22844	Posterior segmental instrumentation (eg, pedicle fixation, dual rods with multiple hooks and sublaminar wires); 13 or more vertebral segments (list separately in addition to code for primary procedure)	N1
22846	Anterior instrumentation; 4 to 7 vertebral segments (list separately in addition to code for primary procedure)	N1

HCPCS Code	Long Descriptor	Final CY 2026 PI
22847	Anterior instrumentation; 8 or more vertebral segments (list separately in addition to code for primary procedure)	N1
22849	Reinsertion of spinal fixation device	J8
22850	Removal of posterior nonsegmental instrumentation (eg, harrington rod)	G2
22852	Removal of posterior segmental instrumentation	G2
22855	Removal of anterior instrumentation	G2
22857	Total disc arthroplasty (artificial disc), anterior approach, including discectomy to prepare interspace (other than for decompression); single interspace, lumbar	J8
22860	Total disc arthroplasty (artificial disc), anterior approach, including discectomy to prepare interspace (other than for decompression); second interspace, lumbar (list separately in addition to code for primary procedure)	N1
22861	Revision including replacement of total disc arthroplasty (artificial disc), anterior approach, single interspace; cervical	J8
22862	Revision including replacement of total disc arthroplasty (artificial disc), anterior approach, single interspace; lumbar	J8
22864	Removal of total disc arthroplasty (artificial disc), anterior approach, single interspace; cervical	G2
22865	Removal of total disc arthroplasty (artificial disc), anterior approach, single interspace; lumbar	G2
23200	Radical resection of tumor; clavicle	G2
23210	Radical resection of tumor; scapula	G2
23220	Radical resection of tumor, proximal humerus	G2
23335	Removal of prosthesis, includes debridement and synovectomy when performed; humeral and glenoid components (eg, total shoulder)	J8
23474	Revision of total shoulder arthroplasty, including allograft when performed; humeral and glenoid component	J8
23900	Interthoracoscapular amputation (forequarter)	G2
23920	Disarticulation of shoulder;	G2
24900	Amputation, arm through humerus; with primary closure	G2
24920	Amputation, arm through humerus; open, circular (guillotine)	G2
24930	Amputation, arm through humerus; re-amputation	G2
24931	Amputation, arm through humerus; with implant	J8
24940	Cineplasty, upper extremity, complete procedure	J8
25900	Amputation, forearm, through radius and ulna;	G2

HCPCS Code	Long Descriptor	Final CY 2026 PI
25905	Amputation, forearm, through radius and ulna; open, circular (guillotine)	G2
25915	Krukenberg procedure	G2
25920	Disarticulation through wrist;	G2
25924	Disarticulation through wrist; re-amputation	G2
25927	Transmetacarpal amputation;	G2
26551	Transfer, toe-to-hand with microvascular anastomosis; great toe wrap-around with bone graft	J8
26553	Transfer, toe-to-hand with microvascular anastomosis; other than great toe, single	J8
26554	Transfer, toe-to-hand with microvascular anastomosis; other than great toe, double	J8
26556	Transfer, free toe joint, with microvascular anastomosis	J8
26992	Incision, bone cortex, pelvis and/or hip joint (eg, osteomyelitis or bone abscess)	G2
27005	Tenotomy, hip flexor(s), open (separate procedure)	G2
27025	Fasciotomy, hip or thigh, any type	J8
27030	Arthrotomy, hip, with drainage (eg, infection)	G2
27036	Capsulectomy or capsulotomy, hip, with or without excision of heterotopic bone, with release of hip flexor muscles (ie, gluteus medius, gluteus minimus, tensor fascia latae, rectus femoris, sartorius, iliopsoas)	G2
27054	Arthrotomy with synovectomy, hip joint	G2
27070	Partial excision, wing of ilium, symphysis pubis, or greater trochanter of femur, (craterization, saucerization) (eg, osteomyelitis or bone abscess); superficial	J8
27071	Partial excision, wing of ilium, symphysis pubis, or greater trochanter of femur, (craterization, saucerization) (eg, osteomyelitis or bone abscess); deep (subfascial or intramuscular)	G2
27075	Radical resection of tumor; wing of ilium, 1 pubic or ischial ramus or symphysis pubis	J8
27076	Radical resection of tumor; ilium, including acetabulum, both pubic rami, or ischium and acetabulum	G2
27077	Radical resection of tumor; innominate bone, total	G2
27078	Radical resection of tumor; ischial tuberosity and greater trochanter of femur	G2
27090	Removal of hip prosthesis; (separate procedure)	G2
27091	Removal of hip prosthesis; complicated, including total hip prosthesis, methylmethacrylate with or without insertion of spacer	G2
27120	Acetabuloplasty; (eg, whitman, colonna, haygroves, or cup type)	J8
27122	Acetabuloplasty; resection, femoral head (eg, girdlestone procedure)	G2
27125	Hemiarthroplasty, hip, partial (eg, femoral stem prosthesis, bipolar arthroplasty)	J8
27132	Conversion of previous hip surgery to total hip arthroplasty, with or without autograft or allograft	J8
27134	Revision of total hip arthroplasty; both components, with or without autograft or allograft	J8
27137	Revision of total hip arthroplasty; acetabular component only, with or without autograft or allograft	J8
27138	Revision of total hip arthroplasty; femoral component only, with or without allograft	J8
27140	Osteotomy and transfer of greater trochanter of femur (separate procedure)	G2
27146	Osteotomy, iliac, acetabular or innominate bone;	J8
27147	Osteotomy, iliac, acetabular or innominate bone; with open reduction of hip	J8

HCPCS Code	Long Descriptor	Final CY 2026 PI
27151	Osteotomy, iliac, acetabular or innominate bone; with femoral osteotomy	J8
27156	Osteotomy, iliac, acetabular or innominate bone; with femoral osteotomy and with open reduction of hip	J8
27158	Osteotomy, pelvis, bilateral (eg, congenital malformation)	J8
27161	Osteotomy, femoral neck (separate procedure)	J8
27165	Osteotomy, intertrochanteric or subtrochanteric including internal or external fixation and/or cast	J8
27170	Bone graft, femoral head, neck, intertrochanteric or subtrochanteric area (includes obtaining bone graft)	J8
27175	Treatment of slipped femoral epiphysis; by traction, without reduction	G2
27176	Treatment of slipped femoral epiphysis; by single or multiple pinning, in situ	J8
27177	Open treatment of slipped femoral epiphysis; single or multiple pinning or bone graft (includes obtaining graft)	J8
27178	Open treatment of slipped femoral epiphysis; closed manipulation with single or multiple pinning	J8
27181	Open treatment of slipped femoral epiphysis; osteotomy and internal fixation	J8
27185	Epiphyseal arrest by epiphysiodesis or stapling, greater trochanter of femur	J8
27187	Prophylactic treatment (nailing, pinning, plating or wiring) with or without methylmethacrylate, femoral neck and proximal femur	J8
27222	Closed treatment of acetabulum (hip socket) fracture(s); with manipulation, with or without skeletal traction	G2
27226	Open treatment of posterior or anterior acetabular wall fracture, with internal fixation	J8
27227	Open treatment of acetabular fracture(s) involving anterior or posterior (one) column, or a fracture running transversely across the acetabulum, with internal fixation	J8
27228	Open treatment of acetabular fracture(s) involving anterior and posterior (two) columns, includes t-fracture and both column fracture with complete articular detachment, or single column or transverse fracture with associated acetabular wall fracture, with internal fixation	J8
27232	Closed treatment of femoral fracture, proximal end, neck; with manipulation, with or without skeletal traction	G2
27236	Open treatment of femoral fracture, proximal end, neck, internal fixation or prosthetic replacement	J8
27240	Closed treatment of intertrochanteric, peritrochanteric, or subtrochanteric femoral fracture; with manipulation, with or without skin or skeletal traction	G2
27244	Treatment of intertrochanteric, peritrochanteric, or subtrochanteric femoral fracture; with plate/screw type implant, with or without cerclage	J8
27245	Treatment of intertrochanteric, peritrochanteric, or subtrochanteric femoral fracture; with intramedullary implant, with or without interlocking screws and/or cerclage	J8
27248	Open treatment of greater trochanteric fracture, includes internal fixation, when performed	G2
27253	Open treatment of hip dislocation, traumatic, without internal fixation	G2
27254	Open treatment of hip dislocation, traumatic, with acetabular wall and femoral head fracture, with or without internal or external fixation	G2

HCPCS Code	Long Descriptor	Final CY 2026 PI
27258	Open treatment of spontaneous hip dislocation (developmental, including congenital or pathological), replacement of femoral head in acetabulum (including tenotomy, etc);	G2
27259	Open treatment of spontaneous hip dislocation (developmental, including congenital or pathological), replacement of femoral head in acetabulum (including tenotomy, etc); with femoral shaft shortening	J8
27268	Closed treatment of femoral fracture, proximal end, head; with manipulation	G2
27269	Open treatment of femoral fracture, proximal end, head, includes internal fixation, when performed	J8
27280	Arthrodesis, sacroiliac joint, open, includes obtaining bone graft, including instrumentation, when performed	J8
27282	Arthrodesis, symphysis pubis (including obtaining graft)	J8
27284	Arthrodesis, hip joint (including obtaining graft);	J8
27286	Arthrodesis, hip joint (including obtaining graft); with subtrochanteric osteotomy	J8
27290	Interpelviabdominal amputation (hindquarter amputation)	G2
27295	Disarticulation of hip	G2
27303	Incision, deep, with opening of bone cortex, femur or knee (eg, osteomyelitis or bone abscess)	J8
27365	Radical resection of tumor, femur or knee	G2
27448	Osteotomy, femur, shaft or supracondylar; without fixation	G2
27450	Osteotomy, femur, shaft or supracondylar; with fixation	J8
27454	Osteotomy, multiple, with realignment on intramedullary rod, femoral shaft (eg, sofield type procedure)	J8
27455	Osteotomy, proximal tibia, including fibular excision or osteotomy (includes correction of genu varus [bowleg] or genu valgus [knock-knee]); before epiphyseal closure	G2
27457	Osteotomy, proximal tibia, including fibular excision or osteotomy (includes correction of genu varus [bowleg] or genu valgus [knock-knee]); after epiphyseal closure	G2
27465	Osteoplasty, femur; shortening (excluding 64876)	J8
27466	Osteoplasty, femur; lengthening	J8
27470	Repair, nonunion or malunion, femur, distal to head and neck; without graft (eg, compression technique)	G2
27472	Repair, nonunion or malunion, femur, distal to head and neck; with iliac or other autogenous bone graft (includes obtaining graft)	J8
27486	Revision of total knee arthroplasty, with or without allograft; 1 component	G2
27487	Revision of total knee arthroplasty, with or without allograft; femoral and entire tibial component	J8
27488	Removal of prosthesis, including total knee prosthesis, methylmethacrylate with or without insertion of spacer, knee	J8
27495	Prophylactic treatment (nailing, pinning, plating, or wiring) with or without methylmethacrylate, femur	J8
27506	Open treatment of femoral shaft fracture, with or without external fixation, with insertion of intramedullary implant, with or without cerclage and/or locking screws	J8
27507	Open treatment of femoral shaft fracture with plate/screws, with or without cerclage	J8
27511	Open treatment of femoral supracondylar or transcondylar fracture without intercondylar extension, includes internal fixation, when performed	J8

HCPCS Code	Long Descriptor	Final CY 2026 PI
27513	Open treatment of femoral supracondylar or transcondylar fracture with intercondylar extension, includes internal fixation, when performed	J8
27514	Open treatment of femoral fracture, distal end, medial or lateral condyle, includes internal fixation, when performed	J8
27519	Open treatment of distal femoral epiphyseal separation, includes internal fixation, when performed	J8
27535	Open treatment of tibial fracture, proximal (plateau); unicondylar, includes internal fixation, when performed	J8
27536	Open treatment of tibial fracture, proximal (plateau); bicondylar, with or without internal fixation	J8
27540	Open treatment of intercondylar spine(s) and/or tuberosity fracture(s) of the knee, includes internal fixation, when performed	G2
27556	Open treatment of knee dislocation, includes internal fixation, when performed; without primary ligamentous repair or augmentation/reconstruction	G2
27557	Open treatment of knee dislocation, includes internal fixation, when performed; with primary ligamentous repair	J8
27558	Open treatment of knee dislocation, includes internal fixation, when performed; with primary ligamentous repair, with augmentation/reconstruction	J8
27580	Arthrodesis, knee, any technique	J8
27590	Amputation, thigh, through femur, any level;	G2
27591	Amputation, thigh, through femur, any level; immediate fitting technique including first cast	G2
27592	Amputation, thigh, through femur, any level; open, circular (guillotine)	G2
27596	Amputation, thigh, through femur, any level; re-amputation	G2
27598	Disarticulation at knee	G2
27645	Radical resection of tumor; tibia	G2
27646	Radical resection of tumor; fibula	G2
27703	Arthroplasty, ankle; revision, total ankle	J8
27712	Osteotomy; multiple, with realignment on intramedullary rod (eg, sofield type procedure)	J8
27715	Osteoplasty, tibia and fibula, lengthening or shortening	J8
27724	Repair of nonunion or malunion, tibia; with iliac or other autograft (includes obtaining graft)	J8
27725	Repair of nonunion or malunion, tibia; by synostosis, with fibula, any method	J8
27727	Repair of congenital pseudarthrosis, tibia	G2
27880	Amputation, leg, through tibia and fibula;	G2
27881	Amputation, leg, through tibia and fibula; with immediate fitting technique including application of first cast	G2
27882	Amputation, leg, through tibia and fibula; open, circular (guillotine)	G2

HCPCS Code	Long Descriptor	Final CY 2026 PI
27886	Amputation, leg, through tibia and fibula; re-amputation	G2
27888	Amputation, ankle, through malleoli of tibia and fibula (eg, syme, pirogoff type procedures), with plastic closure and resection of nerves	G2
28800	Amputation, foot; midtarsal (eg, chopart type procedure)	G2
35372	Thromboendarterectomy, including patch graft, if performed; deep (profunda) femoral	J8
35800	Exploration for postoperative hemorrhage, thrombosis or infection; neck	G2
37182	Insertion of transvenous intrahepatic portosystemic shunt(s) (tips) (includes venous access, hepatic and portal vein catheterization, portography with hemodynamic evaluation, intrahepatic tract formation/dilatation, stent placement and all associated imaging guidance and documentation)	J8
37617	Ligation, major artery (eg, post-traumatic, rupture); abdomen	G2
38562	Limited lymphadenectomy for staging (separate procedure); pelvic and para-aortic	G2
43840	Gastrorrhaphy, suture of perforated duodenal or gastric ulcer, wound, or injury	G2
44300	Placement, enterostomy or cecostomy, tube open (eg, for feeding or decompression) (separate procedure)	G2
44314	Revision of ileostomy; complicated (reconstruction in-depth) (separate procedure)	G2
44345	Revision of colostomy; complicated (reconstruction in-depth) (separate procedure)	G2
44346	Revision of colostomy; with repair of paracolostomy hernia (separate procedure)	G2
44602	Suture of small intestine (enterorrhaphy) for perforated ulcer, diverticulum, wound, injury or rupture; single perforation	G2
49010	Exploration, retroperitoneal area with or without biopsy(s) (separate procedure)	G2
49255	Omentectomy, epiploectomy, resection of omentum (separate procedure)	G2
51840	Anterior vesicourethropexy, or urethropexy (eg, marshall-marchetti-krantz, burch); simple	G2
56630	Vulvectomy, radical, partial;	G2
61624	Transcatheter permanent occlusion or embolization (eg, for tumor destruction, to achieve hemostasis, to occlude a vascular malformation), percutaneous, any method; central nervous system (intracranial, spinal cord)	J8
G0412	Open treatment of iliac spine(s), tuberosity avulsion, or iliac wing fracture(s), unilateral or bilateral for pelvic bone fracture patterns which do not disrupt the pelvic ring includes internal fixation, when performed	J8
G0414	Open treatment of anterior pelvic bone fracture and/or dislocation for fracture patterns which disrupt the pelvic ring, unilateral or bilateral, includes internal fixation when performed (includes pubic symphysis and/or superior/inferior rami)	G2
G0415	Open treatment of posterior pelvic bone fracture and/or dislocation, for fracture patterns which disrupt the pelvic ring, unilateral or bilateral, includes internal fixation, when performed (includes ilium, sacroiliac joint and/or sacrum)	J8

TABLE 133: SURGICAL PROCEDURE RECOMMENDATIONS RECEIVED FROM COMMENTERS

HCPCS Code	Long Descriptor	Final CY 2026 PI
92960	Cardioversion, elective, electrical conversion of arrhythmia; external	G2
93312	Echocardiography, transesophageal, real-time with image documentation (2d) (with or without m-mode recording); including probe placement, image acquisition, interpretation and report	Z3
93318	Echocardiography, transesophageal (tee) for monitoring purposes, including probe placement, real time 2-dimensional image acquisition and interpretation leading to ongoing (continuous) assessment of (dynamically changing) cardiac pumping function and to therapeutic measures on an immediate time basis	Z2
93463	Pharmacologic agent administration (eg, inhaled nitric oxide, intravenous infusion of nitroprusside, dobutamine, milrinone, or other agent) including assessing hemodynamic measurements before, during, after and repeat pharmacologic agent administration, when performed (list separately in addition to code for primary procedure)	N1
93572	Intravascular doppler velocity and/or pressure derived coronary flow reserve measurement (coronary vessel or graft) during coronary angiography including pharmacologically induced stress; each additional vessel (list separately in addition to code for primary procedure)	N1
93619	Comprehensive electrophysiologic evaluation with right atrial pacing and recording, right ventricular pacing and recording, his bundle recording, including insertion and repositioning of multiple electrode catheters, without induction or attempted induction of arrhythmia	Z2
93620	Comprehensive electrophysiologic evaluation including insertion and repositioning of multiple electrode catheters with induction or attempted induction of arrhythmia; with right atrial pacing and recording, right ventricular pacing and recording, his bundle recording	Z2
93623	Programmed stimulation and pacing after intravenous drug infusion (list separately in addition to code for primary procedure)	N1
93642	Electrophysiologic evaluation of single or dual chamber transvenous pacing cardioverter-defibrillator (includes defibrillation threshold evaluation, induction of arrhythmia, evaluation of sensing and pacing for arrhythmia termination, and programming or reprogramming of sensing or therapeutic parameters)	Z3
93724	Electronic analysis of antitachycardia pacemaker system (includes electrocardiographic recording, programming of device, induction and termination of tachycardia via implanted pacemaker, and interpretation of recordings)	Z3
95980	Electronic analysis of implanted neurostimulator pulse generator system (eg, rate, pulse amplitude and duration, configuration of wave form, battery status, electrode selectability, output modulation, cycling, impedance and patient measurements) gastric neurostimulator pulse generator/transmitter; intraoperative, with programming	N1
0582T	Transurethral ablation of malignant prostate tissue by high-energy water vapor thermotherapy, including intraoperative imaging and needle guidance	J8
0786T	Insertion or replacement of percutaneous electrode array, sacral, with integrated neurostimulator, including imaging guidance, when performed	J8
0951T	Totally implantable active middle ear hearing implant; initial placement, including mastoidectomy, placement of and attachment to sound processor	Y5
0952T	Totally implantable active middle ear hearing implant; revision or replacement, with mastoidectomy and replacement of sound processor	Y5
0953T	Totally implantable active middle ear hearing implant; revision or replacement, without mastoidectomy and replacement of sound processor	Y5

HCPCS Code	Long Descriptor	Final CY 2026 PI
0954T	Totally implantable active middle ear hearing implant; replacement of sound processor only, with attachment to existing transducers	Y5
0991T	Cystourethroscopy, with low-energy lithotripsy and acoustically actuated microspheres, including imaging	J8
92924	Percutaneous transluminal coronary atherectomy, with coronary angioplasty when performed; single major coronary artery or branch	J8
92933	Percutaneous transluminal coronary atherectomy, with intracoronary stent, with coronary angioplasty when performed; single major coronary artery or branch	J8
92937	Percutaneous transluminal revascularization of or through coronary artery bypass graft (internal mammary, free arterial, venous), any combination of intracoronary stent, atherectomy and angioplasty, including distal protection when performed; single vessel	J8
92943	Percutaneous transluminal revascularization of chronic total occlusion, coronary artery, coronary artery branch, or coronary artery bypass graft, any combination of intracoronary stent, atherectomy and angioplasty; single vessel	J8
92950	Cardiopulmonary resuscitation (eg, in cardiac arrest)	S1
92953	Temporary transcutaneous pacing	S1
92961	Cardioversion, elective, electrical conversion of arrhythmia; internal (separate procedure)	G2
92970	Cardioassist-method of circulatory assist; internal	C5
92971	Cardioassist-method of circulatory assist; external	C5
92972	Percutaneous transluminal coronary lithotripsy (list separately in addition to code for primary procedure)	N1
92973	Percutaneous transluminal coronary thrombectomy mechanical (list separately in addition to code for primary procedure)	N1
92974	Transcatheter placement of radiation delivery device for subsequent coronary intravascular brachytherapy (list separately in addition to code for primary procedure)	N1
93571	Intravascular doppler velocity and/or pressure derived coronary flow reserve measurement (coronary vessel or graft) during coronary angiography including pharmacologically induced stress; initial vessel (list separately in addition to code for primary procedure)	N1
C8925	Transesophageal echocardiography (tee) with contrast, or without contrast followed by with contrast, real time with image documentation (2d) (with or without m-mode recording); including probe placement, image acquisition, interpretation and report	Z2
C8926	Transesophageal echocardiography (tee) with contrast, or without contrast followed by with contrast, for congenital cardiac anomalies; including probe placement, image acquisition, interpretation and report	Z2
C8927	Transesophageal echocardiography (tee) with contrast, or without contrast followed by with contrast, for monitoring purposes, including probe placement, real time 2-dimensional image acquisition and interpretation leading to ongoing (continuous) assessment of (dynamically changing) cardiac pumping function and to therapeutic measures on an immediate time basis	Z2
C9793	3d predictive model generation for pre-planning of a cardiac procedure, using data from cardiac computed tomographic angiography with report	S1
D7440	Excision of malignant tumor-lesion diameter up to 1.25 cm	D2
D7441	Excision of malignant tumor-lesion diameter greater than 1.25 cm	D2

3. Covered Ancillary Services

Covered ancillary services are specified in § 416.164(b) and, as stated previously, are eligible for separate ASC payment. As provided at § 416.164(b), we make separate ASC payments for ancillary items and services when they are provided integral to ASC covered surgical procedures that include the following: (1) brachytherapy sources; (2) certain implantable items that have pass-through payment status under the OPPS; (3) certain items and services that we designate as contractor-priced, including, but not limited to, procurement of corneal tissue; (4) certain drugs and biologicals for which separate payment is allowed under the OPPS; (5) certain radiology services for which separate payment is allowed under the OPPS; and (6) non-opioid pain management drugs that function as a supply when used in a surgical procedure. Payment for ancillary items and services that are not paid separately under the ASC payment system is packaged into the ASC payment for the covered surgical procedure.

In the CY 2019 OPPS/ASC final rule with comment period (83 FR 59062 through 59063), consistent with the established ASC payment system policy (72 FR 42497), we finalized the policy to update the ASC list of covered ancillary services to reflect the payment status for the services under the OPPS and to continue this reconciliation of packaged status for subsequent calendar years. As discussed in prior rulemaking, maintaining consistency with the OPPS may result in changes to ASC payment indicators for some covered ancillary services. For example, if a covered ancillary service was separately paid under the ASC payment system in CY 2024, but will be packaged under the CY 2025 OPPS, we would also package the ancillary service under the ASC payment system for CY 2025 to maintain consistency with the OPPS. Comment indicator ''CH'' is used in Addendum BB (which is available via the internet on the CMS website) to indicate covered ancillary services for which we proposed a change in the ASC payment indicator to reflect a proposed change in the OPPS treatment of the service for CY 2025.

In the CY 2022 OPPS/ASC final rule with comment period, we finalized our proposal to revise § 416.164(b)(6) to include, as ancillary items that are integral to a covered surgical procedure and for which separate payment is allowed, non-opioid pain management drugs and biologicals that function as a supply when used in a surgical procedure as determined by CMS (86 FR 63490).

Comment: A commenter requested that CMS work with dental and ASC interested parties to expand the number of dental procedures that can be performed with HCPCS code G0330. They also requested that CMS remove the requirement that HCPCS code G0330 must be billed along with a covered but non-payable dental ancillary service.

Response: We thank the commenter for their input. While we are not adding any additional dental procedures that can be billed with G0330 to the list of covered ancillary services at this time, we will take this into consideration for future rulemaking.

Comment: Multiple commenters recommended specific codes to be added to the list of covered ancillary services for CY 2026. We received a total of 24 recommended procedures, which included esophageal motility, gastrointestinal tract imaging, and magnetic resonance safety procedures.

Response: We agreed with commenters that these recommendations could be added to the list of covered ancillary procedures for CY 2026, with the exception of two procedures. We did not find HCPCS codes G0562 (Therapeutic radiology simulation-aided field setting; complex, including acquisition of pet and ct imaging data required for radiopharmaceutical-directed radiation therapy treatment planning (*i.e.,* modeling)) and G0563 (Stereotactic body radiation therapy, treatment delivery, per fraction to one or more lesions, including image guidance and real-time positron emissions-based delivery adjustments to one or more lesions, entire course not to exceed 5 fraction) to be appropriate to add to the list of covered ancillary services because we did not find them to be integral to any procedures on the ASC CPL. Therefore, we are adding an additional 22 procedures recommended by commenters to the list of ASC covered ancillary services for CY 2026. In addition to these 22 procedures, we also found that 13 procedures recommended by commenters that did not qualify for addition to the ASC CPL, due to being nonsurgical in nature, could be appropriately placed on the list of ASC covered ancillary services.

In summary, we are finalizing adding 35 procedures recommended by interested parties to the list of ASC covered ancillary services for CY 2026. New CPT and HCPCS codes for covered ancillary services for CY 2026 can be found in section XIII.B. of this final rule.

E. Skin Substitute Changes to the List of ASC Covered Items and Services for CY 2026

As we discussed in section III. of the CY 2026 OPPS/ASC proposed rule, beginning January 1, 2026, we proposed to remove skin substitutes from the list of packaged items and services at § 419.2(b)(16) under the OPPS and under § 416.164(a)(5) under the ASC payment system. Our proposal intended to establish a consistent and uniform framework for how these products are treated across different outpatient settings of care to help ensure equitable access and appropriate payment for these services. While we do not believe these products are commonly used in the ASC setting, we believe extending our uniform framework from the physician office and hospital outpatient setting to the ASC setting will help ensure equitable access to these products in the future across the different sites of outpatient care.

Our payment policies under the ASC payment system for covered ancillary services generally vary according to the particular type of item or service and its payment policy under the OPPS. Drugs and biologicals that are separately paid under the ASC payment system are paid at the prospective rates adopted under the OPPS. Similar to how ASCs are paid for brachytherapy sources provided integral to ASC covered surgical procedures at prospective rates adopted under the OPPS, we proposed to pay for groups of skin substitute products at annual prospective rates adopted under the OPPS, effective January 1, 2026. Additionally, these prospective rates would not be subject to the ASC wage index adjustment and beneficiaries would be responsible for 20 percent coinsurance.

To separately pay for the provision of certain groups of skin substitute products when used during a covered surgical procedure, we proposed to revise § 416.164(b) to include groups of skin substitute products as covered ancillary items and services that are integral to a covered surgical procedure. As discussed in section XIII.B.6. of the CY 2026 OPPS/ASC proposed rule, we proposed to identify HCPCS skin substitute codes which may be separately payable with our proposed payment indicator of ''S2''—Skin substitute supply group paid separately when provided integral to a surgical procedure on ASC list; payment based on OPPS rate. Therefore, for those existing skin substitute products for which we proposed to separately pay for, we revised the payment indicator from ''N1''—Packaged service/item; no

separate payment made—to payment indicator ''S2'' effective January 1, 2026. Additionally for new skin substitute products which we proposed to add to the list of ASC covered ancillary items and services, we proposed to assign these skin substitute products an ASC payment indicator of ''S2''.

We did not receive public comments on this provision, and therefore, we are finalizing as proposed.

All ASC covered ancillary services and their final payment indicators for CY 2026 are also included in Addendum BB to this final rule (which is available via the internet on the CMS website).

F. Final CY 2026 Non-Opioid Policy for Pain Relief Under the OPPS and ASC Payment System

1. Background

The Consolidated Appropriations Act (CAA), 2023 (Pub. L. 117–328), was signed into law on December 29, 2022. Section 4135(a) and (b) of the CAA, 2023, titled Access to Non-Opioid Treatments for Pain Relief, amended section 1833(t)(16) and section 1833(i) of the Act, respectively, to provide for temporary additional payments for non-opioid treatments for pain relief (as that term is defined in section 1833(t)(16)(G)(i) of the Act). In particular, section 1833(t)(16)(G) of the Act provides that with respect to a non-opioid treatment for pain relief furnished on or after January 1, 2025, and before January 1, 2028, the Secretary shall not package payment for the non-opioid treatment for pain relief into payment for a covered OPD service (or group of services) and shall make an additional payment for the non-opioid treatment for pain relief as specified in clause (ii) of that section. Clauses (ii) and (iii) of section 1833(t)(16)(G) of the Act provide for the amount of additional payment and set a limitation on that amount.

Paragraph (10) of section 1833(i) of the Act cross-references the OPPS provisions about the additional payment amount and payment limitation for non-opioid treatments for pain relief and applies them to payment under the ASC payment system. In particular, paragraph (A) of paragraph (10) of section 1833(i) of the Act, as added by section 4135(b) of the CAA, 2023, provides that in the case of surgical services furnished on or after January 1, 2025, and before January 1, 2028, additional payments shall be made under the ASC payment system for non-opioid treatments for pain relief in the same amount provided in clause (ii) and subject to the limitation in clause (iii) of section 1833(t)(16)(G) of the Act for the OPPS. Paragraph (B) of section 1833(i)(10) of the Act provides that a drug or biological that meets the requirements of 42 CFR 416.174 and is a non-opioid treatment for pain relief shall also receive additional payment in the amount provided in clause (ii) and subject to the limitation in clause (iii) of section 1833(t)(16)(G) of the Act.

Additional payments under this policy began on January 1, 2025. As stated in the CY 2025 OPPS/ASC final rule with comment period (89 FR 94343 through 94344), the statute directs CMS to provide ''additional payment'', and for purposes of this policy, we interpret this language to be equivalent to ''separate payment,'' since CMS provides an additional payment by unpackaging the product and then making a separate payment. ''Separate payment'' is the more commonly used terminology in the OPPS rule and likely more familiar to readers. To avoid confusion, we will continue to use ''separate payment'' throughout the rest of this section, which we believe to be synonymous with ''additional payment.'' Under section 1833(t)(2)(E) of the Act, the temporary separate payments must be made in a budget neutral manner.

For background information on the ASC Payment Policy for Non-Opioid Post-Surgery Pain Management Drugs and Biologicals prior to CY 2025, please see the summary provided in the CY 2025 OPPS/ASC final rule with comment period (89 FR 94342 through 94343).

2. Final CY 2025 Non-Opioid Policy Implementation of Section 4135 of the CAA, 2023

In CY 2025, CMS finalized our implementation methodology for section 4135 of CAA, 2023 (89 FR 94343 through 94361) to provide for temporary separate payments for certain non-opioid treatment for pain relief in the hospital outpatient department and ambulatory surgical center settings on a temporary basis from January 1, 2025 through December 31, 2027. CMS also finalized regulation text at 42 CFR 416.174 and 42 CFR 419.43(k), which outline the payment for non-opioid pain management drugs, biologicals, and medical devices under both the ASC payment system and OPPS, respectively.

a. Drugs and Biologicals Subject to the ASC Non-Opioid Policy (42 CFR 416.174)

Section 1833(i)(10)(B), titled ''Transition'', provides that a drug or biological that meets the requirements of the regulation at 42 CFR 416.174, the current ASC non-opioid policy, and also meets the definition of a non-opioid treatment for pain relief at section 1833(t)(16)(G)(iv) of the Act shall receive separate payments under section 4135 of the CAA, 2023, subject to the payment limitation. In light of this requirement, we finalized in the CY 2025 OPPS/ASC final rule with comment period that drugs and biologicals that meet the definition of a non-opioid treatment for pain relief for purposes of section 4135 of the CAA, 2023 that were subject to the ASC policy for non-opioid treatments authorized by section 6082 of the SUPPORT Act in CY 2024, would instead receive separate payments, subject to the limitation, for the duration of the payment period for section 4135 of the CAA, 2023 (89 FR 94344). The policy was finalized to be in effect for the duration of the payment period for section 4135 of the CAA, 2023.

b. Definition of Non-Opioid Treatment for Pain Relief

Section 1833(t)(16)(G)(iv) of the Act defines a non-opioid treatment for pain relief for a drug, biological product, or medical device, and requires, in part, that such a treatment not receive transitional pass-through payment and has payment packaged into a payment for a covered OPD service (or group of services). In addition, in order for a drug or biological product to qualify as a non-opioid treatment for pain relief, pursuant to section 1833(t)(16)(G)(iv)(I), the product must have ''a label indication approved by the Food and Drug Administration to reduce postoperative pain, or produce postsurgical or regional analgesia, without acting upon the body's opioid receptors''. In order for a medical device to qualify as a non-opioid treatment for pain relief, pursuant to section 1833(t)(16)(G)(iv)(II) of the Act, it must, in part, be ''used to deliver a therapy to reduce postoperative pain, or produce post-surgical or regional analgesia''. A medical device must also, pursuant to section 1833(t)(16)(G)(iv)(II)(aa) and (bb) of the Act have both ''an application under section 515 of the Federal Food, Drug, and Cosmetic Act that has been approved with respect to the device, been cleared for market under section 510(k) of such Act, or is exempt from the requirements of section 510(k) of such Act pursuant to subsection (l) or (m) or section 510 of such Act or section 520(g) of such Act'' and ''demonstrated the ability to replace, reduce, or avoid intraoperative or postoperative opioid use or the quantity of opioids prescribed

in a clinical trial or through data published in a peer-reviewed journal''.

c. Evidence Requirement for Medical Devices

To determine whether a medical device fulfills the statutory requirement that it has demonstrated the ability to replace, reduce, or avoid intraoperative or postoperative opioid use or the quantity of opioids prescribed in a clinical trial or through data published in a peer-reviewed journal, we finalized in the CY 2025 OPPS/ASC final rule with comment period (89 FR 94345) a policy to review all data submitted during the public comment period to determine if the device demonstrates the ability to replace, reduce, or avoid intraoperative or postoperative opioid use or the quantity of opioids. In CY 2025, we encouraged interested parties submitting non-opioid device recommendations to submit any relevant literature that demonstrates that the named medical device replaces, reduces, or avoids opioid use per this statutory provision with their public comments. We review any literature submitted and determine whether it meets this evidence criterion. There is no requirement that commenters submit any data or literature with their device recommendations. If there is no data or literature submitted for a medical device, or if the materials submitted do not demonstrate any ability of the medical device to replace, reduce, or avoid opioids, the medical device would not meet this evidence criterion and would not qualify for separate payment under section 4135 of the CAA, 2023.

d. Non-Opioid Product Indications

(1) FDA-Approved Indications for Drugs and Biologicals

Section 1833(t)(16)(G)(iv)(I) of the Act specifies that to meet the definition of a non-opioid treatment for pain relief and to be eligible for separate payment, a drug or biological product must have a label indication approved by the Food and Drug Administration to reduce postoperative pain, or produce postsurgical or regional analgesia, without acting upon the body's opioid receptors.

Given these statutory requirements, we finalized a policy in the CY 2025 OPPS/ASC final rule with comment period (89 FR 94345 through 94346) only to approve separate payment for drug or biological products with an FDA-approved indication that closely aligns with the statutorily required indication language to reduce post-operative pain or produce post-surgical or regional analgesia. We noted that products with an indication that does not meet this statutory requirement would not qualify. We specifically stated that products with only a general pain indication will not qualify.

As discussed in the CY 2025 OPPS/ASC final rule with comment period (89 FR 94345 through 94346), we note that the Congress specifically included language at section 1833(t)(16)(G)(iv)(I) of the Act requiring that drugs or biologicals have ''a label indication approved by the Food and Drug Administration to reduce postoperative pain, or produce postsurgical or regional analgesia, without acting upon the body's opioid receptors''. Therefore, products with an indication that does not meet the statutory requirement will not qualify.

(2) Intended Use for Medical Devices

Regarding medical devices, section 1833(t)(16)(G)(iv)(II) of the Act specifies that such a device must be used to deliver a therapy to reduce postoperative pain or produce post-surgical or regional analgesia to qualify for separate payment under section 4135 of the CAA, 2023. It also must have an application approved under section 515 of the Federal Food, Drug, and Cosmetic Act (the FD&C Act), have been cleared for market under section 510(k) of the FD&C Act, or be exempt from the requirements of section 510(k) of the FD&C Act pursuant to section 510(l) or (m) or 520(g) of the FD&C Act. For CY 2025, for medical devices, we finalized without modification our proposal that a device must be used to deliver a therapy to reduce postoperative pain or produce post-surgical or regional analgesia to qualify for separate payment under section 4135 of the CAA, 2023 (89 FR 94346 through 94347). We also finalized that the medical device must have an application approved under section 515 of the FD&C Act, which has been cleared for market under section 510(k) of the FD&C Act, or be exempt from the requirements of section 510(k) of the FD&C Act pursuant to section 510(l) or (m) or 520(g) of the FD&C Act. (89 FR 94346 through 94347). This is consistent with the regulation text at 42 CFR 419.43(k)(2)(i) through (iv).

e. Amount of Payment

Section 1833(t)(16)(G)(ii)(I) of the Act provides that, for a non-opioid treatment for pain relief that is a drug or biological product, the amount of separate payment is the amount of payment for such product determined under section 1847A of the Act that exceeds the portion of the otherwise applicable Medicare OPD fee schedule that the Secretary determines is associated with the drug or biological, subject to a limitation, as described in the next section. Section 1833(t)(16)(G)(ii)(II) of the Act provides that, for a non-opioid treatment for pain relief that is a medical device, the amount of separate payment is the amount of the hospital's charges for the device, adjusted to cost, that exceeds the portion of the otherwise applicable Medicare OPD fee schedule that the Secretary determines is associated with the device, subject to a limitation, as described in the next section.

In the CY 2025 OPPS/ASC final rule with comment period, we finalized a policy to assign a payment offset of zero dollars for the qualifying drugs, biologicals, and devices for CY 2025 (89 FR 94347 through 94348). A zero dollar offset means that we would not offset or remove the amount that the non-opioid product represents from the procedure payment rate when setting payment rates. We finalized a zero dollar offset for the initial year of the policy as some of these products are new products or newly separately paid in the OPPS setting and their costs may not be fully reflected yet in the cost of procedures in which they may be used. Therefore, we stated that the separate payment for a drug or biological would be determined by subtracting from the amount calculated using the methodology outlined in section 1847A of the Act the portion of the otherwise applicable Medicare OPD fee schedule associated with the drug or biological, which as previously discussed, we finalized to be zero dollars for CY 2025. For the amount of payment for a medical device, since we are unable to reduce charges to costs for ASCs, we stated that the separate payment amount would be contractor-priced by the ASC's Medicare Administrative Contractor reduced by the portion of the otherwise applicable Medicare OPD fee schedule amount associated with the medical device, which as previously discussed, we finalized to be zero dollars for CY 2025. These separate payment amounts are all subject to the payment limitation, described in the subsequent section.

Section 1833(i)(10) of the Act establishes the same separate payment for the ASC setting as for hospital outpatient departments, as described in section 1833(t)(16)(G)(ii) of the Act. Both separate payments are subject to the limitation in section 1833(t)(16)(G)(iii) of the Act, which specifies that the separate payment amount shall not exceed the estimated average of 18 percent of the OPD fee schedule amount for the OPD service (or

group of services) with which the non-opioid treatment for pain relief is furnished. Given this statutory requirement, starting on January 1, 2025 through December 31, 2027, we finalized paying the same separate payment amount for qualifying non-opioid products in both the HOPD and ASC settings.

As the statute requires separate payment for these non-opioid treatments for pain relief, these products cannot be packaged into the procedure payment. Under our current threshold packaging policy, if the estimated per day cost for a drug or biological is less than or equal to the applicable OPPS drug packaging threshold, we package payment for the drug or biological into the payment for the associated procedure. Similarly, under our comprehensive APC (C–APC) policy, we package all payments for services integral, ancillary, supportive, dependent, and adjunctive to the primary service into a single payment for the primary comprehensive service. For CY 2025, we finalized that non-opioid treatments for pain relief would not be subject to the threshold packaging policy and would also be separately paid when used during a comprehensive APC (C–APC) procedure in the HOPD setting (89 FR 94347 through 94348). See section V.B.1.a. of this final rule with comment period for more information regarding the drug packaging threshold. Section II.A.2.b. of this final rule with comment period contains further information on C–APC packaging.

f. Payment Limitation

Section 1833(t)(16)(G)(iii) of the Act states that the separate payment amount specified in clause (ii), (which is described in the previous section) shall not exceed the estimated average of 18 percent of the OPD fee schedule amount for the OPD service (or group of services) with which the non-opioid treatment for pain relief is furnished, as determined by the Secretary.

In the CY 2025 OPPS/ASC final rule with comment period, we finalized a policy to base the 18 percent payment limitation on the volume weighted average of the payment rates of the top five primary procedures by volume into which a non-opioid treatment for pain relief would have their payment packaged, absent this policy. We also finalized applying the 18 percent payment limitation per date of service billed (89 FR 94349).

g. Payment Limitation With No Claims Data

For drugs, biologicals, and devices with no claims data, such as for newly FDA-approved and marketed products or products that did not previously have their own product-specific HCPCS code by which to track payment and utilization data, we finalized in the CY 2025 OPPS/ASC final rule with comment period (89 FR 94350) a policy where CMS will utilize the services with which a product would be expected to be furnished and would typically be packaged absent this policy, to calculate the payment limitation based on expected clinical use patterns. The finalized policy stated that CMS will determine the service, or group of services, to use to calculate the payment limitation through engagement with interested parties and a review by CMS Medical Officers and clinical staff during annual rulemaking. In the absence of engagement from interested parties, we will determine clinically appropriate procedures with which we would expect the drug or device to be frequently used in order to determine the payment limitation, including review of FDA approval materials, procedures identified in literature available to CMS, and other relevant materials. We noted that we may update the payment limitation amount in future rulemaking as we gather additional claims data on the utilization of and payment for this product.

3. Final CY 2026 Non-Opioid Policy Implementation of Section 4135 of the CAA, 2023

For CY 2026, we proposed to continue the policies finalized in the CY 2025 OPPS ASC final rule without modification (90 FR 33745).

We stated in the CY 2026 OPPS/ASC proposed rule that we continue to believe a zero-dollar offset is appropriate for all qualifying products regulated under the non-opioid policy as some of these products are new products or newly separately paid in the OPPS setting and their costs may not be fully reflected yet in the cost of procedures in which they may be used. Additionally, the data used for CY 2026 ratesetting is derived from CY 2024 claims, which was prior to the effective date of this policy in CY 2025. Accordingly, we proposed to edit the regulation text at 42 CFR 416.174(c)(1) to remove the following text: ''which is determined to be zero dollars for calendar year 2025''. We proposed to remove this language pertaining to the portion of the otherwise applicable Medicare OPD fee schedule amount for CY 2025, as we will discuss the appropriate amount in each year's rulemaking.

We noted that the final payment limitation calculation in the CY 2026 OPPS/ASC final rule with comment period would be based on the proposed procedure payment rates and utilization data available in the CY 2026 OPPS/ASC proposed rule. Therefore, the values included in Table 133, previously published as Table 83 in the CY 2026 OPPS/ASC proposed rule (90 FR 33748 and 33749), are approximate payment limitations based on the best data available at the time of writing the CY 2026 OPPS/ASC proposed rule. We note that the final payment limitations for the CY 2026 OPPS/ASC final rule with comment period are also based on the proposed payment rates in the CY 2026 OPPS/ASC proposed rule.

Table 131, previously published as Table 82 in the CY 2026 OPPS/ASC proposed rule (90 FR 33746 and 33747), includes citations to the indications of the drugs and biologicals proposed to have met the statutory requirements and qualify for separate payment for the CY 2026 OPPS/ASC proposed rule. We welcomed public comment on all of these policies, including the procedures used to determine the payment limitations that are detailed in Table 133.

We welcomed comments regarding additional drugs or devices that readers believe meet the criteria at 42 CFR 416.174 and 42 CFR 419.43(k) and should qualify as non-opioid treatments for pain relief. In the CY 2026 OPPS/ASC proposed rule, we stated we would review those comments, evaluate the products against the criteria, and, if appropriate, would finalize additional drugs and devices that meet these criteria as non-opioid treatments for pain relief in the CY 2026 OPPS/ASC final rule with comment period to begin payment in CY 2026.

We received public comments on these proposals. The following is a summary of the comments we received and our responses.

Comment: Commenters were generally supportive of CMS paying for drugs paid under the ASC non-opioid treatment policy authorized by section 6082 of the SUPPORT Act under the policy authorized by section 4135 of the CAA, 2023 for the second year, including the C–APC exclusion of qualifying products. Commenters recommended that CMS begin to assess its authority for continuing a policy for the payment of non-opioid treatments for pain relief in future rulemaking, starting in CY 2028 and beyond, including making the current policy

permanent. Several commenters provided suggestions on how CMS could craft a policy to pay for non-opioid treatments for pain relief starting in CY 2028 and beyond.

Response: We thank commenters for their support. Comments about possible future funding, payments, and policies are outside the scope of this CY 2026 rule.

Comment: A commenter requested that CMS approve products for this policy off-cycle in order to provide more immediate access to new non-opioid products. This commenter suggested that adding new products upon approval will guarantee that patients have access to new non-opioid options as soon as possible. Many commenters stated that there needs to be access to all qualifying non-opioid treatments for pain relief, and noted the general importance of the availability of non-opioid alternatives.

Response: We thank the commenters for their insights regarding the importance of access to non-opioid treatments for pain relief, as well as the commenter's suggestion for us to approve products off-cycle to provide more immediate access. As we have noted in past rules, it is our priority to address the opioid epidemic and we are committed to evaluating and adjusting our current processes, if necessary, in order to ensure appropriate care or access for beneficiaries amidst the current opioid epidemic. We would expect the majority of non-opioid products that meet the statutory criteria to have already been addressed under this policy; however, we acknowledge there could be a small number of products that could newly meet the established criteria throughout the calendar year. Therefore, given our priorities in addressing the opioid epidemic, and the potential development of new non-opioid products, we believe it may be reasonable to consider a pathway to approve new products or products newly meeting the statutory requirements on a quarterly basis. We welcome engagement from the public on products that newly meet the qualifying criteria and should be paid according to the statute under this policy. Such engagement could include: (1) documentation verifying appropriate FDA status, including the required FDA-approved indication for drugs; (2) qualifying peer-reviewed literature for medical devices and that the medical device is used to deliver a therapy to reduce postoperative pain, or produce postsurgical or regional analgesia; (3) suggestions for the top 5 most frequent procedures for purposes of calculating a payment limitation; (4) verification that the product does not have transitional pass-through status; (5) confirmation that the product has payment that is packaged into a payment for a covered OPD service, and (6) the current HCPCS code describing the product or recommendations for a new HCPCS code to describe the product. Please see 42 CFR 419.43(k) and 416.174 for the full established criteria. As we are considering evaluating and updating the CY 2026 qualifying non-opioid treatments for pain relief, we are modifying the regulation text accordingly. Specifically, we are removing the phrase ''through that year's rulemaking'' and ''for an applicable calendar year'' from 42 CFR 419.43(k)(1), 419.43(k)(2), 416.174(a), and 416.174(b).

We anticipate that if any non-opioid treatments for pain relief qualify during CY 2026, our review process would be similar to the other existing quarterly approval processes, such as OPPS New Technology APC process or the CMS HCPCS application process, where CMS evaluates and approves products on a more frequent basis than annual rulemaking. A quarterly implementation process will be necessary to create new HCPCS codes and implement the necessary claims processing changes to effectuate the calculated payment rates as well as the required payment limitations. We will make payment, according to the statute, retroactively effective to the date that we determine that a product meets the criteria, with the earliest effective payment date being January 1, 2026. Once these determinations are made by us, we will make them publicly available on the CMS OPPS website.[213] Payment will be made according to the statute, and established regulation text, and will be effectuated in the applicable quarterly OPPS/ASC update.

Comment: We received many comments recommending CMS increase access to non-opioid products including commenters emphasizing the benefits of a broader interpretation of the statutory language requiring drugs and biologicals to have an FDA-approved indication to reduce postoperative pain, or produce postsurgical or regional analgesia, without acting upon the body's opioid receptors. Several commenters requested that we allow drugs and biologicals, including those that are orally administered, that have FDA-approved indications for ''acute pain'' or other pain indications to qualify under this policy, rather than only those with the FDA-approved label indications to ''reduce postoperative pain'' or to ''produce postsurgical or regional analgesia'' that is prescribed by the Congress. Some commenters argued that products may receive a broader label that indicates their ability to treat moderate or severe acute pain with the intention of being used in every setting in which pain presents, including postoperatively. Commenters asserted that requiring non-opioid drugs to have a specific indication to reduce postoperative pain, or produce post-surgical or regional analgesia limits patient access to FDA-approved non-opioid treatments with broader indications, including in rural settings.

Several commenters stated their belief that FDA guidance provides that general pain indications can encompass situations in which analgesia or pain management is provided post operatively, and that general indications are often approved based on clinical trials in patients with postoperative pain. One commenter stated that they had discussed with the FDA and were not able to revise their FDA-approved indication. They believed that FDA did not consider it appropriate to add an express reference to postoperative or postsurgical use, due to the fact that adding additional specific language to the FDA-approved indication could be viewed as narrowing the approved indication. Commenters also argued that CMS does not require that the FDA-approved label state that the product must not act upon the body's opioid receptors and, therefore, should not require the indication to have an express reference to postoperative or postsurgical use.

Commenters also noted their belief that the FDA has issued guidance, which CMS understands to be labeled as draft guidance by the FDA, on the approval and labeling of general acute pain therapies, which states that such an indication is appropriate for a product that is supported by at least two successful clinical trials, including trials in postoperative pain. Commenters believed this FDA guidance made it clear that there was a need for a more expansive interpretation of the NO PAIN Act to ensure that products with broader labeling are taken fully into consideration by CMS for purposes to satisfying the criteria set forth by the NO PAIN Act. Commenters encouraged CMS consider FDA-approved labeling that includes products that have been studied in two successful clinical trials in postoperative pain.

Overall, commenters did not think it was appropriate for CMS to require the

[213] *https://www.cms.gov/medicare/payment/prospective-payment-systems/hospital-outpatient/restated-drug-biological-payment-rates.*

indications specified in section 1833(t)(16)(G)(iv) of the Act strictly, and they believed that a broader label indication would still satisfy the requirements. Several commenters believed that drugs with more general pain indications, or indications that did not align with those as listed in the NO PAIN Act, satisfied the criteria of the Act and of the criteria CMS finalized. The drugs mentioned by commenters included Sprix, Caldolor, Journavx, gabapentinoids, Prialt, Celecoxib, XIFYRM, and acetaminophen.

Response: We thank the commenters for their input. As we discussed in section XIII.F.2. of the CY 2025 OPPS/ASC final rule with comment period (89 FR 94344 through 94347), the postoperative pain or postsurgical requirement, referred to in the public comments, is in section 1833(t)(16)(G)(iv) of the Act. The Congress specifically included language stating that, to meet the definition of a ''non-opioid treatment for pain relief,'' drugs or biologicals must have ''a label indication approved by the Food and Drug Administration to reduce postoperative pain, or produce postsurgical or regional analgesia, without acting upon the body's opioid receptors''. We codified this provision at § 419.43(k)(1)(i).

As we stated in the CY 2025 OPPS/ASC final rule with comment period (89 FR 94246), we ''only approve separate payment for drug or biological products with an FDA-approved indication to reduce post-operative pain or produce post-surgical or regional analgesia. Products such as those with only a general pain indication will not qualify''. As we explained, if there is no mention of postoperative or post-surgical use in the FDA-approved indications for the products being evaluated, they do not meet the statutory requirement. For CY 2026, we continue to believe this approach conforms with the statute. While some commenters have asserted that a broad pain indication could include a more specific one, we do not agree that we can infer from a broad acute, or general, pain indication that the FDA also intended that the drug is indicated to reduce post-operative pain or produce post-surgical or regional analgesia, as that specific pain indication is not provided. We defer to the FDA to approve indications for drugs and biological products, based on the relevant statutory and regulatory authorities, and it is not within our purview to infer alternative or more specific pain indications that have not been specifically finalized in the FDA's review. Therefore, while we understand the commenters' concerns regarding revising the payment indication, determining whether the specific pain indications is met under a broader indication is not within our purview.

Because the statute is clear that an indication to reduce post-operative pain or product post-surgical or regional analgesia is required for separate Medicare payment under section 4135 of the CAA, 2023, we do not believe that we can look outside of the specific indication provided or to other sources that are not the FDA-approved Drug Label. Therefore, given the current labeling for the following products, we are not finalizing separate payment for the following products under the OPPS and ASC payment systems in this rule: Sprix, Caldolor, Journavx, gabapentinoids, Prialt, Celecoxib, XIFYRM, and acetaminophen. We note that these products may still be able to be paid under the OPPS/ASC payment system, for example, through packaged payments, but they do not currently qualify for additional separate payment under this provision.

After consideration of public comments, we are finalizing our proposal to continue the policies finalized in the CY 2025 OPPS ASC final rule with comment period with a minor modification to permit more timely consideration of payment requests.

Comment: Commenters supported our proposal to continue to set a zero-dollar offset for CY 2026. Additionally, we received a comment requesting that we keep the zero-dollar offset for qualifying products for CY 2026 and CY 2027. The commenter stated that by extending the policy, CMS removes potential financial barriers that could discourage the use of safer, non-opioid pain control options, which are particularly important in health outcomes for women.

Response: We thank commenters for their support. We will evaluate the need to continue to assign a zero-dollar offset in future rulemaking.

Comment: A commenter provided CMS suggestions and recommendations on how to best complete the Report to Congress assessing the impact of the Act, mandated by subsection C of section 4135 of the CAA, 2023.

Response: We appreciate this engagement on this component of the statute and look forward to continued collaboration with interested parties regarding this issue. We will take this information into consideration for future rulemaking.

a. Qualifying Products for CY 2026

The following table, Table 134, previously published as Table 82 in the CY 2026 OPPS/ASC proposed rule (90 FR 33746 and 33747), lists the non-opioid alternatives that we proposed would receive separate payment as a non-opioid pain management drug or device under section 4135 criteria for CY 2026.

CMS routinely receives public comments with detailed rationales on why commenters believe a particular drug, biological, medical device, or other item or service should receive separate payment. As such, we solicited comment in the CY 2026 OPPS/ASC proposed rule on whether there are any additional drugs, biologicals, or medical devices that meet the statutory requirements outlined in sections 1833(t)(16)(G) and 1833(i)(10) of the Act. In addition to soliciting comment on the actual product and how it meets the criteria at 42 CFR 416.174 and 42 CFR 419.43(k), we solicited comment on the top five procedures used to calculate the payment limitation, as well as HCPCS coding for the product, which CMS could use to establish the payment rate, if CMS determines that the product discussed in the comment qualifies as a non-opioid treatment for pain relief, listed in Table 135.

As discussed previously in this section, there are specific requirements that must be met in order for the product to qualify for separate payment. In the CY 2026 OPPS/ASC proposed rule, we stated that interested parties that believed that a product not addressed in the proposed rule met the statutory requirements were encouraged to submit information during the comment period indicating how the product meets the statutory eligibility requirements. In the proposed rule, we stated that if CMS determines that the product(s) does in fact meet the statutory eligibility requirements, we would finalize separate payment for the product(s) in the CY 2026 OPPS/ASC final rule with comment period.

We stated that for drugs and biological products not addressed in the CY OPPS/ASC proposed rule, if no comment was submitted that outlines how that drug or biological meets the statutory criteria, then CMS would not finalize separate payment for such product for CY 2026. Additionally, for medical devices not addressed in the CY 2026 OPPS/ASC proposed rule, unless a comment was submitted that both outlines how that device meets the statutory criteria, including literature that demonstrates that the device has the ability to replace, reduce, or avoid intraoperative or postoperative opioid use or the quantity of opioids prescribed in a clinical trial or through data published in a peer-reviewed journal,

CMS would not finalize separate payment for such device for CY 2026.

We proposed that the HCPCS codes describing the qualifying devices and drugs in Table 134 would be placed on the ASC covered ancillary procedures list. We noted that Medicare Administrative Contractors (MACs) determine whether a drug, device, procedure, or other service meets all program requirements and conditions for coverage and payment. HOPDs and ASCs only receive payment for qualifying drugs, biologicals, and medical devices when the appropriate MAC determines that the service meets the relevant conditions for coverage and payment. As we have consistently stated in past OPPS/ASC final rules with comment period (see, for example, 87 FR 71879 and 88 FR 81660 through 81661), the fact that a drug, device, procedure or service is assigned a HCPCS code and a payment rate under the OPPS does not imply coverage by the Medicare program, but indicates only how the product, procedure, or service may be paid if covered by the program (see, for example, Pub 100–04 Medicare Claims Processing, Transmittal 11937).

BILLING CODE 4120–01–P

TABLE 134: PROPOSED LIST OF QUALIFYING PRODUCTS FOR SEPARATE PAYMENT IN CY 2026 UNDER SECTION 4135 OF THE CAA, 2023

Brand Name	HCPCS Code	Long Descriptor
Exparel	J0666	Injection, bupivacaine liposome, 1mg
Omidria	J1097	Phenylephrine 10.16 mg/ml and ketorolac 2.88 mg/ml ophthalmic irrigation solution, 1 ml
Dextenza	J1096	Dexamethasone, lacrimal ophthalmic insert, 0.1 mg
Zynrelef	C9088	Instillation, bupivacaine and meloxicam, 1 mg/0.03 mg
Ketorolac tromethamine Injection	J1885	Injection, ketorolac tromethamine, per 15 mg
ON-Q Pump	C9804	Elastomeric infusion pump (e.g., ON-Q* Pump with Bolus), including catheter and all disposable system components, non-opioid medical device (must be a qualifying Medicare non-opioid medical device for post-surgical pain relief in accordance with Section 4135 of the CAA, 2023)
SPRINT Peripheral Nerve Stimulator System	C9807	Nerve stimulator, percutaneous, peripheral (e.g., SPRINT Peripheral Nerve Stimulation System), including electrode and all disposable system components, non-opioid medical device (must be a qualifying Medicare non-opioid medical device for post-surgical pain relief in accordance with Section 4135 of the CAA, 2023)
Cryo Nerve Block Therapy	C9808	Nerve cryoablation probe (e.g., cryoICE, cryoSPHERE, cryoSPHERE MAX, cryoICE cryoSPHERE, cryoICE Cryo2), including probe and all disposable system components, non-opioid medical device (must be a qualifying Medicare non-opioid medical device for post-surgical pain relief in accordance with Section 4135 of the CAA, 2023)
ambIT Electronic Infusion Pump	C9806	Rotary peristaltic infusion pump (e.g., ambIT Pump), including catheter and all disposable system components, non-opioid medical device (must be a qualifying Medicare non-opioid medical device for post-surgical pain relief in accordance with Section 4135 of the CAA, 2023)
Iovera System	C9809	Cryoablation needle (e.g., iovera System), including needle/tip and all disposable system components, non-opioid medical device (must be a qualifying Medicare non-opioid medical device for post-surgical pain relief in accordance with Section 4135 of the CAA, 2023)
IceMan	C9XX0	Water circulating motorized cold therapy device (e.g., IceMan) including all system components (e.g. pads, console, disposable parts), non-opioid medical device (must be a qualifying medicare non-opioid medical device for post-surgical pain relief in accordance with section 4135 of the CAA, 2023)

TABLE 135: PROPOSED PAYMENT LIMITATIONS FOR QUALIFYING PRODUCTS FOR CY 2026

*We assumed equal utilization of the qualifying product among the provided primary procedures unless otherwise advised by commenters. **Expected utilization was provided by the manufacturer based on the CY 2025 OPPS/ASC final rule with comment period (89 FR 94356 through 94357).				

BILLING CODE 4120–01–C

We received public comments on these proposals. The following is a summary of the comments we received and our responses.

Comment: Commenters were generally supportive of our proposals on the qualifying products in Table 82 of the CY 2026 OPPS/ASC proposed rule, republished as Table 134 in this final rule with comment period, and they recommended that we finalize those products for separate payment for CY 2026. These commenters were also generally supportive of most aspects of the implementation of this policy, including the payment amounts for these products and the payment limitations.

Response: We thank the commenters for their support, and we are finalizing those products for separate payment, with updates to their product specific payment limitations as listed in Table 137.

Comment: A commenter requested clarification regarding the established descriptor for HCPCS code C9806 (Rotary peristaltic infusion pump (*e.g.,* ambIT Pump), including catheter and all disposable system components, non-opioid medical device (must be a qualifying Medicare non-opioid medical device for post-surgical pain relief in accordance with Section 4135 of the CAA, 2023) and whether it could be used to describe both reusable and disposable versions of the ambIT pump. This commenter stated that the literature provided concludes lowered opioid usage with both versions of the pump, disposable and reusable.

Response: We thank the commenter for their question and input. We believe that it is appropriate to create a new C-code to describe the reusable version of the ambIT pump. Specifically, we are creating C9816 (Rotary peristaltic infusion pump (*e.g.,* reusable ambIT Pump) including all disposable system components, reusable non-opioid medical device (must be a qualifying Medicare non-opioid medical device for post-surgical pain relief in accordance with section 4135 of the CAA, 2023)) to describe the reusable version of the pump. Please see Table 137 for the payment limitation calculation and the new C-code used to describe the device.

Comment: A commenter supported the continuation of the products described by HCPCS Code C9808 (Nerve cryoablation probe (*e.g.,* cryoice,

cryosphere, cryosphere max, cryoice cryosphere, cryoice cryo2), including probe and all disposable system components, non-opioid medical device (must be a qualifying medicare non-opioid medical device for post-surgical pain relief in accordance with section 4135 of the CAA, 2023)) as qualifying non-opioid treatments for pain relief. This commenter requested that CMS add the CryoXT cryoablation probe to that HCPCS code descriptor. This commenter stated that this product was not widely available on the market at the time that the CY 2025 OPPS/ASC final rule with comment period was published, but they believe that this device should also meet the qualifying criteria. They state this device has the same mechanism of action as the cryoNB probes that were studied in the clinical literature, previously submitted by this same commenter, and since this new device is substantially equivalent, and is a predicate device, to devices that were studied in the literature, the commenter believed that the CryoXT should also qualify for separate payment.

Response: Based on the comment received, we find that the CryoXT medical device is used to deliver a therapy, cryoablation, as stated in the device's 510k summary, to reduce postoperative pain or produce post-surgical or regional analgesia. Accordingly, we confirmed that this device has FDA clearance.[214] However, the supporting literature does not specifically name the CryoXT medical device or demonstrate that this device, specifically, has the ability to replace, reduce, or avoid intraoperative or postoperative opioid use or the quantity of opioids prescribed in a clinical trial or through data published in a peer-reviewed journal.[215] [216] [217] [218] [219] [220] [221] We believe that the device demonstrating the ability to reduce, replace, or avoid opioid use in a clinical trial or peer-reviewed journal must be the same device as the one being studied in order to qualify for separate payment under section 4135. Therefore, we are not finalizing a change to the descriptor of HCPCS code C9808 to include CryoXT as requested by this commenter for CY 2026.

Sapphire™ Multi-Therapy Infusion System

Comment: Commenters requested that we evaluate and approve the Sapphire™ infusion system manufactured by Eitan Medical, under our non-opioid treatment for pain relief separate payment policy. Per the manufacturer, among other uses, the Sapphire™ infusion system is used to deliver therapies to reduce post-surgical pain and/or product post-surgical or regional analgesia in the outpatient setting. The manufacturer provided that the Sapphire™ infusion system has been cleared by the FDA under 510(k) as a Class II device (K192860) [222] and has supporting literature. The manufacturer explained that a range of surgeries requiring postoperative analgesia including shoulder, knee and ankle arthroplasties, thoracic surgery, gynecological surgeries, and spine surgery have been supported with anesthesia and postoperative pain control with the Sapphire™ infusion system. The manufacturer provided four HCPCS procedure codes with which they believed the Sapphire™ infusion system could be used for post-surgical pain management.

Response: Based on comments received, we find that this medical device is used to deliver a therapy to reduce postoperative pain or produce post-surgical or regional analgesia. We confirmed that this product is FDA cleared [223] and has supporting literature demonstrating the ability to replace, reduce, or avoid intraoperative or postoperative opioid use or the quantity of opioids prescribed in a clinical trial or through data published in a peer reviewed journal.[224] The medical device does not currently receive transitional passthrough status and we believe it would have payment that is otherwise packaged into a payment for a covered OPD service, absent this policy. Therefore, we believe that the Sapphire™ medical device meets the statutory requirements at section 1833(t)(16)(G)(iv) of the Act and we are finalizing that it will be paid separately under this provision. We appreciate the commenter's suggestions regarding the top five procedures on which to base the payment limitation. Based on our review of the device, as well as the volume of services in which the device is most likely to be used, we believe that the top five procedures to base the payment limitation on are: HCPCS codes 27447 (Arthroplasty, knee, condyle and plateau; medial AND lateral compartments with or without patella resurfacing (total knee arthroplasty)), 27130 (Arthroplasty, acetabular and proximal femoral prosthetic replacement (total hip arthroplasty), with or without autograft or allograft), 23472 (Arthroplasty, glenohumeral joint; total shoulder (glenoid and proximal humeral replacement (e.g., total shoulder))), 29827 (Arthroscopy, shoulder, surgical; with rotator cuff repair), and 29881 (Arthroscopy, knee, surgical; with meniscectomy (medial OR lateral, including any meniscal shaving) including debridement/shaving of articular cartilage (chondroplasty), same or separate compartment(s), when performed). We will assume an equal utilization of the device with these five procedures for the payment limitation calculation, as shown in Table 137 at the end of this section. We note that in the absence of utilization data for the top five procedures, we believe it is reasonable to assume equal utilization for purposes of calculating the payment limitation until claims data are available. Please see Table 137 for the payment limitation calculation and the new C-code used to describe the device.

Avoset™ Infusion System

Comment: Commenters requested that we evaluate and approve the Avoset™ infusion system manufactured by Eitan Medical, under our non-opioid treatment for pain relief separate payment policy. They noted that the Avoset™ infusion system is a compact ambulatory infusion pump, similar to Eitan Medical's Sapphire™ infusion system. Like the Sapphire™ infusion system, the Avoset™ infusion system is used to deliver therapies to reduce post-surgical pain and/or product post-surgical or regional analgesia in the outpatient setting. The Avoset™ infusion system has been cleared by the FDA under 510(k) as a Class II device. The manufacturer provided four HCPCS procedure codes with which they believed the Avoset™ infusion system could be used for post-surgical pain management.

The manufacturer pointed to the clinical evidence submitted for the Sapphire™ infusion system as evidence that the Avoset™ infusion system has the ability to replace, reduce, or avoid intraoperative or postoperative opioid use in a clinical trial or through data published in a peer-reviewed journal. Per the commenter, the evidence for the Sapphire™ device also provides evidence for the Avoset™ device since Sapphire™ was one of the predicate devices deemed substantially equivalent to the Avoset™ device by the FDA. The manufacturer noted their plans to submit data on the Avoset™ device to the November 2025 American Society of Regional Anesthesia 24th Annual Pain Medicine Meeting. The manufacturer also submitted articles providing supportive evidence for electronic infusion pumps, generally, which do not name either the Sapphire™ or Avoset™ infusion systems. The commenter urged us to interpret the statutory language in section 4135 of the CAA, 2023 to allow for evidence of the effectiveness of therapies using infusion devices to reduce or eliminate opioid use for postoperative pain, even if the device named in the trial or data is not the same infusion device for which separate payment is requested. The commenter believes that an expanded interpretation of the literature requirement will allow for greater access to non-opioid postoperative pain therapies and lower costs to the Medicare program.

Response: Based on the comments received, we find that the Avoset medical device is used to deliver a therapy to reduce postoperative pain or produce post-surgical or regional analgesia. We confirmed that the device has FDA clearance.[225] However, the supporting literature does not demonstrate that the Avoset™ device specifically has the ability to replace, reduce, or avoid intraoperative or postoperative opioid use or the quantity of opioids prescribed in a clinical trial or through data published in a peer reviewed journal. While we acknowledge that Sapphire™ may be the predicate device for the Avoset™ infusion system, we believe that the device demonstrating the ability to reduce, replace, or avoid opioid use in a clinical trial or peer-reviewed journal must be the same device as the one being studied in order to qualify for separate payment under section 4135 of the CAA, 2023. Therefore, we believe that the Avoset™ medical device does not meet the statutory requirements at section 1833(t)(16)(G)(iv)(II) of the Act and are not finalizing separate payment for it under this provision. We understand that peer reviewed literature may be forthcoming for this device, but it was not available at the time of writing of this final rule with comment period. We can take new clinical evidence regarding the named device into consideration for future rulemaking.

Ultrasound-Visible Nerve Block Needles (SonoPlex, SonoBlock, SonoTap)

Comment: A commenter recommended CMS evaluate and approve ultrasound-visible nerve block needles, specifically the SonoPlex, SonoBlock, and SonoTap medical devices manufactured by PAJUNK, under our non-opioid treatment for pain relief separate payment policy. The commenter stated that the nerve block needles are cleared by the FDA as 510(k) devices to inject local anesthetic to achieve regional analgesia and have supporting literature.

The commenter provided five HCPCS codes with which they requested CMS establish the payment limitation. These CPT codes are: 23472 (Arthroplasty, glenohumeral joint; total shoulder (glenoid and proximal humeral replacement (e.g., total shoulder))), 27447 (Arthroplasty, knee, condyle and plateau; medial and lateral compartments with or without patella resurfacing (total knee arthroplasty)), 27130 (Arthroplasty, acetabular and proximal femoral prosthetic replacement (total hip arthroplasty), with or without autograft or allograft), 27792 (Open treatment of distal fibular fracture (lateral malleolus), includes internal fixation, when performed), and 19301 (Mastectomy, partial (e.g., lumpectomy, tylectomy, quadrantectomy, segmentectomy)).

Response: Based on comments received, we find that ultrasound-visible nerve block needles are used to deliver a therapy to reduce postoperative pain or produce post-surgical or regional analgesia. We confirmed that the three named ultrasound-visible nerve block needles, SonoPlex, SonoBlock, and SonoTap, are FDA cleared [226] [227] [228] and have supporting literature demonstrating the ability to replace, reduce, or avoid intraoperative or postoperative opioid use or the quantity of opioids prescribed in a clinical trial or through data published in a peer reviewed journal.[229] [230] [231] The medical device does not currently receive transitional passthrough status and we believe it would have payment that is otherwise packaged into a payment for a covered OPD service, absent this policy. Therefore, we believe that the three named ultrasound-visible nerve block needles, specifically the SonoPlex, SonoBlock, and SonoTap medical devices, meet the statutory requirements at section 1833(t)(16)(G)(iv) of the Act and are finalizing that they will be paid separately under this provision. We appreciate the commenter's suggestions regarding the top five procedures on which to base the payment limitation. Based on our review of the devices, as well as the volume of services in which the devices are most likely to be used, we believe that the top five procedures to base the payment limitation on are: HCPCS codes 27447 (Arthroplasty, knee, condyle and plateau; medial AND lateral compartments with or without patella resurfacing (total knee arthroplasty)), 27130 (Arthroplasty, acetabular and proximal femoral prosthetic replacement (total hip arthroplasty), with or without autograft

or allograft), 23472 (Arthroplasty, glenohumeral joint; total shoulder (glenoid and proximal humeral replacement (e.g., total shoulder))), 29827 (Arthroscopy, shoulder, surgical; with rotator cuff repair), and 29881 (Arthroscopy, knee, surgical; with meniscectomy (medial OR lateral, including any meniscal shaving) including debridement/shaving of articular cartilage (chondroplasty), same or separate compartment(s), when performed). We will assume an equal utilization of the devices with these 5 procedures for the payment limitation calculation, as shown in Table 137 at the end of this section. We note that in the absence of utilization data for the top 5 procedures, we believe it is reasonable to assume equal utilization for purposes of calculating the payment limitation until claims data are available. Please see Table 137 for the payment limitation calculation and the new C-code used to describe the ultrasound-visible nerve block needle devices.

Perforated Continuous Infusion Catheter Set (InfiltraLong)

Comment: A commenter recommended CMS evaluate and approve a perforated continuous infusion catheter set, specifically the InfiltraLong medical device manufactured by PAJUNK, under our non-opioid treatment for pain relief separate payment policy. The commenter stated that the InfiltraLong device is a self-contained system intended for continuous or intermittent pre-operative, peri-operative, or post-operative delivery of a local anesthetic at the surgical site. Per the commenter, the device's distribution of local anesthetic optimizes patient analgesia and improves outcomes while reducing opioid consumption. The commenter stated that the InfiltraLong device is cleared by the FDA and has supporting literature.

The commenter provided five HCPCS codes with which they requested CMS establish the payment limitation. These CPT codes are: 23472 (Arthroplasty, glenohumeral joint; total shoulder (glenoid and proximal humeral replacement (e.g., total shoulder))), 27447 (Arthroplasty, knee, condyle and plateau; medial and lateral compartments with or without patella resurfacing (total knee arthroplasty)), 49650 (Laparoscopy, surgical; repair initial inguinal hernia), 15847 (Excision, excessive skin and subcutaneous tissue (includes lipectomy), abdomen (e.g., abdominoplasty) (includes umbilical transposition and fascial plication) (list separately in addition to code for primary procedure)), and 21601 (Excision of chest wall tumor including rib(s)).

Response: Based on comments received, we find that this medical device is used to deliver a therapy to reduce postoperative pain or produce post-surgical or regional analgesia. We confirmed that this product is FDA cleared [232] and has supporting literature demonstrating the ability to replace, reduce, or avoid intraoperative or postoperative opioid use or the quantity of opioids prescribed in a clinical trial or through data published in a peer reviewed journal.[233] The medical device does not currently receive transitional passthrough status and we believe it would have payment that is otherwise packaged into a payment for a covered OPD service, absent this policy. Therefore, we believe that the InfiltraLong medical device meets the statutory requirements at section 1833(t)(16)(G)(iv) of the Act and are finalizing that it will be paid separately under this provision. We appreciate the commenter's suggestions regarding the top five procedures on which to base the payment limitation. Based on our review of the device, as well as the volume of services in which the device is most likely to be used, we believe that the top five procedures to base the payment limitation on are: HCPCS codes 27447 (Arthroplasty, knee, condyle and plateau; medial AND lateral compartments with or without patella resurfacing (total knee arthroplasty), 27130 (Arthroplasty, acetabular and proximal femoral prosthetic replacement (total hip arthroplasty), with or without autograft or allograft), 23472 (Arthroplasty, glenohumeral joint; total shoulder (glenoid and proximal humeral replacement (e.g., total shoulder))), 29827 (Arthroscopy, shoulder, surgical; with rotator cuff repair), and 29881 (Arthroscopy, knee, surgical; with meniscectomy (medial OR lateral, including any meniscal shaving) including debridement/shaving of articular cartilage (chondroplasty), same or separate compartment(s), when performed). We will assume an equal utilization of the device with these five procedures for the payment limitation calculation, as shown in Table 137 at the end of this section. We note that in the absence of utilization data for the top five procedures, we believe it is reasonable to assume equal utilization for purposes of calculating the payment limitation until claims data are available. Please see Table 137 for the payment limitation calculation and the new C-code used to describe the device.

Atraumatic Spinal Anesthesia Needle (Sprotte)

Comment: A commenter recommended CMS evaluate and approve an atraumatic spinal anesthesia needle, specifically the Sprotte medical device manufactured by PAJUNK, under our non-opioid treatment for pain relief separate payment policy. The commenter stated that the Sprotte device is used to administer anesthetic agents to the subarachnoid space in spinal anesthesia procedures. Per the commenter, the Sprotte device enables physicians to more effectively use spinal anesthesia, which allows for longer, controlled pain relief compared to post-surgical IV opioids. The commenter stated that the Sprotte device is cleared by the FDA [234] [235] and has supporting literature.

The commenter provided five HCPCS codes with which they requested CMS establish the payment limitation. These CPT codes are: 27447 (Arthroplasty, knee, condyle and plateau; medial and lateral compartments with or without patella resurfacing (total knee arthroplasty)), 27130 (Arthroplasty, acetabular and proximal femoral prosthetic replacement (total hip arthroplasty), with or without autograft or allograft), 52601 (Transurethral electrosurgical resection of prostate, including control of postoperative bleeding, complete (vasectomy, meatotomy, cystourethroscopy, urethral calibration and/or dilation, and internal urethrotomy are included)), 52235 (Cystourethroscopy, with fulguration (including cryosurgery or laser surgery) and/or resection of; medium bladder tumor(s) (2.0 to 5.0 cm)), and 52000 (Cystourethroscopy (separate procedure)).

Response: Based on the comments received, we find that this medical device is used to deliver a therapy to reduce postoperative pain or produce post-surgical or regional anesthesia. We confirmed that this device has 510(k) approval by the FDA.[236] However, the

[232] FDA approval letter, June 20, 2008, *https://www.accessdata.fda.gov/scripts/cdrh/cfdocs/cfpmn/pmn.cfm?ID=K080675*.

[234] FDA approval letter, May 4, 1992, *https://www.accessdata.fda.gov/scripts/cdrh/cfdocs/cfpmn/pmn.cfm?id=K911202*.

[235] FDA approval letter, March 14, 2025, *https://www.accessdata.fda.gov/cdrh_docs/pdf25/K250774.pdf*.

[236] FDA approval letter, May 4, 1992, *https://www.accessdata.fda.gov/scripts/cdrh/cfdocs/cfpmn/pmn.cfm?id=K911202*.

supporting literature does not demonstrate that the Sprotte device specifically has the ability to replace, reduce, or avoid intraoperative or postoperative opioid use or the quantity of opioids prescribed in a clinical trial or through data published in a peer-reviewed journal. In one of the articles submitted, it is not possible to verify whether the patients in the intervention group were using the Sprotte device or an alternative needle, called the Quincke. Therefore, we cannot attribute the study results to either device. The other article that was submitted only compared the efficacy between the Sprotte and Quincke needles, and therefore, we similarly could not find clinical evidence to demonstrate that the Sprotte device specifically has the ability to replace, reduce, or avoid intraoperative or postoperative opioid use or the quantity of opioids prescribed.

Therefore, we believe that the atraumatic spinal anesthesia needle, specifically the Sprotte medical device, does not meet the statutory requirements at section 1833(t)(16)(G)(iv)(II) of the Act and are not finalizing separate payment for it under this provision.

Continuous Anesthesia Conduction Catheter Sets (SonoLong, E-Cath)

Comment: A commenter recommended CMS evaluate and approve continuous anesthesia conduction catheter sets, specifically the SonoLong and E-Cath medical devices manufactured by PAJUNK, under our non-opioid treatment for pain relief separate payment policy. Per the commenter, the SonoLong and E-Cath devices are similar to the SonoPlex, SonoBlock, and SonoTAP nerve block needles, which improve needle and catheter placement, except that SonoLong and E-Cath stay in the nerve block site to provide pain relief days after surgery. The commenter provided that the catheter sets are cleared by the FDA. Per the commenter, the intended use of the SonoLong device is the delivery of continuous conduction anesthesia and/or analgesia of peripheral nerves for up to 72 hours, while the intended use of the E-Cath device is the delivery of medication for regional anesthesia and pain management. The commenter submitted literature to advance their claim that both devices have the ability to replace, reduce, or avoid intraoperative or postoperative opioid use or the quantity of opioids prescribed in a clinical trial or through data published in a peer-reviewed journal.

The commenter provided 5 HCPCS codes with which they requested CMS establish the payment limitation. These CPT codes are: 23472 (Arthroplasty, glenohumeral joint; total shoulder (glenoid and proximal humeral replacement (*e.g.,* total shoulder))), 27447 (Arthroplasty, knee, condyle and plateau; medial and lateral compartments with or without patella resurfacing (total knee arthroplasty)), 27130 (Arthroplasty, acetabular and proximal femoral prosthetic replacement (total hip arthroplasty), with or without autograft or allograft), 27792 (Open treatment of distal fibular fracture (lateral malleolus), includes internal fixation, when performed), and 21811 (Open treatment of rib fracture(s) with internal fixation, includes thoracoscopic visualization when performed, unilateral; 1–3 ribs).

Response: Based on comments received, we find that both of these medical devices are used to deliver a therapy to reduce postoperative pain or produce post-surgical or regional analgesia. We confirmed that the products are FDA cleared.[237] [238] We also confirmed that the SonoLong device has supporting literature demonstrating the ability to replace, reduce, or avoid intraoperative or postoperative opioid use or the quantity of opioids prescribed in a clinical trial or through data published in a peer reviewed journal.[239] However, we were not able to confirm that the E-Cath device had supporting literature. While one of the two articles submitted did not study the E-Cath device specifically,[240] the other article submitted by the commenter did not differentiate between the two studied devices.[241] We cannot attribute any result to the E-Cath device because it was either not studied at all in one study, or unclear whether it was utilized over another device in the other study. Therefore, we believe that the E-Cath medical device does not meet the statutory requirements at section 1833(t)(16)(G)(iv)(II) of the Act and are not finalizing separate payment for it under this provision.

The rest of this discussion is only applicable to the SonoLong device. The SonoLong device does not currently receive transitional passthrough status and we believe it would have payment that is otherwise packaged into a payment for a covered OPD service, absent this policy. Therefore, we believe that the SonoLong medical device meets the statutory requirements at section 1833(t)(16)(G)(iv) of the Act and are finalizing that it will be paid separately under this provision. We appreciate the commenter's suggestions regarding the top five procedures on which to base the payment limitation. Based on our review of the device, as well as the volume of services in which the device is most likely to be used, we believe that the top five procedures to base the payment limitation on are: HCPCS codes 27447 (Arthroplasty, knee, condyle and plateau; medial AND lateral compartments with or without patella resurfacing (total knee arthroplasty), 27130 (Arthroplasty, acetabular and proximal femoral prosthetic replacement (total hip arthroplasty), with or without autograft or allograft), 23472 (Arthroplasty, glenohumeral joint; total shoulder (glenoid and proximal humeral replacement (*e.g.,* total shoulder))), 29827 (Arthroscopy, shoulder, surgical; with rotator cuff repair), and 29881 (Arthroscopy, knee, surgical; with meniscectomy (medial OR lateral, including any meniscal shaving) including debridement/shaving of articular cartilage (chondroplasty), same or separate compartment(s), when performed). We will assume an equal utilization of the device with these five procedures for the payment limitation calculation, as shown in Table 137 at the end of this section. We note that in the absence of utilization data for the top five procedures, we believe it is reasonable to assume equal utilization for purposes of calculating the payment limitation until claims data are available. Please see Table 137 for the payment limitation calculation and the new C-code used to describe the device.

CADD–Solis Ambulatory Infusion Pump

Comment: Commenters recommended CMS evaluate and approve the CADD-Solis infusion pump manufactured by ICU Medical, under our non-opioid treatment for pain relief separate payment policy. Per the commenters, the CADD-Solis infusion pump is a medical device designed to deliver medication to reduce postoperative pain or produce postsurgical or regional analgesia. One commenter provided that the CADD-Solis infusion pump has FDA clearance and is indicated for intravenous, intra-arterial, subcutaneous, intraperitoneal, in close

proximity to nerves, into an intraoperative site (soft tissue, body cavity/surgical wound site), epidural space or subarachnoid space. The pump is intended for therapies that require a continuous rate of infusion, and/or an intermittent bolus, and/or with patient-controlled demand doses. The manufacturer submitted literature to demonstrate that the CADD-Solis infusion pump has the ability to replace, reduce, or avoid intraoperative or postoperative opioid use or the quantity of opioids prescribed in a clinical trial or through data published in a peer reviewed journal.

The commenter provided five HCPCS codes with which they requested CMS establish the payment limitation. These CPT codes are: 27447 (Arthroplasty, knee, condyle and plateau; medial and lateral compartments with or without patella resurfacing (total knee arthroplasty)), 23472 (Arthroplasty, glenohumeral joint; total shoulder (glenoid and proximal humeral replacement (*e.g.,* total shoulder))), 29827 (Arthroscopy, shoulder, surgical; with rotator cuff repair), 49505 (Repair initial inguinal hernia, age 5 years or older; reducible), and 27130 (Arthroplasty, acetabular and proximal femoral prosthetic replacement (total hip arthroplasty), with or without autograft or allograft).

Response: Based on comments received, we find that this medical device is used to deliver a therapy to reduce postoperative pain or produce post-surgical or regional analgesia. We confirmed that this product is FDA cleared [242] and has supporting literature demonstrating the ability to replace, reduce, or avoid intraoperative or postoperative opioid use or the quantity of opioids prescribed in a clinical trial or through data published in a peer reviewed journal.[243] The medical device does not currently receive transitional passthrough status and we believe it would have payment that is otherwise packaged into a payment for a covered OPD service, absent this policy. Therefore, we believe that the CADD-Solis infusion pump meets the statutory requirements at section 1833(t)(16)(G)(iv) of the Act and are finalizing that it will be paid separately under this provision. We appreciate the commenter's suggestions regarding the top five procedures on which to base the payment limitation. Based on our review of the device, as well as the volume of services in which the device is most likely to be used, we believe that the top five procedures to base the payment limitation on are: HCPCS codes 27447 (Arthroplasty, knee, condyle and plateau; medial AND lateral compartments with or without patella resurfacing (total knee arthroplasty), 27130 (Arthroplasty, acetabular and proximal femoral prosthetic replacement (total hip arthroplasty), with or without autograft or allograft), 23472 (Arthroplasty, glenohumeral joint; total shoulder (glenoid and proximal humeral replacement (*e.g.,* total shoulder))), 29827 (Arthroscopy, shoulder, surgical; with rotator cuff repair), and 29881 (Arthroscopy, knee, surgical; with meniscectomy (medial OR lateral, including any meniscal shaving) including debridement/shaving of articular cartilage (chondroplasty), same or separate compartment(s), when performed). We will assume an equal utilization of the device with these 5 procedures for the payment limitation calculation, as shown in Table 137 at the end of this section. We note that in the absence of utilization data for the top five procedures, we believe it is reasonable to assume equal utilization for purposes of calculating the payment limitation until claims data are available. Please see Table 137 for the payment limitation calculation and the new C-code used to describe the device.

Altius System

Comment: We received a comment recommending CMS evaluate and approve the Altius System® manufactured by Neuros, under our non-opioid treatment for pain relief separate payment policy. Per the commenter, the Altius System® is designed for the treatment of chronic post-amputation pain. The commenter stated that the Altius System® has FDA approval [244] through the premarket process and is intended as an aid in the management of chronic intractable phantom and residual lower limb post-amputation pain in adult amputees. Per the commenter, FDA approval for the Altius System® was supported by the QUEST study, which was a prospective, multicenter, double-blind, randomized, active-sham-controlled clinical trial designed to evaluate the safety and efficacy of the Altius System® for the treatment of severe chronic post-amputation pain relief in lower limb adult amputees in the U.S. The commenter explained that the QUEST study demonstrated that the use of a high frequency nerve block system provides significant improvement in pain and functional outcomes in patients with amputations experiencing chronic pain.[245]

Response: Based on the comment received, we do not believe that this medical device is used to deliver a therapy to reduce postoperative pain or produce post-surgical or regional analgesia because the supporting information provided demonstrates that this therapy is used to treat chronic rather than post-operative or post-surgical or regional analgesia. For example, in the QUEST study, the key inclusion criteria specified individuals with chronic post-amputation pain, defined as ''6-months with exacerbations lasting 60-minutes with a frequency of 4 episodes per week with >5 Numerical Rating Scale (NRS).[246] Additionally, as the commenter noted, the device's FDA-approved indication specifies that the device is intended as an aid in the management of chronic intractable phantom and residual lower limb post-amputation pain. Therefore, we believe that Altius System® does not meet the statutory requirements at section 1833(t)(16)(G)(iv)(II) of the Act and are not finalizing separate payment for it under this provision.

Reactiv8 Implantable Neurostimulation System

Comment: We received one comment recommending CMS evaluate and approve ReActiv8 Implantable Neurostimulation System, manufactured by Mainstay Medical, under our non-opioid treatment for pain relief separate payment policy. Per the commenter, ReActiv8 addresses the root cause of pain for patients experiencing multifidus muscle dysfunction through efferent stimulation of the medial branch nerve of the dorsal ramus, triggering the multifidus muscle to contract, which over time, improves the multifidus' ability to stabilize the spine. The commenter stated that the ReActiv8

[242] FDA approval letter, August 24 2017, *https://www.accessdata.fda.gov/cdrh_docs/pdf17/K170982.pdf.*

[243] Abbasian, et al (2022). Multimodal continuous ambulatory erector spinae catheter pain protocol for early recovery following Nuss procedure: a retrospective cohort study; American Society of Regional Anesthesia & Pain Medicine.

[244] FDA Approval letter, June 30, 2023, *https://www.accessdata.fda.gov/cdrh_docs/pdf23/P230020A.pdf.*

[245] Kapural L, Melton J, Kim B, Mehta P, Sigdel A, Bautista A, Petersen EA, Slavin KV, Eidt J, Wu J, Elshihabi S, Schwalb JM, Garrett HE Jr, Veizi E, Barolat G, Rajani RR, Rhee PC, Guirguis M, Mekhail N. Primary 3-Month Outcomes of a Double-Blind Randomized Prospective Study (The QUEST Study) Assessing Effectiveness and Safety of Novel High-Frequency Electric Nerve Block System for Treatment of Post- Amputation Pain. J Pain Res. 2024;17:2001–2014. *https://doi.org/10.2147/JPR.S463727.*

[246] *Id.*

has FDA approval [247] through the premarket process and is indicated for bilateral stimulation of the L2 medial branch of the dorsal ramus as it crosses the transverse process at L3 as an aid in the management of intractable chronic low back pain associated with multifidus muscle dysfunction, as evidenced by imaging or physiological testing in adults who have failed therapy including pain medications and physical therapy and are not candidates for spine surgery. The commenter submitted clinical literature to demonstrate that ReActive8 therapy drives a reduction in opioid use.

Response: Based on the comment received, we do not believe that this medical device is used to deliver a therapy to reduce postoperative pain or produce post-surgical or regional analgesia because the supporting information provided demonstrates that this therapy is used to treat chronic low back pain associated with multifidus muscle dysfunction, rather than post-operative or post-surgical or regional analgesia. For example, in a study submitted by the commenter, the study participants were adults ''with a diagnosis of moderate-to-severe, disabling, refractory, predominantly mechanical chronic low back pain . . . with pain on at least half of the days in the year before baseline''.[248] Further, the study participants had persistent chronic low back pain, lasting ''a minimum of 90 days of conservative medical management that included at least medication and physical therapy, and they were not considered candidates for spine surgery''. Therefore, we believe that ReActiv8 does not meet the statutory requirements at section 1833(t)(16)(G)(iv)(II) of the Act and are not finalizing separate payment for it under this provision.

Game Ready System

Comment: We received a comment recommending CMS evaluate and approve the Game Ready System manufactured by Avanos Medical, Inc., under our non-opioid treatment for pain relief separate payment policy. Per the commenter, the Game Ready System is an electronically controlled, integrated cryotherapy and intermittent pneumatic compression system designed for clinical use. The manufacturer provided that the Game Ready System has FDA clearance and is indicated for to treat post-surgical and acute injuries to reduce edema, swelling, and pain where cold and compression are indicated. The manufacturer submitted literature to demonstrate that the Game Ready System has the ability to replace, reduce, or avoid intraoperative or postoperative opioid use or the quantity of opioids prescribed in a clinical trial or through data published in a peer reviewed journal.

The commenter provided five HCPCS codes with which they requested CMS establish the payment limitation. These CPT codes are: 27447 (Arthroplasty, knee, condyle and plateau; medial and lateral compartments with or without patella resurfacing (total knee arthroplasty)), 27130 (Arthroplasty, acetabular and proximal femoral prosthetic replacement (total hip arthroplasty), with or without autograft or allograft), 23472 (Arthroplasty, glenohumeral joint; total shoulder (glenoid and proximal humeral replacement (*e.g.,* total shoulder))), 29888 (Arthroscopically aided anterior cruciate ligament repair/augmentation or reconstruction), and 29827 (Arthroscopy, shoulder, surgical; with rotator cuff repair).

Response: Based on the comment received, we find that this medical device is used to deliver a therapy to reduce postoperative pain or produce post-surgical or regional analgesia. We confirmed that this product is FDA cleared [249] and has supporting literature demonstrating the ability to replace, reduce, or avoid intraoperative or postoperative opioid use or the quantity of opioids prescribed in a clinical trial or through data published in a peer reviewed journal.[250] The medical device does not currently receive transitional passthrough status and we believe it would have payment that is otherwise packaged into a payment for a covered OPD service, absent this policy. Therefore, we believe that the Game Ready System meets the statutory requirements at section 1833(t)(16)(G)(iv) of the Act and are finalizing that it will be paid separately under this provision.

We appreciate the commenter's suggestions regarding the top five procedures on which to base the payment limitation. Based on our review of the device, as well as the volume of services in which the device is most likely to be used, we believe that the top five procedures to base the payment limitation on are: HCPCS codes 27447 (Arthroplasty, knee, condyle and plateau; medial AND lateral compartments with or without patella resurfacing (total knee arthroplasty), 27130 (Arthroplasty, acetabular and proximal femoral prosthetic replacement (total hip arthroplasty), with or without autograft or allograft), 23472 (Arthroplasty, glenohumeral joint; total shoulder (glenoid and proximal humeral replacement (*e.g.,* total shoulder))), 29827 (Arthroscopy, shoulder, surgical; with rotator cuff repair), and 29881 (Arthroscopy, knee, surgical; with meniscectomy (medial OR lateral, including any meniscal shaving) including debridement/shaving of articular cartilage (chondroplasty), same or separate compartment(s), when performed). We will assume an equal utilization of the device with these 5 procedures for the payment limitation calculation, as shown in Table 137 at the end of this section. We note that in the absence of utilization data for the top five procedures, we believe it is reasonable to assume equal utilization for purposes of calculating the payment limitation until claims data are available. Please see Table 137 for the payment limitation calculation and the new C-code used to describe the device.

Additional Non-Opioid Device Comments

Comment: A few commenters requested payments related to physician office payments and long-term care payments to ensure the continued advancement of these safer and more effective techniques related to non-opioid treatments for pain relief.

Response: We appreciate the feedback from commenters, but note that these payment systems are outside the scope of the statutory provision at section 1833(t)(16)(G)(iv) of the Act and this final rule with comment period.

Comment: A commenter suggested that CMS revise the code descriptors of qualifying non-opioid treatment for pain relief products to ensure that it was clear that only the qualifying products were to be appropriately described by these HCPCS codes. This commenter stated, that because ''*e.g.*'' is used to identify an example of an inclusive universe, rather than narrowing or defining the general category of device to that specifically named device, providers suggest that other devices

[247] FDA Approval Letter, June 16, 2020. *https://www.accessdata.fda.gov/cdrh_docs/pdf19/P190021A.pdf.*

[249] FDA 510(k) clearance K192114, 2019, *https://www.accessdata.fda.gov/cdrh_docs/pdf19/K192114.pdf.*

[250] Khan, et al., Cryo-Pneumatic Compression Results in a Significant Decrease in Opioid Consumption After Shoulder Surgery: A Multicenter Randomized Controlled Trial. Am J Sports Med. 2024 Sep;52(11):2860–2865.

beyond the brand name product may qualify—despite the additional parenthetical stating the device must be a qualifying device under section 4135 of the CAA, 2023.

Response: We thank the commenter for their suggestion. We believe the language of the long descriptors makes it clear that the device being billed by the HCPCS code must be a device reviewed and approved by CMS through notice and comment rulemaking, particularly the language CMS includes within all long code descriptors stating that the specific product ''. . . must be a qualifying Medicare non-opioid medical device for post-surgical pain relief in accordance with section 4135 of the CAA, 2023'' clarifies which devices that should be billing that particular HCPCS code. The qualifying Medicare non-opioid medical devices for post surgical pain relief with separate payment starting or continuing on January 1, 2026, are those listed in table 136 of this final rule with comment period. However, we appreciate the commenter's suggestions and we may consider modifications to the descriptors in the future.

Comment: Commenters also recommended other products to CMS but did not provide any supporting documentation or information on the products. Some commenters suggested services or general practices that should be supported as the commenters believed they provided appropriate pain management and could decrease opioid usage. Other commenters requested that we consider alternative non-opioid treatments, such as acupuncture, occupational therapy, physical therapy, and cognitive behavioral therapy for separate payment under section 4135 of the CAA, 2024.

Response: For those products suggested by commenters who did not provide supplemental information, we are unable to fully evaluate the product against the statutory criteria for inclusion in this policy and therefore are not finalizing separate payment for any of these products. This policy covers drugs, biologicals, and medical devices; therefore, many services suggested by commenters are out of scope for purposes of this final rule with comment period. However, in general, if an item or service discussed by commenters does not qualify for separate payment under this provision, that does not mean that there are not other appropriate methods of coverage and payment available under the Medicare Act.

Comment: A commenter mentioned our proposed regulation text edits and noted that the changes discussed in the preamble did not align with what was included in the regulation text at the end of the proposed rule and suggested that there may have been an inadvertent drafting error.

Response: We thank the commenter for their suggested edit. As discussed in the CY 2026 OPPS/ASC proposed rule, we proposed to edit the regulation text at 42 CFR 416.174(c)(1) to remove the following text: ''which is determined to be zero dollars for calendar year 2025'' (90 FR 33745). This information is correct; however, the commenter is also correct that there was an inadvertent drafting error in the proposed rule where this information was not carried over correctly to the proposed rule regulation text (90 FR 33862). We thank the commenter for identifying this drafting error, and we are updating the regulation text to be consistent with our proposal.

After consideration of public comments, for CY 2026, we are finalizing the proposed lists of qualifying products and payment limitations, with modifications. See Table 136 for a list of the final qualifying products for CY 2026, and please see Table 135 for a list of the final payment limitations for qualifying products for CY 2026. This final list of payment limitations contains updated claims data as available for this final rule with comment period, and is using the CY 2026 OPPS/ASC proposed rule payment rates.

Additionally, we are finalizing our proposed edit to the regulation text at 42 CFR 416.174(c)(1) to remove the following text: ''which is determined to be zero dollars for calendar year 2025.'' We are removing this language pertaining to the portion of the otherwise applicable Medicare OPD fee schedule amount for CY 2025, as we will discuss the appropriate amount in each year's rulemaking. Additionally, as we are considering evaluating and updating the CY 2026 qualifying non-opioid treatments for pain relief, we are modifying the regulation text accordingly. Specifically, we are removing the phrase ''through that year's rulemaking'' and ''for an applicable calendar year'' from 42 CFR 419.43(k)(1), 419.43(k)(2), 416.174(a), and 416.174(b).

We note that we are placing the HCPCS codes describing the qualifying devices and drugs in Table 136 on the ASC covered ancillary procedures list. We note that Medicare Administrative Contractors (MACs) determine whether a drug, device, procedure, or other service meets all program requirements and conditions for coverage and payment. HOPDs and ASCs only receive payment for qualifying drugs, biologicals, and medical devices when the appropriate MAC determines that the service meets the relevant conditions for coverage and payment.

As discussed in greater detail earlier in this section, we believe it may be reasonable to consider a pathway to approve new products or products newly meeting the statutory requirements on a quarterly basis. We welcome engagement from the public, including on topics relating to products that newly meet the qualifying criteria and should be paid according to the statute under this policy. Such engagement could include: (1) documentation verifying appropriate FDA status, including the required FDA-approved indication for drugs; (2) qualifying peer-reviewed literature for medical devices and that the medical device is used to deliver a therapy to reduce postoperative pain, or produce postsurgical or regional analgesia; (3) suggestions for the top five most frequent procedures for purposes of calculating a payment limitation; (4) verification that the product does not have transitional pass-through status; (5) confirmation that the product has payment that is packaged into a payment for a covered OPD service, and (6) the current HCPCS code describing the product or recommendations for a new HCPCS code to describe the product. Please see 42 CFR 419.43(k) and 416.174 for the full established criteria.

We anticipate that if any non-opioid treatments for pain relief qualify during CY 2026, any potential CMS review process would be similar to the other existing quarterly approval processes, such as OPPS New Technology APC process or the CMS HCPCS application process, where CMS evaluates and approves products on a more frequent basis than annual rulemaking. A quarterly implementation process will be necessary to create new HCPCS codes and implement the necessary claims processing changes to effectuate the calculated payment rates as well as the required payment limitations. We will make payment, according to the statute, retroactively effective to the date that we determine that a product meets the criteria, with the earliest effective payment date being January 1, 2026. Once these determinations are made by CMS, we will make them publicly available on the CMS OPPS website.[251] Payment will be made according to the statute, and established regulation text,

[251] *https://www.cms.gov/medicare/payment/prospective-payment-systems/hospital-outpatient/restated-drug-biological-payment-rates.*

and will be effectuated in the applicable quarterly OPPS/ASC update.

BILLING CODE 4120–01–P

TABLE 136: FINAL LIST OF QUALIFYING PRODUCTS FOR SEPARATE PAYMENT IN CY 2026 UNDER SECTION 4135 OF THE CAA, 2023

Brand Name	HCPCS Code	Long Descriptor
Exparel	J0666*	Injection, bupivacaine liposome, 1mg
Omidria	J1097	Phenylephrine 10.16 mg/ml and ketorolac 2.88 mg/ml ophthalmic irrigation solution, 1 ml
Dextenza	J1096	Dexamethasone, lacrimal ophthalmic insert, 0.1 mg
Zynrelef	C9088**	Instillation, bupivacaine and meloxicam, 1 mg/0.03 mg
Ketorolac tromethamine Injection	J1885	Injection, ketorolac tromethamine, per 15 mg
ON-Q Pump	C9804	Elastomeric infusion pump (e.g., ON-Q* Pump with Bolus), including catheter and all disposable system components, non-opioid medical device (must be a qualifying Medicare non-opioid medical device for post-surgical pain relief in accordance with Section 4135 of the CAA, 2023)
SPRINT Peripheral Nerve Stimulator System	C9807	Nerve stimulator, percutaneous, peripheral (e.g., SPRINT Peripheral Nerve Stimulation System), including electrode and all disposable system components, non-opioid medical device (must be a qualifying Medicare non-opioid medical device for post-surgical pain relief in accordance with Section 4135 of the CAA, 2023)
Cryo Nerve Block Therapy	C9808	Nerve cryoablation probe (e.g., cryoICE, cryoSPHERE, cryoSPHERE MAX, cryoICE cryoSPHERE, cryoICE Cryo2), including probe and all disposable system components, non-opioid medical device (must be a qualifying Medicare non-opioid medical device for post-surgical pain relief in accordance with Section 4135 of the CAA, 2023)
ambIT Electronic Infusion Pump	C9806	Rotary peristaltic infusion pump (e.g., ambIT Pump), including catheter and all disposable system components, non-opioid medical device (must be a qualifying Medicare non-opioid medical device for post-surgical pain relief in accordance with Section 4135 of the CAA, 2023)
Iovera System	C9809	Cryoablation needle (e.g., iovera System), including needle/tip and all disposable system components, non-opioid medical device (must be a qualifying Medicare non-opioid medical device for post-surgical pain relief in accordance with Section 4135 of the CAA, 2023)
IceMan	C9810	Water circulating motorized cold therapy device (e.g., IceMan) including all system components (e.g. pads, console, disposable parts), non-opioid medical device (must be a qualifying medicare non-opioid medical device for post-surgical pain relief in accordance with section 4135 of the cCAA 2023)

Brand Name	HCPCS Code	Long Descriptor
Sapphire Infusion Pump	C9811	Electronic ambulatory infusion pump (e.g. Sapphire pump), including all pump components, including disposable components , non-opioid medical device (must be a qualifying Medicare non-opioid medical device for post-surgical pain relief in accordance with Section 4135 of the CAA, 2023)
Ultrasound-visible nerve block needles (SonoPlex, SonoBlock, SonoTap)	C9812	Echogenic nerve block needles (e.g. SonoPlex, SonoBlock, SonoTap), non-opioid medical device (must be a qualifying Medicare non-opioid medical device for post-surgical pain relief in accordance with Section 4135 of the CAA, 2023)
Perforated continuous infusion catheter set (InfiltraLong)	C9813	Perforated continuous infusion catheter set (e.g. InfiltraLong), including all components, non-opioid medical device (must be a qualifying Medicare non-opioid medical device for post-surgical pain relief in accordance with Section 4135 of the CAA, 2023)
Continuous anesthesia conduction catheter sets (SonoLong)	C9814	Continuous anesthesia echogenic conduction catheter set (e.g. SonoLong), non-opioid medical device (must be a qualifying Medicare non-opioid medical device for post-surgical pain relief in accordance with Section 4135 of the CAA, 2023)
CADD-Solis infusion pump	C9815	Linear peristaltic pain management infusion pump (e.g. CADD-Solis ambulatory infusion pump), and all disposable system components, non-opioid medical device (must be a qualifying Medicare non-opioid medical device for post-surgical pain relief in accordance with Section 4135 of the CAA, 2023)
ambIT Electronic Infusion Pump (Reusable)	C9816	Rotary peristaltic infusion pump (e.g., reusable ambIT Pump) including all disposable system components, reusable non-opioid medical device (must be a qualifying Medicare non-opioid medical device for post-surgical pain relief in accordance with Section 4135 of the CAA, 2023)
Game Ready System	C9817	Electronic cryo-pneumatic compression, pain management system (e.g. Game Ready® GRPro 2.1 System), including control unit, anatomically correct wrap(s), and other system component(s), non-opioid medical device (must be a qualifying Medicare non-opioid medical device for post-surgical pain relief in accordance with Section 4135 of the CAA, 2023)

*Previously described by HCPCS code C9290.

**HCPCS Code C9088 was replaced by HCPCS code J0668 (Instillation, bupivacaine and meloxicam, 1 mg/0.03 mg) effective October 1, 2025.

*We assumed equal utilization of the qualifying product among the provided primary procedures unless otherwise advised by commenters. **Expected utilization was provided by the manufacturer based on the CY 2025 OPPS/ASC final rule with comment period (89 FR 94356 through 94357).				

BILLING CODE 4120–01–C

G. New Technology Intraocular Lenses (NTIOLs)

New Technology Intraocular Lenses (NTIOLs) are intraocular lenses that replace a patient's natural lens that has been removed in cataract surgery and that also meet the requirements listed in § 416.195.

1. NTIOL Application Cycle

Our process for reviewing applications to establish new classes of NTIOLs is as follows:

• Applicants submit their NTIOL requests for review to CMS by the annual deadline which is announced in the annual OPPS/ASC final rule with comment period. For a request to be considered complete, we require submission of the information requested in the guidance document titled ''Application Process and Information Requirements for Requests for a New Class of NTIOLs or Inclusion of an IOL in an Existing NTIOL Class'' posted on the CMS website at *https://www.cms.gov/medicare/payment/prospective-payment-systems/ambulatory-surgical-center-asc/new-technology-intraocular-lenses-ntiols.*

• We announce annually, in the CY OPPS/ASC proposed rule updating the ASC and OPPS payment rates for the following calendar year, a list of all requests to establish new NTIOL classes accepted for review during the calendar year in which the proposal is published. In accordance with section 141(b)(3) of Pub. L. 103–432 and our regulations at § 416.185(b), the deadline for receipt of public comments is 30 days following publication of the list of requests to establish a new NTIOL class as published in the proposed rule.

• In the final rule with comment period updating the ASC and OPPS payment rates for the following calendar year, we—

++ Provide a list of determinations made as a result of our review of all new NTIOL class requests and public comments.

++ When a new NTIOL class is created, identify the predominant characteristic of NTIOLs in that class that sets them apart from other IOLs (including those previously approved as members of other expired or active NTIOL classes) and that is associated with an improved clinical outcome.

++ Set the date of implementation of a payment adjustment in the case of approval of an IOL as a member of a new NTIOL class prospectively as of 30 days after publication of the ASC payment update final rule, consistent with the statutory requirement.

++ Announce the deadline for submitting requests for review of an application for a new NTIOL class for the following calendar year.

2. Requests To Establish New NTIOL Classes for CY 2026

We did not receive any requests for review to establish a new NTIOL class for CY 2026 by March 1, 2025, the due date published in the CY 2025 OPPS/ASC final rule with comment period (89 FR 94361).

3. Payment Adjustment

The current payment adjustment for a 5-year period from the implementation date of a new NTIOL class is $50 per lens. Since implementation of the process for adjustment of payment amounts for NTIOLs in 1999, we have not revised the payment adjustment amount, and we did not propose to revise the payment adjustment amount for CY 2026.

We received public comments on these proposals. The following is a summary of the comments we received and our responses.

Comment: Multiple commenters requested that CMS increase the NTIOL

add-on payment from the current $50 per lens (established in 1999) to between $95.69–$100 for CY 2026, stating that the payment has not been adjusted for over 2 decades despite significant inflation and increased research and development costs associated with bringing new IOL technologies to market. The commenters noted that in real dollar terms, the flat rate payment for NTIOLs has significantly lagged the overall economic inflation rate, with consumer inflation increasing by 138.6 percent since 2010 and manufacturing costs rising due to labor inflation and increased material costs. The commenters also requested that CMS update the NTIOL payment annually going forward.

Response: We responded to this comment in the CY 2024 OPPS/ASC final rule with comment period (88 FR 81955 through 81956). We refer readers to that final rule with comment period for our response on an increase to the NTIOL $50 per lens payment adjustment.

4. Announcement of CY 2027 Deadline for Submitting Requests for CMS Review of Applications for a New Class of NTIOLs

In accordance with § 416.185(a) of our regulations, CMS announces that in order to be considered for payment effective beginning in CY 2027, request for review of applications for a new class of new technology IOLs must be received by 5 p.m. Eastern Standard Time, on March 1, 2026. Send requests via email to *outpatientpps@cms.hhs.gov* or by mail to ASC/NTIOL, Division of Outpatient Care, Mailstop C4–05–07, Centers for Medicare and Medicaid Services, 7500 Security Boulevard, Baltimore, MD 21244–1850. To be considered, requests for NTIOL reviews must include information requested on the CMS website at: *https://www.cms.gov/medicare/payment/prospective-payment-systems/ambulatory-surgical-center-asc/newtechnology-intraocular-lenses-ntiols*.

H. Calculation of the ASC Payment Rates and the ASC Conversion Factor

1. Background

In the August 2, 2007 ASC final rule with comment period (72 FR 42493), we established our policy to base ASC relative payment weights and payment rates under the revised ASC payment system on APC groups and the OPPS relative payment weights. Consistent with that policy and the requirement at section 1833(i)(2)(D)(ii) of the Act that the revised payment system be implemented so that it would be budget neutral, the initial ASC conversion factor (CY 2008) was calculated so that estimated total Medicare payments under the revised ASC payment system in the first year would be budget neutral to estimated total Medicare payments under the prior (CY 2007) ASC payment system (the ASC conversion factor is multiplied by the relative payment weights calculated for many ASC services in order to establish payment rates). That is, application of the ASC conversion factor was designed to result in aggregate Medicare expenditures under the revised ASC payment system in CY 2008 being equal to aggregate Medicare expenditures that would have occurred in CY 2008 in the absence of the revised system, taking into consideration the cap on ASC payments in CY 2007, as required under section 1833(i)(2)(E) of the Act (72 FR 42522). We adopted a policy to make the system budget neutral in subsequent calendar years (72 FR 42532 through 42533; § 416.171(e)).

In the CY 2008 OPPS/ASC final rule with comment period (72 FR 66857 through 66858), we set out a step-by-step illustration of the final budget neutrality adjustment calculation based on the methodology finalized in the August 2, 2007 ASC final rule (72 FR 42521 through 42531) and as applied to updated data available for the CY 2008 OPPS/ASC final rule with comment period. The application of that methodology to the data available for the CY 2008 OPPS/ASC final rule with comment period resulted in a budget neutrality adjustment of 0.65.

For CY 2008, we adopted the OPPS relative payment weights as the ASC relative payment weights for most services and, consistent with the final policy, we calculated the CY 2008 ASC payment rates by multiplying the ASC relative payment weights by the final CY 2008 ASC conversion factor of $41.401. For covered office-based surgical procedures, covered ancillary radiology services (excluding covered ancillary radiology services involving certain nuclear medicine procedures or involving the use of contrast agents, as discussed in section XIII.D.2. of the CY 2023 OPPS/ASC proposed rule (87 FR 44715 through 44716)), and certain diagnostic tests within the medicine range that are covered ancillary services, the established policy is to set the payment rate at the lower of the PFS unadjusted nonfacility PE RVU-based amount or the amount calculated using the ASC standard ratesetting methodology. Further, as discussed in the CY 2008 OPPS/ASC final rule with comment period (72 FR 66841 through 66843), we also adopted alternative ratesetting methodologies for specific types of services (for example, device-intensive procedures).

As discussed in the August 2, 2007 ASC final rule with comment period (72 FR 42517 through 42518) and as codified at § 416.172(c) of the regulations, the revised ASC payment system accounts for geographic wage variation when calculating individual ASC payments by applying the pre-floor and pre-reclassified IPPS hospital wage indexes to the labor-related share, which is 50 percent of the ASC payment amount based on a GAO report of ASC costs using 2004 survey data. Beginning in CY 2008, CMS accounted for geographic wage variation in labor costs when calculating individual ASC payments by applying the pre-floor and pre-reclassified hospital wage index values that CMS calculates for payment under the IPPS, using updated Core Based Statistical Areas (CBSAs) issued by OMB in June 2003.

The reclassification provision in section 1886(d)(10) of the Act is specific to acute care hospitals. We believe that using the most recently available pre-floor and pre-reclassified IPPS hospital wage indexes result in the most appropriate adjustment to the labor portion of ASC costs. We continue to believe that the pre-floor, pre-reclassified hospital wage indexes, which are updated yearly and are used by several other Medicare payment systems, appropriately account for geographic variation in labor costs for ASCs (89 FR 23424). Therefore, the wage index for an ASC is the pre-floor and pre-reclassified hospital wage index for the fiscal year under the IPPS of the CBSA that maps to the CBSA where the ASC is located.

On July 21, 2023, OMB issued OMB Bulletin No. 23–01, which provided the delineations of all Metropolitan Statistical Areas, Metropolitan Divisions, Micropolitan Statistical Areas, Combined Statistical Areas, and New England City and Town Areas in the U.S. and Puerto Rico based on the standards published on July 16, 2021, in the **Federal Register** (86 FR 37770) and 2020 Census Bureau data. (A copy of this bulletin may be obtained at *https://www.whitehouse.gov/wp-content/uploads/2023/07/OMB-Bulletin-23-01.pdf*.) As discussed in the FY 2025 IPPS/LTCH PPS final rule with comment period (89 FR 69253 through 69266), we finalized our proposal to use the new CBSAs delineations issued by OMB in OMB Bulletin 23–01 for the IPPS hospital wage index beginning in CY 2025. Therefore, because the ASC wage indexes for the calendar year are

the pre-floor and pre-reclassified IPPS hospital wage indexes for the fiscal year, in the CY 2025 OPPS/ASC final rule with comment period (89 FR 94362 through 94363) we finalized our proposal to incorporate the new OMB delineations into CY 2025 ASC wage indexes. We believe that using the revised delineations based on OMB Bulletin No. 23–01 will increase the integrity of the ASC wage index system by creating a more accurate representation of current geographic variations in wage levels. In addition to adopting the revised delineations based on OMB Bulletin No. 23–01, we also finalized our proposal to limit year-to-year ASC wage index value changes to no more than a 5-percent decrease, similar to the policy of other Medicare payment systems under Parts A and B. This 5-percent cap, implemented in a budget neutral manner through the wage index scalar, mitigates any large negative impacts of adopting the new delineations and prevents large year-to-year declines in wage index values as a means to reduce volatility in Medicare payments.

The proposed CY 2026 ASC wage indexes reflect the OMB labor market area delineations (including the revisions to the OMB labor market delineations discussed previously, as set forth in OMB Bulletin No. 23–01). We note that, in certain instances, there might be urban or rural areas for which there is no IPPS hospital that has wage index data that could be used to set the wage index for that area. When all of the areas contiguous to the urban CBSA of interest are rural and there is no IPPS hospital that has wage index data that could be used to set the wage index for that area, our policy has been to determine the ASC wage index by calculating the average of all wage indexes for urban areas in the State (75 FR 72058 through 72059). For example, for CY 2026, we propose to apply a proxy wage index based on this methodology to ASCs located in CBSA 35 (Rural North Dakota). In other situations, where there are no IPPS hospitals located in a relevant labor market area, we apply our current policy of calculating an urban or rural area's wage index by calculating the average of the wage indexes for CBSAs (or metropolitan divisions where applicable) that are contiguous to the area with no wage index. For example, for CY 2026, we proposed that we continue to apply a proxy wage index based on this methodology to ASCs located in CBSA 25980 (Hinesville, GA). Further, the proposed CY 2026 ASC wage index includes our policy finalized in the CY 2025 OPPS/ASC final rule with comment period that limits wage index changes to decrease by no more than 5 percent from the final CY 2025 ASC wage index value. As we discussed in the April 2025 Update to the Ambulatory Surgical Center Payment System (Change Request 14017), to limit wage index changes by no more than 5 percent from the final CY 2025 ASC wage index, some counties may require a transition CBSA before being fully reflected in the OMB labor market delineations as set forth in OMB Bulletin No. 23–01.

We received public comments on these proposals. The following is a summary of the comments we received and our responses.

Comment: A few commenters recommended that we apply OPPS geographic reclassifications and wage index floor policies to ASCs to further harmonize payment systems and mitigate the impact of inadequate wage indices on rural ASCs, noting that hospitals can seek geographic reclassifications and receive wage index floors of 1.0 in frontier States while ASCs are excluded from these protections, despite competing in the same labor markets. The commenters highlighted specific inequities such as in South Dakota, where hospitals receive a wage index floor of 1.0 while ASCs face a much lower rural wage index of 0.8203, creating serious implications for ASCs' ability to recruit and retain staff in areas already facing workforce shortages. Both organizations emphasized that applying these wage index policies to ASCs would advance CMS's goal of aligning outpatient payment systems and ensure that beneficiaries in rural and frontier areas retain access to safe, high-quality surgical care.

Response: We appreciate the concerns the commenter has raised. The reclassification provision in section 1886(d)(10) of the Act is specific to acute care hospitals. We believe that using the most recently available pre-floor and pre-reclassified IPPS hospital wage indexes result in the most appropriate adjustment to the labor portion of ASC costs. However, we are sensitive to payment disparities the commenter raises between the OPPS and ASC payment system and will continue to monitor this issue and consider the commenter's recommendation in future rulemaking.

After consideration of public comments we received, we are finalizing our proposal to use the most recently available pre-floor and pre-reclassified IPPS hospital wage indexes to the labor-related share to create the final CY 2026 ASC wage indexes and to limit wage index decreases by no more than 5 percent from the final CY 2025 ASC wage index for a particular CBSA. The final CY 2026 ASC wage indexes reflect the OMB labor market area delineations (including the revisions to the OMB labor market delineations discussed previously, as set forth in OMB Bulletin No. 23–01) unless the county is otherwise in a transition CBSA. Additionally, based on the absence of IPPS hospitals, we are also finalizing our proposal to apply a proxy wage index based to ASCs located in CBSA 25980 (Hinesville, GA) and in CBSA 35 (Rural North Dakota).

2. Calculation of the ASC Payment Rates

a. Updating the ASC Relative Payment Weights for CY 2026 and Future Years

We update the ASC relative payment weights each year using the national OPPS relative payment weights (and PFS nonfacility PE RVU-based amounts, as applicable) for that same calendar year and uniformly scale the ASC relative payment weights for each update year to make them budget neutral (72 FR 42533). The OPPS relative payment weights are scaled to maintain budget neutrality for the OPPS. We then scale the OPPS relative payment weights again to establish the ASC relative payment weights. To accomplish this, we hold estimated total ASC payment levels constant between calendar years for purposes of maintaining budget neutrality in the ASC payment system. That is, we apply the weight scalar to ensure that projected expenditures from the updated ASC payment weights in the ASC payment system are equal to what would be the current expenditures based on the scaled ASC payment weights. In this way, we ensure budget neutrality and that the only changes to total payments to ASCs result from increases or decreases in the ASC payment update factor.

As discussed in section II.A.1.a. of this final rule with comment period, we are using the CY 2024 claims data to be consistent with the OPPS claims data for this final rule with comment period. Consistent with our established policy, we proposed to scale the CY 2026 relative payment weights for ASCs according to the following method. Holding ASC utilization, the ASC conversion factor, and the mix of services constant from CY 2024, we proposed to compare the estimated total payment using the CY 2025 ASC relative payment weights with the estimated total payment using the CY 2026 ASC relative payment weights to

take into account the changes in the OPPS relative payment weights between CY 2025 and CY 2026.

In consideration of our policy to provide a higher ASC payment rate with ASC complexity adjustment codes for certain primary procedures when performed with add-on packaged services, we incorporated estimated total spending and estimated utilization for these codes in our budget neutrality calculation for CYs 2023 and 2024. For the CY 2026 OPPS/ASC proposed rule, our proposed ASC complexity adjustment codes for CY 2026 did not impact the ASC weight scalar. Similarly, for this final rule with comment period, our estimated change in ASC spending related to our final ASC complexity adjustment codes for CY 2026 did not impact the ASC weight scalar.

Additionally, as discussed in section XIII.E. of the CY 2025 OPPS/ASC final rule with comment period (89 FR 94342 through 94361), section 4135(a) and (b) of the CAA, 2023, titled ''Access to Non-Opioid Treatments for Pain Relief'', amended sections 1833(t)(16) and 1833(i) of the Act, respectively, to provide for temporary separate payments for non-opioid treatments for pain relief. As discussed in further detail in section XIII.E. of the CY 2025 OPPS/ASC final rule with comment period, for qualifying non-opioid products, we finalized applying an 18 percent payment limitation on the volume weighted payment average of the top 5 services associated with the use of the qualifying non-opioid product. In CY 2024, four of these qualifying nonopioid products were separately payable without the 18 percent payment limitation—HCPCS Codes C9089 (Bupivacaine implant, 1 mg), J0666 (Inj, bupivacaine liposome), J1096 (Dexametha opth insert 0.1 mg), and J1097 (Phenylep ketorolac opth soln). Therefore, to maintain budget neutrality, we estimated the total anticipated reduction in ASC spending for these qualifying non-opioid products for CY 2025 as a result of the 18 percent payment limitation required by section 4135 of the CAA, 2023. Based on the updated 18 percent payment limitations and CY 2024 utilization, we estimated that the proposed CY 2026 payment limitations will not impact the ASC weight scalar. Similarly, based on the updated 18 percent payment limitations and CY 2024 utilization for this final rule with comment period, we estimate that the final CY 2026 payment limitations will not impact the ASC weight scalar.

In section XIII.C.2.b. of this final rule with comment period, we discuss our proposal to unpackage and pay separately for groups of skin substitute products under the ASC payment system beginning January 1, 2026. Currently, these products are packaged into payment for the primary covered surgical procedures. To maintain budget neutrality under the OPPS, the reduction in any APC's relative weights from the loss of skin substitute costs in the APC's geometric mean cost will be offset by an increase in the OPPS weight scalar. To maintain budget neutrality, this increase in the OPPS weight scalar will be offset by a reduction in estimated new OPPS payment for skin substitute APC groups.

Since we request ASCs not to report packaged items and services on ASC claims, we are unable to perform a similar adjustment and determine existing utilization of skin substitute products from ASC claims. To resolve this limitation but maintain budget neutrality within the ASC payment system, we multiplied the change in the geometric mean costs of covered surgical skin procedures in the ASC setting from unpackaging skin substitute products by the utilization of such skin procedures in the ASC setting to approximate the estimated skin substitute payments in the ASC setting. Based on existing surgical procedure utilization and our estimated utilization of skin substitute products in the ASC setting, our estimated separate payments for skin substitutes in the ASC setting did not impact the ASC weight scalar.

We proposed to use the ratio of estimated CY 2025 to estimated CY 2026 total payments (the weight scalar) to scale the ASC relative payment weights for CY 2026. The proposed CY 2026 ASC weight scalar was 0.872. The CY 2026 OPPS/ASC proposed rule inadvertently stated the proposed CY 2026 ASC weight scalar was 0.842 (90 FR 33752 and 90 FR 33846). The ASC payment system payment rates that were displayed in Addendum AA, BB, and FF to the CY 2026 OPPS/ASC proposed rule used the correct proposed ASC weight scalar, 0.872, in the proposed payment rate calculations.

As discussed further in the CY 2025 OPPS/ASC final rule with comment period (89 FR 94363 through 94364), we have historically displayed this figure rounded to the nearest ten thousandth; however, we believe this level of specificity is unnecessarily burdensome for an ASC payment system that is less than one-tenth the size of the OPPS (in which the weight scalar is rounded to the nearest ten-thousandth). Consistent with historical practice, we proposed to scale, using this method (with an ASC weight scalar rounded to the nearest thousandth), the ASC relative payment weights of covered surgical procedures, covered ancillary radiology services, and certain diagnostic tests within the medicine range of CPT codes, which are covered ancillary services for which the ASC payment rates are based on OPPS relative payment weights.

We proposed that we would not scale ASC payment for separately payable covered ancillary services that have a predetermined national payment amount (that is, their national ASC payment amounts are not based on OPPS relative payment weights), such as drugs and biologicals that are separately paid or services that are contractor-priced or paid at reasonable cost in ASCs. Any service with a predetermined national payment amount, which includes the device portion of device-intensive procedures, would be included in the ASC budget neutrality comparison, but scaling of the ASC relative payment weights would not apply to those services or the portion of those services. The ASC payment weights for those services without predetermined national payment amounts would be scaled to eliminate any difference in the total payment between the current year and the update year.

However, as discussed in sections V.B.8.i. and XIII.C.4. of the CY 2025 OPPS/ASC proposed rule, we proposed that the OPPS payment rates used for ratesetting under the ASC payment system for CY 2026 and subsequent years would not incorporate the prospective offset to the OPPS conversion factor, as a result of the 340B remedy offset. Historically, the ASC payment system has generally adopted the OPPS conversion factor used for determining the OPPS payment rates and determining the device portions for device-intensive procedures under the ASC payment system.

We estimated that a 2 percent reduction in the OPPS conversion factor would otherwise reduce ASC payments for device-intensive procedures by approximately one percent; the non-device portions for all covered surgical procedures would otherwise be increased to offset reduction to device portions for device-intensive procedures. For CY 2026, we estimated the reduction to device portions from a 2 percent prospective offset would have reduced proposed CY 2026 ASC expenditures for device-intensive procedures by approximately $42 million and would have otherwise increased the ASC weight scalar by 0.1 percent to offset such reduction.

For any given year's ratesetting, we typically use the most recent full calendar year of claims data to model

budget neutrality adjustments. We proposed to use the CY 2024 claims data to model our budget neutrality adjustment for CY 2026.

We received public comments on these proposals. The following is a summary of the comments we received and our responses.

Comment: Many commenters reiterated their longstanding recommendation that CMS discontinue the ASC weight scalar, stating that the secondary rescaling process applied to maintain budget neutrality has created an inappropriate and growing payment disparity between ASCs and HOPDs, with ASC reimbursement rates now averaging 50 percent less than HOPD rates for the same procedures despite no evidence of increased differences in capital and operating costs between settings. The commenters noted that this antiquated cost containment mechanism penalizes migration to lower-cost ASC settings and threatens outpatient access to care, with ASC relative weights decreasing by an average of 7 percent each year since 2010 and the proposed 2026 scalar representing the largest projected cut to ASC weights since payment system alignment in 2008. The commenters recommended that we either eliminate the ASC weight scalar or alternatively combine OPPS and ASC utilization to establish a single weight scalar that would improve payment system alignment and more accurately scale for outpatient volume across both sites of service.

Response: We thank the commenters for their input. We disagree that the ASC weight scalar has impeded beneficiary access to outpatient surgical procedures in an ASC setting. In fact, utilization data demonstrates the opposite trend. While the ASC weight scalar has generally declined each year to maintain budget neutrality in the payment system on a year-to-year basis, the data shows that ASC market share of commonly-performed outpatient surgical procedures has steadily increased. For example, CPT code 66984 (Extracapsular cataract removal with insertion of intraocular lens prosthesis (one stage procedure), manual or mechanical technique (*e.g.*, irrigation and aspiration or phacoemulsification); without endoscopic cyclophotocoagulation), which has been the most commonly-performed surgical procedure in an ASC setting, was reported 73.4 percent of the time in an ASC in CY 2014 when comparing the ASC, HOPD, and physician office settings. This procedure was reported 16.7 percent of the time in a HOPD in CY 2014. For CY 2024, we estimate the share of ASC utilization of CPT code 66984 increased and was reported 81.5 percent of the time in an ASC setting while it declined to 9.2 percent of the time in the HOPD setting. The increase in ASC utilization share across the three outpatient settings and corresponding decline in HOPD utilization share over a 10-year period suggests that the budget neutrality adjustment, and any increase in payment disparity between the OPPS and ASC payment system, does not itself create access to care issues. Therefore, while we will continue to look for changes to our payment methodologies that might improve access to care for Medicare beneficiaries by improving payment accuracies and encourage greater efficiencies in care, we are not accepting the commenters' recommendation to discontinue the ASC weight scalar for CY 2026.

Comment: Many commenters expressed a strong concern with the proposed 4.7 percent reduction in payment for CPT code 66984. Commenters stated that the proposed payment would not keep up with inflation and would have a significant negative financial impact on ASCs that perform such procedures.

Response: After reviewing our OPPS/ASC ratesetting programs, we identified an issue that incorrectly calculated the geometric mean cost for procedures that use intraocular lenses. Specifically, our ratesetting programs inadvertently did not import the HCPCS codes that describe intraocular lens devices and disregarded all intraocular lens costs as not related to the OPPS or ASC payment system. Therefore, such IOL costs had not been packaged into the costs of the primary procedure. After correcting this issue, we observed a 7.3 percent increase in the geometric mean cost of CPT code 66984 as well as a 6.5 percent increase in the geometric mean cost of CPT code 66982 (Extracapsular cataract removal with insertion of intraocular lens prosthesis (1-stage procedure), manual or mechanical technique (*e.g.*, irrigation and aspiration or phacoemulsification), complex, requiring devices or techniques not generally used in routine cataract surgery (*e.g.*, iris expansion device, suture support for intraocular lens, or primary posterior capsulorrhexis) or performed on patients in the amblyogenic developmental stage; without endoscopic cyclophotocoagulation). Since the Level 1 Intraocular APC is largely influenced by the cost of CPT code 66984, we have seen a similarly large increase from our proposed national unadjusted ASC payment rate from $1,156.71. For final CY 2026 surgical procedure payment rates under the ASC payment system, we refer readers Addendum AA of this final rule with comment period.

Comment: A commenter expressed concern about a growing national trend of reduced ASC access for retina surgery, noting that a majority of retina specialists in a recently-performed survey report difficulty accessing sufficient OR time for emergent cases such as retinal detachment repair, with many having their ASC surgical block time reduced or eliminated due to inadequate facility reimbursement that results in significant financial losses for procedures like retinal detachment repair (CPT code 67108 (Repair of retinal detachment; with vitrectomy, any method, including, when performed, air or gas tamponade, focal endolaser photocoagulation, cryotherapy, drainage of subretinal fluid, scleral buckling, and/or removal of lens by same technique)) and complex retinal detachment repair (CPT code 67113 (Repair of complex retinal detachment (*e.g.*, proliferative vitreoretinopathy, stage c–1 or greater, diabetic traction retinal detachment, retinopathy of prematurity, retinal tear of greater than 90 degrees), with vitrectomy and membrane peeling, including, when performed, air, gas, or silicone oil tamponade, cryotherapy, endolaser photocoagulation, drainage of subretinal fluid, scleral buckling, and/or removal of lens)). The commenter emphasized that facilities cannot afford to allocate adequate time to meet patient demand when losing several hundred dollars per case, leading to ASCs limiting retina cases or suspending the service entirely, ultimately moving cases to higher-cost settings contrary to CMS's goal of providing care in the most cost-effective setting.

Response: We appreciate the concerns the commenter has raised and will continue to monitor the payment adequacy of retina detachment procedures and other surgical procedures in the Intraocular Procedures APC clinical family going forward.

Comment: Multiple commenters requested that CMS adjust the ASC payment for CPT code 64590 (insertion or replacement of peripheral neurostimulator pulse generator) from the proposed $16,502.60 to $18,330.98 to maintain consistency with historical methodology where ASC payments typically represent 110 percent–113 percent of the device offset, rather than the proposed 102 percent. The commenters also requested that CMS limit the proposed 16.1 percent payment reduction, stating that such a dramatic decrease will halt patient access to neurostimulation therapies in

ASC facilities and goes against site neutrality goals. Some commenters suggested any payment change, particularly for device-intensive procedures, should be capped at no more than 10 percent in any given year, consistent with the IPPS.

Response: We are aware of the reduction in the OPPS and ASC payment rates for CPT code 64590 but believe our APC assignment changes represent an improvement in our payment for high-cost neurostimulator-related procedures. We note that with the reassignment of CPT code 61885 to APC 5465 Level 5 Neurostimulator and Related Procedures, 95 percent of the claims for APC 5464 Level 4 Neurostimulator and Related Procedures contain CPT code 64590 as the primary procedure. Therefore, the proposed geometric mean cost and payment rate of APC 5464 is almost entirely based on the geometric mean cost of CPT code 64590. For this reason, we do not believe it would be appropriate to limit the payment rate decline for CPT code 64590 and are not accepting the commenters' recommendation.

Comment: A commenter recommended a cap on year-to-year reductions, limiting payment decreases, especially for device-intensive procedures in the ASC payment system, to no more than 10 percent.

Response: We did not propose such a policy in our CY 2026 OPPS/ASC proposed rule. We appreciate the recommendation and may take this comment into consideration in future rulemaking.

After consideration of public comments we received, we are finalizing our proposal to use scaled OPPS relative weights to establish ASC relative payment weights and to use the ratio of CY 2025 to CY 2026 total payments (the weight scalar) to scale the ASC relative payment weights for CY 2026. The final CY 2026 ASC weight scalar is 0.872. Consistent with historical practice, we are finalizing our proposal to scale the ASC relative payment weights of covered surgical procedures, covered ancillary radiology services, and certain diagnostic tests within the medicine range of CPT codes, which are covered ancillary services for which the ASC payment rates are based on OPPS relative payment weights.

b. Updating the ASC Conversion Factor

Under the OPPS, we typically apply a budget neutrality adjustment for provider-level changes, most notably a change in the wage index values for the upcoming year, to the conversion factor. Consistent with our final ASC payment policy, for the CY 2017 ASC payment system and subsequent years, in the CY 2017 OPPS/ASC final rule with comment period (81 FR 79751 through 79753), we finalized our policy to calculate and apply a budget neutrality adjustment to the ASC conversion factor for supplier-level changes in wage index values for the upcoming year, just as the OPPS wage index budget neutrality adjustment is calculated and applied to the OPPS conversion factor.

For CY 2026, we calculated the proposed adjustment for the ASC payment system by using the most recent CY 2024 claims data available and estimating the difference in total payment that would be created by introducing the proposed CY 2026 ASC wage indexes. Specifically, holding CY 2024 ASC utilization, service-mix, and the proposed CY 2026 national payment rates after application of the weight scalar constant, we calculated the total adjusted payment using the CY 2025 ASC wage indexes and the total adjusted payment using the proposed CY 2026 ASC wage indexes which included the 5-percent cap on wage index declines. We used the 50 percent labor-related share for both total adjusted payment calculations. We then compared the total adjusted payment calculated with the CY 2025 ASC wage indexes to the total adjusted payment calculated with the proposed CY 2026 ASC wage indexes and applied the resulting ratio of 0.9999 (the proposed CY 2026 ASC wage index budget neutrality adjustment) to the CY 2025 ASC conversion factor to calculate the proposed CY 2026 ASC conversion factor.

Section 1833(i)(2)(D)(v) of the Act requires that the ASC conversion factor be reduced by a productivity adjustment in each calendar year. Section 1886(b)(3)(B)(xi)(II) of the Act defines the productivity adjustment to be equal to the 10-year moving average of changes in annual economy-wide private nonfarm business multifactor productivity (MFP). We finalized the methodology for calculating the productivity adjustment in the CY 2011 PFS final rule with comment period (75 FR 73394 through 73396) and revised it in the CY 2012 PFS final rule with comment period (76 FR 73300 through 73301) and the CY 2016 OPPS/ASC final rule with comment period (80 FR 70500 through 70501). The proposed productivity adjustment for CY 2026 was projected to be 0.8 percentage point, as published in the FY 2026 IPPS/LTCH PPS proposed rule (90 FR 18266) based on IGI's 2024 fourth quarter forecast.

Section 1833(i)(2)(C)(i) of the Act requires that, if the Secretary has not updated amounts established under the revised ASC payment system in a calendar year, the payment amounts shall be increased by the percentage increase in the Consumer Price Index for all urban consumers (CPI–U), U.S. city average, as estimated by the Secretary for the 12-month period ending with the midpoint of the year involved. The statute does not mandate the adoption of any particular update mechanism, but it requires the payment amounts to be increased by the CPI–U in the absence of any update. Because the Secretary updates the ASC payment amounts annually, we adopted a policy, which we codified at § 416.171(a)(2)(ii)), to update the ASC conversion factor using the CPI–U for CY 2010 and subsequent calendar years.

In the CY 2019 OPPS/ASC final rule with comment period (83 FR 59075 through 59080), we finalized a policy to apply the hospital market basket update (which is the inpatient hospital market basket percentage increase reduced by the productivity adjustment) to ASC payment system rates for an interim period of 5 years (CY 2019 through CY 2023), during which we would assess whether there was a migration of the performance of procedures from the hospital setting to the ASC setting as a result of the use of a hospital market basket update, as well as whether there were any unintended consequences, such as less than expected migration of the performance of procedures from the hospital setting to the ASC setting. At that time, the most recently available full year of claims data to assess the expected migration applying the productivity-adjusted hospital market basket update during the interim period was within the period from CY 2019 through CY 2022. However, the impact of the COVID–19 PHE on health care utilization, CY 2020 in particular, was tremendously profound, particularly for elective surgeries, because many beneficiaries avoided healthcare settings, when possible, to avoid possible infection from the SARS–CoV–2 virus. As a result, it was nearly impossible to disentangle the effects from the COVID–19 PHE in our analysis of whether the higher update factor for the ASC payment system caused increased migration to the ASC setting. To analyze whether procedures migrated from the hospital setting to the ASC setting, we needed to use claims data from a period during which the COVID–19 PHE had less of an impact on health care utilization. Therefore, for CY 2024, we finalized our proposal to extend the 5-year interim period an additional 2 years through CY 2024 and

CY 2025. We believed hospital outpatient and ASC utilization data from CYs 2023 and 2024 would enable us to more accurately analyze whether the application of the hospital market basket update to the ASC payment system had an effect on the migration of services from the hospital setting to the ASC setting. We revised our regulations at § 416.171(a)(2)(iii), (iv), (vi), (vii), and (viii) which establish the annual update to the ASC conversion factor, to reflect this 2-year extension.

For the CY 2026 OPPS/ASC proposed rule, we proposed to extend our utilization of the hospital market basket update factor in the ASC payment system for one additional year, through CY 2026, as we continue to review and evaluate hospital outpatient and ASC utilization data, as well as the migration of surgical procedures between settings. In conjunction with our proposal, we are revising our regulations at § 416.171(a)(2)(iii), (iv), (vi), (vii), and (viii), which establish the annual update to the ASC conversion factor, the 2.0 percentage point reduction for ASCs that fail to meet the standards for reporting ASC quality measures, and the productivity adjustment, to reflect this one year extension.

We received public comments on these proposals. The following is a summary of the comments we received and our responses.

Comment: Multiple commenters supported our continued use of the hospital market basket as the annual update mechanism for ASC payments through CY 2026, with several organizations noting that this policy helps align cost and resource calculations between hospital outpatient departments and ambulatory surgery centers and supports migration of services to lower-cost settings. Many of these commenters recommended we permanently update the ASC payment system with the productivity-adjusted hospital market basket update factor. However, a major hospital industry organization opposed our proposal and recommended that CMS work expeditiously with ASC interested parties to develop a minimally burdensome way to collect ASC-specific cost data that could be used to calculate an appropriate update mechanism, stating that hospitals and ASCs have different costs and serve different patients. The commenters noted that while the hospital market basket update is an improvement over previous methods, evidence indicates it may not accurately reflect ASCs' actual cost structure, and MedPAC has recommended since 2010 that CMS collect ASC cost data to develop an ASC-specific market basket.

Response: We appreciate the feedback from commenters. We did not propose to collect ASC-specific cost data in our CY 2026 OPPS/ASC proposed rule but may take this comment into consideration in future rulemaking. We agree with commenters that providing the same annual update mechanism under the OPPS and ASC payment system can support the migration of services to the lower-cost ASC setting. We are finalizing our proposal to apply the productivity-adjusted hospital market basket update to the ASC payment system for CY 2026.

2. CY 2026 Final ASC Conversion Factor

For CY 2026, we are finalizing our proposal to utilize inpatient hospital market basket percentage increase of 3.3 percent reduced by the productivity adjustment of 0.7 percentage point, resulting in a final hospital market basket update of 2.6 percent for ASCs meeting the quality reporting requirements. Therefore, we are finalizing a 2.6 percent hospital market basket update factor to the CY 2025 ASC conversion factor for ASCs meeting the quality reporting requirements to determine the CY 2026 ASC payment amounts. The ASCQR Program affected payment rates beginning in CY 2014 and, under this program, there is a 2.0 percentage point reduction to the hospital market basket update factor for ASCs that fail to meet the ASCQR Program requirements. We refer readers to section XIV.E. of the CY 2019 OPPS/ASC final rule with comment period (83 FR 59138 through 59139) and section XIV.E. of the CY 2026 OPPS/ASC proposed rule for a detailed discussion of our policies regarding payment reduction for ASCs that fail to meet ASCQR Program requirements.

For CY 2026, we are adjusting the CY 2025 ASC conversion factor ($54.895) by a wage index budget neutrality factor of 1.0000 in addition to the productivity-adjusted hospital market basket update of 2.6 percent, discussed previously, which results in a final CY 2026 ASC conversion factor of $56.322 for ASCs meeting quality reporting requirements. For ASCs not meeting quality reporting requirements, we are adjusting the CY 2025 ASC conversion factor ($54.895) by the wage index budget neutrality factor of 01.0000 in addition to the reduced productivity-adjusted hospital market basket update of 0.6 percent, discussed above, which results in a final CY 2026 ASC conversion factor of $55.224 for ASCs not meeting the quality reporting requirements.

3. Display of the Final CY 2026 ASC Payment Rates

Addenda AA and BB to this final rule with comment period (which are available on the CMS website) display the final ASC payment rates for CY 2026 for covered surgical procedures and covered ancillary services, respectively. The final payment rates included in Addenda AA and BB to this final rule with comment period reflect the full ASC payment update and not the reduced payment update used to calculate payment rates for ASCs not meeting the quality reporting requirements under the ASCQR Program.

These Addenda contain several types of information related to the proposed CY 2026 payment rates. Specifically, in Addendum AA, a ''Y'' in the column titled ''To be Subject to Multiple Procedure Discounting'' indicates that the surgical procedure would be subject to the multiple procedure payment reduction policy. As discussed in the CY 2008 OPPS/ASC final rule with comment period (72 FR 66829 through 66830), most covered surgical procedures are subject to a 50 percent reduction in the ASC payment for the lower-paying procedure when more than one procedure is performed in a single operative session.

The values displayed in the column titled ''Final CY 2026 Payment Weight'' are the final relative payment weights for each of the listed services for CY 2026. The final relative payment weights for all covered surgical procedures and covered ancillary services where the ASC payment rates are based on OPPS relative payment weights were scaled for budget neutrality. Therefore, scaling was not applied to the device portion of the device-intensive procedures; services that are paid at the PFS nonfacility PE RVU-based amount; separately payable covered ancillary services that have a predetermined national payment amount, such as drugs and biologicals and brachytherapy sources that are separately paid under the OPPS; or services that are contractor-priced or paid at reasonable cost in ASCs. This includes separate payment for non-opioid pain management drugs.

To derive the final CY 2026 payment rate displayed in the ''Final CY 2026 Payment Rate'' column, each ASC payment weight in the ''Final CY 2026 Payment Weight'' column was multiplied by the final CY 2026 conversion factor. The conversion factor includes a budget neutrality adjustment for changes in the wage index values and the annual update as reduced by the

productivity adjustment. The final CY 2026 ASC conversion factor uses the final CY 2026 productivity-adjusted hospital market basket update factor of 2.6 percent (which is equal to the inpatient hospital market basket percentage increase of 3.3 percent reduced by the productivity adjustment of 0.7 percentage point).

Comment: A commenter requested that we remove the Multiple Procedure Payment Reduction (MPPR) assignment from CPT code 64596 (insertion of neurostimulator electrode array, peripheral nerve) and reassign it from ''Y'' to ''N'' status in ASC Addendum AA for CY 2026, stating that the current multi-procedure discount results in inequitable payment access since bilateral implantation or multiple nerve targeting requires separate StimRouter devices with individual incision and tunneling procedures. The commenter noted that CPT code 64596 is an outlier compared to other percutaneous implantation codes (64555, 64575, 64590) that do not have MPPR assignment, and emphasized that the clinical need for multiple integrated neurostimulators is similar to other peripheral nerve stimulation devices where each implant requires additional work and separate device costs. The commenter also noted confusion among providers since StimRouter was previously reimbursed under CPT 64555 (which has no multi-procedure discount) prior to the creation of CPT 64596 in January 2024.

Response: We do not agree that CPT code 64596 is an outlier in assigning the MPPR status to ''Y'' in that many other surgical procedures with significant device costs in the Neurostimulator and Related Procedures APC clinical family are also discounted under the MPPR policy, such as CPT code 64583 (Revision or replacement of hypoglossal nerve neurostimulator array and distal respiratory sensor electrode or electrode array, including connection to existing pulse generator). However, we appreciate the concerns the commenter has raised with respect to the impacts of our MPPR policy on access to surgical procedures with significant device costs. We will continue to monitor the concerns the commenter has raised and may take the commenter's recommendation into consideration in future rulemaking.

In Addendum BB, there are no relative payment weights displayed in the ''Final CY 2026 Payment Weight'' column for items and services with predetermined national payment amounts, such as separately payable drugs and biologicals. The ''Final CY 2026 Payment'' column displays the final CY 2026 national unadjusted ASC payment rates for all items and services. The final CY 2026 ASC payment rates listed in Addendum BB for separately payable drugs and biologicals are based on the most recently available data used for payment in physicians' offices. For CY 2021, we finalized adding a new column to ASC Addendum BB titled ''Drug Pass-Through Expiration during Calendar Year'' where we flag through the use of an asterisk each drug for which pass-through payment is expiring during the calendar year (that is, on a date other than December 31st).

Addendum EE to this final rule with comment period provides the HCPCS codes and short descriptors for surgical procedures that are to be excluded from payment in ASCs for CY 2026.

Addendum FF to this final rule with comment period displays the OPPS payment rate (based on the standard ratesetting methodology), the APC device offset percentage, the device offset percentage for determining device-intensive status (based on the standard ratesetting methodology), and the device portion of the ASC payment rate for CY 2026 for covered surgical procedures.

XIV. Cross-Program Measures for the Hospital Outpatient Quality Reporting (OQR), Rural Emergency Hospital Quality Reporting (REHQR), and Ambulatory Surgical Center Quality Reporting (ASCQR) Programs

A. Background

We refer readers to sections XV., XVI., and XVII. of this final rule with comment period for program-specific background information, including the statutory authorities and previously finalized and newly proposed measure sets, for the Hospital Outpatient Quality Reporting (OQR), Rural Emergency Hospital Quality Reporting (REHQR), and Ambulatory Surgical Center Quality Reporting (ASCQR) Programs, respectively.

B. Measure Concepts Under Consideration for Future Years in the Hospital OQR, REHQR, and ASCQR Programs—Request for Information (RFI): Well-Being and Nutrition

In the CY 2026 OPPS/ASC proposed rule (90 FR 33754), we sought input on well-being and nutrition measures for consideration in future rulemaking for the Hospital OQR, REHQR, and ASCQR Programs. Well-being is a comprehensive approach to disease prevention and health promotion, as it integrates mental and physical health while emphasizing preventative care to proactively address potential health issues.[252] This comprehensive approach emphasizes person-centered care by promoting the well-being of patients and family members. We sought comments on tools and measures that assess overall health, happiness, and satisfaction in life, which could include aspects of emotional well-being, social connections, purpose, and fulfillment. We also requested input and comments on the applicability of tools and constructs that assess the integration of complementary and integrative health, skill building, and self-care.

We also sought comments on tools and measures that assess optimal nutrition and preventive care in the Hospital OQR, REHQR, and ASCQR Programs. Assessments for nutritional status may include strategies, guidelines, and practices that promote healthy eating habits and ensure individuals receive the necessary nutrients for maintaining health, growth, and overall well-being. Such assessments may also include aspects of health that support or mediate nutritional status, such as physical activity and sleep. In this context, preventive care plays a vital role by proactively addressing factors that may lead to poor nutritional status or related health issues. These efforts not only support optimal nutrition but also work to prevent conditions that could otherwise hinder an individual's health and nutritional needs.

Comment: Many commenters supported the inclusion of well-being and nutrition measures in the Hospital OQR, REHQR, and ASCQR Programs. Many commenters emphasized that including evidence-based, actionable metrics on these topics in quality reporting programs is essential for managing chronic illness, improving patient outcomes, and advancing health equity. Several commenters encouraged CMS to adopt malnutrition quality measures, such as the Malnutrition Care Score (MCS, formerly known as the Global Malnutrition Composite Score) currently used in the Hospital Inpatient Quality Reporting (IQR) program, for the Hospital OQR, REHQR, and ASCQR programs. A few commenters emphasized the importance of implementing measures that use validated, flexible, and interdisciplinary tools, such as the Patient-Reported Outcomes Measurement Information System (PROMIS), World Health Organization Well-Being Index (WHO–5), Patient Health Questionnaire-9

[252] Centers for Disease Control and Prevention. (May 2024). About Emotional Well-Being. Available at *https://www.cdc.gov/emotional-well-being/about/#cdc_behavioral_basics_types-health-benefits. Accessed: April 30, 2025.*

(PHQ–9), Canadian Occupational Performance Measure (COPM), Occupational Self-Assessment (OSA), and Self-Management Ability Scale (SMAS), that capture individualized outcomes including participation, resilience, and quality of life.[253] [254] [255] [256] [257] [258] Other commenters recommended Functional Communication Measures (FCMs) for swallowing to ensure adequate nutrition, hydration, and recovery.[259] A few commenters recommended incorporating measures that assess care transitions, patient activation, and personalized goals to support pathways to well-being. A few commenters expressed the importance of integrating evidence-based measures that target the aging population and incorporating protective factors such as food access, community safety, financial security, and health literacy. Other commenters encouraged developing new measures that address the topic of maternal recovery in the outpatient setting, as well as measures that recognize specific interventions such as Medical Nutrition Therapy, food insecurity screenings, and chronic care interventions.

A few commenters urged CMS to consider the applicability of any well-being or nutrition measures to the outpatient setting, noting that facilities should not be held accountable for factors beyond their control, such as lack of access to healthy foods. Many commenters expressed concern that implementing measures related to well-being and nutrition in healthcare facilities, particularly in rural or resource-limited settings, may be administratively burdensome. A few commenters stated that, although ASCs play a vital role in delivering surgical and procedural care, the short-term, episodic nature of ASC services is not optimal for addressing broader well-being or nutritional needs, which require longitudinal interventions and follow-up beyond the ASC setting. A few commenters encouraged CMS to engage with primary care providers, patients, and caregivers to ensure that new domains reflect both clinical relevance and patient experience. A few commenters urged CMS to ensure adequate reimbursement for nutrition care measures that reflects true costs and supports equitable patient access.

Many commenters expressed concern over the proposal to remove SDOH measures, arguing that these screenings provide critical insights into patient needs and support holistic care delivery. Some of these commenters recommended aligning any future well-being and nutrition measures with existing social determinants of health screening tools and identified food insecurity screening as a foundational tool for addressing nutrition and well-being. A few commenters emphasized the importance of aligning nutrition measures with clinical workflows and addressing both food insecurity and diet quality.

Several commenters stated that barriers to nutrition and well-being, such as food insecurity and social isolation, should be addressed through targeted interventions and community partnerships. A few commenters stressed the need to address resource gaps through Federally funded programs that impact nutrition and well-being while others recommended incentivizing facilities to partner with community organizations to expand access to nutrition services, including medically tailored meals and food pharmacies. A few commenters emphasized the importance of ensuring continuity of care through discharge planning and community referrals. A few commenters recommended expanding facility-based measures to include post-discharge follow-up and integration with community resources to support long-term health outcomes.

A few commenters recommended the use of standardized tools and existing data sources, such as electronic health records (EHRs), to simplify administration and integration into clinical workflows. A few commenters recommended pilot testing in diverse settings and populations to ensure reliability, practicality, and applicability of new measures before full implementation. A commenter suggested that new measures related to well-being and nutrition should be electronic clinical quality measures (eCQMs) to align submission formats across CMS quality reporting programs. A commenter urged CMS to leverage the Gravity Project's United States Core Data for Interoperability (USCDI) and Fast Healthcare Interoperability Resources® (FHIR®) standards to improve interoperability and integrate community-based supports.[260] [261]

Response: We thank the commenters for their input. While we are not responding to specific comments in response to the RFI in this final rule with comment period, we will take this feedback into consideration for our future measure development efforts for the Hospital OQR, REHQR, and ASCQR Programs.

C. Changes to the Hospital OQR, REHQR, and ASCQR Program Measure Sets

1. Removal of the COVID–19 Vaccination Coverage Among Healthcare Personnel (HCP) Measure From the Hospital OQR and ASCQR Programs Beginning With the CY 2024 Reporting Period/CY 2026 Payment Determination

We refer readers to the CY 2022 OPPS/ASC final rule with comment period where we adopted the COVID–19 Vaccination Coverage Among HCP measure into the Hospital OQR and ASCQR Programs (86 FR 63824 through 63833 and 86 FR 63875 through 63883, respectively) and the CY 2024 OPPS/ASC final rule with comment period where we modified the COVID–19 Vaccination Coverage Among HCP measure to account for updated vaccine guidance (88 FR 81963 through 81968 and 88 FR 82013 through 82017, respectively).

In the CY 2026 OPPS/ASC proposed rule (90 FR 33754 through 33755), for the Hospital OQR and ASCQR Programs, we proposed to remove the COVID–19 Vaccination Coverage Among HCP measure beginning with the CY 2024 reporting period/CY 2026 payment determination under removal Factor 8, as the costs associated with the measure outweigh the benefit of its continued use in the program (42 CFR 419.46(i)(3)(i)(H) and 416.320(c)(2)(viii), respectively). Reporting on this measure currently requires reporting data on COVID–19 Vaccination Coverage

Among HCP for at least 1 week every month. This requires healthcare facilities to track current vaccination status for all employees, licensed independent practitioners, adult students/trainers and volunteers, and other contract personnel and log in to the National Healthcare Safety Network (NHSN) system to report the data monthly, either manually in NHSN or by uploading a comma-separated value (CSV) file.[262] The estimated burden of collecting this information annually across all 3,200 hospitals in the Hospital OQR Program is between $1,446,400 and $1,687,680. Across the 4,590 ASCs in the ASCQR Program, the estimated annual burden is between $2,074,680 and $2,420,766. We refer readers to section XXIII. of this final rule with comment period for more details on this estimated burden calculation.

