Section 1833(t)(9)(A) of the Act requires the Secretary to review, not less often than annually, and revise the APC groups, the relative payment weights, and the wage and other adjustments described in section 1833(t)(2) of the Act to consider changes in medical practice, changes in technology, the addition of new services, new cost data, and other relevant information and factors. Section 1833(t)(9)(A) of the Act also requires the Secretary to consult with an expert outside advisory panel composed of an appropriate selection of representatives of providers to review (and advise the Secretary concerning) the clinical integrity of the APC groups and the relative payment weights. We note that the Advisory Panel on Hospital Outpatient Payment (also known as the HOP Panel or the Panel) recommendations for specific services for the CY 2026 OPPS update will be discussed in the relevant specific sections throughout this final rule with comment period.

In addition, section 1833(t)(2) of the Act provides that, subject to certain exceptions, the items and services within an APC group cannot be considered comparable regarding the use of resources if the highest cost for an item or service in the group is more than 2 times greater than the lowest cost for an item or service within the same group (referred to as the ''2 times rule''). The statute authorizes the Secretary to make exceptions to the 2 times rule in unusual cases, such as for low-volume items and services (but the Secretary may not make such an exception in the case of a drug or biological that has been designated as an orphan drug under section 526 of the Federal Food, Drug, and Cosmetic Act). In determining the APCs with a 2 times rule violation, we consider only those HCPCS codes that are significant based on the number of claims. We note that, for purposes of identifying significant procedure codes for examination under the 2 times rule, we consider procedure codes that have more than 1,000 single major claims or procedure codes that both have more than 99 single major claims and contribute at least 2 percent of the single major claims used to establish the APC cost to be significant (75 FR 71832). This longstanding definition of when a procedure code is significant for purposes of the 2 times rule was selected because we believe that a subset of 1,000 or fewer claims is negligible within the set of approximately 100 million single procedure or single session claims we use for establishing costs. Similarly, a procedure code for which there are fewer than 99 single claims and that comprises less than 2 percent of the single major claims within an APC will have a negligible impact on the APC cost (75 FR 71832). In the CY 2026 OPPS/ASC proposed rule, we proposed to make exceptions to this limit on the variation of costs within each APC group in unusual cases, such as for certain low-volume items and services.

For the CY 2026 OPPS update, we identified the APCs with violations of the 2 times rule, and we proposed changes to the procedure codes assigned to these APCs (with the exception of those APCs for which we proposed a 2 times rule exception) in Addendum B to the CY 2026 OPPS/ASC proposed rule. We note that Addendum B does not appear in the printed version of the **Federal Register** as part of this final rule with comment period. Rather, it is published and made available via the internet on the CMS website at *https://www.cms.gov/medicare/payment/prospective-payment-systems/hospital-outpatient/regulations-notices*.

To eliminate a violation of the 2 times rule and improve clinical and resource homogeneity in the APCs for which we did not propose a 2 times rule exception, we proposed to reassign these procedure codes to new APCs that contain services that are similar with regard to both their clinical and resource characteristics. In many cases, the proposed procedure code reassignments and associated APC reconfigurations for CY 2026 included in the CY 2026 OPPS/ASC proposed rule are related to changes in costs of services that were observed in the CY 2024 claims data available for CY 2026 ratesetting. Addendum B to the CY 2026 OPPS/ASC proposed rule identifies with a comment indicator ''CH'' those procedure codes for which we proposed a change to the APC assignment or status indicator, or both, that were initially assigned in the July 1, 2025, OPPS Addendum B Update, which is available via the internet on the CMS website at *https://www.cms.gov/medicare/payment/prospective-payment-systems/hospital-outpatient/addendum-a-b-update.*

3. APC Exceptions to the 2 Times Rule

While considering the APC changes that we proposed for CY 2026, we reviewed all of the APCs for which we identified 2 times rule violations to determine whether any of the APCs

would qualify for an exception. We used the following criteria to evaluate whether to propose exceptions to the 2 times rule for affected APCs:

- Resource homogeneity;
- Clinical homogeneity;
- Hospital outpatient setting utilization;
- Frequency of service (volume); and
- Opportunity for upcoding and code fragments.

For a detailed discussion of these criteria, we refer readers to the April 7, 2000 final rule (65 FR 18457 through 18458).

Based on the CY 2024 claims data available for the CY 2026 OPPS/ASC proposed rule, we found 26 APCs with violations of the 2 times rule. We applied the criteria as described above to identify the APCs for which we proposed to make exceptions under the 2 times rule for CY 2026 and found that all of the 26 APCs we identified meet the criteria for an exception to the 2 times rule based on the CY 2024 claims data available for the CY 2026 OPPS/ASC proposed rule. We note that, on an annual basis, based on our analysis of the latest claims data, we identify violations to the 2 times rule and propose changes when appropriate. Those APCs that violate the 2 times rule are identified and appear in Table 16. In addition, we did not include in that determination those APCs where a 2 times rule violation was not a relevant concept, such as APC 5401 (Dialysis), which only has two HCPCS codes assigned to it that have similar geometric mean costs and do not create a 2 times rule violation. Therefore, we have only identified those APCs, including those with criteria-based costs, such as device-dependent CPT/HCPCS codes, with violations of the 2 times rule, where a 2 times rule violation is a relevant concept.

Table 12 of the CY 2026 OPPS/ASC proposed rule (90 FR 33537) listed the APCs for which we proposed to make an exception under the 2 times rule for CY 2026 based on the criteria cited above and claims data submitted between January 1, 2024, and December 31, 2024, and CCRs, if available. The proposed geometric mean costs for covered hospital outpatient services for these and all other APCs that were used in the development of the CY 2026 OPPS/ASC proposed rule can be found via the internet on the CMS website at *https://www.cms.gov/medicare/payment/prospective-payment-systems/hospital-outpatient/regulations-notices.*

Based on the updated final rule CY 2024 claims data used for this final rule with comment period, we found a total of 27APCs with violations of the 2 times rule. Of these 27 total APCs, 24 were identified in the proposed rule and three are newly identified in this final rule with comment period. The following two APCs appeared in Table 12 of the CY 2026 OPPS/ASC proposed rule (90 FR 33537) as violating the 2 times rule. However, after conducting data analysis for this final rule with comment period, we found that the APCs no longer violate the 2 times rule:

- APC 5613 (Level 3 Therapeutic Radiation Treatment Preparation).
- APC 5811 (Manipulation Therapy).

In addition, the following three APCs are newly identified with 2 times rule violations using updated data for this final rule with comment period:

- APC 5024 (Level 4 Type A ED Visits).
- APC 5052 (Level 2 Skin Procedures).
- APC 5722 (Level 2 Diagnostic Tests and Related Services).

We received comments on the APCs located in Table 12 of the CY 2026 OPPS/ASC proposed rule (90 FR 33537), along with comments on APC assignments for specific HCPCS codes. These comments and our responses can be found in section III.E. of this final rule with comment period.

Based on our analysis of the CY 2024 costs from hospital claims and cost report data available for this final rule with comment period, we are finalizing our proposals with some modifications. Specifically, we are finalizing our proposal to except the 24 proposed APCs that continue to have 2 times violations in this final rule with comment period data from the 2 times rule for CY 2024 claims data and also except three additional APCs that did not violate the 2 times rule in the CY 2026 OPPS/ASC proposed rule data, but do violate the 2 times rule in this final rule with comment period data, for a total of 27APCs for which we identified 2 times rule violations but that qualify for exceptions.

In summary, Table 16 lists the 27 APCs that we are excepting from the 2 times rule for CY 2026 based on the criteria described earlier and a review of updated claims data for dates of service between January 1, 2024, and December 31, 2024, that were processed on or before June 30, 2025, and updated CCRs, if available. We note that, for cases in which a recommendation by the HOP Panel appears to result in or allow a violation of the 2 times rule, we generally accept the HOP Panel's recommendation because those recommendations are based on explicit consideration of resource use, clinical homogeneity, site of service, and the quality of the claims data used to determine the APC payment rates. The geometric mean costs for hospital outpatient services for these and all other APCs that were used in the development of this final rule with comment period can be found via the internet on the CMS website at *https://www.cms.gov/medicare/payment/prospective-payment-systems/hospital-outpatient/regulations-notices*.

TABLE 16: FINAL CY 2026 APC EXCEPTIONS TO THE 2 TIMES RULE

APC	APC Group Title
5012	Clinic Visits and Related Services
5024	Level 4 Type A ED Visits
5052	Level 2 Skin Procedures
5054	Level 4 Skin Procedures
5071	Level 1 Excision/Biopsy/Incision and Drainage
5301	Level 1 Upper GI Procedures
5502	Level 2 Extraocular, Repair, and Plastic Eye Procedures
5521	Level 1 Imaging without Contrast
5522	Level 2 Imaging without Contrast
5523	Level 3 Imaging without Contrast
5524	Level 4 Imaging without Contrast
5572	Level 2 Imaging with Contrast
5611	Level 1 Therapeutic Radiation Treatment Preparation
5612	Level 2 Therapeutic Radiation Treatment Preparation
5627	Level 7 Radiation Therapy
5671	Level 1 Pathology
5674	Level 4 Pathology
5691	Level 1 Drug Administration
5692	Level 2 Drug Administration
5722	Level 2 Diagnostic Tests and Related Services
5724	Level 4 Diagnostic Tests and Related Services
5731	Level 1 Minor Procedures
5734	Level 4 Minor Procedures
5791	Pulmonary Treatment
5821	Level 1 Health and Behavior Services
5822	Level 2 Health and Behavior Services
5823	Level 3 Health and Behavior Services

C. New Technology APCs

1. Background

In the CY 2002 OPPS final rule (66 FR 59903), we finalized changes to the time period in which a service can be eligible for payment under a New Technology APC. Beginning in CY 2002, we retain services within New Technology APC groups until we gather sufficient claims data to enable us to assign the service to an appropriate clinical APC. This policy allows us to move a service from a New Technology APC in less than 2 years if sufficient data are available. It also allows us to retain a service in a New Technology APC for more than 2 years if sufficient data upon which to base a decision for reassignment have not been collected.

We also adopted in the CY 2002 OPPS final rule the following criteria for assigning a complete or comprehensive service to a New Technology APC: (1) the service must be truly new, meaning it cannot be appropriately reported by an existing HCPCS code assigned to a clinical APC and does not appropriately fit within an existing clinical APC; (2) the service is not eligible for transitional pass-through payment (however, a truly new, comprehensive service could qualify for assignment to a new technology APC even if it involves a device or drug that could, on its own, qualify for pass-through payment); and (3) the service falls within the scope of Medicare benefits under section 1832(a) of the Act and is reasonable and necessary in accordance with section 1862(a)(1)(A) of the Act (66 FR 59898 through 59903). For additional information about our New Technology APC policy, we refer readers to *https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/HospitalOutpatientPPS/passthroughpayment* on the CMS website and then follow the instructions to access the MEARIS™ system for OPPS New Technology APC applications.[15]

In the CY 2004 OPPS final rule with comment period (68 FR 63416), we restructured the New Technology APCs to make the cost intervals more consistent across payment levels and refined the cost bands for these APCs to retain two parallel sets of New Technology APCs: one set with a status indicator of ''S'' (Significant Procedures, Not Discounted when Multiple. Paid under OPPS; separate APC payment) and the other set with a status indicator of ''T'' (Significant Procedure, Multiple Reduction Applies. Paid under OPPS; separate APC payment). These current New Technology APC configurations allow us to price new technology services more appropriately and consistently.

For CY 2025, there were 52 New Technology APC levels, ranging from the lowest cost band assigned to APC 1491 (New Technology—Level 1A ($0–$10)) to the highest cost band assigned to APC 1908 (New Technology—Level 52 ($145,001–$160,000)). We note that the cost bands for the New Technology APCs, specifically, APCs 1491 through 1599 and 1901 through 1908, vary with increments ranging from $10 to $14,999. These cost bands identify the APCs to which new technology procedures and services with estimated service costs that fall within those cost bands are

[15] Currently approved under OMB control number 0938–0860; expires October 31, 2027.

assigned under the OPPS. Payment for each APC is made at the mid-point of the APC's assigned cost band. For example, payment for APC 1507 (New Technology—Level 7 ($501–$600)) is made at $550.50.

Under the OPPS, one of our goals is to make payments that are appropriate for the services that are necessary for the treatment of Medicare beneficiaries. The OPPS, like other Medicare payment systems, is budget neutral and increases are limited to the annual hospital market basket increase reduced by the productivity adjustment. We believe that our payment rates reflect the costs that are associated with providing care to Medicare beneficiaries and are adequate to ensure access to services (80 FR 70374). For many emerging technologies, there is a transitional period during which utilization may be low, often because providers are first learning about the technologies and their clinical utility. Quite often, parties request that Medicare make higher payments under the New Technology APCs for new procedures in that transitional phase. These requests, and their accompanying estimates for expected total patient utilization, often reflect very low rates of patient use of expensive equipment, resulting in high per-use costs for which requesters believe Medicare should make full payment. Medicare does not, and we believe should not, assume responsibility for more than its share of the costs of procedures based on projected utilization for Medicare beneficiaries and does not set its payment rates based on initial projections of low utilization for services that require expensive capital equipment. For the OPPS, we rely on hospitals to make informed business decisions regarding the acquisition of high-cost capital equipment, taking into consideration their knowledge about their entire patient base (Medicare beneficiaries included) and an understanding of Medicare's and other payers' payment policies. We refer readers to the CY 2013 OPPS/ASC final rule with comment period (77 FR 68314) for further discussion regarding this payment policy.

Some services assigned to New Technology APCs have low annual volume, which we consider to be fewer than 100 claims in the year of claims data used for ratesetting (86 FR 63528). Where utilization of services assigned to a New Technology APC is low, it can lead to wide variation in payment rates from year to year, resulting in even lower utilization and potential barriers to access of new technologies, which ultimately limits our ability to assign the service to the appropriate clinical APC. To mitigate these issues, we finalized a policy in the CY 2019 OPPS/ASC final rule with comment period to utilize our equitable adjustment authority at section 1833(t)(2)(E) of the Act to adjust how we determine the costs for low-volume services assigned to New Technology APCs (83 FR 58892 through 58893). Specifically, in the CY 2019 OPPS/ASC final rule with comment period (83 FR 58893), we established that, in each of our annual rulemakings, we would calculate and present the result of each statistical methodology (arithmetic mean, geometric mean, and median) based on up to 4 years of claims data and solicit public comment on which methodology should be used to establish the payment rate for the low-volume new technology service. In the CY 2022 OPPS/ASC final rule (86 FR 63529), we replaced the New Technology APC low volume policy with the universal low volume APC policy. Unlike the New Technology APC low volume policy, the universal low volume APC policy applies to clinical APCs and brachytherapy APCs, in addition to procedures assigned to New Technology APCs, and uses the highest of the geometric mean, arithmetic mean, or median based on up to 4 years of claims data to set the payment rate for the APC. We refer readers to the CY 2022 OPPS/ASC final rule with comment period (86 FR 63529) for further discussion regarding this policy.

Despite the universal low volume APC policy, we continued to see payment instability for services with very low claims volume of fewer than 10 claims in the 4-year lookback period used under the universal low volume APC policy. For CY 2025, we finalized a policy to exempt services assigned to New Technology APCs with fewer than 10 claims over the 4-year lookback period used for the universal low volume policy. Instead of assigning these services to a different New Technology APC based on the very few claims available, we maintained the New Technology APC assignment for each service from the prior year, CY 2024. We refer readers to the CY 2025 OPPS/ASC final rule with comment period for a discussion on the policy (89 FR 94016 through 94018).

Finally, we note that, in a budget-neutral system, payments may not fully cover hospitals' costs in a particular circumstance, including those for the purchase and maintenance of capital equipment. We rely on hospitals to make their decisions regarding the acquisition of high-cost equipment with the understanding that the Medicare program must be careful to establish its initial payment rates, including those made through New Technology APCs, for new services that lack hospital claims data based on realistic utilization projections for all such services delivered in cost-efficient hospital outpatient settings. As the OPPS acquires claims data regarding hospital costs associated with new procedures, we regularly examine the claims data and any available new information regarding the clinical aspects of new procedures to confirm that our OPPS payments remain appropriate for procedures as they transition into mainstream medical practice (77 FR 68314). For CY 2026, we included the proposed payment rates for New Technology APCs 1491 to 1599 and 1901 through 1908 in Addendum A to the CY 2026 OPPS/ASC proposed rule (which is available on the CMS website at *https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/HospitalOutpatientPPS/Hospital-Outpatient-Regulations-and-Notices*.

2. Continue To Exempt Services With Under 10 Claims in the 4-Year Lookback Period From APC Reassignment Based on the Universal Low Volume Policy

We continue to be concerned about payment stability for services assigned to New Technology APCs, specifically services with fewer than 10 claims in the 4-year lookback period used under the universal low volume APC policy. We also continue to believe that determining initial cost estimates for these services may be particularly challenging, given the lack of cost information for new and innovative technologies, and that we generally utilize claims data from hospitals as soon as these data become available.

We proposed to continue our policy to exempt services assigned to New Technology APCs with fewer than 10 claims over the 4-year lookback period from the universal low volume policy. Instead of assigning these services to a different clinical or New Technology APC based on the very few claims available, we proposed to continue maintaining the New Technology APC assignment for each service from the prior year. For example, for CY 2026, services assigned to New Technology APCs with fewer than 10 claims in the previous 4 years would maintain their New Technology APC assignment from CY 2025. We proposed to continue this policy in future years, until, or unless, an alternative policy is finalized. We maintain that it is appropriate to apply this policy to services assigned to New Technology APCs because these services represent new technologies for which it

may be more challenging to determine an appropriate cost than for other, more established services. We continue to believe 10 claims is an appropriate ceiling for exempting services from reassignment based on the universal low volume APC policy because we believe that at 10 claims a rough standard distribution begins to appear. We also continue to believe that services with so few claims over the 4-year lookback period would be especially vulnerable to large changes in payment rates year-to-year as a result of one or two new claims being available or one or two claims from what was previously the fourth year of the lookback period no longer being included in that period.

Consistent with our overall policy regarding use of updated claims data in the final rule, we proposed to perform a similar analysis for the final rule using updated claims data, including determining whether specific HCPCS codes continue to meet the criteria for our universal low volume APC policy or would be subject to our proposed policy to continue exempting services with fewer than 10 claims in the 4-year lookback period from the universal low volume APC policy and maintain the New Technology APC assignment from the previous year. We would update the APC placement as needed in the final rule.

We received public comments on these proposals. The following is a summary of the comments we received and our responses.

Comment: Commenters generally supported our low volume APC policies. Comments were received regarding specific services assigned to New Technology APCs with low claims volume that supported maintaining the APC assignment as a result of our proposal to continue to exempt services assigned to New Technology APCs with fewer than 10 claims over the 4-year lookback period from the universal low volume policy.

Response: We thank the commenters for their support.

After consideration of public comments, we are finalizing our proposal to continue to exempt services assigned to New Technology APCs with fewer than 10 claims over the 4-year lookback period from the universal low volume policy.

3. Procedures Assigned to New Technology APC Groups for CY 2026

As we described in the CY 2002 OPPS final rule (66 FR 59902), we generally retain a procedure in the New Technology APC to which it is initially assigned until we have obtained sufficient claims data to justify reassignment of the procedure to a clinically appropriate APC. In addition, in cases where we find that our initial New Technology APC assignment was based on inaccurate or inadequate information (although it was the best information available at the time), where we obtain new information that was not available at the time of our initial New Technology APC assignment, or where the New Technology APCs are restructured, we may, based on more recent resource utilization information (including claims data) or the availability of refined New Technology APC cost bands, reassign the procedure or service to a different New Technology APC that more appropriately reflects its cost (66 FR 59903).

Consistent with our current policy, for CY 2026, we proposed to retain services within New Technology APC groups until we obtain sufficient claims data to justify reassignment of the service to an appropriate clinical APC. The flexibility associated with this policy allows us to reassign a service from a New Technology APC in less than 2 years if we have obtained sufficient claims data. It also allows us to retain a service in a New Technology APC for more than 2 years if we have not obtained sufficient claims data upon which to base a reassignment decision (66 FR 59902).

We received public comments on these proposals. The following is a summary of the comments we received and our responses.

Comment: A commenter stated that the New Technology APC pathway is vital for bringing innovative services to patients before sufficient claims data exist for permanent APC assignment and suggested that we incorporate the perspectives of patients and caregivers into our review to ensure payment decisions reflect unmet needs and treatment burdens.

Response: We thank the commenter for their comment. We note that we accept a variety of information as part of the New Technology APC application process.

After consideration of public comments, we are finalizing our proposal to retain services within New Technology APC groups until we obtain sufficient claims data to justify reassignment of the service to an appropriate clinical APC.

a. Administration of Subretinal Therapies Requiring Vitrectomy (APC 1563)

Effective January 1, 2021, CMS established HCPCS code C9770 (Vitrectomy, mechanical, pars plana approach, with subretinal injection of pharmacologic/biologic agent) and assigned it to a New Technology APC based on the geometric mean cost of CPT code 67036 (Vitrectomy, mechanical, pars plana approach) due to similar resource utilization. For CY 2021, HCPCS code C9770 was assigned to APC 1561 (New Technology—Level 24 ($3001–$3500)). This code may be used to describe the administration of HCPCS code J3398 (Injection, voretigene neparvovec-rzyl, 1 billion vector genomes). This procedure was previously discussed in depth in the CY 2021 OPPS/ASC final rule with comment period (85 FR 85939 through 85940). For CY 2022, we maintained the APC assignment of APC 1561 (New Technology—Level 24 ($3001–$3500)) for HCPCS code C9770 (86 FR 63531 through 63532).

HCPCS code J3398 (Injection, voretigene neparvovec-rzyl, 1 billion vector genomes) is for a gene therapy product indicated for a rare mutation-associated retinal dystrophy. Voretigene neparvovec-rzyl (Luxturna®) was approved by FDA in December of 2017 and is an adeno-associated virus vector-based gene therapy indicated for the treatment of patients with confirmed biallelic RPE65 mutation-associated retinal dystrophy.[16] This therapy is administered through a subretinal injection, which interested parties describe as an extremely delicate and sensitive surgical procedure. The FDA-approved package insert describes one of the steps for administering Luxturna as, ''after completing a vitrectomy, identify the intended site of administration. The subretinal injection can be introduced via pars plana.''

Interested parties, including the manufacturer of Luxturna®, recommended CPT code 67036 (Vitrectomy, mechanical, pars plana approach) for the administration of the gene therapy.[17] However, the manufacturer previously contended the administration was not accurately described by any existing codes as CPT code 67036 (Vitrectomy, mechanical, pars plana approach) does not account for the administration itself. CMS recognized the need to accurately describe the unique procedure that is required to administer the therapy described by HCPCS code J3398. Therefore, in the CY 2021 OPPS/ASC

[16] Luxturna. FDA Package Insert. Available: *https://www.fda.gov/media/109906/download.*

[17] LUXTURNA REIMBURSEMENT GUIDE FOR TREATMENT CENTERS. *https://mysparkgeneration.com/uploads/2022/09/LUXTURNA-Reimbursement-Guide-for-Treatment-Centers-ISI-Update-April-2022-P-RPE65-US-320025.pdf.*

final rule with comment period, we established a new HCPCS code, C9770 (Vitrectomy, mechanical, pars plana approach, with subretinal injection of pharmacologic/biologic agent) to describe this process. For CY 2021, we assigned HCPCS code C9770 to APC 1561 (New Technology—Level 24 ($3001–$3500)) using the geometric mean cost of CPT code 67036. For CY 2022, we continued to assign HCPCS code C9770 to APC 1561 (New Technology—Level 24 ($3001–$3500)) using the geometric mean cost of CPT code 67036.

CY 2023 was the first year that claims data were available for HCPCS code C9770; therefore, we proposed and finalized a policy to base the payment rate of HCPCS code C9770 on claims data for that code rather than on the geometric mean cost of CPT code 67036. Given the low number of claims for this procedure, we designated HCPCS code C9770 as a low volume procedure under our universal low volume APC policy and used the greater of the geometric mean, arithmetic mean, or median cost calculated based on the available claims data to calculate an appropriate payment rate for purposes of assigning HCPCS code C9770 to a New Technology APC.

Based on the claims data available for the CY 2023 OPPS/ASC final rule with comment period, we found the median was the statistical methodology that estimated the highest cost for the service. The payment rate calculated using this methodology fell within the cost band for APC 1562 (New Technology—Level 25 ($3501–$4000)). Therefore, we finalized our proposal to assign HCPCS code C9770 to APC 1562 for CY 2023.

For CY 2024, we proposed and finalized that we would delete HCPCS code C9770 effective December 31, 2023 and recognize CPT code 0810T (Subretinal injection of a pharmacologic agent, including vitrectomy and 1 or more retinotomies) starting January 1, 2024 (88 FR 81617 through 81619). We determined the payment rate for CPT code 0810T using the claims data for HCPCS code C9770 and designated CPT code 0810T as a low volume procedure under our universal low volume APC policy and used the greater of the geometric mean, arithmetic mean, or median cost calculated based on the available claims data for HCPCS code C9770 to calculate an appropriate payment rate for purposes of assigning CPT code 0810T to a New Technology APC. For CY 2024, we finalized assignment of CPT code 0810T to APC 1563 (New Technology—Level 26 ($4001–$4500)) (88 FR 81617 through 81619). For 2025, claims data for CPT code 0810T was not yet available. Therefore, we continued to use claims data for HCPCS code C9770 to determine the appropriate APC for CPT code 0810T and finalized to continue to assign CPT code 0810T to APC 1563 for CY 2025.

CY 2026 is the first year that we have claims data available for CPT code 0810T, and there are 6 claims available. Since the procedure described by CPT code 0810T was billed using HCPCS code C9770 prior to January 1, 2024, we proposed to use the available combined 42 claims for both codes during this time period to allow for a more accurate picture of the costs associated with this procedure. For CY 2026, we proposed to designate CPT code 0810T as a low volume procedure under our universal low volume APC policy, given that there were only 42 combined claims available. This is below the threshold of 100 claims for a service within a year required to designate a service as a low volume service and apply our universal low volume APC policy. Therefore, we proposed to use the greater of the geometric mean, arithmetic mean, or median cost calculated based on the available claims data from a 4-year lookback period to calculate an appropriate payment rate for purposes of assigning CPT code 0810T to a New Technology APC.

Using all available claims for CPT code 0810T and HCPCS code C9770 from the 4-year lookback period, based on 42 claims, we determined the geometric mean cost to be approximately $4,040, the arithmetic mean cost to be $4,327, and the median cost to be $3,999. Because the arithmetic mean is the statistical methodology that estimated the highest cost for the service, we proposed to use this cost to determine the New Technology APC placement. The arithmetic mean of $4,327 falls within the cost band for APC 1563 (New Technology—Level 26 ($4001–$4500)). Therefore, we proposed to continue to assign CPT code 0810T to APC 1563 for CY 2026. Additionally, we proposed to perform a similar analysis using updated claims data, including determining if CPT code 0810T continues to meet the criteria for our universal low volume APC policy, in the CY 2026 OPPS/ASC final rule with comment period and update the APC assignment as needed.

We did not receive any public comments on our proposal to continue to assign HCPCS code 0810T to APC 1563 for CY 2026.

One additional claim for CY 2024 has been processed since the CY 2026 OPPS/ASC proposed rule. Our analysis of the updated claims data found that the greater of the geometric mean, arithmetic mean, or median cost calculated for HCPCS codes C9770 and 0810T is approximately $4,239. This continues to fall into the cost band of New Technology APC 1563. Therefore, we are finalizing our proposal without modification to continue to assign CPT code 0810T to APC 1563 (New Technology—Level 26 ($4001–$4500)).

Refer to Table 17 for the final OPPS New Technology APC and status indicator assignment for CPT codes 0810T for CY 2026. The final CY 2026 payment rates can be found in Addendum B to this final rule with comment period via the internet on the CMS website. In addition, we refer readers to Addendum D1 to this final rule with comment period for the status indicator meanings for all codes reported under the OPPS. Addendum D1 can also be found via the internet on the CMS website.

TABLE 17: FINAL CY 2026 OPPS NEW TECHNOLOGY APC AND STATUS INDICATOR ASSIGNMENT FOR CPT CODE 0810T

0810T	Subretinal injection of a pharmacologic agent, including vitrectomy and 1 or more retinotomies	T	1563

b. BgRT (APC 1521 and 1525)

Biology Guided Radiation Therapy (BgRT) uses positron-emitting radiopharmaceuticals to control delivery of radiation therapy to treat primary and metastatic lung or bone tumors. During radiation treatment delivery, the same system applies these firing filters to the real-time positron emission tomography (PET) data collected by the radiation treatment delivery machine. Effective January 1, 2024, CMS created HCPCS codes C9794 (Therapeutic radiology simulation-aided field setting; complex, including acquisition of PET and CT imaging data required for radiopharmaceutical-directed radiation therapy treatment planning (*i.e.,* modeling) and C9795 (Stereotactic body radiation therapy, treatment delivery, per fraction to 1 or more lesions, including image guidance and real-time positron emissions-based delivery adjustments to 1 or more lesions, entire course not to exceed 5 fractions) to describe the modeling and treatment delivery portions of the BgRT service. We assigned HCPCS code C9794 to APC 1521 (New Technology—Level 21 ($1901–$2000)) and HCPCS code C9795 to APC 1525 (New Technology—Level 25 ($3501–$4000)) for CY 2024.

For CY 2025, we continued to assign HCPCS code C9794 to APC 1521 (New Technology—Level 21 ($1901–$2000)) with a payment rate of $1,950.50 and HCPCS code C9795 to APC 1525 (New Technology—Level 25 ($3501–$4000)) with a payment rate of $3,750.50 because we did not have any claims data for the service.

Effective January 1, 2025, HCPCS codes C9794 and C9795 were replaced by HCPCS codes G0562 and G0563, respectively. For CY 2026, the proposed OPPS payment rates are based on available CY 2024 claims data. There are no CY 2024 claims for HCPCS codes G0562 and G0563 since they were not effective until CY 2025. However, as HCPCS codes C9794 and C9795 were still in use until December 31, 2024, we proposed to determine the payment rate for HCPCS codes G0562 and G0563 using the available claims data for HCPCS codes C9794 and C9795, respectively. For CY 2026, we proposed to designate HCPCS codes G0562 and G0563 as low volume procedures under our universal low volume APC policy, given that there are only 16 claims for C9794 and 28 claims for C9795 during the claims period. For HCPCS code G0562, using all available claims for C9794, we determined, for the CY 2026 OPPS/ASC proposed rule, the arithmetic mean cost to be $1,241, the median cost to be $1,203, and the geometric mean cost to be $1,121. Because the arithmetic mean cost is the statistical methodology that estimated the highest cost for the service, we proposed to use this cost to determine the New Technology APC placement. The arithmetic mean cost of $1,241 falls within the cost band for APC 1514 (New Technology—Level 14 ($1201–$1300)). Therefore, we proposed to assign HCPCS code G0562 to APC 1514 (New Technology—Level 14 ($1201–$1300) with a payment rate of $1,250.50 for CY 2026. For HCPCS code G0563, using all available claims for C9795, we determined the arithmetic mean cost to be $3,606; the median cost to be $2,915, and the geometric mean cost to be $3,348. The arithmetic mean cost is the statistical methodology that estimated the highest cost for the service; therefore, we proposed to use this cost to determine the New Technology APC placement. The arithmetic mean cost of $3,606 falls within the cost band for APC 1525 (New Technology—Level 25 ($3501–$4000)). Therefore, we proposed to assign HCPCS code G0563 to APC 1525 (New Technology—Level 25 ($3501–$4000) with a payment rate of $3750.50 for CY 2026.

Additionally, we proposed to perform a similar analysis using updated claims data, including determining if HCPCS codes G0562 and G0563 continue to meet the criteria for our universal low volume APC policy, in the CY 2026 OPPS/ASC final rule with comment period and update the APC assignments as needed.

We received public comments on these proposals. The following is a summary of the comments we received and our responses.

Comment: Commenters supported CMS' proposal to assign HCPCS code G0563 to APC 1525 (New Technology—Level 25 ($3501–$4000) with a payment rate of $3750.50 for CY 2026.

Response: We thank the commenters for their support.

Comment: Several commenters did not support the proposal to assign HCPCS code G0562 to APC 1514 (New Technology—Level 14 ($1201–$1300) with a payment rate of $1,250.50 for CY 2026. Commenters explained that the resulting decrease in payment would not cover the costs to provide the service, especially because the modeling service described by HCPCS code G0562 happens on a different day than the treatment, but on the same high-cost device as the treatment. Commenters emphasized the few single frequency claims available and urged CMS to allot hospitals more time to understand how costs for HCPCS code G0562 should be reported versus a diagnostic CT or PET scan that involves different equipment, workflows, and time. Commenters requested that we maintain the APC assignment for HCPCS code G0562 for CY 2026.

Response: We thank the commenters for their input. We agree with commenters who expressed concern that the proposed payment rate was based on an extremely limited number of claims and may not accurately reflect the true resource costs to hospitals associated with furnishing this service. Additionally, we are concerned that, if we were to finalize as proposed, the payment rate for this service would decrease 36 percent based on only 16 single frequency claims and only one year of claims data. As we have stated in prior rules, when only a limited number of claims are available for a given service, it is possible that those claims may not be representative of the full range of hospital costs. We

anticipate that, as hospitals gain additional experience furnishing the service and as more claims data becomes available in future years, the claims data will more accurately reflect the typical resource costs of the service.

We note that since the CY 2026 OPPS/ASC proposed rule published, we have one additional claim for HCPCS code C9795 to use for HCPCS code G0563 ratesetting, and the revised statistical methodologies are: the geometric mean cost is $3,277, the arithmetic mean is $3,449, and the median is $3,228. The highest of these is the arithmetic mean, which falls outside of the proposed APC assignment of APC 1525 (New Technology—Level 25 ($3501–$4000)). After consideration of public comments and the revised statistical methodologies, we are not finalizing our proposals for HCPCS codes G0562 and G0563. For CY 2026, we are finalizing the assignment of HCPCS code G0562 to APC 1521 and status indicator ''S'' and HCPCS code G0563 to APC 1524 (New Technology—Level 24 ($3001–$3500)) and status indicator ''S''. Refer to Table 18 for the final OPPS New Technology APC and status indicator assignment for HCPCS codes G0562 and G0563 for CY 2026. The final CY 2026 payment rates can be found in Addendum B to this final rule with comment period via the internet on the CMS website. In addition, we refer readers to Addendum D1 to this final rule with comment period for the status indicator meanings for all codes reported under the OPPS. Addendum D1 can also be found via the internet on the CMS website.

TABLE 18: FINAL CY 2026 OPPS NEW TECHNOLOGY APC AND STATUS INDICATOR ASSIGNMENTS FOR BIOLOGY GUIDED RADIATION THERAPY

HCPCS Code	Long Descriptor	Proposed CY 2026 OPPS SI	Proposed CY 2026 OPPS APC	Final CY 2026 OPPS SI	Final CY 2026 OPPS APC

G0563	Stereotactic body radiation therapy, treatment delivery, per fraction to 1 or more lesions, including image guidance and real-time positron emissions-based delivery adjustments to 1 or more lesions, entire course not to exceed 5 fractions	S	1525	S	1524

c. Blinded Procedure for NYHA Class III/IV Heart Failure (APC 1590)

A randomized, double-blinded, controlled IDE study was conducted for the V-Wave interatrial shunt. The V-Wave interatrial shunt is for patients with severe symptomatic heart failure and is designed to regulate left atrial pressure in the heart. All participants who passed initial screening for the study receive a right heart catheterization procedure described by CPT code 93451 (Right heart catheterization including measurement(s) of oxygen saturation and cardiac output, when performed). Participants assigned to the experimental group also receive the V-Wave interatrial shunt procedure while participants assigned to the control group only receive right heart catheterization. The developer of V-Wave was concerned that the current coding of these services by Medicare would reveal to the study participants whether they had received the interatrial shunt because an additional procedure code, CPT code 93799 (Unlisted cardiovascular service or procedure), would be included on the claims for participants receiving the interatrial shunt. Therefore, for CY 2020, we created a temporary HCPCS code to describe the V-Wave interatrial shunt procedure for both the experimental group and the control group in the study. Specifically, we established HCPCS code C9758 (Blinded procedure for NYHA class III/IV heart failure; transcatheter implantation of interatrial shunt or placebo control, including right heart catheterization, trans-esophageal echocardiography (TEE)/intracardiac echocardiography (ICE), and all imaging with or without guidance (for example, ultrasound, fluoroscopy), performed in an approved investigational device exemption (IDE) study) to describe the service, and we assigned the service to APC 1589 (New Technology—Level 38 ($10,001–$15,000)) with a payment rate of $12,500.50.

In the CY 2021 OPPS/ASC final rule with comment period (85 FR 85946), we stated that we believe similar resources and device costs are involved with the V-Wave interatrial shunt procedure and the Corvia Medical interatrial shunt procedure (HCPCS code C9760), except that payment for HCPCS codes C9758 and C9760 differs based on how often the interatrial shunt is implanted when each code is billed. An interatrial shunt is implanted one-half of the time HCPCS code C9758 is billed, whereas an interatrial shunt is implanted every time HCPCS code C9760 is billed. Accordingly, for CY 2021, we reassigned HCPCS code C9758 to APC 1590 (New Technology—Level 39 ($15,001–$20,000)), which reflects the cost of furnishing the interatrial shunt one-half of the time the procedure is performed. Since CY 2021, HCPCS code C9758 has continued to be assigned to APC 1590.

For CY 2026, the developer of the V-Wave interatrial shunt informed us that the IDE study had concluded and HCPCS code C9758 was no longer being utilized. Therefore, we proposed to delete HCPCS code C9758 for CY 2026.

We received public comments on this proposal. The following is a summary of the comments we received and our responses.

Comment: A commenter requested that CMS not delete HCPCS code C9758, as Corvia Medical is conducting an ongoing clinical study that utilizes this code.

Response: Since HCPCS code C9758 is currently being utilized, we will continue to keep this code active for CY 2026. Therefore, we are not finalizing our proposal to delete HCPCS code C9758 for CY 2026.

Our updated claims data for the 4-year lookback period for the universal low volume APC policy shows only 8 claims for HCPCS code C9758. Because we are finalizing our proposal to maintain current New Technology APC assignments for CY 2026 for New Technology APC services with fewer than 10 claims in the 4-year lookback period, we are continuing to assign HCPCS code C9758 to APC 1590 for CY 2026. Refer to Table 19 for the final OPPS New Technology APC and status indicator assignment for HCPCS code C9758 for CY 2026. The final CY 2026 payment rates can be found in Addendum B to this final rule with comment period via the internet on the CMS website. In addition, we refer readers to Addendum D1 to this final rule with comment period for the status indicator meanings for all codes reported under the OPPS. Addendum D1 can also be found via the internet on the CMS website.

TABLE 19: FINAL CY 2026 OPPS NEW TECHNOLOGY APC AAND STATUS INDICATOR ASSIGNMENTS FOR BLINDED INTRATRIAL SHUNT PROCEDURE

HCPCS Code	Long Descriptor	Final CY 2026 OPPS SI	Final CY 2026 OPPS APC
C9758	Blinded procedure for NYHA class III/IV heart failure; transcatheter implantation of interatrial shunt or placebo control, including right heart catheterization, trans-esophageal echocardiography (TEE)/intracardiac echocardiography (ICE), and all imaging with or without guidance (for example, ultrasound, fluoroscopy), performed in an approved investigational device exemption (IDE) study	T	1590

d. Bronchoscopy With Transbronchial Ablation of Lesion(s) by Microwave Energy (APC 1562)

Effective January 1, 2019, CMS established HCPCS code C9751 (Bronchoscopy, rigid or flexible, transbronchial ablation of lesion(s) by microwave energy, including fluoroscopic guidance, when performed, with computed tomography acquisition(s) and 3–D rendering, computer-assisted, image-guided navigation, and endobronchial ultrasound (EBUS) guided transtracheal and/or transbronchial sampling (*e.g.,* aspiration[s]/biopsy[ies]) and all mediastinal and/or hilar lymph node stations or structures and therapeutic intervention(s)). This microwave ablation procedure utilizes a flexible catheter to access the lung tumor via a working channel and may be used as an alternative procedure to a percutaneous microwave approach. Based on our review of the New Technology APC application for this service and the service's clinical similarity to existing services paid under the OPPS, we estimated the likely cost of the procedure would be between $8,001 and $8,500. We assigned the procedure to APC 1571 (New Technology—Level 34 ($8001–$8500)) for CY 2019.

In claims data available from CY 2019 for the CY 2021 OPPS/ASC final rule with comment period, there were four claims reported for bronchoscopy with transbronchial ablation of lesions by microwave energy. Given the low volume of claims for the service, we proposed for CY 2021 to apply the universal low volume APC policy we adopted in CY 2019, under which we utilize our equitable adjustment authority under section 1833(t)(2)(E) of the Act to calculate the geometric mean, arithmetic mean, and median costs to determine an appropriate payment rate for purposes of assigning bronchoscopy with transbronchial ablation of lesions by microwave energy to a New Technology APC. Based on this analysis using claims from CY 2019, we assigned HCPCS code C9751 to APC 1562 (New Technology—Level 25 ($3501–$4000)) with a $3750.50 payment rate for CY 2021.

There have been no separately payable claims reported for HCPCS code C9751 since 2019. Therefore, we have continued to use claims from CY 2019 to determine the payment rate for this service in CY 2023, CY 2024, and CY 2025 OPPS/ASC final rules with comment period. Based on the information available, we continue to assign HCPCS code C9751 to APC 1562 (New Technology—Level 25 ($3501–$4000)), with a payment rate of $3,750.50.

For CY 2026, we were informed that the Neuwave Flex program is no longer available for commercial use, and that HCPCS code C9751 is no longer being utilized. Therefore, we proposed to delete HCPCS code C9751 for CY 2026.

We did not receive public comments on our proposal to delete HCPCS code C9751 for CY 2026. Additionally, our updated claims data remain unchanged. Therefore, we are finalizing as proposed.

Refer to Table 20 for the final OPPS New Technology APC and status indicator assignment for HCPCS code C9751 for CY 2026. In addition, we refer readers to Addendum D1 to this final rule with comment period for the status indicator meanings for all codes reported under the OPPS. Addendum D1 can also be found via the internet on the CMS website.

TABLE 20: FINAL CY 2026 OPPS NEW TECHNOLOGY APC AND STATUS INDICATOR ASSIGNMENTS FOR HCPCS CODE C9751

HCPCS Code	Long Descriptor	Final CY 2026 OPPS SI	Final CY 2026 OPPS APC
C9751	Bronchoscopy, rigid or flexible, transbronchial ablation of lesion(s) by microwave energy, including fluoroscopic guidance, when performed, with computed tomography acquisition(s) and 3-D rendering, computer-assisted, image-guided navigation, and endobronchial ultrasound (EBUS) guided transtracheal and/or transbronchial sampling (e.g., aspiration[s]/biopsy[ies]) and all mediastinal and/or hilar lymph node stations or structures and therapeutic intervention(s)	D	N/A

e. Cardiac Positron Emission Tomography (PET)/Computed Tomography (CT) Studies (APCs 1519 and 1522)

For CY 2026, the OPPS payment rates for the service described by CPT codes 78431, 78432, and 78433 were proposed to be based on available CY 2024 claims data. CPT code 78431 had over 30,000 single frequency claims in CY 2024. The geometric mean cost for CPT code 78431 is approximately $2,200. The geometric mean falls within APC 1522 (New Technology—Level 22 ($2001–$2500)) with a payment rate of $2,250.50, which is the current APC assignment for this service. Therefore, we proposed, for CY 2026, to continue to assign CPT code 78431 to APC 1522 (New Technology—Level 22 ($2001–$2500)) with a payment rate of $2,250.50.

There were only 31 single frequency claims in CY 2024 for CPT code 78432. As this is below the threshold of 100 claims for a service within a year, we proposed to apply our universal low volume New Technology APC policy and use the highest of the geometric mean cost, arithmetic mean cost, or median cost based on up to 4 years of claims data to assign CPT code 78432 to the appropriate New Technology APC. Using available claims data from CY 2021, CY 2022, and CY 2023, our analysis found the geometric mean cost of the service is approximately $1,591, the arithmetic mean cost of the service is approximately $1,737, and the median cost of the service is approximately $1,364. The arithmetic mean is the statistical methodology that estimates the highest cost for the service. The arithmetic mean cost of $1,737, is an amount that is below the cost band for APC 1520 (New Technology—Level 20 ($1801–$1900)), where the procedure is currently assigned. Therefore, we proposed, for CY 2026, to assign CPT code 78432 to APC 1519 (New Technology—Level 19 ($1701–$1800)) with a payment rate of $1,750.50.

There were over 1,400 single frequency claims for CPT code 78433 in CY 2024. The geometric mean for CPT code 78433 is approximately $2,037, which is an amount that is above the current New Technology APC cost band APC 1521 (New Technology—Level 21 ($1901–$2000)) to which it is assigned. Therefore, for CY 2026, we proposed to reassign CPT code 78433 to APC 1522 (New Technology—Level 22 ($2001–$2500)) with a payment rate of $2,250.50.

We note that, over the past several years, the claims volumes for CPT codes 78431 and 78433 have increased significantly while the geometric mean costs of the codes have remained relatively stable. However, CPT code 78432, which is closely related to CPT codes 78431 and 78433, continues to have low claims frequency and fluctuating geometric mean costs. Due to our concerns regarding CPT code 78432 and the lack of an appropriate clinical APC for CPT codes 78431 and 78433 at this time based on resource cost similarity, we proposed to continue to assign CPT codes 78431 through 78433 to New Technology APCs for CY 2026.

We received public comments on these proposals. The following is a summary of the comments we received and our responses.

Comment: Commenters supported the proposed APC assignments for CPT codes 78431 and 78433 for CY 2026 based on our analysis of the available claims data.

Response: We thank the commenters for their support.

Comment: Some commenters did not support the proposed APC assignment for CPT code 78432 to APC 1519 (New Technology—Level 19 ($1701–$1800)) with a payment rate of $1,750.50. A commenter explained that CPT code 78432 consumes more resources than CPT code 78431. The commenter stated that with similar, but enhanced, clinical staff and radiotracer workflows to CPT code 78431, it is not appropriate for CPT code 78432 to be assigned to an APC with payments lower than CPT code 78431.

Response: As we have stated in previous rulemaking, New Technology APCs are cost bands rather than clinical groupings. Unlike when we assign a service to a clinical APC and consider resource and clinical similarities to other services in a clinical APC, we assign services to New Technology APCs based on cost. While we appreciate the commenter's information regarding the clinical differences between CPT codes 78431 and 78432, we adjust New Technology APC assignments based on the claims data available rather than clinical characteristics of a service.

We note that additional claims for CPT codes 78431 through 78433 have been processed since the CY 2026 OPPS/ASC proposed rule. Based on updated claims data, CPT code 78431 has an updated geometric mean cost of approximately $2,182. Because the geometric mean cost of CPT code 78431 is still within the range for APC 1522, the proposed APC assignment for CPT code 78431 for CY 2026, we are finalizing the proposed APC assignment of CPT code 78431 without modification.

There were three additional single frequency claims for CY 2024 processed for CPT code 78432 since the CY 2026 OPPS/ASC proposed rule, bringing the total number of single frequency claims to 34 for CPT code 78432 for CY 2024. Based on the updated claims data for CPT code 78432, the geometric mean cost is approximately $1,428; the

arithmetic mean cost is approximately $1,517; and the median cost is approximately $1,274. Of these, the highest statistical methodology is the arithmetic mean cost of $1,517. Since the updated arithmetic mean cost for CPT code 78432 is outside of the cost band for APC 1519 (New Technology—Level 19 ($1701–$1800), we are not finalizing our proposal to assign CPT code 78432 to APC 1519 for CY 2026. Based on the updated statistical methodologies, we are assigning CPT code 78432 to APC 1517 for CY 2026 (New Technology—Level 17 ($1501–$1600)) with a payment rate of $1,550.50.

Based on updated claims data, CPT code 78433 has an updated geometric mean cost of approximately $2004. Because the geometric mean cost of CPT code 78433 is still within the range for APC 1522, the proposed APC assignment for CPT code 78433 for CY 2026, we are finalizing the proposed APC assignment of CPT code 78433 without modification.

Refer to Table 21 for the final OPPS New Technology APC and status indicator assignments for CPT codes 7843, 78432, and 78433 for CY 2026. The final CY 2026 payment rates can be found in Addendum B to this final rule with comment period via the internet on the CMS website. In addition, we refer readers to Addendum D1 to this final rule with comment period for the status indicator meanings for all codes reported under the OPPS. Addendum D1 can also be found via the internet on the CMS website.

BILLING CODE 4120–01–C

f. CardiAMP (APC 1590)

The CardiAMP cell therapy IDE studies are two randomized, double-blinded, controlled IDE studies: the CardiAMP Cell Therapy Chronic Myocardial Ischemia Trial [18] and the CardiAMP Cell Therapy Heart Failure

[18] *ClinicalTrials.gov.* ''Randomized Controlled Pivotal Trial of Autologous Bone Marrow Cells Using the CardiAMP Cell Therapy System in Patients With Refractory Angina Pectoris and Chronic Myocardial Ischemia.'' Accessed May 10, 2022. *https://clinicaltrials.gov/ct2/show/NCT03455725?term=NCT03455725&rank=1.*

Trial.[19] The two trials are designed to investigate the safety and efficacy of autologous bone marrow mononuclear cell treatment for the following: (1) patients with medically refractory and symptomatic ischemic cardiomyopathy; and (2) patients with refractory angina pectoris and chronic myocardial ischemia. On April 1, 2022, we established HCPCS code C9782 to describe the CardiAMP cell therapy IDE studies and assigned HCPCS code C9782 to APC 1574 (New Technology—Level 37 ($9,501–$10,000)) with the status indicator ''T.'' We subsequently revised the descriptor for HCPCS code C9782 to: (Blinded procedure for New York Heart Association (NYHA) Class II or III heart failure, or Canadian Cardiovascular Society (CCS) Class III or IV chronic refractory angina; transcatheter intramyocardial transplantation of autologous bone marrow cells (*e.g.,* mononuclear) or placebo control, autologous bone marrow harvesting and preparation for transplantation, left heart catheterization including ventriculography, all laboratory services, and all imaging with or without guidance (*e.g.,* transthoracic echocardiography, ultrasound, fluoroscopy), all device(s), performed in an approved Investigational Device Exemption (IDE) study) to clarify the inclusion of the Helix trans endocardial injection catheter device in the descriptor. Additionally, we determined that APC 1590 (New Technology—Level 39 ($15,001–$20,000)) most accurately accounted for the resources associated with furnishing the procedure described by HCPCS code C9782.

For CY 2025, the OPPS payment rates were based on available CY 2023 claims data. We identified three single frequency paid claims for C9782 for ratesetting for CY 2025. Because we finalized our proposal to maintain current New Technology APC assignments for CY 2025 for New Technology APC services with fewer than 10 claims in the 4-year lookback period, we continued to assign HCPCS code C9782 to APC 1590 with a payment rate of $17,500.50 for CY 2025.

For CY 2026, there were no new claims reported for HCPCS code C9782. Therefore, there are still only three single frequency claims available for HCPCS code C9782 in the 4-year lookback period. Given our proposal to maintain current New Technology APC assignments for CY 2026 for New Technology APC services with fewer than 10 claims in the 4-year lookback period applicable for the universal low-volume APC policy moving forward, we proposed to continue to assign HCPCS code C9782 to APC 1590 (New Technology—Level 39 ($15,001–$20,000)) with a payment rate of $17,500.50.

We did not receive public comments on this provision, and our updated claims data did not show any additional claims for HCPCS Code C9782. Therefore, we are finalizing our proposal to continue to assign HCPCS code C9782 to New Technology APC 1590 with a status indication of ''T'' for CY 2026. Refer to Table 22 for the final OPPS New Technology APC and status indicator assignment for HCPCS code C9782. The final CY 2026 payment rates can be found in Addendum B to this final rule with comment via the internet on the CMS website.

TABLE 22: FINAL CY 2026 OPPS NEW TECHNOLOGY APC AND STATUS INDICATOR ASSIGNMENTS FOR THE CARDIAMP CELL THERAPY IDE STUDIES

HCPCS Code	Long Descriptor	Final CY 2026 OPPS SI	Final CY 2026 OPPS APC
C9782	Blinded procedure for New York Heart Association (NYHA) Class II or III heart failure, or Canadian Cardiovascular Society (CCS) Class III or IV chronic refractory angina; transcatheter intramyocardial transplantation of autologous bone marrow cells (e.g., mononuclear) or placebo control, autologous bone marrow harvesting and preparation for transplantation, left heart catheterization including ventriculography, all laboratory services, and all imaging with or without guidance (e.g., transthoracic echocardiography, ultrasound, fluoroscopy), all device(s), performed in an approved Investigational Device Exemption (IDE) study	T	1590

g. Atherosclerosis Imaging-Quantitative Computer Tomography (AI–QCT) (APC 1511)

Atherosclerosis Imaging-Quantitative Computer Tomography (AI–QCT) is a Software as a Service (SaaS) that assesses the extent of coronary artery disease severity. This procedure is performed to quantify the extent of coronary plaque and stenosis in patients who have undergone coronary computed tomography analysis (CCTA). The AMA CPT Editorial Panel established the following four codes associated with this service, effective January 1, 2021:

0623T: Automated quantification and characterization of coronary atherosclerotic plaque to assess severity of coronary disease, using data from coronary computed tomographic angiography; data preparation and transmission, computerized analysis of data, with review of computerized analysis output to reconcile discordant data, interpretation and report.

0624T: Automated quantification and characterization of coronary atherosclerotic plaque to assess severity of coronary disease, using data from coronary computed tomographic angiography; data preparation and transmission.

0625T: Automated quantification and characterization of coronary atherosclerotic plaque to assess severity of coronary disease, using data from coronary computed tomographic angiography; computerized analysis of

[19] *ClinicalTrials.gov.* ''Randomized Controlled Pivotal Trial of Autologous Bone Marrow Mononuclear Cells Using the CardiAMP Cell Therapy System in Patients With Post Myocardial Infarction Heart Failure.'' Accessed May 10, 2022. *https://clinicaltrials.gov/ct2/show/NCT02438306.*

data from coronary computed tomographic angiography.

0626T: Automated quantification and characterization of coronary atherosclerotic plaque to assess severity of coronary disease, using data from coronary computed tomographic angiography; review of computerized analysis output to reconcile discordant data, interpretation and report.

Of these four CPT codes, only CPT code 0625T was determined to be separately payable in the OPPS and was assigned to status indicator = ''S'' (Procedure or Service, Not Discounted When Multiple) starting October 1, 2022. We assigned CPT code 0625T to a separately payable status indicator based on the technology and its potential utilization in the HOPD setting, our evaluation of the service, as well as input from our medical advisors. The procedure was assigned to APC 1511 (New Technology—Level 11 ($900–$1000)) with a payment rate of $950.50.

For CY 2024, the OPPS payment rates were based on available CY 2022 claims data. There were 37 claims for CPT code 0625T during this time period. As this was below the threshold of 100 claims for a service within a year, we explained that we could propose to designate CPT code 0625T as a low volume service under our universal low volume New Technology APC policy and use the highest of the geometric mean cost, arithmetic mean cost, or median cost based on up to 4 years of claims data to assign code 0625T to the appropriate New Technology APC. We found the geometric mean cost for the service to be approximately $3.70, the arithmetic mean cost to be approximately $4.10, and the median cost to be approximately $3.50. Under our universal low volume New Technology APC policy, we would use the greatest of the statistical methodologies, the arithmetic mean, to assign CPT code 0625T to New Technology 1491 (New Technology Level 1A—(0–$10)) with a payment rate of $5.00. However, we acknowledged that, because CPT code 0625T was only made separately payable as part of the OPPS in October 2022, and, therefore, the CY 2022 claims available only reflected two months of data, we were concerned that we did not have sufficient claims data to justify reassignment to another New Technology APC (66 FR 69902). Therefore, consistent with our current policy to retain services within New Technology APC groups until we obtain sufficient claims data to justify reassignment (66 FR 59902), for CY 2024, we finalized our proposal to maintain CPT code 0625T's assignment to APC 1511 (New Technology—Level 11 ($901–$1000) with a payment rate of $950.50 rather than applying the universal low volume APC policy. For 2025, there were only 3 available claims for 0625T. We continued to have concerns that we did not have sufficient claims data to justify reassignment to another New Technology APC based on the CY 2023 geometric mean cost of $180. Therefore, we used our authority under section 1833(t)(2)(E) for CY 2025 to continue to assign CPT code 0625T to APC 1511 (New Technology—Level 11 ($901–$1000) with a payment rate of $950.50.

Effective January 1, 2026, the AMA CPT Editorial Panel is creating a new Category I CPT code for AI–QCT, which is currently described by CPT code 75577 (placeholder code 75XX6) (Quantification and characterization of coronary atherosclerotic plaque to assess severity of coronary disease, derived from augmentative software analysis of the data set from a coronary computed tomographic angiography, with interpretation and report by a physician or other qualified healthcare professional). CPT codes 0623T–0626T are being deleted and replaced with CPT code 75577 (placeholder code 75XX6). Since CPT placeholder code 75XX6 will not be effective until January 1, 2026, we will not have claims data available for ratesetting for this code until the CY 2028 rulemaking cycle. However, as CPT code 0625T will still be in use until December 31, 2025, we proposed to determine the payment rate for CPT placeholder code 75XX6 using the available CY 2024 claims data for CPT code 0625T.

For the CY 2026 OPPS/ASC proposed rule, there were 22 separately payable claims in the CY 2024 data reported for CPT code 0625T with a geometric mean cost of approximately $496. Given that there were fewer than 100 claims, CPT code 0625T would fall under our universal low volume New Technology APC policy where we would use the highest of the geometric mean cost, arithmetic mean cost, or median cost based on up to 4 years of claims data to assign CPT code 0625T to the appropriate New Technology APC. Using a 4-year lookback of claims data, we determined the geometric mean cost to be $13.21, the arithmetic mean cost to be $243, and the median cost to be $3.51. However, this lookback includes the claims from CY 2021 and CY 2022 that indicate that the cost of the procedure is less than $5, which would not appear to cover the basic costs of this procedure including computing time, generating a report, and having medical personnel interpret the report. The claims were also significantly lower than the expected cost of this procedure based on evidence submitted by the manufacturer when this technology was initially evaluated for placement in a New Technology APC. For CY 2024, the geometric mean cost of around $496 based on 22 claims may better reflect the cost of the procedure described by CPT code 0625T, but there are not enough claims to be confident about the result. Due to these issues, we are not confident that the results of the 4-year lookback period accurately reflect the actual costs of CPT code 0625T. Additionally, we recognize that software-based technologies are unique and rapidly evolving and that a significant fluctuation in payment may hinder patient access to these new services. We issued a comment solicitation in section III.F. of the CY 2026 OPPS/ASC proposed rule to collect information on alternative and consistent payment methods that seek to reflect the underlying value of SaaS under the OPPS to consider in future rulemaking. We hope to identify whether specific adjustments to our payment policies for SaaS are needed to more accurately and appropriately pay for these products and services across settings of care. Therefore, we proposed to use our authority under section 1833(t)(2)(E) to assign CPT code 75577 (placeholder code 75XX6) to APC 1511 (New Technology—Level 11 ($901–$1000) with a payment rate of $950.50 for CY 2026, which based on the information currently available to us, best reflects the cost of the service as described by the New Technology APC application.

We received public comments on this proposal. The following is a summary of the comments we received and our responses.

Comment: Several commenters supported the assignment of CPT code 75577 (placeholder code 75XX6) to APC 1511 (New Technology—Level 11 ($901–$1000) for CY 2025.

Response: We note that since the CY 2026 OPPS/ASC proposed rule was issued, nine additional claims for CPT code 0625T have been processed, with the updated geometric mean cost decreasing to approximately $375. Although we have nine additional claims, we are not certain that we have enough claims data to be confident in the calculated geometric mean cost for CPT code 0625T. Therefore, we are finalizing our proposal, without modification, to assign CPT code 75577 to APC 1511 (New Technology—Level 11 ($901–$1000).

Comment: Multiple commenters requested that CMS proactively ensures

that Medicare Administrative Contractors (MACs) do not issue an edit that restricts certain revenue codes for CPT code 75577 (placeholder code 75XX6), as had previously been issued for CPT code 75580.

Response: We are able to confirm that there are no MAC edits in place for CPT code 75577. Facilities may bill CPT 75577 with any appropriate revenue code. As a reminder, it is longstanding CMS policy that hospital outpatient facilities are responsible for reporting the appropriate cost centers and revenue codes on claims. As stated in section 20.5 in Chapter 4 (Part B Hospital) of the Medicare Claims Processing Manual, CMS ''does not instruct hospitals on the assignment of HCPCS codes to revenue codes for services provided under OPPS since hospitals' assignment of cost vary. Where explicit instructions are not provided, HOPDs should report their charges under the revenue code that will result in the charges being assigned to the same cost center to which the cost of those services are assigned in the cost report.''

After consideration of the public comments we received, we are finalizing our proposal without modification. Refer to Table 23 for the final OPPS New Technology APC and status indicator assignment for HCPCS codes 0625T and 75577 for CY 2026. The final CY 2026 payment rates can be found in Addendum B to this final rule with comment period via the internet on the CMS website. In addition, we refer readers to Addendum D1 to this final rule with comment period for the status indicator meanings for all codes reported under the OPPS. Addendum D1 can also be found via the internet on the CMS website.

TABLE 23: FINAL CY 2026 NEW TECHNOLOGY APC AND STATUS INDICATOR ASSIGNMENTS FOR ATHEROSCLEROSIS IMAGING-QUANTITATIVE COMPUTER TOMOGRAPHY (AI-QCT) CPT CODES 0625T AND 75577

75577 (75XX6)	Quantification and characterization of coronary atherosclerotic plaque to assess severity of coronary disease, derived from augmentative software analysis of the data set from a coronary computed tomographic angiography, with interpretation and report by a physician or other qualified healthcare professional	S	1511

h. Corvia Medical Interatrial Shunt Procedure (APC 1592)

On July 1, 2020, we established HCPCS code C9760 (Non-randomized, non-blinded procedure for nyha class ii, iii, iv heart failure; transcatheter implantation of interatrial shunt or placebo control, including right and left heart catheterization, transeptal puncture, trans-esophageal echocardiography (tee)/intracardiac echocardiography (ice), and all imaging with or without guidance (for example, ultrasound, fluoroscopy), performed in an approved investigational device exemption (ide) study) to facilitate payment for the implantation of the Corvia Medical interatrial shunt.

As we stated in the CY 2021 OPPS final rule with comment period (85 FR 85947), we believe that similar resources and device costs are involved with the Corvia Medical interatrial shunt procedure and the V–Wave interatrial shunt procedure. Unlike the V–Wave interatrial shunt, which is implanted half the time the associated interatrial shunt procedure described by HCPCS code C9758 is billed, the Corvia Medical interatrial shunt is implanted every time the associated interatrial shunt procedure (HCPCS code C9760) is billed. Therefore, for CY 2021, we assigned HCPCS code C9760 to APC 1592 (New Technology—Level 41 ($25,001–$30,000)) with a payment rate of $27,500.50. We also modified the code descriptor for HCPCS code C9760 to remove the phrase ''or placebo control,'' from the descriptor.

For CY 2025, the OPPS payment rates were based on available CY 2023 claims data. There were two claims for HCPCS code C9760 in CY 2023. We continued to assign HCPCS code C9760 to APC 1592 (New Technology—Level 41 ($25,001– $30,000)) based on our CY 2025 policy to maintain current New Technology APC assignments for CY 2025 for New Technology APC services with fewer than 10 claims in the 4-year lookback period applicable for the universal low-volume APC policy.

For CY 2026, the OPPS payment rates were proposed to be based on available CY 2024 claims data. There were no claims for HCPSC code C9760 in CY 2024. Therefore, for CY 2026, given our proposal to maintain current New Technology APC assignments for CY 2026 for New Technology APC services with fewer than 10 claims in the 4-year lookback period applicable for the universal low-volume APC policy moving forward, we proposed to continue to assign HCPCS code C9760

to APC 1592 (New Technology—Level 41 ($25,001– $30,000)) with a payment rate of $27,500.50.

We received public comments on this proposal. The following is a summary of the comments we received and our responses.

Comment: A commenter supported CMS' proposal and stated that it would preserve access.

Response: We thank the commenter for their support.

We note that there were no additional claims for HCPCS code C9760 in our updated claims data. Therefore, for CY 2026, we are finalizing our proposal without modification. Specifically for CY 2026, we are assigning HCPCS code C9760 to APC 1592 (New Technology—Level 41 ($25,001–$30,000)) with a payment rate of $27,500.50.

Refer to Table 24 for the final OPPS New Technology APC and status indicator assignments for HCPCS code C9760 for CY 2026. The CY 2026 payment rates can be found in Addendum B to this final rule via the internet on the CMS website. In addition, we refer readers to Addendum D1 to this final rule with comment period for the status indicator meanings for all codes reported under the OPPS. Addendum D1 can also be found via the internet on the CMS website.

TABLE 24: FINAL CY 2026 OPPS NEW TECHNOLOGY APC AND STATUS INDICATOR ASSIGNMENTS FOR NON-BLINDED INTRATRIAL SHUNT PROCEDURE

HCPCS Code	Long Descriptor	Final CY 2026 OPPS SI	Final CY 2026 OPPS APC
C9760	(Non-randomized, non-blinded procedure for nyha class ii, iii, iv heart failure; transcatheter implantation of interatrial shunt or placebo control, including right and left heart catheterization, transeptal puncture, trans-esophageal echocardiography (tee)/intracardiac echocardiography (ice), and all imaging with or without guidance (for example, ultrasound, fluoroscopy)	T	1592

i. DARI Motion Procedure (APC 1505)

Effective January 1, 2022, CPT code 0693T (Comprehensive full body computer-based markerless 3D kinematic and kinetic motion analysis and report) is associated with the DARI Motion Procedure, a service that provides human motion analysis to aid clinicians in pre- and post-operative surgical intervention and in making other treatment decisions, including selecting the best course of physical therapy and rehabilitation. The technology consists of eight cameras that surround a patient, which send live video to a computer workstation that analyzes the video to create a 3D reconstruction of the patient without the need for special clothing, markers, or devices attached to the patient's clothing or skin.

Since CPT code 0693T became effective January 1, 2022, we have had no claims for the DARI Motion Procedure and, therefore, have maintained its initial APC assignment to APC 1505 (New Technology—Level 5 ($301–$400)) with a payment of $350.50.

For CY 2026, the OPPS payment rates were proposed based on available CY 2024 claims data. Because we did not have any available claims data, we proposed to continue to assign CPT code 0693T to APC 1505 (New Technology—Level 5 ($301–400)), with a payment rate of $350.50, for CY 2026.

CMS did not receive any public comments on our proposal, and there continue to be no claims for this service. Therefore, for CY 2026, we are finalizing our proposal without modification to continue to assign CPT Code 0693T to New Technology APC 1505 (New Technology—Level 5 ($301–$400)) with a status indicator of ''S'' for CY 2026, found in Table 25. The CY 2026 payment rates can be found in Addendum B to this final rule with comment period via the internet on the CMS website.

TABLE 25: FINAL CY 2026 OPPS NEW TECHNOLOGY APC AND STATUS INDICATOR ASSIGNMENTS FOR THE DARI MOTION PROCEDURE

CPT Code	Long Descriptor	Final CY 2026 OPPS SI	Final CY 2026 OPPS APC
0693T	Comprehensive full body computer-based markerless 3D kinematic and kinetic motion analysis and report	S	1505

j. Instillation of Anti-Neoplastic Pharmacologic/Biologic Agent Into Renal Pelvis (APC 1551)

Effective October 1, 2023, CMS established HCPCS code C9789 (Instillation of anti-neoplastic pharmacologic/biologic agent into renal pelvis, any method, including all imaging guidance, including volumetric measurement if performed) and assigned it to APC 1559 (New Technology—Level 22 ($2001–$2500)), with a payment rate of $2,250.50 based on our review of the clinical and resource characteristics of this service.

This code may be used to describe the unique procedure associated with the administration of the drug described by HCPCS code J9281 (Mitomycin pyelocalyceal instillation, 1 mg) or similar products. HCPCS code J9281 may be used to describe the product, JELMYTO® (mitomycin for pyelocalyceal solution). The FDA approved JELYMTO® in 2020, and the FDA approved indication and usage for JELMYTO® is as an alkylating drug indicated for the treatment of adult patients with low-grade Upper Tract Urothelial Cancer (LG–UTUS).[20]

For CY 2025, the OPPS payment rates were based on available CY 2023 claims data. Because we created HCPCS code C9789 effective October 1, 2023, we had limited claims data from CY 2023 available for CY 2025 rulemaking. Specifically, we only had 6 claims available for ratesetting, so we maintained the New Technology APC assignment of APC 1559 (New Technology—Level 22 ($2001–$2500)) with a payment of $2,250.50 for CY 2025, based on our CY 2025 policy to maintain the New Technology APC assignment for New Technology APC services with fewer than 10 claims in the 4-year lookback period applicable for the universal low-volume APC policy.

For CY 2026, the OPPS payment rates were proposed based on available CY 2024 claims data. HCPCS code C9789 had 109 single frequency claims in CY 2024, which exceeds the 100 claims threshold generally used for the universal low volume APC policy. The geometric mean cost for HCPCS code C9789 is approximately $1,401. Therefore, for CY 2026, we proposed to assign HCPCS code C9789 to APC 1553 (New Technology—Level 16 ($1401–$1500)) with a payment rate of $1,450.50.

We received public comments on this proposal. The following is a summary of the comments we received and our responses.

Comment: A commenter supported HCPCS code C7989 remaining in a New Technology APC but requested that HCPCS C7989 remain assigned to New Technology APC 1559 (New Technology—Level 22 ($2001–$2500)). The commenter stated they do not believe providers are consistently reporting HCPCS code C9789 when JELMYTO® is administered and are using alternative CPT codes for the procedure. As a result, the commenter believes the 2024 claims do not adequately reflect the costs for administering JELMYTO®. The commenter expressed concerns about beneficiaries having future access to the instillation procedure for JELMYTO® if the procedure was no longer assigned to a New Technology APC and requested that CMS issue a MLN Matters® or similar guidance to provide information on how to code and bill the instillation procedure with the drug JELMYTO®.

Response: Providing coding guidance is out of scope for the OPPS/ASC final rule with comment period. We note that if hospitals have questions about appropriate coding that they cannot resolve on their own, the initial first step would be to review the HCPCS code descriptors or consult the appropriate Medicare Administrative Contractor (MAC) for their jurisdiction. We note that HCPCS code J9281 is assigned to a status indicator of 'K' (Nonpass-Through Drugs and Nonimplantable Biologicals, Including Therapeutic Radiopharmaceuticals; Paid under OPPS; separate APC payment.) and procedures and services assigned to a New Technology APC are excluded from the C–APC packaging policy. (See the Medicare Claims Processing Manual, Chapter 4, Section 10.2.3 for a list of exclusions to the comprehensive APC packaging policy.) Therefore, providers may receive separate payment for both the drug and installation procedure when providing this service.

In response to maintaining the CY 2025 New Technology APC assignment, we note that HCPCS code C9789 has over 100 claims, and therefore, the New Technology APC assignment is based on the geometric mean cost for that code. We note that the geometric mean cost and claims data for HCPCS code C9789 has changed since the CY 2026 OPPS/ASC proposed rule. Based on the updated claims data for this final rule with comment period, the geometric mean cost for HCPCS code C9789 is $1,211 based on 222 single frequency claims. We believe that 222 single frequency claims is adequate for ratesetting for this service. As we do every year, we will reevaluate the APC assignments for these codes in the next rulemaking cycle. We remind hospitals that we review, on an annual basis, the APC assignments for all items and services paid under the OPPS.

In summary, after consideration of the public comment we received, we are finalizing with modification a New Technology APC assignment for HCPCS code C9789 to APC 1551 (New Technology—Level 14 ($1201–$1300)) with a payment rate of $1,250.50.

Refer to Table 26 for the final OPPS New Technology APC and status indicator assignments for CPT code C9789 for CY 2026. The final CY 2026 payment rates for this code can be found in Addendum B to this final rule with comment period. In addition, we refer readers to Addendum D1 to this final rule with comment period for the SI definitions for all codes reported under the OPPS. Addenda B and D1 are available via the internet on the CMS website.

k. LimFlow TADV Procedure CPT Code 0620T (APC 1580)

The LimFlow TADV procedure which is described by CPT code 0620T (Endovascular venous arterialization, tibial or peroneal vein, with transcatheter placement of intravascular stent graft(s) and closure by any method, including percutaneous or open vascular access, ultrasound guidance for vascular access when performed, all catheterization(s) and intraprocedural roadmapping and imaging guidance necessary to complete the intervention, all associated radiological supervision and interpretation, when performed) is an endovascular procedure that is used to treat patients with chronic limb-threatening ischemia. According to the developer, these patients are no longer eligible for conventional endovascular or open bypass surgery to treat their artery blockage, and without this procedure, they are likely to face limb amputation.

CPT code 0620T was established in January 2021 and was assigned to APC 5194 (Level 4 Endovascular Procedures) with a payment rate of approximately $17,400, which is the highest-paying APC for endovascular procedures. While we proposed to continue to assign CPT code 0620T to APC 5194 for CY 2024, we finalized a reassignment from a clinical APC to a New Technology APC with a higher payment rate based on comments received expressing concern that the low payment rate of the procedure would discourage providers from performing the procedure and deny access to the procedure. For CY 2024, the procedure was assigned to APC 1578 (New Technology—Level 41 ($25,001–$30,000)). For CY 2025 ratesetting, there were 11 single frequency claims for CPT code 0620T in the CY 2023 claims data. As this is below the threshold of 100 claims for a service within a year, we applied our universal low volume APC policy and used the highest of the geometric mean cost, arithmetic mean cost, or median cost based on up to 4 years of claims data to assign the service to the appropriate New Technology APC. Based on our review of the available claims and the application of the universal low volume APC policy, we assigned HCPCS code 0620T to APC 1579 (New Technology—Level 42 ($30,001–$40,000)) with a payment rate of $35,000.50 based on the median cost of approximately $36,400.

For CY 2026, the OPPS payment rates were proposed to be based on available CY 2024 claims data. There were 19 single frequency claims for 0620T in the CY 2024 claims data. As this is below the threshold of 100 claims for a service within a year, we proposed to again apply our universal low volume APC policy and use the highest of the geometric mean cost, arithmetic mean cost, or median cost based on up to 4 years of claims data to assign the service to the appropriate New Technology APC. Based on our review of the available claims, we have determined that the arithmetic mean is approximately $39,000; the median is approximately $38,000; and the geometric mean cost is approximately $35,000. Of these, the arithmetic mean is the statistical methodology that estimated the highest cost for the service. The payment rate calculated using this methodology falls within the cost band for APC 1579 (New Technology—Level 42 ($30,001–$40,000)) with a payment rate of $35,000.50. Therefore, for CY 2026, we proposed to designate this service as a low volume service under our universal low volume APC policy and to continue to assign HCPCS code 0620T to APC 1579 (New Technology—Level 42 ($30,001–$40,000)) with a payment rate of $35,000.50.

We received public comments on these proposals. The following is a summary of the comments we received and our responses.

Comment: A commenter supported the proposal to assign CPT code 0620T to APC 1579 (New Technology—Level 42 ($30,001–$40,000)) with a payment rate of $35,000.50 for CY 2026 based on the application of the universal low volume APC policy. The commenter stated that the assignment accurately reflects the resources used in the procedure.

Response: Based on the public comments received, we are finalizing our proposal to apply our universal low volume APC policy and use the highest of the geometric mean cost, arithmetic mean cost, or median cost based on up to 4 years of claims data to assign the service to the appropriate New Technology APC. Three additional claims for CY 2024 have been processed since the CY 2026 OPPS/ASC proposed rule. Our analysis of the updated claims data found that the greater of the geometric mean, arithmetic mean, or median cost calculated for CPT code 0620T is $43,748.64 based on the arithmetic mean. This value falls within APC 1580 (New Technology—Level 43 ($40,001–$50,000)) with a payment rate of $45,000.50. Therefore, for CY 2026, we are assigning CPT code 0620T to APC 1580 based on the application of the universal low volume APC policy. Refer to Table 27 for the final OPPS New Technology APC and status indicator assignments for CPT code 0620T for CY 2026. The final CY 2026 payment rates can be found in Addendum B to this final rule with comment period via the internet on the CMS website.

TABLE 27: PROPOSED AND FINAL CY 2026 OPPS NEW TECHNOLOGY APC AND STATUS INDICATOR ASSIGNMENTS FOR THE LIMFLOW TADV PROCEDURE

CPT Code	Long Descriptor	Proposed CY 2026 OPPS SI	Proposed CY 2026 OPPS APC	Final CY 2026 OPPS SI	Final CY 2026 OPPS APC
0620T	Endovascular venous arterialization, tibial or peroneal vein, with transcatheter placement of intravascular stent graft(s) and closure by any method, including percutaneous or open vascular access, ultrasound guidance for vascular access when performed, all catheterization(s) and intraprocedural roadmapping and imaging guidance necessary to complete the intervention, all associated radiological supervision and interpretation, when performed	S	1579	S	1580

l. Liver Histotripsy Service (APC 1579)

CPT code 0686T (Histotripsy (*i.e.,* non-thermal ablation via acoustic energy delivery) of malignant hepatocellular tissue, including image guidance) was first effective July 1, 2021, and describes the histotripsy service associated with the use of the HistoSonics system. Histotripsy is a non-invasive, non-thermal, mechanical process that uses a focused beam of sonic energy to destroy cancerous liver tumors and is currently in a non-randomized, prospective clinical trial to evaluate the efficacy and safety of the device for the treatment of primary or metastatic tumors located in the liver.[21] When HCPCS code 0686T was first effective, the histotripsy procedure was designated as a Category A IDE clinical study (NCT04573881). Since devices in Category A IDE studies are excluded from Medicare payment, payment for CPT code 0686T only reflected the cost of the service that is performed (absent the cost of the device) each time it is reported on a claim. On March 2, 2023, the histotripsy IDE clinical study was re-designated as a Category B (Non-experimental/Investigational) IDE study. Due to this new designation, payment for CPT code 0686T in CY 2024 reflected payment for both the service that was performed and the device used each time it was reported on a claim. For CY 2024, we assigned CPT code 0686T to APC 1576 (New Technology—Level 39 ($15,001–$20,000)) with a payment rate of $17,500.50. For CY 2025, we continued to assign CPT code 0686T to APC 1576 (New Technology—Level 39 ($15,001–$20,000) due to our CY 2025 policy to maintain current New Technology APC assignments for CY 2025 for New Technology APC services with fewer than 10 claims in the 4-year lookback period applicable for the universal low volume APC policy, and based on the fact that there were only 3 claims for CPT code 0686T in the prior 4-year period.

For CY 2026, the OPPS payment rates were proposed to be based on available CY 2024 claims data. For the CY 2026 OPPS/ASC proposed rule, we identified 94 claims for CPT code 0686T within this period. As this is below the threshold of 100 claims for a service within a year, we propose to apply our universal low volume APC policy and use the highest of the geometric mean cost, arithmetic mean cost, or median cost based on up to 4 years of claims data to assign CPT code 0686T to the appropriate New Technology APC. We identified $32,307.41 as the arithmetic mean, $20,577.77 as the median, and $21,264.91 as the geometric mean. The arithmetic mean was the statistical methodology that estimated the highest cost for CPT code 0686T. For CY 2026, we proposed to reassign CPT code 0686T to APC 1579 (New Technology—Level 42 ($30,001–$40,000)) with a payment rate of $35,000.50.

We received public comments on this proposal. The following is a summary of the comments we received and our responses.

Comment: A commenter supported the proposal to reassign CPT code 0686T to APC 1579 (New Technology—Level 42 ($30,001–$40,000)) for CY 2026 based on the 94 claims data available.

Response: We thank the commenter for their input.

Six additional claims for CY 2024 have been processed since the CY 2026 OPPS/ASC proposed rule, bringing the total number of claims to 100. Since the total number of CY 2024 single frequency claims for CY code 0686T surpasses the 99 claim threshold for the universal low volume APC policy, we would use the geometric mean cost of the CY 2024 claims data to set the payment rate for CY 2026 under our standard ratesetting methodology, rather than the highest of the three statistical methodologies over a 4-year lookback period. Based on the updated claims data available for this final rule with comment period, the geometric mean cost for HCPCS code 0686T is around $16,008. Due to the updated claims data available for this final rule with comment period, we are finalizing a New Technology APC assignment for HCPCS code 0686T to APC 1576 (New Technology—Level 39 ($15,001–$20,000)) with a payment rate of around $17,500.50. This is the same APC to which the service is currently assigned in CY 2025.

Refer to Table 28 for the final OPPS New Technology APC and status indicator assignments for CPT code 0686T for CY 2026. We refer readers to Addendum B to this final rule with comment period for the final CY 2026 OPPS payment rate for this code.

Addendum B is available via the internet on the CMS website.

TABLE 28: FINAL CY 2026 OPPS NEW TECHNOLOGY APC AND STATUS INDICATOR ASSIGNMENTS FOR THE LIVER HISTOTRIPSY SERVICE

CPT Code	Long Descriptor	Final CY 2026 OPPS SI	Final CY 2026 OPPS APC
0686T	Histotripsy (i.e., non-thermal ablation via acoustic energy delivery) of malignant hepatocellular tissue, including image guidance	S	1576

m. LiverMultiScan Service (APC 1511)

CPT codes 0648T (Quantitative magnetic resonance for analysis of tissue composition (*e.g.,* fat, iron, water content), including multiparametric data acquisition, data preparation and transmission, interpretation and report, obtained without diagnostic mri examination of the same anatomy (*e.g.,* organ, gland, tissue, target structure) during the same session; single organ) and 0649T (Quantitative magnetic resonance for analysis of tissue composition (*e.g.,* fat, iron, water content), including multiparametric data acquisition, data preparation and transmission, interpretation and report, obtained with diagnostic mri examination of the same anatomy (*e.g.,* organ, gland, tissue, target structure); single organ (list separately in addition to code for primary procedure)) became effective July 1, 2021 and are associated with the LiverMultiScan service.

LiverMultiScan is a Software as a medical Service (SaaS) that is intended to aid the diagnosis and management of chronic liver disease, the most prevalent of which is Non-Alcoholic Fatty Liver Disease (NAFLD). It provides standardized, quantitative imaging biomarkers for the characterization and assessment of inflammation, hepatocyte ballooning, and fibrosis, as well as steatosis, and iron accumulation. LiverMultiScan receives MR images acquired from patients' providers and analyzes the images using their proprietary Artificial Intelligence (AI) algorithms. It then sends the providers a quantitative metric report of the patient's liver fibrosis and inflammation. In accordance with our SaaS add-on codes policy (87 FR 72032 to 72033), SaaS CPT add-on codes are assigned to the same APCs and status indicators as their standalone codes. Thus, CPT code 0649T, the add-on code for LiverMultiScan, is assigned to the identical APC and status indicator as CPT code 0648T, the standalone code for the same service.

For CY 2024 and CY 2025, we used our equitable adjustment authority under section 1833(t)(2)(E) to continue to assign CPT codes 0648T and 0649T to APC 1511 (New Technology—Level 11 ($901–$1,000) with a payment rate of $950.50.

For CY 2026, the OPPS payment rates were proposed based on available CY 2024 claims data. We identified 107 single frequency claims for CPT code 0648T and 104 single frequency claims CPT code 0649T for CY 2024. The geometric mean cost for CPT code 0648T was $253.68 and the geometric mean cost for CPT code 0649T was $162.96. Based on the geometric mean cost for CPT code 0648T, we would have assigned CPT codes 0648T and 0649T to APC 1504 (New Technology—Level 4 ($201–$300)) with a payment rate of $250.50. However, assigning these SaaS technologies based on the geometric costs would have decreased the payment rate by around 75 percent. We recognized that software-based technologies, like those described by CPT codes 0648T and 0649T, continue to evolve and that the limited claims data may not have truly represented the cost of this service. We issued a comment solicitation in section III.F. of the CY 2026 OPPS/ASC proposed rule to collect information on alternative and consistent payment methods that seek to reflect the underlying value of SaaS technologies under the OPPS to consider in future rulemaking. We hoped to identify whether specific adjustments to our payment policies for SaaS technologies are needed to more accurately and appropriately pay for these products and services across settings of care. Therefore, we proposed to use our authority under section 1833(t)(2)(E) of Act for CY 2026 to continue to assign CPT codes 0648T and 0649T to APC 1511 (New Technology—Level 11 ($901–$1000)) with a payment rate of $950.50, which we believed best reflected the cost of the service, based on information provided by the applicant.

We note that since the CY 2026 OPPS/ASC proposed rule was published, CPT code 0648T has an updated geometric mean cost of around $269 based on 114 single frequency claims, and CPT code 0649T has an updated geometric mean cost of around $158 based on 111 single frequency claims.

We received public comments on this proposal. The following is a summary of the comments we received and our responses.

Comment: A number of comments were received in support of maintaining the APC assignments to New Technology APC 1511. Commenters stated that maintaining the current payment rate for LiverMultiScan will allow continued access to this valuable non-invasive imaging tool service. Many commenters noted the clinical relevance of these procedures in obtaining information on a patient's liver health and developing appropriate treatment plans.

A commenter supported the proposed New Technology APC assignment but also provided possible explanations for the payment variability, including the inappropriate use of CPT codes and distorted data due to inappropriate cost to charge ratios. The commenter noted the need for reliable claims data for ratesetting.

Response: We appreciate the commenters' input and support for the proposed APC assignment. We hope to glean valuable information from the SaaS comment solicitation that will help us understand the potential factors that affect payment consistency. We hope by having this additional information, we can put forth a policy in future rulemaking that provides a

more stable payment method for SaaS technologies.

After consideration of the public comment we received, we are finalizing our proposal without modification. We will use our equitable adjustment authority under section 1833(t)(2)(E) of the Act to continue to assign CPT codes 0648T and 0649T to New Technology APC 1511 (New Technology—Level 11 ($901–$1,000) with a payment rate of $950.50 for CY 2026.

Refer to Table 29 for the OPPS New Technology APC and status indicator assignments for CPT codes 0648T and 0649T for CY 2026. The final CY 2026 payment rates can be found in Addendum B to this final rule via the internet on the CMS website. In addition, we refer readers to Addendum D1 to this final rule with comment period for the status indicator meanings for all codes reported under the OPPS. Addendum D1 can also be found via the internet on the CMS website.

TABLE 29: FINAL CY 2026 OPPS NEW TECHNOLOGY APC AND STATUS INDICATOR ASSIGNMENTS FOR THE LIVER MULTISCAN SERVICE

CPT Code	Long Descriptor	Final CY 2026 OPPS SI	Final CY 2026 OPPS APC
0648T	Quantitative magnetic resonance for analysis of tissue composition (e.g., fat, iron, water content), including multiparametric data acquisition, data preparation and transmission, interpretation and report, obtained without diagnostic mri examination of the same anatomy (e.g., organ, gland, tissue, target structure) during the same session; single organ	S	1511
0649T	Quantitative magnetic resonance for analysis of tissue composition (e.g., fat, iron, water content), including multiparametric data acquisition, data preparation and transmission, interpretation and report, obtained with diagnostic MRI examination of the same anatomy (e.g., organ, gland, tissue, target structure) (List separately in addition to code for primary procedure)	S	1511

n. Optellum Lung Cancer Prediction (LCP) (APC 1508)

CPT codes 0721T (Quantitative computed tomography (CT) tissue characterization, including interpretation and report, obtained without concurrent CT examination of any structure contained in previously acquired diagnostic imaging) and 0722T (Quantitative computed tomography (CT) tissue characterization, including interpretation and report, obtained with concurrent CT examination of any structure contained in the concurrently acquired diagnostic imaging dataset (list separately in addition to code for primary procedure)) became effective July 1, 2022, and are associated with the Optellum LCP technology. The Optellum LCP applies an algorithm to a patient's CT scan to produce a raw risk score for a patient's pulmonary nodule. The physician uses the risk score to quantify the risk of lung cancer and to determine what the next management step should be for the patient (for example, CT surveillance versus invasive procedure). In accordance with our SaaS add-on codes policy (87 FR 72032 to 72033), SaaS CPT add-on codes are assigned to the same APCs and status indicators as their standalone codes. Thus, CPT code 0722T, the add-on code for the Optellum LCP service, is assigned to the identical APC and status indicator as CPT code 0721T, the standalone code for the same service. For CY 2024, we assigned CPT codes 0721T and 0722T to APC New Technology 1508 (New Technology—Level 8 ($601–$700)).

For CY 2025, we continued to assign CPT codes 0721T and 0722T to APC 1508 (New Technology—Level 8 ($601–$700)) with a payment rate of $650.50 based on our CY 2025 policy to maintain New Technology APC assignments for CY 2025 for New Technology APC services with fewer than 10 claims in the 4-year lookback period applicable for the universal low-volume APC policy.

For CY 2026, OPPS payment rates were proposed based on available CY 2024 claims data. There were 496 combined claims for CPT codes 0721T and 0722T for CY 2024: 7 claims for CPT code 0721T and 489 claims for 0722T. The geometric mean cost of CPT code 0721T is $30.24 and the geometric mean cost for CPT code 0722T is $60.47. Based on the geometric mean cost for CPT code 0722T, which has a significantly greater number of claims than 0721T, we would assign CPT codes 0721T and 0722T to APC 1502 (New Technology—Level 2 ($51–$100) with a payment rate of $75.50. However, assigning these SaaS technologies based on the geometric costs would decrease the payment rate by close to 90 percent in 1 year. We recognize that software-based technologies, like those described by CPT codes 0721T and 0722T, continue to evolve and that the limited claims data that we have may not truly represent the cost of this service. We issued a comment solicitation in section III.F. of the CY 2026 OPPS/ASC proposed rule to collect information on alternative and consistent payment methods that seek to reflect the underlying value of SaaS under the OPPS to consider in future rulemaking. We hope to identify whether specific adjustments to our payment policies for SaaS technologies are needed to more accurately and appropriately pay for these products and services across settings of care.

While we recognize that there are certain unknowns regarding the cost of technologies like the Optellum LCP service, we believe it would be unlikely for the cost to be 90 percent less than the initial estimated costs based on our

review of the information provided in the New Technology APC application. Therefore, we proposed to use our authority under section 1833(t)(2)(E) for CY 2026 to continue to assign CPT codes 0721T and 0722T to APC 1508 (New Technology—Level 8 ($601–$700)) with a payment rate of $650.50 based on the information provided to us by the manufacturer in their application, which we believed may better reflect the cost of the service at the time of the CY 2026 OPPS/ASC proposed rule than the available claims data.

We received public comments on these proposals. The following is a summary of the comments we received and our responses.

Comment: Commenters were supportive of the proposal to use our equitable adjustment authority to continue to assign CPT codes 0721T and 0722T to APC 1508. Commenters believe the proposed APC assignment aligned with the cost of the service. Commenters expressed concern that the claims data do not accurately reflect the true cost to hospitals and imaging providers of delivering the service. A commenter stated that they believe the inaccurate claims data was the result of hospitals reporting inappropriate revenue codes for the service and expressed support for the creation of a new cost center with revenue codes for AI-based services.

Response: While CMS does not provide billing advice to hospitals, we encourage manufacturers and distributors to provide outreach to hospitals regarding billing practices that are most appropriate for their individual technologies. We will consider the commenter's suggestion to create a new cost center for AI-based services as we explore how to appropriately pay for software as a service in future rulemaking. We note that we solicited comments on payment policies for ''software as a service'' in the CY 2026 OPPS/ASC proposed rule and refer readers to section III.F. of this final rule with comment period for a summary of the comments received.

After consideration of the public comments, we are finalizing our proposal without modification. Specifically, for CY 2026, we are finalizing our proposal to assign CPT codes 0721T and 0722T to APC 1508 (New Technology—Level 8 ($601–$700)) with a payment rate of $650.50.

TABLE 30: PROPOSED AND FINAL CY 2026 OPPS NEW TECHNOLOGY APC AND STATUS INDICATOR ASSIGNMENTS FOR THE OPTELLUM LCP SERVICE

CPT Code	Long Descriptor	Proposed CY 2026 OPPS SI	Proposed CY 2026 OPPS APC	Final CY 2026 OPPS SI	Final CY 2026 OPPS APC
0721T	Quantitative computed tomography (CT) tissue characterization, including interpretation and report, obtained without concurrent CT examination of any structure contained in previously acquired diagnostic imaging	S	1508	S	1508
0722T	Quantitative computed tomography (CT) tissue characterization, including interpretation and report, obtained with concurrent CT examination of any structure contained in the concurrently acquired diagnostic imaging dataset (list separately in addition to code for primary procedure)	S	1508	S	1508

Refer to Table 30 for the proposed and final OPPS New Technology APC and status indicator assignments for HCPCS codes 0721T and 0722T for CY 2026. The final CY 2026 payment rates can be found in Addendum B to this final rule with comment period via the internet on the CMS website.

o. Quantitative Magnetic Resonance (QMR) for Analysis of Tissue Composition (APC 1511)

Effective January 1, 2022, CPT codes 0697T (Quantitative magnetic resonance for analysis of tissue composition (*e.g.,* fat, iron, water content), including multiparametric data acquisition, data preparation and transmission, interpretation and report, obtained without diagnostic mri examination of the same anatomy (*e.g.,* organ, gland, tissue, target structure) during the same session; multiple organs) and 0698T (Quantitative magnetic resonance for analysis of tissue composition (*e.g.,* fat, iron, water content), including multiparametric data acquisition, data preparation and transmission, interpretation and report, obtained with diagnostic mri examination of the same anatomy (*e.g.,* organ, gland, tissue, target structure); multiple organs (list separately in addition to code for primary procedure)) are associated with the CoverScan Software as a medical Service (SaaS). This service is a medical image management and processing software package that analyzes MR data and provides quantified metrics of multiple organs such as the heart, lungs, liver, spleen, pancreas, and kidney. For CY 2024, we assigned CPT codes 0697T and 0698T to APC 1511 (New Technology—Level 11 ($900–$1,000)).

For CY 2025, there were fewer than 100 claims for ratesetting and because we recognized that the number of claims used to apply our universal low volume policy (using the highest of the geometric mean cost, arithmetic mean cost, or median cost based on up to 4

years of claims data) may not have represented the cost of this SaaS, we used our equitable adjustment authority under section 1833(t)(2)(E) to continue to assign CPT codes 0697T and 0698T to APC 1511 (New Technology—Level 11 ($900–$1,000)) with a payment of $950.50. In accordance with our SaaS add-on codes policy (87 FR 72032 to 72033), SaaS CPT add-on codes are assigned to the same APCs and status indicators as their standalone codes. Thus, CPT code 0698T, the add-on code for CoverScan was assigned to the identical APC and status indicator as CPT code 0697T, the standalone code for the same service.

For CY 2026, the proposed OPPS payment rates were based on available CY 2024 claims data. We identified 55 single frequency claims for CPT code 0698T and no claims for CPT code 0697T in CY 2024. Because the SaaS standalone and add-on services are identical, we believe it is important for purposes of ratesetting to use the data that is available, whether it is associated with the standalone code or the add-on code. As the 55 single frequency claims are below the threshold of 100 claims for a service within a year, we would have proposed applying our universal low volume APC policy and would have used the highest of the geometric mean cost, arithmetic mean cost, or median cost based on up to 4 years of claims data to assign CPT codes 0697T and 0698T to the appropriate New Technology APC. Our analysis of the combined data, zero claims for CPT code 0697T and 137 claims for CPT code 0698T, yielded a geometric mean cost of approximately $422, an arithmetic mean cost of approximately $600, and a median cost of approximately $777. The median cost is the statistical methodology that estimated the highest cost for CPT codes 0697T and 0698T. Based on the median cost, we would have proposed to assign CPT codes 0697T and 0698T to APC 1509 (New Technology—Level 9 ($701–$800)) with a payment of $750.50.

As in CY 2025, for the CY 2026 OPPS/ASC proposed rule, we recognized that the few claims available for CPT codes 0697T and 0698T may not have truly represented the cost of this SaaS. We recognized that software-based technologies, like those described by CPT codes 0697T and 0698T, are unique and rapidly evolving and that a significant fluctuation in payment may hinder patient access to these new services. We issued a comment solicitation in section III.F of the CY 2026 OPPS/ASC proposed rule to collect information on alternative and consistent payment methods that seek to reflect the underlying value of SaaS under the OPPS to consider in future rulemaking. We hoped to identify whether specific adjustments to our payment policies for SaaS are needed to more accurately and appropriately pay for these products and services across settings of care.

Because we have continued to have the same concerns about payment variability and the possible effects the payment may have on patient access to SaaS, we proposed to use our authority under section 1833(t)(2)(E) for CY 2026 to continue to assign CPT codes 0697T and 0698T to APC 1511 (New Technology—Level 11 ($900–$1,000)) with a payment of $950.50 which we believe best reflects the cost of the service at this time.

Comment: A commenter provided possible explanations for the payment variability, including the inappropriate use of CPT codes and distorted data due to inappropriate cost to charge ratios and stated the need for reliable claims data for ratesetting. While concerns were expressed as to the payment variability, the commenter supported the proposed APC assignment to APC 1511 (New Technology—Level 11 ($900–$1,000)) with a payment of $950.50. The commenter indicated that this APC assignment provides adequate payment for this service which enables beneficiaries to have continued access to these technologies.

Response: We appreciate the commenter's input and support for the proposed APC assignment. We hope to glean valuable information from the SaaS comment solicitation that will help us understand the potential factors that affect payment consistency. We hope by having this additional information, we can put forth a policy in future rulemaking that provides a more stable payment method for SaaS technologies.

After consideration of the public comment we received, we are finalizing our proposal without modification. We will use our equitable adjustment authority under section 1833(t)(2)(E) to continue to assign CPT codes 0697T and 0698T to New Technology APC 1511 (New Technology—Level 11 ($901–$1,000) with a payment rate of $950.50 for CY 2026. Refer to Table 31 for the OPPS New Technology APC and status indicator assignments for CPT codes 0697T and 0698T for CY 2026. The final CY 2026 payment rates can be found in Addendum B to this final rule with comment period via the internet on the CMS website. In addition, we refer readers to Addendum D1 to this final rule with comment period for the status indicator meanings for all codes reported under the OPPS. Addendum D1 can also be found via the internet on the CMS website.

TABLE 31: FINAL CY 2026 OPPS NEW TECHNOLOGY APC AND STATUS INDICATOR ASSIGNMENTS FOR THE QMR PROCEDURE

CPT Code	Long Descriptor	Final CY 2026 OPPSSI	Final CY 2026 OPPS APC
0697T	Quantitative magnetic resonance for analysis of tissue composition (eg, fat, iron, water content), including multiparametric data acquisition, data preparation and transmission, interpretation and report, obtained without diagnostic mri examination of the same anatomy (eg, organ, gland, tissue, target structure) during the same session; multiple organs	S	1511
0698T	Quantitative magnetic resonance for analysis of tissue composition (eg, fat, iron, water content), including multiparametric data acquisition, data preparation and transmission, interpretation and report, obtained with diagnostic mri examination of the same anatomy (eg, organ, gland, tissue, target structure); multiple organs (list separately in addition to code for primary procedure)	S	1511

p. Quantitative Magnetic Resonance Cholangiopancreatography (QMRCP) (APC 1511)

Effective July 1, 2022, CPT codes 0723T (Quantitative magnetic resonance cholangiopancreatography (QMRCP) including data preparation and transmission, interpretation and report, obtained without diagnostic magnetic resonance imaging (MRI) examination of the same anatomy (*e.g.,* organ, gland, tissue, target structure) during the same session) and 0724T (Quantitative magnetic resonance cholangiopancreatography (QMRCP), including data preparation and transmission, interpretation and report, obtained with diagnostic magnetic resonance imaging (MRI) examination of the same anatomy (*e.g.,* organ, gland, tissue, target structure) (list separately in addition to code for primary procedure)) are associated with the QMRCP Software as a medical Service (SaaS). The service performs quantitative assessment of the biliary tree and gallbladder. It uses a proprietary algorithm that produces a three-dimensional reconstruction of the biliary tree and pancreatic duct and also provides precise quantitative information of biliary tree volume and duct metrics. In accordance with our SaaS add-on codes policy (87 FR 72032 to 72033), SaaS CPT add-on codes are assigned to the same APCs and status indicators as their standalone codes. Consistent with our SaaS add-on codes policy, CPT code 0724T, the add-on code for QMRCP is assigned to the identical APC and status indicator as CPT code 0723T, the standalone code for the same service. For CY 2024, we assigned CPT codes 0723T and 0724T to APC 1511 (New Technology—Level 11 ($900–$1,000)). For CY 2025, we continued to assign CPT codes 0723T and 0724T to APC 1511 (New Technology—Level 11 ($900–$1,000)) based on there being fewer than 10 claims in the 4-year lookback period and the exception from the universal low-volume APC policy.

For CY 2026, the OPPS payment rates were proposed to be based on available CY 2024 claims data. There were only four new claims for HCPCS code 0724T and no claims for CPT code 0723T. Given our proposal to maintain current New Technology APC assignments for CY 2026 for New Technology APC services with fewer than 10 claims in the 4-year lookback period due to an exception from the universal low-volume APC policy, we proposed, for CY 2026, to continue to assign CPT codes 0723T and 0724T to APC 1511 (New Technology—Level 11 ($901–$1000)), with a payment rate of $950.50.

Comment: A commenter supported the proposals to continue to assign 0723T and 0724T to APC 1511.

Response: We thank the commenter for their support.

Our updated claims data for the 4-year lookback period for the universal low volume APC policy shows no claims for HCPCS code 0723T and four single claims for 0724T. Because we are finalizing our proposal to maintain current New Technology APC assignments for CY 2026 for New Technology APC services with fewer than 10 claims in the 4-year lookback period, we are continuing to assign HCPCS code 0723T and 0724T to APC 1511.

Refer to Table 32 for the final OPPS New Technology APC and status indicator assignments for CPT codes 0723T and 0724T for CY 2026. The final CY 2026 payment rates can be found in Addendum B to this final rule with comment period via the internet on the CMS website.

TABLE 32: FINAL CY 2026 OPPS NEW TECHNOLOGY APC AND STATUS INDICATOR ASSIGNMENTS FOR THE QMRCP PROCEDURE

CPT Code	Long Descriptor	Final CY 2026 OPPS SI	Final CY 2026 OPPS APC
0723T	Quantitative magnetic resonance cholangiopancreatography (QMRCP) including data preparation and transmission, interpretation and report, obtained without diagnostic magnetic resonance imaging (MRI) examination of the same anatomy (e.g., organ, gland, tissue, target structure) during the same session	S	1511
0724T	Quantitative magnetic resonance cholangiopancreatography (QMRCP), including data preparation and transmission, interpretation and report, obtained with diagnostic magnetic resonance imaging (MRI) examination of the same anatomy (e.g., organ, gland, tissue, target structure) (list separately in addition to code for primary procedure)	S	1511

q. Supervised Visits for Esketamine Self-Administration (APCs 1512 and 1518)

On March 5, 2019, FDA approved Spravato™ (esketamine) nasal spray, used in conjunction with an oral antidepressant.[22] for treatment of depression in adults who have tried other antidepressant medicines but have not benefited from them (treatment-resistant depression (TRD)). This is the first FDA approval of esketamine for any use.

Esketamine is a noncompetitive N-methyl D-aspartate (NMDA) receptor antagonist. It is a nasal spray supplied as an aqueous solution of esketamine hydrochloride in a vial with a nasal spray device. Each device delivers two sprays containing a total of 28 mg of esketamine. Patients would require either two (2) devices (for a 56 mg dose) or three (3) devices (for an 84 mg dose) per treatment.

Because of the risk of serious adverse outcomes resulting from sedation and dissociation and respiratory depression caused by esketamine nasal spray administration, and the potential for abuse and misuse of the product, it is only available through a restricted distribution system under a Risk Evaluation and Mitigation Strategy (REMS). A REMS is a drug safety program that the FDA can require for certain medications with serious safety concerns to help ensure the benefits of the medication outweigh its risks. The Spravato™ REMS program requires, among other requirements, that the esketamine nasal spray be dispensed and administered to enrolled patients in health care settings that are certified in the REMS. See *www.fda.gov* for more information regarding the Spravato™ REMS program requirements.

A treatment session of esketamine consists of instructed nasal self-administration by the patient followed by a period of at least 2 hours post-administration observation of the patient under direct supervision of a health care professional in the certified health care setting. Refer to the CY 2020 PFS final rule and interim final rule for more information about supervised visits for esketamine nasal spray self-administration (84 FR 63102 through 63105); see also the Spravato REMS document and Spravato labeling available on the FDA website.[23]

To facilitate prompt beneficiary access to the new, potentially life-saving treatment for TRD using esketamine, we created two new HCPCS G codes, G2082 and G2083, effective January 1, 2020. HCPCS code G2082 is for an outpatient visit for the evaluation and management of an established patient who requires the supervision of a physician or other qualified health care professional and provision of up to 56 mg of esketamine through nasal self-administration and includes two hours of post-administration observation. HCPCS code G2083 describes a similar service to HCPCS code G2082 but involves the administration of more than 56 mg of esketamine.

For CY 2025, HCPCS code G2082 was assigned to APC 1513 (New Technology—Level 13 ($1101–$1200)) with a payment rate of $1,150.50 and HCPCS code G2083 was assigned to APC 1516 (New Technology—Level 16 ($1401–$1,500)) with a payment rate of $1,450.50.

For CY 2026, the OPPS payment rates were proposed based on available CY 2024 claims data as the available single frequency claims exceed the 100 claims threshold generally used for our universal low volume policy. Therefore, for CY 2026, we proposed to assign HCPCS codes G2082 and G2083 to New Technology APCs based on each of the codes' geometric mean costs. Specifically, we proposed to assign HCPCS code G2082 to APC 1512 (New Technology—Level 12 ($1001–$1100)) with a payment rate of $1,050.50 based on its geometric mean cost of $1,019, which was calculated using the available 558 single frequency claims from CY 2024 claims data. We also proposed to assign HCPCS code G2083 to APC 1517 (New Technology—Level 17 ($1501–$1600)) with a payment rate

[22] Subsequently, the FDA approved a prior approval supplemental new drug application (sNDA) providing for the following labeling modification: expansion of the indication to include monotherapy of Spravato™ (esketamine) for treatment resistant depression (TRD). See *https://www.accessdata.fda.gov/drugsatfda_docs/appletter/2025/211243Orig1s016ltr.pdf.*

[23] The REMS document is available at *https://www.fda.gov/drugs/drug-safety-and-availability/risk-evaluation-and-mitigation-strategies-rems,* and labeling can be found at *https://www.accessdata.fda.gov/scripts/cder/daf/index.cfm.*

of $1,550.50 based on its geometric mean cost of $1,549, which was calculated using the available 4,138 single frequency claims from CY 2024 claims data. As we continue to gather adequate claims data on these codes, we invited public comment on the appropriate clinical APC assignments for HCPCS codes G2082 and G2083.

