legacy FIX Ports, SQF Ports, SQF Purge Ports and CTI Ports to avoid a fee, thereby allowing Phlx to efficiently and timely sunset the legacy platform. Further, the Exchange's proposal to assess a FIX Port Fee based on each mnemonic associated with new and legacy FIX Ports and to assess SQF Port, SQF Purge Port and CTI Port Fees once the Transition Period has ended is equitable and not unfairly discriminatory as all Phlx members and member organizations would be uniformly assessed FIX Port Fees based on each mnemonic associated with new and legacy FIX Ports as well as SQF Port, SQF Purge Port and CTI Port Fees if they have not returned these ports in December 2025.

The Exchange will assess the port fees for new OTTO Ports and new FIX Drop Ports commencing on November 1, 2025 uniformly to all members and member organizations as noted in the prior rule proposals.[25] Phlx proposed to adopt a new OTTO port and FIX Drop as part of the Exchange's technology migration, therefore no member or member organization has existing legacy versions of these ports.

B. Self-Regulatory Organization's Statement on Burden on Competition

The Exchange does not believe that the proposed rule change will impose any burden on competition not necessary or appropriate in furtherance of the purposes of the Act.

Intermarket Competition

The Exchange believes its proposal remains competitive with other options markets, and will offer market participants with another choice of venue to transact options. The Exchange notes that it operates in a highly competitive market in which market participants can readily favor competing venues if they deem fee levels at a particular venue to be excessive, or rebate opportunities available at other venues to be more favorable. Because competitors are free to modify their own fees in response, and because market participants may readily adjust their order routing practices, the Exchange believes that the degree to which fee changes in this market may impose any burden on competition is extremely limited.

Intramarket Competition

The proposed amendments to Options 7, Section 9, B to permit Phlx members and member organizations to acquire a second set of SQF Ports, SQF Purge Ports, and CTI Ports and duplicate mnemonics for new FIX Ports, at no cost, as part of the technology migration do not impose an undue burden on competition because no Phlx member or member organization would have a pricing impact as a result of this proposal provided the Phlx member or member organization did not obtain additional new ports beyond the number of duplicate legacy ports or additional legacy ports for SQF Ports, SQF Purge Ports, and CTI Ports beyond the quantity and type the member or member organization had on October 1, 2025, additional mnemonics for the new FIX Ports beyond those that exist on legacy FIX Ports as of October 1, 2025, or new optional OTTO or CTI Ports. No Phlx member or member organization would be assessed a fee for the new second set of ports for SQF Ports, SQF Purge Ports, and CTI Ports provided they acquired a new second set of ports commiserate with the type and quantity of ports they subscribed to as of October 1, 2025. No Phlx member or member organization would be assessed a fee for

[25] *See* Securities Exchange Act Release Nos. 102337 (February 4, 2025), 90 FR 9267 (February 10, 2025) (SR–Phlx–2025–05) (Notice of Filing and Immediate Effectiveness of a Proposed Rule Change To Adopt a New OTTO Protocol); and 102296 (January 28, 2025), 90 FR 8818 (February 3, 2025) (SR–Phlx–2025–04) (Notice of Filing and Immediate Effectiveness of a Proposed Rule Change To Adopt a FIX Drop Port and Related Fees).

the new FIX Ports provided they did not acquire mnemonics beyond those that exist on legacy FIX Ports. Any Phlx member or member organization obtaining additional legacy ports, beyond the current type and quantity of ports they have as of October 1, 2025, would be assessed the fees noted in Options 7, Section 9, B as applicable.

Phlx will sunset legacy FIX Ports, SQF Ports, SQF Purge Ports, and CTI Ports on February 27, 2025 for all members and member organizations. Starting January 1, 2026, the Exchange would assess the SQF Port, SQF Purge Port and CTI Port Fees in Options 7, Section 9, B for all SQF Ports, SQF Purge Ports and CTI Ports that all members and member organizations continue to subscribe to after the Transition Period. The Exchange's proposal to assess a FIX Port Fee based on each mnemonic associated with new and legacy FIX Ports and to assess SQF Port, SQF Purge Port and CTI Port Fees once the Transition Period has ended does not impose an undue burden on competition as all Phlx members and member organizations would be uniformly assessed FIX Port Fees based on each mnemonic associated with new and legacy FIX Ports as well as SQF Port, SQF Purge Port and CTI Port Fees if they have not returned these ports in December 2025.

The Exchange will assess the port fees for new OTTO Ports and new FIX Drop Ports commencing on November 1, 2025 uniformly to all members and member organizations as noted in the prior rule proposals.[26] Phlx proposed to adopt a new OTTO port and FIX Drop as part of the Exchange's technology migration, therefore no member or member organization has existing legacy versions of these ports.

C. Self-Regulatory Organization's Statement on Comments on the Proposed Rule Change Received From Members, Participants, or Others

No written comments were either solicited or received.

III. Date of Effectiveness of the Proposed Rule Change and Timing for Commission Action

The foregoing rule change has become effective pursuant to Section 19(b)(3)(A)(ii) of the Act.[27]

At any time within 60 days of the filing of the proposed rule change, the Commission summarily may temporarily suspend such rule change if it appears to the Commission that such action is: (i) necessary or appropriate in the public interest; (ii) for the protection of investors; or (iii) otherwise in furtherance of the purposes of the Act. If the Commission takes such action, the Commission shall institute proceedings to determine whether the proposed rule should be approved or disapproved.

IV. Solicitation of Comments

Interested persons are invited to submit written data, views and arguments concerning the foregoing, including whether the proposed rule change is consistent with the Act. Comments may be submitted by any of the following methods:

Electronic Comments

- Use the Commission's internet comment form (*https://www.sec.gov/rules/sro.shtml*); or
- Send an email to *rule-comments@sec.gov.* Please include file number SR–Phlx–2025–32 on the subject line.

Paper Comments

- Send paper comments in triplicate to Secretary, Securities and Exchange Commission, 100 F Street NE, Washington, DC 20549–1090.

All submissions should refer to file number SR–Phlx–2025–32. This file number should be included on the subject line if email is used. To help the Commission process and review your comments more efficiently, please use only one method. The Commission will post all comments on the Commission's internet website (*https://www.sec.gov/rules/sro.shtml*). Copies of the filing will be available for inspection and copying at the principal office of the Exchange. Do not include personal identifiable information in submissions; you should submit only information that you wish to make available publicly. We may redact in part or withhold entirely from publication submitted material that is obscene or subject to copyright protection. All submissions should refer to file number SR–Phlx–2025–32 and should be submitted on or before August 25, 2025.

For the Commission, by the Division of Trading and Markets, pursuant to delegated authority.[28]

Sherry R. Haywood,

Assistant Secretary.

SECURITIES AND EXCHANGE COMMISSION

[Release No. 34–103592; File No. SR–C2–2025–019]

Self-Regulatory Organizations; Cboe C2 Exchange, Inc.; Notice of Filing and Immediate Effectiveness of a Proposed Rule Change To Amend its Fees Schedule To Increase the Monthly Fee for 10 Gb Physical Ports

July 30, 2025.

Pursuant to Section 19(b)(1) of the Securities Exchange Act of 1934 (''Act''),[1] and Rule 19b–4 thereunder,[2] notice is hereby given that on July 29, 2025, Cboe C2 Exchange, Inc. (the ''Exchange'' or ''C2'') filed with the Securities and Exchange Commission (''Commission'') the proposed rule change as described in Items I, II, and III below, which Items have been prepared by the Exchange. The Commission is publishing this notice to solicit comments on the proposed rule change from interested persons.

I. Self-Regulatory Organization's Statement of the Terms of Substance of the Proposed Rule Change

Cboe C2 Exchange, Inc. (the ''Exchange'' or ''C2'') proposes to amend its Fees Schedule. The text of the proposed rule change is provided in Exhibit 5.

The text of the proposed rule change is also available on the Exchange's website (*http://markets.cboe.com/us/options/regulation/rule_filings/ctwo/*) and at the Exchange's Office of the Secretary.

II. Self-Regulatory Organization's Statement of the Purpose of, and Statutory Basis for, the Proposed Rule Change

In its filing with the Commission, the Exchange included statements concerning the purpose of and basis for the proposed rule change and discussed any comments it received on the proposed rule change. The text of these statements may be examined at the places specified in Item IV below. The Exchange has prepared summaries, set forth in sections A, B, and C below, of the most significant aspects of such statements.

[1] 15 U.S.C. 78s(b)(1).

[2] 17 CFR 240.19b–4.

A. Self-Regulatory Organization's Statement of the Purpose of, and Statutory Basis for, the Proposed Rule Change

1. Purpose

The Exchange proposes to amend its fee schedule relating to physical connectivity fees.[3]

By way of background, a physical port is utilized by a Member or non-Member to connect to the Exchange at the data centers where the Exchange's servers are located. The Exchange currently assesses the following physical connectivity fees for Members and non-Members on a monthly basis: $2,500 per physical port for a 1 gigabit (''Gb'') circuit and $7,500 per physical port for a 10 Gb circuit. The Exchange proposes to increase the monthly fee for 10 Gb physical ports from $7,500 to $8,500 per port. The Exchange notes the proposed fee change better enables it to continue to maintain and improve its market technology and services and also notes that the proposed fee amount, even as amended, continues to be in line with, or even lower than, amounts assessed by other exchanges for similar connections.[4] The Exchange also notes that a single 10 Gb physical port can be used to access the Systems of the following Affiliate Exchanges: the Cboe BYX Exchange, Inc. (equities), and Cboe EDGX Exchange, Inc. (options and equities platforms), Cboe EDGA Exchange, Inc. (''Affiliate Exchanges'').[5] Notably, only one monthly fee currently (and will continue) to apply per 10 Gb physical port regardless of how many Affiliate Exchanges are accessed through that one port.[6]

2. Statutory Basis

The Exchange believes the proposed rule change is consistent with the Securities Exchange Act of 1934 (the ''Act'') and the rules and regulations thereunder applicable to the Exchange and, in particular, the requirements of Section 6(b) of the Act.[7] Specifically, the Exchange believes the proposed rule change is consistent with the Section 6(b)(5)[8] requirements that the rules of an exchange be designed to prevent fraudulent and manipulative acts and practices, to promote just and equitable principles of trade, to foster cooperation and coordination with persons engaged in regulating, clearing, settling, processing information with respect to, and facilitating transactions in securities, to remove impediments to and perfect the mechanism of a free and open market and a national market system, and, in general, to protect investors and the public interest. Additionally, the Exchange believes the proposed rule change is consistent with the Section 6(b)(5)[9] requirement that the rules of an exchange not be designed to permit unfair discrimination between customers, issuers, brokers, or dealers. The Exchange also believes the proposed rule change is consistent with Section 6(b)(4)[10] of the Act, which requires that Exchange rules provide for the equitable allocation of reasonable dues, fees, and other charges among its Members and other persons using its facilities. This belief is based on various factors as described below.

The Exchange believes the proposed fees are reasonable as they are lower than, the amounts assessed by equities exchanges for analogous market access connections and which were similarly adopted via the rule filing process and filed with the Commission. The Exchange further notes that other the exchanges that offer similar pricing for similar or the same connections have a comparable, or even lower, market share as the Exchange, as detailed further below. Indeed, the Exchange has reviewed the U.S. options market share[11] for each of the eighteen options markets utilizing total contracts traded in 2025 through July 2, 2025, as set forth in the following graph:

[3] The Exchange initially filed the proposed fee changes on July 3, 2023 (SR–C2–2023–014). On September 1, 2023, the Exchange withdrew that filing and submitted SR–C2–2023–020. On September 29, 2023, the Securities and Exchange Commission issued a Suspension of and Order Instituting Proceedings to Determine whether to Approve or Disapprove a Proposed Rule Change to Amend its Fees Schedule Related to Physical Port Fees (the ''OIP'') in anticipation of a possible U.S. government shutdown.''). On September 29, 2023, the Exchange filed the proposed fee change (SR–C2–2023–021). On October 13, 2023, the Exchange withdrew that filing and submitted SR–C2–2023–022. On December 12, 2023, the Exchange withdrew that filing and submitted SR–C2–2023–025. On February 9, 2024, the Exchange withdrew that filing and submitted SR–C2–2024–004. On April 9, 2024, the Exchange withdrew that filing and submitted SR–C2–2024–005. On June 7, 2024 the Exchange withdrew that filing and submitted SR–C2–2024–010. On August 29, 2024, the Exchange withdrew that filing and submitted SR–C2–2024–015. On October 25, 2024, the Exchange withdrew that filing and submitted SR–C2–2024–019. On October 28, 2024, the Exchange withdrew that filing and submitted SR–C2–2024–020. On December 18, 2024 the Exchange withdrew that filing and submitted SR–C2–2024–023. On February 14, 2025, the Exchange withdrew that filing and submitted SR–C2–2025–004. On March 13, 2025, the Exchange withdrew that filing and submitted SR–C2–2025–006. On May 9, 2025, the Exchange withdrew that filing and submitted SR–C2–2025–010. On July 7, 2025, the Exchange withdrew that filing and submitted SR–C2–2025–014. On July 17, 2025 the Exchange withdrew that filing and submitted SR–C2–2025–017. On July 29, 2025, the Exchange withdrew that filing and submitted this filing.

[4] *See e.g.*, The Nasdaq Stock Market LLC (''Nasdaq''), General 8, Connectivity to the Exchange. Nasdaq and its affiliated exchanges charge a monthly fee of $16,500 for each 10Gb Ultra fiber connection to the respective exchange. *See also* New York Stock Exchange LLC, NYSE American LLC, NYSE Arca, Inc., NYSE Chicago Inc., NYSE National, Inc. Connectivity Fee Schedule, which provides that 10 Gb LX LCN Circuits (which are analogous to the Exchange's 10 Gb physical port) are assessed $22,000 per month, per port.

[5] The Affiliate Exchanges are also submitting contemporaneous identical rule filings.

[6] The Exchange notes that conversely, other exchange groups charge separate port fees for access to separate, but affiliated, exchanges. *See e.g.,* Securities and Exchange Release No. 99822 (March 21, 2024), 89 FR 21337 (March 27, 2024) (SR–MIAX–2024–016).

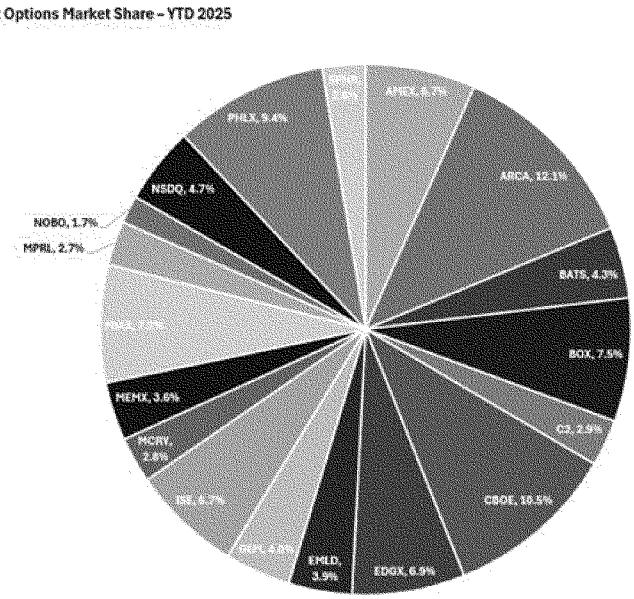
[7] 15 U.S.C. 78f(b).

[8] 15 U.S.C. 78f(b)(5).

[9] *Id.*

[10] 15 U.S.C. 78f(b)(4).

[11] Market share is the percentage of volume on a particular exchange relative to the total volume across all exchanges and indicates the amount of order flow directed to that exchange. High levels of market share enhance the value of trading and ports.



More specifically, the Exchange notes that the proposed physical port fee of $8500 per month, per physical port, is comparable to fees charged by other exchanges with similar, or greater, market share. These comparisons are summarized in Table 1:

TABLE 1

Exchange	Market share (%)	Monthly fee per port
C2	2.9	Proposed $8,500 for each 10 Gb Physical Port Connection.
MIAX Options	7.2	$13,500 per port.
MIAX Pearl	2.7	13,500 per port.
MIAX Emerald	3.9	13,500 per port.
MIAX Sapphire	2.6	13,500 per port.

Specifically, the Exchange points towards the equivalent offering from MIAX Sapphire [12] and its affiliated options exchanges, MIAX Options,[13] MIAX Pearl [14] and MIAX Emerald [15] (collectively, ''MIAX Exchanges'') which is $13,500 per port per month. The Exchange reiterates that a single physical port offering from the Exchange offers the ability to connect to the Affiliate Exchanges (equities and options) and the monthly price does not change based on the number of exchanges a participant is connected to. In this case, examining only the Exchange and its options Affiliate Exchanges, (even though the same physical port could also connect to the Exchange's equities Affiliate Exchanges) a participant could purchase a single physical port from the Exchange and access roughly 14% of the U.S. options market for a cost of $8,500. In contrast, if a participant desired to access all MIAX Exchanges, allowing access to roughly 16% of the U.S. options market, it would cost that participant $54,000 ($13,500 per port per month × 4 MIAX Exchanges).

In addition, as demonstrated in the Mutli-List Market Share Chart (above), the Exchange believes its proposal is reasonable as it reflects a moderate increase in physical connectivity fees for 10 Gb physical ports and its offering. As amended, the Exchange's proposed fee continues to be more affordable as compared to analogous physical connectivity offerings at competitor exchanges. For example, The Nasdaq Stock Market LLC (''Nasdaq'') and its affiliated exchanges charge a monthly fee of $16,500 for each 10Gbps Ultra fiber connection and $11,000 per month for each 10 Gbps fiber connection to their respective exchange. The Exchange's proposed fee of $8,500 per physical port is lower than both of these offerings.

B. Self-Regulatory Organization's Statement on Burden on Competition

The Exchange does not believe that the proposed rule change will impose any burden on competition that is not necessary or appropriate in furtherance of the purposes of the Act. The proposed fee change will not impact intramarket competition because it will apply to all similarly situated Members equally (*i.e.,* all market participants that choose to purchase the 10 Gb physical port). Additionally, the Exchange does not believe its proposed pricing will impose a barrier to entry to smaller participants and notes that its proposed connectivity pricing is associated with relative usage of the various market participants. For example, market participants with modest capacity needs can continue to buy the less expensive 1 Gb physical port (which cost is not changing) or may choose to obtain access via a third-party re-seller. While pricing may be increased for the larger

[12] *See* MIAX Sapphire Options Fee Schedule, available at: *https://www.miaxglobal.com/alert/2024/08/08/miax-sapphire-options-exchange-august-12-2024-fees.*

[13] *See* MIAX Options Fee Schedule, available at: *https://www.miaxglobal.com/markets/us-options/miax-options/fees.*

[14] *See* MIAX Pearl Options Fee Schedule, available at: *https://www.miaxglobal.com/markets/us-options/pearl-options/fees.*

[15] *See* MIAX Emerald Options Fee Scheduled, available at: *https://www.miaxglobal.com//us-options/emerald-options/fees.*

capacity physical ports, such options provide far more capacity and are purchased by those that consume more resources from the network. Accordingly, the proposed connectivity fees do not favor certain categories of market participants in a manner that would impose a burden on competition; rather, the allocation reflects the network resources consumed by the various size of market participants—lowest bandwidth consuming members pay the least, and highest bandwidth consuming members pays the most.

The proposed fee change also does not impose a burden on competition or on other Self-Regulatory Organizations that is not necessary or appropriate. As described above, in establishing its proposed fee change the Exchange compared its proposed fee increase to that of competitor exchanges' analogous offerings. As noted above, the proposed fee of $8500 is less than that of Nasdaq Stock Market, LLC's and its affiliated exchanges fee $16,500 for each 10Gbps Ultra fiber connection and $11,000 per month for each 10 Gbps fiber connection to their respective exchange.

Moreover, the Exchange also points towards the equivalent offering from MIAX Saphire and its affiliated options exchanges, MIAX Options, MIAX Pearl and MIAX Emerald (collectively, ''MIAX Exchanges'') which is $13,500 per port per month. The Exchange reiterates that a single physical port offering from the Exchange offers the ability to connect to the Affiliated Exchanges (equities and options) and the monthly price does not change based on the number of exchanges a participant is connected to. In this case, examining only the Exchange and its options Affiliate Exchanges, (even though the same physical port could also connect to the Exchange's equities Affiliate Exchanges) a participant could purchase a single physical port from the Exchange and access roughly 14% of the U.S. options market for a cost of $8,500. In contrast, if a participant desired to access all MIAX Exchanges, allowing access to roughly 16% of the U.S. options market, it would cost that participant $54,000 ($13,500 per port per month × 4 MIAX Exchanges).

C. Self-Regulatory Organization's Statement on Comments on the Proposed Rule Change Received From Members, Participants, or Others

The Exchange neither solicited nor received comments on the proposed rule change.

III. Date of Effectiveness of the Proposed Rule Change and Timing for Commission Action

The foregoing rule change has become effective pursuant to Section 19(b)(3)(A) of the Act [16] and paragraph (f) of Rule 19b–4 [17] thereunder. At any time within 60 days of the filing of the proposed rule change, the Commission summarily may temporarily suspend such rule change if it appears to the Commission that such action is necessary or appropriate in the public interest, for the protection of investors, or otherwise in furtherance of the purposes of the Act. If the Commission takes such action, the Commission will institute proceedings to determine whether the proposed rule change should be approved or disapproved.

IV. Solicitation of Comments

Interested persons are invited to submit written data, views and arguments concerning the foregoing, including whether the proposed rule change is consistent with the Act. Comments may be submitted by any of the following methods:

Electronic Comments

- Use the Commission's internet comment form (*https://www.sec.gov/rules/sro.shtml*); or
- Send an email to *rule-comments@sec.gov.* Please include file number SR–C2–2025–019 on the subject line.

Paper Comments

- Send paper comments in triplicate to Secretary, Securities and Exchange Commission, 100 F Street NE, Washington, DC 20549–1090.

All submissions should refer to file number SR–C2–2025–019. This file number should be included on the subject line if email is used. To help the Commission process and review your comments more efficiently, please use only one method. The Commission will post all comments on the Commission's internet website (*https://www.sec.gov/rules/sro.shtml*). Copies of the filing will be available for inspection and copying at the principal office of the Exchange. Do not include personal identifiable information in submissions; you should submit only information that you wish to make available publicly. We may redact in part or withhold entirely from publication submitted material that is obscene or subject to copyright protection. All submissions should refer to file number SR–C2–2025–019 and should be submitted on or before August 25, 2025.

For the Commission, by the Division of Trading and Markets, pursuant to delegated authority.[18]

Sherry R. Haywood,

Assistant Secretary.

[FR Doc. 2025–14667 Filed 8–1–25; 8:45 am]

BILLING CODE 8011–01–P

SECURITIES AND EXCHANGE COMMISSION

[Release No. 34–103598; File No. SR–NYSEARCA–2025–54]

Self-Regulatory Organizations; NYSE Arca, Inc.; Notice of Filing of Proposed Rule Change for New Rule 8.201–E (Generic)

July 30, 2025.

Pursuant to Section 19(b)(1) [1] of the Securities Exchange Act of 1934 (''Act'') [2] and Rule 19b–4 thereunder,[3] notice is hereby given that, on July 30, 2025, NYSE Arca, Inc. (''NYSE Arca'' or the ''Exchange'') filed with the Securities and Exchange Commission (the ''Commission'') the proposed rule change as described in Items I, II, and III below, which Items have been prepared by the self-regulatory organization. The Commission is publishing this notice to solicit comments on the proposed rule change from interested persons.

I. Self-Regulatory Organization's Statement of the Terms of Substance of the Proposed Rule Change

The Exchange proposes new Rule 8.201–E (Generic) to permit the generic listing and trading of Commodity-Based Trust Shares that meet the requirements of such rule. The proposed rule change is available on the Exchange's website at *www.nyse.com* and at the principal office of the Exchange.

II. Self-Regulatory Organization's Statement of the Purpose of, and Statutory Basis for, the Proposed Rule Change

In its filing with the Commission, the self-regulatory organization included statements concerning the purpose of, and basis for, the proposed rule change and discussed any comments it received on the proposed rule change. The text of those statements may be examined at the places specified in Item IV below. The Exchange has prepared summaries, set forth in sections A, B, and C below, of the most significant parts of such statements.

[18] 17 CFR 200.30–3(a)(12).

[1] 15 U.S.C. 78s(b)(1).

[2] 15 U.S.C. 78a.

[3] 17 CFR 240.19b–4.

A. Self-Regulatory Organization's Statement of the Purpose of, and the Statutory Basis for, the Proposed Rule Change

1. Purpose

The Exchange proposes new Rule 8.201–E (Generic), which would permit the generic listing and trading of Commodity-Based Trust Shares that meet the requirements of the Rule. Current Rule 8.201–E would continue to provide for the listing and trading of series of Commodity-Based Trust Shares for which the Exchange would file separate proposals under Section 19(b) of the Act.[4] Consistent with other products that may currently list on the Exchange pursuant to generic listing standards (*e.g.,* Investment Company Units listed pursuant to Rule 5.2–E(j)(3), Managed Fund Shares listed pursuant to Rule 8.600–E, and ETF Shares listed pursuant to Rule 5.2–E(j)(8)), the Exchange proposes that Commodity-Based Trust Shares that meet the requirements of proposed Rule 8.201–E (Generic) would be permitted to be listed and traded on the Exchange without prior Commission approval order or notice of effectiveness pursuant to Section 19(b) of the Act.[5] The Exchange believes that the proposed generic listing standards for Commodity-Based Trust Shares would facilitate the efficient listing of such products by significantly reducing the time frame and costs associated with bringing these securities to market, which would in turn promote market competition among issuers of such products, to the benefit of the investing public.

Proposed Rule 8.201–E (Generic)

Proposed Rule 8.201–E(a) (Generic) would provide that the Exchange will consider for trading, whether by listing or pursuant to unlisted trading privileges, Commodity-Based Trust Shares that meet the criteria of this Rule and that the Exchange may list and/or trade Commodity-Based Trust Shares that meet the standards set forth in this Rule 8.201–E (Generic) pursuant to Rule 19b–4(e) under the Exchange Act. If a series of Commodity-Based Trust Shares listed pursuant to proposed Rule 8.201–E (Generic) does not satisfy these requirements, the Exchange may suspend trading in the shares and will initiate delisting proceedings pursuant to Rule 5.5–E(m).

Proposed Rule 8.201–E(b) (Generic) would provide that Rule 8.201–E (Generic) is applicable only to Commodity-Based Trust Shares listed pursuant to this Rule. Except to the extent inconsistent with this Rule, or unless the context otherwise requires, the provisions of the Bylaws and all other rules and procedures of the Board of Directors shall be applicable to the trading on the Exchange of such securities. Commodity-Based Trust Shares are included within the definition of ''security'' or ''securities'' as such terms are used in the Bvlaws and Rules of the Exchange and are subject to the Exchange's existing rules governing the trading of equity securities.

Proposed Rule 8.201–E(c) (Generic) would set forth definitions for purposes of Rule 8.201–E (Generic). Rule 8.201–E(c)(1) (Generic) would define Commodity-Based Trust Shares for purposes of Rule 8.201–E (Generic) as a security that:

- Is issued by a trust, limited liability company, partnership, or other similar entity (''Trust'') that, if applicable, is operated by a registered commodity pool operator pursuant to the Commodity Exchange Act, and is not registered as an investment company pursuant to the Investment Company Act of 1940, or series or class thereof (proposed Rule 8.201–E(c)(1)(i) (Generic));
- Is designed to reflect the performance of one or more reference assets or an index of reference assets, less expenses and other liabilities (proposed Rule 8.201–E(c)(1)(ii) (Generic));
- In order to reflect the performance as provided in (c)(1)(ii) above, is issued by a Trust that holds (A) one or more commodities or commodity-based assets as defined in (c)(3) below, and (B) in addition to such commodities or commodity-based assets, may hold securities, cash, and cash equivalents (proposed Rule 8.201–E(c)(1)(iii) (Generic));
- Is issued by a Trust in a specified aggregate minimum number in return for a deposit of (A) a specified quantity of the underlying commodities, commodity-based assets, securities, cash, and cash equivalents or (B) a cash amount with a value based on the next determined net asset value per Trust share (proposed Rule 8.201–E(c)(1)(iv) (Generic)); and
- When aggregated in the same specified minimum number, may be redeemed at a holder's request by a Trust which will deliver to the redeeming holder (A) the specified quantity of the-underlying commodities, commodity-based assets, securities, cash, and cash equivalents or (B) a cash amount with a value based on the next determined net asset value per Trust share (proposed Rule 8.201–E(c)(1)(v) (Generic)).

Proposed Rule 8.201–E(c)(2) (Generic) would define the term ''commodity'' to have the same meaning as set forth in Section 1a(9) of the Commodity Exchange Act.

Proposed Rule 8.201–E(c)(3) (Generic) would define the term ''commodity-based asset'' to mean commodity futures, commodity options, or commodity swaps.

Proposed Rule 8.201–E(c)(4) (Generic) would define the term ''cash equivalent.'' The Exchange proposes that ''cash equivalents'' would refer to short-term instruments with maturities of less than three months and include the following, as defined in proposed Rules 8.201–E(c)(4)(i) (Generic) through (vii) (Generic):

- U.S. Government securities, including bills, notes, and bonds differing as to maturity and rate of interest, which are either issued or guaranteed by the U.S. Treasury or by U.S. Government agencies or instrumentalities;
- Certificates of deposit issued against funds deposited in a bank or savings and loan association;
- Bankers' acceptances, which are short-term credit instruments used to finance commercial transactions;
- Repurchase agreements and reverse repurchase agreements;

[4] To further distinguish current Rule 8.201–E from proposed Rule 8.201–E (Generic) and promote clarity in Exchange rules, the Exchange proposes to add a parenthetical to the title of Rule 8.201–E to designate it as applicable to non-generically listed series of Commodity-Based Trust Shares. The Exchange also proposes non-substantive, conforming changes throughout current Rule 8.201–E to add references to its new title, Rule 8.201–E (Non-Generic), to ensure specificity and transparency in the rule text. The Exchange proposes to retain Rule 8.201–E (Non-Generic) to accommodate the existing products listed and traded under such rule that may not meet the requirements of proposed Rule 8.201–E (Generic), as well as to provide for the future listing and trading of products that do not meet the generic listing standards.

[5] Rule 19b–4(e)(1) provides that the listing and trading of a new derivative securities product by a self-regulatory organization (''SRO'') is not deemed a proposed rule change, pursuant to paragraph (c)(1) of Rule 19b–4, if the Commission has approved, pursuant to Section 19(b) of the Act, the SRO's trading rules, procedures and listing standards for the product class that would include the new derivative securities product and the SRO has a surveillance program for the product class. As contemplated by proposed Rule 8.201–E (Generic), the Exchange proposes to establish generic listing standards for Commodity-Based Trust Shares that meet the criteria of the rule. Commodity-Based Trust Shares listed under proposed Rule 8.201–E (Generic) would therefore not need a separate proposed rule change pursuant to Rule 19b–4 before they could be listed and traded on the Exchange. Rule 19b–4(e) requires an SRO seeking to rely on Rule 19b–4(e) to file Form 19b–4(e) with the Commission within 5 business days after commencement of trading a new derivative securities product that is not deemed to be a proposed rule change.

• Bank time deposits, which are monies kept on deposit with banks or savings and loan associations for a stated period of time at a fixed rate of interest;

• Commercial paper, which are short-term unsecured promissory notes; and

• Money market funds.

Proposed Rule 8.201–E(c)(5) (Generic) would define ''net asset value'' as an amount reflecting the current market value of the assets held by the Trust, less expenses and liabilities, used to periodically compute the current price for the purpose of creation and redemption of Trust shares.

Proposed Rule 8.201–E(c)(6) (Generic) would define ''designated contract market'' as a board of trade or exchange that has been designated as a contract market under Section 5 of the Commodity Exchange Act and operates under the regulatory oversight of the Commodity Futures Trading Commission, pursuant to Section 5 of the Commodity Exchange Act.

Proposed Rule 8.201–E(c)(7) (Generic) would define ''exchange-traded fund'' as an open-end management investment company or a unit investment trust as defined in Section 4(2) of the Investment Company Act of 1940 or series or class thereof, the shares of which are listed and traded on a national securities exchange, and that has formed and operates under an exemptive order under the Investment Company Act of 1940 or in reliance on an exemptive rule adopted by the Securities and Exchange Commission.

Proposed Rule 8.201–E(c)(8) (Generic) would define ''indicative trust value'' as the estimated indicative value of a Trust share based on current information regarding the value of the Trust's underlying assets.

Proposed Rule 8.201–E(c)(9) (Generic) would define ''market price'' as the official closing price of a Trust share or, if it more accurately reflects the market value of a Trust share at the time as of which the Trust calculates current net asset value per share, the price that is the midpoint between the national best bid and national best offer as of that time.

Proposed Rule 8.201–E(c)(10) (Generic) would define ''premium or discount'' as the positive or negative difference between the market price of a Trust share at the time as of which the current net asset value is calculated and the Trust's current net asset value per share, expressed as a percentage of the Trust share's current net asset value per share.

Proposed Rule 8.201–E(d) (Generic) would set forth the eligibility criteria for the holdings of Commodity-Based Trust Shares listed pursuant to Rule 8.201–E (Generic). Proposed Rule 8.201–E(d)(1) (Generic) would provide for the following criteria, at least one of which must be met for each commodity or commodity that underlies a commodity-based asset held by a Trust:

• On an initial and continuing basis, the commodity trades on a market that is an Intermarket Surveillance Group (''ISG'') member, provided that the Exchange may obtain information about trading in such commodity from the ISG member (proposed Rule 8.201–E(d)(1)(i) (Generic));

• On an initial and continuing basis, the commodity underlies a futures contract that has been made available to trade on a designated contract market for at least six months; provided that the Exchange has a comprehensive surveillance sharing agreement, whether directly or through common membership in ISG, with such designated contract market (proposed Rule 8.201–E(d)(1)(ii) (Generic)); or

• On an initial basis, an exchange-traded fund designed to provide economic exposure of no less than 40% of its net asset value to the commodity lists and trades on a national securities exchange (proposed Rule 8.201–E(d)(1)(iii) (Generic)).

Proposed Rule 8.201–E(d)(2) (Generic) would provide that, on an initial and continuing basis, each security held by the Trust shall meet the criteria of Rule 8.600–E (Managed Fund Shares), Commentary .01(a) and (b) or, if the security is a listed option, trades on an ISG market.

Proposed Rule 8.201–E(e) (Generic) would set forth the information that the Trust must disclose prominently on its website, which must be publicly available free of charge:

• Before the opening of regular trading on the Exchange, for the Trust's commodities, commodity-based assets, securities, cash and cash equivalent, to the extent applicable: (i) ticker symbol; (ii) identifier; (iii) description of the holding; (iv) the quantity of each commodity, commodity-based asset, security, cash, and cash equivalents held; and (v) percentage weighting of the Trust's assets (proposed Rule 8.201–E(e)(1) (Generic) and subparagraphs (i) through (v) thereunder);

• The Trust's current net asset value per share, market price, and premium or discount, each as of the end of the prior business day (proposed Rule 8.201–E(e)(2) (Generic));

• A table showing the number of days the Trust's shares traded at a premium or discount during the most recently completed calendar year and the most recently completed calendar quarters since that year (or the life of the Trust, if shorter) (proposed Rule 8.201–E(e)(3) (Generic));

• A line graph showing the Trust share's premiums or discounts for the most recently completed calendar year and the most recently completed calendar quarters since that year (or the life of the Trust, if shorter) (proposed Rule 8.201–E(e)(4) (Generic));

• The Trust share's median-ask spread, expressed as a percentage rounded to the nearest hundredth, computed by: (i) identifying the Trust share's national best bid and national best offer as of the end of each 10 second interval during each trading day of the last 30 calendar days; (ii) dividing the difference between each such bid and offer by the midpoint of the national best bid and national best offer; and (iii) identifying the median of those values (proposed Rule 8.201–E(e)(5) (Generic));

• Liquidity risk policies and procedures as described in paragraph (g) of proposed Rule 8.201–E (Generic) (proposed Rule 8.201–E(e)(6) (Generic));

• The Trust's methodology for the calculation of its net asset value (proposed Rule 8.201–E(e)(7) (Generic));

• The Trust's trading volume for the previous day (proposed Rule 8.201–E(e)(8) (Generic)); and

• The Trust's effective prospectus, in a form available for download (proposed Rule 8.201–E(e)(9) (Generic)).

Proposed Rule 8.201–E(f) (Generic) would provide that the Trust may not seek, directly or indirectly, to provide investment returns that correspond to the performance of an index, benchmark, or reference value by a specified multiple, or to provide investment returns that have an inverse or multiple inverse relationship to the performance of an index, benchmark, or reference value, over a predetermined period of time.

Proposed Rule 8.201–E(g) (Generic) would provide that, if a Trust has on a daily basis less than 85% of its assets readily available to meet redemption requests, the Trust must have written liquidity risk policies and procedures that address the risk that it could not meet requests to redeem shares issued by the Trust without significant dilution of remaining shareholders' interest in the Trust.[6] For purposes of this Rule, an

[6] The Exchange notes that proposed Rule 8.201–E(g) (Generic) is intended to, for example, allow a Trust issuing Commodity-Based Trust Shares to engage in protocol staking, in accordance with guidance issued by Commission staff, of the commodity(ies) held by the Trust, if applicable. *See https://www.sec.gov/newsroom/speeches-statements/statement-certain-protocol-staking-activities-052925.*

asset is deemed not readily available to meet redemption requests if it is segregated, pledged, hypothecated, encumbered, or otherwise restricted or prevented from being liquidated, sold, transferred, or assigned within one business day. Rule 8.201–E(g) (Generic) would further provide that the Trust's liquidity risk policies and procedures will be periodically reviewed by the Trust (at least annually) and address the following criteria, as applicable:

- The Trust's investment strategy and liquidity of the Trust's assets during normal and stressed conditions, including use of derivatives and whether the investment strategy is appropriate for effective and efficient arbitrage (proposed Rule 8.201–E(g)(1) (Generic));
- Holdings of cash and cash equivalents, as well as borrowing arrangements and other funding sources (proposed Rule 8.201–E(g)(2) (Generic)); and
- Percentage and description of the Trust's assets that are segregated, pledged, hypothecated, encumbered, or otherwise restricted or prevented from being liquidated, sold, transferred or assigned (proposed Rule 8.201–E(g)(3) (Generic)).[7]

Proposed Rule 8.201–E(h) (Generic) would provide that Commodity-Based Trust Shares may be listed and traded on the Exchange pursuant to Rule 8.201–E (Generic) provided that, upon initial listing, the Exchange will establish a minimum number of Commodity-Based Trust Shares required to be outstanding at the time of commencement of trading on the Exchange, and all Commodity-Based Trust Shares shall have a stated investment objective, which shall be adhered to under normal market conditions.

Proposed Rule 8.201–E(i) (Generic) would provide for continued listing standards for Commodity-Based Trust Shares listed pursuant to Rule 8.201–E (Generic). The Exchange will maintain surveillance procedures for Commodity-Based Trust Shares listed under Rule 8.201–E (Generic) and will consider the suspension of trading in and the delisting of such Trust shares under any of the following circumstances:

- If, following the initial twelve-month period following commencement of trading on the Exchange of Commodity-Based Trust Shares, the Trust has more than 60 days remaining until termination and there are fewer than 50 record and/or beneficial holders of Commodity-Based Trust Shares (proposed Rule 8.201–E(i)(1) (Generic)); or
- If, following the initial twelve-month period following commencement of trading on the Exchange of Commodity-Based Trust Shares, the Trust has fewer than 50,000 shares issued and outstanding (proposed Rule 8.201–E(i)(2) (Generic)); or
- If, following the initial twelve-month period following commencement of trading on the Exchange of Commodity-Based Trust Shares, the market value of all shares issued and outstanding is less than $1,000,000 (proposed Rule 8.201–E(i)(3) (Generic)); or
- If the value of the underlying reference asset(s) or index is no longer calculated or made widely available on at least a 15-second basis from a source unaffiliated with the sponsor or the Trust (proposed Rule 8.201–E(i)(4) (Generic));
- If the Indicative Trust Value is no longer calculated or made widely available to all market participants at the same time on at least a 15-second basis during the Core Trading Session (proposed Rule 8.201–E(i)(5) (Generic));
- If the net asset value is not calculated at least once daily or made widely available to all market participants at the same time (proposed Rule 8.201–E(i)(6) (Generic));
- If the information as set forth in this Rule 8.201–E is no longer being disclosed in accordance with the requirement of paragraph (e) above (proposed Rule 8.201–E(i)(7) (Generic));
- If any of the other continued listing requirements set forth in this Rule are not continuously maintained (proposed Rule 8.201–E(i)(8) (Generic));
- If the Exchange submits a rule filing pursuant to Section 19(b) of the Securities Exchange Act of 1934 to permit the listing and trading of a series of Commodity-Based Trust Shares that do not otherwise meet the standards set forth in this Rule and any of the statements or representations regarding (a) the description of the index, portfolio, or reference asset, (b) limitations on the index, portfolio holdings, or reference assets, or (c) the applicability of Exchange listing rules specified in such rule filing are not continuously maintained; or if such other event shall occur or condition exists which in the opinion of the Exchange makes further dealings on the Exchange inadvisable (proposed Rule 8.201–E(i)(9) (Generic));
- Upon termination of a Trust, the Exchange requires that Commodity-Based Trust Shares issued in connection with such Trust be removed from Exchange listing. A Trust may terminate in accordance with the provisions of the Trust prospectus, which may provide for termination if the value of the Trust falls below a specified amount (proposed Rule 8.201–E(i)(10) (Generic)).

Rule 8.201–E(j) (Generic) would set forth requirements applicable to Commodity-Based Trust Shares issued by an entity structured as a trust, on an initial and continuing basis. Proposed Rule 8.201–E(j)(1) (Generic) would require that the stated term of the trust be as stated in the trust prospectus, provided that a trust may be terminated under such earlier circumstances as may be specified in the trust prospectus. Proposed Rule 8.201–E(j)(2) (Generic) would set forth requirements that apply to the trustee of a trust. Proposed Rule 8.201–E(j)(2)(i) (Generic) would require that the trustee of a trust must be a trust company or banking institution having substantial capital and surplus and the experience and facilities for handling corporate trust business and that, if an individual has been appointed as trustee, a qualified trust company or banking institution must be appointed co-trustee. Proposed Rule 8.201–E(j)(2)(ii) (Generic) would provide that no change is to be made in the trustee of a listed issue without prior notice to and approval of the Exchange. Proposed Rule 8.201–E(j)(3) (Generic) would provide that voting rights will be as set forth in the applicable trust prospectus. Proposed Rule 8.201–E(j) (Generic) and the subparagraphs thereunder are based on current Rule 8.201–E(e)(3) through (5) without any substantive changes.

Rule 8.201–E(k) (Generic) would provide that an issuer of Commodity-Based Trust Shares must promptly notify the Exchange of any non-compliance with any of the applicable continued listing standards set forth in Rule 8.201–E (Generic).

Rule 8.201–E(l) (Generic) would set forth rules relating to trading halts. Proposed Rule 8.201–E(l)(1) (Generic) would provide that the Exchange may halt trading during the day in which the interruption to the following occurs: (i) the value of the underlying reference asset(s) or index is not made widely available on at least a 15-second basis from a source unaffiliated with the sponsor or the Trust; (ii) the Indicative Trust Value is not made widely available to all market participants at the same time on at least a 15-second basis during the Core Trading Session; or (iii) the information required by proposed Rule 8.201–E(e) (Generic) to be publicly disclosed on a Trust's

[7] For example, for crypto-based series of Commodity-Based Trust Shares with protocol staked assets, the liquidity risk policies and procedures would describe the asset(s) staked and the percentage of such asset(s) subject to protocol staking.

website, free of charge, is not being disclosed in that manner. If the interruption persists past the trading day in which it occurred, the Exchange will halt trading no later than the beginning of the trading day following the interruption. If Commodity-Based Trust Shares are trading on the Exchange pursuant to unlisted trading privileges, the Exchange will halt trading as specified in Rule 7.34–E(a). Proposed Rule 8.201–E(l)(2) (Generic) would provide that, if the Exchange becomes aware that the net asset value is not disseminated to all the market participants at the same time, it will halt trading in the Commodity-Based Trust Shares until such time as the net asset value is available to all market participants. Finally, proposed Rule 8.201–E(l)(3) (Generic) would provide that the Exchange also may halt trading because of market conditions or for reasons that, in the view of the Exchange, make trading in the Shares inadvisable.

Proposed Rule 8.201–E(m) (Generic) would set forth rules related to Market Maker accounts. An ETP Holder acting as a registered Market Maker in Commodity-Based Trust Shares listed pursuant to Rule 8.201–E (Generic) must file with the Exchange in a manner prescribed by the Exchange and keep current a list identifying all accounts for trading in each underlying commodity and commodity-based asset which the Market Maker may have or over which it may exercise investment discretion. If an ETP Holder is acting as a registered Market Maker in Commodity-Based Trust Shares that have exposure to, but do not, consistent with the definition of Commodity-Based Trust Shares in this Rule 8.201–E (Generic), hold one or more non-U.S. currencies (''Underlying FX''), such Market Maker also must file with the Exchange, in a manner prescribed by the Exchange, and keep current a list identifying all accounts for trading in Underlying FX and derivatives overlying Underlying FX which the Market Maker may have or over which it may exercise investment discretion, as well as a list of all commodity and commodity-related accounts referenced above. No Market Maker in Commodity-Based Trust Shares shall trade in a commodity, commodity-based asset, Underlying FX, or any related derivative thereon in an account that the Market Maker (1) directly or indirectly controls trading activities or has direct interest in the profits or losses thereof, (2) is required by this rule to disclose to the Exchange, and (3) has not reported to the Exchange. In addition to the existing obligations under Exchange rules regarding the production of books and records, the ETP Holder acting as a Market Maker in Commodity-Based Trust Shares shall make available to the Exchange such books, records or other information pertaining to transactions by such entity or registered or non-registered employee affiliated with such entity for its or their own accounts for trading the underlying commodity or commodity-based asset, applicable Underlying FX, or applicable derivatives of each of the foregoing, as may be requested by the Exchange. Proposed Rule 8.201–E(m) (Generic) is based on current Rule 8.201–E(g) without any substantive changes.

Proposed Rule 8.201–E(n) (Generic) would provide for the establishment of firewalls. Specifically, proposed Rule 8.201–E(n)(1) (Generic) would provide that, if the value of a Commodity-Based Trust Share listed pursuant to Rule 8.201–E (Generic) is based in whole or in part on an index that is maintained by a broker-dealer, the broker-dealer shall erect and maintain a ''firewall'' around the personnel responsible for the maintenance of such index or who have access to information concerning changes and adjustments to the index. Proposed Rule 8.201–E(n)(2) (Generic) would provide that any advisory committee, supervisory board, or similar entity that advises an index licensor or administrator or that makes decisions regarding the index composition methodology, and related matters must implement and maintain, or be subject to, procedures designed to prevent the use and dissemination of material, non-public information regarding the applicable index. Proposed Rule 8.201–E(n)(3) (Generic) would provide that, if the Trust is affiliated with any entity that has the ability to influence the price or supply of a commodity, or a commodity underlying a commodity-based asset, held by the Trust, the Trust shall (i) implement and maintain a ''firewall'' between any such entity and the Trust, (ii) have written policies and procedures designed to prevent the use and dissemination of material, non-public information regarding the Trust; and (iii) have written policies and procedures designed to prevent fraudulent, deceptive or manipulative acts, practices, or courses of business with respect to the Trust and such commodity.

Proposed Rule 8.201–E(o) would set forth rules relating to the limitation of Exchange liability. Neither the Exchange nor any agent of the Exchange shall have any liability for damages, claims, losses or expenses caused by any errors, omissions, or delays in calculating or disseminating any underlying commodity value, the current value of the underlying commodity required to be deposited to the Trust in connection with issuance of Commodity-Based Trust Shares pursuant to Rule 8.201–E (Generic); resulting from any negligent act or omission by the Exchange, or any agent of the Exchange, or any act, condition or cause beyond the reasonable control of the Exchange, its agent, including, but not limited to, an act of God; fire; flood; extraordinary weather conditions; war; insurrection; riot; strike; accident; action of government; communications or power failure; equipment or software malfunction; or any error, omission or delay in the reports of transactions in an underlying commodity. Proposed Rule 8.201–E(o) (Generic) is based on current Rule 8.201–E(f) without any substantive changes.

Finally, the Exchange proposes Commentary to Rule 8.201–E (Generic) as follows. Proposed Commentary .01 would provide that the Exchange requires that ETP Holders provide all purchasers of newly issued Commodity-Based Trust Shares a prospectus for the series of Commodity-Based Trust Shares. Proposed Commentary .01 is based on current Rule 8.201–E, Commentary .02 without any changes. Proposed Commentary .02 would provide that transactions in Commodity-Based Trust Shares will occur during the trading hours specified in NYSE Arca Rule 7.34–E. Proposed Commentary .02 is based on current Rule 8.201–E, Commentary .03 without any changes.

Proposed Conforming Changes

The Exchange proposes conforming changes to Rule 5.3–O, which sets forth criteria applicable to underlying securities with respect to which put or call option contracts are approved for listing and trading on the Exchange, and Rule 5.2–E(j)(6), which sets forth listing criteria for Equity Index-Linked Securities, Commodity-Linked Securities, Currency Linked Securities, Fixed Income Index-Linked Securities, Futures-Linked Securities, and Multifactor Index-Linked Securities. Rule 5.3–O(j)(1)(B) defines Commodity-Linked Securities as securities that provide for the payment at maturity of a cash amount based on the performance or the leveraged (multiple or inverse) performance of one or more physical commodities or commodity futures, options on commodities, or other commodity derivatives or Commodity-Based Trust Shares or a basket or index of any of the foregoing. Rule 5.2–E(j)(6) similarly provides that

Commodity-Linked Securities provide for payment at maturity based on the performance of one or more physical commodities or commodity futures, options or other commodity derivatives or Commodity-Based Trust Shares (as defined in NYSE Arca Rule 8.201–E) or a basket or index of any of the foregoing. The Exchange proposes, in both rules, to specify that the reference to Commodity-Based Trust Shares is as defined in NYSE Arca Rule 8.201–E (Non-Generic) or Rule 8.201–E (Generic) to ensure that these rules accommodate Commodity-Based Trust Shares listed pursuant to either rule.

The Exchange also proposes conforming changes to Rules 5.3–E and 5.3–E(e), which set forth requirements related to corporate governance and disclosure policies and shareholder/annual meetings, respectively. The Exchange proposes to amend Rule 5.3–E to include Commodity-Based Trust Shares listed pursuant to Rule 8.201–E (Generic) among the derivative or special purpose securities that are subject to a limited set of corporate governance and disclosure policies and to update the reference to current Rule 8.201–E to be to Rule 8.201–E (Non-Generic). The Exchange likewise proposes to amend Rule 5.3–E(e) to include Commodity-Based Trust Shares listed pursuant to Rule 8.201–E (Generic) among the derivative or special purpose securities to which the requirements concerning shareholder/annual meetings do not apply and to update the title of current Rule 8.201–E to be Rule 8.201–E (Non-Generic).

2. Statutory Basis

The proposed rule change is consistent with Section 6(b) of the Act,[8] in general, and furthers the objectives of Section 6(b)(5),[9] in particular, because it is designed to prevent fraudulent and manipulative acts and practices, to promote just and equitable principles of trade, to foster cooperation and coordination with persons engaged in facilitating transactions in securities, to remove impediments to, and perfect the mechanism of, a free and open market and a national market system and, in general, to protect investors and the public interest.

The Exchange believes proposed Rule 8.201–E (Generic) would promote just and equitable principles of trade, remove impediments to, and perfect the mechanism of, a free and open market and a national market system, and protect investors and the public interest by establishing generic standards for listing and trading of Commodity-Based Trust Shares. Proposed Rule 8.201–E (Generic) would allow Commodity-Based Trust Shares that meet the requirements of the Rule to be listed and traded on the Exchange without prior Commission approval order or notice of effectiveness pursuant to Section 19(b) of the Act. Accordingly, the proposed rule change would promote just and equitable principles of trade, remove impediments to, and perfect the mechanism of, a free and open market and a national market system, and protect investors and the public interest because it would facilitate efficient procedures for listing series of Commodity-Based Trust Shares that meet the requirements of proposed Rule 8.201–E (Generic), thereby reducing the time, resources, and costs associated with bringing new series of Commodity-Based Trust Shares to market and promoting competition among issuers of such products, to the benefit of the market participants. In addition, the Exchange believes that the proposed rule change would further the intended objective of Rule 19b–4(e) under the Act by permitting Commodity-Based Trust Shares that satisfy the proposed listing standards in proposed Rule 8.201–E (Generic) to be listed and traded without separate Commission approval.

To be listed under proposed Rule 8.201–E (Generic), each series of Commodity-Based Trust Shares must satisfy the requirements of the Rule upon initial listing and on a continuing basis. An issuer of Commodity-Based Trust Shares must notify the Exchange of any failure to comply with such requirements, as provided in proposed Rule 8.201–E(k) (Generic). As provided in proposed Rule 8.201–E(i), the Exchange will maintain surveillance procedures for securities listed under proposed Rule 8.201–E (Generic) and will consider the suspension of trading in and the delisting of series of Commodity-Based Trust Shares if an issuer of such Trust shares notifies the Exchange that it is out of compliance with any of the applicable continued listing standards set forth in proposed Rule 8.201–E(i) (Generic), or if such other event shall occur or condition exists which, in the opinion of the Exchange, makes further dealings on the Exchange inadvisable. The Exchange believes that this proposed change would promote just and equitable principles of trade, remove impediments to, and perfect the mechanism of, a free and open market and a national market system, and protect investors and the public interest because it would allow the Exchange to consider the suspension of trading in and the delisting of Commodity-Based Trust Shares that do not meet the proposed continued listing requirements, which are substantially the same as the continued listing requirements for Rule 8.201–E (Non-Generic).

The Exchange further believes that the proposed rule change would remove impediments to, and perfect the mechanism of, a free and open market and a national market system and, in general, protect investors and the public interest because proposed Rule 8.201–E(c) (Generic) sets forth definitions for purposes of this Rule, thereby promoting clarity and specificity in the Exchange's rules, and proposed Rule 8.201–E(d) (Generic) sets forth specific eligibility criteria for the holdings of Commodity-Based Trust Shares listed pursuant to this Rule. Proposed Rule 8.201–E(c)(1)(iii) would provide that a Trust may hold, in addition to one or more commodities or commodity-based assets, securities, cash, and cash equivalents. The Exchange believes that the proposed eligibility criteria in Rule 8.201–E(d)(2) (Generic), which provides that a Trust may hold securities that meet the criteria of Rule 8.600–E, Commentary .01(a) and (b) or listed options that trade on an ISG market would remove impediments to, and perfect the mechanism of, a free and open market and a national market system and, in general, protect investors and the public interest by affording greater flexibility to a Trust issuing Commodity-Based Trust Shares, to the benefit of market participants. The Exchange believes that allowing a Trust to hold cash and cash equivalents would remove impediments to, and perfect the mechanism of, a free and open market and a national market system and, in general, protect investors and the public interest for the same reasons. The Exchange notes that Commentary .01(a) and (b) to Rule 8.600–E set forth certain generic listing requirements for Managed Fund Shares. In addition, to the extent a Trust holds listed options, the Exchange could obtain information regarding such securities from the ISG market on which they trade. The Exchange further notes that Rule 8.201–E (Non-Generic) similarly provides for cash holdings and that the proposed definition of ''cash equivalent'' in Rule 8.201–E(c)(4) (Generic) is substantially identical to the term as used in the generic listing standards for Rule 8.600–E for Managed Fund Shares.

The Exchange believes that the proposed eligibility criteria for the Commodity-Based Trust Shares

[8] 15 U.S.C. 78f(b).

[9] 15 U.S.C. 78f(b)(5).

holdings as set forth in proposed Rules 8.201–E(d)(1)(i) (Generic) through (iii) (Generic) are designed to prevent fraudulent and manipulative acts and practices because they are intended to ensure that the Exchange could obtain information about trading in each commodity or commodity that underlies a commodity-based asset held by a Trust. Specifically, proposed Rules 8.201–E(d)(1)(i) (Generic) through (iii) (Generic) provide that the Trust could hold a commodity or commodity that underlies a commodity-based asset if such commodity trades on a market that is an ISG member from which the Exchange may obtain information about trading in such commodity from the ISG member; if such commodity underlies a futures contract that has been available to trade on a designated contract market, with which the Exchange has a CSSA, for at least six months; or if economic exposure to such commodity represents at least 40% of the NAV of an exchange-traded fund that lists and trades on a national securities exchange. The Exchange believes the proposed rule change would prevent fraudulent and manipulative acts and practices, promote just and equitable principles of trade, remove impediments to, and perfect the mechanism of, a free and open market and a national market system and, in general, protect investors and the public interest because the Exchange's ability to obtain information regarding trading in the commodities or commodities underlying commodity-based assets held by a Trust issuing Commodity-Based Trust Shares would assist in monitoring trading in such shares on the Exchange and to deter and detect violations of Exchange rules and applicable federal securities laws. In addition, with respect to proposed Rule 8.201–E(d)(1)(iii), the Exchange believes that this proposed requirement would prevent fraudulent and manipulative acts and practices, promote just and equitable principles of trade, remove impediments to, and perfect the mechanism of, a free and open market and a national market system and, in general, protect investors and the public interest because it would allow a Trust to hold a commodity or commodity underlying a commodity-based asset where an existing exchange-traded fund that provides economically similar exposure has been permitted to list and trade on a national securities exchange, thereby promoting regulatory consistency with respect to products providing exposure to the same underlying commodities or commodities underlying commodity-based assets.

The Exchange has in place certain surveillance procedures that are adequate to properly monitor trading in Commodity-Based Trust Shares on the Exchange in all trading sessions and to deter and detect violations of Exchange rules and applicable federal securities laws applicable to the Shares of the Trust trading on the Exchange. The Exchange or the Financial Industry Regulatory Authority (''FINRA''), on behalf of the Exchange, or both, will communicate as needed regarding trading in the Shares with other markets that are members of the ISG, and the Exchange or FINRA, on behalf of the Exchange, or both, may obtain trading information regarding trading in Commodity-Based Trust Shares and underlying commodities or commodity-based assets from such markets. In addition, the Exchange may obtain information regarding trading in Commodity-Based Trust Shares from markets with which the Exchange has in place a CSSA. Also, pursuant to proposed Rule 8.201–E(m) (Generic), the Exchange is able to obtain information from ETP Holders acting as registered Market Makers regarding their trading (as principal or agent) in Commodity-Based Trust Shares and any underlying commodities or commodity-based assets.

Proposed Rule 8.201–E(e) (Generic) sets forth the information that must be disclosed on the website of each Trust that issues Commodity-Based Trust Shares pursuant to proposed Rule 8.201–E (Generic). The Exchange believes that this proposed change would remove impediments to, and perfect the mechanism of, a free and open market and a national market system, as well as protect investors and the public interest, by ensuring the public availability of information relevant to trading in Commodity-Based Trust Shares, such as information relating to a Trust's holdings, NAV, and effective prospectus. The information required by proposed Rule 8.201–E(e) (Generic) is consistent with that disclosed by products currently listed pursuant to Rule 8.201–E (Non-Generic).

Proposed Rule 8.201–E(f) (Generic) prohibits a Trust from seeking performance that is the multiple or inverse multiple of an index, benchmark, or reference value. The Exchange believes this proposed change would remove impediments to, and perfect the mechanism of, a free and open market and a national market system, and protect investors and the public interest by limiting Commodity-Based Trust Shares listed pursuant to the proposed generic listing standards from seeking leverage or inverse leverage, thereby mitigating potential risks uniquely associated with investments in leveraged or inverse leveraged products (*e.g.,* risk of amplified losses, decay risk due to frequent rebalancing) given that the shares would be listed and traded on the Exchange without a prior Commission approval order or notice of effectiveness pursuant to Section 19(b) of the Act.

The Exchange further believes that the proposed rule change is designed to remove impediments to, and perfect the mechanism of, a free and open market and a national market system, as well as to protect investors and the public interest, because proposed Rule 8.201–E(g) (Generic) requires that, if a Trust has on a daily basis less than 85% of its assets readily available to meet redemption requests, the Trust must maintain liquidity risk policies and procedures that address the risk that it could not meet requests to redeem shares issued by the Trust, including the percentage and description of the Trust's assets not readily available to satisfy redemption requests. Such policies and procedures would provide transparency to the investing public regarding risks associated with the Trust's potential inability to meet requests to redeem shares issued by the Trust without significant dilution of remaining shareholders' interest in the Trust. In addition, proposed Rule 8.201–E(n) (Generic), which would require the establishment of firewalls if, for example, the value of a Commodity-Based Trust Share is based in whole or in part on an index that is maintained by a broker-dealer or if a Trust is affiliated with any entity that has the ability to influence the price or supply of a commodity, or a commodity underlying a commodity-based asset, held by the Trust, would provide for protective measures to help mitigate against fraudulent and manipulative acts and practices and protect investors and the public interest.

Proposed Rule 8.201–E(1) (Generic) provides that the Exchange may halt trading in a series of Commodity-Based Trust Shares if (1) the value of a Trust's underlying reference asset(s) or index is not made widely available on at least a 15-second basis from a source unaffiliated with the sponsor or the Trust; (2) the Indicative Trust Value is not made widely available to all market participants at the same time on at least a 15-second basis during the Core Trading Session; (3) information is not being disclosed in accordance with the requirements of proposed Rule 8.201–E(e) (Generic); (4) the Exchange becomes aware that the NAV is not disseminated to all the market participants at the

same time; or (5) the Exchange believes that trading in the Shares would be inadvisable based on market conditions or other reasons. This proposed change would promote just and equitable principles of trade, remove impediments to, and perfect the mechanism of, a free and open market and a national market system, and protect investors and the public interest because trading in a series of Commodity-Based Trust Shares could be halted under circumstances where information relevant to trading in the shares is not available to market participants or in other such circumstances that, in the Exchange's view, make trading in the shares inadvisable.

The Exchange believes that proposed Rules 8.201–E(j) (Generic), 8.201–E(m) (Generic), 8.201–E(o) (Generic), and Commentary .01 and .02 to Rule 8.201–E (Generic) would remove impediments to, and perfect the mechanism of, a free and open market and a national market system, as well as protect investors and the public interest because they are based on existing provisions of Rule 8.201–E (Non-Generic) without any substantive changes and would promote consistency between the requirements of proposed Rule 8.201–E (Generic) and Rule 8.201–E (Non-Generic).

The Exchange believes that the proposed conforming changes to current Rule 8.201–E, Rule 5.3–O, Rule 5.2–E(j)(6), Rule 5.3–E, and Rule 5.3–E(e) would remove impediments to, and perfect the mechanism of, a free and open market and a national market system, as well as protect investors and the public interest, by promoting clarity and transparency in Exchange rules. The proposed changes to Rule 8.201–E (Non-Generic) do not reflect any substantive changes to the rule and are intended only to clearly distinguish between the requirements of current Rule 8.201–E, which would be renamed Rule 8.201–E (Non-Generic), and the requirements of proposed Rule 8.201–E (Generic). The proposed changes to Rule 5.3–O and 5.2–E(j)(6) are intended to clarify that references to Commodity-Based Trust Shares in those rules are intended to include Commodity-Based Trust Shares listed under either Rule 8.201–E (Non-Generic) or Rule 8.201–E (Generic). The Exchange also believes that the proposed addition of Commodity-Based Trust Shares listed pursuant to Rule 8.201–E (Generic) to the enumerated derivative and special purpose securities that are subject to the provisions of Rule 5.3–E (Corporate Governance and Disclosure Policies) and Rule 5.3–E(e) (Shareholder/Annual Meetings) would promote just and equitable principles of trade and remove impediments to and perfect the mechanism of a free and open market and a national market system by holding generically-listed Commodity Based Trust Shares to the same requirements currently applicable to other similar derivative and special purpose securities, including those listed pursuant to current Rule 8.201–E.

B. Self-Regulatory Organization's Statement on Burden on Competition

The Exchange does not believe that the proposed rule change will impose any burden on competition that is not necessary or appropriate in furtherance of the purposes of the Act. Instead, the Exchange believes that the proposed rule change would facilitate the listing and trading of Commodity-Based Trust Shares through an efficient process that would enhance competition among market participants, to the benefit of investors and the marketplace. The Exchange believes that the proposed generic listing standards in Rule 8.201–E (Generic) would reduce the timeframe for bringing additional series of Commodity-Based Trust Shares to market, thereby reducing the burdens on issuers and other market participants and promoting competition among issuers of such products.

C. Self-Regulatory Organization's Statement on Comments on the Proposed Rule Change Received From Members, Participants, or Others

No written comments were solicited or received with respect to the proposed rule change.

III. Date of Effectiveness of the Proposed Rule Change and Timing for Commission Action

Within 45 days of the date of publication of this notice in the **Federal Register** or within such longer period up to 90 days (i) as the Commission may designate if it finds such longer period to be appropriate and publishes its reasons for so finding or (ii) as to which the self-regulatory organization consents, the Commission will:

(A) by order approve or disapprove the proposed rule change, or

(B) institute proceedings to determine whether the proposed rule change should be disapproved.

IV. Solicitation of Comments

Interested persons are invited to submit written data, views and arguments concerning the foregoing, including whether the proposed rule change is consistent with the Act. Comments may be submitted by any of the following methods:

Electronic Comments

- Use the Commission's internet comment form (*https://www.sec.gov/rules/sro.shtml*); or
- Send an email to *rule-comments@sec.gov*. Please include file number SR–NYSEARCA–2025–54 on the subject line.

Paper Comments

- Send paper comments in triplicate to Secretary, Securities and Exchange Commission, 100 F Street NE, Washington, DC 20549–1090.

All submissions should refer to file number SR–NYSEARCA–2025–54. This file number should be included on the subject line if email is used. To help the Commission process and review your comments more efficiently, please use only one method. The Commission will post all comments on the Commission's internet website (*https://www.sec.gov/rules/sro.shtml*). Copies of the filing also will be available for inspection and copying at the principal office of the Exchange. Do not include personal identifiable information in submissions; you should submit only information that you wish to make available publicly. We may redact in part or withhold entirely from publication submitted material that is obscene or subject to copyright protection. All submissions should refer to file number SR–NYSEARCA–2025–54 and should be submitted on or before August 25, 2025.

For the Commission, by the Division of Trading and Markets, pursuant to delegated authority.[10]

Sherry R. Haywood,

Assistant Secretary.

SECURITIES AND EXCHANGE COMMISSION

[Release No. 34–103584; File No. SR–FICC–2025–016]

Self-Regulatory Organizations; Fixed Income Clearing Corporation; Notice of Filing and Immediate Effectiveness of a Proposed Rule Change To Amend MBSD Rule 33 (Suspension of Rules in Emergency Circumstances)

July 30, 2025.

Pursuant to Section 19(b)(1) of the Securities Exchange Act of 1934 (''Act'')[1] and Rule 19b–4 thereunder,[2] notice is hereby given that on July 23, 2025, Fixed Income Clearing

[10] 17 CFR 200.30–3(a)(12).

[1] 15 U.S.C. 78s(b)(1).

[2] 17 CFR 240.19b–4.

Corporation (''FICC'') filed with the Securities and Exchange Commission (''Commission'') the proposed rule change as described in Items I, II and III below, which Items have been prepared by the clearing agency. FICC filed the proposed rule change pursuant to Section 19(b)(3)(A) of the Act [3] and Rule 19b–4(f)(6) thereunder.[4] The Commission is publishing this notice to solicit comments on the proposed rule change from interested persons.

I. Clearing Agency's Statement of the Terms of Substance of the Proposed Rule Change

The proposed rule change consists of amendments to the FICC Mortgage-Backed Securities Division (''MBSD'') Clearing Rules (''MBSD Rules'') to (1) amend MBSD Rule 33 (Suspension of Rules in Emergency Circumstances) and, (2) based on those amendments, update title cross-references to MBSD Rule 33 in two locations of the MBSD Rules.[5]

II. Clearing Agency's Statement of the Purpose of, and Statutory Basis for, the Proposed Rule Change

In its filing with the Commission, the clearing agency included statements concerning the purpose of and basis for the proposed rule change and discussed any comments it received on the proposed rule change. The text of these statements may be examined at the places specified in Item IV below. The clearing agency has prepared summaries, set forth in sections A, B, and C below, of the most significant aspects of such statements.

(A) Clearing Agency's Statement of the Purpose of, and Statutory Basis for, the Proposed Rule Change

1. Purpose

The proposed rule change would revise the MBSD Rules to (1) amend MBSD Rule 33 (Suspension of Rules in Emergency Circumstances) and, (2) based on those amendments, update title cross-references to MBSD Rule 33 in two locations of the MBSD Rules, as described in detail below.

(i) Background

MBSD Rule 33 authorizes FICC, in general, to waive, suspend, or extend an MBSD Rule or a requirement under an MBSD Rule. However, MBSD Rule 33 currently limits any waiver, extension or suspension of an MBSD Rule to ''emergency circumstances'' and imposes several reporting obligations on FICC when relying on the rule. More specifically, MBSD Rule 33 requires (i) the existence of an ''emergency;'' (ii) the waiver, suspension, or extension of the MBSD Rules to be necessary for FICC to facilitate the prompt and accurate clearance and settlement of securities transactions and to provide FICC's services in a safe and sound manner; (iii) notice to the Commission within two hours of FICC's determination to extend, waive, or suspend an MBSD Rule, but no later than one hour before the close of the Federal Reserve Banks' Fedwire Funds Service if the action taken relates to a settlement extension on the settlement day; (iv) a written report to be submitted to the Commission no later than three calendar days after the implementation of the extension, waiver or suspension of a rule, procedure, or regulation issued by FICC; and (v) FICC to submit a proposed rule change to the Commission, pursuant to Rule 19b–4 under the Act,[6] if the extension, waiver or suspension is to last for longer than 30 calendar days.

Over time, FICC has come to realize that the extensive limitations on the scope of MBSD Rule 33 and the considerable administrative obligations imposed by the current requirements of the rule greatly restrict FICC's ability to manage situations in MBSD that do not rise to the level of an emergency but still require waiver, extension or suspension of an MBSD Rule or a requirement under an MBSD Rule. Not every situation in which FICC would need to waive, extend, or suspend an MBSD Rule or a requirement under an MBSD Rule is an emergency, nor would every waiver, extension or suspension necessarily support FICC's prompt and accurate clearance and settlement of securities transactions; yet, the absence of an emergency or support of clearance and settlement means FICC may not rely on MBSD Rule 33 to help address such a situation. Moreover, the current scope and regulatory reporting requirements of MBSD Rule 33 are now more appropriately covered by MBSD Rule 40 (Market Disruption and Force Majeure),[7] which was adopted after MBSD Rule 33.

MBSD Rule 40 addresses FICC's authority to take certain actions upon the occurrence and during the pendency of a ''Market Disruption Event,'' as defined in the rule. A Market Disruption Event includes, for example, events that lead to the suspension or limitation of trading or banking in the markets in which FICC operates, or the unavailability or failure of any material payment, bank transfer, wire, or security settlement system.[8] In other words, the Market Disruption Events covered by MBSD Rule 40 are essentially emergencies.

Much like MBSD Rule 33, MBSD Rule 40 also imposes heightened reporting obligations on FICC, given the emergency nature of Market Disruption Events that would require use of MBSD Rule 40. Specifically, if relying on MBSD Rule 40, the rule requires FICC to (i) attempt to consult with the Commission prior to taking action under the rule; (ii) advise the Commission by telephone, confirmed in writing, as soon as practicable after taking such action; and (iii) promptly file a record of that writing with FICC's corporate records, which shall be made available for inspection by any FICC Member.[9] Then, upon the ending of the Market Disruption Event and the associated action taken under MBSD Rule 40, the rule requires FICC to (A) advise the Commission of such by telephone, confirmed in writing, as soon as practicable; and (B) promptly file a record of that writing with FICC's corporate records, which shall be made available for inspection by any Member.[10]

With the adoption of MBSD Rule 40 to address emergency situations, MBSD now has two rules that address essentially the same situations; yet, it lacks a rule to address situations that may not constitute emergencies or relate to clearance and settlement, but still require waiver, extension or suspension of an MBSD Rule or a requirement under an MBSD Rule. As such, FICC proposes to amend MBSD Rule 33 to handle situations that may not rise to the level of an emergency and may not relate to clearance and settlement, but that still require a waiver, extension or suspension of an MBSD Rule or a requirement under an MBSD Rule. The proposed amendments would align with an existing rule of FICC's Government Securities Division (''GSD''), as well as existing rules of FICC's affiliate clearing agencies, National Securities Clearing Corporation (''NSCC'') and The Depository Trust Company (''DTC''), as discussed below.[11]

(ii) Proposed Amendments to MBSD Rule 33

The proposed amendments to MBSD Rule 33 would eliminate the requirements that (i) an ''emergency'' exists; (ii) any extension, waiver or suspension of the MBSD Rules must be necessary for FICC to facilitate the prompt and accurate clearance and settlement of securities transactions and providing FICC's services in a safe and sound manner; (iii) notice be sent to the Commission within two hours of FICC's determination to extend, waive or suspend an MBSD Rule, but no later than one hour before the close of the Federal Reserve Banks' Fedwire Funds Service if the action taken relates to a settlement extension on the settlement day; (iv) a written report be submitted to the Commission no later than three calendar days after the implementation of the extension, waiver or suspension of a rule (although, MBSD would still be required to make and maintain a similar report, as discussed further below); (v) FICC submit a proposed rule change to the Commission, pursuant to Rule 19b–4 under the Act,[12] if the extension, waiver or suspension is to last for longer than 30 calendar days; and (vi) the extension, waiver or suspension will not remain in effect if the Commission notifies the Corporation in writing that it objects to such extension, waiver or suspension.

The proposed amendments to MBSD Rule 33 would add language to (i) establish ''reasonable and appropriate'' as the new standard for when an extension, waiver or suspension may occur; (ii) explain that an extension, waiver or suspension may not continue in effect for more than 60 calendar days unless such action is approved by FICC's Board of Directors prior to the 60th day; (iii) require action under the rule to be in consideration of FICC's obligations as a clearing agency, as explained further below; and (iv) similar to the current reporting requirement, require FICC to promptly make and maintain for inspection by Members a report of any extension, waiver or suspension (other than an extension of time of less than eight hours) stating the pertinent facts, the identity of the person or persons who authorized the action, and the reason such action was reasonable and appropriate. Finally, the proposed rule change would update the title of MBSD Rule 33 to ''Extension, Waiver or Suspension of Rules'' and update two title cross-references to MBSD Rule 33 in MBSD Rules 3 (Ongoing Membership Requirements) and 3A (Cash Settling Bank Members), as described below.[13]

As noted above, the proposed changes would align the language, purpose, and governance of MBSD Rule 33 with the equivalent, existing waiver, suspension, and extension rules of FICC GSD Rule 42,[14] NSCC Rule 22,[15] and DTC Rule 18.[16] Those equivalent rules do not require emergency situations, a relationship to clearance and settlement, or outreach to the Commission or the filing of a rule change where the authority would last longer than 30 days. Instead, like MBSD, the rules of GSD, NSCC, and DTC each include their own Market Disruption and Force Majeure rules to manage emergency situations.[17]

Although the proposed changes to MBSD Rule 33 would not require notification to the Commission, submission of a report to the Commission, or a filing with the Commission if the exercised authority would continue for more than 30 calendar days, as noted above, the proposed modifications still would require FICC to write a report, as described above, except for an extension of time of less than eight hours. The report would need to include almost the same information currently required by the rule, except the report would no longer include the nature of the emergency because an emergency would no longer be required, nor would it include why the action was necessary to facilitate the prompt and accurate clearance and settlement of securities transactions and providing FICC's services in a safe and sound manner because that necessity also would no longer be required. FICC would be required to file the report in FICC's corporate records, and make it available to Members for inspection. Moreover, the proposed amendments would limit any exercised authority under MBSD Rule 33 to no more than 60 calendar days, unless such action is approved by FICC's Board of Directors prior to the 60th calendar day. Each of these governance concepts are consistent with the corresponding GSD, NSCC, and DTC rules noted above.

As described above, the proposed changes eliminate the requirement that an emergency must exist and that any extension, waiver or suspension must be necessary to facilitate the prompt and accurate clearance and settlement of securities transactions. Instead, the proposed changes introduce a ''reasonable and appropriate'' standard, under which FICC may act to prevent, correct, mitigate or otherwise address an event or situation that, if left unaddressed, could result in a failure to satisfy a requirement of the MBSD Rules. The proposed rule change also clarifies that such authority may not be used to circumvent FICC's regulatory obligations provided under MBSD Rule 40 in the event of a Market Disruption.

In determining whether to exercise the authority provided by the proposed changes to MBSD Rule 33, the proposed rule text would require FICC to consider its obligation to facilitate the prompt and accurate clearance and settlement of securities transactions; to safeguard securities and funds which are in its custody or control; and, in general, to protect investors and the public interest. Examples of the types of actions that may be considered reasonable and appropriate include, but are not limited to, temporarily suspending margin charges or extending margin submissions due to an operational error; extending a payment deadline in cases where billing information is not readily available to Members; waiving applicable charges related to processing or submission failures that result from operational constraints; or reversing fees assessed in connection with erroneous activity resulting from misunderstanding of established procedures.

Note, though, any extension, waiver or suspension under the proposed changes to MBSD Rule 33 could not be a permanent action, nor would the rule permit extension, waiver or suspension of any regulatory obligations of FICC.

The proposed changes to MBSD Rule 33, as described above, would help ensure that MBSD is able to respond reasonably and appropriately to situations that may not be emergencies and may not be related to clearance and settlement but still require a waiver, suspension, or extension of an MBSD Rule or a requirement under an MBSD Rule in the same way that GSD, NSCC, and DTC can respond to such situations—without the limited scope and administrative burdens currently contained in MBSD Rule 33. This harmonization is important to help ensure that both FICC divisions, as well as NSCC and DTC, can consistently manage such situations that may apply

across multiple divisions, clearing agencies, or common members, while still maintaining the authority and process to manage situations that are emergencies under separate authority. That is, upon the occurrence of a Market Disruption Event, as defined in MBSD Rule 40, and the need for FICC to exercise the authority provided by MBSD Rule 40, the process and authority set forth in MBSD Rule 40 would be followed.

2. Statutory Basis

Section 17A(b)(3)(F) of the Act requires that the rules of the clearing agency be designed, *inter alia,* to assure the safeguarding of securities and funds which are in the custody or control of the clearing agency or for which it is responsible.[18] FICC believes that the proposed rule change is consistent with the Section 17A(b)(3)(F) of the Act, as cited above.

As described above, the proposed rule change would update MBSD Rule 33 to remove language that restricts the applicable scope of the rule and certain regulatory reporting obligations to the Commission when the rule is exercised. Meanwhile, the proposed rule change would add language to MBSD Rule 33 to include a ''reasonable and appropriate'' use standard, limit any extension, waiver or suspension beyond 60 days without engagement by FICC's Board of Directors but exclude the need for a written report where an extension under the rule is for less than eight hours. Finally, the proposed rule change would update two title cross-references to MBSD Rule 33 in MBSD Rules 3 (Ongoing Membership Requirements) and 3A (Cash Settling Bank Members).

The proposed rule change would help ensure that MBSD is able to respond reasonably, appropriately, and effectively to situations that may not constitute an emergency and may not involve FICC's clearance and settlement of transactions but still require a waiver, suspension, or extension of an MBSD Rule or obligation under an MBSD Rule. The proposed changes also would enable MBSD to respond to such situations in the same way that GSD, NSCC, and DTC can currently respond under their respective rules, without the limited scope and administrative reporting burdens currently contained in MBSD Rule 33, yet maintaining the same governance structure that exists in those corresponding rules. For Market Disruption Events, FICC would continue to rely on MBSD Rule 40 to help address such emergency situations. Additionally, updating the two title cross-references to MBSD Rule 33 in the MBSD Rules helps ensure the rules remain clear and accurate for Members.

Therefore, by helping to ensure that MBSD can respond more efficiently and effectively to more situations that require a waiver, suspension, or extension of an MBSD Rule or obligation under an MBSD Rule, and helping to ensure that cross-references in the MBSD Rules remain clear and accurate, FICC believes the proposed rule change would help to assure the safeguarding of securities and funds which are in the custody or control of FICC or for which it is responsible, consistent with the requirements of the Act, in particular Section 17A(b)(3)(F) of the Act, cited above.

(B) Clearing Agency's Statement on Burden on Competition

FICC does not believe that the proposed rule change will have any impact or impose any burden on competition because, as described above, the proposed changes would not affect the rights and obligations of the MBSD membership. Rather, the proposed changes would enable FICC to employ MBSD Rule 33 more efficiently and effectively when responding to situations that may not constitute an emergency or relate to clearance and settlement, yet still require waiver, suspension, or extension of an MBSD Rule or obligation under an MBSD Rule. As such, FICC believes the proposed rule change would not have any impact on competition.

(C) Clearing Agency's Statement on Comments on the Proposed Rule Change Received From Members, Participants, or Others

FICC has not received or solicited any written comments relating to this proposal. If any written comments are received, FICC will amend this filing to publicly file such comments as an Exhibit 2 to this filing, as required by Form 19b–4 and the General Instructions thereto.

Persons submitting written comments are cautioned that, according to Section IV (Solicitation of Comments) of the Exhibit 1A in the General Instructions to Form 19b–4, the Commission does not edit personal identifying information from comment submissions. Commenters should submit only information that they wish to make available publicly, including their name, email address, and any other identifying information.

All prospective commenters should follow the Commission's instructions on *How to Submit Comments,* available at *https://www.sec.gov/regulatory-actions/how-to-submit-comments.* General questions regarding the rule filing process or logistical questions regarding this filing should be directed to the Main Office of the Commission's Division of Trading and Markets at *tradingandmarkets@sec.gov* or 202–551–5777.

FICC reserves the right to not respond to any comments received.

III. Date of Effectiveness of the Proposed Rule Change, and Timing for Commission Action

Because the foregoing proposed rule change does not:

(i) significantly affect the protection of investors or the public interest;

(ii) impose any significant burden on competition; and

(iii) become operative for 30 days from the date on which it was filed, or such shorter time as the Commission may designate, it has become effective pursuant to Section 19(b)(3)(A) of the Act[19] and Rule 19b–4(f)(6) thereunder.[20]

At any time within 60 days of the filing of the proposed rule change, the Commission summarily may temporarily suspend such rule change if it appears to the Commission that such action is necessary or appropriate in the public interest, for the protection of investors, or otherwise in furtherance of the purposes of the Act.

IV. Solicitation of Comments

Interested persons are invited to submit written data, views and arguments concerning the foregoing, including whether the proposed rule change is consistent with the Act. Comments may be submitted by any of the following methods:

Electronic Comments

- Use the Commission's internet comment form (*https://www.sec.gov/rules-regulations/self-regulatory-organization-rulemaking*); or
- Send an email to *rule-comments@sec.gov.* Please include File Number SR–FICC–2025–016 on the subject line.

Paper Comments

- Send paper comments in triplicate to Secretary, Securities and Exchange Commission, 100 F Street NE, Washington, DC 20549.

All submissions should refer to File Number SR–FICC–2025–016. This file number should be included on the subject line if email is used. To help the Commission process and review your comments more efficiently, please use

[18] 15 U.S.C. 78q–1(b)(3)(F).

[19] 15 U.S.C. 78s(b)(3)(A).

[20] 17 CFR 240.19b–4(f)(6).

only one method. The Commission will post all comments on the Commission's internet website (*https://www.sec.gov/rules-regulations/self-regulatory-organization-rulemaking*). Copies of the filing will be available for inspection and copying at the principal office of FICC and on DTCC's website (*www.dtcc.com/legal/sec-rule-filings*). Do not include personal identifiable information in submissions; you should submit only information that you wish to make available publicly. We may redact in part or withhold entirely from publication submitted material that is obscene or subject to copyright protection. All submissions should refer to File Number SR–FICC–2025–016 and should be submitted on or before August 25, 2025.

For the Commission, by the Division of Trading and Markets, pursuant to delegated authority.[21]

Sherry R. Haywood,

Assistant Secretary.

BILLING CODE 8011–01–P

SECURITIES AND EXCHANGE COMMISSION

[Release No. 34–103594; File No. SR–CboeBZX–2025–104]

Self-Regulatory Organizations; Cboe BZX Exchange, Inc.; Notice of Filing of a Proposed Rule Change To Permit the Generic Listing and Trading of Commodity-Based Trust Shares that Meet the Requirements Set Forth in Proposed Rule 14.11(e)(4)

July 30, 2025.

Pursuant to Section 19(b)(1) of the Securities Exchange Act of 1934 (the ''Act''),[1] and Rule 19b–4 thereunder,[2] notice is hereby given that on July 30, 2025, Cboe BZX Exchange, Inc. (the ''Exchange'' or ''BZX'') filed with the Securities and Exchange Commission (the ''Commission'') the proposed rule change as described in Items I, II, and III below, which Items have been prepared by the Exchange. The Commission is publishing this notice to solicit comments on the proposed rule change from interested persons.

I. Self-Regulatory Organization's Statement of the Terms of Substance of the Proposed Rule Change

Cboe BZX Exchange, Inc. (''BZX'' or the ''Exchange'') is filing with the Securities and Exchange Commission (''Commission'' or ''SEC'') a proposed rule change to amend Rule 14.11(e)(4) to permit the generic listing and trading of Commodity-Based Trust Shares that meet the requirements set forth in proposed Rule 14.11(e)(4). The text of the proposed rule change is provided in Exhibit 5.

The text of the proposed rule change is also available on the Exchange's website (*http://markets.cboe.com/us/equities/regulation/rule_filings/bzx/*) and at the Exchange's Office of the Secretary.

II. Self-Regulatory Organization's Statement of the Purpose of, and Statutory Basis for, the Proposed Rule Change

In its filing with the Commission, the Exchange included statements concerning the purpose of and basis for the proposed rule change and discussed any comments it received on the proposed rule change. The text of these statements may be examined at the places specified in Item IV below. The Exchange has prepared summaries, set forth in sections A, B, and C below, of the most significant aspects of such statements.

A. Self-Regulatory Organization's Statement of the Purpose of, and Statutory Basis for, the Proposed Rule Change

1. Purpose

The Exchange adopted rules to list and trade Commodity-Based Trust Shares under Rule 14.11(e) in 2013.[3] The Exchange now proposes to amend Rule 14.11(e)(4) for the purpose of permitting the generic listing and trading, or trading pursuant to unlisted trading privileges, of Commodity-Based Trust Shares that meet the amended requirements of Rule 14.11(e)(4) as set forth below.[4]

Proposed Listing Rules

Rule 14.11(e)(4)(A) currently provides that the Exchange will consider for trading, whether by listing or pursuant to unlisted trading privileges, Commodity-Based Trust Shares that meet the criteria of Rule 14.11(e)(4), however the Exchange will file separate proposals under Section 19(b) of the Act before listing Commodity-Based Trust Shares. The Exchange proposes to amend Rule 14.11(e)(4)(A) to provide that the Exchange will consider for trading, whether by listing or pursuant to unlisted trading privileges, Commodity-Based Trust Shares that meet the criteria of proposed Rule 14.11(e)(4). The Exchange may list and trade Commodity-Based Trust Shares pursuant to Rule 19b–4(e) under the Exchange Act or may submit a rule filing pursuant to Section 19(b) of the Exchange Act to permit the listing and trading of Commodity-Based Trust Shares that do not meet the standards set forth in this proposed Rule 14.11(e)(4) on an initial or continuing basis.[5] All statements or representations contained in such rule filing regarding (1) the description of the index, portfolio or reference asset, (2) limitations on index, portfolio holdings or reference assets, or (3) the applicability of Exchange listing rules specified in such rule filing will constitute continued listing requirements. An issuer of a series of Commodity-Based Trust Shares must notify the Exchange of any failure to comply with such continued listing requirements. If Commodity-Based Trust Shares do not satisfy these requirements, the Exchange may suspend trading in the Trust shares and will initiate delisting proceedings pursuant to Rule 14.12.

Existing Rule 14.11(e)(4)(B) provides for the applicability of Rule 14.11(e)(4), and states that it is applicable only to Commodity-Based Trust Shares. Except to the extent inconsistent with Rule 14.11(e)(4), or unless the context otherwise requires, the provisions of the trust issued receipts rules, Bylaws, and all other rules and procedures of the Board of Directors shall be applicable to the trading on the Exchange of such securities. Commodity-Based Trust Shares are included within the definition of ''security'' or ''securities'' as such terms are used in the Rules of the Exchange. The Exchange proposes to modify the applicability provision under Rule 14.11(e)(4)(B) to remove the provisions that the trust issued receipt rules shall be applicable to the trading on the Exchange of Commodity-Based Trust Shares. As discussed further below, the proposal seeks to provide that Commodity-Based Trust Shares may be issued by diverse entity structures including trusts, limited liability companies, or other similar vehicles and acknowledges that these entities may hold diversified portfolios

[4] As discussed further below, the Exchange may submit a rule filing pursuant to Section 19(b) of the Exchange Act to permit the listing and trading of Commodity-Based Trust Shares that do not meet the proposed generic listing requirements on an initial or continuing basis.

[5] Any current or future products listed pursuant to Exchange Rule 14.11(e)(4) would adhere to the requirements of proposed Rule 14.11(e)(4).

encompassing multiple commodities, Commodity-Based Assets (as defined in proposed Rule 14.11(e)(4)(C)(iii)), securities, cash, and Cash Equivalents (as defined in proposed Rule 14.11(e)(4)(C)(iv)). The Exchange further proposes to amend the applicability section to provide that Commodity-Based Trust Shares are included in the definition of ''security'' or ''securities'' as such terms are used in the Bylaws and Rules of the Exchange and are subject to the Exchange rules governing the trading of equity securities.

Existing Rule 14.11(e)(4)(C) sets forth the definitions applicable to Rule 14.11(e)(4). The Exchange first proposes to amend the definition of Commodity-Based Trust Shares under Rule 14.11(e)(4)(C)(i) to provide that it means a security that:

(a) is issued by a trust, limited liability company, or other similar entity [6] (''Trust'') that, if applicable, is operated by a registered commodity pool operator pursuant to the Commodity Exchange Act, and is not registered as an investment company pursuant to the Investment Company Act of 1940, or series or class thereof;

(b) is designed to reflect the performance of one or more reference assets or an index of reference assets, less expenses and other liabilities;

(c) in order to reflect the performance as provided in proposed Rule 14.11(e)(4)(C)(i)(b), is issued by a Trust that holds (1) one or more commodities or Commodity-Based Assets as defined in proposed Rule 14.11(e)(4)(C)(iii), as described below; and (2) in addition to such commodities or Commodity-Based Assets, may hold securities, cash, and Cash Equivalents;

(d) is issued by a Trust in a specified aggregate minimum number in return for a deposit of (1) a specified quantity of the underlying commodities, Commodity-Based Assets, securities, cash, and Cash Equivalents, or (2) a cash amount with a value based on the next determined Net Asset Value per Trust share; and

(e) when aggregated in the same specified minimum number, may be redeemed at a holder's request by such Trust which will deliver to the redeeming holder (1) the specified quantity of the underlying commodities, Commodity-Based Assets and securities, cash and Cash Equivalents or (2) a cash amount with a value based on the next determined Net Asset Value per Trust share.

The Exchange proposes no change to the definition of Commodity provided under Rule 14.11(e)(4)(C)(ii), which states that the term ''Commodity'' is defined in Section 1a(9) of the Commodity Exchange Act.

The Exchange also proposes to adopt new definitions under proposed Rules 14.11(e)(4)(C)(iii) through (x).

Proposed 14.11(e)(4)(C)(iii) would provide that the term ''Commodity-Based Asset'' means any of commodity futures, commodity options, commodity swap.

Proposed 14.11(e)(4)(C)(iv) would provide that the term ''Cash Equivalent'' means short-term instruments with maturities of less than three months as follows: (a) U.S. Government securities, including bills, notes and bonds differing as to maturity and rates of interest, which are either issued or guaranteed by the U.S. Treasury or by U.S. Government agencies or instrumentalities; (b) certificates of deposit issued against funds deposited in a bank or savings and loan association; (c) bankers' acceptances, which are short-term credit instruments used to finance commercial transactions; (d) repurchase agreements and reverse repurchase agreements; (e) bank time deposits, which are monies kept on deposit with banks or savings and loan associations for a stated period of time at a fixed rate of interest; (f) commercial paper, which are short-term unsecured promissory notes; and (g) money market funds.

Proposed 14.11(e)(4)(C)(v) would provide that the term ''Net Asset Value'' means the value of Commodity-Based Trust Shares that is used in computing periodically the current price for the purpose of creation and redemption of Trust shares and is an amount which reflects the current market value of the assets held by the Trust less expenses and liabilities.

Proposed 14.11(e)(4)(C)(vi) would provide that the term ''Designated Contract Market'' means a board of trade or exchange that has been designated as a contract market under Section 5 of the Commodity Exchange Act and operates under the regulatory oversight of the Commodity Futures Trading Commission, pursuant to Section 5 of the Commodity Exchange Act.

Proposed Rule 14.11(e)(4)(C)(vii) would provide that the term ''Exchange-Traded Fund'' means an open-end management investment company or a unit investment trust as defined in Section 4(2) of the Investment Company Act of 1940 or series or class thereof, the shares of which are listed and traded on a national securities exchange, and that has formed and operates under an exemptive order under the Investment Company Act of 1940 or in reliance on an exemptive rule adopted by the Securities and Exchange Commission.

Proposed Rule 14.11(e)(4)(C)(viii) would provide that the term ''Intraday Indicative Value'' means the estimated indicative value of a Trust share based on current information regarding the value of the Trust's underlying assets.

Proposed Rule 14.11(e)(4)(C)(ix) would provide that the term ''Market Price'' means: (a) the official closing price of a Trust share; or (b) if it more accurately reflects the market value of a Trust share at the time as of which the trust calculates current Net Asset Value per share, the price that is the midpoint between the national best bid and national best offer as of that time.

Proposed Rule 14.11(e)(4)(C)(x) would provide that the term ''Premium or Discount'' means the positive or negative difference between the Market Price of a Trust share at the time as of which the current Net Asset Value is calculated and the Trust's current Net Asset Value per share, expressed as a percentage of the Trust share's current Net Asset Value per share.

Existing Rule 14.11(e)(4)(D) currently provides for the Designation of an Underlying Commodity and provides that the Exchange may trade, either by listing or pursuant to unlisted trading privileges, Commodity-Based Trust Shares based on an underlying commodity. Each issue of a Commodity-Based Trust Share shall be designated as a separate series and shall be identified by a unique symbol. The Exchange proposes to replace Rule 14.11(e)(4)(D) to instead provide initial and, except for proposed Rule 14.11(e)(4)(D)(i)(c) discussed below, continued listing eligibility criteria for Commodity-Based Trust Shares. Specifically, as proposed, each commodity or commodity that underlies a Commodity-Based Asset held by the trust must meet at least one of the following three criteria on an initial and, except for proposed Rule 14.11(e)(4)(D)(i)(c), continuing basis.[7]

Proposed Rule 14.11(e)(4)(D)(i)(a) provides the first criteria, which states that the commodity trades on a market that is an Intermarket Surveillance Group (''ISG'') member, provided that the Exchange may obtain information about trading in such commodity from the ISG member. This proposed criteria establishes a conditional framework that extends to any commodity traded on individual foreign or domestic markets, contingent upon two essential requirements: the market must maintain

[6] For example, a partnership may be considered an ''other similar entity'' under the proposed Rule.

[7] Following Commission approval of these proposed generic listing standards, the Exchange will submit a separate proposal for an additional quantitative generic listing standard.

ISG membership status,[8] and the Exchange must retain the ability to access trading information for the relevant commodity through the ISG relationship.

Proposed Rule 14.11(e)(4)(D)(i)(b) provides the second criteria, which states that the commodity underlies a futures contract that has been made available to trade on a Designated Contract Market for at least six months, provided that the Exchange has a comprehensive surveillance sharing agreement, whether directly or through common membership in ISG, with such Designated Contract Market.

Proposed Rule 14.11(e)(4)(D)(i)(c) provides the third criteria, which states that an Exchange-Traded Fund designed to provide economic exposure of no less than 40% of its Net Asset Value to the relevant commodity lists and trades on a national securities exchange.[9]

In addition to the above, Rule 14.11(e)(4)(D)(ii) provides that each security held by the Trust shall meet the criteria of Exchange Rule 14.11(i) (Managed Fund Shares), paragraphs (4)(C)(i) and (ii),[10] or if the security is a listed option, trades on an ISG market.

The Exchange proposes to adopt Rule 14.11(e)(4)(E) to address disclosed information by the Trust. Specifically, the Rule would require the Trust to disclose prominently on its website, which is publicly available and free of charge, the following information:

(i) Before the opening of regular trading on the Exchange, for the Trust's commodities, Commodity-Based Assets, securities, cash and Cash Equivalent, to the extent applicable: (a) ticker symbol; (b) identifier; (c) description of the holding; (d) the quantity of each commodity, Commodity-Based Asset, security, cash, and Cash Equivalent held; and (e) the percentage weighting of the Trust's assets.

(ii) The Trust's current Net Asset Value per share, Market Price, and Premium or Discount, each as of the end of the prior business day;

(iii) A table showing the number of days the Trust's shares traded at a Premium or Discount during the most recently completed calendar year and the most recently completed calendar quarters since that year (or the life of the Trust, if shorter);

(iv) A line graph showing the Trust share's Premiums or Discounts for the most recently completed calendar year and the most recently completed calendar quarters since that year (or the life of the Trust, if shorter);

(v) The Trust share's median-ask spread, expressed as a percentage rounded to the nearest hundredth, computed by: (a) identifying the Trust share's national best bid and national best offer as of the end of each 10-second interval during each trading day of the last 30 calendar days; (b) dividing the difference between each such bid and offer by the midpoint of the national best bid and national best offer; and (c) identifying the median of those values.

(vi) Liquidity risk policies and procedures as described in proposed paragraph (G) of Rule 14.11(e)(4) as further explained below;

(vii) The Trust's methodology for the calculation of its Net Asset Value;

(viii) The Trust's trading volume for the previous day; and

(ix) The Trust's effective prospectus, in a form available for download.

This comprehensive website disclosure requirement provides substantial benefits for market transparency, investor protection, and market efficiency by creating a centralized, accessible information hub that addresses the unique challenges of Commodity-Based Trust Shares.

Proposed Rule 14.11(e)(4)(F) generally prohibits a leveraged or inversed series of Commodity-Based Trust Shares to be listed generically on the Exchange. Specifically, the proposed Rule provides that the Trust may not seek, directly or indirectly, to provide investment returns that correspond to the performance of an index, benchmark, or reference value by a specified multiple, or to provide investment returns that have an inverse or multiple inverse relationship to the performance of an index, benchmark, or reference value, over a predetermined period of time.

Proposed Rule 14.11(e)(4)(G) provides for liquidity risk policies and procedures. If a Trust has on a daily basis less than 85% of its assets readily available to meet redemption requests, the Trust must have written liquidity risk policies and procedures reasonably designed to address the risk that it could not meet requests to redeem shares issued by the Trust without significant dilution of remaining shareholders' interest in the Trust. Such policies and procedures must be periodically reviewed (with such review occurring no less frequently than annually) by the Trust. For purposes of this Rule 14.11(e)(4), an asset is deemed not readily available to meet redemption requests if it is segregated, pledged, hypothecated, encumbered or otherwise restricted or prevented from being liquidated, sold, transferred, or assigned within one business day.[11] The policies and procedures must address the following, as applicable:

(i) The Trust's investment strategy and liquidity of the Trust's assets during normal and stressed conditions, including use of derivatives and whether the investment strategy is appropriate for effective and efficient arbitrage;

(ii) Holdings of cash and Cash Equivalents, as well as borrowing arrangements and other funding sources; and

(iii) Percentage and description [12] of the Trust's assets that are segregated, pledged, hypothecated, encumbered, or otherwise restricted or prevented from being liquidated, sold, transferred or assigned.

Current Rule 14.11(e)(4)(E) provides for the initial and continued listing standards for Commodity-Based Trust Shares. The Exchange proposes to bifurcate the initial listing standards from the continued listing standards under proposed Rules 14.11(e)(4)(H) and (I), respectively. Proposed Rule 14.11(e)(4)(H) provides that Commodity-Based Trust Shares that meet the following initial criteria will be listed and traded on the Exchange subject to the application of the following criteria. Proposed Rule 14.11(e)(4)(H)(i) would state that the Exchange will establish a minimum number of Commodity-Based Trust Shares required to be outstanding at the time of commencement of trading on the Exchange. Proposed Rule 14.11(e)(4)(H)(ii) would state that all Commodity-Based Trust Shares shall have a stated investment objective, which shall be adhered to under normal market conditions.

The current continued listing requirements for Commodity-Based Trust Shares provide that the Exchange will consider the suspension of trading in and will commence delisting proceedings for a series of Commodity-Based Trust Shares pursuant to Rule 14.12 if certain enumerated circumstances are met. The Exchange proposes to modify this requirement

[8] For a list of the current members of ISG, *see www.isgportal.com.*

[9] As provided in proposed Rule 14.11(e)(4)(D), the proposed criteria shall only be applicable on an initial listing basis.

[10] Rule 14.11(i)(4)(C)(i) sets forth the requirements for equity component securities for Managed Fund Shares and Rule 14.11(i)(4)(C)(ii) sets forth the requirements for fixed income component securities for Managed Fund Shares.

[11] Proposed Rule 14.11(e)(4)(G) would apply, for example, in situations such as where assets held by the Trust are crypto assets and are subject to protocol staking. Specifically, to the extent that the Trust stakes more than 15% of its assets, the Trust will be required to comply with the liquidity risk policies and procedures as provided under proposed Rule 14.11(e)(4)(G).

[12] For example, for crypto ETPs that have staked assets, this would describe the asset that is staked and the percentage.

under proposed Rule 14.11(e)(4)(I) to codify that the Exchange will maintain surveillance procedures for Trust shares listed under Rule 14.11(e)(4). The Exchange also proposes to amend and renumber the enumerated criteria as follows.

Proposed Rule 14.11(e)(4)(I)(i) is substantively identical to existing Rule 14.11(e)(4)(E)(ii)(a), which provides that the Exchange will consider the suspension of trading in and will commence delisting proceedings for a series of Commodity-Based Trust Shares pursuant to Rule 14.12 if following the initial 12 month period following commencement of trading on the Exchange, the Trust has more than 60 days remaining until termination and there are fewer than 50 record and/or beneficial holders of Commodity-Based Trust Shares for 30 or more consecutive trading days.

Proposed Rule 14.11(e)(4)(I)(ii) maintains the same substantive content as the current Rule 14.11(e)(4)(E)(ii)(b), with the Exchange making a clarifying modification to replace ''receipts'' with ''shares'' for improved terminology. Proposed Rule 14.11(e)(4)(I)(ii) provides that the Exchange will consider the suspension of trading in and will commence delisting proceedings for a series of Commodity-Based Trust Shares pursuant to Rule 14.12 if following the initial 12 month period following commencement of trading on the Exchange, the Trust has fewer than 50,000 shares issued and outstanding.

Proposed Rule 14.11(e)(4)(I)(iii) maintains substantive equivalence with existing Rule 14.11(e)(4)(E)(ii)(c), incorporating two Exchange clarifications: the terminological improvement of replacing ''receipts'' with ''shares'' and the explicit specification that this provision applies to Commodity-Based Trust Shares trading on the Exchange. Proposed Rule 14.11(e)(4)(I)(iii) provides that the Exchange will consider the suspension of trading in and will commence delisting proceedings for a series of Commodity-Based Trust Shares pursuant to Rule 14.12 if following the initial 12 month period following commencement of trading on the Exchange of Commodity-Based Trust Shares, the market value of all shares issued and outstanding is less than $1,000,000.

Existing Rule 14.11(e)(4)(E)(ii)(d) provides that the Exchange will commence delisting proceedings for a series of Commodity-Based Trust Shares pursuant to Rule 14.12 if an interruption to the dissemination of the value of the underlying commodity persists past the trading day in which it occurred or is no longer calculated or available on at least a 15-second delayed basis from a source unaffiliated with the sponsor, Trust, custodian or the Exchange or the Exchange stops providing a hyperlink on its website to any such unaffiliated commodity value. The Exchange proposes to change the continued listing requirement under proposed Rule 14.11(e)(4)(I)(iv) to provide that the Exchange will consider the suspension of trading in and will commence delisting proceedings for a series of Commodity-Based Trust Shares pursuant to Rule 14.12 when the interruption to the dissemination of the value of the underlying reference asset(s) or index persists past the trading day in which it occurred or is no longer calculated or made widely available on at least a 15-second delayed basis from a source unaffiliated with the sponsor, Trust, custodian or the Exchange or the Exchange stops providing a hyperlink on its website to any such unaffiliated commodity value.

Existing Rule 14.11(e)(4)(E)(ii)(e) provides the Exchange will commence delisting proceedings for a series of Commodity-Based Trust Shares pursuant to Rule 14.12 if an interruption to the dissemination of the Intraday Indicative Value persists past the trading day in which it occurred or is no longer made available on at least a 15-second delayed basis. The Exchange proposes to reword the continued listing requirement under proposed Rule 14.11(e)(4)(I)(v) to provide that the Exchange will consider the suspension of trading in and will commence delisting proceedings for a series of Commodity-Based Trust Shares pursuant to Rule 14.12 when the interruption to the dissemination of the Intraday Indicative Value persists past the trading day in which it occurred or is no longer made widely available on at least a 15-second delayed basis during Regular Trading Hours.[13]

The Exchange proposes to adopt Rule 14.11(e)(4)(I)(vi) which provides that the Exchange will consider the suspension of trading in and will commence delisting proceedings for a series of Commodity-Based Trust Shares pursuant to Rule 14.12 if the Net Asset Value is not calculated at least once daily or made widely available to all market participants at the same time.

The Exchange also proposes to adopt Rule 14.11(e)(4)(I)(vii) which provides that the Exchange will consider the suspension of trading in and will commence delisting proceedings for a series of Commodity-Based Trust Shares pursuant to Rule 14.12 if the information as set forth in proposed Rule 14.11(e)(4) is no longer being disclosed in accordance with the requirements of proposed Rule 14.11(e)(4)(E), discussed above.

Proposed Rule 14.11(e)(4)(I)(viii) is substantively identical to existing Rule 14.11(e)(4)(E)(ii)(f) except that the Exchange proposes to add clarifying changes so that the rule provides that the Exchange will consider the suspension of trading in and will commence delisting proceedings for a series of Commodity-Based Trust Shares pursuant to Rule 14.12 if any of the other requirements set forth in Rule 14.11(e)(4) are not continuously maintained.

The Exchange proposes to delete existing Rule 14.11(e)(4)(g) as it duplicative of the requirements set forth in proposed Rule 14.11(e)(4)(I)(viii).

The Exchange proposes to adopt Rule 14.11(e)(4)(I)(ix) which provides that the Exchange will consider the suspension of trading in and will commence delisting proceedings for a series of Commodity-Based Trust Shares pursuant to Rule 14.12 if the Exchange submits a rule filing pursuant to Section 19(b) of the Exchange Act to permit the listing and trading of Commodity-Based Trust Shares that do not otherwise meet the standards set forth in this proposed Rule 14.11(e)(4) and any of the statements or representations regarding (a) the description of the index, portfolio, or reference asset; (b) limitations on the index, portfolio holdings, or reference assets, or (c) the applicability of Exchange listing rules specified in such rule filing are not continuously maintained.

Proposed Rule 14.11(e)(4)(I)(x) is substantively identical to existing Rule 14.11(e)(4)(E)(ii)(h) and provides that the Exchange will consider the suspension of trading in and will commence delisting proceedings for a series of Commodity-Based Trust Shares pursuant to Rule 14.12 if such other event shall occur or condition exists which in the opinion of the Exchange makes further dealings on the Exchange inadvisable. Upon termination of a Trust, the Exchange requires that Commodity-Based Trust Shares issued in connection with such Trust be removed from Exchange listing. A Trust may terminate in accordance with the provisions of the Trust prospectus, which may provide for termination if the value of the Trust falls below a specified amount.

The Exchange proposes to adopt Rule 14.11(e)(4)(J) which provides for Trading Halts in Commodity-Based Trust Shares. Under proposed Rule 14.11(e)(4)(J)(i) the Exchange may halt

[13] *See* Exchange Rule 1.5(w).

trading during the day in which the interruption to the following occurs. If the interruption persists past the trading day in which it occurred, the Exchange will halt trading no later than the beginning of the trading day following the interruption. If Commodity-Based Trust Shares are trading on the Exchange pursuant to unlisted trading privileges, the Exchange will halt trading as specified in Rule 11.18. Specifically, the Exchange may halt if: (a) the value of the underlying reference asset(s) or index is not made widely available on at least a 15-second basis from a source unaffiliated with the sponsor or the Trust; (b) the Intraday Indicative Value is not made widely available to all market participants at the same time on at least a 15-second basis during Regular Trading Hours; or (c) the information as set forth in this proposed Rule 14.11(e)(4) is not being disclosed in accordance with the requirement of proposed paragraph (E) above.

Proposed Rule 14.11(e)(4)(J)(ii) further provides that if the Exchange becomes aware that the Net Asset Value is not disseminated to all market participants at the same time, it will halt trading in the Commodity-Based Trust Shares until such time as the Net Asset Value is available to all market participants.

Proposed Rule 14.11(e)(4)(J)(iii) provides that the Exchange may also exercise discretion to halt trading in a Series of Commodity-Based Trust Shares based on a consideration of the following factors: (A) the extent to which trading has ceased in underlying Commodity(s) or Commodity-Based Assets comprising the index or portfolio, (B) in the event of national, regional, or localized disruption that necessitates a trading halt to maintain a fair and orderly market, or (C) the presence of other unusual conditions or circumstances detrimental to the maintenance of a fair and orderly market.

The Exchange proposes to delete existing Rule 14.11(e)(4)(E)(iii) through (v), which provides for initial and continued listing standards related to the term of the trust, the trustee requirements, and voting rights.

The Exchange proposes to re-letter Rule 14.11(e)(4)(F) to 14.11(e)(4)(K). Proposed Rule 14.11(e)(4)(K) provides for limited liability of the Exchange in certain circumstances and is substantively identical to existing Rule 14.11(e)(4)(F), with a conforming change to reflect that the Trust may hold multiple commodities.

The Exchange proposes to amend Rule 14.11(e)(4)(G) and re-letter as Rule 14.11(e)(4)(L), which generally provides that a registered Market Maker in Commodity-Based Trust Shares must file with the Exchange in a manner prescribed by the Exchange and keep current a list identifying all accounts for trading in certain related instruments. Proposed Rule 14.11(e)(4)(L) states that a registered Market Maker in Commodity-Based Trust Shares must file with the Exchange in a manner prescribed by the Exchange and keep current a list identifying all accounts for trading in each underlying commodity and Commodity-Based Asset which the registered Market Maker may have or over which it may exercise investment discretion. No registered Market Maker in Commodity-Based Trust Shares shall trade in an underlying commodity, Commodity-Based Asset or any other related commodity derivative thereon in an account in which a registered Market Maker (1) directly or indirectly controls trading activities or has a direct interest in the profits or losses thereof, (2) is required by this rule to disclose to the Exchange, and (3) has not been reported to the Exchange. In addition to the existing obligations under Exchange rules regarding the production of books and records (see, *e.g.,* Rule 4.2), the registered Market Maker in Commodity-Based Trust Shares shall make available to the Exchange such books, records or other information pertaining to transactions by such entity or registered or non-registered employee affiliated with such entity for its or their own accounts for trading the underlying physical commodity or Commodity-Based Asset or applicable derivatives of each of the foregoing, as may be requested by the Exchange.

The Exchange proposes to adopt Rule 14.11(e)(4)(M) which would provide for firewall requirements for Commodity-Based Trust Shares. Proposed Rule 14.11(e)(4)(M)(i) provides that if the value of a Commodity-Based Trust Shares is based in whole or in part on an index that is maintained by a broker-dealer, the broker-dealer shall erect and maintain a ''firewall'' around the personnel responsible for maintenance of such index or who have access to information concerning changes and adjustments to the index.

Proposed Rule 14.11(e)(4)(M)(ii) provides that any advisory committee, supervisory board, or similar entity that advises an index licensor or administrator or that makes decisions regarding the index composition, methodology, and related matters must implement and maintain, or be subject to, procedures designed to prevent the use and dissemination of material, non-public information regarding the applicable index.

Proposed Rule 14.11(e)(4)(M)(iii) provides that if the Trust is affiliated with an entity that has the ability to influence the price or supply of a commodity, or a commodity underlying a Commodity-Based Asset, held by the Trust, the Trust shall (a) implement and maintain a ''firewall'' between any such entity and the Trust, (b) have written policies and procedures designed to prevent the use and dissemination of material, non-public information regarding the Trust, and (c) have written policies and procedures designed to prevent fraudulent, deceptive or manipulative acts, practices, or courses of business with respect to the Trust and such commodity.

Last, the Exchange proposes to delete the existing language of Interpretation and Policy .01 to Rule 14.11(e)(4) which provides that a Commodity-Based Trust Share is a Trust Issued Receipt that holds a specified commodity deposited with the Trust. The Exchange proposes to replace the deleted text to provide that an issue of Commodity-Based Trust Shares must notify the Exchange of any failure to comply with the continued listing requirements. The Exchange proposes no change to existing Interpretation and Policies .02 and .03 of Rule 14.11(e)(4). Specifically, Interpretation and Policy .02 to Rule 14.11(e)(4) states that the Exchange requires that Members provide all purchasers of newly issued Commodity-Based Trust Shares a prospectus for the series of Commodity-Based Trust Shares. Interpretation and Policy .03 to Rule 14.11(e)(4) states that transactions in Commodity-Based Trust Shares will occur during Regular Trading Hours [14] and the Early Trading,[15] Pre-Opening [16] and After Hours Trading Sessions.[17]

2. Statutory Basis

The Exchange believes the proposed rule change is consistent with the Act and the rules and regulations thereunder applicable to the Exchange and, in particular, the requirements of Section 6(b) of the Act.[18] Specifically, the Exchange believes the proposed rule change is consistent with the Section 6(b)(5) [19] requirements that the rules of an exchange be designed to prevent fraudulent and manipulative acts and practices, to promote just and equitable principles of trade, to foster cooperation and coordination with persons engaged in regulating, clearing, settling,

[14] *See* Exchange Rule 1.5(w).
[15] *See* Exchange Rule 1.5(ff).
[16] *See* Exchange Rule 1.5(r).
[17] *See* Exchange Rule 1.5(c).
[18] 15 U.S.C. 78f(b).
[19] 15 U.S.C. 78f(b)(5).

processing information with respect to, and facilitating transactions in securities, to remove impediments to and perfect the mechanism of a free and open market and a national market system, and, in general, to protect investors and the public interest. Additionally, the Exchange believes the proposed rule change is consistent with the Section 6(b)(5)[20] requirement that the rules of an exchange not be designed to permit unfair discrimination between customers, issuers, brokers, or dealers.

The Exchange believes that the proposed amendments to Rule 14.11(e)(4) are designed to prevent fraudulent and manipulative acts and practices in that the proposed amended rules relating to listing and trading Commodity-Based Trust Shares on the Exchange provide specific initial and continued listing criteria required to be met by such securities. The proposed Rules set forth initial and continued listing criteria applicable to Commodity-Based Trust Shares, and proposed Rule 14.11(e)(4)(A) specifically provides that the Exchange may approve a series of Commodity-Based Trust Shares for listing and trading (including pursuant to unlisted trading privileges) on the Exchange pursuant to Rule 19b–4(e) under the Act, provided such series of Commodity-Based Trust Shares meet the standards set forth in proposed Rule 14.11(e)(4) on an initial or continuing basis. The Exchange will submit a Form 19b–4(e) for all series of Commodity-Based Trust Shares upon being listed pursuant to proposed Rule 14.11(e)(4). Furthermore, the Exchange may submit a rule filing pursuant to Section 19(b) of the Exchange Act to permit the listing and trading of Commodity-Based Trust Shares that do not meet the proposed generic listing requirements on an initial or continuing basis under proposed Rule 14.11(e)(4)(A). By allowing rule filings for Commodity-Based Trust Shares that don't meet generic requirements, the Exchange maintains flexibility to seek approval from the Commission to list innovative products that may still serve investor interests and market efficiency, even if they don't meet the proposed standards.

The Exchange believes the proposed changes to Rule 14.11(e)(4)(B) and (C) will remove market impediments and enhance the national market system by clarifying the Rule's applicability and providing clear definitions.

The Exchange believes that the eligibility criteria under proposed Rule 14.11(e)(4)(D) to list and trade a series of Commodity-Based Trust Shares is consistent with the Act. In particular, the criteria under proposed Rule14.11(e)(4)(D)(i)(a) aligns with the requirement under Section 6(b)(5) of the Act that requires rules that promote ''just and equitable principles of trade'' by ensuring surveillance capabilities of the underlying commodity through established ISG relationships. The ISG framework has been repeatedly recognized by the Commission as providing adequate surveillance for commodity-based products, creating regulatory consistency with existing approved ETPs.[21]

The six-month trading criteria on Designated Contract Markets (''DCMs'') with comprehensive surveillance sharing agreements as provided under proposed Rule14.11(e)(4)(D)(i)(b) ensures that there is a developed regulated futures market which addresses fraud and manipulation.

The criteria under proposed Rule14.11(e)(4)(D)(i)(c) aligns products that may be listed generically under Rule 6c–11 of the Investment Company Act of 1940 and Rule 14.11(l) with the generic listing requirements for Commodity-Based Trust Shares thereby removing impediments to and perfecting the mechanism of a free and open market.

The requirement that each security held by the Trust meets the criteria applicable to Managed Fund Shares,[22] or if the security is a listed option, trades on an ISG market,[23] is consistent with Section 6(b)(5) because these provisions prevent fraudulent and manipulative acts through substantial market capitalization thresholds, minimum trading volume requirements, concentration limits restricting single holdings of portfolio weight, and diversification mandates that ensure adequate liquidity and prevent over-concentration. The criteria promote just and equitable principles of trade by requiring securities to be listed on national securities exchanges, qualify as NMS Stocks under Regulation NMS, and meet established reporting and transparency standards, while fostering cooperation with regulatory entities through existing exchange surveillance mechanisms and national market system infrastructure. These comprehensive safeguards remove market impediments by establishing clear, objective standards that provide market certainty while maintaining the market integrity and investor protection characteristics mandated by Section 6(b)(5) through proven regulatory frameworks adapted to Commodity-Based Trust Shares.

Requiring the Trust to publicly disclose this comprehensive information under proposed Rule 14.11(e)(4)(E) is consistent with the Act by ensuring all market participants have equal access to critical information needed for informed investment decisions, including real-time portfolio composition, NAV calculations, and trading metrics that enable investors to assess fair value and market efficiency.

The Exchange believes proposed Rule 14.11(e)(4)(F) adds clarity to the Exchange's Rules by explicitly stating that the Trust may not provide investment returns that correspond to inverse or leveraged performance of an index, benchmark, or reference value under the proposed generic listing standards.

The liquidity risk policies and procedures requirement under proposed Rule 14.11(e)(4)(G) is consistent with the Act because it provides information to investors that Trusts with significant illiquid holdings maintain comprehensive risk management frameworks relating to situations where redemption requests cannot be met without harming remaining shareholders, thereby protecting investors from potential dilution or unfair treatment that could result from liquidity mismatches. The requirement promotes just and equitable principles of trade by mandating transparency and systematic assessment of liquidity risks, ensuring that all shareholders are treated fairly during redemption processes and that the Trust maintains adequate procedures to manage both normal and stressed market conditions without disadvantaging any particular group of investors. These policies and procedures remove impediments to and perfect the mechanism of a free and open market by ensuring that ETPs maintain the operational integrity necessary for efficient arbitrage mechanisms and price discovery, as the requirement for readily available assets (85% threshold) and comprehensive liquidity planning aims to provide that authorized participants can effectively create and redeem shares to keep market prices aligned with Net Asset Value,

[20] *Id.*

[21] *See e.g.,* Securities Exchange Act Nos. 99306 (January 10, 2024), 89 FR 3008 (January 17, 2024) (Self-Regulatory Organizations; NYSE Arca, Inc.; The Nasdaq Stock Market LLC; Cboe BZX Exchange, Inc.; Order Granting Accelerated Approval of Proposed Rule Changes, as Modified by Amendments Thereto, To List and Trade Bitcoin-Based Commodity-Based Trust Shares and Trust Units) (the ''Spot Bitcoin ETP Approval Order''); 100224 (May 23, 2024), 89 FR 46937 (May 30, 2024) (Self-Regulatory Organizations; NYSE Arca, Inc.; The Nasdaq Stock Market LLC; Cboe BZX Exchange, Inc.; Order Granting Accelerated Approval of Proposed Rule Changes, as Modified by Amendments Thereto, To List and Trade Shares of Ether-Based Exchange-Traded Products) (the ''Spot ETH ETP Approval Order'').

[22] *See* Exchange Rules 14.11(i)(4)(C)(i) and (ii).

[23] *See* proposed Exchange Rule 14.11(e)(4)(D)(ii).

which is fundamental to the proper functioning of exchange-traded products and the fair and orderly markets.

The Exchange believes that proposed Rules 14.11(e)(4)(H) and (I) are designed to prevent fraudulent and manipulative acts and practices in that the proposed rules relating to listing and trading of Commodity-Based Trust Shares provide specific initial and continued listing criteria required to be met by such securities. These proposed rules are largely the same under existing Commodity-Based Trust Shares rules, but the proposed rules add additional clarity and guidance to Exchange Rules.

The Exchange believes proposed Rule 14.11(e)(4)(J) is consistent with the Act because it provides the Exchange with discretion as to when trading may be halted during the day in which interruption to certain information becomes unavailable and specifically provides when the Exchange will halt on the day following the interruption if the interruption persists. Such halts may be necessary to prevent fraudulent and manipulative acts when critical pricing information becomes unavailable, ensuring that no market participants can exploit informational advantages while others lack access to essential valuation data.

The Exchange believes that removing existing Rules 14.11(e)(4)(E)(iii), (iv), and (v), which establish continued listing standards for trust term, trustee requirements, and voting rights, aligns with the Act because these provisions are either inapplicable under the proposed rules or adequately addressed elsewhere. Trustee requirements may no longer be relevant since Commodity-Based Trust Shares can be issued by trusts, limited liability companies, or other similar entities. The term requirement is redundant because trust termination provisions are already comprehensively covered under proposed Rule 14.11(e)(4)(I)(x). Similarly, the voting rights provision is unnecessary since shareholder rights must be disclosed in the applicable trust prospectus pursuant to other securities laws.

The Exchange considers the proposed amendments to the market maker accounts requirement under proposed Rule 14.11(e)(4)(L) to be reasonable and consistent with existing regulatory frameworks. Current Rule 14.11(e)(4)(G) establishes a comprehensive disclosure obligation requiring Market Makers to maintain and file updated lists of all accounts used for trading underlying commodities, related commodity futures, options on commodity futures, and other related commodity derivatives over which they maintain trading authority or investment discretion. The proposed amendments clarify these requirements to align with other proposed changes.

The Exchange believes the proposal to adopt firewall requirements for Commodity-Based Trust Shares, as provided under proposed Rule 14.11(e)(4)(M), are designed to prevent fraudulent and manipulative acts and practices, promote just and equitable principles of trade, and to protect investors and the public interest. The firewall requirements establish structural barriers against the use and dissemination of material, non-public information which could be used to manipulate a series of Commodity-Based Trust Shares. The consistency of the proposed firewall requirements with existing ETF Share firewall requirements promotes consistent and equitable standards across similar investment products.[24]

The Exchange believes that deleting existing Interpretation and Policy .01 to Rule 14.11(e)(4) is necessary to align the rule text with the comprehensive structural changes proposed throughout the regulatory framework. The current interpretation reflects an outdated paradigm that narrowly characterizes Commodity-Based Trust Shares as Trust Issued Receipts backed exclusively by specified commodities held in deposit, which conflicts with the expanded definitional scope established under proposed Rule 14.11(e)(4)(C)(i). The proposed rule recognizes that Commodity-Based Trust Shares may be issued by diverse entity structures including trusts, limited liability companies, or other similar vehicles, and acknowledges that these entities may hold diversified portfolios encompassing multiple commodities, Commodity-Based Assets, securities, cash, and Cash Equivalents rather than single commodity deposits. The proposed replacement of Interpretation and Policy .01 strengthens the regulatory framework by requiring issuers of Commodity-Based Trust to notify the Exchange of any failure to comply with the continued listing requirements.

The proposed rule change is designed to perfect the mechanism of a free and open market and, in general, to protect investors and the public interest in that it will facilitate the listing and trading of Commodity-Based Trust Shares in a manner that will enhance competition among market participants, to the benefit of investors and the marketplace. The Exchange believes that approval of this proposal will streamline current procedures, reduce the costs and timeline associated with bringing Commodity-Based Trust Shares to market, and provide significantly greater regulatory certainty to potential issuers considering bringing Commodity-Based Trust Shares to market, thereby enhancing competition among Commodity-Based Trust Shares issuers and reducing costs for investors.

For the above reasons, the Exchange believes that the proposed rule change is consistent with the requirements of Section 6(b)(5) of the Act.

B. Self-Regulatory Organization's Statement on Burden on Competition

The Exchange does not believe that the proposed rule change will impose any burden on competition that is not necessary or appropriate in furtherance of the purposes of the Act. To the contrary, the Exchange believes that the proposed rule change would enhance competition by streamlining current procedures, reducing the costs and timeline associated with bringing Commodity-Based Trust Shares to market, and providing significantly greater regulatory certainty to potential issuers considering bringing Commodity-Based Trust Shares to market, all of which the Exchange believes would enhance competition among Commodity-Based Trust Shares issuers and reduce costs for investors. The Exchange also believes that the proposed change would enhance competition among Commodity-Based Trust Shares by ensuring the application of uniform listing standards.

C. Self-Regulatory Organization's Statement on Comments on the Proposed Rule Change Received From Members, Participants, or Others

The Exchange neither solicited nor received written comment letters on this proposal.

III. Date of Effectiveness of the Proposed Rule Change and Timing for Commission Action

Within 45 days of the date of publication of this notice in the **Federal Register** or within such longer period up to 90 days (i) as the Commission may designate if it finds such longer period to be appropriate and publishes its reasons for so finding or (ii) as to which the Exchange consents, the Commission will:

A. by order approve or disapprove such proposed rule change, or

B. institute proceedings to determine whether the proposed rule change should be disapproved.

[24] *See* Exchange Rule 14.11(l)(4)(a)(ii) and (iii).

IV. Solicitation of Comments

Interested persons are invited to submit written data, views and arguments concerning the foregoing, including whether the proposed rule change is consistent with the Act. Comments may be submitted by any of the following methods:

Electronic Comments

- Use the Commission's internet comment form (*https://www.sec.gov/rules/sro.shtml*); or
- Send an email to *rule-comments@sec.gov.* Please include file number SR–CboeBZX–2025–104 on the subject line.

Paper Comments

- Send paper comments in triplicate to Secretary, Securities and Exchange Commission, 100 F Street NE, Washington, DC 20549–1090.

All submissions should refer to file number SR–CboeBZX–2025–104. This file number should be included on the subject line if email is used. To help the Commission process and review your comments more efficiently, please use only one method. The Commission will post all comments on the Commission's internet website (*https://www.sec.gov/rules/sro.shtml*). Copies of the filing will be available for inspection and copying at the principal office of the Exchange. Do not include personal identifiable information in submissions; you should submit only information that you wish to make available publicly. We may redact in part or withhold entirely from publication submitted material that is obscene or subject to copyright protection. All submissions should refer to file number SR–CboeBZX–2025–104 and should be submitted on or before August 25, 2025.

For the Commission, by the Division of Trading and Markets, pursuant to delegated authority.[25]

Sherry R. Haywood,

Assistant Secretary.

SECURITIES AND EXCHANGE COMMISSION

[Release No. 34–103588; File No. SR–CboeBZX–2025–093]

Self-Regulatory Organizations; Cboe BZX Exchange, Inc.; Notice of Filing and Immediate Effectiveness of a Proposed Rule Change To Amend its Fees Schedule To Increase the Monthly Fee for 10 Gb Physical Ports

July 30, 2025.

Pursuant to Section 19(b)(1) of the Securities Exchange Act of 1934 (''Act''),[1] and Rule 19b–4 thereunder,[2] notice is hereby given that on July 17, 2025, Cboe BZX Exchange, Inc. (the ''Exchange'' or ''BZX'') filed with the Securities and Exchange Commission (''Commission'') the proposed rule change as described in Items I, II, and III below, which Items have been prepared by the Exchange. The Commission is publishing this notice to solicit comments on the proposed rule change from interested persons.

I. Self-Regulatory Organization's Statement of the Terms of Substance of the Proposed Rule Change

Cboe BZX Exchange, Inc. (the ''Exchange'' or ''BZX Equities'') proposes to amend its Fees Schedule. The text of the proposed rule change is provided in Exhibit 5.

The text of the proposed rule change is also available on the Exchange's website (*http://markets.cboe.com/us/equities/regulation/rule_filings/BZX/*) and at the Exchange's Office of the Secretary.

II. Self-Regulatory Organization's Statement of the Purpose of, and Statutory Basis for, the Proposed Rule Change

In its filing with the Commission, the Exchange included statements concerning the purpose of and basis for the proposed rule change and discussed any comments it received on the proposed rule change. The text of these statements may be examined at the places specified in Item IV below. The Exchange has prepared summaries, set forth in sections A, B, and C below, of the most significant aspects of such statements.

[1] 15 U.S.C. 78s(b)(1).

[2] 17 CFR 240.19b–4.

A. Self-Regulatory Organization's Statement of the Purpose of, and Statutory Basis for, the Proposed Rule Change

1. Purpose

The Exchange proposes to amend its fee schedule relating to physical connectivity fees.[3]

By way of background, a physical port is utilized by a Member or non-Member to connect to the Exchange at the data centers where the Exchange's servers are located. The Exchange currently assesses the following physical connectivity fees for Members and non-Members on a monthly basis: $2,500 per physical port for a 1 gigabit (''Gb'') circuit and $7,500 per physical port for a 10 Gb circuit. The Exchange proposes to increase the monthly fee for 10 Gb physical ports from $7,500 to $8,500 per port. The Exchange notes the proposed fee change better enables it to continue to maintain and improve its market technology and services and also notes that the proposed fee amount, even as amended, continues to be in line with, or even lower than, amounts assessed by other exchanges for similar connections.[4] The Exchange also notes

[3] The Exchange initially filed the proposed fee changes on July 3, 2023 (SR–CboeBZX–2023–046). On September 1, 2023, the Exchange withdrew that filing and submitted SR–CboeBZX–2023–067. On September 29, 2023, the Securities and Exchange Commission issued a Suspension of and Order Instituting Proceedings to Determine whether to Approve or Disapprove a Proposed Rule Change to Amend its Fees Schedule Related to Physical Port Fees (the ''OIP'') in anticipation of a possible U.S. government shutdown. On October 2, 2023, the Exchange filed the proposed fee change (SR–CboeBZX–2023–080). On October 13, 2023, the Exchange withdrew that filing and on business date October 16, 2023 submitted SR–CboeBZX–2023–084. On December 12, 2023, the Exchange withdrew that filing and submitted SR–CboeBZX–2023–103. On February 9, 2024, the Exchange withdrew that filing and submitted SR–CboeBZX–2024–016. On April 9, 2024, the Exchange withdrew that filing and submitted SR–CboeBZX2024–027. On June 7, 2024, the Exchange withdrew that filing and submitted SR–CboeBZX–2024–051. On August 29, 2024, the Exchange withdrew that filing and submitted SR–CboeBZX–2024–079. On October 25, 2024, the Exchange withdrew that filing and submitted SR–CboeBZX–2024–106. On October 28, 2024, the Exchange withdrew that filing and submitted SR–CboeBZX–2024–108. On December 18, 2024, the Exchange withdrew that filing and submitted SR–CboeBZX–2024–127. On February 14, 2025, the Exchange withdrew that filing and submitted SR–CboeBZX–2025–029. On March 13, 2025, the Exchange withdrew that filing and submitted SR–CboeBZX–2025–042. On May 9, 2025, the Exchange withdrew that filing and submitted SR–CboeBZX–2025–066. On July 7, 2025, the Exchange withdrew that filing and submitted SR–CboeBZX–2025–087. On July 17, 2025 the Exchange withdrew that filing and submitted this filing.