When we first adopted the COVID–19 Vaccination Coverage Among HCP measure for the Hospital OQR and ASCQR Programs, the U.S. was in the midst of a Public Health Emergency (PHE) that incurred millions of cases and over 718,000 COVID–19 deaths (86 FR 63825 and 86 FR 63875 through 63876, respectively). While preventing the spread of COVID–19 remains a public health goal, the PHE ended on May 11, 2023.[263] In addition, the death rate due to COVID–19 in the U.S. has decreased since the adoption of this measure.[264] In August 2021, when this measure was being proposed, the U.S. was averaging over 6,000 deaths related to COVID–19 per week.[265] In April 2023, the last full month of the PHE, weekly number of deaths attributed to COVID–19 averaged around 1,300.[266] With the end of the PHE and the decrease in COVID–19 deaths, we believe the continued costs and burden to healthcare facilities of tracking and monthly reporting on this measure outweigh the benefit of continued information collection on COVID–19 vaccination coverage among HCP. As it may be costly for hospitals and ASCs to continue to report on the COVID–19 Vaccination Coverage Among HCP measure, removal of this measure will allow for the Hospital OQR and ASCQR Programs to focus on other clinical goals.

We stated that if this proposal is finalized, hospitals and ASCs that do not report their CY 2024 reporting period data for the COVID–19 Vaccination Coverage Among HCP measure to CMS would not be considered noncompliant with the measure for their CY 2026 payment determination (that is, hospitals and ASCs that do not report CY 2024 reporting period data would not be penalized for CY 2026 payments due to this measure). Any COVID–19 Vaccination Coverage Among HCP measure data received by CMS would not be used for public reporting or payment purposes.

We also stated that if this proposal is not finalized, hospitals and ASCs that do not report their CY 2024 reporting data for the COVID–19 Vaccination Coverage Among HCP measure to CMS would be considered noncompliant with the measure for their CY 2026 payment determination and would receive a letter of noncompliance. Payment adjustments would apply to CY 2026 payment determination for fee-for-service claims as previously finalized.

We invited public comments on these proposals.

Comment: Many commenters supported the removal of the COVID–19 Vaccination Coverage Among HCP measure and agreed that the burden imposed by tracking COVID–19 vaccination among healthcare personnel outweighs the benefits of its continued use in the Hospital OQR and ASCQR Programs. Many commenters supported removal of this measure because it requires near-continuous monitoring of each employee's vaccination status due to changing vaccination definitions. Commenters asserted that the labor and resource intensiveness of collecting and reporting data for this measure requires significant staff time and resources that are diverted from other clinical priorities, such as direct patient care. Many commenters agreed that this measure no longer aligns with an urgent public health priority or provides meaningful or actionable data for quality improvement. Commenters stated that the measure has become outdated, especially since the COVID–19 PHE declaration ended in May 2023.

Response: We thank commenters for their support.

Comment: Several commenters did not agree with removing this measure, asserting that the benefits of maintaining vaccination data for public health surveillance and promoting vaccine uptake outweigh the costs of tracking vaccination coverage. Commenters stated that systematic reporting of healthcare personnel vaccination rates is essential for monitoring and responding to future infectious disease outbreaks in healthcare settings. Instead of removal, these commenters recommended modifying the measure to reduce administrative burden so that preparedness remains a priority. Commenters expressed concern that removing the measure could reduce institutional accountability and preparedness, ultimately resulting in higher costs associated with preventable infections.

Several commenters asserted that vaccination is a critical strategy to minimize preventable harm and maintain safe healthcare environments, and that removing the measure would contradict the healthcare industry's obligation to uphold high standards of care and infection prevention. Some commenters were concerned that removing this measure could reduce attention to vaccination programs, potentially compromising healthcare system resilience. Commenters stated that removing this measure could lead to decreased vaccination rates among healthcare personnel, thereby increasing the risk of hospital-acquired infections and compromising patient safety for vulnerable patient populations, such as those who are immunocompromised, undergoing cancer treatment, or pregnant. A few commenters stated that vaccination of healthcare personnel is particularly important in ASC settings where many patients are undergoing cardiovascular, oncological, or mediport placement procedures.

Response: We acknowledge commenter concerns about patient safety, protecting vulnerable populations, and maintaining public health surveillance and readiness. We agree that patient safety practices and high-quality healthcare for all patients are a priority, and we expect participating hospitals and ASCs to support safe practices that protect patients from infections and other preventable harm. The removal of the COVID–19 Vaccination Coverage Among HCP measure is not intended to interfere with infection control practices, but rather to alleviate the burden associated with data collection

and reporting on a monthly cadence now that the PHE has ended. We note that hospitals and ASCs are not restricted from tracking HCP vaccinations that are appropriate for the setting of care and the population served.

Comment: A few commenters expressed concerns about the proposed applicability date for removing the COVID–19 Vaccination Coverage Among HCP measure, which is the CY 2026 payment determination. Commenters stated that hospitals and ASCs have already invested significant resources to complete the process of submitting CY 2024 quality data used for CY 2026 payment determination. These commenters discouraged the proposal to remove measures applicable to past reporting periods, especially for relatively new measures, as it creates confusion and burden among hospitals and ASCs.

Response: We understand commenters' concern regarding the timing around removal of these measures and the confusion and burden this may impose on hospitals and ASCs that have already submitted CY 2024 quality data. However, because we have determined that the cost of reporting on these measures outweighs the benefits of retaining them in the program, it would place an undue burden on hospitals and ASCs to continue requiring reporting on these measures for an additional year. We note that hospitals and ASCs that do not report their CY 2024 reporting period data for the COVID–19 Vaccination Coverage Among HCP measure to CMS will not be considered noncompliant with the measure for purposes of their CY 2026 payment determination (that is, hospitals and ASCs that do not report CY 2024 reporting period data will not be penalized for CY 2026 payments due to this measure). Any COVID–19 Vaccination Coverage Among HCP measure data received by CMS will not be used for public reporting or payment purposes.

After consideration of the comments received, we are finalizing our proposal to remove the COVID–19 Vaccination Coverage Among HCP measure from the Hospital OQR and ASCQR Programs beginning with the CY 2024 reporting period/CY 2026 payment determination.

2. Removal of the Hospital Commitment to Health Equity (HCHE) Measure From the Hospital OQR and REHQR Programs and the Facility Commitment to Health Equity (FCHE) Measure From the ASCQR Program Beginning With the CY 2025 Reporting Period/CY 2027 Payment or Program Determination

We refer readers to the CY 2025 OPPS/ASC final rule with comment period where we adopted the Hospital Commitment to Health Equity (hereafter referred to as HCHE) measure into the Hospital OQR and REHQR Programs and the Facility Commitment to Health Equity (hereafter referred to as FCHE) measure into the ASCQR Program (89 FR 94368 through 94381).

In the CY 2026 OPPS/ASC proposed rule (90 FR 33755 through 33756), for the Hospital OQR, REHQR, and ASCQR Programs, we proposed to remove the HCHE and FCHE measures beginning with the CY 2025 reporting period/CY 2027 payment or program determination under removal Factor 8, as the costs associated with achieving a high score on the measure outweigh the benefit of its continued use in the program (§§ 419.46(i)(3)(i)(H), 419.95(e)(3)(i)(H), and 416.320(c)(2)(viii), respectively).

When adopted, we intended the collection of data described in the five domains of these measures to provide hospital, REH, and ASC leadership with meaningful and actionable health data to drive quality improvements to eliminate health disparities. We have a renewed focus on measurable clinical outcomes and direct patient care. The HCHE and FCHE measures are structural measures which do not directly assess these areas of interest. Further, based on the feedback received from hospitals, REHs, and ASCs, the burden of collecting these measures may outweigh the benefits. Removal of these measures will alleviate an estimated annual burden of approximately 533 hours, at a cost of $22,518, across all participating hospitals (89 FR 94523); 6 hours, at a cost of $332, across all participating REHs (89 FR 94530); and 746 hours, at a cost of $41,313 across all participating ASCs (89 FR 94534).

An important goal of the Hospital OQR, REHQR, and ASCQR Programs is to move forward in the least burdensome manner possible while maintaining a parsimonious set of meaningful quality measures and continuing to incentivize improvement in the quality of care provided to patients. Removing these measures from the Hospital OQR, REHQR and ASCQR Programs serves this goal. Our priority is to re-focus on measurable clinical outcomes as well as identifying quality measures on topics of prevention, nutrition, and well-being. As such we refer readers to ''Measure Concepts under Consideration for Future Years in the Hospital OQR, REHQR, and ASCQR Programs—Request for Information (RFI): Well-Being and Nutrition'' in section XIV.B. of this final rule with comment period.

We acknowledge that some hospitals, REHs, and ASCs may have expended resources to implement some or all of the activities described in the HCHE and FCHE measures attestation statements to be able to attest ''yes'' for measure reporting purposes.

We stated that if this proposal is finalized, hospitals, REHs, and ASCs that do not report their CY 2025 reporting period data for the HCHE or FHCE measure to CMS would not be considered noncompliant with the measure for purposes of their CY 2027 payment or program determination (that is, hospitals, REHs, or ASCs that do not report CY 2025 reporting period data would not be penalized for CY 2027 payments due to this measure, if applicable). Any HCHE or FCHE measure data received by CMS would not be used for public reporting or payment purposes.

We also stated that if this proposal is not finalized, hospitals, REHs, or ASCs that do not report their CY 2025 reporting data for the HCHE or FCHE measures to CMS would be considered noncompliant with the measure for their CY 2027 payment or program determination and would receive a letter of noncompliance. Payment adjustments would apply to CY 2027 payment determination fee-for-service (FFS) claims as previously finalized in the Hospital OQR and ASCQR Programs.

We invited public comments on this proposal.

Comment: Many commenters supported the removal of the HCHE measure from the Hospital OQR and REHQR Programs, and the FCHE measure from the ASCQR Program. Several commenters supported the removal as part of broader efforts to streamline quality reporting programs and reduce regulatory burden. They agreed that eliminating measures like HCHE and FCHE would allow facilities to redirect resources toward higher-priority initiatives and patient care, focusing on more tangible interventions and measurable outcomes rather than attestation-based requirements. A commenter stated that the measure duplicates efforts already met through existing standards, such as The Joint Commission's National Patient Safety Goal NPSG.16.01.01—Improve Health

Care Equity. This commenter encouraged CMS to align measures with existing standards.

Many commenters expressed concerns about structural measures, emphasizing their concerns about administrative burden and the limited impact of these measures on improving patient outcomes. These commenters stated that the burden of reporting these measures outweighs the benefits, highlighting challenges in implementation such as a lack of infrastructure, training, and staff capacity to collect and act on the data meaningfully. Several commenters stated these challenges were particularly acute for small and rural facilities, including single-specialty ASCs.

Many commenters stated that the FCHE measure does not reflect the structure of ASCs to provide short-term, episodic care, and ASCs generally do not have the infrastructure nor the resources to meet the requirements of those measures, such as EHR technology. A commenter asserted that the cost of implementation was higher than the CMS estimate for ASCs.

Many commenters supported the removal of these measures as they expressed the measure was not appropriately tailored to the outpatient hospital, ASC, and REH settings. A few commenters supported the removal due to their lack of consensus-based entity (CBE) endorsement, measure testing, and validity. A few commenters expressed concern about the measure scoring methodology, specifically, the complexity of the reporting requirements and the actionability of the data.

Response: We thank the commenters for their support. We agree that the removal of this measure will reduce the administrative burden and the challenges related to implementation in the ASC setting. We note that both the HCHE and FCHE measures went through the rigorous measure development lifecycle outlined at the CMS Measures Management System website,[267] which includes measure testing and reliability analysis. For the Hospital OQR Program and ASCQR Program, we note that section 1833(t)(17) of the Act does not require that each measure adopted for these programs be CBE-endorsed. For the REHQR Program, section 1861(kkk)(7)(C)(i) of the Act generally requires that quality measures specified by the Secretary for the REHQR Program be endorsed by a CBE; however, section 1861(kkk)(7)(C)(ii) of the Act provides an exception to the general CBE-endorsement requirement, stating that in the case of a specified area or medical topic determined appropriate by the Secretary for which a measure has not been endorsed by the entity with a contract under section 1890(a) of the Act, the Secretary may specify a measure that is not endorsed as long as due consideration is given to measures that have been endorsed or adopted by a consensus organization identified by the Secretary. We reviewed CBE-endorsed measures and were unable to identify any other CBE-endorsed measures on this topic, and therefore we believe the exception in section 1861(kkk)(7)(C)(ii) of the Act applies for purposes of this measure for the REHQR Program.

Comment: A few commenters supported the removal of these measures and stated they remain committed to ensuring quality care for all patients and investing in culturally responsive care models.

Response: We appreciate commenters' support and commitment to maintaining quality care for all patients. Despite removal of these measures, facilities will still be able to collect data that is important to their patient care initiatives and reflects the unique needs of their specific patient population.

Comment: Many commenters opposed the removal of the HCHE measure from the Hospital OQR and REHQR Programs, and the FCHE measure from the ASCQR Program, emphasizing the critical role these measures play in advancing health equity and addressing disparities in care delivery. These commenters stated that the measures provide structured accountability for facility leadership to prioritize equity work, collect data on social determinants of health, and implement quality improvement initiatives.

Several commenters asserted that removing the measure would signal a retreat from CMS' stated goals of reducing disparities and improving care for vulnerable populations, including those with severe mental illness, racial and ethnic minorities, rural populations, those with low socioeconomic status, and dual eligible beneficiaries. A commenter stated that removing the HCHE and FCHE measures from the respective programs contradicts the goals of the Make America Healthy Again initiative.

Response: We acknowledge the commenters' concerns. We agree that holding facilities accountable for high-quality healthcare delivery to all beneficiaries is important and remains a priority for the Hospital OQR, REHQR, and ASCQR Programs. We remain focused on identifying measures that balance feasibility, burden, and impact, while aligning with shifting administration priorities as the health system continues to evolve. We are identifying ways to reduce provider reporting burden, while continuing to hold facilities accountable for measurable clinical health outcomes and patient safety. We appreciate the commenters' support for the Make America Healthy Again initiative and will review suggestions received on the new measure RFI in section XIV.B. of this final rule with comment period as we consider relevant measures to introduce in the future.

Comment: Many commenters stated that removal of the measure could result in decreased quality of care, reduce transparency and accountability, and exacerbate gaps in care quality, ultimately resulting in worsened health outcomes and higher costs. Several commenters cited examples of persistent disparities in care, including maternal mortality rates across the population and differences between urban and rural health outcomes. A few commenters asserted removal of this measure would widen the existing gap between medical and behavioral health institutions, emphasizing that addressing social needs such as food insecurity, housing instability, and transportation barriers is essential for improving health outcomes, particularly chronic diseases, and reducing preventable hospital admissions.

Response: We acknowledge commenters' concerns and considered the potential impact on patient outcomes and health disparities when deciding to remove this measure. We urge facilities to continue to incorporate industry standards that may address challenges that could impact safe, high-quality healthcare delivery. Despite removal of these measures, facilities will still be able to collect data that is important to their patient care initiatives and reflects the unique needs of their specific patient population.

Comment: Several commenters stated that the benefits of this measure, which is reducing the costs associated with health inequities, outweigh CMS' estimated burden of implementing the HCHE and FCHE measures. A few commenters stated that structural measures incur a low reporting burden, as facilities do not incur financial penalties so long as they report complete and accurate data. A commenter stated that CMS should prioritize the benefits for Medicare beneficiaries and taxpayers, with

[267] Centers for Medicare & Medicaid Services (2024, December). *Blueprint Measure Lifecycle.* Measures Management System. *Available at https://mmshub.cms.gov/blueprint-measure-lifecycle-overview.*

burden to providers as a secondary consideration.

Response: We appreciate commenters' input regarding the burden associated with reporting on the HCHE and FCHE measures. We agree with commenters that the reporting burden associated with structural measures is typically small; however, we believe that costs are multi-faceted and include administrative costs to facilities, maintaining information collection systems, and analyzing reported data. At this time, we remain focused on identifying outcome measures that balance feasibility, burden, and impact, while aligning with administration priorities. We are identifying ways to reduce provider reporting burden, while continuing to hold facilities accountable for measurable clinical health outcomes and patient safety. We have considered both the benefits and the burden of these measures, and determined the multi-faceted costs associated with the measures outweigh the benefits of continued use in the program.

Comment: A few commenters stated that facilities have already incurred the burden to create programs to support the HCHE and FCHE measures and have already invested resources in collecting and submitting data for the CY 2025 reporting period. These commenters stated that CMS should delay the removal of the measures so as to not erode the substantial efforts already underway. A commenter expressed concerns about the proposed effective date for the removal of the FCHE measures, which is the CY 2027 payment determination.

Response: We acknowledge commenters' concern regarding the timing around measure removal and the costs of preparing to report on the measures. However, because we have determined that the cost of reporting on this measure outweighs the benefits of retaining it in the program, we are removing these measures at the earliest feasible reporting period of CY 2025, for which the submission period has not yet opened and the deadline would not be until in May 2026. This negates the need for hospitals and ASCs to expend additional resources on reporting a measure for which we have determined that the costs outweigh the benefits.

Comment: Several commenters recommended refining the HCHE and FCHE measures rather than removing them entirely. A few commenters suggested modifications to reduce administrative burden while preserving the measure's intent and improving value. A few commenters proposed adjustments to scoring methodologies, reporting frequency, or voluntary submission to make the measure more feasible for facilities to implement. A few commenters expressed concerns about removing structural measures as clinical-based measures do not incentivize actionable change at the systemic level, citing ''measure gaming'', or demonstrating improvements on measures that are disconnected from true improvements in patient care, as a reason to maintain these measures. A few commenters encouraged CMS to explore alternative mechanisms for tracking equity-related efforts and integrating social needs into care delivery, such as voluntary documentation of Z-codes.

Response: We thank the commenters for their recommendations and will consider them as we evaluate any potential future measures on this subject. We note that structural measures, such as the HCHE and FCHE measures, evaluate a hospital or facility's capacity, systems, and processes to deliver high quality care, whereas outcome measures assess the impact of health care services or interventions on patients.[268] We are focused on identifying ways to reduce provider reporting burden while continuing to hold hospitals and facilities accountable for measurable clinical outcomes and patient safety. Hospitals and facilities are encouraged to continue to engage in activities to close gaps in care and collect data that is important to their patient care initiatives and reflect the needs of their patient population regardless of whether it is required for the Hospital OQR, REHQR, and ASCQR Programs.

After consideration of the comments received, we are finalizing our proposal to remove the HCHE measure from the Hospital OQR and REHQR Programs, and the FCHE measure from the ASCQR Program beginning with the CY 2025 reporting period/CY 2027 payment determination.

3. Removal of Two Social Drivers of Health Measures From the Hospital OQR, REHQR, and ASCQR Programs Beginning With the CY 2025 Reporting Period

In the CY 2026 OPPS/ASC proposed rule (90 FR 33756), we proposed to remove two social drivers of health (SDOH) process measures from the Hospital OQR, REHQR, and ASCQR Programs beginning with the CY 2025 reporting period: Screening for Social Drivers of Health (adopted at 89 FR 94381 through 94398) and Screen Positive Rate for Social Drivers of Health (adopted at 89 FR 94398 through 94403), for which the CY 2025 reporting period would be voluntary, and mandatory reporting would begin with the CY 2026 reporting period/CY 2028 payment or program determination.

We proposed to remove the SDOH measures beginning with the CY 2025 reporting period under removal Factor 8 as the costs associated with the measure outweigh the benefit of its continued use in these programs (§§ 419.46(i)(3)(i)(H), 419.95(e)(3)(i)(H), and 416.320(c)(2)(viii), respectively). We heard from some hospitals, REHs, and ASCs concerned with the costs and resources associated with screening patients via manual processes, manually storing such data, training staff, and altering workflows for these measures. In the CY 2025 OPPS/ASC final rule with comment period, we estimated a total annual burden of 6,878,055 hours at a cost of $168,460,032 in the Hospital OQR Program (89 FR 94523 and 94524), 12,984 hours at a cost of $318,163 in the REHQR Program (89 FR 94530 and 94531), and 711,479 hours at a cost of $17,447,164 in the ASCQR Program (89 FR 94534 and 94535), to screen all admitted patients in accordance with the Screening for SDOH measure specifications and report the measure data to CMS. For the Screen Positive Rate for SDOH measure, we estimated a total annual burden of 533 hours at a cost of $29,518 in the Hospital OQR Program (89 FR 94524), 6 hours at a cost of $332 in the REHQR Program (89 FR 94531 and 94532), and 746 hours at a cost of $41,313 in the ASCQR Program (89 FR 94535), to report the measure data. We noted that the HQR system calculates the rate for these two measures, and that hospitals, REHs, and ASCs' responsibility is to report the aggregate number of patients screened, the aggregate number of patients that screened positive, and their total patient population.

We discussed in the CY 2026 OPPS/ASC proposed rule that the costs of the continued use of these measures in the Hospital OQR, REHQR, and ASCQR Programs outweigh the benefits to facilities and patients. Removal of these measures would alleviate the burden on hospitals, REHs, and ASCs to manually screen each patient and submit data each reporting cycle, allowing hospitals, REHs, and ASCs to focus resources on measurable clinical outcomes and direct patient care. This would also remove the patient burden associated with repeated SDOH screenings across multiple healthcare facilities. We refer readers to ''Measure Concepts under

[268] Agency for Healthcare Research and Quality. (Oct 2025) Types of Health Care Quality Measures. Available at *https://www.ahrq.gov/talkingquality/measures/types.html*.

Consideration for Future Years in the Hospital OQR, REHQR, and ASCQR Programs–Request for Information (RFI): Well-Being and Nutrition'' in section XIV.B. of this final rule with comment period for more information regarding our areas of focus for new measures. We acknowledged that some hospitals, ASCs and REHs may have expended resources to implement SDOH screenings, however, facilities that had already implemented such screenings prior to adoption of the measures would not have expended similar resources. The objectives of the Hospital OQR, REHQR, and ASCQR Programs continue to incentivize the improvement of care quality and health outcomes for all patients through transparency and use of appropriate quality measures.

We invited public comments on this proposal.

Comment: Many commenters supported removing the Screening for SDOH and Screen Positive Rate for SDOH measures. These commenters emphasized that the measures require significant resources for data collection, which could distract hospitals, REHs, and ASCs from focusing on direct patient outcomes and other quality improvement initiatives. Many commenters supported removal of these measures because the measures do not show whether facilities are addressing the specific risk factors impacting patients in response to screenings and patients have expressed frustration resulting from duplicative screenings across healthcare settings.

Response: We thank the commenters for their support.

Comment: Several commenters supported removal due to a lack of testing, appropriate tailoring to the outpatient hospital, ASC, and REH settings, and CBE endorsement. Many commenters supported removal of the FCHE measure as ASCs do not provide longitudinal care, and it is therefore unreasonable to expect them to comprehensively address SDOH. A few commenters expressed that ASCs generally do not have the infrastructure nor the resources to meet the requirements of those measures, such as social workers on staff or knowledge of resources in a patient's own community as many patients travel for ASC care.

Response: We note that the two SDOH measures went through the rigorous measure development lifecycle outlined at the CMS Measures Management System website [269] which includes measure testing and reliability analysis. For the Hospital OQR Program and ASCQR Program, we note that section 1833(t)(17) of the Act does not require that each measure adopted for these programs is CBE-endorsed. For the REHQR Program, section 1861(kkk)(7)(C)(i) of the Act generally requires that quality measures specified by the Secretary for the REHQR Program be endorsed by a CBE; however, section 1861(kkk)(7)(C)(ii) of the Act provides an exception to the general CBE-endorsement requirement, stating that in the case of a specified area or medical topic determined appropriate by the Secretary for which a measure has not been endorsed by the entity with a contract under section 1890(a) of the Act, the Secretary may specify a measure that is not endorsed as long as due consideration is given to measures that have been endorsed or adopted by a consensus organization identified by the Secretary. We reviewed CBE-endorsed measures and were unable to identify any other CBE-endorsed measures on this topic, and therefore we believe the exception in section 1861(kkk)(7)(C)(ii) of the Act applies for purposes of this measure for the REHQR Program.

Comment: A few commenters supported the removal of the measure and stated they remain committed to health equity and to operationalizing SDOH screening and intervention in the best manner for their facilities. These commenters mentioned experiencing declined readmissions and emergency department use through connecting patients to community-based services, but that the burden of reporting is significant, so they will continue referring patients voluntarily.

Response: We appreciate commenters' support and commitment to maintaining quality care for all patients.

Comment: Many commenters did not support CMS' proposal to remove the two SDOH measures from the Hospital OQR, REHQR, and ASCQR Programs. Many commenters described how SDOH significantly impacts health outcomes and the types of care and services patients may require in healthcare facilities. These commenters stated that screening for SDOH is fundamental to patient-centered care, including clinical outcomes, treatment adherence, and reducing preventable healthcare utilization (for example, emergency department visits and readmissions). A commenter stated that these SDOH measures intended to create a systematic structure and standardized measurement to support patients with complex needs across all settings, and their removal adds difficulty in scaling care transitions and integrating social care into clinical workflows. Another commenter asserted that ASCs are well-positioned for SDOH screening by serving as a strategic starting point for scaling upstream driver initiatives across the continuum of care.

Response: We acknowledge commenters' concerns and encourage hospitals, REHs, and ASCs to continue to close identified gaps in patient care. Removing these measures from the Hospital OQR, REHQR, and ASCQR Programs does not prevent facilities from measuring and addressing patients' social needs, as clinically appropriate. Further, these SDOH measures are only reported in aggregate and do not measure the extent to which providers are ultimately connecting patients with resources or services and whether patients are benefiting from these screenings.

Comment: Many commenters disagreed that removal of the SDOH measures would reduce burden. Many of these commenters stated that the ultimate cost savings arising from SDOH screening through improved chronic disease management and prevention of avoidable hospitalizations. A few commenters also asserted that facilities have already incurred the cost to set up the systems to collect this data, and that removal now would have minor impacts on costs. Several commenters stated that eliminating these measures without a transition plan could disrupt established care practices, undermine quality, harm partnerships with community-based organizations, and present ethical challenges. A commenter stated that the public deserves to know which facilities are taking a prevention-driven approach to health care.

Response: We thank commenters for their feedback. As previously mentioned, removal of these measures does not prevent hospitals and ASCs from measuring and addressing patients' social needs as clinically appropriate. We acknowledge that hospitals and ASCs may have expended resources to implement SDOH screenings; however, removing these measures at this time will alleviate additional burden with regard to data collection and submission requirements, especially with screening patients via manual processes and other manual collection and data storage mechanisms. We encourage hospitals and facilities to transition in a manner that aligns with existing workflows, operational practices, and community partnerships.

Comment: Several commenters suggested that CMS retain these measures and conduct listening sessions or publish an RFI to gather interested

[269] Centers for Medicare & Medicaid Services (2024, December). *Blueprint Measure Lifecycle.* Measures Management System. *Available at https://mmshub.cms.gov/blueprint-measure-lifecycle-overview.*

parties' feedback to address burden. Several commenters requested that CMS allow for voluntary reporting of the SDOH measures or pause the measures to avoid disrupting ongoing efforts to collect social risk data. A few commenters suggested a period of confidential reporting to facilitate iterative improvement. A few commenters expressed the importance of identifying and documenting Z codes and noted the importance of SDOH-related screening for capturing applicable Z codes. A few commenters suggested stratifying performance reports based on SDOH-associated ICD–10 diagnoses or patient demographics. A commenter advised CMS to develop a claims-based approach to measure health disparities.

A few commenters recommended maintaining the current SDOH measures and developing an additional measure to encourage facilities to connect patients to community resources. Some commenters encouraged alignment with other initiatives, such as the National Committee for Quality Assurance's (NCQA's) Healthcare Effectiveness Data and Information Set (HEDIS) Social Needs Screening and Interventions (SNS–E) measure, Health Level 7 Gravity Project, and United States Core Data for Interoperability. Some commenters requested that CMS provide technical assistance in integrating screening into workflows and connecting patients with social needs to resources. A commenter recommended an incentive program for community-based organizations that face funding challenges in supporting an influx of demand as a result of SDOH screening.

Response: We appreciate the commenters' concerns and feedback regarding the importance of collecting SDOH data from patients and acknowledge that some patients may face challenges following discharge that may be related to SDOH. We recognize that some clinicians may find value in obtaining SDOH information as part of clinical decision making, such as discharge planning and patient care, and acknowledge feedback from some commenters stating that they value collecting this information. We agree that healthcare outcomes may be different for those experiencing unstable housing or food insecurity. Facilities may find ways to address these concerns in their workflow because they recognize the importance of these items and the removal of the SDOH measure requirements should not, in any way, preclude hospitals, REHs, or ASCs from collecting and using this information.

Comment: Many commenters stated that the SDOH measures align with CMS' broader goals, including ensuring high-quality healthcare for all patients and implementing the Make America Healthy Again initiative. In response to the request for comment, ''Measure Concepts under Consideration for Future Years in the Hospital OQR, REHQR, and ASCQR Programs–Request for Information (RFI): Well-Being and Nutrition,'' several commenters urged CMS to keep the SDOH measures and invest resources into improving the applicability and actionability of these measures as a way to improve well-being and nutrition.

Response: We appreciate commenters' support for the goals of the Make America Healthy Again initiative and the constructive role that quality measures can play in ensuring quality healthcare for all. Because we have determined that the cost of reporting on these measures outweighs the benefits of retaining them in these programs, it would place an undue burden on hospitals and ASCs to require reporting on these measures as we explore alternative approaches to implementing measures related to well-being and nutrition. We will consider the feedback commenters provided in future policymaking.

After consideration of the comments we received, we are finalizing our proposal to remove the Screening for Social Drivers of Health and Screen Positive Rate for Social Drivers of Health measures from the Hospital OQR, REHQR, and ASCQR Programs beginning with the CY 2025 reporting period.

D. Updates to the Extraordinary Circumstances Exception (ECE) Policy for the Hospital OQR, REHQR, and ASCQR Programs

1. Background

Under our current Extraordinary Circumstances Exception (ECE) regulations, we have granted exceptions to data submission deadlines and requirements for the Hospital OQR, REHQR, and ASCQR Programs in the event of extraordinary circumstances beyond the control of a hospital, REH, or ASC (42 CFR 419.46(e), 419.95(g), 416.310(d), respectively). Extraordinary circumstances may include, but are not limited to, natural disasters or systemic problems with data collection systems.[270] We refer readers to the CY 2022 OPPS/ASC final rule with comment period (86 FR 63873), the CY 2024 OPPS/ASC final rule with comment period (88 FR 82076), and the CY 2018 OPPS/ASC final rule with comment period (82 FR 52614 through 52614) for further background about the ECE policies for the Hospital OQR, REHQR, and ASCQR Programs, respectively. We also refer readers to the QualityNet website for program-specific requirements for submitting an ECE request.[271]

Our ECE policy provides flexibility for Hospital OQR, REHQR, and ASCQR Program participants toward meeting program requirements in the event of an extraordinary circumstance. For instance, we recognize that, in circumstances where a full exception is not applicable, it is beneficial for a hospital, REH, or ASC to report data later than the reporting deadline. Delayed reporting authorized under our ECE policy allows temporary relief for a hospital, REH, or ASC experiencing an extraordinary circumstance while preserving the benefits of data reporting, such as transparency and informed decision-making for beneficiaries and providers alike.

2. Update to the Extraordinary Circumstances Exception (ECE) Policy for the Hospital OQR, REHQR, and ASCQR Programs

In the CY 2026 OPPS/ASC proposed rule (90 FR 33756 through 33757), we proposed to update the current Hospital OQR, REHQR, and ASCQR Program ECE policies codified at 42 CFR 419.46(e); 419.95(g); and 416.310(d), respectively, to include extensions of time as a form of relief and to further clarify the policy. Specifically, we proposed updating the regulations at §§ 419.46(e)(1), 419.95(g)(1), and 416.310(d)(1) to state that CMS may grant an ECE with respect to reporting requirements in the event of an extraordinary circumstance—defined as an event beyond the control of a hospital, REH, or ASC (for example, a natural or man-made disaster such as a hurricane, tornado, earthquake, terrorist attack, or bombing)—that affected the ability of the hospital, REH, or ASC to comply with one or more applicable

[270] Centers for Medicare & Medicaid Services. (May 2024). Quality Program Extraordinary Circumstances Exceptions (ECE) Request Form. QualityNet. Available at *https://qualitynet.cms.gov/files/677e843f50ed8df7419f60e1?filename=HQR_ECE_Req_Form_CY_2025.pdf. Accessed: April 30, 2025.*

[271] Centers for Medicare & Medicaid Services. Hospital OQR Program Extraordinary Circumstances Exceptions (ECE) Policy: *https://qualitynet.cms.gov/outpatient/oqr/participation%23tab2#tab2*; REHQR Program Extraordinary Circumstances Exceptions (ECE) Policy: *https://qualitynet.cms.gov/reh/rehqr/participation#tab2*; and ASCQR Program Extraordinary Circumstances Exceptions (ECE) Policy: *https://qualitynet.cms.gov/asc/ascqr/participation%23tab3#tab2.* Accessed: April 30, 2025.

reporting requirements with respect to a calendar year.

We proposed that the steps for requesting or granting an ECE would remain the same as the current ECE process, detailed by CMS at the QualityNet website or a successor website.[272] However, at §§ 419.46(e)(2)(i), 419.95(g)(2)(i), and 416.310(d)(2)(i), we proposed that a hospital, REH, or ASC, respectively, may request an ECE within 30 calendar days of the date that the extraordinary circumstance occurred. Our current policy allows a request within 90 days; this change was proposed toward aligning the Hospital OQR, REHQR, and ASCQR policy with CMS systems implementation requirements across all quality reporting programs. Under this proposed policy, we clarified that CMS would retain the authority to grant an ECE as a form of relief at any time after the extraordinary circumstance has occurred. For the Hospital OQR, REHQR, and ASCQR Programs, at §§ 419.46(e)(2)(ii), 419.95(g)(2)(ii), and 416.310(d)(2)(ii), respectively, we proposed that CMS would notify the requestor with a decision in writing. If CMS grants an ECE to the hospital, REH, or ASC, the written decision will specify whether the hospital, REH, or ASC is exempted from one or more reporting requirements or whether CMS has granted the hospital, REH, or ASC an extension of time to comply with one or more reporting requirements.

Additionally, at §§ 419.46(e)(3), 419.95(g)(3), and 416.310(d)(3), we proposed that we may grant an ECE to one or more hospitals, REHs, or ASCs that have not requested an ECE if we determine that: a systemic problem with a CMS data collection system directly impacted the ability of the hospital, REH, or ASC to comply with a quality data reporting requirement, or that an extraordinary circumstance has affected an entire region or locale. We further proposed that, as is the case under our current policy, any ECE granted would specify whether the affected hospitals, REHs, or ASCs are exempted from one or more reporting requirements or whether CMS has granted the hospital, REH, or ASC an extension of time to comply with one or more reporting requirements.

We invited public comments on these proposals.

Comment: Many commenters expressed support for CMS' proposals to update and codify the ECE policy across hospital, REH, and ASC quality programs. Many commenters appreciated CMS' efforts to codify its authority to grant reporting deadline extensions or exceptions in response to extraordinary circumstances, recognizing this flexibility as critical for hospitals, REHs, and ASCs facing natural disasters or other emergencies. A few commenters specifically supported the proposal to update and codify CMS' ability to grant ECEs to hospitals, REHs, and ASCs even if those facilities have not requested an exception. A commenter supported the proposal to allow hospitals, REHs, and ASCs 30 days to submit an ECE request.

Response: We thank the commenters for their support.

Comment: Several commenters cautioned CMS to avoid defaulting to extensions in cases where broader relief is warranted and ensure reporting extensions are not disproportionately utilized in place of exceptions. A few commenters also urged CMS to recognize that a mere extension is not always sufficient, as the reliability and integrity of data collected during extraordinary events may be compromised. A few commenters urged CMS to provide details on how the determination of an exception versus an extension will be made to ensure transparency. A commenter stated this transparency would allow hospitals to better prepare for response times and required resources based on whether they are likely to receive an exemption or an extension. A commenter requested that CMS consider granting full exceptions for cyberattacks, specifically, due to the amount of time that the systems would be offline.

Response: We appreciate commenters' concerns regarding the use of extensions for ECE requests. We note that we do not intend to replace exceptions with extensions and acknowledge that extensions are not always appropriate or operationally feasible. We will determine whether to grant an exception versus an extension using the same evaluation approach currently used in ECE determinations, on a case-by-case basis, based on the specific circumstances affecting the hospital, REH, or ASC, including circumstances impacting the operational feasibility of an extension.

Comment: Many commenters did not support the reduced timeframe for hospitals to request an ECE from the current 90-day period to 30 days following an extraordinary circumstance. A few commenters stated that the proposed 30-day window is insufficient for hospitals, REHs, or ASCs to respond to a crisis, assess the impact on data collection and systems, and submit a request for an exception. A few commenters mentioned previously experienced and potential future situations, such as severe flooding and ransomware attacks, where hospitals, REHs, and ASCs would be fully engaged in patient care and operational recovery, leaving little capacity to prioritize administrative tasks like ECE requests. A few commenters expressed concern that the reduced timeframe encourages hospitals, REHs, or ASCs to divert critical staff at a time they are needed most and would force them to prioritize paperwork over patient care, undermining the goals of the CMS quality reporting and value programs. A few commenters requested that CMS review ECE submissions to assess the feasibility for facilities to meet a 30-day response deadline and disclose its justification for reducing the window.

Many commenters urged CMS to retain the current 90-day window but would support 60 days to align with the IPPS and IPF PPS final rules. A few commenters requested CMS retain the 90-day window, despite alignment with the IPPS and IPF PPS final rules; these commenters stated that even 90 days can be an insufficient period of time due to the impacts of extraordinary circumstances on infrastructure and operations.

Response: We appreciate commenters' feedback regarding concerns about reducing the timeframe for hospitals, REHs, and ASCs to submit an ECE request. Due to concerns regarding a hospital's, REH's, or ASC's ability to assess the impact on quality data submissions and complete the necessary ECE request form within 30 days of the extraordinary circumstance, we are modifying the timeframe to allow for 60 days to submit an ECE request. We believe this timeframe will provide sufficient time for hospitals, REHs, and ASCs to assess the impact on quality reporting without disrupting operational and care needs. The 60-day period will also align with the same policy finalized for hospital inpatient providers and inpatient psychiatric facilities (IPF) in the FY 2026 IPPS/LTCH PPS final rule (90 FR 37026) and the FY 2026 IPF PPS final rule (90 FR 37661), respectively.

Comment: A commenter did not support the proposal that CMS may grant an ECE to one or more hospitals, REHs, or ASCs that have not requested

[272] Centers for Medicare & Medicaid Services. Hospital OQR Program Extraordinary Circumstances Exceptions (ECE) Policy *https://qualitynet.cms.gov/outpatient/oqr/participation%23tab2#tab2*; REHQR Program Extraordinary Circumstances Exceptions (ECE) Policy: *https://qualitynet.cms.gov/reh/rehqr/participation#tab2*; and ASCQR Program Extraordinary Circumstances Exceptions (ECE) Policy: *https://qualitynet.cms.gov/asc/ascqr/participation%23tab3#tab2. Accessed: April 30, 2025.*

an ECE. This commenter expressed concern that granting wholesale exceptions for entire regions or locales is not in the best interest of beneficiaries or the general public who depend on access to quality reporting to assess the safety and quality of the care delivered. Another commenter expressed concern that less publicized extraordinary circumstances will not prompt CMS to issue an ECE without request, and that the process to submit an ECE request via the HQR portal, email, or secure fax may be unavailable if an emergency event severely disrupts operations for months.

Response: We appreciate commenters' concerns regarding our proposal to grant ECEs to hospitals, REHs, and ASCs that have not requested an ECE but were subject to an extraordinary circumstance affecting their region or locale. While we understand the value of quality reporting data to the public, we believe that granting ECEs during certain circumstances where entire regions or locales may be experiencing a collective disruption in normal operations would alleviate some of the immediate administrative burden of submitting an ECE request. In such cases, we would decide whether facilities are excepted from one or more reporting requirements or granted an extension of time so that we can ensure transparent reporting of reliable data. If a facility is not automatically granted an ECE due to an extraordinary circumstance, we encourage the hospital, REH, or ASC to follow the same approach currently used to submit an ECE request. We believe the modified 60-day timeframe will provide sufficient time for a facility to submit an ECE request without further disrupting operations. The 60-day period will also align with the same policy finalized for the Hospital IQR Program and IPFQR Program in the FY 2026 IPPS/LTCH PPS final rule (90 FR 37026) and the FY 2026 IPF PPS final rule (90 FR 37661), respectively.

After consideration of the public comments, we are finalizing our ECE proposals as proposed, except for the proposed 30-day deadline. In lieu of the 30-day deadline, we are finalizing an ECE request deadline of 60 days following an extraordinary circumstance. We are making conforming amendments to our regulation text at §§ 419.46(e), 419.95(g), and 416.310(d) for the Hospital OQR, REHQR, and ASCQR Programs, respectively, to reflect these policy changes.

XV. Hospital Outpatient Quality Reporting (OQR) Program

A. Background and History of the Hospital OQR Program

The Hospital Outpatient Quality Reporting (OQR) Program is a pay-for-reporting program intended to ensure transparency and quality of care furnished at hospital outpatient departments (HOPDs). Section 1833(t)(17)(A) of the Social Security Act (the Act) states that subsection (d) hospitals (as defined under section 1886(d)(1)(B) of the Act) that do not submit data required for measures selected with respect to such a year, in the form and manner required by the Secretary, will incur a 2.0 percentage point reduction to their annual Outpatient Department (OPD) fee schedule increase factor.

We refer readers to the CY 2011 OPPS/ASC final rule with comment period (75 FR 72064 through 72065) for a detailed discussion of the statutory history of the Hospital OQR Program. The Hospital OQR Program requirements are codified at 42 CFR 419.46. We also refer readers to the CMS website at *https://www.cms.gov/medicare/quality/initiatives/hospital-quality-initiative/hospital-outpatient-quality-reporting-program* for general background on the Hospital OQR Program, as well as the CMS QualityNet Hospital OQR website at *https://qualitynet.cms.gov/outpatient* for current program requirements and measure specifications.

B. Changes to the Hospital OQR Program Measure Set

In the CY 2026 OPPS/ASC proposed rule (90 FR 33757), we proposed to adopt the Emergency Care Access & Timeliness electronic clinical quality measure (eCQM) beginning, with voluntary reporting for the CY 2027 reporting period followed by mandatory reporting beginning with the CY 2028 reporting period/CY 2030 payment determination. In addition, we proposed to remove the Median Time from Emergency Department (ED) Arrival to ED Departure for Discharged ED Patients (Median Time for Discharged ED Patients) measure and the Left Without Being Seen measure, beginning with the CY 2028 reporting period/CY 2030 payment determination, if the Emergency Care Access & Timeliness eCQM is adopted into the program. We also proposed to modify the Excessive Radiation Dose or Inadequate Image Quality for Diagnostic Computed Tomography (CT) in Adults (Hospital Level—Outpatient) measure (Excessive Radiation eCQM) from mandatory reporting to voluntary reporting, beginning with the CY 2027 reporting period.

We refer readers to section XIV.C. of this final rule with comment period, Cross-Program Measures, where we discuss the removal of the following Hospital OQR Program measures: (1) COVID–19 Vaccination Coverage Among Healthcare Personnel (HCP) measure beginning with the CY 2024 reporting period/CY 2026 payment determination; (2) Hospital Commitment to Health Equity (HCHE) measure beginning with the CY 2025 reporting period/CY 2027 payment determination; (3) Screening for Social Drivers of Health (SDOH) measure beginning with the CY 2025 reporting period; and (4) Screen Positive Rate for SDOH measure beginning with the CY 2025 reporting period.

1. Adoption of the Emergency Care Access & Timeliness eCQM Beginning With Voluntary Reporting for the CY 2027 Reporting Period Followed by Mandatory Reporting Beginning With the CY 2028 Reporting Period/CY 2030 Payment Determination

a. Background

Occupancy and boarding rates in U.S. emergency departments (EDs) continue to worsen and exceed pre-pandemic levels.[273] ED boarding, defined as holding a patient in the ED after the patient is admitted or placed into observation status at a hospital, often occurs due to shortages of inpatient beds and staff and contributes to ED crowding, leading to safety risks for patients and stressful working conditions for healthcare personnel.[274] A recent report from the Agency for Healthcare Research and Quality (AHRQ) characterized patient ED boarding as a growing public health crisis and engaged interested parties to address the strain on the U.S. healthcare system.[275]

Recent studies indicate that delays in the timeliness of ED care are associated

[273] Moore, C. & Heckmann R. (2025). Hospital Boarding In The ED: Federal, State, And Other Approaches. *Health Affairs Forefront.* Available at *https://www.healthaffairs.org/content/forefront/hospital-boarding-ed-federal-state-and-other-approaches. Accessed: April 30, 2025.*

[274] Moore, C. & Heckmann R. (2025). Hospital Boarding In The ED: Federal, State, And Other Approaches. *Health Affairs Forefront.* Available at *https://www.healthaffairs.org/content/forefront/hospital-boarding-ed-federal-state-and-other-approaches. Accessed: April 30, 2025.*

[275] Agency for Healthcare Research and Quality. (2025). Technical Report: AHRQ Summit To Address Emergency Department Boarding. Available at *https://www.ahrq.gov/sites/default/files/wysiwyg/topics/ed-boarding-summit-report.pdf. Accessed: April 30, 2025.*

with patient harm.[276] [277] Long ED wait times are also one of the most cited reasons for patients leaving an ED without being evaluated by a clinician.[278] Increased ED length of stay (LOS) is also a strong predictor of poor timeliness of care and is significantly impacted by ED boarding. One study found that for every patient boarded, the median ED LOS for all admitted patients increased by at least 12 minutes.[279] Furthermore, ED boarding and crowding have been associated with poor patient outcomes, such as increased mortality,[280] delays in needed care,[281] and negative patient and staff experiences.[282] [283] For instance, evidence shows that ED crowding can harm patients with sepsis by delaying administration of lifesaving intravenous (IV) fluids and antibiotics.[284]

Due to growing concerns about the quality and timeliness of care in the ED, as well as the burden associated with two chart-abstracted ED measures adopted in the Hospital OQR Program measure set, the Median Time for Discharged ED Patients measure and the Left Without Being Seen measure, CMS assessed additional ways to support efforts that reduce patient harm and improve outcomes for patients requiring emergency care.

b. Measure Overview

The Emergency Care Access & Timeliness eCQM [285] is specified for the hospital setting and calculates the proportion of four outcome metrics that quantify access to and timeliness of care in an ED setting against specified thresholds, including: (1) patient wait time—1 hour; (2) whether the patient left the ED without being evaluated; (3) patient boarding time in the ED (as defined by a Decision to Admit (order) to ED departure for admitted patients)—4 hours; and (4) patient ED LOS (time from ED arrival to ED physical departure, as defined by the ED departure timestamp)—8 hours. The Emergency Care Access & Timeliness eCQM provides HOPDs with data for each of these individual numerator components, which are described in greater detail in section XV.B.1.c. of this final rule with comment period.

The numerator components of the Emergency Care Access & Timeliness eCQM overlap with the patient population and measure specifications of two chart-abstracted measures in the Hospital OQR Program: (1) the Median Time for Discharged ED Patients measure, and (2) the Left Without Being Seen measure. The Median Time for Discharged ED Patients measure assesses the time patients spent in the ED before being sent home, also known as ED throughput. The Left Without Being Seen measure assesses the percentage of patients who leave the ED without being evaluated by a physician/advanced practice nurse/physician's assistant (physician/APN/PA). Numerator component (2) overlaps with the Left Without Being Seen patient population, and numerator component (4) overlaps with the Median Time for Discharged ED Patients measure. In addition to capturing the same data elements as the Median Time for Discharged ED Patients and Left Without Being Seen measures, the Emergency Care Access & Timeliness eCQM measures boarding time in the ED, numerator component (3), and time from arrival to placement in a treatment room, numerator component (1), which are not currently captured by any other measure in the Hospital OQR Program measure set.[286]

In the CY 2026 OPPS/ASC proposed rule (90 FR 33757 through 33762), we proposed that removal of two chart-abstracted measures in conjunction with the proposed adoption of the Emergency Care Access & Timeliness eCQM would reduce HOPD burden by requiring the reporting of one digital quality measure instead of two chart-abstracted measures. While the Median Time for Discharged ED Patients and the Left Without Being Seen measures require manual intervention to retrieve data from clinical documentation, the Emergency Care Access & Timeliness eCQM allows for automated extraction of patient-level data directly from the electronic health record (EHR). In the proposed rule (90 FR 33758), we acknowledged that updating EHRs with new measures requires some initial investment from hospitals, but in the long-term it would automate timely collection of more granular quality information. We referred readers to the eCQI Resource Center for general eCQM implementation guidance at *https://ecqi.healthit.gov/oqr/ecqm-resources*. We also refer readers to section XV.B.2. of this final rule with comment period for more information on these removals of the chart-abstracted measures.

For more information about the testing, feasibility, scientific acceptability, meaningfulness, and validity of the Emergency Care Access & Timeliness eCQM, we refer readers to *https://p4qm.org/measures/4625e*.

c. Measure Calculation

The measure denominator includes all ED encounters associated with patients of all ages, for all-payers, during a 12-month period of performance. Patients can have multiple encounters during a period of performance, and each encounter is eligible to contribute to the calculation of the measure.[287]

The measure numerator includes any ED encounter in the denominator where the patient experiences any one of the following: (1) the patient waited longer than 1 hour after arrival to the ED to be placed in a treatment room or dedicated treatment area that allows for audiovisual privacy during history-taking and physical examination; (2) the patient left the ED without being evaluated; (3) the patient boarded in the ED for longer than 4 hours; and (4) the patient had an ED LOS of longer than 8 hours.[288] An encounter is considered part of the numerator if it includes any one of the four numerator events, with events not being mutually exclusive and each contributing only once to the numerator. ED encounters with ED observation stays [289] are excluded from components (3) and (4) but are included in the denominator. Patients who have a ''decision to admit'' after an ED observation stay remain excluded from criteria (3) calculations.[290]

These four outcomes were selected based on published literature demonstrating that each numerator component is associated with patient harm,[291] as well as input from clinical experts including ED experts and statistical and methodological experts and a Technical Expert Panel (TEP) that was convened by the measure developer.[292] A Patient and Family Engagement (PFE) Work Group provided feedback on experiences with emergency care, noting long wait times to be seen by a provider, long wait times to be transferred, and gaps in the discharge processes.

The numerator thresholds were developed according to evidence and consensus-based clinical guidelines for ED time thresholds, including guidelines developed by The Joint Commission (TJC), the American College of Emergency Physicians (ACEP), and the Emergency Department Benchmarking Alliance as well as input from a TEP, literature reviews, and environmental scans. For example, the 4-hour threshold for numerator component (3), boarding time, was developed according to recommendations from TJC and ACEP.[293] [294]

Measure testing for the Emergency Care Access & Timeliness eCQM was conducted by the measure developer across 32 hospital-based EDs, representing a diverse mix of geographic regions, rurality, hospital size, teaching status, trauma level, and EHR vendors, demonstrating that the measure is reliable, valid, and feasible for all required data elements.[295] Measure testing results showed a wide range in overall scores, and across all strata, indicating variation in performance and implying room for quality improvement.[296]

The measure score is first calculated at the individual ED level as the proportion of ED encounters where any one of the four outcomes occurred. Raw measure scores are then standardized by ED case volume using z-scores. The z-score, or standard score, indicates how many standard deviations a data point is from the mean of a normal distribution. It is calculated by subtracting the mean from a data point, then dividing the result by the standard deviation. For the Emergency Care Access & Timeliness eCQM, a volume-adjusted z-score shows how an ED's performance compares to the average for similar-volume EDs, addressing differences in patient population in HOPDs and ensuring fair ''like to like'' comparisons between EDs of similar size. ED volume strata are defined in volume bands of 20,000 ED visits, and each ED is assigned to only one volume stratum. For CMS Certification Numbers (CCNs) with more than one ED, volume-adjusted z-scores are then combined as a weighted average for that CCN.[297]

The results of the Emergency Care Access & Timeliness eCQM are stratified into four groups, two by age (18 years and older, and under 18 years) and two by mental health diagnoses (with, and without).[298] The stratification of results by age and mental health diagnosis, as well as standardization of measure performance scores by volume, is sufficient to account for differences between hospitals without further need for risk adjustment.

For more detail on the measure specifications, we referred readers to the CMS QualityNet Hospital OQR Program website at *https://qualitynet.cms.gov/outpatient*, which also takes readers to the electronic specifications available at the eCQI Resource Center: *https://ecqi.healthit.gov/ecqm/hosp-outpt/2027/cms1244v1*.

d. Pre-Rulemaking Measure Review (PRMR)

As required under section 1890A of the Act, the Secretary must establish and follow a pre-rulemaking process for selection of quality and efficiency measures, including for the Hospital OQR Program. The pre-rulemaking process, which we refer to as the Pre-Rulemaking Measure Review (PRMR), includes a review of measures published on the publicly available ''Measures Under Consideration List'' (MUC List) by one of several committees convened by the consensus-based entity (CBE), with which we contract in accordance with section 1890 of the Act, for the purpose of providing interested parties input to the Secretary on the selection of quality and efficiency

[297] For proposed measure specifications, we refer readers to the CMS QualityNet Hospital OQR Program website at *https://qualitynet.cms.gov/outpatient.*

[298] The principal diagnosis (first listed diagnosis at ED discharge) will be used to define strata inclusion. For this measure's purpose, mental health diagnoses do not include substance use disorder diagnoses. Mental health refers to mental health diagnoses, life stressors and crises, and stress-related physical symptoms.

measures under consideration for use in certain Medicare quality programs, including the Hospital OQR Program. We refer readers to the CY 2025 OPPS/ASC final rule with comment period (89 FR 94372) for details on the PRMR process, including the voting procedures used to reach consensus on measure recommendations. We described in the CY 2026 OPPS/ASC proposed rule that the PRMR Hospital Recommendation Group met on January 15 and 16, 2025, to review measures included by the Secretary on the publicly available 2024 MUC List, including the Emergency Care Access & Timeliness eCQM (MUC2024–075), and provided additional recommendations on the potential use of this measure.[299]

The voting results of the PRMR Hospital Recommendation Group for the proposed Emergency Care Access & Timeliness eCQM within the Hospital OQR Program were: 10 members recommended adopting the measure into the Hospital OQR Program; 10 members recommended adoption with conditions; 7 members voted not to recommend the measure for adoption. No voting category reached 75 percent or greater, including the combination of the recommend and the recommend with conditions categories and thus, the Hospital Recommendation Group did not reach consensus.[300]

The PRMR Hospital Recommendation Group noted in their deliberations that the measure will provide important insights into ED wait times which impact experience of care. The Group expressed concern that this measure may cause an increase in cost of care due to patients being transferred from the ED to observation.[301] While we acknowledged that patients transferred from the ED to observation may result in increased short-term costs due to additional monitoring and extended stays, the measure is designed to address significant issues surrounding the access to timely care which have been proven to reduce long-term costs.[302] Hospital Recommendation Group members also expressed concern about the lack of CBE endorsement. We noted that we submitted the Emergency Care Access & Timeliness eCQM for CBE endorsement for review in the Fall 2024 cycle and the CBE endorsed the measure with conditions on February 12, 2025.[303]

The Hospital Recommendation Group discussed conditions specific to the Hospital OQR Program, including changing the name of the measure to better reflect the measure's focus.[304] We agreed with this feedback and changed the name of the measure from the Emergency Care Capacity and Quality eCQM to Emergency Care Access & Timeliness eCQM. Group members also recommended refraining from including the Emergency Care Access & Timeliness eCQM in Overall Hospital Quality Star Ratings (Star Ratings) due to the possible duplication of data with existing measures. We noted that we proposed to remove two existing measures in the Hospital OQR Program, the Median Time for Discharged ED Patients and the Left Without Being Seen measures, to avoid duplicative data collection and reporting. We also noted that the Emergency Care Access & Timeliness measure would only be included in the Star Ratings calculation after the existing measures are removed. We refer readers to section XV.B.2. of this final rule with comment period for more information on the removal of the Median Time for Discharged ED Patients and the Left Without Being Seen measures.

The Hospital Recommendation Group also recommended revising the measure specifications to create separate measure components and explore alternative measures for patient boarding time and patient ED LOS. We acknowledged the Hospital Recommendation Group's concerns and noted that multiple TEPs and interested parties supported the inclusion of more than one numerator component as a strategy for internally balancing the measure and that the time thresholds for patient boarding time and ED LOS are based on more than a decade of consensus work. Lastly, Group members recommended stratifying the measure by factors such as care type, region, and hospital or trauma level designation. We emphasized that the approach to stratification by age and mental health diagnosis, as well as volume standardization of the measure performance scores, is sufficient to account for differences between hospitals without further need for additional stratification.[305]

e. Measure Endorsement

Section 1833(t)(17)(C)(i) of the Act provides that the Hospital OQR Program shall include measures that reflect consensus among affected parties and, to the extent feasible and practicable, shall include measures set forth by one or more national consensus-based entities. A TEP consisting of interested parties, experts, and consumer advocates contributed their input through the Emergency Care Access & Timeliness eCQM measure design process.[306] The Emergency Care Access & Timeliness eCQM was submitted to the CBE for endorsement review in the Fall 2024 cycle (CBE #4625e), and the CBE endorsed the measure with conditions for use in the Hospital OQR Program on February 12, 2025. The conditions include that the measure developer explore within 3 years: (1) the unintended consequences to patients and providers, including burden, by engaging with the patient community and accountable entities (for instance, qualitative assessments and empirical analyses); and (2) the data elements to identify and address where challenges may persist, including engaging accountable entities. We stated in the CY 2026 OPPS/ASC proposed rule that if the proposal to adopt the Emergency Care Access & Timeliness eCQM for the Hospital OQR Program is finalized, we would monitor the burden on patients and providers and identify areas where

challenges may persist as part of the standard measure maintenance (90 FR 33760).

f. Data Collection, Submission, and Reporting

The Emergency Care Access & Timeliness eCQM is specified in a standard electronic format, utilizing data extracted electronically from EHRs, with all data coming from defined fields in electronic sources. We noted in the CY 2026 OPPS/ASC proposed rule that eCQMs allow for retrieval of data directly from an EHR, reducing administrative burden on hospitals and minimizing errors due to manual abstraction of data.[307]

We proposed to adopt the Emergency Care Access & Timeliness eCQM beginning with voluntary reporting for the CY 2027 reporting period followed by mandatory reporting beginning with the CY 2028 reporting period/CY 2030 payment determination. We stated we believe this would provide HOPDs sufficient time to test and integrate the eCQM into existing clinical workflows. Additionally, limiting voluntary reporting to 1 year prioritizes addressing long ED wait times and ED boarding as well as removing two chart-abstracted measures from the Hospital OQR Program measure set to reduce HOPD burden. We refer readers to section XV.C.2. of this final rule with comment period for additional information on the Emergency Care Access & Timeliness eCQM form, manner, and timing of data submission and reporting requirements.

We refer readers to section XVI.B.1. of this final rule with comment period where we discuss the adoption of a similar measure for the Rural Emergency Hospital Quality Reporting Program.

We invited public comments on this proposal. The following is a summary of the comments we received and our responses.

Comment: Many commenters supported the adoption of the Emergency Care Access & Timeliness eCQM as proposed. These commenters emphasized the importance of measuring emergency room wait times, particularly boarding times. Many commenters stated that ED boarding is a public health emergency and national security and preparedness issue, as it endangers patient outcomes and contributes to ambulance diversion, adverse events, preventable errors, reduced patient satisfaction, ED violence, staff burnout, and higher health care costs. Many commenters stated that boarding reflects broader health system dysfunction and that valid and reliable measurement is essential to identifying, diagnosing, and pursuing strategies that can solve this issue. A few commenters supported CMS for moving to reinstate a boarding-related measure into its quality reporting programs following the previous removal of several measures related to this topic.

Response: We thank commenters for their support. We agree that measurement is essential to addressing the complex issue of ED boarding.

Comment: Several commenters supported the timeline for adoption of the Emergency Care Access & Timeliness eCQM into the Hospital OQR Program, believing the transition from voluntary reporting to mandatory reporting to be appropriate for a new eCQM. These commenters supported the transition for existing ED efficiency measures to the new Emergency Care Access & Timeliness eCQM and urged CMS to finalize the timeline as proposed.

Response: We thank the commenters for their support. The timeline for adoption of the Emergency Care Access & Timeliness eCQM, beginning with voluntary reporting for the CY 2027 reporting period followed by mandatory reporting beginning with the CY 2028 reporting period/CY 2030 payment determination, was developed to balance the immediacy of the ED boarding crisis while providing HOPDs sufficient time to test and integrate the eCQM into existing clinical workflows in preparation for reporting the measure. HOPDs would have approximately 25 months from the publication of this final rule with comment period until the start of the mandatory reporting period in January 2028, and approximately 3.5 years from the publication of this final rule with comment period until the submission deadline for the CY 2028 data in May 2029, to implement any workflow modifications or organizational updates necessary to successfully report on the measure.

Comment: Several commenters recommended publicly reporting the four individual numerator components as well as the overall measure score for the Emergency Care Access & Timeliness eCQM. Several commenters noted that data for the individual numerator components would provide more granular insights and improve hospitals' ability to target specific areas for improvement. A few commenters opposed the use of a composite measure, noting that it would mask performance on the four distinct numerator components.

Response: We agree with commenters that performance data for the four numerator components provides meaningful and actionable information for hospitals, patients, and other members of the public. If the Emergency Care Access & Timeliness eCQM is adopted into the Hospital OQR Program, we would publicly report the overall measure score and rates for the four numerator components once the measure becomes mandatory.

We note that the overall score for the Emergency Care Access & Timeliness eCQM represents the proportion of ED encounters in the denominator where the patient experiences at least one of the four numerator events: (1) the patient waited longer than 1 hour after arrival to the ED to be placed in a treatment room or dedicated treatment area that allows for audiovisual privacy during history-taking and physical examination; (2) the patient left the ED without being evaluated; (3) the patient boarded in the ED for longer than 4 hours; and (4) the patient had an ED LOS of longer than 8 hours.[308] We also note that the four numerator component rates are not blended or combined to obtain the overall score. That is, for each numerator component, the denominator includes all ED encounters associated with patients of all ages, for all-payers, during a 12-month period of performance, and the numerator includes the ED encounters in the denominator that met the criteria for the designated numerator event.

Comment: A few commenters requested clarification on how encounters that meet more than one numerator criteria would be included in the measure calculations. A commenter requested clarification on double counting, benchmarking, and reporting for patients with behavioral health needs.

Response: As specified, if a single ED encounter meets the criteria for more than one numerator event, the encounter would be included in each of the applicable component scores and once in the overall summary score regardless of how many numerator events it met. Because the overall measure score represents the proportion of ED visits where *any* component outcome occurred, the Emergency Care

[307] Centers for Medicare & Medicaid Services. (2023). Electronic Clinical Quality Measures (eCQMs) Specification, Testing, Standards, Tools, and Community. Available at *https://mmshub.cms.gov/sites/default/files/eCQM-Specifications-Testing-Standards-Tools-Community.pdf. Accessed: April 30, 2025.*

[308] For measure specifications, we refer readers to the eCQI Resource Center at *https://ecqi.healthit.gov/ecqm/hosp-outpt/2027/cms1244v1,* or the CMS QualityNet Hospital OQR Program website at *https://qualitynet.cms.gov/outpatient.*

Access & Timeliness eCQM avoids overlap and double counting that can skew measure results. For the request for clarification on the benchmarks for this measure, we believe the commenter is referring to the numerator thresholds. As discussed in the CY 2026 OPPS/ASC proposed rule, these thresholds were developed according to evidence and consensus-based clinical guidelines for ED time thresholds, including those from The Joint Commission (TJC) and the American College of Emergency Physicians (ACEP). For the request for clarification on reporting for patients with behavioral health needs, we reiterate that we will stratify the data for each of the numerator components and the overall summary score into four groups, two by age (18 years and older, and under 18 years) and two by mental health diagnoses (with, and without).[309]

Comment: A few commenters requested clarification of what constitutes a ''treatment room or dedicated treatment area'' in the first numerator component, with a commenter stating that some hospitals may interpret this strictly as a dedicated room, while others might consider curtained dividers as meeting the definition. A few commenters requested that CMS consider revising the language to focus on the initiation of treatment, regardless of where it occurs, to accommodate diverse ED layouts and workflows.

Response: We note that measure numerator component (1) does not specify a physical location; it evaluates whether the patient waited longer than 1 hour after arrival to the ED to be placed in a treatment room or dedicated treatment area that allows for audiovisual privacy during history-taking and physical examination. Based on this description, multiple settings, including both curtained dividers and a dedicated room, would qualify if there is audiovisual privacy. Spaces that do not provide both visual privacy and audio privacy sufficient to ensure patient dignity, confidentiality, and quality of care during history-taking and physical examination would not qualify. We believe this approach allows for flexibility so that diverse ED layouts and workflows can be accommodated when hospitals implement the measure while also ensuring that patients' privacy is respected.

[309] The principal diagnosis (first listed diagnosis at ED discharge) will be used to define strata inclusion. For this measure's purpose, mental health diagnoses do not include substance use disorder diagnoses. Mental health refers to mental health diagnoses, life stressors and crises, and stress-related physical symptoms.

Comment: A few commenters requested that CMS consider either defining exclusion criteria for complex ED encounters (for example, specialized care pathways, specialty consultations, forensic patients, or patients requiring advanced imaging) or adding exclusionary language for each of the numerator components. Another commenter requested exclusion criteria for multi-casualty events. According to commenters, these exclusions are necessary to avoid misclassifying high-quality, comprehensive care provided in a single ED visit as poor performance.

Response: Regarding commenters' requests for exclusion criteria, we note that the measure methodology, including consideration of potential exclusions, was informed by extensive literature review, empiric analyses, and feedback from the TEP, PFE Work Group, and the public comment period held during measure development. The measure does not have exclusions beyond observation stays for numerator component (3) and (4) because the numerator events included in the measure are considered access failures regardless of patient complexity or surge scenarios. We believe that excluding patients from the measure would violate its intent to ensure timely access to emergency care for all patients. As described below, we do not anticipate zero scores for all numerator components on every patient, and we believe the hospital comparison logic (such as using standardized z-scores to adjust for ED volume) adequately accounts for differences in performance among hospitals. We will monitor the measure during implementation to determine whether any additional exclusions are appropriate for measure incorporation in future re-specification.

We agree that some patients are clinically complex and require specialized, time-intensive services in the ED, and note that this was considered during measure development. We do not expect hospitals to achieve zero scores for all numerator components. We also note that the Hospital OQR Program is a pay-for-reporting program that penalizes hospitals for not submitting data rather than for performance on the measure. However, collecting and publicly reporting these data will allow for comparisons between hospitals that serve similar communities and support the development of targeted quality improvement strategies.

Comment: A few commenters noted that for small, rural hospitals, delays in the ability to transfer patients are frequently out of their control. A few commenters sought clarification on whether the measure includes transfer patients, with a commenter noting a distinction between patients who are transferred to another facility and patients being admitted to the same facility or discharged home.

Response: We recognize the complexity and interdependence of multiple systems when it comes to attribution of transfer cases. The decision to include transfer patients in the Emergency Care Access & Timeliness eCQM was carefully considered during measure development, particularly through input from the TEP. Capturing transfers in the measure numerator ensures that it is the responsibility of the transferring ED to proactively build processes that maintain care coordination to ensure timely transfer, which patients from the PFE Work Group expressed was important to them. Additionally, we believe including transfers in the numerator limits the incentive to inappropriately transfer patients to other facilities due to ED overcrowding.

In response to commenters' requests for clarification on whether the measure includes transfer patients, we clarify that transfer patients are included and assessed against all numerator criteria. To the extent that transfer patient encounters meet the threshold for each numerator component, they would be included in the measure. During measure testing, the proportion of total encounters with a final disposition of transfer was 2 percent. Therefore, we believe the inclusion of transfers will not have a significant impact on the reliability or validity of the measure.

We note that the two versions of the Emergency Care Access & Timeliness eCQM proposed for the Hospital OQR and REHQR Programs differ in numerator component (3), boarding. The Hospital OQR Program version of the measure captures inpatient boarding time, defined as the time from Decision to Admit (order) to ED departure. The REHQR Program version of the measure captures transfer boarding time in the ED because REHs do not provide inpatient services. We refer readers to section XVI.B.1 of this final rule with comment period for more information on the Emergency Care Access & Timeliness eCQM proposed for the REHQR Program.

We understand commenters' concerns that small and rural hospitals may face factors outside their control when transferring patients and note that we do not expect hospitals will achieve zero scores for all numerator components. However, collecting and publicly reporting these data is an important step towards addressing ED overcrowding

and barriers to access, which all parties involved during the measure development process agreed is critical.

Comment: Several commenters recommended refinements to the time thresholds established for the numerator components of the Emergency Care Access & Timeliness eCQM. A few commenters suggested using these timing thresholds as absolute maximum limits rather than as mean or median targets. A few commenters recommended that future performance targets should move towards shorter time periods as the quality gap closes. These commenters expressed concern about boarding times for high-risk groups, such as patients admitted to intensive care units and adults aged 65 and older. Another commenter expressed concern about the strain experienced by hospitals serving the most high-risk patients and recommended against setting targets hospitals may not be able to achieve. A few commenters stated that CMS had not provided clinical data to support the timing thresholds in the measure specifications. A few commenters noted that during peak seasonal spikes in patient volume, particularly during the winter months when influenza and COVID–19 surges occur, it would be unrealistic for hospitals to consistently meet the timing thresholds.

Response: We note that the timing thresholds for each numerator component are maximum limits rather than mean or median targets. These timing thresholds were developed according to evidence-based clinical guidelines, including those developed by The Joint Commission, American College of Emergency Physicians, and the Emergency Department Benchmarking Alliance,[310] [311] as well as from input from a TEP, literature reviews, and environmental scans. We acknowledge commenters' concerns that the timing thresholds may be challenging for hospitals serving high-risk patient populations to meet. During measure development, the developer considered ways to address high-risk groups based on risk factor categories, including age, mental health diagnosis, comorbidity, complexity, race, and income.[312] The measure's approach, involving stratification by age and mental health diagnosis and volume standardization to address case mix differences across EDs, is intended to account for differences between hospitals without requiring additional risk adjustment.

We acknowledge that ED volumes fluctuate by seasonal trends. To account for these variations, a full calendar year was selected as the measure's performance period, to allow time to capture seasonal variations in the reported outcomes and allow hospitals and health systems sufficient time to analyze data and implement quality improvement efforts. During the public comment period held during measurement development, commenters strongly agreed with this approach and appreciated its alignment with other CMS reporting periods.[313] While we acknowledge that certain seasons could experience peak volumes, we proposed to require hospitals to report all four calendar quarters (one full calendar year) of data beginning with the CY 2028 reporting period/CY 2030 payment determination (90 FR 33766). The measure would be reported annually, not seasonally, for public reporting purposes. Furthermore, we do not expect the measure rate to be zero.

We also note that hospitals should prepare for predictable volume increases, including ensuring sufficient staffing, as part of emergency preparedness, and note that the measure can help hospitals monitor the adequacy of their staffing plans for anticipated surges. We will consider recommendations regarding the appropriateness of the timing thresholds as part of our measure monitoring and evaluation program.

Comment: A few commenters recommended that CMS assign more weight to numerator component (3) (that is, the patient boarded in the ED for longer than 4 hours), to reflect its importance and the likelihood that it may affect other ED outcomes. A few commenters stated that applying volume standardization for numerator component (3) would be inappropriate because all hospitals must minimize boarding regardless of hospital size.

Response: We appreciate commenters' recommendation to assign more weight to numerator component (3). As previously stated, the overall score for the Emergency Care Access & Timeliness eCQM represents the proportion of ED encounters associated with patients of all ages, for all-payers, that experience at least one of the four numerator events during a 12-month period of performance: (1) the patient waited longer than 1 hour after arrival to the ED to be placed in a treatment room or dedicated treatment area that allows for audiovisual privacy during history-taking and physical examination; (2) the patient left the ED without being evaluated; (3) the patient boarded in the ED for longer than 4 hours; and (4) the patient had an ED LOS of longer than 8 hours.[314] In addition to the overall score, the Emergency Care Access & Timeliness eCQM provides HOPDs with data for each of the individual numerator components; however, the rates for these components are not added or combined to obtain the overall score as they are not mutually exclusive. Therefore, it is not feasible to assign a heavier weight to numerator component (3) without changing the underlying meaning of the measure, or its capacity to provide information that is interpretable or actionable for HOPDs. We recognize, however, that ED boarding is an important issue and we will evaluate the burden and feasibility of the commenters' recommendation as more information on this measure becomes available.

We also acknowledge commenters' concerns about applying volume standardization to numerator component (3). As specified, volume standardization for the Emergency Care Access & Timeliness eCQM is applied after the overall score of the four numerator components is calculated. Since the four numerator components are not mutually exclusive, applying volume standardization to each individual numerator outcome could lead to calculation challenges and undesirable statistical distortions when calculating the overall score. As discussed above, the evidence-based clinical guidelines, input from the TEP, literature reviews, and environmental scans did not provide a basis to support using a different threshold for numerator component (3) based on hospital volume or other factors, since prolonged boarding is associated with patient safety risks, regardless of hospital volume. The application of volume standardization occurs after

calculation of the overall score, which allows comparison of hospitals of similar sizes without diminishing the importance of any numerator component.

Comment: A few commenters recommended additional stratification, such as hospital designation or status, hospital-based ED vs. free-standing ED designations, payer type, race, ethnicity, primary language, or hospital teaching status. A commenter recommended replacing the denominator definition of ''cases with a mental health diagnosis'' with ''patients awaiting a psychiatric bed'' for the mental health stratification, as the need to locate a psychiatric bed is a well-documented and significant driver of prolonged ED stays.

Response: We note that many of the factors recommended are provider-level characteristics, and as such are not feasible to use as a patient characteristic for stratification. Additionally, the measure collects payer type, race, ethnicity, and sex as supplemental data elements. However, we thank the commenters for their suggestions on additional stratifications for public reporting of the measure and will consider utilizing this information in support of additional future stratifications in the future.

We appreciate the commenter's recommendation regarding the denominator definition for mental health stratification, and note that while psychiatric bed delays were considered, the measure consistently uses a diagnostic based approach when identifying patients for the mental health cohorts. For the denominator definition for the mental health strata, we note that the principal diagnosis (first listed diagnosis at ED discharge), and not the patient disposition, would be used to define strata inclusion. We note that this approach is consistent with the Median Time for Discharged ED Patients measure that we have previously reported in our quality reporting programs.[315]

Comment: A few commenters recommended stratification by ED volume, with a commenter suggesting stratifying ED volume as small, medium, or large, to enable meaningful comparisons across hospitals with varying patient volume and resource levels.

Response: For the Emergency Care Access & Timeliness eCQM, volume standardization is applied to the overall score. Our intention is to improve ED efficiency regardless of hospital size. During measure development, volume bands of 20,000 visits were chosen based on existing literature and actual use within the ED measurement and quality community, such as the ED Benchmarking Alliance.[316] The measure uses volume standardization to address the case mix differences between EDs,[317] and volume standardization offers the simplest approach, as approved by the industry, without the complexities and unintended consequence of statistical modeling. This is aligned with ACEP's measure approach in the Merit-Based Incentive Payment System (MIPS) to measuring patient flow in the ED setting.[318] [319] Through volume standardization we allow comparisons across hospitals of all sizes, while accounting for potential variations associated with patient volume, such that large volume EDs will be compared to large volume EDs, while medium and smaller volume EDs will likewise be compared to EDs of similar size.[320] We appreciate commenters' recommendation regarding stratification based on ED volume and note that ED volume is a facility-level characteristic, rather than a patient-case characteristic, although we will take this into consideration as we monitor implementation of this measure and consider any potential future refinements.

Comment: Several commenters expressed concern that factors outside of a hospital's control, such as shortages of beds and providers throughout the healthcare system, can negatively affect ED efficiency. These commenters encouraged CMS to incorporate robust risk adjustment to account for patient case mix and volumes and the availability of post-acute care services within a hospital's service area. A few commenters expressed concern that the Emergency Care Access & Timeliness eCQM does not distinguish between delays that are within a hospital's control and those driven by systemic capacity issues. A few commenters also recommended reporting even more detailed performance data for numerator events, such as performance metrics for the 90th percentile for the timed numerator components.

Response: Although we acknowledge that ED efficiency could be affected by multiple factors, some of which are outside the control of hospitals and health systems, measurement is essential for tracking and addressing these complex systemic issues and their downstream effects. We believe that many hospitals face such concerns and that timely care is a critical aspect of quality of care, directly impacting patient outcomes, particularly for an ED encounter. Collecting and publicly reporting these data will allow comparisons between hospitals that serve similar communities and support the development of targeted quality improvement strategies.

For the risk-adjustment, we note that the measure is not risk-adjusted because the numerator events are considered access failures regardless of patient acuity or clinical comorbidity. This approach focuses on a clear threshold that reflects operational and patient-experience standards for accessible and timely care. We recognize that bed and provider shortages or limited post-acute options can affect ED times but reiterate that the measure is meant to highlight and provide insight to general patterns in access and timeliness. Facilities may supplement this measure internally with percentile-based analyses as part of their ongoing performance improvement efforts. We maintain that the stratification of results by age and mental health diagnosis, as well as standardization of measure performance scores by ED volume, is sufficient to account for differences between hospitals without further need for risk adjustment or additional performance data detail.

Comment: A few commenters expressed concern with the potential for unintended consequences related to the current structure of the measure. The commenters expressed concern that the measure's focus on time thresholds could put undue pressure on ED staff to rush, and that emphasizing speed over quality could compromise patient care to avoid financial penalties. A commenter expressed support for the exclusions of observation stays from numerator components (3) and (4) but

sought clarity regarding cases where observation stays lead to inpatient admission. Another commenter noted that the measure could potentially lead to the inappropriate use of ''observation'' status to circumvent the measure's intent.

Response: We note that the Hospital OQR Program is a pay-for-reporting program, and hospitals are only penalized for not submitting data rather than for their performance on the measure. We also note that because the measure does not track patient status after leaving the emergency department, a patient that is admitted as an inpatient from observation status does not impact this measure. For the concern that some hospitals may inappropriately use observation status to circumvent the measure's intent, we note that clinicians are responsible for adhering to all standards for patient care, including using appropriate clinical decision making to determine which patients should be placed in observation status. We will consider monitoring observation status volumes to determine whether hospitals are increasing use of this status concurrent with measure adoption.

Comment: A few commenters expressed concern about the lack of evidence-based guidelines on how to improve performance on the measure. A few commenters advised CMS to work with interested parties in the hospital community to investigate effective solutions to address the underlying causes of ED boarding instead of implementing a generalized accountability measure.

Response: We refer readers to Table S1 in the supplemental attachment (section 7.1) for the measure on the Partnership for Quality Measurement website.[321] We note that this table details interventions that can improve each of the four numerator components. We also believe that data from this measure could be used as an evidence base to refine interventions and develop additional interventions to improve ED efficiency, for which we will continue to engage with patients, providers, and other interested parties in the hospital community.

Comment: A few commenters stated that measure performance for hospitals caring for larger proportions of Medicare Advantage patients may be affected by delays while waiting for insurance approval for patient admissions or transfers.

Response: We acknowledge that the prior authorization process used by commercial health plans could lead to delays in care or denials in coverage. We note that the Emergency Care Access & Timeliness eCQM includes all payers, which mitigates the potential for national variations in MA coverage to influence measure performance. Additionally, in measure testing the developer examined differences in measure score by patients' payer type composition (that is, proportion of patients with Medicaid, proportion of patients with Private/Other, and proportion of patients with Medicare) and found the strength of the relationship was weak to moderate and not statistically significant across all three of these compositional characteristics.

Comment: A commenter sought CMS guidance on its plans to ensure consistency across the Medicare Shared Savings Program (MSSP) in applying the revised definitions, providing updated technical specifications and training resources, and monitoring the impact of these changes on MSSP performance scores.

Response: We note that this measure is proposed for the Hospital OQR Program and does not affect current or future requirements for the MSSP, which does not currently include any ED boarding measures.

Comment: A few commenters requested excluding this measure from Overall Hospital Star Ratings and performance-based quality reporting programs.

Response: We have only proposed the Emergency Care Access & Timeliness eCQM for adoption in the Hospital OQR Program at this time. If we determine that it is appropriate for inclusion in the Overall Hospital Star Ratings or performance-based quality reporting programs in the future, we would propose it through notice and comment rulemaking.

Comment: Many commenters requested at least 1 or 2 more years of voluntary reporting to give hospitals, especially small and rural hospitals, adequate time to address processes and systems. Specifically, commenters stated that they would need additional time to map the necessary data elements within their EHR system, evaluate the validity of the resulting data, and adjust clinical workflows. A few commenters described their experiences implementing the STEMI (OP–40) eCQM and stated that an early start to mandatory reporting created an unnecessary burden.

Response: We understand commenters' concerns regarding adequate time to update systems and processes to prepare to report the Emergency Care Access & Timeliness eCQM. However, we sought to balance this concern with the urgency of addressing the ED boarding crisis and decided to propose one year of voluntary reporting. HOPDs will have approximately 25 months from the publication of this final rule with comment period until the start of the mandatory reporting period in January 2028, and approximately 3 and a half years from the publication of this final rule until the submission deadline for the CY 2028 data in May 2029. We note this eCQM was developed with the goal of minimizing implementation burden by using data elements that are already captured in EHRs in structured fields. In addition, replacing the current Median Time for Discharged ED Patients and LWBS measures (which require manual abstraction) with the Emergency Care Access & Timeliness eCQM will alleviate burden for hospitals.

Comment: A few commenters requested an indefinite period of voluntary reporting to allow the agency to determine if the measure provides useful data for the public and for hospital quality improvement. A commenter recommended that after voluntary reporting, there should be a period of mandatory reporting that is not publicly reported.

Response: We note that this measure was developed with input from the public regarding its importance. Specifically, these four outcomes were selected based on published literature demonstrating that each numerator component is associated with patient harm,[322] as well as input from clinical experts including ED, statistical, and methodological experts and a TEP that was convened by the measure developer.[323] A PFE Work Group provided feedback on experiences with emergency care, noting long wait times to be seen by a provider, long wait times to be transferred, and gaps in the discharge processes. This demonstrates that the measure would provide useful data for the public and for hospital quality improvement. We strive for transparency in our quality reporting and value-based payment programs, which includes making data available to the public at the first opportunity. We would not publicly report data during

[322] Partnership for Quality Measurement. Emergency Care Access and Timeliness. Available at *https://p4qm.org/measures/4625e.* Accessed: October 15, 2025. *Accessed: November 13, 2025.*

[323] Partnership for Quality Measurement. Emergency Care Access and Timeliness. Available at *https://p4qm.org/measures/4625e.* Accessed: October 15, 2025. *Accessed: November 13, 2025.*

the voluntary reporting period to allow time to confirm that publicly reported data are accurate and complete but will begin to publicly report these data beginning with the first mandatory reporting period consistent with our commitment to transparency.

After consideration of the public comments we received, we are finalizing our proposal to adopt the Emergency Care Access & Timeliness eCQM into the Hospital OQR Program, beginning with voluntary reporting in the CY 2027 reporting period followed by mandatory reporting beginning with the CY 2028 reporting period impacting CY 2030 payment determination. As stated previously, because we are finalizing adoption of the Emergency Care Access & Timeliness eCQM, we will publicly report the overall measure score and rates for the four numerator components, as well as the criteria-specific results regarding the age and mental health strata once the measure becomes mandatory.

2. Removals of the Median Time From ED Arrival to ED Departure for Discharged ED Patients (Median Time for Discharged ED Patients) Measure and the Left Without Being Seen Measure Beginning With the CY 2028 Reporting Period/CY 2030 Payment Determination

In the CY 2026 OPPS/ASC proposed rule (90 FR 33761), we proposed that the Emergency Care Access & Timeliness eCQM would serve as a replacement for two existing chart-abstracted measures in the Hospital OQR Program.

The Median Time for Discharged ED Patients measure (75 FR 72086) and the Left Without Being Seen measure (75 FR 72088 through 72089) were adopted in the CY 2011 OPPS/ASC final rule with comment period to promote transparency, improve patient care and access to EDs, and reduce avoidable delays in the emergency care setting. The Median Time for Discharged ED Patients measure assesses the time patients spent in the ED before being sent home, also known as ED throughput. The Left Without Being Seen measure assesses the percentage of patients who leave the ED without being evaluated by a physician/advanced practice nurse/physician's assistant (physician/APN/PA). Both measures are chart-abstracted, requiring human review and manual intervention to extract data elements from clinical documentation.

In the CY 2024 OPPS/ASC final rule with comment period (88 FR 81961), we did not finalize our proposal to remove the Left Without Being Seen measure due in part to public comments emphasizing the importance of the measure in addressing ED overcrowding and boarding. We stated our intention to identify a more granular measure that could replace the Left Without Being Seen measure, which can now be achieved through the adoption of the Emergency Care Access & Timeliness eCQM. We note that Hospital OQR Program measure specifications can be found at *https://qualitynet.cms.gov/outpatient*.

As stated in section XV.B.1. of this final rule with comment period, the Emergency Care Access & Timeliness eCQM is specified for the hospital setting and calculates the proportion of four outcome metrics that quantify access to and timeliness of care in an ED setting against specified thresholds. The numerator components of the Emergency Care Access & Timeliness eCQM overlap with data elements of the Median Time for Discharged ED Patients and the Left Without Being Seen measures. The numerator of the Emergency Care Access & Timeliness eCQM is comprised of any ED visit in the denominator where the patient experiences any one of the following: (1) waited longer than 1 hour to be placed in a treatment room or a dedicated treatment area that allows for audiovisual privacy history-taking and physical examination; (2) left the ED without being evaluated by a physician/advanced practice nurse/physician's assistant; (3) boarded (defined as time from a Decision to Admit (order) to ED departure for admitted patients) for longer than 4 hours; or (4) had an ED LOS (time from ED arrival to ED physical departure as defined by the ED departure timestamp) of longer than 8 hours. Numerator component (2) overlaps with the Left Without Being Seen patient population and numerator component (4) overlaps with the Median Time for Discharged ED Patients measure. The Emergency Care Access & Timeliness eCQM also incorporates additional metrics to enhance its comprehensiveness and analytic value, including boarding time in the ED, numerator component (3), and time from arrival to placement in a treatment room, numerator component (1), which are not currently captured by any other measure in the Hospital OQR Program.[324]

The Emergency Care Access & Timeliness eCQM therefore provides an alternative approach to quality measurement used to address ED boarding and barriers to emergency care by capturing multiple components of quality and capacity. In addition, the Emergency Care Access & Timeliness eCQM allows for retrieval of patient-level data directly from the EHR. As a result, the Emergency Care Access & Timeliness eCQM, along with our previously adopted eCQMs, advances the Hospital OQR Program toward the use of EHR data for quality measurement, leading to more accurate quality data as well as reduced burden for providers. The adoption of the Emergency Care Access & Timeliness eCQM would allow us to employ a more precise assessment of the timeliness and appropriateness of ED visits and to provide additional information important to patients and hospitals on ED boarding and ED LOS.

Our measure removal policy, codified at 42 CFR 419.46(i)(3), identifies eight factors CMS considers in the removal of quality measures. Removal Factor 4, described at § 419.46(i)(3)(i)(D), is the availability of a more broadly applicable (across settings, populations, or conditions) measure for the topic. Compared to the Median Time for Discharged ED Patients measure and the Left Without Being Seen measure, the Emergency Care Access & Timeliness eCQM is a more broadly applicable measure for the topic. We therefore proposed that, if the Emergency Care Access & Timeliness eCQM is adopted in the Hospital OQR Program, we would remove the Median Time for Discharged ED Patients measure and the Left Without Being Seen measure under removal Factor 4. We proposed that these measure removals would begin with the CY 2028 reporting period/CY 2030 payment determination, when reporting for the Emergency Care Access & Timeliness eCQM becomes mandatory.

We invited public comments on these proposals.

Comment: Many commenters supported the removal of the Median Time for Discharged ED Patients and LWBS measures. Several commenters supported the removal of these measures upon the adoption of the Emergency Care Access & Timeliness eCQM, noting that the eCQM offers a more standardized and improved approach to assessing ED throughput. A commenter supported the removal of the Median Time for Discharged ED Patients and LWBS measures citing that adoption of the Emergency Care Access & Timeliness eCQM would better align with existing technology investments and quality improvement strategy.

[324] Partnership for Quality Measurement. Emergency Care Capacity and Quality. Available at *https://p4qm.org/measures/4625e. Accessed: April 30, 2025.*

Response: We thank the commenters for their support.

Comment: Several commenters supported the replacement of the Median Time for Discharged ED Patients and LWBS measures with the Emergency Care Access & Timeliness eCQM because electronic data sources reduce administrative burden and enhance real time data availability. A few commenters also supported the removal of the Median Time for Discharged ED Patients and LWBS measures to avoid duplicative reporting requirements.

Response: We thank commenters for their support and agree that the removal of the Median Time for Discharged ED Patients and LWBS measures will reduce administrative burden and prevent duplicative reporting.

Comment: A few comments supported the removal of Median Time for Discharged ED Patients and LWBS measures because the measures are no longer endorsed by the CBE. A few commenters supported the removal of the measures because they lack sufficient evidence demonstrating a link to improved patient outcomes. A commenter stated that the measures should be removed even if the Emergency Care Access & Timeliness eCQM is not adopted into the Hospital OQR Program due to concerns regarding the measures' lack of CBE endorsement and poor evidence-base.

Response: We thank the commenters for their support. We note that the Median Time for Discharged ED Patients and LWBS measures went through the measure development lifecycle outlined at the CMS Measures Management System website, which includes measure testing and reliability analysis. Further, section 1833(t)(17) of the Act does not require each measure adopted for the Hospital OQR Program to be CBE-endorsed. Section 1833(t)(17)(C)(i) of the Act provides that the Hospital OQR Program shall, to the extent feasible and practicable, include measures set forth by one or more national consensus building entities. Section 1833(t)(17)(C)(i) of the Act also requires measures developed for the Hospital OQR Program to reflect consensus among affected parties, which may be reflected in ways other than CBE endorsement. We note that the adoption of the Emergency Care Access & Timeliness eCQM is being finalized to replace the existing ED quality measures in the Hospital OQR Program in section XIV.B.1. of this final rule with comment period. This eCQM was submitted to the CBE for endorsement in the Fall 2024 cycle (CBE #4625e) and the CBE endorsed the measure with conditions on February 12, 2025. For more information on CBE endorsement, please refer to section XIV.B.1.e. of this final rule with comment period.

For evidence of impact on patient outcomes, we agree with commenters that it is critical to ensure that quality measures are supported by sufficient evidence. While the Median Time for Discharged ED Patients and LWBS measures have provided useful information on ED throughput, the Emergency Care Access & Timeliness eCQM offers a more robust connection to patient access and safety, as well as to outcome improvement. Therefore, we are finalizing our proposal to adopt the Emergency Care Access & Timeliness eCQM.

Comment: A commenter supported the removal of the Median Time for Discharged ED Patients measure and recommended removing the measure before the CY 2028 reporting period/CY 2030 payment determination.

Response: We acknowledge the commenter's recommendation for earlier removal of the measure but note that the proposed adoption of the Emergency Care Access & Timeliness eCQM begins with voluntary reporting for the CY 2027 reporting period, followed by mandatory reporting beginning with the CY 2028 reporting period/CY 2030 payment determination. Given the importance of ED throughput and its direct impact on patient care, it is essential to maintain mandatory measures within the Hospital OQR Program to ensure continued and reliable assessment of ED performance. This current timeline ensures that there will not be a gap in quality measurement for ED throughput, as there will be a year of overlap between the existing ED throughput measures and the voluntary reporting period for the new eCQM.

Comment: A commenter did not support the removal of the LWBS measure stating that the measure is an indication of ED workload and crowding.

Response: The Emergency Care Access & Timeliness eCQM overlaps with the LWBS measure collecting data on ED workload and crowding for the Hospital OQR Program. We refer readers to section XIV.B.1.b. of this final rule with comment period for additional information on the Emergency Care Access & Timeliness eCQM measure specifications.

After consideration of the comments received, we are finalizing our proposals to remove the Median Time for Discharged ED Patients and LWBS measures from the Hospital OQR Program beginning with the CY 2028 reporting period/CY 2030 payment determination.

3. Modify the Excessive Radiation Dose or Inadequate Image Quality for Diagnostic Computed Tomography (CT) in Adults (Hospital Level—Outpatient) Measure (Excessive Radiation eCQM) From Mandatory Reporting Beginning With the CY 2027 Reporting Period/CY 2029 Payment Determination To Continue Voluntary Reporting in the CY 2027 Reporting Period and Subsequent Years

In the CY 2024 OPPS/ASC final rule with comment period, we finalized the adoption of the Excessive Radiation eCQM in the Hospital OQR Program measure set, with voluntary reporting beginning in the CY 2025 reporting period followed by mandatory reporting beginning with the CY 2027 reporting period/CY 2029 payment determination, one year later than originally proposed (88 FR 81992). We explained our delay in implementing mandatory reporting of the Excessive Radiation eCQM was in response to commenters' concerns regarding the burden associated with implementing the eCQM.

In the CY 2026 OPPS/ASC proposed rule, we proposed to modify the reporting requirements for the Excessive Radiation eCQM in the Hospital OQR Program by maintaining voluntary reporting instead of transitioning to mandatory reporting of the measure, beginning with the CY 2027 reporting period (90 FR 33762). Our proposal to maintain indefinite voluntary reporting of this measure arose from continued feedback expressing concerns about the complex interfaces necessary to develop, maintain, and report the Excessive Radiation eCQM, including the financial burden and operational feasibility needed to translate CT radiology data into standardized eCQM-consumable data used by the measure. In January 2025, we issued a notice to clarify that hospitals and clinicians who choose to report this eCQM can use any vendor's translation software to calculate this measure,[325] consistent with the measure's specifications, and stated our intent to monitor measure results to ensure that all reported data for the Excessive Radiation eCQM are both reliable and valid.[326]

[325] eCQI Resource Center. Excessive Radiation Dose or Inadequate Image Quality for Diagnostic Computed Tomography in Adults eCQM—Measure Clarification. Available at *https://ecqi.healthit.gov/excessive-radiation-dose-or-inadequate-image-quality-diagnostic-computed-tomography-adults-ecqm-measure-clarification. Accessed June 5, 2025.*

[326] In that notice, we also clarified that while CMS is not requiring vendors to demonstrate their software's capabilities to CMS, hospitals and

Continued

We stated that the modification from mandatory to voluntary reporting of the Excessive Radiation eCQM, beginning with the CY 2027 reporting period, would allow HOPDs additional time to integrate, adequately test, and gain experience with implementing the eCQM. This modification would also provide CMS with additional time to monitor implementation progress, including data collection burden and response rates. We stated that we will continue to consider feedback regarding this measure and may propose additional changes in future rulemaking.

We invited public comments on this proposal.

Comment: Many commenters supported the proposed change to maintain voluntary reporting for the Excessive Radiation eCQM. These commenters expressed concern that calculating and reporting the measure creates significant administrative and financial burden and diverts limited resources from patient care without providing commensurate value or improving patient safety. Commenters noted the measure's complexity and reporting requirements create a regulatory burden for which hospitals must divert resources in order to come into compliance. Many commenters noted that the expenses associated with implementing the measure, such as labor and interface costs, impose resource constraints on hospitals that make it difficult to collect and leverage data gained from the measure. Additionally, commenters noted that these expenses are not negated by the software available for free from the measure steward, as the measure requires working with a third-party vendor. Many of these commenters stated that maintaining voluntary reporting appropriately acknowledges the ongoing concerns around provider burden while still allowing hospitals to report data as they are able and avoiding punitive consequences for non-compliance.

Commenters also cited the technical and operational challenges of implementing the Excessive Radiation eCQM as a rationale for supporting voluntary reporting. Several commenters noted the limited health IT infrastructure available to report the measure, particularly for smaller and rural hospitals, which presents significant barriers to implementation. Many commenters noted the measure requires complex integrations across multiple hospital information systems, including Picture Archiving and Communication Systems (PACS), Radiology Information Systems (RIS), CT consoles, and EHRs, and that much of the necessary data reside in imaging software rather than outpatient EMR systems. Several of these commenters stated that extended voluntary reporting is warranted to allow hospitals time to develop the new processes and data extraction methods needed to capture and report this information effectively. Many commenters appreciated the fact that maintaining voluntary reporting allows hospitals time to improve imaging practices. A commenter urged CMS to work closely with hospitals that voluntarily report the measure to determine if the measure is feasible for broader implementation across CMS quality reporting programs. A commenter recommended that CMS align the reporting requirements for the measure across the Hospital OQR and Inpatient Quality Reporting (IQR) Programs to ensure consistency.

Response: We thank the commenters for their support. While we continue to believe in the validity and importance of this measure, and the clinical significance of measuring radiation safety, we acknowledge the current challenges that HOPDs face with respect to the measure's implementation that could necessitate a longer implementation timeframe. We thank the commenter for their recommendation to align reporting requirements across the Hospital OQR and Hospital Inpatient Quality Reporting (IQR) Programs. We will continue to monitor progress during the voluntary reporting period for the Hospital OQR Program, as well as the Hospital IQR Program, where this measure is included on the list of eCQMs from which hospitals may self-select measures to report. We will also continue to engage with hospitals, professional organizations, and health IT interested parties to assess feasibility, interoperability, and opportunities to refine the measure and related implementation pathways. Any further changes to the reporting requirements for this measure would be made in notice and comment rulemaking so that interested parties can prepare. We encourage hospitals to use the voluntary reporting period to improve imaging practices and develop the new processes and data extraction methods needed to capture and report data for this measure effectively, in preparation for future implementation.

Comment: Many commenters expressed concern that the measure relies on a proprietary software platform developed by a single for-profit vendor that also serves as the measure steward. Many commenters stated that this structure creates a potential conflict of interest and could limit transparency, competition, and public trust. Several commenters questioned the vendor's limited experience and technical capacity to oversee the measure, noting issues such as slow responsiveness, nonstandard contracting terms, and inadequate solutions to safeguard patient data. Several commenters raised concerns regarding lack of transparency in the underlying specifications and algorithms, and reliance on non-standardized metrics. Several commenters noted concerns regarding potential privacy and cybersecurity risks associated with transmitting PHI to third-party systems. A commenter highlighted that many current CT systems do not export data in a format that the software can reliably interpret, further complicating implementation.

Due to these concerns, many commenters urged CMS to ensure that any future mandatory implementation of this measure be supported by independent validation, peer-reviewed evidence, and the availability of multiple, vendor-neutral pathways for reporting and compliance. A commenter recommended that CMS explore alternative reporting mechanisms beyond the current single software platform and prioritize development of additional imaging quality measures, including those that recognize the use of emerging technologies such as artificial intelligence, to address existing gaps in diagnostic imaging quality and patient safety. A commenter also recommended that CMS work with the Assistant Secretary for Technology Policy/Office of the National Coordinator for Health Information Technology (ASTP) to address the underlying challenges of this measure to ensure that imaging data can be shared more effectively and broadly.

Response: We acknowledge that the Alara Imaging software for CMS Measure Compliance is proprietary. Regarding commenters' concerns about a conflict of interest, we note that the measure steward makes this software available without charge. In addition, the measure steward has successfully deployed its software across a diverse range of several hundred clinical settings with varied EHR, Picture Archiving and Communication System (PACS), Radiology Information System (RIS), dose monitoring, image quality, and CMS measure submission systems. Furthermore, hospitals are not required to use the Alara Imaging software for

clinicians that choose to do so may request information from a vendor about a specific software's ability to generate and transform the radiology data into the necessary format.

CMS Measure Compliance. They may choose to use any software(s) that performs the necessary functions to generate the same standardized data elements necessary to calculate the measure consistent with the measure's specifications.

Pilot testing conducted by the measure steward was reviewed by an independent TEP, which found that the pilot met the CBE standards for reliability and validity testing. For more information on the Excessive Radiation eCQM pilot, we refer readers to the measure submission materials on the Partnership for Quality Measurement website at *https://p4qm.org/measures/3663e* and the eCQI Resource Center at *https://ecqi.healthit.gov/ecqm/eh/pre-rulemaking/2024/cms1074v1.*

Comment: Many commenters expressed concern that the two core metrics of the Excessive Radiation eCQM, ''Calculated CT Global Noise'' and ''Calculated CT Size-Adjusted Dose'' lack technical validity, clinical relevance, and implementation feasibility. Many commenters stated that the measure specifications have not been vetted or endorsed by the medical and scientific community, including interested parties such as the American Association of Physicists in Medicine (AAPM), the American College of Radiology (ACR), or the International Electrotechnical Commission (IEC). These commenters noted that the calculation methods for both metrics are not transparent or published, limiting peer review, reproducibility, and validation. Many commenters stated that forcing fixed cutoffs, such as the defined thresholds in the Excessive Radiation eCQM's numerator components, can compromise diagnostic accuracy by pushing CT exams toward too little or too much radiation, resulting in missed findings and unnecessary radiation exposure, respectively. These commenters also stated that the ''Calculated CT Global Noise'' does not reliably reflect diagnostic image quality and that the ''Calculated CT Size-Adjusted Dose'' is an imprecise measure of patient safety because it fails to account for factors such as clinical indication, protocol, patient size, scanner technology, and reconstruction methods.

Many commenters stated that maintaining voluntary reporting would give professional organizations and the CT imaging community time to identify metrics that better monitor diagnostic quality and patient outcomes. For example, many commenters recommended adopting the Size Specific Dose Estimate, (SSDE) as a validated alternative that is already implemented in commercial dose-monitoring systems and according to commenters, should be used instead of the ''Calculated CT Size-Adjusted Dose''. Many commenters also recommended that CMS assess independent studies and peer-reviewed evidence of the eCQM's two core metrics before making the measure mandatory.

Response: We remain committed to the Excessive Radiation eCQM as a patient safety issue and affirm, as we did in the CY 2024 OPPS/ASC final rule (88 FR 81987), that the measure's data elements are scientifically and practically valid. The measure's framework was published in peer reviewed medical literature, and the measure's thresholds for noise and radiation dose were developed with close input from a diverse TEP, including radiologists and medical physicists.[327] The image noise thresholds were designed to maintain the diagnostic value of CT scans and empirically derived by radiologists evaluating image quality across a wide variety of studies and practice settings in experiments whose results were reviewed and approved during the measure review process.[328] Further, the measure is based on evidence and consensus-based clinical guidelines for optimizing CT radiation doses, from organizations such as the ACR,[329] Society of Interventional Radiology,[330] Society of Cardiovascular CT,[331] cardiovascular imaging societies,[332] Image Wisely 2020,[333] and the FDA.[334] In addition, measure testing across 16 inpatient and outpatient hospitals confirmed high availability, accuracy, validity, and reproducibility for all of its required data elements and the variables calculated by the translation software. Multiple bodies under the National Quality Forum (NQF) umbrella, including a Scientific Methods panel, gave the measure high scores for accuracy, validity, and reproducibility which led to a unanimous approval from the NQF.[335]

The Excessive Radiation eCQM aims to ensure CT radiation dose and image quality fall within safe and appropriate thresholds. The measure does not set minimal radiation dose requirements for any CT scan that could inadvertently result in higher doses than are currently used. The radiation dose thresholds are size-adjusted and based on underlying clinical indication, allowing for individualized patient care and clinician discretion for imaging protocol. We note that these dose thresholds are intended as general reference ranges to promote consistent optimization of radiation dose and image quality, not as prescriptive limits that override clinical judgment. We would like to further emphasize that hospitals should use the measure as a CT scan guideline while also adjusting noise and radiation doses when needed to ensure quality care.

The purpose of size adjustment in the Excessive Radiation eCQM is to account for the variation in patient size so that reporting entities are not penalized if they see a different mix of patients. To ensure case mix across reporting entities does not drive outlier values, SSDE is not used for adjustment for several reasons. First, SSDE reflects the average dose per slice rather than the total dose a patient receives during a complete scan, and because multiphase scanning is common, SSDE values may appear reasonable even when total exposure is high. The DLP reflects the total dose to the patient and thus more accurately reflects the radiation used and thus the risk for the study. In addition, SSDE is not consistently reported across CT

[335] We note that at the time of the measure's endorsement, NQF served as the CBE responsible for measure endorsement activities. The CBE role has since transitioned to Battelle, which now administers the PQM and oversees both the pre-rulemaking and measure endorsement processes.

manufacturers and would require hospitals to upgrade existing CT machines. Lastly using SSDE for size adjustment would not account for the differences in patient case mix across hospitals. Because radiologists frequently use higher doses of radiation per unit of tissue in larger patients, practices who assess larger patients would be unfairly penalized.

Comment: Many commenters did not support the proposed change to maintain voluntary reporting for the Excessive Radiation eCQM, noting that while CT scans provide essential, life-saving diagnostic benefits, they are frequently performed using radiation doses that are higher than necessary for accurate diagnosis. These commenters, which included both patients and healthcare providers, expressed concern that factors increasing personal cancer risk, such as excessive ionizing radiation, are not being adequately addressed. Many commenters also expressed concerns regarding the lack of standardization and oversight in CT imaging, which according to the commenters results in radiation doses that are highly variable, often unoptimized, and frequently higher than needed for diagnostic purposes, thereby undermining national efforts to minimize unnecessary exposure. Many commenters stated that voluntary reporting is insufficient to protect patients from unnecessary radiation exposure and does not adequately hold hospitals accountable for using standardized, evidence-based radiation doses.

Response: We thank the commenters for their input and note that we remain committed to the Excessive Radiation eCQM as a patient safety issue for cancer prevention. We continue to believe, as we did when this measure was adopted in the Hospital OQR Program measure set, there is evidence that excessive radiation leads to harm,[336] and evidence that radiation doses could be lowered in many patients' situations without deteriorating image diagnostic utility.[337] [338] [339] [340] [341] A recent study in the New England Journal of Medicine suggested an association between exposure to radiation from medical imaging and a small but significantly increased risk of hematologic cancer.[342] We also agree with commenters about the importance of promoting patient safety by ensuring that patients are exposed to the lowest possible level of radiation while preserving image quality. Reducing unnecessary radiation exposure that leads to increased cancer incidence is also an example of primary prevention, or preventing illness before it occurs, a key priority of this administration. We believe that maintaining voluntary reporting supports patient safety goals by allowing the continued monitoring of hospital performance and progress on dose optimization, while providing hospitals with the opportunity to strengthen their technical capacity, refine dose optimization practices, and enhance data quality and consistency before the measure becomes mandatory. Retaining the measure in the program as voluntary ensures that it remains active and that hospitals may opt to report data during this period. This phased approach helps ensure that hospitals are better prepared to achieve sustainable and meaningful dose reductions, thereby advancing patient safety objectives over time.

Comment: A commenter expressed concern that maintaining voluntary reporting would be unfair to hospitals already investing in compliance and would signal a lack of confidence in the measure.

Response: We acknowledge that some hospitals may have already invested in compliance and reiterate that we remain committed to the Excessive Radiation eCQM as a patient safety issue for cancer prevention. Although we proposed extending voluntary reporting of the measure in response to feedback regarding implementation challenges, we also stated our intent to propose any additional changes to this measure in future rulemaking. As such, we intend to return to rulemaking to propose a date to begin mandatory reporting in the future, and we encourage hospitals to use the voluntary reporting period to improve imaging practices and develop the new processes and data extraction methods needed to capture and report data for this measure in preparation for future implementation.

Comment: Several commenters did not support maintaining voluntary reporting for the Excessive Radiation eCQM as they believe the measure is ready for broader adoption across CMS quality reporting programs. A few commenters highlighted their successful implementation of the measure and noted the measure's technical feasibility. A few commenters emphasized that the measure is scientifically sound and supported by peer-reviewed evidence. These commenters maintained that the measure specifications are validated and appropriate for identifying outliers in CT practice, and that the methodology accounts for variations in imaging protocols and technologies, demonstrating its robustness and readiness for broader implementation.

Response: We thank commenters for their feedback regarding the feasibility of the measure and confidence in its evidence-based specifications. We agree that the measure's data elements are scientifically and practically valid, and that the measure could be ready for broader adoption across CMS quality reporting programs. While we believe the measure is technically feasible for some hospitals, the variation in resource levels among hospitals with different characteristics, such as small and rural facilities, combined with feedback we have received regarding the implementation challenges faced by some HOPDs, indicates that more time is needed before reporting for the measure becomes mandatory. As previously stated, any future transition from voluntary to mandatory reporting

would be proposed through notice and comment rulemaking, and we encourage hospitals to use the voluntary reporting period to prepare adequately for future implementation.

While we continue to believe in the validity and importance of this measure in reducing excessive CT radiation dosage as a personal risk factor in developing cancer, we have also received ongoing feedback from interested parties reflecting current significant burden on HOPDs due to implementation challenges, including software integration into facility EHR or EMR systems and the additional processes required to aggregate data components. By keeping reporting voluntary, hospitals will have additional time to integrate and test the measure in their EHR systems effectively. Simultaneously, we can monitor how well hospitals are able to implement the measure over time before reconsidering mandatory reporting requirements in the future. As previously stated, any future transition from voluntary to mandatory reporting would be proposed through notice and comment rulemaking.

After consideration of the comments received, we are finalizing our proposal to modify the Excessive Radiation Dose or Inadequate Image Quality for Diagnostic Computed Tomography (CT) in Adults (Hospital Level—Outpatient) measure (Excessive Radiation eCQM) from mandatory reporting beginning with the CY 2027 reporting period/CY 2029 payment determination to continue voluntary reporting beginning with the CY 2027 reporting period. We encourage hospitals to use the voluntary reporting period to prepare for future implementation by addressing the remaining technical, operational, and data submission challenges needed to support consistent adoption of the measure. We intend to propose a date to begin mandatory reporting at the next feasible opportunity, which we expect to be the CY 2027 OPPS/ASC proposed rule.

4. Summary of Previously Finalized and Newly Finalized Hospital OQR Program Measure Set for CY 2026 to CY 2031 Payment Determinations

Table 138 summarizes the previously finalized and newly finalized Hospital OQR Program measure set for the CY 2026 to CY 2031 payment determinations, which removes the HCHE, Screening for SDOH, Screen Positive Rate for SDOH, and COVID–19 Vaccination Coverage Among HCP measures as discussed in section XIV.C. of this final rule with comment period; modifies reporting requirements for the Excessive Radiation eCQM from mandatory to voluntary reporting beginning with the CY 2027 reporting period, as discussed in section XV.B.3. of this final rule with comment period; removes the Left Without Being Seen and the Median Time for Discharged ED Patients measures as discussed in section XV.B.2. of this final rule with comment period; and adds the Emergency Care Access & Timeliness eCQM as discussed in section XV.B.1. of this final rule with comment period.

✓Measure is mandatory for the specified payment determination year

Voluntary: Submission of this measure is optional and HOPDs are not subject to a payment reduction for not reporting on the measure.

*Removed in this final rule with comment period beginning with the CY 2028 reporting period/CY 2030 payment determination.

**Removed in this final rule with comment period beginning with the CY 2024 reporting period/CY 2026 payment determination.

***Removed in this final rule with comment period beginning with the CY 2025 reporting period/CY 2027 payment determination.

**** Removed in this final rule with comment period beginning with the CY 2025 reporting period.

*****Measure is voluntary for the CY 2025, CY 2026, and CY 2027 reporting periods, followed by mandatory reporting beginning with the CY 2028 reporting period/CY 2031 payment determination, as discussed in the CY 2024 OPPS/ASC final rule with comment period (88 FR 81979 through 81986).

******Finalized for adoption in this final rule with comment period beginning with voluntary reporting for the CY 2027 reporting period, followed by mandatory reporting beginning with the CY 2028 reporting period/CY 2030 payment determination.

*******Modified from mandatory to voluntary reporting beginning with the CY 2027 reporting period.

BILLING CODE 4120–01–C

We refer readers to the QualityNet website at *https://qualitynet.cms.gov/outpatient* for additional information on the reporting periods and submission deadlines for each measure previously finalized in the Hospital OQR Program.

5. Hospital OQR Program Measures and Topics for Future Consideration

We refer readers to section XIV.B. of this final rule with comment period for

our cross-program Request for Information on measure concepts regarding well-being and nutrition for the Hospital OQR Program.

C. Updates to the Form, Manner, and Timing of Hospital OQR Program Data Submission

1. Background on Data Submission and Reporting Requirements for eCQMs

We refer readers to § 419.46(j) and the CY 2025 OPPS/ASC final rule with comment period (89 FR 94418 through 94420) for a discussion of our previously finalized eCQM requirements.

2. Data Submission and Reporting Requirements for the Emergency Care Access & Timeliness eCQM

In section XV.B.1. of this final rule with comment period, we finalized the adoption of the Emergency Care Access & Timeliness eCQM beginning with voluntary reporting for the CY 2027 reporting period followed by mandatory reporting beginning with the CY 2028 reporting period/CY 2030 payment determination. In the CY 2026 OPPS/ASC proposed rule (90 FR 33766), for the CY 2027 reporting period, we proposed that hospitals that voluntarily submit Emergency Care Access & Timeliness eCQM data could submit data for any quarter(s) (that is, up to all four quarters of data).

We also proposed that beginning with the CY 2028 reporting period/CY 2030 payment determination, hospitals would be required to report all four calendar quarters (1 calendar year) of data for the Emergency Care Access & Timeliness eCQM. We also proposed to require Emergency Care Access & Timeliness eCQM data submission by May 15 in the year prior to the affected payment determination year, in alignment with our policies on eCQM submission deadlines, as finalized in the CY 2022 OPPS/ASC final rule with comment period (86 FR 63867 through 63870). For example, for the CY 2028 reporting period/CY 2030 payment determination, hospitals would be required to submit eCQM data by May 15, 2029. All deadlines occurring on a Saturday, Sunday, or legal holiday, or on any other day declared at least in part to be a non-workday for Federal employees by statute or Executive Order, would be extended to the first business day thereafter. All current CMS policies regarding eCQM data submission requirements—including file format, zero denominator declarations, case thresholds, submission deadlines, and EHR certification requirements outlined at § 419.46(j) and finalized in the CY 2022 or CY 2025 OPPS/ASC final rules (86 FR 63867 through 63870 and 89 FR 94418 through 94420, respectively) would apply to the Emergency Care Access & Timeliness eCQM for both the voluntary and mandatory data submission periods.

We invited public comments on this proposal.

We did not receive public comments on these proposals, and therefore, we are finalizing the data submission and reporting requirements for the Emergency Care Access & Timeliness eCQM as proposed.

D. Payment Reduction for Hospitals That Fail To Meet the Hospital OQR Program Requirements for the CY 2026 Payment Determination

1. Background

Section 1833(t)(17) of the Act, which applies to subsection (d) hospitals (as defined under section 1886(d)(1)(B) of the Act), states that hospitals that fail to report data required to be submitted on measures selected by the Secretary, in the form and manner, and at a time, specified by the Secretary will incur a 2.0-percentage point reduction to their OPD fee schedule increase factor; that is, the annual payment update factor. Section 1833(t)(17)(A)(ii) of the Act specifies that any reduction applies only to the payment year involved and will not be taken into account in computing the applicable OPD fee schedule increase factor for a subsequent year.

The application of a reduced OPD fee schedule increase factor results in reduced national unadjusted payment rates that apply to certain outpatient items and services provided by hospitals that are required to report outpatient quality data in order to receive the full payment update factor and that fail to meet the Hospital OQR Program requirements. Hospitals that meet the reporting requirements receive the full OPPS payment update without the reduction. For a more detailed discussion of how this payment reduction was initially implemented, we refer readers to the CY 2009 OPPS/ASC final rule with comment period (73 FR 68769 through 68772).

The national unadjusted payment rates for many services paid under the OPPS equal the product of the OPPS conversion factor and the scaled relative payment weight for the APC to which the service is assigned. The OPPS conversion factor, which is updated annually by the OPD fee schedule increase factor, is used to calculate the OPPS payment rate for services with the following status indicators (listed in Addendum B to this final rule with comment period, which is available via the internet on the CMS website): ''J1'', ''J2'', ''P'', ''Q1'', ''Q2'', ''Q3'', ''R'', ''S'', ''T'', ''V'', or ''U''. Payment for all services assigned to these status indicators will be subject to the reduction of the national unadjusted payment rates for hospitals that fail to meet Hospital OQR Program requirements, with the exception of services assigned to New Technology APCs with assigned status indicator ''S'' or ''T''. We refer readers to the CY 2009 OPPS/ASC final rule with comment period (73 FR 68770 through 68771) for a discussion of this policy. In the CY 2017 OPPS/ASC final rule with comment period (81 FR 79796), we clarified that the reporting ratio does not apply to codes with status indicator ''Q4'' because services and procedures coded with status indicator ''Q4'' are either packaged or paid through the Clinical Laboratory Fee Schedule and are never paid separately through the OPPS.

The OPD fee schedule increase factor is an input into the OPPS conversion factor, which is used to calculate OPPS payment rates. To reduce the OPD fee schedule increase factor for hospitals that fail to meet reporting requirements, we calculate two conversion factors—a full market basket conversion factor (that is, the full conversion factor), and a reduced market basket conversion factor (that is, the reduced conversion factor). We then calculate a reduction ratio by dividing the reduced conversion factor by the full conversion factor. We refer to this reduction ratio as the ''reporting ratio'' to indicate that it applies to payment for hospitals that fail to meet their reporting requirements. Applying this reporting ratio to the OPPS payment amounts results in reduced national unadjusted payment rates that are mathematically equivalent to the reduced national unadjusted payment rates that would result if we multiplied the scaled OPPS relative payment weights by the reduced conversion factor. For example, to determine the reduced national unadjusted payment rates that applied to hospitals that failed to meet their quality reporting requirements for the CY 2010 OPPS/ASC final rule with comment period, we multiplied the final full national unadjusted payment rate found in Addendum B of the CY 2010 OPPS/ASC final rule with comment period by the CY 2010 OPPS final rule with comment period reporting ratio of 0.980 (74 FR 60642).

We note that the only difference in the calculation for the full conversion factor and the calculation for the reduced conversion factor is that the full

conversion factor uses the full OPD update, and the reduced conversion factor uses the reduced OPD update. The baseline OPPS conversion factor calculation is the same since all other adjustments would be applied to both conversion factor calculations. Therefore, our standard approach of calculating the reporting ratio as described earlier in this section is equivalent to dividing the reduced OPD update factor by that of the full OPD update factor. In other words:

Full Conversion Factor = Baseline OPPS conversion factor * (1 + OPD update factor)

Reduced Conversion Factor = Baseline OPPS conversion factor * (1 + OPD update factor − 0.02)

Reporting Ratio = Reduced Conversion Factor/Full Conversion Factor

Which is equivalent to:

Reporting Ratio = (1 + OPD Update factor − 0.02)/(1 + OPD update factor)

In the CY 2009 OPPS/ASC final rule with comment period (73 FR 68771 through 68772), we established a policy that the Medicare beneficiary's minimum unadjusted copayment and national unadjusted copayment for a service to which a reduced national unadjusted payment rate applies would each equal the product of the reporting ratio and the national unadjusted copayment or the minimum unadjusted copayment, as applicable, for the service. Under this policy, we apply the reporting ratio to both the minimum unadjusted copayment and national unadjusted copayment for services provided by hospitals that receive the payment reduction for failure to meet the Hospital OQR Program reporting requirements. This application of the reporting ratio to the national unadjusted and minimum unadjusted copayments is calculated according to § 419.41 of our regulations, prior to any adjustment for a hospital's failure to meet the quality reporting standards according to § 419.43(h). Beneficiaries and secondary payers thereby share in the reduction of payments to these hospitals.

In the CY 2009 OPPS/ASC final rule with comment period (73 FR 68772), we established the policy that all other applicable adjustments to the OPPS national unadjusted payment rates apply when the OPD fee schedule increase factor is reduced for hospitals that fail to meet the requirements of the Hospital OQR Program. For example, the following standard adjustments apply to the reduced national unadjusted payment rates: the wage index adjustment, the multiple procedure adjustment, the interrupted procedure adjustment, the rural sole community hospital adjustment, and the adjustment for devices furnished with full or partial credit or without cost. Similarly, OPPS outlier payments made for high cost and complex procedures will continue to be made when outlier criteria are met. For hospitals that fail to meet the quality data reporting requirements, the hospitals' costs are compared to the reduced payments for purposes of outlier eligibility and payment calculation. We established this policy in the OPPS beginning in the CY 2010 OPPS/ASC final rule with comment period (74 FR 60642). For a complete discussion of the OPPS outlier calculation and eligibility criteria, we refer readers to section II.G. of the CY 2023 OPPS/ASC proposed rule (87 FR 44533 through 44534).

2. Reporting Ratio Application and Associated Adjustment Policy for CY 2026

We proposed to continue our established policy of applying the reduction of the OPD fee schedule increase factor through the use of a reporting ratio for those hospitals that fail to meet the Hospital OQR Program requirements for the full CY 2026 annual payment update factor. For the CY 2026 OPPS/ASC proposed rule, the proposed reporting ratio was 0.9805, which, when multiplied by the proposed full conversion factor of $91.747, equaled a proposed conversion factor for hospitals that fail to meet the requirements of the Hospital OQR Program (that is, the reduced conversion factor) of $89.958. We proposed to continue to apply the reporting ratio to all services calculated using the OPPS conversion factor. We proposed to continue to apply the reporting ratio, when applicable, to all HCPCS codes to which we have proposed status indicator assignments of ''J1,'' ''J2,'' ''P,'' ''Q1,'' ''Q2,'' ''Q3,'' ''R,'' ''S,'' ''T,'' ''V,'' and ''U'' (other than New Technology APCs to which we have proposed status indicator assignments of ''S'' and ''T''). We proposed to continue to exclude services paid under New Technology APCs. We proposed to continue to apply the reporting ratio to the national unadjusted payment rates and the minimum unadjusted and national unadjusted copayment rates of all applicable services for those hospitals that fail to meet the Hospital OQR Program reporting requirements. We also proposed to continue to apply all other applicable standard adjustments to the OPPS national unadjusted payment rates for hospitals that fail to meet the requirements of the Hospital OQR Program. Similarly, we proposed to continue to calculate OPPS outlier eligibility and outlier payment based on the reduced payment rates for those hospitals that fail to meet the reporting requirements. In addition to our proposal to implement the policy through the use of a reporting ratio, we proposed to continue to calculate the reporting ratio to four decimals.

We did not receive any public comments on our proposal and are finalizing as proposed. For this final rule with comment period, the final reporting ratio is 0.9805, which, when multiplied by the final full conversion factor of $91.415, equals a final conversion factor for hospitals that fail to meet the requirements of the Hospital OQR Program (that is, the reduced conversion factor) of $89.632. We are finalizing our proposal to continue to calculate OPPS outlier eligibility and outlier payment based on the reduced payment rates for those hospitals that fail to meet the reporting requirements. We are also finalizing our proposals to implement the policy through the use of a reporting ratio, and to continue to calculate the reporting ratio to four decimals to more precisely calculate the reduced adjusted payment and copayment rates for hospitals that fail to meet the Hospital OQR Program requirements for CY 2026 payment.

XVI. Rural Emergency Hospital Quality Reporting (REHQR) Program

A. Background and History of the REHQR Program

The Rural Emergency Hospital Quality Reporting (REHQR) Program is intended to ensure transparency and quality for rural emergency hospitals (REHs), defined at section 1861(kkk)(2) of the Act. Section 1861(kkk)(7)(A) authorizes the Secretary to implement a quality reporting program requiring REHs to submit data on measures in accordance with the Secretary's requirements in section 1861(kkk)(7). Section 1861(kkk)(7)(B)(ii) requires REHs to submit quality measure data to the Secretary ''in a form and manner, and at a time, specified by the Secretary.'' The Act does not require the Secretary to provide incentives for submitting this data under the REHQR Program, nor does it require the Secretary to impose penalties for failing to comply with this requirement under the REHQR Program. We refer readers to the CY 2024 OPPS/ASC final rule with comment period (88 FR 82046 through 82047) for a detailed discussion of the history of the REHQR Program. The REHQR Program requirements are codified at 42 CFR 419.95. We also refer readers to the CMS QualityNet REHQR

Program website at *https://qualitynet.cms.gov/reh/rehqr* for current program requirements and measure specifications.[343]

B. Changes to the REHQR Program Measure Set

In the CY 2026 OPPS/ASC proposed rule (90 FR 33768 through 337722), we proposed to adopt the Emergency Care Access & Timeliness electronic clinical quality measure (eCQM) beginning with the CY 2027 reporting period/CY 2029 program determination as an alternative to reporting the Median Time from Emergency Department (ED) Arrival to ED Departure for Discharged ED Patients measure. We also refer readers to section XIV.C. of this final rule with comment period where we finalize the following measure removals: (1) Hospital Commitment to Health Equity (HCHE) measure, beginning with the CY 2025 reporting period/CY 2027 program determination; (2) Screening for Social Drivers of Health (SDOH) measure, beginning with the CY 2025 reporting period; and (3) Screen Positive Rate for SDOH measure, beginning with the CY 2025 reporting period.

1. Adoption of the Emergency Care Access & Timeliness eCQM Beginning With Optional Reporting for the CY 2027 Reporting Period/CY 2029 Program Determination

a. Background

Occupancy and boarding rates in United States (U.S.) emergency departments (EDs) continue to worsen and exceed pre-pandemic levels.[344] ED boarding, defined as holding a patient in the ED when there are no available inpatient beds, often occurs due to shortages of inpatient beds and staff. ED boarding time contributes to ED crowding which heightens safety risks for patients and can lead to stressful working conditions for healthcare personnel.[345] A recent report from the Agency for Healthcare Research and Quality (AHRQ) characterized patient ED boarding as a growing public health crisis and engaged interested parties to address the strain on the U.S. healthcare system.[346]

Recent studies indicate that delays in the timeliness of ED care are associated with patient harm.[347] [348] Long ED wait times are also one of the most cited reasons for patients leaving an ED without being evaluated by a clinician.[349] One recent study indicated that ED crowding can harm sepsis patients by delaying administration of lifesaving intravenous (IV) fluids and antibiotics.[350] ED boarding time can lead to an increased length of stay (LOS) which is also a strong predictor of poor timeliness of care. One study found that for every patient boarded, the median ED LOS for all admitted patients increased by at least 12 minutes.[351] While less studied than inpatient boarding, transfer boarding (defined as keeping the patient in the ED after the decision to transfer has been made), can have similar impacts as inpatient boarding, with greater impacts on patients receiving care in rural settings.[352] [353] The timeliness of care provided at REHs may be further impacted by transfer boarding due to lack of inpatient beds and resources required to coordinate transfers.[354]

Due to growing concerns about the quality and timeliness of care in the ED as well as the burden associated with manually abstracting the chart-abstracted ED measure adopted in the REHQR Program measure set, the Median Time from ED Arrival to ED Departure for Discharged ED Patients (Median Time for Discharged ED Patients) measure, CMS assessed additional ways to support efforts that reduce patient harm and improve outcomes for patients requiring emergency care while also providing flexibility for REHs. We previously sought comment on eCQM reporting under the REHQR Program in the CY 2024 OPPS/ASC proposed rule (88 FR 49840 through 49841). Adoption of the Emergency Care Access & Timeliness eCQM as an optional measure into the REHQR Program measure set, as discussed in section XVI.C.2.c. of this final rule with comment period, is in response to public comment recommending that CMS add eCQMs as optional measures initially (88 FR 82070). We refer readers to section XVI.C.2. of this final rule with comment period for a discussion of eCQM reporting and submission policies and requirements for the REHQR Program.

b. Measure Overview

An intermediate outcome measure, the Emergency Care Access & Timeliness eCQM[355] as specified for the REH setting calculates the proportion of four outcome metrics that quantify access to and the timeliness of care in an ED setting against specified thresholds, including: (1) patient wait

[343] For additional information on REHs, we refer readers to a CMS Fact Sheet on REHs (Sept. 2024). Available at *https://www.cms.gov/files/document/rural-emergency-hospitals-factsheet-september-2024.pdf.*

[355] The Emergency Care Access & Timeliness eCQM was previously named the Emergency Care Capacity and Quality (ECCQ) eCQM. The name of the measure has been updated to better reflect the purpose of the measure based on feedback from the Pre-Rulemaking Measure Review (PRMR) Hospital Recommendation Group Meeting on January 16, 2025. Available at *https://p4qm.org/sites/default/files/2025-02/PRMR-Hospital-Recommendation-Group-Meeting-Summary.pdf.*

time; (2) whether the patient left the ED without being evaluated; (3) patient transfer boarding time in the ED; and (4) patient ED LOS. The numerator components for the Emergency Care Access & Timeliness eCQM are described in detail in section XVI.B.1.c. of this final rule with comment period. We note that the population and measure specifications for the Median Time for Discharged ED Patients measure overlaps with the Emergency Care Access & Timeliness eCQM for the numerator outcome metric (4), but that the scope of the proposed Emergency Care Access & Timeliness eCQM is broader than the Median Time for Discharged ED Patients measure.[356] The Median Time for Discharged ED Patients measure assesses one component, the time patients spent in the ED before being sent home, also known as ED throughput. The Emergency Care Access & Timeliness eCQM measures four different ED components in a single measure and provides REHs with separate data for each individual component. Additionally, the eCQM measures transfer boarding time in the ED and time from arrival to placement in a treatment room, which is not measured by the Median Time for Discharged ED Patients measure, or any other measure currently in the REHQR Program measure set.[357] As discussed in the CY 2026 OPPS/ASC proposed rule (90 FR 33771 and 33772), to provide flexibility for REHs, we proposed that REHs could elect to report either the Emergency Care Access & Timeliness eCQM or the Median Time for Discharged ED Patients measure beginning with the CY 2027 reporting period/CY 2029 program determination. While CMS proposed that the Emergency Care Access & Timeliness eCQM would not be required to be reported by REHs, we proposed that REHs must nonetheless elect to report either the Emergency Care Access & Timeliness eCQM or the Median Time for Discharged ED Patient measure to meet program requirements, beginning with the CY 2027 reporting period/CY 2029 program determination. We stated our belief that this timeline would provide REHs sufficient time to test and integrate the Emergency Care Access & Timeliness eCQM into existing clinical workflows.

For more information about the testing, feasibility, scientific acceptability, meaningfulness, and validity of the Emergency Care Access & Timeliness eCQM, we refer readers to the ''Feasibility'' and ''Scientific Acceptability'' sections of the Emergency Care Access & Timeliness eCQM listing on the Partnership for Quality Measurement website at *https://p4qm.org/measures/4625e*.

c. Measure Calculation

The measure denominator includes all ED encounters by patients of all ages, for all-payers, during a 12-month period of performance. Patients can have multiple encounters during a period of performance, and each encounter is eligible to contribute to the calculation of the measure.[358]

The measure numerator includes any ED encounter in the denominator where the patient experiences any one of the following: (1) the patient waited longer than 1 hour after arrival to the ED to be placed in a treatment room or dedicated treatment area that allows for audiovisual privacy during history-taking and physical examination; (2) the patient left the ED without being evaluated; (3) the patient, if transferred, boarded in the ED for longer than 4 hours; [359] or (4) the patient had an ED LOS of longer than 8 hours. An encounter is included in the numerator if any one of the four numerator events occurred with events not being mutually exclusive and each contributing only once to the numerator. ED encounters with ED observation stays [360] are excluded from components (3) and (4).

These four outcomes were selected based on published literature demonstrating that each numerator component is associated with patient harm,[361] as well as clinical (including ED), statistical, and methodological expert input. Additionally, a Technical Expert Panel (TEP) was convened by the measure developer.[362] The Patient and Family Engagement (PFE) Work Group provided feedback on emergency care experiences such as long wait times to be seen by a provider, long wait times to be transferred, and gaps in discharge processes.[363]

The numerator thresholds were developed according to evidence and consensus-based clinical guidelines for ED time thresholds from a TEP and environmental scans. For example, the four-hour threshold for numerator component (3), transfer boarding time, was developed per recommendations from The Joint Commission (TJC) and the American College of Emergency Physicians (ACEP).[364] If this proposal to adopt the Emergency Care Access & Timeliness eCQM for the REHQR Program is finalized, CMS would closely monitor the effect of this measure in REHs and may revise thresholds as appropriate.

Measure testing for the Emergency Care Access & Timeliness eCQM was conducted by the measure developer across 32 hospital-based EDs, representing a diverse mix of geographic regions, rurality, hospital size, teaching status, trauma level, and electronic health record (EHR) vendors, demonstrating that the measure is reliable, valid, and feasible for all required data elements.[365] Measure testing results had a wide range in overall scores, and across all strata, indicating variation in performance and implying room for quality improvement.[366] Although data element feasibility testing was performed at only one REH, the measure was also tested at a few rural hospital-based EDs with similar characteristics of pre-conversion REHs (for example, average bed range of under 25).[367] Based on this, we believe

[356] The Median Time for Discharged ED Patients was adopted in the REHQR Program in the CY 2024 OPPS/ASC final rule with comment period (88 FR 49832).

[357] Partnership for Quality Measurement. (n.d.). Emergency Care Capacity and Quality. Available at *https://p4qm.org/measures/4625e. Accessed: April 30, 2025.*

[358] For proposed measure specifications, we refer readers to the CMS QualityNet REHQR Program website at *https://qualitynet.cms.gov/reh/rehqr.*

[359] This measure component is calculated at the encounter level by subtracting ''Decision to Transfer'' order time from ''ED Departure Time'' for visits with the ED disposition of ''Transferred'' (to an acute care hospital) and then flagging as a numerator event if >240 minutes.

[360] ED observations stays are defined as an observation encounter where the patient remains physically in an area under control of the ED and under the care of an ED clinician inclusive of observation in a hospital bed. these measure testing results are applicable to REHs.

The measure score is calculated at the individual ED level as the proportion of ED encounters where any one of the four outcomes occurred, divided by the number of encounters in a performance period. For CMS Certification Numbers (CCNs) with more than one ED, individual ED scores are then combined as a weighted average for that CCN.[368] The results of the Emergency Care Access & Timeliness eCQM are stratified into four groups, two by age (18 and older, and under 18) and two by mental health diagnoses (with, and without).[369] We note that the approach to stratification by age and mental health diagnosis is sufficient to account for differences between REHs without further need for risk adjustment.

For additional details regarding the measure specifications, we refer readers to the CMS QualityNet REHQR Program website at *https://qualitynet.cms.gov/reh/rehqr*.

d. Pre-Rulemaking Measure Review (PRMR)

As required under section 1890A of the Act, the Secretary must establish and follow a pre-rulemaking process for selection of quality and efficiency measures, including for the REHQR Program. The pre-rulemaking process, which we refer to as the Pre-Rulemaking Measure Review (PRMR), includes a review of measures published on the publicly available list of Measures Under Consideration (MUC List) by one of several committees convened by the consensus-based entity (CBE), with which we contract in accordance with section 1890 of the Act, for the purpose of providing interested parties input to the Secretary on the selection of quality and efficiency measures under consideration for use in certain Medicare quality programs, including the REHQR Program. We refer readers to the CY 2025 OPPS/ASC final rule with comment period (89 FR 94372) for details on the PRMR process, including the voting procedures used to reach consensus on measure recommendations. The PRMR Hospital Recommendation Group met on January 15 and 16, 2025, to review measures included by the Secretary on the publicly available ''2024 Measures Under Consideration List'' (MUC List), including the Emergency Care Access & Timeliness eCQM (MUC2024–095), and provided additional recommendations on the potential use of this measure.[370]

The voting results of the PRMR Hospital Recommendation Group for the proposed Emergency Care Access & Timeliness eCQM within the REHQR Program were: 9 members recommended adopting the measure into the REHQR Program; 6 members recommended adoption with conditions; 11 members voted not to recommend the measure for adoption. No voting category reached 75 percent or greater, including the combination of the recommend and the recommend with conditions categories and thus, the Hospital Recommendation Group did not reach consensus.[371]

The PRMR Hospital Recommendation Group noted in their deliberations that the measure will provide important insights into ED wait times which impact experience of care. The Group expressed concern that this measure may cause an increase in cost of care due to patients being transferred from the ED to observation.[372] While we acknowledge that patients transferred from the ED to observation may result in increased short-term costs due to additional monitoring and extended stays, the measure is designed to address significant issues surrounding the access to timely care which have been proven to reduce long-term costs.[373] Hospital Recommendation Group members also expressed concern about the lack of CBE endorsement. We note that we submitted the Emergency Care Access & Timeliness eCQM for CBE endorsement for review in the Fall 2024 cycle and the CBE endorsed the measure with conditions for use in the REHQR Program on February 12, 2025.[374] [375] We refer readers to section XVI.B.1.e. of this final rule with comment period for additional details on CBE endorsement.

The Hospital Recommendation Group discussed a few conditions specific to the REHQR Program, including changing the name of the measure to better reflect the measure's focus.[376] We agree with this feedback and have changed the name of the measure from the Emergency Care Capacity and Quality eCQM to Emergency Care Access & Timeliness. Additionally, Group members recommended stratifying the measure by factors such as care type as well as by region and trauma level designation. We emphasize that the approach to stratification by age and mental health diagnosis is sufficient to account for differences between REHs without further need for additional stratification.[377]

The Hospital Recommendation Group recommended revising the measure specifications to create separate measure components with the encouragement to explore additional measures for patient transfer boarding time and ED LOS as well as conducting further testing to expand the measure's applicability to REHs. We acknowledge the Hospital Recommendation Group's concerns and note that multiple TEPs and interested parties supported the inclusion of more than one numerator component as a strategy for internally balancing the measure and that time thresholds are

section-7.1-supplemental-attachment.pdf. Accessed: April 30, 2025.

[368] Because REHs are typically a low volume setting, volume standardization is not applied to calculate the Emergency Care Access & Timeliness eCQM, unlike the version of the Emergency Care Access & Timeliness eCQM finalized for adoption into the Hospital OQR Program in section XV.B.1. of this final rule with comment period.

[369] The principal diagnosis (first listed diagnosis at ED discharge) will be used to define strata inclusion. For this measure's purpose, mental health diagnoses do not include substance use disorder diagnoses. Mental health refers to mental health diagnoses, life stressors and crises, and stress-related physical symptoms.

based on more than a decade of consensus work.[378] [379] [380] If the proposal to adopt the Emergency Care Access & Timeliness eCQM for the REHQR Program is finalized, CMS would closely monitor the effect of this measure in REHs and revise thresholds as appropriate (90 FR 33771). We note that out of the 32 hospital-based EDs that were tested for reliability, validity, and feasibility, approximately 20 percent were rural EDs, although not in the REHQR Program. Finally, Group members recommended implementing the Emergency Care Access & Timeliness eCQM with a phased approach with 2 years of voluntary reporting. We noted that we proposed adoption of the Emergency Care Access & Timeliness eCQM as an optional measure in lieu of the Median Time for Discharged ED Patients measure to provide additional flexibility for REHs given the anticipated implementation burden of this measure.

e. Measure Endorsement and Consideration of Low Case Volumes

Section 1861(kkk)(7)(C)(i) of the Act generally provides that any measure specified by the Secretary for use in the REHQR Program be endorsed by the entity with a contract under section 1890(a) of the Act, also known as the consensus-based entity (CBE).

The Emergency Care Access & Timeliness eCQM was submitted to the CBE for endorsement review in the Fall 2024 cycle (CBE #4625e), and the CBE endorsed the measure for use in the REHQR Program with conditions on February 12, 2025.[381] The conditions include that the measure developer explore: (1) the unintended consequences to patients and providers by engaging with the patient community and accountable entities; and (2) the data elements to identify and address where challenges may persist. If our proposal to adopt the Emergency Care Access & Timeliness eCQM is finalized, CMS would closely monitor the effects of this measure in REHs and data as part of the standard measure maintenance (90 FR 33771).

We believe this measure is appropriate for measuring quality of care under the REHQR Program because ED care is the primary focus of REHs. Furthermore, we believe that this measure meets the selection criteria under section 1861(kkk)(7)(C)(i) of the Act because it is endorsed by the CBE.

The REHQR Program's statute also includes a requirement at section 1861(kkk)(7)(C)(iii) of the Act to consider ways to account for rural emergency hospitals that lack sufficient case volumes when selecting measures to ensure that the performance rates for such measures are reliable. We note that the target population for this measure is comprised of patients of all ages, for all payers, that visit an REH during a 1-year measurement period. As such, we anticipate that the overall number of patients that visit an REH within a given year would be high enough so that there would not be any issues with low case volumes that could undermine the reliability of this measure when used in the REH context. We therefore do not believe the Emergency Care Access & Timeliness eCQM would suffer from low case volumes, and we further believe that we have appropriately considered low case volumes as required by the REHQR statute when selecting this measure.

f. Data Collection, Submission, and Reporting

The Emergency Care Access & Timeliness eCQM is specified in a standard electronic format, utilizing data extracted electronically from EHRs, with all data coming from defined fields in electronic sources. We note that eCQMs allowing for the retrieval of data directly from the EHR will minimize errors due to manual abstraction of data.[382] As discussed in the CY 2026 OPPS/ASC proposed rule (90 FR 33771 and 33772), we proposed that REHs would be required to report either the Emergency Care Access & Timeliness eCQM or the Median Time for Discharged Patients measure. We refer readers to the CY 2026 OPPS/ASC proposed rule (90 FR 33774 through 33776) for a discussion of proposed eCQM form, manner, and timing of data submission and reporting requirements. If an REH chooses to report the Emergency Care Access & Timeliness eCQM, the REH would report the data using the proposed methods and standards specified in section XVI.C.2. of this final rule with comment period.

In the CY 2026 OPPS/ASC proposed rule (90 FR 33772), we proposed to adopt the Emergency Care Access & Timeliness eCQM into the REHQR Program measure set beginning with the CY 2027 reporting period/CY 2029 program determination. However, as discussed later in the CY 2026 OPPS/ASC proposed rule (90 FR 33775 and 33776), we also proposed that the Emergency Care Access & Timeliness eCQM would not be a required measure under the REHQR Program, and that REHs could thus elect to report either the Emergency Care Access & Timeliness eCQM or the Median Time for Discharged ED Patients measure for a given reporting period/program determination. We stated that providing REHs with the option to report either of these measures would provide greater flexibility for REHs to implement EHR infrastructure that meets their individual needs while still prioritizing measurement of the variation in access to and the timeliness of emergency care, the goal of promoting interoperability, and reducing burden for REHs in the long term. We note that adoption of this measure does not change the number of mandatory quality measures required to be reported in the REHQR measure set.

The Median Time for Discharged ED Patients measure assesses the time patients spent in the ED before being sent home, also known as ED throughput. We note that this measure is reported quarterly, compared to the Emergency Care Access & Timeliness eCQM, which is less burdensome as it is reported annually. We further emphasize that the Emergency Care Access & Timeliness eCQM measures four different ED metric components in a single measure and is more comprehensive than the Median Time for Discharged ED Patients measure which measures one ED metric component.[383] Additionally, the eCQM measures transfer boarding time in the ED and time from arrival to placement in a treatment room, which are not currently captured by the Median Time for Discharged ED Patients measure, or

[383] The Median Time for Discharged ED Patients was adopted in the REHQR Program in the CY 2024 OPPS/ASC final rule with comment period (88 FR 49832).

any other measure currently in the REHQR Program measure set.[384]

We refer readers to section XV.B.1. of this final rule with comment period where we finalize adoption of a similar version of this eCQM for the Hospital Outpatient Quality Reporting Program. With that finalized adoption, we note that adoption of this eCQM in the REHQR Program would also provide greater alignment of metrics between the two quality reporting programs.

We refer readers to the CY 2024 OPPS/ASC final rule with comment period (88 FR 49832) for more information on the Median Time for Discharged ED Patients measure.[385]

We intend to publicly report data submitted on the Emergency Care Access & Timeliness eCQM and the Median Time for Discharged ED Patients measure on a CMS website after a 30-day preview period. Public reporting for both measure serves to provide similar data on timeliness and encourages REHs to implement process improvements and reduce inefficiencies in ED operations, resulting in better quality of care.

We invited public comment on our proposal to adopt the Emergency Care Access & Timeliness eCQM as an optional measure beginning with the CY 2027 reporting period/CY 2029 program determination.

We note that we are finalizing the adoption of the Emergency Care Access & Timeliness eCQM in the Hospital OQR Program in section XV.B.1. of this final rule with comment period. We refer readers to that section for general comments related to the Emergency Care Access & Timeliness eCQM.

We invited public comments on our proposal.

Comment: Many commenters supported our proposal to adopt the Emergency Care Access & Timeliness eCQM as proposed. A few commenters supported the measure as appropriate and relevant to the REH setting, noting that ED care is a primary focus of REHs and that the measure appropriately addresses the growing challenges of ED occupancy and boarding, challenges which directly affect patient safety and timeliness of care. Some commenters appreciated that the measure represented a meaningful step towards streamlining data collection, improving measure efficiency, and enhancing real-time data availability to support quality improvement efforts. A commenter noted that the measure would enable healthcare organizations to optimize clinical processes, enhance patient safety, and achieve better outcomes in a timely manner.

Response: We thank commenters for their support of our proposal to adopt the Emergency Care Access & Timeliness eCQM and agree that the measure is appropriate and relevant to REHs. We agree that this measure would support healthcare organizations in achieving better outcomes.

Comment: Several commenters supported the Emergency Care Access & Timeliness eCQM as an alternative to reporting the Median Time for Discharged ED Patients measure, noting that this approach recognizes the realities of REHs, such as the technological, monetary, and staffing barriers that may present challenges to eCQM adoption and use for some REHs. Some commenters noted that this approach would enable REHs to select the option with the lower administrative burden of reporting based on their resources and clinical and administrative workflows. Some commenters requested that CMS continue to evaluate reporting for small, rural facilities, including consideration of flexible implementation strategies.

Response: We thank commenters for their support of the Emergency Care Access & Timeliness eCQM. We agree that providing REHs with the option to report either the Emergency Care Access & Timeliness eCQM or the Median Time for Discharged ED Patients measure, as discussed in section XVI.C.2.c. of this final rule with comment period, would provide greater flexibility for REHs. We are committed to ensuring flexibility that supports REHs in meeting program requirements.

Comment: Several commenters recommended publicly reporting the four individual numerator components as well as the overall measure score for the Emergency Care Access & Timeliness eCQM. Several commenters noted that data for the individual numerator components would provide more granular insights and improve hospitals' ability to target specific areas for improvement.

Response: As noted in the CY 2026 OPPS/ASC proposed rule (90 FR 33769), the Emergency Care Access & Timeliness eCQM measures four different ED numerator components in a single measure and provides REHs with separate data for each individual numerator component. We agree that such data provides meaningful and actionable information for REHs, patients, and other members of the public. While we proposed to report data for the Emergency Care Access & Timeliness eCQM as soon as feasible on a CMS website after a 30-day preview period (90 FR 33776), public reporting of these data would be contingent on the measure an REH chooses to satisfy mandatory reporting of one of the two ED-related measures in the REHQR Program measure set. Public reporting of Emergency Care Access & Timeliness eCQM data would begin once an REH has chosen to report and submitted data for the measure. This includes publicly reporting the overall score and four numerator components, in alignment with the approach taken by the Hospital OQR Program for publicly reporting a similar version of Emergency Care Access & Timeliness eCQM. We refer readers to section XV.B.1. of this final rule with comment period for more information on the Hospital OQR Program's adoption of a similar version of the Emergency Care Access & Timeliness eCQM.

Comment: Several commenters requested additional stratification factors for public reporting of the measure. Some commenters stated that they supported the measure but only with public reporting of each of the measure strata.

Response: We thank the commenters for their suggestions for additional stratifications for public reporting of the measure. The measure was evaluated by several stratification factors, and it was determined that age and mental health diagnoses were sufficient to account for differences between hospitals without further need for risk adjustment. We also note that several of the factors recommended are provider-level characteristics, and as such are not feasible to use as a patient characteristic for stratification. Additionally, we note that the Emergency Care Access & Timeliness eCQM does collect payer type, race, ethnicity, and sex as supplemental data elements; we can consider utilizing this information in support of additional future stratifications in the future. We clarify that we intend to publicly report the two mental health strata with the other two age-related strata on a CMS website.

Comment: Several commenters encouraged CMS to incorporate robust risk adjustment to account for patient case mix and volumes and the availability of post-acute care services within a hospital's service area.

Response: We thank the commenters for raising this aspect of the measure. The measure is not risk-adjusted because the numerator events are considered access failures regardless of

[384] Partnership for Quality Measurement (n.d.). Emergency Care Capacity and Quality. Available at *https://p4qm.org/measures/4625e. Accessed: April 30, 2025.*

[385] Partnership for Quality Measurement. Median Time from ED Arrival to ED Departure for Discharged ED Patients. Available at *https://p4qm.org/measures/0496. Accessed: April 30, 2025.*

patient acuity or clinical comorbidity. We believe that the stratification of results by age and mental health diagnosis sufficiently accounts for differences between hospitals without risk adjustment or additional performance data detail based on analyses conducted during measure development.

Additionally, in measure testing the developer examined differences in Emergency Care Access & Timeliness score by patients' payer type composition (that is, proportion of patients with Medicaid, proportion of patients with Private/Other, and proportion of patients with Medicare) and found the strength of the relationship was weak to moderate and not statistically significant across all three of these compositional characteristics.

Comment: Some commenters requested more detailed performance metrics such as percentiles.

Response: We thank the commenters for their interest in the measure. We note that the Emergency Care Access & Timeliness eCQM is intentionally defined as a rate of access and timeliness failures. This approach focuses on a clear threshold that reflects operational and patient experience standards for accessible and timely care. Facilities may supplement this measure internally with percentile-based analyses as part of their ongoing performance improvement efforts.

Comment: Some commenters requested that CMS provide technical assistance to support REHs.

Response: Technical assistance for reporting information is available on the QualityNet website (*https://qualitynet.cms.gov/reh*) and questions can be submitted via the Quality Question and Answer Tool (*https://cmsqualitysupport.servicenowservices.com/qnet_qa*).

Comment: Several commenters did not support adoption of the Emergency Care Access & Timeliness eCQM, citing its unsuitability for REHs. These commenters noted that many rural facilities operate with limited staff, infrastructure, and technological resources, which can make implementation and reporting of complex eCQMs especially challenging. A commenter noted that most REHs operate with scaled-back electronic medical record (EMR) systems that are not designed to capture this data without costly customization and expressed concern that the reporting requirement would risk diverting scarce financial and human resources away from patient care. A few commenters expressed concern that adding a new layer of reporting would undermine the mission of the REH model, which is to preserve essential access to care in rural communities, particularly those facing severe financial distress. A commenter expressed concern that implementation of the measure beginning with the CY 2026 reporting period would be a challenge for Tribal REHs. The commenter noted that the lack of investment in Tribal REHs would hinder their ability to modernize their EHR system and urged cross-agency collaboration across HHS to modernize EHR systems for REHs. The commenter also requested that CMS make exceptions for Tribal REHs implementing new quality reporting requirements.

Response: As we noted in the CY 2026 OPPS/ASC proposed rule (90 FR 33774), while REHs may have some familiarity and experience with reporting eCQMs when formerly operating as a subsection (d) hospital or a CAH participating in the Medicare Promoting Interoperability Program, we recognize that technological, monetary, and staffing barriers may present challenges to eCQM adoption and use in some REHs. In recognition of these barriers, the anticipated implementation burden, as well as in response to public comments recommending that CMS add eCQMs as optional measures initially (88 FR 82070), we proposed that the Emergency Care Access & Timeliness eCQM would not be a required measure under the REHQR Program, and that REHs could thus elect to report either the Emergency Care Access & Timeliness eCQM or the Median Time for Discharged ED Patient measure for a given reporting period/program determination (90 FR 33771 and 33772). Given this flexibility, we believe that this approach, which we are finalizing, is compatible with the intent of the REH model and will provide REHs, including Tribal REHs, with more flexibility to implement the measure in a way that meets individual REH's needs. We also note that we proposed for this measure to begin with the CY 2027 reporting period, not the CY 2026 reporting period as the commenter noted.

Comment: Some commenters expressed concern that factors outside of an REH's control (such as weather or transportation barriers) may impact measure performance.

Response: Although we acknowledge that measure performance could be affected by multiple factors both inside and outside the control of REHs, measurement is essential for tracking and addressing these complex systemic issues and their downstream effects. By measuring the variation in access to and timeliness of care nationally, the measure builds an evidence base to determine which REHs are meeting benchmarks for emergency care, and which REHs could see improvement. Many REHs face similar challenges with factors such as weather or transportation barriers; however, the information collected through the Emergency Care Access & Timeliness eCQM can help patients and their caregivers compare REH performance and inform REH quality improvement efforts. We also note that we examined Median Time from Arrival to Departure metrics in the CY 2024 OPPS/ASC rulemaking and found that smaller, rural hospitals did not have lower performance than larger, urban hospitals.

Comment: A commenter recommended evaluating receiving facilities instead of REHs for numerator component (3) which evaluates the time from Decision to Transfer (order) to the ED departure.

Response: We thank the commenter for underscoring the importance of the time from Decision to Transfer (order) to the ED departure, one of the numerator components for the measure. We note that REHs are statutorily required to have in effect a transfer agreement with a level I or level II trauma center, such that patients that present at an REH with needs for longer-term inpatient care may receive that care. REHs must, therefore, address issues related to the coordination of care for transferred patients. We note that we intend to publicly report all strata of the measure so that this information is available for evaluation purposes.

Comment: Another commenter noted that CMS should focus instead on measures that rely on data sources already collected and available, such as claims data, cost reports, or Hospital Consumer Assessment of Healthcare Providers and Systems (HCAHPS) surveys.

Response: We note that three out of the four measures in the REHQR Program measure set are claims-based. As REHs are statutorily required to provide ED services, we believe it is important that the REHQR Program include one or more measures related to these services. We have provided flexibility to REHs regarding which ED services measure to report, the Emergency Care Access & Timeliness eCQM or the Median Time for Discharged Patients measure. Regarding the commenter's suggestion to use HCAHPS survey data, we note that the HCAHPS survey is designed for the

inpatient setting,[386] and would thus not be suitable for the REH setting.

Comment: A commenter did not support the Emergency Care Access & Timeliness eCQM because it was developed and tested for use in the hospital outpatient setting. The commenter stated that all measures must be tested at the REH level and demonstrate a high level of reliability, feasibility, and validity.

Response: We recognize the value of measures undergoing testing and evaluation of reliability, feasibility, and validity in the setting for which they are being adopted. As part of the PRMR process, the Emergency Care Access & Timeliness eCQM underwent an assessment of the measure's testing data and appropriateness for the REH setting, including a review of the measure's scientific acceptability, feasibility, and usability. As explained in the CY 2026 OPPS/ASC proposed rule (90 FR 33770), although data element feasibility testing was performed at only one REH, the measure was also tested at some rural hospital EDs with similar characteristics of pre-conversion REHs.[387] Based on this, we believe these measure testing results are applicable to REHs. We refer readers to the CY 2026 OPPS/ASC proposed rule (80 FR 33770 through 33771) for further discussion of the measure's review and evaluation.