We received public comments on these proposals. The following is a summary of the comments we received and our responses.

Comment: Commenters supported the proposed APC assignment. They encouraged CMS to continue to provide adequate payment and not to undervalue this needed treatment, as that would cause access issues for beneficiaries in need of this service. Some commenters requested that we maintain the APC assignment for HCPCS code G2082 in APC 1513 (New Technology—Level 13 ($1101–$1200)) with a payment of $1,150.50, stating that adequate payment is needed to preserve access while additional cost data is collected. Another commenter suggested that we create a new clinical APC family with two levels that are specific to this service. The commenter stated that the creation of the new APC would ensure clinical and resource homogeneity and provide an opportunity in the future for similar services to be placed in the same APC.

Response: As readers are aware, we have been contemplating potential clinical APC assignments for the past number of rulemaking cycles but are not convinced as to what clinical APC would be appropriate in terms of clinical and resource homogeneity. We appreciate the public's suggestion of creating a new APC for this service.

We note the geometric mean costs for both HCPCS codes G2082 and G2083 have changed since the CY 2026 OPPS/ASC proposed rule. Based on the updated claims data available for this final rule, the geometric mean cost for HCPCS code G2082 is around $1,015 and the geometric mean cost for HCPCS code G2083 is around $1,612. Based on updated claims data available for this final rule with comment period, we are finalizing a New Technology APC assignment for HCPCS code G2083 to APC 1518 (New Technology—Level 18 ($1601–$1700)) with a payment of $1,650.50.

Finally, we note that because we have gathered additional claims data and seen increases in claims volume, we will continue to consider potential clinical APC placements for HCPCS codes G2082 and G2083 through future rulemaking.

Refer to Table 33 for the CY 2026 proposed and final APC and status indicator assignments for HCPCS codes G2082 and G2083. The CY 2026 payment rates can be found in Addendum B to this final rule with comment period via the internet on the CMS website.

TABLE 33: PROPOSED AND FINAL CY 2026 NEW TECHNOLOGY APC AND STATUS INDICATOR ASSIGNMENTS FOR HCPCS CODES G2082 AND G2083

HCPCS Code	Long Descriptor	Proposed CY 2026 OPPS SI	Proposed CY 2026 OPPS APC	Final CY 2026 OPPS SI	Final CY 2026 OPPS APC
G2082	Office or other outpatient visit for the evaluation and management of an established patient that requires the supervision of a physician or other qualified health care professional and provision of up to 56 mg of esketamine nasal self-administration, includes 2 hours post-administration observation	S	1512	S	1512
G2083	Office or other outpatient visit for the evaluation and management of an established patient that requires the supervision of a physician or other qualified health care professional and provision of greater than 56 mg esketamine nasal self-administration, includes 2 hours post-administration observation	S	1517	S	1518

r. Surfacer® Inside-Out® Access Catheter System (APC 1534)

HCPCS code C9780 (Insertion of central venous catheter through central venous occlusion via inferior and superior approaches (*e.g.,* inside-out technique), including imaging guidance) describes the procedure associated with the use of the Surfacer® Inside-Out® Access Catheter System that is designed to address central venous occlusion. HCPCS code C9780 was established on October 1, 2021, and since its establishment the code has been assigned to APC 1534 (New Technology—Level 34 ($8001–$8500)).

For the CY 2026 OPPS/ASC proposed rule, there were only three new claims for HCPCS code C9780. Therefore, there are only seven single frequency claims available for HCPCS code C9780 in the 2 years of data since the code has been available. Given our proposal to maintain current New Technology APC

assignments for CY 2026 for New Technology APC services with fewer than 10 claims in the 4-year lookback period applicable for the universal low-volume APC policy, we proposed for CY 2026 to continue to assign HCPCS code C9780 to APC 1534 (New Technology—Level 34 ($8001–$8500)) with a payment rate of $8,250.50.

We did not receive any public comments on our proposal to continue to assign CPT code C9870 to APC 1534 (New Technology—Level 34 ($8001–$8500)). We note that there were no additional claims in our updated claims data. Therefore, given our policy to maintain current New Technology APC assignments for CY 2026 for New Technology APC services with fewer than 10 claims in the 4-year lookback period applicable for the universal low volume APC policy, we are finalizing as proposed to continue to assign CPT code C9870 to APC 1534. Refer to Table 34 for the final OPPS New Technology APC and status indicator assignment for HCPCS code C9780. The final CY 2026 payment rates can be found in Addendum B to this final rule with comment period via the internet on the CMS website.

TABLE 34: FINAL CY 2026 NEW TECHNOLOGY APC AND STATUS INDICATOR ASSIGNMENT FOR SURFACER® INSIDE-OUT® ACCESS CATHETER SYSTEM PROCEDURE

HCPCS Code	Long Descriptor	Final CY 2026 OPPS SI	Final CY 2026 OPPS APC
C9780	Insertion of central venous catheter through central venous occlusion via inferior and superior approaches (e.g., inside-out technique), including imaging guidance	S	1534

s. Transcatheter Atrial Shunt System (TASS) (APC 1537)

The Transcatheter Atrial Shunt System (TASS) is a nitinol self-expanding cardiovascular implant consisting of four arms including two left atrial (LA) arms and two coronary sinus (CS) arms placed between the left atrium and coronary sinus to create a 7mm flow diameter channel for blood to flow from the high pressure region of the left atrium to the lower pressure region of the right atrium via the coronary sinus.

TASS was designated as a Category A IDE clinical study (NCT03523416) on July 31, 2019. Effective October 1, 2023 CMS created HCPCS code C9792 (Blinded or nonblinded procedure for symptomatic New York Heart Association (NYHA) Class II, III, IVa heart failure; transcatheter implantation of left atrial to coronary sinus shunt using jugular vein access, including all imaging necessary to intra procedurally map the coronary sinus for optimal shunt placement (*e.g.,* TEE or ICE ultrasound, fluoroscopy), performed under general anesthesia in an approved investigational device exemption (IDE) study) to describe the TASS service and assigned it to APC 1537 (New Technology—Level 37 ($9501–$10000)) with a payment rate of $9750.50. Since devices in Category A IDE studies are not covered by Medicare during the study, the payment for HCPCS code C9792 reflects only the cost of the service that is performed each time it is reported on a claim.

For CY 2025, there were no claims available, so we maintained the APC assignment for HCPCS code C9792 to APC 1537 (New Technology—Level 37 ($9501–$10000)).

For CY 2026, the proposed OPPS payment rates are based on available CY 2024 claims data. We do not have any claims data for HCPCS code C9792. Therefore, for CY 2026, we proposed to continue to assign HCPCS code C9792 to APC 1537 (New Technology—Level 37 ($9501–$10000)) with a payment rate of $9,750.50.

We did not receive public comments on this provision, and therefore, we are finalizing as proposed. HCPCS Code C9792 will remain assigned to APC 1537 (New Technology—Level 37 ($9,501–$10,000)) with a payment rate of $9,750.50.

Refer to Table 35 for the final OPPS New Technology APC and status indicator assignment for HCPCS code C9792. The final CY 2026 payment rates can be found in Addendum B to this final rule with comment period via the internet on the CMS website.

TABLE 35: FINAL CY 2026 OPPS NEW TECHNOLOGY APC AND STATUS INDICATOR ASSIGNMENT FOR TRANSCATHETER ATRIAL SHUNT SYSTEM

C9792	Blinded or nonblinded procedure for symptomatic New York Heart Association (NYHA) Class II, III, IVa heart failure; transcatheter implantation of left atrial to coronary sinus shunt using jugular vein access, including all imaging necessary to intra procedurally map the coronary sinus for optimal shunt placement (e.g., TEE or ICE ultrasound, fluoroscopy), performed under general anesthesia in an approved investigational device exemption (IDE) study	S	1537

t. Magnetic Resonance Imaging With Inhaled Hyperpolarized Xenon-129 Contrast Agent (APC 1551)

HCPCS code C9791 (Magnetic resonance imaging with inhaled hyperpolarized xenon-129 contrast agent, chest, including preparation and administration of agent) was established on October 1, 2023. For CY 2023, we assigned HCPCS code C9791 to APC 1551 (New Technology—Level 14 ($1201–$1300)). Due to the effective date of the service of October 1, 2023, there were no claims available for HCPCS code C9791 for rate setting in CY 2024. Therefore, in CY 2024, we continued to assign HCPCS code C9791 to APC 1551(New Technology—Level 14 ($1201–$1300)). There were no claims available for HCPCS code C9791 when we were setting rates for CY 2025, so we continued to assign HCPCS code C9791 to APC 1551 (New Technology—Level 14 ($1201–$1300)).

For CY 2026, the proposed OPPS payment rates were based on the available CY 2024 data. There were only four new claims for HCPCS code C9791. Given our proposal to maintain current New Technology APC assignments for CY 2026 for New Technology APC services with fewer than 10 claims in the 4-year lookback period applicable for the universal low-volume APC policy, we proposed for CY 2026 to continue to assign HCPCS code C9791 to APC 1551—New Technology—Level 14 ($1201–$1300)), with a payment rate of $1,250.50.

We did not receive public comments on our proposal to continue to assign HCPCS code C9791 to APC 1551.

Our updated claims data for the 4-year lookback period for the universal low volume APC policy shows only five claims for HCPCS code C9791. Because we are finalizing our proposal to maintain current New Technology APC assignments for CY 2026 for New Technology APC services with fewer than 10 claims in the 4-year lookback period, we are finalizing our proposal without modification to continue to assign HCPCS code C9791 to APC 1551.

Refer to Table 36 for the final OPPS New Technology APC and status indicator assignment for HCPCS code C9791 for CY 2026. The final CY 2026 payment rates can be found in Addendum B to this final rule with comment period via the internet on the CMS website. In addition, we refer readers to Addendum D1 to this final rule with comment period for the status indicator meanings for all codes reported under the OPPS. Addendum D1 can also be found via the internet on the CMS website.

u. SAINT Neuromodulation System (APCs 1511 and 1525)

The SAINT Neuromodulation System is a non-invasive repetitive transcranial magnetic stimulation (rTMS) system that identifies an individualized target and delivers navigationally directed repetitive magnetic pulses to that individualized target located within the left dorsolateral prefrontal cortex to treat major depressive disorder (MDD). The patient first receives structural MRI and functional MRI scans that are analyzed by the provider to identify and localize the personalized stimulation target in the patient's dorsolateral prefrontal cortex. Once the areas targeted for treatment are identified, the patient

receives non-invasive magnetic stimulation in the targeted area. The patient has 10 treatment sessions per day with each treatment session lasting 10 minutes followed by 50 minutes of rest before another treatment session occurs. The treatment is administered over five days for a total of 50 sessions of non-invasive magnetic stimulation therapy. There are four CPT codes listed in Table 37 that describe the MRI scans that are used to target the treatment and describe the administration of the non-invasive magnetic stimulation therapy.

TABLE 37: SAINT NEUROMODULATION SYSTEM CPT CODES AND DESCRIPTORS

CPT Code	Long Descriptor
0889T	Personalized target development for accelerated, repetitive high-dose functional connectivity MRI-guided theta-burst stimulation derived from a structural and resting-state functional MRI, including data preparation and transmission, generation of the target, motor threshold-starting location, neuronavigation files and target report, review and interpretation
0890T	Accelerated, repetitive high-dose functional connectivity MRI-guided theta-burst stimulation, including target assessment, initial motor threshold determination, neuronavigation, delivery and management, initial treatment day
0891T	Accelerated, repetitive high-dose functional connectivity MRI-guided theta-burst stimulation, including neuronavigation, delivery and management, subsequent treatment day
0892T	Accelerated, repetitive high-dose functional connectivity MRI-guided theta-burst stimulation, including neuronavigation, delivery and management, subsequent motor threshold redetermination with delivery and management, per treatment day

For CY 2025, the OPPS payment rates were proposed based on available CY 2023 claims data. However, CPT codes 0889T, 0890T, 0891T, and 0892T did not become effective until July 1, 2024, which means there were no claims data for the procedures described these CPT codes. We assigned our proposed rates for these services based on our evaluation of the resources needed to perform these services.

For CY 2026, the OPPS payment rates were proposed based on available CY 2024 claims data. There were only five claims for CPT code 0889T and three claims for CPT code 0892T within this period. Given our proposal to maintain current New Technology APC assignments for CY 2026 for New Technology APC services with fewer than 10 claims in the 4-year lookback period applicable for the universal low-volume APC policy, we proposed to continue to assign CPT code 0889T to APC 1511 (New Technology—Level 11 ($901–$1000)) with a payment of $950.50 and CPT code 0892T to APC 1525 (New Technology—Level 25 ($3501–$4000)) with a payment of $3750.50.

There were 12 single frequency claims for CPT 0890T and 39 single frequency claims for CPT 0891T. As this is above the threshold of 10 claims and below the threshold of 100 claims for a service within a year, we proposed to apply our universal low volume New Technology APC policy and use the highest of the geometric mean cost, arithmetic mean cost, or median cost based on up to 4 years of claims data to assign CPT codes 0890T and 0891T to the appropriate New Technology APCs.

Using available claims data from CY 2024, our analysis found the geometric mean cost of CPT 0890T was approximately $1,646, the median cost was approximately $1,009, and the arithmetic mean cost was approximately $1,950. The arithmetic mean was the statistical methodology that estimates the highest cost for the service. Therefore, we proposed, for CY 2026, to assign CPT code 0890T to APC 1521 (New Technology—Level 21 ($1901–$2000)) with a payment rate of $1,950.50.

For CPT 0891T, using the available claims data from CY 2024, our analysis found the geometric mean cost was approximately $1,692, the median cost was approximately $1,009, and the arithmetic mean cost was approximately $2,010. The arithmetic mean was the statistical methodology that estimated the highest cost for the service. Therefore, we proposed, for CY 2026, to assign CPT code 0891T to APC 1522 (New Technology—Level 22 ($2001–$2500)) with a payment rate of $2,250.50.

Since the CY 2026 OPPS/ASC proposed rule was published, we note that CPT code 0889T now has 11 single frequency claims; CPT code 0890T has an updated geometric mean cost of $1,687; and CPT code 0891T now has 41 single frequency claims and a geometric mean cost of around $1,690. There were no changes to the claims information for CPT code 0892T.

We received public comments on these proposals. The following is a summary of the comments we received and our responses.

Comment: Many commenters requested that CMS maintain the current New Technology APC assignments as the current assignments more appropriately reflect the resources required to provide this highly resource intensive therapy. Commenters noted that if CMS finalized the proposed rates, it would result in a 40–48 percent decrease in payment for two of the SAINT codes. They indicated that not only would the payment reduction affect current access to these services for patients who are suffering from major depressive disorder and treatment-resistant depression, but it would also impede providers from implementing SAINT. As a result, this would further widen the disparities in care, especially in rural and underserved communities where treatment options may be limited.

Commenters stated that the limited claims data (less than 1 year) does not accurately reflect the costs of providing SAINT and that CMS should not use the small dataset that is available for determining the rates for CY 2026. A commenter noted that one of the early providers of SAINT confirmed with

them that their reported costs were made in error and were highly inaccurate. The commenter stated that the charges and revenue code assignments for CPT codes 0890T and 0891T dramatically under-reported costs for SAINT, potentially by 80 percent of actual costs for providing this service.

Response: We agree that the proposed rates based on a partial year of claims do not accurately reflect the costs for implementing, providing, and maintaining this service.

After consideration of the public comments we received, we are not finalizing our proposal for CY 2026. For CY 2026, we are using our equitable adjustment authority under section 1833(t)(2)(E) of the Act to maintain the current APC assignments for CPT codes 0889T, 0890T, 0891T, and 0892T. Refer to Table 38 for the proposed and final OPPS New Technology APC and status indicator assignments for CPT codes 0889T, 0890T, 0891T, and 0892T. The final CY 2026 payment rates for these codes can be found in Addendum B to this final rule with comment period. In addition, we refer readers to Addendum D1 to this final rule with comment period for the SI definitions for all codes reported under the OPPS. Addenda B and D1 are available via the internet on the CMS website.

BILLING CODE 4120–01–P

BILLING CODE 4120–01–C

v. Implantable Glucose Monitoring System (APC 1563)

Effective January 1, 2017, the AMA CPT Editorial Panel established CPT codes 0446T (Creation of subcutaneous pocket with insertion of implantable interstitial glucose sensor, including system activation and patient training) and 0448T (Removal of implantable interstitial glucose sensor with creation of subcutaneous pocket at different anatomic site and insertion of new implantable sensor, including system activation) to describe an implantable glucose sensor for patients with diabetes. These codes were used to describe sensors with a 90-day or 180-day battery life. Although these CPT codes were effective January 1, 2017, the implantable interstitial glucose sensor did not receive FDA approval for marketing until June 6, 2019. For CY 2021, we assigned CPT codes 0446T and 0448T to APC 5054 (Level 4 Skin Procedures) and a status indicator of

''T'' (Procedure or Service, Multiple Procedure Reduction Applies; Paid under OPPS; separate APC payment.) and have maintained these APC assignments since then.

In the CY 2025 OPPS/ASC final rule with comment period, we created the following two HCPCS G codes effective January 1, 2025, to describe the implantable interstitial glucose sensor with a 365-day battery life.

- G0546 (Creation of subcutaneous pocket with insertion of 365 day implantable interstitial glucose sensor, including system activation and patient training); and
- G0565 (Removal of implantable interstitial glucose sensor with creation of subcutaneous pocket at different anatomic site and insertion of new 365 day implantable sensor, including system activation).

We assigned HCPCS codes G0564 and G0565 to APC 1561 (New Technology—Level 24 ($3001–$3500)) with a payment rate of $3,250.50.

For the April 1, 2025, quarterly update, we deleted HCPCS codes G0564 and G0565 and assigned 0446T and 0448T to APC 1561 (New Technology—Level 24 ($3001–$3500)) with a payment rate of $3,250.50 to describe the new implantable interstitial glucose sensor with a 365-day battery life. The 365-day glucose sensor replaced previous versions of the implantable interstitial glucose sensor with shorter battery lives. Therefore, the 365-day sensor is the only sensor on the market and can only be described by CPT codes 0446T and 0448T.

For CY 2026, the proposed OPPS payment rates were based on available CY 2024 claims data. As CPT codes 0446T and 0448T were assigned to New Technology APCs to describe this new sensor for the April 2025 quarterly update and the G codes describing this service were only effective for one quarter, we do not have any claims data for the service. Therefore, for CY 2026, we proposed to continue to assign CPT codes 0446T and 0448T to APC 1561 (New Technology—Level 24 ($3001–$3500)) with a payment rate of $3,250.50.

We received public comments on this proposal. The following is a summary of the comments we received and our responses.

Comment: A commenter requested that CMS reassign CPT codes 0446T and 0448T to APC 1530 (New Technology—Level 30 ($6001–$6500)). The commenter cited the increased cost of the implanted 365-day glucose sensor as the reason for their request and the value of the longer sensor duration, including fewer insertion and removal procedures and better adherence to therapy. They explained that extensive research and development, along with high manufacturing costs, have contributed to the cost of the implantable continuous glucose monitoring system (iCGM system) which they state is $6,800. The commenter also requested that the OPPS payment align with the PFS payment (approximately $5,800) to provide consistent payment regardless of setting.

Response: We appreciate the public comment and understand the implicated value that a longer life sensor brings to Medicare beneficiaries. We agree that there would be inherently increased costs to hospitals for the new technology of a 365-day system, but we do not agree that the costs to hospitals would be almost double the costs of the 180-day system.

In summary, after consideration of the public comment we received, we are finalizing our proposal with modification based on our statutory authority set out at section 1833(t)(2)(E) of the Act, to assign CPT code 0446T and 0448T to APC 1563 (New Technology—Level 26 ($4001–$4500)) with a payment of $4,250.50. We remind hospitals that we review, on an annual basis, the APC assignments for all items and services paid under the OPPS. Refer to Table 39 for code descriptor, APC assignment and status indicator assignments for CPT codes 0446T and 0448T for CY 2026. The final CY 2026 payment rates for these codes can be found in Addendum B to this final rule with comment period. In addition, we refer readers to Addendum D1 to this final rule with comment period for the SI definitions for all codes reported under the OPPS. Addenda B and D1 are available via the internet on the CMS website.

TABLE 39: PROPOSED AND FINAL CY 2026 OPPS NEW TECHNOLOGY APC AND STATUS INDICATOR ASSIGNMENTS FOR IMPLANTABLE GLUCOSE MONITORING

CPT Code	Long Descriptor	Proposed CY 2026 OPPS SI	Proposed CY 2026 OPPS APC	Final CY 2026 OPPS SI	Final CY 2026 OPPS APC
0446T	Creation of subcutaneous pocket with insertion of implantable interstitial glucose sensor, including system activation and patient training	T	1561	T	1563
0448T	Removal of implantable interstitial glucose sensor with creation of subcutaneous pocket at different anatomic site and insertion of new implantable sensor, including system activation	T	1561	T	1563

w. Skin Cell Suspension Autograft (SCSA) Procedures (CPT Code 15013 and HCPCS Code C8002) (APC 1567)

Effective January 1, 2025, both CPT code 15013 (Preparation of skin cell suspension autograft, requiring enzymatic processing, manual mechanical disaggregation of skin cells, and filtration; first 25 sq cm or less of harvested skin) and HCPCS code C8002 (Preparation of skin cell suspension autograft, automated, including all enzymatic processing and device components (do not report with manual suspension preparation)) describe the preparation step of a skin cell suspension autograft (SCSA) procedure to treat acute thermal burn injuries. Both codes describe the preparation step of a three-step SCSA procedure: harvesting, preparation, and

application. The difference between the codes is that CPT code 15013 describes the manual preparation of the SCSA, and HCPCS code C8002 describes the automated preparation of the SCSA. Due to the similarities between the procedures, in the CY 2025 OPPS/ASC final rule with comment period, we assigned both CPT code 15013 and HCPCS code C8002 to APC 1567 (New Technology—Level 30 ($6,001–$6,500)) with a payment rate of $6,250.50 and status indicator ''T''. In the CY 2025 OPPS/ASC final rule with comment period, we noted that we believed the sum of the payment rates for the three-step process should approximate $10,000. However, because of the effect of the multiple procedure reduction, the total payment for the skin cell suspension autograft furnished using the RECELL System would have been approximately $8,000, contrary to the intended target of $10,000 as stated in the CY 2025 OPPS/ASC final rule with comment period. To correct this error, in the CY 2025 OPS/ASC Correction Notice, we assigned both CPT code 15013 and HCPCS code C8002 to APC 1532 (New Technology—Level 32 ($7,001–$7,500)) with a payment rate of $7,250.50 and status indicator ''S'' (Procedure or service, not discounted when multiple, paid under OPPS; separate APC payment).

For CY 2026, the OPPS payment rates are proposed to be based on available CY 2024 claims data. Since CPT code 15013 and HCPCS code C8002 were not effective until January 1, 2025, we did not have any claims for either code for CY 2024. Therefore, for CY 2026, we proposed to continue to assign CPT code 15013 and HCPCS code C8002 to APC 1532 (New Technology—Level 32 ($7,001–$7,500)) with a payment rate of $7,250.50.

We did not receive public comments on this provision, and therefore, we are finalizing as proposed.

Refer to Table 40 for the proposed and final OPPS New Technology APC and status indicator assignments for CPT code 15013 and HCPCS code C8002 for CY 2026. The final CY 2026 payment rates can be found in Addendum B to this final rule via the internet on the CMS website.

TABLE 40: PROPOSED AND FINAL CY 2026 OPPS NEW TECHNOLOGY APC AND STATUS INDICATOR ASSIGNMENT FOR SKIN CELL SUSPENSION PREPARATION PROCEDURES

CPT / HCPCS Code	Long Descriptor	Proposed CY 2026 OPPS SI	Proposed CY 2026 OPPS APC	Final CY 2026 OPPS SI	Final CY 2026 OPPS APC
15013	Preparation of skin cell suspension autograft, requiring enzymatic processing, manual mechanical disaggregation of skin cells, and filtration; first 25 sq cm or less of harvested skin	S	1532	S	1532
C8002	Preparation of skin cell suspension autograft, automated, including all enzymatic processing and device components (do not report with manual suspension preparation)	S	1532	S	1532

x. Renal Histotripsy Service (APC 1576)

HCPCS code C9790 (Histotripsy (that is, non-thermal ablation via acoustic energy delivery) of malignant renal tissue, including image guidance) was created October 1, 2023, and was used to describe the Medicare approved Category B IDE (investigational device exemption) clinical study involving the renal histotripsy procedure associated with the use of the HistoSonics Edison System. CPT code 0888T (Histotripsy (*i.e.,* non-thermal ablation via acoustic energy delivery) of malignant renal tissue, including image guidance) replaced HCPCS code C9790 effective July 1, 2024.

Renal histotripsy is a non-invasive, non-thermal, mechanical process that uses a focused beam of sonic energy to destroy solid renal tumors and is currently in a prospective, multi-center, single-arm pivotal trial designed to evaluate the effectiveness and safety of the device for the destruction of kidney tissue by treating primary solid renal tumors.[24] Because the renal histotripsy clinical study is designated as a Category B (non-experimental/investigational) IDE study, the Medicare payment for CPT code 0888T reflects payment for both the service that is performed, and the device used each time it is reported on a claim. For CY 2025 we assigned CPT code 0888T to APC 1576 (New Technology—Level 39 ($15,001–$20,000)) with a payment rate of $17,500.50 based on the previous APC and status indicator assignments for HCPCS code C9790.

For CY 2026, the proposed OPPS payment rates were based on available CY 2024 claims data. We identified one single frequency claim for HCPCS code C9790 and six single frequency claims for CPT code 0888T. Since the CY 2026 OPPS/ASC proposed rule has been published, we have eight single frequency claims for CPT code 0888T. Given our proposal to maintain current New Technology APC assignments for CY 2026 for New Technology services with fewer than 10 claims in the 4-year lookback period applicable for the universal low-volume APC policy, we proposed to continue to assign CPT code 0888T to APC 1576 (New Technology—Level 39 ($15,001–$20,000)) with a payment rate of $17,500.50.

We received public comments on this proposal. The following is a summary of the comments we received and our responses.

Comment: A commenter supported the proposed New Technology APC assignment.

Response: We thank the commenter for their support.

[24] See ''The HistoSonics System for Treatment of Primary Solid Renal Tumors Using Histotripsy (#HOPE4KIDNEY) at *https://clinicaltrials.gov/study/NCT05820087.*

In summary, we are finalizing our proposal without modification. We will continue to assign CPT code 0888T to APC 1576 with a status indicator of 'S' for CY 2026.

The New Technology APC and status indicator assignment for CPT code 0888T is shown in Table 41. The final CY 2026 payment rates for this CPT code can be found in Addendum B to this final rule via the internet on the CMS website. In addition, we refer readers to Addendum D1 to this final rule with comment period for the status indicator meanings reported under OPPS. Addendum D1 can also be found via the internet on the CMS website.

TABLE 41: FINAL CY 2026 OPPS NEW TECHNOLOGY APC AND STATUS INDICATOR ASSIGNMENTS FOR THE RENAL HISTOTRIPSY SERVICE

0888T	Histotripsy (i.e., non-thermal ablation via acoustic energy delivery) of malignant renal tissue, including image guidance	S	1576

D. Universal Low Volume APC Policy for Clinical and Brachytherapy APCs

In the CY 2022 OPPS/ASC final rule with comment period (86 FR 63743 through 63747), we adopted a policy to designate clinical and brachytherapy APCs as low volume APCs if they have fewer than 100 single claims that can be used for ratesetting purposes in the claims year used for ratesetting for the prospective year. For the CY 2026 OPPS/ASC proposed rule, CY 2024 claims were generally the claims used for ratesetting; and clinical and brachytherapy APCs with fewer than 100 single claims from CY 2024 that can be used for ratesetting would be low volume APCs subject to our universal low volume APC policy. As we stated in the CY 2022 OPPS/ASC final rule with comment period, we adopted this policy to reduce the volatility in the payment rate for those APCs with fewer than 100 single claims. Where a clinical or brachytherapy APC has fewer than 100 single claims that can be used for ratesetting, under our low volume APC payment adjustment policy, we determine the APC cost as the greatest of the geometric mean cost, arithmetic mean cost, or median cost based on up to 4 years of claims data. We excluded APC 5853 (Partial Hospitalization for CMHCs) and APC 5863 (Partial Hospitalization for Hospital-based PHPs) from our universal low volume APC policy given the different nature of policies that affect the partial hospitalization program. We also excluded APC 2698 (Brachytx, stranded, nos) and APC 2699 (Brachytx, non-stranded, nos) as our current methodology for determining payment rates for non-specified brachytherapy sources is appropriate.

Based on claims data available for the CY 2026 OPPS/ASC proposed rule, we proposed to designate six brachytherapy APCs and five clinical APCs as low volume APCs under the OPPS (90 FR 33561 through 33562). The six brachytherapy APCs and five clinical APCs meet our criteria of having fewer than 100 single claims in the claims' year used for ratesetting (CY 2024 for the CY 2026 OPPS/ASC proposed rule). Ten of the 11 APCs were designated as low volume APCs in CY 2025. Based on data for the CY 2026 OPPS/ASC proposed rule, APC 2645 (Brachytx, non-stranded, gold-198) had 103 single claims and no longer met our criteria to be designated as a low volume APC; however, APC 2643 (Brachytx, non-stranded, c-131) had only 88 single claims and met our criteria to be designated as a low volume APC.

We received public comments on this proposal. The following is a summary of the comments we received and our responses.

Comment: Commenters supported our proposal to continue our low volume APC policy.

Response: We thank commenters for their support.

After consideration of public comments, based on CY 2024 claims data available for this final rule with comment period, we are finalizing our proposal to designate six brachytherapy APCs and five clinical APCs as low volume APCs under the OPPS. Table 42 includes the CY 2024 claims available for ratesetting for each of the APCs we are designating as low volume APCs for CY 2026. The final cost statistics for our CY 2026 low volume APCs, such as the median, arithmetic mean, and geometric mean cost are available for download with this final rule with comment period on the CMS website. We refer readers to our website at *https://www.cms.gov/medicare/payment/prospective-payment-systems/hospital-outpatient/regulations-notices*; click on the relevant regulation to download the low volume APC cost statistics under the comprehensive (OPPS) ratesetting methodology in the downloads section of the web page.

TABLE 42: FINAL LOW VOLUME APCS USING COMPREHENSIVE (OPPS) RATESETTING METHODOLOGY FOR CY 2026

APC	APC Description	CY 2024 Claims Available for Ratesetting
2632	Iodine I-125 sodium iodide	1
2635	Brachytx, non-str, HA, p-103	9
2636	Brachy linear, non-str, p-103	0
2642	Brachytx, stranded, c-131	49
2643	Brachytx, non-stranded, c-131	88
2647	Brachytx, NS, Non-HDRIr-192	3
5244	Level 4 Blood Product Exchanges and Related Services	46
5494	Level 4 Intraocular Procedures	72
5495	Level 5 Intraocular Procedures	41
5496	Level 6 Intraocular Procedures	15
5881	Ancillary Outpatient Services When Patient Dies	57

E. APC-Specific Policies

1. APC Structure

a. Diagnostic Tests and Related Services (APCs 5721 Through 5724)

The Diagnostic Tests and Related Services APC series was created as part of the APC restructuring and consolidation in the CY 2016 OPPS (80 FR 70384 through 70386). Since its initial establishment, we have maintained a four-level APC structure for the series. In the CY 2026 OPPS, as part of our standard process of reviewing the OPPS structure based on updated claims data, we proposed to make changes to the APC series, and included those changes in the associated cost statistics files and addenda made available with each proposed and final rule via the internet on the CMS website.

We received public comments on this proposal. The following is a summary of the comments we received and our responses.

Comment: Several commenters requested that CMS does not finalize the proposed changes to the Diagnostic Tests and Related Services APC series. They requested that CMS refrain from shifting services in the APC family until there was sufficient opportunity for meaningful public comment on such changes. Commenters noted the impact on geometric mean costs for each of the APCs. Other commenters requested that CMS delay the changes and conduct further analysis so that the public can evaluate them. A commenter requested that CMS rerun the cost modeling for the APCs excluding low volume or anomalous facility reports and consider volatility guards, public analysis regarding observed changes, and maintain payment levels that preserve beneficiary access until stable cost data can be established.

Commenters noted individual impacts on codes related to the changes in the Diagnostic Tests and Related Services APCs. A commenter noted the impact on CPT code 95924 (Testing of autonomic nervous system function; combined parasympathetic and sympathetic adrenergic function testing with at least 5 minutes of passive tilt), which had an expected decrease in payment of 29 percent. Another commenter noted CPT code 93017 (Cardiovascular stress test using maximal or submaximal treadmill or bicycle exercise, continuous electrocardiographic monitoring, and/or pharmacological stress; tracing only, without interpretation and report) which had an expected decrease of about 29 percent in its payment rate, which the commenter wanted maintained at $311.40. A few commenters recommended that CPT code 90870 (Electroconvulsive therapy (includes necessary monitoring)) be maintained in its current assignment or moved to a clinically coherent APC since the code represents a therapeutic procedure and not a diagnostic test.

Response: As discussed earlier in this rule, section 1833(t) of the Act requires CMS to annually review and update the payment rates for services payable under the OPPS. Section 1833(t)(2)(B) of the Act provides that the Secretary may establish groups of covered OPD services within this classification system, so that services classified within each group are comparable clinically and with respect to the use of resources. In addition, section 1833(t)(2) of the Act provides that, subject to certain exceptions, the items and services within an APC group cannot be considered comparable regarding the use of resources if the highest cost for an item or service in the group is more than 2 times greater than the lowest cost for an item or service within the same group (referred to as the ''2 times rule'').

As part of that review and update process we made changes to the APC assignments within the APC series such that the cost and clinical APC groupings would be more reflective of the codes assigned to them. We note that the changes in geometric mean costs for these APCs are associated with the APC recalibrations so that the services with clinical cost patterns that are more similar to each other are assigned to the same APC. In general, we do not believe that the alternative cost modeling the commenter requested is appropriate for ratesetting for these APCs. In the broader OPPS ratesetting process we generally aim to use as much as data is available that is appropriate for ratesetting, and typically only remove claims data from that process through the systematic trims that are described in the claims accounting narrative document made available on the CMS website.

We believe that sufficient opportunity for public notice and comment was provided, as the proposed changes to the APC assignments and the APC levels are reflected through the cost statistics and two times files we make available with each proposed and final rule. In addition, any changes associated with individual codes are noted in the

Addendum B through the Change Indicator column.

CPT codes 95924 and 93017 were both proposed to be placed in APC 5722 (Level 2 Diagnostic Tests and Related Services) in the CY 2026 OPPS/ASC proposed rule, which has a cost significant range from approximately $165 to $298. (The addenda for CY 2026 OPPS/ASC proposed rule can be found on the CMS website located at *https://www.cms.gov/medicare/payment/prospective-payment-systems/hospital-outpatient/regulations-notices/cms-1834-p*.) In the final rule claims data available for OPPS ratesetting CPT code 95924 has a geometric mean cost of $281.10, while CPT code 93017 has a geometric mean cost of $271.62. While we recognize that APC geometric mean costs can fluctuate based on a variety of factors, including updated claims and cost report data update, APC level recalibration, and others, the geometric mean costs of both codes suggests that they are appropriately placed in the Level 2 APC based on their estimated resource costs. We note that we generally do not set APC payment rates at predetermined rates for clinical APCs.

In the claims available for OPPS ratesetting for this final rule, CPT code 90870 has an estimated geometric mean cost of $713.14 based on 52,518 single claims. The geometric mean cost of APC 5724 (Level 4 Diagnostic Tests and Related Services) is $884.07. We believe that the proposed placement of CPT code 90870 in APC 5724 remains appropriate based on its geometric mean cost relative to that of the APC and the similarity of its resource costs relative to other procedures assigned to the APC and clinical similarity to some of the related services assigned to the APC series more broadly. As a result, we are finalizing the assignment of CPT code 90870 to APC 5724.

We note that we will continue to monitor the APC series as more claims data are available for the procedures assigned to this series and continue to be interested in suggestions regarding changes to those assignments for future years.

After consideration of the public comments we received, we are finalizing the proposed APC recalibration changes for the Diagnostics Tests and Related Procedures APC series. In addition, we are finalizing the assignments of CPT codes 95924 and 93017 to APC 5722, and CPT code 90870 to APC 5724.

b. Nerve Procedures (APCs 5431 Through 5432)

The current APC structure of the Nerve Procedures series was developed during the broader CY 2016 OPPS reorganization and consolidation of APCs. Since that time, it has maintained that same two-level APC structure (89 FR 70379 through 70380).

Comment: A few commenters noted that there was a significant decrease in the estimated geometric mean cost of the Level 2 Nerve Procedures APC due to the impact of a new eligible complexity adjustment code combination. They requested that CMS either map the complexity adjustment 6471R back into the Level 1 Nerve Procedures APC (APC 5431) or alternatively develop a level 3 APC that could accommodate some of the higher cost procedures in the current Level 2, such that there was less of an impact on some portion of the procedures.

Commenters had requested that these codes be included in that level 3 APC:

- 61215—*Insertion of subcutaneous reservoir, pump or continuous infusion system for connection to ventricular catheter*
- 63741—*Creation of shunt, lumbar, subarachnoid-peritoneal, -pleural, or other; percutaneous, not requiring laminectomy*
- 64864—*Suture of facial nerve; extracranial*
- 64885—*Nerve graft (includes obtaining graft), head or neck; up to 4 cm in length*
- 64886—*Nerve graft (includes obtaining graft), head or neck; more than 4 cm length*
- 64890—*Nerve graft (includes obtaining graft), single strand, hand or foot; up to 4 cm length*
- 64891—*Nerve graft (includes obtaining graft), single strand, hand or foot; more than 4 cm length*
- 64892—*Nerve graft (includes obtaining graft), single strand, arm or leg; up to 4 cm length*
- 64895—*Nerve graft (includes obtaining graft), multiple strands (cable), hand or foot; up to 4 cm length*
- 64896—*Nerve graft (includes obtaining graft), multiple strands (cable), hand or foot; more than 4 cm length*
- 64897—*Nerve graft (includes obtaining graft), multiple strands (cable), arm or leg; up to 4 cm length*
- 64898—*Nerve graft (includes obtaining graft), multiple strands (cable), arm or leg; more than 4 cm length*
- 64907—*Nerve pedicle transfer; second stage*
- 64912—*Nerve repair; with nerve allograft, each nerve, first strand (cable)*

A commenter also requested special consideration for CPT code 64912, and that the CPT code be included in the Level 3 Nerve Procedures APC.

Response: While we note that APC geometric mean cost changes are expected under the current structure of the C–APCs and the complexity adjustments, we agree that a Level 3 Nerve Procedures APC is appropriate, in particular to resolve what would otherwise be a significant ''two times rule'' violation in the Level 2 APC. We are including the above requested codes in the Level 3 APC. We believe that there are several additional codes for which it would appropriate from a clinical and resource cost similarity perspective to include in the Level 3 APC. We are finalizing the inclusion of the following additional codes into the Level 3 APC:

- 61720—*Creation of lesion by stereotactic method, including burr hole(s) and localizing and recording techniques, single or multiple stages; globus pallidus or thalamus*
- 62230—*Replacement or revision of cerebrospinal fluid shunt, obstructed valve, or distal catheter in shunt system*
- 62350—*Implantation, revision or repositioning of tunneled intrathecal or epidural catheter, for long-term medication administration via an external pump or implantable reservoir/infusion pump; without laminectomy*
- 64840—*Suture of posterior tibial nerve*
- 64856—*Suture of major peripheral nerve, arm or leg, except sciatic; including transposition*
- 64905—*Nerve pedicle transfer; first stage*
- 64910—*Nerve repair; with synthetic conduit or vein allograft (e.g., nerve tube), each nerve*
- 64911—*Nerve repair; with autogenous vein graft (includes harvest of vein graft), each nerve*
- 0442T—*Ablation, percutaneous, cryoablation, includes imaging guidance; nerve plexus or other truncal nerve (e.g., brachial plexus, pudendal nerve)*

Under the current C–APC methodology, complexity adjustments are mapped to the next higher cost APC within the clinical family. Within this structure, we currently do not have a mechanism for removing eligibility complexity adjustments by assigning them to alternative APCs including the originating primary APC. Therefore, we do not currently believe it is appropriate to manually assign the complexity adjustment represented by 6471 to APC 5431. Despite this, we understand that there are potential opportunities to

refine the C–APC and complexity adjustment methodology to address cost modeling concerns. We continue to remain interested in suggestions regarding the C–APC and complexity adjustment methodology, as noted in section II.A.2.b. of this final rule with comment period.

After consideration of the comments, we are finalizing a 3-Level APC structure for the Nerve Procedures APC series.

c. Endovascular Procedures (APCs 5191 Through 5194)

The Endovascular Procedures APC series was initially mapped and assigned as a 3 level series in the CY 2016 OPPS. In the CY 2017 OPPS, an additional APC level was created. Since that time the Endovascular Procedures APC series has been maintained as a 4-level APC series.

Comment: A commenter requested that APC 5200 (Implantation Wireless PA Pressure Monitor) be converted into a Level 5 Endovascular Procedures APC, and that the following codes be included into that APC:

- C9774—*Revascularization, endovascular, open or percutaneous, tibial/peroneal artery(ies); with intravascular lithotripsy and atherectomy, includes angioplasty within the same vessel(s), when performed.*
- C9775—*Revascularization, endovascular, open or percutaneous, tibial/peroneal artery(ies); with intravascular lithotripsy and transluminal stent placement(s), and atherectomy, includes angioplasty within the same vessel(s), when performed.*
- C9767—*Revascularization, endovascular, open or percutaneous, lower extremity artery(ies), except tibial/peroneal; with intravascular lithotripsy and transluminal stent. placement(s), and atherectomy, includes angioplasty within the same vessel(s), when performed.*
- C9797—*Vascular embolization or occlusion procedure with use of a pressure-generating catheter (e.g., one-way valve, intermittently occluding), inclusive of all radiological supervision and interpretation, intraprocedural roadmapping, and imaging guidance necessary to complete the intervention; for tumors, organ ischemia, or infarction.*

They believe that doing so would be appropriate based on the similarity of the codes' geometric mean costs. That commenter also stated that with the proposal to eliminate the inpatient only list over three years beginning in 2026, creating a Level 5 Endovascular Procedures APC could allow for appropriate clinical APC placement for procedures being removed from the list.

Response: We note that the APC geometric mean cost of APC 5194 (Level 4 Endovascular Procedures) is $18,872.40 while that of APC 5200 (Implantation Wireless PA Pressure Monitor) is $29,529.47. We recognize that the general approximate geometric mean costs for inclusion in the requested Level 5 APC would range from about $24,500 to $27,900. However, that level 5 APC payment weight would still continue to be primarily driven by the estimated costs of the currently assigned HCPCS code 33289 (*Transcatheter implantation of wireless pulmonary artery pressure sensor for long-term hemodynamic monitoring, including deployment and calibration of the sensor, right heart catheterization, selective pulmonary catheterization, radiological supervision and interpretation, and pulmonary artery angiography, when performed*), which has a geometric mean cost of $29,529.47.

We recognize the commenter concerns around procedure codes potentially being removed from the IPO list requiring appropriate clinical APC placements. For the CY 2026 OPPS, we do not believe that the procedures being removed from the IPO list would require the level 5 Endovascular Procedures APC that the commenter requested.

At this time, we do not believe that it is appropriate to convert the APC 5200 (Implantation Wireless PA Pressure Monitor) into a level 5 Endovascular Procedures APC. However, we will continue to monitor the available claims and cost data for the APC series and in the context of codes being removed for the IPO list.

After consideration of the comments, we are finalizing the 4-level APC structure of the Endovascular Procedures APC series as proposed.

d. Laparoscopy and Related Services (APCs 5361 Through 5362)

As part of the CY 2016 OPPS APC restructuring process, the four level APC series for Laparoscopy and Related Services was consolidated into a 2-level APC series (80 FR 70379) through. Since that time, we have maintained that 2-level APC structure based on the clinical and resource homogeneity of the services assigned to those APCs.

Comment: A commenter requested that CMS create a Level 3 Laparoscopy and Related Services APCs that would include the highest cost and complexity services in the current Level 2 APC. The commenter believes that this would restore the previously existing structure of the Laparoscopy and Related Services APCs while allowing potential placements for services being removed from the IPO list. The commenter believes that it would be appropriate to place services with geometric mean costs of $12,000 or more into that level 3 APC.

Response: While we monitor the structure of the OPPS and the various APCs, we note that some of the principles guiding the CY 2016 OPPS APC restructuring and consolidation included improved resource and clinical homogeneity, as well as reduced resource overlap in APCs within a clinical family (80 FR 70379).

The Level 2 Laparoscopy and Related Services APC has an estimated geometric mean cost of $10,943.41, with a range of geometric mean costs for two times rule purposes ranging from $8,909.96 for CPT code 58552 (Laparoscopy, surgical, with vaginal hysterectomy, for uterus 250 g or less; with removal of tube(s) and/or ovary(s)) to $13,085.27 for CPT code 55866 (Laparoscopy, surgical, with vaginal hysterectomy, for uterus 250 g or less; with removal of tube(s) and/or ovary(s)). While some of the services in the cost range indicated by the commenter have significant claims volume, we do not believe that there is a current need for an additional APC level given that the estimated geometric mean cost of the requested Level 3 APC would be significantly distinct from a cost perspective.

We note that we are not removing any services from the IPO list in CY 2026 that would require assignments to the Laparoscopic and Related Services APC series. However, we will continue to monitor the claims data as they become available and the need for additional APC levels in the future.

After consideration of the public comments, we are finalizing the 2-level APC structure for the Laparoscopy and Related Services APC series in this final rule with comment period as proposed.

2. ActiGraft System, HCPCS Code G0465 (APC 5054)

Effective April 2021, HCPCS code G0465 (Autologous platelet rich plasma (PRP) or other blood-derived product for diabetic chronic wounds/ulcers, using an FDA-cleared device for this indication, (includes as applicable administration, dressings, phlebotomy, centrifugation or mixing, and all other preparatory procedures, per treatment) describes autologous blood derived products for chronic non-healing wounds. For CY 2026, we proposed to assign HCPCS code G0465 to APC 5054

(Level 4 Skin Procedures) and status indicator ''T.''

We received public comments on this proposal. The following is a summary of the comments we received and our responses.

Comment: A commenter requested that CMS change the status indicator from ''T,'' which allows for multiple procedure discounting, to a status indicator that pays the full payment rate each time the service is billed on a claim. The commenter explained that CMS recognized that HCPCS code G0465 could be billed twice on the same claim by revising the Medically Unlikely Edit (MUE) for HCPCS code G0465 from ''1'' to ''2'' in April 2025. Per the commenter, when more than one treatment is required for a patient with a single large wound or multiple wounds, providers would need to bill HCPCS code G0465 twice on the same claim to reflect the multiple treatments. The commenter believes that applying a multiple procedure discount to HCPCS code G0465 is inappropriate because the cost of the treatment kit would not be paid fully if billed multiple times. The commenter notes that CPT code 43877, which is also proposed to be assigned to APC 5054, is assigned a status indicator other than ''T,'' specifically ''Q2,'' to demonstrate that CMS has assigned codes in APC 5054 a status indicator other than ''T.'' Finally, the commenter requested that CMS revise the place of service (POS) codes for G0465 to allow for the service to be furnished in the nursing home setting.

Response: With regard to the commenter's request to revise the POS codes for HCPCS code G0465, changes to allow for services to be paid in facilities other than the hospital outpatient department or ambulatory surgical center are outside the scope of this rule.

With regard to the request to not finalize the assignment of the proposed status indicator of ''T'' to HCPCS code G0465, we note that the OPPS uses certain payment principles, including packaging and multiple procedure discounting, in an effort to control costs and promote more efficient care. HCPCS code G0465 describes a service that may be billed more than once on a claim in particular instances when the patient has multiple or large wounds that would require additional product. In reviewing the other services that are assigned to APC 5054, we note there are many other similar skin services (for example, HCPCS code G0460) that are also assigned to status indicator ''T'' and that are described on a ''per treatment'' basis, like HCPCS code G0465. To align with the 80 other similar skin procedure codes assigned to APC 5054 and status indicator ''T,'' we are finalizing our proposal to assign status indicator ''T'' to HCPCS code G0465 as reflected in Table 43.

The final CY 2026 OPPS payment rate for all the codes payable under the OPPS can be found in Addendum B to this final rule with comment period. In addition, we refer readers to Addendum D1 to this final rule with comment period for the SI meanings for all codes reported under the OPPS. Addendum D1 is available via the internet on the CMS website.

TABLE 43: PROPOSED AND FINAL CY 2026 OPPS APC AND SI ASSIGNMENT FOR HCPCS CODE G0465

HCPCS Code	Long Descriptor	Proposed CY 2026 SI	Proposed CY 2026 APC	Final CY 2026 SI	Final CY 2026 APC
G0465	Autologous platelet rich plasma (prp) or other blood-derived product for diabetic chronic wounds/ulcers, using an fda-cleared device for this indication, (includes as applicable administration, dressings, phlebotomy, centrifugation or mixing, and all other preparatory procedures, per treatment)	T	5054	T	5054

Audiology Related Procedures and Services

3. Audiology-Related Services, CPT Codes 92540, 92579, 92588 (APC 5722)

For CY 2025, we assigned CPT codes 92540 (Basic vestibular evaluation, includes spontaneous nystagmus test with eccentric gaze fixation nystagmus, with recording, positional nystagmus test, minimum of 4 positions, with recording, optokinetic nystagmus test, bidirectional foveal and peripheral stimulation, with recording, and oscillating tracking test, with recording) and 92579 (Visual reinforcement audiometry (vra)) to APC 5721 (Level 1 Diagnostic Tests and Related Services) with a payment rate of $156.46. CPT code 92588 (Distortion product evoked otoacoustic emissions; comprehensive diagnostic evaluation (quantitative analysis of outer hair cell function by cochlear mapping, minimum of 12 frequencies), with interpretation and report) was assigned to APC 5722 (Level 2 Diagnostic Tests and Related Services) with a payment rate of $311.40.

In the CY 2026 OPPS/ASC proposed rule, we proposed to assign all three CPT codes to APC 5722 (Level 2 Diagnostic Tests and Related Services) with a proposed payment rate of $221.14.

We received public comments on this proposal. The following is a summary of the comments we received and our responses.

Comment: A commenter stated that they were concerned with the placement of CPT code 92540 in APC 5721 because the time and resources required to perform CPT 92540 are clinically analogous to the electrophysiological tests in APC 5722. Therefore, the commenter requested a reassignment of CPT 92540 from APC 5721 to APC 5722. The same commenter supported the placement of CPT codes 92579 and 92588 to APC 5722 and urged CMS to finalize the assignment.

Response: As we have already proposed to assign CPT code 92540 to APC 5722, we are finalizing our proposal without modification to assign CPT codes 92540, 92579 and 92588 to APC 5722 for CY 2026.

We refer readers to Addendum B to this final rule with comment period for the payment rates for all codes

reportable under the OPPS. Addendum B is available via the internet on the CMS website.

4. Fully Implanted Active Middle Ear Implant (FI–AMEI), CPT Codes 0951T–0955T

Effective July 1, 2025, The AMA CPT Editorial Board created five new Category III CPT codes to report total implantation, revision or replacement with or without mastoidectomy; replacement of sound processor only; and removal, including all implant components of a FI–AMEI. Specifically, the following CPT codes were created:

- 0951T—Totally implantable active middle ear hearing implant; initial placement, including mastoidectomy, placement of and attachment to sound processor;
- 0952T—Totally implantable active middle ear hearing implant; revision or replacement, with mastoidectomy and replacement of sound processor;
- 0953T—Totally implantable active middle ear hearing implant; revision or replacement, without mastoidectomy and replacement of sound processor;
- 0954T—Totally implantable active middle ear hearing implant; replacement of sound processor only, with attachment to existing transducers; and
- 0955T—Totally implantable active middle ear hearing implant; removal, including removal of sound processor and all implant components.

In the CY 2026 OPPS/ASC proposed rule, we proposed to assign CPT codes 0951T–0955T to status indicator ''E1'' to indicate that these codes are not paid by Medicare when submitted on outpatient claims (any outpatient bill type) because we believe that these codes meet the definition of a hearing aid and therefore are not covered by Medicare.

We received public comments on this proposal. The following is a summary of the comments we received and our responses.

Comment: A commenter stated that FI–AMEI is not a hearing aid but instead is a prosthetic device that meets the definition of an osseointegrated implant, and therefore, should be covered by Medicare.

The commenter stated that an FI–AMEI is a prosthetic device because it produces the perception of sound by replacing the function of the middle ear. More specifically, the commenter stated that an FI–AMEI is an osseointegrated implant.

The commenter requested that CMS change the proposed OPPS status indicator assignment for CPT codes 0951T–0955T from status indicator ''E1'' to status indicator ''S'' given the FI–AMEI is a covered prosthetic device as defined by the Medicare Benefit Policy Manual.

The commenter requested CMS assign codes 0951T–0953T to New Technology APC 1577, code 0954T to New Technology APC 1575, and code 0955T to New Technology APC 1534.

Response: We thank the commenter for their input. Section 1862(a)(7) of the Act excludes hearing aids from Medicare coverage. Certain devices that produce perception of sound by replacing the function of the middle ear, cochlea or auditory nerve are excepted and payable by Medicare. Cochlear implants and auditory brainstem implants that replace the function of the cochlea or auditory nerve and provide electrical stimulation to auditory nerve fibers are excepted. Osseointegrated implants that replace the function of the middle ear and provide vibratory mechanical energy through the skull to both cochleae are excepted. Middle ear implants, including fully implanted active middle ear hearing devices, do not function like osseointegrated implants and are not excepted.

Therefore, we are finalizing the assignment of status indicator ''E1'' for CPT codes 0951T–0955T without modification to indicate that these codes are not paid by Medicare when submitted on outpatient claims (any outpatient bill type).

In addition, we refer readers to Addendum D1 to this final rule with comment period for the SI meanings for all codes reported under the OPPS. Addendum D1 is available via the internet on the CMS website.

Breast and Lymph Procedures

5. Ablation of Breast Tumor Procedures, CPT Codes 0970T and 0971T (APC 5091)

Effective July 1, 2025, the AMA CPT Editorial Panel established the CPT codes 0970T and 0971T. CPT codes 0970T (Ablation, benign breast tumor (*e.g.,* fibroadenoma), percutaneous, laser, including imaging guidance when performed, each tumor) and 0971T (Ablation, malignant breast tumor(s), percutaneous, laser, including imaging guidance when performed, unilateral) describe procedures for the ablation of breast tumors. For CY 2026, we proposed to maintain both CPT codes in APC 5091 (Level 1 Breast/Lymphatic Surgery and Related Procedures).

We received public comments on this proposal. The following is a summary of the comments we received and our responses.

Comment: A commenter requested that CMS reassign CPT codes 0970T and 0971T to APC 5093 (Level 3 Breast/Lymphatic Surgery and Related Procedures), which had a proposed payment rate of $6,575.63. The commenter stated that the device associated with these procedures had a cost of around $2,700 and the total costs of the procedure would be more appropriately covered by the payment rate of APC 5093.

Response: After clinical review of these procedures, we continue to believe that these procedures are appropriately assigned to APC 5091. Therefore, we are finalizing our proposal, without modification, to continue to assign CPT codes 0970T and 0971T to APC 5091 (Level 1 Breast/Lymphatic Surgery and Related Procedures). Table 44 shows the finalized status indicator and APC assignment for the procedure codes. We refer readers to Addendum B to this final rule with comment period for the payment rates for all codes reportable under the OPPS. Addendum B is available via the internet on the CMS website.

TABLE 44: FINAL CY 2026 APC AND STATUS INDICATOR ASSIGNMENTS FOR CPT CODES 0970T and 0971T

CPT Code	Long Descriptor	Final CY 2026 OPPS SI	Final CY 2026 OPPS APC
0970T	Ablation, benign breast tumor (eg, fibroadenoma), percutaneous, laser, including imaging guidance when performed, each tumor	J1	5091
0971T	Ablation, malignant breast tumor(s), percutaneous, laser, including imaging guidance when performed, unilateral	J1	5091

6. Lymphovenous Bypass, CPT Code 1019T (APC 5092)

The CPT Editorial Panel created Category III CPT code 1019T (placeholder code X476T) (Lymphovenous bypass, including robotic assistance, when performed, per extremity) effective January 1, 2026. For CY 2026, we proposed to assign CPT code 1019T to APC 5091 (Level 1 Breast/Lymphatic Surgery and Related Procedures) with a proposed payment of around $4,049 and a status indicator of 'J1' (Hospital Part B Services Paid Through a Comprehensive APC; Paid under OPPS).

We received public comments on this proposal. The following is a summary of the comments we received and our responses.

Comment: Several commenters requested higher payment for this procedure providing the following rationale to support their request:

- The procedure is a curative procedure versus managing the condition of lymphedema.
- The procedure requires 2 to 5 hours of operative time.
- The procedure is performed by surgeons who have advanced surgical training in this specialty area.
- The procedure is resource intensive utilizing a highly specialized and expensive equipment (for example, microscope and robot).

A couple of commenters suggested alternative crosswalk codes to determine APC placement such as, CPT code 19357 (*Tissue expander placement in breast reconstruction, including subsequent expansion(s)*) and CPT code 35883 (*Revision, femoral anastomosis of synthetic arterial bypass graft in groin, open; with nonautogenous patch graft (e.g., polyester, ePTFE, bovine pericardium*). The commenter suggested using the claims information for CPT code 35883 and the cost information associated with that procedure as a basis for determining an appropriate New Technology APC assignment.

Response: After review of the comments, we believe that CPT code 1019T should be reassigned to APC 5092, noting that there are currently other lymph procedures assigned to APC 5092. We do not believe a New Technology APC assignment would be appropriate as the procedure is described by a Category III CPT code and can be assigned to a clinical APC.

In summary, after consideration of the public comments we received, we are finalizing our proposal with modification, to assign CPT code 1019T to APC 5092 as reflected in Table 45. The final CY 2026 payment rates for this code can be found in Addendum B to this final rule with comment period. In addition, we refer readers to Addendum D1 to this final rule with comment period for the SI definitions for all codes reported under the OPPS. Addenda B and D1 are available via the internet on the CMS website.

TABLE 45: PROPOSED AND FINAL CY 2026 APC AND STATUS INDICATOR ASSIGNMENTS FOR CPT CODE 1019T

CPT Code	Long Descriptor	Proposed CY 2026 SI	Proposed CY 2026 APC	Final CY 2026 SI	Final CY 2026 APC
1019T	Lymphovenous bypass, including robotic assistance, when performed, per extremity	J1	5091	J1	5092

Cardiac Related Procedures and Services

7. Cardiac CT Services, CPT Codes 75572, 75573, and 75574 (APC 5572)

Cardiac computed tomography services are described by the following Category I CPT codes and have been effective since January 1, 2010:

- 75572—*Computed tomography, heart, with contrast material, for evaluation of cardiac structure and morphology (including 3D image postprocessing, assessment of cardiac function, and evaluation of venous structures, if performed);*
- 75573—*Computed tomography, heart, with contrast material, for evaluation of cardiac structure and morphology in the setting of congenital heart disease (including 3D image postprocessing, assessment of left ventricular [LV] cardiac function, right ventricular [RV] structure and function and evaluation of vascular structures, if performed);* and
- 75574—*Computed tomographic angiography, heart, coronary arteries and bypass grafts (when present), with contrast material, including 3D image postprocessing (including evaluation of*

cardiac structure and morphology, assessment of cardiac function, and evaluation of venous structures, if performed).

In prior rulemaking, we have received comments noting that the payment for these codes has declined since 2017. Comments on previous OPPS proposed rules have indicated that the payment amount is insufficient to cover the cost of providing the service and have stated that the payment amount does not consider the hospital resources required to perform these services, including the use of the equipment, medication administration, staff time, and scanner time. We have maintained over the years that an analysis of our claims data for these three codes have shown geometric mean costs consistent with the geometric mean cost for the APC to which they were assigned to since 2015.

We have also received comments in the past urging CMS to allow hospitals the flexibility to submit charges for cardiac CT services with a revenue code other than CT scan (035X) and Radiology Diagnostic (032X) revenue codes, implying that MACs had applied edits to the cardiac CT codes that prevented hospitals from reporting a cardiology (048X) revenue code when appropriate. It is longstanding CMS policy that hospital outpatient facilities are responsible for reporting the appropriate cost centers and revenue codes on claims. As stated in section 20.5 in Chapter 4 (Part B Hospital) of the Medicare Claims Processing Manual, CMS ''does not instruct hospitals on the assignment of HCPCS codes to revenue codes for services provided under OPPS since hospitals' assignments of cost vary. Where explicit instructions are not provided, HOPDs should report their charges under the revenue code that will result in the charges being assigned to the same cost center to which the cost of those services are assigned in the cost report.'' We have consistently stated that hospital outpatient facilities must determine the most appropriate cost center and revenue code for the cardiac CT codes (87 FR 71849, 88 FR 81664 and 89 FR 94058).

After we issued the CY 2024 OPPS/ASC final rule, interested parties notified us of a specific claims edit that may have limited the revenue codes reported with the cardiac CT codes in prior years' claims data. We removed the outdated revenue code edit in early December 2023 to allow for the cardiac CT codes to be billed with any appropriate revenue code. We informed the public of our findings and the changes that we made in the January 2024 OPPS Update (Transmittal 12421, Change Request 13488), dated December 21, 2023. We believe the edit may have prevented some providers from reporting the cardiology revenue code (048X), which maps to the cardiology cost center (03140), when billing for cardiac CT services. In the past, commenters have indicated that the cardiology cost center has a higher cost-to-charge ratio (CCR) than the imaging cost centers, and they believe the inability to report the cardiology revenue code has resulted in a lower payment rate for cardiac CT services. Since the OPPS ratesetting process utilizes the applicable cost center's CCR to reduce the charges on the claim to estimated cost, utilizing cost centers with lower CCRs results in a lower OPPS payment compared to utilizing cost centers with higher CCRs. With the edit no longer in place, we stated that hospitals may bill for cardiac CT services with whichever revenue code they believe appropriate, including cardiology revenue code 048X.

In CY 2025 rulemaking, we conducted studies to calculate HCPCS geometric mean costs for the cardiac CT codes based on a simulation that assumed that differing numbers of HOPDs (specifically 25 percent, 50 percent, and 75 percent of the total number of HOPDs billing for these services) would have assigned these services to the cardiology revenue code (048X) and cardiology cost center (03410). Based upon the results of the studies, we found that if 50 percent or more of HOPDs had billed these services with the cardiology revenue code (048X) and cardiology cost center (03140), the geometric mean cost for these codes would have increased and would have resulted in a revised APC assignment from APC 5571 (Level 1 Imaging with Contrast) to APC 5572 (Level 2 Imaging with Contrast).

We were persuaded by the public comments submitted that a majority of the providers who bill these codes would have preferred to bill them with the cardiology revenue code but were not able to do so due to the prior revenue code edit and the remaining procedural hurdles that flowed from the prior revenue code edit.

For CY 2025, we used our equitable adjustment authority under section 1833(t)(2)(E) of the Act to utilize an alternative methodology to calculate the payment for the cardiac CT services in CY 2025. We finalized temporary reassignment of the cardiac CT codes (CPT codes 75572, 75573, and 75574) to APC 5572 (Level 2 Imaging with Contrast).

For CY 2026, CPT code 75572 had 33,272 single claims for ratesetting and a geometric mean cost of around $152. CPT code 75573 had 488 single claims for ratesetting and a geometric mean cost of around $216. CPT code 75573 had 94,419 single claims for ratesetting and a geometric mean cost of around $187. Review of the current claims data indicates that there are providers who are utilizing the cardiology revenue codes.

For CY 2026, we proposed to continue assignment of CPT codes 75572, 75573, and 75574 to APC 5572 (Level 2 Imaging with Contrast) with a proposed payment rate of $358.35, noting as we did in last year's final rule that we anticipate that it may take 3 to 4 years to see an impact from changes in billing practices.

We received public comments on this proposal. The following is a summary of the comments we received and our responses.

Comments: Several commenters supported the APC assignment of CPT codes 75572, 75573, and 75574 to APC (Level 2 Imaging with Contrast). Commenters stated that accurate and stable reimbursement is essential in ensuring that Medicare beneficiaries benefit from evidence-based innovations that improve cardiovascular care. Providers believe that the current APC assignment provides adequate reimbursement that appropriately reflects the clinical complexity and resource requirements to provide these services.

Many commenters believe that these services are underutilized, in part due to historical underpayment and billing restrictions that they encountered in the past and expressed concern about the continued challenges with making changes to billing patterns. Commenters requested that CMS provide a specific timeline of when to expect that these codes would be reassigned to APCs, based on their geometric mean costs, if there is not a notable shift in their geometric mean costs over time. Some commenters shared that they have been working with the various departments within their facilities to effectuate the changes in billing practices, but notable changes are slow. Another commenter shared that they are working with major chargemaster software and advice companies to ensure that providers and facilities are aware that may choose the revenue code that they believe is most appropriate for the services provided. This commenter has also reached out to the National Uniform Billing Committee (NUBC) to suggest new revenue codes that better capture mixed modality services. Commenters noted that because the descriptors for these codes contain ''CT'', staff are hesitant to use a revenue code that is not an imaging revenue code.

Many commenters requested educational materials and guidance that specifically indicates that it is appropriate to bill the cardiology revenue codes with cardiac CT services. A commenter suggested specific language that they would like to see CMS use.

Response: We agree with commenters that effectuating change in any size health system can be challenging. As stated in the CY 2025 OPPS/ASC final rule, we will continue to monitor the claims data for these services, anticipating that it may take 3 to 4 years before we see changes in the claims data. While we have seen a number of providers utilizing the cardiology revenue codes for these services, we do not believe that it would be beneficial to provide a specific timeline or deadline for when we would anticipate moving these codes based on their geometric mean costs. If we believe that providers continue to need more time to overcome procedural and logistical hurdles with billing the cardiology revenue codes, we do not believe that a 'fixed' timeline should be the determining factor of whether we allow that flexibility or not. We will continue to monitor the claims data for changes in billing practices. If we do not see a significant change in the geometric mean costs after several years, we would revert payment for these services to the standard OPPS payment methodology and assign the cardiac CT codes to the appropriate APCs based on their geometric mean costs.

Many commenters requested guidance from CMS (Medicare Learning Network or ''MLN'') that explicitly states that it is appropriate to use the cardiology revenue codes when billing for cardiac CT services. We acknowledge that we had stated in last year's final rule that we would provide public education and instruction through MLN and anticipate that we will do so. As a reminder to our readers, we do not provide specific coding guidance. We refer our readers to section 20.5 in Chapter 4 (Part B Hospital) of the Medicare Claims Processing Manual, CMS ''does not instruct hospitals on the assignment of HCPCS codes to revenue codes for services provided under OPPS since hospitals' assignments of cost vary. Where explicit instructions are not provided, HOPDs should report their charges under the revenue code that will result in the charges being assigned to the same cost center to which the cost of those services are assigned in the cost report.'' We have consistently stated that hospital outpatient facilities must determine the most appropriate cost center and revenue code for the cardiac CT codes (87 FR 71849, 88 FR 81664).

In summary, for CY 2026, we are finalizing our proposal without modification and assigning CT codes 75572, 75573, and 75574 to APC 5572 (Level 2 Imaging with Contrast). See Table 46 for the CY 2026 final OPPS status indicator and APC assignments. The final CY 2026 payment rates for these codes can be found in Addendum B to this final rule with comment period. In addition, we refer readers to Addendum D1 to this final rule with comment period for the SI definitions for all codes reported under the OPPS. Addenda B and D1 are available via the internet on the CMS website.

TABLE 46: FINAL CY 2026 APC AND STATUS INDICATOR ASSIGNMENTS FOR CPT CODES 75572 – 75574

CPT Code	Long Descriptor	Final CY 2026 SI	Final CY 2026 APC
75572	Computed tomography, heart, with contrast material, for evaluation of cardiac structure and morphology (including 3D image postprocessing, assessment of cardiac function, and evaluation of venous structures, if performed)	S	5572
75573	Computed tomography, heart, with contrast material, for evaluation of cardiac structure and morphology in the setting of congenital heart disease (including 3D image postprocessing, assessment of left ventricular [LV] cardiac function, right ventricular [RV] structure and function and evaluation of vascular structures, if performed)	S	5572
75574	Computed tomographic angiography, heart, coronary arteries and bypass grafts (when present), with contrast material, including 3D image postprocessing (including evaluation of cardiac structure and morphology, assessment of cardiac function, and evaluation of venous structures, if performed)	S	5572

8. Cardiac Magnetic Resonance (CMR) Imaging, CPT Codes 75557, 75559, 75561, 75563 (APCs 5523, 5524, 5572, and 5573)

For CY 2026, we proposed to continue to assign the following cardiac magnetic resonance imaging (MRI) CPT codes to APC 5523, 5524, 5572, and 5573 respectively:

- CPT code 75557—(*Cardiac magnetic resonance imaging for morphology and function without contrast material*) to APC 5523 (Level 3 Imaging without Contrast) with a proposed payment of $245.72 based on a geometric mean cost of around $299 and 1,452 single frequency claims used for ratesetting;
- CPT code 75559—(*Cardiac magnetic resonance imaging for morphology and function without contrast material; with stress imaging*) to APC 5524 (Level 4 Imaging without Contrast) with a proposed payment of $562.07 based on a geometric mean cost of around $479 and 22 single frequency claims used for ratesetting;
- CPT code 75561—(*Cardiac magnetic resonance imaging for morphology and function without contrast material(s), followed by contrast material(s) and further sequences*) to 5572 (Level 2 Imaging

with Contrast) with a proposed payment of $358.35 based on a geometric mean cost of around $459 and 29,162 single frequency claims used for ratesetting; and

- CPT code 75563—(*Cardiac magnetic resonance imaging for morphology and function without contrast material(s), followed by contrast material(s) and further sequences; with stress imaging*) to APC 5573 (Level 3 Imaging with Contrast) with a proposed payment of $802.38 based on a geometric mean cost of around $819 and 3,202 single frequency claims used for ratesetting.

We received public comments on this proposal. The following is a summary of the comments we received and our responses.

Comment: Commenters requested that CPT codes 75557, 75559, 75561, 75563 be reassigned to the Nuclear Medicine and Related Services APC family because cardiac MRI procedures are not clinically similar or similar in resource use to the other procedures assigned to the current APCs. The commenter indicated that the cardiac MRI procedures are more resource intensive because of stress protocols, continuous patient monitoring, specialized staff to care for patients undergoing these procedures, longer procedure room time, and post-stress observation time and many of the other procedures that are in these APCs are lower-acuity, non-cardiac tests. The commenter believes that their current APC assignments are directly responsible for the low use of cardiac MRIs in cardiac patients. The commenter stated that reassigning these procedures to APC 5593 (Level 3 Nuclear Medicine and Related Services) would restore appropriate payment for similar advanced cardiac imaging modalities and resolve the distorted payment signals (that is, blended geometric mean costs are suppressed by high-volume, low-acuity studies).

Alternatively, the commenter suggested creating a cardiac imaging sub-APC that would include cardiac MRI services, stress echocardiography, and nuclear cardiology services that include patient monitoring and recovery. In addition, the commenter had several recommendations for CMS to implement in the interim to improve the accuracy of ratesetting:

- Issue sub-regulatory guidance encouraging hospitals to map cardiac MRI charges to cardiac/stress imaging cost centers rather than generic MRI;
- Ensure packaged items are consistently captured in the claims data; and
- Consider a complexity adjustment or modality-neutral cardiac imaging APC framework.

Response: The OPPS payment rates were proposed based on available CY 2024 claims data. Our claims data shows that APC 5593 (Level 3 Nuclear Medicine and Related Services) has a geometric mean cost of around $1,332 which is significantly higher than the geometric mean costs for the cardiac MRI codes ($299 to $819).

We do not believe that cardiac MRI with stress imaging is very similar to myocardial perfusion imaging because both tests are performed under a stress protocol and therefore should be assigned to APC 5593. APC 5593 contains procedures that describe nuclear medicine tests, not MRI services. We have noted in previous rulemaking that we do not believe MRI services should be assigned to the nuclear medicine APCs (81 FR 79630).

In response to issuing sub-regulatory guidance encouraging HOPDs to utilize a certain revenue code or map charges to a certain cost center, we refer readers to the Medicare Claims Processing Manual, Chapter 4 (Part B Hospital), section 20.5, where we state, ''Generally, CMS does not instruct hospitals on the assignment of HCPCS codes to revenue codes for services provided under OPPS since hospitals' assignment of cost vary. Where explicit instructions are not provided, providers should report their charges under the revenue code that will result in the charges being assigned to the same cost center to which the cost of those services are assigned in the cost report.''

In summary, after consideration of the public comment, we are finalizing our proposal without modification to maintain the APC assignments for the cardiac MRI codes for CY 2026. The final CY 2026 payment rates for these codes can be found in Addendum B to this final rule with comment period. In addition, we refer readers to Addendum D1 to this final rule with comment period for the SI definitions for all codes reported under the OPPS. Addenda B and D1 are available via the internet on the CMS website.

Refer to Table 47 for code descriptor, APC assignment and status indicator assignment for CPT codes 75557, 75559, 75561, and 75563 for CY 2026.

TABLE 47: FINAL CY 2026 APC AND STATUS INDICATOR ASSIGNMENTS FOR CPT CODES 75557, 75559, 75561, and 75563

CPT Code	Long Descriptor	Final CY 2026 SI	Final CY 2026 APC
75557	Cardiac magnetic resonance imaging for morphology and function without contrast material	Q3	5523
75559	Cardiac magnetic resonance imaging for morphology and function without contrast material; with stress imaging	Q3	5524
75561	Cardiac magnetic resonance imaging for morphology and function without contrast material(s), followed by contrast material(s) and further sequences	Q3	5572
75563	Cardiac magnetic resonance imaging for morphology and function without contrast material(s), followed by contrast material(s) and further sequences; with stress imaging	Q3	5573

9. Computational Electrocardiogram (ECG) Analysis System (vMap), CPT Code 0897T (APC 5724)

CPT code 0897T (Noninvasive augmentative arrhythmia analysis derived from quantitative computational cardiac arrhythmia simulations, based on selected intervals of interest from 12-lead electrocardiogram and uploaded clinical parameters, including uploading clinical parameters with interpretation and report) utilizes ECG data to identify potential arrhythmia focal points for patients. The vMap provides augmented information which enables physicians to characterize arrhythmia and assists in triage and treatment of abnormal rhythm. CPT code 0897T became effective July 1, 2024, and since its establishment, the code has been assigned to APC 5724 (Level 4 Diagnostic Tests and Related Services) for CY 2024. For CY 2025, we maintained the APC assignment to APC 5724 (Level 4 Diagnostic Tests and Related Services). For CY 2026, we proposed maintaining the current APC assignment noting that there were no single frequency claims for ratesetting under OPPS and 34 multiple frequency claims, meaning the procedure was completed with other primary services.

We received public comments on this proposal. The following is a summary of the comments we received and our responses.

Comment: The manufacturer requested that CMS reassign CPT code 0897T to a New Technology APC when the procedure is performed on the day of but separate from the ablation procedure itself until there are sufficient claims data available to support an appropriate clinical APC assignment. The commenter believes that the vMap procedure meets the New Technology APC criteria based on the demonstrated costs of the procedure and that there is precedent for SaaS technologies. In addition to vMap, the commenter urged that CMS pay for all SaaS technologies separately from any underlying procedures and assign these services to New Technology APCs until there are sufficient claims data to support an appropriate clinical APC assignment.

Response: We thank the manufacturer for their input. We do not believe that the vMap procedure meets the New Technology APC criteria based on the costs of the service or because there is precedent for SaaS technologies. There are no cost criteria for a New Technology APC placement. We review the information provided to determine if a service is ''truly new'' meaning there is not a code or combination of codes to describe the complete service. (We refer readers to the final rule in the November 30, 2001, **Federal Register** (66 FR 59897) for a full discussion of the criteria and information needed for a New Technology APC assignment.) All New Technology APC applications are reviewed to determine if they meet the criteria for a New Technology APC placement. The vMap procedure has a Category III CPT code which we crosswalked to CPT code 75580 (HeartFlow®) *(Noninvasive estimate of coronary fractional flow reserve (FFR) derived from augmentative software analysis of the data set from a coronary computed tomography angiography, with interpretation and report by a physician or other qualified health care professional)* and assigned to APC 5724 (Level 4 Diagnostic Tests and Related Services).

In summary, after consideration of the public comment we received, we are finalizing our proposal without modification, to assign CPT code 0897T to APC 5724 (Level 4 Diagnostic Tests and Services as reflected in Table 48.

The final CY 2026 payment rates for this code can be found in Addendum B to this final rule with comment period. In addition, we refer readers to Addendum D1 to this final rule with comment period for the SI definitions for all codes reported under the OPPS. Addenda B and D1 are available via the internet on the CMS website.

TABLE 48: FINAL CY 2026 APC AND STATUS INDICATOR ASSIGNMENT FOR CPT CODE 0897T

CPT Code	Long Descriptor	Final CY 2026 SI	Final CY 2026 APC
0897T	Noninvasive augmentative arrhythmia analysis derived from quantitative computational cardiac arrhythmia simulations, based on selected intervals of interest from 12-lead electrocardiogram and uploaded clinical	S	5724
	parameters, including uploading clinical parameters with interpretation and report		

10. Fractional Flow Reserve Derived From Computed Tomography (FFRct) CPT Code 75580 (APC 5724)

Fractional Flow Reserve Derived from Computed Tomography (FFRct), also known by the trade name HeartFlow®, is a noninvasive diagnostic service that allows physicians to measure coronary artery disease in a patient through the use of coronary CT scans. The HeartFlow® service is indicated for clinically stable symptomatic patients with coronary artery disease, and, in many cases, may avoid the need for an invasive coronary angiogram procedure. HeartFlow® uses a proprietary data analysis process performed at a central facility to develop a three-dimensional image of a patient's coronary arteries, which allows physicians to identify the fractional flow reserve to assess whether patients should undergo further invasive testing (that is, a coronary angiogram).

HeartFlow® is described by CPT code 75580 (Noninvasive estimate of coronary fractional flow reserve (FFR) derived from augmentative software analysis of the data set from a coronary computed tomography angiography, with interpretation and report by a physician or other qualified health care professional) effective January 1, 2024. CPT code 0503T was the predecessor code for HeartFlow®.

HeartFlow® was assigned to APC 5724 (Level 4 Diagnostic Tests and Related Services) for CY 2024 and CY 2025. In last year's rule, we received a comment stating that several of the Medicare Administrative Contractors (MACs) had an edit in place that prohibited the use of the cardiology revenue code (0480) when billing CPT code 75580 as evidenced by claims

denials with ''Invalid Revenue Code'' errors. Based on the information the commenter provided, we were able to identify the outdated edit and removed it. We reminded readers that it is longstanding CMS policy that hospital outpatient facilities are responsible for reporting the appropriate cost centers and revenue codes on claims. We referred readers to Section 20.5 in Chapter 4 (Part B Hospital) of the CMS Medicare Claims Processing Manual, where we state CMS ''does not instruct hospitals on the assignment of HCPCS codes to revenue codes for services provided under OPPS since hospitals' assignment of cost vary. Where explicit instructions are not provided, HOPDs should report their charges under the revenue code that will result in the charges being assigned to the same cost center to which the cost of those services are assigned in the cost report.''

We proposed for CY 2026 to continue to assign HeartFlow® (CPT code 75580) to APC 5724 (Level 4 Diagnostic Tests and Related Services).

We received public comments on this proposal. The following is a summary of the comments we received and our responses.

Comments: Commenters were supportive of the continued APC assignment to APC 5724 (Level 4 Diagnostic Tests and Related Services); however, the commenters universally requested that CMS exclude the ''flawed'' or ''erroneous'' data due to the claims edit that was in place that prohibited them for choosing a revenue center that they deemed most appropriate for the service provided. Several commenters also requested guidance when choosing a revenue center code. They note that this would ensure accurate claims reporting and support reliable data for future ratesetting.

Response: As noted previously in this final rule with comment period, we removed the outdated edit as soon as we were aware that there was an edit in place. HOPDs can use whatever revenue code they believe is most appropriate. We generally do not exclude available claims data, based on the assumption that what is being billed to Medicare is in compliance with coding and billing guidance. We acknowledge that there are a number of procedural and logistical hurdles associated with changing billing practices and will continue to monitor the claims data.

Comment: Many commenters expressed concerns about the lower reimbursement rate for APC 5724 and the movement of services within the APC family. We refer the readers to section III.E.1. of this final rule with comment period for a full discussion about the movement of services within the APC family and the payment variability.

In summary, after consideration of the public comments we received, we are finalizing our proposal without modification to continue to assign CPT 75580 to APC 5724 (see Table 49). The final CY 2026 payment rates for this code can be found in Addendum B to this final rule with comment period. In addition, we refer readers to Addendum D1 to this final rule with comment period for the SI definitions for all codes reported under the OPPS. Addenda B and D1 are available via the internet on the CMS website.

TABLE 49: FINAL CY 2026 APC AND STATUS INDICATOR ASSIGNMENTS FOR CPT CODE 75580

CPT Code	Long Descriptor	Final CY 2026 SI	Final CY 2026 APC
75580	Noninvasive estimate of coronary fractional flow reserve (FFR) derived from augmentative software analysis of the data set from a coronary computed tomography angiography, with interpretation and report by a physician or other qualified health care professional	S	5724

11. Chimeric Antigen Receptor (CAR–T) Administration, CPT Codes 38228 (APC 5694)

Chimeric Antigen Receptor T-Cell (CAR T-cell) therapy is a cell-based gene therapy in which T-cells are collected and genetically engineered to express a chimeric antigen receptor that will bind to a certain protein on a patient's cancerous cells. The CAR T-cells are then administered to the patient to attack certain cancerous cells, and the individual is observed for potential serious side effects that would require medical intervention. We refer readers to previous discussions in the OPPS/ASC final rules with comment period for background regarding the specific CAR T-cell products, including the CY 2020 OPPS/ASC final rule with comment period (84 FR 61231 through 61234) and the CY 2019 OPPS/ASC final rule with comment period (83 FR 58904 through 58908). The AMA created four Category III CPT codes that are related to CAR T-cell therapy, effective January 1, 2019. We also finalized that the procedures described by CPT code 0540T would be assigned status indicator ''S'' (Procedure or Service, Not Discounted when Multiple) and APC 5694 (Level 4 Drug Administration) from CY 2019 through CY 2024 and did not propose to change the APC assignment for CY 2025 when CPT code 0540T was replaced by CPT code 38228.

As listed in Addendum B to the CY 2026 OPPS/ASC proposed rule, we proposed to continue to assign CPT code 38228 to status indicator ''S'' (Procedure or Service, Not Discounted when Multiple) and APC 5694 (Level 4 Drug Administration).

We received public comments on this proposal. The following is a summary of the comments we received and our responses.

Comment: Several commenters recommended the reassignment of CPT code 38228 to APC 5242 (Level 2 Blood Product Exchange and Related Services). A commenter suggested that rationale for the reassignment of CPT code 38228 to APC 5242 is that APC more accurately reflects the higher facility costs associated with the significant nurse monitoring for the outpatient administration of CAR T-cell therapy. The commenter supported this claim as the AMA placed CPT code 38228 in the same section as stem cell transplant codes, which were initially

recognized in the inpatient setting under MS–DRGs 016 and 017. Another commenter also stated CPT code 38228 is analogous to CPT code 38241 (Hematopoietic progenitor cell (hpc); autologous transplantation) and that CMS initially assigned CAR–T related codes to autologous stem cell transplant MS–DRGs 016 and 017, which they believe is the appropriate crosswalk for OPPS.

Another commenter disagreed with the current APC 5694 assignment and stated that CPT code 38338 (and CPT codes 67028 and 67516) do not have the facility NA indicator in the Medicare Physician Fee Schedule and the RUC assigned both facility and non-facility RVUs. Thus, the commenter stated that physicians perform and document the services when they perform the services in facilities.

Response: We continue to believe that the procedures described by CPT codes 38225, 38226, and 38227 describe the various steps required to collect and prepare the genetically modified T-cells, and Medicare does not generally pay separately for each step used to manufacture a drug or biological product. We believe CPT code 38228 is appropriately assigned to APC 5694, which shares similar clinical and resource use as other complex cancer drug administrations. We note that the IPPS established MS–DRG 018 for CAR–T and other immunotherapies and CAR–T therapies are no longer assigned to MS–DRGs 016 and 017. We also disagree that CPT code 38228 is similar clinically and in resource to CPT code 38241 because we view CPT code 38228 as the administration of the CAR–T drugs, while CPT code 38241 involves the transplantation of hematopoietic progenitor cells. Therefore, we are not convinced by the commenter's reason to reassign CPT code 38228 to APC 5242. Furthermore, we believe it is inappropriate to use the IPPS MS–DRGs as an analog to the APC assignments in the OPPS because there are significant differences in resource consumption between the HOPD and inpatient setting.

We are also not compelled to reassign CPT code 38228 to APC 5242 because of the lack of the NA indicator in the Medicare Physician Fee Schedule and because the RUC assignment of both facility and non-facility RVUs do not support the reassignment of CPT codes 38338, 67028 and 67516 to APC 5242. We rely on input from a variety of sources for our APC assignments, including, but not limited to, review of the resource costs and clinical similarity of the service to existing procedures; input from CMS medical advisors; and information from interested specialty societies. We evaluated the recommendations, modeled the suggestions, analyzed the cost results of the suggested APC reassignments, and received additional input from our medical advisors. We note that the drug administration codes that the commenter mentioned were assigned to their respective APCs with similar clinical and resource similarity. Furthermore, the commenter only suggested an APC reassignment for CPT code 38228 but did not provide any APC suggestions for CPT codes 67028 and 67516.

After consideration of the public comments we received, we are finalizing our proposed APC assignment and status indicator for CPT code 38228 to APC 5694 without modification. Refer to Table 50 for the final OPPS APC and status indicator assignment for CPT code 38228 for CY 2026. We refer readers to Addendum B to this final rule with comment period for the payment rates for all codes reportable under the OPPS. Addendum B is available via the internet on the CMS website.

TABLE 50: FINAL CY 2026 OPPS APC AND STATUS INDICATOR ASSIGNMENTS FOR CPT CODE 38228

CPT Code	Long Descriptor	Final CY 2026 OPPS SI	Final CY 2026 OPPS APC
38228	Chimeric antigen receptor t-cell (car-t) therapy; car-t cell administration, autologous	S	5694

12. CVi® Contrast Delivery System

The CVi® Contrast Delivery System is an automated Contrast Management System with multiuse syringes. Contrast Management Systems are designed to assist physicians in infusing iodinated contrast media administered to patients in common angiograph procedures. Contrast with angiography procedures is often administered through a handheld, manual injection device. Automated contrast management systems use variable rate technology to deliver a specific amount of contrast.

We received public comments on this topic. The following is a summary of the comments we received and our responses.

Comment: A commenter requested that CMS establish a G-code to provide additional payment to recognize the cost of automated contrast management systems with angiography procedures. The commenter stated that providing additional payment through the establishment of a new code would facilitate expanded patient access to automated systems that address important policy goals and address significant unmet needs such as reducing the incidence of Acute Kidney Injury (CA–AKI), reducing costs related to CA–AKI related hospitalization, reducing contrast waste, alleviating contrast media shortages precipitated by supply chain issues and reducing physician radiation exposure. The commenter stated that it is necessary to establish a G-code because existing Medicare payment policies for Percutaneous Coronary Intervention (PCI) and other procedures do not differentiate procedures that involve an automated variable rate contrast injector

with multiuse syringe for the administration of iodinated contrast media. They also noted that these procedures are coded and paid identically, regardless of whether the provider has invested in automated contrast management systems that they state provide better health outcomes.

Response: After reviewing the information provided by the commenter and following consultation with our medical officers, we have determined that this equipment is only used in conjunction with another procedure and would be packaged for payment consistent with our policy of packaging items and services that are typically integral, ancillary, supportive, dependent, or adjunctive to a primary service.

Therefore, we are not creating a G-code to describe the use of an automated variable rate contrast injector with multiuse syringe for the administration of iodinated contrast media for CY 2026.

Dental Related Procedures

13. Malignant Tumor/Lesion Removal Dental Procedures, CDT Codes D7440–D7441 (APC 5164)

Effective January 1, 2024, we made over 200 additional dental codes payable under the OPPS when payment and coverage requirements are met, as provided in the relevant PFS payment rules regarding Medicare Part B payment for dental services (88 FR 81540–82185). Of these payable dental codes, we assigned Current Dental Terminology (CDT) codes D7440 (*Excision of malignant tumor-lesion diameter up to 1.25cm*) and D7441(Excision of malignant tumor-lesion diameter greater than 1.25 cm) to APC 5164 (Level 4 ENT Procedures) and status indicator ''J1.'' For CY 2026, we proposed to continue to assign CDT codes D7440 and D7441 to APC 5164 and status indicator ''J1.''

We received public comments on this proposal. The following is a summary of the comments we received and our responses.

Comment: A commenter requested that CMS add CDT codes D7440 and D7441 to the list of covered outpatient services for CY 2026.

Response: We are clarifying that CDT codes D7440 and D7441 are already payable when performed in the outpatient hospital department and coverage requirements are met. Our proposal would maintain the APC and status indicator assignments for CY 2026.

Therefore, we are finalizing our proposal to continue to assign CDT codes D7440 and D7441 to APC 5164 and status indicator ''J1'' for CY 2026.

Endoscopy Procedures

14. Biliary Endoscopy Procedure, CPT Code 47555 (APC 5341)

CPT code 47555 (*Biliary endoscopy, percutaneous via T-tube or other tract; with dilation of biliary duct stricture(s) without stent*) describes the procedure for dilation of bile ducts using an endoscope. Using CY 2024 claims data, CPT code 47555 had geometric mean cost of $8,577.51 in the CY 2026 OPPS/ASC proposed rule. For CY 2026, we believed this procedure was still appropriately assigned to APC 5341 (Level 1 Abdominal/Peritoneal/Biliary and Related Procedures), which had a proposed payment rate of $3,698.49. Therefore, we proposed to continue assigning CPT code to APC 5341.

We received public comments on this proposal. The following is a summary of the comments we received and our responses.

Comment: A commenter requested that CMS reassign CPT code 47555 to APC 5342 (Level 2 Abdominal/Peritoneal/Biliary and Related Procedures), which had a proposed payment rate of $6,667. The commenter stated that the cost of this procedure exceeded the payment rate for APC 5341.

Response: CPT code 47555 has an updated GMC of $8,068.88. After further clinical review, we agree with the commenter that resources and costs associated with CPT code 47555 would be more appropriately reflected by APC 5342. In summary, we are finalizing our proposal with modification to assign CPT code 47555 to APC 5342 (Level 2 Abdominal/Peritoneal/Biliary and Related Procedures) for CY 2026. Table 51 shows the finalized status indicator and APC assignment for the procedure code. We refer readers to Addendum B to this final rule with comment period for the payment rates for all codes reportable under the OPPS. Addendum B is available via the internet on the CMS website.

TABLE 51: FINAL CY 2026 APC AND STATUS INDICATOR ASSIGNMENTS FOR CPT CODE 47555

CPT Code	Long Descriptor	Final CY 2026 OPPS SI	Final CY 2026 OPPS APC
47555	Biliary endoscopy, percutaneous via T-tube or other tract; with dilation of biliary duct stricture(s) without stent	J1	5342

15. Endoscopic Procedure—Upper GI Tract, CPT Code 43252 (APC 5302)

CPT code 43252 (*Esophagogastroduodenoscopy, flexible, transoral; with optical endomicroscopy*) describes a service that is used to visualize the upper portions of the GI tract from the esophagus to the duodenum. Using CY 2024 claims data, CPT code 43252 had geometric mean cost of $1,739.85 in the CY 2026 OPPS/ASC proposed rule. For CY 2026, we believed this procedure was still appropriately assigned to APC 5302 (Level 2 Upper GI Procedures), which had a proposed payment rate of $1,975.59. Therefore, we proposed to continue assigning CPT code to APC 5302.

We received public comments on this proposal. The following is a summary of the comments we received and our responses.

Comment: A few commenters requested that CMS assign CPT code 43252 to APC 5303 (Level 3 Upper GI Procedures) with a payment rate of around $4,002 for CY 2026. The commenters stated that hospitals have historically underreported the costs for this procedure, therefore skewing the GMC for CPT code 43252.

Response: We have stated regularly over the history of the OPPS, it is the responsibility of providers and other interested parties and not CMS to resolve potential claims and reporting issues for individual CPT codes and medical services payable by Medicare. The updated GMC for the service, which is around $1,737.41, is lower than the payment rate for APC 5302 which is

around $1,960. Therefore, we are finalizing our proposal, without modification, to continue to assign CPT code 43252 to APC 5302 (Level 2 Upper GI Procedures). Table 52 shows the finalized status indicator and APC assignment for the procedure codes. We refer readers to Addendum B to this final rule with comment period for the payment rates for all codes reportable under the OPPS. Addendum B is available via the internet on the CMS website.

TABLE 52: FINAL CY 2026 APC AND STATUS INDICATOR ASSIGNMENTS FOR CPT CODE 43252

CPT Code	Long Descriptor	Final CY 2026 OPPS SI	Final CY 2026 OPPS APC
43252	Esophagogastroduodenoscopy, flexible, transoral; with optical endomicroscopy	J1	5302

16. Endoscopic Retrograde Cholangiopancreatography (ERCP) With Stone Destruction Procedure, CPT Code 43265 (APC 5331)

CPT code 43265 (*Endoscopic retrograde cholangiopancreatography (ERCP); with destruction of calculi, any method (eg., mechanical, electrohydraulic, lithotripsy)*) describes the procedure for destruction of stone of bile or pancreatic ducts. Using CY 2024 claims data, CPT code 43265 had geometric mean cost of $9,011.93 in the CY 2026 OPPS/ASC proposed rule. For CY 2026, we believed this procedure was still appropriately assigned to APC 5331 (Complex GI Procedures), which had a proposed payment rate of $6,276.20. Therefore, we proposed to continue assigning CPT code to APC 5331.

Comment: A commenter requested that CMS reassign CPT code 43265 to APC 5362 (Level 2 Laparoscopy and Related Services), which had a proposed payment rate of $10,966.50, due to the similarity to CPT code 47554 (Biliary endoscopy, percutaneous via t-tube or other tract; with removal of calculus/calculi).

Response: We thank the commenter for their input. CPT code 43265 has an updated geometric mean cost of $8,754.94. After clinical review of this procedure, we continue to believe that this procedure is appropriately assigned to the APC 5331. Therefore, we are finalizing our proposal, without modification, to continue to assign CPT codes 43265 to APC 5331 (Complex GI Procedures). Table 53 shows the finalized status indicator and APC assignment for the procedure codes. We refer readers to Addendum B to this final rule with comment period for the payment rates for all codes reportable under the OPPS. Addendum B is available via the internet on the CMS website.

TABLE 53: FINAL CY 2026 OPPS APC AND STATUS INDICATOR ASSIGNMENTS FOR CPT CODE 43265

CPT Code	Long Descriptor	Final CY 2026 OPPS SI	Final CY 2026 OPPS APC
43265	Endoscopic retrograde cholangiopancreatography (ERCP); with destruction of calculi, any method (eg, mechanical, electrohydraulic, lithotripsy)	J1	5331

17. Endoscopic Submucosal Dissection (ESD) Procedure, HCPCS Code C9779 (APC 5303)

We established HCPCS code C9779 (*Endoscopic submucosal dissection (ESD), including endoscopy or colonoscopy, mucosal closure, when performed*) effective October 1, 2021, to describe the endoscopic submucosal dissection (ESD) performed during an endoscopy or colonoscopy. HCPCS code C9779 was established based on a New Technology application that was submitted to CMS for New Technology consideration under the OPPS. Based on our assessment, we assigned the code to APC 5313 (Level 3 Lower GI Procedures) because we believed the ESD procedure had similar clinical characteristics and resource costs as the surgical procedures assigned to APC 5313. We announced the assignment to APC 5313 in the October 2021 OPPS quarterly update CR (Transmittal 10997, Change Request 12436, dated September 16, 2021). In CY 2022, we continued to assign the code to APC 5313.

For CY 2023, we assigned HCPCS code C9779 to APC 5303 (Level 3 Upper GI Procedures) after receiving public comments that stated that the ESD procedure's resource requirements and geometric mean cost were more similar to the resource requirements and geometric mean costs of procedures found in APC 5303. Further, commenters noted that the ESD procedure is technically more demanding, requires advanced skills to perform, and is clinically similar to CPT code 43497 (Lower esophageal myotomy, transoral (*i.e.,* peroral endoscopic myotomy [POEM])), which was assigned to APC 5303. For CY 2026, we proposed to maintain HCPCS code C9779, which had a geometric mean cost of $5,516.81, in APC 5303 (Level 3 Upper GI Procedures). APC 5303 had a proposed CY 2026 payment rate of $4,002.57.

We received public comments on this proposal. The following is a summary of the comments we received and our responses.

Comment: Commenters requested that CMS reassign HCPCS code C9779 to APC 5331 (Complex GI procedures), which had a proposed payment rate of

$6,276.20. The commenters reasoned that HCPCS code C9779 would be more appropriately placed in APC 5331 due to its similarity to CPT code 43479. Additionally, the commenters stated that as HCPCS code C9779 includes both combined upper and lower GI ESD procedures, there is great variability in the costs reported by hospitals which could affect the accuracy of the geometric mean cost.

Response: HCPCS code C9779 has an updated geometric mean cost of $5,182.09. While the geometric mean cost for HCPCS code C9779 is slightly closer to the payment rate for APC 5331, we continue to believe that HCPCS code C9779 is appropriately assigned, based on both clinical and resource similarity, to APC 5303 (Level 3 Upper GI Procedures). Therefore, we are finalizing our proposal, without modification, to continue to assign CPT code C9779 to APC 5303 (Level 3 Upper GI Procedures). Table 54 shows the finalized status indicator and APC assignment for the procedure codes. We refer readers to Addendum B to this final rule with comment period for the payment rates for all codes reportable under the OPPS. Addendum B is available via the internet on the CMS website.

TABLE 54: FINAL CY 2026 OPPS APC AND STATUS INDICATOR ASSIGNMENTS FOR HCPCS CODE C9779

HCPCS Code	Long Descriptor	Final CY 2026 OPPS SI	Final CY 2026 OPPS APC
C9779	Endoscopic submucosal dissection (ESD), including endoscopy or colonoscopy, mucosal closure, when performed	J1	5303

18. Esophageal Balloon Distention Study, CPT Code 91040 (APC 5723)

Esophageal balloon distension studies are used to diagnose conditions of the esophagus and may be used to determine the source of certain types of pain, such as chest pain. The esophageal balloon study is often performed in conjunction with esophagogastroduodenoscopy procedures. Using CY 2024 claims data, CPT Code 91040 (Esophageal balloon distension study, diagnostic, with provocation when performed) had a proposed geometric mean cost of $2,007.29 in the CY 2026 OPPS/ASC proposed rule. For CY 2026, we proposed to continue to assign CPT code 91040 to APC 5723 (Level 3 Diagnostic Tests and Related Services) with a proposed payment rate of around $382.

We received public comments on this proposal. The following is a summary of the comments we received and our responses.

Comment: Commenters requested that CMS reassign CPT code 91040 to APC 5724 (Level 4 Diagnostic Test and Related Services). Commenters stated that CPT code 91040 has the highest geometric mean cost of all codes assigned to APC 5723 and had a higher device offset percentage than other procedures in the same APC.

Response: We note that the updated geometric mean cost for CPT code 91040 is $2,001.92, and the geometric mean cost for APC 5723 is $384.16. While this is a significant difference, the CY 2024 claims data shows that only 2.6 percent (approximately 102 claims) of all the claims billed with CPT code 91040 (3,927 total claims frequency) were billed with only CPT code 91040 on the claim. We believe that, in addition to the higher costs of the packaged items, the costs from the other procedures that are performed with CPT code 91040 have driven up the geometric mean cost of CPT code 91040. Based on review of this procedure, other procedures in the same APC family, and the claims data, we believe that the clinical and resource characteristics of CPT code 91040 are sufficiently like other procedures assigned to APC 5723 and CPT code 91040 should continue to be assigned to APC 5723.

Therefore, for CY 2026 we are finalizing our proposal, without modification, to continue to assign CPT code 91040 to APC 5723 (Level 3 Diagnostic Tests and Related Services). Table 55 shows the finalized status indicator and APC assignment for the procedure codes. We refer readers to Addendum B to this final rule with comment period for the payment rates for all codes reportable under the OPPS. Addendum B is available via the internet on the CMS website.

TABLE 55: FINAL CY 2026 APC AND STATUS INDICATOR ASSIGNMENTS FOR CPT CODE 91040

CPT Code	Long Descriptor	Final CY 2026 OPPS SI	Final CY 2026 OPPS APC
91040	Esophageal balloon distension study, diagnostic, with provocation when performed	J1	5723

19. Transnasal EGD, CPT Codes 0652T, 0653T, and 0654T (APCs 5302 and 5303)

CPT codes 0652T (*Esophagogastroduodenoscopy, flexible, transnasal; diagnostic, including collection of specimen(s) by brushing or washing, when performed (separate procedure)*), 0653T (*Esophagogastroduodenoscopy, flexible, transnasal; with biopsy, single or multiple*), and 06534T (*Esophagogastroduodenoscopy, flexible, transnasal; with insertion of intraluminal tube or catheter*) describe the procedures for transnasal esophagogastroduodenoscopy. Using CY 2024 claims data, CPT codes 0652T, 0653T, and 0654T had geometric mean costs of $1,897.72, $1,107.54, $1,064.23,

respectively, in the CY 2026 OPPS/ASC proposed rule. For CY 2026, we believed CPT codes 0652T and 0653T were still appropriately assigned to APC 5302 (Level 2 Upper GI Procedures), which had a proposed payment rate of $1,975.59. We also believed that CPT code 0654T was still appropriately assigned to APC 5303 (Level 3 Upper GI Procedures), which had a proposed payment rate of $4,002.57. Therefore, we proposed to continue assigning CPT codes 0652T and 0653T to APC 5302 and CPT code 0654T to APC 5303.

We received public comments on this proposal. The following is a summary of the comments we received and our responses.

Comment: A commenter requested that CMS reassign CPT codes 0652T and 0653T to APC 1562 (New Technology—Level 25 ($3,501–$4,000)) and CPT code 0654T to APC 1563 (New Technology—Level 26 ($4,001–$4,500)). The commenter stated that since these are low volume procedures, reassigning these procedures to New Technology APCs would allow them to receive payment rates appropriate to their resource costs.

Response: We thank the commenter for their input. CPT codes 0652T, 0653T, and 0654T have updated GMCs of $1,744.52, $1,096.83, and $1,111.46 in the final rule data. After further clinical review, we continue to believe that CPT codes 0652T, 0653T, and 0654T are still appropriately assigned to APCs 5302 and 5303. Additionally, all three procedures have GMCs lower than the payment rate of their assigned APCs. Therefore, we are finalizing our proposal, without modification, to continue to assign CPT codes 0652T and 0653T to APC 5302 (Level 2 Upper GI Procedures) and CPT code 0654T to APC 5303 (Level 3 Upper GI Procedures). Table 56 shows the finalized status indicator and APC assignment for the procedure codes. We refer readers to Addendum B to this final rule with comment period for the payment rates for all codes reportable under the OPPS. Addendum B is available via the internet on the CMS website.

TABLE 56: FINAL CY 2026 APC AND STATUS INDICATOR ASSIGNMENTS FOR CPT CODES 0652T, 0653T, AND 0654T

CPT Code	Long Descriptor	Final CY 2026 OPPS SI	Final CY 2026 OPPS APC
0652T	Esophagogastroduodenoscopy, flexible, transnasal; diagnostic, including collection of specimen(s) by brushing or washing, when performed (separate procedure)	J1	5302
0653T	Esophagogastroduodenoscopy, flexible, transnasal; with biopsy, single or multiple	J1	5302
0654T	Esophagogastroduodenoscopy, flexible, transnasal; with insertion of intraluminal tube or catheter	J1	5303

Gastrointestinal Services

20. Gastric Electrophysiology Mapping With Simultaneously Validated Patient System Profiling (GEMS) Service, CPT Code 0868T (APC 5723)

Effective July 1, 2023, based on a New Technology application received by CMS for the GEMS service, CMS established HCPCS code C9787 (*Gastric electrophysiology mapping with simultaneous patient symptom profiling*) and assigned it to APC 5723 (Level 3 Diagnostic Tests and Related Services) based on a crosswalk to CPT code 0779T. Effective July 1, 2024, HCPCS code C9787 was deleted and replaced by CPT code 0868T (High-resolution gastric electrophysiology mapping with simultaneous patient symptom profiling, with interpretation and report). CMS assigned CPT code 0868T to APC 5723, the same APC to which its predecessor code, HCPCS code C9787, was assigned. For CY 2026, CMS proposed to continue to assign CPT code 0868T to APC 5723 with a proposed payment rate of $381.96 for CY 2026.

We received public comments on this proposal. The following is a summary of the comments we received and our responses.

Comment: Several commenters requested that CMS not finalize the proposed APC assignment for CPT code 0868T. A commenter explained that the current payment amount is too low and has impacted the ability for the service to be provided to pediatric patients because Medicare payment rates impact the rates of commercial payors and state Medicaid programs. Some commenters drew distinctions between the CPT codes 0868T and 0779T. For example, a commenter stated that CPT code 0868T is fundamentally different from CPT code 0779T across every domain, including the technology, clinical protocol, staff and facility resources, and diagnostic outputs. Commenters requested that CMS assign CPT code 0868T to APC 5724 (Level 4 Diagnostic Tests and Related Services) or a new technology APC.

Response: We appreciate the commenters' input. First, we note that there is extremely low claims volume currently available for CPT code 0868T to justify a change in APC assignment based on existing claims data at this time. While the geometric mean cost of CPT code 0868T is approximately $3,000, this geometric mean cost is based on only 7 single frequency claims, which means that there is a high degree of variability in the limited claims data available. Additionally, based on our review of the technology and in consultation with our medical officers, we continue to believe that CPT codes 0868T and 0779T are comparable services in that they are both studies measuring gastrointestinal physiological activity. Additionally, there are other similar codes that describe gastrointestinal services assigned to APC 5723, such as CPT code 91020. Therefore, we believe that our proposal to assign CPT code 0868T is appropriate for CY 2026. We will continue to monitor the claims data and adjust the APC placement for CPT code 0868T based on the claims data in future rulemaking.