[4] *See e.g.,* The Nasdaq Stock Market LLC (''Nasdaq''), General 8, Connectivity to the Exchange. Nasdaq and its affiliated exchanges charge a monthly fee of $16,500 for each 10Gb Ultra

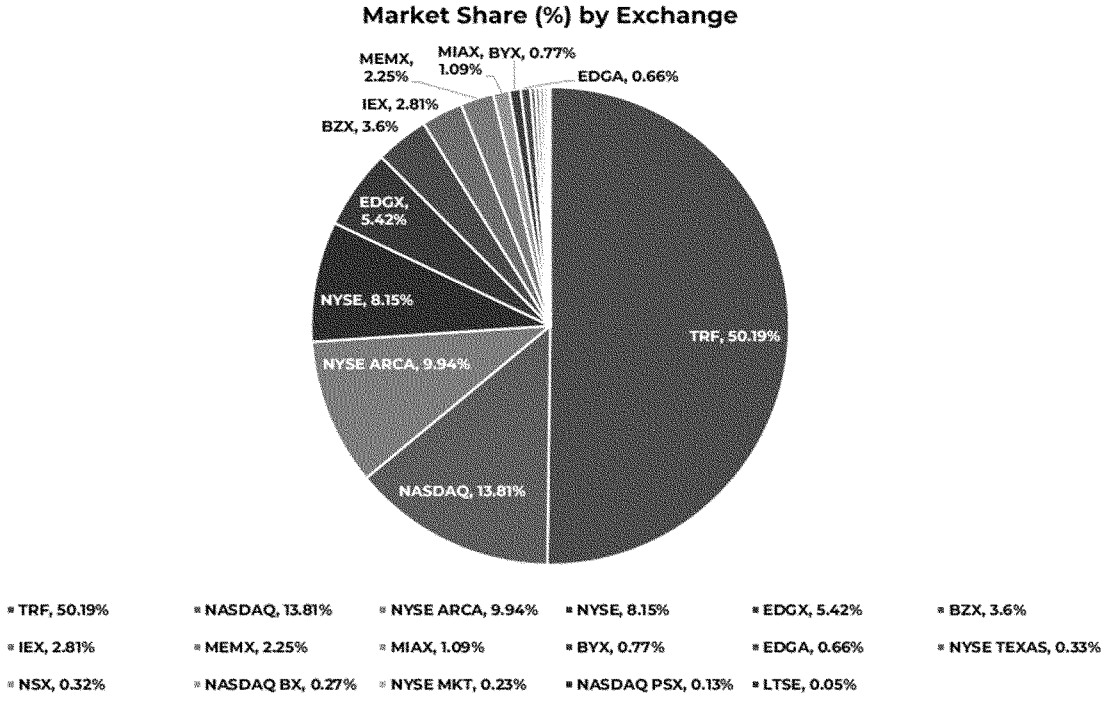
Continued

that a single 10 Gb physical port can be used to access the Systems of the following Affiliate Exchanges: the Cboe BYX Exchange, Inc. (equities), Cboe EDGX Exchange, Inc. (options and equities platforms), Cboe EDGA Exchange, Inc., (equities) and Cboe C2 Exchange, Inc., (options) (collectively, ''Affiliate Exchanges'').[5] Notably, only one monthly fee currently (and will continue) to apply per 10 Gb physical port regardless of how many Affiliate Exchanges are accessed through that one port.[6]

2. Statutory Basis

The Exchange believes the proposed rule change is consistent with the Securities Exchange Act of 1934 (the ''Act'') and the rules and regulations thereunder applicable to the Exchange and, in particular, the requirements of Section 6(b) of the Act.[7] Specifically, the Exchange believes the proposed rule change is consistent with the Section 6(b)(5)[8] requirements that the rules of an exchange be designed to prevent fraudulent and manipulative acts and practices, to promote just and equitable principles of trade, to foster cooperation and coordination with persons engaged in regulating, clearing, settling, processing information with respect to, and facilitating transactions in securities, to remove impediments to and perfect the mechanism of a free and open market and a national market system, and, in general, to protect investors and the public interest. Additionally, the Exchange believes the proposed rule change is consistent with the Section 6(b)(5)[9] requirement that the rules of an exchange not be designed to permit unfair discrimination between customers, issuers, brokers, or dealers. The Exchange also believes the proposed rule change is consistent with Section 6(b)(4)[10] of the Act, which requires that Exchange rules provide for the equitable allocation of reasonable dues, fees, and other charges among its Members and other persons using its facilities. This belief is based on various factors as described below.

The Exchange believes the proposed fees are reasonable as they are lower than, the amounts assessed by equities exchanges for analogous market access connections and which were similarly adopted via the rule filing process and filed with the Commission. The Exchange further notes that other the exchanges that offer similar pricing for similar or the same connections have a comparable, or even lower, market share as the Exchange, as detailed further below. Indeed, the Exchange has reviewed the U.S. equities market share[11] for each of the sixteen equities markets utilizing total shares traded in 2025 through July 2, 2025, as set forth in the following graph:



More specifically, the Exchange notes that the proposed physical port fee of $8,500 per month, per physical port, is comparable to fees charged by at least three other exchanges with similar market share. Indeed, two of these exchanges—Nasdaq BX (''BX'') and Nasdaq PSX (''PSX'')—have less market share than BZX quities yet charge higher

fiber connection to the respective exchange. *See also* New York Stock Exchange LLC, NYSE American LLC, NYSE Arca, Inc., NYSE Chicago Inc., NYSE National, Inc. Connectivity Fee Schedule, which provides that 10 Gb LX LCN Circuits (which are analogous to the Exchange's 10 Gb physical port) are assessed $22,000 per month, per port.

[5] The Affiliate Exchanges are also submitting contemporaneous identical rule filings.

[6] The Exchange notes that conversely, other exchange groups charge separate port fees for access to separate, but affiliated, exchanges. *See e.g.,* Securities and Exchange Release No. 99822 (March 21, 2024), 89 FR 21337 (March 27, 2024) (SR–MIAX–2024–016).

[7] 15 U.S.C. 78f(b).

[8] 15 U.S.C. 78f(b)(5).

[9] *Id.*

[10] 15 U.S.C. 78f(b)(4).

[11] Market share is the percentage of volume on a particular exchange relative to the total volume across all exchanges and indicates the amount of order flow directed to that exchange. High levels of market share enhance the value of trading and ports. The Exchange's calculation of market share also excludes auction volume on both NYSE and Nasdaq, as the benefits of NYSE's and Nasdaq's comparable access connections (*e.g.,* reduced latency) are not realized for transactions executed in their opening and closing auctions, which are instead executed at specific, codified times of the trading day. Accordingly, the Exchange believes that traded volume in NYSE's and Nasdaq's opening and closing auctions are not relevant for comparative purposes.

monthly fees for their competing products. These comparisons are summarized in Table 1:

TABLE 1

Exchange	Market share (%)	Monthly fee per port
BZX Equities	3.60	Proposed $8,500 for each 10 Gb Physical Port Connection.
Nasdaq BX	0.27	$11,000 for each 10 Gbps Fiber Connection. $16,500 for each 10 Gbps Ultra Fiber Connection.
Nasdaq PSX	0.13	$11,000 for each 10 Gbps Fiber Connection. $16,500 for each 10 Gbps Ultra Fiber Connection.

The Exchange believes its proposal is reasonable as it reflects a moderate increase in physical connectivity fees for 10 Gb physical ports and its offering. As amended, the proposed 10 Gb physical port fee continues to be less than the fee charged by both BX[12] and PSX,[13] even though BZX Equities maintains greater market share than BX and PSX, both individually and collectively. Specifically, despite having nearly 3x more market share (3.60%) than that of BX (0.27%) and PSX (0.13%), BZX's proposed $8,500 per month for each 10 Gb physical port connection is still $2,500 less than BX's and PSX's 10 Gbps fiber connection fee ($11,000), and $8,000 less than BX's and PSX's 10 Gbps Ultra Fiber connection fee ($16,500). Furthermore, by purchasing one physical port on BZX, a Member gains access to each of BZX Equities' Affiliate Exchanges (for both equities and options), providing them connectivity to nearly 11% of the equities market.[14] While BX and PSX connectivity provide similar access to Nasdaq Stock Market, LLC's (''Nasdaq'') other markets, a 10 Gb physical port fee on BZX Equities is still comparatively lower than that assessed for access to BX, PSX, and Nasdaq.[15]

TABLE 2

Exchange	Market share (%)	Monthly fee per port
BZX Equities	3.60	Proposed $8,500 for each 10 Gb Physical Port Connection.
MIAX	1.09	$8,000 for each 10 Gigabit ULL Connection.

The Exchange also acknowledges the equivalent offering from MIAX Pearl (''MIAX'') which is $8,000 per port per month for its 10 Gigabit ULL connection.[16] While the Exchange's proposed 10 Gb physical port fee of $8,500 is $500 more than that of MIAX and MIAX maintains greater market share than BZX, the Exchange again reiterates that unlike MIAX, a single physical 10 Gb physical port connection offers Exchange Members access to each of BZX Equities' Affiliated Exchanges (for both equities and options) and the monthly price does not change based on the number of exchanges a Member is connected to. In this case, examining only the Exchange's equities Affiliate Exchanges, as demonstrated in the chart above, a participant could purchase a single physical port from the Exchange and access nearly 11% of the U.S. equities market, in contrast to purchasing a single port from MIAX Pearl and accessing only around 1% of the U.S. equities market.

B. Self-Regulatory Organization's Statement on Burden on Competition

The Exchange does not believe that the proposed rule change will impose any burden on competition that is not necessary or appropriate in furtherance of the purposes of the Act. The proposed fee change will not impact intramarket competition because it will apply to all similarly situated Members equally (*i.e.,* all market participants that choose to purchase the 10 Gb physical port). Additionally, the Exchange does not believe its proposed pricing will impose a barrier to entry to smaller participants and notes that its proposed connectivity pricing is associated with relative usage of the various market participants. For example, market participants with modest capacity needs can continue to buy the less expensive 1 Gb physical port (which cost is not changing) or may choose to obtain access via a third-party re-seller. While pricing may be increased for the larger capacity physical ports, such options provide far more capacity and are purchased by those that consume more resources from the network. Accordingly, the proposed connectivity fees do not favor certain categories of market participants in a manner that would impose a burden on competition; rather, the allocation reflects the network resources consumed by the various size of market participants—lowest bandwidth consuming members pay the least, and highest bandwidth consuming members pays the most.

The proposed fee change also does not impose a burden on competition or on other Self-Regulatory Organizations that is not necessary or appropriate. As described above, in establishing its proposed fee change the Exchange compared its proposed fee increase to that of competitor exchanges' analogous offerings. As noted above, the proposed fee of $8,500 is less than that of both Nasdaq BX and Nasdaq PSX, despite both Nasdaq markets maintaining lesser market share than BZX. Moreover, while BZX's proposed $8,500 10 Gb physical port fee is $500 more than MIAX's

[12] *See* Nasdaq BX (''BX'') rulebook, General 8, Connectivity to the Exchange, available at: *https://listingcenter.nasdaq.com/rulebook/BX/rules/BX%20General%208/Fiber%20Connection%20to%20the%20Exchange/EQUALS/#position.*

[13] *See* Nasdaq PSX (''PSX'') rulebook, General 8, Connectivity to the Exchange, available at: *https://listingcenter.nasdaq.com/rulebook/phlx/rules/Phlx%20General%208.*

[14] 0.77% (BYX) + 3.60% (BZX) + 5.42% (EDGX) + 0.66% (EDGA) = 10.45%.

[15] For $8,500 per month, BYX Members gain access to approximately 11% of the market. For $16,500 a month, Nasdaq members gain access to approximately 14.21% of the market: 13.21% (Nasdaq) + .27% (BX) + .13% (PSX) = 14.21%.

[16] *See* MIAX Pearl Equities Fee Schedule.

$8,000 per month 10 gigabit ULL connection fee, the Exchange again reiterates that the purchase of a single 10 Gb physical port connection provides BZX Equities Members with access to all of BZX Equities' Affiliated Exchanges (both equities and options); *i.e.,* a single 10 Gb physical port connection provides BZX Equities Members with access to nearly 11% of the U.S. equities market, while a single 10 gigabit ULL connection on MIAX provides a MIAX user with access to less than 2% of the U.S. equities market.

C. Self-Regulatory Organization's Statement on Comments on the Proposed Rule Change Received From Members, Participants, or Others

The Exchange neither solicited nor received comments on the proposed rule change.

III. Date of Effectiveness of the Proposed Rule Change and Timing for Commission Action

The foregoing rule change has become effective pursuant to Section 19(b)(3)(A) of the Act [17] and paragraph (f) of Rule 19b–4 [18] thereunder. At any time within 60 days of the filing of the proposed rule change, the Commission summarily may temporarily suspend such rule change if it appears to the Commission that such action is necessary or appropriate in the public interest, for the protection of investors, or otherwise in furtherance of the purposes of the Act. If the Commission takes such action, the Commission will institute proceedings to determine whether the proposed rule change should be approved or disapproved.

IV. Solicitation of Comments

Interested persons are invited to submit written data, views and arguments concerning the foregoing, including whether the proposed rule change is consistent with the Act. Comments may be submitted by any of the following methods:

Electronic Comments

- Use the Commission's internet comment form (*https://www.sec.gov/rules/sro.shtml*); or
- Send an email to *rule-comments@sec.gov.* Please include file number SR–CboeBZX–2025–093 on the subject line.

Paper Comments

- Send paper comments in triplicate to Secretary, Securities and Exchange Commission, 100 F Street NE, Washington, DC 20549–1090.

All submissions should refer to file number SR–CboeBZX–2025–093. This file number should be included on the subject line if email is used. To help the Commission process and review your comments more efficiently, please use only one method. The Commission will post all comments on the Commission's internet website (*https://www.sec.gov/rules/sro.shtml*). Copies of the filing will be available for inspection and copying at the principal office of the Exchange. Do not include personal identifiable information in submissions; you should submit only information that you wish to make available publicly. We may redact in part or withhold entirely from publication submitted material that is obscene or subject to copyright protection. All submissions should refer to file number SR–CboeBZX–2025–093 and should be submitted on or before August 25, 2025.

For the Commission, by the Division of Trading and Markets, pursuant to delegated authority.[19]

Sherry R. Haywood,

Assistant Secretary.

SECURITIES AND EXCHANGE COMMISSION

[Release No. 34–103585; File No. SR–CboeEDGX–2025–057]

Self-Regulatory Organizations; Cboe EDGX Exchange, Inc.; Notice of Filing and Immediate Effectiveness of a Proposed Rule Change To Amend Its Fees Schedule To Increase the Monthly Fee for 10 Gb Physical Ports

July 30, 2025.

Pursuant to Section 19(b)(1) of the Securities Exchange Act of 1934 (''Act''),[1] and Rule 19b–4 thereunder,[2] notice is hereby given that on July 17, 2025, Cboe EDGX Exchange, Inc. (the ''Exchange'' or ''EDGX'') filed with the Securities and Exchange Commission (''Commission'') the proposed rule change as described in Items I, II, and III below, which Items have been prepared by the Exchange. The Commission is publishing this notice to solicit comments on the proposed rule change from interested persons.

I. Self-Regulatory Organization's Statement of the Terms of Substance of the Proposed Rule Change

Cboe EDGX Exchange, Inc. (the ''Exchange'' or ''EDGX Equities'') proposes to amend its Fees Schedule. The text of the proposed rule change is provided in Exhibit 5.

The text of the proposed rule change is also available on the Exchange's website (*http://markets.cboe.com/us/options/regulation/rule_filings/edgx/*) and at the Exchange's Office of the Secretary.

II. Self-Regulatory Organization's Statement of the Purpose of, and Statutory Basis for, the Proposed Rule Change

In its filing with the Commission, the Exchange included statements concerning the purpose of and basis for the proposed rule change and discussed any comments it received on the proposed rule change. The text of these statements may be examined at the places specified in Item IV below. The Exchange has prepared summaries, set forth in sections A, B, and C below, of the most significant aspects of such statements.

A. Self-Regulatory Organization's Statement of the Purpose of, and Statutory Basis for, the Proposed Rule Change

1. Purpose

The Exchange proposes to amend its fee schedule relating to physical connectivity fees.[3]

By way of background, a physical port is utilized by a Member or non-Member

[1] 15 U.S.C. 78s(b)(1).

[2] 17 CFR 240.19b–4.

[3] The Exchange initially filed the proposed fee changes on July 3, 2023 (SR–CboeEDGX–2023–045). On September 1, 2023, the Exchange withdrew that filing and submitted SR–CboeEDGX–2023–058. On September 29, 2023, the Securities and Exchange Commission issued a Suspension of and Order Instituting Proceedings to Determine whether to Approve or Disapprove a Proposed Rule Change to Amend its Fees Schedule Related to Physical Port Fees (the ''OIP'') in anticipation of a possible U.S. government shutdown. ''). On September 29, 2023, the Exchange filed the proposed fee change (SR–CboeEDGX–2023–063). On October 13, 2023, the Exchange withdrew that filing and submitted SR–CboeEDGX–2023–064. On December 12, 2023, the Exchange withdrew that filing and submitted SR–CboeEDGX–2023–080. On February 12, 2024, the Exchange withdrew that filing and submitted SR–CboeEDGX–2024–014. On April 9, 2024, the Exchange withdrew that filing and submitted SR–CboeEDGX–2024–021. On June 7, 2024, the Exchange withdrew that filing and submitted SR–CboeEDGX–2024–036. On August 29, 2024, the Exchange withdrew that filing and submitted SR–CboeEDGX–2024–057. On October 25, 2024, the Exchange withdrew that filing and submitted SR–CboeEDGX–2024–072. On December 18, 2024, the Exchange withdrew that filing and submitted SR–CboeEDGX–2024–086. On February 14, 2025, the Exchange withdrew that filing and submitted SR–CboeEDGX–2025–012. On March 13, 2025, the Exchange withdrew that filing and submitted SR–CboeEDGX–2025–023. On May 9, 2025, the Exchange withdrew that filing and submitted SR–CboeEDGX–2025–040. On July 7, 2025, the Exchange withdrew that filing and submitted SR–CboeEDGX–2025–053. On July 17, 2025 the Exchange withdrew that filing and submitted this filing.

to connect to the Exchange at the data centers where the Exchange's servers are located. The Exchange currently assesses the following physical connectivity fees for Members and non-Members on a monthly basis: $2,500 per physical port for a 1 gigabit (''Gb'') circuit and $7,500 per physical port for a 10 Gb circuit. The Exchange proposes to increase the monthly fee for 10 Gb physical ports from $7,500 to $8,500 per port. The Exchange notes the proposed fee change better enables it to continue to maintain and improve its market technology and services and also notes that the proposed fee amount, even as amended, continues to be in line with, or even lower than, amounts assessed by other exchanges for similar connections.[4] The Exchange also notes that a single 10 Gb physical port can be used to access the Systems of the following Affiliate Exchanges: the Cboe BZX Exchange, Inc. (options and equities), Cboe BYX Exchange, Inc. (equities platform), Cboe EDGA Exchange, Inc. (options), and Cboe C2 Exchange, Inc., (''Affiliate Exchanges'').[5] Notably, only one monthly fee currently (and will continue) to apply per 10 Gb physical port regardless of how many Affiliate Exchanges are accessed through that one port.[6]

2. Statutory Basis

The Exchange believes the proposed rule change is consistent with the Securities Exchange Act of 1934 (the ''Act'') and the rules and regulations thereunder applicable to the Exchange and, in particular, the requirements of Section 6(b) of the Act.[7] Specifically, the Exchange believes the proposed rule change is consistent with the Section 6(b)(5)[8] requirements that the rules of an exchange be designed to prevent fraudulent and manipulative acts and practices, to promote just and equitable principles of trade, to foster cooperation and coordination with persons engaged in regulating, clearing, settling, processing information with respect to, and facilitating transactions in securities, to remove impediments to and perfect the mechanism of a free and open market and a national market system, and, in general, to protect investors and the public interest. Additionally, the Exchange believes the proposed rule change is consistent with the Section 6(b)(5)[9] requirement that the rules of an exchange not be designed to permit unfair discrimination between customers, issuers, brokers, or dealers.

The Exchange also believes the proposed rule change is consistent with Section 6(b)(4)[10] of the Act, which requires that Exchange rules provide for the equitable allocation of reasonable dues, fees, and other charges among its Members and other persons using its facilities. This belief is based on various factors as described below.

The Exchange believes the proposed fees are reasonable as they are lower than, the amounts assessed by equities exchanges for analogous market access connections and which were similarly adopted via the rule filing process and filed with the Commission. The Exchange further notes that other exchanges that offer similar pricing for similar or the same connections have a comparable, or even lower, market share as the Exchange, as detailed further below. Indeed, the Exchange has reviewed the U.S. equities market share[11] for each of the sixteen equities markets utilizing total shares traded in 2025 through July 2, 2025, as set forth in the following graph:

[4] *See e.g.,* The Nasdaq Stock Market LLC (''Nasdaq''), General 8, Connectivity to the Exchange. Nasdaq and its affiliated exchanges charge a monthly fee of $16,500 for each 10Gb Ultra fiber connection to the respective exchange. *See also* New York Stock Exchange LLC, NYSE American LLC, NYSE Arca, Inc., NYSE Chicago Inc., NYSE National, Inc. Connectivity Fee Schedule, which provides that 10 Gb LX LCN Circuits (which are analogous to the Exchange's 10 Gb physical port) are assessed $22,000 per month, per port.

[5] The Affiliate Exchanges are also submitting contemporaneous identical rule filings.

[6] The Exchange notes that conversely, other exchange groups charge separate port fees for access to separate, but affiliated, exchanges. *See e.g.,* Securities and Exchange Release No. 99822 (March 21, 2024), 89 FR 21337 (March 27, 2024) (SR–MIAX–2024–016).

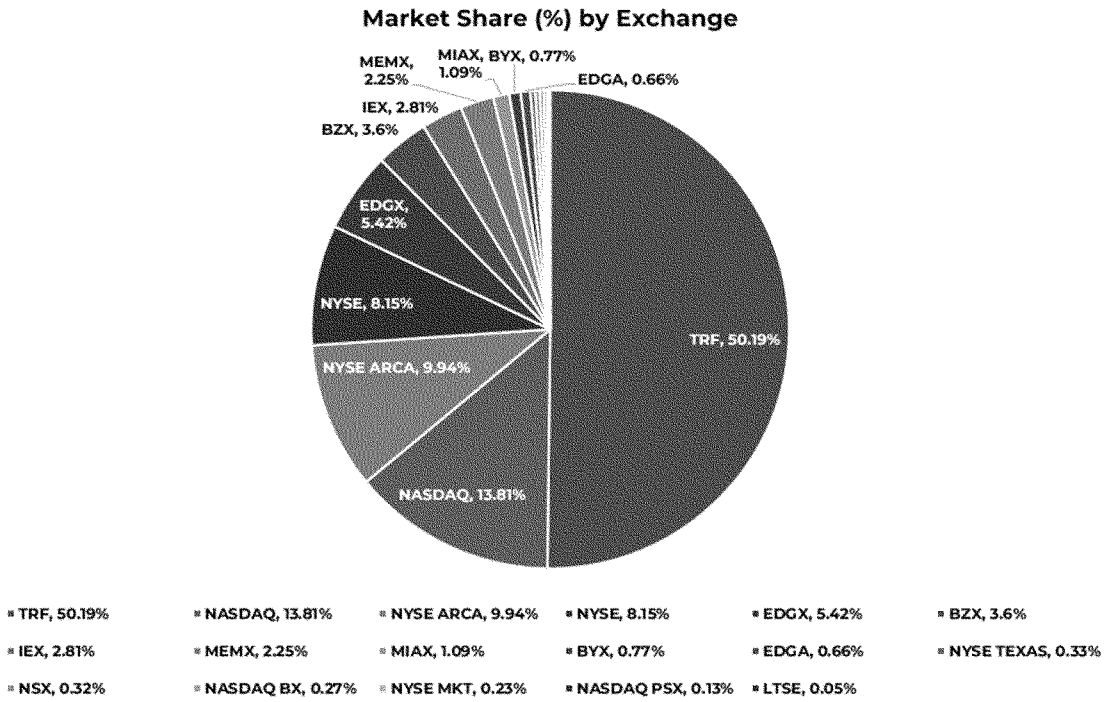
[7] 15 U.S.C. 78f(b).

[8] 15 U.S.C. 78f(b)(5).

[9] *Id.*

[10] 15 U.S.C. 78f(b)(4).

[11] Market share is the percentage of volume on a particular exchange relative to the total volume across all exchanges and indicates the amount of order flow directed to that exchange. High levels of market share enhance the value of trading and ports. The Exchange's calculation of market share also excludes auction volume on both NYSE and Nasdaq, as the benefits of NYSE's and Nasdaq's comparable access connections (*e.g.,* reduced latency) are not realized for transactions executed in their opening and closing auctions, which are instead executed at specific, codified times of the trading day. Accordingly, the Exchange believes that traded volume in NYSE's and Nasdaq's opening and closing auctions are not relevant for comparative purposes.



More specifically, the Exchange notes that the proposed physical port fee of $8500 per month, per physical port, is comparable to fees charged by at least three other exchanges with similar market share. Indeed, two of these exchanges—Nasdaq BX (''BX'') and Nasdaq PSX (''PSX'')—have less market share than BYX yet charge higher monthly fees for their competing products. These comparisons are summarized in Table 1:

TABLE 1

Exchange	Market share (%)	Monthly fee per port
EDGX Equities	5.42	Proposed $8500 for each 10 Gb Physical Port Connection.
Nasdaq BX	0.27	$11,000 for each 10 Gbps Fiber Connection. $16,500 for each 10 Gbps Ultra Fiber Connection.
Nasdaq PSX	0.13	$11,000 for each 10 Gbps Fiber Connection. $16,500 for each 10 Gbps Ultra Fiber Connection.

The Exchange believes its proposal is reasonable as it reflects a moderate increase in physical connectivity fees for 10 Gb physical ports and its offering. As amended, the proposed 10 Gb physical port fee continues to be less than the fee charged by both BX [12] and PSX,[13] even though EDGX Equities maintains greater market share than BX and PSX, both individually and collectively. Specifically, despite having nearly 5x more market share (5.42%) than that of BX (0.27%) and PSX (0.13%), EDGX Equities' proposed $8500 per month for each 10 Gb physical port connection is still $2500 less than BX's and PX's 10Gbps fiber connection fee ($11,000), and $8000 less than BX's and PSX's 10 Gbps Ultra Fiber connection fee ($16,500). Furthermore, by purchasing one physical port on EDGX, a Member gains access to each of EDGX Equities' Affiliate Exchanges (for both equities and options), providing them connectivity to nearly 11% of the equities market.[14] While BX and PSX connectivity provide similar access to Nasdaq Stock Market, LLC's (''Nasdaq'') other markets, a 10 Gb physical port fee on EDGX Equities is still comparatively lower than that assessed access to for access to BX, PSX, and Nasdaq.[15]

TABLE 2

Exchange	Market share (%)	Monthly fee per port
EDGX Equities	5.42	Proposed $8500 for each 10 Gb Physical Port Connection.

[12] *See* Nasdaq BX (''BX'') rulebook, General 8, Connectivity to the Exchange, available at: *https://listingcenter.nasdaq.com/rulebook/BX/rules/BX%20General%208/Fiber%20Connection%20to%20the%20Exchange/EQUALS/#position.*

[13] *See* Nasdaq PSX (''PSX'') rulebook, General 8, Connectivity to the Exchange, available at: *https://listingcenter.nasdaq.com/rulebook/phlx/rules/Phlx%20General%208.*

[14] 0.77% (BYX) + 3.60% (BZX) + 5.42% (EDGX) + 0.66% (EDGA) = 10.45%.

[15] For $8500 per month, BYX Members gain access to approximately 11% of the market. For $16,500 a month, Nasdaq members gain access to approximately 14.21% of the market: 13.21% (Nasdaq) + .27% (BX) + .13% (PSX) = 14.21%.

TABLE 2—Continued

Exchange	Market share (%)	Monthly fee per port
MIAX	1.09	$8,000 for each 10 Gigabit ULL Connection.

The Exchange also acknowledges the equivalent offering from MIAX Pearl (''MIAX'') which is $8,000 per port per month for its 10 Gigabit ULL connection.[16] While the Exchange's proposed 10 Gb physical port fee of $8500 is $500 more than that of MIAX, EDGX Equities maintains greater market share than MIAX. Moreover, the Exchange again reiterates that unlike MIAX, a single physical 10 Gb physical port connection offers Exchange Members access to each of EDGX Equities' Affiliate Exchanges (for both equities and options) and the monthly price does not change based on the number of exchanges a Member is connected to. In this case, examining only the Exchange's equities Affiliate Exchanges, a participant could purchase a single physical port from the Exchange and access nearly 11% of the U.S. equities market, in contrast to purchasing a single port from MIAX Pearl and accessing only around 1% of the U.S. equities market.

B. Self-Regulatory Organization's Statement on Burden on Competition

The Exchange does not believe that the proposed rule change will impose any burden on competition that is not necessary or appropriate in furtherance of the purposes of the Act. The proposed fee change will not impact intramarket competition because it will apply to all similarly situated Members equally (*i.e.,* all market participants that choose to purchase the 10 Gb physical port). Additionally, the Exchange does not believe its proposed pricing will impose a barrier to entry to smaller participants and notes that its proposed connectivity pricing is associated with relative usage of the various market participants. For example, market participants with modest capacity needs can continue to buy the less expensive 1 Gb physical port (which cost is not changing) or may choose to obtain access via a third-party re-seller. While pricing may be increased for the larger capacity physical ports, such options provide far more capacity and are purchased by those that consume more resources from the network. Accordingly, the proposed connectivity fees do not favor certain categories of market participants in a manner that would impose a burden on competition; rather, the allocation reflects the network resources consumed by the various size of market participants—lowest bandwidth consuming members pay the least, and highest bandwidth consuming members pays the most.

The proposed fee change also does not impose a burden on competition or on other Self-Regulatory Organizations that is not necessary or appropriate. As described above, in establishing its proposed fee change the Exchange compared its proposed fee increase to that of competitor exchanges' analogous offerings. As noted above, the proposed fee of $8500 is less than that of both Nasdaq BX and Nasdaq PSX, despite both Nasdaq markets maintaining nearly 5x less market share than EDGX Equities. Moreover, while EDGX Equities' proposed $8500 10 Gb physical port fee is $500 more than MIAX's $8000 per month 10 gigabit ULL connection fee, the Exchange again reiterates that the purchase of a single 10 Gb physical port connection provides EDGX Equities Members with access to all of EDGX's Affiliate Exchanges (both equities and options); *i.e.,* a single 10 Gb physical port connection provides EDGX Equities Members with access to nearly 11% of the U.S. equities market, while a single 10 gigabit ULL connection on MIAX provides a MIAX user with access to less than 2% of the U.S. equities market.

C. Self-Regulatory Organization's Statement on Comments on the Proposed Rule Change Received From Members, Participants, or Others

The Exchange neither solicited nor received comments on the proposed rule change.

III. Date of Effectiveness of the Proposed Rule Change and Timing for Commission Action

The foregoing rule change has become effective pursuant to Section 19(b)(3)(A) of the Act[17] and paragraph (f) of Rule 19b–4[18] thereunder. At any time within 60 days of the filing of the proposed rule change, the Commission summarily may temporarily suspend such rule change if it appears to the Commission that such action is necessary or appropriate in the public interest, for the protection of investors, or otherwise in furtherance of the purposes of the Act. If the Commission takes such action, the Commission will institute proceedings to determine whether the proposed rule change should be approved or disapproved.

IV. Solicitation of Comments

Interested persons are invited to submit written data, views and arguments concerning the foregoing, including whether the proposed rule change is consistent with the Act. Comments may be submitted by any of the following methods:

Electronic Comments

- Use the Commission's internet comment form (*https://www.sec.gov/rules/sro.shtml*); or
- Send an email to *rule-comments@sec.gov.* Please include file number SR–CboeEDGX–2025–057 on the subject line.

Paper Comments

- Send paper comments in triplicate to Secretary, Securities and Exchange Commission, 100 F Street NE, Washington, DC 20549–1090.

All submissions should refer to file number SR–CboeEDGX–2025–057. This file number should be included on the subject line if email is used. To help the Commission process and review your comments more efficiently, please use only one method. The Commission will post all comments on the Commission's internet website (*https://www.sec.gov/rules/sro.shtml*). Copies of the filing will be available for inspection and copying at the principal office of the Exchange. Do not include personal identifiable information in submissions; you should submit only information that you wish to make available publicly. We may redact in part or withhold entirely from publication submitted material that is obscene or subject to copyright protection. All submissions should refer to file number SR–CboeEDGX–2025–057 and should be submitted on or before August 25, 2025.

BILLING CODE 8011–01–P

SECURITIES AND EXCHANGE COMMISSION

[OMB Control No. 3235–0383]

Agency Information Collection Activities; Proposed Collection; Comment Request; Extension: Form F–7—Registration Statement

Upon Written Request, Copies Available From: Securities and Exchange Commission, Office of FOIA Services, 100 F Street NE, Washington, DC 20549–2736

Notice is hereby given that, pursuant to the Paperwork Reduction Act of 1995 (44 U.S.C. 3501 *et seq.*), the Securities and Exchange Commission (''Commission'') is soliciting comments on the collection of information summarized below. The Commission plans to submit this existing collection of information to the Office of Management and Budget (''OMB'') for extension and approval.

Form F–7 (17 CFR 239.37) is a registration statement under the Securities Act of 1933 (15 U.S.C. 77a *et seq.*) used to register securities that are offered for cash upon the exercise of rights granted to a registrant's existing security holders to purchase or subscribe such securities. The information collected is intended to ensure the adequacy of information available to investors in connection with securities offerings. We estimate that Form F–7 is filed once per year by an average of 3 respondents annually. We estimate that Form F–7 has a burden of 1 hour per response for an estimated annual reporting burden of 3 hours (1 hour per response × 3 responses annually). We further estimate that Form F–7 has a cost burden of $1,800 per response for an estimated annual cost burden of $5,400 ($1,800 per response × 3 responses annually).

An agency may not conduct or sponsor, and a person is not required to respond to, a collection of information unless it displays a currently valid OMB control number.

Written comments are invited on: (a) whether this proposed collection of information is necessary for the proper performance of the functions of the agency, including whether the information will have practical utility; (b) the accuracy of the agency's estimate of the burden imposed by the collection of information; (c) ways to enhance the quality, utility, and clarity of the information collected; and (d) ways to minimize the burden of the collection of information on respondents, including through the use of automated collection techniques or other forms of information technology.

Please direct your written comments on this 60-Day Collection Notice to Austin Gerig, Director/Chief Data Officer, Securities and Exchange Commission, c/o Tanya Ruttenberg via email to *PaperworkReductionAct@sec.gov* by October 3, 2025. There will be a second opportunity to comment on this SEC request following the **Federal Register** publishing a 30-Day Submission Notice.

Dated: July 31, 2025.

Sherry R. Haywood,

Assistant Secretary.

BILLING CODE 8011–01–P

SECURITIES AND EXCHANGE COMMISSION

[Release No. 34–103590; File No. SR–CboeBZX–2025–100]

Self-Regulatory Organizations; Cboe BZX Exchange, Inc.; Notice of Filing and Immediate Effectiveness of a Proposed Rule Change To Amend Its Fees Schedule To Increase the Monthly Fee for 10 Gb Physical Ports

July 30, 2025.

Pursuant to Section 19(b)(1) of the Securities Exchange Act of 1934 (''Act''),[1] and Rule 19b–4 thereunder,[2] notice is hereby given that on July 29, 2025, Cboe BZX Exchange, Inc. (the ''Exchange'' or ''BZX'') filed with the Securities and Exchange Commission (''Commission'') the proposed rule change as described in Items I, II, and III below, which Items have been prepared by the Exchange. The Commission is publishing this notice to solicit comments on the proposed rule change from interested persons.

I. Self-Regulatory Organization's Statement of the Terms of Substance of the Proposed Rule Change

Cboe BZX Exchange, Inc. (the ''Exchange'' or ''BZX Options'') proposes to amend its Fees Schedule. The text of the proposed rule change is provided in Exhibit 5.

The text of the proposed rule change is also available on the Exchange's website (*http://markets.cboe.com/us/equities/regulation/rule_filings/BZX/*) and at the Exchange's Office of the Secretary.

II. Self-Regulatory Organization's Statement of the Purpose of, and Statutory Basis for, the Proposed Rule Change

In its filing with the Commission, the Exchange included statements concerning the purpose of and basis for the proposed rule change and discussed any comments it received on the proposed rule change. The text of these statements may be examined at the places specified in Item IV below. The Exchange has prepared summaries, set forth in sections A, B, and C below, of the most significant aspects of such statements.

A. Self-Regulatory Organization's Statement of the Purpose of, and Statutory Basis for, the Proposed Rule Change

1. Purpose

The Exchange proposes to amend its fee schedule relating to physical connectivity fees.[3]

[19] 17 CFR 200.30–3(a)(12).

[1] 15 U.S.C. 78s(b)(1).

[2] 17 CFR 240.19b–4.

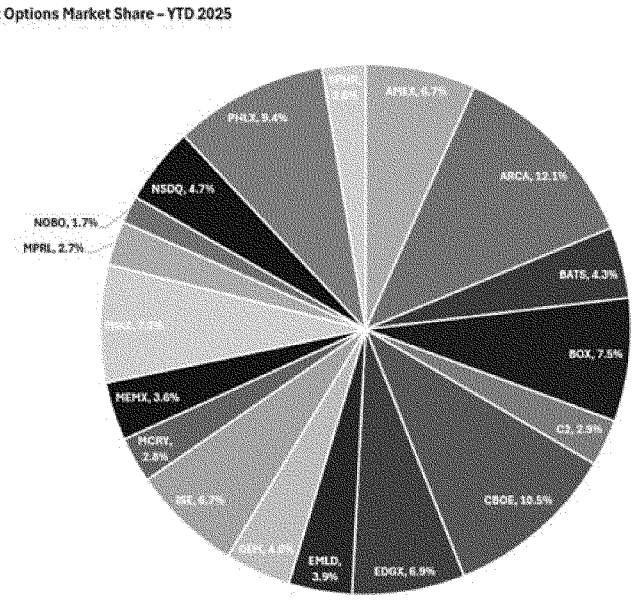
[3] The Exchange initially filed the proposed fee changes on July 3, 2023 (SR–CboeBZX–2023–047). On September 1, 2023, the Exchange withdrew that filing and submitted SR–CboeBZX–2023–068. On September 29, 2023, the Securities and Exchange Commission issued a Suspension of and Order Instituting Proceedings to Determine whether to Approve or Disapprove a Proposed Rule Change to Amend its Fees Schedule Related to Physical Port Fees (the ''OIP'') in anticipation of a possible U.S. government shutdown. On September 29, 2023, the Exchange filed the proposed fee change (SR–CboeBZX–2023–79). On October 13, 2023, the Exchange withdrew that filing and submitted SR–CboeBZX–2023–083. On December 12, 2023 the Exchange withdrew that filing and submitted SR–CboeBZX–2023–104. On February 9, 2024, the Exchange withdrew that filing and submitted SR–CboeBZX–2024–017. On April 9, 2024, the Exchange withdrew that filing and submitted this SR–CboeBZX–2024–028. On April 18, 2024, the Exchange withdrew that filing and submitted SR–CboeBZX–2024–030. On June 7, 2024, the Exchange withdrew that filing and submitted SR–CboeBZX–2024–052. On August 29, 2024, the Exchange withdrew that filing and submitted SR–CboeBZX–2024–080. On October 25, 2024, the Exchange withdrew that filing and submitted SR–CboeBZX–2024–107. On October 28, 2024, the Exchange withdrew that filing and submitted SR–CboeBZX–2024–109. On December 18, 2024 the Exchange withdrew that filing and submitted SR–CboeBZX–2024–128. On February 14, 2025, the Exchange withdrew that filing and submitted SR–CboeBZX–2025–030. On March 13, 2025, the Exchange withdrew that filing and submitted SR–CboeBZX–2025–043. On May 9, 2025, the Exchange withdrew that filing and submitted this SR–CboeBZX–2025–066. On July 7, 2025, the Exchange withdrew that filing and submitted SR–CboeBZX–2025–088. On July 17, 2025, the Exchange withdrew that filing and submitted SR–CboeBZX–2025–094. On July 29, 2025, the Exchange withdrew that filing and submitted this filing.

By way of background, a physical port is utilized by a Member or non-Member to connect to the Exchange at the data centers where the Exchange's servers are located. The Exchange currently assesses the following physical connectivity fees for Members and non-Members on a monthly basis: $2,500 per physical port for a 1 gigabit (''Gb'') circuit and $7,500 per physical port for a 10 Gb circuit. The Exchange proposes to increase the monthly fee for 10 Gb physical ports from $7,500 to $8,500 per port. The Exchange notes the proposed fee change better enables it to continue to maintain and improve its market technology and services and also notes that the proposed fee amount, even as amended, continues to be in line with, or even lower than, amounts assessed by other exchanges for similar connections.[4] The Exchange also notes that a single 10 Gb physical port can be used to access the Systems of the following Affiliate Exchanges: the Cboe BYX Exchange, Inc. (equities), Cboe EDGX Exchange, Inc. (options and equities platforms), Cboe EDGA Exchange, Inc., and Cboe C2 Exchange, Inc., (''Affiliate Exchanges'').[5] Notably, only one monthly fee currently (and will continue) to apply per 10 Gb physical port regardless of how many Affiliate Exchanges are accessed through that one port.[6]

2. Statutory Basis

The Exchange believes the proposed rule change is consistent with the Securities Exchange Act of 1934 (the ''Act'') and the rules and regulations thereunder applicable to the Exchange and, in particular, the requirements of Section 6(b) of the Act.[7] Specifically, the Exchange believes the proposed rule change is consistent with the Section 6(b)(5)[8] requirements that the rules of an exchange be designed to prevent fraudulent and manipulative acts and practices, to promote just and equitable principles of trade, to foster cooperation and coordination with persons engaged in regulating, clearing, settling, processing information with respect to, and facilitating transactions in securities, to remove impediments to and perfect the mechanism of a free and open market and a national market system, and, in general, to protect investors and the public interest. Additionally, the Exchange believes the proposed rule change is consistent with the Section 6(b)(5)[9] requirement that the rules of an exchange not be designed to permit unfair discrimination between customers, issuers, brokers, or dealers. The Exchange also believes the proposed rule change is consistent with Section 6(b)(4)[10] of the Act, which requires that Exchange rules provide for the equitable allocation of reasonable dues, fees, and other charges among its Members and other persons using its facilities. This belief is based on various factors as described below.

The Exchange believes the proposed fees are reasonable as they are lower than, the amounts assessed by equities exchanges for analogous market access connections and which were similarly adopted via the rule filing process and filed with the Commission. The Exchange further notes that other the exchanges that offer similar pricing for similar or the same connections have a comparable, or even lower, market share as the Exchange, as detailed further below. Indeed, the Exchange has reviewed the U.S. options market share[11] for each of the eighteen options markets utilizing total shares traded in 2025 through July 2, 2025, as set forth in the following graph:



[4] *See e.g.,* The Nasdaq Stock Market LLC (''Nasdaq''), General 8, Connectivity to the Exchange. Nasdaq and its affiliated exchanges charge a monthly fee of $16,500 for each 10Gb Ultra fiber connection to the respective exchange. *See also* New York Stock Exchange LLC, NYSE American LLC, NYSE Arca, Inc., NYSE Chicago Inc., NYSE National, Inc. Connectivity Fee Schedule, which provides that 10 Gb LX LCN Circuits (which are analogous to the Exchange's 10 Gb physical port) are assessed $22,000 per month, per port.

[5] The Affiliate Exchanges are also submitting contemporaneous identical rule filings.

[6] The Exchange notes that conversely, other exchange groups charge separate port fees for access to separate, but affiliated, exchanges. *See e.g.,* Securities and Exchange Release No. 99822 (March 21, 2024), 89 FR 21337 (March 27, 2024) (SR–MIAX–2024–016).

[7] 15 U.S.C. 78f(b).

[8] 15 U.S.C. 78f(b)(5).

[9] *Id.*

[10] 15 U.S.C. 78f(b)(4).

[11] Market share is the percentage of volume on a particular exchange relative to the total volume across all exchanges and indicates the amount of order flow directed to that exchange. High levels of market share enhance the value of trading and ports.

More specifically, the Exchange notes that the proposed physical port fee of $8,500 per month, per physical port, is comparable to fees charged by other exchanges with similar, or greater, market share. These comparisons are summarized in Table 1:

TABLE 1

Exchange	Market share (%)	Monthly fee per port
BZX Options	4.3	Proposed $8,500 for each 10 Gb Physical Port Connection.
MIAX Options	7.2	$13,500 per port.
MIAX Pearl	2.7	$13,500 per port.
MIAX Emerald	3.9	$13,500 per port.
MIAX Sapphire	2.6	$13,500 per port.

Specifically, the Exchange points towards the equivalent offering from MIAX Sapphire [12] and its affiliated options exchanges, MIAX Options,[13] MIAX Pearl [14] and MIAX Emerald [15] (collectively, ''MIAX Exchanges'') which is $13,500 per port per month. The Exchange reiterates that a single physical port offering from the Exchange offers the ability to connect to the Affiliated Exchanges (equities and options) and the monthly price does not change based on the number of exchanges a participant is connected to. In this case, examining only the Exchange and its Affiliated Options Exchanges, (even though the same physical port could also connect to the Exchange's affiliated equities exchanges) a participant could purchase a single physical port from the Exchange and access roughly 14% of the U.S. Options Market for a cost of $8,500. In contrast, if a participant desired to access all MIAX Exchanges, allowing access to roughly 16% of the U.S. Options Market, it would cost that participant $54,000 ($13,500 per port per month × 4 MIAX Exchanges).

In addition, as demonstrated in the Mutli-List Market Share Chart (above), the Exchange believes its proposal is reasonable as it reflects a moderate increase in physical connectivity fees for 10 Gb physical ports and its offering. As amended, the Exchange's proposed fee continues to be more affordable as compared to analogous physical connectivity offerings at competitor exchanges. For example, The Nasdaq Stock Market LLC (''Nasdaq'') and its affiliated exchanges charge a monthly fee of $16,500 for each 10Gbps Ultra fiber connection and $11,000 per month for each 10 Gbps fiber connection to their respective exchange. The Exchange's proposed fee of $8,500 per physical port is lower than both of these offerings.

B. Self-Regulatory Organization's Statement on Burden on Competition

The Exchange does not believe that the proposed rule change will impose any burden on competition that is not necessary or appropriate in furtherance of the purposes of the Act. The proposed fee change will not impact intramarket competition because it will apply to all similarly situated Members equally (*i.e.,* all market participants that choose to purchase the 10 Gb physical port). Additionally, the Exchange does not believe its proposed pricing will impose a barrier to entry to smaller participants and notes that its proposed connectivity pricing is associated with relative usage of the various market participants. For example, market participants with modest capacity needs can continue to buy the less expensive 1 Gb physical port (which cost is not changing) or may choose to obtain access via a third-party re-seller. While pricing may be increased for the larger capacity physical ports, such options provide far more capacity and are purchased by those that consume more resources from the network. Accordingly, the proposed connectivity fees do not favor certain categories of market participants in a manner that would impose a burden on competition; rather, the allocation reflects the network resources consumed by the various size of market participants—lowest bandwidth consuming members pay the least, and highest bandwidth consuming members pays the most.

The proposed fee change also does not impose a burden on competition or on other Self-Regulatory Organizations that is not necessary or appropriate. As described above, in establishing its proposed fee change the Exchange compared its proposed fee increase to that of competitor exchanges' analogous offerings. As noted above, the proposed fee of $8,500 is less than that Nasdaq Stock Market, LLC's and its affiliated exchanges fee $16,500 for each 10 Gbps Ultra fiber connection and $11,000 per month for each 10 Gbps fiber connection to their respective exchange.

Moreover, the Exchange also points towards the equivalent offering from MIAX Saphire and its affiliated options exchanges, MIAX Options, MIAX Pearl and MIAX Emerald (collectively, ''MIAX Exchanges'') which is $13,500 per port per month. The Exchange reiterates that a single physical port offering from the Exchange offers the ability to connect to the Affiliate Exchanges (equities and options) and the monthly price does not change based on the number of exchanges a participant is connected to. In this case, examining only the Exchange and its options Affiliate Exchanges, (even though the same physical port could also connect to the Exchange's equities Affiliate Exchanges) a participant could purchase a single physical port from the Exchange and access roughly 14% of the U.S. options market for a cost of $8,500. In contrast, if a participant desired to access all MIAX Exchanges, allowing access to roughly 16% of the U.S. options market, it would cost that participant $54,000 ($13,500 per port per month × 4 MIAX Exchanges).

C. Self-Regulatory Organization's Statement on Comments on the Proposed Rule Change Received From Members, Participants, or Others

The Exchange neither solicited nor received comments on the proposed rule change.

III. Date of Effectiveness of the Proposed Rule Change and Timing for Commission Action

The foregoing rule change has become effective pursuant to Section 19(b)(3)(A) of the Act [16] and paragraph (f) of Rule

[12] *See* MIAX Sapphire Options Fee Schedule, available at: *https://www.miaxglobal.com/alert/2024/08/08/miax-sapphire-options-exchange-august-12-2024-fees.*

19b–4 [17] thereunder. At any time within 60 days of the filing of the proposed rule change, the Commission summarily may temporarily suspend such rule change if it appears to the Commission that such action is necessary or appropriate in the public interest, for the protection of investors, or otherwise in furtherance of the purposes of the Act. If the Commission takes such action, the Commission will institute proceedings to determine whether the proposed rule change should be approved or disapproved.

IV. Solicitation of Comments

Interested persons are invited to submit written data, views and arguments concerning the foregoing, including whether the proposed rule change is consistent with the Act. Comments may be submitted by any of the following methods:

Electronic Comments

- Use the Commission's internet comment form (*https://www.sec.gov/rules/sro.shtml*); or
- Send an email to *rule-comments@sec.gov.* Please include file number SR–CboeBZX–2025–100 on the subject line.

Paper Comments

- Send paper comments in triplicate to Secretary, Securities and Exchange Commission, 100 F Street NE, Washington, DC 20549–1090.

All submissions should refer to file number SR–CboeBZX–2025–100. This file number should be included on the subject line if email is used. To help the Commission process and review your comments more efficiently, please use only one method. The Commission will post all comments on the Commission's internet website (*https://www.sec.gov/rules/sro.shtml*). Copies of the filing will be available for inspection and copying at the principal office of the Exchange. Do not include personal identifiable information in submissions; you should submit only information that you wish to make available publicly. We may redact in part or withhold entirely from publication submitted material that is obscene or subject to copyright protection. All submissions should refer to file number S–CboeBZX–2025–100 and should be submitted on or before August 25, 2025.

For the Commission, by the Division of Trading and Markets, pursuant to delegated authority.[18]

Sherry R. Haywood,

Assistant Secretary.

SECURITIES AND EXCHANGE COMMISSION

[Release No. 34–103591; File No. SR–CboeEDGX–2025–061]

Self-Regulatory Organizations; Cboe EDGX Exchange, Inc.; Notice of Filing and Immediate Effectiveness of a Proposed Rule Change To Amend Its Fees Schedule To Increase the Monthly Fee for 10 Gb Physical Ports

July 30, 2025.

Pursuant to Section 19(b)(1) of the Securities Exchange Act of 1934 (''Act''),[1] and Rule 19b–4 thereunder,[2] notice is hereby given that on July 29, 2025, Cboe EDGX Exchange, Inc. (the ''Exchange'' or ''EDGX'') filed with the Securities and Exchange Commission (''Commission'') the proposed rule change as described in Items I, II, and III below, which Items have been prepared by the Exchange. The Commission is publishing this notice to solicit comments on the proposed rule change from interested persons.

[1] 15 U.S.C. 78s(b)(1).

[2] 17 CFR 240.19b–4.

I. Self-Regulatory Organization's Statement of the Terms of Substance of the Proposed Rule Change

Cboe EDGX Exchange, Inc. (the ''Exchange'' or ''EDGX Options'') proposes to amend its Fees Schedule. The text of the proposed rule change is provided in Exhibit 5.

The text of the proposed rule change is also available on the Exchange's website (*http://markets.cboe.com/us/options/regulation/rule_filings/edgx/*) and at the Exchange's Office of the Secretary.

II. Self-Regulatory Organization's Statement of the Purpose of, and Statutory Basis for, the Proposed Rule Change

In its filing with the Commission, the Exchange included statements concerning the purpose of and basis for the proposed rule change and discussed any comments it received on the proposed rule change. The text of these statements may be examined at the places specified in Item IV below. The Exchange has prepared summaries, set forth in sections A, B, and C below, of the most significant aspects of such statements.

A. Self-Regulatory Organization's Statement of the Purpose of, and Statutory Basis for, the Proposed Rule Change

1. Purpose

The Exchange proposes to amend its fee schedule relating to physical connectivity fees.[3]

By way of background, a physical port is utilized by a Member or non-Member to connect to the Exchange at the data centers where the Exchange's servers are located. The Exchange currently assesses the following physical connectivity fees for Members and non-Members on a monthly basis: $2,500 per physical port for a 1 gigabit (''Gb'') circuit and $7,500 per physical port for a 10 Gb circuit. The Exchange proposes to increase the monthly fee for 10 Gb physical ports from $7,500 to $8,500 per port. The Exchange notes the proposed fee change better enables it to continue to maintain and improve its market technology and services and also notes that the proposed fee amount, even as amended, continues to be in line with, or even lower than, amounts assessed by other exchanges for similar connections.[4] The Exchange also notes that a single 10 Gb physical port can be used to access the Systems of the following Affiliate Exchanges: the Cboe BYX Exchange, Inc. (equities), Cboe BZX Exchange, Inc. (options and equities platforms), Cboe EDGA Exchange, Inc. (equities), and Cboe C2 Exchange, Inc., (options) (''Affiliate Exchanges'').[5] Notably, only one monthly fee currently (and will continue) to apply per 10 Gb physical port regardless of how many Affiliate Exchanges are accessed through that one port.[6]

2. Statutory Basis

The Exchange believes the proposed rule change is consistent with the Securities Exchange Act of 1934 (the ''Act'') and the rules and regulations thereunder applicable to the Exchange and, in particular, the requirements of Section 6(b) of the Act.[7] Specifically, the Exchange believes the proposed rule change is consistent with the Section 6(b)(5)[8] requirements that the rules of an exchange be designed to prevent fraudulent and manipulative acts and practices, to promote just and equitable principles of trade, to foster cooperation and coordination with persons engaged in regulating, clearing, settling, processing information with respect to, and facilitating transactions in securities, to remove impediments to and perfect the mechanism of a free and open market and a national market system, and, in general, to protect investors and the public interest. Additionally, the Exchange believes the proposed rule change is consistent with the Section 6(b)(5)[9] requirement that the rules of an exchange not be designed to permit unfair discrimination between customers, issuers, brokers, or dealers. The Exchange also believes the proposed rule change is consistent with Section 6(b)(4)[10] of the Act, which requires that Exchange rules provide for the equitable allocation of reasonable dues, fees, and other charges among its Members and other persons using its facilities. This belief is based on various factors as described below.

The Exchange believes the proposed fees are reasonable as they are lower than, the amounts assessed by equities exchanges for analogous market access connections and which were similarly adopted via the rule filing process and filed with the Commission. The Exchange further notes that other exchanges that offer similar pricing for similar or the same connections have a comparable, or even lower, market share as the Exchange, as detailed further below. Indeed, the Exchange has reviewed the U.S. options market share[11] for each of the eighteen options markets utilizing total shares traded in 2025 through July 2, 2025, as set forth in the following graph:

[3] The Exchange initially filed the proposed fee changes on July 3, 2023 (SR–CboeEDGX–2023–045). On September 1, 2023, the Exchange withdrew that filing and submitted SR–CboeEDGX–2023–058. On September 29, 2023, the Securities and Exchange Commission issued a Suspension of and Order Instituting Proceedings to Determine whether to Approve or Disapprove a Proposed Rule Change to Amend its Fees Schedule Related to Physical Port Fees (the ''OIP'') in anticipation of a possible U.S. government shutdown.''). On September 29, 2023, the Exchange filed the proposed fee change (SR–CboeEDGX–2023–063). On October 13, 2023, the Exchange withdrew that filing and submitted SR–CboeEDGX–2023–064. On December 12, 2023, the Exchange withdrew that filing and submitted SR–CboeEDGX–2023–080. On February 12, 2024, the Exchange withdrew that filing and submitted SR–CboeEDGX–2024–014. On April 9, 2024, the Exchange withdrew that filing and submitted SR–CboeEDGX–2024–021. On June 7, 2024, the Exchange withdrew that filing and submitted SR–CboeEDGX–2024–036. On August 29, 2024, the Exchange withdrew that filing and submitted SR–CboeEDGX–2024–057. On October 25, 2024, the Exchange withdrew that filing and submitted SR–CboeEDGX–2024–072. On December 18, 2024, the Exchange withdrew that filing and submitted SR-CboeEDGX–2024–086. On February 14, 2025, the Exchange withdrew that filing and submitted SR–CboeEDGX–2025–012. On March 13, 2025, the Exchange withdrew that filing and submitted SR–CboeEDGX–2025–023. On May 9, 2025, the Exchange withdrew and submitted SR–CboeEDGX–2025–040. On July 7, 2025, the Exchange withdrew that filing and submitted SR–CboeEDGX–2025–054. On July 17, 2025, the Exchange withdrew that filing and submitted SR–CboeEDGX–2025–058. On July 29, 2025, the Exchange withdrew that filing and submitted this filing.

[4] *See e.g.,* The Nasdaq Stock Market LLC (''Nasdaq''), General 8, Connectivity to the Exchange. Nasdaq and its affiliated exchanges charge a monthly fee of $16,500 for each 10 Gb Ultra fiber connection to the respective exchange. *See also* New York Stock Exchange LLC, NYSE American LLC, NYSE Arca, Inc., NYSE Chicago Inc., NYSE National, Inc. Connectivity Fee Schedule, which provides that 10 Gb LX LCN Circuits (which are analogous to the Exchange's 10 Gb physical port) are assessed $22,000 per month, per port.

[5] The Affiliate Exchanges are also submitting contemporaneous identical rule filings.

[6] The Exchange notes that conversely, other exchange groups charge separate port fees for access to separate, but affiliated, exchanges. *See e.g.,* Securities and Exchange Release No. 99822 (March 21, 2024), 89 FR 21337 (March 27, 2024) (SR–MIAX–2024–016).

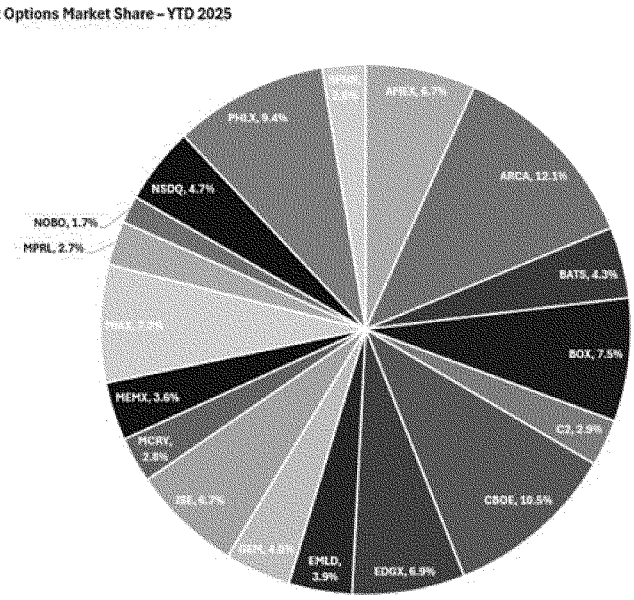
[7] 15 U.S.C. 78f(b).

[8] 15 U.S.C. 78f(b)(5).

[9] *Id.*

[10] 15 U.S.C. 78f(b)(4).

[11] Market share is the percentage of volume on a particular exchange relative to the total volume across all exchanges and indicates the amount of order flow directed to that exchange. High levels of market share enhance the value of trading and ports.



More specifically, the Exchange notes that the proposed physical port fee of $8,500 per month, per physical port, is comparable to fees charged by other exchanges with similar, or greater, market share. These comparisons are summarized in Table 1:

TABLE 1

Exchange	Market share (%)	Monthly fee per port
EDGX Options	6.9	Proposed $8,500 for each 10 Gb Physical Port Connection.
MIAX Options	7.2	$13,500 per port.
MIAX Pearl	2.7	$13,500 per port.
MIAX Emerald	3.9	$13,500 per port.
MIAX Sapphire	2.6	$13,500 per port.

Specifically, the Exchange points towards the equivalent offering from MIAX Sapphire [12] and its affiliated options exchanges, MIAX Options,[13] MIAX Pearl [14] and MIAX Emerald [15] (collectively, ''MIAX Exchanges'') which is $13,500 per port per month. The Exchange reiterates that a single physical port offering from the Exchange offers the ability to connect to the Affiliated Exchanges (equities and options) and the monthly price does not change based on the number of exchanges a participant is connected to. In this case, examining only the Exchange and its Affiliated Options Exchanges, (even though the same physical port could also connect to the Exchange's affiliated equities exchanges) a participant could purchase a single physical port from the Exchange and access roughly 14% of the U.S. Options Market for a cost of $8,500. In contrast, if a participant desired to access all MIAX Exchanges, allowing access to roughly 16% of the U.S. Options Market, it would cost that participant $54,000 ($13,500 per port per month × 4 MIAX Exchanges).

In addition, as demonstrated in the Mutli-List Market Share Chart (above), the Exchange believes its proposal is reasonable as it reflects a moderate increase in physical connectivity fees for 10 Gb physical ports and its offering. As amended, the Exchange's proposed fee continues to be more affordable as compared to analogous physical connectivity offerings at competitor exchanges. For example, The Nasdaq Stock Market LLC (''Nasdaq'') and its affiliated exchanges charge a monthly fee of $16,500 for each 10 Gbps Ultra fiber connection and $11,000 per month for each 10 Gbps fiber connection to their respective exchange. The Exchange's proposed fee of $8,500 per physical port is lower than both of these offerings.

B. Self-Regulatory Organization's Statement on Burden on Competition

The Exchange does not believe that the proposed rule change will impose any burden on competition that is not necessary or appropriate in furtherance of the purposes of the Act. The proposed fee change will not impact intramarket competition because it will apply to all similarly situated Members equally (*i.e.,* all market participants that choose to purchase the 10 Gb physical port). Additionally, the Exchange does not believe its proposed pricing will impose a barrier to entry to smaller participants and notes that its proposed connectivity pricing is associated with relative usage of the various market participants. For example, market participants with modest capacity needs can continue to buy the less expensive 1 Gb physical port (which cost is not changing) or may choose to obtain access via a third-party re-seller. While pricing may be increased for the larger

[12] *See* MIAX Sapphire Options Fee Schedule, available at: *https://www.miaxglobal.com/alert/2024/08/08/miax-sapphire-options-exchange-august-12-2024-fees.*

[13] *See* MIAX Options Fee Schedule, available at: *https://www.miaxglobal.com/markets/us-options/miax-options/fees.*

[14] *See* MIAX Pearl Options Fee Schedule, available at: *https://www.miaxglobal.com/markets/us-options/pearl-options/fees.*

[15] *See* MIAX Emerald Options Fee Scheduled, available at: *https://www.miaxglobal.com//us-options/emerald-options/fees.*

capacity physical ports, such options provide far more capacity and are purchased by those that consume more resources from the network. Accordingly, the proposed connectivity fees do not favor certain categories of market participants in a manner that would impose a burden on competition; rather, the allocation reflects the network resources consumed by the various size of market participants—lowest bandwidth consuming members pay the least, and highest bandwidth consuming members pays the most.

The proposed fee change also does not impose a burden on competition or on other Self-Regulatory Organizations that is not necessary or appropriate. As described above, in establishing its proposed fee change the Exchange compared its proposed fee increase to that of competitor exchanges' analogous offerings. As noted above, the proposed fee of $8500 is less than that Nasdaq Stock Market, LLC's and its affiliated exchanges fee $16,500 for each 10Gbps Ultra fiber connection and $11,000 per month for each 10 Gbps fiber connection to their respective exchange.

Moreover, the Exchange also points towards the equivalent offering from MIAX Saphire and its affiliated options exchanges, MIAX Options, MIAX Pearl and MIAX Emerald (collectively, ''MIAX Exchanges'') which is $13,500 per port per month. The Exchange reiterates that a single physical port offering from the Exchange offers the ability to connect to the Affiliate Exchanges (equities and options) and the monthly price does not change based on the number of exchanges a participant is connected to. In this case, examining only the Exchange and its options Affiliate Exchanges, (even though the same physical port could also connect to the Exchange's equities Affiliate Exchanges) a participant could purchase a single physical port from the Exchange and access roughly 14% of the U.S. options market for a cost of $8,500. In contrast, if a participant desired to access all MIAX Exchanges, allowing access to roughly 16% of the U.S. options market, it would cost that participant $54,000 ($13,500 per port per month × 4 MIAX Exchanges).

C. Self-Regulatory Organization's Statement on Comments on the Proposed Rule Change Received From Members, Participants, or Others

The Exchange neither solicited nor received comments on the proposed rule change.

III. Date of Effectiveness of the Proposed Rule Change and Timing for Commission Action

The foregoing rule change has become effective pursuant to Section 19(b)(3)(A) of the Act [16] and paragraph (f) of Rule 19b–4 [17] thereunder. At any time within 60 days of the filing of the proposed rule change, the Commission summarily may temporarily suspend such rule change if it appears to the Commission that such action is necessary or appropriate in the public interest, for the protection of investors, or otherwise in furtherance of the purposes of the Act. If the Commission takes such action, the Commission will institute proceedings to determine whether the proposed rule change should be approved or disapproved.

IV. Solicitation of Comments

Interested persons are invited to submit written data, views and arguments concerning the foregoing, including whether the proposed rule change is consistent with the Act. Comments may be submitted by any of the following methods:

Electronic Comments

- Use the Commission's internet comment form (*https://www.sec.gov/rules/sro.shtml*); or
- Send an email to *rule-comments@sec.gov.* Please include file number SR–CboeEDGX–2025–061 on the subject line.

Paper Comments

- Send paper comments in triplicate to Secretary, Securities and Exchange Commission, 100 F Street NE, Washington, DC 20549–1090.

All submissions should refer to file number SR–CboeEDGX–2025–061. This file number should be included on the subject line if email is used. To help the Commission process and review your comments more efficiently, please use only one method. The Commission will post all comments on the Commission's internet website (*https://www.sec.gov/rules/sro.shtml*). Copies of the filing will be available for inspection and copying at the principal office of the Exchange. Do not include personal identifiable information in submissions; you should submit only information that you wish to make available publicly. We may redact in part or withhold entirely from publication submitted material that is obscene or subject to copyright protection. All submissions should refer to file number SR–CboeEDGX–2025–061 and should be submitted on or before August 25, 2025.

For the Commission, by the Division of Trading and Markets, pursuant to delegated authority.[18]

Sherry R. Haywood,

Assistant Secretary.

DEPARTMENT OF STATE

[Public Notice: 12772]

Report to Congress Pursuant to the National Defense Authorization Act for Fiscal Year 2013 (FY13 NDAA)

ACTION: Notice.

SUMMARY: The National Defense Authorization Act for Fiscal Year 2013 (also known as the Iran Freedom and Counter-Proliferation Act of 2012 (IFCA)), as delegated by Presidential Memorandum of June 3, 2013, requires the Secretary of State, in consultation with the Secretary of the Treasury, to submit a report to the appropriate congressional committees every 180 days that contains a determination with respect to: Whether Iran is using any of the materials described in IFCA as a medium for barter, swap, or any other exchange or transaction, or listing any of such materials as assets of the Government of Iran for purposes of the national balance sheet of Iran; which sectors of the economy of Iran are controlled directly or indirectly by Iran's Islamic Revolutionary Guard Corps (IRGC); and which of the materials described in subsection (d) are used in connection with the nuclear, military, or ballistic missile programs of Iran. Materials described are graphite, raw or semi-finished metals such as aluminum and steel, coal, and software for integrating industrial processes.

DATES: The Deputy Secretary of State approved this action on April 25, 2025.

Contact: Office of Counterproliferation Initiatives, Department of State, Telephone: (202) 647–5193 or *ISN_Sanctions@state.gov.*

SUPPLEMENTARY INFORMATION: For the purpose of implementing the provisions of IFCA delegated to the Secretary of State, including Sections 1245(a)(1)(B), 1245(a)(1)(C), and 1245(e), ''raw or semi-finished metals'' under IFCA 1245(d) includes, but is not limited to, the following materials (including all types of such materials and all alloys or compounds containing such materials): Aluminum, Americium, Antimony,

Barium, Beryllium, Bismuth, Boron, Cadmium, Calcium, Cerium, Cesium, Chromium, Cobalt, Copper, Dysprosium, Erbium, Europium, Gallium, Gadolinium, Germanium, Gold, Hafnium, Hastelloy, Inconel, Indium, Iridium, Iron, Lanthanum, Lithium, Lead, Lutetium, Manganese, Magnesium, Mercury, Molybdenum, Monel, Neodymium, Neptunium, Nickel, Niobium, Osmium, Palladium, Platinum, Plutonium, Polonium, Potassium, Praseodymium, Promethium, Radium, Rhenium, Rhodium, Ruthenium, Samarium, Scandium, Silicon, Silver, Sodium, Steels, Strontium, Tantalum, Technetium, Tellurium, Terbium, Thallium, Thorium, Tin, Titanium, Tungsten, Uranium, Vanadium, Ytterbium, Yttrium, Zinc, and Zirconium.

This report pursuant to Section 1245(e) of IFCA covers the period January 1, 2021, to December 31, 2024.

Following a review of the available information, and in consultation with the Secretary of the Treasury, the Deputy Secretary of State has determined that Iran is not using the materials described in Section 1245(d) as a medium for barter, swap, or any other exchange or transaction. Following a review of the available information, and in consultation with the Secretary of the Treasury, the Deputy Secretary of State has determined that Iran is not listing any such materials as assets of the Government of Iran for purposes of the national balance sheet of Iran. Following a review of the available information, and in consultation with the Secretary of the Treasury, the Deputy Secretary of State has determined that the construction sector of Iran is controlled directly or indirectly by the IRGC.

Following a review of the available information, and in consultation with the Secretary of the Treasury, the Deputy Secretary of State has determined that the following additional types of materials described in Section 1245(d) are used in connection with the nuclear, military, or ballistic missile programs of Iran:

- Austenitic nickel-chromium alloy
- Magnesium ingots
- Sodium perchlorate
- EDM–11
- EDM–14A
- EDM–15
- Tungsten copper
- AA2024–T351 aluminum sheets and/or tubes
- ISO–68
- ISO–69

Paul S. Watzlavick,

Senior Bureau Official, International Security and Non-Proliferation Department of State.

DEPARTMENT OF TRANSPORTATION

Federal Highway Administration

[Docket No. FHWA–2025–0104]

Agency Information Collection Activities: Notice of Request for Reinstatement of a Previously Approved Information Collection

AGENCY: Federal Highway Administration (FHWA), DOT.

ACTION: Notice of request for reinstatement of a previously approved information collection.

SUMMARY: The FHWA invites public comments about our intention to request the Office of Management and Budget's (OMB) approval for reinstatement of a previously approved information collection that is summarized below under **SUPPLEMENTARY INFORMATION**. We are required to publish this notice in the **Federal Register** by the Paperwork Reduction Act of 1995.

DATES: Please submit comments by October 3, 2025.

ADDRESSES: You may submit comments identified by DOT Docket ID Number 0104 by any of the following methods:

Website: For access to the docket to read background documents or comments received go to the Federal eRulemaking Portal: Go to *http://www.regulations.gov.* Follow the online instructions for submitting comments.

Fax: 1–202–493–2251.

Mail: Docket Management Facility, U.S. Department of Transportation, West Building Ground Floor, Room W12–140, 1200 New Jersey Avenue SE, Washington, DC 20590–0001.

Hand Delivery or Courier: U.S. Department of Transportation, West Building Ground Floor, Room W12–140, 1200 New Jersey Avenue SE, Washington, DC 20590, between 9 a.m. and 5 p.m. ET, Monday through Friday, except Federal holidays.

FOR FURTHER INFORMATION CONTACT: Anne Rowe, (240) 278–5394, Office of Project Development and Environmental Review, Federal Highway Administration, Department of Transportation, 1200 New Jersey Avenue SE, Washington, DC 20590. Office hours are from 7 a.m. to 4 p.m., Monday through Friday, except Federal holidays.

SUPPLEMENTARY INFORMATION:

Title: Wildlife Crossings Pilot Program.

OMB Control: 2125–0672.

Background: The Wildlife Crossings Pilot Program (WCPP) is a competitive grant program established in the Infrastructure Investment and Jobs Act of 2021 (Pub. L. 117–58, November 15, 2021), and codified at 23 U.S.C. 171. The WCPP seeks to fund projects that will reduce wildlife-vehicle collisions and improve habitat connectivity for terrestrial and aquatic species. The FHWA will advertise a Notice of Funding Opportunity for up to $80 million in fiscal year 2026 funds, plus any funds available from prior fiscal years (FY 2022–2025).

Respondents: Approximately 60 Eligible Applicants, which are State departments of transportations, Indian tribes, metropolitan planning organizations, units of local government, regional transportation authorities, special purpose districts or public authorities with a transportation function, or Federal land management agencies (FLMA). For the purpose of the grant agreement stage and project management stage, respondents may also include Eligible Partners, which are a metropolitan organization; a unit of local government; a regional transportation authority; a special purpose district or public authority with a transportation function; an Indian Tribe; an FLMA; a foundation, nongovernmental organization, or institution of higher education; or a Federal, Tribal, regional, or State government entity.

Frequency: Once.

Estimated Average Burden per Response: 17 hours.

Estimated Total Annual Burden Hours: 1,020 hours.

Public Comments Invited: You are asked to comment on any aspect of this information collection, including: (1) Whether the proposed collection is necessary for the FHWA's performance; (2) the accuracy of the estimated burdens; (3) ways for the FHWA to enhance the quality, usefulness, and clarity of the collected information; and (4) ways that the burden could be minimized, including the use of electronic technology, without reducing the quality of the collected information. The agency will summarize and/or include your comments in the request for OMB's clearance of this information collection.

Authority: The Paperwork Reduction Act of 1995; 44 U.S.C. chapter 35, as amended; and 49 CFR 1.48.

Issued on: July 31, 2025.

Jazmyne Lewis,

Information Collection Officer.

BILLING CODE 4910–RY–P

DEPARTMENT OF TRANSPORTATION

Federal Railroad Administration

Rescinding the Notice of Intent To Prepare an Environmental Impact Statement: Baltimore to Washington Superconducting Magnetic Levitation Project

AGENCY: Federal Railroad Administration, Department of Transportation.

ACTION: Notice of rescission.

SUMMARY: The Federal Railroad Administration (FRA) is announcing that it is rescinding its Notice of Intent (NOI) and will not prepare the Environmental Impact Statement (EIS) for the proposed Baltimore-Washington Superconducting Magnetic Levitation (SCMAGLEV) Project described therein. FRA previously issued a NOI to prepare an EIS in the **Federal Register** on November 15, 2016.

DATES: This rescission is effective immediately.

FOR FURTHER INFORMATION CONTACT: Please contact Marlys Osterhues, Office of Environmental Program Management, 202–774–8646, or via email at *marlys.osterhues@dot.gov.*

SUPPLEMENTARY INFORMATION: FRA awarded the Maryland Department of Transportation (MDOT) $27,800,000 through FRA's Magnetic Levitation Deployment grants program (MAGLEV Grants Program), authorized under 23 U.S.C. 322, note, for preliminary engineering and environmental review for the SCMAGLEV Project. The award was made through Cooperative Agreement No. FR–MPS–0002–16. The project would have deployed a new SCMAGLEV system between Washington, DC, and Baltimore, MD, with an intermediary stop at Baltimore/Washington International Thurgood Marshall (BWI) Airport. MDOT partnered with Baltimore Washington Rapid Rail (BWRR) to design the SCMAGLEV system. BWRR would have been responsible for construction and operation of the system. FRA, in cooperation with MDOT, initiated an EIS and published an NOI on November 15, 2016, at 81 FR 85319. FRA published a draft EIS (DEIS) for the project on January 15, 2021. Following the end of the 2021 public comment period on the DEIS, FRA paused the environmental review process on the Federal Permitting Dashboard.[1] The purpose of the pause was to allow MDOT and BWRR additional time to agree on funding to continue the environmental review process and allow FRA and MDOT additional time to review project elements and consider next steps. Since August 24, 2021, the environmental review process has remained paused.

FRA has determined preparation of the final EIS for the SCMAGLEV Project is no longer feasible. FRA has found the current SCMAGLEV Project alternatives are likely to result in unresolvable significant effects to federal agencies, federal property, and critical agency infrastructure and operations during project construction and operation, including to the National Security Agency (NSA), U.S. Department of Defense (DOD) and Fort George G. Meade, National Aeronautics and Space Administration (NASA), U.S Department of Agriculture (USDA), U.S. Secret Service (USSS), U.S. Department of Interior (DOI)—U.S. Fish and Wildlife Service (FWS) and National Park Service (NPS), and the Department of Labor (DOL). Following extensive consultation with these agencies, FRA determined the direct effects would have substantial negative effects to agency operations or to important resources managed by federal agencies. In addition, indirect effects would also significantly impair critical infrastructure and operations and ongoing agency missions.

FRA reviewed project elements to consider whether the DEIS alternatives could be modified to address the agencies' concerns. FRA considered whether modifying the project design of the alternatives, such as locating the SCMAGLEV system entirely underground, would avoid impacts to federal agencies; however, based on agency coordination, FRA found this modification would not address the agencies' collective concerns due to the location of the tunnel and the necessity to locate required ancillary features aboveground (*e.g.,* fresh air/emergency egress [FA/EE]). In addition, BWRR had previously raised technical concerns with a completely underground system, citing cost and constructability, and advised FRA that its 180-acre trainset maintenance facility (TMF) likely could not be located underground.[2] Similarly, FRA considered whether certain project elements (*e.g.,* TMF, FA/EE facilities) could be relocated to avoid impacts. However, BWRR has noted that the system is designed to meet the Central Japan Railway Company's (JRC's) [3] requirements for SCMAGLEV operations and relocation of project elements like the TMF would be inconsistent with JRC's requirements.[4]

In addition, FRA also considered whether the project's Purpose and Need Statement, which was developed consistent with the statutory requirements of the MAGLEV Grants Program and BWRR's technical requirements for system safety and performance, constrained potential modifications to the DEIS alternatives. For example, the Purpose and Need Statement describes the project's objective to achieve optimal speed. Based on BWRR's ridership analysis, a speed up to 310 mph would be necessary to generate revenue to sustain the SCMAGLEV system, accounting for other factors such as power consumption, aerodynamics, and human comfort.[5] However, achieving this top speed requires a specific geometry for the SCMAGLEV guideway, which constrains the ability to avoid sensitive resources, such as the U.S. Fish and Wildlife-managed Patuxent Wildlife Refuge. In addition, the DEIS Purpose and Need Statement was developed prior to the significant federal investment in the Northeast Corridor (NEC) from the Infrastructure Investment and Jobs Act, which is intended to improve intercity passenger rail service along with NEC. Accordingly, many of the conclusions of the Purpose and Need statement may no longer be valid.

FRA found the alternatives analyzed in the DEIS cannot be modified to avoid, minimize, and mitigate significant effects to federal agencies and federal property. On June 23, 2025, at the request of BWRR, FRA coordinated a meeting with the federal land-owning and permitted agencies, BWRR, MDOT and FRA representatives. During the meeting, BWRR presented the proposed project alignment. In response, the agencies emphasized that their previous comments and significant concerns with the project described in the draft EIS remain, further underscoring that the project is not feasible as proposed. Therefore, FRA will not prepare a final EIS.

[1] *https://www.permits.performance.gov/permitting-project/dot-projects/baltimore-washington-superconducting-maglev-project.*

[2] DEIS at 3–7.

[3] JRC is the SCMAGLEV technology owner.

[4] *See* MDE, TMF Site Selection Discussion Points for USACE JPA Questions January 25, 2021, available at: *https://mde.maryland.gov/programs/water/WetlandsandWaterways/SiteAssets/Lists/SCMAGLEV/NewForm/Exhibit%20P%20%E2%80%93%20TMF%20Supplement.pdf.*

[5] DEIS at 3–2.

FRA received over 6,000 comments on the DEIS and attended three public meetings with testimony from members of the public and other stakeholders. FRA reviewed a high-level summary of the public comments prepared by MDOT. Members of the public were generally supportive of the use of SCMAGLEV technology; the development of a new transportation option; as well as potential growth and economic benefits and job creation from the project. Members of the public also raised concerns with potential effects from project construction and operation, energy consumption, and impacts to communities that would not be directly served by the SCMAGLEV Project. By rescinding the NOI, FRA is not precluding future deployment of SCMAGLEV technology in the United States.

Authority: 42 U.S.C. 4321 *et seq.*

Robert Andrew Feeley,

Acting Administrator.

[FR Doc. 2025–14732 Filed 8–1–25; 8:45 am]

BILLING CODE 4910–06–P

DEPARTMENT OF TRANSPORTATION

Maritime Administration

[Docket No. MARAD–2025–0333]

Request Notice: Use of Foreign-Built Small Passenger Vessel in United States Coastwise Trade, S/V MORNING STAR

AGENCY: Maritime Administration, DOT.

ACTION: Notice and request for comments.

SUMMARY: The Secretary of Transportation, as represented by the Maritime Administration (MARAD), is authorized to make determinations regarding the coastwise use of foreign built; certain U.S. built; and U.S. and foreign rebuilt vessels that solely carry no more than twelve passengers for hire. MARAD has received such a determination request and is publishing this notice to solicit comments to assist with determining whether the proposed use of the vessel set forth in the request would have an adverse effect on U.S. vessel builders or U.S. coastwise trade businesses that use U.S.-built vessels in those businesses. Information about the requestor's vessel, including a description of the proposed service, is in the **SUPPLEMENTARY INFORMATION** section below.

DATES: Submit comments on or before September 3, 2025.

ADDRESSES: You may submit comments identified by DOT Docket Number MARAD–2025–0333 by any one of the following methods:

- *Federal eRulemaking Portal:* Go to *https://www.regulations.gov.* Search MARAD–2025–0333 and follow the instructions for submitting comments.
- *Mail or Hand Delivery:* Docket Management Facility is in the West Building, Ground Floor of the U.S. Department of Transportation. The Docket Management Facility location address is U.S. Department of Transportation, MARAD–2025–0333, 1200 New Jersey Avenue SE, West Building, Room W12–140, Washington, DC 20590, between 9 a.m. and 5 p.m., Monday through Friday, except on Federal holidays.

Note: If you mail or hand-deliver your comments, we recommend that you include your name and a mailing address, an email address, or a telephone number in the body of your document so that we can contact you if we have questions regarding your submission.

Instructions: All submissions received must include the agency name and specific docket number. All comments received will be posted without change to the docket at *www.regulations.gov,* including any personal information provided. For detailed instructions on submitting comments, or to submit comments that are confidential in nature, see the section entitled Public Participation.

FOR FURTHER INFORMATION CONTACT: Patricia Hagerty, U.S. Department of Transportation, Maritime Administration, 1200 New Jersey Avenue SE, Mail Stop 2, MAR–620, Washington, DC 20590. Telephone: (202) 366–5400. Email: *smallvessels@dot.gov.*

SUPPLEMENTARY INFORMATION: Pursuant to 46 U.S.C. 12121(b), the U.S. Coast Guard may issue a certificate of documentation with a coastwise trade endorsement for eligible, small passenger vessels authorized to carry no more than 12 passengers for hire if MARAD, after notice and an opportunity for public comment, determines the use of the small passenger vessel in the coastwise trade will not adversely affect United States vessel builders or the coastwise trade business of any person that employs vessels built in the United States in that business.[1]

MARAD has received an eligibility determination request. Further details about the requester's vessel and its proposed operations may be found in the determination request posted in the DOT docket as MARAD–2025–0333 at *https://www.regulations.gov.* Interested parties may comment on the undue adverse effect this action may have on U.S. vessel builders or coastwise trade businesses in the U.S. that employ U.S.-built vessels in those businesses. Comments should refer to the vessel name, state the commenter's interest in the request, and demonstrate, with supporting documentation, the undue adverse effect on U.S. vessel builders and coastwise trade businesses.

[1] The U.S. Coast Guard and MARAD have authority under 46 U.S.C. 12121(b) through the Secretary of the Department of Homeland Security and the Secretary of the Department of Transportation, respectively.

Public Participation

How do I submit comments?

Please submit comments, including the attachments, following the instructions provided under the above heading entitled **ADDRESSES**. It may take a few hours or even days for comments to be reflected on the docket. Comments must be written in English. Provide concise comments and attach additional documents as necessary. There is no limit on the length of the attachments.

Where do I go to read public comments, and find supporting information?

The docket online is located at *https://www.regulations.gov,* keyword search MARAD–2025–0333 or visit the Docket Management Facility (see **ADDRESSES** for hours of operation). Please periodically check the Docket for new submissions and supporting material.

Will my comments be made available to the public?

Yes. Your entire comment, including your personal identifying information, will be made publicly available.

May I submit comments confidentially?

You may request that MARAD treat your comments as commercially confidential by submitting them to *SmallVessels@dot.gov.* Include in the email subject heading ''Contains Confidential Commercial Information'' or ''Contains CCI'' and state in your submission, with specificity, the basis for any such confidential treatment highlighting the CCI portions. If possible, please provide a summary of your submission that can be made available to the public.

If MARAD receives a Freedom of Information Act (FOIA) request for the information, procedures described in the Department's FOIA regulation at 49 CFR 7.29 will be followed. Only information that is ultimately determined to be confidential under those procedures will be exempt from disclosure under FOIA.

Privacy Act

Anyone can search the electronic form of all comments received into any of our dockets by the name of the individual submitting the comment (or signing the comment, if submitted on behalf of an association, business, labor union, etc.). For information on DOT's compliance with the Privacy Act, please visit *https://www.transportation.gov/privacy.*

(Authority: 49 CFR 1.93(a), 46 U.S.C. 12121)

By Order of the Maritime Administration.

T. Mitchell Hudson, Jr.,

Secretary, Maritime Administration.

[FR Doc. 2025–14686 Filed 8–1–25; 8:45 am]

BILLING CODE 4910–81–P

DEPARTMENT OF THE TREASURY

Office of Foreign Assets Control

Notice of OFAC Sanctions Actions

AGENCY: Office of Foreign Assets Control, Treasury.

ACTION: Notice.

SUMMARY: The U.S. Department of the Treasury's Office of Foreign Assets Control (OFAC) is publishing the name of one or more persons that have been placed on OFAC's Specially Designated Nationals and Blocked Persons List (SDN List) based on OFAC's determination that one or more applicable legal criteria were satisfied. All property and interests in property subject to U.S. jurisdiction of these persons are blocked, and U.S. persons are generally prohibited from engaging in transactions with them.

DATES: This action was issued on July 25, 2025. See **SUPPLEMENTARY INFORMATION** section for relevant dates.

FOR FURTHER INFORMATION CONTACT: OFAC: Associate Director for Global Targeting, 202–622–2420; Assistant Director for Sanctions Compliance, 202–622–2490; or *https://ofac.treasury.gov/contact-ofac.*

SUPPLEMENTARY INFORMATION:

Electronic Availability

The SDN List and additional information concerning OFAC sanctions programs are available on OFAC's website: *https://ofac.treasury.gov.*

Notice of OFAC Action

On July 25, 2025, OFAC determined that that the property and interests in property subject to U.S. jurisdiction of the following person is blocked under the relevant sanctions authorities listed below.

Entity

1. CARTEL DE LOS SOLES (a.k.a. CARTEL OF THE SUNS), Venezuela; Secondary sanctions risk: section 1(b) of Executive Order 13224, as amended by Executive Order 13886; Organization Type: Transnational Terrorist Group; Target Type Criminal Organization [SDGT].

Designated pursuant to section 1(a)(iii)(C) of Executive Order 13224 of September 23, 2001, ''Blocking Property and Prohibiting Transactions With Persons Who Commit, Threaten To Commit, or Support Terrorism,'' 66 FR 49079, as amended by Executive Order 13886 of September 9, 2019, ''Modernizing Sanctions To Combat Terrorism,'' 84 FR 48041 (E.O. 13224, as amended) for having materially assisted, sponsored, or provided financial, material, or technological support for, or goods or services to or in support of, TREN DE ARAGUA, a person whose any person whose property and interests in property are blocked pursuant to E.O. 13224, as amended.

Designated pursuant to section 1(a)(iii)(C) of E.O. 13224, as amended, for having materially assisted, sponsored, or provided financial, material, or technological support for, or goods or services to or in support of, the SINALOA CARTEL, a person whose any person whose property and interests in property are blocked pursuant to E.O. 13224, as amended.

Lawrence M. Scheinert,

Acting Deputy Director, Office of Foreign Assets Control.

[FR Doc. 2025–14703 Filed 8–1–25; 8:45 am]

BILLING CODE 4810–AL–P

DEPARTMENT OF THE TREASURY

Internal Revenue Service

Superfund Tax on Chemical Substances; Notice of Determinations To Add Substances to List of Taxable Substances; Corrected Name and Tax Rate for Sodium Nitrilotriacetate Monohydrate

AGENCY: Internal Revenue Service (IRS), Treasury.

ACTION: Notice of determinations.

SUMMARY: This notice of determinations modifies the list of taxable substances to include the following 21 substances: polyphenylene sulfide, cellulose acetate (degree of substitution = 1.5–2.0), 4,4′-isopropylidenediphenol-epichlorohydrin copolymer, nylon 6, caprolactam, methyl ethyl ketoxime, iso-butanol, diethylene glycol monomethyl ether, ethylene glycol phenyl ether, methoxytriglycol, propylene glycol methyl ether acetate, propylene glycol methyl ether, propylene glycol n-propyl ether, propylene glycol phenyl ether, di-isobutyl carbinol, di-isobutyl ketone, methyl isobutyl carbinol, cyanuric acid, potassium bicarbonate, potassium carbonate, and sodium chlorite. This notice also modifies the list included in Notice 2021–66 by correcting a typographical error in the spelling of the name of the taxable substance sodium nitrilotriacetate monohydrate and prescribing a tax rate for sodium nitrilotriacetate monohydrate.

DATES: The effective date for purposes of the tax under section 4671 of the Internal Revenue Code (Code) for the taxable substances added to the list is January 1, 2026. For the effective date for purposes of refund claims under section 4662(e) of the Code for the taxable substances added to the list, see the determination for each substance. The tax rate for sodium nitrilotriacetate monohydrate is effective July 1, 2022.

FOR FURTHER INFORMATION CONTACT: Andrew Clark or Jacob Peeples at (202) 317–6855 (not a toll-free number).

SUPPLEMENTARY INFORMATION:

Background

Section 4671(a) of the Code imposes an excise tax on the sale or use of a taxable substance by the importer thereof. Section 4672(a)(1) of the Code defines the term *taxable substance* as any substance which, at the time of sale or use by the importer, is listed as a taxable substance by the Secretary of the Treasury or the Secretary's delegate (Secretary) on the list of taxable substances under section 4672(a) (List).

Under section 4672(a)(2), an importer or exporter of any substance may request that the Secretary determine whether such substance should be added to the List as a taxable substance or should be removed from the List. Under section 4672(a)(2)(B) and (4) and (b)(2), the Secretary is required to add a substance to the List if the Secretary determines that any taxable chemicals that are listed in section 4661(b) of the Code constitute more than 20 percent of the weight, or more than 20 percent of the value, of the materials used to produce such substance, which determination is required under section 4672(a)(2)(B) and (a)(4) to be made based on the predominant method of production (weight or value test). Section 4672(a)(4) authorizes the Secretary to remove a substance from the List only if such substance meets

neither the weight nor the value test of section 4672(a)(2)(B).

Section 4672(a)(3) includes an initial list of taxable substances. Section 4 of Notice 2021–66 (2021–52 I.R.B. 901) provides the list of 101 substances that the Secretary added to the List before November 15, 2021. Rev. Proc. 2022–26 (2022–29 I.R.B. 90), *as modified by* Rev. Proc. 2023–20 (2023–15 I.R.B. 636), provides the exclusive procedures by which an importer, exporter, or interested person may request a determination that a particular substance be added to or removed from the List.

Section 4671(b)(3) authorizes the Secretary to prescribe a tax rate for taxable substances in lieu of the tax rate specified in section 4671(b)(2). The tax rate prescribed by the Secretary for a substance added to the List is calculated by multiplying the conversion factor for each taxable chemical used in the production of the substance by the corresponding tax rate for that taxable chemical under section 4661(b), and adding those results together. Conversion factors are determined based on the predominant method of production of the substance. *See* sections 8 and 10.04(8) of Rev. Proc. 2022–26. Importers are not required to use the prescribed tax rate for a taxable substance and may calculate their own rate under section 4671(b)(1).

Pursuant to section 4672(a)(4), this notice of determination modifies the List to include the 21 additional taxable substances listed in the Summary of Determinations section of this notice, as explained in the Requests to Add Substances to the List and General Explanation of Determinations sections of this notice. The determination for each specific substance added to the List is explained in parts I through XXI of the Modifications to the List of Taxable Substances section of this notice.

In June 2022, the Secretary prescribed rates for some of the substances listed in section 4672(a)(3) and Notice 2021–66.[1] The Correction to the List of Taxable Substances section of this notice modifies Notice 2021–66 by correcting a typographical error in the spelling of sodium nitrilotriacetate monohydrate and prescribing a tax rate for the substance. The updated List and prescribed tax rates for taxable substances will be included in the instructions to Form 6627, *Environmental Taxes.*

[1] Available at *https://www.irs.gov/newsroom/irs-issues-superfund-chemical-excise-tax-rates.*

Summary of Determinations

On August 1, 2025, the Secretary determined to add the following substances to the List:

I. Polyphenylene sulfide
II. Cellulose acetate (degree of substitution = 1.5–2.0)
III. 4,4′-isopropylidenediphenol-epichlorohydrin copolymer
IV. Nylon 6
V. Caprolactam
VI. Methyl ethyl ketoxime
VII. Iso-butanol
VIII. Diethylene glycol monomethyl ether
IX. Ethylene glycol phenyl ether
X. Methoxytriglycol
XI. Propylene glycol methyl ether acetate
XII. Propylene glycol methyl ether
XIII. Propylene glycol n-propyl ether
XIV. Propylene glycol phenyl ether
XV. Di-isobutyl carbinol
XVI. Di-isobutyl ketone
XVII. Methyl isobutyl carbinol
XVIII. Cyanuric acid
XIX. Potassium bicarbonate
XX. Potassium carbonate
XXI. Sodium chlorite

Requests To Add Substances to the List

For each of the substances listed in the Summary of Determinations section of this notice, an importer, an exporter, or an interested person submitted a petition to the IRS in accordance with Rev. Proc. 2022–26 requesting a determination under section 4672(a)(2) to add the substance to the List. For each substance, the petition represented that the taxable chemicals constitute more than 20 percent of the weight of materials used to produce the substance, based on the predominant method of production.

General Explanation of Determinations

After reviewing the petitions for each of the substances listed in the Summary of Determinations section of this notice, the Secretary determined that taxable chemicals constitute more than 20 percent by weight of the materials used to produce the substance, based on the predominant method of production. Therefore, each of the substances is added to the List as required under section 4672(a)(2) and (4). The Secretary made the determinations to add these substances to the List in accordance with the requirements of section 4672(a)(2) and (4), and pursuant to the procedures set forth in Rev. Proc. 2022–26, *as modified by* Rev. Proc. 2023–20.

The relevant information for each taxable substance is provided in the specific determinations included in parts I through XXI of the Modification to the List of Taxable Substances section of this notice. The tax rate for each taxable substance, as prescribed by the Secretary, is provided in paragraph (a)(6) of each specific determination.

Classification numbers proposed by each petitioner are included in paragraph (b) of each part, after each specific determination. The classification numbers provided with respect to a taxable substance are not part of the determination of whether it is added to the List and do not impact whether such substance is a taxable substance. Taxpayers may not rely on classification numbers for any purpose under sections 4661, 4662, 4671, and 4672, including (but not limited to) identification of a substance as a taxable substance on the List. Classification numbers may change over time. The Department of the Treasury (Treasury Department) and the IRS do not anticipate updating this document to reflect any such changes.

For purposes of the section 4671 tax, all the modifications in parts I through XXI of the Modification to the List of Taxable Substances section of this notice are effective on and after January 1, 2026. For purposes of refund claims under section 4662(e), see the effective date for each specific determination in paragraph (a)(5)(ii) of each of parts I through XXI of the Modification to the List of Taxable Substances section of this notice. The tax rate for sodium nitrilotriacetate monohydrate in the Correction to the List of Taxable Substances section of this notice is effective July 1, 2022.

Modifications to the List of Taxable Substances

I. Determination To Add Polyphenylene Sulfide to the List

Celanese Ltd., an exporter of polyphenylene sulfide, submitted a petition in accordance with Rev. Proc. 2022–26 requesting to add polyphenylene sulfide to the List. According to the petition, the taxable chemicals sodium hydroxide, benzene, and chlorine constitute 90.00 percent by weight of the materials used to produce polyphenylene sulfide, based on the predominant method of production.

(a) *Determination.* Polyphenylene sulfide is added to the list of taxable substances under section 4672(a). Other pertinent information is as follows:

(1) *Predominant method of production:* The process involves three separate reactions:

(i) 1,4 dichlorobenzene is made from the reaction of benzene with 2 equivalents of chlorine;

(ii) Sodium hydrogen sulfide is made from the reaction of hydrogen sulfide with sodium hydroxide; and

(iii) 1,4-dichlorobenzene (p-dichlorobenzene, p-DCB), sodium hydrosulfide (NaSH), and sodium hydroxide (NaOH) are reacted at high temperature and high pressure to form polyphenylene sulfide and byproduct sodium chloride.

(2) *Stoichiometric material consumption equation:*

$$n\,[2\,NaOH + C_6H_6 + 2\,Cl_2 + H_2S] \rightarrow [C_6H_4S]_n + 2n\,H_2O + 2n\,NaCl + 2n\,HCl$$

(3) *Reasons for the determination:* The polyphenylene sulfide petition was filed on December 20, 2022. The notice of filing summarizing the petition and requesting comments was published in the **Federal Register** (87 FR 80579) on December 30, 2022. A supplemental notice of filing announcing a corrected petition and correction to the stoichiometric material consumption equation in the original notice of filing and requesting comments was published in the **Federal Register** (89 FR 11941) on February 15, 2024. The Treasury Department and the IRS received no written comments in response to the original notice of filing or the supplemental notice of filing. A public hearing was neither requested nor held.

The Secretary followed the process in section 4672(a)(2)(B) in making this determination. A review of the stoichiometric material consumption equation in the corrected petition, as provided in the supplemental notice of filing, and other information in the petition shows that the taxable chemicals sodium hydroxide, benzene, and chlorine constitute more than 20 percent by weight of the materials used in the production of polyphenylene sulfide, based on the predominant method of production. Therefore, the test in section 4672(a)(2)(B) is satisfied.

(4) *Date of determination:* August 1, 2025.

(5) *Effective dates for addition of polyphenylene sulfide to the List:*

(i) *Effective date for purposes of the section 4671 tax (see section 11.01 of Rev. Proc. 2022–26):* January 1, 2026.

(ii) *Effective date for purposes of refund claims under section 4662(e) (see sections 11.02 and 11.03 of Rev. Proc. 2022–26, as modified by section 3 of Rev. Proc. 2023–20):* July 1, 2022.

(6) *Tax rate prescribed by the Secretary:* $14.50 per ton. The conversion factors for the taxable chemicals used in the production of polyphenylene sulfide are 0.74 for sodium hydroxide, 0.72 for benzene, and 1.31 for chlorine. The tax rate is calculated by adding the products of the conversion factor for each taxable chemical and the tax rate for that taxable chemical: $((0.74 \times \$0.56) + (0.72 \times \$9.74) + (1.31 \times \$5.40) = \$14.50)$.

(b) *Classification numbers.*

(1) *The Secretary has no basis to object to the following proposed classification numbers:*

(i) *HTSUS number:* 3911.90.2500.

(ii) *Schedule B number:* 3911.90.6100.

(iii) *CAS numbers:* 25212–74–2, 26125–40–6.

(2) *The Secretary is unable to confirm the following proposed classification numbers:* Not applicable.

II. Determination To Add Cellulose Acetate (Degree of Substitution = 1.5–2.0) to the List

Celanese Ltd., an exporter of cellulose acetate (degree of substitution = 1.5–2.0), submitted a petition in accordance with Rev. Proc. 2022–26 requesting to add cellulose acetate (degree of substitution = 1.5–2.0) to the List. According to the petition, the taxable chemical methane constitutes greater than 20 percent [2] by weight, of the materials used to produce cellulose acetate (degree of substitution = 1.5–2.0), based on the predominant method of production.

(a) *Determination.* Cellulose acetate (degree of substitution = 1.5–2.0) is added to the list of taxable substances under section 4672(a). Other pertinent information is as follows:

(1) *Predominant method of production:* Cellulose acetate is derived from cellulose by deconstructing wood pulp into a purified cellulose. The cellulose is reacted with acetic acid and acetic anhydride in the presence of sulfuric acid. It is subjected to a controlled, partial hydrolysis to remove the sulfate and a sufficient number of acetate groups to give the product the desired degree of substitution. The polymer unit is the fundamental repeating structure of cellulose and has three hydroxyl groups which can react to form acetate esters. The most common form of cellulose acetate fiber has an acetate group on approximately two of every three hydroxyls, referred to as cellulose diacetate. In this petitioner's cellulose acetate, the actual substitution is 1.674 acetate/cellulose, a degree of substitution commonly used in U.S. cellulose acetate production.

(2) *Stoichiometric material consumption equation:*

$$3.5\,CH_4 + 1.75\,O_2 + C_6H_{10}O_5 \rightarrow C_{9.5}H_{13.5}O_{6.75} + 3.50\,H_2 + 1.75\,H_2O$$

(3) *Reasons for the determination:* The cellulose acetate (degree of substitution = 1.5–2.0) petition was filed on December 20, 2022. The notice of filing summarizing the petition and requesting comments was published in the **Federal Register** (88 FR 16307) on March 16, 2023. The Treasury Department and the IRS received no written comments in response to the notice of filing. A public hearing was neither requested nor held.

The Secretary followed the process in section 4672(a)(2)(B) in making this determination. A review of the stoichiometric material consumption equation and other information in the petition shows that the taxable chemical methane constitutes more than 20 percent by weight of the materials used in the production of cellulose acetate (degree of substitution = 1.5–2.0), based on the predominant method of production. Therefore, the test in section 4672(a)(2)(B) is satisfied.

(4) *Date of determination:* August 1, 2025.

(5) *Effective dates for addition of cellulose acetate (degree of substitution = 1.5–2.0) to the List:*

(i) *Effective date for purposes of the section 4671 tax (see section 11.01 of Rev. Proc. 2022–26):* January 1, 2026.

(ii) *Effective date for purposes of refund claims under section 4662(e) (see sections 11.02 and 11.03 of Rev. Proc. 2022–26, as modified by section 3 of Rev. Proc. 2023–20):* July 1, 2022.

(6) *Tax rate prescribed by the Secretary:* $1.65 per ton. The conversion factor for the methane used in the production of cellulose acetate (degree of substitution = 1.5–2.0) is 0.24. The tax rate is calculated by multiplying the conversion factor by the tax rate for methane: $(0.24 \times \$6.88 = \$1.65)$.

(b) *Classification numbers.*

(1) *The Secretary has no basis to object to the following proposed classification number: CAS number:* 9035–69–2.

(2) *The Secretary is unable to confirm the following proposed classification numbers:*

(i) *HTSUS numbers:* 5502.10.0000, 5403.33.0020.

(ii) *Schedule B numbers:* 5502.10.0000, 5403.33.0000.

[2] The petition covers cellulose acetate (degree of substitution = 1.5–2.0), commonly referred to as cellulose diacetate. Cellulose acetate in this range generally has similar properties. The petition uses the lowest end of the range cellulose acetate (degree of substitution = 1.5) (21 percent taxable chemicals) to demonstrate that >20% of the substance is made from taxable chemicals, and the midpoint cellulose acetate (degree of substitution = 1.75) (24 percent taxable chemicals) to calculate the tax rate for the entire range.

III. Determination To Add 4,4′-Isopropylidenediphenol-Epichlorohydrin Copolymer to the List

Westlake Epoxy Inc., an exporter of 4,4′-isopropylidenediphenol-epichlorohydrin copolymer, also known as ''bisphenol A epoxy resin,'' submitted a petition in accordance with Rev. Proc. 2022–26 requesting to add 4,4′-isopropylidenediphenol-epichlorohydrin copolymer to the List. According to the petition, the taxable chemicals benzene, propylene, chlorine, and sodium hydroxide constitute 92.98 percent by weight of the materials used to produce 4,4′-isopropylidenediphenol-epichlorohydrin copolymer, based on the predominant method of production.

(a) *Determination.* 4,4′-isopropylidenediphenol-epichlorohydrin copolymer, also known as ''bisphenol A epoxy resin,'' is added to the list of taxable substances under section 4672(a). Other pertinent information is as follows:

(1) *Predominant method of production:* 4,4′-isopropylidenediphenol-epichlorohydrin copolymer is produced from epichlorohydrin and bisphenol-A via a two-step glycidation reaction sequence. Epichlorohydrin is typically produced via an addition reaction of chlorine to propylene that yields allyl chloride and subsequently dichlorohydrin isomers, followed by a dehydrochlorination step in the presence of sodium hydroxide to yield epichlorohydrin. Bisphenol A is typically produced from the reaction of benzene and propylene that yields phenol and acetone. Under acidic conditions and with an appropriate catalyst, two units of phenol can react with one unit of acetone to yield Bisphenol A. With available epichlorohydrin and Bisphenol A, 4,4′-isopropylidenediphenol-epichlorohydrin copolymer can be obtained through a two-step glycidation reaction sequence where epichlorohydrin is added to Bisphenol A (deprotonated with sodium hydroxide) and then water, sodium hydroxide, and sodium chloride are removed in a dehydrochlorination step.

(2) *Stoichiometric material consumption equation:*

$2\ C_6H_6$ (benzene) + $4\ C_3H_6$ (propylene) + $4\ Cl_2$ (chlorine) + 6 NaOH (sodium hydroxide) + $2\ O_2$ (oxygen) → $(CH_3)_2C(C_6H_4OC_3H_5O)_2$ (4,4′-isopropylidenediphenol-epichlorohydrin copolymer) + CH_3COCH_3 (acetone) + 2 HCl (hydrogen chloride) + 6 NaCl (sodium chloride) + $5\ H_2O$ (water)

(3) *Reasons for the determination:* The 4,4′-isopropylidenediphenol-epichlorohydrin copolymer petition was filed on December 20, 2022. The notice of filing summarizing the petition and requesting comments was published in the **Federal Register** (88 FR 3478) on January 19, 2023. The Treasury Department and the IRS received no written comments in response to the notice of filing. A public hearing was neither requested nor held.

The Secretary followed the process in section 4672(a)(2)(B) in making this determination. A review of the stoichiometric material consumption equation and other information in the petition shows that the taxable chemicals benzene, propylene, chlorine, and sodium hydroxide constitute more than 20 percent by weight of the materials used in the production of 4,4′-isopropylidenediphenol-epichlorohydrin copolymer, based on the predominant method of production. Therefore, the test in section 4672(a)(2)(B) is satisfied.

(4) *Date of determination:* August 1, 2025.

(5) *Effective dates for addition of 4,4′-isopropylidenediphenol-epichlorohydrin copolymer to the List:*

(i) *Effective date for purposes of the section 4671 tax (see section 11.01 of Rev. Proc. 2022–26):* January 1, 2026.

(ii) *Effective date for purposes of refund claims under section 4662(e) (see sections 11.02 and 11.03 of Rev. Proc. 2022–26, as modified by section 3 of Rev. Proc. 2023–20):* July 1, 2022.

(6) *Tax rate prescribed by the Secretary:* $14.13 per ton. The conversion factors for the taxable chemicals used in the production of 4,4′-isopropylidenediphenol-epichlorohydrin copolymer are 0.46 for benzene, 0.49 for propylene, 0.83 for chlorine, and 0.71 for sodium hydroxide. The tax rate is calculated by adding the products of the conversion factor for each taxable chemical and the tax rate for that taxable chemical: ((0.46 × $9.74) + (0.49 × $9.74) + (0.83 × $5.40) + (0.71 × $0.56) = $14.13).

(b) *Classification numbers.*

(1) *The Secretary has no basis to object to the following proposed classification numbers:*

(i) *HTSUS number:* 3907.30.0000.

(ii) *Schedule B number:* 3907.30.0000.

(iii) *CAS number:* 25068–38–6.

(2) *The Secretary is unable to confirm the following proposed classification numbers:* Not applicable.

IV. Determination To Add Nylon 6 to the List

AdvanSix Inc., an exporter of nylon 6, submitted a petition in accordance with Rev. Proc. 2022–26 requesting to add nylon 6 to the List. According to the petition, nylon 6 is made from the taxable chemicals benzene, propylene, ammonia, methane, and sulfuric acid; however, sulfuric acid is cancelled from the stoichiometric material consumption equation due to no net consumption/production. The petition further represented that the benzene, propylene, ammonia, and methane constitute 46.64 percent by weight of the materials used to produce nylon 6, based on the predominant method of production.

(a) *Determination.* Nylon 6 is added to the list of taxable substances under section 4672(a). Other pertinent information is as follows:

(1) *Predominant method of production:* The predominant method of production of nylon 6 is the ''hydrolytically initiated ring-opening polymerization of caprolactam'' which is also referred to in industry literature as the ''hydrolytic polymerization of nylon 6.'' This process is termed ''hydrolytic'' because water plays a key role in the chemical mechanism. Nylon 6 is produced almost exclusively through this method because it is easier to control and better adapted for large-scale operations.

The hydrolytic polymerization of nylon 6 generally entails heating a mixture of caprolactam and water to ~270 °C in an inert atmosphere of nitrogen and holding until equilibrium conditions are achieved. The three principal reactions in this process are summarized below:

(i) In the initiation step of the process, the caprolactam ring is hydrolyzed via ring opening with the addition of one water molecule to become amino-caproic acid.

(ii) In the next step of the mechanism, the amino-caproic acid acts as the initiating species to begin the addition polymerization by ring-opening of caprolactam.

(iii) The last major mechanism step of the hydrolytic polymerization of nylon 6 is the condensation of primary amine and carboxylic acid chain-ends to form an amide linkage in the now higher molecular weight polyamide with the simultaneous loss of a water molecule.

(2) *Stoichiometric material consumption equation:*

nC_6H_6 (benzene) + nC_3H_6 (propylene) + $2.5nO_2$ (oxygen) + $0.5nCH_4$ (methane) + $5nNH_3$ (ammonia) + $2nH_2O$ (water) + $2nSO_2$ (sulfur dioxide) → $(C_6H_{11}NO)_n$ (nylon 6) + nC_3H_6O (acetone) + $2n(NH_4)_2SO_4$ (ammonium sulfate) + $0.5nCO_2$ (carbon dioxide)

(3) *Reasons for the determination:* The nylon 6 petition was filed on November 8, 2023. The notice of filing summarizing the petition and requesting comments was published in the **Federal Register** on February 22, 2024 (89 FR 13399). A supplemental notice of filing announcing a corrected petition, correction to the stoichiometric material consumption equation in the original notice of filing, and requesting comments was published in the **Federal Register** (89 FR 66175) on August 14, 2024. The Treasury Department and the IRS received no written comments in response to the notice of filing and received one written comment in response to the supplemental notice of filing, discussed below. A public hearing was neither requested nor held.

The public comment submitted in response to the supplemental notice of filing generally wrote in support of adding nylon 6 to the list of taxable substances. However, the commenter requested that the Treasury Department and the IRS add to the list of taxable substances the categories 'nylon resins' or 'polyamides' rather than merely the single taxable substance nylon 6. The commenter asserts that nylon 6 is one of the many grades of nylons or polyamides which contain more than 20 percent of taxable chemicals.

At this time, the Treasury Department and the IRS decline to add the additional categories of nylon resins and polyamides to the List, as suggested by the commenter. The filed petition that is the subject of this determination requested only to add the substance nylon 6 to the List, so a comment that the Treasury Department and the IRS should add additional substances to the List is outside the scope of the determination for nylon 6. To request to add nylon resins and polyamides to the List, an importer, exporter, or interested person must follow the determination procedures provided under Rev. Proc. 2022–26, including submitting a petition for each substance with the required information. *See* sections 4 and 6 of Rev. Proc. 2022–26.

The Secretary followed the process in section 4672(a)(2)(B) in making the determination to add nylon 6 to the List. A review of the stoichiometric material consumption equation in the corrected petition, as provided in the supplemental notice of filing, and other information in the petition shows that the taxable chemicals benzene, propylene, ammonia, and methane constitute more than 20 percent by weight of the materials used in the production of nylon 6, based on the predominant method of production. Therefore, the test in section 4672(a)(2)(B) is satisfied.

(4) *Date of determination:* August 1, 2025.

(5) *Effective dates for addition of nylon 6 to the List:*

(i) *Effective date for purposes of the section 4671 tax (see section 11.01 of Rev. Proc. 2022–26):* January 1, 2026.

(ii) *Effective date for purposes of refund claims under section 4662(e) (see sections 11.02 and 11.03 of Rev. Proc. 2022–26, as modified by section 3 of Rev. Proc. 2023–20):* July 1, 2022.

(6) *Tax rate prescribed by the Secretary:* $14.77 per ton. The conversion factors for the taxable chemicals used in the production of nylon 6 are 0.69 for benzene, 0.37 for propylene, 0.75 for ammonia, and 0.07 for methane. The tax rate is calculated by adding the products of the conversion factor for each taxable chemical and the tax rate for that taxable chemical: $((0.69 \times \$9.74) + (0.37 \times \$9.74) + (0.75 \times \$5.28) + (0.07 \times \$6.88) = \$14.77)$.

(b) *Classification numbers.*

(1) *The Secretary has no basis to object to the following proposed classification numbers:*

(i) *HTSUS number:* 3908.10.00.

(ii) *Schedule B number:* 3908.10.0000.

(iii) *CAS number:* 25038–54–4.

(2) *The Secretary is unable to confirm the following proposed classification numbers:* Not applicable.

V. Determination To Add Caprolactam to the List

AdvanSix Inc., an exporter of caprolactam, submitted a petition in accordance with Rev. Proc. 2022–26 requesting to add caprolactam to the List. According to the petition, caprolactam is made from the taxable chemicals benzene, propylene, ammonia, methane, and sulfuric acid; however, sulfuric acid is cancelled from the stoichiometric material consumption equation due to no net consumption/production. The petition also represented that the benzene, propylene, ammonia, and methane constitute 46.64 percent by weight of the materials used to produce caprolactam, based on the predominant method of production.

(a) *Determination.* Caprolactam is added to the list of taxable substances under section 4672(a). Other pertinent information is as follows:

(1) *Predominant method of production:* Caprolactam is produced by first oxidizing cumene to yield phenol, which is then partially reduced with hydrogen to yield cyclohexanone. Cyclohexanone is then reacted with Raschig hydroxylamine to generate cyclohexanone oxime. The cyclohexanone oxime undergoes Beckmann rearrangement in the presence of fuming sulfuric acid (oleum) to give an intermediate material known as rearrangement mass, which is subsequently hydrolyzed and then neutralized with ammonia to yield ε-caprolactam.

(2) *Stoichiometric material consumption equation:*

C_6H_6 (benzene) + C_3H_6 (propylene) + 2.5 O_2 (oxygen) + 0.5 CH_4 (methane) + 5 NH_3 (ammonia) + 2 H_2O (water) + 2 SO_2 (sulfur dioxide) → $C_6H_{11}ON$ (ε- caprolactam) + C_3H_6O (acetone) + 2$(NH_4)_2SO_4$ (ammonium sulfate) + 0.5 CO_2 (carbon dioxide)

(3) *Reasons for the determination:* The caprolactam petition was filed on November 8, 2023. The notice of filing summarizing the petition and requesting comments was published in the **Federal Register** (89 FR 13400) on February 22, 2024. The Treasury Department and the IRS received no written comments in response to the notice of filing. A public hearing was neither requested nor held.

The Secretary followed the process in section 4672(a)(2)(B) in making this determination. A review of the stoichiometric material consumption equation and other information in the petition shows that the taxable chemicals benzene, propylene, ammonia, and methane constitute more than 20 percent by weight of the materials used in the production of caprolactam, based on the predominant method of production. Therefore, the test in section 4672(a)(2)(B) is satisfied.

(4) *Date of determination:* August 1, 2025.

(5) *Effective dates for addition of caprolactam to the List:*

(i) *Effective date for purposes of the section 4671 tax (see section 11.01 of Rev. Proc. 2022–26):* January 1, 2026.

(ii) *Effective date for purposes of refund claims under section 4662(e) (see sections 11.02 and 11.03 of Rev. Proc. 2022–26, as modified by section 3 of Rev. Proc. 2023–20):* January 1, 2023.

(6) *Tax rate prescribed by the Secretary:* $14.77 per ton. The conversion factors for the taxable chemicals used in the production of caprolactam are 0.69 for benzene, 0.37 for propylene, 0.75 for ammonia, and 0.07 for methane. The tax rate is calculated by adding the products of the conversion factor for each taxable chemical and the tax rate for that taxable chemical: $((0.69 \times \$9.74) + (0.37 \times \$9.74) + (0.75 \times \$5.28) + (0.07 \times \$6.88) = \$14.77)$.

(b) *Classification numbers.*

(1) *The Secretary has no basis to object to the following proposed classification numbers:*

(i) *HTSUS number:* 2933.71.00.

(ii) *Schedule B number:* 2933.71.0000.

(iii) *CAS number:* 105–60–2.

(2) *The Secretary is unable to confirm the following proposed classification numbers:* Not applicable.

VI. Determination To Add Methyl Ethyl Ketoxime to the List

AdvanSix Inc., an exporter of methyl ethyl ketoxime (commonly referred to as MEKO), submitted a petition in accordance with Rev. Proc. 2022–26 requesting to add methyl ethyl ketoxime to the List. According to the petition, methyl ethyl ketoxime is made from the taxable chemicals ammonia, sulfuric acid, and butylene; however, sulfuric acid is cancelled from the stoichiometric material consumption equation due to no net consumption/production. The petition further represented that ammonia and butylene constitute 39.97 percent by weight of the materials used to produce methyl ethyl ketoxime, based on the predominant method of production.

(a) *Determination.* Methyl ethyl ketoxime is added to the list of taxable substances under section 4672(a). Other pertinent information is as follows:

(1) *Predominant method of production:* The conventional method was developed in the late 1960s via a route that involves condensation of methyl ethyl ketone with a hydroxylamine salt in the presence of a base. More specifically, methyl ethyl ketone is oximated with Raschig hydroxylamine to yield methyl ethyl ketoxime.

(2) *Stoichiometric material consumption equation:*

C_4H_8 (butylene) + 5 NH_3 (ammonia) + 2 H_2O (water) + 1.5 O_2 (oxygen) + 2 SO_2 (sulfur dioxide) → C_4H_9ON (methyl ethyl ketoxime) + 2 $(NH_4)_2SO_4$ (ammonium sulfate) + H_2 (hydrogen)

(3) *Reasons for the determination:* The methyl ethyl ketoxime petition was filed on July 10, 2023. The notice of filing summarizing the petition and requesting comments was published in the **Federal Register** (88 FR 45454) on July 17, 2023. The Treasury Department and the IRS received no written comments in response to the notice of filing. A public hearing was neither requested nor held.

The Secretary followed the process in section 4672(a)(2)(B) in making this determination. A review of the stoichiometric material consumption equation and other information in the petition shows that the taxable chemicals ammonia and butylene constitute more than 20 percent by weight of the materials used in the production of methyl ethyl ketoxime, based on the predominant method of production. Therefore, the test in section 4672(a)(2)(B) is satisfied.

(4) *Date of determination:* August 1, 2025.

(5) *Effective dates for addition of methyl ethyl ketoxime to the List:*

(i) *Effective date for purposes of the section 4671 tax (see section 11.01 of Rev. Proc. 2022–26):* January 1, 2026.

(ii) *Effective date for purposes of refund claims under section 4662(e) (see sections 11.02 and 11.03 of Rev. Proc. 2022–26, as modified by section 3 of Rev. Proc. 2023–20):* January 1, 2023.

(6) *Tax rate prescribed by the Secretary:* $11.41 per ton. The conversion factors for the taxable chemicals used in the production of methyl ethyl ketoxime are 0.98 for ammonia and 0.64 for butylene. The tax rate is calculated by adding the products of the conversion factor for each taxable chemical and the tax rate for that taxable chemical: ((0.98 × $5.28) + (0.64 × $9.74) = $11.41).

(b) *Classification numbers.*

(1) *The Secretary has no basis to object to the following proposed classification numbers:*

(i) *HTSUS number:* 2928.00.10.

(ii) *Schedule B number:* 2928.00.1000.

(iii) *CAS number:* 96–29–7.

(2) *The Secretary is unable to confirm the following proposed classification numbers:* Not applicable.

VII. Determination To Add Iso-Butanol to the List

OQ Chemicals Corporation, an exporter of iso-butanol, submitted a petition in accordance with Rev. Proc. 2022–26 requesting to add iso-butanol to the List. According to the petition, the taxable chemicals methane and propylene constitute 78.41 percent by weight of the materials used to produce iso-butanol, based on the predominant method of production.

(a) *Determination.* Iso-butanol is added to the list of taxable substances under section 4672(a). Other pertinent information is as follows:

(1) *Predominant method of production:* Iso-butanol is co-produced by hydroformylation of propylene to produce both iso-butyraldehyde and n-butyraldehyde followed by hydrogenation of the aldehyde intermediates to the corresponding iso-butanol and n-butanol. The predominant method of production is as follows:

(i) Partial oxidation of methane with oxygen to produce synthesis gas, a mixture of carbon monoxide and hydrogen. This petitioner uses a Partial Oxidation (POX) process that is non catalytic but operates at >1300 deg C and >40 atm pressure. Thus, synthesis gas is produced from methane and oxygen:

$CH_4 + ½\ O_2 \rightarrow CO + 2H_2$

(ii) Oxo process: Hydroformylation of propylene with carbon monoxide and hydrogen over a catalyst to produce iso-butyraldehyde. The reaction also produces normal butyraldehyde simultaneously; the stoichiometry is the same for either the iso or the normal aldehyde. Thus, iso-butyraldehyde is produced from propylene and syngas.

$CO + H_2 + CH_2 = CH\text{-}CH_3 \rightarrow (CH_3)_2\text{-}CH\text{-}CHO$

(iii) Iso-butyraldehyde is hydrogenated with hydrogen over a catalyst. Thus, iso-butanol is produced from iso-butyraldehyde and hydrogen.

$(CH_3)_2\text{-}CH\text{-}CHO + H_2 \rightarrow (CH_3)_2CHCH_2OH$

(2) *Stoichiometric material consumption equation:*

CH_4 (methane) + ½ O_2 + CH_2 = $CH\text{-}CH_3$ (propylene) → $(CH_3)_2CHCH_2OH$ (iso-butanol)

(3) *Reasons for the determination:* The iso-butanol petition was filed on January 25, 2024. The notice of filing summarizing the petition and requesting comments was published in the **Federal Register** (89 FR 14558) on February 27, 2024. The Treasury Department and the IRS received no written comments in response to the notice of filing. A public hearing was neither requested nor held.

The Secretary followed the process in section 4672(a)(2)(B) in making this determination. A review of the stoichiometric material consumption equation and other information in the petition shows that the taxable chemicals methane and propylene constitute more than 20 percent by weight of the materials used in the production of iso-butanol, based on the predominant method of production. Therefore, the test in section 4672(a)(2)(B) is satisfied.

(4) *Date of determination:* August 1, 2025.

(5) *Effective dates for addition of iso-butanol to the List:*

(i) *Effective date for purposes of the section 4671 tax (see section 11.01 of Rev. Proc. 2022–26):* January 1, 2026.

(ii) *Effective date for purposes of refund claims under section 4662(e) (see sections 11.02 and 11.03 of Rev. Proc. 2022–26, as modified by section 3 of Rev. Proc. 2023–20):* April 1, 2023.

(6) *Tax rate prescribed by the Secretary:* $7.07 per ton. The conversion

factors for the taxable chemicals used in the production of iso-butanol are 0.22 for methane and 0.57 for propylene. The tax rate is calculated by adding the products of the conversion factor for each taxable chemical and the tax rate for that taxable chemical: ((0.22 × $6.88) + (0.57 × $9.74) = $7.07).

(b) *Classification numbers.*

(1) *The Secretary has no basis to object to the following proposed classification numbers:*

(i) *HTSUS number:* 2905.14.50.10.

(ii) *Schedule B number:* 2905.14.5010.

(iii) *CAS number:* 78–83–1.

(2) *The Secretary is unable to confirm the following proposed classification numbers:* Not applicable.

VIII. Determination To Add Diethylene Glycol Monomethyl Ether to the List

The Dow Chemical Company, an exporter of diethylene glycol monomethyl ether, submitted a petition in accordance with Rev. Proc. 2022–26 requesting to add diethylene glycol monomethyl ether to the List. According to the petition, the taxable chemicals ethylene and methane constitute 59.00 percent by weight of the materials used to produce diethylene glycol monomethyl ether, based on the predominant method of production.

(a) *Determination.* Diethylene glycol monomethyl ether is added to the list of taxable substances under section 4672(a). Other pertinent information is as follows:

(1) *Predominant method of production:* Glycol ethers are predominantly produced by reacting an epoxide (typically ethylene oxide or propylene oxide) with an alcohol; this reaction process is referred to as alkoxylation. Diethylene glycol monomethyl ether ($C_5H_{12}O_3$) is produced by the alkoxylation process using methanol (CH_3OH) and 2 equivalents of ethylene oxide (C_2H_4O). Methanol is made from syngas (carbon monoxide and dihydrogen). Carbon monoxide (CO) and dihydrogen (H_2) are made by steam-methane reforming (CH_4 and H_2O). Ethylene oxide (EO) is made from oxidizing ethylene (C_2H_4). Additional information on the production process is as follows:

(i) The diethylene glycol monomethyl ether reaction (methanol + EO) is base catalyzed, using a small amount of metal hydroxide to produce methoxide. Since the amount of metal hydroxide used to produce diethylene glycol monomethyl ether [3] is very small, the metal hydroxide has been excluded from the stoichiometric material consumption equation; including the metal hydroxide would lead to a distorted conversion factor.

(ii) Once methoxide is made, it is regenerated following conversion to the product in the presence of EO as follows:

(A) Methoxide + 2 EO → diethylene glycol monomethyl ether-alkoxide.

(B) Diethylene glycol monomethyl ether-alkoxide + methanol → diethylene glycol monomethyl ether + methoxide (goes back to participate in the reaction above).

(iii) Regenerated methoxide in the presence of EO will perpetually react until all EO is consumed or the reaction is halted through the use of controls.

(2) *Stoichiometric material consumption equation:*

2 C_2H_4 (ethylene) + O_2 (oxygen) + CH_4 (methane) + H_2O (water) → H_2 (hydrogen) + $C_5H_{12}O_3$ (diethylene glycol monomethyl ether)

(3) *Reasons for the determination:* The diethylene glycol monomethyl ether petition was filed on June 13, 2024. The notice of filing summarizing the petition and requesting comments was published in the **Federal Register** (89 FR 71788) on September 3, 2024. The Treasury Department and the IRS received no written comments in response to the notice of filing. A public hearing was neither requested nor held.

The Secretary followed the process in section 4672(a)(2)(B) in making this determination. A review of the stoichiometric material consumption equation and other information in the petition shows that the taxable chemicals ethylene and methane constitute more than 20 percent by weight of the materials used in the production of diethylene glycol monomethyl ether, based on the predominant method of production. Therefore, the test in section 4672(a)(2)(B) is satisfied.

(4) *Date of determination:* August 1, 2025.

(5) *Effective dates for addition of diethylene glycol monomethyl ether to the List:*

(i) *Effective date for purposes of the section 4671 tax (see section 11.01 of Rev. Proc. 2022–26):* January 1, 2026.

(ii) *Effective date for purposes of refund claims under section 4662(e) (see sections 11.02 and 11.03 of Rev. Proc. 2022–26, as modified by section 3 of Rev. Proc. 2023–20):* July 1, 2022.

(6) *Tax rate prescribed by the Secretary:* $5.47 per ton. The conversion factors for the taxable chemicals used in the production of diethylene glycol monomethyl ether are 0.47 for ethylene and 0.13 for methane. The tax rate is calculated by adding the products of the conversion factor for each taxable chemical and the tax rate for that taxable chemical: ((0.47 × $9.74) + (0.13 × $6.88) = $5.47).

(b) *Classification numbers.*

(1) *The Secretary has no basis to object to the following proposed classification numbers:*

(i) *HTSUS number:* 2909.44.01.10.

(ii) *Schedule B number:* 2909.49.0000.

(iii) *CAS number:* 111–77–3.

(2) *The Secretary is unable to confirm the following proposed classification numbers:* Not applicable.

IX. Determination To Add Ethylene Glycol Phenyl Ether to the List

The Dow Chemical Company, an exporter of ethylene glycol phenyl ether, submitted a petition in accordance with Rev. Proc. 2022–26 requesting to add ethylene glycol phenyl ether to the List. According to the petition, the taxable chemicals ethylene, benzene, and propylene constitute 76.00 percent by weight of the materials used to produce ethylene glycol phenyl ether, based on the predominant method of production.

(a) *Determination.* Ethylene glycol phenyl ether is added to the list of taxable substances under section 4672(a). Other pertinent information is as follows:

(1) *Predominant method of production:* Glycol ethers are predominantly produced by reacting an epoxide (typically ethylene oxide or propylene oxide) with an alcohol; this reaction process is referred to as alkoxylation. Ethylene glycol phenyl ether ($C_8H_{10}O_2$) is produced by the alkoxylation process using phenol (CH_3OH) and ethylene oxide (C_2H_4O). Ethylene oxide is made by oxidizing ethylene (C_2H_4). Phenol is made via the Hock process (sometimes called the cumene process). The Hock process has two stages. In stage 1, benzene (C_6H_6) is alkylated with propylene (C_3H_6) to make cumene (isopropyl benzene). In stage 2, cumene ($C_6H_5(C_3H_7)$) is partially oxidized to make phenol (C_6H_5OH) and side product dimethyl ketone ($(CH_3)_2CHO$)).

(2) *Stoichiometric material consumption equation:*

C_2H_4 (ethylene) + 1.5 O_2 (oxygen) + C_6H_6 (benzene) + C_3H_6 (propylene) → C_3H_6O (dimethyl ketone) + $C_8H_{10}O_2$ (ethylene glycol phenyl ether)

(3) *Reasons for the determination:* The ethylene glycol phenyl ether petition was filed on June 13, 2024. The notice of filing summarizing the petition and requesting comments was published in

[3] The Notice of Filing erroneously stated, ''Since the amount of metal hydroxide used to produce propylene glycol methyl ether . . .'' This error is corrected here.

the **Federal Register** (89 FR 71785) on September 3, 2024. The Treasury Department and the IRS received no written comments in response to the notice of filing. A public hearing was neither requested nor held.

The Secretary followed the process in section 4672(a)(2)(B) in making this determination. A review of the stoichiometric material consumption equation and other information in the petition shows that the taxable chemicals ethylene, benzene, and propylene constitute more than 20 percent by weight of the materials used in the production of ethylene glycol phenyl ether, based on the predominant method of production. Therefore, the test in section 4672(a)(2)(B) is satisfied.

(4) *Date of determination:* August 1, 2025.

(5) *Effective dates for addition of ethylene glycol phenyl ether to the List:*

(i) *Effective date for purposes of the section 4671 tax (see section 11.01 of Rev. Proc. 2022–26):* January 1, 2026.

(ii) *Effective date for purposes of refund claims under section 4662(e) (see sections 11.02 and 11.03 of Rev. Proc. 2022–26, as modified by section 3 of Rev. Proc. 2023–20):* July 1, 2022.

(6) *Tax rate prescribed by the Secretary:* $10.42 per ton. The conversion factors for the taxable chemicals used in the production of ethylene glycol phenyl ether are 0.20 for ethylene, 0.57 for benzene, and 0.30 for propylene. The tax rate is calculated by adding the products of the conversion factor for each taxable chemical and the tax rate for that taxable chemical: ((0.20 × $9.74) + (0.57 × $9.74) + (0.30 7 × $9.74) = $10.42).