Comment: A commenter noted that the low volumes treated by these facilities likely would be incompatible with the Emergency Care Access & Timeliness eCQM's calculation methodology.

Response: Regarding the commenter's concern about low case volumes, we refer readers to the CY 2026 OPPS/ASC proposed rule (90 FR 33771) for discussion of our consideration of low case volumes prior to proposing this measure for adoption in the REH setting. Given the denominator includes all ED visits over a 1-year measurement period, we anticipate that there would not be any issues with low case volumes that could undermine the reliability of this measure for REHs.

After consideration of the public comments we received, we are finalizing our proposal to adopt the Emergency Care Access & Timeliness eCQM into the REHQR Program, beginning with the CY 2027 reporting period/CY 2029 program determination as proposed. We also refer readers to section XVI.C.2.c. of this final rule with comment period where we finalize the data submission and reporting requirements for the Emergency Care Access & Timeliness eCQM as proposed, such that the Emergency Care Access & Timeliness eCQM would not be required to be reported by REHs under the REHQR Program, but REHs must nonetheless report either the Emergency Care Access & Timeliness eCQM or the Median Time for Discharged ED Patients measure to meet program requirements, beginning with the CY 2027 reporting period/CY 2029 program determination.

2. Summary of Previously Finalized and Newly Finalized REHQR Program Measure Set for CY 2026 to CY 2031 Program Determinations

Table 139 summarizes the previously finalized and newly finalized REHQR Program measure set for the CY 2026 to CY 2031 program determinations, which removes the Hospital Commitment to Health Equity (HCHE), Screening for SDOH, and Screen Positive Rate for SDOH measures as discussed in section XIV.C. of this final rule with comment period and adds the Emergency Care Access & Timeliness eCQM as discussed in section XVI.B.1. of this final rule with comment period.

We refer readers to the QualityNet website at *https://qualitynet.cms.gov/reh/rehqr* for additional information on the reporting periods and submission deadlines for each measure finalized and proposed in the REHQR Program.

3. REHQR Program Measures and Topics for Future Consideration

We refer readers to section XIV.B. of this final rule with comment period for our cross-program Request for Information on measure concepts regarding well-being and nutrition for consideration in the REHQR Program.

C. Updates to the Form, Manner, and Timing of REHQR Program Data Submission

In the CY 2026 OPPS/ASC proposed rule (90 FR 33774 through 33776), we proposed to update program policies for introducing eCQMs into the REHQR Program by establishing eCQM data submission and reporting requirements which apply to the proposed Emergency Care Access & Timeliness eCQM.

1. Maintenance of Technical Specifications for Quality Measures

CMS maintains technical specifications for adopted REHQR Program measures. The manuals containing the specifications for adopted measures are on the QualityNet website at *https://qualitynet.cms.gov/reh/specifications-manuals*. We refer readers to the CY 2024 OPPS/ASC final

rule with comment period (88 FR 82054) for additional information regarding these specification manuals.

In the CY 2026 OPPS/ASC proposed rule (90 FR 33774), in alignment with the Hospital OQR Program, we proposed that the technical specifications for eCQMs for the REHQR Program would be contained in the CMS Annual Update for the Hospital Quality Reporting Programs (Annual Update). The Annual Update and implementation guidance documents are available on the eCQI Resource Center website at *https://ecqi.healthit.gov/*. For eCQMs, we would generally update the measure specifications on an annual basis through the Annual Update which includes code updates, logic corrections, alignment with current clinical guidelines, and additional guidance for REHs and EHR vendors to collect and submit data on eCQMs from EHRs.

We invited public comments on this proposal.

We did not receive public comments on this proposal, and therefore, we are finalizing the policy for maintaining technical specifications for eCQMs as proposed.

2. Data Submission and Reporting Requirements for eCQMs for the REHQR Program Beginning With the CY 2027 Reporting Period/CY 2029 Program Determination

a. Background

Collection and reporting of data through health information technology greatly simplifies and streamlines quality reporting, and automated electronic extraction and reporting of clinical quality data would significantly reduce the administrative burden on REHs for the REHQR Program. Certified EHR technology (CEHRT) could effectively assist REHs in a variety of ways, such as by improving coordination of care with receiving hospitals during transfers, facilitating the types of staffing and personnel models required for REHs, and using eCQMs to improve quality and safety. In response to our request for comments in the CY 2024 OPPS/ASC proposed rule (88 FR 49840 through 49841) on eCQM reporting for the REHQR Program, some commenters recommended that CMS should consider adding eCQMs as optional measures initially (88 FR 82070). REHs have some familiarity and experience with reporting eCQMs when formerly operating as a subsection (d) hospital or CAH participating in the Medicare Promoting Interoperability Program, although we acknowledge that technological, monetary, and staffing barriers may present challenges to eCQM adoption and use in some REHs.

We refer readers to section XVI.B.1. of this final rule with comment period, where we finalize adoption of the Emergency Care Access & Timeliness eCQM into the REHQR Program measure set as an optional measure, beginning with the CY 2027 reporting period/CY 2029 program determination. The Emergency Care Access & Timeliness eCQM is the first eCQM in the REHQR Program measure set. Introducing eCQM reporting to the REHQR Program involves establishing related policies and requirements, such as eCQM certification requirements, data standards and formats, submission methods, and other program-specific requirements. In the following sections, to reduce reporting burden for REHs, we proposed eCQM reporting and submission policies and requirements for the REHQR Program, including reporting of the Emergency Care Access & Timeliness eCQM, that align with those of the Hospital OQR Program, Hospital Inpatient Quality Reporting Program, and Medicare Promoting Interoperability Program.

b. General Data Submission Requirements and Reporting Requirements

(1) eCQM Certification Requirements for eCQM Reporting

In the CY 2025 OPPS/ASC final rule with comment period (89 FR 94418 through 94420), the Hospital OQR Program finalized and codified three requirements relating to eCQM certification for the submission of eCQM data, beginning with the CY 2025 reporting period/CY 2027 payment determination. In the CY 2026 OPPS/ASC proposed rule, we proposed adopting the same eCQM certification requirements in the REHQR Program, beginning with the CY 2027 reporting period/CY 2029 program determination, and to likewise codify them by adding new paragraph (h) ''Requirements for submission of electronic clinical quality measures (eCQMs) under the REHQR Program'' to § 419.95 (90 FR 33774 through 33775). As discussed in section XVI.C.2.c. of this final rule with comment period, REHs would be required to meet these eCQM requirements beginning with the CY 2027 reporting period/CY 2029 program determination if the REH chooses to submit the Emergency Care Access & Timeliness eCQM rather than the Median Time for Discharged ED Patients measure.

Under this approach, we proposed to codify at § 419.95(h)(1) the requirement for REHs to utilize technology certified to Office of the National Coordinator for Health Information Technology's (ONC's) health information technology (IT) certification criteria, as adopted and updated in 45 CFR 170.315, for reporting eCQMs under the REHQR Program. Using the most recent certified health IT, which includes updated standards and criteria, is important as it allows the collection of relevant, accurate, and structured electronic data for electronic clinical quality measurement.

We also proposed to codify at 42 CFR 419.95(h)(2) the requirement that the health IT used for eCQM reporting by REHs must be certified to all eCQMs (that is, tested and validated on each individual eCQM) available to report under the REHQR Program. Additionally, we proposed to codify at § 419.95(h)(3) the requirement that REHs use the most recent version of the eCQM electronic measure specifications for the applicable reporting period available on the Electronic Clinical Quality Improvement (eCQI) Resource Center website at *https://ecqi.healthit.gov/* or another website as designated by CMS. We also proposed that certified EHR technology would not need to be recertified each time the eCQMs specifications are updated to a more recent version.

Requiring EHRs to be certified to all available eCQMs under the REHQR Program would produce greater certainty for REHs that their EHR systems are capable of accurately calculating the eCQMs under the REHQR Program because the EHR technology would be up to date and tested on each eCQM. We believe this would reduce burden on REHs by minimizing the need to consult with their EHR and other health information technology vendors each time they report on a new or different eCQM.

Finally, we also proposed to codify at § 419.95(h)(4) that the requirements set forth in paragraphs (h)(1) through (3) apply only where an REH opts to report an eCQM.

We invited public comments on these proposals.

We did not receive public comments on these proposals, and therefore, we are finalizing the eCQM certification requirements for eCQM reporting as proposed and to codify these requirements by adding new paragraph (h) ''Requirements for submission of electronic clinical quality measures (eCQMs) under the REHQR Program'' to § 419.95.

(2) File Format for EHR Data, Zero Denominator Declarations, and Case Threshold Exemptions

(a) File Format for EHR Data

Data can be collected in EHRs and health information technology systems using standardized formats to promote consistent representation, interpretation, and allowance for systems to compute data without needing human interpretation. As described in the FY 2016 IPPS/LTCH PPS final rule (80 FR 49701), these standards are referred to as content exchange standards because the standard details how data should be represented and the relationships between data elements. This allows the data to be exchanged across EHRs and health IT systems while retaining their meaning. Commonly used content exchange standards include the Quality Reporting Document Architecture (QRDA). The QRDA standard provides a document format and standard structure to electronically report quality measure data. We believe electronically reporting data elements formatted according to the QRDA standard can promote consistent representation and more efficient calculation of eCQM measure results.

To utilize the same file format requirements currently applied in the Hospital IQR, OQR, and Medicare Promoting Interoperability Programs (85 FR 58940, 86 FR 42262, and 80 FR 49706, respectively), in the CY 2026 OPPS/ASC proposed rule (90 FR 33775), we proposed the file format requirements for the REHQR Program beginning with the CY 2027 reporting period/CY 2029 program determination. Specifically, we proposed that REHs: (1) must submit eCQM data via the QRDA Category I (QRDA I) file format; [388] (2) may use third parties to submit QRDA I files on their behalf; and (3) may either use abstraction or pull the data from non-certified sources in order to then input these data into CEHRT for capture and reporting QRDA I. REHs could meet the reporting requirements by submitting data via QRDA I files, zero denominator declaration, or case threshold exemptions. We discuss the zero denominator declaration and case threshold exemptions in the subsequent sections. We also refer readers to section XVI.C.1. of this final rule with comment period where we outline the maintenance of technical specifications including those for eCQMs.

Under this proposal, we expect QRDA I files to reflect data for one patient per file per quarter with five key elements necessary to identify the file: (1) CCN; (2) CMS Program Name; (3) EHR Patient ID; (4) Reporting period specified in the Reporting Parameters Section; and (5) EHR Submitter ID.

(b) Zero Denominator Declarations

We understand there may be situations in which an REH does not have data to report on a particular eCQM. Therefore, we proposed if the REH's EHR is certified to an eCQM, but the REH does not have patients that meet the denominator criteria of that eCQM, the REH could submit a zero in the denominator for that eCQM; submission of a zero in the denominator for an eCQM would qualify as a successful submission for that eCQM (90 FR 33775).

(c) Case Threshold Exemptions

As a general matter, we understand that in some cases, particularly for REHs, an REH may not meet the applicable case threshold of encounters or discharges for a particular eCQM to reliably calculate performance on the measure. In the CY 2026 OPPS/ASC proposed rule (90 FR 33775), we proposed to align with the case threshold exemption from the Medicare Promoting Interoperability Program (77 FR 54080), the Hospital IQR Program (79 FR 50324), and the Hospital OQR Program (86 FR 63869). As stated for the Hospital IQR Program, the case threshold exemption means that for each quality measure where the minimum number of patients that meet the patient population denominator criteria for the relevant reporting period is not met, REHs could declare a ''case threshold exemption.'' Specifically, for the REHQR Program, we proposed that beginning with the CY 2027 reporting period/CY 2029 program determination, if an REH's EHR system is certified to report an eCQM and the REH has 5 or fewer outpatient encounters or discharges per quarter or 20 or fewer outpatient encounters or discharges per year (Medicare and non-Medicare combined), as defined by an eCQM's denominator population, that REH would be exempt from reporting on that eCQM. Case threshold exemptions would be able to be entered on the Denominator Declaration screen within the Hospital Quality Reporting (HQR) System (formerly referred to as the QualityNet Secure Portal) available during the submission period.[389] The exemption would not have to be used; REHs could report those individual cases if they would like to.

We invited public comments on these proposals.

Comment: A commenter supported our proposals related to zero denominator declarations and case threshold exemptions. The commenter particularly appreciated that the proposed case threshold exemption policy aligns with the Medicare Promoting Interoperability Program, the Hospital IQR Program, and the Hospital OQR Program.

Response: We thank the commenter for their support for our proposals related to zero denominator declarations and case threshold exemptions.

Comment: A commenter requested that CMS align eCQM submission formats across quality reporting programs.

Response: We note that in the CY 2026 OPPS/ASC proposed rule (90 FR 33775), we proposed to utilize the same file format requirements—the QRDA standard—applied in the Hospital IQR, OQR, and Medicare Promoting Interoperability Programs (85 FR 58940, 86 FR 42262, and 80 FR 49706, respectively).

After consideration of the public comments we received, we are finalizing the proposals related to the file format for EHR data, zero denominator declarations, and case threshold exemptions as proposed.

(3) Submission Deadlines for eCQM Data

To align with the Hospital OQR Program, in the CY 2026 OPPS/ASC proposed rule (90 FR 33775), we proposed to adopt a policy to require eCQM data submission by May 15 of the following year for the applicable CY reporting period, beginning with the CY 2027 reporting period/CY 2029 program determination. For example, if an REH elects to report the Emergency Care Access & Timeliness eCQM, the first proposed reporting period would run from January 1, 2027, through December 31, 2027, with a submission deadline of May 15, 2028. We note that the submission deadline may be moved to a subsequent day if it falls on a non-working day for Federal employees such as weekends or Federal holidays.

[388] QRDA I is an individual patient-level quality report that contains quality data for one patient for one or more eCQMs. QRDA creates a standard method to report quality measure results in a structured, consistent format and can be used to exchange eCQM data between systems. For further detail on QRDA I, the most recently available QRDA I specifications and Implementation Guides (IGs) can be found at *https://ecqi.healthit.gov/qrda/versions.*

[389] The Hospital Quality Reporting (HQR) System (formerly referred to as the QualityNet Secure Portal) is the only CMS-approved website for secure communications and healthcare quality data exchange to and within various CMS quality reporting programs. For more information regarding the HQR System, we refer readers to the CMS eCQI Resource Center *available at https://ecqi.healthit.gov/tool/hospital-quality-reporting-hqr-system.*

We invited public comments on this proposal.

We did not receive public comments on this proposal, and therefore, we are finalizing the submission deadlines for eCQM data as proposed.

c. Data Submission and Reporting Requirements for the Emergency Care Access & Timeliness eCQM Beginning With the CY 2027 Reporting Period/CY 2029 Program Determination

In section XVI.B.1. of this final rule with comment period, we finalize the adoption of the Emergency Care Access & Timeliness eCQM into the REHQR Program beginning with the CY 2027 reporting period/CY 2029 program determination as an option for REHs to report instead of the Median Time for Discharged ED Patients measure. In addition to the general data submission and reporting requirements finalized for eCQMs in section XVI.C.2. of this final rule with comment period, in the CY 2026 OPPS/ASC proposed rule (90 FR 33775 through 33776), we also proposed requirements for reporting the Emergency Care Access & Timeliness eCQM under the REHQR Program. Specifically, we proposed that the Emergency Care Access & Timeliness eCQM would not be required to be reported by REHs under the REHQR Program, but that REHs must elect to report either the Emergency Care Access & Timeliness eCQM or the Median Time for Discharged ED Patients measure to meet program requirements, beginning with the CY 2027 reporting period/CY 2029 program determination. We stated that we believe our approach would provide REHs with more flexibility, including the time to plan and budget for the type of EHR infrastructure that meets their needs. Additionally, we noted this approach could contribute to successful participation in the REHQR Program, while still requiring REHs to report timeliness of ED care metrics. We also noted that the Median Time for Discharged ED Patients measure is reported quarterly through the HQR system, compared to the Emergency Care Access & Timeliness eCQM, which is reported annually. Sources of the relevant data for the Median Time for Discharged ED Patients measure may include claims forms, electronic health care data, EHRs, or paper records. We refer readers to the CY 2024 OPPS/ASC final rule with comment period (88 FR 82059 through 82062; 88 FR 82074 through 82075) for additional information on reporting the chart-abstracted Median Time for Discharged ED Patients measure.[390]

In the CY 2026 OPPS/ASC proposed rule (90 FR 33776), we proposed to report data from the REHQR Program as soon as it is feasible on a CMS website after a 30-day preview period.

We invited public comments on these proposals.

Comment: A few commenters recommended that CMS extend voluntary reporting of the Emergency Care Access & Timeliness eCQM in the REHQR Program to support a smoother transition to eCQM reporting and provide REHs with time needed to build capacity, train staff, and prepare systems, without compromising care or financial stability. Another commenter recommended mandatory reporting and retiring the Median Time for Discharged ED Patients, for measure alignment purposes.

Response: In the CY 2026 OPPS/ASC proposed rule (90 FR 33775 through 33776), we proposed that the Emergency Care Access & Timeliness eCQM would not be required to be reported by REHs under the REHQR Program, but that REHs report either the Emergency Care Access & Timeliness eCQM or the Median Time for Discharged ED Patients measure to meet program requirements, beginning with the CY 2027 reporting period/CY 2029 program determination. As discussed in greater depth in section XVI.B.1 of this final rule with comment period, CMS is finalizing its proposal to adopt the Emergency Care Access & Timeliness eCQM as an optional measure that REHs may choose to report instead of the existing Median Time for Discharged ED Patients measure. This approach is intended to ensure flexibility for REHs which may face barriers to implementing eCQMs.

After consideration of the public comments we received, we are finalizing the data submission and reporting requirements for the Emergency Care Access & Timeliness eCQM as proposed, such that the Emergency Care Access & Timeliness eCQM would not be required to be reported by REHs under the REHQR Program, but REHs report either the Emergency Care Access & Timeliness eCQM or the Median Time for Discharged ED Patients measure to meet program requirements, beginning with the CY 2027 reporting period/CY 2029 program determination.

[390] For additional information on the Median Time for Discharged ED Patients measure, we refer readers to the specifications manuals for the REHQR Program, available at *https://qualitynet.cms.gov/reh/specifications-manuals.*

3. Review and Corrections Period for Measure Data Submitted to the REHQR Program

In the CY 2024 OPPS/ASC final rule with comment period (88 FR 82075 through 82076), we finalized and codified at § 419.95(c)(3) a review and corrections period for all measure data submitted to the REHQR Program, which runs concurrently with the data submission period. During the review and corrections period, REHs can review, correct, and change these data up until the close of each submission deadline. However, after the submission deadline, REHs are not allowed to change these data. This policy applies to all measure data submitted to the REHQR Program, so this would include eCQM data.

The review and corrections period is from the time the submission period opens to the submission deadline. In the HQR System, REHs can submit QRDA Category I test and production data files and can correct QRDA Category I test and production data files before production data is submitted for final reporting. We encourage early testing and the use of pre-submission testing tools to reduce errors and inaccurate data submissions in eCQM reporting. We refer readers to the HQR System website (available at *https://hqr.cms.gov/hqrng/login*) and the CMS eCQI Resource Center (available at *https://ecqi.healthit.gov/tool/hospital-quality-reporting-hqr-system*) for more resources on eCQM reporting.

We invited public comments on this proposal.

Comment: A commenter supported our proposal to apply the review and corrections period for eCQM data submitted for the REHQR Program. The commenter noted that this policy reflects the workflow of many practices to periodically review progress, adjust their behaviors as necessary, and appreciated the opportunity to review and correct measure during the submission period.

Response: We thank the commenter for their support.

After consideration of the public comments we received, we are finalizing the review and corrections period for eCQM data as proposed.

4. REHQR Program Extraordinary Circumstances Exceptions (ECE) Policy

We refer readers to section XIV.D. of this final rule with comment period where we finalize with modification our cross-program proposal to codify updates to the Extraordinary Circumstances Exceptions (ECE) policy for the REHQR Program.

XVII. Ambulatory Surgical Center Quality Reporting (ASCQR) Program

A. Background and History of the ASCQR Program

The Ambulatory Surgical Center Quality Reporting (ASCQR) Program is a pay-for-reporting program intended to ensure transparency for quality of care provided at ambulatory surgical centers (ASCs). Section 1833(i)(7)(A) of the Act authorizes the Secretary to reduce any annual increase under the revised ambulatory surgical center (ASC) payment system by 2.0 percentage points for such year that an ASC fails to submit required data on quality measures specified by the Secretary in accordance with section 1833(i)(7)(B) of the Act. Section 1833(i)(7)(B) of the Act states that, except as the Secretary may otherwise provide, several of the statutory provisions governing the Hospital Outpatient Quality Reporting (OQR) Program, specifically sections 1833(t)(17)(B) through (E) of the Act, also apply to the services of ASCs under the ASCQR Program in a similar manner to the manner in which they apply to the services of hospital outpatient departments under the Hospital OQR Program.

We refer readers to the CY 2012 OPPS/ASC final rule with comment period (76 FR 74492 through 74494) for a detailed discussion of the statutory authority of the ASCQR Program. The ASCQR Program requirements are codified at 42 CFR part 416, subpart H (§§ 416.300 through 416.330). We refer readers to the CMS website at *https://www.cms.gov/medicare/quality/initiatives/asc-quality-reporting* for general background on the ASCQR Program, as well as the CMS QualityNet ASCQR website at *https://qualitynet.cms.gov/asc* for current program requirements and measure specifications.

B. Changes to the ASCQR Program Measure Set

In the CY 2026 OPPS/ASC proposed rule, we proposed to adopt the Patient Understanding of Key Information Related to Recovery After a Facility-Based Outpatient Procedure or Surgery, Patient Reported Outcome-Based Performance Measure (Information Transfer PRO–PM) beginning with voluntary reporting for the CY 2027 and CY 2028 reporting periods followed by mandatory reporting beginning with the CY 2029 reporting period/CY 2031 payment determination (90 FR 33777 through 33779).

We refer readers to section XIV.C. of this final rule with comment period for a discussion of the following measure removals: (1) the COVID–19 Vaccination Coverage Among Healthcare Personnel (HCP) measure, beginning with the CY 2024 reporting period/CY 2026 payment determination; (2) the Facility Commitment to Health Equity (FCHE) measure, beginning with the CY 2025 reporting period/CY 2027 payment determination; (3) the Screening for Social Drivers of Health (SDOH) measure, beginning with the CY 2025 reporting period; and (4) the Screen Positive Rate for SDOH measure, beginning with the CY 2025 reporting period.

1. Proposed Adoption of the Information Transfer PRO–PM Beginning With Voluntary Reporting for the CY 2027 and CY 2028 Reporting Periods Followed by Mandatory Reporting Beginning With the CY 2029 Reporting Period/CY 2031 Payment Determination

a. Background

The volume and complexity of surgical procedures performed in outpatient settings, including ASCs, have steadily increased for over a decade.[391] [392] [393] As patients can benefit from having a clear understanding of their discharge information to support recovery from such procedures, the communication of discharge information is an important quality of care area for assessing facilities, and this information should be publicly available. A patient's lack of understanding of clinical care instructions provided after a procedure and other aspects of health literacy have been linked to poor adherence to treatment, decreased patient safety, increased return to the emergency department, and lower levels of patient satisfaction; disproportionately increased rates of such adverse effects occur to patients with limited English proficiency and patients over age 65.[394] [395] Research in the hospital setting indicates that information provided to patients that is simpler and more complete is associated with fewer follow-up calls to an associated trauma center and less frequent hospital readmissions.[396] [397] A study comparing discharge instructions provided to patients who had procedures performed in inpatient and ambulatory settings found that discharge instructions from the inpatient setting contained more complete medication lists and pending diagnostic result elements compared to discharge instructions provided by the hospital ambulatory setting.[398]

b. Measure Overview

The Information Transfer PRO–PM assesses patient understanding of provided discharge information for patients aged 18 years or older who had a procedure (surgical or non-surgical) at an ASC via a 9-item survey.[399] The survey evaluates patient reported understanding of information received across three domains: applicability to patient needs, medication, and daily activities. Survey results provide patient reported outcome (PRO) data measuring ASCs' communication efforts regarding discharge instructions and enable ASCs to reduce future risk of patient harm related to patients not fully understanding their recovery information. The survey was tested and deemed reliable in both English and Spanish versions; for ease of administration, the survey can be completed using a translator, proxy, or caregiver. The measure's testing results

are based on data from the hospital outpatient department (HOPD) setting; however, it is reasonably expected that the instrument and methodology apply to the ASC setting regarding patients receiving surgical procedures as both are outpatient surgical settings providing similar services with the supply of discharge instructions. We note that the measure specifications for the Information Transfer PRO–PM require that the survey be administered anonymously to patients and that the survey instrument does not collect any identifiable patient information.

In monitoring implementation of this measure for the Hospital OQR Program, we discovered that the anonymous administration requirement could potentially limit the hospitals' ability to collect data for their patients without working with a third-party vendor. If the survey is required to be fully anonymous, hospitals fielding the survey themselves would not be able to conduct any targeted follow-up with patients during the 65-day response window or use the information provided to develop more targeted quality improvement efforts.

While anonymous surveys can be valuable for gathering candid feedback, these issues of preventing follow-up, targeted action plans, and deeper investigation of specific issues, as well as leading to less serious or misleading responses have been documented.[400]

In the CY 2026 OPPS/ASC proposed rule, we invited public comment on the proposal to utilize this measure as specified with anonymous administration as well as potential data collection options to address the anonymity requirement in both the Hospital OQR Program, where the measure has already been adopted, and the ASCQR Program, where this measure was proposed for adoption (90 FR 33777).

The measure developer conducted pilot testing for this measure in 26 HOPDs in five states and demonstrated that the measure is reliable and meaningful.[401] Reliability of the measure was assessed with the Cronbach alpha score[402] to determine whether the nine survey questions reliably measured the same underlying characteristic; that is, patient's assessment of the clarity and applicability of recovery instructions. The Cronbach alpha score indicated that the survey items are reliable.[403] The measure developer also found the performance scores among facilities in the pilot study to be moderately reliable using a signal-to-noise ratio, which estimated variance among facilities and measured facility-specific standard errors to determine the extent to which variance in facility scores can be attributed to variance in actual performance.[404] More information about the testing, feasibility, scientific acceptability, meaningfulness, and validity of the Information Transfer PRO–PM for the HOPD setting is available at *https://p4qm.org/measures/4210.*

c. Measure Calculation

The measure numerator is the sum of all the individual scores an ASC receives from eligible respondents, which could be patients or their caregivers. Individual scores are calculated for each respondent by taking the sum of items for which the respondent gave the most positive response (either, ''Yes'' or ''Very Clear'') and dividing by the number of items the respondent deemed applicable to their procedure or surgery. Applicable items are calculated by subtracting the sum of items for which the respondent selected ''Does not apply'' from the total number of survey items (nine).[405] The measure denominator is the total number of patients 18 years or older who had a procedure or surgery in an ASC, left the ASC alive, and responded to the survey. The cohort of patients for the Information Transfer PRO–PM is standardized with the OAS CAHPS cohort to minimize provider burden and to harmonize between the two surveys. Only fully completed surveys are included in the measure calculation. For additional details regarding the proposed measure specifications, we refer readers to the CMS QualityNet website.[406]

d. Pre-Rulemaking Measure Review (PRMR)

As required under section 1890A of the Act, the Secretary must establish and follow a pre-rulemaking process for the selection of quality and efficiency measures, including for the ASCQR Program. The pre-rulemaking process, which we refer to as the Pre-Rulemaking Measure Review (PRMR), includes a review of measures published on the publicly available list of Measures Under Consideration (MUC List) by one of several committees convened by the consensus-based entity (CBE), with which we contract in accordance with section 1890 of the Act, for the purpose of providing interested parties' input to the Secretary on the selection of quality and efficiency measures under consideration for use in certain Medicare quality programs, including the ASCQR Program. We refer readers to the CY 2025 OPPS/ASC final rule with comment period (89 FR 94372) for details on the PRMR process, including the voting procedures used to reach consensus on measure recommendations.

The PRMR Hospital Recommendation Group met on January 15 and 16, 2025 to review measures included by the Secretary on the publicly available ''2024 Measures Under Consideration List'' (MUC List), including the Information Transfer PRO–PM, for potential use.[407] [408] The voting results of the PRMR Hospital Recommendation Group for the proposed Information Transfer PRO–PM for the ASCQR Program were: 5 members recommended adopting the measure; 14

members recommended adoption with conditions; and 8 members voted not to recommend the measure for adoption. No voting category reached 75 percent or greater, including the combination of the recommend and the recommend with conditions categories. Thus, the PRMR Hospital Recommendation Group did not reach consensus and did not recommend including this measure in the ASCQR Program either with or without conditions.

The PRMR Hospital Recommendation Group noted in their deliberations the importance of measuring patient experience and delivering personalized and clear discharge instructions to prevent unnecessary hospital readmissions. However, the PRMR Hospital Recommendation Group members expressed concerns about lack of testing in the ASC setting given differences between HOPDs as a hospital setting (where testing of the Information Transfer PRO–PM was conducted) and ASCs. This group also highlighted concerns related to patient survey fatigue; potential overlap with the Outpatient and Ambulatory Surgery Consumer Assessment of Healthcare Providers and Systems (OAS CAHPS) survey sample population and content; and the risk of low response rates—particularly in small or rural facilities, which could impact scoring.

Although the measure was not pilot tested in the ASC setting with facilities citing resource constraints, we believe that the instrument and methodology reasonably apply to the ASC setting as the measure concept was designed for use in both HOPDs and ASCs and many of the same surgical procedures are performed in both settings.[409] Measure harmonization across the Hospital OQR and ASCQR Programs enables meaningful comparisons of care for patients to assess quality between settings that offer similar services.

Regarding the PRMR Hospital Recommendation Group's concern about potential overlap between the Information Transfer PRO–PM and OAS CAHPS content and target population, the OAS CAHPS survey addresses overall quality of healthcare facility communication but does not assess patient understanding of discharge information related to medication, activity, and applicability/personalization. We believe that both surveys provide valuable insights into different aspects of a patient's experience related to discharge instructions. Additionally, to minimize duplication of patient sampling, resources are available to help facilities align administration of OAS CAHPS with other surveys.[410] In consideration of potential population overlap, we selected a timeframe of 2 to 7 days post-procedure for administration of the Information Transfer PRO–PM's survey to strike a balance between patient recovery and mitigate overlap with the initial administration of OAS CAHPS.

Regarding concerns about patient survey fatigue and risk of low response rates, the 9-item survey is concise, presenting a low burden for completion. Further, ASCs would not be penalized for patients' decisions to not complete the survey. Payment implications under the ASCQR Program are tied to the successful and timely reporting of required quality measure data, and an ASC that submits data to CMS in the form, manner, and timing specified, regardless of the number of surveys completed by the ASC's patient population, would be considered compliant with the measure requirements.

To review the Hospital Recommendation Group's voting summary, recommendations, and conditions for the Information Transfer PRO–PM please visit *https://p4qm.org/PRMR/Resources.*

e. Measure Endorsement

Under section 1833(i)(7)(B) of the Act, requirements for the development of outpatient measures for the Hospital OQR Program at section 1833(t)(17)(C) of the Act apply to the ASCQR Program, except as the Secretary may otherwise provide. Section 1833(t)(17)(C)(i) of the Act requires measures developed to reflect consensus among affected parties and, to the extent feasible and practicable, shall include measures set forth by one or more national consensus-based entities (not necessarily the contracted CBE). As we have noted in previous rulemaking, consensus among affected parties can be reflected in ways other than CBE endorsement, including through the measure development process, through broad acceptance and use of the measure(s), and through public comment (76 FR 74494). We have also noted that section 1833(t)(17) of the Act does not require that each measure we adopt for the ASCQR Program be CBE-endorsed (76 FR 74494).

A Technical Expert Panel consisting of interested parties, experts, and consumer advocates contributed to the development of the Information Transfer PRO–PM measure's survey design, measure cohort, and survey implementation, demonstrating a consensus-based approach to the measure's development.[411]

In the CY 2026 OPPS/ASC proposed rule, we explained that while we recognize the value of measures undergoing CBE endorsement review and prefer to use endorsed measures, at that time, we found no other CBE-endorsed measures for the ASC setting that address the topic of patients' understanding of clinical information related to their recovery for an outpatient procedure or surgery (90 FR 33779). We noted that we submitted the Information Transfer PRO–PM to the CBE for endorsement review in the Fall 2023 cycle (CBE #4210) for the Hospital OQR Program, and the CBE endorsed the measure on January 29, 2024.[412] The ASC-specific version of the Information Transfer PRO–PM is designed to use the same specifications as the Hospital OQR Program CBE-endorsed measure. We previously stated that we plan to pursue CBE endorsement for the measure's implementation in the ASC setting in a future measure endorsement cycle and we would continue to monitor implementation of the measure as part of the standard measure maintenance process.

f. Data Collection, Submission, and Reporting

In the CY 2026 OPPS/ASC proposed rule, we proposed that the Information Transfer PRO–PM would be calculated based on PRO data collected by ASCs directly or through their authorized third-party vendors through the Information Transfer PRO–PM survey instrument[413] distributed to patients or

[409] Centers for Medicare & Medicaid Services. (April 2024). Accessed: April 8, 2025.*

[413] A copy of the survey instrument is available at *https://www.cms.gov/files/document/patient-*

their caregivers by electronic mail or text. We note that the Information Transfer PRO–PM survey is nonproprietary and free to use. We proposed that the survey be distributed within 2 to 7 days post-procedure or surgery. This timeframe minimizes the influence of variables related to the surgery or procedure, such as medications that could affect comprehension, fatigue, or acute pain, while ensuring timely reporting of patient experience related to recovery information.

In the pilot testing conducted by the measure developer using a third-party vendor, patients were sent a reminder to complete the survey 7 days after receipt. The survey remained open until pilot testing was completed; the mean length of time between the procedure date to the survey response date was 65 days. Based on these findings, we proposed a 65-day window for patient response to the survey.

We proposed to adopt the Information Transfer PRO–PM as a voluntary measure for the CY 2027 and CY 2028 reporting periods followed by mandatory reporting beginning with the CY 2029 reporting period/CY 2031 payment determination. We stated we would utilize the voluntary period to monitor the implementation and operationalization of the measure. We refer readers to section XVII.C. of this final rule with comment period for a discussion of the Information Transfer PRO–PM form, manner, and timing of data submission and reporting requirements.

We invited public comments on this proposal. The following is a summary of the comments we received and our responses.

Comment: Many commenters generally supported the Information Transfer PRO–PM, stating that it is important that patients have a clear understanding of their discharge instructions to enhance recovery. Some commenters noted that this measure addresses an important measurement area, and that improving patient understanding of discharge instructions can help reduce post-procedural readmissions and mortality, which reduces waste in the healthcare system. A few commenters also agreed that PRO–PMs like this one provide valuable insights into the effectiveness of communication with patients and patient satisfaction and can help identify opportunities for improvement in perioperative care. Another commenter asserted that assessing patient experience beyond the OAS CAHPS survey can drive improvements in care transitions, reduce readmissions, and enhance outcomes. Other commenters supported CMS's decision to introduce the measure through voluntary reporting.

Response: We thank commenters for their support, including their support of a voluntary reporting period. We agree that it is important for patients to have a clear understanding of their discharge instructions to enhance recovery and reduce adverse outcomes, particularly as procedures of higher complexity move to this setting. We agree that this measure addresses an important measurement area, that this measure can provide valuable feedback to clinicians about their communication practices, and it can highlight areas of needed improvement. However, after consideration of public comments, including comments raising concerns regarding low response rates and survey fatigue, we are not finalizing the proposal to adopt the Information Transfer PRO–PM for the ASCQR Program at this time.

Comment: Some commenters supported the proposal to adopt this measure stating that adoption would be a positive step towards aligning with the Hospital OQR Program. A commenter supported CMS' proposal to utilize this measure as specified with anonymous administration, supplying potential data collection options to address the anonymity requirement while emphasizing that the measure is evidence-based, has been tested to show moderate reliability, and has been endorsed by a CBE for the hospital outpatient department setting and has been adopted for the Hospital OQR Program.

Response: We thank the commenters for their support of the measure and for their support of the survey being administered anonymously.

Comment: A commenter supported the Information Transfer PRO–PM stating there is significant variation in the transmission of information between facilities and that patients are the only source of reliable information on the effectiveness of this communication. Another commenter expressed support for including the option to allow family caregivers to provide feedback for the Information Transfer PRO–PM because of the vital role family caregivers play in patient care.

Response: We thank the commenters for their support and for noting the importance of engaging patients and caregivers for information on the effectiveness of communication of information related to their care. We agree that family caregivers play an important role in patient care.

Comment: A commenter supported the use of web-based data collection for survey administration.

Response: We thank this commenter for the support for this mode of data collection.

Comment: A commenter recommended adding questions to the Information Transfer PRO–PM that are specialty specific. For example, this commenter noted that the survey can ask patients about their experience with anesthesia or pain medications, including questions on numbness or increased pain, to provide actionable feedback and support follow-up care after outpatient procedures.

Response: We thank the commenter for their suggested updates to the Information Transfer PRO–PM. While we are not finalizing the Information Transfer PRO–PM for the ASCQR Program at this time, we note that alignment across the quality reporting programs is important to ensure that clear and effective communication of information related to recovery is addressed in every healthcare delivery setting. Accordingly, we proposed to adopt this measure in the ASCQR Program consistent with its use in the Hospital OQR Program. While there are likely to be unique aspects related to patient recovery from an ASC procedure, adopting this measure in consistent form across quality reporting programs would enable cross-setting comparisons and evaluation utilizing a national, standardized survey instrument.

Comment: A commenter did not support the Information Transfer PRO–PM and stated that since a significant portion of the proposed information to be collected is included in the discharge summary the measure information is redundant.

Response: We disagree that this measure is redundant as the purpose of the discharge summary is to meaningfully convey post-surgery instructions to patients. The Information-Transfer PRO–PM was developed to assess the patient's experience during the discharge process and their understanding of these instructions.

Comment: Some commenters recommended engaging ASCs to determine the most effective means to collect data on patient understanding of discharge instructions. One commenter stated that this measure evaluates patients' comprehension rather than the materials and care provided by facilities. Another commenter stated that the Information Transfer PRO–PM

understanding-key-information-related-recovery-after-facility-based-outpatient-procedure-or.pdf.

assesses service delivery, not patient outcomes, and will not be useful in improving clinical decision-making.

Response: The Information Transfer PRO–PM is designed to evaluate facilities based on their patients' perspective of their understanding of discharge instructions and experience based on the materials supplied by facilities. We believe that this measure can provide valuable feedback to facilities on the usefulness of their materials and their method in supplying these materials. We note that a patient's lack of understanding of clinical care instructions provided after a procedure and other aspects of health literacy have been linked to poor adherence to treatment, decreased patient safety, increased return to the emergency department, and lower levels of patient satisfaction; disproportionately increased rates of such adverse effects occur to patients with limited English proficiency and patients over age 65.[414] [415] The Information Transfer PRO–PM addresses this important area of care coordination and offers an effective means of collecting data from patients themselves. Through this data collection, this measure can provide valuable feedback to clinicians about their communication practices and highlight areas of needed improvement in care delivery. However, after consideration of the concerns raised in public comments, we are not finalizing the proposal to adopt the Information Transfer PRO–PM for the ASCQR Program at this time.

Comment: Many commenters did not support adoption of the Information Transfer PRO–PM due to concerns about survey fatigue and low response rates. Several of these commenters recommended integrating the Information Transfer PRO–PM into the OAS CAHPS survey to reduce the potential for survey fatigue. A commenter noted that response rates to Federal surveys is declining as evidenced by reductions in response rates to Federal surveys in general and specifically the OAS CAHPS survey. Several commenters noted that administering two distinct surveys to the same patient cohort would require duplicative processes for identifying eligible patients, coordinating survey vendors, and managing survey distribution within overlapping timeframes. A few of these commenters stated that the OAS CAHPS survey is experiencing declining response rates over time and expressed concern that response rates for both surveys may be affected as patients may experience survey fatigue if they receive both surveys from ASCs. Another commenter requested clarification on whether multiple outreach attempts and reminders would be permitted in order to improve survey response rates.

Response: We thank the commenters for providing their concerns regarding survey fatigue and low response rates, and the suggestion to integrate the Information Transfer PRO–PM with the OAS CAHPS survey to reduce the number of surveys a patient could receive regarding their episode of care. We considered integrating questions from the Information Transfer PRO–PM survey into the OAS CAHPS survey to reduce the number of surveys a patient could receive regarding their episode of care. At that time we decided against doing so because it would necessitate changes to the specifications for administering OAS CAHPS. However, we acknowledge commenters' concerns and may consider the suggestion to combine the information transfer PRO–PM with OAS CAHPS in the future.

Research indicates that COVID–19 pandemic restrictions to in-person research greatly increased survey fatigue as researchers moved to using on-line methods [416] [417] and while this affects all groups, differential effects are seen across industries [418] and demographics.[419] While we continue to believe that standardized patient-reported outcome measures, utilized across different payors including Federal agencies, are important to enable comparison,[420] we also recognize that survey fatigue manifests in declining quality and quantity of survey responses and has become a significant issue in information collection. We therefore understand commenters' concern that having two patient surveys for ASCs would likely result in the potential for low response rates and survey fatigue, even if ASCs provided multiple outreach attempts. Survey fatigue may also present greater challenges for ASCs because of their smaller administrative teams and fewer dedicated resources to manage patient outreach and survey processes.

We also acknowledge that patients receiving care from ASCs may experience more survey fatigue and lower response rates than patients in other settings due to the types of care and services provided by ASCs. For example, ASCs typically handle less complex and lower-risk, same-day procedures, so patients may be less motivated to complete surveys than they would for more serious conditions. Patients at ASCs may also be less willing to complete patient surveys for facilities with which they have less ongoing engagement after discharge, as is likely with ASCs. Patients at ASCs also may undergo multiple elective procedures, so they could receive duplicative patient surveys.

In consideration of the comments received related to concerns about low response rates and survey fatigue, we are not adopting the Information Transfer PRO–PM at this time. We will provide clarification regarding multiple outreach attempts to improve survey response rates if we decide to propose the Information Transfer PRO–PM in the future.

Comment: Many commenters expressed concern that the Information Transfer PRO–PM may increase administrative burden on facilities. Some of these commenters noted the challenge of integrating surveys into clinical workflows. A few commenters stated concerns that the burden of implementing this measure is greater than its potential benefits. Several commenters expressed significant concerns with the operational and logistical challenges related to implementing an additional, separately administered patient survey because

ASCs already administer OAS CAHPS. These commenters noted that the measure's administrative tasks, including data collection and tracking, could create significant burden for facilities with existing staff shortages which would divert resources from direct patient care. A commenter stated that some ASCs are beginning to adopt the OAS CAHPS survey in preparation for mandatory reporting so the addition of another survey to the workflow would be costly and administratively burdensome at this time.

Response: We acknowledge that collecting PRO–PM data may involve more burden and initial implementation effort than some other types of quality measures. While PRO–PMs typically require facilities to integrate data collection into clinical workflows, this integration could provide an opportunity for patient-reported outcomes to inform clinical decision-making. To provide more flexibility and reduce burden, we did not propose to require facilities to collect data in a standardized way for the Information Transfer PRO–PM. However, we understand that ASCs may have less experience integrating surveys into clinical workflows, so it may still be difficult for ASCs to implement this measure. Due to this concern, and concerns that the recent increase in the number of patient surveys may contribute to survey fatigue for patients, we are not finalizing adoption of the Information Transfer PRO–PM at this time.

Comment: A few commenters stated that the Methodology Report cites evidence from inpatient and outpatient hospitals in explaining the need for this measure. These commenters stated that there is no research indicating that ASCs have similar quality concerns. A commenter explained that all ASCs provide written discharge instructions in accordance with the Conditions for Coverage, and that there is no evidence that these instructions are insufficient in the ASC setting.

Response: We understand the commenters' concern that the Methodology Report did not cite studies related to discharge instructions in the ASC setting. We note that collecting data on measures aligned across the Hospital OQR Program and the ASCQR Program allows patients to compare performance across these two settings which provide similar services. Additionally, this measure would allow patients to compare performance between ASCs on discharge instructions, an area which was determined to be important by our Patient and Family Engagement (PFE) Work Group (89 FR 94407). However, as previously stated, we are not finalizing the proposal to adopt the Information Transfer PRO–PM for the ASCQR Program at this time.

Comment: A few commenters recommended administering the Information Transfer PRO–PM in the same nine languages as the OAS CAHPS survey to ensure consistency across surveys. Several commenters recommended requiring that facilities offer the survey in the patient's preferred language, if that language is one of these nine, to ensure inclusivity.

Response: We wish to clarify that the Information Transfer PRO–PM can be completed using a translator, proxy, or caregiver, and that ASCs would have been permitted to use interpretation and translation services in order to ensure that ASCs were administering the survey in the patient's preferred language. Although we are not finalizing adoption of the Information Transfer PRO–PM, we appreciate the commenters' recommendations and will consider available language options for the Information Transfer PRO–PM if we decide to propose this measure in the future.

Comment: Several commenters expressed doubts about the applicability of the measure as it has not been tested in the ASC setting. Some of these commenters recommended site-specific testing in the ASC setting before inclusion in the ASCQR Program. A commenter stated that the measure developer acknowledged the potential need to modify the measure for use among ASCs and recommended evaluating it for needed modifications before adoption. For example, a commenter noted that the survey introduction uses the word ''hospital'' twice and expressed concern that, even if the name of the facility is correct, this could cause patients to question the legitimacy or applicability of the survey. This commenter stated that measures should be fully tested in the setting for which they are being proposed before being adopted (even as voluntary measures) into quality reporting programs. A commenter recommended piloting the measure in an upcoming CMS Innovation Center (CMMI) Model as a means of testing the measure's feasibility for widespread implementation. A commenter requested clarification regarding whether survey response rates had been tested when both the OAS CAHPS survey and the Information Transfer PRO–PM survey are administered to the same patient population.

Response: We believe that the measure is applicable to the ASC setting because improving patient understanding of discharge information is an important part of providing quality care across all care settings. Historically discharge information is provided in written form after surgery because the effects of anesthesia and pain medication may impair the patient's ability to retain information. However, we understand commenters' concerns related to feasibility of implementing this measure without tailoring it to the ASC setting due to lack of testing in the ASC setting. We note that we are not finalizing this measure at this time, and that we will review the measure specifications for applicability to ASCs and will update language as necessary if we decide to propose this measure in the future. We will consider additional testing for the Information Transfer PRO–PM if we decide to propose this measure in the future. If we do conduct additional testing in the future, results of testing would reflect administration of the Information-Transfer PRO–PM and OAS CAHPS because OAS CAHPS is now mandatory for ASCs.

Comment: A few commenters expressed concern regarding potential conflicts between the requirements for the Information Transfer PRO–PM survey and the OAS CAHPS guidelines. A few commenters specifically mentioned that the OAS CAHPS guidelines recommend selecting the OAS CAHPS sample prior to any other survey and not including the same patients in more than one survey to ensure the highest response rates possible. A few commenters stated that the OAS CAHPS guidelines indicate that ASCs must coordinate with the OAS CAHPS Survey Coordination Team if they are conducting more than one Federally sponsored survey and that introduction of the Information Transfer PRO–PM would require all ASCs to coordinate with this team. These commenters expressed concern that the requirements for this survey contradict the goal of ensuring the highest response rate possible for the OAS CAHPS survey since the Information Transfer PRO–PM survey would be distributed before the OAS CAHPS survey, as most patients do not receive the OAS CAHPS survey until five to six weeks after the procedure. A commenter expressed concern that patients may not appreciate the distinction between the two surveys, leading them to discard the second survey. Some commenters recommended developing a coordinated administration plan that ensures patients do not receive more than one survey for the same encounter.

Response: We thank commenters for raising concerns regarding possible

conflicts with the requirements for the Information Transfer PRO–PM survey and the OAS CAHPS guidelines.

Regarding the concern that ASCs must coordinate with the OAS CAHPS Survey Coordination team, we wish to clarify that the OAS CAHPS FAQ document describes this as a recommendation and not a requirement, and note that it only would apply if more than one survey vendor was used or if the surveys were being self-administered.[421] We acknowledge that the timing and order of administering those surveys may impact the likelihood of patients responding to each survey. Additionally, we understand that administering the Information Transfer PRO–PM to every patient, not to a subset or sample of patients, would necessarily lead to some patients receiving multiple surveys. However, we believe that both surveys provide valuable insights into different aspects of a patient's experience. While we are not finalizing the Information Transfer PRO–PM in this final rule, we will take these comments into consideration if we propose the measure in the future.

Comment: A few commenters noted that the denominator cohort for the Information Transfer PRO–PM is different from the denominator cohort for OAS CAHPS, and that as a result, ASCs would need to separately determine patient eligibility for each survey, which could result in onerous processes related to survey administration. A commenter stated that the OAS CAHPS cohort includes codes and exclusions that are not replicated in the Information Transfer PRO–PM. This commenter recommended aligning the denominator cohorts and identifying a mechanism to ensure future standardization of the two surveys to reduce the burden of maintaining two different processes. Another commenter requested clarification regarding which survey, the OAS CAHPS survey or the Information Transfer PRO–PM survey, should be administered to patients first.

Response: We appreciate commenters' recommendation to align the Information Transfer PRO–PM and OAS CAHPS cohorts and to minimize the burden of administering the two surveys. During development of the Information Transfer PRO–PM, we considered incorporating the survey instrument into the OAS CAHPS survey to reduce the number of surveys a patient could receive regarding their episode of care. However, we decided against doing so at that time as the specifications for administering the OAS CAHPS (such as the survey timing, allowing multiple submission modes and requiring a CMS-approved vendor) do not align with the Information Transfer PRO–PM. The PRMR Hospital Recommendation Group recommended the Information Transfer PRO–PM with conditions for the Hospital OQR Program; the condition was to administer the survey at the time of the surgery or procedure so that there is no conflict with other measured pain and function outcomes to improve response rates. We considered this condition and determined that a survey administration window of 2 to 7 days post-procedure provides the necessary balance between allowing patients sufficient time for recovery and comprehension of the Information Transfer PRO–PM survey questions, while also mitigating potential overlap with the OAS CAHPS survey, which begins on the first day post-procedure and includes a reminder at 14 days. Therefore, to the commenter's question on which survey should be administered first under our proposal to adopt the Information Transfer PRO–PM, based on the survey timing guidelines mentioned above, the OAS CAHPS survey should be administered first (that is, first day post-procedure), followed by the Information Transfer PRO–PM survey at any point from 2 to 7 days post-procedure. Currently, there has been no testing measuring survey response rates when both surveys are administered to the same patient population. While we are not finalizing adoption of the Information Transfer PRO–PM in this final rule, we will take these comments into consideration if we propose the measure in the future.

Comment: A commenter requested clarification on when data submission specifications would be provided to vendors and whether there would be a point of contact for questions regarding those specifications. A commenter recommended that CMS provide materials such as technical guidance and standardized tools to assist with reporting.

Response: Data submission specifications for the reporting of this measure are available in the Hospital OQR Program Specifications Manual and would have applied to the ASCQR Program if the measure had been adopted as proposed.[422] Additionally, vendors may submit inquiries for the Information Transfer PRO–PM through the ServiceNow website. However, as previously stated, we are not finalizing the proposal to adopt the Information Transfer PRO–PM for the ASCQR Program at this time.

Comment: A commenter requested clarification on how responses of ''Does Not Apply'' would be treated in scoring and whether partially completed surveys would contribute to measure results. Another commenter requested clarification regarding whether facilities would receive domain-level feedback or only a composite score.

Response: Individual scores are calculated for each respondent by taking the sum of items for which the respondent gave the most positive response (either, ''Yes'' or ''Very Clear'') and dividing by the number of items the respondent deemed applicable to their procedure or surgery. Applicable items are calculated by subtracting the sum of items for which the respondent selected ''Does not apply'' from the total number of survey items (nine). Only fully completed surveys would be included in the measure calculation.[423] If a facility administers the Information Transfer PRO–PM survey, they would be able to calculate domain level or composite results. If a facility uses a third-party to administer the survey, the granularity of data available to the facility would depend on the contract with their selected vendor. However, as previously explained, we are not finalizing the proposal to adopt the Information Transfer PRO–PM for the ASCQR Program at this time.

Comment: Some commenters had concerns with the measure specifications. These commenters recommended that measure scores be adjusted to account for patient factors beyond the control of the facility such as age, education, surgery type, time between surgery and survey response, overall physical and mental health, health literacy, and language barriers. Some of these commenters recommended that other survey factors such as non-response rates, a minimum response-rate threshold, and annual review to identify any potential bias be considered. A commenter stated that combining the Information Transfer PRO–PM survey with the OAS CAHPS survey would allow data from both surveys to be adjusted in the same manner.

Response: We understand commenters' concerns about measure

[421] OAS CAHPS. Frequently Asked Questions for Hospitals and ASCs OAS CAHPS®. OAS CAHPS. Available at *https://oascahps.org/OAS_Facility_FAQs.docx. Accessed: October 14, 2025.*

[422] Centers for Medicare & Medicaid Services. QualityNet. Available at *https://qualitynet.cms.gov/files/6830945005ca4cea73650e74?filename=OQR_v19.0_SpecsManual_2026.pdf. Accessed: October 6, 2025.*

[423] Partnership for Quality Measurement. Submission Tool and Repository Measure Database. Available at *https://p4qm.org/measures/4210. Accessed: April 8, 2025.*

specifications with regard to patient factors beyond the control of the facility. We note the measure developer conducted testing to examine the need for risk adjustment to the measure for a set of factors such as patients self-reported health status, history of procedures, age, and education, and found there was not a significant relationship between the adjusted and unadjusted measure scores. Therefore, given the lack of a significant relationship between adjusted and unadjusted scores, there was empirical evidence to support an unadjusted measure and that providers and facilities should be able to provide clear, personalized instruction to all patients about their recovery from a procedure or surgery.[424] Additional details regarding measure testing and measure methodology, are available on the QualityNet website: *https://qualitynet.cms.gov/outpatient/measures/PRO-PM/methodology*. However, as previously stated, we are not finalizing the proposal to adopt the Information Transfer PRO–PM for the ASCQR Program at this time.

Comment: A few commenters expressed concern about the operational feasibility of the survey timing. Specifically, some commenters expressed concern about issuing survey invitations in the period 2 to 7 days post-procedure. These commenters stated that because of coding practices it may not be feasible to assign CPT–4 or HCPCS Level II codes within this timeframe as well as submit patient files to vendors with sufficient time for the vendor to process files, confirm patient eligibility, and issue invitations. A commenter recommended updating the eligibility definition to rely on data elements available in near real time (for example, use of anesthesia or sedation) or extending the timeline for survey administration. A commenter expressed concern about the 65-day timeline for patients to respond to the survey. The commenter referenced CMS' statement that in the pilot the mean length of time between the procedure date and the survey response date was 65 days and stated that the 65-day period was actually the amount of time that it took to send the survey invitation.

Response: We appreciate commenters' feedback regarding the feasibility of the proposed survey administration timeline, including concerns about the period for issuing invitations (2 to 7 days post-procedure) and the overall survey response window. We acknowledge commenters' operational concerns related to the availability of CPT–4 and HCPCS Level II codes and the ability of facilities and their vendors to identify eligible patients and submit files within the proposed timeframe. The proposed 2- to 7-day invitation window was selected to promote timely contact with patients following the clinical encounter and to minimize recall bias by focusing responses on the recent episode of care. These operational timing parameters were informed by the pilot testing conducted by the measure developer.

With respect to the 65-day observation highlighted by commenters, we clarify that during pilot testing, the survey remained open until sufficient response was attained with the mean interval between the procedure date and the survey response date being 65 days, or approximately two months. We identified this finding as the basis for proposing a 65-day response window to allow sufficient time for patients who are sent an invitation and for non-responders to receive reminders and to submit completed surveys.

At this time, we believe the timing parameters for invitation issuance and the proposed 65-day response window are appropriate to support valid, comparable measurement across facilities while balancing operational feasibility. However, we are not finalizing the Information Transfer PRO–PM for the ASCQR Program at this time.

Comment: A commenter expressed concern that limiting survey administration to email and text communications may affect representativeness and data quality because patients who have limited internet access may not be included in the survey. A commenter expressed concern about limiting access to email and text communications because people are becoming more reluctant to complete surveys due to concerns about data privacy, specifically associated with emails and text communications from unknown or unverified entities. Another commenter stated that the burden is more pronounced for ASCs specializing in ophthalmology, as their ophthalmology patients cannot easily check their emails or text messages due to limited vision.

Response: We appreciate the commenters' concerns about representativeness and data quality as well as the potential impact of this measure to ASCs specializing in ophthalmology. The measure developer did not identify systemic challenges in reaching patients through email or text message. Additionally, as distribution of the survey occurs 2 to 7 days after the procedure, the patient has up to 65 days to respond, and the survey can be completed using a translator, proxy, or caregiver, the influence of post-surgical variables can be minimized.

However, we note that we are not finalizing adoption of this measure at this time and may re-evaluate available survey modalities if we propose the measure in the future.

Comment: A commenter expressed concern that the measure fails to exclude certain patients, potentially violating the Telephone Consumer Protection Act (TCPA) and the Health Insurance Portability and Accountability Act (HIPAA). This commenter proposed excluding: (1) patients without email or text messaging access, (2) patients who have not given (or have withdrawn) prior consent for text message survey invitations (to comply with the TCPA), and (3) patients who requested confidential admission (to adhere to HIPAA). A commenter expressed concern that some ASCs' legal teams interpret a patient opting-out of text survey invitations as opting-out of all text-based communications. This commenter recommended that prior to adopting the Information Transfer PRO–PM, CMS provide guidance on how to allow patients to opt-out of the survey without opting out of important patient communications, such as appointment reminders.

Response: We thank the commenter for expressing these concerns regarding the TPCA and HIPAA as they relate to survey administration. The TPCA establishes rules for how surveys can be administered via phone. If this measure were adopted, facilities and their vendors would need to comply with TCPA regulations to avoid penalties and maintain patient privacy. These requirements are in regard to prior consent, limitations on the use of automatic dialers, and restrictions on artificial or prerecorded messages when contacting patients by phone for the Information Transfer PRO–PM. ASCs would need to work with their legal teams to determine opt-in or opt-out language that clearly indicates the patient's communication preferences. However, we reiterate that we are not finalizing the proposal to adopt the Information Transfer PRO–PM for the ASCQR Program at this time.

Comment: A few commenters stated that the requirement for anonymity limits their ability to use the survey data to investigate any issues identified and

[424] Centers for Medicare & Medicaid Services. (April 2024). Patient Understanding of Key Information Related to Recovery After a Facility-Based Outpatient Procedure or Surgery, Patient Reported Outcome-Based Performance Measure (PRO–PM). Available at *https://qualitynet.cms.gov/outpatient/measures/PRO-PM/methodology. Accessed: November 12, 2025.*

to develop targeted action plans and quality improvement efforts, which defeats the purpose of the measure. A commenter stated that the measure has not been tested with a self-administration option and recommended testing self-administration and resolving barriers prior to adopting this measure. A few commenters requested guidance on how facilities could administer the survey anonymously without working with an outside vendor. A commenter expressed concern about the survey's current framing around anonymity as the instrument introduction informs patients that their responses are ''completely anonymous,'' yet facilities must necessarily use protected health information to identify and contact eligible patients, creating at least a temporary link between patient identity and survey responses. The commenter stated that this promise of total anonymity could increase distrust for patients, whereas stating that the responses would be confidential both aligns with patients' understanding of how healthcare organizations handle their most sensitive data and also aligns with other CMS patient surveys.

Response: We thank the commenters for their input. We agree that anonymity places constraints on use of the measure data which must be balanced with confidentiality concerns. We acknowledge that there are both advantages and disadvantages to maintaining anonymity in patient surveys. Anonymity may encourage patients to provide more candid and reliable feedback about their experiences, which can enhance the validity of the information collected. However, as commenters noted, anonymity can limit the ability of facilities to conduct targeted follow-up or quality improvement activities and may, in some cases, contribute to patient distrust if the anonymity promise is not clearly explained. We appreciate the commenters' insights on these challenges and we agree that the balance between protecting patient privacy and enabling meaningful quality improvement is important.

The survey instrument notes that patient responses are anonymous and that neither the patient's name nor any other identifying information will be shared with their clinician or facility. We recognize that vendors and facilities must use protected health information (such as patient names, contact information, and encounter dates) to invite and remind patients to complete the electronic survey during the administration process. Consistent with prior CMS surveys, such as OAS CAHPS, the intent of this Information Transfer PRO–PM's anonymity language is to indicate that individual patient responses will not be reported or publicly displayed with patient identifiers and will be handled in a manner that protects patient privacy.

When a facility administers the survey directly (without a vendor), it may leverage existing survey tools that include features that protect patient anonymity. Facilities administering the survey themselves can follow-up with all eligible patients throughout the 65-day response window based on the procedure date, rather than the survey administration date. Where vendors are used, we expect both vendors and facilities to comply with all applicable privacy protections and business-associate agreements under HIPAA. They must also meet any minimum business and quality requirements outlined in CMS guidance for vendor administered surveys. If we propose to adopt the Information Transfer PRO–PM in the future, we would provide guidance to support facilities that wish to administer surveys internally or without vendor involvement.

We acknowledge that the phrase ''completely anonymous'' may be interpreted to mean that no possible link to the identity of the respondent ever exists, which is not operationally feasible where contact information must be used to invite and remind patients to complete the survey. To reduce possible confusion and patient distrust, and to align with language used in other CMS patient surveys, we will consider revising the instrument introduction and associated text to clarify that: (i) contact information is used only to invite and remind eligible patients, (ii) individual survey responses will be protected and will not be reported to CMS or published with personal identifiers, and (iii) aggregate or de-identified data will be used for measure calculation and reporting. Although we are not finalizing adoption of this measure at this time we note that this clarification would be reflected in our operational guidance for implementation if this measure is considered for the ASCQR Program in the future. We will also consider including this clarification in our operational guidance for implementation in the Hospital OQR Program.

We note that the proposed voluntary reporting period was also intended to allow for refinement of mode-of-administration recommendations and to identify barriers to self-administration through operational experience. We will consider including additional guidance or flexibilities in this area in future iterations of the measure. Additionally, we recognize that challenges with recruiting ASCs to participate in testing during initial measure development limited opportunities to fully evaluate self-administration approaches, and similar challenges could resurface if we pursue additional testing in this area in the future.

Comment: A commenter stated that facilities already work with Patient and Family Advisory Councils to improve patient communications and that these engagements are more likely to provide meaningful improvements than an anonymous survey which does not allow for follow-up.

Response: We agree that Patient and Family Advisory Councils are a valuable resource, and encourage facilities to engage with these councils to improve their discharge planning processes and overall patient communication.

Comment: A few commenters expressed concern regarding the implementation timeline of the Information Transfer PRO–PM and recommended that CMS delay implementation and extend the use of voluntary reporting periods. A commenter recommended that CMS monitor ASC feedback during the voluntary reporting period to ensure ASCs do not face widespread technical or operational challenges which would require postponing mandatory implementation.

Response: We understand commenters' concern regarding the timeline for the Information Transfer PRO–PM, and we note that we are not finalizing adoption of this measure in the ASCQR Program at this time.

Comment: A commenter stated that when the measure underwent CBE review for the hospital outpatient setting the committee found that the measure did not meet requirements for scientific acceptability, specifically that the sample was too small to report reliability by decile and that the results for validity testing were non-significant.

Response: We acknowledge the commenter's concern regarding the measure's scientific acceptability, but note that the measure developer conducted pilot testing in 26 HOPDs across five states and demonstrated that the measure is both reliable and

meaningful.[425] Reliability of the measure was assessed with the Cronbach alpha score [426] to determine whether the survey questions reliably measure the same underlying characteristic, that is, patients' assessment of the clarity and applicability of recovery instruction. The Cronbach alpha score indicated that the survey items are reliable.[427] The measure developer also found that facility performance scores in the pilot study demonstrated moderate reliability based on a signal-to-noise ratio. This analysis estimated variance across facilities and measured facility-specific standard errors to determine the extent to which variance in facility scores can be attributed to variance in actual performance.[428] More information about the testing, feasibility, scientific acceptability, meaningfulness, and validity of the Information Transfer PRO–PM for the HOPD setting is available at *https://p4qm.org/measures/4210.*

During measure testing, the developer conducted extensive outreach for testing partners, however, ASCs were unavailable at the time of the testing period due to competing demands of implementing other PRO–PMs. The measure developer completed two pilot studies in the HOPD setting. The average annual case volume of an ASC is 4,714, indicating it would take a minimum of three months to meet the minimum requirement of respondents. Given the similar patient or caregiver interactions and goals in ASCs and HOPDs, we expect testing results to have similar reliability.

Comment: A commenter noted that this measure has not met statutory requirements for inclusion in the ASCQR Program due to not being endorsed by a Consensus-Based Entity (CBE) for use in the ASC setting.

Response: We thank the commenter for their observation that the measure has not been endorsed by the CBE for use in the ASC setting. We recognize the value of measures undergoing review for potential CBE endorsement and of measure endorsement specific to care setting. We note that the Information Transfer PRO–PM went through the rigorous measure development lifecycle outlined at the CMS Measures Management System website [429] which includes measure testing and reliability analysis. Furthermore, for the Hospital OQR and ASCQR Programs, we note that section 1833(t)(17) of the Act does not require that each measure we adopt be CBE-endorsed (76 FR 74494), but states that the Hospital OQR and ASCQR Programs, to the extent feasible and practicable, shall include measures set forth by one or more national consensus building entities. We reviewed measures endorsed by consensus organizations and were unable to identify any other measures on this topic endorsed by a consensus organization in the ASC setting, so the inclusion of an endorsed measure is not feasible or practicable. Section 1833(t)(17)(C)(i) of the Act also requires measures included in the Hospital OQR and ASCQR Programs to reflect consensus among affected parties. As we have stated in previous rulemaking (75 FR 72064 and 76 FR 74494), consensus among affected parties can be reflected in ways other than CBE endorsement, including through the measure development process, through broad acceptance and use of the measure(s), and through public comment. However, in light of the significant number of negative public comments received during the comment period opposing the adoption of this measure for the ASCQR Program, we have concerns that there may be a lack of consensus among interested parties. These concerns reflect an additional reason we are not finalizing this measure at this time.

Comment: A commenter stated that the requirement for consensus has not been met through broad acceptance of the measure by ASCs. The commenter stated that the ASC representative on the TEP did not support the use of the measure in the ASC setting and that ASC interested parties have not supported the measure in public comments.

Response: Section 1833(t)(17)(C)(i) of the Act requires measures included in the Hospital OQR and ASCQR Programs to reflect consensus among affected parties. As we have stated in previous rulemaking, consensus among affected parties can be reflected in various ways, including through the measure development process, through broad acceptance and use of the measure(s), and through public comment.

As previously stated, we have concerns regarding a potential lack of consensus among interested parties, given the significant number of negative public comments received during the comment period opposing the adoption of this measure for the ASCQR Program. This concern represents an additional reason we are not finalizing this measure at this time.

After consideration of public comments, we are not finalizing adoption of the Information Transfer PRO–PM for the ASCQR Program at this time.

2. Summary of Previously Finalized and Newly Finalized ASCQR Program Measure Set for CY 2026 to CY 2031 Payment Determinations

Table 140 summarizes the previously finalized and newly finalized ASCQR Program measure set for the CY 2026 to CY 2031 payment determinations. Table 140 reflects the removal of the FCHE, Screening for SDOH, Screen Positive Rate for SDOH, and the COVID–19 Vaccination Coverage Among HCP measures as discussed in section XIV.C., we note that we are not finalizing the addition of the Information Transfer PRO–PM as discussed in section XVII.B.1. of this final rule with comment period.

BILLING CODE 4120–01–C

We refer readers to the QualityNet website at *https://qualitynet.cms.gov/asc/ascqr* for additional information on the reporting periods and submission deadlines for each measure finalized and proposed in the ASCQR Program.

3. ASCQR Program Measures and Topics for Future Consideration

We refer readers to section XIV.B. of this final rule with comment period for information regarding our cross-program

Request for Information on measure concepts regarding well-being and nutrition for consideration in the ASCQR Program.

C. Updates to the Form, Manner, and Timing of ASCQR Program Data Submission

In the CY 2026 OPPS/ASC proposed rule, we proposed to establish data submission and reporting requirements for Patient-Reported Outcome-Based Performance Measures (PRO–PMs) for the ASCQR Program, including for the proposed Information Transfer PRO–PM (90 FR 33782).

1. Data Submission and Reporting Requirements for PRO–PMs

a. Data Submission Requirement for PRO–PMs

In the CY 2024 OPPS/ASC final rule with comment period (88 FR 82041), we finalized that for the Total Hip Arthroplasty and/or Total Knee Arthroplasty PRO–PM, ASCs must use the Hospital Quality Reporting (HQR) system for data submission as specified for a PRO–PM. In the CY 2026 OPPS/ASC proposed rule, we proposed to apply this submission method to PRO–PMs generally, including the Information Transfer PRO–PM (90 FR 33782). Specifically, we proposed that ASCs must use the HQR system for data submission for any PRO–PM that we adopt for the ASCQR Program measure set. ASCs may choose to: (1) directly submit their PRO–PM data to CMS using the HQR system; or (2) utilize a third-party entity, such as a vendor or registry, to submit their data using the HQR system. The HQR system allows for data submission using multiple file formats (such as .CSV and .XML) or a manual data entry option, allowing ASCs additional flexibility in data submission.

b. Data Submission and Reporting Requirements for the Information Transfer PRO–PM

In the CY 2026 OPPS/ASC proposed rule, we discussed the proposed adoption of the Information Transfer PRO–PM beginning with voluntary reporting for the CY 2027 and CY 2028 reporting periods followed by mandatory reporting beginning with the CY 2029 reporting period/CY 2031 payment determination (90 FR 33776 through 33779). We proposed that the reporting period for this measure would include data collection for procedures performed from January 1 through and including December 31 of the year that is two years prior to the applicable payment determination year. Therefore, ASCs would attribute patient survey responses to the CY reporting period during which the patient's procedure was completed. For example, if a patient undergoes a procedure on December 20, 2027, and their survey response is received on January 4, 2028, that response would be attributed to the CY 2027 reporting period. In the CY 2026 OPPS/ASC proposed rule we proposed a 65-day response window for collecting patient survey responses (90 FR 33776 through 33779). Under this 65-day response window policy, ASCs may collect survey responses for a reporting period as late as March of the year preceding the applicable payment determination year.

We proposed to require ASCs to submit their Information Transfer PRO–PM data in aggregate numerators and denominators by May 15 of the year prior to the applicable payment determination year in the HQR system. As codified at 42 CFR 416.310(f), all deadlines occurring on a Saturday, Sunday, or legal holiday, or on any other day, all or part of which is declared to be a non-workday for Federal employees by statute or Executive Order would be extended to the first business day thereafter. For example, for the first voluntary reporting period, data collected for the Information Transfer PRO–PM from surgical procedures performed January 1, 2027, through December 31, 2027, would be submitted to CMS's HQR system by May 15, 2028. For the first mandatory reporting period, data collected for the Information Transfer PRO–PM from surgical procedures performed January 1, 2029, through December 31, 2029, would be submitted to CMS's HQR system by May 15, 2030, for the CY 2031 payment determination.

We proposed to require ASCs to offer all patients meeting the measure's denominator specifications the opportunity to complete the survey and to report on all completed surveys received. For ASCs that anticipate receiving more than 200 completed surveys, these facilities would have the option to either: (1) survey and report data on their entire eligible Information Transfer PRO–PM patient population, or (2) randomly sample their eligible Information Transfer PRO–PM patient population to collect and report data from 200 completed surveys. Thus, to reduce burden, facilities with large patient populations would have the choice to randomly sample a sufficient number of patients to yield at least 200 completed surveys in a reporting period. ASCs that are unable to collect 200 completed surveys would not be able to perform random sampling and would instead be required to submit data on survey responses from all completed surveys received.

A minimum random sample size of 200 completed surveys would ensure the reliability of the measure, consistent with what is required for the OAS CAHPS measure for ASCs (86 FR 63908 through 63909). We note that under the Hospital OQR Program, a minimum sample size of 300 is required for the Information Transfer PRO–PM as this is a recommended minimum sample size for a population of 1,500 to provide a 95 percent confidence interval for a population of over 10,000; this is also generally accepted as a minimum sample size for stable population estimates.[430] [431] However, as ASCs are expected to have less varied populations, we believe the sample size of 200 completed surveys, as determined to be sufficient for the OAS CAHPS survey, is appropriate. The 200 surveys would provide the appropriate balance of ensuring sufficient confidence in the results of the Information Transfer PRO–PM survey, while reducing the overall burden of the survey for facilities with large patient populations.

We invited public comments on this proposal.

Comment: A commenter expressed concern regarding the measure's feasibility as CMS requires a minimum random sample size of 200 completed surveys and asked for clarification regarding the proposal for the minimum random sample size. Another commenter expressed concern that lower-volume facilities would be unable to meet the minimum of 300 survey responses. A commenter noted that extrapolation from the results of the 8-month pilot test in the hospital outpatient department shows that only 38 percent of facilities would have reached the threshold of 200 completed surveys over the course of a year. The commenter stated that this indicates that the threshold of 200 completed surveys is not feasible.

Response: Under the Hospital OQR Program, a minimum random sample size of 300 completed surveys is recommended for a population of 1,500 to provide a 95 percent confidence interval and a 90 percent confidence interval for a population of over 10,000

[430] Ahmad, H., & Halim, H. (2017). Determining Sample Size for Research Activities. Selangor Business Review, 2(1), 20–34. Available at *https://sbr.journals.unisel.edu.my/index.php/sbr/article/view/12. Accessed: April 8, 2025.*

[431] Voorhis, C., & Morgan, B. (2007). Understanding Power and Rules of Thumb for Determining Sample Size. Tutorials in Quantitative Methods for Psychology. 3(2), 43–50. Available at *www.doi.org/10.20982/tqmp.03.2.p043. Accessed: April 8, 2025.*

by reducing the standard error (89 FR 94420 through 954421). As ASCs are expected to have less varied populations, we determined the sample size of 200 completed surveys, which aligns with the sample size for the OAS CAHPS survey, is appropriate. The 200 surveys would provide the appropriate balance of ensuring sufficient confidence in the results of the Information Transfer PRO–PM, while reducing the overall burden of the survey for facilities with large patient populations. We note that we would require data to be submitted on all completed surveys for ASCs unable to achieve 200 completed surveys. However, as discussed in section XVII.B.1. of this final rule with comment period, we are not finalizing our proposal to adopt the Information Transfer PRO–PM into the ASCQR Program measure set at this time and therefore we are also not finalizing our proposed data submission and reporting requirements to be applied to PRO–PMs generally.

Comment: A commenter requested clarification on the apparent discrepancy between permitting sampling when sending the Information Transfer PRO–PM survey and the requirement to offer all patients meeting the measure's denominator specifications the opportunity to complete the survey.

Response: If the Information Transfer PRO–PM had been adopted as proposed, we would have required that all patients that meet the measure's denominator specifications have the opportunity to complete the survey. For facilities that received more than 200 completed surveys, the facility would have the option to randomly sample from these surveys for reporting the measure results. The 200 surveys would provide the appropriate balance of ensuring sufficient confidence in the results of the Information Transfer PRO–PM survey, while reducing the overall burden of the survey for facilities with large patient populations.[432] We note that all questions on the survey must be completed to meet the 200-survey minimum. Partially completed surveys should not be counted towards the 200-survey minimum.

After consideration of public comments, we are not finalizing adoption of the Information Transfer PRO–PM for the ASCQR Program at this time, or our proposed data submission and reporting requirements to be applied to PRO–PMs generally.

2. ASCQR Program Extraordinary Circumstances Exception (ECE) Policy

We refer readers to section XIV.D. of this final rule with comment period for our cross-program policy to codify updates to the ECE policy for the ASCQR Program.

D. Payment Reduction for ASCs That Fail To Meet the ASCQR Program Requirements

1. Statutory Background

We refer readers to the CY 2012 OPPS/ASC final rule with comment period (76 FR 74492 through 74493) for a detailed discussion of the statutory background regarding payment reductions for ASCs that fail to meet the ASCQR Program requirements.

2. Policy Regarding Reduction to the ASC Payment Rates for ASCs That Fail To Meet the ASCQR Program Requirements for a Payment Determination Year

The national unadjusted payment rates for many services paid under the ASC payment system are equal to the product of the ASC conversion factor and the scaled relative payment weight for the APC to which the service is assigned. For CY 2026, the ASC conversion factor is equal to the conversion factor calculated for the previous year updated by the productivity-adjusted hospital market basket update factor. The productivity adjustment is set forth in section 1833(i)(2)(D)(v) of the Act. The productivity-adjusted hospital market basket update was the annual update for the ASC payment system for a 5-year period (CY 2019 through CY 2023), which was extended an additional 2 years (through CY 2025) in the CY 2024 OPPS/ASC final rule with comment period (88 FR 81960). As discussed in section XIII. of this final rule with comment period, we are finalizing our proposal to continue using the productivity-adjusted hospital market basket update as the update factor for the ASC payment system for CY 2026. Under the ASCQR Program, in accordance with section 1833(i)(7)(A) of the Act and as discussed in the CY 2013 OPPS/ASC final rule with comment period (77 FR 68499), any annual increase in certain payment rates under the ASC payment system shall be reduced by 2.0 percentage points for ASCs that fail to meet the reporting requirements of the ASCQR Program. This reduction applied beginning with the CY 2014 payment rates (77 FR 68500). For a complete discussion of the calculation of the ASC conversion factor and our finalized proposal to update the ASC payment rates using the inpatient hospital market basket update for CYs 2019 through 2023, we refer readers to the CY 2019 OPPS/ASC final rule with comment period (83 FR 59073 through 59080).

In the CY 2013 OPPS/ASC final rule with comment period (77 FR 68499 through 68500), in order to implement the requirement to reduce the annual update for ASCs that fail to meet the ASCQR Program requirements, we finalized the following policies: (1) to calculate a full update conversion factor and an ASCQR Program reduced update conversion factor; (2) to calculate reduced national unadjusted payment rates using the ASCQR Program reduced update conversion factor that would apply to ASCs that fail to meet their quality reporting requirements for that calendar year payment determination; and (3) that application of the 2.0 percentage point reduction to the annual update may result in the update to the ASC payment system being less than zero prior to the application of the productivity adjustment. The ASC conversion factor is used to calculate the ASC payment rate for services with the following payment indicators (listed in Addenda AA and BB to this final rule with comment period, which are available via the internet on the CMS website): ''A2,'' ''D2,'' ''G2,'' ''P2,'' ''R2'', and ''Z2,'' as well as the service portion of device-intensive procedures identified by ''J8'' (77 FR 68500). We finalized our proposal that payment for all services assigned the payment indicators listed would be subject to the reduction of the national unadjusted payment rates for applicable ASCs using the ASCQR Program reduced update conversion factor (77 FR 68500).

The conversion factor is not used to calculate the ASC payment rates for separately payable services that are assigned status indicators other than payment indicators ''A2'', ''D2'', ''G2,'' ''J8'', ''P2'', ''R2'', and ''Z2.'' These services include separately payable drugs and biologicals, pass-through devices that are contractor-priced, brachytherapy sources that are paid based on the OPPS payment rates, and certain office-based procedures, radiology services, and diagnostic tests where payment is based on the PFS nonfacility PE RVU-based amount, and a few other specific services that receive cost-based payment (77 FR 68500). As a result, we also finalized our proposal that the ASC payment rates for these

[432] Malevanchik L., Wheeler M., Gagliardi K., Karliner L., Shah S.J. (2021). Disparities After Discharge: The Association of Limited English Proficiency and Postdischarge Patient-Reported Issues, The Issues, The Joint Commission Journal on Quality and Patient Safety, 47(12):775–782. Available at *https://doi.org/10.1016/j.jcjq.2021.08.013. Accessed: October 29, 2025.*

services would not be reduced for failure to meet the ASCQR Program requirements because the payment rates for these services are not calculated using the ASC conversion factor and, therefore, are not affected by reductions to the annual update (77 FR 68500).

Office-based surgical procedures (generally those performed more than 50 percent of the time in physicians' offices) and separately paid radiology services (excluding covered ancillary radiology services involving certain nuclear medicine procedures or involving the use of contrast agents) are paid at the lesser of the PFS nonfacility PE RVU-based amounts or the amount calculated under the standard ASC ratesetting methodology. Similarly, in the CY 2015 OPPS/ASC final rule with comment period (79 FR 66933 through 66934), we finalized our proposal that payment for certain diagnostic test codes within the medical range of CPT codes for which separate payment is allowed under the OPPS will be at the lower of the PFS nonfacility PE RVU-based (or technical component) amount or the rate calculated according to the standard ASC ratesetting methodology when provided integral to covered ASC surgical procedures. In the CY 2013 OPPS/ASC final rule with comment period (77 FR 68500), we finalized our proposal that the standard ASC ratesetting methodology for this type of comparison would use the ASC conversion factor that has been calculated using the full ASC update adjusted for productivity. This is necessary so that the resulting ASC payment indicator, based on the comparison, assigned to these procedures or services is consistent for each HCPCS code, regardless of whether payment is based on the full update conversion factor or the reduced update conversion factor.

For ASCs that receive the reduced ASC payment for failure to meet the ASCQR Program requirements, we have noted our belief that it is both equitable and appropriate that a reduction in the payment for a service should result in proportionately reduced coinsurance liability for beneficiaries (77 FR 68500). Therefore, in the CY 2013 OPPS/ASC final rule with comment period (77 FR 68500), we finalized our proposal that the Medicare beneficiary's national unadjusted coinsurance for a service to which a reduced national unadjusted payment rate applies will be based on the reduced national unadjusted payment rate.

In the CY 2013 OPPS/ASC final rule with comment period, we finalized our proposal that all other applicable adjustments to the ASC national unadjusted payment rates would apply in those cases when the annual update is reduced for ASCs that fail to meet the requirements of the ASCQR Program (77 FR 68500). For example, the following standard adjustments would apply to the reduced national unadjusted payment rates: the wage index adjustment; the multiple procedure adjustment; the interrupted procedure adjustment; and the adjustment for devices furnished with full or partial credit or without cost (77 FR 68500). We believe that these adjustments continue to be equally applicable to payment for ASCs that do not meet the ASCQR Program requirements (77 FR 68500).

In the CY 2015 through CY 2025 OPPS/ASC final rules with comment period, we did not make any other changes to these policies. We proposed to continue applying these policies for the CY 2026 reporting period/CY 2028 payment determination and for subsequent years.

We did not receive public comments on these policies, and therefore, we are finalizing as proposed the continuation of these policies for the CY 2026 reporting period/CY 2028 payment determination and for subsequent years.

XVIII. Overall Hospital Quality Star Rating Modification To Emphasize the Safety of Care Measure Group

A. Summary

In the CY 2025 OPPS/ASC final rule with comment period (89 FR 94514 through 94521), we summarized broad public input received on a Request for Information (RFI) discussing potential methodologic modifications to the Safety of Care measure group within the Overall Hospital Quality Star Rating that is published on the provider comparison tool on *Medicare.gov* (*https://www.medicare.gov/care-compare/*). The potential modifications discussed in that RFI aimed to emphasize the contribution of the Safety of Care measure group to the Overall Hospital Quality Star Rating. In that RFI, we also noted our intention to potentially issue additional RFIs or undertake rulemaking on this topic in the future.

Patient safety constitutes a fundamental component of the CMS National Quality Strategy, representing a sustained commitment to fostering optimal health outcomes and ensuring the safest possible care for all patients.[433] As we noted in the CY 2025 OPPS/ASC final rule with comment period (89 FR 94514 through 94521), we believe that increasing the influence of the Safety of Care measure group is a necessary and appropriate methodological change. Patient safety is cornerstone to healthcare delivery and the foundational principle of professional oaths is to ''do no harm.'' Prioritizing safety for both patients and healthcare workers aligns with this fundamental commitment. Considering the public input received and further internal analyses conducted, we proposed to make the following modifications to the Overall Hospital Quality Star Rating methodology: (1) implement a 4-star cap for hospitals in the lowest-performing quartile of the Safety of Care measure group for the 2026 Overall Hospital Quality Star Rating, and (2) implement a blanket 1-star reduction for hospitals in the lowest-performing quartile of the Safety of Care measure group for the 2027 Overall Hospital Quality Star Rating and thereafter. Both the 4-star cap and the blanket 1-star reduction apply to hospitals with at least three measures in the Safety Measure Group.

B. Background

The Overall Hospital Quality Star Rating provides a summary of certain existing hospital quality information on *Medicare.gov*[434] based on publicly available quality measure results reported through CMS' hospital quality measurement programs, by assigning hospitals between 1 and 5 stars, a way that is simple and easy for patients to understand (85 FR 86193). The Overall Hospital Quality Star Rating methodology was developed and is maintained according to the guiding principles of scientific validity, maximizing inclusion of hospitals and measure information, accounting for heterogeneity of available measures and hospital reporting, accommodating changes in the underlying measures, aligning with CMS hospital quality measure programs to the extent feasible, transparency of the methodology, and responsiveness to input from interested parties. The Overall Hospital Quality Star Rating was first introduced and reported on our Hospital Compare website in July 2016 (now reported on Care Compare on *Medicare.gov*) and has been published multiple times. In this rule, for the Overall Hospital Quality Star Rating, the term ''publish'' refers to the public posting of the Overall Hospital Quality Star Rating and ''refresh'' refers to the public posting quality measure and program data via

[433] *https://www.cms.gov/files/document/cms-national-quality-strategy-handout.pdf.*

[434] *https://www.medicare.gov/care-compare/resources/hospital/overall-star-rating.*

Care Compare on *Medicare.gov* or its successor website.

In the CY 2021 OPPS/ASC final rule with comment period (85 FR 86193), we codified the Overall Hospital Quality Star Rating methodology, including several methodology refinements, intended to improve the simplicity and predictability of measure emphasis within the methodology over time, and comparability of ratings among hospitals. We also finalized the inclusion of Veterans Health Administration (VHA) hospitals and Critical Access Hospitals (CAHs) in the Overall Hospital Quality Star Rating. In the CY 2023 OPPS/ASC final rule with comment period (87 FR 72233), we provided additional information on the previously finalized policy to incorporate VHA hospitals and finalized a proposal to amend 42 CFR 412.190 to revise how we would publish the Overall Hospital Quality Star Rating annually. In the CY 2025 OPPS/ASC final rule with comment period (89 FR 94514 through 94521) we summarized public input received on the following potential methodological updates to greater emphasize patient safety in the Overall Hospital Quality Star Rating: (1) Reweighting the Safety of Care Measure Group, (2) Policy-based 1-Star Reduction for Poor Performance on Safety of Care, and (3) Reweighting the Safety of Care measure group combined with a Policy-based Star Rating Cap. We refer readers to section XXIV. (Overall Hospital Quality Star Rating Modification to Emphasize the Safety of Care Measure Group: RFI) of the CY 2025 OPPS/ASC final rule with comment period (89 FR 94514 through 94521) for additional information.

C. Current Overall Hospital Quality Star Rating Methodology (§ 412.190)

Measures reported on the provider comparison tool on *Medicare.gov* [435] that meet the criteria for inclusion in the Overall Hospital Quality Star Rating are organized into five conceptually coherent measure groups: Safety of Care, Mortality, Readmission, Patient Experience (all of which include outcome measures), and Timely and Effective Care (which includes a selection of process measures).

The current Overall Hospital Quality Star Rating methodology includes eight general steps. First, measures are selected from those publicly reported on Care Compare on *Medicare.gov* through certain CMS hospital inpatient and outpatient quality programs. Second, the direction of all included measures that indicate better performance with a lower score are reversed to uniformly reflect that a higher score indicates better performance for all the measures, and all measure scores are standardized to a single, common scale to account for differences in measure score units. Third, measures are arranged into measure groups. Each measure group contains several publicly reported measures to produce a robust measure group score, which is reflective of differences in hospital quality. Fourth, the measure group scores are calculated as a simple average of the measure scores. Measure group scores are then standardized to a common scale, making varying scores comparable. Fifth, the hospital summary score is calculated as a weighted average of the standardized measure group scores. Specifically, each measure group score is multiplied by the assigned weight for that measure group. The weighted measure group scores are then summed up to generate the hospital summary score. If a hospital has no measure scores in a measure group (for example, by not achieving sufficient sample size in any of the measures), the weight is redistributed proportionally across the remaining measure groups. Sixth, minimum reporting thresholds are applied. To receive an Overall Hospital Quality Star Rating, hospitals must report at least three measures in each of at least three measure groups, one of which must be either the Mortality or Safety of Care measure groups. Seventh, peer grouping is applied. Hospitals are grouped into one of three peer groups based on the number of measure groups for which they report at least three measures: a three-measure group peer group, a four-measure group peer group, and a five-measure group peer group. Eighth, a clustering algorithm is applied within each peer group to assign hospital summary scores to Overall Hospital Quality Star Ratings so that 1 star is the lowest and 5 stars is the highest.

For additional details regarding the current methodology, we refer readers to § 412.190(d) and the Overall Hospital Quality Star Rating Methodology Reports, available at *https://qualitynet.cms.gov/inpatient/public-reporting/overall-ratings/resources.*

D. Modification to the Overall Hospital Quality Star Rating Methodology

In the CY 2025 OPPS/ASC final rule with comment period (89 FR 94514 through 94521), we presented three options and analyses (utilizing data from the July 2023 publication of the Overall Hospital Quality Star Rating) for potential methodological updates to emphasize Safety of Care in the Overall Hospital Quality Star Rating and summarized the public comments received. The majority of commenters did not support updating the methodology at that time. While some commenters expressed support for potential changes, there was no consensus on a preferred option (reweighting, the policy-based 1-star reduction, or reweighting combined with the 4-star cap). We refer readers to the CY 2025 OPPS/ASC RFI (89 FR 94514 through 94521), where we detailed the importance of prioritizing Safety of Care within the Overall Hospital Quality Star Rating.

Following the publication of that final rule, we conducted further internal analyses utilizing updated data from the July 2024 publication of the Overall Hospital Quality Star Rating (the most recent publicly released results as of the writing of the CY 2026 OPPS/ASC proposed rule) to reassess the correlation between the Safety of Care measure group and performance in the Overall Hospital Quality Star Rating.

To receive an Overall Hospital Quality Star Rating, hospitals must have at least three measures in each of at least three measure groups, one of which must be Mortality or Safety of Care. However, because the application of minimum reporting thresholds and peer grouping assignment occur strictly after the calculation of measure group scores and overall summary scores, any hospital with at least one measure in any group will have a measure group score for that group—that is, once a hospital meets the Overall Hospital Quality Star Rating reporting threshold, all measure groups for which it has any measure scores are included in its rating. In other words, a hospital with one or two Safety of Care measures can still receive an Overall Hospital Quality Star Rating if it still has at least three measures in Mortality and in two of the other measure groups; in this case, the hospital would still receive a Safety of Care measure group score based on the one or two measures it does have. Only a hospital qualifying for an Overall Hospital Quality Star Rating with zero Safety of Care measures would not have a Safety of Care measure group score.

There were 2,847 hospitals that met the criteria to receive an Overall Hospital Quality Star Rating in 2024. Among the 2,847 rated hospitals, 2,803 (99 percent) had at least one Safety of Care measure and therefore received a Safety of Care measure group score, while 2,475 (87 percent) had at least three Safety of Care measures. Our analysis showed that hospitals in the lowest-performing quartile of the Safety of Care measure group tended to receive lower Overall Hospital Quality Star

[435] *https://www.medicare.gov/care-compare/.*

Ratings (being more likely to receive 1 or 2 stars and less likely to receive 4 or 5 stars than other hospitals) (Table 141). However, some hospitals performed in the lowest quartile (lowest-performing 25 percent, indicating poor Safety of Care performance relative to other hospitals) of the Safety of Care measure group and still received a 5-star rating. Of the 2,847 hospitals that received an Overall Hospital Quality Star Rating, 695 hospitals scored in the lowest quartile of the Safety of Care measure group, of which 595 hospitals had at least three Safety of Care measures. Of these 595 hospitals, 14 received a 5-star rating, representing 0.5 percent of all rated hospitals (Table 141). These 14 hospitals attained a 5-star rating despite having the lowest quartile Safety of Care measure group performance by achieving high scores across the other measure groups.

TABLE 141: SAFETY PERFORMANCE OF HOSPITALS BY STAR RATING (3+ SAFETY MEASURES)

	Safety Score Range	N	1 Star	2 Stars	3 Stars	4 Stars	5 Stars
Lowest Quartile	-10.06, 0.34	695	156 (22%)	237 (34%)	199 (29%)	86 (12%)	17 (2%)
Lowest Quartile (3+ measures)	-2.94, -0.34	595	136 (23%)	199 (33%)	175 (29%)	71 (12%)	14 (2%)
Quartiles 2-4	-0.33, +2.43	2,152	121 (6%)	358 (17%)	629 (29%)	766 (32%)	381 (17%)
All Hospitals	-10.06, +2.43	2,847	277 (10%)	595 (21%)	828 (29%)	766 (27%)	381 (13%)

As we noted in the CY 2025 OPPS/ASC final rule with comment period (89 FR 94514 through 94521), we believe that a methodological change to increase the importance of the Safety of Care measure group is appropriate. This change is informed by landmark reports on healthcare quality,[436] [437] along with the COVID–19 public health emergency, which revealed persistent patient and workforce safety risks and system vulnerabilities.[438] In response, Federal efforts—such as the National Action Alliance to Advance Patient and Workforce Safety and recommendations from the President's Council of Advisors on Science and Technology—are reinforcing patient safety as a national priority, aligned with CMS' initiatives like the National Quality Strategy and the Universal Foundation.[439] [440] [441] In particular, addressing the issue of hospitals receiving a high Overall Hospital Quality Star Rating despite performing in the lowest quartile of the Safety of Care measure group is critical to achieving CMS' vision of emphasizing and aligning the importance of patient safety across CMS programs. We therefore proposed to make the following two-stage methodologic updates to § 412.190(a)(2) and adding a new paragraph (a)(3)); the first stage would be a narrow but focused transitional step to promptly address the most pressing concern that hospitals in the lowest-performing quartile of the Safety of Care measure group achieve the highest possible Overall Hospital Quality Star Rating while allowing hospitals and interested parties more time to prepare for the second stage, which will increase the impact of the Safety of Care measure group across all hospitals more broadly.

We also proposed changes to paragraphs (b)(1), (e) and (f) to reflect updates to the regulation text uses of Overall Hospital Quality Star Rating and Care Compare on *Medicare.gov* language. In addition, we proposed removing the reference to ''as defined in § 400.200 of this chapter.''

For the methodologic updates:

Stage 1: Implement a 4-Star Cap for Hospitals in the Lowest Quartile of the Safety of Care Measure Group Performance Beginning in 2026 (§ 412.190(d)(9)(i))

We proposed to limit hospitals in the lowest quartile of Safety of Care (based on at least three measure scores) to a maximum of 4 stars out of 5. The Overall Hospital Quality Star Rating methodology would be unchanged through step eight with the exception of redesignating paragraph (d)(5) as (6), and paragraph (d)(6) as (5) (assignment of star ratings using K-means clustering as described previously in this section), with the cap being applied as a new ''step nine'': Any hospital that is assigned 5 stars in step eight but has a lowest quartile Safety of Care score (based on at least three Safety of Care measures) would be reassigned to 4 stars.

Using 2024 Overall Hospital Quality Star Rating data, implementing a cap of 4 stars in the lowest quartile of Safety of Care with at least three safety measures would result in 14 hospitals, out of 2,847 hospitals, receiving a lower Overall Hospital Quality Star Rating. This update provides a targeted, direct, and timely solution to the acute concern of hospitals receiving the highest possible 5-star rating despite performing in the lowest quartile of the Safety of Care measure group. Further, the implementation timeline reflects a deliberate and proactive effort to act swiftly and strategically, reinforcing patient safety as a national priority.

[441] Fleisher, L.A., Schreiber, M., Cardo, D., Srinivasan, A. (2022). Health Care Safety during the Pandemic and Beyond—Building a System That Ensures Resilience. The New England Journal of Medicine, 386(7): 609–611. DOI: 10.1056/NEJMp2118285.

We acknowledge in the CY 2025 OPPS/ASC final rule with comment period that only applying a 4-star maximum to hospitals in the lowest quartile of Safety of Care with at least three safety measures would have less impact than other options discussed in that rule. However, to promptly address the most pressing concern, the proposed 4-star maximum functions as an interim step, allowing hospitals and interested parties additional time to prepare for Stage 2:

Stage 2: Implement a Blanket 1-Star Reduction for Hospitals in the Lowest Quartile of Safety of Care Measure Group Performance for the 2027 Overall Hospital Quality Star Ratings and Later Years (§ 412.190(d)(9)(ii))

We proposed to reduce the Overall Hospital Quality Star Rating of any hospital in the lowest quartile of Safety of Care (based on at least three measure scores) by 1 star, to a minimum 1-star rating. The Overall Hospital Quality Star Rating methodology would be unchanged through step eight (assignment of star ratings using K-means clustering), with the blanket reduction replacing the 4-star cap in the new step nine: any hospital assigned a 2, 3, 4, or 5-star rating in step eight, but that has a lowest quartile Safety of Care score (based on at least three Safety of Care measures) would be reduced to 1, 2, 3, or 4 stars, respectively.

Using 2024 Overall Hospital Quality Star Rating data, applying a 1-star reduction for all hospitals in the lowest quartile of Safety of Care with at least three safety measures would result in 459 hospitals, out of 2,847 hospitals, receiving a lower Overall Hospital Quality Star Rating. This update would emphasize safety by applying a higher standard for patient safety to hospitals across a broad range of overall performance, rather than limiting it to the few 5-star hospitals in the lowest quartile of Safety of Care (with at least three Safety of Care measures). Since the minimum possible Overall Hospital Star Rating will remain 1 star, hospitals already getting one star would not get a further star reduction and therefore would effectively be exempt from this adjustment consistent with established assignment of ratings between 1–5 whole stars (85 FR 86193). This approach also aligns with CMS' overarching objective of advancing patient safety and reinforcing our commitment to continuous improvement across the healthcare system.

When determining the quartiles of Safety of Care measure group scores, we will use the distribution from all hospitals with at least 1 Safety of Care measure whether they qualify for an Overall Hospital Quality Star Rating, in alignment with the guiding principle of the Overall Hospital Quality Star Rating of inclusiveness of hospital and measure information.

Using the data for the July 2024 Overall Hospital Quality Star Rating, we evaluated the proportion of hospitals that would be impacted by the proposed methodological changes, stratified by various hospital characteristics (Table 142). As previously noted, a larger proportion of hospitals would be impacted by the blanket 1-star reduction (Stage 2 proposed methodological change) compared to the targeted 4-star cap (Stage 1 proposed methodological change). Our simulation revealed that teaching hospitals, non-safety-net hospitals, VHA hospitals, non-CAHs, large hospitals (100+ beds), urban hospitals, and non-specialty hospitals could be more likely to observe a change in Overall Hospital Quality Star Rating by both Stage 1 and Stage 2 proposed methodological changes than their counterparts. We recognize that with only 14 hospitals experiencing a change in Overall Hospital Quality Star Rating by the Stage 1 proposed methodological change, the general ability of this observation is limited. In part, this is because these hospitals are more likely to receive an Overall Hospital Quality Star Rating and have three or more Safety of Care measures than their non-teaching, safety-net, non-VHA, CAH, small, rural, and specialty counterparts (Table 142). However, these differences in hospital characteristics are not strongly determinative of a hospital's overall rating, with hospitals of any characteristic being capable of receiving either high or low ratings.

BILLING CODE 4120–01–P

TABLE 142: IMPACT ASSESSMENT OF METHODOLOGICAL ADJUSTMENTS BY HOSPITAL CHARACTERISTICS, JULY 2024 SIMULATION

Characteristic	N (%)	N Rated (Row %)	N Rated & 3+ Safety measures (%)	N Rated & 3+ measures & Q1 Safety (%)	N Capped*^ (%) (Stage 1)	N Blanket 1-Star Reduction* (%) (Stage 2)

*Capped is the number and proportion of hospitals impacted by the d 4-star cap for rated hospitals reporting three or more safety measures and performing in the lowest quartile of Safety of Care measure group. Star Reduction is the number and proportion of hospitals impacted by the blanket 1-Star reduction for rated hospitals reporting three or more safety measures and performing in the lowest quartile of Safety of Care measure group.

^ Certain hospital characteristics (teaching status, safety net, status bed size, geographic location) are only available for non-VHA hospitals.

BILLING CODE 4120–01–C

We received public comments on these proposals. The following is a summary of the comments we received and our responses.

Comment: Many commenters support our proposal to emphasize the Safety of Care measure group within the Overall Hospital Quality Star Rating methodology utilizing a two-stage approach, which would implement a 4-star cap in CY 2026 for hospitals in the lowest quartile of Safety of Care measure group performance (and with at least three Safety of Care measures), followed by a uniform 1-star reduction for hospitals in the lowest quartile of Safety of Care measure group performance (and with at least three Safety of Care measures) beginning in CY 2027. Commenters agreed that patient safety is foundational to assessing hospital quality and should be heavily emphasized in the Overall Hospital Quality Star Rating. Commenters stated increasing the weight of Safety of Care aligns the Overall Hospital Quality Star Rating with patient priorities and would encourage hospitals to invest in safety improvements, thereby increasing transparency and accountability across healthcare systems, and incentivizing improvements in patient safety. One commenter anticipates the proposed updates will support the goals of Pay for Performance programs (like Hospital-Acquired Condition Reduction Program (HACRP)), drive improvements across other Overall Hospital Quality Star Rating measure groups and encourage policies that improve patient satisfaction and promote timely care, while maintaining a strong focus on quality metrics and transparency.

Response: We thank commenters for their support of the proposed modification to the Overall Hospital Quality Star Rating methodology which aligns with our vision to emphasize the importance of patient safety across CMS programs.

Comment: In addition to general support, commenters offered several specific suggestions and considerations. Commenters supported CMS's efforts to strengthen the role of patient safety in the Overall Hospital Quality Star Rating and urged the agency to proceed thoughtfully, with continued interested party engagement and a focus on equitable, transparent implementation. A few commenters recommended that CMS conduct additional testing or simulation of the proposed methodology before full implementation, to allow for refinement and avoid confusion or disincentivizing reporting. A few commenters requested more information and early notification on hospital performance on the Safety of Care measure group to support course correction ahead of public reporting. One commenter highlighted the potential for disproportionate impact on small, rural, and safety-net hospitals and encouraged CMS to monitor these effects during implementation. One commenter expressed concern that hospitals could avoid submitting Safety of Care measures to maintain a higher Overall Hospital Quality Star Rating and recommended awarding a 4- or 5-star rating only to hospitals that submit at least three measures from the Safety of Care group.

A number of commenters suggested alterations to the proposed policy. A few commenters recommended capping hospitals in the lowest quartile of Safety of Care at no more than 2 stars or prohibiting 4- or 5-star ratings altogether, for hospitals with poor patient safety performance. These commenters emphasized that facilities with a pattern of avoidable harm should not be classified as ''average'' or ''above average'' in overall quality. Additionally, one commenter advocated for CMS to ensure that the Overall Hospital Quality Star Rating is reported at the individual facility (CCN) level, rather than at the health system level, to ensure that patients receive accurate and meaningful information about the specific hospitals where they receive care.

A few commenters encouraged CMS to support data infrastructure improvements, such as automating quality reporting, aligning state reporting standards, and exploring use of the Trusted Exchange Framework and Common Agreement (TEFCA) for data sharing. One commenter noted the role of occupational therapy in reducing patient harm and improving Safety of Care outcomes and encouraged CMS to consider how multidisciplinary interventions contribute to improved patient safety performance.

Response: We thank commenters for supporting our proposal. We appreciate commenters' suggestions to conduct additional testing before implementation and to provide additional Safety of Care measure group information; however, we disagree that additional testing is needed. We refer commenters to the testing results in this rule, as well as the results calculated using the July 2023 Overall Star Rating as reported in the CY 2025 OPPS/ASC final rule with comment period (89 FR 94514 through 94521) which produced similar findings. We also appreciate the concern expressed regarding small, rural, and safety-net hospitals. We note that in our July 2024 Overall Hospital Quality Star Rating simulated results, hospitals with these characteristics were less likely to observe a change in their rating through Stage 1 and Stage 2 compared to their counterparts (90 FR 33787). We intend to monitor how different types of hospitals, such as small, rural, and safety-net hospitals, may be affected by this methodology update, as we have throughout the ongoing maintenance of the Overall Hospital Quality Star Rating.

We appreciate the commenter's suggestion to report the Overall Hospital Quality Star Rating at the CCN (facility) level rather than the health system level; while this change is not feasible at this time, CMS will consider future reevaluation work related to this suggestion. As noted in the CY 2021 OPPS/ASC final rule with comment period (85 FR 85866), ''hospitals sharing the same CCN must combine data collection and submission across their multiple campuses for all clinical measures for public reporting purposes. Under our current policy, we publish quality data by the corresponding hospital CCN and indicate instances where data from two or more hospitals are combined to form the publicly reported measures on the Hospital Compare website and the successor Care Compare website. In the CY 2014 OPPS/ASC proposed rule (*78 FR 43645*), we noted that in a situation in which a larger hospital has taken over ownership of a smaller hospital, the smaller hospital's CCN is replaced by the larger hospital's CCN (the principal CCN). For data display purposes, we only display data received under the principal CCN. If both hospitals submit data, those data are not distinguishable in the warehouse [107] and are calculated together as one hospital'' (85 FR 86182).

We appreciate the commenter's concern that hospitals may want to avoid reporting unfavorable Safety of Care results to avoid receiving a lower Overall Hospital Quality Star Rating. The Overall Hospital Quality Star Rating explicitly includes only measures for which all hospitals are required to collect and submit data by CMS's hospital quality reporting & payment programs. Each underlying measure has established thresholds (such as minimum case count) for a hospital's score to be publicly reported to ensure reliable measurement; if a hospital does not meet the threshold for a measure, its score is not publicly reported. In this case its score is considered ''missing'' and its performance does not factor into its Overall Hospital Quality Star Rating. We note this determination is made exclusively by CMS after all data are submitted; in general, hospitals cannot pick and choose which measures of the Overall Hospital Quality Star Rating they submit, and cannot choose to have

any measure withheld from public reporting.

We thank commenters for their suggestion to cap hospitals in the lowest quartile of Safety of Care at no more than 2 stars or prohibiting 4- or 5-star ratings altogether to prevent these hospitals from being categorized as ''average'' or ''above average'' in overall quality. We emphasize that while this update will increase the emphasis on Safety of Care, the Overall Hospital Quality Star Rating is still intended to be a summary of overall quality, and other measure groups will still contribute meaningfully to a hospital's rating.

We appreciate the comment regarding TEFCA. It is not addressed here, as it is out-of-scope for this methodology update. We also appreciate the commenter's suggestion to consider the role of occupational therapy in reducing patient harm and how other clinical interventions can improve Safety of Care. This proposed Overall Hospital Quality Star Rating methodology update is meant to complement and support other efforts within CMS to drive improvements in patient safety, most notably the HACRP. We believe this update will further encourage hospitals to explore such means to improve safety.

Comment: A few commenters discussed specific concerns with the potential disproportionate impact of the proposed approach on small and rural hospitals. One commenter explained that these hospitals often have limited Safety of Care measures available for reporting, making the Safety of Care measure group heavily weighted in their Overall Hospital Quality Star Rating. A few commenters stated that emphasis on this measure group would skew overall ratings and diminish the value of the system for small and rural hospitals. A few commenters noted that rural facilities also face resource constraints and challenges related to staffing and infrastructure, which may force them to divert resources away from other critical measure groups to prioritize Safety of Care. One commenter noted that rural hospitals already contend with physician shortages, maternity care deserts, and ongoing obstetric unit closures, and cautioned that capping or reducing these hospitals' Overall Hospital Quality Star Rating could exacerbate rural health disparities, particularly in maternal health outcomes. One commenter noted that applying a uniform star rating reduction across all hospitals could misrepresent performance and deepen existing disparities in how rural hospital quality is perceived. A few commenters recommended exempting hospitals that report only one or two Safety of Care measures from the proposed 1-star reduction and instead adopt a stratification or rural-specific risk adjustment to avoid disadvantaging these hospitals.

Response: We thank commenters for their concerns regarding the impact of the proposed update to the Overall Hospital Quality Star Rating methodology for small and rural hospitals. As demonstrated in Table 142, there are high, average, and low performers of all hospital types both in Safety of Care and in the Overall Hospital Quality Star Rating more generally. As demonstrated in Table 142, using July 2024 simulation data, 1 percent of CAHs were rated and reported at least three Safety of Care measures compared to 75 percent of non-CAH's. Similarly, 35 percent of rural hospitals were rated and reported at least three Safety of Care Measures compared to 75 percent of urban hospitals. Furthermore, comparing the ''N Rated & 3+ Safety measures'' and ''N Rated & 3+ measures & Q1 Safety'' columns in Table 142, shows that among those meeting the criteria outlined in those columns, there were close to 25 percent of hospitals performing in the bottom quartile of Safety of Care regardless of hospital type. Therefore, there is not a strong association between hospital type and actual Safety of Care performance.

Comment: A few commenters suggested that hospitals with greater patient volumes scored on more Safety of Care measures (particularly larger facilities such as teaching hospitals or VHA hospitals) may have higher potential for score reductions, not because of poor quality, but because they are more exposed to scoring variation; or, conversely, that hospitals without enough data to calculate performance on Safety of Care measures may avoid Overall Hospital Quality Star Rating reductions altogether.

Response: We thank commenters for their concerns regarding the potential impact of the proposed update to the Overall Hospital Quality Star Rating methodology for larger hospitals. As demonstrated in Table 142, there are high, average, and low performers of all hospital types both in Safety of Care and in the Overall Hospital Quality Star Rating more generally. While structural differences may exist for larger, higher-acuity hospitals (such as VHA hospitals and academic medical centers) that could make improved Safety of Care performance more difficult to achieve, we note that these hospitals do tend to both have more Safety of Care measures available and larger volumes for the measures they do have, both factors that increase measure reliability and reduce the possibility of score reductions based on chance variation.

Comment: A few commenters stated that hospitals caring for a significant proportion of high-acuity and complex patients (such as teaching hospitals and VHA hospitals) could be disproportionately affected by higher numbers of adverse events captured in the Safety of Care measures, even if overall quality is high. One commenter suggested that Safety of Care measures may not sufficiently account for clinical complexity, particularly for large tertiary hospitals and those performing high volumes of complex cases, which could obscure meaningful quality differences and discourage hospitals from treating high-risk patients. The commenter recommended implementation of additional safeguards such as more detailed risk adjustment, procedure-specific stratification, clear definitions of complications, and a peer review or appeals process before automatically reducing a hospital's rating. One commenter suggested that a blanket 1-star reduction might disproportionately affect institutions caring for vulnerable populations such as: hospitals serving older adults, patients with chronic conditions, or communities with limited access to post-acute care. The commenter was concerned this could suppress patient volume, exacerbate disparities, and create challenges in recruiting clinical talent, ultimately undermining patient safety outcomes.

Response: We thank commenters for their concerns regarding the impact of the proposed update to the Overall Hospital Quality Star Rating methodology for hospitals with higher-acuity or more clinically complex patients. We note that all individual measures comprising the Safety of Care group are already risk adjusted for clinical factors at the measure level prior to reporting, and thus such differences are already implicitly factored into the Safety of Care measure group score. For example, ''calculations for the Hospital-Associated Infection (HAI) measures adjust for differences in the characteristics of hospitals and patients using a Standardized Infection Ratio.'' [442] This increased emphasis on Safety of Care supports other ongoing efforts within CMS to promote patient safety, chiefly including the HACRP,

[442] Centers for Medicare & Medicaid Services. (n.d.). Complications & deaths. Provider Data Catalog. *https://data.cms.gov/provider-data/topics/hospitals/complications-deaths#complications.*

and aligns with CMS's intent to incentivize improvements in patient safety for all patients. Finally, regarding a commenter's suggestion to implement a peer review or appeals process before applying the 4-star cap or 1-star reduction, we do not believe a peer review or an appeals process is necessary since hospitals can use preview periods to review the methodology and their results, as well as reach out with questions. Since the Overall Hospital Quality Star Rating is calculated using individual measures publicly reported via Care Compare on *Medicare.gov*, hospitals can use established processes under each program to review and correct individual measure scores. Given that the Overall Hospital Quality Star Rating is published annually, there are regular opportunities for hospitals to improve their performance.

Comment: A few commenters suggested that reputational penalties for facilities could exacerbate financial consequences, particularly as the Overall Hospital Quality Star Rating is increasingly tied to payer contracts and value-based payment programs.

Response: We appreciate commenters' concerns regarding reputational and financial impacts of the Overall Hospital Quality Star Rating. We want to emphasize that the Overall Hospital Quality Star Rating is a summary of quality measurements that are already publicly reported as part of CMS hospital quality reporting & payment programs, as a simple, easily interpreted score to assist consumers and the public in assessing a hospital's overall quality. While the individual measures comprising the Overall Hospital Quality Star Rating factor into payment determination of those quality programs, the Overall Hospital Quality Star Rating itself does not have any direct impact on CMS payment.

Comment: Several commenters opposed adopting a quartile-based methodology for categorizing performance in the Safety of Care measure group. Commenters stated that the quartile approach is statistically flawed, arbitrary, and not aligned with the purpose of assessing hospital safety. A few commenters noted that quartiles reflect only relative ranking, not performance against an absolute or meaningful standard. A few commenters noted under this method, hospitals may be labeled as ''low performers'' even if they demonstrate strong safety outcomes, while hospitals ranked in the top quartile may not necessarily meet high safety benchmarks. A few commenters expressed that this creates volatility, as a hospital's placement could shift between quartiles based on small changes in peer performance rather than meaningful changes in its own outcomes.

A few commenters proposed replacing the quartile-based approach with a system based on fixed, evidence-based benchmarks that reflect meaningful differences in performance, rather than rankings relative to peers. A few commenters recommended using thresholds based on standard deviations below the mean, which would limit 1-star reductions to a smaller proportion of hospitals and more precisely target those with significantly lower Safety of Care performance. A few commenters highlighted that the impact of the proposed quartile-based 1-star reduction would be disproportionately broad. They stated that reducing ratings for nearly 20 percent of hospitals is excessive relative to the identified issue and supported alternative statistical methods to more precisely identify poor performers or outliers.

A few commenters also identified a concern with the calculation of the lowest quartile as described in the CY 2026 OPPS/ASC proposed rule. One commenter noted that the calculation included hospitals with fewer than three Safety of Care measures in the distribution and suggested that only hospitals with at least three measures be considered when calculating the quartiles to produce a more accurate assessment of performance, reduce volatility, and increase comparability in future public reporting.

Response: We thank commenters for expressing their concerns regarding the quartile-based methodology for categorizing performance in the Safety of Care measure group. We acknowledge that using a quartile-based approach for the 1-star reduction could sometimes result in hospitals receiving a lower Overall Hospital Quality Star Rating even if overall performance improved. We reiterate the foundational principle of ''do no harm'' in our rationale for making this methodology update to the Safety of Care measure group. The quartile approach to define poor performance emphasizes patient safety globally; all hospitals should be working to produce safer outcomes and minimize adverse events in their facilities. Additionally, we retire ''topped out'' measures on which most hospitals have come to perform highly (in which case such measures would no longer be eligible for the Overall Hospital Quality Star Rating). Currently no Safety of Care measures approach topped-out status, indicating continued room for improvement.

We appreciate commenters' suggestions to replace the quartile-based approach with a fixed benchmark or statistical outlier approach, as well as suggestions that the quartile-based approach would impact too many hospitals. We believe the quartile-based approach in conjunction with the requirement of at least three Safety of Care measures provides a suitable balance between emphasizing Safety of Care broadly across all hospitals (not just at a few extremely low performers) while also ensuring that only hospitals with demonstrably below-average performance would be subject to Overall Hospital Quality Star Rating reduction.

We acknowledge commenters' concern that, in the context of the 1-star reduction methodology update, the quartiles are inclusive of all hospitals that report at least one Safety of Care measure (even though only hospitals that report at least three Safety of Care measures will be subject to the 1-star reduction). We base the quartile calculation on the full Safety of Care measure group score distribution in order to be inclusive of the national Safety of Care landscape (including hospitals with Safety of Care data that do not receive an Overall Hospital Quality Star Rating). This is in alignment with the Overall Hospital Quality Star Rating's guiding principles of inclusiveness of quality information. We also note that this accommodates potential for collective improvement—if hospitals with at least three Safety of Care measures improve in performance relative to those with one or two, then fewer than 25 percent of those with at least three measures would find themselves in that lowest overall quartile. Conversely, if using only rated hospitals with at least three Safety of Care measures for the distribution, by definition 25 percent of all such hospitals would be subject to reduction.

Comment: Several commenters raised concerns that this proposed update to the Overall Hospital Quality Star Rating overvalues the safety relative to other aspects of hospital quality that are also important to patients. Additionally, commenters stated that singling out the Safety of Care measure group for additional emphasis over the other measure groups does not accurately reflect overall hospital quality.

A few commenters also stated concern that the Overall Hospital Quality Star Rating already struggles to summarize diverse domains of care into a single composite score and the proposed updates may exacerbate these limitations. Commenters stated that further increasing the influence of the Safety of Care measure group would

undermine the balance among measure groups, potentially downgrading hospitals that perform well in other areas of quality. A few commenters stated that this could misrepresent overall quality, unfairly penalize hospitals addressing isolated safety issues, and erode public trust in the ratings.

A few commenters expressed concern that this approach could distort results, limit the value of the ratings for patients, and fail to drive meaningful performance improvement, particularly given that many hospitals already receive two- or three-star ratings that signal a need for improvement in multiple respects.

Response: We appreciate commenters' concern that the proposed methodology updates could exacerbate perceived limitations of the Overall Hospital Quality Star Rating, and acknowledge concerns related to the general concept of the Overall Hospital Quality Star Rating serving as a quality summary based on a diverse set of measures.

We also appreciate commenters' concerns regarding the proposed methodology updates and how emphasizing the Safety of Care measure group through the Star Cap and 1-star reduction in turn deemphasizes the influence of the other four measure groups. We note that even hospitals in the lowest quartile of Safety of Care can still achieve ratings as high as 4 stars in this proposal based on strong performance in the other measure groups; while this proposed update increases the emphasis on Safety of Care relative to other measure groups, it does not drastically alter the overall approach.

We reiterate that ''. . . Federal efforts—such as the National Action Alliance to Advance Patient and Workforce Safety and recommendations from the President's Council of Advisors on Science and Technology—are reinforcing patient safety as a national priority, aligned with CMS' initiatives like the National Quality Strategy and the Universal Foundation.[265 266 267].'' The proposed methodology updates better align the Overall Hospital Quality Star Rating with other CMS efforts.

Patients are advised through Care Compare on *Medicare.gov* to consider a variety of factors beyond the Overall Hospital Quality Star Rating when choosing a hospital. The Overall Hospital Quality Star Rating is intended to serve as a complementary tool to existing efforts (such as the Hospital Consumer Assessment of Healthcare Providers and Systems (HCAHPS) star ratings (implemented in April 2015)) and will not replace the reporting of any individual quality measures.

Comment: A few commenters raised concerns that the Safety of Care measure group is based on a limited set of measures, which could reduce comparability across hospitals and may not fully capture the complexity of patient safety performance. A few commenters noted that the current measure set is narrow in scope and predominantly inpatient-focused, making the Safety of Care measure group less applicable to many hospitals; particularly low-volume rural and small hospitals may be unable to report on many of the included measures. One commenter encouraged CMS to identify patient safety measures that are relevant to a broader set of hospitals, including outpatient and observation settings. Another commenter recommended adding additional measures that capture broader dimensions of safety, such as patient safety indicators (PSIs), perinatal and maternal health measures, and Hospital Harm measures (contingent upon validation and interested party vetting). The commenter also recommended breaking down the PSI–90 composite into its individual component measures and weighing them appropriately to provide a more nuanced view of patient safety. Another commenter noted that the composition of the Safety of Care measure group is subject to change as CMS adds or removes measures from the various hospital quality reporting & payment programs.

Response: We thank commenters for their feedback on the composition of the Safety of Care measure group. As noted, the Overall Hospital Quality Star Rating summarizes existing measures that are already publicly reported via Care Compare on *Medicare.gov* as required by CMS. Accordingly, new measures are only added to the Overall Hospital Quality Star Rating after being first added to Care Compare on *Medicare.gov* (the requirements and timing of which are established by the relevant CMS program) and meeting established inclusion criteria. The Overall Hospital Quality Star Rating methodology is designed and intended to be flexible and accommodate changes to the measures publicly reported through Care Compare on *Medicare.gov* as the universe of measures required and reported via these CMS programs evolves.

Comment: A few commenters also emphasized that hospitals may be evaluated on different subsets of measures, which they believed undermined comparability and fairness in Overall Hospital Quality Star Rating. One commenter raised specific concerns regarding the comparability of ratings between large hospitals (with more Safety of Care measures) and small hospitals (with fewer).

Several commenters urged CMS to refine its approach by incorporating improved risk adjustment and stratification and ensuring that modifications to the Overall Hospital Quality Star Rating methodology do not unfairly affect hospitals based on facility type, patient acuity, or mission. Several commenters criticized the lack of adequate risk adjustment for social and demographic factors, noting that hospitals serving higher-risk, underserved, or rural populations could be unfairly affected despite delivering high-quality care. Commenters stated that this could lead to unintended consequences, such as exacerbating disparities or discouraging care for vulnerable populations.

Response: We thank commenters for their concerns regarding comparability of the Overall Hospital Quality Star Rating due to variation in hospital size and other contextual factors. We would like to note that ''peer grouping'' [Step 7 in the methodology] hospitals based on the number of measure groups for which they report at least three measures is intended to improve comparability of Overall Hospital Quality star ratings by accounting for differences in measure information. Peer grouping is applied independent of the measure and measure group reporting threshold and would therefore not result in any reduction in the number or type of hospitals receiving star ratings or the number or type of measures or measure groups contributing to hospital scores'' (85 FR 86232). Therefore, peer grouping ensures hospitals are compared to other hospitals with similar quality measure information on an ''apples-to-apples'' basis. Furthermore, we acknowledge concerns that not all hospitals are scored on the same set of Safety of Care measures but note that the current methodology is designed to accommodate such differences in alignment with our guiding principle of inclusiveness of hospitals and measure information. In other words, the intention of the Overall Hospital Quality Star Rating is to summarize quality information that each hospital does in fact have publicly available, with each measure in a given group reflecting a common underlying construct.

We also thank commenters for their suggestions related to risk adjustment for social and demographic factors. As noted in the 2021 OPPS/ASC final rule with comment period, ''In the past, we have not stratified or adjusted any of the

measures, measure groups, summary scores, or star ratings by social risk factor variables within the Overall Hospital Quality Star Rating methodology, primarily based on the original guiding principles of the Overall Hospital Quality Star Rating. The Overall Hospital Quality Star Rating is meant to summarize the existing quality measure information that is publicly reported through CMS programs, including Hospital IQR Program, Hospital OQR Program, HRRP, HAC Reduction Program, and Hospital VBP Program, on Hospital Compare or its successor websites. Individual measures undergo rigorous development and reevaluation processes under each program that include extensive analytic testing and interested parties engagement. As such, individual measure methodologies as specified under each program, including approaches to risk adjustment, are included within the Overall Star Rating. As measure data and methodologies are updated under each of the programs, they are subsequently reflected within the Overall Star Rating methodology'' (85 FR 86218).

Comment: Several commenters suggested the proposal is methodologically flawed and not proportional to the issue it seeks to address. One commenter emphasized that the changes are being driven by a narrow concern affecting only 14 hospitals (0.5 percent of rated facilities) and do not justify a sweeping modification to the entire Overall Hospital Quality Star Rating framework. The commenter stated that the Overall Hospital Quality Star Rating system already oversimplifies hospital quality and that further emphasizing a single domain, particularly through penalties, risks distorting the meaning of the rating and diminishing its usefulness to patients.

A few commenters stated that the proposal would not lead to meaningful safety improvements and may instead confuse patients by implying that a lower Overall Hospital Quality Star Rating indicates poor safety, when the methodology may not support that conclusion. One commenter urged CMS to reconsider the proposed approach in favor of one that is more equitable, transparent, and methodologically sound.

Response: We thank commenters for their concern regarding whether the proposed Overall Hospital Quality Star Rating methodology updates adequately address the overall CMS goal of prioritizing patient safety across programs. We would like to highlight that, while eliminating the possibility of hospitals achieving a 5-star rating despite being in the lowest quartile of Safety of Care is part of the intent of this update, it is not the sole purpose; through the Stage 2 methodology update (1-star reduction), we are recognizing the broader Federal effort to reinforce patient safety as a national priority across hospitals more globally.

We appreciate a commenter's concern that the Overall Hospital Quality Star Rating oversimplifies hospital quality and that emphasizing Safety of Care distorts the intention of the Overall Hospital Quality Star Rating and diminishes its usefulness. However, we disagree and note that the Overall Hospital Quality Star Rating has always been intended to be an accessible, easily interpreted summary of available hospital quality information. Established measure groups and respective weightings were developed and maintained with interested parties, expert and public input upholding an Overall Hospital Quality Star Rating guiding principle of transparency.

We appreciate commenters' concern that some consumers may equate a lower Overall Hospital Quality Star Rating with poor Safety of Care performance. While it is true there will be cases in which a hospital receives a low Overall Hospital Quality Star Rating despite very good Safety of Care performance, this can be achieved only by having consistently poor performance across the other measure groups. We intend the Overall Hospital Quality Star Rating to remain a summary of all of a hospital's quality information; while this update will increase the emphasis on Safety of Care, the other measure groups will remain integral in determining a hospital's ultimate rating.

Comment: A few commenters encouraged CMS to adopt a more incremental and transparent approach to implementing the proposed methodologic updates to the Overall Hospital Quality Star Rating. Commenters expressed concerns about the timing and phased approach to implementing the proposed changes, recommending that CMS delay the proposal to allow hospitals sufficient time to respond and improve. A few commenters urged CMS to adopt a forward-looking approach to implementation, recommending that the proposed changes, particularly the star cap in 2026 and 1-star reduction in 2027, be delayed until at least 2028 to allow hospitals sufficient time to respond to the new methodology and improve safety performance. The commenters emphasized that the use of lagged data does not reflect current hospital safety performance, urging CMS to incorporate more current or near-real-time data sources such as electronic clinical quality measures (eCQMs) for public reporting. One commenter expressed concern that outdated or poorly contextualized data on Care Compare on *Medicare.gov* may mislead patients and harm hospitals' reputations, particularly when the timeframes for individual measures are inconsistent or poorly labeled. Another commenter stated if the proposal is finalized, hospitals should be provided with timely preview reports clearly indicating whether a hospital's Overall Hospital Quality Star Rating was downgraded due to Safety of Care performance.

Response: We acknowledge commenter's concern about outdated data and collection periods that do not always align across measures. However, the data collection period and refreshed timelines are established on a measure-by-measure basis so that results are released as soon as possible, while also enabling sufficient data collection for measure reliability and accounting for the time necessary to collect, process, and validate data and results.

We acknowledge commenters' concern with the implementation timing of the proposed Overall Hospital Quality Star Rating methodology updates. We believe the proposed approach is already an incremental process to first apply the 4-star cap in CY 2026 followed by the 1-star reduction in CY 2027. Furthermore, the Safety of Care RFI included in the CY 2025 OPPS/ASC Proposed Rule (89 FR 94514 through 94521) provided the public with information about potential methodology updates that were being considered by CMS. While we acknowledge concerns that a hospital may not have the opportunity to respond to performance results between the implementation of the star cap and the 1-star reduction, we note that the Safety of Care measure group and its component measures have been a prominent part of the Overall Hospital Quality Star Rating since its inception, with hospitals' Safety of Care performance already contributing substantially to their Overall Hospital Quality Star Rating. Furthermore, hospitals should always be striving to uphold patient safety in their care settings given the foundational principle of ''Do no harm.''

We also acknowledge commenters' concern with the use of lagged data in the Overall Hospital Quality Star Rating; We note that the challenge of the lag between the data collection period, the public reporting of individual measures,

and the publication of the Overall Hospital Quality Star Rating is well known. The main driver of the gap is the data collection periods for the individual measures which is outside the purview of the Overall Hospital Quality Star Rating methodology, and often necessary as longer periods are needed for smaller volume hospitals. It takes longer periods of time to get sufficient samples for statistical stability for the risk-adjusted measures. Therefore, as noted in prior rules, ''. . . the data collection period for each measure varies depending on measure specifications that set minimum case requirements to ensure individual measure reliability and meet the requirements of CMS quality programs, as detailed in each program's respective rules as well as on Hospital Compare or its successor website'' (85 FR 86202). Regarding eCQMs specifically, as these measures are required for reporting through Care Compare on *Medicare.gov*, they will be assessed for measure inclusion criteria in the Overall Hospital Quality Star Rating. However, we want to highlight that data collection periods for eCQMs (as for all measures) are not dictated by the Overall Hospital Quality Star Rating but rather by their respective CMS quality program; the Overall Hospital Quality Star Rating remains a summary of quality data that has already been publicly reported.

We appreciate commenters' recommendations regarding hospitals being provided with preview reports that indicate if a 1-star reduction was applied. As in prior publications of the Overall Hospital Quality Star Rating, CMS will continue to provide Hospital-Specific Reports and supporting resources during the preview period to help hospitals understand and interpret their results.

Comment: A few commenters raised concerns that the proposed policy's complexity and punitive nature may confuse patients and providers and erode trust in the Overall Hospital Quality Star Rating system as a reliable public reporting tool. One commenter specifically expressed concern that the Stage 2 approach could cause sudden declines in ratings that patients and consumers may not understand. The commenter stated that CMS already uses other programs, such HACRP, to incentivize safety improvement and that layering additional reputational penalties may duplicate or conflict with existing incentives. The commenter added that focusing on modifying the Overall Hospital Quality Star Rating methodology itself does little to improve how safety is actually evaluated or advanced.

A few commenters called for increased transparency around the methodology including clearer documentation on how hospitals are grouped into peer comparisons, how quartiles are calculated, and how measure groups contribute to the Overall Hospital Quality Star Rating, to help hospitals anticipate and manage performance. A few commenters provided similar suggestions related to public documentation describing how patient safety measures are selected for each hospital and how performance distributions affect the Overall Hospital Quality Star Rating year after year. Commenters also recommended enhancing public education efforts to highlight what the Overall Hospital Quality Star Rating represents, preventing misinterpretation by patients and others.

Response: We acknowledge commenters' concerns about the staged process for the Overall Hospital Quality Star Ratings reductions, however more than 50 percent of hospitals already receive different ratings year-to-year just as a result of the evolution of the underlying data. The additional marginal effect of the 1-star reduction is fairly minimal in the scope of ordinary year-on-year changes and is likely less than the one-time impact of other significant methodological changes in past years (most significantly the switch from latent variable modeling to explicit average measure group scoring and the introduction of peer grouping) (85 FR 86193). Furthermore, this update reflects our belief (informed by interested parties' input) that patient safety should have greater emphasis than it does under the current methodology, and that this is a necessary and appropriate step to prevent hospitals from receiving unjustifiably high ratings despite poor Safety of Care outcomes.

We appreciate a commenter's position that there are existing CMS programs that drive patient safety improvement and that additional efforts may be conflicting, but we respectfully disagree and believe that further emphasis of patient safety in the Overall Hospital Quality Star Rating aligns with other efforts to improve patient safety including through HACRP.

We thank commenters for their suggestions related to transparency about peer groups, quartile calculation and measure group contributions. We would like to refer readers to resources related to these topics already publicly available. While hospitals' peer groups are not publicly reported (as a result of prior interested parties' feedback that suggested this may cause confusion for patients), a hospital's own peer group can be found in their Hospital-Specific Report. Additionally, detailed information about the peer grouping process is described in v4.1 of the Overall Hospital Quality Star Rating Methodology, available at *https://qualitynet.cms.gov/inpatient/publicreporting/overall-ratings/resources*. Peer group distribution as well as summary score ranges for each peer group can be found in the Quarterly Updates and Specifications Report that accompanies each Overall Hospital Quality Star Rating release.

In regard to how Safety of Care measures are selected for each hospital, in the process of assigning an Overall Hospital Quality Star Rating, all reported Safety of Care measures are incorporated. Hospitals participating in CMS programs are required to collect data for measures reported via Care Compare on *Medicare.gov*. Each underlying measure has established thresholds (such as minimum case count) for a hospital's score to be publicly reported to ensure reliable measurement. If a hospital does not meet threshold for a measure, a measure score for the hospital is not publicly reported, and therefore a score for that given measure does not factor into the Overall Hospital Quality Star Rating. However, in general, hospitals do not have a choice in measures for which they submit data, and for which their performance is scored and reported.

Comment: One commenter pointed to the significant methodological changes to individual measures finalized in the Fiscal Year (FY) 2026 Inpatient Prospective Payment System (IPPS) final rule (90 FR 36997 through 37027), such as the use of Medicare Advantage (MA) data, changes in risk adjustment models, removal of COVID–19 vaccination measures, and re-baselining of HAI measures, and urged CMS to delay implementation of Stage 2 for a year after updated data is publicly available and after conducting a comprehensive analysis of the combined effects before finalizing further penalties. The commenter noted implementing multiple methodological changes simultaneously may obscure the impact of individual updates, compound penalties that do not reflect actual quality performance, and undermine transparency by limiting public understanding and visibility.

Response: We acknowledge the concern expressed that methodologic changes in some underlying measures may subsequently affect the Overall Hospital Quality Star Rating. The Overall Hospital Quality Star Rating methodology was designed to

accommodate the ongoing evolution of publicly reported quality measures, including instances when existing measures make methodologic updates. CMS vets these updates extensively in advance with interested parties, experts, and the public based on established measure evaluation criteria to ensure the updated specifications are suitable for public reporting. The purpose of the Overall Hospital Quality Star Rating remains to simply summarize these publicly reported data, which must be independently validated as providing a meaningful quality signal prior to public reporting of any results.

https://qualitynet.cms.gov/inpatient/publicreporting/overall-ratings/resources

Comment: Commenters offered a variety of alternative approaches to address concerns with the proposed modifications to the Safety of Care measure group and the Overall Hospital Quality Star Rating.

A few commenters suggested that changes to the Overall Hospital Quality Star Rating, such as a star reduction, only be made if a hospital remains in the lowest quartile for multiple consecutive years, which would help account for normal performance variation and support long-term improvement efforts.

One commenter further proposed revising the minimum requirements for obtaining an Overall Hospital Quality Star Rating. The commenter suggested elimination of the Mortality domain as a minimum requirement and that hospitals be required to report on at least three Safety of Care measures to qualify for an Overall Hospital Quality Star Rating; thus, ensuring the measure group's performance is adequately represented and meaningful within the rating and reducing the need for blanket point reductions. A few commenters suggested alternatives to blanket penalties in public reporting, proposing the use of performance flags or annotations to highlight poor Safety of Care scores without reducing hospitals' Overall Hospital Quality Star Rating, thereby providing meaningful safety information while preserving rating comparability.

A few commenters encouraged CMS to increase the weight of the Safety of Care domain within the existing methodology (for example, from 22 percent to 30 percent) while reducing the weight of other domains proportionally, allowing safety to have a greater influence on the Overall Hospital Quality Star Rating without introducing categorical penalties. One commenter proposed that a more flexible, customizable Overall Hospital Quality Star Rating system that would allow users to assign their own weights to domains such as safety, mortality, or patient experience would reflect individual preferences and better supporting patient decision-making.

One commenter recommended CMS add additional rural-relevant patient safety measures or revise the methodology to include only measure groups with at least three reported measures to ensure composite scores more accurately reflect performance and do not discourage voluntary reporting of safety data, such as National Healthcare Safety Network (NHSN) HAI metrics. One commenter urged CMS to separate HAI measures from the broader Safety of Care measure group, allowing them to stand alone and improving the interpretability and actionability of these metrics for hospitals and the public alike. One commenter recommended exploring the use of more real-time structural patient safety measures, such as the Inpatient Hospital Patient Safety structural measure, to provide a more current and equitable assessment of safety performance. A few commenters specifically noted that many CAHs are excluded from the Overall Hospital Quality Star Rating due to measure reporting thresholds, and even when included, often report only one or two Safety of Care measures, which can disproportionately impact their Overall Hospital Quality Star Rating.

A few commenters called for improvements in data transparency, including clearer and more timely preview reports, enhanced technical assistance, and access to simulation tools to help hospitals prepare for the 2027 methodology change. A few commenters also called for CMS to provide plain-language explanations of methodological changes for patients, families, and advocates. One commenter emphasized the importance of engaging frontline clinicians and staff in future refinements and cautioned that changes to the Overall Hospital Quality Star Rating, such as a star reduction, could discourage transparency and self-reporting of safety events. Commenters urged CMS to implement these changes in a way that promotes fairness, supports continuous improvement, and maintains the credibility and usefulness of the Overall Hospital Quality Star Rating system.

Response: We appreciate commenters' alternative suggestions and recommendations to emphasize Safety of Care in the Overall Hospital Quality Star Rating methodology.

We acknowledge a commenter's recommendation to only apply the 1-star reduction to hospitals that are in the lowest quartile of the Safety of Care measure group for consecutive years. However, we want to reiterate that the goal of this methodology update is to emphasize patient safety across all hospitals, not just consistently low performers in the Safety of Care measure group.

We appreciate a commenter's suggestion to change the Overall Hospital Quality Star Rating eligibility criteria to require hospitals to report at least three measures in the Safety of Care measure group rather than the existing criteria of a hospital needing to report at least three measures in the Safety of Care measure group or the Mortality measure group. The current approach of requiring hospitals to report at least three measures in either Safety of Care or Mortality was vetted and partially informed by interested parties' feedback emphasizing the relative importance of Mortality and Safety of Care while still maintaining the Overall Hospital Quality Star Rating principle of optimizing inclusivity of measure information. This is meant to ensure that there is sufficient measure information available to allow for fair comparisons that reflect multiple dimensions of quality (particularly in the key domains of patient safety and preventing mortality), while still retaining flexibility to accommodate hospitals with varying measure reporting profiles.

We acknowledge commenters' suggestion to implement a performance flag or annotation to indicate poor Safety of Care performance rather than a 4-star cap or 1-star reduction. Currently, we are proceeding with the proposed methodology update to be consistent with the objective of the Overall Hospital Quality Star Rating to provide a single summary metric.

We appreciate commenters' recommendations to reconsider the weightings of the measure groups that contribute to the Overall Hospital Quality Star Rating, implement a customized weighting scheme, or separate out the HAI measures from the Safety of Care measure group. However, as noted in our v4.1 Methodology Report, the measure groups and respective weighting scheme were established during measure development with substantial interested parties, expert, and public input. The weighting of the Mortality, Safety of Care, Readmission, and Patient Experience measure groups will remain 22 percent and the weighting of the Timely & Effective Care measure group 12 percent.

While we acknowledge the suggestion to include the Inpatient Hospital Patient Safety structural measure, structural measures are currently excluded from the Overall Hospital Quality Star Rating as they cannot be easily combined with other measures that are captured on a continuous scale with more granular data.

We thank commenters for their suggestions related to transparency as it is a key guiding principle for maintaining the Overall Hospital Quality Star Rating. Interested parties' input was gathered at two Provider Leadership Workgroup meetings, two Person and Family Engagement Workgroup meetings and one Technical Expert Panel meeting between 2023 and 2024 in addition to the public comment period correlated with the Safety of Care Request for Information included in the CY 2025 OPPS Proposed Rule (89 FR 94514 through 94521). We will consider how to increase transparency by providing plain-language explanations of methodological changes for patients, families and advocates. Accompanying Overall Hospital Quality Star Rating methodology updates, we strive to continue upholding the principle of transparency by publicly posting the R pack and input file used for the Overall Hospital Quality Star Rating calculations. We encourage questions about the methodology to be submitted via the QualityNet Question and Answer Tool.

We received no comments on our proposed adjustments to paragraphs (b)(1), (e) and (f). We are finalizing our proposal without modification to reflect updates to the regulation text uses of Overall Hospital Quality Star Rating and Care Compare on *Medicare.gov* language.

We received no comment on our proposed removal of the reference to ''as defined in § 400.200 of this chapter.'' We are finalizing as proposed.

After consideration of public comments, we are finalizing our proposal without modification to make the following two-stage methodologic updates to the Overall Hospital Quality Star Rating to emphasize the Safety of Care measure group (applicable to hospitals with at least three measures in the Safety of Care Measure Group): Stage 1: Implement a 4-star cap for hospitals in the lowest quartile of the Safety of Care measure group performance beginning in 2026 followed by Stage 2: Implement a blanket 1-star reduction for hospitals in the lowest quartile of Safety of Care measure group performance for the 2027 Overall Hospital Quality Star Ratings and later years.

XIX. Updates to Requirements for Hospitals to Make Public a List of Their Standard Charges

A. Introduction and Overview

1. Statutory Basis and Background

Section 1001 of the Patient Protection and Affordable Care Act (Pub. L. 111–148), as amended by section 10101 of the Health Care and Education Reconciliation Act of 2010 (Pub. L. 111–152), amended Title XXVII of the Public Health Service Act (the PHS Act), in part, by adding a new section 2718(e). Section 2718 of the PHS Act, entitled ''Bringing Down the Cost of Health Care Coverage,'' requires each hospital operating within the United States for each year to establish and update, and make public a list of the hospital's standard charges for items and services provided by the hospital, including for diagnosis-related groups established under section 1886(d)(4) of the Act. Section 2718(b)(3) of the PHS Act requires the Secretary of the Department of Health and Human Services (''Secretary'' or ''HHS'') to issue regulations to enforce the provisions of section 2718 of the PHS Act, and, in so doing, the Secretary may provide for appropriate penalties.

In the final rule that appeared in the November 27, 2019 **Federal Register** (84 FR 65524) titled ''Medicare and Medicaid Programs: CY 2020 Hospital Outpatient PPS Policy Changes and Payment Rates and Ambulatory Surgical Center Payment System Policy Changes and Payment Rates: Price Transparency Requirements for Hospitals to Make Standard Charges Public'' (hereafter referred to as the CY 2020 HPT final rule), we adopted requirements for hospitals to make public their standard charges in two ways: (1) as a comprehensive machine-readable file (MRF); and (2) in a consumer-friendly format. We codified these requirements at 45 CFR part 180. We also explained our belief that these two different methods of making hospital standard charges public are necessary to ensure that such data are available to consumers through data aggregation methods (for example, via integration into price transparency tools, electronic health records, and consumer apps), and direct availability to consumers searching for hospital-specific charge information. We stated our belief that innovators could use this information to create more useful data products for healthcare consumers to effectively compare prices. Moreover, we believe that employers (that offer or sponsor employee health plans), researchers, policy officials, and similar members of the public could utilize this data to promote competition and choice, ultimately helping to improve healthcare value.

Subsequently, in the CY 2022 OPPS/ASC final rule with comment period (86 FR 63941), we strengthened the hospital price transparency (HPT) enforcement process to improve compliance rates and made other updates to the requirements. Specifically, we: (1) increased the penalty amount for noncompliance through the use of a scaling factor based on hospital bed count; (2) deemed state forensic hospitals that meet certain requirements to be in compliance with the requirements of 45 CFR part 180; and (3) prohibited certain actions that we concluded were barriers to accessing the standard charge information, including prohibiting hospitals from designing their MRFs so as to make them inaccessible to automated searches and direct downloads.

In the CY 2024 OPPS/ASC final rule with comment period (88 FR 82079), we revised several HPT requirements to improve access to, and the usability of, hospital standard charge information; standardize the way hospital charges are presented; align, where feasible, certain HPT requirements and processes with requirements in the Transparency in Coverage (TiC) initiative; and strengthen and streamline our monitoring and enforcement capabilities. Specifically, we finalized: (1) a requirement that hospitals make a good faith effort to ensure standard charge information is true, accurate, and complete, and include a statement affirming this in the MRF; (2) new data elements that hospitals must include in the MRF, as well as a requirement that hospitals encode standard charge information in a CMS template layout; (3) a requirement that hospitals include a .txt file in the root folder that includes a direct link to the MRF and a link in the footer on its website that links directly to the publicly available web page that hosts the link to the MRF; and (4) improvements to our enforcement process by updating our methods to assess hospital compliance, requiring hospitals to acknowledge receipt of warning notices, and publicizing more information about CMS enforcement activities related to individual hospital compliance.

In these final rules, we stated that our policies requiring public release of hospital standard charge information are a necessary and important first step in ensuring transparency in prices of healthcare services for consumers. We also recognized that the release of hospital standard charge information is

not sufficient to achieve our ultimate price transparency goals. We noted that the regulations are, therefore, designed to address some of the barriers that limit price transparency, with a goal of requiring hospitals to make meaningful price information available to patients and employers to support a more competitive, innovative, affordable, and higher quality healthcare system.

On February 25, 2025, the White House issued Executive Order 14221, ''Making America Healthy Again by Empowering Patients with Clear, Accurate, and Actionable Healthcare Pricing Information,'' to empower patients with clear, accurate, and actionable healthcare pricing information.[443] The Executive Order states, in part, that the Departments of the Treasury, Labor, and HHS (the Departments) shall take action to:

- Require disclosure of actual prices of items and services, not estimates;
- Ensure pricing information is standardized and easily comparable across hospitals and health plans; and
- Update their enforcement policies designed to ensure compliance with transparent reporting of complete, accurate, and meaningful data.

Executive Order 14221 directs HHS to take actions to continue to implement and enforce existing statutory requirements for hospitals to make public a list of standard charges in accordance with guidelines developed by the Secretary. Consistent with the Executive Order and to better attain the goals we have articulated in previous HPT rulemaking—requiring hospitals to make meaningful price information available to consumers, employers, policymakers, and others to support a more competitive, innovative, affordable, and higher quality healthcare system—in the CY 2026 OPPS/ASC proposed rule, CMS proposed several updates to the regulations at 45 CFR part 180.

In the CY 2020 HPT final rule at § 180.20, we established a definition of ''standard charge'' as the regular rate established by the hospital for an item or service provided to a specific group of paying patients. In the CY 2026 OPPS/ASC proposed rule (90 FR 33790), we proposed subsequent updates to required MRF data elements that contextualize the standard charges, intended to improve the comparison of standard charge information and enable more meaningful disclosures to the public.

In the CY 2024 OPPS/ASC final rule with comment period (88 FR 82079), we established the requirement for each hospital, beginning April 1, 2024, to affirm in its MRF that the hospital has, to the best of its knowledge and belief, included all applicable standard charge information in accordance with the requirements of 45 CFR part 180 and that the information displayed is true, accurate, and complete as of the date indicated in the file. As described in the CY 2026 OPPS/ASC proposed rule, we proposed to strengthen this requirement, beginning January 1, 2026, by replacing it with an attestation in the MRF, and that attestation would also contain new specifications (compared to existing affirmation requirements). We stated in the CY 2026 OPPS/ASC proposed rule that these specifications would include that the hospital has: (1) included all applicable payer-specific negotiated charges in dollars that can be expressed as a dollar amount and for payer-specific negotiated charges that are not knowable in advance or cannot be expressed as a dollar amount, the hospital has provided in the MRF all necessary information available to the hospital for the public to be able to derive the dollar amount, including, but not limited to the specific fee schedule or components referenced in such percentage, algorithm, or formula, and (2) included the name of the hospital's chief executive officer, president, or senior official designated to oversee the encoding of true, accurate, and complete data.

In addition, pursuant to the authority provided to the Secretary under section 2718(b)(3) of the PHS Act to promulgate regulations to enforce section 2718 of the PHS Act, we previously have established regulations for enforcing the provisions of section 2718(e) of the PHS Act, including appropriate penalties. In the CY 2026 OPPS/ASC proposed rule, we proposed an additional change to encourage faster resolution of HPT civil monetary penalties (CMPs) and to reduce the amount of a CMP, under certain conditions, when the hospital waives its right to an administrative law judge (ALJ) hearing.

2. Summary of Final Policies

In this final rule with comment period, we are finalizing our proposals, with modifications, to revise the HPT regulations to enhance clarity and standardization in hospital disclosure of standard charges. Specifically, we are finalizing with modification our proposals to add to § 180.20 definitions for ''tenth (10th) percentile allowed amount,'' ''median allowed amount,'' and ''ninetieth (90th) percentile allowed amount,'' which are values hospitals will encode when a payer-specific negotiated charge is based on a percentage or algorithm, to more accurately reflect the distribution of actual amounts that hospitals have received for an item or service. In tandem with that, we are finalizing revisions to § 180.50 to remove the requirement for hospitals to disclose the estimated allowed amount, and, instead, require hospitals to disclose the 10th percentile, median, and 90th percentile allowed amounts, as well as the count of allowed amounts, in MRFs when payer-specific negotiated charges are based on percentages or algorithms. We are also finalizing, with modification, our proposal to require that hospitals use electronic data interchange (EDI) 835 electronic remittance advice (ERA) transaction data. Hospitals will be required to use EDI 835 ERA transaction data or an alternative, equivalent source of remittance data that includes the same information as EDI 835 ERA transaction data would include, to calculate and encode the allowed amounts. In addition, we are finalizing our proposals, with modifications, to require that hospitals comply with specific instructions regarding the methodology, including a lookback period, that must be used to calculate those amounts. We are finalizing that these policies are effective as of January 1, 2026, but we will delay enforcement of the requirements until April 1, 2026.

Additionally, we are finalizing, with modifications, our proposed amendments to § 180.50 to require hospitals to attest that in the MRF, to the best of the hospital's knowledge and belief, the hospital has included all applicable standard charge information in accordance with the requirements of this section and the information encoded is true, accurate, and complete as of the date in the file. We also are finalizing our proposal that hospitals attest in the MRF that the hospital has included all applicable payer-specific negotiated charges as dollars that can be expressed as a dollar amount, and for payer-specific negotiated charges that are not knowable in advance or cannot be expressed as a dollar amount, the hospital has provided in the MRF all necessary information available to the hospital for the public to be able to derive a dollar amount, including, but not limited to, the specific fee schedule or components referenced in such percentage, algorithm, or formula. Furthermore, we are finalizing our proposal that hospitals encode in the MRF the name of the hospital chief executive officer, president, or senior

[443] Exec. Order No 14,221 (2025). *https://www.govinfo.gov/content/pkg/FR-2025-02-28/pdf/2025-03440.pdf.*

official designated to oversee the encoding of true, accurate, and complete data. In addition, to advance the comparability of HPT data with other healthcare data, we are finalizing our proposal to require that hospitals encode their organizational, or Type 2, National Provider Identifier(s) (NPIs) in the MRFs. We are finalizing an effective date of January 1, 2026, for the revisions at § 180.50, including removal of the estimated allowed amount, disclosure of the 10th percentile, median, 90th percentile allowed amounts and the count of allowed amounts, the attestation requirements, and inclusion of NPIs. However, as discussed in more detail below, we will delay enforcement of these finalized revisions until April 1, 2026.

Finally, to encourage faster resolution and payment of CMPs, and in exchange for a hospital's admission of having violated HPT requirements, we are finalizing our proposal to update § 180.90 to, under certain circumstances, reduce the amount of a CMP by 35 percent when a hospital waives its right to an ALJ hearing. We are finalizing at new § 180.90(c)(4) that, effective beginning January 1, 2026, the amount of a CMP would be reduced by 35 percent should a hospital submit to CMS a written notice requesting to waive its right to a hearing under § 180.100 within 30 calendar days of the date of the notice of imposition of the CMP.

Collectively, these changes aim to improve transparency in hospital pricing, facilitate efficient enforcement of the HPT requirements, and empower consumers with actionable pricing information.

B. Modifications to the Requirements for Making Public Hospital Standard Charges at 45 CFR 180.50

1. Background

a. CY 2024 OPPS/ASC Final Rule With Comment Period

This section of the background recites relevant history from the CY 2024 OPPS/ASC final rule with comment period, and all references in this section pertain to it.

In the CY 2024 OPPS/ASC final rule with comment period (88 FR 82083, 82097, 82184), we indicated we understand that hospitals establish payer-specific negotiated charges in many ways, ranging from basic fee schedules (in which dollar amounts for specific items and services are known) to grouper methodologies (in which a base rate in dollars has been established but may then be modified depending on other factors like transfers or outliers), to ''percent of billed charges'' schemes (in which the dollar amount varies from person to person and is not known until the services are performed). We demonstrated in Figure A in the CY 2024 OPPS/ASC final rule with comment period (88 FR 82098) the components of an MS–DRG algorithm. An example of how Figure A may translate into an algorithm encoded in the MRF may be: base rate multiplied by the MS–DRG weight; outlier payment of $4,303 per diem when length of stay is greater than 2 times the average length of stay. Based on our experiences reviewing MRFs since finalizing the CY 2024 OPPS/ASC final rule with comment period, we have observed factors included in algorithms such as, but not limited to: weights based on resources required, mix of services provided within an episode of care, and thresholds or caps on the overall price of services billed within an episode of care. Therefore, we reiterate our stance outlined in the CY 2024 OPPS/ASC final rule with comment period that not all hospitals can produce a payer-specific negotiated charge in dollars that meets the definition of a ''standard charge.''

As indicated in the CY 2024 OPPS/ASC final rule with comment period, we finalized a requirement for hospitals to display an estimated allowed amount which would provide needed context, in dollars, for instances where the hospital's payer-specific negotiated charge is based on a percentage or algorithm. We defined a new data element, the ''estimated allowed amount,'' at § 180.20, as the average dollar amount that the hospital has historically received from a third party payer for an item or service.

We noted that we heard from interested parties that, when a hospital has negotiated a payer-specific negotiated charge that is based on an algorithm, an estimate displayed in dollars within the MRF is useful, particularly for making comparisons across hospitals (88 FR 82099). We stated, for example, that an estimate displayed in dollars would permit users to make price comparisons across hospitals when, regarding the same procedure and payer/plan, one hospital has established a payer-specific negotiated charge as an algorithm and a second has established a payer-specific negotiated charge as a dollar amount. After considering what additional data could be required in the MRF to provide further needed context for a payer-specific negotiated charge that is expressed as an algorithm or a percentage, we finalized the estimated allowed amount as a new data element at § 180.20. We also required at § 180.50(b)(2)(ii)(C) that hospitals calculate and encode an estimated allowed amount, in dollars, when hospitals have established a payer-specific negotiated charge that is based on a percentage or an algorithm. We stated that the estimated allowed amount is the average reimbursement in dollars that the hospital has received from the payer in the past. We further stated that the estimated allowed amount is therefore not prospective and is also not based on the hospital's chargemaster, which, as we understand it, contains only gross charges for itemized items and services, or claims submitted to the payer. As we explained (88 FR 82099 through 82100), because the estimated allowed amount data element is meant to provide an estimate of what the algorithm produces in dollars, across the universe covered by a particular payer's plan, such an amount should reflect the amount the hospital expects to be reimbursed for the item or service (or service package), on average. We stated that we believed this information provides context to the public that is necessary to compare payer-specific negotiated charges across hospitals and is a valuable benchmark that innovators can use to develop price estimator tools to estimate an individual's personalized out-of-pocket costs. We stated that we believed this information, when paired with the algorithm encoded in the MRF, would promote greater transparency of hospital standard charges that can be useful to MRF users.

b. Background Subsequent to the CY 2024 OPPS/ASC Final Rule With Comment Period

Since the CY2024 OPPS/ASC final rule with comment period was finalized, we have continued to gain experience with the implementation of the estimated allowed amount data element and received public feedback and questions requesting that we further clarify its calculation. Based on our observations through comprehensive audits and feedback from users of the data, and consistent with Executive Order 14221, we proposed to revise the HPT regulations to recast the estimated allowed amount data element to better require, through new data elements, disclosure of dollar amounts for items and services in hospital MRFs, which we believe would enhance transparency and comparability of payer-specific negotiated charges across hospitals. Specifically, and as further discussed later in this section, we proposed to require hospitals to report four new data elements when a payer-specific

negotiated charge is based on a percentage or algorithm—the median allowed amount (which would replace the estimated allowed amount data element), the 10th percentile and 90th percentile allowed amounts, and the count of allowed amounts used to calculate the median, 10th, and 90th percentile allowed amounts.