After consideration of the public comments, we are finalizing our proposal without modification to continue to assign CPT code 0868T to

APC 5723. The final CY 2026 payment rate for the code can be found in Addendum B to this final rule with comment period. We also refer readers to Addendum D1 to this final rule with comment period for the SI meanings for all codes reported under the OPPS. Addenda B and D1 are available via the internet on the CMS website.

21. IB—Stim, CPT 64567 (APC 5301)

CPT code 64567 replaces placeholder code 64X11 (Percutaneous electrical nerve field stimulation, cranial nerves, without implantation) and is effective January 1, 2026. The code describes a neuromodulation therapy for the treatment of functional gastrointestinal disorders. CPT code 64567 replaces existing CPT code 0720T (Percutaneous electrical nerve field stimulation, cranial nerves, without implantation). For CY 2026, we proposed to assign CPT code 64567 to APC 5724 (Level 4 Diagnostic Tests and Related Services) and delete predecessor CPT code 0720T.

We received public comments on this proposal. The following is a summary of the comments we received and our responses.

Comment: A commenter requested that CMS reassign CPT code 64567 to APC 1515 (New Technology—Level 15 ($1301–1400)) with a payment rate of $1,350.50 for CY 2026. The commenter believes the procedure requires more resources than other services currently assigned to APC 5724, and that it is not clinically similar to those other procedures since it represents a therapeutic intervention rather than a diagnostic service. They further explained that no appropriate clinical APC exists for this procedure and note that it has very low Medicare utilization rates upon which to base a clinical APC assignment.

Response: After careful review of the service and the comment received as well as discussions with our medical officers, we are finalizing our proposals with modification. First, we are finalizing our proposal to delete CPT code 0720T as CPT code 64567 is replacing the predecessor code. However, we are not finalizing our proposal to assign CPT code 64567 to APC 5724, due to the clinical characteristics of the service. Specifically, we agree with the commenter that continued assignment to APC 5724 would not be appropriate because we believe CPT code 64567 represents a therapeutic service rather than a diagnostic procedure, based on the information available. We note that there were no claims for the service in CY 2024 for us to consider in our analysis. Therefore, due to the service's clinical characteristics, for CY 2026, we are assigning CPT code 64567 to APC 5301 (Level 1 Upper GI Procedures) as reflected in Table 57 with a payment rate of $926.63. We note that we will continue to monitor the claims data and update the payment rate in future rulemaking based on the available claims. The final CY 2026 payment rate for the code can be found in Addendum B to this final rule with comment period. We also refer readers to Addendum D1 to this final rule with comment period for the SI meanings for all codes reported under the OPPS. Addenda B and D1 are available via the internet on the CMS website.

TABLE 57: PROPOSED AND FINAL CY 2026 OPPS APC AND SI ASSIGNMENT FOR CPT CODE 64567

CPT Code	Long Descriptor	Proposed CY 2026 SI	Proposed CY 2026 APC	Final CY 2025 SI	Final CY 2025 APC
64567	Percutaneous electrical nerve field stimulation, cranial nerves, without implantation	S	5724	T	5301

Imaging Services

22. Computed Tomographic Colonography, CPT Code 74263 (APC 5523)

For CY 2024, we assigned CPT code 74263 (Computed tomographic (CT) colonography, screening, including image postprocessing) to status indicator ''E1'' indicating that the service was not covered and not payable by Medicare under OPPS. For CY 2025, we finalized assigning CPT code 74263 to APC 5523 (Level 3 Imaging without Contrast) using CPT code 74176 (Computed tomography, abdomen and pelvis; without contrast material) as a crosswalk code because of the coverage changes for colorectal cancer screening services. (See 89 FR 94287 through 94290 for a full discussion of the coverage changes for colorectal cancer screening services.)

For the CY 2026 OPPS/ASC proposed rule, we proposed to maintain the APC assignment for CPT code 74263 in APC 5523 (Level 3 Imaging without Contrast) with a proposed payment of around $245 and a status indicator of 'S' (Procedure or Service, Not Discounted When Multiple; Paid under OPPS).

We received public comments on this proposal. The following is a summary of the comments we received and our responses.

Comment: A commenter requested that CMS reassign CPT code 74263 to APC 5524 (Level 4 Imaging without Contrast) with a proposed payment of approximately $562. The commenter noted that CT colonography is a safe, minimally invasive exam that can save lives by detecting early disease. They stated that a lower reimbursement rate is likely to disproportionately affect underserved communities and exacerbate disparities in the early diagnosis of colorectal cancer.

Response: We thank the commenter for the input; however, we disagree with the commenters and believe that CPT code 74263 is appropriately assigned to APC 5523 (Level 3 Imaging without Contrast). Given that any claims data in CY 2024 would be from before the service was payable in the OPPS, it would be difficult to rely on the claims data to determine the APC assignment for this code. We reviewed the claims data and cost information for the crosswalk code and continue to believe that CPT code 74176 is an appropriate crosswalk code for CPT 74263. CPT code 74176 has a geometric mean cost around $164 based on 228,147 single frequency claims used for ratesetting under OPPS. After review and input from our CMS Medical Officers, we believe that CPT code 74263 is

appropriately assigned to APC 5523 (Level 3 Imaging without Contrast).

In summary, after consideration of the public comments we received, we are finalizing our proposal without modification, to assign CPT code 74263 to APC 5523 (Level 3 Imaging without Contrast). The final CY 2026 payment rates for this code can be found in Addendum B to this final rule with comment period. In addition, we refer readers to Addendum D1 to this final rule with comment period for the status indicator definitions for all codes reported under the OPPS. Addenda B and D1 are available via the internet on the CMS website.

Refer to Table 58 for code descriptor, APC assignment and status indicator assignment CPT code 74263 for CY 2026.

TABLE 58: FINAL CY 2026 APC AND STATUS INDICATOR ASSIGNMENTS FOR CPT CODE 74263

CPT Code	Long Descriptor	Final CY 2026 SI	Final CY 2026 APC
74263	Computed tomographic (CT) colonography, screening, including image postprocessing	S	5523

23. Computed Tomographic Services (Head, Neck, and Cerebral Perfusion), CPT Codes 70471 and 70473 (APCs 5572, 5571)

The CPT Editorial Panel created 3 new Category I CPT codes 70471, 70472, and 70473 effective January 1, 2026 to replace the Category III CPT code 0042T. CPT code 0042T will be deleted effective January 1, 2026. The new final CPT codes (along with their placeholder codes) and the deleted Category III code are listed below with their long descriptors.

- 70471 (70XX1): Computed tomographic angiography (CTA), head and neck, with contrast material(s), including noncontrast images, when performed, and image postprocessing
- 70472 (70XX2): Computed tomographic (CT) cerebral perfusion analysis with contrast material(s), including image postprocessing performed with concurrent CT or CT angiography of the same anatomy (List separately in addition to code for primary procedure)
- 70473 (70XX3): Computed tomographic (CT) cerebral perfusion analysis with contrast material(s), including image postprocessing performed without concurrent CT or CT angiography of the same anatomy
- 0042T: Cerebral perfusion analysis using computed tomography with contrast administration, including post-processing of parametric maps with determination of cerebral blood flow, cerebral blood volume, and mean transit time

For CY 2026, we proposed to assign these codes to the following APCs and status indicators (SIs):

- Assign CPT code 70471 to APC 5572 (Level 2 Imaging with Contrast), SI of 'S' (Procedure or Service, Not Discounted When Multiple; Paid under OPPS);
- Assign CPT code 70472 to SI of 'N' (Items and Services Packaged into APC Rates; Paid under OPPS; payment is packaged into payment for other services); and
- Assign CPT 70473 to APC 5571 (Level 1 Imaging with Contrast), SI of 'S' (Procedure or Service, Not Discounted When Multiple; Paid under OPPS).

We received public comments on this proposal. The following is a summary of the comments we received and our responses.

Comment: A commenter requested that CMS assign CPT code 70473 to APC 5572 (Level 2 Imaging with Contrast). The commenter indicated that the procedure described by CPT code 70473 is similar clinically and in resource use to the computed tomographic angiography procedure described by CPT code 70471. The commenter noted that the angiography procedure and the perfusion analysis are not always performed on the same date of service.

Response: After review of these new codes and input from our CMS Medical Officers, we believe that CPT code 70473 is more clinically similar to CPT code 70460 (Computed tomography, head or brain; with contrast material(s)),which has a geometric mean cost of around $173 and 2,659 single frequency claims in the CY 2024 claims data used for CY 2026 OPPS ratesetting. CPT code 70460 is currently assigned to APC 5571 (Level 1 Imaging with Contrast) and has a proposed payment of around $179. We remind hospitals that we review, on an annual basis, the APC assignments for all items and services paid under the OPPS.

In summary, after consideration of the public comments we received, we are finalizing our proposal without modification. The final CY 2026 payment rates for these codes can be found in Addendum B to this final rule with comment period. In addition, we refer readers to Addendum D1 to this final rule with comment period for the SI definitions for all codes reported under the OPPS. Addenda B and D1 are available via the internet on the CMS website.

Refer to Table 59 for code descriptors, APC assignments and status indicator assignments for CPT codes 70471, 70472, and 70473 for CY 2026.

TABLE 59: FINAL CY 2026 APC AND STATUS INDICATOR ASSIGNMENTS FOR CPT CODES 70471, 70472, AND 70473

CPT Code	Long Descriptor	Final CY 2026 SI	Final CY 2026 APC
70471	Computed tomographic angiography (CTA), head and neck, with contrast material(s), including noncontrast images, when performed, and image postprocessing	S	5572
70472	Computed tomographic (CT) cerebral perfusion analysis with contrast material(s), including image postprocessing performed with concurrent CT or CT angiography of the same anatomy (List separately in addition to code for primary procedure)	N	
70473	Computed tomographic (CT) cerebral perfusion analysis with contrast material(s), including image postprocessing performed without concurrent CT or CT angiography of the same anatomy	S	5571

24. Duplex Scan of Extracranial Arteries, CPT Code 93880 (APC 5523)

For CY 2026, we proposed to continue to assign CPT code 93880 (*Duplex scan of extracranial arteries; complete bilateral study*) to APC 5523 (Level 3 Imaging without Contrast) and a status indicator of 'S' with a proposed payment of $245.72.

We received public comments on this proposal. The following is a summary of the comments we received and our responses.

Comment: A commenter requested that CMS reassign CPT code 93880 to APC 5524 (Level 4 Imaging without Contrast) with a proposed payment of $562.07. The commenter stated that CPT code 93880 should be reassigned due to its clinical and resource similarity to CPT code 93306 (Echocardiography, transthoracic, real-time with image documentation (2d), includes m-mode recording, when performed, complete, with spectral doppler echocardiography, and with color flow doppler echocardiography), which is assigned to APC 5524.

Response: We thank the commenter for their input; however, we disagree with their recommendation. We review, on an annual basis, the APC assignments for all services and items paid under the OPPS based on our analysis of the latest claims data. For the CY 2026 OPPS update, based on CY 2024 claims data, our analysis for this final rule with comment period supports the continued assignment of CPT code 93880 to APC 5523 (Level 3 Imaging without Contrast) based on its clinical and resource homogeneity to the procedures and services in APC 5523. Specifically, our claims data show a GMC of approximately $230 based on 410,021 single frequency claims for CPT code 93880, which is consistent with the GMC of approximately $246 for APC 5523, rather than the GMC of approximately $563 for APC 5524 (Level 4 Imaging without Contrast). We believe the resource requirements for CPT code 93880 are more similar to procedures found in APC 5523 (Level 3 Imaging without Contrast) rather than APC 5524 (APC Level 4 Imaging without Contrast).

In summary, after consideration of the public comment, we are finalizing our proposal without modification to assign CPT code 93880 to APC 5523 (Level 3 Imaging without Contrast) for CY 2026. The final CY 2026 payment rates for this code can be found in Addendum B to this final rule with comment period. In addition, we refer readers to Addendum D1 to this final rule with comment period for the SI definitions for all codes reported under the OPPS. Addenda B and D1 are available via the internet on the CMS website.

25. Duplex Scan of Hemodialysis Fistula, CPT Code 0876T

The AMA CPT Editorial Panel established CPT code 0876T (*Duplex scan of hemodialysis fistula, computer-aided, limited (volume flow, diameter, and depth, including only body of fistula)*) effective July 1, 2024. We assigned CPT code 0876T to status indicator 'E1' for July 1, 2024, based on our belief that the implantable marker used with this procedure did not have FDA approval.

For CY 2026, we proposed to continue to assign CPT code 0876T to E1 (Not covered by any Medicare outpatient benefit category; Statutorily excluded by Medicare, Not reasonable and necessary; Not paid by Medicare when submitted on outpatient claims) because we have not been notified by interested parties regarding an updated FDA status.

We received public comments on this proposal. The following is a summary of the comments we received and our responses.

Comment: A commenter requested that CMS assign CPT code 0876T to an APC for payment under the OPPS. The commenter noted that the vast number of end-stage renal disease admissions are related to complications with patients' vascular access and the cost savings of salvaging fistulas versus replacing them.

Response: We are unable to determine if all parts of this service have been approved by the FDA and therefore are maintaining the status indicator assignment of 'E1'. We look forward to hearing from the manufacturer when FDA approval has been obtained.

In summary, after consideration of the public comment that we received, we are finalizing the status indicator assignment for 0876T without modification. The final CY 2026 payment rates for this code can be found in Addendum B to this final rule with comment period. In addition, we refer readers to Addendum D1 to this final rule with comment period for the SI definitions for all codes reported under the OPPS. Addenda B and D1 are available via the internet on the CMS website.

26. Non-Cardiac Contrast Enhanced Ultrasound (CEUS), CPT Codes 76978 and 76979 (APC 5572)

CPT codes 76978 and 76979 describe non-cardiac contrast enhanced ultrasounds. Their code descriptors are as follows:

- 76978: *Ultrasound, targeted dynamic microbubble sonographic*

contrast characterization (non-cardiac); initial lesion.

- 76979: *Ultrasound, targeted dynamic microbubble sonographic contrast characterization (non-cardiac); each additional lesion with separate injection (List separately in addition to code for primary procedure).*

For CY 2026, we proposed to assign CPT codes 76978 and 76979 to APC 5571 (Level 1 Imaging with Contrast). CPT code 76978 had a geometric mean cost of around $287 based on 710 single frequency claims and CPT code 76979 was packaged with a primary procedure.

Comment: Several commenters requested reassignment of CPT codes 76978 and 76969 from their current assignment in APC 5571 (Level 1 Imaging with Contrast) to APC 5572 (Level 2 Imaging with Contrast). CPT code 76978 describes ultrasound, targeted dynamic microbubble sonographic contrast characterization (non-cardiac) for the initial lesion, while CPT code 76979 describes each additional lesion with a separate injection and is packaged with the primary procedure code per OPPS policy. The commenters stated that the current APC assignment does not adequately reflect the resource costs associated with these specialized contrast-enhanced ultrasound procedures.

Response: We agree with the commenters' request for APC reassignment. After reviewing the clinical characteristics and resource costs associated with CPT codes 76978, we are reassigning 76978 from APC 5571 (Level 1 Imaging with Contrast) to APC 5572 (Level 2 Imaging with Contrast) for CY 2026 as reflected in Table 60. This reassignment better reflects the complexity and resource intensity of non-cardiac contrast enhanced ultrasound procedures. CPT code 76978 will be assigned status indicator ''S'' (separately payable) under APC 5572, while CPT code 76979 will maintain status indicator ''N'' (packaged) and will continue to be packaged with the primary procedure code 76978 under the new APC assignment. This change recognizes the specialized nature of contrast-enhanced ultrasound technology and ensures appropriate payment for these services. The reassignment will be effective beginning January 1, 2026.

TABLE 60: PROPOSED AND FINAL CY 2026 APC AND STATUS INDICATOR ASSIGNMENTS FOR CPT CODES 76978 AND 76979

CPT Code	Long Descriptor	Proposed CY 2026 SI	Proposed CY 2026 APC	Final CY 2026 SI	Final CY 2026 APC
76978	Ultrasound, targeted dynamic microbubble sonographic contrast characterization (non-cardiac); initial lesion	S	5571	S	5572
76979	Ultrasound, targeted dynamic microbubble sonographic contrast characterization (non-cardiac); each additional lesion with separate injection (List separately in addition to code for primary procedure)	N	N/A	N	N/A

27. Irreversible Electroporation Ablation of Tumors (NanoKnife® System), CPT Codes 0600T, 47384, 55877 (APC 5362)

Effective July 1, 2020, the AMA CPT Editorial Panel established CPT code 0600T (*Ablation, irreversible electroporation; 1 or more tumors per organ, including imaging guidance, when performed, percutaneous*) which describes a technique in which an electrical field is applied to cells in order to increase the permeability of the cell membranes through the formation of nanoscale defects in the lipid bilayer. The result is creation of nanopores in the cell membrane and disruption of intra-cellular homeostasis, ultimately causing cell death. The procedure received CPT code 0600T from the AMA in July 2020, and we assigned CPT code 0600T to APC 5362 (Level 2 Laparoscopy and Related Services) in the CY 2021 OPPS/ASC final rule with comment period. For the CY 2026 OPPS/ASC proposed rule, CPT code 0600T had a geometric mean cost of around $13,068 and we proposed to continue to assign the procedure to APC 5362, which has a proposed payment rate of around $10,967 and status indicator J1 (Hospital part B services paid through a comprehensive APC). For the CY 2026 OPPS/ASC proposed rule, we proposed CPT code 0600T to be a device intensive procedure with a proposed device offset percentage of 57.02 percent based on claims data for CPT code 0600T.

Effective July 1, 2025, the AMC CPT Editorial Panel established placeholder CPT code 4001X (Ablation, irreversible electroporation, liver, 1 or more tumors, including imaging guidance, percutaneous); and placeholder CPT code 5XX11 (Ablation, irreversible electroporation, prostate, 1 or more tumors, including imaging guidance, percutaneous). CPT code 47384 is the final code for 4001X and CPT code 55877 is the final code for 5XX11. For the CY 2026 OPPS/ASC proposed rule, we proposed to assign CPT code 47384 and CPT code 55877 to APC 5362 and status indicator J1. For the CY 2026 OPPS/ASC proposed rule, we proposed CPT code 47384 and CPT code 55877 to be device intensive procedures with a proposed device offset percentage of 31 percent which is the default for new device intensive procedures that lack claims data, or lack claims data from a predecessor code or a clinically related or similar code.

We note that at the August 25, 2025, HOP Panel Meeting, a presentation was made requesting: (1) reassignment to APC 5377 (Level 7 Urology and Related Services) for CPT code 55877; (2) reassignment to APC 1575 (New Technology—Level 38) for CPT codes 47384 and 0600T; and (3) the use of the claims data for CPT code 0600T to determine the device offset percentage for CPT codes 47384 and 55877. Based

on the information presented at the meeting, the Panel recommended that CMS use the claims data for CPT code 0600T to determine the device offset percentage for CPT code 47384 and CPT code 55877. The Panel made no recommendation on the APC assignments for CPT codes 0600T, 47384 and 55877.

We received public comments on this topic. The following is a summary of the comments we received and our responses.

Comment: A few commenters requested reassignment from APC 5362 to APC 5377 (Level 7 Urology and Related Services) for CPT code 55877 and reassignment from APC 5362 to APC 1575 (New Technology—Level 38) for CPT codes 47384 and 0600T. One of the commenters additionally requested device-intensive status for CPT codes 0600T, 47384 and 55877. We refer readers to sections IV.B. and XIII.C. of this final rule with comment period for our response those requests.

The commenters stated that all three procedures need to be reassigned because the CY 2024 claims data for CPT code 0600T shows a geometric mean cost of $13,068, which is higher than the proposed APC 5362 geometric mean cost of $11,137. For which specific APCs the procedures should be assigned to, the commenters stated that it is appropriate to assign CPT code 55877 to APC 5377 (Level 7 Urology and Related Services) based on resource and clinical coherence. The commenters stated that the costs associated with CPT code 0600T are more akin to the geometric mean of APC 5377 and the clinical range of services included in APC 5377 encompass ablation procedures, including CPT 55882, that are used in treating the same patient diagnoses and population. For CPT codes 0600T and 47384, commenters stated that there is no clinically appropriate APC that fits these procedures from both a clinical and resource perspective, so they proposed to reassign them to APC 1575 based on geometric mean cost. Alternatively, the commenter suggested, if CMS believes that all three procedures should be assigned to the same APC, the alternative APC assignment for placeholder code 55877 could be APC 1575.

Response: We thank the commenters for their recommendations. After consideration of the public comments we received and discussion and input from our Medical Officers, we are finalizing our proposal without modification for the APC assignments for CPT codes 0600T, 47384 and 55877. We believe the current claim data for 0600T indicates that APC 5362 is an appropriate assignment for these services. We note that we review the APC assignments for all items and services paid under the OPPS on an annual basis. We will reevaluate the APC assignments for CPT codes 0600T, 47384 and 55877 in the next rulemaking cycle.

Table 61 shows the finalized status indicator and APC assignment for these procedure codes. We refer readers to Addendum B to this final rule with comment period for the payment rates for all codes reportable under the OPPS. Addendum B is available via the internet on the CMS website.

TABLE 61: FINAL CY 2026 APC AND STATUS INDICATOR ASSIGNMENTS FOR CPT CODES 0600T, 47384, AND 55877

CPT Code	Long Descriptor	Final CY2026 OPPS SI	Final CY2026 OPPS APC
0600T	Ablation, irreversible electroporation; 1 or more tumors per organ, including imaging guidance, when performed, percutaneous	J1	5362
47384	Ablation, irreversible electroporation, liver, 1 or more tumors, including imaging guidance, percutaneous	J1	5362
55877	Ablation, irreversible electroporation, prostate, 1 or more tumors, including imaging guidance, percutaneous	J1	5362

Laboratory Related Services

Certain clinical diagnostic laboratory tests that are listed on the Clinical Laboratory Fee Schedule (CLFS) are packaged in the OPPS as integral, ancillary, supportive, dependent, or adjunctive to the primary service or services provided in the hospital outpatient setting during the same outpatient stay. Specifically, we conditionally package laboratory tests and only pay separately for laboratory tests when (1) they are the only services provided to a beneficiary on a claim; (2) they are molecular pathology tests; (3) they are advanced diagnostic laboratory tests (ADLTs) that provide an analysis of multiple biomarkers of DNA, RNA, or proteins combined with a unique algorithm to yield a single patient-specific result; or (4) the laboratory tests are considered preventive services. When laboratory tests are not packaged under the OPPS and are listed on the CLFS, they are paid at the CLFS payment rates, outside the OPPS, under Medicare Part B.

28. Diagnostic Biomarker Tests for Alzheimer's Disease, CPT Codes 0551U and 0568U

Recently, the AMA CPT Editorial Panel created two new CPT codes to describe diagnostic biomarker tests for Alzheimer's disease. CPT code 0551U became effective April 1, 2025, and CPT code 0568U became effective October 1, 2025. The CPT codes and their descriptors are as follows:

- 0551U (Tau, phosphorylated, pTau217, by single-molecule array (ultrasensitive digital protein detection), using plasma); and
- 0568U (Neurology (dementia), beta amyloid (Aβ40, Aβ42, Aβ42/40 ratio), tau-protein phosphorylated at residue (eg, pTau217), neurofilament light chain (NfL), and glial fibrillary acidic protein (GFAP), by ultra-high sensitivity molecule array detection, plasma, algorithm reported as positive, intermediate, or negative for Alzheimer pathology).

In the CY 2026 OPPS/ASC proposed rule, we proposed to assign CPT codes

0551U and 0568U status indicator ''Q4'' under OPPS.

Comment: We received one comment in support of our proposal. A commenter commended CMS's commitment to developing the basis of payment for these new clinical diagnostic laboratory tests with the addition of CPT codes 0551U and 0568U.

Response: We thank the commenter for their support. However, on October 1, 2025, the AMA CPT Editorial Panel deleted CPT code 0551U effective January 1, 2026. Therefore, for CY 2026, we will delete this code from this final rule with comment period and the January 2026 Update. However, we are finalizing our proposal to assign status indicator ''Q4'' to CPT code 0568U for CY 2026.

We refer readers to Addendum D1 of this final rule with comment period for the SI meanings for all codes reported under the OPPS. Addendum D1 is available via the internet on the CMS website.

29. PreciseBreast Test, CPT Code 0220U

AMA CPT Editorial Panel created CPT code 0220U on October 1, 2020 to describe a clinical diagnostic laboratory test that utilizes an Al-digital risk assessment methodology to measure protein-based biomarkers that are digitized to recapitulate the location, morphology and biological grade of a patient's invasive (ductal) breast cancer.

In the CY 2026 OPPS/ASC proposed rule, we proposed to continue assigning CPT code 0220U to status indicator ''Q4'' under OPPS.

We received public comments on this proposal. The following is a summary of the comments we received and our responses.

Comment: A commenter requested that CMS update its guidance on the laboratory date of service (DOS) policy for protein-based multianalyte algorithmic tests for cancer indications. Under the DOS regulations at § 414.510(b)(5), a clinical diagnostic laboratory test on a specimen collected during a hospital outpatient encounter can be billed by the performing laboratory if the test involves DNA, RNA or protein biomarkers or is classified as an Advanced Diagnostic Laboratory Test (ADLT). PreciseBreast® test (0220U) [1] is a cancer-related protein-based multi-analyte algorithmic test, however, because it is assigned a Proprietary Laboratory Analyses'' (PLA) code by AMA CPT Editorial Panel, it does not meet the exclusion from the DOS policy under CMS's current interpretation. According to the commenter, they cannot bill Medicare for their PreciseBreast® test even though it is performed in their laboratory outside of the hospital. This has significantly limited access to the targeted clinical diagnostic information that the test provides to breast cancer patients.

The commenter requested that CMS update the laboratory DOS policy at § 414.510(b)(5) to clarify that PreciseBreast®, as a cancer-related protein-based MAAA, can be billed by the performing lab with a DOS of the date of test performance. PreciseBreast® should be added to CMS's list of ''Laboratory Tests Subject to Exceptions to Laboratory DOS Policy Defined at § 414.510(b)(5))'', reassigned to Status Indicator ''A'', and excluded from packaging in the outpatient setting.

Response: We thank the commenter for their input but note that the comment related to the Date of Service (DOS) policy is out of scope for the purposes of this OPPS/ASC final rule with comment period as there was no proposal to modify the DOS regulations in the CY 2026 OPPS/ASC proposed rule.

We also do not believe that PreciseBreast® test qualifies as an exception to the OPPS laboratory packaging policy based on criteria discussed in the Laboratory Related Services section.

Based on that information, we continue to believe that the assignment of status indicator ''Q4'' to CPT code 0220U is still appropriate and are finalizing without modification, our proposal to assign CPT code 0220U to status indicator ''Q4'' for CY 2026.

30. Screening DNA/RNA Test for Hepatitis C Virus, HCPCS Code G0567

In the April 2025 quarterly update, effective June 27, 2024, CMS created a new HCPCS code, G0567, to describe a new screening DNA/RNA test for Hepatitis C Virus. We assigned this code to status indicator ''A'' under OPPS indicating that this code would be paid separately under clinical laboratory fee schedule (CLFS), similar to other preventive screening tests that are excluded from the OPPS packaging policy for the laboratory tests.

In the CY 2026 OPPS/ASC proposed rule, we proposed to continue to assign HCPCS code G0567 to status indicator ''A''.

We received public comments on this proposal. The following is a summary of the comments we received and our responses.

Comment: A commenter requested confirmation on the assignment of status indicator ''A'' where a commenter stated that such an assignment would be fully consistent with CMS precedent for other ''screening'' G-codes, such as G0472 (Hepatitis c antibody), G0475 (HIV antigen/antibody), G0476 (HPV co-testing), G0499 (Hep B screening)).

Response: We thank the commenter for their feedback and believe that the assignment of status indicator ''A'' continues to be appropriate for CY 2026. Therefore, we are finalizing our proposal, without modification to assign HCPCS code G0567 to status indicator ''A'' for CY 2026. We refer readers to OPPS Addendum D1 to this final rule with comment period for the status indicator definitions for all codes reported under the OPPS.

31. Laparoscopic Hernia Repair and Appendectomy, Procedures, CPT Codes 49650, 49651, and 44970 (APC 5342)

CPT codes 49650 (*Laparoscopy, surgical; repair initial inguinal hernia*) and 49651 (*Laparoscopy, surgical; repair recurrent inguinal hernia*) describe laparoscopic hernia repair procedures. CPT code 44970 (*Laparoscopy, surgical, appendectomy*) describes the procedure for laparoscopic appendectomy. Using CY 2024 claims data, CPT codes 49650, 49651, and 44970 had geometric mean costs of $7,050.22, $7,173.25, $6,777.47, respectively, in the CY 2026 OPPS/ASC proposed rule. For CY 2026, we believed these were still appropriately assigned to APC 5361 (Level 1 Laparoscopy and Related Services), which had a proposed payment rate of $6,228.97. Therefore, we proposed to continue assigning CPT codes 49651, 49651, and 44970 to APC 5361.

We received public comments on this proposal. The following is a summary of the comments we received and our responses.

Comment: The HOP Panel recommended that we reassign CPT codes 49650, 49651, and 44970 to APC 5342 (Level 2 Abdominal/Peritoneal/Biliary and Related Procedures) based on clinical and resource similarity to procedure in that APC. A commenter disagreed with the HOP Panel's recommendation and instead requested that CMS finalize our proposal without modification due to potential disruption to the payment rate for APC 5361 if we were to remove the three procedures.

Response: We thank the commenter for their input. CPT codes 49650, 49651, and 44970 have updated GMCs of $6,902.69, $7,040.05, and $6,638.55 in the final rule data. While these are closer to the payment rate for APC 5342, after clinical review of these procedures, we did not find APC 5342 to be the clinically appropriate APC family for CPT codes 49650, 49651, and 44970. We

continue to believe that these procedures belong in the Laparoscopy and Related Procedures family and are appropriately paid based on the payment rate for APC 5361.

After consideration of the public comment we received, we are finalizing our proposal without modification to continue to assign CPT codes 49650, 49651, and 44970 to APC 5361 (Level 1 Laparoscopy and Related Services).

Table 62 shows the finalized status indicator and APC assignment for the procedure codes. We refer readers to Addendum B to this final rule with comment period for the payment rates for all codes reportable under the OPPS. Addendum B is available via the internet on the CMS website.

TABLE 62: FINAL CY 2026 OPPS APC AND STATUS INDICATOR ASSIGNMENTS FOR CPT CODES 49650, 49651, AND 44970

CPT Code	Long Descriptor	Final CY 2026 OPPS SI	Final CY 2026 OPPS APC
49650	Laparoscopy, surgical; repair initial inguinal hernia	J1	5361
49651	Laparoscopy, surgical; repair recurrent inguinal hernia	J1	5361
44970	Laparoscopy, surgical, appendectomy	J1	5361

32. Medical 3D Printing, CPT Codes 0559T, 0561T (5734)

CPT codes 0559T (*Anatomic model 3D-printed from image data set(s); first individually prepared and processed component of an anatomic structure*) and 0561T (*Anatomic guide 3D-printed and designed from image data set(s); first anatomic guide*) were established in 2019 to describe medical 3D printing services. For the CY 2026 OPPS/ASC proposed rule, CPT code 0559T had a geometric mean of approximately $183 based on 12 single frequency claims and 16 total frequency claims, and CPT code 0561T had a geometric mean cost of approximately $255 based on 8 single frequency claims and 84 total frequency claims. For CY 2026, we proposed to continue to assign CPT codes 0559T and 0561T to APC 5733 (Level 3 Minor Procedures) and status indicator ''Q1.''

We received public comments on this proposal. The following is a summary of the comments we received and our responses.

Comment: A commenter requested that CMS assign CPT codes 0559T and 0561T to APC 5735 (Level 5 Minor Procedures) because the resources and supplies needed to provide these services are greater than the proposed payment rates. The commenter explained that the low utilization for both codes caused a lack of reliable claims data for ratesetting and urged us to assign the codes to a clinical APC with a higher payment rate to ensure patient access. Per the commenter, the 3D-printed models cost close to $3,000 per patient.

Response: Based on the geometric mean cost of both codes, we agree with the commenter that the proposed payment rate is not appropriate for CPT codes 0559T and 0561T, as the payment rate is significantly lower than the geometric mean cost of the codes. Based on the claims data available, we believe an assignment to APC 5734, a higher payment level within the same clinical APC, would align more closely with the geometric mean costs for both codes.

After consideration of the public comment we received, we are finalizing our proposal with modification to assign CPT codes 0559T and 0561T to APC 5734 and status indicator ''Q1'' as reflected in Table 63. As we do every year, we will re-evaluate the APC assignments for these codes in the next rulemaking cycle.

TABLE 63: FINAL CY 2026 APC AND SI ASSIGNMENT FOR CPT CODES 0559T AND 0561T

CPT Code	Long Descriptor	Final CY 2025 SI	Final CY 2025 APC
0559T	Anatomic model 3D-printed from image data set(s); first individually prepared and processed component of an anatomic structure	Q1	5734
0561T	Anatomic guide 3D-printed and designed from image data set(s); first anatomic guide	Q1	5734

Neuro and Nerve Related Procedures

33. Continuous EEG Monitoring, CPT Codes 0956T, 0960T (APC 5117)

Continuous EEG monitoring involves an implantable device. The device is an electroencephalographic (EEG) recording and transmitting device implanted under the scalp. It is a prescription device indicated to acquire, transmit, and store EEGs continuously from patients between 18–75 years of age with drug-resistant epilepsy who are intolerant or not indicated for more conservative monitoring tools. The device is intended to aid a physician's remote assessment and monitoring of the indicated patient's condition.

The medical use of the data acquired by the continuous EEG monitoring system is to be performed under the direction and interpretation of a licensed medical professional. The device does not provide any diagnostic conclusions about the patient's condition.

The AMA CPT Editorial Board created five new Category III CPT codes to describe various procedures associated with a sub-scalp bilateral continuous

EEG monitoring system to assist in identifying seizure activity for patients with drug resistant epilepsy (DRE). Specifically, effective July 1, 2025, the three new CPT codes are:

- 0956T—Partial craniectomy, channel creation, and tunneling of electrode for sub-scalp implantation of an electrode array, receiver, and telemetry unit for continuous bilateral electroencephalography monitoring system, including imaging guidance
- 0957T—Revision of sub-scalp implanted electrode array, receiver, and telemetry unit for electrode, when required, including imaging guidance
- 0958T—Removal of sub-scalp implanted electrode array, receiver, and telemetry unit for continuous bilateral electroencephalography monitoring system, including imaging guidance
- 0959T—Removal or replacement of magnet from coil assembly that is connected to continuous bilateral electroencephalography monitoring system, including imaging guidance
- 0960T—Replacement of sub-scalp implanted electrode array, receiver, and telemetry unit with tunneling of electrode for continuous bilateral electroencephalography monitoring system, including imaging guidance

In the CY 2026 OPPS/ASC proposed rule, we proposed to assign CPT codes 0956T and 0960T to status indicator ''S'' and APC 1577 (New Technology—Level 40 ($20,001–$25,000)) with a proposed payment rate of $22,500.50. CPT code 0957T was assigned to status indicator ''J1'' and APC 5112 (Level 2 Musculoskeletal Procedures) with a proposed payment rate of $1,659.95. CPT code 0958T was assigned to status indicator ''J1'', APC 5113 (Level 3 Musculoskeletal Procedures) with a proposed payment rate of $3,377.20. CPT code 0959T was assigned to status indicator ''Q2'' APC 5072 (Level 2 Excision/Biopsy/Incision and Drainage) with a proposed payment rate of $1,692.22.

We received public comments on this proposal. The following is a summary of the comments we received and our responses.

Comment: Several commenters requested that CMS reexamine and revise the reimbursement rates for CPT codes 0956T and 0960T because, according to the commenters, outpatient reimbursement for services associated with sub-scalp EEG monitoring is substantially below the actual resources required to deliver them.

A few commenters urged CMS to move CPT codes 0956T and 0960T to a higher-paying New Technology APC.

A commenter recommended that CMS assign both CPT codes to APC 1579 (New Technology—Level 42 ($30,001–$40,000)). Their analysis indicated that a similar procedure is the implantation of a cochlear implant. In evaluating the CY 2026 OPPS claims data, the procedure costs of implanting a cochlear implant (CPT code 69930) are $8,461. The commenter stated that the cost of the device is $25,000, so total estimated hospital costs of the procedure are $33,461. The commenter requested that CMS reassign CPT codes 0956T and 0960T to APC 1579.

Another commenter estimated that the total procedure costs for 0956T and 0960T exceed $35,000. Device costs are approximately $25,000. Surgical and facility costs for outpatient implantation procedures add approximately $10,000. The commenter stated that with the current proposed reimbursement falling $12,500 short of actual costs, a hospital would be unlikely to offer this service, and patients would not be able to access this service.

Response: Based on clinical similarity and resource homogeneity of the procedures described by CPT codes 0956T and 0960T to existing procedures assigned to the Level 7 Musculoskeletal Procedures APC, and based on input from our medical advisors, we are assigning CPT codes 0956T and 0960 to status indicator ''J1'' and APC 5117 (Level 7 Musculoskeletal Procedures) for CY 2026 as reflected in Table 64.

The final payment rates for the codes can be found in Addendum B to this final rule with comment period. In addition, we refer to Addendum D1 to this final rule with comment period for the status indicator (SI) meanings for all codes reported under the OPPS. Addenda B and D1 are available via the internet on the CMS website.

TABLE 64: PROPOSED AND FINAL CY 2026 APC AND STATUS INDICATOR ASSIGNMENTS FOR CPT CODE 0956T and 0960T

CPT Code	Long Descriptor	Proposed CY 2026 SI	Proposed CY 2026 APC	Final CY 2026 SI	Final CY 2026 APC
0956T	Partial craniectomy, channel creation, and tunneling of electrode for sub-scalp implantation of an electrode array, receiver, and telemetry unit for continuous bilateral electroencephalography monitoring system, including imaging guidance	S	1577	J1	5117
0960T	Replacement of sub-scalp implanted electrode array, receiver, and telemetry unit with tunneling of electrode for continuous bilateral electroencephalography monitoring system, including imaging guidance	S	1577	J1	5117

34. Transcutaneous Magnetic Peripheral Nerve Stimulation CPT Codes 0766T and 0767T (APC 5722)

Transcutaneous Magnetic Peripheral Nerve Stimulation is intended to stimulate peripheral nerves for relief of chronic intractable pain, post-traumatic pain, post-surgical pain and/or for relief of chronic painful diabetic peripheral neuropathy in the lower extremities for patients 18 and older. CPT code 0766T (*Transcutaneous magnetic stimulation by focused low-frequency electromagnetic pulse, peripheral nerve, with identification and marking of the treatment location, including noninvasive electroneurographic localization (nerve conduction*

localization), when performed; first nerve) became effective January 1, 2023. For CY 2025, CPT code 0766T was reassigned to APC 5722 (Level 2 Diagnostic Tests and Related Services) with the status indicator ''S'' (Significant Procedures, Not Discounted when Multiple. Paid under OPPS; separate APC payment). There are no claims available for CPT code 0766T in CY 2024. For CY 2026, we proposed to continue assigning CPT code 0766T to APC 5722.

CPT code 0767T (*Transcutaneous magnetic stimulation by focused low-frequency electromagnetic pulse, peripheral nerve, with identification and marking of the treatment location, including noninvasive electroneurographic localization (nerve conduction localization), when performed; each additional nerve (list separately in addition to code for primary procedure)*) became effective January 1, 2023 and assigned status indicator ''N'' (packaged). CPT code 0767T is an add-on code and we proposed to continue assignment of status indicator ''N'' for this code for CY 2026.

We received public comments on this proposal. The following is a summary of the comments we received and our responses.

Comment: Commenters requested CPT code 0766T be reassigned to APC 5724 (Level 4 Diagnostic Tests and Related Services), claiming that CPT code 0766T is not clinically similar and does not use comparable resources to other services in APC 5722. The commenters requested that CMS follows the 2025 HOP Panel recommendations to reassign 0766T to APC 5724 (Level 4 Diagnostic Tests and Related Services) and reassign the 0767T status indicator to ''S'' (Significant Procedures, Not Discounted when Multiple. Paid under OPPS; separate APC payment).

Response: We disagree that CPT code 0766T is comparable, clinically and in resource costs, to the services assigned to APC 5724. We continue to believe CPT code 0766T is more comparable, clinically and from a resource cost perspective, to CPT code 90867 (Therapeutic repetitive transcranial magnetic stimulation (tms) treatment; initial, including cortical mapping, motor threshold determination, delivery and management), and CPT code 90868 (Therapeutic repetitive transcranial magnetic stimulation (tms) treatment; subsequent delivery and management, per session), which are assigned to APC 5722 (Level 2 Diagnostic Tests and Related Services), because these services share similar magnetic stimulation and nerve localization processes.

We note that CPT code 0767T is an add-on code. Add-on codes are always performed in addition to the primary service or procedure and not reported as a stand-alone code. As specified under regulation 42 CFR 419.2(b)(18), add-on codes are generally packaged under the OPPS, and payment for the codes are bundled with the primary codes. Consequently, CPT code 0767T is not paid separately under the OPPS and its payment is packaged into payment for the primary code.

After consideration of the public comments we received, we are finalizing our proposed APC assignment and status indicators for CPT codes 0766T and 0767T without modification. Refer to Table 65 for the final OPPS APC and status indicator assignment for CPT codes 0766T and 0767T for CY 2026. We refer readers to Addendum B to this final rule with comment period for the payment rates for all codes reportable under the OPPS. Addendum B is available via the internet on the CMS website.

TABLE 65 FINAL CY 2026 APC AND STATUS INDICATOR ASSIGNMENTS FOR CPT CODES 0766T and 0767T

CPT Code	Long Descriptor	Final CY 2026 OPPS SI	Final CY 2026 OPPS APC
0766T	Transcutaneous magnetic stimulation by focused low-frequency electromagnetic pulse, peripheral nerve, with identification and marking of the treatment location, including noninvasive electroneurographic localization (nerve conduction localization), when performed; first nerve	S	5722
0767T	Transcutaneous magnetic stimulation by focused low-frequency electromagnetic pulse, peripheral nerve, with identification and marking of the treatment location, including noninvasive electroneurographic localization (nerve conduction localization), when performed; *each additional nerve* (List separately in addition to code for primary procedure)	N	N/A

35. Ultrasound Guided Carpal Tunnel Release Procedure, CPT Code 64728 (APC 5431)

For CY 2026, the AMA CPT Editorial Board created a new Category I CPT code 64728 (Placeholder code 647XX) to describe carpal tunnel release procedures using ultrasound guidance. In the CY 2026 OPPS/ASC proposed rule, we proposed to assign CPT code 647XX to APC 5431 (Level 1 Nerve Procedures) with status indicator ''J1'' and a proposed payment rate of $1,999.82.

We received public comments on this proposal. The following is a summary of the comments we received and our responses.

Comment: A commenter believes overall hospital resources for this service can be approximated using other similar procedures—for example, endoscopic carpal tunnel release (CPT code 29848 (*Endoscopy, wrist, surgical, with release of transverse ligament*)) and

open carpal tunnel release (CPT code 64721 (*Neuroplasty and/or transposition; median nerve at carpal tunnel)*)—and adding the single-use device cost of $1,099, plus the $140 cost of intraprocedure ultrasound to those other costs. Using the geometric mean costs for these services and adding the single-use device and intraprocedure ultrasound costs results in an estimated cost of between $3,048 and $3,454 for the new 647XX procedure.

Based on this information, the commenter suggested that CMS re-assign CPT code 64728 to APC 1524 (New Technology—Level 24 ($3001–$3500) with status indicator ''S'' and a proposed payment rate of $3,250.50 or alternatively re-assign it to APC 5432 (Level 2 Nerve Procedures) with status indicator ''J1'' and a proposed payment rate of $6,667.00 or to APC 5113 (Level 3 Musculoskeletal Procedures) with status indictor ''J1'' with a proposed payment rate of $3,377.20.

Response: Based on the estimated resource costs and clinical similarity of CPT code 64728 to other surgical procedures assigned to APC 5431, we continue to believe that the assignment of CPT code 64728 to APC 5431 is appropriate. Therefore, we are finalizing without modification our proposal to assign CPT code 64728 to APC 5431 for CY 2026.

We refer readers to Addendum B to this final rule with comment period for the payment rates for all codes reportable under the OPPS. Addendum B is available via the internet on the CMS website.

Neurostimulators

36. Creation of a Level 6 Neurostimulator APC

In prior rulemaking, some interested parties have requested that we create a Level 6 Neurostimulator and Related Procedures APC, due to their concerns around clinical and resource cost similarity in the Level 5 Neurostimulator and Related Procedures APC. We most recently responded to this request in the CY 2025 OPPS/ASC final rule with comment period (89 FR 94064). We noted that we believed that the current 5 level APC structure for the Neurostimulator and Related Procedures series provided for an appropriate distribution of clinical and cost similarity at the different APC levels. As discussed in the CY 2021 OPPS/ASC final rule with comment period, we reiterate that the OPPS is a prospective payment system. We group procedures with similar clinical characteristics and resource costs into APCs and establish a payment rate that reflects the geometric mean of all services in the group even though the cost of any individual service within the APC may be higher or lower than the APC's geometric mean. As a result, in the OPPS, any individual procedure may potentially be paid more or less than the cost of the services because the payment rate is based on the geometric mean of the entire group of services in the APC. However, the impact of these payment differences should be mitigated when distributed across a large number of APCs (85 FR 85968).

While we continued to believe that a five-level structure for the Neurostimulator and Related Procedures APC series remains appropriate, we solicited comment from interested parties on the need for a Level 6 APC, given the clinical and estimated cost characteristics of the services currently assigned to the Level 5 APC and New Technology APC 1580 (New Technology—Level 43 ($40,001–$50,000)).

In summary, for the CY 2026 OPPS, we proposed to maintain the current 5 level structure for the Neurostimulator and Related Procedure APC series. We also solicited comments on potentially creating an additional Level 6 APC in the series.

See Table 66 for proposed CY 2026 SI and APC assignments for specific HCPCS codes in the series and Table 67 for the proposed CY 2026 Neurostimulator and Related Procedures APCs.

TABLE 66: PROPOSED CY 2026 APC AND STATUS INDICATOR ASSIGNMENTS

HCPCS Code	HCPCS Long Descriptor	Proposed CY 2026 OPPS SI	Proposed CY 2026 OPPS APC
61885	Insertion or replacement of cranial neurostimulator pulse generator or receiver, direct or inductive coupling; with connection to a single electrode array	J1	5465

TABLE 67: PROPOSED CY 2026 NEUROSTIMULATOR AND RELATED PROCEDURES APCS

APC	Group Title	SI	Proposed CY 2026 APC Geometric Mean Cost
5461	Level 1 Neurostimulator and Related Procedures	J1	$3,780.68
5462	Level 2 Neurostimulator and Related Procedures	J1	$6,662.66
5463	Level 3 Neurostimulator and Related Procedures	J1	$11,885.66
5464	Level 4 Neurostimulator and Related Procedures	J1	$20,440.08
5465	Level 5 Neurostimulator and Related Procedures	J1	$32,246.05

We received public comments on the proposal to maintain the 5 level APC structure. The following is a summary of the comments we received and our responses.

Comment: Some commenters supported the proposal to continue assigning CPT code 0266T/64XX5 (*Implantation or replacement of carotid sinus baroreflex activation device; total system (includes generator placement, unilateral or bilateral lead placement, intra-operative interrogation, programming, and repositioning, when performed)*) to New Technology APC 1580. Commenters also supported maintaining assignment of CPT code 33276 (Insertion of phrenic nerve stimulator system (pulse generator and stimulating lead[s]), including vessel catheterization, all imaging guidance, and pulse generator initial analysis with diagnostic mode activation, when performed) to New Technology APC 1580.

Other commenters noted that CPT code 64568 (*Open implantation of cranial nerve (e.g., vagus nerve) neurostimulator electrode array and pulse generator*) which has similar characteristics to 33276 and 0266T/64XX5 should similarly be placed in New Technology APC 1580, based on its geometric mean cost and that continuing to assign CPT code 64568 to the Level 5 Neurostimulator and Related Procedures APC would be an inconsistent treatment of the procedure code, relative to the others. Finally, a commenter suggested that a combined C-code be created to pair 64568 with C1827 (*Generator, neurostimulator (implantable), non-rechargeable, with implantable stimulation lead and external paired stimulation controller*).

At the August 2025 HOP Panel meeting, the HOP panel made a recommendation to consider placement of CPT code 64568 to New Technology APC 1580.

Response: We appreciate the commenters' support for the proposed assignments of HCPCS codes 33276 and 0266T/64XX5 to New Technology APC 1580.

We agree that it is appropriate to assign CPT code 64568 to New Technology APC 1580 based on its geometric mean cost of $46,926.67 and apply a similar temporary New Technology APC assignment, as we have for the other neurostimulator procedure codes assigned to that APC. We will continue to monitor the claims data for the code as additional claims become available. Finally, we do not believe the creation of a C-code pairing CPT code 64568 and device code C1827 is necessary or appropriate, given a final placement for the primary procedure code to New Technology APC 1580 in this final rule with comment period.

Comment: Many commenters requested the creation of a Level 6 Neurostimulator and Related Procedures APC, with some requesting that specific codes or codes with similar costs be included in that Level 6 APC. We note that at the August 2025 HOP Panel meeting, the HOP panel made a recommendation to create a Level 6 Neurostimulator APC.

Commenters stated that while they appreciated the assignment of specific codes to New Technology APCs and that those assignments represent a viable short term solution, a Level 6 APC represents a more long term solution to commenter concerns, including those around procedure payment relative to costs. A commenter also noted that some of the factors supporting the creation of the Level 7 Musculoskeletal Procedures APC would also apply to this series, such as the bimodal distribution of cost and potential placement of procedures being removed from the IPO list. A commenter also noted that although a Level 6 Neurostimulator and Related Procedures APC would have relatively low claims volume, that there are already other comparable APCs with low volume in the Intraocular Procedures APC series.

A few commenters supported maintaining the current 5 level structure of the APC series. One of the commenters requested that CMS not make any changes to the APC series structure or any of its assignments until a more comprehensive review of the current APC family could be performed.

Response: We appreciate the thoughtful responses commenters have provided with regard to the Neurostimulator and Related Procedures APC series and our request for comments.

At this time, we believe the 5-level APC structure for the APC series remains appropriate and individual temporary New Technology APC assignments with respect to the high cost procedures in this evolving area resolve some of the concerns around procedure payment relative to cost. We will continue to monitor the claims data for these procedures as more information around their volume and estimated costs become available.

After consideration of public comments, we are assigning CPT code 64568 to New Technology APC 1580 and maintaining the 5-level APC structure for the Neurostimulator and

Related Procedures APC series in the CY 2026 OPPS.

See Table 68 for final CY 2026 SI and APC assignments for specific HCPCS codes in the series and Table 69 for the final CY 2026 Neurostimulator and Related Procedures APCs.

BILLING CODE 4120–01–P

TABLE 68: FINAL CY 2026 APC AND STATUS INDICATOR ASSIGNMENTS

CPT Code	HCPCS Long Descriptor	Final CY 2026 OPPS SI	Final CY 2026 OPPS APC
61885	Insertion or replacement of cranial neurostimulator pulse generator or receiver, direct or inductive coupling; with connection to a single electrode array	J1	5465
61891	Revision or replacement of skull-mounted cranial neurostimulator pulse generator or receiver with connection to depth and/or cortical strip electrode array(s)	J1	5465
64568	Open implantation of cranial nerve (eg, vagus nerve) neurostimulator electrode array and pulse generator	S	1580
0786T	Open implantation of cranial nerve (eg, vagus nerve) neurostimulator electrode array and pulse generator	J1	5463
0817T	Open insertion or replacement of integrated neurostimulation system for bladder dysfunction including electrode(s) (eg, array or leadless), and pulse generator or receiver, including analysis, programming, and imaging guidance, when performed, posterior tibial nerve; subfascial	J1	5464
0988T	Open insertion or replacement of integrated neurostimulation system for bladder dysfunction including electrode(s) (eg, array or leadless), and pulse generator or receiver, including analysis, programming, and imaging guidance, when performed, posterior tibial nerve; subcutaneous and subfascial	E1	

TABLE 69: FINAL CY 2026 NEUROSTIMULATOR AND RELATED PROCEDURES APCS

APC	Group Title	SI	Final CY 2026 APC Geometric Mean Cost
5461	Level 1 Neurostimulator and Related Procedures	J1	$3,599.23
5462	Level 2 Neurostimulator and Related Procedures	J1	$6,560.99
5463	Level 3 Neurostimulator and Related Procedures	J1	$11,471.39
5464	Level 4 Neurostimulator and Related Procedures	J1	$19,972.38
5465	Level 5 Neurostimulator and Related Procedures	J1	$31,767.96

BILLING CODE 4120–01–C

37. Neurostimulator and Related Procedures (APCs 5461 Through 5465)

In the CY 2021 OPPS/ASC final rule with comment period, we finalized a five-level APC structure for the Neurostimulator and Related Procedures series (85 FR 85968 through 85970). For a detailed discussion of the history of neurostimulators policy, we refer readers to the CY 2015, CY 2020, CY 2021, CY 2023, CY 2024, and CY 2025 OPPS/ASC final rules with comment period (79 FR 66807 through 66808; 84 FR 61162 through 6116, 85 FR 85968 through 85970; 87 FR 71869; 88 FR 81645 through 81658; 89 FR 94062 through 96045).

CPT Codes 61885 and 64590

Effective January 1, 1982, The AMA CPT Editorial Board created Category I CPT code 61885 (Insertion or replacement of cranial neurostimulator pulse generator or receiver, direct or inductive coupling; with connection to a single electrode array) and CPT code 64590 *(Insertion or replacement of peripheral, sacral, or gastric neurostimulator pulse generator or receiver, requiring pocket creation and connection between electrode array and pulse generator or receiver*).

Based on the estimated resource costs and clinical similarity of HCPCS code 61885 to other procedures assigned to APC 5465 and because the geometric mean cost for that procedure aligned with the geometric mean cost of APC 5465, we proposed to reassign CPT code 61885 from APC 5464 (Level 4 Neurostimulator and Related Procedures) with a proposed payment rate of $20,126.69 for CY 2026 to APC 5465 (Level 5 Neurostimulator and Related Procedures) with a proposed payment rate of $31,751.65 for CY 2026. We also proposed to continue assigning CPT code 64590 to APC 5464 (Level 4 Neurostimulator and Related Procedures).

We received public comments on these proposals. The following is a summary of the comments we received and our responses.

Comment: Some commenters supported these proposals and other commenters were concerned that since CMS was proposing to reassign CPT code 61885 from APC 5464 to APC 5465, the OPPS proposed payment rate for APC 5464 will decline significantly, when calculated both with and without the comprehensive APC (C–APC) methodology.

A commenter stated that the decrease in the payment rate for services remaining in APC 5464 will limit access for Medicare beneficiaries to important therapies reported under CPT code 64590 and other codes in that APC.

Other commenters requested that CMS utilize the adjustment authority at section 1833(t)(2)(E) of the Act to ensure equitable payments under the OPPS and calculate the OPPS payment rates for APC 5464 with and without the C–APC methodology using a geometric mean cost that phases in the reassignment of 61855.

During the 4-year phase-in, the payment rate calculation for APC 5464 would include a declining share of the mean cost of 61855 according to the following schedule:

- 2026—75%.
- 2027—50%.
- 2028—25%.
- 2029—0%.

The commenters requested that CMS apply this adjustment only to APC 5464; the calculation of the payment rate for APC 5465 should not be affected by this adjustment.

Response: Under the OPPS, we use the latest claims data to set the annual payment rates. For this final rule with comment period, the OPPS payment rates are based on claims submitted between January 1, 2024, and December 31, 2024, processed through June 30, 2025. Based on our evaluation of the claims data, the geometric mean cost for CPT code 61885 is $31,169.28 based on 3,008 single claims (out of 3,030 total claims), which is much more consistent with the geometric mean cost for APC 5465 (geometric mean cost of $31,767.96) than APC 5464 (geometric mean cost of $19,972.38).

In addition, the geometric mean costs of HCPCS codes that are assigned to APC 5464 are in line with the geometric mean cost for APC 5464. For instance, the geometric mean cost of CPT code 64590 which has over 95 percent of the claims volume in APC 5464, is $20,065.44 based on 11,062 single claims (out of 11,254 total claims) which is comparable with the geometric mean cost of $$19,972.38 for APC 5464.

In summary, after consideration of the public comments, we are finalizing without modification our proposal to assign CPT code 61885 to APC 5465 for CY 2026.

CPT code 61891 (*Responsive neurostimulation (RNS)*) is an epilepsy treatment that uses an implanted device to help prevent seizures before they begin, similar to how a pacemaker detects and treats abnormal heart rhythms. With RNS, surgeons implant a small battery-powered device called a

neurostimulator in the patient's skull. The neurostimulator is connected to thin wires, which the surgeon places in the area or areas of the brain where the patient's seizures originate. The neurostimulator monitors the brain's electrical activity, and when activity that could lead to a seizure is detected, it delivers a pulse of electrical stimulation that may stop the seizure before it begins. The neurostimulator's battery generally lasts about 11 years. The neurostimulator is surgically replaced on an outpatient basis when the battery is at end of service.

The RNS procedures are described by CPT codes: 61889, 61891 and 61892.

- 61889—Insertion of skull-mounted cranial neurostimulator pulse generator or receiver, including craniectomy or craniotomy, when performed, with direct or inductive coupling, with connection to depth and/or cortical strip electrode array(s).
- 61891—Revision or replacement of skull-mounted cranial neurostimulator pulse generator or receiver with connection to depth and/or cortical strip electrode array(s).
- 61892—Removal of skull-mounted cranial neurostimulator pulse generator or receiver with cranioplasty, when performed.

In the CY 2026 OPPS/ASC proposed rule, we proposed to continue assigning CPT code 61889 to status indicator ''C'' since this procedure is only performed in the inpatient setting. We proposed to continue assigning CPT code 61891 to status ''J1'', APC 5464 (Level 4 Neurostimulator and Related Procedures) with a proposed payment rate of $20,126.69 and we proposed to continue assigning CPT code 61892 to status indicator ''J1'', APC 5113 (Level 3 Musculoskeletal Procedures) with a proposed payment rate of $3,377.20.

At the August 25, 2025, HOP Panel Meeting, a presenter advised the Panel to request that CMS reassign CPT code 61891 to APC 5465 (Level 5 Neurostimulator and Related Procedures). Based on the information presented at the meeting, the Panel recommended that CMS reassign CPT code 61891 to APC 5465 for CY 2026.

Comment: Commenters disagreed with CMS' assignment of APC 5464 and requested that CMS reassign CPT code 61891 to APC 5465. The commenters cited the inadequacy of APC 5464 from a cost and payment perspective, the fact that the predecessor CPT code 61886 was assigned to APC 5465, and that revision procedures are extremely rare.

A few commenters stated that while they understood CMS' concern about overpaying for a revision procedure that does not involve replacing the neurostimulator, the likelihood of this occurring is extremely rare. One of the commenters noted that based on internal data collected by NeuroPace, the company that manufactures the RNS System, it is less than one case per year across all payers.

Several commenters also noted that in their own practices, they have never performed a revision to the neurostimulator but have performed a number of replacements.

Another commenter stated that the current APC assignment for CPT code 61891 does not adequately reflect hospital costs, nor does it provide adequate outpatient payment for the service.

A few commenters stated that CY 2024 claims data published with the CY 2026 OPPS/ASC proposed rule demonstrates that the geometric mean cost (GMC) of CPT code 61891 is more appropriately aligned with the GMC of APC 5465. The commenter noted that per the Cost Statistics file, CPT code 61891 has a geometric mean cost (GMC) of $32,487. This is significantly higher than the GMC of current APC 5464 ($20,440) and the proposed payment rate of APC 5464 ($20,127). If finalized, hospitals will incur a loss of over $12,000 per procedure in CY 2026 for this procedure.

Some commenters also pointed out that assigning CPT code 61891 to APC 5465 is consistent with the APC assignment for the predecessor CPT code 61886—Insertion or replacement of cranial neurostimulator pulse generator or receiver, direct or inductive coupling; with connection to two or more electrode arrays. Prior to the implementation of CPT code 61891 in January 2024, the replacement of a skull-mounted cranial neurostimulator was reported with CPT code 61886 and assigned to APC 5465. CPT code 61891 was created to differentiate the services associated with skull-mounted cranial neurostimulators and cranial neurostimulators implanted in the chest (for example, CPT code 61886).

Another commenter acknowledged that the volume of procedures coded with CPT code 61891 remains low. However, a further reduction in payment has the potential to create access issues for the vulnerable patient population of patients with intractable epilepsy in whom these neurostimulator are utilized.

Response: We agree with the commenters and the HOP Panel that CPT code 61891 should be reassigned to APC 5465.

After consideration of the public comments we received, we are assigning CPT code 61891 to APC 5465 for CY 2026. We refer readers to Addendum B to this final rule with comment period for the payment rates for all codes reportable under the OPPS. Addendum B is available via the internet on the CMS website.

CPT Code 0786T

Effective January 1, 2024, the CPT Editorial Panel separated integrated from non-integrated (*i.e.,* traditional) sacral neurostimulator procedure by establishing a new CPT code, 0786T to report procedures using integrated sacral neurostimulator devices, while CPT code 64590 was updated to reflect the use of traditional technology:

- *0786T:* Insertion or replacement of percutaneous electrode array, sacral, with integrated neurostimulator, including imaging guidance, when performed.
- *64590:* Insertion or replacement of peripheral, sacral, or gastric neurostimulator pulse generator or receiver, requiring pocket creation and connection between electrode array and pulse generator or receiver.

In the CY 2026 OPPS/ASC proposed rule, we proposed to continue assigning CPT code 0786T to status indicator ''E1'' to indicate that it is still pending the FDA approval. However, this service received FDA approval on June 17, 2025.

We received public comments on this proposal. The following is a summary of the comments we received and our responses.

Comment: At the August 25, 2025 HOP Panel Meeting, the presenter advised the panel to request that CMS assign CPT code 0786T to APC 5464 (Level 4 Neurostimulator and Related Procedures). The HOP Panel agreed with the presenter and made that recommendation.

A commenter stated CPT code 0786T should not map to the same APC (APC 5464) as the traditional peripheral and sacral nerve stimulation devices that require lead insertion and pocket formation for the insertion of an implanted neurostimulator (INS). The traditional approach for a neurostimulator implant is reported with CPT code 64561 (*Percutaneous implantation of neurostimulator electrode array; sacral nerve (transforaminal placement) including image guidance, if performed*) or 64555 (*Percutaneous implantation of neurostimulator electrode array; peripheral nerve (excludes sacral nerve)*) for a percutaneous lead implant. These codes define the trial lead and permanent lead insertion. CPT code (64590 *Insertion or replacement of peripheral, sacral, or gastric*

neurostimulator pulse. generator or receiver, requiring pocket creation and connection between electrode array and pulse generator or receiver is used to report the insertion of a neurostimulator pulse generator or receiver and requires the creation of a pocket and the connection between the electrode array and the pulse generator). This does not occur with integrated devices. As a predicate, CPT code 64596 (Insertion or replacement of percutaneous electrode array, peripheral nerve, with integrated neurostimulator, including imaging guidance, when performed; initial electrode array) is used to report the permanent placement of an integrated system that includes the contacts and the receiver on the other end of the lead and maps to APC 5463 (Level 3 Neurostimulator and Related Procedures). Therefore, the commenter recommended assignment of CPT codes 0786T, to either APC 5462 (Level 2 Neurostimulator and Related Procedures) or APC 5463 as either APC is a more accurate assignment given the cost and resources required to perform the procedure with an integrated device.

Another commenter recommended that we assign CPT code 0786T to APC 5462. CMS has assigned CPT code 0587T, describing the percutaneous implantation of an integrated single-device neurostimulation system for bladder dysfunction targeting the posterior tibial nerve, to APC 5462. The commenter believed that assignment of CPT code 0786T to the same APC as CPT code 0587T (APC 5462) would be much more clinically coherent than assignment to APC 5464, because both procedures involve percutaneous implantation of integrated neurostimulators for the treatment of bladder dysfunction with the only difference being the nerve target (sacral vs. posterior tibial nerve).

Another commenter requested that CMS assign CPT code 0786T to APC 5464 with a status indicator of ''J1'' based on clinical and resource homogeneity. The commenter believes that assignment to APC 5464 creates clinical alignment with other urinary urge incontinence (UUI) procedures, including both integrated and non-integrated systems.

Response: We thank the commenters for their input. We agree with one of the commenters that APC 5463 is the most appropriate assignment based on the cost and resources required to perform the procedure with an integrated device. Therefore, we are reassigning CPT code 0786T from status indicator ''E1'' to status indicator ''J1'', APC 5463 for CY 2026.

We refer readers to Addendum B to this final rule with comment period for the payment rates for all codes reportable under the OPPS. We also refer readers to Addendum D1 to this final rule with comment period for the SI meanings for all codes reported under the OPPS. Addenda B and D1 are available via the internet on the CMS website.

CPT Codes 0817T and 0988T

For CY 2024, the CPT Editorial Panel established four new Category III CPT codes, specifically, CPT codes 0816T, 0817T, 0818T, and 0819T to describe integrated neurostimulation services for bladder dysfunction, effective January 1, 2024.

For CY 2026, we proposed to continue assigning CPT code 0817T—*Open insertion or replacement of integrated neurostimulation system for bladder dysfunction including electrode(s) (e.g., array or leadless), and pulse generator or receiver, including analysis, programming, and imaging guidance, when performed, posterior tibial nerve; subfascial,* to APC 5464 with status indicator ''J1''.

For CY 2026, CPT Editorial Panel created new Category III CPT code 0988T (placeholder code X400T)—*Open insertion or replacement of integrated neurostimulation system for bladder dysfunction including electrode(s) (e.g., array or leadless), and pulse generator or receiver, including analysis, programming, and imaging guidance, when performed, posterior tibial nerve; subcutaneous and subfascial,* effective January 1, 2026.

In the CY 2026 OPPS/ASC proposed rule, we proposed to assign it to APC 5464 with status indicator ''J1''.

We received public comments on these proposals. The following is a summary of the comments we received and our responses.

Comment: A commenter recommended assigning CPT codes 0988T and 0817T to either APC 5462 or APC 5463 as either APC is a more accurate assignment given the cost and resources required to perform the procedure with an integrated device.

Another commenter was concerned that the proposed 2026 OPPS payment rate for CPT 0817T is significantly lower than the 2025 rate.

Response: In the CY 2026 OPPS/ASC proposed rule, we inadvertently listed CPT code X400T as receiving FDA-approval even though the Coloplast's implantable tibial nerve stimulator that is described by this code is still pending FDA approval. Therefore, in the Final Rule, we are changing the status indicator for CPT code 0988T to status indicator ''E1'' Not covered by any Medicare outpatient benefit category; Statutorily excluded by Medicare; Not reasonable and necessary; Not paid by Medicare when submitted on outpatient claims (any outpatient bill type)) for CY 2026 because the device is not yet FDA approved.

We thank the commenters for their feedback related to our proposal for CPT code 0817T and we agree with one of the comments that it is appropriately placed in APC 5464 based on resource cost and clinical homogeneity to other similar codes in that APC. We also believe that its geometric mean cost is in line with the geometric mean cost of APC 5464.

For the CY 2026, based on claims submitted between January 1, 2024, and December 31, 2024, processed through June 30, 2025, our analysis of the latest claims data for this final rule with comment period shows a geometric mean cost of approximately $21,783.06 for CPT code 0817T based on 93 single claims, which is comparable to the geometric mean cost of about $19,972.38 for APC 5464. Based on the data, we continue to believe that assignment to APC 5464 for CPT code 0817T is appropriate.

We refer readers to Addendum D1 to this final rule with comment period for the SI meanings for all codes reported under the OPPS. Addendum D1 is available via the internet on the CMS website.

38. New Technology Applications

a. Digital Mental Health Treatment (DMHT), HCPCS Code G0552 (APC 5012)

HCPCS code G0552 (*Supply of digital mental health treatment device and initial education and onboarding, per course of treatment that augments a behavioral therapy plan*). became effective January 1, 2025, and describes digital mental health treatment devices. We proposed to assign HCPCS code G0552 to APC 5012 (Clinic Visits and Related services) and status indicator V (clinic or emergency department visit) for CY 2026.

We received public comments on this proposal. The following is a summary of the comments we received and our responses.

Comment: Commenters recommended that CMS not finalize the proposal to continue to assign HCPCS code G0552 to APC 5012 for CY 2026, stating that the proposed payment rate of approximately $134 would not cover the costs associated with furnishing the service. A commenter explained that CMS should not use CPT code 98975

(*Remote therapeutic monitoring (e.g., therapy adherence, therapy response, digital therapeutic intervention); initial set-up and patient education on use of equipment*) as a crosswalk code to assign HCPCS code G0552 to APC 5012, noting certain differences between the codes. For example, the commenter explained that HCPCS code G0552 treats a condition while a remote monitoring device is designed to monitor a patient's status at home related to treatment. As a result of these differences, the commenter noted that DMHT devices, like those described by HCPCS code G0552, are significantly more costly to design, develop, study, obtain clearance, and commercialize compared with remote monitoring devices.

Response: We thank the commenters for their input. The New Technology APC application for the service described by HCPCS code G0552 is currently under consideration. After careful review and discussion with our CMS medical officers and leadership, we will render a decision through the subregulatory process through which the New Technology APC placement was initially requested.

b. Leadless Pacemaker (WiSE CRT System), CPT Code 0515T (APC 5231)

CPT code 0515T (*Insertion of wireless cardiac stimulator for left ventricular pacing, including device interrogation and programming, and imaging supervision and interpretation, when performed; complete system (includes electrode and generator [transmitter and battery])* became effective January 1, 2019, and describes the insertion of a wireless cardiac stimulator for left ventricular pacing.

CPT code 0515T is currently assigned to APC 5231 (Level 1 ICD and Similar Procedures) and status indicator of J1 (Hospital Part B Services Paid Through a Comprehensive APC; Paid under OPPS).

For CY 2026, we proposed to continue assignment of CPT code 0515T to APC 5231 (Level 1 ICD and Similar Procedures) with a proposed payment of around $22,725. This code had 2 claims for ratesetting and a geometric mean cost (GMC) of $16,837.74.

We received public comments on this proposal. The following is a summary of the comments we received and our responses.

Comment: A commenter requested that CMS reassign CPT code 0515T to New Technology APC 1576—Level 39 ($15,001–$20,000) to ensure that there is adequate payment for the non-device costs as this code is tentatively approved for pass-through payment (device costs).

Response: The New Technology APC application is currently under consideration. After careful review and discussion with our CMS medical officers and leadership, we will render a decision through the sub-regulatory process through which the New Technology APC placement was initially requested. We refer the readers to section IV. of this final rule with comment period for a discussion of applications that have been submitted for pass-through payment.

c. Paired Vagal Nerve Stimulation (Vivistim® System), CPT Code 64568 (APC 5465)

The Vivistim® System is an implanted neurostimulator that is used to stimulate the vagal nerve for upper extremity motor deficits and motor function in chronic ischemic stroke patients with moderate to severe arm impairment. CPT code 64568 (*Open implantation of cranial nerve (e.g., vagus nerve) neurostimulator electrode array and pulse generator*) is used to describe the implantation of the Vivistim® System.

CPT code 64568 is assigned to APC 5465 (Level 5 Neurostimulator and Related Procedures), status indicator of 'J1' (Hospital Part B Services Paid Through a Comprehensive APC;) and has a geometric mean cost (GMC) of around $49,319 with 151 single frequency claims used for ratesetting under OPPS. We note that the Vivistim® System was granted transitional device pass-through status on January 1, 2023, that is set to expire December 31, 2025.

Comment: Many commenters shared their experience with the Vivistim® System (paired vagus nerve stimulation) noting the effectiveness of the system to restore motor function in patients living with long term disabilities after having a stroke. Many of the commenters expressed concern about the lack of reimbursement once the transitional pass-through payments expire. They encouraged CMS to create a Level 6 Neurostimulator and Related Procedures APC to ensure that there is adequate and sustainable reimbursement for this advanced therapy. Commenters indicate that the current reimbursement for CPT code 64568 will not adequately cover hospital costs, putting access for Medicare beneficiaries at risk.

A commenter provided three options to ensure that there is adequate reimbursement for this advanced neuromodulation. The commenter requested that CMS consider creating a Level 6 Neurostimulator APC that includes CPT code 64568, reassigning 64568 to New Technology APC 1580 (New Technology—Level 43 ($40,001–$50,000)) or creating a C-code through the pending New Technology APC application and assigning the C-code to New Technology APC 1581 (New Technology—Level 44 ($50,001–$60,000)).

Response: We appreciate the input from commenters. As stated earlier in section ''36. Creation of a Level 6 Neurostimulator APC'', we are assigning the primary procedure code to New Technology APC 1580 (New Technology—Level 43 ($40,001–$50,000)) in this final rule with comment period. We refer readers to the above noted section for a full discussion of the comments and our responses regarding CPT code 64568.

39. Noncontact Near-Infrared (NIR) Spectroscopy, CPT 0640T (APC 5732)

Effective CY 2024, there are three codes that describe the service related to NIR spectroscopy: CPT codes 0640T (*Noncontact near-infrared spectroscopy (e.g., for measurement of deoxyhemoglobin, oxyhemoglobin, and ratio of tissue oxygenation), other than for screening for peripheral arterial disease, image acquisition, interpretation, and report; first anatomic site*), 0859T (*Noncontact near-infrared spectroscopy (e.g., for measurement of deoxyhemoglobin, oxyhemoglobin, and ratio of tissue oxygenation), other than for screening for peripheral arterial disease, image acquisition, interpretation, and report; each additional anatomic site (list separately in addition to code for primary procedure)*), and 0860T (*Noncontact near-infrared spectroscopy (e.g., for measurement of deoxyhemoglobin, oxyhemoglobin, and ratio of tissue oxygenation), for screening for peripheral arterial disease, including provocative maneuvers, image acquisition, interpretation, and report, one or both lower extremities*). Only CPT code 0640T is currently separately paid under the OPPS. For CY 2026, we proposed to assign CPT code 0640T to APC 5732 (Level 2 Minor Procedures) and status indicator ''S'' with a payment rate of approximately $39.

We received public comments on this proposal. The following is a summary of the comments we received and our responses.

Comment: A commenter requested that CMS reassign CPT code 0640T to APC 5722 (Level 2 Diagnostic Tests and Related Services), which had a proposed payment rate of approximately $220 for CY 2026, based on a crosswalk to CPT code 0598T (Noncontact real-time fluorescence wound imaging, for bacterial presence, location, and load, per session; first anatomic site (*e.g.,* lower extremity)). The commentor noted

certain similarities between both codes, such as that CPT code 0640T and CPT code 0598T are both Category III CPT codes, diagnostic imaging services, and neither use contrast.

Response: We note that for CY 2026, OPPS payment rates are based on available CY 2024 claims data. Based on our analysis of the claims data for this final rule with comment period, we found a geometric mean cost of approximately $11 for CPT code 0640T based on 347 single frequency claims (out of 1,067 total claims). In contrast, we found a geometric mean cost of approximately $200 for CPT code 0598T based on 1974 single frequency claims (out of 4,063 total claims). Based on the data, the resource cost associated with noncontact real-time fluorescence imaging (CPT code 0598T), is significantly higher compared to noncontact near-infrared (NIR) spectroscopy (CPT code 0640T). We disagree that the resource costs for NIR spectroscopy is similar to noncontact real-time fluorescence imaging based on the claims data available.

After consideration of the public comment, we continue to believe that CPT code 0640T is appropriately assigned to APC 5732. Therefore, for CY 2026, we are finalizing our proposal to assign CPT code 0640T to APC 5732 as reflected in Table 70. The final CY 2026 OPPS payment rate for all the codes payable under the OPPS can be found in Addendum B to this final rule with comment period. In addition, we refer readers to Addendum D1 to this final rule with comment period for the SI meanings for all codes reported under the OPPS. Addendum D1 is available via the internet on the CMS website.

TABLE 70: FINAL CY 2026 OPPS APC AND SI ASSIGNMENT FOR CPT CODE 0640T

CPT Code	Long Descriptor	Final CY 2026 SI	Final CY 2026 APC
0640T	Noncontact near-infrared spectroscopy (eg, for measurement of deoxyhemoglobin, oxyhemoglobin, and ratio of tissue oxygenation), other than for screening for peripheral arterial disease, image acquisition, interpretation, and report; first anatomic site	S	5732

Nuclear Medicine Tests

40. Nuclear Medicine Services: Single-Photon Emission Computed Tomography (SPECT) Studies, CPT 78803 (APC 5592)

CPT code 78803 (*Radiopharmaceutical localization of tumor, inflammatory process or distribution of radiopharmaceutical agent(s) (includes vascular flow and blood pool imaging, when performed); tomographic (spect), single area (e.g., head, neck, chest, pelvis), single day imaging*) describes a SPECT scan to find and map a tumor, inflammatory process, or how a radioactive tracer is distributed in a single body area, like the head, chest, or pelvis. For the CY 2026 OPPS/ASC proposed rule, CPT code 78803 had a geometric mean cost of around $585 and we proposed to reassign the procedure from APC 5593 (Level 3 Nuclear Medicine and Related Services) with a proposed payment rate of around $1,323 to APC 5592 (Level 2 Nuclear Medicine and Related Services) with a proposed payment rate of around $559 and status indicator S (Procedure or service not subject to multiple procedure discounting).

Comment: Commenters objected to the reassignment of CPT code 78803 to APC 5592 and requested that CMS not finalize the proposal but rather maintain the current placement in APC 5593. These commenters stated that the significant payment decrease of 57 percent resulting from the reassignment would limit patient access, affect patient care, and restrict hospitals from offering the test. Most commenters referenced the fact that costs were pulled out of 78803 last year when CMS finalized its policy to separately pay for certain radiopharmaceuticals and stated that physicians and hospitals needed time to properly account for resources and inputs associated with 78803 for services that do not use high-cost radiopharmaceuticals. These commenters requested that CMS collect several years of geometric mean data before reassigning CPT code 78803 from its current APC 5593. A commenter stated that CPT code 78803 should remain in APC 5593 because it is used to report SPECT (not planar) imaging, and other SPECT procedures are assigned to APC 5593.

Response: As acknowledged by commenters, last year we finalized a policy to unpackage diagnostic radiopharmaceuticals with per day costs above an annually adjusted threshold and pay separately for them. As a result of this shift from packaged payment to separate payment, the geometric mean cost for CPT 78803 understandably dropped, from around $1,137 for CY 2024 to around $588 for CY 2025. We appreciate commenters' concerns about providing additional time for hospitals to adjust and for additional geometric mean data to accumulate, however given that costs that were previously packaged into CPT code 78803 are now separately paid as a result of the policy we instituted last year, we think it is appropriate to reassign CPT 78803 to an APC that better aligns with 78803's CY 2026 geometric mean cost of around $585.

After consideration of the public comments we received, we are finalizing our policy without modification for CPT code 78803. We note that we review the APC assignments for all items and services paid under the OPPS on an annual basis. We will reevaluate the APC assignment for CPT code 78803 in the next rulemaking cycle.

Table 71 shows the finalized status indicator and APC assignment for this procedure code. We refer readers to Addendum B to this final rule with comment period for the payment rates for all codes reportable under the OPPS. Addendum B is available via the internet on the CMS website.

TABLE 71: FINAL CY 2026 APC AND STATUS INDICATOR ASSIGNMENTS FOR CPT CODE 78803

CPT Code	Long Descriptor	Final CY2026 OPPS SI	Final CY2026 OPPS APC
78803	Radiopharmaceutical localization of tumor, inflammatory process or distribution of radiopharmaceutical agent(s) (includes vascular flow and blood pool imaging, when performed); tomographic (spect), single area e.g., head, neck, chest, pelvis), single day imaging	S	5592

41. Nuclear Medicine Study (1 Area), CPT Code 78800 (APC 5591)

CPT code 78800 (*Radiopharmaceutical localization of tumor, inflammatory process or distribution of radiopharmaceutical agent(s) (includes vascular flow and blood pool imaging, when performed); planar, single area (e.g., head, neck, chest, pelvis), single day imaging*) describes a planar (2D) nuclear medicine scan of a single area on a single day, used to locate tumors, inflammatory processes, or track the distribution of a radioactive tracer. It includes vascular flow and blood pool imaging if they are performed as part of the study. CPT code 78800 is assigned to APC 5591 (Level 1 Nuclear Medicine and Related Services) and status indicator S (Procedure or Service, Not Discounted When Multiple).

Comment: A commenter stated that CPT code 78800 is assigned to APC 5591 in proposed Addendum B but is assigned to APC 5573 in the proposed ''Data Addendum B'' and ''2 Times Rule'' files. The commenter believes that the code assignment to APC 5573 in the ''Data Addendum B'' and ''2 Times Rule'' files is incorrect, and that the correct APC assignment for CPT code 78800 is APC 5591.

Response: We agree that the correct APC assignment for CPT code 78800 is APC 5591. However, we note that the proposed 2026 ''Data Addendum B'' and ''2 Times Rule'' files (which are available via the internet on the CMS website at *https://www.cms.gov/medicare/payment/prospective-payment-systems/hospital-outpatient/regulations-notices/cms-1834-p*) both indicate that the code is assigned to APC 5591.

The final CY 2026 payment rates for this code can be found in Addendum B to this final rule with comment period. In addition, we refer readers to Addendum D1 to this final rule with comment period for the SI definitions for all codes reported under the OPPS. Addenda B and D1 are available via the internet on the CMS website.

Ophthalmology Related Services

42. Administration of Lacrimal Ophthalmic Insert Into Lacrimal Canaliculus, CPT Code 68841 (APC 5503)

HCPCS code J1096 (*Dexamethasone, lacrimal ophthalmic insert, 0.1 mg*), describes the drug Dextenza and is a drug indicated for ''the treatment of ocular inflammation and pain following ophthalmic surgery'' and for ''the treatment of ocular itching associated with allergic conjunctivitis.'' [25] Dextenza is administered via a natural opening in the eyelid (called the punctum) and delivers a tapered dose of dexamethasone to the ocular surface for up to 30 days. CPT code 68841 (Insertion of drug-eluting implant, including punctal dilation when performed, into lacrimal canaliculus, each) describes the insertion of the implant to administer Dextenza.

In the CY 2024 OPPS/ASC final rule with comment period (88 FR 81651 through 81653), we stated that based on the claims data available at the time, we continued to believe that the assignment of CPT code 68841 to APC 5503 (Level 3 Extraocular, Repair, and Plastic Eye Procedures) was appropriate based on the geometric mean costs. We also reiterated our reasoning that CPT code 68841 was appropriately assigned to an OPPS status indicator of ''Q1'' and ASC payment indicator of ''N1.'' We continued to believe that CPT code 68841 is mostly performed during ophthalmic surgeries, such as cataract surgeries. A status indicator ''Q1,'' indicating a conditionally packaged procedure, describes a HCPCS code where the payment is packaged when it is provided with a significant procedure but is separately paid when the service appears on the claim without a significant procedure. Because ASC services always include a surgical procedure, HCPCS codes that are conditionally packaged under the OPPS are generally packaged (payment indictor ''N1'') under the ASC payment system. Although interested parties stated this is an independent surgical procedure and should not be packaged into the primary ophthalmic procedure in which the drug and drug administration are associated, we did not agree based on observed clinical patterns of how the drug is used. Based on CY 2023 claims data, out of over 7,000 total frequency claims, CPT code 68841 was used independently only about 2 percent of the time, meaning that the other 98 percent of the time CPT code 68841 had its payment packaged into the primary procedure with which it is associated. These data reinforced our belief that Dextenza and CPT code 68841 are not furnished independently of a surgical procedure and should be packaged into the primary ophthalmic procedure with which the drug and drug administration are associated. While we recognized that there are some claims that may only include CPT code 68841 without a primary ophthalmic surgery on the claim, we did not believe that this is a frequent occurrence based on our claims data and clinical use patterns; as previously mentioned, our claims data showed that only 2 percent of claims are performed independently of another primary procedure.

For CY 2025, we continued to assign CPT code 68841 to APC 5503 (Level 3 Extraocular, Repair, and Plastic Eye Procedures). We also maintained the OPPS status indicator ''Q1'' and an ASC payment indicator of ''N1.''

For CY 2026, we proposed to continue to assign CPT code 68841 to APC 5503 (Level 3 Extraocular, Repair, and Plastic Eye Procedures). We also proposed to continue to assign CPT code to OPPS status indicator 'Q1' and an ASC payment indicator of 'N1'.

We note that CPT code 68841 does not have any single frequency claims

[25] See FDA Package Insert. *https://www.accessdata.fda.gov/drugsatfda_docs/label/2021/208742s007lbl.pdf.*

out of 2,930 total frequency claims. As stated above, this data once again reinforces our belief that Dextenza and CPT code 68841 are not furnished independently of a surgical procedure and should be packaged into the primary ophthalmic procedure with which the drug and drug administration are associated.

We received public comments on this proposal. The following is a summary of the comments we received and our responses.

Comment: Commenters requested that CMS revise the status indicator to 'J1' (Hospital Part B Services Paid Through a Comprehensive APC; Paid under OPPS) to allow for separate ASC payment. The commenter stated that Dextenza replaces the use of self-administered eye drops, which can be difficult for some patients to administer and adhere to the regimen. The commenter also stated the lack of payment disproportionately and negatively affects the ASC setting where this procedure is done 80 percent of the time.

The commenter did not agree with CMS that the fact that CPT code 68841 was performed as a standalone procedure a small percentage of the time was adequate justification for assigning a 'Q1' status indicator. The commenter stated that CMS is treating this procedure (CPT 68841) differently than the other procedures assigned to APC 5503 with a 'J1' status indicator and that there are other comparable drug delivery procedures, specifically CPT codes 64415, 66020, 66030, and 0699T that also have J1 status indicators and receive separate payment in the ASC setting.

Response: We have long maintained that Dextenza is a drug that functions as a surgical supply and should be packaged under our packaging policy at § 419.2(b), which lists the types of items and services for which payment is packaged under the OPPS. Specifically, § 419.2(b)(16) includes drugs and biologicals that function as supplies when used in a surgical procedure as packaged costs. Historically, we have stated that we consider all items related to the surgical outcome and provided during the hospital stay in which the surgery is performed, including postsurgical pain management drugs, to be part of the surgery for purposes of our drug and biological surgical supply packaging policy (79 FR 66875). As such, the drug administration procedure, CPT code 68841, is also supporting the main ocular procedure being performed. CPT code 68841 should, therefore, be packaged as an intraoperative service under § 419.2(b)(14). We do not believe the listed HCPCS codes suggested by the commenter are analogous to CPT code 68841:

- 64415—Injection(s), anesthetic agent(s) and/or steroid; brachial plexus, including imaging guidance, when performed; assigned to APC 5443 (Level 3 Nerve Injections), status indicator of 'T';
- 66020—Injection, anterior chamber of eye (separate procedure); air or liquid; assigned to APC 5491 (Level 1 Intraocular Procedures), status indicator of 'J1';
- 66030—Injection, anterior chamber of eye (separate procedure); medication; assigned to APC 5491 (Level 1 Intraocular Procedures), status indicator of 'J1'; and
- 0699T—Injection, posterior chamber of eye, medication; assigned to APC 5491 (Level 1 Intraocular Procedures), status indicator of 'J1'.

We disagree with the commenter that lack of payment for the procedure in the ASC setting is a disincentive to use Dextenza. We note the number of claims continue to increase. We also note that HCPCS code J1096, which may be used to describe the drug, Dextenza, is a qualifying product for separate payment in both the OPPS and ASC under our policy to implement section 4135 of the CAA, 2023.

For the reasons discussed, we continue to believe that it is appropriate to assign CPT code 68841 to a status indicator ''Q1,'' indicating a conditionally packaged procedure, which describes a HCPCS code where the payment is packaged when it is provided with a significant procedure but is separately paid when the service appears on the claim without a significant procedure. Because ASC services always include a surgical procedure, HCPCS codes that are conditionally packaged under the OPPS are generally packaged (payment indictor ''N1'') under the ASC payment system.

After consideration of the public comment, we are finalizing our proposal, without modification, to assign CPT code 68841 to APC 5503 with OPPS status indicator ''Q1'' (STV Packaged Codes) for CY 2026, which typically means there will be a packaged APC payment if this code is billed on the same claims as a HCPCS code assigned to status indictor ''S,'' ''T,'' or ''V'' (Clinic or Emergency Department Visit). In addition, based on the OPPS assignments, we are finalizing an ASC payment indicator of ''N1'' (Packaged service/item; no separate payment made) for CPT code 68841 for CY 2026.

For the final CY 2026 OPPS payment rates, we refer readers to OPPS Addendum B to this final rule with comment period. In addition, we refer readers to OPPS Addendum D1 to this final rule with comment period for the status indicator definitions for all codes reported under the OPPS. For the final CY 2026 ASC payment rates and payment indicators, we refer readers to Addendum AA and Addendum BB for the ASC payment rates, and Addendum DD1 for the ASC payment indicator and their definitions. The OPPS Addenda B and D1 and ASC Addenda AA, BB, and DD1 are available via the internet on the CMS website.

43. Comprehensive Aqueous Outflow Procedure

The comprehensive aqueous outflow procedure consists of more than 90 degrees of microcatheterization followed by more than 90 degrees of ab interno trabeculotomy used to treat patients with glaucoma.

We received public comments on this topic. The following is a summary of the comments we received and our responses.

Comment: A commenter stated that this service is more complex, utilizes more intraoperative time, and resource utilization. The other commenter stated that the current coding structure does not adequately reflect the differences in procedures currently reported with CPT code 66174 (*Transluminal dilation of aqueous outflow canal (e.g., canaloplasty); without retention of device or stent*) and the comprehensive aqueous outflow procedure. The commenter indicated that these differences risk limiting hospitals from adopting the procedure and thus hindering patient access. The commenters requested that CMS create a C code and finalize a New Technology APC assignment that appropriately recognizes this unique procedure.

Response: We thank the commenters for their input. After review of the comment, we do not believe the commenter has provided sufficient explanation to justify the creation of a new C-code at this time.

Orthopedic Related Services

44. First Carpometacarpal Total Joint Arthroplasty, CPT Code 1003T (APC 5115)

The CPT Editorial Panel established CPT code 1003T to describe a total joint arthroplasty procedure involving the thumb effective January 1, 2026. The long descriptor for CPT code 1003T is as follows: *Arthroplasty, first carpometacarpal joint, with distal*

trapezial and proximal first metacarpal prosthetic replacement (e.g., first carpometacarpal total joint). Because the final CY 2026 CPT code numbers were not available when we published the CY 2026 OPPS/ASC proposed rule, the code was listed as placeholder code CPT code X459T in the OPPS Addendum B to the CY 2026 OPPS/ASC proposed rule.

For CY 2026, we proposed to assign CPT code 1003T to APC 5114 (Level 4 Musculoskeletal Procedures) and status indicator 'J1' (Hospital Part B Services Paid Through a Comprehensive APC; Paid under OPPS.) with a proposed payment of around $7,533 based on clinical similarity to CPT code 26531 *(Arthroplasty, metacarpophalangeal joint; with prosthetic implant, each joint).*

At the August 25, 2025, HOP Panel Meeting, a presenter provided information to the Panel regarding new CPT code 1003T. The presenter advised the Panel to request that CMS reassign CPT code 1003T from APC 5114 to APC 5116. The HOP Panel agreed with the presenter and recommended that CMS reassign CPT code 1003T to APC 5116 (Level 6 Musculoskeletal Procedures), with a proposed payment of $18,056.80.

We received public comments on this proposal. The following is a summary of the comments we received and our responses.

Comment: Commenters noted that while other hand and wrist procedures are assigned to APC 5114, this procedure involves a total joint reconstruction with an implantation of a complex and costly prosthesis. The commenter believes that CPT 1003T is more similar to other arthroplasty procedures in APC 5116 suggesting CPT code 25446 (which describes a total wrist arthroplasty) and CPT code 25442 (which describes a distal ulna arthroplasty) as appropriate crosswalks. Commenters urged CMS to reassign CPT code 1003T to APC 5116 (Level 6 Musculoskeletal Procedures) as the HOP Panel recommended.

Response: We agree with the commenters that CPT code 1003T should not be assigned to APC 5114; however, we disagree that CPT code 1003T should be reassigned to APC 5116. After reviewing the comments and taking into consideration the HOP Panel recommendation, we believe that CPT code 1003T should be reassigned to APC 5115 crosswalking to CPT code 25441 *(Arthroplasty with prosthetic replacement; distal radius).* As we do every year, we will reevaluate the APC assignments for this code in the next rulemaking cycle. We remind hospitals that we review, on an annual basis, the APC assignments for all items and services paid under the OPPS.

In summary, after consideration of the public comments we received, we are finalizing the APC and status indicator assignment for CPT code 1003T with modification and assigning CPT code 1003T to APC 5115 (Level 5 Musculoskeletal Procedures) with a status indicator of J1. The final CY 2026 payment rates for this code can be found in Addendum B to this final rule with comment period. In addition, we refer readers to Addendum D1 to this final rule with comment period for the SI definitions for all codes reported under the OPPS. Addenda B and D1 are available via the internet on the CMS website.

Refer to Table 72 for code descriptor, APC assignment and status indicator assignment for CPT code 1003T for CY 2026.

TABLE 72: PROPOSED AND FINAL CY 2026 APC AND STATUS INDICATOR ASSIGNMENTS FOR CPT CODE 1003T

CPT Code	Long Descriptor	Proposed CY 2026 SI	Proposed CY 2026 APC	Final CY 2026 SI	Final CY 2026 APC
1003T	Arthroplasty, first carpometacarpal joint, with distal trapezial and proximal first metacarpal prosthetic replacement (eg, first carpometacarpal total joint)	J1	5114	J1	5115

45. Fusion of Foot Bones, CPT Code 28740 (APC 5114)

CPT code 28740 (*Arthrodesis, midtarsal or tarsometatarsal, single joint*) describes the fusion of foot bones. In the CY 2026 OPPS/ASC proposed rule, we proposed to continue to assign CPT code 28740 to APC 5114 (Level 4 Musculoskeletal Procedures) with a status indicator of 'J1' (Hospital Part B Services Paid Through a Comprehensive APC; Paid under OPPS) and proposed payment rate of $7,533.87.

We received public comments on this proposal. The following is a summary of the comments we received and our responses.

Comment: A commenter stated that the assignment of CPT code 28740 to APC 5114 may represent a violation of the 2 times rule, which may impede access to care for beneficiaries. The commenter recommended that CMS consider a volume threshold of 500 single major claims (or the existing greater or equal to 99 claims that constitute greater than or equal to the 2 percent criterion) as the standard for designating an item or service ''significant'' for purposes of the 2 times rule.

Response: We appreciate the commenter's request. We did not identify a 2-times rule violation for APC 5114. Our updated claims data found CPT code 28740 has fewer than 1,000 claims and does not meet the significance threshold for the 2-times rule evaluation for APC 5114. We believe that the current APC assignment of CPT code 28740 to APC 5114 continues to be appropriate for CY 2026.

However, we will take the commenter's suggestion on the 500-claim significance threshold into consideration for the future rulemaking.

In summary, after consideration of the public comments we received, we are finalizing our proposal without modification, to assign CPT code 28740 to APC 5114 (Level 4 Musculoskeletal Procedures). The final CY 2026 payment rates for this code can be found in Addendum B to this final rule with comment period. In addition, we refer readers to Addendum D1 to this final rule with comment period for the status indicator definitions for all codes reported under the OPPS. Addenda B and D1 are available via the internet on the CMS website.

Refer to Table 73 for code descriptor, APC assignment and status indicator

assignment CPT code 28740 for CY 2026.

TABLE 73: FINAL CY 2026 APC AND STATUS INDICATOR ASSIGNMENTS FOR CPT CODE 28740

CPT Code	Long Descriptor	Final CY 2026 SI	Final CY 2026 APC
28740	Arthrodesis, midtarsal or tarsometatarsal, single joint	J1	5114

Oncology Related Services

46. Radiation Oncology Treatment Delivery, CPT Codes 77402, 77407, 77412 (APCs 5621, 5622, and 5623)

At the September 2024 CPT Editorial Panel meeting, the Panel approved the revision of radiation therapy CPT codes 77402, 77407 and 77412 to establish a technique-agnostic family of codes and bundle imaging into the three CPT codes. In addition, Intensity Modulated Radiation Therapy (IMRT) treatment delivery codes 77385 and 77386 and CT guidance code 77014 were deleted and consolidated into this new code structure:

- Revised CPT code 77402 (*Radiation treatment delivery; Level 1 (e.g., single electron field, multiple electron fields, or 2D photons), including imaging guidance, when performed*) describes the delivery of a low-complexity form of radiation to a cancer or tumor and includes any imaging that is used during the session to ensure the radiation beam is accurately targeting the cancer. For the CY 2026 OPPS/ASC proposed rule, we proposed to continue to assign CPT code 77402 to APC 5621 (Level 1 Radiation Therapy), which has a payment rate of around $108, and status indicator S (Procedure or service not subject to multiple procedure discounting).
- Revised CPT code 77407 (*Radiation treatment delivery; Level 2, single isocenter (e.g., 3D or IMRT), photons, including imaging guidance, when performed*) describes the delivery of a more complex form of radiation using a single central point of radiation (isocenter) with high-energy photons which may be delivered through 3D conformal radiation therapy (3D–CRT) or Intensity-Modulated Radiation Therapy (IMRT) and includes any imaging that is used during the session. For the CY 2026 OPPS/ASC proposed rule, we proposed to continue to assign CPT code 77407 to APC 5622 (Level 2 Radiation Therapy), which has a payment rate of around $275, and status indicator S.
- Revised CPT code 77412 (*Radiation treatment delivery; Level 3, multiple isocenters with photon therapy (e.g., 2D, 3D, or IMRT) OR a single isocenter photon therapy (e.g., 3D or IMRT) with active motion management, OR total skin electrons, OR mixed electron/photon field(s), including imaging guidance, when performed*) describes the most complex radiation treatment delivery where multiple points of focus (isocenters) are used with photon therapy (2D, 3D, or IMRT) or a single isocenter is used but with active motion management or specialized techniques like total skin electrons or mixed electron/photon beams are performed and includes any imaging that is used during the session. For the CY 2026 OPPS/ASC proposed rule, we proposed to continue to assign CPT code 77412 to APC 5622 (Level 2 Radiation Therapy), which has a payment rate of around $275, and status indicator S.

A comment letter was submitted to the HOP Panel in advance of the August 25, 2025 HOP Panel Meeting that provided information about CPT codes 77407 and 77412. The letter advised the Panel to request that CMS reassign CPT code 77407 to APC 5623 and CPT code 77412 to APC 5624 for CY 2026. The HOP Panel had no recommendations.

We received public comments on this proposal. The following is a summary of the comments we received and our responses.

Comment: Many commenters expressed concern that CMS' proposed APC assignments for CPT codes 77407 and 77412 did not adequately reflect the procedures described by the revised codes and would not provide sufficient payment. Many commenters pointed out that these revised codes now included 3D conformal and IMRT treatment delivery that were previously described by deleted CPT codes 77385 and 77386. Several commenters suggested that for the purposes of rate setting, CMS should treat the three revised CPT codes as new codes. A commenter stated that ''[a]lthough the CPT code numbers are the same for the remaining three CPT codes in the new treatment delivery family, they represent completely different services. For HOPPS rate setting purposes, CMS should treat 77402, 77407, and 77412 as new codes.''

Several commenters suggested alternative APC assignments, recommending that CPT code 77407 be reassigned from APC 5622 to APC 5623 (Level 3 Radiation Therapy), which has a CY 2026 proposed payment rate of around $600. These commenters reasoned that reassigning CPT code 77407 to APC 5623 would more accurately reflect the higher resource utilization associated with IMRT. On the same basis, roughly half of these commenters suggested that CPT code 77412 be reassigned from APC 5622 to APC 5623 and the other half suggested reassignment to APC 5624 (Level 4 Radiation Therapy) with a CY 2026 proposed payment rate of $716. Proponents of reassignment to APC 5624 stated that the higher APC assignment was warranted as CPT code 77412 is intended to account for the highest complexity therapy and such therapy requires additional time and incremental capital equipment resources to deliver multi-isocenter treatments and active motion management. Finally, a few commenters suggested that CPT code 47702 be reassigned from APC 5621 to APC 5622.

Response: We agree with commenters that the proposed APC assignments and the resulting payment rates for CPT codes 77407 and 77412 could more properly account for the revisions made to those codes and that the geometric mean costs of CPT codes 77385 ($568) and 77386 ($634) should be considered when assigning the appropriate APC for these codes. Accordingly, to establish a geometric mean cost for CPT codes 77407 and 77412 that better reflects the geometric mean costs under CPT codes 77385 and 77386, we have crosswalked the claims volume of CPT codes 77385, 77386, 77407, and 77412 in the following manner: For CPT code 77407, we are imputing all CY 2024 claims in CPT code 77407, the bottom 50 percent (with respect to total estimated cost) of single claims from CPT code 77412, and

all of the claims from CPT code 77385. For CPT code 77412, we are imputing the highest 50 percent (with respect to total estimated cost) of claims in 77412, and all of the claims from 77386. As a result of this crosswalking of claims, we are continuing to assign CPT code 77407 to APC 5622, which now has a geometric mean cost of around $397 and reassigning CPT code 77412 to APC 5623, which now has a geometric mean cost of around $569. We note that, while CPT code 77407 is assigned to the same APC it was assigned in the CY 2026 OPPS/ASC proposed rule, as a result of the crosswalk described above, the payment rate for that APC is much greater than it was in the CY 2026 OPPS/ASC proposed rule. With respect to 77402, we disagree with commenters that reassignment to APC 5622 is appropriate. Unlike CPT codes 77407 and 77412, CPT code 77402 was not revised to incorporate IMRT which is the basis for the crosswalk/APC reassignment for CPT codes 77407 and 77412 above.

We note that we received a few comments on our proposal that, due to the proposed deletion of radiation therapy G-codes (G6001–G6017), nonexcepted off-campus PBDs use the revised CPT codes 77402, 77407 and 77412 to continue our existing policy of paying the PFS-equivalent rate for radiation therapy to these departments. For a summary of and response to those comments, we refer readers to section III.G. of this final rule with comment period.

After consideration of the public comments we received, we are: (1) finalizing as proposed to continue to assign CPT code 77402 to APC 5621 and CPT code 77407 to APC 5622, while noting that the payment rate for APC 5622 is much greater than in the CY 2026 OPPS/ASC proposed rule as a result of the above code crosswalk; and (2) reassigning CPT code 77412 to APC 5623. We note that we review the APC assignments for all items and services paid under the OPPS on an annual basis. We will reevaluate the APC assignments for CPT codes 77402, 77407 and 77412 in the next rulemaking cycle.

Table 74 shows the finalized status indicator and APC assignment for these procedure codes. We refer readers to Addendum B to this final rule with comment period for the payment rates for all codes reportable under the OPPS. Addendum B is available via the internet on the CMS website.

TABLE 74: PROPOSED AND FINAL CY 2026 APC AND STATUS INDICATOR ASSIGNMENTS FOR CPT CODES 77402, 77407, 77412

CPT Code	Long Descriptor	Proposed CY2026 OPPS SI	Proposed CY2026 OPPS APC	Final CY2026 OPPS SI	Final CY2026 OPPS APC
77402	Radiation treatment delivery; Level 1 (eg, single electron field, multiple electron fields, or 2D photons), including imaging guidance, when performed	S	5621	S	5621
77407	Radiation treatment delivery; Level 2, single isocenter (eg, 3D or IMRT), photons, including imaging guidance, when performed	S	5622	S	5622
77412	Radiation treatment delivery; Level 3, multiple isocenters with photon therapy	S	5622	S	5623
	(eg, 2D, 3D, or IMRT) OR a single isocenter photon therapy (eg, 3D or IMRT) with active motion management, OR total skin electrons, OR mixed electron/photon field(s), including imaging guidance, when performed				

47. Radiofrequency Ablation of Bone Tumors, CPT 20982 (APC 5116)

CPT code 20982 (*Ablation therapy for reduction or eradication of 1 or more bone tumors (e.g., metastasis) including adjacent soft tissue when involved by tumor extension, percutaneous, including imaging guidance when performed; radiofrequency*) describes a primarily palliative procedure that reduces the size of bone tumors and addresses the pain from the tumors. For the CY 2026 OPPS/ASC proposed rule, CPT code 20982 had a geometric mean cost of around $18,375 and we proposed to continue to assign the procedure to APC 5115 (Level 5 Musculoskeletal Procedures), which has a proposed payment rate of around $13,254.

We received public comments on this proposal. The following is a summary of the comments we received and our responses.

Comment: A commenter requested that CMS reassign CPT code 20982 from APC 5115 to APC 5116 (Level 6 Musculoskeletal Procedures) with a payment rate of around $18,057. The commenter noted that according to the CY 2026 OPPS/ASC proposed rule cost statistics file, CPT code 20982 has a geometric mean cost of approximately $18,375, which exceeds the overall APC cost of $13,461 by nearly $5,000 or 36 percent. In contrast, the commenter pointed out that the overall cost of APC 5116 is $18,338, which very closely aligns with the cost of CPT code 20982. The commenter also noted that the cost of the bone tumor ablation procedure exceeds that of 10 procedures proposed for assignment to APC 5116 with claims data, including two of the three procedures with significant volume in the APC (described by CPT codes 22612

and 27279), which have costs that are over $1,000 less than CPT code 20982. The third procedure with significant volume in APC 5116, described by CPT code 23472, has a geometric mean cost of $18,452, which is nearly identical to CPT code 20982.

Response: After reviewing the information provided by the commenter, the claims data and input from our CMS Medical Officers, we agree with the commenter that it is appropriate to reassign CPT code 20982 from APC 5115 to 5116 based on the resource costs related to CPT code 20982.

After consideration of the public comments we received, we are assigning CPT code 20982 to APC 5116 (Level 6 Musculoskeletal Procedures). Table 75 shows the finalized status indicator and APC assignment for this procedure code. We refer readers to Addendum B to this final rule with comment period for the payment rates for all codes reportable under the OPPS. Addendum B is available via the internet on the CMS website.