(b) *Classification numbers.*

(1) *The Secretary has no basis to object to the following proposed classification numbers:*

(i) *Schedule B number:* 2909.49.0000.

(ii) *CAS number:* 122–99–6

(2) *The Secretary is unable to confirm the following proposed classification number:*

HTSUS number: 2909.49.60.00.

X. Determination To Add Methoxytriglycol to the List

The Dow Chemical Company, an exporter of methoxytriglycol, submitted a petition in accordance with Rev. Proc. 2022–26 requesting to add methoxytriglycol to the List. According to the petition, the taxable chemicals ethylene and methane constitute 60.00 percent by weight of the materials used to produce methoxytriglycol, based on the predominant method of production.

(a) *Determination.* Methoxytriglycol is added to the list of taxable substances under section 4672(a). Other pertinent information is as follows:

(1) *Predominant method of production:* Glycol ethers are predominantly produced by reacting an epoxide (typically ethylene oxide or propylene oxide) with an alcohol; this reaction process is referred to as alkoxylation. Methoxytriglycol ($C_7H_{16}O_4$) is produced by the alkoxylation process using methanol (CH_3OH) and 3 equivalents of ethylene oxide (C_2H_4O). Methanol is made from syngas (carbon monoxide and dihydrogen). Carbon monoxide (CO) and dihydrogen (H_2) are made by steam-methane reforming (CH_4 and H_2O). Ethylene oxide (EO) is made from oxidizing ethylene (C_2H_4). Additional information on the production process is as follows:

(i) The methoxytriglycol reaction (methanol + EO) is base catalyzed, using a small amount of metal hydroxide to produce methoxide. Since the amount of metal hydroxide used to produce methoxytriglycol[4] is very small, the metal hydroxide has been excluded from the stoichiometric material consumption equation; including the metal hydroxide would lead to a distorted conversion factor.

(ii) Once methoxide is made, it is regenerated following conversion to the product in the presence of EO as follows:

(A) Methoxide + 3 EO → methoxytriglycol-alkoxide.

(B) Methoxytriglycol-alkoxide + methanol → methoxytriglycol + methoxide (goes back to participate in the reaction above).

(iii) Regenerated methoxide in the presence of EO will perpetually react until all EO is consumed or the reaction is halted through the use of controls.

(2) *Stoichiometric material consumption equation:*

3 C_2H_4 (ethylene) + 1.5 O_2 (oxygen) + CH_4 (methane) + H_2O (water) → H_2 (hydrogen) + $C_7H_{16}O_4$ (methoxytriglycol)

(3) *Reasons for the determination:* The methoxytriglycol petition was filed on June 13, 2024. The notice of filing summarizing the petition and requesting comments was published in the **Federal Register** (89 FR 71789) on September 3, 2024. The Treasury Department and the IRS received no written comments in response to the notice of filing. A public hearing was neither requested nor held.

The Secretary followed the process in section 4672(a)(2)(B) in making this determination. A review of the stoichiometric material consumption equation and other information in the petition shows that the taxable chemicals ethylene and methane constitute more than 20 percent by weight of the materials used in the production of methoxytriglycol, based on the predominant method of production. Therefore, the test in section 4672(a)(2)(B) is satisfied.

(4) *Date of determination:* August 1, 2025.

(5) *Effective dates for addition of methoxytriglycol to the List:*

(i) *Effective date for purposes of the section 4671 tax (see section 11.01 of Rev. Proc. 2022–26):* January 1, 2026.

(ii) *Effective date for purposes of refund claims under section 4662(e) (see sections 11.02 and 11.03 of Rev. Proc. 2022–26, as modified by section 3 of Rev. Proc. 2023–20):* July 1, 2022.

(6) *Tax rate prescribed by the Secretary:* $5.66 per ton. The conversion factors for the taxable chemicals used in the production of methoxytriglycol are 0.51 for ethylene and 0.10 for methane. The tax rate is calculated by adding the products of the conversion factor for each taxable chemical and the tax rate for that taxable chemical: ((0.51 × $9.74) + (0.10 × $6.88) = $5.66).

(b) *Classification numbers.*

(1) *The Secretary has no basis to object to the following proposed classification numbers:*

(i) *HTSUS number:* 2909.49.6000.

(ii) *Schedule B number:* 2922.17.0000.

(iii) *CAS number*: 112–35–6.

(2) *The Secretary is unable to confirm the following proposed classification numbers:* Not applicable.

XI. Determination To Add Propylene Glycol Methyl Ether Acetate to the List

The Dow Chemical Company, an importer and exporter of propylene glycol methyl ether acetate, submitted a petition in accordance with Rev. Proc. 2022–26 requesting to add propylene glycol methyl ether acetate to the List. According to the petition, the taxable chemicals propylene, chlorine, sodium hydroxide, and methane constitute 93.00 percent by weight of the materials used to produce propylene glycol methyl ether acetate, based on the predominant method of production.

(a) *Determination.* Propylene glycol methyl ether acetate is added to the list of taxable substances under section 4672(a). Other pertinent information is as follows:

(1) *Predominant method of production:* Glycol ethers are predominantly produced by reacting an epoxide (typically ethylene oxide or propylene oxide) with an alcohol; this

[4] The Notice of Filing erroneously stated, ''Since the amount of metal hydroxide used to produce propylene glycol methyl ether. . .'' This error is corrected here.

reaction process is referred to as alkoxylation. Propylene glycol methyl ether acetate is made by esterification of propylene glycol methyl ether and acetic acid. Propylene glycol methyl ether is made via the alkoxylation process (also known as ring opening of an epoxide) using methanol and propylene oxide. Methanol is made from syngas (carbon monoxide and dihydrogen). Carbon monoxide (CO) and dihydrogen (H_2) are made by steam-methane reforming (CH_4 and H_2O). Propylene oxide is made by hydrochlorination (chlorine (Cl_2), propylene (C_3H_6), and sodium hydroxide (NaOH)). Acetic acid is made via the carbonylation of methanol with carbon monoxide. Additional information on the production process is as follows:

(i) The propylene glycol methyl ether alkoxylation reaction (methanol + propylene oxide) is base catalyzed, using a small amount of metal hydroxide to produce methoxide. Once methoxide is made, it is regenerated following conversion to the product in the presence of propylene oxide. Regenerated methoxide in the presence of propylene oxide will perpetually react until all propylene oxide is consumed or the reaction is halted through the use of controls. Since the amount of metal hydroxide used to produce propylene glycol methyl ether acetate [5] is very small, the metal hydroxide has been excluded from the stoichiometric material consumption equation; including the metal hydroxide would lead to a distorted conversion factor.

(ii) After the production of methanol from syngas, methanol is reacted with CO to produce acetic acid. This process is commonly referred to as carbonylation. The reaction is typically catalyzed by either a rhodium or iridium-based catalyst and involves iodomethane as a key intermediate.

(iii) Acetic acid when combined with propylene glycol methyl under specific conditions (temperature, pressure, pH, etc.) produces propylene glycol methyl ether acetate. This reaction is commonly known as esterification (or Fischer esterification). Esterification typically involves a basic or acid catalytic species and can generate water or an aqueous hydroxide as byproduct depending on the pH. Once the final reaction contents are dehydrated and separated, commercial grade propylene glycol methyl ether acetate is obtained.

[5] The Notice of Filing erroneously stated, ''Since the amount of metal hydroxide used to produce propylene glycol methyl ether is very small . . .'' This error is corrected here.

(2) *Stoichiometric material consumption equation:*

C_3H_6 (propylene) + Cl_2 (chlorine) + 2 NaOH (sodium hydroxide) + 3 CH_4 (methane) + H_2O (water) → 2 NaCl (sodium chloride) + 5 H_2 (hydrogen) + $C_6H_{12}O_3$ (propylene glycol methyl ether acetate)

(3) *Reasons for the determination:* The propylene glycol methyl ether acetate petition was filed on June 13, 2024. The notice of filing summarizing the petition and requesting comments was published in the **Federal Register** (89 FR 71789) on September 3, 2024. The Treasury Department and the IRS received no written comments in response to the notice of filing. A public hearing was neither requested nor held.

The Secretary followed the process in section 4672(a)(2)(B) in making this determination. A review of the stoichiometric material consumption equation and other information in the petition shows that the taxable chemicals propylene, chlorine, sodium hydroxide, and methane constitute more than 20 percent by weight of the materials used in the production of propylene glycol methyl ether acetate, based on the predominant method of production. Therefore, the test in section 4672(a)(2)(B) is satisfied.

(4) *Date of determination:* August 1, 2025.

(5) *Effective dates for addition of propylene glycol methyl ether acetate to the List:*

(i) *Effective date for purposes of the section 4671 tax (see section 11.01 of Rev. Proc. 2022–26):* January 1, 2026.

(ii) *Effective date for purposes of refund claims under section 4662(e) (see sections 11.02 and 11.03 of Rev. Proc. 2022–26, as modified by section 3 of Rev. Proc. 2023–20):* July 1, 2022.

(6) *Tax rate prescribed by the Secretary:* $8.85 per ton. The conversion factors for the taxable chemicals used in the production of propylene glycol methyl ether acetate are 0.32 for propylene, 0.54 for chlorine, 0.61 for sodium hydroxide, and 0.36 for methane. The tax rate is calculated by adding the products of the conversion factor for each taxable chemical and the tax rate for that taxable chemical: ((0.32 × $9.74) + (0.54 × $5.40) + (0.61 × $0.56) + (0.36 × $6.88) = $8.85).

(b) *Classification numbers.*

(1) *The Secretary has no basis to object to the following proposed classification numbers:*

(i) *HTSUS number:* 2915.39.90.00.

(ii) *Schedule B number:* 2915.39.9500.

(iii) *CAS number:* 108–65–6.

(2) *The Secretary is unable to confirm the following proposed classification numbers:* Not applicable.

XII. Determination To Add Propylene Glycol Methyl Ether to the List

The Dow Chemical Company, an importer and exporter of propylene glycol methyl ether, submitted a petition in accordance with Rev. Proc. 2022–26 requesting to add propylene glycol methyl ether to the List. According to the petition, the taxable chemicals propylene, chlorine, sodium hydroxide, and methane constitute 100.00 percent by weight of the materials used to produce propylene glycol methyl ether, based on the predominant method of production.

(a) *Determination.* Propylene glycol methyl ether is added to the list of taxable substances under section 4672(a). Other pertinent information is as follows:

(1) *Predominant method of production:* Glycol ethers are predominantly produced by reacting an epoxide (typically ethylene oxide or propylene oxide) with an alcohol; this reaction process is referred to as alkoxylation. Propylene glycol methyl ether is made via the alkoxylation process (also known as ring opening of an epoxide) using methanol and propylene oxide. Methanol is made from syngas (carbon monoxide and dihydrogen). Carbon monoxide (CO) and dihydrogen (H_2) are made by steam-methane reforming (CH_4 and H_2O). Propylene oxide is made by hydrochlorination (chlorine (Cl_2), propylene (C_3H_6), and sodium hydroxide (NaOH)). Additional information on the production process is as follows:

(i) The propylene glycol methyl ether alkoxylation reaction (methanol + propylene oxide) is base catalyzed, using a small amount of metal hydroxide to produce methoxide. Once methoxide is made, it is regenerated following conversion to the product in the presence of propylene oxide. Regenerated methoxide in the presence of propylene oxide will perpetually react until all propylene oxide is consumed or the reaction is halted through the use of controls.

(ii) Since the amount of metal hydroxide used to produce propylene glycol methyl ether is very small, the metal hydroxide has been excluded from the stoichiometric material consumption equation; including the metal hydroxide would lead to a distorted conversion factor.

(2) *Stoichiometric material consumption equation:*

C_3H_6 (propylene) + Cl_2 (chlorine) + 2 NaOH (sodium hydroxide) + CH_4 (methane) → $C_4H_{10}O_2$ (propylene

glycol methyl ether) + 2 NaCl (sodium chloride) + H_2 (hydrogen)

(3) *Reasons for the determination:* The propylene glycol methyl ether petition was filed on June 13, 2024. The notice of filing summarizing the petition and requesting comments was published in the **Federal Register** (89 FR 71784) on September 3, 2024. The Treasury Department and the IRS received no written comments in response to the notice of filing. A public hearing was neither requested nor held.

The Secretary followed the process in section 4672(a)(2)(B) in making this determination. A review of the stoichiometric material consumption equation and other information in the petition shows that the taxable chemicals propylene, chlorine, sodium hydroxide, and methane constitute more than 20 percent by weight of the materials used in the production of propylene glycol methyl ether, based on the predominant method of production. Therefore, the test in section 4672(a)(2)(B) is satisfied.

(4) *Date of determination:* August 1, 2025.

(5) *Effective dates for addition of propylene glycol methyl ether to the List:*

(i) *Effective date for purposes of the section 4671 tax (see section 11.01 of Rev. Proc. 2022–26):* January 1, 2026.

(ii) *Effective date for purposes of refund claims under section 4662(e) (see sections 11.02 and 11.03 of Rev. Proc. 2022–26, as modified by section 3 of Rev. Proc. 2023–20):* July 1, 2022.

(6) *Tax rate prescribed by the Secretary:* $10.58 per ton. The conversion factors for the taxable chemicals used in the production of propylene glycol methyl ether are for 0.47 for propylene, 0.79 for chlorine, 0.89 for sodium hydroxide, and 0.18 for methane. The tax rate is calculated by adding the products of the conversion factor for each taxable chemical and the tax rate for that taxable chemical: ((0.47 × $9.74) + (0.79 × $5.40) + (0.89 × $0.56) + (0.18 × $6.88) = $10.58).

(b) *Classification numbers.*

(1) *The Secretary has no basis to object to the following proposed classification numbers:*

(i) *HTSUS number:* 2909.49.6000.

(ii) *Schedule B number:* 2909.49.0000.

(iii) *CAS number*: 107–98–2.

(2) *The Secretary is unable to confirm the following proposed classification numbers:* Not applicable.

XIII. Determination To Add Propylene Glycol N-Propyl Ether to the List

The Dow Chemical Company, an importer and exporter of propylene glycol n-propyl ether, submitted a petition in accordance with Rev. Proc. 2022–26 requesting to add propylene glycol n-propyl ether to the List. According to the petition, the taxable chemicals propylene, chlorine, sodium hydroxide, ethylene, and methane constitute 100.00 percent by weight of the materials used to produce propylene glycol n-propyl ether, based on the predominant method of production.

(a) *Determination.* Propylene glycol n-propyl ether is added to the list of taxable substances under section 4672(a). Other pertinent information is as follows:

(1) *Predominant method of production:* Glycol ethers are predominantly produced by reacting an epoxide (typically ethylene oxide or propylene oxide) with an alcohol; this reaction process is referred to as alkoxylation. Propylene glycol n-propyl ether is produced via the alkoxylation process (also known as ring opening of an epoxide) using n-propylene and propylene oxide. Propylene oxide is made by hydrochlorination (chlorine, propylene, NaOH). The n-propanol is manufactured by catalytic hydrogenation of propionaldehyde (hydrogen (H_2) + propionaldehyde (CH_3CH_2CHO)). Propionaldehyde is produced by hydroformulation of ethylene (C_2H_4) using carbon monoxide (CO). The n-propanol is made by hydrogenating propionaldehyde in the presence of a catalyst. Additional information on the production process is as follows:

(i) The propylene glycol n-propyl ether alkoxylation reaction (n-propanol + propylene oxide) is base catalyzed, using a small amount of metal hydroxide to produce methoxide. Once propoxide is made, it is regenerated following conversion to the product in the presence of propylene oxide. Regenerated propoxide in the presence of propylene oxide will perpetually react until all propylene oxide is consumed or the reaction is halted through the use of controls.

(ii) Since the amount of metal hydroxide used to produce propylene glycol n-propyl ether is very small, the metal hydroxide has been excluded from the stoichiometric material consumption equation; including the metal hydroxide would lead to a distorted conversion factor.

(2) *Stoichiometric material consumption equation:*

C_3H_6 (propylene) + Cl_2 (chlorine) + 2 NaOH (sodium hydroxide) + C_2H_4 (ethylene) + CH_4 (methane) → 2 NaCl (sodium chloride) + H_2 (hydrogen) + $C_6H_{14}O_2$ (propylene glycol n-propyl ether)

(3) *Reasons for the determination:* The propylene glycol n-propyl ether petition was filed on June 13, 2024. The notice of filing summarizing the petition and requesting comments was published in the **Federal Register** (89 FR 71791) on September 3, 2024. The Treasury Department and the IRS received no written comments in response to the notice of filing. A public hearing was neither requested nor held.

The Secretary followed the process in section 4672(a)(2)(B) in making this determination. A review of the stoichiometric material consumption equation and other information in the petition shows that the taxable chemicals propylene, chlorine, sodium hydroxide, ethylene, and methane constitute more than 20 percent by weight of the materials used in the production of propylene glycol n-propyl ether, based on the predominant method of production. Therefore, the test in section 4672(a)(2)(B) is satisfied.

(4) *Date of determination:* August 1, 2025.

(5) *Effective dates for addition of propylene glycol n-propyl ether to the List:*

(i) *Effective date for purposes of the section 4671 tax (see section 11.01 of Rev. Proc. 2022–26):* January 1, 2026.

(ii) *Effective date for purposes of refund claims under section 4662(e) (see sections 11.02 and 11.03 of Rev. Proc. 2022–26, as modified by section 3 of Rev. Proc. 2023–20):* July 1, 2022.

(6) *Tax rate prescribed by the Secretary:* $10.43 per ton. The conversion factors for the taxable chemicals used in the production of propylene glycol n-propyl ether are for 0.36 for propylene, 0.60 for chlorine, 0.68 for sodium hydroxide, 0.24 for ethylene, and 0.14 for methane. The tax rate is calculated by adding the products of the conversion factor for each taxable chemical and the tax rate for that taxable chemical: ((0.36 × $9.74) + (0.60 × $5.40) + (0.68 × $0.56) + (0.24 × $9.74) + (0.14 × $6.88) = $10.43).

(b) *Classification numbers.*

(1) *The Secretary has no basis to object to the following proposed classification numbers:*

(i) *HTSUS number:* 2909.49.60.00.

(ii) *Schedule B number:* 2909.49.0000.

(iii) *CAS number*: 1569–01–3.

(2) *The Secretary is unable to confirm the following proposed classification numbers:* Not applicable.

XIV. Determination To Add Propylene Glycol Phenyl Ether to the List

The Dow Chemical Company, an importer and exporter of propylene glycol phenyl ether, submitted a petition in accordance with Rev. Proc.

2022–26 requesting to add propylene glycol phenyl ether to the List. According to the petition, the taxable chemicals propylene, chlorine, sodium hydroxide, and benzene constitute 91.00 percent by weight of the materials used to produce propylene glycol phenyl ether, based on the predominant method of production.

(a) *Determination.* Propylene glycol phenyl ether is added to the list of taxable substances under section 4672(a). Other pertinent information is as follows:

(1) *Predominant method of production:* Glycol ethers are predominantly produced by reacting an epoxide (typically ethylene oxide or propylene oxide) with an alcohol; this reaction process is referred to as alkoxylation. Propylene glycol phenyl ether is made via the alkoxylation process (also known as ring opening of an epoxide) using phenol and propylene oxide. Propylene oxide is made by hydrochlorination (chlorine (Cl_2), propylene (C_3H_6), and sodium hydroxide (NaOH)). Phenol is made via the Hock process (sometimes called the cumene process). The Hock process has two stages. In stage 1, benzene (C_6H_6) is alkylated with propylene (C_3H_6) to make cumene (isopropyl benzene). In stage 2, cumene ($C_6H_5(C_3H_7)$) is partially oxidized to make phenol (C_6H_5OH) and side product dimethyl ketone ($(CH_3)_2CHO$). Additional information on the production process is as follows:

(i) The propylene glycol phenyl ether alkoxylation reaction (phenol + propylene oxide) is base catalyzed, using a small amount of metal hydroxide. Once phenoxide is made, it is regenerated following conversion to the product in the presence of propylene oxide. Regenerated phenoxide in the presence of propylene oxide will perpetually react until all propylene oxide is consumed or the reaction is halted through the use of controls.

(ii) Since the amount of metal hydroxide used to produce propylene glycol phenyl ether is very small, the metal hydroxide has been excluded from the stoichiometric material consumption equation; including the metal hydroxide would lead to a distorted conversion factor.

(2) *Stoichiometric material consumption equation:*

$$2\,C_3H_6\ (\text{propylene}) + Cl_2\ (\text{chlorine}) + 2\,\text{NaOH (sodium hydroxide)} + C_6H_6\ (\text{benzene}) + O_2\ (\text{oxygen}) \rightarrow 2\,\text{NaCl (sodium chloride)} + H_2O\ (\text{water}) + (CH_3)_2CO\ (\text{dimethyl ketone}) + C_9H_{12}O_2\ (\text{propylene glycol phenyl ether})$$

(3) *Reasons for the determination:* The propylene glycol phenyl ether petition was filed on June 13, 2024. The notice of filing summarizing the petition and requesting comments was published in the **Federal Register** (89 FR 71786) on September 3, 2024. The Treasury Department and the IRS received no written comments in response to the notice of filing. A public hearing was neither requested nor held.

The Secretary followed the process in section 4672(a)(2)(B) in making this determination. A review of the stoichiometric material consumption equation and other information in the petition shows that the taxable chemicals propylene, chlorine, sodium hydroxide, and benzene constitute more than 20 percent by weight of the materials used in the production of propylene glycol phenyl ether, based on the predominant method of production. Therefore, the test in section 4672(a)(2)(B) is satisfied.

(4) *Date of determination:* August 1, 2025.

(5) *Effective dates for addition of propylene glycol phenyl ether to the List:*

(i) *Effective date for purposes of the section 4671 tax (see section 11.01 of Rev. Proc. 2022–26):* January 1, 2026.

(ii) *Effective date for purposes of refund claims under section 4662(e) (see sections 11.02 and 11.03 of Rev. Proc. 2022–26, as modified by section 3 of Rev. Proc. 2023–20):* July 1, 2022.

(6) *Tax rate prescribed by the Secretary:* $13.16 per ton. The conversion factors for the taxable chemicals used in the production of propylene glycol phenyl ether are 0.55 for propylene, 0.47 for chlorine, 0.53 for sodium hydroxide, and 0.51 for benzene. The tax rate is calculated by adding the products of the conversion factor for each taxable chemical and the tax rate for that taxable chemical: $((0.55 \times \$9.74) + (0.47 \times \$5.40) + (0.53 \times \$0.56) + (0.51 \times \$9.74) = \$13.16)$.

(b) *Classification numbers.*

(1) *The Secretary has no basis to object to the following proposed classification numbers:*

(i) *HTSUS number:* 2909.49.15.00.

(ii) *Schedule B number:* 2909.49.0000.

(iii) *CAS number:* 770–35–4.

(2) *The Secretary is unable to confirm the following proposed classification numbers:* Not applicable.

XV. Determination To Add Di-Isobutyl Carbinol to the List

ALTIVIA Ketones & Additives, LLC, an exporter of di-isobutyl carbinol, submitted a petition in accordance with Rev. Proc. 2022–26 requesting to add di-isobutyl carbinol to the List. According to the petition, the taxable chemical propylene constitutes 87.51 percent by weight of the materials used to produce di-isobutyl carbinol, based on the predominant method of production.

(a) *Determination.* Di-isobutyl carbinol is added to the list of taxable substances under section 4672(a). Other pertinent information is as follows:

(1) *Predominant method of production:* The predominant method of production is aldol condensation of acetone. Aldol condensation is a two-step process in which an aldol reaction forms an aldol product and a dehydration reaction removes water to form the final product. The process uses acetone in condensation, dehydration, and hydrogenation steps. Acetone is passed over a strong base catalyst to form diacetone alcohol, then dehydrated to mesityl oxide, and subsequently hydrogenated to methyl isobutyl ketone. Generally, the process forms co-produced methyl isobutyl ketone, methyl isobutyl carbinol, di-isobutyl ketone and, to a lesser extent, di-isobutyl carbinol.

(2) *Stoichiometric material consumption equation:*

$$3(C_3H_6\ (\text{propylene})) + H_2O \rightarrow C_9H_{20}O\ (\text{di-isobutyl carbinol})$$

(3) *Reasons for the determination:* The di-isobutyl carbinol petition was filed on September 23, 2024. The notice of filing summarizing the petition and requesting comments was published in the **Federal Register** (89 FR 94878) on November 29, 2024. The Treasury Department and the IRS received no written comments in response to the notice of filing. A public hearing was neither requested nor held.

The Secretary followed the process in section 4672(a)(2)(B) in making this determination. A review of the stoichiometric material consumption equation and other information in the petition shows that the taxable chemical propylene constitutes more than 20 percent by weight of the materials used in the production of di-isobutyl carbinol, based on the predominant method of production. Therefore, the test in section 4672(a)(2)(B) is satisfied.

(4) *Date of determination:* August 1, 2025.

(5) *Effective dates for addition of di-isobutyl carbinol to the List:*

(i) *Effective date for purposes of the section 4671 tax (see section 11.01 of Rev. Proc. 2022–26):* January 1, 2026.

(ii) *Effective date for purposes of refund claims under section 4662(e) (see sections 11.02 and 11.03 of Rev. Proc. 2022–26, as modified by section 3 of Rev. Proc. 2023–20):* January 1, 2024.

(6) *Tax rate prescribed by the Secretary:* $8.57 per ton. The conversion

factor for the propylene used in the production of di-isobutyl carbinol is 0.88. The tax rate is calculated by multiplying the conversion factor by the tax rate for propylene (0.88 × $9.74 = $8.57).

(b) *Classification numbers.*

(1) *The Secretary has no basis to object to the following proposed classification numbers:*

(i) *HTSUS number:* 2905.19.9090.

(ii) *Schedule B number:* 2905.19.9095.

(iii) *CAS number:* 108–82–7.

(2) *The Secretary is unable to confirm the following proposed classification numbers:* Not applicable.

XVI. Determination To Add Di-Isobutyl Ketone to the List

ALTIVIA Ketones & Additives, LLC, an exporter of di-isobutyl ketone, submitted a petition in accordance with Rev. Proc. 2022–26 requesting to add di-isobutyl ketone to the List. According to the petition, the taxable chemical propylene constitutes 87.51 percent by weight of the materials used to produce di-isobutyl ketone, based on the predominant method of production.

(a) *Determination.* Di-isobutyl ketone is added to the list of taxable substances under section 4672(a). Other pertinent information is as follows:

(1) *Predominant method of production:* The predominant method of production is aldol condensation of acetone. Aldol condensation is a two-step process in which an aldol reaction forms an aldol product and a dehydration reaction removes water to form the final product. The process uses acetone in condensation, dehydration, and hydrogenation steps. Acetone is passed over a strong base catalyst to form diacetone alcohol, then dehydrated to mesityl oxide, and subsequently hydrogenated to methyl isobutyl ketone. Generally, the process forms co-produced methyl isobutyl ketone, methyl isobutyl carbinol, di-isobutyl ketone and, to a lesser extent, di-isobutyl carbinol.

(2) *Stoichiometric material consumption equation:*

$$3(C_3H_6\ \text{(propylene)}) + H_2O \rightarrow C_9H_{18}O\ \text{(di-isobutyl ketone)} + H_2$$

(3) *Reasons for the determination:* The di-isobutyl ketone petition was filed on September 23, 2024. The notice of filing summarizing the petition and requesting comments was published in the **Federal Register** (89 FR 94879) on November 29, 2024. The Treasury Department and the IRS received no written comments in response to the notice of filing. A public hearing was neither requested nor held.

The Secretary followed the process in section 4672(a)(2)(B) in making this determination. A review of the stoichiometric material consumption equation and other information in the petition shows that the taxable chemical propylene constitutes more than 20 percent by weight of the materials used in the production of di-isobutyl ketone, based on the predominant method of production. Therefore, the test in section 4672(a)(2)(B) is satisfied.

(4) *Date of determination:* August 1, 2025.

(5) *Effective dates for addition of di-isobutyl ketone to the List:*

(i) *Effective date for purposes of the section 4671 tax (see section 11.01 of Rev. Proc. 2022–26):* January 1, 2026.

(ii) *Effective date for purposes of refund claims under section 4662(e) (see sections 11.02 and 11.03 of Rev. Proc. 2022–26, as modified by section 3 of Rev. Proc. 2023–20):* January 1, 2024.

(6) *Tax rate prescribed by the Secretary:* $8.67 per ton. The conversion factor for the propylene used in the production of di-isobutyl ketone is 0.89. The tax rate is calculated by multiplying the conversion factor by the tax rate for propylene: (0.89 × $9.74 = $8.67).

(b) *Classification numbers.*

(1) *The Secretary has no basis to object to the following proposed classification numbers:*

(i) *HTSUS number:* 2914.19.0000.

(ii) *Schedule B number:* 2914.19.0000.

(iii) *CAS number:* 108–83–8.

(2) *The Secretary is unable to confirm the following proposed classification numbers:* Not applicable.

XVII. Determination To Add Methyl Isobutyl Carbinol to the List

ALTIVIA Ketones & Additives, LLC, an exporter of methyl isobutyl carbinol, submitted a petition in accordance with Rev. Proc. 2022–26 requesting to add methyl isobutyl carbinol to the List. According to the petition, the taxable chemical propylene constitutes 82.36 percent by weight of the materials used to produce methyl isobutyl carbinol, based on the predominant method of production.

(a) *Determination.* Methyl isobutyl carbinol is added to the list of taxable substances under section 4672(a). Other pertinent information is as follows:

(1) *Predominant method of production:* The predominant method of production is aldol condensation of acetone. Aldol condensation is a two-step process in which an aldol reaction forms an aldol product and a dehydration reaction removes water to form the final product. The process uses acetone in condensation, dehydration, and hydrogenation steps. Acetone is passed over a strong base catalyst to form diacetone alcohol, then dehydrated to mesityl oxide, and subsequently hydrogenated to methyl isobutyl ketone. Generally, the process forms co-produced methyl isobutyl ketone, methyl isobutyl carbinol, di-isobutyl ketone and, to a lesser extent, di-isobutyl carbinol.

(2) *Stoichiometric material consumption equation:*

$$2(C_3H_6\ \text{(propylene)}) + H_2O \rightarrow C_6H_{14}O\ \text{(methyl isobutyl carbinol)}$$

(3) *Reasons for the determination:* The methyl isobutyl carbinol petition was filed on September 23, 2024. The notice of filing summarizing the petition and requesting comments was published in the **Federal Register** (89 FR 94877) on November 29, 2024. The Treasury Department and the IRS received no written comments in response to the notice of filing. A public hearing was neither requested nor held.

The Secretary followed the process in section 4672(a)(2)(B) in making this determination. A review of the stoichiometric material consumption equation and other information in the petition shows that the taxable chemical propylene constitutes more than 20 percent by weight of the materials used in the production of methyl isobutyl carbinol, based on the predominant method of production. Therefore, the test in section 4672(a)(2)(B) is satisfied.

(4) *Date of determination:* August 1, 2025.

(5) *Effective dates for addition of methyl isobutyl carbinol to the List:*

(i) *Effective date for purposes of the section 4671 tax (see section 11.01 of Rev. Proc. 2022–26):* January 1, 2026

(ii) *Effective date for purposes of refund claims under section 4662(e) (see sections 11.02 and 11.03 of Rev. Proc. 2022–26, as modified by section 3 of Rev. Proc. 2023–20):* January 1, 2024

(6) *Tax rate prescribed by the Secretary:* $7.99 per ton. The conversion factor for the propylene used in the production of methyl isobutyl carbinol is 0.82. The tax rate is calculated by multiplying the conversion factor by the tax rate for propylene: (0.82 × $9.74 = $7.99).

(b) *Classification numbers.*

(1) *The Secretary has no basis to object to the following proposed classification numbers:*

(i) *HTSUS number:* 2905.19.9090.

(ii) *Schedule B number:* 2905.19.9095.

(iii) *CAS number:* 108–11–2.

(2) *The Secretary is unable to confirm the following proposed classification numbers:* Not applicable.

XVIII. Determination To Add Cyanuric Acid to the List

Occidental Chemical Corporation, an interested person in cyanuric acid,

submitted a petition in accordance with Rev. Proc. 2022–26 requesting to add cyanuric acid to the List. According to the petition, the taxable chemical ammonia constitutes 27.90 percent by weight of the materials used to produce cyanuric acid, based on the predominant method of production.

(a) *Determination.* Cyanuric acid is added to the list of taxable substances under section 4672(a). Other pertinent information is as follows:

(1) *Predominant method of production:* The predominant process for the manufacture of cyanuric acid is using urea thermal decomposition to produce cyanuric acid.

(2) *Stoichiometric material consumption equation:*

3 NH_3 (ammonia) + 3 CO_2 (carbon dioxide) → $C_3N_3O_3H_3$ (cyanuric acid) + 3 H_2O (water)

(3) *Reasons for the determination:* The cyanuric acid petition was filed on November 25, 2024. The notice of filing summarizing the petition and requesting comments was published in the **Federal Register** (90 FR 7246) on January 21, 2025. The Treasury Department and the IRS received one written comment, discussed below, in response to the notice of filing. A public hearing was neither requested nor held.

The commenter asserts that the notice did not give a reason to add the substance to the List and inquires ''[w]hy would a long-term product be added . . . if it's already in production at a chemical plant for distribution.'' It is not clear to the Treasury Department and the IRS what is the significance of a ''long-term product.'' Regardless, the commenter did not demonstrate that cyanuric acid does not meet the weight or value test under section 4672(a)(2)(B). Under section 4672(a)(2)(b) and (4) and (b)(2), the Secretary is required to add a substance to the List if the Secretary determines that any taxable chemicals used to produce the substance meet the weight or value test. The petition represented and the Secretary determined that a taxable chemical constitutes more than 20 percent by weight of the materials used in the production of cyanuric acid, based on the predominant method of production. For this reason, the Treasury Department and the IRS decline to adopt any change to this determination based on the public comment.

The Secretary followed the process in section 4672(a)(2)(B) in making this determination. A review of the stoichiometric material consumption equation and other information in the petition shows that the taxable chemical ammonia constitutes more than 20 percent by weight of the materials used in the production of cyanuric acid, based on the predominant method of production. Therefore, the test in section 4672(a)(2)(B) is satisfied.

(4) *Date of determination:* August 1, 2025.

(5) *Effective dates for addition of cyanuric acid to the List:*

(i) *Effective date for purposes of the section 4671 tax (see section 11.01 of Rev. Proc. 2022–26):* January 1, 2026.

(ii) *Effective date for purposes of refund claims under section 4662(e) (see sections 11.02 and 11.03 of Rev. Proc. 2022–26, as modified by section 3 of Rev. Proc. 2023–20):* October 1, 2024.

(6) *Tax rate prescribed by the Secretary:* $2.11 per ton. The conversion factor for the ammonia used in the production of cyanuric acid is 0.40. The tax rate is calculated by multiplying the conversion factor by the tax rate for ammonia: (0.40 × $5.28 = $2.11).

(b) *Classification numbers.*

(1) *The Secretary has no basis to object to the following proposed classification numbers:*

(i) *HTSUS number:* 2933.69.6050.

(ii) *Schedule B number:* 2933.69.0000.

(iii) *CAS number:* 108–80–5.

(2) *The Secretary is unable to confirm the following proposed classification numbers:* Not applicable.

XIX. Determination To Add Potassium Bicarbonate to the List

Occidental Chemical Corporation, an exporter of potassium bicarbonate, submitted a petition in accordance with Rev. Proc. 2022–26 requesting to add potassium bicarbonate to the List. According to the petition, the taxable chemical potassium hydroxide constitutes 56.04 percent by weight of the materials used to produce potassium bicarbonate, based on the predominant method of production.

(a) *Determination.* Potassium bicarbonate is added to the list of taxable substances under section 4672(a). Other pertinent information is as follows:

(1) *Predominant method of production:* The predominant process for the manufacture of potassium bicarbonate is absorption of CO_2 with potassium hydroxide. The predominant process for carbonate manufacture is absorption of CO_2 with alkaline liquid. This substance is produced as a pure component, not a mixture.

(2) *Stoichiometric material consumption equation:*

CO_2 (carbon dioxide) + KOH (potassium hydroxide) → $HKCO_3$ (potassium bicarbonate)

(3) *Reasons for the determination:* The potassium bicarbonate petition was filed on November 25, 2024. The notice of filing summarizing the petition and requesting comments was published in the **Federal Register** (90 FR 7245) on January 21, 2025. The Treasury Department and the IRS received no written comments in response to the notice of filing. A public hearing was neither requested nor held.

The Secretary followed the process in section 4672(a)(2)(B) in making this determination. A review of the stoichiometric material consumption equation and other information in the petition shows that the taxable chemical potassium hydroxide constitutes more than 20 percent by weight of the materials used in the production of potassium bicarbonate, based on the predominant method of production. Therefore, the test in section 4672(a)(2)(B) is satisfied.

(4) *Date of determination:* August 1, 2025.

(5) *Effective dates for addition of potassium bicarbonate to the List:*

(i) *Effective date for purposes of the section 4671 tax (see section 11.01 of Rev. Proc. 2022–26):* January 1, 2026.

(ii) *Effective date for purposes of refund claims under section 4662(e) (see sections 11.02 and 11.03 of Rev. Proc. 2022–26, as modified by section 3 of Rev. Proc. 2023–20):* July 1, 2022.

(6) *Tax rate prescribed by the Secretary:* $0.25 per ton. The conversion factor for the potassium hydroxide used in the production of potassium bicarbonate is 0.56. The tax rate is calculated by multiplying the conversion factor by the tax rate for potassium hydroxide: (0.56 × $0.44 = $0.25).

(b) *Classification numbers.*

(1) *The Secretary has no basis to object to the following proposed classification numbers:*

(i) *HTSUS number:* 2836.40.2000.

(ii) *Schedule B number:* 2836.40.0000.

(iii) *CAS number:* 298–14–6.

(2) *The Secretary is unable to confirm the following proposed classification numbers:* Not applicable.

XX. Determination To Add Potassium Carbonate to the List

Occidental Chemical Corporation, an exporter of potassium carbonate, submitted a petition in accordance with Rev. Proc. 2022–26 requesting to add potassium carbonate to the List. According to the petition, the taxable chemical potassium hydroxide constitutes 71.83 percent by weight of the materials used to produce potassium carbonate, based on the predominant method of production.

(a) *Determination.* Potassium carbonate is added to the list of taxable

substances under section 4672(a). Other pertinent information is as follows:

(1) *Predominant method of production:* The predominant process for the manufacture of potassium carbonate is absorption of CO_2 with KOH. The predominant process for carbonate manufacture is absorption of CO_2 with alkaline liquid. This substance is produced as a pure component, not a mixture.

(2) *Stoichiometric material consumption equation:*

CO_2 (carbon dioxide) + 2 KOH (potassium hydroxide) → K_2CO_3 (potassium carbonate) + H_2O (water)

(3) *Reasons for the determination:* The potassium carbonate petition was filed on November 25, 2024. The notice of filing summarizing the petition and requesting comments was published in the **Federal Register** (90 FR 7247) on January 21, 2025. The Treasury Department and the IRS received two written comments, discussed below, in response to the notice of filing. A public hearing was neither requested nor held.

One public comment asserted that potassium carbonate does ''not pose any significant health or environmental risks,'' objected to the weight or value test of section 4672(a)(2)(B), and urged the Secretary to exercise discretion when determining whether a substance poses a significant danger that warrants imposing the tax under section 4671. Another public comment inquired about the effects of potassium carbonate and asserted that ''[t]he most important thing is to avoid any type of exposure to the chemical as it can cause severe damage.'' Neither comment demonstrated whether potassium carbonate meets the weight or value test under section 4672(a)(2)(B). Under section 4672(a)(2)(b) and (4) and (b)(2), the Secretary is required to add a substance to the List if the Secretary determines that any taxable chemicals used to produce the substance meet the weight or value test. Congress did not give the Secretary discretion to determine whether a substance poses significant health or environmental risks or otherwise poses a significant danger. The petition represented and the Secretary determined that a taxable chemical constitutes more than 20 percent by weight of the materials used in the production of potassium carbonate, based on the predominant method of production. For this reason, the Treasury Department and the IRS decline to adopt the suggestions of these public comments.

The Secretary followed the process in section 4672(a)(2)(B) in making this determination. A review of the stoichiometric material consumption equation and other information in the petition shows that the taxable chemical potassium hydroxide constitutes more than 20 percent by weight of the materials used in the production of potassium carbonate, based on the predominant method of production. Therefore, the test in section 4672(a)(2)(B) is satisfied.

(4) *Date of determination:* August 1, 2025.

(5) *Effective dates for addition of potassium carbonate to the List:*

(i) *Effective date for purposes of the section 4671 tax (see section 11.01 of Rev. Proc. 2022–26):* January 1, 2026.

(ii) *Effective date for purposes of refund claims under section 4662(e) (see sections 11.02 and 11.03 of Rev. Proc. 2022–26, as modified by section 3 of Rev. Proc. 2023–20):* July 1, 2022.

(6) *Tax rate prescribed by the Secretary:* $0.36 per ton. The conversion factor for the potassium hydroxide used in the production of potassium carbonate is 0.81. The tax rate is calculated by multiplying the conversion factor by the tax rate for potassium hydroxide: (0.81 × $0.44 = $0.36).

(b) *Classification numbers.*

(1) *The Secretary has no basis to object to the following proposed classification numbers:*

(i) *HTSUS number:* 2836.40.1000.

(ii) *Schedule B number:* 2836.40.0000.

(iii) *CAS number:* 584–08–7.

(2) *The Secretary is unable to confirm the following proposed classification numbers:* Not applicable.

XXI. Determination To Add Sodium Chlorite to the List

Occidental Chemical Corporation, an exporter of sodium chlorite, submitted a petition in accordance with Rev. Proc. 2022–26 requesting to add sodium chlorite to the List. According to the petition, the taxable chemicals chlorine and sodium hydroxide constitute 75.87 percent by weight of the materials used to produce sodium chlorite, based on the predominant method of production.

(a) *Determination.* Sodium chlorite is added to the list of taxable substances under section 4672(a). Other pertinent information is as follows:

(1) *Predominant method of production:* The predominant process for the manufacture of sodium chlorite is electrolytic production of $NaClO_3$ followed by hydrochlorination with wet acid with byproduct chlorine and hydrogen used in the manufacture of acid. This substance is produced as a pure component, not a mixture, though it may be sold as an aqueous liquid.

(2) *Stoichiometric material consumption equation:*

2 Cl_2 (chlorine) + 4 NaOH (sodium hydroxide) + 3 O_2 (oxygen) → 4 $NaClO_2$ (sodium chlorite) + 2 H_2O (water)

(3) *Reasons for the determination:* The sodium chlorite petition was filed on November 25, 2024. The notice of filing summarizing the petition and requesting comments was published in the **Federal Register** (90 FR 7247) on January 21, 2025. The Treasury Department and the IRS received no written comments in response to the notice of filing. A public hearing was neither requested nor held.

The Secretary followed the process in section 4672(a)(2)(B) in making this determination. A review of the stoichiometric material consumption equation and other information in the petition shows that the taxable chemicals chlorine and sodium hydroxide constitute more than 20 percent by weight of the materials used in the production of sodium chlorite, based on the predominant method of production. Therefore, the test in section 4672(a)(2)(B) is satisfied.

(4) *Date of determination:* August 1, 2025.

(5) *Effective dates for addition of sodium chlorite to the List:*

(i) *Effective date for purposes of the section 4671 tax (see section 11.01 of Rev. Proc. 2022–26):* January 1, 2026.

(ii) *Effective date for purposes of refund claims under section 4662(e) (see sections 11.02 and 11.03 of Rev. Proc. 2022–26, as modified by section 3 of Rev. Proc. 2023–20):* July 1, 2022.

(6) *Tax rate prescribed by the Secretary:* $2.35 per ton. The conversion factors for the taxable chemicals used in the production of sodium chlorite are 0.39 for chlorine and 0.44 for sodium hydroxide. The tax rate is calculated by adding the products of the conversion factor for each taxable chemical and the tax rate for that taxable chemical: (0.39 × $5.40 + 0.44 × $0.56 = $2.35).

(b) *Classification numbers.*

(1) *The Secretary has no basis to object to the following proposed classification numbers:*

(i) *HTSUS number:* 2828.90.0000.

(ii) *Schedule B number:* 2828.90.0000.

(iii) *CAS number:* 7758–19–2.

(2) *The Secretary is unable to confirm the following proposed classification numbers:* Not applicable.

Correction to the List of Taxable Substances

Section 4 of Notice 2021–66 includes in the initial list of taxable substances the taxable substance ''sodium nitriolotriacetate monohydrate.'' There is a typographical error in the spelling of this taxable substance. The correct name of this taxable substance is

''sodium nitrilotriacetate monohydrate.'' The tax rate for sodium nitrilotriacetate monohydrate was not previously provided by the Secretary. The tax rate prescribed by the Secretary for sodium nitrilotriacetate monohydrate is $3.97 per ton. The conversion factors for the taxable chemicals used in the production of sodium nitrilotriacetate monohydrate are 0.25 for ammonia, 0.35 for methane, and 0.44 for sodium hydroxide. The tax rate is calculated by adding the products of the conversion factor for each taxable chemical and the tax rate for that taxable chemical: ((0.25 × $5.28) + (0.35 × $6.88) + (0.44 × $0.56) = $3.97). This tax rate is effective July 1, 2022.

Effect on Other Documents

Section 4 of Notice 2021–66 is modified by replacing the name ''sodium nitriolotriacetate monohydrate'' with ''sodium nitrilotriacetate monohydrate.''

Krishna P. Vallabhaneni,

Tax Legislative Counsel.

Medicare Program; Hospital Inpatient Prospective Payment Systems for Acute Care Hospitals (IPPS) and the Long-Term Care Hospital Prospective Payment System and Policy Changes and Fiscal Year (FY) 2026 Rates; Changes to the FY 2025 IPPS Rates Due to Court Decision; Requirements for Quality Programs; and Other Policy Changes; Health Data, Technology, and Interoperability: Electronic Prescribing, Real-Time Prescription Benefit and Electronic Prior Authorization

AGENCY: Centers for Medicare & Medicaid Services (CMS) and Assistant Secretary for Technology Policy (ASTP)/Office of the National Coordinator for Health Information Technology (ONC) (collectively, ASTP/ONC), Department of Health and Human Services (HHS).

ACTION: Final rules.

SUMMARY: This final rule revises the Medicare hospital inpatient prospective payment systems (IPPS) for operating and capital-related costs of acute care hospitals; makes changes relating to Medicare graduate medical education (GME) for teaching hospitals; updates the payment policies and the annual payment rates for the Medicare prospective payment system (PPS) for inpatient hospital services provided by long-term care hospitals (LTCHs); updates and makes changes to requirements for certain quality programs; and makes other policy-related changes. We are also finalizing the provisions of the interim final action with comment period regarding the changes to the FY 2025 IPPS rates due to the court decision in *Bridgeport Hosp.* v. *Becerra.* Lastly, it finalizes certain updates to the ONC Health Information Technology (IT) Certification Program.

DATES: These final rules are effective on October 1, 2025. The incorporation by reference of certain material listed in this document is approved by the Director of the Federal Register as of October 1, 2025.

SUPPLEMENTARY INFORMATION:

Tables Available on the CMS Website

The IPPS tables for this fiscal year (FY) 2026 final rule are available on the CMS website at *https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/AcuteInpatientPPS/index.html*. Click on the link on the left side of the screen titled ''FY 2026 IPPS Final Rule Home Page'' or ''Acute Inpatient—Files for Download.'' The LTCH PPS tables for this FY 2026 final rule are available on the CMS website at *https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/LongTermCareHospitalPPS/index.html* under the list item for Regulation Number CMS–1833–F. For further details on the contents of the tables referenced in this final rule, we refer readers to section VI. of the Addendum to this FY 2026 IPPS/LTCH PPS final rule.

Readers who experience any problems accessing any of the tables that are posted on the CMS websites, as previously identified, should contact Michael Treitel, *DAC@cms.hhs.gov*.

I. Executive Summary and Background

A. Executive Summary

1. Purpose and Legal Authority

This FY 2026 IPPS/LTCH PPS final rule will make payment and policy changes under the Medicare inpatient

prospective payment system (IPPS) for operating and capital-related costs of acute care hospitals as well as for certain hospitals and hospital units excluded from the IPPS. In addition, it makes payment and policy changes for inpatient hospital services provided by long-term care hospitals (LTCHs) under the long-term care hospital prospective payment system (LTCH PPS). This final rule also makes policy changes to programs associated with Medicare IPPS hospitals, IPPS-excluded hospitals, and LTCHs. We are also making changes relating to Medicare graduate medical education (GME) for teaching hospitals.

In the Hospital Value-Based Purchasing (VBP) Program, we are finalizing modifications to the Hospital-Level Total Hip Arthroplasty/Total Knee Arthroplasty (THA/TKA) Complications measure beginning with the FY 2033 program year. We also provide notice of the technical update to the five National Healthcare Safety Network (NHSN) Healthcare Associated Infection (HAI) measures beginning with the FY 2029 program year, and the technical update to the six measures in the Clinical Outcomes domain beginning with the FY 2027 program year. We are finalizing removal of the Health Equity Adjustment (HEA) from the program's scoring calculations in the FY 2026 program year. We provide previously and newly established performance standards for FY 2027 through FY 2031 program years for the Hospital VBP Program.

In the Hospital-Acquired Condition (HAC) Reduction Program, we are also providing notice of the technical update to the five Centers for Disease Control and Prevention's (CDC) NHSN healthcare-associated infection (HAI) measures.

In the Hospital Readmissions Reduction Program, we are finalizing our proposal to add Medicare Advantage (MA) beneficiaries to the six Hospital Readmissions Reduction Program (HRRP) measures beginning with the FY 2027 program year; however, we are not finalizing our proposal to include payment data for MA beneficiaries in the calculation of aggregate payments for excess readmissions. We also are finalizing our proposal to reduce the applicable period from 3-years to 2-years beginning with the FY 2027 program year. We also provide notice of the technical update to remove the COVID–19 exclusion from all six readmission measures.

In the PPS-Exempt Cancer Hospital Quality Reporting Program (PCHQR), we are finalizing our proposals to modify the public reporting requirements and remove three existing measures.

In the Hospital Inpatient Quality Reporting (IQR) Program, we are finalizing our proposals to modify four existing quality measures and to remove four existing measures. We also are finalizing our proposal, with modification, to update and codify the Extraordinary Circumstances Exception (ECE) policy to clarify that CMS has the discretion to grant an extension in response to an ECE request from a hospital in the Hospital IQR, Hospital Readmissions Reduction, PCHQR, HAC Reduction, and Hospital VBP Programs with a modification.

In the Medicare Promoting Interoperability Program, we are finalizing our proposal to define the electronic health record (EHR) reporting period in CY 2026 and subsequent years as a minimum of any continuous 180-day period within that calendar year for eligible hospitals and CAHs participating in the Medicare Promoting Interoperability Program and to make corresponding revisions at 42 CFR 495.4. We are finalizing our proposal, with modifications, to revise the Security Risk Analysis measure beginning with the EHR reporting period in CY 2026. We are finalizing our proposal to modify the Safety Assurance Factors for EHR Resilience (SAFER) Guides measure beginning with the EHR reporting period in CY 2026. We are finalizing our proposal to add an optional bonus measure under the Public Health and Clinical Data Exchange objective for reporting data to a public health agency (PHA) using the Trusted Exchange Framework and Common Agreement (TEFCA) beginning with the EHR reporting period in CY 2026.

For the LTCH Quality Reporting Program (QRP), we are finalizing our proposal to remove one item from the LTCH Continuity Assessment Record and Evaluation (CARE) Data Set (LCDS) with respect to patients who have expired in the LTCH. We also are finalizing our proposal to remove four Social Determinant of Health (SDOH) standardized patient assessment data elements from the LCDS. Next, we are finalizing our proposal to amend the reconsideration request process in the LTCH QRP. Finally, we include summaries of comments received in response to Requests for Information (RFIs) on: (1) future measure concepts for the LTCH QRP; (2) revisions to the data submission deadlines for assessment data collected for the LTCH QRP; and (3) advancing digital quality measurement (dQM) in the LTCH QRP.

The Transforming Episode Accountability Model (TEAM), a mandatory alternative payment model that was finalized in the FY 2025 IPPS/LTCH PPS final rule (89 FR 68986), aims to improve beneficiary care through financial accountability for episodes categories that begin with one of the following procedures: coronary artery bypass graft (CABG), lower extremity joint replacement (LEJR), major bowel procedure, surgical hip/femur fracture treatment (SHFFT), and spinal fusion. TEAM will test whether financial accountability for these episode categories reduces Medicare expenditures while preserving or enhancing the quality of care for Medicare beneficiaries. In this final rule, we finalizing updates to TEAM that would modify policies affecting participation of new hospitals, quality measure and assessment, the construction of target prices, the removal of certain health reporting elements, the broadening of the Skilled Nursing Facility (SNF) 3-Day Rule, and the removal of the Decarbonization and Resilience Initiative (DRI). Additionally, the policies in this final rule reflect our commitment to ensuring TEAM's incentives help to drive beneficiary quality of care improvements and reductions in Medicare spending.

The Secretary of Health and Human Services has delegated responsibilities to the Assistant Secretary for Technology Policy (ASTP)/Office of the National Coordinator for Health Information Technology (ONC) (collectively, ASTP/ONC [1]) for the implementation of certain provisions in Title IV of the 21st Century Cures Act (Public Law (Pub. L.)) 114–255, December 13, 2016) (Cures Act) that are designed to: advance interoperability; support the access, exchange, and use of electronic health information (EHI); and identify reasonable and necessary activities that do not constitute information blocking.[2] ASTP/ONC is also responsible for implementation of certain provisions of the Health Information Technology for Economic and Clinical Health Act (Pub. L. 111–5, Feb. 17. 2009) (HITECH Act) including: requirements that the National Coordinator perform duties consistent with the development of a nationwide

[1] On July 29, 2024, notice was posted in the **Federal Register** that ONC would be dually titled to the Assistant Secretary for Technology Policy and Office of the National Coordinator for Health Information Technology (89 FR 60903).

[2] Reasonable and necessary activities that do not constitute information blocking, also known as information blocking exceptions, are identified in 45 CFR part 171 subparts B, C and D. ONC's official website, *HealthIT.gov*, offers a variety of resources on the topic of Information Blocking, including fact sheets, recorded webinars, and frequently asked questions. To learn more, please visit: *https://www.healthit.gov/topic/information-blocking/*.

health information technology infrastructure that allows for the electronic use and exchange of information and that promotes a more effective marketplace, greater competition, and increased consumer choice, among other goals; and requirements to keep or recognize a program or programs for the voluntary certification of health information technology.

Under various statutory authorities, we either discuss continued program implementation or make changes to the Medicare IPPS, the LTCH PPS, other related payment methodologies and programs for FY 2026 and subsequent fiscal years, and other policies and provisions included in this final rule. These statutory authorities include, but are not limited to, the following:

- Section 1886(d) of the Social Security Act (the Act), which sets forth a system of payment for the operating costs of acute care hospital inpatient stays under Medicare Part A (Hospital Insurance) based on prospectively set rates. Section 1886(g) of the Act requires that, instead of paying for capital-related costs of inpatient hospital services on a reasonable cost basis, the Secretary use a prospective payment system (PPS).
- Section 1886(d)(1)(B) of the Act, which specifies that certain hospitals and hospital units are excluded from the IPPS. These hospitals and units are: rehabilitation hospitals and units; LTCHs; psychiatric hospitals and units; children's hospitals; cancer hospitals; extended neoplastic disease care hospitals; and hospitals located outside the 50 States, the District of Columbia, and Puerto Rico (that is, hospitals located in the U.S. Virgin Islands, Guam, the Northern Mariana Islands, and American Samoa). Religious nonmedical health care institutions (RNHCIs) are also excluded from the IPPS.
- Sections 123(a) and (c) of the Balanced Budget Refinement Act of 1999 (BBRA) (Public Law (Pub. L.) 106–113) and section 307(b)(1) of the Benefits Improvement and Protection Act of 2000 (BIPA) (Pub. L. 106–554) (as codified under section 1886(m)(1) of the Act), which provide for the development and implementation of a prospective payment system for payment for inpatient hospital services of LTCHs described in section 1886(d)(1)(B)(iv) of the Act.

Section 1814(l)(4) of the Act requires, beginning with FY 2017, that CAHs that do not successfully demonstrate meaningful use of certified electronic health record technology (CEHRT) for an EHR reporting period for a cost reporting period shall be paid 100 percent of reasonable costs rather than 101 percent of reasonable costs.

- Section 1886(a)(4) of the Act, which specifies that costs of approved educational activities are excluded from the operating costs of inpatient hospital services. Hospitals with approved graduate medical education (GME) programs are paid for the direct costs of GME in accordance with section 1886(h) of the Act. Hospitals paid under the IPPS with approved GME programs are paid for the indirect costs of training residents in accordance with section 1886(d)(5)(B) of the Act.
- Section 1886(d)(5)(F) of the Act provides for additional Medicare IPPS payments to subsection (d) hospitals that serve a significantly disproportionate number of low-income patients. These payments are known as the Medicare disproportionate share hospital (DSH) adjustment. Section 1886(d)(5)(F) of the Act specifies the methods under which a hospital may qualify for the DSH payment adjustment.
- Section 1886(b)(3)(B)(viii) of the Act, which requires the Secretary to reduce the applicable percentage increase that would otherwise apply to the standardized amount applicable to a subsection (d) hospital for discharges occurring in a fiscal year if the hospital does not submit data on measures in a form and manner, and at a time, specified by the Secretary.
- Section 1886(b)(3)(B)(ix) of the Act, which requires downward adjustments to the applicable percentage increase, beginning with FY 2015 (and beginning with FY 2022 for subsection (d) Puerto Rico hospitals), for eligible hospitals that do not successfully demonstrate meaningful use of CEHRT for an EHR reporting period for a payment adjustment year.
- Section 1866(k) of the Act, which provides for the establishment of a quality reporting program for hospitals described in section 1886(d)(1)(B)(v) of the Act, referred to as ''PPS-exempt cancer hospitals.''
- Section 1886(n) of the Act, which establishes the requirements for an eligible hospital to be treated as a meaningful EHR user for an EHR reporting period for a payment year or, for purposes of subsection (b)(3)(B)(ix) of the Act, for a fiscal year.
- Section 1886(o) of the Act, which requires the Secretary to establish a Hospital Value-Based Purchasing (VBP) Program, under which value-based incentive payments are made in a fiscal year to hospitals based on their performance on measures established for a performance period for such fiscal year.
- Section 1886(p) of the Act, which establishes a Hospital-Acquired Condition (HAC) Reduction Program, under which payments to applicable hospitals are adjusted to provide an incentive to reduce hospital-acquired conditions.
- Section 1886(q) of the Act, as amended by section 15002 of the 21st Century Cures Act, which establishes the Hospital Readmissions Reduction Program. Under the program, payments for discharges from an applicable hospital as defined under section 1886(d) of the Act will be reduced to account for certain excess readmissions. Section 15002 of the 21st Century Cures Act directs the Secretary to assess a hospital's performance relative to other hospitals with a similar proportion of beneficiaries who are dually eligible for both Medicare and full Medicaid benefits.
- Section 1886(r) of the Act, as added by section 3133 of the Affordable Care Act, which provides for a reduction to disproportionate share hospital (DSH) payments under section 1886(d)(5)(F) of the Act and for an additional uncompensated care payment to eligible hospitals. Specifically, section 1886(r) of the Act requires that, for fiscal year 2014 and each subsequent fiscal year, subsection (d) hospitals that would otherwise receive a DSH payment made under section 1886(d)(5)(F) of the Act will receive two separate payments: (1) 25 percent of the amount they previously would have received under the statutory formula for Medicare DSH payments in section 1886(d)(5)(F) of the Act if subsection (r) did not apply (''the empirically justified amount''), and (2) an additional payment for the DSH hospital's proportion of uncompensated care, determined as the product of three factors. These three factors are: (1) 75 percent of the payments that would otherwise be made under section 1886(d)(5)(F) of the Act, in the absence of section 1886(r) of the Act; (2) 1 minus the percent change in the percent of individuals who are uninsured; and (3) the hospital's uncompensated care amount relative to the uncompensated care amount of all DSH hospitals expressed as a percentage.
- Section 1886(m)(5) of the Act, which requires the Secretary to reduce by 2 percentage points the annual update to the standard Federal rate for discharges for a long-term care hospital (LTCH) during the rate year for LTCHs that do not submit data on quality measures in the form, manner, and at a time, specified by the Secretary.
- Section 1886(m)(6) of the Act, as added by section 1206(a)(1) of the Pathway for Sustainable Growth Rate

(SGR) Reform Act of 2013 (Pub. L. 113–67) and amended by section 51005(a) of the Bipartisan Budget Act of 2018 (Pub. L. 115–123), which provided for the establishment of site neutral payment rate criteria under the LTCH PPS, with implementation beginning in FY 2016. Section 51005(b) of the Bipartisan Budget Act of 2018 amended section 1886(m)(6)(B) by adding new clause (iv), which specifies that the IPPS comparable amount defined in clause (ii)(I) shall be reduced by 4.6 percent for FYs 2018 through 2026.

- Section 1899B of the Act, which provides for the establishment of standardized data reporting for certain post-acute care providers, including LTCHs.
- Section 1115A of the Act authorizes the testing of innovative payment and service delivery models that preserve or enhance the quality of care furnished to Medicare, Medicaid, and Children's Health Insurance Program (CHIP) beneficiaries while reducing program expenditures.

2. Summary of the Major Provisions

The following is a summary of the major provisions in this final rule. In general, these major provisions are being finalized as part of the annual update to the payment policies and payment rates, consistent with the applicable statutory provisions. A general summary of the changes in this final rule is presented in section I.D. of the preamble of this final rule.

a. Transition for the Discontinuation of the Low Wage Index Hospital Policy

To help mitigate growing wage index disparities between high wage and low wage hospitals, in the FY 2020 IPPS/LTCH PPS rule (84 FR 42326 through 42332), we adopted a policy to increase the wage index values for certain hospitals with low wage index values (the low wage index hospital policy). This policy was adopted in a budget neutral manner through an adjustment applied to the standardized amounts for all hospitals. We indicated our intention that this policy would be effective for at least 4 years, beginning in FY 2020, in order to allow employee compensation increases implemented by these hospitals sufficient time to be reflected in the wage index calculation. We also stated we intended to revisit the issue of the duration of this policy in future rulemaking as we gained experience under the policy. In the FY 2025 IPPS/LTCH PPS final rule (89 FR 69301 through 69308), we adopted an extension of the low wage index hospital policy and the related budget neutrality adjustment effective for at least three more years, beginning in FY 2025, in order for sufficient wage data from after the end of the COVID–19 Public Health Emergency to become available.

As discussed in section III.F.5. of the preamble of this final rule, on July 23, 2024, the Court of Appeals for the D.C. Circuit held that the Secretary lacked authority under section 1886(d)(3)(E) of the Act or under the ''adjustments'' language of section 1886(d)(5)(I)(i) of the Act to adopt the low wage index hospital policy for FY 2020, and that the policy and related budget neutrality adjustment must be vacated. *Bridgeport Hosp.* v. *Becerra,* 108 F.4th 882, 887–91 & n.6 (D.C. Cir. 2024). After considering the D.C. Circuit's decision in *Bridgeport Hosp.* v. *Becerra,* in the FY 2025 IFC (89 FR 80405 through 80421), we recalculated the FY 2025 IPPS hospital wage index to remove the low wage index hospital policy for FY 2025. We also removed the low wage index budget neutrality factor from the FY 2025 standardized amounts. In addition, we established an interim transition policy for hospitals significantly impacted by the removal of the FY 2025 low wage index hospital policy using our authority under section 1886(d)(5)(I) of the Act. We note, as discussed elsewhere, in this final rule we are finalizing the provisions of the interim final action with comment period (IFC) (89 FR 80405) (hereinafter referred to as the FY 2025 IFC), that implemented revised Medicare wage index values for FY 2025, established a transitional payment exception for low wage hospitals significantly impacted by those revisions, and made conforming changes to the hospital IPPS and LTCH PPS payment rates for FY 2025 to reflect the removal of the low wage index hospital policy following the appellate court decision in *Bridgeport Hosp.* v. *Becerra*.

For FY 2026 and subsequent fiscal years, after considering the D.C. Circuit's decision in *Bridgeport Hosp.* v. *Becerra,* we are discontinuing the low wage index hospital policy and will no longer apply a low wage index budget neutrality factor to the standardized amounts. As discussed in section III.F.7. of the preamble of this final rule, we are using our authority under section 1886(d)(5)(I)(i) of the Act to adopt a narrow transitional exception to the calculation of FY 2026 IPPS payments for low wage index hospitals significantly impacted by the discontinuation of the low wage index hospital policy, that will be implemented in a budget neutral manner. This transitional exception policy will apply to hospitals that benefitted from the FY 2024 low wage index hospital policy and compares the hospital's FY 2026 wage index to the hospital's FY 2024 wage index. If the hospital's FY 2026 wage index is decreasing by more than 9.75 percent from the hospital's FY 2024 wage index, then the transitional payment exception for FY 2026 for that hospital is equal to the additional FY 2026 amount the hospital would be paid under the IPPS if its FY 2026 wage index were equal to 90.25 percent of its FY 2024 wage index. We are making this policy budget neutral through an adjustment applied to the standardized amounts for all hospitals.

b. Update to the IPPS Labor-Related Share

As discussed in section IV. of the preamble of this final rule, we are finalizing our proposal to rebase and revise the 2018-based IPPS market basket to reflect a 2023 base year. In addition, using the cost category weights from the 2023-based IPPS market basket, we calculated a labor-related share of 66.0 percent, which we will use for discharges occurring on or after October 1, 2025. The labor-related share of 66.0 percent is 1.6 percentage points lower than the current labor-related share of 67.6 percent. As discussed in section IV.B.3. of the preamble of this final rule, this downward revision to the labor-related share is primarily the result of incorporating the more recent 2023 Medicare cost report data for Wages and Salaries, Employee Benefits, and Contract Labor costs. This is partially offset by an increase in the Professional Fees: Labor-Related cost weight.

c. Hospital Readmissions Reduction Program

The Hospital Readmissions Reduction Program was established under section 1886(q) of the Act, as amended by section 15002 of the Cures Act. The Hospital Readmissions Reduction Program requires a reduction to a hospital's base operating DRG payment to account for excess readmissions of selected applicable conditions or procedures. In this final rule, we are finalizing the following proposals, beginning with the FY 2027 program year: (1) Refine all six readmission measures to add Medicare Advantage patient cohort data; (2) reduce the applicable period from 3-years to 2-years and update codified regulation language; and (4) update and codify the ECE policy to clarify that CMS has the discretion to grant an extension in response to an ECE request from a hospital with a modification. We also

provide notice of the technical update to remove the COVID–19 exclusion from all six readmission measures. We are not finalizing the proposal to include payment data for MA beneficiaries in the calculation of aggregate payments for excess readmissions..

d. Hospital Acquired Condition (HAC) Reduction Program

Section 1886(p) of the Act establishes the HAC Reduction Program under which payments to applicable hospitals are adjusted to provide an incentive to reduce hospital-acquired conditions. In this final rule, we are making a technical update to the NHSN Healthcare Associated Infection (HAI) measures baseline. We are also finalizing our proposal to update and codify the ECE policy to clarify that CMS has the discretion to grant an extension in response to an ECE request from a hospital with a modification.

e. Hospital Value-Based Purchasing (VBP) Program

Section 1886(o) of the Act requires the Secretary to establish a Hospital VBP Program under which value-based incentive payments are made in a fiscal year to hospitals based on their performance on measures established for a performance period for such fiscal year. In this final rule, we are finalizing modifications to the THA/TKA Complications measure beginning with the FY 2033 program year. We also provide notice of the technical update to remove the COVID–19 exclusion from the six measures in the Clinical Outcomes domain beginning with the FY 2027 program year and the technical update to the five NHSN Healthcare Associated Infection (HAI) measures beginning with the FY 2029 program year. We also are finalizing our proposal to update and codify the ECE policy to clarify that CMS has the discretion to grant an extension in response to an ECE request from a hospital with a modification. We are also finalizing our proposal to remove the Program's HEA adjustment in the FY 2026 program year. Lastly, we provide previously and newly established performance standards for FY 2027 through FY 2031 program years for the Hospital VBP Program.

f. Hospital Inpatient Quality Reporting (IQR) Program

Under section 1886(b)(3)(B)(viii) of the Act, subsection (d) hospitals are required to report data on measures selected by the Secretary for a fiscal year in order to receive the full annual percentage increase. In this FY 2026 IPPS/LTCH PPS final rule, we are finalizing several changes to the Hospital IQR Program. We are finalizing modifications to four measures currently in the Hospital IQR Program measure set: (1) Hospital-Level, Risk-Standardized Complication Rate (RSCR) Following Elective Primary Total Hip Arthroplasty (THA) and/or Total Knee Arthroplasty (TKA) beginning with the April 1, 2023–March 30, 2025 reporting period/2027 payment determination; (2) Hospital 30-Day, All-Cause, Risk-Standardized Mortality Rate (RSMR) Following Acute Ischemic Stroke Hospitalization with Claims-Based Risk Adjustment for Stroke Severity beginning with the July 1, 2023–June 30, 2025 reporting period/2027 payment determination; (3) the Hybrid Hospital-Wide Readmission (HWR) measure beginning with the July 1, 2025, through June 30, 2026 Reporting Period/FY 2028 payment determination; and (4) the Hybrid Hospital-Wide All-Cause Risk Standardized Mortality (HWM) measure beginning with the July 1, 2025, through June 30, 2026 reporting period/FY 2028 payment determination. We are also finalizing the removal of four measures: (1) the Hospital Commitment to Health Equity measure beginning with the CY 2024 reporting period/FY 2026 payment determination; (2) the COVID–19 Vaccination Coverage among HCP measure beginning with the CY 2024 reporting period/FY 2026 payment determination; (3) the Screening for Social Drivers of Health measure beginning with the CY 2024 reporting period/FY 2026 payment determination; and (4) the Screen Positive Rate for Social Drivers of Health measure beginning with the CY 2024 reporting period/FY 2026 payment determination. We are finalizing our proposal to update and codify the ECE policy to clarify that CMS has the discretion to grant an extension in response to an ECE request from a hospital with a modification. Additionally, we sought comments regarding measure concepts related to well-being and nutrition for future consideration. We also sought comments on the path forward for digital quality measurement and use of Fast Healthcare Interoperability Resources (FHIR).

g. PPS-Exempt Cancer Hospital Quality Reporting (PCHQR) Program

Section 1866(k)(1) of the Act requires, for purposes of FY 2014 and each subsequent fiscal year, that a hospital described in section 1886(d)(1)(B)(v) of the Act (a PPS-exempt cancer hospital, or a PCH) submit data in accordance with section 1866(k)(2) of the Act with respect to such fiscal year. In this final rule, we are finalizing our proposal to publicly report PCH data on both the Provider Data Catalog and on Care Compare and to make corresponding changes to regulatory text to replace references to ''Provider Data Catalog'' with ''CMS website''. We are also finalizing our proposals to remove the (1) Hospital Commitment to Health Equity, (2) the Screening for Social Drivers of Health measure; and (3) the Screen Positive Rate for Social Drivers of Health measure beginning with the CY 2024 reporting period/FY 2026 program year. Lastly, we are finalizing our proposal to update and codify the ECE policy to clarify that CMS has the discretion to grant an extension in response to an ECE request from a hospital with a modification.

h. Long-Term Care Hospital Quality Reporting Program (LTCH QRP)

For the LTCH QRP, we are finalizing our proposal to remove one item from the LCDS with respect to patients who have expired in the LTCH. We also are finalizing our proposal to removal of four SDOH standardized patient assessment data elements from the LCDS. We are finalizing our proposal to amend the reconsideration request process in the LTCH QRP. Finally, we include a summary of comments received in response to Requests for Information (RFIs) on: (1) future measure concepts for the LTCH QRP; (2) revisions to the data submission deadlines for assessment data collected for the LTCH QRP; and (3) advancing digital quality measurement (dQM) in the LTCH QRP.

i. Medicare Promoting Interoperability Program

Under sections 1886(b)(3)(B)(ix) and 1814(l)(4) of the Act, respectively, eligible hospitals and CAHs are required to submit data in accordance with section 1886(n) to successfully demonstrate meaningful use of CEHRT for an EHR reporting period to avoid a downward payment adjustment under Medicare for the associated fiscal year. In this final rule, we are finalizing several changes to the Medicare Promoting Interoperability Program. Specifically, we are finalizing our proposals: (1) to amend the definition of ''EHR reporting period for a payment adjustment year'' at 42 CFR 495.4 for eligible hospitals and CAHs participating in the Medicare Promoting Interoperability Program to define the EHR reporting period in CY 2026 and subsequent years as a minimum of any continuous 180-day period within that calendar year; (2) to modify the Security Risk Analysis measure to require eligible hospitals and CAHs to attest

''yes'' to having conducted security risk management in addition to the existing measure requirement to attest ''yes'' to having conducted security risk analysis, beginning with the EHR reporting period in CY 2026; (3) to modify the SAFER Guides measure by requiring eligible hospitals and CAHs to attest ''yes'' to completing an annual self-assessment using the eight SAFER Guides published in January 2025, beginning with the EHR reporting period in CY 2026; and (4) to add an optional bonus measure to the Public Health and Clinical Data Exchange objective for eligible hospitals and CAHs that submit health information to a public health agency (PHA) using the Trusted Exchange Framework and Common Agreement ™ (TEFCA), and consistent with other measure requirements, beginning with the EHR reporting period in CY 2026.

j. Transforming Episode Accountability Model (TEAM)

In section XI.A. of the preamble of this final rule, we discuss the changes we finalized and considered for the Transforming Episode Accountability Model (TEAM). TEAM is a 5-year mandatory model that will be tested under the authority of section 1115A of the Act, beginning on January 1, 2026, and ending on December 31, 2030. We finalized changes to multiple areas of the model, including: (1) a limited deferment period for certain hospitals; (2) addressing the expiration of the Medicare Dependent Hospital program; (3) excluding Indian Health Service (IHS) hospitals from TEAM participation; (4) adding the Information Transfer Patient Reported Outcome-based Performance Measure (Information Transfer PRO–PM); (5) applying a neutral quality measure score for TEAM participants with insufficient quality data; (6) a methodology to construct target prices when there are coding changes; (7) reconstructing the normalization factor and prospective trend factor; (8) replacing the Area Deprivation Index (ADI) with the Community Deprivation Index (CDI); (9) using a 180-day lookback period and Hierarchical Condition Categories (HCC) version 28 for beneficiary risk adjustment; (10) eliminating downside financial risk for low volume hospitals; (11) aligning the date range used for episode attribution; (12) removing health equity plans and health related social needs data reporting; (13) broadening the Skilled Nursing Facility (SNF) 3-day rule waiver; (14) modifying the referral to primary care services requirement; and (15) removing the Decarbonization and Resilience Initiative (DRI).

k. ONC Health IT Certification Program Updates

In the Health Data, Technology, and Interoperability: Patient Engagement, Information Sharing, and Public Health Interoperability proposed rule (HTI–2 Proposed Rule) (89 FR 63498), which appeared in the **Federal Register** on August 5, 2024, ASTP/ONC proposed a wide-ranging set of updates to the ONC Health IT Certification Program. In the Health Data, Technology, and Interoperability: Electronic Prescribing, Real-Time Prescription Benefit and Electronic Prior Authorization (HTI–4 final rule), which is being published as part of the FY 2026 IPPS/LTCH final rule, ASTP/ONC is finalizing a limited subset of the proposals in the HTI–2 proposed rule. In this section, ASTP/ONC describes the HTI–2 proposals it is finalizing in this rule.

(1) New and Revised Standards and Certification Criteria

(a) Minimum Standards Code Sets Updates

In section III.B.5 of the preamble of the HTI–2 Proposed Rule, ASTP/ONC proposed to adopt an updated baseline version of RxNorm, identified as a minimum standard code set, in 45 CFR 170.207(d) (Medications), and to reorganize the text of the regulation in 45 CFR 170.207(d). RxNorm is referenced in the ''electronic prescribing'' and ''real-time prescription benefit'' health IT certification criteria ASTP/ONC is also finalizing in this final rule. ASTP/ONC is finalizing these proposals in section XI.*B*.4.b.(2) of the preamble of this final rule, with modifications. Consistent with 45 CFR 170.555, health IT developers may use newer versions of the adopted baseline version of a standard identified as a minimum standard on a voluntary basis.

(b) Revised Electronic Prescribing Certification Criterion

As discussed in section XI.*B*.4.b.(3) of the preamble of this final rule, ASTP/ONC is finalizing proposed updates in the HTI–2 Proposed Rule to the ''electronic prescribing'' criterion in 45 CFR 170.315(b)(3), with modifications. ASTP/ONC is finalizing that, for technology certified to the criterion in 45 CFR 170.315(b)(3) subsequent to June 30, 2020, health IT developers must update the Health IT Module to use the National Council for Prescription Drug Programs (NCPDP) SCRIPT standard version 2023011 and provide that update to their customers in order to maintain certification of the Health IT Module, by January 1, 2028. For the time period up to and including December 31, 2027, ASTP/ONC is finalizing that developers certifying a Health IT Module to 45 CFR 170.315(b)(3) may use either the updated NCPDP SCRIPT standard version 2023011 or the NCPDP SCRIPT standard version 2017071. ASTP/ONC is also finalizing that any Health IT Modules for which a health IT developer seeks certification to the updated criterion using NCPDP SCRIPT standard version 2023011 would need to support electronic prior authorization transactions in accordance with the standard. Finally, ASTP/ONC is finalizing a series of additional updates to 45 CFR 170.315(b)(3)(ii), including removing transactions currently identified as optional for the certification criterion.

(c) New Real-Time Prescription Benefit Criterion

As discussed in section XI.*B*.4.b.(4) of the preamble of this final rule, ASTP/ONC is finalizing the proposal in the HTI–2 Proposed Rule to adopt a ''real-time prescription benefit'' certification criterion in 45 CFR 170.315(b)(4), with modifications. Real-time prescription benefit tools empower providers and their patients to compare the patient-specific cost of a drug to the cost of a suitable alternative, compare prescription costs at different pharmacies, view information about out-of-pocket costs, and learn whether prior authorization for a specific drug is required. The certification criterion ASTP/ONC is finalizing is based on the NCPDP Real-Time Prescription Benefit (RTPB) standard version 13. ASTP/ONC is also finalizing a proposal to include this certification criterion in the Base EHR definition in 45 CFR 170.102 after January 1, 2028. ASTP/ONC is finalizing these policies in order to implement section 119(b)(3) of Title I of the Consolidated Appropriations Act, 2021 (Pub. L. 116–260).

(d) New Certification Criteria for Modular API Capabilities

As discussed in section XI.*B*.4.b.(5) of the preamble of this final rule, ASTP/ONC is finalizing two health IT certification criteria for ''modular API capabilities'' proposed in the HTI–2 Proposed Rule. Specifically, ASTP/ONC is finalizing certification criteria in 45 CFR 170.315(j)(20), ''Workflow triggers for decision support interventions,'' and 45 CFR 170.315(j)(21), ''Subscriptions—client,'' both of which are cross-referenced by other certification criteria ASTP/ONC is finalizing to support electronic prior authorization.

(e) New Certification Criteria for Electronic Prior Authorization

In section III.B.20 of the preamble of the HTI–2 Proposed Rule, ASTP/ONC proposed to adopt a ''prior authorization API—provider'' criterion in 45 CFR 170.315(g)(34). ASTP/ONC also proposed to adopt a set of HL7® FHIR® implementation guides (IGs) in 45 CFR 170.215 for HHS use, including IGs referenced as part of the proposed criterion for electronic prior authorization and other IGs that support interoperable exchange of information between payers, providers, and patients.

In section XI.*B*.4.b.(5) of the preamble of this final rule, ASTP/ONC is finalizing three certification criteria in 45 CFR 170.315(g)(31), (32), and (33) for electronic prior authorization that are based on the requirements originally proposed in 45 CFR 170.315(g)(34), with modifications. ASTP/ONC is also finalizing adoption of the IGs proposed in section III.B.20 and incorporating these specifications by reference in 45 CFR 170.299.

ASTP/ONC is finalizing these criteria to make available Health IT Modules that can enable health care providers to conduct prior authorization transactions using payer APIs established by CMS in the Interoperability and Prior Authorization rule (89 FR 8758). Use of these Health IT Modules will also support providers and clinicians participating in the Promoting Interoperability programs and MIPS Promoting Interoperability performance category required to report on Electronic Prior Authorization measures.

3. Summary of Costs and Benefits

The following table provides a summary of the costs, savings, and benefits associated with the major provisions described in section I.A.2. of the preamble of this final rule.

BILLING CODE 4120–01–P

Provision Description	Description of Costs, Transfers, Savings, and Benefits
Transition for the Discontinuation of the Low Wage Index Hospital Policy	As discussed in section III.F.7. of the preamble of this final rule, we are using our authority under section 1886(d)(5)(I)(i) of the Act to adopt a narrow transitional exception to the calculation of FY 2026 IPPS payments for low wage index hospitals significantly impacted by the discontinuation of the low wage index hospital policy, that would be implemented in a budget neutral manner. We are making this policy budget neutral through an adjustment applied to the standardized amounts for all hospitals.
Update to the IPPS Labor-Related Share	As discussed in section IV. of the preamble of this final rule, we are rebasing and revising the 2018-based IPPS market basket to reflect a 2023 base year. In addition, using the cost category weights from the 2023-based IPPS market basket, we calculated a labor-related share of 66.0 percent, which we will use for discharges occurring on or after October 1, 2025. The labor-related share of 66.0 percent is 1.6 percentage points lower than the current labor-related share of 67.6 percent. This change is budget neutral.
Update to the IPPS Payment Rates and Other Payment Policies	As discussed in Appendix A of this final rule, acute care hospitals are estimated to experience an increase of approximately $5.0 billion in FY 2026, primarily driven by the changes in FY 2026 operating payments, uncompensated care payments, and capital payments and the expiration of the temporary changes in the low-volume hospital program and the expiration of the MDH program on October 1, 2025.
Update to the LTCH PPS Payment Rates and Other Payment Policies	As discussed in Appendix A of this final rule, based on the best available data for the 329 LTCHs in our database, we estimate that the changes to the payment rates and factors that we present in the preamble of and Addendum of this final rule, which reflect the update to the LTCH PPS standard Federal payment rate for FY 2026, would result in an estimated increase in payments in FY 2026 of approximately $83 million.
Changes to the Hospital Readmissions Reduction Program	We estimated that our changes for the Hospital Readmissions Reduction Program will result in no financial impact for the FY 2026 payment determination or subsequent years.
Changes to the Value-Based Incentive Payments under the Hospital VBP Program	We estimated that there will be no net financial impact to the Hospital VBP Program for the FY 2026 program year in the aggregate because, by law, the amount available for value-based incentive payments under the program in a given year must be equal to the total amount of base operating MS-DRG payment amount reductions for that year, as estimated by the Secretary. The estimated amount of base operating MS-DRG payment amount reductions for the FY 2026 program year and, therefore, the estimated amount available for value-based incentive payments for FY 2026 discharges is approximately $1.7 billion.
Changes to the HAC Reduction Program	We estimated that our changes for the HAC Reduction Program will result in no financial impact for the FY 2026 payment determination or subsequent years.
Changes to the Hospital IQR Program	Across 3,050 IPPS hospitals, we estimated that our changes for the Hospital IQR Program will result in a maximum decrease of 654,477 hours and $17,724,699 to the information collection burden for the FY 2026 payment determination or subsequent years.
Changes to the PCHQR Program	Across 11 PCHs, we estimated that our changes for the PCHQR Program will result in a decrease of 107 hours and $2,921 to the information collection burden for the FY 2026 program year or subsequent years.
Changes to the LTCH QRP	Across 330 LTCHs, we estimated that our proposed changes for the FY 2026 LTCH QRP would result in a total information collection burden increase of 4 hours and $187.60 associated with updates to our reconsideration policy. We estimated that our proposed changes for the FY 2028 LTCH QRP would result in a decrease of 2,633.51 hours associated with our policies and updated burden estimates and a total cost decrease of approximately $180,016.80.
Changes to the Medicare Promoting Interoperability Program	Across 4,550 eligible hospitals and CAHs, we estimated that our changes for the Medicare Promoting Interoperability Program will not result in a change to the information collection burden for the EHR reporting period in CY 2026 and subsequent years.

Provision Description	Description of Costs, Transfers, Savings, and Benefits
Transforming Episode Accountability Model (TEAM)	We estimate for the TEAM proposals included in this final rule that there would be no significant change from the savings estimate in the FY 2025 IPPS/LTCH PPS final rule. Therefore, we estimate testing TEAM would result in saving the Medicare program $368 million across the 5 performance years.
HTI-2 (ASTP/ONC)	ASTP/ONC estimate that the total annual cost to developers of certified health IT and health IT purchasers for this final rule for the first year after it is finalized (including one-time costs), based on the cost estimates outlined above and throughout this RIA, would result in $50.3 million. The total undiscounted cost over a 10-year period for this final rule (starting in year two), based on the cost estimates outlined above, would result in $177.6 million. ASTP/ONC estimate the total costs to developers of certified health IT and health IT purchasers to be $228 million. ASTP/ONC estimate the total annual benefit across all entities for progress toward interoperability (progress initiated by adoption of the criteria and standards set forth in this final rule, then implemented with intermediate activities that connect such adoption with the generation of benefits) beginning in 2027, when the associated policies are required to be implemented and expected benefits to be realized, would be on average $1.0 billion. ASTP/ONC estimate the total benefits across all entities to be $19.2 billion. This benefits estimate is not comparable with the quantification of costs (totaling $228 million over ten years) because the cost of some intermediate activities has not been estimated and the cost of other intermediate activities has been attributed to other regulatory provisions, such as the ones finalized by CMS at 89 FR 8758.
FY 2025 IFC	In section XI.C. of the preamble of this final rule, we finalize the provisions of the FY 2025 IFC, which implemented revised Medicare wage index values for FY 2025, established a transitional payment exception for low wage hospitals significantly impacted by those revisions, and made conforming changes to the hospital IPPS payment rates for FY 2025. These changes reflect the removal of the low wage index hospital policy following the appellate court decision in *Bridgeport Hosp. v. Becerra.* That IFC also made conforming changes to IPPS rates and factors used to determine certain payments under the LTCH PPS for FY 2025. We estimate that acute care hospitals will experience an increase of approximately $41 million in FY 2025 due to the provisions of the FY 2025 IFC. This change is primarily due to the application of the non-budget neutral transitional payment exception policy

BILLING CODE 4120–01–C

B. Background Summary

1. Acute Care Hospital Inpatient Prospective Payment System (IPPS)

Section 1886(d) of the Act sets forth a system of payment for the operating costs of acute care hospital inpatient stays under Medicare Part A (Hospital Insurance) based on prospectively set rates. Section 1886(g) of the Act requires the Secretary to use a prospective payment system (PPS) to pay for the capital-related costs of inpatient hospital services for these ''subsection (d) hospitals.'' Under these PPSs, Medicare payment for hospital inpatient operating and capital-related costs is made at predetermined, specific rates for each hospital discharge. Discharges are classified according to a list of diagnosis-related groups (DRGs).

The base payment rate is comprised of a standardized amount that is divided into a labor-related share and a nonlabor-related share. The labor-related share is adjusted by the wage index applicable to the area where the hospital is located. If the hospital is located in Alaska or Hawaii, the nonlabor-related share is adjusted by a cost-of-living adjustment (COLA) factor. This base payment rate is multiplied by the DRG relative weight.

If the hospital treats a high percentage of certain low-income patients, it receives a percentage add-on payment applied to the DRG-adjusted base payment rate. This add-on payment, known as the disproportionate share hospital (DSH) adjustment, provides for a percentage increase in Medicare payments to hospitals that qualify under either of two statutory formulas designed to identify hospitals that serve a disproportionate share of low-income patients. For qualifying hospitals, the amount of this adjustment varies based on the outcome of the statutory calculations. The Affordable Care Act revised the Medicare DSH payment methodology and provides for an additional Medicare payment beginning on October 1, 2013, that considers the amount of uncompensated care furnished by the hospital relative to all other qualifying hospitals.

If the hospital is training residents in an approved residency program(s), it receives a percentage add-on payment for each case paid under the IPPS, known as the indirect medical education (IME) adjustment. This percentage varies, depending on the ratio of residents to beds.

Additional payments may be made for cases that involve new technologies or medical services that have been approved for special add-on payments. In general, to qualify, a new technology or medical service must demonstrate that it is a substantial clinical improvement over technologies or services otherwise available, and that, absent an add-on payment, it would be inadequately paid under the regular DRG payment. In addition, certain transformative new devices and certain antimicrobial products may qualify under an alternative inpatient new technology add-on payment pathway by demonstrating that, absent an add-on payment, they would be inadequately paid under the regular DRG payment.

The costs incurred by the hospital for a case are evaluated to determine whether the hospital is eligible for an additional payment as an outlier case. This additional payment is designed to protect the hospital from large financial losses due to unusually expensive cases. Any eligible outlier payment is added to the DRG-adjusted base payment rate, plus any DSH, IME, and new technology or medical service add-on adjustments and, beginning in FY 2023 for IHS and Tribal hospitals and hospitals located in Puerto Rico, the new supplemental payment.

Although payments to most hospitals under the IPPS are made on the basis of the standardized amounts, some categories of hospitals are paid in whole or in part based on their hospital-specific rate, which is determined from their costs in a base year. For example, sole community hospitals (SCHs) receive the higher of a hospital-specific rate based on their costs in a base year (the highest of FY 1982, FY 1987, FY 1996, or FY 2006) or the IPPS Federal rate based on the standardized amount. SCHs are the sole source of care in their areas. Specifically, section 1886(d)(5)(D)(iii) of the Act defines an SCH as a hospital that is located more than 35 road miles from another hospital or that, by reason of factors such as an isolated location, weather conditions, travel conditions, or absence of other like hospitals (as determined by the Secretary), is the sole source of hospital inpatient services reasonably available to Medicare beneficiaries. In addition, certain rural hospitals previously designated by the Secretary as essential access community hospitals are considered SCHs.

With the recent enactment of section 2202 of the Full-Year Continuing Appropriations and Extensions Act, 2025, under current law, the Medicare-dependent, small rural hospital (MDH) program is effective through September 30, 2025. For discharges occurring on or after October 1, 2007, but before October 1, 2025, an MDH receives the higher of the Federal rate or the Federal rate plus 75 percent of the amount by which the Federal rate is exceeded by the highest of its FY 1982, FY 1987, or FY 2002 hospital-specific rate. MDHs are a major source of care for Medicare beneficiaries in their areas. Section 1886(d)(5)(G)(iv) of the Act defines an MDH as a hospital that is located in a rural area (or, as amended by the Bipartisan Budget Act of 2018, a hospital located in a State with no rural area that meets certain statutory criteria), has not more than 100 beds, is not an SCH, and has a high percentage of Medicare discharges (not less than 60 percent of its inpatient days or discharges in its cost reporting year beginning in FY 1987 or in two of its three most recently settled Medicare cost reporting years). As section 2202 of the Full-Year Continuing Appropriations and Extensions Act, 2025 extended the MDH program through FY 2025 only, beginning on October 1, 2025, the MDH program will no longer be in effect absent a change in law. Because the MDH program is not authorized by statute beyond September 30, 2025, beginning October 1, 2025, all hospitals that previously qualified for MDH status under section 1886(d)(5)(G) of the Act will no longer have MDH status and will be paid based on the IPPS Federal rate.

Section 1886(g) of the Act requires the Secretary to pay for the capital-related costs of inpatient hospital services in accordance with a prospective payment system established by the Secretary. The basic methodology for determining capital prospective payments is set forth in our regulations at 42 CFR 412.308 and 412.312. Under the capital IPPS, payments are adjusted by the same DRG for the case as they are under the operating IPPS. Capital IPPS payments are also adjusted for IME and DSH, similar to the adjustments made under the operating IPPS. In addition, hospitals may receive outlier payments for those cases that have unusually high costs.

The existing regulations governing payments to hospitals under the IPPS are located in 42 CFR part 412, subparts A through M.

2. Hospitals and Hospital Units Excluded From the IPPS

Under section 1886(d)(1)(B) of the Act, as amended, certain hospitals and hospital units are excluded from the IPPS. These hospitals and units are: Inpatient rehabilitation facility (IRF) hospitals and units; long-term care hospitals (LTCHs); Inpatient psychiatric hospitals (IPF) and units; children's hospitals; cancer hospitals; extended neoplastic disease care hospitals, and hospitals located outside the 50 States,

the District of Columbia, and Puerto Rico (that is, hospitals located in the U.S. Virgin Islands, Guam, the Northern Mariana Islands, and American Samoa). Religious nonmedical health care institutions (RNHCIs) are also excluded from the IPPS. Various sections of the Balanced Budget Act of 1997 (BBA) (Pub. L. 105–33), the Medicare, Medicaid and SCHIP [State Children's Health Insurance Program] Balanced Budget Refinement Act of 1999 (BBRA, Pub. L. 106–113), and the Medicare, Medicaid, and SCHIP Benefits Improvement and Protection Act of 2000 (BIPA, Pub. L. 106–554) provide for the implementation of PPSs for IRF hospitals and units, LTCHs, and psychiatric hospitals and units (referred to as inpatient psychiatric facilities (IPFs)). (We note that the annual updates to the LTCH PPS are included along with the IPPS annual update in this document. Updates to the IRF PPS and IPF PPS are issued as separate documents.) Children's hospitals, cancer hospitals, hospitals located outside the 50 States, the District of Columbia, and Puerto Rico (that is, hospitals located in the U.S. Virgin Islands, Guam, the Northern Mariana Islands, and American Samoa), and RNHCIs continue to be paid solely under a reasonable cost-based system, subject to a rate-of-increase ceiling on inpatient operating costs. Similarly, extended neoplastic disease care hospitals are paid on a reasonable cost basis, subject to a rate-of-increase ceiling on inpatient operating costs.

The existing regulations governing payments to excluded hospitals and hospital units are located in 42 CFR parts 412 and 413.

3. Long-Term Care Hospital Prospective Payment System (LTCH PPS)

The Medicare prospective payment system (PPS) for LTCHs applies to hospitals described in section 1886(d)(1)(B)(iv) of the Act, effective for cost reporting periods beginning on or after October 1, 2002. The LTCH PPS was established under the authority of sections 123 of the BBRA and section 307(b) of the BIPA (as codified under section 1886(m)(1) of the Act). Section 1206(a) of the Pathway for SGR Reform Act of 2013 (Pub. L. 113–67) established the site neutral payment rate under the LTCH PPS, which made the LTCH PPS a dual rate payment system beginning in FY 2016. Under this statute, effective for LTCH's cost reporting periods beginning in FY 2016 cost reporting period, LTCHs are generally paid for discharges at the site neutral payment rate unless the discharge meets the patient criteria for payment at the LTCH PPS standard Federal payment rate. The existing regulations governing payment under the LTCH PPS are located in 42 CFR part 412, subpart O. Beginning October 1, 2009, we issue the annual updates to the LTCH PPS in the same documents that update the IPPS.

4. Critical Access Hospitals (CAHs)

Under sections 1814(l), 1820, and 1834(g) of the Act, payments made to critical access hospitals (CAHs) (that is, rural hospitals or facilities that meet certain statutory requirements) for inpatient and outpatient services are generally based on 101 percent of reasonable cost. Reasonable cost is determined under the provisions of section 1861(v) of the Act and existing regulations under 42 CFR part 413.

5. Payments for Graduate Medical Education (GME)

Under section 1886(a)(4) of the Act, costs of approved educational activities are excluded from the operating costs of inpatient hospital services. Hospitals with approved graduate medical education (GME) programs are paid for the direct costs of GME in accordance with section 1886(h) of the Act. The amount of payment for direct GME costs for a cost reporting period is based on the hospital's number of residents in that period and the hospital's costs per resident in a base year. The existing regulations governing payments to the various types of hospitals are located in 42 CFR part 413. Section 1886(d)(5)(B) of the Act provides that prospective payment hospitals that have residents in an approved GME program receive an additional payment for each Medicare discharge to reflect the higher patient care costs of teaching hospitals relative to non-teaching hospitals. The additional payment is based on the indirect medical education (IME) adjustment factor, which is calculated using a hospital's ratio of residents to beds and a multiplier, which is set by Congress. Section 1886(d)(5)(B)(ii)(XII) of the Act provides that, for discharges occurring during FY 2008 and fiscal years thereafter, the IME formula multiplier is 1.35. The regulations regarding the indirect medical education (IME) adjustment are located at 42 CFR 412.105.

C. Summary of Provisions of Recent Legislation That Are Implemented in This Final Rule

1. The Full-Year Continuing Appropriations and Extensions Act, 2025 (Pub. L. 119–4)

Section 2201 of the Full-Year Continuing Appropriations and Extensions Act, 2025 extended through FY 2025 the modified definition of a low-volume hospital and the methodology for calculating the payment adjustment for low-volume hospitals that had been in effect for FYs 2019 through 2024. Specifically, under section 1886(d)(12)(C)(i) of the Act, as amended, for FYs 2019 through 2025, a subsection (d) hospital qualifies as a low-volume hospital if it is more than 15 road miles from another subsection (d) hospital and has less than 3,800 total discharges during the fiscal year. Under section 1886(d)(12)(D) of the Act, as amended, for discharges occurring in FYs 2019 through September 30, 2025, the Secretary determines the applicable percentage increase using a continuous, linear sliding scale ranging from an additional 25 percent payment adjustment for low-volume hospitals with 500 or fewer discharges to a zero percent additional payment for low-volume hospitals with more than 3,800 discharges in the fiscal year.

Section 2202 of the Full-Year Continuing Appropriations and Extensions Act, 2025 amended sections 1886(d)(5)(G)(i) and 1886(d)(5)(G)(ii)(II) of the Act to provide for an extension of the MDH program through FY 2025 (that is, through September 30, 2025).

D. Issuance of a Notice of Proposed Rulemaking and Summary of the Proposed Provisions

The FY 2026 IPPS/LTCH PPS proposed rule appeared in the April 30, 2025, **Federal Register** (90 FR 18002). In the proposed rule, we set forth proposed payment and policy changes to the Medicare IPPS for FY 2026 operating costs and capital-related costs of acute care hospitals and certain hospitals and hospital units that are excluded from IPPS. In addition, we set forth proposed changes to the payment rates, factors, and other payment and policy-related changes to programs associated with payment rate policies under the LTCH PPS for FY 2026.

The following is a general summary of the changes that we proposed to make.

1. Proposed Changes to MS–DRG Classifications and Recalibrations of Relative Weights

In section II. of the preamble of the proposed rule, we included the following:

- Proposed changes to MS–DRG classifications based on our yearly review for FY 2026.
- Proposed recalibration of the MS–DRG relative weights.
- A discussion of the proposed FY 2026 status of new technologies approved for add-on payments for FY

2025, a presentation of our evaluation and analysis of the FY 2026 applicants for add-on payments for high-cost new medical services and technologies (including public input, as directed by the Medicare Prescription Drug, Improvement, and Modernization Act of 2003 (MMA) Public Law 108–173, obtained in a town hall meeting for applications not submitted under an alternative pathway), and a discussion of the proposed status of FY 2026 new technology applicants under the alternative pathways for certain medical devices and certain antimicrobial products.

2. Proposed Changes to the Hospital Wage Index for Acute Care Hospitals

In section III. of the preamble of the proposed rule, we proposed revisions to the wage index for acute care hospitals and the annual update of the wage data. Specific issues addressed include, but are not limited to, the following:

- The proposed FY 2026 wage index update using wage data from cost reporting periods beginning in FY 2022.
- Calculation, analysis, and implementation of the proposed occupational mix adjustment to the wage index for acute care hospitals for FY 2026 based on the 2022 Occupational Mix Survey.
- Proposed application of the rural, imputed and frontier State floors, and proposed transition for the discontinuation of the low wage index hospital policy.
- Proposed revisions to the wage index for acute care hospitals, based on hospital redesignations and reclassifications under sections 1886(d)(8)(B), (d)(8)(E), and (d)(10) of the Act.
- Proposed adjustment to the wage index for acute care hospitals for FY 2026 based on commuting patterns of hospital employees who reside in a county and work in a different area with a higher wage index.
- Proposed labor-related share for applying the FY 2026 wage index.

3. Proposed Rebasing and Revising of the IPPS Market Baskets

In section IV. of the preamble of the proposed rule, we proposed to rebase and revise the IPPS market baskets to reflect a 2023 base year. In section IV.B.3. of the preamble of the proposed rule, using the cost category weights from the proposed 2023-based IPPS market basket, we proposed to use a labor-related share of 66.0 percent for the national standardized amounts for all IPPS hospitals (including hospitals in Puerto Rico) that have a wage index value that is greater than 1.0000.

4. Payment Adjustment for Medicare Disproportionate Share Hospitals (DSHs) for FY 2026

In section V. of the preamble of the proposed rule, we discussed the following:

- Proposed calculation of Factor 1 and Factor 2 of the uncompensated care payment methodology.
- Proposed methodological approach for determining Factor 3 of the uncompensated care payment for FY 2026, which is the same methodology that was used for FY 2025.
- Proposed methodological approach for determining the amount of interim uncompensated care payments, using the average of the most recent 3 years of discharge data.

5. Other Decisions and Proposed Changes to the IPPS for Operating Costs

In section VI. of the preamble of the proposed rule, we discussed proposed changes or clarifications of a number of the provisions of the regulations in 42 CFR parts 412 and 413, including the following:

- Proposed inpatient hospital market basket update for FY 2026.
- Proposed updated national and regional case-mix values and discharges for purposes of determining RRC status.
- Proposed conforming amendments to reflect the statutory extension of the temporary changes to the low-volume hospital payment adjustment through September 30, 2025.
- Proposed conforming amendments to reflect the statutory extension of the MDH program through September 30, 2025.
- A direct graduate medical education (GME) and indirect medical education (IME) policy proposal for calculating full-time equivalent counts and caps for cost reporting periods other than 12 months; and a notice of closure of two teaching hospitals and opportunities to apply for available slots.
- Proposed nursing and allied health education (NAHE) program Medicare Advantage (MA) add-on rates and direct GME MA percent reductions for CY 2024; and proposed regulatory changes regarding the calculation of net cost of NAHE.
- Proposed update to and revision to the payment adjustment for certain immunotherapy cases.
- Proposed changes to the requirements of the Hospital Readmissions Reduction Program—Updating the proposed estimate of the financial impacts for the FY 2026 Hospital Readmissions Reduction Program.
- Proposed changes to the requirements of the Hospital Value-Based Purchasing Program—Updating the proposed estimate of the financial impacts for the FY 2026 Hospital Value-Based Purchasing Program.
- Proposed changes to the requirements of the Hospital-Acquired Conditions Reduction Program—Updating the proposed estimate of the financial impacts for the FY 2026 Hospital-Acquired Conditions Reduction Program.
- Discussion of and proposed changes relating to the implementation of the Rural Community Hospital Demonstration Program in FY 2025.

6. Proposed FY 2026 Policy Governing the IPPS for Capital-Related Costs

In section VII. of the preamble of the proposed rule, we discussed the proposed payment policy requirements for capital-related costs and capital payments to hospitals for FY 2026.

7. Proposed Changes to the Payment Rates for Certain Excluded Hospitals: Rate-of-Increase Percentages

In section VIII. of the preamble of the proposed rule, we discussed the following:

- Proposed changes to payments to certain excluded hospitals for FY 2026.
- Proposed continued implementation of the Frontier Community Health Integration Project (FCHIP) Demonstration.

8. Proposed Changes to the LTCH PPS

In section IX. of the preamble of the proposed rule, we set forth proposed changes to the LTCH PPS Federal payment rates, factors, and other payment rate policies under the LTCH PPS for FY 2026.

9. Proposed Changes Relating to Quality Data Reporting for Specific Providers and Suppliers

In section X. of the preamble of the proposed rule, we addressed the following:

- Solicitation of comment on adopting measures across the hospital quality reporting and value-based purchasing programs which capture more forms of unplanned post-acute care and encourage hospitals to improve discharge processes.
- Proposed changes to the requirements for the Hospital IQR Program.
- Proposed changes to the requirements for the PCHQR Program.
- Proposed changes to the requirements for the LTCH QRP, and requests for information on future measure concepts, revisions to the data

submission deadlines for assessment data collection, and advancing digital quality measurement (dQM) in the LTCH QRP.

- Proposed changes to requirements pertaining to eligible hospitals and CAHs participating in the Medicare Promoting Interoperability Program.

10. Other Proposals and Comment Solicitations Included in the Proposed Rule

Section XI. of the preamble of the proposed rule included proposed changes to TEAM that would affect participation, quality measure and assessment, pricing methodology, health data reporting, waivers of Medicare Program requirements, and the Decarbonization and Resilience Initiative.

11. Other Provisions of the Proposed Rule

Section XII.A. of the preamble of the proposed rule includes our discussion of the MedPAC Recommendations.

Section XII.B. of the preamble of the proposed rule includes a descriptive listing of the public use files associated with the proposed rule.

Section XIII. of the preamble of the proposed rule includes the collection of information requirements for entities based on our proposals.

Section XIV. of the preamble of the proposed rule includes information regarding our responses to public comments.

12. Determining Prospective Payment Operating and Capital Rates and Rate-of-Increase Limits for Acute Care Hospitals

In sections II. and III. of the Addendum of the proposed rule, we set forth proposed changes to the amounts and factors for determining the proposed FY 2026 prospective payment rates for operating costs and capital-related costs for acute care hospitals, including cost-of-living adjustment (COLA) factors for IPPS hospitals located in Alaska and Hawaii. We proposed to establish the threshold amounts for outlier cases. In addition, in section IV. of the Addendum of the proposed rule, we addressed the proposed update factors for determining the rate-of-increase limits for cost reporting periods beginning in FY 2026 for certain hospitals excluded from the IPPS.

13. Determining Prospective Payment Rates for LTCHs

In section V. of the Addendum of the proposed rule, we set forth proposed changes to the amounts and factors for determining the proposed FY 2026 LTCH PPS standard Federal payment rate and other factors used to determine LTCH PPS payments under both the LTCH PPS standard Federal payment rate and the site neutral payment rate in FY 2026. We proposed to establish the adjustments for the wage index, labor-related share, the cost-of-living adjustment, and high-cost outliers, including the applicable fixed-loss amounts and the LTCH cost-to-charge ratios (CCRs) for both payment rates.

14. Impact Analysis

In Appendix A of the proposed rule, we set forth an analysis of the impact the proposed changes would have on affected acute care hospitals, LTCHs, and other entities.

15. Recommendation of Update Factors for Operating Cost Rates of Payment for Hospital Inpatient Services

In Appendix B of the proposed rule, as required by sections 1886(e)(4) and (e)(5) of the Act, we provided our recommendations of the appropriate percentage changes for FY 2026 for the following:

- A single average standardized amount for all areas for hospital inpatient services paid under the IPPS for operating costs of acute care hospitals (and hospital-specific rates applicable to SCHs and MDHs).
- Target rate-of-increase limits to the allowable operating costs of hospital inpatient services furnished by certain hospitals excluded from the IPPS.
- The LTCH PPS standard Federal payment rate and the site neutral payment rate for hospital inpatient services provided for LTCH PPS discharges.

16. Discussion of Medicare Payment Advisory Commission Recommendations

Under section 1805(b) of the Act, MedPAC is required to submit a report to Congress, no later than March 15 of each year, in which MedPAC reviews and makes recommendations on Medicare payment policies. MedPAC's March 2025 recommendations concerning hospital inpatient payment policies address the update factor for hospital inpatient operating costs and capital-related costs for hospitals under the IPPS. We addressed these recommendations in Appendix B of the proposed rule. For further information relating specifically to the MedPAC March 2025 report or to obtain a copy of the report, contact MedPAC at (202) 220–3700 or visit MedPAC's website at *https://www.medpac.gov*.

E. Public Comments Received in Response to the FY 2026 IPPS/LTCH PPS Proposed Rule

We received approximately 5,409 timely pieces of correspondence containing multiple comments on the proposed rule that appeared in the April 30, 2025 **Federal Register** (89 FR 18002) titled ''Medicare Program; Hospital Inpatient Prospective Payment Systems for Acute Care Hospitals and the Long-Term Care Hospital Prospective Payment System and Policy Changes and Fiscal Year 2026 Rates; Requirements for Quality Programs; and Other Policy Changes'' (hereinafter referred to as the FY 2026 IPPS/LTCH PPS proposed rule). We note that some of these public comments were outside of the scope of the proposed rule. These out-of-scope public comments are not addressed with policy responses in this final rule. Summaries of the public comments that are within the scope of the proposed rule and our responses to those public comments are set forth in the various sections of this final rule under the appropriate heading.

II. Changes to Medicare Severity Diagnosis-Related Group (MS–DRG) Classifications and Relative Weights

A. Background

Section 1886(d) of the Act specifies that the Secretary shall establish a classification system (referred to as diagnosis-related groups (DRGs)) for inpatient discharges and adjust payments under the IPPS based on appropriate weighting factors assigned to each DRG. Therefore, under the IPPS, Medicare pays for inpatient hospital services on a rate per discharge basis that varies according to the DRG to which a beneficiary's stay is assigned. The formula used to calculate payment for a specific case multiplies an individual hospital's payment rate per case by the weight of the DRG to which the case is assigned. Each DRG weight represents the average resources required to care for cases in that particular DRG, relative to the average resources used to treat cases in all DRGs.

Section 1886(d)(4)(C) of the Act requires that the Secretary adjust the DRG classifications and relative weights at least annually to account for changes in resource consumption. These adjustments are made to reflect changes in treatment patterns, technology, and any other factors that may change the relative use of hospital resources.

B. Adoption of the MS–DRGs and MS–DRG Reclassifications

For information on the adoption of the MS–DRGs in FY 2008, we refer readers to the FY 2008 IPPS final rule with comment period (72 FR 47140 through 47189).

For general information about the MS–DRG system, including yearly reviews and changes to the MS–DRGs, we refer readers to the previous discussions in the FY 2010 IPPS/RY 2010 LTCH PPS final rule (74 FR 43764 through 43766) and the FYs 2011 through 2025 IPPS/LTCH PPS final rules (75 FR 50053 through 50055; 76 FR 51485 through 51487; 77 FR 53273; 78 FR 50512; 79 FR 49871; 80 FR 49342; 81 FR 56787 through 56872; 82 FR 38010 through 38085; 83 FR 41158 through 41258; 84 FR 42058 through 42165; 85 FR 58445 through 58596; 86 FR 44795 through 44961; 87 FR 48800 through 48891; 88 FR 58654 through 58787; and 89 FR 69000 through 69109, respectively). For discussion regarding our previously finalized policies (including our historical adjustments to the payment rates) relating to the effect of changes in documentation and coding that do not reflect real changes in case mix, we refer readers to the FY 2023 IPPS/LTCH PPS final rule (87 FR 48799 through 48800).

Comment: A commenter summarized the statutory and regulatory history regarding the documentation and coding recoupment adjustments required under section (7)(b) of the TMA, Abstinence Education, and QI Programs Extension Act of 2007 (Pub. L. 110–90), as amended. The commenter reiterated its position that the total level of adjustments made by CMS under this section took back more than was authorized by Congress and stated that section 7(b)(2) of Public Law 110–90 requires CMS to increase the standardized amount by 0.9412% to avoid carrying over into FY 2026 the -3.9% reduction to the standardized amount that law required between FY 2013 and FY 2017.

Response: As of FY 2023, CMS completed the statutory requirements of section 7(b)(1)(B) of Public Law 110–90 as amended by section 631 of the American Taxpayer Relief Act of 2012 (ATRA, Pub. L. 112–240), section 404 of the Medicare Access and CHIP Reauthorization Act of 2015 (MACRA) (Pub. L. 114–10), and section 15005 of the 21st Century Cures Act (Pub. L. 114–255). As we discussed in the FY 2022 IPPS/LTCH PPS final rule (86 FR 44794 through 44795), the FY 2021 IPPS/LTCH PPS final rule (85 FR 58444 through 58445) and in prior rules, we believe section 414 of the MACRA and section 15005 of the 21st Century Cures Act set forth the levels of positive adjustments for FYs 2018 through 2023. Those adjustments added up to +2.9488 percentage points, not +3.9 percentage points, and we see no evidence that Congress enacted that smaller adjustment schedule with the silent intent that CMS would later make a permanent 0.9412% payment adjustment to reach a total +3.9 percentage point adjustment. To the contrary, section 414 of MACRA instructs the agency to ''not make the adjustment (estimated to be an increase of 3.2 percent) that would otherwise apply for discharges occurring during fiscal year 2018 by reason of the completion of the adjustments required under clause (ii).'' Because the adjustment ''that would otherwise apply'' in fiscal year 2018 but for clause (1)(B)(iii) was +3.9%, the commenter's suggestion to complete making that adjustment now is inconsistent with the statute's text.

Subparagraph (b)(2) of Public Law 110–90 does not compel a contrary result. As the U.S. Court of Appeals for the D.C. Circuit has explained, that provision simply requires CMS ''to ignore recoupment adjustments'' when ''calculat[ing] and apply[ing] the annual 'percentage increase' '' to base rates provided for in the Medicare statute to account for inflation. *Fresno Community Hospital & Medical Center* v. *Cochran,* 987 F.3d 158, 163 (D.C. Cir. 2021). The Secretary has complied with that instruction. Similarly, the commenter's citations to statements the agency made in the **Federal Register** about its intent to unwind the reductions to the standardized amount the agency made between FY 2013 and FY 2017 were made before Congress passed clause (1)(B)(iii) and have been countermanded by that provision. We therefore decline the commenter's suggestion to read into section 7(b) of Public Law 110–90 implied authority to increase the standardized payment amount by 0.9412%.

C. Changes to Specific MS–DRG Classifications

1. Discussion of Changes to Coding System and Basis for FY 2026 MS–DRG Updates

a. International Classification of Diseases, 10th Revision (ICD–10)

Providers use the International Classification of Diseases, 10th Revision (ICD–10) coding system to report diagnoses and procedures for Medicare hospital inpatient services under the MS–DRG system. The ICD–10 coding system includes the International Classification of Diseases, 10th Revision, Clinical Modification (ICD–10–CM) for diagnosis coding and the International Classification of Diseases, 10th Revision, Procedure Coding System (ICD–10–PCS) for inpatient hospital procedure coding, as well as the ICD–10–CM and ICD–10–PCS Official Guidelines for Coding and Reporting.

b. Basis for FY 2026 MS–DRG Updates

The deadline for interested parties to submit MS–DRG classification change requests for FY 2026 was October 20, 2024. All requests are submitted to CMS via Medicare Electronic Application Request Information System™ (MEARIS™), accessed at *https://mearis.cms.gov*. Specifically, as indicated on the MEARIS™ site, the MS–DRG classification change request process may be used for requests to create, modify, or delete MS–DRGs, change ICD–10–CM diagnosis code(s) severity level designations, change ICD–10–PCS procedure code(s) Operating Room (O.R.) designations, or to review the CC Exclusions List or the surgical hierarchy.

Within MEARIS™, we have built in several resources to support users, including a ''Resources'' section available at *https://mearis.cms.gov/public/resources* with technical support available under ''Useful Links'' at the bottom of the MEARIS™ site. Questions regarding the MEARIS™ system can be submitted to CMS using the form available under ''Contact'', also at the bottom of the MEARIS™ site.

We note that the burden associated with this information collection requirement is the time and effort required to collect and submit the data in the request for MS–DRG classification changes to CMS. The aforementioned burden is subject to the Paperwork Reduction Act (PRA) of 1995 and approved under OMB control number 0938–1431 and has an expiration date of 09/30/2025.

Interested parties should submit any MS–DRG classification change requests, including any comments and suggestions for FY 2027 consideration by October 20, 2025 via MEARIS™ at: *https://mearis.cms.gov/public/home*. As we have discussed in prior rulemaking, we may not be able to fully consider all of the requests that we receive for the upcoming fiscal year. We have found that, with the implementation of ICD 10, some types of requested changes to the MS–DRG classifications require more extensive research to identify and analyze all of the data that are relevant to evaluating the potential change.

Beginning with the MS–DRG classification change requests that are submitted for FY 2027 consideration, we plan to inform requestors via MEARIS™ if the MS–DRG classification change request is not able to be considered with the upcoming fiscal year rulemaking cycle. As in prior years, requests that may require more extensive analysis may include those involving multiple MS–DRGs, overlapping logic across multiple Major Diagnostic Categories (MDCs), special logic such as diagnosis codes combined with procedure codes, and/or complex logic including code clusters or multiple logic lists. Beginning with FY 2027 rulemaking, we will no longer summarize in the proposed and final rules those requests that are not able to be considered for the upcoming FY.

As noted previously, interested parties had to submit MS–DRG classification change requests for FY 2026 by October 20, 2024. As we have discussed in prior rulemaking and as previously noted, we may not be able to fully consider all of the requests that we receive for the upcoming fiscal year. In the proposed rule, we noted those topics for which further research and analysis are required, and which we will continue to consider in connection with future rulemaking as summarized in the discussion that follows. We further noted that we also received recommendations and feedback that did not involve requests to create, modify, or delete MS–DRGs, change code designations, or to review the CC Exclusions List or the surgical hierarchy, which therefore were not summarized or addressed in the discussion of the MS–DRG classification change requests received for FY 2026.

As discussed in the proposed rule, we received requests to modify the GROUPER logic in several MS–DRGs under MDC 08 (Diseases and Disorders of the Musculoskeletal System and Connective Tissue) and a request to modify the GROUPER logic for MS–DRG 794 (Neonate with Other Significant Problems) under MDC 15 (Newborns and Other Neonates with Conditions Originating in Perinatal Period). Specifically, we received requests to do the following:

- Modify the GROUPER logic of new MS–DRG 426 (Multiple Level Combined Anterior and Posterior Spinal Fusion Except Cervical with MCC or Custom-Made Anatomically Designed Interbody Fusion Device), new MS–DRG 427 (Multiple Level Combined Anterior and Posterior Spinal Fusion Except Cervical with CC), and new MS–DRG 428 (Multiple Level Combined Anterior and Posterior Spinal Fusion Except Cervical without CC/MCC); new MS–DRG 447 (Multiple Level Spinal Fusion Except Cervical with MCC or Custom-Made Anatomically Designed Interbody Fusion Device) and new MS–DRG 448 (Multiple Level Spinal Fusion Except Cervical without MCC); and MS–DRGs 456, 457, and 458 (Spinal Fusion Except Cervical with Spinal Curvature, Malignancy, Infection or Extensive Fusions with MCC, with CC, and without CC/MCC, respectively) by reassigning cases with an ICD–10–PCS code that describes fusion of a sacroiliac joint using an internal fixation device with tulip connector or insertion of an internal fixation device with tulip connector into a pelvic bone with another spinal fusion procedure code that currently map to the lower severity level MS–DRG to the highest severity level (with MCC) MS–DRG.
- Modify the GROUPER logic of MS–DRGs 463, 464, and 465 (Wound Debridement and Skin Graft Except Hand for Musculoskeletal and Connective Tissue Disorders with MCC, with CC, and without CC/MCC, respectively); MS–DRGs 466, 467, and 468 (Revision of Hip or Knee Replacement with MCC, with CC, and without CC/MCC, respectively); and MS–DRGs 492, 493, and 494 (Lower Extremity and Humerus Procedures Except Hip, Foot and Femur with MCC, with CC, and without CC/MCC, respectively) by reassigning cases with ICD–10–PCS code XW0V0P7 (Introduction of antibiotic-eluting bone void filler into bones, open approach, new technology group 7) that currently map to the lower severity level MS–DRG to the highest severity level (with MCC) MS–DRG.
- Modify the GROUPER logic of MS–DRG 794. The requestor recommended that ICD–10–CM diagnosis codes P09.6 (Abnormal findings on neonatal screening for neonatal hearing loss), Z13.0 (Encounter for screening for diseases of the blood and blood-forming organs and certain disorders involving the immune mechanism), Z82.5 (Family history of asthma and other chronic lower respiratory diseases) and Z82.79 (Family history of other congenital malformations, deformations and chromosomal abnormalities), be added to the MS–DRG 795 (Normal Newborn) ''only secondary diagnosis'' list so that they would result in assignment to MS–DRG 795 when coded with a principal diagnosis code from ICD–10–CM category Z38 (Liveborn infants according to place of birth and type of delivery) instead of MS–DRG 794.

In the proposed rule, we stated that we appreciated the submissions and related analyses provided by the requestors for our consideration as we review MS–DRG classification change requests for FY 2026; however, we also noted the complexity of the GROUPER logic for these MS–DRGs in connection with these requests requires more extensive analyses to identify and evaluate all the data relevant to assessing these potential modifications. Specifically, we noted that MS–DRGs 426, 427, 428, 447, and 448 recently became effective October 1, 2024 (FY 2025) and as discussed in the FY 2025 IPPS/LTCH PPS proposed rule (89 FR 35982 through 35983) and final rule (89 FR 69049 through 69053) in consideration of any future modifications to the current structure of the logic for case assignment to MS–DRGs 456, 457, and 458 we noted that additional analysis would be needed because the logic is also defined by diagnosis code logic as well as extensive fusions. We also noted that, as discussed further in section II.C.5.c. of the preamble of the FY 2026 IPPS/LTCH PPS proposed rule, we identified additional inconsistencies related to the diagnosis code logic for MS–DRGs 456, 457, and 458 for which we proposed modifications. In addition, we stated that analyzing the impact of restructuring the logic in these MS–DRGs with respect to procedure codes describing fusion of a sacroiliac joint using an internal fixation device with tulip connector necessitates evaluating the impact across numerous other MS–DRGs in MDC 08, as well as MS–DRG 028 (Spinal Procedures with MCC), MS–DRG 029 (Spinal Procedures with CC or Spinal Neurostimulators), and MS–DRG 030 (Spinal Procedures without CC/MCC) under MDC 01 (Diseases and Disorders of the Nervous System) since the procedure codes describing fusion of a sacroiliac joint using an internal fixation device with tulip connector also map to these MS–DRGs.

With respect to the request to reassign cases reporting procedure code XW0V0P7 from the lower severity level to the highest (with MCC) severity level in the previously listed MS–DRGs, we noted in the proposed rule that the procedure to insert a bone void filler is designated as a non-operating room (Non-O.R.) procedure and believe that the key factor that would contribute to resource utilization in these cases is the fact that the patients have an infection(s) which require additional resources. As discussed in section II.C.5.a. of the preamble of the FY 2026 IPPS/LTCH PPS proposed rule, we also noted that we received an MS–DRG request related to cases reporting a hip or knee procedure with a diagnosis of

periprosthetic joint infection (PJI) in MS–DRGs 463, 464, and 465. We stated that in our review of the claims data to address that request we noted that a subset of the cases also reported procedure code XW0V0P7. As discussed in the proposed rule, consistent with our established process, we must also consider if there are additional factors, such as the severity of illness with other secondary CC/MCC conditions reported and any other O.R. procedures or services provided, such as mechanical ventilation, that may be contributing to the consumption of resources for these cases. We stated that, for these reasons and those previously described, we believed additional time was needed to review and evaluate potential extensive modifications to the structure of these MS–DRGs.

In the proposed rule, we noted that with respect to the request to modify the GROUPER logic of MS–DRG 794, as discussed in the FY 2025 IPPS/LTCH PPS final rule (89 FR 69061 through 69065), we acknowledged that MS–DRG 794 utilizes ''fall-through'' logic, meaning if a diagnosis code is not assigned to any of the other MS–DRGs, then assignment ''falls-through'' to MS–DRG 794. As discussed in the FY 2025 IPPS/LTCH PPS rule, we stated we have started to examine the GROUPER logic that would determine the assignment of cases to the MS–DRGs in MDC 15, including MS–DRGs 794 and 795, to determine where further refinements could potentially be made to better account for differences in clinical complexity and resource utilization. However, as we have noted in prior rulemaking (72 FR 47152), we stated we cannot adopt the same approach to refine the newborn MS–DRGs because of the extremely low volume of Medicare patients there are in these MS–DRGs. We stated we believe it is appropriate to consider the request to add ICD–10–CM diagnosis codes P09.6 (Abnormal findings on neonatal screening for neonatal hearing loss), Z13.0 (Encounter for screening for diseases of the blood and blood-forming organs and certain disorders involving the immune mechanism), Z82.5 (Family history of asthma and other chronic lower respiratory diseases) and Z82.79 (Family history of other congenital malformations, deformations and chromosomal abnormalities) to the MS–DRG 795 (Normal Newborn) ''only secondary diagnosis'' list in connection with our continued examination of the GROUPER logic that would determine the assignment of cases to the MS–DRGs in MDC 15 in future rulemaking, rather than proposing to change the MS–DRG assignment of individual ICD–10–CM diagnosis codes at this time. We stated that additional time is needed to fully and accurately evaluate cases currently grouping to the MS–DRGs in MDC 15 to consider if restructuring the current MS–DRGs would better recognize the clinical distinctions of these patient populations.

Comment: A commenter (the manufacturer) thanked CMS for consideration of its request to reassign cases with an ICD–10–PCS code that describes fusion of a sacroiliac joint using an internal fixation device with tulip connector or insertion of an internal fixation device with tulip connector into a pelvic bone with another spinal fusion procedure code that currently map to the lower severity level MS–DRG to the highest severity level (with MCC) MS–DRG and expressed their understanding that resources are limited such that not every request may be considered each cycle. However, the commenter stated they were hopeful that CMS would move forward with their recommendations, so that hospitals supporting these case types in FY 2026 would be compensated appropriately. The commenter provided additional information and analyses for CMS' consideration, including analyses with the proposed diagnosis code logic changes for MS–DRGs 456, 457, and 458, and stated its findings reinforce that the reassignment request for FY 2026 involving MS–DRGs 426, 427, and 428; MS–DRGs 456, 457, and 458; and MS–DRGs 447 and 448 to maintain payment accuracy and protect access to care for Medicare beneficiaries requiring advanced sacropelvic fixation is warranted, given the significant cost differences reported for these cases compared to all other cases in related MS–DRGs.

Several commenters (members of an international society for spine surgery) suggested that CMS finalize the requested reassignment of cases reporting a sacroiliac joint fusion or pelvic fixation procedure with another spinal fusion procedure code from the lower severity level to the higher severity level spinal fusion MS–DRG in FY 2026 IPPS rulemaking. The commenters stated that in comparison to standard spinal fusion cases, procedures that include sacroiliac joint fusion and pelvic fixation represent a substantial increase in surgical complexity, operative time, and instrumentation cost. According to the commenters, the addition of both sacroiliac joint fusion and pelvic fixation adjunctive to spinal fusion introduces a level of surgical intensity that is not currently accounted for in the existing MS–DRG assignments. The commenters encouraged CMS to recognize the added clinical burden and cost associated with these cases and assign them to MS–DRGs that appropriately reflect their complexity.

A commenter stated that CMS should reconsider its rejection of the request to reassign cases reporting procedures describing sacroiliac joint and pelvic internal fixation devices using a tulip connector. Another commenter stated that while there is an increased cost in performing pelvic fixation, its use dramatically lowers the risk of failure and reoperation, both of which lead to extraordinary cost escalation for care of these patients. The commenter also stated that long-term sustainability of the health care landscape depends on CMS incentivizing and supporting better care for these spinal patients through reassigning these higher cost cases to the higher paying MCC MS–DRG in the relevant MS–DRG grouping.

In response to the discussion regarding the request to reassign cases reporting procedure code XW0V0P7 (Introduction of antibiotic-eluting bone void filler into bones, open approach, new technology group 7) from the lower severity level to the highest (with MCC) severity level MS–DRG among MS–DRGs 463, 464, and 465; MS–DRGs 466, 467, and 468; and MS–DRGs 492, 493, and 494, a commenter (the manufacturer) expressed concern that CMS did not act on its request and deferred the requested changes. The commenter stated its belief that without action on its request, the payment outlook for cases reporting procedure code XW0V0P7 for bone infection will result in underpayment and suppress hospital adoption and patient access to improved clinical outcomes. Additionally, the commenter stated that CMS' reasoning to defer decision making on claims reporting procedure code XW0V0P7 was based on the procedures non-O.R. designation and it was confusing to them as most treatments of bone infection with the antibiotic-eluting bone void filler (code XW0V0P7) are performed in the O.R. The commenter further stated that CMS should reconsider its FY 2026 decision to postpone action on the MS–DRG modification request to reassign cases reporting procedure code XW0V0P7 and clarify the criteria for how procedures are assigned O.R. versus non-O.R. status, as well as whether having O.R. status for a procedure code is essential for the code to potentially influence the MS–DRG assignment in the GROUPER. The commenter provided additional information and analyses for CMS' consideration and stated that cases

reporting procedure code XW0V0P7 show a compelling discrepancy in resource use that should not be ignored.

With respect to our discussion regarding the request to modify the GROUPER logic of MS–DRG 794, a commenter specifically stated they appreciate CMS' ongoing examination of the GROUPER logic for the MS–DRGs in MDC 15 (Newborns and Other Neonates with Conditions Originating in Perinatal Period) to determine if restructuring the current MS–DRGs would better recognize the clinical distinctions of these patient populations.

Response: We thank the commenters for sharing their feedback on these requests. As discussed in the proposed rule, we have found that with the implementation of ICD–10, some types of requested changes to the MS–DRG classifications require more extensive research to identify and analyze the relevant data for evaluating a potential change.

With respect to the comments received in response to our proposed rule discussion of the request to modify the GROUPER logic of MS–DRGs 426, 427, and 428, MS–DRGs 456, 457, and 458, and MS–DRGs 447 and 448, while many commenters stated their belief that a modification to the logic of these MS–DRGs is warranted for FY 2026, we note that we did not propose a change to the logic for FY 2026, nor did we state the request was specifically rejected. Rather, we noted in the proposed rule that we will continue to consider this request in connection with future rulemaking. We appreciate the analysis that the commenter (the manufacturer) performed and the findings it shared, including with the proposed changes to the diagnosis code logic for MS–DRGs 456, 457, and 458; however, as discussed in the proposed rule, the proposed changes for MS–DRGs 456, 457, and 458 involving diagnosis code logic were only one of several considerations as to why additional time is needed to evaluate the reassignment request (90 FR 18012). We note that the logic for case assignment to MS–DRGs 456, 457, and 458 is also defined by extensive fusions. In addition, MS–DRGs 426, 427, 428, 447, and 448 (that is, multiple level spinal fusions) recently became effective October 1, 2024 which we are continuing to monitor. The data analysis necessary to examine the intricate logic within the spinal fusion MS–DRGs outlined in the request is complex and requires additional time for careful consideration of case redistribution and potential relative weight impacts, in connection with other related spinal fusion procedure requests that may be discussed in future rulemaking.

With respect to the comment we received in response to our proposed rule discussion of the request to reassign cases with ICD–10–PCS code XW0V0P7 (Introduction of antibiotic-eluting bone void filler into bones, open approach, new technology group 7) among MS–DRGs 463, 464, and 465; MS–DRGs 466, 467, and 468; and MS–DRGs 492, 493, and 494, while the commenter stated that CMS should reconsider the decision to postpone action on the request to modify the MS–DRG logic for the aforementioned MS–DRGs for FY 2026, we note that we did not propose a change to the logic for FY 2026. Rather, we noted in the proposed rule that we will continue to consider this request in connection with future rulemaking. We appreciate the analysis that the commenter (the manufacturer) performed and the findings it shared; however, we note that in addition to assessing impacts in association with other MS–DRG requests being considered, there are various types of bone void fillers and additional data analysis would also need to be performed to assess cases reporting the procedure codes describing those alternative products for comparison. While we did not propose a change to the assignment of these cases for FY 2026, we noted in our proposed rule discussion that we will continue to consider this request in connection with future rulemaking.