2. General Comments

Comment: Many commenters, including, for example, hospitals and hospital associations, information technology developers, researchers, employers, payers, healthcare consumers, and consumer advocates expressed support for the Administration's goals of making more meaningful price information available to patients to support a more competitive, innovative, affordable, and higher quality healthcare system. Many commenters also supported our continued commitment to improving price transparency and the clarity of healthcare pricing. Many commenters agreed that price transparency supports consumers' ability to plan and make informed decisions about their care and to select high value providers. Several commenters indicated how complete, accurate, and timely price transparency can be a powerful tool allowing employers, innovators, researchers, policy makers, and public and private payers to have a truer picture of where cost pressures may lie and how they may be mitigated.

Response: We appreciate the overwhelming support for CMS price transparency policies, which include HPT, TiC, and the implementation of the No Surprises Act (NSA). We agree with commenters who believe that price transparency can stimulate provider competition, empower healthcare consumers, and result in lower healthcare costs. We agree that transparency in healthcare pricing is integral to supporting a transition to value-based care. We further agree that transparency in healthcare pricing is a societal benefit that can facilitate competition and comparison shopping to lower healthcare costs, and that policies that promote providing accurate and complete data ensure users of the MRF (such as employers and researchers) have the information they need to draw comparisons for contracting or research purposes, or support innovators as they develop products to enable patients' well-informed healthcare decisions.

Comment: Several commenters were generally supportive of the proposed regulatory requirements. Several commenters agreed that while some proposals may be useful, CMS should focus on policies that directly help patients understand the costs of their care rather than increasing administrative requirements on hospitals. A few commenters appreciated the agency revisiting the HPT policies to ensure that the information hospitals disclose in their MRFs is accurate and complete, so the information is maximally actionable for healthcare purchasers and consumers. A few commenters supported our efforts to simplify and streamline requirements, including MRF standardization, as such standardization facilitates actionable comparisons, and reduces the administrative burden of complying with these rules. One commenter indicated that ensuring that MRFs are available, timely, and accurate is the foundation upon which innovators can build tools that actually help patients navigate the cost of healthcare, but the commenter expressed that the data in the MRFs are insufficient on their own to fully support a patient's understanding of their individual price, and offered the view that final rules governing MRF creation must work in tandem with the NSA policy.

Response: We thank commenters for their support of the proposals. As we stated in the CY 2020 HPT final rule (84 FR 65571), we believe there is a direct connection between hospital standard charge information transparency and more affordable healthcare and lower healthcare costs. We believe healthcare markets can work more efficiently and provide consumers with higher value healthcare if we promote policies that encourage choice and competition. As we have stated on numerous occasions (for example, 84 FR 65526), we believe that transparency in healthcare pricing is critical to enabling patients to become active consumers so they can lead the drive towards value. As we stated in the CY 2020 HPT final rule (84 FR 65571), we continue to encourage hospitals to provide consumers with cost information in a consumer-friendly manner. We agree with commenters that standardization facilitates more actionable comparisons of the MRF data, and that over time standardization will reduce burden to hospitals and payers. We continue to affirm the premise we articulated in the CY 2024 OPPS/ASC final rule with comment period (88 FR 82080), that HPT regulations requiring hospitals to make public standard charges are a necessary and important first step for driving competition and in ensuring transparency in healthcare prices for the public. But, while foundational, we believe the release of hospital standard charge information alone is insufficient to achieve our ultimate goals for price transparency to help drive marketplace competition and consumer shopping. Instead, healthcare consumers' more complete understanding of real prices would come in tandem with other price transparency policies, including TiC and NSA.

Comment: Many commenters who opposed the proposals highlighted the operational and data complexities for hospitals—particularly for small, rural, and/or safety-net hospitals—in implementing the proposed changes. Several commenters provided examples of the operational burden, noting recent revenue losses, constrained resources, necessity of hiring vendor support to meet the requirements, and concern about the amount of time required for implementation. Several commenters noted that the steady stream of new HPT requirements has forced hospitals into a far more frequent update cycle, and asked that we stop adding new requirements. Several commenters recommended that CMS maintain the HPT rules in their current form and seek ways to reduce hospital burden. A few commenters cited Executive Order 14192 (Unleashing Prosperity Through Deregulation, issued January 31, 2025) and stated that we should be actively seeking ways to reduce hospital burden. A few of these commenters urged us to ensure HPT requirements are implemented with flexibility, clear technical guidance, and a supportive compliance framework that acknowledges the complexity of hospital pricing arrangements.

Response: We believe the benefits of these proposals to the public outweigh the burden on hospitals. The American public overwhelmingly supports healthcare price transparency. A September 2024 poll found that 92 percent of Americans want requirements for hospitals to provide upfront prices.[444] Additionally, these proposals align with the President's Executive Order 14221 directing that we require the disclosure of actual prices and ensure that pricing information is easily comparable across hospitals. We believe that continued use of a standardized format to encode and display this information will improve the public's understanding of the standard charges hospitals have established as well as reduce hospitals' burden over time. We will provide

[444] PatientRightsAdvocate.org. (2024). Transparency Survey 2024. *https://www.patientrightsadvocate.org/patient-rights-advocate-bipartisan-pollster-memo-2024.*

technical guidance and examples of how to encode the new data elements we are finalizing in this rule on the CMS Hospital Price Transparency—Data Dictionary GitHub Repository, as well as in guidance on the HPT resources page on the CMS website. After consideration of comments, we are finalizing increased burden estimates found in section XXIII., Collection of Information Requirements'', of this final rule with comment period. Further, we are delaying enforcement (discussed in more detail in section XIX.B.7. of this final rule with comment period) of the revisions to § 180.50 to April 1, 2026, to provide hospitals with more time to comply.

Comment: Many commenters stated that we should prioritize efforts to improve the price comparison tools that are accessible to consumers who want to know their out-of-pocket costs, instead of layering more hospital regulatory requirements with respect to tools like MRFs that are not consumer-friendly. A few commenters asked CMS not to finalize these proposals, stating that the burden to implement them would outweigh the utility of the information for patients, and that the vast amounts of data presented in the MRF format, including hospital ''standard charges,'' are not consumer-friendly and do not provide patients with the personalized, prospective information they need to make informed decisions.

Response: We appreciate commenters' suggestions that we should focus on improving policies that directly help patients understand costs, and we may revisit the consumer-friendly display requirements in future rulemaking. While we understand the comment that MRFs may not be primarily intended for direct patient use, we disagree that they have little utility for patients and the public. The MRF format is designed to be parsed and analyzed by entities including innovators, employers, researchers, and journalists who transform that structured data into products, tools, research, and reports to support patients' ability to understand and compare hospital prices, which ultimately drives competition and directly benefits patients.

Since the HPT requirements went into effect on January 1, 2021, we have seen numerous examples of researchers and industry experts using MRFs to uncover potential savings by analyzing variation in payer-specific negotiated charges and discounted cash prices for the same items and services within and across hospitals; employers using the data to negotiate more competitive rates; and innovators identifying and aggregating the hospital price data for consumers to make more meaningful comparisons.[445] [446] [447] [448] The impacts are beginning to be reflected in hospital pricing data. For example, a research report by Turquoise Health found that negotiated rates began converging between December 2021 and June 2024, and researchers from the University of Miami found that in Florida, ''patients seeking elective, self-paid care responded [to hospital price transparency] by choosing hospitals that were transparent about their prices, and hospitals, in turn, responded by simplifying their pricing and reducing the intensity of services.'' [449] [450]

Comment: Many commenters pointed out the need for more policy coordination across the various price transparency initiatives (HPT, TiC, NSA and state level efforts), and the importance of not addressing HPT policies in isolation. These commenters stated that price transparency efforts would benefit from a comprehensive review of the numerous and sometimes conflicting requirements at both the State and Federal levels and urged us to focus future efforts to reform price transparency on streamlining policies to reduce the risk of conflicting information while improving accuracy, as well as alleviating costly administrative burden for both providers and insurers. Several commenters explained that with the recent Federal requirements for insurers and health plans to publicly share detailed pricing data, hospitals are no longer the most suitable or effective entities for this task. One commenter strongly felt that these proposals are shifting the responsibility of the plan's benefit design and education from the payers themselves to providers.

Response: We believe the HPT requirements we proposed to modify are complementary to other price transparency efforts such as the NSA. We note that in the CY 2024 OPPS/ASC final rule with comment period (88 FR 82079), we sought comment on alignment between HPT policies related to the consumer-friendly display requirements at § 180.60 which we may consider in future rulemaking. We acknowledge some states may have their own additional or more stringent requirements to promote price transparency. We also acknowledge that for patients with employer-based insurance, their health plans may have additional data to help the patient understand their out-of-pocket obligation, but, as stated above, the MRFs are a key foundational data source to support driving efficiency in health care. We continue to evaluate opportunities to improve coordination and further alignment across related Federal price transparency initiatives and policies.

Comment: Many commenters provided other suggestions on how to improve the HPT requirements and resources. In particular, commenters made recommendations on how to enhance the CMS template for the MRF. Several commenters recommended we add or remove data elements/attributes to or from the CMS template, particularly related to the hospital license number, hospital points of contact, the de-identified minimum negotiated charge, the de-identified maximum negotiated charge, the standard charge methodology, payer/plan name, billing class, stop loss, outliers, carve-outs, general contract provisions, a count of services, and plain language item/service descriptions. A few commenters suggested we further align data element/attribute names in the HPT MRFs with those in the TiC MRFs. A few commenters recommended limiting the display of items and services in the MRF. A few commenters recommended that we require hospitals to combine standard charge information with quality, health outcomes data and/or clinical data. A few commenters recommended that we require hospitals to group standard charge information by episodes of care. One commenter suggested eliminating the JSON format of the CMS template.

Several commenters provided recommendations for potential updates to the technical specifications in the CMS Hospital Price Transparency-Data Dictionary GitHub repository or to the Hospital Price Transparency validator tool. A few commenters requested we

[450] Yaraghi, N., & Pan, X. (2025, September 9). The hospital price transparency rule is working, but patients still need help using it. Brookings Institute. *https://www.brookings.edu/articles/the-hospital-price-transparency-rule-is-working-but-patients-still-need-help-using-it.*

increase the number of errors displayed in the online validator tool. A few commenters recommended that we clarify in the Hospital Price Transparency-Data Dictionary GitHub repository technical specifications that hospitals are required to make public their discounted cash prices for items and services, if the hospital has established a discounted cash price for an item or service. Several commenters requested that we provide enhanced technical assistance, guidance, or support to specific kinds of hospitals or in specific scenarios and increase engagement with hospitals. A few commenters suggested we provide financial support to hospitals to help them implement any new requirements finalized. One commenter recommended we implement the HHS Office of Inspector General's (OIG) recommendation to create a training and compliance program tailored for small and rural hospitals. One commenter requested we establish a multi-stakeholder technical advisory group, made up of hospitals, physicians, information technology firms, accounting firms, insurers, and patients to develop future HPT requirements and guidance.

A few commenters suggested we make updates to the requirements for displaying shoppable services in a consumer-friendly manner at § 180.60, with some of these commenters indicating we should eliminate these requirements as they feel they are no longer necessary as a result of the TiC and NSA regulations. Other commenters recommended that we: update, expand, or enhance the requirements for displaying shoppable services in a consumer-friendly manner; require hospitals to combine standard charge information with quality, health outcomes, and/or clinical data; and require hospitals to group standard charge information by episodes of care.

A few commenters requested we modify or vary the scope of the HPT requirements. A few commenters suggested tailoring the HPT requirements based on hospitals' specialty/size/patient volume. One commenter requested we expand the HPT requirements to include the disclosure of professional fees for providers not directly employed by hospitals.

Other commenters offered other HPT-related suggestions, with one recommending we consider strategies states are using to improve and enforce state-level HPT requirements, and another requesting that we further engage with patients in developing future HPT requirements.

Several commenters provided suggestions related to improving the TiC and NSA regulations, the 340B program, transparency of Medicare and Medicare Advantage rates, and extending the HPT requirements to other providers.

Response: While these comments are out of scope for this final rule because they do not relate to the specific proposals, we thank commenters for their suggestions on how to improve the HPT requirements and resources and may consider these comments with respect to future rulemaking, guidance, resources, and/or HPT enforcement process improvement.

3. Definitions

At § 180.20, we proposed to add definitions for three new data elements, the ''median allowed amount,'' the ''tenth (10th) percentile allowed amount,'' and the ''ninetieth (90th) percentile allowed amount.'' We stated in the proposed rule that these data elements would be defined as follows:

- ''Median allowed amount'' is defined as the median of the total allowed amounts the hospital has historically received from a third party payer for an item or service for a time period no longer than the 12 months prior to posting the machine-readable file. Should the calculated median fall between two observed allowed amounts, the median allowed amount is the next highest observed value.
- ''Tenth (10th) percentile allowed amount'' is defined as the 10th percentile of the total allowed amounts the hospital has historically received from a third party payer for an item or service for a time period no longer than the 12 months prior to posting the machine-readable file. Should the calculated percentile fall between two observed allowed amounts, the 10th percentile allowed amount is the next highest observed value.
- ''Ninetieth (90th) percentile allowed amount'' is defined as the 90th percentile of total allowed amounts the hospital has historically received from a third party payer for an item or service for a time period no longer than the 12 months prior to posting the machine-readable file. Should the calculated percentile fall between two observed allowed amounts, the 90th percentile allowed amount is the next highest observed value.

We discuss these definitions in more detail in sections below.

Comment: A few commenters supported our proposals to add the definitions for these three data elements. The commenters noted that more precise definitions will ensure that hospitals are interpreting the specifications correctly and patients will have more accurate data to allow them to make more informed decisions.

Response: We thank commenters for their support.

Comment: We received many comments on the proposed 12-month lookback period referenced in these definitions, as well as on the proposed definitions of the allowed amounts and how to calculate them when the percentiles fall between two observed allowed amounts.

Response: We address these comments in later sections on the lookback period and allowed amounts. As discussed in those sections, in light of these comments, we are finalizing these proposals with modification. Specifically, we are finalizing our proposed definitions for three new data elements, the ''median allowed amount,'' the ''tenth (10th) percentile allowed amount,'' and the ''ninetieth (90th) percentile allowed amount'' with modification to revise the phrase, ''no longer than the 12 months'' to state, ''no less than 12 months and no longer than 15 months.''

Final Action: After consideration of public comments, we are finalizing the proposed definitions of ''median allowed amount,'' ''tenth (10th) percentile allowed amount,'' and ''ninetieth (90th) percentile allowed amount'' with modification to reflect a lookback period of no less than 12 months and no longer than 15 months prior to posting the MRF. These data elements will be defined as follows:

- ''Median allowed amount'' is defined as the median of the total allowed amounts the hospital has historically received from a third party payer for an item or service for a time period no less than 12 months and no longer than 15 months prior to posting the machine-readable file. Should the calculated median fall between two observed allowed amounts, the median allowed amount is the next highest observed value.
- ''Tenth (10th) percentile allowed amount'' is defined as the 10th percentile of the total allowed amounts the hospital has historically received from a third-party payer for a time period no less than 12 months and no longer than 15 months prior to posting the machine-readable file. Should the calculated percentile fall between two observed allowed amounts, the 10th percentile allowed amount is the next highest observed value.
- ''Ninetieth (90th) percentile allowed amount'' is defined as the 90th percentile of total allowed amounts the hospital has historically received from a third-party payer for a time period no

less than 12 months and no longer than 15 months prior to posting the machine-readable file. Should the calculated percentile fall between two observed allowed amounts, the 90th percentile allowed amount is the next highest observed value.

4. Replacing the Estimated Allowed Amount With the Allowed Amounts Data Elements and the Count of Allowed Amounts Data Element

a. Background on Encoding Payer-Specific Negotiated Charges as Dollar Amounts

As noted in the CY 2024 OPPS/ASC final rule with comment period (88 FR 82099), we have learned that most commercial contracting methods allow a hospital to identify and display as a dollar figure the payer-specific negotiated charges they have established with third party payers. Accordingly, we stated that we expect that, for most contracting scenarios, a hospital's payer-specific negotiated charges can also be expressed as a dollar amount.

As discussed in the CY 2026 OPPS/ASC proposed rule (90 FR 33476), hospitals and MRF users have indicated in inquiries to CMS that they are confused about our current requirements for encoding payer-specific negotiated charges, so we clarified our current policy in the proposed rule. We stated that if a dollar amount can be derived from a hospital's payer-specific negotiated charge, it must be encoded as a dollar value in the MRF. For items and services encoded in the MRF with a ''standard charge methodology'' of ''case rate,'' ''per diem,'' or a known ''fee schedule,'' we stated that we expect hospitals will be able to encode a ''payer-specific negotiated charge: dollar amount.'' We recognized that there may be situations where the payer-specific negotiated charge is a percentage of a fee schedule that is not available to the hospital. In such instances, under our existing policies, we stated the hospital must encode a ''payer-specific negotiated charge: percentage'' and an estimated allowed amount (which we stated would be replaced with the median allowed amount should our proposal be finalized) and may indicate in the additional notes data element the type of fee schedule. We noted that hospitals encoding a case rate or per diem as the standard charge methodology must encode the dollar amount for the service package base rate, which may be coupled with a ''payer-specific negotiated charge: algorithm'' and an estimated allowed amount (which we stated would be replaced with the median allowed amount should our proposal be finalized). We encouraged readers to review the scenarios and examples on the CMS Hospital Price Transparency—Data Dictionary GitHub Repository website for examples of how to encode standard charge information,[451] and additional guidance on CMS' HPT website.[452]

Comment: A few commenters commented on our clarification that if a dollar amount can be derived from a hospital's payer-specific negotiated charge, it must be encoded as a dollar value in the MRF. One commenter indicated they appreciated the May 22, 2025 guidance we provided at the CMS Hospital Price Transparency website's ''Resources'' page on this topic, titled ''Updated Hospital Price Transparency Guidance Implementing the President's Executive Order (E.O.) 'Making America Healthy Again by Empowering Patients with Clear, Accurate, and Actionable Healthcare Pricing Information,' '' (''May 22, 2025 guidance'') indicating they believe it is an important step towards ensuring the accuracy and completeness of the MRF data. Another commenter indicated they had not encountered any scenarios where a known fee schedule, case rate, or per diem exists outside of a more complicated and detailed algorithm and provided examples of factors that may further modify a fee schedule, case rate, or per diem, including carveouts, ''lesser of'' methodology, stop loss provisions, exclusions, and grouper logic. Therefore, this commenter recommended CMS reconsider the emphasis on the ''payer-specific negotiated charge: dollar amount'' data element in the MRF. A few commenters indicated they do not currently encode the ''estimated allowed amount'' if they can calculate the ''payer-specific negotiated charge: dollar amount'' of a known fee schedule, case rate, or per diem.

Response: We thank the commenters for their support of our guidance that if a dollar amount can be derived from a hospital's payer-specific negotiated charge, it must be encoded as a dollar value in the MRF. We continue to believe that for many items and services encoded in hospitals' MRFs with a ''standard charge methodology'' of ''case rate,'' ''per diem,'' or a known ''fee schedule,'' hospitals will be able to encode a ''payer-specific negotiated charge: dollar amount,'' as evidenced by a few commenters that indicated they are currently doing so. We recognize that there may be situations where the payer-specific negotiated charge for a particular item or service is further modified by a percentage or an algorithm, as suggested by one commenter. We clarify that if there are percentages or algorithms that modify the negotiated rate for an individual item or service, hospitals must encode the base rate for that item or service in the ''payer-specific negotiated charge: dollar amount,'' which must be coupled with a payer-specific negotiated charge percentage or algorithm, and hospitals must also encode the allowed amounts and count of allowed amounts we are finalizing in this rule (discussed in more detail below). For payer contract provisions that are negotiated at an aggregate level across multiple items and services (for example, claim level or episode of care), in the CMS Hospital Price Transparency—Data Dictionary GitHub Repository we provide guidance on the use of an optional data element, ''general contract provisions,'' that hospitals may, but are not required to use to convey this information. We point readers to the Hospital Price Transparency—Data Dictionary GitHub Repository available at *https://github.com/CMSgov/hospital-price-transparency* for additional details about this optional data element.

b. Replacing the Estimated Allowed Amount With the Median Allowed Amount and Adding the 10th and the 90th Percentile Allowed Amounts

In the CY 2026 OPPS/ASC proposed rule (90 FR 33476), we proposed to revise § 180.50(b)(2)(ii)(C) to require, at new § 180.50(b)(2)(ii)(C)(*2*), that, beginning January 1, 2026, if a payer-specific negotiated charge is based on a percentage or algorithm, the hospital must calculate and encode the median allowed amount in dollars for that item or service. As noted above, we proposed to define ''median allowed amount'' in § 180.20 as the median of the total allowed amounts the hospital has historically received from a third party payer for an item or service for a time period no longer than the 12 months prior to posting the MRF. We stated in the proposed rule that should the calculated median fall between two observed allowed amounts (in other words, where the total count, *n,* is an even number), we proposed that the median allowed amount would be the next highest observed value. As we stated in the proposed rule, we believe requiring hospitals to encode the

[451] CMS, (2024, June), *Hospital-Price-Transparency Examples,* Hospital Price Transparency, GitHub. *https://github.com/CMSgov/hospital-price-transparency/tree/master/examples.*

[452] CMS, (2025, May), *Resources,* Hospital Price Transparency website at *https://www.cms.gov/priorities/key-initiatives/hospital-price-transparency/resources.*

median allowed amount in the circumstances described in § 180.50(b)(2)(ii)(C), rather than the estimated allowed amount, defined as the average dollar amount that the hospital has historically received from a third party payer for an item or service, would improve the public's ability to better understand, and, therefore, more meaningfully use, payer-specific negotiated charges, and would make such charges more comparable across hospitals.

We also proposed to revise § 180.50(b)(2)(ii)(C) to require at new § 180.50(b)(2)(ii)(C)(*2*) that, beginning January 1, 2026, if a payer-specific negotiated charge is based on a percentage or algorithm, the hospital must calculate and encode the 10th and 90th percentile allowed amounts in dollars for that item or service. We proposed to define ''tenth (10th) percentile allowed amount'' in § 180.20 as the 10th percentile of the total allowed amounts the hospital has historically received from a third party payer for an item or service for a time period no longer than the 12 months prior to posting the MRF. We also proposed that if the calculated percentile falls between two observed allowed amounts, the 10th percentile allowed amount is the next highest observed value. We proposed to define ''ninetieth (90th) percentile allowed amount'' in § 180.20 as the 90th percentile of the total allowed amounts the hospital has historically received from a third party payer for an item or service for a time period no longer than the 12 months prior to posting the MRF. We also proposed that if the calculated percentile falls between two observed allowed amounts, the 90th percentile allowed amount is the next highest observed value.

Comment: We received many comments in support of our proposals to replace the estimated allowed amount with the median allowed amount and to add the 10th and 90th percentile allowed amounts. Several commenters indicated they believe the median, 10th percentile, and 90th percentile allowed amounts would be more useful than the estimated allowed amount, better reflecting what hospitals have been reimbursed for items and services. One commenter indicated they believe the median allowed amount would provide a more ''robust and nuanced picture'' of negotiated charges within the MRF. One commenter indicated they believe the median, 10th percentile, and 90th percentile allowed amounts would enhance ''data utility for researchers, innovators, purchasers, and consumers seeking to understand price variation across hospitals and payers in a market.''

Response: We thank commenters for their support of the proposals. As we discussed in the CY 2026 OPPS/ASC proposed rule (90 FR 33792 through 33793), and in agreement with commenters, we continue to believe that requiring the median, 10th percentile, and 90th percentile allowed amounts will provide greater context and clarity with respect to the payer-specific negotiated charge than the estimated allowed amount. The median, 10th percentile, and 90th percentile allowed amounts will further improve the public's ability to understand the actual price of care, particularly when making comparisons across hospitals. As we stated in the CY 2026 OPPS/ASC proposed rule, allowed amount data elements will help MRF users to develop patient-level solutions to aid in patient financial planning and decision-making. The availability of a range of reference points, including lower (10th percentile), median (50th percentile), and upper (90th percentile) allowed amounts, will better enable healthcare consumers to compare cost information across hospitals, empowering them to better manage budgets, avoid unexpected financial burdens, and make more fully informed and value-conscious health care choices.

Likewise, researchers, innovators, policy officials, employers, and others MRF users will be able to use the information to improve data analysis and more precisely model healthcare costs and cost estimation algorithms, provide insights into healthcare pricing dynamics, and gain a deeper understanding of price dispersion across contracts that might provide a basis for negotiation and advocacy to more effectively bargain with healthcare providers and payers to yield more competitive pricing. Furthermore, the 90th percentile allowed amount will be helpful for assessing financial risk and identifying cases where costs exceed typical ranges. This information could assist researchers and innovators in refining cost predictions and contribute to better risk management strategies. As stated in the CY 2026 OPPS/ASC proposed rule (90 FR 33794), we continue to believe that for consumers with insurance plans that include coinsurance and deductibles, the 10th and 90th percentile allowed amounts would provide critical potential lower and upper reference points for estimating out-of-pocket expenses.

Comment: We also received comments opposing our proposals to replace the estimated allowed amount with the median allowed amount and to add the 10th and 90th percentile allowed amounts. Many commenters questioned the value of replacing the estimated allowed amount with the median allowed amount and adding the 10th and 90th percentile allowed amounts, indicating that they saw no additional benefit in these proposals for patients. Several commenters indicated they believe that replacing the estimated allowed amount with the median allowed amount and adding the 10th and 90th percentile allowed amounts would ''overwhelm'' patients with information that is difficult to interpret. A few commenters maintained that patients are more interested in knowing what their out-of-pocket costs may be for an upcoming hospital visit than negotiated rates between hospitals and insurers, or what hospitals have been reimbursed for items and services. A few commenters indicated that requiring the median, 10th percentile, and 90th percentile allowed amounts in the MRFs may be misleading for patients who would look at this information as a representation of what they would be expected to pay should they receive that item or service at the hospital. Therefore, several commenters recommended that we focus on advancing tools and requirements that provide patients with individualized and accurate pre-service estimates that factor in cost-sharing amounts/coinsurance, patient progress toward meeting their deductible, co-payments, and other pertinent information.

Response: We disagree with commenters who indicated there is no value for patients in replacing the estimated allowed amount with the median allowed amount and adding the 10th and 90th percentile allowed amounts. As we stated in the CY 2024 OPPS/ASC final rule with comment period (88 FR 82079), while the MRF format is designed to be used by innovators, employers and researchers and to be ingested into machines for further processing of the data, the information contained in a MRF is critical for driving competition and directly beneficial for patients. We believe, as discussed in the CY 2026 OPPS/ASC proposed rule (90 FR 33792 through 33793), that replacing the estimated allowed amount with the median allowed amount and adding the 10th and the 90th percentile allowed amounts will better enable price estimator tools to develop and estimate an individual's personalized out-of-pocket cost, as suggested by some commenters, ultimately providing patients with the information some

commenters stressed patients are most interested in and need.

Comment: Many commenters indicated that they oppose the proposals to replace the estimated allowed amount with the median allowed amount and add the 10th and 90th percentile allowed amounts due to the burden they place on hospitals. In particular, commenters expressed concerns about the specific instruction, in the definition of the median allowed amount and the 10th and 90th percentile allowed amounts, stating that should the calculated percentile ''fall between two observed allowed amounts, the percentile allowed amount is the next highest observed value.'' These commenters indicated this deviation from the standard way of calculating a percentile when it falls between two observed values would require hospitals to implement custom formulas for these calculations rather than the ''out-of-the-box'' formulas, increasing hospital burden. Several commenters requested that CMS not finalize these proposals due to resource constraints, particularly for small and rural hospitals, and a few commenters indicated the proposed effective date of January 1, 2026, would make complying with the requirements, if finalized as proposed, especially challenging. A few commenters requested we provide technical support and training for hospitals to assist them with implementing the requirements, should we finalize them as proposed. One commenter suggested we convene a group of stakeholders to evaluate how to display allowed amounts within the MRF and allow flexibility for hospitals to display their negotiated charges in the MRF as they deem appropriate until such time as the group could meet.

Response: We appreciate commenters' concerns that the proposed methodology for arriving at a value when the median, 10th percentile, or 90th percentile allowed amounts fall between two different values is not standard and may require additional programming or calculations by hospitals and this creates additional burden. However, as we stated in the CY 2026 OPPS/ASC proposed rule (90 FR 33792 through 33793), we believe the need to identify the actual dollar value a hospital has received is consistent with our statutory authority and aligns with the Administration's goals of ensuring pricing information is standardized and easily comparable across hospitals when a hospital's payer-specific negotiated charge is based on a percentage or algorithm.

As with previous HPT rulemaking, we will provide technical guidance and examples of how to encode the new data elements we are finalizing in this rule on the CMS Hospital Price Transparency—Data Dictionary GitHub Repository (*https://github.com/CMSgov/hospital-price-transparency*), as well as guidance on the HPT resources page on the CMS website (*https://www.cms.gov/priorities/key-initiatives/hospital-price-transparency/resources*). We thank the commenter for their suggestion to convene a stakeholder group to evaluate the use and display of allowed amounts within the MRF and to continue to allow flexibility until we do, but decline the commenter's suggestion at this time as we believe we have received sufficient feedback on encoding allowed amounts within the MRF via the public comment period on the proposed rule as well as in response to the ''CMS Hospital Price Transparency Accuracy and Completeness Request for Information'' (the public comment period for which closed on July 21, 2025), in which commenters recommended hospital MRFs should list a precise dollar amount for items and services whenever possible.

Comment: Several commenters expressed concern about replacing the estimated allowed amount with the median allowed amount and adding the 10th and 90th percentile allowed amounts so soon after the January 1, 2025 effective date of the estimated allowed amount requirement. These commenters questioned why CMS believes the estimated allowed amount is insufficient to provide context to the payer-specific negotiated charge when it is based on a percentage or algorithm and why the median allowed amount is more useful to consumers of the MRF. One commenter questioned why our proposals in the proposed rule deviate from our May 22, 2025 guidance.

Response: As discussed in the CY 2026 OPPS/ASC proposed rule, on February 25, 2025, the President issued Executive Order 14221 directing that HHS act to require disclosure of actual prices and ensure pricing information is easily comparable across hospitals. Consistent with the Executive Order and the feedback we have received from interested parties, we have considered ways to improve the requirement for hospitals to make public actual dollar amounts in the MRF to further transparency and comparability of hospital pricing information. Specifically, we considered the usefulness of the estimated allowed amount, as defined at § 180.20, in providing necessary context for the payer-specific negotiated charge and in facilitating comparisons across hospitals. As we stated in the proposed rule, we believe that the payer-specific negotiated charge should be better contextualized and more precisely encoded to improve the MRF users' ability to understand and use hospital standard charges. While the estimated allowed amount provides useful additional context and enhances transparency and comparability of hospital standard charges, the median, 10th percentile, and 90th percentile allowed amounts more accurately reflect what the hospital is reimbursed.

Our May 22, 2025 guidance regarding the use of the estimated allowed amount was an important first step towards requiring the disclosure of the actual prices of items and services, not estimates, and ensuring pricing information is standardized and easily comparable across hospitals and health plans. We realized, however, that additional requirements would be needed to achieve that aim. Toward that end, we proposed in the CY 2026 OPPS/ASC proposed rule to replace the estimated allowed amount with the median allowed amount and to add the 10th and 90th percentile allowed amounts, requiring hospitals to encode actual dollar values they have received for an item or service when the payer-specific negotiated charge is based on an algorithm or percentage. Consistent with the President's Executive Order and our goal of advancing the disclosure of the actual prices of items and services, we are finalizing our proposals to replace the estimated allowed amount with the median allowed amount and to add the 10th and 90th percentile allowed amounts.

Comment: Several commenters requested, as an alternative to our proposal to replace the estimated allowed amount with the median allowed amount and to add the 10th and 90th percentile allowed amounts, that CMS require hospitals, without exception, to make public all their payer-specific negotiated charges ''in dollars and cents,'' thus eliminating the need for the currently required estimated allowed amount or the proposed median, 10th percentile, and 90th percentile allowed amounts. These commenters indicated they believe this is the only way to be able to make ''apples-to-apples'' comparisons across hospitals and for patients to understand what they might be expected to pay for an item or service. One of these commenters suggested we prohibit hospitals from charging patients more than a payer-specific negotiated charge dollar amount and presume that any MRF that has payer-specific negotiated charges represented as percentages and algorithms is automatically non-compliant with our requirements.

Conversely, one commenter requested we indicate in the final rule that the allowed amounts would not represent a guaranteed price because they do not necessarily represent the amount an individual would expect to pay for the item or service.

Response: We point these commenters to the discussion in the CY 2024 OPPS/ASC final rule with comment period (88 FR 82079) where we acknowledged and agreed with commenters that, although critical for determining an individual's out-of-pocket obligation, hospital standard charges do not represent either an individual's out-of-pocket obligation or a ''real, guaranteed price.'' However, as we noted in the CY 2024 OPPS/ASC final rule with comment period, individualized estimates in dollars may be obtained directly, in many circumstances, from providers and payers through other Federal price transparency efforts such as those implementing the NSA and TiC requirements. As such, we continue to strongly encourage individual consumers to avail themselves of hospital and payer price estimator and comparison tools, and to seek out ''good faith estimates'' from hospitals to comply with separate requirements implementing the NSA, which may provide up-front pricing that can be used to dispute final charges that are substantially in excess of the up-front amounts. Additionally, we reiterate, as we stated in the CY 2020 HPT final rule and the CY 2024 OPPS/ASC final rule with comment period, that we continue to encourage hospitals to provide consumers with cost information in a consumer-friendly manner. Furthermore, as we noted in the CY 2024 OPPS/ASC final rule with comment period, we understand the desire for individual patients to access hospital prices in dollars and cents. However, as discussed in that rule, we continue to disagree that all hospitals can produce a payer-specific negotiated charge in dollars that meets the definition of a ''standard charge'' because hospitals establish payer-specific negotiated charges in many ways, ranging from basic fee schedules (in which dollar amounts for specific items and services are known), to grouper methodologies (in which a base rate in dollars has been established but may then be modified depending on other factors like transfers or outliers), to ''percent of billed charges'' schemes (in which the dollar amount varies from person to person). Finally, as discussed in the CY 2024 OPPS/ASC final rule with comment period, we believe that section 2718(e) of the PHS Act directs the Secretary to tell hospitals how to display their standard charges, not how to establish them or that they must establish them.

We continue to believe that the policies we are finalizing in this final rule with comment period will greatly improve the transparency of payer-specific negotiated charges and will make such charges more comparable across hospitals.

Comment: A few commenters recommended CMS keep the requirement to encode the estimated allowed amount in the MRF instead of replacing it with the median allowed amount and adding the 10th and 90th percentile allowed amounts, indicating they believe that given the volume and complexity of the MRFs, the average would provide a more accurate estimate of what a hospital has historically received for that item or service. One commenter indicated that ''the law of large numbers ensures that the sample mean will converge towards the true population mean as the sample size grows. This assures that with enough data, such as that contained in MRFs, the average provides a more accurate estimate of the overall characteristic of the population being studied.''

Response: We recognize that the extent to which a sample statistic provides a reasonable representation of the population statistic depends, at least in part, on the sample size. Therefore, we proposed hospitals encode the count of allowed amounts data element (described in a later section) so that consumers of the MRFs can make informed decisions about the data. The commenter did not provide additional reasons for why the mean is a preferred statistic to the median, 10th percentile, and 90th percentile allowed amounts. We provided our reasons for proposing hospitals encode the median, 10th percentile, and 90th percentile allowed amounts in the proposed rule. Specifically, we stated we believe these allowed amounts would be a more accurate reflection of the amount a hospital would be reimbursed for an item or service. Thus, we proposed to revise § 180.50(b)(2)(ii)(C) to require hospitals to encode, beginning January 1, 2026, the median allowed amount, rather than the estimated allowed amount, if a payer-specific negotiated charge is based on an algorithm or percentage. We explained why the median allowed amount would be a more accurate and useful indicator of the allowed amount instead of a mean or average allowed amount with an outlier example in the proposed rule, that we reiterate here.

TABLE 143: Allowed Amount Outlier Example

Rank	Claim Remittance Value
1	$10,000
2	$11,000
3	$12,000
4	$15,000
5	$18,000
6	$20,000
7	$22,000
8	$25,000
9	$26,000
10	$26,000
11	$200,000

In the scenario detailed in Table 143, the mean of the claim remittance amounts is $35,000, which exceeds all the other values except for the $200,000 outlier and would not reasonably reflect the allowed amount for that item or service. By contrast, the $20,000 median would be a more accurate reflection of the allowed amount for that item and service and the amount a hospital typically would be reimbursed for that item or service. As we stated in the proposed rule, requiring the median rather than the average is consistent with generally accepted statistical principles for assessing the central point of a distribution when there are outliers.[453]

Comment: A few commenters requested clarification on, or seemed to misinterpret, our proposal to replace the estimated allowed amount with the median allowed amount. One commenter suggested regular changes in the gross charge will impact the calculation of the allowed amount. One commenter requested we clarify what a hospital should encode when they have no remittance data from which to calculate the median allowed amount. One commenter asked if CMS finalizes the proposals, would a hospital be required to encode the median, 10th percentile, and 90th percentile allowed amounts if they have encoded a payer-specific negotiated charge as a dollar amount.

Response: We thank commenters for the questions. We clarify that we proposed to define the median allowed amount as the median of the total allowed amounts the hospital has historically received from a third party payer. Since the median allowed amount would be based on the remittances received from a third party payer, we do not see how changes in the gross charge, which is defined in regulation as the charge for an individual item or service that is reflected on a hospital's chargemaster, absent any discounts, would impact the calculation of the allowed amounts. We also clarify that should a hospital have no remittance data for a particular item or service within the 12-to-15 month lookback period prior to posting the MRF (discussed in a later section), a hospital would encode ''0'' for the count of allowed amounts for that item and service and may leave the median, 10th percentile, and 90th percentile allowed amounts in the MRF blank. Further, we clarify that if a hospital has encoded a payer-specific negotiated charge in the MRF as a dollar amount, and that dollar amount represents the full payer-specific negotiated charge that is not further modified by a percentage or algorithm, the hospital would not be required to encode the allowed amounts. For example, if the hospital's payer-specific negotiated charge is 70 percent of the Medicare payment rate, then the hospital would calculate and encode the payer-specific negotiated charge as a dollar amount, and would not need to further describe the percentage or algorithm or provide the allowed amounts. If a payer-specific negotiated charge is a dollar amount and can be calculated, in part, but does not fully account for the payer-specific negotiated charge, however, then the hospital must calculate and encode the payer-specific negotiated charge dollar amount and must also describe the algorithm or percentage and encode the allowed amounts. For example, if the service has a base rate of $3,495, and is further modified by an algorithm, then the hospital would encode the base rate of $3,495 in the standard charge dollar data element, and then describe the algorithm that further modifies that base rate in the standard charge algorithm data element, and encode the allowed amounts. Figure 3 is an example of the information required for the algorithm description.

Comment: One commenter requested CMS reconsider in future rulemaking requiring hospitals to encode a ''maximum allowed amount'' that would reflect the maximum total allowed amount a hospital has historically received for a third party payer for an item and service.

Response: In the CY 2024 OPPS/ASC final rule with comment period (88 FR 82100), we stated that we agreed with commenters that the display of a maximum allowed amount could provide some clarity about the highest dollar amount a consumer might be obligated to pay (once the consumer calculates their own potential out-of-pocket obligation based on the displayed maximum allowed amount). For example, suppose, with respect to a particular payer and plan, the maximum allowed amount for an item or service was displayed as $1,500, the plan featured a 20 percent coinsurance requirement, and the individual had already met any applicable annual deductible. In such a scenario, the individual would likely not be required to pay more than $300 (20 percent of $1,500) for the indicated item or service.[454]

At that time, however, we elected not to adopt commenters' suggestions to require hospitals to encode the maximum allowed amount because, as we stated, a maximum dollar value derived from past remittances or other data sources could include outliers, thereby potentially misrepresenting an individual's required payment for an item or service. As we indicated in the CY 2026 OPPS/ASC proposed rule (88 FR 82101), the display of the maximum allowed amount could be skewed to the point where it would not present useful information to consumers or the public. As opposed to the maximum allowed amount, however, the 90th percentile of the total allowed amounts for an item or service would be more representative of the dollar amount the individual might be responsible for paying, less subject to extreme outliers, and would provide an additional data point to contextualize the dollar value when the payer-specific negotiated charge for an item or service is based on a percentage or algorithm. Similarly, we stated we believe that setting a threshold based at the 10th percentile would exclude outliers on the low end, and, when combined with the other data elements, provide MRF users with a better understanding of the realistic range of payer-specific negotiated charges. We will continue to evaluate the utility of the maximum allowed amount, and may revisit this alternative in future rulemaking.

Final Action: After consideration of public comments, we are finalizing our proposals to replace the estimated allowed amount with the median allowed amount and to add the 10th and 90th percentile allowed amounts, including our proposed methodology for calculating the allowed amounts should the calculated percentile fall between two observed allowed amounts. As described earlier, we are revising § 180.50(b)(2)(ii)(C) to require, at new § 180.50(b)(2)(ii)(C)(*2*), that, beginning January 1, 2026, if a payer-specific negotiated charge is based on a percentage or algorithm, the hospital must calculate and encode the 10th percentile, median, and 90th percentile allowed amounts in dollars for that item or service, but delaying enforcement until April 1, 2026.

As noted previously, we also are finalizing, with modification, our proposed definition of ''median allowed amount'' in § 180.20, such that the

[453] Cooksey, R.W. (2020). Descriptive Statistics for Summarising Data. In: Illustrating Statistical Procedures: Finding Meaning in Quantitative Data. *https://doi.org/10.1007/978-981-15-2537-7_5. https://doi.org/10.1007/978-981-15-2537-7_5.*

[454] We note that this scenario is slightly different than we had portrayed at 88 FR 81540, 82101 which, in retrospect, we realized was erroneous with respect to the deductible.

''median allowed amount'' will be defined as the total allowed amounts the hospital has historically received from a third party payer for an item or service for a time period no less than 12 months and no longer than 15 months prior to posting the machine-readable file. We are finalizing, with modification, our proposed definition of ''tenth (10th) percentile allowed amount'' in § 180.20 as the 10th percentile of the total allowed amounts the hospital has historically received from a third party payer for an item or service for a time period no less than 12 months and no longer than 15 months prior to posting the machine-readable file. We are finalizing, with modification, our proposed definition of ''ninetieth (90th) percentile allowed amount'' in § 180.20 as the 90th percentile of the total allowed amounts the hospital has historically received from a third party payer for an item or service for a time period no less than 12 months and no longer than 15 months prior to posting the machine-readable file. We are also finalizing at § 180.20 that should the calculated percentile fall between two observed allowed amounts (in other words, where the total count, *n*, is an even number), the allowed amount will be the next highest observed value.

c. Calculation of Allowed Amounts

(1) Determining the ''Total Allowed Amount''

In the CY 2026 OPPS/ASC proposed rule (90 FR 33795), we noted that, under the proposed definitions of ''median allowed amount,'' ''10th percentile allowed amount,'' and ''90th percentile allowed amount'' at § 180.20, hospitals would calculate the allowed amount considering the ''total allowed amount'' for an item or service. As with the estimated allowed amount in the current rule, and as we explained in the CY 2024 OPPS/ASC final rule with comment period (88 FR 82101), the amount should reflect the total amount the hospital was reimbursed for the item or service (or service package). We stated in the CY 2026 OPPS/ASC proposed rule (90 FR 33795) that the ''total allowed amount'' dollar figure would be derived from the gross charge minus contractual adjustments and consist of the portion billed to a payer for a particular plan and the portion, if any, billed to the patient. As we indicated in the CY 2026 OPPS/ASC proposed rule, we believe defining the ''total allowed amount'' this way would help to enhance consistency in how hospitals calculate this contextual data element, increasing comparability across hospitals.

We received no comments about this provision and are finalizing as proposed.

(2) Data Source for Calculating the Allowed Amounts

In the CY 2024 OPPS/ASC final rule with comment period (88 FR 82101), we stated our belief at the time that hospitals should retain flexibility, in the interest of reducing burden, to determine the best data source(s) for calculating the estimated allowed amount data element, though we agreed with commenters that using information from EDI 835 ERA transaction data would appear to meet our requirements. To enhance the consistency of hospital standard charge information and the comparability of the median allowed amount, and the 10th percentile and 90th percentile allowed amounts, and in accord with what commenters had earlier suggested in the CY 2024 OPPS/ASC final rule with comment period, in the CY 2026 OPPS/ASC proposed rule (90 FR 33476), we proposed to require that hospitals only use EDI 835 ERA transaction data to calculate and encode the allowed amounts. As we had indicated in prior rulemaking (88 FR 82100 through 82101), EDI 835 ERA transaction data, the electronic transaction data that provides claim payment information that hospitals use to track and analyze their claims and reimbursement patterns, including any adjustments made to the claim such as denials, reductions or increases to the amount charged, and expected patient co-payments, co-insurance, or secondary coverage, would meet the requirement to calculate an allowed amount. We sought comment on the proposal to require that hospitals only use EDI 835 ERA transaction data to calculate and encode the allowed amounts. We also sought comment on whether there are instances where a hospital would not have access to EDI 835 ERA transaction data and whether there are alternative data sources we should consider requiring hospitals to use to calculate the allowed amounts and count of allowed amounts.

Comment: Several commenters supported our proposal to require that hospitals only use EDI 835 ERA transaction data to calculate and encode the allowed amounts, indicating that the proposal would enhance comparability across hospitals and improve the utility of MRFs. One commenter indicated that the requirement would improve consumers' ability to ''comparison shop'' between hospitals as they will have confidence that the allowed amounts were calculated using common sources of data. Another commenter indicated that EDI 835 ERA transaction data is the ''superior option'' for calculating the allowed amounts and suggested that other data sources would be less reliable. One commenter maintained that EDI 835 ERA transaction data is an industry standard and the most comprehensive source of transaction data from which to calculate the allowed amounts and urged us not to deem any other data sources as a compliant alternative to EDI 835 ERA transaction data.

Response: We thank commenters for the support of our proposal to require that hospitals only use EDI 835 ERA transaction data to calculate and encode the allowed amounts. We agree with commenters that suggested EDI 835 ERA transaction data is sent by many payers and thus requiring its use to calculate and encode the allowed amounts would enhance the consistency of hospital standard charge information and the comparability of the median allowed amount, and the 10th percentile and the 90th percentile allowed amounts. However, as discussed in a later comment summary, several commenters indicated that there are scenarios in which a hospital does not have access to EDI 835 ERA transaction data. In order to ensure that all hospitals subject to the HPT requirements are able to calculate and encode the allowed amounts, we are requiring hospitals to use EDI 835 ERA transaction data or an alternative, equivalent source of remittance data that includes the same information as EDI 835 ERA transaction data would include (as discussed in more detail below).

Comment: Many commenters opposed our proposal to require that hospitals only use EDI 835 ERA transaction data to calculate and encode the allowed amounts due to the perceived burden of the proposal. Several commenters indicated that requiring hospitals to only use EDI 835 transaction data would require significant resource investment, coordination within the hospital, and, potentially, coordination with their EHR vendors. Several commenters maintained that it would be difficult to only use EDI 835 ERA transaction data to calculate and encode the allowed amounts because the data is not standardized, the data may not capture item or service level detail, payers use claim adjustment reason codes (CARC) and remittance advice reason codes (RARC) inconsistently, and payers frequently deviate from Health Insurance Portability and Accountability Act (HIPAA) standard transaction requirements. A few commenters suggested that using EDI 835 ERA transaction data to calculate

and encode the allowed amounts may be particularly difficult for small and rural hospitals with limited technical capacity.

Several commenters opposed the proposal to require hospitals to only use EDI 835 ERA transaction data to calculate and encode the allowed amounts because they indicated there are scenarios where a hospital does not have EDI 835 ERA transaction data. Several commenters noted that some payers still send paper remittances and a few commenters indicated that they have electronic remittance data from some payers, but it is not EDI 835 ERA transaction data. A few commenters indicated hospitals may lack direct access to EDI 835 ERA transaction data. A few commenters indicated that hospitals may receive reimbursement in the form of per month supplements, value-based payment distributions, or other payment arrangements that may not be reflected in EDI 835 ERA transaction data, and in such cases, one commenter suggested hospitals be allowed to reconcile EDI 835 ERA transaction data with other data sources to ensure the allowed amounts reflect the full reimbursement for a particular item or service. One commenter noted that CMS' proposal does not account for hospitals with integrated healthcare delivery systems which rely on internal allowed amount fee schedules as an alternative, equivalent data source and would produce the same allowed amount outputs as the EDI 835 ERA transaction data, but without significant administrative inefficiencies. Another commenter suggested that if a hospital does not have access to EDI 835 ERA transaction data, they support allowing the use of an alternative data source.

Response: We believe the requirements we are finalizing in this final rule with comment period will strengthen HPT through further standardization and comparability of the allowed amounts across hospitals, and that the benefits to the public outweigh the burden on hospitals. We appreciate commenters who suggested that there are reimbursements that may not be reflected in the EDI 835 ERA transaction data. Acknowledging the merits of these comments, we are finalizing that hospitals be required to use EDI 835 ERA transaction data or an alternative, equivalent source of remittance data that includes the same information as EDI 835 ERA transaction data would include. We clarify that if a hospital uses an alternative, equivalent source of remittance data to calculate and encode the allowed amounts, such data source must allow the hospital to calculate the ''total allowed amount,'' meaning the gross charge minus contractual adjustments, consisting of the portion billed to a payer for a particular plan and the portion, if any, billed to the patient. Further, as discussed in more detail in another section of this final rule with comment period, although the new requirements at § 180.50 will be effective January 1, 2026, we are delaying enforcement of these requirements to April 1, 2026, to provide hospitals with more time to comply. We believe our finalized policy to give hospitals the option to use an alternative, equivalent source of remittance data that includes the same information as EDI 835 ERA transaction data is responsive to commenters' concerns about the lack of availability of EDI 835 ERA transaction data for certain hospitals and mitigates concerns of burden associated with accessing EDI 835 ERA transaction data for such hospitals. At the same time, acknowledging commenters' concerns about burden we have increased burden estimates in section XXIII. (Collection of Information Requirements) of this final rule with comment period.

Comment: Several commenters opposed our proposal to only use EDI 835 ERA transaction data to calculate and encode the allowed amounts because they disagree with the EDI data they have been provided by payers, or believe there are errors in the data they have received. A few commenters indicated that the allowed amounts encoded in hospitals' MRFs may be much lower than the payer-specific negotiated charge for those items and services if CMS finalizes the requirement to use only EDI 835 ERA transaction data, as hospitals may have ongoing payment disputes with payers at the time the MRF is updated. One commenter indicated it would be ''unreasonable'' to require hospitals to use EDI 835 ERA transaction data because hospitals lack control over the accuracy of the data.

Response: We disagree with the commenter that indicated it would be unreasonable for us to require hospitals to use EDI 835 ERA transaction data to calculate and encode the allowed amounts. As indicated by commenters that supported our proposal, many payers send EDI 835 ERA transaction data to hospitals and thus it would be a consistent and reliable source of data for hospitals to use to calculate and encode the allowed amounts. However, as indicated elsewhere in this section, we are finalizing requiring hospitals to use EDI 835 ERA transaction data or an alternative, equivalent source of remittance data that includes the same information as EDI 835 ERA transaction data would include. Additionally, we recognize that some remittance data initially provided to a hospital may be later adjusted for a variety of reasons that may modify the total allowed amount for an item or service. However, as discussed in the CY 2026 OPPS/ASC proposed rule (90 FR 33796), timely filing limits for claims vary by state and payer, with a typical range of 30 days to 12 months from the date of service.[455] [456] [457] [458] In addition, research suggests that many healthcare claims are adjudicated within 30 days.[459] Therefore, we believe much of the remittance data hospitals will use to encode the allowed amounts will be finalized within 13 months, and that our finalized lookback period (discussed in a later section) that includes no less than 12 months and no longer than 15 months of data prior to posting the MRF should provide sufficient time for hospitals to receive corrected remittance data for most of the data that is used. We acknowledge that there may be some instances where the remittance data hospitals use to calculate and encode the allowed amounts may change after the MRF is posted, due to additional adjustments. However, we believe the need for hospitals to use more recent remittance data to enhance comparability outweighs the need to capture the final disposition on a claim.

Comment: A few commenters provided alternative suggestions to or requested clarification of our proposal for hospitals to calculate and encode the allowed amounts using only EDI 835 ERA transaction data. One commenter questioned whether we are proposing to require hospitals to calculate and encode a payer-specific negotiated charge that is not based on a percentage or algorithm using EDI 835 ERA transaction data. One commenter recommended we publish a standardized guide for calculating the allowed amounts at an item or service

level. One commenter suggested we require hospitals to encode the date of the most recent chargemaster update and the weighted average percentage increase applied to gross charges since the date of last update.

Response: As indicated in the CY 2020 HPT final rule (84 FR 65551), the payer-specific negotiated charge is defined as the charge that a hospital has negotiated with a third party payer for an item or service. We clarified in that rule (84 FR 65534) that the payer-specific negotiated charge can be found in other parts of the hospital billing and accounting systems than the chargemaster, or in rate tables or the rate sheets found in hospital in-network contracts with third party payers indicating the agreed upon rates for the provision of various hospital services. Since EDI 835 ERA transaction data is the electronic transaction data from payers that provides claim payment information rather than the payer-specific negotiated charge for an item or service, we clarify that we would not expect, nor should hospitals use, EDI 835 ERA transaction data to encode their payer-specific negotiated charges. We thank the commenter for the suggestion to publish a standardized guide for calculating the allowed amounts at an item or service level, but given the variation in how hospitals contract for items and services, we believe we would be unable to develop a standardized guide for calculating the allowed amounts that would apply to all items and services offered by all hospitals. We thank the commenter for the suggestion to require hospitals to encode the date of the most recent chargemaster update and the weighted average percentage increase applied to gross charges since the date of last update. We may consider these suggestions for future rulemaking.

Final Action: After consideration of public comments, we are finalizing our proposal, with modification. We are finalizing the requirement that hospitals must use EDI 835 ERA transaction data or an alternative equivalent source of remittance data that includes the same information as EDI 835 ERA transaction data would include, to calculate and encode the allowed amounts for items and services based on a percentage or algorithm in the MRF.

(3) Lookback Period for Calculating the Allowed Amounts

In the CY 2024 OPPS/ASC final rule with comment period, we declined to specify a lookback period for hospitals when calculating the estimated allowed amount. This flexibility was intended to reflect the variations in frequency and timing with which hospitals negotiate contracts with payers. The estimated allowed amount was intended to reflect the average reimbursement in dollars a hospital received. Our expectation was that hospitals would calculate the historical amount they received from a payer for an item or service based on the most recent reimbursement under that negotiated algorithm or percentage.

However, as we stated in the proposed rule, we have come to understand that if hospitals use substantially different lookback periods, particularly across multiple years, it could distort the allowed amounts, for example, because of pricing changes over time such as inflation, efficiencies, or the introduction of new products or services. Additionally, hospitals using varied lookback periods reduces comparability across MRFs.

As such, to help ensure that all hospitals calculate the allowed amount data elements consistently and calculate them based on the most recent reimbursements, we proposed to require that hospitals base the median allowed amount, the 10th and 90th percentile allowed amounts, and the count of allowed amounts (discussed in a later section) on EDI 835 ERA transaction data from no longer than 12 months prior to posting the MRF. We proposed that if the negotiated percentage or algorithm associated with the allowed amounts was only used for a portion of the 12-month time period prior to posting the MRF, the hospital would encode the median allowed amount, 10th and 90th percentile allowed amounts, and count of allowed amounts from the EDI 835 ERA transaction data for the portion of time that the percentage or algorithm was used. We proposed that if the negotiated percentage or algorithm associated with the allowed amounts was used for the entire 12-month time period prior to posting the MRF, the hospital would encode the median allowed amount, 10th and 90th percentile allowed amounts, and count of allowed amounts from the EDI 835 ERA transaction data for the entire 12-month time period prior to posting the MRF. We stated that a hospital may therefore need to use different lookback periods to calculate the allowed amounts for each payer, depending on when a contract was negotiated. We acknowledged that there may be situations where the EDI 835 ERA transaction data is not yet final or may change after the allowed amounts are encoded in the MRF due to additional adjustments being applied to a claim(s), so we clarified that the allowed amounts should be based on the EDI 835 ERA transaction data available at the time the MRF is updated.

We considered the efficacy of various lookback periods to calculate and encode the allowed amount data elements, and looked to research to help us gauge potential lookback periods for generating price data based on historic claims remittances.[460] [461] As we discuss below, we considered a 3- or 6-month lookback period, and requiring hospitals to use a rolling 12-month period prior to when the MRF posted.

We stated in the proposed rule that while a shorter lookback period (3- or 6-month) could be useful for accounting for recent healthcare trends and identifying quick changes in allowed amounts, with respect to less frequently provided items and services, we acknowledged that hospitals may not have any remittance data from such a short time period from which to derive the allowed amount data elements, which would result in numerous blanks in the MRF. Additionally, we noted that timely filing limits for claims vary by state and payer, with a typical range of 30 days to 12 months from the date of service, with some longer claim periods.[462] [463] [464] [465] [466] [467] Therefore, we stated that using a 3-month or 6-

[467] 42 CFR 447.45(d)(1). *https://www.ecfr.gov/current/title-42/part-447/section-447.45#p-447.45(d)(1).*

month lookback period to derive the median, 10th percentile, and 90th percentile allowed amounts, and count of allowed amounts, could result in numerous blanks in the MRF for some items and services and would not accomplish our goal of providing MRF users with meaningful and comparable price data.

After considering these alternative options, we proposed that the lookback period for the median allowed amount, 10th and 90th percentile allowed amounts, and count of allowed amounts (discussed in a later section) be based on EDI 835 ERA transaction data from no longer than 12 months prior to posting the MRF. As discussed previously, we proposed that if the negotiated percentage or algorithm associated with the allowed amounts was only used for a portion of the 12-month time period prior to posting the file, the hospital would encode the median allowed amount, 10th and 90th percentile allowed amounts, and count of allowed amounts from the EDI 835 ERA transaction data for the portion of time that the percentage or algorithm was used. We stated that limiting the lookback period to no more than 12 months prior to posting the MRF would be consistent with section 2718(e) of the Public Health Service Act that refers to ''for each year,'' and our regulations that require the MRF to be updated at least annually (§§ 180.50(e) and 180.60(e)). Additionally, we stated that for most items and services, it would allow hospitals the ability to amass sufficient claims remittance data at the payer and plan level to encode a price. We stated that where a hospital's payer contracts were initiated or renegotiated in a lesser period than the previous 12 months, with respect to those contracts, we proposed that a hospital would apply whatever period of applicability existed. As noted above, under the proposal, hospitals may need to employ different lookback periods for payers and plans, depending on when a contract was negotiated. We indicated our belief that this approach would help achieve our goal of ensuring pricing information is standardized and easily comparable across hospitals when a hospital's payer-specific negotiated charge is based on a percentage or algorithm, as well as the purpose of Executive Order 14221 to promote disclosure of a real price. We solicited comment on our proposal to require that the lookback period for the median allowed amount, the 10th and 90th percentile allowed amounts, and count of allowed amounts be based on EDI 835 ERA transaction data from no longer than 12 months prior to posting the MRF.

Comment: A few commenters supported our proposal to require that the lookback period for the median allowed amount, the 10th and 90th percentile allowed amounts, and count of allowed amounts be no longer than 12 months prior to posting the MRF. A few commenters indicated that a shorter lookback period would result in numerous blanks in the MRFs. One commenter stated that our proposal would provide a reasonable amount of time without skewing the data by including long lookback periods which would not consider changes such as inflation over that time period.

Response: We thank commenters for their support of our proposal.

Comment: Many commenters expressed concern about the proposal. While most of these commenters supported the standardization of the lookback period, many commenters expressed concern with the 12-month timeframe. Several commenters noted that 12 months is not sufficient as hospitals typically pull the data several months before posting and have claims adjudication lags effectively meaning that hospitals will only be able to use 6 to 8 months of data. One commenter suggested allowing hospitals to select any contiguous 12-month period within the 24 months prior to posting the MRF to allow for delays in payer adjudication. One commenter suggested that CMS allow time for hospitals to incorporate payment data from only the final month of the 12-month lookback period into the MRF before publication. Several commenters recommended a lookback period of at least 18 months. One commenter recommended an 18–24 month lookback period.

Response: We thank commenters for their comments on our proposal. We believe it is important to standardize the lookback period to improve comparability across MRFs by eliminating variances due to different lookback periods, without distorting the data by including data from several years prior that do not account for inflation, efficiencies, or the introduction of new products or services. However, we understand commenters' concerns that requiring a lookback period of 12 months from the date the MRF is posted may not result in data that truly reflects 12 months. As several commenters stated, hospitals may pull the data to encode the allowed amounts several months prior to posting the MRF, thus eliminating those months from the data calculations. We agree with commenters that this would result in several months not being included in the data calculations, effectively shortening the 12-month lookback period. In light of these comments, we are finalizing, with modifications, our proposed lookback period.

We are modifying the proposed definitions of ''median allowed amount,'' ''10th percentile allowed amount,'' and ''90th percentile allowed amount'' at § 180.20 to replace the phrase, ''no longer than 12 months'' with ''no less than 12 months and no longer than 15 months,'' thus requiring hospitals to use a lookback period of no less than 12 months and no longer than 15 months prior to posting the MRF. This modification solidifies our intent in the proposed rule to ensure hospitals calculate the allowed amount data elements over a more consistent time period and calculate them based on the most recent reimbursements to enhance comparability. As noted earlier, we agree with commenters that a 12-month lookback period from the date of posting of the MRF may eliminate several months of data if hospitals pull the data a few months prior to posting. We believe the modifications we are finalizing to the lookback period help to address this concern by allowing a longer lookback period in situations where hospitals need time to pull and prepare data prior to posting the MRF. We expect hospitals to use at least the most recent 12 months of data that are available to them. However, in the case where hospitals need additional time to pull or prepare the data before posting the MRF, hospitals may use data from up to 15 months prior to the date the file is posted to help ensure they have adequate data to encode the allowed amounts. We agree with commenters that using a shorter, static 12-month period to derive the data could result in less information. We believe these modifications will result in hospitals encoding 12 months of data for all allowed amounts, striking a balance of fewer blanks in the files with meaningful data. We note that nothing precludes a hospital from using 15 months of data to encode the ''median allowed amount,'' ''10th percentile allowed amount,'' and ''90th percentile allowed amount.''

Comment: Several commenters stated that a 12 month-lookback period may not be enough time for a meaningful count when the hospital has recently negotiated or renegotiated a contract or an item or service is rarely performed or newly introduced. A few commenters pointed out that, as proposed, there will be varying amounts of data available as hospitals negotiate contracts at different times. A few commenters noted the complexity of a segmented lookback

period if a contract changes midyear or if there are multiple allowed amounts that vary as a result of a lookback period that includes a contract change. One commenter requested clarification on whether hospitals should limit the claims utilized in cases where a contract has become effective within the 12-month window. Another commenter requested clarity on what defines the threshold of a change in a contracted amount.

Response: We agree with commenters that a 12-month lookback period for data to encode the ''median allowed amount,'' ''10th percentile allowed amount,'' and ''90th percentile allowed amount'' may not be enough for a meaningful amount of data when the hospital has recently negotiated or renegotiated a contract, or an item or service is rarely performed or newly introduced. We believe the modifications we are finalizing to the lookback period help to address this concern by providing a longer period to amass adequate data to encode a value. As we discussed earlier, we also believe a more standardized lookback period will improve comparability across MRFs. A lookback period of no less than 12 months and no longer than 15 months prior to posting the MRF, as described in more detail earlier in this section, provides for a more consistent lookback period across hospitals than a static 12-month lookback period, which we believe helps to alleviate commenters' concerns about having varying amounts of data from which to encode the allowed amounts for an item or service and the complexity of a segmented lookback period if a contract changes midyear. We agree with commenters that the proposed requirement may have allowed instances where hospitals could have very short lookback periods and a lack of data depending on when a contract was negotiated or renegotiated. We believe that our finalized requirement will address this issue. We agree with commenters that it is important for hospitals to have a lookback period of at least 12 months prior to posting the file to provide MRF users with meaningful and comparable data, and that this may require additional flexibility. As such, and in response to these comments, we clarify that hospitals should report data from both prior to and after a contract negotiation date to capture a full 12-month period regardless of when the contract negotiation takes place. In the event that hospitals renegotiate a contract during the lookback period, hospitals should use data from both prior to and after the negotiation date and encode one figure for each of the allowed amount data elements. Regardless of how many times a contract was modified or the amount changed, the hospital should use all data available over a 12-month lookback period. We are making this change to address commenters' concerns that only including data from the most recent contract negotiation date would limit the amount of data used to encode allowed amounts.

Comment: A few commenters opposed our proposal. A few commenters requested that CMS retain the current requirements which allow hospitals the flexibility to use a lookback period of their choosing from which to encode the allowed amounts. One commenter expressed concern that the proposal will significantly increase the administrative burden on hospitals as the commenter believes it is a complex approach. A few commenters expressed concern that this requirement could require heavy manual analytics to view which rate codes changed during the course of the year at the contract level and extract those specific values.

Response: We appreciate commenters' concerns; however, as we stated in the proposed rule, the current flexibility has resulted in distorted allowed amounts because of pricing changes over time such as inflation, efficiencies, or the introduction of new products or services and reduced comparability across MRFs. By standardizing the lookback period, we believe we are simplifying the process and decreasing the amount of manual work needed to encode the allowed amounts. In particular, if a hospital renegotiates a contract during the lookback period, the hospital will include data from both before and after the renegotiated contract. We believe that this mitigates the additional burden mentioned by commenters about requiring analytics to view which rate codes changed during the course of the year and extract those specific values. We also believe the benefit of the modification we are finalizing to require hospitals to use a lookback period of no less than 12 months and no longer than 15 months prior to posting the MRF outweighs any burden that hospitals may experience, as users of the MRF will be able to better understand and use the data.

Comment: A few commenters offered additional suggestions with respect to this proposal. One commenter suggested that because it will be difficult for MRF users to know how many months of EDI 835 ERA transaction data were used in the allowed amount calculations, hospitals should also be required to encode the effective date of the contract in the MRF. Another commenter recommended an option by which a hospital could leave the field blank if it had less than 6 months of data available. One commenter suggested requiring hospitals to update their files every 6 months to ensure the most recent and complete data is provided and to minimize the number of blanks when hospitals have no historical claim remittance data.

Response: We thank commenters for providing additional suggestions with respect to this proposal, and, as we have explained, we are finalizing modifications to the proposal that we believe address several commenters' concerns. Our intent is to standardize the lookback period to improve comparability without distorting the data with a longer lookback period or creating unnecessary blanks in the MRF with a shorter lookback period. We believe our finalized lookback period of no less than 12 months and no longer than 15 months prior to posting the MRF strikes the right balance. We note that nothing precludes a hospital from adding additional information in the ''Additional Notes'' field, such as the effective date of the contract.

Final action: After consideration of public comments, we are finalizing our proposal with modification. We are finalizing that the lookback period for the median allowed amount, the 10th and 90th percentile allowed amounts, and count of allowed amounts is a time period of no less than 12 months and no longer than 15 months prior to posting the MRF. As such, we are revising the definitions of ''median allowed amount'', ''10th percentile allowed amount'', and ''90th percentile allowed amount'' at § 180.20 to reflect a lookback period of no less than 12 months and no longer than 15 months prior to posting the MRF. We expect hospitals to use at least the most recent 12 months of data that is available to them. However, in the case where hospitals need additional time to pull or prepare the data before posting the MRF, hospitals may use data from up to 15 months prior to the date the MRF is posted to help ensure they have an adequate number of data points to encode the allowed amounts. The 12 to 15 months of data must be contiguous. In the event that a hospital renegotiates a contract during the 12- to 15-month span, the hospital must include data from both prior to and after the negotiation date.

d. Hospitals To Encode the Count of Allowed Amounts

As part of our proposal to require hospitals to encode the median, 10th

percentile, and 90th percentile allowed amounts if a hospital's payer-specific negotiated charge is based on an algorithm or percentage, we also proposed to require hospitals to encode the count of allowed amounts from the EDI 835 ERA transaction data used to calculate the median, 10th percentile, and 90th percentile allowed amounts. We proposed that the same count of allowed amounts would be used to calculate the median, 10th percentile, and 90th percentile allowed amounts (90 FR 33797). We solicited comment on our proposed revision to § 180.50(b)(2)(ii)(C) to require hospitals to calculate and encode the count of allowed amounts used to calculate the median, 10th percentile, and 90th percentile allowed amounts, as well as on our proposal that hospitals encode this data element with the actual number of allowed amounts used within the EDI 835 ERA transaction data. We also solicited comment on the alternative we considered of encoding the count of allowed amounts using a standardized range of the number of allowed amounts used within the EDI 835 ERA transaction data, rather than the actual number of allowed amounts, and sought comment on standardized range values of counts of allowed amounts that would be useful. In our proposal, we indicated our belief that this data element would also help drive understanding of the accuracy and completeness of the file, where applicable, and we also proposed that hospitals would be required to disclose why they were unable to calculate the median, 10th percentile and 90th percentile allowed amounts based on a lack of EDI 835 ERA transaction data.

Comment: Several commenters expressed their support for hospitals to encode the count of allowed amounts that were used to calculate the median, 10th percentile, and 90th percentile allowed amounts when the payer-specific negotiated charge is based on a percentage or algorithm. A few commenters indicated that the median, 10th percentile, and 90th percentile allowed amounts need to be interpreted in the context of the number of cases (or quantities) for which each procedure is performed and that disclosing the count of allowed amounts would help MRF users establish the credibility of this data, while further noting the policy aims to improve the accuracy and usability of the pricing data that hospitals must report.

Response: We thank commenters for their support of this proposal. We believe this additional context regarding the number of values used to calculate the median, 10th percentile, and 90th percentile allowed amounts—because more price volatility might reasonably be anticipated with respect to a less frequently performed service—would help MRF users determine whether allowed amounts are reasonably good approximations of what typically would be generated by the payer-specific negotiated charge percentage or algorithm. Knowing the number of allowed amounts used to derive the allowed amounts will better enable MRF users to assess how representative the median, 10th percentile, and 90th percentile allowed amounts are of the overall price distribution for the item or service.

Comment: A few commenters did not support the proposal to add the count of allowed amounts, citing the additional burden to encode this data from EDI 835 ERA transaction data.

Response: We acknowledge comments that cited the additional burden to calculate the count of allowed amounts used when calculating the median, 10th percentile, and 90th percentile allowed amounts, derived from EDI 835 ERA transaction data. In response to these comments, we have increased burden estimates, and as addressed above, have allowed additional flexibility to use an alternative, equivalent source of remittance data to address those concerns. As we stated in the CY 2026 OPPS/ASC proposed rule, we believe that requiring hospitals to encode the count of allowed amounts provides valuable information to allow MRF users to assess how representative the median, 10th percentile, and 90th percentile allowed amounts are of the overall price distribution for the item or service, with the reassurance of their statistical validity increasing with the increasing number of allowed amounts used to make the calculation. We believe that the benefit to the public to be able to understand the amount of data or number of remittances used to determine the allowed amounts outweighs the additional burden incurred by hospitals in encoding the count of allowed amounts. Additionally, as described in more detail later in this final rule with comment period, we are delaying enforcement of these new requirements to April 1, 2026 to allow hospitals additional time to implement the requirements.

Comment: Many commenters expressed concerns that, for low-volume services— especially in rural settings—the requirement to encode the count of allowed amounts could mean publishing very small claim counts that risk disclosure of protected health information and conflict with long-standing CMS and Federal data suppression standards. Commenters stated that publishing such small counts would not only raise HIPAA concerns but could also allow MRF users to back into sensitive information. A few commenters provided alternative approaches to address privacy concerns, including masking counts under either 10 or 11 by encoding an indicator such as ''<10'' or ''<11'' as the count of allowed amounts value, stating this indicator would alleviate privacy concerns. One commenter also suggested that CMS only require the 10th and 90th percentile allowed amount values when the count of allowed amounts is greater than 10, explaining doing so would better statistically capture true 10th and 90th percentile values and would, in outlier situations, address privacy concerns. This commenter also recommended that median values could be statistically calculated with two claims or greater.

Response: Commenters' persuasive recommendations with respect to encoding the count of allowed amounts for low-volume services lead us to finalize modifications to our proposal. We believe that masking counts of remittances greater than zero but less than 11 would align with the CMS Cell Suppression Policy [468] and alleviate commenters' concerns regarding any potential patient privacy risks. Should the actual number of allowed amounts within the EDI 835 ERA transaction data, or an alternative, equivalent source of remittance data used to calculate the allowed amount data elements, range from 1–10, hospitals will be required to encode a valid value ''1 through 10'' to indicate that there were from 1 through 10 allowed amounts used to calculate the median, 10th percentile, and 90th percentile allowed amounts. We will provide further instruction on how to encode the valid value in the CMS Hospital Price Transparency—Data Dictionary GitHub Repository.

We also acknowledge that, in certain situations (for example, in the case of a new hospital, or a hospital contracting with a new payer organization), a hospital may have no historical claim remittance history from which to derive a median, 10th percentile, or 90th percentile allowed amount for a payer and plan. We discussed this in the proposed rule (90 FR 33797), albeit with respect to a 12-month, as opposed to a 12- to 15-month, lookback period. Should a hospital have a ''0'' count of allowed amounts from the 12- to 15-month lookback period prior to posting

[468] CMS Cell Size Suppression Policy, Current Version January 26, 2024: *https://resdac.org/articles/cms-cell-size-suppression-policy.*

the MRF from which to derive the allowed amounts for a particular item or service, we are finalizing that it: (1) must encode ''0'' as the value for the count of allowed amounts for a specific payer and plan; (2) leave blank the associated MRF median, 10th percentile, and 90th percentile allowed amounts given there is no applicable data to encode; and (3) must encode information to explain the hospital's insufficient claim remittance history in the additional notes data element. In particular, should a hospital have no claims for the payer, we are requiring that a hospital encode why there is a ''0'' count of allowed amounts in the additional notes data element. We also note that nothing would preclude a hospital from updating its MRF when it has one or more remittances for an item or service. We also require that hospitals exclude zero-dollar claims from the count of allowed amounts because, as we noted in the proposed rule (90 FR 33797), they would result in a misleading and skewed calculation of the median, 10th percentile, and 90th percentile allowed amounts. Zero-dollar claims are health care claims submitted by the hospital to a payer organization where the payment amount is zero. Hospitals submit claims that result in no payment for some items and services because they provide information for the payer to calculate and process payment for the mix of services furnished, not because it results in a separate payment for that item or service. We appreciate the alternative suggested by one commenter that CMS only require the 10th and 90th percentile allowed amount values when counts are 11 or greater, but disagree as we would err on the side of the completeness of the MRF and the data encoded within.

Comment: One commenter stated, in response to the alternative we considered to encode the count of allowed amounts as ranges rather than a precise count, that requiring a range would present unnecessary burden to hospitals; thus, this commenter supported finalizing a precise count in the final rule.

Response: We agree with the commenter that our proposal offers greater precision and information, and reduces the burden on the hospital to encode the count of allowed amounts data element as a range.

Final action: After consideration of the comments received, we are finalizing at new § 180.50(b)(2)(ii)(C)(*2*) that if the payer-specific negotiated charge is based on a percentage or algorithm, the hospital must calculate and encode the total number of allowed amount remittances from the EDI 835 ERA transaction data or an alternative, equivalent source of remittance data used to calculate the median, 10th percentile, and 90th percentile allowed amounts. Should the total count of allowed amount remittances be greater than 0 but less than 11, or 1 through 10, a hospital must indicate that at least 1 but no more than 10 allowed amount remittances were used in the calculation, using the valid value described in the CMS Hospital Price Transparency—Data Dictionary GitHub Repository website. We refer readers to section XIX.B.4.c.*(2)* of this final rule with comment period for discussion of the remittance data we are requiring hospitals to use to determine the count of allowed amounts. Should a hospital have a ''0'' count of allowed amounts within their remittance data from the 12- to 15-month lookback period from which to derive the allowed amounts for a particular item or service, we are finalizing that it: (1) must encode ''0'' as the value for the count of allowed amounts for a specific payer and plan; (2) leave the median, 10th percentile, and 90th percentile allowed amounts in the MRF blank as there is no data to encode; and (3) must encode information to explain the hospital's insufficient claim remittance history in the additional notes data element using the examples provided in the Hospital Price Transparency—Data Dictionary GitHub Repository. We also require that hospitals exclude zero-dollar claims from the count of allowed amounts.

5. Modification to the MRF Affirmation Statement

We proposed to supplant the existing affirmation requirement by, instead, specifying at new § 180.50(a)(3)(iii) that, beginning January 1, 2026, hospitals will be required to attest in their MRFs to the following statement: ''The hospital has included all applicable standard charge information in accordance with the requirements of § 180.50, and the information encoded is true, accurate, and complete as of the date in the file. The hospital has included all payer-specific negotiated charges in dollars that can be expressed as a dollar amount. For payer-specific negotiated charges that cannot be expressed as a dollar amount in the machine-readable file or not knowable in advance, the hospital attests that the payer-specific negotiated charge is based on a contractual algorithm, percentage or formula that precludes the provision of a dollar amount and has provided all necessary information available to the hospital for the public to be able to derive the dollar amount, including, but not limited to, the specific fee schedule or components referenced in such percentage, algorithm or formula.'' We also proposed at new § 180.50(a)(3)(iv) that, beginning January 1, 2026, the hospital must encode within the MRF the name of the hospital chief executive officer, president, or senior official designated to oversee the encoding of true, accurate and complete data as directed in § 180.50(a)(3)(iii).

We stated in the proposed rule (90 FR 33798) that since the proposed new attestation requirements at § 180.50(a)(3)(iii)–(iv) would supplant, with significantly stronger provisions, certain existing requirements, we believe those particular existing requirements would become superfluous and proposed to remove them. Provisions that we proposed to remove, effective December 31, 2025, include the affirmation requirement now at § 180.50(a)(3)(ii) and the requirement at § 180.50(a)(3)(i), which states that, beginning January 1, 2024, each hospital must make a good faith effort to ensure that the standard charge information encoded in the MRF is true, accurate, and complete as of the date indicated in the MRF. Specifically, we stated that we believe the attestation requirement we proposed would not only incorporate those concepts, but, in fact, would mandate significantly heightened hospital recognition of their responsibilities than what we presently require. We stated that we believe our proposed attestation requirements, if finalized as proposed, would reduce public confusion related to whether all standard charges for hospital items and services, where possible, are included within the MRF as dollar amounts. Additionally, we stated that, should our proposal be finalized as proposed, it would establish that the hospital has provided all available information to enable the public to derive a dollar amount, including, but not limited to, the specific fee schedule or components referenced in a percentage, algorithm or formula. We explained that we believe this would provide the necessary reassurance that hospitals have provided in their MRFs meaningful, accurate information to MRF users about their standard charges for health care items and services in order for those users to fully realize the intended use of the MRFs as expressed in the CY 2020 HPT final rule—that is, for enhancing the public's ability to use the data in, for example, innovator developed consumer tools and in EHRs at the point of care for value-based

referrals, or to aggregate and use the data to increase competition.

We stated in the proposed rule (90 FR 33799) that requiring an individual's name be specified would also, we believe, expedite our ability to quickly identify an individual at the hospital to obtain, where necessary, further clarity regarding the MRF data. In connection with this proposed requirement, we proposed to add a new general data element, attester name, and stated that, should the proposal be finalized as proposed, we would provide, on the CMS Hospital Price Transparency—Data Dictionary GitHub Repository website, instruction on how to encode this data element.

We also sought comment on an alternative approach, that is, whether CMS should require hospitals to post on their publicly available websites that host the hospital MRF, a standalone attestation document that would be signed by a hospital senior official. We received public comments on these proposals.

Comment: Several commenters supported the proposal to strengthen the current HPT requirements by replacing the ''affirmation'' standard with a more robust ''attestation.'' These commenters agreed that hospitals should attest that they have included all applicable payer-specific negotiated charges that can be expressed in dollars, and for charges not knowable in advance or that cannot be expressed as a dollar amount, hospitals should be required to include in the MRFs all necessary information available to enable the public to derive the dollar amount—such as the specific fee schedule or components referenced in any percentage, algorithm, or formula. A few commenters appreciated the proposal to rescind existing requirements that a hospital merely make a ''good faith effort'' to ensure their MRF data are true, accurate, and complete. One commenter expressed specific support for the removal of the phrase ''to the best of their knowledge'' from the proposed attestation statement. One commenter stated that without such attestation, hospital accountability for encoding accurate and complete data does not exist and the new requirement will demonstrate to the public that the Federal government and hospitals take seriously their obligation to provide accurate, reliable, actionable prices. One commenter underscored the requirement that hospitals must provide all necessary information for an average patient to determine the dollar amount without third-party assistance.

Response: We appreciate commenters' support for the proposed attestation statement. We proposed to adopt this attestation to make clear to hospitals and MRF users our expectations that the hospital will accurately and completely encode all available standard charge information. If the hospital established a payer-specific negotiated charge as a dollar amount, the hospital must display the payer-specific negotiated charge as a dollar amount. If the hospital is unable to display a payer-specific negotiated charge solely as a dollar amount, such as when the payer-specific negotiated charge is further modified by a percentage or algorithm, the hospital will be required to provide all necessary information available to the hospital to derive a dollar amount. We intend this public declaration to establish for MRF users and for CMS actionable certainty on the accuracy and completeness of the standard charge information displayed. We also intend that this public declaration will increase hospital accountability to MRF users that the data is complete as of the date indicated in the file. We believe demonstrating our strengthened expectations will result in the public display by hospitals of more meaningful data for MRF users. We agree with commenters that supported our removing the good faith effort provision, as this statement did not provide adequate assurances that all standard charge information was encoded in the MRF.

As discussed in more detail later in this section, we are finalizing the proposed attestation requirement, but with modification to retain the current phrase, ''to the best of its knowledge and belief.'' We appreciate the comment that patients will use the MRF to be able to understand the dollar amount for an item or service, but caution that the standard charge information encoded within the MRF reflects the standard charge, or the regular rate established by the hospital for an item or service provided to a specific group of paying patients, which is not necessarily reflective of an individualized charge for an episode of care. We encourage patients to use the HPT consumer-friendly display files and tools and the TiC tools that take into consideration the patient's plan design and avail themselves of the protections provided under the NSA, in order to obtain an individualized charge for their care.

Comment: Many commenters opposed the proposed attestation language, in particular, the phrase ''has provided all necessary information available to the hospital for the public to be able to derive the dollar amount.'' Many commenters stated that the proposed attestation fails to account for the reality of hospital billing, which they stated depends, in significant part, on insurer behavior and calculations which in turn depend on a host of factors that cannot be easily calculated by a third party, such as whether the service was provided in conjunction with other services, the applicability of any volume discounts or stop loss amounts, as well as other unique features of a patient's insurance plan. Commenters also noted that inpatient hospital reimbursement is typically based on an entire treatment case rather than a single service as well as on patient acuity, and stated that in many cases all the procedures that may be required cannot be known in advance. Several commenters stated that the phrase ''has provided all necessary information available to the hospital for the public to be able to derive the dollar amount'' incorrectly assumes that a member of the public is (1) capable of prospectively anticipating their every need during an episode of care; and (2) has the specialized knowledge and understanding of processes and nuances that underly hospital billing, coding, and reimbursement and can accurately use the algorithms displayed. Commenters stated that there will always be some additional piece of information that an individual could use to more accurately calculate a particular charge and noted that hospitals can never be entirely certain that they have provided ''all necessary information . . . for the public to be able to derive the dollar amount.'' In addition, commenters stated that publicizing negotiated rates and frameworks or even the full text of every single payer contract would not be sufficient to enable a patient to calculate their final bill, noting that because of insurers' penchant for proprietary systems and calculations, there may be nuances that are not readily available to or shareable by hospitals.

Several commenters further expressed concern that the proposed attestation language appears to require hospitals to guarantee the absolute accuracy of complex data and apply a strict liability standard and were concerned about the practicality of expecting flawless MRF data given the volume and complexity of hospital contracts and payment arrangements. Several commenters noted that the proposed median, and 10th and 90th percentile, allowed amounts are based exclusively on EDI 835 ERA transaction data which are developed by the payer and that hospitals do not have control over the accuracy and completeness of this data. Commenters stated that it would be unreasonable to hold hospitals accountable for validating and attesting

to the accuracy and completeness of data developed by a third party. One commenter noted that individual patient cost data requires detailed information not necessarily within hospitals' control (for example, payer algorithms, plan features, etc.). A few commenters also expressed concern that the proposed attestation that the hospital ''has provided all necessary information available to the hospital for the public to be able to derive the dollar amount'' risks ensnaring hospitals and health systems in a trap: since hospitals are unable to provide this detailed information, they cannot meet the new requirements of the attestation.

Given this, many commenters recommended retaining the existing ''good faith effort'' affirmation and the phrase ''to the best of the hospital's knowledge and belief,'' which they stated reflects what hospitals can realistically provide without raising the risk of liability for the failure to identify every single piece of information (''all'') that may exist. One commenter stated specifically that this is the most responsible option given the complexity of hospital price transparency reporting and the structural limits on the data hospitals receive from payers, and asserted that these qualifying phrases represent bona fide, reasonable commitments to integrity and transparency which are commonly used in legal certifications and affirmations. One commenter specifically asked that CMS include the language, ''available information to best of our knowledge.'' A few commenters stated that, at the very least, the agency must clarify the reasonable scope of ''all necessary information.''

A few commenters stated that, because it would be impossible for hospitals to unilaterally provide sufficient information to enable patients to undertake these calculations on their own, the proposed attestation requirement would be arbitrary and capricious. Some of these commenters asserted that the imposition of an impossible requirement is, by definition, arbitrary and capricious and cited case law to support this belief. A few commenters further stated that at the very least, CMS' failure to consider the operability of this requirement would be arbitrary and capricious, with one commenter again citing case law to support their position.

Response: In the CY 2020 HPT final rule we asked hospitals to display their standard charges, and, subsequently, we encountered many MRFs strewn with blanks as hospitals indicated they could not display their charges as a dollar amount. In the CY 2024 OPPS/ASC final rule with comment period, based on hospital statements that many hospitals could not calculate a payer-specific negotiated charge as their payer-specific negotiated charge was based on a percentage of billed charges or based on a formula or algorithm that may be determined after the episode of care, we finalized new data elements, the payer-specific negotiated charge percentage and the payer-specific negotiated charge algorithm, to provide MRF users with an understanding of how the payer-specific negotiated charge was calculated, and a contextual data element, the estimated allowed amount, which is a dollar amount reflecting the average of the historical reimbursement (allowed amount) received from a third party payer for an item or service, required to be displayed when no payer-specific negotiated charge dollar can be encoded. We allowed hospitals the flexibility to describe their algorithms. Some hospitals met these additional requirements by providing additional data that gave MRF users valuable understanding on how the payer-specific negotiated charge is calculated and enough information that innovators, employers, and researchers could then draw meaningful comparisons. But other hospitals continued to provide opaque descriptions of algorithms with no anchor to help MRF users understand the calculation, sometimes using nine 9s in the estimated allowed amount field,[469] and with some indicating they did not have enough claims data to calculate any estimated allowed amounts for any items or services in their MRF. We are issuing this fourth final rule to reiterate, and further, our goal of ensuring that pricing information is standardized and easily comparable across hospitals. In this final rule with comment period, we reinforce our requirement that hospitals must calculate and encode a payer-specific negotiated charge dollar amount when possible and, when the payer-specific negotiated charge is based on an algorithm or percentage, must do more than merely offer a good faith effort to enter their payer-specific negotiated charge percentage or algorithms; instead, hospitals must provide MRF users with a detailed explanation, when the payer-specific negotiated charge is based on a percentage or algorithm, of how the payer-specific negotiated charge is derived. In this rule, we describe the data source to be used to calculate the allowed amount data elements, providing flexibility on the lookback period to calculate the data, and attempting, again, to provide MRF users more fulsome data.

We disagree with commenters who stated that it is impossible for hospitals to comply with our requirements. We understand that hospitals may not know plan design, payer-based algorithms, or patient acuity, that are determined after the episode of care is complete, and also understand that an MRF in JSON or CSV that captures standard charge information at the item or service level cannot possibly account for every patient scenario. But we remind commenters that an MRF represents a point in time—as of the date in the file—and require that hospitals attest that the information therein is accurate and complete. We require that hospitals calculate a payer-specific negotiated charge in a dollar amount, and, if the hospital cannot, that it provide all the information ''available to the hospital,'' which would include information in the hospital's systems and payer contracts, in a way that a reasonable MRF user can understand.

We understand that some data is provided to hospitals from payers, and that hospitals cannot vouch that the EDI 835 ERA transaction data provided by the payer is accurate and complete, but hospitals can attest that their calculations of the allowed amounts follow the requirements specified within this regulation completely and accurately. We likewise understand that hospitals cannot provide everything that everyone might need to know, because such information may not be available to them, but we expect them to provide sufficient and necessary information that is available to them for a reasonable objective person to derive the price for an item or service. Through this final rule with comment period, we are requiring hospitals to take the steps necessary to provide all information available to the hospital, including in their systems and contracts, to support the public to be able to derive the dollar amount. Provided here are some examples.

If the payer-specific negotiated charge is based on 115 percent of the Medicare allowed amount, the hospital is required to perform the necessary calculations

[469] We acknowledge that, in past guidance, we established the use of the ''nine 9s'' policy. *See https://www.cms.gov/files/document/cms-hpt-webinar-10-21-2024.pdf.* (''CMS recommends that the hospital encode 999999999 (nine 9s) in the data element value to indicate that there is not sufficient historic claims history to derive the estimated allowed amount, and then update the file when sufficient history is available.''). Later recognizing that was a suboptimal approach, however, in subsequent guidance dated May 22, 2025, we said that ''[h]ospitals should discontinue encoding 999999999 (nine 9s) in the estimated allowed amount data element within the MRF and should instead encode an actual dollar amount''. *https://www.cms.gov/files/document/updated-hpt-guidance-encoding-allowed-amounts.pdf.*

and encode the payer-specific negotiated charge dollar amount. If the payer-specific negotiated charge is based on 87 percent of total billed charges, when the payment reflects the total of all charges provided at the time of the service, the hospitals should encode 87 in the payer-specific negotiated charge percentage data element and then calculate the 10th percentile, median, and 90th percentile allowed amount data elements in dollars so that MRF users can use that data to draw comparisons.

The HPT regulations state that if the payer-specific negotiated charge is based on a percentage or algorithm, the MRF must also describe the percentage or algorithm that determines the dollar amount for the item or service, and, beginning January 1, 2025, calculate and encode an estimated allowed amount in dollars for that item or service. For payer-specific negotiated charges based on algorithms and payment formulas, we believe that all necessary information means all factors that comprise an algorithm that determines how the payer-specific negotiated charge is derived should be encoded in the MRF. Examples include, but are not limited to, patient demographics, hospital demographics, clinical characteristics, length of stay, resource utilization, and adjustments based on mix of services performed.

Figure 1 is an example of where a hospital provides all the contractual data on how the price is calculated, but in a way that a reasonable, objective MRF user would not be able to interpret it and use it to draw comparisons; therefore, Figure 1 illustrates an approach that would not meet the regulatory requirements:

Figure 1: Example of an Unacceptable Payer-Specific Negotiated Charge Algorithm

Interim Value: Interim Percentage Procedure Lookup: Procedure Code Tables: [[MEDICAID CCR REVS]] 100% of Table Multipliers: 100% Limited Sort By: Allowed Amount Conditions: Process Daily: N Do not limit reimbursement When duplicate code found in Procedure Code Tables use: First Code Found Consume Charges: N Consume Units: N Treat zero Procedure Code Table amount as not found: N Apply Mod50: No Additional Modifier Table: None LSS reimbursement: N FormulaCPE: (({iv: Interim Percentage} / 100) * {Charges In Service Type}) * 103% End FormulaCPE

Figure 2 provides an example where a hospital provides an algorithm that provides adequate context so that an MRF user may be able to replicate the formula to derive a price.

Figure 2: Example of an Acceptable Payer-Specific Negotiated Charge Algorithm

Case rate ($4,659), per diem for days 1-5 ($3,921), per diem for days over 5 ($3,782), subject to lesser of charges and total not to exceed $49,234 or 87 percent of billed charges.

Figure 3 provides an example where the case rate is encoded as a payer-specific negotiated dollar amount, and then further modified.

Figure 3: Example of an Acceptable Payer-Specific Negotiated Charge Algorithm

Case rate listed refers to the fixed fee payment made to provider for hospital and professional health services provided to a patient during the transplant period. Case rate represents payment in full for all such services. Transplant period is defined as transplant date through discharge or expiration of inlier days of 20. Days 21 through discharge are considered outlier days and reimbursed at the per diem rate of $3,000. Transplant period is reimbursed at the lesser of the applicable case rate and per diems or 85 percent of total billed charges for the transplant period. Associated inpatient days pre- and post-transplant period are reimbursed at $3,000 per diem or 50 percent of related charges, whichever is greater. Pre-transplant begins at the referral effective date and ends the day before the transplant procedure. Post-transplant begins the day after the transplant period ends and one year after the start of the post-transplant period.

We will provide additional examples in the CMS Hospital Price Transparency Data Dictionary GitHub Repository.

We have also observed that some hospitals provide their contractual language in the payer-specific negotiated charge dollar data element and provide additional useful descriptions of what the contractual language includes using one of the additional notes data elements provided. Nothing would preclude a hospital from also providing a plain language description in the additional notes data elements in the MRF.

We disagree with commenters that our proposal is arbitrary and capricious. We are asking hospitals to provide within the MRF, all standard charge information that they have in their systems and contracts to support the public to be able to derive the dollar amount. We are revising the attestation statement to retain the phase ''to the best of its knowledge and belief'' to acknowledge that there may be varied interpretations of contract calculations that could lead to variation in price, that the hospital may not know at the time of MRF development every factor that may impact the price or the payer may not have disclosed all factors to the hospital, and that for many hospital services the price is determined after services are performed at the episode of care level, not at the line item level, which would hinder an MRF user from being able to derive a price prior to services being performed.

Comment: A few commenters questioned that the attestation in its current form risks exposing hospitals to undue risk under the False Claims Act (FCA) and stated that CMS' existing assurances that this requirement falls outside the scope of the FCA are insufficient to allay hospital and health system concerns. Although commenters appreciated CMS' perspective, as set forth in the proposed rule, that noncompliance with this new requirement would not implicate the FCA, commenters expressed concern that there is no evidence that the Department of Justice, regulators, or judges would agree. These commenters stated that, to ensure that these new attestation requirements do not generate FCA challenges, CMS must articulate why the rule would not give rise to FCA liability. Commenters suggested that the Department of Justice could co-issue a policy stating that it would move to dismiss all FCA cases based on this attestation requirement, and stated that, short of that, no signatory could be confident that an attestation would not be used against them, or their institution.

Response: We appreciate commenters' concerns but forcefully reiterate, as stated in the CY 2024 OPPS/ASC final rule with comment period (88 FR 82086, 82116), that this final rule with comment period falls outside the scope of the FCA.

In tandem with that, and as discussed in response to a comment summary earlier in this section, we have elected not to finalize the removal of the statement, ''to the best of the hospital's knowledge and belief'' from the attestation statement, to reflect that we do not view the attestation as an absolute guarantee of perfection, but instead, as a reassurance to CMS and MRF users that to the best of the hospital's knowledge and belief, it has included all applicable standard charge information in accordance with the requirements of § 180.50, and the information encoded is true, accurate, and complete as of the date in the file. We believe that the inclusion of this statement should help allay commenters' concerns. We further note that while we have strengthened the attestation statement to require the hospital to attest that it has provided ''all necessary information available to the hospital for the public to be able to derive the dollar amount'' in cases where the payer-specific negotiated charges cannot be expressed as a dollar amount in the MRF or are not knowable in advance, we emphasize that this attestation requires the hospital to provide information that is ''available''

to the hospital, which does not require hospitals to provide any information to which they do not have access.

Comment: Several commenters expressed concern that the requirement to include ''all necessary information'' for the public to derive the dollar amount for cells that use algorithms or formulas could expose hospitals to significant legal challenges because many pricing algorithms rely on proprietary groupers or logic developed and owned by payers or third-party vendors. Commenters stated that such methodologies or reimbursement structures are often protected under intellectual property agreements or confidentiality clauses in hospital contracts, and requiring hospitals to encode such logic in the MRF could expose them to contractual breaches or legal liability. Commenters further noted that encoding such information may not even be technically possible because some components are completely and wholly managed by the payer and/or third-party vendor. A few commenters generally expressed concern that under the proposed attestation language, hospitals would be required to include privately negotiated contract terms in their MRFs or contract data that is contractually protected. A few commenters stated that the original price transparency rule struck an appropriate balance by requiring disclosure of prices without mandating hospitals to publish the full text of their contracts or all the underlying formula mechanics. Commenters asserted that the proposed attestation requirement goes well beyond the intent of helping patients understand prices, veering instead into revealing trade secrets that do not meaningfully help a patient estimate their out-of-pocket cost. Commenters believed that the attestation's purpose should simply be to ensure hospitals are making a good-faith, comprehensive effort to post the required standard charge information

Response: Consistent with the Executive Order 14221, Making America Healthy Again by Empowering Patients with Clear, Accurate, and Actionable Healthcare Pricing Information, the requirements we are finalizing advance our longstanding goals of equipping health care consumers with more meaningful and actionable price information to make well-informed healthcare decisions and supporting a more competitive, innovative, affordable, and higher quality healthcare system. This extends to ensuring that the MRF contains all accurate and complete information that the MRF users may need in order to be able to derive a payer-specific negotiated charge, including those formulas and algorithms used to derive the payer-specific negotiated charge.

Hospitals have had 4 years to demonstrate their good faith effort to make public the required standard charge information, but in that time we have assessed hospitals 2,531 warning notices, required 1,419 plans of corrective action, and imposed 27 CMPs (totaling 3,977 enforcement actions, and in the proposed rule we noted that only 7,416 hospitals meet our regulatory hospital definition (90 FR 33835)). Meanwhile, many MRF users are still confused by the dearth of data in the MRF files and whether the hospitals have indeed disclosed all the items and services they offer and the corresponding required standard charges for those items and services.[470] As we stated earlier in this rule and in prior rules, we believe MRF users (for example innovators, researchers, employers) will use this data to analyze and draw more meaningful comparisons of hospital standard charge information, identify outliers and encourage market competition, support more effective contract negotiations, and develop downstream tools to support patient price comparisons.

We do not discount commenters assertions that various confidentiality provisions may generally protect the terms of various contracts or products that intersect with price transparency, but reiterate the point we articulated in the CY 2020 HPT Final Rule (84 FR 65544) that such contracts typically include exceptions where Federal law requires such a disclosure. Our view, which we explained in the CY 2020 HPT Final Rule (84 FR 65544), is that the Defend Trade Secrets Act of 2016 (18 U.S.C. 1905), which we do not believe is applicable here, applies only to trade secrets that are ''misappropriated,'' which is defined by reference to, among other things, ''improper means,'' where there was a ''duty to maintain the secrecy,'' or ''accident or mistake.'' We do not believe any of the meanings of the term ''misappropriation'' under the Defend Trade Secrets Act apply to a circumstance where an agency rule requires disclosure of certain information. Making these charges public enables, among others, health care consumers to be better informed about the cost of care, enabling them to compare options and make informed decisions. In turn, this transparency fosters competition among providers, advancing our broader goal of lowering overall healthcare costs.

We also disagree with commenters asserting there are many pricing algorithms that rely on proprietary groupers or logic developed and owned by payers or third-party vendors for which they cannot provide information used to determine what the hospital will be reimbursed. While there may be components of such negotiated fee schedules that may depend on proprietary data or algorithms (such as proprietary groupers), this would not preclude a hospital from being able to provide all the information available to it to reflect the negotiated amount for that item or service, either as a payer-specific negotiated charge dollar amount or the formula or algorithm and the historically received allowed amounts. To support hospital implementation efforts, we will provide examples of how to encode specific scenarios in the CMS Hospital Price Transparency—Data Dictionary.

Comment: Several commenters were concerned that implementing the proposed attestation statement would overwhelm the file with conditional logic and supporting documentation that cannot conform to the file schema and would undermine the goal of machine-readability and comparability.

Response: We thank commenters for these comments. In addition to the examples we have provided, we will provide additional examples on how to encode data and information required in the attestation statement on the CMS Hospital Price Transparency—Data Dictionary GitHub Repository website.

Comment: A few commenters supported our proposal to encode within the MRF the name of the hospital chief executive officer, president, or other senior official designated to oversee the encoding of true accurate and complete data. These commenters stated their belief that this requirement appropriately enhances executive accountability and reinforces the importance of leadership engagement in ensuring transparent and reliable pricing information for the public.

Response: We thank commenters for their support of this proposal. As discussed in the proposed rule (90 FR 33799), we believe the inclusion of the name of a hospital senior official will provide CMS actionable and enforceable certainty, and MRF users additional assurance, including in situations where the hospital's payer-specific negotiated charge is based on a contractual algorithm, percentage, or formula by which a hospital genuinely cannot specify a dollar amount, that the data were reviewed and verified by the

[470] Data is inclusive of compliance actions from January 1, 2021, through August 31, 2025.

hospital's leadership, and would expedite our ability to quickly identify an individual at the hospital to obtain, where necessary, further clarity regarding the MRF data. For the reasons stated previously, we believe inclusion of the name of the CEO, president, or senior hospital official designated to oversee the encoding of true, accurate, and complete data in the MRF is reasonable and appropriate to achieve our stated goals.

Comment: Many commenters disagreed with the proposal to require hospitals to encode the name of the CEO, president, or senior hospital official designated to oversee the encoding of true, accurate, and complete data in the MRF because it would be unnecessarily burdensome to the hospital executive, hinder their ability to fulfill their primary role of focusing on strategic vision and overall governance, or introduce delays without improving accuracy. Several commenters stated that it would be unreasonable to expect the executive to personally validate potentially hundreds of thousands or millions of data points, noting that such executives are likely to rely on staff review and confirmation of the data. Instead, commenters stated that CMS should trust the good faith of others within the hospital who are far closer to the information and can verify its accuracy far more directly and easily than someone higher on the organizational chart with broader responsibility. Commenters also noted that compiling and interpreting standard charge information is extraordinarily complex, requiring interpretation of numerous assumptions and formulas, changing regulatory requirements, and intricate contract terms, and expressed concern that there is no recognition that given the vastness of the data required, an error could be overlooked despite all efforts to prevent it. One commenter further noted that there are entire software solutions designed to understand payment rates. Several commenters stated that the attestation requirement places a hospital executive in the untenable position of having to certify information beyond their practical control or granular knowledge, potentially exposing them to legal risks, with one commenter specifically recommending that the attestation be provided by the compliance officer or revenue cycle leader directly involved in the MRF development.

A few commenters expressed concern that CMS offered no support for requiring hospitals to encode the name of the CEO, president, or senior official and stated that ''conclusory reasoning'' cannot withstand scrutiny. Commenters noted that the agency did not consider the significant administrative burdens on the named attester, nor did it provide any support for why other employees within a hospital would not provide ''meaningful, accurate information.'' These commenters stated that absent actual support for this proposal, the agency should not add to the burdens of hospital leaders.

A few commenters generally stated that the current affirmation is sufficient and that it is unnecessary to require hospitals to make an attestation and encode the name of the hospital CEO, president, or senior official. One commenter asked if the hospital executive name encoded in the proposed attestation needed to match who the hospital designates as the CMS authorized and delegated official when under compliance review.

Response: We disagree with commenters and believe the reassurance to MRF users that the MRF contains data that is accurate and complete as of the date encoded in the MRF far outweighs any burden to the hospital executives whose names are encoded in the MRF. We believe the proposed requirement that hospitals encode in the MRF the name of a senior hospital official as the attester appropriately strengthens the attestation and the reassurances it provides to MRF users and CMS by providing accountability at a senior management level for the accuracy and completeness of the data. While we recognize that the senior hospital executive may not be directly involved in MRF development, we expect the named attester, as part of their role in the overall governance of the hospital, would, as necessary, be able to consult with the appropriate personnel more directly involved in MRF development, such as a compliance officer or revenue cycle leader as suggested by a commenter, in order to obtain the necessary information to make the required attestation. As such, we do not believe the proposed attestation requirement will hinder the executive's primary role within the hospital, create delays in the MRF development process, or place the attester in a position of having to attest to information of which they have no knowledge. Other CMS programs require a senior hospital executive to attest to complex financial information; for example, CMS requires a Chief Financial Officer or hospital administrator to read, prepare, and sign CMS–2552–10 (Hospital and Hospital Health Care Complex Cost Report) after the cost report has been completed.[471]

We have provided some flexibility on the title of the senior hospital executive who would attest to the file's accuracy and completeness, and indicated in the proposed rule (90 FR 33799) that we would expect the senior hospital official who is named as the attester in the file would be the same individual who would submit to CMS, if requested as part of CMS' monitoring oversight, a certification of the accuracy and completeness of the MRF data under § 180.70(a)(2)(iv). We recognize that we did not include in section XXIII. (Collection of Information Requirements) the applicable burden level for CEO review of the MRF and have added an additional 2 hours to both the one time and annual burden estimates.

Comment: A few commenters stated that requiring the proposed attester name data element would raise concern that any unintentional errors in the MRFs may be punitively attached to the name of a single person, including exposing hospital executives to excessive liability or public criticism over unintentional, technical variances. The commenters stated that since the MRFs are published on the public-facing websites of hospitals, they urged CMS to not finalize the proposed ''attester name'' data element. One commenter believed that this would pose unnecessary privacy and security concerns and would not, in any way, advance the utility of price transparency regulations. One commenter further stated that the proposal raised potential safety and security concerns for the hospital executive named on the MRF, noting that requiring a named individual to publicly affirm the accuracy and completeness of complex pricing data could inadvertently expose that person to unintended harm. Given this, commenters urged CMS to retain the existing language requiring a good faith affirmation that the data is true, accurate, and complete.

Response: We acknowledge commenters' apprehension that the addition of the hospital senior official name could create privacy or security concerns; however, senior officials' names are already disclosed in multiple other public documents, including on the hospital's own website and in press releases, on state hospital licensure websites and, for Medicare-certified hospitals, information on hospital administration, including senior

[471] *https://www.cms.gov/regulations-and-guidancelegislationpaperworkreductionactof1995pra-listing/cms-2552-10.*

officials' names, is publicly disclosed on the CMS website in the ''Hospital All Owners'' dataset and well as in the National Plan & Provider Enumeration System (NPPES) NPI Registry. Further, we believe that, by virtue of our modification that includes retaining the statement ''to the best of its knowledge and belief,'' hospitals and senior hospital officials would be less likely to receive public criticism over unintentional, technical variances.

Comment: A few commenters noted that requiring attestation by a CEO or other senior official would be duplicative of other existing hospital price transparency regulatory requirements. One commenter noted that hospitals are currently required to submit a certification of MRF data accuracy and completeness from an authorized hospital official on CMS' request; and to include a point of contact in their .txt files. This commenter believed these existing processes are fully appropriate and adequate, particularly given the complex nature of this data, noting that having a centralized hospital liaison who can either directly answer an MRF data question and/or refer to the appropriate individual, as applicable, would ensure efficiency and clarity. This commenter further noted that CMS already has the authority to request a certification. One commenter urged CMS to omit the proposed change to add another, more senior contact person in the MRF and keep the process as is. Another commenter stated that if CMS requires encoding the CEO's name within the MRF, it recommended direct communication with the individual named in the .txt file first to address any concerns, and if no response is provided, communication be directed to the CEO and the individual, recommending that CMS prioritize the use of email communication over postal mail to prevent delays. Another commenter stated that seeking a certification from a hospital official would be duplicative of the initial attestation without offering additional clarity on whether the file is truly compliant in the eyes of the regulators.

Response: We disagree with commenters that this information is duplicative as the MRF .txt file contact name is a person who can answer technical questions from entities such as innovators and researchers about the file structure and data encoded within it, but not attest to accuracy and completeness of the data. We further disagree that the proposed requirements are duplicative of the certification requirement at § 180.70(a)(2)(iv) as our stated goal for adding the attester name was to provide further reassurance to the public of the accuracy and completeness of the MRF, while the certification requirement is provided directly and only to CMS under the compliance process.

Comment: We received one comment in response to our alternative that the attestation reside in a separate document on the hospital's website. That commenter responded that the attestation statement and attestor name should reside within the MRF.

Response: We appreciate the comment and agree that the attestation confirmation and attestor name should reside in the MRF.

Comment: We received comments on a few additional alternatives for this proposal. One commenter suggested the addition of a signature within the file, and another commenter suggested we require the senior hospital official to specifically have one of the following titles: the hospital's Chief Executive Officer, Chief Financial Officer, Chief Revenue Officer, or their equivalents. One commenter suggested an alternative, that in order to provide all necessary information for the public to derive a dollar amount, the hospital should make public a separate formula sheet providing the complete underlying formula by which actual reimbursement would be determined, because algorithms, formulas, and percentages make the file no longer machine-readable.

Response: We decline to require a signature within the MRF file, given that the MRF required formats, JSON and CSV, do not permit the inclusion of electronic signature solutions. If a hospital is found noncompliant, CMS already has the authority under § 180.70(a)(2)(iv)–(v) to require the authorized hospital official to submit to us a signed certification as to the accuracy and completeness of the standard charge information encoded within the MRF. We decline at this time to be more prescriptive regarding the title of the senior hospital official, as we stated in the proposed rule that we want this name to align to the authorized hospital official who would submit to us the aforementioned signed certification, but we may revisit this suggestion in future rulemaking. We also decline the suggestion to require hospitals to provide additional files outside of the MRF, and require that hospitals encode all relevant data within the MRF.

Final Action: After consideration of public comments, we are finalizing, effective January 1, 2026, our proposal to supplant the existing affirmation requirement with the proposed attestation statement at new § 180.50(a)(3)(iii), with a modification to add the following phrase to the beginning of the attestation: ''To the best of its knowledge and belief,''. In addition, we are finalizing, as proposed, new § 180.50(a)(3)(iv) to require that, beginning January 1, 2026, the hospital must encode within the MRF the name of the hospital chief executive officer, president, or senior official designated to oversee the encoding of true, accurate and complete data as directed in § 180.50(a)(3)(iii). We are also modifying proposed § 180.50(a)(3)(i) and (ii) to clarify that these provisions apply beginning January 1, 2024 through December 31, 2025, such that these provisions will no longer be effective as of January 1, 2026. Finally, as discussed in section XIX.B.7. (Effective Dates), although these revisions to the attestation requirements will be effective January 1, 2026, we will delay enforcement of these revisions until April 1, 2026.

6. Requirement To Report Hospital National Provider Identifier (NPI) Information in the Machine Readable File

We proposed to revise § 180.50(b)(2)(i)(A) to require hospitals, beginning January 1, 2026, to report a unique identifier, specifically their NPI(s), in their MRFs. As we explained in the proposed rule, we believe that having hospitals add their NPI(s) to the MRF would improve the comparability of HPT and other healthcare data, including health plan transparency data from the TiC MRFs. Below, we explain the details of this proposal, including how we proposed that hospitals would encode their NPI(s) in their MRFs.

An NPI is a unique 10-digit number used to identify healthcare providers and organizations, including hospitals.[472] All healthcare providers that are HIPAA-covered entities must obtain an NPI.[473] Health care providers who are individuals are assigned a Type 1 NPI and healthcare providers that are organizations are assigned a Type 2 NPI (69 FR 3440). Type 2 NPIs are also known as organizational NPIs. ''Subparts'' of organizations—which are components of the same organization that may be separately licensed or identified[474]—may also obtain a Type 2 NPI (69 FR 3441) if they conduct HIPAA

[472] *https://www.cms.gov/regulations-and-guidance/administrative-simplification/nationalprovidentstand.*

[473] Ibid.

[474] Guidance on NPI Enumeration; 45 CFR 162.412(b). *https://www.cms.gov/files/document/guidance-national-provider-identifier-npi-enumeration-pdf.pdf.*

standard transactions separately [475] from the main organization (45 CFR 162.410(a)(1)). Entities and individuals maintain NPIs unless they are deactivated upon request, death, or dissolution (45 CFR 162.408(c)), and NPIs do not change if provider name, EIN, or state licensure changes (69 FR 3441). There are several internet-based NPI lookup tools available online, including CMS' NPPES NPI registry.[476] NPIs are commonly used in other CMS systems for financial transactions, and for other healthcare data sets, including claims, utilization, and quality data sets.

Under the current HPT regulations at § 180.50, hospitals must provide identifying information, including hospital name, address, license number, and the Employer Identification Number (EIN) either in the MRF file name or the file itself. We stated in the proposed rule that while these elements help to identify the hospital, interested parties have told us that they are inadequate to facilitate comparing hospital MRF data with other datasets that include hospital-related information and that a standard identifier would bolster these efforts. In particular, commenters stated that the lack of a standard identifier in the MRF hinders efforts to compare standard charge information across files and limits opportunities to automate the comparison and analysis of HPT and TiC MRF data. Innovators, researchers, and other MRF users have stressed to us the importance of including standard identifiers to streamline data and reduce the complexity of analyzing numerous and different disclosures. The currently required hospital license number is useful to help crosswalk the name of the hospital with the state license number, but because it differs from the identifier required in the TiC files, innovators and researchers have noted that they find it difficult to compare across files. We also note that EINs, while required as part of the naming convention for the hospital MRF and included in the TiC MRF, are generally not included in CMS datasets or other public financial and claims datasets. Therefore, we stated in the proposed rule that we believe it is important to require hospitals to report a standard identifier, specifically the NPI, which is used in the TiC MRFs and in CMS systems such as the Provider Enrollment, Chain, and Ownership System (PECOS), to maximize comparability across data and files.

Moreover, Executive Order 14221 directs HHS to ensure that pricing information is standardized and easily comparable across hospitals and health plans.[477] We stated in the proposed rule that, to this end, we believe it is important to align the HPT MRF and the TiC identifier data element. Under the TiC final rule (85 FR 72158), and as described in the TiC GitHub schemas for the ''In-Network File,'' ''Out-Of-Network Allowed Amount File,'' and the optional ''Provider Reference File,'' most group health plans and health insurance issuers must post pricing information, and such pricing information must be associated with a provider's NPI to ensure that consumers have reliable data and can make informed healthcare purchasing decisions.[478] We explained in the proposed rule that we believe aligning the NPI across the HPT and TiC MRFs would support improved cross-comparison among hospital data and health plan data, providing users of both MRFs further context about hospital standard charges.

We specifically proposed to require, beginning January 1, 2026, that hospitals report, in a newly created general data element in the MRF, any Type 2 NPI(s) that has a primary taxonomy code starting with '28' (indicating hospital) or '27' (indicating hospital unit) and that is active as of the date of the most recent update to the standard charge information. We proposed to limit the Type 2 NPI(s) that hospitals would report to only those that meet this taxonomy criteria, because while hospitals may have more NPIs beyond these criteria for other departments or units, these taxonomy codes limit the number of NPIs to only those indicating hospital or hospital unit. In the case that hospitals have more than one NPI that meet the proposed criteria above, we proposed that hospitals would be required to report in the general data element all active Type 2 NPIs meeting the criteria. We stated that we would include additional technical instructions in the CMS data dictionary and CSV template and JSON schema in the Hospital Price Transparency—Data Dictionary GitHub Repository available at *https://github.com/CMSgov/hospital-price-transparency*. We sought comment on our proposal and any additional taxonomy codes that would be necessary or helpful to consider.

We considered in the proposed rule, as an alternative, that should a hospital have multiple Type 2 NPIs, it would be required to report only one NPI. We stated that with this alternative, MRF users could crosswalk the NPI to identify additional NPIs. A review of the publicly available January 2025 data from PECOS, the online Medicare enrollment system, found that only approximately 10 percent of hospital enrollment applications reported multiple NPIs.[479] This data was cross-walked with NPPES data to find the provider taxonomy code (a 10-digit code that designates classification or specialization), whether the NPI was still active in the system, and whether an NPI was classified as an organization subpart. The majority of reported NPIs for applications with multiple NPIs were active. Some applications reported as many as 27 NPIs with a hospital or hospital unit taxonomy. However, the median number of NPIs with a hospital or hospital unit taxonomy was two and the average number of NPIs with a hospital or hospital unit taxonomy was 1.9. For this reason, we stated in the proposed rule that we believe requiring hospitals to include NPIs that meet our proposed criteria would not pose a significant burden or, for most hospitals, significantly increase the amount of data stored in the MRFs.

We also considered requiring that hospitals include other identifiers in their MRF, such as the CMS Certification Number (CCN). CCNs are assigned by CMS and used to identify healthcare facilities participating in the Medicare Part A and Medicaid programs.[480] [481] Hospitals primarily have assigned CCNs as entities, but CCNs can also be used to identify specific hospital locations or units, especially when those units operate under the same organizational umbrella but at different sites. CCNs do not change when hospital ownership changes, but hospital mergers, acquisitions, and consolidations can result in CCN changes. We elected not to propose to require that hospitals encode CCNs because CCNs are limited to Medicare- or Medicaid-participating hospitals, while the HPT regulations apply to all hospitals in the United States (with exceptions listed at § 180.30(b)), and, also, the inclusion of

CCNs would not align with the TiC provider identifier requirements.

We sought comment on our proposal, as well as any additional, or alternative, taxonomy codes that commenters believe would be necessary or helpful to consider. We also sought comment on other standard identifiers that may be useful in providing needed context for and streamlining the alignment of price transparency data.

We received public comments on this proposal. The following is a summary of the comments we received and our responses.

Comment: Many commenters supported our proposal to revise § 180.50(b)(2)(i)(A) to require hospitals to report a unique identifier, specifically their Type 2 NPI(s), in their MRFs. Supportive commenters stated that the Type 2 NPI is a valuable identifier for linking to claims data and provider directories, and the inclusion of this information in the MRF would enhance interoperability across datasets, including TiC files. Further, commenters indicated that adding NPI information to the MRFs would allow payers, employers, and researchers to match hospital pricing information more reliably with utilization and outcomes data to identify variation in negotiated rates, analyze payment trends, and develop tools that empower consumers to make informed healthcare purchasing decisions.

Response: We thank commenters for their support of this proposal.

Comment: Several commenters did not support the proposal to include the NPI in the MRF. A few commenters believed it would increase burden to hospitals. One commenter questioned our analysis that only 10 percent of hospitals nationwide would report multiple NPIs. One commenter opposed the inclusion of the NPI as it could add technical and operational complexity when combined with other CMS requirements. This commenter argued that including the NPI with detailed pricing data could expose specific contracting arrangements.

Response: We thank commenters for their comments on this subject. We disagree with commenters that this proposal would add significant burden to hospitals or that it would add complexity to the files. We reiterate that the Type 2 NPI would be listed as a general data element (in CSV) or data attribute (in JSON) in the MRFs that would only need to be included once in the file, not repeated for each item and service. This would be similar to the hospital name, location, and address data that innovators and researchers use to correctly attribute files to locations. Since the requirement is confined to one data element/attribute where the hospital is being asked to list all their NPIs only once, we do not anticipate a significant increase in file size. As we indicated in the proposed rule, our review of the publicly available January 2025 data from PECOS, the online Medicare enrollment system, found that only approximately 10 percent of hospital enrollment applications reported multiple NPIs registered as hospital or hospital units.[482] This is validated by an Office of the Assistant Secretary for Planning and Evaluation (ASPE) report that found that the ''vast majority'' of hospitals only have one NPI and a ''very small'' number of hospitals have multiple NPIs.[483] We anticipate that MRF users have the necessary sophistication and tools to navigate multiple NPIs and would appreciate the additional information. Furthermore, because the TiC files already include this information, we do not believe it exposes sensitive contracting information, but, rather, allows alignment and cross-comparison with other data sets.

Comment: A few commenters opposed the proposal because, they stated, insurers are not required to report NPIs in their TiC files, creating an uneven playing field. Another commenter expressed that the requirement to include Type 2 NPIs in the MRF would not make it possible to compare the information with TiC files, stating that TiC requires attributes that specifically define the payer network, plan, and item/service billing class.

Response: While insurers do not have NPIs, we disagree with commenters that insurers are not required to report NPIs in their TiC files, as they do report pricing information that must be associated with a provider's NPI. As we stated in the proposed rule, we proposed the NPI requirement to align more closely with the TiC requirements. Under the TiC final rule (85 FR 72158), and as described in the TiC GitHub schemas for the ''In-Network File,'' ''Out-Of-Network Allowed Amount File,'' and the optional ''Provider Reference File,'' most group health plans and health insurance issuers must post pricing information, and such pricing information must be associated with a provider's NPI to ensure that consumers have reliable data and can make informed healthcare purchasing decisions.[484] We also disagree that the inclusion of the NPI will not improve comparability with the TiC files. While most group health plans and health insurance issuers do include additional data such as billing class, plan market type, and payer network, we believe the inclusion of the NPI will allow for a direct crosswalk between the hospital MRFs and the TiC MRFs. Prior to the inclusion of this data element, innovators and researchers would have to match files by hospital name, EIN, or hospital address. Because hospital name and address are not standardized, there may be variances between hospital and TiC MRFs. EINs may be used across health systems and may not be distinguishable between hospitals within the same health system. The NPI is a standard, unique, 10-digit identifier that hospitals have readily available for inclusion in their MRFs. Furthermore, we believe that some commenters may not have understood our proposal to require hospitals to enter their organizational taxonomy code(s), which begin with '28' or '27.' We are clarifying that our proposal was for hospitals to encode the NPI associated with a taxonomy code reflecting either a hospital or a hospital unit, not that the hospitals should enter the actual taxonomy code.

Comment: Several commenters suggested alternatives to our proposal for consideration. One commenter recommended that CMS require both the NPI and the CCN in the file to strengthen the link between hospital pricing data and other CMS datasets. One commenter recommended that CMS consider replacing the EIN in the file naming convention with the CCN. A few commenters recommended that CMS limit the requirement to a single Type 2 NPI that is associated with a primary taxonomy code starting with '28' but not require Type 2 NPIs beginning with a primary taxonomy code '27,' which represent hospital units, to reduce burden and confusion. One commenter suggested that hospitals include the TIN or EIN that is applicable for each negotiated rate. One commenter suggested that we require all NPIs associated with the hospital, beyond the NPIs associated with the taxonomy codes starting with '28' or '27.'

Response: We thank commenters for their suggestions and alternatives. We decline to include the CCNs in the files as CCNs are limited to Medicare- or

Medicaid-participating hospitals, while the HPT regulations apply to all hospitals in the United States (with exceptions listed at § 180.30(b)). Additionally, we note that the inclusion of CCNs would not align with the TiC provider identifier requirements.

As we stated, the vast majority of hospitals have only one Type 2 NPI, and therefore we do not believe it would be overly burdensome to require hospitals to encode all Type 2 NPIs that have a primary taxonomy code starting with '28' or '27.' Furthermore, a review of the publicly available January 2025 data from PECOS, indicates that not all hospitals, such as psychiatric hospitals, have a Type 2 NPI with a primary taxonomy code starting with '28.'[485] Therefore, requiring both strikes a balance ensuring that all hospitals subject to the HPT requirements will have an NPI listed in their MRF.

We do not believe it is necessary for hospitals to include all of their NPIs or include the NPI with each item and service. Innovators and researchers should have the ability to crosswalk to additional NPIs, if necessary, once they have a Type 2 NPI that is associated with primary taxonomy code starting with '28' or '27.' We also decline to include the EIN/TIN for each item and service. We do not believe this is necessary, as it will continue to be required in the file name and as it is applicable to the hospital, it would be applicable to all items and services.

We clarify that this requirement will require hospitals to report their Type 2 NPIs that are associated with a primary taxonomy code starting with '28' or '27.' As we described above, NPIs are unique 10-digit numbers used to identify healthcare providers and organizations, including hospitals. They are associated with taxonomy codes that identify a healthcare provider's specialty and type. Primary taxonomy codes that begin '28' represent hospitals. Primary taxonomy codes that begin with '27' represent hospital units. When applying for a NPI from the NPPES, a healthcare provider must select the Healthcare Provider Taxonomy Code or code description that the health care provider determines most closely describes the healthcare provider's type/classification/specialization, and report that code or code description in the NPI application.[486] Readers can reference the Medicare Provider and Supplier Taxonomy Crosswalk to familiarize themselves with the descriptions for each provider taxonomy code.[487] Hospitals are only required to report their Type 2 NPIs that meet the criteria specified at § 180.50(b)(2)(i)(A), not the taxonomy codes.

Final action: After consideration of public comments, we are finalizing, as proposed, the requirement that, beginning January 1, 2026, hospitals must report, in a newly created general data element in the MRF, any Type 2 NPI(s) that are associated with a primary taxonomy code starting with '28' (indicating hospital) or '27' (indicating hospital unit) and that is active as of the date of the most recent update to the standard charge information. As noted in the ''Effective Dates'' section below, while this requirement will become effective January 1, 2026, we will delay enforcement to April 1, 2026.

7. Effective Dates

In the CY 2026 OPPS/ASC proposed rule, we proposed several revisions to § 180.50, that would be effective January 1, 2026, including removing the requirement for hospitals to disclose the estimated allowed amount, and, instead, disclose the median, and 10th and 90th percentile, allowed amounts, and the count of allowed amounts; requiring an attestation that the hospital has included all applicable standard charge information in the MRF and that the information encoded is true, accurate, and complete as of the date in the file; requiring the name of the hospital chief executive officer, president, or senior official overseeing the encoding of the data; and a requirement that hospitals must encode their Type 2 (organizational) NPIs. We also proposed at § 180.90, beginning January 1, 2026, to reduce the amount of a CMP by 35 percent, under certain conditions, when a hospital waives its right to an ALJ hearing.

Comment: We received many comments related to the effective date of the proposed requirements at § 180.50, with nearly all such commenters asserting that our proposed timeline was aggressive and that it would be unreasonable to require hospitals to update the data elements and implement the changes by January 1, 2026. Many commenters recommended alternative effective dates, ranging from 60 days to 2 years beyond our proposed effective date of January 1, 2026, that they considered more reasonable. Many commenters indicated that hospitals would need additional time to review new guidance, develop plans for updating the files, coordinate with vendors, encode the data, validate for accuracy, and refresh and post the files. A few commenters expressed concern that a January 1, 2026 implementation date would disrupt hospitals that are then updating their files in anticipation of annual updates. Several commenters expressed concern that hospitals only recently implemented the required CMS standardized templates and other requirements as of January 1, 2025, and would like more time before incorporating additional changes. A few commenters requested that we delay enforcement of the proposed requirements, rather than delay the implementation date.

Response: We believe that hospitals should adopt the new and updated data elements as soon as possible to improve public use of hospital standard charge information. However, in light of the comments, we understand that hospitals may require additional time to develop and encode the additional required information, particularly the new data requirements associated with the median, 10th percentile, and 90th percentile allowed amounts, and the count of allowed amounts. Therefore, while we are finalizing revisions to § 180.50 effective beginning January 1, 2026, we will delay enforcement of those specific new requirements at § 180.50 until April 1, 2026.

Final action: After consideration of public comments, we are finalizing that the effective date of the revisions at § 180.50, including removal of the estimated allowed amount, disclosure of the median, and 10th and 90th percentile, allowed amounts and the count of allowed amounts, the attestation requirement, and the NPIs, will be January 1, 2026. However, we will delay enforcement of these finalized revisions until April 1, 2026. This 3-month enforcement delay will apply solely to enforcement actions based on the new requirements at revised § 180.50 and in no way will affect already-initiated compliance actions or actions for noncompliance with other requirements under part 180 as they are currently being implemented. We believe this 3-month enforcement delay will provide hospitals with sufficient time to update their systems, and review, validate, and post their files.

C. Improved and Enhanced Enforcement

1. Background

In the CY 2020 HPT final rule (84 FR 65524), we established actions that

[485] CMS Hospital Enrollments and Hospital Additional NPIs datasets *https://data.cms.gov/provider-characteristics/hospitals-and-other-facilities/hospital-enrollments.*

[486] *https://data.cms.gov/resources/medicare-provider-and-supplier-taxonomy-crosswalk-methodology.*

[487] *https://data.cms.gov/provider-characteristics/medicare-provider-supplier-enrollment/medicare-provider-and-supplier-taxonomy-crosswalk/data.*

would address hospital noncompliance with the requirements under §§ 180.50 and 180.60, which may include issuing a written warning notice, requesting a corrective action plan (CAP), and imposing CMPs on noncompliant hospitals and publicizing these penalties on a CMS website. In the CY 2022 OPPS/ASC final rule with comment period (86 FR 63941), we increased the amount of CMPs to which a hospital could be subject to a minimum total penalty of $300/day that applies to smaller hospitals with a bed count of 30 or fewer, and a penalty of $10/bed/day for hospitals with a bed count greater than 30, not to exceed a maximum daily dollar amount of $5,500. In the CY 2024 OPPS/ASC final rule with comment period (88 FR 82113), we finalized several enhancements to our enforcement process by updating our methods to assess hospital compliance, requiring hospitals to acknowledge receipt of warning notices, working with health system officials to address noncompliance issues in one or more hospitals that are part of a health system, and publicizing more information about CMS enforcement activities related to individual hospital compliance. We also finalized revisions to § 180.70(a)(2) to add activities that CMS may use to monitor and assess for compliance. Specifically, we revised § 180.70(a)(2)(iii) to indicate that we may conduct an audit and comprehensive compliance review of a hospital's standard charge information posted on a publicly available website. We received comments on our general enforcement activities.

Comment: Several commenters supported our previous regulatory changes to address noncompliance, including the increase in the CMPs for noncompliance, and stated their appreciation of the enforcement efforts taken to address compliance violations to date. Several commenters indicated they desired an enhanced focus on enforcement by CMS to ensure widespread compliance with the HPT rule in an expeditious and efficient manner. Several commenters suggested we increase the CMPs for noncompliant hospitals, while a few commenters opposed the issuance of CMPs or the publicization of compliance actions against hospitals, particularly for those that demonstrate they are making a good faith effort to comply with the requirements immediately following the effective date of new requirements.

Response: We thank commenters for their support of our enforcement activities to date. In a fact sheet, ''Hospital Price Transparency Enforcement Updates,'' that we posted on April 26, 2023,[488] we provided updates on improvements we implemented regarding our enforcement process, including streamlining the process to no longer issue a warning notice to a hospital that has not posted an MRF or shoppable services list/price estimator tool. This was intended to encourage hospitals to more quickly comply with our HPT requirements, and especially the fundamental HPT requirements to make public an MRF and a consumer-friendly display of shoppable services.

TABLE 144: Number of Violations by Type, August 2022-October 2025; Number of Compliance Actions by Violation Type, 2022-2025*

Violation Type (No MRF, No Consumer-friendly Display, and Other)	Number of Compliance Actions	Compliance Actions as a Percent of Total
No MRF	275	9.1%
No Consumer-friendly Display	89	2.9%
No MRF and No Consumer-friendly Display	41	1.4%
Violations Unrelated to missing MRF and/or Consumer-friendly Display (all other cases**)	2622	86.6%
Total Compliance Actions	3027	100.0%

*Note: data are from 8/29/2022 through 10/17/2025.

**These compliance actions represent form and manner requirements associated with a hospital's MRF or consumer-friendly display in accordance with 45 CFR part 180.

Consistent with Executive Order 14221, we continue to believe that it is critically important that all hospitals comply with applicable HPT regulations. As CMS identifies hospitals without an MRF and/or shoppable services file, we will continue to prioritize those cases for immediate compliance by expediting the compliance process and sending hospitals a CAP request letter.

Comment: Several commenters provided suggestions on how to improve the HPT enforcement process for hospitals and for individuals reporting potential noncompliance with the HPT requirements. A few commenters noted the recent CMPs imposed on smaller hospitals and encouraged us to continue providing hospitals with robust technical assistance and sufficient opportunities to correct deficiencies prior to issuance of a CMP. A few commenters recommended increased clarity in warning notices provided to noncompliant hospitals. A few commenters suggested we formally notify hospitals that are deemed to be in compliance with the Hospital Price Transparency requirements following monitoring and assessment. Other commenters offered other ideas,

[488] *https://www.cms.gov/newsroom/fact-sheets/hospital-price-transparency-enforcement-updates.*

including: recommending that we establish a hotline for individuals to report potential HPT noncompliance and following up on those reports within 60 days, recommending that we conduct random audits of hospital websites to assess compliance with the requirements, and suggesting that we require hospitals to publicize on their websites the status of their CMS HPT requirements compliance.

Response: We thank commenters for their suggestions on how to improve the HPT requirements and the monitoring and assessment process. We may consider these comments for future rulemaking, guidance, resources, and as part of our HPT monitoring process.

2. Civil Money Penalties: Waiver of Hearing, Automatic Reduction of Penalty Amount

In prior HPT rulemaking,[489] we issued regulations that established processes to enforce the HPT requirements, including issuance of CMPs when a noncompliant hospital fails to respond to our request to submit a CAP or comply with the requirements of the CAP (§ 180.90(a)). The HPT regulations set forth the criteria we use to determine the CMP amount (§ 180.90(c)) and permit hospitals to appeal a CMP imposed by us within 30 days of issuance of the notice of imposition of a CMP (§§ 180.100 and 180.110). As of September 2025, we have issued CMP notices to 27 hospitals, 22 of which have exercised their right to appeal the CMP to an ALJ.[490] Hospitals may elect to appeal for many reasons, including disagreeing with our assessment of the law or facts underlying our determination, seeking to protect their reputation and/or avoid other civil or state regulatory actions, or other reasons.

We are aware that in some other CMS enforcement programs, entities subject to CMPs receive a 35 percent discount to the CMP amount if they waive their appeal rights.[491] For example, in the FY 2024 Skilled Nursing Facility Prospective Payment System final rule (88 FR 53200, 53326), we discussed our experience over the years with the CMP reduction pertaining to LTC facilities. We noted there how, between CYs 2016 and 2022 (but for CY 2017 that was not referenced), around 80 percent of LTC facilities submitted waivers, with the figure rising to 91 percent in CY 2021 but retreating to 81 percent in CY 2022, while also a considerable percentage of the remaining facilities did not submit a waiver but also not did not contest the penalty and its basis. Throughout the period, between 2 to 6 percent of facilities availed themselves of the full hearing process.

Given respondents' widespread invocation of the LTC facility enforcement appeal waiver provision, we considered whether offering hospitals the opportunity to receive a reduced penalty—in some circumstances, and in exchange for their acknowledging their HPT noncompliance—could expedite timely payment of CMPs. Among our considerations, we believed that hospitals that elect this waiver opportunity pursuant to such a proposal would be demonstrating their acceptance of responsibility for HPT noncompliance, and consequently also their commitment to timely achieving future compliance, which would be key to helping us achieve our overarching HPT goal of ensuring this information, in compliant form, is accessible to healthcare consumers.

We therefore proposed at new § 180.90(c)(4), and subject to the exceptions discussed below, that the amount of a CMP would be reduced by 35 percent should a hospital submit to CMS a written notice waiving its right to a hearing under § 180.100 within 30 calendar days of the date of the notice of imposition of the CMP. We also proposed that if a hospital waives its right to appeal a CMP and receives a 35 percent reduction in accordance with § 180.90(c)(4), the hospital: (1) *would not* be eligible to receive a 35 percent reduction under § 180.90(c)(4) on any subsequent CMPs issued under § 180.90(f) that result from the same instance(s) of noncompliance (that is, continuing violations); and (2) *would* waive its right to appeal the subsequent CMPs for any such continuing violations. As discussed above, in waiving its right to appeal and receiving a 35 percent reduction with respect to the initial CMP, we believe a hospital would be demonstrating acceptance of responsibility for HPT noncompliance and a commitment to achieving future compliance without further intervention; further appeal rights or CMP reductions in the face of continuing violations would be not consistent with that underlying rationale for the CMP discount.

At § 180.90(c)(4), we proposed that, in certain situations, CMS would decline to make available to hospitals the opportunity to have a CMP amount reduced. First, we proposed that, should a hospital not affirmatively waive its right to a hearing in accordance with the procedures specified at proposed § 180.90(c)(4), the CMP amount would not be reduced. We explained that the proposed timeframe (within 30 calendar days of the date of notice of imposition of the CMP) would provide a hospital ample opportunity to elect whether to exercise its option to waive a hearing. Second, we proposed that, should CMS impose upon a hospital a CMP for HPT noncompliance going to the core of the HPT requirements—specified as failing to make public either: (1) an MRF as required in § 180.40(a), or (2) any shoppable services in a consumer-friendly format (either in the form of a shoppable services file or an internet price estimator tool) as required in § 180.40(b)—the hospital would be ineligible to avail itself of such an opportunity. As reflected in Table 144, through the compliance review process, CMS has encountered instances where hospitals have not made public an MRF and/or a consumer-friendly list of shoppable services (either a shoppable services file or internet price estimator tool). We stated in the proposed rule that a hospital that fails to abide by such core HPT requirements—entirely depriving the public access to these important tools—would forfeit the opportunity to avail itself of a penalty reduction and would be required to pay in full a CMP. For example, should CMS impose upon a hospital a CMP for failing to make public an MRF as required by § 180.40(a), even if it did have a shoppable services file or internet price estimator tool as required by § 180.40(b), such hospital would not be eligible for a reduction to its CMP by waiving its appeal rights (and the same would pertain were a hospital to have an MRF as required by § 180.40(a), but not a shoppable services file or internet price estimator tool as required by § 180.40(b)). We explained that this exception would be appropriate because we finalized, and codified at 42 CFR part 180, the requirement that hospitals make public their standard charges in two ways (as an MRF and in a consumer-friendly format), effective beginning January 1, 2021; in other words, hospitals have been subject to this requirement for more than 4 years and failing even to try to comply with the requirement renders any effort to

[489] The CY 2020 HPT final rule (*https://www.federalregister.gov/d/2019-24931/p-683*), CY 2022 OPPS/ASC final rule (*https://www.federalregister.gov/d/2021-24011/p-4135*), and CY 2024 OPPS/ASC final rule with comment period (*https://www.federalregister.gov/d/2023-24293/p-5090*).

[490] CMS (2025, June) *Enforcement Actions. https://www.cms.gov/priorities/key-initiatives/hospital-price-transparency/enforcement-actions.*

[491] *See, for example,* 42 CFR 488.1245(c)(2)(ii) (Hospice); 42 CFR 488.845(c)(2)(ii) (Home Health Agency); 42 CFR 488.436(b) (Long-Term Care (LTC) Facility).

accept responsibility or commit to future compliance less credible than a hospital whose efforts to comply have simply fallen short.

We noted that our proposal would not preclude a hospital, so long as it did not seek a waiver, from requesting a hearing, nor would waiving the right to a hearing remove from the hospital's record the fact of its HPT noncompliance. Rather we proposed that should a hospital choose to waive its right to a hearing, it would accept CMS' determination that it was noncompliant. Significantly, whether or not a hospital would elect to waive the right to a hearing, it would still be required to achieve compliance to avoid the potential imposition of additional CMPs pursuant to § 180.90(f). We also expected that this proposal would benefit both CMS and the hospital by reducing or eliminating the time, resources, expenses, and other potential burden otherwise attributable to prosecuting or defending the administrative appeals processes.

Finally, we also proposed to make conforming revisions to § 180.90(d)(1) and to add a new § 180.90(d)(2) to take into account the proposed provisions at § 180.90(c)(4), which would allow for a reduction to the CMP amount were certain criteria to be met, as discussed above. We proposed to redesignate current § 180.90(d)(2) and (3) as § 180.90(d)(3) and (4), respectively.

We received public comments on these proposals. The following is a summary of the comments we received and our responses.

Comment: A few commenters supported our proposal at new § 180.90(c)(4), that the amount of a CMP be reduced by 35 percent should a hospital submit to CMS a written notice requesting to waive its right to a hearing under § 180.100 within 30 calendar days of the date of the notice of imposition of the CMP. One commenter noted that this proposal strikes a fair balance between accountability and administrative efficiency, encouraging timely resolution of violations while reinforcing the importance of transparency. The commenter indicated their support of the proposal as a constructive incentive to help ensure that patients and stakeholders have access to accurate and actionable pricing information.

Response: We appreciate the commenters' support for our proposal.

Comment: A few commenters indicated that CMS' proposal to reduce penalties by 35 percent puts undue pressure on hospitals to waive their rights to appeal and due process. One commenter requested that CMS consider hospitals' good faith efforts to implement corrective actions addressing ongoing noncompliance to avoid further imposition of CMPs and sought clarification on their understanding that the regulations currently allow for reduced penalties. One commenter stated that the current regulations at § 180.90 already permit CMS to reduce CMPs.

Response: We disagree with the commenters that the 35 percent reduction in CMPs described in our proposed rule puts undue pressure on hospitals to waive their rights. By accepting the 35 percent reduction in their CMP amount, a hospital acknowledges and accepts CMS' noncompliance determination and demonstrates its commitment to correct its behavior going forward. Commenters point to no case law finding that crediting acceptance of responsibility for legal violations violates due process, and if a hospital disagrees with the legal or factual basis of our determination, it may exercise its right to appeal as outlined in § 180.100. We thank the commenter who indicated that § 180.90 already permits CMS to reduce CMPs, but reinforce that this proposal would benefit both CMS and the hospital by reducing or eliminating the time, resources, expenses, and other potential burden otherwise attributable the administrative appeals processes.

Comment: One commenter requested we withdraw the 35 percent reduction in CMPs described in our proposed rule because it will incentivize noncompliant hospitals to pay reduced CMPs and remain noncompliant as a course of business, rather than come into compliance with the HPT rules. Another commenter called for increased penalties and more enforcement.

Response: We do not agree with commenters that the 35 percent reduction in CMPs will incentivize hospitals to remain noncompliant with our requirements. Hospitals can continue to receive additional CMPs for the same violations if they remain out of compliance, but they will not be eligible to receive a 35 percent reduction in CMPs for the same instance(s) (that is, continuing violations) of noncompliance. Therefore, hospitals cannot remain noncompliant as a course of business and continue to receive a 35 percent CMP reduction. We acknowledge that there is a risk a hospital might take advantage of the 35 percent reduction to the CMP to avoid affirmative efforts to comply with the HPT requirements until CMS conducts an audit and identifies the violations, however, we believe this risk to be minimal and mitigated by the fact that hospitals are not eligible for the 35 percent reduction in CMPs if they receive a subsequent CMP for the same violation. We also note that those hospitals found to not have an MRF or consumer-friendly display of shoppable services would not be eligible for this CMP reduction in the first instance. We remain committed to ensuring that all hospitals comply with the HPT rules, and will continue to assess CMPs for violations, as appropriate. We believe that structuring the 35 percent CMP reduction in this way maximizes the likelihood that the reduction will be used mainly by hospitals that are accepting responsibility for past failures and are committed to coming into compliance. Should that belief prove false, we may revisit the 35 percent CMP reduction. For now, however, we decline to withdraw the proposal.

Comment: One commenter called for stronger enforcement actions and increased penalties for noncompliant hospitals.

Response: We thank the commenters for their suggestion. Currently, we do not see the need to increase penalties as we are seeing increasing compliance rates among hospitals subject to the HPT regulations. As we note above, CMS remains committed to ensuring that all hospitals comply with the HPT rules and will continue to assess CMPs for violations, as appropriate.

Comment: Several commenters noted that the current requirements have achieved high compliance rates through increased enforcement efforts and collaboration. A few commenters noted that this waiver is unnecessary due to the existing high levels of compliance.

Response: We thank commenters and agree with their assessment that the HPT program has achieved increasing levels of compliance since enforcement began in January 1, 2021. However, we do not agree with the commenters' assessment that this proposal is unnecessary. We believe that both CMS and the hospital would benefit from this proposal by reducing or eliminating the time, resource, and expense burden that may be incurred with a protracted appeals process. Further, we believe this will continue to increase hospital compliance as we believe, by virtue of its terms that we describe above, that only hospitals committed to achieving timely compliance will avail themselves of it.

Final Action: After consideration of the public comments received, we are finalizing our proposal at new § 180.90(c)(4) with clarifying edits, with an effective date of January 1, 2026. Specifically, we are adding the word

''subsequent'' before the word ''civil monetary penalties'' in the second sentence so that this sentence now reads, ''A hospital that receives a 35 percent reduction in a civil monetary penalty under this paragraph is not eligible to receive a 35 percent reduction for any subsequent civil monetary penalties imposed pursuant to continuing violations according to § 180.90(f) and also waives its right to appeal under § 180.100 any subsequent civil monetary penalties imposed for such continuing violations.'' In addition, we are revising the introductory language of the third sentence to clarify that the reduction in ''the amount of a civil monetary penalty'' referred to this sentence means the ''35 percent'' reduction in accordance with § 180.90(c)(4).

In addition, we are finalizing, as proposed, conforming revisions to § 180.90(d)(1) and new § 180.90(d)(2) to take into account the final provisions at § 180.90(c)(4). Finally, as proposed, we are redesignating current § 180.90(d)(2) and (3) as § 180.90(d)(3) and (4), respectively.

XX. Market-Based Medicare Severity-Diagnosis Related Groups (MS–DRG) Relative Weight Data Collection and Change in Methodology for Calculating MS–DRG Relative Weights Under the Inpatient Prospective Payment System

A. Overview

In the FY 2021 IPPS/LTCH PPS final rule (85 FR 58873 through 58892), we discussed the need for Medicare to reduce its reliance on the hospital chargemaster and develop market-based approaches to payment under the Medicare FFS system. We continue to believe this is the case.

In that rulemaking (85 FR 58891), we adopted a policy that required hospitals to report on the Medicare cost report the median payer-specific negotiated charge that the hospital had negotiated with all of its Medicare Advantage Organizations (MAOs), by MS–DRG, effective for cost reporting periods ending on or after January 1, 2021. In the same final rule, we adopted the use of the median payer-specific negotiated charge by MS–DRG for MAOs in the market-based MS–DRG relative weight methodology finalized for relative weight calculations beginning in FY 2024. In the FY 2022 IPPS/LTCH PPS final rule (86 FR 45319), we repealed both the collection of market-based rate information on the Medicare cost report and the market-based MS–DRG relative weight methodology and stated that we would continue to evaluate and consider the usefulness and appropriateness of market-based data for ratesetting purposes. After further consideration, as discussed in section XX.C. of this final rule with comment period, we once again proposed, with modifications (as discussed in section XX.C.2. of this final rule with comment period), to require that hospitals report on the Medicare cost report, beginning January 1, 2026, the median [492] of the payer-specific negotiated charges (hereinafter referred to as the ''median payer-specific negotiated charge'') that the hospital has negotiated with all of its MAOs, by MS–DRG, for use in a market-based MS–DRG relative weight methodology, effective for the relative weights calculated for FY 2029.

In the FY 2021 IPPS/LTCH PPS final rule (85 FR 58885), we discussed our authority for adopting a market-based MS–DRG relative weight data collection and MS–DRG relative weight methodology. Sections 1815(a) and 1833(e) of the Act provide authority to collect data for purposes of determining the amount of payments due to a provider under the Medicare program. Specifically, sections 1815(a) and 1833(e) of the Act state that no Medicare payments will be made to a provider unless it has furnished information requested by the Secretary to determine payment amounts due under the Medicare program and pertain to CMS' authority to collect information on the Medicare cost report. We also discussed CMS' authority under section 1886(d)(4) of the Act to assign and update MS–DRG weighting factors to reflect relative resource use. In particular, section 1886(d)(4)(B) of the Act requires that for each diagnosis-related group the Secretary shall assign an appropriate weighting factor which reflects the relative hospital resources used with respect to discharges classified within that group compared to discharges classified within other groups, and section 1886(d)(4)(C)(i) of the Act requires that the weighting factors be adjusted at least annually to reflect changes in treatment patterns, technology, and other factors which may change the relative use of hospital resources.

In the CY 2026 OPPS/ASC proposed rule, we proposed for cost reporting periods ending on or after January 1, 2026, to collect on the Medicare cost report the median payer-specific negotiated charge that the hospital has negotiated with all of its MAOs, by MS–DRG. We proposed to utilize this data within a proposed methodology for calculating the IPPS MS–DRG relative weights to reflect relative market-based pricing, effective in FY 2029. This proposal reflected certain modifications to the policy as finalized in the FY 2021 IPPS/LTCH PPS final rule (85 FR 58873 through 58892), as discussed further in section XX.C. of this final rule with comment period. As stated previously, and in the CY 2026 OPPS/ASC proposed rule, we continue to believe there is a need for Medicare to reduce its reliance on the hospital chargemaster and develop market-based approaches to payment under the Medicare FFS system. We discuss in further detail in this section our evaluation and reconsideration of the usefulness and appropriateness of market-based data for ratesetting purposes since the FY 2022 IPPS/LTCH PPS final rule. As discussed in greater detail in section XX.C.2. of this final rule with comment period, the CY 2026 OPPS/ASC proposed rule also provided instruction on how hospitals would calculate the median of the payer-specific negotiated charges for an MS–DRG using data from the machine-readable file (MRF) that hospitals are required to disclose under the hospital price transparency regulations at 45 CFR part 180. The CY 2026 OPPS/ASC proposed rule also addressed circumstances when hospitals use something other than MS–DRGs as a basis for reporting under those hospital price transparency requirements.

As described further in section XX.C.2. of this final rule with comment period, we specifically proposed that for the purposes of reporting the data on the cost report, hospitals would report the median of the payer-specific negotiated charges for an MS–DRG that the hospital has disclosed for all of its MAOs on the most recent version of the MRF that the hospital is required to disclose under 45 CFR 180.40(a). If the hospital disclosed the payer-specific negotiated charge for an MS–DRG as a dollar amount, the hospital would use the dollar amount disclosed on its MRF under 45 CFR 180.50(b)(2)(ii)(C) in determining the median of the payer-specific negotiated charges to be reported on its Medicare cost report, as discussed further in section XX.C.2 of this final rule with comment period. If the hospital disclosed the payer-specific negotiated charge as a percentage or algorithm on the MRF, we proposed that the hospital would instead use the proposed ''median allowed amount'' (as discussed in section XIX. of this final rule with comment period) to calculate the

[492] More precisely as discussed later in this section, the weighted median MAO payer-specific negotiated charges where the MAO payer-specific negotiated charges are weighted by the number of inpatient discharges for each of those payers that occurred during the cost reporting period. We simply refer to the median for ease of discussion.

median of the payer-specific negotiated charges.[493] The hospital would then report the median payer-specific negotiated charge on its Medicare cost report, as also discussed further in section XX.C.2. of this final rule with comment period. In the CY 2026 OPPS/ASC proposed rule, we stated that we believed this approach of utilizing data required for disclosure on the MRF under 45 CFR 180.50(b)(2)(ii)(C) in determining the median of the payer-specific negotiated charges would help streamline requirements for hospitals and result in less administrative burden overall because hospitals would already be required to calculate and disclose these data in compliance with the hospital price transparency requirements. For additional details on hospital price transparency requirements, including MRF requirements and the modifications to the hospital price transparency requirements, we refer readers to section XIX. of this final rule with comment period and *https://www.cms.gov/priorities/key-initiatives/hospital-price-transparency/hospitals*.

As described in greater detail in section XX.C. of this final rule with comment period, we proposed that the median payer-specific negotiated charges as reported on the Medicare cost report would be used in a proposed market-based methodology to calculate IPPS MS–DRG relative weights beginning in FY 2029 to reflect the relative hospital resources used to provide inpatient services to patients. The use of the median payer-specific negotiated charges would replace the current use of gross charges that are reflected on a hospital's chargemaster and cost information from Medicare cost reports for the development of the IPPS MS–DRG relative weights.

B. Factors Considered

As discussed in the FY 2021 IPPS/LTCH PPS final rule (85 FR 58873 through 58892), to reduce the Medicare program's reliance on the hospital chargemaster and to support the development of a market-based approach to payment under the Medicare FFS system, we finalized our proposal to require that hospitals report certain market-based payment rate information on their Medicare cost report for cost reporting periods ending on or after January 1, 2021. In that same rulemaking, we also adopted a market-based MS–DRG relative weight methodology using that information. In the FY 2022 IPPS/LTCH PPS final rule (86 FR 45319), we repealed both the collection of market-based rate information on the Medicare cost report and the market-based MS–DRG relative weight methodology and stated that we would continue to evaluate and consider the usefulness and appropriateness of market-based data for ratesetting purposes.

As noted in the FY 2022 IPPS/LTCH PPS rulemaking, we have continued to consider the use of market-based rate information for purposes of the IPPS relative weight methodology, including for the reasons discussed in the FY 2021 IPPS/LTCH PPS final rule (85 FR 58874 through 58875) regarding reducing the Medicare program's reliance on the hospital chargemaster and supporting the development of a market-based approach to payment under the Medicare FFS system, as well as additional factors since the repeal of the prior policies.

For example, in the FY 2021 IPPS/LTCH PPS proposed rule we described research that chargemasters are usually highly inflated and that these inflated charges have been used to secure higher payments from Medicare and private payers (85 FR 32790). We indicated that some hospitals' charges do not reflect market rates. Hospital bills that are generated off these chargemaster rates can be inherently unreasonable when judged against prevailing market rates. We stated that recognizing that chargemaster (gross) rates rarely reflect true market costs, we believed that by reducing our reliance on the hospital chargemaster we could adjust Medicare payment rates so that they reflect the relative market value for inpatient items and services. As part of our efforts since the FY 2022 repeal, we have examined more recent research on hospital chargemasters, which is generally consistent with the discussion in the FY 2021 rulemaking regarding whether hospital chargemasters reflect true market costs. Recent research by Linde and Egede [494] concluded that higher chargemaster markups are associated with higher hospital profitability. They delineated four potential causal pathways that may connect chargemaster markups to hospital profitability. First, chargemaster prices are commonly billed to uninsured patients and therefore may increase profits via higher payments (or payment settlements) with uninsured patients. Second, higher chargemasters may yield higher payments from insured individuals that seek care out-of-network, or who receive care at in-network facilities but are cared for by out-of-network providers. Third, chargemaster prices do in many cases serve as reference prices for the contractual payments between private insurers and hospitals. As such, higher chargemaster prices may yield increased profits by increasing payments from private payors. Fourth, higher chargemaster prices may allow hospitals to increase the cost-saving value of liabilities that end up being written off as bad debt, and therefore increased hospital profits.

We have also continued to consider the available research comparing Medicare, MAO, and commercial payment rates since the repeal. As discussed in the FY 2021 IPPS/LTCH PPS final rule (85 FR 58874 through 58877), we reviewed available literature to compare Medicare FFS and MAO payment rates and how those MAO rates may reflect the relative hospital resources used within an MS–DRG differently than our current cost-based methodology.