TABLE 75: PROPOSED AND FINAL CY 2026 APC AND STATUS INDICATOR ASSIGNMENTS FOR CPT CODE 20982

CPT Code	Long Descriptor	Proposed CY 2026 SI	Proposed CY 2026 OPPS APC	Final CY 2026 SI	Final CY 2026 OPPS APC
20982	Ablation therapy for reduction or eradication of 1 or more bone tumors (eg, metastasis) including adjacent soft tissue when involved by tumor extension, percutaneous, including imaging guidance when performed; radiofrequency	J1	5115	J1	5116

48. Scalp Cooling, CPT Codes 97007, 97008, and 97009 (APC 1517)

For CY 2025, the scalp cooling service is described by temporary CPT codes 0662T and 0663T. CPT code 0662T (*Scalp cooling, mechanical; initial measurement and calibration of cap*) became effective on July 1, 2021, to describe initial measurement and calibration of a scalp cooling device for use during chemotherapy administration to prevent hair loss. According to Medicare's National Coverage Determination (NCD) policy, specifically, NCD 110.6 (Scalp Hypothermia During Chemotherapy to Prevent Hair Loss), the scalp cooling cap itself is classified as an incident to supply to a physician service, and would not be paid under the OPPS; however, interested parties have indicated that there are substantial resource costs of around $1,900 to $2,400 associated with calibrating and fitting the cap. CPT guidance states that CPT code 0662T should be billed once per chemotherapy session, which we interpret to mean once per course of chemotherapy. Therefore, if a course of chemotherapy involves, for example, 6 or 18 sessions, HOPDs should report CPT 0662T only once for those 6 or 18 therapy sessions. We note that CPT code 0663T (Scalp cooling, mechanical; placement of device, monitoring, and removal of device (List separately in addition to code for primary procedure)) describes an ancillary service and is assigned to status indicator ''N'' to indicate that OPPS payment is packaged into the payment for the primary service. We assigned CPT code 0662T to APC 1519 (New Technology—Level 19 ($1,701–$1,800)) with a payment rate of $1,750.50 and CPT code 0663T to status indicator ''N'' for CY 2025.

Beginning January 1, 2026, CPT codes 0662T and 0663T will be deleted and replaced with three new Category I CPT codes:

- 97007 (formerly placeholder 9XX01)—*Mechanical scalp cooling, including individual cap supply with head measurement, fitting, and patient education.*
- 97008 (formerly placeholder 9XX02)—*Mechanical scalp cooling; including hair preparation, individual cap placement, therapy initiation, and precooling period).*
- 97009 (formerly placeholder 9XX03)—*Mechanical scalp cooling; provided after discontinuation of chemotherapy, each 30 minutes (List separately in addition to code for primary procedure).*

In the CY 2026 OPPS/ASC proposed rule, we stated that we believed that CPT code 97007 most closely describes the primary service currently described by CPT code 0662T, while CPT codes 97008 and 97009 describe ancillary services for which payment would be packaged in the primary service. Therefore, for CY 2026, we proposed to assign CPT code 97007 to APC 1517 (New Technology—Level 17 ($1,501–$1,600)) with a $1,550.50 payment rate based on existing claims data for CPT code 0662T. We also proposed to assign status indicator ''N'' to CPT codes 97007 and 97009 to align with our current packaging policies generally, and specifically with regard to our current packaging of CPT code 0663T. Finally, we noted that because CPT is deleting CPT codes 0662T and 0663T, we would similarly delete the temporary codes under the OPPS/ASC payment systems.

We received public comments on these proposals. The following is a summary of the comments we received and our responses.

Comment: A few commenters expressed concerns with the proposal to assign the new CPT codes to lower payment rates based on low claim volumes and requested that we withhold any payment reductions until the volume of claims increases. Other commenters supported the proposed APC assignment for CPT code 97007 based on claims data for CPT code 0662T but took issue with the proposal to package payment for CPT code 97008. These commenters requested that we assign CPT code 97008 to APC 1506 (New Technology—Level 6 ($401–$500)) and status indicator ''S'' instead of the proposed status indicator ''N.'' The commenter stated that there is no service to which CPT code 97008 can be packaged into, while also explaining that it is reported once for each chemotherapy session for an average of 5 to 7 sessions per patient. Per the commenters, scalp cooling is a

standalone treatment that requires specialized nursing resources and significant chair time, with an average cost of $500 outside of the chemotherapy service. The commenters emphasized that there is no service to which scalp cooling can be appropriately packaged, as it is not ancillary to any other procedure. They also highlighted certain concerns about patient access if the proposal to package payment for CPT code 97008 were to be finalized, noting that packaging this service would create financial barriers for Medicare beneficiaries and limit hospitals' ability to offer this treatment.

Response: With regard to the proposed APC assignment for CPT code 97007, we thank the commenters for their support to utilize claims data for CPT code 0662T and assign CPT code 97007 to APC 1517. Since the CY 2026 OPPS/ASC proposed rule was released, 15 additional CY 2024 claims for CPT code 0662T have been processed upon which to base the APC assignment for CPT code 97007. The revised geometric mean cost for CPT code 97007 is approximately $1,410. Therefore, we are finalizing our proposal to use available claims data for CPT code 0662T to finalize the APC assignment for CPT code 97007 to APC 1516 (New Technology—Level 16 ($1,401–$1,500) with a payment rate of $1,450.50 and status indicator ''S.''

With regard to comments on the status indicator assignment for CPT code 97008, we disagree with comments asserting that there is no service to which scalp cooling can be appropriately packaged. Scalp cooling is always furnished in conjunction with chemotherapy administration, for the purpose of addressing a side effect of chemotherapy treatment. Unlike CPT code 97007 describing the fitting of the cap, which is performed on a date of service distinct from the chemotherapy administration and for which we proposed separate payment, CPT codes 97008 and 97009 would always be performed on the same date of service as the chemotherapy treatment. We acknowledge commenters' concerns regarding the resources required to furnish scalp cooling and potential impacts to patient access; however, we believe that the costs associated with the scalp cooling service are appropriately captured within the packaged payment for chemotherapy treatment. Therefore, we believe it is appropriate to package payment for CPT codes 97008 and 97009 with the primary chemotherapy service.

In summary, for CY 2026, we are finalizing our proposal to use available claims data for CPT code 0662T to finalize the APC assignment for CPT code 97007 to APC 1516 (New Technology—Level 16 ($1,401–$1,500) with a payment rate of $1,450.50 and status indicator ''S.'' We are also finalizing our proposals to assign CPT codes 97008 and 97009 to status indicator ''N'' for CY 2026. These changes are reflected in Table 76.

The final CY 2026 OPPS payment rate for all the codes payable under the OPPS can be found in Addendum B to this final rule with comment period. In addition, we refer readers to Addendum D1 to this final rule with comment period for the SI meanings for all codes reported under the OPPS. Addendum D1 is available via the internet on the CMS website.

TABLE 76: PROPOSED AND FINAL CY 2026 OPPS APC AND SI ASSIGNMENT FOR CPT Codes 97007, 97008, and 97009

CPT Code	Long Descriptor	Proposed CY 2026 SI	Proposed CY 2026 APC	Final CY 2026 SI	Final CY 2026 APC
97007	Mechanical scalp cooling, including individual cap supply with head measurement, fitting, and patient education	S	1517	S	1516
97008	Mechanical scalp cooling; including hair preparation, individual cap placement, therapy initiation, and precooling period	N	N/A	N	N/A
97009	Mechanical scalp cooling; provided after discontinuation of chemotherapy, each 30 minutes (List separately in addition to code for primary procedure)	N	N/A	N	N/A

Respiratory Related Services and Procedures

49. Group Respiratory Therapy, HCPCS G0239 (APC 5732)

HCPCS code G0239 (*Therapeutic procedures to improve respiratory function or increase strength or endurance of respiratory muscles, two or more individuals (includes monitoring)*) describes a medical service for two or more patients to improve their breathing and strengthen their respiratory muscles, conducted in a group setting under the supervision of a healthcare professional. For the CY 2026 OPPS/ASC proposed rule, HCPCS code G0239 had a geometric mean cost of around $43.00, and we proposed to continue to assign the procedure to APC 5732 (Level 2 Minor Procedures), which has a payment rate of around $39.00.

We received public comments on this proposal. The following is a summary of the comments we received and our responses.

Comment: A commenter expressed concern that the payment amount for APC 5732 dropped by 2.5 percent, from $39.96 in CY 2025 to $38.91 in CY 2026. The commenter requested that CMS provide further explanation for what is driving the decrease in payment for APC 5732 and, specifically, for HCPCS code G0239.

Response: There are a number of factors pertinent to the OPPS that may cause geometric mean costs to change from one year to the next. Some of these are a reflection of hospital behavior, and some of them are a reflection of fundamental characteristics of the OPPS, as defined in statute. For example, the OPPS payment rates are based on hospital cost report and claims data. However, hospital costs and charges change each year and this results in both changes to the cost-to-

charge ratios (CCRs) taken from the most currently available cost reports and also differences in the charges on the claims that are the basis of the calculation of the geometric mean costs on which OPPS rates are based. Similarly, hospitals adjust their mix of services from year to year by offering new services, and ceasing to furnish services, or changing the proportion of the various services they furnish, which has an impact on the CCRs that we derive from their cost reports. CMS cannot stabilize these hospital-driven fundamental inputs to the calculation of OPPS payment rates. Moreover, there are other essential elements of the OPPS which contribute to the changes in relative weights each year. These include, but are not limited to, reassignments of HCPCS codes to APCs to rectify 2 times violations as required by the law, to address the costs of new services, to address differences in hospitals' costs that may result from changes in medical practice, and to respond to public comments. In summary, after consideration of the public comment, we are finalizing our proposal without modification.

Specifically, we are continuing to assign HCPCS code G0239 to APC 5732 (Level 2 Minor Procedures) with a payment rate of $38.16. We note that we review the APC assignments for all items and services paid under the OPPS on an annual basis.

Table 77 shows the finalized status indicator and APC assignment for this HCPCS code. We refer readers to Addendum B to this final rule with comment period for the payment rates for all codes reportable under the OPPS. Addendum B is available via the internet on the CMS website.

TABLE 77: FINAL CY 2026 APC AND STATUS INDICATOR ASSIGNMENT FOR HCPCS CODE G0239

HCPCS Code	Long Descriptor	Final CY2026 OPPS SI	Final CY2026 OPPS APC
G0239	Therapeutic procedures to improve respiratory function or increase strength or endurance of respiratory muscles, two or more individuals (includes monitoring))	S	5732

50. Insertion of Endobronchial Valves, CPT Code 31647 (APC 5155)

CPT code 31647 (Bronchoscopy, rigid or flexible, including fluoroscopic guidance, when performed; with balloon occlusion, when performed, assessment of air leak, airway sizing, and insertion of bronchial valve(s), initial lobe) describes a procedure used for conditions such as severe emphysema or persistent bronchopleural air leaks, where a device is placed to control airflow into a portion of the lung. For the CY 2026 OPPS/ASC proposed rule, CPT code 31647 had a geometric mean cost of $11,385.22 and we proposed to continue to assign the procedure to APC 5155 (Level 5 Airway Endoscopy) and status indicator J1, which has a payment rate of around $7,269.

We note that at the August 25, 2025, HOP Panel Meeting, a presentation was made requesting the reassignment of CPT code 31647 from APC 5155 to New Technology APC 1575 (New Technology Level 38). Based on the information presented at the meeting, the Panel recommended this reassignment.

We received public comments on this proposal. The following is a summary of the comments we received and our responses.

Comment: Commenters recommended that CMS reassign CPT code 31647 from APC 5155 to New Technology APC 1575 (New Technology Level 38).

The commenters noted that the cost of the procedure exceeds payment by approximately $4,000 and expressed concern that this discrepancy would result in patient access to the procedure being limited, particularly considering that the alternatives for severe emphysema patients involve much more invasive and expensive treatment options.

A commenter stated that the reassignment to a New Technology APC was necessary because (1) there is no higher-level APC in the Airway Endoscopy APC family and (2) there is no other clinical APC that would be an appropriate clinical and resource fit.

The commenter claimed that the geometric mean costs for CPT code 31647 have been stable and significantly more than the geometric mean cost for the APC into which it maps (APC 5155). While acknowledging that there is not a 2-times rule violation (given the number of single frequency claims for the procedure), the commenter noted that the GMC for CPT code 31647 is significantly above the GMC of the other procedures assigned to APC 5155 and more than double that for many procedures in the APC.

The commenter stated that they considered an alternative clinical APC but could not identify a clinically and resource cohesive clinical APC into which to move it.

The commenter stated that with no appropriate clinical APC to use as an alternative, CMS should assign the procedure to a new technology APC that more closely aligns with its GMC. The commenter concluded that APC 1575 is the appropriate new technology APC for the service given that the GMC for CPT code 31647 has been in the $11,000–$12,000 range for the past 3 plus years and is $11,385 in the 2024 claims data that CMS released.

Response: As recognized by one of the commenters, APC 5155 does not currently have a 2 times rule violation in the final rule data and APC 5155 appears to be the best clinical fit for CPT code 31647 of any existing clinical APC.

After consideration of the public comments we received and discussion and input from our Medical Officers, we are finalizing our proposal without modification to assign CPT code 31647 to APC 5155. We note that we review the APC assignments for all items and services paid under the OPPS on an annual basis. We will reevaluate the APC assignment for CPT code 31647 in the next rulemaking cycle. Table 78 shows the finalized status indicator and APC assignment for this procedure code. We refer readers to Addendum B to this final rule with comment period for the payment rates for all codes reportable under the OPPS. Addendum B is available via the internet on the CMS website.

TABLE 78: FINAL CY 2026 APC AND STATUS INDICATOR ASSIGNMENTS FOR CPT CODE 31647

CPT Code	Long Descriptor	Final CY2026 OPPS SI	Final CY2026 OPPS APC
31647	Bronchoscopy, rigid or flexible, including fluoroscopic guidance, when performed; with balloon occlusion, when performed, assessment of air leak, airway sizing, and insertion of bronchial valve(s), initial lobe	J1	5155

51. Non-Invasive Gas Exchange and Cardiorespiratory Status (AGM 100), CPT Code 0893T (APC 5734)

Effective July 1, 2024, the AMA CPT Editorial Panel established CPT code 0893T (*Noninvasive assessment of blood oxygenation, gas exchange efficiency, and cardiorespiratory status, with physician or other qualified health care professional interpretation and report*) to describe a non-invasive method for assessing a patient's blood oxygenation, gas exchange efficiency, and overall cardiorespiratory status using a special breathing device and monitor, with the resulting data interpreted and reported by a healthcare professional. We assigned CPT code 0893T to APC 5733 (Level 3 Minor Procedures) in the CY 2025 OPPS/ASC final rule. For the CY 2026 OPPS/ASC proposed rule, we did not have any claims for rate setting, so we proposed to continue to assign the procedure to APC 5733 (Level 3 Minor Procedures), which has a proposed payment rate of around $61.00 and status indicator Q1 (STV-Packaged Codes; Paid under OPPS).

We note that at the August 25, 2025, HOP Panel Meeting, a presentation was made requesting the reassignment to APC 5723 (Level 3 Diagnostic Tests and Related Services) for CPT code 0893T. Based on the information presented at the meeting, the Panel made no recommendation on the APC assignment for the code.

We received public comments on this proposal. The following is a summary of the comments we received and our responses.

Comments: Commenters requested that CPT code 0893T be reassigned from APC 5733 (Level 3 Minor Procedures) to APC 5723 (Level 3 Diagnostic Tests and Related Services) with a proposed payment rate of around $382.00. The commenters stated that the cost of the procedure is approximately $350 to $360 and therefore the proposed payment rate of $61.00 falls far short of adequate reimbursement and threatens patient access to the procedure. Some commenters additionally stated that the current APC assignment is inappropriate because there are no clinically similar procedures in that classification. These commenters stated that CPT 0893T involves exhaled gas analysis of oxygen, carbon dioxide, non-invasive blood oxygenation (PO2) and A-a gradient calculations and state that this procedure is comparable to CPT 94681 (oxygen uptake with exhaled gas analysis including carbon dioxide to assess lung function). According to these commenters, these two procedures utilize the same methodology and measure the physiological impairment parameters involving integrated cardiopulmonary assessment, supporting reclassification to APC 5723 (Level 3 Diagnostic Tests and Related Services).

Response: While we note that we do not have any claims for rate setting, based upon the input provided by commenters, we agree that CPT code 0893T should be reassigned to an APC that better reflects the costs of the procedure. However, we do not agree that the appropriate APC is 5723 (Level 3 Diagnostic Tests and Related Services). We are also not persuaded that the device is diagnostic in nature. While it provides additional information about a patient's oxygen level and other factors that may be helpful in formulating a diagnosis, it is not itself diagnosing a specific condition.

Accordingly, after consideration of the public comments we received and discussion and input from our Medical Officers, we have decided to reassign 0893T to APC 5734 (Level 4 Minor Procedures) with a payment amount of around $136. We note that we review the APC assignments for all items and services paid under the OPPS on an annual basis.

Table 79 shows the finalized status indicator and APC assignment for this procedure code. We refer readers to Addendum B to this final rule with comment period for the payment rates for all codes reportable under the OPPS. Addendum B is available via the internet on the CMS website.

TABLE 79: PROPOSED AND FINAL CY 2026 APC AND STATUS INDICATOR ASSIGNMENTS FOR CPT CODE 0893T

CPT Code	Long Descriptor	Proposed CY2026 OPPS SI	Proposed CY2026 OPPS APC	Final CY2026 SI	Final CY2026 OPPS APC
0893T	Noninvasive assessment of blood oxygenation, gas exchange efficiency, and cardiorespiratory status, with physician or other qualified health care professional interpretation and report	Q1	5733	Q1	5734

SaaS Imaging

52. 3D Anatomical Segmentation Imaging Software Service, HCPCS Code C8001 (APC 5721)

In the January 2025 update, we established HCPCS code C8001 to describe the 3D anatomical segmentation imaging intended as software for preoperative surgical planning and as software for the intraoperative display of multi-dimensional digital images. We initially assigned HCPCS code C8001 to APC 5521 (Level 1 Imaging without Contrast) with a status indicator of 'S' (Procedure or Service, Not Discounted When Multiple; Paid under OPPS; separate APC payment). After receiving feedback from external parties, we reassigned HCPCS code C8001 to APC 5721 (Level 1 Diagnostic Tests and Related Services) for the April 2025 quarterly update.

For CY 2026, we proposed to continue to assign HCPCS code C8001 to APC 5721 which has a proposed rate of around $132. We note that because this is a new service, we do not have any claims data.

We received public comments on this proposal. The following is a summary of the comments we received and our responses.

Comment: A commenter requested for HCPCS code C8001 to be reassigned from APC 5721 (Level 1 Diagnostic Tests and Related Services) to APC 5723 (Level 3 Diagnostic Tests and Related Services). The commenter cited the technical expertise required by the technologist and the additional hardware and software costs as justification for the higher-level APC assignment. The code describes 3D anatomical segmentation imaging for preoperative planning, data preparation, and transmission obtained from previous diagnostic computed tomographic or magnetic resonance examination of the same anatomy.

Response: After careful review of the request to reassign C8001 from APC 5721 to APC 5723, we do not believe it would be appropriate to reassign the APC for C8001 until we have claims data for this service. We will continue to monitor claims and utilization patterns for C8001 and may reconsider the APC assignment in future notice-and-comment rulemaking.

In summary, after consideration of the public comment we received, we are finalizing the APC assignment for HCPCS code C8001 without modification. The final CY 2026 payment rates for this code can be found in Addendum B to this final rule with comment period. In addition, we refer readers to Addendum D1 to this final rule with comment period for the SI definitions for all codes reported under the OPPS. Addenda B and D1 are available via the internet on the CMS website. Refer to Table 80 for code descriptor, APC assignment and status indicator assignment for HCPCS code C8001 for CY 2026.

TABLE 80: FINAL CY 2026 APC AND STATUS INDICATOR ASSIGNMENT FOR HCPCS CODE C8001

HCPCS Code	Long Descriptor	Final CY 2026 OPPS SI	Final CY 2026 OPPS APC
C8001	3d anatomical segmentation imaging for preoperative planning, data preparation and transmission, obtained from previous diagnostic computed tomographic or magnetic resonance examination of the same anatomy	S	5721

53. 3D Image Generation Used in Surgical Planning and Navigation for Placement of Implants and Devices (BoneMRI), HCPCS Code G0566 (APC 5721)

In CY 2025, we established HCPCS code G0566 (*3D radiodensity-value bone imaging, algorithm derived, from previous magnetic resonance examination of the same anatomy*) to describe the BoneMRI software as a service (Change Request 13993).[26] This service provides 3D radiodensity-value bone imaging from previous magnetic resonance images. For CY 2025, HCPCS code G0566 was assigned to APC 5721 (Level 1 Diagnostic Tests and Related Services) with the status indicator ''S'' (separate APC payment).

As HCPCS code G0566 is a new code in 2025, we have no claims data. For CY 2026, we proposed to assign HCPCS Code G0566 to APC 5721 (Level 1 Diagnostic Tests and Related Services).

We received public comments on this proposal. The following is a summary of the comments we received and our responses.

Comment: Several commenters expressed concern with the low payment rate for this service which commenters stated may provide a financial barrier for providers to adopt this new technology into their practice and limit access. A commenter stated the proposed payment rate is not comparable to other SaaS technologies payment, such as EchoGo Heart Failure (CPT code 0932T) or HeartFlow FFRct (CPT code 75580), which ranges from about $316 to $879. The commenter stated the payment rate for BoneMRI does not reflect the value and resources for this service. The commenters recommended that HCPCS code be reassigned to APC 5723 (Level 3 Diagnostic Tests and Related Services) as that APC reflects the clinical value and cost of this service.

Response: In determining the appropriate APC placement for CPT/HCPCS codes, we rely on input from a variety of sources, including, but not limited to, review of the resource costs and clinical similarity of the service to existing procedures; input from CMS medical advisors; and information from interested specialty societies. We evaluated the recommendations, modeled the suggestions, analyzed the cost results of the suggested APC reassignments, and received additional input from our medical advisors. We note the SaaS codes that the commenter mentioned were assigned to their respective APCs based on similar clinical and resource similarity. While we recognize that there is not currently a one-to-one match to crosswalk to the new codes, we based the proposed APC assignments for HCPCS code G0566 on crosswalks to CPT/HCPCS codes that have similar service and resource

[26] *https://www.cms.gov/files/document/r13135cp.pdf.*

elements to the new codes. Based on our review of the service compared to other services assigned to the Diagnostic Tests and Related Services Series, we believe HCPCS code C8001 (*3d anatomical segmentation imaging for preoperative planning, data preparation and transmission, obtained from previous diagnostic computed tomographic or magnetic resonance examination of the same anatomy*) is an appropriate crosswalk code for HCPCS code G0566, which is currently assigned to APC 5721 (Level 1 Diagnostic Tests and Related Services).

After consideration of the public comments we received, we are finalizing our proposed APC assignment and status indicator for HCPCS code G0566 to APC 5721 without modification. Refer to Table 81 for the final OPPS APC and status indicator assignment for HCPCS code G0566 for CY 2026. We refer readers to Addendum B to this final rule with comment period for the payment rates for all codes reportable under the OPPS. Addendum B is available via the internet on the CMS website.

TABLE 81 FINAL CY 2026 APC AND STATUS INDICATOR ASSIGNMENTS FOR HCPCS CODE G0566

HCPCS Code	Long Descriptor	Final CY 2026 OPPS SI	Final CY 2026 OPPS APC
G0566	3D radiodensity-value bone imaging, algorithm derived, from previous magnetic resonance examination of the same anatomy	S	5721

54. Augmentative Analysis of CT Imaging Data for Interstitial Lung Disease, CPT Code 0877T (APC 1508)

In the CY 2026 OPPS/ASC proposed rule, we proposed to continue assigning CPT code 0877T (*Augmentative analysis of chest computed tomography (ct) imaging data to provide categorical diagnostic subtype classification of interstitial lung disease; obtained without concurrent ct examination of any structure contained in previously acquired diagnostic imaging*) to APC 1508 (New Technology—Level 8 ($601–$700)) with a proposed payment rate of $650.50 and status indicator ''S''.

We received public comments on this proposal. The following is a summary of the comments we received and our responses.

Comment: A commenter requested that CMS remove CPT Code 0877T from the current OPPS rule and fee schedule because according to the commenter, this service is best categorized as an ambulatory service, not an outpatient service to be reviewed and priced under the OPPS. That is, there are currently no hospitals that can provide the type of service described in CPT code 0877T. For this reason, any claims billed for this service in the hospital setting were billed in error and are the result of miscoding.

They also stated that CPT code 0877T is currently designated as contractor-priced under the Medicare Physician Fee Schedule (PFS), meaning that the local Medicare contractors determine payment rates for the service within the PFS geographic areas in their jurisdiction. Since IMVARIA's IDTF is located in Texas, Novitas Solutions, Inc., the local Medicare Administrative Contractor (MAC), is solely responsible for evaluating coverage and payment for CPT 0877T.

Finally, they stated that the rate posted by OPPS for 0877T appears potentially based on an inaccurate and unrelated crosswalk to the published rate for CPT code 0721T, which bears no clinical, procedural, or technological relationship to the Fibresolve test or the commenter's area of focus.

Another commenter supported CMS' proposal and urged CMS to finalize the proposed payment structure for CPT code 0877T which enables facilities to bill for state-of-the-art ILD diagnostic services.

They also noted that it came to their attention that there was a comment submitted to CMS that claimed that there are currently no hospitals that can provide the type of service described in CPT code 0877T. For this reason, any claims billed for this service in the hospital setting were billed in error and are the result of miscoding. The commenter noted that their company is not operating as an Independent Diagnostic Testing Facility (IDTF) but rather entering into contractual agreements with facilities to offer e-Lung as a software-as-a-medical-device (SaMD) for which the hospitals will then submit claims as the provider. Therefore, another commenter's claim that existing claims were billed in error, and the result of miscoding is not accurate.

Response: Based on our review and input from our medical advisors, we believe that there may be other services that could be described by CPT code 0877T and therefore, we continue to believe that the current assignment of CPT code 0877T to APC 1508 with status indicator ''S'' is appropriate. Therefore, we are finalizing without modification our proposal to assign CPT code 0877T to APC 1508 for CY 2026. The final payment rates for the codes can be found in Addendum B to this final rule with comment period.

In addition, we refer to Addendum D1 to this final rule with comment period for the status indicator (SI) meanings for all codes reported under the OPPS. Addenda B and D1 are available via the internet on the CMS website.

55. Noninvasive Arterial Plaque Analyses, CPT Code 0712T (5722)

Established in 2022, Category III CPT code 0712T is related to noninvasive arterial plaque analysis and describes the steps required for a software as a service (SaaS) imaging service that uses data from computed tomography angiography (CTA) to produce clinical information about arterial plaque for providers. See Table 82 for the CPT code, its long descriptor, and the proposed payment assignments.

TABLE 82: PROPOSED CY 2026 OPPS SI AND APC ASSIGNMENTS FOR NONINVASIVE ARTERIAL PLAQUE ANALYSES

CPT Code	Long Descriptor	Proposed CY 2026 OPPS SI	Proposed CY 2026 OPPS APC
0712T	Noninvasive arterial plaque analysis using software processing of data from noncoronary computerized tomography angiography; quantification of the structure and composition of the vessel wall and assessment for lipid-rich necrotic core plaque to assess atherosclerotic plaque stability	S	5521

For CY 2026, we proposed to assign CPT code 0712T to APC 5521 (Level 1 Imaging without Contrast), which has a proposed payment rate of approximately $89. The issue of payment for CPT code 0712T was brought to the Advisory Panel on Hospital Outpatient Payment (also known as HOP Panel) in August 2025 for CY 2026 rulemaking. At the 2025 HOP Panel, several presenters provided information to the Panel regarding 0712T and advised the Panel to request that CMS reassign 0712T to New Technology APC 1511 with a payment rate of $950.50. Based on the information presented, the HOP Panel did not make a recommendation to CMS to reassign 0712T to a different APC for CY 2026.

We received public comments on this proposal. The following is a summary of the comments we received and our responses.

Comment: Several commenters requested that CMS reassign CPT code 0712T to a New Technology APC 1511 with a payment rate of $950.50. Commenters detailed the procedural methodology and stated that the procedure involves segmentation, quantification, and assessment of high-risk biomarkers such as lipid-rich necrotic core plaque, which are critical for predicting strokes and other cardiovascular events. Several commenters recommended using CPT code 0625T (*Automated quantification and characterization of coronary atherosclerotic plaque to assess severity of coronary disease, using data from coronary computed tomographic angiography; computerized analysis of data from coronary computed tomographic angiography*) as a crosswalk code for CPT code 0712T, as they believe that CPT code 0625T and CPT code 0712T resemble each other in methodology, clinical purpose, and resource demands. Additionally, commenters stated that the current APC assignment fails to cover the cost of performing noninvasive arterial plaque analysis from CTA data and that hospitals cannot absorb the financial loss associated with this service. Further, commenters stated that undervaluing the complexity and resource cost of CPT code 0712T would discourage adoption, limit data collection, and impede CMS's ability to monitor utilization and outcomes.

Response: After consideration of the public comments, additional review of the procedures, and input from our CMS Medical Officers, we do not agree with the recommended crosswalk code of CPT code 0625T. Based on our review of the clinical characteristics of the procedure and input from our medical advisors, we believe that CPT code 0712T is more similar clinically and in terms of resource requirements and procedure costs to the procedures assigned to APC 5722 (Level 2 Diagnostic Tests).

We remind hospitals that we review, on an annual basis, the APC assignments for all items and services paid under the OPPS and we will continue to monitor the claims data as they become available.

In summary, after consideration of the public comments we received, we are finalizing our proposal with modification and reassigning CPT code 0712T to APC 5722 (Level 2 Diagnostic tests). The final CY 2026 payment rates for these codes can be found in Addendum B to this final rule with comment period. In addition, we refer readers to Addendum D1 to this final rule with comment period for the status indicator definitions for all codes reported under the OPPS. Addenda B and D1 are available via the internet on the CMS website.

Refer to Table 83 for code descriptors, APC assignments and status indicator assignments for CPT code 0712T.

TABLE 83: FINAL CY 2026 APC AND STATUS INDICATOR ASSIGNMENTS FOR CPT CODES 0712T

CPT Code	Long Descriptor	Final CY 2026 OPPS SI	Final CY 2026 OPPS APC
0712T	Computed tomographic angiography (CTA), head and neck, with contrast material(s), including noncontrast images, when performed, and image postprocessing	S	5722

Urology Related Services

56. Aquabeam Waterjet Ablation Procedure, CPT Code 52597 (APC 5376)

CPT code 0421T (*Transurethral waterjet ablation of prostate, including control of post-operative bleeding, including ultrasound guidance, complete (vasectomy, meatotomy, cystourethroscopy, urethral calibration and/or dilation, and internal urethrotomy are included when performed*) describes the Aquabeam waterjet ablation procedure. According to the manufacturer, Aquabeam is for treating lower urinary tract symptoms (LUTS) due to benign prostatic hyperplasia (BPH) by using a high-velocity water stream to ablate and remove tissue from enlarged prostates. Effective January 1, 2026, CPT code 0421T will be replaced with CPT code 52XX1 (52597), Transurethral robotic-assisted waterjet resection of prostate, including intraoperative planning, ultrasound guidance, control of postoperative bleeding, complete, including vasectomy, meatotomy, cystourethroscopy, urethral calibration and/or dilation, and internal urethrotomy, when performed. We will assign the underlying claims associated with HCPCS code 0421T to CPT code 52XX1 (52597).

For the CY 2026 OPPS/ASC proposed rule, we estimated the geometric mean cost for CPT code 0421T to be $10,342 based on 7,557 single claims and proposed to assign the service to APC 5376 (Level 6 Urology and Related Services), which has a geometric mean cost of $9,746.

We received public comments on this proposal. The following is a summary of the comments we received and our responses.

Comment: Several commenters requested CMS reassign CPT code 52597 (0421T) from APC 5376 (Level 6 Urology and Related Services) to APC 5377 (Level 7 Urology and Related Services) in the CY 2026 OPPS/ASC final rule with comment period. The commenters stated that CPT code 52597 (0421T) requires greater complexity and more resource than other CPT codes 55880 (*Ablation of malignant prostate tissue, transrectal, with high intensity-focused ultrasound (hifu), including ultrasound guidance*) and 55873 (*Cryosurgical ablation of the prostate (includes ultrasonic guidance and monitoring)*) that are currently in APC 5376 (Level 6 Urology and Related Services). The commenters stated that CPT code 52597 (0421T) is similar both clinically and in resource use to the procedures assigned to APC 5377 (Level 7 Urology and Related Services), citing CPT code 55882 (*Ablation of prostate tissue, transurethral, using thermal ultrasound, including magnetic resonance imaging guidance for, and monitoring of, tissue ablation; with insertion of transurethral ultrasound transducer for delivery of thermal ultrasound, including suprapubic tube placement and placement of an endorectal cooling device, when performed*).

Response: We appreciate the commenter's recommendation regarding the APC assignment of CPT code 52597 (0421T) but we disagree that the clinical complexity and resource required for CPT code 52597 (0421T) is comparable to CPT code 55882. We believe that CPT code 52597 (0421T) fits more appropriately in APC 5376 rather than in APC 5377 based on resource cost and clinical similarity and to the procedures in APC 5376. We note that while both CPT code 52597 (0421T) and CPT code 55882 CPT provides imaging guidance, we believe that the use of magnetic resonance imaging guidance in CPT code 55882 necessitates greater resource than ultrasound guidance.

After consideration of the public comment we received, we are finalizing our proposal without modification to assign CPT code 52597 (0421T) to APC 5376. Refer to Table 84 for the final OPPS APC and status indicator assignment for CPT code 52597 (0421T) for CY 2026. We refer readers to Addendum B to this final rule with comment period for the payment rates for all codes reportable under the OPPS. Addendum B is available via the internet on the CMS website.

TABLE 84: FINAL CY 2026 OPPS APC STATUS INDICATOR ASSIGNMENTS FOR CPT CODE 52597 (0421T)

CPT Code	Long Descriptor	Final CY 2026 OPPS SI	Final CY 2026 OPPS APC
52597	Cystourethroscopy with transurethral anterior prostate commissurotomy and drug delivery, including transrectal ultrasound and fluoroscopy, when performed	J1	5376

57. Enhanced Lithotripsy System, CPT Code 0991T (APC 5376)

CPT code 0991T (*Cystourethroscopy, with low-energy lithotripsy and acoustically actuated microspheres, including imaging*) describes the lithotripsy with acoustically actuated microspheres in an approved investigational device exemption (IDE) study (NCT06942949). According to the manufacturer, this prospective, single arm study utilizes low pressure ultrasound to actuate proprietary microbubble to fragment urinary stones. The AMA CPT Editorial Panel established CPT code 0991T effective January 1, 2026.

As this is a new code in 2026, we have no claims data for CPT code 0991T. For CY 2026, we proposed to assign CPT Code 0991T with the status indicator ''E1.''

We received public comments on this proposal. The following is a summary of the comments we received and our responses.

Comment: A few commenters stated that CPT code X432T has transitioned to CPT code 0991T, effective July 1, 2025 and that CMS incorrectly assigned status indicator ''E1'' to CPT code X432T in the CY 2026 OPPS/ASC proposed rule. Additionally, the commenters requested the assignment of CPT code 0991T to APC 5376 (Level 6 Urology and Related Services), based on the commenter's resource cost of

$10,131, and be designated as device intensive with a device offset of 44 percent.

Response: We note that according to the AMA, CPT code 0991T will replace CPT code X432T, effective January 1, 2026. While CPT code 0991T was released on the AMA website on July 1, 2025, the code is not effective until January 1, 2026. We also note that our status indicator assignment of ''E1'' for CPT code 0991T (X432T) was appropriate in the CY 2026 OPPS/ASC proposed rule. During our CY 2026 OPPS/ASC proposed rule assessment of CPT code X432T, we determined that the enhanced lithotripsy service involved a non-FDA approved device not excepted by any IDE status and therefore not payable under the OPPS/ASC because non-FDA approved devices are considered not reasonable and necessary under Section 1862(a)(1)(A) of the Act. The Evaluation of Enhanced Lithotripsy System (ELS) in the Treatment of Urinary Stones (NCT06942949) did not receive CMS category B IDE approval until August 1, 2025. Therefore, status indicator ''E1'' was an appropriate assignment for a service involving a non-FDA approved device. The definition of the OPPS status indicators can be found in Addendum D to this final rule with comment period via the internet on the CMS website.

In determining the appropriate APC placement for new codes, we rely on input from a variety of sources, including, but not limited to, review of the resource costs and clinical similarity of the service to existing procedures; input from CMS medical advisors; and information from interested specialty societies. We evaluated the recommendations, modeled the suggestions, analyzed the cost results of the suggested APC reassignments, and received additional input from our medical advisors. We agree with the commenter's request to assign CPT code 0991T (X432T) to APC 5376 (Level 6 Urology and Related Services). While we recognize that there is not currently a one-to-one match to crosswalk to the new codes, we based our APC assignment for CPT code 0991T (X432T) on crosswalks to CPT codes that have similar service and resource elements, as well as required staff, to the new codes. Based on our review of the enhanced lithotripsy service compared to other services assigned to the Urology and Related Services series, we believe HCPCS code C9761 (Cystourethroscopy, with ureteroscopy and/or pyeloscopy, with lithotripsy, and ureteral catheterization for steerable vacuum aspiration of the kidney, collecting system, ureter, bladder, and urethra if applicable (must use a steerable ureteral catheter)) is an appropriate crosswalk code for CPT code 0991T (X432T), which is currently assigned to APCs 5376 (Level 6 Urology and Related Services).

For this service's device offset, we refer readers to section IV.B. of this final rule with comment period.

After consideration of the public comment we received, we are finalizing our proposal with modification to assign CPT code 0991T (X432T) to APCs 5376 (Level 6 Urology and Related Services) with a status indicator of ''J1''. Refer to Table 85 for the final OPPS APC and status indicator assignment for CPT code 0991T (X432T) for CY 2026. We refer readers to Addendum B to this final rule with comment period for the payment rates for all codes reportable under the OPPS. Addendum B is available via the internet on the CMS website.

TABLE 85: FINAL CY 2026 OPPS APC STATUS INDICATOR ASSIGNMENTS FOR CPT CODE 0991T

CPT Code	Long Descriptor	Final CY 2026 OPPS SI	Final CY 2026 OPPS APC
0991T	Cystourethroscopy, with low-energy lithotripsy and acoustically actuated microspheres, including imaging	J1	5376

58. Insertion of Permanent Urethral Stent, CPT Code 52282 (APC 5374)

CPT code 52282 (*Cystourethroscopy, with insertion of permanent urethral stent*) describes the insertion of a permanent urethral stent using an endoscope procedure. CPT code 52282 became effective January 1, 1998. For the CY 2026 OPPS/ASC proposed rule, we estimated the geometric mean cost for CPT code 52282 to be approximately $3,382 based on 111 single claims and proposed to continue to assign the service to APC 5374 (Level 4 Urology and Related Services), which had a proposed geometric mean cost of $3,686.

We received public comments on this proposal. The following is a summary of the comments we received and our responses.

Comment: Several commenters requested the APC reassignment of CPT code 52282 to APC 5376 (Level 6 Urology and Related Services). The commenter stated that the current payment rate of APC 5374 (Level 4 Urology and Related Services) and the lack of device intensive status do not cover the cost of the stent and the procedure. The commenters stated CPT code 52282 is similar in device intensity to CPT code 53865. The commenters further stated that the inappropriate low payment creates a patient access issue which may push patients to other higher cost treatment options for both Medicare and beneficiaries. Furthermore, the low payment in ASCs for this treatment drives patients to HOPDs which can be more costly for the both Medicare and beneficiaries.

Another commenter stated that there has not been a permanent urethral stent device on the US market for the past decade. The commenter stated the 2024 claims showed CPT code 52282 had a mean device cost of $485, which is far below the price that will be available in the Q4 2025 and 2026. The commenter reported that about 33 percent of the 2024 claims are female patients, which indicate that these were incorrect

billings and that they should be removed from CY 2026 claims accounting. The commenter further stated that their analysis of the OPPS CPT 52282 claims revealed diagnosis codes do not correspond to treatment with a permanent urethral stent. The commenter also reported that their analysis of the CPT 52282 claims included device codes such as HCPCS code C2617 (*Stent, non-coronary, temporary, without delivery system*) and HCPCS code C1758 (*Catheter, ureteral*) that do not correspond to the treatment represented by CPT code 52282. The commenter suggested the following: (1) CMS exclude all CPT code 52282 claims for ratesetting, and device offset calculations, reassign CPT code 52282 to APC 5376, and use the manufacturer's price as a device offset or use CPT code 53865 that has a temporary urethral stent) until accurate claims are available; (2) Create a new device code for a permanent urethral stent with the suggested descriptor (Stent, prostatic, permanent with integrated transurethral delivery system); (3) Conduct annual reviews of device offset and review all surgical procedures; and (4) Coordinate with the FDA and AMA CPT Editorial Panel when devices are withdrawn from the market.

Response: We appreciate the commenters' suggestions regarding CPT code 52282. We rely on hospitals and providers to accurately report the use of HCPCS codes in accordance with their code descriptors, and CPT and CMS instructions, and to report services accurately on claims and charges and costs for the services on their Medicare hospital cost report. We defer to the clinicians and providers to provide the appropriate course of treatment, at the appropriate site of treatment. We will take the commenter's concerns regarding the US market availability of a permanent urethral stent and the claims surrounding CPT code 52282 into consideration for future rulemaking. We note that all comments requesting the reassignment of CPT code 52282 to APC 5376 were related to a device that has not received FDA approval or any exceptions such as an Investigational Device Exemptions (IDE) or PMA/510K Exemptions, and so those comments are out of the scope for this final rule with comment period.

For this service's device offset, we refer readers to section IV.B of this final rule with comment period.

After consideration of the public comments we received, we are finalizing our proposed APC assignment and status indicator for CPT code 52282 without modification. Refer to Table 86 for the final OPPS APC and status indicator assignment for CPT code 52282 for CY 2026. We refer readers to Addendum B to this final rule with comment period for the payment rates for all codes reportable under the OPPS. Addendum B is available via the internet on the CMS website.

TABLE 86: FINAL CY 2026 OPPS APC AND STATUS INDICATOR ASSIGNMENTS FOR CPT CODE 52282

CPT Code	Long Descriptor	Final CY 2026 OPPS SI	Final CY 2026 OPPS APC
52282	Cystourethroscopy, with insertion of permanent urethral stent	J1	5374

59. Penile Prosthesis, CPT Code 54417 (APC 5377)

CPT code 54417 (Removal and replacement of non-inflatable (semi-rigid) or inflatable (self-contained) penile prosthesis through an infected field at the same operative session, including irrigation and debridement of infected tissue) describes the removal and replacement of penile implant and debridement of infected tissue.

For the CY 2026 OPPS/ASC proposed rule, we calculated the geometric mean for CPT code 54417 to be about $18,732, and we proposed to assign the service to APC 5377 (Level 7 Urology and Related Services), which has a geometric mean cost of $13,635. There were 11 single claims used to calculate the geometric mean cost for CPT code 54417.

We received public comments on this proposal. The following is a summary of the comments we received and our responses.

Comment: A commenter requested that CMS reassign CPT code 54417 to APC 5478. The commenter stated CPT code 54417 is similar to CPT codes 54411 (Removal and replacement of all components of a multi-component inflatable penile prosthesis through an infected field at the same operative session, including irrigation and debridement of infected tissue) and 54416 (Removal and replacement of non-inflatable (semi-rigid) or inflatable (self-contained) penile prosthesis at the same operative session) both clinically and in resource utilization. The commenter stated CPT code 54417 is a low frequency procedure, which is the expected utilization pattern, but its geometric mean has been increasing year over year. The commenter stated all three procedures involve the similar operative complexity of removing and replacing a penile prosthesis, while CPT codes 54411 and 54417 also includes irrigation and debridement of an infected tissue. The commenter stated that CPT code 54417 has the highest geometric mean cost in APC 5377, that exceeds CPT code 54416 and is closer to the geometric mean cost of APC 5378.

Response: We agree with the commenter that CPT code 54417 is similar clinically and in resource utilization to CPT codes 54411 and 54416. APC 5378 (Level 8 Urology and Related Services) is a more appropriate placement for CPT code 54417 due to the clinical work and resources utilized to furnish the removal and replacement of penile implant and/or debridement of infected tissue irrigation, which is clinically similar to CPT codes 54411 and 54416. We also agree with the commenters that the geometric mean cost of CPT code 54417 more closely matches the geometric mean cost of APC 5378 than APC 5377. Therefore, we will be reassigning CPT code 54417 to APC 5378 for CY 2026.

After consideration of the public comment we received, we are finalizing

a modification to our proposal to assign CPT code 54417 to APC 5378 (Level 8 Urology and Related Services) with a status indicator of ''J1''. Refer to Table 87 for the final OPPS APC and status indicator assignment for CPT code 54417 for CY 2026. We refer readers to Addendum B to this final rule with comment period for the payment rates for all codes reportable under the OPPS. Addendum B is available via the internet on the CMS website.

TABLE 87: FINAL CY 2026 OPPS APC AND STATUS INDICATOR ASSIGNMENTS FOR CPT CODE 54417

CPT Code	Long Descriptor	Final CY 2026 OPPS SI	Final CY 2026 OPPS APC
54417	Removal and replacement of non-inflatable (semi-rigid) or inflatable (self-contained) penile prosthesis through an infected field at the same operative session, including irrigation and debridement of infected tissue	J1	5378

60. Prostate Biopsy Codes, CPT Codes 55712, 55713, 55714, and 55715

For 2026, the AMA CPT Editorial Panel established four new codes to describe the various services related to report prostate biopsy to replace CPT code 55770 (*Biopsy, prostate; needle or punch, single or multiple, any approach*) which will be retired December 31, 2025. The four new codes are effective January 1, 2026, and describe the biopsy of the prostate with various imaging guidance. The codes and their complete long descriptors are listed in Table 88. When determining the proposed status indicators and APC assignments for CY 2026, we reviewed the clinical and resource characteristics of the procedures, we considered input from our medical advisors and reviewed existing APC classifications to identify similar and closely related procedures.

We note that CPT codes 55712, 55713, 55714, and 55715 were listed as placeholder codes 5XX07, 5XX08, 5XX09, and 5XX10 respectively, in OPPS Addendum B and Addendum O that were released with the CY 2026 OPPS/ASC proposed rule. Because we had not received the final CPT code numbers from AMA for the new codes that would be effective January 1, 2026, in time for the publication of the CY 2026 OPPS/ASC proposed rule, we listed the new CPT codes with their respective placeholder codes in OPPS Addendum B and Addendum O.

We received public comments on this proposal. The following is a summary of the comments we received and our responses.

Comment: Some commenters sought clarification on the new prostate biopsy CPT codes with more detailed code descriptors for high-field and low-field MRI technologies, including in-office MRI systems.

Response: We thank the commenters for their input, but these comments are out of scope of this OPPS/ASC final rule with comment period. We note the CPT code descriptors are copyright property of the American Medical Association and we do not have the ability to modify CPT codes.

After consideration of the public comments we received, we are finalizing our proposal without modification for CPT codes 55712 through 55715. Table 88 shows the finalized status indicators and APC assignments for all the four prostate biopsy codes. The final CY 2026 payment rates for these codes can be found in Addendum B to this final rule with comment period. We also refer readers to Addendum D1 to this final rule with comment period for the SI meanings for all codes reported under the OPPS. Addenda B and D1 are available via the internet on the CMS website.

TABLE 88: FINAL CY 2026 SI AND APC ASSIGNMENTS FOR CPT CODES 55712 THROUGH 55715

CPT Code	Long Descriptor	Final CY 2026 OPPS SI	Final CY 2026 OPPS APC
55712	Biopsy, prostate, transperineal, MRI-ultrasound-fusion guided, targeted lesion(s) only, first targeted lesion	J1	5374
55713	Biopsy, prostate, in-bore CT- or MRI-guided (ie, sextant), with biopsy of additional targeted lesion(s), first targeted lesion	J1	5375
55714	Biopsy, prostate, in-bore CT- or MRI-guided targeted lesion(s) only, first targeted lesion	J1	5375
55715	Biopsy, prostate, each additional, MRI-ultrasound fusion or in-bore CT- or MRI-guided targeted lesion (List separately in addition to code for primary procedure)	N	N/A

61. Ureteroscopy, HCPCS Code C9761 (APC 5376)

The ureteroscopy procedure addresses kidney stones and may apply catheterization to vacuum aspirate the fragmented kidney stones. HCPCS code C9761 (*Cystourethroscopy, with ureteroscopy and/or, with lithotripsy, and ureteral catheterization for steerable vacuum aspiration of the kidney, collecting system, ureter, bladder, and urethra if applicable (must use a steerable ureteral catheter*) became effective October 1, 2020.

For CY 2026, the OPPS payment rates were proposed based on available CY 2024 claims data. For the CY 2026 OPPS/ASC proposed rule, we found a total of 721 single frequency claims and a geometric mean cost of approximately $9,470 for HCPCS code C9761. For CY 2026, we proposed to continue to assign HCPCS code C9761 to APC 5376 (Level 6 Urology and Related Services) with a proposed payment rate of approximately $9,746.

We received public comments on this proposal. The following is a summary of the comments we received and our responses.

Comment: Commenters requested CMS provide coding guidance on the appropriate device billed under HCPCS code C9761.

Response: Comments on coding guidance are out of scope of this OPPS/ASC final rule with comment period. We note that if hospitals have questions about appropriate coding that they cannot resolve on their own, the appropriate first step would be to review the HCPCS codes or consult a Medicare Administrative Contractor (MAC).

62. Water Vapor Thermotherapy CPT Code 0582T (APC 5377)

CPT code 0582T (*Transurethral ablation of malignant prostate tissue by high-energy water vapor thermotherapy, including intraoperative imaging and needle guidance*) describes an Category B IDE study where water vapor is used to ablate localized prostate cancer. It was designated a Category B IDE study (NCT05683691) on October 12, 2023. The purpose of this prospective, single arm study is to evaluate the safety and effectiveness of utilizing water vapor ablation delivered transurethrally in patients with immediate risk, localized prostate cancer.

For CY 2025, CPT code 0582T was assigned status indicator ''E1.'' For the CY 2026 OPPS/ASC proposed rule, we proposed to continue assigning CPT code 0582T with the status indicator ''E1.''

We received public comments on this proposal. The following is a summary of the comments we received and our responses.

Comment: A commenter requested CPT code 0582T be reassigned to APC 5378 (Level 8 Urology and Related Services) with a status indicator of J1 where other clinically and cost similar procedures are assigned. The commenter stated that this service is currently an approved Category B IDE study, Water Vapor Ablation for Localized Intermediate Risk Prostate Cancer (VAPOR 2) [G220303–NCT05683691]. Furthermore, the commenter stated the procedure cost ranges between $21,672 to $22,233, including the device cost of $16,415 and requested device intensive status and a device offset percentage of 74 percent.

Response: We thank the commenter for the notification that CPT code 0582T represents a Category B IDE study. While we recognize that there is not currently a one-to-one match to crosswalk to the new codes, we based the APC assignment on crosswalks to CPT codes that have similar service and resource elements to the new codes. Based on our review of the service compared to other services assigned to the Urology and Related Services APC series, we believe CPT code 55882 (*Ablation of prostate tissue, transurethral, using thermal ultrasound, including magnetic resonance imaging guidance for, and monitoring of, tissue ablation; with insertion of transurethral ultrasound transducer for delivery of thermal ultrasound, including suprapubic tube placement and placement of an endorectal cooling device, when performed*) is an appropriate crosswalk code for CPT code 0582T. CPT code 55882 is currently assigned to APC 5377 (Level 7 Urology and Related Services).

After consideration of the public comment we received, we are finalizing our proposed APC assignment and status indicator for CPT code 0582T with modification to assign CPT code 0582T to APC 5377 (Level 7 Urology and Related Services) with a status indicator of ''J1''. Refer to Table 89 for the final OPPS APC and status indicator assignment for CPT code 0582T for CY 2026. We refer readers to Addendum B to this final rule with comment period for the payment rates for all codes reportable under the OPPS. Addendum B is available via the internet on the CMS website.

TABLE 89: FINAL CY 2026 OPPS APC AND STATUS INDICATOR ASSIGNMENTS FOR CPT CODE 0582T

CPT Code	Long Descriptor	Final CY 2026 OPPS SI	Final CY 2026 OPPS APC
0582T	Transurethral ablation of malignant prostate tissue by high-energy water vapor thermotherapy, including intraoperative imaging and needle guidance	J1	5377

Vascular Procedures

63. Arteriovenous Fistula (AVF) Creation Procedures, CPT Codes 36836 and 36837 (APC 5194)

CPT codes 36836 (*Percutaneous arteriovenous fistula creation, upper extremity, single access of both the peripheral artery and peripheral vein, including fistula maturation procedures (eg, transluminal balloon angioplasty, coil embolization*) when performed, including all vascular access, imaging guidance and radiologic supervision and interpretation) and 36837 (*Percutaneous arteriovenous fistula creation, upper extremity, separate access sites of the peripheral artery and peripheral vein, including fistula*

maturation procedures (e.g., transluminal balloon angioplasty, coil embolization) when performed, including all vascular access, imaging guidance and radiologic supervision and interpretation) describe a percutaneous arteriovenous fistula creation of an upper extremity. CPT code 36836 became effective January 1, 2023 and replaced HCPCS codes C9754 and G2170, while CPT code 36837 became effective January 1, 2023, and replaced HCPCS codes C9755 and G2171.

In the CY 2020 OPPS/ASC final rule with comment period (84 FR 61246 through 61247), in response to public comment, input from our medical advisors, and the available claims data, we reassigned C9754 and C9755 from APC 5193 to APC 5194. In the CY 2021 OPPS/ASC final rule with comment period (85 FR 85954 through 95955), we used our equitable adjustment authority to maintain the assignment of HCPCS codes G2170 and G2171 to APC 5194 (Level 4 Endovascular Procedures), given that both procedures are for ESRD patients that need dialysis, the predecessor codes had very similar median costs, and there were low claims data available. We continued the assignment of CPT codes 36836 and 36837 to APC 5194, with commenter support, for CY 2022.

In the CY 2023 OPPS/ASC final rule with comment period (87 FR 71863 through 71864), we assigned the newly established CPT codes 36836 and 36837 to APC 5194 based on our assessment of the CY 2023 geometric mean cost of predecessor codes HCPCS codes G2170 ($12,055.90) and G2171 ($13,486.08) and their APC assignment. For CYs 2024 and 2025, we continued assignment to APC 5194 for CPT codes 36836 and 36837, with commenter support.

For CY 2026, we proposed to continue assignment of both CPT codes 36836 and 36837 to APC 5194 (Level 4 Endovascular) with a proposed payment rate of $18,791.32. For the CY 2026 OPPS/ASC proposed rule, CPT code 36836 had 170 single claims for ratesetting, a geometric mean cost (GMC) of around $11,260, and CPT code 36837 had 77 single claims for ratesetting and a GMC of around $19,615.

We received public comments on this proposal. The following is a summary of the comments we received and our responses.

Comment: A commenter requested that CMS reassign CPT code 36836 to APC 5193 (Level 3 Endovascular Procedures) stating that there is a significant cost differential between CPT codes 36836 and 36837.

Response: At this time, we continue to believe that both CPT codes 36836 and 36837 are assigned to appropriate APCs. We will continue to monitor the geometric mean costs and claims data and revise their APC assignments as appropriate.

In summary, after consideration of the public comment we received, we are finalizing the APC assignments for CPT codes 36836 and 36837 without modification. Specifically, we are finalizing the APC assignment of CPT codes 36836 and 36837 to APC 5194 (Level 4 Endovascular Services).

Refer to Table 90 for the code descriptor, proposed and final status indicator (SI) assignment, and proposed and final APC assignment. The final CY 2026 payment rates for the codes can be found in Addendum B to this final rule with comment period. In addition, we refer readers to Addendum D1 to this final rule with comment period for the SI definitions for all codes reported under the OPPS. Addenda B and D1 are available via the internet on the CMS website.

TABLE 90: FINAL CY 2026 APC AND STATUS INDICATOR ASSIGNMENTS FOR CPT CODES 36836 AND 36837

CPT Code	Long Descriptor	Final CY 2026 OPPS SI	Final CY 2026 OPPS APC
36836	Percutaneous arteriovenous fistula creation, upper extremity, single access of both the peripheral artery and peripheral vein, including fistula maturation procedures (eg, transluminal balloon angioplasty, coil embolization) when performed, including all vascular access, imaging guidance and radiologic supervision and interpretation	J1	5194
36837	Percutaneous arteriovenous fistula creation, upper extremity, separate access sites of the peripheral artery and peripheral vein, including fistula maturation procedures (eg, transluminal balloon angioplasty, coil embolization	J1	5194

64. Atherectomy With Angioplasty, CPT Code 92924 (APC 5193)

CPT code 92924 (*Percutaneous transluminal coronary atherectomy, with coronary angioplasty when performed; single major coronary artery or branch*) describes a procedure to treat coronary artery disease by removing plaque from the coronary vessels.

For the CY 2026 OPPS/ASC proposed rule, CPT code 92924 had a geometric mean cost (GMC) of around $16,262 based on 498 single frequency claims. We proposed to maintain the APC assignment to APC 5193 (Level 3 Endovascular Procedures), with a proposed payment of around $11,873.

We received public comments on this proposal. The following is a summary of the comments we received and our responses.

Comment: Commenters requested that CMS reassign CPT code 92924 to APC 5194 (Level 4 Endovascular Procedures). The commenters stated that CPT code 92924 is a technically demanding complex procedure and is more clinically similar to other procedures assigned to APC 5194 (Level 4 Endovascular Procedures). They note that in the CY 2026 OPPS/ASC proposed 2 Times Rule File, CPT code 92924 has the 3rd highest GMC in its current APC assignment (APC 5193) and has a higher GMC than 7 other procedures assigned to APC 5194. Based on the GMC of CPT code 92924, the commenters believe it is more appropriate to assign CPT code 92924 to

APC 5194 (Level 4 Endovascular Procedures).

Response: After reviewing the comments, we believe that CPT code 92924 is more clinically similar to the procedures assigned to APC 5193. As with many APC families, there may be services and procedures that have higher GMCs than other procedures in the next level. We determine APC assignments based on resource and clinical homogeneity and review and revise the services within each APC group and the APC assignments under the OPPS.

In summary, after consideration of the public comments we received, we are finalizing our proposal without modification, to assign CPT code 92924 to APC 5193 (Level 3 Endovascular Procedures).

The final CY 2026 payment rates for this code can be found in Addendum B to this final rule with comment period. In addition, we refer readers to Addendum D1 to this final rule with comment period for the SI definitions for all codes reported under the OPPS. Addenda B and D1 are available via the internet on the CMS website.

Refer to Table 91 for code descriptor, APC assignment and status indicator assignment for CPT 92924 code for CY 2026.

TABLE 91: FINAL CY 2026 APC AND STATUS INDICATOR ASSIGNMENTS FOR CPT CODE 92924

CPT Code	Long Descriptor	Final CY 2026 SI	Final CY 2026 APC
92924	Percutaneous transluminal coronary atherectomy, with coronary angioplasty when performed; single major coronary artery or branch	J1	5193

65. Coronary Therapeutic Services and Procedures CPT Codes 92930, 92945 (APCs 5194, 5193)

The CPT Editorial Panel created 2 new Category I codes 92930 and 92945, effective January 1, 2026. The new final CPT codes (along with their placeholder codes) are as follows:

- 92930 (92X01): *Percutaneous transcatheter placement of intracoronary stent(s), with coronary angioplasty when performed, single major coronary artery and/or its branch(es); 2 or more distinct coronary lesions with 2 or more coronary stents deployed in 2 or more coronary segments, or a bifurcation lesion requiring angioplasty and/or stenting in both the main artery and the side branch;* and
- 92945 (92X02): *Percutaneous transluminal revascularization of chronic total occlusion, single coronary artery, coronary artery branch, or coronary artery bypass graft, and/or subtended major coronary artery branches of the bypass graft, any combination of intracoronary stent, atherectomy and angioplasty; combined antegrade and retrograde approaches.*

For CY 2026, we proposed to assign both of these procedures to APC 5193 (Level 3 Endovascular Procedures) and a status indicator (SI) of 'J1' with a proposed payment of $11,873.70.

We note that at the August 25, 2025, HOP Panel Meeting, a presentation was made requesting the APC reassignment of CPT codes 92930 (92X01) and 92945 (92X02). Based on the information presented at the meeting, the HOP Panel recommended that we reassign both CPT codes 92930 and 92945 from APC 5193 (Level 3 Endovascular Procedures) to APC 5194 (Level 4 Endovascular Procedures).

We received public comments on this proposal. The following is a summary of the comments we received and our responses.

Comment: Commenters requested that CMS reassign CPT codes 92930 and 92945 to APC 5194 (Level 4 Endovascular Procedures) to better reflect the increased complexity of these procedures and resource utilization.

The commenters noted that while CMS crosswalked these codes to the straightforward versions of these procedures, the new codes include additional procedural work and resources that warrant a higher APC assignment. They note that CPT code 92930 includes 2 or more lesions with 2 or more stents deployed in 2 or more coronary segments versus the crosswalk code CPT code 92928 (*Percutaneous transcatheter placement of intracoronary stent(s), with coronary angioplasty when performed; single major coronary artery or branch*) which only refers to a single coronary artery or branch.

Commenters also pointed to the multiple procedural approaches (antegrade and retrograde) with CPT code 92945, whereas the crosswalk CPT code 92943 (*Percutaneous transluminal revascularization of chronic total occlusion, coronary artery, coronary artery branch, or coronary artery bypass graft, any combination of intracoronary stent, atherectomy and angioplasty; single vessel*) is only a single approach (antegrade).

A commenter suggested using C9607 (*Percutaneous transluminal revascularization of chronic total occlusion, coronary artery, coronary artery branch, or coronary artery bypass graft, any combination of drug-eluting intracoronary stent, atherectomy and angioplasty; single vessel*) as a crosswalk code for CPT code 92945. Commenters urged CMS to not undervalue these services from the outset and that CMS should reassign these codes to APC 5194 (Level 4 Endovascular Procedures and monitor the claims data to ensure that these codes are assigned to an appropriate APC based on clinical and resource homogeneity.

Response: After review of the public comments and input from our Medical Officers, we agree with the commenters that CPT code 92930 is more complex and utilizes more resources (that is, additional stents) than its crosswalk code. However, we disagree with commenters that more resources are used with CPT 92945. As we do every year, we will monitor the claims data and reevaluate the APC assignments for these codes in the next rulemaking cycle to determine if a more appropriate APC assignment is warranted.

In summary, after consideration of the public comments we received, input from our Medical Officers, and the HOP Panel recommendation, we are finalizing the APC and status indicators for CPT codes 92930 and 92945 with modification. Specifically, we are assigning CPT 92930 to APC 5194 and continuing to assign CPT 92945 to APC 5193.

The final CY 2026 payment rates for these codes can be found in Addendum B to this final rule with comment period. In addition, we refer readers to

Addendum D1 to this final rule with comment period for the SI definitions for all codes reported under the OPPS. Addenda B and D1 are available via the internet on the CMS website.

Refer to Table 92 for code descriptor, APC assignment and status indicator assignments for CPT codes 92930 and 92945 for CY 2026.

TABLE 92: PROPOSED AND FINAL CY 2026 APC AND STATUS INDICATOR ASSIGNMENTS FOR CPT CODES 92930 AND 92945

CPT Code	Long Descriptor	Proposed CY 2026 SI	Proposed CY 2026 APC	Final CY 2026 SI	Final CY 2026 APC
92930	Percutaneous transcatheter placement of intracoronary stent(s), with coronary angioplasty when performed, single major coronary artery and/or its branch(es); 2 or more distinct coronary lesions with 2 or more coronary stents deployed in 2 or more coronary segments, or a bifurcation lesion requiring angioplasty and/or stenting in both the main artery and the side branch	J1	5193	J1	5194
92945	Percutaneous transluminal revascularization of chronic total occlusion, single coronary artery, coronary artery branch, or coronary artery bypass graft, and/or subtended major coronary artery branches of the bypass graft, any combination of intracoronary stent, atherectomy and angioplasty; combined antegrade and retrograde approaches	J1	5193	J1	5193

66. Lower Extremity Revascularization, CPT Codes 37254 Through 37299 (APCs 5192, 5193, and 5194)

For CY 2026, the CPT Editorial Panel deleted 16 CPT codes that described lower extremity revascularization and replaced them with 46 new codes. The new codes establish an additional peripheral vessel territory as well as being more granular in describing the procedures. The 16 revascularization codes will be deleted December 31, 2025, and replaced with the new CPT codes effective January 1, 2026.

The deleted revascularization CPT codes are listed in Table 93, along with their current APC and status indicator assignments. Table 94 lists the new revascularization CPT code (along with its placeholder), the long descriptor, status indicator, APC assignment, and the crosswalk code that was used to determine the proposed APC assignment.

BILLING CODE 4120–01–P

TABLE 93: LOWER EXTREMITY REVASCULARIZATION CPT CODES THAT WILL BE DELETED EFFECTIVE DECEMBER 31, 2025

CPT Code	Long Descriptor	CY 2025 OPPS SI	CY 2025 OPPS APC
37220	Revascularization, endovascular, open or percutaneous, iliac artery, unilateral, initial vessel; with transluminal angioplasty	J1	5192

BILLING CODE 4120–01–C

We received public comments on these proposals. The following is a summary of the comments we received and our responses.

Comment: Commenters were supportive that CMS used the corresponding codes that are being deleted as crosswalks for the new codes, noting that we have extensive claims history for the codes that are being deleted, and this approach provides payment stability.

A commenter requested that CMS reassign CPT codes 37263, 37265, and 37269 to APCs 5193, 5194, and 5194, respectively because of the complexity of these codes and the additional resources used during these procedures.

Several of the commenters had comments related to complexity adjustments and device offset percentages involving these new codes. We refer the readers to the applicable sections in this final rule with comment period for responses to those comments.

Response: We reviewed the commenter's request to reassign CPT codes 37263, 37265, and 37269 to APCs 5193, 5194, and 5194 respectively. After review and discussion with our CMS Medical Officers, we believe that we assigned these codes to appropriate APCs utilizing the predecessor codes as crosswalks.

In summary, after consideration of the public comments we received, we are finalizing our proposals without modification, to assign CPT codes 37254 through 37299 to the APCs and status indicators noted in Table 94. The final CY 2026 payment rates for these codes can be found in Addendum B to this final rule with comment period. In addition, we refer readers to Addendum D1 to this final rule with comment period for the SI definitions for all codes reported under the OPPS. Addenda B and D1 are available via the internet on the CMS website.

67. Percutaneous Transcatheter Therapeutic Drug Delivery (CPT Code 0913T)

The CPT Editorial Panel created CPT code 0913T (*Percutaneous transcatheter therapeutic drug delivery by intracoronary drug-delivery balloon (e.g., drug-coated, drug-eluting), including mechanical dilation by nondrug-delivery balloon angioplasty, endoluminal imaging using intravascular ultrasound (IVUS) or optical coherence tomography (OCT) when performed, imaging supervision, interpretation, and report, single major coronary artery or branch*) effective January 1, 2025. For CY 2026, we proposed to assign CPT code 0913T to APC 5192 (Level 2 Endovascular Procedures) based on the crosswalk code CPT 92920 (Percutaneous transluminal coronary angioplasty; single major coronary artery or branch) which is assigned to APC 5192 (Level 2 Endovascular Procedures) and a status indicator of ''J1'' (Hospital Part B Services Paid through a Comprehensive APC; Paid under OPPS).

For the CY 2026 OPPS/ASC proposed rule, the OPPS payment rates were proposed based on available CY 2024 claims data. Because CPT code 0913T became effective January 1, 2025, we have no claims for ratesetting. We also note that the device associated with this procedure (AGENT™ Paclitaxel-Coated Balloon Catheter) received device pass-through status effective January 1, 2025 (89 FR 91434 through 91439).

We received public comments on these proposals. The following is a summary of the comments we received and our responses.

Comment: Commenters requested that CMS reassign CPT code 0913T to APC 5193 (Level 3 Endovascular Procedures). Commenters stated that CPT code 0913T was more clinically coherent with procedures assigned to Level 3 Endovascular Procedures than Level 2 Endovascular Procedures. To support their requested APC changes, commenters suggested that CMS consider crosswalking CPT code 0913T to HCPCS C9600 (Percutaneous transcatheter placement of drug eluting intracoronary stent(s), with coronary angioplasty when performed; single major coronary artery or branch). Commenters stated that both services are performed in addition to angioplasty, suggesting that both drug-coated balloon and stent placement serve a separate and distinct purpose, as compared to coronary angioplasty alone. Commenters also provided an analysis of 294 single frequency claims and indicated that the geometric mean cost of those claims was $11,000. Moreover, commenters stated that assignment of CPT code 0913T to APC 5192 would pose a two times rule violation. In addition to the APC reassignment request, commenters also requested a complexity adjustment for CPT code 0913T and procedure code 93459.

Response: We note that APC 5192 does not currently have a two times rule violation in the final rule data. In addition, CPT code 0913T does not meet the requirements for cost significance for 2 times rule violation purposes, under the requirements described in section III.B.2. of this final rule with comment period. After consideration of the public comments, additional review of the procedures, and input from our CMS Medical Officers, we believe that the resource costs of CPT code 0913T is more aligned with the procedures in APC 5193, which includes HCPCS code C9600 (Percutaneous transcatheter placement of drug eluting intracoronary stent(s), with coronary angioplasty when performed; single major coronary artery or branch).

We remind hospitals that we review, on an annual basis, the APC assignments for all items and services paid under the OPPS and we will continue to monitor the claims data for APC 5193 as they become available. Additionally, we refer readers to XIII.C. of this final rule with comment period for a discussion of the complexity adjustment policies.

In summary, after consideration of the public comments we received, we are finalizing our proposal with modification and reassigning CPT code 0913T to APC Level 5193. The final CY 2026 payment rates for these codes can be found in Addendum B to this final rule with comment period. In addition, we refer readers to Addendum D1 to this final rule with comment period for the status indicator definitions for all codes reported under the OPPS.

Addenda B and D1 are available via the internet on the CMS website.

Refer to Table 95 for code descriptors, APC assignments and status indicator assignments for CPT code 0913T.

TABLE 95: FINAL CY 2026 APC AND STATUS INDICATOR ASSIGNMENTS FOR CPT CODE 0913T

CPT Code	Long Descriptor	Final CY 2026 OPPS SI	Final CY 2026 OPPS APC
0913T	Computed tomographic angiography (CTA), head and neck, with contrast material(s), including noncontrast images, when performed, and image postprocessing	J1	5193

68. APC Specific Comments That Support the Proposed APC Assignment

Each year, in accordance with section 1833(t)(9)(A) of the Act, we review and revise the services within each APC group and the APC assignments under the OPPS. As a result of our annual review of the services and the APC assignments, we may reassign some services to another APC or maintain the current APC assignment.

We received public comments on this proposal. The following is a summary of the comments we received and our responses.

Comment: Commenters supported the proposed CY 2026 assignments for various HCPCS and CPT codes and requested that CMS finalize the payment assignments for CY 2026 as proposed.

Response: We thank the commenters for their input.

Therefore, for CY 2026, we are finalizing without modification the APCs and status indicators for the CPT codes listed in Table 96. The final CY 2026 payment rates for the codes listed below can be found in Addendum B to this final rule with comment period. In addition, we refer readers to Addendum D1 to this final rule with comment period for all codes reported under the OPPS. Addenda B and D1 are available via the internet on the CMS website.

BILLING CODE 4120–01–P

TABLE 96: FINAL CY 2026 APC AND STATUS INDICATOR ASSIGNMENTS FOR VARIOUS CPT AND HCPCS CODES

HCPCS / CPT Code	Long Descriptor	Final CY 2026 SI	Final CY 2026 APC
C9757	Laminotomy (hemilaminectomy), with decompression of nerve root(s), including partial facetectomy, foraminotomy and excision of herniated intervertebral disc, and repair of annular defect with implantation of bone anchored annular closure device, including annular defect measurement, alignment and sizing assessment, and image guidance; 1 interspace, lumbar	J1	5115
C9781	Arthroscopy, shoulder, surgical; with implantation of subacromial spacer (e.g., balloon), includes debridement (e.g., limited or extensive), subacromial decompression, acromioplasty, and biceps tenodesis when performed	J1	5115
0962T	Assistive algorithmic analysis of acoustic and electrocardiogram recording for detection of cardiac dysfunction (eg, reduced ejection fraction, cardiac murmurs, atrial fibrillation), with review and interpretation by a physician or other qualified health care professional	S	5734
66989	Extracapsular cataract removal with insertion of intraocular lens prosthesis (1-stage procedure), manual or mechanical technique (eg, irrigation and aspiration or phacoemulsification), complex, requiring devices or techniques not generally used in routine cataract surgery (eg, iris expansion device, suture support for intraocular lens, or primary posterior capsulorrhexis) or performed on patients in the amblyogenic developmental stage; with insertion of intraocular (eg, trabecular meshwork, supraciliary, suprachoroidal) anterior segment aqueous drainage device, without extraocular reservoir, internal approach, one or more	J1	5493
66991	Extracapsular cataract removal with insertion of intraocular lens prosthesis (1 stage procedure), manual or mechanical technique (eg, irrigation and aspiration or phacoemulsification); with insertion of intraocular (eg, trabecular meshwork, supraciliary, suprachoroidal) anterior segment aqueous drainage device, without extraocular reservoir, internal approach, one or more	J1	5493
0671T	Insertion of anterior segment aqueous drainage device into the trabecular meshwork, without external reservoir, and without concomitant cataract removal, one or more	J1	5493
92229	Imaging of retina for detection or monitoring of disease; point-of-care autonomous analysis and report, unilateral or bilateral	S	5733
0660T	Implantation of anterior segment intraocular nonbiodegradable drug-eluting system, internal approach	J1	5492
0661T	Removal and reimplantation of anterior segment intraocular nonbiodegradable drug-eluting implant	J1	5492
93923	Complete bilateral noninvasive physiologic studies of upper or lower extremity arteries, 3 or more levels (eg, for lower extremity: ankle/brachial indices at distal posterior tibial and anterior tibial/dorsalis pedis arteries plus segmental blood pressure measurements with bidirectional Doppler waveform recording and analysis, at 3 or more levels, or ankle/brachial indices at distal posterior tibial and anterior tibial/dorsalis pedis arteries plus segmental volume	S	5721

HCPCS / CPT Code	Long Descriptor	Final CY 2026 SI	Final CY 2026 APC
	plethysmography at 3 or more levels, or ankle/brachial indices at distal posterior tibial and anterior tibial/dorsalis pedis arteries plus segmental transcutaneous oxygen tension measurements at 3 or more levels), or single level study with provocative functional maneuvers (eg, measurements with postural provocative tests, or measurements with reactive hyperemia)		
93924	Complete bilateral noninvasive physiologic studies of upper or lower extremity arteries, 3 or more levels (eg, for lower extremity: ankle/brachial indices at distal posterior tibial and anterior tibial/dorsalis pedis arteries plus segmental blood pressure measurements with bidirectional Doppler waveform recording and analysis, at 3 or more levels, or ankle/brachial indices at distal posterior tibial and anterior tibial/dorsalis pedis arteries plus segmental volume plethysmography at 3 or more levels, or ankle/brachial indices at distal posterior tibial and anterior tibial/dorsalis pedis arteries plus segmental transcutaneous oxygen tension measurements at 3 or more levels), or single level study with provocative functional maneuvers (eg, measurements with postural provocative tests, or measurements with reactive hyperemia)	S	5721
21243	Arthroplasty, temporomandibular joint, with prosthetic joint replacement	J1	5117

BILLING CODE 4120–01–C

69. Dialysis Related Services and Technologies

a. Dialysis-Related Amyloidosis (DRA) Treatment With Lixelle® Apheresis Columns

LIXELLE® β2-microglobulin Apheresis Column is indicated for use in the treatment of dialysis-related amyloidosis (DRA), a disease that affects people with end-stage renal disease (ESRD). DRA is a metabolic disorder from the failure of the kidney to filter and remove β2-microglobulin, typically from chronic hemodialysis (typically 5 years or longer). The LIXELLE® device is used in an apheresis procedure that selectively removes β2-microglobulin from circulating blood and is used in accordance with a physician prescription in conjunction with hemodialysis. It is intended to be used at each hemodialysis session (that is, frequency of treatment is expected to be 3 times per week). In March 2015, FDA approved LIXELLE® as a Class III Humanitarian Use Device (HUD) with an approved Humanitarian Device Exemption (HDE). For CY 2026, there are currently no specific HCPCS or CPT codes that represent the LIXELLE® apheresis service.

We received public comments on this topic. The following is a summary of the comments we received and our responses.

Comment: Several interested parties commented requesting coverage for Lixelle® apheresis columns for treating dialysis-related amyloidosis (DRA). Commenters noted that Lixelle® has FDA Humanitarian Use Device approval and has been successfully utilized in Japan.

Response: We recognize the clinical need for effective treatments for dialysis-related amyloidosis and appreciates the information provided regarding Lixelle® apheresis columns. We acknowledge that DRA represents a serious complication for long-term dialysis patients and that treatment options have been limited. We are actively reviewing coverage pathways for innovative treatments that address unmet medical needs in the ESRD population, including those with FDA Humanitarian Use Device designations. We note this complex, ongoing issue is still under consideration and continues to merit a thorough evaluation to ensure an appropriate Medicare benefit category and payment pathway for the service is determined.

b. Dialysis Technologies

We received public comments on this topic. The following is a summary of the comments we received and our responses.

Comment: A commenter supported the payment of dialysis technologies not included in the End Stage Renal Disease (ESRD) bundle through the OPPS. The commenter noted that CMS continues to evaluate potential avenues of payment for treatments using medical devices administered during dialysis procedures that are not considered ''renal dialysis services'' under the Medicare statute and requested that CMS provides payment for such services through the OPPS.

Response: We appreciate the input regarding coverage and payment for medical device technologies used in conjunction with dialysis services. We recognize the importance of ensuring appropriate payment pathways for innovative treatments that may be administered during dialysis but fall outside the definition of a renal dialysis service under § 413.171 and thus are not paid for under the ESRD PPS. We will continue to evaluate the appropriate payment mechanisms for such technologies for future rulemaking.

c. Open Surgical Fistula Creation

CPT code 36821 *(Arteriovenous anastomosis, open; direct, any site (e.g., Cimino type) (separate procedure)* describes an open surgical fistula creation for hemodialysis procedures. CPT code 36821 is currently assigned to APC 5183 (Level 3 Vascular Procedures) with a proposed payment of around $3,254, and a status indicator of 'J1' (Hospital Part B Services Paid Through a Comprehensive APC; Paid under OPPS).

We received public comments on this proposal. The following is a summary of the comments we received and our responses.

Comment: A commenter expressed concern about payment disparities between traditional surgical arteriovenous fistula (AVF) creation and endovascular procedures. The commenter noted that ASC payment for endovascular creation can be substantially higher than traditional fistula creation, despite the benefits that surgical AVFs may offer to both patients and providers, particularly the greater versatility that surgical AVFs can offer in placement locations when compared to endovascular AVFs. The commenter expressed concern that low payment may cause skilled surgeons to preferentially choose better-paying procedures and potentially diminish the availability of AVF creation.

Response: We acknowledge the concerns regarding payment disparities between surgical and endovascular fistula creation procedures. We recognize that both approaches serve important clinical roles in vascular access for dialysis patients. We will continue to evaluate payment rates for these procedures to ensure appropriate payment that reflects the clinical value and resource costs associated with each approach.

d. Peritoneal Dialysis (PD) Catheter Placement

There are a number of CPT codes that describe placing a catheter for peritoneal dialysis. These codes and their payment assignments include the following:

- 49324—*Laparoscopy, surgical; with insertion of tunneled intraperitoneal catheter;* assigned to APC 5361 (Level 1 Laparoscopy and Related Services) and status indicator 'J1' (Hospital Part B Services Paid Through a Comprehensive APC; Paid under OPPS);
- 49418—*Insertion of tunneled intraperitoneal catheter (e.g., dialysis, intraperitoneal chemotherapy instillation, management of ascites), complete procedure, including imaging guidance, catheter placement, contrast injection when performed, and radiological supervision and interpretation, percutaneous;* assigned to APC 5341 (Level 1 Abdominal/Peritoneal/Biliary and Related Procedures) and status indicator 'J1' (Hospital Part B Services Paid Through a Comprehensive APC; Paid under OPPS); and
- 49421—*Insertion of tunneled intraperitoneal catheter for dialysis, open;* assigned to APC 5341 (Level 1 Abdominal/Peritoneal/Biliary and Related Procedures) and status indicator 'J1' (Hospital Part B Services Paid Through a Comprehensive APC; Paid under OPPS).

For CY 2026, we proposed to continue to assign these codes to their current payment assignments.

We received public comments on this proposal. The following is a summary of the comments we received and our responses.

Comment: A commenter expressed concern that current CMS payment for peritoneal dialysis (PD) catheter placement may have created a disincentive for performing the procedure. The commenter specifically noted that low payment for PD catheter placement relative to vascular access procedures may create barriers to patients receiving more convenient home-based treatment. The commenter requested that CMS equalize payment between PD catheter procedures and vascular access procedures to avoid possible disincentives to home treatment and provide patients with additional quality care options.

Response: We support policies that facilitate appropriate home-based dialysis care when clinically appropriate. We recognize the importance of ensuring that payment policies do not inadvertently create barriers to home dialysis modalities, including peritoneal dialysis. We will review the current payment rates for PD catheter placement procedures and consider any adjustments that better align with the clinical value and resource requirements of these services for future notice-and-comment rulemaking.

70. Mobile Stroke Units

Mobile stroke units (MSU) are specialized ambulances equipped with various skilled healthcare personnel, specialized equipment, including imaging capability to diagnose and treat acute stroke in the prehospital setting.[27]

[27] See *https://www.ahajournals.org/doi/10.1161/STROKEAHA.121.037376.*

We received public comments on this topic. The following is a summary of the comments we received and our responses.

Comment: A commenter requested that MSU services be reimbursed as hospital outpatient services rather than ambulance transport services. The commenter noted that the current Ambulance Fee Schedule (AFS) payment does not cover the cost of CT scans and other essential components of an MSU, leading to financial challenges for MSU operators. The commenter cited clinical evidence pointing to improved outcomes associated with the use of MSUs.

Response: We appreciate the detailed comment regarding MSU payment challenges. We appreciate the thoughtful recommendations and will consider them for future rulemaking. We note that MSUs are currently paid under the AFS.

F. Comment Solicitation on Payment Policy for Software as a Service (SaaS)

In recent years, there have been rapid developments in the use of software-based technologies with new functionalities, including artificial intelligence, to support clinical decision-making in the outpatient and physician office settings. Medicare refers to these software-based technologies as software as a service (SaaS). Prior to CY 2018, SaaS procedures were considered supportive or ancillary services, and therefore, payment for the SaaS was packaged into the payment for the underlying clinical service. For example, payment for image processing software that visually enhances an image in an existing MRI, would be packaged into the payment for the MRI service. In recent years, CMS has paid separately for SaaS procedures under the OPPS through New Technology APCs, which are cost bands that allow us to provide appropriate and consistent payment for designated new procedures that are not yet reflected in our claims data, and various clinical APCs based on clinical and resource similarity to existing services, including Imaging APCs and Diagnostic Tests and Related Services APCs. We currently do not have a payment methodology specifically for SaaS, and as these technologies have continued to evolve and diversify, some interested parties have stated that the lack of a consistent payment policy for SaaS can be an impediment to patient access when these services are otherwise approved by the FDA. Interested parties have requested that CMS consider development of a payment policy for these services that is stable and

consistent across settings of care, payment systems, and types of SaaS.

In the CY 2026 OPPS/ASC proposed rule, we welcomed public comment as we consider how to appropriately pay for these services, including any applicable lessons or best practices from risk-bearing payment arrangements, how we can determine that Medicare payments for SaaS truly reflect the value of the technologies to medical practice, and how to ensure that any payment policies on this topic demonstrate fiscal responsibility and good stewardship by promoting high-value, cost-effective care. For pricing new technologies where we do not have substantive supporting data, there are ambiguities regarding the service costs for purposes of setting a payment rate. For example, we have observed wide variations in the purported costs of clinically similar SaaS technologies. The various costs that manufacturers consider when pricing their technologies, including research and development as well as software maintenance, are often not publicly verifiable. It is also unclear to what extent Medicare should pay for the research and development costs of SaaS that could be frequently used by non-Medicare beneficiaries in hospital outpatient departments and ambulatory surgical center settings. Additionally, due to the novel and evolving nature of these technologies, there are rarely existing medical items or services that can be utilized for comparison purposes to determine clinical and resource similarity. Finally, while there has been a rapid increase in the development and coding of these services in recent years, there is a very limited amount of Medicare claims data for these services.

Given these issues and our interest in developing payment policies that seek to reflect the underlying value of a service or technology to the practice of medicine, we requested public comment on future SaaS payment ideas, including:

- What factors could Medicare consider when setting payment rates for SaaS?
- What APCs, existing or new, should we use to pay for SaaS?
- How should we assess the costs of SaaS, and how can we account for hospital acquisition costs?
- What cost or claims data should be used to establish the payment rates for the services?
- Why are the geometric mean costs, as provided in our claims data, for SaaS currently assigned to APCs (both clinical and New Technology APCs) consistently lower than the manufacturers' purported costs of the technologies?
- Is there an alternative data source outside of the limited Medicare claims data currently available and hospital invoices provided by manufacturers, which may not fully depict total hospital acquisition costs, that can accurately reflect the costs of the SaaS?
- What kinds of efficiencies, if any, would SaaS provide for services performed in hospital outpatient departments and ambulatory surgical centers?
- In the context of setting Medicare payment rates, how can CMS best reflect the quality and efficacy of SaaS technologies?

We welcomed input from interested parties on these questions as well as any additional suggestions that would enhance our ability to provide accurate and consistent payment for SaaS procedures. Finally, we noted that there is a similar comment solicitation on a payment policy for SaaS under the Physician Fee Schedule, and directed readers to the CY 2026 PFS proposed rule to provide comments.

We received public comments on this topic. The following is a summary of the comments we received and our responses.

Comment: Several commenters requested that CMS more explicitly define the technologies we would consider to be SaaS. Some commenters suggested that CMS use an alternative term to refer to these technologies, such as ''Software as a Medical Device'' in conformance with FDA definitions, or ''clinical decision support tools.'' Some commenters provided suggestions on how CMS should categorize these types of services in terms of payment. Suggestions included classifying the technologies by the type of solution they provide, such as diagnostic, therapeutic, augmentative, patient-facing, operational. Commenters encouraged CMS to work with interested parties to establish definitions to help clarify which technologies are payable, while maintaining flexibility to adopt definitions as technologies evolve.

Generally, commenters supported a dedicated payment policy for innovative technologies. Commenters requested that CMS create an evidence-based, flexible framework that encourages the use and innovation of SaaS while maintaining fair and adequate payment for the services in which they are incorporated. Commenters offered ideas for potential payment policies. For example, most commenters recommended that CMS assign all SaaS to New Technology APCs for a certain amount of time, usually between 3 to 5 years, to allow for CMS to gather sufficient claims data upon which to make an appropriate clinical APC assignment. Some commenters supported and referenced the payment pathway outlined in *The Health Tech Investment Act (S. 1399).* Another suggestion was for CMS to treat SaaS technologies as ancillary items and package payment with the related primary services as long as patient access was not adversely affected. In general, commenters encouraged CMS to adopt a payment approach that balances innovation, patient access, and value to the Medicare program.

Many commenters urged CMS to exercise caution and consider several factors in creating a payment methodology specifically for SaaS. Several commenters explained that costs for these technologies are difficult to determine. For example, some commenters explained the different variations in pricing models for SaaS, noting that some services are invoiced as a subscription or per-click fee as opposed to a one-time purchase of software or equipment. Commenters also stated that appropriately accounting for research and development costs in Medicare payments would be challenging. Many commenters addressed why they believe even current Medicare claims data may be unreliable for setting payment rates for SaaS, including that hospitals may be reporting various revenue center codes with different cost-to-charge ratios. To address the lack of price transparency across vendors and practice types, and to collect real-world cost data, a commenter encouraged CMS to work with the Congress to establish authority to incentivize standardized vendor disclosures, stratified by practice or facility size, setting, and geography. Other commenters suggested that CMS consider creating new revenue codes to facilitate more accurate hospital cost reporting for AI-based services. Others requested that CMS establish a unique cost center for AI-based diagnostic and decision-support services within the cost reporting structure to enable the collection of accurate, disaggregated cost and charge data specific to these technologies. Many commenters requested detailed guidance regarding charging and cost reporting practices for these services given the various pricing models available.

Some commenters were concerned about the potential for costs to increase if CMS were to finalize a new payment policy specific to SaaS. A commenter explained that providing separate payment for SaaS items under the OPPS, rather than packaging payment for SaaS with the related primary service for which it is used, would not

provide any downward pricing pressures on SaaS developers to provide value to the Medicare program. Commenters urged that, if not carefully designed, such a policy for SaaS could create significant financial risk, administrative burden, and access issues, without delivering clear clinical value. To that end, some commenters suggested CMS package payment when tools are integral to a service or pursue value-based payment models and risk-based contracts that reward outcomes and efficient care delivery.

Regarding coding, some commenters believe CMS should develop broad HCPCS codes to describe multiple SaaS technologies. Commenters also encouraged CMS to pursue future code development for SaaS and valuation through the American Medical Association CPT/RUC process, which allows for transparency and dialogue with involved interested parties. Commenters also requested new codes for certain SaaS technologies.

Finally, many commenters recommended that CMS adopt a site-neutral payment policy for SaaS across the facility and non-facility settings.

Response: The comments received illustrate the complexity intrinsic to paying for SaaS, and we will proceed with awareness of these challenges. We continue to recognize the need for a payment policy that accounts for the unique and heterogenous characteristics of SaaS, and we remain interested in ensuring that any such payment policy reflects the value provided to Medicare providers and beneficiaries. We intend to take the comments submitted into consideration as we develop our proposals for future rulemaking.

G. Continuation of Payment Policy for Radiation Therapy Services Furnished at Nonexcepted Off-Campus Provider Based Departments (PBDs)

1. Background on Section 603 of the Bipartisan Budget Act of 2015 and the PFS Relativity Adjuster

Section 603 of the Bipartisan Budget Act of 2015 (Pub. L. 114–74) (BBA, 2015) (hereinafter referred to as ''section 603'') amended section 1833(t) of the Act by adding a new clause (v) to paragraph (1)(B) and adding a new paragraph (21). As a general matter, under sections 1833(t)(1)(B)(v) and (t)(21) of the Act, applicable items and services furnished by certain off-campus outpatient departments of a provider on or after January 1, 2017, are not considered covered OPD services as defined under section 1833(t)(1)(B) of the Act for purposes of payment under the OPPS. Instead such items are paid ''under the applicable payment system'' under Medicare Part B if the requirements for such payment are otherwise met. Section 603 amended section 1833(t)(1)(B) of the Act by adding a new clause (v), which excludes from the definition of ''covered OPD services'' applicable items and services (defined in paragraph (21)(A) of the section) that are furnished on or after January 1, 2017, by an off-campus PBD, as defined in paragraph (21)(B) of the section.

In the CY 2017 OPPS/ASC final rule with comment period (81 FR 79699 through 79719), we adopted a number of policies to implement section 603. Broadly, we: (1) defined applicable items and services in accordance with section 1833(t)(21)(A) of the Act for purposes of determining whether such items and services are covered OPD services under section 1833(t)(1)(B)(v) of the Act or whether payment for such items and services will instead be made under the applicable payment system designated under section 1833(t)(21)(C) of the Act; (2) defined off-campus PBD for purposes of sections 1833(t)(1)(B)(v) and (t)(21) of the Act; and (3) established policies for payment for applicable items and services furnished by an off-campus PBD (nonexcepted items and services) under section 1833(t)(21)(C) of the Act. To do so, we finalized policies that define whether certain items and services furnished by a given off-campus PBD may be considered excepted and, thus, continue to be paid under the OPPS; established the requirements for the off-campus PBDs to maintain excepted status (both for the excepted off-campus PBDs and for the items and services furnished by such excepted off-campus PBDs); and described the applicable payment system for nonexcepted items and services (generally, the PFS).

To effectuate payment for nonexcepted items and services, in the CY 2017 interim final rule with comment period (81 FR 79720 through 79729), we established a new set of payment rates under the PFS that reflected the relative resource costs of furnishing the technical component of a broad range of services to be paid under the PFS specific to the nonexcepted off-campus PBDs of a hospital. Specifically, we established a PFS Relativity Adjuster that is applied to the OPPS rate for the billed nonexcepted items and services furnished in a nonexcepted off-campus PBD in order to calculate payment rates under the PFS. The PFS Relativity Adjuster reflects the estimated overall difference between the payment that would otherwise be made to a hospital under the OPPS for the nonexcepted items and services furnished in nonexcepted off-campus PBDs and the resource-based payment under the PFS for the technical aspect of those services with reference to the difference between the facility and nonfacility (office) rates and policies under the PFS. Nonexcepted items and services furnished by nonexcepted off-campus PBDs are generally paid under the PFS at the applicable OPPS payment rate adjusted by the PFS Relativity Adjuster of 40 percent (that is, 60 percent less than the OPPS rate) (82 FR 53030).

In the CY 2017 OPPS/ASC final rule with comment period (81 FR 79719 and 79725), we created modifier ''PN'' to collect data for purposes of implementing section 603 but also to trigger payment under the newly adopted PFS-equivalent rates for nonexcepted items and services. Nonexcepted off-campus PBDs bill for nonexcepted items and services on the institutional claim utilizing modifier ''PN'' to indicate that an item or service is a nonexcepted item or service.

For a full discussion of our initial implementation of section 603, we refer readers to the CY 2017 OPPS/ASC final rule with comment period (81 FR 79699 through 79719) and the interim final rule with comment period (79720 through 79729). For a detailed discussion of the current PFS Relativity Adjuster related to payments under section 603, we refer readers to the CY 2018 OPPS/ASC final rule with comment period (82 FR 52356 through 52637) and the CY 2019 PFS final rule with comment period (82 FR 59505 through 59513).

2. Payment for Radiation Therapy Services Furnished at Nonexcepted Off-Campus PBDs

The PFS Relativity Adjuster is not applied to radiation therapy services (radiation treatment delivery and related imaging guidance services) furnished by nonexcepted off-campus PBDs. Due to section 1848(c)(2)(K) of the Act, which required maintenance of the CY 2016 coding and payment inputs for these services for CY 2017 and CY 2018 under the PFS, when the section 603 requirements were implemented in the CY 2017 final OPPS rule, we instructed nonexcepted off-campus PBDs to bill the PFS G-codes for these services. As we explained in that rule:

''. . . [S]everal radiation treatment delivery and imaging guidance services also are reported using different codes under the MPFS and the OPPS. CMS established HCPCS Level II G-codes to describe radiation treatment delivery services when furnished in the physician office setting (79 FR 67666

through 67667). However, these HCPCS G-codes are not recognized under the OPPS; rather, CPT codes are used to describe these services when furnished in the HOPD. Both sets of codes were implemented for CY 2015 and were maintained for CY 2016. Under the MPFS, there is a particular statutory provision under section 1848(c)(2)(K) of the Act that requires maintenance of the CY 2016 coding and payment inputs for these services for CY 2017 and CY 2018. Accordingly, the finalized CY 2017 MPFS rates for these services were calculated based on the maintenance of the CY 2016 coding payment inputs. On that basis, we are establishing payment amounts for nonexcepted items and services consistent with the payments that would be made to other facilities under the MPFS. That is, an off-campus PBDs submitting claims for nonexcepted items and services will bill the HCPCS G-codes established under the MPFS to describe radiation treatment delivery procedures. However, the off-campus PBD must append modifier ''PN'' to each applicable claim line for nonexcepted items and services. The payment amount for these services will be set to reflect the technical component rate for the code under the MPFS.'' (81 FR 79726).''

As discussed in the CY 2026 Physician Fee Schedule (PFS) final rule, we are finalizing our proposal to delete radiation therapy G-codes (G6001 through G6017) that describe imaging guidance for radiation treatment (G6001, G6002, G6017) and radiation treatment delivery (G6003–G6015) because CPT codes 77402, 77407, and 77412 have been revised and may be used to report these services instead. See Table 97 for the long descriptors of the G codes that we are deleting effective January 1, 2026 and Table 98 for the current and revised long descriptors for CPT codes 77402, 77407, and 77412. The final CY 2026 payment rates for the radiation treatment delivery codes can be found in Addendum B to this final rule via the internet on the CMS website.

As we noted in the CY 2026 OPPS/ASC proposed rule, nonexcepted off-campus PBDs currently use the above referenced G codes to report radiation therapy services and, were we to finalize our proposal to delete them, they would no longer be available after December 31, 2025. To continue paying the PFS-equivalent rate for these services to these departments, we proposed that, effective January 1, 2026, nonexcepted off-campus PBDs would use the revised CPT codes described in the CY 2026 PFS proposed rule. In other words, because the G codes are being eliminated, we proposed that the revised CPT codes be used to preserve the existing policy of paying nonexcepted off-campus PBDs a specific radiation treatment rate, which is the technical component for the code under the Medicare PFS (MPFS). Crosswalk information between the G codes and the revised CPT codes is available under the Downloads section [28] of the CY 2026 PFS proposed rule, under ''CY 2025 Analytic Crosswalk to CY 2026.'' We additionally proposed that nonexcepted off-campus PBDs would continue to append the ''PN'' modifier to each applicable claim line for these services. We emphasized in the CY 2026 OPPS/ASC proposed rule that this was not a new policy but rather a continuation of current policy adjusting for the newly revised CPT codes and the corresponding deletion of the G codes.

BILLING CODE 4120–01–P

[28] *https://www.cms.gov/medicare/payment/fee-schedules/physician/federal-regulation-notices.*

TABLE 97: HCPCS G CODES THAT WILL BE DELETED EFFECTIVE JANUARY 1, 2026

HCPCS Code	Long Descriptor
G6001	Ultrasonic guidance for placement of radiation therapy fields
G6002	Stereoscopic x-ray guidance for localization of target volume for the delivery of radiation therapy
G6003	Radiation treatment delivery, single treatment area, single port or parallel opposed ports, simple blocks or no blocks: up to 5 mev
G6004	Radiation treatment delivery, single treatment area, single port or parallel opposed ports, simple blocks or no blocks: 6-10 mev
G6005	Radiation treatment delivery, single treatment area, single port or parallel opposed ports, simple blocks or no blocks: 11-19 mev
G6006	Radiation treatment delivery, single treatment area, single port or parallel opposed ports, simple blocks or no blocks: 20 mev or greater
G6007	Radiation treatment delivery, 2 separate treatment areas, 3 or more ports on a single treatment area, use of multiple blocks: up to 5 mev
G6008	Radiation treatment delivery, 2 separate treatment areas, 3 or more ports on a single treatment area, use of multiple blocks: 6-10 mev
G6009	Radiation treatment delivery, 2 separate treatment areas, 3 or more ports on a single treatment area, use of multiple blocks: 11-19 mev
G6010	Radiation treatment delivery, 2 separate treatment areas, 3 or more ports on a single treatment area, use of multiple blocks: 20 mev or greater
G6011	Radiation treatment delivery, 3 or more separate treatment areas, custom blocking, tangential ports, wedges, rotational beam, compensators, electron beam; up to 5 mev
G6012	Radiation treatment delivery, 3 or more separate treatment areas, custom blocking, tangential ports, wedges, rotational beam, compensators, electron beam; 6-10 mev
G6013	Radiation treatment delivery,3 or more separate treatment areas, custom blocking, tangential ports, wedges, rotational beam, compensators, electron beam; 11-19 mev
G6014	Radiation treatment delivery, 3 or more separate treatment areas, custom blocking, tangential ports, wedges, rotational beam, compensators, electron beam; 20 mev or greater
G6015	Intensity modulated treatment delivery, single or multiple fields/arcs,via narrow spatially and temporally modulated beams, binary, dynamic mlc, per treatment session
G6016	Compensator-based beam modulation treatment delivery of inverse planned treatment using 3 or more high resolution (milled or cast) compensator, convergent beam modulated fields, per treatment session
G6017	Intra-fraction localization and tracking of target or patient motion during delivery of radiation therapy (eg, 3D positional tracking, gating, 3D surface tracking), each fraction of treatment.

TABLE 98: RADIATION TREATMENT DELIVERY CPT CODES: COMPARISON OF CURRENT DESCRIPTORS AND REVISED DESCRIPTORS EFFECTIVE JANUARY 1, 2026

CPT Code	Current Long Descriptor	Revised Long Descriptor
77402	Radiation treatment delivery, >=1 MeV; simple	Radiation treatment delivery; Level 1 (eg, single electron field, multiple electron fields, or 2D photons), including imaging guidance, when performed
77407	Radiation treatment delivery, >=1 MeV; intermediate	Radiation treatment delivery; Level 2, single isocenter (eg, 3D or IMRT), photons, including imaging guidance, when performed
77412	Radiation treatment delivery, >=1 MeV; complex	Radiation treatment delivery; Level 3, multiple isocenters with photon therapy (eg, 2D, 3D, or IMRT) OR a single isocenter photon therapy (eg, 3D or IMRT) with active motion management, OR total skin electrons, OR mixed electron/photon field(s), including imaging guidance, when performed

BILLING CODE 4120–01–C

We received public comments on this proposal. The following is a summary of the comments we received and our responses.

Comment: A commenter opined that the continuation of the policy was essential to preserve access for patients with cancer who might otherwise face long travel burdens and encouraged CMS to monitor visit utilization rates after implementation to ensure that beneficiaries with multiple chronic conditions do not lose timely access to complex management in outpatient settings.

Response: We thank the commenter for their support.

Comment: A commenter supported the deletion of the G codes and the use of the revised CPT codes by all radiation treatment providers. However, the commenter requested that CMS not apply the PFS Relativity Adjustor to the revised codes when billed by nonexcepted off-campus provider-based departments. The commenter expressed concern that doing so would have an ''untenable impact on payment'' to these departments because, based on the proposed radiation treatment delivery APCs in CY 2026, the reimbursement for IMRT in these locations would fall to $110 per treatment which is well below cost. The commenter contended that it is not logical to use OPPS data to set PFS rates for offices and then reduce those rates by 60 percent. The commenter recommended that, since CMS plans to use OPPS data for developing MPFS Practice Expense Relative Value Units (PE RVUs), CMS should not apply the PFS adjustor to the new radiation treatment codes and simply pay the MPFS PE rates for these services when billed with modifier PN.

Response: We appreciate the commenter's concerns for the application of the PFS Relativity Adjustor to the new radiation treatment codes when billed by nonexcepted off-campus PBDs. We note that, while the off-campus PBD must append modifier ''PN'' to each applicable claim line for the new radiation treatment codes, the payment amount for these services when billed with modifier ''PN'' will be set to reflect the technical component rate for the code under the MPFS. We do not intend for radiation therapy services furnished by nonexcepted off-campus PBDs to be paid any differently than they were paid previously when billed as G codes. We believe that the commenter's concerns for adequate payment to these departments for codes involving IMRT is further addressed by our final APC assignments for CPT codes 77407 and 77412 discussed in section III.E. of this final rule with comment period.

After consideration of the public comments we received, we are finalizing, without modification, our proposal that, effective January 1, 2026, nonexcepted off-campus PBDs use the revised radiation treatment CPT codes described in the CY 2026 PFS proposed rule and append modifier ''PN'' to each applicable claim line for nonexcepted items and services. The payment amount for these services when billed with the ''PN'' modifier will be set to reflect the technical component rate for the code under the MPFS.

IV. OPPS Payment for Devices

A. Pass-Through Payment for Devices

1. Beginning Eligibility Date for Device Pass-Through Status and Quarterly Expiration of Device Pass-Through Payments

a. Background

The intent of transitional device pass-through payment, as implemented at 42 CFR 419.66, is to facilitate access for beneficiaries to the advantages of new and truly innovative devices by allowing for adequate payment for these new devices while the necessary cost data is collected to incorporate the costs for these devices into the procedure APC rate (66 FR 55861). Under section 1833(t)(6)(B)(iii) of the Act, the period for which a device category eligible for transitional pass-through payments under the OPPS can be in effect is at least 2 years but not more than 3 years.

In the CY 2017 OPPS/ASC final rule with comment period, in accordance with section 1833(t)(6)(B)(iii)(II) of the Act, we amended § 419.66(g) to provide that the pass-through eligibility period for a device category begins on the first date on which pass-through payment is made under the OPPS for any medical device described by such category (81 FR 79654). In addition, in the CY 2017 OPPS/ASC final rule with comment period, we finalized a policy to allow for quarterly expiration of pass-through payment status for devices to afford a pass-through payment period that is as close to a full 3 years as possible for all pass-through payment devices (81 FR 79655). We also established a policy to package the costs of the devices that are no longer eligible for pass-through

payments into the costs of the procedures with which the devices are reported in the claims data used to set the payment rates (67 FR 66763).

We refer readers to the CY 2017 OPPS/ASC final rule with comment period (81 FR 79648 through 79661) for a full discussion of the current device pass-through payment policy.[29]

In the CY 2023 OPPS/ASC final rule with comment period, we finalized our policy to publicly post online OPPS device pass-through applications received on or after March 1, 2023, beginning with the issuance of the CY 2025 proposed rule and for each OPPS rulemaking thereafter. We refer readers to the CY 2023 OPPS/ASC final rule with comment period (87 FR 71934 through 71938) for a full discussion of the policy to publicly post OPPS device pass-through applications.

b. Expiration of Transitional Pass-Through Payments for Certain Devices

As stated earlier, section 1833(t)(6)(B)(iii) of the Act requires that, under the OPPS, a category of devices be eligible for transitional pass-through payments for at least 2 years, but not more than 3 years. Currently, there are 20 device categories eligible for pass-through payment. These devices are listed in Table 99, previously published as Table 46 of the CY 2026 OPPS/ASC proposed rule (90 FR 33570 and 33571), where we detail the expiration dates of pass-through payment status for each of the 20 devices currently receiving device pass-through payment.

BILLING CODE 4120–01–P

[29] To apply for OPPS transitional device pass-through status, applicants complete an application that is subject to the Paperwork Reduction Act of 1995 (PRA) (44 U.S.C. 3501 *et seq.*). This information collection (CMS–10052) is currently approved under OMB control number 0938–0857 and has an expiration date of November 30, 2025. The information collection is in the resubmission process. The 60-day FR notice published on August 21, 2025 (90 FR 40831). The 30-day notice will publish at a future date in the **Federal Register** before the information collection is formally submitted to OMB for reapproval.