As previously discussed, we will continue to consider these issues in connection with future rulemaking. As we develop and refine our analysis of the claims data with respect to MS–DRGs in MDC 01, MDC 08, and MDC 15, we welcome feedback on other factors that should be considered in the potential restructuring of these MS–DRGs. Feedback and other suggestions may be directed to MEARIS™ at: *https://mearis.cms.gov/public/home.* As noted, interested parties should submit any MS–DRG classification change requests, including any comments and suggestions for FY 2027 consideration by October 20, 2025 via MEARIS™ at: *https://mearis.cms.gov/public/home.*

As we did for the FY 2025 IPPS/LTCH PPS proposed rule, for the FY 2026 IPPS/LTCH PPS proposed rule we provided a test version of the ICD–10 MS–DRG GROUPER Software, Version 43, so that the public can better analyze and understand the impact of the proposals included in the proposed rule. We noted that this test software reflected the proposed GROUPER logic for FY 2026. Therefore, it included the new diagnosis and procedure codes that are effective for FY 2026 as reflected in Table 6A.—New Diagnosis Codes—FY 2026 and Table 6B.—New Procedure Codes—FY 2026 associated with the proposed rule and does not include the diagnosis codes that are invalid beginning in FY 2026 as reflected in Table 6C.—Invalid Diagnosis Codes—FY 2026 and Table 6D.—Invalid Procedure Codes—FY 2026 associated with the proposed rule. Those tables were not published in the Addendum to the FY 2026 IPPS/LTCH PPS proposed rule, but are available on the CMS website at: *https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/AcuteInpatientPPS/index.html* as described in section VI. of the Addendum to the FY 2026 IPPS/LTCH PPS proposed rule. Because the diagnosis and procedure codes no longer valid for FY 2026 are not reflected in the test software, we made available a supplemental file in Table 6P.1a that includes the mapped Version 43 FY 2026 ICD–10–CM codes and the deleted Version 42 FY 2025 ICD–10–CM codes and Table 6P.1b that includes the mapped Version 43 FY 2026 ICD–10–PCS codes and the deleted Version 42.1 FY 2025 ICD–10–PCS codes that should be used for testing purposes with users' available claims data. Therefore, users had access to the test software allowing them to build case examples that reflect the proposals that were included in the proposed rule. In addition, users were able to view the draft version of the ICD–10 MS–DRG Definitions Manual, Version 43 that contains the documentation for proposed FY 2026 ICD–10 MS–DRG GROUPER Version 43 logic changes and were also able to view a draft version of the Definitions of Medicare Code Edits (MCE) Manual to review any changes that will become effective October 1 for FY 2026. In the proposed rule we also noted that, as a result of new and modified code updates approved after the annual spring ICD–10 Coordination and Maintenance Committee meeting, any further changes to the MCE will be reflected in the finalized Definitions of Medicare Code Edits (MCE) Manual, made available in association with the annual IPPS/LTCH PPS final rule. As such, we made available the draft FY 2026 ICD–10 MCE Version 43 Manual file on the CMS website at: *https://www.cms.gov/medicare/payment/prospective-payment-systems/acute-inpatient-pps/ms-drg-classifications-and-software.*

We noted in the proposed rule that the MCE manual is comprised of two chapters: *Chapter 1: Edit code lists* provides a listing of each edit, an

explanation of each edit, and as applicable, the diagnosis and/or procedure codes for each edit, and *Chapter 2: Code list changes* summarizes the changes in the edit code lists (for example, additions and deletions) from the prior release of the MCE software. We also stated that the public may submit any questions, comments, concerns, or recommendations regarding the MCE to the CMS mailbox at *MSDRGClassificationChange@cms.hhs.gov* for our review and consideration.

In association with the proposed rule, we made available the test version of the ICD–10 MS–DRG GROUPER Software, Version 43, the draft version of the ICD–10 MS–DRG Definitions Manual, Version 43, the draft version of the Definitions of Medicare Code Edits Manual, Version 43, and the supplemental mapping files in Tables 6P.1a and 6P.1b of the FY 2025 and FY 2026 ICD–10–CM diagnosis codes and ICD–10–PCS procedure codes which are available at *https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/AcuteInpatientPPS/MS-DRG-Classifications-and-Software*.

Comment: Commenters expressed appreciation that we provided a test version of the ICD–10 MS–DRG GROUPER Software, Version 43, along with mapping files to assist with analysis, however, the commenters stated that this version essentially only allows for a case-by-case analysis and a minimal batch analysis. The commenters stated that it would be more beneficial to have a Batch z/OS version of the test GROUPER so that it could be better utilized for broader and more meaningful analysis purposes. The commenters requested that availability of a Batch z/OS version of the test GROUPER be made publicly available for all future rulemaking.

Response: We appreciate the commenters' feedback and will take the suggestion into consideration.

Following are the changes that we proposed to the MS–DRGs for FY 2026. We invited public comments on each of the MS–DRG classification proposed changes, as well as our proposals to maintain certain existing MS–DRG classifications discussed in the FY 2026 IPPS/LTCH PPS proposed rule. In some cases, we proposed changes to the MS–DRG classifications based on our analysis of claims data and clinical appropriateness. In other cases, we proposed to maintain the existing MS–DRG classifications based on our analysis of claims data and clinical appropriateness. As discussed in the FY 2026 IPPS/LTCH PPS proposed rule, our MS–DRG analysis was based on ICD–10 claims data from the September 2024 update of the FY 2024 MedPAR file, which contains hospital bills received from October 1, 2023 through September 30, 2024. In our discussion of the proposed MS–DRG reclassification changes, we referred to these claims data as the ''September 2024 update of the FY 2024 MedPAR file.''

As explained in previous rulemaking (76 FR 51487), in deciding whether to propose to make further modifications to the MS–DRGs for particular circumstances brought to our attention, we consider whether the resource consumption and clinical characteristics of the patients with a given set of conditions are significantly different than the remaining patients represented in the MS–DRG. We evaluate patient care costs using average costs and lengths of stay and rely on clinical factors to determine whether patients are clinically distinct or similar to other patients represented in the MS–DRG. In evaluating resource costs, we consider both the absolute and percentage differences in average costs between the cases we select for review and the remainder of cases in the MS–DRG. We also consider variation in costs within these groups; that is, whether observed average differences are consistent across patients or attributable to cases that are extreme in terms of costs or length of stay, or both. Further, we consider the number of patients who will have a given set of characteristics and generally prefer not to create a new MS–DRG unless it would include a substantial number of cases.

In the FY 2021 IPPS/LTCH PPS final rule (85 FR 58448), we finalized our proposal to expand our existing criteria to create a new complication or comorbidity (CC) or major complication or comorbidity (MCC) subgroup within a base MS–DRG. Specifically, we finalized the expansion of the criteria to include the NonCC subgroup for a three-way severity level split. We stated we believed that applying these criteria to the NonCC subgroup would better reflect resource stratification as well as promote stability in the relative weights by avoiding low volume counts for the NonCC level MS–DRGs. We noted that in our analysis of MS–DRG classification requests for FY 2021 that were received by November 1, 2019, as well as any additional analyses that were conducted in connection with those requests, we applied these criteria to each of the MCC, CC, and NonCC subgroups.

As discussed in the FY 2024 IPPS/LTCH PPS final rule (88 FR 58661), we continue to apply the criteria to create subgroups, including application of the NonCC subgroup criteria, in our annual analysis of MS–DRG classification requests, consistent with our approach since FY 2021 when we finalized the expansion of the criteria to include the NonCC subgroup for a three-way severity level split. Accordingly, in our analysis of the MS–DRG classification requests for FY 2026 that we received by October 20, 2024, as well as any additional analyses that were conducted in connection with those requests, we applied these criteria to each of the MCC, CC, and NonCC subgroups, as described in the following table.

Criteria Number	Three-Way Split 123 (MCC vs CC vs NonCC)	Two-Way Split 1_23 MCC vs (CC+NonCC)	Two-Way Split 12_3 (MCC+CC) vs NonCC
1. At least 500 cases in the MCC/CC/NonCC group	500+ cases for MCC group; and 500+ cases for CC group; and 500+ cases for NonCC group	500+ cases for MCC group; and 500+ cases for (CC+NonCC) group	500+ cases for (MCC+CC) group; and 500+ cases for NonCC group
2. At least 5% of the patients are in the MCC/CC/NonCC group	5%+ cases for MCC group; and 5%+ cases for CC group; and 5%+ cases for NonCC group	5%+ cases for MCC group; and 5%+ cases for (CC+NonCC) group	5%+ cases for (MCC+CC) group; and 5%+ cases for NonCC group
3. There is at least a 20% difference in average cost between subgroups	20%+ difference in average cost between MCC group and CC group; and 20%+ difference in average cost between CC group and NonCC group	20%+ difference in average cost between MCC group and (CC+NonCC) group	20%+ difference in average cost between (MCC+ CC) group and NonCC group
4. There is at least a $2,000 difference in average cost between subgroups	$2,000+ difference in average cost between MCC group and CC group; and $2,000+ difference in average cost between CC group and NonCC group	$2,000+ difference in average cost between MCC group and (CC+ NonCC) group	$2,000+ difference in average cost between (MCC+ CC) group and NonCC group
5. The R2 of the split groups is greater than or equal to 3	R2 ≥ 3.0 for the three-way split within the base MS-DRG	R2 ≥3.0 for the two-way 1_23 split within the base MS-DRG	R2 ≥ 3.0 for the two-way 12_3 split within the base MS-DRG

In general, once the decision has been made to propose to make further modifications to the MS–DRGs as described previously, such as creating a new base MS–DRG, or in our evaluation of a specific MS–DRG classification request to split (or subdivide) an existing base MS–DRG into severity levels, all five criteria must be met for the base MS–DRG to be split (or subdivided) by a CC subgroup. We note that in our analysis of requests to create a new MS–DRG, we typically evaluate the most recent year of MedPAR claims data available. For example, we stated earlier that for the FY 2026 IPPS/LTCH PPS proposed rule, our MS–DRG analysis was based on ICD–10 claims data from the September 2024 update of the FY 2024 MedPAR file. However, in our evaluation of requests to split an existing base MS–DRG into severity levels, as noted in prior rulemaking (80 FR 49368), we typically analyze the most recent 2 years of data. This analysis includes 2 years of MedPAR claims data to compare the data results from one year to the next to avoid making determinations about whether additional severity levels are warranted based on an isolated year's data fluctuation and also, to validate that the established severity levels within a base MS–DRG are supported. The first step in our process of evaluating if the creation of a new CC subgroup within a base MS–DRG is warranted is to determine if all the criteria is satisfied for a three-way split. In applying the criteria for a three-way split, a base MS–DRG is initially subdivided into the three subgroups: MCC, CC, and NonCC. Each subgroup is then analyzed in relation to the other two subgroups using the volume (Criteria 1 and 2), average cost (Criteria 3 and 4), and reduction in variance (Criteria 5). If the criteria fail, the next step is to determine if the criteria are satisfied for a two-way split. In applying the criteria for a two-way split, a base MS–DRG is initially subdivided into two subgroups: ''with MCC'' and ''without MCC'' (1_23) or ''with CC/MCC'' and ''without CC/MCC'' (12_3). Each subgroup is then analyzed in relation to the other using the volume (Criteria 1 and 2), average cost (Criteria 3 and 4), and reduction in variance (Criteria 5). If the criteria for both of the two-way splits fail, then a split (or CC subgroup) would generally not be warranted for that base MS–DRG. If the three-way split fails on any one of the five criteria and all five criteria for both two-way splits (1_23 and 12_3) are met, we would apply the two-way split with the highest R2 value. We note that if the request to split (or subdivide) an existing base MS–DRG into severity levels specifies the request is for either one of the two-way splits (1_23 or 12_3), in response to the specific request, we will evaluate the criteria for both of the two-way splits; however, we do not also evaluate the criteria for a three-way split.

We are making the FY 2026 ICD–10 MS–DRG GROUPER and Medicare Code Editor (MCE) Software Version 43, the ICD–10 MS–DRG Definitions Manual files Version 43 and the Definitions of Medicare Code Edits Manual Version 43 available to the public on our CMS website at: *https://www.cms.gov/medicare/payment/prospective-payment-systems/acute-inpatient-pps/ms-drg-classifications-and-software*.

2. Pre-MDC MS–DRG 018 Chimeric Antigen Receptor (CAR) T-Cell and Other Immunotherapies

In the FY 2026 IPPS/LTCH PPS proposed rule (90 FR 18015 through 18017), we discussed a request we received to review the recent MS–DRG assignments to Pre-MDC MS–DRG 018 (Chimeric Antigen Receptor (CAR) T-cell and Other Immunotherapies) and to clarify how decisions for the assignment of cell and gene therapies will be made moving forward. According to the requestor, for FY 2025, CMS did not assign prademagene zamikeracel (PZ), an autologous genetically engineered cell-based gene therapy, to MS–DRGs that would create clinical homogeneity and therefore, the mapping of these cases to MS–DRG 018 instead implied that estimated post-approval product pricing takes precedent for cell and gene therapies over clinical homogeneity principles. The requestor acknowledged that CMS has previously clarified that therapies mapped to Pre-MDC MS–DRG 018 do not need to be CAR T-cell products or utilized in the treatment of cancer and stated it concurs with that approach. However, the requestor indicated that the mapping of PZ to Pre-MDC MS–DRG 018 for FY 2025 also raised the following questions:

- Why was PZ mapped to Pre-MDC MS–DRG 018 when a different product (eladocagene exuparvovec) that is also delivered via operating room administration methods was mapped to other non-pre-MDC MS–DRGs?
- Why did CMS indicate that Lantidra, a recently approved cellular therapy, would map to the same MS–DRGs as existing insulin delivery therapies and technologies used to treat the subset of patients with hard-to-control Type 1 diabetes complicated by severe hypoglycemia who cannot receive a whole pancreas transplant instead of to Pre-MDC MS–DRG 018?
- Does CMS intend a future split of Pre-MDC MS–DRG 018 between medical and surgical cell and gene therapies to recognize the clinical resource

differential between the two modalities, even if the 500 case volume threshold is not reached?

- Why was a product delivered via allogeneic stem cell transplant procedure (Orca-T) mapped to Pre-MDC MS–DRG 018 instead of Pre-MDC MS–DRG 014 (Allogeneic Bone Marrow Transplant)?
- If products delivered via stem cell transplant should be mapped to Pre-MDC MS–DRG 018 based on resource use, per the Orca-T example, why are multiple gene therapy products delivered via stem cell transplant instead mapped to Pre-MDC MS–DRGs 016 and 017 (Autologous Bone Marrow Transplant with CC/MCC and without CC/MCC, respectively)?

The requestor stated the previously listed questions illustrate examples of inconsistencies with the MS–DRG mappings of cell and gene therapy products in recent years. The requestor recommended that CMS review recent MS–DRG assignments for these products and consider refinements to the approach. The requestor also urged CMS to clarify how decisions for cell and gene therapies will be made in the future. The requestor stated that if the intent of CMS is for Pre-MDC MS–DRG 018 to be a broad cell and gene therapy MS–DRG then a modification to the title of Pre-MDC MS–DRG 018 should be proposed and therapies currently assigned to other MS–DRGs should be re-mapped.

The requestor also suggested that CMS clarify the process by which interested parties can submit comments on potential or proposed procedure code mappings to the MS–DRGs for code proposals discussed at the Spring ICD–10 Coordination and Maintenance (C&M) Committee meeting since, given the timing, proposed code assignments are not published in association with the annual IPPS/LTCH PPS proposed rule. Specifically, the requestor stated there is no opportunity for interested parties to provide feedback to CMS about the assignment of new codes to Pre-MDC MS–DRG 018. The requestor stated that because MS–DRG 018 is a Pre-MDC MS–DRG with a limited number of procedure codes mapping to it, it is important for interested parties to have the ability to preview potential assignments to this MS–DRG and provide feedback to CMS prior to any final mapping decisions being made. The requestor acknowledged that CMS previously responded to prior comments regarding the process of commenting on the assignment of newly created codes; however, the requestor suggested that CMS provide additional clarification. Specifically, the requestor stated that the primary comment period with respect to the Spring procedure code requests is the timeframe following the ICD–10 C&M Committee meeting and that the materials provided in association with the meeting do not contain mapping requests submitted by the code requestor. The requestor indicated that if it is to assume any new procedure code request could potentially be mapped to Pre-MDC MS–DRG 018 and submits comments accordingly, that would create an undue burden. The requestor submitted the following questions regarding the process by which interested parties may submit comments on potential procedure code mappings to MS–DRGs:

- Can mapping requests be submitted as part of the request for a new ICD–10–PCS procedure code or do mapping requests need to go through the MS–DRG modification process with an annual October deadline?
- Can CMS provide information on mapping requests as part of the ICD–10 C&M Committee meeting materials?
- Will comments submitted to the ICD–10 C&M Committee about potential mappings be shared with the CMS teams associated with MS–DRG mapping decisions?
- Should interested parties include the same comments that are submitted to the ICD–10 C&M Committee in their proposed rule comments?
- Will comments submitted as part of the proposed rule be considered within scope for proposed codes presented during the spring meeting that are subsequently finalized but not listed in Table 6A.—New Diagnosis codes and Table 6B.—New Procedure Codes with proposed mappings?
- Do CMS' prior responses indicate that interested parties who submit comments on procedure code mappings should request code proposals presented at the spring meeting be delayed until the fall meeting?

The requestor recommended that CMS address the previously listed questions and seek input on the process by which interested parties may submit comments on potential procedure code mappings.

We stated in the proposed rule that we appreciated the requestor's feedback and suggestions regarding the classification of therapies to Pre-MDC MS–DRG 018 and the broader topic of MS–DRG mappings of cell and gene therapy products for the future. As discussed in the FY 2025 IPPS/LTCH PPS final rule (89 FR 69008 through 69010), we summarized and responded to comments regarding the mapping of procedure codes describing the application of PZ and other newly established procedure codes to Pre-MDC MS–DRG 018. We noted that we previously addressed similar comments in the FY 2023 IPPS/LTCH PPS final rule (87 FR 48806 through 48807), and we also noted that we provided detailed summaries and responses to these same or similar comments in the FY 2022 IPPS/LTCH PPS final rule (86 FR 44798 through 44806). We also referred the reader to the discussion in section II.D. of the FY 2026 IPPS/LTCH PPS proposed rule, regarding the proposed relative weight methodology for cases mapping to Pre-MDC MS–DRG 018 effective October 1, 2025, for FY 2026.

As discussed in the proposed rule, with respect to the requestor's suggestion that a modification to the title of Pre-MDC MS–DRG 018 be proposed, we noted that the requestor did not provide a specific recommendation for FY 2026 consideration; however, we acknowledged that there has been discussion related to requests to revise the title to Pre-MDC MS–DRG 018 in prior rulemaking, most recently in the FY 2025 IPPS/LTCH PPS final rule (89 FR 69008 through 69010), and we stated that we continue to be interested in obtaining input from members of the public on options to consider, recognizing there are additional types of cell and gene therapies now mapping to Pre-MDC MS–DRG 018. We stated we will continue to review additional feedback and suggestions in connection with future rulemaking.

In response to the requestor's assertion that there is no opportunity for interested parties to submit feedback about MS–DRG assignments, as we have discussed in prior rulemaking (87 FR 48807 through 48808) and as noted in the proposed rule discussion, interested parties may use current coding information as shown in the ICD–10 C&M Committee meeting materials to consider the potential MS–DRG assignments for any procedure codes that may be finalized after the Spring meeting and submit public comments for consideration. As we have noted in prior rulemaking, because the diagnosis and procedure code proposals that are presented at the Spring ICD–10–CM C&M Committee meeting for an October 1 implementation (upcoming FY) are not finalized in time to include in Table 6A.—New Diagnosis Codes and Table 6B.—New Procedure Codes in association with the proposed rule, we use our established process to examine the MS–DRG assignment for the predecessor codes to determine the most appropriate MS–DRG assignment. Specifically, we review the predecessor code and MS–DRG assignment most

closely associated with the new procedure code, and in the absence of claims data, we consider other factors that may be relevant to the MS–DRG assignment, including the severity of illness, treatment difficulty, complexity of service and the resources utilized in the diagnosis and/or treatment of the condition. We have noted in prior rulemaking that this process does not automatically result in the new procedure code being assigned to the same MS–DRG or to have the same designation (O.R. versus Non-O.R.) as the predecessor code. In response to the question regarding the inclusion of information on mapping requests as part of the ICD–10 C&M Committee meeting materials, we noted in the proposed rule that, as announced at each ICD–10 C&M Committee meeting, there is no discussion of MS–DRGs, payment, coverage, or billing at the ICD–10 C&M Committee meetings; therefore, we do not include such information in the meeting materials made publicly available in association with the meeting. Rather, we state that any issues related to MS–DRGs or payment are addressed through IPPS rulemaking. We noted that the purpose of the ICD–10 C&M Committee meeting is to present code proposals based on requests received regarding coding updates (that is, additions, deletions, or revisions). Therefore, while mapping requests may be included in the submission of an ICD–10–PCS procedure code request, that information is not included in the meeting materials, nor is there any discussion about any mapping request(s) during the meeting.

In response to the requestor's question regarding whether comments submitted to the ICD–10 C&M Committee about potential mappings are shared with the CMS staff associated with MS–DRG mapping decisions, we noted in the proposed rule that the comments are shared. With respect to whether interested parties should include the same comments submitted to the ICD–10 C&M Committee in the comments submitted in response to the proposed rule, we noted in the proposed rule that what comments to include and submit for each process is up to the commenter. In response to the question of whether comments submitted in response to the proposed rule would be considered within scope for proposed codes presented during the Spring meeting that are subsequently finalized but not listed in Table 6A.—New Diagnosis codes and Table 6B.—New Procedure Codes with proposed mappings, we noted in the proposed rule that the procedure code update files reflecting the newly finalized codes are made publicly available following the receipt and review of public comments received by the established deadline for the Spring coding topics, and that interested parties may choose to submit public comments on MS–DRG assignment for the agency's consideration. Lastly, in response to the question of whether interested parties considering submitting comments on procedure code mappings should request code proposals associated with the Spring meeting be delayed until the Fall meeting, we similarly noted in the proposed rule that the decision on what comments a commenter decides to include and submit in response to a code proposal is up to the commenter. We referred the reader to section II.C.11. of the preamble of the FY 2026 IPPS/LTCH PPS proposed rule for additional information regarding the ICD–10 C&M Committee meeting process.

As discussed in the proposed rule, in connection with the comments and questions about how products are grouped under the IPPS MS–DRGs, specifically with respect to cell and gene therapies under Pre-MDC MS–DRG 018, for FY 2026, we also received a request to create a new neurosurgical gene therapy MS–DRG to more accurately reflect the clinical characteristics and resource intensity required for the administration of neurosurgical gene therapies, including eladocagene exuparvovec, for patients diagnosed with Aromatic L-amino acid decarboxylase (AADC) deficiency. We referred the reader to the FY 2022 IPPS/LTCH PPS final rule (86 FR 44895) and the FY 2023 IPPS/LTCH PPS final rule (87 FR 48853 through 48854) for discussion regarding eladocagene exuparvovec.

We stated that the requestor (the manufacturer), expressed its appreciation for CMS' efforts to reassign cases reporting procedure code XW0Q316 (Introduction of eladocagene exuparvovec into cranial cavity and brain, percutaneous approach, new technology group 6) to a surgical MS–DRG as discussed in the FY 2022 IPPS/LTCH PPS final rule (86 FR 44895). According to the requestor, the decision appropriately reclassified cases involving eladocagene exuparvovec from a Non-O.R. procedure to an operating room (O.R.) procedure due to the requirement for intraputaminal administration via a burr hole in the skull. However, the requestor did not agree with the current assignment to MS–DRGs 628, 629, and 630 (Other Endocrine, Nutritional and Metabolic O.R. Procedures with MCC, with CC, and without CC/MCC, respectively) in MDC 10, or MS–DRGs 987, 988, and 989 (Non-Extensive O.R. Procedure Unrelated to Principal Diagnosis with MCC, with CC, and without MCC/CC, respectively). According to the requestor, the clinical characteristics and average costs of the cases currently assigned to MS–DRGs 628, 629, and 630 are significantly different from those associated with eladocagene exuparvovec neurosurgical gene therapy for rare disease.

The requestor stated that CMS denied the request to create a new MS–DRG for FY 2023, stating that it would continue to explore appropriate mechanisms to address low volume MS–DRGs indicated for rare diseases; however, after receiving responses to the Request for Information (RFI), the requestor stated that there have not been any changes proposed to the IPPS. The requestor stated its belief that assigning cases for this gene therapy and the rare disease indicated to a new MS–DRG is both appropriate and warranted. According to the requestor, the current MS–DRGs that eladocagene exuparvovec cases group to do not adequately reflect the clinical characteristics or resource needs associated with treatment which may deter hospitals from providing this therapy.

The requestor also stated there are approximately 68 gene therapy trials in the U.S. for central nervous system disorders for which over 30 of the 68 trials involve the gene therapy being administered directly into the brain parenchyma. According to the requestor, gene therapies administered surgically, including with neurosurgery, are extremely complicated, resource-intensive procedures for hospitals to undertake. These procedures require highly specialized surgeons, surgical equipment, and staff. Patients undergoing these procedures may also require continuous monitoring and longer hospital stays. The requestor stated the more intensive needs of these patients are not adequately captured in existing MS–DRGs and the creation of a new MS–DRG for neurosurgical gene therapy would help CMS proactively shape payment policy for this evolving class of therapies, thus allowing appropriate payment to support patient access to these treatments.

We stated that our analysis of the September 2024 update of the FY 2024 MedPAR file yielded zero cases reporting the administration of eladocagene exuparvovec; therefore, we believed it would be premature to consider the creation of a new neurosurgical gene therapy MS–DRG at this time. We also stated we appreciated

the detailed clinical information that the requestor provided and acknowledged that cases involving neurosurgery are technically complex and that patients undergoing these procedures tend to be critically ill, many with rare diseases.

We noted that we did receive a new procedure code request to identify and describe the Smartflow® Neuro Cannula as the delivery mechanism to administer eladocagene exuparvovec that was included as a topic in the Spring 2025 ICD–10 Coordination and Maintenance Committee Update materials. We refer the reader to the CMS website at: *https://www.cms.gov/Medicare/Coding/ICD10/C-and-M-Meeting-Materials* for additional detailed information regarding the request, and the related materials. We note that procedure code 00H033J (Insertion of infusion device into brain, temporary, percutaneous approach) that describes the procedure that uses the Smartflow® Neuro Cannula was approved and finalized as reflected in the FY 2026 ICD–10–PCS code update files that were made publicly available on the CMS website on June 6, 2025 at: *https://www.cms.gov/medicare/coding-billing/icd-10-codes*.

We also noted, as discussed in prior rulemaking, that this category of therapies continues to evolve, and we are in the process of carefully considering the feedback we have previously received about ways in which we can continue to appropriately reflect resource utilization while maintaining clinical coherence and stability in the relative weights under the IPPS MS–DRGs. We appreciate the recommendations and suggestions for consideration we have received and will continue to examine these complex issues in connection with future rulemaking. We acknowledge that there may be distinctions to account for as we continue to gain more experience in the use of these therapies and have additional claims data to analyze.

Comment: A commenter (the requestor) expressed appreciation for the clarification CMS provided regarding the submission of comments related to coding requests presented during the Spring ICD–10 Coordination and Maintenance Committee Meeting and that comments submitted after the Spring meeting will be shared with the groups responsible for considering MS–DRG mappings. The commenter stated that while some stakeholders may have the resources and expertise to review meeting materials, infer potential requested mappings for all therapies requesting new codes and submit mapping comments accordingly, many stakeholders will not. The commenter stated that if an applicant is requesting an MS–DRG mapping as part of the ICD–10–PCS process, this should be made explicitly public in the meeting materials, even if it is not discussed in the meeting itself. The commenter also stated that CMS should not ask or expect all stakeholders to know enough about clinical care and CMS' mapping processes to be able to suggest an alternative mapping for a code, if required. The commenter reiterated its request for CMS to introduce a process by which stakeholders can review requested MS–DRG mappings as part of, or in parallel to, the ICD–10–PCS code request process. The commenter also requested that CMS utilize its established process to review and reconsider MS–DRG assignment when stakeholders raise concerns about CMS' assignment instead of expecting stakeholders to propose alternative mappings.

Response: We thank the commenter for the feedback. In response to the commenter's assertion that not all stakeholders may have the resources and expertise to review meeting materials, infer potential requested mappings for all therapies requesting new codes and submit mapping comments accordingly, we note that we have made all of the information and materials necessary to conduct those actions publicly available via the CMS website. Specifically, the ICD–10 Coordination and Maintenance Committee Meeting materials are available at: *https://www.cms.gov/medicare/coding-billing/icd-10-codes/icd-10-coordination-maintenance-committee-materials*, and the meeting process is summarized in the annual rulemakings available at: *https://www.cms.gov/medicare/payment/prospective-payment-systems/acute-inpatient-pps*. In addition, the ICD–10 MS–DRG Definitions Manual is made publicly available via the CMS website at: *https://www.cms.gov/medicare/payment/prospective-payment-systems/acute-inpatient-pps/ms-drg-classifications-and-software*.

In response to the commenter's statement that if an applicant is requesting an MS–DRG mapping as part of the ICD–10–PCS process it should be made public in the meeting materials even if it is not discussed in the meeting itself, we note that, as discussed in the preamble of the proposed rule (90 FR 18016) and this final rule, the purpose of the ICD–10 Coordination and Maintenance Committee meeting is to present code proposals based on requests received regarding coding updates (that is, additions, deletions, or revisions). Therefore, while mapping requests may be included in the submission of an ICD–10–PCS procedure code request, we disagree that the information should be included in the meeting materials. We underscore that the focus of the ICD–10 Coordination and Maintenance Committee meetings is on updates and maintenance to the ICD–10 code sets and not about how a potential new code may be designated or assigned under the IPPS, which is addressed through rulemaking. These are two separate and distinct processes, each with their own objectives and timelines.

In response to the commenter's statement that CMS should not ask or expect all stakeholders to know enough about clinical care and CMS' mapping processes to be able to suggest an alternative mapping for a code, if required, we note that under our established process, we consider requests for MS–DRG classification changes on an annual basis that are submitted via MEARIS™ at: *https://mearis.cms.gov/public/home* by the designated October 20 deadline for the upcoming fiscal year. If a proposal is subsequently put forth in rulemaking and members of the public submit comments expressing disagreement with that proposal (for example, proposed new MS–DRG(s), proposed reassignment of diagnosis and/or procedure codes, or their designation), the public comments routinely provide the rationale behind the disagreement as well as alternative suggestions) for our consideration, which we may be able to further evaluate. With respect to the mapping process, as discussed in the preamble of the proposed rule (90 FR 18016) and this final rule, under our established process, when a new procedure code is finalized, we review the predecessor code and MS–DRG assignment most closely associated with the new procedure code, and in the absence of claims data, we consider other factors that may be relevant to the MS–DRG assignment, including the severity of illness, treatment difficulty, complexity of service and the resources utilized in the diagnosis and/or treatment of the condition. We have noted in prior rulemaking that this process does not automatically result in the new procedure code being assigned to the same MS–DRG or to have the same designation (O.R. versus Non-O.R.) as the predecessor code.

Comment: A commenter (the requestor) expressed appreciation that CMS shared the types of concerns and questions raised by stakeholders about the rationale for mapping new ICD–10–PCS codes for novel therapies into Pre-MDC MS–DRG 018; however, the commenter requested that CMS discuss

the rationale for mapping Orca-T allogeneic T-cell immunotherapy to Pre-MDC MS–DRG 018.

Response: We thank the commenter for the feedback. The procedure code proposal for Orca-T allogeneic T-cell immunotherapy was discussed at the March 19–20, 2024 ICD–10 Coordination and Maintenance Committee meeting. We refer the reader to the meeting materials on the CMS website at: *https://www.cms.gov/medicare/coding-billing/icd-10-codes/icd-10-coordination-maintenance-committee-materials* for additional information regarding the request. ICD–10–PCS codes XW033BA (Introduction of Orca-T allogeneic T-cell immunotherapy into peripheral vein, percutaneous approach, new technology group 10) and XW043BA (Introduction of Orca-T allogeneic T-cell immunotherapy into central vein, percutaneous approach, new technology group 10) became effective October 1, 2024, for FY 2025. Under our established process, we reviewed the predecessor code assignments. The predecessor codes for Orca-T allogeneic T-cell immunotherapy (hereafter referred to as Orca-T) are procedure codes 3E033GC (Introduction of other therapeutic substance into peripheral vein, percutaneous approach) and 3E043GC (Introduction of other therapeutic substance into central vein, percutaneous approach) that are designated as non-O.R. and do not affect MS–DRG assignment. We then reviewed other factors associated with Orca-T. Notably, Orca-T is a precision-engineered allogeneic stem cell and T-cell immunotherapy biologic (that is, a combination therapy comprised of immune cells, including regulatory T-cells (Tregs) and conventional T-cells (Tcons), and stem cells) that is in clinical trials and regulated under FDA section 351 of the Public Health Service Act (PHSA) as a biologic.

Allogeneic hematopoietic stem cell transplant (alloHSCT) can provide a curative therapy for many patients with advanced hematologic malignancies. Unfortunately, despite advancements in identifying matching donors and medical care, patients can experience a variety of post-transplant complications including Graft Versus Host Disease (GvHD), infection and organ failure. GvHD is a condition in which the donated cells attack the recipient's tissues which can lead to end organ damage.

Orca-T is derived from an HLA matched donor and combines progenitor stem cells along with highly purified T-cells in the form of regulatory T-cells (Tregs, a specialized CD4+ T cell subset) and conventional T-cells (Tcons). Because of its purified nature, the Tregs can proliferate and exist in a patient's tissues in a fashion not normally possible. While the stem cells serve to build a long term immune system in the recipient, the Tregs act to protect the patient's tissues and organs from GvHD and other toxicities. The Tcons component is designed to accelerate the reconstitution of a patient's immune system, mediating the graft-versus-leukemic effect, graft-versus-infection and the inflammatory responses, providing protection against infection.

Establishment of a successful allograft requires an approach that balances an enhancement of the graft-vs-tumor and graft-vs-infection effects while avoiding or limiting GvHD. While some immunotherapeutic agents treat an active disease process, the specialized cells in Orca-T are intended to immunologically mitigate significant post allograft complications such as GvHD and infection.

We note that both CAR T-cell therapy and Orca T-cell therapy are forms of immunotherapies that are indicated for patients diagnosed with acute lymphoblastic leukemia (ALL), among other types of cancer. One of the challenges experienced to date with the treatment of ALL is GvHD, which is what Orca-T is formulated to address. We also note that there are other procedure codes describing both allogeneic CAR T-cell and non-CAR T-cell immunotherapy currently assigned to MS–DRG 018. Therefore, we believe the assignment of Orca T-cell immunotherapy to Pre-MDC MS–DRG 018 is appropriate.

Comment: A commenter stated that the procedure code describing valoctocogene roxaparvovec is listed in Table 6B in association with the proposed rule and a proposed mapping to Pre-MDC MS–DRG 018, but CMS did not discuss any rationale for this proposal in the rule text. The commenter stated that the title of Pre-MDC MS–DRG 018 is Chimeric Antigen Receptor (CAR) T-Cell and Other Immunotherapies, and valoctocogene roxaparvovec is an off-the-shelf in vivo gene therapy that is neither a CAR–T nor an immunotherapy. Additionally, according to the commenter, it does not require the same types of complex and specialized clinical resources to administer as the other therapies assigned to Pre-MDC MS–DRG 018. The commenter further stated that, as a result, and without any discussion or explanation from CMS about why its medical advisors have proposed this, they assume that this proposed assignment is simply based on the manufacturer's request to assign its product to Pre-MDC MS–DRG 018 as part of the ICD–10–PCS code request application. The commenter stated that CMS' acceptance of this requested mapping is concerning as it seems that resource homogeneity is the only factor being relied upon. The commenter stated its understanding is that CMS has always discussed the importance of balancing both clinical and resource homogeneity when considering MS–DRG assignments for new therapies. The commenter provided an example stating that CMS assigned several hematopoietic stem cell gene therapies to autologous transplant MS–DRGs 016 and 017 (Autologous Bone Marrow Transplant with CC/MCC and without CC/MCC, respectively) based on the clinical similarity of the services being provided to the patient, rather than basing assignment on price point. According to the commenter, if the latter had been deemed more critical at the time of those assignments, then CMS would have assigned the therapies to Pre-MDC MS–DRG 018 as well. The commenter also stated that CMS did not propose to map eladocagene exuparvovec to MS–DRG 018 after denying its request for a new MS–DRG (as discussed later in this section), though eladocagene exuparvovec has a similar price point. The commenter stated it cannot determine any consistent logic guiding the variation in recent mapping proposals and decisions.

The commenter requested that CMS not finalize the proposed mapping of valoctocogene roxaparvovec to Pre-MDC MS–DRG 018 due to differences in clinical complexity and resource use. The commenter stated that CMS should use its established mapping process and input from its clinical advisors to assign valoctocogene roxaparvovec to a more clinically appropriate MS–DRG.

Response: In response to the commenter's request that CMS not finalize the proposed mapping of valoctocogene roxaparvovec to Pre-MDC MS–DRG 018 because it is neither a CAR–T nor an immunotherapy and does not require the same types of complex and specialized clinical resources to administer as the other therapies assigned to Pre-MDC MS–DRG 018, we note that, as discussed in prior rulemaking, consideration is given to the similarities and differences in resource utilization among patients in each MS–DRG and we strive to ensure that resource utilization is relatively consistent across patients in each MS–DRG. However, some variation in resource intensity will remain among the patients in each MS–DRG because

the definition of the MS–DRG is not so specific that every patient is identical, rather the average pattern of resource intensity of a group of patients in an MS–DRG can be predicted. We note that historically, in the development of the DRGs, the initial step in the determination of the DRG had been the assignment of the appropriate MDC based on the principal diagnosis, however, beginning with the eighth version of the GROUPER (CMS 8.0), the initial step in DRG assignment was based on the procedure being performed, thus the creation of the Pre-MDC DRGs, where the patient is assigned to these DRGs independent of the MDC of the principal diagnosis. Therefore, the logic for case assignment to Pre-MDC MS–DRG 018 does not preclude the assignment of other therapies indicated in the treatment of patients with different diagnoses. In our review of the MS–DRG assignment of valoctocogene roxaparvovec, we recognized that this technology is defined as a gene therapy. We also note that similar to the discussions in prior rulemaking with respect to the difficulty in predicting what the associated costs will be in the future for CAR T-cell and other immunotherapies that remain under development (87 FR 48806), it is also difficult to predict what the associated costs will be in the future for cell and gene therapies that remain under development or in clinical trials.

In response to the commenter's assertion that CMS did not use its established mapping process and input from its clinical advisors to assign valoctocogene roxaparvovec to a more clinically appropriate MS–DRG, as discussed in the preamble of the proposed rule (90 FR 18016) and this final rule, and as noted in prior rulemaking, we use our established process to examine the MS–DRG assignment for the predecessor codes to determine the most appropriate MS–DRG assignment. Specifically, we review the predecessor code and MS–DRG assignment most closely associated with the new procedure code, and in the absence of claims data, we consider other factors that may be relevant to the MS–DRG assignment, including the severity of illness, treatment difficulty, complexity of service and the resources utilized in the diagnosis and/or treatment of the condition. As noted previously and in prior rulemaking, this process does not automatically result in the new procedure code being assigned to the same MS–DRG or to have the same designation (O.R. versus Non-O.R.). We note that the proposal to create new procedure codes that describe the administration of valoctocogene roxaparvovec was discussed at the September 10, 2024 ICD–10 Coordination and Maintenance Committee meeting. The predecessor codes to describe the administration of valoctocogene roxaparvovec are ICD–10–PCS codes 3E033GC (Introduction of other therapeutic substance into peripheral vein, percutaneous approach) and 3E043GC (Introduction of other therapeutic substance into central vein, percutaneous approach) which are designated as non-O.R. and do not impact MS–DRG assignment. We refer the reader to the CMS website at: *https://www.cms.gov/Medicare/Coding/ICD10/C-and-M-Meeting-Materials* for additional detailed information regarding the code request, including a recording of the discussion and the related meeting materials. We also note that the procedure codes to describe the administration of valoctocogene roxaparvovec were approved and finalized as reflected in Table 6B.—New Procedure Codes associated with the proposed rule and this final rule (and available via the CMS website at: *https://www.cms.gov/medicare/payment/prospective-payment-systems/acute-inpatient-pps*) as well as reflected in the FY 2026 ICD–10–PCS code update files that were made publicly available on the CMS website on June 6, 2025 at: *https://www.cms.gov/medicare/coding-billing/icd-10-codes.* As discussed in section II.C.11. of the preamble of the FY 2026 IPPS/LTCH PPS proposed rule and this final rule, the code titles are adopted as part of the ICD–10 Coordination and Maintenance Committee meeting process that have been finalized after the review of public comments. As also discussed in the preamble of the proposed rule (90 FR 18067) and this final rule, we proposed the MDC and MS–DRG assignments for the new diagnosis codes and procedure codes as set forth in Table 6A.—New Diagnosis Codes and Table 6B.—New Procedure Codes associated with the proposed rule. Therefore, the public has the opportunity to comment and provide feedback on the proposed assignments for CMS' consideration, which is subsequently included in the final rule with a summary of the comments and feedback and CMS' response, as is reflected in the discussion in this section of this final rule.

In response to the commenter's statement that valoctocogene roxaparvovec does not require the same types of complex and specialized clinical resources to administer as other therapies assigned to Pre-MDC MS–DRG 018, we note that valoctocogene roxaparvovec is indicated in the treatment of Hemophilia A, an X-linked genetic disorder that results in a dysfunction in the gene encoding for Factor VIII which is essential for proper coagulation. Patients may have varying degrees of functional activity of Factor VIII with severe activity (< 1IU per deciliter) resulting in spontaneous hemorrhage. This can result in life threatening hemorrhages into the brain or lead to debilitating hemorrhages in the soft tissues or joints leading to chronic pain or arthropathy. While prophylactic regimens may improve outcomes, they do not address the underlying dysfunctional gene encoding for Factor VIII. Valoctocogene roxaparvovec is a one-time therapy that uses an adeno-associated virus (AAV5) to deliver a functional copy of the F8 gene which is responsible for the production of Factor VIII.

Valoctocogene roxaparvovec is similar to other gene based therapies currently assigned to Pre-MDC MS–DRG 18 such as prademagene zamikeracel (Zevaskyn™) and CAR T-cell therapy in that these treatments involve introduction of genetic material into a patient's cells to treat a disease process. CAR T-cell therapy uses a patient's genetically modified T-cells to treat cancer while prademagene zamikeracel and valoctocogene roxaparvovec introduce functional deoxyribonucleic acid (DNA) copies into a patient's skin and liver, respectively, to correct an inherited genetic dysfunction. While they are similar in character to the hematopoietic stem cell gene therapies assigned to autologous transplant MS–DRGs 016 and 017 (Autologous Bone Marrow Transplant with CC/MCC and without CC/MCC, respectively), resource utilization differs. Prademagene zamikeracel and valoctocogene roxaparvovec involve introduction of genetic material into mature cells while hematopoietic gene therapy involves introduction of genetic material into stem cells which require a level of resource utilization more akin to other therapies in MS–DRGs 016 and 017.

In response to the commenter's assumption that the manufacturer requested assignment to Pre-MDC MS–DRG 018 in association with its procedure code request, we note that it did not. We also take this opportunity to emphasize that, as has been discussed in prior rulemaking with respect to gene therapies, this category of therapies continues to evolve, and we are in the process of carefully considering the feedback we have previously received about ways in which we can continue

to appropriately reflect resource utilization while maintaining clinical coherence and stability in the relative weights under the IPPS MS–DRGs. We also note that valoctogene roxaparvovec is primarily administered in the outpatient setting (for example, hemophilia treatment centers). However, in rare instances when the therapy is administered in the inpatient setting or the patient must be transferred to the inpatient setting, providers are equipped with a specific procedure code to report its use in connection with a predictable payment mechanism under the IPPS.

Comment: A commenter stated they support appropriate and ongoing refinement of the MS–DRG system and greater clarity with respect to how CMS renders decisions regarding ICD–10–PCS codes mapped to Pre-MDC MS–DRG 018. Another commenter recommended that CMS dedicate space in each IPPS proposed rule to identify relevant ICD–10–PCS codes that might be assigned to Pre-MS–DRG 018, along with preliminary rationales for these potential assignments.

Response: We appreciate the commenters' feedback. We note that while the establishment of Pre-MDC MS–DRG 018 has presented unique operational considerations under the IPPS, there are also over 700 other MS–DRGs that warrant continued review for ongoing refinements. In response to how CMS renders decisions regarding the mapping of procedure codes to a Pre-MDC MS–DRG, as discussed in the preamble of the proposed rule (90 FR 18068) and in this final rule, we review the predecessor code and MS–DRG assignment most closely associated with the new diagnosis or procedure code, and in the absence of claims data, we consider other factors that may be relevant to the MS–DRG assignment, including the severity of illness, treatment difficulty, complexity of service and the resources utilized in the diagnosis or treatment of the condition. As previously noted, this process does not automatically result in the new diagnosis or procedure code being proposed for assignment to the same MS–DRG or to have the same designation as the predecessor code.

Comment: A commenter stated it is unclear why discussion of the request to create a new MS–DRG to describe neurosurgical gene therapies was included under the Pre-MDC MS–DRG 018 section of the proposed rule instead of under MDC 10 (Endocrine, Nutritional and Metabolic Diseases and Disorders) where prior discussions of eladocagene exuparvovec have been included. The commenter indicated that if CMS placed this discussion in the Pre-MDC MS–DRG 018 section in an effort to seek comments about whether Pre-MDC MS–DRG 018 should be broadened to include eladocagene exuparvovec and other gene therapies that it be made explicit what information the agency is seeking from stakeholders in advance of the FY 2027 IPPS/LTCH PPS rulemaking cycle. The commenter also stated that if CMS intends for Pre-MDC MS–DRG 018 to be the primary Pre-MDC MS–DRG for all cell and gene therapies until further modifications can be made, the agency should propose to rename the MS–DRG and be consistent with mapping practices and rationale. The commenter further remarked that CMS' proposed rule analysis stated no cases reporting eladocagene exuparvovec were found, however, according to the commenter, because the product was not approved until November 2024, cases would not be expected to appear in the data.

Response: As stated in the preamble of the proposed rule (90 FR 18016), in connection with the comments and questions about how products are grouped under the IPPS MS–DRGs, specifically with respect to cell and gene therapies under Pre-MDC MS–DRG 018, for FY 2026, we also received a request to create a new neurosurgical gene therapy MS–DRG, which we believe was appropriately placed and discussed in that section of the preamble of the proposed rule. As also explicitly stated in the preamble of the proposed rule (90 FR 18017), we continue to welcome additional feedback and comments on other options to consider on how to appropriately address low volume, high-cost treatments for rare diseases, therefore, we believe that our intentions were clearly stated. In response to the commenter's suggestion that a proposal to revise the title for Pre-MDC MS–DRG 018 should be put forth if CMS aims to temporarily designate Pre-MDC MS–DRG 018 as the primary Pre-MDC MS–DRG for all cell and gene therapies, we note that, as also stated in the preamble of the proposed rule, (90 FR 18016), there has been discussion related to requests to revise the title to Pre-MDC MS–DRG 018 in prior rulemaking, most recently in the FY 2025 IPPS/LTCH PPS final rule (89 FR 69008 through 69010), and we continue to be interested in obtaining input from members of the public on options to consider, recognizing there are additional types of cell and gene therapies now mapping to Pre-MDC MS–DRG 018. We stated we will continue to review additional feedback and suggestions in connection with future rulemaking. In response to the commenter's remarks that CMS' proposed rule analysis stated no cases were found to report the administration of eladocagene exuparvovec and because the product was not approved until November 2024, cases would not be expected to appear in the data, we note that procedure code XW0Q316 (Introduction of eladocagene exuparvovec into cranial cavity and brain, percutaneous approach, new technology group 6) that describes the administration of eladocagene exuparvovec became effective October 1, 2020 (FY 2021) and a single case was previously identified in the data in MS–DRG 829 (Myeloproliferative Disorders or Poorly Differentiated Neoplasms with Other Procedures with CC/MCC) with an average length of stay of 2 days and average costs of $1,544, as discussed in the FY 2023 IPPS/LTCH PPS final rule (87 FR 48854). We further note that, as also discussed in prior rulemaking, the creation of a code to describe a technology that is utilized in the performance of a procedure or service does not require FDA approval of the technology nor is the proposed and final assignment of a procedure code to an MS–DRG dependent upon a product's FDA approval (86 FR 44806).

Several commenters provided general feedback on the subject of cell and gene therapies for CMS' consideration in association with the Pre-MDC MS–DRG 018 proposed rule discussion. Notably, commenters suggested that CMS: (1) issue a Request for Information (RFI) to obtain additional insight on provider experiences, including information on the therapies under development and expected to become available in the near future, as well as features of their administration and the affected patient populations, (2) develop a payment model or long-term solution for appropriate payment that also accounts for products whose new technology add-on payment is expiring, and (3) ensure transparency in the refinement process by collaborating with stakeholders.

We appreciate the commenters' recommendations and feedback as we continue to examine the complexities involved with these therapies under the IPPS. We intend to address any potential modifications to the MS–DRGs through future notice and comment rulemaking.

3. MDC 01 (Diseases and Disorders of the Nervous System)

a. Logic for MS–DRGs 023 Through 027

As discussed in the FY 2026 IPPS/LTCH PPS proposed rule (90 FR 18017

through 18025), we received three separate but related requests to review the MS–DRG assignments for a subset of procedures assigned to MS–DRGs 023 through 027. In this section of the preamble of this FY 2026 IPPS/LTCH PPS final rule, we discuss each of these separate, but related requests.

The first request was to create a new MS–DRG for cases involving ''chemotherapy implants'' and cases involving ''epilepsy with neurostimulator.'' The requestor noted chemotherapy implants are used to treat patients with brain tumors. They are implanted into the brain during the craniotomy procedure at the time of tumor resection. Upon implantation, these devices immediately release radiation or chemotherapeutic agents. This approach enables treatment to be initiated at the time of tumor resection without undue delay. ''Epilepsy with neurostimulator'' cases involve devices used in the treatment of medically intractable epilepsy. The neurostimulator is implanted in the skull via a craniotomy and is connected to electrodes that are implanted on the surface of the brain or in the brain through either a craniotomy or a burr hole(s). According to the requestor, like the procedure to insert a chemotherapy implant, the craniotomy procedure to insert the neurostimulator lead is performed under general anesthesia and the procedure typically takes four hours.

We noted in the proposed rule that the requestor performed their own analysis of Medicare claims data and stated they found that the average costs of cases involving chemotherapy implants and cases involving epilepsy with neurostimulators are significantly higher than the average costs of other procedures currently grouped within MS–DRG 023 (Craniotomy with Acute Complex CNS Principal Diagnosis with MCC or Antineoplastic Implant). The requestor asserted that as a result, these cases are not being adequately paid under the current MS–DRG. Therefore, given the limited options within the existing MS–DRG structure, the requestor recommended that CMS extract cases reporting the insertion of a chemotherapy implant and cases reporting a neurostimulator generator inserted into the skull with the insertion of a neurostimulator lead into the brain, and a principal diagnosis of epilepsy from MS–DRG 023 and create a new MS–DRG for these cases with a payment rate that better aligns with the resource utilization associated with these procedures. The requestor stated that this recommendation appeared to be reasonable, given that CMS has already determined that these two subsets of cases are clinically coherent by virtue of them being currently assigned to the same MS–DRG.

To begin our analysis, as discussed in the proposed rule, we reviewed the GROUPER logic for MS–DRGs 023 and 024 (Craniotomy with Acute Complex CNS Principal Diagnosis without MCC). We noted in the proposed rule that the requestor is correct that currently, cases involving ''chemotherapy implants'' and cases involving ''epilepsy with neurostimulator'' are assigned to the higher severity level MS–DRG 023. MS–DRGs 023 and 024 contain a logic list referred to as ''Chemotherapy Implant.'' This logic list includes the following four ICD–10–PCS codes:

ICD-10-PCS Code	Description
00H004Z	Insertion of radioactive element, cesium-131 collagen implant into brain, open approach
3E0Q005	Introduction of other antineoplastic into cranial cavity and brain, open approach
3E0Q305	Introduction of other antineoplastic into cranial cavity and brain, percutaneous approach
3E0Q705	Introduction of other antineoplastic into cranial cavity and brain, via natural or artificial opening

We stated that the ''Chemotherapy Implant'' logic list was created for cases reporting the implantation of a chemotherapeutic agent and devices implanted in the brain, such as implantable chemotherapeutic wafers. Additionally, we noted MS–DRGs 023 and 024 contain a logic list referred to as ''Epilepsy Principal Diagnosis'' that includes 58 ICD–10–CM diagnosis codes that describe epilepsy, and a logic list referred to as ''Neurostimulator'' that includes the following three ICD–10–PCS procedure code combinations:

- 0NH00NZ (Insertion of neurostimulator generator into skull, open approach), in combination with 00H00MZ (Insertion of neurostimulator lead into brain, open approach);
- 0NH00NZ (Insertion of neurostimulator generator into skull, open approach), in combination with 00H03MZ (Insertion of neurostimulator lead into brain, percutaneous approach); and
- 0NH00NZ (Insertion of neurostimulator generator into skull, open approach), in combination with 00H04MZ (Insertion of neurostimulator lead into brain, percutaneous endoscopic approach).

These two logic lists were created to capture cases involving the use of the Responsive Neurostimulation (RNS)® neurostimulator, a treatment option for persons diagnosed with medically intractable epilepsy. The RNS® neurostimulator includes a cranially implanted programmable neurostimulator connected to one or two depth and/or subdural cortical strip leads that are surgically placed in or on the brain at the seizure focus. The implanted neurostimulator continuously monitors brain electrical activity and is programmed by a physician to detect abnormal patterns of electrical activity that the physician believes may lead to seizures (epileptiform activity).

We refer the reader to the ICD–10 MS–DRG Definitions Manual, Version 42.1 (available on the CMS website at: *https://www.cms.gov/medicare/payment/prospective-payment-systems/acute-inpatient-pps/ms-drg-classifications-and-software*) for complete documentation of the GROUPER logic for MS–DRGs 023 and 024.

As discussed in the preamble of the proposed rule, we then examined claims data from the September 2024 update of the FY 2024 MedPAR file for all cases in MS–DRG 023 and compared the results to cases reporting one of the four procedure codes that appear under the logic list referred to as ''Chemotherapy Implant'' in MS–DRG 023 and for all cases reporting a neurostimulator generator inserted into the skull with the insertion of a neurostimulator lead into the brain (including cases involving the use of the RNS® neurostimulator), and a principal diagnosis of epilepsy. The following table shows our findings:

MS-DRG 023 – ALL CASES COMPARED TO CASES REPORTING THE INSERTION OF A CHEMOTHERAPY IMPLANT AND CASES REPORTING A NEUROSTIMULATOR GENERATOR INSERTED INTO THE SKULL WITH THE INSERTION OF A NEUROSTIMULATOR LEAD INTO THE BRAIN AND A PRINCIPAL DIAGNOSIS OF EPILEPSY			
MS-DRG	Number of Cases	Average Length of Stay	Average Costs
MS-DRG 023 - All cases	12,136	10	$51,132
Cases reporting the insertion of a chemotherapy implant	176	6.4	$49,743
Cases with principal diagnosis of epilepsy with neurostimulator generator inserted into the skull and insertion of a neurostimulator lead into brain	68	2.4	$66,303

As shown in the table, for MS–DRG 023, we identified a total of 12,136 cases, with an average length of stay of 10 days and average costs of $51,132. Of the 12,136 cases in MS–DRG 023, there were 176 cases reporting the insertion of a chemotherapy implant with an average length of stay of 6.4 days and average costs of $49,743. Additionally, there were 68 cases describing a neurostimulator generator inserted into the skull with the insertion of a neurostimulator lead into the brain (including cases involving the use of the RNS® neurostimulator) that had a principal diagnosis of epilepsy with an average length of stay of 2.4 days and average costs of $66,303.

As the data show, the 68 cases in MS–DRG 023 describing a neurostimulator generator inserted into the skull with the insertion of a neurostimulator lead into the brain (including cases involving the use of the RNS® neurostimulator) and a principal diagnosis of epilepsy have average costs that are higher than the average costs of all cases in MS–DRG 023 ($66,303 compared to $51,132), and they have an average length of stay that is shorter (2.4 days compared to 10 days). The 176 cases in MS–DRG 023 reporting the insertion of a chemotherapy implant have average costs that are lower than the average costs of all cases in MS–DRG 023 ($49,743 compared to $51,132), and they have an average length of stay that is shorter (6.4 days compared to 10 days).

We stated we reviewed the claims data, and did not believe the data support creating a new MS–DRG for cases reporting the insertion of a chemotherapy implant and cases describing a neurostimulator generator inserted into the skull with the insertion of a neurostimulator lead into the brain (including cases involving the use of the RNS® neurostimulator) and a principal diagnosis of epilepsy. We stated that the results of the claims analysis as previously summarized indicate the cases reporting the insertion of a chemotherapy implant demonstrate comparable resource utilization with other cases in their currently assigned MS–DRG. Further, the claims data analysis indicates that these two subsets of cases, that is cases reporting the insertion of a chemotherapy implant and cases describing a neurostimulator generator inserted into the skull with the insertion of a neurostimulator lead into the brain (including cases involving the use of the RNS® neurostimulator) and a principal diagnosis of epilepsy, do not demonstrate comparable resource utilization. The cases in MS–DRG 023 reporting the insertion of a chemotherapy implant have average costs that are lower than the average costs of cases describing a neurostimulator generator inserted into the skull with the insertion of a neurostimulator lead into the brain and a principal diagnosis of epilepsy ($49,743 compared to $66,303), and they have an average length of stay that is longer (6.4 days compared to 2.4 days).

Therefore, based on review of the claims data, we did not propose to create a new MS–DRG for cases reporting the insertion of a chemotherapy implant and cases describing a neurostimulator generator inserted into the skull with the insertion of a neurostimulator lead into the brain (including cases involving the use of the RNS® neurostimulator) and a principal diagnosis of epilepsy for FY 2026. However, while our analysis of the claims data did not support creating a new MS–DRG for cases reporting the insertion of a chemotherapy implant and cases describing a neurostimulator generator inserted into the skull with the insertion of a neurostimulator lead into the brain (including cases involving the use of the RNS® neurostimulator) and a principal diagnosis of epilepsy, as discussed in the proposed rule, cases describing a neurostimulator generator inserted into the skull with the insertion of a neurostimulator lead into the brain (including cases involving the use of the RNS® neurostimulator) and a principal diagnosis of epilepsy have average costs that are higher than the average costs of all cases in MS–DRG 023, with a shorter average length of stay. Accordingly, in the proposed rule we stated we determined that further analysis of cases reporting a neurostimulator generator inserted into the skull with the insertion of a neurostimulator lead into the brain (including cases involving the use of the RNS® neurostimulator), and a principal diagnosis of epilepsy was needed in conjunction with the separate but related requests we received to review the MS–DRG assignments for a subset of procedures also assigned to MS–DRGs 023 through 027 for the FY 2026 IPPS/LTCH PPS proposed rule to ensure clinical coherence between these cases and the other cases with which they would potentially be grouped, as discussed later in this section.

As noted previously, MS–DRGs 023 and 024 contain a logic list referred to as ''Chemotherapy Implant'' that includes the following four ICD–10–PCS codes:

ICD-10-PCS Code	Description
00H004Z	Insertion of radioactive element, cesium-131 collagen implant into brain, open approach
3E0Q005	Introduction of other antineoplastic into cranial cavity and brain, open approach
3E0Q305	Introduction of other antineoplastic into cranial cavity and brain, percutaneous approach
3E0Q705	Introduction of other antineoplastic into cranial cavity and brain, via natural or artificial opening

In the proposed rule we stated that during our review of the GROUPER logic for MS–DRGs 023 and 024, we identified that the following four ICD–10–PCS procedure codes describing the insertion of a radioactive element were inadvertently excluded from the ''Chemotherapy Implant'' logic list:

ICD-10-PCS Code	Description
00H001Z	Insertion of radioactive element into brain, open approach
00H005Z	Insertion of radioactive element, palladium-103 collagen implant into brain, open approach
00H031Z	Insertion of radioactive element into brain, percutaneous approach
00H041Z	Insertion of radioactive element into brain, percutaneous endoscopic approach

In review of this finding, we stated we analyzed claims data from the September 2024 update of the FY 2024 MedPAR file for MS–DRGs 023, 024, 025, 026, and 027 for all cases and for cases reporting procedure codes 00H001Z, 00H005Z, 00H031Z, or 00H041Z. The findings from our analysis are shown in the following table.

MS-DRG		Number of cases	Average Length of Stay	Average Costs
023	All cases	12,136	10	$51,132
	Cases reporting 00H001Z, 00H005Z, 00H031Z, or 00H041Z	0	0	$0
024	All cases	4,624	5	$35,516
	Cases reporting 00H001Z, 00H005Z, 00H031Z, or 00H041Z	0		$0
025	All cases	21,059	8.6	$40,215
	Cases reporting 00H001Z, 00H005Z, 00H031Z, or 00H041Z	4	3.8	$40,199
026	All cases	5,833	4.1	$28,404
	Cases reporting 00H001Z, 00H005Z, 00H031Z, or 00H041Z	0	0	$0
027	All cases	7,049	1.9	$23,059
	Cases reporting 00H001Z, 00H005Z, 00H031Z, or 00H041Z	0	0	$0

As the data show, we found four cases reporting procedure code 00H001Z, 00H005Z, 00H031Z, or 00H041Z in MS–DRG 025, with average costs of $40,199 and an average length of stay of 3.8 days. We reviewed this issue and noted in the proposed rule radioactive elements are inserted into the brain to deliver a targeted concentrated dose of radiation directly to a brain tumor or tumor bed. They are primarily used to treat recurrent brain metastases or other aggressive brain cancers, as it allows for high-dose radiation delivery specifically to the tumor site while minimizing damage to surrounding healthy brain tissue. Although we did not identify many cases, we stated we believe the four procedure codes describing the insertion of a radioactive element into the brain are clinically aligned with the procedure codes currently included in the ''Chemotherapy Implant'' logic list in MS–DRGs 023 and 024.

Therefore, for clinical consistency we proposed to add procedure codes 00H001Z, 00H005Z, 00H031Z, and 00H041Z to the ''Chemotherapy Implant'' logic list in MS–DRGs 023 and 024, effective October 1, 2025, for FY 2026. We also proposed to change the description of the logic list in MS–DRGs 023 and 024 from ''Chemotherapy Implant'' to ''Antineoplastic Implant'' to better reflect the GROUPER logic that includes ICD–10–PCS procedure codes describing antineoplastic agents implanted in the brain.

Comment: Commenters supported the proposals to add procedure codes 00H001Z, 00H005Z, 00H031Z, and 00H041Z to the ''Chemotherapy Implant'' logic list in MS–DRGs 023 and 024 and to change the description of the logic list in MS–DRGs 023 and 024 from ''Chemotherapy Implant'' to ''Antineoplastic Implant'', effective October 1, 2025, for FY 2026.

Response: We appreciate the commenters' support.

After consideration of the public comments we received, we are finalizing our proposal to add procedure codes 00H001Z, 00H005Z, 00H031Z, and 00H041Z to the ''Chemotherapy Implant'' logic list in MS–DRGs 023 and 024, without modification, effective October 1, 2025, for FY 2026. We are also finalizing the change of the description of the logic list in MS–DRGs 023 and 024 from ''Chemotherapy Implant'' to ''Antineoplastic Implant''.

As mentioned previously, and as discussed in the FY 2026 IPPS/LTCH PPS proposed rule, we received three separate but related requests to review and reconsider the MS–DRG assignments for a subset of procedures assigned to MS–DRGs 023 through 027. The second and third request involve the MS–DRG assignment of cases reporting procedure codes describing the insertion of deep brain stimulators (DBS). Deep brain stimulation is a surgical treatment that involves the implantation of a neurostimulator, used in the treatment of essential tremor, Parkinson's disease, dystonia, epilepsy, obsessive-compulsive disorder and chronic pain. A DBS system consists of one or two leads that are placed stereotactically at defined targets deep within the brain via one or two burr holes created in the skull. The lead is then connected to an extension that is tunneled under the skin, down the neck, and connected to a programmable neurostimulator generator that is placed under the skin.

The second request we received was to reassign cases reporting the implantation of a DBS system from the lower (without MCC) severity level MS–DRG 024 to the higher (MCC) severity level MS–DRG 023, even if there is no MCC reported. The requestor suggested that if finalized, the title for MS–DRG 023 should be revised to reflect ''Craniotomy with Acute Complex Central Nervous System Principal Diagnosis with MCC or Chemotherapy Implant or Major Device Implant or Epilepsy with Neurostimulator.''

We stated in the proposed rule that the requestor performed their own analysis and stated they found that the majority of cases reporting the implantation of a DBS system are assigned to the lower severity level MS–DRG 024. The requestor also stated that in their analysis, the cases reporting the implantation of a DBS system assigned to MS–DRG 024 have average costs that are 20 percent greater than all cases in MS–DRG 024. The requestor asserted that reassigning cases reporting the implantation of a DBS system from the lower (without MCC) severity level MS–DRG 024 to the higher (with MCC) severity level MS–DRG 023, even if there is no MCC reported, would better recognize hospital resource utilization when the DBS systems are inserted.

We stated in the proposed rule that the requestor identified cases reporting the implantation of a DBS system by the presence of the following procedure code combinations:

- 0JH60DZ (Insertion of multiple array stimulator generator into chest subcutaneous tissue and fascia, open approach), in combination with 00H00MZ (Insertion of neurostimulator lead into brain, open approach);
- 0JH60DZ (Insertion of multiple array stimulator generator into chest subcutaneous tissue and fascia, open approach), in combination with 00H03MZ (Insertion of neurostimulator lead into brain, percutaneous approach);
- 0JH60EZ (Insertion of multiple array rechargeable stimulator generator into chest subcutaneous tissue and fascia, open approach), in combination with 00H00MZ (Insertion of neurostimulator lead into brain, open approach); and
- 0JH60EZ (Insertion of multiple array rechargeable stimulator generator into chest subcutaneous tissue and fascia, open approach), in combination with 00H03MZ (Insertion of neurostimulator lead into brain, percutaneous approach).

To begin our analysis, as discussed in the proposed rule, we again reviewed the GROUPER logic for MS–DRGs 023 and 024. The GROUPER logic for MS–DRGs 023 and 024 also contains 78 procedure code combinations representing the insertion of neurostimulator generator and a neurostimulator lead that are captured under a list referred to as ''Major Device Implant.'' The procedure codes describing the insertion of a neurostimulator generator on this list describe insertion of the neurostimulator generator into the subcutaneous areas of the chest, back, or abdomen, as well as into the skull. The procedure codes describing the insertion of a neurostimulator lead describe the insertion of the lead into the brain or the cerebral ventricle. We refer the reader to the ICD–10 MS–DRG Definitions Manual, Version 42.1 (available on the CMS website at: *https://www.cms.gov/medicare/payment/prospective-payment-systems/acute-inpatient-pps/ms-drg-classifications-and-software*) for complete documentation of the GROUPER logic for MS–DRGs 023 and 024.

In our analysis of this issue, we stated that we agree that the four procedure code combinations discussed previously that were identified by this requestor are included in the ''Major Device Implant'' logic list of MS–DRGs 023 and 024, but we noted in the proposed rule that 32 additional procedure code combinations exist on the ''Major Device Implant'' logic list that also describe the implantation of a DBS system by describing the insertion of a neurostimulator generator into the subcutaneous areas of the chest, back, or abdomen in combination with a code describing the insertion of a neurostimulator lead into the brain. We refer the reader to Table 6P.2a associated with the FY 2026 IPPS/LTCH PPS proposed rule (and available at: *https://www.cms.gov/medicare/payment/prospective-payment-systems/acute-inpatient-pps*) for the list of the 36 ICD–10–PCS procedure code combinations in the logic of MS–DRGs 023 and 024 in the ''Major Device Implant'' logic list that we identified that describe the implantation of a DBS system and therefore were included in our analysis.

We stated we then examined claims data from the September 2024 update of the FY 2024 MedPAR file for all cases in MS–DRGs 023 and 024 and compared the results to cases reporting the implantation of a DBS system by reporting a procedure code combination that describes the insertion of a neurostimulator generator into the subcutaneous areas of the chest, back, or abdomen in combination with a code describing the insertion of a neurostimulator lead into the brain. The following table shows our findings:

MS-DRGs 023 AND 024 – ALL CASES COMPARED TO CASES REPORTING THE INSERTION OF A DEEP BRAIN STIMULATION SYSTEM

MS-DRG	Number of Cases	Average Length of Stay	Average Costs
MS-DRG 023 - All cases	12,136	10	$51,132
Cases reporting the implantation of a DBS system	26	8.3	$81,947
MS-DRG 024 - All cases	4,624	5	$35,516
Cases reporting the implantation of a DBS system	432	1.7	$43,032

As shown in the table, for MS–DRG 023, we identified a total of 12,136 cases, with an average length of stay of 10 days and average costs of $51,132. Of the 12,136 cases in MS–DRG 023, there were 26 cases reporting the implantation of a DBS system with an average length of stay of 8.3 days and average costs of $81,947. For MS–DRG 024, we identified a total of 4,624 cases, with an average length of stay of 5 days and average costs of $35,516. Of the 4,624 cases in MS–DRG 024, there were 432 cases reporting the implantation of a DBS system with an average length of stay of 1.7 days and average costs of $43,032.

In the proposed rule, we stated we reviewed the claims data, and the data did not support reassignment of the cases reporting the implantation of a DBS system from MS–DRG 024 to MS–DRG 023 even if there is no MCC

reported. We stated the results of the claims analysis as previously summarized indicate the cases reporting the implantation of a DBS system, without reporting a secondary diagnosis designated as an MCC, that are currently assigned to MS–DRG 024, have average costs that are lower than the average costs of all cases in MS–DRG 023 ($43,032 compared to $51,132), and they have an average length of stay that is shorter (1.7 days compared to 10 days). While the average costs of these cases are higher than the average costs of all cases in MS–DRG 024 ($43,032 compared to $35,516), we stated we believe it would not be appropriate to reassign these cases into the higher severity level MS–DRG 023, even if there is no MCC reported, because the cases would not be coherent with regard to resource utilization. The cases reporting the implantation of a DBS system, without reporting a secondary diagnosis designated as an MCC, that are currently assigned to MS–DRG 024 have average costs that are $8,100 lower than the average costs of all cases in MS–DRG 023. Therefore, we did not propose to reassign cases reporting the implantation of a DBS system from the lower (without MCC) severity level MS–DRG 024 to the higher (with MCC) severity level MS–DRG 023, even if there is no MCC reported. However, while the analysis of the claims data did not support reassigning the cases reporting the implantation of a DBS system from the lower (without MCC) severity level MS–DRG 024 to the higher (MCC) severity level MS–DRG 023 even if there is no MCC reported, as discussed, we stated our analysis of the claims data found the average costs of the cases reporting the implantation of a DBS system are higher than all cases in their respective MS–DRGs, while the average lengths of stay are shorter. Accordingly, and as discussed later in this section, we stated we determined that further analysis of cases reporting the implantation of a DBS system is needed in conjunction with the separate but related requests we received to review the MS–DRG assignments for a subset of procedures also assigned to MS–DRGs 023 through 027 for the FY 2026 IPPS/LTCH PPS proposed rule to ensure clinical coherence between these cases and the other cases with which they may potentially be grouped.

The third request we received, as discussed in the proposed rule, was to have all cases reporting the concomitant insertion of a DBS generator and lead assigned to MS–DRGs 023 and 024. This requestor performed their own analysis and stated they found 76 claims reporting procedure codes describing the insertion of a DBS generator and a lead assigned to MS–DRGs 026 and 027 (Craniotomy and Endovascular Intracranial Procedures with CC, and without CC/MCC, respectively) and found that the average costs of these cases were 54% and 63% higher than the average of all cases in MS–DRGs 026 and 027, respectively. The requestor stated that placement of a complete DBS system, which requires placement of both the generator and the lead, during a single procedure, appears to be an efficacious and well-tolerated procedure. The requestor asserted that the relatively low reimbursement in MS–DRGs 026 and 027 can limit patient access to a single stage procedure.

This requestor identified cases reporting the implantation of a DBS system by the presence of the following procedure code combinations:

- 0JH60DZ (Insertion of multiple array stimulator generator into chest subcutaneous tissue and fascia, open approach), in combination with 00H00MZ (Insertion of neurostimulator lead into brain, open approach);
- 0JH60DZ (Insertion of multiple array stimulator generator into chest subcutaneous tissue and fascia, open approach), in combination with 00H03MZ (Insertion of neurostimulator lead into brain, percutaneous approach);
- 0JH60EZ (Insertion of multiple array rechargeable stimulator generator into chest subcutaneous tissue and fascia, open approach), in combination with 00H00MZ (Insertion of neurostimulator lead into brain, open approach); and
- 0JH60EZ (Insertion of multiple array rechargeable stimulator generator into chest subcutaneous tissue and fascia, open approach), in combination with 00H03MZ (Insertion of neurostimulator lead into brain, percutaneous approach);
- 0JH60BZ (Insertion of single array stimulator generator into chest subcutaneous tissue and fascia, open approach), in combination with 00H00MZ (Insertion of neurostimulator lead into brain, open approach); and
- 0JH60BZ (Insertion of single array stimulator generator into chest subcutaneous tissue and fascia, open approach), in combination with 00H03MZ (Insertion of neurostimulator lead into brain, percutaneous approach).

In the proposed rule, we stated to begin our analysis, we again reviewed the GROUPER logic for MS–DRG 023 and 024. As mentioned previously, the GROUPER logic for MS–DRGs 023 and 024 contains 78 procedure code combinations representing the insertion of neurostimulator generator and a neurostimulator lead that are captured under a list referred to as ''Major Device Implant.'' The procedure codes describing the insertion of a neurostimulator generator on this list describe insertion of the neurostimulator generator into the subcutaneous areas of the chest, back, or abdomen, as well as into the skull.

In reviewing this request, we noted in the proposed rule that the procedure code combinations in MS–DRG 023 and 024 captured under the ''Major Device Implant'' logic list that describe the insertion of a neurostimulator generator into the subcutaneous areas of the chest, back, or abdomen, all describe the insertion of a multiple array stimulator generator or a rechargeable multiple array stimulator generator. We further noted that procedure code combinations describing the insertion of a single array stimulator generator or a rechargeable single array stimulator generator into the subcutaneous areas of the chest, back, or abdomen and a neurostimulator lead are not captured under the ''Major Device Implant'' logic list, therefore MS–DRGs 025, 026, and 027 (Craniotomy and Endovascular Intracranial Procedures with MCC, with CC, and without CC/MCC, respectively) are assigned based on the reporting of the ICD–10–PCS procedure code describing the insertion of the neurostimulator into the brain. We refer the reader to the ICD–10 MS–DRG Definitions Manual, Version 42.1 (available on the CMS website at: *https://www.cms.gov/medicare/payment/prospective-payment-systems/acute-inpatient-pps/ms-drg-classifications-and-software*) for complete documentation of the GROUPER logic for MS–DRGs 023, 024, 025, 026, and 027.

In the proposed rule, we stated we identified 36 ICD–10–PCS procedure code combinations that would describe the implantation of a DBS system with a single array stimulator generator or a rechargeable single array stimulator generator and the insertion of a neurostimulator lead into the brain. We refer the reader to Table 6P.2b associated with the FY 2026 IPPS/LTCH PPS proposed rule and this final rule (available at: *https://www.cms.gov/medicare/payment/prospective-payment-systems/acute-inpatient-pps*) for the list of the 36 ICD–10–PCS procedure code combinations we identified that describe the implantation of a DBS system with a single array stimulator generator or a rechargeable single array stimulator generator and the insertion of a neurostimulator lead into the brain.

As discussed in the proposed rule, we then examined claims data from the September 2024 update of the FY 2024 MedPAR file for all cases in MS–DRGs 025, 026, and 027 and compared the results to cases reporting a procedure code combination that describes the insertion of a single array stimulator generator or a rechargeable single array stimulator generator into the subcutaneous areas of the chest, back, or abdomen in combination with a code describing the insertion of a neurostimulator lead into the brain. The following table shows our findings:

MS-DRGs 025, 026, AND 027 – ALL CASES COMPARED TO CASES REPORTING THE INSERTION OF A SINGLE ARRAY GENERATOR AND INSERTION OF NEUROSTIMULATOR LEAD INTO BRAIN			
MS-DRG	**Number of Cases**	**Average Length of Stay**	**Average Costs**
MS-DRG 025 - All cases	21,059	8.6	$40,215
Cases reporting the insertion of a single array generator and insertion of neurostimulator lead into brain	5	5	$73,168
MS-DRG 026 - All cases	5,833	4.1	$28,404
Cases reporting the insertion of a single array generator and insertion of neurostimulator lead into brain	25	2.3	$42,002
MS-DRG 027 - All cases	7,049	1.9	$23,059
Cases reporting the insertion of a single array generator and insertion of neurostimulator lead into brain	78	1.4	$39,381

As shown in the table, for MS–DRG 025, we identified a total of 21,059 cases, with an average length of stay of 8.6 days and average costs of $40,215. Of those 21,059 cases, there were 5 cases reporting the insertion of a single array generator and insertion of neurostimulator lead into brain with average costs higher than the average costs in the FY 2024 MedPAR file for MS–DRG 025 ($73,168 compared to $40,215) and a shorter average length of stay (5 days compared to 8.6 days). In MS–DRG 026, we identified a total of 5,833 cases, with an average length of stay of 4.1 days and average costs of $28,404. Of the 5,833 cases in MS–DRG 026, there were 25 cases reporting the insertion of a single array generator and insertion of neurostimulator lead into brain with average costs higher than the average costs in the FY 2024 MedPAR file for MS–DRG 026 ($42,002 compared to $28,404) and a shorter average length of stay (2.3 days compared to 4.1 days). In MS–DRG 027, we identified a total of 7,049 cases, with an average length of stay of 1.9 days and average costs of $23,059. Of the 7,049 cases in MS–DRG 027, there were 78 cases reporting the insertion of a single array generator and insertion of neurostimulator lead into brain with average costs higher than the average costs in the FY 2024 MedPAR file for MS–DRG 027 ($39,381 compared to $23,059) and a shorter average length of stay (1.4 days compared to 1.9 days). As the data show, the cases in MS–DRGs 025, 026, and 027 reporting the insertion of a single array generator and insertion of neurostimulator lead into brain have average costs that are higher than the average costs of all cases in their respective MS–DRGs.

We reviewed the clinical issues and noted in the proposed rule a deep brain stimulator typically has one or two leads implanted in the brain, depending on whether one or both sides of the brain need treatment. A single array stimulator generator has one port where one lead can be connected. A multiple array stimulator generator has two or more ports where two or more leads can be connected. We stated we believe the procedure code combinations that describe the insertion of a single array stimulator generator or a rechargeable single array stimulator generator into the subcutaneous areas of the chest, back, or abdomen in combination with a code describing the insertion of a neurostimulator lead into the brain are clinically coherent with the procedure code combinations in MS–DRG 023 and 024 captured under the ''Major Device Implant'' logic list that describe the insertion of a multiple array stimulator generator or a rechargeable multiple array stimulator generator into the subcutaneous areas of the chest, back, or abdomen in combination with a code describing the insertion of a neurostimulator lead into the brain.

As discussed in the proposed rule, to determine how the resources for this subset of cases compared to cases in MS–DRGs 023 and 024 as a whole, we examined the average costs and length of stay for cases in MS–DRGs 023 and 024. Our findings are shown in this table.

MS-DRG	Number of Cases	Average Length of Stay	Average Costs
MS-DRG 023--All cases	12,136	10	$51,132
MS-DRG 024--All cases	4,624	5	$35,516

We reviewed the data and noted in the proposed rule the cases in MS–DRGs 025, 026, and 027 reporting the insertion of a single array generator and insertion of neurostimulator lead into brain have average costs that are higher and the average length of stay is shorter than all cases in MS–DRGs 023 and 024. We stated we agree with the requestor that cases reporting the insertion of a single array generator and insertion of neurostimulator lead into brain are more resource intensive and are clinically distinct from other cases currently assigned to MS–DRGs 025, 026, and 027. However, we stated we did not believe proposing to reassign all cases reporting the procedure code combination describing a single array generator and insertion of neurostimulator lead into brain to MS–DRGs 023 and 024 would fully address the difference in resource utilization in these cases.

To explore other mechanisms to address this request, we stated we then reexamined the separate but related requests discussed previously to review the MS–DRG assignments for a subset of procedures assigned to MS–DRGs 023

through 027. In examining these requests, we noted in the proposed rule that the first request was to reassign cases involving ''chemotherapy implants'' and cases involving ''epilepsy with neurostimulator'' from MS–DRG 023 and to create a new MS–DRG for these cases. While analysis of the claims data did not support creating a new MS–DRG for cases reporting the insertion of a chemotherapy implant and cases describing a neurostimulator generator inserted into the skull with the insertion of a neurostimulator lead into the brain (including cases involving the use of the RNS® neurostimulator) and a principal diagnosis of epilepsy, we stated in the proposed rule that our analysis of that request found cases describing a neurostimulator generator inserted into the skull with the insertion of a neurostimulator lead into the brain (including cases involving the use of the RNS® neurostimulator) and a principal diagnosis of epilepsy have average costs that are higher than the average costs of all cases in MS–DRG 023, with a shorter average length of stay.

The second request we received was to reassign cases reporting the implantation of a DBS system from the lower (without MCC) severity level MS–DRG 024 to the higher (MCC) severity level MS–DRG 023 even if there is no MCC reported. While analysis of the claims data did not support reassigning the cases reporting the implantation of a DBS system from the lower (without MCC) severity level MS–DRG 024 to the higher (MCC) severity level MS–DRG 023 even if there is no MCC reported, we stated our analysis of that request found the average costs of the cases reporting the implantation of a DBS system are higher than all cases in their respective MS–DRGs, while the average lengths of stay are shorter. Lastly, our analysis of the third request demonstrates the cases reporting the insertion of a single array generator and insertion of neurostimulator lead into brain have average costs that are higher than the average costs of all cases in their respective MS–DRGs, while the average lengths of stay are shorter.

As discussed in the proposed rule, we reviewed these issues and noted intracranial neurostimulator implants, such as deep brain stimulators and RNS® neurostimulators, are similar in that these intracranial neurostimulators are implanted surgically and include placement of a neurostimulator generator and insertion of leads into specific brain regions to deliver electrical stimulation. Additionally, we stated that based on our data analysis, cases reporting the insertion of intracranial neurostimulator implants are clinically coherent in that they are similar in terms of technical complexity and hospital resource use as reflected by the similarity in average costs and average lengths of stay.

We stated we explored creating a new base MS–DRG for cases reporting the insertion of an intracranial neurostimulator implant and compared the analysis discussed previously using the claims data from the September 2024 update of the FY 2024 MedPAR file. The following table illustrates our findings for all 654 cases reporting procedure codes describing the insertion of an intracranial neurostimulator implant.

CASES REPORTING THE INSERTION OF AN INTRACRANIAL NEUROSTIMULATOR IMPLANT			
	Number of Cases	**Average Length of Stay**	**Average Costs**
Cases with principal diagnosis of epilepsy with neurostimulator generator inserted into the skull and insertion of a neurostimulator lead into brain	68	2.4	$66,303
Cases reporting the implantation of a DBS system (insertion of a multiple array generator and insertion of neurostimulator lead into brain) – with MCC	26	8.3	$81,947
Cases reporting the insertion of a multiple array generator and insertion of neurostimulator lead into cerebral ventricle – with MCC	1	9	$44,475
Cases reporting the insertion of a single array generator and insertion of neurostimulator lead into brain – with MCC	5	5	$73,168
Cases reporting the insertion of a multiple array generator and insertion of neurostimulator lead into cerebral ventricle – with CC	5	2.2	$81,517
Cases reporting the insertion of a single array generator and insertion of neurostimulator lead into brain – with CC	25	2.3	$42,002
Cases reporting the implantation of a DBS system (insertion of a multiple array generator and insertion of neurostimulator lead into brain) – without MCC	432	1.7	$43,032
Cases reporting the insertion of a multiple array generator and insertion of neurostimulator lead into cerebral ventricle – without CC/MCC	14	1.7	$48,258
Cases reporting the insertion of a single array generator and insertion of neurostimulator lead into brain – without CC/MCC	78	1.4	$39,381
Total	**654**	**2.1**	**$47,163**

In the proposed rule we stated we reviewed these data and did not believe proposing a new base MS–DRG for these cases would better reflect hospital resource use. Because there were only 654 cases identified, the analysis demonstrates both a three-way and a two-way split of a new base MS–DRG would fail the criterion that there be at least 500 cases for each subgroup. The analysis also demonstrates the cases reporting a principal diagnosis of epilepsy with neurostimulator generator inserted into the skull and insertion of a neurostimulator lead into brain, and cases reporting the insertion of a single or multiple array generator with a secondary diagnosis designated as an

MCC, would continue to have average costs that are higher when compared to all other cases reporting the insertion of an intracranial neurostimulator implant in a new MS–DRG. We therefore explored an alternative mechanism to address these requests.

We noted in the proposed rule that in the FY 2018 IPPS/LTCH PPS final rule (82 FR 38015 through 38019), the FY 2021 IPPS/LTCH PPS final rule (85 FR 58459 through 58462) and the FY 2024 IPPS/LTCH PPS final rule (88 FR 58661 through 58667), we discussed requests we received to reassign cases describing the insertion of a neurostimulator generator into the skull in combination with the insertion of a neurostimulator lead into the brain from MS–DRG 023 to MS–DRG 021 (Intracranial Vascular Procedures with Principal Diagnosis Hemorrhage with CC). While acknowledging the cases in MS–DRG 023 describing a neurostimulator generator inserted into the skull with the insertion of a neurostimulator lead into the brain (including cases involving the use of the RNS® neurostimulators) and a principal diagnosis of epilepsy have average costs that are similar to the average costs of cases in MS–DRG 021, we have stated we did not support reassigning the cases describing a neurostimulator generator inserted into the skull with the insertion of a neurostimulator lead into the brain (including cases involving the use of the RNS® neurostimulators) and a principal diagnosis of epilepsy from MS–DRG 023 to MS–DRGs 020, 021, and 022 (Intracranial Vascular Procedures with Principal Diagnosis Hemorrhage, with MCC, with CC, without CC/MCC, respectively), as the cases in MS–DRGs 020, 021, and 022 are defined by a principal diagnosis of a hemorrhage. We stated that RNS® neurostimulators are not used to treat patients with diagnosis of hemorrhage and that we believe that it is inappropriate to reassign cases representing a principal diagnosis of epilepsy to a MS–DRG that contains cases that represent the treatment of intracranial hemorrhage.

However, after further consideration, to explore other mechanisms to address this request, we stated in the proposed rule we examined MS–DRGs 020, 021, and 022 to reconsider the possibility of reassigning the cases reporting the insertion of an intracranial neurostimulator implant as we have been unable to identify another MS–DRG in MDC 01 that would be a more appropriate MS–DRG assignment for these cases based on the indication for and complexity of the procedures.

As discussed in the proposed rule, the GROUPER logic for MS–DRGs 020, 021, and 022 contains a list of procedure codes describing intracranial vascular procedures that are captured under a logic list referred to as ''Intracranial Vascular Procedures'' and a list of diagnosis codes describing a diagnosis of a hemorrhage that are captured under a logic list referred to as ''Hemorrhage Principal Diagnosis.'' We noted in the proposed rule that during our review of MS–DRGs 020, 021, and 022, we identified 57 ICD–10–PCS procedure codes describing the intracranial vascular procedures and 66 diagnosis codes describing a diagnosis of intracranial hemorrhage that were inadvertently excluded from these logic lists. We refer the reader to Table 6P.2c and Table 6P.2d associated with the FY 2026 IPPS/LTCH PPS proposed rule (and available at: *https://www.cms.gov/medicare/medicare-fee-for-service-payment/acuteinpatientpps*) for the lists of the 57 ICD–10–PCS procedure codes and 66 ICD–10–CM diagnosis codes that we identified.

As these 57 procedure codes describe intracranial vascular procedures and the 66 diagnosis codes describe a diagnosis of intracranial hemorrhage, in the proposed rule we stated we believe these codes are clinically aligned with the codes currently included in the ''Intracranial Vascular Procedures'' and the ''Hemorrhage Principal Diagnosis'' logic lists, respectively in MS–DRGs 020, 021, and 022. Therefore, for clinical consistency we proposed to add the 57 procedure codes to the ''Intracranial Vascular Procedures'' logic list, and the 66 diagnosis codes to the ''Hemorrhage Principal Diagnosis'' logic list of MS–DRGs 020, 021, and 022, effective October 1, 2025, for FY 2026.

As discussed in the proposed rule, in reviewing the claims data from the September 2024 update of the FY 2024 MedPAR file and examining the clinical considerations, we stated we believe that the cases reporting the insertion of an intracranial neurostimulator implant could more suitably group to MS–DRGs 020, 021, and 022 and would lead to a grouping that is more coherent and better reflects the clinical severity and resource use involved in these cases. While we previously have stated that we believe it would be inappropriate to reassign cases representing a principal diagnosis of epilepsy to a MS–DRG that contains cases that represent the treatment of intracranial hemorrhage, after further consideration, we stated we no longer believe maintaining a difference in assignment based on the indication is warranted in this subset of cases based on the fact that both treatments involve intracranial procedures and demonstrate comparable resource utilization.

In the proposed rule, we stated we also believe that cases reporting the insertion of an intracranial neurostimulator implant, regardless of principal diagnosis, share similar resource utilization such that it is no longer necessary to subdivide these cases based on the diagnosis codes reported. Accordingly, we stated that we believe it is appropriate to remove the special logic defined as ''Epilepsy Principal Diagnosis'' from the definition for assignment to the proposed modified MS–DRGs, as the cases can be appropriately grouped along with cases reporting any MDC 01 diagnosis when reported with qualifying procedures, as part of the proposed restructured MS–DRGs.

Therefore, we proposed to add 114 procedure code combinations to a new ''Intracranial Neurostimulator Implant'' logic list in MS–DRGs 020, 021, and 022 that describe (1) the insertion of multiple or single array neurostimulator generators with the insertion of a neurostimulator lead into the brain or the cerebral ventricle and (2) the insertion of neurostimulator generator inserted into the skull with the insertion of a neurostimulator lead into the brain. We also proposed to delete the ''Major Device Implant,'' ''Epilepsy Principal Diagnosis,'' ''Neurostimulator'' logic lists from MS–DRGs 023 and 024. We refer the reader to Table 6P.2e associated with the FY 2026 IPPS/LTCH PPS proposed rule (and available at: *https://www.cms.gov/medicare/payment/prospective-payment-systems/acute-inpatient-pps*) for the list of the 114 ICD–10–PCS procedure code combinations we proposed to add to a new ''Intracranial Neurostimulator Implant'' logic list in MS–DRGs 020, 021, and 022.

To compare and analyze the impact of these potential modifications, as discussed in the proposed rule, we ran a simulation using the claims data from the September 2024 update of the FY 2024 MedPAR file. The following table reflects the simulation of our proposed changes in MS–DRGs 020, 021, and 022.

MS-DRG		Number of Cases	Average Length of Stay	Average Cost
020	All Cases	2,322	12.5	$71,916
	-- add cases reporting procedure codes describing the insertion of an intracranial neurostimulator implant	100	4.1	$70,495
	-- add cases reporting one of the 57 procedure codes describing an intracranial vascular procedure with one of the 66 diagnosis codes describing hemorrhage as principal diagnosis	140	13.6	$73,810
	Intracranial Vascular Procedures with Principal Diagnosis Hemorrhage or Intracranial Neurostimulator Implant with MCC	**2,562**	**12.2**	**$71,964**
021	All Cases	642	7.8	$48,421
	-- add cases reporting procedure codes describing the insertion of an intracranial neurostimulator implant	134	2.2	$47,421
	-- add cases reporting one of the 57 procedure codes describing an intracranial vascular procedure with one of the 66 diagnosis codes describing hemorrhage as principal diagnosis	45	9.3	$54,617
	Intracranial Vascular Procedures with Principal Diagnosis Hemorrhage or Intracranial Neurostimulator Implant with CC	**821**	**7**	**$48,597**
022	All Cases	385	2.4	$28,243
	-- add cases reporting procedure codes describing the insertion of an intracranial neurostimulator implant	420	1.5	$41,525
	-- add cases reporting one of the 57 procedure codes describing an intracranial vascular procedure with one of the 66 diagnosis codes describing hemorrhage as principal diagnosis	1	1	$24,744
	Intracranial Vascular Procedures with Principal Diagnosis Hemorrhage or Intracranial Neurostimulator Implant without CC/MCC	**806**	**1.9**	**$35,160**

In the proposed rule, we stated we believe that this simulation supports that the resulting MS–DRG assignments would be more clinically homogeneous, coherent, and better reflect hospital resource use. As the table shows, for MS–DRG 020, there were a total of 2,322 cases with an average length of stay of 12.5 days and average costs of $71,916. For MS–DRG 021, there were a total of 642 cases with an average length of stay of 7.8 days and average costs of $48,421. For MS–DRG 022, there were a total of 385 cases with an average length of stay of 2.4 days and average costs of $28,243. We stated that a review of this simulation shows that adding a new ''Intracranial Neurostimulator Implant'' logic list, while also adding 57 procedure codes to the ''Intracranial Vascular Procedures'' logic list, and 66 diagnosis codes to the ''Hemorrhage Principal Diagnosis'' logic list in MS–DRGs 020, 021 and 022 has a limited effect on the average costs of these MS–DRGs, while leading to a grouping that is more coherent and better reflects the clinical severity and resource use involved in these cases.

In summary, for FY 2026, to more appropriately reflect utilization of resources for these procedures, we proposed to add 114 procedure code combinations to a new ''Intracranial Neurostimulator Implant'' logic list in MS–DRGs 020, 021, and 022 that describe (1) the insertion of multiple or single array neurostimulator generators with the insertion of a neurostimulator lead into the brain or the cerebral ventricle and (2) the insertion of neurostimulator generator inserted into the skull with the insertion of a neurostimulator lead into the brain. We also proposed to add 57 procedure codes to the ''Intracranial Vascular Procedures'' logic list, and 66 diagnosis codes to the ''Hemorrhage Principal Diagnosis'' logic list of MS–DRGs 020, 021, and 022.

Additionally, we also proposed to delete the ''Major Device Implant,'' ''Epilepsy Principal Diagnosis,'' ''Neurostimulator'' logic lists from MS–DRGs 023 and 024. Lastly, for consistency, we proposed to change the titles of MS–DRGs 020, 021, and 022 from ''Intracranial Vascular Procedures with Principal Diagnosis Hemorrhage with MCC, with CC, and without CC/MCC, respectively'' to ''Intracranial Vascular Procedures with Principal Diagnosis Hemorrhage or Intracranial Neurostimulator Implant with MCC, with CC, and without CC/MCC, respectively,'' proposed to change the title of MS–DRG 023 from ''Craniotomy with Major Device Implant or Acute Complex Central Nervous System Principal Diagnosis with MCC or Chemotherapy Implant or Epilepsy with Neurostimulator'' to ''Craniotomy with Acute Complex Central Nervous System Principal Diagnosis with MCC or Antineoplastic Implant,'' and proposed to change the title of MS–DRG 024 from ''Craniotomy with Major Device Implant or Acute Complex Central Nervous System Principal Diagnosis without MCC'' to ''Craniotomy with Acute Complex Central Nervous System Principal Diagnosis without MCC'' to better reflect the assigned procedures effective October 1, 2025, for FY 2026.

Comment: Commenters supported the proposal to add the 57 procedure codes to the ''Intracranial Vascular Procedures'' logic list, and the 66 diagnosis codes to the ''Hemorrhage Principal Diagnosis'' logic list of MS–DRGs 020, 021, and 022, effective October 1, 2025, for FY 2026.

Response: We appreciate the commenters' support.

Comment: Several commenters supported our proposal to add 114 procedure code combinations to a new ''Intracranial Neurostimulator Implant'' logic list in MS–DRGs 020, 021, and 022 that describe (1) the insertion of multiple or single array neurostimulator generators with the insertion of a neurostimulator lead into the brain or the cerebral ventricle and (2) the insertion of neurostimulator generator inserted into the skull with the insertion of a neurostimulator lead into the brain. A few commenters expressed gratitude to CMS for its thorough analysis and fully supported the proposal, urging CMS to finalize it in its current form. A

commenter specifically stated that this proposal supports their longstanding goal of providing more appropriate payment levels for hospitals furnishing intracranial vascular procedures that are assigned to MS–DRGs 020, 021, and 022 after multiple years of payment declines. Another commenter stated that the proposal recognizes the similarities in clinical characteristics associated with deep brain stimulators for Parkinson's disease, essential tremor, epilepsy, and dystonia and stated that the proposed reassignments better represent the resource utilization associated with inserting a full deep brain stimulator system.

Many other commenters expressed their concerns with the proposals. Some commenters noted that procedure code 00H004Z (Insertion of radioactive element, cesium-131 collagen implant into brain, open approach) is included in the Chemotherapy Implant logic list of MS–DRG 023 and suggested that this assignment does not accurately reflect the increased resources required to perform procedures involving the insertion of radioactive implants. Several commenters stated that with CMS' proposed reassignment of neurostimulator cases out of MS–DRG 023, these procedures involving the insertion of radioactive implants will be grouped with acute complex central nervous system (CNS) procedures, and this grouping is clinically inconsistent, as the majority of acute CNS cases describe conditions treated without implanted devices. Other commenters stated that while procedures involving the insertion of radioactive implants and procedures involving the introduction of chemotherapy both involve the delivery of either radiation or chemotherapy directly after tumor resection, the overall care pathway and resources associated with the episodes of care are dramatically different. These commenters stated that procedures involving the insertion of radioactive implants are more aligned with major device implant procedures than with the acute complex CNS cases that will remain in MS–DRG 023. Another commenter stated they performed their own analysis and stated that they found that procedures involving the insertion of radioactive implants have consistently demonstrated higher resource use than antineoplastic chemotherapy implant cases across two consecutive years of MedPAR data and are more closely aligned with cases assigned to MS–DRGs 020, 021 and 022. These commenters recommended that cases reporting procedure code 00H004Z, such as cases involving GammaTile®, which is a surgically implanted brachytherapy device used to treat patients with malignant brain tumors, be assigned to MS–DRGs 020, 021, and 022.

Other commenters expressed concerns with the proposal to reassign cases describing a neurostimulator generator inserted into the skull with the insertion of a neurostimulator lead into the brain (including cases involving the use of the RNS® neurostimulator) with a principal diagnosis of epilepsy from MS–DRG 023 to MS–DRGs 020, 021, and 022. These commenters stated that this proposal would have devastating impacts on hospital payment, which in turn would impact the ability of hospitals to continue to offer the RNS® neurostimulator to Medicare beneficiaries. While thanking CMS for continuing to explore solutions to better align the resource utilization of epilepsy with neurostimulator cases, some commenters stated the proposed reassignment would result in a greater misalignment of hospital costs, resulting in a significant reduction in hospital payment for the vast majority of epilepsy with neurostimulator cases. A commenter specifically stated that they performed their own analysis and found that most epilepsy with neurostimulator cases do not report a secondary diagnosis designated as an MCC, therefore reassigning these cases to MS–DRGs 020, 021, and 022 without maintaining the ''Epilepsy Principal Diagnosis,'' ''Neurostimulator'' logic lists in these MS–DRGs will have the opposite effect and will decrease hospital payments even further. Many commenters requested that CMS modify its current proposal and assign all cases describing a neurostimulator generator inserted into the skull with the insertion of a neurostimulator lead into the brain (including cases involving the use of the RNS® neurostimulator) with a principal diagnosis of epilepsy to MS–DRG 020 even if there is no MCC reported.

Response: We appreciate the commenters' feedback and thank the commenters for sharing their concerns.

In response to the commenters' concerns that finalizing our proposal could adversely affect cases reporting procedure code 00H004Z and cases reporting a neurostimulator generator inserted into the skull with the insertion of a neurostimulator lead into the brain (including cases involving the use of the RNS® neurostimulator) and a principal diagnosis of epilepsy, we performed additional analysis of these cases. As discussed in the preamble of the proposed rule, MS–DRGs 023 and 024 contain a logic list referred to as ''Chemotherapy Implant.'' This logic list includes four ICD–10–PCS codes: 00H004Z (Insertion of radioactive element, cesium-131 collagen implant into brain, open approach), 3E0Q005 (Introduction of other antineoplastic into cranial cavity and brain, open approach), 3E0Q305 (Introduction of other antineoplastic into cranial cavity and brain, percutaneous approach), and 3E0Q705 (Introduction of other antineoplastic into cranial cavity and brain, via natural or artificial opening). In our analysis discussed in the proposed rule, we examined claims data from the September 2024 update of the FY 2024 MedPAR file for all cases in MS–DRG 023 and compared the results to cases reporting one of the four procedure codes that appear under the ''Chemotherapy Implant'' logic list in MS–DRG 023.

To evaluate the commenters' concerns regarding cases involving the insertion of radioactive implants, we further examined claims data from the September 2024 update of the FY 2024 MedPAR file for all cases in MS–DRG 023 and compared the results to cases reporting procedure code 00H004Z specifically. The following table shows our findings:

MS-DRG 023	Number of Cases	Average Length of Stay	Average Costs
All cases	12,136	10	$51,132
Cases reporting procedure code 00H004Z	111	5.5	$53,666

As shown in the table, for MS–DRG 023, we identified a total of 12,136 cases, with an average length of stay of 10 days and average costs of $51,132. Of the 12,136 cases in MS DRG 023, there were 111 cases reporting procedure

code 00H004Z with an average length of stay of 5.5 days and average costs of $53,666.

Because all cases reporting a procedure code included in the logic list referred to as ''Chemotherapy Implant'' are assigned to the higher severity level (with MCC) MS–DRG 023 and there is a three-way split within MS–DRGs 020, 021, and 022, we next analyzed the 111 cases reporting a procedure code 00H004Z in MS–DRG 023 for the presence or absence of a secondary diagnosis designated as a complication or comorbidity (CC) or a major complication or comorbidity (MCC).

MS-DRG		Number of Cases	Average Length of Stay	Average Costs
023	Cases reporting procedure code 00H004Z with a secondary diagnosis code designated as an MCC	77	6.5	$57,820
	Cases reporting procedure code 00H004Z with a secondary diagnosis code designated as a CC	23	3.5	$46,741
	Cases reporting procedure code 00H004Z without a secondary diagnosis code designated as a CC or an MCC	11	2.1	$39,075

We then examined claims data from the September 2024 update of the FY 2024 MedPAR file for MS–DRGs 020, 021, and 022. Our findings are shown in the following table.

MS-DRG	Number of Cases	Average Length of Stay	Average Costs
020	2,322	12.5	$71,916
021	642	7.8	$48,421
022	385	2.4	$28,243

As shown in the table, the data analysis performed indicates that the 77 cases in MS–DRG 023 reporting procedure code 00H004Z with a secondary diagnosis code designated as an MCC have a shorter average length of stay (6.5 days versus 12.5 days) and lower average costs ($57,820 versus $71,916) when compared to all the cases in MS–DRG 020. The 23 cases in MS–DRG 023 reporting procedure code 00H004Z with a secondary diagnosis code designated as an CC have a shorter average length of stay (3.5 days versus 7.8 days) and lower average costs ($46,741 versus $48,421) when compared to all the cases in MS–DRG 021. The 11 cases in MS–DRG 023 reporting procedure code 00H004Z without a secondary diagnosis code designated as an CC or an MCC have a shorter average length of stay (2.1 days versus 2.4 days) and higher average costs ($39,075 versus $28,243) when compared to all the cases in MS–DRG 022. These data reflect when distributed based on the presence or absence of a secondary diagnosis designated as a CC or an MCC, the 111 cases in MS–DRG 023 reporting procedure code 00H004Z have lower average costs and shorter lengths of stay than the cases in the FY 2024 MedPAR file for MS–DRGs 020 and 021 while having higher average costs and shorter lengths of stay than the cases in MS–DRG 022.

While the 111 cases reporting procedure code 00H004Z have average costs that are higher than the average costs of all cases in their currently assigned MS–DRG 023 ($53,666 versus $51,132), we do not believe it would be appropriate to reassign the cases reporting procedure code 00H004Z to MS–DRG 020, 021, and 022 as the cases are not clinically coherent with regard to resource utilization as reflected in the difference in average costs when distributed based on the presence or absence of a secondary diagnosis designated as a CC or an MCC.

We then performed a similar analysis for the cases describing a neurostimulator generator inserted into the skull with the insertion of a neurostimulator lead into the brain (including cases involving the use of the RNS® neurostimulator) and a principal diagnosis of epilepsy. As discussed in the proposed rule, for MS–DRG 023, there were 68 cases describing a neurostimulator generator inserted into the skull with the insertion of a neurostimulator lead into the brain (including cases involving the use of the RNS® neurostimulator) and a principal diagnosis of epilepsy with an average length of stay of 2.4 days and average costs of $66,303. Because all cases describing a neurostimulator generator inserted into the skull with the insertion of a neurostimulator lead into the brain (including cases involving the use of the RNS® neurostimulator) and a principal diagnosis of epilepsy are assigned to the higher severity level (with MCC) MS–DRG 023 and there is a three-way split within MS–DRGs 020, 021, and 022, next we analyzed the 68 cases describing a neurostimulator generator inserted into the skull with the insertion of a neurostimulator lead into the brain (including cases involving the use of the RNS® neurostimulator) and a principal diagnosis of epilepsy in MS–DRG 023 for the presence or absence of a secondary diagnosis designated as a complication or comorbidity (CC) or a major complication or comorbidity (MCC).

MS-DRG		Number of Cases	Average Length of Stay	Average Costs
023	Cases with a principal diagnosis of epilepsy and a secondary diagnosis code designated as an MCC with a neurostimulator generator inserted into the skull and insertion of a neurostimulator lead into brain	9	4.6	$66,945
	Cases with a principal diagnosis of epilepsy and a secondary diagnosis code designated as a CC with a neurostimulator generator inserted into the skull and insertion of a neurostimulator lead into brain	23	2.6	$76,648
	Cases with a principal diagnosis of epilepsy without a secondary diagnosis code designated as a CC or an MCC with a neurostimulator generator inserted into the skull and insertion of a neurostimulator lead into brain	36	1.8	$59,534

The data analysis performed indicates that the 9 cases in MS–DRG 023 reporting a principal diagnosis of epilepsy and a secondary diagnosis code designated as an MCC with a neurostimulator generator inserted into the skull and insertion of a neurostimulator lead into brain have a shorter average length of stay (4.6 days versus 12.5 days) and lower average costs ($66,945 versus $71,916) when compared to all the cases in MS–DRG 020. The 23 cases in MS–DRG 023 reporting a principal diagnosis of epilepsy and a secondary diagnosis code designated as a CC with a neurostimulator generator inserted into the skull and insertion of a neurostimulator lead into brain have a shorter average length of stay (2.6 days versus 7.8 days) and higher average costs ($76,648 versus $48,421) when compared to all the cases in MS–DRG 021. The 36 cases in MS–DRG 023 reporting a principal diagnosis of epilepsy without a secondary diagnosis code designated as a CC or an MCC with a neurostimulator generator inserted into the skull and insertion of a neurostimulator lead into brain have a shorter average length of stay (1.8 days versus 2.4 days) and higher average costs ($59,534 versus $28,243) when compared to all the cases in MS–DRG 022.

As shown in the table, when distributed based on the presence or absence of a secondary diagnosis designated as a CC or an MCC, the 68 cases in MS–DRG 023 reporting a principal diagnosis of epilepsy with a neurostimulator generator inserted into the skull and insertion of a neurostimulator lead into brain have higher average costs and shorter lengths of stay than the cases in the FY 2024 MedPAR file for MS–DRGs 021 and 022 while having lower average costs and shorter lengths of stay than the cases in MS–DRG 020. We note, similar to the commenters' analysis, our analysis using the September 2024 update of the FY 2024 MedPAR file reflects that the majority of the cases (36) describing a neurostimulator generator inserted into the skull with the insertion of a neurostimulator lead into the brain (including cases involving the use of the RNS® neurostimulator) and a principal diagnosis of epilepsy do not also report secondary diagnoses designated as CCs or MCCs.

While the 68 cases reporting a principal diagnosis of epilepsy with a neurostimulator generator inserted into the skull and insertion of a neurostimulator lead into brain have average costs that are higher than the average costs of all cases in their currently assigned MS–DRG 023 ($66,303 versus $51,132), the data indicate that the difference in average costs is $12,382 ($71,916 − $59,534 = $12,382) for the majority of the cases which describe a neurostimulator generator inserted into the skull with the insertion of a neurostimulator lead into the brain (including cases involving the use of the RNS® neurostimulator) and a principal diagnosis of epilepsy without reporting a secondary diagnosis code designated as a CC or an MCC in MS–DRG 023 when compared to all the cases in MS–DRG 020. We do not believe it would be appropriate to reassign all cases reporting a principal diagnosis of epilepsy with a neurostimulator generator inserted into the skull and insertion of a neurostimulator lead into the brain to the highest severity level (with MCC) MS DRG 020 as the majority of the cases are not clinically coherent with regard to resource utilization as reflected in the difference in average costs.

After consideration of the public comments we received, and for the reasons discussed, we believe that further analysis of cases reporting the insertion of a radioactive element into the brain and cases reporting a neurostimulator generator inserted into the skull with the insertion of a neurostimulator lead into the brain (including cases involving the use of the RNS® neurostimulator) and a principal diagnosis of epilepsy is needed prior to generally finalizing further reassignment of these cases to ensure clinical and resource coherence between these cases and the other cases with which they may potentially be grouped. Accordingly, we believe it would be appropriate to take additional time to examine the relevant clinical factors and similarities in resource consumption in order to best represent these subsets of patients within the MS–DRG classification and improve the overall accuracy of the IPPS payments.

CMS appreciates the comments submitted in response to our proposal as discussed in the FY 2026 IPPS/LTCH PPS proposed rule. We continue to be attuned to the requestors' and the commenters' concerns about payment for cases reporting procedure codes describing the insertion of the RNS® neurostimulator, the implantation of a DBS system, or the insertion of antineoplastic implants and note that our work in this area is ongoing. As stated in prior rulemaking, we recognize the logic for MS–DRGs 020 through 027 has grown more complex over the years and continue to believe there is an opportunity for further refinement. As discussed in the FY 2024 IPPS/LTCH PPS final rule (88 FR 58661 through 58667), we have begun to analyze the ICD–10 coded claims data to determine if the patients' diagnoses, the objective of the procedure performed, the specific anatomical site where the procedure is performed or the surgical approach used (for example, open, percutaneous, percutaneous endoscopic, among others) demonstrates a greater severity of illness and/or increased treatment difficulty as we consider where further refinements could potentially be made to better account for differences in the technical complexity and resource utilization among the procedures that are currently assigned to MS–DRGs 020 through 027, including how to better

align the clinical indications with the performance of specific intracranial procedures. CMS will continue to monitor and analyze the claims data with respect to MS–DRGs 020 through 027 as we further examine the logic for case assignment to the craniotomy MS–DRGs and we will continue to consider these issues as we develop potential future rulemaking proposals. Feedback and other suggestions on what other factors should be considered in a potential restructuring of these MS–DRGs may continue to be directed to MEARIS™, discussed in section II.C.1.b. of the preamble of this final rule at: *https://mearis.cms.gov/public/home*.

In summary, for FY 2026, after consideration of the public comments we received and for the reasons discussed, we are generally not finalizing our proposed changes to the assignment of the cases reporting the insertion of an intracranial neurostimulator implant, other than the changes described in more detail in the discussion that follows.

For FY 2026, cases reporting a neurostimulator generator inserted into the skull with the insertion of a neurostimulator lead into the brain (including cases involving the use of the RNS® neurostimulator) and a principal diagnosis of epilepsy will be maintained in MS–DRG 023. We are not finalizing our proposal to add 114 procedure code combinations to a ''Intracranial Neurostimulator Implant'' logic list in MS–DRGs 020, 021, and 022 that describe (1) the insertion of multiple or single array neurostimulator generators with the insertion of a neurostimulator lead into the brain or the cerebral ventricle and (2) the insertion of neurostimulator generator inserted into the skull with the insertion of a neurostimulator lead into the brain. Accordingly, the ''Major Device Implant,'' ''Epilepsy Principal Diagnosis,'' ''Neurostimulator'' logic lists will be maintained in MS–DRGs 023 and 024 for FY 2026.

We are also not finalizing our proposals to change the titles of MS–DRGs 020, 021, and 022 from ''Intracranial Vascular Procedures with Principal Diagnosis Hemorrhage with MCC, with CC, and without CC/MCC, respectively'' to ''Intracranial Vascular Procedures with Principal Diagnosis Hemorrhage or Intracranial Neurostimulator Implant with MCC, with CC, and without CC/MCC, respectively,'' to change the title of MS–DRG 023 from ''Craniotomy with Major Device Implant or Acute Complex Central Nervous System Principal Diagnosis with MCC or Chemotherapy Implant or Epilepsy with Neurostimulator'' to ''Craniotomy with Acute Complex Central Nervous System Principal Diagnosis with MCC or Antineoplastic Implant,'' or to change the title of MS–DRG 024 from ''Craniotomy with Major Device Implant or Acute Complex Central Nervous System Principal Diagnosis without MCC'' to ''Craniotomy with Acute Complex Central Nervous System Principal Diagnosis without MCC.''

As discussed earlier in this section, we noted that 36 procedure code combinations describing the insertion of a single array stimulator generator or a rechargeable single array stimulator generator into the subcutaneous areas of the chest, back, or abdomen and a neurostimulator lead are not captured under the ''Major Device Implant'' logic list, in MS–DRG 023 and 024, therefore MS–DRGs 025, 026, and 027 (Craniotomy and Endovascular Intracranial Procedures with MCC, with CC, and without CC/MCC, respectively) are assigned based on the reporting of the ICD–10–PCS procedure code describing the insertion of the neurostimulator into the brain. As discussed in the proposed rule, our analysis indicated the cases in MS–DRGs 025, 026, and 027 reporting the insertion of a single array generator and insertion of neurostimulator lead into brain have average costs that are higher than the average costs of all cases in their respective MS–DRGs. We then examined the data to determine how the resources for the subset of cases reporting the insertion of a single array generator and insertion of neurostimulator lead into brain compared to cases in MS–DRGs 023 and 024, and similarly found that the cases reporting the insertion of a single array generator and insertion of neurostimulator lead into brain have average costs that are higher and an average length of stay that is shorter than all cases in MS–DRGs 023 and 024. In the FY 2026 proposed rule we stated we believe the procedure code combinations that describe the insertion of a single array stimulator generator or a rechargeable single array stimulator generator into the subcutaneous areas of the chest, back, or abdomen in combination with a code describing the insertion of a neurostimulator lead into the brain are clinically coherent with the procedure code combinations in MS–DRG 023 and 024 captured under the ''Major Device Implant'' logic list that describe the insertion of a multiple array stimulator generator or a rechargeable multiple array stimulator generator into the subcutaneous areas of the chest, back, or abdomen in combination with a code describing the insertion of a neurostimulator lead into the brain. While we continue to believe that reassigning all cases reporting the procedure code combination describing a single array generator and insertion of neurostimulator lead into brain to MS–DRGs 023 and 024 would not fully address the difference in resource utilization in these cases, we believe that adding the 36 procedure code combinations describing the insertion of a single array stimulator generator or a rechargeable single array stimulator generator into the subcutaneous areas of the chest, back, or abdomen and a neurostimulator lead to the ''Major Device Implant'' logic list under MS–DRGs 023 and 024 for FY 2026 would better reflect hospital resource utilization and appropriately group these cases describing single array stimulator generator combinations with those cases describing multiple array generator combinations consistent with our proposal. Therefore, for the reasons discussed, we are finalizing the addition of the 36 ICD–10–PCS procedure code combinations that describe the implantation of a DBS system with a single array stimulator generator or a rechargeable single array stimulator generator and the insertion of a neurostimulator lead into the brain to the ''Major Device Implant'' logic list in MS–DRGs 023 and 024. We refer the reader to Table 6P.2b associated with this FY 2026 IPPS/LTCH PPS final rule (available at: *https://www.cms.gov/medicare/payment/prospective-payment-systems/acute-inpatient-pps*) for the list of the 36 ICD–10–PCS procedure code combinations that describe the implantation of a DBS system with a single array stimulator generator or a rechargeable single array stimulator generator and the insertion of a neurostimulator lead into the brain that are being added to the ''Major Device Implant'' logic list in MS–DRGs 023 and 024.

We also note that as discussed earlier in this section, after consideration of the public comments we received, we are finalizing our proposal to add procedure codes 00H001Z, 00H005Z, 00H031Z, and 00H041Z to the ''Chemotherapy Implant'' logic list in MS–DRGs 023 and 024, without modification, effective October 1, 2025, for FY 2026. We are also finalizing the change of the description of the logic list in MS–DRGs 023 and 024 from ''Chemotherapy Implant'' to ''Antineoplastic Implant''. Therefore, for consistency with our finalized changes to the logic list, we are finalizing a change to the title of MS–DRG 023 from ''Craniotomy with Major

Device Implant or Acute Complex Central Nervous System Principal Diagnosis with MCC or Chemotherapy Implant or Epilepsy with Neurostimulator'' to ''Craniotomy with Major Device Implant or Acute Complex Central Nervous System Principal Diagnosis with MCC or Antineoplastic Implant or Epilepsy with Neurostimulator.''

Comment: Several commenters noted that in Table 6P.2c associated with the FY 2026 IPPS/LTCH PPS proposed rule, which contains the list of the 57 ICD–10–PCS procedure codes that were inadvertently excluded from the ''Intracranial Vascular Procedures'' logic list of MS–DRGs 020, 021, and 022, ICD–10–PCS codes 057L3DZ (Dilation of intracranial vein with intraluminal device, percutaneous approach) and 057L4DZ (Dilation of intracranial vein with intraluminal device, percutaneous endoscopic approach) were included. These commenters noted that ICD–10–PCS code 057L0DZ (Dilation of intracranial vein with intraluminal device, open approach) was not also included in the list and recommended CMS consider also adding procedure code 057L0DZ to the ''Intracranial Vascular Procedures'' logic list of MS–DRGs 020, 021, and 022, as this code also describes dilation of an intracranial vein with an intraluminal device, differing only in approach. Several commenters specifically stated that they were unclear on the rationale for not including ICD–10–PCS code 057L0DZ (Dilation of Intracranial Vein with Intraluminal Device, Open Approach) to the logic list of MS–DRGs 020, 021, and 022.

Response: We appreciate the commenters' feedback. In the ICD–10 MS–DRGs Version 42.1, ICD–10–PCS procedure codes 057L3DZ and 057L4DZ are currently assigned to MS–DRGs 023, 024, 025, 026, and 027. As we noted in the proposed rule, during our review of MS–DRGs 020, 021, and 022, we identified 57 ICD–10–PCS procedure codes describing intracranial vascular procedures that were inadvertently excluded from the ''Intracranial Vascular Procedures'' logic list of MS–DRGs 020, 021, and 022. We note that we identified the 57 procedure codes by comparing the logic lists in MS–DRGs 023, 024, 025, 026, and 027 to the logic list of MS–DRGs 020, 021, and 022.

ICD–10–PCS procedure code 057L0DZ (Dilation of intracranial vein with intraluminal device, open approach) is currently assigned to MDC 05 (Diseases and Disorders of the Circulatory System) MS–DRGs 252, 253 and 254 (Other Vascular Procedures with MCC, with CC, without MCC respectively) and therefore was not identified in our initial review. We agree with the commenters that ICD–10–PCS code 057L0DZ describes an intracranial vascular procedure and should be added to the ''Intracranial Vascular Procedures'' logic list of MS–DRGs 020, 021, and 022, consistent with our proposal to add the ICD–10–PCS procedure codes describing intracranial vascular procedures that were inadvertently excluded from the ''Intracranial Vascular Procedures'' logic list.

During our review of this issue identified by the commenters, we further examined the GROUPER logic that would determine the assignment of a case to MS–DRGs 020, 021, and 022. Specifically, we reviewed the ICD–10–PCS classification to determine if there were other ICD–10–PCS codes describing dilation of an intracranial vein that were not listed in the logic for MS–DRGs 020, 021, and 022. We identified the following three procedure codes.

ICD-10-PCS Code	Description
057L0ZZ	Dilation of intracranial vein, open approach
057L3ZZ	Dilation of intracranial vein, percutaneous approach
057L4ZZ	Dilation of intracranial vein, percutaneous endoscopic approach

ICD–10–PCS codes 057L0ZZ, 057L3ZZ, and 057L4ZZ are also currently assigned to MS–DRGs 252, 253 and 254 in the ICD–10 MS–DRGs Version 42.1. In response to the commenters that stated they were unclear on the rationale for not including ICD–10–PCS code 057L0DZ in the list of procedure codes proposed to be added to the ''Intracranial Vascular Procedures'' logic list of MS–DRGs 020, 021, and 022, we have identified that the disparate MS–DRG assignments of the six ICD–10–PCS procedure codes that describe the dilation of an intracranial vein are a result of a replication error in transitioning to ICD–10. We determined it may be helpful to provide the comparable translations under ICD–9–CM for commenters to better understand how these six procedures were initially grouped to the ICD–10 MS–DRGs as a result of replication during the conversion from ICD–9 to ICD–10 based MS–DRGs. We refer the reader to Table 6P.2f associated with this FY 2026 IPPS/LTCH PPS final rule (which is available on the CMS website at: *https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/AcuteInpatientPPS/index*) for the findings from our analysis of the six procedure codes, which indicates how these procedures were classified under ICD–10–PCS based on the comparable translations under ICD–9–CM resulting in the current MS–DRG assignments.

We reviewed ICD–10–PCS codes 057L0DZ, 057L0ZZ, 057L3ZZ, and 057L4ZZ and note these codes describe intracranial vascular procedures that are consistent with the existing procedure codes included in the logic for case assignment to MS–DRGs 020, 021, 022, 023, 024, 025, 026, and 027. Accordingly, because procedure codes 057L0DZ, 057L0ZZ, 057L3ZZ, and 057L4ZZ that describe dilation of an intracranial vein were not assigned to MS–DRGs 020, 021, 022, 023, 024, 025, 026, and 027 as a result of replication in the transition from ICD–9 to ICD–10 based MS–DRGs, and are consistent with the existing procedure codes that also describe dilation of an intracranial vein currently included in the logic for these MS–DRGs, we believe that consistent with our proposal to add the other ICD–10–PCS procedure codes describing intracranial vascular procedures that were inadvertently excluded from the ''Intracranial Vascular Procedures'' logic list, procedure codes 057L0DZ, 057L0ZZ, 057L3ZZ, and 057L4ZZ should be assigned to MS–DRGs 020, 021, 022, 023, 024, 025, 026, and 027 in MDC 01, effective FY 2026.

Therefore, after consideration of the public comments we received, and for the reasons discussed, we are finalizing our proposal to add the 57 procedure codes to the ''Intracranial Vascular Procedures'' logic list, and the 66 diagnosis codes to the ''Hemorrhage

Principal Diagnosis'' logic list of MS–DRGs 020, 021, and 022, with modification, effective October 1, 2025, for FY 2026. Specifically, we are also adding ICD–10–PCS codes 057L0DZ, 057L0ZZ, 057L3ZZ, and 057L4ZZ that also describe dilation of an intracranial vein to the list of procedure codes in the ''Intracranial Vascular Procedures'' logic list of MS–DRGs 020, 021, and 022. The list of ICD–10–PCS procedure codes describing intracranial vascular procedures that we are finalizing to add to the ''Intracranial Vascular Procedures'' logic list of MS–DRGs 020, 021, and 022 are shown in Table 6P.2c associated with this final rule and available on the CMS website at *https://www.cms.gov/medicare/payment/prospective-payment-systems/acute-inpatient-pps*. In addition, we are also finalizing the assignment of ICD–10–PCS codes 057L0DZ, 057L0ZZ, 057L3ZZ, and 057L4ZZ to MS–DRGs 023, 024, 025, 026, and 027 in MDC 01 effective FY 2026.

These finalizations as discussed are reflected in the final version of ICD–10 MS–DRG Definitions Manual, Version 43 that contains the complete documentation of the GROUPER logic for MS–DRGs 020 through 027 for FY 2026 and is available via the CMS website at: *https://www.cms.gov/medicare/payment/prospective-payment-systems/acute-inpatient-pps/ms-drg-classifications-and-software*.

b. Hypertensive Encephalopathy

As discussed in the FY 2026 IPPS/LTCH PPS proposed rule (90 FR 18026 through 18028, we received a request to delete MS–DRGs 077, 078, and 079 (Hypertensive Encephalopathy with MCC, with CC, and without CC/MCC, respectively). Hypertensive encephalopathy refers to brain dysfunction that occurs when the brain's blood vessels can no longer regulate blood flow due to severe or sudden rises in blood pressure, causing brain swelling and damage. It is characterized by the insidious onset of headache, nausea, and vomiting, followed by non-localizing neurologic symptoms such as restlessness, confusion, and, if the hypertension is not treated, seizures and coma. The diagnosis is based on clinical presentation, elevated blood pressure, and neurological examination, often supported by brain imaging like CT or MRI. The treatment involves immediate and rapid lowering of blood pressure with appropriate medications administered in a controlled setting. ICD–10–CM diagnosis code I67.4 (Hypertensive encephalopathy) is used to report this diagnosis.

The requestor noted that effective FY 2025, a ''use additional code'' instructional note was added under diagnosis code I16.1 (Hypertensive emergency) in the ICD–10–CM Tabular List of Diseases and Injuries. Specifically, the instructional note states, ''use additional code, if applicable, to identify specific organ dysfunction, such as:'' and lists I67.4 as well as eight other ICD–10–CM diagnosis codes. The requestor stated that the addition of this ''use additional code'' instructional note has sequencing implications and requires I67.4 to be sequenced as a secondary diagnosis when hypertensive emergency and hypertensive encephalopathy are documented. As the GROUPER logic for MS–DRGs 077, 078, and 079 is defined by only diagnosis code I67.4, the requestor stated there will no longer be cases grouping to medical MS–DRGs 077, 078, and 079 because I67.4 will only be sequenced as a secondary diagnosis and I16.1 will have to be sequenced as the principal diagnosis. Instead, these cases will group to MDC 05 (Diseases and Disorders of the Circulatory System) medical MS–DRGs 304 and 305 (Hypertension with MCC and without MCC, respectively) since I16.1 is assigned to those MS–DRGs.

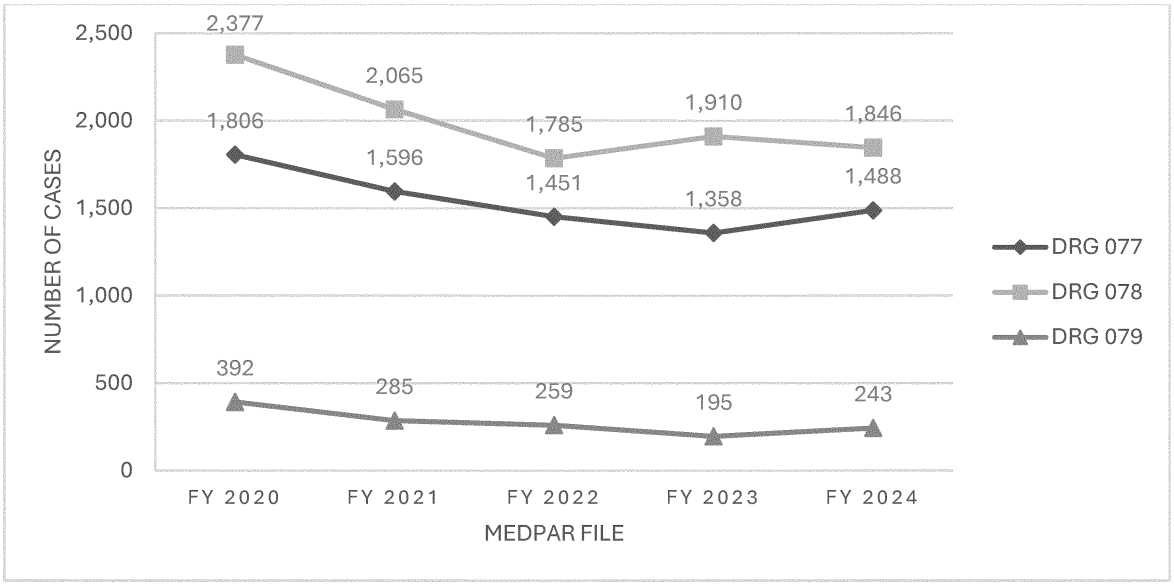
To begin our analysis, as discussed in the proposed rule, we reviewed the ICD–10–CM Tabular List of Diseases and Injuries. We stated that the requestor is correct a ''use additional code'' instructional note was added under diagnosis code I16.1 (Hypertensive emergency) in the ICD–10–CM Tabular List of Diseases and Injuries, effective FY 2025. According to the ICD–10–CM Official Guidelines for Coding and Reporting, ''certain conditions have both an underlying etiology and multiple body system manifestations due to the underlying etiology. For such conditions the ICD–10–CM has a coding convention that requires the underlying condition to be sequenced first followed by the manifestation. Wherever such a combination exists there is an 'use additional code' note at the etiology code, and a 'code first' note at the manifestation code. These instructional notes indicate the proper sequencing order of the codes, etiology followed by manifestation.'' We noted in the proposed rule that no such ''code first'' note appears at ICD–10–CM diagnosis code I67.4 (Hypertensive encephalopathy) in the ICD–10–CM Tabular List of Diseases and Injuries meaning the sequencing depends on the circumstances of the encounter when hypertensive emergency and hypertensive encephalopathy are documented. If providers have cases involving hypertensive emergency and hypertensive encephalopathy for which they need ICD–10 coding assistance, we encourage them to submit their questions to the American Hospital Association's Central Office on ICD–10 at *https://www.codingclinicadvisor.com/*.

We then reviewed the GROUPER logic. We stated the requestor is correct that diagnosis code I67.4 is the only diagnosis code listed under the heading of ''Principal Diagnosis'' in the ICD–10 MS–DRG Definitions Manual for MS–DRGs 077, 078, and 079. We refer the reader to the ICD–10 MS–DRG Definitions Manual Version 42.1, which is available on the CMS website at: *https://www.cms.gov/medicare/payment/prospective-payment-systems/acute-inpatient-pps/ms-drg-classifications-and-software,* for complete documentation of the GROUPER logic for MS–DRGs 077, 078, and 079. We noted in the proposed rule that a DRG for a principal diagnosis of hypertensive encephalopathy (48 FR 39876) has existed since 1983 when Congress amended the Social Security Act to include a national DRG-based hospital prospective payment system for all Medicare patients.

We then examined claims data from the September 2024 update of the FY 2024 MedPAR file for all cases in MS–DRGs 077, 078, and 079 to consider the resources involved in the cases reporting a principal diagnosis of hypertensive encephalopathy. Our findings are shown in this table.

MS-DRG	Number of Cases	Average Length of Stay	Average Costs
MS-DRG 077--All cases	1,488	5.0	$13,176
MS-DRG 078--All cases	1,846	3.3	$8,591
MS-DRG 079--All cases	243	2.4	$6,729

We stated in the proposed rule the data reflect a moderately low volume of cases in MS–DRGs 077, 078, and 079, relatively. We then evaluated the reporting of hypertensive encephalopathy in the inpatient setting over the past few years in medical MS–DRGs 077, 078, and 079. We analyzed claims data for MS–DRGs 077, 078, and 079 from the FY 2020 through the FY 2024 MedPAR files, which were used in our analysis of claims data for MS–DRG reclassification requests effective for FY 2022 through FY 2026 to trend the number of cases assigned to these MS–DRGs over time. Our findings are shown in the following graph:



The data show a general decline in the number of cases reporting hypertensive encephalopathy as a principal diagnosis in medical MS–DRGs 077, 078, and 079 for the past 5 years. We noted in the proposed rule that as discussed in prior rulemaking, the MS–DRGs are a classification system intended to group together diagnoses and procedures with similar clinical characteristics and utilization of resources. We generally seek to identify sufficient sets of claims data with demonstrated clinical similarity in developing diagnosis related groups rather than subsets based on single diagnoses. After review of the findings indicating a general decline in the number of cases reporting hypertensive encephalopathy as a principal diagnosis, and consideration of the intent of the MS–DRGs, we stated we believe that there is no longer a clinical reason to maintain the MS–DRGs for hypertensive encephalopathy (MS–DRGs 077, 078, and 079) as they are defined by the reporting of one principal diagnosis code.

As discussed in the proposed rule, to explore mechanisms to ensure clinical coherence between cases reporting hypertensive encephalopathy as a principal diagnosis and the other cases with which they may potentially be grouped, we then conducted an examination of all the MS–DRGs where I67.4 was also reported as principal diagnosis to determine if the diagnosis was included in any other MS–DRGs outside of MDC 01, to assess the current MS–DRG assignment of this diagnosis code. Our findings are shown in the following table.