As discussed in the FY 2021 rulemaking, Berenson et al.[495] surveyed senior hospital and health plan executives and found that MA plans nominally pay only 100 to 105 percent of traditional Medicare rates and, in real economic terms, possibly less. Respondents broadly identified three primary reasons for near payment equivalence:

- Statutory and regulatory provisions that limit out-of-network payments to traditional Medicare rates,
- De facto budget constraints that MA plans face because of the need to compete with traditional Medicare and other MA plans, and
- A market equilibrium that permits relatively lower MA rates as long as commercial rates remain well above the traditional Medicare rates.

As also discussed in the FY 2021 rulemaking, Baker et al.[496] used data from Medicare and the Health Care Cost Institute (HCCI) to identify the prices paid for hospital services by FFS Medicare, MA plans, and commercial insurers in 2009 and 2012. They

[493] As discussed further in section XX.C.2. of this final rule with comment period, we proposed that if CMS did not finalize the proposal to amend 45 CFR 180.50(b)(2)(ii)(C), hospitals would use the ''estimated allowed amount'' as required under the hospital price transparency regulations for purposes of calculating the median payer-specific negotiated charge that is reported on the cost report.

[496] Baker L.C., Bundorf M.K., Devlin A.M., Kessler D.P. Medicare Advantage plans pay less than traditional Medicare pays. *Health Aff. (Millwood).* 2016;35(8):1444–1451.

calculated the average price per admission, and its trend over time, in each of the three types of insurance for fixed baskets of hospital admissions across metropolitan areas. After accounting for differences in hospital networks, geographic areas, and case-mix between MA and FFS Medicare, they found that MA plans paid 5.6 percent less for hospital services compared to FFS Medicare. For the time period studied, the authors suggest that at least one channel through which MA plans paid lower prices was by obtaining greater discounts on types of FFS Medicare admissions that were known to have very short lengths-of-stay. They also found that the rates paid by commercial plans were much higher than those of either MA or FFS Medicare, and that this differential was growing. At least some of this difference they indicated came from the much higher prices that commercial plans paid for certain service lines.

Maeda and Nelson [497] also analyzed data from the HCCI in their research. They compared the hospital prices paid by MA organizations and commercial plans with Medicare FFS prices using 2013 claims from the HCCI. The HCCI claims were used to calculate hospital prices for private insurers, and Medicare's payment rules were used to estimate Medicare FFS prices. The authors focused on stays at acute care hospitals in metropolitan statistical areas (MSAs). They found MA prices to be roughly equal to Medicare FFS prices, on average, but commercial prices were 89 percent higher than FFS prices. In addition, commercial prices varied greatly across and within MSAs, but MA prices varied much less. Although they noted that they used slightly different methods to calculate Medicare FFS prices, the authors considered their results generally consistent with the Baker et al. study findings in that hospital payments by MA plans were much more similar to Medicare FFS levels than they were to commercial payment levels.

In their study, Maeda and Nelson also examined whether the ratio of MA prices to FFS prices varied across DRGs to assess whether there were certain DRGs for which MA plans tended to pay more or less than FFS. They ranked the ratio of MA prices to FFS prices and adjusted for outlier payments. The authors found that ''there were some DRGs where the average MA price was much higher than FFS and there were some DRGs where the average MA price was a bit lower than FFS.'' For example, for the time period in question, on average, MA plans paid 129 percent more than FFS for rehabilitation stays (DRG 945), 33 percent more for depressive neuroses (DRG 881), and 27 percent more for stays related to psychoses (DRG 885). But MA plans paid an average of 9 percent less than FFS for stays related to pathological fractures (DRG 542) and wound debridement and skin graft (DRG 464) (see Online Appendix Table 5 from their study). The authors state these results suggest that there may be certain services where MA plans pay more than FFS possibly because the FFS rates for those services are too low, but that there may be other services where MA plans pay less than FFS possibly because the FFS rates for those DRGs are too high (Maeda, Nelson, 2018 p. 5).

In addition to this research discussed in the FY 2021 rulemaking, we have also considered more recent research comparing Medicare FFS rates, MAO rates, and rates of other commercial payers, some of which used data that was made public under the provisions of the Hospital Price Transparency regulations. Meiselbach et al.[498] used 2022 price information disclosed by hospitals to examine the ratio of commercial-to-MA prices negotiated by the same insurer and found that median prices were two to three times higher for commercial plans than MA plans in the same hospital for the same service. They attributed the relatively lower MA prices to the same reasons outlined by Berenson et al. Based on price transparency data from 22 dyads of large hospitals and insurers, Randall and Duffy [499] found that, for a market basket of inpatient services, prices for health insurance exchange plans were 143.3 percent of those for MA organizations and about 89 percent of those for commercial group insurance plans.

This more recent research does not directly address the relationship between payer-specific charges negotiated between hospitals and MAOs and Medicare IPPS payment rates, but it is generally consistent in other respects to the earlier research we cited in the FY 2021 IPPS/LTCH PPS final rule (85 FR 58876 through 58877) indicating that hospital payments by MAOs are much more similar to Medicare FFS levels than they are to commercial payment levels. We continue to believe that payer-specific charges negotiated between hospitals and MAOs and Medicare IPPS payment rates are generally well-correlated. In the FY 2022 IPPS/LTCH PPS final rule we indicated that we agreed with commenters that we needed to further consider the questions raised by commenters regarding the ability of the payer-specific charges negotiated between hospitals and MAOs to represent market-based pricing given the relationship between Medicare FFS and MAO rates. After considering this issue further since the FY 2022 rulemaking, we do not believe that the current general correlation between the two precludes the ability of this data over time to reflect market-based pricing for at least some services. As discussed in the FY 2021 IPPS/LTCH PPS final rule (85 FR 58883), MA rates to MA contracted inpatient hospitals are not required to be the same as (or based on) Medicare FFS rates; the Medicare statute only requires MAOs to pay FFS rates to a health care provider for services furnished to an MA enrollee when the MAO does not have a contract with the health care provider. We believe that to the extent hospitals and MAOs over time negotiate different relative relationships for some services than the relationships that exist under the IPPS, this information adds value to the IPPS and should be incorporated. For example, in the FY 2021 IPPS final rule we stated that we believe the rates that hospitals negotiate with MAOs capture the relative resource use to provide services to patients in order to maximize profits (or, in the case of not-for-profit hospitals, net income), subject to market constraints and conditions (supply and demand, community benefit requirements, etc.). Therefore, we stated we believed that payer-specific negotiated charges provide greater insight into the resource use of a hospital (85 FR 58886). After further consideration, recognizing that there is currently general correlation between the Medicare FFS and MAO rates, we believe that the ability of the payer specific negotiated charges to provide these insights over time still holds true.

Another factor that we considered in our current proposal is the experience hospitals have gained through the process of disclosing the payer-specific negotiated charge information for the purpose of the hospital price transparency requirements. In calculating the median payer-specific

[497] Maeda J.L.K., Nelson L. How Do the Hospital Prices Paid by Medicare Advantage Plans and Commercial Plans Compare with Medicare Fee-for-Service Prices? *The Journal of Health Care Organization, Provision, and Financing.* 2018;55(1–8).

[498] Meiselbach M.K., Wang Y., Xu Jianhui, Bai G., Anderson G.F. Hospital Prices for Commercial Plans Are Twice Those For Medicare Advantage Plans When Negotiated By The Same Insurer. *Health Aff.* 2023;42(8):1110–1118.

[499] Randall S., Duffy E.L. Insurers Negotiate Lower Hospital Prices for HIX Than for Commercial Groups. *The American Journal of Managed Care.* 2022;28(9): e347–e350.

negotiated charges to be reported on the Medicare cost report for use in the proposed market-based relative weight methodology, hospitals would use the same payer-specific negotiated charge information that hospitals are required to disclose under the requirements (45 CFR 180.40(a)) that we initially finalized in the Hospital Price Transparency final rule (84 FR 65524), beginning January 1, 2021. Over the last four years, hospitals have become increasingly familiar with the hospital price transparency requirements and procedures necessary to disclose payer-specific negotiated charges. CMS has also taken enforcement actions against hospitals that have failed to comply with the price transparency requirements.[500] We believe that this increased familiarity, experience, and enforcement has improved the data integrity of this information, simplified the initial administrative burden in disclosing this data, and means that this data is now more robust for Medicare ratesetting purposes than it was when we repealed the prior market-based policies.

An additional factor we considered was the ending of the COVID–19 public health emergency (PHE). To the extent commenters previously raised concerns regarding the need for additional flexibilities as hospitals continue to recover from the COVID–19 PHE, as summarized in the FY 2022 IPPS/LTCH final rule (86 FR 45319), the COVID–19 PHE expired on May 11, 2023.

Considering these factors, we proposed to require that hospitals report on the Medicare cost report the median payer-specific negotiated charge that the hospital has negotiated with all of its MAO payers, by MS–DRG, effective for cost reporting periods ending on or after January 1, 2026, and to use this data in a new market-based MS–DRG relative weight methodology, beginning in FY 2029.

We stated in the CY 2026 OPPS/ASC proposed rule that, if the policy were finalized, we intend to make our analysis of this market-based data available for public review prior to the proposed effective date of this market-based relative weight methodology in FY 2029, including the estimated potential payment impact on the MS–DRG relative weights. As under the current methodology, the impact of any MS–DRG relative weight changes on an individual hospital would depend on the mix of services provided by that particular hospital.

[500] For example, see *https://www.cms.gov/priorities/key-initiatives/hospital-price-transparency/enforcement-actions.*

C. Market-Based MS–DRG Relative Weight Estimation

1. Overview

Section 1886(d)(4)(A) of the Act states that the Secretary shall establish a classification of inpatient hospital discharges by diagnosis-related groups and a methodology for classifying specific hospital discharges within these groups. Section 1886(d)(4)(B) of the Act states that for each such diagnosis-related group the Secretary shall assign an appropriate weighting factor which reflects the relative hospital resources used with respect to discharges classified within that group compared to discharges classified within other groups. For the reasons previously discussed, we stated in the CY 2026 OPPS/ASC proposed rule that we believe the use of median payer-specific negotiated charge data for a hospital's MAOs, to be collected on the Medicare cost report, may support the development of an appropriate market-based approach to payment under the Medicare FFS system by incorporating such data into the estimation of the relative hospital resources used with respect to discharges classified within a single MS–DRG compared to discharges classified within other MS–DRGs, as required by statute.

As discussed, since the FY 2022 IPPS/LTCH PPS final rule, we have continued to evaluate and consider the usefulness and appropriateness of market-based data for ratesetting purposes. Based on this review, in the CY 2026 OPPS/ASC proposed rule we stated that we believed it would be appropriate to propose the use of hospitals' median payer-specific negotiated charges for MAOs, to be collected on the Medicare cost report as described previously, within a proposed new methodology for calculating the MS–DRG relative weights to reflect a more market-based approach, using our authority under sections 1886(d)(4)(A), 1886(d)(4)(B), and 1886(d)(4)(C) of the Act.

2. Market-Based Data Collection

In order to support the development of a relative market-based payment methodology under the IPPS, we proposed to collect market-based payment rate data on the Medicare cost report for cost reporting periods ending on or after January 1, 2026. This proposed data collection was similar to the market-based data collection as finalized in the FY 2021 IPPS/LTCH PPS final rule (85 FR 558873 through 58892), with additional modifications to use the payer-specific negotiated charges from the hospital's most recent MRF published prior to the submission of its cost report, to reflect proposed revisions to the hospital price transparency regulations at 45 CFR 180, and to better address when the payer-specific negotiated charge is based on a percentage or algorithm, in response to previous concerns (85 FR 58884).

Specifically, we proposed that hospitals would report on their cost report the median of the payer-specific negotiated charges that the hospital negotiated with its MAOs, by MS–DRG, beginning with cost reporting periods ending on or after January 1, 2026. Sections 1815(a) and 1833(e) of the Act provide that no Medicare payments will be made to a provider unless it has furnished the information, as may be requested by the Secretary, to determine the amount of payments due to the provider under the Medicare program. We require that providers follow reasonable cost principles under section 1861(v)(1)(A) of the Act when completing the Medicare cost report. Under the regulations at 42 CFR 413.20 and 413.24, we define adequate cost data and require cost reports from providers on an annual basis. As previously discussed, the collection of this market-based data on the Medicare cost report would allow for the adoption of a market-based strategy to determine the appropriate weighting factors to reflect the relative hospital resources used with respect to hospital discharges, as required under sections 1886(d)(4)(B) and 1886(d)(4)(C) of the Act.

As discussed in the FY 2021 IPPS/LTCH PPS final rule (85 FR 58877), Medicare certified providers, such as Medicare certified hospitals, are required to submit an annual cost report to their Medicare Administrative Contractor (MAC). The Medicare cost report contains provider information such as facility characteristics, cost and charges by cost center, in total and for Medicare, Medicare settlement data, and financial statement data. The cost report must be submitted in a standard (ASCII) electronic cost report (ECR) format. CMS maintains the cost report data in the Healthcare Cost Report Information System (HCRIS) data set. The HCRIS data supports our payment policymaking, congressional studies, legislative health care reimbursement initiatives, Medicare profit margin analysis, and relative weight updates. As such, data from hospital cost reports beginning on or after May 1, 2010 is reflected on the HCRIS dataset, and available for public access and use.

In the CY 2026 OPPS/ASC proposed rule, we stated that if we were to finalize the proposal to collect the proposed market-based information (specifically, the median payer-specific

negotiated charges negotiated between a hospital and all its MAOs, by MS–DRG) on the cost report, the data would become publicly accessible on the HCRIS dataset in a de-identified manner and would be usable for analysis by third parties. The data would, by definition, be de-identified since we proposed that the hospital calculate the median rate (that is, the specific rate that is negotiated between a hospital and a specific MAO for an MS–DRG would not be reported and need to be de-identified). For more information or to obtain HCRIS data we refer readers to *https://www.cms.gov/data-research/statistics-trends-and-reports/cost-reports/cost-reports-fiscal-year.*

We proposed that the hospital would determine the weighted median of the payer-specific negotiated charges that the hospital negotiated with its MAOs, by MS–DRG, as follows:

Step 1. Using the hospital's most recent MRF as of the hospital's cost report filing date identify the following information: (a) each MAO payer-specific negotiated charge under 45 CFR 180.50(b)(2)(ii) that the hospital has negotiated with its MAOs for inpatient items or services (for example, discharges), and (b) the code under 45 CFR 180.50(b)(2)(iv)(A) for each payer-specific negotiated charge. If the payer-specific negotiated charge is based on a percentage or algorithm, the hospital would identify and substitute the dollar amount in the MRF required under 45 CFR 180.50(b)(2)(ii)(C) for the percentage or algorithm. Exclude any payer-specific negotiated charges that represent capitated payment.

Step 2. For the cost reporting period, sum the number of inpatient discharges for each MAO for each MS–DRG. Exclude inpatient discharges where payment was made on a capitated basis.

Step 3. For each MS–DRG, list each MAO payer-specific negotiated charge (from Step 1) the number of times as there were inpatient discharges that occurred during the cost reporting period for that MAO (from Step 2).

Step 4. For each MS–DRG, compute the median [501] of the MAO payer-specific negotiated charge in the list from Step 3. To compute the median, using the list in Step 3, order the list in Step 3 from the lowest MAO payer-specific negotiated charge to the highest; if the list contains an odd number of charges the median is the middle value in the list, or if the list contains an even number of charges the median is the mean of the two middle values. For each MS–DRG, this median is the weighted median MAO payer-specific negotiated charge for that MS–DRG.

As we discussed in the FY 2021 rulemaking, we recognize that the payer-specific negotiated charges negotiated between MAOs and hospitals may in some cases be based on a system other than MS–DRGs. If there are codes identified in (b) of Step 1 that are not MS–DRG codes, or discharges in Step 2 that are not classified to MS–DRGs, the hospital would crosswalk those codes or classify those discharges to MS–DRGs. Hospitals can utilize the CMS GROUPER and associated definitions manual for this purpose. Hospitals have access to the publicly available version of the CMS Grouper used to group ICD–10 diagnosis and procedure codes to MS–DRGs. [502] This software and associated definitions manual can be used to crosswalk the code(s) in the MRF or classify the discharge to an MS–DRG code.

We note that, in section XIX. of the CY 2026 OPPS/ASC proposed rule, we proposed to amend the regulations at 45 CFR 180 as they relate to a standard charge that is based on a percentage or algorithm. Specifically, we proposed in section XIX. of the CY 2026 OPPS/ASC proposed rule, that, beginning January 1, 2026, hospitals would be required to report a new data element, the ''median allowed amount,'' instead of the ''estimated allowed amount'' reported at present, and that the median allowed amount would be defined as the median of the total allowed amount that the hospital has historically received from a third-party payer (including MAOs) for an item or service. We also proposed in section XIX. of the CY 2026 OPPS/ASC proposed rule that if a payer-specific negotiated charge is based on a percentage or algorithm, the hospital's MRF would have to describe the percentage or algorithm that determines the dollar amount for the item or service and the hospital would have to calculate and encode the median allowed amount in dollars for that item or service. We proposed in section XIX. of the CY 2026 OPPS/ASC proposed rule that, to calculate the 'median allowed amount,' hospitals would be required to use electronic remittance advice transaction data, and that the dollar amount would reflect no longer than a 12-month time period prior to the posting of the most recent MRF. Accordingly, we proposed that the dollar amount in the MRF required under 45 CFR 180.50(b)(2)(ii)(C) for the percentage or algorithm in Step 1 would be the ''median allowed amount'' if the proposed amendment was finalized. We also proposed that if CMS did not finalize changes to 45 CFR 180.50(b)(2)(ii)(C), the dollar amount would be the ''estimated allowed amount'' under the current regulations. We note that in section XIX. of this final rule with comment period, CMS is finalizing, with modification, that beginning January 1, 2026, if a hospital's payer specific negotiated amount is based on an algorithm or percentage, the hospital would be required to describe the percentage or algorithm and report a new data element, the ''median allowed amount'', instead of the ''estimated allowed amount'', and that the ''median allowed amount'' is defined as the median of the total allowed amounts the hospital has historically received from a third-party payer for an item or service for a time period no less than 12 months and no longer than 15 months prior to the date the MRF is posted. Should the calculated median fall between two observed allowed amounts, the median allowed amount is the next highest observed value. In section XIX. of this final rule with comment period, CMS is finalizing as proposed that if a payer-specific negotiated charge is based on a percentage or algorithm, the hospital must describe the algorithm or percentage and calculate and encode the median allowed amount in dollars for that item or service. Finally, in section XIX. of this final rule with comment period, CMS is finalizing, with modification, that hospitals must use EDI 835 ERA transaction data or an alternative equivalent source of remittance data that includes the same information as EDI 835 ERA transaction data would include, to calculate and encode the allowed amounts for items and services based on a percentage or algorithm in the MRF. We refer readers to section XIX. of this final rule with comment period for more information regarding the specific final policy.

A simplified example for the purpose of illustrating this process is as follows:

For its cost reporting period ending on September 30, 2026, a hospital had MAO payer-specific negotiated charges for MS–DRG 123 for five MAOs: MA1, MA2, MA3, MA4, and MA5.

The hospital filed its cost report on February 28, 2027.

The hospital made available to the public its MRF on January 1, 2027. This MRF did not contain MAO payer-specific negotiated charges for MA5 because the hospital stopped contracting with MA5 and began contracting with a new MAO, MA6.

[501] The middle number; found by ordering all data points and selecting the one in the middle (or if there are two middle numbers, taking the mean of those two numbers).

[502] *https://www.cms.gov/medicare/payment/prospective-payment-systems/acute-inpatient-pps/ms-drg-classifications-and-software.*

Step 1. The hospital identified the following MAO payer-specific negotiated charge information for MS–DRG 123 from its January 1, 2027 MRF:

- MA1: $7,400
- MA2: $7,200
- MA3: $7,500
- MA4: $7,300 (algorithm-based)
- MA6: $7,400

Note, as the payer-specific negotiated charge for MA4 was based on an algorithm, the hospital substituted the dollar amount in the MRF required under 45 CFR 180.50(b)(2)(ii)(C) for the algorithm.

Step 2. The hospital summed the number of inpatient discharges that occurred during the cost report period ending September 30, 2026, for each MAO for MS–DRG 123.

- MA1: 2 discharges
- MA2: 1 discharge
- MA3: 1 discharge
- MA4: 3 discharges
- MA5: 2 discharges

Step 3. The hospital listed each MAO payer-specific negotiated charge (from Step 1) the number of times as there were inpatient discharges that occurred during the cost reporting period for that MAO (from Step 2).

- MA1: $7,400, $7,400
- MA2: $7,200
- MA3: $7,500
- MA4: $7,300, $7,300, $7,300

For example, the $7,400 MA1 charge from Step 1 was listed two times because there were two discharges for MS–DRG 123 that occurred during the cost report period ending September 30, 2026, for MA1; the MRF charge of $7,200 for MA2 was listed once because there was one discharge; the MRF charge of $7,500 for MA3 was listed once because there was one discharge; the MRF charge of $7,300 for MA4 was listed three times because there were three discharges, there is no MRF charge for MA5 as the hospital no longer contracted with that MAO, and the MRF charge of $7,400 for MA6 was not listed as there were no discharges during the cost reporting period for that MAO.

Step 4. The median charge for MS–DRG 123 is $7,300 because that is the median of the charges in the list from Step 3.[503] (Note that if the list had contained an even number of charges, the median would have been the mean of the two middle numbers).[504]

- $7,200–MA2
- $7,300–MA4
- $7,300–MA4
- $7,300–MA4
- $7,400–MA1
- $7,400–MA1
- $7,500–MA3

For purposes of this calculation, we proposed to define the term ''payer-specific negotiated charge'' as the charge that a hospital has negotiated with a MAO for an item or service. We proposed to use this definition of payer-specific negotiated charge because it would capture the charges that are negotiated between hospitals and MAOs and be able to provide the data needed to support the use of market-based information for payment purposes within the MS–DRG relative weight calculation. For consistency, the definition of ''payer-specific negotiated charge'' that we proposed is the same as the definition at 45 CFR 180.20 for purposes of our requirements for hospitals to make their standard charges available to the public. We also proposed to define ''items and services'' as all items and services, including individual items and services and service packages, that could be provided by a hospital to a patient in connection with an inpatient admission for which the hospital has established a standard charge.[505] (With respect to service packages, we note that an MS–DRG, as established by CMS under the MS–DRG classification system, is a type of service package consisting of items and services based on patient diagnosis and other characteristics.) We proposed this definition of ''items and services'' because we believe it captures the types of items and services, including service packages, that a hospital would use to calculate and report the median payer-specific negotiated charge for each MS–DRG to support the use of market-based rate information by MS–DRG within the MS–DRG relative weight calculation. For purposes of this calculation, an MAO is defined as in 42 CFR 422.2 and means a public or private entity organized and licensed by a State as a risk-bearing entity (with the exception of provider-sponsored organizations receiving waivers) that is certified by CMS as meeting the MA contract requirements. We note that these definitions are the same as those finalized in the FY 2021 IPPS/LTCH PPS final rule.

As finalized in the FY 2021 IPPS/LTCH PPS final rule (85 FR 58888), we proposed that subsection (d) hospitals in the 50 states and DC, as defined at section 1886(d)(1)(B) of the Act, and subsection (d) Puerto Rico hospitals, as defined under section 1886(d)(9)(A) of the Act, would be required to report the median payer-specific negotiated charge information. In the CY 2026 OPPS/ASC proposed rule, we noted that hospitals that do not negotiate payment rates and only receive non-negotiated payments for service would be exempted from this proposed data collection. Examples of subsection (d) hospitals that only receive non-negotiated payment rates include hospitals operated by an Indian Health Program as defined in section 4(12) of the Indian Health Care Improvement Act or Federally owned and operated facilities. In the CY 2026 OPPS/ASC proposed rule, we noted that the proposed data collection requirement would apply to a smaller subset of hospitals as compared to the public reporting requirements under the hospital price transparency regulations. We recognized that Critical Access Hospitals (CAHs) may, in some instances, negotiate payment rates; however, because CAHs are not subsection (d) hospitals and are not paid on the basis of MS–DRGs, CAHs would not be subject to the proposed data collection requirement. We also noted that rural emergency hospitals would not be subject to the proposed data collection requirement given that they do not provide inpatient services.

On March 12, 2025, CMS announced the intention to end the Maryland Total Cost of Care Model.[506] We proposed that hospitals in Maryland, which are currently paid under the Maryland Total Cost of Care Model, would be exempted from this data collection requirement during the performance period of that Model. Following the end of the performance period of the Maryland Total Cost of Care Model, Maryland hospitals would no longer be exempt from this data collection requirement.

In the CY 2026 OPPS/ASC proposed rule, we stated that further instructions for the reporting of the proposed market-based data collection requirement on the Medicare cost report would be discussed in a forthcoming new Information Collection Request, which we stated was currently under development.

In the CY 2026 OPPS/ASC proposed rule, we stated that we believed that the administrative burden for the proposal was reduced by utilizing data that hospitals would disclose under existing and proposed hospital price transparency requirements relative to if hospitals did not already have this data compiled. We referred readers to section XXII.E. of the CY 2026 OPPS/ASC proposed rule for discussion of the

[503] Ordering the payer-specific negotiated charges from Step 3 from lowest to highest as {$7,200, $7,300, $7,300, $7,300, $7,400, $7,400, $7,500} the median, or middle, charge in that list is the fourth charge of $7,300.

[504] For example, if the list had been {$7,300, $7,300, $7,400, $7,500} the median would have been $7,350, the mean of $7,300 and $7,400 (the two middle values are the second and third charges of $7,300 and $7,400).

[505] We noted in the CY 2026 OPPS/ASC proposed rule that our proposed definition here of ''items and services'' is the same as the definition at 45 CFR 180.20, but for the examples included there and omitting the reference to outpatient department visits, as here we would not require hospitals to calculate the median of their payer-specific negotiated charges for items and services provided in the hospital outpatient setting.

[506] *https://www.cms.gov/priorities/innovation/innovation-models/md-tccm.*

estimated burden for hospitals as a result of the proposed policy.

We also proposed to amend 42 CFR 413.20(d)(3) to reflect this proposed requirement. Specifically, we proposed to amend § 413.20(d)(3) to require hospitals to report the median payer-specific negotiated charge by MS–DRG for MAOs on the Medicare cost report. We proposed to capture this proposed data collection requirement in regulation at § 413.20(d)(3)(i)(B). We proposed that this requirement would be effective for cost reporting periods ending on or after January 1, 2026.

3. Market Based MS–DRG Relative Weight Methodology

As previously discussed, we proposed a new market-based methodology for estimating the MS–DRG relative weights, beginning in FY 2029. We noted that the proposed market-based MS–DRG relative weight methodology would be the same market-based MS–DRG relative weight methodology that was initially adopted in the FY 2021 IPPS/LTCH PPS final rule (85 FR 58879 through 58881). Specifically, we proposed to implement a methodology for calculating the MS–DRG relative weights using the median payer-specific negotiated charge for MAOs for each MS–DRG, as described in this section and reported on the cost report. For the reasons discussed in section XX.B. of the CY 2026 OPPS/ASC proposed rule and this final rule with comment period, based on our further review, in the CY 2026 OPPS/ASC proposed rule we stated we believed that using the median payer-specific negotiated charge for MAOs within the MS–DRG relative weight calculation would allow for a more market-based approach to determining Medicare FFS reimbursement.

Below is a description of the steps for the proposed MS–DRG relative weight methodology change using the payer-specific negotiated charge data. We refer readers to the FY 2021 IPPS/LTCH PPS final rule (85 FR 58880 through 58881) for additional discussion of the finalized methodology which we reproposed.

- *Step One: Standardize the Median Payer-Specific Negotiated Charges:* In order to make the median payer-specific negotiated charges from the cost reports more comparable among hospitals, we would standardize the median payer-specific negotiated charges reported on the cost report by removing the effects of differences in area wage levels, and cost-of living adjustments for hospital claims from Alaska and Hawaii, in the same manner as under the current MS–DRG relative weight calculation for those effects.
- *Step Two: Create a Single Weighted Average Standardized Median MAO Payer-Specific Negotiated Charge by MS–DRG Across Hospitals:* For each MS–DRG, we would create a single weighted average across hospitals of the standardized median payer-specific negotiated charges. We would weight the standardized payer-specific negotiated charge for each MS–DRG for each hospital using that hospital's Medicare transfer-adjusted case count for that MS–DRG, with transfer adjusted case counts calculated the same way as under the current MS–DRG relative weight methodology. We note that, as discussed in the FY 2025 IPPS/LTCH PPS final rule (89 FR 69109), the current MS–DRG relative weight methodology does not include MA cases as discharges for Medicare beneficiaries enrolled in a MA managed care plan are excluded from the relative weight methodology. We believe that using the Medicare transfer-adjusted case counts would be a reasonable approach to combining the data across hospitals because it would reflect relative volume and transfer activity (that is, larger hospitals responsible for more discharges would be weighted more heavily in the calculation, hospitals that transfer more often would be weighted less heavily).
- *Step Three: Create a Single National Weighted Average Standardized MAO Payer-Specific Negotiated Charge Across all MS–DRGs:* We would create a single national weighted average across MS–DRGs of the results of Step Two, where the weights are the national Medicare transfer adjusted case counts by MS–DRG.
- *Step Four: Calculate the Market-based Relative Weights:* For each MS–DRG, the market-based relative weight would be calculated as the ratio of the single weighted average standardized median MAO payer-specific negotiated charge for that MS–DRG across hospitals from Step Two to the single national weighted average standardized median MAO payer-specific negotiated charge across all MS–DRGs from Step Three.
- *Step Five: Normalize the Market-based Relative Weights:* We noted that as under the current cost-based MS–DRG relative weight methodology, the market-based relative weights would be normalized by an adjustment factor so that the average case weight after recalibration would be equal to the average case weight before recalibration. We stated that as under the current cost-based relative weight estimation methodology, the normalization adjustment is intended to help ensure that recalibration by itself neither increases nor decreases total payments under the IPPS, as required by section 1886(d)(4)(C)(iii) of the Act.

In the CY 2026 OPPS/ASC proposed rule, we stated that we believed initially there would be minimal impacts to the relative weights calculated under the proposed market based MS–DRG relative weight methodology (which would utilize the median payer-specific negotiated charge data negotiated between hospitals and their MAOs) beginning in FY 2029, given the relationship between the MAO rates and Medicare FFS rates (as evidenced by feedback from commenters as discussed in the FY 2021 IPPS/LTCH PPS final rule and the results of our literature review). In the CY 2026 OPPS/ASC proposed rule we stated that, if the proposed policy were finalized, we would expect, for some period of time following implementation of the proposed market-based MS–DRG relative weight methodology, to continue to estimate and publicly provide, for informational purposes, the MS–DRG relative weights as calculated using our current cost-based estimation methodology.

In addition, similar to our discussion in the FY 2021 IPPS/LTCH PPS final rule (85 FR 58886 through 58887), in the CY 2026 OPPS/ASC proposed rule we stated that, if the proposed policy were finalized, we would intend to provide additional opportunity for the public to review the MAO median payer-specific negotiated charge data received prior to the utilization of this data in the market-based MS–DRG relative weight methodology beginning in FY 2029. We continue to believe this would allow for additional discussions, public review, and conversation about utilizing this market-based data in the MS–DRG relative weight methodology.

We sought comment on all elements of the proposed market-based data collection for cost reporting periods ending on or after January 1, 2026, and market-based methodology for estimating the MS–DRG relative weights beginning in FY 2029. We also sought comments on potential unintended consequences of the proposal, if any, including special considerations if needed to mitigate those potential consequences for certain hospitals. We also sought comment on how these or other market-based strategies could be utilized in additional Medicare FFS payment systems and the benefits of these market-based approaches.

In this section, we summarize and respond to the public comments received on these proposals. Commenters included individuals, consumer and patient advocacy organizations, hospitals and health

systems, hospital and State hospital associations, medical associations, health benefits consultants, health information technology (IT) organizations, and academic institutions, among others.

Comment: The vast majority of commenters were opposed to the proposals that hospitals report median payer specific negotiated charges for MAOs on the Medicare cost report and that CMS use that data to recalibrate the IPPS MS–DRG relative weights. Commenters asserted that the proposals are not authorized by and conflict with CMS's statutory authority, are arbitrary and capricious, and require new unsupported expansive interpretations of the statute. Commenters indicated that the statute requires the MS–DRG weights reflect ''the relative hospital resources used''—that is a resource-based system—not market rates negotiated with MA plans. Commenters stated that the cost reporting provisions CMS invoked authorize collection only of information necessary to determine appropriate payment amounts due to a provider—not the collection of information that they asserted cannot lawfully be used to set payments.

More specifically, many commenters stated that the text of section 1886(d)(4)(B) of the Act compels a resource-based, not a market-based methodology. Commenters discussed the statutory requirements that CMS assign to each MS–DRG ''an appropriate weighting factor which reflects the relative hospital resources used.'' They stated that the negotiated rates are influenced by many factors, including bargaining leverage, patient populations, network needs, utilization management practices, local market concentration, out-of-network Medicare payment requirements, quality and value initiatives, episodes of care, and other contract and pricing dynamics rather than relative hospital resource use at the MS–DRG level.

With respect to the data collection proposal, commenters stated that sections 1815(a) and 1833(e) of the Act permit CMS to require providers to furnish information necessary to determine amounts due (for example, to process claims and compute legally authorized payments) but establish no broader authority. Commenters asserted that these statutory authorities do not authorize and cannot be interpreted to authorize a policy to collect third party negotiated rates because CMS cannot lawfully use that data to set IPPS payments.

In contrast to the proposed approach, many commenters indicated that the current MS–DRG cost-based methodology established in the FY 2007 IPPS rulemaking is a longstanding and better framework for improving the MS–DRG relative weights consistent with the statute. Commenters indicated that although CMS is focused on the charges in the hospital chargemaster as being inflated and not reflecting resource use, the current methodology is not based on charges, but rather on charges converted to cost.

Some commenters who opposed finalizing our proposal agreed with CMS that conceptually a methodology that relies more on market-based concepts would be preferable to the current system of administered pricing, but disagreed that our current proposal was an appropriate approach because they asserted that it risked circular and destabilizing effects across both FFS and MA and could create uncertainty within the MA program, FFS program, and value-based payment models that depend on a stable FFS baseline. They indicated CMS should engage with interested parties through multiple avenues to identify effective, stable alternatives. Examples of suggested alternatives included more sophisticated cost accounting systems, improved cost reporting, and CMS demonstrations.

A few commenters expressed support for our proposal in terms of improving the efficiency of care, ensuring payments are set appropriately, better reflecting hospital resources for inpatient items and services and improving the accuracy of MS–DRGs. One commenter who supported our proposal stated it would result in greater alignment of the MS–DRG relative weights with the statutory requirements. The commenter stated that MA rates are more likely to reflect the relativity of hospitals' true resources because those rates represent the ending point of the negotiations between hospitals and plans, as opposed to the chargemasters which may reflect the starting point of the negotiations. The commenter also indicated that although Medicare Advantage is not a market-based system, the proposal would create an opportunity for negotiations to reflect market dynamics even if the immediate impact of the proposal is minimal due to the current extremely close correlation between the MS–DRG relative weights and the MA rates.

Response: We agree with commenters that CMS is required to assign and update MS–DRG weighting factors to reflect relative resource use. Section 1886(d)(4)(A) of the Act states that the Secretary shall establish a classification of inpatient hospital discharges by diagnosis-related groups and a methodology for classifying specific hospital discharges within these groups. Section 1886(d)(4)(B) of the Act states that for each such diagnosis-related group the Secretary shall assign an appropriate weighting factor which reflects the relative hospital resources used with respect to discharges classified within that group compared to discharges classified within other groups. Section 1886(d)(4)(C)(i) of the Act states that the Secretary shall adjust the weighting factors at least annually to reflect changes in treatment patterns, technology, and other factors which may change the relative use of hospital resources. As indicated by commenters with respect to the current methodology, relative resources are accounted for when hospitals establish the costs of services. We continue to believe that the costs of services are considered when hospitals and payers negotiate rates. Commenters noted that the negotiated rates are influenced by many factors, including bargaining leverage, patient populations, network needs, utilization management practices, local market concentration, out-of-network Medicare payment requirements, quality and value initiatives, episodes of care, and other contract and pricing dynamics. While the negotiated rates may reflect a variety of factors, it does not follow that the resources necessary to perform the services based on these negotiated rates would not be considered in the negotiations. As an extreme example for purposes of illustration, in contract negotiations hospitals would not generally negotiate payments of $1,500 for heart transplant cases and MA organizations would not generally negotiate payments of $150,000 for simple pneumonia cases because those rates would not reflect the relative resources required to provide those services. Furthermore, as network needs (*e.g.* network adequacy) are considerations in the negotiations between hospitals and payers and network needs involve anticipated patient utilization, we do not believe that hospitals and payers would consider anticipated patient utilization when negotiating contracts without considering the resources necessary (that is, costs) to provide those items and services for that level of patient utilization anticipated. We continue to believe that payer-specific negotiated charges that hospitals negotiate with MA organizations capture the relative resources used to provide services to patients in order to maximize profits (or, in the case of not-for-profit hospitals, net income), subject to market

constraints and conditions (supply and demand, community benefit requirements, etc.).

Because we believe the payer-specific negotiated charges reflect relative resources used (*i.e.* costs) for the reasons described earlier, our proposal is entirely consistent with and based on longstanding interpretations of the statute with respect to the relationship between resources and costs. We disagree with commenters that our proposed policy is in any way arbitrary or capricious or relies on new expansive unsupported interpretations of the statute. For the same reasons, we also disagree with commenters who stated we lack authority and did not articulate a sufficient policy basis for our data collection policy. As discussed in the CY 2026 OPPS/ASC proposed rule, sections 1815(a) and 1833(e) of the Act provide us with the authority to collect data for purposes of determining the amount of payments due to the provider under the Medicare program. We proposed to collect this negotiated charge data so that it may be used in determining relative weights for purposes of payment under the IPPS. We also note that we referenced the requirement that providers follow reasonable cost principles under section 1861(v)(1)(A) of the Act when completing Medicare cost reports and reiterate that section 1861(v)(1)(A) of the Act requires reporting of data elements beyond just cost, including non-cost items and items used to determine the cost of services.

In response to comments that the current approach for establishing the MS–DRG relative weights involves estimating cost from charges, we note that it still relies on data derived from hospital chargemasters as input and it still relies on an estimation methodology to convert those charges to cost. As we indicated in the FY 2007 IPPS rulemaking (71 FR 47894–95) when initially adopting a charges-to-cost methodology, no payment methodology can be perfect because DRG-specific costs cannot be determined. We indicated that we believed that the cost-based methodology represented an improvement over the prior charge-based methodology. Similarly, we believe that while a market-based methodology, a different type of cost-based methodology, may also not be perfect, it would be an improvement over the current methodology. By using payer specific negotiated charges, we can reduce our reliance on the hospital chargemaster and utilize this data in Medicare payment methodologies so that payments more closely reflect the market cost and therefore the relative market value and resource utilization for inpatient items and services.

In response to comments that our proposed approach risks circular and destabilizing effects across both FFS and MA and could create uncertainty within the MA program, FFS program, and value-based payment models that depend on a stable FFS baseline, we disagree. We continue to believe that if market-based data (median payer-specific negotiated charges for MA organizations) are incorporated into the calculation of the MS–DRG relative weights, initially there will be limited impact on the relative weights given the current similarity between MA organization rates and Medicare FFS rates. As discussed in the CY 2026 OPPS/ASC proposed rule, we intend to provide an opportunity for the public to review the data we collect prior to use of these data in a market-based relative weight methodology. To the extent the data shows that there would be more than a limited impact on the relative weights initially, which we do not believe will be the case, CMS will be able to further consider the impact and appropriate approach to utilizing this market-based data in the MS–DRG relative weight methodology. We will continue to provide impact analyses of changes in the MS–DRG relative weights in the annual IPPS rulemaking. Also, as discussed in the CY 2026 OPPS/ASC proposed rule we expect for some period of time following implementation of this market-based MS–DRG relative weight methodology to continue to estimate and publicly provide the MS–DRG relative weights calculated using the current methodology for informational purposes. We also note that our adoption of a market-based methodology does not preclude continued engagement with interested parties to identify further improvements to our payment systems.

Comment: Commenters stated that the research CMS cited in the CY 2026 OPPS/ASC proposed rule does not analyze relative hospital resource utilization at the MS–DRG level and that CMS cannot use this research to support that the MA negotiated payment rates capture relative resource use. Furthermore, some commenters stated that the MA non-interference clause at section 1854(a)(6)(B)(iii) of the Act bars CMS from requiring particular price structures in MA provider contracts and therefore prohibits CMS from ever ensuring any correlation between MA rates and resource use.

Response: As previously discussed in this final rule with comment period, we believe the payer-specific negotiated charges would better reflect relative resources used because the rates that hospitals negotiate with MAOs capture the relative resource use to provide services to patients in order to maximize profits (or, in the case of not-for-profit hospitals, net income), subject to market constraints and conditions (supply and demand, community benefit requirements, etc.). Therefore, for the reasons previously discussed, we believe that payer-specific negotiated charges provide greater insight into the resource use of a hospital. The primary focus of the literature discussion in this context is the correlation between the payer specific charges negotiated between hospitals and MA organizations and Medicare IPPS payment rates and the implications of that correlation to analyze the impacts of the use of these data in a market-based relative weight methodology, as discussed in section XXV.C.7 of this final rule with comment period, both initially and over time, for the relative weights to the extent that the MA rates and the FFS rates differ for some services. In the CY 2026 OPPS/ASC proposed rule, we described research that chargemasters are usually highly inflated and that inflated charges have been used to secure higher payments; we discussed available literature to compare Medicare FFS and MAO payment rates and how those MAO payment rates *may* (emphasis added) reflect the relative hospital resources used within an MS–DRG differently than our current cost-based system, and we indicated that we considered more recent research comparing Medicare FFS rates, MAO rates, and rates of other commercial payers, some of which used data that was made public under the provisions of the Hospital Price Transparency regulations (90 FR 33805–33807). In the FY 2021 IPPS final rule we stated that taken as a whole, we continued to believe that the body of research discussed in that rulemaking suggests that payer specific charges negotiated between hospitals and MA organizations are generally well-correlated with Medicare IPPS payment rates, and payer-specific charges negotiated between hospitals and other commercial payers are generally not as well-correlated with Medicare IPPS payment rates. With respect to either type of payer-specific negotiated charges, there may be instances where those negotiated charges *may* (emphasis added) reflect the relative hospital resources used within an MS–DRG differently than our current cost-based methodology (85 FR 58877). As

discussed in the FY 2021 IPPS/LTCH PPS final rule (85 FR 58883) and the CY 2026 OPPS/ASC proposed rule (90 FR 33807), the MA rates to MA contracted inpatient hospitals are not required to be the same as (or based on) Medicare FFS rates; the Medicare statute only requires MAOs to pay FFS rates to a health care provider for services furnished to an MA enrollee when the MAO does not have a contract with the health care provider. Recognizing that there is currently a general correlation as shown by the research we cited, we believe that to the extent hospitals and MAOs over time negotiate different relative relationships for some services than the well correlated relationships that currently exist under the IPPS, this information adds value to the IPPS regarding resource use and should be incorporated (90 FR 33807).

We agree with commenters that the MA non-interference clause at section 1854(a)(6)(B)(iii) of the Act generally bars CMS from requiring particular price structures in MA provider contracts. However, our proposal does not create any requirements for particular price structures in MA provider contracts.

Comment: Commenters stated that the proposals would create distortions in the MS–DRG relative weights and that CMS has not modelled the impacts of or otherwise accounted for these distortions in the proposed policy. Commenters asserted these distortions are evidence as to why the proposed approach would be unlawful if adopted (that is, not resource-based), as well as evidence as to why the proposed approach is inappropriate even if CMS had the authority to adopt it. Commenters discussed the statutory requirement at section 1886(d)(4)(C)(i) of the Act to update the relative weights at least annually to reflect ''changes in treatment patterns, technology . . . and other factors which may change the relative use of hospital resources'' and asserted that the proposal failed to do so. Commenters stated that because MA rates are often based on Medicare FFS rates the proposal would over time lock in outdated weights in a closed loop that adds no independent information on these factors. According to the commenters, this locked in ''circularity'' would contradict the statutory requirement to update weights to reflect changes in resource use. Some commenters stated that over time as the MS–DRG weights become outdated MA plans and hospitals would rely more on non-MS–DRG based approaches. Commenters further stated that even absent circularity, the MA negotiated rates cannot assist with determining when changes to the MS–DRG classification system itself are necessary (for example splitting MS–DRGs) because unlike the current case-level methodology the MA negotiated rates do not provide information on resource use variations within an MS–DRG. Commenters also stated that the MS–DRG relative weights could be distorted by a lag between when a hospital updates its price transparency data and when it submits its cost report.

Commenters stated that in cases where MA plans pay hospitals for inpatient services based on charges, MS–DRG relative weights would be distorted by different cost-to-charge ratios across departments. Commenters stated the proposed process would yield higher relative weights for MS–DRGs that had higher mark-ups of charges relative to costs to the extent some MA plans still pay hospitals a rate based on discounts off charges.

Commenters stated that the combined data across hospitals would not be nationally representative for a variety of reasons. Commenters stated that in cases where MA plans pay hospitals for inpatient services as a percentage of FFS Medicare payments, MS–DRG relative weights would be distorted by existing FFS Medicare policy-based payments that do not correspond to the relative cost of providing the service. Commenters cited the example of FFS Medicare payments to hospitals including uncompensated care payments to help support hospitals' costs of treating the uninsured as well as wage index policies reflected in the current payment rates. Commenters stated the proposal would yield higher relative weights for MS–DRGs for procedures disproportionately performed at hospitals that receive these additional policy-based payments. Commenters indicated that the proposed methodology would use no data from subsection (d) providers that exclusively contract with MAOs on a capitated basis and/or have no MA network participation agreements. They also stated payment elements that are excluded from the payer-specific negotiated rates for MAOs may skew the data. For example, they stated that the payer-specific negotiated rate would exclude components of the total payment amount that are based on risk-sharing or value-based payment methodologies, and the use of those payment methodologies is not uniformly distributed across hospitals. Commenters stated that using Medicare data on fee-for-service case counts to develop a single weighted average standardized median MAO payer-specific negotiated rate by MS–DRG across hospitals means that data from hospitals with less MA penetration, which have less at stake in MA negotiations, is weighted more heavily than data from hospitals with high MA penetration that have more at stake. Commenters also stated that the impact of stoploss provisions and prior authorizations are similarly not uniformly distributed and would skew the relative weights. Commenters also asserted that the proposed approach is not actually market-based due to a lack of competing hospitals and/or a lack of competing MAOs in many areas.

Commenters also stated that CMS has not and cannot analyze the impacts of its proposed policy because it has not yet collected the data and contrasted the impact analysis of this proposed policy with the impact analysis performed when CMS adopted the current cost-based MS–DRG methodology. Commenters stated that the policy could reduce access to care, particularly for high-cost new technologies such as innovative cell and gene therapies, and in rural communities.

Response: With respect to the comments that our proposals would create distortions in the MS–DRG relative weights, we note that there is some similarity between these comments and the comments that we received during the FY 2021 rulemaking (85 FR 58883). We appreciate the additional feedback from commenters regarding differences in payment methodologies and other factors that influence the contracts between MA organizations and hospitals. We thank commenters for their concerns regarding the comparability of payer-specific negotiated charges by MS–DRG due to these and other factors and the potential impact on the MS–DRG relative weights. We believe, as discussed earlier, based on the literature review we conducted and feedback from commenters, that MA rates and Medicare FFS rates are often similar and/or are highly reliant on one another. However, as previously discussed, MA rates to MA contracted inpatient hospitals are not required to be the same as (or based on) Medicare FFS rates. We continue to believe that if market-based data (median payer-specific negotiated charges for MA organizations) are incorporated into the calculation of the MS–DRG relative weights, initially there will be limited impact on the relative weights given the current similarity between MA organization rates and Medicare FFS rates, but that over time the proposal would create an opportunity for negotiations to reflect market dynamics, as noted by a commenter who supported our proposed policy. As discussed

earlier, to the extent the data shows that there would be more than a limited impact on the relative weights initially, which we do not believe will be the case, we intend to provide an opportunity for additional public input and will continue to provide impact analyses of changes in the MS–DRG relative weights in the annual IPPS rulemaking. We remain open to adjusting our finalized policy for the MS–DRG relative weights through future rulemaking prior to the effective date if appropriate.

We note that we did not propose modifications to the process for making adjustments to the MS–DRG classification system itself, nor did we propose changes to the new technology or outlier payment policies at this time. We may revisit these issues in future rulemaking as part of our larger goal of reducing reliance on the hospital chargemaster.

Comment: Commenters indicated that the proposed data collection on Worksheet S–12 would be administratively burdensome and that it was often unclear how the hospital should perform the required calculations. For example, commenters indicated that it was not clear from the proposed instructions how hospitals should (1) crosswalk the MAO's payment methodology to an MS–DRG for payers that do not use the MS–DRG as a basis of payment and (2) calculate the cases for the weighted median.

With respect to the crosswalking issue, commenters indicated that hospitals will not readily be able to crosswalk an MAO's rate for an item or service (or bundle of items and services) to a particular MS–DRG when the MAO does not use an MS–DRG-based rate. For example, commenters indicated that the proposed instructions do not provide information about how a provider would determine an MS–DRG rate for an MAO that pays for an inpatient stay based on a per-diem rate where the length of stay for cases that map to a particular MS–DRG will vary between patients.

Commenters also indicated that an MAO's payment methodology might bundle different cases together such that some cases within an MS–DRG are paid at one rate and others that map to that same MS–DRG are paid at a different rate or such that a single rate is applied to a range of discharges that map to multiple MS–DRGs. Commenters stated the proposed instructions assume that it would be a simple matter of crosswalking one rate to a single discharge and provide no guidance on how the MAO's rate should be determined for a particular MS–DRG when this is not the case. Commenters indicated that to the extent that a hospital would be required to identify each patient discharge to which a particular rate applied, then determine the MS–DRG that would have applied to that case, and then calculate or determine an MS–DRG rate for that payer based on that claims history, CMS severely understates the hospital burden in completing Worksheet S–12 and that this burden and approach is wholly unsupported.

Commenters indicated the calculation of the weighted median for each MS–DRG requires summing the number of inpatient discharges for each MAO for each MS–DRG, but a hospital might get a different result depending on whether inpatient discharges are counted as (1) all inpatient discharges for the MAO's members, (2) those inpatient discharges where the MAO made payment (whether inpatient or otherwise), or (3) those inpatient discharges where the MAO paid for the care at the inpatient rate.

Response: In response to comments that it was not clear from the proposed instructions how hospitals should crosswalk the MAO's payment methodology to an MS–DRG for payers that do not use the MS–DRG as a basis of payment, as discussed in the CY 2026 OPPS/ASC proposed rule (90 FR 33808) if there are codes identified that are not MS–DRG codes, or discharges that are not classified to MS–DRGs, the hospital would crosswalk those codes or classify those discharges to MS–DRGs. Hospitals can utilize the CMS GROUPER and associated definitions manual for this purpose. Hospitals have access to the publicly available version of the CMS Grouper used to group ICD–10 diagnosis and procedure codes to MS–DRGs.[507] This software and associated definitions manual can be used to crosswalk the code(s) in the MRF or classify the discharge to an MS–DRG code.

In response to comments that a hospital would be required to (1) identify each patient discharge to which a particular rate applied, then (2) determine the MS–DRG that would have applied to that case, and then (3) calculate or determine an MS–DRG rate for that payer based on that claims history, we agree with the first two statements, but is it unclear what the commenters mean by the third statement with respect to the claims history. The rates associated with the discharge would come from the MRF and would not be recalculated from the claims history for this purpose. For example, if the rate associated with an MS–DRG discharge was strictly based on a per diem, the hospital would multiply the per diem amount from the MRF by the number of days of the hospital stay. More specifically, as discussed in the CY 2026 OPPS/ASC proposed rule (90 FR 33808) and applied to this situation, in Step 1 the hospital would use its most recent MRF as of the hospital's cost report filing date to identify the MAO payer-specific negotiated charge under 45 CFR 180.50(b)(2)(ii) that the hospital has negotiated with its MAOs for the discharge. Because the payer-specific negotiated charge is based on an algorithm, the hospital would identify and substitute the dollar amount in the MRF required under 45 CFR 180.50(b)(2)(ii)(C) for the algorithm. In this example, that means that the hospital would identify the per diem amount in the MRF and substitute the per diem amount times the length of stay for that discharge for the algorithm.

In response to the comments indicating that the calculation of the weighted median for each MS–DRG requires summing the number of inpatient discharges for each MAO for each MS–DRG, and stating that a hospital might get a different result depending on whether inpatient discharges are counted as (1) all inpatient discharges for the MAO's members, (2) those inpatient discharges where the MAO made payment (whether inpatient or otherwise), or (3) those inpatient discharges where the MAO paid for the care at the inpatient rate, the hospital should use (3) those inpatient discharges where the MAO paid for the care at the inpatient rate as the sole purpose of the discharges in the calculation is to weight the rates contained in the MRF.

We continue to believe that hospitals have the capacity, based on the instructions provided within this final rule with comment period, and the forthcoming revision of the Information Collection Request currently approved under OMB control number 0938–0050 to report this data on the Medicare cost report for cost reporting periods ending on or after January 1, 2026. We may provide additional guidance as appropriate or as determined necessary. Absent additional guidance, we believe that hospitals have the capability to report this market-based data for cost reporting periods ending on or after January 1, 2026.

The burden associated with our proposal is discussed in section XXII of this final rule with comment period.

[507] *https://www.cms.gov/medicare/payment/prospective-payment-systems/acute-inpatient-pps/ms-drg-classifications-and-software.*

Comment: Commenters stated that proposing a methodology for one payment system within the CY 2026 OPPS/ASC proposed rule of a different payment system does not reflect the intent of the annual rulemaking cycles as it will not result in the amount or kind of interested party feedback necessary to properly evaluate the proposal.

Response: We may, in certain circumstances, propose policies in a rule associated with a different payment system, including when those policies have cross-cutting implications or when statutory or operational considerations necessitate timely implementation. We believe that the established notice-and-comment rulemaking process for the OPPS provides interested parties with the opportunity to review the proposal and affords all interested parties the ability to submit feedback. We also note the substantial overlap between subsection (d) hospitals and hospitals subject to the OPPS.

After consideration of the comments received, and for the reasons previously discussed, we are finalizing our proposed market-based data collection requirement as proposed. Specifically, we are finalizing that hospitals would report on the Medicare cost report the median payer-specific negotiated charge that the hospital has negotiated with all of its MA organization payers, by MS–DRG, for cost reporting periods ending on or after January 1, 2026. We are also finalizing our proposal that if the hospital disclosed the payer-specific negotiated charge as a percentage or algorithm on the MRF, the hospital would use the ''median allowed amount'' (as finalized in section XIX. of this final rule with comment period) to calculate the median of the payer-specific negotiated charges. To determine the median payer-specific negotiated charge for MA organizations for a given MS–DRG, a hospital would follow the process as outlined in section XX.C.2. of this final rule with comment period. We are finalizing our definitions of ''payer-specific negotiated charge,'' ''MA organization'' and ''items and services,'' as proposed. For the purposes of calculating and reporting the median payer-specific negotiated charge the hospital has negotiated with all of its MA organization payers, by MS–DRG, we define an MA organization the same way as proposed, and defined in 42 CFR 422.2; namely, an MA organization means a public entity or private entity organized and licensed by a State as a risk-bearing entity (with the exception of provider-sponsored organizations receiving waivers) that is certified by CMS as meeting the MA contract requirements. We are finalizing as proposed that subsection (d) hospitals in the 50 States and DC, as defined at section 1886(d)(1)(B) of the Act, and subsection (d) Puerto Rico hospitals, as defined under section 1886(d)(9)(A) of the Act, would be required to report this median payer-specific negotiated charge information. As discussed in the CY 2026 OPPS/ASC proposed rule, hospitals that do not negotiate payment rates and only receive non-negotiated payments for service would be exempted from this data collection.

We are finalizing our proposed amendment to the regulations to reflect this data collection requirement at 42 CFR 413.20(d)(3), without modification. Specifically, we are finalizing our proposal to amend § 413.20(d)(3) to require hospitals to report the median payer-specific negotiated charge by MS–DRG for MAOs on the Medicare cost report. This data collection requirement is effective for cost reporting periods ending on or after January 1, 2026. As stated in the CY 2026 OPPS/ASC proposed rule, further instructions for the reporting of this market-based data collection requirement on the Medicare cost report will be discussed in a forthcoming new Information Collection Request. This new information collection request will be submitted to OMB for review under control number 0938–1486 (CMS–10935). The OMB control number will not be valid until formally approved by OMB. Please see section XXII.E. of this final rule with comment period for further details. We may provide additional guidance regarding this data collection policy as determined appropriate or necessary. However, absent additional guidance, we believe that hospitals have the capability to report this market-based data, as required, for cost reporting periods ending on or after January 1, 2026.

We are also finalizing the adoption of a market-based MS–DRG relative weight methodology effective for FY 2029. We are finalizing the market-based MS–DRG relative weight methodology, as described within the CY 2026 OPPS/ASC proposed rule, without modification. Specifically, we will begin using the median payer-specific negotiated charge by MS–DRG for MA organizations in the market-based MS–DRG relative weight methodology beginning with the relative weights calculated for FY 2029. We also remain open to making modifications and refinements to this market-based methodology, through rulemaking prior to the FY 2029 effective date. We are not finalizing, at this time, a transition period to this market-based MS–DRG relative weight methodology. We may, however, consider this in future rulemaking prior to FY 2029. We expect, for some period of time, following implementation of this market-based MS–DRG relative weight methodology, as discussed in the CY 2026 OPPS/ASC proposed rule, to continue to estimate and publicly provide the MS–DRG relative weights calculated using the cost-based estimation methodology for informational purposes.

We will continue to consider ways to reduce the role of hospital chargemasters in Medicare IPPS payments, as we described in the CY 2026 OPPS/ASC proposed rule, to further reflect market-based approaches in Medicare FFS payments, to the extent permitted by law.

XXI. Graduate Medical Education Accreditation

A. Executive Order 14279

Executive Order 14279 (April 23, 2025), entitled ''Reforming Accreditation to Strengthen Higher Education,'' directs the Attorney General, in consultation with the Secretary of Health and Human Services, to ''investigate and take appropriate action to terminate unlawful discrimination by American medical schools or graduate medical education entities that is advanced by the Liaison Committee on Medical Education or the Accreditation Council for Graduate Medical Education or other accreditors of graduate medical education, including unlawful 'diversity, equity, and inclusion' requirements under the guise of accreditation standards.'' [508] The Executive Order further directs that standards for training doctors should focus solely on providing the highest quality care, and should not require or encourage educational institutions to discriminate unlawfully on the basis of race.

The Accreditation Council for Graduate Medical Education ('ACGME') is the primary organization in the United States that currently conducts accreditation for Graduate Medical Education ('GME') Programs. While ACGME accreditation is a voluntary process, programs that are not accredited by the ACGME generally do not receive Medicare funding from CMS for Direct Graduate Medical Education (DGME) and Indirect Medical Education (IME). Additionally, if the ACGME withdraws accreditation, residents generally must receive assistance to

[508] 90 FR 17529. *https://www.federalregister.gov/documents/2025/04/28/2025-07376/reforming-accreditation-to-strengthen-higher-education.*

continue their education from other ACGME-accredited programs.[509]

Historically, the ACGME identified 'diversity, equity, and inclusion' as a primary value of the organization and a central component of its vision for graduate medical education.[510] The ACGME's Common Program Requirements required that institutions ''must engage in practices that focus on mission-driven, ongoing, systematic recruitment and retention of a diverse and inclusive workforce of residents, fellows (if present), faculty members, senior administrative staff members,'' and that organizations' ''programs implement policies and procedures related to recruitment and retention of individuals underrepresented in medicine and medical leadership.'' [511] In practice, many such diversity, equity, and inclusion programs unlawfully discriminate against Americans on the basis of race. In *Students for Fair Admissions* v. *President and Fellows of Harvard College (2023),* the U.S. Supreme Court held that race-based admissions policies, even when focused on the goal of diversity, violate the Equal Protection Clause of the Fourteenth Amendment unless they satisfy strict scrutiny.[512] While the ruling applies specifically to admissions decisions at institutions of higher education, its broader reasoning—especially the requirement that any use of race be narrowly tailored to a compelling interest—strongly suggests that race-conscious elements in Diversity, Equity, and Inclusion (DEI) initiatives in Federally funded education programs are generally impermissible. These programs raise particular concerns in the medical context, where patients and the larger society have a compelling need for medical education to be focused primarily on excellence and delivering the best possible care to patients.

B. Definition of ''Approved Medical Residency Programs''

Section 1886(h) of the Act, as added by section 9202 of the Consolidated Omnibus Budget Reconciliation Act (COBRA) of 1985 (Pub. L. 99–272), and as currently implemented in CMS regulations at 42 CFR 413.75 through 413.83, establishes a methodology for determining payments to hospitals for the direct costs of approved graduate medical education (GME) programs. Section 1886(h)(2) of the Act sets forth a methodology for the determination of a hospital-specific base-period per resident amount (PRA) that is calculated by dividing a hospital's allowable direct costs of GME in a base period by its number of full-time equivalent (FTE) residents in the base period. In general, Medicare direct GME payments are calculated by multiplying the hospital's updated PRA by the weighted number of FTE residents working in all areas of the hospital complex (and at non-provider sites, when applicable), and the hospital's Medicare share of total inpatient days.

Section 1886(d)(5)(B) of the Act provides for a payment adjustment known as the indirect medical education (IME) adjustment under the IPPS for hospitals that have residents in an approved GME program, to account for the higher indirect patient care costs of teaching hospitals relative to nonteaching hospitals. The regulations regarding the calculation of this additional payment are located at 42 CFR 412.105. The hospital's IME adjustment applied to the DRG payments is calculated based on the ratio of the hospital's number of FTE residents training in either the inpatient or outpatient departments of the IPPS hospital (and, for discharges occurring on or after October 1, 1997, at non-provider sites, when applicable) to the number of inpatient hospital beds.

Hospitals may receive direct GME and IME payments for residents in ''approved medical residency training programs.'' Section 1886(h)(5)(A) of the Act defines an ''approved medical residency training program'' as ''a residency or other postgraduate medical training program participation in which may be counted toward certification in a specialty or subspecialty and includes formal postgraduate training programs in geriatric medicine approved by the Secretary.''

The regulations at § 413.75(b) define an ''approved medical residency program'' for purposes of direct GME payment as a program that meets one of four criteria: (1) is approved by one of the national organizations specified in the regulations at § 415.152; (2) may count towards certification of the participant in a specialty or subspecialty listed in the current edition of certain publications specified in the regulations; (3) is approved by the ACGME as a fellowship program in geriatric medicine; or (4) is a program that would be accredited except for the accrediting agency's reliance upon an accreditation standard that involves induced abortions, regardless of whether the standard provides exceptions or exemptions. The regulations at § 412.105(f)(1)(i) define an ''approved teaching program'' similarly for purposes of IME payment.

The regulations at § 415.152 define an ''approved graduate medical education program'' as a residency program approved by one of the following national organizations (or their predecessors): The Accreditation Council for Graduate Medical Education (ACGME), the American Osteopathic Association (AOA), the Commission on Dental Accreditation (CODA) of the American Dental Association, and the Council on Podiatric Medical Education (CPME) of the American Podiatric Medical Association. Thus, in general, under §§ 413.75(b) and 412.105(f)(1)(i), an ''approved'' program can be a program that is accredited by one of these national organizations, or one that leads toward board certification by the American Board of Medical Specialties (ABMS).

The statute gives CMS authority to specify additional criteria for approved GME programs. Therefore, to ensure that accreditation for approved medical residency programs is in compliance with applicable laws related to race-based admission policies and to improve the accreditation process, in the CY 2026 OPPS/ASC proposed rule (90 FR 33811 through 33812), we proposed that accreditors may not require as part of accreditation, or otherwise encourage institutions to put in place, diversity, equity, and inclusion programs that encourage unlawful discrimination on the basis of race or other violations of Federal law. The effective date of this proposed policy would be January 1, 2026. Additionally, we noted that the Secretary may recognize other organizations that meet or exceed Medicare's requirements as accreditors to increase the potential for competition in the accreditation space and improve the quality of the accreditation process.

Our intent in issuing this proposal was to ensure that accreditors of academic medical institutions are focused on the mission of ensuring excellence in graduate medical education, of improving the potential for competition in the accreditation space, and of eliminating unlawful and discriminatory DEI programs. We invited commenters' feedback on this proposal. The following is a summary of

the comments we received and our responses.

Comment: CMS received numerous comments in support of our proposal to modify the definition of ''approved medical residency program'' so that accreditors may not require as part of accreditation, or otherwise encourage institutions to put in place, diversity, equity, and inclusion programs that encourage unlawful discrimination on the basis of race or other violations of Federal law. A majority of these commenters also expressed support for the Secretary's authority to recognize other organizations as accreditors of graduate medical education programs.

Many commenters that supported the proposal also recommended that CMS expand the policy to explicitly prohibit the use of accreditation standards that violate Federal healthcare conscience laws, including the Church Amendments (42 U.S.C. 300a–7), the Coats-Snowe Amendment (42 U.S.C. 238n), certain provisions of the Affordable Care Act (Pub. L. 111–148), and the Weldon Amendment. These statutory provisions generally prohibit discrimination against recipients of certain Federal funding who refuse to perform abortions or provide other services in violation of their moral or religious convictions. Specifically, a commenter recommended defining an approved program at § 412.105(f)(1)(i)(A) as one that ''[i]s approved by one of the national organizations listed in § 415.152 of this chapter, provided that the national organization does not use accreditation criteria that promote or emphasize diversity, equity, inclusion, or awareness based on race, color, sex, sexual orientation or identity, national origin, or any other characteristic which serves as a proxy to achieve the same ends, or that would cause entities or individuals to act contrary to objections protected by Federal conscience and nondiscrimination statutes, including 42 U.S.C. 300a–7, 42 U.S.C. 238n, 42 U.S.C. 18113, or the Weldon Amendment, for example, Consolidated Appropriations Act, 2023, Public Law 117–328, div. H, title V General Provisions, section 507(d)(1) (Dec. 29, 2022)) [*sic*].'' The commenter recommended similar language for other sections of the regulations subject to this proposal. Other commenters stated that the existing regulations at §§ 413.75(b) and 412.105(f)(1)(i)(D), which recognize approved programs that would be accredited except for the accrediting agency's reliance upon an accreditation standard that requires an entity to perform an induced abortion, should be expanded to include other services, such as in vitro fertilization, surrogacy, certain forms of family planning, sterilization, sex-rejecting procedures, assisted suicide, euthanasia, medical aid in dying, voluntary stopping of eating and drinking, and inducing death for organ harvesting. A commenter also urged CMS to require that abortion training be offered under an opt-in only model, as opposed to the ACGME's current opt-out requirement.

Commenters stated that these additional provisions are necessary to protect individuals and other healthcare entities from discrimination on the basis of their moral and religious beliefs. Some commenters argued that, as a result of current requirements, individual physicians and faith-based institutions are effectively forced to act in violation of their conscientious objections in order to complete their training or secure Medicare GME funding; several respondents described instances in which they or others experienced allegedly discriminatory treatment as a result of their objections to certain training requirements.

A commenter that supported the proposal also expressed concern that Medicare GME funding may be used to pay for abortions, in violation of the Hyde Amendment, which generally prohibits the use of Federal funding for abortion except under limited circumstances.

Another commenter that supported the proposal encouraged CMS to add language to the regulations that would prevent accreditors from engaging in word play as a means of circumventing the proposed policy. Specifically, the commenter recommended defining an approved program at § 412.105(f)(1)(i)(A) as one that ''[i]s approved by one of the national organizations listed in § 415.152 of this chapter, provided that the national organization does not use accreditation criteria that either promote or emphasize diversity, equity, inclusion, or awareness based on race, color, sex, sexual orientation or gender identity, national origin, or any other characteristic which serves as a proxy to achieve the same ends or would cause the hospitals to violate, or reasonably cause the hospitals to believe that they would violate, Federal civil rights laws if adopted by the hospitals.'' The commenter recommended similar language for other sections of the regulations subject to this proposal.

Response: We thank the commenters for their support of our proposal.

In response to comments recommending further expansion of the proposed policy, we may take these comments into consideration for future rulemaking. We emphasize that regardless of the inclusion of explicit language in the GME regulations, no entity or individual may be forced to act contrary to objections protected by Federal conscience and nondiscrimination statutes. We also note with regard to the Hyde Amendment that both direct GME and IME payments are made only with respect to services otherwise payable under Medicare, and that abortion services are not payable under Medicare except under the limited circumstances specified in the Hyde Amendment.

In response to a commenter's concerns regarding potential circumvention of the proposed regulations, we believe the language we proposed is sufficiently clear to prevent gaming. However, as we also note in response to a subsequent comment, we agree that the regulations should more explicitly specify the types of practices that will be prohibited under our finalized policy. Therefore, we are finalizing, with modification, our proposed change to the definition of ''approved medical residency program'' and equivalent terms in the regulations at 42 CFR 412.105(f)(1)(i), 413.75(b) and 415.152, to state that accrediting organizations may not use accreditation criteria that promote or encourage discrimination on the basis of race, color, national origin, sex, age, disability, or religion, including the use of those characteristics or intentional proxies for those characteristics as a selection criterion for employment, program participation, resource allocation, or similar activities, opportunities, or benefits.

In connection with this policy, we emphasize the independent obligation of all recipients (and subrecipients) of Federal financial assistance to comply with all applicable Federal civil rights laws and, thus, not to discriminate on the bases prohibited by such laws. Thus, we further note that prohibited practices include all other conduct in violation of Federal antidiscrimination laws, including any ''unlawful practices'' under the Attorney General's *Guidance for Recipients of Federal Funding Regarding Unlawful Discrimination* (July 29, 2025). Any person or entity that believes that they have been subjected to discrimination in violation of Federal civil rights/antidiscrimination laws can file a complaint with HHS' Office for Civil Rights; information can be located at *https://www.hhs.gov/ocr/complaints/index.html*.

As we gain more experience with this policy, we may revisit this issue in future rulemaking if we determine that

it is necessary to further refine the regulations to prevent gaming.

Comment: Several commenters opposed our proposed change to the definition of ''approved medical residency programs''. Commenters expressed concern that the proposal would create uncertainty for hospitals, disrupt residency training, and potentially exacerbate physician shortages in various specialties. A few commenters emphasized the importance of a diverse physician workforce in achieving positive health outcomes, addressing upstream drivers of health (such as housing and food insecurity), and reducing health disparities, with a commenter adding that the shift away from training informed by diverse American experiences risks eroding trust in healthcare institutions, especially among underserved groups. Another commenter cited studies that they believe demonstrate the continuing adverse effects of implicit bias and systemic racism on public health, as well as the positive impacts that increased diversity and inclusion have on innovation, research, and patient outcomes.

A commenter stated that the proposed policy is unnecessary in light of developments within the GME community that have taken place since the publication of the CY 2026 OPPS/ASC proposed rule. The commenter reported that on September 5, 2025, the ACGME announced that, in response to Federal directives related to diversity, equity and inclusion, it was removing its DEI-related accreditation requirements and closing its Department of DEI. The commenter added that they are not aware of any other GME accrediting organization that includes DEI-related standards within its requirements.

Another commenter requested that, if the proposed policy were to be finalized, CMS should explicitly specify what sort of activities remain permissible for accreditors under the regulations, and whether these include activities such as holistic applicant review, targeted mentorship and coaching, curricula on language access, cultural humility, upstream drivers of health, and outreach that does not rely on impermissible classifications.

Response: We respectfully disagree with the commenters' objections. As we stated in the CY 2026 OPPS/ASC proposed rule, we believe that race-conscious elements of diversity, equity and inclusion policies such as those historically required by the ACGME are generally impermissible under Federal law, as strongly suggested by the Supreme Court's ruling in *Students for Fair Admissions* v. *President and Fellows of Harvard College.* In addition, we are unpersuaded by commenters' arguments that diversity, equity and inclusion programs are necessary for achieving positive health outcomes or maintaining trust in healthcare institutions: rather, as we stated in the CY 2026 OPPS/ASC proposed rule, we believe that patients and the larger society have a compelling need for medical education to be focused primarily on excellence and delivering the best possible care to patients.

While our understanding is that the ACGME has removed its DEI-related accreditation standards, we do not believe this renders the proposed policy unnecessary, since the ACGME or another accrediting body might seek to reinstate such requirements in the future. Regarding what activities would remain permissible for accreditors under the proposal, the regulatory text that we are finalizing in this final rule with comment period states that an accrediting organization must not use accreditation criteria that promote or encourage discrimination on the basis of race, color, national origin, sex, age, disability, or religion, including the use of those characteristics or intentional proxies for those characteristics as a selection criterion for employment, program participation, resource allocation, or similar activities, opportunities, or benefits. We emphasize that accrediting bodies should review their requirements to ensure that any activities such as those mentioned by the commenter do not serve as a proxy for unlawful discrimination based on race or other characteristics.

Comment: Several commenters objected to our statement in the CY 2026 OPPS/ASC proposed rule that the Secretary may recognize other organizations that meet or exceed Medicare's requirements as accreditors to increase the potential for competition in the accreditation space and improve the quality of the accreditation process. Commenters expressed concern that the recognition of new accrediting bodies with divergent standards would create uncertainty for hospitals, undermine the rigor of the accreditation process, and jeopardize patient care by diminishing the quality of residency training. A commenter stated that if CMS recognizes additional accreditors, such organizations should be required to: (1) Publish transparent standards and conflict-of-interest safeguards; (2) Demonstrate parity or improvement in patient-safety and competency expectations compared to existing accrediting bodies; and (3) Ensure grandfathering protections so that residents currently in training are not disrupted.

Response: We disagree that the recognition of additional accreditors for graduate medical education programs would lead to the circumstances described by commenters. For instance, we have not observed that the existence of multiple accreditors for various specialties of nursing and allied health education programs has undermined the quality of training or patient care in those specialties. Any new GME accreditors recognized by the Secretary would be subject to the same requirements as current accreditors, including the requirements we are adopting in this final rule with comment period.

After consideration of public comments, we are finalizing, with modification, our proposed change to the definition of ''approved medical residency program'' and equivalent terms at §§ 412.105(f)(1)(i), 413.75(b), and 415.152, to specify that accrediting organizations must not use accreditation criteria that promote or encourage discrimination on the basis of race, color, national origin, sex, age, disability, or religion, including the use of those characteristics or intentional proxies for those characteristics as a selection criterion for employment, program participation, resource allocation, or similar activities, opportunities, or benefits.

We also note that, in line with the Administration's commitment to preventing and reducing chronic disease through improved diet and public health measures, we are considering for future rulemaking how best to encourage accrediting bodies to incorporate nutrition education requirements into the accreditation standards for graduate medical education programs. These efforts would build on the Secretary's recent request to U.S. medical education organizations to submit written plans detailing the scope, timeline, standards alignment, measurable milestones, and accountability measures of their nutrition education commitments.[513]

XXII. Payment for Indirect and Direct Graduate Medical Education Costs (§§ 412.105 and 413.75 Through 413.83)

Notice of Closure of Teaching Hospital and Opportunity To Apply for Available Slots

A. Background

Section 5506 of the Patient Protection and Affordable Care Act (Pub. L. 111–148), as amended by the Health Care and Education Reconciliation Act of 2010 (Pub. L. 111–152) (collectively, ''Affordable Care Act''), authorizes the Secretary to redistribute residency slots after a hospital that trained residents in an approved medical residency program closes. Section 5506 of the Affordable Care Act instructs the Secretary to establish a process by regulation that redistributes slots from teaching hospitals that close to hospitals that meet certain criteria, with priority given to certain hospitals including those located in the same Core Based Statistical Area (CBSA), in a contiguous CBSA or in the same state as the closed hospital.

Specifically, section 5506 of the Affordable Care Act amended the Act by adding subsection (vi) to section 1886(h)(4)(H) of the Act and modifying language at section 1886(d)(5)(B)(v) of the Act, to instruct the Secretary to establish a process to increase the full-time equivalent (FTE) resident caps for other hospitals based upon the FTE resident caps in teaching hospitals that closed on or after a date that is 2 years before the date of enactment (that is, March 23, 2008). In the CY 2011 Outpatient Prospective Payment System (OPPS) final rule with comment period (75 FR 72264), we established regulations at 42 CFR 413.79(o) and an application process for qualifying hospitals to apply to CMS to receive direct GME and IME FTE resident cap slots from the hospital that closed. We made certain additional modifications to § 413.79 in the FY 2013 IPPS/LTCH PPS final rule (77 FR 53434), and we made changes to the section 5506 application process in the FY 2015 IPPS/LTCH PPS final rule (79 FR 50122 through 50134). The procedures we established apply both to teaching hospitals that closed on or after March 23, 2008, and on or before August 3, 2010, and to teaching hospitals that close after August 3, 2010 (75 FR 72215).

B. Notice of Closure of Pontiac General Hospital Located in Pontiac, MI, and the Application Process—Round 26

We have learned of the closure of Pontiac General Hospital, located in Pontiac, MI (CCN 230013). Accordingly, this notice serves to notify the public of the closure of this teaching hospital and initiate another round (''Round 26'') of the application and selection process. This round will be the 26th round (''Round 26'') of the application and selection process. Table 145 contains the identifying information and IME and direct GME FTE resident caps for the closed teaching hospital, which are part of the Round 26 application process under section 5506 of the Affordable Care Act.

TABLE 145: PONTIAC GENERAL HOSPITAL FTE RESIDENT CAPS

CCN	Provider Name	City and State	CBSA Code	Terminating Date	IME FTE Resident Cap (including+/- MMA Sec. 422[1] and ACA Sec. 5503[2] adjustments)	Direct GME FTE Resident Cap (including+/- MMA Sec. 422 and ACA Sec. 5503 adjustments)
230013	Pontiac General Hospital	Pontiac, MI	47664	November 24, 2024	34.46 – 0.71 sec. 422 reduction = 33.75[3]	36.49 – 2.31 sec. 422 reduction – 3.74 sec. 5503 reduction = 30.44[4]

[1] Section 422 of the MMA, Pub. L. 108–173, redistributed unused IME and direct GME residency slots effective July 1, 2005.

[2] Section 5503 of the Affordable Care Act of 2010, Pub. L. 111–148 and Pub. L. 111–152, redistributed unused IME and direct GME residency slots effective July 1, 2011.

[3] Pontiac General Hospital's 1996 IME FTE resident cap is 34.46. Under section 422 of the MMA, the hospital received a reduction of 0.71 to its IME FTE resident cap: 34.46 – 0.71 = 33.75.

[4] Pontiac General Hospital's 1996 direct GME FTE resident cap is 36.49. Under section 422 of the MMA, the hospital received a reduction of 2.31 to its direct GME FTE resident cap, and under section 5503 of the Affordable Care Act, the hospital received a reduction of 3.74 to its direct GME FTE resident cap: 36.49 – 2.31 – 3.74 = 30.44.

C. Application Process for Available Resident Slots

The application period for hospitals to apply for slots under section 5506 of the Affordable Care Act is 90 days following notice to the public of a hospital closure (77 FR 53436). Therefore, hospitals that wish to apply for and receive slots from the previously noted hospital's FTE resident caps must submit applications using the electronic application intake system, Medicare Electronic Application Request Information System (MEARIS™), with application submissions for Round 26 due no later than February 19, 2026. The section 5506 application can be accessed at *https://mearis.cms.gov/public/home*.

CMS will only accept Round 26 applications submitted via MEARIS™. Applications submitted through any other method will not be considered. Within MEARIS™, we have built in several resources to support applicants:

- Please refer to the ''Resources'' section for guidance regarding the application submission process at *https://mearis.cms.gov/public/resources*.
- Technical support is available under ''Useful Links'' at the bottom of the MEARIS™ web page.
- Application related questions can be submitted to CMS using the form available under ''Contact'' at *https://mearis.cms.gov/public/resources*.

Application submission through MEARIS™ will not only help CMS track applications and streamline the review process, but it will also create efficiencies for applicants when

compared to a paper submission process.

We have not established a deadline by when CMS will issue the final determinations to hospitals that receive slots under section 5506 of the Affordable Care Act. However, we review all applications received by the application deadline and notify applicants of our determinations as soon as possible.

We refer readers to the CMS Direct Graduate Medical Education (DGME) website at *https://www.cms.gov/medicare/payment/prospective-payment-systems/acute-inpatient-pps/direct-graduate-medical-education-dgme*. Hospitals should access this website for a list of additional section 5506 guidelines for the policy and procedures for applying for slots, and the redistribution of the slots under sections 1886(h)(4)(H)(vi) and 1886(d)(5)(B)(v) of the Act.

XXIII. Collection of Information Requirements

Under the Paperwork Reduction Act of 1995 (PRA), 44 U.S.C. 3501–3520, we are required to provide notice in the **Federal Register** and solicit public comment before a collection of information requirement is submitted to the Office of Management and Budget (OMB) for review and approval. To fairly evaluate whether an information collection should be approved by OMB, 44 U.S.C. 3506(c)(2)(A) requires that we solicit comment on the following issues:

- The need for the information collection and its usefulness in carrying out the proper functions of our agency.
- The accuracy of our estimate of the information collection burden.
- The quality, utility, and clarity of the information to be collected.
- Recommendations to minimize the information collection burden on the affected public, including automated collection techniques.

We solicited public comment on each of these issues for the following sections of this document that contain information collection requirements (ICRs):

A. ICRs for the Hospital Outpatient Quality Reporting (OQR) Program

1. Background

In sections XIV. and XV. of this final rule with comment period, we discuss the finalized requirements for the Hospital OQR Program. The Hospital OQR Program is generally aligned with the CMS quality reporting program for hospital inpatient services known as the Hospital Inpatient Quality Reporting (IQR) Program. We refer readers to the CY 2025 OPPS/ASC final rule with comment period (89 FR 94522 through 94530) for detailed discussions of the previously finalized Hospital OQR Program ICRs which are currently approved under OMB control number 0938–1109 (expiration date January 31, 2026).

We are: (1) removing the COVID–19 Vaccination Coverage Among Healthcare Personnel (HCP) measure beginning with the CY 2024 reporting period/CY 2026 payment determination; (2) removing the Hospital Commitment to Health Equity (HCHE) measure beginning with the CY 2025 reporting period/CY 2027 payment determination; (3) removing the Screening for Social Drivers of Health (SDOH) measure beginning with the CY 2025 reporting period; (4) removing the Screen Positive Rate for SDOH measure beginning with the CY 2025 reporting period; (5) modifying the Excessive Radiation Dose or Inadequate Image Quality for Diagnostic Computed Tomography (CT) in Adults (Hospital Level—Outpatient) eCQM (Excessive Radiation eCQM) from mandatory reporting beginning with the CY 2027 reporting period to continue voluntary reporting in the CY 2027 reporting period and subsequent years; (6) adopting the Emergency Care Access & Timeliness electronic clinical quality measure (eCQM) with voluntary reporting for the CY 2027 reporting period, followed by mandatory reporting beginning with the CY 2028 reporting period/CY 2030 payment determination; (7) removing the Median Time from Emergency Department (ED) Arrival to ED Departure for Discharged ED Patients measure beginning with the CY 2028 reporting period/CY 2030 payment determination; and (8) removing the Left Without Being Seen (LWBS) measure beginning with the CY 2028 reporting period/CY 2030 payment determination.

In section XIV.D. of this final rule with comment period, we are also updating our Extraordinary Circumstances Exception (ECE) Policy for the Hospital OQR Program. This update will explicitly include extensions as a type of extraordinary circumstances relief option, in addition to exceptions. Because the process for requesting or granting an ECE will remain the same as the current ECE process, these updates will not affect burden associated with the submission of the ECE form.

In the CY 2025 OPPS/ASC final rule with comment period, we calculated reporting burden estimates for the Hospital OQR Program by utilizing the Bureau of Labor Statistics (BLS) mean hourly wage rate for Medical Records Specialists (89 FR 94522 through 94523). Specifically, we used the industry-specific wage for Medical Records Specialists working in ''general medical and surgical hospitals'', as this categorization aligns the closest with the Hospital OQR Program care setting. The most recent data from BLS' May 2024 National Occupational Employment and Wage Estimates reflects a median hourly wage of $27.53 per hour for Medical Records Specialists working in ''general medical and surgical hospitals'' (SOC 29–2072).[514] We calculated the cost of overhead, including fringe benefits, at 100 percent of the median hourly wage, consistent with previous years. This is a rough adjustment, both because fringe benefits and overhead costs vary significantly by employer and methods of estimating these costs vary widely in the literature. Nonetheless, we believe that doubling the hourly wage rate ($27.53 × 2 = $55.06) to estimate total cost burden is reasonably accurate. Accordingly, unless otherwise specified, we calculate cost burden to hospitals using a wage plus benefits estimate of $55.06 per hour throughout the discussion in this section of this final rule with comment period for the Hospital OQR Program.

In the CY 2025 OPPS/ASC final rule with comment period, our burden estimates assumed that approximately 3,200 hospital outpatient departments (HOPDs) will report data to the Hospital OQR Program (89 FR 94523). For this final rule with comment period, based on the most recent available data from the CY 2024 Hospital OQR Program payment determination, we estimate that 3,200 HOPDs will report data to the Hospital OQR Program for the CY 2026 reporting period/CY 2028 payment determination and future years.

2. Information Collection Burden Estimate for the Removal of the COVID–19 Vaccination Coverage Among HCP Measure Beginning With CY 2024 Reporting Period/CY 2026 Payment Determination

As discussed in section XIV.C.1. of this final rule with comment period, we are removing the COVID–19 Vaccination Coverage Among HCP measure beginning with the CY 2024 reporting period/CY 2026 payment determination. The information collection burden associated with this measure is currently approved under OMB control number 0920–1317. To report this measure, HOPDs have the option to

[514] U.S. Bureau of Labor Statistics. (2025). Occupational Outlook Handbook, Medical Records Specialists. Available at: *https://data.bls.gov/oes/#/industry/622100. Accessed: April 8, 2025.*

manually enter data directly into the Centers for Disease Control and Prevention (CDC) National Healthcare Safety Network (NHSN) web-based application or by uploading a CSV file. CDC estimates that each HOPD requires between 40 minutes (0.67 hours) to upload a CSV file and 45 minutes (0.75 hours) monthly to enter the data manually. CDC assumes that manual data entry will be completed by a Microbiologist with a wage rate of $58.60/hour and uploading of a CSV file will be completed by an Information Technologist with a wage rate of $56.50/hour. Therefore, we estimate that this policy will result in a decrease in burden of between 25,600 hours (0.67 hours × 12 months × 3,200 HOPDs) at a savings of $1,446,400 (25,600 hours × $56.50/hour) and 28,800 hours (0.75 hours × 12 months × 3,200 HOPDs) at a savings of $1,687,680 (28,800 hours × $58.60/hour) annually across all 3,200 HOPDs under OMB control number 0920–1317.

We did not receive public comments on this burden estimate.

3. Information Collection Burden Estimate for the Removal of the HCHE Measure Beginning With the CY 2025 Reporting Period/CY 2027 Payment Determination

As discussed in section XIV.C.2. of this final rule with comment period, we are removing the HCHE measure beginning with the CY 2025 reporting period/CY 2027 payment determination. The information collection burden associated with this measure is currently approved under OMB control number 0938–1109. The currently approved information collection burden estimate for this measure assumes HOPDs spend approximately 10 minutes (0.167 hours) annually to report measure data. Therefore, for all participating HOPDs, we estimate removal of this measure will decrease burden by approximately 533 hours (0.167 hours × 3,200 HOPDs) at a savings of $29,347 (533 hours × $55.06/hour).

We did not receive public comments on this burden estimate.

4. Information Collection Burden Estimate for the Removal of the Screening for SDOH Measure Beginning With the CY 2025 Reporting Period

In section XIV.C.3. of this final rule with comment period, we are removing the Screening for SDOH measure beginning with the CY 2025 reporting period. There are two components to this measure: patient screening for five health related social needs domains and hospital submission of aggregated hospital-level measure data. We have previously estimated each patient requires 2 minutes (0.033 hours) to complete the screening and each hospital requires 10 minutes (0.167 hours) annually to report this measure.

We determine the cost for patients (or their representative) to complete the screening using a post-tax wage of $25.63/hour based on assumptions from the report ''Valuing Time in U.S. Department of Health and Human Services Regulatory Impact Analyses: Conceptual Framework and Best Practices'', which identifies an approach for valuing time when individuals undertake administrative and other tasks on their own time.[515] To derive the costs for patients (or their representatives), a measurement of the usual weekly earnings of wage and salary workers of $1,192 is divided by 40 hours to calculate an hourly pre-tax wage rate of $29.80/hour.[516] This rate is adjusted downwards by an estimate of the effective tax rate for median income households of about 14 percent calculated by comparing pre- and post-tax income,[517] resulting in the post-tax hourly wage rate of $25.63/hour. Unlike our State and private sector wage adjustments, we are not adjusting beneficiary wages for fringe benefits and other indirect costs because the individuals' activities, if any, will occur outside the scope of their employment.

Under OMB control number 0938–1109, we estimated 206,325,645 HOPD visits annually that would have resulted in screening once the measure became mandatory. Therefore, for all participating HOPDs, we estimate removal of this measure will decrease burden for voluntary reporting for the CY 2025 reporting period by approximately 1,719,380 hours for 51,581,411 patients (0.033 hours × 206,325,645 patients × 50 percent response rate × 50 percent of HOPDs) at a savings of $44,067,709 (1,719,380 hours × $25.63/hour). For mandatory reporting beginning with the CY 2026 reporting period, we estimate a decrease in burden of 6,877,522 hours (206,325,645 patients × 0.033 hours per patient) at a savings of $176,270,889 (6,877,522 hours × $25.63/hour). With regard to measure reporting, we estimate a decrease in burden of 267 hours (3,200 HOPDs × 50 percent of HOPDs × 0.167 hours per HOPD) at a savings of $14,701 (267 hours × $55.06/hour) for voluntary reporting for the CY 2025 reporting period and 533 hours annually (0.167 hours × 3,200 HOPDs) at a savings of $29,347 (533 hours × $55.06/hour) for mandatory reporting beginning with the CY 2026 reporting period.

We did not receive public comments on this burden estimate.

5. Information Collection Burden Estimate for the Removal of the Screen Positive Rate for SDOH Measure Beginning With the CY 2025 Reporting Period

In section XIV.C.3. of this final rule with comment period, we are removing the Screen Positive Rate for SDOH measure beginning with the CY 2025 reporting period. For this measure, HOPDs are required to report on an annual basis the number of patients who screen positive for one or more of the five SDOH domains divided by the total number of patients screened (reported as five separate rates). We previously estimated each HOPD requires 10 minutes (0.167 hours) annually to report this measure. Therefore, we estimate removal of this measure will decrease burden by 267 hours (3,200 HOPDs × 50 percent of HOPDs × 0.167 hours per HOPD) at a savings of $14,701 (267 hours × $55.06/hour) for voluntary reporting for the CY 2025 reporting period and 533 hours annually (0.167 hours × 3,200 HOPDs) at a savings of $29,347 (533 hours × $55.06/hour) for mandatory reporting beginning with the CY 2026 reporting period.

We did not receive public comments on this burden estimate.

6. Information Collection Burden Estimate for the Adoption of the Emergency Care Access & Timeliness eCQM With Voluntary Reporting for the CY 2027 Reporting Period, Followed by Mandatory Reporting Beginning With the CY 2028 Reporting Period/CY 2030 Payment Determination

As discussed in section XV.B.1. of this final rule with comment period, we are adopting the Emergency Care Access & Timeliness eCQM beginning with voluntary reporting for the CY 2027 reporting period, followed by mandatory reporting beginning with the CY 2028 reporting period/CY 2030 payment determination. Similar to the information collection burden for the Appropriate Treatment for ST-Segment

[515] Office of the Assistant Secretary for Planning and Evaluation. (2017). Valuing Time in U.S. Department of Health and Human Services Regulatory Impact Analyses: Conceptual Framework and Best Practices. Available at *https://aspe.hhs.gov/reports/valuing-time-us-department-health-human-services-regulatory-impact-analyses-conceptual-framework. Accessed: June 24, 2025.*

[516] Bureau of Labor and Statistics. (2025). Usual Weekly Earnings of Wage and Salary Workers, Fourth Quarter 2025. Available at *https://www.bls.gov/news.release/pdf/wkyeng.pdf. Accessed: March 3, 2025.*

[517] Guzman, G. & Kollatr, M. (2024). Income in the United States: 2023. Available at *https://www2.census.gov/library/publications/2024/demo/p60-282.pdf. Accessed: June 24, 2025.*

Elevation Myocardial Infarction (STEMI) and Excessive Radiation Dose or Inadequate Image Quality for Diagnostic CT in Adults eCQMs currently approved under OMB control number 0938–1109, we assume a Medical Records Specialist will require 10 minutes (0.167 hours) to submit the data required per quarter for each HOPD or 40 minutes (0.67 hours; 10 minutes × 4 quarters) annually. For voluntary reporting for the CY 2027 reporting period, HOPDs will be able to voluntarily submit at least one quarter and up to four quarters of data. For estimation purposes, similar to the assumptions previously used for the STEMI and Excessive Radiation Dose or Inadequate Image Quality for Diagnostic CT in Adults eCQMs, we estimate 20 percent of HOPDs will voluntarily report one quarter of data for the measure in the CY 2027 reporting period, with 100 percent of HOPDs reporting the measure as required in subsequent years (86 FR 63962 and 63963, and 88 FR 82134). For voluntary reporting for the CY 2027 reporting period, we estimate an annual burden for voluntarily participating HOPDs of 107 hours (3,200 HOPDs × 20 percent × 0.167 hours × 1 quarter) at a cost of $5,891 (107 hours × $55.06/hour). Beginning with the CY 2028 reporting period, we estimate the annual burden for all participating HOPDs to be 2,133 hours (0.67 hours × 3,200 HOPDs) at a cost of $117,443 (2,133 hours × $55.06/hour). With respect to any costs/burdens unrelated to data submission, we refer readers to the Regulatory Impact Analysis in section XXVI. of this final rule with comment period.

We received public comments on these burden estimates. The following is a summary of the comments we received and our responses.

Comment: A commenter asserted that the burden estimate associated with the Emergency Care Access & Timeliness eCQM, and eCQMs in general, includes only the burden associated with the submission of data and does not include the cost or effort associated with other activities such as: education to providers and staff on the impact of the measure on their workflow; modifications to documentation as appropriate; evaluation of measure report details against EHR documentation, especially on fallouts and exclusions to identify opportunities for improved discrete documentation; time needed for review of ONC Project Tracking for ongoing issues identified with the eCQM measures; development of trending and benchmark reports for awareness of reported outcomes prior to submission of data; reprocessing of data when errors have been identified and corrected; and meetings with vendors and IT, quality, leadership, and other staff to assure an understanding of what is reported on *Medicare.gov/Care* Compare, its impact on public reporting, star reporting, and use by other reporting agencies.

Response: Because we assume the collection of data for eCQMs is already being collected in each HOPD's electronic health record (EHR) system as part of the HOPD's patient workflow, the burden estimates provided in this final rule with comment period include only the time associated with submission of data to CMS. However, as noted in the Regulatory Impact Analysis in section XXVI.C.3.b. of this final rule with comment period, we agree with the commenter that there are additional recurring and non-recurring activities associated with the adoption of new eCQM measures.

After consideration of public comments, we are declining to update our burden estimate.

7. Information Collection Burden Estimate for the Removal of the Median Time From ED Arrival to ED Departure for Discharged ED Patients Measure Beginning With the CY 2028 Reporting Period/CY 2030 Payment Determination

As discussed in section XV.B.2. of this final rule with comment period, we are removing the Median Time from ED Arrival to ED Departure for Discharged ED Patients measure beginning with the CY 2028 reporting period/CY 2030 payment determination, when reporting for the Emergency Care Access & Timeliness eCQM becomes mandatory. The information collection burden associated with this measure is currently approved under OMB control number 0938–1109. The currently approved information collection burden estimate for this measure assumes an average of 289 cases are reported annually per HOPD, and HOPDs require approximately 2.9 minutes (0.049 hours) per case to perform the necessary chart abstraction and report measure data. Therefore, we estimate removal of this measure will decrease burden by approximately 14.2 hours (0.049 hours × 289 cases) at a savings of $782 per HOPD (14.2 hours × $55.06/hour). Therefore, for all participating HOPDs, we estimate a decrease in annual burden of 45,440 hours (14.2 hours per HOPD × 3,200 HOPDs) at a savings of $2,501,926 (45,440 hours × $55.06/hour).

We did not receive public comments on this burden estimate.

8. Information Collection Burden Estimate for the Removal of the Left Without Being Seen Measure Beginning With the CY 2028 Reporting Period/CY 2030 Payment Determination

As discussed in section XV.B.2. of this final rule with comment period, we are removing the Left Without Being Seen measure beginning with the CY 2028 reporting period/CY 2030 payment determination, when reporting for the Emergency Care Access & Timeliness eCQM becomes mandatory. The information collection burden associated with this measure is currently approved under OMB control number 0938–1109. The currently approved information collection burden estimate for this measure assumes HOPDs spend approximately 10 minutes (0.167 hours) annually to report measure data. Therefore, for all participating HOPDs, we estimate removal of this measure will decrease burden by approximately 533 hours (0.167 hours × 3,200 HOPDs) at a savings of $29,347 (533 hours × $55.06/hour).

We did not receive public comments on this burden estimate.

9. Information Collection Burden Estimate To Modify the Excessive Radiation eCQM From Mandatory Reporting Beginning With the CY 2027 Reporting Period To Continue Voluntary Reporting in the CY 2027 Reporting Period and Subsequent Years

As discussed in section XV.B.3. of this final rule with comment period, we are modifying the reporting requirements for the Excessive Radiation eCQM by maintaining voluntary reporting instead of mandatory reporting of the measure, beginning with the CY 2027 reporting period. The information collection burden associated with this measure is currently approved under OMB control number 0938–1109 and estimates HOPDs spend approximately 10 minutes (0.167 hours) per quarter annually to report measure data. In the CY 2024 OPPS/ASC final rule with comment period, where we adopted the Excessive Radiation eCQM beginning with voluntary reporting in the CY 2026 reporting period, we estimated that 20 percent of hospitals will voluntarily report one quarter of data for the measure and 100 percent of hospitals would report data for the measure once mandatory reporting began with the CY 2027 reporting period/CY 2029 payment determination. We also finalized to gradually increase the number of quarters of data hospitals would be required to report on the measure

starting with two self-selected quarters for the CY 2027 reporting period/CY 2029 payment determination, and all four quarters for the CY 2028 reporting period/CY 2030 payment determination (88 FR 82134).

Because HOPDs will no longer be required to report this measure under the modification to extend voluntary reporting beginning with the CY 2027 reporting period, we estimate the revised data submission burden, reflecting 20 percent of hospitals voluntarily reporting, will be 107 hours (3,200 HOPDs × 20 percent × 0.167 hours × 1 quarter) at a cost of $5,891 (107 hours × $55.06/hour) annually. This updated burden estimate is a decrease of 960 hours [(3,200 HOPDs × 0.167 hours × 2 quarters) − (3,200 HOPDs × 20 percent × 0.167 hours × 1 quarter)] at a savings of $52,858 (960 hours × $55.06) for the CY 2027 reporting period, and a decrease of 2,027 hours [(3,200 HOPDs × 20 percent × 0.167 hours × 3 quarters) + (3,200 HOPDs × 80 percent × 0.167 hours × 4 quarters)] at a savings of $111,607 (2,027 hours × $55.06/hour) annually beginning with the CY 2028 reporting period.

In addition, for this measure as described under OMB control number 0938–1109, participating HOPDs must follow the process for running their chosen vendor's translation software prior to sending data to its EHR for measure calculation and reporting. We estimate participating HOPDs spend approximately 15 minutes (0.25 hours) annually to conduct these activities prior to data submission. Therefore, for all participating HOPDs, we estimate modification of this measure from mandatory to voluntary reporting will decrease annual burden associated with these activities by approximately 640 hours (0.25 hours × 80 percent × 3,200 HOPDs) at a savings of $35,238 (640 hours × $55.06/hour) beginning with the CY 2027 reporting period.

We received public comments on these burden estimates. The following is a summary of the comments we received and our responses.

Comment: A commenter stated their opinion that the burden estimate associated with the Excessive Radiation eCQM includes only the burden associated with the submission of data and does not include the cost or effort associated with other activities such as: contracted physicist time for scanner reconfiguration and validation; health information system, radiology information system, and EHR modifications to create separate low-, routine-, and high-dose orderable exams; radiologist and technologist labor for workflow redesign and training; IT integration across picture archiving and communication systems, dose monitoring systems, and reporting vendors; and scanner manufacturer support to ensure redesigned protocols remain consistent with each scanner's technology and capability. The commenter further noted that first-year costs associated with these activities range between $20,000 and $50,000 with additional annual expenses incurred thereafter.

Response: Reporting on this measure will continue to be voluntary, and as such HOPDs can determine their readiness to implement any changes necessary if they elect to report on this measure. Because we assume the collection of data for eCQMs is already being collected in each HOPD's EHR system as part of the HOPD's patient workflow, the burden estimates provided in this final rule with comment period include only the time associated with submission of data to CMS. However, as noted in the Regulatory Impact Analysis in section XXVI.C.3.b. of this final rule with comment period, we agree with the commenter that there are additional recurring and non-recurring activities associated with adoption of new eCQM measures.

After consideration of public comments, we are declining to update our burden estimate.

10. Summary of Information Collection Burden Estimates for the Hospital OQR Program

Tables 146 through 150 summarizes the information collection burden changes under OMB control number 0938–1109 (expiration date January 1, 2026). We estimate that removal of the COVID–19 Vaccination Coverage Among HCP measure in this final rule with comment period will result in a decrease in information collection burden of between 25,600 hours at a savings of $1,446,400 and 28,800 hours at a savings of $1,687,680 under OMB control number 0920–1317. We also estimate that the remaining measure removals, adoptions, and modifications in this final rule with comment period will result in a decrease in information collection burden of 6,924,988 hours at a savings of $178,884,367 annually for all 3,200 program-eligible HOPDs from the CY 2025 reporting period/CY 2027 payment determination through the CY 2028 reporting period/CY 2030 payment determination. We submitted the revised information collection estimates to OMB for approval under OMB control number 0938–1109. With respect to any costs/burdens unrelated to data submission, we refer readers to the Regulatory Impact Analysis in section XXVI.C.3 of this final rule with comment period.

We invited public comments on the information collection requirements and whether our estimated burden is a reasonable estimate but did not receive any comments other than those previously discussed.

*For purposes of this table, we state the maximum possible burden across all HOPDs.

BILLING CODE 4120–01–C

B. ICRs for the Rural Emergency Hospital Quality Reporting (REHQR) Program

1. Background

In sections XIV. and XVI. of this final rule with comment period, we discuss the finalized changes to requirements for the REHQR Program. The REHQR Program is generally aligned with the CMS quality reporting program for HOPDs, known as the Hospital OQR Program. We refer readers to the CY 2025 OPPS/ASC final rule with comment period (89 FR 94530 through 94533) for detailed discussions of the previously finalized REHQR Program ICRs, which have been submitted for OMB approval under OMB control number 0938–1454 (expiration date April 30, 2027).

We are: (1) removing the HCHE measure beginning with the CY 2025 reporting period/CY 2027 program determination; (2) removing the Screening for SDOH measure beginning with the CY 2025 reporting period; (3) removing the Screen Positive Rate for SDOH measure beginning with the CY 2025 reporting period; and (4) adopting the Emergency Care Access & Timeliness eCQM beginning with the CY 2027 reporting period/CY 2029 program determination as an optional measure. In section XIV.D. of this final rule with comment period, we are also updating our Extraordinary Circumstances Exception (ECE) Policy for the REHQR Program. This update will explicitly include extensions as a type of extraordinary circumstances relief option, in addition to exceptions. Because the process for requesting or granting an ECE will remain the same as the current ECE process, these updates will not affect burden associated with the submission of the ECE form.

In the CY 2025 OPPS/ASC final rule with comment period, we calculated reporting burden estimates for the REHQR Program by utilizing the BLS mean hourly wage rate for Medical Records Specialists (89 FR 94530). Specifically, we used the industry-specific wage for Medical Records Specialists working in ''general medical and surgical hospitals,'' as this categorization aligns the closest with the REHQR Program care setting. The most recent data from BLS' May 2024 National Occupational Employment and Wage Estimates reflects a median hourly wage of $27.53 per hour for Medical Records Specialists working in ''general medical and surgical hospitals'' (SOC 29–2072).[518] We calculated the cost of overhead, including fringe benefits, at 100 percent of the median hourly wage, consistent with previous years. This is necessarily a rough adjustment, both because fringe benefits and overhead costs vary significantly by employer and methods of estimating these costs vary widely in the literature. Nonetheless, we believe that doubling the hourly wage rate ($27.53 × 2 = $55.06) to estimate total cost is a reasonably accurate estimation method. Accordingly, unless otherwise specified, we will calculate cost burden to REHs using a wage plus benefits estimate of $55.06 per hour throughout the discussion in this section of this rule for the REHQR Program.

In the CY 2025 OPPS/ASC final rule with comment period, our burden estimates were based on the 33 acute care and critical access hospital conversions to REH status as of September 27, 2024 (89 FR 94530). For this final rule with comment period, based on the actual number of acute care and critical access hospital conversions to REH status as of April 11, 2025, we estimate that 38 REHs will report data to the REHQR Program during the CY 2026 reporting period unless otherwise noted. While the exact number of REHs required to submit data may vary due to status changes to and from an REH, as reiterated in section XVI. of this final rule with comment period, REHs are required by statute to submit quality data. Therefore, for purposes of estimating burden, we assume that all 38 REHs will submit data under the REHQR Program for the CY 2026 reporting period and future years.

2. Information Collection Burden Estimate for the Removal of the HCHE Measure Beginning With the CY 2025 Reporting Period/CY 2027 Program Determination

As discussed in section XIV.C.2. of this final rule with comment period, we are removing the HCHE measure beginning with the CY 2025 reporting

[518] U.S. Bureau of Labor Statistics. (2025). Occupational Outlook Handbook, Medical Records Specialists. Available at *https://data.bls.gov/oes/#/industry/622100. Accessed: June 24, 2025.*

period/CY 2027 program determination. The information collection burden associated with this measure is currently approved under OMB control number 0938–1454. The currently approved information collection burden estimate for this measure assumes REHs spend approximately 10 minutes (0.167 hours) annually to report measure data. Therefore, for all participating REHs, we estimate removal of this measure will decrease burden by approximately 6 hours (0.167 hours x 38 REHs) at a savings of $349 (6 hours x $55.06/hour).

We did not receive public comments on this burden estimate.

3. Information Collection Burden Estimate for the Removal of the Screening for SDOH Measure Beginning With the CY 2025 Reporting Period

In section XIV.C.3. of this final rule with comment period, we are removing the Screening for SDOH measure beginning with the CY 2025 reporting period. There are two components to this measure: patient screening for five health related social needs domains and hospital submission of aggregated hospital-level measure data. We have previously estimated each patient requires 2 minutes (0.033 hours) to complete the screening and each hospital requires 10 minutes (0.167 hours) annually to report this measure.

We determine the cost for patients (or their representative) to complete the screening using a post-tax wage of $25.63/hour based on assumptions from the report ''Valuing Time in U.S. Department of Health and Human Services Regulatory Impact Analyses: Conceptual Framework and Best Practices,'' which identifies an approach for valuing time when individuals undertake administrative and other tasks on their own time.[519] To derive the costs for patients (or their representatives), a measurement of the usual weekly earnings of wage and salary workers of $1,192 is divided by 40 hours to calculate an hourly pre-tax wage rate of $29.80/hour.[520] This rate is adjusted downwards by an estimate of the effective tax rate for median income households of about 14 percent calculated by comparing pre- and post-tax income,[521] resulting in the post-tax hourly wage rate of $25.63/hour. Unlike our State and private sector wage adjustments, we are not adjusting beneficiary wages for fringe benefits and other indirect costs because the individuals' activities, if any, will occur outside the scope of their employment.

Under OMB control number 0938–1454, we estimated 11,798 patients annually would have been screened per REH when reporting on the measure became mandatory. For voluntary reporting in the CY 2025 reporting period, we estimate that 50 percent of REHs will survey 50 percent of patients. Therefore, for all participating REHs with regard to patient screening, we estimate removal of this measure will decrease burden for voluntary reporting for the CY 2025 reporting period by 3,699 hours for 112,081 patients (0.033 hours × 11,798 patients × 50 percent response rate × 19 REHs) at a savings of $94,797 (3,699 hours × $25.63/hour). For mandatory reporting beginning with the CY 2026 reporting period, we estimate a decrease in burden of 14,795 hours (448,324 patients × 0.033 hours per patient) at a savings of $379,188 (14,795 hours × $25.63/hour). With regard to measure reporting, we estimate a decrease in burden of 3 hours (38 REHs × 50 percent of REHs × 0.167 hours per REH) at a savings of $175 (3 hours × $55.06/hour) for voluntary reporting for the CY 2025 reporting period and 6 hours annually (38 REHs × 0.167 hours) at a savings of $349 (6 hours × $55.06/hour) for mandatory reporting beginning with the CY 2026 reporting period.

We did not receive public comments on this burden estimate.

4. Information Collection Burden Estimate for the Removal of the Screen Positive Rate for SDOH Measure Beginning With the CY 2025 Reporting Period

In section XIV.C.3. of this final rule with comment period, we are removing the Screen Positive Rate for SDOH measure beginning with the CY 2025 reporting period. For this measure, REHs are required to report on an annual basis the number of patients who screen positive for one or more of the five SDOH domains divided by the total number of patients screened (reported as five separate rates). We previously estimated each REH requires 10 minutes (0.167 hours) annually to report this measure. Therefore, we estimate the removal of this measure will decrease burden by 3 hours (38 REHs × 50 percent of REHs × 0.167 hours) at a savings of $175 (3 hours × $55.06/hour) for voluntary reporting for the CY 2025reporting period and 6 hours (38 REHs × 0.167 hours) at a savings of $349 (6 hours × $55.06/hour) annually for mandatory reporting beginning with the CY 2026 reporting period.

We did not receive public comments on this burden estimate.

5. Information Collection Burden Estimate for the Adoption of the Emergency Care Access & Timeliness eCQM Beginning With the CY 2027 Reporting Period/CY 2029 Program Determination

As discussed in section XVI.B.1. of this final rule with comment period, we are adopting the Emergency Care Access & Timeliness eCQM beginning with the CY 2027 reporting period/CY 2029 program determination. We refer readers to the discussion of information collection burden associated with the proposal to adopt a similar measure for the Hospital OQR Program in section XXIII.A.6. of this final rule with comment period. Because this will be the first eCQM adopted in the REHQR Program, we are also finalizing that REHs will be provided with the option of reporting either the Median Time for Discharged ED Patients measure or the Emergency Care Access & Timeliness eCQM to meet program requirements. We assume a Medical Records Specialist will require 10 minutes (0.167 hours) to submit the data required per quarter for each REH, therefore, for each REH that elects to report the Emergency Care Access & Timeliness eCQM, we estimate an annual burden of 40 minutes (0.67 hours; 10 minutes × 4 quarters) annually at a cost of $36.92 (0.67 hours × $55.06/hour). Because we are currently unable to estimate the number of REHs that will elect to report the Emergency Care Access & Timeliness eCQM instead of the Median Time for Discharged ED Patients measure, we base our estimate of total burden for the REHQR Program solely on the time to report the Median Time for Discharged ED Patients measure. For reporting the Median Time for Discharged ED Patients measure, we have previously estimated that a Medical Records Specialist would require 12.2 hours per REH annually or 464 hours (12.2 hours × 38 REHs) at a cost of $25,526 (464 hours × $55.06/hour) across all REHs.

We received public comments on this burden estimate. The following is a summary of the comments we received and our responses.

[519] Office of the Assistant Secretary for Planning and Evaluation. (2017). Valuing Time in U.S. Department of Health and Human Services Regulatory Impact Analyses: Conceptual Framework and Best Practices. Available at *https://aspe.hhs.gov/reports/valuing-time-us-department-health-human-services-regulatory-impact-analyses-conceptual-framework. Accessed: June 24, 2025.*

[520] Bureau of Labor and Statistics. (2025). Usual Weekly Earnings of Wage and Salary Workers, Fourth Quarter 2025. Available at *https://www.bls.gov/news.release/pdf/wkyeng.pdf. Accessed: March 3, 2025.*

[521] Guzman, G. & Kollatr, M. (2024). Income in the United States: 2023. Available at *https://www2.census.gov/library/publications/2024/demo/p60-282.pdf. Accessed: June 24, 2025.*

Comment: A commenter stated their opinion that the burden estimate associated with the Emergency Care Access & Timeliness eCQM and eCQMs in general includes only the burden associated with the submission of data and does not include the cost or effort associated with other activities such as: education to impacted providers and staff on the impact of the measure on their workflow; modifications to documentation as appropriate; evaluation of measure report details against EHR documentation, especially on fallouts and exclusions to identify opportunities for improved discrete documentation; time needed for review of ONC Project Tracking for ongoing issues identified with the eCQM measures; development of trending and benchmark reports for awareness of reported outcomes prior to submission of data; reprocessing of data when errors have been identified and corrected; and meetings with vendors and IT, quality, leadership, and other staff to assure an understanding of what is reported on *Medicare.gov/Care Compare*, its impact on public reporting, star reporting, and use by other reporting agencies.

Response: Because we assume the collection of data for eCQMs is already being collected in each REH's EHR system as part of the REH's patient workflow, the burden estimates provided in this final rule include only the time associated with submission of data to CMS. However, as noted in the Regulatory Impact Analysis in section XXVI.C.4.b. of this final rule with comment period, we agree with the commenter that there are additional recurring and non-recurring activities associated with adoption of new eCQM measures.

After consideration of public comments, we are declining to update our burden estimate.

6. Summary of Information Collection Burden Estimates for the REHQR Program

Tables 151 through 153 summarizes the information collection burden changes for the REHQR Program. We estimate that the measure adoptions and removals in this final rule with comment period will result in a decrease of 14,813 hours at a savings of $380,235 for 38 REHs annually from the CY 2025 reporting period through the CY 2027 reporting period. We submitted these information collection estimates to OMB for approval under OMB control number 0938–1454. With respect to any costs/burdens unrelated to data submission, we refer readers to the Regulatory Impact Analysis in section XXVI.C.4. of this final rule with comment period.

We invited public comments on the information collection requirements and whether our estimated burden is a reasonable estimate but did not receive any comments other than those previously discussed.

	Total Cost Estimate: Updated Hourly Wage (Varies) x Change in Burden Hours (-14,813) = **-$380,235**							

* We do not account for any additional burden associated with this measure as REHs may elect to report the more burdensome Median Time for Discharged ED Patients measure.

BILLING CODE 4120–01–C

C. ICRs for the Ambulatory Surgical Center Quality Reporting (ASCQR) Program

1. Background

In sections XIV. and XVII. of this final rule with comment period, we discuss the finalized requirements for the ASCQR Program. We refer readers to the CY 2025 OPPS/ASC final rule with comment period (89 FR 94533 through 94537) for detail regarding the previously finalized ASCQR Program ICRs which are currently approved under OMB control number 0938–1270 (expiration date July 31, 2027).

We are: (1) removing the COVID–19 Vaccination Coverage Among HCP measure beginning with the CY 2024 reporting period/CY 2026 payment determination; (2) removing the Facility Commitment to Health Equity (FCHE) measure beginning with the CY 2025 reporting period/CY 2027 payment determination; (3) removing the Screening for SDOH measure beginning with the CY 2025 reporting period; and (4) removing the Screen Positive Rate for SDOH measure beginning with the CY 2025 reporting period. We are not finalizing the Patient Understanding of Key Information Related to Recovery After a Facility-Based Outpatient Procedure or Surgery, Patient Reported Outcome-Based Performance measure (Information Transfer PRO–PM).

In section XIV.D. of this final rule with comment period, we are also updating our Extraordinary Circumstances Exception (ECE) Policy for the ASCQR Program. This update will explicitly include extensions as a type of extraordinary circumstances relief option, in addition to exceptions. Because the process for requesting or granting an ECE will remain the same as the current ECE process, these updates will not affect burden associated with the submission of the ECE form.

In the CY 2025 OPPS/ASC final rule with comment period, we calculated reporting burden estimates for the ASCQR Program by utilizing the BLS mean hourly wage rate for Medical Records Specialists (89 FR 94534). Specifically, we used the industry-specific wage for Medical Records Specialists working in the ''general medical and surgical hospitals''

industry, as this categorization aligns the closest with the ASCQR Program care setting. The most recent data from BLS' May 2024 National Occupational Employment and Wage Estimates reflects a median hourly wage of $27.53 per hour for Medical Records Specialists working in ''general medical and surgical hospitals'' (SOC 29–2072).[522] We calculated the cost of overhead, including fringe benefits, at 100 percent of the median hourly wage, consistent with previous years. This is necessarily a rough adjustment, both because fringe benefits and overhead costs vary significantly by employer and methods of estimating these costs vary widely in the literature. Nonetheless, doubling the hourly wage rate ($27.53 × 2 = $55.06) to estimate total cost is a reasonably accurate estimation method. Accordingly, unless otherwise specified, we will calculate cost burden to ASCs using a wage plus benefits estimate of $55.06 per hour throughout the discussion in this section of this rule for the ASCQR Program.

Based on the most recent analysis of the CY 2025 payment determination data, we found that, of the 6,012 ASCs that were actively billing Medicare, 4,271 were required to participate in the ASCQR Program. Of the 1,741 ASCs not required to participate in the program, 319 ASCs did so and met full requirements. On this basis, we estimate that 4,590 ASCs (4,271 + 319) will submit data for the ASCQR Program for the CY 2026 reporting period/CY 2028 payment determination and future years.

We received public comments on these burden estimates. The following is a summary of the comments we received and our responses.

Comment: A commenter stated their opinion that CMS' estimate of the costs associated with implementing the Information Transfer PRO–PM are too low and does not believe the utility of the measure is outweighed by the burden.

Response: We thank the commenter for its comment and note that we are not finalizing the Information Transfer PRO–PM measure.

2. Information Collection Burden Estimate for the Removal of the COVID–19 Vaccination Coverage Among HCP Measure Beginning With CY 2024 Reporting Period/CY 2026 Payment Determination

As discussed in section XIV.C.1. of this final rule with comment period, we are removing the COVID–19 Vaccination Coverage Among HCP measure beginning with the CY 2024 reporting period/CY 2026 payment determination. The information collection burden associated with this measure is currently approved under OMB control number 0920–1317.

To report this measure, ASCs have the option to manually enter data directly into CDC's NHSN web-based application or to upload a CSV file. CDC estimates that each ASC requires between 40 minutes (0.67 hours) to upload a CSV file and 45 minutes (0.75 hours) monthly to enter the data manually. CDC assumes that manual data entry will be completed by a Microbiologist with a wage rate of $58.60/hour and uploading of a CSV file would be completed by an Information Technologist with a wage rate of $56.50/hour. Therefore, we estimate that this proposal will result in a decrease in burden of between 36,720 hours (0.67 hours × 12 months × 4,590 ASCs) at a savings of $2,074,680 (36,720 hours × $56.50/hour) and 41,310 hours (0.75 hours × 12 months × 4,590 ASCs) at a savings of $2,420,766 (41,310 hours × $58.60/hour) annually across all 4,590 ASCs under OMB control number 0920–1317.

We did not receive public comments on this burden estimate.

3. Information Collection Burden Estimate for the Removal of the FCHE Measure Beginning With the CY 2025 Reporting Period/CY 2027 Payment Determination

As discussed in section XIV.C.2. of this final rule with comment period, we are removing the FCHE measure beginning with the CY 2025 reporting period/CY 2027 payment determination. The information collection burden associated with this measure is currently approved under OMB control number 0938–1270.

The currently approved information collection burden estimate for this measure assumes ASCs spend approximately 10 minutes (0.167 hours) annually to report measure data. Therefore, for all participating ASCs, we estimate removal of this measure will decrease burden by approximately 765 hours (0.167 hours × 4,590 ASCs) at a savings of $42,121 (765 hours × $55.06/hour).

We did not receive public comments on this burden estimate.

4. Information Collection Burden Estimate for the Removal of the Screening for SDOH Measure Beginning With the CY 2025 Reporting Period

In section XIV.C.3. of this final rule with comment period, we are removing the Screening for SDOH measure beginning with the CY 2025 reporting period. There are two components to this measure's burden calculation: patient screening for five health related social needs domains and ASC submission of aggregated ASC-level measure data. We previously estimated each patient requires 2 minutes (0.033 hours) to complete the screening and each ASC requires 10 minutes (0.167 hours) annually to report this measure. We determine the cost for patients (or their representative) to complete the screening using a post-tax wage of $25.63/hour based on assumptions from the report ''Valuing Time in U.S. Department of Health and Human Services Regulatory Impact Analyses: Conceptual Framework and Best Practices,'' which identifies the approach for valuing time when individuals undertake administrative and other tasks on their own time.[523] To derive the costs for patients (or their representatives), a measurement of the usual weekly earnings of wage and salary workers of $1,192 is divided by 40 hours to calculate an hourly pre-tax wage rate of $29.80/hour.[524] This rate is adjusted downwards by an estimate of the effective tax rate for median income households of about 14 percent calculated by comparing pre- and post-tax income,[525] resulting in the post-tax hourly wage rate of $25.63/hour. Unlike our State and private sector wage adjustments, we are not adjusting beneficiary wages for fringe benefits and other indirect costs because the individuals' activities, if any, will occur outside the scope of their employment.

Under OMB control number 0938–1270, we estimated an average of 4,765 patients per ASC annually would have been screened once the measure became mandatory. Therefore, consistent with

the burden estimates for this measure under OMB control number 0938–1270, for all participating ASCs with regard to patient screening, we estimate removal of this measure will decrease burden for voluntary reporting for the CY 2025 reporting period by approximately 182,262 hours for 5,467,838 patients (0.033 hours × 4,765 patients × 50 percent response rate × 4,590 ASCs × 50 percent of ASCs) at a savings of $4,671,375 (182,262 hours × $25.63/hour). Beginning with the mandatory reporting for the CY 2026 reporting period, we estimate a decrease in burden of approximately 729,045 hours for 21,871,350 patients (4,765 patients × 4,590 ASCs × 0.033 hours per patient) at a savings of $18,685,423 (729,045 hours × $25.63/hour). With regard to measure reporting, we estimate the removal of this measure will decrease burden for voluntary reporting for the CY 2025 reporting period by 383 hours (4,590 ASCs × 50 percent of ASCs × 0.167 hours per ASC) at a savings of $21,088 (383 hours × $55.06/hour) and 765 hours annually (0.167 hours × 4,590 ASCs) at a savings of $42,121 (765 hours × $55.06/hour) for mandatory reporting beginning with the CY 2026 reporting period.

We did not receive public comments on this burden estimate.

5. Information Collection Burden Estimate for the Removal of the Screen Positive Rate for SDOH Measure Beginning With the CY 2025 Reporting Period

In section XIV.C.3. of this final rule with comment period, we are removing the Screen Positive Rate for SDOH measure beginning with the CY 2025 reporting period. For this measure, ASCs are required to report on an annual basis the number of patients who screen positive for one or more of the five SDOH domains divided by the total number of patients screened (reported as five separate rates). We previously estimated each ASC requires 10 minutes (0.167 hours) annually to report this measure. Therefore, consistent with the burden estimates for this measure under OMB control number 0938–1270, we estimate the removal of this measure will decrease burden for voluntary reporting for the CY 2025 reporting period by 383 hours (4,590 ASCs × 50 percent of ASCs × 0.167 hours per ASC) at a savings of $21,088 (383 hours × $55.06/hour) and 765 hours annually (0.167 hours × 4,590 ASCs) at a savings of $42,121 (765 hours × $55.06/hour) for mandatory reporting beginning with the CY 2026 reporting period.

We did not receive public comments on this burden estimate.

6. Summary of Information Collection Burden Estimates for the ASCQR Program

Tables 154 through 158 summarizes the information collection burden changes for OMB control number 0938–1270 (expiration date July 31, 2027). We estimate that the removal of the COVID–19 Vaccination Coverage Among HCP Measure in this final rule with comment period will result in a decrease in information collection burden of between 36,720 hours at a savings of $2,074,680 and 41,310 hours at a savings of $2,420,766 under OMB control number 0920–1317. We also estimate that the remaining measure removals and adoptions in this final rule with comment period will result in an overall decrease in information collection burden of 731,340 hours at a savings of $18,811,786 annually for all 4,590 program-eligible ASCs from the CY 2025 reporting period/CY 2027 payment determination through the CY 2029 reporting period/CY 2031 payment determination. We submitted the revised information collection estimates to OMB for approval under OMB control number 0938–1270. With respect to any costs/burdens unrelated to data submission, we refer readers to the Regulatory Impact Analysis in section XXVI.C.5. of this final rule with comment period.

We invited public comments on the information collection requirements and whether our estimated burden is a reasonable estimate but did not receive any comments other than those previously discussed.

BILLING CODE 4120–01–C

D. Summary of Information Collection Burden Estimates for the Overall Hospital Quality Star Rating

The Overall Hospital Quality Star Rating uses measures that are publicly reported on Hospital Compare or its successor websites under the public reporting authority of each individual hospital program furnishing measure data. The burden associated with measures included in the Overall Hospital Quality Star Rating, including requesting withholding of measures from public reporting, is already captured in the respective hospital programs' ICRs and represents no increased information collection burden to hospitals.

Therefore, as the Overall Hospital Quality Star Rating utilizes output data from CMS hospital quality and payment programs, there is no additional information collection burden. The burden is accounted for under OMB control numbers 0938–1109, 0938–1022, 0938–1352, 0920–0666, 0938–0981, 0938–1240 and 0938–1197.

E. ICRs for Payer-Specific Negotiated Charges Data Collection

Section XX. of this final rule with comment period discusses the collection of market-based payment rate information by MS–DRG on the Medicare cost report for cost reporting periods ending on or after January 1, 2026. Hospitals would report the median payer-specific negotiated charge by MS–DRG for payers that are Medicare Advantage Organization (MAOs). We proposed to collect this market-based information on new worksheet Supplemental to Form CMS–2552–10, Weighted Median MAO Payer-Specific Negotiated Charge Data Worksheet. This new information collection request will be submitted to OMB for review under control number 0938–1486 (CMS–10935). The OMB control number will not be valid until formally approved by OMB.

As described further in section XX.C.3. of this final rule with comment period, for the purposes of reporting the data on the cost report, we proposed and are finalizing that hospitals would report the median of the payer-specific negotiated charges for an MS–DRG that the hospital has disclosed for all of its MAOs on the most recent version of the MRF that the hospital is required to disclose under the hospital price transparency regulations. We believe reporting this market-based information would result in less burden for hospitals given that hospitals are required to make public their payer-specific negotiated charges for the same service packages under the requirements we finalized in the Hospital Price Transparency final rule, which became effective January 1, 2021. We refer readers to the Hospital Price Transparency final rule for the full burden assessment analysis for the requirements set forth within that final rule (84 FR 65524). We also refer readers to section XIX. of this final rule with comment period, where we discuss our proposal to amend the hospital price transparency regulations at 45 CFR 180 to require that, beginning January 1, 2026, hospitals would report a new data element, the ''median allowed amount'', instead of the ''estimated allowed amount'' reported at present, and that the median allowed amount would be defined as the median of the total allowed amounts that the hospital has historically received from a third-party payer (including MAOs) for an item or service. For purposes of the market-based rate information we proposed to collect on the Medicare cost report, in determining the median of the payer-specific negotiated charges to report on its cost report, we proposed that if the proposal to amend the regulations at 45 CFR 180 was finalized, the ''median allowed amount'' would be used for instances in which the payer-specific negotiated charge reported on the MRF is based on a percentage or algorithm. Otherwise, we proposed that the ''estimated allowed amount'' (as defined under current regulations) would be used in determining the median of the payer-specific negotiated charges for instances in which the payer-specific negotiated charge is based on a percentage or algorithm. We note that in section XIX. of this final rule with comment period, CMS is finalizing, that beginning January 1, 2026, if a hospital's payer specific negotiated amount is based on an algorithm or percentage, the hospital would be required to describe the percentage or algorithm and report a new data element, the ''median allowed amount'', instead of the ''estimated allowed amount'', and that the ''median allowed amount'' is defined as the median of the total allowed amounts the hospital has historically received from a third-party payer for an item or service for a time period no less than 12 months and no longer than 15 months prior to the date the MRF is posted. Should the calculated median fall between two observed allowed amounts, the median allowed amount is the next highest observed value. In section XIX. of this final rule with comment period, CMS is finalizing as proposed that if a payer-specific negotiated charge is based on a percentage or algorithm, the hospital must describe the algorithm or percentage and calculate and encode the median allowed amount in dollars for that item or service. Finally, in section XIX. of this final rule with comment period, CMS is finalizing, with modification, that hospitals must use EDI 835 ERA transaction data or an alternative equivalent source of remittance data that includes the same information as EDI 835 ERA transaction data would include, to calculate and encode the allowed amounts for items and services based on a percentage or algorithm in the MRF. We refer readers to section XIX. of this final rule with comment period for more information regarding the specific final policy. In the CY 2026 OPPS/ASC proposed rule we stated that we believed that because hospitals would already be required to publicly report the payer-specific negotiated charge information that they would use to calculate these medians, the additional calculation and reporting of the median payer-specific negotiated charge would result in less burden for hospitals than if hospitals did not already have this information compiled to disclose on the MRF under the hospital price transparency requirements. For additional details on hospital price transparency requirements, including MRF requirements and the final modifications to the hospital price transparency requirements, we refer readers to section XIX. of this final rule with comment period and *https://www.cms.gov/priorities/key-initiatives/hospital-price-transparency/hospitals*.

Burden hours estimate the time (number of hours) required for each IPPS hospital to complete ongoing data gathering and recordkeeping tasks, search existing data resources, review instructions, and complete the Supplemental to Form CMS–2552–10, Weighted Median MAO Payer-Specific Negotiated Charge Data Worksheet. In the CY 2026 OPPS/ASC proposed rule we stated that the most recent data from the System for Tracking Audit and Reimbursement, an internal CMS data system maintained by the Office of Financial Management (OFM), reported that 3,038 hospitals, the current number of Medicare certified IPPS hospitals, file Form CMS–2552–10 annually.

As discussed in section XX.C.2. of this final rule with comment period, we proposed that subsection (d) hospitals in the 50 states and DC, as defined at section 1886(d)(1)(B) of the Act, and subsection (d) Puerto Rico hospitals, as defined under section 1886(d)(9)(A) of the Act, would be required to report the median payer-specific negotiated charge

information. We proposed that hospitals that do not negotiate payment rates and only receive non-negotiated payments for service would be exempted from this definition. We noted that this proposed data collection requirement would apply to a smaller subset of hospitals as compared to the public reporting requirements under the hospital price transparency regulations. Under our proposal, hospitals that would be exempted from this policy included, Critical Access Hospitals (CAHs), hospitals in Maryland, which are currently paid under the Maryland Total Cost of Care Model, during the performance period of that Model, hospitals operated by an Indian Health Program as defined in section 4(12) of the Indian Health Care Improvement Act, and Federally owned and operated facilities, and non-subsection (d) hospitals. In the CY 2026 OPPS/ASC proposed rule, we also noted that rural emergency hospitals would not be subject to this data collection requirement given that they do not provide inpatient services. Based on this proposal, we estimated that 3,038 hospitals (which excludes hospitals described earlier as being exempted from this proposal) would be required to comply with this market-based data collection requirement.

Based on our understanding of the resources necessary to report this information, in the CY 2026 OPPS/ASC proposed rule we estimated an average annual burden per hospital of 20 hours (5 hours for recordkeeping and 15 hours for reporting) for the Supplemental to Form CMS–2552–10: Weighted Median MAO Payer-Specific Negotiated Charge Data Worksheet. This estimate included effort that would be necessary to crosswalk inpatient discharges to an MS–DRG, specifically if a hospital is not familiar with the MS–DRG classification system, for use in calculating the median payer-specific negotiated charges. In the CY 2026 OPPS/ASC proposed rule we stated that the burden was minimized because the median payer-specific negotiated charge data that we proposed to collect on the Supplemental to Form CMS–2552–10: Weighted Median MAO Payer-Specific Negotiated Charge Data Worksheet is based on payer-specific data that would already be maintained by the hospital, the data from the MRF that hospitals are required to disclose under the hospital price transparency regulations at 45 CFR part 180. In the CY 2026 OPPS/ASC proposed rule we stated we believed that since hospitals assign the underlying ICD–10–CM principal diagnosis, and any other secondary diagnosis codes and ICD–10–PCS procedure codes, which determine how patients are assigned to an MS–DRG, hospitals are able to associate those items and services to MS–DRGs for each discharge. Additionally, hospitals that are not as familiar with MS–DRGs have access to the most current publicly available version of the CMS Grouper used to group ICD–10 codes to MS–DRGs, and are able to use this software to uniformly group inpatient items and services to MS–DRGs, either initially by proactively using the same Grouper version used by CMS, or retrospectively after an inpatient hospital stay, but prior to submitting this information on the hospital cost report.

In the CY 2026 OPPS/ASC proposed rule, we estimated the total annual burden hours as follows: 3,038 hospitals times 20 hours per hospital equals 60,760 annual burden hours.

The 5 hours for recordkeeping include hours for bookkeeping, accounting and auditing clerks; the 15 hours for reporting include accounting and audit professionals' activities. In the CY 2026 OPPS/ASC proposed rule we stated that we believed the basic median calculation would be captured within the recordkeeping portion of this assessment.

Based on the most recent Bureau of Labor Statistics (BLS) in its 2024 Occupation Outlook Handbook, the mean hourly wage for Category 43–3031 (bookkeeping, accounting and auditing clerks) is $25.01 (*https://www.bls.gov/oes/current/oes433031.htm*). We added 100 percent of the mean hourly wage to account for fringe and overhead benefits, which calculates to $50.02 ($25.01 + $25.01) and multiplied it by 5 hours, to determine the annual recordkeeping costs per hospital to be $250.10 ($50.02 × 5 hours).

The mean hourly wage for Category 13–2011 (accounting and audit professionals) is $44.96 (*www.bls.gov/oes/current/oes132011.htm*). We added 100 percent of the mean hourly wage to account for fringe and overhead benefits, which calculates to $89.92 ($44.96 + $44.96) and multiplied it by 15 hours, to determine the annual reporting costs per hospital to be $1,348.80 ($89.92 × 15 hours). We calculated the total annual cost per hospital of $1,598.90 by adding the recordkeeping costs of $250.10 plus the reporting costs of $1,348.80 (Table 157). We estimated the total annual cost to be $4,857,458.20 ($1,598.90 × 3,038 IPPS hospitals) (Table 158).

TABLE 157: ESTIMATED ANNUAL COST PER HOSPITAL

Average Hourly Rate Analysis: May 2025	Hours Per Response	BLS Cost Per Hour	Cost Per Hour with Overhead and Fringes	Cost Per Response	Average Hourly Rate
Reporting	15	44.96	89.92	1348.80	
Record Keeping	5	25.01	50.02	250.10	
Third Party Disclosure					
Total	20			1598.90	N/A

TABLE 158: ESTIMATED TOTAL ANNUAL COST

	Currently Approved			Total Requested			Increase/(Decrease) Over Currently Approved	
Respondent Costs	Number of Providers	Per Provider	Total Hours	Number of Providers	Per Provider	Total Hours	Number of Providers	Total
Hours required for CR preparation	3,038	-	-	3,038	20	60,760	-	60,760
Cost for CR preparation						$4,857,458.20		$4,857,458.20

Comment: Some commenters expressed concern that CMS underestimated the amount of time and burden it will take hospitals to collect, organize, properly format, calculate, update and report the median payer-specific negotiated charges by MS–DRG. According to commenters, the proposal's newly added burden is at odds with the Administration's goal of reducing administrative burden in healthcare. Commenters stated that hospitals cannot complete the task of implementing the reporting requirements themselves, nor have they been able to find vendors capable of accomplishing the task. Commenters noted that a health system operating in numerous States will have multiple contracts for each individual hospital, within each State, and with each payer. Commenters stated that this could result in the system needing to arrange the payer-specific negotiated charges for hundreds of discharges for a given MS–DRG across hundreds of different payer contracts in order to determine the median. Additionally, commenters stated that some MA organizations do not pay based on MS–DRGs and as a result, hospitals will need to calculate an MS–DRG based on the same or similar package of services. Commenters noted that this process becomes even more complicated if MAOs do not pay the hospital based on FFS rates.

According to commenters, the task of tabulating the data required for complying with this proposed policy could encompass reviewing data from thousands of patients from a single hospital taking well over the estimated 20 hours. According to a commenter, even if CMS moved to market-based weights, it would still need cost data for other purposes (outlier payments, new technology add-on payments, etc.) and thus, hospitals would shoulder additional reporting duties rather than any offsetting reduction. According to the commenter, this would create a dual system: cost reports still collecting traditional cost/charge info (for outliers and transparency enforcement) plus this new, additive median price reporting. The commenter stated that this duplication further undermines any claim of burden reduction or simplification.

According to a commenter, each hospital would be required to ensure its chargemaster team, contracting department, and finance staff coordinate to correctly identify all negotiated rates for each MS–DRG across potentially dozens of contracts, then calculate medians (with volume-weighting for each payer's discharges). For hospitals with complex contracts (per diems, etc.), the commenter stated that this means analyzing internal claims data to derive the ''allowed amounts'' per case and then the median, which it described as an extremely labor-intensive task. According to the commenter, this is an example of new regulation requirements that will divert critically needed resources to administrative tasks that do not benefit patients. The commenter stated that every hour staff spend on this reporting is an hour not spent on patient care improvement, revenue cycle for actual claims, or compliance with existing requirements. The commenter stated that this burden is especially onerous for smaller and rural hospitals that have fewer staff and already face compliance challenges and limited resources and it is precisely those hospitals that often have less sophisticated contracting (or more capitated arrangements) and will struggle to compute medians from messy data.

One commenter stated that they simply do not have the manpower to perform this collection and would need to contract this out to a third-party vendor leading to a cost of $32,000 a year. The commenter also stated that this would cause an increase in employee time for coordinating data capture and ensuring quality data and that the cost would continue to increase as well because of the complexity of the requirements and the resources to create the data.

Some commenters recommended CMS collect MA negotiated data from hospital or payor websites via MRFs or gather it directly since CMS already contracts with MAO plans, rather than requiring hospitals to extract and re-report the same information on the cost report, to avoid unnecessary administrative burden.

Response: We continue to note as discussed in the CY 2026 OPPS/ASC proposed rule that under the Hospital Price Transparency requirements hospitals are already required to publicly report the payer-specific negotiated charge information that they will use to calculate median payer-specific negotiated charges by MS–DRG for payers that are MA organizations. We therefore continue to believe that the additional calculation and reporting requirements in this final rule with comment period for this policy would result in less burden overall for hospitals absent those price transparency requirements since hospitals will already have the initial data compiled and the incremental additional burden of reporting medians by MS–DRG would be limited.

In the CY 2026 OPPS/ASC proposed rule (90 FR 33831), we estimated a total annual burden to hospitals of 20 hours per hospital: 5 hours for recordkeeping, including hours for bookkeeping, accounting and auditing clerks; and 15 hours for reporting, including accounting and audit professionals' activities. We acknowledge that different hospitals may face more or less

burden and do not assert that the total annual burden for every hospital will be precisely 20 hours, but we continue to believe that the 20 hour estimate per hospital for this data collection is reasonable given that hospitals will already be required to disclose the data used to calculate the median payer-specific negotiated charges under the Hospital Price Transparency requirements. We estimated an initial annual burden of 60,760 annual burden hours for 3,038 hospitals, at cost of $1,598.90 per hospital, or $4,857,458.20 across all hospitals. Although commenters did not agree with our proposed burden estimate for cost and hours, they did not provide additional information, to include a breakdown of tasks and hours estimates across hospitals, to support a burden estimate revision. In addition, we note that in response to comments in the FY 2021 IPPS/LTCH PPS final rule (85 FR 59015 through 59016), we increased the burden estimate from 15 hours to 20 hours after consideration of comments stating that additional effort would be necessary to crosswalk discharges to an MS–DRG, specifically if a hospital is not familiar with the MS–DRG classification system, for use in calculating the median payer-specific negotiated charges. In light of this prior burden estimate revision to account for the additional effort that commenters stated would be necessary to crosswalk discharges to an MS–DRG, and since hospitals are already required to publicly report the payer-specific negotiated charge information which they will use to calculate these medians, in accordance with the Hospital Price Transparency requirements in effect at the time that this data collection requirement goes into effect, we continue to believe that the burden estimate is reasonable. As noted earlier, we continue to believe that the additional calculation and reporting of the median payer-specific negotiated charge will result in less administrative burden overall for hospitals than in the absence of the Hospital Price Transparency requirements since hospitals are already required to have this information compiled and the burden associated with that compilation is already assumed.

In response to the comments recommending CMS collect MA negotiated data from hospital or payor websites via MRFs or gather it directly, we believe hospitals are more familiar with their own data and are best positioned to calculate the medians across payers.

In summary, for the reasons discussed we are maintaining our estimate for the hours associated with recordkeeping at 5 and our estimate of hours associated with reporting at 15, which equals 20 hours of annual burden per hospital and 60,760 hours of estimated annual burden across all 3,038 hospitals. This equals a cost of $1,598.90 per hospital, or $4,857,458.20 across all hospitals.

F. ICRs for Medicare OPPS Drug Acquisition Cost Survey

a. Background

In section V.C. of this final rule with comment period, we discuss our intent to conduct a survey of hospitals' drug acquisition costs. Section 1833(t)(14)(A)(iii) of the Act required the Secretary to set payment rates for specified covered outpatient drugs (SCODs) [526] beginning in 2006 at the amount the Secretary determined to be the average acquisition cost for the drug for that year, at least when certain hospital acquisition cost survey data is available. To collect the cost survey data for the Secretary to use for 2006 payment rates, section 1833(t)(14)(D)(i)(I) of the Act required the Comptroller General of the U.S. to conduct a survey in each of 2004 and 2005 to determine the hospital acquisition cost for each SCOD. To inform payment rates in later years, section 1833(t)(14)(D)(ii) of the Act requires the Secretary periodically to conduct surveys of hospital acquisition costs for each SCOD.

The GAO conducted the required surveys in 2004 and 2005, and, in reporting the results in 2006, recommended that the Secretary thereafter validate, ''on an occasional basis—possibly every 5 or 10 years—average sales price (ASP) data that manufacturers report to CMS for developing SCOD payment rates.'' [527] CMS has not, however, conducted its own survey of the acquisition costs for each SCOD for all hospitals paid under the OPPS. Accordingly, under section 1833(t)(14)(D)(ii) of the Act, we intend to conduct a survey, with the survey submission window opening by early CY 2026, of the acquisition costs for each separately payable drug acquired by all hospitals paid under the OPPS. We intend for the survey to be completed in time for the survey results to be used to inform policy making beginning with the CY 2027 OPPS/ASC proposed rule.

Additionally, on April 18, 2025, President Trump signed Executive Order (E.O.) 14273, ''Lowering Drug Prices by Once Again Putting Americans First.'' [528] Section 5 of the E.O., ''Appropriately Accounting for Acquisition Costs of Drugs in Medicare,'' directs the Secretary of HHS to publish in the **Federal Register** a plan to conduct a survey under section 1833(t)(14)(D)(ii) of the Act so he can determine the hospital acquisition cost for covered outpatient drugs at hospital outpatient departments.

b. OPPS Drug Acquisition Cost Survey Description and Burden Calculation

From January 1, 2026, through March 31, 2026, we intend to survey hospitals paid under the OPPS for their drug acquisition costs, including for SCODs, and drugs and biologicals CMS historically treats as SCODs. The survey is designed to impose the least amount of burden on hospitals as possible while ensuring we capture the required data to inform payment rates as required by statute. As part of this data collection, we will survey hospitals only about drugs that are separately paid under the OPPS and will ask hospitals to report the total acquisition cost, net of all rebates and discounts, of each drug by National Drug Code (NDC) purchased during the 1-year timeframe of July 1, 2024 through June 30, 2025. We are asking hospitals to incorporate all rebates and discounts in their acquisition cost for each NDC, including discounts directly applicable to an individual NDC, but also those discounts that are not necessarily linked to a single NDC, but could be a discount linked to a certain invoice, or discounts linked to purchases made over a certain time period, such as prompt pay discounts, wholesaler discounts, or other discounts. We understand that certain discounts may depend on whether an eligible patient receives the drug. That is true, for example, for drugs acquired through the 340B program. We are therefore asking for hospitals to separately list their acquisition costs for drug NDCs acquired through the 340B program and those drug NDCs acquired outside of the 340B program to ensure that all discounts are accurately captured and represent the hospital's acquisition costs. In the CY 2026 OPPS/ASC proposed rule, we welcomed comments on whether other common drug discount programs have a similar structure or should otherwise also be separately noted.

There are approximately 700 drug HCPCS codes that will be subject to the survey, with most HCPCS codes having multiple NDCs per HCPCS code. During

[526] For the definition of a SCOD, see section 1833(t)(14)(B) of the Act at *https://www.ssa.gov/OP_Home/ssact/title18/1833.htm*.

[527] *https://www.gao.gov/assets/gao-06-372.pdf*.

[528] *https://www.govinfo.gov/content/pkg/FR-2025-04-18/pdf/2025-06837.pdf*.

the CY 2026 OPPS/ASC proposed rule stage, we published a draft list of the NDCs that would be included in the survey, if finalized, so hospitals would have ample opportunity to review and prepare to report their acquisition costs for those NDCs. We noted there may be slight adjustments to this NDC list, but we expected the final list would be similar to the draft list. We recognized that hospitals may not have acquired all drugs on this list, and hospitals are not expected to provide data for NDCs for which they do not have acquisition cost data. We are collecting acquisition cost data by NDC as we understand most hospitals acquire drugs from wholesalers and manufacturers based on NDCs rather than other identifiers, such as HCPCS billing codes. We expect this method will likely reduce hospital burden, as hospitals can simply report the cost at which they acquired the drug without significant calculations. Additionally, we have designed the survey so that only the total cost and the total units of the drug acquired need to be reported. This means that only two fields of information are required per NDC: total net acquisition cost—non-340B and total units purchased—non-340B. If the same drug NDC is purchased multiple times throughout the given timeframe, only the total cost of all of the drug acquired during the given timeframe plus the total number of units purchased is needed. As we previously discussed, for each NDC, we are asking hospitals to report the total acquisition cost, net of all rebates and discounts, which includes all discounts attributable to each specific NDC as well as those discounts attributable to multiple NDCs. For those discounts received for drugs acquired through the 340B Program, since those discounts may be dependent on whether a 340B eligible patient receives the drug, we are asking for hospitals to separately list their acquisition costs for those drug NDCs acquired through the 340B program and those drug NDCs acquired outside of the 340B program. This means for 340B covered entity hospitals that acquire NDCs through the 340B program, they are to submit up to four fields of information for each NDC depending on their acquisition patterns: total net acquisition cost—non-340B, total units purchased—non-340B, total net acquisition cost 340B, total units purchased 340B.

We will assume the burden of performing any additional calculations. We believe this collection of information is based on common information that the hospital already has in its records from its drug purchase history.

This survey will apply to all hospitals paid under the OPPS, which for purposes of our burden calculations we estimated to be 3,500 hospitals in the CY 2026 OPPS/ASC proposed rule. Based on our understanding of hospital practices, in the CY 2026 OPPS/ASC proposed rule we estimated the total time for each hospital to respond to the survey to be 73.5 hours, which includes time required to review instructions, gather data (including potentially from hospital wholesalers), perform basic addition calculations, and enter data. As previously mentioned, we will take every practical step to streamline the data collection for each hospital.

We estimated 73.5 hours to complete the survey by aggregating time from the four roles that are most likely to be responsible. These roles are described below:

- A Top Executive (11–1000) will likely review the survey request and designate a Submitter prior to survey distribution.
- A Lawyer (23–1011) will likely review the survey request, the survey, and requirements for compliance.
- A Pharmacy Technician (29–1051) will likely register for the module and apply to fill out the survey. Once the survey is distributed, the Pharmacy Technician will review the survey. Then, the Pharmacy Technician will request data from suppliers, and/or pull data from internal systems, ensure data are in the appropriate format, manually enter data OR upload data into system, review data, make corrections as needed, and certify data.
- A Pharmacist (29–2052) will likely review the survey request and data that are pulled by the Pharmacy Technician.

TABLE 159: CY 2026 OPPS/ASC PROPOSED RULE ESTIMATED COST FOR THE OPPS DRUG ACQUISITION COST SURVEY

Role:	Estimated Hours per Hospital / Survey Response	BLS Cost per Hour ($)	Cost Per Hour with Overhead & Fringes ($)	Cost per Response ($)
Top Executives (11-1000)	0.5	116.99	233.98	116.99
Lawyers (23-1011)	1	108.36	216.72	216.72
Pharmacist (29-1051)	1	70.94	141.88	141.88
Pharmacy Technicians (29-2052)	71	25.2	50.4	3,578.40
			Total Estimated Annual Cost Per Response:	$4,053.93
			Total Estimated Cost Across all Survey Responses:	$4,053.93 * 3,500 hospitals = $14,188,965

As described in Table 159, we estimated the total burden hours as follows: 3,500 hospitals times 73.5 hours per hospital equals 257,250 hours. We used data from the Occupational Employment and Wage Statistics (Hospital-Specific Wages) [529] for all

[529] *https://data.bls.gov/oes/#/industry/622000.*

salary estimates. In this regard, the previous table presents the mean hourly wage, the cost of fringe benefits, and the adjusted hourly wage for providers that are responsible for completing the survey. We added 100 percent of the mean hourly wage to account for fringe and overhead benefits.

We received public comments on these proposals. We refer readers to section V.C. of this final rule with comment period for the summary of comments and our responses to them. We reiterate below one comment especially relevant to the calculation of burden discussed in this section.

Comment: Many commenters alleged that, given the complexity and scale of the required data collection and analysis, conducting the survey will impose a significant burden on hospitals and that CMS's estimate of that burden grossly underestimates the cost, time and resources that will be necessary to complete the survey. Commenters also stated that CMS is wrong to assume that the reporting will be done by pharmacy technicians and that the survey will actually be completed by pharmacists, which will cost more. One commenter opined that completing the survey would demand the concerted effort of multi-disciplinary teams, including pharmacy, supply chain, finance, legal, and reimbursement professionals, far beyond what pharmacy technicians alone could provide. The commenter stated that CMS's own Information Collection Review document ''acknowledges the breadth of the undertaking, but fails to account for the extensive coordination needed with vendors and suppliers, from whom much of the requested data must be sourced. The time and resources required to collect, clean, analyze, and accurately report thousands of distinct drug prices would divert critical personnel from patient care and other essential hospital functions''. Many other commenters also emphasized the point that the cost of completing the survey would come at the expense of the hospital's ability to provide essential care to patients and quoted the GAO's 2006 report to the Congress in which the GAO concluded that the surveys it conducted ''created a considerable burden for hospitals'' and that to submit the required price data hospitals ''had to divert staff from their normal duties, thereby incurring additional costs.'' Many commenters stated that the financial burden of completing the survey would be exacerbated by upcoming Medicaid and Medicare reductions under the Inflation Reduction Act.

Response: We have taken the burdens on hospitals of completing the survey and the GAO's conclusions relating to that burden very seriously in the design and implementation of the survey. We have created a survey instrument and survey process that we think will minimize, to the greatest extent possible, the staffing and financial burden on hospitals of collecting and reporting the necessary information to CMS. The survey instrument consists of a streamlined online portal, where hospitals can either directly enter acquisition costs or download and reupload an excel template of acquisition costs. There will be technical assistance available for those with any issues that arise during the submission process. We have taken the feedback from commenters into careful consideration when finalizing the survey tool. We believe future surveys will be periodic in nature, as to limit the burden that hospitals face on a reoccurring basis.

We were persuaded that the role of the pharmacist in the data collection effort may be greater than 1 hour. Therefore, based on comments, we are now estimating 1 working day of 8 hours, for a pharmacist to assist in completing the survey. This is reflected in Table 160. Additionally, reflected in Table 160 is an updated number of total hospitals expected to respond to the survey. This number was determined by assessing which CCNs were paid under the OPPS during the survey period for a drug or biological under the OPPS. Additionally, in the rare event that a hospital is paid under the OPPS, but does not have any acquisition costs for the entire year period that is being surveyed, we'd still expect a submission by the hospital. During the CY 2026 OPPS/ASC proposed rule stage, we published a draft list of the NDCs that would be included in the survey, if finalized, so hospitals would have ample opportunity to review and prepare to report their acquisition costs for those NDCs. We noted there may be slight adjustments to this NDC list, but we expected the final list would be similar to the draft list. We have refined this list by removing certain NDCs that were not separately payable under the OPPS to ensure that we are only surveying necessary drugs.

TABLE 160: FINAL RULE WITH COMMENT PERIOD ESTIMATED COST FOR THE OPPS DRUG ACQUISITION COST SURVEY

Role:	Estimated Hours per Hospital / Survey Response	BLS Cost per Hour ($)	Cost Per Hour with Overhead & Fringes ($)	Cost per Response ($)
Top Executives (11-1000)	0.5	116.99	233.98	116.99
Lawyers (23-1011)	1	108.36	216.72	216.72
Pharmacist (29-1051)	8	70.94	141.88	1,135.04
Pharmacy Technicians (29-2052)	71	25.2	50.4	3,578.40
			Total Estimated Annual Cost Per Response:	$5,047.15
			Total Estimated Cost Across all Survey Responses:	$5,047.15 * 4,500 hospitals = $22,712,175

After consideration of public comments as discussed in section V.C. of this final rule with comment period, we are finalizing our intent to conduct a survey of OPPS drug acquisition costs, subject to the clarifications and modifications discussed in this final rule with comment period and outlined in the final package approved by OMB. Based on the updates to the burden calculations in response to commenters, we now estimate the cost per response to be $5,047.15 and the total estimated cost across all survey respondents to be $22,712,175.

This new information collection request will be submitted to OMB for review under control number 0938–1487 (CMS–10931). The OMB control number will not be valid until formally approved by OMB.

G. ICRs for Hospital Price Transparency

In a final rule published in November 2019 (84 FR 65524) (herein referred to as the CY 2020 HPT final rule), we adopted requirements for hospitals to make public their standard charges in two ways: (1) as a comprehensive machine-readable file (MRF); and (2) in a consumer-friendly format. We codified these requirements at 45 CFR 180.50 and 180.60, respectively.

The proposed changes to the information collection request were submitted to OMB for review under control number 0938–1369 (CMS–10707). The previously approved requirements and burden associated with 0938–1369 lapsed due to administrative oversight. Specifically, CMS failed to submit the revisions to 0938–1369 that pertained to the 2024 hospital price transparency requirements in the CY 2024 OPPS/ASC final rule with comment period (88 FR 81540). Therefore, we included the finalized burden mentioned in the CY 2024 OPPS/ASC final rule with comment period and the new burden associated with the CY 2026 OPPS proposed rule in the request for reinstatement.