TABLE 99: DEVICES WITH PASS-THROUGH STATUS EXPIRING IN 2025, IN 2026, IN 2027, OR IN 2028

HCPCS Code	Long Descriptor	Effective Date	Pass-Through Expiration Date
C1826	Generator, neurostimulator (implantable), includes closed feedback loop leads and all implantable components, with rechargeable battery and charging system	01/1/2023	12/31/2025
C1827	Generator, neurostimulator (implantable), non-rechargeable, with implantable stimulation lead and external paired stimulation controller	01/01/2023	12/31/2025
C1747	Endoscope, single-use (*i.e.* disposable), urinary tract, imaging/illumination device (insertable)	01/01/2023	12/31/2025
C1600	Catheter, transluminal intravascular lesion preparation device, bladed, sheathed (insertable)	01/01/2024	12/31/2026
C1601	Endoscope, single-use (*i.e.* disposable), pulmonary, imaging/illumination device (insertable)	01/01/2024	12/31/2026
C1602	Orthopedic/device/drug matrix/absorbable bone void filler, antimicrobial-eluting (implantable)	01/01/2024	12/31/2026
C1603	Retrieval device, insertable, laser (used to retrieve intravascular inferior vena cava filter)	01/01/2024	12/31/2026
C1604	Graft, transmural transvenous arterial bypass (implantable), with all delivery system components	01/01/2024	12/31/2026
C1605	Pacemaker, leadless, dual chamber (right atrial and right ventricular implantable components), rate-responsive, including all necessary components for implantation	07/01/2024	06/30/2027
C1606	Adapter, single-use (*i.e.* disposable), for attaching ultrasound system to upper gastrointestinal endoscope	07/01/2024	06/30/2027
C8000	Support device, extravascular, for arteriovenous fistula (implantable)	10/01/2024	9/30/2027
C1735	Catheter(s), intravascular for renal denervation, radiofrequency, including all single use system components	01/01/2025	12/31/2027
C1736	Catheter(s), intravascular for renal denervation, ultrasound, including all single use system components	01/01/2025	12/31/2027

HCPCS Code	Long Descriptor	Effective Date	Pass-Through Expiration Date
C1737	Joint fusion and fixation device(s), sacroiliac and pelvis, including all system components (implantable)	01/01/2025	12/31/2027
C1738	Powered, single-use (i.e. disposable) endoscopic ultrasound-guided biopsy device	01/01/2025	12/31/2027
C1739	Tissue marker, uniquely detectable and identifiable with probe/sensor, any method (implantable), with delivery system	01/01/2025	12/31/2027
C9610	Catheter, transluminal drug delivery with or without angioplasty, coronary, non-laser (insertable)	01/01/2025	12/31/2027
C1740	Leadless electrode, transmitter, battery (all implantable), for sequential left ventricular pacing	10/01/2025	09/30/2028
C1741	Anchor/screw for bone fixation, absorbable (implantable)	10/01/2025	09/30/2028
C1742	Pressure monitoring system, compartmental intramuscular (implantable), continuous, including all components (e.g., introducer, sensor), excludes mobile (wireless) software application	10/01/2025	09/30/2028

BILLING CODE 4120–01–C

2. New Device Pass-Through Applications for CY 2026

a. Background

Section 1833(t)(6) of the Act provides for pass-through payments for devices, and section 1833(t)(6)(B) of the Act requires CMS to use categories in determining the eligibility of devices for pass-through payments. As part of implementing the statute through regulations, we continue to believe that it is important for hospitals to receive pass-through payments for devices that offer substantial clinical improvement in the treatment of Medicare beneficiaries to facilitate access by beneficiaries to the advantages of the new technology. Conversely, we have noted that the need for additional payments for devices that offer little or no clinical improvement over previously existing devices is less apparent. In such cases, these devices can still be used by hospitals, and hospitals will be paid for them through appropriate APC payment. Moreover, a goal is to target pass-through payments for those devices where cost considerations are most likely to interfere with patient access (66 FR 55852; 67 FR 66782; and 70 FR 68629).

As specified in regulations at § 419.66(b)(1) through (3), to be eligible for transitional pass-through payment under the OPPS, a device must meet the following criteria:

- If required by FDA, the device must have received FDA approval or clearance and FDA marketing authorization (except for a device that has received an FDA investigational device exemption (IDE) and has been classified as a Category B device by FDA), or meet another appropriate FDA exemption; and the pass-through payment application must be submitted within 3 years from the date of the initial FDA marketing authorization, if required, unless there is a documented, verifiable delay in U.S. market availability after FDA marketing authorization is granted, in which case CMS will consider the pass-through payment application if it is submitted within 3 years from the date of market availability;
- The device is determined to be reasonable and necessary for the diagnosis or treatment of an illness or injury or to improve the functioning of a malformed body part, as required by section 1862(a)(1)(A) of the Act; and
- The device is an integral part of the service furnished, is used for one patient only, comes in contact with human tissue, and is surgically implanted or inserted (either permanently or temporarily), or applied in or on a wound or other skin lesion.

In addition, according to § 419.66(b)(4), a device is not eligible to be considered for device pass-through payment if it is any of the following: (1) equipment, an instrument, apparatus, implement, or item of this type for which depreciation and financing expenses are recovered as depreciable assets as defined in Chapter 1 of the Medicare Provider Reimbursement Manual (CMS Pub. 15–1); or (2) a material or supply furnished incident to a service (for example, a suture, customized surgical kit, or clip, other than a radiological site marker).

Separately, we use the following criteria, as set forth under § 419.66(c), to determine whether a new category of pass-through payment devices should be established. The device to be included in the new category must—

- Not be appropriately described by an existing category or by any category previously in effect established for transitional pass-through payments, and was not being paid for as an outpatient service as of December 31, 1996;

• Have an average cost that is not ''insignificant'' relative to the payment amount for the procedure or service with which the device is associated as determined under § 419.66(d) by demonstrating: (1) the estimated average reasonable cost of devices in the category exceeds 25 percent of the applicable APC payment amount for the service related to the category of devices; (2) the estimated average reasonable cost of the devices in the category exceeds the cost of the device-related portion of the APC payment amount for the related service by at least 25 percent; and (3) the difference between the estimated average reasonable cost of the devices in the category and the portion of the APC payment amount for the device exceeds 10 percent of the APC payment amount for the related service (with the exception of brachytherapy and temperature-monitored cryoablation, which are exempt from the cost requirements as specified at § 419.66(c)(3) and (e)); and

• Demonstrate a substantial clinical improvement, that is, substantially improve the diagnosis or treatment of an illness or injury or improve the functioning of a malformed body part compared to the benefits of a device or devices in a previously established category or other available treatment, or, for devices for which pass-through payment status will begin on or after January 1, 2020, as an alternative pathway to demonstrating substantial clinical improvement, a device is part of the FDA's Breakthrough Devices Program and has received marketing authorization for the indication covered by the Breakthrough Device designation.

In the CY 2016 OPPS/ASC final rule with comment period, we changed our device pass-through evaluation and determination process. Device pass-through applications are still submitted to CMS through the quarterly process, but the applications are subject to notice and comment rulemaking in the next applicable OPPS annual rulemaking cycle. Under this process, all applications that are preliminarily approved upon quarterly review will automatically be included in the next applicable OPPS annual rulemaking cycle, while submitters of applications that are not approved upon quarterly review will have the option of being included in the next applicable OPPS annual rulemaking cycle or withdrawing their application from consideration. Under this notice-and-comment process, applicants may submit new evidence, such as clinical trial results published in a peer-reviewed journal or other materials, for consideration during the public comment process for the proposed rule. This process allows those applications that we are able to determine meet all of the criteria for device pass-through payment under the quarterly review process to receive timely pass-through payment status, while still allowing for a transparent, public review process for all applications (80 FR 70417 through 70418).

In the CY 2020 OPPS/ASC final rule with comment period, we finalized an alternative pathway for devices that are granted a Breakthrough Device designation (84 FR 61295) and receive FDA marketing authorization for the indication covered by the Breakthrough Device designation. Under this alternative pathway, devices that are granted an FDA Breakthrough Device designation are not evaluated in terms of the current substantial clinical improvement criterion at § 419.66(c)(2) for the purposes of determining device pass-through payment status, but do need to meet the other requirements for pass-through payment status in our regulation at § 419.66. Devices that are part of the Breakthrough Devices Program, have received FDA marketing authorization for the indication covered by the Breakthrough Devices designation, and meet the other criteria in the regulation can be approved through the quarterly process and announced through that process (81 FR 79655). Proposals regarding these devices and whether pass-through payment status should continue to apply are included in the next applicable OPPS rulemaking cycle. This process promotes timely pass-through payment status for innovative devices, while also recognizing that such devices may not have a sufficient evidence base to demonstrate substantial clinical improvement at the time of FDA marketing authorization.

More details on the requirements for device pass-through payment applications are included on the CMS website in the application form itself at *https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/HospitalOutpatientPPS/passthrough_payment.html*, in the ''Downloads'' section. In addition, CMS is amenable to meeting with applicants or potential applicants to facilitate information sharing to support the evaluation of an OPPS device pass-through payment application or discuss general application criteria, including the substantial clinical improvement criterion.

In accordance with section V.B.9. of this final rule with comment period, skin substitutes with an approved Biologics License Application (BLA) will be considered under transitional drug pass-through payment status and skin substitutes with FDA Premarket approval (PMA) or FDA 510(k) clearance will continue to be evaluated under transitional device pass-through payment status.

b. Applications Received for Device Pass-Through Status for CY 2026

We received eight complete applications by the March 3, 2025, quarterly deadline, which was the last quarterly deadline for applications to be received in time to be included in the CY 2026 OPPS/ASC proposed rule. Of the complete applications, we received one application in the second quarter of 2024, three applications in the third quarter of 2024, one application in the fourth quarter of 2024, and three applications in the first quarter of 2025. One application was withdrawn. Two of the applications were approved for device pass-through payment during the quarterly review process: VasQ, which was preliminarily approved upon quarterly review under the alternative pathway effective October 1, 2024, and the SCOUT MD™ Surgical Guidance System which was preliminarily approved upon quarterly review under the alternative pathway effective January 1, 2025. As previously stated, all applications that are preliminarily approved upon quarterly review will automatically be included in the next applicable OPPS annual rulemaking cycle. Therefore, VasQ and the SCOUT MD™ Surgical Guidance System were discussed in section IV.2.b.1. of the CY 2026 OPPS/ASC proposed rule and within this section.

Applications received for the later deadlines for the remaining 2025 quarters (the quarters beginning June 1, September 1, and December 1 of 2025), if any, will be discussed in the CY 2027 OPPS/ASC proposed rule. We note that the quarterly application process and requirements have not changed because of the addition of rulemaking review. Detailed instructions on submission of a quarterly device pass-through payment application are included on the CMS website at *https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/HospitalOutpatientPPS/Downloads/catapp.pdf*.

Discussions of the applications we received by the March 3, 2025, deadline are included in section IV.2.b.1. of the CY 2026 OPPS/ASC proposed rule and in this section. We do not include in this final rule with comment period the description and discussion of new device category for transitional pass-through payment status applications

which were included in the CY 2026 OPPS/ASC proposed rule that were withdrawn for consideration for the upcoming calendar year. We also do not summarize or respond to public comments received regarding these withdrawn or ineligible applications.

Comment: One commenter opined that all of the nominated devices included in the CY2026 OPPS/ASC proposed rule meet the criteria for device pass-through. Another commenter encouraged CMS to approve or finalize all qualifying applications that meet the statutory criteria, especially those demonstrating clear clinical improvements. This commenter further noted that the substantial clinical improvement criterion should be applied rigorously and that innovations should earn supplemental payment only if they offer a real patient-care advantage, not merely convenience. This commenter commended CMS's careful scrutiny, particularly in regard to the single-use endoscope application, and urged CMS to continue evidence-based evaluations.

Response: We appreciate the commenters' input. We have taken these comments into consideration in our final determination for pass-through status for the nominated devices included in the CY 2026 OPPS/ASC proposed rule.

(1) Alternative Pathway Device Pass-Through Applications

As discussed in the CY 2026 OPPS/ASC proposed rule, we received four device pass-through applications by the March 2025 quarterly application deadline for devices that have received Breakthrough Device designation from FDA and FDA marketing authorization for the indication for which they have a Breakthrough Device designation and, therefore were eligible to apply under the alternative pathway.

(a) aprevo® Cervical ACDF System, aprevo® Cervical ACDF–X System, aprevo® Cervical ACDF–X NO CAM System

Carlsmed, Inc. submitted an application for a new device category for transitional passthrough payment status for the -aprevo® Cervical ACDF system, aprevo® Cervical ACDF–X system, and aprevo® Cervical ACDF–X NO CAM system (herein after collectively referred to as the aprevo® Cervical ACDF System) for CY 2026. Per the applicant, the aprevo® Cervical ACDF System is designed to stabilize the cervical spinal column and facilitate fusion. The applicant further explained that the personalized aprevo® Cervical ACDF System devices incorporate patient-specific features to allow the clinician to tailor the deformity correction to the individual needs of the patient and include an aperture for the packing of bone graft. Per the applicant, the aprevo® Cervical ACDF System includes the following components: (1) aprevo® implant, which includes two implants with slightly different heights for each vertebral level, (2) aprevo® insertion instrument, and (3) for the aprevo® Cervical ACDF–X system only, integrated fixation screws. The applicant further stated that the aprevo® Cervical ACDF–X NO CAM system does not have a part that blocks screws from backing out.

Please refer to the online application posting for the aprevo® Cervical ACDF System, available at *https://mearis.cms.gov/public/publications/device-ptp/DEP250303GJ8LW*.

Comment: The applicant noted that, after FDA authorization, it changed the devices' names from aprevo® Cervical ACDF system and aprevo® Cervical ACDF–X system to aprevo® Cervical ACDF interbody and aprevo® Cervical ACDF–X interbody, respectively.

Response: We appreciate the applicant's clarification. Based on the information available to us, we referred to the nominated technology as the aprevo® Cervical ACDF system, the aprevo® Cervical ACDF–X system, the aprevo® Cervical ACDF–X NO CAM system, and collectively as the aprevo® Cervical ACDF System in the CY 2026 OPPS/ASC proposed rule and will continue to refer to the technology as the aprevo® Cervical ACDF System in this final rule with comment period for clarity and consistency.

Comment: The applicant and a commenter expressed their support for approval of transitional pass-through payment for the aprevo® Cervical ACDF System, stating that they believe the device meets all the transitional pass-through payment criteria. The applicant also asserted that beneficiary access is at risk if CMS payment policies do not reflect the actual cost of providing custom-made, anatomically-designed interbody fusion device technology, like the aprevo® Cervical ACDF System, to more Medicare beneficiaries.

Response: We appreciate the commenters' input and support for the aprevo® Cervical ACDF System application for transitional pass-through payment. We have taken these comments into consideration in our final determination for pass-through status for the aprevo® Cervical ACDF System.

As stated previously, to be eligible for transitional pass-through payment under the OPPS, a device must meet the criteria at § 419.66(b)(1) through (4). With respect to the newness criterion at § 419.66(b)(1), the aprevo® Cervical ACDF System received FDA Breakthrough Device designation effective September 15, 2023, under the name aprevo®-C cervical interbody fusion device. The approved FDA indication for the aprevo® Cervical ACDF System is:

- For use in skeletally mature patients with degenerative cervical conditions including cervical disc degeneration, stenosis, deformity, and/or instability of the cervical spine (C2–T1) at one or more levels. DDD [30] is defined as discogenic pain with degeneration of the disc confirmed by history and radiographic studies. These patients should have had at least six (6) weeks of non-operative treatment. These devices are to be filled with autograft bone and/or allogenic bone graft composed of cancellous, cortical, and/or cortico-cancellous bone. The aprevo®-C cervical interbody fusion devices can be used with supplemental fixation, such as an anterior plate, or as a standalone construct to be used [with the] integrated bone screw fixation.

FDA granted the applicant 510(k) clearance for the aprevo® Cervical ACDF System on November 15, 2024, with separate indications for the aprevo® Cervical ACDF system and the aprevo® Cervical ACDF–X system (with and without CAM).[31] We note that while the indication for the FDA Breakthrough Device designation and the indication for the FDA 510(k) clearance for the aprevo® Cervical ACDF System vary, per FDA, the FDA 510(k) clearance indication is covered by the Breakthrough Device designation. We received the application for a new device category for transitional pass-through payment status for the aprevo® Cervical ACDF System on March 3, 2025, which is within 3 years of the date of the initial FDA marketing authorization.

We stated in the CY 2026 OPPS/ASC proposed rule that it was unclear to us whether the aprevo® Cervical ACDF system and the aprevo® Cervical ACDF–X system (with and without CAM) are different devices such that they should be evaluated separately for OPPS pass-through payment status. We noted that the aprevo® Cervical ACDF–X system

[30] The Medicare Coverage Database defines DDD as degenerative disc disease. In addition, we believe that DDD is commonly referred to as degenerative disk disease in the healthcare industry.

[31] For more information on the aprevo® Cervical ACDF System's indications, we refer readers to the November 15, 2024, FDA 510(k) clearance letter (K242260) *https://www.accessdata.fda.gov/cdrh_docs/pdf24/K242260.pdf*.

(with and without CAM) includes additional components, such as the integrated fixation screws, and has a different indicated use as stated in the November 15, 2024, FDA 510(k) clearance letter (K242260). Specifically, based on the FDA 510(k) clearance indication, we noted that a key difference of the aprevo® Cervical ACDF–X system (with and without CAM)'s interbody implant is that it incorporates integrated screw fixation and may be used as a standalone system for certain indications. We also noted that, for deformity procedures to correct coronal angulation or any use of hyperlordotic correction (≥20°), the aprevo® Cervical ACDF–X system (with and without CAM) must include supplemental fixation such as posterior cervical screw fixation or anterior plating.

We invited public comments on whether the aprevo® Cervical ACDF system and aprevo® Cervical ACDF–X system should be evaluated separately for OPPS pass-through payment status. Separately, we invited public comments on whether the aprevo® Cervical ACDF System meets the newness criterion at § 419.66(b)(1).

Comment: The applicant and a commenter expressed support for evaluating the aprevo® Cervical ACDF system and the aprevo® Cervical ACDF–X system together for pass-through payment status, stating that two configurations are part of the same system and noting that the difference between these two configurations is limited to supplemental fixation requirements. Specifically, the applicant stated that the aprevo® Cervical ACDF system requires supplemental fixation that is not provided in the kit, whereas the aprevo® Cervical ACDF–X system's kit includes interfixation screws. In addition, the applicant noted that the incremental cost of each screw is an additional 1.3 percent of the price of the single-level aprevo® Cervical ACDF system. The applicant claimed that this difference does not justify a separate pass-through category code.

Response: We appreciate the applicant's and commenter's clarification. We agree with the applicant that the aprevo® Cervical ACDF system and the aprevo® Cervical ACDF–X system should not be evaluated separately for transitional pass-through payment status. Therefore, we will review the aprevo® Cervical ACDF system and the aprevo® Cervical ACDF–X system together as the aprevo® Cervical ACDF System.

Comment: The applicant stated it agreed with CMS that the aprevo® Cervical ACDF systems are FDA Breakthrough-designated devices that meet the newness criterion. Further, the applicant stated that it submitted its transitional pass-through payment application for aprevo® Cervical ACDF System on March 3, 2025, which is within 3 years of the FDA marketing authorization date of November 15, 2024.

Response: We appreciate the applicant's input. We received the application for a new device category for transitional pass-through payment status for the aprevo® Cervical ACDF System within 3 years of the date of FDA 510(k) clearance. After consideration of the public comments we received and our review of the application, we have determined that the aprevo® Cervical ACDF System meets the newness criterion at § 419.66(b)(1).

With respect to the eligibility criteria at § 419.66(b)(3), the device must be an integral part of the service furnished, be used for one patient only, come in contact with human tissue, and be surgically inserted or implanted, or applied in or on a wound or other skin lesion. Per the applicant, the aprevo® Cervical ACDF System meets the requirements at § 419.66(b)(3).

With respect to the aprevo® Cervical ACDF System, in the CY 2026 OPPS/ASC proposed rule, we questioned whether the aprevo® insertion instrument, the integrated fixation screws, and/or the CAM components or parts are integral to the service furnished. We noted that, in the CY 2014 OPPS/ASC final rule with comment period (78 FR 75005), we stated that we have interpreted the term ''integral'' to mean that the device is necessary to furnish or deliver the primary procedure with which it is used. For example, a pacemaker is integral to the procedure of implantation of a pacemaker. Given our interpretation of integral, we questioned whether these components and parts of the aprevo® Cervical ACDF System are integral to the service furnished as it remains unclear which of these components and parts are utilized during the primary procedure and we questioned whether some of these components or parts may be purely additive in nature and not necessary to furnish the service. Specifically, we noted that it is unclear whether other available insertion instruments may be used to implant the aprevo® implant, and, for the aprevo® Cervical ACDF–X system, whether any or all of the integrated fixation screws may be replaced with other commercially available screws. In addition, we stated it was unclear whether the CAM is part of the aprevo® implant, part of the integrated fixation screws, or is a separate part altogether. We stated it was also unclear whether the CAM can be removed and replaced by other products, and whether there are any requirements for its utilization. We stated that we were interested in additional information about these components and parts of the aprevo® Cervical ACDF System, including how and when they are used, and whether they can be substituted with other products.

We invited public comments on whether the aprevo® Cervical ACDF System meets the eligibility criterion at § 419.66(b)(3).

Comment: In response to our concerns that all components or parts of the aprevo® Cervical ACDF System may not be integral parts of the service furnished because it is unclear how and when these components or parts are used and whether they can be substituted with other products, the applicant commented that the aprevo® insertion instrument, integrated fixation screws, and the CAM components are all part of the 510(k) cleared aprevo® Cervical ACDF System's kit, are integral to the implant and arthrodesis services furnished, and are not supplies that are incident to the procedure. The applicant stated that the aprevo® insertion instrument is an FDA class II instrument integral to the device systems and that other commercially available inserters are not FDA-authorized for use with or compatible with the aprevo® Cervical ACDF System. The applicant also noted that only the aprevo® insertion instrumentation, cleared by FDA, is authorized to implant the aprevo® Cervical interbody device, and these instruments are not available to be purchased separately for use with other devices. Further, the applicant stated that other commercially available screws are not authorized for use with or compatible with the aprevo® Cervical ACDF System; only the FDA-cleared aprevo® screws are authorized for use with the aprevo® Cervical ACDF–X system, and therefore, the fixation screws are integral to the device systems. The applicant also noted that these screws may not be purchased separately for use with other devices. Additionally, the applicant stated that the CAM is a non-separable, integral component of the FDA-cleared aprevo® Cervical ACDF–X system, cannot be removed from the interbody device, cannot be replaced by other products, and is designed to prevent screw backout. The applicant added that, once the integrated fixation screws have been inserted through the interbody device

and properly placed into the vertebral body, the CAM lock is rotated to cover a portion of the fixation screw's head, which is designed to prevent the screw from backing out. The applicant stated that these items cannot be substituted with other items.

Response: We appreciate the applicant's clarification. Based on the information provided in the comment, we agree with the applicant that all components of the aprevo® Cervical ACDF System, including the aprevo® insertion instrument, integrated fixation screws, and CAM, are integral parts of the service furnished. After consideration of the public comments we received and our review of the application, we have determined that the aprevo® Cervical ACDF System meets the eligibility criterion at § 419.66(b)(3).

With respect to the exclusion criteria at § 419.66(b)(4), a device is not eligible to be considered for pass-through payment if it is any of the following: (1) equipment, an instrument, apparatus, implement, or item of this type for which depreciation and financing expenses are recovered as depreciable assets as defined in Chapter 1 of the Medicare Provider Reimbursement Manual (CMS Pub. 15–1); or (2) a material or supply furnished incident to a service (for example, a suture, customized surgical kit, or clip, other than a radiological site marker). Per the applicant, the aprevo® Cervical ACDF System is (1) not considered equipment, an instrument, apparatus, implement, or item of this type for which depreciation and financing expenses are recovered as depreciable assets, and is (2) not a material or supply furnished incident to a service, and, therefore, is eligible to be considered for pass-through payment.

With respect to the aprevo® Cervical ACDF System, in the CY 2026 OPPS/ASC proposed rule, we questioned whether the aprevo® insertion instrument, the integrated fixation screws, and/or the CAM components or parts may be considered a material or supply furnished incident to the service. Specifically, as discussed previously with respect to criteria at § 419.66(b)(3), we noted that it is unclear whether other available insertion instruments may be used to implant the aprevo® implant and, for the aprevo® Cervical ACDF–X system, whether any or all of the integrated fixation screws may be replaced with other commercially available screws. In addition, we stated that we are unclear about whether the CAM is part of the aprevo® implant, part of the integrated fixation screws, or is a separate part altogether, and whether the CAM can be removed and replaced by other products. We requested clarification about each of these components and parts, including how and when they are used and whether they can be substituted with other commercially available products. We questioned whether these components or parts of the aprevo® Cervical ACDF System may be considered a supply or material furnished incident to a service and excluded from device pass-through payment eligibility under § 419.66(b)(4).

We invited public comments on whether the aprevo® Cervical ACDF System meets the criterion at § 419.66(b)(4).

Comment: The applicant submitted a response to our concerns that some components or parts of the aprevo® Cervical ACDF System, specifically the aprevo® insertion instrument, the integrated fixation screws, and/or the CAM, may be considered a material or supply furnished incident to the service, because, as previously discussed with respect to criteria at § 419.66(b)(3), it is unclear how and when these components or parts are used, and whether they can be substituted with other products. The applicant commented that the components of aprevo® Cervical ACDF System (insertion instrument, the integrated fixation screws, and the CAM) are part of the 510(k)-cleared aprevo® Cervical ACDF System and other commercially available insertion instruments and screws are not FDA authorized or compatible with the aprevo® Cervical ACDF System. In addition, the applicant commented that the CAM is a non-separable component of the aprevo® Cervical ACDF–X System and cannot be substituted with other items. Finally, the applicant noted that insertion instruments and screws are not available for purchase separately for use with other devices. Therefore, the applicant asserted that the components of aprevo® Cervical ACDF System are integral to the implant services furnished and are not supplies that are incident to the procedure.

Response: We appreciate the applicant's clarification. Based on the information provided in the comment and our review of the application, we agree with the applicant that the aprevo® Cervical ACDF System meets the criterion because the referenced components are only intended to be used with the aprevo® Cervical ACDF System, commercially available insertion instruments or screws cannot be utilized with the device, and the use of these components is necessary and/or required to furnish or deliver the primary procedure(s) with which it is used, and are not supplies incident to the procedure. As such, we have determined that the aprevo® Cervical ACDF System meets the criterion at § 419.66(b)(4).

In addition to the criteria at § 419.66(b)(1) through (4), the criteria for establishing new device categories are specified at § 419.66(c). The first criterion, at § 419.66(c)(1), provides that CMS determines that a device to be included in the category is not appropriately described by any of the existing categories or by any category previously in effect, and was not being paid for as an outpatient service as of December 31, 1996. Per the applicant, the existing pass-through code C1831 [32] (Interbody cage, anterior, lateral or posterior, personalized (implantable)) does not appropriately describe the aprevo® Cervical ACDF System because C1831 was created for the original (lumbar-specific) aprevo® product. According to the applicant, the aprevo® Cervical ACDF System device is different from C1831 because (1) the original (lumbar-specific) aprevo® and the nominated aprevo® Cervical ACDF System are separate and distinct products that have no overlap in anatomical indications for use or patient population; (2) the original (lumbar-specific) aprevo® and the aprevo® Cervical ACDF System are billed with different primary procedure CPT codes, are indicated for a different set of surgical approaches, are typically assigned to different places of service, and are mapped to different payment classifications; and (3) CMS transmittals state that C1831 is limited to lumbar procedures.

We noted, in the CY 2026 OPPS/ASC proposed rule, that based on the description provided by the applicant, that the aprevo® Cervical ACDF System is a personalized interbody cage that is implanted using an anterior surgical approach, and therefore, could be appropriately described by C1831. Specifically, we stated that C1831 may appropriately describe the aprevo® Cervical ACDF System because it describes any device that is a personalized interbody cage, designed for anterior, lateral, or posterior procedures. We noted that CMS does not establish pass-through device categories for the purposes of describing

[32] The aprevo® Intervertebral Fusion Device (IFD) received quarterly approval under the alternative pathway effective October 1, 2021, and final approval in the CY 2023 OPPS/ASC final rule (87 FR 71891 through 71895). CMS established device category code C1831 based on the approval of the aprevo® IFD. Device pass-through payment status eligibility for C1831 expired effective September 30, 2024.

specific devices, but rather, device categories which are intended to encompass all devices that can be appropriately described by a category. In this context, we stated that we believed that the aprevo® Cervical ACDF System may be similar to devices described by C1831 and therefore, the aprevo® Cervical ACDF System may be appropriately described by C1831.

We invited public comment on whether the aprevo® Cervical ACDF System meets the device category criterion at § 419.66(c)(1).

Comment: In response to our concerns that the aprevo® Cervical ACDF System may be appropriately described by C1831, the applicant and a commenter stated that they believe the aprevo® Cervical ACDF System meets all the criteria for establishing a new device category and asserted that CMS has used C1831 to describe personalized lumbar interbody fusion devices and that C1831 should not be used to describe the personalized cervical interbody fusion device that is the subject of this transitional pass-through payment application. The applicant and commenter further contended that CMS guidance indicates that CMS intended for C1831 to be lumbar-specific. In addition, the applicant noted that there are differences in the FDA indications, applicable CPT codes, and APC assignments for the nominated device and the original (lumbar-specific) aprevo® device. A commenter stated that the device categories differ in applicable CPT codes, APCs and FDA indications.

The applicant further summarized evidence included in its application to support its assertion that the aprevo® Cervical ACDF System is substantively distinct and significantly different from the expired device category C1831. The applicant reiterated that it believes that the original (lumbar-specific) aprevo® and the aprevo® Cervical ACDF System are separate and distinct products that have no overlap in FDA anatomical indications for use or patient population. The applicant stated that CMS has previously made similar distinctions between device categories with anatomical indications when it created device category codes C1748 (Endoscope, single-use (*i.e.,* disposable), upper GI, imaging/illumination device (insertable)), effective July 1, 2020, and subsequently created both C1747 (Endoscope, single use (*i.e.,* disposable), urinary tract, imaging/illumination device (insertable)), effective January 1, 2023, and C1601 (Endoscope, single-use (*i.e.,* disposable), pulmonary, imaging/illumination device (insertable)), effective January 1, 2024. Additionally, the applicant asserted that CMS previously made distinct device categories for anatomical locations when it created device category codes C1888 (Catheter, ablation, non-cardiac, endovascular (implantable)), effective July 1, 2002, and C1886 (Catheter, extravascular tissue ablation, any modality (insertable)), effective January 1, 2012.

The applicant and commenter also stated that the original (lumbar-specific) aprevo® and the aprevo® Cervical ACDF System are billed with different primary procedure CPT codes, are indicated for different surgical approaches, and are assigned to different APCs. Moreover, the applicant noted that anterior lumbar approaches are currently assigned to the Medicare Inpatient Only list and may not be performed in the outpatient setting.

In addition, the applicant and commenter noted that several prior CMS transmittals (#R10997CP, #R11004CP, and #R11801CP) have stated that C1831 is to only be used in lumbar fusion procedures. The applicant and commenter stated that the criteria to apply an existing category to a new device, as stated in § 419.66(f)(2), requires that the new device conforms to CMS guidance relating to the definition of terms and other information in conjunction with the category descriptors and codes. Furthermore, the applicant claimed that no CMS transmittals have stated that C1831 can be appropriately billed with cervical fusion CPT codes. The applicant and commenter asserted that the aprevo® Cervical ACDF System does not conform to CMS guidance related to the category codes, and therefore, they believe that C1831 is specific to the original (lumbar-specific) aprevo® and does not apply to the aprevo® Cervical ACDF System.

Response: We appreciate the commenters' input. After consideration of the public comments we received and our review of the application, we continue to believe that C1831 appropriately describes the aprevo® Cervical ACDF System, because the aprevo® Cervical ACDF System is a personalized interbody cage that is implanted using an anterior surgical approach, and C1831 describes any device that is a personalized interbody cage, designed for anterior, lateral, or posterior procedures.

We note that the applicant asserted that the aprevo® Intervertebral Fusion Device (IFD) (referred to as the original (lumbar-specific) aprevo® by the applicant) and the aprevo® Cervical ACDF System are separate and distinct products. We reiterate that CMS does not establish pass-through device categories for the purposes of describing specific devices. Rather, device categories are intended to encompass any device that can be appropriately described by the category, while ensuring that no medical device is described by more than one category in accordance with section 1833(t)(6)(B)(ii)(II) of the Act. When we evaluate a potential pass-through device to determine whether it meets the device category criterion at § 419.66(c)(1), we compare the nominated device to the device category descriptor rather than to the specific device for which the device category was created. Section 419.66(f) states that a device is described by a category if, (1) it matches the long descriptor of the category code established by CMS, and (2) conforms to the guidance issued by CMS relating to the definition of terms and other information in conjunction with the category descriptors and codes. Per the applicant, the aprevo® Cervical ACDF System is a personalized interbody cage that is implanted using an anterior surgical approach, which matches the descriptor for C1831 (interbody cage, anterior, lateral or posterior, personalized (implantable)). We also believe that the aprevo® Cervical ACDF System conforms to the guidance issued on C1831 as discussed in the following paragraphs.

We disagree with the applicant's assertion in its application and comment that C1831 is ''de facto lumbar-specific'' and that CMS intended to limit C1831 to lumbar procedures. We note that CMS establishes the reportable procedure codes for each device pass-through category based on the information available at the time in which the code is established and, unless specified in the descriptor, device category codes are not anatomically specific. CMS has included specific anatomic language in the descriptors of previous device category codes when such language was necessary based on the unique circumstances surrounding the establishment of a particular device category code, as acknowledged in the CY 2025 OPPS/ASC final rule with comment period (89 FR 94137). When CMS established C1831 as a new device category based on the approval of the aprevo® (IFD) application for transitional pass-through payment status, there were no circumstances which warranted the use of vertebrae-specific language in the long descriptor, as such, none was included (87 FR 71894 and 71895). The applicant acknowledged this in its device pass-

through payment application for the aprevo® Cervical ACDF System, stating that when CMS established C1831 there was no need to make anatomical distinctions as it was the first and only personalized interbody cage. We agree with the applicant that no vertebral distinctions were warranted because C1831 was established to describe any device that is a personalized interbody cage, designed for anterior, lateral, or posterior procedures. The aprevo® Cervical ACDF System is a device that is a personalized interbody cage, designed for anterior procedures, and as such we believe that the aprevo® Cervical ACDF System is described by C1831.

As noted by the applicant and acknowledged, CMS has established anatomically specific device category codes in the past, specifically for endoscopes and some ablation catheters. However, the device category codes referenced by the applicant were intentionally defined with anatomically specific descriptors from their inception (*e.g.,* C1748 (Endoscope, single-use (*i.e.,* disposable), upper GI, imaging/illumination device (insertable)) followed by C1747 (Endoscope, single use (*i.e.,* disposable), urinary tract, imaging/illumination device (insertable)), and C1601 (Endoscope, single-use (*i.e.,* disposable), pulmonary, imaging/illumination device (insertable)), as well as C1888 (Catheter, ablation, non-cardiac, endovascular (implantable)) followed by C1886 (Catheter, extravascular tissue ablation, any modality (insertable))). The anatomical specificity included in these device descriptors demonstrated our intention that these device category codes be anatomically specific. We further note that the descriptor for C1831 contains no such anatomical distinction within the spinal column, which demonstrates that CMS did not intend C1831 to be anatomically specific within the spinal column as the applicant and commenter believe.

We also disagree with the applicant and commenter's assertion that C1831 does not describe the aprevo® Cervical ACDF System because the aprevo® (IFD) and the aprevo® Cervical ACDF System are billed with different primary CPT procedure codes and assigned to different APCs. First, as previously stated, the procedure codes with which a device category code may be reported are approved when the device category code is established and are based on the current indication of the subject device and information available to us at the time. For the reasons discussed, the list of reportable procedure codes approved for a device category code is not intended to create a de facto determination regarding other devices or exclude devices that may also be appropriately described by the device category code descriptor. It is also not intended to change, restrict, or redefine the device category code in any manner that is inconsistent with the device category code descriptor.

Second and relatedly, the list of procedure codes with which device category codes may be reported is not unalterable. The list of approved procedure codes with which the device category code may be reported can, and do, change as required throughout the device pass-through payment eligibility period. Reportable procedures are updated for many reasons, including FDA approval of a new indication for an existing device or of a new device with an indication that includes additional procedures that are reportable with an existing device category code, necessitating the inclusion of those additional procedure codes in the reportable procedures list. For example, when CMS established C2623 as a device category code effective April 1, 2015, the procedure codes with which C2623 could be reported (HCPCS codes 37224 and 37226) were limited to use in the femoral or popliteal arteries (89 FR 94136). However, based on FDA approval of a new indication for an existing device (a drug-coated balloon catheter for use with dialysis circuit procedures for the treatment of patients with dysfunctional arteriovenous fistulae), CMS added two procedure codes, HCPCS codes 36902 and 36903 (transluminal balloon angioplasty procedures in peripheral dialysis segments), with which C2623 could be reported effective August 25, 2017.[33] As another example, after we established C1748 as a device category code effective July 1, 2020, we updated the list of procedure codes (HCPCS codes 43260 through 43265 and HCPCS codes 43274, 43276 through 43278) associated with HCPCS code C1748 in 2022 to include transnasal services (HCPCS codes 0652T, 0653T, 0654T, 43197, and 43198).[34] In line with these examples, had other devices that were appropriately described by C1831 received marketing authorization during the time C1831 was eligible for device pass-through payments, CMS likely would have added the appropriate additional procedure codes with which C1831 could be reported. In this instance, we believe HCPCS codes 22551 and 22554 (the HCPCS codes with which the aprevo® Cervical ACDF System is reported) could have been included in the list of reportable procedure codes for C1831 either when the device category code was first established or during the device category code status eligibility period, if the nominated device had received FDA marketing authorization. Third, beginning October 1, 2024, upon the expiration of device pass-through payment status for C1831, CMS packaged the payment for the costs of each of the devices described by C1831 into the payment for the costs related to the procedure with which each device is reported in the hospital claims data.[35] [36] We note that upon becoming packaged for payment, C1831 effectively became reportable with other musculoskeletal procedure codes, including procedure codes for cervical-specific procedures. Additionally, we note that since payment has been packaged for C1831, cervical procedure codes, including HCPCS code 22551 (Arthrodesis, anterior interbody, including disc space preparation, discectomy, osteophytectomy and decompression of spinal cord and/or nerve roots; cervical below C2), one of the two procedure codes with which the aprevo® Cervical ACDF System may be billed, have been performed and billed with C1831. As such, we believe that the aprevo® Cervical ACDF System is appropriately described by C1831 and that CMS is already collecting cost data for the nominated device in the appropriate APC. Regarding the APC assignment, while we acknowledge that the aprevo® Cervical ACDF System and the aprevo® (IFD) are currently assigned to different APCs, we note that many device category codes are reportable with multiple APCs and HCPCS (procedure) codes, and therefore, we do not agree with the applicant or the commenter that this warrants the establishment of a new device category code. We do not believe, in this case, that the procedure codes and APC

[35] Centers for Medicare & Medicaid Services (2024). Pub 100–04 Medicare Claims Processing, Transmittal 12816, Change Request 13784, dated August 29, 2024. Accessed at *https://www.cms.gov/files/document/r12816cp.pdf.*

[36] Centers for Medicare & Medicaid Services (2024). Hospital Outpatient Prospective System Quarterly Addenda Updates October 2024, Addendum B. Accessed at *https://www.cms.gov/medicare/payment/prospective-payment-systems/hospital-outpatient/addendum-a-b-updates/october-2024-updated-10/02/2024-0.*

assignments distinguish the aprevo® Cervical ACDF System from the aprevo® (IFD) device for purposes of the device category code determination.

Similarly, we disagree with the applicant and commenters' assertion that the CMS transmittals limit C1831 to lumbar procedures. The purpose of CMS transmittals is to describe changes to, and billing instructions for, various payment policies implemented for a specified time period. The guidance for device pass-through category codes is based on the current applicable indications and is not intended to restrict or redefine a device category code descriptor. Since device pass-through payment status expired for C1831, CMS transmittals have appropriately described the changes to, and updated billing instructions for C1831, and explained that C1831 would remain an active code and its payment would be included in the primary service. We believe hospitals are very familiar with the approval and expiration of transitional pass-through status for device category codes and how to correctly report device costs under the OPPS.

We also disagree with the applicant's assertion that the aprevo® (IFD) and the nominated aprevo® Cervical ACDF System are separate and distinct products that have no overlap in anatomical indications for use or patient population. We note that a commenter indicated that the device categories differ in FDA indications. While we are not clear to which other device categories the commenter is referring, we believe there is only one relevant device category code, C1831, we believe the FDA indications are similar and note that both aprevo® devices treat many of the same conditions, including degenerative disc disease, deformity (kyphosis or scoliosis), spinal stenosis, and failed previous fusion, at different levels of the spine.[37] Moreover, the aprevo® Cervical ACDF System and the aprevo® (IFD) appear to be intended for use in the same, or very similar procedures, differentiated only by the section of the spinal column in which the procedure is performed. As such, we disagree with the applicant that the devices have no overlap in anatomical indication and that they treat a different patient population.

We note that for the purposes of transitional pass-through payments, if we determine that a device is not appropriately described by any of the existing device categories or by any category previously in effect, then we issue a new category code.[38] Unlike previously established device category codes where CMS has made an anatomical specification based on a clear anatomical distinction in the device indication, such as a ureter and the bronchi, a different indication such as drug-delivery rather than angioplasty, or different mechanisms of action like radiofrequency versus ultrasound, with regard to the nominated technology, we did not believe at the time the code was established, nor do we believe at this time, that such an anatomical distinction is necessary for C1831. As such, we do not believe that the anatomical indications for different regions of the spinal column sufficiently distinguish the aprevo® Cervical ACDF System from the aprevo® (IFD) for purposes of the device category code determination.

Further, even though the aprevo® Cervical ACDF System is only placed through an anterior surgical approach and the aprevo® (IFD) may be placed through multiple surgical approaches, we note that per the device category code descriptor, C1831 is intended to cover all surgical approaches to the spine: anterior, lateral, or posterior. In the CY 2023 OPPS/ASC final rule with comment period (87 FR 71894 through 71895), we updated the device descriptor for C1831, effective January 1, 2023, to include the posterior/transforaminal approach at the request of the applicant.[39] Moreover, we declined the applicant's request to remove the anterior and lateral approaches from the descriptor and, instead, stated that the anterior and lateral approaches should remain in the descriptor and clarified our intent that the descriptor address all potential surgical approaches. We note, that while the C1831 descriptor was updated effective January 1, 2023, the anterior surgical approach—the surgical approach for which the aprevo® Cervical ACDF System is indicated—has been included in the category's descriptor since its establishment and, as previously noted, cervical-specific procedures using the anterior surgical approach have been reported with C1831 in the outpatient setting. HCPCS codes 22630 and 22633 (which can be reported with C1831) and HCPCS codes 22551 and 22554 (the aprevo® Cervical ACDF System procedure codes) are procedures that can be performed in the outpatient setting.

Finally, we disagree with the applicant's assertion that the healthcare setting in which procedures utilizing the aprevo® Cervical ACDF System device and the aprevo® (IFD)are typically performed has relevance to the device category discussion. We note that both devices may be used in the outpatient setting, as such, we do not believe that the surgical approach or healthcare setting distinguishes the aprevo® Cervical ACDF System from the aprevo® (IFD) for purposes of the device category code assignment.

After consideration of the public comment we received and our review of the device pass-through application, we have determined that the aprevo® Cervical ACDF System does not meet the device category eligibility criterion at § 419.66(c)(1) because it is appropriately described by an existing category or a category previously in effect. Therefore, in this final rule with comment period, we will not address whether the technology meets the other remaining criteria required for transitional pass-through payment for devices. We are not approving the aprevo® Cervical ACDF System for transitional pass-through payment status for CY 2026 because the technology does not meet the device category eligibility criterion at § 419.66(c)(1).

Comment: The applicant commented that CMS assigned a $0.00 device offset amount associated with the device pass-through payment for the original (lumbar-specific) aprevo® and requested that CMS be consistent with this policy determination and assign a $0.00 to the aprevo® Cervical ACDF System device pass-through payment.

Response: We appreciate the applicant's input regarding the device offset amount associated with the

[37] As stated in the CY 2023 OPPS/ASC final rule with comment period (87 FR 71892), the aprevo® (IFD) is indicated for use as an adjunct to fusion at one or more levels of the lumbar spine in patients having an Oswestry Disability Index (ODI) >40 and diagnosed with severe symptomatic adult spinal deformity (ASD) conditions. These patients should have had 6 months of non-operative treatment. The devices are intended to be used with autologous and/or allogenic bone graft comprised of cancellous and/or cortico-cancellous bone graft. These implants may be implanted via a variety of open or minimally invasive approaches. These approaches may include anterior lumbar interbody fusion or lateral lumbar interbody fusion.

[38] For examples, please see our decisions regarding CavaClear Inferior Vena Cava Filter Removal Laser Sheath (88 FR 81718 through 81720), which differed from devices described in C2629 and C1773 by mechanism of action, clinical use, impacted anatomy, and FDA clearance pathway; CERAMENT® G (88 FR 81723 through 81725), which differed from the device described in C1734 by composition, mechanisms of action, indication for use, intended patient population, associated treatment cases and procedures, and FDA designation and classification; and AGENT™ Paclitaxel-Coated Balloon Catheter (89 FR 94136 through 94137), which differed from devices described in C2623 by indication and type of procedure.

[39] Centers for Medicare & Medicaid Services (2023). Pub 100–04 Medicare Claims Processing,Transmittal 11801, Change Request 13031, dated January 20, 2023. Accessed at *https://www.cms.gov/files/document/r11801cp.pdf*.

aprevo® Cervical ACDF System; however, as the device pass-through application for the aprevo® Cervical ACDF System has not been approved in this final rule with comment period, we will not address the device offset assignment.

Comment: The applicant expressed concern that the placement of the anterior and lateral procedures associated with the original (lumbar-specific) aprevo® on the IPO list effective January 1, 2022 following the approval of device pass-through payment status for C1831 effective October 1, 2021 prevented CMS from collecting sufficient and proper cost data to assign the procedures to an appropriate APC following the expiration of device pass-through payment status on September 30, 2024. The applicant commented that it was unable to market the original (lumbar-specific) aprevo® in the outpatient setting due to this change and that limited applicable use of the anterior and lateral surgical approaches and inconsistent coding guidance for the posterior surgical approach disincentivized adoption. As such, the applicant requested that CMS reinstate C1831 to ensure a full 3 years of device pass-through payment status and to capture the necessary cost data.

Response: We thank the commenters for their input. We appreciate the applicant's concern with the timing of the placement of the anterior and lateral procedures on the IPO list, however, we cannot reinstate the pass-through payment status of HCPCS code C1831, neither do we agree we should. Consistent with section 1833(t)(6)(B)(iii) of the Act and § 419.66(g), the period for which a device category for transitional pass-through payments under the OPPS can be in effect is at least 2 years, but not more than 3 years, beginning on the first date on which pass-through payment is made. Once 3 years has passed since a device category first received transitional pass-through payments, the device category is no longer eligible for pass-through payments and we utilize the established policy (first described in the CY 2003 OPPS/ASC final rule, 67 FR 66763) to package the costs of the devices that are no longer eligible for pass-through payments into the costs of the procedures with which the devices are reported in the claims data used to set the payment rates. We note that device pass-through payment status is intended to be temporary, and we consider the cost data to be included in the payment rates regardless of whether the technology's use in the Medicare population has been frequent or infrequent during the time period under which a device was receiving transitional pass-through payments. The C1831 device category was made effective in the OPPS on October 1, 2021, and expired on September 30, 2024, as such, we cannot reinstate the pass-through payment status of C1831 because reinstatement would make the pass-through payment status effective longer than the maximum 3-year period permitted under section 1833(t)(6)(B)(iii) of the Act and § 419.66(g).

(b) SCOUT MD™ Surgical Guidance System

Merit Medical Systems submitted an application for a new device category for transitional pass-through payment status for the SCOUT MD™ Surgical Guidance System for CY 2026. According to the applicant, the SCOUT MD™ Surgical Guidance System communicates the location of tumor tissue during a tumor excision procedure. Per the applicant, the SCOUT MD™ Surgical Guidance System consists of the SCOUT MD™ Delivery System, SCOUT MD™ Guide, SCOUT MD™ Handpiece, and SCOUT MD™ Console.

The applicant stated that it is only seeking a new device category for transitional pass-through payment status for the SCOUT MD™ Delivery System component of the SCOUT MD™ Surgical Guidance System. The SCOUT MD™ Delivery System consists of the SCOUT MD™ Reflectors and the SCOUT MD™ Delivery Device, a plastic, molded handle attached to a 16 GA introducer needle with a SCOUT MD™ Reflector preloaded inside. According to the applicant, the SCOUT MD™ Delivery System is used to implant each of the SCOUT MD™ Reflectors, which identify the location of the tumor tissue to be excised and/or the boundaries of the region of tissue to be excised during a separately scheduled procedure. The applicant further explained that there are four unique configurations of the SCOUT MD™ Reflectors, which return a detectable signal within surrounding tissue when illuminated by the micro-impulse radar signal from the SCOUT MD™ Guide and Handpiece used during the tumor excision procedure. Per the applicant, each single-use SCOUT MD™ Delivery System contains one SCOUT MD™ Delivery Device with one preloaded SCOUT MD™ Reflector.

Please refer to the online application posting for the SCOUT MD™ Surgical Guidance System, available at *https://mearis.cms.gov/public/publications/device-ptp/DEP240830W9M8U.*

As stated previously, to be eligible for transitional pass-through payment under the OPPS, a device must meet the criteria at § 419.66(b)(1) through (4). With respect to the newness criterion at § 419.66(b)(1), the SCOUT MD™ Surgical Guidance System received FDA Breakthrough Device designation effective February 1, 2023. The approved FDA indication for the SCOUT MD™ Surgical Guidance System is:

- The SCOUT MD Reflectors are intended to be placed percutaneously in soft tissue, (≤30 days) [40] to mark a biopsy site or a soft tissue site intended for surgical removal. Using imaging guidance (such as ultrasound, MRI, or radiography) or aided by non-imaging guidance (SCOUT MD System), the SCOUT MD Reflector is located and surgically removed with the target tissue. The SCOUT MD™ Delivery System is intended only for the non-imaging detection and localization of the SCOUT MD Reflector that has been implanted in a soft tissue biopsy site or a soft tissue site intended for surgical removal.

FDA granted 510(k) clearance for the SCOUT MD™ Surgical Guidance System on February 12, 2024, for the same indication as the one covered by the Breakthrough Device designation. We received the application for a new device category for transitional pass-through payment status for the SCOUT MD™ Surgical Guidance System on August 30, 2024, which is within 3 years of the date of the initial FDA marketing authorization.

We invited public comments on whether the SCOUT MD™ Surgical Guidance System, inclusive of the SCOUT MD™ Delivery System meets the newness criterion at § 419.66(b)(1).

Comment: The applicant reiterated that the SCOUT MD™ Surgical Guidance System received FDA clearance on February 12, 2024, and the application for transitional pass-through payment status for the SCOUT MD™ Surgical Guidance System was submitted on August 30, 2024 which is within 3 years from the date of FDA clearance.

Response: We appreciate the applicant's input. We agree that we received the application for a new device category for transitional pass-through payment status for the SCOUT MD™ Surgical Guidance System within 3 years of the date of FDA 510(k) clearance. After consideration of the public comment we received and our

[40] The SCOUT MD Reflectors are implanted percutaneously in soft tissue and may remain in place for 30 days or longer.

review of the application, we have determined that the SCOUT MD™ Surgical Guidance System meets the newness criterion at § 419.66(b)(1).

As previously noted, the applicant is only seeking a new device category for transitional pass-through payment status for the SCOUT MD™ Delivery System component of the SCOUT MD™ Surgical Guidance System; as such, the eligibility and exclusion criteria will evaluate SCOUT MD™ Delivery System.

With respect to the eligibility criteria at § 419.66(b)(3), the device must be an integral part of the service furnished, be used for one patient only, come in contact with human tissue, and be surgically inserted or implanted, or applied in or on a wound or other skin lesion. Per the applicant, the SCOUT MD™ Delivery System meets the requirements at § 419.66(b)(3).

We invited public comments on whether the SCOUT MD™ Delivery System meets the eligibility criterion at § 419.66(b)(3).

Comment: The applicant reiterated that the SCOUT MD™ Delivery System meets all the eligibility criteria.

Response: We appreciate the applicant's input. After consideration of the public comment we received and our review of the application, we agree with the applicant and have determined that the SCOUT MD™ Delivery System meets the eligibility criterion at § 419.66(b)(3).

With respect to the exclusion criteria at § 419.66(b)(4), a device is not eligible to be considered for pass-through payment if it is any of the following: (1) equipment, an instrument, apparatus, implement, or item of this type for which depreciation and financing expenses are recovered as depreciable assets as defined in Chapter 1 of the Medicare Provider Reimbursement Manual (CMS Pub. 15–1); or (2) a material or supply furnished incident to a service (for example, a suture, customized surgical kit, or clip, other than a radiological site marker). Per the applicant, the SCOUT MD™ Delivery System is (1) not considered equipment, an instrument, apparatus, implement, or item of this type for which depreciation and financing expenses are recovered as depreciable assets, and is (2) not a material or supply furnished incident to a service, and, therefore, is eligible to be considered for pass-through payment.

We invited public comments on whether the SCOUT MD™ Delivery System meets the exclusion criterion at § 419.66(b)(4).

Comment: The applicant reiterated that the SCOUT MD™ Delivery System is not a depreciating asset as defined in Chapter 1 of the Medicare Provider Reimbursement Manual (CMS Pub. 15–1) nor is it a material or supply furnished incident to a service.

Response: We appreciate the applicant's input. After consideration of the public comment we received and our review of the application, we agree with the applicant and have determined that the SCOUT MD™ Delivery System meets the criterion at § 419.66(b)(4).

In addition to the criteria at § 419.66(b)(1) through (4), the criteria for establishing new device categories are specified at § 419.66(c). The first criterion, at § 419.66(c)(1), provides that CMS determines that a device to be included in the category is not appropriately described by any of the existing categories or by any category previously in effect, and was not being paid for as an outpatient service as of December 31, 1996. Per the applicant, the existing pass-through codes C1879 [41] (Tissue marker (implantable)) and C1819 (Tissue localization excision device) do not appropriately describe the SCOUT MD™ Delivery System because the SCOUT MD™ Delivery System is different than other wire-free localization/fiducial devices used for breast conserving surgery and is the only device that: (1) incorporates application-specific integrated circuit (ASIC) technology customized for use with the SCOUT MD™ Surgical Guidance System; (2) uses radar technology to detect, locate and identify the implanted reflector(s) within ±1 millimeter (mm) of accuracy; (3) utilizes up to four uniquely shaped reflectors for a more clearly defined radiographic image of the area of interest to be excised; (4) incorporates differentiated radar signatures and detection cadences specific to each reflector; (5) can detect up to four unique reflectors simultaneously or individually to more precisely identify pre-defined surgical margins; and (6) has no significant MRI artifact. The applicant further explained that the SCOUT MD™ Delivery System includes four distinct implant (SCOUT MD™ Reflector) shapes, each with a unique radar signature that enables clear detection and identification of the multiple localization devices previously placed to mark the desired surgical margins during the excision procedure. Upon review, we stated in the CY 2026 OPPS/ASC proposed rule that we did not identify an existing pass-through payment category that describes the SCOUT MD™ Delivery System.

We invited public comment on whether the SCOUT MD™ Delivery System meets the device category criterion at § 419.66(c)(1).

Comment: The applicant reiterated that the SCOUT MD™ Delivery System is not appropriately described by any of the existing categories or by any category previously in effect, and that it has not been paid for as an outpatient service as of December 31, 1996.

Response: We appreciate the applicant's input. After consideration of the public comment we received and our review of the application, we continue to believe that there is no existing category or category previously in effect that appropriately describes the SCOUT MD™ Delivery System. Therefore, we have determined that the SCOUT MD™ Delivery System meets the device category eligibility criterion at § 419.66(c)(1).

The second criterion for establishing a device category, at § 419.66(c)(2), provides that CMS determines either of the following: (1) that a device to be included in the category has demonstrated that it will substantially improve the diagnosis or treatment of an illness or injury or improve the functioning of a malformed body part compared to the benefits of a device or devices in a previously established category or other available treatment; or (2) for devices for which pass-through status will begin on or after January 1, 2020, as an alternative to the substantial clinical improvement criterion, the device is part of the FDA's Breakthrough Devices Program and has received FDA marketing authorization for the indication covered by the Breakthrough Device designation. The SCOUT MD™ Surgical Guidance System has a Breakthrough Device designation and marketing authorization from FDA for the indication covered by the Breakthrough Device designation (as explained in more detail of the newness criterion) and therefore was not evaluated for substantial clinical improvement.

We invited public comment on whether the SCOUT MD™ Delivery System meets the device category criterion at § 419.66(c)(2).

Comment: The applicant confirmed that the SCOUT MD™ Delivery System received a Breakthrough Device designation from FDA. The applicant also asserted that it believes that, even if the SCOUT MD™ Delivery System did not have Breakthrough Device designation, the device would still meet

[41] Effective July 1, 2013, CMS deleted C1879 (Tissue marker, implantable) because it is described by A4648 (Tissue marker, implantable, any type). Centers for Medicare & Medicaid Services (2013). Pub 100–04 Medicare Claims Processing (Transmittal 2718) in CMS Manual System. Accessed at *https://www.cms.gov/regulations-and-guidance/guidance/transmittals/2013-transmittals-items/r2718cp.*

the device category criterion at § 419.66(c)(2).

Response: We appreciate the applicant's input. The SCOUT MD™ Surgical Guidance System, inclusive of the SCOUT MD™ Delivery System, has a Breakthrough Device designation effective February 1, 2023, and marketing authorization from FDA effective February 12, 2024, for the indication covered by the Breakthrough Device designation. Therefore, the SCOUT MD™ Surgical Guidance System meets the criterion at 419.66(c)(2)(ii) and is not evaluated for substantial clinical improvement at § 419.66(c)(2)(i). After consideration of the public comment we received and our review of the application, we have determined that the SCOUT MD™ Delivery System meets the device category criterion at § 419.66(c)(2).

The third criterion for establishing a device category, at § 419.66(c)(3), requires CMS to determine that the cost of the device is not insignificant, as described in § 419.66(d). Section 419.66(d) includes three cost significance criteria that must each be met. The applicant stated that the SCOUT MD™ Delivery System would be reported with HCPCS codes as shown in Table 100, previously published as Table 49 of the CY 2026 OPPS/ASC proposed rule (90 FR 33579).

TABLE 100: HCPCS CODES REPORTED WITH THE SCOUT MD™ DELIVERY SYSTEM

HCPCS Code	Long Descriptor	SI	APC
19281	Placement of breast localization device(s) (e.g., clip, metallic pellet, wire/needle, radioactive seeds) percutaneous, first lesion, including mammographic guidance.	Q1	5072
19283	Placement of breast localization device(s) (e.g., clip, metallic pellet, wire/needle, radioactive seeds) percutaneous, first lesion, including stereotactic guidance.	Q1	5071
19285	Placement of breast localization device(s) (e.g., clip, metallic pellet, wire/needle, radioactive seeds) percutaneous, first lesion, including ultrasound guidance.	Q1	5071
19287	Placement of breast localization device(s) (e.g., clip, metallic pellet, wire/needle, radioactive seeds) percutaneous, first lesion, including magnetic resonance guidance.	Q1	5071
10035	Placement of soft tissue localization device(s) (e.g., clip, metallic pellet, wire/needle, radioactive seeds), percutaneous, including imaging guidance; first lesion.	T	5071

To meet the cost criterion for device pass-through payment status, a device must pass all three tests of the cost criterion for at least one APC. As we explained in the CY 2005 OPPS final rule with comment period (69 FR 65775), we generally use the lowest APC payment rate applicable for use with the nominated device when we assess whether a device meets the cost significance criterion, thus increasing the probability the device will pass the cost significance test. Beginning in CY 2017, we calculate the device offset amount at the HCPCS/CPT code level instead of the APC level (81 FR 79657). We noted in the CY 2026 OPPS/ASC proposed rule that the applicant utilized the CY 2025 payment rates for the three tests of the cost criterion. For our calculations, we used APC 5071, which had a CY 2025 payment rate of $703.59 at the time the application was received. HCPCS code 19287 in APC 5071 had a device offset amount of $240.56 at the time the application was received.[42] Per the applicant, an average of 1.95 SCOUT MD™ Reflectors are placed per procedure with a selling price of $550.00 for each single-use SCOUT MD™ Delivery System containing a SCOUT MD™ Delivery Device with one preloaded SCOUT MD™ Reflector. Therefore, according to the applicant, the average cost per procedure for the SCOUT MD™ Delivery System is $1,072.00.

Section 419.66(d)(1), the first cost significance requirement, provides that the estimated average reasonable cost of devices in the category must exceed 25 percent of the applicable APC payment amount for the service related to the category of devices. The average reasonable cost of $1,072.00 for the SCOUT MD™ Delivery System is 152.36 percent of the applicable APC payment amount for the service related to the category of devices, of $703.59 (($1,072.00/$703.59 × 100 = 152.36 percent). Therefore, we stated in the CY 2026 OPPS/ASC proposed rule that we believe that the SCOUT MD™ Delivery System meets the first cost significance requirement.

The second cost significance requirement, at § 419.66(d)(2), provides that the estimated average reasonable cost of the devices in the category must exceed the cost of the device-related portion of the APC payment amount for the related service by at least 25 percent, which means that the device cost needs to be at least 125 percent of the offset amount (the device-related portion of the APC found on the offset list). The estimated average reasonable cost of $1,072.00 for the SCOUT MD™ Delivery System is 445.63 percent of the cost of the device-related portion of the APC payment amount for the related service, of $240.56 ($1,072.00/$240.56 × 100 = 445.63 percent). Therefore, we stated in the CY 2026 OPPS/ASC

[42] We noted the applicant selected APC 5072 and an APC payment rate of $1,620.24 for the three tests of the cost criteria. However, for our calculation, we selected APC 5071, which we believe had the lowest applicable APC payment rate of $703.59 found in the CY 2025 OPPS/ASC final rule with comment period, among the APCs related to the HCPCS/CPT codes provided by the applicant. We selected the HCPCS/CPT code level device offset amount of $240.56 related to HCPCS 19287 in APC 5071. We stated that, based on our initial assessment in the CY 2026 OPPS/ASC proposed rule, using the APC payment rate of $703.59 and the device offset amount of $240.56 would result in the SCOUT MD™ Delivery System meeting the cost significance requirement.

proposed rule that we believe that the SCOUT MD™ Delivery System meets the second cost significance requirement.

The third cost significance requirement, at § 419.66(d)(3), provides that the difference between the estimated average reasonable cost of the devices in the category and the portion of the APC payment amount for the device must exceed 10 percent of the APC payment amount for the related service. The difference between the estimated average reasonable cost of $1,072.00 for the SCOUT MD™ Delivery System and the portion of the APC payment amount for the device of $240.56 is 118.17 percent of the APC payment amount for the related service, of $703.59 ((($1,072.00 − $240.56)/$703.59) × 100 = 118.17 percent). Therefore, we stated in the CY 2026 OPPS/ASC proposed rule that we believe that the SCOUT MD™ Delivery System meets the third cost significance requirement.

We invited public comment on whether the SCOUT MD™ Delivery System meets the cost criterion at § 419.66(c)(3).

Comment: The applicant reiterated that the SCOUT MD™ Delivery System meets all three of the cost significance criteria and confirmed that the cost analysis in the CY 2026 OPPS/ASC proposed rule is accurate.

Response: We appreciate the applicant's input. We agree with the applicant and continue to believe that the SCOUT MD™ Delivery System meets the first, second, and third cost significance tests described at § 419.66(d).

As discussed previously in this section, we preliminarily approved the SCOUT MD™ Delivery System application for transitional pass-through payment under the alternative pathway effective January 1, 2025. After consideration of the public comment we received and our review of the device pass-through application, we have determined that the SCOUT MD™ Delivery System meets the requirements for device pass-through status described at § 419.66. We are finalizing approval for device pass-through payment status for the SCOUT MD™ Delivery System under the alternative pathway for devices that have an FDA Breakthrough Device designation and have received FDA marketing authorization for the indication covered by the Breakthrough Device designation.

Comment: The applicant requested that CMS withdraw C1739, the device category code established upon the preliminary approval of the SCOUT MD™ Delivery System application for device pass-through payment status and issue a new HCPCS code with descriptor language including, ''radar detectable implantable reflectors'', effective January 1, 2026, to ensure that the SCOUT MD™ Delivery System receives the full 3 years of pass-through status. The applicant asserted that the code descriptor for C1739, ''tissue marker, probe detectable any method (implantable), with delivery system,'' is overly broad, describes numerous legacy tissue marker systems that the applicant believes are not eligible for device pass-through, and does not appropriately differentiate the SCOUT MD™ Delivery System or other similar systems from the wide range of existing tissue markers currently on the market. The applicant stated it believes this change is necessary so that only those devices truly eligible for device pass-through status can use the HCPCS code and so that the claims data appropriately reflects accurate billing.

The applicant further asserted that the code description for C1739 has allowed thousands of claims to be submitted by hospitals for devices not eligible for pass-through payment, resulting in millions of dollars of waste and abuse. Specifically, the applicant asserted that as of the end of June 2025, over 2,000 claims have been submitted using C1739 for tissue markers which were commercialized before the issuance of C1739. The applicant clarified that not one of those claims have been for the use of the SCOUT MD™ Delivery System, because the device is not yet commercially available. The applicant estimated that those 2,000 claims would have been paid under APC 5071, but for the creation of C1739, and resulted in $2,000,000 of waste. The applicant further projected that continued use of the current descriptor would result in $4,000,000–$5,000,000 of waste by the end of 2025 and could represent as much as $32,000,000 to $64,000,000 of waste over the next 2 years.

Finally, the applicant stated that, under the regulation at § 419.66(a), CMS makes a pass-through payment for a medical device that meets the requirements in paragraph (b) of that section and that is described by a category of devices established by CMS under the criteria in paragraph (c) of that section, and that, further, according to § 419.66(g), the pass-through period begins on the first date on which pass-through payment is made. The applicant asserted that while CMS has been paying for devices submitted using C1739, none of those payments are pass-through payments because CMS has not paid for the SCOUT MD™ Delivery System or any other devices that would be described by a device pass-through category code with an appropriately specific descriptor. Because the device pass-through category code descriptor is overly broad, according to the applicant, the agency has been paying for devices that do not meet the eligibility requirements in paragraph (b) or the criteria for establishing device categories in paragraph (c) and thus, has not been making pass-through payments. As such, the applicant requested that CMS withdraw C1739 and issue a new device pass-through category code effective January 1, 2026 with a descriptor that describes only the SCOUT MD™ Delivery System and any devices legitimately eligible for pass-through status.

Response: Although we acknowledge the applicant's concerns regarding the descriptor for C1739, we do not agree that the device category code should be withdrawn and replaced with a new code effective January 1, 2026, for the following reasons:

First, per the applicant's request prior to CY 2026 rulemaking, CMS revised the descriptor for C1739 to read, effective October 1, 2025: Tissue marker, uniquely detectable and identifiable with probe/sensor, any method (implantable), with delivery system. The short descriptor was also revised to: Marker unique detect w/probe. These revisions were retroactive to January 1, 2025.[43] We believe that the updated descriptor accurately reflects the devices intended to be described by C1739, inclusive of the SCOUT MD™ Delivery System, and addresses the applicant's concerns that the prior descriptor was overly broad.

Second, we wish to reiterate that device category codes are not device specific; rather, CMS establishes device categories that are intended to encompass all devices that can be appropriately described by the category under § 419.66. We disagree with the applicant's assertion that CMS has not made any pass-through payments for C1739. Any device described by the descriptor associated with a currently payable device pass-through category code qualifies for pass-through payment. The fact that no claims have purportedly been submitted for the SCOUT MD™ Delivery System does not mean that no appropriate pass-through payments have been made for C1739. As such, we believe that appropriate pass-through payments for C1739 have been made in accordance with § 419.66(g).

[43] Center of Medicare & Medicaid Services (2025). Pub 100–04 Medicare Claims Processing, Transmittal 13425, Change Request 14223, dated September 22, 2025. *Accessed at https://www.cms.gov/files/document/r13425cp.pdf.*

We further note that, consistent with section 1833(t)(6)(B)(iii) of the Act and § 419.66(g), the period for which a device category for transitional pass-through payments under the OPPS can be in effect is at least 2 years, but not more than 3 years, beginning on the first date on which pass-through payment is made. Once 3 years has passed since a device category first received transitional pass-through payments, the device category is no longer eligible for pass-through payments and we utilize the established policy (first described in the CY 2003 OPPS/ASC final rule, 67 FR 66763) to package the costs of the devices that are no longer eligible for pass-through payments into the costs of the procedures with which the devices are reported in the claims data used to set the payment rates. Moreover, device pass-through payment status is intended to be temporary, and we consider the cost data to be included in the payment rates regardless of whether the technology's use in the Medicare population has been frequent or infrequent during the time period under which a device was receiving transitional pass-through payments.

Finally, we agree with the applicant that the pass-through period begins on the first date on which pass-through payment is made in accordance with § 419.66(g), which we finalized in the CY 2017 OPPS/ASC final rule with comment period (81 FR 79654 and 79655). Therefore, for the purposes of C1739, CMS considers the start of the device pass-through payment status eligibility period to be January 1, 2025, and, as such, CMS does not agree with the applicant that the device category code for C1739 should be withdrawn, and a new code issued effective January 1, 2026. We believe that the updated device category code descriptor for C1739 issued on October 1, 2025, addresses the applicants' concerns and that the necessary cost data will be collected to incorporate the costs for these devices into the procedure APC rate during the device pass-through payment status eligibility period. CMS will continue to monitor utilization and payment trends for C1739 to ensure accurate and appropriate payment.

(c) VasQ™

Laminate Medical submitted an application for a new device category for transitional pass-through payment status for VasQ™ for CY 2026. Per the applicant, VasQ™ is a nitinol implant which is surgically placed outside and/or around an artery and/or vein to provide external support to arteriovenous fistulas created for vascular access by means of vascular surgery. The applicant further explained that VasQ™ reinforces the juxta-anastomotic region against increased wall tension in the newly arterialized vein, guides a more laminate hemodynamic profile of flow with its tapered configuration, and maintains the structural integrity of the anastomotic configuration.

Please refer to the online application posting for VasQ™, available at *https://mearis.cms.gov/public/publications/device-ptp/DEP2405312T1JR*.

As stated previously, to be eligible for transitional pass-through payment under the OPPS, a device must meet the criteria at § 419.66(b)(1) through (4). With respect to the newness criterion at § 419.66(b)(1), VasQ™ received FDA Breakthrough Device designation effective June 5, 2020. The approved FDA indication for VasQ™ is:

- For use as an external support for upper extremity arteriovenous fistulas created for vascular access by means of vascular surgery.

FDA granted De Novo classification for VasQ™ on September 26, 2023, for the same indication as the one covered by the Breakthrough Device designation. We received the application for a new device category for transitional pass-through payment status for VasQ™ on May 31, 2024, which is within 3 years of the date of the initial FDA marketing authorization.

We invited public comments on whether VasQ™ meets the newness criterion at § 419.66(b)(1).

We did not receive public comments regarding whether VasQ™ meets the newness criterion at § 419.66(b)(1). We received the application for a new device category for transitional pass-through payment status for VasQ™ within 3 years of the date of the FDA De Novo classification. Based on our review of the application, we have determined that VasQ™ meets the newness criterion at § 419.66(b)(1).

With respect to the eligibility criteria at § 419.66(b)(3), the device must be an integral part of the service furnished, be used for one patient only, come in contact with human tissue, and be surgically inserted or implanted, or applied in or on a wound or other skin lesion. Per the applicant, VasQ™ meets the requirements at § 419.66(b)(3).

We invited public comments on whether VasQ™ meets the eligibility criterion at § 419.66(b)(3).

We did not receive public comments regarding whether VasQ™ meets the eligibility requirements of § 419.66(b)(3). Based on our review of the application, we agree with the applicant, and have determined that VasQ™ meets the eligibility criterion at § 419.66(b)(3).

With respect to the exclusion criteria at § 419.66(b)(4), a device is not eligible to be considered for pass-through payment if it is any of the following: (1) equipment, an instrument, apparatus, implement, or item of this type for which depreciation and financing expenses are recovered as depreciable assets as defined in Chapter 1 of the Medicare Provider Reimbursement Manual (CMS Pub. 15–1); or (2) a material or supply furnished incident to a service (for example, a suture, customized surgical kit, or clip, other than a radiological site marker). Per the applicant, VasQ™ is (1) not considered equipment, an instrument, apparatus, implement, or item of this type for which depreciation and financing expenses are recovered as depreciable assets, and is (2) not a material or supply furnished incident to a service, and, therefore, is eligible to be considered for pass-through payment.

We invited public comments on whether VasQ™ meets the exclusion criterion at § 419.66(b)(4).

We did not receive public comments regarding whether VasQ™ meets the exclusion requirements of § 419.66(b)(4). Based on our review of the application, we agree with the applicant and have determined that VasQ™ meets the criterion at § 419.66(b)(4).

In addition to the criteria at § 419.66(b)(1) through (4), the criteria for establishing new device categories are specified at § 419.66(c). The first criterion, at § 419.66(c)(1), provides that CMS determines that a device to be included in the category is not appropriately described by any of the existing categories or by any category previously in effect, and was not being paid for as an outpatient service as of December 31, 1996. Per the applicant, no existing (current or previous) device categories for pass-through payment appropriately describe VasQ™. According to the applicant, pass-through code: C1877 (Stent, non-coated/non-covered, without delivery system) does not appropriately describe VasQ™ because VasQ™ is not a stent and does not come in contact with blood. The applicant also stated that pass-through code C1768 (Graft, vascular) does not appropriately describe VasQ™ because VasQ™ is not a dialysis graft, is not permitted to be cannulated, and does not have direct contact with blood. The applicant asserted that pass-through code C1881 (Dialysis access system (implantable)) does not appropriately describe VasQ™ because VasQ™ is not a dialysis access system, is not

permitted to be cannulated, and does not have direct contact with blood. Upon review, we stated in the CY 2026 OPPS/ASC proposed rule that we did not identify an existing pass-through payment category that describes VasQ™.

We invited public comment on whether VasQ™ meets the device category criterion at § 419.66(c)(1).

We did not receive public comments regarding whether VasQ™ meets the eligibility requirements at § 419.66(c)(1). Based on our review of the application, we continue to believe there is no existing category or category previously in effect that appropriately describes VasQ™. Therefore, we have determined that VasQ™ meets the device category eligibility criterion at § 419.66(c)(1).

The second criterion for establishing a device category, at § 419.66(c)(2), provides that CMS determines either of the following: (1) that a device to be included in the category has demonstrated that it will substantially improve the diagnosis or treatment of an illness or injury or improve the functioning of a malformed body part compared to the benefits of a device or devices in a previously established category or other available treatment; or (2) for devices for which pass-through status will begin on or after January 1, 2020, as an alternative to the substantial clinical improvement criterion, the device is part of the FDA's Breakthrough Devices Program and has received FDA marketing authorization for the indication covered by the Breakthrough Device designation. VasQ™ has a Breakthrough Device designation and marketing authorization from FDA for the indication covered by the Breakthrough Device designation (as explained in more detail of the newness criterion) and therefore was not evaluated for substantial clinical improvement.

We invited public comment on whether VasQ™ meets the device category criterion at § 419.66(c)(2).

We did not receive public comments regarding whether VasQ™ meets the eligibility requirements at § 419.66(c)(2). VasQ™ has a Breakthrough Device designation effective June 5, 2020, and De Novo classification from FDA effective September 26, 2023, for the indication covered by the Breakthrough Device designation. Therefore, VasQ™ meets the criterion at 419.66(c)(2)(ii) and is not evaluated for substantial clinical improvement at § 419.66(c)(2)(i). Based on our review of the application, we have determined that VasQ™ meets the device category criterion at § 419.66(c)(2).

The third criterion for establishing a device category, at § 419.66(c)(3), requires CMS to determine that the cost of the device is not insignificant, as described in § 419.66(d). Section 419.66(d) includes three cost significance criteria that must each be met. The applicant stated that VasQ™ would be reported with HCPCS codes as shown in Table 101, previously published as Table 50 of the CY 2026 OPPS/ASC proposed rule (90 FR 33581).

TABLE 101: HCPCS CODES REPORTED WITH VASQ™

HCPCS Code	Long Descriptor	SI	APC
36818	Arteriovenous anastomosis, open; by upper arm cephalic vein transposition	J1	5184
36819	Arteriovenous anastomosis, open; by upper arm basilic vein transposition	J1	5184
36820	Arteriovenous anastomosis, open; by forearm vein transposition	J1	5184
36821	Arteriovenous anastomosis, open; direct, any site (e.g., Cimino type) (separate procedure)	J1	5183
36832	Revision, open, arteriovenous fistula; without thrombectomy, autogenous or nonautogenous dialysis graft (separate procedure)	J1	5184
36833	Revision, open, arteriovenous fistula; with thrombectomy, autogenous or nonautogenous dialysis graft (separate procedure)	J1	5184

To meet the cost criterion for device pass-through payment status, a device must pass all three tests of the cost criterion for at least one APC. As we explained in the CY 2005 OPPS final rule (69 FR 65775), we generally use the lowest APC payment rate applicable for use with the nominated device when we assess whether a device meets the cost significance criterion, thus increasing the probability the device will pass the cost significance test. Beginning in CY 2017, we calculate the device offset amount at the HCPCS/CPT code level instead of the APC level (81 FR 79657). We noted that the applicant used the CY 2024 payment rates for the three tests of the cost criterion. For our calculations in the CY 2026 OPPS/ASC proposed rule, we used APC 5183, which had a CY 2024 payment rate of $3,037.01 at the time the application was received. HCPCS code 36821 in APC 5183 had a device offset amount of $49.81 at the time the application was received. According to the applicant, the cost of VasQ™ is $4,900.00.

Section 419.66(d)(1), the first cost significance requirement, provides that the estimated average reasonable cost of devices in the category must exceed 25 percent of the applicable APC payment amount for the service related to the category of devices. The average reasonable cost of $4,900.00 for VasQ™ is 161.34 percent of the applicable APC payment amount for the service related to the category of devices of $3,037.01 (($4,900.00/$3,037.01) × 100 = 161.34 percent). Therefore, we stated in the CY 2026 OPPS/ASC proposed rule that we believe that VasQ™ meets the first cost significance requirement.

The second cost significance requirement, at § 419.66(d)(2), provides that the estimated average reasonable cost of the devices in the category must exceed the cost of the device-related portion of the APC payment amount for the related service by at least 25 percent, which means that the device cost needs to be at least 125 percent of the offset amount (the device-related portion of the APC found on the offset list). The estimated average reasonable cost of $4,900.00 for VasQ™ is 9,837.38 percent of the cost of the device-related portion of the APC payment amount for the related service of $49.81 (($4,900.00/$49.81) × 100 = 9,837.38 percent). Therefore, we stated in the CY 2026 OPPS/ASC proposed rule that we

believe that VasQ™ meets the second cost significance requirement.

The third cost significance requirement, at § 419.66(d)(3), provides that the difference between the estimated average reasonable cost of the devices in the category and the portion of the APC payment amount for the device must exceed 10 percent of the APC payment amount for the related service. The difference between the estimated average reasonable cost of $4,900.00 for VasQ™ and the portion of the APC payment amount for the device of $49.81 is 159.70 percent of the APC payment amount for the related service of $3,037.01 ((($4,900.00 − $49.81)/$3,037.01) × 100 = 159.70 percent). Therefore, we stated in the CY 2026 OPPS/ASC proposed rule that we believe that VasQ™ meets the third cost significance requirement.

We invited public comment on whether VasQ™ meets the cost criterion at § 419.66(c)(3).

We did not receive any public comments regarding whether VasQ™ meets the cost significance criteria as described at § 419.66(d). Based on our findings from the first, second, and third cost significance tests, we continue to believe that VasQ™ meets the cost significance criteria specified at § 419.66(d).

As discussed, the VasQ™ pass-through application was preliminarily approved for transitional pass-through payment under the alternative pathway effective October 1, 2024. After our review of the device pass-through application, we have determined that VasQ™ meets the requirements for device pass-through status described at § 419.66. We are finalizing approval for device pass-through payment status for VasQ™ under the alternative pathway for devices that have an FDA Breakthrough Device designation and FDA marketing authorization for the indication for which the device has Breakthrough Device designation.

(2) Traditional Device Pass-Through Applications

(a) Axoguard HA+ Nerve Protector™

Axogen Corporation submitted an application for a new device category for transitional pass-through payment status for the Axoguard HA+ Nerve Protector™ for CY 2026. Per the applicant, the Axoguard HA+ Nerve Protector™ is a porcine small intestinal submucosa (SIS) decellularized extracellular matrix (ECM), with a dry coating of sodium hyaluronate and sodium alginate applied to both sides of the device that forms a thin layer of lubricious hydrogel when hydrated. According to the applicant, the Axoguard HA+ Nerve Protector™ is designed to be a protective interface between the nerve and the surrounding tissue to minimize the potential for soft tissue attachments and tethering that restricts the nerve's ability to glide and move through the tissue structures during anatomic movement.

Please refer to the online application posting for the Axoguard HA+ Nerve Protector™, available at *https://mearis.cms.gov/public/publications/device-ptp/DEP240830YUKGT.*

Comment: The applicant expressed its general support for approving transitional pass-through status for the Axoguard HA+ Nerve Protector™. The applicant asserted its belief that the nominated device offers a meaningful advancement for patients with challenging peripheral nerve injuries and that it meets the regulatory criteria for a transitional pass-through payment under § 419.66.

Response: We appreciate the applicant's input. We have taken these comments into consideration in making our determination for pass-through status for the Axoguard HA+ Nerve Protector™.

As stated previously, to be eligible for transitional pass-through payment under the OPPS, a device must meet the criteria at § 419.66(b)(1) through (4). With respect to the newness criterion at § 419.66(b)(1), FDA granted the applicant 510(k) clearance for the Axoguard HA+ Nerve Protector™ on April 7, 2023, and then granted a second 510(k) clearance for an expanded indication on October 12, 2023. The approved FDA indications for the Axoguard HA+ Nerve Protector™ are:

- For the management of peripheral nerve injuries where there is no gap;
- For the management and protection of peripheral nerve injuries where there is no gap or following closure of the gap.

We received the application for a new device category for transitional pass-through payment status for the Axoguard HA+ Nerve Protector™ on August 30, 2024, which is within 3 years of the date of the initial FDA marketing authorization.

Per the applicant, the OPPS pass-through application for the Axoguard HA+ Nerve Protector™ is only for the protection of peripheral nerve injuries where there is no nerve gap, specifically for protecting a nerve following a revision (secondary) carpal tunnel (CT) or cubital tunnel (CuT) nerve decompression procedure.

We invited public comments on whether the Axoguard HA+ Nerve Protector™ meets the newness criterion at § 419.66(b)(1).

We did not receive public comments regarding whether the Axoguard HA+ Nerve Protector™ meets the newness criterion at § 419.66(b)(1). We received the application for a new device category for transitional pass-through payment status for the Axoguard HA+ Nerve Protector™ within 3 years of the date of the initial FDA 510(k) clearance. Based on our review of the application, we have determined that the Axoguard HA+ Nerve Protector™ meets the newness criterion at § 419.66(b)(1).

With respect to the eligibility criteria at § 419.66(b)(3), the device must be an integral part of the service furnished, be used for one patient only, come in contact with human tissue, and be surgically inserted or implanted, or applied in or on a wound or other skin lesion. Per the applicant, the Axoguard HA+ Nerve Protector™ meets the requirements at § 419.66(b)(3).

We invited public comments on whether the Axoguard HA+ Nerve Protector™ meets the eligibility criterion at § 419.66(b)(3).

We did not receive public comments regarding whether the Axoguard HA+ Nerve Protector™ meets the eligibility requirements of § 419.66(b)(3). Based on our review of the application, we agree with the applicant and have determined that the Axoguard HA+ Nerve Protector™ meets the eligibility criterion at § 419.66(b)(3).

With respect to the exclusion criteria at § 419.66(b)(4), a device is not eligible to be considered for pass-through payment if it is any of the following: (1) equipment, an instrument, apparatus, implement, or item of this type for which depreciation and financing expenses are recovered as depreciable assets as defined in Chapter 1 of the Medicare Provider Reimbursement Manual (CMS Pub. 15–1); or (2) a material or supply furnished incident to a service (for example, a suture, customized surgical kit, or clip, other than a radiological site marker). Per the applicant, the Axoguard HA+ Nerve Protector™ is (1) not considered equipment, an instrument, apparatus, implement, or item of this type for which depreciation and financing expenses are recovered as depreciable assets and is (2) not a material or supply furnished incident to a service, and therefore, is eligible to be considered for pass-through payment.

We invited public comments on whether the Axoguard HA+ Nerve Protector™ meets the exclusion criterion at § 419.66(b)(4).

We did not receive public comments regarding whether the Axoguard HA+ Nerve Protector™ meets the exclusion requirements of § 419.66(b)(4). Based on

our review of the application, we agree with the applicant and have determined that the Axoguard HA+ Nerve Protector™ meets the criterion at § 419.66(b)(4).

In addition to the criteria at § 419.66(b)(1) through (4), the criteria for establishing new device categories are specified at § 419.66(c). The first criterion, at § 419.66(c)(1), provides that CMS determines that a device to be included in the category is not appropriately described by any of the existing categories or by any category previously in effect and was not being paid for as an outpatient service as of December 31, 1996. According to the applicant, no existing device categories for pass-through payment appropriately describe the Axoguard HA+ Nerve Protector™ because the existing device categories C1763 (Connective tissue, non-human (includes synthetic)), C1765 (Adhesion barrier), and C1781 (Mesh (implantable)) describe similar, but distinct products. The applicant stated that the existing pass-through code C1763 does not appropriately describe the Axoguard HA+ Nerve Protector™ because the devices described by C1763 are used for treating urinary incontinence or for implantation to reinforce soft tissues where weakness exists in the urological or musculoskeletal anatomy, whereas the Axoguard HA+ Nerve Protector™ is indicated for the management of peripheral nerve injuries. In addition, the applicant asserted that the existing pass-through code C1765 does not appropriately describe the Axoguard HA+ Nerve Protector™ because the devices described by C1765 are bioresorable substances and principally used in spinal surgeries, while the Axoguard HA+ Nerve Protector™ is indicated for peripheral nerves. Moreover, the applicant stated that the existing pass-through code C1781 does not appropriately describe the Axoguard HA+ Nerve Protector™ because the nominated device is indicated specifically for management of peripheral nerve injuries, whereas devices described by C1781 are for use in hernia repair. The applicant further asserted that C1765 and C1781 do not describe the Axoguard HA+ Nerve Protector™ because the device's porcine SIS ECM is not simply resorbed but is remodeled into a meso/epineurium-like tissue, while its sodium hyaluronate and sodium alginate coating reduces friction and promotes nerve gliding.

We noted in the CY 2026 OPPS/ASC proposed rule that based on the description the applicant provided, the Axoguard HA+ Nerve Protector™ is a porcine SIS ECM with hyaluronate-alginate coating used for the management and protection of peripheral nerve injuries where there is no gap or following closure of a gap, and thus, could be encompassed by the descriptors C1763 and C1765. Specifically, we stated that we believe that the description the applicant provided for the C1763 category definition is incomplete. The applicant stated that C1763 is indicated for treating urinary incontinence resulting from hypermobility or Intrinsic Sphincter Deficiency (ISD), pelvic floor repair, [or implantation] to reinforce soft tissues where weakness exists in the urological or musculoskeletal anatomy. However, we noted that, in reference to C1763, section 60.4.3, Chapter 4 of the Medicare Claims Processing Manual provides that these tissues include a natural, acellular collagen matrix typically obtained from porcine or bovine small intestinal submucosa, or pericardium. This bio-material is intended to repair or support damaged or inadequate soft tissue. They are used to treat urinary incontinence resulting from hypermobility or Intrinsic Sphincter Deficiency (ISD), pelvic floor repair, or for implantation to reinforce soft tissues where weakness exists in the urological or musculoskeletal anatomy. [This excludes those items that are used to replace skin.] Thus, because the Axoguard HA+ Nerve Protector™ is an ECM obtained from porcine SIS and intended to support a damaged or inadequate soft tissue (nerve), we stated that we believe that the pass-through payment category C1763 may appropriately describe the Axoguard HA+ Nerve Protector™.

Additionally, we stated in the CY 2026 OPPS/ASC proposed rule that we believe that the pass-through payment category C1765 may also appropriately describe the Axoguard HA+ Nerve Protector™ because the device, as described by the applicant, is designed to be placed on and around neural structures to be a protective interface between a nerve and the surrounding tissue, to minimize the potential for soft tissue attachments, and to ensure the nerve's ability to glide through tissue structures during anatomic movement, and therefore may be appropriately described as an adhesion barrier consistent with devices described by C1765.

We further noted in the CY 2026 OPPS/ASC proposed rule that the two neuroplasty procedure codes that could be used with the Axoguard HA+ Nerve Protector™ (CPT® codes 64718 and 64721) have previously been used with both categories C1763 and C1765 and that FDA has previously approved devices described by C1763 and C1765 and billed using CPT® codes 64718 or 64721 for neuroplasty and/or transposition of the ulnar nerve at elbow or median nerve at carpal tunnel. We also noted that the inclusion of these neuroplasty devices in categories C1763 and C1765 appears contradictory to the applicant's assertion that the categories are inapplicable for devices indicated for peripheral nerves. In this context, we stated that we believe the Axoguard HA+ Nerve Protector™ may be similar to the devices described by C1763 and C1765, and therefore, the Axoguard HA+ Nerve Protector™ may be appropriately described by C1763 and C1765.

We invited public comment on whether the Axoguard HA+ Nerve Protector™ meets the device category criterion at § 419.66(c)(1).

Comment: In response to our concern that the Axoguard HA+ Nerve Protector™ may be appropriately described by C1763 and C1765, the applicant commented that although the Axoguard HA+ Nerve Protector™, on a superficial level, shares some attributes with products billed to those HCPCS codes, the existing codes were established for different materials and clinical uses, and thus, do not accurately describe the nominated device or its intended application. The applicant asserted that a new, distinct device category is warranted. The applicant acknowledged that C1763 (Connective tissue, non-human (includes synthetic)) generally covers acellular collagen matrices derived from animal sources, which sounds similar to Axoguard HA+ Nerve Protector™'s extracellular matrix component. The applicant noted, however, that the Medicare Claims Processing Manual's definition for C1763 clarifies that these matrices are ''intended to repair or support damaged or inadequate soft tissue'' and are typically used for ''urinary incontinence (*e.g.,* pelvic floor repair) or to reinforce soft tissues where weakness exists in the urological or musculoskeletal anatomy,'' explicitly excluding products used as skin replacements. The applicant further asserted that CMS created C1763 to describe implants like surgical grafts or slings for pelvic floor and orthopedic reinforcement, not nerve protectors. The applicant stated that the Axoguard HA+ Nerve Protector™ is indicated for the management and protection of peripheral nerves, which is neither a urological nor a musculoskeletal application. In addition, the applicant asserted its belief that a peripheral nerve's needs (*i.e.,* gliding in a tissue

bed and protection from adhesions) are very different from the structural support typically provided by C1763 devices used in incontinence or hernia repairs. The applicant stated that using C1763 for a nerve protector is a clinical stretch beyond the code's intended scope, even if the base material (porcine SIS) is similar. In response to our statement that some neuroplasty procedures (CPT 64718 and 64721) have previously been billed for devices in the C1763 category, the applicant opined that such practice reflects the absence of a nerve-specific device code rather than a proper fitting of nerve products into C1763. The applicant stated that a new code would eliminate ambiguity and ensure more precise coding for nerve repair technologies.

In regard to the applicability of C1765 (Adhesion barrier), the applicant stated that, although one might consider Axoguard HA+ Nerve Protector™ an adhesion barrier since it aims to prevent scar adhesion around nerves, C1765 is defined as a bioresorbable substance placed on or around neural structures, which inhibits fibroblast migration and minimizes scar tissue formation, principally used in spine surgeries (laminectomies, discectomies). The applicant also stated that paradigmatic C1765 devices are spinal dura shields or gels that prevent epidural fibrosis after back surgery. The applicant asserted that the Axoguard HA+ Nerve Protector™ differs in both composition and clinical context, as it is a biological matrix implant (not just a synthetic or biochemical barrier), which is used in peripheral nerve surgeries of the limbs, not in the spine. The applicant further added that Axoguard HA+ Nerve Protector™'s ECM is intended to integrate into the nerve's outer tissue layer over time (providing long-term support), rather than resorb away like typical adhesion barriers. The applicant added that, as with C1763, any device assigned to C1765 currently receives no transitional pass-through payment, as C1765 was a pass-through category long ago and is now a packaged supply code, and continuing to use C1765 for a new nerve-specific technology would perpetuate the lack of appropriate payment, contrary to the purpose of establishing new device categories for innovations.

The applicant also stated that C1781 (Mesh, implantable) is used for hernia repair, which is different from the Axoguard HA+ Nerve Protector™'s indication. The applicant asserted that the Axoguard HA+ Nerve Protector™ does not fit any existing mesh or patch category used for general surgical repair because it is a specialized nerve protector and stands apart from surgical meshes used in abdominal or orthopedic procedures. The applicant concluded that, given these distinctions, no existing HCPCS Level II code adequately describes Axoguard HA+ Nerve Protector™'s combination of material, function, and clinical indication. The applicant stated that assigning the nominated device to C1763, C1765, or C1781 would not only be inappropriate from a descriptive standpoint but would also fail to facilitate tracking of the device's utilization and outcomes since its use would be obscured under codes that include many other dissimilar products. The applicant asserted that, by creating a new device category and code, CMS will ensure that claims for the Axoguard HA+ Nerve Protector™ can be accurately identified, and thus, improve transparency and allow the collection of meaningful data regarding the device's cost and performance during the transitional pass-through period, as intended under § 419.66.

Finally, the applicant also stated that CMS regulations stipulate that a new device category may be established if the device is not appropriately described by any of the existing categories. For these reasons, the applicant believes that the Axoguard HA+ Nerve Protector™ meets the device category criterion. The applicant reiterated its belief that the Axoguard HA+ Nerve Protector™ satisfies the requirements described at § 419.66(c)(1) regarding distinct category status. According to the applicant, the alternative to establishing a new category code—forcing the device into a category like C1763 or C1765—would continue the current disincentive for adoption, contradicting CMS's goal of enabling access to worthwhile new therapies, whereas creating a new category code would signal to hospitals that the Axoguard HA+ Nerve Protector™ is recognized as an innovation and encourage appropriate use in patients who need it. Finally, the applicant stated that finalizing the creation of a new code would accurately describe the device's unique characteristics and clinical use.

Response: We appreciate the applicant's input. We agree with the applicant that C1781 does not appropriately describe the Axoguard HA+ Nerve Protector™. However, based on the information available to us, we continue to believe that C1763 and C1765 may describe the Axoguard HA+ Nerve Protector™. We have taken this into consideration in making our determination for device pass-through payment status for the Axoguard HA+ Nerve Protector™.

The second criterion for establishing a device category, at § 419.66(c)(2), provides that CMS determines either of the following: (1) that a device to be included in the category has demonstrated that it will substantially improve the diagnosis or treatment of an illness or injury or improve the functioning of a malformed body part compared to the benefits of a device or devices in a previously established category or other available treatment; or (2) for devices for which pass-through status will begin on or after January 1, 2020, as an alternative to the substantial clinical improvement criterion, the device is part of the FDA's Breakthrough Devices Program and has received FDA marketing authorization for the indication covered by the Breakthrough Device designation. The applicant asserted that the Axoguard HA+ Nerve Protector™ represents a substantial clinical improvement over existing technologies in the management of peripheral nerve injuries where there is no nerve gap, specifically in protecting a nerve following a revision (secondary) CT or CuT nerve decompression procedure.

The applicant provided three redacted manufacturer internal reports to support these claims, as well as eight background articles/documents about the predicate device, the Axoguard Nerve Protector™. We noted in the CY 2026 OPPS/ASC proposed rule that the predicate device differs from the Axoguard HA+ Nerve Protector™ in that the nominated device has a dry coating of sodium hyaluronate and sodium alginate applied to both sides that forms a thin layer of lubricious hydrogel when hydrated. We stated that the addition of the dry coating of sodium hyaluronate and sodium alginate to the Axoguard Nerve Protector™ appears to be the distinguishing feature of the device that is the subject of this application. In addition, the applicant submitted 32 supplemental background articles describing topics including general disease processes and disease prevalence.

The applicant's assertions regarding the substantial clinical improvement criterion are shown in Table 102, previously published as Table 51 of the CY 2026 OPPS/ASC proposed rule (90 FR 33584 through 33588). Please see the online posting for the Axoguard HA+ Nerve Protector™ for the applicant's complete statements regarding the substantial clinical improvement

criterion and the supporting evidence provided.

BILLING CODE 4120–01–P

TABLE 102: SUBSTANTIAL CLINICAL IMPROVEMENT ASSERTIONS

Substantial Clinical Improvement Assertion: The device demonstrates that it will substantially improve the diagnosis or treatment of an illness or injury or improve the functioning of a malformed body part compared to the benefits of a device(s) in a category or other available treatment		
Applicant statements in support	**Supporting evidence provided by the applicant**	**Reference Title**
Nerve health in an injured tissue bed – Less adhesion, extraneural scar, and inflammatory markers	The quality, extent, tenacity, and overall impression of adhesions were not different from a sham surgery control group.	*Kokkalis, Z. T., Pu, C., Small, G. A., Weiser, R. W., Venouziou, A. I., & Sotereanos, D. G. (2011). Assessment of processed porcine extracellular matrix as a protective barrier in a rabbit nerve wrap model. *Journal of Reconstructive Microsurgery*, *27*(1), 19–28. *https://doi.org/10.1055/s-0030-1267379.*
	26 weeks following the surgical injury of a rat sciatic nerve tissue bed, Axoguard HA+ Nerve Protector™ was implanted into an injured nerve tissue bed and compared to the contralateral nerve, a sham surgery control and a non-wrapped nerve placed into a damaged nerve tissue bed. No statistical difference of adhesion scores was found between the Axoguard HA+ Nerve Protector™ group and the sham group. A statistically higher difference in adhesion scores was observed between the damaged tissue bed control and the sham control.	Axogen Corporation. (2024). *Preclinical study to evaluate the effect of protection in a tissue bed thermal injury model utilizing an Axoguard HA+ Nerve Protector: 26-week timepoint* [Redacted report].
	26 weeks following the surgical injury of a rat sciatic nerve tissue bed, Axoguard HA+ Nerve Protector™ was implanted into an injured nerve tissue bed and compared to the contralateral nerve, a sham surgery control and a non-wrapped nerve placed into a damaged nerve tissue bed. No statistical difference of extraneural collagen between the contralateral nerve was observed. Axoguard HA+ Nerve Protector™ group had significantly lower extraneural collogen versus the non-wrapped nerve control at 26 weeks.	Axogen Corporation, 2024, *op. cit.*
	26 weeks following the surgical injury of a rat sciatic nerve tissue bed, Axoguard HA+ Nerve Protector™ was implanted into an injured nerve tissue bed and compared to the contralateral nerve, a sham surgery control and a non-wrapped nerve placed into a damaged nerve tissue bed. The Axoguard HA+ Nerve Protector™ group had significantly lower CD68 positive macrophages versus the non-wrapped nerve control at 26 weeks.	Axogen Corporation, 2024, *op. cit.*
	Axoguard HA+ Nerve Protector™ was implanted into an injured rat sciatic nerve tissue bed and compared to the contralateral nerve, a sham surgery control and a non-wrapped nerve placed into a damaged nerve tissue bed. At 6 weeks, adhesion scores of the untreated injury	Alsmadi, N. Z., Deister, C., Evans, P., Ghanem, T., Smetana, B. S., & Mercer, D. M. (2025). *Use of hyaluronate-alginate gel-coated small intestine submucosa for nerve protection in a preclinical adhesion model* [Conference

Substantial Clinical Improvement Assertion: The device demonstrates that it will substantially improve the diagnosis or treatment of an illness or injury or improve the functioning of a malformed body part compared to the benefits of a device(s) in a category or other available treatment		
Applicant statements in support	**Supporting evidence provided by the applicant**	**Reference Title**
	and Axoguard HA+ Nerve Protector™ groups were significantly higher than the sham, $p<0.001$ and $p = 0.03$, respectively. At 26 weeks, the adhesion score trended higher in the untreated injury group than the Axoguard HA+ Nerve Protector™.	presentation abstract]. 2025 American Association for Hand Surgery Annual Meeting, Waikoloa Village, HI, United States. *https://meeting.handsurgery.org/program/2025/HS64.cgi*.
	Axoguard HA+ Nerve Protector™ was implanted into an injured rat sciatic nerve tissue bed and compared to the contralateral nerve, a sham surgery control and a non-wrapped nerve placed into a damaged nerve tissue bed. At 6 and 26 weeks, extraneural collagen deposition was significantly higher in the untreated injury group than the sham and the Axoguard HA+ Nerve Protector™, $p=0.02$ and $p<0.001$.	Alsmadi, 2025, *op. cit.*
	Axoguard HA+ Nerve Protector™ was implanted into an injured rat sciatic nerve tissue bed and compared to the contralateral nerve, a sham surgery control and a non-wrapped nerve placed into a damaged nerve tissue bed. CD68-positive macrophages were similar across groups at 6 weeks explant. At 26 weeks, CD68-positive macrophages in the untreated injury group were significantly higher than the Axoguard HA+ Nerve Protector™ group, $p = 0.01$	Alsmadi, 2025, *op. cit.*
Nerve health in an injured tissue bed – Tissue remodeling, vascularization	Significant increase in M2/M1 macrophage ratio indicating a pro-healing response ($p<0.001$) compared with bovine collagen. In addition, significantly greater vascularization ($p<0.001$) and fibroblast ingrowth ($p<0.01$) were observed. These are all markers of the remodeling process.	*Zhukauskas, R., Fischer, D. N., Deister, C., Alsmadi, N. Z., & Mercer, D. (2021). A Comparative Study of Porcine Small Intestine Submucosa and Cross-Linked Bovine Type I Collagen as a Nerve Conduit. *Journal of Hand Surgery Global Online*, *3*(5), 282–288. *https://doi.org/10.1016/j.jhsg.2021.06.006*.
	Histological examination of the material demonstrated revascularization of the material as early as 1 month. The nerve wrap gradually remodeled and incorporated into a connective tissue structure much like the nerve epineurium.	*Kokkalis, 2011, *op. cit.*
Low rate of recurrent symptoms	No evidence of recurrent symptoms following revision with Axoguard Nerve Protector® (n=12, mean follow-up of 41 months).	*Papatheodorou, L. K., Williams, B. G., & Sotereanos, D. G. (2015). Preliminary results of recurrent cubital tunnel syndrome treated with neurolysis and porcine extracellular matrix nerve wrap. *The Journal of Hand Surgery, 40*(5), 987–992. *https://doi.org/10.1016/j.jhsa.2015.02.031*.

Substantial Clinical Improvement Assertion: The device demonstrates that it will substantially improve the diagnosis or treatment of an illness or injury or improve the functioning of a malformed body part compared to the benefits of a device(s) in a category or other available treatment

	No evidence of recurrent symptoms following revision with Axoguard HA+ Nerve Protector™ in 5 patients (up to 60 months).	*Kokkalis, S. T., Mavr ogenis, A. F., Vottis, C., Papatheodorou, L., Papagelopoulos, P. J., Soucacos, P. N., & Sotereanos, D. G. (2016). Median nerve biodegradable wrapping: Clinical outcome of 10 patients. *Acta Orthopaedica Belgica, 82*(2), 351–357. *https://www.actaorthopaedica.be/assets/2407/28-mavrogenis-.pdf*.
	One of 35 patients underwent revision surgery for recurrent symptoms.	*Fones, L., DePascal, M., & Ilyas, A. M. (2024). Use of Nerve Wraps in the Upper Extremity. *Surgical Colectivel, 2*(1). *https://doi.org/10.58616/001c.90454*.
	One additional surgery among 34 decompression procedures. Patient was re-explored for an acute post-operative hematoma related to anti-coagulation.	*Jordaan, P. W., Uhiara, O., & Power, D. (2019). Management of the scarred nerve using porcine submucosa extracellular matrix nerve wraps. *Journal of Musculoskeletal Surgery and Research, 3*, 128-133. *https://doi.org/10.4103/jmsr.jmsr_69_18*.
	There were no re-revision procedures necessary at the latest follow-up (n=12).	*Imran, R., George, S., Jose, R., Shirley, C., & Power, D. M. (2022). Clinical outcomes following neurolysis and porcine collagen extracellular matrix wrapping of scarred nerves in revision carpal tunnel decompression. *Journal of Plastic, Reconstructive, & Aesthetic Surgery, 75*(8), 2802–2808. *https://doi.org/10.1016/j.bjps.2022.04.010*.
Sensory symptoms: Decreased post-operative pain and abnormal sensory sensations	A significant reduction in mean VAS pain score from 9 pre-operatively to 4.5 at post- operative ($p < 0.05$).	*Imran, 2022, *op. cit.*
	Average pain levels (VAS) were significantly reduced ($p<0.001$). Pre-operative range was 7-10; post-operative range was 1-2.	*Papatheodorou, 2015, *op. cit.*
	All patients showed improvement of VAS pain score at the final follow-up (mean 3 years). Pre-operative range was 6-10; post-operative range was 1-3.	*Kokkalis, 2016, *op. cit.*
	All patients showed improvement of hyperesthesia and numbness at the index and middle fingers at final follow-up. Tinel sign was absent and the static two-point discrimination test at the index and middle fingers was 5-9 mm. Mean follow-up was 3 years (range, 0.5 to 5 years).	*Kokkalis, 2016, *op. cit.*

Substantial Clinical Improvement Assertion: The device demonstrates that it will substantially improve the diagnosis or treatment of an illness or injury or improve the functioning of a malformed body part compared to the benefits of a device(s) in a category or other available treatment		
Applicant statements in support	**Supporting evidence provided by the applicant**	**Reference Title**
Motor symptoms – Improved hand functionality and strength	Grip strength and pinch strength were both significantly improved ($p<0.001$) from preoperative levels at final follow-up (24-60 mo).	*Papatheodorou, 2015, *op. cit.*
	The Impact of Hand Nerve Disorders (I-HaND;Version 2) was used to measure symptom severity and functional limitations. There was a significant post-operative reduction in I-HaND score when compared with pre-operative scores ($p < 0.05$), demonstrating a significant reduction in hand disability.	*Imran, 2022, *op. cit.*
	All patients had delayed latencies and slowed conduction velocities pre-surgery, and all were improved at the final post-surgical follow-up. Mean follow-up was 3 years (range, 0.5 to 5 years).	*Kokkalis, 2016, *op. cit.*
Positive survey symptom severity, functional limitations, and patient satisfaction scores	Patient satisfaction rating for symptom resolution was 79% (range 20–100).	*Imran, 2022, *op. cit.*
Safety - No complications or infections	No foreign body reactions, post-operative infections, or wound complications.	*Papatheodorou, 2015, *op. cit.*
	Complications related to the nerve wrap materials were not observed. Mean follow up was 3 years.	*Kokkalis, 2011, *op. cit.*
	102 patients were analyzed, 35 had revision carpal or cubital tunnel decompression. There were no cases of wrap rejection, extrusion, or infection.	*Fones, 2024, *op. cit.*
	The median follow-up period was 23 months (range 6–36 months). There were no complications related to the use of the Axoguard Nerve ProtectorÔ.	*Imran, 2022, *op. cit.*
	No cases of infection, persistent inflammation, or recurrent symptomatic perineural fibrosis.	*Jordaan, 2019, *op. cit.*
Decreased friction between the nerve and surrounding tissue to allow for gliding and minimize potential for soft tissue attachment	Axoguard HA+ Nerve Protector™ was subjected to 6 months of real time aging, testing for the static CoF. The results found the mean static CoF was 95.01% lower compared to uncoated porcine SIS (t-stat of 11.1506).	Axogen Corporation. (n.d.). *Axoguard HA+ Nerve Protector (Next Generation Protection or NGP) static coefficient of friction (lubricity) test report: Performed following real-time age conditioning of 6 months* [Redacted report].
Device performance – sodium hyaluronate and sodium alginate gel layer and nerve gliding	Axoguard HA+ Nerve Protector™ features a lubricant layer that resorbs within 4-8 weeks.	Axogen Corporation. (2022, December 1). *Chronic GLP Evaluation of Local Biologic al Response of the Surrounding Muscle Tissue Post-Implantation of Next*

Substantial Clinical Improvement Assertion: The device demonstrates that it will substantially improve the diagnosis or treatment of an illness or injury or improve the functioning of a malformed body part compared to the benefits of a device(s) in a category or other available treatment		
Applicant statements in support	**Supporting evidence provided by the applicant**	**Reference Title**
		Generation Protection Device in a Rat Sciatic Nerve Model [Redacted report].
Motor and Sensory Symptoms – Improved sensory and motor symptoms	After adjusting for baseline characteristics, patients in the wrapped group improved with a significant difference of 0.43 points more than the non-wrapped group (95% CI (0.01–0.86), p = 0.049) in terms of the McGowan scores. Wrapped patients scored higher on the Wilson Krout Grade with more excellent/good and less fair/poor outcomes versus the unwrapped group (p = 0.04).	*Burahee, A. S., Duraku, L. S., Bosman, R., Shirley, C., van der Oest, M. J. W., Zuidam, M. J., & Power, D. M. (2024). Porcine submucosal extracellular matrix wrapping of the ulnar nerve in revision cubital tunnel surgery. *Journal of Plastic, Reconstructive, & Aesthetic Surgery*, *98*, 176-183. *https://doi.org/10.1016/j.bjps.2024.08.072*.