OTHER MS-DRGs REPORTING HYPERTENSIVE ENCEPHALOPATHY AS PRINCIPAL DIAGNOSIS					
MDC	MS-DRG	Description	Number of Cases	Average Length of Stay	Average Costs
PRE	004	Tracheostomy with MV >96 Hours or Principal Diagnosis Except Face, Mouth and Neck without Major O.R. Procedures	1	52	$128,406
01	025	Craniotomy and Endovascular Intracranial Procedures with MCC	1	16	$114,582
01	026	Craniotomy and Endovascular Intracranial Procedures with CC	1	6	$79,934
01	028	Spinal Procedures with MCC	1	26	$58,049
01	037	Extracranial Procedures with MCC	4	5.5	$27,923
01	038	Extracranial Procedures with CC	1	4	$12,509
01	040	Peripheral, Cranial Nerve and Other Nervous System Procedures with MCC	5	8.2	$29,325
01	041	Peripheral, Cranial Nerve and Other Nervous System Procedures with CC or Peripheral Neurostimulator	8	4.9	$14,909
	981	Extensive O.R. Procedures Unrelated to Principal Diagnosis with MCC	10	10.3	$31,543
	982	Extensive O.R. Procedures Unrelated to Principal Diagnosis with CC	1	1	$10,926
	987	Non-Extensive O.R. Procedures Unrelated to Principal Diagnosis with MCC	2	8.5	$28,020
		Total	**35**	**9.3**	**$32,956**

As shown in the table, we found 35 cases reporting hypertensive encephalopathy as the principal diagnosis in MS–DRGs other than MS–DRGs 077, 078, and 079. We noted in the proposed rule that the majority of the listed MS–DRGs are assigned to MDC 01 with one exception: Pre-MDC MS–DRG 004 (Tracheostomy with MV >96 Hours or Principal Diagnosis Except Face, Mouth and Neck without Major O.R. Procedures). Additionally, there were 11 cases that grouped to MS–DRGs 981, and 982 (Extensive O.R. Procedure Unrelated to Principal Diagnosis with MCC, and with CC, respectively) and two cases that grouped to MS–DRG 987 (Non-Extensive O.R. Procedures Unrelated to Principal Diagnosis with MCC). After review of these data, we stated we believe it would not be appropriate to reassign diagnosis code I67.4 to another MDC because it could inadvertently cause cases reporting a principal diagnosis of hypertensive encephalopathy with a nervous system procedure to be assigned to an unrelated MS–DRG. Further, we stated we believe it is clinically appropriate to maintain the assignment of I67.4 in MDC 01 as the condition is consistent with other conditions reported by diagnosis codes assigned to MDC 01.

We then examined the MS–DRGs within MDC 01 to consider the possibility of reassigning the cases with a principal diagnosis of hypertensive encephalopathy to other MS–DRGs within MDC 01. In reviewing the claims data from the September 2024 update of the FY 2024 MedPAR file, and examining the clinical considerations, we stated we believe that the cases reporting a principal diagnosis of hypertensive encephalopathy could suitably group to MS–DRGs 070, 071, and 072 (Nonspecific Cerebrovascular Disorders with MCC, with CC and, without CC/MCC, respectively), which contain other cerebrovascular diagnoses under the heading of ''Principal Diagnosis'' in the GROUPER logic list, noting in the proposed rule that hypertensive encephalopathy is considered a cerebrovascular disorder, as it is a neurological condition directly caused by a sudden, severe elevation in blood pressure. We refer the reader to the ICD–10 MS–DRG Definitions Manual Version 42.1, which is available on the CMS website at: *https://www.cms.gov/medicare/payment/prospective-payment-systems/acute-inpatient-pps/ms-drg-classifications-and-software*, for complete documentation of the GROUPER logic for MS–DRGs 070, 071, and 072.

To determine how the resources for the cases in MS–DRGs 077, 078, and 079 compared to cases in MS–DRGs 070, 071, and 072, we examined the average costs and length of stay for cases in MS–DRGs 070, 071, and 072. Our findings are shown in the following table.

MS-DRG	Number of Cases	Average Length of Stay	Average Costs
MS-DRG 070--All cases	16,979	6.4	$14,771
MS-DRG 071--All cases	16,596	4.5	$9,381
MS-DRG 072--All cases	2,687	2.9	$7,047

As reflected and discussed in the proposed rule, the average costs of the 1,488 cases reporting a principal diagnosis of I67.4 with a secondary diagnosis designated as a MCC in MS–DRG 077 are slightly lower ($13,176 compared to $14,771) and the average length of stay is shorter (5 days compared to 6.4 days) than for all cases in MS–DRGs 070. The average costs of the 1,846 cases reporting a principal diagnosis of I67.4 with a secondary diagnosis designated as a CC in MS–DRG 078 are slightly lower ($8,591 compared to $9,381) and the average length of stay is shorter (3.3 days compared to 4.5 days) than for all cases in MS–DRGs 071. The average costs of the 243 cases reporting a principal diagnosis of I67.4 without reporting a secondary diagnosis designated as a CC or a MCC in MS–DRG 079 are slightly lower ($6,729 compared to $7,047) and the average length of stay is shorter (2.4

days compared to 2.9 days) than for all cases in MS–DRGs 072.

We stated in the proposed rule our analysis demonstrates that the cases reporting a principal diagnosis of I67.4 currently grouping to medical MS–DRGs 077, 078, and 079 are generally aligned with the average costs for the cases currently grouping to MS–DRGs 070, 071, and 072. While the cases reporting a principal diagnosis code describing hypertensive encephalopathy have slightly lower costs and a shorter average length of stay than for cases in MS–DRGs 070, 071, and 072, we stated we believe reassigning diagnosis code I67.4 to MS–DRGs 070, 071, and 072 will account for the subset of patients reporting this principal diagnosis and will appropriately reflect the resources involved in evaluating and treating these patients.

As discussed in the proposed rule, during our review of this issue and the examination of the MS–DRGs within MDC 01, we noted that the title of MS–DRGs 067, 068, and 069 is ''Nonspecific CVA and Precerebral Occlusion without Infarction with MCC, with CC, and without CC/MCC, respectively'' and the title of MS–DRGs 070, 071, and 072 is ''Nonspecific Cerebrovascular Disorders, with MCC, with CC, and without CC/MCC, respectively.'' In examining the GROUPER logic for these MS–DRGs and reviewing the diagnoses listed under the heading of ''Principal Diagnosis'' in the ICD–10 MS–DRG Definitions Manual, we stated we believe the titles for these MS–DRGs no longer accurately reflects the assigned diagnoses. Like MS–DRGs 077, 078, and 079, the titles of MS–DRGs 067, 068, 069, 070, 071, and 072 were established prior to the transition to ICD–10–CM. The terminology ''nonspecific'' in the titles for these MS–DRGs was appropriate to describe the ICD–9–CM diagnosis codes that were previously assigned to these DRGs, but as discussed in the HIPAA Administrative Simplification: Modification to Medical Data Code Set Standards To Adopt ICD–10–CM and ICD–10–PCS proposed rule (73 FR 49796 through 49803), in comparison to ICD–9–CM, ICD–10–CM diagnosis codes are very specific and that this specificity improves the richness of data for analysis and improves the accuracy of data used for medical research. Therefore, we stated we believe it is appropriate to propose to revise the titles of these MS–DRGs for consistency.

In this final rule, we are amending our previous statement as the titles of MS–DRGs 067 and 068 are ''Nonspecific CVA and Precerebral Occlusion without Infarction with MCC and without MCC'', respectively, in the ICD–10 MS–DRG Definitions Manual Version 42.1. The title of MS–DRG 069 is ''Transient Ischemia without Thrombolytic'' and was inadvertently referenced in our proposed rule discussion in connection with MS–DRGs 067 and 068.

In summary, for FY 2026, we proposed to delete MS–DRGs 077, 078, and 079. Additionally, we proposed to reassign ICD–10–CM diagnosis code I67.4 (Hypertensive encephalopathy) from MDC 01 MS–DRGs 077, 078, and 079 to MS–DRGs 070, 071, and 072. Lastly, for consistency, we also proposed to change the titles of MS–DRGs 067, 068, and 069 from ''Nonspecific CVA and Precerebral Occlusion without Infarction with MCC, with CC, and without CC/MCC, respectively'' to ''Precerebral Occlusion without Infarction with MCC, with CC, and without CC/MCC, respectively'' and to change the titles of MS–DRGs 070, 071, and 072 from ''Nonspecific Cerebrovascular Disorders, with MCC, with CC, and without CC/MCC, respectively'' to ''Other Cerebrovascular Disorders with MCC, with CC, and without CC/MCC, respectively'' to better reflect the assigned diagnoses.

Comment: Commenters supported the proposals to delete MS–DRGs 077, 078, and 079, to reassign ICD–10–CM diagnosis code I67.4 (Hypertensive encephalopathy) from MDC 01 MS–DRGs 077, 078, and 079 to MS–DRGs 070, 071, and 072, to change the titles of MS–DRGs 067, 068, and 069 to ''Precerebral Occlusion without Infarction with MCC, with CC, and without CC/MCC, respectively'' and to change the titles of MS–DRGs 070, 071, and 072 to ''Other Cerebrovascular Disorders with MCC, with CC, and without CC/MCC, respectively''. Some commenters stated that they supported the proposal based on CMS' data analysis, which indicates a general decline in the number of cases reporting hypertensive encephalopathy as a principal diagnosis in these MS–DRGs over the past 5 years.

Several commenters, while supporting the proposals, stated that they disagree with CMS' statement that since no ''code first'' note appears at ICD–10–CM diagnosis code I67.4 (Hypertensive encephalopathy) in the ICD–10–CM Tabular List of Diseases and Injuries, the sequencing of the diagnosis codes depends on the circumstances of the encounter when hypertensive emergency and hypertensive encephalopathy are documented. These commenters stated that they do not believe this is a correct interpretation of the ICD–10–CM instructional notes. In their interpretation, when both an etiology and manifestation are documented, and a ''use additional code'' note appears at the ICD–10–CM code for the etiology, the manifestations listed in that note must be sequenced as secondary diagnosis codes, regardless of whether a corresponding ''code first'' note appears at the codes listed in the ''use additional code'' note. A commenter stated that since they question the interpretation of the instructional notes as discussed in the proposed rule, additional data analysis should be performed based on the ICD–10–CM Tabular List instructions.

Response: We appreciate the commenters' support and thank them for sharing their interpretation of the ICD–10–CM instructional notes. As noted in section II.C.11. of the preamble of this final rule, the Centers for Disease Control and Prevention's (CDC's) National Center for Health Statistics (NCHS) has lead responsibility for the diagnosis codes and CMS has lead responsibility for the ICD–10–PCS procedure codes. We note that after review of the commenters' interpretation of the ICD–10–CM Tabular List instructions, we consulted with the staff at the CDC/NCHS and NCHS confirmed that they would consider further review of the classification, including review of the Tabular List instructions for hypertensive emergency and hypertensive encephalopathy and other instances in the classification where a ''code first'' note does not appear at the manifestation code. Additionally, as we noted in the FY 2018 IPPS/LTCH PPS final rule (82 FR 38012), coding advice is issued independently from payment policy. While we collaborate with the American Hospital Association (AHA) through the Coding Clinic for ICD–10–CM and ICD–10–PCS to promote proper coding as one of the Cooperating Parties for ICD–10, the AHA is the official U.S. clearinghouse on medical coding. We recommend that an entity seeking coding guidance on reporting hypertensive emergency and hypertensive encephalopathy submit any questions to the AHA's Central Office on ICD–10 at *https://www.codingclinicadvisor.com/*.

In response to the suggestion that CMS perform additional analysis based on the commenters' interpretation of the ICD–10–CM Tabular List instructions, we note that as discussed in the proposed rule, the GROUPER logic for MS–DRGs 077, 078, and 079 is defined by only diagnosis code I67.4 listed under the heading of ''Principal Diagnosis'' in the ICD–10 MS–DRG Definitions Manual. As the GROUPER logic for MS–DRGs 077, 078, and 079 is

defined by only one diagnosis code, it is unclear how the interpretation of the ICD–10–CM Tabular List instructions would factor into our data analysis, as cases reporting a different principal diagnosis code would not be assigned to MS–DRGs 077, 078, and 079. We further note our proposal to delete MS–DRGs 077, 078, and 079 was based on our review of the findings indicating a general decline in the number of cases reporting hypertensive encephalopathy as a principal diagnosis in the inpatient setting over the past few years and in consideration of the intent of the MS–DRGs.

Therefore, after consideration of the public comments we received, we are finalizing our proposal to delete MS–DRGs 077, 078, and 079. Additionally, we are finalizing our proposal to reassign ICD–10–CM diagnosis code I67.4 (Hypertensive encephalopathy) from MDC 01 MS–DRGs 077, 078, and 079 to MS–DRGs 070, 071, and 072. We are also finalizing our proposal to change the titles of MS–DRGs 070, 071, and 072 from ''Nonspecific Cerebrovascular Disorders, with MCC, with CC, and without CC/MCC, respectively'' to ''Other Cerebrovascular Disorders with MCC, with CC, and without CC/MCC, respectively'', without modification, effective October 1, 2025, for FY 2026.

Lastly, as discussed previously, in the ICD–10 MS–DRG Definitions Manual Version 42.1, the titles of MS–DRGs 067 and 068 are ''Nonspecific CVA and Precerebral Occlusion without Infarction with MCC and without MCC'', respectively, and MS–DRG 069 was inadvertently referenced in our discussion in the proposed rule. Therefore, after consideration of the public comments we received, for the reasons discussed, we are finalizing our proposal with modification. Specifically, we are finalizing our proposal to change the titles of MS–DRGs 067 and 068 from ''Nonspecific CVA and Precerebral Occlusion without Infarction with MCC and without MCC'', respectively, to ''Precerebral Occlusion without Infarction with MCC and without MCC'', respectively, effective October 1, 2025. Under this finalization, the title of MS–DRG 069 will be maintained as ''Transient Ischemia without Thrombolytic'' for FY 2026.

c. Encounter for Adjustment and Management of Implanted Devices of the Special Senses

As discussed in the FY 2026 IPPS/LTCH PPS proposed rule (90 FR 18028 through 18029), we identified a replication issue from the ICD–9 based MS–DRGs to the ICD–10 based MS–DRGs regarding the assignment of four ICD–10–CM diagnosis codes that describe encounters for adjustment and management of implanted devices of the special senses. Under the Version 32 ICD–9–CM based MS–DRGs, ICD–9–CM diagnosis code V53.09 (Fitting and adjustment of other devices related to nervous system and special senses), as shown in the following table, was assigned medical MS–DRGs 091, 092, and 093 (Other Disorders of Nervous System with MCC, with CC, and without CC/MCC, respectively) in MDC 01 (Diseases and Disorders of the Nervous System). The four ICD–10–CM code translations also shown in the following table, that provide more detailed and specific information, also currently group to MS–DRGs 091, 092, and 093 in the ICD–10 MS–DRGs Version 42.1. We refer the reader to the ICD–10 MS–DRG Definitions Manual Version 42.1 (available on the CMS website at: *https://www.cms.gov/medicare/payment/prospective-payment-systems/acute-inpatient-pps/ms-drg-classifications-and-software*) for complete documentation of the GROUPER logic for MS–DRGs 091, 092, and 093.

ICD-9-CM Diagnosis Code	Description	ICD-10-CM Diagnosis Code	Description
V53.09	Fitting and adjustment of other devices related to nervous system and special senses	Z45.31	Encounter for adjustment and management of implanted visual substitution device
		Z45.320	Encounter for adjustment and management of bone conduction device
		Z45.321	Encounter for adjustment and management of cochlear device
		Z45.328	Encounter for adjustment and management of other implanted hearing device

As discussed in the proposed rule, during our review of this issue, we noted that under ICD–9–CM, diagnosis code V53.09 (Fitting and adjustment of other devices related to nervous system and special senses) did not further describe the type of device related to nervous system and special senses. This is in contrast to its four comparable ICD–10–CM code translations listed in the previous table that provide more detailed and specific information than the ICD–9–CM diagnosis code and do specify the type of device.

In reviewing the four ICD–10–CM diagnosis codes listed in the previous table and the devices they describe, we stated we believe that code Z45.31 is more appropriately assigned to MDC 02 (Diseases and Disorders of the Eye) and codes Z45.320, Z45.321, and Z45.328 are more appropriately assigned to MDC 03 (Diseases and Disorders of the Ear, Nose, Mouth and Throat). We noted in the proposed rule that an ''implanted visual substitution device,'' also known as a ''visual prosthesis,'' is a medical implant designed to partially restore vision to a patient who is blind by directly stimulating the visual pathway in the retina or brain, essentially bypassing damaged photoreceptor cells in the eye and providing a basic visual perception through electrical stimulation. Bone conduction devices, also known as bone conduction hearing aids, amplify sound via bone conduction, or vibrations through the bones of the skull which directly stimulate a functioning cochlea. Cochlear devices and other implanted hearing devices are small electronic devices designed for patients with moderate to severe hearing loss caused by damage to the inner ear to help perceive sounds.

We analyzed claims data from the September 2024 update of the FY 2024 MedPAR file to determine if there were any cases reported with diagnosis codes Z45.31, Z45.320, Z45.321, or Z45.328. One case was found in MS–DRG 983 (Extensive O.R. Procedures Unrelated to Principal Diagnosis without CC/MCC) reporting principal diagnosis Z45.321 and procedure code 09PE0SZ (Removal of hearing device from left inner ear, open approach) with costs of $5,530 and a length of stay of one day.

In the proposed rule we stated we recognize that the volume of inpatient cases for patients with a principal diagnosis of Z45.31, Z45.320, Z45.321,

or Z45.328 is low, however we believe that for clinical consistency, it is more appropriate for these cases to be assigned to MDCs that better describe the indication of the implanted devices of the special senses the codes describe. Accordingly, because the cases reporting principal diagnoses describing encounters for adjustment and management of implanted devices of the special senses are more clinically consistent in MDC 02 or MDC 03 depending on the type of device, and the diagnosis codes were initially assigned to MDC 01 MS–DRGs 091, 092, and 093 as a result of replication in the transition from ICD–9 to ICD–10 based MS–DRGs, we proposed to reassign ICD–10–CM diagnosis code Z45.31 from MS–DRGs 091, 092, and 093 to MDC 02 MS–DRG 123 (Neurological Eye Disorders). We also proposed to reassign ICD–10–CM diagnosis codes Z45.320, Z45.321, and Z45.328 from MS–DRGs 091, 092, and 093 to MDC 03 MS–DRGs 154, 155, and 156 (Other Ear, Nose, Mouth and Throat Diagnoses with MCC, with CC, and without CC/MCC, respectively).

Comment: Commenters supported the proposal to assign ICD–10–CM codes Z45.31, Z45.320, Z45.321, and Z45.328 to MDCs that better describe the indication of the implanted devices of the special senses the diagnosis codes describe.

Response: We appreciate the commenters' support.

After consideration of the public comments we received, we are finalizing, without modification, our proposal to reassign ICD–10–CM diagnosis code Z45.31 from MDC 01 MS–DRGs 091, 092, and 093 to MDC 02 MS–DRG 123 (Neurological Eye Disorders). We are also finalizing our proposal to reassign ICD–10–CM diagnosis codes Z45.320, Z45.321, and Z45.328 from MS–DRGs 091, 092, and 093 to MDC 03 MS–DRGs 154, 155, and 156 (Other Ear, Nose, Mouth and Throat Diagnoses with MCC, with CC, and without CC/MCC, respectively).

4. MDC 05 (Diseases and Disorders of the Circulatory System)

a. Endovascular Aneurysm Repair (EVAR) With Iliac Branch Procedures

In the FY 2026 IPPS/LTCH PPS proposed rule (90 FR 18029 through 18032), we discussed a request we received to create a new MS–DRG for cases reporting endovascular repair of abdominal aortic aneurysms that extend into at least one iliac artery to preserve blood flow to the external or internal iliac arteries. According to the requestor, aortic aneurysms extend into at least one of the iliac arteries in approximately 25% of patients with abdominal aortic aneurysms. The requestor (the manufacturer), stated that the GORE® EXCLUDER® Iliac Branch Endoprosthesis was approved by the Food and Drug Administration (FDA) in March of 2016 to be used exclusively with the GORE® EXCLUDER® Abdominal Aortic Aneurysm Endoprosthesis to isolate the common iliac artery from systemic blood flow and preserve blood flow in the external iliac and internal iliac arteries in patients with a common iliac or aortoiliac aneurysm, who have appropriate anatomy.[3] According to the requestor, maintaining flow to the internal iliac artery and pelvic circulation using iliac branch devices or alternative techniques aims to decrease complications associated with artery occlusion.[4] [5] [6] The requestor also stated that occluding the internal iliac artery can result in significant hip and/or buttock claudication, erectile dysfunction, and colonic and spinal cord ischemia.

According to the requestor, endovascular aneurysm repair (EVAR) procedures that preserve blood flow to the iliac arteries are technically more challenging than conventional EVAR of the abdominal aorta, and they require increased procedure time, fluoroscopy time, and anesthesia time. The requestor stated that tortuosity and/or stenosis in the iliac territory may increase the complexity or even prevent the deployment of devices, leading to treatment failure or causing early occlusion of the branches. In such cases, some patients may develop symptoms of pelvic ischaemia.[7] [8] The requestor stated that current guidelines advocate the preservation of at least one internal iliac artery in patients with common iliac artery aneurysms, and iliac branched devices were developed to preserve the perfusion in the internal iliac artery.[9]

The requestor also expressed concern that hospitals who treat Medicare patients with aortoiliac and common iliac aneurysms using endovascular procedures with endoprostheses are not classified appropriately based on the current MS–DRG assignment and the resources required. The requestor performed its own data analysis and indicated it found differences in resource utilization when comparing cases reporting standard EVAR of the abdominal aorta to cases reporting EVAR of the abdominal aorta combined with procedures to preserve flow to an iliac branch. According to the requestor, the disparity in resource coherency under the current MS–DRG assignment may reduce access to Medicare beneficiaries who could benefit from these procedures. The requestor stated a new MS–DRG would enable more precise payments and better resource coherency under the MS–DRGs.

The procedure codes that describe EVAR using an abdominal aortic aneurysm (AAA) endoprosthesis and the procedure codes that describe EVAR using an iliac branch endoprosthesis (IBE) that are used to treat aortoiliac and iliac artery aneurysms, respectively, are listed in the following tables.

PROCEDURE CODES DESCRIBING EVAR USING AN ABDOMINAL AORTIC ANEURYSM (AAA) ENDOPROSTHESIS	
ICD-10-PCS Code	**Description**
04V03DZ	Restriction of abdominal aorta with intraluminal device, percutaneous approach
04V03EZ	Restriction of abdominal aorta with branched or fenestrated intraluminal device, one or two arteries, percutaneous approach
04V03FZ	Restriction of abdominal aorta with branched or fenestrated intraluminal device, three or more arteries, percutaneous approach

PROCEDURE CODES DESCRIBING EVAR USING AN ILIAC BRANCH ENDOPROSTHESIS (IBE)	
ICD-10-PCS Code	**Description**
04VC3DZ	Restriction of right common iliac artery with intraluminal device, percutaneous approach
04VC3EZ	Restriction of right common iliac artery with branched or fenestrated intraluminal device, one or two arteries, percutaneous approach
04VD3DZ	Restriction of left common iliac artery with intraluminal device, percutaneous approach
04VD3EZ	Restriction of left common iliac artery with branched or fenestrated intraluminal device, one or two arteries, percutaneous approach
04VE3DZ	Restriction of right internal iliac artery with intraluminal device, percutaneous approach
04VF3DZ	Restriction of left internal iliac artery with intraluminal device, percutaneous approach
04VH3DZ	Restriction of right external iliac artery with intraluminal device, percutaneous approach
04VJ3DZ	Restriction of left external iliac artery with intraluminal device, percutaneous approach

Cases reporting a combination of these procedure codes (that is, any one procedure code from each list) for the endovascular treatment of aortoiliac and iliac artery aneurysms are currently assigned to MS–DRGs 268 and 269 (Aortic and Heart Assist Procedures Except Pulsation Balloon with MCC and without MCC, respectively). Based on its analysis of Medicare claims data using the previously listed codes in MS–DRGs 268 and 269, and to facilitate more precise payments for these procedures, the requestor recommended that CMS assign cases reporting a procedure code describing EVAR using an AAA endoprosthesis with a procedure code describing EVAR using an IBE to a proposed new MS–DRG titled, ''Concomitant Endovascular Abdominal Aorta and Iliac Branch Procedures''.

In review of this request, as discussed in the proposed rule, we analyzed claims data from the September 2024 update of the FY 2024 MedPAR file for MS–DRGs 268 and 269 and for cases reporting standard EVAR using an AAA endoprosthesis compared to cases reporting EVAR using an AAA endoprosthesis with an IBE that are used to treat aortoiliac and iliac artery aneurysms with the previously listed procedure codes. The findings from our analysis are shown in the following table.

MS-DRG	Number of Cases	Average Length of Stay	Average Costs
MS-DRG 268 – All cases	2,519	9.1	$62,984
MS-DRG 268 – Cases reporting standard EVAR using an AAA endoprosthesis	1,500	7.4	$63,877
MS-DRG 268 – Cases reporting EVAR using an AAA endoprosthesis with an IBE	193	8.2	$68,145
MS-DRG 269 – All cases	10,108	2.0	$39,165
MS-DRG 269 – Cases reporting standard EVAR using an AAA endoprosthesis	8,655	1.8	$38,562
MS-DRG 269 – Cases reporting EVAR using an AAA endoprosthesis with an IBE	871	1.8	$48,159

As shown in the table, we identified a total of 2,519 cases within MS–DRG 268 with an average length of stay of 9.1 days and average costs of $62,984. Of the 2,519 cases, we found 1,500 cases reporting standard EVAR using an AAA endoprosthesis with an average length of stay of 7.4 days and average costs of $63,877 and 193 cases reporting EVAR using an AAA endoprosthesis with an IBE with an average length of stay of 8.2 days and average costs of $68,145. The data show that the cases reporting standard EVAR using an AAA endoprosthesis have a shorter average length of stay (7.4 days versus 8.2 days) and lower average costs ($63,877 versus $68,145) compared to the average costs of the cases reporting EVAR using an AAA endoprosthesis with an IBE. The data further show that the 193 cases reporting EVAR using an AAA endoprosthesis with an IBE have a shorter average length of stay (8.2 days versus 9.1 days) and higher average costs ($68,145 versus $62,984) compared to the average length of stay and average costs of all the cases in MS–DRG 268.

For MS–DRG 269, we identified a total of 10,108 cases with an average length of stay of 2.0 days and average costs of $39,165. Of the 10,108 cases, we found 8,655 cases reporting standard EVAR using an AAA endoprosthesis with an average length of stay of 1.8 days and average costs of $38,562 and 871 cases reporting EVAR using an AAA endoprosthesis with an IBE with an average length of stay of 1.8 days and average costs of $48,159. The data show that the cases reporting standard EVAR using an AAA endoprosthesis have a comparable average length of stay (1.8 days versus 1.8 days) and lower average costs ($38,562 versus $48,159) compared to the cases reporting EVAR using an AAA endoprosthesis with an IBE. The data further show that the 871 cases reporting EVAR using an AAA endoprosthesis with an IBE have a

shorter average length of stay (1.8 days versus 2.0 days) and higher average costs ($48,159 versus $39,165) compared to the average length of stay and average costs of all the cases in MS–DRG 269.

We stated in the proposed rule that the findings suggest that the cases reporting EVAR using an AAA endoprosthesis with an IBE utilize greater resources compared to the cases reporting standard EVAR using an AAA endoprosthesis. We agreed that patients who have aortoiliac and iliac aneurysms are a more complex population to treat, contributing to increased resource utilization.

Additionally, in the proposed rule we stated that, based on our review and analysis of the cases reporting standard EVAR using an AAA endoprosthesis compared to the cases reporting EVAR using an AAA endoprosthesis with an IBE to treat aortoiliac and iliac artery aneurysms in MS–DRGs 268 and 269, we believe new MS–DRGs are warranted to differentiate the utilization of resources between standard EVAR to treat AAA and EVAR to treat AAA extending into the iliac artery.

We stated we applied the criteria to create subgroups in a base MS–DRG as discussed in section II.C.1.b. of the preamble of the FY 2026 IPPS/LTCH PPS proposed rule and this final rule. We noted that, as shown in the table that follows, a three-way split of the proposed new base MS–DRG failed to meet the criterion that at least 500 or more cases are in each subgroup. It also failed to meet the criterion that there be at least a 20 percent difference in average costs between the CC and NonCC (without CC/MCC) subgroup and at least a $2,000 difference in average costs between the CC and NonCC (without CC/MCC) subgroup. The following table illustrates our findings.

Proposed New MS-DRGs	Number of Cases	Average Length of Stay	Average Costs
With MCC	193	8.2	$68,145
With CC	419	2.3	$48,415
Without CC/MCC	452	1.3	$47,921

As discussed in section II.C.1.b. of the preamble of the FY 2026 IPPS/LTCH PPS proposed rule and this final rule, if the criteria for a three-way split fail, the next step is to determine if the criteria are satisfied for a two-way split. In the proposed rule we stated we applied the criteria for a two-way split for the ''with MCC'' and ''without MCC'' subgroups. We noted that, as shown in the table that follows, a two-way split of this base MS–DRG failed to meet the criterion that there be at least 500 cases in the ''with MCC'' subgroup.

Proposed New MS-DRGs	Number of Cases	Average Length of Stay	Average Costs
With MCC	193	8.2	$68,145
Without MCC	871	1.8	$48,159

We then applied the criteria for a two-way split for the ''with CC/MCC'' and ''without CC/MCC'' subgroups. As shown in the table that follows, a two-way split of this base MS–DRG failed to meet the criterion that there be at least 500 or more cases in the ''without CC/MCC'' subgroup and at least a 20 percent difference in average costs between the ''with CC/MCC'' and ''without CC/MCC'' subgroup.

Proposed New MS-DRGs	Number of Cases	Average Length of Stay	Average Costs
With CC/MCC	612	4.2	$54,637
Without CC/MCC	452	1.3	$47,921

We noted that because the criteria for both of the two-way splits failed, a split (or CC subgroup) is not warranted for the proposed new base MS–DRG. As a result, for FY 2026, we proposed to create new base MS–DRG 213 (Endovascular Abdominal Aorta and Iliac Branch Procedures). The following table reflects a simulation of the proposed new base MS–DRG.

Proposed New MS-DRG	Number of Cases	Average Length of Stay	Average Costs
Proposed MS-DRG 213	1,064	3.0	$51,784

Comment: Commenters supported the proposal to create proposed new MS–DRG 213 to differentiate resource use between standard EVAR to treat AAA and EVAR to treat AAA extending into the iliac artery. The commenters stated that they appreciated CMS' thorough analysis of the request in exploring mechanisms to address resource use of these procedures. The commenters agreed with CMS' findings that the cases reporting EVAR using an abdominal aortic aneurysm (AAA) endoprosthesis with an IBE utilize greater resources compared to the cases reporting standard EVAR using an AAA endoprosthesis and that patients who have aortoiliac and iliac aneurysms are a more complex population to treat, contributing to increased resource utilization. The commenters also acknowledged that the criteria were not met to subdivide the proposed new MS–DRG 213 further. However, the commenters stated that given that CMS' data support that patients who have EVAR procedures using an AAA endoprosthesis with an IBE are a more complex population to treat and contribute to increased resource utilization, they requested CMS reconsider the proposed relative weight of proposed new MS–DRG 213. The

commenters stated that, as reflected in Table 5.—List of Medicare Severity Diagnosis-Related Groups (MS–DRGs), Relative Weighting Factors, and Geometric and Arithmetic Mean Length of Stay—FY 2026 Proposed Rule, the proposed new MS–DRG 213 relative weight of 5.7834 is lower than the FY 2026 proposed relative weight of MS–DRG 268 (6.9027) and that MS–DRG 268 is the ''with MCC'' MS–DRG. A commenter who supported the proposal also encouraged CMS to continue to track the costs of these cases in future years to assess if CC subgroups would be supported.

Response: We thank the commenters for their support and feedback. The commenters are correct that in Table 5., made publicly available in association with the proposed rule at: *https://www.cms.gov/medicare/payment/prospective-payment-systems/acute-inpatient-pps*, the proposed relative weight for MS–DRG 213 is shown as 5.7834 and the proposed relative weight for MS–DRG 268 is shown as 6.9027. As summarized in the analysis provided in the preamble of the proposed rule (90 FR 18031) and this final rule, a total of 2,519 cases were identified in MS–DRG 268 and a total of 10,108 cases were identified in MS–DRG 269. Among the 2,519 cases in MS–DRG 268, we found 193 cases that reported EVAR using an AAA endoprosthesis with an IBE, with an average length of stay of 8.2 days and average costs of $68,145. Of the 10,108 cases in MS–DRG 269, we found 871 cases that reported EVAR using an AAA endoprosthesis with an IBE, with an average length of stay of 1.8 days and average costs of $48,159. Because most of the cases reporting EVAR using an AAA endoprosthesis with an IBE are derived from MS–DRG 269 compared to MS–DRG 268 (871 versus 193), and the cases from MS–DRG 269 have lower average costs compared to MS–DRG 268 ($48,159 versus $68,145), the data from MS–DRG 269 have a greater influence on the structure and composition of the proposed new MS–DRG 213. Alternatively, among the 2,519 cases found in MS–DRG 268, 1,500 cases reported standard EVAR using an AAA endoprosthesis with average costs of $63,877, and among the 10,108 cases in MS–DRG 269, we found 8,655 cases that reported standard EVAR using an AAA endoprosthesis with average costs of $38,562. Since the higher volume of cases in MS–DRG 268 is reflected by the cases reporting standard EVAR using an AAA endoprosthesis compared to the cases reporting EVAR using an AAA endoprosthesis with an IBE (1,500 compared to 193), the cases reporting standard EVAR using an AAA endoprosthesis have a greater influence on the revised structure and composition of MS–DRG 268, thus, the higher proposed relative weight for MS–DRG 268 compared to the proposed relative weight for the proposed new MS–DRG 213.

After consideration of the public comments we received, we are finalizing our proposal, without modification, to create new base MS–DRG 213 (Endovascular Abdominal Aorta and Iliac Branch Procedures) for FY 2026. We will continue to monitor the data for this new MS–DRG to determine if future revisions are warranted.

b. Concomitant Single Valve Procedure With Open Surgical Ablation

In the FY 2022 IPPS/LTCH PPS final rule (86 FR 44836 through 44848), we discussed a two-part request we received to review the MS–DRG assignments for cases involving the surgical ablation procedure for atrial fibrillation. The first part of the request was to create a new classification of surgical ablation MS–DRGs to better accommodate the costs of open concomitant surgical ablations. The second part of the request was to reassign cases describing standalone percutaneous endoscopic surgical ablation. In the part of the request relating to the costs of open concomitant surgical ablations, the requestor identified the following potential procedure combinations that would comprise an ''open concomitant surgical ablation'' procedure.

- Open coronary artery bypass graft (CABG) + open surgical ablation.
- Open mitral valve repair or mitral valve replacement (MVR) + open surgical ablation.
- Open aortic valve repair or mitral valve replacement (AVR) + open surgical ablation.
- Open MVR + open AVR + open surgical ablation.
- Open MVR + open CABG + open surgical ablation.
- Open MVR + open AVR + open CABG + open surgical ablation.
- Open AVR + open CABG + open surgical ablation.

As discussed in the FY 2022 IPPS/LTCH PPS final rule, we examined claims data from the March 2020 update of the FY 2019 MedPAR file and the September 2020 update of the FY 2020 MedPAR file for cases reporting procedure code combinations describing open concomitant surgical ablations and stated our analysis showed while the average lengths of stay and average costs of cases reporting procedure code combinations describing open concomitant surgical ablations are higher than all cases in their respective MS–DRG, we found variation in the volume, length of stay, and average costs of the cases.

In the FY 2022 IPPS/LTCH PPS final rule, for the reasons discussed, we finalized our proposal to revise the surgical hierarchy for the MS–DRGs in MDC 05 (Diseases and Disorders of the Circulatory System) to sequence MS–DRGs 231–236 (Coronary Bypass, with or without PTCA, with or without Cardiac Catheterization or Open Ablation, with and without MCC, respectively) above MS–DRGs 228 and 229 (Other Cardiothoracic Procedures with and without MCC, respectively), effective October 1, 2021. In addition, we also finalized the assignment of cases with a procedure code describing coronary bypass and a procedure code describing open ablation to MS–DRGs 233 and 234 and changed the titles of these MS–DRGs to ''Coronary Bypass with Cardiac Catheterization or Open Ablation with and without MCC, respectively'' to reflect this reassignment for FY 2022.

In the FY 2023 IPPS/LTCH PPS final rule (87 FR 48845 through 48849), we discussed a request we received to again review the MS–DRG assignment of cases involving open concomitant surgical ablation procedures. The requestor stated they continue to believe that the average hospital costs for surgical ablation for atrial fibrillation demonstrates a cost disparity compared to all procedures within their respective MS–DRGs. The requestor suggested that when open surgical ablation is performed with MVR, or AVR or MVR/AVR + CABG that these procedures are either (1) assigned to a different family of MS–DRGs or (2) assigned to MS–DRGs 216 and 217 (Cardiac Valve and Other Major Cardiothoracic Procedures with Cardiac Catheterization with MCC and with CC, respectively) similar to what CMS did with CABG and open ablation procedures in the FY 2022 rulemaking to better accommodate the added cost of open concomitant surgical ablation.

We stated our analysis using the September 2021 update of the FY 2021 MedPAR file reflected that the cases reporting an open concomitant surgical ablation code combination are predominately found in the higher (CC or MCC) severity level MS–DRGs of their current base MS–DRG assignment, suggesting that the patient's co-morbid conditions may also be contributing to the higher costs of these cases. Secondly, for the numerous procedure combinations that would comprise an

''open concomitant surgical ablation'' procedure, the increase in average costs appeared to directly correlate with the number of procedures performed. For example, cases that describe ''Open MVR + Open surgical ablation'' generally demonstrated costs that were lower than cases that describe ''Open MVR + Open AVR + Open CABG + Open surgical ablation.''

Therefore, we stated we believe that additional time was needed to allow for further analysis of the claims data to determine to what extent the patient's co-morbid conditions are also contributing to higher costs and to identify other contributing factors that might exist with respect to the increased length of stay and costs of these cases in these MS–DRGs. For the reasons summarized, and after consideration of the public comments we received, we did not make any MS–DRG changes for cases involving the open concomitant surgical ablation procedures for FY 2023.

As discussed in the FY 2024 IPPS/LTCH PPS final rule (88 FR 58681 through 58690), we again received a request to review the MS–DRG assignment of cases involving open concomitant surgical ablation procedures. The requestor recommended that CMS reassign open concomitant surgical ablation procedures for atrial fibrillation (AF) from MS–DRGs 219, 220, and 221 (Cardiac Valve and Other Major Cardiothoracic Procedures without Cardiac Catheterization with MCC, with CC, and without CC/MCC, respectively) to MS–DRGs 216, 217, and 218. The requestor further recommended that if CMS does not reassign cases involving open concomitant surgical ablation procedures to MS–DRGs 216, 217, and 218, in the alternative, CMS should create new MS–DRGs for all open mitral or aortic valve repair or replacement procedures with concomitant surgical ablation for AF to improve clinical coherence when three to four open heart procedures are performed in one setting.

The requestor stated that cases reporting open surgical ablation procedures for AF performed during open valve repair/replacement procedures are typically assigned to MS–DRGs 216, 217, 218, 219, 220, and 221, with the majority of the cases being assigned to MS–DRGs 219, 220, and 221 because of the surgical hierarchy in MDC 05 and because there is less of a need for cardiac catheterization in these cases. We stated in the final rule that the requestor performed its own data analysis, and stated their analysis showed that the data continue to demonstrate that claims with open surgical ablation procedures for AF are not clinically similar to the remaining cases in MS–DRGs 219, 220, and 221, and there are significant differences in resource utilization that reflect those clinical differences.

We noted in FY 2024 IPPS/LTCH PPS final rule that our analysis of the claims data suggested that it is the performance of an aortic valve repair or replacement procedure, a mitral valve repair or replacement procedure plus another concomitant procedure that is associated with increased hospital resource utilization, not solely the performance of open surgical ablation as suggested by the requestor, when compared to other cases in their respective MS–DRGs. Therefore, for the reasons discussed, we finalized our proposal to create MS–DRG 212 (Concomitant Aortic and Mitral Valve Procedures) in MDC 05 for cases reporting an aortic valve repair or replacement procedure, a mitral valve repair or replacement procedure, and another concomitant procedure.

As discussed in the FY 2026 IPPS/LTCH PPS proposed rule (90 FR 18032 through 18035), we again received a request to review the MS–DRG assignment of cases involving a single open surgical valve procedure with an open surgical ablation. The requestor recommended that CMS reassign cases involving a single open surgical valve procedure with an open surgical ablation from MS–DRGs 219, 220, and 221 (Cardiac Valve and Other Major Cardiothoracic Procedures without Cardiac Catheterization with MCC, with CC, and without CC/MCC, respectively) to MS–DRGs 216, 217, and 218 (Cardiac Valve and Other Major Cardiothoracic Procedures with Cardiac Catheterization with MCC, with CC, and without CC/MCC, respectively). The requestor also suggested that if finalized, the title for MS–DRGs 216, 217, and 218 should be revised to ''Cardiac valve and Other Major Cardiothoracic Procedures with Cardiac Catheterization or Open Ablation, with MCC, with CC or without CC/MCC, respectively.''

As discussed in the proposed rule, the requestor stated MS–DRGs primarily focus on the most resource intensive procedure, without fully accounting for the overall resource intensity and complexity of all procedures performed and stated treating AF as a secondary condition is one such example. The requestor stated that AF, if not treated early after diagnosis, continues to worsen and is associated with stroke and mortality risk, and significantly higher healthcare spending. According to the requestor, a majority of AF patients undergoing surgical ablation procedures are older and frailer than non-surgical ablation valvular patients, and these patients frequently require two or even three procedures during one hospital visit to treat multiple conditions (AF, valve disease, heart failure, blocked coronaries). The requestor further stated patients undergoing multiple cardiac procedures, including surgical ablation, typically require between two and four hours of additional time in the operating room, a longer length of stay, and are at an increased risk for adverse event in recovery and noted that much like cardiac catheterization procedures, in many instances adding surgical ablation to open valvular procedures also requires an atriotomy to better visualize the mitral valve and complete the surgical ablation, making these concomitant procedures significantly more complex than single valve procedures performed on their own. The requestor stated that the current MS–DRG assignments do not adequately pay hospitals for the resources associated with furnishing surgical ablation procedures and that therefore, it is increasingly becoming financially unviable for hospitals to perform these procedures to Medicare beneficiaries in a single admission.

The requestor asserted that reassigning cases involving a single open surgical valve procedure with an open surgical ablation, which are currently assigned in MS–DRGs 219, 220, and 221, to MS–DRGs 216, 217, and 218 would accommodate the clinical complexity of performing two or more open heart procedures, would enhance clinical coherence for patients undergoing multiple procedures within MDC 05, would more accurately reflect associated costs and resource utilization, and would help minimize the need for multiple patient admissions. The requestor performed its own data analysis of the Standard Analytical File (SAF) FY 2022 Q1–Q3 report and stated they identified 1,938 cases involving a single open surgical valve procedure with an open surgical ablation that were assigned to MS–DRGs 219, 220, and 221. The requestor stated their analysis showed that the impact of reassigning the 1,938 cases would result in better resource alignment with minimal relative weight changes. Specifically, the requestor stated that their analysis showed that if the cases involving a single open surgical valve procedure with an open surgical ablation that are currently assigned to MS–DRGs 219, 220, and 221 were reassigned to MS–DRGs 216, 217, and 218, the relative weights of MS–DRGs

216, 217, 218, 219, 220, and 221 would change by −5.35%, −4.48%, −2.59%, +0.47%, −0.93% and −0.12% respectively.

As previously noted, the requestor recommended that we consider cases involving a single open surgical valve procedure with an open surgical ablation; however, the requestor did not provide a specific list of procedure codes for our consideration. Therefore, as discussed in the proposed rule, we reviewed the ICD–10–PCS classification and identified 81 procedure codes describing open surgical valve procedures and eight procedure codes describing open surgical ablation procedures. We refer readers to Table 6P.3a associated with the FY 2026 IPPS/LTCH PPS proposed rule (which is available on the CMS website at: *https://www.cms.gov/medicare/payment/prospective-payment-systems/acute-inpatient-pps*) which sets forth the list of ICD–10–PCS procedure codes describing open surgical valve procedures and open surgical ablation procedures that we examined.

To address this request and to understand the resource use for the subset of cases reporting procedure codes describing a single open surgical valve procedure with an open surgical ablation, without reporting a procedure code describing the performance of a cardiac catheterization, that are currently grouping to MS–DRGs 219, 220, and 221, we examined claims data from the September 2024 update of the FY 2024 MedPAR file for the average length of stay and average costs for these cases. Our findings are shown in the following table:

MS-DRGs 219-221: CASES REPORTING AN OPEN VALVE PROCEDURE AND AN OPEN SURGICAL ABLATION PROCEDURE WITHOUT REPORTING CARDIAC CATHETERIZATION

MS-DRG		Number of Cases	Average Length of Stay	Average Costs
219	All cases	13,222	10	$69,728
	Cases reporting an open valve procedure and an open surgical ablation procedure without reporting cardiac catheterization	1,657	10.1	$67,532
220	All cases	9,636	6.2	$49,514
	Cases reporting an open valve procedure and an open surgical ablation procedure without reporting cardiac catheterization	999	6.9	$53,603
221	All cases	1,146	3.6	$46,900
	Cases reporting an open valve procedure and an open surgical ablation procedure without reporting cardiac catheterization	41	5.6	$48,353

As shown in the table, the data analysis performed indicates that the 1,657 cases in MS–DRG 219 reporting an open valve procedure and an open surgical ablation procedure, without a procedure code describing the performance of a cardiac catheterization, and with a secondary diagnosis code designated as an MCC have an average length of stay that is longer than the average length of stay for all the cases in MS–DRG 219 (10.1 days versus 10 days) and lower average costs when compared to all the cases in MS–DRG 219 ($67,532 versus $69,728). The difference in average costs is $2,196 ($69,728 − $67,532 = $2,196) for the cases reporting an open valve procedure and an open surgical ablation procedure without a procedure code describing the performance of a cardiac catheterization, and with a secondary diagnosis code designated as a MCC in MS–DRG 219 when compared to all the cases in MS–DRG 219.

In MS–DRG 220, the 999 cases reporting an open valve procedure and an open surgical ablation procedure without a procedure code describing the performance of a cardiac catheterization, and with a secondary diagnosis code designated as a CC have an average length of stay that is longer than the average length of stay for all the cases in MS–DRG 220 (6.9 days versus 6.2 days) and higher average costs when compared to all the cases in MS–DRG 220 ($53,603 versus $49,514). The difference in average costs is $4,089 ($53,603 − $49,514=$4,089) for the cases reporting an open valve procedure and an open surgical ablation procedure without a procedure code describing the performance of a cardiac catheterization, and with a secondary diagnosis code designated as a CC in MS–DRG 220 when compared to all the cases in MS–DRG 220.

In MS–DRG 221, the 41 cases reporting an open valve procedure and an open surgical ablation procedure without a procedure code describing the performance of a cardiac catheterization, and without a secondary diagnosis code designated as a CC or MCC have an average length of stay that is longer than the average length of stay for all the cases in MS–DRG 221 (5.6 days versus 3.6 days) and higher average costs when compared to all the cases in MS–DRG 221 ($48,353 versus $46,900). The difference in average costs is $1,453 ($48,353 − $46,900=$1,453) for the cases reporting an open valve procedure and an open surgical ablation procedure without a procedure code describing the performance of a cardiac catheterization, and without a secondary diagnosis code designated as a CC or MCC in MS–DRG 221 when compared to all the cases in MS–DRG 221.

As discussed in the proposed rule, we then examined the data for cases in MS–DRGs 216, 217, and 218, and our findings are shown in the following table:

MS-DRG	Description	Number of Cases	Average Length of Stay	Average Costs
216	Cardiac Valve and Other Major Cardiothoracic Procedures with Cardiac Catheterization with MCC	5,137	13.6	$88,193
217	Cardiac Valve and Other Major Cardiothoracic Procedures with Cardiac Catheterization with CC	1,571	6.8	$59,943
218	Cardiac Valve and Other Major Cardiothoracic Procedures with Cardiac Catheterization without CC/MCC	251	2.9	$61,733

The data analysis performed indicates that the cases in MS–DRGs 219, 220, and 221 reporting an open valve procedure and an open surgical ablation procedure without a procedure code describing the performance of a cardiac catheterization have a generally longer average length of stay and lower average costs when compared to all cases in MS–DRGs 216, 217, and 218. As shown in the table, the data analysis performed indicates that the 1,657 cases in MS–DRG 219 reporting an open valve procedure and an open surgical ablation procedure without a procedure code describing the performance of a cardiac catheterization, and with a secondary diagnosis code designated as an MCC have a shorter average length of stay (10.1 days versus 13.6 days) and lower average costs ($67,532 versus $88,193) when compared to all the cases in MS–DRG 216. The difference in average costs is $20,661 ($88,193 − $67,532=$20,661) for the cases reporting an open valve procedure and an open surgical ablation procedure without a procedure code describing the performance of a cardiac catheterization, and with a secondary diagnosis code designated as a MCC in MS–DRG 219 when compared to all the cases in MS–DRG 216.

The 999 cases in MS–DRG 220 reporting an open valve procedure and an open surgical ablation procedure without a procedure code describing the performance of a cardiac catheterization, and with a secondary diagnosis code designated as a CC have a longer average length of stay (6.9 days versus 6.8 days) and lower average costs ($53,603 versus $59,943) when compared to all the cases in MS–DRG 217. The difference in average costs is $6,340 ($59,943 − $53,603=$6,340) for the cases reporting an open valve procedure and an open surgical ablation procedure without a procedure code describing the performance of a cardiac catheterization, and with a secondary diagnosis code designated as a CC in MS–DRG 220 when compared to all the cases in MS–DRG 217.

The 41 cases in MS–DRG 221 reporting an open valve procedure and an open surgical ablation procedure without a procedure code describing the performance of a cardiac catheterization, and without a secondary diagnosis code designated as a CC or MCC have a longer average length of stay (5.6 days versus 2.9 days) and lower average costs ($48,353 versus $61,733) when compared to all the cases in MS–DRG 218. The difference in average costs is $13,380 ($61,733 − $48,353=$13,380) for the cases reporting an open valve procedure and an open surgical ablation procedure without a procedure code describing the performance of a cardiac catheterization, and without a secondary diagnosis code designated as a CC or MCC in MS–DRG 221 when compared to all the cases in MS–DRG 218.

While the data analysis reflects that cases that report an open valve procedure and an open surgical ablation procedure without a procedure code describing the performance of a cardiac catheterization generally demonstrate slightly higher average costs in their respective MS–DRGs, we stated we believe these cases are more suitably grouped to MS–DRGs 219, 220, and 221 where they are currently assigned, based on the closer similarities in resource utilization compared to all the cases in their respective MS–DRG. As discussed in prior rulemaking (86 FR 44878), the MS–DRG system is a system of averages and it is expected that within the diagnostic related groups, some cases may demonstrate higher than average costs, while other cases may demonstrate lower than average costs. We also provide outlier payments to mitigate extreme loss on individual cases. Moreover, we stated that the data do not indicate cases reporting an open valve procedure and an open surgical ablation procedure without a procedure code describing the performance of a cardiac catheterization utilize similar resources when compared to the cases assigned to MS–DRGs 216, 217, and 218. We stated that the cases are not clinically coherent with regard to resource utilization as reflected in the greater differences in average costs.

Further, in examining this request, we noted in the proposed rule that the requestor suggested that CMS reassign cases reporting an open valve procedure and an open surgical ablation procedure without a procedure code describing the performance of a cardiac catheterization from MS–DRGs 219, 220, and 221 (Cardiac Valve and Other Major Cardiothoracic Procedures without Cardiac Catheterization with MCC, with CC, and without CC/MCC, respectively) to MS–DRGs 216, 217, and 218 for FY 2026, however, as discussed in prior rulemaking (86 FR 44830, 87 FR 48847, and 88 FR 58683), MS–DRGs 216, 217, and 218 are defined by the performance of cardiac catheterization. We stated we continue to be concerned about the effect on clinical coherence of assigning cases reporting an open valve procedure and an open surgical ablation procedure that do not also have a cardiac catheterization procedure reported to MS–DRGs that are defined by the performance of that procedure. We stated our claims analysis for the FY 2026 IPPS/LTCH PPS proposed rule continues to reflect the difference in average costs demonstrated by the two cohorts, as cases reporting the performance of a cardiac catheterization in MS–DRGs 216, 217, and 218 continue to demonstrate higher average costs.

We stated that our analysis of the claims data continues to reflect that cases reporting an open valve procedure and an open surgical ablation procedure without a procedure code describing the performance of a cardiac catheterization are clinically coherent in their currently assigned MS–DRGs. Therefore, we proposed to maintain the structure of MS–DRGs 216, 217, and 218 for FY 2026. We also proposed to maintain the title of MS–DRGs 216, 217, and 218 as ''Cardiac Valve and Other Major Cardiothoracic Procedures with Cardiac Catheterization with MCC, with CC, and without CC/MCC, respectively'' for FY 2026.

Comment: Commenters expressed support for the proposal to maintain the structure of MS–DRGs 216, 217, and 218 in MDC 05 for FY 2026. A commenter specifically stated that they support CMS' decision and rationale for maintaining the current structure of MS–DRGs 216, 217, and 218. Another commenter stated they acknowledge CMS' assessment that current data do not support moving these cases for the upcoming fiscal year and stated they believe that updated data will continue to reflect the greater resource utilization

of cases reporting cardiac valve procedures with surgical ablation compared to other cases in the respective MS–DRGs, and respectfully requested that CMS continue to monitor the relevant data and reassess the impact of concomitant surgical ablation in future rulemaking cycles.

Some commenters stated while they appreciate CMS' continued review of this issue and understand CMS' reasoning for proposing to maintain the current structure of MS–DRGs 216, 217, and 218 for FY 2026, the measures taken by CMS, such as revisions to the surgical hierarchy in FY 2022 and the creation of MS–DRG 212 (Concomitant Aortic and Mitral Valve Procedures) in FY 2024, have not effectively addressed the increased resource demands of cases involving a single open surgical valve procedure combined with open surgical ablation despite repeated analyses over the years recognizing the higher costs associated with these procedures. A few commenters suggested that CMS should consider alternative methods of addressing the increased costs associated with cases where a single open surgical valve procedure is performed with any of the other concomitant procedures, such as the creation of new MS–DRGs, to ensure clinical coherence and more accurately reflect resource utilization. A commenter suggested that CMS amend the definition of MS–DRG 212 to address cases where a single open surgical valve procedure is performed with any of the other concomitant procedures from MDC 05 that are included in the GROUPER logic of MS–DRG 212, while another commenter suggested that CMS carefully review all concomitant procedures with higher hospital resource utilization, given the important patient care benefits and efficiencies associated with performing certain procedures concomitantly in a single encounter rather than staging separate procedures.

Response: We thank the commenters for their support, and we appreciate the commenters sharing their concerns and feedback on this proposal. While the data do not support creating a new MS–DRG for cases reporting an open valve procedure and an open surgical ablation procedure and instead suggest that cases are suitably grouped to MS–DRGs 216, 217, 218, 219, 220, and 221 where they are currently assigned based on the similarities in resource utilization compared to all the cases in their respective MS–DRG, we will continue to monitor the claims data for cases reporting an open valve procedure and an open surgical ablation procedure to determine if additional refinements may be warranted in the future. We note that we would address any proposed modifications to the existing logic in future rulemaking.

Comment: Another commenter suggested that if CMS finalizes its proposal to maintain the structure of MS–DRGs 216, 217, and 218 for FY 2026, CMS should consider partially mitigating the impact of this finalization on advanced AF patients by designating ICD–10–CM diagnosis codes I48.11 (Longstanding persistent atrial fibrillation) and I48.21 (Permanent atrial fibrillation) as MCCs on its own initiative for FY 2026 to better align appropriate resources to treat the most complex subset of patients with atrial fibrillation. This commenter stated they performed their own analysis and found that data indicate that the presence of longstanding persistent atrial fibrillation and permanent atrial fibrillation results in significant costs differences compared to other admissions.

Response: We appreciate the commenters' feedback. While we consider this comment to be outside the scope of the proposal included in the FY 2026 IPPS/LTCH PPS proposed rule as we did not examine a potential change to the severity level designations for the diagnosis codes that describe longstanding persistent atrial fibrillation and permanent atrial fibrillation, we encourage individuals with comments about the severity level designations of ICD–10–CM diagnosis codes to submit these comments no later than October 20th of each year, via MEARIS™ at: *https://mearis.cms.gov/public/home*, so that they can be considered for possible inclusion in the annual proposed rule. We refer the commenter to section II.C.8. of the preamble of this FY 2026 IPPS/LTCH PPS final rule for discussion related to our plan to continue a comprehensive CC/MCC analysis, using a combination of mathematical analysis of claims data and the application of nine guiding principles and plan to present the findings and proposals in future rulemaking.

Therefore, after consideration of the public comments we received, we are finalizing our proposal to maintain the structure of MS–DRGs 216, 217, and 218 for FY 2026, without modification. We are also finalizing our proposal to maintain the title of MS–DRGs 216, 217, and 218 as ''Cardiac Valve and Other Major Cardiothoracic Procedures with Cardiac Catheterization with MCC, with CC, and without CC/MCC, respectively'' for FY 2026.

c. Transcatheter Aortic Valve Replacement Procedures for Aortic Regurgitation

Transcatheter aortic valve replacement (TAVR) is a minimally invasive procedure that involves a catheter being inserted into an artery, without an incision for most cases, and then guided to the heart. The catheter delivers the new valve without the need for the chest or heart to be surgically opened. As discussed in the FY 2026 IPPS/LTCH PPS proposed rule (90 FR 18035 through 18038), we received a request to reassign cases reporting TAVR procedures for aortic regurgitation (AR) from MS–DRGs 266 and 267 (Endovascular Cardiac Valve Replacement with or without MCC, respectively) to what the requester described as a more clinically and cost cohesive MS–DRG such as MS–DRG 215 (Other Heart Assist System Implant) and to revise the title of MS–DRG 215 to ''Other Heart Assist System Implant or Endovascular Cardiac Regurgitant Valve Replacement Procedures.''

According to the requestor, Medicare patients with severe, symptomatic AR often present with chronic, congestive heart failure, which equates to significantly greater diastolic heart failure, atrial fibrillation, and concomitant kidney, liver, and biventricular failure. As a result, managing this systemic damage requires a multidisciplinary care team, comprised of implanting physicians, cardiac surgeons, imaging cardiologists, and heart failure specialists, similar to the management required for cases currently assigned to MS–DRG 215. Further, the requestor stated TAVR procedures for AR prevent patients from devolving into heart failure and are clinically more comparable to short term heart assist device support. The requestor stated regurgitant valve disease, such as AR, is a whole-heart cardiac disease that has systemic manifestations that leads to biventricular heart failure and non-cardiac morbidity, while stenotic valve disease, such as aortic stenosis (AS), is less often associated with non-cardiac dysfunction. According to the requestor, managing a diagnosis of AR leads to inpatient lengths of stay that are double the duration of the length of stay of patients with AS, as management of AS only requires the involvement of the implanting physician and the cardiac surgeon.

As discussed in the proposed rule, the requestor identified TAVR for AR with ICD–10–CM diagnosis code I35.1 (Nonrheumatic aortic (valve) insufficiency) and ICD–10–PCS

procedure code 02RF38Z (Replacement of aortic valve with zooplastic tissue, percutaneous approach) and performed their own analysis of the FY 2023 Final MedPAR data. The requestor stated they found the cases reporting a diagnosis of aortic regurgitation in MS–DRG 266 and 267 have 20 percent higher average costs (AR = $54,425 versus AS = $45,323), two times the length of stay (AR = 5 days versus AS = 2.5 days) and trigger outlier payments two times more often (AR = 11.43 percent versus AS = 5.82 percent) compared to the cases reporting a diagnosis of aortic stenosis in MS–DRGs 266 and 267. The requestor noted in order to perform their analysis, they excluded cases reporting procedure codes describing the insertion of a percutaneous short-term external heart assist device by removing cases that reported ICD–10–PCS procedure codes 02HA3RZ (Insertion of short-term external heart assist system into heart, percutaneous approach) and 5A0221D (Assistance with cardiac output using impeller pump, continuous) from their analyses, as the requestor asserted those procedure codes were reassigned to MS–DRGs 001 and 002 (Heart Transplant or Implant of Heart Assist System with MCC and without MCC, respectively) in FY 2024.

As stated previously, the requestor identified TAVR procedures for AR with ICD–10–CM diagnosis code I35.1 (Nonrheumatic aortic (valve) insufficiency) and ICD–10–PCS procedure code 02RF38Z (Replacement of aortic valve with zooplastic tissue, percutaneous approach). As we discussed in the proposed rule, in reviewing this request, we identified five additional ICD–10–CM diagnosis codes that also describe aortic regurgitation and included these codes in our analysis. The five ICD–10–CM diagnosis codes we identified are listed in the following table.

ICD-10-CM Code	Description
I06.1	Rheumatic aortic insufficiency
I08.0	Rheumatic disorders of both mitral and aortic valves
I08.2	Rheumatic disorders of both aortic and tricuspid valves
I08.3	Combined rheumatic disorders of mitral, aortic and tricuspid valves
I35.2	Nonrheumatic aortic (valve) stenosis with insufficiency

Also, we noted in the proposed rule we identified eight additional ICD–10–PCS procedure codes that describe TAVR procedures as well, and similarly included these codes in our analysis. The eight ICD–10–PCS procedure codes we identified are listed in the following table.

ICD-10-PCS Code	Description
02RF37H	Replacement of aortic valve with autologous tissue substitute, transapical, percutaneous approach
02RF37Z	Replacement of aortic valve with autologous tissue substitute, percutaneous approach
02RF38H	Replacement of aortic valve with zooplastic tissue, transapical, percutaneous approach
02RF38N	Replacement of aortic valve with zooplastic tissue, using rapid deployment technique, percutaneous approach
02RF3JH	Replacement of aortic valve with synthetic substitute, transapical, percutaneous approach
02RF3JZ	Replacement of aortic valve with synthetic substitute, percutaneous approach
02RF3KH	Replacement of aortic valve with nonautologous tissue substitute, transapical, percutaneous approach
02RF3KZ	Replacement of aortic valve with nonautologous tissue substitute, percutaneous approach

To begin our analysis, we reviewed the GROUPER logic. We stated the requestor is correct that nine ICD–10–PCS codes that describe TAVR procedures mentioned previously are currently assigned to MS–DRGs 266 and 267. The requestor is also correct that in the FY 2024 IPPS/LTCH PPS final rule (88 FR 58690 through 58696), we discussed a request we received to reassign certain cases reporting procedure codes describing the insertion of a short-term external heart assist device from MS–DRG 215 to MS–DRGs 001 and 002. We stated temporary heart assist devices are intended to support blood pressure and provide increased blood flow to critical organs in patients with cardiogenic shock, by drawing blood out of the heart and pumping it into the aorta, partially or fully bypassing the left ventricle to provide adequate circulation of blood (replace or supplement left ventricle pumping) while also allowing damaged heart muscle the opportunity to rest and recover in patients who need short-term support.

In the FY 2024 IPPS/LTCH PPS final rule, we stated that we examined the claims data and the data suggested that overall, cases reporting a procedure code describing the open insertion of a short-term external heart assist device may be more appropriately aligned with the average costs of the cases in MS–DRGs 001 and 002 in comparison to MS–DRG 215, even though the average length of stay is shorter. We also stated that we reviewed the clinical considerations along with this data analysis and agreed that cases reporting a procedure code that describes the open insertion of a short-term external heart assist device are generally more resource intensive and are clinically distinct from other cases reporting procedure codes describing the insertion of short-term external heart devices by other approaches currently assigned to MS–DRG 215. Therefore, for the reasons discussed and after consideration of the public comments we received, we finalized our proposal to reassign ICD–10–PCS code 02HA0RZ (Insertion of short-term external heart assist system into heart, open approach) from MS–DRG 215 in MDC 05 to Pre-MDC MS–DRGs 001 and 002 when reported as a standalone procedure for FY 2024. Under this finalization, procedure code 02HA0RZ no longer needs to be reported as part of a procedure code combination or procedure code ''cluster'' to satisfy the logic for assignment to MS–DRGs 001 and 002. We refer the reader to the ICD–10 MS–DRG Definitions Manual, Version 42.1 (available on the CMS website at: *https://www.cms.gov/medicare/payment/prospective-payment-systems/acute-inpatient-pps/ms-drg-classifications-and-software)* for complete documentation of the

GROUPER logic for MS–DRGs 001, 002, 215, 266 and 267.

While the requestor stated that procedure code 02HA3RZ (Insertion of short-term external heart assist system into heart, percutaneous approach) and procedure code 5A0221D (Assistance with cardiac output using impeller pump, continuous) were reassigned to MS–DRGs 001 and 002 (Heart Transplant or Implant of Heart Assist System with MCC and without MCC, respectively) in FY 2024, we noted in the proposed rule that our finalization in the FY 2024 IPPS/LTCH PPS final rule did not involve modifying the MS–DRG assignment of procedure code 02HA3RZ or procedure code 5A0221D. In Version 42.1, cases reporting procedure codes 02HA3RZ and 5A0221D, continue to be assigned to MS–DRG 215. We refer the reader to Appendix E of the ICD–10 MS–DRG Definitions Manual, Version 42.1 (available on the CMS website at: *https://www.cms.gov/medicare/payment/prospective-payment-systems/acute-inpatient-pps/ms-drg-classifications-and-software)* for the MS–DRG assignments of procedure codes 02HA0RZ, 02HA3RZ, and 5A0221D.

Next, we examined claims data from the September 2024 update of the FY 2024 MedPAR file for MS–DRG 266 and 267 to identify cases reporting one of the six ICD–10–CM codes listed previously that describe aortic regurgitation as a principal or a secondary diagnosis with one of the nine procedure codes that describe a TAVR procedure. Our findings are shown in the following table:

MS-DRGs 266 – 267: ALL CASES AND CASES REPORTING A PROCEDURE CODE DESCRIBING TAVR WITH A PRINCIPAL OR SECONDARY DIAGNOSIS OF AORTIC REGURGITATION

MS-DRG		Number of Cases	Average Length of Stay	Average Costs
266	All cases	22,083	4.5	$55,402
	Cases reporting a procedure code describing TAVR with a principal or secondary diagnosis of aortic regurgitation	3,616	5.7	$56,010
267	All Cases	36,405	1.5	$43,282
	Cases reporting a procedure code describing TAVR with a principal or secondary diagnosis of aortic regurgitation	4,521	1.6	$41,189

As shown in the table, in MS–DRG 266, we identified a total of 22,083 cases with an average length of stay of 4.5 days and average costs of $55,402. Of those 22,083 cases, there were 3,616 cases reporting a procedure code describing TAVR with a principal or secondary diagnosis of aortic regurgitation, with average costs higher than the average costs in the FY 2024 MedPAR file for MS–DRG 266 ($56,010 compared to $55,402) and a longer average length of stay (5.7 days compared to 4.5 days). In MS–DRG 267, we identified a total of 36,405 cases with an average length of stay of 1.5 days and average costs of $43,282. Of those 36,405 cases, there were 3,616 cases reporting a procedure code describing TAVR with a principal or secondary diagnosis of aortic regurgitation, with average costs lower than the average costs in the FY 2024 MedPAR file for MS–DRG 267 ($41,189 compared to $43,282) and a longer average length of stay (1.6 days compared to 1.5 days).

As discussed in the proposed rule, we then examined claims data from the September 2024 update of the FY 2024 MedPAR for MS–DRG 215. Our findings are shown in the following table.

MS-DRG	Number of Cases	Average Length of Stay	Average Costs
215	3,257	8.2	$87,701

Our analysis indicates that the cases assigned to MS–DRG 215 have much higher average costs ($87,701 versus $56,010 or $41,189) and a much longer length of stay (8.2 days versus 5.7 days or 1.6 days) than the cases reporting a procedure code describing TAVR with a principal or secondary diagnosis of aortic regurgitation currently assigned to MS–DRGs 266 or 267, respectively. Instead, we stated the average costs and average length of stay for cases reporting a procedure code describing TAVR with a principal or secondary diagnosis of aortic regurgitation appear to be generally more aligned with the average costs and average length of stay for all cases in MS–DRGs 266 and 267, where they are currently assigned.

In addition, based on our review of the clinical considerations, in the proposed rule we stated we do not believe the procedure codes describing a TAVR are clinically coherent with the procedure codes currently assigned to MS–DRG 215. Heart assist devices, such as ventricular assist devices and artificial heart systems, provide circulatory support by taking over most of the workload of the left ventricle. Blood enters the pump through an inflow conduit connected to the left ventricle and is ejected through an outflow conduit into the body's arterial system. Heart assist devices can provide temporary left, right, or biventricular support for patients whose hearts have failed and can also be used as a bridge for patients who are awaiting a heart transplant. We stated while we agree that TAVR can be a treatment option for patients with severe AR who are at high risk for mortality or complications due to advanced age and multiple comorbidities, we do not believe the procedure codes describing TAVR should be assigned to MS–DRG 215. AR is a condition where the aortic valve doesn't close properly causing blood to leak back into the heart. While we acknowledged that if not treated AR can gradually worsen and lead to left ventricular enlargement and eventually heart failure, we stated we believe that patients with indications for heart assist devices tend to be more severely ill and these inpatient admissions are associated with greater resource utilization as evidenced by the higher average costs and longer lengths of stay. Therefore, for the reasons stated previously, we proposed to maintain the GROUPER logic for MS–DRGs 266 and 267 for FY 2026. We also proposed to maintain the title of MS–DRGs 215 as ''Other Heart Assist System Implant'' for FY 2026.

Comment: Commenters supported the proposal to maintain the GROUPER

logic for MS–DRGs 266 and 267 for FY 2026. A commenter stated they believe the request to reassign cases reporting TAVR procedures for aortic regurgitation from MS–DRGs 266 and 267 was premature, as valve treatments and the data associated with these procedures are limited. This commenter further stated that as more data are available, CMS will be better able to evaluate appropriate assignment of endovascular cardiac valve therapies in the future. Another commenter stated that patients requiring heart assist devices tend to present with more severe illnesses and require greater resource utilization and longer lengths of stay than those patients undergoing TAVR for aortic regurgitation, therefore reassigning cases reporting TAVR procedures for aortic regurgitation to MS–DRG 215 would not be clinically coherent. Other commenters stated that upon review of the data analysis that CMS described in the proposed rule, it appears the reassignment may not be appropriate at this time and encouraged CMS to continue to monitor the data for these cases and consider if any MS–DRG modifications may be warranted in the future.

Response: We appreciate the commenters' support.

Comment: Other commenters stated CMS should reconsider its proposal to maintain the GROUPER logic for MS–DRGs 266 and 267 for FY 2026 and should reassign cases reporting TAVR procedures for aortic regurgitation from MS–DRGs 266 and 267 to a more clinically and cost cohesive MS–DRG. Several commenters noted that CMS' analysis of cases reporting a procedure code describing TAVR with a principal or secondary diagnosis of aortic regurgitation included ICD–10–CM diagnosis code I35.2 (Nonrheumatic aortic (valve) stenosis with insufficiency). These commenters stated that code I35.2 inadvertently identifies patients with mixed valvular heart disease and predominant aortic stenosis and including this code in the analysis does not allow an understanding of the resource utilization required to treat patients with predominant aortic regurgitation. These commenters encouraged CMS to refine our analysis to exclude cases with aortic stenosis by analyzing the cases reporting a principal or secondary diagnosis of aortic regurgitation, without including ICD–10–CM code I35.2 and, if the data supports, assign these cases to a more clinically and cost cohesive MS–DRG. Another commenter (the requestor) stated the inclusion of ICD–10–CM code I35.2 inadvertently analyzed a very different patient population from the population they identified in their initial request, which they asserted truly identified patients who were treated with TAVR for aortic regurgitation. This commenter stated that it was impossible for more than 8,000 TAVR procedures to have been performed for patients with aortic regurgitation since there is no FDA-approved valve for this indication and noted that the ALIGN–AR trial (a single-arm, prospective, multicenter study designed to evaluate the efficacy and safety of the JenaValve Trilogy transcatheter heart valve in patients with symptomatic, greater-than-moderate native aortic regurgitation who were deemed high risk for surgery) only treated 180 patients in 2023. The commenter requested that CMS analyze the MedPAR data again using ICD–10–CM diagnosis codes I06.1 (Rheumatic aortic insufficiency) or I35.1 (Nonrheumatic aortic (valve) insufficiency) as principal or secondary diagnosis only, to accurately identify the costs and lengths of stay for patients treated for aortic regurgitation.

Response: We appreciate the commenters sharing their concerns and feedback. We agree with commenters that diagnosis code I35.2 describes nonrheumatic mixed aortic valve disease (MAVD), a condition where the aortic valve is affected by both aortic stenosis and aortic regurgitation. As discussed in the proposed rule and earlier in this section, the requestor identified TAVR for aortic regurgitation with ICD–10–CM diagnosis code I35.1 (Nonrheumatic aortic (valve) insufficiency) only. In reviewing this request, we identified five additional diagnosis codes in the ICD–10–CM classification that also describe aortic regurgitation, including code I35.2, and therefore included these codes in our analysis to avoid unintended consequences or missed opportunities in most appropriately capturing the resource utilization and clinical coherence for cases reporting a procedure code describing TAVR with a principal or secondary diagnosis of aortic regurgitation.

To examine the recommendations that CMS (1) analyze cases reporting a procedure code describing TAVR with a principal or secondary diagnosis of aortic regurgitation, while excluding cases reporting a principal or secondary diagnosis of ICD–10–CM code I35.2 (Nonrheumatic aortic (valve) stenosis with insufficiency), and (2) analyze cases reporting a procedure code describing TAVR with a principal or secondary diagnosis of ICD–10–CM codes I06.1 (Rheumatic aortic insufficiency) or I35.1 (Nonrheumatic aortic (valve) insufficiency) only, we further examined claims data from the September 2024 update of the FY 2024 MedPAR file for MS–DRG 266 and 267. Our findings are shown in the following table:

MS-DRGs 266 – 267: ALL CASES AND CASES REPORTING A PROCEDURE CODE DESCRIBING TAVR WITH A PRINCIPAL OR SECONDARY DIAGNOSIS OF AORTIC REGURGITATION				
MS-DRG		Number of Cases	Average Length of Stay	Average Costs
266	All cases	22,083	4.5	$55,402
	Cases reporting a procedure code describing TAVR with a principal or secondary diagnosis of aortic regurgitation excluding cases reporting ICD-10-CM diagnosis code I35.2	2,019	6.5	$57,724
	Cases reporting a procedure code describing TAVR with a principal or secondary diagnosis of aortic regurgitation by reporting ICD-10-CM diagnosis codes I06.1 or I31.1 only	264	7.0	$61,433
267	All Cases	36,405	1.5	$43,282
	Cases reporting a procedure code describing TAVR with a principal or secondary diagnosis of aortic regurgitation excluding cases reporting ICD-10-CM code I35.2	2,038	1.7	$40,153
	Cases reporting a procedure code describing TAVR with a principal or secondary diagnosis of aortic regurgitation by reporting ICD-10-CM diagnosis codes I06.1 or I31.1 only	262	1.6	$40,937

As shown in the table, in MS–DRG 266, we identified a total of 22,083 cases with an average length of stay of 4.5 days and average costs of $55,402. Of those 22,083 cases, there were 2,019 cases reporting a procedure code describing TAVR with a principal or secondary diagnosis of aortic regurgitation, excluding cases reporting ICD–10–CM diagnosis code I35.2, with average costs higher than the average costs in the FY 2024 MedPAR file for MS–DRG 266 ($57,724 compared to $55,402) and a longer average length of stay (6.5 days compared to 4.5 days). Additionally, there were 264 cases reporting a procedure code describing TAVR with a principal or secondary diagnosis of aortic regurgitation by reporting ICD–10–CM diagnosis codes I06.1 or I31.1 only, with average costs higher than the average costs in the FY 2024 MedPAR file for MS–DRG 266 ($61,433 compared to $55,402) and a longer average length of stay (7.0 days compared to 4.5 days).

In MS–DRG 267, we identified a total of 36,405 cases with an average length of stay of 1.5 days and average costs of $43,282. Of those 36,405 cases, there were 2,038 cases reporting a procedure code describing TAVR with a principal or secondary diagnosis of aortic regurgitation, excluding cases reporting ICD–10–CM diagnosis code I35.2, with average costs lower than the average costs in the FY 2024 MedPAR file for MS–DRG 267 ($40,153 compared to $43,282) and a longer average length of stay (1.7 days compared to 1.5 days). Additionally, there were 262 cases reporting a procedure code describing TAVR with a principal or secondary diagnosis of aortic regurgitation by reporting ICD–10–CM diagnosis codes I06.1 or I31.1 only, with average costs lower than the average costs in the FY 2024 MedPAR file for MS–DRG 267 ($40,937 compared to $43,282) and a longer average length of stay (1.6 days compared to 1.5 days).

We reviewed these data and note that the original request was to reassign cases reporting TAVR procedures for aortic regurgitation from MS–DRGs 266 and 267 to what the requester described as a more clinically and cost cohesive MS–DRG such as MS–DRG 215 (Other Heart Assist System Implant). We continue to believe that patients with indications for heart assist devices tend to be more severely ill and these inpatient admissions are associated with greater resource utilization as evidenced by the higher average costs and longer lengths of stay compared to cases reporting codes describing TAVR for aortic regurgitation, even when excluding cases with a principal or secondary diagnosis of ICD–10–CM code I35.2 or when considering cases reporting a principal or secondary diagnosis of ICD–10–CM codes I06.1 or I35.1 only. We also note that the claims data reflect variance with regard to average length of stay and average costs for these cases when considering which principal or secondary ICD–10–CM diagnosis codes are reported to describe aortic regurgitation. The claims data also clearly show that the cases reporting secondary diagnoses designated as MCCs are more resource intensive compared to other cases reporting codes describing TAVR for aortic regurgitation. As such, we believe it is premature to propose changes to the MS–DRG assignment of cases reporting TAVR procedures for aortic regurgitation. Further analysis is needed, particularly focusing on the diagnosis codes reported, and also giving consideration as to whether other factors, such as the reporting of secondary MCC and CC diagnoses, may be contributing to the average costs prior to proposing any reassignment of these cases to ensure clinical coherence between these cases and the other cases with which they may potentially be grouped. Furthermore, it is also difficult to predict what the associated costs and resource utilization will be in the future for TAVR devices that remain under development or in clinical trials as research continues to refine TAVR techniques, evaluate long-term outcomes, develop new devices, and expand clinical indications. We expect in future years we will have additional data that can be used to evaluate the potential reassignment of cases reporting TAVR procedures. We will continue to monitor the claims data in consideration of any future modifications to the MS–DRGs for which TAVR procedures may be reported.

Therefore, after consideration of the public comments we received, we are finalizing our proposal to maintain the GROUPER logic for MS–DRGs 266 and 267 for FY 2026, without modification. We are also finalizing our proposal to maintain the title of MS–DRGs 215 as ''Other Heart Assist System Implant'' for FY 2026.

d. Percutaneous Coronary Atherectomy

In the FY 2024 IPPS/LTCH PPS final rule (88 FR 58704 through 58712), we discussed a request we received to

review the MS–DRG assignment of cases describing percutaneous coronary intravascular lithotripsy (IVL). Coronary IVL is utilized in a subset of percutaneous coronary intervention (PCI) procedures when the artery is severely calcified. According to the requestor, PCIs involving coronary IVL are clinically more complex because coronary IVL is a therapy deployed exclusively in severely calcified coronary lesions, and these lesion types are associated with longer procedure times and increased utilization of hospital resources. In analyzing this request, we stated in the FY 2024 IPPS/LTCH PPS final rule that the data analysis showed that the average costs of cases reporting percutaneous coronary IVL, with or without involving the insertion of an intraluminal device, were higher than for all cases in their respective MS–DRG. Therefore, for FY 2024, taking into consideration that it clinically requires greater resources to perform coronary IVL, and after consideration of the public comments we received, we finalized our proposal to create MS–DRG 323 (Coronary Intravascular Lithotripsy with Intraluminal Device with MCC), MS–DRG 324 (Coronary Intravascular Lithotripsy with Intraluminal Device without MCC) and MS–DRG 325 (Coronary Intravascular Lithotripsy without Intraluminal Device) in MDC 05.

In the FY 2025 IPPS/LTCH PPS final rule (89 FR 69000 through 69002), we discussed requests to modify the GROUPER logic in a number of cardiac MS–DRGs under MDC 05 (Diseases and Disorders of the Circulatory System) for which we stated further research and analysis were required, and which we would continue to consider in connection with future rulemaking. Specifically, we discussed requests we received to modify the GROUPER logic of MS–DRGs 323, 324, and 325. In two separate but related requests, the requestors suggested that we add procedure codes that describe additional PCI procedures, such as percutaneous coronary rotational, laser, and orbital atherectomy, to the GROUPER logic of new MS–DRGs 323, 324, and 325.

In the FY 2025 IPPS/LTCH PPS final rule, we noted that as stated in prior rulemaking (88 FR 58708), atherectomy is distinct from coronary lithotripsy in that each of these procedures are defined by clinically distinct definitions and objectives. We stated additional analysis to assess for unintended consequences across the classification was needed as we have made a distinction between the root operations used to describe atherectomy (Extirpation) and the root operation used to describe lithotripsy (Fragmentation) in evaluating other requests in rulemaking. We stated we would need to consider the application of these two root operations in other scenarios where we have also specifically stated that Extirpation is not the same as Fragmentation and do not warrant similar MS–DRG assignment (85 FR 58572 through 58573). Furthermore, as MS–DRGs 323, 324, and 325 had recently become effective on October 1, 2023 (FY 2024), we stated additional time was needed to review and evaluate extensive modifications to the structure of these MS–DRGs.

As discussed in the FY 2026 IPPS/LTCH PPS proposed rule (90 FR 18038 through 18042), we received a request to reassign percutaneous coronary atherectomy procedures from MS–DRGs 250 and 251 (Percutaneous Cardiovascular Procedures without Intraluminal Device with MCC and without MCC, respectively) and MS–DRGs 321 and 322 (Percutaneous Cardiovascular Procedures with Intraluminal Device with MCC or 4+ Arteries/Intraluminal Devices and without MCC, respectively) to MS–DRGs 323, 324, and 325 where cases reporting percutaneous coronary IVL are assigned. Atherectomy is a procedure used to remove plaque buildup from the inside of arteries. The requestor stated that coronary atherectomy and coronary IVL target the same step of the PCI treatment process (that is, reducing the burden of calcium by preparing the vessel prior to stent delivery). The requestor further stated that coronary atherectomy is more clinically similar to coronary IVL than other routine vessel preparation techniques (such as angioplasty) in that both coronary atherectomy and coronary IVL are used to modify severe coronary calcium, treat the same patient population, and have the same intended clinical use for complex vessel preparation. Complex vessel preparation is required to increase the diameter of an artery's lumen in severely calcified lesions and improves revascularization by debulking calcification which enables better intraluminal device deployment and improved drug uptake into the vessel wall. Similar to lithotripsy, after percutaneous atherectomy is performed, the provider can implant an intraluminal device, also called a stent, to keep the vessel open.

According to the requestor, removing percutaneous coronary atherectomy procedures from their current MS–DRG assignments and assigning them to MS–DRGs 323, 324, and 325 would reduce cost variance and improve clinical coherence across all PCI MS–DRGs. The requestor also stated that as atherectomy procedures involve more complex calcified lesions and require greater resources, it is not clinically or cost coherent to maintain their current MS–DRG assignments, therefore creating a new MS–DRG for all cases involving percutaneous coronary atherectomy procedures was a reasonable alternative option if CMS did not agree with the reassignment of these cases to MS–DRGs 323, 324, and 325.

As discussed in the proposed rule, the requestor identified eight ICD–10–PCS codes that they state describe percutaneous coronary atherectomy. The eight codes the requestor identified are listed in the following table.

ICD-10-PCS Code	Description
02C03Z7	Extirpation of matter from coronary artery, one artery, orbital atherectomy technique, percutaneous approach
02C03ZZ	Extirpation of matter from coronary artery, one artery, percutaneous approach
02C13Z7	Extirpation of matter from coronary artery, two arteries, orbital atherectomy technique, percutaneous approach
02C13ZZ	Extirpation of matter from coronary artery, two arteries, percutaneous approach
02C23Z7	Extirpation of matter from coronary artery, three arteries, orbital atherectomy technique, percutaneous approach
02C23ZZ	Extirpation of matter from coronary artery, three arteries, percutaneous approach
02C33Z7	Extirpation of matter from coronary artery, four or more arteries, orbital atherectomy technique, percutaneous approach
02C33ZZ	Extirpation of matter from coronary artery, four or more arteries, percutaneous approach

While we agree with the requestor that the eight procedure codes listed in the previous table describe percutaneous coronary atherectomy, we noted in the proposed rule there are additional ICD–10–PCS codes that

describe percutaneous coronary atherectomy in the GROUPER logic for MS–DRGs 250, 251, 321, and 322. Therefore, in reviewing this request, we stated we identified 12 additional ICD–10–PCS procedure codes that also describe percutaneous or percutaneous endoscopic coronary atherectomy procedures and included these codes in our analysis. The 12 codes we identified are listed in the following table.

ICD-10-PCS Code	Description
02C03Z6	Extirpation of matter from coronary artery, one artery, bifurcation, percutaneous approach
02C04Z6	Extirpation of matter from coronary artery, one artery, bifurcation, percutaneous endoscopic approach
02C04ZZ	Extirpation of matter from coronary artery, one artery, percutaneous endoscopic approach
02C13Z6	Extirpation of matter from coronary artery, two arteries, bifurcation, percutaneous approach
02C14Z6	Extirpation of matter from coronary artery, two arteries, bifurcation, percutaneous endoscopic approach
02C14ZZ	Extirpation of matter from coronary artery, two arteries, percutaneous endoscopic approach
02C23Z6	Extirpation of matter from coronary artery, three arteries, bifurcation, percutaneous approach
02C24Z6	Extirpation of matter from coronary artery, three arteries, bifurcation, percutaneous endoscopic approach
02C24ZZ	Extirpation of matter from coronary artery, three arteries, percutaneous endoscopic approach
02C33Z6	Extirpation of matter from coronary artery, four or more arteries, bifurcation, percutaneous approach
02C34Z6	Extirpation of matter from coronary artery, four or more arteries, bifurcation, percutaneous endoscopic approach
02C34ZZ	Extirpation of matter from coronary artery, four or more arteries, percutaneous endoscopic approach

We refer the reader to the ICD–10 MS–DRG Definitions Manual, Version 42.1 (available on the CMS website at: *https://www.cms.gov/medicare/payment/prospective-payment-systems/acute-inpatient-pps/ms-drg-classifications-and-software*) for complete documentation of the GROUPER logic for MS–DRGs 250, 251, 321, and 322.

To begin our analysis, we examined claims data from the September 2024 update of the FY 2024 MedPAR file for MS–DRGs 250, 251, 321, and 322 to identify cases reporting a procedure code describing percutaneous or percutaneous endoscopic coronary atherectomy and compared the results to all cases in their respective MS–DRG. Our findings are shown in the following table.

MS-DRG		Number of Cases	Average Length of Stay	Average Costs
250	All cases	3,047	4.4	$21,383
	Cases reporting percutaneous or percutaneous endoscopic coronary atherectomy	493	4.6	$25,139
251	All cases	2,515	2.4	$14,521
	Cases reporting percutaneous or percutaneous endoscopic coronary atherectomy	340	2.5	$18,121
321	All cases	32,517	5.0	$26,309
	Cases reporting percutaneous or percutaneous endoscopic coronary atherectomy	3,307	5.1	$31,886
322	All cases	46,600	2.4	$16,792
	Cases reporting percutaneous or percutaneous endoscopic coronary atherectomy	3,134	2.5	$20,889

As shown by the table, in MS–DRG 250, we identified a total of 3,047 cases, with an average length of stay of 4.4 days and average costs of $21,383. Of those 3,047 cases, there were 493 cases reporting percutaneous or percutaneous endoscopic coronary atherectomy without reporting the insertion of an intraluminal device, with higher average costs as compared to all cases in MS–DRG 250 ($25,139 compared to $21,383), and a longer average length of stay (4.6 days compared to 4.4 days). In MS–DRG 251, we identified a total of 2,515 cases with an average length of stay of 2.4 days and average costs of $14,521. Of those 2,515 cases, there were 340 cases reporting percutaneous or percutaneous endoscopic coronary atherectomy without reporting the insertion of an intraluminal device, with higher average costs as compared to all cases in MS–DRG 251 ($18,121 compared to $14,521), and a longer average length of stay (2.5 days compared to 2.4 days).

In MS–DRG 321, we identified a total of 32,517 cases with an average length of stay of 5.0 days and average costs of $26,309. Of those 32,517 cases, there were 3,307 cases reporting percutaneous or percutaneous endoscopic coronary atherectomy with the insertion of an intraluminal device, with higher average costs as compared to all cases in MS–DRG 321 ($31,886 compared to $26,309), and a longer average length of stay (5.1 days compared to 5.0 days). In MS–DRG 322, we identified a total of 46,600 cases with an average length of stay of 2.4 days and average costs of $16,792. Of those 46,600 cases, there were 3,134 cases reporting percutaneous or percutaneous endoscopic coronary atherectomy with the insertion of an intraluminal device, with higher average costs as compared to all cases in MS–DRG 322 ($20,889 compared to $16,792), and a longer average length of stay (2.5 days compared to 2.4 days). The data analysis shows that the average costs of cases reporting percutaneous or percutaneous endoscopic coronary atherectomy, with or without involving the insertion of an intraluminal device, are higher than for all cases in their respective MS–DRG.

As discussed in the proposed rule, we then examined claims data from the September 2024 update of the FY 2024 MedPAR file for MS–DRGs 323, 324, and 325. Our findings are shown in the following table.

MS-DRG	Number of Cases	Average Length of Stay	Average Costs
323	4,429	6.0	$39,047
324	4,877	2.9	$28,809
325	646	3.9	$29,362

In MS–DRG 323, we found a total of 4,429 cases with an average length of stay of 6.0 days and average costs of $39,047. In MS–DRG 324, we found a total of 4,877 cases with an average length of stay of 2.9 days and average costs of $28,809. In MS–DRG 325, we found a total of 646 cases with an average length of stay of 3.9 days and average costs of $29,362.

The average costs of the 3,307 cases reporting percutaneous or percutaneous endoscopic coronary atherectomy with the insertion of an intraluminal device in MS–DRG 321 are $7,161 less than the average costs of all cases in MS–DRG 323 ($39,047 − $31,886 = $7,161) and have an average length of stay that is less than the average length of stay of all cases in MS–DRG 323 (5.1 days versus 6.0 days). The average costs of the 3,134 cases reporting percutaneous or percutaneous endoscopic coronary atherectomy with the insertion of an intraluminal device in MS–DRG 322 are $7,920 less than the average costs of all cases in MS–DRG 324 ($28,809 − $20,899 = $7,920) and have an average length of stay that is less than the average length of stay of all cases in MS–DRG 324 (2.5 days versus 2.9 days). The average costs of the 493 cases in MS–DRG 250 and the 340 cases in MS–DRG 251 reporting percutaneous or percutaneous endoscopic coronary atherectomy without reporting a procedure code describing the insertion of an intraluminal device are $4,223 and $11,241 less than the average costs of all cases in MS–DRG 325 ($29,362 − $25,139 = $7,920; $29,362 − $18,121 = $11,241), respectively. These 493 cases in MS–DRG 250 have an average length of stay that is more than the average length of stay of all cases in MS–DRG 325 (4.6 days versus 3.9 days) while the 340 cases in MS–DRG 251 have an average length of stay that is less than the average length of stay of all cases in MS–DRG 325 (2.5 days versus 3.9 days).

Upon analysis of the claims data and our review of the request, we stated in the proposed rule we do not agree with reassigning cases reporting percutaneous or percutaneous endoscopic coronary atherectomy from MS–DRGs 250, 251, 321, and 322 to MS–DRGs 323, 324, and 325. We stated that while we agree that the performance of percutaneous or percutaneous endoscopic coronary atherectomy contributes to increased resource consumption for these PCI procedures, as previously noted, the data do not support that cases reporting percutaneous or percutaneous endoscopic coronary atherectomy, with or without involving the insertion of an intraluminal device, utilize similar resources when compared to coronary IVL procedures currently assigned to MS–DRGs 323, 324, and 325. Additionally, as stated previously and in prior rulemaking (88 FR 58708), coronary atherectomy is distinct from coronary lithotripsy in that each of these procedures are defined by clinically distinct definitions and objectives. We stated we continue to believe that the root operation Extirpation is not the same as the root operation Fragmentation and do not warrant similar MS–DRG assignment (85 FR 58572 through 58573).

As discussed in the proposed rule, we then explored alternative options, as was requested. As discussed in prior rulemaking (88 FR 58706), we continue to agree that clinically, the presence of severe calcification can increase the treatment difficulty and complexity of service. We stated the data analysis clearly shows that cases reporting percutaneous or percutaneous endoscopic coronary atherectomy, with or without involving the insertion of an intraluminal device, have higher average costs and longer lengths of stay compared to all the cases in their assigned MS–DRG. For these reasons, we proposed to create new MS–DRGs for cases reporting procedure codes describing percutaneous or percutaneous endoscopic coronary atherectomy involving the insertion of an intraluminal device, as well as a new MS–DRG for cases reporting procedure codes describing percutaneous or percutaneous endoscopic coronary atherectomy without the insertion of an intraluminal device to address the differential in resource consumption.

To compare and analyze the impact of our suggested modifications, as discussed in the proposed rule, we ran a simulation using the most recent claims data from the September 2024 update of the FY 2024 MedPAR file. The following table illustrates our findings for all 6,441 cases reporting procedure codes describing percutaneous or percutaneous endoscopic atherectomy involving the insertion of an intraluminal device.

Proposed New MS-DRG	Number of Cases	Average Length of Stay	Average Costs
Proposed new MS-DRG XXX Percutaneous Coronary Atherectomy with Intraluminal Device	6,441	3.8	$26,535

We applied the criteria to create subgroups in a base MS–DRG as discussed in section II.C.1.b. of the preamble of the FY 2026 IPPS/LTCH PPS proposed rule and this final rule. As shown, a three-way split of the proposed new MS–DRG failed to meet the criterion that there be at least a 20 percent difference in average costs between the CC and NonCC subgroup.

Proposed New MS-DRGs	Number of Cases	Average Length of Stay	Average Costs
With MCC	3,307	5.1	$31,886
With CC	1,861	2.8	$21,961
Without CC/MCC	1,273	2	$19,322

As discussed in section II.C.1.b. of the preamble of the FY 2026 IPPS/LTCH PPS proposed rule and this final rule, if the criteria for a three-way split fail, the next step is to determine if the criteria are satisfied for a two-way split. We therefore applied the criteria for a two-way split for the ''with MCC'' and ''without MCC'' subgroups and found that all five criteria were met. The following table illustrates our findings.

Proposed New MS-DRGs	Number of Cases	Average Length of Stay	Average Costs
With MCC	3,307	5.1	$31,886
Without MCC	3,134	2.5	$20,889

As discussed in the proposed rule, for the proposed new MS–DRGs for cases reporting procedure codes describing percutaneous or percutaneous endoscopic atherectomy involving the insertion of an intraluminal device, there is at least (1) 500 cases in the MCC subgroup and 500 cases in the without MCC subgroup; (2) 5 percent of the cases in the MCC group and 5 percent in the without MCC subgroup; (3) a 20 percent difference in average costs between the MCC group and the without MCC group; (4) a $2,000 difference in average costs between the MCC group and the without MCC group; and (5) a 3-percent reduction in cost variance, indicating that the proposed severity level splits increase the explanatory power of the base MS–DRG in capturing differences in expected cost between the proposed MS–DRG severity level splits by at least 3 percent and thus improve the overall accuracy of the IPPS payment system.

We then ran a simulation using the most recent claims data from the September 2024 update of the FY 2024 MedPAR file for all 833 cases reporting procedure codes describing percutaneous or percutaneous endoscopic atherectomy without the insertion of an intraluminal device. The following table illustrates our findings.

Proposed New MS-DRG	Number of Cases	Average Length of Stay	Average Costs
Proposed new MS-DRG XXX Percutaneous Coronary Atherectomy without Intraluminal Device	833	3.7	$22,275

We applied the criteria to create subgroups in a base MS–DRG as discussed in section II.C.1.b. of the preamble of the FY 2026 IPPS/LTCH PPS proposed rule and this final rule. As shown, a three-way split of the proposed new MS–DRG failed to meet the criterion that there be at least 500 cases in the MCC subgroup, CC subgroup, and NonCC subgroup.

Proposed New MS-DRGs	Number of Cases	Average Length of Stay	Average Costs
With MCC	493	4.6	$25,139
With CC	257	2.7	$19,080
Without CC/MCC	83	2	$15,151

As discussed in section II.C.1.b. of the preamble of the FY 2026 IPPS/LTCH PPS proposed rule and this final rule, if the criteria for a three-way split fail, the next step is to determine if the criteria are satisfied for a two-way split. We therefore applied the criteria for a two-way split for the ''with MCC'' and ''without MCC'' subgroups. We note that, as shown in the table that follows, a two-way split of this base MS–DRG failed to meet the criterion that there be at least 500 cases in the with MCC and the without MCC subgroups.

Proposed New MS-DRGs	Number of Cases	Average Length of Stay	Average Costs
With MCC	493	4.6	$25,139
Without MCC	340	2.5	$18,121

We then applied the criteria for a two-way split for the ''with CC/MCC'' and ''without CC/MCC'' subgroups. As shown in the table that follows, a two-way split of this base MS–DRG also failed to meet the criterion that there be at least 500 cases in the without CC/MCC subgroup.

Proposed New MS-DRGs	Number of Cases	Average Length of Stay	Average Costs
With CC/MCC	750	3.9	$23,063
Without CC/MCC	83	2	$15,151

We noted in the proposed rule that because the criteria for both of the two-way splits failed, a split (or CC subgroup) is not warranted for the proposed new base MS–DRG. As a result, for FY 2026, we proposed to

create a base MS–DRG for cases reporting procedure codes describing percutaneous or percutaneous endoscopic atherectomy without the insertion of an intraluminal device.

In summary, for FY 2026, taking into consideration that it clinically requires greater resources to perform percutaneous or percutaneous endoscopic coronary atherectomy, we proposed to create two new MS–DRGs with a two-way severity level split for cases describing percutaneous or percutaneous endoscopic coronary atherectomy involving the insertion of an intraluminal device in MDC 05. We also proposed to create a new base MS–DRG for cases describing percutaneous or percutaneous endoscopic coronary atherectomy without an intraluminal device. The proposed new MS–DRGs are proposed new MS–DRG 359 (Percutaneous Coronary Atherectomy with Intraluminal Device with MCC), proposed new MS–DRG 360 (Percutaneous Coronary Atherectomy with Intraluminal Device without MCC) and proposed new MS–DRG 318 (Percutaneous Coronary Atherectomy without Intraluminal Device). We refer the reader to Table 6P.4a and Table 6P.4b associated with the FY 2026 IPPS/LTCH PPS proposed rule (which is available on the CMS website at: *https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/AcuteInpatientPPS/index*) for the list of procedure codes we proposed to define in the logic for each of the proposed new MS–DRGs. We noted that discussion of the surgical hierarchy for the proposed modification is discussed in section II.C.10. of the preamble of the FY 2026 IPPS/LTCH PPS proposed rule.

Comment: Many commenters expressed support for CMS' proposal to create new MS–DRGs for cases describing percutaneous or percutaneous endoscopic coronary atherectomy. Commenters stated they appreciate CMS' recognition of the greater resources required to perform percutaneous or percutaneous endoscopic coronary atherectomy. These commenters stated that they agree that the new MS–DRGs will appropriately reflect the higher resource use and longer hospital stays associated with these complex procedures and applauded CMS for recognizing the increased resources required and for undertaking the detailed analysis.

Response: We thank the commenters for their support.

After consideration of the public comments we received, we are finalizing our proposal to create new MS–DRG 359 (Percutaneous Coronary Atherectomy with Intraluminal Device with MCC), new MS–DRG 360 (Percutaneous Coronary Atherectomy with Intraluminal Device without MCC) and new MS–DRG 318 (Percutaneous Coronary Atherectomy without Intraluminal Device) for cases reporting percutaneous or percutaneous endoscopic coronary atherectomy, without modification, for FY 2026.

We refer the reader to Table 6P.4a and Table 6P.4b associated with this FY 2026 IPPS/LTCH PPS final rule (which is available on the CMS website at: *https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/AcuteInpatientPPS/index*) for the list of procedure codes we are finalizing to define in the logic for each of the new MS–DRGs. We note that discussion of the surgical hierarchy for the finalized modification is discussed in section II.C.10. of the preamble of this FY 2026 IPPS/LTCH PPS final rule.

e. Complex Aortic Arch Procedures

As discussed in the FY 2026 IPPS/LTCH PPS proposed rule (90 FR 18042 through 18047), we received two separate but related requests to review and reconsider the MS–DRG assignments for a subset of codes describing aortic arch procedures assigned to MS DRGs 216, 217, 218, 219, 220, and 221 (Cardiac Valve & Other Major Cardiothoracic Procedure with and without Cardiac Catheterization, with MCC, with CC, without CC/MCC, respectively). In this section of the preamble of this FY 2026 IPPS/LTCH PPS final rule, we discuss each of these separate, but related requests.

The first request was to reassign cases reporting a procedure code describing endovascular restriction of the thoracic aorta with a branched or fenestrated intraluminal device from MS–DRGs 219, 220, and 221 (Cardiac Valve and Other Major Cardiothoracic Procedures without Cardiac Catheterization with MCC, with CC, and without CC/MCC, respectively) to MS–DRG 216 (Cardiac Valve and Other Major Cardiothoracic Procedures with Cardiac Catheterization with MCC). Alternatively, the requestor stated CMS could consider reassigning other similar complex aortic arch branch procedures to MS–DRG 216. The requestor suggested that if finalized, the title for MS–DRG 216 should be revised to reflect ''Cardiac Valve and Other Major Cardiothoracic Procedures with Cardiac Catheterization with MCC or with Aortic Arch Branch Intraluminal Device.''

According to the requestor, the manufacturer of the GORE® TAG® Thoracic Branch Endoprosthesis (TBE), reassignment of the procedure code describing endovascular restriction of the thoracic aorta with a branched or fenestrated intraluminal device to MS–DRG 216 would result in higher payment and better account for the differences in resource use of the cases reporting this procedure than other cases in their respective MS–DRGs where they are currently assigned. The GORE® TAG® TBE provides endovascular repair of pathologies of the descending thoracic aorta requiring a proximal landing zone including the left subclavian artery. It is a modular device that consists of three implantable fabric tubes supported by a nitinol framework. The GORE® TAG® TBE is indicated for endovascular repair of lesions such as aortic aneurysms, traumatic transections, and dissections of the descending thoracic aorta with treatment extending to the aortic arch, while maintaining flow into the left subclavian artery (Zone 2 of the aortic arch), in patients who are at high risk for debranching subclavian procedures and who have appropriate anatomy. According to the requestor, patients with lesions in the aortic arch are often more clinically complex and more difficult to treat than patients with lesions in lower parts of the aorta due to vascular tortuosity, proximity to the heart, involvement of arch vessels that feed into the head and brain, and risk of stroke and paraplegia or paraparesis from emboli released into arteries that provide blood flow to the left arm and head. The requestor stated that for lesions involving the left subclavian artery, the only other treatment options available today include open surgical repair with a synthetic graft or a hybrid procedure which includes a non-branched endovascular device and an open surgical bypass procedure of the head vessels. Per the requestor, for arch lesions involving the brachiocephalic and left common carotid arteries, a TBE device enables hybrid treatment with one fewer bypass procedure.

The requestor identified cases reporting endovascular restriction of the thoracic aorta with a branched or fenestrated intraluminal device by the presence of ICD–10–PCS codes 02VX3EZ (Restriction of thoracic aorta, ascending/arch with branched or fenestrated intraluminal device, one or two arteries, percutaneous approach) and 02VW3DZ (Restriction of thoracic aorta, descending with intraluminal device, percutaneous approach) on the same claim and performed its own analysis of the claims data. The requestor stated they found 90 cases reporting endovascular restriction of the thoracic aorta with a branched or fenestrated intraluminal device, and

these cases are 49% (+$32,326), 60% (+$27,727), and 38% (+$15,432) more costly compared to all cases in MS–DRGs 219, 220, and 221, respectively. While acknowledging that cases reporting endovascular restriction of the thoracic aorta with a branched or fenestrated intraluminal device typically do not require a cardiac catheterization procedure, the requestor asserted that this claims analysis demonstrates cases reporting endovascular restriction of the thoracic aorta with a branched or fenestrated intraluminal device require resources similar to cases in MS–DRG 216.

As mentioned previously, the requestor stated we could also consider reassigning cases reporting procedure codes describing other complex aortic arch branch procedures to MS–DRG 216. The requestor stated to be considered a similar ''complex aortic arch procedure'' the case should report an ICD–10–PCS code describing the endovascular restriction of the thoracic aorta with a branched or fenestrated intraluminal device with an ICD–10–PCS code describing a Zone 0 or a Zone 1 Bypass procedure. Zone 0 is in the ascending aorta, proximal to the brachiocephalic artery and Zone 1 covers the portion of the aortic arch between the brachiocephalic artery and the left common carotid artery. The requestor identified cases reporting these ''other complex aortic arch procedures'' as cases reporting ICD–10–PCS codes as reflected in the following table.

ICD-10-PCS Code	Description
02VX3EZ	Restriction of thoracic aorta, ascending/arch with branched or fenestrated intraluminal device, one or two arteries, percutaneous approach
with one of the following:	
031409J	Bypass left subclavian artery to right extracranial artery with autologous venous tissue, open approach
031409K	Bypass left subclavian artery to left extracranial artery with autologous venous tissue, open approach
03140AJ	Bypass left subclavian artery to right extracranial artery with autologous arterial tissue, open approach
03140AK	Bypass left subclavian artery to left extracranial artery with autologous arterial tissue, open approach
03140JJ	Bypass left subclavian artery to right extracranial artery with synthetic substitute, open approach
03140JK	Bypass left subclavian artery to left extracranial artery with synthetic substitute, open approach
03140KJ	Bypass left subclavian artery to right extracranial artery with nonautologous tissue substitute, open approach
03140KK	Bypass left subclavian artery to left extracranial artery with nonautologous tissue substitute, open approach
03140ZJ	Bypass left subclavian artery to right extracranial artery, open approach
03140ZK	Bypass left subclavian artery to left extracranial artery, open approach
03LJ0CZ	Occlusion of left common carotid artery with extraluminal device, open approach
03LJ0ZZ	Occlusion of left common carotid artery, open approach
03LJ3BZ	Occlusion of left common carotid artery with bioactive intraluminal device, percutaneous approach
03LJ3DZ	Occlusion of left common carotid artery with intraluminal device, percutaneous approach
03LJ4CZ	Occlusion of left common carotid artery with extraluminal device, percutaneous endoscopic approach
03LJ4ZZ	Occlusion of left common carotid artery, percutaneous endoscopic approach
031J09J	Bypass left common carotid artery to right extracranial artery with autologous venous tissue, open approach
031J09K	Bypass left common carotid artery to left extracranial artery with autologous venous tissue, open approach
031J09Y	Bypass left common carotid artery to upper artery with autologous venous tissue, open approach
031J0AJ	Bypass left common carotid artery to right extracranial artery with autologous arterial tissue, open approach
031J0AK	Bypass left common carotid artery to left extracranial artery with autologous arterial tissue, open approach
031J0AY	Bypass left common carotid artery to upper artery with autologous arterial tissue, open approach
031J0JJ	Bypass left common carotid artery to right extracranial artery with synthetic substitute, open approach
031J0JK	Bypass left common carotid artery to left extracranial artery with synthetic substitute, open approach
031J0JY	Bypass left common carotid artery to upper artery with synthetic substitute, open approach
031J0KJ	Bypass left common carotid artery to right extracranial artery with nonautologous tissue substitute, open approach
031J0KK	Bypass left common carotid artery to left extracranial artery with nonautologous tissue substitute, open approach
031J0KY	Bypass left common carotid artery to upper artery with nonautologous tissue substitute, open approach
031J0ZJ	Bypass left common carotid artery to right extracranial artery, open approach
031J0ZK	Bypass left common carotid artery to left extracranial artery, open approach
031J0ZY	Bypass left common carotid artery to upper artery, open approach

In analyzing this request, we noted in the proposed rule the requestor is correct that the following ICD–10–PCS codes specifically describe procedures involving the GORE® TAG® TBE: 02VX3EZ (Restriction of thoracic aorta, ascending/arch with branched or fenestrated intraluminal device, one or two arteries, percutaneous approach), in combination with 02VW3DZ (Restriction of thoracic aorta, descending with intraluminal device, percutaneous approach). The requestor is also correct that procedure codes 02VX3EZ and 02VW3DZ are assigned to MS–DRGs 216, 217, 218, 219, 220, and 221. Additionally, we stated we agree that the ICD–10–PCS codes as reflected in the previous table can describe other complex aortic arch procedures, and when reported, MS–DRGs 216, 217, 218, 219, 220, and 221 would be assigned. We refer the reader to the ICD–10 MS–DRG Definitions Manual Version 42.1, which is available on the CMS website at: *https://www.cms.gov/medicare/payment/prospective-payment-systems/acute-inpatient-pps/ms-drg-classifications-and-software*, for complete documentation of the GROUPER logic for MS–DRGs 216, 217, 218, 219, 220, and 221. We noted in the proposed rule that the GORE® TAG® TBE was approved for new technology add-on payments for FY 2023 (87 FR 48966 through 48969), FY 2024 (88 FR 58800), and FY 2025 (89 FR 69124). We refer readers to section II.E.5 of the preamble of this FY 2026 IPPS/LTCH PPS final rule for a discussion regarding the FY 2026 status of technologies approved for FY 2025 new technology add-on payments, including the GORE® TAG® TBE.

To explore mechanisms to address this request and to understand the resource use for the subset of cases reporting procedure codes 02VX3EZ and 02VW3DZ, and cases reporting ''other complex aortic arch procedures'', in the proposed rule we stated we began our analysis by examining claims data from the September 2024 update of the FY 2024 MedPAR file for cases assigned to MS–DRGs 216, 217, 218, 219, 220, and 221. Our findings are shown in the following table:

MS-DRGs 216-221: CASES REPORTING ENDOVASCULAR RESTRICTION OF THE THORACIC AORTA WITH A BRANCHED OR FENESTRATED INTRALUMINAL DEVICE AND CASES REPORTING OTHER COMPLEX AORTIC ARCH PROCEDURES				
MS-DRG		Number of Cases	Average Length of Stay	Average Costs
216	All cases	5,137	13.6	$88,193
	Cases reporting 02VX3EZ and 02VW3DZ	4	25.3	$156,361
	Cases reporting other complex aortic arch procedures	0	0	$0
217	All cases	1,571	6.8	$59,943
	Cases with 02VX3EZ and 02VW3DZ	1	2	$46,235
	Cases reporting other complex aortic arch procedures	0	0	$0
218	All cases	251	2.9	$61,733
	Cases with 02VX3EZ and 02VW3DZ	0	0	$0
	Cases reporting other complex aortic arch procedures	0	0	$0
219	All cases	13,222	10	$69,728
	Cases with 02VX3EZ and 02VW3DZ	81	11.4	$97,336
	Cases reporting other complex aortic arch procedures	10	20.7	$112,213
220	All cases	9,636	6.2	$49,514
	Cases with 02VX3EZ and 02VW3DZ	64	5.2	$76,700
	Cases reporting other complex aortic arch procedures	10	6.9	$87,003
221	All cases	1,146	3.6	$46,900
	Cases with 02VX3EZ and 02VW3DZ	32	1.9	$56,765
	Cases reporting other complex aortic arch procedures	0	0	$0

As shown in the table, the data analysis performed indicates that the 4 cases in MS–DRG 216 reporting procedure codes 02VX3EZ and 02VW3DZ have an average length of stay that is longer than the average length of stay for all the cases in MS–DRG 216 (25.3 days versus 13.6 days) and higher average costs when compared to all the cases in MS–DRG 216 ($156,361 versus $88,193). The difference in average costs is $68,168 ($156,361 − $88,193 = $68,168) for the cases reporting procedure codes 02VX3EZ and 02VW3DZ in MS–DRG 216 when compared to all the cases in MS–DRG 216. There were zero cases reporting other complex aortic arch procedures in MS–DRG 216. In MS–DRG 217, the one case reporting procedure codes 02VX3EZ and 02VW3DZ has a length of stay that is shorter than the average length of stay for all the cases in MS–DRG 217 (2 days versus 6.8 days) and lower costs when compared to all the cases in MS–DRG 217 ($46,235 versus $59,943). The difference in average costs is $13,708 ($59,943 − $46,235 = $13,708) for the cases reporting procedure codes 02VX3EZ and 02VW3DZ in MS–DRG 217 when compared to all the cases in MS–DRG 217. There were zero cases reporting other complex aortic arch procedures in MS–DRG 217. In MS–DRG 218, there were zero cases reporting procedure codes 02VX3EZ and 02VW3DZ or other complex aortic arch procedures.

The 81 cases in MS–DRG 219 reporting procedure codes 02VX3EZ and 02VW3DZ have an average length of stay that is longer than the average length of stay for all the cases in MS–DRG 219 (11.4 days versus 10 days) and higher average costs when compared to all the cases in MS–DRG 219 ($97,336 versus $69,728). The difference in average costs is $27,608 ($97,336 − $69,728 = $27,608) for the cases reporting procedure codes 02VX3EZ and 02VW3DZ in MS–DRG 219 when compared to all the cases in MS–DRG 219. The 10 cases in MS–DRG 219 reporting procedure codes describing other complex arch procedures have an average length of stay that is longer than the average length of stay for all the cases in MS–DRG 219 (20.7 days versus 10 days) and higher average costs when compared to all the cases in MS–DRG 219 ($112,213 versus $69,728). The difference in average costs is $42,485 ($112,213 − $69,728 = $42,485) for the cases reporting procedure codes describing other complex arch procedures in MS–DRG 219 when compared to all the cases in MS–DRG 219.

In MS–DRG 220, the 64 cases reporting procedure codes 02VX3EZ and 02VW3DZ have an average length of stay that is shorter than the average length of stay for all the cases in MS–DRG 220 (5.2 days versus 6.2 days) and higher average costs when compared to all the cases in MS–DRG 220 ($76,700 versus $49,514). The difference in average costs is $27,186 ($76,700 − $49,514 = $27,186) for the cases reporting procedure codes 02VX3EZ and 02VW3DZ in MS–DRG 220 when compared to all the cases in MS–DRG 220. The 10 cases reporting procedure codes describing other complex arch procedures have an average length of stay that is longer than the average length of stay for all the cases in MS–DRG 220 (6.9 days versus 6.2 days) and higher average costs when compared to all the cases in MS–DRG 220 ($87,003 versus $49,514). The difference in average costs is $37,489 ($87,003 − $49,514 = $37,489) for the cases reporting procedure codes describing other complex arch procedures in MS–DRG 220 when compared to all the cases in MS–DRG 220.

In MS–DRG 221, the 32 cases reporting procedure codes 02VX3EZ and 02VW3DZ have an average length of stay that is shorter than the average length of stay for all the cases in MS–DRG 221 (1.9 days versus 3.6 days) and higher average costs when compared to all the cases in MS–DRG 221 ($56,765 versus $46,900). The difference in average costs is $9,865 ($56,765 − $46,900 = $9,865) for the cases reporting procedure codes 02VX3EZ and 02VW3DZ in MS–DRG 221 when compared to all the cases in MS–DRG 221. There were zero cases reporting other complex aortic arch procedures in MS–DRG 221.

As discussed in the proposed rule, our analysis of the claims data for cases reporting procedure codes 02VX3EZ and 02VW3DZ and cases reporting procedure codes describing other complex arch procedures demonstrated a relatively low volume of cases in comparison to all the cases in their respective MS–DRGs (that is, in 216, 217, 218, 219, 220, and 221). Analysis of the claims data also demonstrates that the cases had an average length of stay

generally longer than all the cases in their respective MS–DRGs. The data analysis indicates that the average costs of the 182 cases reporting procedure codes 02VX3EZ and 02VW3DZ and the 20 cases reporting procedure codes describing other complex arch procedures are generally higher when compared to the average costs of all cases in MS–DRGs 216, 217, 218, 219, 220, and 221. Specifically, most of these cases have average costs that are considerably higher than the average costs of all cases in MS–DRG 216. We stated we reviewed these data and do not believe that proposing to reassign the cases reporting procedure codes 02VX3EZ and 02VW3DZ and the cases reporting procedure codes describing other complex arch procedures to MS–DRG 216, even if there is no cardiac catheterization procedure reported and no secondary diagnosis designated as an MCC reported, would fully address the difference in resource utilization in these cases. Accordingly, we stated we do not believe the data adequately support a potential reassignment of these cases to MS–DRG 216. Therefore, we decided to further explore alternative options to ensure clinical coherence between these cases and the other cases with which they may potentially be grouped in conjunction with the separate but related request we received to review and reconsider the MS–DRG assignments for another subset of codes describing aortic arch procedures, as discussed later in this section.

The second request we received, and discussed in the proposed rule, was to reassign cases reporting thoracic aortic arch replacement combined with restriction of the descending thoracic aorta from MS–DRGs 219, 220, and 221 (Cardiac Valve and Other Major Cardiothoracic Procedures without Cardiac Catheterization with MCC, with CC, and without CC/MCC, respectively) to MS–DRGs 216, 217, and 218 (Cardiac Valve and Other Major Cardiothoracic Procedures with Cardiac Catheterization with MCC, with CC, and without CC/MCC, respectively).

The requestor, the manufacturer of the Thoraflex™ Hybrid device (also known as the Terumo Aortic Hybrid device), stated that hospital resource utilization for cases involving the Thoraflex™ Hybrid device is significantly higher compared to all cases in MS–DRGs 216, 217, 218, 219, 220, and 221, creating substantial financial loss for the hospitals that offer this technology. The Thoraflex™ Hybrid device is a dual-purpose medical device that replaces the ascending aorta and aortic arch while also stabilizing and repairing the descending thoracic aorta in a single procedure. It is indicated for the open surgical repair or replacement of damaged or diseased vessels of the aortic arch and descending aorta with or without involvement of the ascending aorta in cases of aneurysm and/or dissection. According to the requestor, when the Thoraflex™ Hybrid device is implanted within the aorta, it creates a channel for the blood to bypass the damaged or diseased part of the vessel and keep flowing as the graft and stented sections of the implant replace the parts of the aorta that are not working properly.

The requestor stated that aortic pathologies such as aneurysms and dissections that involve the aortic arch and descending thoracic aorta continue to present surgical challenges and carry risks such as stroke, cerebral malperfusion, paralysis, and renal malperfusion. These risks must be mitigated by intense and patient specific goal-oriented care. According to the requestor, hospitals treating aortic arch pathologies must be able to deploy rapid neurology, neurosurgery, and nephrology all within hours to ensure a good patient outcome. According to the requestor, all these attributes attest to the difficulty and complexity of thoracic aortic arch replacement combined with restriction of the descending thoracic aorta and care of the patient.

The requestor identified cases reporting thoracic aortic arch replacement combined with restriction of the descending thoracic aorta by the presence of ICD–10–PCS code X2RX0N7 (Replacement of thoracic aorta, arch using branched synthetic substitute with intraluminal device, open approach, new technology group 7) in combination with X2VW0N7 (Restriction of thoracic aorta, descending using branched synthetic substitute with intraluminal device, open approach, new technology group 7) on the same claim and performed its own analysis of the claims data. The requestor stated they found that while the volume of cases reporting thoracic aortic arch replacement combined with restriction of the descending thoracic aorta is <1% of total volume in MS–DRGs 216, 217, 218, 219, 220, and 221, the average costs and average lengths of stay of these cases are significantly greater than all other cases in MS–DRG 216.

As discussed in the proposed rule, in analyzing this request, we noted the requestor is correct that the following ICD–10–PCS codes specifically describe procedures involving the Thoraflex™ Hybrid device: X2RX0N7 (Replacement of thoracic aorta arch with branched synthetic substitute with intraluminal device, new technology group 7) in combination with X2VW0N7 (Restriction of thoracic descending aorta with branched synthetic substitute with intraluminal device, new technology group 7). We stated the requestor is also correct that procedure codes X2RX0N7 and X2VW0N7 are assigned to MS–DRGs 216, 217, 218, 219, 220, and 221. We refer the reader to the ICD–10 MS–DRG Definitions Manual Version 42.1, which is available on the CMS website at: *https://www.cms.gov/medicare/payment/prospective-payment-systems/acute-inpatient-pps/ms-drg-classifications-and-software*, for complete documentation of the GROUPER logic for MS–DRGs 216, 217, 218, 219, 220, and 221. The Thoraflex™ Hybrid device was approved for new technology add-on payments for FY 2023 (87 FR 48974 through 48976), FY 2024 (88 FR 58800), and FY 2025 (89 FR 69124). We refer readers to section II.E.5 of the preamble of this FY 2026 IPPS/LTCH PPS final rule for a discussion regarding the FY 2026 status of technologies approved for FY 2025 new technology add-on payments, including the Thoraflex™ Hybrid device.

To explore mechanisms to address this request and to understand the resource use for the subset of cases reporting procedure codes X2RX0N7 and X2VW0N7, we stated in the proposed rule that we began our analysis by examining claims data from the September 2024 update of the FY 2024 MedPAR file for cases reporting the procedure code combination describing thoracic aortic arch replacement combined with restriction of the descending thoracic aorta assigned to MS–DRGs 216, 217, 218, 219, 220, and 221. Our findings are shown in the following table:

MS-DRGs 216-221: CASES REPORTING THORACIC AORTIC ARCH REPLACEMENT COMBINED WITH RESTRICTION OF THE DESCENDING THORACIC AORTA				
MS-DRG		Number of Cases	Average Length of Stay	Average Costs
216	All cases	5,137	13.6	$88,193
	Cases reporting X2RX0N7 and X2VW0N7	20	23	$158,920
217	All cases	1,571	6.8	$59,943
	Cases reporting X2RX0N7 and X2VW0N7	2	21.5	$160,014
218	All cases	251	2.9	$61,733
	Cases reporting X2RX0N7 and X2VW0N7	0	0	$0
219	All cases	13,222	10	$69,728
	Cases reporting X2RX0N7 and X2VW0N7	61	16.9	$154,134
220	All cases	9,636	6.2	$49,514
	Cases reporting X2RX0N7 and X2VW0N7	14	8.9	$84,004
221	All cases	1,146	3.6	$46,900
	Cases reporting X2RX0N7 and X2VW0N7	1	3	$97,825

As shown in the table, the data analysis performed indicates that the 20 cases in MS–DRG 216 reporting procedure codes X2RX0N7 and X2VW0N7 have an average length of stay that is longer than the average length of stay for all the cases in MS–DRG 216 (23 days versus 13.6 days) and higher average costs when compared to all the cases in MS–DRG 216 ($158,920 versus $88,193). The difference in average costs is $70,727 ($158,920 − $88,193 = $70,727) for the cases reporting procedure codes X2RX0N7 and X2VW0N7 in MS–DRG 216 when compared to all the cases in MS–DRG 216. In MS–DRG 217, the 2 cases reporting procedure codes X2RX0N7 and X2VW0N7 have an average length of stay that is longer than the average length of stay for all the cases in MS–DRG 217 (21.5 days versus 6.8 days) and higher average costs when compared to all the cases in MS–DRG 217 ($160,014 versus $59,943). The difference in average costs is $100,071 ($160,014 − $59,943 = $100,071) for the cases reporting procedure codes X2RX0N7 and X2VW0N7 in MS–DRG 217 when compared to all the cases in MS–DRG 217. In MS–DRG 218, there were zero cases reporting procedure codes X2RX0N7 and X2VW0N7.

The 61 cases in MS–DRG 219 reporting procedure codes X2RX0N7 and X2VW0N7 have an average length of stay that is longer than the average length of stay for all the cases in MS–DRG 219 (16.9 days versus 10 days) and higher average costs when compared to all the cases in MS–DRG 219 ($154,134 versus $69,728). The difference in average costs is $84,406 ($154,134 − $69,728 = $84,406) for the cases reporting procedure codes X2RX0N7 and X2VW0N7 in MS–DRG 219 when compared to all the cases in MS–DRG 219. In MS–DRG 220, the 14 cases reporting procedure codes X2RX0N7 and X2VW0N7 have an average length of stay that is longer than the average length of stay for all the cases in MS–DRG 220 (8.9 days versus 6.2 days) and higher average costs when compared to all the cases in MS–DRG 220 ($84,004 versus $49,514). The difference in average costs is $34,490 ($84,004 − $49,514 = $34,490) for the cases reporting procedure codes X2RX0N7 and X2VW0N7 in MS–DRG 220 when compared to all the cases in MS–DRG 220. In MS–DRG 221, the one case reporting procedure codes X2RX0N7 and X2VW0N7 has a length of stay that is shorter than the average length of stay for all the cases in MS–DRG 221 (3 days versus 3.6 days) and higher average costs when compared to all the cases in MS–DRG 221 ($97,825 versus $46,900). The difference in average costs is $50,925 ($97,825 − $46,900 = $50,925) for the cases reporting procedure codes X2RX0N7 and X2VW0N7 in MS–DRG 221 when compared to all the cases in MS–DRG 221.

In the proposed rule, we stated we reviewed these data and noted the average costs of the 98 cases reporting the procedure code combination describing thoracic aortic arch replacement combined with restriction of the descending thoracic aorta are higher when compared to the average costs of all cases in MS–DRGs 216, 217, 218, 219, 220, and 221. The difference in average costs of the 98 cases reporting the procedure code combination describing thoracic aortic arch replacement combined with restriction of the descending thoracic aorta is $56,445 ($144,638 − $88,193 = $56,445) for the cases reporting procedure codes X2RX0N7 and X2VW0N7 when compared to all the cases in MS–DRG 216, which is the highest severity level ''with MCC'' MS–DRG. We reviewed these data and stated we do not believe that proposing to reassign all cases reporting the procedure code combination describing thoracic aortic arch replacement combined with restriction of the descending thoracic aorta to MS–DRGs 216, 217, and 218, even if there is no cardiac catheterization procedure reported and no secondary diagnosis designated as an MCC reported, would fully address the difference in resource utilization in these cases as the average costs of the cases reporting procedure codes X2RX0N7 and X2VW0N7 are much higher when compared to all the cases in MS–DRG 216. Accordingly, we stated we do not believe the data adequately supports a potential reassignment of these cases to MS–DRGs 216, 217, and 218, respectively.

We also stated we do not believe that the small subset cases that report the procedure code combination describing thoracic aortic arch replacement combined with restriction of the descending thoracic aorta warrants the creation of a new MS–DRG at this time. As stated in prior rulemaking, the MS–DRGs are a classification system intended to group together diagnoses and procedures with similar clinical characteristics and utilization of resources. We generally seek to identify sufficiently large sets of claims data with a resource/cost similarity and clinical similarity in developing diagnosis related groups rather than smaller subsets. Moreover, as stated in prior rulemaking (85 FR 58472), we have concerns regarding making proposed MS–DRG changes based on a specific, single technology (the Thoraflex™ Hybrid device) identified by only one unique procedure code combination versus considering proposed changes based on a group of related procedure codes that can be reported to describe the same type or class of technology, which is more consistent with the intent of the MS–DRGs.

To explore other mechanisms to address this request, we then reexamined the separate but related request discussed previously to reassign cases reporting procedure codes describing endovascular restriction of the thoracic aorta with a branched or fenestrated intraluminal device and cases reporting other complex aortic arch procedures. In examining these requests, we noted in the proposed rule that the first requestor suggested that CMS reassign cases reporting procedure codes describing endovascular restriction of the thoracic aorta with a branched or fenestrated intraluminal device from MS–DRGs 219, 220, and 221 to MS–DRG 216 and the second requestor suggested that CMS reassign cases reporting the procedure code combination describing thoracic aortic arch replacement combined with restriction of the descending thoracic aorta without a procedure code describing the performance of a cardiac catheterization from MS–DRGs 219, 220, and 221 to MS–DRGs 216, 217, and 218 for FY 2026. As discussed in prior rulemaking (86 FR 44830, 87 FR 48847, and 88 FR 58683), MS–DRGs 216, 217, and 218 are defined by the performance of cardiac catheterization. We stated we are concerned about the effect on clinical coherence of assigning cases that do not also have a cardiac catheterization procedure reported to MS–DRGs that are defined by the performance of that procedure.

However, we stated that in our examination of both requests, the data analysis indicates that the average costs of these complex aortic arch procedures, such as the cases reporting procedure codes describing endovascular restriction of the thoracic aorta with a branched or fenestrated intraluminal device, the cases reporting the procedure code combination describing thoracic aortic arch replacement combined with restriction of the descending thoracic aorta, and the cases reporting other complex aortic arch procedures, are higher when compared to the average costs of all cases in MS–DRGs 216, 217, 218, 219, 220, and 221. Analysis of the claims data also suggests that these cases reporting complex aortic arch procedures are associated with increased hospital resource utilization.

We reviewed these data and noted in the proposed rule that, clinically, aortic arch pathologies are serious clinical conditions associated with an increased likelihood of death but also the potential for significant functional limitations. The aortic arch is the segment of the aorta that helps distribute blood to the head and upper extremities via the brachiocephalic trunk, the left common carotid, and the left subclavian artery. The aortic arch also plays a role in blood pressure homeostasis via baroreceptors found within the walls of the aortic arch that help prevent quick, drastic changes in blood pressure. Aortic aneurysms and aortic dissection that involve the aortic arch are associated with extremely high mortality and morbidity and the data analysis clearly shows that cases reporting complex aortic arch procedures have higher average costs and generally longer lengths of stay compared to all the cases in their assigned MS–DRG.

Therefore, based on our review of the clinical issues and the claims data, we proposed to create a new MS–DRG to better differentiate these complex aortic arch procedures from other cases in their respective MS–DRGs, based on treatment difficulty, clinical similarity, and resource use. To compare and analyze the impact of our suggested modifications, we ran a simulation using the claims data from the September 2024 update of the FY 2024 MedPAR file.

Proposed New MS-DRG	Number of Cases	Average Length of Stay	Average Costs
Proposed new MS-DRG XXX Complex Aortic Arch Procedures	300	11.2	$104,826

For the cases reporting complex aortic arch procedures, we identified a total of 300 cases using the claims data from the September 2024 update of the FY 2024 MedPAR file, so the criterion that there are at least 500 or more cases in each subgroup could not be met. Therefore, we did not propose to subdivide the proposed new MS–DRG for complex aortic arch procedures into severity levels.

In summary, for FY 2026, taking into consideration that it clinically requires greater resources to perform complex aortic arch procedures, we proposed to create a new base MS–DRG for cases reporting complex aortic arch procedures in MDC 05. The proposed new MS–DRG is proposed new MS–DRG 209 (Complex Aortic Arch Procedures). We refer the reader to Table 6P.5a associated with the FY 2026 IPPS/LTCH PPS proposed rule (which is available on the CMS website at: *https://www.cms.gov/medicare/payment/prospective-payment-systems/acute-inpatient-pps/ms-drg-classifications-and-software*) for the list of procedure codes we proposed to define in the logic for the proposed new MS–DRG. We note that the surgical hierarchy for the proposed modification is discussed in section II.C.10. of the preamble of the FY 2026 IPPS/LTCH PPS proposed rule.

Comment: Many commenters expressed support for the proposal to create new base MS–DRG 209 for cases reporting complex aortic arch procedures in MDC 05. Commenters stated that the creation of MS–DRG 209 would ensure better alignment with resource use and clinical needs, allowing appropriate payment and improved access to care for patients undergoing these complex surgeries. Several commenters agreed patients undergoing complex aortic arch procedures reflect a complex patient population that require increased resource utilization associated with their care. A commenter stated that the new MS–DRG would account for new technologies, resulting in a more tailored and appropriate payment to providers, which will inevitably result in better patient care and wider access to these complex aortic arch procedures. Another commenter specifically stated they appreciate the creation of the new MS–DRG and stated the proposed placement of MS–DRG 209 in the surgical hierarchy of MDC 05 will ensure that this group of complex patients will be clinically coherent and will appropriately account for the increased resource use and complexity required to care for them.

Response: We appreciate the commenters' support.