In the CY 2020 HPT final rule, we originally estimated the number of hospitals subject to the HPT requirements to be 6,002. We finalized an initial one-time burden of 150 hours and cost of $11,898.60 per hospital, resulting in a total national burden of 900,300 hours (150 hours × 6,002 hospitals) and $71,415,397 ($11,898.60 × 6,002 hospitals) for hospitals to build processes and make required system updates to make their standard charge information publicly available: (1) as a comprehensive MRF and (2) in a consumer-friendly format. Additionally, we estimated an ongoing annual burden of 46 hours per hospital with a cost of $3,610.88 per hospital, resulting in a total national burden of 276,092 hours (46 hours × 6,002 hospitals) and total cost of $21,672,502 ($3,610.88 × 6,002 hospitals), to make required annual updates to the hospitals' standard charge information. For a detailed discussion of the cost estimates for the requirements related to hospitals making their standard charge information publicly available, we refer readers to our discussion in the collection of information section in the CY 2020 HPT final rule (84 FR 65591 through 65596).

In the CY 2024 OPPS/ASC final rule with comment period (88 FR 82080 through 82114), we finalized revisions to the regulations at 45 CFR 180.50 related to making public hospital standard charges in an MRF. First, we finalized adding data elements to be included in the hospital's MRF and to require hospitals to conform to a CMS template layout. Second, to enhance automated access to the MRF, we finalized that hospitals include a .txt file in the root folder of the public website it selects to host its MRF in the form and manner specified by CMS that includes a standardized set of fields, and a link in the footer on its website that is labeled ''Hospital Price Transparency'' and links directly to the publicly available web page that hosts the link to the MRF.

As explained in the CY 2024 OPPS/ASC final rule with comment period, we increased the number of hospitals that we believed to be subject to these requirements from 6,002 to 7,098, which, in turn, increased the estimated national burden. The reason for this increase was because in the CY 2020 HPT final rule (84 FR 65591), we relied on data from the American Hospital Association (AHA).[530] For the collection of information estimates in the CY 2024 OPPS/ASC final rule with comment period we used updated hospital numbers based on the publicly available dataset from the Homeland Infrastructure Foundation-Level Data (HIFLD) hospital dataset.[531] The HIFLD dataset compiles a directory of hospital facilities based on data acquired directly from State hospital licensure information and Federal sources and validates this data annually. Thus, we stated our belief that the HIFLD dataset is more comprehensive than the AHA Directory. To estimate the number of hospitals subject to these requirements in the CY 2024 OPPS/ASC proposed rule with comment period, we leveraged the HIFLD hospital dataset to identify 8,013 total hospitals. We then subtracted 379 hospitals HIFLD identified as ''closed'' as well as hospitals that are deemed under the regulation to have met requirements (see 45 CFR 180.30) which included 339 Federally owned non-military and military hospitals, and 197 State, local, and district run forensic hospitals. We therefore estimated that the CY 2024 OPPS/ASC final rule with comment period would apply to 7,098 hospitals operating within the U.S that meet the HPT regulation's definition of ''hospital'' at 45 CFR 180.20.

In the CY 2024 OPPS/ASC final rule with comment period (88 FR 82151), we estimated the total initial one-time burden to implement the CMS standard template and conform to the data dictionary to be 120 hours (5 hours for a Lawyer + 5 hours for a General and Operations Manager + 80 hours for a Business Operations Specialist + 30 hours for a Network and Computer System Administrator) per hospital with a cost of $10,587.10 ($787.40 for a Lawyer + $590.70 for a General and Operations Manager + $6,406.40 for a Business Operations Specialist + $2,802.60 for a Network and Computer System Administrator) per hospital. The initial one-time national burden was calculated to be $75,147,235.80 dollars ($10,587.10 per hospital × 7,098 hospitals). As we indicated in the CY 2026 OPPS/ASC proposed rule, we still believe this estimate to be an accurate estimate of the one-time burden for a new hospital to implement the CMS standard template and conform to the data dictionary. However, CMS is not presently aware of any new hospitals that are beginning operations. We find it challenging to determine the number of new hospitals that are opened each year because distinguishing brand-new hospitals from expansions, new locations, or mergers is inherently arduous. Many hospitals open satellite facilities or rebrand existing ones under similar names, creating ambiguity in identifying independent entities. Additionally, there is no standardized or centralized database that categorizes hospitals based on their origin, and regulatory processes often overlap for new openings, expansions, and mergers, making it difficult to rely on licensing data alone. Complex ownership structures within healthcare systems further blur the lines between new hospitals and extensions of existing networks. Marketing strategies and naming conventions can also mislead public perception, as hospitals often promote new locations as ''new'' regardless of their operational independence. Finally, data inconsistencies and delays in reporting further complicate efforts to verify whether a hospital is truly new. Because we find it difficult to determine a new hospital, we will still account for the original one-time burden to implement the CMS standard template that we calculated in the CY 2024 OPPS/ASC final rule with comment period, but we will no longer account for this one-time burden moving forward.

Additionally, we finalized in the CY 2024 OPPS/ASC final rule with comment period an estimated ongoing annual national burden of 383,292 hours (54 hours × 7,098 hospitals) and an annual national cost of $32,370,571 dollars ($4,560.52 per respondent × 7,098 hospitals), which represented a $10,698,069 ($32,370,571 − $21,672,502) increase over our previous estimated ongoing national annual burden for subsequent years for hospitals to update their standard charge information in the CMS standard template and conform to the data dictionary.

As we discuss in more detail below, in addition to providing updated one-time estimates for hospitals to implement new MRF data elements, updating wage rates for the ongoing annual estimates, and adding an additional labor category for Chief Executives, we are also updating the number of hospitals estimated to be subject to the HPT requirements, in this final rule with comment period.

For this final rule with comment period, we updated the number of hospitals estimated to be subject to the HPT requirements using the same methodology as we did in the CY 2024 OPPS/ASC final rule with comment period. There were 8,340 hospitals most recently identified in the HIFLD hospital dataset.[532] We subtracted 374 hospitals HIFLD identified as ''closed'' as well as hospitals that are deemed under the regulation to have met requirements which included 352 Federally owned non-military and military hospitals, and 198 State, local, and district run forensic hospitals. We therefore estimate that, for this final rule with comment period, 7,416 hospitals would meet the HPT regulation's definition of ''hospital'' at 45 CFR 180.20.

We estimated the hourly cost for each labor category used in this analysis by referencing the Bureau of Labor Statistics report on Occupational Employment and Wages (May 2024).[533] We included labor categories for General and Operations Managers, Business Operations Specialists, and Network and Computer Systems Administrators for this final rule with comment period as we still believe these labor categories are associated with the one-time and annual burden related to the implementation of HPT requirements. As discussed below, we have also added a labor category for Chief Executives in response to comments on the CY 2026 OPPS/ASC proposed rule (that are addressed in section XIX. of this final rule with comment period), that suggested we failed to account for the burden for the hospital chief executive officer, president, or senior official designated to oversee the encoding of true, accurate, and complete data in the MRF

to review and attest to the information (See Table 161.)

TABLE 161: OCCUPATION TITLES AND WAGE RATES

Occupational Title	Occupation code	Mean hourly wage ($/hr)	Fringe benefit ($/hr)	Adjusted hourly wage ($/hr)
Chief Executives	BLS 11-1011	$126.41	$126.41	$252.82
General and Operations Managers	BLS 11-1021	$64.00	$64.00	$128.00
Business Operations Specialists	BLS 13-1000	$43.76	$43.76	$87.52
Network and Computer Systems Administrators	BLS 15-1244	$48.65	$48.65	$97.30

As discussed in section XIX. of this final rule with comment period, while we believe the ''estimated allowed amount'' (defined at § 180.20 as the average dollar amount that the hospital has historically received from a third party payer for an item or service) provides useful additional context and enhances transparency and comparability of hospital standard charges, we acknowledge that these average dollar amounts do not necessarily apply to any particular individual, nor do they necessarily represent the actual dollar amount an individual would pay for an item or service. Therefore, we proposed to require hospitals to report four new data elements when the payer-specific negotiated charge is based on a percentage or algorithm—the median allowed amount (which would replace the estimated allowed amount data element), the 10th percentile allowed amount, the 90th percentile allowed amount, and the count of allowed amounts. We also proposed to require that hospitals abide by specific instructions regarding the data source and methodology, including the lookback period, that should be used to calculate the median, 10th and 90th percentile allowed amounts. As we indicated in the CY 2026 OPPS/ASC proposed rule, we believe that the median, 10th and 90th percentile allowed amounts would provide greater context and clarity with respect to the payer-specific negotiated charge, would be a better consumer benchmark than the estimated allowed amount, and better enable price estimator tools to develop and estimate an individual's personalized out-of-pocket cost, enabling MRF users to more easily compare such standard charges across hospitals. After consideration of public comments, discussed in an earlier section of this final rule with comment period, we are finalizing with modification our proposals to replace the estimated allowed amount with the median allowed amount and to add the 10th and 90th percentile allowed amounts, including our proposed methodology for calculating the allowed amounts should the calculated percentile fall between two observed allowed amounts, effective January 1, 2026. We are finalizing with modification our proposal that a hospital must calculate and encode the total number of allowed amount remittances that were used to calculate the median, 10th and 90th percentile allowed amounts, using the valid values and instructions that will be detailed in the CMS Hospital Price Transparency—Data Dictionary GitHub Repository website. We are also finalizing with modification our proposals to require that hospitals abide by specific instructions regarding the data source and methodology, including the lookback period, that should be used to calculate the median, 10th and 90th percentile allowed amounts effective January 1, 2026.

We also proposed that beginning January 1, 2026, hospitals must attest in their MRF that they have included all applicable standard charge information in accordance with the requirements of 45 CFR 180.50, and the information encoded is true, accurate, and complete as of the date in the file, and the hospital has included all payer-specific negotiated charges in dollars that can be expressed as a dollar amount. For payer-specific negotiated charges that cannot be expressed as a dollar amount in the MRF, or are not knowable in advance, the hospital would attest that the payer-specific negotiated charge is based on a contractual algorithm, percentage or formula that precludes the provision of a dollar amount and has provided all necessary information available to the hospital for the public to be able to derive the dollar amount, including, but not limited to, the specific fee schedule or components referenced in such percentage, algorithm or formula. Additionally, we proposed that, beginning January 1, 2026, the hospital must encode within the MRF the name of the chief executive officer, president, or senior official designated to oversee the encoding of true, accurate and complete data in the MRF. As we indicated in the CY 2026 OPPS/ASC proposed rule, we believe these proposed requirements would provide the necessary reassurance that hospitals have provided in their MRFs meaningful, accurate information to users of the MRF about their standard charges for health care items and services. However, after consideration of public comments, discussed in an earlier section of this final rule with comment period, we are finalizing, effective January 1, 2026, our proposal to supplant the existing affirmation requirement with the proposed attestation statement at new

§ 180.50(3)(iii), with a modification to add to the following phrase to the beginning of the attestation: ''To the best of its knowledge and belief,''. In addition, we are finalizing, as proposed, new § 180.50(a)(3)(iv) to require that, beginning January 1, 2026, the hospital must encode within the MRF the name of the hospital chief executive officer, president, or senior official designated to oversee the encoding of true, accurate and complete data as directed in § 180.50(a)(3)(iii).

We also proposed in the CY 2026 OPPS/ASC proposed rule adding a standard identifier, specifically the hospital's National Provider Identifiers (NPIs) to the MRFs. As we indicated in the CY 2026 OPPS/ASC proposed rule, we believe that adding a standard identifier to the file would advance the comparability of the HPT data with other healthcare data, including health plan transparency data from the Transparency in Coverage (TiC) MRFs. After consideration of public comments, discussed in an earlier section of this final rule with comment period, we are finalizing, as proposed, the requirement that, beginning January 1, 2026, hospitals must report, in a newly created general data element in the MRF, any Type 2 NPI(s) that are associated with a primary taxonomy code starting with '28' (indicating hospital) or '27' (indicating hospital unit) and that is active as of the date of the most recent update to the standard charge information.

As we indicated in the CY 2026 OPPS/ASC proposed rule, we still believe that, by now, hospitals have largely developed standardized processes and procedures for encoding the existing estimated allowed amount and general data elements, like hospital license number, in the MRF and that modifying their existing processes to include the four new data elements related to the proposed allowed amounts and hospital NPI would not entail a significant amount of additional work for hospitals. Furthermore, hospitals are required to encode the affirmation statement in the MRF currently, therefore we still believe the additional burden related to the proposed attestation statement is the requirement for hospitals to encode the name of the senior official making the attestation. However, as discussed in more detail below, after consideration of public comments, we are increasing both the one-time and annual burden hours estimates associated with the information collections in this final rule with comment period.

We indicated in the CY 2026 OPPS/ASC proposed rule, we believed hospitals would incur an initial one-time cost to update their processes and systems to (1) identify and collect the newly proposed data elements, and (2) encode the standard charge information for the newly proposed data elements in the CMS standard template. To implement the proposed requirements, we estimated that it would take a Business Operations Specialist (BLS 13–1000), on average, 4 hours (at a cost of $87.52 per hour) to develop and update the necessary processes and procedures and develop the requirements to implement the proposed data elements and a General and Operations Managers (BLS 11–1021), on average, 1 hours (at a cost of $128.00 per hour) to review the updates.

Therefore, we believed the one-time burden estimate to be 37,080 hours for all hospitals (5 hours × 7,416 hospitals) at a cost of $3,545,441.28 (7,416 hospitals × [($87.52 × 4 hours) + ($128.00 × 1 hours)]); see Table 162. As we indicated in the CY 2026 OPPS/ASC proposed rule, we believe the benefits to users of the MRF of having this additional information would justify the initial one-time burden to hospitals to update their processes and systems to identify and collect the newly proposed data elements and encode the standard charge information for the newly proposed data elements in the CMS standard template.

TABLE 162: SUMMARY OF ONE-TIME BURDEN FOR THE INFORMATION COLLECTIONS IN THE CY 2026 OPPS/ASC PROPOSED RULE

Regulation section	OMB control no.	Number of respondents	Number of responses	Burden per response (hours)	Total annual burden (hours)	Total labor cost of reporting ($)
§ 180.50	0938-1369	7,416	7,416	5	37,080	$3,545,441.28

For the annual burden estimate we relied on our previous assumptions related to labor categories and number of hours as we did in the CY 2024 OPPS/ASC final rule with comment period (88 FR 82153). We estimated it would take a General and Operations Manager 2 hours per hospital, to review and determine updates in compliance with requirements. We estimated the ongoing time for a Business Operations Specialist to be 40 hours per hospital, to identify and gather the required data elements on an annual basis. We estimated that it would take a Computer System Administrator 12 hours to maintain and post the MRF in a manner that conforms to the CMS standard template, which brings the total burden per hospital to 54 hours. Therefore, we estimated a total annual burden of 400,464 hours for all hospitals (7,416 hospitals × 54 hours) at a cost of $36,519,350.40 (7,416 hospitals × [($128/hour × 2 hours) + ($87.52/hour × 40 hours) + ($97.30/hour × 12 hours)]); see Table 163.

TABLE 163: SUMMARY OF ANNUAL BURDEN FOR THE INFORMATION OF COLLECTIONS IN THE CY 2026 OPPS/ASC PROPOSED RULE

Regulation section	OMB control no.	Number of respondents	Number of responses	Burden per response (hours)	Total annual burden (hours)	Total labor cost of reporting ($)
§ 180	0938-1369	7,416	7,416	54	400,464	$36,519,350.40

We received public comments on these information collections. The following is a summary of the comments we received and our responses.

Comment: While many commenters indicated that our proposed changes to the HPT requirements outlined in the CY 2026 OPPS/ASC proposed rule and/or the HPT requirements in general are burdensome, as discussed in prior sections of this final rule with comment period, only several commenters commented on our specific burden estimates for these information collections. Several commenters stated that CMS's projected annual burden estimate was underestimated, noting an undefined, but ''significantly higher'' burden and cost to implement the proposed policies. A few commenters stated that hospitals that contract with outside vendors or consultants to update their MRFs on an annual basis, do so at a cost of $10,000 to $30,000 per hospital and those without vendor support report needing 5 to 30 full-time-equivalents (FTEs) to update their MRFs on an annual basis. One commenter indicated that they recently updated their MRF to meet the annual update requirement and it required 5 times the amount of hours CMS estimated for the annual burden estimates. One commenter indicated that hospitals incur annual vendor fees of up to $250,000 to update their MRFs and that even with vendor support, hospitals may have three FTEs spend an entire month developing and validating their MRFs.

Similarly, several commenters indicated that CMS' one-time burden estimate to encode the new data elements in the MRF as proposed in the CY 2026 OPPS/ASC proposed rule was underestimated. A few commenters maintained that they expect to spend $20,000-$30,000 to elicit vendor support to encode the new data elements in the MRF by the January 1, 2026, effective date proposed in the CY 2026 OPPS/ASC proposed rule. One commenter indicated they believe they will need to spend thousands of dollars per hospital to hire a third-party vendor or devote an internal ''project management team'' to support the encoding of the new data elements. One commenter incorrectly stated that we estimated a one-time burden estimate of 20 hours to implement the new HPT requirements, at a cost of $1,598.90, and that this estimate significantly understated the real cost of implementing the proposals. One commenter indicated they had already spent more than the cost of the entire one-time burden estimate in just reviewing the proposed rule.

Response: We appreciate commenters' concerns and the varying range of estimates provided by commenters suggests that hospitals have different operational and administrative processes and systems that impact the projected burden of encoding the new data elements and meeting the requirement to update the MRF annually. To address this variability, we allow hospitals to choose which CMS MRF template format they use, providing hospitals some flexibility to select the least burdensome format and layout to develop and update their MRF. We expect that, as indicated in the CY 2026 OPPS/ASC proposed rule, more than a year after the implementation of the CMS MRF standard template, some hospitals have well developed automated processes in place that they leverage to minimize the burden associated with making hospital standard charge information public in their current MRFs. Additionally, as discussed in more detail in prior sections of this final rule with comment period and as with previous HPT rulemaking, we will provide technical guidance and examples of how to encode the new data elements we are finalizing in this rule on the CMS Hospital Price Transparency—Data Dictionary GitHub Repository, as well as guidance on the HPT resources page on the CMS website to further minimize the burden to hospitals.

Moreover, in order to further reduce burden, as discussed in more detail in prior sections of this final rule with comment period, we are delaying enforcement of our requirements to encode the new data elements in the MRF. Specially, we are finalizing at § 180.50, the removal of the estimated allowed amount, disclosure of the 10th percentile, median, 90th percentile allowed amounts and the count of allowed amounts, the attestation requirements, and the requirement to encode hospital NPIs effective January 1, 2026. However, we will delay enforcement of these finalized revisions until April 1, 2026. We believe this 3-month enforcement delay will provide hospitals with sufficient additional time to encode the new data elements and review their MRFs prior to making them public online.

We continue to believe that increased standardization and comparability of the MRFs benefit consumers of the MRF, and that this benefit outweighs the burden imposed by these requirements. However, we are swayed by commenters that suggested we underestimated the one-time burden of encoding the new data elements in the MRF. Therefore, we have increased the one-time burden estimate for the General and Operations Manager and Business Operations Specialist labor categories by doubling those estimates in this final rule with comment period. Additionally, we have also added one-time and annual burden estimates for Chief Executives in response to comments on the ''Modification to the MRF Affirmation Statement'' section of the CY 2026 OPPS/ASC proposed rule, addressed in an earlier section of this final rule with comment period, that suggested we failed to account for the burden for the hospital chief executive officer, president, or senior official designated to oversee the encoding of true, accurate, and complete data in the MRF to review and attest to the information. However, we have retained our existing annual burden estimates for the General and Operations Manager and Business Operations Specialist labor categories as we believe it is reasonable to assume that the burden to

hospitals for encoding the new data elements finalized in this rule will lessen with subsequent annual updates to the MRF once hospitals have developed standardized processes and procedures for doing so such that increasing the annual burden estimates for these labor categories is unnecessary.

Final Action: After consideration of public comments, we are increasing both our one-time and annual burden estimates. To implement the encoding of the new data elements we are finalizing in this final rule with comment period, we now estimate that it will take a Business Operations Specialist (BLS 13–1000), on average, 8 hours (at a cost of $87.52 per hour) to develop and update the necessary processes and procedures and develop the requirements to implement the new data elements and a General and Operations Managers (BLS 11–1021), on average, 2 hours (at a cost of $128.00 per hour) to review the updates, and a Chief Executive (BLS 11–1011) 2 hours (at a cost of $252.82) to review and attest to the accuracy and completeness of the data in the MRF. Therefore, we believe the one-time burden estimate to be 88,992 hours for all hospitals (12 hours × 7,416 hospitals) at a cost of $10,840,708.80 (7,416 hospitals × [($87.52 × 8 hours) + ($128.00 × 2 hours) + ($252.82 × 2 hours]); see Table 164.

TABLE 164: SUMMARY OF ONE-TIME BURDEN FOR THE INFORMATION COLLECTIONS IN THE CY 2026 OPPS/ASC FINAL RULE

Regulation section	OMB control no.	Number of respondents	Number of responses	Burden per response (hours)	Total annual burden (hours)	Total labor cost of reporting ($)
§ 180.50	0938-1369	7,416	7,416	12	88,992	$10,840,708.80

Additionally, we still estimate it will take a General and Operations Manager (BLS 11–1021), 2 hours (at a cost of $128.00 per hour) per hospital to review and determine updates in compliance with the annual update requirement. We still estimate the ongoing time for a Business Operations Specialist (BLS 13–1000), to be 40 hours (at a cost of $87.52 per hour) per hospital, to identify and gather the required data elements on an annual basis. We still estimate that it will take a Computer System Administrator (BLS 15–1244) 12 hours (at a cost of $97.30 per hour) to maintain and post the MRF in a manner that conforms to the CMS standard template. However, we now estimate it will take a Chief Executive (BLS 11–1011) 2 hours (at a cost of $252.82) to review and attest to the accuracy and completeness of the data in the MRF each year prior to posting the MRF online, which now brings the total ongoing annual burden per hospital to 56 hours. Therefore, we estimate a total ongoing annual burden of 415,296 hours for all hospitals (7,416 hospitals × 56 hours) at a cost of $40,269,176.60 (7,416 hospitals × [($128/hour × 2 hours) + ($87.52/hour × 40 hours) + ($97.30/hour × 12 hours) + ($252.82/hour × 2 hours]); see Table 165. The annual burden is increased by 2 hours from 54 hours to 56 hours per hospital as compared to the CY 2024 OPPS/ASC final rule with comment period, which reflects the additional burden annually associated with the new requirements finalized in this final rule with comment period.

TABLE 165: SUMMARY OF ANNUAL BURDEN FOR THE INFORMATION COLLECTIONS IN THE CY 2026 OPPS/ASC FINAL RULE

Regulation section	OMB control no.	Number of respondents	Number of responses	Burden per response (hours)	Total annual burden (hours)	Total labor cost of reporting ($)
§ 180.50	0938-1369	7,416	7,416	56	415,296	$40,269,176.60

If you comment on these information collection, that is, reporting, recordkeeping or third-party disclosure requirements, please submit your comments to the Office of Information and Regulatory Affairs, Office of Management and Budget,

XXIV. Files Available to the Public via the Internet

The Addenda to the OPPS/ASC proposed rules and final rules with comment period are published and available via the internet on the CMS website. In the CY 2019 OPPS/ASC final rule with comment period (83 FR 59154), for CY 2019, we changed the format of the OPPS Addenda A, B, and C by adding a column titled ''Copayment Capped at the Inpatient Deductible of $1,364.00'' where we flag, through use of an asterisk, those items and services with a copayment that is equal to or greater than the inpatient hospital deductible amount for any given year (the copayment amount for a

procedure performed in a year cannot exceed the amount of the inpatient hospital deductible established under section 1813(b) of the Act for that year). In the CY 2022 OPPS/ASC final rule with comment period (85 FR 86266), we updated the format of the OPPS Addenda A, B, and C by adding a column titled ''Drug Pass-Through Expiration during Calendar Year'' where we flagged, through the use of an asterisk, each drug for which pass-through payment was expiring during the calendar year on a date other than December 31. For CY 2026 and subsequent years, we proposed to retain these columns that are updated to reflect the drug codes for which pass-through payment is expiring in the applicable year.

In the CY 2023 OPPS/ASC final rule with comment period (87 FR 72250) for CY 2023, we changed the format of the OPPS Addenda A, B, and C by adding a column titled ''Drug Pass-Through Expiration during Calendar Year'' to include devices, so that the column reads: ''Drug and Device Pass-Through Expiration during Calendar Year'' where we flagged, through the use of an asterisk, each drug and device for which pass-through payment was expiring during the calendar year on a date other than December 31.

For CY 2024, we deleted the column titled ''Copayment Capped at the Inpatient Deductible'' and instead added a new column for ''Adjusted Beneficiary Copayment'' to identify any copayment adjustment due to either the inpatient deductible amount copayment cap or the inflation-adjusted copayment of a Part B rebatable drug per section 1833(t)(8)(F) and section 1833(i)(9) of the Act, as added by section 11101 of the Inflation Reduction Act (IRA). We also added another column for notes. The ''Note'' column contains multiple messages including, but not limited to, inflation-adjusted copayment of a Part B rebatable drug, the copayment for a code capped at the inpatient deductible, or 8 percent of the reference product add-on applied for a biosimilar.

In addition, for CY 2024, we updated the format of the OPPS Addenda A, B, and C by adding another column for ''IRA Coinsurance Percentage'' to identify the percentage for the inflation-adjusted copayment of a Part B rebatable drug per section 1833(t)(8)(F) and section 1833(i)(9) of the Act, as added by section 11101 of the Inflation Reduction Act (IRA).

For CY 2026 and subsequent years, we proposed to keep the same format for the addenda A, B, and C, and we did not propose any additional changes for CY 2026.

We did not receive any public comments related to the format of the OPPS Addenda A, B, and C and are adopting the addenda format as proposed.

To view the Addenda to this final rule with comment period pertaining to CY 2026 payments under the OPPS, we refer readers to the CMS website at *https://www.cms.gov/medicare/payment/prospective-payment-systems/hospital-outpatient/regulations-notices*; select ''CMS–1834–FC'' from the list of regulations. All OPPS Addenda to this final rule with comment period are contained in the zipped folder titled ''2026 NFRM OPPS Addenda'' in the related links section at the bottom of the page. To view the Addenda to this final rule with comment period pertaining to CY 2026 payments under the ASC payment system, we refer readers to the CMS website at *https://www.cms.gov/medicare/payment/prospective-payment-systems/ambulatory-surgical-center-asc/asc-regulations-and-notices*; select ''CMS–1834–FC'' from the list of regulations. The ASC Addenda to this final rule with comment period are contained in a zipped folder titled ''2026 NFRM Addendum AA, BB, DD1, DD2, EE, and FF'' in the related links section at the bottom of the page.

XXV. Response to Comments

Because of the large number of public comments, we normally receive on **Federal Register** documents, we are not able to acknowledge or respond to them individually. We will consider all comments we receive by the date and time specified in the **DATES** section of this preamble; and, when we proceed with a subsequent document, we will respond to the comments in the preamble to that document.

XXVI. Economic Analyses

A. Statement of Need

This final rule with comment period is necessary to make updates to the Medicare hospital OPPS rates. It is also necessary to make changes to the payment policies and rates for outpatient services furnished by hospitals and CMHCs in CY 2026. We are required under section 1833(t)(3)(C)(ii) of the Act to update annually the OPPS conversion factor used to determine the payment rates for APCs. We also are required under section 1833(t)(9)(A) of the Act to review, not less often than annually, and revise the groups, the relative payment weights, and the wage and other adjustments described in section 1833(t)(2) of the Act. We must review the clinical integrity of payment groups and relative payment weights at least annually. We are revising the APC relative payment weights using claims data for services furnished on and after January 1, 2024, through and including December 31, 2024, and processed through June 30, 2025, and updated HCRIS cost report information.

This final rule with comment period is also necessary to make updates to the ASC payment rates for CY 2026, enabling CMS to make changes to payment policies and payment rates for covered surgical procedures and covered ancillary services that are performed in ASCs in CY 2026. Because ASC payment rates are based on the OPPS relative payment weights for most of the procedures performed in ASCs, the ASC payment rates are updated annually to reflect annual changes to the OPPS relative payment weights. In addition, we are required under section 1833(i)(1) of the Act to review and update the list of surgical procedures that can be performed in an ASC, not less frequently than every 2 years.

In the CY 2019 OPPS/ASC final rule with comment period (83 FR 59075 through 59079), we finalized a policy to update the ASC payment system rates using the hospital market basket update instead of the CPI–U for CY 2019 through 2023. In the CY 2024 OPPS/ASC final rule with comment period, we finalized a policy to extend the 5-year interim period by an additional 2 years, through CY 2024 and CY 2025, to enable us to more accurately analyze whether the application of the hospital market basket update to the ASC payment system resulted in a migration of services from the hospital setting to the ASC setting (88 FR 81960). As discussed in section XIII. of this final rule with comment period, we are extending our utilization of the hospital market basket update as the update factor for the ASC payment system for one additional year (through CY 2026). The ASC impacts discussed below reflect our application of the hospital market basket update for CY 2026.

In addition, this final rule with comment period is necessary to make policy changes for facilities reporting data under the Hospital OQR, REHQR, and ASCQR Programs. The primary objective of these quality reporting programs is to promote higher quality, more efficient health care for Medicare beneficiaries by collecting and reporting on quality-of-care metrics. This information is made available to consumers, both to empower Medicare beneficiaries and inform decision making, as well as to incentivize healthcare facilities to make continued improvements. This rule is also

necessary to modify the methodology for the Overall Hospital Quality Star Ratings to emphasize and align the importance of patient safety across CMS programs. The Overall Hospital Quality Star Ratings information is publicly available.

Also, this final rule with comment period is necessary to enhance clarity and standardization in hospital disclosure of standard charges. The Hospital Price Transparency regulations requiring public release of hospital standard charge information are a necessary and important first step in ensuring transparency in prices of healthcare services for consumers.

B. Overall Impact of Provisions of This Final Rule With Comment Period

We have examined the impacts of this rule as required by Executive Order 12866, ''Regulatory Planning and Review''; Executive Order 13132, ''Federalism''; Executive Order 13563, ''Improving Regulation and Regulatory Review''; Executive Order 14192, ''Unleashing Prosperity Through Deregulation''; the Regulatory Flexibility Act (RFA) (Pub. L. 96–354); section 1102(b) of the Social Security Act; and section 202 of the Unfunded Mandates Reform Act of 1995 (Pub. L. 104–4); and the Congressional Review Act (5 U.S.C. 804(2)).

Executive Orders 12866 and 13563 direct agencies to assess all costs and benefits of available regulatory alternatives and, if regulation is necessary, to select those regulatory approaches that maximize net benefits (including potential economic, environmental, public health and safety, and other advantages; distributive impacts; and equity). Section 3(f) of Executive Order 12866 defines a ''significant regulatory action'' as any regulatory action that is likely to result in a rule that may: (1) have an annual effect on the economy of $100 million or more or adversely affect in a material way the economy, a sector of the economy, productivity, competition, jobs, the environment, public health or safety, or State, local, or tribal governments or communities; (2) create a serious inconsistency or otherwise interfere with an action taken or planned by another agency; (3) materially alter the budgetary impact of entitlements, grants, user fees, or loan programs or the rights and obligations of recipients thereof; or (4) raise novel legal or policy issues arising out of legal mandates, or the President's priorities.

A regulatory impact analysis (RIA) must be prepared for a regulatory action that is significant under section 3(f)(1) of E.O. 12866. Based on our estimates, the Office of Management and Budget's (OMB) Office of Information and Regulatory Affairs (OIRA) has determined this rulemaking is significant per section 3(f)(1). Accordingly, we have prepared a Regulatory Impact Analysis that to the best of our ability presents the costs and benefits of the rulemaking. Therefore, OMB has reviewed this final rule with comment period, and the Departments have provided the following assessment of their impact. In accordance with subtitle E of the Small Business Regulatory Enforcement Fairness Act of 1996 (also known as the Congressional Review Act), OIRA has also determined that this final rule meets the criteria set forth in 5 U.S.C. 804(2).

We estimate that the total increase in Federal Government expenditures under the OPPS for CY 2026, compared to CY 2025, due to the changes to the OPPS in this final rule with comment period, will be approximately $1.77 billion. Taking into account our estimated changes in enrollment, utilization, and case-mix for CY 2026 we estimate that the OPPS expenditures, including beneficiary cost-sharing, for CY 2026 will be approximately $101.0 billion, which is approximately $8.0 billion higher than estimated OPPS expenditures in CY 2025. Table 167 of this final rule with comment period displays the distributional impact of the CY 2026 changes in OPPS payment to various groups of hospitals and for CMHCs.

We note that under our proposed CY 2026 policy, drugs and biologicals are generally paid at ASP plus 6 percent, WAC plus 6 percent, or 95 percent of AWP, as applicable.

We estimate that the final update to the conversion factor will increase total OPPS payments by 2.6 percent in CY 2026. The final changes to the APC relative payment weights, the final changes to the wage indexes, the continuation of a payment adjustment for rural SCHs, including EACHs, and the final payment adjustment for cancer hospitals would not increase total OPPS payments because these changes to the OPPS are budget neutral. However, these updates would change the distribution of payments within the budget neutral system. We estimate that the total change in payments between CY 2025 and CY 2026, considering all budget-neutral payment adjustments, changes in estimated total outlier payments, the application of the frontier State wage adjustment, the payment adjustment for drug administration services furnished at excepted off campus PBDs, in addition to the application of the OPD fee schedule increase factor after all adjustments required by sections 1833(t)(3)(F), 1833(t)(3)(G), and 1833(t)(17) of the Act will increase total estimated OPPS payments by 2.4 percent. We note that, as previously discussed in section V.B.7 of this final rule with comment period, we reduce payments for non-drug items and services for hospitals for whom the annual reduction to payment amounts under § 419.32(b)(1)(iv)(B)(12) applies by 0.5 percentage points in CY 2026. We estimate that this reduction would reduce OPPS spending by $275 million in CY 2026.

We estimate the total increase (from changes to the ASC provisions in this final rule with comment period, as well as from enrollment, utilization, and case-mix changes) in Medicare expenditures (not including beneficiary cost-sharing) under the ASC payment system for CY 2026 compared to CY 2025, to be approximately $450 million. Tables 168 and 169 of this final rule with comment period display the redistributive impact of the CY 2026 changes regarding ASC payments, grouped by specialty area and then grouped by procedures with the greatest ASC expenditures, respectively.

C. Detailed Economic Analyses

1. Estimated Effects of OPPS Changes in This Final Rule With Comment Period

a. Limitations of Our Analysis

The distributional impacts presented here are the projected effects of the proposed CY 2026 policy changes on various hospital groups. We post our hospital-specific estimated payments for CY 2026 on the CMS website with the other supporting documentation for this final rule with comment period. To view the hospital-specific estimates, we refer readers to the CMS website at *https://www.cms.gov/medicare/payment/prospective-payment-systems/hospital-outpatient.* On the website, select ''Regulations and Notices'' from the left side of the page and then select ''CMS–1834–FC'' from the list of regulations and notices. The hospital-specific file layout and the hospital-specific file are listed with the other supporting documentation for this final rule. We show hospital-specific data only for hospitals whose claims were used for modeling the impacts shown in Table 167 of this final rule with comment period. We do not show hospital-specific impacts for hospitals whose claims we were unable to use. We refer readers to section II.A. of this final rule with comment period for a discussion of the hospitals whose claims we do not use for ratesetting or impact purposes.

We estimate the effects of the individual policy changes by estimating payments per service, while holding all other payment policies constant. We use the best data available but do not attempt to predict behavioral responses to our policy changes in order to isolate the effects associated with specific policies or updates, but any policy that changes payment could have a behavioral response. In addition, we have not made any adjustments for future changes in variables, such as service volume, service-mix, or number of encounters.

b. Estimated Effects To Control Unnecessary Increases in the Volume of Outpatient Services Furnished in Excepted Off-Campus Provider Based Departments (PBDs)

In section X.A. of this final rule with comment period, we discuss our CY 2026 policy to control for unnecessary increases in the volume of outpatient services by paying for drug administration services furnished at an off-campus PBD at an amount equal to the site-specific PFS payment rate for nonexcepted items and services furnished by a nonexcepted off-campus PBD (the PFS payment rate). Specifically, we pay for HCPCS codes billed with modifier ''PO'' and assigned to and paid through drug administration APCs 5691 through 5694 at an amount equal to the site-specific PFS payment rate for nonexcepted items and services furnished by a nonexcepted off-campus PBD (the PFS payment rate). For a discussion of the PFS relativity adjuster that is used to pay for all drug administration services provided at all off-campus PBDs, we refer readers to the CY 2018 PFS final rule with comment period discussion (82 FR 53023 through 53024), as well as the CY 2019 PFS proposed rule.

To develop an estimated impact of this policy, we began with CY 2024 outpatient claims data used, for claim lines with HCPCS codes assigned for payment through drug administration APCs 5691 through 5694 that contained modifier ''PO'' because the presence of this modifier indicates that such claims were billed for services furnished by an off-campus department of a hospital paid under the OPPS. We then simulated payment for the remaining claim lines as if they were paid at the PFS-equivalent rate, removing a portion of the payment associated with rural Sole Community Hospitals based on our finalized exception for those hospitals. An estimate of the final policy that includes the effects of estimated changes in enrollment, utilization, and case-mix based on the FY 2026 Mid-Session review budget approximates the estimated decrease in total payments at $290 million, with Medicare OPPS payments decreasing by $220 million and beneficiary copayments decreasing by $70 million in CY 2026.

This estimate is utilized for the accounting statement displayed in Table 170 of this final rule with comment period because the impact of this final CY 2026 policy, which is not budget neutral, is combined with the impact of the OPD update, which is also not budget neutral, to estimate changes in Medicare spending under the OPPS as a result of the changes in this rule.

We note our estimates may differ from the actual effect of the proposed policy due to offsetting factors, such as changes in provider behavior. We note that by removing this payment differential that may influence site-of-service decision-making, we anticipate an associated decrease in the volume of drug administration services provided in the excepted off-campus PBD setting.

TABLE 166: ESTIMATED EFFECT OF CHANGES TO DRUG ADMINISTRATION SERVICES WHEN FURNISHED AT EXCEPTED OFF-CAMPUS PROVIDERS (IN $ MILLIONS)

CY	2026	2027	2028	2029	2030	2031	2032	2033	2034	2035	2026 - 2035
Part B Trust Fund benefits	(290)	(790)	(870)	(970)	(1,060)	(1,160)	(1,270)	(1,410)	(1,540)	(1,670)	(11,030)
Premium offset	70	200	210	250	260	290	320	350	390	420	2,760
Net Part B Trust Fund impact	(220)	(590)	(660)	(720)	(800)	(870)	(950)	(1,060)	(1,150)	(1,250)	(8,270)
Beneficiary cost-sharing	(70)	(200)	(220)	(250)	(270)	(300)	(320)	(360)	(390)	(430)	(2,810)

Comment: A commenter requested additional clarification regarding the figures in Table 111 of the CY 2026 OPPS/ASC proposed rule. They noted that while their estimates remained relatively similar to the Table in CY 2026, for the latter years of the table their estimates differed significantly.

Response: Table 166 of this final rule with comment period updates the estimated effect of changes related to the excepted off-campus drug administration payment policy. In the table displaying the effects of the final policy, the CY 2026 estimates are primarily isolated to effects on OPPS payments and are also what are included in Table 170 of this final rule with comment period. However, in CY 2027 and later years of Table 166 of this final rule with comment period, the savings estimates also include the impact of this policy on reducing Medicare Advantage payments starting in CY 2027, and this is why the estimates in Table 111 of the CY 2026 OPPS/ASC proposed rule were greater than the commenter's estimates beginning in CY 2027.

c. Estimated Effects of OPPS Changes on Hospitals

Table 167 shows the estimated impact of the final rule with comment period on hospitals. Historically, the first line of the impact table, which estimates the change in payments to all facilities, has always included cancer and children's hospitals, which are held harmless to their pre-Balanced Budget Act (BBA) amount. We also include CMHCs in the first line that includes all providers. We include a second line for all hospitals, excluding permanently held harmless hospitals and CMHCs.

We present separate impacts for CMHCs in Table 167, and we discuss them separately below, because CMHCs are paid only for partial hospitalization and intensive outpatient program services under the OPPS and are a different provider type from hospitals. In the CY 2025 OPPS/ASC final rule with comment period (89 FR 94269 through 94270), we finalized paying CMHCs for partial hospitalization services and intensive outpatient services under APCs 5851 through 5854. For CY 2026, we are maintaining the same APC structure and revising our methodology for calculating APC payment rates. Specifically, we are finalizing our proposal to apply the 40 percent Medicare Physician Fee Schedule (MPFS) Relativity Adjuster to calculate PHP and IOP payment rates for CMHCs.

The estimated increase in the total payments made under the OPPS is determined largely by the increase to the conversion factor under the statutory methodology. The distributional impacts presented do not include assumptions about changes in volume and service-mix. The conversion factor is updated annually by the OPD fee schedule increase factor, as discussed in detail in section II.B. of this final rule with comment period.

Section 1833(t)(3)(C)(iv) of the Act provides that the OPD fee schedule increase factor is equal to the market basket percentage increase applicable under section 1886(b)(3)(B)(iii) of the Act, which we refer to as the IPPS market basket percentage increase. The final IPPS market basket percentage increase applicable to the OPD fee schedule for CY 2026 is 3.3 percent. Section 1833(t)(3)(F)(i) of the Act reduces that 3.3 percent by the productivity adjustment described in section 1886(b)(3)(B)(xi)(II) of the Act, which is a 0.7 percentage point for CY 2026 (which is also the productivity adjustment for FY 2026 in the FY 2026 IPPS/LTCH PPS proposed rule (90 FR 18257)) resulting in the proposed CY 2026 OPD fee schedule increase factor of 2.6 percent. We are using the OPD fee schedule increase factor of 2.6 percent in the calculation of the final CY 2026 OPPS conversion factor. Section 10324 of the Affordable Care Act, as amended by HCERA, further authorized additional expenditures outside budget neutrality for hospitals in certain frontier States that have a wage index less than 1.0000. The amounts attributable to this frontier State wage index adjustment are incorporated in the estimates in Table 167 of this final rule with comment period.

To illustrate the impact of the CY 2026 changes, our analysis begins with a baseline simulation model that uses the CY 2025 relative payment weights, the CY 2025 final OPPS wage indexes that include reclassifications, and the final CY 2025 conversion factor. Table 167 shows the estimated redistribution of the increase or decrease in payments for CY 2026 over CY 2025 payments to hospitals and CMHCs as a result of the following factors: the impact of the APC reconfiguration and recalibration changes between CY 2025 and CY 2026 (Column 2); the wage indexes and the provider adjustments (Column 3); the combined impact of all of the changes described in the preceding columns plus the 2.6 percent OPD fee schedule increase factor update to the conversion factor (Column 4); the additional estimated impact for the payment adjustment for drug administration furnished at excepted off campus PBDs (Column 5); the estimated impact taking into account all payments for CY 2026 relative to all payments for CY 2025, including the impact of changes in estimated outlier payments and changes to the pass-through payment estimate (Column 6).

We did not model an explicit budget neutrality adjustment for the rural adjustment for SCHs because we are maintaining the current adjustment percentage for CY 2026. Because the final updates to the conversion factor (including the update of the OPD fee schedule increase factor), the estimated cost of the rural adjustment, and the estimated cost of projected pass-through payment for CY 2026 are applied uniformly across services, observed redistributions of payments in the impact table for hospitals largely depend on the mix of services furnished by a hospital (for example, how the APCs for the hospital's most frequently furnished services would change), and the impact of the wage index changes on the hospital. However, total payments made under this system and the extent to which this final rule with comment period would redistribute money during implementation also will depend on changes in volume, practice patterns, and the mix of services billed between CY 2025 and CY 2026 by various groups of hospitals, which CMS cannot forecast.

Overall, we estimate that the final rates for CY 2026 will increase Medicare OPPS payments by an estimated 2.4 percent. Removing payments to cancer and children's hospitals because their payments are held harmless to the pre-OPPS ratio between payment and cost and removing payments to CMHCs results in an estimated 2.5 percent increase in Medicare payments to all other hospitals. These estimated payments will not significantly impact other providers. We note that providers not considered ''new providers'' for purposes of the 340b remedy offset would receive an adjustment to their OPPS payment rates.

Column 1: Total Number of Hospitals

The first line in Column 1 in Table 167 shows the total number of facilities (3,543), including designated cancer and children's hospitals and CMHCs, for which we were able to use CY 2024 hospital outpatient and CMHC claims data to model CY 2025 and CY 2026 payments, by classes of hospitals, for CMHCs and for dedicated cancer hospitals. We excluded all hospitals and CMHCs for which we could not plausibly estimate CY 2025 or CY 2026 payment and entities that are not paid under the OPPS. The latter entities include CAHs, IHS and tribal hospitals, and hospitals located in Guam, the U.S. Virgin Islands, Northern Mariana Islands, American Samoa, and the State of Maryland. This process is discussed in greater detail in section II.A. of this final rule with comment period. At this time, we are unable to calculate a DSH variable for hospitals that are not also paid under the IPPS because DSH payments are only made to hospitals paid under the IPPS. Hospitals for which we do not have a DSH variable are grouped separately and generally include freestanding psychiatric hospitals, rehabilitation hospitals, and long-term care hospitals. We show the total number of OPPS hospitals (3,439), excluding the hold harmless cancer and children's hospitals and CMHCs, on the second line of the table. We excluded cancer and children's hospitals because section 1833(t)(7)(D) of the Act permanently holds harmless cancer hospitals and children's hospitals to their ''pre-BBA amount'' as specified under the terms of the statute, and therefore, we removed them from our impact analyses. We show the isolated impact on the 34 CMHCs at the bottom of the impact table (Table 167) and discuss that impact separately below.

Column 2: APC Recalibration—All Changes

Column 2 shows the estimated effect of APC recalibration. Column 2 also reflects any changes in multiple procedure discount patterns or conditional packaging that occur as a result of the changes in the relative magnitude of payment weights. As a result of APC recalibration, we estimate that urban hospitals will experience a 0.1 increase, with the impact ranging

from no change to an increase of 0.2, depending on the number of beds. Rural hospitals will experience a decrease of 0.4 percent overall. Major teaching hospitals will experience no change.

Column 3: Wage Indexes and the Effect of the Provider Adjustments

Column 3 demonstrates the combined budget neutral impact of the APC recalibration, the updates for the wage indexes with the FY 2026 IPPS post-reclassification wage indexes, the rural adjustment, the frontier adjustment, and the cancer hospital payment adjustment. We modeled the independent effect of the budget neutrality adjustments and the OPD fee schedule increase factor by using the relative payment weights and wage indexes for each year and using a CY 2025 conversion factor that included the OPD fee schedule increase and a budget neutrality adjustment for differences in wage indexes.

Column 3 reflects the independent effects of the updated wage indexes, including the application of budget neutrality for the rural floor policy on a nationwide basis, as well as the final CY 2026 changes in wage index policy, discussed in section II.C. of this final rule with comment period. We did not model a budget neutrality adjustment for the rural adjustment for SCHs because we are continuing the rural payment adjustment of 7.1 percent to rural SCHs for CY 2026, as described in section II.E. of this final rule with comment period. We modeled a budget neutrality adjustment for the final cancer hospital payment adjustment because the final payment-to-cost ratio target for the cancer hospital payment adjustment in CY 2026 is 0.87, which is the same PCR target adopted in the CY 2025 OPPS/ASC final rule with comment period (89 FR 93979). We note that, in accordance with section 16002 of the 21st Century Cures Act, we apply a budget neutrality factor calculated as if the cancer hospital adjustment target payment-to-cost ratio was 0.88, not the 0.87 target payment-to-cost ratio we discuss in section II.F. of this final rule with comment period.

We modeled the independent effect of updating the wage indexes by varying only the wage indexes, holding APC relative payment weights, service-mix, and the rural adjustment constant and using the CY 2026 scaled weights and a CY 2025 conversion factor that included a budget neutrality adjustment for the effect of the changes to the wage indexes between CY 2025 and CY 2026.

Column 4: All Budget Neutrality Changes Combined With the Market Basket Update

Column 4 demonstrates the combined impact of all the final changes previously described and the update to the conversion factor of 2.6 percent. Overall, these changes would increase payments to urban hospitals by 2.8 percent and to rural hospitals by 2.4 percent. Rural sole community hospitals would receive an estimated increase of 2.8 percent while other rural hospitals would receive an estimated increase of 1.8 percent.

Column 5—Final Off-Campus PBD Drug Administration Payment Policy

Column 5 displays the estimated effect of our final CY 2026 policy to pay for drug administration services assigned to APCs 5691 through 5694 when billed with modifier ''PO'' at a PFS-equivalent rate. We note that the numbers provided in this column isolate the estimated effect of this final policy adjustment relative to the numerator of Column 4. Therefore, the numbers reported in Column 5 show how much of the difference between the estimates in Column 4 and the estimates in Column 6 are a result of the off-campus PBD drug administration policy.

Column 6: All Changes With Outlier—Final CY 2026 Update

Column 6 depicts the full impact of the final CY 2026 policies on each hospital group by including the effect of all changes for CY 2026 and comparing them to all estimated payments in CY 2025. Column 6 shows the combined budget neutral effects of Columns 2 and 3; the effect of the off-campus provider-based department drug administration policy; the OPD fee schedule increase; the impact of estimated OPPS outlier payments, as discussed in section II.G. of this final rule with comment period; the Hospital OQR Program payment reduction for the small number of hospitals in our impact model that failed to meet the reporting requirements (discussed in section XV. of this final rule with comment period); and other rule adjustments to the CY 2026 OPPS payments.

Of those hospitals that failed to meet the Hospital OQR Program reporting requirements for the full CY 2025 update (and assumed, for modeling purposes, to be the same number for CY 2026), we included 75 hospitals in our model because they had both CY 2024 claims data and recent cost report data. We estimate that the cumulative effect of all changes for CY 2026 would increase payments to all facilities by 2.4 percent for CY 2026. We modeled the independent effect of all changes in Column 6 using the final relative payment weights for CY 2025 and the proposed relative payment weights for CY 2026. We used the final conversion factor for CY 2025 of $89.169 and a CY 2026 conversion factor of $91.415 discussed in section II.B. of this final rule with comment period.

Column 6 contains simulated outlier payments for each year. We used the 1-year charge inflation factor used in the FY 2026 IPPS/LTCH PPS final rule (90 FR 37227) of 5.5 percent (1.05505) to increase charges on the CY 2024 claims, and we used the overall CCR in the July 2025 Outpatient Provider-Specific File (OPSF) to estimate outlier payments for CY 2025. Using the CY 2024 claims and a 5.5 percent charge inflation factor, we currently estimate that outlier payments for CY 2025, using a multiple threshold of 1.75 and a fixed-dollar threshold of $7,175, would be approximately 0.95 percent of total payments. The estimated current outlier payments of 0.95 percent are incorporated in the comparison in Column 5. We used the same set of claims and a charge inflation factor of 11.3 percent (1.11313) and the CCRs in the July 2025 OPSF, with an adjustment of 0.956081 (90 FR 37227), to reflect relative changes in cost and charge inflation between CY 2025 and CY 2026, to model the final CY 2026 outliers at 1.0 percent of estimated total payments using a multiple threshold of 1.75 and a fixed dollar threshold of $6,225. The charge inflation and CCR inflation factors are discussed in detail in the FY 2026 IPPS/LTCH PPS final rule (90 FR 37224 through 37228).

Overall, we estimate that facilities will experience an increase of 2.4 percent under this final rule in CY 2026 relative to total spending in CY 2025. This projected increase (shown in Column 6) of Table 167 of this final rule with comment period reflects the final 2.6 percent OPD fee schedule increase factor, adding the 0.05 difference in estimated outlier payments between CY 2025 (0.95 percent) and CY 2026 (1.0 percent), including the -0.3 percent decrease due to the payment adjusted for drug administration at off campus PBDs, plus 0.07 percent for the change in the pass-through payment estimate between CY 2025 and CY 2026. We estimate that the combined effect of all changes for CY 2026 will increase payments to urban hospitals by 2.6 percent. Overall, we estimate that rural hospitals will experience a 2.3 percent increase as a result of the combined effects of all the changes for CY 2026.

Among hospitals, by teaching status, we estimate that the impacts resulting from the combined effects of all changes include an increase of 2.4 percent for major teaching hospitals and an increase of 2.6 percent for nonteaching hospitals. Minor teaching hospitals will experience an estimated increase of 2.7 percent.

In our analysis, we also have categorized hospitals by type of ownership. Based on this analysis, we estimate that voluntary hospitals will experience an increase of 2.5 percent, proprietary hospitals will experience an increase of 3.3 percent, and governmental hospitals will experience an increase of 2.1 percent.

Reduction for Providers Subject to the 340B Remedy Offset

In column 7 we have included additional information to account for estimated changes in the CY 2026 OPPS for providers subject to the 340B Remedy Offset.

CMHCs	34	-0.7	0.2	2.1	0.0	**2.2**	0.0

Column (1) shows total hospitals and/or CMHCs.

Column (2) includes all CY 2026 OPPS policies and compares those to the CY 2025 OPPS.

Column (3) shows the budget neutral impact of updating the wage index by applying the FY 2026 hospital inpatient wage index. The rural SCH adjustment continues our current policy of 7.1 percent so the budget neutrality factor is 1. The final budget neutrality adjustment for the cancer hospital adjustment is 1.0000 because the CY 2026 target payment-to-cost ratio is the same as the CY 2025 PCR target.

Column (4) shows the impact of all budget neutrality adjustments and the addition of the final 2.6 percent OPD fee schedule update factor (3.3 percent reduced by 0.7 percentage points for the productivity adjustment).

Column (5) shows the separate impact of the final payment adjustment for drug administration services furnished at excepted off campus providers.

Column (6) shows the additional adjustments to the conversion factor resulting from a change in the pass-through estimate and adding estimated outlier payments. Note that previous years included the frontier adjustment in this column, but we have included the frontier adjustment to Column 3 in this table.

The column for the 340B Providers shows the separate impact of applying the 0.5 percentage point reduction to the OPPS conversion factor update in CY 2026 as part of the 340B Remedy Offset.

These 3,543 providers include children and cancer hospitals, which are held harmless to pre-BBA amounts, and CMHCs.

We estimate that 3,229 providers would be subject to the reduction to payments that result from the 340B remedy offset.

** Complete DSH numbers are not available for providers that are not paid under IPPS, including rehabilitation, psychiatric, and long-term care hospitals.

BILLING CODE 4120–01–C

d. Estimated Effects of OPPS Changes on CMHCs

The last line of Table 167 demonstrates the isolated impact on CMHCs, which furnished only partial hospitalization and intensive outpatient program services under the OPPS during CY 2024. As discussed in section VIII.C. of this final rule with comment period, we are finalizing for CY 2026 to continue paying CMHCs using APCs 5851 through 5854. We modeled the impact of this APC policy, assuming CMHCs will continue to provide the same PHP and IOP care as seen in the CY 2024 claims used for ratesetting in the final rule with comment period. We did not exclude days with one or two services from our modeling for CY 2026, because our final rule policy would pay the per diem rate for APC 5853 for such days in CY 2026. As a result of the final PHP APC changes for CMHCs, we estimate that CMHCs will experience a 0.7 percent decrease in CY 2026 payments relative to their CY 2025 payments (shown in Column 2). For a detailed discussion of our final PHP and IOP policies, please see section VIII. of this final rule with comment period.

Column 3 shows the estimated impact of adopting the final FY 2026 wage index values, which result in an estimated increase of 0.2 percent to CMHCs.

Column 4 shows that combining the OPD fee schedule increase factor, along with the final changes in APC policy for CY 2026 and the final FY 2026 wage index updates, will result in an estimated increase of 2.1 percent.

e. Estimated Effect of OPPS Changes on Beneficiaries

For services for which the beneficiary pays a copayment of 20 percent of the payment rate, the beneficiary's payment would increase for services for which the OPPS payments would rise and decrease for services for which the OPPS payments would fall. For further discussion of the calculation of the national unadjusted copayments and minimum unadjusted copayments, we refer readers to section II.H. of this final rule with comment period. In all cases, section 1833(t)(8)(C)(i) of the Act limits beneficiary liability for copayment for a procedure performed in a year to the hospital inpatient deductible for the applicable year.

We estimate that the aggregate beneficiary coinsurance percentage would be approximately 18 percent for all services paid under the OPPS in CY 2026. The estimated aggregate beneficiary coinsurance reflects general system adjustments. We note that the individual payments, and therefore copayments, associated with services may differ based on the setting in which they are furnished. However, at the aggregate system level, we do not currently observe significant impact on beneficiary coinsurance as a result of those policies.

f. Estimated Effects of OPPS Changes on Other Providers

The relative payment weights and payment amounts established under the OPPS affect the payments made to ASCs, as discussed in section XIII. of this final rule with comment period. Hospitals, CMHCs, and ASCs will be affected by the changes in this final rule. Additionally, the payment policies we established for IOP services affect RHCs and FQHCs. These providers of IOP are not paid under the OPPS and are not included in the impact analysis shown in Table 167. However, the final payment amount for OPPS APC 5861 will affect payments to RHCs and FQHCs since under sections 1834(o)(5)(A) and 1834(y)(3)(A) of the Act payment for IOP services in these settings is required to be equal to the payment determined for IOP services in the hospital outpatient department.

g. Estimated Effects of OPPS Changes on the Medicare and Medicaid Programs

The effect of the update on the Medicare program is expected to be an increase of $1.77 billion in program payments for OPPS services furnished in CY 2026. The effect on the Medicaid program is expected to be limited to copayments that Medicaid may make on behalf of Medicaid recipients who are also Medicare beneficiaries. We estimate that the changes in this final rule with comment period will increase these Medicaid beneficiary payments by approximately $145 million in CY 2026. Currently, there are approximately 11.5 million dual-eligible beneficiaries, which represent approximately 40 percent of Medicare Part B fee-for-service beneficiaries. The impact on Medicaid was determined by taking 40 percent of the beneficiary cost-sharing impact. The national average split of Medicaid payments is 58 percent Federal payments and 42 percent State payments. Therefore, for the estimated $145 million Medicaid increase, approximately $85 million will be from the Federal Government and $60 million will be from State governments.

h. Alternative OPPS Policies Considered

Alternatives to the OPPS changes we proposed and the reasons for our selected alternatives are discussed throughout this final rule with comment period.

Alternatives Considered for the Final Payment Policy for Skin Substitute Products

We considered several alternatives to our policy to group skin substitute products based on FDA regulatory category. For example, we considered grouping skin substitute products based on their composition (for example, whether they are non-synthetic or synthetic) or by graft type (*e.g.,* allograft or xenograft). We also considered grouping all products together to set a single payment rate or creating new categories reflecting product cost, similar to our current payment policy. All of these alternatives considered would be implemented in a budget neutral manner and would involve unpackaging the current costs of skin substitute products from the application procedures, resulting in separate payments for skin substitute products under the OPPS and ASC. For a more detailed discussion of our CY 2026 payment policy for skin substitutes, please see section V. of this final rule with comment period.

2. Estimated Effects of CY 2026 ASC Payment System Changes

Most ASC payment rates are calculated by multiplying the ASC conversion factor by the ASC relative payment weight. As discussed fully in section XIII. of this final rule with comment period, we are setting the CY 2026 ASC relative payment weights by scaling the final CY 2026 OPPS relative payment weights by the final CY 2026 ASC scalar of 0.872. The estimated effects of the updated relative payment weights on payment rates are varied and are reflected in the estimated payments displayed in Tables 168 and 169.

Beginning in CY 2011, section 3401 of the Affordable Care Act requires that the annual update to the ASC payment system after application of any quality reporting reduction be reduced by a productivity adjustment. In CY 2019, we adopted a policy for the annual update to the ASC payment system to be the hospital market basket update for CY 2019 through CY 2023. In the CY 2024 OPPS/ASC final rule with comment period, we extended this 5-year interim period an additional 2 years through CYs 2024 and 2025. As discussed in further detail in section XIII. of this final rule with comment period, we are finalizing an extension of our utilization of the hospital market basket update as the update factor to the ASC payment system for 1 additional year (through CY 2026). Section 1886(b)(3)(B)(xi)(II) of the

Act defines the productivity adjustment to be equal to the 10-year moving average of changes in annual economy-wide private nonfarm business multifactor productivity (as projected by the Secretary for the 10-year period, ending with the applicable fiscal year, year, cost reporting period, or other annual period). For ASCs that fail to meet their quality reporting requirements, the CY 2026 payment determinations would be based on the application of a 2.0 percentage point reduction to the hospital market basket update for CY 2026. We calculated the final CY 2026 ASC conversion factor by adjusting the CY 2025 ASC conversion factor ($54.895) by 1.0000 to account for changes in the pre-floor and pre-reclassified hospital wage indexes between CY 2025 and CY 2026, which includes our policy to limit wage index declines of greater than 5 percent, and by applying the CY 2026 hospital market basket update factor of 2.6 percent (which is equal to the final inpatient hospital market basket percentage increase of 3.3 percent reduced by a productivity adjustment of 0.7 percentage point). The final CY 2026 ASC conversion factor is $56.322 for ASCs that successfully meet the quality reporting requirements.

a. Limitations of Our Analysis

Presented here are the projected effects of the final changes for CY 2026 on Medicare payment to ASCs. A key limitation of our analysis is our inability to predict changes in ASC service-mix between CY 2024 and CY 2026 with precision. We believe the net effect on Medicare expenditures resulting from the final CY 2026 changes would be small in the aggregate for all ASCs. However, such changes may have differential effects across surgical specialty groups, as ASCs continue to adjust to the payment rates based on the policies of the revised ASC payment system. We are unable to accurately project such changes at a disaggregated level. Clearly, individual ASCs would experience changes in payment that differ from the aggregated estimated impacts presented below.

b. Estimated Effects of ASC Payment System Policies on ASCs

Some ASCs are multispecialty facilities that perform a wide range of surgical procedures from excision of lesions to hernia repair to cataract extraction; others focus on a single specialty and perform only a limited range of surgical procedures, such as ophthalmology, digestive system, or orthopedic procedures. The combined effect of the final update to the payments on an individual ASC would depend on a number of factors, including, but not limited to, the mix of services the ASC provides, the volume of specific services provided by the ASC, the percentage of its patients who are Medicare beneficiaries, and the extent to which an ASC provides different services in the coming year. The following discussion includes tables that display estimates of the impact of the final CY 2026 updates to the ASC payment system on Medicare payments to ASCs, assuming the same mix of services, as reflected in our CY 2024 claims data. Table 168 depicts the estimated aggregate percent change in payment by surgical specialty or ancillary items and services group by comparing estimated CY 2025 payments to estimated CY 2026 payments, and Table 169 shows a comparison of estimated CY 2025 payments to estimated CY 2026 payments for items and procedures that we estimate would receive the most Medicare payment in CY 2025.

In Table 168, we have aggregated the surgical HCPCS codes by specialty group, grouped all HCPCS codes for covered ancillary items and services into a single group, and then estimated the effect on aggregated payment for surgical specialty and ancillary items and services groups. The groups are sorted for display in descending order by estimated Medicare program payment to ASCs. The following is an explanation of the information presented in Table 168.

- Column 1—Surgical Specialty or Ancillary Items and Services Group indicates the surgical specialty into which ASC procedures are grouped and the ancillary items and services group, which includes all HCPCS codes for covered ancillary items and services. To group surgical procedures by surgical specialty, we used the CPT code range definitions and Level II HCPCS codes and Category III CPT codes, as appropriate, to account for all surgical procedures to which the Medicare program payments are attributed.
- Column 2—Estimated CY 2025 ASC Payments were calculated using CY 2024 ASC utilization data (the most recent full year of ASC utilization) and CY 2025 ASC payment rates. The surgical specialty groups are displayed in descending order based on estimated CY 2025 ASC payments.
- Column 3—Estimated CY 2026 Percent Change is the aggregate percentage increase or decrease in Medicare program payment to ASCs for each surgical specialty or ancillary items and services group that is attributable to final updates to ASC payment rates for CY 2026 compared to CY 2025.

As shown in Table 168, for the six specialty groups that account for the most ASC utilization and spending, we estimate that the final update to ASC payment rates for CY 2026 would result in a 4 percent increase in aggregate payment amounts for eye and ocular adnexa procedures, a 2 percent increase in aggregate payment amounts for musculoskeletal system procedures, a 2 percent increase in aggregate payment amounts for nervous system procedures, a 3 percent increase in aggregate payment amounts for digestive system procedures, a 5 percent increase in aggregate payment amounts for cardiovascular system procedures, and a 12 percent increase in aggregate payment amounts for genitourinary system procedures. We note that these changes can be a result of different factors, including updated data, payment weight changes, and changes in policy. In general, spending in each of these categories of services is increasing due to the 2.6 percent payment rate update. After the payment rate update is accounted for, aggregate payment increases or decreases for a category of services can be higher or lower than a 2.6 percent increase, depending on if payment weights in the OPPS APCs that correspond to the applicable services increased or decreased or if the most recent data show an increase or a decrease in the volume of services performed in an ASC for a category. For example, we estimate a 4 percent increase in eye surgical procedure payments. The increase in expenditures for eye surgical procedures is largely a result of the 2.6 percent hospital market basket update. The large increases in genitourinary procedure expenditures are a result of higher APC level assignment in the OPPS of newer prostate biopsy procedure codes compared to prior prostate biopsy procedure codes. For estimated changes for selected procedures, we refer readers to Table 168.

TABLE 168: ESTIMATED IMPACT OF THE CY 2026 UPDATE TO THE ASC PAYMENT SYSTEM ON AGGREGATE CY 2025 MEDICARE PROGRAM PAYMENTS BY SURGICAL SPECIALTY OR ANCILLARY ITEMS AND SERVICES GROUP

Surgical Specialty Group (1)	Estimated CY 2025 ASC Payments (in Millions) (2)	Estimated CY 2026 Percent Change (3)
Total	$7,814	3
Eye	$2,082	4
Musculoskeletal	$1,718	2
Nervous System	$1,588	2
Gastrointestinal	$1,066	3
Cardiovascular	$520	5
Genitourinary	$327	12

Table 169 shows the estimated impact of the updates to the revised ASC payment system on aggregate ASC payments for selected surgical procedures during CY 2026. The table displays 30 of the procedures receiving the greatest estimated CY 2025 aggregate Medicare payments to ASCs. The HCPCS codes are sorted in descending order by estimated CY 2025 program payment.

- Column 1–CPT/HCPCS code.
- Column 2–Short Descriptor of the HCPCS code.
- Column 3–Estimated CY 2025 ASC Payments were calculated using CY 2024 ASC utilization (the most recent full year of ASC utilization) and the CY 2025 ASC payment rates. The estimated CY 2025 payments are expressed in millions of dollars.
- Column 4–Estimated CY 2026 Percent Change reflects the percent differences between the estimated ASC payment for CY 2025 and the estimated payment for CY 2026 based on the final update.

TABLE 169: ESTIMATED IMPACT OF THE CY 2026 UPDATE TO THE ASC PAYMENT SYSTEM ON AGGREGATE PAYMENTS FOR SELECTED PROCEDURES

c. Estimated Effects of ASC Payment System Policies on Beneficiaries

We estimate that the CY 2026 update to the ASC payment system will be generally positive (that is, result in lower cost-sharing) for beneficiaries with respect to the procedures we are finalizing to add to the ASC CPL for CY 2026. First, other than certain preventive services where coinsurance and the Part B deductible are waived to comply with sections 1833(a)(1) and (b) of the Act, the ASC coinsurance rate for all procedures is 20 percent. This contrasts with procedures performed in HOPDs under the OPPS, where the beneficiary is responsible for copayments that range from 20 percent to 40 percent of the procedure payment (other than for certain preventive services), although the majority of HOPD procedures have a 20-percent copayment. Second, in almost all cases, the ASC payment rates under the ASC payment system are lower than payment rates for the same procedures under the OPPS. Therefore, the beneficiary coinsurance amount under the ASC payment system will usually be less than the OPPS copayment amount for the same services. (The only exceptions will be if the ASC coinsurance amount exceeds the hospital inpatient deductible since the statute requires that OPPS copayment amounts not exceed the hospital inpatient deductible. Therefore, in limited circumstances, the ASC coinsurance amount may exceed the hospital inpatient deductible and, therefore, the OPPS copayment amount for similar services.) Beneficiary coinsurance for services migrating from physicians' offices to ASCs may decrease or increase under the ASC payment system, depending on the particular service and the relative payment amounts under the MPFS compared to the ASC. While the ASC payment system bases most of its payment rates on hospital cost data used to set OPPS relative payment weights, services that are performed a majority of the time in a physician office are generally paid the lesser of the ASC amount according to the standard ASC ratesetting methodology or at the nonfacility practice expense-based amount payable under the PFS. For those additional procedures that we finalized to designate as office-based in CY 2026, the beneficiary coinsurance amount under the ASC payment system generally will be no greater than the

beneficiary coinsurance under the PFS because the coinsurance under both payment systems generally is 20 percent (except for certain preventive services where the coinsurance is waived under both payment systems).

Accounting Statements and Tables for OPPS and ASC Payment System

As required by OMB Circular A–4 (available on the Office of Management and Budget website at *https://trumpwhitehouse.archives.gov/sites/whitehouse.gov/files/omb/circulars/A4/a-4.pdf*), we have prepared accounting statements to illustrate the impacts of the OPPS and ASC changes in this final rule with comment period. The first accounting statement, Table 170, illustrates the classification of expenditures for the CY 2026 estimated hospital OPPS incurred benefit impacts associated with the final CY 2026 OPD fee schedule increase and the final policy for drug administration services furnished at excepted off-campus PBDs. The second accounting statement, Table 171, illustrates the classification of expenditures associated with the 2.6 percent CY 2026 update to the ASC payment system, based on the provisions of the final rule with comment period and the baseline spending estimates for ASCs. Both tables classify most estimated impacts as transfers. The third accounting statement, Table 172, outlines the one-time burden associated with the HPT requirements we are finalizing in this rule.

TABLE 170: ACCOUNTING STATEMENT: CY 2026 ESTIMATED HOSPITAL OPPS TRANSFERS FROM CY 2025 TO CY 2026 ASSOCIATED WITH THE CY 2026 HOSPITAL OUTPATIENT OPD FEE SCHEDULE INCREASE

Category	Transfers
Annualized Monetized Transfers	$1.77 billion
From Whom to Whom	Federal Government to outpatient hospitals and other providers who receive payment under the hospital OPPS

TABLE 171: ACCOUNTING STATEMENT: CLASSIFICATION OF ESTIMATED TRANSFERS FROM CY 2025 TO CY 2026 AS A RESULT OF THE CY 2026 UPDATE TO THE ASC PAYMENT SYSTEM

Category	Transfers
Annualized Monetized Transfers	$170 million
From Whom to Whom	Federal Government to Medicare Providers and Suppliers
Total	$170 million

TABLE 172: ESTIMATED ONE-TIME COSTS IN CY 2026 FOR HOSPITAL PRICE TRANSPARENCY

Category	Costs
Burden	$10.841 million

We did not receive public comments on this provision, and therefore, we are finalizing as proposed.

3. Effects of Changes in Requirements for the Hospital Outpatient Quality Reporting (OQR) Program

a. Background

We refer readers to the CY 2025 OPPS/ASC final rule with comment period (89 FR 94561 and 94562) for the previously estimated effects of changes to the Hospital OQR Program for the CY 2025 reporting period and subsequent years. Of the 3,014 hospital outpatient departments (HOPDs) that met eligibility requirements for the CY 2025 payment determination for the Hospital OQR Program, we determined that 42 HOPDs did not meet the program requirements to receive the full annual Outpatient Department (OPD) fee schedule increase factor while an additional 54 HOPDs elected not to participate.

b. Impact of CY 2026 OPPS/ASC Final Rule Policies

We are finalizing: (1) removal of the COVID–19 Vaccination Coverage Among Healthcare Personnel (HCP) measure beginning with the CY 2024 reporting period/CY 2026 payment determination; (2) removal of the Hospital Commitment to Health Equity (HCHE) measure beginning with the CY 2025 reporting period/CY 2027 payment determination; (3) removal of the Screening for Social Drivers of Health (SDOH) measure beginning with the CY 2025 reporting period; (4) removal of the Screen Positive Rate for SDOH measure beginning with the CY 2025 reporting period; (5) adoption of the Emergency Care Access & Timeliness electronic clinical quality measure (eCQM) with voluntary reporting for the CY 2027 reporting period followed by mandatory reporting beginning with the CY 2028 reporting period/CY 2030 payment determination; (6) removal of the Median Time from Emergency Department (ED) Arrival to ED Departure for Discharged ED Patients (Median Time for Discharged ED Patients) measure beginning with the CY 2028 reporting period/CY 2030 payment determination; (7) removal of

the Left Without Being Seen (LWBS) measure beginning with the CY 2028 reporting period/CY 2030 payment determination; and (8) modification of the Excessive Radiation Dose or Inadequate Image Quality for Diagnostic Computed Tomography (CT) in Adults (Hospital Level—Outpatient) eCQM (Excessive Radiation eCQM) from mandatory reporting beginning with the CY 2027 reporting period to continue voluntary reporting in the CY 2027 reporting period and subsequent years.

In section XV.D. of this final rule with comment period, we updated our Extraordinary Circumstances Exception (ECE) policy for the Hospital OQR Program. This update will explicitly include extensions as a type of extraordinary circumstances relief option, in addition to exceptions. Because the process for requesting or granting an ECE will remain the same as the current ECE process, these updates will not affect burden associated with the submission of the ECE form.

We refer readers to section ''XXIII.A. Collection of Information'' of this final rule with comment period for a detailed discussion of the calculations estimating the changes to the information collection and reporting burden for finalized data requirements under the Hospital OQR Program for the estimated 3,200 program-eligible HOPDs. As shown in summary tables in section XXIII.A.10, we estimate a total information collection and reporting burden decrease of 6,924,988 hours at a savings of $178,884,367 annually associated with our proposals for the CY 2028 reporting period/CY 2030 payment determination and subsequent years compared to our currently approved information collection burden estimates under OMB control number 0938–1109 (expiration date January 31, 2026). We also estimate a decrease of between 25,600 hours at a savings of $1,446,400 and 28,800 hours at a savings of $1,687,680 in information collection burden associated with the removal of the COVID–19 Vaccination Coverage Among HCP measure compared to the currently approved information collection burden estimates and under OMB control number 0920–1317 (expiration date January 31, 2028).

In section XV.B.1. of this final rule with comment period, we adopted the Emergency Care Access & Timeliness eCQM. Similar to the effects associated with the ST-Segment Elevation Myocardial Infarction (STEMI) eCQM finalized in the CY 2022 OPPS/ASC final rule with comment period (86 FR 63984 and 63985), we believe that costs associated with adoption of eCQMs are multifaceted and include not only the burden associated with reporting but also the costs associated with implementing and maintaining program requirements, such as maintaining measure specifications in hospitals' electronic health record (EHR) systems for the eCQMs used in the Hospital OQR Program.

In section XV.B.2. of this final rule with comment period, we finalized the removal of the Median Time from ED Arrival to ED Departure for Discharged ED Patients and LWBS measures in coordination with the adoption of the Emergency Care Access & Timeliness eCQM. Because these measures will be replaced by the Emergency Care Access & Timeliness eCQM, we believe HOPDs will be positively impacted by the decreased effort required to report one eCQM rather than one chart-abstracted measure and one web-based measure.

In section XV.B.3, of this final rule with comment period, we modified the reporting requirements for the Excessive Radiation eCQM by maintaining voluntary reporting instead of mandatory reporting of the measure, beginning with the CY 2027 reporting period. In the CY 2024 OPPS/ASC final rule with comment period, we stated that for the Excessive Radiation eCQM, HOPDs may incur costs associated with implementing and maintaining program requirements, such as maintaining measure specifications in hospitals' electronic health record (EHR) systems (88 FR 82167). HOPDs would be required to link their EHR and PACS data to their chosen vendor's translation software to calculate the measure, which we estimate would require no more than 1 hour to complete. In section XXIII.A.9., we estimate that 20 percent of HOPDs will report this measure annually. Because some HOPDs may only elect to report this eCQM for some reporting periods, we are unable to assume that 80 percent of HOPDs will not report this measure in any reporting period. However, for HOPDs who elect not to report this eCQM in any reporting period, the modification will result in a savings of no more than 1 hour and $55 (1 hour × $55.06) as well as any costs that would be associated with implementing and maintaining program requirements specific to this eCQM.

Regarding the remaining policies, we do not believe these policies will result in any additional economic impact beyond those discussed in section ''XXIII.A. Collection of Information'' of this final rule with comment period.

We did not receive public comments on the financial impact of our proposals.

4. Effects of Changes in Requirements for the Rural Emergency Hospital Quality Reporting (REHQR) Program

a. Background

We refer readers to the CY 2025 OPPS/ASC final rule with comment period (89 FR 94562 and 94563) for the previously estimated effects of changes to the REHQR Program for the CY 2025 reporting period and subsequent years. For the CY 2026 reporting period, we have estimated there will be 38 REHs required to report under the REHQR Program based on hospital conversions as of April 11, 2025. We use this number of REHs for our impact analyses knowing that more jurisdictions will pass or amend necessary legislation enabling transitions, acknowledging that the number of conversions could be less than or significantly greater than this estimate with time.

b. Impact of CY 2026 OPPS/ASC Final Rule Policies

We are finalizing: (1) removal of the HCHE measure beginning with the CY 2025 reporting period/CY 2027 program determination; (2) removal of the Screening for SDOH measure beginning with the CY 2025 reporting period/CY 2027 program determination; (3) removal of the Screen Positive Rate for SDOH measure beginning with the CY 2025 reporting period/CY 2027 program determination; and (4) adoption of the Emergency Care Access & Timeliness eCQM beginning with the CY 2027 reporting period/CY 2029 program determination as optional in lieu of reporting the chart-abstracted Median Time for Discharged ED Patients. In section XVI.D. of this final rule with comment period, we also updated our ECE policy for the REHQR Program. This update will explicitly include extensions as a type of extraordinary circumstances relief option, in addition to exceptions. Because the process for requesting or granting an ECE will remain the same as the current ECE process, these updates will not affect burden associated with the submission of the ECE form.

We refer readers to section ''XXIII.B. Collection of Information'' of this final rule with comment period for a detailed discussion of the calculations estimating the changes to the information collection and reporting burden for finalized data requirements under the REHQR Program for the estimated 38 REHs. As shown in summary tables in section XXIII.B.6. of this final rule with comment period, we estimate a total information collection and reporting burden decrease of 14,813 hours at a savings of $380,235 annually associated

with our policies for the CY 2027 reporting period/CY 2029 program determination and subsequent years compared to our currently approved information collection burden estimates under OMB control number 0938–1454 (expiration date April 30, 2027).

In section XVI.B.1. of this final rule with comment period, we adopted the Emergency Care Access & Timeliness eCQM. Similar to the effects associated with the STEMI eCQM finalized for the Hospital OQR Program in the CY 2022 OPPS/ASC final rule with comment period (86 FR 63984 and 63985), we believe that costs associated with adoption of eCQMs are multifaceted and include not only the burden associated with reporting but also the costs associated with implementing and maintaining program requirements, such as maintaining measure specifications in REHs' EHR systems for the eCQMs used in the REHQR Program. Because REHs will have the option to report the Emergency Care Access & Timeliness eCQM or the more burdensome Median Time for Discharged ED Patients measure, we believe REHs will be positively impacted by the decreased effort required to report the Emergency Care Access & Timeliness eCQM in the long-term following initial implementation in the EHR.

Regarding the remaining policies, we do not believe these policies will result in any additional economic impact beyond those discussed in section ''XXIII.B. Collection of Information'' of this final rule with comment period.

We did not receive public comments on the financial impact of our proposals.

5. Effects of Changes in Requirements for the Ambulatory Surgical Center Quality Reporting (ASCQR) Program

a. Background

We refer readers to the CY 2025 OPPS/ASC final rule with comment period (89 FR 94563) for the previously estimated effects of changes to the ASCQR Program for the CY 2025 reporting period and subsequent years. Based on the most recent analysis of the CY 2025 payment determination data, we found that, of the 6,012 ambulatory surgical centers (ASCs) that were actively billing Medicare, 4,271 were required to participate in the ASCQR Program. Of the 1,741 ASCs not required to participate in the program, 319 ASCs did so and met full requirements. On this basis, we estimate that 4,590 ASCs (4,271 + 319) will submit data for the ASCQR Program for the CY 2026 reporting period and subsequent years unless otherwise noted. We note that this estimate is an increase of 115 ASCs from our estimate of 4,475 provided in the CY 2025 OPPS/ASC final rule with comment period (89 FR 94563) due to more recent data analysis regarding numbers of eligible ASCs.

b. Impact of CY 2025 OPPS/ASC Final Rule Policies

We are finalizing: (1) removal of the COVID–19 Vaccination Coverage Among HCP Measure beginning with the CY 2024 reporting period/CY 2026 payment determination; (2) removal of the Facility Commitment to Health Equity (FCHE) measure beginning with the CY 2025 reporting period/CY 2027 payment determination; (3) removal of the Screening for SDOH measure beginning with the CY 2025 reporting period/CY 2027 payment determination; and (4) removal of the Screen Positive Rate for SDOH measure beginning with the CY 2025 reporting period/CY 2027 payment determination.

In section XVII.D. of this final rule with comment period, we also updated our ECE policy for the ASCQR Program. This update will explicitly include extensions as a type of extraordinary circumstances relief option, in addition to exceptions. Because the process for requesting or granting an ECE will remain the same as the current ECE process, these updates will not affect burden associated with the submission of the ECE form.

We refer readers to section ''XXIII.C. Collection of Information'' of this final rule with comment period for a detailed discussion of the calculations estimating the changes to the information collection and reporting burden for proposed data requirements under the ASCQR Program for the estimated 4,590 program-eligible ASCs. As shown in summary tables in section XXIII.C.7. of this final rule with comment period, we estimate a total information collection and reporting burden decrease of 731,340 hours at a cost of $18,811,786 annually associated with our policies for the CY 2029 reporting period/CY 2031 payment determination and subsequent years compared to our currently approved information collection burden estimates under OMB control number 0938–1270 (expiration date July 31, 2027). We also estimate a decrease of between 36,720 hours at a savings of $2,074,680 and 41,310 hours at a savings of $2,420,766 in information collection burden associated with the removal of the COVID–19 Vaccination Among HCP measure compared to the currently approved information collection burden estimates and under OMB control number 0920–1317 (expiration date January 31, 2028).

We do not believe these policies will result in any additional economic impact beyond those discussed in section ''XXIII.C. Collection of Information'' of this final rule with comment period.

We did not receive public comments on the financial impact of our proposals.

6. Effects of Requirements for the Overall Hospital Quality Star Rating

a. Background

In section XVIII. Overall Hospital Quality Star Rating Modification to Emphasize the Safety of Care Measure Group of this final rule with comment period, we discussed our finalized policies as they relate to the Overall Hospital Quality Star Rating methodology. The Overall Hospital Quality Star Rating uses measures that are publicly reported on the provider comparison tool on *Medicare.gov* (*https://www.medicare.gov/care-compare/*) under the public reporting authority of each individual hospital program furnishing measure data. The burden associated with measures included in the Overall Hospital Quality Star Rating, including forms used to request withholding of publicly reported measure data and the Overall Hospital Quality Star Rating (for CAHs), is already captured in respective hospital programs' burden estimates and represents no increased information collection burden to hospitals.

b. Impact of CY 2026 OPPS/ASC Proposed Rule Policies

In this CY 2026 OPPS/ASC proposed rule, we are using the most recent data from the Bureau of Labor Statistics, which reflects a median hourly wage of $24.16 per hour for a Medical Records and Health Information Technician professional.[534] We calculate the cost of overhead, including fringe benefits, at 100 percent of the hourly wage estimate, consistent with the previous year. This is necessarily a rough adjustment, both because fringe benefits and overhead costs vary significantly from employer-to-employer and because methods of estimating these costs vary widely from study-to-study. Therefore, we believe that doubling the hourly wage rate ($24.16 × 2 = $48.32) to estimate total cost is a reasonably accurate estimation method. Accordingly, we calculate the cost burden to hospitals using a wage

[534] Bureau of Labor Statistics, U.S. Department of Labor, Occupational Outlook Handbook, Medical Records Specialists, at *https://www.bls.gov/ooh/healthcare/medical-records-and-health-information-technicians.htm.*

plus benefits estimate of $48.32 per hour. We estimate that the non-information collection burden associated with all non-Veterans Health Administration (VHA) hospitals reviewing their Overall Hospital Quality Star Rating preview report prior to public reporting to be 2 hours per hospital, which includes time to review the report and ask any questions about the calculation necessary to increase comprehension. Estimating that approximately 4,600 hospitals would receive an Overall Hospital Quality Star Rating hospital specific report (HSR), regardless of if they meet the reporting thresholds to be assigned a star rating, we estimate the overall non-information collection burden to be $444,544 annually ($48.32 × 2 hours per preview report × once per year × 4,600 hospitals). For CAHs specifically, which are included in the estimate above, we estimate that 1,300 CAHs would be eligible for an Overall Hospital Quality Star Rating, which represents a burden of $125,632 annually (1,300 CAHs × 2 hours per preview report × once per year × $48.32).

Within this rule, for CY 2026 Overall Hospital Quality Star Rating and subsequent years, we finalized our policy to make the following two-stage methodological updates to emphasize the importance of the Safety of Care measure group to the Overall Hospital Quality Star Rating methodology: (1) implement a 4-star cap for poor performance in the Safety of Care measure group (lowest performing quartile) for the 2026 Star Rating, and (2) implement a blanket 1-star reduction for poor performance in the Safety of Care measure group (lowest performing quartile) for the 2027 Star Rating and thereafter.

To simulate the impact of the proposed Overall Hospital Quality Star Rating methodology, we used the July 2024 refresh of the Overall Hospital Quality Star Rating (the most recent publicly released results as of the writing of the proposal) to describe the overall distribution and reclassification of the Overall Hospital Quality Star Rating across different types of hospitals. The update to the Overall Hospital Quality Star Rating methodology in CY 2026 that will limit hospitals in the lowest quartile of Safety of Care (based on at least three measure scores) to a maximum of 4 out of 5 stars (Stage 1 methodological change) would have resulted in 14 (0.30 percent) hospitals receiving a lower Overall Hospital Quality Star Rating in the July 2024 simulation. The update to the Overall Hospital Quality Star Rating methodology beginning in CY 2027 that will reduce the Overall Hospital Quality Star Rating of any hospital in the lowest quartile of Safety of Care (based on at least three measure scores) by 1 star, to a minimum 1-star rating (Stage 2 methodological change) would have resulted in 459 (9.90 percent) hospitals receiving a lower Overall Hospital Quality Star Rating (in the simulation).

Utilizing the Stage 1 methodology update, fewer hospitals would have received a different Overall Hospital Quality Star Rating and changes in the Overall Hospital Quality Star Rating are less easily attributed to specific hospital characteristics, as very few hospitals of any type would be affected. In contrast, the Stage 2 methodological update resulted in teaching hospitals, non-safety-net hospitals, VHA hospitals, non-CAHs, large hospitals (100+ beds), and non-specialty hospitals being more likely to receive a lower Overall Hospital Quality Star Rating in the July 2024 simulation. (Table 173).

BILLING CODE 4120–01–P

TABLE 173: IMPACT ASSESSMENT OF PROPOSED METHODOLOGICAL ADJUSTMENTS BY HOSPITAL CHARACTERISTICS, JULY 2024 SIMULATION

Characteristic	N (%)	N Rated (Row %)	N Rated & 3+ Safety measures (%)	N Rated & 3+ measures & Q1 Safety (%)	N Capped* ^ (%) (Stage 1)	N Blanket 1-Star Reduction* (%) (Stage 2)
All hospitals	4,628 (100%)	2,847 (61.5%)	2,475 (53.5%)	595 (12.9%)	14 (0.30%)	459 (9.9%)
Teaching Status						
Teaching	1,284 (27.7%)	1,234 (96.1%)	1,204 (93.8%)	269 (21.0%)	6 (0.47%)	211 (16.4%)
Non-Teaching	3,177 (68.6%)	1,496 (47.1%)	1,185 (37.3%)	293 (9.2%)	4 (0.13%)	222 (7.0%)
Safety-net Status						
Safety-net	1,199 (25.9%)	468 (39.0%)	383 (31.9%)	115 (9.6%)	2 (0.17%)	83 (6.9%)
Non-Safety-net	3,239 (70%)	2,250 (69.5%)	1,999 (61.7%)	445 (13.7%)	8 (0.25%)	348 (10.7%)
Veterans' hospitals						
VHA hospital	136 (2.9%)	113 (83.1%)	82 (60.3%)	33 (24.3%)	4 (2.94%)	26 (19.1%)
Non-VHA	4,490 (97.0%)	2,734 (60.9%)	2,393 (53.3%)	562 (12.5%)	10 (0.22%)	433 (9.6%)
Critical Access Hospitals						
CAH	1,340 (29.0%)	164 (12.2%)	15 (1.1%)	3 (0.2%)	0 (0%)	2 (0.1%)
Non-CAH	3,286 (71.0%)	2,683 (81.6%)	2,460 (74.9%)	592 (18.0%)	14 (0.43%)	457 (13.9%)
Bed Size						
1-99 Beds	2,511 (54.3%)	854 (34.0%)	535 (21.3%)	139 (5.5%)	5 (0.20%)	116 (4.6%)
100+ Beds	1,942 (42.0%)	1,876 (96.6%)	1,854 (95.5%)	423 (21.8%)	5 (0.26%)	317 (16.3%)
Geographic Location						
Urban	2,060 (44.5%)	1,626 (78.9%)	1,559 (75.7%)	362 (17.6%)	4 (0.19%)	280 (13.6%)
Rural	2,399 (51.8%)	1,104 (46.0%)	830 (34.6%)	200 (8.3%)	6 (0.25%)	153 (6.4%)
Specialty status						
Specialty	122 (2.6%)	32 (26.2%)	27 (22.1%)	4 (3.3%)	0 (0%)	3 (2.5%)
Non-Specialty	4,317 (93.3%)	2,686 (62.2%)	2,355 (54.6%)	556 (12.9%)	10 (0.23%)	428 (9.9%)

*Capped is the number and proportion of hospitals impacted by the proposed 4-star cap for rated hospitals reporting three or more safety measures and performing in the lowest quartile of Safety of Care measure group. Star Reduction is the number and proportion of hospitals impacted by the proposed blanket 1-Star reduction for rated hospitals reporting three or more safety measures and performing in the lowest quartile of Safety of Care measure group.

^ Certain hospital characteristics (teaching status, safety net status, bed size, geographic location) are only available for non-VHA hospitals.

BILLING CODE 4120–01–C

7. Effects of a Final Market-Based MS–DRG Relative Weight Methodology

In section XX. of this final rule with comment period we are finalizing the adoption of a market-based methodology for determining the MS–DRG relative weights beginning in FY 2029 utilizing the median payer-specific negotiated charge information we will be collecting on the cost report. More specifically, the Medicare cost report will collect the median of the payer-specific negotiated charge that the hospital has negotiated with all of its MAOs, by MS–DRG, effective for cost reporting periods ending on or after January 1, 2026.

We note that the estimated total annual burden hours for this final policy are as follows: 3,038 hospitals times 20 hours per hospital equals 60,760 annual burden hours and $4,857,458.20. We refer readers to section XXIII.E. of this final rule with comment period for further analysis of this assessment.

Under the finalized methodology, we will apply a budget neutrality factor to ensure that the overall payment impact of any MS–DRG relative weight changes is budget neutral, as required by section 1886(d)(4)(C)(iii) of the Act and consistent with our current practice.

As discussed in the CY 2026 OPPS/ASC proposed rule, similar to our discussion in the economic analysis section of the FY 2021 IPPS/LTCH PPS final rule (85 FR 59089 through 59090) regarding the market-based MS–DRG relative weight methodology, once we have access to the weighted payer-specific negotiated charge information at the MS–DRG level from the cost reports we would be able to more precisely estimate the payment impact of adopting this market-based MS–DRG relative weight methodology for payments beginning in FY 2029. We also stated that we intended to provide these more precise estimates prior to the FY 2029 effective date. However, to explore the potential impacts more generally, in the CY 2026 OPPS/ASC proposed rule we explained that we conducted a literature search to compare the payment rates of Medicare FFS, MA organizations, and other commercial payers, which is discussed in section XX.B. of this final rule with comment period. As discussed in that section, the payer-specific charges negotiated between hospitals and MAOs are generally well-correlated with Medicare IPPS payment rates, although in the future this may change over time for some services. As discussed in response to comments on the impacts in section XX.C.3. of this final rule with comment period, we continue to believe that if market-based data (median payer-specific negotiated charges for MA organizations) are incorporated into the calculation of the MS–DRG relative weights, initially there will be limited impact on the relative weights given the current similarity between MA organization rates and Medicare FFS rates. To the extent the data shows that there would be more than a limited impact on the relative weights initially, which we do not believe will be the case, we intend to provide an opportunity for the public to review the data we collect prior to implementation. This will allow for additional discussions, public review, and feedback on utilizing this market-based data in the MS–DRG relative weight methodology. We will continue to provide impact analyses of changes in the MS–DRG relative weights in the annual IPPS rulemaking. Also, as discussed in the CY 2026 OPPS/ASC proposed rule we expect for some period of time following implementation of this market-based MS–DRG relative weight methodology to continue to estimate and publicly provide the MS–DRG relative weights calculated using the current methodology for informational purposes.

As previously noted, once we have access to the payer-specific negotiated charge information at the MS–DRG level, we can more precisely estimate the potential payment impact, which we intend to do in future rulemaking, prior to the FY 2029 effective date of the market-based MS–DRG relative weight methodology. As under the current methodology, the impact of any MS–DRG relative weight changes on an individual hospital would depend on the mix of services provided by that particular hospital.

8. Graduate Medical Education Accreditation

In section XXI. of this final rule with comment period, we are finalizing, with modification, our proposal that accreditors may not require as part of accreditation or otherwise encourage institutions to put in place diversity, equity, and inclusion programs that encourage unlawful discrimination on the basis of race or other violations of Federal law. Specifically, we are changing the definition of ''approved medical residency program'' and equivalent terms in the regulations to state that accrediting organizations may not use accreditation criteria that promote or encourage discrimination on the basis of race, color, national origin, sex, age, disability, or religion, including the use of those characteristics or intentional proxies for those characteristics as a selection criterion for employment, program participation, resource allocation, or similar activities, opportunities, or benefits. The effective date of this policy is January 1, 2026. We believe there is no financial impact associated with this policy because, as of January 1, 2026, we do not expect that current or future accrediting organizations would continue to or newly require or otherwise encourage institutions to put in place diversity, equity, and inclusion programs that encourage unlawful discrimination on the basis of race or other violations of Federal law.

9. Effects Relating to Hospital Price Transparency

a. Background

Since the January 1, 2021, effective date of the CY 2020 Hospital Price Transparency (HPT) final rule, hospitals have been required to make their standard charges available to the public. Consistent with Executive Order 14221, and to further advance the goals articulated in previous HPT rulemaking of requiring hospitals to make meaningful price information available to consumers, employers, policymakers, and others to support a more competitive, innovative, and affordable healthcare system, we proposed several updates to the HPT regulations in the CY 2026 OPPS/ASC proposed rule to enhance the clarity and standardization of hospital disclosure of standard charges. We are finalizing with modifications revisions to § 180.20 to add definitions for ''tenth (10th) percentile allowed amount'', ''median allowed amount'', and ''ninetieth (90th) percentile allowed amount,'' which are values a hospital will encode when a payer-specific negotiated charge is based on a percentage or algorithm, to more accurately reflect the distribution of actual amounts that a hospital has received for an item or service. In tandem with that, we are finalizing revisions to § 180.50 to remove the requirement for hospitals to disclose the estimated allowed amount, and, instead, require hospitals to disclose the 10th percentile, median, and 90th percentile allowed amounts, as well as the count of allowed amounts, in MRFs when payer-specific negotiated charges are based on percentages or algorithms. We are also finalizing, with modification, our proposal to require that hospitals use electronic data interchange (EDI) 835 electronic remittance advice (ERA) transaction data or an alternative, equivalent source of remittance data to

calculate and encode the allowed amounts. We are finalizing our proposals, with some modifications, to require that hospitals comply with specific instructions regarding the methodology, including a lookback period, that must be used to calculate those amounts.

Additionally, we are finalizing with modifications our proposed revisions to § 180.50 to require hospitals to attest that in the MRF, to the best of the hospital's knowledge and belief, the hospital has included all applicable standard charge information in accordance with the requirements of this section and the information encoded is true, accurate, and complete as of the date in the file. We are finalizing our proposal that hospitals attest in the MRF that the hospital has included all applicable payer-specific negotiated charges as dollars that can be expressed as a dollar amount, and for payer-specific negotiated charges that are not knowable in advance or cannot be expressed as a dollar amount, the hospital has provided in the MRF all necessary information available to the hospital for the public to be able to derive a dollar amount, including, but not limited to, the specific fee schedule or components referenced in such percentage, algorithm, or formula. Furthermore, we are finalizing our proposal that hospitals encode in the MRF the name of the hospital chief executive officer, president, or senior official designated to oversee the encoding of true, accurate, and complete data. In addition, to advance the comparability of HPT data with other healthcare data, we are finalizing our proposal to require that hospitals encode their organizational, or Type 2, National Provider Identifier(s) (NPIs) in the MRFs.

Finally, to encourage faster resolution and payment of CMPs, and in exchange for a hospital's admission of having violated HPT requirements, we are finalizing our proposal with clarifying edits to update § 180.90 to reduce the amount of a CMP by 35 percent, under certain conditions, when a hospital waives its right to an ALJ hearing. These changes aim to improve transparency in hospital pricing, facilitate efficient enforcement of the HPT requirements, and empower consumers with actionable pricing information.

We are finalizing an effective date of January 1, 2026, for the revisions at § 180.50, including removal of the estimated allowed amount, disclosure of the 10th percentile, median, 90th percentile allowed amounts and the count of allowed amounts, the attestation requirements, and inclusion of NPIs. However, we will delay enforcement of these finalized policies until April 1, 2026. We are finalizing at new § 180.90(c)(4) that, effective beginning January 1, 2026, the amount of a CMP would be reduced by 35 percent should a hospital submit to CMS a written notice requesting to waive its right to a hearing under § 180.100 within 30 calendar days of the date of the notice of imposition of the CMP.

b. Overall Estimated Burden on Hospitals Due to HPT Requirements

To analyze the costs of the requirements, we used an updated baseline that assumes the existing requirements (those adopted in the CY 2020 HPT final rule, the CY 2022 OPPS/ASC final rule with comment period and the CY 2024 OPPS/ASC final rule with comment period and still codified at 45 CFR part 180) remain in place over the time horizon of this RIA.

In the CY 2024 OPPS/ASC final rule with comment period, we estimated an ongoing annual national burden of 383,292 hours (54 hours × 7,098 hospitals) and an annual national cost of $32,370,571 dollars ($4,560.52 per respondent × 7,098 hospitals), which represented a $10,698,069 ($32,370,571 − $21,672,502) increase over our previous estimated ongoing national annual burden for subsequent years for hospitals to update their standard charge information in the CMS standard template and conform to the data dictionary.

We indicated in the CY 2026 OPPS/ASC proposed rule, we believe hospitals would incur an initial one-time cost to update their processes and systems to (1) identify and collect the newly proposed data elements, and (2) encode the standard charge information for the newly proposed data elements in the CMS standard template. To implement the proposed requirements, we estimated that it would take a Business Operations Specialist (BLS 13–1000), on average, 4 hours (at a cost of $87.52 per hour) to develop and update the necessary processes and procedures and develop the requirements to implement the proposed data elements and a General and Operations Managers (BLS 11–1021), on average, 1 hours (at a cost of $128.00 per hour) to review the updates.

Therefore, we stated in the CY 2026 OPPS/ASC proposed rule that we believed the one-time burden estimate to be 37,080 hours for all hospitals (5 hours × 7,416 hospitals) at a cost of $3,545,441.28 (7,416 hospitals × [($87.52 × 4 hours) + ($128.00 × 1 hours)]); see Table 163. As we indicated in the CY 2026 OPPS/ASC proposed rule, we believe the benefits to users of the MRF of having this additional information would justify the initial one-time burden to hospitals to update their processes and systems to identify and collect the newly proposed data elements and encode the standard charge information for the newly proposed data elements in the CMS standard template.

For this final rule with comment period, we updated the number of hospitals estimated to be subject to the HPT requirements using the same methodology as we did in the CY 2024 OPPS/ASC final rule with comment period. There were 8,340 hospitals most recently identified in the HIFLD hospital dataset.[535] We subtracted 374 hospitals HIFLD identified as ''closed'' as well as hospitals that are deemed under the regulation to have met requirements which included 352 Federally owned non-military and military hospitals, and 198 State, local, and district run forensic hospitals. We therefore estimate that, for this final rule with comment period, 7,416 hospitals would meet the HPT regulation's definition of ''hospital'' at 45 CFR 180.20.

After consideration of public comments, we are increasing both our one-time and ongoing annual burden estimates as demonstrated in section ''XXIII. Collection of Information''. To establish processes and requirements related to the new data elements we are finalizing in this final rule with comment period, we now estimate that it will take a Business Operations Specialist (BLS 13–1000), on average, 8 hours (at a cost of $87.52 per hour) to develop and update the necessary processes and procedures and develop the requirements to implement the proposed data elements, a General and Operations Managers (BLS 11–1021), on average, 2 hours (at a cost of $128.00 per hour) to review the updates, and a Chief Executive (BLS 11–1011) 2 hours (at a cost of $252.82) to review and attest to the accuracy and completeness of the data in the MRF. We added the labor category for Chief Executives in response to comments on the CY 2026 OPPS/ASC proposed rule, addressed in an earlier section of this final rule with comment period, that suggested we failed to account for the burden for the Chief Executive Officer, president, or senior official designated to oversee the encoding of true, accurate, and complete data in the MRF to review and attest to

[535] HIFLD Open was discontinued on August 26, 2025. This information is now accessible via the Geospatial Information Infrastructure (GII).

the information. Therefore, we believe the one-time burden estimate to implement the new requirements finalized in this final rule with comment period to be 88,992 hours for all hospitals (12 hours × 7,416 hospitals) at a cost of $10,840,708.80 (7,416 hospitals × [($87.52 × 8 hours) + ($128.00 × 2 hours) + ($252.82 × 2 hours]). For the annual burden, we added the labor category for Chief Executives in response to comments on the CY 2026 OPPS/ASC proposed rule, and we now estimate a total of 415,296 hours for all hospitals (7,416 hospitals × 56 hours) at a cost of $40,269,176.60 (7,416 hospitals × [($128/hour × 2 hours) + ($87.52/hour × 40 hours) + ($97.30/hour × 12 hours) + ($252.82/hour × 2 hours]), to include the burden for the senior hospital official. The annual burden is increased by 2 hours from 54 hours to 56 hours per hospital as compared to the CY 2024 OPPS/ASC final rule with comment period, which reflects the additional burden annually associated with the new requirements finalized in this final rule with comment period.

c. Benefit of Policies

As indicated in the CY 2026 OPPS/ASC proposed rule (90 FR 33856), although we cannot quantify the benefits of including additional data elements and encoding such data in the CMS required MRF template, we believe any opportunity to provide further context about standard charges, including through the addition of contextual information when the payer-specific negotiated charge is based on a percentage or algorithm, will be helpful to all consumers of the MRF as they analyze the data to identify cost savings and ways to stimulate market competition. We believe the attestation statement we are finalizing and the requirement to add the name of a senior official to publicly attest to the accuracy and completeness of the data encoded within the file will reduce public confusion related to whether all standard charges for hospital items and services are included within the MRF as dollar amounts, if possible, and the hospital has provided all necessary information available to the hospital for the public to be able to derive the dollar amount, including, but not limited to, the specific fee schedule or components referenced in such percentage, algorithm or formula. We also believe the addition of the NPI data element will catalyze more fulsome HPT and Transparency in Coverage (TiC) analysis.

(1) Benefits to Hospitals

As indicated in the CY 2026 OPPS/ASC proposed rule (90 FR 33856), hospitals, either directly or through management or actuarial consultants, are consuming the data released in the MRFs for their own operational purposes. Hospitals consume and analyze MRF data to improve negotiation strategies with employers and third party payers, improve contracting strategies, and demonstrate value in the negotiation process.[536] [537] Hospitals also use the MRF data to determine pricing strategies and to identify and hone their competitive advantage,[538] as well as to improve their revenue cycle efficiency.[539] Further, we continue to believe, as indicated in the CY 2026 OPPS/ASC proposed rule that, for those hospitals that are assessed a CMP, the reduction of the CMP we are finalizing if the hospital elects not to appeal CMS' findings, would offset some of the hospital financial burden, including legal fees and costs associated with challenging the imposition—including requesting and defending a hearing before an Administrative Law Judge (ALJ) and any subsequent appeals.

(2) Benefits to Other Interested Parties

As discussed in the CY 2020 HPT final rule (84 FR 65538) and the CY 2026 OPPS/ASC proposed rule (90 FR 33856), we believe public access to hospital standard charge information can be useful to the public, including patients who need to obtain services from a hospital, consumers of healthcare who wish to view hospital standard charge information prior to selecting a hospital, employers and State governments searching for lower cost options for health care coverage, and other users of the MRF who may develop consumer-friendly price transparency tools or perform price analyses to uncover disparities or drive value-based policy development. Since the effective date of the HPT regulations, innovators have been compiling HPT data sets and making them available for employers, researchers, and journalists to perform cost comparison studies and publish findings.

As discussed in the CY 2026 OPPS/ASC proposed rule (90 FR 33856 through 33857), feedback from interested parties, specifically innovators and researchers, has illuminated the need to detangle complex hospital contracting methods through the provision of data elements that help define the algorithm or percentage set forth in hospital MRFs. The allowed amount data elements we are finalizing in this final rule with comment period will support a better understanding of the range of payer-specific negotiated charge dispersion, which would further assist employers and consumers to understand a hospital's value as compared to other hospitals, stimulating competition and potentially resulting in price convergence to drive more predictable and consistent health care costs.[540]

With regard to the proposals we are finalizing in this final rule with comment period to strengthen the affirmation statement requirement, beginning January 1, 2026, by replacing it with an attestation in the MRF that would contain new specifications (relative to existing affirmation requirements) and to require hospitals to encode the name of the chief executive officer, president or senior official designated to oversee the encoding of true, accurate and complete data in the MRF, we continue to believe they will provide the necessary reassurance that hospitals have provided in their MRFs meaningful, accurate information to users of the MRF about their standard charges for health care items and services.

With regard to the NPI data element, as indicated in the CY 2026 OPPS/ASC proposed rule (90 FR 33857), including identifiers used for financial transactions in the MRF will make it easier for key participants in price negotiations (for example, employers and payers) to programmatically identify hospitals in their internal financial databases, such as claims data,

to conduct more in-depth payment and volume analyses to support contract negotiations and potentially reduce healthcare costs for consumers. We believe requiring a standard identifier will also help CMS, researchers, and innovators reduce dependence on manual processes for identifying the hospital and the hospital locations and increase opportunities for automated processes.

d. Limitations of Our Analysis

As stated in the CY 2024 OPPS/ASC final rule with comment period (88 FR 82174) and the CY 2026 OPPS/ASC proposed rule (90 FR 33857), it would be difficult for us to conduct a detailed quantitative analysis of the impact of requiring hospitals to make HPT information publicly available, given the lack of studies at the national level on the impact of the HPT regulations. Thus, in assessing the impact of our proposals, we rely on qualitative evidence of, and experiences with, the use of the public HPT data and feedback from consumers of the MRFs, as well as our own experiences reviewing the MRFs. Specifically, as discussed in the CY 2026 OPPS/ASC proposed rule, we have noted through our own reviews that many hospital MRFs lack dollar values when the standard charge for an item or service is based on an algorithm or percentage and have heard from interested parties the limitations of drawing meaningful comparisons without necessary context to help understand the standard charge in dollars for such items or services. We also have received comments from MRF users since the effective date of the 2024 OPPS/ASC final rule with comment period indicating that requiring hospitals to make a good faith effort did not go far enough to convey CMS' intent that all standard charge information available must be encoded in the MRF, with commenters suggesting our requirement to allow a good faith estimate may actually deter hospitals from providing fully complete and accurate standard charge data in their MRF. As we indicated in the proposed rule, we also heard users of the MRFs who questioned a hospital's inability to encode dollar amounts for the payer-specific negotiated charge data elements, and whether the complex contracting methodologies used by hospitals and payer organizations could only be expressed through an algorithm or formula, and not a dollar amount. We noted that we understand that users of the MRF may find the addition of algorithms make price comparisons among hospitals challenging when only an algorithm is available because the algorithms may not be consumer friendly. We continue to believe that our proposal to require an attestation, as opposed to merely requiring an affirmation statement, may enhance users' confidence that the data encoded is accurate and complete.

In addition, as indicated in the CY 2026 OPPS/ASC proposed rule (90 FR 33857), in discussions with innovators and researchers, we have heard that the addition of an NPI as a hospital unique identifier would allow more effective data crosswalking between hospital HPT MRFs and TiC MRFs, as well as to other CMS datasets that contain hospital quality data. We continue to believe this regulation would provide the additional context needed for consumers of the MRFs to create meaningful dollar comparisons that would ultimately benefit consumers through development of cost comparison tools, increased competition, or improved price negotiations with employers.

e. Alternatives Considered

The revisions to the HPT regulations we are finalizing in this final rule with comment period are designed to further address some of the barriers identified that limit price transparency, with a goal of increasing competition among healthcare providers to bring down costs. Specifically, this final rule with comment period aims to make meaningful price information via hospital standard charges more readily available to the public by providing additional contextual information, displayed as a dollar value, in those instances where standard charges are based on a percentage or an algorithm, as well as provide needed hospital identifier values to enable innovators and researchers to combine the HPT data with other claims and quality data to further empower consumer decision-making. We considered several alternative approaches, including other methodologies and lookback periods for calculating the allowed amount data elements, and whether to display specific counts of allowed amounts or ranges. We discuss these alternatives in section XIX. of this final rule with comment period. Specifically, we considered EDI 835 ERA transaction data lookback period alternatives of 3 months, 6 months, as well as requiring hospitals to use a rolling 12-month period prior to when the MRF posted. Based on comments received, we are ultimately finalizing a lookback period of no less than 12 months and no longer than 15 months. We sought comment on data sources other than the EDI 835 ERA transaction data to use to derive the allowed amount data elements. We received comments that not all hospitals have access to the EDI 835 ERA data for every item and service and that some payers provide paper or alternative electronic sources of remittance data. Based on comments, we are finalizing that hospitals use EDI 835 ERA transaction data or an alternative, equivalent source of remittance data to calculate and encode the allowed amounts. We also considered whether hospitals could encode a range of allowed amounts, as opposed to the exact count of allowed amounts, to achieve our objective of providing needed context to the allowed amount data element values. We received one comment indicating that adopting a range would be more burdensome than encoding the exact amount and are thus finalizing that hospitals must encode the count of allowed amounts.

We considered several alternative options to updating the required affirmation within the MRF, as discussed in section XIX. of this final rule with comment period. We considered asking the official to submit their MRF attestation directly to CMS, using a CMS developed template that would provide evidence of the accuracy and completeness of the MRF, and we also considered requiring the hospitals to post a more detailed attestation document that is signed by a senior official on the publicly available website that hosts the MRF. However, after consideration of public comments, we continue to believe these alternatives to be less useful than our proposals as they would either not meet the stated need to alert the public to the hospital's declaration of the accuracy and completeness of the data encoded within the MRF, or the attestation would not ''travel'' inside the MRF like the affirmation statement.

In addition, we considered different types of hospital identifiers, specifically the Employer Identification Number and the CMS Certification Number. Ultimately, however, we continue to believe that the alternatives would either limit the usefulness of hospital standard charge information or increase burden for hospitals without any additional benefit for users of MRF standard charge information.

Comment: Many commenters expressed concern about the financial and administrative burden for hospitals to comply with the proposed hospital price transparency requirements. Several commenters commented on the alternatives to our proposals outlined earlier in this section and section XIX. (Updates to Requirements for Hospitals to Make Public a List of Their Standard Charges section) that we considered.

Response: We refer readers to the more substantial discussion of these comments and our responses to these comments in section XIX. (Updates to Requirements for Hospitals to Make Public a List of Their Standard Charges section) and section ''XXIII. Collection of Information''. After consideration of the public comments, we are finalizing with modifications our proposals and our burden estimates.

D. Regulatory Review Cost Estimation

Due to the uncertainty involved with accurately quantifying the number of entities that will review the rule, we assume that the total number of unique commenters on this year's proposed rule will be the number of reviewers of this final rule with comment period. We acknowledge that this assumption may understate or overstate the costs of reviewing this rule. It is possible that not all commenters reviewed this year's rule in detail, and it is also possible that some reviewers chose not to comment on the proposed rule. For these reasons we believe that the number of past commenters would be a fair estimate of the number of reviewers of this rule. We welcomed any public comments on the approach in estimating the number of entities that would review the proposed rule. We did not receive any public comments specific to our solicitation.

We also recognize that different types of entities are in many cases affected by mutually exclusive sections of this final rule with comment period, and therefore for the purposes of our estimate we assume that each reviewer reads approximately 50 percent of the rule. We sought comments on this assumption. We did not receive any public comments specific to our solicitation.

Using the wage information from the Bureau of Labor Statistics (BLS) for medical and health service managers (Code 11–9111), we estimate that the cost of reviewing this rule is $113.42 per hour, including overhead and fringe benefits (*https://www.bls.gov/oes/current/oes_nat.htm*). Assuming an average reading speed, we estimate that it would take approximately 8 hours for the staff to review half of this final rule with comment period. For each entity that reviews the rule, the estimated cost is $907.36 (8 hours × $113.42). Therefore, we estimate that the total cost of reviewing this regulation is $2,760,189 ($907.36 × 3,042).

E. Regulatory Flexibility Act (RFA) Analysis

The RFA requires agencies to analyze options for regulatory relief of small entities, if a rule has a significant impact on a substantial number of small entities. For purposes of the RFA, we estimate that many hospitals and CAHs are considered small businesses either by the Small Business Administration's size standards with total revenues of $41.5 million or less in any single year or by the hospital's not-for-profit status. Most ASCs and most CMHCs are considered small businesses with total revenues of $16.5 million or less in any single year. While we note the limited availability of certain information for OPPS providers, we estimate that approximately 3,000 OPPS providers included in the impact analysis would be considered small entities. As the small entity category would represent the majority of the providers in the table, the individual impact table categories would provide more specific estimated hospital impacts. While the estimated impacts of this final rule with comment period vary by OPPS provider category, many of those categories will be within the range of 1.5 to 2.5 percent. For details, we refer readers to the Small Business Administration's ''Table of Size Standards'' at *http://www.sba.gov/content/small-business-size-standards*.

Individuals and States are not included in the definition of a small entity. As its measure of significant economic impact on a substantial number of small entities, HHS uses a change in revenue of more than 3 to 5 percent. We believe that this threshold will not be reached by the requirements in this final rule with comment period, since as noted earlier in this section, most estimated changes will be below that range. Therefore, the Secretary has certified that this final rule with comment period will not have a significant economic impact on a substantial number of small entities.

In addition, section 1102(b) of the Act requires us to prepare a regulatory impact analysis if a rule may have a significant impact on the operations of a substantial number of small rural hospitals. This analysis must conform to the provisions of section 604 of the RFA. For purposes of section 1102(b) of the Act, we define a small rural hospital as a hospital that is located outside of a metropolitan statistical area and has 100 or fewer beds. We estimate that this final rule with comment period will increase payments to small rural hospitals by approximately 2.4 percent; therefore, it should have a negligible impact on approximately 526 small rural hospitals. We note that the estimated payment impact for any category of small entity will depend on both the services that they provide as well as the payment policies and/or payment systems that may apply to them. Therefore, the most applicable estimated impact may be based on the specialty, provider type, or payment system.

The analysis above, together with the remainder of this preamble, provides a regulatory flexibility analysis and a regulatory impact analysis.

F. Unfunded Mandates Reform Act (UMRA)

Section 202 of the Unfunded Mandates Reform Act of 1995 (UMRA) also requires that agencies assess anticipated costs and benefits before issuing any rule whose mandates require spending in any 1 year of $100 million in 1995 dollars, updated annually for inflation. In 2025, that threshold is approximately $187 million. This final rule with comment period will not impose a mandate that will result in the expenditure by State, local, and Tribal Governments, in the aggregate, or by the private sector, of more than $187 million in any 1 year.''

G. Federalism

Executive Order 13132 establishes certain requirements that an agency must meet when it promulgates a proposed rule (and subsequent final rule) that imposes substantial direct requirement costs on State and local governments, preempts State law, or otherwise has Federalism implications. We have examined the OPPS and ASC provisions included in this final rule with comment period in accordance with Executive Order 13132, Federalism, and have determined that they will not have a substantial direct effect on State, local, or tribal governments, preempt State law, or otherwise have a federalism implication. As reflected in Table 166 of this final rule with comment period, we estimate that OPPS payments to governmental hospitals (including State and local governmental hospitals) will increase by 2.1 percent under this final rule with comment period. While we do not know the number of ASCs or CMHCs with government ownership, we anticipate that it is small. The analyses we have provided in this section of this final rule with comment period, in conjunction with the remainder of this document, demonstrate that this rule is consistent with the regulatory philosophy and principles identified in Executive Order 12866, the RFA, and section 1102(b) of the Act.

This final rule with comment period will affect payments to a substantial number of small rural hospitals and a small number of rural ASCs, as well as other classes of hospitals, CMHCs, and ASCs, and some effects may be

significant. However, as noted in section XXVI. of this final rule with comment period, this rule should not have a significant effect on small rural hospitals.

H. E.O. 14192, ''Unleashing Prosperity Through Deregulation''

Executive Order 14192, entitled ''Unleashing Prosperity Through Deregulation'' was issued on January 31, 2025, and requires that ''any new incremental costs associated with new regulations shall, to the extent permitted by law, be offset by the elimination of existing costs associated with at least 10 prior regulations''. This final rule with comment period, is neither an E.O. 14192 deregulatory action nor an E.O. 14192 deregulatory action, due to generating no more than *de minimis* costs.

This final regulation is subject to the Congressional Review Act provisions of the Small Business Regulatory Enforcement Fairness Act of 1996 (5 U.S.C. 801 *et seq.*) and has been transmitted to the Congress and the Comptroller General for review.

XXVII. Waiver of 60-Day Delay of Effective Date

In the absence of an appropriation for FY 2026 or a Continuing Resolution, the Federal government funding for HHS lapsed on October 1, 2025. During this funding lapse, only excepted or exempt operations have continued, which significantly delayed work on this final rule with comment period. CMS identified funding that allowed the agency to restore additional day-to-day operations on a temporary basis beginning on October 27, 2025. However, most of the work on this final rule with comment period was not completed in accordance with our usual schedule for final CY OPPS/ASC payment rules, which aims for an issuance date of November 1, followed by an effective date of January 1, to ensure that the policies are effective at the start of the calendar year to which they apply.

We ordinarily provide a 60-day delay in the effective date of final rules after the date they are issued. The 60-day delay in effective date required by the Congressional Review Act, 5 U.S.C. 801(a)(3), can be waived, however, if the agency finds, for good cause, that notice and public procedure thereon are impracticable, unnecessary, or contrary to the public interest, and the agency incorporates the finding and a brief statement of reasons in the rule issued, 5 U.S.C. 808(2). We believe it would be impracticable and contrary to the public interest to delay the effective date of the OPPS and ASC final rule with comment period for the following reasons.

If the effective date of this final rule with comment period mentioned above in this document is delayed by 60 days, the finalized OPPS and ASC payment system updated policies (including the Hospital Outpatient Quality Report (OQR) Program, Rural Emergency Hospital Quality Reporting (REHQR) Program, the Ambulatory Surgical Center Quality Reporting (ASCQR) Program, Overall Hospital Quality Star Rating, the Hospital Price Transparency, Medicare Severity Diagnostis Related Groups (MS–DRGs), and Graduate Medical Education (GME) policies will not be effective as of the beginning of the payment year, and CMS will be compelled to continue to use obsolete reimbursement rates which will disadvantage health care providers and suppliers. We note that our waiver of the delayed effective date only applies to the OPPS and ASC payment system policies that are adopted in this final rule with comment period.

In accordance with sections 1833(t)(9) and 1833(i)(2)(D) of the Act, the OPPS and the ASC payment systems are calendar year payment systems. We typically issue the OPPS/ASC final rule with comment period by November 1 of each year to both comply with the statutory requirement under section 1833(t)(9)(A) of the Act to annually review and update these payment systems on a calendar year basis and ensure 60-days' notice so that the payment policies for these systems are effective on January 1, the first day of the calendar year to which the policies are intended to apply. The Hospital OQR Program, REHQR Program, and the ASCQR Program are intended to align with the OPPS and the ASC payment systems, respectively.

In this final rule with comment period, we review and revise payment rates for specific services and adopt or revise other policies that relate to the OPPS/ASC payment system for CY 2026. Section 1833(t)(9)(A) of the Act requires that no less often than annually, the Secretary shall review and revise the groups, the relative payment weights, and the wage and other adjustments for outpatient services to take into account changes in medical practice, changes in technology, the addition of new services, new cost data, and other relevant information and factors. In addition, section 1833(i)(2)(A) of the Act states that the payment amount made for facility services furnished in connection with a surgical procedure furnished to an individual in an ambulatory surgical center should be reviewed and updated annually to take account of varying conditions in different areas.

We find that, in order to comply with the statutory requirements to annually review and update these payment systems and ensure that the payment policies for these systems are effective on an annual basis, we must ensure that the rule is effective no later than 1 full year after the effective date of the previous year's update (that is, January 1 of each year). Moreover, it is in the public interest to waive the 60-day delay of the effective date, so that providers, and suppliers are adequately reimbursed starting at the beginning of the calendar year.

Therefore, we find good cause exists to waive the 60-day delay in the effective date for this final rule with comment period.

Mehmet Oz, Administrator of the Centers for Medicare & Medicaid Services, approved this document on November 20, 2025.

List of Subjects

42 CFR Part 410

Diseases, Health facilities, Health professions, Laboratories, Medicare, Reporting and recordkeeping requirements, Rural areas, X-rays.

42 CFR Part 412

Administrative practice and procedure, Health facilities, Medicare, Puerto Rico, Reporting and recordkeeping requirements.

42 CFR Part 413

Diseases, Health facilities, Medicare, Puerto Rico, Reporting and recordkeeping requirements.

42 CFR Part 415

Health facilities, Health professions, Medicare, Reporting and recordkeeping requirements.

42 CFR Part 416

Health facilities, Health professions, Medicare, Reporting and recordkeeping requirements.

42 CFR Part 419

Hospitals, Medicare, Reporting and recordkeeping requirements.

45 CFR Part 180

Hospital Price Transparency.

For the reasons set forth in the preamble, the Centers for Medicare & Medicaid Services amends 42 CFR chapter IV as follows:

PART 410—SUPPLEMENTARY MEDICAL INSURANCE (SMI) BENEFITS

■ 1. The authority citation for part 410 continues to read as follows:

Authority: 42 U.S.C. 1302, 1395m, 1395hh, 1395rr, and 1395ddd.

■ 2. Section 410.27 is amended by revising paragraph (a)(1)(iv)(B)(*1*) to read as follows:

§ 410.27 Therapeutic outpatient hospital or CAH services and supplies incident to a physician's or nonphysician practitioner's service: Conditions.

(a) * * *

(1) * * *

(iv) * * *

(B) * * *

(*1*) For purposes of this section, direct supervision means that the physician or nonphysician practitioner must be immediately available to furnish assistance and direction throughout the performance of the procedure. It does not mean that the physician or nonphysician practitioner must be present in the room when the procedure is performed. For pulmonary rehabilitation, cardiac rehabilitation, and intensive cardiac rehabilitation services, direct supervision must be furnished as specified in §§ 410.47 and 410.49, respectively. The presence of the physician or nonphysician practitioner for the purpose of the supervision of pulmonary rehabilitation, cardiac rehabilitation, and intensive cardiac rehabilitation services includes virtual presence through audio/video real-time communications technology (excluding audio-only); and

* * * * *

■ 3. Section 410.28 is amended by revising paragraph (e)(2)(iii) to read as follows:

§ 410.28 Hospital or CAH diagnostic services furnished to outpatients: Conditions.

* * * * *

(e) * * *

(2) * * *

(iii) The presence of the physician or nonphysician practitioner under paragraphs (e)(2)(i) and (ii) of this section includes virtual presence through audio/video real-time communications technology (excluding audio-only) for services without a 010 or 090 global surgery indicator.

* * * * *

PART 412—PROSPECTIVE PAYMENT SYSTEMS FOR INPATIENT HOSPITAL SERVICES

■ 4. The authority citation for part 412 continues to read as follows:

Authority: 42 U.S.C. 1302 and 1395hh.

■ 5. Section 412.3 is amended by revising paragraph (d)(2) introductory text and removing paragraphs (d)(2)(i) and (ii) to read as follows:

§ 412.3 Admissions.

* * * * *

(d) * * *

(2) An inpatient admission for a surgical procedure specified by Medicare as inpatient only under § 419.22(n) of this chapter is generally appropriate for payment under Medicare Part A regardless of the expected duration of care. Procedures no longer specified as inpatient only under § 419.22(n) of this chapter are appropriate for payment under Medicare Part A in accordance with paragraph (d)(1) or (3) of this section. Claims for services and procedures removed from the inpatient only list under § 419.22 of this chapter on or after January 1, 2021 are exempt from certain medical review activities until the Secretary determines that the service or procedure is more commonly performed in the outpatient setting than the inpatient setting.

* * * * *

■ 6. Section 412.105 is amended by—

■ a. Revising paragraphs (f)(1)(i)(A) through (C); and

■ b. Adding paragraph (f)(1)(i)(E).

The revisions and addition read as follows:

§ 412.105 Special treatment: Hospitals that incur indirect costs for graduate medical education programs.

* * * * *

(f) * * *

(1) * * *

(i) * * *

(A) Is approved by one of the national organizations listed in § 415.152 of this chapter, provided that the national organization does not use accreditation criteria that promote or encourage discrimination on the basis of race, color, national origin, sex, age, disability, or religion, including the use of those characteristics or intentional proxies for those characteristics as a selection criterion for employment, program participation, resource allocation, or similar activities, opportunities, or benefits.

(B) May count towards certification of the participant in a specialty or subspecialty listed in the current edition of either of the following publications, provided that listing in either of those publications, or in successor information sources, does not require the program to promote or encourage discrimination on the basis of race, color, national origin, sex, age, disability, or religion, including the use of those characteristics or intentional proxies for those characteristics as a selection criterion for employment, program participation, resource allocation, or similar activities, opportunities, or benefits:

(*1*) The Directory of Graduate Medical Education Programs published by the American Medical Association.

(*2*) The Annual Report and Reference Handbook published by the American Board of Medical Specialties.

(C) Is approved by the Accreditation Council for Graduate Medical Education (ACGME), or other organization designated by the Secretary, as a fellowship program in geriatric medicine, provided that the Council or other organization does not use accreditation criteria that promote or encourage discrimination on the basis of race, color, national origin, sex, age, disability, or religion, including the use of those characteristics or intentional proxies for those characteristics as a selection criterion for employment, program participation, resource allocation, or similar activities, opportunities, or benefits.

* * * * *

(E) Is a program that would be accredited except for the accrediting agency's reliance upon an accreditation standard that requires an entity to promote or encourage discrimination on the basis of race, color, national origin, sex, age, disability, or religion, including the use of those characteristics or intentional proxies for those characteristics as a selection criterion for employment, program participation, resource allocation, or similar activities, opportunities, or benefits.

* * * * *

■ 7. Section 412.190 is amended by—

■ a. Revising paragraph (a)(2);

■ b. Adding paragraph (a)(3);

■ c. Revising paragraph (b)(1) introductory text;

■ d. Redesignating paragraph (d)(5) as (d)(6), and paragraph (d)(6) as (d)(5);

■ e. Adding paragraph (d)(9); and

■ f. Revising paragraphs (e) and (f).

The revisions and additions read as follows

§ 412.190 Overall Hospital Quality Star Rating.

(a) * * *

(2) To update the methodology that will be used to calculate the Overall Hospital Quality Star Ratings to emphasize the contribution of the Safety of Care measure group to the Overall Hospital Quality Star Rating. This change aims to address the issue of hospitals receiving a high Star Rating despite performance in the lowest quartile of the Safety of Care measure group.

(3) The guiding principles of the Overall Hospital Quality Star Rating are as follows. In developing and maintaining the Overall Hospital Quality Star Ratings, we strive to:

(i) Use scientifically valid methods that are inclusive of hospitals and measure information and able to accommodate underlying measure changes;

(ii) Align with Care Compare on *Medicare.gov* and CMS programs;

(iii) Provide transparency of the methods for calculating the Overall Hospital Quality Star Rating; and

(iv) Be responsive to stakeholder input.

(b) * * *

(1) *Sources of Data.* Measures are selected from those publicly reported on Care Compare on *Medicare.gov* through certain CMS hospital inpatient and outpatient quality programs:

* * * * *

(d) * * *

(9) *Emphasize Safety of Care.* (i) Apply a 4-star cap for hospitals in the lowest quartile of the Safety of Care measure group performance in Calendar Year 2026. Any hospital that is assigned 5 stars in step eight but has a lowest quartile Safety of Care score (based on at least three Safety of Care measures) would be reassigned to 4 stars.

(ii) Apply a blanket 1-Star reduction for hospitals in the lowest quartile of Safety of Care measure group performance beginning in Calendar Year 2027 and later years. Any hospital assigned a 2, 3, 4, or 5-star rating in step eight, but with a lowest quartile Safety of Care score (based on at least three Safety of Care measures) would be reduced to 1, 2, 3, or 4 stars, respectively.

(e) *Preview period prior to publication.* CMS provides hospitals the opportunity to preview their Overall Hospital Quality Star Rating prior to publication. Hospitals have at least 30 days to preview their results, and if necessary, can reach out to CMS with questions.

(f) *Suppression of Overall Hospital Quality Star Rating*—(1) *Subsection (d) hospitals.* CMS may consider suppressing Overall Hospital Quality Star Rating for subsection (d) hospitals only under extenuating circumstances that affect numerous hospitals (as in, not an individualized or localized issue) as determined by CMS, or when CMS is at fault, including but not limited to when:

(i) There is an Overall Hospital Quality Star Rating calculation error by CMS;

(ii) There is a systemic error at the CMS quality program level that substantively affects the Overall Hospital Quality Star Rating calculation; or;

(iii) If a Public Health Emergency substantially affects the underlying measure data.

(2) *CAHs.* (i) CAHs may request to withhold their Overall Hospital Quality Star Rating from publication on Care Compare on *Medicare.gov* so long as the request for withholding is made, at the latest, during the Overall Hospital Quality Star Rating preview period.

(ii) CAHs may request to have their Overall Hospital Quality Star Rating withheld from publication on Care Compare on *Medicare.gov*, as well as their data from the public input file, so long as the request is made during the CMS quality program-level 30-day confidential preview period for the Care Compare refresh data used to calculate the Overall Hospital Quality Star Ratings.

PART 413—PRINCIPLES OF REASONABLE COST REIMBURSEMENT; PAYMENT FOR END–STAGE RENAL DISEASE SERVICES; PROSPECTIVELY DETERMINED PAYMENT RATES FOR SKILLED NURSING FACILITIES; PAYMENT FOR ACUTE KIDNEY INJURY DIALYSIS

■ 8. The authority citation for part 413 continues to read as follows:

Authority: 42 U.S.C. 1302, 1395d(d), 1395f(b), 1395g, 1395l(a), (i), and (n), 1395m, 1395x(v), 1395x(kkk), 1395hh, 1395rr, 1395tt, and 1395ww.

■ 9. Section 413.20 is amended by revising paragraph (d)(3) to read as follows:

§ 413.20 Financial data and reports.

* * * * *

(d) * * *

(3)(i) The provider must furnish the contractor—

(A) Upon request, copies of patient service charge schedules and changes thereto as they are put into effect; and

(B) Its median payer-specific negotiated charge by MS–DRG for payers that are Medicare Advantage (MA) organizations, as applicable, and changes thereto as they are put into effect.

(ii) The contractor evaluates the charge schedules as specified in paragraph (d)(3)(i) of this section to determine the extent to which they may be used for determining program payment.

* * * * *

■ 10. Section 413.75 is amended in paragraph (b) by revising the definitions of ''Approved geriatric program'' and ''Approved medical residency program'' to read as follows:

§ 413.75 Direct GME payments: General requirements.

* * * * *

(b) * * *

* * * * *

Approved geriatric program means a fellowship program of one or more years in length that is approved by one of the national organizations listed in § 415.152 of this chapter under that respective organization's criteria for geriatric fellowship programs, provided that the national organization does not use accreditation criteria that promote or encourage discrimination on the basis of race, color, national origin, sex, age, disability, or religion, including the use of those characteristics or intentional proxies for those characteristics as a selection criterion for employment, program participation, resource allocation, or similar activities, opportunities, or benefits.

Approved medical residency program means a program that meets one of the following criteria:

(i) Is approved by one of the national organizations listed in § 415.152 of this chapter, provided that the national organization does not use accreditation criteria that promote or encourage discrimination on the basis of race, color, national origin, sex, age, disability, or religion, including the use of those characteristics or intentional proxies for those characteristics as a selection criterion for employment, program participation, resource allocation, or similar activities, opportunities, or benefits.

(ii) May count towards certification of the participant in a specialty or subspecialty listed in the current edition of either of the following publications, provided that listing in either of those publications, or in successor information sources, does not require the program to promote or encourage discrimination on the basis of race, color, national origin, sex, age, disability, or religion, including the use of those characteristics or intentional proxies for those characteristics as a

selection criterion for employment, program participation, resource allocation, or similar activities, opportunities, or benefits:

(A) The Directory of Graduate Medical Education Programs published by the American Medical Association, and available from American Medical Association, Department of Directories and Publications, 515 North State Street, Chicago, Illinois 60610; or

(B) The Annual Report and Reference Handbook published by the American Board of Medical Specialties, and available from American Board of Medical Specialties, One Rotary Center, Suite 805, Evanston, Illinois 60201.

(iii) Is approved by the Accreditation Council for Graduate Medical Education (ACGME), or other organization designated by the Secretary, as a fellowship program in geriatric medicine, or other organization designated by the Secretary, provided that the Council or other organization does not use accreditation criteria that promote or encourage discrimination on the basis of race, color, national origin, sex, age, disability, or religion, including the use of those characteristics or intentional proxies for those characteristics as a selection criterion for employment, program participation, resource allocation, or similar activities, opportunities, or benefits.

(iv) Is a program that would be accredited except for the accrediting agency's reliance upon an accreditation standard that requires an entity to perform an induced abortion or require, provide, or refer for training in the performance of induced abortions, or make arrangements for such training, regardless of whether the standard provides exceptions or exemptions.

(v) Is a program that would be accredited except for the accrediting agency's reliance upon an accreditation standard that requires an entity to promote or encourage discrimination on the basis of race, color, national origin, sex, age, disability, or religion, including the use of those characteristics or intentional proxies for those characteristics as a selection criterion for employment, program participation, resource allocation, or similar activities, opportunities, or benefits.

* * * * *

PART 415—SERVICES FURNISHED BY PHYSICIANS IN PROVIDERS, SUPERVISING PHYSICIANS IN TEACHING SETTINGS, AND RESIDENTS IN CERTAIN SETTINGS

■ 11. The authority citation for part 415 continues to read as follows:

Authority: 42 U.S.C. 1302 and 1395hh.

■ 12. Section 415.152 is amended by revising the definition of ''Approved graduate medical education (GME) program'' to read as follows:

§ 415.152 Definitions.

* * * * *

Approved graduate medical education (GME) program means one of the following:

(1) A residency program approved by the Accreditation Council for Graduate Medical Education, by the American Osteopathic Association, by the Commission on Dental Accreditation of the American Dental Association, or by the Council on Podiatric Medical Education of the American Podiatric Medical Association, or other organization determined by the Secretary, provided that the applicable organization does not use accreditation criteria that promote or encourage discrimination on the basis of race, color, national origin, sex, age, disability, or religion, including the use of those characteristics or intentional proxies for those characteristics as a selection criterion for employment, program participation, resource allocation, or similar activities, opportunities, or benefits.

(2) A program otherwise recognized as an ''approved medical residency program'' under § 413.75(b) of this chapter.

* * * * *

PART 416—AMBULATORY SURGICAL SERVICES

■ 13. The authority citation for part 416 is revised to read as follows:

Authority: 42 U.S.C. 273, 1302, 1320b–8, and 1395hh.

■ 14. Section 416.164 is amended by—

■ a. Revising paragraphs (a)(5), (b)(5) and (6); and

■ b. Adding paragraph (b)(7).

The revisions and addition read as follows:

§ 416.164 Scope of ASC services.

(a) * * *

(5) Medical and surgical supplies not on pass-through status under subpart G of part 419 of this subchapter and not covered ancillary skin substitute supplies under paragraph (b) of this section;

* * * * *

(b) * * *

(5) Certain radiology services and certain diagnostic tests for which separate payment is allowed under the OPPS;

(6) Non-opioid pain management drugs, biologicals, and medical devices as determined by CMS under § 416.174; and

(7) Groups of skin substitute supply products.

* * * * *

■ 15. Section 416.166 is revised to read as follows:

§ 416.166 Covered surgical procedures.

(a) *Covered surgical procedures.* (1) Effective for services furnished on or after January 1, 2008 through December 31, 2025, covered surgical procedures are those procedures that meet the general standards described in paragraph (b)(1) of this section (whether commonly furnished in an ASC or a physician's office) and are not excluded under paragraph (c) of this section; and

(2) Effective for services furnished on or after January 1, 2026, covered surgical procedures are those procedures that meet the requirements described in paragraph (b)(2) of this section (whether commonly furnished in an ASC or a physician's office).

(b) *Requirements for covered surgical procedures*—(1) *General Standards.* Effective for services furnished on or after January 1, 2008 through December 21, 2025, subject to the exclusions in paragraph (c) of this section, covered surgical procedures are surgical procedures specified by the Secretary and published in the **Federal Register** and/or via the internet on the CMS website that are separately paid under the OPPS, that would not be expected to pose a significant safety risk to a Medicare beneficiary when performed in an ASC, and for which standard medical practice dictates that the beneficiary would not typically be expected to require active medical monitoring and care at midnight following the procedure.

(2) Effective for services furnished on or after January 1, 2026, covered surgical procedures are surgical procedures specified by the Secretary that are published in the **Federal Register** and/or via the internet on the CMS website and that:

(i) Are separately paid under the OPPS; and

(ii) Are not:

(A) Currently designated as requiring inpatient care under § 419.22(n) of this subchapter;

(B) Only able to be reported using a CPT unlisted surgical procedure code; or

(C) Otherwise excluded under § 411.15 of this chapter.

(c) *General exclusions effective January 1, 2008, through December 31, 2025.* Notwithstanding paragraph (b)(1) of this section, covered surgical procedures do not include those surgical procedures that:

(1) Generally result in extensive blood loss;

(2) Require major or prolonged invasion of body cavities;

(3) Directly involve major blood vessels;

(4) Are generally emergent or life-threatening in nature;

(5) Commonly require systemic thrombolytic therapy;

(6) Are designated as requiring inpatient care under § 419.22(n) of this subchapter;

(7) Can only be reported using a CPT unlisted surgical procedure code; or

(8) Are otherwise excluded under § 411.15 of this chapter.

(d) *Physician considerations beginning January 1, 2026.* Physicians should consider the following safety factors as to a specific beneficiary when determining whether to perform a covered surgical procedure. The covered procedure:

(1) Is not expected to pose a significant safety risk when performed in an ASC;

(2) Is one of which standard medical practice dictates the beneficiary would not typically be expected to require active medical monitoring and care at midnight following the procedure;

(3) Generally results in extensive blood loss;

(4) Requires major or prolonged invasion of body cavities;

(5) Directly involves major blood vessels;

(6) Is generally emergent or life-threatening in nature; and

(7) commonly requires systemic thrombolytic therapy.

(e) *Additions to the list of ASC covered surgical procedures beginning January 1, 2026.* On or after January 1, 2026, CMS adds surgical procedures to the list of ASC covered procedures as follows:

(1) CMS identifies a surgical procedure that meets the requirements at paragraph (b)(2) of this section.

(2) CMS is notified of a surgical procedure that could meet the requirements at paragraph (b)(2) of this section and CMS confirms that such surgical procedure meets those requirements.

■ 16. Section 416.171 is amended by revising paragraphs (a)(2)(iii) through (viii) to read as follows:

§ 416.171 Determination of payment rates for ASC services.

(a) * * *

(2) * * *

(iii) For CY 2019 through CY 2026, the update is the hospital inpatient market basket percentage increase applicable under section 1886(b)(3)(B)(iii) of the Act.

(iv) For CY 2027 and subsequent years, the update is the Consumer Price Index for All Urban Consumers (U.S. city average) as estimated by the Secretary for the 12-month period ending with the midpoint of the year involved.

(v) For CY 2014 through CY 2018, the Consumer Price Index for All Urban Consumers update determined under paragraph (a)(2)(ii) of this section was reduced by 2.0 percentage points for ASCs that failed to meet the standards for reporting of ASC quality measures as established by the Secretary for the corresponding calendar year.

(vi) For CY 2019 through CY 2026, the hospital inpatient market basket percentage increase determined under paragraph (a)(2)(iii) of this section is reduced by 2.0 percentage points for an ASC that fails to meet the standards for reporting of ASC quality measures as established by the Secretary for the corresponding calendar year.

(vii) For CY 2027 and subsequent years, the Consumer Price Index for All Urban Consumers update determined under paragraph (a)(2)(iv) of this section is reduced by 2.0 percentage points for an ASC that fails to meet the standards for reporting of ASC quality measures as established by the Secretary for the corresponding calendar year.

(viii)(A) For CY 2011 through CY 2018, the Consumer Price Index for All Urban Consumers determined under paragraph (a)(2)(ii) of this section, after application of any reduction under paragraph (a)(2)(iv) of this section, was reduced by the productivity adjustment described in section 1886(b)(3)(B)(xi)(II) of the Act.

(B) For CY 2019 through CY 2026, the hospital inpatient market basket percentage increase determined under paragraph (a)(2)(iii) of this section, after application of any reduction under paragraph (a)(2)(v) of this section, is reduced by the productivity adjustment described in section 1886(b)(3)(B)(xi)(II) of the Act.

(C) For CY 2027 and subsequent years, the Consumer Price Index for All Urban Consumers determined under paragraph (a)(2)(iv) of this section, after application of any reduction under paragraph (a)(2)(vii) of this section, is reduced by the productivity adjustment described in section 1886(b)(3)(B)(xi)(II) of the Act.

* * * * *

■ 17. Section 416.174 is amended by revising paragraphs (a) introductory text, (b) introductory text, and (c)(1) and (2) to read as follows:

(a) *Eligibility for separate payment for non-opioid pain management drugs and biologicals.* From January 1, 2025, through December 31, 2027, a non-opioid drug or biological is eligible for separate payment if CMS determines it meets the following requirements:

* * * * *

(b) *Eligibility for separate payment for non-opioid medical devices.* From January 1, 2025, through December 31, 2027, a medical device is eligible for separate payment if CMS determines it meets all of the following requirements:

* * * * *

(c) * * *

(1) For a qualifying drug or biological as defined in paragraph (a) of this section, the amount of payment is the amount determined under section 1847A of the Act for the drug or biological that exceeds the portion of the otherwise applicable Medicare OPD fee schedule amount, subject to paragraph (c)(3) of this section.

(2) For a qualifying medical device as defined in paragraph (b) of this section, the amount of payment is the amount of the hospital's charges for the device, adjusted to cost, that exceeds the portion of the otherwise applicable Medicare OPD fee schedule amount, subject to paragraph (c)(3) of this section.

* * * * *

■ 18. Section 416.310 is amended by revising paragraph (d) to read as follows:

§ 416.310 Data collection and submission requirements under the ASCQR Program.

* * * * *

(d) *Extraordinary circumstance exception (ECE)*—(1) *General rule.* CMS may grant an ECE with respect to the reporting requirements under this section in the event of extraordinary circumstances beyond the control of the ASC. For purposes of this paragraph (d), an extraordinary circumstance is an event beyond the control of an ASC (for example, a natural or man-made disaster such as a hurricane, tornado, earthquake, terrorist attack, or bombing) that affected the ability of the ASC to comply with one or more applicable reporting requirements with respect to a calendar year.

(2) *Process for requesting an ECE.* (i) An ASC may request an ECE within 60 calendar days of the date that the extraordinary circumstance occurred by submitting the information specified by CMS at QualityNet or a successor website.

(ii) CMS notifies the ASC of its decision on the request, in writing, via email. In the event that CMS grants an ECE to the ASC, the written decision specifies whether the ASC is exempted from one or more reporting requirements or whether CMS has granted the ASC an extension of time to comply with one or more reporting requirements.

(3) *Authority to Grant an ECE.* CMS may grant an ECE to one or more ASCs that have not requested an ECE if CMS determines that—

(i) A systemic problem with a CMS data collection system directly impacted the ability of the ASC to comply with a quality data reporting requirement; or

(ii) An extraordinary circumstance has affected an entire region or locale. Any ECE granted under this paragraph (d)(3) specifies whether the affected ASCs are exempted from one or more reporting requirements or whether CMS has granted the ASCs an extension of time to comply with one or more reporting requirements.

* * * * *

PART 419—PROSPECTIVE PAYMENT SYSTEM FOR HOSPITAL OUTPATIENT DEPARTMENT SERVICES

■ 19. The authority citation for part 419 continues to read as follows:

Authority: 42 U.S.C. 1302, 1395l(t), and 1395hh.

■ 20. Section 419.2 is amended by revising paragraphs (b)(16) and (18) to read as follows:

§ 419.2 Basis of payment.

* * * * *

(b) * * *

(16) Drugs and biologicals that function as supplies when used in a surgical procedure including, but not limited to products, excluding skin substitutes, that aid wound healing;

* * * * *

(18) Certain services described by add-on codes (excluding skin substitute product add-on codes that are assigned to status indicator ''S1'').

* * * * *

■ 21. Section 419.22 is amended by revising paragraph (n) to read as follows:

§ 419.22 Hospital services excluded from payment under the hospital outpatient prospective payment system.

* * * * *

(n) Services and procedures that the Secretary designates as requiring inpatient care. Effective beginning on January 1, 2026, the Secretary shall eliminate the list of services and procedures designated as requiring inpatient care through a 3-year transition, with the list eliminated in its entirety by January 1, 2029.

* * * * *

§ 419.23 [Removed]

■ 22. Section 419.23 is removed.

■ 23. Section 419.43 is amended by revising paragraphs (k)(1) introductory text and (k)(2) introductory text to read as follows:

§ 419.43 Adjustments to national program payment and beneficiary copayment amounts.

* * * * *

(k) * * *

(1) *Eligibility for separate payment for non-opioid pain management drugs and biologicals.* From January 1, 2025, through December 31, 2027, a drug or biological is eligible for separate payment if CMS determines it meets the following requirements:

* * * * *

(2) *Eligibility for separate payment for non-opioid medical devices.* From January 1, 2025, through December 31, 2027, a medical device is eligible for separate payment if CMS determines it meets the following requirements:

* * * * *

■ 24. Section 419.46 is amended by revising paragraph (e) to read as follows:

§ 419.46 Requirements under the Hospital Outpatient Quality Reporting (OQR) Program.

* * * * *

(e) *Extraordinary circumstance exception (ECE).* (1) *General rule.* CMS may grant an ECE with respect to the reporting requirements under this section in the event of extraordinary circumstances beyond the control of the hospital. For purposes of this paragraph (e), an extraordinary circumstance is an event beyond the control of a hospital (for example, a natural or man-made disaster such as a hurricane, tornado, earthquake, terrorist attack, or bombing) that affected the ability of the hospital to comply with one or more applicable reporting requirements with respect to a calendar year.

(2) *Process for requesting an ECE.* (i) A hospital may request an ECE within 60 calendar days of the date that the extraordinary circumstance occurred by submitting the information specified by CMS at QualityNet or a successor website.

(ii) CMS notifies the hospital of its decision on the request, in writing, via email. In the event that CMS grants an ECE to the hospital, the written decision specifies whether the hospital is exempted from one or more reporting requirements or whether CMS has granted the hospital an extension of time to comply with one or more reporting requirements.

(3) *Authority to Grant an ECE.* CMS may grant an ECE to one or more hospitals that have not requested an ECE if CMS determines that—

(i) A systemic problem with a CMS data collection system directly impacted the ability of the hospital to comply with a quality data reporting requirement; or

(ii) An extraordinary circumstance has affected an entire region or locale. Any ECE granted under this paragraph (e)(3) specifies whether the affected hospitals are exempted from one or more reporting requirements or whether CMS has granted the hospitals an extension of time to comply with one or more reporting requirements.

* * * * *

■ 25. Section 419.47 is amended by revising the section heading and paragraph (a) and to read as follows:

§ 419.47 Coding and payment for Category B Investigational Device Exemption (IDE) studies.

(a) Creation of a new HCPCS code for Category B IDE studies that have a treatment arm and a placebo control arm. CMS will create a new HCPCS code, or revise an existing HCPCS code, to describe a Category B IDE study, which will include both the treatment and placebo control arms, related device(s) of the study, as well as routine care items and services, as specified under § 405.201 of this chapter, when CMS determines that:

(1) The Medicare coverage IDE study criteria in § 405.212 of this chapter are met; and

(2) A new or revised code is necessary to preserve the scientific validity of such a study, such as by preventing the unblinding of the study.

* * * * *

■ 26. Section 419.49 is added to read as follows:

§ 419.49 Additional payment for technetium-99m (Tc-99m) derived from domestically produced molybdenum-99 (Mo-99).

(a) *General rule.* CMS provides for an additional payment beyond the standard payment to a hospital for a dose of Tc-

99m derived from Mo-99, if at least 50 percent of the Mo-99 in the Tc-99m generator that produced the dose was both irradiated and processed in the United States.

(1) Domestically produced Mo-99 refers to Mo-99 that was both irradiated and processed in the United States.

(2) Irradiated refers to the process of bombarding a uranium or molybdenum target with radiation in order to produce Mo-99. Irradiation is typically performed with a nuclear reactor or particle accelerator.

(3) Processed refers to the purification of Mo-99 from irradiated material.

(b) *Exclusions.* A dose of Tc-99m does not qualify for the add-on payment if more than 50 percent of the Mo-99 in the Tc-99m generator was irradiated or processed outside the United States, even if the Mo-99 has been loaded into a Tc-99m generator in the United States or if the Tc-99m has been eluted at a radiopharmacy in the United States.

(1) Eluted refers to the process by which Tc-99m is chemically separated from Mo-99 within the generator and collected in an elution vial.

(2) [Reserved]

§ 419.64 [Amended]

■ 27. Section 419.64 is amended by removing paragraph (a)(4)(iv).

■ 28. Section 419.95 is amended by revising paragraph (g) and adding paragraph (h) to read as follows:

§ 419.95 Requirements under the Rural Emergency Hospital Quality Reporting (REHQR) Program.

* * * * *

(g) *Extraordinary circumstance exception (ECE).* (1) *General rule.* CMS may grant an ECE with respect to the reporting requirements under this section in the event of extraordinary circumstances beyond the control of the REH. For purposes of this paragraph (g), an extraordinary circumstance is an event beyond the control of an REH (for example, a natural or man-made disaster such as a hurricane, tornado, earthquake, terrorist attack, or bombing) that affected the ability of the REH to comply with one or more applicable reporting requirements with respect to a calendar year.

(2) *Process for requesting an ECE.* (i) An REH may request an ECE within 60 calendar days of the date that the extraordinary circumstance occurred by submitting the information specified by CMS at QualityNet or a successor website.

(ii) CMS notifies the REH of its decision on the request, in writing, via email. In the event that CMS grants an ECE to the REH, the written decision specifies whether the REH is exempted from one or more reporting requirements or whether CMS has granted the REH an extension of time to comply with one or more reporting requirements.

(3*) Authority to Grant an ECE.* CMS may grant an ECE to one or more REHs that have not requested an ECE if CMS determines that—

(i) A systemic problem with a CMS data collection system directly impacted the ability of the REH to comply with a quality data reporting requirement; or

(ii) An extraordinary circumstance has affected an entire region or locale. Any ECE granted under this paragraph (g)(3) specifies whether the affected REHs are exempted from one or more reporting requirements or whether CMS has granted the REHs an extension of time to comply with one or more reporting requirements.

(h) *Requirements for submission of electronic clinical quality measures (eCQMs) under the REHQR Program.* When reporting eCQMs under the REHQR Program, REHs must adhere to the following requirements:

(1) REHs must utilize technology certified to the Office of the National Coordinator for Health Information Technology's (ONC's) health information technology (IT) certification criteria, as adopted and updated in 45 CFR 170.315, for reporting eCQMs under the REHQR Program.

(2) REHs must use health IT certified to all eCQMs that are available to report under the REHQR Program.

(3) REHs must use the most recent version of the eCQM electronic measure specifications for the applicable reporting period available on the Electronic Clinical Quality Improvement Resource Center website at *https://ecqi.healthit.gov/*, or another website as designated by CMS.

(4) The requirements set forth in paragraphs (h)(1) through (3) of this section apply only where an REH opts to report an eCQM.

For the reasons set forth in the preamble, the Department of Health and Human Services amends 45 CFR part 180 as set forth below:

PART 180—HOSPITAL PRICE TRANSPARENCY

■ 29. The authority citation for part 180 continues to read as follows:

Authority: 42 U.S.C. 300gg–18, 42 U.S.C. 1302.

■ 30. Section 180.20 is amended by adding definitions of ''Median allowed amount'', ''Ninetieth (90th) percentile allowed amount'', and ''Tenth (10th) percentile allowed amount'' in alphabetical order to read as follows.

§ 180.20 Definitions.

* * * * *

Median allowed amount means the median of the total allowed amounts the hospital has historically received from a third party payer for an item or service for a time period no less than 12 months and no longer than 15 months prior to posting the machine-readable file. Should the calculated median fall between two observed allowed amounts, the median allowed amount is the next highest observed value.

Ninetieth (90th) percentile allowed amount means the 90th percentile of the total allowed amounts the hospital has historically received from a third party payer for an item or service for a time period no less than 12 months and no longer than 15 months prior to posting the machine-readable file. Should the calculated percentile fall between two observed allowed amounts, the 90th percentile allowed amount is the next highest observed value.

* * * * *

Tenth (10th) percentile allowed amount means the 10th percentile of the total allowed amounts the hospital has historically received from a third party payer for an item or service for a time period no less than 12 months and no longer than 15 months prior to posting the machine-readable file. Should the calculated percentile fall between two observed allowed amounts, the 10th percentile allowed amount is the next highest observed value.

* * * * *

■ 31. Section 180.50 is amended by revising paragraphs (a)(3), (b)(2)(i)(A), and (b)(2)(ii)(C) to read as follows:

§ 180.50 Requirements for making public hospital standard charges for all items and services.

(a) * * *

(3) Each hospital must:

(i) Beginning January 1, 2024 through December 31, 2025, make a good faith effort to ensure that the standard charge information encoded in the machine-readable file is true, accurate, and complete as of the date indicated in the machine-readable file.

(ii) Beginning January 1, 2024 through December 31, 2025, affirm in its machine-readable file that, to the best of its knowledge and belief, the hospital has included all applicable standard charge information in accordance with the requirements of this section, and that the information encoded is true, accurate, and complete as of the date indicated in the machine-readable file.