* We note this source does not assess, evaluate, or review the nominated device and only provides background information in support of the applicant's claims of substantial clinical improvement.

**The language included in the first two columns is the language the applicant provided to describe its claim and the evidence in support of its claim. The language does not reflect CMS's analysis of the information provided.

BILLING CODE 4120–01–C

After review of the information provided by the applicant, we noted in the CY 2026 OPPS/ASC proposed rule that we have the following concerns regarding whether the Axoguard HA+ Nerve Protector™ meets the substantial clinical improvement criterion.

The applicant asserted that the Axoguard HA+ Nerve Protector™ demonstrates clinical improvement in: (1) nerve health in an injured tissue bed through less adhesion, extraneural scarring, and inflammatory markers, (2) nerve health in an injured tissue bed through decreased friction between the nerve and surrounding tissue to allow for gliding and to minimize potential for soft tissue attachment, (3) device performance due to its sodium hyaluronate and sodium alginate gel layer that allows for nerve gliding, and (4) sensory and motor symptoms. We noted that the applicant provided redacted internal studies of animal models (Axogen Corporation, 2024; Axogen Corporation, n.d.; Axogen Corporation, 2022) and an abstract (Alsmadi et al., 2025) on Axoguard HA+ Nerve Protector™ in rats. We noted that the applicant did not submit studies assessing the Axoguard HA+ Nerve Protector™ in humans. Therefore, we questioned whether data from animal studies is sufficient to extrapolate to human populations for the purposes of demonstrating substantial clinical improvement.

For the other claims, the applicant provided only background evidence, specifically retrospective studies, which describe findings for a predicate device, the Axoguard Nerve Protector™, which received FDA 510(k) clearance on January 10, 2014, not the nominated device, the Axoguard HA+ Nerve Protector™. We noted that the applicant stated that the nominated Axoguard HA+ Nerve Protector™ improved on the predicate device, but the applicant did not provide any additional information or evidence to support this claim. We also noted that the application did not include comparative outcome data between the Axoguard HA+ Nerve Protector™ and its predicate device. We stated that we welcome additional information that compares outcome data from the Axoguard HA+ Nerve Protector™ and the predicate device, the Axoguard Nerve Protector™, to help inform our assessment of whether the Axoguard HA+ Nerve Protector™ demonstrates a substantial clinical improvement.

In addition, we stated in the CY 2026 OPPS/ASC proposed rule that we are concerned that the provided evidence did not directly support the applicant's 10 claims that the Axoguard HA+ Nerve Protector™ demonstrates substantial clinical improvement over existing technologies. We noted that no evidence was provided comparing the Axoguard HA+ Nerve Protector™ to other currently available treatments for the indicated condition including autologous flaps/fat pads and xenografts or off-the-shelf wraps that include materials sourced from human amniotic membrane, bovine, porcine, and plants. We stated that we welcome further evidence that compares the Axoguard HA+ Nerve Protector™ to currently available treatments in the clinical setting where it is most likely to be used. To demonstrate substantial clinical improvement over currently available treatments, we stated that we consider supporting evidence, preferably published peer-reviewed clinical trials, that show improved clinical outcomes, such as reduction in mortality, complications, subsequent interventions, future hospitalizations, recovery time, pain, or a more rapid beneficial resolution of the disease process compared to the standard of care. We stated that additional supporting evidence demonstrating these improved clinical outcomes would help inform our assessment of whether the Axoguard HA+ Nerve Protector™ demonstrates substantial clinical improvement over existing technologies.

We invited public comment on whether the Axoguard HA+ Nerve Protector™ meets the device category criterion at § 419.66(c)(2).

Comment: The applicant acknowledged that CMS applies a high evidentiary standard for substantial clinical improvement, typically requiring robust clinical data showing improved patient outcomes such as reduced complications, fewer reoperations, faster recovery, or better functional results compared to the current standard of care. The applicant further acknowledged the concerns CMS

included in the CY 2026 OPPS/ASC proposed rule regarding the Axoguard HA+ Nerve Protector™ application and agreed that demonstrating improved clinical outcomes in patients is essential to meeting the substantial clinical improvement criterion.

In response to our concerns, the applicant commented that it is committed to providing the clinical evidence necessary to satisfy the substantial clinical improvement standard and indicated that it is currently conducting an ongoing prospective, multicenter, open-label, single-arm clinical study[44] to evaluate the Axoguard HA+ Nerve Protector™ in patients undergoing a first revision cubital tunnel decompression procedure for recurrent or recalcitrant cubital tunnel syndrome. The applicant explained that the study has enrolled 19 study participants with recurrent cubital tunnel syndrome following a failure to maintain the functional improvements from their primary decompression procedure, allowing participants to serve as their own in-patient controls for analysis of the treatment effect of repeating the decompression procedure with the addition of the Axoguard HA+ Nerve Protector™. The applicant noted that the study is currently in the participant follow-up phase, with the intent for each participant to complete 18 months of follow-up. The applicant reported that although the study is not complete, it has completed a planned interim analysis of the study that it believes directly addresses the previous lack of human outcomes data for the Axoguard HA+ Nerve Protector™. The applicant asserted that the preliminary results demonstrate a decrease in pain, improvements in grip strength and sensory testing, and no adverse effects.

Specifically, the applicant stated that 84.2 percent of study participants reported a level of none to mild (0–30 mm on 0–100 mm in the Visual Analog Scale (VAS)) pain at 6 months post-operatively. Further, the study found a mean VAS score at first pre-operative visit of 73.6 mm (SD = 18.3) and a post-operative score of 13.5 mm at 6 months (SD = 23.8), representing an 81.7 percent decrease in mean VAS-reported pain. The applicant also stated that, 26.3 percent of participants reported a VAS of zero at the 6-month post-operative timepoint. Moreover, the applicant added that the participants demonstrated functional recovery of the ulnar nerve as measured by improvements in grip strength (68.4 percent of participants) and sensory testing (63.2 percent of participants) from baseline to 6 months. The applicant finally asserted that the study data showed improvement in investigator-rated ulnar neuropathy assessed by the Modified McGowan Classification of Ulnar Nerve Neuropathy and that there have been no second revision procedures performed, no reports of recurrences of ulnar neuropathy, and no safety issues. The applicant noted that these interim findings are descriptive in nature, and the final analysis will be available upon completion of the 18-month follow-up period, database lock, and final statistical review. Finally, the applicant highlighted that, while the study is ongoing and data remains subject to final investigator approval and statistical analysis, preliminary, 100 percent source-verified observations to date are consistent with the FDA-cleared intended use and function of the Axoguard HA+ Nerve Protector™. The applicant stated that it believes that the nominated device meets the substantial clinical improvement threshold, given its novel mechanism addressing unmet need for recurrent nerve compression injuries, and requested that CMS consider the provided clinical data and recognize the Axoguard HA+ Nerve Protector™ as an innovative device offering improved clinical outcomes.

Response: We appreciate the applicant's input; however, we maintain some of our concerns listed in the CY 2026 OPPS/ASC proposed rule (90 FR 33588 through 35589), including the lack of comparative data between the Axoguard HA+ Nerve Protector™ and the predicate device and other currently available treatments for the indicated condition. While the new information from the preliminary findings of the 19-patient clinical trial currently underway may address our concern about the lack of human clinical trial evidence, we believe that the data provided does not sufficiently demonstrate substantial clinical improvement. Specifically, we believe that the preliminary findings may contain uncontrolled confounding variables specific to the study participants' initial procedures that may cast doubt on the validity of the study's outcomes. We note that the new evidence provided is preliminary data gathered during the first 6 months of an 18-month long clinical trial. The applicant specifically stated that these interim findings are descriptive in nature, and the final analysis will be conducted upon completion of follow-up, database lock, and final statistical review. At this time, the provided summary of the preliminary data is insufficient to draw a conclusion that the clinical benefits purportedly resulting from use of the Axoguard HA+ Nerve Protector™ are substantial when compared to existing treatments.

In addition, we note that the small sample size may affect the quality and reliability of the data provided in support of the Axoguard HA+ Nerve Protector™ and may limit the statistical significance and generalizability of the results. Further, we question whether using patients as their own controls for subsequent decompression procedure with Axoguard HA+ Nerve Protector™ demonstrates a substantial clinical improvement when compared to other available treatments. Finally, it is unclear based on the data submitted by the applicant which prior procedures were performed.

For the reasons discussed, we do not believe that the Axoguard HA+ Nerve Protector™ represents a substantial clinical improvement relative to existing therapies currently available. Therefore, after consideration of the public comment we received and our review of the device pass-through application, we are not approving the Axoguard HA+ Nerve Protector™ for transitional pass-through payment status for CY 2026 because the technology does not meet the substantial clinical improvement criterion at § 419.66(c)(2). Because we have determined that the Axoguard HA+ Nerve Protector™ does not meet the substantial clinical improvement criterion, we will not address in this final rule with comment period whether the technology meets the cost criterion required for transitional pass-through payment for devices.

(b) LithoVue™ Elite Digital Flexible Ureteroscope System With Pressure Monitoring

Boston Scientific Corporation submitted an application for a new device category for transitional pass-through payment status for the LithoVue™ Elite Digital Flexible Ureteroscope System with Pressure Monitoring (the LithoVue™ Elite System) for CY 2026. Per the applicant, the LithoVue™ Elite System consists of a single-use, disposable flexible ureteroscope (the LithoVue™ Elite Ureteroscope) and a workstation (the StoneSmart Connect Console), that provide real-time intraluminal pressure monitoring in the kidney and ureter during ureteroscopy and can be used in conjunction with endoscopic accessories to perform various diagnostic and therapeutic procedures in the urinary tract. The applicant stated that the distal tip of the LithoVue™

[44] Nerve Protection Evaluation: Revision Cubital Tunnel Syndrome Decompression (COVERED); (NCT06117501).

Elite Ureteroscope's shaft includes the working channel, the illumination optics, the digital imaging sensor, and a Micro-Electro-Mechanical Systems (MEMS) pressure sensor for monitoring the real-time intraluminal pressure during ureteroscopy.

The applicant is only seeking a new device category for transitional pass-through payment status for the LithoVue™ Elite Ureteroscope, a component of the LithoVue™ Elite System.

Please refer to the online application posting for the LithoVue™ Elite Digital Flexible Ureteroscope System with Pressure Monitoring, available at *https://mearis.cms.gov/public/publications/device-ptp/DEP2503038TF22.*

Comment: A few commenters expressed support for approval of transitional pass-through payment for the LithoVue™ Elite Ureteroscope. The commenters expressed their belief that the LithoVue™ Elite Ureteroscope benefits patients by minimizing the post-operative risks of pyelonephritis, urosepsis, and pain.

However, a few commenters expressed that the LithoVue™ Elite Ureteroscope should not receive approval for transitional pass-through payments, because the applicant did not provide sufficiently robust, peer-reviewed clinical evidence that demonstrates a clear benefit to patient outcomes over existing ureteroscopes.

Response: We appreciate the commenters' input and acknowledge the commenters' support for and against the approval of the LithoVue™ Elite Ureteroscope for transitional pass-through status. We have taken these comments into consideration in our final determination for pass-through status for the LithoVue™ Elite Ureteroscope.

As stated previously, to be eligible for transitional pass-through payment under the OPPS, a device must meet the criteria at § 419.66(b)(1) through (4). With respect to the newness criterion at § 419.66(b)(1), FDA granted the applicant 510(k) clearance for the LithoVue™ Elite System on February, 2023. The approved FDA indication for the LithoVue™ Elite System is:

- To be used to visualize organs, cavities, and canals in the urinary tract (urethra, bladder, ureter, calyces and renal papillae) via transurethral or percutaneous access routes. It can also be used in conjunction with endoscopic accessories to perform various diagnostic and therapeutic procedures in the urinary tract.

On July 1, 2024, FDA granted the applicant Special 510(k) clearance for the LithoVue™ Elite Ureteroscope (with pressure monitoring) with a redesigned distal tip to improve its durability during a ureteroscopy for this same indication. We received the application for a new device category for transitional pass-through payment status for the LithoVue™ Elite System on March 3, 2025, which is within 3 years of the date of the initial FDA marketing authorization.

We invited public comments on whether the LithoVue™ Elite System meets the newness criterion at § 419.66(b)(1).

Comment: With respect to the newness criterion at § 419.66(b)(1), the applicant reiterated that FDA granted 510(k) clearance for the LithoVue™ Elite Ureteroscope on February 2, 2023. The applicant also noted that it submitted an application for transitional pass-through payment on March 3, 2025, which is within 3 years of the initial market authorization, and therefore, the LithoVue™ Elite Ureteroscope meets the criterion at § 419.66(b)(1).

Response: We appreciate the applicant's input. We agree with the applicant that we received the application for a new device category for transitional pass-through payment status for the LithoVue™ Elite Ureteroscope within 3 years of the date of FDA 510(k) clearance. After consideration of the public comments we received and our review of the application, we have determined that the LithoVue™ Elite System meets the newness criterion at § 419.66(b)(1).

As previously noted, the applicant is only seeking a new device category for transitional pass-through payment status for the LithoVue™ Elite Ureteroscope component of the LithoVue™ Elite System, and as such, the eligibility and exclusion criteria will evaluate the LithoVue™ Elite Ureteroscope.

With respect to the eligibility criteria at § 419.66(b)(3), the device must be an integral part of the service furnished, be used for one patient only, come in contact with human tissue, and be surgically inserted or implanted, or applied in or on a wound or other skin lesion. Per the applicant, the LithoVue™ Elite Ureteroscope meets the requirements at § 419.66(b)(3).

With respect to the LithoVue™ Elite Ureteroscope, we questioned in the CY 2026 OPPS/ASC proposed rule whether the MEMS pressure sensor is integral to the service furnished. In the CY 2014 OPPS final rule with comment period (78 FR 75005), we stated that we have interpreted ''integral'' to mean that the device is necessary to furnish or deliver the primary procedure with which it is used. For example, a pacemaker is integral to the procedure of implantation of a pacemaker. Per the applicant, the LithoVue™ Elite Ureteroscope differs from other currently available ureteroscopes, because the device includes the MEMS pressure sensor which is located at the distal tip of the ureteroscope and enables continuous, real-time monitoring of intrarenal pressure (IRP) during ureteroscopy. We noted that neither the FDA 510(k) indication nor the FDA Special 510(k) indication includes the MEMS pressure sensor, and the cleared indications appear to be consistent with the indications for other FDA approved ureteroscopes. In addition, as discussed in more detail in the § 419.66(c)(2) discussion in the CY 2026 OPPS/ASC proposed rule, we questioned whether there is sufficient evidence to support the assertion that continuous pressure monitoring is necessary and/or required to furnish or deliver the primary procedure (ureteroscopy) with which it is used. While we did not question whether the ureteroscope itself is integral to the service furnished, we questioned whether the MEMS pressure sensor, the mechanism which the applicant asserts is the distinguishing feature of the LithoVue™ Elite Ureteroscope, is integral to the service furnished in accordance with § 419.66(b)(3), because pressure monitoring during ureteroscopy procedures appears to be purely additive and not necessary to furnish the ureteroscopy.

We invited public comments on whether the LithoVue™ Elite Ureteroscope meets the eligibility criterion at § 419.66(b)(3).

Comment: The applicant reiterated that the LithoVue™ Elite Ureteroscope is used for one patient only, comes in contact with human tissue, and is surgically inserted during a ureteroscopy procedure.

In response to our concern whether the LithoVue™ Elite Ureteroscope's MEMS pressure sensor is integral to the services furnished, specifically whether continuous pressure monitoring is required to perform ureteroscopy, the applicant commented that it disagrees with our interpretation of integral and believes that the MEMS pressure sensor is an intrinsic part of the LithoVue™ Elite Ureteroscope because it is not a detachable or an adjunctive component. The applicant further stated that the LithoVue™ Elite Ureteroscope's unique pressure sensing capability is the device's key feature and the basis for its substantial clinical improvement claim. Specifically, the applicant asserted that

the ability to measure IRP makes ureteroscopy safer because the surgeon is able (through use of this new technology) to avoid dangerously high IRPs, which the surgeon has no way of detecting with a conventional ureteroscope. The applicant also asserted that CMS's literal application of its example that ''a pacemaker is integral to the procedure of implantation of a pacemaker'' is overly simplistic and suggests that any feature beyond the basic function of a device could be considered ''non-integral.'' In addition, the applicant asserted that CMS has previously deviated from this approach when determining transitional pass-through payment status. For example, according to the applicant, pass-through categories distinguish between neurostimulators with rechargeable and non-rechargeable batteries. The applicant noted that different power supplies have different clinical advantages for neurostimulators, but the type of power supply does not affect the basic function of the neurostimulator. The applicant stated that the LithoVue™ Elite Ureteroscope with the MEMS pressure sensor is integral to the ureteroscopy codes listed in Table 54 of the CY 2026 OPPS/ASC proposed rule (90 FR 33597 and 33598) in that it is a ureteroscope with a novel capability (IRP measurement) that allows for fewer complications associated with high (and unchecked) IRP during ureteroscopy.

In contrast, a few commenters stated that they do not believe that the LithoVue™ Elite Ureteroscope with the MEMS pressure sensor is integral to the services furnished. One commenter asserted that the LithoVue™ Elite Ureteroscope is not integral to the procedures listed in the application and uses technology in a manner like device applications previously rejected on this basis. The commenter also stated that it agrees with CMS that the pressure sensor technology that is the basis of the LithoVue™ Elite Ureteroscope application is not integral to the procedures presented in the application. According to the commenter, CMS has consistently applied its interpretation of integral to mean that the device is necessary to furnish or deliver the primary procedure with which it is used. The commenter noted that interested parties rely on consistent and reliable rulemaking to make informed decisions about when to engage with CMS and what to expect. The commenter claimed that CMS made a similar ''decision'' when it ''rejected'' the CANARY Canturio™ Tibial Extension (CTE) with CHIRP® System application in the CY 2025 OPPS/ASC proposed rule after concluding that the CTE implant within the CHIRP® system was not integral to the arthroplasty procedure identified in the application. The commenter stated that the CHIRP® System's CTE implant included technology that provided kinematic data, and in this manner, is similar to the LithoVue™ Elite Ureteroscope's pressure sensor providing data. The commenter noted that, in the CY 2025 OPPS/ASC proposed rule, CMS questioned if the CTE implant was integral to the service provided because the utilization appeared to be purely additive and unnecessary to furnish or deliver the underlying procedure. The commenter stated that the LithoVue™ Elite Ureteroscope pressure sensor is of a similar nature to the CHIRP® System's CTE implant because ureteroscopy can be completed without IRP monitoring. The commenter expressed its belief that CMS has articulated, in the CY 2026 OPPS/ASC proposed rule, a position on the LithoVue™ Elite Ureteroscope that is consistent with prior rulemaking related to § 419.66(b)(3). Another commenter asserted that monitoring a physiological parameter does not inherently translate to improved outcomes unless accompanied by actionable thresholds and validated interventions. Further, the commenter asserted that without consensus on what constitutes a safe IRP level or how to respond to elevated readings, the utility of the sensor remains theoretical.

Response: We appreciate the applicant's clarification and the commenters' input. First, we agree with the applicant that the LithoVue™ Elite Ureteroscope is used for one patient only, comes in contact with human tissue, and is surgically implanted or inserted or applied in or on a wound or other skin lesion. However, we disagree with the applicant's assertion that we deviated from our approach of assessing whether a device is integral regarding neurostimulators with rechargeable and non-rechargeable batteries because neurostimulators require a power source to operate and the batteries are, therefore, integral to the device regardless of how they are charged. We also note that while we did express concerns in the CY2025 OPPS/ASC proposed rule that the CHIRP® System's CTE implant may not be integral (89 FR 59294), we cannot comment further on the CHIRP® System's CTE implant because the applicant for that device withdrew the application prior to the final rule and we made no final determination of the eligibility of the CHIRP® System's CTE implant. We also disagree with the applicant's interpretation of the pacemaker example. Pacemakers are used as an example of a device being utilized in an integral manner for illustrative purposes. The example is not intended to suggest or imply any standard as the applicant asserts. Finally, while we maintain our concern regarding the overall utility of the MEMS pressure sensor, we agree with the applicant that the LithoVue™ Elite Ureteroscope, inclusive of the MEMS pressure sensor, meets the criterion because the MEMS pressure sensor is not a detachable or an adjunctive component to the ureteroscope itself, which we previously agreed is necessary and/or required to furnish or deliver the primary procedure (ureteroscopy) with which it is used. After consideration of the public comments we received and our review of the application, we have determined that the LithoVue™ Elite Ureteroscope meets the eligibility criterion at § 419.66(b)(3).

With respect to the exclusion criteria at § 419.66(b)(4), a device is not eligible to be considered for pass-through payment if it is any of the following: (1) equipment, an instrument, apparatus, implement, or item of this type for which depreciation and financing expenses are recovered as depreciable assets as defined in Chapter 1 of the Medicare Provider Reimbursement Manual (CMS Pub. 15–1); or (2) a material or supply furnished incident to a service (for example, a suture, customized surgical kit, or clip, other than a radiological site marker). Per the applicant, the LithoVue™ Elite Ureteroscope, the component nominated in this application, is (1) not considered equipment, an instrument, apparatus, implement, or item of this type for which depreciation and financing expenses are recovered as depreciable assets, and (2) not a material or supply furnished incident to a service, and therefore, is eligible to be considered for pass-through payment.

We invited public comments on whether the LithoVue™ Elite Ureteroscope meets the exclusion criterion at § 419.66(b)(4).

Comment: The applicant reiterated that the LithoVue™ Elite Ureteroscope is a single-use ureteroscope, is not subject to capital equipment depreciation schedules, and is therefore not excluded under the criterion at § 419.66(b)(4).

Response: We appreciate the applicant's input. After consideration of the public comments we received and our review of the application, we agree with the applicant and have determined

that the LithoVue™ Elite Ureteroscope meets the criterion at § 419.66(b)(4).

In addition to the criteria at § 419.66(b)(1) through (4), the criteria for establishing new device categories are specified at § 419.66(c). The first criterion, at § 419.66(c)(1), provides that CMS determines that a device to be included in the category is not appropriately described by any of the existing categories or by any category previously in effect, and was not paid for as an outpatient service as of December 31, 1996. Per the applicant, the existing pass-through code C1747 (Endoscope, single-use (*i.e.,* disposable), urinary tract, imaging/illumination device (insertable)) does not appropriately describe the LithoVue™ Elite Ureteroscope because the category description does not include the LithoVue™ Elite Ureteroscope's pressure monitoring feature. The applicant also stated that the existing pass-through code C2624 (Implantable wireless pulmonary artery pressure sensor with delivery catheter, including all system components) does not appropriately describe the LithoVue™ Elite Ureteroscope because the nominated device is an insertable ureteroscope that measures IRP, whereas C2624 is specific to sensors that measure pulmonary artery pressure.

We noted in the CY 2026 OPPS/ASC proposed rule that, based on the description the applicant provided, the LithoVue™ Elite Ureteroscope is a single-use, disposable ureteroscope inserted into the urinary tract for imaging and illumination, and thus, could be appropriately described by C1747. Specifically, we stated that we believe that C1747 may appropriately describe the LithoVue™ Elite Ureteroscope because it describes any device that is a single-use (*i.e.,* disposable) endoscope with imaging/illumination capabilities intended for use in the urinary tract to perform ureteroscopy procedures. We noted that the descriptor for C1747 does not reference device features that would exclude the inclusion of a pressure monitoring feature. Further, we noted that the HCPCS procedure codes with which the applicant has stated the LithoVue™ Elite Ureteroscope would be reported are consistent with the HCPCS codes approved for C1747. In this context, we stated that we believe that the LithoVue™ Elite Ureteroscope may be similar to the devices described by C1747, and therefore, the LithoVue™ Elite Ureteroscope may also be appropriately described by C1747.

We invited public comment on whether the LithoVue™ Elite Ureteroscope meets the device category criterion at § 419.66(c)(1).

Comment: In response to our concern that the LithoVue™ Elite Ureteroscope may be appropriately described by C1747, the applicant stated that while C1747 does describe a single-use ureteroscope, the descriptor is too broad and does not include the key feature—IRP monitoring—that makes the LithoVue™ Elite Ureteroscope unique. The applicant stated it strongly believes that the IRP monitoring capabilities that make the LithoVue™ Elite Ureteroscope unique, merit a new pass-through device category.

In contrast, a few commenters stated their belief that the LithoVue™ Elite Ureteroscope is appropriately described by the existing code C1747. One commenter agreed with CMS that the LithoVue™ Elite Ureteroscope is appropriately described by existing device category C1747 and that the presence of the additional feature of a pressure sensor is not, by itself, a reason to exclude the LithoVue™ Elite Ureteroscope from C1747. The commenter also stated that, from its experience with providers, billers, facilities, and other interested parties in the field of urology, C1747 has already been used for the LithoVue™ Elite Ureteroscope. Therefore, the commenter stated it supports a conclusion that C1747 remains the appropriate device category for the LithoVue™ Elite Ureteroscope, and no new device category is warranted.

Another commenter stated that, per the criteria described at § 419.66(c), CMS has previously established this device category in the CY 2023 OPPS/ASC final rule with comment period. Specifically, the commenter noted that CMS approved a device category code for single-use ureteroscopes—C1747 (Endoscope, single-use (that is, disposable), urinary tract, imaging/illumination device (insertable))—and asserted that CMS created this device category for Uretero1™. The commenter also noted that 1 month after C1747 was established based on the approval of the STERIS Uretero1™ device pass-through application, FDA granted the LithoVue™ Elite System 510(k) clearance, on February 2, 2023. The commenter asserted that, therefore, the nominated device has been eligible for transitional pass-through payment for 35 out of the full 36-month eligibility period, which expires December 31, 2025. The commenter stated its belief that the applicant is clearly aware that the LithoVue™ Elite System has already benefited from transitional pass-through status for single-use ureteroscopes.

In addition, the commenter noted that advertisement on the applicant's website recommends billing C1747 for single-use ureteroscopes, including the LithoVue™ Elite Single-Use Digital Flexible Ureteroscope. Furthermore, the commenter stated that, in the new study by Bhojani et al. (2025),[45] the methods indicate that the authors used claims data to ascertain the study's conclusions. The commenter stated that for the Bhojani et al. (2025) study, the authors queried Medicare claims data submitted with C1747 alongside either CPT code 52353 or 52356. According to the commenter, in using the C1747 data for the Bhojani et al. (2025) study alongside the LithoVue™ Elite Ureteroscope, the authors are demonstrating that this device has previously been identified by the established device category code and has already benefited from its use. Moreover, the commenter noted that the initial LithoVue™ Elite Ureteroscope application cited literature that suggests IRP relevance is limited to kidney stone procedures. The commenter further highlighted that the Bhojani et al. (2025) study only references lithotripsy procedures. The commenter asserted that, despite this, the LithoVue™ Elite Ureteroscope application does not appropriately narrow the associated CPT code set to reflect this clinical specificity; instead, the applicant generalizes the clinical claims to all ureteroscopy procedures. Per the commenter, if the LithoVue™ Elite Ureteroscope pressure sensor were integral to improved outcomes in stone management, as the applicant claims, then the applicable CPT codes should have been refined accordingly, as not all ureteroscopy procedures are performed for the treatment of kidney stones.

Additionally, the commenter stated that in the CY 2026 OPPS/ASC proposed rule, CMS appropriately acknowledged that the LithoVue™ Elite Ureteroscope may fall within the scope of the existing device category C1747, which includes all single-use ureteroscopes and their associated procedures. The commenter asserted that creating a new device category code without clear differentiation risks redundancy and confusion in coding practices. The commenter further asserted that it may also set a precedent for incremental innovations to seek separate reimbursement pathways

[45] Bhojani, N, Morris, K, White, J, Rojanasarot, S Tran, E.D, Monga, M. (2025). Post-operative infection with a single-use ureteroscope with real-time intrarenal pressure monitoring vs. all other single-use ureteroscopes. *Expert Review of Medical Devices,* 1–9. *https://doi.org/10.1080/17434440.2025.2557403.*

without sufficient clinical justification. The commenter stated that, therefore, it agrees that the LithoVue™ Elite Ureteroscope may be appropriately described by C1747.

Response: We appreciate the applicant's and commenters' input. After consideration of the public comments we received and our review of the application, we continue to believe that C1747 appropriately describes the LithoVue™ Elite Ureteroscope because C1747 includes any device that is a single-use (that is, disposable) endoscope with imaging/illumination capabilities intended for use in the urinary tract to perform ureteroscopy procedures. We also continue to believe that the procedure codes with which the applicant has stated that the LithoVue™ Elite Ureteroscope would be reported are consistent with the CPT codes approved for C1747.

We disagree with the applicant's assertions that the IRP monitoring capabilities that make the LithoVue™ Elite Ureteroscope unique merit a new pass-through device category because the LithoVue™ Elite Ureteroscope is consistent with C1747, regardless of the presence of the additional pressure sensing feature, as a few commenters noted. We agree with the commenter that the nominated device has already benefited from transitional pass-through status for single-use ureteroscopes and that CMS is already collecting cost data for the nominated device in the appropriate APC. Therefore, we have determined that the LithoVue™ Elite Ureteroscope does not meet the device category eligibility criterion at § 419.66(c)(1), because it is appropriately described by an existing category or a category previously in effect.

We conclude that the LithoVue™ Elite Ureteroscope does not meet the device category eligibility criterion to be considered as a device for transitional pass-through payment. Therefore, in this final rule with comment period, we will not address whether the technology meets the other remaining criteria required for transitional pass-through payment for devices. We are not approving the LithoVue™ Elite Ureteroscope for transitional pass-through payment status for CY 2026 because the technology does not meet the device category eligibility criterion at § 419.66(c)(1).

(c) VersaVue™ Single-Use Flexible Cystoscope

Boston Scientific Corporation submitted an application for a new device category for transitional pass-through payment status for the VersaVue™ Single-Use Flexible Cystoscope for CY 2026. Per the applicant, the VersaVue™ Single-Use Flexible Cystoscope is used in cystoscopy procedures to diagnose or treat diseases of the lower urinary tract. According to the applicant, the VersaVue™ Single-Use Flexible Cystoscope is a single-use, disposable flexible cystoscope intended to be operated with its compatible display system, the VersaVue™ Tablet (a tablet where the image is present directly on the tablet) or the VersaVue™ Video Box (a standalone imaging transfer system which can be connected to a computer to project live imaging), that provides live imaging of the lower urinary tract.

Please refer to the online application posting for the VersaVue™ Single-Use Flexible Cystoscope, available at *https://mearis.cms.gov/public/publications/device-ptp/DEP250211C4HRV.*

Comment: A commenter expressed its support for approval of transitional pass-through payment for the VersaVue™ Single-Use Flexible Cystoscope. The commenter stated that single-use, disposable cystoscopes provide clinical benefit in the diagnosis and treatment of lower urinary tract diseases and the elimination of reprocessing steps, not only enhancing safety but also streamlining workflow and improving operational efficiency for providers.

Response: We appreciate the commenter's input. We have taken this comment into consideration in our final determination for pass-through status for the VersaVue™ Single-Use Flexible Cystoscope.

As stated previously, to be eligible for transitional pass-through payment under the OPPS, a device must meet the criteria at § 419.66(b)(1) through (4). With respect to the newness criterion at § 419.66(b)(1), FDA granted the applicant 510(k) clearance for the VersaVue™ Single-Use Flexible Cystoscope on October 6, 2023. The approved FDA indication for the VersaVue™ Single-Use Flexible Cystoscope is:

- The VersaVue™ Single-Use Flexible Cystoscope is a sterile, single-use, and flexible device intended to be operated with its compatible display system (VersaVue™ Tablet or VersaVue™ Video Box). The device provides endoscopic procedure and surgical treatment within the lower urinary tract. The Cystoscope is intended to provide visualization via [the] displaying unit. The Cystoscope is intended for use in a hospital environment or medical office environment. It is designed for use in adults.

We received the application for a new device category for transitional pass-through payment status for the VersaVue™ Single-Use Flexible Cystoscope on February 11, 2025, which is within 3 years of the date of the initial FDA marketing authorization.

We invited public comments on whether the VersaVue™ Single-Use Flexible Cystoscope meets the newness criterion at § 419.66(b)(1).

Comment: With respect to the newness criterion at § 419.66(b)(1), the applicant reiterated that the VersaVue™ Single-Use Flexible Cystoscope received 510(k) clearance from FDA on October 6, 2023, and that it submitted an application for pass-through status on February 11, 2025, which is within 3 years of the initial market authorization.

Response: We appreciate the applicant's input. We received the application for a new device category for transitional pass-through payment status for the VersaVue™ Single-Use Flexible Cystoscope on February 11, 2025, which is within 3 years of October 6, 2023, the date of FDA 510(k) clearance. After consideration of the public comment we received and our review of the application, we have determined that the VersaVue™ Single-Use Flexible Cystoscope meets the newness criterion at § 419.66(b)(1).

With respect to the eligibility criteria at § 419.66(b)(3), the device must be an integral part of the service furnished, be used for one patient only, come in contact with human tissue, and be surgically inserted or implanted, or applied in or on a wound or other skin lesion. Per the applicant, the VersaVue™ Single-Use Flexible Cystoscope meets the requirements at § 419.66(b)(3).

We invited public comments on whether the VersaVue™ Single-Use Flexible Cystoscope meets the eligibility criterion at § 419.66(b)(3).

Comment: The applicant reiterated that the VersaVue™ Single-Use Flexible Cystoscope is an integral part of a cystoscopy procedure, used for one patient only, comes in contact with human tissue, and is surgically inserted during a cystoscopy procedure.

Response: We appreciate the applicant's input. We agree with the applicant that the VersaVue™ Single-Use Flexible Cystoscope is an integral part of the service furnished, used for one patient only, comes in contact with human tissue, and is surgically implanted or inserted. After consideration of the public comment we received, and our review of the

application, we have determined that the VersaVue™ Single-Use Flexible Cystoscope meets the eligibility criterion at § 419.66(b)(3).

With respect to the exclusion criteria at § 419.66(b)(4), a device is not eligible to be considered for pass-through payment if it is any of the following: (1) equipment, an instrument, apparatus, implement, or item of this type for which depreciation and financing expenses are recovered as depreciable assets as defined in Chapter 1 of the Medicare Provider Reimbursement Manual (CMS Pub. 15–1); or (2) a material or supply furnished incident to a service (for example, a suture, customized surgical kit, or clip, other than a radiological site marker). Per the applicant, the VersaVue™ Single-Use Flexible Cystoscope is (1) not considered equipment, an instrument, apparatus, implement, or item of this type for which depreciation and financing expenses are recovered as depreciable assets, and is (2) not a material or supply furnished incident to a service, and, therefore, is eligible to be considered for pass-through payment.

We invited public comments on whether the VersaVue™ Single-Use Flexible Cystoscope meets the exclusion criterion at § 419.66(b)(4).

Comment: The applicant reiterated that the VersaVue™ Single-Use Flexible Cystoscope is not a supply furnished incident to the service, is a single-use cystoscope, is not subject to capital equipment depreciation schedules, and cannot be reprocessed.

Response: We appreciate the applicant's input. We agree with the applicant that the VersaVue™ Single-Use Flexible Cystoscope is not equipment, an instrument, apparatus, implement, or item of this type for which depreciation and financing expenses are recovered as depreciable assets, or a material or supply furnished incident to a service. After consideration of the public comment we received and our review of the application, we have determined that the VersaVue™ Single-Use Flexible Cystoscope meets the criterion at § 419.66(b)(4).

In addition to the criteria at § 419.66(b)(1) through (4), the criteria for establishing new device categories are specified at § 419.66(c). The first criterion, at § 419.66(c)(1), provides that CMS determines that a device to be included in the category is not appropriately described by any of the existing categories or by any category previously in effect, and was not being paid for as an outpatient service as of December 31, 1996. Per the applicant, the existing pass-through code C1747 (Endoscope, single-use (*i.e.,* disposable), urinary tract, imaging/illumination device (insertable)) does not appropriately describe the VersaVue™ Single-Use Flexible Cystoscope because cystourethroscopy procedures are not encompassed by this pass-through device category.[46] The applicant also stated that the existing code C1889 (Implantable/insertable device, not otherwise classified) does not appropriately describe the VersaVue™ Single-Use Flexible Cystoscope. We noted in the CY 2026 OPPS/ASC proposed rule that C1889 is not a device pass-through category code and therefore would not describe the VersaVue™ Single-Use Flexible Cystoscope for the purposes of device pass-through status. Upon review, we stated that we did not identify an existing pass-through payment category that describes the VersaVue™ Single-Use Flexible Cystoscope.

We invited public comment on whether the VersaVue™ Single-Use Flexible Cystoscope meets the device category criterion at § 419.66(c)(1).

Comment: The applicant commented that FDA first issued the VersaVue™ Single-Use Flexible Cystoscope 510(k) clearance in 2023, that the VersaVue™ Single-Use Flexible Cystoscope was not receiving payment as an outpatient service as of December 31, 1996, and that it is not described by any current or previous device categories. The applicant stated that, in correspondence between Boston Scientific and CMS from September 2023, CMS determined that C1747 (Endoscope, single-use (*i.e.,* disposable), urinary tract, imaging/illumination device (insertable)) does not include cystoscopy or cystourethroscopy devices.

Response: We appreciate the applicant's input. After consideration of the public comment we received and our review of the application, we continue to believe that there is no existing category or category previously in effect that appropriately describes the VersaVue™ Single-Use Flexible Cystoscope. Therefore, we have determined that the VersaVue™ Single-Use Flexible Cystoscope meets the device category eligibility criterion at § 419.66(c)(1).

The second criterion for establishing a device category, at § 419.66(c)(2), provides that CMS determines either of the following: (1) that a device to be included in the category has demonstrated that it will substantially improve the diagnosis or treatment of an illness or injury or improve the functioning of a malformed body part compared to the benefits of a device or devices in a previously established category or other available treatment; or (2) for devices for which pass-through status will begin on or after January 1, 2020, as an alternative to the substantial clinical improvement criterion, the device is part of the FDA's Breakthrough Devices Program and has received FDA marketing authorization for the indication covered by the Breakthrough Device designation. The applicant asserted that single-use, disposable cystoscopes, including the VersaVue™ Single-Use Flexible Cystoscope, represent a substantial clinical improvement over reusable cystoscopes.

The applicant provided five documents to support these claims, which included three studies and two FDA communications concerning reusable, reprocessed urological endoscopes. The applicant's assertions regarding the substantial clinical improvement criterion are shown in Table 103, previously published as Table 55 of the CY 2026 OPPS/ASC proposed rule (90 FR 33600 and 33601). Please see the online posting for the VersaVue™ Single-Use Flexible Cystoscope for the applicant's complete statements regarding the substantial clinical improvement criterion and the supporting evidence provided.

BILLING CODE 4120–01–P

[46] As discussed in section IV.A.2 (New Device Pass-Through Applications for CY 2023) of the CY 2023 OPPS/ASC final rule with comment period, we approved C1747 (Endoscope, single-use (*i.e.,* disposable), urinary tract, imaging/illumination device (insertable)), as a new device category for pass-through status under the OPPS, with an effective date of January 1, 2023. For the full discussion on the criteria used to evaluate device pass-through applications, refer to the CY 2023 OPPS/ASC final rule with comment period, which was published in the **Federal Register** on November 23, 2022 (87 FR 71929 through 71934). We note that C1747 was established for a ureteroscope that can only be used for a single procedure and cannot be reprocessed. As such, C1747 only describes devices that cannot be reprocessed.

TABLE 103: SUBSTANTIAL CLINICAL IMPROVEMENT ASSERTIONS

Substantial Clinical Improvement Assertion: The device demonstrates that it will substantially improve the diagnosis or treatment of an illness or injury or improve the functioning of a malformed body part compared to the benefits of a device(s) in a category or other available treatment		
Applicant statements in support**	**Supporting evidence provided by the applicant****	**Reference Title**
Use of disposable cystoscopes decreases post-procedure encounters and infections compared to reusable cystoscopes.	A urology practice evaluated the impact of converting cystoscopy procedures over to disposable cystoscopes by comparing post-procedure encounter and infection rates using disposable cystoscopes with those using reusable cystoscopes. The authors reviewed 1,000 cases (494 with a reusable scope, 506 with a disposable scope) and found substantial and statistically significant reductions in both outcomes for cases using disposable scopes.	*Geldmaker, L. E., Baird, B. A., Lyon, T. D., Regele, E. J., Wajswol, E. J., Pathak, R. A., Petrou, S. P., Haehn, D. A., Gajarawala, N. M., Ball, C. T., Broderick, G. A., & Thiel, D. D. (2023). Conversion to disposable cystoscopes decreased post-procedure encounters and infections compared to reusable cystoscopes. *Urology Practice, 12*(1), 58-64. *https://doi.org/10.1097/UPJ.0000000000000410.*
Single-use cystoscopes avoid post-cystoscopy infections and device malfunctions documented with use of reprocessed cystoscopes.	The authors reviewed 335 adverse events reported to the MAUDE database related to reusable flexible cystoscopes. Infection (n=124) was the leading cause of adverse events associated with patient harm, followed by mechanical malfunction (n=6), and allergic reaction (n=1). Of the patients with infections, 19 developed sepsis, one was admitted to the ICU and one died. Of the patients experiencing mechanical malfunction, four experienced device entrapment requiring surgery.	*Lee, J., Kaplan-Marans, E., Jivanji, D., Tennenbaum, D., & Schulman, A. (2022). Post-cystoscopy infections and device malfunctions in reprocessed flexible cystoscopes in a national database. *Canadian Journal of Urology, 29*(6), 11361-11365. *https://pubmed.ncbi.nlm.nih.gov/36495577.*
Use of disposable scopes would avoid contamination problems associated with reusable devices.	Muscarella reviewed MAUDE reports for endoscopes from 2014 through 2021. He found that the number of adverse event reports for urological endoscopes, including cystoscopes, increased by more than 2000% over the seven year period. Several bacterial outbreaks were linked to urological endoscopes. The study concludes that findings suggest healthcare providers should consider "the use of a single-use urological endoscope (if and/or when available and as warranted).	*Muscarella, L. F. (2022, January 28). Contamination of flexible endoscopes and associated infections: A comprehensive review and analysis of FDA adverse event reports. *Discussions in Infection Control. https://lfm-hcs.com/2022/01/contamination-of-flexible-endoscopes-and-associated-infections/.*
Use of disposable cystoscope eliminates need for reprocessing as recommended by FDA.	FDA announcement of numerous reports of patient infections and possible contamination issues with reprocessing urological endoscopes, including cystoscopes. The reports include a patient death involving a cystoscope that did not pass a leak test, indicating damage to the device, that could have been an underlying factor in the infection. Use of single use, disposable devices eliminates the	*U.S. Food and Drug Administration. (2021, April 1). *FDA is investigating reports of infections associated with reprocessed urological endoscopes: Agency is taking action to remind health care providers about the proper way to clean certain devices for reuse.* [FDA News Release]. *https://www.fda.gov/news-events/press-announcements/fda-investigating-reports-infections-associated-reprocessed-urological-endoscopes.*

Substantial Clinical Improvement Assertion: The device demonstrates that it will substantially improve the diagnosis or treatment of an illness or injury or improve the functioning of a malformed body part compared to the benefits of a device(s) in a category or other available treatment

	need for reprocessing. FDA has encouraged manufacturers to transition to such devices.	
Use of disposable cystoscopes avoids risk of infection associated with improper reprocessing.	FDA notified the public about a recall related to the risk of infection from improper reprocessing of the MAJ-891 Forceps/Irrigation Plug. The manufacturer of the device reported 120 injuries and 1 death due to infection following procedures in which the MAJ-891 was used with a cystoscope. Use of a disposable cystoscope, which requires no reprocessing, avoids the risk of this type of infection.	*U.S. Food and Drug Administration. (2025, January 31). *Update on alert: Endoscope accessories forceps/irrigation plug issue from Olympus*. *https://www.fda.gov/medical-devices/medical-device-recalls/update-alert-endoscope-accessories-forcepsirrigation-plug-issue-olympus.*

*We note this source does not assess, evaluate, or review the nominated device and only provides background information in support of the applicant's claims of substantial clinical improvement.
**The language included in the first two columns is the language the applicant provided to describe its claim and the evidence in support of its claim. The language does not reflect CMS's analysis of the information provided.

BILLING CODE 4120–01–C

After review of the information provided by the applicant, we stated in the CY 2026 OPPS/ASC proposed rule that we had the following concerns regarding whether the VersaVue™ Single-Use Flexible Cystoscope meets the substantial clinical improvement criterion.

Overall, we noted that the applicant indicated that the technology does not offer a treatment option for patients unresponsive to or ineligible for currently available treatments, stating that the same patient population could be treated using a reusable, reprocessed cystoscope. Further, the applicant did not claim that the nominated device, the VersaVue™ Single-Use Flexible Cystoscope, offers a substantial clinical improvement over other single-use, disposable cystoscopes available on the market. Specifically, the applicant stated that no claim is being made that a specific disposable device offers a substantial clinical improvement over other disposable devices in the same category. Rather, the applicant stated that it presented evidence to support its claim that single-use, disposable cystoscopes (as a group) demonstrate substantial clinical improvement over reusable cystoscopes. We noted that for the purposes of the device pass-through evaluation process, CMS evaluates the nominated device that is the subject of an application to determine if the device meets the eligibility criteria described in § 419.66.

Further, for the purposes of our substantial clinical improvement evaluation in the CY 2026 OPPS/ASC proposed rule, we considered both reusable, reprocessed cystoscopes and single-use, disposable cystoscopes as available treatment options for this patient population and noted that single-use, disposable cystoscopes appear to be widely accessible and well utilized in the outpatient setting. According to the applicant, of the 2.2 million flexible cystoscopy procedures furnished annually across all payers, 23 percent are performed with single-use, disposable cystoscopes. As discussed in more detail in this section, we stated in the CY 2026 OPPS/ASC proposed rule that we were interested in additional evidence that demonstrates substantial clinical improvement with the use of the VersaVue™ Single-Use Flexible Cystoscope over other available treatment options (both single-use, disposable cystoscopes and reusable, reprocessed cystoscopes). In order to evaluate substantial clinical improvement over currently available treatments to meet the transitional pass-through payment criterion at § 419.66(c)(2), we stated that we consider supporting evidence, preferably published peer-reviewed clinical trials, that demonstrates improved clinical outcomes, such as reduction in mortality, complications, subsequent interventions, future hospitalizations, recovery time, pain, or a more rapid beneficial resolution of the disease process comparing the nominated device to the standard of care (88 FR 81733).

We stated in the CY 2026 OPPS/ASC proposed rule that, first, the evidence provided did not include data demonstrating that the use of the VersaVue™ Single-Use Flexible Cystoscope compared to other available single-use, disposable cystoscopes for this patient population results in substantial clinical improvement. The applicant identified other devices it believes are closely related or similar to the VersaVue™ Single-Use Flexible Cystoscope, including the following: (1) Ambu® aScope 4™ Cysto manufactured by AMBU A/S, (2) Ambu® aScope 5™ Cysto manufactured by AMBU A/S, (3) WiScope® SingleUse- Digital Flexible Cystoscope manufactured by OTU Medical AnQing, (4) Medical Single Use Flexible Cystoscope manufactured by Shanghai AnQing Medical Instrument Company, and (5) Pusen Single Use Flexible Video Cystoscope System manufactured by Zhuhai Pusen Medical Technology Company. We noted that the VersaVue™ Single-Use Flexible Cystoscope was determined to be substantially equivalent to a legally marketed device, the Ambu® aScope 4™ Cysto (K193095), which received 510(k) clearance on April 2, 2020.[47] The

[47] U.S. Food and Drug Administration. (2020, April 2). *Decision Summary for K193095* [Ambu® aScope™ 4 Cysto]. U.S. Department of Health and

FDA 510(k) summary for the VersaVue™ Single-Use Flexible Cystoscope stated that both devices have the same intended use and similar specifications, and that there are no significant differences. According to the applicant, these five similar devices would also become eligible for transitional pass-through payment under the additional category proposed by the applicant. We reiterated that we consider other single-use, disposable cystoscopes as available treatment options for this patient population and that the devices appear to share similar technological and/or procedural characteristics. We noted that none of the studies the applicant included reference another single-use, disposable device as a comparator against which to evaluate and assess the VersaVue™ Single-Use Flexible Cystoscope. While we found that the source articles provided background information about multiple risks associated with reprocessing reusable devices, we stated that we would welcome additional evidence demonstrating a comparison of the VersaVue™ Single-Use Flexible Cystoscope's performance against other similar single-use, disposable devices. We questioned whether the VersaVue™ Single-Use Flexible Cystoscope offers a substantial clinical improvement over other single-use, disposable cystoscopes currently on the market. We stated that we would welcome evidence that demonstrates substantial clinical improvement with the use of the VersaVue™ Single-Use Flexible Cystoscope over other single-use, disposable cystoscopes.

Second, in the CY 2026 OPPS/ASC proposed rule, we questioned whether the supporting evidence submitted by the applicant demonstrates substantial clinical improvement of the VersaVue™ Single-Use Flexible Cystoscope over reusable, reprocessed cystoscopes for this patient population. In the first claim, the applicant asserted that the use of single-use, disposable cystoscopes decreases post-procedure encounters and infections compared to reusable cystoscope devices. However, while Geldmaker et al. (2023) reported some improved clinical outcomes with the use of a specific single-use, disposable cystoscope when compared to the use of a specific reusable cystoscope,[48] we noted that the study does not assess, evaluate, or review clinical outcomes associated with the use of the VersaVue™ Single-Use Flexible Cystoscope or compare clinical outcomes associated with the use of the VersaVue™ Single-Use Flexible Cystoscope to reusable cystoscopes. Rather, we stated that the evidence provided compared clinical outcomes associated with another device, the single-use, disposable Ambu aS4C cystoscope [Ambu® aScope 4™ Cysto] to the reuseable Olympus® CYF–5 V2 Flexible cystoscope. Therefore, we questioned whether the use of the VersaVue™ Single-Use Flexible Cystoscope resulted in substantial clinical improvement as compared to reusable, reprocessed cystoscopes.

In addition, we noted that, as a retrospective study, Geldmaker et al. (2023) fails to establish that the differences in the observed clinical outcomes are caused by using reusable, reprocessed cystoscopes versus single-use, disposable cystoscopes. We noted that retrospective studies can only suggest associations between variables and cannot establish cause and effect relationships. While the propensity score matching did an adequate job of balancing the two groups (reusable, reprocessed cystoscope procedures versus single-use, disposable cystoscope procedures) and yielded statistically significant results, we questioned whether the propensity score matching variables used in the study adequately account for patient factors that may impact the outcomes, such as the reason for the cystoscopy, positive preoperative UTI, and other comorbid conditions. We noted that data were collected during different time periods (reusable, reprocessed cystoscope data were collected in 2020, and single-use, disposable cystoscope data were collected in 2021), which may introduce systematic errors in the measurement due to retrospective data collection or confounders not accounted for, such as changes in clinical practice between the 2 study years. Further, per the study authors, we noted that urine cultures were ordered more frequently in the reusable cystoscope group, potentially increasing the likelihood of a UTI diagnosis in the reusable cystoscope group. We stated that we would be interested in whether equivalent pre- and post-procedure urine cultures from patients in both groups would have yielded different results. We noted that the evidence is not conclusive to support whether the use of single-use, disposable cystoscopes results in improved clinical outcomes compared to reusable, reprocessed cystoscopes.

Moreover, while not included in the evidence submitted by the applicant in support of the substantial clinical improvement claims for the VersaVue™ Single-Use Flexible Cystoscope, we noted two studies, Anderson et al. (2024) and Johnson et al. (2023), provide notable evidence directly related to the use of single-use, disposable cystoscopes versus reusable cystoscopes.[49] [50] Anderson et al. (2024), a systematic review (using meta-analyses techniques) comparing the clinical outcomes of all single-use, disposable endoscopes used in urology with those of reusable endoscopes across a range of urological procedures, found that of the seven studies that reported the rate of postoperative infections, none found a statistically significant difference in postoperative infection rates between single-use, disposable endoscopes and reusable endoscopes.[51] Further, we noted that the Anderson et al. (2024) sub-group analysis of cystoscopes found no difference in overall complication rates or postoperative infection rates between the single-use, disposable cystoscopes and the reusable cystoscope subgroups. Similarly, Johnson et al. (2023) found no statistically significant difference in adverse events in a multicenter, randomized trial comparing single-use, disposable cystoscopes (Ambu® aScope 4™ Cysto) with reusable cystoscopes for ureteral stent removal in 102 patients.[52] Given the evidence in these additional studies, we questioned in the CY 2026 OPPS/ASC proposed rule whether the totality of available evidence establishes that the use of a single-use, disposable cystoscope results in substantial clinical improvement when compared to reprocessed cystoscopes, and furthermore, whether the use of the VersaVue™ Single-Use Flexible Cystoscope compared to reusable, reprocessed cystoscopes results in decreased adverse events, including post-procedure encounters and infections. We stated that we would welcome studies that evaluate whether the use of the VersaVue™ Single-Use Flexible Cystoscope results in

substantial clinical improvement over reusable, reprocessed cystoscopes, such as a reduction in mortality, complications, subsequent interventions, future hospitalizations, recovery time, pain, or a more rapid beneficial resolution of the disease process compared to reusable, reprocessed cystoscopes.

Third, in the second, third, fourth and fifth claims, the applicant asserted that the use of single-use, disposable cystoscopes avoids post-cystoscopy infections, device malfunctions, and contamination problems associated with reusable devices, and eliminates the need for reprocessing and avoids the risk of infection associated with improper reprocessing. In support of these claims, the applicant provided two retrospective reviews (Lee et al., 2022 and Muscarella, 2022) of medical device reports (MDRs) from the FDA Manufacturer and User Facility Device Experience (MAUDE) database, an FDA News Release (2021, April 1) concerning infection and contamination risks associated with reusable urological endoscopes, and an FDA Update (2025, January 31) communicating the recall of endoscope accessories from Olympus® reusable urological endoscopes as supporting evidence.[53] [54] [55] [56] First, we questioned whether, per the applicant, the avoidance of device malfunctions, contamination problems, and the elimination of the need for reprocessing demonstrates substantial clinical improvement, as these are not clinical outcome metrics. Second, while we concurred that avoiding post-cystoscopy infections is important, we noted that none of the studies the applicant submitted as evidence evaluated or assessed the VersaVue™ Single-Use Flexible Cystoscope and that none of the studies compared clinical outcomes, such as adverse events (including post-cystoscopy infection) associated with the use of the VersaVue™ Single-Use Flexible Cystoscope to clinical outcomes associated with reusable cystoscopes. Third, while these studies discuss potential adverse events from reusable cystoscope procedures, we noted that FDA states that the FDA MAUDE database's MDR data are not intended to be used to evaluate rates of adverse events, evaluate a change in event rates over time, or compare adverse event occurrence rates across devices.[57] FDA explains that the MAUDE database is a passive surveillance system, and that incidence, prevalence, or cause of an event cannot be determined from this surveillance system alone due to under-reporting of events, inaccuracies in reports, lack of verification that the device caused the reported event, and lack of information about frequency of device use.[58] FDA further explains that the submission of an MDR itself does not necessarily demonstrate that the device caused or contributed to the adverse outcome or event.[59] Therefore, we questioned whether these reports can substantiate that the use of single-use, disposable cystoscopes, like the VersaVue™ Single-Use Flexible Cystoscope, would result in substantial clinical improvements over currently available reusable, reprocessed cystoscopes. Fourth, while the applicant asserted that the FDA News Release (2021, April 1) encouraged manufacturers to transition to single-use, disposable devices, we noted that this FDA News Release does not specifically reference single-use, disposable cystoscopes but, rather encouraged manufacturers to transition to devices with features that eliminate the need for reprocessing and provided information to manufacturers on how to modify and validate their reprocessing instructions. As such, we questioned the assertion that this FDA communication encouraged manufacturers to transition to single-use, disposable cystoscopes, such as the VersaVue™ Single-Use Flexible Cystoscope. We further noted that FDA stated that the risk of infection from reusable, reprocessed urological endoscopes was low based on its data.[60] We also noted that the FDA Update (2025, January 31) communicated a medical device recall of the Olympus® endoscope accessory (MAJ–891 Forceps/Irrigation Plug) that is attached to the instrument channel port of a certain endoscope, due to the risk of infection that may result from improper reprocessing, but that this communication made no mention of the use of the nominated device or single-use, disposable cystoscopes, instead it appears to be a concern related to a particular reusable device component.[61]

While the applicant asserted that the use of single-use, disposable cystoscopes avoids risk of infection associated with improper reprocessing, the applicant did not submit any FDA safety communications directly related to single-use, disposable cystoscopes. We questioned whether the evidence provided by the applicant directly supports this claim.

Finally, we noted in the CY 2026 OPPS/ASC proposed rule that the intent of transitional device pass-through payment, as implemented at § 419.66, is to facilitate access for beneficiaries to the advantages of new and truly innovative devices by allowing for adequate payment for these new devices while the necessary cost data is collected to incorporate the costs for these devices into the procedure APC rate (66 FR 55861). Based on the information provided by the applicant, approximately 510,600 units of single-use, disposable cystoscope devices, like those that would be included in the proposed device category for single-use, disposable cystoscopes, are estimated to have sold annually in the U.S. Moreover, the applicant provided that, of the 2.2 million flexible cystoscopy procedures furnished annually, 23 percent are performed with single-use, disposable cystoscopes, further, single-use, disposable cystoscopes are used in at least 500 hospitals and clinics, including 35 to 50 academic medical centers. Based on the information provided in the application, we stated that it appears as though single-use, disposable cystoscopes are widely available and consistently utilized for the purposes of performing cystoscopy procedures in outpatient facilities. As such, we questioned whether the creation of a device pass-through payment category code for single-use, disposable cystoscopes is consistent

with the intent of transitional device pass-through payment and necessary to appropriately incorporate adequate cost data of these devices into the applicable procedure APC.

We questioned whether the evidence submitted by the applicant demonstrates that the use of single-use, disposable cystoscopes results in improved patient outcomes and reduced patient risk compared to the use of reusable devices. Further, we questioned whether the VersaVue™ Single-Use Flexible Cystoscope offers a substantial clinical improvement in the treatment of Medicare beneficiaries over other available treatment and whether a transitional device pass-through category for single-use, disposable cystoscopes is in alignment with the intent of the transitional device pass-through payment program policy.

We invited public comment on whether the VersaVue™ Single-Use Flexible Cystoscope meets the device category criterion at § 419.66(c)(2).

Comment: The applicant provided responses to concerns raised by CMS in the CY 2026 OPPS/ASC proposed rule. In response to the concern that the data provided did not compare the VersaVue™ Single-Use Flexible Cystoscope to other single-use, disposable cystoscopes, the applicant stated its belief that such evidence would not be relevant to this application, and that CMS did not explain why such evidence is necessary or how it could apply to the application under review. Further, the applicant explained that it did not assert that the VersaVue™ Single-Use Flexible Cystoscope offers a substantial clinical improvement compared to other single-use cystoscopes, stating that the substantial clinical improvement claims and evidence provided were in support of the category of single-use cystoscopes compared to reusable cystoscopes rather than the VersaVue™ Single-Use Flexible Cystoscope compared to other single-use, disposable cystoscopes or reusable cystoscopes. The applicant stated its belief that CMS has recognized similar claims for categories of other types of disposable endoscopes, including upper GI endoscopes, ureteroscopes, and bronchoscopes. As an example, the applicant cited language from the Uretero1™ decision in which CMS agreed that the device met the criterion for substantial clinical improvement, which stated that while comparative studies between Uretero1™ and other disposable devices would be helpful, CMS agreed that the evidence demonstrating improved outcomes and reduced patient risk associated with the disposable device in comparison with reusable devices represented substantial clinical improvement (87 FR 71932). The applicant asserted that the VersaVue™ Single-Use Flexible Cystoscope evidence is directly equivalent to the Uretero1™ evidence in both type and claims. Additionally, the applicant asserted that the Uretero1™ decision makes clear that the lack of such evidence comparing the nominated device to other disposable devices does not and should not preclude an applicant from meeting the substantial clinical improvement standard. The applicant stated that CMS should consider the VersaVue™ Single-Use Flexible Cystoscope application using the same standard applied to other recent decisions for disposable devices and determine that the improved patient outcomes and reduced patient risk associated with the disposable nominated device in comparison with reusable devices is a substantial clinical improvement.

Response: We appreciate the applicant's input. However, we maintain our concern regarding the lack of data comparing the VersaVue™ Single-Use Flexible Cystoscope to other single-use, disposable and reusable, reprocessed cystoscopes. First, regarding the applicant's statement that the evidence provided in support of the category of single-use cystoscopes should suffice for a demonstration of substantial clinical improvement, we reiterate that, CMS evaluates transitional pass-through applications using the substantial clinical improvement criterion described at § 419.66(c)(2)(i), which requires CMS to determine if ''the device'' that has been nominated has demonstrated that ''it will substantially improve the diagnosis or treatment of an illness or injury or improve the functioning of a malformed body part compared to the benefits of a device or devices in a previously established category or other available treatment.'' The regulatory provision refers to ''the'' device (singular) being compared to ''a device or devices'' for purposes of substantial clinical improvement. For the purposes of the device pass-through evaluation process, CMS evaluates the nominated device that is the subject of an application, not a category of devices, to determine if the device meets the eligibility criteria described in § 419.66. The applicant referenced studies comparing the category of single-use cystoscopes to reusable cystoscopes but did not provide evidence that its specific device demonstrates a substantial clinical improvement.

Second, we disagree with the applicant that CMS has recognized similar claims for other types of disposable endoscopes, including upper GI endoscopes, ureteroscopes, and bronchoscopes. For example, while we concluded that Uretero1™ met the criterion for substantial clinical improvement, we note that CMS agreed that the evidence demonstrated improved outcomes for ''the disposable device'' (singular), *i.e.,* Uretero1™ (87 FR 71932). In response to additional comments, we explain more about our evaluation of the evidence submitted for both applications.

Finally, we disagree with the applicant that the evidence for the VersaVue™ Single-Use Flexible Cystoscope is equivalent to that used for Uretero1™, and, as we previously explained in the CY 2024 and CY 2025 OPPS/ASC final rules with comment period for Ambu® aScope™ 5 Broncho HD (88 FR 81736) and Ambu® aScope™ Gastro (89 FR 94182), and as discussed in more detail in our responses to comment, we evaluate all evidence submitted for each device pass-through application as it applies to the nominated device. Due to inherent differences in the devices themselves and the supporting documentation submitted, CMS may have different concerns as they relate to the nominated device. As discussed in the following responses, we continue to believe that the evidence submitted for the VersaVue™ Single-Use Flexible Cystoscope application fails to demonstrate a substantial clinical improvement as required.

Comment: In response to our concerns that the single-use device included in the Geldmaker et al. (2023) study was not the VersaVue™ Single-Use Flexible Cystoscope, the applicant commented that the Geldmaker et al. (2023) study provides important evidence about the impact of disposable cystoscope use on clinical practice and demonstrates one of the substantial clinical improvement claims for single-use cystoscopes. The applicant acknowledged that the device involved in this study was not the VersaVue™ Single-Use Flexible Cystoscope but asserted that this situation is identical to the Uretero1™ transitional pass-through evaluation and approval. The applicant asserted that the Uretero1™ application used a study by Bozzini et al. (2021) to support the claims that Uretero1™ reduced hospitalization rates, antibiotic therapy, complication rates, and post-operative infection rates. The applicant further asserted that the Bozzini et al. (2021) study did not utilize Uretero1™ but the study findings were directly applicable

to the Uretero1™ application. The applicant stated its belief that CMS appropriately accepted that study in support of the Uretero1™ substantial clinical improvement claims, allowing the findings to be directly applicable to Uretero1™. The applicant opined that CMS should apply the same standard to the VersaVue™ Single-Use Flexible Cystoscope application and recognize that Geldmaker et al. (2023) demonstrates the substantial clinical improvement afforded by use of disposable cystoscopes, including the VersaVue™ Single-Use Flexible Cystoscope.

In response to our concerns regarding the Geldmaker et al. (2023) study's design, the applicant commented that the study is a high-quality, retrospective analysis of a large outpatient urology practice's real-world experience following conversion from reusable to disposable cystoscopes and stated that it strongly disagrees with CMS's assessment of the study in the CY 2026 OPPS/ASC proposed rule. Additionally, the applicant asserted that the specific substantial clinical improvement claim addressed by Geldmaker et al. (2023) is the impact that the type of scope has on post-procedural health care resource utilization—that is, whether the type of scope affects unplanned interactions or the incidence of UTIs. The applicant further asserted that a large study population is essential for meaningful findings and this retrospective review allowed the authors to include 1,000 patients.

Regarding our question whether the propensity score matching variables adequately account for patient factors, such as the reason for cystoscopy, positive preoperative UTI, and other comorbid conditions, the applicant stated that the reason for cystoscopy, specifically including UTI, was the basis for the propensity score weighting. The applicant also noted that after propensity-score weighting, the study considered all differences in the reason(s) for cystoscopy to be negligible and collected data from a single institution's integrated electronic medical record. The applicant asserted its belief that the specific focus on equivalent pre- and post-procedure urine cultures suggests that CMS may have misunderstood the intent of the Geldmaker et al. (2023) study. The applicant stated that the study included urine cultures which were only ordered based on post-procedure, patient-reported lower urinary tract symptoms and noted that Geldmaker et al. (2023) found patients in the reusable scope group were three times as likely to have an encounter, which would likely include reporting of symptoms, and therefore, it is not surprising that the group also had more urine cultures ordered. The applicant agreed that systematic urine cultures would have produced different evidence related to the incidence of UTIs, but it would also have eliminated key data on health resource utilization. The applicant asserted its belief that the study was appropriately designed and provides strong evidence that the use of disposable scopes is associated with reduced post-procedure encounters.

Response: We appreciate the applicant's input. However, we maintain our concerns listed in the CY 2026 OPPS/ASC proposed rule regarding the Geldmaker et al. (2023) study. First, the device involved in this study was not the VersaVue™ Single-Use Flexible Cystoscope, and second, the Geldmaker et al. (2023) study has design limitations as discussed. As previously stated, we disagree with the applicant that this situation is identical to the Uretero1™ transitional pass-through evaluation and approval. First, no two applications are identical in nature given the fact that the basic premise of device pass-through is to provide additional payment for novel technologies and, as such, these innate differences for each technology requires a robust evaluation of each application on its own merits. As the applicant indicated, CMS approved Uretero1™ [62] for transitional pass-through payment status in the CY 2023 OPPS/ASC final rule with comment period. We note that we expressed similar concerns relating to the lack of comparative studies between the single-use Uretero1™ device and other disposable devices and indicated that, while we ultimately agreed that the totality of evidence demonstrated improved patient outcomes and reduced patient risk associated with the disposable device in comparison with reusable devices represents substantial clinical improvement, we stated it would have been helpful to see comparative studies (87 FR 71932). The applicant seems to suggest that because we determined that the Uretero1™ device demonstrated substantial clinical improvement despite providing a study which did not include the nominated device as a comparator, that we must similarly determine that the type of evidence submitted for the VersaVue™ Single-Use Flexible Cystoscope represents substantial clinical improvement. We do not believe that this implied approach to application evaluation is appropriate. Rather, we continue to believe that our current process, wherein we evaluate all evidence submitted for each device pass-through application as it applies to the nominated device, is appropriate and consistent with the regulatory requirements. We reiterate that, due to inherent differences in the devices themselves and the supporting documentation submitted, CMS may have different concerns as they relate to the nominated device. In addition, we are not precluded from evaluating evidence, expressing concerns, or making a determination on the applicability or validity regarding evidence submitted in support of an application, simply because that type of evidence has been submitted in support of a previous application.

Furthermore, we maintain our concerns listed in the CY 2026 OPPS/ASC proposed rule that the Geldmaker et al. (2023) study has design limitations. Specifically, we note that retrospective studies can only suggest associations between variables and cannot establish causation. While we appreciate the applicant's explanation about the propensity score matching in Geldmaker et al. (2023), we question whether the propensity score matching variables used in the study adequately account for all patient factors that may impact outcomes, such as the reason for cystoscopy and other comorbid conditions. We also maintain our interest in whether equivalent pre- and post-procedure urine cultures from patients in both study groups would have yielded different results, which the applicant agreed would have produced different evidence related to UTI incidence. Finally, we continue to maintain concerns over potential systematic errors in measurement due to retrospective data collection and unaccounted for confounders, such as changes in clinical practice between the 2 study years.

The Geldmaker et al. (2023) study did not assess, evaluate, review, or compare clinical outcomes associated with the use of the VersaVue™ Single-Use Flexible Cystoscope to reusable cystoscopes. Likewise, none of the other evidence provided compared the benefits of the VersaVue™ Single-Use Flexible Cystoscope to currently available treatments, including other single-use cystoscopes. For these reasons, we do not believe that the Geldmaker et al. (2023) study supports a demonstration of substantial clinical improvement.

[62] In the CY 2023 OPPS/ASC final rule with comment period CMS approved Uretero1™ as a new device category for transitional pass-through payment status and established C1747 as a new device category beginning in January 2023 (87 FR 7129 through 71934) effective January 1, 2023.

Based on our review, we continue to believe that the current application lacks sufficient evidence to demonstrate that the VersaVue™ Single-Use Flexible Cystoscope significantly improves clinical outcomes in patients receiving cystoscopy using either reusable scopes or other single-use scopes.

Comment: In response to our request for additional evidence of substantial clinical improvement, the applicant stated its belief that the Anderson et al. (2024) and Johnson et al. (2023) studies, which we identified in the CY 2026 OPPS/ASC proposed rule, have substantial limitations. Specifically, the applicant asserted that while the Anderson et al. (2024) meta-analysis included 12 studies, only 4 of them involved cystoscopes, which makes the subgroup analysis particularly challenging. The applicant also stated that the cystoscope studies were not specifically intended to identify post-procedure complications and that two of the included studies provided no data on those outcomes. Additionally, the applicant noted that only one of the two remaining cystoscopy studies reported the overall complication rate, and the other cystoscopy study reported the post-operative infection rate. Therefore, the applicant asserted that when Anderson et al. (2024) reported a disposable cystoscopes subgroup analysis for each of these outcomes, the study was simply reporting the result of a single study from its meta-analysis. The applicant also noted Anderson et al. (2024) supports the understanding that disposable scope use reduces the risk of infection and explains why data is unavailable to document that conclusion, stating:

The use of single-use endoscopes should reduce the risk of transmission of these important public health infections to a negligible level. However, the absolute risk of transmission of these pathogens with reusable endoscopes is so low that it is unlikely any study will be sufficiently powered to show a difference when compared to [single-use flexible ureteroscopes].

In addition, the applicant stated that the Johnson et al. (2023) study, a multicenter, randomized trial that compared disposable cystoscopes with reusable cystoscopes for ureteral stent removal, found no statistically significant difference in adverse events. The applicant asserted that based on the study design, this outcome is unsurprising and should not be considered evidence that no difference exists in adverse events for single-use versus multiple-use cystoscopes. The applicant noted that Johnson et al. (2023) was a randomized, dual-arm post-market clinical trial that compared single-use cystoscopes (Ambu® aScope™ 4 Cysto; Ambu A/S) for removal of ureteral stents to routine flexible reusable cystoscopes (combination of digital and fiberoptic). The applicant further opined that, although not explicitly stated, the paper presumably calculated the sample size based on the primary endpoint of stent removal, not to detect any clinical differences and, while Johnson et al. (2023) collected patient-reported adverse event data as a secondary endpoint, the study would have been severely underpowered to detect any group differences in adverse events. The applicant added that the single serious adverse event observed during the study occurred in the standard of care reusable arm and that the authors noted that patients in the reusable cystoscope group reported significantly higher pain with urination post-procedure.

The applicant submitted a new study, Chew et al. (2025), with its public comment. According to the applicant, Chew et al. (2025),[63] is a retrospective study that compared 30-day health care utilization between patients treated with single-use cystoscopes and patients treated with reusable cystoscopes. The applicant stated that the Chew et al. (2025) study used propensity score matching (1:5 ratio) to control for demographics, comorbidities, clinical history, and prior utilization and performed a pre-defined subgroup analysis in patients aged 65 years. The applicant also noted that of the study's 62,965 eligible encounters, 1,473 (2.3 percent) used single-use cystoscopes and 61,492 (97.7 percent) used reusable cystoscopes. The applicant explained that, after propensity score matching, Chew et al. (2025) compared 1,473 single-use procedures with 7,365 reusable procedures and found that single-use devices resulted in lower 30-day health care utilization (5.2 percent vs. 13.0 percent; hazard ratio (HR)=0.34; 95 percent confidence interval (CI): 0.26, 0.45; p<0.001). The applicant further noted that the study's component analyses favored single-use cystoscopes for acute care events (p<0.001), emergency department visits (p=0.03), same-day surgery (p=0.01), and clinic visits (p<0.001). The applicant reported that Chew et al. (2025) found that single-use cystoscopes resulted in lower complication rates (1.8 percent vs. 4.3 percent; HR=0.40; 95 percent CI: 0.27, 0.60; p<0.001) and serious complications (HR=0.65, 95 percent CI: 0.49, 0.86; p=0.003), and that these findings were similar in patients aged 65 years. The applicant asserted that this study provides important new evidence that use of disposable cystoscopes is associated with a lower risk of serious complications and found comparable infection rates between disposable and reusable cystoscopes. The applicant acknowledged that Chew et al. (2025) has the same underpowering issue identified in Anderson et al. (2024) and stated that the study's authors speculate that mechanical factors associated with reprocessing may influence morbidity following cystoscopy. The applicant expressed its belief that the totality of the evidence, particularly with the addition of the Chew et al. (2025) study, strongly supports that single-use, disposable cystoscope use reduces complication rates, post-procedure encounters, and health care utilization.

Response: We appreciate the applicant's input. However, we maintain our concerns listed in the CY 2026 OPPS/ASC proposed rule that additional evidence is needed to establish the VersaVue™ Single-Use Flexible Cystoscope's substantial clinical improvement over reusable, reprocessed cystoscopes or other single-use cystoscopes, such as that which shows a reduction in mortality, complications, subsequent interventions, future hospitalizations, recovery time, pain, or a more rapid beneficial resolution of the disease process.

We appreciate the applicant's critique of the Anderson et al. (2024) and Johnson et al. (2023) studies and for sharing the Chew et al. (2025) study. While we agree that all studies have their limitations, we note that Anderson et al. (2024) is reportedly the largest study to compare outcomes of single-use urologic endoscopes to those of reusable endoscopes and presents evidence suggesting that single-use urologic endoscopes provide no improvement with regard to postoperative infection rates or overall complication rates compared to reusable urologic endoscopes. This is contradictory to the applicant's assertions that the VersaVue™ Single-Use Flexible Cystoscope or any other single-use disposable cystoscope represents a substantial clinical improvement compared to a reusable cystoscope.

Moreover, we have concerns regarding the Chew et al. (2025) study. First, similar to our concern with

[63] Chew, B.H., Miller, L.E., Morris, K.C., Shin, Y.E., Tsacogianis, T., White, J., Rojanasarot, S., & Forbes, C.M. (2025) Healthcare Utilization and Complications Associated With Single-Use Versus Reusable Flexible Cystoscopy in Hospital Outpatient Settings. *Cureus, 17*(9): e91879. *https://doi.org/10.7759/cureus.91879.*

Geldmaker et al. (2023), Chew et al. (2025) does not compare the VersaVue™ Single-Use Flexible Cystoscope to other single-use or reusable devices, and retrospective studies can only suggest associations between variables, not establish causation. Second, the methodology used by Chew et al. (2025) for selecting and matching cases retrospectively is unclear, specifically, how the 7,365 matched reusable procedures were selected from the potential pool of 62,965. We also question if the study's results demonstrate substantial clinical improvement of single-use cystoscopes compared to reusable cystoscopes. While we acknowledge that Chew et al. (2025) reports an association between single-use cystoscopes and significantly lower 30-day complication rates (cumulative incidence: 1.8 percent vs. 4.3 percent) with a 60 percent relative risk reduction (HR=0.40; 95 percent CI: 0.27, 0.60; p<0.001), we note that there were no statistical differences between the single-use device group and the reusable device group in regard to recatheterization (47 percent risk reduction; p=0.11), UTI (6 percent risk increase; p=0.85), or sepsis/bacteremia (87 percent risk reduction; p=0.17). Finally, we note that the Chew et al. (2025) study cited the systematic review by Anderson et al. (2024) of 21 studies that reported no differences in overall complications or infection rates between single-use and reusable urologic endoscopes.

Comment: In response to our question whether the avoidance of device malfunctions, contamination problems, and the elimination of the need for reprocessing are clinical outcome metrics, the applicant commented that these are items that put patients at risk of complications and additional healthcare encounters, and that avoidance of these outcomes is clearly a clinical benefit. The applicant stated that CMS has recognized the complication risk in consideration of previous device pass-through applications. Specifically, the applicant pointed to CMS's consideration of the Utereo1™ pass-through application in which CMS concluded that the evidence demonstrated that the improved patient outcomes and reduced patient risk associated with the disposable device in comparison to reusable devices represented a substantial clinical improvement. The applicant asserted that many of the substantial clinical improvement claims for Uretero1™ related to these same outcomes, including infection transmission prevention, contamination risk reduction, procedure delays reduction, and increased patient safety and education. The applicant further expressed its belief that CMS should consider reduction in patient risk as a clinical outcome metric and recognize this evidence as demonstrating a substantial clinical improvement for the VersaVue™ Single-Use Flexible Cystoscope.

Response: We appreciate the applicant's input. We agree that risk of device malfunction, device contamination, and faulty reprocessing are important considerations that may affect device integrity and subsequent clinical outcomes. However, we note that these risks may not be the same between different types of devices, such as a ureteroscope and a cystoscope, and they may not even be the same between different models of similar devices, such as two cystoscopes. Further, for some devices, these risks may be so small that they render no significant clinical impact on a patient population. Thus, we believe it is not sufficient to simply argue that the elimination of risk must result in a substantial clinical improvement, especially if that risk is small. Therefore, we do not believe the applicant has sufficiently established that avoidance of device malfunctions, contamination problems, and the elimination of the need for reprocessing demonstrates substantial clinical improvement.

We further note that when there are currently-available treatment options for a patient population (as is the case for the VersaVue™ Single-Use Flexible Cystoscope), substantial clinical improvement is demonstrated when the candidate device demonstrates significantly improved clinical outcomes compared to the currently available treatments.[64] We evaluate all evidence submitted for each device pass-through application as it applies to the nominated device that is the subject of the application. In this context, the submitted evidence in support of the VersaVue™ Single-Use Flexible Cystoscope's substantial clinical improvement must demonstrate that the VersaVue™ Single-Use Flexible Cystoscope results in substantial clinical improvement when compared to available reusable and single-use devices for the treatment of the patient population. Inferences that the device may improve clinical outcomes because it may obviate complications associated with other available treatments are insufficient to demonstrate substantial clinical improvement. Therefore, the inferences derived from submitted evidence here do not establish substantial clinical improvement.

Comment: In response to our concerns regarding the use of FDA data in support of substantial clinical improvement claims, the applicant asserted that CMS cited two concerns with the use of FDA information in the VersaVue™ Single-Use Flexible Cystoscope application. Per the applicant, CMS cited guidance from FDA about use of MDRs compiled in the MAUDE database and questioned whether a study that includes analysis of that data can be used to demonstrate substantial clinical improvement. The applicant stated that CMS also questioned the appropriateness of an FDA News Release concerning infection and contamination risks associated with reusable urological endoscopes, including cystoscopes, because the release did not specifically mention single-use devices.

The applicant commented that these concerns appear to represent a reversal of CMS's position taken 3 years prior when evaluating the Uretero1™ application. The applicant further asserted that one of the primary studies, Ofstead et al. (2022), used for the Uretero1™ application's literature review included 892 MDRs submitted to FDA, and that CMS raised no concerns about use of MAUDE data in that application.

Regarding the FDA News Release, the applicant stated that FDA encouraged manufacturers to transition to devices with features that eliminate the need for reprocessing and helped manufacturers modify and validate their reprocessing instructions. The applicant opined that single-use devices are not reprocessed, thus eliminating the need for reprocessing. The applicant further commented that the Uretero1™ application included the same release and that CMS noted at that time that the release did not specifically mention single-use devices. The applicant stated that, despite receiving no comments as to whether Uretero1™ met the substantial clinical improvement criteria, CMS approved Uretero1™ for device pass-through and therefore, the applicant inferred that CMS concluded that this concern, while noted, was not significant. The applicant acknowledged that CMS's intent is to evaluate applications by consistently applying the standards for each criterion, and that each pass-through application presents its own unique circumstances, but, according to the applicant, the similarities between the Uretero1™ and the VersaVue™ Single-Use Flexible Cystoscope applications are

[64] Device Pass-through Requirements: *https://mearis.cms.gov/public/resources.*

overwhelming. According to the applicant, both devices are urological endoscopes, both applications include evidence that is not specific to the nominated device, and both applications include claims of substantial clinical improvement related to avoidance of patient risk, documented in part through analysis of FDA MAUDE data. The applicant stated its belief that this level of evidence appropriately supported the Uretero1™ application and also supports the substantial clinical improvement provided by VersaVue™ Single-Use Flexible Cystoscope and other disposable cystoscopes. The applicant asked that if CMS reaches a different conclusion, the agency provide a detailed rationale as to what requirements have changed since the rulemaking cycle for 2023.

Response: We appreciate the applicant's input. As an initial matter, we note that the requirements under § 419.66(c)(2) have not changed since we revised the alternative pathway provision effective January 1, 2021 (85 FR 86303), and CMS has consistently explained that its approach is to evaluate all evidence submitted for each device pass-through application as it applies to the nominated device (88 FR 81736, 89 FR 94182). In this case, we maintain our concerns listed in the CY 2026 OPPS/ASC proposed rule about whether the use of data that solely rely on MDRs compiled in the MAUDE database can be used to demonstrate that the use of single-use, disposable cystoscopes, like the VersaVue™ Single-Use Flexible Cystoscope, would result in substantial clinical improvement. Additionally, we continue to be concerned that the FDA News Release (2021, April 1) does not specifically reference single-use, disposable cystoscopes or encourage manufacturers to transition to single-use, disposable cystoscopes, such as the VersaVue™ Single-Use Flexible Cystoscope.

With respect to the concern that the use of MDRs compiled in the MAUDE database can be used to demonstrate substantial clinical improvement, we acknowledge that, since the Uretero1™ approval, we have more critically evaluated and questioned the utility of studies and reports using data solely collected from the MAUDE database, which claim associations between infections and devices for the purposes of demonstrating substantial clinical improvement. For example, in our decision for Ambu® aScope™ Gastro (89 FR 94179 through 94182), we found that the applicant's self-sponsored analyses of FDA adverse event reports and the FDA MAUDE report did not provide evidence on the prevalence of infection, establish a clear relationship between infection risk and reprocessing procedures, or substantiate that single-use disposable scopes, or the nominated device specifically, would be a substantial clinical improvement over currently-available devices. As we discussed in the CY 2026 OPPS/ASC proposed rule, the FDA MAUDE database's MDR data are not intended to be used to evaluate rates of adverse events, evaluate a change in event rates over time, or compare adverse event occurrence rates across devices. Further, FDA describes the MAUDE database as a passive surveillance system, and that incidence, prevalence, or cause of an event cannot be determined from this surveillance system alone due to underreporting of events, inaccuracies, or bias in reports; untimely reports; lack of verification that the device caused the reported event; and lack of information about frequency of device use. Additionally, MDRs submitted to MAUDE have not been independently reviewed and the reported adverse events, by themselves, are not definitive evidence of faulty or defective medical devices. Finally, we note that the MAUDE database lacks the clinical granularity, such as comorbidities, procedure details, or the etiology of an adverse event, needed to calculate the true incidence of any post-cystoscopy complication. These same limitations of the MAUDE database are also acknowledged in the Lee et al. (2022) and Muscarella (2022) articles, which the applicant submitted as part of the VersaVue™ Single-Use Flexible Cystoscope application. For these reasons, we maintain our concerns that data from MAUDE alone cannot substantiate that the VersaVue™ Single-Use Flexible Cystoscope exhibits substantial clinical improvement over currently available devices.

With respect to the MAUDE data included as evidence in the Uretero1™ application, we note that, in addition to 892 MDRs, the Ofstead et al. (2022) study also included five articles describing reprocessing breaches, contamination, infections, or injuries related to fully reprocessed flexible ureteroscopes, as well as conference abstracts. We note that the inclusion of Ofstead et al. (2022), which contained additional studies and data sources, provided evidence other than MAUDE data for the Uretero1™ application. In contrast to Ofstead et al. (2022), the Lee et al. (2022) and Muscarella (2022) articles included in the VersaVue™ Single-Use Flexible Cystoscope application rely solely on MAUDE data and do not evaluate other data or sources. Moreover, the Muscarella (2022) article is not peer-reviewed and is self-published. For these reasons, we maintain our concerns that the use of studies that solely rely on MDRs compiled in the MAUDE database cannot substantiate that the use of single-use, disposable cystoscopes, like VersaVue™ Single-Use Flexible Cystoscope, results in substantial clinical improvement over currently available devices.

Regarding the FDA News Release (April 1, 2021), we note that within the document, FDA does not make specific recommendations for the use of single-use, disposable cystoscopes, including the VersaVue™ Single-Use Flexible Cystoscope, over reusable, reprocessed devices. Rather, FDA stated that its Letter to Health Care Providers issued recommendations for reprocessing and using these devices, such as following the reprocessing instructions and developing schedules for routine device inspection and maintenance. Additionally, FDA stated that it believes the risk of infection from reusable, reprocessed urological endoscopes was low based on its data. We also note that the FDA Update (January 31, 2025) communicated a medical device recall of a specific device component, the Olympus® endoscope accessory (MAJ–891 Forceps/Irrigation Plug) that is attached to the instrument channel port of a certain endoscope, due to the risk of infection that may result from improper reprocessing; however, it made no mention of, or recommendation for, the use of single-use, disposable devices, including the VersaVue™ Single-Use Flexible Cystoscope, over reusable, reprocessed devices. For these reasons, we maintain our concern that the FDA News Release (April 1, 2021) does not specifically reference single-use, disposable devices, including the nominated device.

In response to the applicant's comment comparing the Uretero1™ application summary with the nominated device's application summary, we note that we expressed a similar concern for Uretero1™, specifically that the FDA advisory letter regarding ureteroscopes did not mention single-use devices and that it was unclear how the news release's recommendations supported Uretero1™'s claims of substantial clinical improvement (87 FR 71932). While we ultimately determined that evidence submitted as part of the Uretero1™ pass-through application was sufficient to demonstrate substantial clinical improvement at that

time, we would like to reiterate, again, that we evaluate all evidence submitted for each device pass-through application as it applies to the nominated device at the time the current application is submitted. As previously noted, we have gained additional knowledge about the limitations of what is reported and included in the MAUDE database.

Based on the totality of the evidence, we do not believe that the applicant has submitted documentation demonstrating that the use of the VersaVue™ Single-Use Flexible Cystoscope results in a substantial clinical improvement compared to other existing technologies. Further, we disagree with the assertion that our acceptance of FDA guidance documents for previous applications controls the outcome of our evaluation of evidence of substantial clinical improvement for the VersaVue™ Single-Use Flexible Cystoscope. The ultimate determination of whether evidence demonstrates substantial clinical improvement for one application is not controlling on future determinations because, due to inherent differences in the devices themselves and the supporting documentation submitted, CMS may have different concerns as they relate to the nominated device. We do not believe our evaluation of the totality of the evidence provided by the applicant, including the FDA data and News Release, represents a change in requirements for evaluating transitional pass-through applications.

Comment: In response to our concern that the utilization data submitted as part of the VersaVue™ Single-Use Flexible Cystoscope application suggests that disposable cystoscopes are widely available and consistently used in outpatient facilities, the applicant commented that neither the statute nor the regulations describe a standard related to whether a device is widely available or consistently used. The applicant stated its belief that CMS has never applied such a standard in the past and should not apply such a requirement to an individual application. The applicant asserted that, while it opposes such an approach, if CMS intends to limit pass-through categories for devices it determines are widely available, then CMS must go through rulemaking to establish that standard.

Further, the applicant stated that it understood the utilization data CMS collects is requested to calculate the estimated total utilization across pass-through items in a given year. Finally, the applicant clarified that some of the marketing data provided on its application was inaccurate and that the Chew et al. (2025) study indicates that, based on review of outpatient hospital claims data, 2.3 percent of encounters involved single-use cystoscopes, rather than the estimated 23 percent initially provided.

Response: We appreciate the applicant's input. The applicant is correct that volume and utilization data are used to calculate the estimated cost of pass-through items. However, we may use any information submitted as part of a device pass-through application for the purposes of evaluating that application, if such information is relevant to other eligibility criteria. In addition, we continue to believe that our approach, including the question raised regarding the creation of a device pass-through payment category code for certain categories of devices, is consistent with both the statutory intent of section 1833(t)(6)(B) of the Act and with the implementing regulation at § 419.66. As explained in the CY 2002 OPPS interim final rule with comment period (66 FR 55852 and 55853) and in other final and proposed rules (see, for example, the CY 2023 final rule with comment period, 87 FR 71886) thereafter, the transitional pass-through payment provision is intended as an interim measure to facilitate beneficiary access by allowing for adequate payment of new, innovative technology while we collect the necessary data to incorporate the costs for these items into the base APC rates. The statute and regulations specifically limit the payment for individual pass-through items to at least 2 years but no more than 3 years, with the intention that the costs for these items should be incorporated into the APC rates for the procedures associated with these items after that period. We believe that in if CMS has already collected cost data in the appropriate APC for devices that would be described by a potential device category code, then establishing such a device category code would be unnecessary and contrary to the intent of the statute. Further, CMS is not establishing a new standard as the applicant suggests; rather, the standard is set by the statute and regulation and our discussion of volume and utilization is part of our review of the evidence to determine compliance with the requirements of § 419.66(c)(2), which we believe is consistent with both the language and intent of transitional pass-through payment provisions. We continue to believe that, consistent with the statute and regulations, transitional pass-through payment should be limited to those new and innovative technologies for which the necessary data to appropriately incorporate adequate cost data of these technologies into the applicable procedure APC have not been collected.

Because of the reasons discussed in this section, the VersaVue™ Single-Use Flexible Cystoscope does not meet the substantial clinical improvement criterion to be considered as a device for transitional pass-through payment. Therefore, in this final rule with comment period, we will not address whether the technology meets the cost criterion required for transitional pass-through payment for devices. We are not approving the VersaVue™ Single-Use Flexible Cystoscope for transitional pass-through payment status for CY 2026 because the technology does not meet the substantial clinical improvement criterion at § 419.66(c)(2).

(d) Other Comments

Comment: Multiple commenters recommended CMS calculate the device-related portion of APCs for purposes of determining transitional pass-through payment status eligibility and the device offset using only the cost of the devices replaced by the proposed device pass-through payment status device category. Specifically, the commenters recommended CMS eliminate the evaluation of device pass-through cost significance criteria when a proposed device does not replace any existing devices used in a procedure. For devices that replace some, but not all, of the devices used in a procedure, the commenters requested CMS revise the methodology of device pass-through cost significance criteria to assess the cost of proposed device using only the cost of the devices the proposed device replaces in the associated procedure. For approved pass-through devices, the commenters recommended CMS identify and apply an offset amount that reflects only the costs of the replaced devices for devices that replace only a portion of device-related costs within a procedure. The commenters asserted that the refinement of the device offset calculation would ensure a more accurate and fair evaluation of device costs and reduce unnecessary barriers for a procedure to perform safely and successfully. In addition, one commenter proposed that CMS consider a new policy to set the device offset at the lesser of the APC offset or the HCPCS-level offset for purposes of calculating transitional pass-through payments when insufficient claims data are available to demonstrate that the costs of a pass-through device are meaningfully reflected in the associated APC payment for the procedure. The commenter opined that this approach would prevent excessive and

unwarranted device costs from being deducted from hospital payments.

Response: We appreciate the commenters' recommendations regarding the revision of the methodology for calculating the device-related portion of APCs for the purpose of determining the transitional pass-through payment status eligibility and the device offset of a nominated device. We will continue to consider the issues and any additional public comments related to them.

Comment: We received multiple comments supporting the OPPS transitional device pass-through payment pathway and highlighting the important role the program plays in the treatment of Medicare beneficiaries. One commenter noted that the program bridges the gap between FDA approval of novel devices and their full integration into OPPS rates and encourages manufacturers to invest in innovation without delaying patient access.

Response: We appreciate the commenters' input and ongoing support of the device pass-through payment program.

Comment: We received several public comments requesting changes to the device pass-through payment policies, such as, but not limited to: modifying or removing the requirement that a device be surgically inserted or implanted. We also received multiple public comments requesting updates to the device offset amounts for existing device category codes. In addition, we received comments on devices that were not under consideration for device pass-through payment status for CY 2026.

Response: These comments were outside the scope of the proposals included in the CY 2026 OPPS/ASC proposed rule and we are therefore not addressing them in this final rule with comment period.

B. Device-Intensive Procedures

1. Background

Under the OPPS, prior to CY 2017, device-intensive status for procedures was determined at the APC level for APCs with a device offset percentage greater than 40 percent (79 FR 66795). Beginning in CY 2017, CMS began determining device-intensive status at the HCPCS code level. In assigning device-intensive status to an APC prior to CY 2017, the device costs of all the procedures within the APC were calculated and the geometric mean device offset of all of the procedures had to exceed 40 percent. Almost all of the procedures assigned to device-intensive APCs utilized devices, and the device costs for the associated HCPCS codes exceeded the 40-percent threshold. The no cost/full credit and partial credit device policy (79 FR 66872 through 66873) applies to device-intensive procedures and is discussed in detail in section IV.B.4. of the CY 2026 OPPS/ASC proposed rule. A related device policy was the requirement that certain procedures assigned to device-intensive APCs require the reporting of a device code on the claim (80 FR 70422) and is discussed in detail in section IV.B.3. of the CY 2026 OPPS/ASC proposed rule. For further background information on the device-intensive APC policy, we refer readers to the CY 2016 OPPS/ASC final rule with comment period (80 FR 70421 through 70426).

a. HCPCS Code-Level Device-Intensive Determination

As stated earlier, prior to CY 2017, under the device-intensive methodology we assigned device-intensive status to all procedures requiring the implantation of a device that were assigned to an APC with a device offset greater than 40 percent and, beginning in CY 2015, that met the three criteria as listed. Historically, the device-intensive designation was at the APC level and applied to the applicable procedures within that APC. In the CY 2017 OPPS/ASC final rule with comment period (81 FR 79658), we changed our methodology to assign device-intensive status at the individual HCPCS code level rather than at the APC level. Under this policy, a procedure could be assigned device-intensive status regardless of its APC assignment, and device-intensive APC designations were no longer applied under the OPPS or the ASC payment system.

We believe that a HCPCS code-level device offset is, in most cases, a better representation of a procedure's device cost than an APC-wide average device offset based on the average device offset of all of the procedures assigned to an APC. Unlike a device offset calculated at the APC level, which is a weighted average offset for all devices used in all of the procedures assigned to an APC, a HCPCS code-level device offset is calculated using only claims for a single HCPCS code. We believe that this methodological change results in a more accurate representation of the cost attributable to implantation of a high-cost device, which ensures consistent device-intensive designation of procedures with a significant device cost. Further, we believe a HCPCS code-level device offset removes inappropriate device-intensive status for procedures without a significant device cost that are granted such status because of their APC assignment.

Under our existing policy, procedures that meet the criteria listed in section IV.C.1.b. of this final rule with comment period are identified as device-intensive procedures and are subject to all the policies applicable to procedures assigned device-intensive status under our established methodology, including our policies on device edits and no cost/full credit and partial credit devices discussed in sections IV.C.3. and IV.C.4. of this final rule with comment period.

b. Use of the Three Criteria To Designate Device-Intensive Procedures

We clarified our established policy in the CY 2018 OPPS/ASC final rule with comment period (82 FR 52474), where we explained that device-intensive procedures require the implantation of a device and additionally are subject to the following criteria:

- All procedures must involve implantable devices that would be reported if device insertion procedures were performed.
- The required devices must be surgically inserted or implanted devices that remain in the patient's body after the conclusion of the procedure (at least temporarily); and
- The device offset amount must be significant, which is defined as exceeding 40 percent of the procedure's mean cost.

We changed our policy to apply these three criteria to determine whether procedures qualify as device-intensive in the CY 2015 OPPS/ASC final rule with comment period (79 FR 66926), where we stated that we would apply the no cost/full credit and partial credit device policy—which includes the three criteria listed previously—to all device-intensive procedures beginning in CY 2015. We reiterated this position in the CY 2016 OPPS/ASC final rule with comment period (80 FR 70424), where we explained that we were finalizing our proposal to continue using the three criteria established in the CY 2007 OPPS/ASC final rule with comment period for determining the APCs to which the CY 2016 device intensive policy will apply. Under the policies we adopted in CYs 2015, 2016, and 2017, all procedures that require the implantation of a device and meet the previously described criteria are assigned device-intensive status, regardless of their APC placement.

2. Device-Intensive Procedure Policy

As part of our effort to better capture costs for procedures with significant device costs, in the CY 2019 OPPS/ASC final rule with comment period (83 FR

58944 through 58948), for CY 2019, we modified our criteria for device-intensive procedures. We had heard from interested parties that the criteria excluded some procedures that interested parties believed should qualify as device-intensive procedures. Specifically, we were persuaded by interested party arguments that procedures requiring expensive surgically inserted or implanted devices that are not capital equipment should qualify as device-intensive procedures, regardless of whether the device remains in the patient's body after the conclusion of the procedure. We agreed that a broader definition of device-intensive procedures was warranted, and made two modifications to the criteria for CY 2019 (83 FR 58948). First, we allowed procedures that involve surgically inserted or implanted single-use devices that meet the device offset percentage threshold to qualify as device-intensive procedures, regardless of whether the device remains in the patient's body after the conclusion of the procedure. We established this policy because we no longer believe that whether a device remains in the patient's body should affect a procedure's designation as a device-intensive procedure, as such devices could, nonetheless, comprise a large portion of the cost of the applicable procedure. Second, we modified our criteria to lower the device offset percentage threshold from 40 percent to 30 percent, to allow a greater number of procedures to qualify as device intensive. We stated that we believed allowing these additional procedures to qualify for device-intensive status would help ensure these procedures receive more appropriate payment in the ASC setting, which would help encourage the provision of these services in the ASC setting. In addition, we stated that this change would help to ensure that more procedures containing relatively high-cost devices are subject to the device edits, which leads to more correctly coded claims and greater accuracy in our claims data. Specifically, for CY 2019 and subsequent years, we finalized that device-intensive procedures will be subject to the following criteria:

- All procedures must involve implantable devices assigned a CPT or HCPCS code;
- The required devices (including single-use devices) must be surgically inserted or implanted; and
- The device offset amount must be significant, which is defined as exceeding 30 percent of the procedure's mean cost (83 FR 58945).

In addition, to further align the device-intensive policy with the criteria used for device pass-through payment status, we finalized, for CY 2019 and subsequent years, that for purposes of satisfying the device-intensive criteria, a device-intensive procedure must involve a device that:

- Has received FDA marketing authorization, has received an FDA investigational device exemption (IDE), and has been classified as a Category B device by FDA in accordance with §§ 405.203 through 405.207 and 405.211 through 405.215, or meets another appropriate FDA exemption from premarket review;
- Is an integral part of the service furnished;
- Is used for one patient only;
- Comes in contact with human tissue;
- Is surgically implanted or inserted (either permanently or temporarily); and
- Is not either of the following:

++ Equipment, an instrument, apparatus, implement, or item of the type for which depreciation and financing expenses are recovered as depreciable assets as defined in Chapter 1 of the Medicare Provider Reimbursement Manual (CMS Pub. 15–1); or

++ A material or supply furnished incident to a service (for example, a suture, customized surgical kit, scalpel, or clip, other than a radiological site marker) (83 FR 58945).

In addition, for new HCPCS codes describing procedures requiring the implantation of devices that do not yet have associated claims data, in the CY 2017 OPPS/ASC final rule with comment period (81 FR 79658), we finalized a policy for CY 2017 to apply device-intensive status with a default device offset set at 41 percent for new HCPCS codes describing procedures requiring the implantation or insertion of a device that did not yet have associated claims data until claims data are available to establish the HCPCS code-level device offset for the procedures. This default device offset amount of 41 percent was not calculated from claims data; instead, it was applied as a default until claims data were available upon which to calculate an actual device offset for the new code. The purpose of applying the 41-percent default device offset to new codes that describe procedures that implant or insert devices was to ensure ASC access for new procedures until claims data become available.

As discussed in the CY 2019 OPPS/ASC proposed rule and final rule with comment period (83 FR 37108 through 37109 and 83 FR 58945 through 58946, respectively), in accordance with our policy stated previously to lower the device offset percentage threshold for procedures to qualify as device-intensive from greater than 40 percent to greater than 30 percent, for CY 2019 and subsequent years, we modified this policy to apply a 31-percent default device offset to new HCPCS codes describing procedures requiring the implantation of a device that do not yet have associated claims data until claims data are available to establish the HCPCS code-level device offset for the procedures. In conjunction with the policy to lower the default device offset from 41 percent to 31 percent, we continued our current policy of, in certain rare instances (for example, in the case of a very expensive implantable device), temporarily assigning a higher offset percentage if warranted by additional information such as pricing data from a device manufacturer (81 FR 79658). Once claims data are available for a new procedure requiring the implantation or insertion of a device, device-intensive status is applied to the code if the HCPCS code-level device offset is greater than 30 percent, according to our policy of determining device-intensive status by calculating the HCPCS code-level device offset.

In addition, in the CY 2019 OPPS/ASC final rule with comment period, we clarified that since the adoption of our policy in effect as of CY 2018, the associated claims data used for purposes of determining whether or not to apply the default device offset are the associated claims data for either the new HCPCS code or any predecessor code, as described by CPT coding guidance, for the new HCPCS code. Additionally, for CY 2019 and subsequent years, in limited instances where a new HCPCS code does not have a predecessor code as defined by CPT, but describes a procedure that was previously described by an existing code, we use clinical discretion to identify HCPCS codes that are clinically related or similar to the new HCPCS code but are not officially recognized as a predecessor code by CPT, and to use the claims data of the clinically related or similar code(s) for purposes of determining whether or not to apply the default device offset to the new HCPCS code (83 FR 58946). Clinically related and similar procedures for purposes of this policy are procedures that have few or no clinical differences and use the same devices as the new HCPCS code. In addition, clinically related and similar codes for purposes of this policy are codes that either currently or previously describe the procedure described by the

new HCPCS code. Under this policy, claims data from clinically related and similar codes are included as associated claims data for a new code, and where an existing HCPCS code is found to be clinically related or similar to a new HCPCS code, we apply the device offset percentage derived from the existing clinically related or similar HCPCS code's claims data to the new HCPCS code for determining the device offset percentage. We stated that we believe that claims data for HCPCS codes describing procedures that have minor differences from the procedures described by new HCPCS codes will provide an accurate depiction of the cost relationship between the procedure and the device(s) that are used, and will be appropriate to use to set a new code's device offset percentage, in the same way that predecessor codes are used. If a new HCPCS code has multiple predecessor codes, the claims data for the predecessor code that has the highest individual HCPCS-level device offset percentage is used to determine whether the new HCPCS code qualifies for device-intensive status. Similarly, in the event that a new HCPCS code does not have a predecessor code but has multiple clinically related or similar codes, the claims data for the clinically related or similar code that has the highest individual HCPCS level device offset percentage is used to determine whether the new HCPCS code qualifies for device-intensive status.