Comment: Another commenter disagreed with the proposal to create new MS–DRG 209 for cases reporting complex aortic arch procedures in MDC 05 and suggested that CMS delay the creation of the new MS–DRG to allow more time to analyze cost and length of stay data. This commenter stated that the current volume of cases is too small to justify a new MS–DRG and stated that more data is needed to assess the impact of concomitant comorbidities on resource use. While acknowledging that aortic arch repair procedures can be resource-intensive, the commenter

asserted that the impact of other concomitant comorbidities in exacerbating resource use has not adequately been assessed, and these cases should be more thoroughly evaluated before establishing a new MS–DRG. This commenter performed their own analysis and stated that they found that cases reporting a diagnosis of atrial fibrillation with procedure codes describing complex aortic arch procedures have higher average costs and longer average lengths of stay. The commenter stated that the disparity of resource use for complex aortic procedures may partially be due to the presence of comorbid diagnoses, such as atrial fibrillation, and should be evaluated in further detail. Lastly, the commenter expressed concern that the new MS–DRG could negatively affect the surgical hierarchy in MDC 05, particularly with regard to MS–DRG 212 (Concomitant Aortic and Mitral Valve Procedures). Specifically, the commenter noted that for FY 2026, CMS proposed to place new MS–DRG 209 in the highest position in the proposed Version 43 surgical hierarchy for MDC 05, ahead of MS–DRG 212. The commenter stated that MS–DRG 212 is defined by the performance of three cardiac procedures and asserted the complexity of performing three cardiac procedures is significant and should be reflected in the surgical hierarchy.

Response: We thank the commenter for their feedback and for sharing their concerns. In response to the suggestion that CMS delay implementation of proposed new MS–DRG 209 for complex aortic arch procedures, we reviewed the commenters' concern and do not agree that a delay is necessary or appropriate. As stated earlier, the data analysis clearly shows that when performed, complex aortic arch procedures are clinically different when compared to all cases in MS–DRGs 216, 217, 218, 219, 220, and 221 in terms of technical complexity and hospital resource use. For these reasons, we proposed to create a new MS–DRG for cases reporting complex aortic arch procedures. We continue to believe that a new base MS–DRG in MDC 05 will better differentiate these cases reporting complex aortic arch procedures from other cases in their currently assigned MS–DRGs.

In response to the commenters' concern that the disparity of resource use for complex aortic procedures may partially be due to the presence of comorbid diagnoses and therefore should be evaluated in further detail, as discussed in the proposed rule and earlier in this section, our data analysis indicated that the average costs of the cases reporting procedure codes describing endovascular restriction of the thoracic aorta with a branched or fenestrated intraluminal device, the cases reporting the procedure code combination describing thoracic aortic arch replacement combined with restriction of the descending thoracic aorta, and the cases reporting other complex aortic arch procedures are generally higher when compared to the average costs of all cases in MS–DRGs 216, 217, 218, 219, 220, and 221. Specifically, most of these cases have average costs that are higher than the average costs of all cases in MS–DRG 216, which is the highest severity level ''with MCC'' MS–DRG. For the cases reporting these complex aortic arch procedures, we identified a total of 300 cases using the claims data from the September 2024 update of the FY 2024 MedPAR file, so the criterion that there are at least 500 or more cases in each subgroup could not be met. Therefore, we did not propose to subdivide the proposed new MS DRG for complex aortic arch procedures into severity levels for FY 2026. We believe that over time the volume of cases reporting complex aortic arch procedures in MS–DRG 209 may increase and we could consider subdividing the proposed new MS DRG for complex aortic arch procedures into severity levels in the future.

In response to the concern regarding the surgical hierarchy for MDC 05, we continue to believe our proposed revisions to the surgical hierarchy account for the resources expended to address these complex procedures and do not believe any modifications are warranted at this time. We believe the sequencing as discussed in the proposed rule appropriately reflects resource utilization when the assigned cardiac procedures are performed and will result in the most suitable MS–DRG assignments. We will continue to review the surgical hierarchy, consistent with our annual rulemaking, to determine if other modifications are warranted in the future.

Comment: A commenter (the manufacturer of the GORE® TAG® TBE) stated they reviewed the ICD–10–PCS classification for other procedure code combinations that would describe a ''complex aortic arch procedure'' by reporting a procedure code reporting the endovascular restriction of the thoracic aorta with a branched or fenestrated intraluminal device with an ICD–10–PCS code describing a Zone 0 (innominate artery), Zone 1 (left common carotid), or Zone 2 (left subclavian artery) aortic arch procedure to ensure continued access to care for Medicare beneficiaries undergoing this treatment and better alignment of resource use, costs, and clinical complexity of these aortic arch procedures. This commenter identified the following nine ICD–10–PCS codes and requested that these codes be added to definition (logic) of new MS–DRG 209 when reported with code 02VX3EZ (Restriction of thoracic aorta, ascending/arch with branched or fenestrated intraluminal device, one or two arteries, percutaneous approach).

ICD-10-PCS Code	Description
031209K	Bypass innominate artery to left extracranial artery with autologous venous tissue, open approach
03120AK	Bypass innominate artery to left extracranial artery with autologous arterial tissue, open approach
03120JK	Bypass innominate artery to left extracranial artery with synthetic substitute, open approach
03120KK	Bypass innominate artery to left extracranial artery with nonautologous tissue substitute, open approach
03L40CZ	Occlusion of left subclavian artery with extraluminal device, open approach
03L40ZZ	Occlusion of left subclavian artery, open approach
03L43DZ	Occlusion of left subclavian artery with intraluminal device, percutaneous approach
03L44CZ	Occlusion of left subclavian artery with extraluminal device, percutaneous endoscopic approach
03L44ZZ	Occlusion of left subclavian artery, percutaneous endoscopic approach

Response: We appreciate the commenters' feedback. As discussed previously and in the proposed rule, Zone 0 of the aortic arch is in the ascending aorta, proximal to the brachiocephalic artery and Zone 1 covers the portion of the aortic arch between the brachiocephalic artery and the left common carotid artery. We note

that Zone 2 of the aortic arch refers to the segment of the aortic arch located between the left common carotid artery and the left subclavian artery. This zone is a common location for aortic tears, aneurysms, and dissections and is a critical area for surgical and endovascular interventions. We agree with the commenter that the nine ICD–10–PCS codes as reflected in the previous table describe Zone 0, Zone 1, or Zone 2 aortic arch procedures, and when reported with code 02VX3EZ (Restriction of thoracic aorta, ascending/arch with branched or fenestrated intraluminal device, one or two arteries, percutaneous approach), would describe complex aortic arch procedures and should be added to the list of ICD–10–PCS procedure codes in the logic for assignment of cases for the proposed new MS–DRG that describe complex aortic arch procedures when reported with code 02VX3EZ.

During our review of this issue, we further examined the GROUPER logic that would determine assignment of a case to proposed new MS–DRG 209. Specifically, we reviewed the ICD–10–PCS classification to determine if there were other ICD–10–PCS codes describing Zone 0, Zone 1 or Zone 2 aortic arch procedures that could describe complex aortic arch procedures when reported with code 02VX3EZ that were inadvertently not listed in the proposed GROUPER logic for MS–DRG 209. We identified the following 11 procedure codes.

ICD-10-PCS Code	Description
03120ZK	Bypass innominate artery to left extracranial artery, open approach
03L40DZ	Occlusion of left subclavian artery with intraluminal device, open approach
03L43CZ	Occlusion of left subclavian artery with extraluminal device, percutaneous approach
03L43ZZ	Occlusion of left subclavian artery, percutaneous approach
03L44DZ	Occlusion of left subclavian artery with intraluminal device, percutaneous endoscopic approach
03LJ0BZ	Occlusion of left common carotid artery with bioactive intraluminal device, open approach
03LJ0DZ	Occlusion of left common carotid artery with intraluminal device, open approach
03LJ3CZ	Occlusion of left common carotid artery with extraluminal device, percutaneous approach
03LJ3ZZ	Occlusion of left common carotid artery, percutaneous approach
03LJ4BZ	Occlusion of left common carotid artery with bioactive intraluminal device, percutaneous endoscopic approach
03LJ4DZ	Occlusion of left common carotid artery with intraluminal device, percutaneous endoscopic approach

We reviewed the 11 ICD–10–PCS codes as reflected in the previous table and note that when reported with code 02VX3EZ (Restriction of thoracic aorta, ascending/arch with branched or fenestrated intraluminal device, one or two arteries, percutaneous approach), these procedure code combinations also describe complex aortic arch procedures. As these procedure code combinations also describe complex aortic arch procedures, we believe these 11 ICD–10–PCS procedure codes should also be added to the list of ICD–10–PCS procedure codes that describe complex aortic arch procedures when reported with code 02VX3EZ in the logic for assignment of cases for proposed new MS–DRG 209.

Therefore, after consideration of the public comments received, and for the reasons discussed, we are finalizing our proposal to create new MS–DRG 209 (Complex Aortic Arch Procedures), with modification, effective October 1, 2025, for FY 2026. Specifically, we are adding the 20 ICD–10–PCS codes listed previously to the list of procedure codes that describe other complex aortic arch procedures when reported with ICD–10–PCS code 02VX3EZ in the logic for the new MS–DRG 209. Conforming changes to the GROUPER logic are also are shown in Table 6P.5a associated with this final rule and available on the CMS website at *https://www.cms.gov/medicare/payment/prospective-payment-systems/acute-inpatient-pps* and also as reflected in the final version of ICD–10 MS–DRG Definitions Manual, version 43, available in association with this final rule and available via the CMS website at *https://www.cms.gov/medicare/payment/prospective-payment-systems/acute-inpatient-pps/ms-drg-classifications-and-software*. We note that discussion of the surgical hierarchy for the finalized modification is discussed in section II.C.10. of the preamble of this FY 2026 IPPS/LTCH PPS final rule.

Comment: A commenter noted that a code proposal requesting new procedure codes to identify bypass procedures from the innominate artery to a subclavian artery or an axillary artery was displayed in association with the Spring 2025 ICD–10 Coordination and Maintenance Committee Update. The commenter suggested that any new procedure codes finalized in association with the Spring 2025 ICD–10 Coordination and Maintenance Committee Update that identify bypass procedures from the innominate artery to a subclavian artery or an axillary artery should be assigned to the GROUPER logic of MS–DRG 209 when coded with procedure code 02VX3EZ, as these procedure code combinations would describe ''complex aortic arch procedures'' as well.

Response: We thank the commenter for their feedback. We note that the proposal requesting new procedure codes to identify bypass procedures from the innominate artery to a subclavian artery or an axillary artery that was displayed in association with the Spring 2025 ICD–10 Coordination and Maintenance Committee Update was approved and five new procedure codes to identify bypass procedures from the innominate artery to a subclavian artery or an axillary artery were finalized as reflected in the FY 2026 ICD–10–PCS Code Update files that were made publicly available on the CMS website at *https://www.cms.gov/Medicare/Coding/ICD10* on June 6, 2025. We note that the new procedure codes are also reflected in Table 6B.—New Procedure Codes, in association with this final rule and available on the CMS website at *https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/AcuteInpatientPPS*, including the MS–DRG assignments for these new codes for FY 2026.

We agree that when coded with procedure code 02VX3EZ, these procedure code combinations would also describe complex aortic arch procedures and therefore should be assigned to new MS–DRG 209 along with other procedure codes describing complex aortic arch procedures. As reflected in Table 6B.—New Procedure Codes in association with this final rule, we note that the five procedure codes describing bypass procedures from the innominate artery to a subclavian artery or an axillary artery are assigned to new MDC 05 MS–DRG 209 and MS–DRGs

252, 253, and 254 (Other Vascular Procedures with MCC, with CC, and without CC/MCC, respectively) for FY 2026. This assignment is reflected in the final V43 GROUPER logic. We refer the reader to section II.C.13. of the preamble of this final rule for further information regarding the table.

f. Deep Vein Thrombophlebitis

In the FY 2026 IPPS/LTCH PPS proposed rule (90 FR 18047), we stated that consistent with our annual review of the MS–DRGs, we consider changes in resource consumption, treatment patterns, technology, and any other factors that may change the relative use of hospital resources. We noted that in our review of the claims data from the September 2024 update of the FY 2024 MedPAR file, we identified a low volume of cases for MS–DRGs 294 and 295 (Deep Vein Thrombophlebitis with CC/MCC and without CC/MCC, respectively). Our findings are shown in the following table.

MS-DRG	Number of Cases	Average Length of Stay	Average Costs
294	146	4.1	$10,808
295	0	0	0

A deep vein thrombophlebitis (DVT) is a blood clot that forms in one of the deep veins of the body, most commonly occurring in the veins of the pelvis, calf, or thigh. The 35 ICD–10–CM diagnosis codes describing deep vein thrombophlebitis currently assigned to MS–DRGs 294 and 295 are shown in the following table.

BILLING CODE 4120–01–P

DIAGNOSIS CODES DESCRIBING DEEP VENOUS THROMBOPHLEBITIS (DVT) IN MS-DRGS 294-295	
ICD-10-CM Code	Description
I80.10	Phlebitis and thrombophlebitis of unspecified femoral vein
I80.11	Phlebitis and thrombophlebitis of right femoral vein
I80.12	Phlebitis and thrombophlebitis of left femoral vein
I80.13	Phlebitis and thrombophlebitis of femoral vein, bilateral
I80.201	Phlebitis and thrombophlebitis of unspecified deep vessels of right lower extremity
I80.202	Phlebitis and thrombophlebitis of unspecified deep vessels of left lower extremity
I80.203	Phlebitis and thrombophlebitis of unspecified deep vessels of lower extremities, bilateral
I80.209	Phlebitis and thrombophlebitis of unspecified deep vessels of unspecified lower extremity
I80.211	Phlebitis and thrombophlebitis of right iliac vein
I80.212	Phlebitis and thrombophlebitis of left iliac vein
I80.213	Phlebitis and thrombophlebitis of iliac vein, bilateral
I80.219	Phlebitis and thrombophlebitis of unspecified iliac vein
I80.221	Phlebitis and thrombophlebitis of right popliteal vein
I80.222	Phlebitis and thrombophlebitis of left popliteal vein
I80.223	Phlebitis and thrombophlebitis of popliteal vein, bilateral
I80.229	Phlebitis and thrombophlebitis of unspecified popliteal vein
I80.231	Phlebitis and thrombophlebitis of right tibial vein
I80.232	Phlebitis and thrombophlebitis of left tibial vein
I80.233	Phlebitis and thrombophlebitis of tibial vein, bilateral
I80.239	Phlebitis and thrombophlebitis of unspecified tibial vein
I80.241	Phlebitis and thrombophlebitis of right peroneal vein
I80.242	Phlebitis and thrombophlebitis of left peroneal vein
I80.243	Phlebitis and thrombophlebitis of peroneal vein, bilateral
I80.249	Phlebitis and thrombophlebitis of unspecified peroneal vein
I80.251	Phlebitis and thrombophlebitis of right calf muscular vein
I80.252	Phlebitis and thrombophlebitis of left calf muscular vein
I80.253	Phlebitis and thrombophlebitis of calf muscular vein, bilateral
I80.259	Phlebitis and thrombophlebitis of unspecified calf muscular vein
I80.291	Phlebitis and thrombophlebitis of other deep vessels of right lower extremity
I80.292	Phlebitis and thrombophlebitis of other deep vessels of left lower extremity
I80.293	Phlebitis and thrombophlebitis of other deep vessels of lower extremity, bilateral
I80.299	Phlebitis and thrombophlebitis of other deep vessels of unspecified lower extremity
I80.3	Phlebitis and thrombophlebitis of lower extremities, unspecified
I82.220	Acute embolism and thrombosis of inferior vena cava
I82.221	Chronic embolism and thrombosis of inferior vena cava

BILLING CODE 4120–01–C

In light of the initial findings of only 146 cases for MS–DRG 294 and zero cases in MS–DRG 295, we further reviewed the MedPAR claims data for cases assigned to MS–DRGs 294 and 295 for the past 5 fiscal years. As reflected in the following tables, the data indicate that the number of cases grouping to MS–DRGs 294 and 295 has declined.

FY and MedPAR Data Reviewed for MS-DRG 294	Number of Cases	Average Length of Stay	Average Costs
FY 2022 (FY 2020 MedPAR)	222	4.3	$8,962
FY 2023 (FY 2021 MedPAR)	227	4.2	$9,325
FY 2024 (FY 2022 MedPAR)	177	4.8	$9,665
FY 2025 (FY 2023 MedPAR)	178	4.6	$10,404
FY 2026 (FY 2024 MedPAR)	146	4.1	$10,808

FY and MedPAR Data Reviewed for MS-DRG 295	Number of Cases	Average Length of Stay	Average Costs
FY 2022 (FY 2020 MedPAR)	20	3.4	$7,323
FY 2023 (FY 2021 MedPAR)	11	2.5	$4,988
FY 2024 (FY 2022 MedPAR)	0	0	0
FY 2025 (FY 2023 MedPAR)	0	0	0
FY 2026 (FY 2024 MedPAR)	0	0	0

We noted in the proposed rule that, if, during our annual MS–DRG analysis we identify that there are only a few patients in a respective MS–DRG, consistent with our established process in deciding whether to propose to make further modifications, we consider if there have been potential changes in the clinical characteristics of the patients, treatment patterns, or resource utilization. A principle of the MS–DRGs and the characteristics of a meaningful DRG classification scheme is the ability to detect such changes and accordingly, propose clinically appropriate modifications that are also consistent with resource utilization. We have noted in prior rulemaking that we prefer to have a substantial number of cases in an MS–DRG because having larger clinical cohesive groups within an MS–DRG provides greater stability for annual updates to the relative payment weights. In light of these considerations, and the low volume of cases in MS–DRGs 294 and 295, we believed it was appropriate to further analyze how to potentially reclassify these cases.

Accordingly, using the September 2024 update of the FY 2024 MedPAR file, we examined whether there were other MS–DRGs to which these cases could appropriately be reassigned. As part of this analysis, we also reviewed the base DRG by severity claims data for MS–DRG 294 because the MS–DRG includes cases reporting an MCC as well as cases reporting a CC. As previously noted, there were zero cases identified in MS–DRG 295, which would only consist of NonCC cases. Therefore, we analyzed the claims data to determine the number of cases, the average length of stay, and average costs for the 146 cases in MS–DRG 294 by severity level (1=MCC and 2=CC). Our findings are shown in the following table.

MS-DRG	Number of Cases	Average Length of Stay	Average Costs
294-1	45	5.4	$14,085
294-2	101	3.5	$9,348
294 base DRG total	**146**	**4.1**	**$10,808**

We note that medical MS–DRGs 299, 300, and 301 (Peripheral Vascular Disorders with MCC, with CC, and without CC/MCC, respectively) also include diagnoses describing other types of phlebitis and thrombophlebitis in the logic for case assignment, consistent with the diagnosis codes in the logic for case assignment to MS–DRGs 294 and 295. As such, we reviewed the claims data from the September 2024 update of the FY 2024 MedPAR file for MS–DRGs 299, 300, and 301 to examine the resource utilization associated with cases assigned to these MS–DRGs. Our findings are shown in the following table.

MS-DRG	Number of Cases	Average Length of Stay	Average Costs
299	14,129	5.5	$14,742
300	18,038	3.9	$9,757
301	3,807	2.5	$6,723

As shown in the data, the 45 cases reporting an MCC in MS–DRG 294 have an average length of stay of 5.4 days with average costs of $14,085, which is comparable to the cases in MS–DRG 299 reporting an MCC that have an average length of stay of 5.5 days with average costs of $14,742. The 101 cases reporting a CC in MS–DRG 294 have an average length of stay of 3.5 days with average costs of $9,348, which is comparable to the cases in MS–DRG 300 reporting an CC that have an average length of stay of 3.9 days with average costs of $9,757.

We stated in the proposed rule that based on our analysis and review of the cases grouping to MS–DRGs 294 and 295, we believed it is appropriate to delete these MS–DRGs and reassign the cases currently assigned to MS–DRGs 294 and 295 to MS–DRGs 299, 300, and 301, which are clinically consistent and also align with the resource utilization for these cases. Accordingly, for FY 2026, we proposed to delete MS–DRGs 294 and 295 and reassign the previously listed 35 diagnosis codes describing deep vein thrombophlebitis to MS–DRGs 299, 300, and 301. We refer the reader to the ICD–10 MS–DRG Version 42.1 Definitions Manual (which is available via the internet on the CMS website at: *https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/AcuteInpatientPPS/MS–DRG-Classifications-and-Software* for complete documentation of the

GROUPER logic for MS–DRGs 299, 300, and 301.

Comment: Several commenters supported the proposal to delete MS–DRGs 294 and 295 and reassign the previously listed 35 diagnosis codes describing deep vein thrombophlebitis to MS–DRGs 299, 300, and 301.

Response: We appreciate the commenters' support.

After consideration of the public comments we received, we are finalizing, without modification, our proposal to delete MS–DRGs 294 and 295 and reassign the 35 diagnosis codes describing deep vein thrombophlebitis listed previously that are currently assigned to MS–DRGs 294 and 295 to MS–DRGs 299, 300, and 301 for FY 2026.

5. MDC 08 (Diseases and Disorders of the Musculoskeletal System and Connective Tissue)

a. Hip or Knee Procedures With Periprosthetic Joint Infection

In the FY 2026 IPPS/LTCH PPS proposed rule (90 FR 18049 through 18052), we discussed a request we received to reassign cases reporting a hip or knee procedure with a principal diagnosis of periprosthetic joint infection (PJI) from the lower severity level ''without CC/MCC'' MS–DRG to the higher severity level ''with CC'' MS–DRG when there is no major complication or comorbidity (MCC) or complication or comorbidity (CC) reported. According to the requestor, PJI is a devastating healthcare condition that occurs in one percent to two percent (1% to 2%) of primary joint replacements.[10] PJI is also the primary cause for revision arthroplasty in most developed markets. The requestor stated that patients undergoing revision for PJI experience higher mortality rates ranging from 0.8 to 4 percent at 1 year and 12.9 to 25.9 percent at 5 years following revision surgery.

According to the requestor, management of PJI requires complex treatment strategies including multiple surgical revisions and long-term antimicrobial treatment, leading to substantially higher costs versus aseptic revision arthroplasty. The requestor asserted that when missed or undertreated, PJI leads to persistence of infection and multiple surgical revisions causing poor function or disability, considerably impairing quality of life.

The requestor stated that current treatment options for PJI include chronic suppressive antibiotics; debridement, antibiotics, and implant retention (DAIR); one-stage revision; two-stage revision; and amputation. According to the requestor, regardless of the treatment option selected for the knee or hip, the presence of PJI as the principal diagnosis appears to significantly increase the length of stay and the resource utilization of these cases in comparison to all other cases assigned to the respective MS–DRGs.

Using the FY 2023 MedPAR file that informed FY 2025 rulemaking, the requestor stated it performed its own analysis of cases reporting PJI as the principal diagnosis. The requestor provided the following list of ICD–10–CM diagnosis codes it used to identify the presence of a PJI in the hip or knee joint.

ICD-10-CM Code	Description
T84.51XA	Infection and inflammatory reaction due to internal right hip prosthesis, initial encounter
T84.51XD	Infection and inflammatory reaction due to internal right hip prosthesis, subsequent encounter
T84.51XS	Infection and inflammatory reaction due to internal right hip prosthesis, sequela
T84.52XA	Infection and inflammatory reaction due to internal left hip prosthesis, initial encounter
T84.52XD	Infection and inflammatory reaction due to internal left hip prosthesis, subsequent encounter
T84.52XS	Infection and inflammatory reaction due to internal left hip prosthesis, sequela
T84.53XA	Infection and inflammatory reaction due to internal right knee prosthesis, initial encounter
T84.53XD	Infection and inflammatory reaction due to internal right knee prosthesis, subsequent encounter
T84.53XS	Infection and inflammatory reaction due to internal right knee prosthesis, sequela
T84.54XA	Infection and inflammatory reaction due to internal left knee prosthesis, initial encounter
T84.54XD	Infection and inflammatory reaction due to internal left knee prosthesis, subsequent encounter
T84.54XS	Infection and inflammatory reaction due to internal left knee prosthesis, sequela

The requestor stated that cases involving the DAIR procedure are commonly assigned to MS–DRGs 463, 464, and 465 (Wound Debridement and Skin Graft Except Hand for Musculoskeletal and Connective Tissue Disorders with MCC, with CC, and without CC/MCC, respectively), MS–DRGs 480, 481, and 482 (Hip and Femur Procedures Except Major Joint with MCC, with CC, and without CC/MCC, respectively) or MS–DRG 485, 486, and 487 (Knee Procedures with Principal Diagnosis of Infection with MCC, with CC, and without CC/MCC, respectively). According to the requestor, in each of the scenarios reviewed, the average cost and average length of stay for cases with a principal diagnosis of PJI that grouped to the ''with CC'' or ''without CC/MCC'' MS–DRG are similar or higher and longer than the other cases assigned to the same MS–DRGs.

The requestor also stated that one-stage hip or knee revision procedures are typically assigned to MS–DRGs 466, 467, and 468 and the findings from their analysis showed the presence of a PJI as the principal diagnosis with a hip or knee revision procedure show a longer length of stay and a similar or higher average cost than for the other aseptic revision arthroplasties.

In addition, the requestor stated that its analysis of cases reporting PJI with the last treatment option, amputation, assigned to MS–DRGs 474, 475, and 476 (Amputation for Musculoskeletal System and Connective Tissue Disorders with MCC, with CC, and without CC/MCC, respectively) also showed a longer average length of stay and higher average costs compared to all other non-PJI cases in MS–DRGs 474, 475, and 476, further supporting the request to reassign cases to the ''with CC'' severity level MS–DRG.

In summary, the requestor specifically recommended the following modifications to the listed MS–DRGs for cases reporting a hip or knee procedure with a principal diagnosis of PJI:

[10] Corvec S, Portillo ME, Pasticci BM, Borens O, Trampuz A. Epidemiology and new developments in the diagnosis of prosthetic joint infection. Int J Artif Organs 2012;35:923–934.

Current MS-DRG Assignment	Requested MS-DRG Assignment
465 (Wound Debridement and Skin Graft Except Hand for Musculoskeletal and Connective Tissue Disorders without CC/MCC)	MS-DRG 464 (Wound Debridement and Skin Graft Except Hand for Musculoskeletal and Connective Tissue Disorders with CC)
MS-DRG 468 (Revision of Hip or Knee Replacement without CC/MCC)	MS-DRG 467 (Revision of Hip or Knee Replacement with CC)
MS-DRG 476 (Amputation for Musculoskeletal System and Connective Tissue Disorders without CC/MCC)	MS-DRG 475 (Amputation for Musculoskeletal System and Connective Tissue Disorders with CC)
MS-DRG 482 (Hip and Femur Procedures Except Major Joint without CC/MCC)	MS-DRG 481 (Hip and Femur Procedures Except Major Joint with CC)
MS-DRG 487 (Knee Procedures with Principal Diagnosis of Infection without CC/MCC)	MS-DRG 486 (Knee Procedures with Principal Diagnosis of Infection with CC)

We reviewed claims data from the September 2024 update of the FY 2024 MedPAR file for MS–DRGs 463, 464, 465, 466, 467, 468, 474, 475, 476, 480, 481, 482, 485, 486, and 487 and for cases reporting a principal diagnosis of PJI with a hip or knee procedure. We refer the reader to Table 6P. 6a that was made publicly available in association with the proposed rule and is available at: *https://www.cms.gov/medicare/payment/prospective-payment-systems/acute-inpatient-pps* for the list of diagnosis codes we analyzed to identify a PJI and for the list of procedure codes we analyzed from the previously listed MS–DRGs to identify a hip or knee procedure. Findings from our analysis are shown in the following table.

MS-DRG	Description	Number of Cases	Average Length of Stay	Average Costs
463	All cases	3,909	14.2	$45,233
	Cases with principal diagnosis of PJI with hip or knee procedure	804	13.9	$50,127
464	All cases	5,775	7.3	$26,757
	Cases with principal diagnosis of PJI with hip or knee procedure	1,358	7.7	$32,474
465	All cases	1,496	3.0	$16,794
	Cases with principal diagnosis of PJI with hip or knee procedure	237	4.3	$22,689
466	All cases	4,282	9.0	$43,314
	Cases with principal diagnosis of PJI with hip or knee procedure	460	11.2	$40,433
467	All cases	17,682	4.1	$30,612
	Cases with principal diagnosis of PJI with hip or knee procedure	947	6.5	$28,505
468	All cases	12,986	1.8	$24,921
	Cases with principal diagnosis of PJI with hip or knee procedure	160	4	$23,978
474	All cases	2,417	12.2	$35,707
	Cases with principal diagnosis of PJI with hip or knee procedure	112	13.6	$47,240
475	All cases	2,634	7.3	$19,577
	Cases with principal diagnosis of PJI with hip or knee procedure	166	7	$20,739
476	All cases	322	3.5	$10,454
	Cases with principal diagnosis of PJI with hip or knee procedure	27	4.1	$14,101
480	All cases	26,238	7.3	$26,430
	Cases with principal diagnosis of PJI with hip or knee procedure	136	11.7	$38,407
481	All cases	62,141	4.9	$19,153
	Cases with principal diagnosis of PJI with hip or knee procedure	234	7.4	$24,138
482	All cases	13,842	3.5	$14,886
	Cases with principal diagnosis of PJI with hip or knee procedure	30	4.6	$19,122
485	All cases	1,297	9.5	$29,761
	Cases with principal diagnosis of PJI with hip or knee procedure	521	9.6	$31,779
486	All cases	2,574	6.0	$19,679
	Cases with principal diagnosis of PJI with hip or knee procedure	985	5.8	$21,376
487	All cases	632	4.1	$14,615
	Cases with principal diagnosis of PJI with hip or knee procedure	194	4	$16,616

The findings show that the cases reporting a PJI with a hip or knee procedure in MS–DRGs 466, 467, and 468 have a slightly longer average length of stay and lower average costs compared to the average length of stay and average costs of all the cases in their respective MS–DRGs. Therefore, because the resource utilization of these cases is generally comparable to all the cases in their respective MS–DRGs, we believe the cases reporting a PJI in MS–DRGs 466, 467, and 468 appear to be grouping appropriately in their current MS–DRG assignment.

The findings show that for the cases reporting a PJI with a hip or knee procedure in MS–DRGs 463, 464, 465, 474, 475, 476, 485, 486, and 487, the average length of stay is comparable to the average length of stay of all the cases in their respective MS–DRGs, however, the average length of stay for the cases reporting a PJI with a hip or knee procedure in MS–DRGs 480, 481, and 482 are notably longer compared to the average length of stay of all the cases in their respective MS–DRGs. Findings from our analysis also show that the average costs of the cases reporting a PJI with a hip or knee procedure in MS–DRGs 463, 464, 465, 474, 475, 476, 480, 481, and 482 are higher compared to the average costs of all the cases in their respective MS–DRGs with a difference in average costs of approximately $5,459 for cases reporting a PJI with a hip or knee procedure across MS–DRGs 463, 464, and 465, a difference in average costs of approximately $5,190 for cases reporting a PJI with a hip or knee procedure across MS–DRGs 474, 475, and 476, and a difference in average costs of approximately $7,306 for cases reporting a PJI with a hip or knee procedure across MS–DRGs 480, 481 and 482. However, because MS–DRGs

485, 486, and 487 currently include a principal diagnosis of infection in the logic for case assignment to these MS–DRGs, the difference in average costs for the cases reporting a PJI with a hip or knee procedure compared to the average costs of all the cases in their respective MS–DRG is minimal ($2,018, $1,697, and $2,001, respectively).

We stated in the proposed rule that, based on our review and analysis of the data, we disagreed with the request to reassign PJI cases from the lower severity ''without CC/MCC'' level MS–DRG to the higher severity ''with CC'' level MS–DRG suggested by the requestor as the average costs of the PJI cases in the ''without CC/MCC'' level are not comparable and do not align with the average costs of all the cases at the ''with CC'' level. In addition, our findings show that other than for MS–DRGs 466, 467, and 468, the cases reporting a PJI with a hip or knee procedure at the higher ''with CC'' level and the highest ''with MCC'' level have higher average costs compared to all the cases in their respective MS–DRG. For example, as reflected in the findings of our analysis for MS–DRGs 463, 464, and 465, if we were to reassign the 237 cases reporting a PJI with a hip or knee procedure with an average length of stay of 4.3 days and average costs of $22,689 from MS–DRG 465 to MS–DRG 464 where we found a total of 5,775 cases with an average length of stay of 7.3 days and average costs of $26,757, the 1,358 cases reporting a PJI with a hip or knee procedure with an average length of stay of 7.7 days and average costs of $32,474 in MS–DRG 464 and the 804 cases reporting a PJI with a hip or knee procedure with an average length of stay of 13.9 days and average costs of $50,127 in MS–DRG 463 would continue to not be comparable from a resource perspective as compared to all the cases in their assigned MS–DRGs. We stated we believe the data support proposing a new base MS–DRG for the cases reporting a PJI with a hip or knee procedure in MS–DRGs 463, 464, 465, 474, 475, 476, 480, 481, and 482 to better reflect the complexity of services, resource utilization, and severity of illness of these patients.

We stated we applied the criteria to create subgroups in a base MS–DRG as discussed in section II.C.1.b. of the preamble of the FY 2026 IPPS/LTCH PPS proposed rule and this final rule. We noted that, as shown in the table that follows, a three-way split of this proposed new base MS–DRG failed to meet the criterion that at least 500 or more cases are in the ''without CC/MCC'' subgroup. The following table illustrates our findings.

Proposed New MS-DRGs	Number of Cases	Average Length of Stay	Average Costs
With MCC	1,052	13.6	$48,305
With CC	1,758	7.6	$30,256
Without CC/MCC	293	4.3	$21,505

As discussed in section II.C.1.b. of the preamble of the FY 2026 IPPS/LTCH PPS proposed rule and this final rule, if the criteria for a three-way split fail, the next step is to determine if the criteria are satisfied for a two-way split. Therefore, we applied the criteria for a two-way split for the ''with MCC and without MCC'' subgroups and found that all five criteria were met. The following table illustrates our findings.

Proposed New MS-DRGs	Number of Cases	Average Length of Stay	Average Costs
With MCC	1,052	13.6	$48,305
Without MCC	2,051	7.1	$29,006

For the proposed new MS–DRGs for cases reporting a PJI with a hip or knee procedure, there is at least: (1) 500 cases in the MCC subgroup and 500 cases in the without MCC subgroup; (2) 5 percent of the cases in the MCC group and 5 percent in the without MCC subgroup; (3) a 20 percent difference in average costs between the MCC group and the without MCC group; (4) a $2,000 difference in average costs between the MCC group and the without MCC group; and (5) a 3-percent reduction in cost variance, indicating that the proposed severity level splits increase the explanatory power of the base MS–DRG in capturing differences in expected cost between the proposed MS–DRG severity level splits by at least 3 percent and thus improve the overall accuracy of the IPPS payment system.

As a result, for FY 2026, we proposed to create new MS–DRGs 403 and 404 (Hip or Knee Procedures with Principal Diagnosis of Periprosthetic Joint Infection with MCC and without MCC, respectively). The following table reflects a simulation of the proposed new MS–DRGs.

Proposed New MS-DRG	Number of Cases	Average Length of Stay	Average Costs
Proposed MS-DRG 403	1,052	13.6	$48,305
Proposed MS-DRG 404	2,051	7.1	$29,006

Comment: Several commenters supported the proposal to create proposed new MS–DRGs 403 and 404. A commenter stated it was pleased that CMS is taking note of the resource intensiveness required to thoroughly treat periprosthetic joint infections (PJI). According to the commenter, PJIs have become more prevalent in recent years and are now the leading cause of revision surgery in both Total Knee Arthroplasty (TKA) and Total Hip Arthroplasty (THA) procedures. The commenter stated that according to the American Joint Replacement Registry, PJIs account for over 20 percent of hip revisions and 28 percent of knee revisions annually. The commenter expressed agreement with CMS' statement in the proposed rule that there are multiple MS–DRGs to which these cases are assigned dependent on treatment type. The commenter stated that given the wide variability of cost among the cases in the MS–DRGs analyzed, they appreciate that CMS proposed to assign these cases to

proposed new MS–DRGs based on a principal diagnosis of PJI. The commenter stated its belief that these proposed new MS–DRGs will provide more accurate and appropriate payment for the treatment of PJI commensurate with the complexity of these cases. The commenter also stated that as this epidemic of PJI is growing, they want to ensure that individuals facing challenges with treatment of PJI have access to a quality health care system which is primarily based on a set of organizational structures to ensure rapid diagnosis and appropriate treatment, and this proposed change is a significant positive step in that direction. Another commenter who expressed support for the proposal recommended that CMS and other stakeholders take caution and closely monitor these proposed new MS–DRGs if finalized, to observe how the proposed new structure may alter referral patterns, utilization, or site of service for unanticipated effects. This commenter also suggested that CMS identify the party requesting reassignment and stated that in the interest of transparency in public programs, when CMS addresses a reclassification request in the annual proposed rulemakings, it should be clear to the public which parties are requesting the changes so that stakeholders can take that into account when commenting to CMS.

Response: We appreciate the commenters' support. In response to the commenter's recommendation that any finalized policy should continue to be closely monitored, we thank the commenter for the feedback and note that we review the MS–DRGs for changes in treatment patterns and resource utilization on an annual basis. With respect to the request that CMS identify the party requesting reassignment for transparency, we will consider this suggestion for future rulemaking.

Comment: A commenter who expressed support for the creation of proposed new MS–DRGs 403 and 404 stated it encountered inconsistencies with case volumes when grouping cases using the Version 43 test GROUPER that was made publicly available in association with the FY 2026 IPPS/LTCH PPS proposed rule on the CMS website: *https://www.cms.gov/medicare/payment/prospective-payment-systems/acute-inpatient-pps/ms-drg-classifications-and-software.* The commenter stated it reviewed CMS' analysis findings summarized in the proposed rule and the accompanying After Outliers Removed and Before Outliers Removed (AOR/BOR) file that shows the case volume and MS–DRG shifts between the Version 42.1 GROUPER and Version 43 test GROUPER and identified differences in case volume shifts among the MS–DRGs that were analyzed for proposed new MS–DRGs 403 and 404. The commenter indicated that it was challenging to understand the rationale for some of the shifts in case volume among the MS–DRGs when comparing the AOR/BOR file to the proposed rule findings. The commenter stated it validated that the data appropriately reflected declining volume in MS–DRGs 463, 464, 465, 474, 475, 476, 480, 481, and 482 as CMS outlined in the analysis as the cases shifted to proposed new MS–DRGs 403 and 404. The commenter also validated that CMS' analysis excluded MS–DRGs 485, 486, and 487 and these MS–DRGs reflected zero cases shifting as CMS outlined in the preamble of the proposed rule (90 FR 18051) and in the AOR/BOR file that was made publicly available in association with the proposed rule at: *https://www.cms.gov/medicare/payment/prospective-payment-systems/acute-inpatient-pps.* However, the commenter stated that the AOR/BOR file shows a decline (that is, shift) in case volume for MS–DRG 466 (243 cases), MS–DRG 467 (406 cases), and MS–DRG 468 (48 cases), resulting in a total decline of 699 cases while the proposed rule analysis identified a total of 1,567 cases reporting a principal diagnosis of PJI with a hip or knee procedure among those MS–DRGs (MS–DRG 466 (460 cases); MS–DRG 467 (947 cases); and MS–DRG 468 (160 cases)). The commenter also stated that in the proposed rule analysis, CMS noted that it excluded MS–DRGs 466, 467, and 468 from further consideration because it believed those cases were grouping appropriately in their current MS–DRG assignment.

The commenter stated that they reviewed the list of procedure codes analyzed by CMS, which was made publicly available in Table 6P.6a in connection with the proposed rule, as well as the list of procedure codes in the logic for MS–DRGs 466, 467, and 468 included in the Draft Version 43 ICD–10 MS–DRG Definitions Manual and noted an overlap of approximately 52 procedure codes. The commenter provided the example of procedure code 0SRB0EZ (Replacement of left hip joint with articulating spacer, open approach) and stated this procedure code is included in both lists. The commenter stated it recognized that logically the surgical hierarchy would result in the assignment of MS–DRG 403 or 404 versus MS–DRGs 466, 467, or 468, however, the commenter expressed concern regarding the case shift for 699 of the 1,567 cases from MS–DRGs 466, 467, and 468 into the proposed new MS–DRGs 403 and 404 and that the shift was not acknowledged nor explained in the proposed rule. The commenter stated their belief that the shifts should have been included within the proposed rule and explained for data transparency. According to the commenter, the lack of detail in the proposed rule made it unclear if the cases shifted because of the procedure code overlap or because of programming within the Version 43 test GROUPER. The commenter requested CMS provide an explanation for the decline in case volume among MS–DRGs 466, 467, and 468.

The commenter stated that during its review of the shift in case volume among MS–DRGs 466, 467, and 468, it identified inconsistencies in the assignment of cases to proposed new MS–DRGs 403 and 404 utilizing the Version 43 test GROUPER. The commenter provided examples of eight different test cases that included procedure codes from the list in Table 6P.6a that was made available in association with the proposed rule. According to the commenter's review, all eight cases should have resulted in assignment to the proposed new MS–DRGs 403 and 404; however, using the Version 43 test GROUPER, only four of the test cases grouped to proposed new MS–DRGs 403 and 404 while the remaining four test cases grouped to current MS–DRGs 463 or 464. The commenter stated that proposed new MS–DRGs 403 and 404 are proposed to be sequenced higher in the surgical hierarchy than existing MS–DRGs 463 and 464, therefore, the commenter requested an explanation regarding the accuracy of the Version 43 test GROUPER and the impact on the AOR/BOR file. The commenter requested additional transparency with regard to the MS–DRG groupings, the Version 43 test GROUPER, and the AOR/BOR file. Additionally, the commenter stated that if the findings demonstrate inaccuracies, corrected versions should be made available. The commenter suggested that for future rulemaking CMS consider including further insight, rationale and transparency regarding any shifts in volume that may result from proposed changes to MS–DRG logic.

Response: We appreciate the commenter's support and feedback. The commenter is correct that there is a redistribution (or shift) in cases among the MS–DRGs that were analyzed and discussed in the proposed rule (466, 467, and 468). We note that under the

GROUPER software program some collections of ICD–10–PCS procedure codes have a different set of attributes, independent of those of the codes that make them up (that is, their ''components''). These collections of ICD–10–PCS procedure codes are called clusters. A routine program in the GROUPER, upstream of the MS–DRG assignment logic, searches the claim for clusters. When a cluster is found, it is added to the list of procedures found on the claim. Clusters may be ''restricted'' by Major Diagnostic Category (MDC) and a restricted cluster inhibits the use of its procedure code component attributes for the MDC's MS–DRG assignment logic. For example, procedure code cluster 0SPC0JZ (Removal of synthetic substitute from right knee joint, open approach) and 0SRT0JZ (Replacement of right knee joint, femoral surface with synthetic substitute, open approach) may be recognized on a claim if both codes appear (in any order). The reporting of these codes creates a new procedure code cluster ''@0045''. The cluster @ 0045 has a different set of attributes than either code 0SPC0JZ or 0SRT0JZ by itself and is further ''restricted'' for MDC 08. When the GROUPER logic determines that the MDC is 08, it ignores the attributes of procedure codes 0SPC0JZ and 0SRT0JZ individually, only using those of @0045. This logic results in assignment of the claim to MS–DRGs 466, 467, and 468 (Revision of Hip or Knee Replacement with MCC, with CC, and without CC/MCC, respectively) rather than MS–DRGs 463, 464, and 465 (Wound Debridement and Skin Graft Except Hand for Musculoskeletal and Connective Tissue Disorders with MCC, with CC, and without CC/MCC, respectively). If the principal diagnosis reported is not assigned under MDC 08, the cluster would not restrict the interpretation of the component codes and their individual attributes could be relevant as well as those of @0045.

Following publication of the proposed rule, we identified that the intended grouping of cases to the proposed new MS–DRGs was impacted because of these cluster restrictions under MDC 08, therefore we removed the restrictions and performed additional analysis. As a result of removing the restrictions, and due to the existing overlapping procedure code logic among a subset of the MDC 08 MS–DRGs, our analysis showed that further redistribution of the cases under MDC 08 occurs, impacting the remaining number of cases in MS–DRGs 466, 467, and 468 and MS–DRGs 485, 486, and 487, such that, those MS–DRGs no longer satisfy the criteria for a 3-way split. Under our established process for applying the criteria to create subgroups within a base MS–DRG, existing MS–DRGs 466, 467, and 468 would be deleted and a new base MS–DRG for Revision of Hip or Knee Replacement would be established. Additionally, under this established process, existing MS–DRGs 485, 486, and 487 would be deleted and new MS–DRGs (2-way split) for Knee Procedures with Principal Diagnosis of Infection with and without MCC, respectively, would be established. Because these findings were not identified until after publication of the proposed rule, we believe it is appropriate to further consider the creation of proposed new MS–DRGs 403 and 404, along with the removal of the MDC 08 restrictions on the procedure code clusters and the potential implications for existing MS–DRGs 466, 467, and 468 and MS–DRGs 485, 486, and 487, as well as the creation of new MS–DRGs, in addition to having an updated test Grouper that reflects these potential changes. We also note that any future proposed MS–DRG changes may also impact the surgical hierarchy.

After consideration of the public comments we received, and for the reasons described, we are not finalizing our proposal to create new MS–DRGs 403 and 404 (Hip or Knee Procedures with Principal Diagnosis of Periprosthetic Joint Infection with MCC and without MCC, respectively) for FY 2026. As noted, we may further consider these potential MS–DRG changes for future rulemaking.

b. Arthroscopy

In the FY 2026 IPPS/LTCH PPS proposed rule (90 FR 18052 through 18054), we stated that consistent with our annual review of the MS–DRGs, we consider changes in resource consumption, treatment patterns, technology, and any other factors that may change the relative use of hospital resources. We noted that in our review of the claims data from the September 2024 update of the FY 2024 MedPAR file, we identified an extremely low volume of cases for MS–DRG 509 (Arthroscopy). Specifically, we found 16 cases with an average length of stay of 5.2 days and average costs of $18,239.

An arthroscopy is a surgical procedure that allows orthopedic surgeons to see the inside of a joint through a small incision and with specialized instruments (for example, arthroscope). The ICD–10–PCS codes describing arthroscopy and currently assigned to MS–DRG 509 are shown in the following table.

BILLING CODE 4120–01–P

PROCEDURE CODES DESCRIBING ARTHROSCOPY IN MS-DRG 509	
ICD-10-PCS Code	**Description**
0RJ04ZZ	Inspection of occipital-cervical joint, percutaneous endoscopic approach
0RJ14ZZ	Inspection of cervical vertebral joint, percutaneous endoscopic approach
0RJ34ZZ	Inspection of cervical vertebral disc, percutaneous endoscopic approach
0RJ44ZZ	Inspection of cervicothoracic vertebral joint, percutaneous endoscopic approach
0RJ54ZZ	Inspection of cervicothoracic vertebral disc, percutaneous endoscopic approach
0RJ64ZZ	Inspection of thoracic vertebral joint, percutaneous endoscopic approach
0RJ94ZZ	Inspection of thoracic vertebral disc, percutaneous endoscopic approach
0RJA4ZZ	Inspection of thoracolumbar vertebral joint, percutaneous endoscopic approach
0RJB4ZZ	Inspection of thoracolumbar vertebral disc, percutaneous endoscopic approach
0RJE4ZZ	Inspection of right sternoclavicular joint, percutaneous endoscopic approach
0RJF4ZZ	Inspection of left sternoclavicular joint, percutaneous endoscopic approach
0RJG4ZZ	Inspection of right acromioclavicular joint, percutaneous endoscopic approach
0RJH4ZZ	Inspection of left acromioclavicular joint, percutaneous endoscopic approach
0RJJ4ZZ	Inspection of right shoulder joint, percutaneous endoscopic approach
0RJK4ZZ	Inspection of left shoulder joint, percutaneous endoscopic approach
0RJL4ZZ	Inspection of right elbow joint, percutaneous endoscopic approach
0RJM4ZZ	Inspection of left elbow joint, percutaneous endoscopic approach
0RJN4ZZ	Inspection of right wrist joint, percutaneous endoscopic approach
0RJP4ZZ	Inspection of left wrist joint, percutaneous endoscopic approach
0RJQ4ZZ	Inspection of right carpal joint, percutaneous endoscopic approach
0RJR4ZZ	Inspection of left carpal joint, percutaneous endoscopic approach
0RJS4ZZ	Inspection of right carpometacarpal joint, percutaneous endoscopic approach
0RJT4ZZ	Inspection of left carpometacarpal joint, percutaneous endoscopic approach
0RJU4ZZ	Inspection of right metacarpophalangeal joint, percutaneous endoscopic approach
0RJV4ZZ	Inspection of left metacarpophalangeal joint, percutaneous endoscopic approach
0RJW4ZZ	Inspection of right finger phalangeal joint, percutaneous endoscopic approach
0RJX4ZZ	Inspection of left finger phalangeal joint, percutaneous endoscopic approach
0SJ04ZZ	Inspection of lumbar vertebral joint, percutaneous endoscopic approach
0SJ34ZZ	Inspection of lumbosacral joint, percutaneous endoscopic approach
0SJ54ZZ	Inspection of sacrococcygeal joint, percutaneous endoscopic approach
0SJ64ZZ	Inspection of coccygeal joint, percutaneous endoscopic approach
0SJ74ZZ	Inspection of right sacroiliac joint, percutaneous endoscopic approach
0SJ84ZZ	Inspection of left sacroiliac joint, percutaneous endoscopic approach
0SJ94ZZ	Inspection of right hip joint, percutaneous endoscopic approach
0SJB4ZZ	Inspection of left hip joint, percutaneous endoscopic approach
0SJC4ZZ	Inspection of right knee joint, percutaneous endoscopic approach
0SJD4ZZ	Inspection of left knee joint, percutaneous endoscopic approach
0SJF4ZZ	Inspection of right ankle joint, percutaneous endoscopic approach
0SJG4ZZ	Inspection of left ankle joint, percutaneous endoscopic approach
0SJH4ZZ	Inspection of right tarsal joint, percutaneous endoscopic approach
0SJJ4ZZ	Inspection of left tarsal joint, percutaneous endoscopic approach
0SJK4ZZ	Inspection of right tarsometatarsal joint, percutaneous endoscopic approach
0SJL4ZZ	Inspection of left tarsometatarsal joint, percutaneous endoscopic approach
0SJM4ZZ	Inspection of right metatarsal-phalangeal joint, percutaneous endoscopic approach
0SJN4ZZ	Inspection of left metatarsal-phalangeal joint, percutaneous endoscopic approach
0SJP4ZZ	Inspection of right toe phalangeal joint, percutaneous endoscopic approach
0SJQ4ZZ	Inspection of left toe phalangeal joint, percutaneous endoscopic approach

BILLING CODE 4120–01–C

In light of our initial findings of 16 cases for MS–DRG 509, we further reviewed the MedPAR claims data for cases assigned to MS–DRG 509 for the past 5 fiscal years. As reflected in the following table, the data indicate that the number of cases grouping to MS–DRG 509 has steadily declined.

FY and MedPAR Data Reviewed	Number of Cases	Average Lenth of Stay	Average Costs
FY 2022 (FY 2020 MedPAR)	25	3.9	$10,372
FY 2023 (FY 2021 MedPAR)	31	4.2	$10,882
FY 2024 (FY 2022 MedPAR)	34	4.3	$11,380
FY 2025 (FY 2023 MedPAR)	21	5.4	$13,683
FY 2026 (FY 2024 MedPAR)	16	5.2	$18,239

We noted that, if, during our annual MS–DRG analysis we identify that there are only a few patients in a respective MS–DRG, consistent with our established process, we consider if there have been potential changes in the clinical characteristics of the patients, treatment patterns, or resource utilization. A principle of the MS–DRGs and the characteristics of a meaningful DRG classification scheme is the ability to detect such changes and accordingly, propose clinically appropriate modifications that are also consistent with resource utilization.

We stated we believe that the volume of cases reporting the arthroscopy procedures in the inpatient setting has shifted to the outpatient setting over the years; it is usually performed as an outpatient procedure. Of the 16 cases found to report an arthroscopy procedure in the FY 2024 MedPAR data, 13 cases also reported another procedure. For example, one case that reported procedure code 0RJK4ZZ (Inspection of left shoulder joint, percutaneous endoscopic approach) also reported procedure code 0RBK4ZZ (Excision of left shoulder joint, percutaneous endoscopic approach). Procedure code 0RBK4ZZ is assigned to MS–DRGs 510, 511, and 512 (Shoulder, Elbow or Forearm Procedures, Except Major Joint Procedures with MCC, with CC, and without CC/MCC, respectively). However, because of the surgical hierarchy, the resulting assignment is MS–DRG 509.

Using the September 2024 update of the FY 2024 MedPAR file, we also reviewed the base DRG by severity claims data for MS–DRG 509 to determine the number of cases, average length of stay and average costs for the 16 cases by severity level (1=MCC, 2=CC and 3=NonCC). Our findings are shown in the following table.

MS-DRG	Number of Cases	Average Length of Stay	Average Costs
509-1	4	5.5	$15,196
509-2	7	6.1	$27,880
509-3	5	3.6	$7,177
509 base DRG total	**16**	**5.2**	**$18,239**

Next, we reviewed the claims data from the September 2024 update of the FY 2024 MedPAR file for MS–DRGs 510, 511, and 512 (Shoulder, Elbow or Forearm Procedures, Except Major Joint Procedures with MCC, with CC, and without CC/MCC, respectively); MS–DRGs 513 and 514 (Hand or Wrist Procedures, Except Major Thumb or Joint Procedures with CC/MCC and without CC/MCC, respectively); and MS–DRGs 515, 516, and 517 (Other Musculoskeletal System and Connective Tissue O.R. Procedures with MCC, with CC, and without CC/MCC, respectively) because these MS–DRGs are considered to be clinically appropriate and consistent with the arthroscopy procedure code descriptions in MS–DRG 509 previously listed that specify the anatomic site. Our findings are shown in the following tables.

MS-DRG	Number of Cases	Average Length of Stay	Average Costs
510	916	6.4	$25,000
511	2,538	4.3	$18,701
512	1,303	2.6	$14,582

MS-DRG	Number of Cases	Average Length of Stay	Average Costs
513	1,335	5.0	$14,219
514	317	2.6	$9,556

MS-DRG	Number of Cases	Average Length of Stay	Average Costs
515	4,095	8.4	$28,466
516	10,522	5.0	$18,832
517	5,951	2.9	$14,067

Based on our analysis and review of the cases grouping to MS–DRG 509, we stated that we believe it is appropriate to delete MS–DRG 509 and reassign the 47 procedure codes describing arthroscopy of various anatomic sites to clinically appropriate MS–DRGs that also align with the resource utilization for these cases. For example, of the 16 cases found to group to MS–DRG 509, in addition to identifying 13 cases reporting additional procedures as previously discussed, we also identified 11 cases reporting diagnosis codes designated as a CC or MCC where the average length of stay and average costs of those cases are comparable with the average length of stay and average costs of the cases in the MS–DRGs considered clinically appropriate for their reassignment. Therefore, for FY 2026, of the 47 procedure codes previously listed describing arthroscopy of various anatomic sites, we proposed to do the following:

- Reassign the 8 procedure codes describing arthroscopy of the shoulder or elbow joint to MS–DRGs 510, 511, and 512 (Shoulder, Elbow or Forearm Procedures, Except Major Joint Procedures with MCC, with CC, and without CC/MCC, respectively).
- Reassign the 10 procedure codes describing arthroscopy of the hand or wrist joint to MS–DRGs 513 and 514 (Hand or Wrist Procedures, Except Major Thumb or Joint Procedures with CC/MCC and without CC/MCC, respectively).
- Reassign the 29 procedure codes describing arthroscopy of various vertebral joints and other

musculoskeletal joints to MS–DRGs 515, 516, and 517 (Other Musculoskeletal System and Connective Tissue O.R. Procedures with MCC, with CC, and without CC/MCC, respectively).

We refer the reader to Table 6P.7a made publicly available in association with the proposed rule and available at: *https://www.cms.gov/medicare/payment/prospective-payment-systems/acute-inpatient-pps* for the detailed list of procedure codes with the proposed MS–DRG reassignments.

Comment: Commenters supported our proposal to delete MS–DRG 509 and to reassign the 47 procedure codes describing arthroscopy of various anatomic sites to the proposed clinically appropriate MS–DRGs.

Response: We thank the commenters for their support.

After consideration of the public comments we received, we are finalizing, without modification, our proposal to delete MS–DRG 509 and to reassign the 47 procedure codes describing arthroscopy of various anatomic sites to clinically appropriate MS–DRGs, as reflected in Table 6P.7a in association with this final rule and available at: *https://www.cms.gov/medicare/payment/prospective-payment-systems/acute-inpatient-pps*.

c. MS–DRG Logic for MS–DRGs 456, 457, and 458

As discussed in the FY 2026 IPPS/LTCH PPS proposed rule (90 FR 18054 through 18056), we identified an inconsistency in the GROUPER logic for MS–DRGs 456, 457, and 458 (Spinal Fusion Except Cervical with Spinal Curvature, Malignancy, Infection or Extensive Fusions with MCC, with CC, and without CC/MCC, respectively) related to the ICD–10–CM diagnosis codes describing a principal diagnosis of infection. The logic for case assignment to MS–DRGs 456, 457, and 458 as displayed in the ICD–10 MS–DRG Definitions Manual Version 42.1 (which is available on the CMS website at: *https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/AcuteInpatientPPS/MS-DRG-Classifications-and-Software*) is comprised of four logic lists. The first logic list is titled ''Spinal Fusion Except Cervical'' and is defined by a list of procedure codes designated as O.R. procedures that describe spinal fusion procedures of the thoracic, thoracolumbar, lumbar, lumbosacral, sacrococcygeal, and sacroiliac joint. (We note that 12 procedure codes describing Fusion of coccygeal joint were deleted effective with discharges beginning April 1, 2025 in version 42.1). The second logic list is titled ''Spinal Curvature/Malignancy/Infection'' and is defined by a list of diagnosis codes describing spinal curvature, spinal malignancy, and spinal infection that are used to define the logic for case assignment when any one of the listed diagnosis codes is reported as the principal diagnosis. The third logic list is titled ''OR Secondary Diagnosis'' and is defined by a list of diagnosis codes describing curvature of the spine that are used to define the logic for case assignment when any one of the listed codes is reported as a secondary diagnosis. The fourth logic list is titled ''Extensive Fusions'' and is defined by a list of procedure codes designated as O.R. procedures that describe extensive spinal fusion procedures. We refer the reader to the ICD–10 MS–DRG Definitions Manual Version 42.1, (available on the CMS website at: *https://www.cms.gov/medicare/payment/prospective-payment-systems/acute-inpatient-pps/ms-drg-classifications-and-software*) for complete documentation of the GROUPER logic for MS–DRGs 456, 457, and 458.

In the second logic list titled ''Spinal Curvature/Malignancy/Infection'' there are a subset of diagnosis codes describing spinal infections. We stated in the proposed rule that in our review and analysis of MS–DRGs 456, 457, and 458, we identified additional diagnosis codes within the ICD–10–CM classification describing spinal infections that are not currently listed in the logic for case assignment to MS–DRGs 456, 457, and 458. Specifically, we identified the following 47 diagnoses that we believe are clinically appropriate to add to the existing diagnosis codes describing spinal infections in MS–DRGs 456, 457, and 458.

BILLING CODE 4120–01–P

ICD-10-CM Code	Description
A02.24	Salmonella osteomyelitis
A54.40	Gonococcal infection of musculoskeletal system, unspecified
A54.41	Gonococcal spondylopathy
A54.43	Gonococcal osteomyelitis
A54.49	Gonococcal infection of other musculoskeletal tissue
M46.21	Osteomyelitis of vertebra, occipito-atlanto-axial region
M46.22	Osteomyelitis of vertebra, cervical region
M46.23	Osteomyelitis of vertebra, cervicothoracic region
M46.30	Infection of intervertebral disc (pyogenic), site unspecified
M46.31	Infection of intervertebral disc (pyogenic), occipito-atlanto-axial region
M46.32	Infection of intervertebral disc (pyogenic), cervical region
M46.33	Infection of intervertebral disc (pyogenic), cervicothoracic region
M46.34	Infection of intervertebral disc (pyogenic), thoracic region
M46.35	Infection of intervertebral disc (pyogenic), thoracolumbar region
M46.36	Infection of intervertebral disc (pyogenic), lumbar region
M46.37	Infection of intervertebral disc (pyogenic), lumbosacral region
M46.38	Infection of intervertebral disc (pyogenic), sacral and sacrococcygeal region
M46.39	Infection of intervertebral disc (pyogenic), multiple sites in spine
M46.50	Other infective spondylopathies, site unspecified
M46.51	Other infective spondylopathies, occipito-atlanto-axial region
M46.52	Other infective spondylopathies, cervical region
M46.53	Other infective spondylopathies, cervicothoracic region
M46.54	Other infective spondylopathies, thoracic region
M46.55	Other infective spondylopathies, thoracolumbar region
M46.56	Other infective spondylopathies, lumbar region
M46.57	Other infective spondylopathies, lumbosacral region
M46.58	Other infective spondylopathies, sacral and sacrococcygeal region
M46.59	Other infective spondylopathies, multiple sites in spine
M86.00	Acute hematogenous osteomyelitis, unspecified site
M86.09	Acute hematogenous osteomyelitis, multiple sites
M86.10	Other acute osteomyelitis, unspecified site
M86.19	Other acute osteomyelitis, multiple sites
M86.20	Subacute osteomyelitis, unspecified site
M86.29	Subacute osteomyelitis, multiple sites
M86.30	Chronic multifocal osteomyelitis, unspecified site
M86.39	Chronic multifocal osteomyelitis, multiple sites
M86.40	Chronic osteomyelitis with draining sinus, unspecified site
M86.49	Chronic osteomyelitis with draining sinus, multiple sites
M86.50	Other chronic hematogenous osteomyelitis, unspecified site
M86.59	Other chronic hematogenous osteomyelitis, multiple sites
M86.60	Other chronic osteomyelitis, unspecified site
M86.69	Other chronic osteomyelitis, multiple sites
M86.8X0	Other osteomyelitis, multiple sites
M86.8X9	Other osteomyelitis, unspecified sites
M86.9	Osteomyelitis, unspecified
T84.63XA	Infection and inflammatory reaction due to internal fixation device of spine, initial encounter
T84.69XA	Infection and inflammatory reaction due to internal fixation device of other site, initial encounter

BILLING CODE 4120–01–C

Therefore, for clinical consistency and because these codes describe spinal infections that could reasonably require a spinal fusion procedure, we proposed to add the previously listed diagnosis codes to the logic list titled ''Spinal Curvature/Malignancy/Infection'' in MS–DRGs 456, 457, and 458, effective October 1, 2025 for FY 2026.

We also identified eight diagnosis codes currently listed in the second logic list titled ''Spinal Curvature/Malignancy/Infection'' for case assignment to MS–DRGs 456, 457, and 458 that we believe are not clinically appropriate to maintain in the list. Specifically, we identified the following diagnoses.

ICD-10-CM Code	Description
M4850XA	Collapsed vertebra, not elsewhere classified, site unspecified, initial encounter for fracture
M4854XA	Collapsed vertebra, not elsewhere classified, thoracic region, initial encounter for fracture
M4855XA	Collapsed vertebra, not elsewhere classified, thoracolumbar region, initial encounter for fracture
M4856XA	Collapsed vertebra, not elsewhere classified, lumbar region, initial encounter for fracture
M4857XA	Collapsed vertebra, not elsewhere classified, lumbosacral region, initial encounter for fracture
M4858XA	Collapsed vertebra, not elsewhere classified, sacral and sacrococcygeal region, initial encounter for fracture
M8008XA	Age-related osteoporosis with current pathological fracture, vertebra(e), initial encounter for fracture
M8088XA	Other osteoporosis with current pathological fracture, vertebra(e), initial encounter for fracture

The previously listed diagnosis codes do not describe a spinal curvature, malignancy or infection, rather they describe compression fractures of various anatomic sites (for example, collapsed vertebra) and osteoporosis is a condition where the bones become weakened leading to an increased risk of bone fracture. Therefore, for clinical consistency and to ensure accuracy in the logic for case assignment, we proposed to remove the eight previously listed diagnosis codes from the logic list titled ''Spinal Curvature/Malignancy/Infection'' in MS–DRGs 456, 457, and 458, effective October 1, 2025 for FY 2026.

Comment: Commenters supported our proposal to add the previously listed 47 diagnosis codes to the logic list titled ''Spinal Curvature/Malignancy/Infection'' in MS–DRGs 456, 457, and 458, and our proposal to delete the eight previously listed diagnosis codes from the logic list titled ''Spinal Curvature/Malignancy/Infection'' in MS–DRGs 456, 457, and 458.

Response: We thank the commenters for their support.

After consideration of the public comments we received, we are finalizing, without modification, our proposal to add the previously listed 47 diagnosis codes to the logic list titled ''Spinal Curvature/Malignancy/Infection'' in MS–DRGs 456, 457, and 458, effective October 1, 2025 for FY 2026. We are also finalizing, without modification, our proposal to remove the eight previously listed diagnosis codes from the logic list titled ''Spinal Curvature/Malignancy/Infection'' in MS–DRGs 456, 457, and 458, effective October 1, 2025 for FY 2026.

6. Review of Procedure Codes in MS–DRGs 981 Through 983 and 987 Through 989

We annually conduct a review of procedures producing assignment to MS–DRGs 981 through 983 (Extensive O.R. Procedure Unrelated to Principal Diagnosis with MCC, with CC, and without CC/MCC, respectively) or MS–DRGs 987 through 989 (Non-Extensive O.R. Procedure Unrelated to Principal Diagnosis with MCC, with CC, and without CC/MCC, respectively) on the basis of volume, by procedure, to see if it would be appropriate to move cases reporting these procedure codes out of these MS–DRGs into one of the surgical MS–DRGs for the MDC into which the principal diagnosis falls. The data are arrayed in two ways for comparison purposes. We look at a frequency count of each major operative procedure code. We also compare procedures across MDCs by volume of procedure codes within each MDC. We use this information to determine which procedure codes and diagnosis codes to examine.

We identify those procedures occurring in conjunction with certain principal diagnoses with sufficient frequency to justify adding them to one of the surgical MS–DRGs for the MDC in which the diagnosis falls. We also consider whether it would be more appropriate to move the principal diagnosis codes into the MDC to which the procedure is currently assigned.

Based on the results of our review of the claims data from the September 2024 update of the FY 2024 MedPAR file of cases found to group to MS–DRGs 981 through 983 or MS–DRGs 987 through 989, we proposed to move the cases reporting the procedures and/or principal diagnosis codes described in this section of this rule from MS–DRGs 981 through 983 or MS–DRGs 987 through 989 into one of the surgical MS–DRGs for the MDC into which the principal diagnosis or procedure is assigned.

a. Control of Bleeding in the Genitourinary Tract

As discussed in the FY 2026 IPPS/LTCH PPS proposed rule (90 FR 18056 through 18057), during the review of the cases that group to MS–DRGs 981 through 983, we noted that when ICD–10–PCS procedure codes describing the control of bleeding in the genitourinary tract are reported in conjunction with ICD–10–CM diagnosis codes in MDC 16 (Diseases and Disorders of Blood, Blood Forming Organs, and Immunologic Disorders), the cases group to MS–DRGs 981 through 983. The five ICD–10–CM procedure codes reviewed, as well as their current MDC assignments, are found in the table:

ICD-10-PCS Code	Description	MDC
0W3R0ZZ	Control bleeding in genitourinary tract, open approach	05; 11; 12; 13; 17; 21; 24
0W3R3ZZ	Control bleeding in genitourinary tract, percutaneous approach	05; 11; 12; 13; 17; 21; 24
0W3R4ZZ	Control bleeding in genitourinary tract, percutaneous endoscopic approach	05; 11; 12; 13; 17; 21; 24
0W3R7ZZ	Control bleeding in genitourinary tract, via natural or artificial opening	05; 11; 12; 13; 17; 21; 24
0W3R8ZZ	Control bleeding in genitourinary tract, via natural or artificial opening endoscopic	05; 11; 12; 13; 17; 21; 24

We refer the reader to Appendix E of the ICD–10 MS–DRG Version 42.1 Definitions Manual, which is available on the CMS website at: *https://www.cms.gov/medicare/payment/prospective-payment-systems/acute-inpatient-pps.html*, for the MS–DRG assignment for each procedure code listed and further discussion of how each procedure code may be assigned to multiple MDCs and MS–DRGs under the IPPS.

The principal diagnosis most frequently reported with the five ICD–10–PCS procedure codes describing the control of bleeding in the genitourinary tract in MDC 16 is ICD–10–CM code D68.32 (Hemorrhagic disorder due to extrinsic circulating anticoagulants). Hemorrhagic disorder due to extrinsic circulating anticoagulants is a condition

that occurs when bleeding is caused by anticoagulants or antithrombotics, which are medicines commonly used to treat or prevent blood clots by decreasing the amount of clotting proteins in the blood.

As noted in the proposed rule, we examined claims data from the September 2024 update of the FY 2024 MedPAR file to identify the average length of stay and average costs for cases reporting a procedure code describing the control of bleeding in the genitourinary tract with a principal diagnosis in MDC 16, which are currently grouping to MS–DRGs 981 through 983, as well as all cases in MS–DRGs 981 through 983. Our findings are shown in the following table.

MS-DRGs 981-983: ALL CASES AND CASES REPORTING A PROCEDURE CODE DESCRIBING THE CONTROL OF BLEEDING IN THE GENITOURINARY TRACT AND A PRINCIPAL DIAGNOSIS IN MDC 16

MS-DRG	Number of Cases	Average Length of Stay	Average Costs
MS-DRG 981--All cases	19,155	11.7	$40,259
MS-DRG 981--Cases reporting procedure code describing the control of bleeding in the genitourinary tract and a principal diagnosis in MDC 16	23	9	$27,900
MS-DRG 982--All cases	9,392	5.7	$21,951
MS-DRG 982-- Cases reporting procedure code describing the control of bleeding in the genitourinary tract and a principal diagnosis in MDC 16	64	4.3	$13,462
MS-DRG 983--All cases	1,831	2.6	$15,837
MS-DRG 983-- Cases reporting procedure code describing the control of bleeding in the genitourinary tract and a principal diagnosis in MDC 16	5	2.8	$9,416

We then examined the MS–DRGs within MDC 16 and determined that the cases reporting procedure codes describing the control of bleeding in the genitourinary tract with a principal diagnosis in MDC 16 would most suitably group to MS–DRGs 802, 803, and 804 (Other O.R. Procedures of the Blood and Blood Forming Organs with MCC, with CC, and without CC/MCC, respectively), which contains a group of procedures that are only infrequently related to the diagnoses in the MDC, but are still occasionally performed on patients with cases assigned to the MDC with these diagnoses.

To determine how the resources for this subset of cases compared to cases in MS–DRGs 802, 803, and 804 as a whole, we stated in the proposed rule we examined the average costs and length of stay for cases in MS–DRGs 802, 803, and 804. Our findings are shown in this table.

MS-DRG	Number of Cases	Average Length of Stay	Average Costs
MS-DRG 802--All cases	417	11.6	$37,595
MS-DRG 803--All cases	452	5.3	$16,762
MS-DRG 804--All cases	209	2.2	$12,605

We reviewed the data and noted in the proposed rule that for this subset of cases, the average costs are lower and the average length of stays are generally shorter than for cases in MS–DRGs 802, 803, and 804. However, we stated we believe that when an ICD–10–PCS procedure code describing the control of bleeding in the genitourinary tract is reported with a principal diagnosis in MDC 16 (typically hemorrhagic disorder due to extrinsic circulating anticoagulants), the procedure is related to the principal diagnosis. Because a procedure code describing the control of bleeding in the genitourinary tract would be expected to be related to a principal diagnosis describing a hemorrhagic disorder due to extrinsic circulating anticoagulants, it is clinically appropriate for the procedures to group to the same MS–DRGs as the principal diagnoses. Therefore, we proposed to add the five procedure codes listed previously to MDC 16. Under this proposal, cases reporting a procedure code describing the control of bleeding in the genitourinary tract with a principal diagnosis of a hemorrhagic disorder due to extrinsic circulating anticoagulants (diagnosis code D68.32) in MDC 16 would group to MS–DRGs 802, 803, and 804.

Comment: Commenters supported the proposal to add ICD–10–PCS procedure codes 0W3R0ZZ, 0W3R3ZZ, 0W3R4ZZ, 0W3R7ZZ, and 0W3R8ZZ to MDC 16 (Diseases and Disorders of Blood, Blood Forming Organs and Immunologic Disorders).

Response: We appreciate the commenters' support.

After consideration of the public comments we received, we are finalizing our proposal to add ICD–10–PCS procedure codes 0W3R0ZZ, 0W3R3ZZ, 0W3R4ZZ, 0W3R7ZZ, and 0W3R8ZZ to MDC 16, without modification, for FY 2026. Under this finalization, cases reporting a procedure code describing the control of bleeding in the genitourinary tract with a principal diagnosis of a hemorrhagic disorder due to extrinsic circulating anticoagulants (diagnosis code D68.32) in MDC 16 would group to MS–DRGs 802, 803, and 804.

b. Removal of Infusion Device From Peritoneal Cavity

As discussed in the FY 2026 IPPS/LTCH PPS proposed rule (90 FR 18057 through 18058), during the review of the

cases that group to MS–DRGs 981 through 983, we noted that when ICD–10–PCS procedure codes describing the removal of an infusion device from the peritoneal cavity are reported in conjunction with ICD–10–CM diagnosis codes in MDC 21 (Injuries, Poisonings and Toxic Effects of Drugs), the cases group to MS–DRGs 981 through 983. In the proposed rule, we included the following table, listing the three ICD–10–PCS procedure codes reviewed, and indicating current assignment to MDCs 06 and 21:

ICD-10-PCS Code	Description	MDC
0WPG03Z	Removal of infusion device from peritoneal cavity, open approach	06; 21
0WPG33Z	Removal of infusion device from peritoneal cavity, percutaneous approach	06; 21
0WPG43Z	Removal of infusion device from peritoneal cavity, percutaneous endoscopic approach	06; 21

In this final rule, we are correcting this display to reflect that ICD–10–PCS code 0WPG33Z is not currently assigned to MDC 21. We note that, in ICD–10 MS–DRGs Definitions Manual Version 42.1, ICD–10–PCS codes 0WPG03Z and 0WPG43Z are assigned to MDC 21 MS–DRGs 907, 908, and 909 (Other O.R. Procedures for Injuries with MCC, with CC, and without CC/MCC, respectively). ICD–10–PCS code 0WPG33Z is assigned to MDC 06 MS–DRGs 356, 357 and 358 (Other Digestive System O.R. Procedures with MCC, with CC, and without CC/MCC, respectively). We list in the following table the ICD–10–PCS procedure codes describing the removal of an infusion device from the peritoneal cavity and their corresponding MS–DRG assignments in the ICD–10 MS–DRGs Definitions Manual Version 42.1.

ICD-10-PCS Code	Description	MDC	MS-DRG	Description
0WPG03Z	Removal of infusion device from peritoneal cavity, open approach	06	356-358	Other Digestive System O.R. Procedures with MCC, with CC, and without CC/MCC, respectively
		21	907-909	Other O.R. Procedures for Injuries with MCC, with CC, and without CC/MCC, respectively
0WPG33Z	Removal of infusion device from peritoneal cavity, percutaneous approach	06	356-358	Other Digestive System O.R. Procedures with MCC, with CC, and without CC/MCC, respectively
0WPG43Z	Removal of infusion device from peritoneal cavity, percutaneous endoscopic approach	06	356-358	Other Digestive System O.R. Procedures with MCC, with CC, and without CC/MCC, respectively
		21	907-909	Other O.R. Procedures for Injuries with MCC, with CC, and without CC/MCC, respectively

We refer the reader to Appendix E of the ICD–10 MS–DRG Version 42.1 Definitions Manual (which is available on the CMS website at: *https://www.cms.gov/medicare/payment/prospective-payment-systems/acute-inpatient-pps.html*) for the MS–DRG assignment for each procedure code listed and further discussion of how each procedure code may be assigned to multiple MDCs and MS–DRGs under the IPPS.

As discussed in the proposed rule, the principal diagnosis most frequently reported with the three ICD–10–PCS procedure codes describing the removal of an infusion device from the peritoneal cavity in MDC 21 is ICD–10–CM code T85.71XA (Infection and inflammatory reaction due to peritoneal dialysis catheter, initial encounter).

We stated we examined claims data from the September 2024 update of the FY 2024 MedPAR file to identify the average length of stay and average costs for cases reporting a procedure code describing the removal of an infusion device from the peritoneal cavity with a principal diagnosis in MDC 21, which are currently grouping to MS–DRGs 981 through 983, as well as all cases in MS–DRGs 981 through 983. Our findings are shown in the following table.

MS-DRGs 981-983: ALL CASES AND CASES REPORTING A PROCEDURE CODE DESCRIBING THE REMOVAL OF AN INFUSION DEVICE FROM THE PERITONEAL CAVITY AND A PRINCIPAL DIAGNOSIS IN MDC 21			
MS-DRG	Number of Cases	Average Length of Stay	Average Costs
MS-DRG 981--All cases	19,155	11.7	$40,259
MS-DRG 981--Cases reporting procedure code describing the removal of an infusion device from the peritoneal cavity and a principal diagnosis in MDC 21	85	8.8	$25,556
MS-DRG 982--All cases	9,392	5.7	$21,951
MS-DRG 982--Cases reporting procedure code describing the removal of an infusion device from the peritoneal cavity and a principal diagnosis in MDC 21	1	4	$11,845
MS-DRG 983--All cases	1,831	2.6	$15,837
MS-DRG 983--Cases reporting procedure code describing the removal of an infusion device from the peritoneal cavity and a principal diagnosis in MDC 21	0	0	$0

We then examined the MS–DRGs within MDC 21 and determined that the cases reporting procedure codes describing the removal of an infusion device from the peritoneal cavity with a principal diagnosis in MDC 21 would most suitably group to MS–DRGs 907, 908, and 909 (Other O.R. Procedures for Injuries with MCC, with CC, and without CC/MCC, respectively), which contains other operating room procedures performed for injuries as further detailed later in this section.

To determine how the resources for this subset of cases compared to cases in MS–DRGs 907, 908, and 909 as a whole, we examined the average costs and length of stay for cases in MS–DRGs 907, 908, and 909. Our findings are shown in the following table.

MS-DRG	Number of Cases	Average Length of Stay	Average Costs
MS-DRG 907--All cases	7,754	9.4	$34,049
MS-DRG 908--All cases	6,625	4.8	$17,938
MS-DRG 909--All cases	1,721	2.7	$12,154

As discussed in the proposed rule, we reviewed the data and noted for the subset of cases reporting procedure codes describing the removal of an infusion device from the peritoneal cavity with a principal diagnosis in MDC 21, the average costs are lower and the average lengths of stay are shorter than for cases in MS–DRGs 907, 908, and 909. However, we stated we believe that when an ICD–10–PCS procedure code describing the removal of an infusion device from the peritoneal cavity is reported with a principal diagnosis in MDC 21 (typically infection and inflammatory reaction due to peritoneal dialysis catheter), the procedure is related to the principal diagnosis. Because a procedure code describing the removal of an infusion device from the peritoneal cavity would be expected to be related to a principal diagnosis describing an infected catheter used for peritoneal dialysis causing inflammation in the surrounding tissue, we stated it is clinically appropriate for the procedures to group to the same MS–DRGs as the principal diagnoses. Therefore, we proposed to add the three procedure codes listed previously to MDC 21. We stated that under this proposal, cases reporting a procedure code describing the removal of an infusion device from the peritoneal cavity with a principal diagnosis of an infection and inflammatory reaction due to peritoneal dialysis catheter, initial encounter (diagnosis code T85.71XA) in MDC 21 would group to MS–DRGs 907, 908, and 909.

Comment: Commenters supported the proposal to add procedure codes describing the removal of an infusion device from the peritoneal cavity to MDC 21 (Injuries, Poisonings and Toxic Effects of Drugs).

Response: We appreciate the commenters' support.

As discussed previously, in ICD–10 MS–DRGs Definitions Manual Version 42.1, ICD–10–PCS codes 0WPG03Z and 0WPG43Z are already assigned to MDC 21 MS–DRGs 907, 908, and 909 (Other O.R. Procedures for Injuries with MCC, with CC, and without CC/MCC, respectively). Therefore, after consideration of the public comments we received, for the reasons discussed, we are finalizing our proposal with modification. Specifically, we are finalizing our proposal to add ICD–10–PCS code 0WPG33Z to MDC 21 for FY 2026. Under this finalization, cases reporting procedure code 0WPG33Z (Removal of infusion device from peritoneal cavity, percutaneous approach) with a principal diagnosis of an infection and inflammatory reaction due to peritoneal dialysis catheter, initial encounter (diagnosis code T85.71XA) in MDC 21 would group to MS–DRGs 907, 908, and 909.

In addition to the internal review of procedures producing assignment to MS–DRGs 981 through 983 or MS–DRGs 987 through 989, as discussed in the proposed rule, we also consider requests that we receive to examine cases found to group to MS–DRGs 981 through 983 or MS–DRGs 987 through 989 to determine if it would be appropriate to add procedure codes to one of the surgical MS–DRGs for the MDC into which the principal diagnosis falls or to move the principal diagnosis to the surgical MS–DRGs to which the procedure codes are assigned. We stated we did not receive any requests suggesting reassignment.

We also review the list of ICD–10–PCS procedures that, when in combination with their principal diagnosis code, result in assignment to MS DRGs 981 through 983, or 987 through 989, to ascertain whether any of those procedures should be reassigned from one of those two groups of MS–DRGs to the other group of MS–DRGs

based on average costs and the average length of stay. We look at the data for trends such as shifts in treatment practice or reporting practice that would make the resulting MS–DRG assignment illogical. If we find these shifts, we will propose to move cases to keep the MS–DRGs clinically similar or to propose MS–DRG assignments for the cases in a similar manner. Generally, we propose to move only those procedures for which we have an adequate number of discharges to analyze the data.

Additionally, we also consider requests that we receive to examine cases found to group to MS–DRGs 981 through 983 or MS–DRGs 987 through 989 to determine if it would be appropriate for the cases to be reassigned from one of the MS–DRG groups to the other. We stated we did not receive any requests suggesting reassignment. Further, based on the results of our review of the claims data from the September 2024 update of the FY 2024 MedPAR file we stated we did not identify any cases for reassignment. Therefore, for FY 2026 we did not propose to move any cases reporting procedure codes from MS–DRGs 981 through 983 to MS–DRGs 987 through 989 or vice versa.

Comment: Commenters expressed support for CMS' proposal to not move any cases reporting procedure codes from MS–DRGs 981 through 983 to MS–DRGs 987 through 989 or vice versa.

Response: We appreciate the commenters' support.

After consideration of the public comments we received, we are finalizing, without modification, our proposal to not move any cases reporting procedure codes from MS–DRGs 981 through 983 to MS–DRGs 987 through 989 or vice versa.

7. Operating Room (O.R.) and Non-O.R. Procedures

a. Background

Under the IPPS MS–DRGs (and former CMS MS–DRGs), we have a list of procedure codes that are considered operating room (O.R.) procedures. Historically, we developed this list using physician panels that classified each procedure code based on the procedure and its effect on consumption of hospital resources. For example, generally the presence of a surgical procedure which required the use of the operating room would be expected to have a significant effect on the type of hospital resources (for example, operating room, recovery room, and anesthesia) used by a patient, and therefore, these patients were considered surgical. Because the claims data generally available do not precisely indicate whether a patient was taken to the operating room, surgical patients were identified based on the procedures that were performed.

Generally, if the procedure was not expected to require the use of the operating room, the patient would be considered medical (non-O.R.). Currently, each ICD–10–PCS procedure code has designations that determine whether and in what way the presence of that procedure on a claim impacts the MS–DRG assignment. First, each ICD–10–PCS procedure code is either designated as an O.R. procedure for purposes of MS–DRG assignment (''O.R. procedures'') or is not designated as an O.R. procedure for purposes of MS–DRG assignment (''non-O.R. procedures''). Second, for each procedure that is designated as an O.R. procedure, that O.R. procedure is further classified as either extensive or non-extensive. Third, for each procedure that is designated as a non-O.R. procedure, that non-O.R. procedure is further classified as either affecting the MS–DRG assignment or not affecting the MS–DRG assignment. We refer to these designations that do affect MS–DRG assignment as ''non O.R. affecting the MS–DRG.'' For new procedure codes that have been finalized through the ICD–10 Coordination and Maintenance Committee meeting process and are proposed to be classified as O.R. procedures or non-O.R. procedures affecting the MS–DRG, we recommend the MS–DRG assignment which is then made available in association with the proposed rule (Table 6B.—New Procedure Codes) and subject to public comment. These proposed assignments are generally based on the assignment of predecessor codes or the assignment of similar codes. For example, we generally examine the MS–DRG assignment for similar procedures, such as the other approaches for that procedure, to determine the most appropriate MS–DRG assignment for procedures proposed to be newly designated as O.R. procedures. As discussed in section II.C.13 of the preamble of this FY 2026 IPPS/LTCH PPS final rule, we are making Table 6B.—New Procedure Codes—FY 2026 available on the CMS website at: *https://www.cms.gov/medicare/payment/prospective-payment-systems/acute-inpatient-pps.html.* We also refer readers to the ICD–10 MS–DRG Version 42.1 Definitions Manual at: *https://www.cms.gov/medicare/payment/prospective-payment-systems/acute-inpatient-pps/ms-drg-classifications-and-software.html* for detailed information regarding the designation of procedures as O.R. or non-O.R. (affecting the M–DRG) in Appendix E—Operating Room Procedures and Procedure Code/MS–DRG Index.

In the FY 2020 IPPS/LTCH PPS proposed rule, we stated that, given the long period of time that has elapsed since the original O.R. (extensive and non-extensive) and non-O.R. designations were established, the incremental changes that have occurred to these O.R. and non-O.R. procedure code lists, and changes in the way inpatient care is delivered, we plan to conduct a comprehensive, systematic review of the ICD–10–PCS procedure codes. This will be a multiyear project during which we will also review the process for determining when a procedure is considered an operating room procedure. For example, we may restructure the current O.R. and non-O.R. designations for procedures by leveraging the detail that is now available in the ICD–10 claims data. We refer readers to the discussion regarding the designation of procedure codes in the FY 2018 IPPS/LTCH PPS final rule (82 FR 38066) where we stated that the determination of when a procedure code should be designated as an O.R. procedure has become a much more complex task. This is, in part, due to the number of various approaches available in the ICD–10–PCS classification, as well as changes in medical practice. While we have typically evaluated procedures on the basis of whether or not they would be performed in an operating room, we believe that there may be other factors to consider with regard to resource utilization, particularly with the implementation of ICD–10.

We discussed in the FY 2020 IPPS/LTCH PPS proposed rule (84 FR 19230) that, as a result of this planned review and potential restructuring, procedures that are currently designated as O.R. procedures may no longer warrant that designation, and conversely, procedures that are currently designated as non-O.R. procedures may warrant an O.R. designation. We intend to consider the resources used and how a procedure should affect the MS–DRG assignment. We may also consider the effect of certain surgical approaches to evaluate whether to subdivide a subset of MS–DRGs based on a specific surgical approach. We stated we plan to utilize our available MedPAR claims data as a basis for this review and the input of our clinical advisors. As part of this comprehensive review of the procedure codes, we also intend to evaluate the MS–DRG assignment of the procedures and the current surgical hierarchy

because both of these factor into the process of refining the ICD–10 MS–DRGs to better recognize complexity of service and resource utilization.

In the FY 2021 IPPS/LTCH PPS final rule (85 FR 58540 through 58541), we provided a summary of the comments we had received in response to our request for feedback on what factors or criteria to consider in determining whether a procedure is designated as an O.R. procedure in the ICD–10–PCS classification system for future consideration. We also stated that in consideration of the PHE, we believed it may be appropriate to allow additional time for the claims data to stabilize prior to selecting the timeframe to analyze for this review.

As discussed in the FY 2026 IPPS/LTCH PPS proposed rule (90 FR 18059 through 18060), we stated we continue to believe additional time is necessary as we continue to develop our process and methodology. As discussed in the FY 2024 IPPS/LTCH PPS final rule (88 FR 58749), we have signaled in prior rulemaking that the designation of an O.R. procedure encompasses more than the physical location of the hospital room in which the procedure may be performed; in other words, the performance of a procedure in an operating room is not the sole determining factor we will consider as we examine the designation of a procedure in the ICD–10–PCS classification system. We stated we are exploring alternatives on how we may restructure the current O.R. and non-O.R. designations for procedures by leveraging the detail that is available in the ICD–10 claims data. We are considering the feedback received on what factors and/or criteria to consider in determining whether a procedure is designated as an O.R. procedure in the ICD–10–PCS classification system as we continue to develop our process and methodology and will provide more detail on this analysis and the methodology for conducting this comprehensive review in future rulemaking. We encourage the public to continue to submit feedback and comments on any other factors in consideration of our refinement efforts to recognize and differentiate consumption of resources under the ICD–10 MS–DRGs.

Comment: Commenters supported CMS' plan to continue to conduct the comprehensive, systematic review of the ICD–10–PCS codes and to evaluate their current O.R. and non-O.R. designations. These commenters expressed that they were supportive of CMS' decision to continue to develop our process and methodology. A commenter stated they agreed that the revolution in medical procedures in recent years may render the performance of a procedure in an O.R. a less critical distinction in driving payment policy and stated that because of technological advances, sophisticated, resource-intensive procedures are no longer confined to the O.R. setting and noted that in their observation, bi-plane radiology interventional suites and cardiac catheterization labs used for procedures such as mechanical thrombectomy or endovascular coiling for aneurysms can utilize more advanced equipment and supplies than a basic operating room with minimal installed equipment. This commenter recommended that CMS provide detailed impact files prior to the adoption of changes to the designation of procedure codes in the ICD–10–PCS classification and stated that they look forward to commenting on CMS' data analysis and methodology in the future.

As part of the broader and continuing conversation about the designations of procedures in the ICD–10–PCS classification system, a commenter recommended that CMS work closely with physician specialty societies and industry stakeholders to identify the most important drivers of complexity and resource use in the hospital setting. Another commenter specifically recommended that CMS include nurse representatives when reviewing methodologies for determining the designation of procedure codes in the ICD–10–PCS classification system and noted that nurses are an integral part of the healthcare team, work closely with physicians in the operating room and have firsthand knowledge and experience to know what hospital resources are needed for procedures. This commenter further stated that omitting nurses only serves to discount their perspectives and could result in decision making that does not fully capture the hospital resources needed.

Response: We thank the commenters for their support. We also thank commenters for sharing their views and their willingness to provide feedback and recommendations as to what factors to consider in evaluating O.R. versus non-O.R. designations. We agree with commenters and believe that there may be other factors to consider with regard to resource utilization, particularly with the implementation of ICD–10. While CMS has already convened an internal team comprised of clinicians, consultants, coding specialists and other policy analysts, as well as provided the opportunity for interested parties to provide feedback as to what factors to consider in evaluating O.R. versus non-O.R. designations, we look forward to further input and feedback from interested parties, including nurses. As discussed in the proposed rule, we are considering the feedback received to date on what factors and/or criteria to consider in determining whether a procedure is designated as an O.R. procedure in the ICD–10–PCS classification system as we continue to develop our process and methodology and will provide more detail on this analysis and the methodology for conducting this comprehensive review in future rulemaking. As part of this comprehensive review of the procedure codes, we are also considering renaming the designations that determine whether and in what way the presence of that procedure on a claim impacts the MS–DRG assignment (that is, ''O.R. procedures'', ''non-O.R. procedures'', or ''non O.R. affecting the MS–DRG'') for consistency. As discussed in prior rulemaking and earlier in this section of the preamble of this final rule, we have signaled that the performance of a procedure in an operating room is not the sole determining factor we will consider as we examine the designation of a procedure in the ICD–10–PCS classification system. We encourage the public to continue to submit comments and feedback on any other factors to consider in our refinement efforts to recognize and differentiate consumption of resources for procedures within the ICD–10 MS–DRGs under the IPPS.

As discussed in the FY 2026 IPPS/LTCH PPS proposed rule, we received requests regarding changing the designation of specific ICD–10–PCS procedure codes from non-O.R. to O.R. procedures. In this section of the preamble of this FY 2026 IPPS/LTCH PPS final rule, as we did in the proposed rule, we summarize and respond to those requests. In this section of the preamble of this final rule, we also discuss the proposal we made based on our internal review and analysis and the process that was utilized for evaluating each procedure code. For each procedure, we considered—

- Whether the procedure would typically require the resources of an operating room;
- Whether it is an extensive or a non-extensive procedure; and
- To which MS–DRGs the procedure should be assigned.

We note that many MS–DRGs require the presence of any O.R. procedure. As a result, cases with a principal diagnosis associated with a particular MS–DRG would, by default, be grouped to that MS–DRG. Therefore, we do not list these MS–DRGs in our discussion in this section of the preamble of this FY

2026 IPPS/LTCH PPS final rule. Instead, we only discuss MS–DRGs that require explicitly adding the relevant procedure codes to the GROUPER logic in order for those procedure codes to affect the MS–DRG assignment as intended.

For procedures that would not typically require the resources of an operating room, we determined if the procedure should affect the MS–DRG assignment. In cases where we proposed to change the designation of procedure codes from non-O.R. procedures to O.R. procedures, we also proposed one or more MS–DRGs with which these procedures are clinically aligned and to which the procedure code would be assigned.

In addition, cases that contain O.R. procedures will map to MS–DRGs 981, 982, or 983 (Extensive O.R. Procedure Unrelated to Principal Diagnosis with MCC, with CC, and without CC/MCC, respectively) or MS–DRGs 987, 988, or 989 (Non-Extensive O.R. Procedure Unrelated to Principal Diagnosis with MCC, with CC, and without CC/MCC, respectively) when they do not contain a principal diagnosis that corresponds to one of the MDCs to which that procedure is assigned. These procedures need not be assigned to MS–DRGs 981 through 989 in order for this to occur. Therefore, we did not specifically address that aspect in summarizing the request and our response to that request or the proposal we made based on our internal review and analysis in the proposed rule and in this section of the preamble of this FY 2026 IPPS/LTCH PPS final rule.

b. Non-O.R. Procedures to O.R. Procedures

(1) Open Drainage of the Mandible

In the FY 2022 IPPS/LTCH PPS final rule (86 FR 44895 through 44896), we discussed a request we received to change the designation of procedure codes 0N9R0ZZ (Drainage of maxilla, open approach), 0N9T0ZZ (Drainage of right mandible, open approach), and 0N9V0ZZ (Drainage of left mandible, open approach), from non-O.R. to O.R. procedures. In the FY 2022 final rule, we stated that we disagreed that the procedures describing the open drainage of the maxilla or mandible typically require the resources of an operating room. We stated that if admission is required for the treatment of a jaw infection, the admission is quite likely due to the need for IV antibiotics as opposed to the need for operating room resources in an inpatient setting. After consideration of the public comments we received, we finalized our proposal to maintain the non-O.R. designation of ICD–10–PCS procedure codes 0N9R0ZZ, 0N9T0ZZ, and 0N9V0ZZ, without modification, for FY 2022.

As discussed in the FY 2026 IPPS/LTCH PPS proposed rule (90 FR 18060 through 18061), we again received a request to change the designation of ICD–10–PCS codes 0N9T0ZZ (Drainage of right mandible, open approach), and 0N9V0ZZ (Drainage of left mandible, open approach), from non-O.R. to O.R. The requestor identified procedure code 0W950ZZ (Drainage of lower jaw, open approach) that is currently designated as an O.R. procedure and stated that the body part value of mandible is more specific than the body part value of lower jaw. The requestor also stated that in the ICD–10–PCS classification, other procedure codes that describe drainage procedures performed on body parts deeper than subcutaneous tissue, such as muscles, tendons, and bone, are designated as O.R. procedures. Therefore, the requestor stated that procedure codes 0N9T0ZZ and 0N9V0ZZ should also be recognized as O.R. procedures for purposes of MS–DRG assignment. The requestor did not provide a specific list of the procedure codes that describe drainage procedures performed on body parts deeper than subcutaneous tissue, such as muscles, tendons, and bone, that are currently designated as O.R. procedures for CMS to review.

In the ICD–10 MS–DRGs Definitions Manual Version 42.1, procedure codes 0N9T0ZZ and 0N9V0ZZ are currently designated as non-O.R. procedures for purposes of MS–DRG assignment. We reviewed this issue and in the proposed rule, we stated we continue to disagree that the procedures describing the open drainage of the mandible are typically performed in the operating room under general anesthesia. As discussed in the FY 2022 IPPS/LTCH PPS final rule (86 FR 44896), these procedures can be done in an oral surgeon's office, or an outpatient setting and are rarely performed in the inpatient setting. Therefore, we proposed to maintain the current non-O.R. designation of ICD–10–PCS procedure codes 0N9T0ZZ and 0N9V0ZZ.

Comment: A commenter opposed CMS' proposal to maintain the current non-O.R. designation of ICD–10–PCS procedure codes 0N9T0ZZ (Drainage of right mandible, open approach), and 0N9V0ZZ (Drainage of left mandible, open approach) and stated when performed in the inpatient setting, these procedures often involve complex infectious disease cases requiring significant resources. This commenter stated that their analysis and clinical experience suggest that these procedures, when performed on hospitalized patients, are substantially different and more complex when compared to routine outpatient drainage procedures and more closely align with other O.R.-designated procedures in terms of resource utilization. The commenter further stated that the infectious nature of these cases specifically requires additional resources beyond the procedure itself, including extended antimicrobial therapy, infectious diseases consultation and potential management of sepsis or other systemic complications.

Response: We thank the commenter for their feedback.

We reviewed the commenter's concerns and continue to support maintaining the current non-O.R. designation of the procedure codes describing open drainage of the mandible and disagree that the procedures describing the open drainage of the mandible typically require the resources of an operating room. We continue to believe if admission is required for the treatment of a jaw infection, the admission is quite likely due to the need for IV antibiotics as opposed to the need for operating room resources in an inpatient setting.

In response to the issues raised by this commenter, we examined claims data from the September 2024 update of the FY 2024 MedPAR file for cases reporting 0N9T0ZZ or 0N9V0ZZ. Our findings are shown in the following table.

BILLING CODE 4120–01–P

MS-DRGs Reporting Procedure Codes 0N9T0ZZ or 0N9V0ZZ					
MS-DRG	**Description**		**Number of Cases**	**Average Length of Stay**	**Average Costs**
012	Tracheostomy for Face, Mouth and Neck Diagnoses or Laryngectomy with CC	All cases	1,294	9.8	$38,637
		Cases reporting 0N9T0ZZ or 0N9V0ZZ	1	11	$69,077
157	Dental and Oral Diseases with MCC	All cases	1,598	6.1	$15,737
		Cases reporting 0N9T0ZZ or 0N9V0ZZ	2	4	$6,798
158	Dental and Oral Diseases with CC	All cases	2,725	3.5	$8,424
		Cases reporting 0N9T0ZZ or 0N9V0ZZ	13	3.6	$10,745
159	Dental and Oral Diseases without CC/MCC	All cases	503	2.5	$6,686
		Cases reporting 0N9T0ZZ or 0N9V0ZZ	1	6	$19,745
356	Other Digestive System O.R. Procedures with MCC	All cases	6,122	10.2	$38,574
		Cases reporting 0N9T0ZZ or 0N9V0ZZ	1	3	$37,175
516	Other Musculoskeletal System and Connective Tissue O.R. Procedures with CC	All cases	10,522	5.0	$18,832
		Cases reporting 0N9T0ZZ or 0N9V0ZZ	1	4	$10,908
554	Bone Diseases and Arthropathies without MCC	All cases	8,807	3.5	$7,800
		Cases reporting 0N9T0ZZ or 0N9V0ZZ	1	3	$4,352
603	Cellulitis without MCC	All cases	55,341	3.8	$8,045
		Cases reporting 0N9T0ZZ or 0N9V0ZZ	1	2	$2,437
853	Infectious and Parasitic Diseases with O.R. Procedures with MCC	All cases	75,711	12.3	$42,737
		Cases reporting 0N9T0ZZ or 0N9V0ZZ	1	17	$39,483
856	Postoperative or Post-Traumatic Infections with O.R. Procedures with MCC	All cases	6,497	12.1	$38,696
		Cases reporting 0N9T0ZZ or 0N9V0ZZ	1	4	$11,471
871	Septicemia or Severe Sepsis without MV >96 Hours with MCC	All cases	540,907	6.4	$17,468
		Cases reporting 0N9T0ZZ or 0N9V0ZZ	2	10	$17,971
872	Septicemia or Severe Sepsis without MV >96 Hours without MCC	All cases	98,684	4.2	$9,413
		Cases reporting 0N9T0ZZ or 0N9V0ZZ	1	4	$15,260
908	Other O.R. Procedures for Injuries with CC	All cases	6,625	4.8	$17,938
		Cases reporting 0N9T0ZZ or 0N9V0ZZ	1	9	$11,475
920	Complications of Treatment with CC	All cases	10,257	3.7	$9,330
		Cases reporting 0N9T0ZZ or 0N9V0ZZ	1	4	$13,263
983	Extensive O.R. Procedures Unrelated to Principal Diagnosis without CC/MCC	All cases	1,831	2.6	$15,837
		Cases reporting 0N9T0ZZ or 0N9V0ZZ	1	1	$4,117
		All cases reporting 0N9T0ZZ or 0N9V0ZZ	**29**	**4.9**	**$14,758**

BILLING CODE 4120–01–C

As shown in the table, we found a total of 29 cases reporting procedure codes 0N9T0ZZ or 0N9V0ZZ across the MS–DRGs, demonstrating that procedures that describe open drainage of the mandible are infrequently performed in the inpatient setting. Our data findings also demonstrate, generally, the cases reporting procedures describing the open drainage of the mandible have average costs that are lower than the average costs of all cases in their respective MS–DRGs, while the average lengths of stay are shorter.

Therefore, after consideration of the public comments we received, for the reasons stated, we are finalizing our proposal to maintain the current non-O.R. designation of ICD–10–PCS procedure codes 0N9T0ZZ and 0N9V0ZZ, without modification, for FY 2026.

In our review of this issue, in the proposed rule, we stated we agree with the requestor that in the ICD–10 MS–DRGs Definitions Manual Version 42.1, procedure code 0W950ZZ (Drainage of lower jaw, open approach) is currently designated as an O.R. procedure for purposes of MS–DRG assignment. While we have stated in prior rulemaking that a correlation cannot be made between procedures performed in general anatomic regions and procedures performed in specific body parts because these procedures coded with the general anatomic regions body part represent a broader range of procedures that cannot be coded to a specific body part, we stated we continue to believe if admission is required for the treatment of a jaw infection, the admission is quite likely due to the need for IV antibiotics as opposed to the need for operating room resources in an inpatient setting. Like procedures that describe open drainage of the mandible, procedures to drain the lower jaw can also be done in an oral surgeon's office or an outpatient setting and are rarely performed in the inpatient setting. In the proposed rule we stated we agree that procedures that describe open drainage of the mandible consume resources comparable to the related ICD–10–PCS procedure code that describes the open drainage of the jaw. These procedures do not typically require the resources of an operating room and are not surgical in nature. Therefore, for clinical consistency, we proposed to remove procedure code 0W950ZZ (Drainage of lower jaw, open approach) from the FY 2026 ICD–10 MS–DRGs Version 43 Definitions Manual in Appendix E—Operating Room Procedures and Procedure Code/MS–DRG Index as an O.R. procedure. Under this proposal, this procedure

would no longer impact MS–DRG assignment.

Comment: Commenters supported CMS' proposal to remove procedure code 0W950ZZ from the FY 2026 ICD–10 MS–DRGs Version 43 Definitions Manual in Appendix E—Operating Room Procedures and Procedure Code/MS–DRG Index as an O.R. procedure.

Response: We appreciate the commenters' support.

After consideration of the public comments we received, we are finalizing our proposal to change the designation of procedure code 0W950ZZ (Drainage of lower jaw, open approach) from O.R. procedure to non-O.R. procedure, without modification, effective October 1, 2025. Under this finalization, this procedure code would no longer impact MS–DRG assignment.

(2) Introduction of Paclitaxel-Coated Balloon Catheter Technology

In the FY 2025 IPPS/LTCH PPS final rule (89 FR 69094 through 69096), we summarized and responded to comments we received regarding the O.R. designation and MS–DRG assignment of 16 procedure codes that describe introduction of the AGENT™ Paclitaxel-Coated Balloon Catheter technology that is indicated to treat coronary in-stent restenosis (ISR) in patients with coronary artery disease. The following procedure codes describing use of the AGENT™ Paclitaxel-Coated Balloon Catheter technology were finalized following the March 19, 2024, ICD–10 Coordination and Maintenance Committee meeting and made available via the CMS website on June 5, 2024, at *https://www.cms.gov/medicare/payment/prospective-payment-systems/acute-inpatient-pps*. We refer the reader to the CMS website at: *https://www.cms.gov/Medicare/Coding/ICD10/C-and-M-Meeting-Materials* for additional detailed information regarding the request, including a recording of the discussion and the related meeting materials.

ICD-10-PCS Code	Description
XW0J3HA	Introduction of paclitaxel-coated balloon technology, one balloon into coronary artery, one artery, percutaneous approach, new technology group 10
XW0J3JA	Introduction of paclitaxel-coated balloon technology, two balloons into coronary artery, one artery, percutaneous approach, new technology group 10
XW0J3KA	Introduction of paclitaxel-coated balloon technology, three balloons into coronary artery, one artery, percutaneous approach, new technology group 10
XW0J3LA	Introduction of paclitaxel-coated balloon technology, four or more balloons into coronary artery, one artery, percutaneous approach, new technology group 10
XW0K3HA	Introduction of paclitaxel-coated balloon technology, one balloon into coronary artery, two arteries, percutaneous approach, new technology group 10
XW0K3JA	Introduction of paclitaxel-coated balloon technology, two balloons into coronary artery, two arteries, percutaneous approach, new technology group 10
XW0K3KA	Introduction of paclitaxel-coated balloon technology, three balloons into coronary artery, two arteries, percutaneous approach, new technology group 10
XW0K3LA	Introduction of paclitaxel-coated balloon technology, four or more balloons into coronary artery, two arteries, percutaneous approach, new technology group 10
XW0L3HA	Introduction of paclitaxel-coated balloon technology, one balloon into coronary artery, three arteries, percutaneous approach, new technology group 10
XW0L3JA	Introduction of paclitaxel-coated balloon technology, two balloons into coronary artery, three arteries, percutaneous approach, new technology group 10
XW0L3KA	Introduction of paclitaxel-coated balloon technology, three balloons into coronary artery, three arteries, percutaneous approach, new technology group 10
XW0K3LA	Introduction of paclitaxel-coated balloon technology, four or more balloons into coronary artery, two arteries, percutaneous approach, new technology group 10
XW0L3HA	Introduction of paclitaxel-coated balloon technology, one balloon into coronary artery, three arteries, percutaneous approach, new technology group 10
XW0L3JA	Introduction of paclitaxel-coated balloon technology, two balloons into coronary artery, three arteries, percutaneous approach, new technology group 10
XW0L3KA	Introduction of paclitaxel-coated balloon technology, three balloons into coronary artery, three arteries, percutaneous approach, new technology group 10
XW0M3LA	Introduction of paclitaxel-coated balloon technology, four or more balloons into coronary artery, four or more arteries, percutaneous approach, new technology group 10

As discussed in the FY 2026 IPPS/LTCH PPS proposed rule (90 FR 18061 through 18062), we again received a request to reconsider the designation and MS–DRG assignment of the previously listed 16 procedure codes. Specifically, the requestor (the manufacturer) requested that the procedure codes be designated as O.R. procedures and assigned to the following surgical MS–DRGs:

- MS–DRG 250 Percutaneous Cardiovascular Procedures without Intraluminal Device with MCC
- MS–DRG 251 Percutaneous Cardiovascular Procedures without Intraluminal Device without MCC
- MS–DRG 321 Percutaneous Cardiovascular Procedures with Intraluminal Device with MCC or 4+ Arteries/Intraluminal Devices
- MS–DRG 322 Percutaneous Cardiovascular Procedures with Intraluminal Device without MCC
- MS–DRG 323 Coronary Intravascular Lithotripsy with Intraluminal Device with MCC
- MS–DRG 324 Coronary Intravascular Lithotripsy with Intraluminal Device without MCC
- MS–DRG 325 Coronary Intravascular Lithotripsy without Intraluminal Device

According to the requestor, the root operation CMS identified as the most appropriate (that is, Introduction in the Administration section), and the predecessor code selected, (procedure code 3E073GC (Introduction of other therapeutic substance into coronary artery, percutaneous approach)), only involves a therapeutic substance being delivered via infusion or injection. The requestor stated that the procedure to administer the paclitaxel via the drug coated balloon (DCB) catheter is a surgical procedure as described in the instructions for use, with the drug delivery occurring using controlled prolonged balloon inflation during which the patient is monitored for signs of ischemia or arrythmia. The requestor stated that the procedure to deliver the paclitaxel is more appropriate as an O.R. procedure than a non-O.R. procedure. The requestor acknowledged that while the MS–DRG assignment for existing percutaneous coronary intervention (PCI) procedures is driven by vessel preparation or the use of an intraluminal device, it should not preclude the designation of the procedure codes identifying use of an AGENT™ Paclitaxel-Coated Balloon Catheter technology that describes the delivery of the paclitaxel to the coronary vessel(s) as O.R. procedures.

In the FY 2025 IPPS/LTCH PPS final rule (89 FR 69095 through 69096), we stated that under our established process, we reviewed the predecessor code and MS–DRG assignment most closely associated with the new procedure codes. We noted that because the procedure codes describing the use of an AGENT™ Paclitaxel-Coated Balloon Catheter are describing delivery of the paclitaxel to the coronary vessel(s), the predecessor code is 3E073GC, which is designated as a non-O.R. procedure and does not affect MS–DRG assignment. We also stated that, as discussed at the March 19, 2024, ICD–10 Coordination and Maintenance Committee meeting and in the commenters' feedback, a preparatory step (that is, vessel preparation by either angioplasty, atherectomy, or lithotripsy) is required to be performed first, before the AGENT™ Paclitaxel-Coated Balloon Catheter is deployed. We noted that each type of vessel preparation procedure is designated as an O.R. procedure and maps to one of the previously listed surgical MS–DRGs. We also noted that based on the surgical hierarchy, the reporting of one of the vessel preparation steps (that is, angioplasty, atherectomy, or lithotripsy), or placement of a new stent in connection with the use of the AGENT™ Paclitaxel-Coated Balloon Catheter would result in assignment to one of the previously listed surgical MS–DRGs. We noted that use of the AGENT™ Paclitaxel-Coated Balloon Catheter to deliver the paclitaxel to the coronary vessel(s) cannot occur in the absence of a surgical vessel preparation and therefore, it is the vessel preparation procedure that will determine the surgical MS–DRG assignment to one of the previously listed surgical MS–DRGs.

In the proposed rule, we noted that we reviewed the instructions for use submitted by the requestor regarding the procedure to insert the drug-coated balloon catheter. The instructions for use state:

''Note: For optimal DCB results, adequate lesion preparation is essential. This should include predilatation with a non-coated coronary balloon. Intravascular imaging to guide lesion preparation and to assess the adequacy of the final result is strongly recommended.

Caution: Lesion preparation is necessary to prevent delamination of the balloon's drug coating while traversing patient anatomy. The TransPax coating is designed to facilitate drug transfer into the vessel wall upon contact. Do not use the AGENT Drug-Coated Balloon Catheter for lesion preparation.''

We also noted that the FDA-approved indication states, ''The AGENT™ Paclitaxel-Coated Balloon Catheter is intended to be used after appropriate vessel preparation in adult patients undergoing percutaneous coronary intervention (PCI) in coronary arteries 2.0 mm to 4.0 mm in diameter and lesions up to 26 mm in length for the purpose of improving myocardial perfusion when treating in-stent restenosis (ISR).'' We further noted that, as reflected in the March 19, 2024 ICD–10 Coordination and Maintenance Committee meeting materials, ''The AGENT™ Drug-Coated Balloon (DCB) has been designated by the FDA as an implant for PMA purposes. Per FDA guidance, the drug component is considered a permanent implant because it remains in the body for greater than 30 days.''

As such, we stated in the proposed rule that we continue to disagree with designating the procedure to deliver paclitaxel to a coronary vessel as identified by any one of the previously listed 16 procedure codes as O.R. procedures. As stated earlier in this section, the MS–DRG assignment is dependent on the surgical vessel preparation procedure that would be reported when the AGENT™ Paclitaxel-Coated Balloon Catheter technology is used to deliver the paclitaxel to the coronary vessel(s) and result in assignment to one of the previously listed surgical MS–DRGs. We referred the reader to the ICD–10 MS–DRG Definitions Manual, Version 42.1 available in association with the FY 2026 IPPS/LTCH PPS proposed rule on the CMS website at *https://www.cms.gov/medicare/payment/prospective-payment-systems/acute-inpatient-pps* for complete documentation of the GROUPER logic for the previously listed surgical MS–DRGs under MDC 05. For the reasons discussed, we proposed to maintain the designation of the 16 procedure codes describing use of the AGENT™ Paclitaxel-Coated Balloon Catheter technology as non-O.R. for FY 2026.

Comment: Some commenters agreed with the proposal to maintain the designation of the 16 procedure codes describing use of the AGENT™ Paclitaxel-Coated Balloon Catheter technology as non-O.R. for FY 2026.

Response: We thank the commenters for their support.

Comment: A commenter (the manufacturer) urged CMS to change the designation of the procedure codes that describe the AGENT™ Paclitaxel-Coated Balloon Catheter technology from non-O.R. to O.R. for FY 2026. The commenter stated that patients scheduled for a procedure that uses the AGENT™ Paclitaxel-Coated Balloon Catheter technology have a principal diagnosis of ISR, and introduction of the AGENT™ implant is the principal procedure to address the ISR. The commenter stated that the AGENT™ implant represents the therapeutic intent of the intervention, drives associated resource requirements, and is not performed incident to vessel preparation. The commenter stated that other services provided during the same operative session as the AGENT™ implant are for the purpose of vessel dilation or plaque modification in preparation for effective therapeutic drug delivery. According to the commenter, the specific approach and rigor to vessel preparation technique(s) are dictated by the physician's decision to treat the lesion with the AGENT™ implant and are therefore secondary to the AGENT™ implant. The commenter stated the secondary procedures may include balloon angioplasty for vessel dilation, and atherectomy, lithotripsy, and/or cutting balloon for plaque modification. In addition, the commenter stated that intravascular ultrasound (IVUS) and/or optical coherence tomography (OCT) may be used for enhanced vessel visualization.

The commenter provided a table comparing clinical functions associated with percutaneous coronary interventions as follows:

Clinical Function	Procedure	Technologies
Vessel Dilation	Angioplasty	Compliant Low-Pressure Dilation Balloon Semi-Compliant Low- Pressure Dilation Balloon Non-Compliant High- Pressure Dilation Balloon
Lesion Modification *(fragmentation, extirpation)*	Atherectomy Intravascular Lithotripsy	Cutting and Scoring Balloons Rotational and Orbital Atherectomy Laser Fiber Catheter Sonic Wave Balloon Catheter
Lesion Treatment *(insertion, supplement)*	Stent Placement Localized Drug Implant	Bare Metal Stent (BMS) Drug Eluting Stent (DES) Drug Coated Balloon (DCB)

The commenter also stated that the primary role of the AGENT™ implant is supported by ICD–10–PCS Guidelines which instruct to sequence the procedure performed for definitive treatment most related to the principal diagnosis as principal procedure. The commenter included the FDA labeling language that was referenced in the preamble of the proposed rule (90 FR 18062) and stated that because patients who are admitted for a procedure to deliver the AGENT™ implant have a principal diagnosis of ISR, the AGENT™ implant is the principal procedure from a coding perspective and is the primary procedure that represents the therapeutic intent of the intervention.

The commenter asserted that the AGENT™ DCB therapy is consistent with drug-eluting stent (DES) therapy in terms of diagnostic methods, intra-operative procedure steps, complexity and risk, therefore, consistent with DES and other procedure codes for percutaneous coronary interventions (PCI), the codes for the AGENT™ DCB should be designated as O.R. codes. The commenter stated that the procedure involving the AGENT™ implant is most clinically similar to a DES procedure because both are PCI procedures, performed only by physicians experienced in PCI, involve a surgical implant within the coronary artery, involve the transfer of therapeutic substances to a lesion and are targeted localized therapies as opposed to systemic treatments. The commenter added that the procedural steps to prepare a vessel for the AGENT™ implant is consistent with that required for a DES including obtaining percutaneous arterial access, positioning a guide catheter in the heart, advancing a guide wire across the coronary artery stenosis, preparing the vessel for the AGENT™ implant using specialized catheters and devices as needed (for example, angioplasty balloon, cutting balloon, lithotripsy, atherectomy), and using angiographic imaging to visualize the heart and IVUS or OCT to guide the procedure.

The commenter stated that in addition to the clinical similarities between the AGENT™ DCB and a DES, the procedure codes describing use of the AGENT™ Paclitaxel-Coated Balloon Catheter technology in ICD–10–PCS Table XW0 (Introduction, Anatomical Regions) closely mirror the procedure codes describing use of a DES, in ICD–10–PCS Table 027, Dilation of Heart and Great Vessels because both sets of codes account for treatment of multiple coronary arteries and the use of multiple devices. The commenter asserted that since the procedure codes describing a DES and all other PCI procedure codes are classified as surgical, the AGENT™ Paclitaxel-Coated Balloon Catheter technology should be similarly classified as surgical. The commenter stated that the 16 procedure codes describing use of the AGENT™ Paclitaxel-Coated Balloon Catheter technology should be designated as O.R. procedures regardless of whether there is immediate impact to the MS–DRG assignment.

Other commenters expressed appreciation that CMS reviewed the request to reconsider the MS–DRG assignment of the sixteen procedure codes describing use of the AGENT™ Paclitaxel-Coated Balloon Catheter technology from non-O.R. to O.R. however, the commenters disagreed with the proposal to maintain the DCB placement as a non-O.R. procedure. According to the commenters, because the vessel preparation techniques discussed to allow placement of the AGENT™ Paclitaxel-Coated Balloon Catheter are O.R. services, it would only be consistent for the AGENT™ Paclitaxel-Coated Balloon Catheter service itself to also be designated as an O.R. service. The commenters stated that, from a similar perspective, just as drug-eluting intraluminal device procedures (drug-eluting stents) are considered alongside non-drug-eluting intraluminal devices (stents); the AGENT™ Paclitaxel-Coated Balloon Catheter service should be categorized in the same manner as other dilation of coronary artery procedures (that is, angioplasty).

Response: We appreciate the commenters' feedback. We disagree with the commenter's (the manufacturer) statement that the vessel preparation technique(s) are secondary to delivery of the AGENT™ implant (that is, paclitaxel). While the delivery of paclitaxel via the AGENT™ Paclitaxel-Coated Balloon Catheter is the intended therapeutic intervention to treat ISR, it cannot occur in the absence of the initial vessel preparation procedure (for example, angioplasty for vessel dilation, and atherectomy, lithotripsy, and/or cutting balloon for plaque modification). In response to the commenter's statement that the primary role of the AGENT™ implant is supported by ICD–10–PCS sequencing guidelines for the principal procedure, we note that the ICD–10–PCS Guidelines regarding sequencing of the principal procedure have no direct correlation on MS–DRG assignment or whether a procedure code is designated as O.R. or non-O.R. We also note that the sequencing of the procedure on the claim does not have an effect on MS–DRG assignment. Rather, the MS–DRG assignment is based on the O.R. or non-O.R. designation of the procedure code.

While we agree that there are some procedural similarities between delivery of the AGENT™ implant and the insertion of a DES, we note that a major distinction is that the objective of the AGENT™ Paclitaxel-Coated Balloon Catheter is to deliver a targeted anti-proliferative drug dose, without introducing an extra layer of metal that is intended to remain permanently. We disagree with the commenter that the procedure involving the AGENT™ implant should be designated as an O.R. procedure. Although the FDA

designated the AGENT™ Paclitaxel-Coated Balloon as an implant for Pre-Market Approval (PMA) purposes, (that is, per FDA guidance, the drug component is considered a permanent implant because it remains in the body for greater than 30 days), delivery of a drug (or therapeutic agent) is not equivalent to the insertion of an intraluminal device (that is, stent) under the ICD–10–PCS classification. Notably, unlike a device, a drug cannot become dislodged from its location nor can it be removed.

Designating a procedure code that is identified as one component of a multi-component procedure, service, or therapy as O.R. when that component would not be performed independently and is not FDA approved to be performed independently in the absence of another component (that is, two components are necessary for reporting to accurately reflect the entire procedure) would not be appropriate and is also not necessary when the other component has an existing O.R. designation. Specifically, it would not be appropriate to only report a procedure code describing the introduction of the AGENT™ Paclitaxel-Coated Balloon Catheter technology and arrive at one of the requested MS–DRG assignments in the absence of a procedure code describing an angioplasty, lithotripsy, or atherectomy procedure being reported. To encourage proper coding and reporting, as well as to ensure appropriate MS–DRG assignment, both the AGENT™ Paclitaxel-Coated Balloon Catheter technology and one of the procedure codes describing an angioplasty, lithotripsy, or atherectomy must be reported. We also note that under ICD–10–PCS, PCI procedures such as angioplasty performed for the treatment of blocked arteries with one or more intraluminal devices (that is, stents) that remain in the patient are coded to ''Dilation with intraluminal device''. The AGENT™ Paclitaxel-Coated Balloon Catheter technology does not involve a stent; rather, the drug (paclitaxel) is deployed and the balloon catheter is removed. The procedure codes describe the administration or transfer of the drug via the delivery mechanism of the balloon catheter. The intended outcomes or benefits of altering the designation of the procedure codes for the AGENT™ Paclitaxel-Coated Balloon Catheter technology from non-O.R. to O.R. remain unclear, as the MS–DRG assignment is determined by the vessel preparation procedure, which is classified as an O.R. procedure. As discussed in section II.C.7 of the preamble of the proposed rule (90 FR 18059) and this final rule, each ICD–10–PCS procedure code has a designation that determines whether and in what way the presence of that procedure on a claim impacts the MS–DRG assignment.

After consideration of the public comments received and for the reasons previously described, we are finalizing our proposal to maintain the designation of the 16 procedure codes describing use of the AGENT™ Paclitaxel-Coated Balloon Catheter technology as non-O.R. for FY 2026.

(3) Endoscopic Drainage of the Ureter With Drainage Device

As discussed in the proposed rule (90 FR 18062 through 18063), during our internal review, we noted that procedure codes that describe drainage of the ureter with a drainage device, via a natural or artificial opening endoscopic approach, are not recognized as O.R. procedures for purposes of MS–DRG assignment. We identified the following three related codes:

ICD-10-PCS Code	Description
0T9680Z	Drainage of right ureter with drainage device, via natural or artificial opening endoscopic
0T9780Z	Drainage of left ureter with drainage device, via natural or artificial opening endoscopic
0T9880Z	Drainage of bilateral ureters with drainage device, via natural or artificial opening endoscopic

Upon further review and consideration, we stated we believe that procedure codes 0T9680Z, 0T9780Z, and 0T9880Z that describe the drainage of the ureter with a drainage device via a natural or artificial opening endoscopic approach warrant designation as O.R. procedures. These procedures involve the use of a cystoscope and include the insertion of a small tube (called a ureteral stent or drainage tube) into one or both of the ureters (the tubes that carry urine from the kidneys to the bladder) to drain urine from a blocked or partially blocked ureter and must be performed by a urologist who specializes in diagnosing and treating conditions of the urinary tract, genitals, and adrenal glands through surgery. These procedures are typically performed in an operating room under anesthesia, can take about 30 minutes or more, including preparation time, and require that a patient's vital signs be monitored by the health care team for the duration of the procedure.

Therefore, we proposed to add procedure codes 0T9680Z, 0T9780Z, and 0T9880Z to the FY 2026 ICD–10 MS–DRG Version 43 Definitions Manual in Appendix E—Operating Room Procedures and Procedure Code/MS-DRG Index as O.R. procedures assigned to MS–DRG 264 (Other Circulatory System O.R. Procedures) in MDC 05 (Diseases and Disorders of the Circulatory System); MS–DRGs 656, 657, and 658 (Kidney and Ureter Procedures for Neoplasm, with MCC, with CC, and without CC/MCC, respectively) and MS–DRGs 659, 660, and 661 (Kidney and Ureter Procedures for Non-Neoplasm, with MCC, with CC, and without CC/MCC, respectively) in MDC 11 (Diseases and Disorders of the Kidney and Urinary Tract); MS–DRGs 907, 908, and 909 (Other O.R. Procedures for Injuries with MCC, with CC, and without CC/MCC, respectively) in MDC 21 (Injuries, Poisonings and Toxic Effects of Drugs); and MS–DRGs 957, 958, and 959 (Other O.R. Procedures for Multiple Significant Trauma with MCC, with CC, and without CC/MCC, respectively) in MDC 24 (Multiple Significant Trauma).

Comment: Commenters supported the proposal to change the designation of procedure codes 0T9680Z, 0T9780Z, and 0T9880Z from non-O.R. procedures to O.R. procedures.

Response: We appreciate the commenters' support.

After consideration of the public comments we received, we are finalizing our proposal to change the designation of procedure codes 0T9680Z, 0T9780Z, and 0T9880Z from non-O.R. procedures to O.R. procedures, without modification, effective October 1, 2025.

8. Changes to the MS–DRG Diagnosis Codes for FY 2026

a. Background of the CC List and the CC Exclusions List

Under the IPPS MS–DRG classification system, we have developed a standard list of diagnoses that are considered CCs. Historically, we

developed this list using physician panels that classified each diagnosis code based on whether the diagnosis, when present as a secondary condition, would be considered a substantial complication or comorbidity. A substantial complication or comorbidity was defined as a condition that, because of its presence with a specific principal diagnosis, would cause an increase in the length-of-stay by at least 1 day in at least 75 percent of the patients. However, depending on the principal diagnosis of the patient, some diagnoses on the basic list of complications and comorbidities may be excluded if they are closely related to the principal diagnosis. In FY 2008, we evaluated each diagnosis code to determine its impact on resource use and to determine the most appropriate CC subclassification (NonCC, CC, or MCC) assignment. We refer readers to sections II.D.2. and 3. of the preamble of the FY 2008 IPPS final rule with comment period for a discussion of the refinement of CCs in relation to the MS DRGs we adopted for FY 2008 (72 FR 47152 through 47171).

b. Overview of Comprehensive CC/MCC Analysis

In the FY 2008 IPPS/LTCH PPS final rule (72 FR 47159), we described our process for establishing three different levels of CC severity into which we would subdivide the diagnosis codes. The categorization of diagnoses as an MCC, a CC, or a NonCC was accomplished using an iterative approach in which each diagnosis was evaluated to determine the extent to which its presence as a secondary diagnosis resulted in increased hospital resource use. We refer readers to the FY 2008 IPPS/LTCH PPS final rule (72 FR 47159) for a complete discussion of our approach. Since the comprehensive analysis was completed for FY 2008, we have evaluated diagnosis codes individually when assigning severity levels to new codes and when receiving requests to change the severity level of specific diagnosis codes.

We noted in the FY 2020 IPPS/LTCH PPS proposed rule (84 FR 19235 through 19246) that with the transition to ICD–10–CM and the significant changes that have occurred to diagnosis codes since the FY 2008 review, we believed it was necessary to conduct a comprehensive analysis once again. Based on this analysis, we proposed changes to the severity level designations for 1,492 ICD–10–CM diagnosis codes and invited public comments on those proposals. As summarized in the FY 2020 IPPS/LTCH PPS final rule, many commenters expressed concern with the proposed severity level designation changes overall and recommended that CMS conduct further analysis prior to finalizing any proposals. After careful consideration of the public comments we received, as discussed further in the FY 2020 IPPS/LTCH PPS final rule, we generally did not finalize our proposed changes to the severity designations for the ICD–10–CM diagnosis codes, other than the changes to the severity level designations for the diagnosis codes in category Z16 (Resistance to antimicrobial drugs) from a NonCC to a CC. We stated that postponing adoption of the proposed comprehensive changes in the severity level designations would allow further opportunity to provide additional background to the public on the methodology utilized and clinical rationale applied across diagnostic categories to assist the public in its review. We refer readers to the FY 2020 IPPS/LTCH PPS final rule (84 FR 42150 through 42152) for a complete discussion of our response to public comments regarding the proposed severity level designation changes for FY 2020.

As discussed in the FY 2021 IPPS/LTCH PPS proposed rule (85 FR 32550); to provide the public with more information on the CC/MCC comprehensive analysis discussed in the FY 2020 IPPS/LTCH PPS proposed and final rules, CMS hosted a listening session on October 8, 2019. The listening session included a review of this methodology utilized to mathematically measure the impact on resource use. We refer readers to *https://www.cms.gov/Outreach-and-Education/Outreach/OpenDoorForums/Downloads/10082019ListingSessionTrasncriptandQandAsandAudioFile.zip* for the transcript and audio file of the listening session. We also refer readers to *https://www.cms.gov/Medicare/MedicareFee-for-Service-Payment/AcuteInpatientPPS/MS-DRG-Classifications-and-Software.html* for the supplementary file containing the mathematical data generated using claims from the FY 2018 MedPAR file describing the impact on resource use of specific ICD–10–CM diagnosis codes when reported as a secondary diagnosis that was made available for the listening session.

In the FY 2021 IPPS/LTCH PPS final rule (85 FR 58550 through 58554), we discussed our plan to continue a comprehensive CC/MCC analysis, using a combination of mathematical analysis of claims data as discussed in the FY 2020 IPPS/LTCH PPS proposed rule (84 FR 19235) and the application of nine guiding principles and plan to present the findings and proposals in future rulemaking. The nine guiding principles are as follows:

- Represents end of life/near death or has reached an advanced stage associated with systemic physiologic decompensation and debility.
- Denotes organ system instability or failure.
- Involves a chronic illness with susceptibility to exacerbations or abrupt decline.
- Serves as a marker for advanced disease states across multiple different comorbid conditions.
- Reflects systemic impact.
- Post-operative/post-procedure condition/complication impacting recovery.
- Typically requires higher level of care (that is, intensive monitoring, greater number of caregivers, additional testing, intensive care unit care, extended length of stay).
- Impedes patient cooperation or management of care or both.
- Recent (last 10 years) change in best practice, or in practice guidelines and review of the extent to which these changes have led to concomitant changes in expected resource use.

We refer readers to the FY 2021 IPPS/LTCH PPS final rule for a complete summation of the comments we received for each of the nine guiding principles and our responses to those comments.

In the FY 2022 IPPS/LTCH PPS proposed rule (86 FR 25175 through 25180), as another interval step in our comprehensive review of the severity designations of ICD–10–CM diagnosis codes, we requested public comments on a potential change to the severity level designations for ''unspecified'' ICD–10–CM diagnosis codes that we were considering adopting for FY 2022. Specifically, we noted we were considering changing the severity level designation of ''unspecified'' diagnosis codes to a NonCC where there are other codes available in that code subcategory that further specify the anatomic site. As summarized in the FY 2022 IPPS/LTCH PPS final rule, many commenters expressed concern with the potential severity level designation changes overall and recommended that CMS delay any possible change to the designation of these codes to give hospitals and their physicians time to prepare. After careful consideration of the public comments we received, we maintained the severity level designation of the ''unspecified'' diagnosis codes currently designated as a CC or MCC where there are other codes available in that code subcategory that further specify the anatomic site for

FY 2022. We refer readers to the FY 2022 IPPS/LTCH PPS final rule (86 FR 44916 through 44926) for a complete discussion of our response to public comments regarding the potential severity level designation changes. Instead, for FY 2022, we finalized a new Medicare Code Editor (MCE) code edit for ''unspecified'' codes, effective with discharges on and after April 1, 2022. We stated we believed finalizing this new edit would provide additional time for providers to be educated while not affecting the payment the provider is eligible to receive. We refer the reader to section II.D.14.e. of the preamble of the FY 2022 IPPS/LTCH PPS final rule (86 FR 44940 through 44943) for the complete discussion.

As discussed in the FY 2023 IPPS/LTCH PPS final rule (87 FR 48866), we stated that as the new unspecified edit became effective beginning with discharges on and after April 1, 2022, we believed it was appropriate to not propose to change the designation of any ICD–10–CM diagnosis codes, including the unspecified codes that are subject to the ''Unspecified Code'' edit, as we continue our comprehensive CC/MCC analysis to allow interested parties the time needed to become acclimated to the new edit.

In the FY 2023 IPPS/LTCH proposed rule (87 FR 28177 through 28181), we also requested public comments on how the reporting of diagnosis codes in categories Z55–Z65 might improve our ability to recognize severity of illness, complexity of illness, and/or utilization of resources under the MS–DRGs. We stated we were also interested in receiving feedback on how we might otherwise foster the documentation and reporting of the diagnosis codes describing social and economic circumstances to more accurately reflect each health care encounter and improve the reliability and validity of the coded data.