(iii) Beginning January 1, 2026, attest in its machine-readable file the following: To the best of its knowledge and belief, this hospital has included all applicable standard charge information in accordance with the requirements of 45 CFR 180.50, and the information encoded is true, accurate, and complete as of the date in the file. This hospital has included all payer-specific negotiated charges in dollars that can be expressed as a dollar amount. For payer-specific negotiated charges that cannot be expressed as a dollar amount in the machine-readable file or not knowable in advance, the hospital attests that the payer-specific negotiated charge is based on a contractual algorithm, percentage or formula that precludes the provision of a dollar amount and has provided all necessary information available to the hospital for the public to be able to derive the dollar amount, including, but not limited to, the specific fee schedule or components referenced in such percentage, algorithm or formula.

(iv) Beginning January 1, 2026, encode the name of the hospital chief executive officer, president, or senior official designated to oversee the encoding of true, accurate, and complete data as directed in in paragraph (a)(3)(iii) of this section.

(b) * * *

(2) * * *

(i) * * *

(A) Hospital name, license number, location name(s) and address(es) under the single hospital license to which the list of standard charges applies, and beginning January 1, 2026, Type 2 (organizational) National Provider Identifier(s) (NPI). Location name(s) and address(es) must include, at minimum, all inpatient facilities and stand-alone emergency departments; and

* * * * *

(ii) * * *

(C) Whether the standard charge indicated should be interpreted by the user as a dollar amount, or if the standard charge is based on a percentage or algorithm. If the standard charge is based on a percentage or algorithm, the machine-readable file (MRF) must also describe the percentage or algorithm that determines the dollar amount for the item or service, and

(1) Beginning January 1, 2025 through December 31, 2025, calculate and encode an estimated allowed amount in dollars for that item or service; and

(2) Beginning January 1, 2026, calculate and encode the tenth (10th) percentile allowed amount, the median allowed amount, and the ninetieth (90th) percentile allowed amount in dollars for that item or service. Hospitals must also calculate and encode the total number of allowed amount remittances that were used to calculate the 10th percentile allowed amount, median allowed amount, and 90th percentile allowed amount.

* * * * *

■ 32. Section 180.90 is amended by—

■ a. Adding paragraph (c)(4);

■ b. Revising paragraph (d)(1);

■ c. Redesignating paragraphs (d)(2) and (3) as paragraphs (d)(3) and (4), respectively; and

■ d. Adding new paragraph (d)(2).

The additions and revision read as follows:

§ 180.90 Civil monetary penalties.

* * * * *

(c) * * *

(4) Except as provided in this paragraph, the amount of a civil monetary penalty is reduced by 35 percent if the hospital submits a written notice to CMS requesting to waive its right to a hearing under § 180.100 within 30-calendar days of the date of the notice of imposition of the civil monetary penalty. A hospital that receives a 35 percent reduction in a civil monetary penalty under this paragraph is not eligible to receive a 35 percent reduction for any subsequent civil monetary penalties imposed pursuant to continuing violations according to § 180.90(f) and also waives its right to appeal under § 180.100 any subsequent civil monetary penalties imposed for such continuing violations. A hospital is not eligible to request that CMS reduce the amount of a civil monetary penalty by 35 percent in accordance with this paragraph if—

(i) The hospital does not request to waive its right to a hearing in accordance with this paragraph; or

(ii) CMS imposed the CMP because the hospital failed to make public an MRF as required at § 180.40(a) or failed to make public a consumer-friendly list of standard charges as required at § 180.40(b).

(d) * * *

(1) A hospital that does not meet the criteria to receive a reduction to the civil monetary penalty that had been imposed upon it as set forth in paragraph (c)(4) of this section must pay the civil monetary penalty in full within 60 calendar days after the date of the notice of imposition of a civil monetary penalty from CMS under paragraph (b) of this section.

(2) A hospital that meets the criteria to receive a reduction to the civil monetary penalty that had been imposed upon it as set forth in paragraph (c)(4) of this section must pay the civil monetary penalty, as reduced in accordance with paragraph (c)(4) of this section, within 60 calendar days after the date of the notice of imposition of a civil monetary penalty from CMS under paragraph (b) of this section.

Presidential Documents

Title 3—

The President

Executive Order 14360 of November 14, 2025

Modifying the Scope of the Reciprocal Tariffs With Respect to Certain Agricultural Products

By the authority vested in me as President by the Constitution and the laws of the United States of America, including the International Emergency Economic Powers Act (50 U.S.C. 1701 *et seq.*) (IEEPA), the National Emergencies Act (50 U.S.C. 1601 *et seq.*), section 604 of the Trade Act of 1974, as amended (19 U.S.C. 2483), and section 301 of title 3, United States Code, it is hereby ordered:

Section 1. *Background.* In Executive Order 14257 of April 2, 2025 (Regulating Imports With a Reciprocal Tariff To Rectify Trade Practices That Contribute to Large and Persistent Annual United States Goods Trade Deficits), I found that conditions reflected in large and persistent annual U.S. goods trade deficits, including the consequences of those deficits, constitute an unusual and extraordinary threat to the national security and economy of the United States that has its source in whole or substantial part outside the United States. I declared a national emergency with respect to that threat, and to deal with that threat, I imposed certain *ad valorem* duties that I deemed necessary and appropriate. In Annex II to Executive Order 14257, I set forth a list of certain goods that, in my judgment, should not be subject to the *ad valorem* rates of duty imposed pursuant to that order.

In Executive Order 14346 of September 5, 2025 (Modifying the Scope of Reciprocal Tariffs and Establishing Procedures for Implementing Trade and Security Agreements), I modified the scope of products subject to the reciprocal tariff imposed under Executive Order 14257, as amended, and I issued an updated version of Annex II to Executive Order 14257.

I have received additional information and recommendations from various officials who, pursuant to my direction, have been monitoring the circumstances involving the emergency declared in Executive Order 14257. After considering the information and recommendations these officials have provided to me, the status of negotiations with various trading partners, current domestic demand for certain products, and current domestic capacity to produce certain products, among other things, I have determined that it is necessary and appropriate to further modify the scope of products subject to the reciprocal tariff imposed under Executive Order 14257, as amended. Specifically, I have determined that certain agricultural products shall not be subject to the reciprocal tariff imposed under Executive 14257, as amended. Accordingly, updated versions of Annex II to Executive Order 14257, as amended, and the Annex to Executive Order 14346 entitled, ''Potential Tariff Adjustments for Aligned Partners,'' are attached to this order and shall be effective with respect to goods entered for consumption, or withdrawn from warehouse for consumption, on or after 12:01 a.m. eastern standard time on November 13, 2025. In my judgment, these modifications are necessary and appropriate to deal with the national emergency declared in Executive Order 14257.

Sec. 2. *Updating Scope of Duties Globally.* The Harmonized Tariff Schedule of the United States shall be modified as provided in Annex I to this order. The modifications shall be effective with respect to goods entered for consumption, or withdrawn from warehouse for consumption, on or after 12:01 a.m. eastern standard time on November 13, 2025. To the extent that implementation of this order requires a refund of duties collected,

refunds shall be processed pursuant to applicable law and the standard procedures of U.S. Customs and Border Protection for such refunds.

Sec. 3. *Implementation.* (a) The Secretary of Commerce and the United States Trade Representative shall continue to monitor the circumstances involving the emergency declared in Executive Order 14257 and shall regularly consult on such circumstances with any senior official they deem appropriate. The Secretary of Commerce and the United States Trade Representative shall inform me of any circumstance that, in their opinion, might indicate the need for further action by the President.

(b) Consistent with applicable law, the Secretary of Commerce, the Secretary of Homeland Security, and the United States Trade Representative are directed and authorized to take such actions, including adopting rules, regulations, or guidance, and to employ all powers granted to the President, including those granted by IEEPA, as may be necessary to implement and effectuate this order. The Secretary of Commerce, the Secretary of Homeland Security, and the United States Trade Representative, consistent with applicable law, may redelegate any of these functions within their respective department or agency. All executive departments and agencies shall take all appropriate measures within their authority to implement this order.

Sec. 4. *Severability.* If any provision of this order, or the application of any provision to any individual or circumstance, is held to be invalid, the remainder of this order and the application of its other provisions to any other individuals or circumstances shall not be affected thereby.

Sec. 5. *General Provisions.* (a) Nothing in this order shall be construed to impair or otherwise affect:

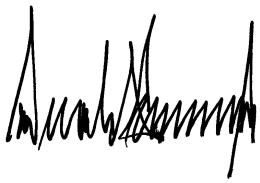
(i) the authority granted by law to an executive department or agency, or the head thereof; or

(ii) the functions of the Director of the Office of Management and Budget relating to budgetary, administrative, or legislative proposals.

(b) This order shall be implemented consistent with applicable law and subject to the availability of appropriations.

(c) This order is not intended to, and does not, create any right or benefit, substantive or procedural, enforceable at law or in equity by any party against the United States, its departments, agencies, or entities, its officers, employees, or agents, or any other person.

(d) The costs for publication of this order shall be borne by the United States Trade Representative.



THE WHITE HOUSE,
November 14, 2025.

Billing code 3290–F8–P

ANNEX I

1. Effective with respect to goods entered for consumption, or withdrawn from warehouse for consumption, on or after 12:01 eastern time on November 13, 2025, subchapter III of chapter 99 of the Harmonized Tariff Schedule of the United States (HTSUS) is modified as follows:

   a. Heading 9903.01.25 is modified by deleting "9903.02.77" and inserting "9903.02.78" in lieu thereof;

   b. Heading 9903.01.32 is modified by deleting "subdivision (v)(iii)" and inserting "subdivision (v)(iii)(a)" in lieu thereof;

   c. Headings 9903.02.02–9903.02.73 are modified by deleting "headings 9903.01.30–9903.01.33" each place that it appears and inserting "headings 9903.01.30–9903.01.33 and 9903.02.78" in lieu thereof;

   d. The following new heading is inserted in numerical sequence, with the material in the new heading inserted in the columns of the HTSUS labeled "Heading/Subheading", "Article Description", Rates of Duty 1-General", "Rates of Duty 1-Special" and "Rates of Duty 2", respectively:

Heading/ Subheading	Article Description	Rates of Duty		
		1		2
		General	Special	
"9903.02.78	Articles the product of any country, as provided for in subdivision (v)(iii)(b) of U.S. note 2 to this subchapter	The duty provided in the applicable subheading	The duty provided in the applicable subheading	The duty provided in the applicable subheading"

   e. Subdivision (v)(i) of U.S. note 2 to subchapter III of chapter 99 of the HTSUS is amended by deleting "headings 9903.02.74–9903.02.77" and inserting "headings 9903.02.74–9903.02.78" in lieu thereof.

   f. Subdivision (v)(iii) of U.S. note 2 to subchapter III of chapter 99 of the HTSUS is amended:

      i. by deleting "As provided for in heading 9903.01.32" and inserting "(a) As provided for in heading 9903.01.32" in lieu thereof, and by inserting in the new subdivision (v)(iii)(a) the following provisions of the HTSUS in numerical order:

0201.10.05	0702.00.40	0802.91.10	0902.20.90	0910.99.07	2008.20.00
0201.10.10	0702.00.60	0802.91.90	0902.30.00	0910.99.10	2008.91.00
0201.10.50	0709.99.05	0802.92.10	0902.40.00	0910.99.20	2008.99.13
0201.20.02	0709.99.10	0802.92.90	0903.00.00	0910.99.40	2008.99.15
0201.20.04	0710.80.15	0803.10.10	0904.11.00	0910.99.50	2008.99.40
0201.20.06	0711.90.30	0803.10.20	0904.12.00	0910.99.60	2008.99.45

ii. by inserting the following new subdivision (v)(iii)(b):

"(b) As provided in heading 9903.02.78, the additional duties imposed by headings 9903.01.25, 9903.01.35, 9903.01.39 and 9903.02.02–9903.02.73 shall not apply to the following particular articles the product of any country:

(1) Etrogs (classifiable in subheading 0805.90.01)

(2) Tropical fruit, nesoi, frozen, whether or not previously steamed or boiled (classifiable in subheading 0811.90.80)

(3) Date palm branches, Myrtus branches or other vegetable material, for religious purposes only (classifiable in subheading 1404.90.90)

(4) Bread, pastry, cakes, biscuits and similar baked products, nesoi, and puddings, whether or not containing chocolate, fruit, nuts or confectionery, for religious purposes only (classifiable in subheading 1905.90.10)

(5) Bakers' wares, communion wafers, sealing wafers, rice paper and similar products, nesoi, for religious purposes only (classifiable in subheading 1905.90.90)

(6) Acai (classifiable in subheading 2008.99.21)

(7) Citrus juice of any single citrus fruit (other than orange, grapefruit or lime), of a Brix value not exceeding 20, concentrated, unfermented, except for lemon juice (classifiable in subheading 2009.31.60)

(8) Coconut water or juice of acai (classifiable in subheading 2009.89.70)

(9) Coconut water juice blends, not from concentrate, packaged for retail sale (classifiable in subheading 2009.90.40)

(10) Acai preparations for the manufacture of beverages (classifiable in subheading 2106.90.99)

(11) Essential oils other than those of citrus fruit, nesoi, for religious purposes only (classifiable in subheading 3301.29.51)"

ANNEX II

Note: All products that are properly classified in the provisions of the Harmonized Tariff Schedule of the United States (HTSUS) that are listed in this Annex are not covered by the duties imposed by Executive Order 14257, as amended. The product descriptions that are contained in this Annex are provided for informational purposes only, and are not intended to delimit in any way the scope of the action. Only items that are properly classified in the listed provisions of the HTSUS are excluded from the tariff action imposed by Executive Order 14257, as amended. Any questions regarding the scope of particular HTSUS provisions should be referred to U.S. Customs and Border Protection. In the product descriptions, the abbreviation "nesoi" means "not elsewhere specified or included".

For certain HTSUS provisions, only a portion of the provision is covered in this Annex; specifically, a subheading marked with "Ex" in the "Notes" column is defined and limited by the product description.

HTSUS	Description	Notes
0201.10.05	Bovine carcasses and halves, fresh or chilled, described in general note 15 of the HTSUS	Addition
0201.10.10	Bovine carcasses and halves, fresh or chilled, described in additional U.S. note 3 to chapter 2 of the HTSUS	Addition
0201.10.50	Bovine carcasses and halves, fresh or chilled, other than described in general note 15 or additional U.S. note 3 to chapter 2 of the HTSUS	Addition
0201.20.02	High-quality beef cuts, with bone in, processed, fresh or chilled, described in general note 15 of the HTSUS	Addition
0201.20.04	Bovine meat cuts (except high-quality beef cuts), with bone in, processed, fresh or chilled, described in general note 15 of the HTS	Addition
0201.20.06	Bovine meat cuts, with bone in, not processed, fresh or chilled, described in general note 15 of the HTSUS	Addition
0201.20.10	High-quality beef cuts, with bone in, processed, fresh or chilled, described in additional U.S. note 3 to chapter 2 of the HTSUS	Addition
0201.20.30	Bovine meat cuts (except high-quality beef cuts), with bone in, processed, fresh or chilled, described in additional U.S. note 3 to chapter 2 of the HTSUS	Addition
0201.20.50	Bovine meat cuts, with bone in, not processed, fresh or chilled, described in additional U.S. note 3 to chapter 2 of the HTSUS	Addition
0201.20.80	Bovine meat cuts, with bone in, fresh or chilled, not described in general note 15 or additional U.S. note 3 to chapter 2 of the HTSUS	Addition

HTSUS	Description	Notes
0201.30.02	High-quality beef cuts, boneless, processed, fresh or chilled, described in general note 15 of the HTSUS	Addition
0201.30.04	Bovine meat cuts (except high-quality beef cuts), boneless, processed, fresh or chilled, described in general note 15 of the HTSUS	Addition
0201.30.06	Bovine meat cuts, boneless, not processed, fresh or chilled, described in general note 15 of the HTSUS	Addition
0201.30.10	High-quality beef cuts, boneless, processed, fresh or chilled, described in additional U.S. note 3 to chapter 2 of the HTSUS	Addition
0201.30.30	Bovine meat cuts (except high-quality beef cuts), boneless, processed, fresh or chilled, described in additional U.S. note 3 to chapter 2 of the HTSUS	Addition
0201.30.50	Bovine meat cuts, boneless, not processed, fresh or chilled, described in additional U.S. note 3 to chapter 2 of the HTSUS	Addition
0201.30.80	Bovine meat cuts, boneless, fresh or chilled, not described in general note 15 or additional U.S. note 3 to chapter 2 of the HTSUS	Addition
0202.10.05	Bovine carcasses and halves, frozen, described in general note 15 of the HTSUS	Addition
0202.10.10	Bovine carcasses and halves, frozen, described in additional U.S. note 3 to chapter 2 of the HTSUS	Addition
0202.10.50	Bovine carcasses and halves, frozen, other than described in general note 15 or additional U.S. note 3 to chapter 2 of the HTSUS	Addition
0202.20.02	High-quality beef cuts, with bone in, processed, frozen, described in general note 15 of the HTSUS	Addition
0202.20.04	Bovine meat cuts (except high-quality beef cuts), with bone in, processed, frozen, described in general note 15 of the HTSUS	Addition
0202.20.06	Bovine meat cuts, with bone in, not processed, frozen, described in general note 15 of the HTSUS	Addition
0202.20.10	High-quality beef cuts, with bone in, processed, frozen, described in additional U.S. note 3 to chapter 2 of the HTSUS	Addition
0202.20.30	Bovine meat cuts (except high-quality beef cuts), with bone in, processed, frozen, described in additional U.S. note 3 to chapter 2 of the HTSUS	Addition
0202.20.50	Bovine meat cuts, with bone in, not processed, frozen, described in additional U.S. note 3 to chapter 2 of the HTSUS	Addition
0202.20.80	Bovine meat cuts, with bone in, frozen, not described in general note 15 or additional U.S. note 3 to chapter 2 of the HTSUS	Addition

HTSUS	Description	Notes
0202.30.02	High-quality beef cuts, boneless, processed, frozen, described in general note 15 of the HTSUS	Addition
0202.30.04	Bovine meat cuts (except high-quality beef cuts), boneless, processed, frozen, described in general note 15 of the HTSUS	Addition
0202.30.06	Bovine meat cuts, boneless, not processed, frozen, described in general note 15 of the HTSUS	Addition
0202.30.10	High-quality beef cuts, boneless, processed, frozen, described in additional U.S. note 3 to chapter 2 of the HTSUS	Addition
0202.30.30	Bovine meat cuts (except high-quality beef cuts), boneless, processed, frozen, described in additional U.S. note 3 to chapter 2 of the HTSUS	Addition
0202.30.50	Bovine meat cuts, boneless, not processed, frozen, described in additional U.S. note 3 to chapter 2 of the HTSUS	Addition
0202.30.80	Bovine meat cuts, boneless, frozen, not described in general note 15 or additional U.S. note 3 to chapter 2 of the HTSUS	Addition
0206.10.00	Edible offal of bovine animals, fresh or chilled	Addition
0206.21.00	Tongues of bovine animals, frozen	Addition
0206.22.00	Livers of bovine animals, frozen	Addition
0206.29.00	Edible offal of bovine animals, except tongues or livers, frozen	Addition
0210.20.00	Meat of bovine animals, salted, in brine, dried or smoked	Addition
0508.00.00	Coral, shells, cuttlebone and similar materials, unworked or simply prepared but not cut to shape; powder and waste thereof	
0702.00.20	Tomatoes, fresh or chilled, if entered during the period from March 1 to July 14, or the period from September 1 to November 14 in any year	Addition
0702.00.40	Tomatoes, fresh or chilled, entered during the period from July 15 to August 31 in any year	Addition
0702.00.60	Tomatoes, fresh or chilled, entered during the period from November 15, in any year, to the last day of February of the following year	Addition
0709.99.05	Jicamas and breadfruit, fresh or chilled	Addition
0709.99.10	Chayote (Sechium edule), fresh or chilled	Addition
0710.80.15	Bamboo shoots and water chestnuts (other than Chinese water chestnuts), uncooked or cooked by steaming or boiling in water, frozen	Addition
0711.90.30	Capers, provisionally preserved but unsuitable in that state for immediate consumption	Addition
0712.32.00	Dried wood ears (Auricularia spp.), whole, cut, sliced, broken or in powder, but not further prepared	Addition

HTSUS	Description	Notes
0712.34.10	Air dried or sun dried shiitake	Addition
0712.34.20	Dried (other than air dried or sun dried) shiitake	Addition
0713.34.20	Dried Bambara beans, shelled, if entered for consumption during the period from May 1 through August 31, inclusive, in any year	Addition
0713.34.40	Dried Bambara beans, shelled, if entered for consumption outside the above period, or if withdrawn for consumption	Addition
0714.10.10	Cassava (manioc), frozen, whether or not sliced or in the form of pellets	Addition
0714.10.20	Cassava (manioc), fresh, chilled or dried, whether or not sliced or in the form of pellets	Addition
0714.40.10	Taro (Colocasia spp.), fresh or chilled, whether or not sliced or in the form of pellets	Addition
0714.40.20	Taro (Colocasia spp.), frozen	Addition
0714.40.50	Taro (Colocasia spp.), dried, in the form of pellets	Addition
0714.40.60	Taro (Colocasia spp.), dried, whether or not sliced but not in pellets	Addition
0714.50.10	Yautia (Xanthosoma spp.), fresh or chilled, whether or not sliced or in the form of pellets	Addition
0714.50.20	Yautia (Xanthosoma spp.), frozen	Addition
0714.50.60	Yautia (Xanthosoma spp.), dried, whether or not sliced but not in pellets	Addition
0714.90.42	Other mixtures of Chinese water chestnuts, frozen	Addition
0714.90.44	Chinese water chestnuts, not mixed, frozen	Addition
0714.90.46	Frozen dasheens, arrowroot, salep, Jerusalem artichokes, and similar roots and tubers, nesoi	Addition
0714.90.48	Chinese water chestnuts, dried	Addition
0714.90.61	Dried dasheens, arrowroot, salep, Jerusalem artichokes, and similar roots and tubers nesoi, whether or not sliced but not in pellets	Addition
0801.11.00	Coconuts, desiccated	Addition
0801.12.00	Coconuts, fresh, in the inner shell (endocarp)	Addition
0801.19.01	Coconuts, fresh, not in the inner shell (endocarp)	Addition
0801.21.00	Brazil nuts, fresh or dried, in shell	Addition
0801.22.00	Brazil nuts, fresh or dried, shelled	Addition
0801.31.00	Cashew nuts, fresh or dried, in shell	Addition
0801.32.00	Cashew nuts, fresh or dried, shelled	Addition
0802.41.00	Chestnuts (Castanea spp.), fresh or dried, in shell	Addition
0802.42.00	Chestnuts (Castanea spp.), fresh or dried, shelled	Addition
0802.61.00	Macadamia nuts, in shell	Addition
0802.62.00	Macadamia nuts, shelled	Addition
0802.70.10	Kola nuts (Cola spp.), fresh or dried, in shell	Addition

HTSUS	Description	Notes
0802.70.20	Kola nuts (Cola spp.), fresh or dried, shelled	Addition
0802.80.10	Areca nuts, fresh or dried, in shell	Addition
0802.80.20	Areca nuts, fresh or dried, shelled	Addition
0802.91.10	Pignolia pine nuts, fresh or dried, in shell	Addition
0802.91.90	Pine nuts (other than Pignolia), fresh or dried, in shell	Addition
0802.92.10	Pignolia pine nuts, fresh or dried, shelled	Addition
0802.92.90	Pine nuts (other than Pignolia), fresh or dried, shelled	Addition
0803.10.10	Plantains, fresh	Addition
0803.10.20	Plantains, dried	Addition
0803.90.00	Bananas, fresh or dried	Addition
0804.30.20	Pineapples, fresh or dried, not reduced in size, in bulk	Addition
0804.30.40	Pineapples, fresh or dried, not reduced in size, in crates or other packages	Addition
0804.30.60	Pineapples, fresh or dried, reduced in size	Addition
0804.40.00	Avocados, fresh or dried	Addition
0804.50.40	Guavas, mangoes and mangosteens, fresh, if entered during the period September 1 through the following May 31, inclusive	Addition
0804.50.60	Guavas, mangoes and mangosteens, fresh, if entered during the period June 1 through August 31, inclusive	Addition
0804.50.80	Guavas, mangoes and mangosteens, dried	Addition
0805.10.00	Oranges, fresh or dried	Addition
0805.50.30	Tahitian limes, Persian limes and other limes of the Citrus latifolia variety, fresh or dried	Addition
0805.50.40	Limes of the Citrus aurantifolia variety, fresh or dried	Addition
0805.90.01	Etrogs	Addition (Ex)
0807.20.00	Papayas (papaws), fresh	Addition
0808.40.20	Quinces, fresh, if entered during the period from April 1 through June 30, inclusive	Addition
0808.40.40	Quinces, fresh, if entered during the period from July 1 through the following March 31, inclusive	Addition
0810.50.00	Kiwifruit, fresh	Addition
0810.60.00	Durians, fresh	Addition
0810.90.27	Other berries and tamarinds, fresh	Addition
0810.90.46	Fruit, nesoi, fresh	Addition
0811.90.10	Bananas and plantains, frozen, in water or containing added sweetening	Addition
0811.90.25	Cashew apples, mameyes colorados, sapodillas, soursops and sweetsops, frozen, in water or containing added sweetening	Addition
0811.90.30	Coconut meat, frozen, in water or containing added sweetening	Addition

HTSUS	Description	Notes
0811.90.40	Papayas, frozen, in water or containing added sweetening	Addition
0811.90.50	Pineapples, frozen, in water or containing added sweetening	Addition
0811.90.52	Mangoes, frozen, whether or not previously steamed or boiled	Addition
0811.90.80	Tropical fruit, nesoi, frozen, whether or not previously steamed or boiled	Addition (Ex)
0812.90.40	Pineapples, provisionally preserved, but unsuitable in that state for immediate consumption	Addition
0901.11.00	Coffee, not roasted, not decaffeinated	Addition
0901.12.00	Coffee, not roasted, decaffeinated	Addition
0901.21.00	Coffee, roasted, not decaffeinated	Addition
0901.22.00	Coffee, roasted, decaffeinated	Addition
0901.90.10	Coffee husks and skins	Addition
0901.90.20	Coffee substitutes containing coffee	Addition
0902.10.10	Green tea in immediate packings of a content not exceeding 3 kg, flavored	Addition
0902.10.90	Green tea in immediate packings of a content not exceeding 3 kg, not flavored	Addition
0902.20.10	Green tea in immediate packings of a content exceeding 3 kg, flavored	Addition
0902.20.90	Green tea in immediate packings of a content exceeding 3 kg, not flavored	Addition
0902.30.00	Black tea (fermented) and partly fermented tea, in immediate packings of a content not exceeding 3 kg	Addition
0902.40.00	Black tea (fermented) and partly fermented tea, other than in immediate packings of a content not exceeding 3 kg	Addition
0903.00.00	Maté	Addition
0904.11.00	Pepper of the genus Piper, neither crushed nor ground	Addition
0904.12.00	Pepper of the genus Piper, crushed or ground	Addition
0904.21.20	Paprika, dried, neither crushed nor ground	Addition
0904.21.40	Anaheim and ancho pepper, dried, neither crushed nor ground	Addition
0904.21.60	Fruits of the genus Capsicum, other than paprika or anaheim and ancho pepper, dried, neither crushed nor ground	Addition
0904.21.80	Fruits of the genus Pimenta (including allspice), dried	Addition
0904.22.20	Paprika, crushed or ground	Addition
0904.22.40	Anaheim and ancho pepper, crushed or ground	Addition
0904.22.73	Mixtures of mashed or macerated hot red peppers and salt, nesoi	Addition
0904.22.76	Fruits of the genus Capsicum, crushed or ground, nesoi	Addition
0904.22.80	Fruits of the genus Pimenta (including allspice), crushed or ground	Addition
0905.10.00	Vanilla beans, neither crushed nor ground	Addition

HTSUS	Description	Notes
0905.20.00	Vanilla beans, crushed or ground	Addition
0906.11.00	Cinnamon (Cinnamomum zeylanicum Blume), neither crushed nor ground	Addition
0906.19.00	Cinnamon and cinnamon-tree flowers, nesoi, neither crushed nor ground	Addition
0906.20.00	Cinnamon and cinnamon-tree flowers, crushed or ground	Addition
0907.10.00	Cloves (whole fruit, cloves and stems), neither crushed nor ground	Addition
0907.20.00	Cloves (whole fruit, cloves and stems), crushed or ground	Addition
0908.11.00	Nutmeg, neither crushed nor ground	Addition
0908.12.00	Nutmeg, crushed or ground	Addition
0908.21.00	Mace, neither crushed nor ground	Addition
0908.22.20	Mace, ground, Bombay or wild	Addition
0908.22.40	Mace, crushed or ground, other than ground Bombay or wild mace	Addition
0908.31.00	Cardamoms, neither crushed nor ground	Addition
0908.32.00	Cardamoms, crushed or ground	Addition
0909.21.00	Seeds of coriander, neither crushed nor ground	Addition
0909.22.00	Seeds of coriander, crushed or ground	Addition
0909.31.00	Seeds of cumin, neither crushed nor ground	Addition
0909.32.00	Seeds of cumin, crushed or ground	Addition
0909.61.00	Seeds of anise, badian, caraway or fennel; juniper berries; neither crushed nor ground	Addition
0909.62.00	Seeds of anise, badian, caraway or fennel; juniper berries; crushed or ground	Addition
0910.11.00	Ginger, neither crushed nor ground	Addition
0910.12.00	Ginger, crushed or ground	Addition
0910.20.00	Saffron	Addition
0910.30.00	Turmeric (curcuma)	Addition
0910.91.00	Mixtures of spices referred to in note 1(b) to chapter 9 of the HTSUS	Addition
0910.99.07	Bay leaves, other than crude or not manufactured	Addition
0910.99.10	Curry	Addition
0910.99.20	Origanum, crude or not manufactured	Addition
0910.99.40	Origanum, other than crude or not manufactured	Addition
0910.99.50	Dill	Addition
0910.99.60	Spices, nesoi	Addition
1003.90.40	Barley, not seed, other than for malting purposes	Addition
1008.30.00	Canary seed	Addition
1008.40.00	Fonio (Digitaria spp.)	Addition
1008.60.00	Triticale	Addition

HTSUS	Description	Notes
1106.20.90	Flour, meal and powder of sago, or of roots or tubers of heading 0714 (excluding Chinese water chestnuts)	Addition
1106.30.20	Flour, meal and powder of banana and plantain	Addition
1108.14.00	Cassava (manioc) starch	Addition
1108.19.00	Starches other than wheat, corn (maize), potato or cassava (manioc) starches	Addition
1203.00.00	Copra	Addition
1207.91.00	Poppy seeds, whether or not broken	Addition
1404.90.90	Date palm branches, Myrtus branches or other vegetable material, for religious purposes only	Addition (Ex)
1513.11.00	Coconut (copra) oil and its fractions, crude oil	Addition
1513.19.00	Coconut (copra) oil and its fractions, other	Addition
1521.10.00	Vegetable waxes (other than triglycerides), whether or not refined or colored	Addition
1521.90.20	Bleached beeswax	Addition
1602.50.05	Offal of bovine animals, prepared or preserved	Addition
1602.50.07	Corned beef in airtight containers	Addition
1602.50.08	Offal of bovine animals, cured or pickled, not corned beef, not in airtight containers	Addition
1602.50.21	Offal of bovine animals, other, in airtight containers	Addition
1602.50.60	Prepared or preserved meat of bovine animals, not containing cereals or vegetables, nesoi	Addition
1602.50.90	Prepared or preserved meat of bovine animals, containing cereals or vegetables	Addition
1801.00.00	Cocoa beans, whole or broken, raw or roasted	Addition
1802.00.00	Cocoa shells, husks, skins and other cocoa waste	Addition
1803.10.00	Cocoa paste, not defatted	Addition
1803.20.00	Cocoa paste, wholly or partly defatted	Addition
1804.00.00	Cocoa butter, fat and oil	Addition
1805.00.00	Cocoa powder, not containing added sugar or other sweetening matter	Addition
1903.00.20	Tapioca and substitutes prepared from starch, of arrowroot, cassava or sago, in the form of flakes, grains, pearls, siftings or in similar forms	Addition
1903.00.40	Tapioca and substitutes, prepared from starch nesoi, in the form of flakes, grains, pearls, siftings or in similar forms	Addition
1905.90.10	Bread, pastry, cakes, biscuits and similar baked products, nesoi, and puddings, whether or not containing chocolate, fruit, nuts or confectionery, for religious purposes only	Addition (Ex)
1905.90.90	Bakers' wares, communion wafers, sealing wafers, rice paper and similar products, nesoi, for religious purposes only	Addition (Ex)

HTSUS	Description	Notes
2001.90.45	Mangoes, prepared or preserved by vinegar or acetic acid	Addition
2005.91.60	Bamboo shoots in airtight containers, prepared or preserved otherwise than by vinegar or acetic acid, not frozen, not preserved by sugar	Addition
2006.00.40	Pineapples, preserved by sugar (drained, glacé or crystallized)	Addition
2007.99.40	Pineapple jam	Addition
2007.99.50	Guava and mango pastes and purees, being cooked preparations	Addition
2008.19.15	Coconuts, otherwise prepared or preserved, nesoi	Addition
2008.20.00	Pineapples, otherwise prepared or preserved, nesoi	Addition
2008.91.00	Palm hearts, otherwise prepared or preserved, nesoi	Addition
2008.99.13	Banana pulp, otherwise prepared or preserved, nesoi	Addition
2008.99.15	Bananas, other than pulp, otherwise prepared or preserved, nesoi	Addition
2008.99.21	Acai	Addition (Ex)
2008.99.40	Mangoes, otherwise prepared or preserved, nesoi	Addition
2008.99.45	Papaya pulp, otherwise prepared or preserved, nesoi	Addition
2008.99.91	Bean cake, bean stick, miso, other fruit, nuts and other edible parts of plants, prepared or preserved	Addition
2009.11.00	Orange juice, frozen, unfermented and not containing added spirit	Addition
2009.12.25	Orange juice, not frozen, of a Brix value not exceeding 20, not concentrated and not made from juice having a degree of concentration of 1.5 or more, unfermented	Addition
2009.12.45	Orange juice, not frozen, of a Brix value not exceeding 20, concentrated, unfermented	Addition
2009.19.00	Orange juice, not frozen, of a Brix value exceeding 20, unfermented	Addition
2009.31.60	Citrus juice of any single citrus fruit (other than orange, grapefruit or lime), of a Brix value not exceeding 20, concentrated, unfermented, except for lemon juice	Addition (Ex)
2009.39.20	Lime juice, of a Brix value exceeding 20, fit for beverage purposes, unfermented	Addition
2009.49.40	Pineapple juice, of a Brix value exceeding 20, concentrated (in degree of concentration greater than 3.5)	Addition
2009.89.70	Coconut water or juice of acai	Addition (Ex)
2009.90.40	Coconut water juice blends, not from concentrate, packaged for retail sale	Addition (Ex)
2101.11.29	Extracts, essences and concentrates of coffee other than unflavored instant coffee	Addition
2101.12.90	Preparations nesoi, with a basis of extracts, essences or concentrates or with a basis of coffee	Addition

HTSUS	Description	Notes
2101.20.20	Extracts, essences or concentrates of tea or mate	Addition
2106.90.48	Orange juice, fortified with vitamins or minerals	Addition
2106.90.99	Acai preparations for the manufacture of beverages	Addition (Ex)
2202.99.30	Orange juice, fortified with vitamins or minerals, not made from a juice having a degree of concentration of 1.5 or more	Addition
2202.99.35	Orange juice, fortified with vitamins or minerals, nesoi	Addition
2504.10.10	Natural graphite, in crystalline flakes (not including flake dust)	Executive Order 14346 of September 5, 2025
2504.10.50	Natural graphite, in powder or flakes (other than crystalline flake)	
2504.90.00	Natural graphite, other than in powder or in flakes	
2510.10.00	Natural calcium phosphates, natural aluminum calcium phosphates, unground	
2510.20.00	Natural calcium phosphates, natural aluminum calcium phosphates, ground	
2511.10.10	Natural barium sulfate (barytes), ground	
2511.10.50	Natural barium sulfate (barytes), not ground	
2519.10.00	Natural magnesium carbonate (magnesite)	
2519.90.10	Fused magnesia; dead-burned (sintered) magnesia, whether or not containing small quantities of other oxides added before sintering	
2519.90.20	Caustic calcined magnesite	
2524.90.00	Asbestos other than Crocidolite (Blue)	
2529.21.00	Fluorspar, containing by weight 97 percent or less of calcium fluoride	
2529.22.00	Fluorspar, containing by weight more than 97 percent of calcium fluoride	
2530.20.10	Kieserite	
2530.20.20	Epsom salts (natural magnesium sulfates)	
2530.90.10	Natural cryolite; natural chiolite	
2530.90.20	Natural micaceous iron oxides	
2530.90.80	Other mineral substances, nesoi	
2602.00.00	Manganese ores and concentrates including ferruginous manganese ores and concentrates, with manganese content over 20 percent, calculated on dry weight	
2603.00.00	Copper ores and concentrates	
2604.00.00	Nickel ores and concentrates	Executive Order 14346 of September 5, 2025
2605.00.00	Cobalt ores and concentrates	

HTSUS	Description	Notes
2606.00.00	Aluminum ores and concentrates	
2608.00.00	Zinc ores and concentrates	
2609.00.00	Tin ores and concentrates	Executive Order 14346 of September 5, 2025
2610.00.00	Chromium ores and concentrates	
2611.00.30	Tungsten ores	
2611.00.60	Tungsten concentrates	
2612.10.00	Uranium ores and concentrates	
2612.20.00	Thorium ores and concentrates	Executive Order 14346 of September 5, 2025
2613.90.00	Molybdenum ores and concentrates, not roasted	Executive Order 14346 of September 5, 2025
2614.00.30	Synthetic rutile	
2614.00.60	Titanium ores and concentrates, other than synthetic rutile	
2615.90.30	Synthetic tantalum-niobium concentrates	
2615.90.60	Niobium, tantalum or vanadium ores and concentrates, nesoi	
2616.10.00	Silver ores and concentrates	
2617.10.00	Antimony ores and concentrates	
2620.30.00	Ash and residues (other than from the manufacture of iron or steel), containing mainly copper	
2620.99.50	Slag (other than from the manufacture of iron or steel), containing by weight over 40 percent titanium, and which if containing over 2 percent by weight of copper, lead, or zinc is not to be treated for the recovery thereof	
2701.11.00	Coal, anthracite, whether or not pulverized, but not agglomerated	
2701.12.00	Coal, bituminous, whether or not pulverized, but not agglomerated	
2701.19.00	Coal, other than anthracite or bituminous, whether or not pulverized, but not agglomerated	
2701.20.00	Coal, briquettes, ovoids and similar solid fuels manufactured from coal	
2702.10.00	Lignite (excluding jet), whether or not pulverized, but not agglomerated	
2702.20.00	Lignite (excluding jet), agglomerated	
2703.00.00	Peat (including peat litter), whether or not agglomerated	

HTSUS	Description	Notes
2704.00.00	Coke and semicoke of coal, lignite or peat, whether or not agglomerated; retort carbon	
2705.00.00	Coal gas, water gas, producer gas and similar gases, other than petroleum gases and other gaseous hydrocarbons	
2706.00.00	Tars (including reconstituted tars), distilled from coal, lignite or peat, and other mineral tars, whether dehydrated or partially distilled	
2707.10.00	Benzene, from the distillation of high-temperature coal tar, or in which the weight of the aromatic constituents exceeds that of the nonaromatic constituents	
2707.20.00	Toluene, from the distillation of high-temperature coal tar, or in which the weight of aromatic constituents exceeds that of the nonaromatic constituents	
2707.30.00	Xylenes, from the distillation of high-temperature coal tar, or in which the weight of the aromatic constituents exceeds that of the nonaromatic constituents	
2707.40.00	Naphthalene, from the distillation of high-temperature coal tar, or in which the weight of the aromatic constituents exceeds that of the nonaromatic constituents	
2707.50.00	Aromatic hydrocarbon mixtures (from the distillation of high-temperature coal tar, or similar products in which the weight of the aromatic constituents exceeds that of the nonaromatic constituents), other than Benzene, Toluene, Xylenes, and Naphathalene, in which 65% or more by volume (including losses) distills at 250 C by the ISO 3405 method (equivalent to the ASTM D 86 method)	
2707.91.00	Creosote oils, from the distillation of high-temperature coal tar or similar products in which the weight of the aromatic constituents exceeds that of the nonaromatic constituents	
2707.99.10	Light oil, from the distillation of high-temperature coal tar or similar products in which the weight of the aromatic constituents exceeds that of the nonaromatic constituents	
2707.99.20	Picolines, from the distillation of high-temperature coal tar or similar products in which the weight of the aromatic constituents exceeds that of the nonaromatic constituents	
2707.99.40	Carbazole, from the distillation of high-temperature coal tar or similar products in which the weight of the aromatic constituents exceeds that of the nonaromatic constituents, having a purity of 65 percent or more by weight	
2707.99.51	Phenols, from the distillation of high-temperature coal tar or similar products in which the weight of aromatic constituents exceeds that of nonaromatic constituents, containing more than 50 percent by weight of hydroxybenzene	

HTSUS	Description	Notes
2707.99.55	Metacresol, orthocresol, paracresol, and metaparacresol, from the distillation of high-temperature coal tar or similar products where the weight of the aromatic constituents exceeds that of the nonaromatic constituents, having a purity of 75 percent or more by weight	
2707.99.59	Phenols, nesoi	
2707.99.90	Other products of the distillation of high-temperature coal tar and similar products in which the weight of the aromatic constituents exceed that of the nonaromatic constituents, nesoi	
2708.10.00	Pitch, obtained from coal tar or other mineral tars	
2708.20.00	Pitch coke, obtained from coal tar or other mineral tars	
2709.00.10	Petroleum oils and oils from bituminous minerals, crude, testing under 25 degrees A.P.I.	
2709.00.20	Petroleum oils and oils from bituminous minerals, crude, testing 25 degrees A.P.I. or more	
2710.12.15	Light oil motor fuel from petroleum oils and oils from bituminous minerals (other than crude) and containing by weight 70 percent or more of petroleum oils or oils from bituminous minerals	
2710.12.18	Light oil motor fuel blending stock from petroleum oils and oils from bituminous minerals (other than crude) containing by weight 70 percent or more from petroleum oils or oils from bituminous minerals	
2710.12.25	Naphthas (except motor fuel or motor fuel blending stock)	
2710.12.45	Light oil mixtures of hydrocarbons nesoi which contain by weight not over 50 percent of any single hydrocarbon compound	
2710.12.90	Light oils and preparations, from petroleum oils and oils from bituminous minerals or preparations nesoi containing by weight 70 percent or more of petroleum oils or oils obtained from bituminous minerals	
2710.19.06	Distillate and residual fuel oils (including blended fuel oils), derived from petroleum or oils from bituminous minerals, testing under 25 degrees A.P.I.	
2710.19.11	Distillate and residual fuel oils (including blended fuel oils), derived from petroleum oils or oils from bituminous minerals, testing 25 degrees A.P.I. or more	
2710.19.16	Kerosene-type jet fuel, from petroleum oils and oils of bituminous minerals (other than crude) or preparations containing by weight 70 percent or more of petroleum oils or oils obtained from bituminous minerals	
2710.19.24	Kerosene motor fuel (except kerosene-type jet fuel), from petroleum oils and oils of bituminous minerals (other than	

HTSUS	Description	Notes
	crude) or preparations containing by weight 70 percent or more of petroleum oils or oils obtained from bituminous minerals	
2710.19.25	Kerosene motor fuel blending stock (except kerosene-type jet fuel), from petroleum oils and oils of bituminous minerals (other than crude) or preparations containing by weight 70 percent or more of petroleum oils or oils obtained from bituminous minerals	
2710.19.26	Kerosene (except kerosene-type jet fuel, kerosene motor fuel, and kerosene motor fuel blending stock), from petroleum oils and oils of bituminous minerals (other than crude) or preparations containing by weight 70 percent or more of petroleum oils or oils obtained from bituminous minerals	
2710.19.30	Lubricating oils, with or without additives, from petroleum oils and oils of bituminous minerals (other than crude) or preparations containing by weight 70 percent or more of petroleum oils or oils obtained from bituminous minerals	
2710.19.35	Lubricating greases, containing not over 10 percent by weight of salts of fatty acids of animal or vegetable origin, from petroleum oils and oils of bituminous minerals (other than crude) or preparations containing by weight 70 percent or more of petroleum oils or oils obtained from bituminous minerals	
2710.19.40	Lubricating greases, containing 10 percent or more by weight of salts of fatty acids of animal or vegetable origin, from petroleum oils and oils of bituminous minerals (other than crude) or preparations containing by weight 70 percent or more of petroleum oils or oils obtained from bituminous minerals	
2710.19.45	Mixture of hydrocarbons nesoi, which contain by weight not over 50 percent of any single hydrocarbon compound, from petroleum oils and oils of bituminous minerals (other than crude) or preparations containing by weight 70 percent or more of petroleum oils or oils obtained from bituminous minerals	
2710.19.90	Petroleum oils and oils from bituminous minerals or preparations nesoi containing by weight 70% or more of petroleum oils or oils obtained from bituminous minerals	
2710.20.05	Distillate and residual fuel oils (including blended fuel oils), testing under 25 degrees A.P.I., from petroleum oils and oils of bituminous minerals (other than crude) or preparations nesoi containing by weight 70 percent or more of petroleum oils or oils obtained from bituminous minerals, containing biodiesel, other than waste oils	

HTSUS	Description	Notes
2710.20.10	Distillate and residual fuel oils (including blended fuel oils), testing 25 degrees A.P.I. or more, from petroleum oils and oils of bituminous minerals (other than crude) or preparations nesoi containing by weight 70 percent or more of petroleum oils or oils obtained from bituminous minerals, containing biodiesel, and other than waste oils	
2710.20.15	Kerosene-type jet fuel, motor fuel or motor fuel blending stock, from petroleum oils and oils of bituminous minerals (other than crude) or preparations nesoi containing by weight 70 percent or more of petroleum oils or oils obtained from bituminous minerals, containing biodiesel, and other than waste oils	
2710.20.25	Kerosene (except kerosene-type jet fuel, motor fuel or motor fuel blending stock, from petroleum oils and oils of bituminous minerals (other than crude) or preparations nesoi containing by weight 70 percent or more of petroleum oils or oils obtained from bituminous minerals, containing biodiesel, other than waste oils	
2710.91.00	Waste oils containing polychlorinated biphenyls (PCBs), polychlorinated terphenyls (PCTs) or polybrominated biphenyls (PBBs)	
2710.99.05	Wastes of distillate and residual fuel oil (including blends) derived from petroleum oil or bituminous minerals, testing under 25 degrees A.P.I.	
2710.99.10	Wastes of distillate and residual fuel oil (including blends) derived from petroleum oil or bituminous minerals, testing 25 degrees A.P.I. or more	
2710.99.16	Waste motor fuel or motor fuel blending stock	
2710.99.21	Waste kerosene or naphthas	
2710.99.31	Waste lubricating oils, with or without additives	
2710.99.32	Waste lubricating greases, containing not over 10 percent by weight of fatty acids of animal (including marine animal) or vegetable origin	
2710.99.39	Other wastes of lubricating oils and greases	
2710.99.45	Waste oil mixtures of hydrocarbons nesoi containing not over 50 percent of any single hydrocarbon compound	
2710.99.90	Other waste oils	
2711.11.00	Natural gas, liquefied	
2711.12.00	Propane, liquefied	
2711.13.00	Butanes, liquefied	
2711.14.00	Ethylene, propylene, butylene and butadiene, liquefied	
2711.19.00	Liquefied petroleum gases and other gaseous hydrocarbons, nesoi	
2711.21.00	Natural gas, in gaseous state	

HTSUS	Description	Notes
2711.29.00	Petroleum gases and other gaseous hydrocarbons, except natural gas	
2712.10.00	Petroleum jelly	
2712.20.00	Paraffin wax (whether or not colored), obtained by synthesis or other process and less than 0.75 percent oil by weight	
2712.90.10	Montan wax (whether or not colored), obtained by synthesis or other process	
2712.90.20	Mineral waxes (i.e., paraffin wax with 0.75 percent or more oil by weight, microcrystalline wax, slack lignite and peat waxes, ozokerite), obtained by synthesis	
2713.11.00	Coke, petroleum, not calcined	
2713.12.00	Coke, petroleum coke, calcined	
2713.20.00	Petroleum bitumen	
2713.90.00	Residues (except petroleum coke or petroleum bitumen) of petroleum oils or of oils obtained from bituminous materials	
2714.10.00	Bituminous or oil shale and tar sands	
2714.90.00	Bitumen and asphalt, natural; asphaltites and asphaltic rocks	
2715.00.00	Bituminous mixtures based on natural asphalt, natural bitumen, petroleum bitumen, mineral tar or mineral tar pitch	
2716.00.00	Electrical energy	
2801.20.00	Iodine	
2804.29.00	Rare gases, other than argon	
2804.50.00	Boron; tellurium	
2804.61.00	Silicon containing by weight not less than 99.99 percent of silicon	
2804.80.00	Arsenic	
2804.90.00	Selenium	
2805.19.10	Strontium	
2805.19.20	Barium	
2805.19.90	Alkali metals, other than sodium	
2805.30.00	Rare-earth metals, scandium and yttrium, whether or not intermixed or interalloyed	
2811.11.00	Hydrogen fluoride (Hydrofluoric acid)	
2811.19.10	Arsenic acid	
2811.29.10	Arsenic trioxide	
2811.29.20	Selenium dioxide	
2812.19.00	Other chlorides and chloride oxides	
2813.90.10	Arsenic sulfides	
2815.20.00	Potassium hydroxide (Caustic potash)	
2816.10.00	Hydroxide and peroxide of magnesium	
2816.40.10	Oxides, hydroxides and peroxides of strontium	

HTSUS	Description	Notes
2816.40.20	Oxides, hydroxides and peroxides of barium	
2817.00.00	Zinc oxide; zinc peroxide	
2818.10.10	Artificial corundum, crude	
2818.10.20	Artificial corundum, in grains, or ground, pulverized or refined	
2818.20.00	Aluminum oxide, other than artificial corundum	
2820.10.00	Manganese dioxide	
2821.10.00	Iron oxides and hydroxides	
2821.20.00	Earth colors containing 70 percent or more by weight of combined iron evaluated as Fe2O3	
2822.00.00	Cobalt oxides and hydroxides; commercial cobalt oxides	
2823.00.00	Titanium oxides	
2825.20.00	Lithium oxide and hydroxide	
2825.40.00	Nickel oxides and hydroxides	Executive Order 14346 of September 5, 2025
2825.50.30	Copper hydroxides	
2825.60.00	Germanium oxides and zirconium dioxide	
2825.80.00	Antimony oxides	
2825.90.15	Niobium oxide	
2825.90.30	Tungsten oxides	
2825.90.90	Other inorganic bases; other metal oxides, hydroxides and peroxides, nesoi	
2826.12.00	Fluorides of aluminum	
2826.30.00	Sodium hexafluoroaluminate (Synthetic cryolite)	
2826.90.90	Other complex fluorine salts, nesoi	
2827.31.00	Magnesium chloride	
2827.39.45	Barium chloride	
2827.39.60	Cobalt chlorides	
2827.39.90	Chlorides, nesoi	
2827.41.00	Chloride oxides and chloride hydroxides of copper	
2827.49.50	Chloride oxides and chloride hydroxides other than of copper or of vanadium	
2827.59.51	Other bromides and bromide oxides, other than ammonium, calcium or zinc	
2827.60.10	Iodide and iodide oxide of calcium or copper	
2827.60.51	Iodides and iodide oxides, other than of calcium, copper or potassium	
2833.21.00	Magnesium sulfate	
2833.24.00	Nickel sulfate	Executive Order 14346

HTSUS	Description	Notes
		of September 5, 2025
2833.25.00	Copper sulfate	
2833.27.00	Barium sulfate	
2833.29.10	Cobalt sulfate	
2833.29.45	Zinc sulfate	
2833.29.51	Other sulfates nesoi	
2834.21.00	Potassium nitrate	
2834.29.20	Strontium nitrate	
2834.29.51	Nitrates, nesoi	
2836.60.00	Barium carbonate	
2836.91.00	Lithium carbonates	
2836.92.00	Strontium carbonate	
2836.99.10	Cobalt carbonates	
2836.99.50	Carbonates nesoi, and peroxocarbonates (percarbonates)	
2841.80.00	Tungstates (wolframates)	
2841.90.20	Ammonium perrhenate	
2841.90.40	Aluminates	
2843.29.01	Silver compounds, other than silver nitrate	
2843.30.00	Gold compounds	
2843.90.00	Inorganic or organic compounds of precious metals, excluding those of silver and gold; amalgams of precious metals	
2844.10.10	Natural uranium metal	
2844.10.20	Natural uranium compounds	
2844.20.00	Uranium enriched in U235 and plutonium and their compounds; alloys, dispersions, ceramic products and mixtures containing these products	
2844.30.20	Compounds of uranium depleted in U235	
2844.30.50	Uranium depleted in U235, thorium; alloys, dispersions, ceramic products and mixtures of these products and their compounds	
2844.43.00	Other radioactive elements, isotopes, compounds, nesoi; alloys, dispersions, ceramic products and mixtures thereof	
2845.90.01	Isotopes not in heading 2844 and their compounds other than boron, lithium and helium	
2846.10.00	Cerium compounds	
2846.90.20	Mixtures of rare-earth oxides or of rare-earth chlorides	
2846.90.40	Yttrium materials and compounds containing by weight more than 19 percent but less than 85 percent yttrium oxide equivalent	

HTSUS	Description	Notes
2846.90.80	Compounds, inorganic or organic, of rare-earth metals, of yttrium or of scandium, or of mixtures of these metals, nesoi	
2849.20.10	Silicon carbide, crude	
2849.20.20	Silicon carbide, in grains, or ground, pulverized or refined	
2849.90.30	Tungsten carbide	
2853.90.10	Phosphor copper containing more than 15 percent by weight of phosphorus, excluding ferrosphosphorus	
2853.90.90	Other phosphides, excluding ferrophosphorous, nesoi	
2903.45.10	1,2,1,2-Tetrafluoroethane (HFC-134a) and 1,1,2,2-tetrafluoroethane (HFC-134)	
2903.51.10	2,3,3,3-Tetrafluoropropene (HFO-1234yf),1,3,3,3-tetrafluoropropene (HFO-1234ze) and (Z)-1,1,1,4,4,4-hexafluoro-2-butene (HFO-1336mzz)	Executive Order 14346 of September 5, 2025
2903.59.90	Other unsaturated fluorinated derivatives of acyclic hydrocarbons	
2903.69.90	Other brominated or iodinated derivatives of acyclic hydrocarbons	
2903.78.00	Other perhalogenated acyclic hydrocarbon derivatives, nesoi	
2903.79.90	Other halogenated derivatives of acyclic hydrocarbons containing two or more different halogens, nesoi	
2903.89.15	Halogenated products derived in whole or in part from benzene or other aromatic hydrocarbon, described in additional U.S. note 3 to section VI of the HTSUS	
2903.89.20	Halogenated derivatives derived in whole or in part from benzene or other aromatic hydrocarbon, nesoi	
2903.89.70	Other halogenated derivatives of cyclanic etc hydrocarbons not deriv from benzene or other aromatic hydrocarbons	
2903.92.00	Hexachlorobenzene (ISO) and DDT (clofenatone (INN), (1,1,1-Trichloro-2,2-bis(p-chlorophenyl)ethane))	
2904.99.40	Sulfonated, nitrated or nitrosated derivatives of aromatic products described in additional U.S. note 3 to section VI of the HTSUS	
2905.29.90	Unsaturated monohydric alcohols, other than allyl alcohol or acyclic terpene alcohols	
2905.39.90	Dihydric alcohols (diols), nesoi	
2905.59.10	Halogenated, sulfonated, nitrated or nitrosated derivatives of monohydric alcohols	
2905.59.90	Halogenated, sulfonated, nitrated or nitrosated derivatives of acyclic alcohols, nesoi	
2906.19.50	Other cyclanic, cyclenic or cycloterpenic alcohols and their halogenated, sulfonated, nitrated or nitrosated derivatives	

HTSUS	Description	Notes
2906.29.60	Other aromatic alcohols and their halogenated, sulfonated, nitrated or nitrosated derivatives	
2907.29.90	Other polyphenols, nesoi	
2908.19.60	Other halogenated, sulfonated, nitrated or nitrosated derivatives of phenol or phenol-alcohols	
2909.19.18	Ethers of acyclic monohydric alcohols and derivatives, nesoi	
2909.20.00	Cyclanic, cyclenic or cycloterpenic ethers and their halogenated, sulfonated, nitrated or nitrosated derivatives	
2909.30.60	Other aromatic ethers and their halogenated, sulfonated, nitrated, or nitrosated derivatives, nesoi	
2909.49.10	Other aromatic ether-alcohols, their halogenated, sulfonated, nitrated or nitrosated derivatives described in additional U.S. note 3 to section VI of the HTSUS	
2909.49.15	Aromatic ether-alcohols and their halogenated, sulfonated, nitrated or nitrosated derivatives, nesoi	
2909.49.20	Nonaromatic glycerol ethers	
2909.49.60	Other non-aromatic ether-alcohols and their halogenated, sulfonated, nitrated or nitrosated derivatives	
2909.50.40	Odoriferous or flavoring compounds of ether-phenols, ether-alcohol-phenols and their halogenated, sulfonated, nitrated, nitrosated derivatives	
2909.50.45	Ether-phenols, ether-alcohol-phenols & their halogenated, sulfonated, nitrated, nitrosated derivatives nesoi, in additional U.S. note 3 to section VI	
2909.50.50	Ether-phenols, ether-alcohol-phenols and their halogenated, sulfonated, nitrated or nitrosated derivatives, nesoi	
2912.19.50	Acyclic aldehydes without other oxygen function, nesoi	
2912.49.26	Other aromatic aldehyde-alcohols, aldehyde-ethers, aldehyde-phenols and aldehydes with other oxygen function	
2914.19.00	Acyclic ketones without other oxygen function, nesoi	
2914.40.90	Nonaromatic ketone-alcohols and ketone-aldehydes, nesoi	
2914.50.30	Aromatic ketone-phenols and ketones with other oxygen function	
2914.50.50	Nonaromatic ketone-phenols and ketones with other oxygen function	
2914.62.00	Coenzyme Q10 (ubidecarenone (INN)	
2914.69.21	Quinone drugs	
2914.69.90	Quinones, nesoi	
2914.79.40	Other halogenated, sulfonated, nitrated, etc derivatives of aromatic ketones and quinones, whether or not with other oxygen function	
2915.29.30	Cobalt acetates	

HTSUS	Description	Notes
2915.39.31	Aromatic esters of acetic acid described in additional U.S. note 3 to section VI of the HTSUS	
2915.39.35	Aromatic esters of acetic acid, nesoi	
2915.39.47	Acetates of polyhydric alcohols or of polyhydric alcohol ethers	
2915.39.90	Other non-aromatic esters of acetic acid	
2915.90.10	Fatty acids of animal or vegetable origin, nesoi	
2915.90.14	Valproic acid	
2915.90.18	Saturated acyclic monocarboxylic acids, nesoi	
2915.90.20	Aromatic anhydrides, halides, peroxides and peroxyacids, of saturated acyclic monocarboxylic acids, and their derivatives, nesoi	
2915.90.50	Nonaromatic anhydrides, halides, peroxides and peroxyacids, of saturated acyclic monocarboxylic acids, and their derivatives, nesoi	
2916.19.30	Unsaturated acyclic monocarboxylic acids, nesoi	
2916.19.50	Unsaturated acyclic monocarboxylic acid anhydrides, halides, peroxides, peroxyacids and their derivatives, nesoi	
2916.20.50	Cyclanic, cyclenic or cycloterpenic monocarboxylic acids, their anhydrides, halides, peroxides, peroxyacids and their derivatives	
2916.31.50	Benzoic acid esters, nesoi	
2916.39.46	Aromatic monocarboxylic acids, their anhydrides, halides, peroxides, peroxyacids and derivatives described in additional U.S. note 3 to section VI of the HTSUS	
2916.39.79	Other aromatic monocarboxylic acids, their anhydrides, halides, peroxides, peroxyacids and their derivatives	
2917.13.00	Azelaic acid, sebacic acid, their salts and esters	
2917.19.10	Ferrous fumarate	
2917.19.70	Acyclic polycarboxylic acids and their derivatives (excluding plasticizers)	
2917.34.01	Esters of orthophthalic acid, nesoi	
2917.39.30	Aromatic polycarboxylic acids, their anhydrides, halides, peroxides, peroxyacids and their derivatives nesoi, in additional U.S. note 3 to section VI	
2918.11.51	Salts and esters of lactic acid	
2918.13.50	Salts and esters of tartaric acid, nesoi	
2918.16.50	Salts and esters of gluconic acid	
2918.19.60	Malic acid	
2918.19.90	Nonaromatic carboxylic acids with alcohol function, without other oxygen function, and their derivatives, nesoi	
2918.22.10	O-Acetylsalicylic acid (Aspirin)	
2918.22.50	Salts and esters of O-acetylsalicylic acid	

HTSUS	Description	Notes
2918.23.30	Esters of salicylic acid and their salts, described in additional U.S. note 3 to section VI of the HTSUS	
2918.23.50	Esters of salicylic acid and their salts, nesoi	
2918.29.20	Gentisic acid; and hydroxycinnamic acid and its salts	
2918.29.65	Carboxylic acids with phenol function but without other oxygen function, described in additional U.S. note 3 to section VI of the HTSUS	
2918.29.75	Other carboxylic acids with phenol function but without other oxygen function and their derivatives (excluding products described in additional U.S. note 3 to section VI of the HTSUS)	
2918.30.25	Aromatic carboxylic acids with aldehyde or ketone function but without other oxygen function and their derivatives described in additional U.S. note 3 to section VI of the HTSUS, nesoi	
2918.30.30	Aromatic carboxylic acids with aldehyde or ketone function but without other oxygen function and their derivatives, nesoi	
2918.30.90	Non-aromatic carboxylic acids with aldehyde or ketone function but without other oxygen function and their derivatives	
2918.99.30	Aromatic drugs derived from carboxylic acids with additional oxygen function and their derivatives, nesoi	
2918.99.43	Aromatic carboxylic acids with additional oxygen function and their derivatives described in additional U.S. note 3 to section VI of the HTSUS, nesoi	
2918.99.47	Other aromatic carboxylic acids with additional oxygen function and their derivatives (excluding goods described in additional U.S. note 3 to section VI of the HTSUS)	
2918.99.50	Nonaromatic carboxylic acids with additional oxygen function, and their derivatives, nesoi	
2919.90.30	Aromatic phosphoric esters and their salts, including lactophosphates, and their derivatives, not used as plasticizers	
2919.90.50	Nonaromatic phosphoric esters and their salts, including lactophosphates, and their derivatives	
2920.90.51	Nonaromatic esters of inorganic acids of nonmetals and their salts and derivatives, excluding esters of hydrogen halides, nesoi	
2921.19.11	Mono- and triethylamines; mono-, di-, and tri(propyl- and butyl-) monoamines; salts of any of the foregoing	
2921.19.61	N,N-Dialkyl (methyl, ethyl, N-Propyl or Isopropyl)-2-Chloroethylamines and their protonated salts; Acylcic monoamines and their derivatives, nesoi	

HTSUS	Description	Notes
2921.29.00	Acyclic polyamines, their derivatives and salts, other than ethylenediamine or hexamethylenediamine and their salts	
2921.30.10	Cyclanic, cyclenic, cycloterpenic mono- or polyamines, derivatives and salts, from any aromatic compound described in additional U.S. note 3 to section VI	
2921.30.50	Cyclanic, cyclenic or cycloterpenic mono- or polyamines, and their derivatives and salts, from any nonaromatic compounds	
2921.42.90	Other aniline derivatives and their salts	
2921.46.00	Amfetamine (INN), benzfetamine (INN), dexamfetamine (INN), etilamfetamine (INN), and other specified INNs; salts thereof	
2921.49.38	Aromatic monoamine antidepressants, tranquilizers and other psychotherapeutic agents, nesoi	
2921.49.43	Aromatic monoamine drugs, nesoi	
2921.49.45	Aromatic monoamines and their derivatives nesoi; salts thereof, described in additional U.S. note 3 to section VI of the HTSUS	
2921.49.50	Aromatic monoamines and their derivatives and salts thereof, nesoi	
2921.59.80	Aromatic polyamines and their derivatives; salts thereof nesoi	
2922.11.00	Monoethanolamine and its salts	
2922.14.00	Dextropropoxyphene (INN) and its salts	
2922.19.09	Aromatic amino-alcohols drugs, their ethers and esters, other than those containing more than one kind of oxygen function; salts thereof; nesoi	
2922.19.20	4,4'-Bis(dimethylamino)benzhydrol (Michler's hydrol) and other specified aromatic amino-alcohols, their ethers and esters; salts thereof	
2922.19.33	N1-(2-Hydroxyethyl-2-nitro-1,4-phenylendiamine; N1,N4,N4-tris(2-hydroxyethyl)-2-nitro-1,4-phenylenediamine; and other specified chemicals	
2922.19.60	Aromatic amino-alcohols, their ethers and esters, other than those containing more than one oxygen function described in additional U.S. note 3 to section VI of the HTSUS	
2922.19.70	Other aromatic amino-alcohols, their ethers and esters, other than those containing more than one oxygen function (excluding goods described in additional U.S. note 3 to section VI)	
2922.19.90	Salts of triethanolamine	
2922.19.96	Amino-alcohols, other than those containing more than one kind of oxygen function, their ethers and esters and salts thereof, nesoi	

HTSUS	Description	Notes
2922.29.27	Drugs of amino-naphthols and -phenols, their ethers and esters, except those containing more than one oxygen function; salts thereof, nesoi	
2922.29.61	Amino-naphthols and other amino-phenols and their derivatives of products described in additional U.S. note 3 to section VI of the HTSUS	
2922.29.81	Amino-naphthols and other amino-phenols; their ethers, esters and salts (not containing more than one oxygen function) thereof nesoi	
2922.31.00	Amfepramone (INN), methadone (INN) and normethadone (INN); salts thereof	
2922.39.25	Aromatic amino-aldehydes, -ketones and -quinones, other than those with more than one oxygen function; salts; described in additional U.S. note 3 to section VI of the HTSUS	
2922.39.45	Aromatic amino-aldehydes, -ketones and -quinones, other than those with more than one oxygen function; salts thereof; nesoi	
2922.39.50	Nonaromatic amino-aldehydes, -ketones and -quinones, other than those with more than one kind of oxygen function, salts thereof; nesoi	
2922.41.00	Lysine and its esters and salts thereof	
2922.42.50	Glutamic acid and its salts, other than monosodium glutamate	
2922.44.00	Tildine (INN) and its salts	
2922.49.10	m-Aminobenzoic acid, technical; and other specified aromatic amino-acids and their esters, except those with more than one oxygen function	
2922.49.26	Aromatic amino-acids drugs and their esters, not containing more than one kind of oxygen function, nesoi	
2922.49.30	Aromatic amino-acids and their esters, excluding those with more than one oxygen function; salts; described in additional U.S. note 3 to section VI	
2922.49.37	Aromatic amino-acids and their esters, not containing more than one kind of oxygen function (excluding goods described in additional U.S. note 3 to section VI), nesoi	
2922.49.49	Nonaromatic amino-acids, other than those containing more than one kind of oxygen function, other than glycine	
2922.49.80	Non-aromatic esters of amino-acids, other than those containing more than one kind of oxygen function; salts thereof	
2922.50.07	3,4-Diaminophenetole dihydrogen sulfate; 2-nitro-5-[(2,3-dihydroxy)propoxy]-N-methylaniline; and other specified aromatic chemicals	

HTSUS	Description	Notes
2922.50.10	Specified aromatic amino-alcohol-phenols, amino-acid-phenols and other amino-compounds with oxygen function	
2922.50.11	Salts of d(underscored)-(-)-p-Hydroxyphenylglycine	
2922.50.13	Isoetharine hydrochloride and other specified aromatic drugs of amino-compounds with oxygen function	
2922.50.14	Other aromatic cardiovascular drugs of amino-compounds with oxygen function	
2922.50.17	Aromatic dermatological agents and local anesthetics of amino-compounds with oxygen function	
2922.50.25	Aromatic drugs of amino-compounds with oxygen function, nesoi	
2922.50.35	Aromatic amino-alcohol-phenols, amino-acid-phenols and other amino-compounds with oxygen function described in additional U.S. note 3 to section VI of the HTSUS	
2922.50.40	Aromatic amino-alcohol-phenols, amino-acid-phenols and other amino-compounds with oxygen function, nesoi	
2922.50.50	Nonaromatic amino-alcohol-phenols, amino-acid-phenols and other amino-compounds with oxygen function	
2923.10.00	Choline and its salts	
2923.20.20	Lecithins and other phosphoaminolipids, nesoi	
2923.90.01	Quaternary ammonium salts and hydroxides, whether or not chemically defined, nesoi	
2924.11.00	Meprobamate (INN)	
2924.19.11	Acyclic amides (including acyclic carbamates)	
2924.19.80	Acyclic amide derivatives; salts thereof; nesoi	
2924.21.16	Aromatic ureines and their derivatives pesticides, nesoi	
2924.21.50	Nonaromatic ureines and their derivatives; and salts thereof	
2924.29.01	p-Acetanisidide; p-Acetoacetotoluidide; 4'-Amino-N-methylacetanilide; 2,5-Dimethoxyacetanilide; and N-(7-Hydroxy-1-naphthyl) acetamide	Executive Order 14346 of September 5, 2025
2924.29.03	3,5-Dinitro-o-toluamide	Executive Order 14346 of September 5, 2025
2924.29.10	Acetanilide; N-acetylsulfanilyl chloride; aspartame; and 2-methoxy-5-acetamino-N,N-bis(2-acetoxyethyl)aniline	
2924.29.23	4-Amino acetanilide; 2,2'-Oxamido bis [ethyl-3-(3,5-di-tert-butyl-4-hydroxyphenyl) propionate]; Aceto acetsulfanilic acid, potassium salt; and N-(2,3-Dihydroxy propyl)-5-N-(2,3-dihydroxy-propyl) acetamido-N'-(2-hydroxyethyl)-2,4,6-triiodoisophthalamide	Executive Order 14346 of September 5, 2025
2924.29.26	3-Amineomethoxybenzanilide	Executive Order 14346

HTSUS	Description	Notes
		of September 5, 2025
2924.29.28	N-[[(4-Chlorophenyl)amino]carbonyl]-2,6-difluorobenzamide; and 3,5-Dichloro-N-(1,1-dimethyl-2-propynyl)- benzamide (Pronamide)	Executive Order 14346 of September 5, 2025
2924.29.33	Napthol AS and derivatives: 3-Hydroxy-2-naphthanilide; 3-Hydroxy-2-naphtho-o-toluidide; 3-Hydroxy-2-naphtho-o-anisidine; 3-Hydroxy-2-naphtho-o-phenetidide; 3-Hydroxy-2-naphtho-4-chloro-2,5- dimethoxyanilide; 3-Hydroxy-3'-nitro-2-naphthanilide; andN,N'-Bis(acetoacetyl-o-toluidine)	Executive Order 14346 of September 5, 2025
2924.29.57	Diethylaminoacetoxylidide (Lidocaine)	Executive Order 14346 of September 5, 2025
2924.29.62	Other aromatic cyclic amides and derivatives for use as drugs	
2924.29.71	Aromatic cyclic amides and their derivatives of products described in additional U.S. note 3 to section VI of the HTSUS, nesoi	
2924.29.77	Aromatic cyclic amides (including cyclic carbamates) and their derivatives and salts thereof, nesoi	
2924.29.80	2,2-Dimethylcyclopropylcarboxamide	Executive Order 14346 of September 5, 2025
2924.29.95	Other nonaromatic cyclic amides and their derivatives; salts thereof; nesoi	
2925.12.00	Glutethimide (INN)	
2925.19.42	Other aromatic imides and their derivatives; salts thereof; nesoi	
2925.19.91	Other non-aromatic imides and their derivatives	
2925.21.00	Chlordimeform (ISO)	
2925.29.20	Aromatic drugs of imines and their derivatives, nesoi	
2925.29.60	Aromatic imines and their derivatives; salts thereof (excluding drugs); nesoi	
2925.29.90	Non-aromatic imines and their derivatives; salts thereof	
2926.30.10	Fenproporex (INN) and its salts	
2926.40.00	alpha-Phenylacetoacetonitrile	
2926.90.14	p-Chlorobenzonitrile and verapamil hydrochloride	
2926.90.43	Aromatic nitrile-function compounds, nesoi, described in additional U.S. note 3 to section VI of the HTSUS	

HTSUS	Description	Notes
2926.90.48	Aromatic nitrile-function compounds other than those products in additional U.S. note 3 to section VI of the HTSUS, nesoi	
2926.90.50	Nonaromatic nitrile-function compounds, nesoi	Executive Order 14346 of September 5, 2025
2927.00.40	Diazo-, azo- or azoxy-compounds, nesoi, described in additional U.S. note 3 to section VI of the HTSUS	
2927.00.50	Other diazo-, azo- or azoxy-compounds, nesoi	
2928.00.25	Aromatic organic derivatives of hydrazine or of hydroxylamine	
2928.00.30	Nonaromatic drugs of organic derivatives of hydrazine or of hydroxylamine, other than Methyl ethyl ketoxime	
2928.00.50	Nonaromatic organic derivatives of hydrazine or of hydroxylamine, nesoi	
2929.90.20	Aromatic compounds with other nitrogen functions, nesoi	
2929.90.50	Nonaromatic compounds with other nitrogen functions, except isocyanates	
2930.20.20	Aromatic compounds of thiocarbamates and dithiocarbamates, excluding pesticides	
2930.20.90	Other non-aromatic thiocarbamates and dithiocarbamates	
2930.30.60	Thiuram mono-, di- or tetrasulfides, other than tetramethylthiuram monosulfide	
2930.90.29	Other aromatic organo-sulfur compounds (excluding pesticides)	
2930.90.49	Nonaromatic organo-sulfur acids, nesoi	
2930.90.92	Other non-aromatic organo-sulfur compounds	
2931.49.00	Other non-halogenated organo-phosphorous derivatives	
2931.53.00	O-(3-chloropropyl) O-[4-nitro-3-(trifluoromethyl)phenyl] methylphosphonothionate	
2931.90.22	Drugs of aromatic organo-inorganic compounds	
2931.90.90	Other non-aromatic organo-inorganic compounds	
2932.14.00	Sucralose	
2932.19.51	Nonaromatic compounds containing an unfused furan ring (whether or not hydrogenated) in the ring	
2932.20.20	Aromatic drugs of lactones	
2932.20.30	Aromatic lactones, nesoi, described in additional U.S. note 3 to section VI of the HTSUS	
2932.20.50	Nonaromatic lactones	
2932.99.61	Aromatic heterocyclic compounds with oxygen hetero-atom(s) only described in additional U.S. note 3 to section VI of the HTSUS, nesoi	

HTSUS	Description	Notes
2932.99.70	Aromatic heterocyclic compounds with oxygen hetero-atom(s) only, nesoi	
2932.99.90	Nonaromatic heterocyclic compounds with oxygen hetero-atom(s) only, nesoi	
2933.11.00	Phenazone (Antipyrine) and its derivatives	
2933.19.35	Aromatic or modified aromatic drugs of heterocyclic compounds with nitrogen hetero-atom(s) only containing an unfused pyrazole ring	
2933.19.45	Nonaromatic drugs of heterocyclic compounds with nitrogen hetero-atom(s) only containing an unfused pyrazole ring	
2933.19.90	Other compound (excluding aromatic, modified aromatic & drugs) containing unfused pyrazole ring (whether or n/hydrogenated) in the structure	
2933.21.00	Hydantoin and its derivatives	
2933.29.05	Aromatic or modified aromatic goods: 1-[1-((4-Chloro-2-(trifluoromethyl)phenyl)- imino)-2-propoxyethyl]-1H-imidazole (Triflumizole); and Ethylene thiourea	Executive Order 14346 of September 5, 2025
2933.29.20	Aromatic or modified aromatic drugs of heterocyclic compounds with nitrogen hetero-atom(s) only containing an unfused imidazole ring	
2933.29.35	Aromatic or modified aromatic goods described in additional U.S. note 3 to section VI of the HTSUS containing an unfused imidazole ring (whether or not hydrogenated) in structure	
2933.29.43	Aromatic or modified aromatic goods containing unfused imidazole ring (whether or not hydrogenated) in the structure (excluding products described in additional U.S. note 3 to section VI of the HTSUS)	
2933.29.45	Nonaromatic drugs of heterocyclic compounds with nitrogen hetero-atom(s) only, containing an unfused imidazole ring, nesoi	
2933.29.60	Imidazole	Executive Order 14346 of September 5, 2025
2933.29.90	Other compounds (excluding drugs, aromatic and modified aromatic compounds) containing an unfused imidazole ring (whether or not hydrogenated)	
2933.33.01	Alfentanil (INN), anileridine (INN), bezitramide (INN), bromazepam (INN), difenoxin (INN), and other specified INNs; salts thereof	
2933.34.00	Other fentanyls and their derivatives, containing an unfused pyrazole ring	

HTSUS	Description	Notes
2933.35.00	3-Quinuclidinol	
2933.37.00	N-Phenethyl-4-piperidone (NPP)	
2933.39.08	1-(3-Sulfapropyl)pryidinium hydroxide; N,N-bis(2,2,6,6-tetramethyl-4-piperidinyl)-1,6-hexanediamine; and 5 other specified chemicals	
2933.39.10	Collidines, lutidines and picolines	
2933.39.20	p-Chloro-2-benzylpyridine & other specified heterocyclic compounds, w nitrogen hetero-atom(s) only containing an unfused pyridine ring	
2933.39.21	Fungicides of heterocyclic compounds with nitrogen hetero-atom(s) only, containing an unfused pyridine ring	
2933.39.23	o-Paraquat dichloride	
2933.39.25	Herbicides nesoi, of heterocyclic compounds with nitrogen hetero-atom(s) only, containing an unfused pyridine ring	
2933.39.27	Pesticides nesoi, of heterocyclic compounds with nitrogen hetero-atom(s) only, containing an unfused pyridine ring	
2933.39.31	Psychotherapeutic agents of heterocyclic compounds with nitrogen hetero-atom(s) only, containing an unfused pyridine ring, nesoi	
2933.39.41	Drugs containing an unfused pyridine ring (whether or not hydrogenated) in the structure, nesoi	
2933.39.61	Heterocyclic compounds with nitrogen hetero-atom(s) only containing an unfused pyridine ring, described in additional U.S. note 3 to section VI	
2933.39.92	Heterocyclic compounds with nitrogen hetero-atom(s) only containing an unfused pyridine ring, nesoi	
2933.41.00	Levorphenol (INN) and its salts	
2933.49.08	4,7-Dichloroquinoline	
2933.49.10	Ethoxyquin (1,2-Dihydro-6-ethoxy-2,2,4-trimethylquinoline)	
2933.49.15	8-Methylquinoline and Isoquinoline	
2933.49.17	Ethyl ethyl-6,7,8-trifluoro-1,4-dihydro-4-oxo-3-quinoline carboxylate	
2933.49.20	5-Chloro-7-iodo-8-quinolinol (Iodochlorhydroxyquin); Decoquinate; Diiodohydroxyquin; and Oxyquinoline sulfate	
2933.49.26	Drugs containing a quinoline or isoquinoline ring-system (whether or not hydrogenated) not further fused, nesoi	
2933.49.30	Pesticides of heterocyclic compounds with nitrogen hetero-atom(s) only, containing a quinoline or isoquinoline ring-system, not further fused	
2933.49.60	Products described in additional U.S. note 3 to section VI of the HTSUS containing quinoline or isoquinoline ring-system (whether or not hydrogenated), not further fused	

HTSUS	Description	Notes
2933.49.70	Heterocyclic compounds with nitrogen hetero-atom(s) only, containing a quinoline ring-system, not further fused, nesoi	
2933.52.10	Malonylurea (barbituric acid)	
2933.52.90	Salts of barbituric acid	
2933.53.00	Allobarbital (INN), amobarbital (INN), barbital (INN), butalbital (INN), butobarbital, and other specified INNs; salts thereof	
2933.54.00	Other derivatives of malonylurea (barbituric acid); salts thereof	
2933.59.10	Aromatic or modified aromatic herbicides of heterocyclic compounds with nitrogen hetero-atom(s) only, containing a pyrimidine or piperazine ring	
2933.59.15	Aromatic or modified aromatic pesticides nesoi, of heterocyclic compounds with nitrogen hetero-atom(s) only, containing a pyrimidine or piperazine ring	
2933.59.18	Nonaromatic pesticides of heterocyclic compounds with nitrogen hetero-atom(s) only, containing a pyrimidine or piperazine ring, nesoi	
2933.59.21	Antihistamines, including those principally used as antinauseants	
2933.59.22	Nicarbazin and trimethoprim	
2933.59.36	Anti-infective agents nesoi, of heterocyclic compounds with nitrogen hetero-atom(s) only, containing a pyrimidine or piperazine ring	
2933.59.46	Psychotherapeutic agents of heterocyclic compounds with nitrogen hetero-atom(s) only, containing a pyrimidine or piperazine ring, nesoi	
2933.59.53	Other aromatic or modified aromatic drugs containing a pyrimidine ring (whether or not hydrogenated) or piperazine ring in the structure	
2933.59.59	Nonaromatic drugs of heterocyclic compounds nesoi, with nitrogen hetero-atom(s) only, containing a pyrimidine or piperazine ring	
2933.59.70	Aromatic heterocyclic compounds nesoi, with nitrogen hetero-atom(s) only, containing a pyrimidine or piperazine ring, described in additional U.S. note 3 to section VI	
2933.59.80	Aromatic or modified aromatic heterocyclic compounds nesoi, with nitrogen hetero-atom(s) only, containing a pyrimidine or piperazine ring	
2933.59.85	2-Amino-4-chloro-6-methoxypyrimidine; 2-amino-4,6-dimethoxypyrimidine; and 6-methyluracil	
2933.59.95	Other (excluding aromatic or mod aromatic) compounds containing a pyrimidine ring (whether or not hydrogenated) or piperazine ring in the structure	

HTSUS	Description	Notes
2933.69.60	Other compounds containing an unfused triazine ring (whether or not hydrogenated) in the structure	
2933.72.00	Clobazam (INN) and methyprylon (INN)	
2933.79.08	Aromatic or modified aromatic lactams with nitrogen hetero-atoms only, described in additional U.S. note 3 to section VI of the HTSUS	
2933.79.15	Aromatic or modified aromatic lactams, nesoi	
2933.79.85	Aromatic or modified aromatic lactams with nitrogen hetero-atoms only, nesoi	
2933.91.00	Alprazolam (INN), camazepam (INN), chlordiazepoxide (INN), clonazepam (INN), clorazepate, and other specified INNs; salts thereof	
2933.99.01	Butyl (R)-2-[4-(5-triflouromethyl-2-pyridinyloxy)phenoxy]propanoate	
2933.99.02	2-[4-[(6-Chloro-2-quinoxalinyl)oxy]phenoxy]propionic acid, ethyl ester; and 1 other specified aromatic chemical	
2933.99.05	Acridine and indole	
2933.99.06	alpha-Butyl-alpha-(4-chlorophenyl)-1H-1,2,4-triazole-1-propanenitrile (Mycolbutanil); and one other specified aromatic chemical	
2933.99.08	Acetoacetyl-5-aminobenzimidazolone; 1,3,3-Trimethyl-2-methyleneindoline; and two other specified aromatic chemicals	
2933.99.11	Carbazole	
2933.99.12	6-Bromo-5-methyl-1H-imidazo-(4,5-b)pyridine; 2-sec-butyl-4-tert-butyl-6-(benzotriazol-2-yl)phenol; 2-methylindoline; and other specific	
2933.99.16	o-Diquat dibromide (1,1-Ethylene-2,2-dipyridylium dibromide)	
2933.99.17	Aromatic or modified aromatic insecticides with nitrogen hetero-atom(s) only, nesoi	
2933.99.22	Other heterocyclic aromatic or modified aromatic pesticides with nitrogen hetero-atom(s) only, nesoi	
2933.99.24	Aromatic or modified aromatic photographic chemicals with nitrogen hetero-atom(s) only	
2933.99.26	Aromatic or modified aromatic antihistamines of heterocyclic compounds with nitrogen hetero-atom(s) only	
2933.99.42	Acriflavin; Acriflavin hydrochloride; Carbadox; Pyrazinamide	
2933.99.46	Aromatic or modified aromatic anti-infective agents of heterocyclic compounds with nitrogen hetero-atom(s) only, nesoi	
2933.99.51	Hydralazine hydrochloride	

HTSUS	Description	Notes
2933.99.53	Aromatic or modified aromatic cardiovascular drugs of heterocyclic compounds with nitrogen hetero-atom(s) only, nesoi	
2933.99.55	Aromatic or modified aromatic analgesics and certain like affecting chemicals, of heterocyclic compounds with nitrogen hetero-atom(s) only	
2933.99.58	Droperidol; and Imipramine hydrochloride	
2933.99.61	Aromatic or modified aromatic psychotherapeutic agents, affecting the central nervous system, of heterocyclic compounds with nitrogen hetero-atom(s) only, nesoi	
2933.99.65	Aromatic or modified aromatic anticonvulsants, hypnotics and sedatives, of heterocyclic compounds with nitrogen hetero-atom(s) only, nesoi	
2933.99.70	Aromatic or modified aromatic drugs affecting the central nervous system, of heterocyclic compounds with nitrogen atom(s) only, nesoi	
2933.99.75	Aromatic or modified aromatic drugs of heterocyclic compounds with nitrogen hetero-atom(s) only, nesoi	
2933.99.79	Aromatic or modified aromatic compounds with nitrogen hetero-atom(s) only described in additional U.S. note 3 to section VI of the HTSUS	
2933.99.82	Aromatic or mod. aromatic compounds with nitrogen hetero-atom(s) only other than products described in additional U.S. note 3 to section VI of the HTSUS, nesoi	
2933.99.85	3-Amino-1,2,4-triazole	
2933.99.89	Hexamethyleneimine	
2933.99.90	Nonaromatic drugs of heterocyclic compounds with nitrogen hetero-atom(s) only, nesoi	
2933.99.97	Nonaromatic heterocyclic compounds with nitrogen hetero-atom(s) only, nesoi	
2934.10.10	Aromatic or modified aromatic heterocyclic compounds containing an unfused thiazole ring, described in additional U.S. note 3 to section VI of the HTSUS	
2934.10.20	Aromatic or modified aromatic heterocyclic compounds, nesoi, containing an unfused thiazole ring	
2934.10.90	Other compounds (excluding aromatic or modified aromatic) containing an unfused thiazole ring (whether or not hydrogenated) in the structure	
2934.20.40	Heterocyclic compounds containing a benzothiazole ring system, not further fused, described in additional U.S. note 3 to section VI of the HTSUS	
2934.20.80	Other compounds containing a benzothiazole ring system (whether or not hydrogenated), not further fused	

HTSUS	Description	Notes
2934.30.23	Antidepressants, tranquilizers and other pschotherapeutic agents containing a phenothiazine ring system, not further fused	
2934.30.27	Other drugs containing a phenothiazine ring system (whether or not hydrogenated), not further fused, nesoi	
2934.30.43	Products described in additional U.S. note 3 to section VI of the HTSUS containing a phenothiazine ring system (whether or not hydrogenated), not further fused	
2934.30.50	Heterocyclic compounds containing a phenothiazine ring-system (whether or not hydrogenated), not further fused, nesoi	
2934.91.00	Aminorex (INN), brotizolam (INN), clotiazepam (INN), cloxazolam (INN), dextromoramide (INN), and other specified INNs; salts thereof	
2934.92.00	Other fentanyls and their derivatives, containing an unfused thiazole ring	
2934.99.01	Mycophenolate mofetil	
2934.99.03	2-Acetylbenzo(b)thiophene; and 2 other specified aromatic or modified aromatic compounds	
2934.99.05	5-Amino-3-phenyl-1,2,4-thiadiazole(3-Phenyl-5-amino-1,2,4-thiadiazole); and 3 other specified aromatic/mod. aromatic heterocyclic compounds	
2934.99.06	7-Nitronaphth[1,2]oxadiazole-5-sulfonic acid and its salts	
2934.99.07	Ethyl 2-[4-[(6-chloro-2-benzoxazoyl)oxy]phenoxy]propanoate (Fenoxaprop- ethyl)	
2934.99.08	2,5-Diphenyloxazole	
2934.99.09	1,2-Benzisothiazolin-3-one	
2934.99.11	2-tert-Butyl-4-(2,4-dichloro-5-isopropoxyphenyl)-delta(squared)-1,3,4-oxadiazolin-5-one; Bentazon; Phosalone	
2934.99.12	Aromatic or modified aromatic fungicides of other heterocyclic compounds, nesoi	
2934.99.15	Aromatic or modified aromatic herbicides of other heterocyclic compounds, nesoi	
2934.99.16	Aromatic or modified aromatic insecticides of other heterocyclic compounds, nesoi	
2934.99.18	Aromatic or modified aromatic pesticides nesoi, of other heterocyclic compounds, nesoi	
2934.99.20	Aromatic or modified aromatic photographic chemicals of other heterocyclic compounds, nesoi	
2934.99.30	Aromatic or modified aromatic drugs of other heterocyclic compounds, nesoi	

HTSUS	Description	Notes
2934.99.39	Aromatic or modified aromatic other heterocyclic compounds described in additional U.S. note 3 to section VI of the HTSUS	
2934.99.44	Aromatic or modified aromatic other heterocyclic compounds, nesoi	
2934.99.47	Nonaromatic drugs of other heterocyclic compounds, nesoi	
2934.99.70	Morpholinethyl chloride hydrochloride; 2-methyl-2,5-dioxo-1-oxa-2-phospholan; and 1 other specified nonaromatic chemical	
2934.99.90	Nonaromatic other heterocyclic compounds, nesoi	
2935.50.00	Other perfluorooctane sulfonamides	
2935.90.06	4-Amino-6-chloro-m-benzenedisulfonamide and Methyl-4-aminobenzenesulfonylcarbamate (Asulam)	
2935.90.10	2-Amino-N-Ethylbenzenesulfonanilide etc	
2935.90.13	(5-[2-Chloro-4-(Trifluoromeythyl)phenoxy]-N-(Methylsulfonyl)-2-Nitrobenzamide)(fomesafen); etc	
2935.90.15	ortho-Toluenesulfonamide	
2935.90.20	Sulfonamides used as fast color bases and fast color salts	
2935.90.30	Sulfamethazine	
2935.90.32	Acetylsulfisoxazole; Sulfacetamide, sodium; and Sulfamethazine, sodium	
2935.90.33	Sulfathiazole and Sulfathiazole, sodium	
2935.90.42	Salicylazosulfapyridine (Sulfasalazine); Sulfadiazine; Sulfaguanidine; Sulfamerizine; and Sulfapyridine	
2935.90.48	Other sulfonamides used as anti-infective agents	
2935.90.60	Other sulfonamide drugs (excluding anti-infective agents)	
2935.90.75	Other sulfonamides (excluding drugs, etc.) of products described in additional U.S. note 3 to section VI of the HTSUS	
2935.90.95	Other sulfonamides, excluding drugs, excluding products described in additional U.S. note 4 to section VI of the HTSUS	
2936.21.00	Vitamins A and their derivatives, unmixed, natural or synthesized	
2936.22.00	Vitamin B1 (Thiamine) and its derivatives, unmixed, natural or synthesized	
2936.23.00	Vitamin B2 (Riboflavin) and its derivatives, unmixed, natural or synthesized	
2936.24.01	Vitamin B5 (D- or DL-Pantothenic acid) and its derivatives, unmixed, natural or synthesized	
2936.25.00	Vitamin B6 (Pyridoxine and related compounds with Vitamin B6 activity) and its derivatives, unmixed, natural or synthesized	

HTSUS	Description	Notes
2936.26.00	Vitamin B12 (Cyanocobalamin and related compounds with Vitamin B12 activity) and its derivatives, unmixed, natural or synthesized	
2936.27.00	Vitamin C (Ascorbic acid) and its derivatives, unmixed, natural or synthesized	
2936.28.00	Vitamin E (Tocopherols and related compounds with Vitamin E activity) and its derivatives, unmixed, natural or synthesized	
2936.29.10	Folic acid and its derivatives, unmixed	
2936.29.16	Niacin and niacinamide	
2936.29.20	Aromatic or modified aromatic vitamins and their derivatives, nesoi	
2936.29.50	Other vitamins and their derivatives, nesoi	
2936.90.01	Vitamins or provitamins (including natural concentrates) and intermixtures of the foregoing, whether or not in any solvent	
2937.11.00	Somatotropin, its derivatives and structural analogues	
2937.12.00	Insulin and its salts	
2937.19.00	Polypeptide hormones, protein hormones and glycoprotein hormones, their derivatives and structural analogues, nesoi	
2937.21.00	Cortisone, hydrocortisone, prednisone (Dehydrocortisone) and prednisolone (Dehydrohydrocortisone)	
2937.22.00	Halogenated derivatives of corticosteroidal hormones	
2937.23.10	Estrogens and progestins obtained directly or indirectly from animal or vegetable materials	
2937.23.25	Estradiol benzoate; and Estradiol cyclopentylpropionate (estradiol cypionate)	
2937.23.50	Other estrogens and progestins not derived from animal or vegetable materials, nesoi	
2937.29.10	Desonide; and Nandrolone phenpropionate	
2937.29.90	Steroidal hormones, their derivatives and structural analogues, nesoi	
2937.50.00	Prostaglandins, thromboxanes and leukotrienes, their derivatives and structural analogues	
2937.90.05	Epinephrine	
2937.90.10	Epinephrine hydrochloride	
2937.90.20	Catecholamine hormones, their derivatives and structural analogues, nesoi	
2937.90.40	l-Thyroxine(Levothyroxine), sodium	
2937.90.45	Amino-acid derivatives of hormones and their derivatives, nesoi	
2937.90.90	Other hormones, their derivatives and structural analogues, other steroid derivatives and structural analogues used primarily as hormones, nesoi	

HTSUS	Description	Notes
2938.10.00	Rutoside (Rutin) and its derivatives	
2938.90.00	Glycosides, natural or synthesized, and their salts, ethers, esters, and other derivatives other than rutoside and its derivatives	
2939.11.00	Concentrates of poppy straw; buprenorphine (INN), codeine, dihydrocodeine (INN), ethylmorphine, and other specified INNs; salts thereof	
2939.19.10	Papaverine and its salts	
2939.19.20	Synthetic alkaloids of opium and their derivatives; salts thereof; nesoi	
2939.19.50	Nonsynthetic alkaloids of opium and their derivatives; salts thereof; nesoi	
2939.20.00	Alkaloids of cinchona, and their derivatives; salts thereof, other than quinine and its salts	
2939.30.00	Caffeine and its salts	
2939.41.00	Ephedrine and its salts	
2939.42.00	Pseudoephedrine and its salts	
2939.44.00	Norephedrine & its salts	
2939.45.00	Levometamfetamine, metamfetamine (INN), metamfetamine racemate and their salts	
2939.49.03	Alkaloids of ephedra and their salts, other than ephedrine, pseudoephedrine, cathine, norephedrine, levometamfetamine and their salts	
2939.59.00	Theophylline aminophylline (Theophylline-ethylenediamine) and their derivatives; salts thereof; nesoi	
2939.62.00	Ergotamine and its salts	
2939.63.00	Lysergic acid and its salts	
2939.69.00	Alkaloids of rye ergot and their derivatives, nesoi; salts thereof	
2939.72.00	Cocaine, ecgonine; salts, esters and other derivatives thereof	
2939.79.00	Vegetable alkaloids, natural or reproduced by synthesis, their salts and other derivatives, nesoi	
2939.80.00	Other alkaloids, natural or reproduced by synthesis and their salts, ethers, esters & other derivatives, nesoi	
2940.00.60	Other sugars, nesoi excluding d-arabinose	
2941.10.10	Ampicillin and its salts	
2941.10.20	Penicillin G salts	
2941.10.30	Carfecillin, sodium; cloxacillin, sodium; dicloxacillin, sodium; flucloxacillin (Floxacillin); and oxacillin, sodium	
2941.10.50	Penicillins and their derivatives nesoi, with a penicillanic acid structure; salts thereof	
2941.20.10	Dihydrostreptomycins and its derivatives; salts thereof	
2941.20.50	Streptomycins and their derivatives; salts thereof, nesoi	

HTSUS	Description	Notes
2941.30.00	Tetracyclines and their derivatives; salts thereof	
2941.40.00	Chloramphenicol and their derivatives; salts thereof	
2941.50.00	Erythromycin and their derivatives; salts thereof	
2941.90.10	Natural antibiotics, nesoi	
2941.90.30	Antibiotics, nesoi, aromatic or modified aromatic, other than natural	
2941.90.50	Antibiotics nesoi, other than aromatic or modified aromatic antibiotics	
2942.00.05	Aromatic or modified aromatic drugs of other organic compounds, nesoi	
2942.00.35	Other aromatic or modified aromatic organic compounds (excluding products described in additional U.S. note 3 to section VI of the HTSUS)	
2942.00.50	Nonaromatic organic compounds, nesoi	
3001.20.00	Extracts of glands or other organs or of their secretions for organotherapeutic uses	
3001.90.01	Glands and other organs for organotherapeutic uses, dried, whether or not powdered	
3002.12.00	Antisera and other blood fractions including human blood and fetal bovine serum	
3002.13.00	Immunological products, unmixed, not put up in measured doses or in forms or packings for retail sale	
3002.14.00	Immunological products, mixed, not put up in measured doses or in forms or packings for retail sale	
3002.15.00	Immunological products, put up in measured doses or in forms or packings for retail sale	
3002.41.00	Vaccines for human medicine	
3002.42.00	Vaccines for veterinary medicine	
3002.49.00	Toxins or cultures of micro-organisms (excluding yeasts)	
3002.51.00	Cell therapy products	
3002.59.00	Other cell cultures, other than cell therapy products	
3002.90.10	Ferments, excluding yeasts	
3002.90.52	Human blood; animal blood prepared for therapeutic, prophylactic, diagnostic uses; antisera; antiallergenic preparations nesoi and like products	
3003.10.00	Medicaments, containing penicillins or streptomycins, not dosage form and not packed for retail	
3003.20.00	Medicaments containing antibiotics, nesoi, not dosage form and not packaged for retail	
3003.39.10	Medicaments containing artificial mixtures of natural hormones, but not antibiotics, not dosage form and not packed for retail	

HTSUS	Description	Notes
3003.39.50	Medicaments containing products of heading 2937, nesoi, but not antibiotics, not dosage form and not packed for retail	
3003.41.00	Medicaments containing ephedrine or its salts, not dosage form and not packed for retail	
3003.42.00	Medicaments containing pseudoephedrine (INN) or its salts, not dosage form and not packed for retail	
3003.49.00	Other medicaments containing alkaloids or derivatives thereof, nesoi, not dosage form and not packed for retail	
3003.90.01	Other medicaments excluding goods of headings 3002, 3005 and 3006 consisting of two or more constituents mixed together, not dosage form and not packed for retail	
3004.10.10	Medicaments containing penicillin G salts, in dosage form or packed for retail	
3004.10.50	Medicaments containing penicillins or streptomycins, nesoi, in dosage form or packed for retail	
3004.20.00	Medicaments containing antibiotics, nesoi, in dosage form or packed for retail	
3004.31.00	Medicaments containing insulin, in dosage form or packed for retail	
3004.32.00	Medicaments containing adrenal cortical hormones, in dosage form or packed for retail	
3004.39.00	Medicaments containing products of heading 2937 nesoi, in dosage form or packed for retail	
3004.41.00	Medicaments containing ephedrine or its salts, in dosage form or packed for retail	
3004.42.00	Medicaments containing pseudoephedrine (INN) or its salts, in dosage form or packed for retail	
3004.49.00	Other medicaments containing alkaloids or derivatives thereof, nesoi, in dosage form or packed for retail	
3004.50.10	Medicaments containing vitamin B2 synthesized from aromatic or modified aromatic compounds, in dosage form or packed for retail	
3004.50.20	Medicaments containing vitamin B12 synthesized from aromatic or modified aromatic compounds, in dosage form or packed for retail	
3004.50.30	Medicaments containing vitamin E synthesized from aromatic or modified aromatic compounds, in dosage form or packed for retail	
3004.50.40	Medicaments containing vitamins nesoi, synthesized from aromatic or modified aromatic compounds, in dosage form or packed for retail	
3004.50.50	Medicaments containing vitamins or other products of heading 2936, nesoi, in dosage form or packed for retail	

HTSUS	Description	Notes
3004.60.00	Other medicaments containing antimalarial active principles described in subheading note 2 to chapter 30 of the HTSUS, in dosage form and packed for retail	
3004.90.10	Medicaments containing antigens or hyaluronic acid or its sodium salt, nesoi, in dosage form or packed for retail	
3004.90.92	Medicaments nesoi, in dosage form and packed for retail	
3006.30.10	Opacifying preparations for X-ray examinations; diagnostic reagents designed to be administered to the patient; all containing antigens or antisera	
3006.30.50	Opacifying preparations for X-ray examinations; diagnostic reagents designed to be administered to the patient, nesoi	
3006.60.00	Chemical contraceptive preparations based on hormones or spermicides	
3006.70.00	Gel preparations designed to be used in human or veterinary medicine as a lubricant in surgical operation, physical exam or coupling agent between body and medical instrument	
3006.93.10	Placebos and blinded clinical trial kits, put up in measured doses, packaged with medicinal preparations	
3006.93.20	Placebos and blinded clinical trial kits, put up in measured doses, containing over 10 percent by dry weight of sugar	
3006.93.50	Placebos and blinded clinical trial kits, put up in measured doses, containing ingredients having nutritional value	
3006.93.60	Placebos and blinded clinical trial kits, put up in measured doses, in liquid form for oral intake	
3006.93.80	Placebos and blinded clinical trial kits, put up in measured doses, containing other chemicals other than medicaments	
3101.00.00	Animal or vegetable fertilizers; fertilizers produced by the mixing or chemical treatment of animal or vegetable products	Addition
3102.10.00	Urea, whether or not in aqueous solution	Addition
3102.21.00	Ammonium sulfate	Addition
3102.29.00	Double salts and mixtures of ammonium sulfate and ammonium nitrate	Addition
3102.30.00	Ammonium nitrate, whether or not in aqueous solution	Addition
3102.40.00	Mixtures of ammonium nitrate with calcium carbonate or other inorganic nonfertilizing substances	Addition
3102.50.00	Sodium nitrate	Addition
3102.60.00	Double salts and mixtures of calcium nitrate and ammonium nitrate	Addition
3102.80.00	Mixtures of urea and ammonium nitrate in aqueous or ammoniacal solution	Addition
3102.90.01	Mineral or chemical fertilizers, nitrogenous, nesoi, including mixtures not specified elsewhere in heading 3102	Addition

HTSUS	Description	Notes
3103.11.00	Superphosphates containing by weight 35 percent or more of diphosphorous pentaoxide (P2O5)	Addition
3103.19.00	Superphosphates nesoi	Addition
3103.90.01	Mineral or chemical fertilizers, phosphatic	Addition
3104.20.00	Potassium chloride	
3104.30.00	Potassium sulfate	
3104.90.01	Mineral or chemical fertilizers, potassic, nesoi	
3105.10.00	Fertilizers of chapter 31 in tablets or similar for	
3105.20.00	Mineral or chemical fertilizers nesoi, containing three fertilizing elements	
3105.30.00	Diammonium hydrogenorthophosphate (Diammonium phosphate)	Addition
3105.40.00	Ammonium dihydrogenorthophosphate (Monoammonium phosphate), mixtures thereof with diammonium hydrogenorthophosphate (Diammonium phosphate)	Addition
3105.51.00	Mineral or chemical fertilizers nesoi, containing nitrates and phosphates	Addition
3105.59.00	Mineral or chemical fertilizers nesoi, containing the two fertilizing elements nitrogen and phosphorus	Addition
3105.60.00	Mineral or chemical fertilizers nesoi, containing 2 fertilizing elements	
3105.90.00	Mineral or chemical fertilizers cont. two or three of the fertilizing elements nitrogen, phosphorus and potassium fertilizers, nesoi	Addition
3203.00.80	Coloring matter of vegetable or animal origin, nesoi	
3204.13.80	Basic dyes and preparations based thereon, nesoi	
3204.17.20	Copper phthalocyanine ([Phthalocyanato(2-)]copper) not ready for use as a pigment	
3204.18.00	Carotenoid coloring matters and preparations based thereon	
3206.11.00	Pigments and preparations based on titanium dioxide containing 80 percent or more by weight of titanium dioxide calculated on the dry weight	
3206.19.00	Pigments and preparations based on titanium dioxide, nesoi	
3301.29.51	Essential oils other than those of citrus fruit, nesoi, for religious purposes only	Addition (Ex)
3402.42.10	Non-ionic organic surface-active agents, aromatic or modified aromatic	
3402.42.20	Fatty substances of animal, vegetable or microbial origin; non-ionic organic surface-active agents, other than aromatic or modified aromatic	
3402.42.90	Non-ionic organic surface-active agents, other than fatty substances of animal, vegetable or microbial origin, other than aromatic or modified aromatic	

HTSUS	Description	Notes
3606.90.30	Ferrocerium and other pyrophoric alloys in all forms	
3808.94.10	Disinfectants, containing any aromatic or modified aromatic disinfectant	
3808.94.50	Disinfectants not subject to subheading note 1 of chapter 38 of the HTSUS, nesoi	
3818.00.00	Chemical elements doped for use in electronics, in the form of discs, wafers etc., chemical compounds doped for electronic use	
3824.91.00	Mixtures consisting mainly of methylphosphonate etc.	
3824.99.29	Mixtures containing 5 percent or more by weight of one or more aromatic or modified aromatic substance, nesoi	
3824.99.49	Mixtures that are in whole or in part of hydrocarbons derived in whole or in part from petroleum, shale oil or natural gas	
3824.99.55	Mixtures of halogenated hydrocarbons, nesoi	
3901.90.90	Polymers of ethylene, nesoi, in primary forms, other than elastomeric	
3902.90.00	Polymers of propylene or of other olefins, nesoi, in primary forms	
3904.61.00	Polytetrafluoroethylene (PTFE), in primary forms	
3905.91.10	Copolymers of vinyl esters or other vinyls, in primary forms, containing by weight 50 percent or more of derivatives of vinyl acetate	
3905.99.80	Polymers of vinyl esters or other vinyl polymers, in primary forms, nesoi	
3906.90.50	Acrylic polymers (except plastics or elastomers), in primary forms, nesoi	
3907.10.00	Polyacetals in primary forms	
3907.21.00	Bis(polyoxyethylene) methylphosphonate	
3907.70.00	Poly(lactic acid)	
3908.10.00	Polyamide-6, -11, -12, -6,6, -6,9, -6,10 or -6,12 in primary form	
3911.90.25	Thermoplastic polysulfides, polysulfones and other products specified in note 3 to chapter 39 of the HTSUS, containing aromatic monomer units or derived therefrom	
3911.90.91	Polysulfides, polysulfones and other products specified in note 3 to chapter 39 of the HTSUS, nesoi	
3912.31.00	Carboxymethylcellulose and its salts	
3912.39.00	Cellulose ethers, other than carboxymethylcellulose and its salts, in primary forms	
3912.90.00	Cellulose and its chemical derivatives nesoi, in primary forms	
3913.90.20	Polysaccharides and their derivatives, nesoi, in primary forms	

HTSUS	Description	Notes
3913.90.50	Natural polymers and modified natural polymers, nesoi, in primary forms	
3914.00.60	Ion-exchangers based on polymers of headings 3901 to 3913, in primary forms, nesoi	
4001.10.00	Natural rubber latex, whether or not prevulcanized	
4001.21.00	Natural rubber smoked sheets	
4001.22.00	Technically specified natural rubber (TSNR), in primary forms	
4001.29.00	Natural rubber in primary forms other than latex, smoked sheets or technically specified natural rubber (TSNR)	
4001.30.00	Balata, gutta-percha, guayule, chicle and similar natural rubber gums, in primary forms	
4403.42.00	Teak, in the rough or roughly squared, not treated with paint, stain, creosote, or other preservatives	
4403.49.02	Tropical wood other than teak or meranti, in the rough or roughly squared, not treated with paint, stain, creosote, or other preservatives	
4407.21.00	Mahogany, sawn or chipped lengthwise, sliced or peeled, whether or not planed, sanded or end-jointed, of a thickness exceeding 6 mm	
4407.22.00	Virola, imbuia and balsa wood, sawn or chipped lengthwise, sliced or peeled, whether or not planed, sanded or end-jointed, of a thickness exceeding 6 mm	
4407.23.01	Teak, sawn or chipped lengthwise, sliced or peeled, whether or not planed, sanded or end-jointed, of a thickness exceeding 6 mm	
4407.25.00	Dark red meranti, light red meranti and meranti bakau wood, sawn or chipped lengthwise, sliced or peeled, whether or not planed, sanded or end-jointed, of a thickness exceeding 6 mm	
4407.26.00	White lauan, white meranti, white seraya, yellow meranti, and alan wood, sawn or chipped lengthwise, sliced or peeled, whether or not planed, sanded or end-jointed, of a thickness exceeding 6 mm	
4407.27.00	Sapelli wood, sawn or chipped lengthwise, sliced or peeled, whether or not planed, sanded or end-jointed, of a thickness exceeding 6 mm	
4407.28.00	Iroko wood, sawn or chipped lengthwise, sliced or peeled, whether or not planed, sanded or end-jointed, of a thickness exceeding 6 mm	
4407.29.02	Tropical wood, nesoi, sawn or chipped lengthwise, sliced or peeled, whether or not planed, sanded or end-jointed, of a thickness exceeding 6 mm	

HTSUS	Description	Notes
4408.31.01	Dark red meranti, light red meranti and meranti bakau wood, sheets for veneering (including those obtained by slicing laminated wood), for plywood or for similar laminated wood and other wood, sawn lengthwise, sliced or peeled, whether or not planed, sanded, spliced or end-jointed, of a thickness not exceeding 6 mm	
4408.39.02	Tropical wood, other than meranti, sheets for veneering (including those obtained by slicing laminated wood), for plywood or for similar laminated wood and other wood, sawn lengthwise, sliced or peeled, whether or not planed, sanded, spliced or end-jointed, of a thickness not exceeding 6 mm	
4703.11.00	Unbleached coniferous chemical woodpulp	Executive Order 14346 of September 5, 2025
4703.21.00	Semibleached or bleached coniferous chemical woodpulp	Executive Order 14346 of September 5, 2025
4703.29.00	Semibleached or bleached nonconiferous chemical woodpulp	Executive Order 14346 of September 5, 2025
4820.20.00	Exercise books of paper or paperboard	
4901.10.00	Printed books, brochures, leaflets and similar printed matter in single sheets, whether or not folded	
4901.91.00	Printed dictionaries and encyclopedias and serial installments thereof	
4901.99.00	Printed books, brochures, leaflets and similar printed matter, other than in single sheets	
4902.10.00	Newspapers, journals and periodicals, appearing at least four times a week	
4902.90.10	Newspaper supplements printed by a gravure process	
4902.90.20	Newspapers, journals and periodicals, except those appearing at least four times a week	
4903.00.00	Children's picture, drawing or coloring books	
4904.00.00	Music, printed or in manuscript, whether or not bound or illustrated	
4905.20.00	Maps and hydrographic or similar charts of all kinds, including atlases and topographical plans, printed in book form	
4905.90.20	Globes, printed	

HTSUS	Description	Notes
4905.90.60	Other printed maps and hydrographic or similar charts, not globes and not in book form, nesoi	
4906.00.00	Hand-drawn original plans and drawings; hand-written texts; photo reproductions on sensitized paper and carbon copies of the foregoing	
4911.10.00	Printed trade advertising material, commercial catalogs and the like	
4911.99.60	Printed matter, nesoi, printed on paper in whole or in part by a lithographic process	
4911.99.80	Printed matter, nesoi	
7106.91.10	Silver bullion and dore	
7108.11.00	Gold, nonmonetary, powder	Executive Order 14346 of September 5, 2025
7108.12.10	Gold, nonmonetary, bullion and dore	
7108.12.50	Gold, nonmonetary, other unwrought forms, other	Executive Order 14346 of September 5, 2025
7108.13.10	Gold, nonmonetary, other semimanufactured forms, gold leaf	Executive Order 14346 of September 5, 2025
7108.13.55	Gold, nonmonetary, other semimanufactured forms, rectangular or near rectangular shapes, containing 99.5 percent or more by weight of gold and not otherwise marked or decorated than with weight, purity, or other identifying information	Executive Order 14346 of September 5, 2025
7108.13.70	Gold, nonmonetary, other semimanufactured forms, other	Executive Order 14346 of September 5, 2025
7108.20.00	Gold, monetary	Executive Order 14346 of September 5, 2025
7110.11.00	Platinum, unwrought or in powder form	
7110.19.00	Platinum, in semimanufactured forms	
7110.21.00	Palladium, unwrought or in powder form	
7110.29.00	Palladium, in semimanufactured forms	
7110.31.00	Rhodium, unwrought or in powder form	
7110.39.00	Rhodium, in semimanufactured forms	

HTSUS	Description	Notes
7110.41.00	Iridium, osmium and ruthenium, unwrought or in powder form	
7110.49.00	Iridium, osmium and ruthenium, in semimanufactured forms	
7112.92.01	Platinum waste and scrap, incl. metal clad with platinum, excluding sweepings containing other precious metals, other than goods of electrical and electronic waste covered under heading 8549	
7115.90.05	Articles of precious metal, in rectangular or near rectangular shapes, containing 99.5 percent or more by weight of a precious metal and not otherwise marked or decorated than with weight, purity, or other identifying information	Executive Order 14346 of September 5, 2025
7115.90.30	Articles of precious metal or of metal clad with precious metal, other articles of gold, including metal clad with gold	Executive Order 14346 of September 5, 2025
7118.90.00	Coins, nesoi	
7202.11.10	Ferromanganese containing by weight more than 2 percent but not more than 4 percent of carbon	
7202.11.50	Ferromanganese containing by weight more than 4 percent of carbon	
7202.19.10	Ferromanganese containing by weight not more than 1 percent of carbon	
7202.19.50	Ferromanganese containing by weight more than 1 percent but not more than 2 percent of carbon	
7202.30.00	Ferrosilicon manganese	
7202.41.00	Ferrochromium containing by weight more than 4 percent of carbon	
7202.49.10	Ferrochromium containing by weight more than 3 percent but not more than 4 percent of carbon	
7202.49.50	Ferrochromium containing by weight 3 percent or less of carbon	
7202.50.00	Ferrosilicon chromium	
7202.60.00	Ferronickel	Executive Order 14346 of September 5, 2025
7202.80.00	Ferrotungsten and ferrosilicon tungsten	
7202.91.00	Ferrotitanium and ferrosilicon titanium	
7202.93.40	Ferroniobium containing by weight less than 0.02 percent of phosphorus or sulfur or less than 0.4 percent of silicon	
7202.93.80	Ferroniobium, nesoi	
7204.21.00	Stainless steel waste and scrap	
7401.00.00	Copper mattes; cement copper (precipitated copper)	

HTSUS	Description	Notes
7402.00.00	Unrefined copper; copper anodes for electrolytic refining	
7403.11.00	Refined copper cathodes and sections of cathodes	
7403.12.00	Refined copper, wire bars	
7403.13.00	Refined copper, billets	
7403.19.00	Refined copper, unwrought articles nesoi	
7403.21.00	Copper-zinc base alloys (brass), unwrought nesoi	
7403.22.00	Copper-tin base alloys (bronze), unwrought nesoi	
7403.29.01	Copper alloys (other than copper-zinc, copper-tin alloys), unwrought nesoi	
7404.00.30	Copper spent anodes; copper waste and scrap containing less than 94 percent by weight of copper	
7404.00.60	Copper, waste and scrap containing 94 percent or more by weight of copper	
7405.00.10	Copper master alloys, containing 5 percent or more but not more than 15 percent by weight of phosphorus	
7405.00.60	Copper master alloys, not containing 5 percent or more but not more than 15 percent by weight of phosphorus	
7501.10.00	Nickel mattes	Executive Order 14346 of September 5, 2025
7502.10.00	Nickel, not alloyed	Executive Order 14346 of September 5, 2025
7502.20.00	Nickel alloys	Executive Order 14346 of September 5, 2025
7503.00.00	Nickel waste and scrap	Executive Order 14346 of September 5, 2025
7504.00.00	Nickel powders and flakes	Executive Order 14346 of September 5, 2025
7508.90.50	Nickel, articles of nesoi	
7901.11.00	Zinc (other than alloy), unwrought, containing 99.99 percent or more by weight of zinc	
7901.12.10	Zinc (other than alloy), unwrought, casting-grade zinc, containing at least 97.5 percent but less than 99.99 percent by weight of zinc	

HTSUS	Description	Notes
7901.12.50	Zinc (other than alloy), unwrought, other than casting-grade zinc, containing at least 97.5 percent but less than 99.99 percent by weight of zinc	
7901.20.00	Zinc alloy, unwrought	
7902.00.00	Zinc, waste and scrap	
7903.90.30	Zinc powder	Executive Order 14346 of September 5, 2025
7907.00.60	Zinc, articles (other than for household, table or kitchen use), nesoi	
8001.10.00	Tin (other than alloy), unwrought	
8001.20.00	Tin alloy, unwrought	
8002.00.00	Tin, waste and scrap	
8007.00.50	Tin, articles nesoi	
8101.10.00	Tungsten, powders	
8101.97.00	Tungsten, waste and scrap	
8103.20.00	Tantalum, unwrought (including bars and rods obtained simply by sintering); tantalum powders	
8103.30.00	Tantalum, waste and scrap	
8103.91.00	Tantalum, crucibles	
8103.99.00	Tantalum, articles other than crucibles, nesoi	
8104.11.00	Magnesium, unwrought, containing at least 99.8 percent by weight of magnesium	
8104.19.00	Magnesium, unwrought, nesoi	
8104.20.00	Magnesium, waste and scrap	
8104.30.00	Magnesium, raspings, turnings and granules graded according to size; magnesium powders	
8104.90.00	Magnesium, articles nesoi	
8105.20.30	Cobalt alloys, unwrought	
8105.20.60	Cobalt (other than alloys), unwrought	
8105.20.90	Cobalt, mattes and other intermediate products of cobalt metallurgy; cobalt powders	
8105.30.00	Cobalt, waste and scrap	
8105.90.00	Cobalt, articles thereof nesoi	
8106.10.00	Bismuth (including waste and scrap) and articles thereof, containing more than 99.99 percent of bismuth by weight	
8106.90.00	Bismuth (including waste and scrap) and articles thereof, containing 99.99 percent of bismuth or less, nesoi	
8108.20.00	Titanium, unwrought; titanium powders	
8108.30.00	Titanium, waste and scrap	
8108.90.30	Titanium, articles nesoi	

HTSUS	Description	Notes
8108.90.60	Titanium, wrought nesoi	
8110.10.00	Antimony, unwrought; antimony powders	
8110.20.00	Antimony, waste and scrap	
8110.90.00	Articles of antimony, nesoi	
8111.00.47	Unwrought manganese flake containing at least 99.5 percent by weight manganese	
8111.00.49	Unwrought manganese, nesoi	
8112.21.00	Chromium, unwrought; chromium powders	
8112.22.00	Chromium, waste and scrap	
8112.29.00	Articles of chromium, nesoi	
8112.41.10	Rhenium, waste and scrap	
8112.41.50	Rhenium, unwrought; rhenium powders	
8112.49.00	Rhenium, articles, nesoi	
8112.59.00	Articles of thallium, nesoi	
8112.92.10	Gallium, unwrought; gallium powders	
8112.92.30	Indium, unwrought; indium powders	
8112.92.40	Niobium (columbium), unwrought; niobium powders	
8112.92.60	Germanium, unwrought	
8112.92.65	Germanium powder, wrought	
8112.99.10	Germanium nesoi and articles thereof	
8112.99.91	Articles of gallium, indium, or niobium, nesoi	
8471	Automatic data processing machines and units thereof; magnetic or optical readers, machines for transcribing data onto data media in coded form and machines for processing such data, nesoi	Presidential Memorandum of April 11, 2025
8473.30	Parts and accessories for automatic data processing machines and units thereof; magnetic or optical readers, machines for transcribing data onto data media in coded form and machines for processing such data, nesoi	Presidential Memorandum of April 11, 2025
8486	Machines and apparatus of a kind used solely or principally for the manufacture of semiconductor boules or wafers, semiconductor devices, electronic integrated circuits or flat panel displays; machines and apparatus specified in note 11(C) to this chapter; parts and accessories	Presidential Memorandum of April 11, 2025
8505.11.0070	Sintered neodymium-iron-boron magnets	Executive Order 14346 of September 5, 2025
8517.13.00	Smartphones for cellular networks or for other wireless of networks	Presidential Memorandum of April 11, 2025

HTSUS	Description	Notes
8517.62.00	Machines for the reception, conversion and transmission or regeneration of voice, images or other data, including switching and routing apparatus	Presidential Memorandum of April 11, 2025
8523.51.00	Semiconductor media, solid state non-volatile storage devices	Presidential Memorandum of April 11, 2025
8524	Flat panel display modules, whether or not incorporating touch-sensitive screens	Presidential Memorandum of April 11, 2025
8528.52.00	Other monitors capable of directly connecting to and designed for use with an automatic data processing machine of heading 8471	Presidential Memorandum of April 11, 2025
8541.10.00	Diodes, other than photosensitive or light-emitting diodes	
8541.21.00	Transistors, other than photosensitive transistors, with a dissipation rating of less than 1 W	
8541.29.00	Transistors, other than photosensitive transistors, with a dissipation rating of 1 W or more	
8541.30.00	Thyristors, diacs and triacs, other than photosensitive devices	
8541.41.00	Light emitting diodes (LED)	Executive Order 14346 of September 5, 2025
8541.49.10	Other photosensitive semiconductor diodes, other than light-emitting	
8541.49.70	Other photosensitive semiconductor transistors	
8541.49.80	Optical coupled isolators	
8541.49.95	Other photosensitive semiconductor devices, other than diodes or transistors, nesoi	
8541.51.00	Other semiconductor-based transducers, other than photosensitive transducers	
8541.59.00	Other semiconductor devices, other than semiconductor-based transducers, other than photosensitive devices, nesoi	
8541.90.00	Parts of diodes, transistors, similar semiconductor devices, photosensitive semiconductor devices, LEDs and mounted piezoelectric crystals	
8542	Electronic integrated circuits; parts thereof	Presidential Memorandum of April 11, 2025

HTSUS	Description	Notes
8542.31.00	Electronic integrated circuits: processors and controllers	
8542.32.00	Electronic integrated circuits: memories	
8542.33.00	Electronic integrated circuits: amplifiers	
8542.39.00	Electronic integrated circuits: other	
8542.90.00	Parts of electronic integrated circuits and microassemblies	

Potential Tariff Adjustments for Aligned Partners

Annex

Note: All products that are properly classified in the provisions of the Harmonized Tariff Schedule of the United States (HTSUS) that are listed in this Annex are potentially eligible to be exempted from duties imposed by Executive Order 14257, as amended, as determined by the Secretary of Commerce and the United States Trade Representative for each trading partner that has concluded an agreement on reciprocal trade, based on the scope and nature of the trading partner's commitments under that agreement. The product descriptions that are contained in this Annex are provided for informational purposes only, do not supersede the text of the HTSUS, and are not intended to delimit in any way the scope of the action, except as specified below. Only items that are properly classified in the listed provisions of the HTSUS are potentially eligible to be exempted from the tariff action imposed by Executive Order 14257, as amended. Any questions regarding the scope of particular HTSUS provisions should be referred to U.S. Customs and Border Protection. In the product descriptions, the abbreviation "nesoi" means "not elsewhere specified or included".

Notes on certain HTSUS provisions for which only a portion of the provision is covered in this Annex, as provided in the "Scope Limitations" column:

- A subheading marked with "**Ex**" is defined and limited by the product description.
- A subheading marked with "**Aircraft**" includes only articles of civil aircraft (all aircraft other than military aircraft); their engines, parts, and components; their other parts, components, and subassemblies; and ground flight simulators and their parts and components, that otherwise meet the criteria of General Note 6 of HTSUS, regardless of whether a product is entered under a provision for which the rate of duty "Free (C)" appears in the "Special" sub-column.
- A subheading marked with "**Pharma**" includes only non-patented articles for use in pharmaceutical applications.

HTSUS	Description	Scope Limitations
0106.11.00	Live primates	
0106.12.01	Live whales, dolphins and porpoises; manatees and dugongs, seals, sea lions, and walruses	
0106.13.00	Live camels and other camelids	
0106.14.00	Live rabbits and hares	
0106.19.30	Live foxes	
0106.19.91	Live mammals, nesoi	
0106.20.00	Live reptiles (including snakes and turtles)	
0106.31.00	Live birds of prey	
0106.32.00	Live psittaciformes birds (including parrots, parakeets, macaws and cockatoos)	
0106.33.00	Ostriches; emus	

HTSUS	Description	Scope Limitations
0106.39.01	Live birds, other than poultry, birds of prey or psittaciformes birds	
0106.90.01	Live animals other than mammals, reptiles, insects, and birds	
0208.50.00	Meat and edible meat offal of reptiles, fresh, chilled or frozen	
0208.90.25	Frog legs, fresh, chilled or frozen	
0302.31.00	Albacore or longfinned tunas, fresh or chilled, excluding fillets, other meat portions, livers and roes	
0302.32.00	Yellowfin tunas, fresh or chilled, excluding fillets, other meat portions, livers and roes	
0304.87.00	Frozen tuna fillets	
0410.10.00	Edible insects	
0501.00.00	Human hair, unworked, whether or not washed or scoured; waste of human hair	
0510.00.40	Cantharides; bile; glands and other animal products nesoi used in pharmaceutical products	
0601.10.15	Tulip bulbs, dormant	
0601.10.30	Hyacinth bulbs, dormant	
0601.10.45	Lily bulbs, dormant	
0601.10.60	Narcissus bulbs, dormant	
0601.10.75	Crocus corms, dormant	
0601.10.90	Bulbs, tubers, tuberous roots, corms, crowns and rhizomes, nesoi, dormant	
0601.20.90	Bulbs nesoi, tubers, tuberous roots, corms, crowns and rhizomes, in growth or in flower; chicory plants and roots	
0602.10.00	Unrooted cuttings and slips of live plants	
0602.40.00	Roses, grafted or not	
0602.90.20	Live orchid plants	
0602.90.30	Live herbaceous perennials, other than orchid plants, with soil attached to roots	
0602.90.60	Other live plants nesoi, with soil attached to roots	
0603.11.00	Sweetheart, spray and other roses, fresh cut	
0603.12.30	Miniature (spray) carnations, fresh cut	
0603.12.70	Other Carnations, fresh cut	
0603.13.00	Orchids, fresh cut	
0603.14.00	Chrysanthemums, fresh cut	
0603.15.00	Fresh cut lilies (Lillium spp.)	
0603.19.01	Fresh cut, anthuriums, alstroemeria, gypsophilia, lilies, snapdragons and other flowers nesoi	
0603.90.00	Cut flowers and flower buds, suitable for bouquets or ornamental purposes, dried, dyed, bleached, impregnated or otherwise prepared	

HTSUS	Description	Scope Limitations
0604.20.00	Fresh foliage, branches, and other parts of plants, without flowers or buds, suitable for bouquets or ornamental purposes	
0604.90.10	Mosses and lichens suitable for bouquets or ornamental purposes	
0604.90.30	Dried or bleached foliage, branches, and other parts of plants for bouquets or ornamental purposes, except mosses and lichens	
0604.90.60	Other than fresh, bleached or dried: Foliage, branches, parts of plants and grasses, suitable for bouquets or ornamental purposes, except mosses and lichen	
0805.40.60	Grapefruit and pomelos, fresh or dried, if entered during the month of October	
1207.10.00	Palm nuts and kernels	
1211.30.00	Coca leaf, of a kind used in perfumery, in pharmacy or for insecticidal, fungicidal or similar purposes	
1211.60.00	Bark of African cherry (Prunus Africana)	
1211.90.60	Tonka beans, of a kind used in perfumery, in pharmacy or for insecticidal, fungicidal or similar purposes	
1211.90.89	Psyllium seed husks	Ex
1212.21.00	Seaweeds and other algae, fresh, chilled, frozen or dried, whether or not ground, fit for human consumption	
1212.29.00	Seaweeds and other algae, fresh, chilled, frozen or dried, whether or not ground, other than for human consumption	
1212.94.00	Chicory roots	
1301.20.00	Gum Arabic	
1301.90.91	Boswellia	Ex
1302.19.21	Poppy straw extract	
1302.19.91	Aloe, Tasmanian pepper, coconut, centella	Ex
1302.31.00	Agar-agar	
1302.32.00	Mucilages and thickeners, whether or not modified, derived from locust beans, locust bean seeds or guar seeds	
1401.10.00	Bamboos, of a kind used primarily for plaiting	
1401.20.20	Rattans, in the rough or cut transversely into sections, of a kind used primarily for plaiting	
1401.20.40	Rattans, other than those in the rough or cut transversely into sections, of a kind used primarily for plaiting	
1404.90.30	Istle of a kind used primarily in brooms or brushes	
1404.90.40	Piassava, couch-grass and other vegetable materials nesoi, of a kind used primarily in brooms or brushes	
1511.10.00	Palm oil, crude, and its fractions, whether or not refined, not chemically modified	
1511.90.00	Palm oil, other than crude, and its fractions, whether or not refined, but not chemically modified	

HTSUS	Description	Scope Limitations
1513.21.00	Palm kernel oil or babassu oil, crude, and their fractions, not chemically modified	
1513.29.00	Palm kernel oil or babassu oil, other than crude, and their fractions, whether or not refined, but not chemically modified	
1515.30.00	Castor oil and its fractions, whether or not refined, but not chemically modified	
1515.90.21	Nut oils, whether or not refined, not chemically modified	
1515.90.60	Jojoba oil and its fractions, whether or not refined, not chemically modified	
1515.90.81	Argan oil	Ex
1604.14.40	Tunas and skipjack, not in airtight containers, not in oil, in bulk or in immediate containers weighing with contents over 6.8 kg each	
2101.30.00	Roasted chicory and other roasted coffee substitutes and extracts, essences and concentrates thereof	
2102.20.60	Single-cell micro-organisms, dead, excluding yeasts (but not including vaccines of heading 3002)	
2306.50.00	Oilcake and other solid residues, resulting from the extraction of vegetable fats or oils, of coconut or copra	
2504.10.10	Natural graphite, crystalline flake (not including flake dust)	
2504.10.50	Natural graphite in powder or flakes other than crystalline flake	
2504.90.00	Natural graphite, other than in powder or in flakes	
2511.10.10	Natural barium sulfate (barytes), ground	
2511.10.50	Natural barium sulfate (barytes), not ground	
2519.10.00	Natural magnesium carbonate (magnesite)	
2519.90.10	Fused magnesia; dead-burned (sintered) magnesia, whether or not containing small quantities of other oxides added before sintering	
2519.90.20	Caustic calcined magnesite	
2524.90.00	Asbestos other than crocidolite	
2529.21.00	Fluorspar, containing by weight 97 percent or less of calcium fluoride	
2529.22.00	Fluorspar, containing by weight more than 97 percent of calcium fluoride	
2530.20.10	Kieserite	
2530.20.20	Epsom salts (natural magnesium sulfates)	
2530.90.10	Natural cryolite; natural chiolite	
2530.90.20	Natural micaceous iron oxides	
2530.90.80	Other mineral substances, nesoi	
2602.00.00	Manganese ores and concentrates including ferruginous manganese ores and concentrates with manganese content over 20 percent calculated on the dry weight	

HTSUS	Description	Scope Limitations
2604.00.00	Nickel ores and concentrates	
2605.00.00	Cobalt ores and concentrates	
2606.00.00	Aluminum ores and concentrates	
2608.00.00	Zinc ores and concentrates	
2609.00.00	Tin ores and concentrates	
2610.00.00	Chromium ores and concentrates	
2611.00.30	Tungsten ores	
2611.00.60	Tungsten concentrates	
2612.20.00	Thorium ores and concentrates	
2613.90.00	Molybdenum ores and concentrates, not roasted	
2614.00.30	Synthetic rutile	
2614.00.60	Titanium ores and concentrates, other than synthetic rutile	
2615.90.30	Synthetic tantalum-niobium concentrates	
2615.90.60	Niobium, tantalum or vanadium ores and concentrates, nesoi	
2616.10.00	Silver ores and concentrates	
2617.10.00	Antimony ores and concentrates	
2620.99.50	Slag (other than from the manufacture of iron or steel) containing over 40 percent titanium, and which if containing over 2 percent by weight of copper, lead, or zinc is not to be treated for the recovery thereof	
2801.20.00	Iodine	
2804.10.00	Hydrogen	Pharma
2804.29.00	Rare gases, other than argon	Pharma
2804.30.00	Nitrogen	Pharma
2804.50.00	Boron; tellurium	Pharma
2804.80.00	Arsenic	
2804.90.00	Selenium	
2805.19.10	Strontium	
2805.19.20	Barium	Pharma
2805.19.90	Alkali metals, other than strontium and barium	
2805.30.00	Rare-earth metals, scandium and yttrium, whether or not intermixed or interalloyed	
2806.10.00	Hydrogen chloride (Hydrochloric acid)	Pharma
2807.00.00	Sulfuric acid; oleum	Pharma
2809.20.00	Phosphoric acid and polyphosphoric acids	Pharma
2811.11.00	Hydrogen fluoride (Hydrofluoric acid)	
2811.12.00	Hydrogen cyanide	Pharma
2811.19.10	Arsenic acid	
2811.22.50	Silicon dioxide, other than synthetic silica gel	Pharma
2811.29.10	Arsenic trioxide	

HTSUS	Description	Scope Limitations
2811.29.20	Selenium dioxide	
2812.12.00	Phosphorus oxychloride	Pharma
2812.19.00	Other chlorides and chloride oxides	Pharma
2813.90.10	Arsenic sulfides	
2814.10.00	Anhydrous ammonia	Pharma
2814.20.00	Ammonia in aqueous solution	Pharma
2815.11.00	Sodium hydroxide (Caustic soda), solid	Pharma
2815.12.00	Sodium hydroxide (Caustic soda), in aqueous solution (Soda lye or liquid soda)	Pharma
2815.20.00	Potassium hydroxide (Caustic potash)	Pharma
2815.30.00	Peroxides of sodium or potassium	Pharma
2816.10.00	Hydroxide and peroxide of magnesium	
2816.40.10	Oxides, hydroxides and peroxides of strontium	
2816.40.20	Oxides, hydroxides and peroxides of barium	
2817.00.00	Zinc oxide; zinc peroxide	
2818.10.10	Artificial corundum, crude	
2818.10.20	Artificial corundum, in grains, or ground, pulverized or refined	
2818.20.00	Aluminum oxide, other than artificial corundum	
2818.30.00	Aluminum hydroxide	Pharma
2820.10.00	Manganese dioxide	
2821.10.00	Iron oxides and hydroxides	
2821.20.00	Earth colors containing 70 percent or more by weight of combined iron evaluated as Fe2O3	
2822.00.00	Cobalt oxides and hydroxides; commercial cobalt oxides	
2823.00.00	Titanium oxides	
2825.10.00	Hydrazine and hydroxylamine and their inorganic salts	Pharma
2825.20.00	Lithium oxide and hydroxide	Pharma
2825.40.00	Nickel oxides and hydroxides	
2825.60.00	Germanium oxides and zirconium dioxide	
2825.80.00	Antimony oxides	
2825.90.15	Niobium oxide	
2825.90.30	Tungsten oxides	
2825.90.90	Other inorganic bases; other metal oxides, hydroxides and peroxides, nesoi	
2826.12.00	Fluorides of aluminum	
2826.30.00	Sodium hexafluoroaluminate (Synthetic cryolite)	
2826.90.90	Other complex fluorine salts, nesoi	
2827.31.00	Magnesium chloride	
2827.39.45	Barium chloride	
2827.39.60	Cobalt chlorides	

HTSUS	Description	Scope Limitations
2827.39.65	Zinc chloride	Pharma
2827.39.90	Chlorides, nesoi	Pharma
2827.59.51	Other bromides and bromide oxides, other than ammonium, calcium or zinc	
2827.60.20	Iodide and iodide oxide of potassium	Pharma
2827.60.51	Iodides and iodide oxides, other than of calcium, copper or potassium	Pharma
2832.10.00	Sodium sulfites	Pharma
2832.30.10	Sodium thiosulfate	Pharma
2833.11.50	Disodium sulfate, other than salt cake	Pharma
2833.19.00	Sodium sulfates, other than disodium sulfate	Pharma
2833.21.00	Magnesium sulfate	Pharma
2833.22.00	Aluminum sulfate	Pharma
2833.24.00	Nickel sulfate	
2833.27.00	Barium sulfate	
2833.29.10	Cobalt sulfate	
2833.29.45	Zinc sulfate	
2833.29.51	Other sulfates nesoi	
2834.10.10	Sodium nitrite	Pharma
2834.21.00	Potassium nitrate	
2834.29.20	Strontium nitrate	
2834.29.51	Nitrates, nesoi	
2835.22.00	Mono- or disodium phosphates	Pharma
2835.24.00	Potassium phosphate	Pharma
2836.20.00	Disodium carbonate	Pharma
2836.30.00	Sodium hydrogencarbonate (Sodium bicarbonate)	Pharma
2836.40.20	Potassium hydrogencarbonate (Potassium bicarbonate)	Pharma
2836.60.00	Barium carbonate	
2836.91.00	Lithium carbonates	
2836.92.00	Strontium carbonate	
2836.99.10	Cobalt carbonates	
2836.99.50	Carbonates nesoi, and peroxocarbonates (percarbonates)	
2837.20.51	Complex cyanides, excluding potassium ferricyanide	Pharma
2841.80.00	Tungstates (wolframates)	
2841.90.20	Ammonium perrhenate	
2841.90.40	Aluminates	Pharma
2842.10.00	Double or complex silicates	Pharma
2842.90.90	Salts of inorganic acids or peroxoacids nesoi, excluding azides	Pharma
2843.29.01	Silver compounds, other than silver nitrate	Pharma
2843.30.00	Gold compounds	Pharma

HTSUS	Description	Scope Limitations
2843.90.00	Inorganic or organic compounds of precious metals, excluding those of silver and gold; amalgams of precious metals	Pharma
2844.41.00	Tritium and its compounds, alloys, dispersions, ceramic products and mixtures thereof	Pharma
2844.42.00	Actinium, californium, curium, einsteinium, gadolinium, polonium, radium, uranium and their compounds, alloys, dispersions, ceramic products and mixtures	Pharma
2844.43.00	Other radioactive elements, isotopes, compounds, nesoi; alloys, dispersions, ceramic products and mixtures thereof	Pharma
2844.44.00	Radioactive residues	Pharma
2845.20.00	Boron enriched in boron-10 and its compounds	Pharma
2845.30.00	Lithium enriched in lithium-6 and its compounds	Pharma
2845.90.01	Isotopes not in heading 2844 and their compounds other than boron, lithium and helium	Pharma
2846.10.00	Cerium compounds	
2846.90.20	Mixtures of rare-earth oxides or of rare-earth chlorides	Pharma
2846.90.40	Yttrium bearing materials and compounds containing by weight more than 19 percent but less than 85 percent yttrium oxide equivalent	Pharma
2846.90.80	Compounds, inorganic or organic, of rare-earth metals, of yttrium or of scandium, or of mixtures of these metals, nesoi	
2847.00.00	Hydrogen peroxide, whether or not solidified with urea	Pharma
2849.20.10	Silicon carbide, crude	
2849.20.20	Silicon carbide, in grains, or ground, pulverized or refined	
2849.90.30	Tungsten carbide	
2850.00.50	Hydrides, nitrides, azides, silicides and borides other than of calcium, titanium, tungsten or vanadium	Pharma
2853.10.00	Cyanogen chloride (Chlorocyan)	Pharma
2853.90.10	Phosphor copper containing more than 15 percent by weight of phosphorus, excluding ferrosphosphorus	Pharma
2853.90.50	Phosphides, whether or not chemically defined, excluding ferrophosphorus, of other metals or of nonmetals	Pharma
2853.90.90	Other phosphides, excluding ferrophosphorous, nesoi	Pharma
2901.10.40	Saturated acyclic hydrocarbon (not ethane, butane, n-pentane or isopentane), derived in whole or in part from petroleum, shale oil or natural gas	Pharma
2902.19.00	Cyclanic hydrocarbons (except cyclohexane), cyclenic hydrocarbons and cycloterpenes nesoi	Pharma
2902.90.30	Alkylbenzenes and polyalkylbenzenes	Pharma
2903.12.00	Dichloromethane (Methylene chloride)	Pharma
2903.13.00	Chloroform (Trichloromethane)	Pharma
2903.22.00	Trichloroethylene	Pharma

HTSUS	Description	Scope Limitations
2903.41.10	Trifluoromethane (HFC-23)	Pharma
2903.42.10	Difluoromethane (HFC-32)	Pharma
2903.43.10	Fluoromethane (HFC-41), 1,2-difluoroethane (HFC-152) and 1,1-difluoroethane (HFC-152-a)	Pharma
2903.44.10	Pentafluoroethane (HFC-125), 1,1,1-trifluoroethane (HFC-143a) and 1,1,2-trifluoroethane (HFC-143)	Pharma
2903.45.10	1,1,1,2-Tetrafluoroethane (HFC-134a) and 1,1,2,2-tetrafluoroethane (HFC-134)	Pharma
2903.46.10	1,1,1,2,3,3,3-Heptafluoropropane (HFC-227ea),1,1,1,2,2,3-hexafluoropropane (HFC-236cb),1,1,1,2,3,3-hexafluoropropane (HFC-236ea) and 1,1,1,3,3,3-hexafluoropropane (HFC-236fa)	Pharma
2903.47.10	1,1,1,3,3-Pentafluoropropane (HFC-245fa) and 1,1,2,2,3-pentafluoropropane (HFC-245ca)	Pharma
2903.48.00	1,1,1,3,3-Pentafluorobutane (HFC-365mfc) and 1,1,1,2,2,3,4,5,5,5-decafluoropentane (HFC-4310mee)	Pharma
2903.49.00	Other saturated fluorinated derivatives of acyclic hydrocarbons, nesoi	Pharma
2903.51.10	2,3,3,3-Tetrafluoropropene (HFO-1234yf), 1,3,3,3-tetrafluoropropene (HFO-1234ze) and (Z)-1,1,1,4,4,4-hexafluoro-2-butene (HFO-1336mzz)	Pharma
2903.59.10	1,1,3,3,3-Pentafluoro-2-(trifluoromethyl)-prop-1-ene	Pharma
2903.59.90	Other unsaturated fluorinated derivatives of acyclic hydrocarbons	Pharma
2903.69.10	Acetylene tetrabromide; alkyl bromides, other than methyl bromide (bromomethane); methylene dibromide; and vinyl bromide	Pharma
2903.69.90	Other brominated or iodinated derivatives of acyclic hydrocarbons	Pharma
2903.71.01	Chlorodifluoromethane (HCFC-22)	Pharma
2903.77.00	Other acyclic hydrocarbon derivatives, perhalogenated only with fluorine and chlorine	Pharma
2903.78.00	Other perhalogenated acyclic hydrocarbon derivatives, nesoi	Pharma
2903.79.90	Other halogenated derivatives of acyclic hydrocarbons containing two or more different halogens, nesoi	Pharma
2903.81.00	1,2,3,4,5,6-Hexachlorocyclohexane (HCH (ISO)), including lindane (ISO, INN)	Pharma
2903.89.15	Halogenated products derived in whole or in part from benzene or other aromatic hydrocarbons, described in additional U.S. note 3 to section VI of the HTSUS	Pharma
2903.89.20	Halogenated derivatives derived in whole or in part from benzene or other aromatic hydrocarbons, nesoi	Pharma

HTSUS	Description	Scope Limitations
2903.89.70	Other halogenated derivatives of cyclanic, cyclenic or cycloterpenic hydrocarbons not derived from benzene or other aromatic hydrocarbons	Pharma
2903.92.00	Hexachlorobenzene (ISO) and DDT (clofenotane (INN), (1,1,1-trichloro-2,2-bis(p-chlorophenyl)ethane)	Pharma
2903.93.00	Halogenated derivatives of aromatic hydrocarbons, pentachlorobenzene	Pharma
2903.94.00	Halogenated derivatives of aromatic hydrocarbons, hexabromobiphenyls	Pharma
2903.99.20	Benzyl chloride (α-Chlorotoluene); Benzotrichloride (α, α, α-Trichlorotoluene)	Pharma
2903.99.80	Other halogenated derivatives of aromatic hydrocarbons, nesoi	Pharma
2904.10.32	Aromatic derivatives of hydrocarbons containing only sulfo groups, their salts and ethyl esters, described in additional U.S. note 3 to section VI of the HTSUS	Pharma
2904.10.50	Nonaromatic derivatives of hydrocarbons containing only sulfo groups, their salts and ethyl esters, nesoi	Pharma
2904.20.10	p-Nitrotoluene	Pharma
2904.20.15	p-Nitro-o-xylene	Pharma
2904.20.20	Trinitrotoluene	Pharma
2904.20.30	5-tert-Butyl-2,4,6-trinitro-m-xylene (Musk xylol) and other artificial musks	Pharma
2904.20.35	Nitrated benzene, nitrated toluene (except p-nitrotoluene) or nitrated naphthalene	Pharma
2904.20.40	Aromatic derivatives of hydrocarbons containing only nitro or only nitroso groups, described in additional U.S. note 3 to section VI of the HTSUS	Pharma
2904.20.45	Aromatic derivatives of hydrocarbons containing only nitro or only nitroso groups, nesoi	Pharma
2904.20.50	Nonaromatic derivatives of hydrocarbons containing only nitro or only nitroso groups, nesoi	Pharma
2904.99.04	Monochloromononitrobenzenes; o-nitrochlorobenzene; p-nitrochlorobenzene	Pharma
2904.99.08	Monochloromononitrobenzenes nesoi	Pharma
2904.99.15	4-Chloro-3-nitro-α-α-α-trifluorotoluene; 2-Chloro-5-nitro-α-α-α-trifluorotoluene; and 4-Chloro-3,5-dinitro-α-α-α-trifluorotoluene	Pharma
2904.99.20	Nitrotoluenesulfonic acids	Pharma
2904.99.30	1-Bromo-2-nitrobenzene; 1,2-Dichloro-4-nitrobenzene and o-Fluoronitrobenzene	Pharma
2904.99.35	4,4'-Dinitrostilbene-2,2'-disulfonic acid	Pharma

HTSUS	Description	Scope Limitations
2904.99.40	Sulfonated, nitrated or nitrosated derivatives of aromatic products described in additional U.S. note 3 to section VI of the HTSUS	Pharma
2904.99.47	Other sulfonated, nitrated or nitrosated derivatives of aromatic hydrocarbons excluding aromatic products described in additional U.S. note 3 to section VI of the HTSUS	Pharma
2904.99.50	Nonaromatic sulfonated, nitrated or nitrosated derivatives of hydrocarbons, nesoi	Pharma
2905.11.20	Methanol (Methyl alcohol), other than imported only for use in producing synthetic natural gas (SNG) or for direct use as fuel	Pharma
2905.12.00	Propan-1-ol (Propyl alcohol) and Propan-2-ol (isopropyl alcohol)	Pharma
2905.13.00	Butan-1-ol (n-Butyl alcohol)	Pharma
2905.19.10	Pentanol (Amyl alcohol) and isomers thereof	Pharma
2905.19.90	Saturated monohydric alcohols, nesoi	Pharma
2905.22.10	Geraniol	Pharma
2905.22.20	Isophytol	Pharma
2905.22.50	Acyclic terpene alcohols, other than geraniol and isophytol	Pharma
2905.29.90	Unsaturated monohydric alcohols, other than allyl alcohol or acyclic terpene alcohols	Pharma
2905.31.00	Ethylene glycol (Ethanediol)	Pharma
2905.32.00	Propylene glycol (Propane-1,2-diol)	Pharma
2905.39.90	Dihydric alcohols (diols), nesoi	Pharma
2905.49.20	Esters of glycerol formed with the acids of heading 2904	Pharma
2905.49.50	Polyhydric alcohols, nesoi	Pharma
2905.51.00	Ethchlorvynol (INN)	Pharma
2905.59.10	Halogenated, sulfonated, nitrated or nitrosated derivatives of monohydric alcohols	Pharma
2905.59.90	Halogenated, sulfonated, nitrated or nitrosated derivatives of acyclic alcohols, nesoi	Pharma
2906.11.00	Menthol	Pharma
2906.19.50	Other cyclanic, cyclenic or cycloterpenic alcohols and their halogenated, sulfonated, nitrated or nitrosated derivatives	Pharma
2906.29.60	Other aromatic alcohols and their halogenated, sulfonated, nitrated or nitrosated derivatives	Pharma
2907.11.00	Phenol (Hydroxybenzene) and its salts	Pharma
2907.19.10	Alkylcresols	Pharma
2907.19.20	Alkylphenols	Pharma
2907.19.40	Thymol	Pharma
2907.19.80	Other monophenols	Pharma
2907.29.90	Other polyphenols, nesoi	Pharma
2908.19.10	6-Chloro-m-cresol [OH=1]; m-chlorophenol; and chlorothymol	Pharma

HTSUS	Description	Scope Limitations
2908.19.35	Derivatives of phenols or phenol-alcohols containing only halogen substituents and their salts described in additional U.S. note 3 to section VI of the HTSUS	Pharma
2908.19.60	Other halogenated, sulfonated, nitrated or nitrosated derivatives of phenol or phenol-alcohols	Pharma
2908.99.12	Derivatives nesoi, of phenols or phenol-alcohols containing only sulfo groups, their salts and esters, described in additional U.S. note 3 to section VI of the HTSUS	Pharma
2908.99.15	Derivatives of phenol or phenol-alcohols containing only sulfo groups, their salts and esters, nesoi	Pharma
2908.99.25	Nitrophenols, except p-nitrophenol	Pharma
2909.11.00	Diethyl ether	Pharma
2909.19.18	Ethers of acyclic monohydric alcohols and their derivatives, nesoi	Pharma
2909.19.60	Ethers of polyhydric alcohols and their halogenated, sulfonated, nitrated or nitrosated derivatives, nesoi	Pharma
2909.20.00	Cyclanic, cyclenic or cycloterpenic ethers and their halogenated, sulfonated, nitrated or nitrosated derivatives	Pharma
2909.30.40	Aromatic ethers and their halogenated, sulfonated, nitrated or nitrosated derivatives, nesoi, described in additional U.S. note 3 to section VI of the HTSUS	Pharma
2909.30.60	Other aromatic ethers and their halogenated, sulfonated, nitrated, or nitrosated derivatives, nesoi	Pharma
2909.49.05	Guaifenesin	Pharma
2909.49.10	Other aromatic ether-alcohols, their halogenated, sulfonated, nitrated or nitrosated derivatives described in additional U.S. note 3 to section VI of the HTSUS	Pharma
2909.49.15	Aromatic ether-alcohols and their halogenated, sulfonated, nitrated or nitrosated derivatives, nesoi	Pharma
2909.49.20	Nonaromatic glycerol ethers	Pharma
2909.49.60	Other non-aromatic ether-alcohols and their halogenated, sulfonated, nitrated or nitrosated derivatives	Pharma
2909.50.20	Guaiacol and its derivatives	Pharma
2909.50.40	Odoriferous or flavoring compounds of ether-phenols, ether-alcohol-phenols and their halogenated, sulfonated, nitrated or nitrosated derivatives	Pharma
2909.50.45	Ether-phenols, ether-alcohol-phenols and their halogenated, sulfonated, nitrated or nitrosated derivatives nesoi, described in additional U.S. note 3 to section VI of the HTSUS	Pharma
2909.50.50	Ether-phenols, ether-alcohol-phenols and their halogenated, sulfonated, nitrated or nitrosated derivatives, nesoi	Pharma
2910.10.00	Oxirane (Ethylene oxide)	Pharma
2910.30.00	1-Chloro-2,3-epoxypropane (Epichlorohydrin)	Pharma

HTSUS	Description	Scope Limitations
2910.40.00	Dieldrin (ISO, INN)	Pharma
2910.50.00	Endrin	Pharma
2910.90.10	Butylene oxide	Pharma
2910.90.20	Aromatic epoxides, epoxyalcohols, epoxyphenols and epoxyethers, with a three-membered ring, and their derivatives, nesoi	Pharma
2910.90.91	Other nonaromatic epoxides, epoxyalcohols and epoxyethers, with a three-membered ring, and their halogenated, sulfonated, nitrated or nitrosated derivatives	Pharma
2911.00.10	1,1-Bis(1-methylethoxy)cyclohexane	Pharma
2911.00.50	Acetals and hemiacetals, whether or not with other oxygen function, and their halogenated, sulfonated, nitrated or nitrosated derivatives	Pharma
2912.19.50	Acyclic aldehydes without other oxygen function, nesoi	Pharma
2912.29.60	Other cyclic aldehydes without other oxygen function	Pharma
2912.49.26	Other aromatic aldehyde-alcohols, aldehyde-ethers, aldehyde-phenols and aldehydes with other oxygen function	Pharma
2912.60.00	Paraformaldehyde	Pharma
2914.11.10	Acetone, derived in whole or in part from cumene	Pharma
2914.19.00	Acyclic ketones without other oxygen function, nesoi	Pharma
2914.29.30	Natural camphor	Pharma
2914.29.50	Cyclanic, cyclenic or cycloterpenic ketones without other oxygen function, nesoi	Pharma
2914.39.90	Aromatic ketones without other oxygen function, nesoi	Pharma
2914.40.40	Aromatic ketone-alcohols and ketone-aldehydes, nesoi	Pharma
2914.40.90	Nonaromatic ketone-alcohols and ketone-aldehydes, nesoi	Pharma
2914.50.10	5-Benzoyl-4-hydroxy-2-methoxybenzene-sulfonic acid	Pharma
2914.50.30	Aromatic ketone-phenols and ketones with other oxygen function	Pharma
2914.50.50	Nonaromatic ketone-phenols and ketones with other oxygen function	Pharma
2914.62.00	Coenzyme Q10 (ubidecarenone (INN)	Pharma
2914.69.21	Quinone drugs	Pharma
2914.69.90	Quinones, nesoi	Pharma
2914.71.00	Halogenated, sulfonated, nitrated or nitrosated derivatives: chlordecone (ISO)	Pharma
2914.79.10	2,3-dichloro-1,4-naphthoquinone and other artificial musks	Pharma
2914.79.40	Other halogenated, sulfonated, nitrated or nitrosated derivatives of aromatic ketones and quinones whether or not with other oxygen function	Pharma
2914.79.60	1-Chloro-5-hexanone	Pharma