In the CY 2025 OPPS/ASC final rule with comment period (89 FR 94214 through 92419), we finalized a change to our methodology for applying default device offset percentages for new device-intensive procedures. Under our previous policy, if a new CPT/HCPCS code did not have available claims data, either from the new HCPCS code or any predecessor code or clinically-similar code that uses the same device, and the CPT/HCPCS code otherwise met our criteria for device-intensive status, we would apply a default device offset percentage of 31 percent. However, we were aware of certain situations where the default device offset amount might not adequately reflect the existing device portion of the procedure's costs when compared to the cost of similar devices. A potential large difference between the default device offset amount and the device portion of similar devices might impede our ability to accurately remove device offset amounts from new device-intensive procedures under the OPPS and to set payment rates for device-intensive procedures under the ASC payment system. Therefore, for CY 2025 and subsequent CYs, we finalized our proposal to modify our default device offset percentage policy for new device-intensive procedures. Specifically, for new CPT/HCPCS codes that both describe a procedure that requires the surgical implantation or insertion of a single-use device that exceeds 30 percent of the procedure's cost and that meets our requirements of a device as described here and lack claims data (from either the new HCPCS code or any predecessor code or clinically-similar code that uses the same device), we would apply a default device offset percentage that is the greater of 31 percent or the device offset percentage of the APC to which the procedure has been assigned. We stated that we still believe that a HCPCS code-level device offset is, in most cases, a more accurate representation of a procedure's device cost than an APC-wide average device offset based on the average device offset of all the procedures assigned to an APC. However, because newer device-intensive procedures lack claims data, we believe the APC-wide average device offset percentage is, in many cases, a better reflection of the estimated device costs of the procedure than a default 31 percent offset. Additionally, there can be instances where the typical device costs of procedures in an APC can be significantly greater than the 31 percent default device offset. For these reasons, we finalized our modification to our default device offset percentage for new device-intensive procedures. This methodological change was finalized for both the OPPS and ASC Payment System for CY 2025 and subsequent CYs and applies to new procedures assigned to clinical APCs, but not to new procedures assigned to New Technology APCs.

Additionally, in the CY 2025 OPPS/ASC final rule with comment period (89 FR 92414 through 92419), we stated that we were persuaded by commenters that the lack of a device edit for device-intensive procedures, particularly new technologies, might lead to an underreporting of device costs and total procedure costs and potentially impede beneficiary access to such new technologies over time. Therefore, in addition to finalizing a modification to our device edits policy for CY 2025, we finalized a modification to our device offset percentage calculation. For procedures subject to our modified device edits policy for CY 2025 that cannot report modifier ''CG'' to bypass this claims processing edit, the device offset percentages calculated (for the CPT/HCPCS code or its predecessor code) are based on hospital claims that reported a device code. We stated that we believed that hospital outpatient claims that report a device code with such procedures provide, in general, a more accurate representation of the procedures' total costs. We also finalized, for purposes of determining device offset percentages, that we will not use claims data from procedures that had a status indicator of ''E1'' during the calendar year we are using for ratesetting and determining device offset percentages. Lastly, we refined our process for applying device offset percentages to use available claims data from predecessor codes annually, rather than the first year of the successor code's activation date, until we have available claims data from the successor code.

In the CY 2026 OPPS/ASC proposed rule (90 FR 33609), we proposed to continue these policies for CY 2026. As we indicated in the CY 2019 OPPS/ASC proposed rule and final rule with comment period, additional information for our consideration of an offset percentage higher than the default of 31 percent (or the APC-wide default offset percentage) for new HCPCS codes describing procedures requiring the implantation (or, in some cases, the insertion) of a device that do not yet have associated claims data, such as pricing data or invoices from a device manufacturer, should be directed to the Division of Outpatient Care, Mail Stop C4–01–26, Centers for Medicare & Medicaid Services, 7500 Security Boulevard, Baltimore, MD 21244–1850, or electronically *outpatientpps@cms.hhs.gov.* We stated in the CY 2026 OPPS/ASC proposed rule that additional information can be submitted prior to issuance of an OPPS/ASC proposed rule or as a public comment in response to an issued OPPS/ASC proposed rule. Device offset percentages will be set in each year's final rule.

We received public comments on these proposals. The following is a summary of the comments we received and our responses.

Comment: Commenters supported our assignment of device-intensive status and the proposed device offset percentages for the following CPT/HCPCS codes:

- CPT code 0671T (Insertion of anterior segment aqueous drainage device into the trabecular meshwork, without external reservoir, and without concomitant cataract removal, one or more);
- CPT code 0970T (Ablation, benign breast tumor (*e.g.,* fibroadenoma), percutaneous, laser, including imaging guidance when performed, each tumor);

- CPT code 0971T (Ablation, malignant breast tumor(s), percutaneous, laser, including imaging guidance when performed, unilateral);
- CPT code 52284 (Cystourethroscopy, with mechanical urethral dilation and urethral therapeutic drug delivery by drug-coated balloon catheter for urethral stricture or stenosis, male, including fluoroscopy, when performed);
- CPT code 52443 (placeholder code 52XX2) (Cystourethroscopy with initial transurethral anterior prostate commissurotomy with a nondrug-coated balloon catheter followed by therapeutic drug delivery into the prostate by a drug-coated balloon catheter, including transrectal ultrasound and fluoroscopy, when performed);
- CPT codes 66989 (Extracapsular cataract removal with insertion of intraocular lens prosthesis (1-stage procedure), manual or mechanical technique (*e.g.,* irrigation and aspiration or phacoemulsification), complex, requiring devices or techniques not generally used in routine cataract surgery (*e.g.,* iris expansion device, suture support for intraocular lens, or primary posterior capsulorrhexis) or performed on patients in the amblyogenic developmental stage; with insertion of intraocular (*e.g.,* trabecular meshwork, supraciliary, suprachoroidal) anterior segment aqueous drainage device, without extraocular reservoir, internal approach, one or more),
- CPT code 66991 (Extracapsular cataract removal with insertion of intraocular lens prosthesis (1 stage procedure), manual or mechanical technique (*e.g.,* irrigation and aspiration or phacoemulsification); with insertion of intraocular (*e.g.,* trabecular meshwork, supraciliary, suprachoroidal) anterior segment aqueous drainage device, without extraocular reservoir, internal approach, one or more), and
- HCPCS code C9781 (Arthroscopy, shoulder, surgical; with implantation of subacromial spacer (*e.g.,* balloon), includes debridement (*e.g.,* limited or extensive), subacromial decompression, acromioplasty, and biceps tenodesis when performed);

Response: We appreciate the commenters' support for our proposed device-intensive assignments and proposed device offset percentages based on CY 2024 claims data available for the CY 2026 OPPS/ASC proposed rule. Final device-intensive assignments are based on CY 2024 claims data available found in Addendum P of this final rule with comment period.

Comment: One commenter recommended a nomination process for device-intensive procedures.

Response: We thank the commenter for their recommendation. We believe it is important for our current methodology to rely on cost information from claims data for determining device-intensive status for CPT/HCPCS codes. Additionally, we believe our current methodology of determining device-intensive status and device offset percentages in the absence of claims data and seeking public comments on our determinations in our notice and comment rulemaking remains an appropriate methodology that relies on engagement with healthcare interested parties. Therefore, we do not see a need to create a nomination process for device-intensive procedures at this time.

Comment: One commenter requested that CMS update Addendum P for the CY 2026 OPPS/ASC final rule to include the default device offset of 31 percent for CPT codes 0956T (Partial craniectomy, channel creation, and tunneling of electrode for sub-scalp implantation of an electrode array, receiver, and telemetry unit for continuous bilateral electroencephalography monitoring system, including imaging guidance) and 0960T (Replacement of sub-scalp implanted electrode array, receiver, and telemetry unit with tunneling of electrode for continuous bilateral electroencephalography monitoring system, including imaging guidance) as these are device-intensive procedures requiring sophisticated implantable devices with external wearable components and cloud services.

Response: We thank the commenter and note that we inadvertently omitted CPT codes 0956T and 0960T from Addendum P in the CY 2026 OPPS/ASC proposed rule, although we did propose in the CY 2026 OPPS/ASC proposed rule that such procedures were device-intensive in the ASC setting in Addenda AA and FF. We are therefore accepting the commenter's recommendation and assigning device-intensive status to CPT codes 0956T and 0960T with a device offset percentage of 31 percent in this CY 2026 OPPS/ASC final rule with comment period.

Comment: Some commenters recommended that we modify our definition of device-intensive procedures to include non-insertable or implantable devices. The CPT/HCPCS codes commenters recommended assigning device-intensive status include:

- CPT code 0686T (Histotripsy (*i.e.,* non-thermal ablation via acoustic energy delivery) of malignant hepatocellular tissue, including image guidance);
- CPT code 0888T (Histotripsy (*i.e.,* non-thermal ablation via acoustic energy delivery) of malignant renal tissue, including imaging guidance);
- CPT code 15013 (Preparation of skin cell suspension autograft, requiring enzymatic processing, manual mechanical disaggregation of skin cells, and filtration; first 25 sq cm or less of harvested skin); and
- HCPCS code C8002 (Preparation of skin cell suspension autograft, automated, including all enzymatic processing and device components (do not report with manual suspension preparation)).

The commenters asserted that failure to assign device-intensive status to these procedures will result in ASC payment rates that do not accurately reflect the resource costs of furnishing these services, potentially limiting beneficiary access to innovative skin cell suspension autograft procedures and certain histotripsy procedures in the ASC setting.

Response: We appreciate the commenters' recommendations. We do not believe we should expand our definition of devices to include the costs of skin substitute products or capital-intensive equipment, as our current ratesetting methodology adequately captures the costs for such items and services for developing OPPS/ASC payment rates. Therefore, we are not accepting the commenter's recommendation.

Comment: One commenter disagreed with our proposed device offset percentage for CPT code 0202T (Posterior vertebral joint(s) arthroplasty (*e.g.,* facet joint[s] replacement), including facetectomy, laminectomy, foraminotomy, and vertebral column fixation, injection of bone cement, when performed, including fluoroscopy, single level, lumbar spine) at 59.21 percent. The commenter was unclear how we determined this figure, and stated it is unclear since this procedure was previously on the IPO list and the APC-wide device offset percentage is 59.63 percent.

Response: While CPT code 0202T was on the inpatient-only list for CY 2024, we did receive one claim for CY 2026 OPPS/ASC ratesetting from CY 2024. Based on this CY 2024 claim available for this final rule with comment period, we are not relying on our default device offset methodology and assigning device-intensive status to CPT code 0202T using the CY 2024 claim data available. The final device offset percentage for CPT code 0202T under the OPPS can be found in Addendum P to this final rule with comment period.

Comment: Two commenters requested that CMS assign device-intensive status to HCPCS code C9779 (Endoscopic submucosal dissection (esd), including endoscopy or colonoscopy, mucosal closure, when performed). The commenters noted that endoscopic submucosal dissection requires specialized, expensive single-use devices and equipment that represent a significant portion of the total procedure cost, warranting device-intensive recognition to ensure appropriate reimbursement. Both commenters asserted that without proper device-intensive status, the payment may be insufficient to cover the actual costs of performing this complex procedure, potentially limiting patient access to this advanced endoscopic technique in both hospital outpatient and ASC settings.

Response: For this final rule with comment period, the device offset percentage for HCPCS code C9779 is below our device-intensive threshold based on 963 claims for this service in the CY 2024 data and, therefore, does not qualify for device-intensive for CY 2026.

Comment: Some commenters recommended that we establish the device offset percentage for CPT code 47384 (placeholder code 4001X) (Ablation, irreversible electroporation, liver, one or more tumors, including imaging guidance, percutaneous) and CPT code 55877 (placeholder code 5XX11) (Ablation, irreversible electroporation, prostate, one or more tumors, including imaging guidance, percutaneous) using CPT code 0600T (Ablation, irreversible electroporation; one or more tumors per organ, other than liver or prostate, including imaging guidance, when performed, percutaneous). The commenters argue that CPT code 0600T was the predecessor code to CPT codes 47384 and 55877 and therefore under our policy for establishing device offset percentages for new device-intensive procedures, we should rely on claims data from CPT code 0600T to establish the device offset percentages for the new procedures.

Response: We agree with the commenters' recommendation. We inadvertently did not use claims data from predecessor CPT code 0600T for establishing the proposed device offset percentages for CPT codes 47384 and 55877 for the CY 2026 OPPS/ASC proposed rule. We are accepting the commenters' recommendations and establishing the device offset percentage for CPT codes 47384 and 55877 using the claims data from CPT code 0600T for CY 2026.

Comment: Multiple commenters requested that CMS classify CPT code 52282 (Cystourethroscopy, with insertion of permanent urethral stent) as device-intensive. The commenters believed that CMS's claims data analysis is fundamentally flawed because no permanent urethral stents have been available in the U.S. market since April 2016, making any recent claims data implausible and not reflective of actual procedural activity, with analysis showing that over 33 percent of the 111 claims used were inappropriately billed to female patients despite the procedure being indicated only for males. The commenters urged CMS to exclude all existing hospital outpatient claims for CPT 52282 from payment calculations, designate the procedure as device-intensive using manufacturer pricing as a device offset, and ensure adequate reimbursement to support patient access to upcoming clinically proven permanent urethral stent technologies for BPH treatment. Separately, a commenter requested that CMS consider granting device-intensive status for CPT code 62287 (Decompression procedure, percutaneous, of nucleus pulposus of intervertebral disc, any method utilizing needle based technique to remove disc material under fluoroscopic imaging or other form of indirect visualization, with discography and/or epidural injection(s) at the treated level(s), when performed, single or multiple levels, lumbar) due to a lack of consistent reporting of device costs associated with this procedure. The commenter stated that if the invoice cost of devices used in the procedure were compared to the reimbursement rate, the device-related portion of the reimbursement would exceed the 30 percent threshold required for device-intensive status.

Response: We appreciate the concerns the commenters have raised but note that hospitals have reported these CPT codes across a significant number of claims in total over the past several years and the device offset percentages of such claims has not exceeded our device-intensive threshold of 30 percent in each of the past several years. We believe it would be inappropriate to disregard the entirety of such claims data for determining device-intensive status as we rely on hospitals to accurately report device costs for OPPS/ASC ratesetting. Therefore, we are not accepting the commenters' recommendation to assign device-intensive status to CPT codes 52282 and 62287 for CY 2026.

Comment: Commenters requested that CMS retain the predecessor device offset percentages for the newly restructured lower extremity revascularization CPT codes (placeholder codes 37X02–37X46) rather than adopting the APC device offset percentage, arguing that this approach aligns with CMS's standard policy of maintaining historical device offset data when codes are revised or bifurcated.

Response: We agree with the commenters that the newly-restructured lower extremity revascularization CPT codes have a suitable predecessor code for which we can use claims data for determining device offset percentages. Therefore, for such procedures that are separately payable, we are accepting the commenters' recommendation and will assign a device offset percentage to the new lower extremity revascularization CPT codes based on claims data from the predecessor code. Specifically, for CY 2026, we rely on the mapping that follows:

- Claims data from CPT code 37220 (Revascularization, endovascular, open or percutaneous, iliac artery, unilateral, initial vessel; with transluminal angioplasty) for determining the device offset percentage for CPT codes 37254 (Revascularization, endovascular, open or percutaneous, iliac vascular territory, with transluminal angioplasty, including all maneuvers necessary for accessing and selectively catheterizing the artery and crossing the lesion, including all imaging guidance and radiological supervision and interpretation necessary to perform the angioplasty within the same artery, unilateral; straightforward lesion, initial vessel) and 37256 (Revascularization, endovascular, open or percutaneous, iliac vascular territory, with transluminal angioplasty, including all maneuvers necessary for accessing and selectively catheterizing the artery and crossing the lesion, including all imaging guidance and radiological supervision and interpretation necessary to perform the angioplasty within the same artery, unilateral; complex lesion, initial vessel) (placeholder codes 37XX1 and 37X03);
- Claims data from CPT code 37221 (Revascularization, endovascular, open or percutaneous, iliac artery, unilateral, initial vessel; with transluminal stent placement(s), includes angioplasty within the same vessel, when performed) for determining the device offset percentage for CPT codes 37258 (Revascularization, endovascular, open or percutaneous, iliac vascular territory, with transluminal stent placement, including transluminal angioplasty when performed, including all maneuvers necessary for accessing and selectively catheterizing the artery and crossing the lesion, including all imaging guidance and radiological

supervision and interpretation necessary to perform the stent placement and angioplasty when performed, within the same artery, unilateral; straightforward lesion, initial vessel) and 37260 (Revascularization, endovascular, open or percutaneous, iliac vascular territory, with transluminal stent placement, including transluminal angioplasty when performed, including all maneuvers necessary for accessing and selectively catheterizing the artery and crossing the lesion, including all imaging guidance and radiological supervision and interpretation necessary to perform the stent placement and angioplasty when performed, within the same artery, unilateral; complex lesion, initial vessel) (placeholder codes 37X05 and 37X07);

- Claims data from CPT code 37224 (Revascularization, endovascular, open or percutaneous, femoral, popliteal artery(s), unilateral; with transluminal angioplasty) for determining the device offset percentage for CPT codes 37263 (Revascularization, endovascular, open or percutaneous, femoral and popliteal vascular territory, with transluminal angioplasty, including all maneuvers necessary for accessing and selectively catheterizing the artery and crossing the lesion, including all imaging guidance and radiological supervision and interpretation necessary to perform the angioplasty within the same artery, unilateral; straightforward lesion, initial vessel) and 37265 (Revascularization, endovascular, open or percutaneous, femoral and popliteal vascular territory, with transluminal angioplasty, including all maneuvers necessary for accessing and selectively catheterizing the artery and crossing the lesion, including all imaging guidance and radiological supervision and interpretation necessary to perform the angioplasty within the same artery, unilateral; complex lesion, initial vessel) (placeholder codes 37X10 and 37X12);
- Claims data from CPT code 37225 (Revascularization, endovascular, open or percutaneous, femoral, popliteal artery(s), unilateral; with atherectomy, includes angioplasty within the same vessel, when performed) for determining the device offset percentage for CPT codes 37271 (Revascularization, endovascular, open or percutaneous, femoral and popliteal vascular territory, with transluminal atherectomy, including transluminal angioplasty when performed, including all maneuvers necessary for accessing and selectively catheterizing the artery and crossing the lesion, including all imaging guidance and radiological supervision and interpretation necessary to perform the atherectomy and angioplasty when performed, within the same artery, unilateral; straightforward lesion, initial vessel) and 37273 (Revascularization, endovascular, open or percutaneous, femoral and popliteal vascular territory, with transluminal atherectomy, including transluminal angioplasty when performed, including all maneuvers necessary for accessing and selectively catheterizing the artery and crossing the lesion, including all imaging guidance and radiological supervision and interpretation necessary to perform the atherectomy and angioplasty when performed, within the same artery, unilateral; complex lesion, initial vessel) (placeholder codes 37X18 and 37X20);
- Claims data from CPT code 37226 (Revascularization, endovascular, open or percutaneous, femoral, popliteal artery(s), unilateral; with transluminal stent placement(s), includes angioplasty within the same vessel, when performed) for determining the device offset percentage for CPT codes 37267 (Revascularization, endovascular, open or percutaneous, femoral and popliteal vascular territory, with transluminal stent placement, including transluminal angioplasty when performed, including all maneuvers necessary for accessing and selectively catheterizing the artery and crossing the lesion, including all imaging guidance and radiological supervision and interpretation necessary to perform the stent placement and angioplasty when performed, within the same artery, unilateral; straightforward lesion, initial vessel) and 37269 (Revascularization, endovascular, open or percutaneous, femoral and popliteal vascular territory, with transluminal stent placement, including transluminal angioplasty when performed, including all maneuvers necessary for accessing and selectively catheterizing the artery and crossing the lesion, including all imaging guidance and radiological supervision and interpretation necessary to perform the stent placement and angioplasty when performed, within the same artery, unilateral; complex lesion, initial vessel) (placeholder codes 37X14 and 37X16);
- Claims data from CPT code 37227 (Revascularization, endovascular, open or percutaneous, femoral, popliteal artery(s), unilateral; with transluminal stent placement(s) and atherectomy, includes angioplasty within the same vessel, when performed) for determining the device offset percentage for CPT codes 37275 (Revascularization, endovascular, open or percutaneous, femoral and popliteal vascular territory, with transluminal stent placement, with transluminal atherectomy, including transluminal angioplasty when performed, including all maneuvers necessary for accessing and selectively catheterizing the artery and crossing the lesion, including all imaging guidance and radiological supervision and interpretation necessary to perform the stent placement, atherectomy, and angioplasty when performed, within the same artery, unilateral; straightforward lesion, initial vessel) and 37277 (Revascularization, endovascular, open or percutaneous, femoral and popliteal vascular territory, with transluminal stent placement, with transluminal atherectomy, including transluminal angioplasty when performed, including all maneuvers necessary for accessing and selectively catheterizing the artery and crossing the lesion, including all imaging guidance and radiological supervision and interpretation necessary to perform the stent placement, atherectomy, and angioplasty when performed, within the same artery, unilateral; complex lesion, initial vessel) (placeholder codes 37X22 and 37X24);
- Claims data from CPT code 37228 (Revascularization, endovascular, open or percutaneous, tibial, peroneal artery, unilateral, initial vessel; with transluminal angioplasty) for determining the device offset percentage for CPT codes 37280 (Revascularization, endovascular, open or percutaneous, tibial and peroneal vascular territory, with transluminal angioplasty, including all maneuvers necessary for accessing and selectively catheterizing the artery and crossing the lesion, including all imaging guidance and radiological supervision and interpretation necessary to perform the angioplasty within the same artery, unilateral; straightforward lesion, initial vessel), 37282 (Revascularization, endovascular, open or percutaneous, tibial and peroneal vascular territory, with transluminal angioplasty, including all maneuvers necessary for accessing and selectively catheterizing the artery and crossing the lesion, including all imaging guidance and radiological supervision and interpretation necessary to perform the angioplasty within the same artery, unilateral; complex lesion, initial vessel), 37296 (Revascularization, endovascular, open or percutaneous, inframalleolar vascular territory, with transluminal angioplasty, including all maneuvers necessary for accessing and selectively catheterizing the artery and

crossing the lesion, including all imaging guidance and radiological supervision and interpretation necessary to perform the angioplasty within the same artery, unilateral; straightforward lesion, initial vessel), 37298 (Revascularization, endovascular, open or percutaneous, inframalleolar vascular territory, with transluminal angioplasty, including all maneuvers necessary for accessing and selectively catheterizing the artery and crossing the lesion, including all imaging guidance and radiological supervision and interpretation necessary to perform the angioplasty within the same artery, unilateral; complex lesion, initial vessel) (placeholder codes 37X27, 37X29, 37X43, and 37X45);

- Claims data from CPT code 37229 (Revascularization, endovascular, open or percutaneous, tibial, peroneal artery, unilateral, initial vessel; with atherectomy, includes angioplasty within the same vessel, when performed) for determining the device offset percentage for CPT codes 37288 (Revascularization, endovascular, open or percutaneous, tibial and peroneal vascular territory, with transluminal atherectomy, including transluminal angioplasty when performed, including all maneuvers necessary for accessing and selectively catheterizing the artery and crossing the lesion, including all imaging guidance and radiological supervision and interpretation necessary to perform the atherectomy and angioplasty when performed, within the same artery, unilateral; straightforward lesion, initial vessel) and 37290 (Revascularization, endovascular, open or percutaneous, tibial and peroneal vascular territory, with transluminal atherectomy, including transluminal angioplasty when performed, including all maneuvers necessary for accessing and selectively catheterizing the artery and crossing the lesion, including all imaging guidance and radiological supervision and interpretation necessary to perform the atherectomy and angioplasty when performed, within the same artery, unilateral; complex lesion, initial vessel) (placeholder codes 37X35 and 37X37);
- Claims data from CPT code 37230 (Revascularization, endovascular, open or percutaneous, tibial, peroneal artery, unilateral, initial vessel; with transluminal stent placement(s), includes angioplasty within the same vessel, when performed) for determining the device offset percentage for CPT codes 37284 (Revascularization, endovascular, open or percutaneous, tibial and peroneal vascular territory, with transluminal stent placement, including transluminal angioplasty when performed, including all maneuvers necessary for accessing and selectively catheterizing the artery and crossing the lesion, including all imaging guidance and radiological supervision and interpretation necessary to perform the stent placement and angioplasty when performed, within the same artery, unilateral; straightforward lesion, initial vessel) and 37286 (Revascularization, endovascular, open or percutaneous, tibial and peroneal vascular territory, with transluminal stent placement, including transluminal angioplasty when performed, including all maneuvers necessary for accessing and selectively catheterizing the artery and crossing the lesion, including all imaging guidance and radiological supervision and interpretation necessary to perform the stent placement and angioplasty when performed, within the same artery, unilateral; complex lesion, initial vessel) (placeholder codes 37X31 and 37X33);
- Claims data from CPT code 37231 (Revascularization, endovascular, open or percutaneous, tibial, peroneal artery, unilateral, initial vessel; with transluminal stent placement(s) and atherectomy, includes angioplasty within the same vessel, when performed) for determining the device offset percentage for CPT codes 37292 (Revascularization, endovascular, open or percutaneous, tibial and peroneal vascular territory, with transluminal stent placement, with transluminal atherectomy, including transluminal angioplasty when performed, including all maneuvers necessary for accessing and selectively catheterizing the artery and crossing the lesion, including all imaging guidance and radiological supervision and interpretation necessary to perform the stent placement, atherectomy, and angioplasty when performed, within the same artery, unilateral; straightforward lesion, initial vessel) and 37294 (Revascularization, endovascular, open or percutaneous, tibial and peroneal vascular territory, with transluminal stent placement, with transluminal atherectomy, including transluminal angioplasty when performed, including all maneuvers necessary for accessing and selectively catheterizing the artery and crossing the lesion, including all imaging guidance and radiological supervision and interpretation necessary to perform the stent placement, atherectomy, and angioplasty when performed, within the same artery, unilateral; complex lesion, initial vessel) (placeholder codes 37X39 and 37X41);

After consideration of the public comments we received, we are finalizing our proposed continued use of HCPCS code-level device-intensive determination and three criteria to designate device-intensive procedures, in accordance with existing policies as discussed in the CY 2026 OPPS/ASC proposed rule section IV.B.1.a (90 FR 33607). We are also finalizing our proposed continuation of our device-intensive procedure policy, proposed use of CY 2024 claims information for determining device offset percentages and assigning device-intensive status, and our proposed default device offset policy for determining device offset percentages in the absence of claims data for device-intensive procedures, in accordance with existing policies as discussed in the CY 2026 OPPS/ASC proposed rule section IV.B.1.b (90 FR 33607).

Comments and our responses related to device-intensive procedure policy and the procedures we proposed for device-intensive status under the ASC payment system for CY 2026 can be found in section XIII.C.4. of this final rule with comment period. Our responses and final determinations related to device-intensive status for certain procedures under the ASC payment system are also applied to our final determinations of device-intensive status under the OPPS. The full listing of the final CY 2026 device-intensive procedures can be found in Addendum P to this final rule with comment period (which is available via the internet on the CMS website). Further, our claims accounting narrative contains a description of our device offset percentage calculation. Our claims accounting narrative for this final rule with comment period can be found under supporting documentation for the CY 2026 OPPS/ASC final rule with comment period on our website at *https://www.cms.gov/medicare/payment/prospective-payment-systems/hospital-outpatient.*

3. Device Edit Policy

In the CY 2015 OPPS/ASC final rule with comment period (79 FR 66795), we finalized a policy and implemented claims processing edits that require any of the device codes used in the previous device-to-procedure edits to be present on the claim whenever a procedure code assigned to any of the APCs listed in Table 5 of the CY 2015 OPPS/ASC final rule with comment period (the CY 2015 device-dependent APCs) was reported on the claim. In addition, in the CY 2016 OPPS/ASC final rule with

comment period (80 FR 70422), we modified our previously existing policy and applied the device coding requirements exclusively to procedures that require the implantation of a device assigned to a device-intensive APC. In the CY 2016 OPPS/ASC final rule with comment period, we also finalized our policy that the claims processing edits are such that any device code, when reported on a claim with a procedure assigned to a device-intensive APC (listed in Table 42 of the CY 2016 OPPS/ASC final rule with comment period (80 FR 70422)), will satisfy the edit.

In the CY 2017 OPPS/ASC final rule with comment period (81 FR 79658 through 79659), we changed our policy for CY 2017 and subsequent years to apply the CY 2016 device coding requirements to the newly defined device-intensive procedures. For CY 2017 and subsequent years, we also specified that any device code, when reported on a claim with a device-intensive procedure, will satisfy the edit. In addition, we created HCPCS code C1889 to recognize devices furnished during a device-intensive procedure that are not described by a specific Level II HCPCS Category C-code. Reporting HCPCS code C1889 with a device-intensive procedure will satisfy the edit requiring a device code to be reported on a claim with a device-intensive procedure. In the CY 2019 OPPS/ASC final rule with comment period, we revised the description of HCPCS code C1889 to remove the specific applicability to device-intensive procedures (83 FR 58950). For CY 2019 and subsequent years, the description of HCPCS code C1889 is ''Implantable/insertable device, not otherwise classified.''

In the CY 2024 OPPS/ASC final rule with comment period (88 FR 81758 through 81759), we finalized our proposal to establish a procedure-to-device edit for the procedures assigned to APC 5496 (Level 6 Intraocular Procedures) and require hospitals to report the correct device HCPCS codes when reporting any of the four procedures—CPT codes 0308T and 0616T, 0617T, and 0618T. (We note that CPT codes 0617T and 0618T were deleted effective January 1, 2025 and CPT code 0616T was deleted effective January 1, 2025 and replaced with new CPT code 66683.) We have noted that interested parties have previously recommended in past rulemaking that we reestablish all our previous procedure-to-device edits, but we do not expect to extend this policy beyond the procedures assigned to APC 5496 (Level 6 Intraocular Procedures). This APC represents a unique situation—the APC (which was the Level 5 Intraocular APC in previous years) had been a Low Volume APC (fewer than 100 claims in a claims year) since we established our Low Volume APC policy, the procedures associated with this APC have significant procedure costs often greater than $15,000, and the procedures associated with this APC require the implantation of a high-cost intraocular device. In the CY 2025 OPPS/ASC final rule, we finalized to continue this policy for APC 5496 (Level 6 Intraocular Procedures) for CY 2025 and subsequent years.

In the CY 2025 OPPS/ASC final rule with comment period (89 FR 92419 through 92422), we finalized a modification to our device edits policy. While historically our device edits policy has only applied to procedures that are device-intensive based on the most recent claims data available, commenters had raised concerns about hospitals underreporting device costs in years when certain device-intensive procedures had lost device-intensive status because the device portion of a procedure can fluctuate above and below our device-intensive threshold of 30 percent. Commenters indicated to us that the presence of the device edit requirement can have a significant impact on the device portion and geometric mean cost of a procedure, particularly for newer technologies. Therefore, for CY 2025 and subsequent CYs, we finalized a policy to apply our device edits policy permanently once a procedure is designated as a device-intensive procedure in a given year. Additionally, we finalized a policy to reinstate our device edits policy for procedures that have been device-intensive since we began assigning device-intensive status at the HCPCS code level on January 1, 2017. We believed that by applying our device edit policy to procedures that were device-intensive on or after January 1, 2017, we might continue to receive device cost information for relatively new procedures with limited claims data, which may have been impacted by our policy to require that only existing device-intensive procedures be subject to our device edits policy. For CY 2026, under our modified device edits policy, our device edits requirement will apply to procedures that are designated as device-intensive in CY 2026 and will apply in subsequent years.

We did not propose any changes to our device edit policy for CY 2026 in the CY 2026 OPPS/ASC proposed rule. We received public comments. The following is a summary of the comments we received and our responses.

Comment: Some commenters supported CMS's current device edits policy.

Response: We appreciate commenters support of our device edits policy.

Comment: One commenter recommended we reinstate procedure-to-device edits, particularly for joint replacement procedures.

Response: We believe hospitals have adequate experience in coding and billing for joint replacement procedures, which are subject to our device edits policy, and do not believe it is necessary to reinstate specific procedure-to-device edits for joint replacement procedures. Therefore, we are not accepting the commenter's recommendation.

Comment: Commenters recommended that CMS establish specific new device category HCPCS C-codes to improve capturing device costs for certain procedures under the OPPS/ASC ratesetting methodologies. Specifically, commenters requested we establish a C-code for a bone-anchored annular implant, C-codes for devices used with procedures we are finalizing to remove from the inpatient-only list for CY 2026, and C-codes to describe the drug-coated balloon catheter and guidewire used for urethral stricture or prostatic hyperplasia.

Response: While we may create new device category C-codes for device categories approved under transitional pass-through status to be paid at charges reduced to cost, we do not believe it is appropriate or necessary to create additional device category C-codes outside of the transitional pass-through approval process. We believe hospitals have sufficient experience in coding and reporting significant device costs correctly on hospital claims using the existing device category HCPCS C-codes as well as uncoded revenue codes

After consideration of public comments, we are finalizing our proposal, without modification, to continue our device edits policy for CY 2026.

4. Adjustment to OPPS Payment for No Cost/Full Credit and Partial Credit Devices

a. Background

To ensure equitable OPPS payment when a hospital receives a device without cost or with full credit, in CY 2007, we implemented a policy to reduce the payment for specified device-dependent APCs by the estimated portion of the APC payment attributable to device costs (that is, the device offset) when the hospital receives a specified device at no cost or with full credit (71 FR 68071 through 68077).

Hospitals were instructed to report no cost/full credit device cases on the claim using the ''FB'' modifier on the line with the procedure code in which the no cost/full credit device is used. In cases in which the device is furnished without cost or with full credit, hospitals were instructed to report a token device charge of less than $1.01. In cases in which the device being inserted is an upgrade (either of the same type of device or to a different type of device) with a full credit for the device being replaced, hospitals were instructed to report as the device charge the difference between the hospital's usual charge for the device being implanted and the hospital's usual charge for the device for which it received full credit. In CY 2008, we expanded this payment adjustment policy to include cases in which hospitals receive partial credit of 50 percent or more of the cost of a specified device. Hospitals were instructed to append the ''FC'' modifier to the procedure code that reports the service provided to furnish the device when they receive a partial credit of 50 percent or more of the cost of the new device. We refer readers to the CY 2008 OPPS/ASC final rule with comment period for more background information on the ''FB'' and ''FC'' modifiers payment adjustment policies (72 FR 66743 through 66749).

In the CY 2014 OPPS/ASC final rule with comment period (78 FR 75005 through 75007), beginning in CY 2014, we modified our policy of reducing OPPS payment for specified APCs when a hospital furnishes a specified device without cost or with a full or partial credit. For CY 2013 and prior years, our policy had been to reduce OPPS payment by 100 percent of the device offset amount when a hospital furnishes a specified device without cost or with a full credit and by 50 percent of the device offset amount when the hospital receives partial credit in the amount of 50 percent or more of the cost for the specified device. For CY 2014, we reduced OPPS payment, for the applicable APCs, by the full or partial credit a hospital receives for a replaced device. Specifically, under this modified policy, hospitals are required to report on the claim the amount of the credit in the amount portion for value code ''FD'' (Credit Received from the Manufacturer for a Replaced Device) when the hospital receives a credit for a replaced device that is 50 percent or greater than the cost of the device. For CY 2014, we also limited the OPPS payment deduction for the applicable APCs to the total amount of the device offset when the ''FD'' value code appears on a claim. For CY 2015, we continued our policy of reducing OPPS payment for specified APCs when a hospital furnishes a specified device without cost or with a full or partial credit and to use the three criteria established in the CY 2007 OPPS/ASC final rule with comment period (71 FR 68072 through 68077) for determining the APCs to which our CY 2015 policy will apply (79 FR 66872 through 66873). In the CY 2016 OPPS/ASC final rule with comment period (80 FR 70424), we finalized our policy to no longer specify a list of devices to which the OPPS payment adjustment for no cost/full credit and partial credit devices would apply and instead apply this APC payment adjustment to all replaced devices furnished in conjunction with a procedure assigned to a device-intensive APC when the hospital receives a credit for a replaced specified device that is 50 percent or greater than the cost of the device.

b. Policy for No Cost/Full Credit and Partial Credit Devices

In the CY 2017 OPPS/ASC final rule with comment period (81 FR 79659 through 79660), for CY 2017 and subsequent years, we finalized a policy to reduce OPPS payment for device-intensive procedures, by the full or partial credit a provider receives for a replaced device, when a hospital furnishes a specified device without cost or with a full or partial credit. Under our current policy, Under our current policy, hospitals continue to be required to report on the claim the amount of the credit in the amount portion for value code ''FD'' when the hospital receives a credit for a replaced device that is 50 percent or greater than the cost of the device.

In the CY 2014 OPPS/ASC final rule with comment period (78 FR 75005 through 75007), we adopted a policy of reducing OPPS payment for specified APCs when a hospital furnishes a specified device without cost or with a full or partial credit by the lesser of the device offset amount for the APC or the amount of the credit. We adopted this change in policy in the preamble of the CY 2014 OPPS/ASC final rule with comment period and discussed it in subregulatory guidance, including chapter 4, section 61.3.6 of the Medicare Claims Processing Manual. Further, in the CY 2021 OPPS/ASC final rule with comment period (85 FR 86017 through 86018, 86302), we made conforming changes to our regulations at § 419.45(b)(1) and (2) that codified this policy.

We did not propose any changes related to our policies regarding payment for no cost/full credit and partial credit devices for CY 2026 in the CY 2026 OPPS/ASC proposed rule, and we did not receive public comments. We are maintaining our current policy for CY 2026.

V. OPPS Payment for Drugs, Biologicals, and Radiopharmaceuticals

A. OPPS Transitional Pass-Through Payment for Additional Costs of Drugs, Biologicals, and Radiopharmaceuticals

1. Background

Section 1833(t)(6) of the Act (42 U.S.C. 1395*l*(t)(6)) provides for temporary additional payments or ''transitional pass-through payments'' for certain drugs and biologicals. A ''biological'' as used in this final rule with comment period, and as codified at 42 CFR 414.802 and 414.902 includes a ''product licensed under section 351 of the PHS [Public Health Service] Act''. As enacted by the Medicare, Medicaid, and SCHIP Balanced Budget Refinement Act of 1999 (BBRA) (Pub. L. 106–113), this pass-through payment provision requires the Secretary to make additional payments to hospitals for: current orphan drugs for rare diseases and conditions, as designated under section 526 of the Federal Food, Drug, and Cosmetic Act; current drugs and biologicals and brachytherapy sources used in cancer therapy; and current radiopharmaceutical drugs and biologicals. ''Current'' refers to those types of drugs or biologicals mentioned above that are hospital outpatient services under Medicare Part B for which transitional pass-through payment was made on the first date the hospital OPPS was implemented.

Transitional pass-through payments also are provided for certain ''new'' drugs and biologicals that were not being paid for as a Hospital Outpatient Department (HOPD) service as of December 31, 1996, and whose cost is ''not insignificant'' in relation to the OPPS payments for the procedures or services associated with the new drug or biological. For pass-through payment purposes, radiopharmaceuticals are included as ''drugs.'' As required by statute, transitional pass-through payments for a drug or biological described in section 1833(t)(6)(C)(i)(II) of the Act can be made for a period of at least 2 years, but not more than 3 years, after the payment was first made for the drug as a hospital outpatient service under Medicare Part B. Final CY 2026 pass-through drugs and biologicals and their designated APCs are assigned status indicator ''G'' in Addenda A and

B to this final rule with comment period (which are available on the CMS website).[65]

Section 1833(t)(6)(D)(i) of the Act specifies that the pass-through payment amount, in the case of a drug or biological, is the amount by which the amount determined under section 1842(o) of the Act (42 U.S.C. 1395u(o)) for the drug or biological exceeds the portion of the otherwise applicable Medicare Outpatient Department (OPD) fee schedule that the Secretary determines is associated with the drug or biological. The methodology for determining the pass-through payment amount is set forth in regulations at 42 CFR 419.64. In accordance with section V.B.9. of the CY 2026 OPPS/ASC proposed rule, skin substitutes with an approved Biologics License Application (BLA) would be considered under transitional drug pass-through payment status. As such, we proposed to amend our regulation at § 419.64 to remove paragraph (a)(4)(iv), which currently reads ''A biological that is not a skin substitute or similar product that aids wound healing.'' The regulations at 42 CFR 419.64(d) specify that the pass-through payment equals the amount determined under section 1842(o) of the Act minus the portion of the Ambulatory Payment Classification (APC) payment that CMS determines is associated with the drug or biological.

Section 1847A of the Act (42 U.S.C. 1395w–3a) establishes the average sales price (ASP) methodology, which is used for payment for drugs and biologicals described in section 1842(o)(1)(C) of the Act furnished on or after January 1, 2005. The ASP methodology, as applied under the OPPS, uses several sources of data as a basis for payment, including the ASP, the wholesale acquisition cost (WAC), and the average wholesale price (AWP). In this final rule with comment period, the term ''ASP methodology'' and ''ASP-based'' are inclusive of all data sources and methodologies described therein. Additional information on the ASP methodology can be found on our website at *https://www.cms.gov/medicare/payment/fee-for-service-providers/part-b-drugs/average-drug-sales-price.*

The pass-through application[66] and review process for drugs and biologicals is described on our website at *https://www.cms.gov/medicare/payment/prospective-payment-systems/hospital-outpatient/pass-through-payment-status-new-technology-ambulatory-payment-classification-apc.*

We received a comment on our proposal.

Comment: We received a comment requesting that CMS codify in regulation that biologicals classified and approved by the FDA under section 351 will be evaluated for coding and pass-through payment under CMS' drugs and biologics pathways and applications.

Response: While under this policy, skin substitute products approved as a drug or biological product (via the BLA pathway) under section 351 of the PHS Act may be eligible for drug pass-through, we note that, the policy does not apply to the evaluation for coding or transitional pass-through payment for other products that are not skin substitute products, including other drugs and biological products approved under section 351 of the PHS Act.

In accordance with section V.B.9. of the CY 2026 OPPS/ASC final rule with comment period, skin substitutes with an approved BLA will be considered under the transitional drug pass-through payment process. As such, we are finalizing our proposal to amend our regulation at § 419.64 to remove paragraph (a)(4)(iv) ''A biological that is not a skin substitute or similar product that aids wound healing.'' For more information on our payment policy for skin substitute products, we refer readers to section V.B.9 of this final rule with comment period.

2. Transitional Pass-Through Payment Period for Pass-Through Drugs, Biologicals, and Radiopharmaceuticals and Quarterly Expiration of Pass-Through Status

As required by statute, transitional pass-through payments for a drug or biological described in section 1833(t)(6)(C)(i)(II) of the Act can be made for a period of at least 2 years, but not more than 3 years, after the payment was first made for the drug or biological as a hospital outpatient service under Medicare Part B. Drugs and biologicals pass-through applications are accepted and approved on a quarterly basis in which pass-through payments for approved applications could begin on the next available OPPS quarterly update. Furthermore, our current policy, which was finalized in CY 2017 OPPS/ASC final rule with comment period (81 FR 79662), is to allow for quarterly expiration of pass-through payment status for drugs, biologicals, and radiopharmaceuticals to afford a pass-through payment period that is as close to a full 3 years as possible to allow, on a prospective basis, for the maximum pass-through payment period without exceeding the statutory limit of 3 years. Notice of drugs for which pass-through payment status is ending during the calendar year is included in the quarterly OPPS Change Request transmittals.

3. Drugs and Biologicals With Expiring Pass-Through Payment Status in CY 2025

There are 28 drugs and biologicals for which pass-through payment status expires by December 31, 2025, as listed in Table 104. These drugs and biologicals will have received OPPS pass-through payment for 3 years during the period of April 1, 2022 through December 31, 2025. In accordance with the policy finalized in the CY 2017 OPPS/ASC final rule with comment period (81 FR 79662) and described earlier, pass-through payment status for drugs and biologicals approved in CY 2017 and subsequent years will expire on a quarterly basis, with a pass-through payment period as close to 3 years as possible.

With the exception of those groups of drugs and biologicals that are always packaged when they do not have pass-through payment status (specifically, anesthesia drugs; drugs, biologicals, and radiopharmaceuticals[67] that function as supplies when used in a diagnostic test or procedure; and drugs and biologicals that function as supplies when used in a surgical procedure), our standard methodology for providing payment for drugs and biologicals with expiring pass-through payment status in an upcoming calendar year is to determine the product's estimated per day cost and compare it with the OPPS drug packaging threshold for that calendar year, which is proposed to be $140 for CY 2026 for all drugs, biologicals, and therapeutic radiopharmaceuticals (for high-cost diagnostic radiopharmaceuticals, we would provide separate payment when their per day cost greater than the finalized threshold of $655). These policies are discussed further in section V.B.1. of this final rule with comment period. If the estimated per day cost for the drug or biological is less than or equal to the applicable OPPS drug packaging threshold, we package payment for the

[65] *https://www.cms.gov/medicare/payment/prospective-payment-systems/hospital-outpatient.*

[66] To apply for OPPS transitional Pass-Through Payment Status and New Technology Ambulatory Payment Classification (APC), applicants complete an application that is subject to the Paperwork Reduction Act of 1995 (PRA) (44 U.S.C. 3501 *et seq.*). This information collection (CMS–10008) is currently approved under OMB control number of 0938–0802 and has an expiration date of July 31, 2027.

[67] In the CY 2025 OPPS/ASC final rule with comment period (89 FR 93948), we finalized the diagnostic radiopharmaceuticals policy to separately pay those products when the per-day costs are greater than a threshold. Please refer to section II.A.3.c. of the CY 2025 OPPS/ASC final rule for more information regarding this policy.

drug or biological into the payment for the associated procedure in the upcoming calendar year. If the estimated per day cost of the drug or biological is greater than the OPPS drug packaging threshold, we provide separate payment at the applicable ASP methodology-based payment amount (which is generally ASP plus 6 percent), as discussed further in section V.B.2. of this final rule with comment period.

BILLING CODE 4120–01–C

4. Drugs, Biologicals, and Radiopharmaceuticals With Pass-Through Payment Status Expiring in CY 2026

We proposed to end pass-through payment status in CY 2026 for 52 drugs and biologicals. These drugs and biologicals, which were initially approved for pass-through payment status between April 1, 2023 and January 1, 2024, are listed in Table 105. The APCs and Healthcare Common Procedure Coding System (HCPCS) codes for these drugs and biologicals, which have pass-through payment status that will end by December 31, 2026, are assigned status indicator ''G'' (Pass-Through Drugs and Biologicals) in Addenda A and B to this final rule with comment period (which are available on the CMS website).[68] The APCs and HCPCS codes for these drugs and biologicals are assigned status indicator ''G'' only for the duration of their pass-through status.

Section 1833(t)(6)(D)(i) of the Act sets the amount of pass-through payment for pass-through drugs and biologicals (the pass-through payment amount) as the difference between the amount authorized under section 1842(o) of the Act and the portion of the otherwise applicable OPD fee schedule that the Secretary determines is associated with the drug or biological. For CY 2026, we are continuing our policy to pay for pass-through drugs and biologicals using the ASP methodology, meaning a payment rate based on ASP, WAC, or AWP, as applicable. This payment rate is generally ASP plus 6 percent, equivalent to the payment rate these drugs and biologicals would receive in the physician's office setting in CY 2026. We note that, under the OPD fee schedule, separately payable drugs assigned to an APC are generally payable at ASP plus 6 percent. Therefore, a $0 pass-through payment amount will continue to be paid for pass-through drugs and biologicals under the CY 2026 OPPS because the difference between the amount authorized under section 1842(o) of the Act, which is generally ASP plus 6 percent, and the portion of the otherwise applicable OPD fee schedule that the Secretary determines is appropriate, which is generally ASP plus 6 percent, is $0.

In the case of policy-packaged drugs (which include the following: anesthesia drugs; drugs, biologicals, and radiopharmaceuticals[69] below the applicable cost threshold that function as supplies when used in a diagnostic test or procedure; and drugs and biologicals that function as supplies when used in a surgical procedure), their pass-through payment amount will continue to be equal to a payment rate calculated using the ASP methodology, meaning a payment rate based on ASP, WAC, or AWP. This payment rate will generally continue to be ASP plus 6 percent for CY 2026, minus a payment offset for the portion of the otherwise applicable OPPS payment that the Secretary determines is associated with the drug or biological. We note that if not for the pass-through payment status of these policy-packaged products, payment for these products would be packaged into the associated procedure and therefore, there are associated OPPS payment amounts for them.

We note that in the CY 2025 OPPS/ASC final rule with comment period (89 FR 93948 through 93963), we modified the regulation text at 42 CFR 419.2(b)(15) to specify that only those

[68] *https://www.cms.gov/medicare/payment/prospective-payment-systems/hospital-outpatient.*

[69] In the CY 2025 OPPS/ASC final rule with comment period (89 FR 93948), we finalized the diagnostic radiopharmaceuticals policy to separately pay those products when the per-day costs are greater than a threshold. Please refer to section II.A.3.c. of the CY 2025 OPPS/ASC final rule for more information regarding this policy.

diagnostic radiopharmaceuticals with per-day costs at or below the per-day diagnostic radiopharmaceutical packaging threshold for the applicable year are policy-packaged. Meaning, for those diagnostic radiopharmaceuticals that are below the diagnostic radiopharmaceutical packaging threshold, for purposes of pass-through co-insurance calculations, they are treated like policy packaged drugs. For those diagnostic radiopharmaceuticals above the diagnostic radiopharmaceutical packaging threshold, they are not packaged, and are not considered policy packaged; therefore, for purposes of pass-through co-insurance calculations, they are treated like separately payable drugs assigned to an APC. Accordingly, a $0 pass-through payment amount is assigned consistent with our policy described previously in this section for separately payable drugs assigned to an APC.

We will continue our policy to update pass-through payment rates on a quarterly basis on the CMS website during CY 2026 if later quarter ASP submissions (or more recent WAC or AWP information, as applicable) indicate that adjustments to the payment rates for these pass- through payment drugs or biologicals are necessary. For a full description of this policy, we refer readers to the CY 2006 OPPS/ASC final rule with comment period (70 FR 68632 through 68635).

For CY 2026, consistent with our CY 2025 policy for diagnostic and therapeutic radiopharmaceuticals, we will continue to provide payment for both diagnostic and therapeutic radiopharmaceuticals that are granted pass-through payment status based on the ASP methodology. As stated earlier, for purposes of pass-through payment, we consider radiopharmaceuticals to be drugs under the OPPS. Therefore, if a diagnostic or therapeutic radiopharmaceutical receives pass-through payment status during CY 2026, we will continue to follow the standard ASP methodology to determine the pass-through payment rate that drugs receive under section 1842(o) of the Act, which is generally ASP plus 6 percent. If ASP data are not available for a radiopharmaceutical, we will continue to provide pass-through payment at WAC plus 3 percent (consistent with our policy in section V.B.2.a. of this final rule with comment period), the equivalent payment provided for pass-through drugs and biologicals without ASP information. Additional detail on the WAC plus 3 percent payment policy can be found in section V.B.2.a. of this final rule with comment period. If WAC information also is not available, we will continue to provide payment for the pass-through radiopharmaceutical at 95 percent of its most recent AWP.

We refer readers to Table 105 for the list of drugs and biologicals with pass-through payment status expiring during CY 2026.

BILLING CODE 4120–01–C

We did not receive public comments on our proposal, and therefore, we are finalizing our proposal to end pass-through payment status in CY 2026 for 52 drugs and biologicals. However, we did receive comment regarding our clarification included in the CY 2026 OPPS/ASC proposed rule regarding the co-insurance calculations for diagnostic radiopharmaceuticals (90 FR 33614).

In the CY 2025 OPPS/ASC final rule with comment period (89 FR 93948 through 93963), we modified the regulation text at 42 CFR 419.2(b)(15) to specify that only those diagnostic radiopharmaceuticals with per-day costs at or below the per-day diagnostic radiopharmaceutical packaging threshold for the applicable year are policy-packaged. Meaning, for those diagnostic radiopharmaceuticals that are below the diagnostic radiopharmaceutical packaging threshold, for purposes of pass-through co-insurance calculations, they are treated like policy packaged drugs. For those diagnostic radiopharmaceuticals above the diagnostic radiopharmaceutical packaging threshold, they are not packaged, and are not considered policy packaged; therefore, for purposes of pass-through co-insurance calculations, they are treated like separately payable drugs assigned to an APC. Accordingly, a $0 pass-through payment amount is assigned consistent with our policy described previously in this section for separately payable drugs assigned to an APC.

Comment: A few commenters asked for additional clarification from CMS regarding the calculation of beneficiary copayments for diagnostic radiopharmaceuticals while on drug pass-through. Commenters requested that CMS clarify that diagnostic radiopharmaceuticals that exceed the applicable cost threshold while on transitional pass-through status would have a beneficiary copayment listed. Commenters also asked for clarification regarding the beneficiary co-insurance for specific product HCPCS codes, such as HCPCS Code A9608 (Flotufolastat f18 diag 1 mci) and HCPCS code A9611 (flurpiridaz F 18).

Commenters also requested clarification that, for any diagnostic radiopharmaceutical that is separately paid specifically because it is on transitional drug pass-through status, and whose payment is expected to be below the diagnostic radiopharmaceutical cost threshold, no beneficiary copayment should apply, which the commenter states is consistent with the principle that such costs are packaged.

Commenters contend that when a diagnostic radiopharmaceutical is applying for drug pass-through status, CMS is not making a fair comparison if it uses the diagnostic radiopharmaceutical's ASP, WAC, or AWP to determine if the diagnostic radiopharmaceutical would otherwise be packaged, because if the product had claims data, CMS would use the MUC, which is often lower than ASP, WAC, and AWP, to determine if the product was above or below the packaging threshold. Therefore, in the commenter's view, CMS is incorrectly determining that pass-through applicants would otherwise be above the packaging threshold, and thus that the product would otherwise be separately paid and that the pass-through amount is $0, resulting in applicable co-insurance for the beneficiary.

One commenter believed CMS should calculate the co-insurance for all diagnostic radiopharmaceuticals under

the policy packaged method. Additionally, this commenter stated that it is impossible for interested parties or CMS to know whether a product will exceed the cost threshold under the MUC methodology in future claims data and therefore whether a product will or will not be considered policy packaged.

Response: We thank the commenters for engaging with CMS on this issue. Only those diagnostic radiopharmaceuticals with estimated per-day costs at or below the per-day diagnostic radiopharmaceutical packaging threshold for the applicable year are policy-packaged. Meaning, for these diagnostic radiopharmaceuticals that are estimated to be below the diagnostic radiopharmaceutical packaging threshold, for purposes of pass-through co-insurance calculations, they are treated like policy packaged drugs. These diagnostic radiopharmaceuticals would have an overall $0 co-insurance payment. If a drug is policy packaged, meaning absent pass-through status there would be no separate payment for the drug, the pass-through payment amount is generally equal to a payment rate calculated using the ASP methodology (89 FR 94226). Per statute, 1833(t)(8) of the Act, there is no copayment on the pass-through payment amount. Therefore, policy packaged drugs have a $0 copayment amount, since the entirety of their separate payment amount is due to their passthrough payment status.

For those diagnostic radiopharmaceuticals estimated to be above the diagnostic radiopharmaceutical packaging threshold, their payment is not policy packaged, and they are not considered policy packaged; therefore, for purposes of pass-through co-insurance calculations, they are treated like a separately payable drug assigned to an APC. Accordingly, a $0 pass-through payment amount is assigned consistent with our policy described previously in this section for separately payable drugs assigned to an APC. The pass-through amount is the amount that is not subject to co-insurance. The non-pass-through payment amount is still subject to co-insurance provisions, including 1833(t)(3)(B) of the Act and § 419.41(d). These diagnostic radiopharmaceuticals would have a co-insurance payment.

Estimating the per day costs of radiopharmaceuticals with HCPCS codes, but without hospital claims data, is consistent with our longstanding policy regarding payment for non-pass-through drugs, biologicals, and radiopharmaceuticals with HCPCS codes but without OPPS Hospital Claims Data where CMS estimates the average number of units of each product that would typically be furnished to a patient during one day in the hospital outpatient setting and utilizes the available payment rate for the product, to determine whether their payment will be packaged.

Specifically for HCPCS Codes A9608 (Flotufolastat f18 diag 1 mci) and A9611 (flurpiridaz F 18), these HCPCS codes have co-insurance assigned during CY 2025 as these products were determined to have an estimated per day cost above the diagnostic radiopharmaceutical packaging threshold.

Comment: A commenter asked CMS to confirm that multiple offsets are not applied to the pass-through payment for diagnostic radiopharmaceuticals. This commenter was concerned that CMS may be inappropriately subtracting both the ASP-based payment under the separately payable drug methodology and subtracting the policy-packaged drug amount under the policy-packaged drug methodology.

Response: We can confirm that the payment should not have multiple offsets subtracted, either the policy-packaged offset or the threshold-packaged offset depending on the calculations performed as discussed earlier in this section to determine co-insurance status.

5. Drugs, Biologicals, and Radiopharmaceuticals With Pass-Through Payment Status Continuing Through CY 2026

We proposed to continue pass-through payment status in CY 2026 for 61 drugs and biologicals. These drugs and biologicals, which were approved for pass-through payment status with effective dates beginning between April 1, 2024 and October 1, 2025, are listed in Table 106. The APCs and HCPCS codes for these drugs and biologicals, which have pass-through payment status that would continue after December 31, 2026, are assigned status indicator ''G'' in Addenda A and B to the CY 2026 OPPS/ASC proposed rule (which are available on the CMS website).[70]

Section 1833(t)(6)(D)(i) of the Act sets the amount of pass-through payment for pass-through drugs and biologicals (the pass-through payment amount) as the difference between the amount authorized under section 1842(o) of the Act and the portion of the otherwise applicable OPD fee schedule that the Secretary determines is associated with the drug or biological. For CY 2026, we are continuing our policy to pay for pass-through drugs and biologicals at a payment rate based on the ASP methodology, which may be based on ASP, WAC, or AWP, but is generally ASP plus 6 percent, which is equivalent to the payment rate these drugs and biologicals would receive in the physician's office setting in CY 2026. We will continue with our policy of paying a $0 pass-through payment amount for pass-through drugs and biologicals that are not policy-packaged under the CY 2026 OPPS, because the difference between the amount authorized under section 1842(o) of the Act, which would generally be ASP plus 6 percent, and the portion of the otherwise applicable OPD fee schedule that the Secretary determines is appropriate, which would also generally be ASP plus 6 percent, is $0.

In the case of policy-packaged drugs (which include the following: anesthesia drugs; drugs, biologicals, and radiopharmaceuticals[71] that function as supplies when used in a diagnostic test or procedure; and drugs and biologicals that function as supplies when used in a surgical procedure), their pass-through payment amount would continue to be equal to a payment rate based on the ASP methodology, which may be based on ASP, WAC, or AWP, but would generally be ASP plus 6 percent for CY 2026, minus a payment offset for any predecessor drug products contributing to the pass-through payment. We note if not for the pass-through payment status of these policy-packaged products, payment for these products would be packaged into the associated procedure and therefore, there are associated OPD fee schedule amounts for them.

We are continuing our policy to update pass-through payment rates on a quarterly basis on our website during CY 2026 if later quarter ASP submissions (or more recent WAC or AWP information, as applicable) indicate that adjustments to the payment rates for these pass-through payment drugs or biologicals are necessary. For a full description of this policy, we refer readers to the CY 2006 OPPS/ASC final rule with comment period (70 FR 68632 through 68635).

For CY 2026, consistent with our CY 2025 policy for diagnostic and therapeutic radiopharmaceuticals, we proposed to continue our policy to provide payment for both diagnostic and therapeutic radiopharmaceuticals

[70] *https://www.cms.gov/medicare/payment/prospective-payment-systems/hospital-outpatient.*

[71] In the CY 2025 OPPS/ASC final rule with comment period (89 FR 93948), we finalized a diagnostic radiopharmaceuticals policy to separately pay those products when the per-day costs are greater than a threshold. Please refer to section II.A.3.c. of the CY 2025 OPPS/ASC final rule for more information regarding this policy.

that are granted pass-through payment status based on the ASP methodology. As stated earlier, for purposes of pass-through payment, we consider radiopharmaceuticals to be drugs under the OPPS. Therefore, if a diagnostic or therapeutic radiopharmaceutical receives pass-through payment status during CY 2026, we will continue to follow the standard ASP methodology to determine the pass-through payment rate that drugs receive under section 1842(o) of the Act, which would generally be ASP plus 6 percent. If ASP data are not available for a radiopharmaceutical, we would provide pass-through payment at WAC plus 3 percent (consistent with our policy in section V.B.2.a. of this final rule with comment period), the equivalent payment provided for pass-through drugs and biologicals without ASP information. Additional detail on the WAC plus 3 percent payment policy can be found in section V.B.2.a. of this final rule with comment period. If WAC information also is not available, we would provide payment for the pass-through radiopharmaceutical at 95 percent of its most recent AWP.

The drugs and biologicals that would have pass-through payment status expire after December 31, 2026, are shown in Table 106.

BILLING CODE 4120–01–C

We received public comments on these proposals. The following is a summary of the comments we received and our responses.

Comment: A commenter expressed support for maintaining pass-through status for iDose® TR for all of CY 2026.

Response: We thank the commenter for their comment. We are maintaining drug pass-through status for iDose TR, which may be described by HCPCS Code J7355, for all of CY 2026.

Comment: A commenter expressed support for our inclusion of IMDELLTRA® and PAVBLU® in the List of Drugs with Pass-Through Payment Status Expiring After 2026 (Table 106) and acknowledged that we did not include drugs that were granted pass-through status after April 1, 2025 in Table 106 in the CY 2026 OPPS/ASC proposed rule, due to the timing of preparation of the CY 2026 OPPS/ASC proposed rule. The commenter requested that BKEMV™, which was granted pass-through status effective July 1, 2025, be included in Table 106 in the CY 2026 OPPS/ASC final rule with comment period.

Response: We thank the commenter for their comment. BKEMV™ is included in Table 106 in this final rule final rule with comment period.

After consideration of public comments, we are finalizing as proposed to continue pass-through payment status in CY 2026 for 61 drugs and biologicals.

B. OPPS Payment for Drugs, Biologicals, and Radiopharmaceuticals Without Pass-Through Payment Status

We note that several commenters made comments on the Inflation Reduction Act Medicare Drug Price Negotiation Program, provider status for pharmacists under Medicare Part B, Most Favored Nation-style reference pricing, among other topics that were not discussed in the CY 2026 OPPS/ASC proposed rule. These topics are out of scope for purposes of this notice and comment rulemaking, but we will consider these comments as we consider these issues for future rulemaking.

1. Criteria for Packaging Payment for Drugs, Biologicals, and Radiopharmaceuticals

a. Packaging Threshold

In accordance with section 1833(t)(16)(B) of the Act, the threshold for establishing separate APCs for payment of drugs and biologicals was set to $50 per administration during CYs 2005 and 2006. In CY 2007, we used the four-quarter moving average Producer Price Index (PPI) levels for Pharmaceutical Preparations (Prescription) to trend the $50 threshold forward from the third quarter of CY 2005 (when the Pub. L. 108–173 mandated threshold became effective) to the third quarter of CY 2007. We then rounded the resulting dollar amount to the nearest $5 increment to determine the CY 2007 threshold amount of $55. Using the same methodology as that used in CY 2007 (which is discussed in more detail in the CY 2007 OPPS/ASC final rule with comment period (71 FR 68085 through 68086)), we set the packaging threshold for establishing separate APCs for drugs and biologicals at $140 for CY 2025 (89 FR 94237).

Following the CY 2007 methodology, for the CY 2026 OPPS/ASC proposed rule, we proposed to use the most recently available four quarter moving average PPI levels to trend the $50 threshold forward from the third quarter of CY 2005 to the third quarter of CY 2026 and round the resulting dollar amount ($141.67) to the nearest $5 increment, which yields a figure of $140. In performing this calculation, we used the most recent forecast of the quarterly index levels for the PPI for Pharmaceuticals for Human Use (Prescription) (Bureau of Labor Statistics series code WPUSI07003) from IGI. IGI is a nationally recognized economic and financial forecasting firm with which CMS contracts to forecast various price indexes including the PPI Pharmaceuticals for Human Use (Prescription). Based on these calculations, we proposed a packaging threshold for CY 2026 of $140 for drugs, biologicals, and therapeutic radiopharmaceuticals. We also proposed that if more recent data subsequently become available after the publication of the CY 2026 OPPS/ASC proposed rule, we would use such updated data, if appropriate, to determine the final CY 2026 OPPS drug packaging threshold amount in the CY 2026 OPPS/ASC final rule with comment period.

We finalized in section II.A.3.c. of the CY 2025 OPPS/ASC final rule with comment period (89 FR 94238 through 94241) to pay separately for diagnostic radiopharmaceuticals with a per-day cost above the packaging threshold for CY 2025 of $630. We also finalized that starting in CY 2026 and subsequent years, we would update this threshold by the PPI for Pharmaceuticals for Human Use (Prescription) (Bureau of Labor Statistics series code WPUSI07003) from IHS Global, Inc (IGI). For the diagnostic radiopharmaceutical packaging threshold, we finalized using the same methodology as that used in CY 2007 (which is discussed in more detail in the CY 2007 OPPS/ASC final rule with comment period (71 FR 68085 and 68086)) to calculate the update to the OPPS drug packaging threshold. Specifically, we finalized that, starting for the CY 2026 rulemaking, we would use the most recently available four quarter moving average PPI levels to trend the final current year (CY 2025) threshold forward from the third quarter of the data year (CY 2024) to the third quarter of the current year (CY 2025) and round the resulting dollar amount to the nearest $5 increment. In the CY 2026 OPPS/ASC proposed rule, we proposed a technical refinement to this policy to use the most recently available four-quarter moving average PPI levels to trend the CY 2025 final threshold forward from the third quarter of CY 2025 to the third quarter of the payment year (CY 2026) and round the resulting dollar amount to the nearest $5 increment. We believed using the most recently available four quarter moving average PPI levels more appropriately updates the packaging threshold from CY 2025 for payment in CY 2026. For the CY 2026 OPPS/ASC proposed rule, we used the most recently available four quarter moving average PPI levels to trend the $630 diagnostic radiopharmaceutical packaging threshold forward from the third quarter of CY 2025 to the third quarter of CY 2026 and we rounded the resulting dollar amount ($654.23) to the nearest $5 increment, which yielded a figure of $655. We also proposed that if more recent data subsequently becomes available after the publication of the CY 2026 OPPS/ASC proposed rule, we would use such updated data, if appropriate, to determine the final CY 2026 diagnostic radiopharmaceutical packaging threshold amount in the CY 2026 OPPS/ASC final rule with comment period. For CY 2027 and subsequent updates, we therefore proposed to trend the CY 2025 threshold of $630 forward using the four-quarter moving average PPI levels for Pharmaceuticals for Human Use, Prescription for CY 2025 (third quarter) forward using the PPI for Pharmaceuticals for Human Use, Prescription for the applicable payment year (third quarter).

We received public comments on these proposals. The following is a summary of the comments we received and our responses.

Comment: Some commenters supported the drug packaging threshold. One commenter stated that a static threshold would fail to account for rapid drug inflation. This same commenter urged CMS to implement a transparent and predictable methodology for adjusting the threshold annually to reflect drug price inflation.

Response: We thank the commenters for their support. We believe using the

four-quarter moving average PPI levels for Pharmaceuticals for Human Use, Prescription to adjust the OPPS drug packaging threshold through notice and comment rulemaking is a transparent and predictable methodology that has been in use under the OPPS for many years.

Comment: Several commenters did not support CMS following the proposed methodology to update the OPPS drug packaging threshold. These commenters had concerns that the packaging threshold approach introduces financial and operational concerns, especially when multiple packaged drugs are used during a procedure. Commenters recommended using a different inflation factor, maintaining the current threshold, or rolling back the threshold.

Response: We appreciate these perspectives; however, we believe that the PPI update factor provides aggregate changes in the selling prices of pharmaceuticals, which makes it an appropriate factor with which to update the OPPS drug packaging threshold to ensure that as costs change over time, the threshold continues to identify products appropriate for payment packaging, a fundamental principle of a prospective payment system. For CY 2026, the update to the inflation factor results in the same rounded final OPPS drug packaging threshold for CY 2026 compared to CY 2025.

After consideration of public comments, we are finalizing our proposal to use the most recently available four-quarter moving average PPI levels to trend the $50 threshold forward from the third quarter of CY 2005 to the third quarter of CY 2026 and round the resulting dollar amount to the nearest $5 increment for the OPPS drug packaging threshold. We proposed that if more recent data subsequently become available after the publication of the CY 2026 OPPS/ASC proposed rule, we would use such updated data, if appropriate, to determine the final CY 2026 OPPS drug packaging threshold amount in the CY 2026 OPPS/ASC final rule with comment period. Using the most recent forecast of the quarterly index levels for the PPI for Pharmaceuticals for Human Use (Prescription) (Bureau of Labor Statistics series code WPUSI07003) from IGI, we trended the $50 threshold forward from the third quarter of CY 2005 to the third quarter of CY 2026 and round the resulting dollar amount ($140.13) to the nearest $5 increment, which yields a figure of $140.

We refer readers to section II.A.3.c.(2). of this final rule with comment period for additional details regarding the diagnostic radiopharmaceutical packaging threshold comment and response discussion. We are finalizing our proposal to update the CY 2025 $630 threshold amount by the four-quarter moving average PPI levels for Pharmaceuticals for Human Use, Prescription to trend the $630 threshold forward. Specifically, we are using the most recently available forecast of the four-quarter moving average PPI levels for Pharmaceutical for Human Use, Prescription from the third quarter of 2025 to the third quarter of 2026, and to round the resulting dollar amount to the nearest $5 increment. We also proposed, and are subsequently finalizing, that if more recent data are subsequently available (for example, a more recent estimate of the PPI for Pharmaceuticals for Human Use, Prescription), we would use such data, if appropriate, to determine the CY 2026 diagnostic radiopharmaceutical packaging threshold in the final rule. Based on this methodology, using the most recent data available for this final rule, we trended the $630 threshold forward and rounded the resulting dollar amount ($656.65) to the nearest $5 increment, which yields a final diagnostic radiopharmaceutical packaging threshold figure of $655 per day for CY 2026.

b. Packaging of Payment for HCPCS Codes That Describe Certain Drugs, Certain Biologicals, and Certain Radiopharmaceuticals Under the Cost Thresholds

To determine the proposed CY 2026 packaging status for all nonpass-through drugs, biologicals, diagnostic and therapeutic radiopharmaceuticals that are not policy packaged, we calculated, on a HCPCS code-specific basis, the per day cost of all drugs, biologicals, and therapeutic radiopharmaceuticals that had a HCPCS code in CY 2024 and were paid (via packaged or separate payment) under the OPPS. We used data from CY 2024 claims processed through December 31, 2024, for this calculation. However, we did not perform this calculation for those drugs and biologicals with multiple HCPCS codes that include different dosages, as described in section V.B.1.d. of this final rule with comment period, or for the following policy-packaged items that we proposed to continue to package in CY 2026: anesthesia drugs; drugs, biologicals, and contrast agents and other drugs that function as supplies when used in a diagnostic test or procedure; and drugs and biologicals that function as supplies when used in a surgical procedure. Consistent with our policy described in section V.B.5. of this final rule with comment period, in situations where we have no claims data and must determine if these products exceed the per-day cost threshold, we estimated the average number of units of each product that would typically be furnished to a patient during one day in the hospital outpatient setting and utilized the ASP methodology to determine whether their payment will be packaged as well as their payment status indicators.

To calculate the per day costs for drugs, biologicals, diagnostic radiopharmaceuticals, and therapeutic radiopharmaceuticals to determine their proposed packaging status in CY 2026, we used the methodology that was described in detail in the CY 2006 OPPS proposed rule (70 FR 42723 through 42724) and finalized in the CY 2006 OPPS final rule with comment period (70 FR 68636 through 68638). For each drug and biological HCPCS code, we used an estimated payment rate based on the ASP methodology, which is generally ASP plus 6 percent (which is the payment rate we proposed for separately payable drugs and biologicals) for CY 2026, as discussed in more detail in section V.A.1. and V.B.2. of the CY 2026 OPPS/ASC proposed rule to calculate the CY 2026 proposed rule per day costs. We used the manufacturer-submitted ASP data from the fourth quarter of CY 2024 (data that were used for payment purposes in the physician's office setting, effective April 1, 2025) to determine the CY 2026 OPPS/ASC proposed rule per day cost.

As is our standard methodology, for CY 2026, we proposed to use payment rates based on the ASP data from the fourth quarter of CY 2024 for budget neutrality estimates, packaging determinations, impact analyses, and completion of Addenda A and B to the CY 2026 OPPS/ASC proposed rule (which are available via the internet on the CMS website) because these are the most recent data available for use at the time of development of the CY 2026 OPPS/ASC proposed rule. These data also are the basis for drug payments in the physician's office setting, effective April 1, 2025. Exceptions to our standard methodology include:

- For therapeutic radiopharmaceuticals that do not have pass-through status as of April 1, 2025, and do not have an ASP-based payment rate, we did not use a payment rate based on WAC or AWP for those items, consistent with our policy described in section V.B.3.a. of this final rule with comment period. Instead, we used their arithmetic mean unit cost derived from the CY 2024 hospital claims data to determine their per day cost.

• For diagnostic radiopharmaceuticals that do not have pass-through status as of April 1, 2025, we used their mean unit cost derived from the CY 2024 hospital claims data to determine their per day cost. We did not use an ASP-based, WAC-based, or AWP-based payment rate for those items unless there was no mean unit cost reported for the product, consistent with our finalized policy described in section V.B.3.b of this final rule with comment period.

• For items other than diagnostic or therapeutic radiopharmaceuticals that did not have either an ASP-based payment rate, a payment rate based on WAC, or a payment rate based on AWP, we used the arithmetic mean unit cost of the items derived from the CY 2024 hospital claims data to determine their per day cost.

We proposed to package drugs, biologicals, and therapeutic radiopharmaceuticals with a per day cost less than or equal to $140 and identify items with a per day cost greater than $140 as separately payable unless they are policy-packaged. For diagnostic radiopharmaceuticals, we proposed to package those items with a per day cost less than or equal to $655 and identify items with a per day cost greater than $655 as separately payable. Consistent with our past practice (72 FR 667580), we cross-walked historical OPPS claims data from the CY 2024 HCPCS codes that were reported to the CY 2024 HCPCS codes that we display in Addendum B to the CY 2026 OPPS/ASC proposed rule (which is available on the CMS website)[72] for proposed payment in CY 2026.

Our policy during previous cycles of OPPS rulemaking has been to use updated ASP and claims data to make final determinations of the packaging status of HCPCS codes for drugs, biologicals, and therapeutic radiopharmaceuticals for the OPPS/ASC final rule with comment period (71 FR 68086; 78 FR75022; 89 FR 94238). We note that it is also our policy to make an annual packaging determination for a HCPCS code only when we develop the OPPS/ASC final rule with comment period for the update year (71 FR 68086). Only HCPCS codes that are identified as separately payable in the final rule with comment period are subject to quarterly updates. For our calculation of per day costs of HCPCS codes for drugs, biologicals, and radiopharmaceuticals in the CY 2026 OPPS/ASC proposed rule, we proposed to use ASP data from the fourth quarter of CY 2024, which is the basis for calculating payment rates for drugs and biologicals in the physician's office setting using the ASP methodology, effective April 1, 2025, along with updated hospital claims data from CY 2024. We note that we also proposed to use these data for budget neutrality estimates and impact analyses for the CY 2026 OPPS/ASC proposed rule.

We proposed that payment rates for HCPCS codes for separately payable drugs and biologicals included in Addenda A and B of the CY 2026 OPPS/ASC final rule with comment period would be based on ASP data from the second quarter of CY 2025. These data are the basis for calculating payment rates for drugs and biologicals in the physician's office setting using the ASP methodology, effective October 1, 2025. These payment rates would then be updated in the January 2026 OPPS update, based on the most recent ASP data to be used for physicians' office and OPPS payment as of January 1, 2026. For drugs and biologicals that do not currently have a payment rate based on ASP, WAC, or AWP, for therapeutic radiopharmaceuticals that do not currently have an ASP payment rate, and for all diagnostic radiopharmaceuticals, we will calculate their arithmetic mean unit cost from all of the CY 2024 claims data and updated cost report information available for the CY 2026 final rule with comment period to determine their final per day cost.

Consequently, the final rule with comment period packaging status of some HCPCS codes for drugs, biologicals, and radiopharmaceuticals in the CY 2026 OPPS/ASC proposed rule may be different from the same drugs' HCPCS codes' packaging status determined based on the data used for this final rule with comment period. Under such circumstances, we proposed to continue to follow the established policies initially adopted for the CY 2005 OPPS final rule with comment period (69 FR 65780) is in order to more equitably pay for those drugs whose costs fluctuate relative to the proposed CY 2026 OPPS drug packaging threshold and the drug's payment status (packaged or separately payable) in CY 2026. These established policies have not changed for many years and are the same as described in the CY 2016 OPPS/ASC final rule with comment period (80 FR 70434). Specifically, for CY 2026 and subsequent years, consistent with our historical practice, we proposed to apply the following policies to those HCPCS codes for drugs, biologicals, and therapeutic radiopharmaceuticals whose relationship to the drug packaging threshold changes based on the updated drug packaging threshold and on the final updated data:

• HCPCS codes for drugs, biologicals, and radiopharmaceuticals that were paid separately in CY 2025 and that are proposed for separate payment in CY 2026, and that then have per day costs equal to or less than the CY 2026 final rule drug packaging threshold or diagnostic radiopharmaceutical packaging threshold, based on the updated ASPs and hospital claims data used for the CY 2026 final rule, would continue to receive separate payment in CY 2026.

• HCPCS codes for drugs, biologicals, and radiopharmaceuticals that were packaged in CY 2025 and that are proposed for separate payment in CY 2026, and that then have per day costs equal to or less than the CY 2026 final rule drug packaging threshold or diagnostic radiopharmaceutical packaging threshold, based on the updated ASPs and hospital claims data used for the CY 2026 final rule, would remain packaged in CY 2026.

• HCPCS codes for drugs, biologicals, and radiopharmaceuticals for which we proposed packaged payment in CY 2026 but that then have per-day costs greater than the CY 2026 final rule drug packaging threshold or diagnostic radiopharmaceutical packaging threshold, based on the updated ASPs and hospital claims data used for the CY 2026 final rule, would receive separate payment in CY 2026.

We did not receive public comments on this provision, and therefore, we are finalizing as proposed.

c. Policy-Packaged Drugs, Biologicals, and Radiopharmaceuticals

As mentioned earlier in this section, under the OPPS, we package several categories of nonpass-through drugs, biologicals, and radiopharmaceuticals, regardless of the cost of the products. Because the products are packaged according to the policies in 42 CFR 419.2(b), we refer to these packaged drugs, biologicals, and radiopharmaceuticals as ''policy-packaged'' drugs, biologicals, and radiopharmaceuticals. These policies are either longstanding or based on longstanding principles and inherent to the OPPS and are currently as follows:

• Anesthesia, certain drugs, biologicals, and other pharmaceuticals; medical and surgical supplies and equipment; surgical dressings; and devices used for external reduction of fractures and dislocations (§ 419.2(b)(4));

• Intraoperative items and services (§ 419.2(b)(14));

[72] *https://www.cms.gov/medicare/payment/prospective-payment-systems/hospital-outpatient.*

• Drugs, biologicals, and radiopharmaceuticals that function as supplies when used in a diagnostic test or procedure (including but not limited to, diagnostic radiopharmaceuticals with per-day costs at or below the per-day diagnostic radiopharmaceutical packaging threshold for the applicable year, contrast agents, and pharmacologic stress agents) (§ 419.2(b)(15)); and

• Drugs and biologicals that function as supplies when used in a surgical procedure (including, but not limited to, skin substitutes and similar products that aid wound healing and implantable biologicals) (§ 419.2(b)(16)).

The policy at § 419.2(b)(16) is broader than the policy at § 419.2(b)(14). As we stated in the CY 2015 OPPS/ASC final rule with comment period: ''We consider all items related to the surgical outcome and provided during the hospital stay in which the surgery is performed, including postsurgical pain management drugs, to be part of the surgery for purposes of our drug and biological surgical supply packaging policy'' (79 FR 66875). The category described by § 419.2(b)(15) is large and includes diagnostic radiopharmaceuticals that have a per day cost below the finalized diagnostic radiopharmaceutical packaging threshold that we discuss in section II.A.3. of this final rule with comment period, contrast agents, stress agents, and some other products. The category described by § 419.2(b)(16) currently includes skin substitutes and some other products. We believe it is important to reiterate that cost consideration is not a factor when determining whether an item is a surgical supply (79 FR 66875).

We received public comments on these policies. The following is a summary of the comments we received and our responses.

Comment: One commenter suggested CMS should develop a policy that covers drugs that are administered at the time of ophthalmic surgery, that are direct substitutes for postoperative medications, or that have an FDA-approved indication to treat/prevent post-operative issues, such as pain, inflammation, or infection, separately under Medicare Part B.

Response: We thank the commenter for their suggestion. We believe such a policy already exists under 42 CFR 419.2(b)(16)), in which drugs and biologicals that function as supplies when used in a surgical procedure (including, but not limited to, skin substitutes and similar products that aid wound healing and implantable biologicals) have their payment policy-packaged into the procedures in which the product is used. We believe these drugs function as supplies and are supportive to the procedures in which they are used, which maintains the important packaging principles of the OPPS to encourage efficiencies.

We did not propose any changes to our policy for policy-packaged drugs, biologicals, and radiopharmaceuticals; therefore, after consideration of comments received, we are continuing the policies at 42 CFR 419.2(b).

d. Packaging Determination for HCPCS Codes That Describe the Same Drug or Biological but Different Dosages

In the CY 2010 OPPS/ASC final rule with comment period (74 FR 60490 through 60491), we finalized a policy to make a single packaging determination for a drug, rather than an individual HCPCS code, when a drug has multiple HCPCS codes describing different dosages because we believe that adopting the standard HCPCS code-specific packaging determinations for these codes could lead to inappropriate payment incentives for hospitals to report certain HCPCS codes instead of others. We continue to believe that making packaging determinations on a drug-specific basis eliminates payment incentives for hospitals to report certain HCPCS codes for drugs and allows hospitals flexibility in choosing to report all HCPCS codes for different dosages of the same drug or only the lowest dosage HCPCS code. Therefore, we proposed to continue our policy to make packaging determinations on a drug-specific basis, rather than a HCPCS code-specific basis, for those HCPCS codes that describe the same drug or biological but different dosages in CY 2026.

To propose a packaging determination that is consistent across all HCPCS codes that describe different dosages of the same drug or biological, we aggregated both our CY 2024 claims data and our pricing information, which is based on the ASP methodology, generally ASP plus 6 percent, across all of the HCPCS codes that describe each distinct drug or biological in order to determine the mean units per day of the drug or biological in terms of the HCPCS code with the lowest dosage descriptor. The following drugs did not have pricing information available for the ASP methodology for the CY 2026 OPPS/ASC proposed rule; and, as is our current policy for determining the packaging status of other drugs, we used the mean unit cost available from the CY 2024 claims data to make the proposed packaging determinations for them: HCPCS code J3472 (Injection, hyaluronidase, ovine, preservative free, per 1000 usp units); HCPCS code J7100 (Infusion, dextran 40,500 ml); and HCPCS code J7110 (Infusion, dextran 75,500 ml).

For all other drugs and biologicals that have HCPCS codes describing different doses, we then multiplied the proposed weighted average ASP methodology based payment rate, which is generally ASP plus 6 percent, per-unit payment amount across all dosage levels of a specific drug or biological by the estimated units per day for all HCPCS codes that describe each drug or biological from our claims data to determine if the estimated per day cost of each drug or biological is less than or equal to the proposed CY 2026 drug packaging threshold of $140 (in which case all HCPCS codes for the same drug or biological would be packaged) or greater than the proposed CY 2026 drug packaging threshold of $140 (in which case all HCPCS codes for the same drug or biological would be separately payable). The proposed and final packaging status of each drug and biological HCPCS code to which this methodology would apply in CY 2026 is displayed in Table 107.

BILLING CODE 4120–01–P

TABLE 107: HCPCS CODES TO WHICH THE CY 2026 DRUG-SPECIFIC PACKAGING DETERMINATION METHODOLOGY APPLIES

CY 2026 HCPCS Code	CY 2026 Long Descriptor	Proposed CY 2026 Status Indicator (SI)	Final CY 2026 Status Indicator (SI)
C9257	Injection, bevacizumab, 0.25 mg	K	K
J9035	Injection, bevacizumab, 10 mg	K	K
J1460	Injection, gamma globulin, intramuscular, 1 cc	K	K
J1560	Injection, gamma globulin, intramuscular over 10 cc	K	K
J1642	Injection, heparin sodium, (heparin lock flush), per 10 units	N	N
J1644	Injection, heparin sodium, per 1000 units	N	N
J2788	Injection, rho d immune globulin, human, minidose, 50 micrograms (250 i.u.)	N	N
J2790	Injection, rho d immune globulin, human, full dose, 300 micrograms (1500 i.u.)	N	N
J3471	Injection, hyaluronidase, ovine, preservative free, per 1 usp unit (up to 999 usp units)	N	N
J3472	Injection, hyaluronidase, ovine, preservative free, per 1000 usp units	N	N
J7030	Infusion, normal saline solution, 1000 cc	N	N
J7040	Infusion, normal saline solution, sterile (500 ml=1 unit)	N	N
J7050	Infusion, normal saline solution, 250 cc	N	N
J7100	Infusion, dextran 40, 500 ml	N	N
J7110	Infusion, dextran 75, 500 ml	N	N
J7515	Cyclosporine, oral, 25 mg	N	N
J7502	Cyclosporine, oral, 100 mg	N	N

BILLING CODE 4120–01–C

We proposed that our policy to make packaging determinations on a drug-specific basis, rather than a HCPCS code-specific basis, for those HCPCS codes that describe the same drug or biological but different dosages in CY 2026 would also apply to diagnostic radiopharmaceuticals. This is because, as with drugs and biologicals, we believe that adopting standard HCPCS code-specific packaging determinations for radiopharmaceutical codes could lead to inappropriate payment incentives for hospitals to report certain HCPCS codes instead of others. To propose a packaging determination that is consistent across all HCPCS codes that describe different dosages of the same diagnostic radiopharmaceutical, we would aggregate our CY 2024 claims data across all the HCPCS codes that describe each distinct diagnostic radiopharmaceutical to determine the mean units per day of the diagnostic radiopharmaceutical in terms of the HCPCS code with the lowest dosage descriptor. We would then analyze the aggregate per day cost of the diagnostic radiopharmaceutical to determine if the per day cost is less than or equal to the proposed CY 2026 diagnostic radiopharmaceutical packaging threshold of $655 (in which case all HCPCS codes for the same diagnostic radiopharmaceutical would be packaged) or greater than the proposed CY 2026 diagnostic radiopharmaceutical packaging threshold of $655 (in which case all HCPCS codes for the same diagnostic radiopharmaceutical would be separately payable). There are currently no diagnostic radiopharmaceuticals that this policy would apply to.

We did not receive any public comments on our proposal, and we are finalizing our proposal without modification, and confirm that the final CY 2026 drug packaging threshold remains at $140 per day as described in section V.B.1.a. of this final rule with comment period. All parts of the proposal are finalized without modification.

2. Payment for Drugs and Biologicals Without Pass-Through Status That Are Not Packaged

a. Payment for Specified Covered Outpatient Drugs (SCODs) and Other Separately Payable Drugs and Biologicals

Section 1833(t)(14) of the Act defines certain separately payable radiopharmaceuticals, drugs, and biologicals and mandates specific payments for these items. Under section 1833(t)(14)(B)(i) of the Act, a ''specified covered outpatient drug'' (known as a SCOD) is defined as a covered outpatient drug, as defined in section 1927(k)(2) of the Act, for which a separate APC has been established and that either is a radiopharmaceutical agent or a drug or biological for which payment was made on a pass-through basis on or before December 31, 2002.

Under section 1833(t)(14)(B)(ii) of the Act, certain drugs and biologicals are designated as exceptions and are not included in the definition of SCODs. These exceptions are—

- A drug or biological for which payment is first made on or after

January 1, 2003, under the transitional pass-through payment provision in section 1833(t)(6) of the Act.

- A drug or biological for which a temporary HCPCS code has not been assigned.
- During CYs 2004 and 2005, an orphan drug (as designated by the Secretary).

Section 1833(t)(14)(A)(iii) of the Act requires that payment for SCODs in CY 2006 and subsequent years be equal to the average acquisition cost for the drug for that year as determined by the Secretary, subject to any adjustment for overhead costs and considering the hospital acquisition cost survey data collected by the Government Accountability Office (GAO) in CYs 2004 and 2005, and later periodic surveys conducted by the Secretary as set forth in the statute. If hospital acquisition cost data are not available, the law requires that payment be equal to payment rates established under the methodology described in section 1842(o), section 1847A, or section 1847B of the Act, as calculated and adjusted by the Secretary as necessary for purposes of paragraph (14). We refer to this alternative methodology as the ''statutory default.'' Most physician Part B drugs are paid at ASP plus 6 percent in accordance with section 1842(o) and section 1847A of the Act.

Section 1833(t)(14)(E)(ii) of the Act provides for an adjustment in OPPS payment rates for SCODs to consider overhead and related expenses, such as pharmacy services and handling costs. Section 1833(t)(14)(E)(i) of the Act required MedPAC to study pharmacy overhead and related expenses and to make recommendations to the Secretary regarding whether, and if so how, a payment adjustment should be made to compensate hospitals for overhead and related expenses. Section 1833(t)(14)(E)(ii) of the Act authorizes the Secretary to adjust the weights for ambulatory procedure classifications for SCODs to consider the findings of the MedPAC study.[73]

It has been our policy since CY 2006 to apply the same treatment to all separately payable drugs and biologicals, which include SCODs, and drugs and biologicals that are not SCODs. Therefore, we apply the payment methodology in section 1833(t)(14)(A)(iii) of the Act to SCODs, as required by statute, but we also apply it to separately payable drugs and biologicals that are not SCODs, which is a policy determination rather than a statutory requirement. For CY 2023 and subsequent years, we finalized a policy to apply section 1833(t)(14)(A)(iii)(II) of the Act to all separately payable drugs and biologicals, including SCODs. Although we do not distinguish SCODs in this discussion, we note that we are required to apply section 1833(t)(14)(A)(iii)(II) of the Act to SCODs; but we also are applying this provision to other separately payable drugs and biologicals, consistent with our history of using the same payment methodology for all separately payable drugs and biologicals.

For a detailed discussion of our OPPS drug payment policies from CY 2006 to CY 2012, we refer readers to the CY 2013 OPPS/ASC final rule with comment period (77 FR 68383 through 68385). In the CY 2013 OPPS/ASC final rule with comment period (77 FR 68386 through 68389), we first adopted the statutory default policy to pay for separately payable drugs and biologicals at ASP plus 6 percent based on section 1833(t)(14)(A)(iii)(II) of the Act. We have continued this policy of paying for separately payable drugs and biologicals at the statutory default for CYs 2014 through 2025.

In the case of a drug or biological during an initial sales period in which data on the prices for sales of the drug or biological are not sufficiently available from the manufacturer, section 1847A(c)(4) of the Act permits the Secretary to make payments that are based on WAC. Under section 1833(t)(14)(A)(iii)(II) of the Act, the amount of payment for a separately payable drug equals the average price for the drug for the year established under, among other authorities, section 1847A of the Act. As explained in greater detail in the CY 2019 PFS final rule, under section 1847A(c)(4) of the Act, although payments may be based on WAC, unlike section 1847A(b) of the Act (which specifies that payments using ASP or WAC must be made with a 6 percent add-on), section 1847A(c)(4) of the Act does not require that a particular add-on amount be applied to WAC-based pricing for this initial period when ASP data are not available. Consistent with section 1847A(c)(4) of the Act, in the CY 2019 PFS final rule (83 FR 59661 to 59666), we finalized a policy that, effective January 1, 2019, WAC-based payments for Part B drugs made under section 1847A(c)(4) of the Act will utilize a 3 percent add-on in place of the 6 percent add-on that was being used according to our policy in effect as of CY 2018. For the CY 2019 OPPS, we followed the same policy finalized in the CY 2019 PFS final rule (83 FR 59661 to 59666). Since CY 2020, we have continued to utilize a 3 percent add-on instead of a 6 percent add-on for drugs that are paid based on WAC pursuant to our authority under section 1833(t)(14)(A)(iii)(II) of the Act (84 FR 61318 and 85 FR 86039), which provides, in part, that the amount of payment for a SCOD is the average price of the drug in the year established under section 1847A of the Act. We also apply this provision to non-SCOD separately payable drugs, biologicals, and certain radiopharmaceuticals. Because we establish the average price for a drug paid based on WAC under section 1847A of the Act as WAC plus 3 percent instead of WAC plus 6 percent, we believe it is appropriate to price separately payable drugs paid based on WAC at the same amount under the OPPS. Our policy to pay for drugs and biologicals at WAC plus 3 percent, rather than WAC plus 6 percent, applies whenever WAC-based pricing is used for a drug, biological, or radiopharmaceutical under section 1847A(c)(4). When WAC-based pricing is used for a drug, biological, or radiopharmaceutical, but not under section 1847A(c)(4), the payment of WAC plus 6 percent would apply. We refer readers to the CY 2019 PFS final rule (83 FR 59661 to 59666) for additional background on this policy.

Consistent with our current policy, payments for separately payable drugs, biologicals, and radiopharmaceuticals are included in the budget neutrality adjustments, under the requirements in section 1833(t)(9)(B) of the Act. Also, the budget neutral weight scalar is not applied in determining payments for these separately payable drugs and biologicals.

Separately payable drug, biological, and radiopharmaceutical payment rates were listed in Addenda A and B to the CY 2026 OPPS/ASC proposed rule (available on the CMS website).[74] These addenda provided the proposed CY 2026 payment rates based on the ASP methodology for separately payable nonpass-through drugs, biologicals, and radiopharmaceuticals, with exceptions for certain radiopharmaceuticals previously discussed, and the ASP methodology for pass-through drugs, biologicals, and radiopharmaceuticals. Except for proposed payment rates for certain radiopharmaceuticals, these rates were based either on ASP information that is the basis for calculating payment rates for drugs and biologicals in the physician's office

[73] Medicare Payment Advisory Committee. June 2005 Report to the Congress. Chapter 6: Payment for pharmacy handling costs in hospital outpatient departments. Available at *https://www.medpac.gov/wp-content/uploads/import_data/scrape_files/docs/default-source/reports/June05_ch6.pdf.*

[74] *https://www.cms.gov/medicare/payment/prospective-payment-systems/hospital-outpatient.*

setting effective April 1, 2025, or WAC, AWP, or mean unit cost from CY 2024 claims data and updated cost report information available for the proposed rule. For nonpass-through therapeutic radiopharmaceuticals, payment rates were based on ASP data or mean unit cost. We proposed to pay separately at mean unit cost for diagnostic radiopharmaceuticals with per day costs above the proposed threshold; the payment rates proposed for qualifying diagnostic radiopharmaceuticals are entirely mean unit cost if available. See section II.A.3.c.(3) for the finalized policy regarding payment of qualifying diagnostic radiopharmaceuticals. In general, these published proposed payment rates will not be the same as the actual January 2026 payment rates. This is because payment rates for drugs, biologicals, and therapeutic radiopharmaceuticals with ASP information for January 2026 will be determined through the standard quarterly process where ASP data submitted by manufacturers for the third quarter of CY 2025 (July 1, 2025, through September 30, 2025) will be used to set the payment rates that are released for the quarter beginning in January 2026 in December 2025. In addition, in Addenda A and B to the CY 2026 OPPS/ASC proposed rule, payment rates for drugs, biologicals, and therapeutic radiopharmaceuticals for which there was no ASP, WAC, or AWP information available for April 2025, as well as all separately payable diagnostic radiopharmaceuticals, were based on mean unit cost in the available CY 2024 claims data.

If new pricing information becomes available for payment for the quarter beginning in January 2026, we will price payment for these drugs, biologicals, therapeutic radiopharmaceuticals, and diagnostic radiopharmaceuticals based on their newly available information. Finally, there may be drugs, biologicals and therapeutic radiopharmaceuticals that had ASP, WAC, or AWP information available for the proposed rule (reflecting April 2025 ASP data) that do not have ASP, WAC, or AWP information available for the quarter beginning in January 2026. These drugs, biologicals and therapeutic radiopharmaceuticals would then be paid based on arithmetic mean unit cost data derived from CY 2024 hospital claims. Therefore, the proposed payment rates listed in Addenda A and B to the CY 2026 OPPS/ASC proposed rule were not for January 2026 payment purposes and were only illustrative of the CY 2026 OPPS payment methodology using the most recently available information at the time of issuance of the CY 2026 OPPS/ASC proposed rule.

As previously discussed, we proposed that payment rates for HCPCS codes for separately payable drugs and biologicals included in Addenda A and B of this CY 2026 OPPS/ASC final rule with comment period would be based on ASP data from the second quarter of CY 2025. These data are the basis for calculating payment rates for drugs and biologicals in the physician's office setting using the ASP methodology, effective October 1, 2025. These payment rates would then be updated in the January 2026 OPPS update, based on the most recent ASP data to be used for physicians' office and OPPS payment as of January 1, 2026. For drugs and biologicals that do not currently have a payment rate based on ASP, WAC, or AWP, for therapeutic radiopharmaceuticals that do not currently have an ASP payment rate, and for all diagnostic radiopharmaceuticals, we would calculate their arithmetic mean unit cost from all of the CY 2024 claims data and updated cost report information available for the CY 2026 final rule with comment period to determine their final per day cost.

We note that payment amounts for most drugs separately payable under Medicare Part B are determined using the methodology in section 1847A of the Act, and in many cases, payment is based on the average sales price (ASP) plus a statutorily mandated 6 percent add-on.

In CY 2025, we clarified that only ASP data or, if ASP data are not available, mean unit cost data, would be used to set payment rates for separately payable nonpass-through therapeutic radiopharmaceuticals under the OPPS. For CY 2026, we did not propose any changes to our policies for payment for separately payable therapeutic or diagnostic radiopharmaceuticals other than the technical update that was proposed to the diagnostic radiopharmaceutical packaging threshold update factor as discussed in section V.B.1. of this final rule with comment period.

For CY 2026, we did not propose any additional changes to our policies for payment for separately payable drugs, biologicals, and radiopharmaceuticals. We proposed to continue our payment policy that has been in effect since CY 2013 to pay for separately payable drugs and biologicals in accordance with section 1833(t)(14)(A)(iii)(II) of the Act (the statutory default).

We received public comments on these proposals. The following is a summary of the comments we received and our responses.

Comment: Several commenters supported our proposals related to the separate payment for separately payable non-passthrough drugs and biologicals under the OPPS.

Response: We thank the commenters for their support.

Comment: Several commenters suggested technical improvements for CMS to consider regarding the operationalization of drug payment. Suggestions included improving transparency regarding updates to the CMS Average Sales Price Pricing Files, the OPPS/ASC Addenda Files, and the NCCI Medically Unlikely Edits. A commenter also suggested enabling a timelier issuance of J-codes to improve transparency for new drugs and to accelerate the rate at which ASP data is utilized following ASP reporting to CMS by the manufacturer. Two commenters requested CMS designate additional resources, including career staff and guidance, for communication with the pharmaceutical industry to increase transparency and ensure timely inclusion of new products in the OPPS payment files. One commenter indicates that uncertainty regarding Medicare payment often causes providers to hesitate or delay adoption of new therapies. Additionally, one commenter suggested CMS develop a drug-intensive policy for ASC rate setting similar to the current device-intensive policy. Additionally, two commenters recommended CMS increase transparency regarding packaging status post pass-through expiration and include the expected packaging status of a drug as part of the rulemaking process.

Response: We thank the commenters for their feedback and recommendations. While these comments are generally out of scope for purposes of this rulemaking, we will take these comments into consideration for future rulemaking, future issuance of sub-regulatory guidance, and future internal process improvements. Based on these comments we may also consider publishing additional files, documents, and data as part of the rulemaking process in future years.

After consideration of public comments, we are finalizing, without modification, our proposals to continue our payment policy for separately payable drugs and biologicals in accordance with section 1833(t)(14)(A)(iii)(II) of the Act.

b. Biosimilar Biological Products

For CY 2024, we finalized the exception of biosimilars from the OPPS threshold packaging policy when their

reference products are separately paid (88 FR 81783 through 81785). This policy allows for separate payment for biosimilars even if the biosimilar's per-day cost is below the packaging threshold if the biosimilar's reference product is separately paid. This policy removes the financial incentive to use a more expensive separately payable biological and promotes biosimilar use as a lower cost alternative to higher cost reference products.

Payment rates for drugs and biologicals (including biosimilars) under Medicare Part B are determined using the methodology in section 1847A of the Act, and in many cases, payment is based on the average sales price (ASP) plus a statutorily mandated 6 percent add-on. Additionally, section 11403 of the IRA requires that a qualifying biosimilar be paid at ASP plus 8 percent of the reference product's ASP rather than 6 percent during the applicable 5-year period. Section 1847A(b)(8)(B)(ii) of the Act defines the applicable 5-year period for a qualifying biosimilar for which payment has been made using ASP (that is, payment under section 1847A(b)(8) of the Act) as of September 30, 2022, as the 5-year period beginning on October 1, 2022. For a qualifying biosimilar for which payment is first made using ASP during the period beginning October 1, 2022, and ending December 31, 2027, the statute defines the applicable 5-year period as the 5-year period beginning on the first day of such calendar quarter of such payment (88 FR 81783). These payment rates are published in the quarterly release of Addendum B or ASP pricing files.

Comment: A few commenters supported the continuation of our biosimilar packaging exception policy that was implemented in CY 2024. The commenters stated they support policies that encourage a competitive marketplace and do not penalize price competition. Furthermore, a commenter suggested CMS expand the current biosimilar packaging exception policy to all biosimilars regardless of the reference product's packaging status. Another commenter expressed concerns regarding the OPPS packaging policy and believed it hinders competition against the reference products.

Response: We thank the commenters for their support of continuing our biosimilar packaging exception policy. We believe the current policy supports both our intent to promote the use of biosimilars as a less expensive alternative to the reference products while also preserving our longstanding OPPS packaging intent to create incentives for efficiency. We continue to believe packaging is an essential component of a prospective payment system and do not support categorically excepting all biosimilars from the threshold packaging policy.

After consideration of public comments we received, we are finalizing our proposal without modification to continue the exception of biosimilars from the OPPS threshold packaging policy when their reference products are separately paid. For CY 2026, we will pay separately for these biosimilars even if their per-day cost is below the threshold packaging policy when their reference products are separately paid.

c. Invoice Drug Pricing for CY 2026

In the CY 2025 OPPS/ASC final rule with comment period (89 FR 94243 to 94244), we finalized that, for separately payable drugs or biologicals for which CMS does not provide a payment rate in Addendum B, which would indicate to MACs that CMS does not have pricing information (specifically, that ASP, WAC, AWP, and mean unit cost information is not available to determine a payment rate), MACs would calculate the payment based on provider invoices. The drug or biological invoice cost would be the net acquisition cost minus any rebates, chargebacks, or post-sale concessions. Before calculating an invoice-based payment amount, MACs would use the provider invoice to determine that: (a) the drug is not policy packaged; and (b) the per-day cost of the drug, biological, therapeutic radiopharmaceutical or diagnostic radiopharmaceutical is above the threshold packaging amount, as applicable. If both conditions are met, the MACs would use the provider invoice amount to set a payment rate for the separately payable drug, biological, or radiopharmaceutical until its payment amount becomes available to CMS. We generally expect invoice pricing to be temporary, lasting two to three quarters, for qualified drugs required to report ASP under section 1847A of the Act. For drug products that are not required to report ASP under section 1847A of the Act (that is, diagnostic pharmaceuticals), invoice pricing may be used on a longer-term basis until a MUC can be calculated. We finalized the invoice pricing policy for drugs to be effective January 1, 2026, with the intent to make technical updates to outpatient hospital claims and to allow providers time to prepare for any operational changes. We noted that the National Uniform Billing Committee (NUBC) created a value code that would allow for the reporting of invoice prices of drugs, biologicals, and radiopharmaceuticals for CY 2026 for the purpose of this policy. The NUBC value code created is 92 (Drug/Biologic Invoice Cost), with the definition of: ''Invoice Cost of drug/biologic. For use with Revenue Category 0636 when required by federal regulation.'' We proposed a technical clarification to this policy in the CY 2026 OPPS/ASC proposed rule. Previously, we stated that MACs would use the provider invoice to determine that: (1) the drug is not policy packaged; and (2) the per-day cost of the drug, biological, therapeutic radiopharmaceutical or diagnostic radiopharmaceutical is above the threshold packaging amount, as applicable. However, we proposed to clarify that CMS will determine whether the first condition is met, whether the drug is not policy packaged; however, the MAC will continue to determine whether the second condition is met, whether the per-day cost of the drug, biological, therapeutic radiopharmaceutical or diagnostic radiopharmaceutical is above threshold packaging amount, as applicable.

Comment: A commenter sought clarification regarding ''invoice pricing''. The commenter stated that ''invoice pricing'' by nature does not reflect post sale adjustment and that the CMS text on this subject, ''The drug or biological invoice cost would be the net acquisition cost minus any rebates, chargebacks, or post-sale concessions'' may create confusion and result in unintended consequences.

Response: We thank the commenter for seeking clarification on this subject. The invoice pricing policy aims to enhance transparency and accuracy in the determination of payment rates for drugs and biologicals when CMS lacks pricing information. By using the net acquisition cost and accounting for various post-sale adjustments, this policy ensures that the payment rates reflect the true cost incurred by providers. Therefore, in the CY 2026 OPPS/ASC proposed rule, we defined ''invoice pricing'' to be net acquisition cost minus any rebates, chargebacks, or post-sale concessions. To illustrate the calculation of the net acquisition cost: if the acquisition cost of a unit of drug X is $10, and the rebate was $2. The net acquisition cost of drug X per unit is $8 ($10 − $2). Therefore, the invoice price to submit to the MAC is $8 per unit.

After consideration of the public comments we received, we are implementing this policy without modification in CY 2026. We refer readers to the previous discussion when we finalized the policy in the CY 2025 OPPS/ASC final rule with comment period (89 FR 94243 to 94244).

3. Payment Policy for Radiopharmaceuticals

For a complete history of the OPPS payment policy for radiopharmaceuticals, we refer readers to the CY 2005 OPPS final rule with comment period (69 FR 65811), the CY 2006 OPPS final rule with comment period (70 FR 68655), and the CY 2010 OPPS/ASC final rule with comment period (74 FR 60524).

We received public comments on our payment policy for radiopharmaceuticals in general. The following is a summary of the comments we received and our responses.

Comment: One commenter requested that CMS determine HCPCS specific radiopharmaceutical offsets and include preliminary nuclear medicine APC offset data with the proposed rule in order to inform public comments. Additionally, this commenter requested that CMS restore the radiopharmaceutical edits used in nuclear medicine procedures to increase the accuracy of claims data used to set rates for both separately payable diagnostic radiopharmaceuticals as well as the nuclear medicine APCs.