In the FY 2024 IPPS/LTCH PPS final rule (88 FR 58755 through 58759), based on our analysis of the impact on resource use for the ICD–10–CM Z codes that describe homelessness and after consideration of public comments, we finalized changes to the severity levels for diagnosis codes Z59.00 (Homelessness, unspecified), Z59.01 (Sheltered homelessness), and Z59.02 (Unsheltered homelessness), from NonCC to CC.

In the FY 2025 proposed rule (89 FR 35995), we noted that since the FY 2021 IPPS/LTCH PPS final rule we have continued to solicit feedback regarding the nine guiding principles, as well as other possible ways we can incorporate meaningful indicators of clinical severity. We stated we had encouraged the public to provide a detailed explanation of how applying a suggested concept or principle would ensure that the severity designation appropriately reflects resource use for any diagnosis code when providing feedback or comments. We also noted in the FY 2024 IPPS/LTCH PPS proposed rule (88 FR 26748 through 26750) we illustrated how the nine guiding principles might be applied in evaluating changes to the severity designations of diagnosis codes in our discussion of our proposed changes to the severity level designation for certain diagnosis codes that describe homelessness. After consideration of the ongoing feedback and comments we had received, we proposed to finalize the nine guiding principles. After consideration of the public comments received, and for the reasons discussed, we finalized the nine guiding principles as listed previously in the FY 2025 IPPS/LTCH PPS final rule (89 FR 69076 through 69078). Accordingly, we stated that our evaluations to determine the extent to which the presence of a diagnosis code as a secondary diagnosis results in increased hospital resource use will include a combination of mathematical analysis of claims data as discussed in the FY 2020 IPPS/LTCH PPS proposed rule (84 FR 19235) and the application of the nine guiding principles.

Comment: A commenter stated that they applaud the inclusion of the guiding principles that recognize organ system instability or failure, chronic illness with susceptibility to exacerbations, conditions requiring higher levels of care, and systemic impact. This commenter stated that these principles appropriately capture the resource intensity associated with managing complex infectious diseases. This commenter also urged CMS to expedite the comprehensive CC/MCC analysis, paying particular attention to diagnoses that describe infectious conditions, and recommended that CMS consider additional factors specific to infectious disease management such as antimicrobial resistances, factors related to immunocompromised hosts and the role of antimicrobial stewardship when reviewing these conditions.

Response: We thank the commenter for their support and appreciate their feedback. We continue to welcome feedback regarding the guiding principles, as well as other possible ways we can incorporate meaningful indicators of clinical severity. We will examine these suggestions as we continue the comprehensive CC/MCC analysis and will provide more detail in future rulemaking.

Additionally, in the FY 2025 IPPS/LTCH PPS final rule (89 FR 69079 through 69084), based on our analysis of the impact on resource use for the ICD–10–CM diagnosis codes that describe inadequate housing and housing instability, and after consideration of public comments, we finalized changes to the severity levels for seven diagnosis codes for FY 2025.

As discussed in the FY 2026 IPPS/LTCH PPS proposed rule (90 FR 18064), we did not receive any requests to change the severity level designations of specific ICD–10–CM diagnosis codes. We stated at this time, we believe it is appropriate to continue to formulate future next steps in our comprehensive review of the severity designations of ICD–10–CM diagnosis codes, rather than proposing to change the designation of individual ICD–10–CM diagnosis codes. Therefore, we did not propose any severity designation changes for FY 2026.

Comment: Commenters supported the decision to not propose any severity designation changes for FY 2026. A commenter stated that they appreciate CMS' commitment to refining the MS–DRG system to better reflect hospital resource use.

Response: We appreciate the commenters' support.

Comment: Several commenters stated that they appreciate that CMS finalized changes to the severity level designations for the diagnosis codes in category Z16 (Resistance to antimicrobial drugs) from a NonCC to a CC in the FY 2020 IPPS/LTCH PPS final rule. These commenters stated that they continue to support these designations and encouraged CMS to clarify that all current and future ICD–10–CM diagnosis codes describing antimicrobial resistance will be appropriately designated as CCs.

Other commenters encouraged CMS to examine the ICD–10–CM diagnosis codes that describe longstanding persistent and permanent atrial fibrillation to determine the hospital resource utilization related to addressing these diagnoses and to analyze whether these codes should be considered for severity designation changes. These commenters stated that from a resource perspective, patients with longstanding persistent atrial fibrillation or permanent atrial fibrillation require markedly more intensive management and typically face longer operative times, higher complication rates, prolonged hospital stays, and increased readmission risk.

Response: We appreciate the feedback.

In response to the request that CMS clarify that all future ICD–10–CM diagnosis codes describing antimicrobial resistance will be designated as CCs, as discussed in prior rulemaking and in section II.C.9 of this final rule, consistent with our established process for assigning new diagnosis or new procedure codes to MDCs, MS–DRGs, and the associated attributes (severity level and O.R. status), we examine the MDCs, MS–DRG assignment and severity level designation of the predecessor diagnosis codes to inform our assignments and designations. We review the predecessor code and MS–DRG assignment most closely associated with the new diagnosis or procedure code, and in the absence of claims data, we consider other factors that may be relevant to the MS–DRG assignment, including the severity of illness, treatment difficulty, complexity of service and the resources utilized in the diagnosis and/or treatment of the condition. As we have previously noted, this process does not automatically result in the new diagnosis or procedure code being assigned to the same MS–DRG or to have the same designation as the predecessor code.

As we continue our comprehensive CC/MCC analysis, we may consider proposing changes for other diagnosis codes in the future based on our analysis of the impact on resource use, per our methodology, as previously described, and consideration of the guiding principles consistent with our annual process and will provide more detail in future rulemaking. We have updated the Impact on Resource Use Files on the CMS website so that the public can review the mathematical data for the impact on resource use generated using claims from the FY 2019 through the FY 2024 MedPAR files. These files are posted on the CMS website at *https://www.cms.gov/medicare/payment/prospective-payment-systems/acute-inpatient-pps/ms-drg-classifications-and-software*.

We encourage individuals with comments about the severity level designations of ICD–10–CM diagnosis codes to submit these comments no later than October 20th of each year, via the Medicare Electronic Application Request Information System™ (MEARIS™) at: *https://mearis.cms.gov/public/home*, so that they can be considered for possible inclusion in the annual proposed rule. When submitting requests to change the severity level designation of an ICD–10–CM diagnosis code when reported as a secondary diagnosis, we encourage the public to review the mathematical data for the impact on resource use generated using claims from the FY 2019 through the FY 2024 MedPAR files as well as to provide a detailed explanation of how applying a suggested guiding principle would ensure that the severity designation appropriately reflects resource use for any diagnosis code.

For new diagnosis codes approved for FY 2026, consistent with our annual process for designating a severity level (MCC, CC, or NonCC) for new diagnosis codes, we first review the predecessor code designation, followed by review and consideration of other factors that may be relevant to the severity level designation, including the severity of illness, treatment difficulty, complexity of service and the resources utilized in the diagnosis or treatment of the condition. We note that this process does not automatically result in the new diagnosis code having the same designation as the predecessor code. We refer the reader to section II.C.9 of the preamble of this FY 2026 IPPS/LTCH PPS final rule for the discussion of the finalized changes to the ICD–10–CM and ICD–10–PCS coding systems for FY 2026.

c. Additions and Deletions to the Diagnosis Code Severity Levels for FY 2026

In the FY 2026 IPPS/LTCH PPS proposed rule (90 FR 18065), we stated that the following tables identify the proposed additions and deletions to the diagnosis code MCC and CC severity levels list for FY 2026 and are available on the CMS website at: *https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/AcuteInpatientPPS/index.html*

Table 6I.1—Proposed Additions to the MCC List—FY 2026;

Table 6I.2—Proposed Deletions to the MCC List—FY 2026;

Table 6J.1—Proposed Additions to the CC List—FY 2026; and

Table 6J.2—Proposed Deletions to the CC List—FY 2026.

We note that there was an inadvertent error in the listing of Table 6I.2 in the preamble of the proposed rule as there were no proposed deletions to the MCC list for FY 2026 and Table 6I.2 was not developed in association with the proposed rule.

Comment: Commenters agreed with the proposed additions and deletions to the MCC and CC lists as shown in tables 6I.1, 6J.1, and 6J.2 associated with the proposed rule.

Response: We appreciate the commenters' support.

The following tables associated with this final rule reflect the finalized severity levels under Version 43 of the ICD–10 MS–DRGs for FY 2026 and are available on the CMS website at: *https://www.cms.gov/medicare/payment/prospective-payment-systems/acute-inpatient-pps*; Table 6I.—Complete MCC List—FY 2026; Table 6I.1—Additions to the MCC List—FY 2026; Table 6J.—Complete CC List—FY 2026; Table 6J.1—Additions to the CC List—FY 2026; and Table 6J.2—Deletions to the CC List—FY 2026.

d. CC Exclusions List for FY 2026

In the September 1, 1987 final notice (52 FR 33143) concerning changes to the DRG classification system, we modified the GROUPER logic so that certain diagnoses included on the standard list of CCs would not be considered valid CCs in combination with a particular principal diagnosis. We created the CC Exclusions List for the following reasons: (1) to preclude coding of CCs for closely related conditions; (2) to preclude duplicative or inconsistent coding from being treated as CCs; and (3) to ensure that cases are appropriately classified between the complicated and uncomplicated DRGs in a pair.

In the May 19, 1987 proposed notice (52 FR 18886) and the September 1, 1987 final notice (52 FR 33154), we explained that the excluded secondary diagnoses were established using the following five principles:

- Chronic and acute manifestations of the same condition should not be considered CCs for one another;
- Specific and nonspecific (that is, not otherwise specified (NOS)) diagnosis codes for the same condition should not be considered CCs for one another;
- Codes for the same condition that cannot coexist, such as partial/total, unilateral/bilateral, obstructed/unobstructed, and benign/malignant, should not be considered CCs for one another;
- Codes for the same condition in anatomically proximal sites should not be considered CCs for one another; and
- Closely related conditions should not be considered CCs for one another.

The creation of the CC Exclusions List was a major project involving hundreds of codes. We have continued to review the remaining CCs to identify additional exclusions and to remove diagnoses from the master list that have been shown not to meet the definition of a CC. We refer readers to the FY 2014 IPPS/LTCH PPS final rule (78 FR 50541 through 50544) for detailed information regarding revisions that were made to

the CC and CC Exclusion Lists under the ICD–9–CM MS–DRGs.

The ICD–10 MS–DRGs Version 42.1 CC Exclusion List is included as Appendix C in the ICD–10 MS–DRG Definitions Manual (available on the CMS website at: *https://www.cms.gov/medicare/payment/prospective-payment-systems/acute-inpatient-pps/ms-drg-classifications-and-software*) and includes three lists identified as Part 1, Part 2 and Part 3. Part 1 is the list of all diagnosis codes that are defined as a CC or MCC when reported as a secondary diagnosis. For all diagnosis codes on the list, a link is provided to a collection of diagnosis codes which, when reported as the principal diagnosis, would cause the CC or MCC diagnosis to be considered as a NonCC. Part 2 is the list of diagnosis codes designated as an MCC only for patients discharged alive; otherwise, they are assigned as a NonCC. Part 3 is the list of diagnosis codes that are designated as a CC or MCC and included in the definition of the logic for the listed MS–DRGs. When reported as a secondary diagnosis and grouped to one of the listed MS–DRGs, the diagnosis is excluded from acting as a CC/MCC for severity in DRG assignment (that is, suppression logic).

In the FY 2025 IPPS/LTCH PPS final rule (89 FR 69093), we stated that, because commenters had raised concerns regarding the principal diagnoses listed under Part 1 of Appendix C–CC Exclusions List in Principal Diagnosis Collection Lists 1379 and 1380 that exclude diagnosis codes N18.5 (Chronic kidney disease, stage 5) and N18.6 (End stage renal disease) from acting as a CC or MCC under the CC exclusion logic in accordance with the list of five principles established in 1987, we intended to perform a broad review of the conditions in these lists to determine if any modifications are warranted and to ensure they continue to be clinically appropriate. In the FY 2026 IPPS/LTCH PPS proposed rule (90 FR 18065), we noted that the Principal Diagnosis Collection List numbers may change because of updates that are made to the list annually through rulemaking. Therefore, while under Version 41.1 the principal diagnoses listed in Principal Diagnosis Collection List numbers 1379 and 1380 exclude diagnosis codes N18.5 and N18.6 from acting as a CC or MCC, under Version 42.1, the principal diagnoses listed in Principal Diagnosis Collection List numbers 1330 and 1331 exclude diagnosis codes N18.5 and N18.6 from acting as a CC or MCC. Accordingly, we reviewed the list of principal diagnosis codes listed in Principal Diagnosis Collection List numbers 1330 and 1331 that exclude diagnosis codes N18.5 and N18.6 from acting as a CC or MCC to assess clinical appropriateness.

As discussed in the preamble of the FY 2026 IPPS/LTCH PPS proposed rule, the findings from our review indicated several of the listed conditions, when reported as a principal diagnosis, are not applicable to exclude the designated N18.5 or N18.6 secondary CC/MCC diagnosis code under application of our five established principles finalized in the September 1, 1987 final notice (52 FR 33154) previously discussed. For example, diagnosis codes describing diabetes with other specified complications such as arthropathy, periodontal disease, or a foot ulcer, and diagnosis codes describing endometriosis, are not chronic and acute manifestations of, or closely related conditions to, chronic kidney disease, stage 5 (code N18.5) or end stage renal disease (code N18.6), nor are they describing codes for the same condition that cannot coexist.

As previously described, the Principal Diagnosis Collection List numbers may change because of updates that are made to the list annually through rulemaking. We noted that, under proposed Version 43, the proposed Principal Diagnosis Collection List number to exclude diagnosis codes N18.5 and N18.6 from acting as a CC or MCC is 1335. We therefore proposed to remove the diagnosis codes listed in Table 6P.8a associated with the FY 2026 IPPS/LTCH PPS proposed rule and available via the CMS website at *https://www.cms.gov/medicare/payment/prospective-payment-systems/acute-inpatient-pps* from Principal Diagnosis Collection List number 1335 under proposed Version 43. In the proposed rule (90 FR 18065), we stated that findings from our internal review also indicated that diagnosis code I12.9 (Hypertensive chronic kidney disease with stage 1 through stage 4 chronic kidney disease, or unspecified chronic kidney disease) is currently listed in Principal Diagnosis Collection List number 1331 and excludes diagnosis code N18.6 from acting as an MCC; however, diagnosis code I12.9 is not currently listed in the Principal Diagnosis Collection List number 1330 to exclude diagnosis code N18.5. We stated we believe it is clinically appropriate to add diagnosis code I12.9 to Principal Diagnosis Collection List number 1335 under Version 43 because it would not be expected that a secondary diagnosis of N18.5 would be reported with a principal diagnosis of I12.9. As also discussed in the proposed rule, during our internal review we identified diagnosis code I13.0 (Hypertensive heart and chronic kidney disease with heart failure and stage 1 through stage 4 chronic kidney disease, or unspecified chronic kidney disease) and diagnosis code I13.10 (Hypertensive heart and chronic kidney disease without heart failure, with stage 1 through stage 4 chronic kidney disease, or unspecified chronic kidney disease) that we believe are appropriate to add to Principal Diagnosis Collection List number 1335 to exclude diagnosis codes N18.5 and N18.6 from acting as a CC/MCC when reported because the conditions describe chronic kidney disease, stage 5 and end stage renal disease (ESRD) and it would not be clinically appropriate to have a principal diagnosis describing stage 1 through stage 4 chronic kidney disease reported with chronic kidney disease, stage 5 or ESRD.

In summary, we proposed to add diagnosis code I12.9 to Principal Diagnosis Collection List number 1335 to exclude diagnosis code N18.5 from acting as a CC, proposed to remove the diagnosis codes listed in Table 6P.8a associated with the FY 2026 IPPS/LTCH PPS proposed rule and available via the CMS website at *https://www.cms.gov/medicare/payment/prospective-payment-systems/acute-inpatient-pps* from Principal Diagnosis Collection List number 1335, and proposed to add diagnosis codes I13.0 and I13.10 to Principal Diagnosis Collection List number 1335 to exclude diagnosis codes N18.5 and N18.6 from acting as a CC/MCC.

Comment: Several commenters agreed with our proposals to add diagnosis code I12.9 to Principal Diagnosis Collection List number 1335 to exclude diagnosis code N18.5 from acting as a CC, remove the diagnosis codes listed in Table 6P.8a associated with the FY 2026 IPPS/LTCH PPS proposed rule and available via the CMS website at *https://www.cms.gov/medicare/payment/prospective-payment-systems/acute-inpatient-pps* from Principal Diagnosis Collection List number 1335, and to add diagnosis codes I13.0 and I13.10 to Principal Diagnosis Collection List number 1335 to exclude diagnosis codes N18.5 and N18.6 from acting as a CC/MCC. However, a commenter disagreed with the proposed addition of diagnosis codes I13.0 and I13.10 to principal diagnosis collection list number 1335 to exclude diagnosis codes N18.5 and N18.6 from acting as a CC/MCC. According to the commenter, diagnosis codes I13.0 and I13.10 are combination codes and do not differentiate between a patient that is being admitted for congestive heart failure (CHF) or

chronic kidney disease (CKD). The commenter stated that the exclusion of codes N18.5 and N18.6 eliminates the complexity of these patients and the additional resources in management of their renal function when admitted for cardiogenic related conditions.

Response: We appreciate the commenters' support and feedback. In response to the commenter who disagreed with the proposal to exclude diagnosis codes N18.5 and N18.6 from acting as a CC/MCC when diagnosis code I13.0 or I13.10 is assigned as the principal diagnosis, we note that, as discussed in the FY 2026 IPPS/LTCH PPS proposed rule, the conditions described by diagnosis codes N18.5 and N18.6 describe chronic kidney disease, stage 5 and end stage renal disease (ESRD), respectively, and it would not be clinically appropriate to have a principal diagnosis describing stage 1 through stage 4 chronic kidney disease reported with chronic kidney disease, stage 5 or ESRD. We also note that in the ICD–10–CM Tabular List of Diseases, there are instructional notes at diagnosis codes I13.0 and I13.10 that specifically direct the user to ''Use additional code to identify the stage of chronic kidney disease (N18.1–N18.4, N18.9)''. The instructional note does not list diagnosis codes N18.5 or N18.6 because they are not clinically applicable, as previously described. There is also another instructional note in the ICD–10–CM Tabular List of Diseases at diagnosis code I13.0 that specifically directs the user to ''Use additional code to identify the type of heart failure (I50.-)'' because diagnosis code I13.0 describes ''with heart failure'' (while diagnosis code I13.10 describes ''without heart failure''). With respect to the commenter's statement that the combination codes (I13.0 and I13.10) do not differentiate between a patient that is being admitted for CHF or CKD, we note that because these codes are classified as combination codes, they include both a CHF and CKD component. Therefore, the appropriate combination code (I13.0 or I13.10) is assigned on a claim to accurately reflect the conditions documented, and any additional codes would be assigned based on the Tabular instructions.

After consideration of the public comments we received, we are finalizing our proposals to add diagnosis code I12.9 to Principal Diagnosis Collection List number 1335 to exclude diagnosis code N18.5 from acting as a CC, remove the diagnosis codes listed in Table 6P.8a associated with this FY 2026 IPPS/LTCH PPS final rule and available via the CMS website at *https://www.cms.gov/medicare/payment/prospective-payment-systems/acute-inpatient-pps* from Principal Diagnosis Collection List number 1335, and to add diagnosis codes I13.0 and I13.10 to Principal Diagnosis Collection List number 1335 to exclude diagnosis codes N18.5 and N18.6 from acting as a CC/MCC, effective October 1, 2025 for FY 2026.

We intend to continue this type of internal review to ensure all the other Principal Diagnosis Collection lists reflect the appropriate codes in connection with the CC/MCC secondary diagnosis code that is excluded from acting as a CC/MCC. Any proposed changes to the lists will be discussed in future rulemaking. To inform future rulemaking, feedback and other suggestions may be submitted by October 20, 2025, and directed to MEARIS™ at: *https://mearis.cms.gov/public/home*.

As discussed in the proposed rule (90 FR 18066 through 18067), we also performed an internal review of the diagnoses listed in Appendix C—Part 2: Codes That are Major CC Only if Patient Discharged Alive. The diagnoses listed in Part 2 of Appendix C are assigned as an MCC only for patients discharged alive, otherwise the codes are assigned as a NonCC. The diagnoses listed in Part 2 in Version 42.1 are shown in the following table.

ICD-10-CM Code	Description
I46.2	Cardiac arrest due to underlying cardiac condition
I46.8	Cardiac arrest due to other underlying condition
I46.9	Cardiac arrest, cause unspecified
I49.01	Ventricular fibrillation
R09.2	Respiratory arrest
R57.0	Cardiogenic shock
R57.1	Hypovolemic shock
R57.8	Other shock

In developing Appendix C—Part 2: Codes That are Major CC Only if Patient Discharged Alive (72 FR 47161 through 47168), the claims data were evaluated to determine if there was a difference in resource use between cases in which the patient was discharged alive or died during the hospital stay. For most secondary diagnoses, the charges were similar for the two groups. However, there were a few diagnoses where the difference in charges and clinical considerations supported a different CC designation for patients who died before discharge. For these diagnoses, the patients who were discharged alive required significantly more hospital resources than the patients who died. Therefore, when reported as a secondary diagnosis, each of the diagnoses is designated as an MCC in cases where the patient is discharged alive and as a NonCC in cases where the patient died.

As discussed in the preamble of the FY 2026 IPPS/LTCH PPS proposed rule, we analyzed claims data from the September 2024 update of the FY 2024 MedPAR file for the diagnoses currently listed in Appendix C—Part 2. Our findings are reflected in the following table:

ICD-10-CM Code	Description	Patient Discharged Alive (Without Discharge Status 20)			Patient Expired (With Discharge Status 20)		
		Number of Cases	Average LOS	Average Cost	Number of Cases	Average LOS	Average Cost
I46.2	Cardiac arrest due to underlying cardiac condition	8,241	11.6	$61,108	5,766	5.3	$33,173
I46.8	Cardiac arrest due to other underlying condition	3,884	15.6	$62,505	6,133	5.8	$25,979
I46.9	Cardiac arrest, cause unspecified	13,121	13.3	$59,732	28,437	5.2	$24,933
I49.01	Ventricular fibrillation	10,705	9.9	$52,118	6,788	4.6	$28,949
R09.2	Respiratory arrest	367	8.7	$33,536	375	5.5	$17,280
R57.0	Cardiogenic shock	46,537	12.5	$58,432	23,335	6.8	$39,457
R57.1	Hypovolemic shock	32,614	10.8	$39,051	6,476	8.3	$38,697
R57.8	Other shock	37,728	12.4	$50,374	11,570	8.4	$43,215

As shown in the table, the data reflect that most of the conditions currently listed in Appendix C—Part 2, utilize hospital resources as expected, with the patients who were discharged alive (without discharge status 20) requiring significantly more hospital resources than the patients who expired (with discharge status 20), as demonstrated by the longer lengths of stay and higher average costs of these cases. However, we noted in the proposed rule that the resource utilization for cases reporting R57.1 (Hypovolemic shock) as a secondary diagnosis appear to be comparable whether the patient was discharged alive or the patient expired. As reflected in the table, the claims data from the September 2024 update of the FY 2024 MedPAR file reflect that code R57.1 was reported as a secondary diagnosis in 32,614 cases where the patient was discharged alive. These cases had average costs of $39,051 and an average length of stay of 10.8 days. In the 6,476 cases where R57.1 was reported as a secondary diagnosis and the patient expired, the average costs were slightly lower ($38,697 versus $39,051) and the average length of stay was slightly shorter (8.3 days versus 10.8 days). We reviewed this issue and noted clinically, the recommended treatment for hypovolemic shock is immediate intervention with fluid resuscitation with intravenous (IV) fluids, blood transfusions, and vasoactive drugs. Hypovolemic shock generally has a lower mortality rate and responds to timely treatment. As the claims data no longer reflect that patients reporting hypovolemic shock as secondary diagnosis that are discharged alive require significantly more hospital resources than the patients who expire, we proposed to remove code R57.1 from the list found in Appendix C—Part 2: Codes That are Major CC Only if Patient Discharged Alive. We noted that under this proposal, when reported as a secondary diagnosis, R57.1 (Hypovolemic shock) will be assigned as an MCC when the patient is discharged alive or if the patient expires.

Comment: Commenters expressed support for our proposal to remove code R57.1 from the list found in Appendix C—Part 2: Codes That are Major CC Only if Patient Discharged Alive.

Response: We appreciate the commenters' support.

After consideration of the public comments we received, we are finalizing our proposal to remove code R57.1 (Hypovolemic shock) from the list found in Appendix C—Part 2: Codes That are Major CC Only if Patient Discharged Alive, without modification, effective October 1, 2025. Under this finalization, when reported as a secondary diagnosis, R57.1 will be assigned as an MCC when the patient is discharged alive or if the patient expires.

Based on our review, we considered if it was appropriate to add other diagnosis codes describing shock to Appendix C—Part 2. Specifically, we considered code T79.4XXA (Traumatic shock, initial encounter). ICD–10–CM diagnosis code T79.4XXA is currently designated as an MCC when reported as secondary diagnoses. Traumatic shock represents a unique pathological condition that begins with multiple, usually blunt, trauma and may conclude with acute respiratory distress syndrome, coagulopathy, sepsis, multiple organ dysfunction syndrome and death.

As discussed in the proposed rule, we analyzed claims data from the September 2024 update of the FY 2024 MedPAR file for cases reporting T79.4XXA as a secondary diagnosis and our findings are reflected in the following table:

ICD-10-CM Code	Description	Patient Discharged Alive (Without Discharge Status 20)			Patient Expired (With Discharge Status 20)		
		Number of Cases	Average LOS	Average Cost	Number of Cases	Average LOS	Average Cost
T79.4XXA	Traumatic shock, initial encounter	1,187	16.1	$79,218	553	6.5	$48,880

As reflected in the table, the claims data from the September 2024 update of the FY 2024 MedPAR file indicate that T79.4XXA was reported as a secondary diagnosis in 1,187 cases where the patient was discharged alive. These cases had average costs of $79,218 and an average length of stay of 16.1 days. In the 553 cases where T79.4XXA was reported as a secondary diagnosis and the patient expired, the average costs were considerably lower ($48,880 versus $79,218) and the average length of stay was much shorter (6.5 days versus 16.1 days).

As the data reflect that cases reporting traumatic shock, initial encounter, as a secondary diagnosis for patients that are discharged alive require significantly more hospital resources than the patients who expire, we proposed to add code T79.4XXA to the list found in Appendix C—Part 2: Codes That are Major CC Only if Patient Discharged Alive. We noted that under this proposal, when reported as a secondary diagnosis, T79.4XXA (Traumatic shock, initial encounter) would be assigned as an MCC only when the patient is discharged alive.

Comment: Commenters expressed support for our proposal to add code T79.4XXA to the list found in Appendix C—Part 2: Codes That are Major CC Only if Patient Discharged Alive.

Response: We appreciate the commenters' support.

After consideration of the public comments we received, we are finalizing our proposal to add code T79.4XXA (Traumatic shock, initial encounter) to the list found in Appendix C—Part 2: Codes That are Major CC Only if Patient Discharged Alive, without modification, effective October 1, 2025. Under this finalization, when reported as a secondary diagnosis, T79.4XXA would be assigned as an MCC only when the patient is discharged alive.

In summary, the proposals and related findings discussed in connection with Appendix C and finalized in this section of the preamble of this final rule are reflected in the Version 43 ICD–10 MS–DRG Definitions Manual, which is available in association with this final rule at: *https://www.cms.gov/medicare/payment/prospective-payment-systems/acute-inpatient-pps/ms-drg-classifications-and-software*.

In the FY 2026 IPPS/LTCH PPS proposed rule (90 FR 18067), we proposed additional changes to the ICD–10 MS–DRGs Version 43 CC Exclusion List based on the diagnosis code updates as discussed in section II.C.13. of the preamble of the proposed rule and set forth in Tables 6G.1, 6G.2, 6H.1, and 6H.2 associated with the proposed rule and available on the CMS website at: *https://www.cms.gov/medicare/payment/prospective-payment-systems/acute-inpatient-pps*.

We did not receive any public comments opposing the proposed CC Exclusions List.

The finalized CC Exclusions List as displayed in Tables 6G.1, 6G.2, 6H.1, 6H.2, and 6K, associated with this final rule reflect the additions, deletions, and complete list of CC exclusions under Version 43 of the ICD–10 MS–DRGs. We have developed Table 6G.1.—Secondary Diagnosis Order Additions to the CC Exclusions List—FY 2026; Table 6G.2.—Principal Diagnosis Order Additions to the CC Exclusions List—FY 2026; Table 6H.1.—Secondary Diagnosis Order Deletions to the CC Exclusions List—FY 2026; and Table 6H.2.—Principal Diagnosis Order Deletions to the CC Exclusions List—FY 2026; and Table 6K. Complete List of CC Exclusions—FY 2026. Tables 6G.1., 6G.2., 6H.1., 6H.2., and 6K associated with this FY 2026 IPPS/LTCH PPS final rule are available on the CMS website at: *https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/AcuteInpatientPPS/index.html*.

For Table 6G.1, each secondary diagnosis code finalized for addition to the CC Exclusion List is shown with an asterisk and the principal diagnoses that exclude the secondary diagnosis code are provided in the indented column immediately following it. For Table 6G.2, each of the principal diagnosis codes for which there is a CC exclusion is shown with an asterisk and the conditions finalized for addition to the CC Exclusion List that will not count as a CC are provided in an indented column immediately following the affected principal diagnosis. For Table 6H.1, each secondary diagnosis code finalized for deletion from the CC Exclusion List is shown with an asterisk followed by the principal diagnosis codes that exclude it. For Table 6H.2, each of the principal diagnosis codes is shown with an asterisk and the finalized deletions to the CC Exclusions List are provided in an indented column immediately following the affected principal diagnosis. Table 6K contains a list of all of the codes that are defined as either a CC or MCC when assigned as a secondary diagnosis. Each CC or MCC secondary diagnosis code is assigned to a principal diagnosis number that reflects a collection of diagnosis codes which, when reported as the principal diagnosis, will cause the CC or MCC secondary diagnosis to be considered as only a non-CC secondary diagnosis.

9. Changes to the ICD–10–CM and ICD–10–PCS Coding Systems

To identify new, revised, and deleted diagnosis and procedure codes, for FY 2026, we have developed Table 6A.—New Diagnosis Codes, Table 6B.—New Procedure Codes, Table 6C.—Invalid Diagnosis Codes, Table 6D.—Invalid Procedure Codes, Table 6E.—Revised Diagnosis Code Titles, and Table 6F.—Revised Procedure Code Titles for this FY 2026 IPPS/LTCH PPS final rule.

These tables are not published in the Addendum to the proposed rule or final rule, but are available on the CMS website at: *https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/AcuteInpatientPPS/index.html* as described in section VI. of the Addendum to this FY 2026 IPPS/LTCH PPS final rule. As discussed in section II.C.11. of the preamble of this FY 2026 IPPS/LTCH PPS final rule, the code titles are adopted as part of the ICD–10 Coordination and Maintenance Committee meeting process. Therefore, although we publish the code titles in the IPPS proposed and final rules, they are not subject to comment in the proposed or final rules.

In the FY 2026 IPPS/LTCH PPS proposed rule (90 FR 18067 through 18068), we proposed the MDC and MS–DRG assignments for the new diagnosis codes and procedure codes as set forth in Table 6A.—New Diagnosis Codes and Table 6B.—New Procedure Codes. We also stated that the proposed severity level designations for the new diagnosis codes are set forth in Table 6A. and the proposed O.R. status for the new procedure codes are set forth in Table 6B. Consistent with our established process, we examined the MS–DRG assignment and the attributes (severity level and O.R. status) of the predecessor diagnosis or procedure code, as applicable, to inform our proposed assignments and designations.

Specifically, we reviewed the predecessor code and MS–DRG assignment most closely associated with the new diagnosis or procedure code, and in the absence of claims data, we considered other factors that may be relevant to the MS–DRG assignment, including the severity of illness, treatment difficulty, complexity of service and the resources utilized in the diagnosis and/or treatment of the condition. We noted that this process does not automatically result in the new diagnosis or procedure code being proposed for assignment to the same MS–DRG or to have the same designation as the predecessor code.

In this FY 2026 IPPS/LTCH PPS final rule, we present a summation of the comments we received in response to the proposed assignments, our responses to those comments, and our finalized policies.

Comment: Several commenters supported the proposed MDC and MS–DRG assignments for the new diagnosis codes and procedure codes as set forth in Table 6A.—New Diagnosis Codes and Table 6B.—New Procedure Codes. A commenter expressed appreciation for the new diagnosis codes finalized that describe ''Fontan physiology'' (I27.840, Fontan-associated liver disease [FALD]; I27.841, Fontan-associated lymphatic dysfunction; I27.848, Other Fontan-associated condition; and I27.849, Fontan related circulation, unspecified) and stated they are needed. The commenter also stated they were thankful for the work the Committee and the submitters do to keep the code set current and accurate. Another commenter expressed strong support for the new diagnosis codes finalized related to pyrophosphate metabolism (E83.82, ENPP1 deficiency causing generalized arterial calcification of infancy; E83.822, ENPP1 deficiency causing autosomal recessive hypophosphatemic rickets type 2; E83.823, ABCC6 deficiency causing generalized arterial calcification of infancy; and E83.824, ABCC6 deficiency causing pseudoxanthoma elasticum) and stated providers and medical coders

will now be better equipped to more specifically document and report, which will be very useful for tracking patients diagnosed with these rare conditions and help to improve patient outcomes.

Response: We appreciate the commenters' support and feedback.

Comment: A commenter (the manufacturer) requested that CMS assign procedure code X2H13XB (Insertion of temporary phrenic nerve/diaphragm stimulation electrodes into superior vena cava, percutaneous approach, new technology group 11) that can be reported to describe use of the AeroPace® System, to MS–DRG 003 (ECMO or Tracheostomy with MV >96 Hours or Principal Diagnosis Except Face, Mouth and Neck with Major O.R. Procedures), MS–DRG 004 (Tracheostomy with MV >96 Hours or Principal Diagnosis Except Face, Mouth and Neck without Major O.R. Procedures), MS–DRG 207 (Respiratory System Diagnosis with Ventilator Support >96 Hours), and MS–DRG 870 (Septicemia or Severe Sepsis with MV >96 Hours). The commenter stated that based on the predecessor code, CMS assigned this new procedure code to MS–DRG 264 (Other Circulatory System O.R. Procedures) under MDC 05 (Diseases and Disorders of the Circulatory System) and to MS–DRGs 981, 982, and 983 (Extensive O.R. Procedures Unrelated to Principal Diagnosis with MCC, with CC, and without CC/MCC, respectively) as reflected in Table 6B.—New Procedure Codes. The commenter also stated that it understands these are preliminary MS–DRG assignments and do not limit the MS–DRGs to which a case may group.

According to the commenter, because the Food and Drug Administration (FDA) indication for use of the technology is in patients ages 18 years or older on mechanical ventilation > 96 hours and who have not weaned, procedure code X2H13XB will be reported on claims that also report procedure code 5A1955Z (Respiratory ventilation, greater than 96 consecutive hours). The commenter stated that the data described in the new technology add-on payment application demonstrate that over 60 percent of beneficiaries who have received greater than 96 hours of mechanical ventilation are assigned to MS–DRGs 003, 004, 207, and 870.

Response: We thank the commenter for their feedback. We note that procedure code X2H13XB may be reported to describe the use of the AeroPace® System and was finalized following the September 10–11, 2024 ICD–10 Coordination and Maintenance Committee meeting. The materials for the discussion related to this topic are located on the CMS website at: *https://www.cms.gov/medicare/coding-billing/icd-10-codes/icd-10-coordination-maintenance-committee-materials*.

Under our established process, we reviewed the predecessor code and MS–DRG assignment most closely associated with the new procedure code. We note that because the procedure code that identifies use of the AeroPace® System is describing temporary transvenous diaphragm activation via stimulation of the phrenic nerve(s), the predecessor code is 02HV3YZ (Insertion of other device into superior vena cava, percutaneous approach), which is designated as an O.R. procedure and assigned to MS–DRG 264 under MDC 05.

The logic for case assignment to Pre-MDC MS–DRG 003 (ECMO or Tracheostomy with MV >96 Hours or Principal Diagnosis Except Face, Mouth and Neck with Major O.R. Procedures) requires that either a procedure code describing extracorporeal membrane oxygenation (ECMO) or a procedure code describing a tracheostomy procedure with procedure code 5A1955Z is reported with any principal diagnosis that is not assigned to MS–DRGs 011, 012, or 013 (Tracheostomy for Face, Mouth and Neck Diagnoses or Laryngectomy with MCC, with CC, and without CC/MCC, respectively) and with a procedure code that is designated as a major operating room (O.R.) procedure. Accordingly, the appropriate MS–DRG assignment to Pre-MDC MS–DRG 003 or to Pre-MDC MS–DRG 004 would be determined when procedure code X2H13XB is reported on a claim with procedure codes that satisfy the logic for case assignment to the respective Pre-MDC MS–DRG.

We note that when procedure code X2H13XB is reported on a claim with procedure code 5A1955Z and a principal diagnosis from MDC 04 (Diseases and Disorders of the Respiratory System), the MS–DRG assignment will result in MS–DRG 207 (Respiratory System Diagnosis with Ventilator Support >96 Hours). Specifically, the logic for case assignment to MS–DRG 207 requires any principal diagnosis from MDC 04 with procedure code 5A1955Z. When procedure code X2H13XB is reported on a claim with procedure code 5A1955Z and a principal diagnosis describing septicemia, the MS–DRG assignment will result in MS–DRG 870 (Septicemia or Severe Sepsis with MV >96 Hours). In those scenarios, it is the respiratory ventilation procedure code and the principal diagnosis that will determine the MS–DRG assignment. We refer the reader to the ICD–10 MS–DRG Definitions Manual, Version 43 available in association with this final rule on the CMS website at: *https://www.cms.gov/medicare/payment/prospective-payment-systems/acute-inpatient-pps/ms-drg-classifications-and-software* for complete documentation of the GROUPER logic.

Comment: Commenters expressed support for the seven new diagnosis codes describing various types of hyperoxaluria and the proposed CC severity level designation for three of the new codes as reflected in Table 6A.—New Diagnosis Codes that was made publicly available in association with the proposed rule. However, the commenters stated that the remaining four new codes were not proposed to be designated as CCs and recommended that CMS reconsider the proposed designations. A commenter stated that each hyperoxaluria type involves the excessive excretion of oxalate in urine that can lead to kidney stones and therefore, all seven codes should be considered for a CC designation.

Response: We appreciate the commenters' feedback. The seven new diagnosis codes describing various types of hyperoxaluria and their proposed severity level designation are shown in the following table:

ICD-10-CM Diagnosis Code	Description	Proposed Severity Level
E72.530	Primary hyperoxaluria, type 1	CC
E72.538	Other specified primary hyperoxaluria	CC
E72.539	Primary hyperoxaluria, unspecified	CC
E72.540	Dietary hyperoxaluria	NonCC
E72.541	Enteric hyperoxaluria	NonCC
E72.548	Other secondary hyperoxaluria	NonCC
E72.549	Secondary hyperoxaluria, unspecified	NonCC

Consistent with our established process, we identified diagnosis code E72.53 (Primary hyperoxaluria) which is designated as a CC, as the predecessor code for the three diagnosis codes describing a specified type of primary hyperoxaluria (E72.530, E72.538, and E72.539). We identified diagnosis code R82.992 (Hyperoxaluria) which is designated as a NonCC, as the predecessor code for the four diagnosis codes proposed to be designated as NonCC (E72.540, E72.541, E72.548, and E72.549). We also reviewed the FY 2024 Impact on Resource Use file available via the CMS website at: *https://www.cms.gov/medicare/payment/prospective-payment-systems/acute-inpatient-pps/ms-drg-classifications-and-software* for the predecessor codes and the C1, C2, and C3 counts reflected in the following table. We refer readers to the FY 2008 IPPS/LTCH PPS final rule (72 FR 47159) for a complete discussion of our historical approach to mathematically evaluate the extent to which the presence of an ICD–10–CM code as a secondary diagnosis resulted in increased hospital resource use, and a more detailed explanation of the columns in the table.

ICD-10-CM Code[a]	Description[b]	Total Count[c]	Cnt 1[d]	C1[e]	Cnt 2[f]	C2[g]	Cnt 3[h]	C3[i]
E72.53	Primary hyperoxaluria	92	2	1.19	31	2.90	59	3.30
R82.992	Hyperoxaluria	57	2	1.06	30	2.10	25	1.85

[a] This column is the secondary diagnosis code (SDX).
[b] This column is the title of the SDX.
[c] The total count of discharge claims with the SDX.
[d] Count of discharge claims with the SDX but with no other SDX or with all other SDX a NonCC.
[e] "C1" impact on resource use of the SDX for discharge claims in "Cnt1".
[f] Count of discharge claims with the SDX and with at least one other SDX that is a CC but none that is an MCC.
[g] "C2" impact on resource use of the SDX for discharge claims in "Cnt2".
[h] Count of discharge claims with the SDX and with at least one other SDX that is an MCC
[i] "C3" impact on resource use of the SDX for discharge claims in "Cnt3".

The table shows that for diagnosis code E72.53 the C1 finding is 1.19 and the C2 finding is 2.90, and for diagnosis code R82.992, the C1 finding is 1.06 and the C2 finding is 2.10. A higher value in the C1 (or C2 and C3) field suggests more resource usage is associated with the diagnosis and an increased likelihood that it is more like a CC or MCC than a NonCC. Thus, a value close to 2.0 suggests the condition is more like a CC than a NonCC but not as significant in resource usage as an MCC. A value close to 3.0 suggests the condition is expected to consume resources more similar to an MCC than a CC or NonCC. The data suggest that when diagnosis code E72.53 is reported as a secondary diagnosis the resources involved in caring for a patient diagnosed with primary hyperoxaluria are aligned with a CC and may also consume resources more similar to an MCC. The data suggest that when diagnosis code R82.992 is reported as a secondary diagnosis that the resources involved in caring for a patient diagnosed with hyperoxaluria are more aligned with a NonCC.

Comment: Several commenters indicated their support for the initiative to refine ICD–10 coding for immune complex membranoproliferative glomerulonephritis (IC–MPGN), though they also expressed concerns regarding the finalized new diagnosis codes. Specifically, a commenter stated that historically, IC–MPGN and C3 glomerulonephritis (C3G) (code N00.A, acute nephritic syndrome with C3 glomerulonephritis) were two distinct but related conditions, and based on that understanding, the proposed codes make sense. However, the commenter reported that new evidence has emerged suggesting that IC–MPGN and C3G may actually be a spectrum of the same condition and some patients can present with IC–MPGN initially and a repeat kidney biopsy might show C3G or the opposite (that is, some patients can present with C3G initially and a repeat kidney biopsy might show IC–MPGN). According to the commenter, the true distinction between these two diagnoses is currently uncertain. The commenter suggested that new codes be developed to address circumstances where the distinction between IC–MPGN and C3G cannot be determined. Other commenters stated similar concerns and suggested that reconsideration be given to the implementation of these new codes, including postponement, until treatment pathways for these conditions become more distinctly defined.

Response: We appreciate the commenters' feedback. We note that the Centers for Disease Control and Prevention's National Center for Health Statistics (CDC/NCHS) has lead responsibility for updates and maintenance to the ICD–10–CM diagnosis code set and the code proposal for Immune Complex-mediated Membranoproliferative Glomerulonephritis (IC–MPGN) was discussed at the September 10–11, 2024 ICD–10 Coordination and Maintenance Committee meeting. The materials for the discussion relating to this topic are located on the CDC website at: *https://www.cdc.gov/nchs/icd/icd-10-maintenance/meetings.html.*

The finalized diagnosis codes describing IC–MPGN are:

ICD-10-CM Code	Description
N00.B1	Acute nephritic syndrome with idiopathic immune membranoproliferative glomerulonephritis(IC-MPGN)
N00.B2	Acute nephritic syndrome with secondary immune complex membranoproliferative glomerulonephritis (IC-MPGN)
N04.B1	Nephrotic syndrome with idiopathic immune complex membranoproliferative glomerulonephritis(IC-MPGN)
N04.B2	Nephrotic syndrome with secondary immune complex membranoproliferative glomerulonephritis(IC-MPGN)

We communicated with the CDC/NCHS staff regarding the feedback and concerns expressed by the commenters with respect to the new codes and they indicated that the public comments received in response to the code proposal were all in support.

Comment: A commenter stated that CMS proposed to assign ICD–10–PCS code D228DZZ (Stereotactic other photon radiosurgery of conduction mechanism) to MS–DRG 317 (Concomitant Left Atrial Appendage Closure and Cardiac Ablation). The commenter indicated that the ICD–10 meeting materials describe the code proposal as enabling the capture of procedures such as cardiac stereotactic body radiotherapy (SBRT). Additionally, the commenter stated the meeting materials reflect that cardiac SBRT, also called cardiac radioablation, is a non-invasive procedure to treat ventricular tachycardia (VT) that allows for the precise delivery of high-dose radiation to target tissue to any desired area within the body, including areas that may be inaccessible in traditional catheter ablation while also minimizing radiation exposure to adjacent anatomic structures. Alternatively, the commenter reported that intracardiac catheter ablation procedures are either percutaneous or surgical procedures, often involving femoral access and transeptal puncture to access the left atrium and ablate electrical irregularities causing atrial fibrillation. According to the commenter, because of the non-invasive nature of the cardiac SBRT procedure, its application to the treatment of VT, and the lack of identifiable current clinical concomitant performance with left atrial appendage closure (LAAC) during the same operative session, they stated their belief that the new procedure code (D228DZZ) is inappropriately proposed for assignment to MS–DRG 317. The commenter requested that CMS reconsider the appropriateness of this proposed assignment as well as the potential need for a different assignment when cardiac SBRT is performed without percutaneous LAAC.

Response: We appreciate the commenter's feedback. The proposal for a new procedure code to describe SBRT was discussed at the September 10, 2024 ICD–10 Coordination and Maintenance Committee meeting. We refer the reader to the CMS website at: *https://www.cms.gov/Medicare/Coding/ICD10/C-and-M-Meeting-Materials* for additional detailed information regarding the code request, including a recording of the discussion and the related meeting materials.

Procedure code D228DZZ was approved and finalized following the review and consideration of public comments effective with discharges on and after April 1, 2025, as reflected in Table 6B associated with the proposed rule (and available via the CMS website at: *https://www.cms.gov/medicare/payment/prospective-payment-systems/acute-inpatient-pps*).

Under our established process, we reviewed the predecessor code. The predecessor code for SBRT is 02583ZZ (Destruction of conduction mechanism, percutaneous approach) which is designated as an O.R. procedure and is assigned to MS–DRGs 273 and 274 (Percutaneous and Other Intracardiac Procedures with MCC and without MCC, respectively) in addition to MS–DRG 317. Because SBRT is not considered an intracardiac catheter ablation procedure we did not propose assignment to MS–DRGs 273 and 274.

We acknowledge that SBRT and LAAC procedures may be performed for separate and distinct cardiac conditions (that is, ventricular tachycardia and atrial fibrillation, respectively) as reflected in the September 10, 2024 ICD–10 Coordination and Maintenance Committee meeting materials, however, recent studies also suggest that SBRT or stereotactic arrhythmia radioablation (STAR) may be indicated as a non-invasive treatment option for atrial fibrillation. Although studies are ongoing, we believe the assignment of SBRT to MS–DRG 317 is appropriate at this time. We note that if there is a lack of concomitant LAAC and SBRT procedures performed, there is no significant impact since, as previously stated, the designation of the procedure code that describes SBRT is designated as non-O.R. Specifically, in response to the commenter's request that CMS consider the potential need for a different assignment when cardiac SBRT is performed without percutaneous LAAC, we note that because the designation of procedure code D228DZZ is non-O.R., the reporting of procedure code D228DZZ only impacts the MS–DRG assignment when reported with a LAAC procedure as listed in the logic for case assignment to MS–DRG 317. Accordingly, when procedure code D228DZZ is reported in the absence of an LAAC procedure, the MS–DRG assignment is dependent on the reported principal diagnosis, any secondary diagnoses defined as a CC or MCC, other procedures or services performed, age, sex, and discharge status.

Comment: A commenter stated that the proposed MS–DRG assignment for new diagnosis code E11.A (Type 2 diabetes mellitus without complications in remission) to MDC 10 (Endocrine, Nutritional and Metabolic Diseases and Disorders) in MS–DRGs 637, 638, and 639 (Diabetes with MCC, with CC, and without CC/MCC, respectively) as listed in Table 6A in association with the FY 2026 IPPS/LTCH PPS proposed rule is not entirely consistent with the MS–DRG assignments of the predecessor code, E11.9 (Type 2 diabetes mellitus without complications). According to the commenter, in addition to MDC 10, diagnosis code E11.9 is also currently mapped to Pre-MDC MS–DRG 008 (Simultaneous Pancreas and Kidney Transplant), Pre-MDC MS–DRG 010 (Pancreas Transplant), and Pre-MDC MS–DRG 019 (Simultaneous Pancreas and Kidney Transplant with Hemodialysis), as are diagnosis codes E08.9 (Diabetes mellitus due to underlying condition without complications), E09.9 (Drug or chemical induced diabetes mellitus without complications), E10.9 (Type 1 diabetes mellitus without complications), and E13.9 (Other specified diabetes mellitus without complications. The commenter stated that each of these five diagnoses describes a specific type of diabetes ''without complications''. However, the commenter also indicated that the five diagnosis codes do not appear to be clinically appropriate to be listed in the logic for Pre-MDC MS–DRGs 008, 010, and 019 because these MS–DRGs are defined by transplant procedures that are indicated for the treatment of diabetes ''with complications''. According to the commenter, a transplant procedure that is assigned to any one of the previously listed Pre-

MDC MS–DRGs would not be indicated for a patient diagnosed with diabetes that does not have any associated complications of the diabetes. The commenter suggested that CMS review the clinical appropriateness for assignment of these five diagnosis codes and consider removing them from the logic for Pre-MDC MS–DRGs 008, 010, and 019 and only maintaining assignment to MS–DRGs 637, 638, and 639 under MDC 10 for FY 2026.

Response: We thank the commenter for the feedback. The commenter is correct that the predecessor code E11.9 (as reflected in the FY 2026 ICD–10–CM Conversion Table available via the CMS website at: *https://www.cms.gov/medicare/coding-billing/icd-10-codes*) for new diagnosis code E11.A currently maps to Pre-MDC MS–DRGs 008, 010, and 019, in addition to MDC 10 MS–DRGs 637, 638, and 639. The commenter is also correct that diagnosis codes E08.9, E09.9, E10.9, and E13.9 describe specific types of diabetes ''without complications''. We agree with the commenter that these codes are not clinically appropriate to be listed in the logic for case assignment to Pre-MDC MS–DRGs 008, 010, and 019 because as the commenter noted, these MS–DRGs are defined by transplant procedures that are indicated for the treatment of diabetes ''with complications''. In light of these findings, we examined claims data from the September 2024 update of the FY 2024 MedPAR file for Pre-MDC MS–DRGs 008, 010, and 019 and for cases reporting any one of the five listed diagnoses. Our analysis yielded zero cases reporting any one of the five diagnoses describing a type of diabetes ''without complications''. For clinical appropriateness and because the diagnoses are not indicated for a pancreatic or kidney transplant procedure, we are removing diagnosis codes E08.9, E09.9, E10.9, E11.9, and E13.9 from the logic lists in Pre-MDC MS–DRGs 008, 010, and 019. We are maintaining the assignment of the diagnosis codes to MDC 10 in MS–DRGs 637, 638, and 639 effective October 1, 2025, for FY 2026.

After consideration of the public comments received, we are finalizing the MDC and MS–DRG assignments for the new diagnosis codes and procedure codes as set forth in Table 6A.—New Diagnosis Codes and Table 6B.—New Procedure Codes associated with this final rule. In addition, the finalized severity level designations for the new diagnosis codes are set forth in Table 6A. and the finalized O.R. status for the new procedure codes are set forth in Table 6B associated with this final rule.

In association with this FY 2026 IPPS/LTCH PPS final rule, we are making the following tables available on the CMS website at *https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/AcuteInpatientPPS/index.html*:

- Table 6A.—New Diagnosis Codes—FY 2026;
- Table 6B.—New Procedure Codes—FY 2026;
- Table 6C.—Invalid Diagnosis Codes—FY 2026;
- Table 6D.—Invalid Procedure Codes—FY 2026;
- Table 6E.—Revised Diagnosis Code Titles—FY 2026;
- Table 6F.—Revised Procedure Code Titles—FY 2026;
- Table 6G.1.—Secondary Diagnosis Order Additions to the CC Exclusions List—FY 2026;
- Table 6G.2.—Principal Diagnosis Order Additions to the CC Exclusions List—FY 2026;
- Table 6H.1.—Secondary Diagnosis Order Deletions to the CC Exclusions List—FY 2026;
- Table 6H.2.—Principal Diagnosis Order Deletions to the CC Exclusions List—FY 2026;
- Table 6I.—Complete MCC List—FY 2026;
- Table 6I.1.—Additions to the MCC List—FY 2026;
- Table 6J.—Complete CC List—FY 2026;
- Table 6J.1.—Additions to the CC List—FY 2026;
- Table 6J.2.—Deletions to the CC List—FY 2026; and
- Table 6K.—Complete List of CC Exclusions—FY 2026.

10. Changes to the Surgical Hierarchies

Some inpatient stays entail multiple surgical procedures, each one of which, occurring by itself, could result in assignment of the case to a different MS–DRG within the MDC to which the principal diagnosis is assigned. Therefore, it is necessary to have a decision rule within the GROUPER by which these cases are assigned to a single MS–DRG. The surgical hierarchy, an ordering of surgical classes from most resource-intensive to least resource-intensive, performs that function. Application of this hierarchy ensures that cases involving multiple surgical procedures are assigned to the MS–DRG associated with the most resource-intensive surgical class.

A surgical class can be composed of one or more MS–DRGs. For example, in MDC 11, the surgical class ''kidney transplant'' consists of a single MS–DRG (MS–DRG 652) and the class ''major bladder procedures'' consists of three MS–DRGs (MS–DRGs 653, 654, and 655).

Consequently, in many cases, the surgical hierarchy has an impact on more than one MS–DRG. The methodology for determining the most resource-intensive surgical class involves weighting the average resources for each MS–DRG by frequency to determine the weighted average resources for each surgical class. For example, assume surgical class A includes MS–DRGs 001 and 002 and surgical class B includes MS–DRGs 003, 004, and 005. Assume also that the average costs of MS–DRG 001 are higher than that of MS–DRG 003, but the average costs of MS–DRGs 004 and 005 are higher than the average costs of MS–DRG 002. To determine whether surgical class A should be higher or lower than surgical class B in the surgical hierarchy, we would weigh the average costs of each MS–DRG in the class by frequency (that is, by the number of cases in the MS–DRG) to determine average resource consumption for the surgical class. The surgical classes would then be ordered from the class with the highest average resource utilization to that with the lowest, with the exception of ''other O.R. procedures'' as discussed in this FY 2026 IPPS/LTCH PPS final rule.

This methodology may occasionally result in assignment of a case involving multiple procedures to the lower-weighted MS–DRG (in the highest, most resource-intensive surgical class) of the available alternatives. However, given that the logic underlying the surgical hierarchy provides that the GROUPER search for the procedure in the most resource-intensive surgical class, in cases involving multiple procedures, this result is sometimes unavoidable.

We note that, notwithstanding the foregoing discussion, there are a few instances when a surgical class with a lower average cost is ordered above a surgical class with a higher average cost. For example, the ''other O.R. procedures'' surgical class is uniformly ordered last in the surgical hierarchy of each MDC in which it occurs, regardless of the fact that the average costs for the MS–DRG or MS–DRGs in that surgical class may be higher than those for other surgical classes in the MDC. The ''other O.R. procedures'' class is a group of procedures that are only infrequently related to the diagnoses in the MDC but are still occasionally performed on patients with cases assigned to the MDC with these diagnoses. Therefore, assignment to these surgical classes should only occur if no other surgical class more closely related to the diagnoses in the MDC is appropriate.

A second example occurs when the difference between the average costs for two surgical classes is very small. We have found that small differences generally do not warrant reordering of the hierarchy because, as a result of reassigning cases on the basis of the hierarchy change, the average costs are likely to shift such that the higher-ordered surgical class has lower average costs than the class ordered below it.

In the FY 2025 IPPS/LTCH PPS final rule (89 FR 69100), we stated our intent to consider if the development of evaluation criteria would be useful for future proposed modifications to the surgical hierarchy for MS–DRGs that have meaningful changes to the clinical logic. We are continuing to examine what factors should be taken into account as we consider any future proposals. We welcome feedback and other suggestions to be submitted via MEARIS™ at *https://mearis.cms.gov/public/home* by October 20, 2025.

Based on the changes that we proposed to make for FY 2026, as discussed in section II.C. of the preamble of the FY 2026 IPPS/LTCH PPS proposed rule and this final rule, we proposed to modify the existing surgical hierarchy for FY 2026 as illustrated in the following tables. We noted in the proposed rule that because the current methodology involves weighing the average costs of each MS–DRG in the surgical class by frequency (that is, by the number of cases in the MS–DRG) to determine average resource consumption for the surgical class, that the surgical hierarchy of other MS–DRGs in the MDC may need to be adjusted based on the MS–DRG classification changes that are proposed to ensure that the average weighted cost for each base MS–DRG in each MDC are monotonically decreasing. We further noted that the proposed Version 43 surgical hierarchy as illustrated in the following tables may be subject to further modifications based on the finalized changes to the MS–DRG classifications for FY 2026.

BILLING CODE 4120–01–P

MDC 05 (Diseases and Disorders of the Circulatory System)			
		Current Version 42 Surgical Hierarchy	**Proposed Version 43 Surgical Hierarchy**
Proposed New MS-DRG 209	Complex Aortic Arch Procedures	N/A	1
MS-DRG 212	Concomitant Aortic and Mitral Valve Procedures	2	2
MS-DRG 215	Other Heart Assist System Implant	1	3
MS-DRGs 216 - 218	Cardiac Valve and Other Major Cardiothoracic Procedures with Cardiac Catheterization	3	4
MS-DRGs 231 - 232	Coronary Bypass with PTCA	4	5
MS-DRG 275	Cardiac Defibrillator Implant with Cardiac Catheterization	6	6
MS-DRG 317	Concomitant Left Atrial Appendage Closure and Cardiac Ablation	5	7
MS-DRGs 219 - 221	Cardiac Valve and Other Major Cardiothoracic Procedures without Cardiac Catheterization	3	8
MS-DRGs 233 - 234	Coronary Bypass with Cardiac Catheterization or Open Ablation	4	9
Proposed New MS-DRG 213	Endovascular Abdominal Aorta with Iliac Branch Procedures	N/A	10
MS-DRGs 266 - 267	Endovascular Cardiac Valve Replacement and Supplement Procedures	7	11
MS-DRGs 276 - 277	Cardiac Defibrillator Implant	6	12
MS-DRGs 268 - 269	Aortic and Heart Assist Procedures Except Pulsation Balloon	8	13
MS-DRGs 235 - 236	Coronary Bypass without Cardiac Catheterization	4	14
MS-DRG 245	AICD Generator Procedures	14	15
MS-DRGs 270 - 272	Other Major Cardiovascular Procedures	11	16
MS-DRGs 228 - 229	Other Cardiothoracic Procedures	9	17
MS-DRGs 319 - 320	Other Endovascular Cardiac Valve Procedures	10	18
MS-DRGs 278 - 279	Ultrasound Accelerated and Other Thrombolysis of Peripheral Vascular Structures	20	19
MS-DRGs 323 - 324	Coronary Intravascular Lithotripsy with Intraluminal Device	17	20
MS-DRGs 239 - 241	Amputation for Circulatory System Disorders Except Upper Limb and Toe	12	21
MS-DRG 265	AICD Lead Procedures	15	22
MS-DRGs 273 - 274	Percutaneous and Other Intracardiac Procedures	16	23
MS-DRG 325	Coronary Intravascular Lithotripsy without Intraluminal Device	17	24
MS-DRG 263	Vein Ligation and Stripping	25	25
MS-DRGs 252 - 254	Other Vascular Procedures	21	26
Proposed New MS-DRGs 359 - 360	Percutaneous Coronary Atherectomy with Intraluminal Device	N/A	27
MS-DRGs 242 - 244	Permanent Cardiac Pacemaker Implant	13	28
MS-DRGs 260 - 262	Cardiac Pacemaker Revision Except Device Replacement	24	29
Proposed New MS-DRG 318	Percutaneous Coronary Atherectomy without Intraluminal Device	N/A	30
MS-DRGs 321 - 322	Percutaneous Cardiovascular Procedures with Intraluminal Device	18	31
MS-DRGs 258 - 259	Cardiac Pacemaker Device Replacement	23	32
MS-DRGs 255 - 257	Upper Limb and Toe Amputation for Circulatory System Disorders	22	33
MS-DRGs 250 - 251	Percutaneous Cardiovascular Procedures without Intraluminal Device	19	34
MS-DRG 264	Other Circulatory System O.R. Procedures	26	35

MDC 08 (Diseases and Disorders of the Musculoskeletal System and Connective Tissue)			
		Current Version 42 Surgical Hierarchy	Proposed Version 43 Surgical Hierarchy
MS-DRGs 426 - 428	Multiple Level Combined Anterior and Posterior Spinal Fusion Except Cervical	1	1
MS-DRG 402	Single Level Combined Anterior and Posterior Spinal Fusion Except Cervical	2	5
MS-DRGs 429 - 430	Combined Anterior and Posterior Cervical Spinal Fusion	3	2
MS-DRGs 456 - 458	Spinal Fusion Except Cervical with Spinal Curvature, Malignancy, Infection or Extensive Fusions	4	3
MS-DRGs 447 - 448	Multiple Level Spinal Fusion Except Cervical	5	4
Proposed New MS-DRGs 403 - 404	Hip or Knee Procedures with Principal Diagnosis of Periprosthetic Joint Infection	N/A	6
MS-DRGs 450 - 451	Single Level Spinal Fusion Except Cervical	6	7
MS-DRGs 461 - 462	Bilateral or Multiple Major Joint Procedures of Lower Extremity	7	10
MS-DRGs 463 - 465	Wound Debridement and Skin Graft Except Hand for Musculoskeletal and Connective Tissue Disorders	8	8
MS-DRGs 466 - 468	Revision of Hip or Knee Replacement	9	9
MS-DRGs 521 - 522	Hip Replacement with Principal Diagnosis of Hip Fracture	10	18
MS-DRGs 469 - 470	Major Hip and Knee Joint Replacement or Reattachment of Lower Extremity or Total Ankle Replacement	11	21
MS-DRGs 471 - 473	Cervical Spinal Fusion	12	11
MS-DRGs 474 - 476	Amputation for Musculoskeletal System and Connective Tissue Disorders	13	12
MS-DRGs 477 - 479	Biopsies of Musculoskeletal System and Connective Tissue	14	14
MS-DRGs 480 -482	Hip and Femur Procedures Except Major Joint	15	19
MS-DRG 483	Major Joint or Limb Reattachment Procedures of Upper Extremities	16	13
MS-DRGs 485 - 487	Knee Procedures with Principal Diagnosis of Infection	17	17
MS-DRGs 488 - 489	Knee Procedures without Principal Diagnosis of Infection	17	27
MS-DRGs 518 - 520	Back and Neck Procedures Except Spinal Fusion or Disc Device or Neurostimulator	18	20
MS-DRGs 492 - 494	Lower Extremity and Humerus Procedures Except Hip, Foot and Femur	19	15
MS-DRGs 495 - 497	Local Excision and Removal of Internal Fixation Devices Except Hip and Femur	20	25
MS-DRGs 498 - 499	Local Excision and Removal of Internal Fixation Devices of Hip and Femur	21	16
MS-DRGs 500 - 502	Soft Tissue Procedures	22	24
MS-DRGs 503 - 505	Foot Procedures	23	23
MS-DRG 506	Major Thumb or Joint Procedures	24	29
MS-DRGs 507 - 508	Major Shoulder or Elbow Joint Procedures	25	26
MS-DRGs 510 - 512	Shoulder, Elbow or Forearm Procedures, Except Major Joint Procedures	26	22
MS-DRGs 513 -514	Hand or Wrist Procedures, Except Major Thumb or Joint Procedures	27	28
MS-DRGs 515 - 517	Other Musculoskeletal System and Connective Tissue O.R. Procedures	28	30

Comment: Several commenters expressed support for the proposed changes to the surgical hierarchy for MDC 05 and MDC 08.

Response: We thank the commenters for their support.

Therefore, after consideration of the public comments we received, and based on the changes that we are finalizing for FY 2026, as discussed in section II.C. of the preamble of this final rule, we are finalizing our proposals to modify the existing surgical hierarchy under MDC 05 and MDC 08, effective with the ICD–10 MS–DRGs Version 43, with modification. As discussed in section II.C.4., we are creating MS–DRG 209, MS–DRG 213, MS–DRG 218, and MS–DRGs 359 and 360. As discussed in section II.C.5., we are not finalizing the creation of proposed new MS–DRGs 403 and 404 for FY 2026.

The finalized surgical hierarchy for MDC 05 and MDC 08 is shown in the following tables. These changes are also reflected in Appendix D MS–DRG Surgical Hierarchy by MDC and MS–DRG of the ICD–10 MS–DRG Definitions Manual, Version 43 available on the CMS website at: *https://www.cms.gov/medicare/payment/prospective-payment-systems/acute-inpatient-pps/ms-drg-classifications-and-software*, effective October 1, 2025, for FY 2026.

MDC 05 (Diseases and Disorders of the Circulatory System)		
		Final Version 43 Surgical Hierarchy
MS-DRG 209	Complex Aortic Arch Procedures	1
MS-DRG 212	Concomitant Aortic and Mitral Valve Procedures	2
MS-DRG 215	Other Heart Assist System Implant	3
MS-DRGs 216 - 218	Cardiac Valve and Other Major Cardiothoracic Procedures with Cardiac Catheterization	4
MS-DRGs 231 - 232	Coronary Bypass with PTCA	5
MS-DRG 275	Cardiac Defibrillator Implant with Cardiac Catheterization	6
MS-DRG 317	Concomitant Left Atrial Appendage Closure and Cardiac Ablation	7
MS-DRGs 219 - 221	Cardiac Valve and Other Major Cardiothoracic Procedures without Cardiac Catheterization	8
MS-DRGs 233 - 234	Coronary Bypass with Cardiac Catheterization or Open Ablation	9
MS-DRG 213	Endovascular Abdominal Aorta with Iliac Branch Procedures	10
MS-DRGs 266 - 267	Endovascular Cardiac Valve Replacement and Supplement Procedures	11
MS-DRGs 276 - 277	Cardiac Defibrillator Implant	12
MS-DRGs 268 - 269	Aortic and Heart Assist Procedures Except Pulsation Balloon	13
MS-DRGs 235 - 236	Coronary Bypass without Cardiac Catheterization	14
MS-DRG 245	AICD Generator Procedures	15
MS-DRGs 270 - 272	Other Major Cardiovascular Procedures	16
MS-DRGs 228 - 229	Other Cardiothoracic Procedures	17
MS-DRGs 319 - 320	Other Endovascular Cardiac Valve Procedures	18
MS-DRGs 278 - 279	Ultrasound Accelerated and Other Thrombolysis of Peripheral Vascular Structures	19
MS-DRGs 323 - 324	Coronary Intravascular Lithotripsy with Intraluminal Device	20
MS-DRGs 239 - 241	Amputation for Circulatory System Disorders Except Upper Limb and Toe	21
MS-DRG 265	AICD Lead Procedures	22
MS-DRGs 273 - 274	Percutaneous and Other Intracardiac Procedures	23
MS-DRG 325	Coronary Intravascular Lithotripsy without Intraluminal Device	24
MS-DRG 263	Vein Ligation and Stripping	25
MS-DRGs 252 - 254	Other Vascular Procedures	26
MS-DRGs 359 - 360	Percutaneous Coronary Atherectomy with Intraluminal Device	27
MS-DRGs 242 - 244	Permanent Cardiac Pacemaker Implant	28
MS-DRGs 260 - 262	Cardiac Pacemaker Revision Except Device Replacement	29
MS-DRG 318	Percutaneous Coronary Atherectomy without Intraluminal Device	30
MS-DRGs 321 - 322	Percutaneous Cardiovascular Procedures with Intraluminal Device	31
MS-DRGs 258 - 259	Cardiac Pacemaker Device Replacement	32
MS-DRGs 255 - 257	Upper Limb and Toe Amputation for Circulatory System Disorders	33
MS-DRGs 250 - 251	Percutaneous Cardiovascular Procedures without Intraluminal Device	34
MS-DRG 264	Other Circulatory System O.R. Procedures	35

MDC 08 (Diseases and Disorders of the Musculoskeletal System and Connective Tissue)		
		Final Version 43 Surgical Hierarchy
MS-DRGs 426 - 428	Multiple Level Combined Anterior and Posterior Spinal Fusion Except Cervical	1
MS-DRGs 429 - 430	Combined Anterior and Posterior Cervical Spinal Fusion	2
MS-DRGs 456 - 458	Spinal Fusion Except Cervical with Spinal Curvature, Malignancy, Infection or Extensive Fusions	3
MS-DRGs 447 - 448	Multiple Level Spinal Fusion Except Cervical	4
MS-DRG 402	Single Level Combined Anterior and Posterior Spinal Fusion Except Cervical	5
MS-DRGs 463 - 465	Wound Debridement and Skin Graft Except Hand for Musculoskeletal and Connective Tissue Disorders	6
MS-DRGs 450 - 451	Single Level Spinal Fusion Except Cervical	7
MS-DRGs 466 - 468	Revision of Hip or Knee Replacement	8
MS-DRGs 461 - 462	Bilateral or Multiple Major Joint Procedures of Lower Extremity	9
MS-DRGs 471 - 473	Cervical Spinal Fusion	10
MS-DRGs 474 - 476	Amputation for Musculoskeletal System and Connective Tissue Disorders	11
MS-DRG 483	Major Joint or Limb Reattachment Procedures of Upper Extremities	12
MS-DRGs 477 - 479	Biopsies of Musculoskeletal System and Connective Tissue	13
MS-DRGs 492 - 494	Lower Extremity and Humerus Procedures Except Hip, Foot and Femur	14
MS-DRGs 498 - 499	Local Excision and Removal of Internal Fixation Devices of Hip and Femur	15
MS-DRGs 485 - 487	Knee Procedures with Principal Diagnosis of Infection	16
MS-DRGs 521 - 522	Hip Replacement with Principal Diagnosis of Hip Fracture	17
MS-DRGs 480 -482	Hip and Femur Procedures Except Major Joint	18
MS-DRGs 518 - 520	Back and Neck Procedures Except Spinal Fusion or Disc Device or Neurostimulator	19
MS-DRGs 469 - 470	Major Hip and Knee Joint Replacement or Reattachment of Lower Extremity or Total Ankle Replacement	20
MS-DRGs 510 - 512	Shoulder, Elbow or Forearm Procedures, Except Major Joint Procedures	21
MS-DRGs 503 - 505	Foot Procedures	22
MS-DRGs 500 - 502	Soft Tissue Procedures	23
MS-DRGs 495 - 497	Local Excision and Removal of Internal Fixation Devices Except Hip and Femur	24
MS-DRGs 507 - 508	Major Shoulder or Elbow Joint Procedures	25
MS-DRGs 488 - 489	Knee Procedures without Principal Diagnosis of Infection	26
MS-DRGs 513 -514	Hand or Wrist Procedures, Except Major Thumb or Joint Procedures	27
MS-DRG 506	Major Thumb or Joint Procedures	28
MS-DRGs 515 - 517	Other Musculoskeletal System and Connective Tissue O.R. Procedures	29

BILLING CODE 4120–01–C

For issues pertaining to the surgical hierarchy, as with other MS–DRG related requests, we encourage interested parties to submit comments no later than October 20, 2025, via MEARIS™ at *https://mearis.cms.gov/public/home*, so that they can be considered for possible inclusion in the annual proposed rule. We will consider these public comments for possible proposals in future rulemaking as part of our annual review process.

11. Maintenance of the ICD–10–CM and ICD–10–PCS Coding Systems

In September 1985, the ICD–9–CM Coordination and Maintenance Committee was formed. This is a Federal interdepartmental committee, co-chaired by the Centers for Disease Control and Prevention's (CDC) National Center for Health Statistics (NCHS) and CMS, charged with maintaining and updating the ICD–9–CM system. The final update to ICD–9–CM codes was made on October 1, 2013. Thereafter, the name of the Committee was changed to the ICD–10 Coordination and Maintenance Committee, effective with the March 19–20, 2014 meeting. The ICD–10 Coordination and Maintenance Committee addresses updates to the ICD–10–CM and ICD–10–PCS coding systems. The Committee is jointly responsible for approving coding changes, and developing errata, addenda, and other modifications to the coding systems to reflect newly developed procedures and technologies and newly identified diseases. The Committee is also responsible for promoting the use of Federal and non-Federal educational programs and other communication techniques with a view toward standardizing coding applications and upgrading the quality of the classification system.

The official list of ICD–9–CM diagnosis and procedure codes by fiscal year can be found on the CMS website at: *https://www.cms.gov/medicare/coding-billing/icd-10-codes/icd-9-cm-diagnosis-procedure-codes-abbreviated-and-full-code-titles*.

The official list of ICD–10–CM and ICD–10–PCS codes can be found on the CMS website at: *http://www.cms.gov/Medicare/Coding/ICD10/index.html*.

The NCHS has lead responsibility for the ICD–10–CM and ICD–9–CM diagnosis codes included in the Tabular List and Alphabetic Index for Diseases, while CMS has lead responsibility for the ICD–10–PCS and ICD–9–CM procedure codes included in the Tabular List and Alphabetic Index for Procedures.

The Committee encourages participation in the previously mentioned process by health-related organizations. In this regard, the Committee holds public meetings for discussion of educational issues and proposed coding changes. These meetings provide an opportunity for representatives of recognized organizations in the coding field, such as the American Health Information Management Association (AHIMA), the American Hospital Association (AHA), and various physician specialty groups, as well as individual physicians, health information management professionals, and other members of the public, to contribute ideas on coding matters. Members of the public may submit comments on the proposed procedure code topics to CMS at: *ICDProcedureCodeRequest@cms.hhs.gov* and may submit comments on the proposed diagnosis code topics to the CDC/NCHS at: *nchsicd10cm@cdc.gov*. After considering the opinions expressed during the public meetings and in writing, the Committee formulates recommendations, which then must be approved by the agencies.

The Committee presented proposals for coding changes for implementation in FY 2026 at a public meeting held on September 10–11, 2024 and finalized

the coding changes after consideration of comments received at the meetings and in writing by November 15, 2024.

In lieu of holding its Spring 2025 meeting, the Committee solicited comments on the Spring 2025 ICD–10–PCS procedure code topics. The deadline for submitting comments on these code proposals was April 18, 2025. Any new diagnosis and procedure codes for which there was consensus of public support, and for which complete tabular and indexing changes would be made by June 2025 are included in the October 1, 2025 update to the ICD–10–CM diagnosis and ICD–10–PCS procedure code sets. As discussed in earlier sections of the preamble of this FY 2026 IPPS/LTCH PPS final rule, there are new, revised, and deleted ICD–10–CM diagnosis codes and ICD–10–PCS procedure codes that are captured in Table 6A.—New Diagnosis Codes, Table 6B.—New Procedure Codes, Table 6C.—Invalid Diagnosis Codes, Table 6D.—Invalid Procedure Codes, Table 6E.—Revised Diagnosis Code Titles, and Table 6F.—Revised Procedure Code Titles for this FY 2026 IPPS/LTCH PPS final rule, which are available on the CMS website at: *https://www.cms.gov/medicare/medicare-fee-for-service-payment/acuteinpatientpps.*

The code titles are adopted as part of the ICD–10 Coordination and Maintenance Committee process. Therefore, although we make the code titles available for the IPPS proposed and final rules, they are not subject to comment in the proposed or final rule. Because of the length of these tables, they are not published in the Addendum to the proposed or final rule. Rather, they are available on the CMS website as discussed in section VI. of the Addendum to the proposed rule and this final rule.

Recordings for the virtual meeting discussions of the procedure codes at the Committee's September 10–11, 2024 meeting and the materials for the Spring 2025 ICD–10–PCS procedure code topics can be obtained from the CMS website at: *https://www.cms.gov/Medicare/Coding/ICD10/C-and-M-Meeting-Materials*. The materials for the topics relating to diagnosis codes discussed at the September 10–11, 2024 meeting can be found at: *https://www.cdc.gov/nchs/icd/icd-10-maintenance/meetings.html*. These websites also provide detailed information about the Committee, including information on requesting a new code, participating in a Committee meeting, timeline requirements, submitting comments, and meeting dates.

Comment: A commenter stated that in March 2025, CMS decided to not present the Spring 2025 ICD–10–PCS procedure code topics during a public meeting. Instead, CMS posted the meeting materials on the CMS website and solicited public comments with a 30-day comment period. The commenter requested clarification from CMS regarding its plans for future ICD–10–PCS procedure code topics. Specifically, whether CMS intends to resume its previous practice of hosting a public meeting twice annually, in March and September, or if CMS plans to permanently discontinue these meetings. The commenter stated they do not oppose the current approach; however, appreciate any insight into CMS' intention for future code proposals.

Response: CMS will share any updates to our approach for upcoming ICD–10 Coordination and Maintenance Committee meetings through the CMS website and our Subscriber List. To sign up for ICD–10 Coordination and Maintenance Committee meeting and related updates, members of the public may join the ICD–10 Coordination and Maintenance Committee Meetings Subscriber List. Instructions are located in the Downloads section on the following CMS website: *https://www.cms.gov/medicare/coding-billing/icd-10-codes/icd-10-coordination-maintenance-committee-meetings*.

We encourage commenters to submit questions and comments on coding issues involving diagnosis codes via email to: *nchsicd10cm@cdc.gov*.

Questions and comments concerning the procedure codes should be submitted via email to: *ICDProcedureCodeRequest@cms.hhs.gov*.

As discussed in the proposed rule (90 FR 18071), CMS implemented 50 new procedure codes including cardiac stereotactic body radiotherapy (SBRT), transplantation of the larynx, repositioning of long bones using a ring external fixation device with automated strut adjustment, supplementing the right atrium with heterotopic bioprosthetic valve(s), the administration of emapalumab-Izsg anti-IFNy monoclonal antibody, and the administration of tarlatamab-dlle antineoplastic into the ICD–10–PCS classification effective with discharges on and after April 1, 2025. The procedure codes are as follows:

BILLING CODE 4120–01–P

Procedure Code	Description	O.R.	MDC	MS-DRG
D228DZZ**	Stereotactic other photon radiosurgery of conduction mechanism	N	05	317
0B118D6*	Bypass trachea to esophagus with intraluminal device, via natural or artificial opening endoscopic	N		
0CYS0Z0	Transplantation of larynx, allogeneic, open approach	Y	03 04 21 24	143-145 166-168 907-909 957-959
0CYS0Z1	Transplantation of larynx, syngeneic, open approach	Y	03 04 21 24	143-145 166-168 907-909 957-959
0DX80Z7	Transfer small intestine to vagina, open approach	Y	13 21 24	748 907-909 957-959
0DX84Z7	Transfer small intestine to vagina, percutaneous endoscopic approach	Y	13 21 24	748 907-909 957-959
0TT00Z0	Resection of right kidney, open approach, allogeneic	Y	11 21 24	656-661 907-909 957-959
0TT00Z1	Resection of right kidney, open approach, syngeneic	Y	11 21 24	656-661 907-909 957-959
0TT00Z2	Resection of right kidney, open approach, zooplastic	Y	11 21 24	656-661 907-909 957-959
0TT10Z0	Resection of left kidney, open approach, allogeneic	Y	11 21 24	656-661 907-909 957-959
0TT10Z1	Resection of left kidney, open approach, syngeneic	Y	11 21 24	656-661 907-909 957-959
0TT10Z2	Resection of left kidney, open approach, zooplastic	Y	11 21 24	656-661 907-909 957-959

Procedure Code	Description	O.R.	MDC	MS-DRG
0U7C7DJ*	Dilation of cervix with intraluminal device, temporary, via natural or artificial opening	N		
10D10ZZ	Extraction of products of conception, retained, open approach	Y	14	770 796-798
3E0U0GC*	Introduction of other therapeutic substance into joints, open approach	N		
X2KA30A	Bypass left atrium using conduit through coronary sinus to right atrium, percutaneous approach, new technology group 10	Y	05 21	270-272 907-909
X2U93YA	Supplement right atrium with intraluminal device, heterotopic bioprosthetic valve(s), percutaneous approach, new technology group 10	Y	05	266-267
XNS40GA	Reposition right humeral shaft with ring external fixation device with automated strut adjustment, open approach, new technology group 10	Y	08 21 24	492-494 907-909 957-959
XNS43GA	Reposition right humeral shaft with ring external fixation device with automated strut adjustment, percutaneous approach, new technology group 10	Y	08 21 24	492-494 907-909 957-959
XNS50GA	Reposition left humeral shaft with ring external fixation device with automated strut adjustment, open approach, new technology group 10	Y	08 21 24	492-494 907-909 957-959
XNS53GA	Reposition left humeral shaft with ring external fixation device with automated strut adjustment, percutaneous approach, new technology group 10	Y	08 21 24	492-494 907-909 957-959
XNS60GA	Reposition right radius with ring external fixation device with automated strut adjustment, open approach, new technology group 10	Y	08 21 24	510-512 907-909 957-959
XNS63GA	Reposition right radius with ring external fixation device with automated strut adjustment, percutaneous approach, new technology group 10	Y	08 21 24	510-512 907-909 957-959

*As the procedure codes are designated as non-O.R. procedures, there is no assigned MDC or MS-DRG. The ICD-10 MS-DRG assignment is dependent on the reported principal diagnosis, any secondary diagnoses defined as a complication or comorbidity (CC) or major complication or comorbidity (MCC), procedures or services performed, age, sex, and discharge status.
**Non-O.R. procedure affecting the MS-DRG assignment.

BILLING CODE 4120–01–C

The 50 procedure codes are also reflected in Table 6B.—New Procedure Codes, in association with the proposed rule and available on the CMS website at: *https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/AcuteInpatientPPS*. As with the other new procedure codes and MS-DRG assignments included in Table 6B. in association with the FY 2026 IPPS/LTCH PPS proposed rule, we solicited public comments on the most appropriate MDC, MS–DRG, and operating room status assignments for these codes for FY 2026, as well as any other options for the GROUPER logic. We discuss the comments we received on these assignments in section II.C.9. of this final rule as well as our finalized assignments, as reflected in Table 6B.—New Procedure Codes in association with this final rule.

In the proposed rule, we also noted that Change Request (CR) 13917, Transmittal 12995, titled ''April 2025 Update to the Medicare Severity-Diagnosis Related Group (MS–DRG) Grouper and Medicare Code Editor (MCE) Version 42.1'' was issued on December 12, 2024 (available on the CMS website at: *https://www.cms.gov/medicare/regulations-guidance/transmittals/2024-transmittals/r12995cp*) regarding the release of an updated version of the ICD–10 MS–DRG GROUPER and Medicare Code Editor software, Version 42.1, effective with discharges on and after April 1, 2025, reflecting the new procedure codes. The updated software, along with the updated ICD–10 MS–DRG Version 42.1 Definitions Manual and the Definitions of Medicare Code Edits Version 42.1 manual is available at: *https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/AcuteInpatientPPS/MS-DRG-Classifications-and-Software*.

In the September 7, 2001 final rule implementing the IPPS new technology add-on payments (66 FR 46906), we indicated we would attempt to include proposals for procedure codes that

would describe new technology discussed and approved at the Spring meeting as part of the code revisions effective the following October.

Section 503(a) of the Medicare Modernization Act (Pub. L. 108–173) included a requirement for updating diagnosis and procedure codes twice a year instead of a single update on October 1 of each year. This requirement was included as part of the amendments to the Act relating to recognition of new technology under the IPPS. Section 503(a) of Public Law 108–173 amended section 1886(d)(5)(K) of the Act by adding a clause (vii) which states that the Secretary shall provide for the addition of new diagnosis and procedure codes on April 1 of each year, but the addition of such codes shall not require the Secretary to adjust the payment (or diagnosis-related group classification) until the fiscal year that begins after such date. This requirement improves the recognition of new technologies under the IPPS by providing information on these new technologies at an earlier date. Data will be available 6 months earlier than would be possible with updates occurring only once a year on October 1.

In the FY 2005 IPPS final rule, we implemented section 1886(d)(5)(K)(vii) of the Act, as added by section 503(a) of Public Law 108–173, by developing a mechanism for approving, in time for the April update, diagnosis and procedure code revisions needed to describe new technologies and medical services for purposes of the new technology add-on payment process. We also established the following process for making these determinations. Topics considered during the Fall ICD–10 (previously ICD–9–CM) Coordination and Maintenance Committee meeting were considered for an April 1 update if a strong and convincing case was made by the requestor during the Committee's public meeting. The request needed to identify the reason why a new code was needed in April for purposes of the new technology process. Meeting participants and those reviewing the Committee meeting materials were provided the opportunity to comment on the expedited request. We refer the reader to the FY 2022 IPPS/LTCH PPS final rule (86 FR 44950) for further discussion of the implementation of this prior April 1 update for purposes of the new technology add-on payment process.

However, as discussed in the FY 2022 IPPS/LTCH PPS final rule (86 FR 44950 through 44956), we adopted an April 1 implementation date, in addition to the annual October 1 update, beginning with April 1, 2022. We noted that the intent of this April 1 implementation date is to allow flexibility in the ICD–10 code update process. With this new April 1 update, CMS now uses the same process for consideration of all requests for an April 1 implementation date, including for purposes of the new technology add-on payment process (that is, the prior process for consideration of an April 1 implementation date only if a strong and convincing case was made by the requestor during the meeting no longer applies). We are continuing to use several aspects of our existing established process to implement new codes through the April 1 code update, which includes presenting proposals for April 1 consideration at the September ICD–10 Coordination and Maintenance Committee meeting, requesting public comments, reviewing the public comments, finalizing codes, and announcing the new codes with their assignments consistent with the new GROUPER release information. We note that under our established process, requestors indicate whether they are submitting their code request for consideration for an April 1 implementation date or an October 1 implementation date. The ICD–10 Coordination and Maintenance Committee makes efforts to accommodate the requested implementation date for each request submitted. However, the Committee determines which requests are to be presented for consideration for an April 1 implementation date or an October 1 implementation date. As discussed earlier in this section of the preamble of this FY 2026 IPPS/LTCH PPS final rule, there were code proposals presented for an April 1, 2025 implementation at the September 10–11, 2024 Committee meetings. Following the receipt of public comments, the code proposals were approved and finalized, therefore, there were new codes implemented April 1, 2025.

As discussed in the FY 2026 IPPS/LTCH PPS proposed rule, consistent with the process we outlined for the April 1 implementation date, we announced the new codes in November 2024 and provided the updated code files in December 2024. The NCHS provided the ICD–10–CM Official Guidelines for Coding and Reporting in January 2025. By February 27, 2025, we made available the updated Version 42.1 ICD–10 MS–DRG GROUPER software and related materials on the CMS web page at: *https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/AcuteInpatientPPS/MS-DRG-Classifications-and-Software*.

ICD–9–CM addendum and code title information are published on the CMS website at *https://www.cms.gov/Medicare/Coding/ICD9ProviderDiagnosticCodes/addendum*. ICD–10–CM and ICD–10–PCS addendum and code title information are published on the CMS website at *https://www.cms.gov/Medicare/Coding/ICD10*. CMS also sends electronic files containing all ICD–10–CM and ICD–10–PCS coding changes to its Medicare contractors for use in updating their systems and providing education to providers. Information on ICD–10–CM diagnosis codes, along with the Official ICD–10–CM Coding Guidelines, can be found on the CDC website at *https://www.cdc.gov/nchs/icd/icd-10-cm/files.html*. Additionally, information on new, revised, and deleted ICD–10–CM diagnosis and ICD–10–PCS procedure codes is provided to the AHA for publication in the Coding Clinic for ICD–10. The AHA also distributes coding update information to publishers and software vendors.

In the proposed rule (90 FR 18074), we noted that for FY 2025, there are currently 74,044 diagnosis codes and 78,986 procedure codes. We also noted as displayed in Table 6A.—New Diagnosis Codes and in Table 6B.—New Procedure Codes associated with the FY 2026 IPPS/LTCH PPS proposed rule (and available on the CMS website at *https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/AcuteInpatientPPS*), there are 487 new diagnosis codes and 14 new procedure codes that had been finalized for FY 2026 at the time of the development of the FY 2026 IPPS/LTCH PPS proposed rule and 50 new procedure codes that were effective with discharges on and after April 1, 2025. The code titles are adopted as part of the ICD–10 Coordination and Maintenance Committee process. Thus, although we publish the code titles in the IPPS proposed and final rules, they are not subject to comment in the proposed or final rules.

As discussed in section II.C.13 of the preamble of this final rule, we are making Table 6A.—New Diagnosis Codes, Table 6B.—New Procedure Codes, Table 6C.—Invalid Diagnosis Codes, Table 6D.—Invalid Procedure Codes, Table 6E.—Revised Diagnosis Code Titles and Table 6F.—Revised Procedure Code Titles available on the CMS website at: *https://www.cms.gov/medicare/payment/prospective-payment-systems/acute-inpatient-pps* in association with this final rule. As shown in Table 6B.—New Procedure

Codes, there were procedure codes proposed for the Spring 2025 ICD–10 Coordination and Maintenance Committee Update that were not finalized in time to include in the proposed rule and are identified with an asterisk. We refer the reader to Table 6B.—New Procedure Codes associated with this final rule and available on the CMS website at: *https://www.cms.gov/medicare/payment/prospective-payment-systems/acute-inpatient-pps* for the detailed list of these 142 new procedure codes finalized for FY 2026.

We also note, as reflected in Table 6C.—Invalid Diagnosis Codes and in Table 6D.—Invalid Procedure Codes, there are a total of 28 diagnosis codes and 27 procedure codes that will become invalid effective October 1, 2025. Based on these code updates, effective October 1, 2025, there are a total of 74,719 ICD–10–CM diagnosis codes and 79,115 ICD–10–PCS procedure codes for FY 2026 as shown in the following table.

FY 2025 ICD-10-CM	74,260 total codes	FY 2025 ICD-10-PCS	78,986 total codes
FY 2026 ICD-10-CM	487 additions	FY 2026 ICD-10-PCS	156 additions
FY 2026 ICD-10-CM	28 deletions	FY 2026 ICD-10-PCS	27 deletions
FY 2026 ICD-10-CM	**74,719 total codes**	**FY 2026 ICD-10-PCS**	**79,115 total codes**

As stated previously, the public is provided the opportunity to comment on any requests for new diagnosis or procedure codes discussed during the ICD–10 Coordination and Maintenance Committee meeting. The code titles are adopted as part of the ICD–10 Coordination and Maintenance Committee process. Thus, although we publish the code titles in the IPPS proposed and final rules, they are not subject to comment in the proposed or final rules.

12. Replaced Devices Offered Without Cost or With a Credit

a. Background

In the FY 2008 IPPS final rule with comment period (72 FR 47246 through 47251), we discussed the topic of Medicare payment for devices that are replaced without cost or where credit for a replaced device is furnished to the hospital. We implemented a policy to reduce a hospital's IPPS payment for certain MS–DRGs where the implantation of a device that subsequently failed or was recalled determined the base MS–DRG assignment. At that time, we specified that we will reduce a hospital's IPPS payment for those MS–DRGs where the hospital received a credit for a replaced device equal to 50 percent or more of the cost of the device.

In the FY 2012 IPPS/LTCH PPS final rule (76 FR 51556 through 51557), we clarified this policy to state that the policy applies if the hospital received a credit equal to 50 percent or more of the cost of the replacement device and issued instructions to hospitals accordingly.

b. Changes for FY 2026

As discussed in section II.C.3a. of the preamble of the FY 2026 IPPS/LTCH PPS proposed rule and this final rule, for FY 2026, under MDC 01, we proposed to add procedure code combinations that describe the insertion of multiple or single array generators and the insertion of neurostimulator lead into the brain or cerebral ventricle and the procedure code combinations that describe the insertion of a neurostimulator generator into the skull and the insertion of a neurostimulator lead into the brain to a new ''intracranial neurostimulator implant'' logic list in MS–DRGs 020, 021, and 022. A subset of the procedures currently assigned to MS–DRGs 023 and 024 were proposed for reassignment to MS–DRGs 020, 021, and 022. We also proposed to revise the title of MS–DRG 020 from ''Intracranial Vascular Procedures with Principal Diagnosis Hemorrhage with MCC'' to ''Intracranial Vascular Procedures with Principal Diagnosis Hemorrhage or Intracranial Neurostimulator Implant with MCC''; revise the title of MS–DRG 021 from ''Intracranial Vascular Procedures with Principal Diagnosis Hemorrhage with CC'' to ''Intracranial Vascular Procedures with Principal Diagnosis Hemorrhage or Intracranial Neurostimulator Implant with CC''; revise the title of MS–DRG 022 from ''Intracranial Vascular Procedures with Principal Diagnosis Hemorrhage without CC/MCC'' to ''Intracranial Vascular Procedures with Principal Diagnosis Hemorrhage or Intracranial Neurostimulator Implant without CC/MCC''; revise the title of MS–DRG 023 from ''Craniotomy with Major Device Implant or Acute Complex CNS Principal Diagnosis with MCC or Chemotherapy Implant or Epilepsy with Neurostimulator'' to ''Craniotomy with Acute Complex CNS Principal Diagnosis with MCC or Antineoplastic Implant''; and revise the title of MS–DRG 024 from ''Craniotomy with Major Device Implant or Acute Complex CNS Principal Diagnosis without MCC'' to ''Craniotomy with Acute Complex CNS Principal Diagnosis without MCC''.

Additionally, as discussed in section II.C.4. of the preamble of the FY 2026 IPPS/LTCH PPS proposed rule and this final rule, for FY 2026, under MDC 05, we proposed new MS–DRG 209 (Complex Aortic Arch Procedures) and new MS–DRG 213 (Endovascular Abdominal Aorta with Iliac Branch Procedures). A subset of the procedures currently assigned to MS–DRGs 216, 217, 218, 219, 220, and 221 were proposed for assignment to proposed new MS–DRG 209 and a subset of the procedures currently assigned to MS–DRGs 268, 269, 270, 271, and 272 were proposed for assignment to proposed new MS–DRG 213.

As stated in the FY 2016 IPPS/LTCH PPS proposed rule (80 FR 24409), we generally map new MS–DRGs onto the list when they are formed from procedures previously assigned to MS–DRGs that are already on the list. Currently, MS–DRGs 023, 024, 216, 217, 218, 219, 220, 221, 268, 269, 270, 271, and 272 are on the list of MS–DRGs subject to the policy for payment under the IPPS for replaced devices offered without cost or with a credit as shown in the following table. Therefore, we proposed that if the applicable proposed MS–DRG changes are finalized, we also would add MS–DRGs 020, 021, and 022 and proposed new MS–DRGs 209 and 213 to the list of MS–DRGs subject to the policy for payment under the IPPS for replaced devices offered without cost or with a credit and make conforming changes to the titles of MS–DRGs 023 and 024 in the list of MS–DRGs subject to the policy as reflected in the following table. We also proposed to continue to include the existing MS–DRGs currently subject to the policy.

As discussed in section II.C.3a of the preamble of this FY 2026 IPPS/LTCH PPS final rule, we are not finalizing our proposal to add procedure code combinations that describe the insertion of multiple or single array generators and the insertion of neurostimulator lead into the brain or cerebral ventricle and the procedure code combinations

that describe the insertion of a neurostimulator generator into the skull and the insertion of a neurostimulator lead into the brain to a new ''intracranial neurostimulator implant'' logic list in MS–DRGs 020, 021, and 022. Consequently, a subset of the procedures currently assigned to MS–DRGs 023 and 024 will not be reassigned to MS–DRGs 020, 021, and 022. Therefore, we are not finalizing our proposal to add MS–DRGs 020, 021, and 022 to the list of MS–DRGs subject to the policy for payment under the IPPS for replaced devices offered without cost or with a credit for FY 2026. We are finalizing our proposal to make conforming changes to the titles of MS–DRGs 023 and 024 in the list of MS–DRGs subject to the policy, with modification. As discussed in section II.C.3a, we are finalizing the change of the description of the logic list in MS–DRG 023 from ''Chemotherapy Implant'' to ''Antineoplastic Implant''. Therefore, for consistency, we are finalizing a change to the title of MS–DRG 023 from ''Craniotomy with Major Device Implant or Acute Complex Central Nervous System Principal Diagnosis with MCC or Chemotherapy Implant or Epilepsy with Neurostimulator'' to ''Craniotomy with Major Device Implant or Acute Complex Central Nervous System Principal Diagnosis with MCC or Antineoplastic Implant or Epilepsy with Neurostimulator'' in the list of MS–DRGs subject to the policy. We are not finalizing a change to the title of MS–DRG 024 in the list of MS–DRGs subject to the policy for payment under the IPPS for replaced devices offered without cost or with a credit for FY 2026.

As discussed in section II.C.4 of the preamble of this FY 2026 IPPS/LTCH PPS final rule, we are finalizing our proposals to create new MS–DRGs 209 and 213. We did not receive any public comments opposing our proposal to add proposed new MS–DRGs 209 and 213 to the list of MS–DRGs that will be subject to the replaced devices offered without cost or with a credit policy effective October 1, 2025. Therefore, we are finalizing our proposal to add new MS–DRGs 209 and 213 to the list of MS–DRGs subject to the policy for payment under the IPPS for replaced devices offered without cost or with a credit for FY 2026.

We also note that under the current MS–DRGs version 42.1, MS–DRGs 466, 467, and 468 are on the list of MS–DRGs subject to the policy for payment under the IPPS for replaced devices offered without cost or with a credit as shown in the table that was made available in association with the proposed rule (90 FR 18075 through 18076). As previously discussed in this section of this final rule, we generally map new MS–DRGs onto the list when they are formed from procedures previously assigned to MS–DRGs that are already on the list. As discussed in section II.C.5. of the preamble of the FY 2026 IPPS/LTCH PPS proposed rule and this final rule, for FY 2026, under MDC 08, we proposed to create new MS–DRGs 403 and 404 (Hip or Knee Procedures with Principal Diagnosis of Periprosthetic Joint Infection with MCC and without MCC, respectively). A subset of the procedures currently assigned to MS–DRGs 466, 467, and 468 were proposed for assignment to proposed new MS–DRGs 403 and 404, however, we inadvertently omitted listing MS–DRGs 403 and 404 in the proposed list of MS–DRGs subject to the policy for payment under the IPPS for replaced devices offered without cost or with a credit in the proposed rule. As discussed in section II.C.5. of the preamble of this final rule, we are not finalizing our proposal to create new MS–DRGs 403 and 404 for FY 2026. Therefore, MS–DRGs 403 and 404 are not reflected in the table of MS–DRGs that will be subject to the policy for FY 2026.

We did not receive any public comments opposing our proposal to continue to include the existing MS–DRGs currently subject to the policy. Therefore, for the reasons summarized, we are finalizing the list of MS–DRGs in the following table that will be subject to the replaced devices offered without cost or with a credit policy effective October 1, 2025.

BILLING CODE 4120–01–P

MDC	MS-DRG	MS-DRG TITLE
Pre-MDC	001	Heart Transplant or Implant of Heart Assist System with MCC
Pre-MDC	002	Heart Transplant or Implant of Heart Assist System without MCC

08	468	Revision of Hip or Knee Replacement without CC/MCC
08	469	Major Hip and Knee Joint Replacement or Reattachment of Lower Extremity with MCC or Total Ankle Replacement
08	470	Major Hip and Knee Joint Replacement or Reattachment of Lower Extremity without MCC
08	521	Hip Replacement with Principal Diagnosis of Hip Fracture with MCC
08	522	Hip Replacement with Principal Diagnosis of Hip Fracture without MCC

BILLING CODE 4120–01–C

The final list of MS–DRGs subject to the IPPS policy for replaced devices offered without cost or with a credit will be issued to providers in the form of a Change Request (CR).

13. Out of Scope Public Comments Received

We received public comments on MS–DRG related issues that were outside the scope of the proposals included in the FY 2026 IPPS/LTCH PPS proposed rule.

Because we consider these public comments to be outside the scope of the proposed rule, we are not addressing them in this final rule. As stated in section II.C.1.b. of the preamble of this final rule, we encourage individuals with comments about MS–DRG classifications to submit these comments no later than October 20, 2025, via MEARIS™ at: *https://mearis.cms.gov/public/home*, so that they can be considered for possible inclusion in the annual proposed rule. We will consider these public comments for possible proposals in future rulemaking as part of our annual review process.

D. Recalibration of the FY 2026 MS–DRG Relative Weights

1. Data Sources for Developing the Relative Weights

Consistent with our established policy, in developing the MS–DRG relative weights for FY 2026, we proposed to use two data sources: claims data and cost report data. The claims data source is the MedPAR file, which includes fully coded diagnostic and procedure data for all Medicare inpatient hospital bills. The FY 2024 MedPAR data used in this final rule includes discharges occurring on October 1, 2023, through September 30, 2024, based on bills received by CMS through March 31, 2025, from all hospitals subject to the IPPS and short-term, acute care hospitals in Maryland (which at that time were under a waiver from the IPPS).

The FY 2024 MedPAR file used in calculating the relative weights includes data for approximately 6,899,914 Medicare discharges from IPPS providers. Discharges for Medicare beneficiaries enrolled in a Medicare Advantage managed care plan are excluded from this analysis. These discharges are excluded when the MedPAR ''GHO Paid'' indicator field on the claim record is equal to ''1'' or when the MedPAR DRG payment field, which represents the total payment for the claim, is equal to the MedPAR ''Indirect Medical Education (IME)'' payment field, indicating that the claim was an ''IME only'' claim submitted by a teaching hospital on behalf of a beneficiary enrolled in a Medicare Advantage managed care plan. In addition, the March 2025 update of the FY 2024 MedPAR file complies with version 5010 of the X12 HIPAA Transaction and Code Set Standards, and includes a variable called ''claim type.'' Claim type ''60'' indicates that the claim was an inpatient claim paid as fee-for-service. Claim types ''61,'' ''62,'' ''63,'' and ''64'' relate to encounter claims, Medicare Advantage IME claims, and HMO no-pay claims. Therefore, the calculation of the relative weights for FY 2026 also excludes claims with claim type values not equal to ''60.'' The data exclude CAHs, including hospitals that subsequently became CAHs after the period from which the data were taken. In addition, the data exclude Rural Emergency Hospitals (REHs), including hospitals that subsequently became REHs after the period from which the data were taken. We note that the FY 2026 relative weights are based on the ICD–10–CM diagnosis codes and ICD–10–PCS procedure codes from the FY 2024 MedPAR claims data, grouped through the ICD–10 version of the FY 2026 GROUPER (Version 43).

The second data source used in the cost-based relative weighting methodology is the Medicare cost report data files from the Healthcare Cost Report Information System (HCRIS). In general, we use the HCRIS dataset that is 3 years prior to the IPPS fiscal year. Specifically, for this final rule, we used the March 2025 update of the FY 2023 HCRIS for calculating the FY 2026 cost-based relative weights. Consistent with our historical practice, for this FY 2026 final rule, we are providing the version of the HCRIS from which we calculated these 19 cost-to charge-ratios (CCRs) on the CMS website at *https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/AcuteInpatientPPS*. Click on the link on the left side of the screen titled ''FY 2026 IPPS Final Rule Home Page'' or ''Acute Inpatient Files for Download.''

2. Methodology for Calculation of the Relative Weights

a. General

We calculated the FY 2026 relative weights based on 19 CCRs. The methodology we proposed to use to calculate the FY 2026 MS–DRG cost-based relative weights based on claims data in the FY 2024 MedPAR file and data from the FY 2023 Medicare cost reports is as follows:

- To the extent possible, all the claims were regrouped using the FY 2026 MS–DRG classifications discussed in sections II.B. and II.C. of the preamble of this final rule.
- The transplant cases that were used to establish the relative weights for heart and heart-lung, liver and/or intestinal, and lung transplants (MS–DRGs 001, 002, 005, 006, and 007, respectively) were limited to those Medicare-approved transplant centers that have cases in the FY 2024 MedPAR file. (Medicare coverage for heart, heart-lung, liver and/or intestinal, and lung transplants is limited to those facilities that have received approval from CMS as transplant centers.)
- Organ acquisition costs for kidney, heart, heart-lung, liver, lung, pancreas, and intestinal (or multivisceral organs) transplants continue to be paid on a reasonable cost basis.

Because these acquisition costs are paid separately from the prospective payment rate, it is necessary to subtract the acquisition charges from the total charges on each transplant bill that showed acquisition charges before computing the average cost for each MS–DRG and before eliminating statistical outliers.

Section 108 of the Further Consolidated Appropriations Act, 2020 provides that, for cost reporting periods beginning on or after October 1, 2020, costs related to hematopoietic stem cell acquisition for the purpose of an allogeneic hematopoietic stem cell transplant shall be paid on a reasonable cost basis. We refer the reader to the FY 2021 IPPS/LTCH PPS final rule for further discussion of the reasonable cost basis payment for cost reporting periods beginning on or after October 1, 2020 (85 FR 58835 through 58842). For FY 2022 and subsequent years, we subtract the hematopoietic stem cell acquisition charges from the total charges on each transplant bill that showed hematopoietic stem cell acquisition charges before computing the average cost for each MS–DRG and before eliminating statistical outliers.

- Claims with total charges or total lengths of stay less than or equal to zero were deleted. Claims that had an amount in the total charge field that differed by more than $30.00 from the sum of the routine day charges, intensive care charges, pharmacy charges, implantable devices charges, supplies and equipment charges, therapy services charges, operating room charges, cardiology charges, laboratory charges, radiology charges, other service charges, labor and delivery charges, inhalation therapy charges, emergency room charges, blood and blood products charges, anesthesia charges, cardiac catheterization charges, CT scan charges, and MRI charges were also deleted.
- At least 92.7 percent of the providers in the MedPAR file had charges for 14 of the 19 cost centers. All claims of providers that did not have charges greater than zero for at least 14 of the 19 cost centers were deleted. In other words, a provider must have no more than five blank cost centers. If a provider did not have charges greater than zero in more than five cost centers, the claims for the provider were deleted.
- Statistical outliers were eliminated by removing all cases that were beyond 3.0 standard deviations from the geometric mean of the log distribution of both the total charges per case and the total charges per day for each MS–DRG.
- Effective October 1, 2008, because hospital inpatient claims include a Present on Admission (POA) field for each diagnosis present on the claim, only for purposes of relative weight-setting, the POA indicator field was reset to ''Y'' for ''Yes'' for all claims that otherwise have an ''N'' (No) or a ''U'' (documentation insufficient to determine if the condition was present

at the time of inpatient admission) in the POA field.

Under current payment policy, the presence of specific HAC codes, as indicated by the POA field values, can generate a lower payment for the claim. Specifically, if the particular condition is present on admission (that is, a ''Y'' indicator is associated with the diagnosis on the claim), it is not a HAC, and the hospital is paid for the higher severity (and, therefore, the higher weighted MS–DRG). If the particular condition is not present on admission (that is, an ''N'' indicator is associated with the diagnosis on the claim) and there are no other complicating conditions, the DRG GROUPER assigns the claim to a lower severity (and, therefore, the lower weighted MS–DRG) as a penalty for allowing a Medicare inpatient to contract a HAC. While the POA reporting meets policy goals of encouraging quality care and generates program savings, it presents an issue for the relative weight-setting process. Because cases identified as HACs are likely to be more complex than similar cases that are not identified as HACs, the charges associated with HAC cases are likely to be higher as well. Therefore, if the higher charges of these HAC claims are grouped into lower severity MS–DRGs prior to the relative weight-setting process, the relative weights of these particular MS–DRGs would become artificially inflated, potentially skewing the relative weights. In addition, we want to protect the integrity of the budget neutrality process by ensuring that, in estimating payments, no increase to the standardized amount occurs as a result of lower overall payments in a previous year that stem from using weights and case-mix that are based on lower severity MS–DRG assignments. If this would occur, the anticipated cost savings from the HAC policy would be lost.

To avoid these problems, we reset the POA indicator field to ''Y'' only for relative weight-setting purposes for all claims that otherwise have an ''N'' or a ''U'' in the POA field. This resetting ''forced'' the more costly HAC claims into the higher severity MS–DRGs as appropriate, and the relative weights calculated for each MS–DRG more closely reflect the true costs of those cases.

In addition, in the FY 2013 IPPS/LTCH PPS final rule, for FY 2013 and subsequent fiscal years, we finalized a policy to treat hospitals that participate in the Bundled Payments for Care Improvement (BPCI) initiative the same as prior fiscal years for the IPPS payment modeling and ratesetting process without regard to hospitals' participation within these bundled payment models (77 FR 53341 through 53343). Specifically, because acute care hospitals participating in the BPCI Initiative still receive IPPS payments under section 1886(d) of the Act, we include all applicable data from these subsection (d) hospitals in our IPPS payment modeling and ratesetting calculations as if the hospitals were not participating in those models under the BPCI initiative. We refer readers to the FY 2013 IPPS/LTCH PPS final rule for a complete discussion on our final policy for the treatment of hospitals participating in the BPCI initiative in our ratesetting process. For additional information on the BPCI initiative, we refer readers to the CMS' Center for Medicare and Medicaid Innovation's website at *https://innovation.cms.gov/initiatives/Bundled-Payments/index.html* and to section IV.H.4. of the preamble of the FY 2013 IPPS/LTCH PPS final rule (77 FR 53341 through 53343).

The participation of hospitals in the BPCI initiative concluded on September 30, 2018. The participation of hospitals in the BPCI Advanced model started on October 1, 2018. The BPCI Advanced model, tested under the authority of section 1115A of the Act, is comprised of a single payment and risk track, which bundles payments for multiple services that beneficiaries receive during a Clinical Episode. Acute care hospitals may participate in BPCI Advanced in one of two capacities: as a model Participant or as a downstream Episode Initiator. Regardless of the capacity in which they participate in the BPCI Advanced model, participating acute care hospitals will continue to receive IPPS payments under section 1886(d) of the Act. Acute care hospitals that are Participants also assume financial and quality performance accountability for Clinical Episodes in the form of a reconciliation payment. For additional information on the BPCI Advanced model, we refer readers to the BPCI Advanced web page on the CMS Center for Medicare and Medicaid Innovation's website at *https://innovation.cms.gov/initiatives/bpci-advanced*. Consistent with our policy for FY 2025, and consistent with how we have treated hospitals that participated in the BPCI Initiative, for FY 2026, we continue to believe it is appropriate to include all applicable data from the subsection (d) hospitals participating in the BPCI Advanced model in our IPPS payment modeling and ratesetting calculations because, as noted previously, these hospitals are still receiving IPPS payments under section 1886(d) of the Act. Consistent with the FY 2025 IPPS/LTCH PPS final rule, we also proposed to include all applicable data from subsection (d) hospitals participating in the Comprehensive Care for Joint Replacement (CJR) Model in our IPPS payment modeling and ratesetting calculations.

The charges for each of the 19 cost groups for each claim were standardized to remove the effects of differences in area wage levels, IME and DSH payments, and for hospitals located in Alaska and Hawaii, the applicable cost-of-living adjustment. Because hospital charges include charges for both operating and capital costs, we standardized total charges to remove the effects of differences in geographic adjustment factors, cost-of-living adjustments, and DSH payments under the capital IPPS as well. Charges were then summed by MS–DRG for each of the 19 cost groups so that each MS–DRG had 19 standardized charge totals. Statistical outliers were then removed. These charges were then adjusted to cost by applying the national average CCRs developed from the FY 2023 cost report data.

The 19 cost centers that we used in the relative weight calculation are shown in a supplemental data file, Cost Center HCRIS Lines Supplemental Data File, posted via the internet on the CMS website for this final rule and available at *https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/AcuteInpatientPPS*. The supplemental data file shows the lines on the cost report and the corresponding revenue codes that we used to create the 19 national cost center CCRs. In the proposed rule, we stated that if we receive comments about the groupings in this supplemental data file, we may consider these comments as we finalize our policy. We did not receive any comments on the groupings in this table and are finalizing the groupings as proposed.

Consistent with historical practice, we account for rare situations of non-monotonicity in a base MS–DRG and its severity levels, where the mean cost in the higher severity level is less than the mean cost in the lower severity level, in determining the relative weights for the different severity levels. If there are initially non-monotonic relative weights in the same base DRG and its severity levels, then we combine the cases that group to the specific non-monotonic MS–DRGs for purposes of relative weight calculations. For example, if there are two non-monotonic MS–DRGs, combining the cases across those two

MS–DRGs results in the same relative weight for both MS–DRGs. The relative weight calculated using the combined cases for those severity levels is monotonic, effectively removing any non-monotonicity with the base DRG and its severity levels. In the FY 2026 proposed rule, we stated that this calculation was applied to address non-monotonicity for cases that grouped to the following: MS–DRG 016 and MS–DRG 017, MS–DRG 095 and MS–DRG 096, MS–DRG 504 and MS–DRG 505, MS–DRG 797 and MS–DRG 798. In the supplemental file titled AOR/BOR File, we include statistics for the affected MS–DRGs both separately and with cases combined.

We invited public comments on our proposals related to recalibration of the proposed FY 2026 relative weights and the changes in relative weights from FY 2025.

Comment: A commenter requested that CMS clarify whether MS–DRGs 016 and 017 were non-monotonic.

Response: The proposed rule inadvertently included an incorrect list of MS–DRGs where a calculation was applied to address non-monotonicity. This list should have been *MS–DRG 095 and MS–DRG 096, MS–DRG 217 and MS–DRG 218.*

After consideration of the comments received, we are finalizing our proposals without modifications related to the recalibration of the FY 2026 relative weights. We summarize and respond to comments relating to the methodology for calculating the relative weight for MS–DRG 018 in the next section of this final rule.

b. Relative Weight Calculation for MS–DRG 018

In the FY 2021 IPPS/LTCH PPS final rule (85 FR 58451 through 58453), we created MS–DRG 018 for cases that include procedures describing CAR T-cell therapies. We also finalized our proposal to modify our existing relative weight methodology to ensure that the relative weight for MS–DRG 018 appropriately reflects the relative resources required for providing CAR T-cell therapy outside of a clinical trial, while still accounting for the clinical trial cases in the overall average cost for all MS–DRGs (85 FR 58599 through 58600). Specifically, we stated that clinical trial claims that group to new MS–DRG 018 would not be included when calculating the average cost for MS–DRG 018 that is used to calculate the relative weight for this MS–DRG, so that the relative weight reflects the costs of the CAR T-cell therapy drug. We stated that we identified clinical trial claims as claims that contain ICD–10–CM diagnosis code Z00.6 or contain standardized drug charges of less than $373,000, which was the average sales price of KYMRIAH and YESCARTA, the two CAR T-cell biological products licensed to treat relapsed/refractory large B-cell lymphoma as of the time of the development of the FY 2021 final rule. In addition, we stated that (a) when the CAR T-cell therapy product is purchased in the usual manner, but the case involves a clinical trial of a different product, the claim will be included when calculating the average cost for new MS–DRG 018 to the extent such cases can be identified in the historical data, and (b) when there is expanded access use of immunotherapy, these cases will not be included when calculating the average cost for new MS–DRG 018 to the extent such cases can be identified in the historical data.

We also finalized our proposal to calculate an adjustment to account for the CAR T-cell therapy cases identified as clinical trial cases in calculating the national average standardized cost per case that is used to calculate the relative weights for all MS–DRGs and for purposes of budget neutrality and outlier simulations. We calculate this adjustor by dividing the average cost for cases that we identify as clinical trial cases by the average cost for cases that we identify as non-clinical trial cases, with the additional refinements that (a) when the CAR T-cell therapy product is purchased in the usual manner, but the case involves a clinical trial of a different product, the claim will be included when calculating the average cost for cases not determined to be clinical trial cases to the extent such cases can be identified in the historical data, and (b) when there is expanded access use of immunotherapy, these cases will be included when calculating the average cost for cases determined to be clinical trial cases to the extent such cases can be identified in the historical data. We stated that to the best of our knowledge, there were no claims in the historical data used in the calculation of this adjustment for cases involving a clinical trial of a different product, and to the extent the historical data contain claims for cases involving expanded access use of immunotherapy we believe those claims would have drug charges less than $373,000.

In the FY 2021 IPPS/LTCH PPS final rule (85 FR 58842), we also finalized an adjustment to the payment amount for applicable clinical trial and expanded access use immunotherapy cases that group to MS–DRG 018, and indicated that we would provide instructions for identifying these claims in separate guidance. Following the issuance of the FY 2021 IPPS/LTCH PPS final rule, we issued guidance [11] stating that providers may enter a Billing Note NTE02 ''Expand Acc Use'' on the electronic claim 837I or a remark ''Expand Acc Use'' on a paper claim to notify the MAC of expanded access use of CAR T-cell therapy. In this case, the MAC would add payer-only condition code ''ZB'' so that Pricer will apply the payment adjustment in calculating payment for the case. In cases when the CAR T-cell therapy product is purchased in the usual manner, but the case involves a clinical trial of a different product, the provider may enter a Billing Note NTE02 ''Diff Prod Clin Trial'' on the electronic claim 837I or a remark ''Diff Prod Clin Trial'' on a paper claim. In this case, the MAC would add payer-only condition code ''ZC'' so that the Pricer will not apply the payment adjustment in calculating payment for the case.

In the FY 2022 IPPS/LTCH PPS final rule, we revised MS–DRG 018 to include cases that report the procedure codes for CAR T-cell and non-CAR T-cell therapies and other immunotherapies (86 FR 44798 through 44806). We also finalized our proposal to continue to use the proxy of standardized drug charges of less than $373,000 (86 FR 44965) to identify clinical trial claims. We also finalized use of this same proxy for the FY 2023 IPPS/LTCH PPS final rule (87 FR 48894).

Following the issuance of the FY 2023 IPPS/LTCH PPS final rule, we issued guidance [12] stating where there is expanded access use of immunotherapy, the provider may submit condition code ''90'' on the claim so that Pricer will apply the payment adjustment in calculating payment for the case. We stated that MACs would no longer append Condition Code 'ZB' to inpatient claims reporting Billing Note NTE02 ''Expand Acc Use'' on the electronic claim 837I or a remark ''Expand Acc Use'' on a paper claim, effective for claims for discharges that occur on or after October 1, 2022.

In the FY 2024 IPPS/LTCH PPS final rule, we explained that the MedPAR claims data now includes a field that identifies whether or not the claim includes expanded access use of immunotherapy. We stated that for the FY 2022 MedPAR claims data, this field identifies whether or not the claim includes condition code ZB, and for the FY 2023 MedPAR data and subsequent

[11] *https://www.cms.gov/files/document/r10571cp.pdf.*

[12] *https://www.cms.gov/files/document/r11727cp.pdf.*

years, this field will identify whether or not the claim includes condition code 90. We further noted that the MedPAR files now also include a variable that indicates whether the claim includes the payer-only condition code ''ZC'', which identifies a case involving the clinical trial of a different product where the CAR T-cell, non-CAR T-cell, or other immunotherapy product is purchased in the usual manner.

Accordingly, and as discussed further in the FY 2024 IPPS/LTCH PPS final rule, we finalized two modifications to our methodology for identifying clinical trial claims and expanded access use claims in MS–DRG 018 (88 FR 58791). First, we finalized to exclude claims with the presence of condition code ''90'' (or, for FY 2024 ratesetting, which was based on the FY 2022 MedPAR data, the presence of condition code ''ZB'') and claims that contain ICD–10–CM diagnosis code Z00.6 without payer-only code ''ZC'' to MS–DRG 018 when calculating the average cost for MS–DRG 018. Second, we finalized to no longer use the proxy of standardized drug charges of less than $373,000 to identify clinical trial claims and expanded access use cases when calculating the average cost for MS–DRG 018. Accordingly, we finalized that in calculating the relative weight for MS–DRG 018 for FY 2024, only those claims that group to MS–DRG 018 that (1) contain ICD–10–CM diagnosis code Z00.6 and do not include payer-only code ''ZC'' or (2) contain condition code ''ZB'' (or, for subsequent fiscal years, condition code ''90'') would be excluded from the calculation of the average cost for MS–DRG 018. Consistent with this, we also finalized modifications to our calculation of the adjustment to account for the CAR T-cell therapy cases identified as clinical trial cases in calculating the national average standardized cost per case that is used to calculate the relative weights for all MS–DRGs. We refer readers to the FY 2024 IPPS/LTCH PPS final rule for further discussion of these modifications (88 FR 58791).

Consistent with the FY 2025 IPPS/LTCH PPS final rule, in the proposed rule, for FY 2026 we proposed to continue to use our methodology as modified in the FY 2024 IPPS/LTCH PPS final rule for identifying clinical trial claims and expanded access use claims in MS–DRG 018, with an additional modification as discussed in this section. First, we exclude claims with the presence of condition code ''90'' and claims that contain ICD–10–CM diagnosis code Z00.6 without payer-only code ''ZC'' that group to MS–DRG 018 when calculating the average cost for MS–DRG 018. Second, we no longer use the proxy of standardized drug charges of less than $373,000 to identify clinical trial claims and expanded access use cases when calculating the average cost for MS–DRG 018.

In section VI.H. of this final rule, we discuss our proposal to apply the payment adjustment for clinical trial and expanded access use immunotherapy cases to other cases where the immunotherapy product is not purchased in the usual manner, such as obtained at no cost. To mirror this proposed change within our relative weight methodology, we proposed to also exclude claims with standardized drug charges below the median standardized drug charge of claims identified as clinical trials in MS–DRG 018 when we calculate the average cost for MS–DRG 018. For the proposed rule, based on the December 2024 update of the FY 2024 MedPAR file, we estimated that the median standardized drug charge of claims identified as clinical trials in MS–DRG 018 is $29,819. We proposed to apply this policy for 2 years (that is, in our relative weight methodology for MS–DRG 018 for FYs 2026 and 2027), until the claims data reflects the addition of the condition code indicating that the immunotherapy product is not purchased in the usual manner, such as obtained at no cost, which then would be able to be used to identify these cases such that they can be identified for exclusion from the calculation of the average cost of MS–DRG 018. We also proposed, for the purpose of performing this trim, to update the median standardized drug charge of claims identified as clinical trials in MS–DRG 018 based on more recent data for the final rule.

Accordingly, we proposed that in calculating the relative weight for MS–DRG 018 for FY 2026, in identifying clinical trial claims and expanded access use claims and other cases where the immunotherapy product is not purchased in the usual manner, such as obtained at no cost, only those claims that group to MS–DRG 018 that (1) contain ICD–10–CM diagnosis code Z00.6 and do not include payer-only code ''ZC'', (2) contain condition code ''90'', or (3) contain standardized drug charges below the median standardized drug charge of clinical trial cases in MS–DRG 018 would be excluded from the calculation of the average cost for MS–DRG 018.

With respect to claims that group to MS–DRG 018 and are identified as clinical trials or involve expanded access use of the CAR T-cell therapy or other immunotherapy, we noted in the proposed rule that there are some cases that appear to include drug charges similar to cases not identified as clinical trials or involving expanded access use. These charges are generally in revenue center 0891, Cell Therapy Drug Charges. We stated that we are seeking comments on potential reasons for why claims identified as clinical trials or involving expanded access use, in which the provider would typically receive the product at no cost, would have charges in revenue center 0891, Cell Therapy Drug Charges.

We also proposed to continue to use the methodology as modified in the FY 2024 IPPS/LTCH PPS final rule to calculate the adjustment to account for the CAR T-cell therapy cases identified as clinical trial cases in calculating the national average standardized cost per case that is used to calculate the relative weights for all MS–DRGs, with the same proposed modification as described previously to identify other cases where the immunotherapy product is not purchased in the usual manner, such as obtained at no cost:

- Calculate the average cost for cases assigned to MS–DRG 018 that (a) contain ICD–10–CM diagnosis code Z00.6 and do not contain condition code ''ZC'', (b) contain condition code ''90'', or (c) contain standardized drug charges below the median standardized drug charge of clinical trial cases in MS–DRG 018.
- Calculate the average cost for all other cases assigned to MS–DRG 018.
- Calculate an adjustor by dividing the average cost calculated in step 1 by the average cost calculated in step 2.
- Apply the adjustor calculated in step 3 to the cases identified in step 1 as applicable clinical trial or expanded access use cases, and other cases where the immunotherapy product is not purchased in the usual manner, such as obtained at no cost, then add this adjusted case count to the non-clinical trial case count prior to calculating the average cost across all MS–DRGs.

Under our proposal to continue to apply this methodology, with the proposed modification as described, based on the December 2024 update of the FY 2024 MedPAR file used for the proposed rule, we estimated that the average costs of cases assigned to MS–DRG 018 that are identified as clinical trial cases ($88,484) were 23 percent of the average costs of the cases assigned to MS–DRG 018 that are identified as non-clinical trial cases ($385,147). Accordingly, as we did for FY 2025, we proposed to adjust the transfer-adjusted case count for MS–DRG 018 by applying the proposed adjustor of 0.23 to the applicable clinical trial and expanded access use immunotherapy cases, and

other cases where the immunotherapy product is not purchased in the usual manner, such as obtained at no cost, and to use this adjusted case count for MS–DRG 018 in calculating the national average cost per case, which is used in the calculation of the relative weights. Therefore, in calculating the national average cost per case for purposes of the proposed rule, each case identified as an applicable clinical trial or expanded access use immunotherapy case, and other cases where the immunotherapy product is not purchased in the usual manner, such as obtained at no cost, was adjusted by 0.23. As we did for FY 2025, we applied the same adjustor for the applicable cases that group to MS–DRG 018 for purposes of budget neutrality and outlier simulations. We also proposed to update the value of the adjustor based on more recent data for the final rule.

Comment: Commenters supported our proposal to exclude claims in MS–DRG 018 with standardized drug charges below the median standardized drug charges of cases identified as clinical trials in MS–DRG 018. Commenters stated that this proposal ensures that clinical trial and no-cost cases do not distort payment rates across the IPPS. We note a commenter mistakenly referred to our existing policy as still excluding cases that have a standardized drug charge of less than $373,000.

Commenters requested clarification about whether the median standardized drug charges includes all drug revenue lines and all clinical trial claims, including expanded access claims. Some commenters expressed support for the identification of cases involving patient assistance programs, where no cost is incurred, but expressed confusion regarding the language ''product not purchased in the usual manner'', stating that is subjective, which can lead to confusion and undue administrative burden for providers and varying interpretations by the MACs. A commenter requested that CMS modify the language to reflect the request in the comment summarized in the FY 2025 IPPS/LTCH PPS final rule, which referred to cases where the immunotherapy is ''obtained at no cost''.

Response: We appreciate commenters support for our proposal. While we indicated in the proposed rule that we calculate the median standardized drug charges for cases identified as clinical trial claims including cases that contain ICD–10–CM diagnosis code Z00.6 and do not include payer only code ZC, we note that in calculating the median standardized drug charges for cases identified as clinical trial claims, we included claims that (a) contain ICD–10–CM diagnosis code Z00.6 and do not contain condition code ''ZC'' or (b) contain condition code ''90''. Just as we treat cases identified as clinical trial cases and expanded access use cases in the same manner for payment purposes and in the calculation of the relative weights, we are also including both claims identified as clinical trial cases and claims identified as expanded access use cases in calculating the median drug charges. Since the provider does not incur the cost of the drug in cases identified as clinical trial cases or expanded access use cases, but still incurs costs for other drugs during the inpatient stay, we believe that using the median standardized drug charge for clinical trial and expanded access use cases would appropriately identify other cases involving products not purchased in the usual manner. The drug revenue lines are the same as those used in the relative weight calculations, which are shown in the Cost Center HCRIS Lines Supplemental Data File referenced earlier in this section.

With respect to the commenters who expressed concerns about the language ''product not purchased in the usual manner'', we note that this phrasing is not new; we have used the language ''product is purchased in the usual manner'' in prior rules with respect to MS–DRG 018. Furthermore, we believe that this language is appropriately phrased to include the broad range of scenarios that may fall under it. For example, as described later in this section, commenters raised the possibility of immunotherapy products administered over multiple encounters. Given that we cannot predict all possible scenarios where the product is not purchased in the usual manner, use of a condition code that reflects a broad array of circumstances will facilitate more accurate payment and ratesetting. We further note that the ''usual manner'' in which a product is purchased may differ for products administered in one dose versus split doses.

Comment: Commenters noted that some immunotherapy products may be administered over multiple encounters (including in an outpatient setting). A commenter requested that CMS confirm that a reduced payment for MS–DRG 018 does not apply when a hospital purchases an immunotherapy product (that is, incurs a cost), irrespective of whether it is administered in multiple encounters. This commenter requested that if CMS has specific requirements for how providers should handle these situations, it should clarify them or state that it is up to the individual provider to determine how to develop charges for multiple administrations of a single product obtained from a manufacturer. A commenter stated that unless manufacturers change their processes for products administered over multiple encounters, hospitals will continue to receive a single invoice and require guidance about how to report the charges.

Response: CMS does not dictate a provider's charge structure or how they itemize their charges. As stated in Chapter 22, Section 2203 of the Provider Reimbursement Manual (*https://www.cms.gov/regulations-and-guidance/guidance/manuals/paper-based-manuals-items/cms021929*), providers ''should have an established charge structure which is applied uniformly to each patient as services are furnished to the patient and which is reasonably and consistently related to the cost of providing the services''. Providers should bill in the manner that they customarily bill for split-dose administration and the charges should be reasonably and consistently related to the cost of providing the service in a split-dose administration circumstance. A split-dose administration should not result in twice the amount of payment just by virtue of the fact it is a split-dose administration. For example, we remind hospitals that Chapter 3, Inpatient Hospital Billing, section 40.2.5 of the Medicare Claims Processing Manual (*https://www.cms.gov/regulations-and-guidance/guidance/manuals/downloads/clm104c03.pdf*) states that hospitals may place a patient on a leave of absence when readmission is expected and the patient does not require a hospital level of care during the interim period. Placing a patient on a leave of absence will not generate two payments. Only one bill and one DRG payment are made.

Comment: A commenter stated that a potential reason why claims identified as clinical trials or involving expanded access use, in which the provider would typically receive the product at no cost, would have charges in revenue center 0891, is that the case involves a clinical trial of another product. The commenter stated that given the two-step and manual process in flagging these claims, (that is, the provider includes ''Diff Prod Clin Trial'' in the Remarks field and the MAC adds a payer-only condition code of ''ZC''), there is likely a percentage of cases where the condition code was not applied as it should be. The commenter noted that CMS' recent billing instructions that automate the application of ''ZC'' should reduce the number of claims with this profile.

Response: We appreciate the feedback on our comment solicitation and will continue to monitor CAR T-cell therapy claims for such potential anomalies.

Comment: Some commenters expressed concern that CMS no longer uses the $373,000 threshold to identify clinical trial cases and requested that CMS continue to refine its methodology to also consider standardized drug charges to correctly identify clinical trial cases. Commenters expressed concern that due to incorrect coding or incorrect application of condition codes, cases below the $373,000 threshold may be identified as clinical trials when the provider incurs the cost of the drug. The commenter stated that as a result, these cases would be included in ratesetting for MS–DRG 018 and these cases could be underpaid, particularly as more hospitals administer cell and gene therapies. The commenter requested that CMS publish information on future cases that are below the $373,000 threshold given the likely impact on the payment rate for MS–DRG 018.

Response: As we stated in the FY 2024 (88 FR 58791) and FY 2025 IPPS/LTCH PPS (89 FR 69112) final rules, while there continues to be a small percentage of claims that report standardized drug charges of less than $373,000 and do not report ICD–10–CM code Z00.6, we do not believe it is necessary to continue the use of the proxy until the number of cases reaches zero. In addition, our proposal to exclude claims with standardized drug charges below the median standardized drug charge of claims identified as clinical trials in MS–DRG 018 (that is, claims that (a) contain ICD–10–CM diagnosis code Z00.6 and do not include payer-only code ''ZC'' or (b) contain condition code ''90'') is expected to reduce the number of cases with low standardized drug charges that group to MS–DRG 018. We note that information on obtaining the MedPAR Limited Data Set is available on the CMS website, at *https://www.cms.gov/Research-Statistics-Data-and-Systems/Files-for-Order/LimitedDataSets/MEDPARLDSHospitalNational.*

Comment: A few commenters expressed confusion about CMS' differentiation between clinical trial and expanded access use cases. A commenter stated that it does not believe this differentiation is CMS' intent because expanded access use of CAR T-cell or other therapies that are grouped to MS–DRG 018 must occur as part of an Investigational New Device (IND) study, which would have a National Clinical Trial number and would meet criteria for routine costs of the clinical trial NCD 310.1. This commenter cited the FDA website [13] in support of these statements. Another commenter requested that CMS clarify that expanded access cases are a type of clinical trial.