HTSUS	Description	Scope Limitations
2914.79.90	Other halogenated, sulfonated, nitrated or nitrosated derivatives of nonaromatic ketones and quinones whether or not with other oxygen function	Pharma
2915.21.00	Acetic acid	Pharma
2915.24.00	Acetic anhydride	Pharma
2915.29.30	Cobalt acetates	Pharma
2915.29.50	Other salts of acetic acid	Pharma
2915.32.00	Vinyl acetate	Pharma
2915.36.00	Dinoseb (ISO) acetate	Pharma
2915.39.10	Benzyl acetate	Pharma
2915.39.31	Aromatic esters of acetic acid, described in additional U.S. note 3 to section VI of the HTSUS	Pharma
2915.39.35	Aromatic esters of acetic acid, nesoi	Pharma
2915.39.40	Linalyl acetate	Pharma
2915.39.45	Odoriferous or flavoring compounds of nonaromatic esters of acetic acid, nesoi	Pharma
2915.39.47	Acetates of polyhydric alcohols or of polyhydric alcohol ethers	Pharma
2915.39.70	Isobutyl acetate	Pharma
2915.39.90	Other non-aromatic esters of acetic acid	Pharma
2915.40.10	Chloroacetic acids	Pharma
2915.40.20	Aromatic salts and esters of chlorocetic acids, described in additional U.S. note 3 to section VI of the HTSUS	Pharma
2915.40.30	Aromatic salts and esters of chlorocetic acids, nesoi	Pharma
2915.40.50	Nonaromatic salts and esters of chlorocetic acids, nesoi	Pharma
2915.50.20	Aromatic salts and esters of propionic acid	Pharma
2915.90.10	Fatty acids of animal or vegetable origin, nesoi	Pharma
2915.90.14	Valproic acid	Pharma
2915.90.18	Saturated acyclic monocarboxylic acids, nesoi	Pharma
2915.90.20	Aromatic anhydrides, halides, peroxides and peroxyacids, of saturated acyclic monocarboxylic acids, and their derivatives, nesoi	Pharma
2915.90.50	Nonaromatic anhydrides, halides, peroxides and peroxyacids, of saturated acyclic monocarboxylic acids, and their derivatives, nesoi	Pharma
2916.16.00	Binapacryl (ISO)	Pharma
2916.19.30	Unsaturated acyclic monocarboxylic acids, nesoi	Pharma
2916.19.50	Unsaturated acyclic monocarboxylic acid anhydrides, halides, peroxides, peroxyacids and their derivatives, nesoi	Pharma
2916.20.50	Cyclanic, cyclenic or cycloterpenic monocarboxylic acids, their anhydrides, halides, peroxides, peroxyacids and their derivatives, nesoi	Pharma

HTSUS	Description	Scope Limitations
2916.31.30	Benzoic acid esters, except odoriferous or flavoring compounds, described in additional U.S. note 3 to section VI of the HTSUS	Pharma
2916.31.50	Benzoic acid esters, nesoi	Pharma
2916.39.15	Ibuprofen	Pharma
2916.39.17	2,2-Dichlorophenylacetic acid, ethyl ester and m-Toluic acid	Pharma
2916.39.46	Aromatic monocarboxylic acids, their anhydrides, halides, peroxides, peroxyacids and their derivatives, described in additional U.S. note 3 to section VI of the HTSUS	Pharma
2916.39.79	Other aromatic monocarboxylic acids, their anhydrides, halides, peroxides, peroxyacids and their derivatives	Pharma
2917.13.00	Azelaic acid, sebacic acid, their salts and esters	Pharma
2917.19.10	Ferrous fumarate	Pharma
2917.19.15	Fumaric acid, derived in whole or in part from aromatic hydrocarbons	Pharma
2917.19.17	Fumaric acid except derived in whole or in part from aromatic hydrocarbons	Pharma
2917.19.20	Specified acyclic polycarboxylic acids and their derivatives, described in additional U.S. note 3 to section VI of the HTSUS	Pharma
2917.19.23	Maleic acid	Pharma
2917.19.27	Succinic acid, glutaric acid, and their derivatives, and derivatives of adipic, fumeric and maleic acids, nesoi	Pharma
2917.19.30	Ethylene brassylate	Pharma
2917.19.35	Malonic acid	Pharma
2917.19.40	Acyclic polycarboxylic acids, derived from aromatic hydrocarbons, and their derivatives, nesoi	Pharma
2917.19.70	Acyclic polycarboxylic acids and their derivatives (excluding plasticizers)	Pharma
2917.20.00	Cyclanic, cyclenic or cycloterpenic polycarboxylic acids, their anhydrides, halides, peroxides, peroxyacids and their derivatives	Pharma
2917.34.01	Esters of orthophthalic acid, nesoi	Pharma
2917.37.00	Dimethyl terephthalate	Pharma
2917.39.30	Aromatic polycarboxylic acids, their anhydrides, halides, peroxides, peroxyacids and their derivatives nesoi, described in additional U.S. note 3 to section VI of the HTSUS	Pharma
2918.11.51	Salts and esters of lactic acid	Pharma
2918.12.00	Tartaric acid	Pharma
2918.13.50	Salts and esters of tartaric acid, nesoi	Pharma
2918.14.00	Citric acid	Pharma
2918.16.50	Salts and esters of gluconic acid, nesoi	Pharma
2918.18.00	Chlorobenzilate (ISO)	Pharma

HTSUS	Description	Scope Limitations
2918.19.15	Other Phenylglycolic (Mandelic) acid salts and esters	Pharma
2918.19.20	Aromatic carboxylic acids with alcohol function, without other oxygen functions, and their derivatives, described in additional U.S. note 3 to section VI of the HTSUS	Pharma
2918.19.31	Aromatic carboxylic acids with alcohol function, without other oxygen functions, and their derivatives, nesoi	Pharma
2918.19.60	Malic acid	Pharma
2918.19.90	Nonaromatic carboxylic acids with alcohol function, without other oxygen function, and their derivatives, nesoi	Pharma
2918.21.10	Salicylic acid and its salts, suitable for medicinal use	Pharma
2918.22.10	O-Acetylsalicylic acid (Aspirin)	Pharma
2918.22.50	Salts and esters of O-acetylsalicylic acid	Pharma
2918.23.10	Salol (Phenyl salicylate) suitable for medicinal use	Pharma
2918.23.30	Esters of salicylic acid and their salts, described in additional U.S. note 3 to section VI of the HTSUS	Pharma
2918.23.50	Esters of salicylic acid and their salts, nesoi	Pharma
2918.29.20	Gentisic acid; and Hydroxycinnamic acid and its salts	Pharma
2918.29.22	p-Hydroxybenzoic acid	Pharma
2918.29.65	Carboxylic acids with phenol function but without other oxygen function, described in additional U.S. note 3 to section VI of the HTSUS	Pharma
2918.29.75	Other carboxylic acids with phenol function but without other oxygen function and their derivatives (excluding goods of additional U.S. note 3 to section VI of the HTSUS)	Pharma
2918.30.10	1-Formylphenylacetic acid, methyl ester	Pharma
2918.30.15	2-Chloro-4,5-difluoro-beta -oxobenzenepropanoic acid, ethyl ester; and Ethyl 2-keto-4-phenylbutanoate	Pharma
2918.30.25	Aromatic carboxylic acids with aldehyde or ketone function but without other oxygen function and their derivatives described in additional U.S. note 3 to section VI of the HTSUS, nesoi	Pharma
2918.30.30	Aromatic carboxylic acids with aldehyde or ketone function but without other oxygen function, and their derivatives, nesoi	Pharma
2918.30.70	Dimethyl acetyl succinate; Oxalacetic acid diethyl ester, sodium salt; 4,4,4-Trifluoro-3-oxobutanoic acid, both ethyl and methyl ester versions	Pharma
2918.30.90	Non-aromatic carboxylic acids with aldehyde or ketone function but without other oxygen function, their anhydrides, halides, peroxides, peroxyacids and their derivatives	Pharma
2918.99.05	p-Anisic acid; clofibrate and 3-phenoxybenzoic acid	Pharma
2918.99.30	Aromatic drugs derived from carboxylic acids with out additional oxygen function, and their derivatives, nesoi	Pharma
2918.99.43	Aromatic carboxylic acids with out additional oxygen function and their anhydrides, halides, peroxides, peroxyacids and their	Pharma

HTSUS	Description	Scope Limitations
	derivatives, described in additional U.S. note 3 to section VI of the HTSUS, nesoi	
2918.99.47	Other aromatic carboxylic acids without additional oxygen function and their anhydrides, halides, peroxides, peroxyacids and their derivatives (excluding goods described in additional U.S. note 3 to section VI of the HTSUS)	Pharma
2918.99.50	Nonaromatic carboxylic acids without additional oxygen function, and their derivatives, nesoi	Pharma
2919.10.00	Tris(2,3-dibromopropyl phosphate)	Pharma
2919.90.30	Aromatic phosphoric esters and their salts, including lactophosphates, and their derivatives, not used as plasticizers	Pharma
2919.90.50	Nonaromatic phosphoric esters and their salts, including lactophosphates, and their derivatives	Pharma
2920.19.40	Other aromatic thiophosphoric esters (phosphorothioates), their salts and their halogenated, sulfonated, nitrated or nitrosated derivatives	Pharma
2920.19.50	Nonaromatic phosphorothioates, their salts and their halogenated, sulfonated, nitrated or nitrosated derivatives, nesoi	Pharma
2920.21.00	Dimethyl phosphite	Pharma
2920.22.00	Diethyl phosphite	Pharma
2920.23.00	Trimethyl phosphite	Pharma
2920.24.00	Triethyl phosphite	Pharma
2920.29.00	Other phosphite esters, their salts and their halogenated, sulfonated, nitrated or nitrosated derivatives	Pharma
2920.30.00	Endosulfan (ISO)	Pharma
2920.90.20	Aromatic esters of other inorganic acids (excluding hydrogen halides), their salts and their derivatives, nesoi	Pharma
2920.90.51	Nonaromatic esters of inorganic acids of nonmetals, their salts and derivatives, excluding esters of hydrogen halides, nesoi	Pharma
2921.11.00	Methylamine, di- or trimethylamine, and their salts	Pharma
2921.14.00	2-(N,N,-Diisopropylamino)ethyl chloride hydrochloride	Pharma
2921.19.11	Mono- and triethylamines; mono-, di-, and tri(propyl- and butyl-) monoamines; salts of any of the foregoing	Pharma
2921.19.61	N,N-Dialkyl (methyl, ethyl, n-Propyl or Isopropyl)-2-Chloroethylamines and their protonated salts; Acyclic monoamines and their derivatives, nesoi	Pharma
2921.29.00	Acyclic polyamines, their derivatives and salts, other than ethylenediamine or hexamethylenediamine and their salts	Pharma
2921.30.10	Cyclanic, cyclenic or cycloterpenic mono- or polyamines, derivatives and salts, from any aromatic compound described in additional U.S. note 3 to section VI of the HTSUS	Pharma
2921.30.30	Cyclanic, cyclenic, cycloterpenic mono- or polyamines and their derivatives and salts, derived from any aromatic	Pharma

HTSUS	Description	Scope Limitations
	compound (excluding goods described in additional U.S. note 3 to section VI of the HTSUS)	
2921.30.50	Cyclanic, cyclenic or cycloterpenic mono- or polyamines, and their derivatives and salts, derived from any nonaromatic compounds	Pharma
2921.41.10	Aniline	Pharma
2921.41.20	Aniline salts	Pharma
2921.42.65	Aniline derivatives and their salts thereof, described in additional U.S. note 3 to section VI of the HTSUS	Pharma
2921.42.90	Other aniline derivatives and their salts	Pharma
2921.43.40	Toluidines and their derivatives and salts thereof, described in additional U.S. note 3 to section VI of the HTSUS	Pharma
2921.45.60	Aromatic monoamines and their derivatives and salts thereof, described in additional U.S. note 3 to section VI of the HTSUS, nesoi	Pharma
2921.45.90	Aromatic monoamines and their derivatives and salts thereof nesoi	Pharma
2921.46.00	Amfetamine (INN), benzfetamine (INN), dexamfetamine (INN), etilamfetamine (INN), and other specified INNs; salts thereof	Pharma
2921.49.38	Aromatic monoamine antidepressants, tranquilizers and other psychotherapeutic agents,	Pharma
2921.49.43	Aromatic monoamine drugs, nesoi	Pharma
2921.49.45	Aromatic monoamines and their derivatives and salts thereof nesoi, described in additional U.S. note 3 to section VI of the HTSUS	Pharma
2921.49.50	Aromatic monoamines and their derivatives and salts thereof, nesoi	Pharma
2921.59.40	Aromatic polyamines and their derivatives and salts thereof, described in additional U.S. note 3 to section VI of the HTSUS	Pharma
2921.59.80	Aromatic polyamines and their derivatives and salts thereof nesoi	Pharma
2922.11.00	Monoethanolamine and its salts	Pharma
2922.12.00	Diethanolamine and its salts	Pharma
2922.14.00	Dextropropoxyphene (INN) and its salts	Pharma
2922.15.00	Triethanolamine	Pharma
2922.16.00	Diethylammonium perfluorooctane sulfonate	Pharma
2922.17.00	Methyldiethanolamine and ethyldiethanolamine	Pharma
2922.18.00	2-(N,N-Diisopropylamino)ethanol	Pharma
2922.19.09	Aromatic amino-alcohols drugs, their ethers and esters, other than those containing more than one kind of oxygen function, and their salts thereof; nesoi	Pharma

HTSUS	Description	Scope Limitations
2922.19.20	4,4'-Bis(dimethylamino)benzhydrol (Michler's hydrol) and other specified aromatic amino-alcohols, their ethers and esters, and salts thereof	Pharma
2922.19.33	N1-(2-Hydroxyethyl-2-nitro-1,4-phenylendiamine; N1,N4,N4-tris(2-hydroxyethyl)-2-nitro-1,4-phenylenediamine; and other specified chemicals	Pharma
2922.19.60	Aromatic amino-alcohols, their ethers and esters, other than those containing more than one oxygen function, described in additional U.S. note 3 to section VI of the HTSUS	Pharma
2922.19.70	Other aromatic amino-alcohols, their ethers and esters, other than those containing more than one oxygen function (excluding goods described in additional U.S. note 3 to section VI of the HTSUS)	Pharma
2922.19.90	Salts of triethanolamine	Pharma
2922.19.96	Amino-alcohols, other than those containing more than one kind of oxygen function, their ethers and esters and salts thereof, nesoi	Pharma
2922.21.10	1-Amino-8-hydroxy-3,6-naphthalenedisulfonic acid; and other specified aminohydroxynaphthalenesulfonic acids and their salts	Pharma
2922.21.25	1-Amino-8-hydroxy-4,6-naphthalenedisulfonic acid, monosodium salts	Pharma
2922.21.40	Aminohydroxynaphthalene sulfonic acids and their salts, described in additional U.S. note 3 to section VI of the HTSUS	Pharma
2922.21.50	Aminohydroxynaphthalene sulfonic acids and their salts, nesoi	Pharma
2922.29.03	o-Anisidine; p-anisidine; and p-phenetidine	Pharma
2922.29.06	m-Nitro-p-anisidine and m-nitro-o-anisidine as fast color bases	Pharma
2922.29.08	m-Nitro-p-anisidine and m-nitro-o-anisidine, nesoi	Pharma
2922.29.10	2-Amino-6-chloro-4-nitrophenol and other specified amino-naphthols and amino-phenols, their ethers and esters; salts thereof	Pharma
2922.29.13	o-Aminophenol; and 2,2-bis-[4-(4-aminophenoxy)phenyl]propane	Pharma
2922.29.15	m-Diethylaminophenol; m-dimethylaminophenol; 3-ethylamino-p-cresol; and 5-methoxy-m-phenylenediamine	Pharma
2922.29.20	4-Chloro-2,5-dimethoxyaniline; and 2,4-dimethoxyaniline	Pharma
2922.29.26	Amino-naphthols and other amino-phenols and their derivatives used as fast color bases	Pharma
2922.29.27	Drugs of amino-naphthols and -phenols, their ethers and esters, except those containing more than one oxygen function, and salts thereof, nesoi	Pharma

HTSUS	Description	Scope Limitations
2922.29.29	Photographic chemicals of amino-naphthols and -phenols, their ethers and esters, except those containing more than one oxygen function, and salts thereof, nesoi	Pharma
2922.29.61	Amino-naphthols and other amino-phenols and their derivatives, described in additional U.S. note 3 to section VI of the HTSUS	Pharma
2922.29.81	Amino-naphthols and other amino-phenols, their ethers and esters (not containing more than one oxygen function), and salts thereof, nesoi	Pharma
2922.31.00	Amfepramone (INN), methadone (INN) and normethadone (INN), and salts thereof	Pharma
2922.39.05	1-Amino-2,4-dibromoanthraquinone and 2-Amino-5-chlorobenzophenone	Pharma
2922.39.10	2'-Amino aceto phenone and other specified aromatic amino-aldehydes, -ketones and -quinones, other than those with more than one oxygen function	Pharma
2922.39.14	2-Aminoanthraquinone	Pharma
2922.39.17	1-Aminoanthraquinone	Pharma
2922.39.25	Aromatic amino-aldehydes, -ketones and -quinones, other than those with more than one oxygen function, and salts thereof, described in additional U.S. note 3 to section VI of the HTSUS	Pharma
2922.39.45	Aromatic amino-aldehydes, -ketones and -quinones, other than those with more than one oxygen function, and salts thereof, nesoi	Pharma
2922.39.50	Nonaromatic amino-aldehydes, -ketones and -quinones, other than those with more than one kind of oxygen function, and salts thereof, nesoi	Pharma
2922.41.00	Lysine and its esters and salts thereof	Pharma
2922.42.10	Monosodium glutamate	Pharma
2922.42.50	Glutamic acid and its salts, other than monosodium glutamate	Pharma
2922.43.10	Anthranilic acid and its salts, described in additional U.S. note 3 to section VI of the HTSUS	Pharma
2922.43.50	Anthranilic acid and its salts, nesoi	Pharma
2922.44.00	Tildine (INN) and its salts	Pharma
2922.49.05	(R)-α-Aminobenzeneacetic acid; and 2-amino-3-chlorobenzoic acid, methyl ester	Pharma
2922.49.10	m-Aminobenzoic acid, technical; and other specified aromatic amino-acids and their esters, except those with more than one oxygen function	Pharma
2922.49.26	Aromatic amino-acids drugs and their esters, not containing more than one kind of oxygen function, nesoi	Pharma

HTSUS	Description	Scope Limitations
2922.49.30	Aromatic amino-acids and their esters, excluding those with more than one oxygen function, and their salts, described in additional U.S. note 3 to section VI of the HTSUS	Pharma
2922.49.37	Aromatic amino-acids and their esters, not containing more than one oxygen function (excluding goods described in additional U.S. note 3 to section VI of the HTSUS), nesoi	Pharma
2922.49.43	Glycine (aminoacetic acid)	Pharma
2922.49.49	Nonaromatic amino-acids, other than those containing more than one oxygen function, other than glycine	Pharma
2922.49.60	3-Aminocrotonic acid, methyl ester; and (R)-α-amino-1,4-cyclohexadiene-1-acetic acid	Pharma
2922.49.80	Non-aromatic esters of amino-acids, other than those containing more than one oxygen function, and salts thereof	Pharma
2922.50.07	3,4-Diaminophenetole dihydrogen sulfate, 2-nitro-5-[(2,3-dihydroxy)propoxy]-N-methylaniline and other specified aromatic chemicals	Pharma
2922.50.10	Specified aromatic amino-alcohol-phenols, amino-acid-phenols and other amino-compounds with oxygen function	Pharma
2922.50.11	Salts of d(-)-p-Hydroxyphenylglycine ((R)- α-Amino-4-hydroxybenzeneacetic acid)	Pharma
2922.50.13	Isoetharine hydrochloride and other specified aromatic drugs of amino-compounds with oxygen function	Pharma
2922.50.14	Other aromatic cardiovascular drugs of amino-compounds with oxygen function	Pharma
2922.50.17	Aromatic dermatological agents and local anesthetics of amino-compounds with oxygen function	Pharma
2922.50.19	Aromatic guaiacol derivatives of amino-compounds with oxygen function	Pharma
2922.50.25	Aromatic drugs of amino-compounds with oxygen function, nesoi	Pharma
2922.50.35	Aromatic amino-alcohol-phenols, amino-acid-phenols and other amino-compounds with oxygen function described in additional U.S. note 3 to section VI of the HTSUS	Pharma
2922.50.40	Aromatic amino-alcohol-phenols, amino-acid-phenols and other amino-compounds with oxygen function, nesoi	Pharma
2922.50.50	Nonaromatic amino-alcohol-phenols, amino-acid-phenols and other amino-compounds with oxygen function	Pharma
2923.10.00	Choline and its salts	Pharma
2923.20.10	Purified egg phospholipids, pharmaceutical grade meeting requirements of the U.S. FDA, for use in intravenous fat emulsion	Pharma
2923.20.20	Lecithins and other phosphoaminolipids, nesoi	Pharma
2923.30.00	Tetraethylammonium perfluorooctane sulfonate	Pharma

HTSUS	Description	Scope Limitations
2923.40.00	Didecylmethylammonium perfluorooctane sulfonate	Pharma
2923.90.01	Quaternary ammonium salts and hydroxides, whether or not chemically defined, nesoi	Pharma
2924.11.00	Meprobamate (INN)	Pharma
2924.12.00	Fluoroacetamide (ISO), monocrotophos (ISO) and phosphamidon (ISO)	Pharma
2924.19.11	Acyclic amides (including acyclic carbamates)	Pharma
2924.19.80	Acyclic amide derivatives and salts thereof; nesoi	Pharma
2924.21.16	Aromatic ureines and their derivatives, nesoi	Pharma
2924.21.20	Aromatic ureines, their derivatives and salts thereof, described in additional U.S. note 3 to section VI of the HTSUS	Pharma
2924.21.45	Aromatic ureines, their derivatives and salts thereof, nesoi	Pharma
2924.21.50	Nonaromatic ureines and their derivatives; and salts thereof	Pharma
2924.23.70	2-Acetamidobenzoic acid salts described in additional U.S. note 3 to section VI of the HTSUS	Pharma
2924.23.75	2-Acetamidobenzoic acid salts, nesoi	Pharma
2924.24.00	Ethinamate (INN)	Pharma
2924.25.00	Alachlor (ISO)	Pharma
2924.29.01	p-Acetanisidide; p-acetoacetatoluidide; 4'-amino-N-methylacetanilide; 2,5-dimethoxyacetanilide; and N-(7-hydroxy-1-naphthyl)acetamide	Pharma
2924.29.03	3,5-Dinitro-o-toluamide	Pharma
2924.29.05	Biligrafin acid; 3,5-diacetamido-2,4,6-triiodobenzoic acid; and metrizoic acid	Pharma
2924.29.10	Acetanilide; N-acetylsulfanilyl chloride; aspartame; and 2-methoxy-5-acetamino-N,N-bis(2-acetoxyethyl)aniline	Pharma
2924.29.23	4-Aminoacetanilide; 2-2-oxamidobis[ethyl-3-(3,5-di-tert-butyl-4-hydroxyphenyl)propionate]; and other specified cyclic amide chemicals	Pharma
2924.29.26	3-Aminomethoxybenzanilide	Pharma
2924.29.28	N-[[(4-Chlorophenyl)amino]carbonyl]difluorobenzamide; and 3,5-dichloro-N-(1,1-dimethyl-2-propynyl)benzamide (pronamide)	Pharma
2924.29.33	3-Hydroxy-2-naphthanilide; 3-hydroxy-2-naphtho-o-toluidide; 3-hydroxy-2-naphtho-o-anisidine; 3-hydroxy-2-naphtho-o-phenetidide; and other	Pharma
2924.29.57	Diethylaminoacetoxylidide (Lidocaine)	Pharma
2924.29.62	Other aromatic cyclic amides and derivatives for use as drugs	Pharma
2924.29.65	5-Bromoacetyl-2-salicylamide	Pharma
2924.29.71	Aromatic cyclic amides and their derivatives, described in additional U.S. note 3 to section VI of the HTSUS, nesoi	Pharma

HTSUS	Description	Scope Limitations
2924.29.77	Aromatic cyclic amides (including cyclic carbamates), their derivatives and salts thereof, nesoi	Pharma
2924.29.80	2,2-Dimethylcyclopropylcarboxamide	Pharma
2924.29.95	Other nonaromatic cyclic amides, their derivatives and salts thereof; nesoi	Pharma
2925.12.00	Glutethimide (INN)	Pharma
2925.19.42	Other aromatic imides, their derivatives and salts thereof; nesoi	Pharma
2925.19.91	Other non-aromatic imides and their derivatives	Pharma
2925.21.00	Chlordimeform (ISO)	Pharma
2925.29.10	N'-(4-Chloro-o-tolyl)-N,N-dimethylformamidine; bunamidine hydrochloride; and pentamidine	Pharma
2925.29.18	N,N'-Diphenylguanidine; 3-Dimethyl amino methyleneiminophenol hydrochloride; 1,3-Di-o-tolylguanidine; and N,N-Dimethyl-N'-[3-[[(methylamino) carbonyl]- oxy] phenyl] methanimidamide monohydro- chloride	Pharma
2925.29.20	Aromatic drugs of imines and their derivatives, nesoi	Pharma
2925.29.60	Aromatic imines, their derivatives and salts thereof (excluding drugs), nesoi	Pharma
2925.29.70	Tetramethylguanidine	Pharma
2925.29.90	Non-aromatic imines, their derivatives and salts thereof	Pharma
2926.30.10	Fenproporex (INN) and its salts	Pharma
2926.40.00	alpha-Phenylacetoacetonitrile	Pharma
2926.90.14	p-Chlorobenzonitrile and verapamil hydrochloride	Pharma
2926.90.43	Aromatic nitrile-function compounds, nesoi, described in additional U.S. note 3 to section VI of the HTSUS	Pharma
2926.90.48	Aromatic nitrile-function compounds other than those products described in additional U.S. note 3 to section VI of the HTSUS, nesoi	Pharma
2926.90.50	Nonaromatic nitrile-function compounds, nesoi	Pharma
2927.00.40	Diazo-, azo- or azoxy-compounds, nesoi, described in additional U.S. note 3 to section VI of the HTSUS	Pharma
2927.00.50	Other diazo-, azo- or azoxy-compounds, nesoi	Pharma
2928.00.10	Methyl ethyl ketoxime	Pharma
2928.00.15	Phenylhydrazine	Pharma
2928.00.25	Aromatic organic derivatives of hydrazine or of hydroxylamine	Pharma
2928.00.30	Nonaromatic drugs of organic derivatives of hydrazine or of hydroxylamine, other than Methyl ethyl ketoxime	Pharma
2928.00.50	Nonaromatic organic derivatives of hydrazine or of hydroxylamine, nesoi	Pharma
2929.90.05	2,2-Bis(4-cyanatophenyl)-1,1,1,3,3,3,-hexafluoropropane; 2,2-bis(4-cyanatophenyl)propane; 1,1-ethylidenebis(phenyl-4-cyanate); and 2 others	Pharma

HTSUS	Description	Scope Limitations
2929.90.15	Other aromatic compounds with other nitrogen function, described in additional U.S. note 3 to section VI of the HTSUS	Pharma
2929.90.20	Aromatic compounds with other nitrogen function, nesoi	Pharma
2929.90.50	Nonaromatic compounds with other nitrogen functions, except isocyanates	Pharma
2930.10.01	2-(N,N-Dimethylamino) ethanethiol	Pharma
2930.20.20	Aromatic compounds of thiocarbamates and dithiocarbamates, excluding pesticides	Pharma
2930.20.90	Other non-aromatic thiocarbamates and dithiocarbamates	Pharma
2930.30.60	Thiuram mono-, di- or tetrasulfides, other than tetramethylthiuram monosulfide	Pharma
2930.40.00	Methionine	Pharma
2930.60.00	2-(N,N-Diethylamino)ethanethiol	Pharma
2930.70.00	Bis(2-hydroxyethyl)sulfide (thiodiglycol (INN))	Pharma
2930.90.29	Other aromatic organo-sulfur compounds (excluding pesticides)	Pharma
2930.90.49	Nonaromatic organo-sulfur acids, nesoi	Pharma
2930.90.92	Other non-aromatic organo-sulfur compounds	Pharma
2931.41.00	Dimethyl methylphosphonate	Pharma
2931.42.00	Dimethyl propylphosphonate	Pharma
2931.43.00	Diethyl ethylphosphonate	Pharma
2931.44.00	Methylphosphonic acid	Pharma
2931.45.00	Salt of methylphosphonic acid and (aminoiminomethyl)urea (1:1)	Pharma
2931.46.00	2,4,6-Tripropyl-1,3,5,2,4,6-trioxatriphosphinane 2,4,6-trioxide	Pharma
2931.47.00	(5-Ethyl-2-methyl-2-oxido-1,3,2-dioxaphosphinan-5-yl) methyl methyl methylphosphonate	Pharma
2931.48.00	3,9-Dimethyl-2,4,8,10-tetraoxa-3,9-diphosphaspiro [5.5] undecane 3,9-dioxide	Pharma
2931.49.00	Other non-halogenated organo-phosphorous derivatives	Pharma
2931.51.00	Methylphosphonic dichloride	Pharma
2931.52.00	Propylphosphonic dichloride	Pharma
2931.53.00	O-(3-chloropropyl) O-[4-nitro-3-(trifluoromethyl)phenyl] methylphosphonothionate	Pharma
2931.54.00	Trichlorfon (ISO)	Pharma
2931.59.00	Other halogenated organo-phosphorous derivatives	Pharma
2931.90.22	Drugs of aromatic organo-inorganic compounds	Pharma
2931.90.30	Aromatic organo-inorganic compounds, nesoi, described in additional U.S. note 3 to section VI of the HTSUS	Pharma
2931.90.60	Other aromatic organo-inorganic compounds (excluding products described in additional U.S. note 3 to section VI of the HTSUS)	Pharma

HTSUS	Description	Scope Limitations
2931.90.90	Other non-aromatic organo-inorganic compounds	Pharma
2932.11.00	Tetrahydrofuran	Pharma
2932.14.00	Sucralose	Pharma
2932.19.10	Aromatic heterocyclic compounds with oxygen hetero-atom(s) only, containing an unfused furan ring, nesoi	Pharma
2932.19.51	Nonaromatic compounds containing an unfused furan ring (whether or not hydrogenated) in the ring	Pharma
2932.20.05	Coumarin, methylcoumarins and ethylcoumarins	Pharma
2932.20.20	Aromatic drugs of lactones	Pharma
2932.20.25	4-Hydroxycoumarin	Pharma
2932.20.30	Aromatic lactones, nesoi, described in additional U.S. note 3 to section VI of the HTSUS	Pharma
2932.20.45	Aromatic lactones, nesoi	Pharma
2932.20.50	Nonaromatic lactones	Pharma
2932.95.00	Tetrahydrocannabinols (all isomers)	Pharma
2932.99.04	2,2-Dimethyl-1,3-benzodioxol-4-yl methylcarbamate (Bendiocarb)	Pharma
2932.99.08	2-Ethoxy-2,3-dihydro-3,3-dimethyl-5-benzofuranylmethanesulfonate	Pharma
2932.99.21	Aromatic pesticides of heterocyclic compounds with oxygen hetero-atom(s) only, nesoi	Pharma
2932.99.32	Benzofuran (Coumarone); and Dibenzofuran (Diphenylene oxide)	Pharma
2932.99.35	2-Hydroxy-3-dibenzofurancarboxylic acid	Pharma
2932.99.39	Benzointetrahydropyranyl ester; and Xanthen-9-one	Pharma
2932.99.55	Bis-O-[(4-methylphenyl)methylene]-D-glucitol (Dimethylbenzylidene sorbitol); and Rhodamine 2C base	Pharma
2932.99.61	Aromatic heterocyclic compounds with oxygen hetero-atom(s) only, described in additional U.S. note 3 to section VI of the HTSUS, nesoi	Pharma
2932.99.70	Aromatic heterocyclic compounds with oxygen hetero-atom(s) only, nesoi	Pharma
2932.99.90	Nonaromatic heterocyclic compounds with oxygen hetero-atom(s) only, nesoi	Pharma
2933.11.00	Phenazone (Antipyrine) and its derivatives	Pharma
2933.19.08	3-(5-Amino-3-methyl-1H-pyrazol-1-yl)benzenesulfonic acid; amino-J-pyrazolone; and another 12 specified chemicals	Pharma
2933.19.35	Aromatic or modified aromatic drugs of heterocyclic compounds with nitrogen hetero-atom(s) only, containing an unfused pyrazole ring	Pharma
2933.19.37	Aromatic or modified aromatic compounds, described in additional U.S. note 3 to section VI of the HTSUS, containing	Pharma

HTSUS	Description	Scope Limitations
	an unfused pyrazole ring (whether or not hydrogenated) in the structure	
2933.19.43	Aromatic or modified aromatic compounds (excluding products described in additional U.S. note 3 to section VI of the HTSUS), containing an unfused pyrazole ring in the structure	Pharma
2933.19.45	Nonaromatic drugs of heterocyclic compounds with nitrogen hetero-atom(s) only, containing an unfused pyrazole ring	Pharma
2933.19.90	Other compounds (excluding aromatic or modified aromatic compounds and drugs) containing an unfused pyrazole ring (whether or not hydrogenated) in the structure	Pharma
2933.21.00	Hydantoin and its derivatives	Pharma
2933.29.05	1-[1-((4-Chloro-2-(trifluoromethyl)phenyl)imino)-2-propoxyethyl]-1H-imidazole (triflumizole); and Ethylene thiourea	Pharma
2933.29.10	2-Phenylimidazole	Pharma
2933.29.20	Aromatic or modified aromatic drugs of heterocyclic compounds with nitrogen hetero-atom(s) only, containing an unfused imidazole ring	Pharma
2933.29.35	Aromatic or modified aromatic goods, described in additional U.S. note 3 to section VI of the HTSUS, containing an unfused imidazole ring (whether or not hydrogenated) in structure	Pharma
2933.29.43	Aromatic or modified aromatic goods containing an unfused imidazole ring (whether or not hydrogenated) in the structure (excluding products described in additional U.S. note 3 to section VI of the HTSUS)	Pharma
2933.29.45	Nonaromatic drugs of heterocyclic compounds with nitrogen hetero-atom(s) only, containing an unfused imidazole ring, nesoi	Pharma
2933.29.60	Imidazole	Pharma
2933.29.90	Other compounds (excluding drugs, aromatic and modified aromatic compounds) containing an unfused imidazole ring (whether or not hydrogenated)	Pharma
2933.31.00	Pyridine and its salts	Pharma
2933.33.01	Alfentanil (INN), anileridine (INN), bezitramide (INN), bromazepam (INN), difenoxin (INN), and other specified INNs; salts thereof	Pharma
2933.34.00	Other fentanyls and their derivatives, containing an unfused pyrazole ring	Pharma
2933.35.00	3-Quinuclidinol	Pharma
2933.36.00	4-Anilino-N-phenethylpiperidine (ANPP)	Pharma
2933.37.00	N-Phenethyl-4-piperidone (NPP)	Pharma

HTSUS	Description	Scope Limitations
2933.39.08	1-(3-Sulfapropyl)pryidinium hydroxide; N,N-bis(2,2,6,6-tetramethyl-4-piperidinyl)-1,6-hexanediamine; and 5 other specified chemicals	Pharma
2933.39.10	Collidines, lutidines and picolines	Pharma
2933.39.20	p-Chloro-2-benzylpyridine and other specified heterocyclic compounds, with nitrogen hetero-atom(s) only, containing an unfused pyridine ring	Pharma
2933.39.21	Fungicides of heterocyclic compounds with nitrogen hetero-atom(s) only, containing an unfused pyridine ring	Pharma
2933.39.23	o-Paraquat dichloride	Pharma
2933.39.25	Herbicides nesoi, of heterocyclic compounds with nitrogen hetero-atom(s) only, containing an unfused pyridine ring	Pharma
2933.39.27	Pesticides nesoi, of heterocyclic compounds with nitrogen hetero-atom(s) only, containing an unfused pyridine ring	Pharma
2933.39.31	Psychotherapeutic agents of heterocyclic compounds with nitrogen hetero-atom(s) only, containing an unfused pyridine ring, nesoi	Pharma
2933.39.41	Drugs containing an unfused pyridine ring (whether or not hydrogenated) in the structure, nesoi	Pharma
2933.39.61	Heterocyclic compounds with nitrogen hetero-atom(s) only, containing an unfused pyridine ring, described in additional U.S. note 3 to section VI of the HTSUS	Pharma
2933.39.92	Heterocyclic compounds with nitrogen hetero-atom(s) only, containing an unfused pyridine ring, nesoi	Pharma
2933.41.00	Levorphenol (INN) and its salts	Pharma
2933.49.20	5-Chloro-7-iodo-8-quinolinol (Iodochlorhydroxyquin); Decoquinate; Diiodohydroxyquin; and Oxyquinoline sulfate	Pharma
2933.49.26	Drugs containing a quinoline or isoquinoline ring-system (whether or not hydrogenated), not further fused, nesoi	Pharma
2933.49.60	Products described in additional U.S. note 3 to section VI of the HTSUS containing quinoline or isoquinoline ring-system (whether or not hydrogenated), not further fused	Pharma
2933.49.70	Heterocyclic compounds with nitrogen hetero-atom(s) only, containing a quinoline ring-system, not further fused, nesoi	Pharma
2933.53.00	Allobarbital (INN), amobarbital (INN), barbital (INN), butalbital (INN), butobarbital, and other specified INNs; salts thereof	Pharma
2933.54.00	Other derivatives of malonylurea (barbituric acid); salts thereof	Pharma
2933.55.00	Loprazolam (INN), mecloqualone (INN), methaqualone (INN) and zipeprol (INN); salts thereof	Pharma
2933.59.10	Aromatic or modified aromatic herbicides of heterocyclic compounds with nitrogen hetero-atom(s) only, containing a pyrimidine or piperazine ring	Pharma

HTSUS	Description	Scope Limitations
2933.59.15	Aromatic or modified aromatic pesticides nesoi, of heterocyclic compounds with nitrogen hetero-atom(s) only, containing a pyrimidine or piperazine ring	Pharma
2933.59.18	Nonaromatic pesticides of heterocyclic compounds with nitrogen hetero-atom(s) only, containing a pyrimidine or piperazine ring, nesoi	Pharma
2933.59.21	Antihistamines, including those principally used as antinauseants	Pharma
2933.59.22	Nicarbazin and trimethoprim	Pharma
2933.59.36	Anti-infective agents nesoi, of heterocyclic compounds with nitrogen hetero-atom(s) only, containing a pyrimidine or piperazine ring	Pharma
2933.59.46	Psychotherapeutic agents of heterocyclic compounds with nitrogen hetero-atom(s) only, containing a pyrimidine or piperazine ring, nesoi	Pharma
2933.59.53	Other aromatic or modified aromatic drugs containing a pyrimidine ring (whether or not hydrogenated) or piperazine ring in the structure	Pharma
2933.59.59	Nonaromatic drugs of heterocyclic compounds nesoi, with nitrogen hetero-atom(s) only, containing a pyrimidine or piperazine ring	Pharma
2933.59.70	Aromatic heterocyclic compounds nesoi, with nitrogen hetero-atom(s) only, containing a pyrimidine or piperazine ring, described in additional U.S. note 3 to section VI of the HTSUS	Pharma
2933.59.80	Aromatic or modified aromatic heterocyclic compounds nesoi, with nitrogen hetero-atom(s) only, containing a pyrimidine or piperazine ring	Pharma
2933.59.85	2-Amino-4-chloro-6-methoxypyrimidine; 2-amino-4,6-dimethoxypyrimidine; and 6-methyluracil	Pharma
2933.59.95	Other (excluding aromatic or modified aromatic) compounds containing a pyrimidine ring (whether or not hydrogenated) or piperazine ring in the structure	Pharma
2933.69.50	Hexamethylenetetramine	Pharma
2933.69.60	Other compounds containing an unfused triazine ring (whether or not hydrogenated) in the structure	Pharma
2933.72.00	Clobazam (INN) and methyprylon (INN)	Pharma
2933.79.04	2,4-Dihydro-3,6-diphenylpyrrolo-(3,4-C)pyrrole-1,4-dione	Pharma
2933.79.08	Aromatic or modified aromatic lactams with nitrogen hetero-atoms only, described in additional U.S. note 3 to section VI of the HTSUS	Pharma
2933.79.15	Aromatic or modified aromatic lactams, nesoi	Pharma
2933.79.20	N-Methyl-2-pyrrolidone; and 2-pyrrolidone	Pharma
2933.79.30	N-Vinyl-2-pyrrolidone, monomer	Pharma

HTSUS	Description	Scope Limitations
2933.79.40	12-Aminododecanoic acid lactam	Pharma
2933.79.85	Aromatic or modified aromatic lactams with nitrogen hetero-atoms only, nesoi	Pharma
2933.91.00	Alprazolam (INN), camazepam (INN), chlordiazepoxide (INN), clonazepam (INN), clorazepate, and other specified INNs; salts thereof	Pharma
2933.99.01	Butyl (R)-2-[4-(5-triflouromethyl-2-pyridinyloxy)phenoxy]propanoate	Pharma
2933.99.02	2-[4-[(6-Chloro-2-quinoxalinyl)oxy]phenoxy]propionic acid, ethyl ester; and 1 other specified aromatic chemical	Pharma
2933.99.05	Acridine and indole	Pharma
2933.99.06	α-Butyl-α-(4-chlorophenyl)-1H-1,2,4-triazole-1-propanenitrile (Mycolbutanil); and one other specified aromatic chemical	Pharma
2933.99.08	Acetoacetyl-5-aminobenzimidazolone; 1,3,3-Trimethyl-2-methyleneindoline; and two other specified aromatic chemicals	Pharma
2933.99.11	Carbazole	Pharma
2933.99.12	6-Bromo-5-methyl-1H-imidazo-(4,5-b)pyridine; 2-sec-butyl-4-tert-butyl-6-(benzotriazol-2-yl)phenol; 2-methylindoline; and other chemicals specified	Pharma
2933.99.14	5-Amino-4-chloro-a-phenyl-3-pyridazinone	Pharma
2933.99.16	o-Diquat dibromide (1,1-Ethylene-2,2'-dipyridylium dibromide)	Pharma
2933.99.17	Aromatic or modified aromatic insecticides with nitrogen hetero-atom(s) only, nesoi	Pharma
2933.99.22	Other heterocyclic aromatic or modified aromatic pesticides with nitrogen hetero-atom(s) only, nesoi	Pharma
2933.99.24	Aromatic or modified aromatic photographic chemicals with nitrogen hetero-atom(s) only	Pharma
2933.99.26	Aromatic or modified aromatic antihistamines of heterocyclic compounds with nitrogen hetero-atom(s) only	Pharma
2933.99.42	Acriflavin; Acriflavin hydrochloride; Carbadox; Pyrazinamide	Pharma
2933.99.46	Aromatic or modified aromatic anti-infective agents of heterocyclic compounds with nitrogen hetero-atom(s) only, nesoi	Pharma
2933.99.51	Hydralazine hydrochloride	Pharma
2933.99.53	Aromatic or modified aromatic cardiovascular drugs of heterocyclic compounds with nitrogen hetero-atom(s) only, nesoi	Pharma
2933.99.55	Aromatic or modified aromatic analgesics and certain like affecting chemicals, of heterocyclic compounds with nitrogen hetero-atom(s) only	Pharma
2933.99.58	Droperidol; and Imipramine hydrochloride	Pharma

HTSUS	Description	Scope Limitations
2933.99.61	Aromatic or modified aromatic psychotherapeutic agents, affecting the central nervous system, of heterocyclic compounds with nitrogen hetero-atom(s) only, nesoi	Pharma
2933.99.65	Aromatic or modified aromatic anticonvulsants, hypnotics and sedatives, of heterocyclic compounds with nitrogen hetero-atom(s) only, nesoi	Pharma
2933.99.70	Aromatic or modified aromatic drugs affecting the central nervous system, of heterocyclic compounds with nitrogen atom(s) only, nesoi	Pharma
2933.99.75	Aromatic or modified aromatic drugs of heterocyclic compounds with nitrogen hetero-atom(s) only, nesoi	Pharma
2933.99.79	Aromatic or modified aromatic compounds with nitrogen hetero-atom(s) only, described in additional U.S. note 3 to section VI of the HTSUS	Pharma
2933.99.82	Aromatic or modified aromatic compounds with nitrogen hetero-atom(s) only, excluding products described in additional U.S. note 3 to section VI of the HTSUS, nesoi	Pharma
2933.99.85	3-Amino-1,2,4-triazole	Pharma
2933.99.89	Hexamethyleneimine	Pharma
2933.99.90	Nonaromatic drugs of heterocyclic compounds with nitrogen hetero-atom(s) only, nesoi	Pharma
2933.99.97	Nonaromatic heterocyclic compounds with nitrogen hetero-atom(s) only, nesoi	Pharma
2934.10.10	Aromatic or modified aromatic heterocyclic compounds containing an unfused thiazole ring, described in additional U.S. note 3 to section VI of the HTSUS	Pharma
2934.10.20	Aromatic or modified aromatic heterocyclic compounds, nesoi, containing an unfused thiazole ring	Pharma
2934.10.70	4,5-Dichloro-2-n-octyl-4-isothiazolin-3-one; thiothiamine hydrochloride; and 4 other specified chemicals	Pharma
2934.10.90	Other (excluding aromatic or modified aromatic) compounds containing an unfused thiazole ring (whether or not hydrogenated) in the structure	Pharma
2934.20.40	Heterocyclic compounds containing a benzothiazole ring-system, not further fused, described in additional U.S. note 3 to section VI of the HTSUS	Pharma
2934.20.80	Other compounds containing a benzothiazole ring system (whether or not hydrogenated), not further fused	Pharma
2934.30.18	Ethyl (1H-phenothiazin-2,4,1)carbamate	Pharma
2934.30.23	Antidepressants, tranquilizers and other psychotherapeutic agents containing a phenothiazine ring-system, not further fused	Pharma
2934.30.27	Other drugs containing a phenothiazine ring system (whether or not hydrogenated), not further fused, nesoi	Pharma

HTSUS	Description	Scope Limitations
2934.30.43	Products described in additional U.S. note 3 to section VI of the HTSUS containing a phenothiazine ring system (whether or not hydrogenated), not further fused	Pharma
2934.30.50	Heterocyclic compounds containing a phenothiazine ring-system (whether or not hydrogenated), not further fused, nesoi	Pharma
2934.91.00	Aminorex (INN), brotizolam (INN), clotiazepam (INN), cloxazolam (INN), dextromoramide (INN), and other specified INNs; salts thereof	Pharma
2934.92.00	Other fentanyls and their derivatives, containing an unfused thiazole ring	Pharma
2934.99.01	Mycophenolate mofetil	Pharma
2934.99.03	2-Acetylbenzo(b)thiophene; and 2 other specified aromatic or modified aromatic compounds	Pharma
2934.99.05	5-Amino-3-phenyl-1,2,4-thiadiazole(3-Phenyl-5-amino-1,2,4-thiadiazole); and 3 other specified aromatic or modified aromatic heterocyclic compounds	Pharma
2934.99.06	7-Nitronaphth[1,2]oxadiazole-5-sulfonic acid and its salts	Pharma
2934.99.07	Ethyl 2-[4-[(6-chloro-2-benzoxazoyl)oxy]phenoxy]propanoate (Fenoxaprop- ethyl)	Pharma
2934.99.08	2,5-Diphenyloxazole	Pharma
2934.99.09	1,2-Benzisothiazolin-3-one	Pharma
2934.99.11	2-tert-Butyl-4-(2,4-dichloro-5-isopropoxyphenyl)-Δ2-1,3,4-oxadiazolin-5-one; Bentazon; Phosalone	Pharma
2934.99.12	Aromatic or modified aromatic fungicides of other heterocyclic compounds, nesoi	Pharma
2934.99.15	Aromatic or modified aromatic herbicides of other heterocyclic compounds, nesoi	Pharma
2934.99.16	Aromatic or modified aromatic insecticides of other heterocyclic compounds, nesoi	Pharma
2934.99.18	Aromatic or modified aromatic pesticides nesoi, of other heterocyclic compounds, nesoi	Pharma
2934.99.20	Aromatic or modified aromatic photographic chemicals of other heterocyclic compounds, nesoi	Pharma
2934.99.30	Aromatic or modified aromatic drugs of other heterocyclic compounds, nesoi	Pharma
2934.99.39	Aromatic or modified aromatic, other heterocyclic compounds, described in additional U.S. note 3 to section VI of the HTSUS	Pharma
2934.99.44	Aromatic or modified aromatic, other heterocyclic compounds, nesoi	Pharma
2934.99.47	Nonaromatic drugs of other heterocyclic compounds, nesoi	Pharma
2934.99.70	Morpholinoethyl chloride hydrochloride; 2-Methyl-2,5-dioxo-1-oxa-2-phospholan; and (6R-trans)-7-Amino-3-methyl-8-oxo-5- thia-1-azabicyclo[4.2.0]-oct-2-ene-2- carboxylic acid	Pharma

HTSUS	Description	Scope Limitations
2934.99.90	Nonaromatic other heterocyclic compounds, nesoi	Pharma
2935.90.06	4-Amino-6-chloro-m-benzenedisulfonamide and Methyl-4-aminobenzenesulfonylcarbamate (Asulam)	Pharma
2935.90.29	Acetylsulfaguanidine	Pharma
2935.90.30	Sulfamethazine	Pharma
2935.90.32	Acetylsulfisoxazole; Sulfacetamide, sodium; and Sulfamethazine, sodium	Pharma
2935.90.33	Sulfathiazole and Sulfathiazole, sodium	Pharma
2935.90.42	Salicylazosulfapyridine (Sulfasalazine); Sulfadiazine; Sulfaguanidine; Sulfamerizine; and Sulfapyridine	Pharma
2935.90.48	Other sulfonamides used as anti-infective agents	Pharma
2935.90.60	Other sulfonamide drugs (excluding anti-infective agents)	Pharma
2935.90.75	Other sulfonamides (excluding fast color bases, fast color salts, and drugs) of products described in additional U.S. note 3 to section VI of the HTSUS	Pharma
2935.90.95	Other sulfonamides, excluding fast color bases, fast color salts, and drugs and products described in additional U.S. note 3 to section VI of the HTSUS	Pharma
2936.21.00	Vitamins A and their derivatives, unmixed, natural or synthesized	Pharma
2936.22.00	Vitamin B1 (Thiamine) and its derivatives, unmixed, natural or synthesized	Pharma
2936.23.00	Vitamin B2 (Riboflavin) and its derivatives, unmixed, natural or synthesized	Pharma
2936.24.01	Vitamin B5 (D- or DL-Pantothenic acid) and its derivatives, unmixed, natural or synthesized	Pharma
2936.25.00	Vitamin B6 (Pyridoxine and related compounds with Vitamin B6 activity) and its derivatives, unmixed, natural or synthesized	Pharma
2936.26.00	Vitamin B12 (Cyanocobalamin and related compounds with Vitamin B12 activity) and its derivatives, unmixed, natural or synthesized	Pharma
2936.27.00	Vitamin C (Ascorbic acid) and its derivatives, unmixed, natural or synthesized	Pharma
2936.28.00	Vitamin E (Tocopherols and related compounds with Vitamin E activity) and its derivatives, unmixed, natural or synthesized	Pharma
2936.29.10	Folic acid and its derivatives, unmixed	Pharma
2936.29.16	Niacin and niacinamide	Pharma
2936.29.20	Aromatic or modified aromatic vitamins and their derivatives, nesoi	Pharma
2936.29.50	Other vitamins and their derivatives, nesoi	Pharma
2936.90.01	Vitamins or provitamins (including natural concentrates) and intermixtures of the foregoing, whether or not in any solvent	Pharma
2937.11.00	Somatotropin, its derivatives and structural analogues	Pharma

HTSUS	Description	Scope Limitations
2937.12.00	Insulin and its salts	Pharma
2937.19.00	Polypeptide hormones, protein hormones and glycoprotein hormones, their derivatives and structural analogues, nesoi	Pharma
2937.21.00	Cortisone, hydrocortisone, prednisone (Dehydrocortisone) and prednisolone (Dehydrohydrocortisone)	Pharma
2937.22.00	Halogenated derivatives of adrenal cortical hormones	Pharma
2937.23.10	Estrogens and progestins obtained directly or indirectly from animal or vegetable materials	Pharma
2937.23.25	Estradiol benzoate; and Estradiol cyclopentylpropionate (estradiol cypionate)	Pharma
2937.23.50	Other estrogens and progestins not derived from animal or vegetable materials, nesoi	Pharma
2937.29.10	Desonide; and Nandrolone phenpropionate	Pharma
2937.29.90	Steroidal hormones, their derivatives and structural analogues, nesoi	Pharma
2937.50.00	Prostaglandins, thromboxanes and leukotrienes, their derivatives and structural analogues	Pharma
2937.90.05	Epinephrine	Pharma
2937.90.10	Epinephrine hydrochloride	Pharma
2937.90.20	Catecholamine hormones, their derivatives and structural analogues, nesoi	Pharma
2937.90.40	l-Thyroxine(Levothyroxine), sodium	Pharma
2937.90.45	Amino-acid derivatives of hormones and their derivatives, nesoi	Pharma
2937.90.90	Other hormones, their derivatives and structural analogues, other steroid derivatives and structural analogue used primarily as hormones, nesoi	Pharma
2938.10.00	Rutoside (Rutin) and its derivatives	Pharma
2938.90.00	Glycosides, natural or synthesized, and their salts, ethers, esters, and other derivatives other than rutoside and its derivatives	Pharma
2939.11.00	Concentrates of poppy straw; buprenorphine (INN), codeine, dihydrocodeine (INN), ethylmorphine, and other specified INNs; salts thereof	Pharma
2939.19.10	Papaverine and its salts	Pharma
2939.19.20	Synthetic alkaloids of opium, their derivatives and salts thereof, nesoi	Pharma
2939.19.50	Nonsynthetic alkaloids of opium, their derivatives and salts thereof, nesoi	Pharma
2939.20.00	Alkaloids of cinchona, their derivatives and salts thereof, other than quinine and its salts	Pharma
2939.30.00	Caffeine and its salts	Pharma
2939.41.00	Ephedrine and its salts	Pharma
2939.42.00	Pseudoephedrine (INN) and its salts	Pharma

HTSUS	Description	Scope Limitations
2939.43.00	Cathine (INN) and its salts	Pharma
2939.44.00	Norephedrine and its salts	Pharma
2939.45.00	Levometamfetamine, metamfetamine (INN), metamfetamine racemate and their salts	Pharma
2939.49.03	Alkaloids of ephedra, their derivatives and salts thereof, other than ephedrine, pseudoephedrine, cathine (INN), norephedrine, levometamfetamine and their salts	Pharma
2939.51.00	Fenetylline (INN) its salts	Pharma
2939.59.00	Theophylline and aminophylline (theophylline-ethylenediamine), their derivatives and salts thereof, nesoi	Pharma
2939.61.00	Ergometrine and its salts	Pharma
2939.62.00	Ergotamine and its salts	Pharma
2939.63.00	Lysergic acid and its salts	Pharma
2939.69.00	Alkaloids of rye ergot, their derivatives and salts thereof, nesoi	Pharma
2939.72.00	Cocaine, ecgonine; salts, esters and other derivatives thereof	Pharma
2939.79.00	Vegetal alkaloids, natural or reproduced by synthesis, their salts and other derivatives, nesoi	Pharma
2939.80.00	Other alkaloids, natural or reproduced by synthesis, and their salts, ethers, esters and other derivatives, nesoi	Pharma
2940.00.60	Other sugars, nesoi, excluding d-arabinose	Pharma
2941.10.10	Ampicillin and its salts	Pharma
2941.10.20	Penicillin G salts	Pharma
2941.10.30	Carfecillin, sodium; cloxacillin, sodium; dicloxacillin, sodium; flucloxacillin (Floxacillin); and oxacillin, sodium	Pharma
2941.10.50	Penicillins and their derivatives nesoi, with a penicillanic acid structure; salts thereof	Pharma
2941.20.50	Streptomycins and their derivatives; salts thereof, nesoi	Pharma
2941.30.00	Tetracyclines and their derivatives; salts thereof	Pharma
2941.40.00	Chloramphenicol and its derivatives; salts thereof	Pharma
2941.50.00	Erythromycin and its derivatives; salts thereof	Pharma
2941.90.10	Natural antibiotics, nesoi	Pharma
2941.90.30	Antibiotics nesoi, aromatic or modified aromatic, other than natural	Pharma
2941.90.50	Antibiotics nesoi, other than aromatic or modified aromatic antibiotics	Pharma
2942.00.03	[2,2'-Thiobis(4-(1,1,3,3-tetramethyl-n-butyl)phenolato)(2,1)]-O,O',S-(1-butanamine), nickel II	Pharma
2942.00.05	Aromatic or modified aromatic drugs of other organic compounds, nesoi	Pharma
2942.00.10	Aromatic or modified aromatic organic compounds, nesoi, described in additional U.S. note 3 to section VI of the HTSUS	Pharma

HTSUS	Description	Scope Limitations
2942.00.35	Other aromatic or modified aromatic organic compounds (excluding products described in additional U.S. note 3 to section VI of the HTSUS)	Pharma
2942.00.50	Nonaromatic organic compounds, nesoi	Pharma
3001.20.00	Extracts of glands or other organs or of their secretions for organotherapeutic uses	Pharma
3001.90.01	Glands and other organs for organotherapeutic uses, dried, whether or not powdered	Pharma
3002.12.00	Antisera and other blood fractions including human blood plasma and fetal bovine serum (FBS)	Pharma
3002.13.00	Immunological products, unmixed, not put up in measured doses or in forms or packings for retail sale	Pharma
3002.14.00	Immunological products, mixed, not put up in measured doses or in forms or packings for retail sale	Pharma
3002.15.00	Immunological products, put up in measured doses or in forms or packings for retail sale	Pharma
3002.41.00	Vaccines for human medicine	Pharma
3002.42.00	Vaccines for veterinary medicine	Pharma
3002.49.00	Toxins or cultures of micro-organisms (excluding yeasts)	Pharma
3002.51.00	Cell therapy products	Pharma
3002.59.00	Other cell cultures, other than cell therapy products	Pharma
3002.90.10	Ferments, excluding yeasts	Pharma
3002.90.52	Human blood; animal blood prepared for therapeutic, prophylactic, or diagnostic uses; antisera; antiallergenic preparations, nesoi and like products	Pharma
3003.10.00	Medicaments, containing penicillins or streptomycins, not in dosage form and not packed for retail	Pharma
3003.20.00	Medicaments containing antibiotics, nesoi, not in dosage form and not packed for retail	Pharma
3003.31.00	Medicaments containing insulin, not in dosage form and not packed for retail	Pharma
3003.39.10	Medicaments containing artificial mixtures of natural hormones, but not antibiotics, not in dosage form and not packed for retail	Pharma
3003.39.50	Medicaments containing products of heading 2937, nesoi, but not antibiotics, not in dosage form and not packed for retail	Pharma
3003.41.00	Medicaments containing ephedrine or its salts, not in dosage form and not packed for retail	Pharma
3003.42.00	Medicaments containing pseudoephedrine (INN) or its salts, not in dosage form and not packed for retail	Pharma
3003.43.00	Medicaments containing norephedrine or its salts, not in dosage form and not packed for retail	Pharma

HTSUS	Description	Scope Limitations
3003.49.00	Other medicaments containing alkaloids or derivatives thereof, nesoi, not in dosage form and not packed for retail	Pharma
3003.60.00	Other medicaments containing antimalarial active principles described in subheading note 2 to this chapter, not dosage form and not packed for retail	Pharma
3003.90.01	Other medicaments (excluding goods of heading 3002, 3005 or 3006) consisting of two or more constituents mixed together for therapeutic or prophylactic uses, not in dosage form and not packed for retail	Pharma
3004.10.10	Medicaments (excluding goods of heading 3002, 3005, or 3006) containing penicillin G salts, in dosage form or packed for retail	Pharma
3004.10.50	Medicaments containing penicillins or streptomycins, nesoi, in dosage form or packed for retail	Pharma
3004.20.00	Medicaments containing antibiotics, nesoi, in dosage form or packed for retail	Pharma
3004.31.00	Medicaments containing insulin, in dosage form or packed for retail	Pharma
3004.32.00	Medicaments containing corticosteroidhormones , in dosage form or packed for retail	Pharma
3004.39.00	Medicaments containing products of heading 2937 nesoi, in dosage form or packed for retail	Pharma
3004.41.00	Medicaments containing ephedrine or its salts, in dosage form or packed for retail	Pharma
3004.42.00	Medicaments containing pseudoephedrine (INN) or its salts, in dosage form or packed for retail	Pharma
3004.43.00	Medicaments containing norephedrine or its salts, in dosage form or packed for retail	Pharma
3004.49.00	Other medicaments containing alkaloids or derivatives thereof, nesoi, in dosage form or packed for retail	Pharma
3004.50.10	Medicaments containing vitamin B2 synthesized from aromatic or modified aromatic industrial organic compounds, in dosage form or packed for retail	Pharma
3004.50.20	Medicaments containing vitamin B12 synthesized from aromatic or modified aromatic industrial organic compounds, in dosage form or packed for retail	Pharma
3004.50.30	Medicaments containing vitamin E synthesized from aromatic or modified aromatic industrial organic compounds, in dosage form or packed for retail	Pharma
3004.50.40	Medicaments containing vitamins nesoi, synthesized from aromatic or modified aromatic industrial organic compounds, in dosage form or packed for retail	Pharma
3004.50.50	Medicaments containing vitamins or other products of heading 2936, nesoi, in dosage form or packed for retail	Pharma

HTSUS	Description	Scope Limitations
3004.60.00	Other medicaments containing antimalarial active principles described in subheading note 2 to this chapter, in dosage form or packed for retail	Pharma
3004.90.10	Medicaments containing antigens or hyaluronic acid or its sodium salt, nesoi, in dosage form or packed for retail	Pharma
3004.90.92	Medicaments nesoi, in dosage form or packed for retail	Pharma
3006.30.10	Opacifying preparation for X-ray examination; diagnostic reagents designed to be administered to the patient; containing antigens or antisera	Pharma
3006.30.50	Opacifying preparations for X-ray examinations; diagnostic reagents designed to be administered to the patient, nesoi	Pharma
3006.60.00	Chemical contraceptive preparations based on hormones or spermicides	Pharma
3006.70.00	Gel preparations designed to be used in human orveterinary medicine as a lubricant in surgical operation, physical examinations or as a coupling agent between body and medical instrument	Pharma
3006.92.00	Waste pharmaceuticals	Pharma
3006.93.10	Placebos and blinded clinical trial kits, put up in measured doses, packaged with medicinal preparations	Pharma
3006.93.20	Placebos and blinded clinical trial kits, put up in measured doses, containing over 10 percent by dry weight of sugar	Pharma
3006.93.50	Placebos and blinded clinical trial kits, put up in measured doses, containing ingredients having nutritional value	Pharma
3006.93.60	Placebos and blinded clinical trial kits, put up in measured doses, in liquid form for oral intake	Pharma
3006.93.80	Placebos and blinded clinical trial kits, put up in measured doses, containing other chemicals other than medicaments	Pharma
3203.00.80	Coloring matter of vegetable or animal origin, nesoi	Pharma
3204.13.60	Basic dyes and preparations based thereon, described in additional U.S note 3 to section VI of the HTSUS	Pharma
3204.13.80	Basic dyes and preparations based thereon, nesoi	Pharma
3204.18.00	Carotenoid coloring matters and preparations based thereon	Pharma
3204.90.00	Synthetic organic coloring matter or preparations based thereon, nesoi; synthetic organic products used as luminophores	Pharma
3206.11.00	Pigments and preparations based on titanium dioxide, containing 80 percent or more by weight of titanium dioxide calculated on the dry matter	
3206.19.00	Pigments and preparations based on titanium dioxide, nesoi	
3301.19.51	Essential oils of citrus fruit, other, nesoi	
3301.29.10	Essential oils of eucalyptus	
3301.30.00	Resinoids	

HTSUS	Description	Scope Limitations
3401.30.10	Organic surface-active products for washing skin, in liquid or cream form, containing any aromatic or modified aromatic surface-active agent, put up for retail	Pharma
3402.42.10	Non-ionic organic surface-active agents, aromatic or modified aromatic	Pharma
3402.42.20	Fatty substances of animal, vegetable or microbial origin; non-ionic organic surface-active agents, other than aromatic or modified aromatic	Pharma
3402.42.90	Non-ionic organic surface-active agents, other than fatty substances of animal, vegetable or microbial origin, other than aromatic or modified aromatic	Pharma
3402.50.11	Preparations of organic surface-active agents, put up for retail sale, containing any aromatic or modified aromatic surface-active agent	Pharma
3507.90.70	Enzymes and prepared enzymes, nesoi	Pharma
3606.90.30	Ferrocerium and other pyrophoric alloys in all forms	
3802.10.00	Activated carbon	Pharma
3808.59.40	Disinfectants specified in subheading note 1 to chapter 38	Pharma
3808.59.50	Pesticides, nesoi, specified in subheading note 1 to chapter 38	Pharma
3808.61.50	Pesticides, nesoi, not exceeding 300g, specified in subheading note 2 to chapter 38	Pharma
3808.94.10	Disinfectants, containing any aromatic or modified aromatic disinfectant	Pharma
3808.94.50	Disinfectants not included in subheading note 1 of chapter 38, nesoi	Pharma
3812.31.00	Mixtures of oligomers of 2,2,4-trimethyl-1,2-dihydroquinoline (TMQ)	Pharma
3815.11.00	Supported catalysts with nickel or nickel compounds as the active substance	Pharma
3815.12.00	Supported catalysts with precious metal or precious metal compounds as the active substance	Pharma
3815.90.50	Reaction initiators, reaction accelerators and catalytic preparations, nesoi	Pharma
3823.11.00	Stearic acid	
3823.12.00	Oleic acid	
3823.19.20	Industrial monocarboxylic fatty acids or acid oils from refining derived from coconut, palm-kernel, or palm oil	
3823.70.40	Industrial fatty alcohols, other than oleyl, derived from fatty substances of animal or vegetable origin	
3824.81.00	Chemical mixtures containing oxirane (ethylene oxide)	Pharma
3824.82.10	Goods specified in subheading note 3 to chapter 38, containing PCBs, PCTs or PBBs, chlorinated but not otherwise halogenated, nesoi	Pharma

HTSUS	Description	Scope Limitations
3824.82.90	Goods specified in subheading note 3 to chapter 38, containing PCBs, PCTs or PBBs, other than chlorinated only, nesoi	Pharma
3824.83.00	Containing tris(2,3-dibromopropyl) phosphate	Pharma
3824.84.00	Other mixtures containing aldrin, camphechlor (toxaphene), chlordane, chlordecone, DDT (clofenatone), 1,1,1-trichloro-2,2-bis(p-chlorophenyl)ethane), dieldrin, endosulfan, endrin, heptachlor or mirex	Pharma
3824.85.00	Mixtures containing 1,2,3,4,5,6-hexachlorocyclohexane (HCH (ISO)), including lindane (ISO,INN)	Pharma
3824.86.00	Mixtures containing pentachlorobenzene (ISO) or hexachlorobenzene (ISO)	Pharma
3824.87.00	Mixtures containing perfluorooctane sulfonic acid, its salts, perfluorooctane sulfonamides, or perfluorooctane sulfonyl fluoride	Pharma
3824.88.00	Mixtures containing tetra-, penta-, hexa-, hepta-, or octabromodiphenyl ethers	Pharma
3824.89.00	Mixtures containing short-chain chlorinated paraffins	Pharma
3824.91.00	Mixtures consisting mainly of methylphosphonate etc.	Pharma
3824.92.00	Polyglycol esters mixtures of methylphosphonic acid	Pharma
3824.99.25	Mixtures of triphenyl sulfonium chloride, diphenyl (4-phenylthio)phenyl sulfonium chloride and (thiodi-4,1-phenylene)bis(diphenyl sulfonium) dichloride	Pharma
3824.99.29	Mixtures containing 5 percent or more by weight of one or more aromatic or modified aromatic substance, nesoi	Pharma
3824.99.49	Mixtures that are in whole or in part of hydrocarbons derived in whole or in part from petroleum, shale oil or natural gas	Pharma
3824.99.50	Mixtures chlorinated but not otherwise halogenated	Pharma
3824.99.55	Mixtures of halogenated hydrocarbons, nesoi	Pharma
3824.99.93	Chemical products and preparations and residual products of the chemical or allied industries, nesoi	Pharma
3826.00.30	Biodiesel containing less than 70 percent petroleum or bituminous oil	Pharma
3827.13.00	Mixtures containing carbon tetrachloride	Pharma
3827.14.00	Mixtures containing methyl chloroform	Pharma
3827.40.00	Mixtures containing bromomethane or bromochloromethane	Pharma
3901.90.90	Polymers of ethylene, nesoi, in primary forms, other than elastomeric	Pharma
3902.90.00	Polymers of propylene or of other olefins, nesoi, in primary forms	Pharma
3904.61.00	Polytetrafluoroethylene (PTFE), in primary forms	Pharma
3905.91.10	Copolymers of vinyl esters or other vinyls, in primary forms, containing by weight 50 percent or more of derivatives of vinyl acetate	Pharma

HTSUS	Description	Scope Limitations
3905.91.50	Copolymers of vinyl esters or other vinyls, in primary forms, nesoi	Pharma
3905.99.80	Polymers of vinyl esters or other vinyl polymers, in primary forms, nesoi	Pharma
3906.90.50	Acrylic polymers (except plastics or elastomers), in primary forms, nesoi	Pharma
3907.10.00	Polyacetals in primary forms	Pharma
3907.21.00	Bis(polyoxyethylene) methylphosphonate	Pharma
3907.29.00	Polyethers, other than polyacetals or bis(polyoxyethylene) methylphosphonate, in primary forms	Pharma
3907.30.00	Epoxide resins in primary forms	Pharma
3907.61.00	Polyethylene terephthalate, having a viscosity number of 78 ml/g or higher	Pharma
3907.69.00	Polyethylene terephthalate, having a viscosity number less than 78 ml/g	Pharma
3907.70.00	Poly(lactic acid)	Pharma
3907.99.50	Other polyesters nesoi, saturated, in primary forms	Pharma
3908.10.00	Polyamide-6, -11, -12, -6,6, -6,9, -6,10 or -6,12 in primary form	Pharma
3908.90.20	Bis(4-amino-3-methylcyclohexyl)methaneisophthalic acid-laurolactam copolymer	Pharma
3909.10.00	Urea resins; thiourea resins	Pharma
3909.40.00	Phenolic resins	Pharma
3910.00.00	Silicones in primary forms	Pharma
3911.20.00	Poly(1,3-phenylene methylphosphonate)	Pharma
3911.90.25	Thermoplastic polysulfides, polysulfones and other products specified in note 3 to chapter 39, containing aromatic monomer units or derived therefrom	Pharma
3911.90.45	Thermosetting polysulfides, polysulfones and other products specified in note 3 to chapter 39, containing aromatic monomer units or derived therefrom	Pharma
3911.90.91	Polysulfides, polysulfones and other products specified in note 3 to chapter 39, nesoi	Pharma
3912.20.00	Cellulose nitrates (including collodions), in primary forms	Pharma
3912.31.00	Carboxymethylcellulose and its salts	Pharma
3912.39.00	Cellulose ethers, other than carboxymethylcellulose and its salts, in primary forms	Pharma
3912.90.00	Cellulose and its chemical derivatives, nesoi, in primary forms	Pharma
3913.90.20	Polysaccharides and their derivatives, nesoi, in primary forms	Pharma
3913.90.50	Natural polymers and modified natural polymers, nesoi, in primary forms	Pharma
3914.00.20	Cross-linked polyvinylbenzyltrimethylammonium chloride (Cholestyramine resin USP)	Pharma

HTSUS	Description	Scope Limitations
3914.00.60	Ion-exchangers based on polymers of headings 3901 to 3913, in primary forms, nesoi	Pharma
3917.21.00	Tubes, pipes and hoses, rigid, of polymers of ethylene	Aircraft
3917.22.00	Tubes, pipes and hoses, rigid, of polymers of propylene	Aircraft
3917.23.00	Tubes, pipes and hoses, rigid, of polymers of vinyl chloride	Aircraft
3917.29.00	Tubes, pipes and hoses, rigid, of other plastics nesoi	Aircraft
3917.31.00	Flexible plastic tubes, pipes and hoses, having a minimum burst pressure of 27.6 MPa	Aircraft
3917.33.00	Flexible plastic tubes, pipes and hoses, nesoi, with fittings, not reinforced or otherwise combined with other materials	Aircraft
3917.39.00	Flexible plastic tubes, pipes and hoses, nesoi	Aircraft
3917.40.00	Fittings of plastics, for plastic tubes, pipes and hoses, nesoi	Aircraft
3926.90.45	Gaskets, washers and other seals, of plastics	Aircraft
3926.90.94	Cards, not punched, suitable for use as, or in making, jacquard cards; Jacquard cards and jacquard heads for power-driven weaving machines, and parts thereof; and transparent sheeting of plastics containing 30 percent or more by weight of lead	Aircraft
3926.90.96	Casing for bicycle derailleur cables; and casing for cable or inner wire for caliper and cantilever brakes, whether or not cut to length; of plastic	Aircraft
3926.90.99	Other articles of plastic, nesoi	Aircraft
4001.10.00	Natural rubber latex, whether or not prevulcanized	
4001.21.00	Natural rubber smoked sheets	
4001.22.00	Technically specified natural rubber (TSNR), in primary forms	
4001.29.00	Natural rubber in primary forms other than latex, smoked sheets or technically specified natural rubber (TSNR)	
4001.30.00	Balata, gutta-percha, guayule, chicle and similar natural rubber gums, in primary forms	
4008.29.20	Rods and profile shapes of vulcanized, noncellular rubber, other than hard rubber	Aircraft
4009.12.00	Tubes, pipes and hoses of vulcanized rubber other than hard rubber, not reinforced or combined with other materials, with fittings	Aircraft
4009.22.00	Tubes, pipes and hoses of vulcanized rubber other than hard rubber, reinforced or combined only with metal, with fittings	Aircraft
4009.32.00	Tubes, pipes and hoses of vulcanized rubber other than hard rubber, reinforced or combined only with textile materials, with fittings	Aircraft
4009.42.00	Tubes, pipes and hoses of vulcanized rubber other than hard rubber, reinforced or combined with other materials nesoi, with fittings	Aircraft
4011.30.00	New pneumatic tires, of rubber, of a kind used on aircraft	Aircraft

HTSUS	Description	Scope Limitations
4012.13.00	Retreaded pneumatic tires, of rubber, of a kind used on aircraft	Aircraft
4012.20.10	Used pneumatic tires of rubber, for aircraft	Aircraft
4016.10.00	Articles of vulcanized cellular rubber other than hard rubber	Aircraft
4016.93.50	Gaskets, washers and other seals, of noncellular vulcanized rubber other than hard rubber, not for use in automotive goods of chapter 87	Aircraft
4016.99.35	Articles made of noncellular vulcanized natural rubber, not used as vibration control goods in vehicles of headings 8701 through 8705, nesoi	Aircraft
4016.99.60	Articles of noncellular vulcanized synthetic rubber other than hard rubber	Aircraft
4017.00.00	Hard rubber (for example, ebonite) in all forms, including waste and scrap; articles of hard rubber	Aircraft
4403.41.00	Wood in the rough or roughly squared, of Dark Red Meranti, Light Red Meranti or Meranti Bakau, not treated with paint, stain, creosote, or other preservatives	
4403.42.00	Wood in the rough or roughly squared, of teak, not treated with paint, stain, creosote, or other preservatives	
4403.49.02	Wood in the rough or roughly squared, of tropical wood other than Teak or Meranti, not treated with paint, stain, creosote, or other preservatives	
4407.21.00	Mahogany (Swietenia spp.), sawn or chipped lengthwise, sliced or peeled, over 6 mm thick	
4407.22.00	Virola, Imbuia and Balsa, sawn or chipped lengthwise, sliced or peeled, over 6 mm thick	
4407.23.01	Teak, sawn or chipped lengthwise, sliced or peeled, over 6 mm thick	
4407.25.00	Dark Red Meranti, Light Red Meranti and Meranti Bakau wood, sawn or chipped lengthwise, sliced or peeled, over 6 mm thick	
4407.26.00	White Lauan, White Meranti, White Seraya, Yellow Meranti and Alan wood, sawn or chipped lengthwise, sliced or peeled, over 6 mm thick	
4407.27.00	Sapelli wood, sawn or chipped lengthwise, sliced or peeled, over 6 mm thick	
4407.28.00	Iroko wood, sawn or chipped lengthwise, sliced or peeled, over 6 mm thick	
4407.29.02	Tropical wood, nesoi, sawn or chipped lengthwise, sliced or peeled, over 6 mm thick	
4408.31.01	Dark Red Meranti, Light Red Meranti and Meranti Bakau veneer sheets, for plywood and other wood, sawn lengthwise, sliced or peeled, not over 6 mm thick	

HTSUS	Description	Scope Limitations
4408.39.02	Other tropical wood veneer sheets, for plywood and other wood, sawn lengthwise, sliced or peeled, not over 6 mm thick	
4409.22.05	Nonconiferous tropical wood continuously shaped along any ends, whether or not also continuously shaped along any edges or faces	
4409.22.10	Nonconiferous tropical wood siding, whether or not continuously shaped along its edges or faces but not its ends	
4409.22.25	Nonconiferous tropical wood flooring, whether or not continuously shaped along its edges or faces but not its ends	
4409.22.40	Nonconiferous tropical wood standard moldings, whether or not continuously shaped along its edges or faces but not its ends	
4409.22.50	Other nonconiferous tropical wood moldings, whether or not continuously shaped along its edges or faces but not its ends	
4409.22.60	Plain nonconiferous tropical wood dowel rods, whether or not continuously shaped along its edges or faces but not its ends	
4409.22.65	Nonconiferous tropical wood dowel rods, sanded, grooved or otherwise advanced in condition, whether or not continuously shaped along its edges or faces but not its ends	
4409.22.90	Other nonconiferous tropical wood, whether or not continuously shaped along its edges or faces but not its ends	
4412.31.06	Plywood sheets not over 6 mm thick, tropical wood outer ply, birch face ply, not surface covered beyond clear or transparent	
4412.31.26	Plywood sheets not over 6 mm thick, tropical wood outer ply, Spanish cedar or walnut face ply, not surface covered beyond clear or transparent	
4412.31.42	Plywood sheets not over 6 mm thick, tropical wood outer ply, with mahogany face ply, not surface covered beyond clear or transparent	
4412.31.45	Plywood sheets not over 3.6 mm thick, exceeding 1.2 m width and 2.2 m length, tropical wood outer ply, not mahogany face ply, not surface covered beyond clear or transparent	
4412.31.48	Plywood sheets not over 3.6 mm thick, tropical wood outer ply, not mahogany face ply, not surface covered beyond clear or transparent, nesoi	
4412.31.52	Plywood sheets not over 6 mm thick, tropical wood nesoi outer ply, with face ply nesoi, not surface covered beyond clear or transparent	
4412.31.61	Plywood sheets not over 6 mm thick, with certain specified tropical wood outer ply, surface covered beyond clear or transparent	
4412.31.92	Plywood sheets not over 6 mm thick, tropical wood nesoi at least one outer ply, surface covered beyond clear or transparent	
4412.41.00	Laminated veneered lumber with outer ply of tropical wood	

HTSUS	Description	Scope Limitations
4412.51.10	Blockboard, laminboard and battenboard of plywood nesoi, outer ply of tropical wood, not surface covered beyond clear or transparent, with face ply of birch	
4412.51.31	Blockboard, laminboard and battenboard of plywood nesoi, outer ply of tropical wood, not surface covered beyond clear or transparent, not with face ply of birch	
4412.51.41	Blockboard, laminboard and battenboard of plywood nesoi, outer ply of tropical wood, surface covered other than clear or transparent	
4412.51.51	Blockboard, laminboard and battenboard other than of plywood nesoi, outer ply of tropical wood	
4412.91.06	Not blockboard, laminboard or battenboard, outer ply of tropical wood, containing particle board	
4412.91.10	Not blockboard, laminboard or battenboard, plywood with outer ply of tropical wood, no particle board, not surface covered beyond clear or transparent, with face ply of birch	
4412.91.31	Not blockboard, laminboard or battenboard, plywood with outer ply of tropical wood, no particle board, not surface covered beyond clear or transparent, not with face ply of birch	
4412.91.41	Not blockboard, laminboard or battenboard, plywood with outer ply of tropical wood, surface covered beyond clear or transparent	
4412.91.51	Not blockboard, laminboard or battenboard, veneered panels and similar laminated wood with outer ply of tropical wood, nesoi	
4501.10.00	Natural cork, raw or simply prepared	
4501.90.20	Waste cork	
4501.90.40	Crushed, granulated or ground cork	
4502.00.00	Natural cork, debacked or roughly squared or in rectangular blocks, plates, sheets or strip (including sharp-edged blanks for corks or stoppers)	
4503.10.20	Corks and stoppers of natural cork, tapered and of a thickness (or length) greater than the maximum diameter, not over 19mm maximum diameter	
4503.10.30	Corks and stoppers wholly of natural cork, tapered and of a thickness (or length) greater than the maximum diameter, over 19mm maximum diameter	
4503.10.40	Corks and stoppers of natural cork, tapered and of a thickness (or length) greater than the maximum diameter, over 19mm maximum diameter, nesoi	
4503.10.60	Corks and stoppers of natural cork, of a thickness (or length) not greater than the maximum diameter	
4503.90.20	Disks, wafers and washers of natural cork	

HTSUS	Description	Scope Limitations
4503.90.40	Natural cork wallcoverings, backed with paper or otherwise reinforced	
4503.90.60	Articles of natural cork, other than corks and stoppers	
4504.10.10	Vulcanized sheets and slabs wholly of agglomerated ground or pulverized cork and rubber	
4504.10.20	Insulation of compressed agglomerated cork, coated or not coated	
4504.10.30	Floor coverings of agglomerated cork	
4504.10.40	Agglomerated cork wallcoverings, backed with paper or otherwise reinforced	
4504.10.45	Agglomerated cork stoppers, not tapered, wholly of cork, of a thickness (or length) greater than the maximum diameter	
4504.10.47	Corks, stoppers, disks, wafers and washers of agglomerated cork, nesoi	
4504.10.50	Blocks, plates, sheets and strip; tiles of any shape; solid cylinder; all the foregoing of cork; all the foregoing, nesoi	
4504.90.00	Agglomerated cork and articles of cork, nesoi	
4601.22.40	Woven or partly assembled materials of rattan for mats, matting and screens	
4601.22.80	Rattan floor coverings	
4601.22.90	Mats, matting and screens of rattan, nesoi	
4601.29.40	Woven or partly assembled materials of willow for mats, matting and screens	
4601.93.01	Rattan webbing for mats, matting and screens	
4601.93.05	Plaits of rattan and similar products of such plaiting materials, whether or not assembled into strips	
4601.93.20	Products of rattan other than plaits and similar products such as plaiting materials.	
4602.12.05	Fishing baskets or creels made from rattan	
4602.12.14	Baskets and bags of rattan wickerwork	
4602.12.16	Baskets and bags of rattan other than wickerwork	
4602.12.23	Articles of a kind normally carried in the pocket or in the handbag, of rattan	
4602.12.25	Luggage, handbags and flat goods, whether or not lined, of rattan, nesoi	
4602.12.35	Articles of wickerwork, nesoi, of rattan	
4602.12.45	Basketwork and other articles, nesoi, of rattan	
4823.90.10	Articles of paper pulp, nesoi	Aircraft
4823.90.20	Articles of papier-mâché, nesoi	Aircraft
4823.90.31	Cards of paper or paperboard, nesoi, not punched, for punchcard machines, whether or not in strips	Aircraft

HTSUS	Description	Scope Limitations
4823.90.40	Frames or mounts for photographic slides of paper or paperboard	Aircraft
4823.90.50	Hand fans of paper or paperboard	Aircraft
4823.90.60	Gaskets, washers and other seals of coated paper or paperboard	Aircraft
4823.90.67	Coated paper or paperboard, nesoi	Aircraft
4823.90.70	Articles of cellulose wadding, nesoi	Aircraft
4823.90.80	Gaskets, washers and other seals of paper, paperboard and webs of cellulose fibers, nesoi	Aircraft
4823.90.86	Articles of paper pulp, paper, paperboard, cellulose wadding or webs of cellulose fibers, nesoi	Aircraft
5001.00.00	Silkworm cocoons suitable for reeling	
5002.00.00	Raw silk (not thrown)	
5003.00.10	Silk waste (including cocoons unsuitable for reeling, yarn waste and garnetted stock), not carded or combed	
5003.00.90	Silk waste (including cocoons unsuitable for reeling, yarn waste and garnetted stock), carded or combed	
5004.00.00	Silk yarns (other than yarn spun from silk waste), not put up for retail sale	
5005.00.00	Yarn spun from silk waste, not put up for retail sale	
5006.00.10	Spun yarn, containing 85 percent or more by weight of silk, put up for retail sale; silkworm gut	
5006.00.90	Spun silk yarn, containing less than 85 percent by weight of silk, put up for retail sale	
5007.10.30	Woven fabrics of noil silk, containing 85 percent or more by weight of silk or silk waste	
5007.10.60	Woven fabrics of noil silk, containing less than 85 percent by weight of silk or silk waste	
5007.20.00	Woven fabrics containing 85 percent or more by weight of silk or silk waste, other than noil silk	
5007.90.30	Woven silk fabrics, containing 85 percent or more by weight of silk or silk waste, nesoi	
5102.11.90	Fine hair of Kashmir (cashmere) goats, processed beyond the degreased or carbonized condition, not carded or combed	
5102.19.20	Fine hair of the camel, not processed in any manner beyond the degreased or carbonized condition, not carded or combed	
6812.80.90	Articles or mixtures of crocidolite, nesoi	Aircraft
6812.99.10	Paper, millboard and felt of asbestos, other than crocidolite	Aircraft
6812.99.20	Compressed asbestos (other than crocidolite) fiber jointing, in sheets or rolls	Aircraft
6812.99.90	Articles of mixtures of or with a basis of asbestos, nesoi, other than crocidolite	Aircraft
6813.20.00	Friction material and articles thereof, containing asbestos	Aircraft

HTSUS	Description	Scope Limitations
6813.81.00	Brake linings and pads not containing asbestos	Aircraft
6813.89.00	Friction material and articles thereof with a basis of mineral substances (other than asbestos) or of cellulose, nesoi	Aircraft
7007.21.11	Laminated safety glass windshields, of size and shape suitable for incorporation in vehicles (other than for goods of headings 8701 through 8705), aircraft, spacecraft or vessels	Aircraft
7101.10.30	Natural pearls, graded and temporarily strung for convenience of transport	
7101.10.60	Natural pearls, not strung, mounted or set	
7102.10.00	Diamonds, unsorted, whether or not worked	
7102.31.00	Nonindustrial diamonds, unworked or simply sawn, cleaved or bruted	
7102.39.00	Nonindustrial diamonds, worked, but not mounted or set	
7103.10.20	Precious stones (other than diamonds) and semiprecious stones, unworked	
7103.10.40	Precious stones (other than diamonds) and semiprecious stones, simply sawn or roughly shaped	
7103.91.00	Rubies, sapphires and emeralds, worked, whether or not graded, but not strung, mounted or set	
7103.99.10	Precious or semiprecious stones, nesoi, cut but not set, suitable for use in the manufacture of jewelry	
7103.99.50	Precious or semiprecious stones, nesoi, worked, whether or not graded, but not strung, mounted or set	
7110.11.00	Platinum, unwrought or in powder form	
7110.19.00	Platinum, in semimanufactured forms	
7110.21.00	Palladium, unwrought or in powder form	
7110.29.00	Palladium, in semimanufactured forms	
7110.31.00	Rhodium, unwrought or in powder form	
7110.39.00	Rhodium, in semimanufactured forms	
7110.41.00	Iridium, osmium and ruthenium, unwrought or in powder form	
7110.49.00	Iridium, osmium and ruthenium, in semimanufactured forms	
7112.92.01	Platinum waste and scrap, including metal clad with platinum, excluding sweepings containing other precious metals, other than goods of heading 8549	
7118.90.00	Coins, nesoi	
7201.10.00	Nonalloy pig iron containing by weight 0.5 percent or less of phosphorus	
7201.20.00	Nonalloy pig iron containing by weight more than 0.5 percent of phosphorus	
7201.50.30	Alloy pig iron in blocks or other primary forms	
7202.11.10	Ferromanganese containing by weight more than 2 percent but not more than 4 percent of carbon	

HTSUS	Description	Scope Limitations
7202.11.50	Ferromanganese containing by weight more than 4 percent of carbon	
7202.19.10	Ferromanganese containing by weight not more than 1 percent of carbon	
7202.19.50	Ferromanganese containing by weight more than 1 percent but not more than 2 percent of carbon	
7202.30.00	Ferrosilicon manganese	
7202.41.00	Ferrochromium containing by weight more than 4 percent of carbon	
7202.49.10	Ferrochromium containing by weight more than 3 percent but not more than 4 percent of carbon	
7202.49.50	Ferrochromium containing by weight 3 percent or less of carbon	
7202.50.00	Ferrosilicon chromium	
7202.60.00	Ferronickel	
7202.80.00	Ferrotungsten and ferrosilicon tungsten	
7202.91.00	Ferrotitanium and ferrosilicon titanium	
7202.93.40	Ferroniobium containing by weight less than 0.02 percent of phosphorus or sulfur or less than 0.4 percent of silicon	
7202.93.80	Ferroniobium, nesoi	
7204.21.00	Stainless steel waste and scrap	
7205.10.00	Pig iron, spiegeleisen, and iron or steel granules	
7304.31.30	Iron (other than cast) or nonalloy steel, seamless, cold-drawn or cold-rolled, hollow bars with circular cross section	Aircraft
7304.31.60	Iron (other than cast) or nonalloy steel, seamless, cold-drawn or cold-rolled, tubes, pipes and hollow profiles, with circular cross section, nesoi	Aircraft
7304.39.00	Iron (other than cast) or nonalloy steel, seamless, not cold-drawn or cold-rolled, tubes, pipes and hollow profiles, with circular cross section, nesoi	Aircraft
7304.41.30	Stainless steel, seamless, cold-drawn or cold-rolled, tubes, pipes and hollow profiles, with circular cross section and external diameter of less than 19mm	Aircraft
7304.41.60	Stainless steel, seamless, cold-drawn or cold-rolled, tubes, pipes and hollow profiles, with circular cross section and external diameter of 19mm or more	Aircraft
7304.49.00	Stainless steel, seamless, not cold-drawn or cold-rolled, tubes, pipes and hollow profiles, with circular cross section	Aircraft
7304.51.10	Alloy steel (other than stainless), seamless, cold-drawn or cold-rolled, tubes, pipes and hollow profiles, with circular cross section, for manufacture of ball or roller bearings	Aircraft

HTSUS	Description	Scope Limitations
7304.51.50	Alloy steel (other than stainless), seamless, cold-drawn or cold-rolled, tubes, pipes and hollow profiles, with circular cross section, nesoi	Aircraft
7304.59.10	Alloy steel (other than stainless), seamless, not old-drawn or cold-rolled, tubes, pipes and hollow profiles, with circular cross section, for manufacture of ball or roller bearings	Aircraft
7304.59.20	Alloy steel (other than stainless), seamless, not cold-drawn or cold-rolled, tubes, pipes and hollow profiles, with circular cross section, for boilers, heaters, etc.	Aircraft
7304.59.60	Heat-resisting alloy steel (other than stainless), seamless, not cold-drawn or cold-rolled, tubes, pipes and hollow profiles, with circular cross section, nesoi	Aircraft
7304.59.80	Alloy steel (other than heat-resist or stainless), seamless, not cold-drawn or cold-rolled, tubes, pipes and hollow profiles, with circular cross section, nesoi	Aircraft
7304.90.10	Iron (other than cast) or nonalloy steel, seamless, tubes, pipes and hollow profiles, other than circular cross section, with wall thickness of 4 mm or more	Aircraft
7304.90.30	Alloy steel (other than stainless), seamless, tubes, pipes and hollow profiles, other than circular cross section, with wall thickness of 4 mm or more	Aircraft
7304.90.50	Iron (other than cast) or nonalloy steel, seamless, tubes, pipes and hollow profiles, other than circular cross section, with wall thickness of less than 4 mm	Aircraft
7304.90.70	Alloy steel (other than stainless), seamless, tubes, pipes and hollow profiles, other than circular cross section, with wall thickness of less than 4 mm	Aircraft
7306.30.10	Iron or nonalloy steel, welded, with circular cross section and external diameter of 406.4mm or less, tubes, pipes and hollow profiles, with wall thickness of less than 1.65 mm	Aircraft
7306.30.30	Nonalloy steel, welded, with circular cross-section and external diameter 406.4mm or less, tapered pipes and tubes, with wall thickness of 1.65 mm+, principally used as parts of illuminating articles	Aircraft
7306.30.50	Iron or nonalloy steel, welded, with circular cross section and external diameter of 406.4mm or less, pipes, tubes and hollow profiles, with wall thickness of 1.65 mm or more	Aircraft
7306.40.10	Stainless steel, welded, with circular cross section and external diameter of 406.4mm or less, tubes, pipes and hollow profiles, with wall thickness of less than 1.65 mm	Aircraft
7306.40.50	Stainless steel, welded, with circular cross section and external diameter of 406.4mm or less, tubes, pipes and hollow profiles, with wall thickness of 1.65 mm or more	Aircraft

HTSUS	Description	Scope Limitations
7306.50.10	Alloy steel (other than stainless), welded, with circular cross section and external diameter of 406.4mm or less, tubes, pipes and hollow profiles, with wall thickness of less than 1.65 mm	Aircraft
7306.50.30	Alloy steel (other than stainless), welded, with circular cross section and external diameter 406.4mm or less, tapered pipes and tubes, with wall thickness of 1.65 mm or more, principally used as parts of illuminating articles	Aircraft
7306.50.50	Alloy steel (other than stainless), welded, with circular cross section and external diameter of 406.4mm or less, tubes, pipes and hollow profiles, with wall thickness of 1.65 mm or more	Aircraft
7306.61.10	Iron or nonalloy steel, welded, with square or rectangular cross section, tubes, pipes and hollow profiles, with wall thickness of 4 mm or more	Aircraft
7306.61.30	Alloy steel, welded, with square or rectangular cross section, tubes, pipes and hollow profiles, with wall thickness of 4 mm or more	Aircraft
7306.61.50	Iron or nonalloy steel, welded, with square or rectangular cross section, tubes, pipes and hollow profiles, with wall thickness of less than 4 mm	Aircraft
7306.61.70	Alloy steel, welded, with square or rectangular cross section, tubes, pipes and hollow profiles, with wall thickness of less than 4 mm	Aircraft
7306.69.10	Iron or nonalloy steel, welded, with other non-circular cross section, tubes, pipes and hollow profiles, with wall thickness of 4 mm or more	Aircraft
7306.69.30	Alloy steel, welded, with other non-circular cross-section, tubes, pipes and hollow profiles, with wall thickness of 4 mm or more	Aircraft
7306.69.50	Iron or nonalloy steel, welded, with other non-circular cross section, tubes, pipes and hollow profiles, with wall thickness of less than 4 mm	Aircraft
7306.69.70	Alloy steel, welded, with other non-circular cross section, tubes, pipes and hollow profiles, with wall thickness of less than 4 mm	Aircraft
7312.10.05	Stainless steel, stranded wire, not electrically insulated, fitted with fittings or made up into articles	Aircraft
7312.10.10	Stainless steel, stranded wire, not electrically insulated, not fitted with fittings or made up into articles	Aircraft
7312.10.20	Iron or steel (other than stainless), stranded wire, not electrically insulated, fitted with fittings or made up into articles	Aircraft
7312.10.30	Iron or steel (other than stainless), stranded wire, not electrically insulated, not fitted with fittings or made up into articles	Aircraft

HTSUS	Description	Scope Limitations
7312.10.50	Stainless steel, ropes, cables and cordage (other than stranded wire), not electrically insulated, fitted with fittings or made up into articles	Aircraft
7312.10.60	Stainless steel, ropes, cables and cordage (other than stranded wire), not electrically insulated, not fitted with fittings or made up into articles	Aircraft
7312.10.70	Iron or steel (other than stainless), ropes, cables and cordage (other than stranded wire), not electrically insulated, fitted with fittings or made up into articles	Aircraft
7312.10.80	Iron or steel (other than stainless), ropes, cables and cordage, of brass plated wire (other than stranded wire), not electrically insulated, without fittings or articles	Aircraft
7312.10.90	Iron or steel (other than stainless), ropes, cables and cordage, other than of brass plate wire (other than stranded wire), not electrically insulated, without fittings or articles	Aircraft
7312.90.00	Iron or steel (other than stainless), plaited bands, slings and the like, not electrically insulated	Aircraft
7322.90.00	Iron or steel, non-electrically heated air heaters and hot air distributors with motor driven fan or blower and parts thereof	Aircraft
7324.10.00	Stainless steel, sinks and wash basins	Aircraft
7324.90.00	Iron or steel, sanitary ware (other than baths or stainless steel sinks and wash basins) and parts thereof	Aircraft
7326.20.00	Iron or steel, articles of wire, nesoi	Aircraft
7413.00.90	Copper, stranded wire, cables, plaited bands and the like, not electrically insulated, fitted with fittings or made up into articles	Aircraft
7501.10.00	Nickel mattes	
7502.10.00	Nickel (other than alloy), unwrought	
7502.20.00	Nickel alloys, unwrought	
7503.00.00	Nickel, waste and scrap	
7504.00.00	Nickel, powders and flakes	
7508.90.50	Nickel, articles of nesoi	Pharma
7608.10.00	Aluminum (other than alloy), tubes and pipes	Aircraft
7608.20.00	Aluminum alloy, tubes and pipes	Aircraft
7901.11.00	Zinc (other than alloy), unwrought, containing 99.99 percent or more by weight of zinc	
7901.12.10	Zinc (other than alloy), unwrought, casting-grade zinc, containing at least 97.5 percent but less than 99.99 percent by weight of zinc	
7901.12.50	Zinc (other than alloy), unwrought, other than casting-grade zinc, containing at least 97.5 percent but less than 99.99 percent by weight of zinc	
7901.20.00	Zinc alloy, unwrought	

HTSUS	Description	Scope Limitations
7902.00.00	Zinc, waste and scrap	
7903.90.30	Zinc, powders	
7907.00.60	Zinc, articles (other than for household, table or kitchen use), nesoi	Pharma
8001.10.00	Tin (other than alloy), unwrought	
8001.20.00	Tin alloy, unwrought	
8002.00.00	Tin, waste and scrap	
8007.00.50	Tin, articles nesoi	Pharma
8101.10.00	Tungsten, powders	
8101.97.00	Tungsten waste and scrap	
8103.20.00	Tantalum, unwrought (including bars and rods obtained simply by sintering); tantalum powders	
8103.30.00	Tantalum waste and scrap	
8103.91.00	Tantalum, crucibles	
8104.11.00	Magnesium, unwrought, containing at least 99.8 percent by weight of magnesium	
8104.19.00	Magnesium, unwrought, nesoi	
8104.20.00	Magnesium, waste and scrap	
8104.30.00	Magnesium, raspings, turnings and granules graded according to size; magnesium powders	
8104.90.00	Magnesium, articles nesoi	
8105.20.30	Cobalt alloys, unwrought	
8105.20.60	Cobalt (other than alloys), unwrought	
8105.20.90	Cobalt, mattes and other intermediate products of cobalt metallurgy; cobalt powders	
8105.30.00	Cobalt waste and scrap	
8106.10.00	Bismuth (including waste and scrap) and articles thereof, containing more than 99.99 percent of bismuth by weight	
8106.90.00	Bismuth (including waste and scrap) and articles thereof, containing 99.99 percent of bismuth or less, nesoi	
8108.20.00	Titanium, unwrought; titanium powders	
8108.30.00	Titanium waste and scrap	
8108.90.60	Wrought titanium, nesoi	Aircraft
8110.10.00	Antimony, unwrought; antimony powders	
8110.20.00	Antimony waste and scrap	
8110.90.00	Articles of antimony, nesoi	
8111.00.47	Unwrought manganese flake containing at least 99.5 percent by weight of manganese	
8111.00.49	Unwrought manganese, nesoi	
8112.21.00	Chromium, unwrought; chromium powders	
8112.22.00	Chromium waste and scrap	

HTSUS	Description	Scope Limitations
8112.41.10	Rhenium, waste and scrap	
8112.41.50	Rhenium, unwrought; rhenium powders	
8112.59.00	Articles of thallium, nesoi	Pharma
8112.92.07	Waste and scrap of gallium, germanium, indium, niobium, or vanadium	
8112.92.10	Gallium, unwrought; gallium powders	
8112.92.30	Indium, unwrought; indium powders	
8112.92.40	Niobium (columbium), unwrought; niobium powders	
8112.92.60	Germanium, unwrought	
8112.92.65	Germanium powder, wrought	
8112.99.10	Germanium nesoi and articles thereof	
8112.99.91	Articles of gallium, indium, or niobium, nesoi	
8302.10.60	Iron or steel, aluminum, or zinc hinges and base metal parts thereof, not designed for motor vehicles	Aircraft
8302.10.90	Base metal (other than iron or steel or aluminum or zinc) hinges and base metal parts thereof	Aircraft
8302.20.00	Base metal castors and base metal parts thereof	Aircraft
8302.42.30	Iron or steel, aluminum, or zinc mountings, fittings and similar articles, suitable for furniture, and base metal parts thereof	Aircraft
8302.42.60	Base metal (other than iron or steel or aluminum or zinc) mountings, fittings and similar articles, suitable for furniture, and base metal parts thereof	Aircraft
8302.49.40	Base metal harness, saddlery or riding-bridle hardware, not coated or plated with precious metal, and base metal parts thereof	Aircraft
8302.49.60	Iron or steel, aluminum, or zinc, mountings, fittings and similar articles nesoi, and base metal parts thereof	Aircraft
8302.49.80	Base metal (other than iron or steel or aluminum or zinc) mountings, fittings and similar articles nesoi, and base metal parts thereof	Aircraft
8302.60.30	Base metal automatic door closers	Aircraft
8307.10.30	Iron or steel flexible tubing, with fittings	Aircraft
8307.90.30	Base metal (other than iron or steel) flexible tubing, with fittings	Aircraft
8407.10.00	Spark-ignition reciprocating or rotary internal combustion piston engines for use in aircraft	Aircraft
8408.90.90	Compression-ignition internal-combustion piston engines, for machinery or equipment, nesoi	Aircraft
8409.10.00	Parts for internal combustion aircraft engines	Aircraft
8411.11.40	Aircraft turbojets of a thrust not exceeding 25 kN	Aircraft
8411.11.80	Turbojets of a thrust not exceeding 25 kN, other than aircraft	Aircraft
8411.12.40	Aircraft turbojets of a thrust exceeding 25 kN	Aircraft

HTSUS	Description	Scope Limitations
8411.12.80	Turbojets of a thrust exceeding 25 kN, other than aircraft	Aircraft
8411.21.40	Aircraft turbopropellers of a power not exceeding 1,100 kW	Aircraft
8411.21.80	Turbopropellers of a power not exceeding 1,100 kW, other than aircraft	Aircraft
8411.22.40	Aircraft turbopropellers of a power exceeding 1,100 kW	Aircraft
8411.22.80	Turbopropellers of a power exceeding 1,100 kW, other than aircraft	Aircraft
8411.81.40	Aircraft gas turbines other than turbojets or turbopropellers, of a power not exceeding 5,000 kW	Aircraft
8411.82.40	Aircraft gas turbines other than turbojets or turbopropellers, of a power exceeding 5,000 kW	Aircraft
8411.91.10	Cast-iron parts of turbojets or turbopropellers, not advanced beyond cleaning, machined only for removal of fins, gates, sprues and risers, or to permit location in machinery	Aircraft
8411.91.90	Parts of turbojets or turbopropellers other than those of subheading 8411.91.10	Aircraft
8411.99.10	Cast-iron parts of gas turbines nesoi, not advanced beyond cleaning, and machined for removal of fins, gates, sprues and risers	Aircraft
8411.99.90	Parts of gas turbines nesoi , other than those of subheading 8411.99.10	Aircraft
8412.10.00	Reaction engines other than turbojets	Aircraft
8412.21.00	Hydraulic power engines and motors, linear acting (cylinders)	Aircraft
8412.29.40	Hydrojet engines for marine propulsion	Aircraft
8412.29.80	Hydraulic power engines and motors, nesoi	Aircraft
8412.31.00	Pneumatic power engines and motors, linear acting (cylinders)	Aircraft
8412.39.00	Pneumatic power engines and motors, other than linear acting	Aircraft
8412.80.10	Spring-operated and weight-operated motors	Aircraft
8412.80.90	Engines and motors, nesoi (excluding motors of heading 8501)	Aircraft
8412.90.90	Parts for engines of heading 8412 other than hydrojet engines for marine propulsion	Aircraft
8413.19.00	Pumps for liquids fitted or designed to be fitted with a measuring device, nesoi	Aircraft
8413.20.00	Hand pumps other than those of subheading 8413.11 or 8413.19, not fitted with a measuring device	Aircraft
8413.30.10	Fuel-injection pumps for compression-ignition engines, not fitted with a measuring device	Aircraft
8413.30.90	Fuel, lubricating or cooling medium pumps for internal-combustion piston engines, not fitted with a measuring device, nesoi	Aircraft
8413.50.00	Reciprocating positive displacement pumps for liquids, not fitted with a measuring device, nesoi	Aircraft

HTSUS	Description	Scope Limitations
8413.60.00	Rotary positive displacement pumps for liquids, not fitted with a measuring device, nesoi	Aircraft
8413.70.10	Stock pumps imported for use with machines for making cellulosic pulp, paper or paperboard, not fitted with a measuring device	Aircraft
8413.70.20	Centrifugal pumps for liquids, not fitted with a measuring device, nesoi	Aircraft
8413.81.00	Pumps for liquids, not fitted with a measuring device, nesoi	Aircraft
8413.91.10	Parts of fuel-injection pumps for compression-ignition engines	Aircraft
8413.91.20	Parts of stock pumps imported for use with machines for making cellulosic pulp, paper or paperboard	Aircraft
8413.91.90	Parts of pumps, nesoi	Aircraft
8414.10.00	Vacuum pumps	Aircraft
8414.20.00	Hand-operated or foot-operated air pumps	Aircraft
8414.30.40	Compressors of a kind used in refrigerating equipment (including air conditioning) not exceeding 1/4 horsepower	Aircraft
8414.30.80	Compressors of a kind used in refrigerating equipment (including air conditioning) exceeding 1/4 horsepower	Aircraft
8414.51.30	Ceiling fans for permanent installation, with a self-contained electric motor of an output not exceeding 125 W	Aircraft
8414.51.90	Table, floor, wall, window or roof fans, with a self-contained electric motor of an output not exceeding 125 W	Aircraft
8414.59.30	Turbocharger and supercharger fans	Aircraft
8414.59.65	Other fans, nesoi	Aircraft
8414.80.05	Turbocharger and supercharger air compressors	Aircraft
8414.80.16	Air compressors, nesoi	Aircraft
8414.80.20	Gas compressors, nesoi	Aircraft
8414.80.90	Air or gas pumps, compressors and fans, nesoi	Aircraft
8414.90.10	Parts of fans (including blowers) and ventilating or recycling hoods	Aircraft
8414.90.30	Stators and rotors of goods of subheading 8414.30	Aircraft
8414.90.41	Parts of air or gas compressors, nesoi	Aircraft
8414.90.91	Parts of air or vacuum pumps, ventilating or recycling hoods, gas-tight biological safety cabinets	Aircraft
8415.10.60	Window or wall type air conditioning machines, split-system, incorporating a refrigerating unit and valve for reversal of cooling/heat cycle	Aircraft
8415.10.90	Window or wall type air conditioning machines, split-system, nesoi	Aircraft
8415.81.01	Air conditioning machines incorporating a refrigerating unit and valve for reversal of cooling/heat cycle, nesoi	Aircraft

HTSUS	Description	Scope Limitations
8415.82.01	Air conditioning machines incorporating a refrigerating unit, nesoi	Aircraft
8415.83.00	Air conditioning machines not incorporating a refrigerating unit	Aircraft
8415.90.40	Chassis, chassis bases and other outer cabinets for air conditioning machines,	Aircraft
8415.90.80	Parts for air conditioning machines, nesoi	Aircraft
8418.10.00	Combined refrigerator-freezers, fitted with separate external doors, electric or other	Aircraft
8418.30.00	Freezers of the chest type, not exceeding 800 liters capacity, electric or other	Aircraft
8418.40.00	Freezers of the upright type, not exceeding 900 liters capacity, electric or other	Aircraft
8418.61.01	Heat pumps, other than the air-conditioning machines of heading 8415	Aircraft
8418.69.01	Refrigerating or freezing equipment nesoi	Aircraft
8419.50.10	Brazed aluminum plate-fin heat exchangers	Aircraft
8419.50.50	Heat exchange units, nesoi	Aircraft
8419.81.50	Cooking stoves, ranges and ovens, other than microwave, for making hot drinks or for cooking or heating food, not used for domestic purposes	Aircraft
8419.81.90	Machinery and equipment nesoi, for making hot drinks or for cooking or heating food, not used for domestic purposes	Aircraft
8419.90.10	Parts of instantaneous or storage water heaters	Aircraft
8419.90.20	Parts of machinery and plant, for making paper pulp, paper or paperboard	Aircraft
8419.90.30	Parts of heat exchange units	Aircraft
8419.90.50	Parts of molten-salt-cooled acrylic acid reactors, nesoi; parts of certain medical, surgical or laboratory sterilizers, nesoi	Aircraft
8419.90.85	Parts of electromechanical tools for work in the hand, with self-contained electric motor, for treatment of materials by change in temperature	Aircraft
8421.19.00	Centrifuges, other than cream separators or clothes dryers	Aircraft
8421.21.00	Machinery and apparatus for filtering or purifying water	Aircraft
8421.23.00	Oil or fuel filters for internal combustion engines	Aircraft
8421.29.00	Filtering or purifying machinery and apparatus for liquids, nesoi	Aircraft
8421.31.00	Intake air filters for internal combustion engines	Aircraft
8421.32.00	Catalytic converters; particulate filters for internal combustion engines	Aircraft
8421.39.01	Filtering or purifying machinery and apparatus for gases, other than intake air filters or catalytic converters, for internal combustion engines	Aircraft

HTSUS	Description	Scope Limitations
8424.10.00	Fire extinguishers, whether or not charged	Aircraft
8425.11.00	Pulley tackle and hoists other than skip hoists or hoists used for raising vehicles, powered by electric motor	Aircraft
8425.19.00	Pulley tackle and hoists other than skip hoists or hoists used for raising vehicles, not powered by electric motor	Aircraft
8425.31.01	Winches nesoi, and capstans, powered by electric motor	Aircraft
8425.39.01	Winches nesoi, and capstans, not powered by electric motor	Aircraft
8425.42.00	Hydraulic jacks and hoists, nesoi	Aircraft
8425.49.00	Jacks and hoists of a kind used for raising vehicles, other than hydraulic, nesoi	Aircraft
8426.99.00	Derricks, cranes and other lifting machinery nesoi	Aircraft
8428.10.00	Passenger or freight elevators other than continuous action; skip hoists	Aircraft
8428.20.00	Pneumatic elevators and conveyors	Aircraft
8428.33.00	Belt type continuous-action elevators and conveyors, for goods or materials	Aircraft
8428.39.00	Continuous-action elevators and conveyors, for goods or materials, nesoi	Aircraft
8428.90.03	Machinery for lifting, handling, loading or unloading, nesoi	Aircraft
8443.31.00	Multifunction units (machines which perform two or more of the functions of printing, copying or facsimile transmission, capable of connecting to an automatic data processing machine or to a network)	Aircraft
8443.32.10	Printer units, capable of connecting to an automatic data processing machine or to a network	Aircraft
8443.32.50	Single function units other than printer units (machines which perform only one of the functions of printing, copying or facsimile transmission)	Aircraft
8471.41.01	Automatic data processing machines, nonportable or over 10 kg, comprising in the same housing at least a central processing unit and an input and output unit, whether or not combined	Aircraft
8471.49.00	Automatic data processing machines, nesoi, entered in the form of systems (consisting of at least a central processing unit, and an input and output unit)	Aircraft
8471.50.01	Processing units other than those of subheading 8471.41 and 8471.49, nesoi	Aircraft
8471.60.10	Combined input/output units for automatic data processing machines not entered with the rest of a system	Aircraft
8471.60.20	Keyboards for automatic data processing machines not entered with the rest of a system	Aircraft
8471.60.70	Input or output units suitable for physical incorporation into an automatic data processing machine or unit thereof, nesoi, not entered with the rest of a system	Aircraft

HTSUS	Description	Scope Limitations
8471.60.80	Optical scanners and magnetic ink recognition devices not entered with the rest of an automatic data processing system	Aircraft
8471.60.90	Other input or output units of digital automatic data processing machines, nesoi, not entered with the rest of a system	Aircraft
8471.70.10	Automatic data processing magnetic disk drive storage units, disk diameter exceeding 21 cm, without read-write unit assembled therein; read-write units; all not entered with the rest of a system	Aircraft
8471.70.20	Automatic data processing magnetic disk drive storage units, disk diameter exceeding 21 cm, for incorporation into automatic data processing machines or units, not entered with the rest of a system	Aircraft
8471.70.30	Automatic data processing magnetic disk drive storage units, disk diameter exceeding 21 cm, nesoi, not entered with the rest of a system	Aircraft
8471.70.40	Automatic data processing magnetic disk drive storage units, disk diameter not exceeding 21 cm, not assembled in cabinets, without attached external power supply, not entered with the rest of a system	Aircraft
8471.70.50	Automatic data processing magnetic disk drive storage units, disk diameter not exceeding 21 cm, nesoi, not entered with the rest of a system	Aircraft
8471.70.60	Automatic data processing storage units other than magnetic disk, not assembled in cabinets for placing on a table etc., not entered with the rest of a system	Aircraft
8471.70.90	Automatic data processing storage units other than magnetic disk drive units, nesoi, not entered with the rest of a system	Aircraft
8479.89.10	Air humidifiers or dehumidifiers with self-contained electric motor, other than for domestic purposes	Aircraft
8479.89.20	Floor polishers with self-contained electric motor, other than for domestic purposes	Aircraft
8479.89.65	Electromechanical appliances with self-contained electric motor, nesoi	Aircraft
8479.89.70	Carpet sweepers, not electromechanical with self-contained electric motor	Aircraft
8479.89.95	Other machines and mechanical appliances having individual functions, not specified or included elsewhere in chapter 84, nesoi	Aircraft
8479.90.41	Parts of floor polishers of subheading 8479.89.20; parts of carpet sweepers	Aircraft
8479.90.45	Parts of trash compactors, frame assemblies	Aircraft
8479.90.55	Parts of trash compactors, ram assemblies	Aircraft
8479.90.65	Parts of trash compactors, container assemblies	Aircraft

HTSUS	Description	Scope Limitations
8479.90.75	Parts of trash compactors, cabinets or cases	Aircraft
8479.90.85	Parts of trash compactors, nesoi	Aircraft
8479.90.95	Parts of machines and mechanical appliances having individual functions, not specified or included elsewhere in chapter 84, nesoi	Aircraft
8483.10.10	Camshafts and crankshafts for use solely or principally with spark-ignition internal-combustion piston or rotary engines	Aircraft
8483.10.30	Camshafts and crankshafts nesoi	Aircraft
8483.10.50	Transmission shafts and cranks other than camshafts and crankshafts	Aircraft
8483.30.40	Bearing housings of the flange, take-up, cartridge and hanger unit type	Aircraft
8483.30.80	Bearing housings nesoi; plain shaft bearings	Aircraft
8483.40.10	Torque converters	Aircraft
8483.40.30	Fixed, multiple and variable ratio speed changers, imported for use with machines for making cellulosic pulp, paper or paperboard	Aircraft
8483.40.50	Fixed, multiple and variable ratio speed changers, not imported for use with machines for making cellulosic pulp, paper or paperboard	Aircraft
8483.40.70	Speed changers other than fixed, multiple and variable ratio speed changers	Aircraft
8483.40.80	Ball or roller screws	Aircraft
8483.40.90	Gears and gearing, other than toothed wheels, chain sprockets and other transmission elements entered separately	Aircraft
8483.50.40	Gray-iron awning or tackle pulleys, not over 6.4 cm in wheel diameter	Aircraft
8483.50.60	Flywheels, nesoi	Aircraft
8483.50.90	Pulleys, including pulley blocks, nesoi	Aircraft
8483.60.40	Clutches and universal joints	Aircraft
8483.60.80	Shaft couplings (other than universal joints)	Aircraft
8483.90.10	Chain sprockets and parts thereof	Aircraft
8483.90.20	Parts of flange, take-up, cartridge and hanger units	Aircraft
8483.90.30	Parts of bearing housings and plain shaft bearings, nesoi	Aircraft
8483.90.50	Parts of gearing, gear boxes and other speed changers	Aircraft
8483.90.80	Parts of transmission equipment, nesoi	Aircraft
8484.10.00	Gaskets and similar joints of metal sheeting combined with other material or of two or more layers of metal	Aircraft
8484.90.00	Sets or assortments of gaskets and similar joints dissimilar in composition, put up in pouches, envelopes or similar packings	Aircraft
8501.20.50	Universal AC/DC motors of an output exceeding 735 W but under 746 W	Aircraft

HTSUS	Description	Scope Limitations
8501.20.60	Universal AC/DC motors of an output of 746 W or more	Aircraft
8501.31.50	DC motors, nesoi, of an output exceeding 735 W but under 746 W	Aircraft
8501.31.60	DC motors nesoi, of an output of 746 W but not exceeding 750 W	Aircraft
8501.31.81	DC generators, other than photovoltaic generators, of an output not exceeding 750 W	Aircraft
8501.32.20	DC motors nesoi, of an output exceeding 750 W but not exceeding 14.92 kW	Aircraft
8501.32.55	DC motors nesoi, of an output exceeding 14.92 kW but not exceeding 75 kW, nesoi	Aircraft
8501.32.61	DC generators, other than photovoltaic generators, of an output exceeding 750 W but not exceeding 75 kW	Aircraft
8501.33.20	DC motors nesoi, of an output exceeding 75 kW but under 149.2 kW	Aircraft
8501.33.30	DC motors, nesoi, 149.2 kW or more but not exceeding 150 kW	Aircraft
8501.33.61	DC generators, other than photovoltaic generators, of an output exceeding 75 kW but not exceeding 375 kW	Aircraft
8501.34.61	DC generators, other than photovoltaic generators, of an output exceeding 375 kW	Aircraft
8501.40.50	AC motors, nesoi, single-phase, exceeding 735 W but under 746 W	Aircraft
8501.40.60	AC motors nesoi, single-phase, of 746 W or more	Aircraft
8501.51.50	AC motors, nesoi, multi-phase, of an output exceeding 735 W but under 746 W	Aircraft
8501.51.60	AC motors nesoi, multi-phase of an output of 746 W but not exceeding 750 W	Aircraft
8501.52.40	AC motors nesoi, multi-phase, of an output exceeding 750 W but not exceeding 14.92 kW	Aircraft
8501.52.80	AC motors nesoi, multi-phase, of an output exceeding 14.92 kW but not exceeding 75 kW	Aircraft
8501.53.40	AC motors nesoi, multi-phase, of an output exceeding 75 kW but under 149.2 kW	Aircraft
8501.53.60	AC motors, nesoi, multi-phase, 149.2 kW or more but not exceeding 150 kW	Aircraft
8501.61.01	AC generators (alternators), other than photovoltaic generators, of an output not exceeding 75 kVA	Aircraft
8501.62.01	AC generators (alternators), other than photovoltaic generators, of an output exceeding 75 kVA but not exceeding 375 kVA	Aircraft
8501.63.01	AC generators (alternators), other than photovoltaic generators, of an output exceeding 375 kVA but not exceeding 750 kVA	Aircraft
8501.71.00	Photovoltaic DC generators, of an output not exceeding 50 W	Aircraft

HTSUS	Description	Scope Limitations
8501.72.10	Photovoltaic DC generators, of an output exceeding 50 W but not exceeding 750 W	Aircraft
8501.72.20	Photovoltaic DC generators, of an output exceeding 750 W but not exceeding 75 kW	Aircraft
8501.72.30	Photovoltaic DC generators, of an output exceeding 75 kW but not exceeding 375 kW	Aircraft
8501.72.90	Photovoltaic DC generators, of an output exceeding 375 kW	Aircraft
8501.80.10	Photovoltaic AC generators, of an output not exceeding 75 kVA	Aircraft
8501.80.20	Photovoltaic AC generators, of an output exceeding 75 kVA but not exceeding 375 kVA	Aircraft
8501.80.30	Photovoltaic AC generators, of an output exceeding 375 kVA but not exceeding 750 kVA	Aircraft
8502.11.00	Electric generating sets with compression-ignition internal-combustion piston engines, of an output not exceeding 75 kVA	Aircraft
8502.12.00	Electric generating sets with compression-ignition internal-combustion piston engines, of an output exceeding 75 kVA but not over 375 kVA	Aircraft
8502.13.00	Electric generating sets with compression-ignition internal-combustion piston engines, of an output exceeding 375 kVA	Aircraft
8502.20.00	Electric generating sets with spark-ignition internal-combustion piston engines	Aircraft
8502.31.00	Wind-powered electric generating sets	Aircraft
8502.39.00	Electric generating sets, nesoi	Aircraft
8502.40.00	Electric rotary converters	Aircraft
8504.10.00	Ballasts for discharge lamps or tubes	Aircraft
8504.31.20	Unrated electrical transformers other than liquid dielectric, having a power handling capacity not exceeding 1 kVA	Aircraft
8504.31.40	Electrical transformers other than liquid dielectric, having a power handling capacity less than 1 kVA	Aircraft
8504.31.60	Electrical transformers other than liquid dielectric, having a power handling capacity of l kVA	Aircraft
8504.32.00	Electrical transformers other than liquid dielectric, having a power handling capacity exceeding 1 kVA but not exceeding 16 kVA	Aircraft
8504.33.00	Electrical transformers other than liquid dielectric, having a power handling capacity exceeding 16 kVA but not exceeding 500 kVA	Aircraft
8504.40.40	Electrical speed drive controllers for electric motors (static converters)	Aircraft
8504.40.60	Power supplies suitable for physical incorporation into automatic data processing machines or units thereof of heading 8471	Aircraft

HTSUS	Description	Scope Limitations
8504.40.70	Power supplies for automatic data processing machines or units thereof of heading 8471, nesoi	Aircraft
8504.40.85	Static converters (for example, rectifiers) for telecommunication apparatus	Aircraft
8504.40.95	Static converters (for example, rectifiers), nesoi	Aircraft
8504.50.40	Other inductors for power supplies for ADP machines and units of heading 8471 or for telecommunication apparatus	Aircraft
8504.50.80	Other inductors, nesoi	Aircraft
8507.10.00	Lead-acid storage batteries of a kind used for starting piston engines	Aircraft
8507.20.80	Lead-acid storage batteries other than of a kind used for starting piston engines or as the primary source of power for electric vehicles	Aircraft
8507.30.80	Nickel-cadmium storage batteries, other than of a kind used as the primary source of power for electric vehicles	Aircraft
8507.50.00	Nickel-metal hydride batteries	Aircraft
8507.60.00	Lithium-ion batteries	Aircraft
8507.80.82	Other storage batteries nesoi, other than of a kind used as the primary source of power for electric vehicles	Aircraft
8507.90.40	Parts of lead-acid storage batteries, including separators therefor	Aircraft
8507.90.80	Parts of storage batteries, including separators therefor, other than parts of lead-acid storage batteries	Aircraft
8511.10.00	Spark plugs	Aircraft
8511.20.00	Ignition magnetos, magneto-dynamos and magnetic flywheels	Aircraft
8511.30.00	Distributors and ignition coils	Aircraft
8511.40.00	Starter motors and dual purpose starter-generators	Aircraft
8511.50.00	Generators nesoi, of a kind used in conjunction with spark-ignition or compression-ignition internal-combustion engines	Aircraft
8511.80.20	Voltage and voltage-current regulators with cut-out relays designed for use on 6, 12 or 24 V systems	Aircraft
8511.80.40	Voltage and voltage-current regulators with cut-out relays other than those designed for use on 6, 12 or 24 V systems	Aircraft
8511.80.60	Electrical ignition or starting equipment of a kind used for spark-ignition internal-combustion or compression-ignition engines, nesoi	Aircraft
8514.20.40	Industrial or laboratory microwave ovens for making hot drinks or for cooking or heating food	Aircraft
8516.80.40	Electric heating resistors assembled only with simple insulated former and electrical connectors, used for anti-icing or de-icing	Aircraft
8516.80.80	Electric heating resistors, nesoi	Aircraft
8517.13.00	Smartphones for cellular networks or for other wireless of networks	Aircraft

HTSUS	Description	Scope Limitations
8517.14.00	Other telephones for cellular networks or for other wireless of networks, other than smartphones	Aircraft
8517.61.00	Base stations	Aircraft
8517.62.00	Machines for the reception, conversion and transmission or regeneration of voice, images or other data, including switching and routing apparatus	Aircraft
8517.69.00	Other apparatus for transmission or reception of voice, images or other data, nesoi, but not apparatus of headings 8443, 8525, 8527 or 8528	Aircraft
8517.71.00	Aerials and aerial reflectors of all kinds; parts suitable for use therewith	Aircraft
8518.10.40	Microphones having a frequency range of 300Hz-3.4kHz with diameter not over 10 mm and height not exceeding 3 mm, for telecommunication	Aircraft
8518.10.80	Microphones and stands therefor, nesoi	Aircraft
8518.21.00	Single loudspeakers, mounted in their enclosures	Aircraft
8518.22.00	Multiple loudspeakers mounted in the same enclosure	Aircraft
8518.29.40	Loudspeakers not mounted in their enclosures, with frequency range of 300Hz to 3.4kHz, with a diameter of not exceeding 50 mm, for telecommunication	Aircraft
8518.29.80	Loudspeakers nesoi, not mounted in their enclosures, nesoi	Aircraft
8518.30.10	Line telephone handsets	Aircraft
8518.30.20	Headphones, earphones and combined microphone/speaker sets, other than telephone handsets	Aircraft
8518.40.10	Audio-frequency electric amplifiers for use as repeaters in line telephony	Aircraft
8518.40.20	Audio-frequency electric amplifiers, other than for use as repeaters in line telephony	Aircraft
8518.50.00	Electric sound amplifier sets	Aircraft
8519.81.10	Transcribing machines	Aircraft
8519.81.20	Cassette players (non-recording) designed exclusively for motor-vehicle installation	Aircraft
8519.81.25	Cassette players (non-recording), nesoi	Aircraft
8519.81.30	Sound reproducing apparatus nesoi, not incorporating a sound recording device	Aircraft
8519.81.41	Other sound recording and reproducing apparatus using magnetic tape, optical media, or semiconductor media	Aircraft
8519.89.10	Record players, other than coin- or token-operated, without loudspeaker	Aircraft
8519.89.20	Record players, other than coin- or token-operated, with loudspeakers	Aircraft
8519.89.30	Sound recording and reproducing apparatus, nesoi	Aircraft

HTSUS	Description	Scope Limitations
8521.10.30	Color, cartridge or cassette magnetic tape-type video players, not capable of recording	Aircraft
8521.10.60	Color, cartridge or cassette magnetic tape-type video recording and reproducing apparatus, nesoi	Aircraft
8521.10.90	Magnetic tape-type video recording or reproducing apparatus, other than color, cartridge or cassette type	Aircraft
8522.90.25	Assemblies and subassemblies of articles of subheading 8519.81.41 , consisting of 2 or more pieces fastened together, printed circuit assemblies	Aircraft
8522.90.36	Other assemblies and subassemblies of articles of subheading 8519.81.41 , consisting of 2 or more pieces fastened together, other than printed circuit assemblies	Aircraft
8522.90.45	Other parts of telephone answering machines, printed circuit assemblies	Aircraft
8522.90.58	Other parts of telephone answering machines, other than printed circuit assemblies	Aircraft
8522.90.65	Parts and accessories of apparatus of headings 8519 or 8521 , nesoi, printed circuit assemblies	Aircraft
8522.90.80	Parts and accessories of apparatus of headings 8519 or 8521 , nesoi, other than printed circuit assemblies	Aircraft
8526.10.00	Radar apparatus	Aircraft
8526.91.00	Radio navigational aid apparatus, other than radar	Aircraft
8526.92.10	Radio remote control apparatus for video game consoles	Aircraft
8526.92.50	Radio remote control apparatus other than for video game consoles	Aircraft
8528.42.00	Cathode-ray tube monitors capable of directly connecting to and designed for use with an automatic data processing machine of heading 8471	Aircraft
8528.52.00	Other monitors capable of directly connecting to and designed for use with an automatic data processing machine of heading 8471	Aircraft
8528.62.00	Projectors capable of directly connecting to and designed for use with an automatic data processing machine of heading 8471	Aircraft
8529.10.21	Television antennas and antenna reflectors, and parts suitable for use therewith	Aircraft
8529.10.40	Radar, radio navigational aid and radio remote control antennas and antenna reflectors, and parts suitable for use therewith	Aircraft
8529.10.91	Other antennas and antenna reflectors of all kinds and parts, for use	Aircraft
8529.90.04	Tuners (printed circuit assemblies)	Aircraft
8529.90.05	Printed circuit boards and ceramic substrates and subassemblies thereof, for color TV, with components listed in additional U.S. note 4 to this chapter	Aircraft

HTSUS	Description	Scope Limitations
8529.90.06	Printed circuit boards and ceramic substrates and subassemblies thereof, for color TV, not with components listed in additional U.S. note 4 to this chapter	Aircraft
8529.90.09	Printed circuit assemblies for television cameras	Aircraft
8529.90.13	Printed circuit assemblies for television apparatus, nesoi	Aircraft
8529.90.16	Printed circuit assemblies which are subassemblies of radar, radio navigational aid or remote control apparatus, of 2 or more parts joined together	Aircraft
8529.90.19	Printed circuit assemblies, nesoi, for radar, radio navigational aid or radio remote control apparatus	Aircraft
8529.90.21	Other printed circuit assemblies suitable for use solely or principally with the apparatus of headings 8524 to 8528, nesoi	Aircraft
8529.90.24	Transceiver assemblies for the apparatus of subheading 8526.10, other than printed circuit assemblies	Aircraft
8529.90.29	Tuners for television apparatus, other than printed circuit assemblies	Aircraft
8529.90.33	Subassemblies with 2 or more printed circuit boards or ceramic substrates, for color TV, entered with components in additional U.S. note 4 to this chapter	Aircraft
8529.90.36	Subassemblies with 2 or more printed circuit boards or ceramic substrates, for color TV, other	Aircraft
8529.90.39	Parts of television receivers specified in U.S. note 9 to chapter 85, other than printed circuit assemblies, nesoi	Aircraft
8529.90.43	Printed circuit boards and ceramic substrates and subassemblies thereof for color TV, with components listed in additional U.S. note 4 to chapter 85	Aircraft
8529.90.46	Combinations of printed circuit boards and ceramic substrates and subassemblies thereof for color TV, with components listed in additional U.S. note 4 to chapter 85	Aircraft
8529.90.49	Combinations of parts of television receivers specified in U.S. note 10 to chapter 85, other than printed circuit assemblies, nesoi	Aircraft
8529.90.55	Flat panel screen assemblies for TV reception apparatus, color video monitors and video projectors	Aircraft
8529.90.63	Parts of printed circuit assemblies (including face plates and lock latches) for television cameras	Aircraft
8529.90.68	Parts of printed circuit assemblies (including face plates and lock latches) for television apparatus other than television cameras	Aircraft
8529.90.73	Parts of printed circuit assemblies (including face plates and lock latches) for radar, radio navigational aid or radio remote control app.	Aircraft

HTSUS	Description	Scope Limitations
8529.90.77	Parts of printed circuit assemblies (including face plates and lock latches) for other apparatus of headings 8524 to 8528, nesoi	Aircraft
8529.90.78	Mounted lenses for use in closed circuit television cameras, separately imported, with or without attached electrical connectors or motors	Aircraft
8529.90.81	Other parts of television cameras, nesoi	Aircraft
8529.90.83	Other parts of television apparatus (other than television cameras), nesoi	Aircraft
8529.90.87	Parts suitable for use solely or principally with the apparatus of 8525 and 8527 (except television apparatus or cellular phones), nesoi	Aircraft
8529.90.88	Subassemblies with 2 or more printed circuit boards or ceramic substrates, except tuners or convergence assemblies, for color TV, entered with components in additional U.S. note 4 to chapter 85	Aircraft
8529.90.89	Subassemblies with 2 or more printed circuit boards or ceramic substrates, except tuners or convergence assemblies, for color TV, other	Aircraft
8529.90.93	Parts of television apparatus, nesoi	Aircraft
8529.90.95	Assemblies and subassemblies of radar, radio navigational aid or remote control apparatus, of 2 or more parts joined together, nesoi	Aircraft
8529.90.97	Parts suitable for use solely or principally in radar, radio navigational aid or radio remote control apparatus, nesoi	Aircraft
8529.90.98	Parts suitable for use solely or principally with the apparatus of headings 8524 through 8528, nesoi	Aircraft
8531.10.00	Electric burglar or fire alarms and similar apparatus	Aircraft
8531.20.00	Indicator panels incorporating liquid crystal devices (LCD's) or light emitting diodes (LED's)	Aircraft
8531.80.15	Doorbells, chimes, buzzers, and similar apparatus	Aircraft
8531.80.90	Electric sound or visual signaling apparatus, nesoi	Aircraft
8536.70.00	Connectors for optical fibers, optical fiber bundles or cables	Aircraft
8539.10.00	Sealed beam lamp units	Aircraft
8539.51.00	Light-emitting diode (LED) modules	Aircraft
8543.70.42	Flight data recorders	Aircraft
8543.70.45	Other electric synchros and transducers; defrosters and demisters with electric resistors for aircraft	Aircraft
8543.70.60	Electrical machines and apparatus nesoi, designed for connection to telegraphic or telephonic apparatus, instruments or networks	Aircraft
8543.70.80	Microwave amplifiers	Aircraft

HTSUS	Description	Scope Limitations
8543.70.91	Digital signal processing apparatus capable of connecting to a wired or wireless network for sound mixing	Aircraft
8543.70.95	Touch screens without display capabilities for incorporation in apparatus having a display	Aircraft
8543.90.12	Parts of physical vapor deposition apparatus of subheading 8543.70	Aircraft
8543.90.15	Assemblies and subassemblies for flight data recorders, consisting of 2 or more parts pieces fastened together, printed circuit assemblies	Aircraft
8543.90.35	Assemblies and subassemblies for flight data recorders, consisting of 2 or more parts pieces fastened together, not printed circuit assemblies	Aircraft
8543.90.65	Printed circuit assemblies of flat panel displays other than for reception apparatus for television of heading 8528, except for subheadings 8528.52 or 8528.62	Aircraft
8543.90.68	Printed circuit assemblies of electrical machines and apparatus, having individual functions, nesoi	Aircraft
8543.90.85	Parts, nesoi, of flat panel displays other than for reception apparatus for television of heading 8528, except for subheadings 8528.52 or 8528.62	Aircraft
8543.90.88	Parts (other than printed circuit assemblies) of electrical machines and apparatus, having individual functions, nesoi	Aircraft
8544.30.00	Insulated ignition wiring sets and other wiring sets of a kind used in vehicles, aircraft or ships	Aircraft
8801.00.00	Balloons, dirigibles and non-powered aircraft, gliders and hang gliders	Aircraft
8802.11.01	Helicopters (except unmanned aircraft of heading 8806), with an unladen weight not over 2,000 kg	Aircraft
8802.12.01	Helicopters (except unmanned aircraft of heading 8806), with an unladen weight over 2,000 kg	Aircraft
8802.20.01	Airplanes and other powered aircraft (except unmanned aircraft of heading 8806), nesoi, with an unladen weight not over 2,000 kg	Aircraft
8802.30.01	Airplanes and other powered aircraft (except unmanned aircraft of heading 8806), nesoi, with an unladen weight over 2,000 kg but not over 15,000 kg	Aircraft
8802.40.01	Airplanes and other powered aircraft (except unmanned aircraft of heading 8806), nesoi, with an unladen weight over 15,000 kg	Aircraft
8805.29.00	Ground flying trainers and parts thereof, other than air combat simulators	Aircraft
8806.10.00	Unmanned aircraft designed for the carriage of passengers	Aircraft
8806.21.00	Unmanned aircraft, not for the carriage of passengers, for remote-controlled flight only, max take-off weight not more than 250g	Aircraft

HTSUS	Description	Scope Limitations
8806.22.00	Unmanned aircraft, not for the carriage of passengers, for remote-controlled flight only, max take-off weight more than 250g but less than 7kg	Aircraft
8806.23.00	Unmanned aircraft, not for the carriage of passengers, for remote-controlled flight only, max take-off weight more than 7kg but less than 25kg	Aircraft
8806.24.00	Unmanned aircraft, not for the carriage of passengers, for remote-controlled flight only, max take-off weight more than 25kg but less than 150 kg	Aircraft
8806.29.00	Unmanned aircraft, not for the carriage of passengers, for remote-controlled flight only, max take-off weight more than 150 kg	Aircraft
8806.91.00	Unmanned aircraft, not for the carriage of passengers, not for remote-controlled flight only, nesoi, max take-off weight not more than 250g	Aircraft
8806.92.00	Unmanned aircraft, not for the carriage of passengers, not for remote-controlled flight only, nesoi, max take-off weight more 250g less than 7kg	Aircraft
8806.93.00	Unmanned aircraft, not for the carriage of passengers, not for remote-controlled flight only, nesoi, max take-off weight more than 7kg but less than 25kg	Aircraft
8806.94.00	Unmanned aircraft, not for the carriage of passengers, not for remote-controlled flight only, nesoi, max take-off weight more than 25kg but less than 150 kg	Aircraft
8806.99.00	Unmanned aircraft, not for the carriage of passengers, not for remote-controlled flight only, nesoi, max take-off weight more than 150 kg	Aircraft
8807.10.00	Parts of aircraft of headings 8801, 8802 or 8806, propellers and rotors and parts thereof	Aircraft
8807.20.00	Parts of aircraft of headings 8801, 8802 or 8806, undercarriages and parts thereof	Aircraft
8807.30.00	Parts of aircraft of headings 8801, 8802 or 8806, for airplanes, helicopters, unmanned aircraft, other than propellers, rotors or undercarriages, nesoi	Aircraft
8807.90.90	Parts of aircraft of headings 8801, 8802 or 8806, not for airplanes, helicopters or unmanned aircraft, nesoi	Aircraft
9001.90.40	Lenses nesoi, unmounted	Aircraft
9001.90.50	Prisms, unmounted	Aircraft
9001.90.60	Mirrors, unmounted	Aircraft
9001.90.80	Half-tone screens designed for use in engraving or photographic processes, unmounted	Aircraft
9001.90.90	Optical elements nesoi, unmounted	Aircraft
9002.90.20	Prisms, mounted, for optical uses	Aircraft

HTSUS	Description	Scope Limitations
9002.90.40	Mirrors, mounted, for optical uses	Aircraft
9002.90.70	Half-tone screens, mounted, designed for use in engraving or photographic processes	Aircraft
9002.90.85	Mounted lenses suitable for use in, and entered separately from, closed circuit television cameras, with or without attached electrical connectors or motors	Aircraft
9002.90.95	Mounted optical elements, nesoi; parts and accessories of mounted optical elements, nesoi	Aircraft
9014.10.10	Optical direction finding compasses	Aircraft
9014.10.60	Gyroscopic directing finding compasses, other than electrical	Aircraft
9014.10.70	Electrical direction finding compasses	Aircraft
9014.10.90	Direction finding compasses, other than optical instruments, gyroscopic compasses or electrical	Aircraft
9014.20.20	Optical instruments and appliances (other than compasses) for aeronautical or space navigation	Aircraft
9014.20.40	Automatic pilots for aeronautical or space navigation	Aircraft
9014.20.60	Electrical instruments and appliances (other than compasses) for aeronautical or space navigation	Aircraft
9014.20.80	Nonelectrical instruments and appliances (other than compasses) for aeronautical or space navigation	Aircraft
9014.90.10	Parts and accessories of automatic pilots for aeronautical or space navigation of subheading 9014.20.40	Aircraft
9014.90.20	Parts and accessories of nonelectrical instruments and appliances for aeronautical or space navigation of subheading 9014.20.80	Aircraft
9014.90.40	Parts and accessories of nonelectrical navigational instruments and appliances nesoi of subheading 9014.80.50	Aircraft
9014.90.60	Parts and accessories of navigational instruments and appliances, nesoi	Aircraft
9020.00.40	Underwater breathing devices designed as a complete unit to be carried on the person and not requiring attendants, parts and accessories thereof	Aircraft
9020.00.60	Breathing appliances, nesoi, and gas masks, except protective masks having neither mechanical parts or replaceable filters, parts, accessories thereof	Aircraft
9025.11.20	Clinical thermometers, liquid-filled, for direct reading, not combined with other instruments	Aircraft
9025.11.40	Liquid-filled thermometers, for direct reading, not combined with other instruments, other than clinical thermometers	Aircraft
9025.19.40	Pyrometers, not combined with other instruments	Aircraft
9025.19.80	Thermometers, for direct reading, not combined with other instruments, other than liquid-filled thermometers	Aircraft

HTSUS	Description	Scope Limitations
9025.80.10	Electrical hydrometers and similar floating instruments, thermometers, pyrometers, barometers, hygrometers, psychometers, and any combination	Aircraft
9025.80.15	Nonelectrical barometers, not combined with other instruments	Aircraft
9025.80.20	Hydrometers and similar floating instruments, whether or not incorporating a thermometer, non-recording, other than electrical	Aircraft
9025.80.35	Hygrometers and psychrometers, non-electrical, non-recording	Aircraft
9025.80.40	Thermographs, barographs, hygrographs and other recording instruments, other than electrical	Aircraft
9025.80.50	Combinations of thermometers, barometers and similar temperature and atmosphere measuring and recording instruments, nonelectrical	Aircraft
9025.90.06	Other parts and accessories of hydrometers and like floating instruments, thermometers, pyrometers, barometers, hygrometers, psychrometers and combinations	Aircraft
9026.10.20	Electrical instruments and apparatus for measuring or checking the flow or level of liquids	Aircraft
9026.10.40	Flow meters, other than electrical, for measuring or checking the flow of liquids	Aircraft
9026.10.60	Instruments and apparatus for measuring or checking the level of liquids, other than flow meters, non-electrical	Aircraft
9026.20.40	Electrical instruments and apparatus for measuring or checking the pressure of liquids or gases	Aircraft
9026.20.80	Instruments and apparatus, other than electrical, for measuring or checking the pressure of liquids or gases	Aircraft
9026.80.20	Electrical instruments and apparatus for measuring or checking variables of liquids or gases, nesoi	Aircraft
9026.80.40	Nonelectrical heat meters incorporating liquid supply meters, and anemometers	Aircraft
9026.80.60	Nonelectrical instruments and apparatus for measuring or checking variables of liquids or gases, nesoi	Aircraft
9026.90.20	Parts and accessories of electrical instruments and apparatus for measuring or checking variables of liquids or gases	Aircraft
9026.90.40	Parts and accessories of nonelectrical flow meters, heat meters incorporating liquid supply meters and anemometers	Aircraft
9026.90.60	Parts and accessories of nonelectrical instruments and apparatus for measuring or checking variables of liquids or gases, nesoi	Aircraft
9029.10.80	Revolution counters, production counters, odometers, pedometers and the like, other than taximeters	Aircraft
9029.20.40	Speedometers and tachometers, other than bicycle speedometers	Aircraft

HTSUS	Description	Scope Limitations
9029.90.80	Parts and accessories of revolution counters, production counters, odometers, pedometers and the like, of speedometers nesoi and tachometers	Aircraft
9030.10.00	Instruments and apparatus for measuring or detecting ionizing radiations	Aircraft
9030.20.05	Oscilloscopes and oscillographs, specially designed for telecommunications	Aircraft
9030.20.10	Oscilloscopes and oscillographs, nesoi	Aircraft
9030.31.00	Multimeters for measuring or checking electrical voltage, current, resistance or power, without a recording device	Aircraft
9030.32.00	Multimeters, with a recording device	Aircraft
9030.33.34	Resistance measuring instruments	Aircraft
9030.33.38	Other instruments and apparatus, nesoi, for measuring or checking electrical voltage, current, resistance or power, without a recording device	Aircraft
9030.39.01	Instruments and apparatus, nesoi, for measuring or checking electrical voltage, current, resistance or power, with a recording device	Aircraft
9030.40.00	Instruments and apparatus specially designed for telecommunications	Aircraft
9030.84.00	Instruments and apparatus for measuring, checking or detecting electrical quantities or ionizing radiations, nesoi, with a recording device	Aircraft
9030.89.01	Instruments and apparatus for measuring, checking or detecting electrical quantities or ionizing radiations, nesoi, without a recording device	Aircraft
9030.90.25	Printed circuit assemblies for instruments and apparatus for measuring or detecting ionizing radiation	Aircraft
9030.90.46	Parts and accessories for instruments and apparatus for measuring or detecting ionizing radiation, nesoi	Aircraft
9030.90.66	Printed circuit assemblies for subheadings and apparatus of subheadings 9030.40 or 9030.82	Aircraft
9030.90.68	Printed circuit assemblies, nesoi	Aircraft
9030.90.84	Parts and accessories for instruments and apparatus for measuring or checking semiconductor wafers or devices, nesoi	Aircraft
9030.90.89	Parts and accessories for articles of subheadings 9030.20 to 9030.84, nesoi	Aircraft
9031.80.40	Electron beam microscopes fitted with equipment specifically designed for the handling and transport of semiconductor devices or reticles	Aircraft
9031.80.80	Measuring and checking instruments, appliances and machines, nesoi	Aircraft
9031.90.21	Parts and accessories of profile projectors	Aircraft

HTSUS	Description	Scope Limitations
9031.90.45	Bases and frames for the optical coordinate-measuring machines of subheading 9031.49.40	Aircraft
9031.90.54	Parts and accessories of measuring and checking optical instruments and appliances of subheading 9031.41 or 9031.49.70	Aircraft
9031.90.59	Parts and accessories of measuring and checking optical instruments and appliances, other than test benches or profile projectors, nesoi	Aircraft
9031.90.70	Parts and accessories of articles of subheading 9031.80.40	Aircraft
9031.90.91	Parts and accessories of measuring or checking instruments, appliances and machines, nesoi	Aircraft
9032.10.00	Automatic thermostats	Aircraft
9032.20.00	Automatic manostats	Aircraft
9032.81.00	Hydraulic and pneumatic automatic regulating or controlling instruments and apparatus	Aircraft
9032.89.20	Automatic voltage and voltage-current regulators, designed for use in a 6, 12, or 24 V system	Aircraft
9032.89.40	Automatic voltage and voltage-current regulators, not designed for use in a 6, 12, or 24 V system	Aircraft
9032.89.60	Automatic regulating or controlling instruments and apparatus, nesoi	Aircraft
9032.90.21	Parts and accessories of automatic voltage and voltage-current regulators designed for use in a 6, 12, or 24 V system, nesoi	Aircraft
9032.90.41	Parts and accessories of automatic voltage and voltage-current regulators, not designed for use in a 6, 12, or 24 V system, nesoi	Aircraft
9032.90.61	Parts and accessories for automatic regulating or controlling instruments and apparatus, nesoi	Aircraft
9033.00.90	Other parts and accessories for machines, appliances, instruments or apparatus of chapter 90, nesoi	Aircraft
9104.00.05	Instrument panel clocks for vehicles, air/spacecraft or vessels, clock movement over 50 mm wide, opto-electronic display only, not over $10 each	Aircraft
9104.00.10	Instrument panel clocks for vehicles, air/spacecraft or vessels, clock movement over 50 mm wide, electric, not optoelectronic display, not over $10 each	Aircraft
9104.00.20	Instrument panel clocks for vehicles, air/spacecraft or vessels, clock movement over 50 mm wide, nonelectric, valued not over $10 each	Aircraft
9104.00.25	Instrument panel clocks for vehicles, air/spacecraft or vessels, clock movement over 50 mm wide, opto-electronic display only, over $10 each	Aircraft

HTSUS	Description	Scope Limitations
9104.00.30	Instrument panel clocks for vehicles, air/spacecraft or vessels, clock movement over 50 mm wide, electric, not optoelectronic display, over $10 each	Aircraft
9104.00.40	Instrument panel clocks for vehicles, air/spacecraft or vessels, clock movement over 50 mm wide, non-electric, valued over $10 each	Aircraft
9104.00.45	Instrument panel clocks for vehicles, air/spacecraft or vessels, watch or clock movement not over 50 mm wide, opto-electronic display only	Aircraft
9104.00.50	Instrument panel clocks for vehicles, air/spacecraft, vessels, watch or clock movement not over 50 mm wide, electric, not opto-electronic display	Aircraft
9104.00.60	Instrument panel clocks for vehicles, air/spacecraft or vessels, clock or watch movement not over 50 mm wide, nonelectric	Aircraft
9109.10.50	Clock movements nesoi, complete and assembled, electrically operated, with opto-electronic display only	Aircraft
9109.10.60	Clock movements nesoi, complete and assembled, electrically operated, with display nesoi, measuring not over 50 mm in width or diameter	Aircraft
9109.90.20	Clock movements, complete and assembled, not electrically operated, measuring not over 50 mm in width or diameter	Aircraft
9401.10.40	Seats, of a kind used for aircraft, leather upholstered	Aircraft
9401.10.80	Seats, of a kind used for aircraft (other than leather upholstered)	Aircraft
9403.20.00	Furniture (other than seats) of metal nesoi, other than of a kind used in offices	Aircraft
9403.70.40	Furniture (other than seats and other than of heading 9402) of reinforced or laminated plastics nesoi	Aircraft
9403.70.80	Furniture (other than seats and other than of heading 9402) of plastics (other than reinforced or laminated) nesoi	Aircraft
9405.11.40	Chandeliers and other electric ceiling or wall lighting fittings, of brass, designed for use solely with LED sources	Aircraft
9405.11.60	Chandeliers and other electric ceiling or wall lighting fixtures, of base metal (other than brass), designed for use solely with LED sources	Aircraft
9405.11.80	Chandeliers and other electric ceiling or wall lighting fixtures, not of base metal, designed for use solely with LED sources	Aircraft
9405.19.40	Chandeliers and other electric ceiling or wall lighting fittings, of brass, not designed for use solely with LED sources	Aircraft
9405.19.60	Chandeliers and other electric ceiling or wall lighting fixtures, of base metal (other than brass), not designed for use solely with LED sources	Aircraft
9405.19.80	Chandeliers and other electric ceiling or wall lighting fixtures, not of base metal, not designed for use solely with LED sources	Aircraft

HTSUS	Description	Scope Limitations
9405.61.20	Illuminated signs, illuminated name plates and the like, of brass, designed for use solely with LED sources	Aircraft
9405.61.40	Illuminated signs, illuminated name plates and the like, of base metal (other than brass), designed for use solely with LED sources	Aircraft
9405.61.60	Illuminated signs, illuminated name plates and the like, not of base metal, designed for use solely with LED sources	Aircraft
9405.69.20	Illuminated signs, illuminated name plates and the like, of brass, not designed for use solely with LED sources	Aircraft
9405.69.40	Illuminated signs, illuminated name plates and the like, of base metal (other than brass), not designed for use solely with LED sources	Aircraft
9405.69.60	Illuminated signs, illuminated name plates and the like, not of base metal, not designed for use solely with LED sources	Aircraft
9405.92.00	Parts of lamps, lighting fixtures, illuminated signs and the like, of plastics	Aircraft
9405.99.20	Parts of lamps, lighting fixtures, illuminated signs and the like, of brass	Aircraft
9405.99.40	Parts of lamps, lighting fixtures, illuminated signs and the like, not of glass, plastics or brass	Aircraft
9620.00.50	Monopods, bipods, tripods and similar articles of plastics, nesoi	Aircraft
9620.00.60	Monopods, bipods, tripods and similar articles of graphite and other carbon, nesoi	Aircraft
9802.00.40	Articles returned to the United States after having been exported for repairs or alterations made pursuant to a warranty	Aircraft
9802.00.50	Articles returned to the United States after having been exported for repairs or alterations, other	Aircraft
9802.00.60	Any article of metal (as defined in U.S. note 3(e) of this subchapter) manufactured in the United States or subjected to a process of manufacture in the United States, if exported for further processing, and if the exported article as processed outside the United States, or the article which results from the processing outside the United States, is returned to the United States for further processing	Aircraft
9802.00.80	Articles, except goods of heading 9802.00.91 and goods imported under provisions of subchapter XIX of this chapter and goods imported under provisions of subchapter XX, assembled abroad in whole or in part of fabricated components, the product of the United States, which (a) were exported in condition ready for assembly without further fabrication, (b) have not lost their physical identity in such articles by change in form, shape or otherwise, and (c) have not been advanced in value or improved in condition abroad except by being	Aircraft

HTSUS	Description	Scope Limitations
	assembled and except by operations incidental to the assembly process such as cleaning, lubricating and painting	
9818.00.05	Spare parts necessarily installed before first entry into the United States, upon first entry into the United States of each such spare part purchased in, or imported from, a foreign country	Aircraft
9818.00.07	Other, upon first arrival in any port of the United States of any vessel described in U.S. note 1 to subchapter XVIII	Aircraft

Letter of November 20, 2025

Letter From the President to United States Steel Corporation Senior Vice President, General Counsel and Secretary Scot Duncan

Mr. Scot Duncan

Senior Vice President, General Counsel and Secretary

United States Steel Corporation

Corporate Headquarters

600 Grant Street

Pittsburgh, Pennsylvania 15219

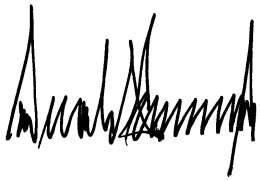
Dear Mr. Duncan:

American national security depends on the continued operation of the United States Steel Corporation (U.S. Steel) and its various United States production facilities. I, President Donald J. Trump, hold the Class G Preferred Stock (Golden Share) in U.S. Steel, pursuant to the National Security Agreement (Agreement) between the United States Government, Nippon Steel Corporation, and U.S. Steel. The Golden Share provides the President with the ability to oversee U.S. Steel's activities and to ensure the company continues operating its United States-based production facilities.

The United States Government must closely monitor U.S. Steel and its compliance with the Agreement. Accordingly, I designate the Under Secretary of Commerce for International Trade, William Kimmitt, as my designee, to exercise the authorities enumerated in Article IV(B) Section 7 of the Sixth Amended and Restated Certificate of Incorporation of the United States Steel Corporation. Further, I am exercising my exclusive right as the holder of the Golden Share to appoint and elect one director of U.S. Steel (Class G Director) pursuant to Article IV(B) Section 4 of the Sixth Amended and Restated Certificate of Incorporation of the United States Steel Corporation.

I hereby appoint and elect the Chief Counsel of the Department of Commerce's Investment Accelerator, David Shapiro, as the United States Government's Class G Director. Unless I direct otherwise, these designations shall last for as long as Under Secretary Kimmitt and Mr. Shapiro are employees of the United States Government.

Sincerely,



THE WHITE HOUSE,
Washington, November 20, 2025

LIST OF PUBLIC LAWS

Note: No public bills which have become law were received by the Office of the Federal Register for inclusion in today's **List of Public Laws**.

Last List November 24, 2025

Public Laws Electronic Notification Service (PENS)

PENS is a free email notification service of newly enacted public laws. To subscribe, go to *https://portalguard.gsa.gov/__*layouts/PG/register.aspx.

Note: This service is strictly for email notification of new laws. The text of laws is not available through this service. **PENS** cannot respond to specific inquiries sent to this address.