A commenter requested that CMS clarify that expanded access use would also be excluded from ratesetting because facilities do not incur the cost of these products. A few commenters requested that CMS clarify that the agency would expect to see clinical trial billing indicators on expanded access claims (that is, diagnosis code Z00.6, condition code 30, value code D4, and the NCT number), in addition to condition code 90, which would help identify which clinical trial claims are expanded access claims.

Response. The FDA states, at the link provided by the commenter, ''Expanded access, sometimes called ''compassionate use,'' is the use of investigational new drug products *outside of clinical trials* to treat patients with serious or immediately life-threatening diseases or conditions when there are no comparable or satisfactory alternative treatment options''. While we utilize separate condition codes to identify clinical trial claims and expanded access use cases, we note that they are treated the same for payment purposes and in the calculation of the relative weights for MS–DRG 018.

Comment: A commenter stated that the MS–DRG payment for CAR T-cell therapy services has never been sufficient and provided various reasons for this, including problems with hospital chargemasters, CCRs, and charge compression. Commenters provided various suggestions to mitigate these concerns and increase the payment rate for MS–DRG 018. Commenters stated that the percentage of cases in MS–DRG 018 that are eligible for outlier payments has increased since FY 2021, which, the commenter stated, if left unaddressed, places a constraint on the outlier pool, which negatively impacts all hospitals.

A commenter stated that hospitals should not be targeted for having high outlier payments given that it is the ''new norm'' for cell and gene therapies, and that hospitals should not be questioned if they set their charges consistent with their CCRs. This commenter stated that CMS needs to provide more clarity so that stakeholders understand that hospitals have no choice but to mark up product charges, and that patients do not bear the cost of those charges. This commenter also requested that CMS consider other methodologies to pay for immunotherapies and expand CMMI's cell and gene therapy model.

Commenters requested that CMS explore the integration of Medicare Advantage claims into the ratesetting process for MS–DRG 018 to improve the sample size available for low volume products, which could improve the robustness and reliability of cost estimates. A commenter noted that as the percentage of enrollees in Medicare fee-for-service decreases, the number of claims used in the ratesetting process will decrease and become less representative for predicting resource utilization.

Response: Regarding the comments that the MS–DRG relative weight for MS–DRG 018 is inadequate and does not result in payment that fully covers the hospital resource costs, as well as comments regarding hospital charging practices, we refer readers to the FY 2022 IPPS/LTCH final rule (86 FR 44965) where we responded to similar comments. With respect to the commenter's statement about hospitals being ''targeted'' for having high outlier payments, we are unaware of the issue the commenter is raising. We note our proposal, as discussed in the CY 2026 OPPS proposed rule (90 FR 33476), to collect payer-specific negotiated charge data from MA organizations by MS–DRG for use in the MS–DRG relative weight setting, would, if finalized, obviate many of the concerns that commenters raised, including challenges with hospital charging practices and the potential role of MA claims in the ratesetting process.

Comment: Commenters requested that CMS revise its cost reporting instructions for cell and gene therapy products (revenue codes 0891 and 0892) to instruct providers to use cost center 78. A commenter requested that CMS also instruct providers to leave the services associated with these therapies in their original cost centers. This commenter stated that there is a precedent for CMS to define a cost center based on a revenue code, like it did for the implantable devices cost center. The commenter also requested that CMS clarify whether hospitals are allowed to use product charges and expenses as valid statistics to allocate administrative and general expenses to cost report line 78.

Response: We do not believe changes to billing guidance are needed at this time but will take these comments into consideration when developing policies and program requirements for future years for CAR T-cell therapy policy. We further note that under the proposal in

[13] *https://www.fda.gov/drugs/investigational-new-drug-ind-application/ind-applications-clinical-treatment-expanded-access-overview.*

the CY 2026 OPPS proposed rule to collect payer-specific negotiated charge data from MA organizations by MS–DRG for use in the MS–DRG relative weight setting, an additional cost center would not impact the relative weight for MS–DRG 018.

After consideration of the public comments we received, we are finalizing our proposals without modifications regarding the calculation of the relative weight for MS–DRG 018. We note that for this final rule, based on the March 2025 update of the FY 2024 MedPAR file, we estimated that the median standardized drug charge of claims identified as clinical trials in MS–DRG 018 (that is, claims that (a) contain ICD–10–CM diagnosis code Z00.6 and do not include payer-only code ''ZC'' or (b) contain condition code ''90'') is $27,466. Applying this finalized methodology, based on the March 2025 update of the FY 2024 MedPAR file used for this final rule, we estimated that the average costs of cases assigned to MS–DRG 018 that are identified as clinical trial cases ($61,643.46) were 16 percent of the average costs of the cases assigned to MS–DRG 018 that are identified as nonclinical trial cases ($384,471.59).

Accordingly, as we did for FY 2025, we are finalizing our proposal to adjust the transfer-adjusted case count for MS–DRG 018 by applying the adjustor of 0.16 to the applicable clinical trial and expanded access use immunotherapy cases, and other cases where the immunotherapy product is not purchased in the usual manner, such as obtained at no cost, and to use this adjusted case count for MS–DRG 018 in calculating the national average cost per case, which is used in the calculation of the relative weights. Therefore, in calculating the national average cost per case for purposes of this final rule, each case identified as an applicable clinical trial or expanded access use immunotherapy case, and other cases where immunotherapy product is not purchased in the usual manner, such as obtained at no cost, was adjusted by 0.16. As we did for FY 2025, we are applying this same adjustor for the applicable cases that group to MS–DRG 018 for purposes of budget neutrality and outlier simulations.

d. Cap for Relative Weight Reductions

In the FY 2023 IPPS/LTCH PPS final rule, we finalized a permanent 10-percent cap on the reduction in an MS–DRG's relative weight in a given fiscal year, beginning in FY 2023. We also finalized a budget neutrality adjustment to the standardized amount for all hospitals to ensure that application of the permanent 10-percent cap does not result in an increase or decrease of estimated aggregate payments. We refer the reader to the FY 2023 IPPS/LTCH PPS final rule for further discussion of this policy. In the Addendum to this IPPS/LTCH PPS final rule, we present the budget neutrality adjustment for reclassification and recalibration of the FY 2026 MS–DRG relative weights with application of this cap. We are also making available on the CMS website a supplemental file demonstrating the application of the permanent 10 percent cap for FY 2026. For a further discussion of the final budget neutrality adjustment for FY 2026, we refer readers to the Addendum of this final rule.

3. Development of National Average Cost-to-Charge Ratios (CCRs)

We developed the national average CCRs as follows:

Using the FY 2023 cost report data, we removed CAHs, REHs, Indian Health Service hospitals, all-inclusive rate hospitals, and cost reports that represented time periods of less than 1 year (365 days). We included hospitals located in Maryland because we include their charges in our claims database. Then we created CCRs for each provider for each cost center (see the supplemental data file for line items used in the calculations) and removed any CCRs that were greater than 10 or less than 0.01. We normalized the departmental CCRs by dividing the CCR for each department by the total CCR for the hospital for the purpose of trimming the data. Then we took the logs of the normalized cost center CCRs and removed any cost center CCRs where the log of the cost center CCR was greater or less than the mean log plus/minus 3 times the standard deviation for the log of that cost center CCR. Once the cost report data were trimmed, we calculated a Medicare-specific CCR. The Medicare-specific CCR was determined by taking the Medicare charges for each line item from Worksheet D–3 and deriving the Medicare-specific costs by applying the hospital-specific departmental CCRs to the Medicare-specific charges for each line item from Worksheet D–3. Once each hospital's Medicare-specific costs were established, we summed the total Medicare-specific costs and divided by the sum of the total Medicare-specific charges to produce national average, charge-weighted CCRs.

After we multiplied the total charges for each MS–DRG in each of the 19 cost centers by the corresponding national average CCR, we summed the 19 ''costs'' across each MS–DRG to produce a total standardized cost for the MS–DRG. The average standardized cost for each MS–DRG was then computed as the total standardized cost for the MS–DRG divided by the transfer-adjusted case count for the MS–DRG. The average cost for each MS–DRG was then divided by the national average standardized cost per case to determine the relative weight. The final FY 2026 cost-based relative weights were then normalized by an adjustment factor of 1.922881 so that the average case weight after recalibration was equal to the average case weight before recalibration. The normalization adjustment is intended to ensure that recalibration by itself neither increases nor decreases total payments under the IPPS, as required by section 1886(d)(4)(C)(iii) of the Act. We then applied the permanent 10-percent cap on the reduction in a MS–DRG's relative weight in a given fiscal year; specifically for those MS–DRGs for which the relative weight otherwise would have declined by more than 10 percent from the FY 2025 relative weight, we set the FY 2026 relative weight equal to 90 percent of the FY 2025 relative weight. The final relative weights for FY 2026 as set forth in Table 5 associated with this final rule and available on the CMS website at *https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/AcuteInpatientPPS* reflect the application of this cap.

The 19 national average CCRs for FY 2026 are as follows:

NATIONAL AVERAGE CCRS	
Group	CCR
Routine Days	0.394
Intensive Days	0.335
Drugs and Cellular Therapies	0.177
Supplies & Equipment	0.297
Implantable Devices	0.255
Inhalation Therapy	0.148
Therapy Services	0.256
Anesthesia	0.071
Labor & Delivery	0.373
Operating Room	0.153
Cardiology	0.086
Cardiac Catheterization	0.098
Laboratory	0.098
Radiology	0.123
MRIs	0.065
CT Scans	0.032
Emergency Room	0.139
Blood and Blood Products	0.23
Other Services	0.327

Since FY 2009, the relative weights have been based on 100 percent cost weights based on our MS–DRG grouping system.

When we recalibrated the DRG weights for previous years, we set a threshold of 10 cases as the minimum number of cases required to compute a reasonable weight. We proposed to use that same case threshold in recalibrating the proposed MS–DRG relative weights for FY 2026. In this final rule, using data from the FY 2024 MedPAR file, there are 9 MS–DRGs that contain fewer than 10 cases. For FY 2026, because we do not have sufficient MedPAR data to set accurate and stable cost relative weights for these low-volume MS–DRGs, we proposed to compute relative weights for the low-volume MS–DRGs by adjusting their final FY 2025 relative weights by the percentage change in the average weight of the cases in other MS–DRGs from FY 2025 to FY 2026. The crosswalk table is as follows.

LOW-VOLUME MS-DRGS		
Low-Volume MS-DRG	MS-DRG Title	Crosswalk to MS-DRG
096	Bacterial and Tuberculous Infections of Nervous System without CC/MCC	Final FY 2025 relative weight (adjusted by percent change in average weight of the cases in other MS-DRGs)
218	Cardiac Valve and Other Major Cardiothoracic Procedures with Cardiac Catheterization without CC/MCC	Final FY 2025 relative weight (adjusted by percent change in average weight of the cases in other MS-DRGs)
789	Neonates, Died or Transferred to Another Acute Care Facility	Final FY 2025 relative weight (adjusted by percent change in average weight of the cases in other MS-DRGs)
790	Extreme Immaturity or Respiratory Distress Syndrome, Neonate	Final FY 2025 relative weight (adjusted by percent change in average weight of the cases in other MS-DRGs)
791	Prematurity with Major Problems	Final FY 2025 relative weight (adjusted by percent change in average weight of the cases in other MS-DRGs)
792	Prematurity without Major Problems	Final FY 2025 relative weight (adjusted by percent change in average weight of the cases in other MS-DRGs)
793	Full-Term Neonate with Major Problems	Final FY 2025 relative weight (adjusted by percent change in average weight of the cases in other MS-DRGs)
794	Neonate with Other Significant Problems	Final FY 2025 relative weight (adjusted by percent change in average weight of the cases in other MS-DRGs)
795	Normal Newborn	Final FY 2025 relative weight (adjusted by percent change in average weight of the cases in other MS-DRGs)

We did not receive any public comments on this proposal and therefore are finalizing it for FY 2026 without modification.

E. Add-On Payments for New Services and Technologies for FY 2026

1. Background

Effective for discharges beginning on or after October 1, 2001, section 1886(d)(5)(K)(i) of the Act requires the Secretary to establish a mechanism to recognize the costs of new medical services and technologies (sometimes collectively referred to in this section as ''new technologies'') under the IPPS. Section 1886(d)(5)(K)(vi) of the Act specifies that a medical service or technology will be considered new if it meets criteria established by the Secretary after notice and opportunity for public comment. Section 1886(d)(5)(K)(ii)(I) of the Act specifies

that a new medical service or technology may be considered for new technology add-on payment if, based on the estimated costs incurred with respect to discharges involving such service or technology, the DRG prospective payment rate otherwise applicable to such discharges under this subsection is inadequate. The regulations at 42 CFR 412.87 implement these provisions and § 412.87(b) specifies three criteria for a new medical service or technology to receive the additional payment: (1) the medical service or technology must be new; (2) the medical service or technology must be costly such that the DRG rate otherwise applicable to discharges involving the medical service or technology is determined to be inadequate; and (3) the service or technology must demonstrate a substantial clinical improvement over existing services or technologies. In addition, certain transformative new devices and antimicrobial products may qualify under an alternative inpatient new technology add-on payment pathway, as set forth in the regulations at § 412.87(c) and (d).

We note that section 1886(d)(5)(K)(i) of the Act requires the Secretary to establish a mechanism to recognize the costs of new medical services and technologies under the payment system established under that subsection, which establishes the system for paying for the operating costs of inpatient hospital services. The system of payment for capital costs is established under section 1886(g) of the Act. Therefore, as discussed in prior rulemaking (72 FR 47307 through 47308), we do not include capital costs in the add-on payments for a new medical service or technology or make new technology add-on payments under the IPPS for capital-related costs.

In the proposed rule, we highlighted some of the major statutory and regulatory provisions relevant to the new technology add-on payment criteria, as well as other information. For further discussion on the new technology add-on payment criteria, we refer readers to the FY 2012 IPPS/LTCH PPS final rule (76 FR 51572 through 51574), the FY 2020 IPPS/LTCH PPS final rule (84 FR 42288 through 42300), and the FY 2021 IPPS/LTCH PPS final rule (85 FR 58736 through 58742).

a. New Technology Add-On Payment Criteria

(1) Newness Criterion

Under the first criterion, as reflected in § 412.87(b)(2), a specific medical service or technology will no longer be considered ''new'' for purposes of new medical service or technology add-on payments after CMS has recalibrated the MS–DRGs, based on available data, to reflect the cost of the technology. We note that we do not consider a service or technology to be new if it is substantially similar to one or more existing technologies. That is, even if a medical product receives a new FDA marketing authorization, it may not necessarily be considered ''new'' for purposes of new technology add-on payments if it is ''substantially similar'' to another medical product that was market authorized by FDA and has been on the market for more than 2 to 3 years. In the FY 2010 IPPS/RY 2010 LTCH PPS final rule (74 FR 43813 through 43814), we established criteria for evaluating whether a new technology is substantially similar to an existing technology, specifically whether: (1) a product uses the same or a similar mechanism of action to achieve a therapeutic outcome; (2) a product is assigned to the same or a different MS–DRG; and (3) the new use of the technology involves the treatment of the same or similar type of disease and the same or similar patient population. If a technology meets all three of these criteria, it would be considered substantially similar to an existing technology and would not be considered ''new'' for purposes of new technology add-on payments. For a detailed discussion of the criteria for substantial similarity, we refer readers to the FY 2006 IPPS final rule (70 FR 47351 through 47352) and the FY 2010 IPPS/LTCH PPS final rule (74 FR 43813 through 43814).

(2) Cost Criterion

Under the second criterion, § 412.87(b)(3) further provides that, to be eligible for the add-on payment for new medical services or technologies, the MS–DRG prospective payment rate otherwise applicable to discharges involving the new medical service or technology must be assessed for adequacy. Under the cost criterion, consistent with the formula specified in section 1886(d)(5)(K)(ii)(I) of the Act, to assess the adequacy of payment for a new technology paid under the applicable MS–DRG prospective payment rate, we evaluate whether the charges of the cases involving a new medical service or technology will exceed a threshold amount that is the lesser of 75 percent of the standardized amount (increased to reflect the difference between cost and charges) or 75 percent of one standard deviation beyond the geometric mean standardized charge for all cases in the MS–DRG to which the new medical service or technology is assigned (or the case-weighted average of all relevant MS–DRGs if the new medical service or technology occurs in many different MS–DRGs). The MS–DRG threshold amounts generally used in evaluating new technology add-on payment applications for FY 2026 are presented in a data file that is available, along with the other data files associated with the FY 2025 IPPS/LTCH PPS final rule, correction notice and interim final action with comment period, on the CMS website at: *https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/AcuteInpatientPPS/index*.

We note that, under the policy finalized in the FY 2021 IPPS/LTCH PPS final rule (85 FR 58603 through 58605), beginning with FY 2022, we use the proposed threshold values associated with the proposed rule for that fiscal year to evaluate the cost criterion for all applications for new technology add-on payments and previously approved technologies that may continue to receive new technology add-on payments, if those technologies would be assigned to a proposed new MS–DRG for that same fiscal year.

As finalized in the FY 2019 IPPS/LTCH PPS final rule (83 FR 41275), beginning with FY 2020, we include the thresholds applicable to the next fiscal year (previously included in Table 10 of the annual IPPS/LTCH PPS proposed and final rules) in the data files associated with the prior fiscal year. Accordingly, the final thresholds for applications for new technology add-on payments for FY 2027 are presented in a data file that is available on the CMS website, along with the other data files associated with this FY 2026 final rule, by clicking on the FY 2026 IPPS Final Rule Home Page at: *https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/AcuteInpatientPPS/index*.

In the September 7, 2001, final rule that established the new technology add-on payment regulations (66 FR 46917), we discussed that applicants should submit a significant sample of data to demonstrate that the medical service or technology meets the high-cost threshold. Specifically, applicants should submit a sample of sufficient size to enable us to undertake an initial validation and analysis of the data. We also discussed in the September 7, 2001, final rule (66 FR 46917) the issue of whether the Health Insurance Portability and Accountability Act of 1996 (HIPAA) Privacy Rule at 45 CFR part 160 and subparts A and E of 45 CFR part 164, applies to claims information that providers submit with applications

for new medical service or technology add-on payments. We refer readers to the FY 2012 IPPS/LTCH PPS final rule (76 FR 51573) for further information on this issue.

(3) Substantial Clinical Improvement Criterion

Under the third criterion at § 412.87(b)(1), a medical service or technology must represent an advance that substantially improves, relative to technologies previously available, the diagnosis or treatment of Medicare beneficiaries. In the FY 2020 IPPS/LTCH PPS final rule (84 FR 42288 through 42292), we prospectively codified in our regulations at § 412.87(b) the following aspects of how we evaluate substantial clinical improvement for purposes of new technology add-on payments under the IPPS:

- The totality of the circumstances is considered when making a determination that a new medical service or technology represents an advance that substantially improves, relative to services or technologies previously available, the diagnosis or treatment of Medicare beneficiaries.
- A determination that a new medical service or technology represents an advance that substantially improves, relative to services or technologies previously available, the diagnosis or treatment of Medicare beneficiaries means—

++ The new medical service or technology offers a treatment option for a patient population unresponsive to, or ineligible for, currently available treatments;

++ The new medical service or technology offers the ability to diagnose a medical condition in a patient population where that medical condition is currently undetectable, or offers the ability to diagnose a medical condition earlier in a patient population than allowed by currently available methods, and there must also be evidence that use of the new medical service or technology to make a diagnosis affects the management of the patient;

++ The use of the new medical service or technology significantly improves clinical outcomes relative to services or technologies previously available as demonstrated by one or more of the following: a reduction in at least one clinically significant adverse event, including a reduction in mortality or a clinically significant complication; a decreased rate of at least one subsequent diagnostic or therapeutic intervention; a decreased number of future hospitalizations or physician visits; a more rapid beneficial resolution of the disease process treatment including, but not limited to, a reduced length of stay or recovery time; an improvement in one or more activities of daily living; an improved quality of life; or, a demonstrated greater medication adherence or compliance; or

++ The totality of the circumstances otherwise demonstrates that the new medical service or technology substantially improves, relative to technologies previously available, the diagnosis or treatment of Medicare beneficiaries.

- Evidence from the following published or unpublished information sources from within the United States or elsewhere may be sufficient to establish that a new medical service or technology represents an advance that substantially improves, relative to services or technologies previously available, the diagnosis or treatment of Medicare beneficiaries: clinical trials, peer reviewed journal articles; study results; meta-analyses; consensus statements; white papers; patient surveys; case studies; reports; systematic literature reviews; letters from major healthcare associations; editorials and letters to the editor; and public comments. Other appropriate information sources may be considered.
- The medical condition diagnosed or treated by the new medical service or technology may have a low prevalence among Medicare beneficiaries.
- The new medical service or technology may represent an advance that substantially improves, relative to services or technologies previously available, the diagnosis or treatment of a subpopulation of patients with the medical condition diagnosed or treated by the new medical service or technology.

We refer the reader to the FY 2020 IPPS/LTCH PPS final rule (84 FR 42288 through 42292) for additional discussion of the evaluation of substantial clinical improvement for purposes of new technology add-on payments under the IPPS.

We note, consistent with the discussion in the FY 2003 IPPS final rule (67 FR 50015), that while FDA has regulatory responsibility for decisions related to marketing authorization (for example, approval, clearance, etc.), we do not rely upon FDA criteria in our evaluation of substantial clinical improvement for purposes of determining what services and technologies qualify for new technology add-on payments under Medicare. This criterion does not depend on the standard of safety and effectiveness on which FDA relies but on a demonstration of substantial clinical improvement in the Medicare population.

b. Alternative Inpatient New Technology Add-On Payment Pathway

Beginning with applications for FY 2021 new technology add-on payments, under the regulations at § 412.87(c), a medical device that is part of FDA's Breakthrough Devices Program may qualify for the new technology add-on payment under an alternative pathway. Additionally, under the regulations at § 412.87(d) for certain antimicrobial products, beginning with FY 2021, a drug that is designated by FDA as a Qualified Infectious Disease Product (QIDP), and, beginning with FY 2022, a drug that is approved by FDA under the Limited Population Pathway for Antibacterial and Antifungal Drugs (LPAD), may also qualify for the new technology add-on payment under an alternative pathway. We refer the reader to the FY 2020 IPPS/LTCH PPS final rule (84 FR 42292 through 42297) and the FY 2021 IPPS/LTCH PPS final rule (85 FR 58737 through 58739) for further discussion on this policy. We note that CMS reviews the application based on the information provided by the applicant only under the alternative pathway specified by the applicant at the time of application submission. To receive approval for the new technology add-on payment under that alternative pathway, the technology must have the applicable FDA designation and meet all other requirements in the regulations in § 412.87(c) and (d), as applicable.

(1) Alternative Pathway for Certain Transformative New Devices

For applications received for new technology add-on payments for FY 2021 and subsequent fiscal years, a medical device designated under FDA's Breakthrough Devices Program[14] that has received FDA marketing authorization will be considered not substantially similar to an existing technology for purposes of the new technology add-on payment under the IPPS, and will not need to meet the requirement under § 412.87(b)(1) that it represent an advance that substantially improves, relative to technologies previously available, the diagnosis or treatment of Medicare beneficiaries. Under this alternative pathway, a medical device that has received a Breakthrough Device designation, and then received FDA marketing authorization (that is, has been

[14] Breakthrough Devices Program *https://www.fda.gov/medical-devices/how-study-and-market-your-device/breakthrough-devices-program.*

approved or cleared by, or had a De Novo classification request granted by, FDA) for the indication covered by the Breakthrough Device designation, will need to meet the requirements of § 412.87(c). We note that in the FY 2021 IPPS/LTCH PPS final rule (85 FR 58734 through 58736), we clarified our policy that a new medical device under this alternative pathway must receive marketing authorization for the indication covered by the Breakthrough Devices Program designation. We refer the reader to the FY 2021 IPPS/LTCH PPS final rule (85 FR 58734 through 58736) for further discussion regarding this clarification.

(2) Alternative Pathway for Certain Antimicrobial Products

For applications received for new technology add-on payments for certain antimicrobial products, beginning with FY 2021, if a technology is designated by FDA as a QIDP and received FDA marketing authorization, and, beginning with FY 2022, if a drug is approved under FDA's LPAD pathway and used for the indication approved under the LPAD pathway, it will be considered not substantially similar to an existing technology for purposes of new technology add-on payments and will not need to meet the requirement that it represent an advance that substantially improves, relative to technologies previously available, the diagnosis or treatment of Medicare beneficiaries. Under this alternative pathway for QIDPs and LPADs, a medical product that has received FDA marketing authorization and is designated by FDA as a QIDP or approved under the LPAD pathway will need to meet the requirements of § 412.87(d). We refer the reader to the FY 2020 IPPS/LTCH PPS final rule (84 FR 42292 through 42297) and FY 2021 IPPS/LTCH PPS final rule (85 FR 58737 through 58739) for further discussion on this policy.

We note that, in the FY 2021 IPPS/LTCH PPS final rule (85 FR 58737 through 58739), we clarified that a new medical product seeking approval for the new technology add-on payment under the alternative pathway for QIDPs must receive FDA marketing authorization for the indication covered by the QIDP designation. We also finalized our policy to expand our alternative new technology add-on payment pathway for certain antimicrobial products to include products approved under the LPAD pathway and used for the indication approved under the LPAD pathway.

c. Additional Payment for New Medical Service or Technology

The new medical service or technology add-on payment policy under the IPPS provides additional payments for cases with relatively high costs involving eligible new medical services or technologies, while preserving some of the incentives inherent under an average-based prospective payment system. The payment mechanism is based on the cost to hospitals for the new medical service or technology. As noted previously, we do not include capital costs in the add-on payments for a new medical service or technology or make new technology add-on payments under the IPPS for capital-related costs (72 FR 47307 through 47308).

For discharges occurring before October 1, 2019, under § 412.88, if the costs of the discharge (determined by applying operating cost-to-charge ratios (CCRs) as described in § 412.84(h)) exceed the full DRG payment (including payments for IME and DSH, but excluding outlier payments), CMS made an add-on payment equal to the lesser of: (1) 50 percent of the costs of the new medical service or technology; or (2) 50 percent of the amount by which the costs of the case exceed the standard DRG payment.

Beginning with discharges on or after October 1, 2019, for the reasons discussed in the FY 2020 IPPS/LTCH PPS final rule (84 FR 42297 through 42300), we finalized an increase in the new technology add-on payment percentage, as reflected at § 412.88(a)(2)(ii). Specifically, for a new technology other than a medical product designated by FDA as a QIDP, beginning with discharges on or after October 1, 2019, if the costs of a discharge involving a new technology (determined by applying CCRs as described in § 412.84(h)) exceed the full DRG payment (including payments for IME and DSH, but excluding outlier payments), Medicare will make an add-on payment equal to the lesser of: (1) 65 percent of the costs of the new medical service or technology; or (2) 65 percent of the amount by which the costs of the case exceed the standard DRG payment. For a new technology that is a medical product designated by FDA as a QIDP, beginning with discharges on or after October 1, 2019, if the costs of a discharge involving a new technology (determined by applying CCRs as described in § 412.84(h)) exceed the full DRG payment (including payments for IME and DSH, but excluding outlier payments), Medicare will make an add-on payment equal to the lesser of: (1) 75 percent of the costs of the new medical service or technology; or (2) 75 percent of the amount by which the costs of the case exceed the standard DRG payment. For a new technology that is a medical product approved under FDA's LPAD pathway, beginning with discharges on or after October 1, 2020, if the costs of a discharge involving a new technology (determined by applying CCRs as described in § 412.84(h)) exceed the full DRG payment (including payments for IME and DSH, but excluding outlier payments), Medicare will make an add-on payment equal to the lesser of: (1) 75 percent of the costs of the new medical service or technology; or (2) 75 percent of the amount by which the costs of the case exceed the standard DRG payment. As set forth in § 412.88(b)(2), unless the discharge qualifies for an outlier payment, the additional Medicare payment will be limited to the full MS–DRG payment plus 65 percent (or 75 percent for certain antimicrobial products (QIDPs and LPADs)) of the estimated costs of the new technology or medical service. We refer the reader to the FY 2020 IPPS/LTCH PPS final rule (84 FR 42297 through 42300) for further discussion on the increase in the new technology add-on payment beginning with discharges on or after October 1, 2019.

As discussed in the FY 2025 IPPS/LTCH PPS final rule (89 FR 69245 through 69252), we finalized an increase in the new technology add-on payment percentage, reflected at § 412.88(a)(2)(ii)(C) and (b)(2)(iv), that for certain gene therapies approved for new technology add-on payments in the FY 2025 IPPS/LTCH PPS final rule that are indicated and used specifically for the treatment of sickle cell disease (SCD), effective with discharges on or after October 1, 2024 and concluding at the end of the 2- to 3-year newness period for such therapy, if the costs of a discharge (determined by applying CCRs as described in § 412.84(h)) involving the use of such therapy for the treatment of SCD exceed the full DRG payment (including payments for IME and DSH, but excluding outlier payments), Medicare will make an add-on payment equal to the lesser of: (1) 75 percent of the costs of the new medical service or technology; or (2) 75 percent of the amount by which the costs of the case exceed the standard DRG payment. We noted that these payment amounts would only apply to Casgevy™ (exagamglogene autotemcel) and Lyfgenia™ (lovotibeglogene autotemcel), when indicated and used specifically for the treatment of SCD, which were approved for new

technology add-on payments in the FY 2025 IPPS/LTCH PPS final rule (89 FR 69128 through 69135, and 89 FR 69188 through 69196).

We note that, consistent with the prospective nature of the IPPS, we finalize the new technology add on payment amount for technologies approved or conditionally approved for new technology add-on payments in the final rule for each fiscal year and do not make mid-year changes to new technology add-on payment amounts. Updated cost information may be submitted and included in rulemaking to be considered for the following fiscal year.

Section 503(d)(2) of the MMA (Pub. L. 108–173) provides that there shall be no reduction or adjustment in aggregate payments under the IPPS due to add-on payments for new medical services and technologies. Therefore, in accordance with section 503(d)(2) of the MMA, add-on payments for new medical services or technologies for FY 2005 and subsequent years have not been subjected to budget neutrality.

d. Evaluation of Eligibility Criteria for New Medical Service or Technology Applications

In the FY 2009 IPPS final rule (73 FR 48561 through 48563), we modified our regulation at § 412.87 to codify our longstanding practice of how CMS evaluates the eligibility criteria for new medical service or technology add-on payment applications. That is, we first determine whether a medical service or technology meets the newness criterion, and only if so, do we then make a determination as to whether the technology meets the cost threshold and represents a substantial clinical improvement over existing medical services or technologies. We specified that all applicants for new technology add-on payments must have FDA approval or clearance by July 1 of the year prior to the beginning of the fiscal year for which the application is being considered. In the FY 2021 IPPS/LTCH PPS final rule, to more precisely describe the various types of FDA approvals, clearances and classifications that we consider under our new technology add-on payment policy, we finalized a technical clarification to the regulation to indicate that new technologies must receive FDA marketing authorization [15] [16] (such as pre-market approval (PMA); 510(k) clearance; the granting of a De Novo classification request; or approval of a New Drug Application (NDA) or Biologics License Application (BLA)) by July 1 of the year prior to the beginning of the fiscal year for which the application is being considered (85 FR 58742). Consistent with our longstanding policy, we consider FDA marketing authorization as representing that a product has received FDA approval or clearance, or has been granted a De Novo classification request when considering eligibility for the new technology add-on payment.

Additionally, in the FY 2021 IPPS/LTCH PPS final rule (85 FR 58739 through 58742), we finalized our proposal to provide conditional approval for new technology add-on payment for a technology for which an application is submitted under the alternative pathway for certain antimicrobial products at § 412.87(d) that does not receive FDA marketing authorization by July 1 prior to the particular fiscal year for which the applicant applied for new technology add-on payments, provided that the technology otherwise meets the applicable add-on payment criteria. Under this policy, cases involving eligible antimicrobial products would begin receiving the new technology add-on payment sooner, effective for discharges the quarter after the date of FDA marketing authorization, provided that the technology receives FDA marketing authorization before July 1 of the fiscal year for which the applicant applied for new technology add-on payments.

As discussed in the FY 2024 IPPS/LTCH PPS final rule (88 FR 58948 through 58958) and the FY 2025 IPPS/LTCH PPS final rule (89 FR 69242 through 69245), beginning with the new technology add-on payment applications for FY 2025, for technologies that are not already FDA market authorized for the indication that is the subject of the new technology add-on payment application, applicants must have a complete and active FDA market authorization request at the time of new technology add-on payment application submission and must provide documentation of FDA acceptance (for a 510k application or De Novo Classification request) or filing (for a PMA, NDA, or BLA) to CMS at the time of application submission, consistent with the type of FDA marketing authorization application the applicant has submitted to FDA. See § 412.87(e) and further discussion in the FY 2024 IPPS/LTCH PPS final rule (88 FR 58948 through 58958) and the FY 2025 IPPS/LTCH PPS final rule (89 FR 69242 through 69245). As we have discussed in prior rulemaking, we consider the application to be complete when the full application has been submitted to FDA and FDA has provided documentation to the applicant indicating that FDA has determined that the application is sufficiently complete to allow for substantive review by FDA. We recognize that FDA processes and documentation may change over time, and the acceptance or filing documentation may vary depending on the type of FDA marketing authorization application the applicant has submitted to FDA. For example, we understand that FDA considers submission of a 510(k) or De Novo Classification request to be accepted for substantive review after the completion of either a refuse to accept (RTA) review or a technical screening process. [17] [18] Submissions of 510(k) and De Novo Classification requests undergo a technical screening process when they are submitted to FDA using the electronic Submission Template And Resource (eSTAR) process; 510(k) and De Novo Classification requests that are not submitted via eSTAR undergo an RTA review. Accordingly, FDA provides applicants using eSTAR with a review assignment notification to indicate that FDA has completed its technical screening process and has determined that the application is sufficiently complete to allow for substantive review. Therefore, new technology add-on payment applicants that have submitted a 510(k) application or De Novo Classification request to FDA through eSTAR must submit a copy of the review assignment notification to CMS (at the time of new technology add-on payment application) to establish the application is sufficiently complete to allow for substantive review by FDA. We note that PMAs submitted using eSTAR that complete technical screening will still undergo a subsequent filing review by FDA, after which an application is determined to be sufficiently complete to allow for substantive review; therefore, we

[16] Types of Applications *https://www.fda.gov/drugs/how-drugs-are-developed-and-approved/types-applications.*

[17] FDA and Industry Actions on Premarket Notification (510(k)) Submissions: Effect on FDA Review Clock and Goals Guidance for Industry and Food and Drug Administration Staff Document issued on October 3, 2022. *https://www.fda.gov/media/73507/download.*

[18] FDA and Industry Actions on De Novo Classification Requests: Effect on FDA Review Clock and Goals Guidance for Industry and Food and Drug Administration Staff Document issued on October 3, 2022. *https://www.fda.gov/media/107652/download.*

continue to require documentation of FDA filing for these applications.

In addition, we recognize that FDA does not conduct a new filing review for NDA or BLA applications that were the subject of a Complete Response Letter (CRL) and were subsequently resubmitted to FDA, even though resubmissions are considered a new review cycle.[19] [20] Therefore, beginning with the new technology add-on applications submitted for FY 2027, these new technology add-on payment applicants must provide to CMS a copy of the resubmission acknowledgement letter from FDA that provides the new goal date for FDA review of the application. We further note that if there are other processes not described here, or if there are further changes to FDA's review processes, consistent with our policy, applicants must provide to CMS the most up-to-date documentation that indicates FDA has determined that the application is sufficiently complete to allow for substantive review by FDA.

Comment: A commenter expressed support for this clarification and, as FDA's review processes evolve or other challenges arise, encouraged CMS to be flexible and to consider additional opportunities to clarify documentation requirements to ensure technologies remain eligible for new technology add-on payment and reach patients who need them, without creating further delays in the availability of new technology add-on payment.

Response: We appreciate the commenter's support and note that an applicant may submit to us specific questions regarding their new technology add-on payment application using the resources described on the CMS website for the electronic application intake system: *https://www.cms.gov/medicare/payment/prospective-payment-systems/acute-inpatient-pps/new-medical-services-and-new-technologies.*

In the FY 2024 IPPS/LTCH PPS final rule (88 FR 58948 through 58958), we also finalized that, beginning with FY 2025 applications, in order to be eligible for consideration for the new technology add-on payment for the upcoming fiscal year, an applicant for new technology add-on payments must have received FDA marketing authorization by May 1 (rather than July 1) of the year prior to the beginning of the fiscal year for which the application is being considered (except for an application that is submitted under the alternative pathway for certain antimicrobial products), as reflected at § 412.87(f)(2) and (3), as amended and redesignated in the FY 2024 IPPS/LTCH PPS final rule (88 FR 58948 through 58958, 88 FR 59331).

e. Pharmaceutical & Technology Ombudsman (PTO)

Many interested parties (including device/biologic/drug developers or manufacturers, industry consultants, others) engage with CMS for coverage, coding, and payment questions or concerns. In order to streamline engagement by centralizing the different innovation pathways within CMS including new technology add-on payments, CMS utilizes the Pharmaceutical & Technology Ombudsman as an initial resource for interested parties. This Ombudsman is available to assist with all of the following:

- Help to point interested parties to or provide information and resources where possible regarding process, requirements, and timelines.
- As necessary, coordinate and facilitate opportunities for interested parties to engage with various CMS components.
- Serve as a primary point of contact for interested parties and provide updates on developments where possible or appropriate.

We receive many questions from parties interested in pursuing new technology add-on payments who may not be entirely familiar with working with CMS. While we encourage interested parties to first review our resources available at *https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/AcuteInpatientPPS/newtech*, we know that there may be additional questions about the application process. Interested parties with further questions regarding Medicare's coverage, coding, and payment processes, and how they can navigate these processes, whether for new technology add-on payments or otherwise, should review the updated resource guide available at: *https://www.cms.gov/medicare/coding-billing/guide-medical-technology-companies-other-interested-parties.* Parties that would like to further discuss questions or concerns with CMS should contact the Pharmaceutical & Technology Ombudsman at *PharmTechOmbud@cms.hhs.gov*.

f. Application Information for New Medical Services or Technologies

Applicants for add-on payments for new medical services or technologies for FY 2027 must submit a formal request, including a full description of the clinical applications of the medical service or technology and the results of any clinical evaluations demonstrating that the new medical service or technology represents a substantial clinical improvement (unless the application is under one of the alternative pathways as previously described), along with a significant sample of data to demonstrate that the medical service or technology meets the high-cost threshold. CMS will review the application based on the information provided by the applicant under the pathway specified by the applicant at the time of application submission. Complete application information, along with final deadlines for submitting a full application, will be posted as it becomes available on the CMS website at: *https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/AcuteInpatientPPS/newtech.html*.

To allow interested parties to identify the new medical services or technologies under review before the publication of the proposed rule for FY 2027, once the application deadline has closed, CMS will post on its website a list of the applications submitted, along with a brief description of each technology as provided by the applicant.

As discussed in the FY 2023 IPPS/LTCH PPS final rule (87 FR 48986 through 48990), we finalized our proposal to publicly post online new technology add-on payment applications, including the completed application forms, certain related materials, and any additional updated application information submitted subsequent to the initial application submission (except certain volume, cost and other information identified by the applicant as confidential), beginning with the application cycle for FY 2024, at the time the proposed rule is published. We also finalized that with the exception of information included in a confidential information section of the application, cost and volume information, and materials identified by the applicant as copyrighted or not otherwise releasable to the public, the contents of the application and related materials may be posted publicly, and that we will not post applications that are withdrawn prior to publication of the proposed rule. We refer the reader to the FY 2023 IPPS/LTCH PPS final

[19] SOPP 8405.1: Procedures for Resubmissions to an Application or Supplement. Version: 8 Effective Date: November 13, 2022. *https://www.fda.gov/media/84417/download.*

[20] 21 CFR 314.110, Complete response letter to the applicant *https://www.ecfr.gov/current/title-21/chapter-I/subchapter-D/part-314/subpart-D/section-314.110.*

rule (87 FR 48986 through 48990) for further information regarding this policy. In the proposed rule, we stated that beginning with the new technology add-on applications submitted for FY 2027, we intend to include certain cost criterion information in this public posting; however, consistent with our current policy, cost and volume information will not be publicly posted. Consistent with current practice, certain cost and volume information may still be summarized and discussed in the proposed rule, but we intend to provide more succinct information as part of the summaries in the proposed and final rules regarding the applicant's assertions as to how the medical service or technology meets the cost criterion. Specifically, beginning with the FY 2027 applications, the public posting will include the applicant's explanation of the cost analysis methodology, including the step-by-step explanation of the columns used in the cost analysis spreadsheet attachment, any optional comments provided by the applicant, and information about the case weighted threshold and final inflated case weighted standardized charge per case, as is currently subject to discussion in the cost criterion analysis for each eligible application in the proposed rule. The cost analysis spreadsheet attachment and other charge values provided in the applicant's responses would not be included in the public posting. We stated that we believe that including the described cost criterion information in the public posting will further improve and streamline our evaluation process, while also further supporting transparency and engagement with interested parties.

Comment: Multiple commenters asked CMS to reconsider finalizing or request additional input from interested parties through rulemaking before finalizing the inclusion of certain cost criterion information in the public posting beginning with FY 2027. Commenters stated that because CMS already summarizes the relevant cost analyses in the proposed rules to allow interested parties to comment on the analyses, there is no extra benefit to additional disclosures. Some commenters stated that disclosing applicants' cost analyses raises confidentiality concerns because information about expected inpatient volume and other data incorporated within cost analyses are based on confidential commercial and financial information, including proprietary market analyses. A commenter further explained that for therapies that target small patient populations, even high-level methodological detail may be commercially sensitive or permit back-calculation of pricing strategy. Commenters explained that such information should be kept confidential, consistent with long-standing statutes recognizing the need to protect confidential commercial and financial information against public disclosure. Multiple commenters also noted that because of the single annual application period, applicants generally submit their applications before their products are approved by FDA, creating special sensitivities in disclosing pricing information. Commenters stated that public release of this information could create disincentives for small or emerging companies that may be more risk-averse with respect to transparency of confidential methods.

Multiple commenters requested that CMS provide additional details on the guardrails and specific steps the Agency would employ to ensure proprietary and market sensitive cost and pricing data provided by new technology add-on payment applicants are not inadvertently publicized, either directly or indirectly, through this proposal. For example, a commenter noted that the application asks the applicant to provide the charges related to the new technology, as well as the cost-to-charge ratio used to convert the product's cost to charges, and if CMS were to publish these two data points, the public would be able to calculate the cost of the product. Another commenter further asked CMS to articulate the policy gaps this proposal would address and what stakeholder needs it would serve.

A commenter recommended that CMS modify the proposal to allow applicants to redact, generalize, or submit alternate public summaries of methodology where disclosure could reasonably reveal proprietary strategy. It also asked that CMS provide clear written guidance on what components of the cost methodology are considered ''public'' versus protected from disclosure.

Another commenter also stated its appreciation and support for CMS's commitment to only publishing an explanation of the applicant's cost analysis methodology without including cost or pricing data, and CMS's effort to bring additional information about new technology add-on payment applications to the public. The commenter further asked that CMS create a sub-section text box dedicated to capturing proprietary information in the cost analysis methodology section that would not be included in any publication. Finally, the commenter asked that CMS avoid use of artificial intelligence in drafting summaries of applications for public display, including in the proposed rule, or ensure human review of the summary before publication.

Response: We thank the commenters for their feedback and appreciate the commenters' raising their concerns regarding balancing the need to maintain the confidentiality of commercial and financial information with our intent to further improve and streamline our evaluation process and support transparency and engagement with interested parties.

As discussed in the FY 2023 IPPS/LTCH PPS final rule (87 FR 48986 through 48990), we finalized to publicly post online new technology add-on payment applications, including the completed application forms, certain related materials (for example, attachments, uploaded supportive materials), and any additional updated application information submitted subsequent to the initial application submission (except certain volume, cost and other information identified by the applicant as confidential). We also provided a mechanism for applicants to submit confidential information that would not be posted online, such as in a separate section of the application, or by identifying particular questions for which the information submitted would not be publicly posted. We also stated we would not publicly post cost and volume information; however, consistent with our current practice, we would continue to summarize and discuss certain cost and volume information for the proposed rule and will indicate as such in the application. With the exception of information included in a confidential information section of the application, cost and volume information, and materials identified by the applicant as copyrighted and/or not otherwise releasable to the public, the contents of the application and related materials may be posted publicly.

While we did not initially include the cost criterion analysis and related materials in the public posting as we gained experience with the public posting process, as noted by the commenters, in the meantime, we have continued to summarize the information under the cost criterion, including the applicant's assertions and supporting data on how the technology meets the criteria under § 412.87, in the annual rules. This includes information such as: the inclusion/exclusion criteria used for the cost analysis, including the data source and list of ICD–10–CM/PCS codes and MS–DRGs used by the applicant, the number of claims and

MS–DRGs identified by the applicant for the cost analysis, the indirect and direct charges removed for prior technology (including the methodology used to estimate these charges), how the applicant standardized charges, the inflation factor applied to the standardized charges, the indirect and direct charges added for the new technology (including the methodology used to convert the cost of the new technology to charges), the average case-weighted threshold amount, and the final inflated average case-weighted standardized charge per case.

Under this current proposal, the processes described in the FY 2023 IPPS/LTCH PPS final rule (87 FR 48986 through 48990) remain unchanged. The information described by commenters, including high-level methodological detail or information about data incorporated within cost analyses, is already included or subject to inclusion in the proposed and final rulemaking. Under our existing practice, we generally do not consider information that is marked as confidential, proprietary, or trade secret when determining whether a technology meets the criteria for new technology add-on payments. We would continue to indicate in the application where certain information will not be posted publicly (for example, contact information, cost and volume), otherwise, applicants should expect that everything else may be posted publicly. We would continue to provide a mechanism for applicants to submit confidential information that would not be posted online in a separate section of the application. Certain cost and volume information would continue to be included in the proposed or final rulemaking. For example, for an alternative pathway application, we continue to include, as applicable, the maximum add-on payment amount, where cost information is available. In the final rule, we would continue to provide, for approved technologies, the final add-on payment amounts and volume estimates.

When reviewing the public postings prior to publication, we would continue to use human review rather than review by artificial intelligence. Under this proposal, the case weighted threshold and final inflated case weighted standardized charge per case would be included in the public posting because they are currently subject to discussion in the cost criterion analysis for each eligible application in the proposed rule. The cost criterion analysis spreadsheet attachment would continue to be excluded from the public posting. Other cost or charge values, such as for charges related to the new technology, provided in the applicant's responses would not be included in the public posting. Human review would be used to identify and manually redact cost or charge values that may have been provided in the applicant's responses in the cost criterion section.

We continue to believe that providing additional information to the public by publicly posting the applications and certain related materials online helps further public engagement and fosters greater public input on the various new medical services and technologies presented annually for consideration for new technology add-on payments. We also continue to believe that posting the applications online reduces the risk that we may inadvertently omit or misrepresent relevant information submitted by applicants, or are perceived as misrepresenting such information, in our summaries in the rules. We do not believe that it would be appropriate for applicants to further redact, generalize, or provide alternate public summaries that would differ from the information provided in their new technology add-on payment applications for public review. As noted, we will continue to provide a mechanism for applicants to submit confidential information that would not be posted online in a separate section of the application.

Therefore, we are finalizing that, beginning with the new technology add-on payment applications submitted for FY 2027, the public posting will include the applicant's explanation of the cost analysis methodology, including the step-by-step explanation of the columns used in the cost analysis spreadsheet attachment, any optional comments provided by the applicant, and information about the case weighted threshold and final inflated case weighted standardized charge per case, as is currently subject to discussion in the cost criterion analysis for each eligible application in the proposed rule. The cost analysis spreadsheet attachment and other cost or charge values that may have been provided in the applicant's responses in the cost criterion section would not be included in the public posting. Consistent with current practice, certain cost and volume information may still be summarized and discussed in the proposed rule, but we intend to provide more succinct information as part of the summaries in the proposed and final rules regarding the applicant's assertions as to how the medical service or technology meets the cost criterion.

We note that the burden associated with this information collection requirement is the time and effort required to collect and submit the data in the formal request for add-on payments for new medical services and technologies to CMS. The aforementioned burden is subject to the PRA and approved under OMB control number 0938–1347 and has an expiration date of December 31, 2026.

2. Public Input Before Publication of a Notice of Rulemaking on Add-On Payments

Section 1886(d)(5)(K)(viii) of the Act, as amended by section 503(b)(2) of the MMA, provides for a mechanism for public input before publication of a notice of proposed rulemaking regarding whether a medical service or technology represents a substantial clinical improvement. The process for evaluating new medical service and technology applications requires the Secretary to do all of the following:

- Provide, before publication of a proposed rule, for public input regarding whether a new service or technology represents an advance in medical technology that substantially improves the diagnosis or treatment of Medicare beneficiaries.
- Make public and periodically update a list of the services and technologies for which applications for add-on payments are pending.
- Accept comments, recommendations, and data from the public regarding whether a service or technology represents a substantial clinical improvement.
- Provide, before publication of a proposed rule, for a meeting at which organizations representing hospitals, physicians, manufacturers, and any other interested party may present comments, recommendations, and data regarding whether a new medical service or technology represents a substantial clinical improvement to the clinical staff of CMS.

In order to provide an opportunity for public input regarding add-on payments for new medical services and technologies for FY 2026 prior to publication of the FY 2026 IPPS/LTCH PPS proposed rule, we published a notice in the September 13, 2024, **Federal Register** (89 FR 74962) and held a virtual town hall meeting on December 11, 2024. In the announcement notice for the meeting, we stated that the opinions and presentations provided during the meeting would assist us in our evaluations of applications by allowing public discussion of the substantial clinical improvement criterion for the FY 2026 new medical service and technology add-on payment

applications before the publication of the FY 2026 IPPS/LTCH PPS proposed rule.

Approximately 200 individuals attended the virtual town hall meeting. We posted the recordings of the virtual town hall on the CMS web page at: *https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/AcuteInpatientPPS/newtech.*

We considered each applicant's presentation made at the town hall meeting, as well as written comments received by the December 16, 2024, deadline, in our evaluation of the new technology add-on payment applications for FY 2026 in the development of the FY 2026 IPPS/LTCH PPS proposed rule. In response to the published notice and the December 11, 2024, New Technology Town Hall meeting, we received written comments regarding the applications for FY 2026 new technology add on payments. As explained earlier and in the **Federal Register** notice announcing the New Technology Town Hall meeting (89 FR 74962 through 74964), the purpose of the meeting was specifically to discuss the substantial clinical improvement criterion with regard to pending new technology add-on payment applications for FY 2026. Therefore, we did not summarize any written comments in the proposed rule that were unrelated to the substantial clinical improvement criterion. In section II.E.5. of the preamble of the proposed rule, we summarized comments regarding individual applications, or, if applicable, indicated that there were no comments received in response to the New Technology Town Hall meeting notice or New Technology Town Hall meeting, at the end of each discussion of the individual applications.

3. ICD–10–PCS Section ''X'' Codes for Certain New Medical Services and Technologies

As discussed in the FY 2016 IPPS/LTCH PPS final rule (80 FR 49434), the ICD–10–PCS includes a new section containing the new Section ''X'' codes, which began being used with discharges occurring on or after October 1, 2015. Decisions regarding changes to ICD–10–PCS Section ''X'' codes will be handled in the same manner as the decisions for all of the other ICD–10–PCS code changes. That is, proposals to create, delete, or revise Section ''X'' codes under the ICD–10–PCS structure will be referred to the ICD–10 Coordination and Maintenance CommitteIn addition, several of the new medical services and technologies that have been, or may be, approved for new technology add-on payments may now, and in the future, be assigned a Section ''X'' code within the structure of the ICD–10–PCS. We posted ICD–10–PCS Guidelines on the CMS website at: *https://www.cms.gov/medicare/coding-billing/icd-10-codes*, including guidelines for ICD–10–PCS Section ''X'' codes. We encourage providers to view the material provided on ICD–10–PCS Section ''X'' codes.

4. FY 2026 Status of Technologies Receiving New Technology Add-On Payments for FY 2025

In this section of the final rule, we discuss the FY 2026 status of 42 technologies approved for 39 new technology add-on payments for FY 2025, as set forth in the tables that follow. In the proposed rule, we presented our proposals to continue the new technology add-on payments for FY 2026 for those technologies that were approved for the new technology add-on payment for FY 2025, and which would still be considered ''new'' for purposes of new technology add-on payments for FY 2026. We also presented our proposals to discontinue new technology add-on payments for FY 2026 for those technologies that were approved for the new technology add-on payment for FY 2025, and which would no longer be considered ''new'' for purposes of new technology add-on payments for FY 2026.

Our policy is that a medical service or technology may continue to be considered ''new'' for purposes of new technology add-on payments within 2 or 3 years after the point at which data begin to become available reflecting the inpatient hospital code assigned to the new service or technology. Our practice has been to begin and end new technology add-on payments on the basis of a fiscal year, and we have generally followed a guideline that uses a 6-month window before and after the start of the fiscal year to determine whether to extend the new technology add-on payment for an additional fiscal year, and, in general, we have extended new technology add-on payments for an additional year only if the 3-year anniversary date of the product's entry onto the U.S. market occurs in the latter half of the fiscal year (70 FR 47362).

As discussed in the FY 2025 IPPS/LTCH PPS final rule (89 FR 69238 through 69242), we finalized that, beginning with new technology add-on payments for FY 2026, in assessing whether to continue the new technology add-on payments for those technologies that are first approved for new technology add-on payments in FY 2025 or a subsequent year, we will extend new technology add-on payments for an additional fiscal year when the 3-year anniversary date of the product's entry onto the U.S. market occurs on or after October 1 of that fiscal year. This change is effective beginning with those technologies that are initially approved for new technology add-on payments in FY 2025 or a subsequent year. For technologies that were first approved for new technology add-on payments prior to FY 2025, including for technologies we determine to be substantially similar to those technologies, we continue to use the midpoint of the upcoming fiscal year (April 1) when determining whether a technology would still be considered ''new'' for purposes of new technology add-on payments.

In the proposed rule, we provided Table II.E–01.A listing the technologies that were first approved for new technology add-on payments prior to FY 2025, for which we proposed to continue making new technology add-on payments for FY 2026 because they were still considered ''new'' for purposes of new technology add-on payments because the 3-year anniversary date of the product's entry onto the U.S. market occurs on or after April 1, 2026. This table also presented the newness start date, new technology add-on payment start date, 3-year anniversary date of the product's entry onto the U.S. market, relevant final rule citations from prior fiscal years, proposed maximum add-on payment amount, and coding assignments for each technology. We referred readers to the cited final rules in the table for a complete discussion of the new technology add-on payment application, coding, and payment amount for these technologies, including the applicable indications and discussion of the newness start date.

In the proposed rule, we also provided Table II.E–01.B listing the technologies that were first approved for new technology add-on payments in FY 2025, for which we proposed to continue making new technology add-on payments for FY 2026 because they were still considered ''new'' for purposes of new technology add-on payments because the 3-year anniversary date of the product's entry onto the U.S. market occurs on or after October 1, 2025. This table also presented the newness start date, new technology add-on payment start date, 3-year anniversary date of the product's entry onto the U.S. market, relevant final rule citations from prior fiscal years, proposed maximum add-on payment amount, and coding assignments for each technology. We referred readers to the cited final rules in the table for a complete discussion of

the new technology add-on payment application, coding, and payment amount for these technologies, including the applicable indications and discussion of the newness start date.

We invited public comments on our proposals to continue new technology add-on payments for FY 2026 for the technologies listed in Tables II.E.–01.A and II.E.–01.B of the proposed rule.

Comment: Multiple commenters supported CMS's proposed continuation of new technology add-on payments for FY 2026 for those technologies that were approved for the new technology add-on payment for FY 2025, and which would still be considered ''new'' for purposes of new technology add-on payments for FY 2026.

Response: We appreciate the commenters' support.

Comment: Commenters, including the applicant for CYTALUX® for use in lung cancer, stated that they found that providers often do not bill for the full cost of the single-use vials when only a portion of the vial is administered during the surgical procedure. Commenters noted that this appears to be due confusion about whether Medicare Part B's discarded drug billing rules apply to inpatient billing under Medicare Part A, or uncertainty about whether the full vial cost should be reported in cases where only partial use occurs due to patient-specific dosing considerations.

The applicant noted that although the non-reporting of the full vial cost does not affect the triggering of the new technology add-on payment because payment is driven by the unique ICD–10–PCS code for CYTALUX®, this practice can decrease the likelihood that a hospital's reported cost for a case will exceed the payment threshold. Furthermore, commenters noted that underreporting of the full cost of CYTALUX® can distort the hospital's cost report data, which CMS relies upon for rate-setting purposes and for future MS–DRG assignments.

Commenters requested that CMS clarify that because hospitals are not required to report drug wastage, they should bill for the full package size used in administration, and that hospitals should report the full acquisition cost of inpatient-administered drugs in their cost reports, regardless of the quantity administered. A commenter further suggested that CMS could instead support the reporting of waste for products within the billing process for Medicare Part A inpatient billing, similar to what is required on Medicare Part B.

Response: We thank the applicant and other commenters for their comment. We note that they are correct that the drug wastage policy applies to Medicare Part B. We encourage commenters to consult the CMS Medicare discarded drug policy website at *https://www.cms.gov/medicare/payment/part-b-drugs/discarded-drugs* for further information.

Comment: The applicant for ZEVTERA® (ceftobiprole medocaril sodium for injection) submitted a comment providing updated information on its commercial availability and to update its Wholesale Acquisition Cost (WAC). The applicant noted that ZEVTERA® received marketing approval from FDA on April 3, 2024, for the treatment of adult patients with Staphylococcus aureus bloodstream infections (bacteremia) (SAB), including those with right-sided infective endocarditis, and adult patients with acute bacterial skin and skin structure infections (ABSSSI) and for adult and pediatric patients (3 months to less than 18 years old) with community-acquired bacterial pneumonia (CABP). The applicant also noted that ZEVTERA® received new technology add-on payment approval for FY 2025, with its newness period beginning on April 3, 2024.

Per the applicant, on December 14, 2024, it entered into a license and distribution agreement with Innoviva Specialty Therapeutics, LLC (ISTx) for the commercialization of ZEVTERA® in the United States. The applicant stated that transfer of ownership for the ceftobiprole Investigational New Drug (IND) Application (064407) and the ZEVTERA (ceftobiprole medocaril sodium for injection) NDA (218275) from Basilea to ISTx, LLC was submitted to FDA and was effective on March 18, 2025. ISTx, LLC announced on May 20th the commercial availability of ZEVTERA® for the US market. The applicant asserted that prior to this date, ZEVTERA® was not available to Medicare beneficiaries in the United States, and requested that CMS assign a newness date of May 20, 2025. The applicant asserted that CMS had delayed the newness dates for other products when market availability was significantly later than the FDA approval date, and provided examples from FY 2025: HEPZATO™ KIT, Annalise Enterprise CTB Triage—OH, and the LimFlow™ System.

The applicant also stated that ISTx, LLC made ZEVTERA® available for use on May 20, 2025, with a WAC of $235.00 per vial. The applicant explained that, with this updated pricing information, the average inpatient cost per case is $21,620 for the indication of SAB and $7,050 for the indication of ABSSSI and CABP. Therefore, because ZEVTERA® is a Qualified Infectious Disease Product (QIDP), the applicant requested that the maximum new technology add-on payment for a case involving the use of ZEVTERA® be updated to $16,215 for the indication of SAB and $5,288 for the indications of ABSSSI and CABP for FY 2026 (that is, 75 percent of the average cost of the technology).

Response: We thank the applicant for its comment and the updated cost information. We have updated the new technology add-on payment amount for ZEVTERA® accordingly.

ZEVTERA®'s current new technology add-on payment amount is $8,625.00 for the indication of SAB and $2,812.50 for the indications of ABSSSI and CABP, based on a WAC of $125 per vial. As we noted in the FY 2025 IPPS/LTCH PPS final rule (89 FR 69237), for ABSSSI and CABP, the suggested daily dose is 3 vials per day for a duration of 5–14 days, resulting in an estimated average cost of $3,750 for a 10-day therapy. For SAB, the recommended dose is every 6 hours for the first 8 days, followed by every 8 hours for up to 42 days, and the applicant had made the assumption that patients would be inpatient for 28 days and then continue the therapy as an outpatient for up to 42 days. For FY 2026, the maximum new technology add-on payment amount is $16,215.00 for the indication of SAB and $5,287.50 for the indications of ABSSSI and CABP, as reflected in Table II.E.–01.B in this final rule.

With respect to the applicant's request that CMS should consider the beginning of the newness period to commence on May 20, 2025, which it states is the date on which ZEVTERA® became commercially available on the U.S. market, we note that that date occurred after new technology add-on payments for ZEVTERA® began, as it was approved for new technology add-on payment for FY 2025 (starting October 1, 2024). While we agree that per our policy, we may consider a documented delay in a technology's market availability in our determination of newness, we note that the new technology add-on payment for claims reporting ICD–10–PCS procedure codes for ZEVTERA® (XW0335A (Introduction of ceftobiprole medocaril anti-infective into peripheral vein, percutaneous approach) and XW0435A (Introduction of ceftobiprole medocaril anti-infective into central vein, percutaneous approach)) was available beginning October 1, 2024.

Furthermore, as discussed in the FY 2025 IPPS/LTCH PPS final rule (89 FR 69238 through 69242), we finalized that,

beginning with new technology add-on payments for FY 2026, in assessing whether to continue the new technology add-on payments for those technologies that are first approved for new technology add-on payments in FY 2025 or a subsequent year, we would extend new technology add-on payments for an additional fiscal year when the 3-year anniversary date of the product's entry onto the U.S. market occurs on or after October 1 of that fiscal year. If we were to consider the beginning of the newness period to commence on May 20, 2025, the date on which the applicant states ZEVTERA® became commercially available on the U.S. market, under our policy, the technology would potentially be eligible for new technology add-on payment for up to four years. Although the applicant stated that CMS had delayed the newness start dates for other technologies when market availability was significantly later than the FDA approval date, and that like these other products, ZEVTERA®'s newness period should commence on the date on which the technology became commercially available, we note that, unlike these other technologies, the applicant for ZEVTERA® is asserting a date of commercial availability that occurred after its new technology add-on payment began.

We also note that applicants may assert a delay in commercial availability due to business decisions made by the applicant. We are concerned that a delay in commercial availability extending beyond the implementation date for the new technology add-on payment would potentially allow applicants to postpone commercial availability for an indefinite period of time while the technology (and other technologies reported using the same codes) remain eligible for new technology add-on payment.

Therefore, we question whether, where the applicant asserts a date of commercial availability that occurred after the new technology add-on payment for the technology began, it would be appropriate to instead consider the beginning of the newness period to commence with the start of the technology's new technology add-on payment. We note that regardless of whether we consider the beginning of the newness period to commence for ZEVTERA® on May 20, 2025, April 3, 2024, or a date in between, the three-year anniversary date would occur after April 1, 2026, and, therefore, the technology would be considered new for FY 2026.

After consideration of the public comments we received, we are finalizing our proposals to continue new technology add-on payments for FY 2026 for the technologies that were approved for new technology add-on payment for FY 2025 and would still be considered ''new'' for purposes of new technology add-on payments for FY 2026, as listed in the proposed rule and in the following Tables II.E.–01.A and II–E.–01.B in this section of this final rule.

We note that the following Tables II.E.–01.A and II.E.–01.B are the same as Tables II.E.–01.A and II.E.–01.B that were presented in the proposed rule, but Table II.E.–01.A in this final rule includes the SAINT Neuromodulation System, as discussed later in this section, and Table II.E.–01.B in this final rule includes the updated cost information for ZEVTERA®, as discussed previously. Tables II.E.–01.A and II.E.–01.B in this final rule also present the newness start date, new technology add-on payment start date, 3-year anniversary date of the product's entry onto the U.S. market, relevant final rule citations from prior fiscal years, maximum add-on payment amount, and coding assignments for each technology. We refer readers to the final rules cited in the following tables for a complete discussion of the new technology add-on payment application, coding, and payment amount for these technologies, including the applicable indications and discussion of the newness start date.

*We note that as discussed previously in this section, we are continuing to consider the applicable newness start date for this technology, but that it would continue to be eligible for new technology add-on payment in FY 2026.

BILLING CODE 4120–01–C

In the proposed rule, we provided a Table II.E.–02 listing the technologies that were first approved for new technology add-on payments prior to FY

2025, including technologies determined to be substantially similar to such technologies, for which we proposed to discontinue making new technology add-on payments for FY 2026 because they were no longer ''new'' for purposes of new technology add-on payments because the 3-year anniversary date of the product's entry onto the U.S. market occurs before April 1, 2026. This table also presented the newness start date, new technology add-on payment start date, the 3-year anniversary date of the product's entry onto the U.S. market, and relevant final rule citations from prior fiscal years. We referred readers to the cited final rules in the table for a complete discussion of each new technology add-on payment application and the coding and payment amount for these technologies, including the applicable indications and discussion of the newness start date.

As we discussed in section II.E.6. of the preamble of the proposed rule, BONESUPPORT, Inc. is also seeking new technology add-on payments for CERAMENT® G for FY 2026 for use in defects in the extremities of skeletally mature patients as an adjunct to systemic antibiotic therapy and surgical debridement as part of the standard treatment approach to open fractures. Additionally, as discussed in the FY 2023 IPPS/LTCH PPS final rule (87 FR 48961 through 48966), CERAMENT® G was approved for new technology add-on payments with an indication for use as a bone void filler in skeletally mature patients as an adjunct to systemic antibiotic therapy and surgical debridement (standard treatment approach to a bone infection) as part of the surgical treatment of osteomyelitis in defects in the extremities. For the proposed rule, we proposed to discontinue new technology add-on payments for FY 2026 for CERAMENT® G when used for bone infections, as the technology will no longer be considered new for this indication. We believed cases involving the use of CERAMENT® G related to bone infections, which would no longer be eligible for new technology add-on payment in FY 2026, would be identified by the ICD–10–PCS code XW0V0P7 (Introduction of antibiotic-eluting bone void filler into bones, open approach, new technology group 7) in combination with the ICD–10–CM codes in category M86 (Osteomyelitis). We invited public comments on the use of these codes to exclude the indication for use of CERAMENT® G related to bone infections, which we stated would not be eligible for the new technology add-on payment for FY 2026, if approved.

Comment: Commenters expressed general support of the proposed ICD–10–CM codes for which CMS specifically sought input.

Response: We thank the commenters for their comments. As discussed in section II.E.6. of the preamble of this final rule, we are approving CERAMENT® G for new technology add-on payments for FY 2026 for use as a bone void filler intended for use in defects in the extremities of skeletally mature patients as an adjunct to systemic antibiotic therapy and surgical debridement as part of the standard treatment approach to open fractures. Therefore, cases involving the use of CERAMENT® G related to bone infections, which will no longer be eligible for new technology add-on payment in FY 2026, will be identified by the ICD–10–PCS code XW0V0P7 (Introduction of antibiotic-eluting bone void filler into bones, open approach, new technology group 7) in combination with the ICD–10–CM codes in category M86 (Osteomyelitis).

We invited public comments on our proposals to discontinue new technology add-on payments for FY 2026 for the technologies listed in Table II.E.–02 of the proposed rule.

Comment: Multiple commenters, including the applicant for SAINT Neuromodulation System, requested that CMS recognize a delay in commercial availability of the technology to April 5, 2024, and subsequently extend new technology add-on payment for the SAINT Neuromodulation System for FY 2026.

Commenters presented the timelines for use of the device at their hospitals. A commenter stated that equipment was installed at the hospital on May 9 through 10, 2024; physicians and staff were trained by the manufacturer on May 15 through 17, 2024; and the first patient was treated on May 23, 2024. Another commenter stated that equipment was installed at its hospital on April 23, 2024; physicians and staff were trained between April 29 and May 1, 2024; and the first patients were treated on May 30, 2024. Commenters stated their hope that innovation for inpatient mental health patients would continue to be available to hospitals in 2026.

The applicant also asserted that the SAINT Neuromodulation System was commercially available in the United States on April 5, 2024, and provided a timeline of the device's availability. The applicant stated that although the device received FDA clearance on September 1, 2022, there were significant product development, manufacturing design, and compliance steps that it needed to complete before the device became commercially available. Per the applicant, initially, it had planned to develop and manufacture its own hardware; however, it was determined in the second half of 2023 that the best course was to work with third-party manufacturers for the stimulator and neuronavigation hardware. The applicant stated that for compliance purposes, it followed a development plan consistent with its quality system and the commercial product could not be sold until the manufacturing processes were designed, developed, and validated according to FDA quality guidelines. Per the applicant, this process was finished on April 5, 2024, which was the earliest possible date the device could be sold in compliance with FDA regulations.

The applicant further stated that in the FY2025 IPPS/LTCH PPS final rule, it was surprised to learn that there had been claims submitted with the ICD–10–PCS section X code that was created to administer the new technology add-on payment for the SAINT Neuromodulation System, before it was commercially available. The applicant stated it analyzed the claims using the Medicare Inpatient Standard Analytic Files (IPSAF) from October 2022 through March 2024 and confirmed that none of the billed cases were submitted by providers with access to the device or had discussed the device with the applicant.

The applicant further looked at the primary diagnoses, all diagnoses, and MS–DRG mapping for these claims. The applicant explained that the device is intended to treat patients with major depressive disorder with claims including ICD–10–CM diagnosis codes F33.2 or F32.2 and whose cases map to MS–DRG 885 (Psychoses), yet none of the claims contained either a psychiatric diagnosis or were assigned to MS–DRG 885. The applicant asserted that these claims used the ICD–10–PCS code inappropriately, and provided additional details in a summary table. Per the applicant, in the FY 2026 final rule, CMS stated that the applicant stated the specific ICD–10–PCS code X0Z0X18 is ''used to uniquely describe procedures involving the use of SAINT Neuromodulation System,'' which the applicant stated supports its contention that the procedure code was intended to be used specifically for the device or a procedure that is virtually the same when the technology was introduced into the clinical setting. Therefore, the applicant asserted that the 5 claims should not have been accepted as qualifying claims and should not be

included in the evaluation of continued eligibility.

The applicant asked that CMS establish the newness start date for the SAINT Neuromodulation System to be April 5, 2024, and noted that this would allow for the new technology add-on payment to continue in FY 2026. The applicant further asserted that this accurate newness date and continued new technology add-on payment would no longer result in premature termination of payment. The applicant stated that to fulfill the requirement for an adequate period of data collection of no less than 2 and no more than 3 years, terminating the new technology add-on payment at the end of FY 2025 would fall short of two years of active new technology add-on payment.

Response: We thank the applicant and the commenters for their comments and further details regarding the claims reporting the ICD–10–PCS code X0Z0X18 (Computer-assisted transcranial magnetic stimulation of prefrontal cortex, new technology group 8). As discussed in greater detail previously in this section, we question whether, where the applicant asserts a date of commercial availability that occurred after the new technology add-on payment for the technology began, it would be appropriate to instead consider the beginning of the newness period to commence with the start of the technology's new technology add-on payment. We note that regardless of whether we consider the beginning of the newness period to commence for SAINT Neuromodulation System on April 5, 2024; a date that reflects the start of the technology's new technology add-on payment in FY 2024; or a date in between, the three-year anniversary date would occur after April 1, 2026, and, therefore, the technology would be considered new for FY 2026.

Comment: Multiple commenters, including the applicant for EchoGo® Heart Failure 1.0 (referred to as EchoGo® Heart Failure), requested that CMS extend new technology add-on payment for EchoGo® Heart Failure for a third year. The commenters noted that EchoGo® Heart Failure, developed by Ultromics, is an FDA-cleared, AI-powered decision support platform designed to assist clinicians in detecting heart failure with preserved ejection fraction (HFpEF) using a single, routine echocardiogram view, and described the clinical need and clinical value of the device in identifying HFpEF from a standard echocardiogram.

The applicant stated that the request to extend new technology add-on payment is consistent with CMS's longstanding policy that the newness period begins with availability of the product on the market, which is when data become available. The applicant explained that the device was not available on the market until November 2023, when it entered its first contract with a customer and invoiced a customer for the service. As such, the applicant asserted that the three-year anniversary of entry into the U.S. market would be in November of 2026. The applicant noted that CMS has recognized a later date where an applicant could prove a delay in actual availability of a product after FDA approval or clearance. Therefore, the applicant stated that consistent with this policy, CMS should not use the identified date of November 23, 2022 (date of FDA marketing authorization) as the newness start date for EchoGo® Heart Failure because that does not reflect when the product was first available.

The applicant explained that the reason for the gap in time from FDA clearance to sales of EchoGo® Heart Failure was that upon FDA clearance, it had to perform considerable architectural and workflow changes to integrate the software into the product platform. Additionally, the applicant stated that it took considerable time to implement its product platform into a hospital's Picture Archiving and Communication System (PACS) and electronic health record (EHR) systems, all of which delayed it being able to have a viable and available product for which it could sign a commercial contract until 12 months after clearance. The applicant explained that it was not until late in 2023 that it could pursue contracts with customers, the first of which was signed in November of 2023, leading to a first invoice dated November 30, 2023. The applicant further stated that in light of this information, supplemented by its understanding that there are no claims for the ICD–10–PCS procedure code tied to the technology (XXE2X19) in the MedPAR database of FY 2023 claims, it asked CMS to apply its current policy and consider the starting point for the newness period for EchoGo® Heart Failure to begin in November of 2023, not November of 2022, such that EchoGo® Heart Failure would continue to receive new technology add-on payment for FY 2026.

Commenters stated that that while EchoGo® Heart Failure had been available with new technology add-on payment since October 2023, the technology is still in the early stages of adoption across U.S. hospitals. Commenters explained that new technology add-on payment has been instrumental in facilitating access to the device by offsetting the additional costs associated with its use. However, commenters asserted that broader clinical integration and real-world evidence generation of novel technologies require more than two years, particularly in the context of hospital operational cycles, education, and ongoing validation in diverse patient populations. Commenters explained that extending new technology add-on payment for a third year would: ensure continued access to EchoGo® Heart Failure for Medicare beneficiaries, particularly as hospitals complete the necessary training and workflow adjustments; support ongoing data collection and outcomes research, further establishing the clinical and economic value of the technology; and encourage adoption in a wider range of hospital settings, including those serving high-risk and underserved populations disproportionately affected by HFpEF.

The applicant stated that if CMS did not believe this extension is warranted under current policy, it should make changes to the new technology add-on payment policy to provide new technology add-on payment for three years for all technologies, similar to what was done under the hospital outpatient prospective payment system pass-through policy. The applicant explained that it can take a considerable period of time for a new technology to enter into the market, and that having a later year's data should provide more fulsome data set for rate setting. The applicant stated that CMS should not settle for data that would not be insufficient, but instead should strive to use as fulsome a data set as possible when making the important determination as to how to work a new technology into the MS–DRGs.

Response: We thank the applicant and commenters for their comments. We note that while CMS may consider a documented delay in the technology's market availability in our determination of newness, our policy for determining whether to extend new technology add-on payments for an additional year generally applies regardless of the volume of claims for the technology after the beginning of the newness period (83 FR 41280). We do not consider the date of first sale of a product, or first shipment of a product, as an indicator of the entry of a product onto the U.S. market; neither of these dates indicate when a technology in fact became available for sale. Similarly, our policy for determining whether to extend new technology add-on payments for a third year generally

applies regardless of the claims volume for the technology after the start of the newness period (88 FR 58801 through 58802).

The applicant stated the device was not available on the market until November 2023, which is when the applicant was able to enter its first contract with a customer and invoice a customer for the service; however, it is not clear to us when the technology first became *available* for sale. The applicant noted that it was not until late in 2023 that it had taken such steps that it could pursue contracts with customers, the first of which was signed in November of 2023, leading to a first invoice dated November 30, 2023. However, it seems that a viable product would have needed to be available for sale before the applicant would be able to pursue and enter its first contract. Furthermore, we note that according to the applicant's website, the device was available in the United States as of the press release on July 5, 2023,[21] if not earlier. This further conflicts with the applicant's assertion that the device was not available for sale until November 2023.

Therefore, we cannot determine a newness date based on a documented delay in the technology's availability on the U.S. market. Accordingly, we are finalizing that we consider November 23, 2022, the date on which the technology received FDA 510(k) clearance for the indication covered by its Breakthrough Device designation, to be the date the technology became available on the market and the beginning of its newness period.

We also disagree with the applicant's request that if CMS does not believe this extension is warranted under current policy, we should make changes to the new technology add-on payment policy to provide new technology add-on payment for three years for all technologies, similar to the hospital outpatient prospective payment system pass-through policy, to allow for as fulsome a data set as possible. When we had stated in the FY 2025 IPPS/LTCH PPS final rule (89 FR 69241) that we did not believe that 2 years' worth of data would be insufficient to inform rate-setting for the inpatient setting, we also noted that, as described in the FY 2005 IPPS final rule (69 FR 49003), even if a technology does not receive new technology add-on payments, CMS continues to pay for new technologies through the regular payment mechanism established by the DRG payment methodology. In addition, the costs incurred by the hospital for a case are evaluated to determine whether the hospital is eligible for an additional payment as an outlier case. This additional payment is designed to protect the hospital from large financial losses due to unusually expensive cases. Any eligible outlier payment is added to the DRG-adjusted base payment rate (88 FR 58648). We further noted that whether a technology receives new technology add-on payments or not does not affect coverage of the technology or the ability for hospitals to provide a technology to patients where appropriate.

After consideration of the public comments we received, we are finalizing our proposal to discontinue new technology add-on payments for the technologies as listed in the proposed rule and in the following Table II.E.-02 of this final rule for FY 2025 because they are no longer ''new'' for purposes of new technology add-on payments. We note that Table II.E.-02 is the same as Table II.E.-02 that was presented in the proposed rule, but Table II.E.-02 in this final rule no longer lists the SAINT Neuromodulation System, as discussed previously. This Table II.E.-02 also presents the newness start date, new technology add-on payment start date, the 3-year anniversary date of the product's entry onto the U.S. market, and relevant final rule citations from prior fiscal years. We refer readers to the final rules cited in the following table for a complete discussion of each new technology add-on payment application and the coding and payment amount for these technologies, including the applicable indications and discussion of the newness start date.

BILLING CODE 4120–01–C

5. FY 2026 Applications for New Technology Add-On Payments (Traditional Pathway)

As discussed previously, in the FY 2023 IPPS/LTCH PPS final rule, we finalized our policy to publicly post online applications for new technology add-on payment beginning with FY 2024 applications (87 FR 48986 through 48990). As noted in the FY 2023 IPPS/LTCH PPS final rule, we are continuing to summarize each application in this final rule. However, while we are continuing to provide discussion of the concerns or issues we identified with respect to applications submitted under the traditional pathway, we are providing more succinct information as part of the summaries in the proposed and final rules regarding the applicant's assertions as to how the medical service or technology meets the newness, cost, and substantial clinical improvement criteria. We refer readers to *https://mearis.cms.gov/public/publications/ntap* for the publicly posted FY 2026 new technology add-on payment applications and supporting information (with the exception of certain cost and volume information, and information or materials identified by the applicant as confidential or copyrighted), including tables listing the ICD–10–CM codes, ICD–10–PCS codes, and/or MS–DRGs related to the analyses of the cost criterion for certain technologies for the FY 2026 new technology add-on payment applications.

We received 19 applications for new technology add-on payments for FY 2026 under the new technology add-on payment traditional pathway. In accordance with the regulations under § 412.87(f), applicants for FY 2026 new technology add-on payments must have received FDA marketing authorization by May 1 of the year prior to the beginning of the fiscal year for which the application is being considered. As discussed in the FY 2024 IPPS/LTCH PPS final rule (88 FR 58948 through 58958) and the FY 2025 IPPS/LTCH PPS final rule (89 FR 69242 through 69245), we finalized that beginning with the new technology add-on payment applications for FY 2025, for technologies that are not already FDA market authorized for the indication that is the subject of the new technology add-on payment application, applicants must have a complete and active FDA market authorization request at the time of new technology add-on payment application submission and must provide documentation of FDA acceptance or filing to CMS at the time of application submission, consistent with the type of FDA marketing authorization application the applicant has submitted to FDA. See § 412.87(e) and further discussion in the FY 2024 and FY 2025 IPPS/LTCH PPS final rules (88 FR 58948 through 58958, 89 FR 69242 through 69245). Of the 19 applications received under the traditional pathway, 2 applicants were not eligible for consideration for new technology add-on payment because they did not meet these requirements, and 3 applicants withdrew their applications prior to the issuance of the proposed rule. Subsequently, prior to the issuance of this final rule, one additional application was withdrawn for DuraGraft® (Vascular Conduit Solution). We are not including in this final rule the description and discussion of applications that were withdrawn or that are ineligible for consideration for FY 2026. We are addressing the remaining 13 applications. We are not approving new technology add-on payments for 8 technologies: AUCATZYL® (obecabtagene autoleucel), COBENFY™ (xanomeline and trospium chloride), FIBRYGA® (fibrinogen (human)), IntelliSep® Test, Neuroguard IEP® 3-in-1 Carotid Stent and Post-Dilation Balloon System with Integrated Embolic Protection, RYSTIGGO® (rozanolixizumab-noli), SYMVESS™ (acellular tissue engineered vessel-tyod), and ZIIHERA® (zanidatamab-hrii) for the reasons discussed in the following sections. We are approving new technology add-on payments for FY 2026 for the remaining 5 technologies: AURLUMYN™ (iloprost injection), BREYANZI® (lisocabtagene maraleucel), GRAFAPEX™ (treosulfan), IMDELLTRA® (tarlatamab-dlle), and TECELRA® (afamitresgene autoleucel). A discussion of these applications is presented in the following sections.

a. AUCATZYL® (obecabtagene autoleucel)

Autolus Therapeutics, Inc. submitted an application for new technology add-on payments for AUCATZYL® for FY 2026. According to the applicant, AUCATZYL® is a fast off-rate cluster of differentiation 19 (CD19) autologous chimeric antigen receptor (CAR) T-cell therapy with tumor burden-guided dosing designed to improve persistence and reduce immune-mediated toxicity. Per the applicant, AUCATZYL® is indicated for the treatment of adults with relapsed or refractory (R/R) B-cell precursor acute lymphoblastic leukemia (B–ALL).

Please refer to the online application posting for AUCATZYL®, available at *https://mearis.cms.gov/public/publications/ntap/NTP241002GUJHV*, for additional detail describing the technology and the disease treated by the technology.

With respect to the newness criterion, according to the applicant, AUCATZYL® was granted BLA approval from FDA on November 8, 2024, for the treatment of adults with R/R B–ALL. According to the applicant, AUCATZYL® was commercially available immediately after FDA approval. The applicant stated that a single treatment of AUCATZYL® consists of two intravenous infusions (given on Day 1 and Day 10 [±2]) administered via a syringe or gravity-assisted infusion through a central or peripheral venous line over a few minutes. Per the applicant, each infusion is packaged in three or more infusion bags containing a cell dispersion of the target tumor burden-guided dose of 410×10^6 CD19 CAR-positive viable T cells.[23]

The applicant stated that, effective October 1, 2024, the following ICD–10–PCS codes may be used to uniquely describe procedures involving the use of AUCATZYL®: XW0338A (Introduction of obecabtagene autoleucel into peripheral vein, percutaneous approach, new technology group 10) or XW0438A (Introduction of obecabtagene autoleucel into central vein, percutaneous approach, new technology group 10). The applicant stated that C91.00 (Acute lymphoblastic leukemia not having achieved remission), C91.01 (Acute lymphoblastic leukemia, in remission), or C91.02 (Acute lymphoblastic leukemia, in relapse) may

[22] As discussed in the FY 2025 IPPS/LTCH PPS final rule (89 FR 69149 through 69155), we determined that ELREXFIO™ (elranatamab-bcmm) and TALVEY™ (talquetamab-tgvs) were substantially similar to TECVAYLI® (teclistamab-cqyv), which was first approved for new technology add-on payment in the FY 2024 IPPS/LTCH PPS final rule (88 FR 58885 through 58891). In accordance with our policy, because these technologies are substantially similar to each other, we use the earliest market availability date submitted as the beginning of the newness period for these technologies, November 9, 2022, the date TECVAYLI® became commercially available. As discussed previously in this section, for technologies that were first approved for new technology add-on payments prior to FY 2025, including for technologies we determine to be substantially similar to those technologies, we continue to use the midpoint of the upcoming fiscal year (April 1) when determining whether a technology would still be considered ''new'' for purposes of new technology add-on payments.

[23] The applicant stated that the first dose, infused on Day 1, is determined by the patient's bone marrow disease burden within 7 days prior to lymphodepletion, and the second dose, infused on Day 10 [±2], is tailored for a total dose of 410×10^6 CAR T cells to complete the single treatment of AUCATYZL®.

be used to currently identify the R/R B–ALL indication for AUCATZYL® under the ICD–10–CM coding system.

As previously discussed, if a technology meets all three of the substantial similarity criteria under the newness criterion, it would be considered substantially similar to an existing technology and would not be considered ''new'' for the purpose of new technology add-on payments.

With respect to the substantial similarity criteria, the applicant asserted that AUCATZYL® is not substantially similar to other currently available technologies because it has a distinct immune-modulating mechanism of action and first-in-class tumor burden-guided dosing indicated for the treatment of adults with R/R B–ALL, and that therefore, the technology meets the newness criterion. More specifically, the applicant asserted that AUCATZYL® is the only CAR T-cell therapy constructed using the differentiated 4–1BB co-stimulatory domain with a novel, proprietary low affinity, fast off-rate CAT19 binding domain, and tumor burden-guided dosing. The following table summarizes the applicant's assertions regarding the substantial similarity criteria. Please see the online application posting for AUCATZYL® for the applicant's complete statements in support of its assertion that AUCATZYL® is not substantially similar to other currently available technologies.

BILLING CODE 4120–01–P

Substantial Similarity Criteria	Applicant Response	Applicant assertions regarding this criterion
Does the technology use the same or similar mechanism of action to achieve a therapeutic outcome?	No	AUCATZYL® is not substantially similar to currently available T-cell therapies indicated for the treatment of adult R/R B-ALL, specifically TECARTUS® (brexucabtagene autoleucel), the only currently available CD19 CAR T-cell therapy for this population. Specifically, AUCATZYL® is designed to model physiological T-cell activation, and its CAR is constructed using the differentiated 4-1BB co-stimulatory domain along with a proprietary and unique CAT19 binding domain, specifically designed to improve potency and persistence and to reduce immune-mediated toxicity. Shorter cell-cell contact resulting from the >40-fold lower affinity of CAT19 (off-rate of 3.7 minutes) compared with the FMC63 antigen-binding domain (off-rate of 2.8 hours) used in currently available CAR T-cell therapy, including TECARTUS®, serves to reduce cytokine release and toxicity, reduces CAR T-cell exhaustion and enhances CAR T-cell persistence. The 4-1BB co-stimulatory domain is also highly differentiated from the CD28 co-stimulatory domain used in TECARTUS®; the 4-1BB distinct signaling pathway results in lower T-cell activation, increased mitochondrial biogenesis, greater oxidative metabolism, and sustained CAR T-cell persistence. AUCATZYL® is also specifically designed to follow a manageable, personalized tumor burden-guided dosing schedule to proactively mitigate risk of cytokine release syndrome (CRS) and immune effector cell-associated neurotoxicity syndrome (ICANS), addressing the potential for toxicity in older patients and for consideration of patients with higher disease burden. The first-in-class tumor burden-guided dosing of AUCATZYL® tailors administration based on the individual patient's disease burden and corresponding immunotoxicity risk and supports maximal control for the treating physician, while minimizing immune-related toxicities and maximizing treatment effect.
Is the technology assigned to the same MS-DRG as existing technologies?	Yes	CMS has made the determination that ICD-10-PCS procedure codes identifying all CAR T-cell therapies will map to Pre-MDC MS-DRG 018 (Chimeric antigen receptor (CAR) T-cell and other immunotherapies), including previously approved TECARTUS® indicated for adult R/R B-ALL. Patient claims for adult R/R B-ALL patients where AUCATZYL® is administered will also be mapped to Pre-MDC MS-DRG 018 and will be identified by unique, AUCATZYL®-specific ICD-10-PCS codes which have been approved by CMS with an effective date of October 1, 2024.
Does new use of the technology involve the treatment of the same/similar type of disease and the same/similar patient population when compared to an existing technology?	Yes	Inpatient cases involving adults with r/r B-ALL are identified by existing ICD-10-CM diagnosis codes C91.00 (Acute lymphoblastic leukemia not having achieved remission), C91.01 (Acute lymphoblastic leukemia, in remission), and C91.02 (Acute lymphoblastic leukemia, in relapse). These same ICD-10-CM diagnosis codes will identify adult R/R B-ALL patient types eligible for treatment with AUCATZYL®, where the inpatient claims will be identified by unique AUCATZYL® ICD-10-PCS codes, XW0338A or XW0438A, effective October 1, 2024. Importantly, the eligible patient population for treatment with AUCATZYL® is expected to be expanded because of the substantial clinical benefits of its highly differentiated immune-modulating mechanism of action and the first-in-class tumor burden-guided dosing, namely because of a significantly improved safety profile with very low rates of severe CRS and ICANS and high, sustained remissions following the single treatment of AUCATZYL®. The promise of these clinically meaningful results after treatment with AUCATZYL® are especially important for the older Medicare population, the Hispanic population that faces worse survival outcomes than patients of other ethnicities, and others with overall poor health and high disease burden; today, these populations are either considered ineligible for currently available therapies or are at elevated risk following treatment or consolidation with allogenic hemopoietic stem cell transplant (HSCT).

BILLING CODE 4120–01–C

As discussed in the FY 2026 IPPS/LTCH PPS proposed rule (90 FR 18092), we had the following concerns with regard to the newness criterion. We noted that the applicant asserted that AUCATZYL® does not use the same or

similar mechanism of action as existing technologies for R/R B–ALL in adults because AUCATZYL®'s co-stimulatory and binding domains differ from those of TECARTUS®, which the applicant stated is the only other currently available CD19-directed CAR T-cell immunotherapy for this population. However, we noted that in the FY 2019 IPPS/LTCH PPS final rule (83 FR 41285 through 41291), with regard to the CAR T-cell therapies KYMRIAH® (tisagenlecleucel) and YESCARTA® (axicabtagene ciloleucel), we stated that although the two technologies were not completely the same in terms of manufacturing processes, co-stimulatory domains, and clinical profiles, these differences did not result in different mechanisms of action, and therefore, inferred that the technologies' mechanisms of action were the same. Similarly, we questioned whether differences in the co-stimulatory and binding domains for AUCATZYL® and TECARTUS® result in the use of a different mechanism of action. In addition, we noted that KYMRIAH® is also a CD19-directed CAR T-cell immunotherapy, and it is indicated for the treatment of patients up to 25 years of age with R/R B–ALL. We stated our belief that the mechanism of action for all three therapies is the binding to CD19 by a CAR construct, which results in T-cell activation and killing of malignant cells in the treatment of B–ALL. Furthermore, while the applicant also stated that AUCATZYL®'s personalized tumor burden-guided dosing schedule is first in class and differentiates it from other technologies' mechanisms of action, we stated we were unclear how a technology's dosing schedule is relevant to its mechanism of action. Accordingly, as it appeared that AUCATZYL®, TECARTUS®, and KYMRIAH® may use the same or similar mechanism of action to achieve a therapeutic outcome, are assigned to the same MS–DRG, and treat the same or similar patient population and disease, that is, adult patients with R/R B–ALL, we stated our belief that these technologies may be substantially similar to each other. We noted that, per our policy, if these technologies are substantially similar to each other, we use the earliest market availability date as the beginning of the newness period for the technologies. Therefore, if AUCATZYL® is substantially similar to TECARTUS® and KYMRIAH®, we stated our belief that the newness period for this technology would begin on November 22, 2017, the date KYMRIAH® became commercially available.[24] In addition, because the 3-year anniversary date of the KYMRIAH®'s entry onto the U.S. market (November 22, 2020) occurred in FY 2021, AUCATZYL® would no longer be considered new and would not be eligible for new technology add-on payments for FY 2026. We stated we were interested in information on how these technologies may differ from each other with respect to the substantial similarity criteria and newness criterion.

We invited public comments on whether AUCATZYL® meets the newness criterion, including whether AUCATZYL® is substantially similar to TECARTUS® and KYMRIAH® for purposes of new technology add-on payments.

Comment: Several commenters submitted comments in support of new technology add-on payments for AUCATZYL®. Some of the commenters disagreed with CMS's proposal to treat AUCATZYL® as substantially similar to other CD19-directed CAR T-cell therapies. A commenter argued that CMS's proposed approach does not take into consideration the specifics of the technological advancements that differentiate how mechanisms of action are achieved. Some commenters stated that when determining whether a CAR T-cell therapy sufficiently demonstrates substantial similarity compared to an existing technology, CMS should recognize innovations in the newer generation of therapies and how they differentiate these from previous CAR T-cell therapies. According to these commenters, those advancements should form the basis for differentiation as a distinct mechanism of action and without recognition of such advancements, continued innovation in the CAR T-cell therapy field may be discouraged and Medicare beneficiaries may be denied equitable access to such treatment advances. Some commenters argued that CMS should consider each CAR T-cell therapy application for new technology add-on payments on its own merits and not overly anchor to previous decisions to inform evaluation of the current fiscal year's applications. Per a commenter, it is especially important that CMS consider technological advancements when evaluating similarity of mechanisms of actions because they can translate directly into improved clinical outcomes.

Response: We thank the commenters for their comments. We note that we have stated in prior rulemaking (73 FR 48561 through 48563) that we first determine whether a new technology meets the newness criterion, and only if so, do we make a determination as to whether the technology meets the cost threshold and represents a substantial clinical improvement over existing medical services or technologies. Further, as we have discussed in prior final rules (69 FR 49018 through 49019, and 70 FR 47344), it is our past and present practice to analyze the new medical service or technology add-on payment criteria in the following sequence: Newness, cost threshold, and finally substantial clinical improvement.

Comment: The applicant and several commenters submitted public comments regarding the newness criterion for AUCATZYL®. The applicant reiterated that AUCATZYL® is a B-lymphocyte antigen CD19 CAR T-cell therapy designed to overcome the immune-related limitations in clinical activity and safety compared to current CD19 CAR T-cell therapies, with a fast target binding off-rate to minimize excessive activation of the programmed T cells, which reduces immune-mediated toxicity and is less prone to T-cell exhaustion, and that decreased T-cell exhaustion has been shown to enhance persistence. The applicant reiterated that based on the overall results from the pivotal phase 1b/2 FELIX study (N=127), the largest and most diverse patient population CAR T-cell study for adults with R/R B–ALL, a single treatment of AUCATZYL® reduces immune-mediated toxicity and results in reduced T cell exhaustion and improved persistence, leading to high levels of durable remissions.

The applicant stated that AUCATZYL® is not the same or substantially similar to TECARTUS®, the only other currently available CD19 CAR T-cell therapy approved for adult R/R B–ALL. The applicant reiterated that AUCATZYL® has a significantly distinct immune-modulating mechanism of action designed to model physiologic T-cell activation, and that it is constructed using the differentiated 4–1BB co-stimulatory domain with a novel, proprietary low affinity, fast off-rate anti-CD 19 (CAT) hybridoma-derived anti-CD19 scFv (CAT19 binding domain) designed to improve potency and persistence and to reduce immune-mediated toxicity, including CRS and ICANS. The applicant provided an illustration of various components of AUCATZYL®, which facilitate its immune-modulating mechanism of

[24] TECARTUS® received FDA approval on October 1, 2021, for treatment of adult patients with R/R B–ALL. *https://www.fda.gov/drugs/resources-information-approved-drugs/fda-approves-brexucabtagene-autoleucel-relapsed-or-refractory-b-cell-precursor-acute-lymphoblastic.*

action. These components included the CAT19 fast off-rate binder, the CD8-derived hinge region/transmembrane domain, the 4–1BB co-stimulatory domain, shown to enhance CAR T-cell expansion and reduce exhaustion compared with CD28 CARs in preclinical studies, and the CD3-zeta activation domain. The applicant reiterated that shorter cell-cell contact resulting from the greater than 40-fold lower affinity of CAT19 (off-rate of 3.7 minutes) compared with the FMC63 antigen-binding domain used in other currently available CAR T-cell therapy, including TECARTUS®, reduces cytokine release and toxicity and CAR T-cell exhaustion, and enhances CAR T-cell persistence. The applicant also reiterated that the 4–1BB co-stimulatory domain is also highly differentiated from the CD28 co-stimulatory domain used in TECARTUS®; the 4–1BB distinct signaling pathway results in lower T-Cell activation, increased mitochrondrial biogenesis, greater oxidative metabolism, and sustained CAR T-Cell persistence.

The applicant stated although it agreed that both AUCATZYL® and TECARTUS® target and kill CD19-expressing cancer cells, AUCATZYL® has a differentiated mechanism of action in how it binds CD19, with the key difference residing in the components of the respective CAR constructs. The applicant described differences in the CAR single chain variable fragments (scFv) for each technology and how they were derived, as well as the differing co-stimulatory domains, reiterating that the resulting shorter target interaction with targeT-Cells for AUCATZYL® due to its lower affinity for CD19 mimics physiologic T-cell activation, and the 4–1BB co-stimulatory domain is generally associated with longer persistence. The applicant stated that the use of these different features in AUCATZYL® leads to a unique mechanism of action characterized by differentiated binding kinetics, engraftment, persistence and immune-elicited responses. Regarding differentiated binding kinetics, the applicant stated that the CD19 (CAT) CAR binds CD19 with an above 40-fold lower affinity, resulting in faster disengagement, and >40 shorter half-life compared to the CD19 (FMC63) CAR used in currently marketed CAR–Ts, including TECARTUS® (CAT 3.73 min vs FMC63 2.8 hours). Per the applicant, both antibodies bind to an overlapping epitope of CD19 consisting of residues within loops 1 and 2 of the CD19 ectodomain and provided a chart that shows the results of the Ghorashian (2019) study. The applicant stated that, in particular, in *in vitro* studies, AUCATZYL® showed a higher equilibrium dissociation constant with CAT scFv (14 nM) as a result of a much faster off-rate (CAT: 3.1×10^{-3} s^{-1} vs FMC63: 6.8×10^{-5} s^{-1}), whereas the on-rate was equivalent compared to FMC63 scFv (CAT: 2.2×10^{5} $M^{-1}s^{-1}$ vs FMC63: 2.1×10^{5} $M^{-1}s^{-1}$). According to the applicant, the fast off-rate and subsequent shorter cell-cell contact is advantageous by reducing cytokine release and thereby reducing toxicity, as well as reducing T-cell exhaustion, which enhances CAR T-cell persistence. The applicant stated that these features are designed to address major limitations of CAR T-cell therapy in B–ALL, namely, toxicity and lack of durable responses.

Regarding engraftment and persistence, the applicant stated that owing to the differentiated binding kinetics of AUCATZYL®, differenT-Cell kinetics at initial expansion and persistence compared to TECARTUS® are observed. According to the applicant, the pharmacokinetics for each patient in the Infused Set of Cohort IIA (N=94) of the FELIX study were assessed between Day 1 and Day 28, and AUCATZYL® demonstrated a rapid and high level of expansion of the cells following infusion. The overall geometric mean of C_{max} was 114,982 copies/µg/deoxyribonucleic acid (DNA) (range 129–600,000 copies/µg DNA) with a median time to maximum (or peak) concentration (T_{max}) of 14 days (range 2–55 days) and a geometric mean AUC0–28d of 1,138,188 copies/µg DNA (range 179,000–7,230,000 copies/µg DNA * day). The applicant stated that expansion, measured by droplet digital PCR (ddPCR), was high regardless of whether patients achieved complete remission/complete remission with incomplete count recovery (CR/CRi) or not. Per the applicant, no biologically significant differences were seen in the geometric mean or median, interquartile range of C_{max}. Per the applicant, in CR/CRi patients, approximately 68.4 percent (54.6 percent–78.7 percent 95 percent confidence interval [CI]) demonstrated persistence at 6 months with a maximum duration of 21 months. The applicant added that 75 percent (27/36) of the patients who had ongoing remission as of the data cut-off date had ongoing CAR T persistence at the last laboratory assessment as of the data cut-off date. According to the applicant, in comparison to other FMC63-based CARs approved for ALL, such as TECARTUS®, the median C_{max} was 38.35 cells/uL (range: 1.31–1533.4) and median $AUC_{0–28}$ was 424.03 cells/uL × day (range: 14.12–19390.42) in responding patients treated with TECARTUS® (ZUMA–3 trial) compared to 0.49 cells/uL (range 0.0–183.50) and 4.12 cells/uL × day (range 0.0–642.25) for C_{max} and AUC0–28d respectively for non-responders. The applicant added that no CAR persistence was seen for TECARTUS® in the ZUMA–3 trial beyond 3 months by flow cytometry and 6 months by ddPCR.

Per the applicant, not only was CAR–T expansion generally lower for TECARTUS® than that seen for AUCATZYL®, an even lower expansion was observed in patients who did not respond compared to patients who responded, and CAR–T expansion of AUCATZYL® demonstrated a less than 3-fold increase in patients in CR/CRi vs patients not in CR/CRi. According to the applicant, this is strikingly different from TECARTUS® where ~80-fold increase in CAR–T expansion is seen in CR/CRi vs patients not in CR/CRi and where there is minimal CAR–T expansion in patients not in CR/CRi (0.49 cell/uL). The applicant referred to the chart that shows the comparative results of the Ghorashian (2019) study.

The applicant further stated that the immune-elicited responses for AUCATZYL® are not similar to TECARTUS®. Per the applicant, at an early stage of AUCATZYL® development, it was hypothesized that the scFv of obe-cel's CAT CAR with a greatly reduced affinity for CD19 would improve the post-infusion immune-mediated cytokine release kinetics and toxicity profile common to currently marketed CAR Ts using the FMC63 CAR construct. The applicant stated that the novel 2-step fractionated tumor burden-guided dosing regimen further enhances the ability to reduce immunotoxicity, which has been linked to both disease burden and expansion of CAR T-cells. The applicant stated that supportive data from a number of different CD19 CAR T-cell trials in acute lymphoblastic leukemia indicated that higher disease burden is predictive of more severe CRS. The applicant further stated this led some groups to mitigate this toxicity by either administering a lower dose of CAR T-cells to patients with higher disease burden or splitting the total dose. Furthermore, the applicant stated that tumor burden-guided dosing provides an opportunity to tailor AUCATZYL® doses based on the patient-specific tumor burden, which may reduce the extent and rate of expansion, and thereby affect the severity of CRS. The applicant stated that spacing between the dose fractions takes into consideration the duration of IL–15 surge following lymphodepletion

(LD), which is important for CAR T-cell expansion and function as well as timing of early signals of subsequent severe toxicity. The applicant also stated that tumor burden-guided dose is also unlikely to increase the risk of immune-mediated reactions to the murine sequence present in the CD19 antigen-binding domain of AUCATZYL®. The applicant stated thaT-Cellular immune response at the time of the second dose, on Day 10, will be significantly reduced by the LD chemotherapy administered before AUCATZYL® infusion. The applicant added that the humoral immune response, which takes approximately 14 days to be generated, will be impaired by the B cell aplasia and subsequent hypogammaglobulinaemia induced by the CD19 CAR T-cells administered on Day 1. The applicant also stated that a range of serum biomarkers were evaluated in the FELIX study, and per the applicant, in accordance with AUCATZYL®'s distinct immune-modulating mechanism of action, the profiles observed for induced inflammatory soluble serum biomarkers were overall consistently and considerably lower than those reported for TECARTUS® in the ZUMA–3 trial. The applicant illustrated this finding with a table that compares selected peak inflammatory soluble serum biomarkers between the FELIX and ZUMA–3 trials.

Per the applicant, the efficacy of CAR–T-cell therapy with impressive response rates in hematologic malignancies must be weighed with immune-mediated toxicities, notably CRS, a toxicity requiring urgent diagnostic and therapeutic interventions, and targeted modulation of key cytokine pathways represents the mainstay of CRS management. The applicant stated that the expected risk of developing CRS grade 3 after AUCATZYL® treatment was reduced relative to TECARTUS® (2.4 percent vs 25 percent). Per the applicant, the observed magnitude of difference in grade 3 CRS substantiates the distinct functional and biological properties of AUCATZYL®. The applicant acknowledged the limitations of unadjusted comparisons between single-arm trials and conducted a prospectively designed matching-adjusted indirect comparison (MAIC) of AUCATZYL® and TECARTUS® which, per the applicant, demonstrated that patients treated with TECARTUS® are significantly more likely to experience a grade 3 CRS event or immune-mediated neurotoxicity relative to patients treated with AUCATZYL®.

The applicant concluded that AUCATZYL®'s immune-modulating mechanism of action is not the same or substantially similar to TECARTUS® because the novel CD19 (CAT) CAR in AUCATZYL® exhibits distinct functional and biological characteristics, notably lower affinity binding kinetics, prolonged persistence, and a differentiated immune-modulating mechanism of action that leads to a marked decrease in the release of inflammatory cytokines and a decrease in the incidence of grade 3 CRS and immune-mediated neurotoxicity.

According to the applicant and several commenters, KYMRIAH® is not a relevant comparator for treatment of the Medicare population, as it is only approved for treatment of patients aged 25 or younger with R/R B–ALL. The applicant stated that in the pivotal AUCATZYL® Phase 2 Cohort IIA FELIX study population (n=94, infused), the median age was 50 years (range 20–81), with 88.3 percent over the age of 25. The applicant, as well as several commenters, also stated that while KYMRIAH® also uses the 4–1BB co-stimulatory domain, its scFv is FMC63-derived and therefore differences in binding kinetics described previously for TECARTUS® apply to KYMRIAH® as well. The applicant stated that therefore, AUCATZYL® is non-similar to KYMRIAH® in its mechanism of action and its intended population. In addition, the applicant stated that AUCATZYL® has a fundamentally different mechanism of action as a CAR T-cell therapy compared to immunotherapy, BLINCYTO® and BESPONSA®. The applicant stated that BLINCYTO® is a bispecific T-cell engager molecule derived from two distinct monoclonal antibodies that bind CD19 and CD3, while BESPONSA® is an antibody-drug conjugate (ADC) composed of a CD22-directed monoclonal IgG4 antibody linked to a cytotoxic agent. The applicant also explained that while immunotherapy is recommended as first-line treatment and considered superior to standard chemotherapy, CAR T-cell therapy is recommended following immunotherapy. The applicant stated that therefore, the focus of the substantial similarity test for AUCATZYL® should be TECARTUS®.

Response: We appreciate the additional information from the applicant and commenters with respect to whether AUCATZYL® is substantially similar to existing technologies. We agree that AUCATZYL® has a different mechanism of action as a CD19-directed CAR T-cell therapy compared to BLINCYTO® and BESPONSA®, which are bispecific T-cell engager molecule and antibody-drug conjugates. We also agree with the applicant that because KYMRIAH® is only approved for treatment of patients aged 25 or younger, representing a very small fraction of adults compared to AUCATZYL®, it therefore treats a different population and is not substantially similar. However, we disagree with the applicant and commenters that AUCATZYL® has a unique mechanism of action because we do not believe there is a clear differentiation between the mechanism of action of AUCATZYL® and that of TECARTUS®. While the applicant highlights differences such as the binding domain, costimulatory/activation domains, binding kinetics, and dosing regimen, we do not believe these meaningfully differentiate the mechanism of action of AUCATZYL® from other CD19-directed CAR T-cell therapies, which are all genetically modified autologous T-cell immunotherapies that bind to CD–19 expressing cancer cells. We refer the reader to the FY 2019 and FY 2022 IPPS/LTCH PPS final rules (83 FR 41287 through 41291, and 86 FR 44999 through 45000) for further discussion of this issue, where we determined that the mechanisms of action for CAR T-cell therapies were not new based on similar factors. While the applicant stated that AUCATZYL® uses a fast-on-fast-off mechanism, we disagree that a shorter length of binding time for AUCATZYL® represents a different mechanism of action than the other CAR T-cell therapies. We also disagree that any association between AUCATZYL®'s binding and the rates of CRS and ICANS would represent the technology's mechanism of action, nor would CAR T-cell persistence and how it affects durability of response, as any differences between AUCATZYL® and existing technologies in observed outcomes would relate to an assessment of substantial clinical improvement rather than the newness criterion.

Therefore, after consideration of the comments we received on AUCATZYL®'s newness, we believe that AUCATZYL® and TECARTUS® use the same mechanism of action to achieve a therapeutic outcome: the binding to CD19 by a CAR construct, which results in T-cell activation and killing of malignant cells in the treatment of B–ALL, and are assigned to the same MS–DRG. We also agree with the applicant that AUCATZYL® treats the same or similar patient population and disease as TECARTUS®, which is used in treatment for adult patients with R/R B–ALL.

Because AUCATZYL® meets all three of the substantial similarity criteria, we

believe AUCATZYL® is substantially similar to TECARTUS®. In accordance with our policy, because these technologies are substantially similar to each other, we use the earliest market availability date as the beginning of the newness period for AUCATZYL®. Therefore, we consider the newness period for AUCATZYL® to begin on October 1, 2021, the date TECARTUS® became commercially available. Since the 3-year anniversary date of TECARTUS®'s entry onto the market occurred prior to FY 2026, AUCATZYL® does not meet the newness criterion and is not eligible for new technology add-on payments for FY 2026. We note that we received public comments with regard to the cost and substantial clinical improvement criteria for this technology, but because we have determined that the technology does not meet the newness criterion and therefore is not eligible for approval for new technology add-on payments for FY 2026, we are not summarizing comments received or making a determination on those criteria in this final rule.

b. AURLUMYN™ (iloprost injection)

SERB Pharmaceuticals submitted an application for new technology add-on payments for AURLUMYN™ for FY 2026. According to the applicant, AURLUMYN™ is an intravenous form of iloprost associated with immediate generalized vasodilation, immunomodulation, and anti-inflammation indicated for the treatment of severe frostbite in adults to reduce the risk of digit amputations.

Please refer to the online application posting for AURLUMYN™, available at *https://mearis.cms.gov/public/publications/ntap/NTP241007QK29V*, for additional detail describing the technology and the disease treated by the technology.

With respect to the newness criterion, according to the applicant, FDA granted NDA approval for AURLUMYN™ on February 13, 2024, for the treatment of severe frostbite in adults to reduce the risk of digit amputations. Per the applicant, the commercial launch of AURLUMYN™ was delayed until the NDA sponsor could secure a capable commercial partner. Per the applicant, it acquired AURLUMYN™ globally on October 18, 2024, and prepared for launch aligned with the beginning of the winter season. The applicant stated that the technology became available for sale on November 12, 2024. In the FY 2026 IPPS/LTCH PPS proposed rule (90 FR 18096), we stated we were interested in additional information regarding the cause of any delay in the technology's commercial availability, including additional details about the preparation for launch that aligned with the beginning of the winter season.

According to the applicant, AURLUMYN™ is administered as a continuous intravenous (IV) infusion over 6 hours per day, increased in increments up to a maximum dose of 2 ng/kg/minute, for up to a maximum of 8 consecutive days. The applicant expected that AURLUMYN™ will be dosed in the inpatient setting for 8 consecutive days using a total of eight single-use vials (one per day).

The applicant submitted a request for unique ICD–10–PCS procedure codes for AURLUMYN™ beginning in FY 2026 and was granted approval for the following procedure codes effective October 1, 2025: XW033QB (Introduction of iloprost into peripheral vein, percutaneous approach, new technology group 11) and XW043QB (Introduction of iloprost into central vein, percutaneous approach, new technology group 11). The applicant provided a list of diagnosis codes that may be used to currently identify the indication for AURLUMYN™ under the ICD–10–CM coding system. Please refer to the online application posting for the complete list of ICD–10–CM codes provided by the applicant.

As previously discussed, if a technology meets all three of the substantial similarity criteria under the newness criterion, it would be considered substantially similar to an existing technology and would not be considered ''new'' for the purpose of new technology add-on payments.

With respect to the substantial similarity criteria, the applicant asserted that AURLUMYN™ is not substantially similar to other currently available technologies because it is the first-ever FDA-approved treatment for frostbite of any grade and is specifically indicated for the treatment of severe frostbite in adults to reduce the risk of finger or toe amputation, and therefore, the technology meets the newness criterion. The following table summarizes the applicant's assertions regarding the substantial similarity criteria. Please see the online application posting for AURLUMYN™ for the applicant's complete statements in support of its assertion that AURLUMYN™ is not substantially similar to other currently available technologies.

BILLING CODE 4120–01–P

Substantial Similarity Criteria	Applicant Response	Applicant assertions regarding this criterion
Does the technology use the same or similar mechanism of action to achieve a therapeutic outcome?	No	AURLUMYN™ is the only IV form of iloprost available in the U.S. AURLUMYN™ is a stable synthetic analog of prostaglandin I2 (PGI2) and is a potent prostacyclin receptor agonist. Upon binding to the prostacyclin receptor, prostacyclin inhibits platelet activation and acts as a vasodilator. AURLUMYN™ is associated with immediate generalized vasodilation, immunodulation, and anti-inflammation. AURLUMYN™ has been associated with reductions in neutrophil adhesion and chemotaxis as well as downregulation of intracellular expression of IL-6 and TNF alpha in human monocytes. In addition, AURLUMYN™ has been shown to enhance fibrinolysis, increase red cell deformability, and reduce white cell adhesion to endothelial cells. AURLUMYN™ has also demonstrated activity with respect to increasing cAMP levels in human platelets via stimulation of adenylate cyclase, with resultant inhibition of platelet aggregation. AURLUMYN™ inhibits arachidonic acid-induced vasoconstriction, which may be explained by its ability to counteract thromboxane. As a result of these properties, AURLUMYN™ may mitigate vasoconstriction and microthrombosis to limit frostbite injury. Previously, access to medical frostbite treatment in the U.S. has been limited to agents not specifically studied or approved for frostbite. AURLUMYN™ is not substantially similar to those agents used in case study and anecdotal reports, including nonsteroidal anti-inflammatory drugs, heparin, antibiotics, dextran, tetanus toxoid, immune globulin, antiplatelet agents, and anticoagulant therapy. AURLUMYMN™ is also significantly differentiated from VENTAVIS® (iloprost) inhalation solution approved in 2004, and since discontinued, for the chronic treatment of pulmonary arterial hypertension and intended to be chronically administered.
Is the technology assigned to the same MS-DRG as existing technologies?	No	The 2023 MedPAR file contains no patient cases assigned to any MS-DRG representing frostbite cases treated with an FDA-approved therapy for severe frostbite. AURLUMYN™ is the first-ever FDA-approved treatment for frostbite of any grade. It is expected AURLUMYN™ administration cases will map to MS-DRGs based on the MS-DRG assignment logic for the case-specific diagnosis or procedural codes.
Does new use of the technology involve the treatment of the same/similar type of disease and the same/similar patient population when compared to an existing technology?	No	AURLUMYN™ is the first-ever FDA-approved treatment for frostbite of any grade and is specifically approved for the treatment of severe frostbite in adults to reduce the risk of finger or toe amputation.

BILLING CODE 4120–01–C

In the FY 2026 IPPS/LTCH PPS proposed rule (90 FR 18097), we noted that the applicant asserted that AURLUMYN™ is not assigned to the same MS–DRG as existing technologies. However, as the applicant also stated that AURLUMYN™ will map to MS–DRGs based on diagnosis/procedure codes, we stated our belief that the use of AURLUMYN™ will not change the MS–DRG assignment and will, therefore, map to the same MS–DRGs as other treatments for severe frostbite. In addition, while the applicant asserted that AURLUMYN™ does not treat the same or similar type of disease and the same or similar patient population as existing treatments because it is the first-ever FDA-approved treatment for frostbite, we noted that there are other severe frostbite treatments that are commonly used including rapid rewarming, fasciotomy, thrombolysis, and sympathectomy.

We invited public comments on whether AURLUMYN™ is substantially similar to existing technologies and whether AURLUMYN™ meets the newness criterion.

Comment: A few commenters, including the applicant, stated that AURLUMYN™ meets the newness criterion because it is the only FDA-approved treatment for severe frostbite and the only available intravenous formulation of iloprost, which enhances blood flow and accelerates the healing

process through preserving tissue integrity and minimizing complications.

Response: We thank the applicant and other commenters for their input and have taken it into consideration in determining whether AURLUMYN™ meets the newness criterion, as discussed later in this section.

Comment: The applicant reiterated that AURLUMYN™ does not use the same or substantially similar mechanisms of action as any technology or drug therapy assigned to any MS–DRG in the 2023 MedPAR data, nor of any drug currently marketed in the U.S. The applicant further stated that AURLUMYN™ is a stable synthetic analog of PGI2 and is a potent prostacyclin receptor agonist as well as the only intravenous form of iloprost available in the U.S. In response to CMS's note that use of AURLUMYN™ will not change the MS–DRG assignment and will map to the same MS–DRGs as other treatments for severe frostbite, the applicant agreed that patient cases with severe frostbite where AURLUMYN™ is administered will map to the same MS–DRGs as other frostbite cases where AURLUMYN™ is not part of the frostbite treatment regimen, but noted that there are no claims for medical therapies or procedures in the 2023 MedPAR data with the same or similar mechanism of action as AURLUMYN™. Lastly, the applicant reiterated that patient cases where AURLUMYN™ is administered will be uniquely identified by two ICD–10–PCS codes specific to AURLUMYN™.

In response to CMS's note that there are other commonly used severe frostbite treatments, the applicant stated that prior to AURLUMYN™'s availability, frostbite treatment in the U.S. was limited to off-label use of tissue plasminogen activator (tPA) within 24 hours of injury. The applicant further stated that AURLUMYN™ extends the treatment window beyond the <24 hours recommended for off-label use of tPA, and AURLUMYN will be available to more patients with severe frostbite who, without access to AURLUMYN, would be contraindicated for the use of tPA with its associated significant bleeding risks and contraindications in trauma, recent surgery, recent stroke, and many other conditions that might pose a bleeding risk. Furthermore, the applicant stated that other non-pharmacologic post-thaw medical therapy options, such as hydrotherapy, hyperbaric oxygen therapy, sympathectomy, and fasciotomy, are part of multimodal frostbite treatment regimens; however, none of these non-pharmacologic treatments replace AURLUMYN™ or are used at the exclusion of AURLUMYN™.

In addition, a few commenters stated that AURLUMYN™ meets an unmet need for targeted, early intervention for patients with severe frostbite and represents a major advancement by uniquely promoting vasodilation and improving microcirculatory flow, thereby addressing the underlying pathophysiology of frostbite in a way that no other medication currently does.

In response to CMS's request for additional information about the delay in AURLUMYN™'s commercial availability, the applicant commented that, while AURLUMYN™ received FDA approval on February 13, 2024, the BLA sponsor, EICOS, delayed market availability because it lacked the necessary commercial infrastructure and needed to search for a capable commercial partner, and that the newness period should begin on November 1, 2024. The applicant stated that it acquired AURLUMYN™ on October 18, 2024, and immediately initiated production, resulting in AURLUMYN™ becoming available for order and shipment on November 1, 2024. The applicant stated that CMS should use November 1, 2024, as the market availability date for the newness period, and therefore, allow AURLUMYN™ to receive new technology add-on payments for a full 3 years instead of a 2-year period if the FDA approval date of February 13, 2024 is used.

Response: We thank the applicant and other commenters for their comments. Based on our review of comments received and information submitted by the applicant as part of its FY 2026 new technology add-on payment application for AURLUMYN™, we agree with the applicant that AURLUMYN™ is the first synthetic analog of PGI2 that binds to prostacyclin receptors leading to vasodilation and inhibition of platelet activation approved by FDA to treat severe frostbite, and therefore uses a unique mechanism of action. Therefore, we agree with the applicant that AURLUMYN™ is not substantially similar to existing treatment options and meets the newness criterion. We consider the beginning of the newness period to commence on November 1, 2024, the date on which AURLUMYN™ became commercially available.

With respect to the cost criterion, the applicant provided multiple analyses to demonstrate that AURLUMYN™ meets the cost criterion. Each analysis followed the order of operations summarized in the following table.

AURLUMYN™ COST ANALYSIS	
Inclusion/exclusion criteria	For the Inclusion/Exclusion criteria used in the Cost Analysis, including the data source and lists of ICD-10-CM codes and MS-DRGs used by the applicant, see the cost criterion codes and MS-DRGs attachment included in the online posting for AURLUMYN™.
Claims identified	Scenario 1: 103 claims mapping to nine MS-DRGs, with none of the MS-DRGs exceeding 13.59% of the total identified cases. Scenario 2: 159 claims mapping to 11 MS-DRGs, with 22.64% of claims mapping to MS-DRG 923 (Other Injury, Poisoning and Toxic Effect Diagnoses without CC).
Charges removed for prior technology	The applicant stated that no charges were removed for a prior technology as a result of using AURLUMYN™, and that there were no indirect charges related to a prior technology to be removed.
Standardized charges	The applicant used the standardization formula provided in Appendix A of the application. The applicant used all relevant values reported in the impact file posted with the FY 2023 IPPS/LTCH PPS final rule correcting amendment.
Inflation factor	The applicant applied an inflation factor of 8.4% to the standardized charges, based on the inflation factor used to calculate outlier threshold charges in the FY 2025 IPPS/LTCH PPS final rule.
Charges added for the new technology	For both scenarios 1 and 2, the applicant added charges for the new technology by dividing the average cost of the new technology per inpatient stay by the national average cost-to-charge ratio of 0.178 for Drugs and Cellular Therapies from the FY 2025 IPPS/LTCH PPS final rule. The applicant did not add indirect charges related to the new technology.
Cost analysis results	Scenario 1: - Average case-weighted threshold amount: $87,166 - Final inflated average case-weighted standardized charge per case: $353,509 Scenario 2: - Average case-weighted threshold amount: $73,762 - Final inflated average case-weighted standardized charge per case: $328,186

Because the final inflated average case-weighted standardized charge per case exceeded the average case-weighted threshold amount in both scenarios, the applicant asserted that AURLUMYN™ meets the cost criterion.

We invited public comments on whether AURLUMYN™ meets the cost criterion.

Comment: Multiple commenters, inclusive of the applicant, stated that AURLUMYN™ meets the cost criterion. A few commenters also asserted that the current DRG payments for an inpatient hospitalization for severe frostbite are inadequate to account for the total cost of care and suggested that, without approval of new technology add-on payments, hospitals may not be able to use AURLUMYN™ for the treatment of frostbite in Medicare patients.

Response: We thank the applicant and other commenters for their comments. Based on the information submitted by the applicant as part of its FY 2026 new technology add-on payment application, as previously summarized, the final inflated average case-weighted standardized charge per case exceeded the average case-weighted threshold amount under both scenarios. Therefore, we agree that AURLUMYN™ meets the cost criterion.

With regard to the substantial clinical improvement criterion, the applicant asserted that AURLUMYN™ represents a substantial clinical improvement over existing technologies because AURLUMYN™ substantially lowers the risk of digit amputation in severe frostbite cases. Additionally, the applicant claimed that, by reducing the risk of finger and toe amputations in adults with severe frostbite, AURLUMYN™ mitigates debilitating, lifelong health-related, functional, and work-related impacts associated with digit amputation. The applicant provided four documents, including two studies and clinical practice guidelines to support these claims, as well as two background articles about a classification system for frostbite severity and the prevention and clinical treatment of frostbite.[25] The following table summarizes the applicant's assertions regarding the substantial clinical improvement criterion. Please see the online posting for AURLUMYN™ for the applicant's complete statements regarding the substantial clinical improvement criterion and the supporting evidence provided.

[25] Background articles are not included in the following table but can be accessed via the online posting for the technology.

Substantial Clinical Improvement Assertion #1: The technology offers a treatment option for a patient population unresponsive to, or ineligible for, currently available treatments	
Applicant statements in support	**Supporting evidence provided by the applicant**
AURLUMYN™ is the first-ever medical treatment for frostbite approved by the FDA and is specifically approved for treatment of severe frostbite to reduce the risk of digit amputations.	Cauchy E, et al. A controlled trial of a prostacyclin and rt-PA in the treatment of severe frostbite. N Engl J Med 2011;364, 189-190 Crooks S, et al. Effectiveness of intravenous prostaglandin to reduce digital amputations from frostbite: an observational study. Canadian Journal of Emergency Medicine 2022;24, 622-629. McIntosh SE, et al. Wilderness Medical Society Clinical Practice Guidelines for the Prevention and Treatment of Frostbite. 2019 Update. Wilderness & Environmental Medicine 2019;30, S19-S32. McIntosh SE, et al. Wilderness Medical Society Clinical Practice Guidelines for the Prevention and Treatment of Frostbite: 2024 Update. Wilderness & Environmental Medicine 2024;35(2) 183-197. The applicant also provided background information to support this claim, which can be accessed via the online posting for the technology.
Substantial Clinical Improvement Assertion #2: The technology significantly improves clinical outcomes relative to services or technologies previously available	
AURLUMYN™ reduces the risk of amputation of fingers and toes in adults with severe frostbite, mitigating debilitating, lifelong health-related, functional and work-related impacts of digit amputation.	Cauchy, 2011, *op. cit.* Crooks, 2022, *op. cit.* McIntosh, 2019, *op. cit.* McIntosh, 2024, *op. cit.*

In the FY 2026 IPPS/LTCH PPS proposed rule (90 FR 18098 through 18099), after review of the information provided by the applicant, we stated we had the following concerns regarding whether AURLUMYN™ meets the substantial clinical improvement criterion. With respect to the claim that AURLUMYN™ offers a treatment option for a patient population unresponsive to, or ineligible for, currently available treatments, we noted that the applicant stated that AURLUMYN™ is the first-ever FDA-approved medical treatment for severe frostbite to reduce the risk of digit amputations, but did not identify a patient group that is unresponsive to, or ineligible for, the standard-of-care treatment, where AURLUMYN™ does offer a treatment option.

We stated that the applicant provided two published studies that used AURLUMYN™ to support this claim (Cauchy et al., 2011; Crooks et al., 2022). Cauchy et al. (2011), which was published as a letter to the editor, is a single site, open-label trial which randomized 47 healthy patients (aged 18 to 55 years) with severe frostbite after mountain rescue in France to receive either buflomedil, AURLUMYN™, or AURLUMYN™ plus recombinant tPA (rtPA), and assessed treatment efficacy based on bone scan scintigraphy to determine risk of amputation. The second study (Crooks et al., 2022) was a retrospective cohort study consisting of a medical records review in Calgary, Canada, a large city inclusive of an unhoused population. The study excluded patients due to superficial or grade 1 frostbite, resulting in 90 patients with an interquartile age range of 31 to 53 years old. For frostbite treatment, these patients received either AURLUMYN™ or the standard of care, which consisted of the local best practice without AURLUMYN™. We noted that while these two studies compared treatment of patients with severe frostbite using AURLUMYN™ to other treatments, neither study described a patient group that is unresponsive to, or ineligible for, existing treatment options where AURLUMYN™ offers treatment. We further noted that while the applicant also cited the Wilderness Medical Society Practice Guidelines (McIntosh et al., 2024) which included a strong recommendation for iloprost as the first-line treatment for severe (grades 3 and 4) frostbite less than 48 hours after thawing, and possibly for up to 72 hours post-thawing,[26] the full statement in the Guidelines is that intravenous iloprost should be considered first-line therapy for grade 3 and 4 frostbite <72 hours after injury, when tPA is contraindicated, and in austere environments where tPA infusion is considered risky or evacuation to a treatment facility will be delayed. Additionally, the guidelines include other recommendations for treatments such as sympathectomy, fasciotomy, and hydrotherapy. Therefore, we stated it appeared that there are other treatment options for frostbite other than AURLUMYN™. We stated that we would appreciate any additional information regarding which patient population AURLUMYN™ can treat for severe frostbite, for which other existing treatments could not be used.

With respect to the claim that AURLUMYN™ significantly improves clinical outcomes relative to services or technologies previously available, the

[26] McIntosh, S.E., Freer, L., Grissom, C.K., Rodway, G.W., Giesbrecht, G.G., McDevitt, M., Imray, C.H., Johnson, E.L., Pandey, P., Dow, J., & Hackett, P.H. (2024). Wilderness Medical Society Clinical Practice Guidelines for the Prevention and Treatment of Frostbite: 2024 Update. Wilderness & Environmental Medicine, 35(2). *https://doi.org/10.1177/10806032231222359.*

applicant stated that AURLUMYN™ reduces the risk of amputation of fingers and toes in adults with severe frostbite, mitigating debilitating, lifelong health-related, functional, and work-related impacts of digit amputation. To support this claim, the applicant provided the two published studies and Wilderness Medical Society Practice Guidelines previously discussed (Cauchy et al., 2011; Crooks et al., 2022; McIntosh et al., 2024). The Cauchy et al. (2011) study found that the 16 patients treated with AURLUMYN™ without rtPA resulted in no amputations, whereas the risk of amputation was greater in patients treated with buflomedil (60 percent, 9 of 15 patients) and patients treated with AURLUMYN™ plus rtPA (19 percent, 3 of 16 patients). The Crooks et al. (2022) study found that 18 percent of grade 3 frostbite injuries and 46 percent of grade 4 frostbite injuries treated with AURLUMYN™ resulted in digital amputation, compared to the standard of care groups where 44 percent of grade 3 frostbite injuries and 95 percent of grade 4 frostbite injuries resulted in amputations. However, we questioned whether the composition of the AURLUMYN™ and standard of care treatment groups in these two published studies were sufficiently comparable and, consequently, whether the outcomes demonstrated were clinically significant. Specifically, we questioned the accuracy of severity grading determinations and the resulting randomization process used to group patients in both studies due to the subjective nature of grading frostbite injuries that can evolve over time, and being that the grading of frostbite injuries in Crooks et al. (2022) was conducted using photographs and clinician health descriptions in the local electronic health record. We also noted that, in Crooks et al. (2022), no patients in the control group were treated with tPA, despite tPA and heparin being available for severe injuries during the period of treatment with standard frostbite care. The absence of tPA in the control group raised questions about the adequacy of the comparator, given that the Wilderness Medical Society Practice Guidelines recommend tPA for select severe frostbite cases where timely administration is feasible. We also questioned the extent to which the quality of frostbite care in the control group may have varied, prior to the implementation of the protocol that implemented 5-day iloprost infusion. In addition, while the utility of recommendations in establishing evidence of clinically improved outcomes is limited, we further noted that neither study provided direct comparison with therapies that are also strongly recommended by the Wilderness Medical Society, such as fasciotomy and hydrotherapy, or with other therapies that may have limited data availability, such as sympathectomy and hyperbaric oxygen therapy.

We also stated concerns about the generalizability of the Cauchy et al. (2011) and Crooks et al. (2022) studies to the Medicare population. We noted that Cauchy et al. (2011) studied AURLUMYN™ treatment in patients in France, whose mean age was 33.1 years and who had no notable medical or surgical history. As noted in the Crooks et al. (2022) study, which studied patients from a large Canadian city with a substantial unhoused population, the effects may not be as dramatic as results in other studies, owing to the differences in medical and social comorbidities in the study population. Similarly, the Medicare population may have significant differences from the Cauchy et al. (2011) study population, in physical and mental health and social complexities. We also questioned whether efficacy data from Cauchy et al. (2011) is generalizable to the Medicare population due to the study's location, small patient population, and patients' age. We noted that these two published studies assessing AURLUMYN™ were both conducted outside of the U.S and primarily included patients under the age of 55 years (range: 18 to 55 and 29 to 54 years, respectively). As noted in the AURLUMYN™ prescribing information, clinical studies included insufficient numbers of patients aged 65 years and older to determine whether they respond differently than younger subjects.[27]

We invited public comments on whether AURLUMYN™ meets the substantial clinical improvement criterion.

Comment: We received several comments in support of AURLUMYN™'s new technology add-on payment application. These commenters stated that denying AURLUMYN™'s application would leave a large gap in frostbite treatment and would be a grave disservice to the most vulnerable patients, as AURLUMYN™ offers a critical opportunity to change the trajectory of their lives. A few commenters specifically stated that AURLUMYN™ meets the substantial clinical improvement criterion because it has demonstrated a reduced risk of amputation, a clear improvement in patient quality of life, and a reduction in long-term costs associated with disability, rehabilitation, prosthetic use, and readmission. A commenter also stated that the inclusion of AURLUMYN™ into a multimodal treatment regimen has the potential to improve patient flow within healthcare systems, streamline the care of frostbite patients, decrease the burden on Q1 providers, facilitate more effective use of resources, and enhance continuity of care during critical treatment windows.