Response: We appreciate the commenter's feedback; however, we are not reinstating the radiolabeled product edits for nuclear medicine procedures, which required a diagnostic radiopharmaceutical to be present on the same claim as a nuclear medicine procedure for payment to be made under the OPPS. As previously discussed in the CY 2020 OPPS/ASC final rule with comment period (85 FR 86033 and 86034), the edits were in place between CY 2008 and CY 2014 (78 FR 75033). We believe the period of time in which the edits were in place was sufficient for hospitals to gain experience reporting procedures involving radiolabeled products and to become accustomed to ensuring that they code and report charges so that their claims fully and appropriately reflect the costs of those radiolabeled products. As with all other items and services recognized under the OPPS, we expect hospitals to code and report their costs appropriately, regardless of whether there are claims processing edits in place. We welcome ongoing dialogue and engagement from interested parties regarding suggestions for payment changes for consideration in future rulemaking. We will take into consideration additional files and data that may be helpful to readers as supplements to future notice and comment rulemaking.

a. Payment Policy for Therapeutic Radiopharmaceuticals

In the CY 2023 OPPS/ASC final rule with comment period, we adopted as final our proposal to continue our longstanding payment policy for therapeutic radiopharmaceuticals for CY 2023 and subsequent years. Accordingly, this payment policy for therapeutic radiopharmaceuticals will continue to apply in CY 2026.

Specifically, our policy of paying for separately payable pass-through therapeutic radiopharmaceuticals under the ASP methodology adopted for separately payable drugs and biologicals described in section V.A.1. of this CY 2026 OPPS/ASC final rule will continue to apply for CY 2026. We will pay for separately payable nonpass-through therapeutic radiopharmaceuticals through a modified ASP methodology where we pay at ASP plus 6 percent if ASP data are available. However, if ASP information is unavailable for a separately payable nonpass-through therapeutic radiopharmaceutical, we will continue to base the payment rate on arithmetic mean unit cost data derived from hospital claims. Our policy not to use WAC or AWP to establish payment for separately payable nonpass-through therapeutic radiopharmaceuticals if ASP is not available will continue for CY 2026. We explained our rationale in the CY 2010 OPPS/ASC final rule with comment period (74 FR 60524 through 60525) when we first adopted our policy to apply the principles of separately payable drug pricing to therapeutic radiopharmaceuticals.

For a full discussion of ASP-based payment for therapeutic radiopharmaceuticals, we refer readers to the CY 2010 OPPS/ASC final rule with comment period (74 FR 60520 through 60521). We will rely on CY 2024 mean unit cost data derived from hospital claims data for payment rates for separately payable nonpass-through therapeutic radiopharmaceuticals for which ASP data are unavailable and update the payment rates for these products according to our usual process for updating the payment rates for separately payable drugs and biologicals on a quarterly basis if updated ASP information becomes available.

The CY 2026 payment rates for separately payable nonpass-through therapeutic radiopharmaceuticals are included in Addenda A and B of this final rule with comment period (which are available on the CMS website).[75]

[75] *https://www.cms.gov/medicare/payment/prospective-payment-systems/hospital-outpatient.*

Though we made no proposal regarding payment for therapeutic radiopharmaceuticals, we received public comments that were generally in support of these policies. We thank the commenters for their support. We are continuing our policies unchanged for CY 2026.

b. Payment Policy for Diagnostic Radiopharmaceuticals Without Claims Data

For CY 2025, we finalized, as described in the CY 2025 OPPS/ASC final rule (89 FR 93948 through 93963), to pay separately at arithmetic mean unit cost for diagnostic radiopharmaceuticals with a per day cost above our diagnostic radiopharmaceutical packaging threshold ($655 for CY 2026). We also finalized our policy to pay for pass-through diagnostic radiopharmaceuticals based on ASP, WAC, and AWP.

We continue to believe that paying for nonpass-through diagnostic radiopharmaceuticals using arithmetic mean unit cost would appropriately pay for the average price of a nonpass-through separately payable diagnostic radiopharmaceutical, as discussed in section II.A.3.c of this final rule with comment period. In our view, MUC is an appropriate proxy for the average price for a diagnostic radiopharmaceutical for a given year, as it is calculated based on the average costs for a particular year and is directly reflective of the actual cost data that hospitals submit to CMS. As we stated in the CY 2010 OPPS/ASC final rule with comment period (74 FR 60523), we believe that WAC or AWP is not an appropriate proxy to provide OPPS payment for radiopharmaceuticals because these pricing methodologies do not include discounts. Specifically, the absence of appropriate ASP reporting could result in payment for a separately payable diagnostic radiopharmaceutical based on WAC or AWP indefinitely, a result which we believe would be inappropriate, as these pricing metrics do not capture all of the pricing discounts that may be reflected in the ASP.

Additionally, in the CY 2025 OPPS/ASC final rule with comment period (89 FR 93948 through 93963), we finalized to base the initial payment for new diagnostic radiopharmaceuticals with HCPCS codes that do not have pass-through status or claims data on ASP, and on the WAC for these products if ASP data for these diagnostic radiopharmaceuticals are not available. To further clarify, these products will be paid based on ASP plus 6 percent, and

at WAC plus 3 or 6 percent according to the policy in section V.B.2.a. of this final rule with comment period if ASP data are not available.

If the WAC also is unavailable, we proposed to make payment for new diagnostic radiopharmaceuticals at 95 percent of the products' most recent AWP. We believe the volume of products in this category will typically be very low; however, in these rare situations, we believe it would be appropriate to use ASP, WAC, or AWP until a MUC is established for new diagnostic radiopharmaceuticals with HCPCS codes that do not have passthrough status or claims data.

We received public comments on these proposals. The following is a summary of the comments we received and our responses.

Comment: Commenters were generally supportive of our policy regarding payment for non-passthrough diagnostic radiopharmaceuticals without claims data. While commenters had suggestions regarding payment for diagnostic radiopharmaceuticals with claims data and while on pass-through status, commenters generally supported the policies to pay for diagnostic radiopharmaceuticals without claims data according to the existing methodology.

Response: We thank the commenters for their support.

After consideration of public comments, we are continuing our policy, without modification, to base the initial payment for new diagnostic radiopharmaceuticals with HCPCS codes that do not have pass-through status or claims data on ASP, at ASP plus 6 percent, and on the WAC for these products if ASP data for these diagnostic radiopharmaceuticals are not available. To further clarify, these products will be paid based on ASP plus 6 percent, and at WAC plus 3 or 6 percent according to the policy in section V.B.2.a. of this final rule with comment period if ASP data are not available.

If the WAC also is unavailable, payment for new diagnostic radiopharmaceuticals will be made at 95 percent of the products' most recent AWP. We believe the volume of products in this category will typically be very low; however, in these rare situations, we believe it would be appropriate to use ASP, WAC, or AWP until a MUC is established for new diagnostic radiopharmaceuticals with HCPCS codes that do not have passthrough status or claims data.

Please refer to section II.A.3.c of this final rule with comment period for information regarding our broader payment policies for diagnostic radiopharmaceuticals, including our policy to pay separately for diagnostic radiopharmaceuticals above a certain cost threshold, our policy to pay for separately payable diagnostic radiopharmaceuticals with claims data based on mean unit cost data derived from hospital claims, and a list of the final qualifying diagnostic radiopharmaceuticals with per day costs exceeding the $655 threshold for CY 2026 in Table 7. The final CY 2026 payment rates for separately payable nonpass-through diagnostic radiopharmaceuticals are included in Addenda A and B of this final rule with comment period (which are available on the CMS website).[76]

4. Payment for Blood Clotting Factors

For CY 2026, we proposed to continue our established policy to provide payment for blood clotting factors using the same methodology as other separately payable drugs and biologicals under the OPPS and to continue to pay a furnishing fee. For a full discussion of our established payment policy for blood clotting factors, please refer to the CY 2023 OPPS/ASC final rule with comment period (87 FR 71969 through 71970). In accordance with our policy as finalized in the CY 2008 OPPS/ASC final rule with comment period (72 FR 66765), we will announce the actual figure of the percent change in the applicable CPI and the updated furnishing fee calculation based on that figure through the applicable program instructions and posting on the CMS website at *https://www.cms.gov/medicare/payment/fee-for-service-providers/part-b-drugs/average-drug-sales-price.*

Comment: Commenters supported our proposal to continue to provide payment for the for blood clotting factors using the same methodology as other separately payable drugs and biologicals under the OPPS and to continue to pay a furnishing fee.

Response: We thank the commenters for their support of our policy.

After consideration of public comments, we are finalizing our proposal without modification to pay for clotting factors using the same methodology as other separately payable drugs and biologicals under the OPPS, and to provide a clotting factor furnishing fee. For CY 2026, the blood clotting factor furnishing fee is $0.265. The actual percentage change in the applicable CPI and the updated furnishing fee calculation based on that figure through the applicable program instructions are posted on the CMS website.[77]

5. Payment for Nonpass-Through Drugs, Biologicals, and Radiopharmaceuticals With HCPCS Codes But Without OPPS Hospital Claims Data

In the CY 2023 OPPS/ASC final rule with comment period, we adopted as final our proposal to continue our longstanding payment policy for nonpass-through drugs, biologicals, and radiopharmaceuticals with HCPCS codes but without OPPS hospital claims data for CY 2023 and subsequent years. Therefore, for CY 2026, this policy will continue to apply. For a detailed discussion of the payment policy and methodology, we refer readers to the CY 2016 OPPS/ASC final rule with comment period (80 FR 70442 through 70443). Consistent with our policy, because we have no claims data and must determine if these products, drugs, biologicals, therapeutic radiopharmaceuticals, and diagnostic radiopharmaceuticals, exceed the per-day cost threshold, we estimated the average number of units of each product that would typically be furnished to a patient during one day in the hospital outpatient setting and utilized the payment rate for the product, typically the ASP methodology, to determine whether their payment will be packaged as well as their payment status indicators.

We did not make a proposal on this policy. This policy did not receive public comments on this provision. We are continuing this policy unchanged for CY 2026.

6. Requirement in the CY 2026 PFS Proposed Rule for HOPDs and ASCs To Report Discarded Amounts of Certain Single-Dose or Single-Use Package Drugs

Section 90004 of the Infrastructure Investment and Jobs Act (Pub. L. 117–9, November 15, 2021) (''the Infrastructure Act'') amended section 1847A of the Act to re-designate subsection (h) as subsection (i) and insert a new subsection (h), which requires manufacturers to provide a refund to CMS for certain discarded amounts from a refundable single-dose container or single-use package drug. We explained in the CY 2026 OPPS/ASC proposed rule (90 FR 33631) that the CY 2026 Physician Fee Schedule (PFS) proposed rule (90 FR 32538 through 32540) includes proposals related to the discarded drug refund

[76] *https://www.cms.gov/medicare/payment/prospective-payment-systems/hospital-outpatient.*

[77] *https://www.cms.gov/files/document/r13379cp.pdf.*

policy, including proposals that may impact hospital outpatient departments (HOPDs) and ambulatory surgical centers (ASCs). Similar to our past notices in OPPS/ASC proposed rules, such as in the CY 2025 OPPS/ASC proposed rule (89 FR 59370), we wanted to ensure interested parties were aware of these proposals and knew to refer to the CY 2026 PFS proposed rule for a full description of the proposed policy. Interested parties were asked to submit comments on any proposals to implement section 90004 of the Infrastructure Act to the CY 2026 PFS proposed rule. We noted that public comments on these proposals would be addressed in the CY 2026 PFS final rule with comment period.

We refer readers to the CY 2026 PFS final rule with comment period for a summary of comments, our responses, and the finalized policy for CY 2026.

7. CY 2026 Prospective Adjustment to Payments for Non-Drug Items and Services To Offset the Increased Payments for Non-Drug Items and Services Made in CY 2018 Through CY 2022 as a Result of the 340B Payment Policy

a. Overview

Under the OPPS, we generally set payment rates for separately payable drugs, and biologicals (hereinafter referred to collectively as ''drugs'' in this section) under section 1833(t)(14)(A) of the Act). Section 1833(t)(14)(A)(iii)(II) of the Act provides that, if hospital acquisition cost data are not available, the payment amount is the average price for the drug in a year established under sections 1842(o), 1847A, or 1847B of the Act, as the case may be. Payment rates for drugs have usually been established under section 1847A of the Act, which generally sets a default rate of the average sales price (ASP) plus 6 percent. Section 1833(t)(14)(A)(iii)(II) of the Act also provides that the average price for the drug in the year as established under section 1847A of the Act, is calculated and adjusted by the Secretary as necessary for purposes of paragraph (14).

In the CY 2018 OPPS/ASC final rule with comment period (82 FR 59353 through 59371), CMS reexamined the appropriateness of paying the ASP plus 6 percent for drugs acquired through the 340B Drug Pricing Program (hereinafter referred to as the ''340B Program''), a Health Resources and Services Administration (HRSA)-administered program that allows covered entities to purchase certain covered outpatient drugs at discounted prices from drug manufacturers. Based on findings of the Government Accountability Office (GAO),[78] the HHS Office of the Inspector General (OIG),[79] and the Medicare Payment Advisory Commission (MedPAC)[80] that 340B hospitals were acquiring drugs at a significant discount under the 340B Program, CMS adopted a policy beginning in 2018 generally to pay an adjusted amount of ASP minus 22.5 percent for certain separately payable drugs or biologicals acquired through the 340B Program. This adjustment amount was based on our concurrence with an analysis by MedPAC that concluded that the estimated average minimum discount of 22.5 percent of ASP adequately represented the average minimum discount that a 340B participating hospital received for separately payable drugs under the OPPS (82 FR 59354 through 59371). Our intent in implementing this payment reduction was to reflect more accurately the actual costs incurred by participating hospitals in acquiring 340B drugs. We stated our belief that such changes would allow Medicare beneficiaries and the Medicare program to pay a more appropriate amount when hospitals participating in the 340B Program furnished drugs to Medicare beneficiaries that were purchased under the 340B Program (82 FR 59353 through 59371).

b. Payment for 340B Drugs and Biologicals in CYs 2018 Through 2022

From January 1, 2018 through September 27, 2022, under the OPPS we generally paid for certain separately payable drugs acquired through the 340B Program at ASP minus 22.5 percent. In the CY 2018 OPPS/ASC final rule with comment period (82 FR 59369 through 59370), we finalized our proposal to adjust the payment rate for separately payable drugs (other than drugs with pass-through payment status and vaccines) acquired under the 340B Program from ASP plus 6 percent to ASP minus 22.5 percent. We also noted that critical access hospitals are not paid under the OPPS and therefore were not subject to the OPPS 340B drug payment adjustment policy. For ease of reference, the OPPS 340B drug payment adjustment policy is hereinafter referred to as the ''340B Payment Policy'' and refers both to the adjustments made to payment rates for 340B-acquired drugs described here and the corresponding rate adjustment for non-drug services and items described later in section V.B.7.c. of this final rule with comment period. We note that rural sole community hospitals, children's hospitals, and PPS-exempt cancer hospitals were exempted from the adjustments made to payment rates for 340B-acquired drugs primarily due to these hospitals receiving special payment adjustments under the OPPS. In addition, as stated in the CY 2018 OPPS/ASC final rule with comment period, this policy change did not apply to drugs with pass-through payment status, which are required to be paid based on the ASP methodology, or vaccines, which are excluded from the 340B Program.

In the CY 2019 OPPS/ASC final rule with comment period (83 FR 58981), we continued the Medicare 340B payment policies that were implemented in CY 2018 and adopted a policy to pay for non-pass-through 340B-acquired biosimilars at ASP minus 22.5 percent of the biosimilar's ASP, rather than the reference biological product's ASP. Additionally, in the CY 2019 OPPS/ASC final rule with comment period (83 FR 59015 through 59022), we finalized a policy to pay ASP minus 22.5 percent for 340B-acquired drugs furnished in non-exempted off-campus provider-based departments (PBDs) paid under the PFS. We adopted this payment policy for CY 2019 and subsequent years. Also, during the CY 2019 OPPS/ASC rulemaking cycle, we clarified that the 340B payment adjustment applied to drugs priced using either wholesale acquisition cost (WAC) or average wholesale price (AWP), and since the policy was first adopted, we applied the 340B payment adjustment to 340B-acquired drugs priced using these pricing methodologies. The 340B payment adjustment for WAC-priced drugs was WAC minus 22.5 percent. 340B-acquired drugs that were priced using AWP were paid an adjusted amount of 69.46 percent of AWP (83 FR 37125).[81]

[81] The 69.46 percent of AWP was calculated by first reducing the original 95 percent of AWP price by 6 percent to generate a value that is similar to ASP or WAC with no percentage markup. Then we applied the 22.5 percent reduction to ASP/WAC-

Continued

As discussed further in section V.B.7.f. of the CY 2026 OPPS/ASC proposed rule, the results of this policy meant that hospitals received an estimated $10.6 billion less in 340B drug payments (including money that would have been paid by Medicare and money that would have come from beneficiaries as copayments) than they would have for drugs provided in CY 2018 through September 27th of 2022 had the 340B Payment Policy not been implemented (88 FR 77162). These reduced payments are detailed in Table 108 and are derived from Addendum AAA published with the Final Remedy rule (88 FR 77150).

TABLE 108: APPROXIMATE IMPACT IN REDUCED OPPS PAYMENT FOR 340B ACQUIRED DRUGS 2018 THROUGH 2022

	2018	2019	2020	2021	2022
Approximate Reduced OPPS Drug Payment (billions)	$1.9	$2.2	$2.3	$2.4	$1.8*
*Amount January 1 to September 27, 2022. Reduced payments under the 340B Payment Policy were not in effect after September 27, 2022.					

For more detailed descriptions of our OPPS payment policy for drugs acquired under the 340B Program during this timeframe, we refer readers to the CY 2018 OPPS/ASC final rule with comment period (82 FR 59353 through 59371); the CY 2019 OPPS/ASC final rule with comment period (83 FR 59015 through 59022); the CY 2020 OPPS/ASC final rule with comment period (84 FR 61321 through 61327); the CY 2021 OPPS/ASC final rule with comment period (85 FR 86042 through 86055); the CY 2022 OPPS/ASC final rule with comment period (86 FR 63640 through 63649); the CY 2023 OPPS/ASC final rule with comment period (87 FR 71972 through 71973); and the CY 2024 OPPS/ASC final rule with comment period 88 FR 81789 through 81792).

c. Payment for Non-Drug Items and Services in CY 2018 Through CY 2022

In the CY 2018 OPPS/ASC final rule with comment period (82 FR 59216, 59258), to comply with the statutory budget neutrality requirements under sections 1833(t)(9)(B) and (t)(14)(H) of the Act, we finalized our proposal to redistribute our estimated reduction in payments for separately payable drugs as a result of the 340B Payment Policy by increasing the conversion factor used to determine the payment amounts for non-drug items and services. As further described in the CY 2018 OPPS/ASC final rule with comment period, we used updated CY 2016 claims data and a list of 340B-eligible providers to calculate an estimated impact of $1.6 billion based on the final CY 2018 policy to pay for OPPS 340B-acquired drugs at a payment rate of generally ASP minus 22.5 percent. To effectuate the budget neutrality provisions of the OPPS for CY 2018, we redistributed an estimated $1.6 billion in reduced drug payments from adoption of the final 340B payment methodology to all hospitals paid under the OPPS by increasing the payment rates by 3.19 percent for nondrug items and services furnished by all hospitals paid under the OPPS for CY 2018. We carried through this conversion factor adjustment from CYs 2019 through 2022, increasing payments for non-drug items and services in these CYs. This resulted in approximately $7.769 billion, which for ease of reference in this rule we hereafter refer to as $7.8 billion, in additional spending on non-drug items and services from CYs 2018 through 2022.

d. Litigation History of the 340B Payment Policy

The 340B Payment Policy was the subject of extensive litigation. See the Proposed Remedy for the 340B-Acquired Drug Payment Policy for Calendar Years 2018–2022 (hereinafter referred to as the ''proposed remedy rule'') for a more comprehensive summary of the litigation history (88 FR 44079 through 44080).

On June 15, 2022, the Supreme Court held that because we had not conducted a survey of hospitals' acquisition costs, we could not vary the payment rates for outpatient prescription drugs by hospital group. *See Am. Hosp. Ass'n* v. *Becerra,* 142 S. Ct. 1896, 1906 (2022). The Supreme Court declined to opine on the appropriate remedy, *id.* at 1903, and on September 28, 2022, the district court vacated the reimbursement rate for 340B-acquired drugs for the remainder of 2022. *See Am. Hosp. Ass'n* v. *Becerra,*1:18–cv–2084–RC, 2022 WL 4534617, at *5.[82] On January 10, 2023, the district court remanded without vacatur to give the agency the opportunity to determine the proper remedy for the reduced payment amounts to 340B hospitals under the payment rates in the final OPPS rules for CY 2018 through CY 2022. *See Am. Hospital Ass'n* v. *Becerra,* 1:18–cv–2084–RC, 2023 WL 143337, at *6.[83]

e. Payment for 340B-Acquired Drug Claims for September 28, 2022 Through CY 2025

The agency complied with the district court's September 28, 2022 decision by uploading revised OPPS drug files to pay the default rate (generally ASP plus 6 percent) for all CY 2022 claims for 340B-acquired drugs paid from September 28, 2022, through the end of CY 2022.

In the CY 2023 OPPS/ASC final rule with comment period (87 FR 71970), we finalized a policy reversing the 340B Payment Policy so that going forward we would pay for 340B acquired drugs no differently than we pay for drugs that are not acquired through the 340B program. To do so, we first provided that drugs acquired through the 340B Program would be paid at the statutory default rate (generally ASP plus 6

similar AWP value to obtain the 69.46 percent of AWP, which was similar to either ASP minus 22.5 percent or WAC minus 22.5 percent.

[82] *https://ecf.dcd.uscourts.gov/cgi-bin/show_public_doc?2018cv2084-79.*

[83] *https://ecf.dcd.uscourts.gov/cgi-bin/show_public_doc?2018cv2084-86.*

percent) for CY 2023. Second, to ensure budget neutrality for CY 2023 OPPS payment rates as required by statute, we finalized a reduction of 3.09 percent to the 2023 OPPS conversion factor. This one-time adjustment to the conversion factor removed the effect of this aspect of the 340B Payment Policy, as originally adopted in CY 2018, for CY 2023 and subsequent years. This adjustment to the conversion factor reduced the conversion factor to the conversion factor that would have been in place in CY 2023 if the 340B payment policy had never been implemented. For more detail on the payment rate for drugs acquired under the 340B Program for CY 2023 and the corresponding adjustment to the conversion factor to maintain budget neutrality as a result of reversing the 340B adjustment and paying for all separately payable drugs at ASP plus 6 percent (or WAC plus 3 or 6 percent or 95 percent of AWP), we refer readers to the CY 2023 OPPS/ASC final rule with comment period (87 FR 71973 through 71976).

For CYs 2024 and 2025, consistent with our policy finalized for CY 2023, we continued to pay the statutory default rate for 340B acquired drugs (88 FR 81789 through 81791).

f. Remedy Payment Adjustment for 340B-Acquired Drugs From CY 2018 Through September 27, 2022

The agency complied with the district court's January 10, 2023, remand order by issuing the Final Remedy for the 340B-Acquired Drug Payment Policy for Calendar Years 2018–2022 (hereinafter referred to as the ''Final Remedy rule'') on November 8, 2023 (88 FR 81540). The purpose of this rule was to address the reduced payment amounts to 340B hospitals under the reimbursement rates in effect for CY 2018 through September 27, 2022 and to comply with the statutory requirement to maintain budget neutrality under the OPPS.

To address the reduced payment amounts to 340B hospitals under the reimbursement rates in effect for CY 2018 through September 27, 2022, CMS made one-time lump sum payments to affected 340B covered entity hospitals, calculated as the difference between what an affected 340B covered entity hospital received for 340B-acquired drugs from CY 2018 through September 27, 2022 and what they would have received for those drugs if the 340B adjustment had not been in place. These one-time lump sum payments were issued in early 2024. For more information on the calculation and distribution of the one-time lump sum payments, see the Final Remedy rule (88 FR 77156 through 77170).

g. Prospective Adjustment to Payments for Non-Drug Items and Services To Offset the Increased Payments for Non-Drug Items and Services Made in CY 2018 Through CY 2022

As we described under section V.B.7.c. of the CY 2026 OPPS/ASC proposed rule and section I.A.3 of the Final Remedy rule, to comply with statutory budget neutrality requirements, the decreased payments made to 340B hospitals for drugs in CY 2018 through September 27, 2022 were budget neutralized by corresponding increased payments to all hospitals for non-drug items and services starting in CY 2018 through CY 2022. When these past payments were subsequently increased through the one-time lump sum payments in 2024, the same budget neutrality requirements correspondingly required us to decrease the non-drug item and services payments made from CY 2018 through CY 2022.

To reduce the burden on providers of immediately offsetting the estimated $7.8 billion of increased non-drug item and services payments made from CY 2018 through CY 2022, we decided to implement the offset prospectively over the course of several years. As we explained in the CY 2026 OPPS/ASC proposed and Final Remedy rules (88 FR 44088, 88 FR 77172), this approach was similar to the original budget neutrality adjustment in the 340B Payment Policy that increased the payment for every non-drug item and service for CY 2018 through CY 2022 to offset the downward adjustment in the payment rate for drugs acquired under the 340B Program. We finalized in the Final Remedy rule that, beginning in CY 2026, we would reduce the conversion factor for non-drug items and services to all OPPS providers—except any hospital that enrolled in Medicare after January 1, 2018 (as described further below)—by 0.5 percent each year until the total offset was reached (which we estimated would take approximately 16 years (88 FR 77181)).

As we stated in the CY 2026 OPPS/ASC proposed and Final Remedy rule, we believed an annual reduction in the conversion factor would be appropriate because it would balance the need to address the past payments for non-drug items and services to ensure budget neutrality while also ensuring that the offset was not immediately overly financially burdensome on impacted entities, which we believed would be the case if we were to apply an adjustment for the full offset amount in a single year. (88 FR 44087, 88 FR 77170).

Accordingly, the Final Remedy rule finalized changes to the calculation of the OPPS conversion factor applicable to non-drug items and services beginning in CY 2026. Specifically, we codified a 0.5 percent reduction in the OPPS conversion factor applicable to non-drug items and services in the regulations by adding new paragraph (b)(1)(iv)(B)(*12*) to § 419.32. This 0.5 percent reduction would remain in effect until the estimated payment reduction reached $7.8 billion, which we estimated would occur in CY 2041. For a fuller discussion of the CY 2026 adjustment to the conversion factor for non-drug items and services in the Final Remedy rule, see the Final Remedy rule (88 FR 77156 through 77170).

In finalizing our policy to apply a prospective adjustment, we recognized that any hospital that enrolled in Medicare after January 1, 2018 (hereinafter referred to as a ''new provider'') received less than the full amount of the increased non-drug item and service payments made during that time than they otherwise would have received if enrolled prior to that date (88 FR 44080). We therefore exempted these providers from the prospective rate reduction, which was predominantly designed to account for non-drug item and service payments made during CY 2018 through CY 2022. As we explained, that meant that we would calculate payment rates for new providers using the conversion factor before applying the 0.5 percent annual reduction to the conversion factor for non-drug items and services that would apply for hospitals that are not ''new providers'' for purposes of this policy. For the purpose of designating a new provider, we defined the date of enrollment in Medicare as the provider's CMS certification number (CCN) effective date. We codified the exclusion of these new providers from the prospective payment adjustment to the conversion factor for the duration of its application in the regulations by adding new paragraph (b)(1)(iv)(B)(*12*) to § 419.32.

In the CY 2026 OPPS/ASC proposed rule we indicated that we had reviewed our provider enrollment and OPPS billing records, and based on that data, the providers that would be subject to the proposed payment reduction were listed in Addendum R—340B Remedy Offset Providers to the CY 2026 OPPS/ASC proposed rule. We welcomed comment on the providers listed in this Addendum, and based upon those comments, we proposed to publish a final Addendum R—340B Remedy Offset Providers for CY 2026 in the CY 2026 OPPS/ASC final rule with

comment period. We indicated in the CY 2026 OPPS/ASC proposed rule that providers not included on this list (providers that began billing Medicare under the OPPS after January 1, 2018) would not be subject to the proposed payment reduction. For a complete discussion of our exclusion of new providers from the prospective payment adjustment, we refer readers to the Final Remedy rule (88 FR 77182 through 77185).

We did not receive public comments on Addendum R—List of Providers Subject to the Reduction to Non-Drug Item and Service Payments as a Result of the 340B Payment Policy Remedy, and therefore, we are finalizing as proposed.

h. CY 2026 Prospective Payment Adjustment

When we considered how to recover the estimated $7.8 billion in increased estimated payments made for non-drug items and services from 2018 through 2022, we considered several alternatives, including those that would fully recover that amount in a single year. For example, in the Proposed Remedy rule, we rejected an aggregate payment approach that would have implemented budget neutrality requirements through an immediate lump sum recoupment that would mirror the lump sum remedy payment because ''[s]uch an approach would require immediate, and in many cases large, retroactive recoupments from the majority of OPPS hospitals and would impose a substantial, immediate burden on these hospitals as well as an uncertain impact on beneficiaries'' (88 FR 44083). To avoid imposing such a burden, we elected to reduce payments prospectively until the total offset was reached, which we estimated would take approximately 16 years.

As we discussed in the CY 2026 OPPS/ASC proposed rule, we considered various methods to implement this prospective payment reduction. In the Final Remedy rule, we made the prospective payment reduction by applying an annual 0.5-percentage point downward adjustment to the OPPS conversion factor. We stated in the CY 2026 OPPS/ASC proposed rule that we continued to believe that a downward adjustment to the OPPS conversion factor was a fair way to apportion the $7.8 billion reduction amongst hospitals, because relative hospital utilization of non-drug items and services beginning in 2026 would approximately track the relative hospital utilization for non-drug items and services each hospital received from CY 2018 through CY 2022. We stated in the CY 2026 OPPS/ASC proposed rule that the future payment reductions would thus roughly offset the windfall those hospitals received from increased payments from CY 2018 through CY 2022. And we noted our statement in the final rule that the approach of tethering future payments for each non-drug item and service for each hospital ''was similar to the original budget neutrality adjustment in the 340B Payment Policy that increased the payment for every non-drug item and service for CY 2018 through CY 2022 to offset the downward adjustment in the payment rate for drugs acquired under the 340B Program'' (88 FR 77172). Finally, the methodology does so with minimal administrative burden to hospitals and beneficiaries, because we can effectuate the offset by calculating the appropriate payment reduction in annual rulemaking without requiring any subsequent action by hospitals. Other methodologies—like delivering a series of demand letters to each hospital for a share of the $7.8 billion—would not only require us to recalculate the proper amount to apportion to each hospital but would most likely require large lump-sum payments from hospitals. We expressed concern that hospitals might find it financially disruptive to promptly write such one-time checks depending on their financial circumstances when we issue the demand letters, whereas implementing a percentage reduction in their Medicare OPPS payments over a number of years would be less disruptive. Such one-time payments would impose greater administrative burden on hospitals and possibly introduce complications to our collections efforts if hospitals delay payments.

We stated in the CY 2026 OPPS/ASC proposed rule that while we continued to believe that a reduction to the OPPS conversion factor was the best way to effectuate budget neutrality, we had reconsidered whether the timing we selected—a 0.5-percentage point annual reduction for approximately 16 years—best achieved the overarching goal of the Final Remedy rule, which is to restore hospitals to as close to the financial position they would have been in had the 340B Payment Policy never been implemented as is reasonably feasible. In particular, we indicated that the further away from CY 2018 through CY 2022 the adjustments extend, the less likely that relative hospital utilization of non-drug items and services would correlate to the relative hospital utilization of non-drug items and services from 2018 through 2022. In other words, a hospital's utilization of non-drug items and services is likely going to diverge more from CY 2018 utilization in CY 2041 than it would in CY 2031 or CY 2026. And the more a hospital's utilization of non-drug items and services diverge, the less hospitals would be restored to as close as possible to the approximate financial position as they would have been in had the 340B Payment Policy never been implemented. By beginning the decrease to non-drug item and service payments in CY 2026, there is already an 8-year delay between the first year of the OPPS 340B payment policy and the first year of the prospective offset. Thus, the longer it takes for us to fully recover the $7.8 billion, the less likely that the relative burden on hospitals from the adjustments will match the relevant benefits those hospitals previously received. In addition, it is possible that at least some hospitals that benefited from the increased payments from CY 2018 through CY 2022 will leave the market before 2041, increasing the risk that the remaining hospitals might ultimately account for a larger share of the payment reductions than they would have if the annual reduction to the OPPS conversion factor concluded sooner. We noted that the $7.8 billion dollar figure calculated in the Final Remedy rule (88 FR 77150) does not and will not account for inflation and does not contain interest even though the prospective offset is occurring many years after both the start of the 340B payment policy in CY 2018 as well as the lump sum remedy payments made in CY 2024.

Accordingly, effective January 1, 2026, we proposed to revise the annual reduction to the OPPS conversion factor under § 419.32(b)(1)(iv)(B)(*12*) used to determine the payment amounts for non-drug items and services from 0.5 percent to 2 percent. Under this revised rate, we expected it would take approximately 6 years to reach the total offset of $7.8 billion (see Table 62 in the CY 2026 OPPS/ASC proposed rule (90 FR 33636)). Consistent with the Final Remedy rule, we noted, this reduction would not apply to new providers. We also included on Table 62 in the CY 2026 OPPS/ASC proposed rule, and Table 109 in this final rule with comment period, an alternative policy option with an annual reduction of 5 percent which would reach the total offset of $7.8 billion in approximately 3 years.

We acknowledged that this revised annual reduction would be a change to the approach we finalized in the Final Remedy rule and that, at that time, we considered but did not adopt a

suggestion from a commenter requesting that we recover the amount over a shorter timeframe than 16 years. (88 FR 77179.) We indicated that our basis for not accepting the suggestion in the Final Remedy rule was that the 0.5 percent rate/16-year timeframe ''properly reverses the increased payments for non-drug items and services to comply with statutory budget neutrality requirements while at the same time accounting for any reliance interests and ensuring that the offset is not overly burdensome to impacted entities''. We stated in the CY 2026 OPPS/ASC proposed rule that we now thought that this balancing insufficiently accounted for the main premise of the Final Remedy rule, which is to implement the budget neutrality requirement in a manner that restores affected 340B covered entity hospitals to the financial position they would have been in had the 340B Payment Policy not been implemented in 2018. For the reasons explained in the CY 2026 OPPS/ASC proposed rule, we believed that a 6-year time frame better achieved that main goal. We also stated that we believed this time frame balanced better that goal and our budget neutrality obligations against hospital burden and reliance interests. We provided as an example that the 16-year timeframe is more than three times longer than the 5-year period the 340B Payment Policy was in place. The 6 years we expect that the revised policy would be in effect, by contrast, is closer to the timeframe the 340B Payment Policy was in place, and the 2 percent payment reduction we proposed is still well below the 3.19 percent payment increase hospitals received for that time period (82 FR 52624 through 52625). We also stated that because we proposed this policy in advance of CY 2026 and before any rate reductions go into effect for OPPS and Medicare Fee for Service payments, any reliance interests hospitals have in a policy that has not been implemented yet for these payment systems would be minimal and outweighed by the other considerations discussed in the CY 2026 OPPS/ASC proposed rule.

TABLE 109: ILLUSTRATION OF THE PROPOSED 2 PERCENT AND ALTERNATIVE 5 PERCENT CONVERSION FACTOR ANNUAL REDUCTION TO THE OPPS NON-DRUG ITEMS AND SERVICES BEGINNING CY 2026 TO MAINTAIN BUDGET NEUTRALITY IN THE CY 2026 OPPS/ASC PROPOSED RULE

	CY 2026	CY 2027	CY 2028	CY 2029	CY 2030	CY 2031
Total Applicable OPPS Non-Drug Item and Service Spending (millions)	51,400	55,700	60,300	65,200	70,200	75,500
Proposed 2 Percent Payment Reduction Amount (millions)	1,100	1,200	1,300	1,400	1,600	1,169*
Proposed 2 Percent Payment Reduction Estimated Total Cumulative Offset (millions)	1,100	2,300	3,600	5,000	6,600	7,769
Alternative 5 Percent Payment Reduction Amount (millions)	2,700	3,000	2,069**			
Alternative 5 Percent Payment Reduction Estimated Total Cumulative Offset (millions)	2,700	5,700	7,769			

* Note, the final year's offset is estimated to be less than 2 percent in order to meet the total estimated offset of $7.769 billion. The amounts illustrated in Table 109 reflect the total amount of reduced spending, which includes both Medicare and Beneficiary cost-sharing.
** Note, the final year's offset is estimated to be less than 5 percent in order to meet the total estimated offset of $7.769 billion. The amounts illustrated in Table 109 reflect the total amount of reduced spending, which includes both Medicare and Beneficiary cost-sharing.

BILLING CODE 4120–01–C

We received public comments on these proposals. The following is a summary of the comments we received and our responses.

Comment: Most commenters opposed our proposal. Many of these commenters referenced previous comments they or others made to the Final Remedy rule alleging that CMS lacks the statutory authority to budget neutralize the remedy and that CMS' approach to budget neutrality is inconsistent with its past practices. Based on these reasons, these commenters requested that we abandon the proposal and rescind the regulation codified in that rule, 42 CFR 419.32(b)(1)(iv)(B)(*12*) to implement the offset.

Response: We direct readers to our responses to those comments in the

Final Remedy rule at 88 FR 77150 through 77194.

Comment: One commenter stated that CMS does not have the legal authority to apply an additional 2.0-percentage point reduction to OPPS rates because, under section 1833(t)(3)(C)(iv) of the Act, CMS is required to update OPPS rates by the same update that applied under the IPPS. Since CMS has already finalized an update of 2.6 percent for the FY 2026 IPPS, the commenter stated that CMS must apply the same update to the OPPS for CY 2026 without further changes.

Response: We disagree with the commenter, who conflates two distinct statutory obligations. Under section 1833(t)(3)(C) of the Act, the Secretary updates the conversion factor used to determine the payment rates under the OPPS on an annual basis by applying the OPD fee schedule increase factor. The commenter is correct that we have implemented that fee schedule increase factor under section 1833(t)(3)(C)(iv) of the Act by applying the hospital inpatient market basket percentage increase applicable to hospital discharges under section 1886(b)(3)(B)(iii) of the Act, subject to sections 1833(t)(17) and (t)(3)(F) of the Act. As we explain in section XXVI. of this final rule with comment period, we continue to do so by increasing the OPD fee schedule for CY 2026 by a factor of 2.6 percent—the same as applicable to hospital discharges for fiscal year 2026 under section 1886(b)(3)(B)(iii) of the Act.

The commenter is incorrect, however, that the statute makes the fee schedule increase factor the only update the Secretary can make to the OPPS conversion factor each year. Section 1833(t)(3)(C)(iii) of the Act, for example, authorizes the Secretary further to modify the conversion factor in certain circumstances based on adjustments to service mix. And many parts of the OPPS statute require the Secretary to budget neutralize particular payments, including sections 1833(t)(2)(E), (t)(9)(B), and (t)(14)(H) of the Act. Since the very first payment rule implementing OPPS, we have implemented OPPS's budget neutrality requirements by adjusting the conversion factor. (65 FR 18476 (implementing budget-neutrality requirement)). We have long rejected the commenter's suggestion that section 1833(t)(3)(C)(iv) of the Act means that the conversion factor cannot account for these budget neutrality requirements, explaining that the ''[s]tatute requires us to ensure that a conversion factor for covered OPD services in subsequent years is an amount equal to the conversion factor applicable to the previous year before any increases due to the market-basket increase.'' (67 FR 66788.) We accordingly applied that same policy when we first decreased payments for 340B-acquired drugs in the CY 2018 OPPS/ASC final rule with comment period, which we budget neutralized through an upward adjustment of 1.0319 to the OPPS conversion factor on top of the annual OPD fee schedule increase factor under 1833(t)(3)(C)(iv) of the Act. (82 FR 59353 through 59371). Even on the commenter's statutory theory, then, that increase—in place from CY 2018 through CY 2022—was itself unlawful and so should be repaid.

Comment: One commenter stated that the statute does not authorize CMS to impose what the commenter characterized as a compressed repayment schedule or heightened offset and disagreed with CMS' stated justification for it, which the commenter characterizes as ''that a shorter offset period is preferable because it more closely aligns with the duration of the unlawful 340B payment policy''. The commenter contended that the statute does not authorize CMS to ''calibrate budget neutrality offsets based on temporal symmetry or administrative convenience'' and that such an approach ignores the disproportionate impact that a 2 percent annual reduction will have on hospitals that did not receive full remedy payments, including those with high Medicare Advantage penetration or limited exposure to the original 340B cuts.

Response: We disagree with the commenter that the statute prohibits the proposed budget neutrality adjustment schedule or amount, or that our rationale for that proposed schedule is flawed based on hospitals' reduced payments for drug acquired under the 340B program from CY 2018 through 2022. As we explained in the CY 2026 OPPS/ASC proposed rule, the main reason we proposed to shorten the timeframe for the adjustment was to recognize that OPPS utilization changes over time. As we have explained, the purpose of any rate reduction is to unwind the 3.19 percent increase budget neutrality hospitals received from CY 2018 through 2022. (For example, 88 FR 77170.) Current OPPS utilization for a hospital is a reasonable proxy for past OPPS utilization for a hospital, but it becomes a less accurate proxy the longer the recoupment timeframe. The commenter is wrong to suggest that our proposed policy would pursue symmetry for symmetry's sake. By pointing out that adjusting rates by 2 percent for 6 years is similar to the initial policy of adjusting rates by 3.19 percent for 4 years, we meant to illustrate both that the proposed larger decrease would still be the type of ''adjustment'' to payment rates authorized by sections 1833(t)(2)(E), (9)(B), and (14)(H) of the Act (88 FR 77158 through 77159) and that the reduction would still fall within the type of year-to-year rate fluctuations in OPPS rates that hospitals should reasonably expect in annual ratemaking. Nor was it inherently unreasonable for us to consider how long it will take fully to implement the adjustment; no statute requires us to implement our budget neutrality obligations so that a policy in place only from CY 2018 through 2022 still drives payment rates in 2040. Finally, the commenter is correct that not all hospitals received 340B remedy payments and might have been impacted differently by the payment reductions for 340B-acquired drugs from CY 2018 through 2022. But the commenter is wrong that we should treat those hospitals differently here. We accounted for the fact that some hospitals received payment reductions for 340B-acquired drugs from CY 2018 through 2022 by making remedy payment to those hospitals. By contrast, and as noted above, the payment cuts in 42 CFR 419.32 (b)(1)(iv)(B)(*12*) unwinds the 3.19 percent budget neutrality increase hospitals received from CY 2018 through 2022. We are applying this cut only to the hospitals who received the full increase. Because hospitals received the 3.19 percent increase from CY 2018 through 2022 regardless of whether they also were paid less for 340B-acquired drugs, we disagree that whether hospitals were paid less for 340B-acquired drugs is relevant here.

Comment: Many commenters noted that in the Final Remedy rule we rejected annual percent reductions greater than 0.5 based on our conclusion that a 0.5 percent reduction ''properly reverses the increased payments for non-drug items and services to comply with statutory budget neutrality requirements while at the same time accounting for any reliance interests and ensuring that the offset is not overly burdensome to impacted entities''. (88 FR 77179). These commenters critiqued our subsequent determination in the CY 2026 OPPS/ASC proposed rule that the 0.5 percent reduction ''insufficiently accounted for the main premise of the Final Remedy rule which is to implement the budget neutrality requirement in a manner that restores affected 340B covered entity hospitals to the financial position they would have been in had the 340B Payment Policy

not been implemented in 2018'' and our conclusion that ''a 6 year time frame better achieves that main goal'' and ''balances better that goal and our budget neutrality obligations against hospital burden and reliance interests''. These commenters stated that CMS does not sufficiently explain how it reassessed the relationship between budget neutrality obligations, hospital reliance interests, and the financial burden on providers and that CMS has attributed insufficient weight to the reliance interest and hospital burden side of the equation. One commenter accused CMS of a ''bait-and-switch'' because it changed its position after initially rejecting the proposal for a quicker recoupment and faults CMS for not offering any new facts or circumstances not known to CMS when it published the Final Remedy rule that would warrant a change in policy. That commenter suggested that CMS failed to provide a rational basis for its position change, because another policy best achieves CMS' stated goal: reprocessing of all claims for the period in which the unlawful policy was in effect.

Commenters also raised several alleged reliance interests. They emphasized that we finalized the 0.5 percent reduction in the Final Remedy rule and that they have relied on that amount in good faith in the nearly 2 years since to engage in financial planning and long-term investment decisions. These commenters challenged CMS' contention that any reliance interests hospitals have in a policy that has not been implemented yet would be minimal because the proposal to increase the offset was made in advance of CY 2026 and before any rate reductions go into effect for OPPS and Medicare Fee for Service payments. These commenters stated that this fails to account for the long-term, multi-year nature of hospital budgeting and they described the many expenditures (opening new facilities, buying new medical equipment, hiring staff and expanding services lines, etc.) they have allegedly made based on the 0.5 percent reduction. Commenters maintained that CMS recognized their reliance interests in the Final Remedy rule when it delayed the start of the offset to 2026 so that hospitals could ''assess and prepare for the new payment rates that will be calculated using a reduced conversion factor''. One commenter stated that the reliance interest discussed in the Final Remedy rule is ''clearly the reliance interest on continued, stable payments in the OPPS'' and that CMS took this interest into account by deciding not to impose the 0.5 percent reduction until 2026 ''allowing adequate time for impacted parties to assess and prepare for the new payment rates that will be calculated using a reduced conversion factor''. The commenter contended that the CY 2026 OPPS/ASC proposed rule not only entirely fails to address hospitals' reliance interest as envisioned in the Final Remedy rule but also undermines the separate reliance interests that CMS allowed to be built from the date of the Final Remedy rule's publication to the CY 2026 OPPS/ASC rule's publication. The commenter stated that the budget process for CY 2026 is already materially complete and a roughly 2-month planning period (assuming a November OPPS/ASC final rule with comment period release) is simply not reasonable and would have drastic consequences without the ability to plan or adjust. Another commenter argued that CMS cannot ignore these considerations, ''which informed CMS' choice in 2023 to adopt a lengthy recovery period and to extend the implementation of even a 0.5 percent reduction from 2025 to 2026, giving hospitals over 2 years to prepare.''

Response: While we disagree with many of the arguments these commenters raise, we are persuaded by the commenters to the extent that we will not finalize in CY 2026 our proposal to increase to 2 percent the 0.5 percent adjustment in 42 CFR 419.32(b)(1)(iv)(B)(*12*). We currently anticipate delaying a change for just 1 year. Thus, while we will retain the original 0.5 percent adjustment in the conversion factor in CY 2026, hospitals should anticipate that we will implement a larger adjustment (such as 2 percent or other adjustment greater than 0.5 percent) beginning in CY 2027. Any change to the adjustment in 42 CFR 419.32(b)(1)(iv)(B)(*12*) that applies beginning in CY 2027 would go through the usual annual rulemaking process.

We do so based on the unique circumstances here. We finalized outside the standard annual rulemaking cycle a 0.5 percent reduction to payment rates that would not begin for 2 years and explained that we were giving hospitals that second year before implementing the payment reduction in part ''to provide entities additional time to prepare for the new payment rate'' (88 FR 77180). It might not have been unreasonable for hospitals to do just as we suggested and used that additional year to prepare for only a 0.5 percent payment decrease in CY 2026—particularly because our decision to announce the rate adjustment outside the usual calendar year rulemaking process and then delay that rate adjustment was atypical. While hospitals may be correct that they often plan their budgets in advance, section 1833(t)(9)(A) of the Act requires us to update OPPS rates annually, and section 1871(e)(1)(B) of the Act requires only that changes to Medicare payment rates be finalized at least 30 days before they take effect. We therefore often implement policy changes with significant financial impacts for the upcoming year through the annual rulemaking process, and nothing here should be construed to suggest a change to that general practice, nor should hospitals expect us to generally give them additional time to prepare for policy changes beyond what the Congress prescribes in the statute. As we noted above, we changed hospital payments by over 3 percent through the annual ratemaking process for CY 2018 as part of our budget neutralization obligations, and so a 1.5 percentage point change through those same rulemaking procedures falls within the type of annual rate fluctuations hospitals can reasonably expect. Neither the APA nor the Medicare statute imposes a one-way ratchet in which we may increase payments through annual rulemaking but not decrease them through annual rulemaking.

Also important to our decision is that giving hospitals an additional year before any increase to the adjustment still fulfills the rationale underlying the Final Remedy rule that motivated our proposed change: to implement the budget neutrality requirement in a manner that restores affected 340B covered entity hospitals to the financial position they would have been in had the 340B Payment Policy not been implemented in 2018. We proposed to increase the adjustment to 2 percent so that the hospital utilization that will ultimately determine each hospital's payment reduction would better map onto payment increase from CY 2018 through 2022. We are still beginning the reductions this year, and we doubt that 1 year of reduced reductions will materially undermine that rationale. Nor do we agree that because reprocessing every claim would more perfectly place hospitals in the position they would have been in absent the 340B Payment Policy than the repayment policy we adopt here, it makes relying on that general approach irrational. We already explained the flaws with claims reprocessing (88 FR 77153 through 77154), including significant delays and administrative burden on us and hospitals alike. We anticipate that adopting in future years a larger percent prospective payment reduction will

better serve that goal than a 0.5 percent reduction while still avoiding the pitfalls of full claims reprocessing.

We also disagree with commenters to the extent that they suggest more explanation would be required, including any suggestion that we need to define precisely the relationship between budget neutrality obligations, hospital reliance interests, and the financial burden on providers. As the U.S. Supreme Court recently explained, when changing positions, ''the agency does not need to show that the reasons for the new policy are *better* than the reasons for the old one'' or ''provide a more detailed justification than what would suffice for a new policy created on a blank slate'' so long as it remains ''cognizant'' that ''longstanding'' policies might have engendered reliance interests. *Food & Drug Admin.* v. *Wages & White Lion Invs., L.L.C.,* 604 U.S. 542, 570 (2025) (internal quotation marks omitted and emphasis in original). We identified in the CY 2026 OPPS/ASC proposed rule that we were proposing to change our policy, and we gave an explanation for why we believed our proposed new policy reasonably balanced the relevant interests. We specifically considered reliance interests in the CY 2026 OPPS/ASC proposed rule, and in this final rule with comment period we are finalizing to delay by an additional year any increase in payment reductions to further respect any reliance interest. Any change to the adjustment in 42 CFR 419.32(b)(1)(iv)(B)(*12*) that applies beginning in CY 2027 would go through the usual annual rulemaking process. Nothing more is required.

Comment: One commenter suggested that CMS failed in the CY 2026 OPPS/ASC proposed rule to adequately to grapple with why CMS did not implement a commenter's suggestion to impose percent reductions greater than 0.5 in the Final Remedy rule. In the CY 2026 OPPS/ASC proposed rule, we explained that ''[o]ur basis for not accepting the suggestion was that the 0.5 percent rate/16-year timeframe 'properly reverses the increased payments for non-drug items and services to comply with statutory budget neutrality requirements while at the same time accounting for any reliance interests and ensuring that the offset is not overly burdensome to impacted entities''. (90 FR 33635 [quoting 88 FR 77179]) In the commenter's estimation, this incorrectly suggests that CMS' response to these comments as being the entire rationale for selecting the 0.5 percent reduction when the Final Remedy rule had additional rationales. The commenter identified these rationales as ''potential impact on vulnerable providers and their communities'', ''standard remedial principles'' and ''basic fairness''. The commenter stated that CMS fails to account for these concerns in the CY 2026 OPPS/ASC proposed rule ''leaving affected communities without any information about how the proposed rule is lawful, much less fair''.

Response: We disagree that our proposal failed to properly account for the potential impact on vulnerable providers and their communities, standard remedial principles, and basic fairness when proposing a new schedule for the budget neutrality adjustment. As an initial matter, we did not cite any of those rationales as the basis for rejecting a higher reduction rate in the Final Remedy rule. Instead, as we noted in the CY 2026 OPPS/ASC proposed rule, our explanation turned on the fact that a 0.5 percent reduction complies with budget neutrality requirements while accounting for reliance interests and burden on providers. We cited remedial principles and basic fairness when rejecting a suggestion that we recoup the full $10.6 billion payment we were also making to providers who had previously acquired drugs through the 340B program instead of simply unwinding the $7.8 billion payment increase to hospitals from CY 2018 through 2022 to place hospitals in as close to a position as they would have been absent the 340B Payment Policy. We also addressed vulnerable patients and communities in response to a suggestion that we exempt from the budget neutrality policy hospital groups that serve certain communities. We explained in part that the payment reductions were the mirror image of prior payment increases that would otherwise be a windfall to providers—windfalls that those communities would share in the cost of funding through taxes, premiums, and cost sharing. We did not propose to revisit either policy and so there was no reason to revisit those rationales.

In any event, our proposal was consistent with those principles. As we noted, ''standard remedial principles and basic fairness support situating hospitals as closely as possible to the financial situation they would have been in absent the 340B Payment Policy'' (88 FR 77179)—the same rationale we explained in the CY 2026 OPPS/ASC proposed rule supports a quicker recoupment period (90 FR 33635). And we continue to be sensitive to the potential impact on vulnerable patients, their communities, and providers. The proposed decreases were the mirror image of prior payment increases—in fact, they would be even more so if we ultimately implement a quicker recoupment period. Additionally, as we noted in the Final Remedy rule, the statute authorizes transitional outpatient payments to cancer and children's hospitals that insulate them from the payment impact of policies like these. (88 FR 77181)

Comment: One commenter, reiterating their comments to the Final Remedy rule, suggested that CMS abandon reliance on ''inapt'' payment rules and its budget neutrality proposal altogether and instead invoke section 1870 of the Act (42 U.S.C. 1395gg), which describes when and how CMS may recover incorrect payments it makes on behalf of an individual. The commenter explained that this authority would allow CMS to forgo recovery where the individual for whom the incorrect payment was made was without fault and making the adjustment would ''defeat the purposes of subchapter II or subchapter XVIII or would be against equity and good conscience'' and that it would be appropriate for CMS to exercise this discretion as ''[c]learly the beneficiaries for whom providers received increased payments from 2018 to 2022 were without fault''. The commenter additionally contended that CMS recovering from recipient hospitals is also against equity and good conscience from a broader economic standpoint. The commenter stated that the increased OPPS payments hospitals received have been incorrectly characterized as a ''windfall'' and such a characterization ''does not square with the modest 3.19 percent adjustment that was in place from 2018 to 2022. Over that time period, even a compounded 3.19 percent adjustment would not have kept up with the rate of inflation.'' Finally, the commenter alleged that recoupment is bad policy because it excuses statutory non-compliance. By setting a precedent of financing its remedy payments, the commenter stated that CMS removes an incentive to engage in thoughtful, judicious and textually grounded rulemaking. In the absence of clear statutory authority to offset its remedy payments, the commenter argued that CMS should choose not to do so, and allow the Congress to intervene if it chooses to do so.

Response: We refer readers to our response in the Final Remedy rule to the same commenter's suggestion that we rely on section 1870 of the Act (42 U.S.C. 1395gg) (88 FR 77178). As we explained there, section 1870 of the Act specifies when providers can shift liability to beneficiaries for overpayments, which can in turn be

waived when, among other requirements, liability would ''defeat the purposes of . . . subchapter XVIII or would be against equity and good conscience.'' Section 1870 is silent about the situation here where CMS adjusts future payments through its budget neutrality authority, and the commenter does not suggest we are required to invoke section 1870 of the Act in this circumstance.

We disagree with the commenter's suggestion that the payment statute that we have invoked to make the lump-sum remedy payments—section 1833(t)—is comparatively ''inapt.'' That is the payment statute governing the OPPS, and as we explained in the Final Remedy rule, sections 1833(t)(2)(E) and (14) of the Act authorize the $10.6 billion in payments that compensate hospitals for the reduced payments they received. (88 FR 77156 through 77161.) Those authorities, however, have budget neutrality consequences, which we have implemented through prospective payment decreases. (88 FR 77169 through 77182.) The commenter does not explain how section 1870 of the Act interacts with those authorities, or how abandoning section 1833(t) of the Act in favor of section 1870 of the Act would have allowed us to make billions of dollars in lump-sum remedy payments. And even if the commenter could, we do not find under section 1870 of the Act that honoring the budget neutrality requirements under section 1833 of the Act through our policy here would ''defeat the purposes of . . . subchapter XVIII'' of the Act. Disregarding the Congress' instruction that OPPS generally be budget neutral here would instead defeat the purposes of subchapter XVIII—one of which is sustainability.

Nor do we find under section 1870 of the Act that honoring the budget neutrality requirements under section 1833 of the Act through the budget neutrality policy we proposed would be against equity and good conscience. It is incongruous to suggest that the 3.19 percent increase from 2018 through 2022 is ''modest'', but our proposed 2 percent decrease or finalized 0.5 percent decrease to unwind that increase would be against equity and good conscience. As we have repeatedly stated, even a 2 percent decrease would be within the usual annual payment fluctuations. With regards to inflation, the OPPS primarily accounts for increased costs through other mechanisms like the annual market basket increase and wage index, not through the payment changes for hospitals from budget neutralization requirements. We maintain that allowing hospitals to keep past payment increases due to the 340B Payment Policy would be a windfall in the sense that hospitals would be retaining payment *increases* after we unwound the corresponding payment *decreases* that both justified and authorized them. *See, for example,* windfall, Mirriam Webster Online (''an unearned . . . gain or advantage'').[84]

Finally, we disagree with the commenter's policy statements against budget neutrality. As an initial matter, such arguments cannot overcome the text of the statute. And the commenter is wrong that we are financing remedy payments to the extent the commenter means that we are charging hospitals for the cost of the Final Remedy rule. We rejected comments suggesting that we budget neutralize the full $10.6 billion remedy payments in the Final Remedy rule. Instead, we are simply unwinding the $7.8 billion in payment increases from CY 2018 through 2022 predicated on the invalidated payment decreases to place all parties as close as we can to the situation they would have been in if the 340B Payment Policy had never been adopted. Doing so does not excuse statutory non-compliance or disincentivize us from seeking the best reading of the statute. Rather, as we have noted, it ensures that the only money actually spent is money authorized to be spent by the statute and avoids strategic behavior on behalf of regulated entities. (88 FR 77176.)

Comment: The same commenter stated that section 1833(t)(14)(A) of the Act creates a ''workaround'' to section 1833(t)(14)(D) of the Act, which requires CMS to conduct acquisition cost surveys to assess in setting the drug APC payment rates, that ''absolves'' the Secretary from actually using data resulting from the acquisition cost surveys. In the commenter's view, this allows the Secretary to ''game the system'' for any rates set under section 1395l(t)(14) of the Act. The commenter alleged that there is no information in the CY 2026 OPPS/ASC proposed rule to suggest the pricing information was set with data obtained from compliance with section 1833(t)(14)(D) of the Act or its ''workaround'' in 1833(t)(14)(A) of the Act. The commenter claimed that this lack of transparency prevents meaningful comment and does not adequately explain the agency's authority to budget neutralize. The commenter concluded that ''[a]s the requisite survey is just being rolled out in this same Proposed Rulemaking, these 'budget neutrality offset adjustments' should not be allowed to continue because the agency is under no obligation to neutralize the effects of its 340B payments cuts that the Supreme Court found to be in violation of another statute.''

Response: The commenter correctly identifies that 1833(t)(14) of the Act authorizes two options to set drug APC payment rates, depending on the circumstance, though we would not necessarily characterize either as a ''workaround'' for the other. As the Supreme Court explained, section 1833(t)(14)(A)(III)(i) of the Act ''applies if [CMS] collects 'hospital acquisition cost survey data' from hospitals'' under paragraph (D), and section 1833(t)(14)(A)(III)(ii) of the Act applies if we ''do not conduct a survey of hospitals' acquisition costs and if acquisition cost data are therefore 'not available.' '' *Am. Hosp. Ass'n* v. *Becerra,* 596 U.S. 724, 734 (2022). Because we have not yet completed a survey under paragraph (D), we have set payment rates under section 1833(t)(14)(A)(III)(ii) of the Act, just as we have for two decades. We explained that policy and how we set rates under section 1833(t)(14)(A)(III)(ii) of the Act in the CY 2026 OPPS/ASC proposed rule (88 FR 33628 through 33629) and published for comments the proposed rates in Appendices A and B to that proposed rule.[85] The commenter does not identify any flaw with those explanations, and we disagree that doing so inadequately explains those rates or failed to provide adequate information for comment, or that by following the statutory process we have ''game[d] the system.'' As we have previously explained, we do not rely on section 1833(t)(14)(A)(III)(i) or (ii) of the Act for the payment adjustment here, but instead our budget neutralization authority.[86] We explained at length how we arrived at the reduction and the amount of the total reduction, and the commenter does not identify any flaws with that methodology besides reiterating its disagreement with our statutory interpretation. We therefore disagree that we have provided insufficient information for comment.

Comment: One commenter stated that CMS has not provided meaningful notice of its intent to recoup because CMS has not provided affected hospitals with concrete information for review and consideration. To support this contention, the commenter focuses on CMS' use of the words ''estimated'' and

[84] *https://www.merriam-webster.com/dictionary/windfall.*

[85] Available at *https://www.cms.gov/medicare/payment/prospective-payment-systems/hospital-outpatient/regulations-notices/cms-1834-p.*

[86] *See* 88 FR 77169 through 77181; *see also Id.* at 77156 through 77161; 90 FR 33633 through 33634.

''approximately'' in the CY 2026 OPPS/ASC proposed rule's discussion of payment for non-drug items and services in CY 2018 through CY 2022 and stated that ''3 years later the agency is still talking in estimates and approximations''. The commenter alleged a discrepancy between an estimated impact of $1.6 billion that is listed in the narrative and an approximate impact of $1.9B noted for FY 2018 in Table 61 on the same page. The commenter also compared Table 4 in the Final Remedy rule, describing the repayment schedule, scheduled to begin in CY 2026, that would take back 0.5 percent per year from 2026–2041 and Table 62 in the CY 2026 OPPS/ASC proposed rule, describing the repayment schedule that would take back 2 percent per year from 2026–2031 and alleged that ''[s]eemingly, something has changed in the math. The 2023 0.5 percent reduction dollar amounts in Table 4 multiplied by 4 yield very different numbers than what appears in Table 62. Yet, no meaningful explanation walks the public through these numbers, nor is there any confirmation that the $7.769 billion was the actual reinstatement. It is referred to as an ''estimate'' in the Table 62''. The commenter stated that 42 U.S.C. 1395hh(a)(2) requires the agency to undergo notice and comment rulemaking regarding anything that affects a provider's payment and that this is separate from its other obligations regarding notice and comment requirements in the Administrative Procedure Act (APA) (5 U.S.C. 553). The commenter stated that in order for there to be proper notice under either statute, the notice must provide sufficient detail for the reviewer to fully understand the substantive change to be made and that that is not possible because the commenter does not know why CMS is using estimates for data that was completed more than a year ago or why CMS' numbers changed from the 2023 Final Remedy rule to the CY 2026 OPPS/ASC proposed rule.

Response: We disagree that using the terms ''estimated'' and ''approximately'' means that this rulemaking fails to meet any requirement to engage in notice-and-comment rulemaking. The commenter does not suggest that we failed adequately to explain how we arrived at our estimations or approximations or that we gave the commenter inadequate information to comment on our methodology or data. Instead, the commenter appears to read into sections 1870 of the Act and the APA a categorical ban on setting policy based on estimations or approximations. We are unaware of any such requirement, nor would one make sense in a prospective payment system where the statute requires us routinely to set policy based on future predictions. We routinely approximate the results of our calculation rather than describe every calculation to the cent. However, for the readers awareness, in the Final Remedy rule, we state that our estimate of the total amount of additional spending on non-drug item and service spending ''rounds to $7.8 billion, but is more precisely $7,768,568, 239'' (88 FR 77153). And here, it was more precise to refer to estimations when we did. We are unwinding payment increases for non-drug items and services between CY 2018 and 2022 based on the rate increase for those items and services that CMS estimated in 2017 would redistribute the amount it estimated it would save for drugs acquired through the 340B program. We are not recouping the actual amount CMS saved by decreasing payments for drugs acquired through the 340B program, which, as we explained in the Final Remedy rule, exceeded our 2017 expectations. (*See* 88 FR 77177 and 77187.)

That difference between estimated payments and actual payments also explains the alleged discrepancy between the estimated impact of $1.6 billion for CY 2018 that is listed in the narrative and the approximate impact of $1.9 billion for that year listed in Table 61 on the same page of the CY 2026 OPPS/ASC proposed rule. As we explained in the CY 2026 OPPS/ASC proposed rule, to effectuate the budget neutrality provisions of the OPPS in CY 2018 rulemaking, CMS redistributed the $1.6 billion it estimated in 2017 that it would save in CY 2018 in reduced drug payments to increase nondrug item and service payments (90 FR 33632). That is the $1.6 billion number we reference in the narrative and that contributes to the $7.8 billion we intend to recoup through budget neutrality policy. Again, actual savings on drug payments in CY 2018 through CY 2022 exceeded our projections. (88 FR 77177 and 77187.) Table 61 of the CY 2026 OPPS/ASC proposed rule summarizes the actual reduced 340B drug payment amounts, which we derived from Addendum AAA published with the Final Remedy rule. (90 FR 33632). Thus, adding the amounts in Table 61 together totals to $10.6 billion—the total remedy payments we made to hospitals that acquired drugs through the 340B program at a reduced payment rate. Nor has anything changed in the math between Table 4 in the Final Remedy rule and the projected recoupments in Table 62 in the 2026 OPPS/ASC proposed rule. Since Table 4 was published in 2023, CMS has updated its payment projections for Medicare based on additional data. Table 62 uses those updated projections when estimating the impact of a 2 percent reduction, rather than just multiplying the original 0.5 percent reduction dollar amount by 4 like the commenter.

Comment: One commenter referenced CMS' statement in the CY 2026 OPPS/ASC proposed rule that the main premise of the Final Remedy rule was to implement the budget neutrality requirement in a manner that restored affected 340B covered entity hospitals to the financial position they would have been in had the 340B Payment Policy not been implemented in 2018. The commenter stated that there is no need to restore affected 340B entity hospitals to the financial position they would have been in had the 340B payment policy not been implemented in 2018 because that restoration already occurred with the early 2024 lump sum payments.

Response: We do not agree that the lump sum payments paid to hospitals in 2024 restored 340B covered entity hospitals, or any OPPS-paid hospital, to the financial position they would have been in had the 340B Payment Policy not been implemented from 2018 through 2022. The lump sum payment does not account for the additional payments for non-drug items and services that were made to all hospitals from CY 2018 through CY 2022 to achieve budget neutrality for the reduced 340B drug payments.

Comment: Many commenters stated that CMS' proposal failed to appreciate the financial strain the proposed increased reduction would impose on hospitals that are already operating on tight margins. These commenters claimed that CMS' proposal failed to account for adverse financial trends that have occurred since 2023, such as increased costs of labor, supplies and pharmaceuticals, aging hospital infrastructure, inflation, inadequate government reimbursements that lag behind inflation, eroding margins, supply chain disruptions, an aging population with more complex, chronic conditions, the lingering effects of the COVID–19 PHE and impending economic strains such as the OBBBA's reduction to Medicaid and Health Insurance Marketplace payments, IRA drug reductions, Medicare sequestration, and HRSA's recently noticed 340B Rebate Model. These commenters stated that the financial burden imposed by the proposal would threaten the services that they provide.

Response: We recognize that hospitals may have experienced financial strain in recent years, but other statutory provisions address many of the issues hospitals raise like inflation or the medical complexity of the Medicare population, and we do not believe that relaxing OPPS's budget neutrality provisions is the proper policy response. With respect to interest specifically, we note that the first of the increased payment amounts occurred in 2018, whereas the last of the recoupment amounts may not be until after 2030—in effect a more than 10-year loan without any attached interest. Ultimately, though, we cannot ignore the financial windfall that hospitals received from 2018 to 2022 and our statutory obligation to recover that windfall. We hope that delaying for a year any increase to the 0.5 percent reduction will allow hospitals to do any necessary planning and help to mitigate any financial strain

Comment: One commenter contended that the CY 2026 OPPS/ASC proposed rule fails to address how a 2 percent reduction is not ''overly burdensome'' when it previously concluded in the Final Remedy rule that reductions of 1.25 percent, 2.25 percent, and 3 percent would have been.

Response: We have addressed above why we reevaluated in the CY 2026 OPPS/ASC proposed rule our burden analysis in the Final Remedy rule and believed a larger offset percentage was more appropriate and better achieved the overarching goal of the Final Remedy rule, which is to restore hospitals as close to the financial position they would have been in had the 340B Payment Policy never been implemented. However, also for the reasons we have described above, we are maintaining the 0.5 percent reduction for CY 2026.

Comment: Many commenters characterized the offset, whether increased or not, as a penalty, arguing that it is unfair for hospitals to be penalized for mistakes or past unlawful actions by CMS.

Response: The offset is not a penalty on hospitals. Rather, it is a rate adjustment under section 1833(t) of the Act that accomplishes an incremental and interest free recovery of windfall payments to hospitals. It is calibrated to the amount of extra money hospitals received and thus achieves payment precision, not punishment. It returns hospitals to the position they would have been absent the unlawful 340B Payment Policy and ensures that the only money ultimately spent is the money authorized to be spent by the statute.

As we stated in the Final Remedy rule, in determining the specific annual percent reduction by which to recover the funds from hospitals, our goal was to appropriately balance our statutory budget neutrality obligations against hospitals' burden and reliance interests. The adjustment we proposed in the CY 2026 OPPS/ASC proposed rule to the percent reduction we finalized in the Final Remedy rule is our attempt to more precisely balance these elements.

Comment: Multiple commenters expressed concern about the disproportionate financial effect the increased rate of recoupment would have on safety-net providers, rural providers, 340B hospitals and teaching hospitals and stated that the recoupment would reduce resources available to provide services to their patients, particularly to low-income, rural, underserved and vulnerable populations.

Response: As we said in response to similar concerns expressed by commenters in the Final Remedy rule, we recognize that our proposal to decrease future payments will have a financial impact across all hospitals paid under the OPPS, except for new providers, and we are particularly mindful of the impact on vulnerable patients and communities. But, as we also stated in the Final Remedy rule, future decreases are, on aggregate, the mirror image of prior payment increases that would otherwise be a windfall to providers and such windfalls are not cost-free; the costs are ultimately borne by beneficiaries and taxpayers—including the vulnerable patients and communities served by the hospitals to which commenters themselves refer. In fact, this remedy will reduce any beneficiary cost sharing obligations, and incrementally reduce beneficiary Part B premiums, for all Medicare beneficiaries, including the vulnerable patients to which the commenters refer. (88 FR 77180 through 77181)

Comment: Many commenters expressed concern that, if implemented, the 2 percent reduction would effectively wipe out the CY 2026 OPPS rate increase. Others referenced recent estimates from the Congressional Budget Office predicting a new 4 percent Medicare sequestration to begin in January 2026 and argued that, coupled with the proposed 2 percent reduction, outpatient hospital services would be reduced by as much as 8 percent in CY 2026.

Response: Commenters are referencing distinct statutory obligations or potential future statutory obligations. Section 1833(t)(3)(C)(ii) of the Act requires the Secretary to update the conversion factor used to determine the payment rates under the OPPS on an annual basis by applying the OPD fee schedule increase factor. Sections 1833(t)(9)(B), (t)(14)(H) and (t)(2)(E) of the Act require that the OPPS be a budget neutral system, and we decline the commenters' invitation to implement those budget neutrality provisions in a way that defeats the purpose of other statutory policies.

Comment: Many commenters recognized CMS' statutory obligation to implement a budget neutral recoupment but, based on concern about the financial impact of a two percent reduction, requested the reduction to remain at 0.5 percent. Some commenters requested that the reduction be no larger than one percent while others requested 0.25 percent. One commenter suggested that if we could not maintain the 0.5 percent reduction then we should exempt non-340B hospitals entirely and specifically, physician owned hospitals. Nearly all commenters opposed our suggested alternative of a 5 percent reduction.

Response: We appreciate commenters' acknowledgement of our statutory obligation to budget neutralize the recoupment and their suggestions for alternative annual percent reductions to do so. With respect to a 0.25 percent reduction, we do not believe that an approximately 40 year recoupment timeframe would appropriately implement the budget neutrality requirement in a manner that restores affected 340B covered entity hospitals to the financial position they would have been in had the 340B Payment Policy not been implemented in 2018. This would be over 6 times the timeframe that the 340B Payment Policy was in place and exacerbates the concern that was driving the proposed 2 percent reduction—that the longer it takes to complete the recoupment, the more likely hospital utilization or other payment factors will change from CY 2018 through 2022, and so the less each hospital's total payment reduction will correspond with that hospitals' payment increase from CY 2018 through 2022.

As for the other suggestions, we are this year finalizing a 0.5 percent reduction for the reasons we discussed previously. That is consistent with these commenters' suggestion of a 0.5 percent reduction, and less than the alternative 1 percent reduction. As we noted above, however, we anticipate implementing a larger adjustment (such as 2 percent or other adjustment greater than 0.5 percent) in next year's rulemaking, and we can consider additional alternatives at that time.

Comment: One commenter stated that CMS is required to pay interest under 42 U.S.C. 1395*l*(j) for the remedy payments from the Final Remedy rule. The commenter stated that section 1395*l*(j) of the Act provides that interest is due when a provider received an OPPS payment ''in excess of or less than the amount of payment that is due'' that is not corrected within 30 days and that CMS paid 340B hospitals ''less than the amount of payment that [was] due''. The commenter alleged that although the Supreme Court's decision applied only to 2018 and 2019, since CMS has never disputed that the rule was just as unlawful in 2020, 2021, and 2022, CMS must pay affected hospitals interest at the rate determined under 42 U.S.C. 1395*l*(j), with the clock on interest beginning no later than July 15, 2022.

Response: The amount of the remedy payments, including interest on the remedy payment, is outside the scope of this rulemaking. In any event, we have addressed the issue of interest under 42 U.S.C. 1395*l*(j) in the Final Remedy rule and in subsequent court briefing in *Board of Trustees of University of Alabama* v. *Becerra,* 22–cv–3367 (D.D.C.), which we incorporate here. (88 FR 77167 through 77168.) At least one court has agreed with our interpretation. *See Bd. of Trs. of Univ. of Alabama* v. *Becerra,* No. CV 22–3367 (RC), 2025 WL 2239289 (D.D.C. Aug. 6, 2025).

Comment: One commenter stated that for the same reasons we exempted new providers from the adjustment, we should exempt new procedures from the adjustment. The commenter stated that a procedure that did not exist or was not yet billable in CY 2018 through 2022 should be excluded from the reduction. The commenter suggested that recoupment be done ''through individual hospital payment terms, not a nonspecific process linked to ongoing or future services''. In the event CMS does not adopt the commenter's suggestion, the commenter alternatively suggested that CMS adopt the 5 percent reduction to expedite repayment.

Response: A similar request was made by a commenter in the Final Remedy rule. As we said in our response to that comment, ''exempting new items and services from this payment adjustment may distort providers' incentives to prescribe items and services based on whether they existed between CY 2018 and 2022 rather than whether they are medically appropriate, potentially impacting the care providers give to beneficiaries. And the more exceptions we create, the more complicated we make the payment reduction. Complications increase the risk of delays or errors in implementing this final rule''. (88 FR 77180.) This continues to be true. With respect to the commenter's recommendation that we consider adopting a 5 percent reduction to expedite repayment, we do not believe that it would be appropriate to implement such a reduction in CY 2026 for the same reasons that we are not implementing a 2 percent reduction in CY 2026, as we have explained previously.

Comment: Several commenters offered an alternative method of recoupment in which CMS would incrementally increase the 340B repayment percentage to shorten the overall repayment period but do so in a way that accommodates other financial pressures in the industry. In such a scenario, the commenters suggested, the CY 2026 reduction would remain at 0.5 percent since there are other planned cuts for Medicare providers due to sequestration, and CMS could plan to move to 0.75 and then one percent in future years if the sequester cuts are mitigated by Congress.

Response: We thank the commenter for their suggestions. While we disagree that we should implement our budget neutrality obligations in a way that frustrates other Congressional payment directives such as sequestration, we have partially adopted this commenter's proposed phased approach by retaining a 0.5 percent reduction for CY 2026 while delaying any larger reduction until CY 2027. As we note, we believe an additional year is sufficient time for providers to adequately prepare for the change in policy.

Comment: Many commenters posited that CMS failed to consider a sufficient number of alternative timeframes and adequately explain why it selected 3 years as the one alternative it did consider. As a result of this failure, these commenters stated that the 6-year timeframe CMS did propose is arbitrary, inadequately justified, and does not satisfy the APA's requirement to consider reasonable alternatives. These commenters stated that CMS needs to consider more alternatives, including those longer than 16 years, and explain why 6 years is the appropriate timeframe compared to them.

Response: For the reasons we have explained, we believe that our proposal properly acknowledged that it was shifting course and adequately explained the rationale behind the proposed shift. We disagree that we needed to propose more options to consider. Ultimately, commenters ask us to, but neither the APA nor the Act requires us to, consider every possible alternative. We are just required to consider significant ones. In the CY 2026 OPPS/ASC proposed rule, we discussed the initial 0.5 percent reduction for 16 years, a 2 percent reduction for 6 years, and a 5 percent reduction for 3 years. (90 FR 33636.) We proposed that a 2 percent reduction for 6 years adequately balanced budget neutrality against hospital burden and reliance. (90 FR 33635.) Hospitals have not raised additional interests we failed to consider, but convinced us that we could better account for their reliance interests, which we have done by retaining the 0.5 percent reduction for CY 2026 this while planning to raise the reduction to a larger percentage (such as 2 percent) beginning in CY 2027. In the course of finalizing this rule, we also considered commenters' suggestion that we extend the budget neutrality policy, such as implementing a 0.25 percent reduction for 40 years. As we explained above, any extension would likely exacerbate differences between how much hospitals received in excess payments from CY 2018 through 2022 and their total reductions in CY 2026 and thereafter, thus undermining our goal of returning hospitals as close as reasonably possible to the position they would have been absent the 340B Payment Policy. We have rejected this option.

While there are many possible specific payment reductions, the particular amount is necessarily an exercise in line-drawing. Commenters raise no specific reduction range that we fail to address in this final rule with comment period, and we disagree that there are significant other options commenters do not identify that we have not considered.

Comment: Several commenters requested that CMS establish an appeals process for hospitals that disagree with cost assignments. One commenter indicated that the CY 2026 OPPS/ASC proposed rule states that CMS will direct MACs to remedy the hospital 340B drug underpayments with budget neutrality adjustments between 2026–2031 but it does not clearly state how those remedy payments fit into the existing claims, reimbursement, and appeal structures. The commenter recommended that CMS state in the final rule that (1) dissatisfied hospitals will have a clear path to appeal the amount of CMS' budget neutrality adjustment recoupments and describe the appeals process; and (2) that CMS intends the final rule to be subject to judicial review. Specifically, the commenter stressed, CMS should state that reliance on section 1833(t)(2)(E) of the Act as authority for its proposed adjustments is not intended to create any implication that the adjustments are

not subject to judicial review under section 1833 (t)(12) of the Act.

Response: With respect to a process for hospitals to appeal the amount of CMS' budget neutrality adjustment recoupments, we believe these adjustments, like the initial adjustments in 2018, ultimately adjudicate claims for payment and so any available appeal would follow the procedures set out under section 1869 of the Act and its implementing regulations. We respectfully decline the commenter's request to opine in advance on how the jurisdictional provisions of section 1833(t)(12) of the Act might impact the Departmental Appeals Board's or courts' jurisdiction. Those bodies will adjudicate their jurisdiction in specific cases in the ordinary course with the benefit of appropriate briefing.

Comment: One commenter suggested that if we proceed with the two percent reduction that we should conduct robust monitoring for any unintended consequences and consideration of flexibilities or targeted supports for safety-net and teaching hospitals that may be disproportionately affected.

Response: We agree that it is important to monitor the effects of the increase for any unintended consequences and will take the commenter's suggestion under consideration for future rulemaking. We also appreciate the commenter's suggestion with respect to future consideration of flexibilities or targeted supports for hospitals based on that monitoring. We will consider this for future rulemaking.

Comment: One commenter recommended that CMS consider stronger regulation of the pricing by pharmaceutical companies to allow hospitals to get more of a discount ''since pharmaceutical companies continue to have high profit margins while non-profit health systems continue to struggle to provide 340B drugs to many underserved patients.''

Response: This rule implements budget neutralization requirements in section 1833(t)(14) of the Act based on the Final Remedy rule, and the CY 2026 OPPS/ASC proposed rule did not propose additional regulations of pharmaceutical prices. This comment is therefore out of its scope.

Comment: A few commenters supported our proposal to revise the annual reduction to the OPPS conversion factor under § 419.32(b)(1)(iv)(B)(*12*) used to determine the payment amounts for non-drug items and services from 0.5 percent to 2 percent. One commenter stated that faster repayment would ensure greater certainty in repayment amounts and also, due to the time value of money, reduce the strain on the Federal budget.

Response: We thank commenters for their support of our proposal. As we note, while we are not finalizing that proposal at this time, we anticipate proposing a larger offset beginning in CY 2027.

Comment: Several commenters expressed concern about the implications of the proposed 2 percent reduction in OPPS non-drug payments for providers contracting with Medicare Advantage (MA) organizations. Commenters stated that CMS has provided remedy payments under traditional Medicare following *AHA* v. *Becerra* in accordance with the Medicare Program; Hospital Outpatient Prospective Payment System: Remedy for the 340B-Acquired Drug Payment Policy for calendar years 2018–2022 OPPS/ASC rule.[87] Further, commenters shared that MA organizations, who adopted a similar reimbursement rate for 340B-acquired drugs during that same time period, may not have made the corresponding remedy payments to providers. Commenters emphasized that this could leave hospitals disadvantaged as they may not have received the benefit of a remedy payment from MA organizations, and they may be subject to the new prospective reductions to provider reimbursement for non-drug payments. Several commenters stated that this dynamic unfairly shifts resources to MA organizations and compounds the financial strain on hospitals, particularly given high and growing MA enrollment.

Several commenters recommended that CMS take additional steps in this CY 2026 OPPS/ASC final rule with comment period to mitigate the impact of the proposed adjustment. Commenters specifically urged CMS to clarify that MA organizations are expected to make hospitals whole for 340B-acquired drugs administered between 2018–2022 and to prevent the prospective reductions from being passed through to providers absent repayment by MA organizations.

Response: We appreciate commenters' feedback on this issue. Under the MA program, CMS provides a capitated prospective payment to MA organizations to provide coverage to enrollees, and the MA organizations pay providers for this care. CMS calculated and paid CY 2018–2022 MA rates under the Advance Notice and Rate Announcement,[88] and those MA rates reflected the FFS policies as of the time they were finalized.

We also appreciate commenters' concerns regarding the potential implications of the Final Remedy rule for MA organizations' payments to providers. We understand from commenters that many MA organizations base their privately contracted reimbursement rates with providers on FFS rates set by CMS and that existing MA contracts may not account for the remedy provisions established in the Final Remedy rule. However, CMS establishes payment policies and payment rates for services payable under FFS through a separate, distinct process that is not directly related to the terms of private contracting arrangements between MA organizations and providers. Further, section 1854(a)(6)(B)(iii) of the Act prohibits CMS from requiring an MA organization to contract with a particular hospital, physician, or other entity to furnish items and services, including 340B-acquired drugs, or requiring a particular price structure for payment under such a contract. Providers and MA organizations may engage in any contract negotiations or re-negotiations independently of CMS.

Section 1852(a)(2) of the Act mandates that MA organizations reimburse non-contract providers at least the amount they would have received under Medicare FFS. We expect that MA organizations will comply with this statutory requirement. We note that the Final Remedy rule excluded providers that enrolled in Medicare after January 1, 2018, from the prospective rate reduction.

After consideration of public comments received, we are finalizing our proposal to adopt Addendum R—340B Remedy Offset Providers for CY 2026. For the reasons discussed above, we are not finalizing for CY 2026 our proposal to revise the reduction to the OPPS conversion factor under 42 CFR 419.32(b)(1)(iv)(B)(*12*) used to determine the payment amounts for non-drug items and services for hospitals for whom this adjustment applies from 0.5 percent to 2 percent. However, also for the reasons discussed above and in the 2026 OPPS/ASC proposed rule, we anticipate implementing a larger percent reduction (such as 2 percent or other reduction greater than 0.5 percent) beginning in CY 2027. Any change to the adjustment

[87] *https://www.federalregister.gov/documents/2023/11/08/2023-24407/medicare-program-hospital-outpatient-prospective-payment-system-remedy-for-the-340b-acquired-drug.*

[88] Prior Advance Notice and Rate Announcement documents are available at *https://www.cms.gov/medicare/payment/medicare-advantage-rates-statistics/announcements-and-documents.*

in 42 CFR 419.32(b)(1)(iv)(B)(*12*) that applies beginning in CY 2027 would go through the usual annual rulemaking process. Please see Table 110, for an estimate of the impacts of the offset for CY 2026.

We note that the status indicators impacted by this finalized policy include, SI = J1, J2, P, Q1, Q2, Q3, R, S, S1, T, U, V. These status indicators generally capture the non-drug items and services impacted by a change in the OPPS conversion factor. Status indicator S1 will be newly effective starting in CY 2026 per our policy finalized in section V.B. of this final rule with comment period. The new ''S1'' status indicator represents products that were once packaged into procedures assigned to a status indicator of ''S''. This aligns with our goal of reducing non-drug item and service spending to situate hospitals in the approximate financial position they would have been in absent the 340B payment policy. Additionally, we note that although New Technology APCs are assigned to a status indicator of ''S'' or ''T'' they are assigned to fixed payment rates that are unaffected by this reduction to the OPPS conversion factor.

TABLE 110: ILLUSTRATION OF THE FINALIZED 0.5 PERCENT CONVERSION FACTOR REDUCTION TO THE OPPS NON-DRUG ITEMS AND SERVICES FOR CY 2026 TO MAINTAIN BUDGET NEUTRALITY

	CY 2026
Total Applicable OPPS Non-Drug Item and Service Spending (millions)	51,400
Finalized 0.5 Percent Payment Reduction Amount (millions)	275

* Note, the final year's offset is estimated to be less than 0.5 percent in order to meet the total estimated offset of $7.769 billion. The amounts illustrated in Table 62 reflect the total amount of reduced spending, which includes both Medicare and Beneficiary cost-sharing.
** Note, we only included the first year's estimated impact, as we expect to reconsider a larger offset percentage in future rulemaking, which would altern the course of the timeline recoupment.

i. Impact of the Prospective Offset to the OPPS Conversion Factor on the ASC Payment System

As we noted in the CY 2023 OPPS/ASC final rule with comment period (87 FR 71975), budget neutrality adjustments to the OPPS conversion factor do not impact the ASC conversion factor. However, we also noted in that rule that revisions to the OPPS conversion factor can have an indirect impact on the ASC payment system because the ASC standard rate setting methodology adopts OPPS payment rates and the device portion (or device offset amount). Specifically, because the device portion for device-intensive procedures is held constant with the OPPS and is not calculated with the ASC conversion factor, a reduction to the OPPS conversion factor will lower the device portion for device-intensive procedures, including the payment rates for device-intensive procedures under the ASC payment system. We further clarified, however, that any decline in expenditures for device portions under the ASC payment system would be fully offset through the ASC weight scalar, which would increase payment for the non-device portions of all covered surgical procedures and certain covered ancillary services. Together, that means that reducing the OPPS conversion factor can mean that we pay relatively less for device-intensive procedures and relatively more for other surgical procedures.

In the Final Remedy rule (88 FR 77179), a commenter referenced this discussion in the CY 2023 OPPS/ASC final rule with comment period and requested that CMS provide an analysis of the impact of the remedy's proposed OPPS conversion factor reduction on ASC payment rates. Specifically, the commenter requested additional details on the magnitude of the change in payments for device-intensive procedures with and without the OPPS conversion factor reduction. As further discussed in section XIII. of the CY 2026 OPPS/ASC proposed rule, historically, the ASC payment system has generally adopted the final OPPS conversion factor for a calendar year in determining the OPPS payment rates that are used for determining the device portions for device-intensive procedures under the ASC payment system. A 2 percent reduction in OPPS payment rates would otherwise reduce ASC payments for device-intensive procedures by approximately 1 percent; the non-device portions for all covered surgical procedures would otherwise be increased to offset reduction to device portions for device-intensive procedures. For CY 2026, we estimated that the reduction to device portions would be approximately $42 million and would otherwise increase the ASC weight scalar by 0.1 percent.

However, we proposed to set ASC payment rates based on the OPPS payment rates without the remedy's 2 percent prospective offset. In other words, we proposed that these payment rates would be based on OPPS payment rates for hospitals that enrolled in Medicare after January 1, 2018. We acknowledged that in the CY 2023 OPPS/ASC proposed rule we stated that ''the revised OPPS conversion factor will have an impact on the ASC payment system'', but we were responding to a comment asking about how unwinding the 340B Payment Policy would reduce the OPPS conversion factor prospectively beginning in CY 2023, not about how we should approach any temporary reduction in the OPPS conversion factor to unwind the 340B Payment Policy in place from CY 2018 through 2022 (87 FR 71975). In this context, we believed that selecting the higher OPPS payment rate is more consistent with the history

and logic of both the ASC payment system as well as the Final Remedy rule.

As for the ASC payment system, including the 2-percent prospective offset would not be an accurate reflection of the device costs of covered surgical procedures in the ASC setting. Further, we are concerned beneficiaries could have access issues to certain device-intensive procedures in the ASC setting, such as total knee arthroplasty and total hip arthroplasty, if we maintained a 2 percent reduction to the payment rates for device-intensive procedures for each calendar year we applied the prospective offset. The total payment for device portions of device-intensive procedures under the ASC payment system is roughly 27 percent of total ASC payments.

We stated in the CY 2026 OPPS/ASC proposed rule that this proposed policy would also be consistent with the logic of the Final Remedy rule. As we explained in that rule, the reduction to the OPPS payment rate is intended to comply with statutory budget neutrality requirements and was implemented in a manner to place hospitals in as close to the financial position they would have been in had this policy not been implemented in CY 2018 as is reasonably feasible. By contrast, it would not satisfy any similar statutory budget neutrality requirements to pass through this reduction to ASC payment rates. Nor would changing *ASC* payment rates for the next several years help place *hospitals* affected by the 340B Payment Policy in the same position as they have been absent that policy. Even if the agency wanted to extend the Final Remedy rule's logic to ASCs and try to place ASCs—none of whom ever challenged the 340B Payment Policy—in the same position as they would have been absent that policy, we doubt that passing through the 2 percent OPPS payment reduction to the device portion of ASC payment rates would do so. That is because, as discussed in the CY 2026 OPPS/ASC proposed rule, doing so would have a purely distributional impact on ASC payment rates that financially favors procedures that are less device-intensive. Therefore, as discussed in section XIII.C.4. of the CY 2026 OPPS/ASC proposed rule, we proposed that the OPPS payment rates used for rate setting under the ASC payment system for CY 2026 and subsequent years would not include the two percent prospective offset to the OPPS conversion factor as a result of the 340B remedy offset that we proposed to implement in that rule.

We received public comments on these proposals. The following is a summary of the comments we received and our responses.

Comment: Two commenters supported our proposal to set ASC payment rates based on OPPS payment rates without the two percent prospective offset. Both commenters stated that not doing so would result in inaccurate payments for device costs in covered surgical procedures in the ASC setting.

Response: We thank commenters for their support.

After consideration of public comments, we are finalizing, without modification, our proposal to set ASC payment rates based on the OPPS payment rates without the remedy's prospective offset.

8. All-Inclusive Rate (AIR) Add-On Payment for High-Cost Drugs Provided by Indian Health Service and Tribal Facilities

a. Background

In the CY 2000 OPPS final rule (65 FR 18434), CMS implemented the PPS for hospital outpatient services furnished to Medicare beneficiaries, as set forth in section 1833(t) of the Act. In the CY 2000 OPPS final rule, we noted that the OPPS applies to covered hospital outpatient services furnished by all hospitals participating in the Medicare program with a few exceptions. We identified one of these exceptions as ''outpatient services provided by hospitals of the Indian Health Service (IHS).'' We stated that these services would ''continue to be paid under separately established rates which are published annually in the **Federal Register**'' and, in the CY 2002 OPPS/ASC final rule (66 FR 59856), we finalized a revision to § 419.20 (Hospitals subject to the hospital outpatient prospective payment system) by adding paragraph (b)(4), which specifies that hospitals of the IHS are excluded from the OPPS.

In the intervening years, IHS and tribal facilities have been paid under the separately established All-Inclusive Rate (AIR). On an annual basis, the IHS calculates and publishes, in the **Federal Register**, calendar year reimbursement rates.[89] Due to the higher cost of living in Alaska, separate rates are calculated for Alaska and the lower 48 States. For CY 2025, the Medicare Outpatient per visit rate is $718 for the lower 48 States (hereinafter referred to as ''the lower 48 AIR'') and $1,193 for Alaska.[90]

In the CY 2025 OPPS/ASC final rule with comment period (89 FR 94280 through 94286), we finalized a policy to separately pay IHS and tribal hospitals for high-cost drugs, biologicals, and radiopharmaceuticals (hereinafter referred to as ''drugs'' for the purpose of this section) furnished in hospital outpatient departments through an add-on payment in addition to the AIR using the authority under which the AIR is calculated.[91] We note that the AIR and the add-on payment are paid out of the Part B trust fund and are not subject to OPPS budget neutrality.

We defined high cost drugs (that is, drugs qualifying for the add-on payment) for the purpose of the policy as all drugs covered under Medicare Part B and for which payment would otherwise be made under the OPPS whose per day cost exceeds two times the lower 48 AIR amount in effect at the time of the release of each year's OPPS/ASC final rule. In the CY 2025 OPPS/ASC final rule with comment period, this amount was identified as $1,334 (2) times the CY 2024 lower 48 AIR of $667).

To determine the calculated per day cost for each drug HCPCS code, we employed a methodology similar to our longstanding methodology used to calculate the per day cost of drugs for OPPS payment purposes. Specifically, to calculate the per day cost for CY 2025, we used an estimated payment rate based on the ASP methodology payment rate, which for purposes of the policy was generally ASP plus 0 percent (which is the payment rate for separately payable IHS drugs under the policy). We then used the manufacturer-submitted ASP data from the fourth quarter of CY 2023 to determine the per day cost. For drugs that did not have either an ASP-based payment rate or a payment rate based on WAC, we used mean unit cost (MUC) of the items derived from the CY 2023 hospital claims data to determine their per day cost.

We finalized that the amount of the add-on payment for a high-cost drug would be the average sales price (ASP) for the drug with no additional payment (that is, ASP plus zero percent). We note that this add-on payment was implemented on a per-dose basis. In the event ASP pricing information was not available for a particular drug, we paid the WAC plus 0 percent and if WAC pricing information was not available, we paid 89.6 percent of average

[89] *https://www.ihs.gov/BusinessOffice/reimbursement-rates/.*

[90] 89 FR 101607 (December 16, 2024); *https://www.federalregister.gov/documents/2024/12/16/2024-29505/reimbursement-rates-for-calendar-year-2025.*

[91] Sections 321(a) and 322(b) of the Public Health Service Act (42 U.S.C. 248(a) and 249(b)), Public Law 83–568 (42 U.S.C. 2001(a)), and the Indian Health Care Improvement Act (25 U.S.C. 1601 *et seq.*).

wholesale price (AWP). We also adopted a drug packaging threshold exception for biosimilars in which the add-on payment is made for biosimilars whose per-day costs do not exceed the threshold of two times the lower 48 AIR but whose reference products do exceed the threshold.

To implement this policy, we finalized in the CY 2025 OPPS/ASC final rule with comment period a recurring annual process in which the lower 48 AIR in effect at the time of the release of each year's OPPS/ASC final rule with comment period would be used to create a list of drugs qualifying for the add-on payment for the following calendar year. Once the drugs qualifying for the add-on payment were determined, the payment rate for a unit of the drug would be determined in accordance with the above described pricing hierarchy. The results of that process for CY 2025 were displayed in Addendum Q to the CY 2025 OPPS/ASC final rule with comment period. We additionally finalized that during the calendar year, the list of drugs would be modified on a quarterly basis to add new-to-market drugs with per-day costs that exceeded two times the lower 48 AIR and to update qualifying drugs' ASPs. For a full discussion of the AIR add-on payment for high cost drugs provided by IHS and tribal hospitals, we refer readers to the CY 2025 OPPS/ASC final rule with comment period (89 FR 94280 through 94286).

b. AIR Add-On Payment for High-Cost Drugs Provided by IHS and Tribal Facilities Policy for CY 2026

For CY 2026, we proposed to continue to separately pay IHS and tribal hospitals for high-cost drugs furnished in hospital outpatient departments through an add-on payment in addition to the AIR using the authorities under which the AIR is calculated.

We proposed to continue to define high cost drugs (that is, drugs qualifying for the add-on payment) for the purpose of the policy as any drugs covered under Medicare Part B and for which payment would otherwise be made under the OPPS which have per day costs exceeding two times the lower 48 AIR amount in effect at the time of the release of the CY 2026 OPPS/ASC final rule with comment period. For CY 2026, we proposed that if the CY 2025 lower 48 AIR amount was still in effect at the time of the release of the CY 2026 OPPS/ASC final rule with comment period, this amount would be $1,436 (2 times the CY 2025 lower 48 AIR of $718).

To determine the calculated per day cost for each drug HCPCS code, we proposed to continue using an estimated payment rate based on the ASP methodology payment rate (generally ASP plus 0 percent) and then using the manufacturer-submitted ASP data from the fourth quarter of CY 2024 to determine the per day cost. For drugs that do not have either an ASP-based payment rate or a payment rate based on WAC, we proposed to continue to use the MUC of the items derived from the CY 2024 hospital claims data to determine their per day cost.

With respect to the amount of the add-on payment, we proposed to use the same pricing hierarchy that we adopted in the CY 2025 OPPS/ASC final rule with comment period. For CY 2025, we explained that we adopted a practice of paying the MUC when AWP pricing is not available for a particular drug, and we proposed to continue that practice for CY 2026. We proposed for CY 2026 that the amount of the add-on payment for each dose of a high-cost drug would continue to be the average sales price (ASP) for the drug with no additional payment (that is, ASP plus zero percent). In the event ASP pricing information is not available for a particular drug, we proposed to continue to pay the wholesale acquisition cost (WAC) plus 0 percent. If WAC pricing information is not available, we proposed to continue to pay 89.6 percent of AWP. And, consistent with our practice for purposes of CY 2025, if AWP pricing information is not available, we proposed to pay the MUC. Finally, we proposed to continue the drug packaging threshold exception for biosimilars in which the add-on payment is made for biosimilars whose per-day costs do not exceed the threshold of two times the lower 48 AIR but whose reference products do exceed the threshold.

c. List of Drugs Qualifying for the Add-On Payment for CY 2026

Using two times the lower 48 AIR amount of $718 that is in effect for CY 2025 and applying the above described per-day cost methodology and pricing hierarchy, we included as Addendum Q to the CY 2026 OPPS/ASC proposed rule a preliminary list of the drugs qualifying for the proposed add-on payment and their proposed add on payment rates for CY 2026.

We proposed to create a final Addendum Q in the CY 2026 OPPS/ASC final rule with comment period using the claims data (units used per day) and ASPs available at that time. We also proposed that for HCPCS codes for drugs that are proposed for separate payment in CY 2026, but then have per day costs equal to or less than $1,436 (2 times $718) in the CY 2026 OPPS/ASC final rule with comment period, based on the updated ASPs and hospital claims data used for the CY 2026 OPPS/ASC final rule with comment period, those drugs would still receive separate payment in CY 2026.

Finally, during CY 2026, as we did during CY 2025, we proposed to modify the list on a quarterly basis (January, April, July, October) to add new-to-market drugs with per-day costs that exceed two times the lower 48 AIR and to update qualifying drugs' ASPs.

We received public comments on this proposal. The following is a summary of the comments we received and our responses.

Comment: All commenters supported our proposal to continue to separately pay IHS and tribal hospitals for high-cost drugs furnished in hospital outpatient departments through an add-on payment in addition to the AIR using the authorities under which the AIR is calculated.

Response: We thank commenters for their support.

Comment: One commenter suggested that CMS consider whether the current threshold and payment methodology adequately supports access to the full range of cell and gene therapies (CGTs) that may become available for outpatient administration. The commenter recommends that as experience with CGT delivery in these settings grows, CMS should be prepared to make additional adjustments to ensure that payment policies continue to support access to innovative therapies for underserved populations. The commenter stated that this may include evaluating whether additional reimbursement support is needed for the specialized infrastructure and training requirements associated with CGT administration.

Response: We thank the commenter for their input and will keep it in mind for future rulemaking.

After consideration of the public comments we received, we are finalizing our proposed policy without modification to continue to separately pay IHS and tribal hospitals for high-cost drugs furnished in hospital outpatient departments through an add-on payment in addition to the AIR using the authorities under which the AIR is calculated.

9. Payment for Skin Substitutes

For the public's awareness: as the policies discussed in this section are closely aligned with those addressed in the CY 2026 PFS final rule, the preamble language is largely consistent

across both rules. Because we proposed to apply these policies across both the HOPD, ASC, and non-facility setting, we believe it is important for us to address the issues raised by commenters in a comprehensive way and provide the public with a unified understanding of how these policies would apply under both the PFS and OPPS/ASC payment systems.

While the majority of the discussion is the same in both rules, we have also included additional information specific to technical payment issues that commenters raised in response to the OPPS proposals and did not include certain highly technical issues unique to the PFS that were not proposed or included in the CY 2026 OPPS/ASC proposed rule. That said, our approach here is to provide a comprehensive discussion of the payment for skin substitute products in both the facility and non-facility settings. This approach promotes transparency, consistency, and reflects CMS' strong interest in aligning payment policies across care settings when appropriate. Finally, because the proposals under both rules are substantively the same apart from technical differences arising from the distinct characteristics of each payment system, such as geometric mean costs of APCs and Practice Expense RVUs, we believe it is reasonable and efficient to present a unified discussion of the policy.

a. Background

The CY 2014 Hospital Outpatient Prospective Payment System (OPPS)/Ambulatory Surgical Center (ASC) final rule with comment period describes skin substitutes as ''a category of products that are most commonly used in outpatient settings for the treatment of diabetic foot ulcers and venous leg ulcers'' (78 FR 74930 through 74931). When a procedure utilizing a skin substitute product is performed, providers bill one or more Healthcare Common Procedure Coding System (HCPCS) codes to describe the preparation of the wound, the use of at least one skin substitute product, and application of the skin substitute product through suturing or various other techniques. Specifically, CPT codes 15271 through 15278 describe the application of skin substitutes to various size wounds and anatomical locations.

Recently, several novel industry practices have come to our attention, likely driving substantial and unusual increases in the number of available skin substitute products, the sales and distribution structure for these products, and the rapidity of products changing manufacturer ownership. These industry changes are causing a significant increase in spending under Medicare Part B for skin substitute products in the non-facility setting. According to Medicare claims data, Part B spending for these products rose from approximately $250 million in 2019 to over $10 billion in 2024, a nearly 40-fold increase, while the number of patients receiving these products only doubled. Increases in payment rates, and launch prices for skin substitutes, especially newer products, account for the majority of observed Medicare spending increases on these products. Of note, as part of its workplan, the U.S. Department of Health and Human Services' Office of the Inspector General announced, in November 2024, plans to review Medicare Part B claims for skin substitutes to identify payments that were at risk for noncompliance with Medicare requirements with an expected issue date of fiscal year 2026.[92]

We outlined our HCPCS Level II coding and payment policy objectives for skin substitutes in the CY 2023 OPPS/ASC proposed rule (87 FR 71985) because we concluded it would be beneficial for interested parties to understand our priorities as we work to create a consistent approach for the suite of products we have referred to as skin substitutes. As discussed in the CY 2023 OPPS/ASC proposed rule, we have a number of objectives related to refining our Medicare policies in this area, including: (1) ensuring a consistent payment approach for skin substitute products across the physician office and hospital outpatient department settings; (2) ensuring that appropriate HCPCS codes describe skin substitute products; (3) employing a uniform benefit category across products within the physician office setting, regardless of whether the product is synthetic or comprised of human- or animal-based material, so we can incorporate payment methodologies that are more consistent; and (4) promoting clarity for interested parties on CMS skin substitutes policies and procedures. Interested parties have asked CMS to address what they have described as inconsistencies in our payment and coding policies, indicating that treating clinically similar products (for example, animal-based and synthetic skin products) differently for purposes of payment is confusing and problematic for healthcare providers and patients. These concerns exist specifically within the non-facility setting; however, interested parties have also indicated that further alignment of our policies across the non-facility and hospital outpatient department settings would reduce confusion.

On April 25, 2024, the Medicare Administrative Contractors (MACs) released a proposed Local Coverage Determination (LCD) to provide appropriate coverage for skin substitute grafts used for chronic non-healing diabetic foot and venous leg ulcers. The MACs issued the collaborative proposed Skin Substitute Grafts/Cellular and Tissue-Based Products for the Treatment of Diabetic Foot Ulcers and Venous Leg Ulcers LCD to make sure that Medicare covers, and people with Medicare have access to, skin substitute products that are supported by evidence that shows that they are reasonable and necessary for the treatment of diabetic foot and venous leg ulcers in the Medicare population and that coverage aligns with professional guidelines for appropriately managing these wounds. All of the MACs have delayed the effective date of the final LCDs for cellular and tissue-based products for wounds, or skin substitutes, in diabetic foot ulcers and venous leg ulcers, moving the implementation date across all MAC jurisdictions to January 1, 2026. For details, please see the final LCD, titled: Skin Substitute Grafts/Cellular and Tissue-Based Products for the Treatment of Diabetic Foot Ulcers and Venous Leg Ulcers at: *https://www.cms.gov/medicare-coverage-database/basket/basket.aspx?loadBasketLink=Y&basketLinkId=552.* We note that additional coverage determinations may apply to skin substitute products.

The Medicare statute, regulations, and manual provisions empower the Medicare program to determine if a product is reasonable and necessary for the treatment of a beneficiary's condition and safe and effective, not experimental or investigational, and appropriate and therefore eligible for coverage under Part B. (*See,* for example, section 1833(e) of the Act (42 U.S.C. 1395l(e)), section 1862(a)(1)(A) of the Act (42 U.S.C. 1395y(a)(1)(A)), 42 CFR 411.15(k)(1), 424.5(a)(6), Medicare Program Integrity Manual section 3.6.2.2, Medicare Benefit Policy Manual chapter. 15, section 50.4.1–50.4.3, and Medicare Program Integrity Manual, chapterch.13 section 13.5.3, 13.5.4.) Coverage is a threshold determination that must be satisfied before payment considerations arise. The inclusion of a product in this payment rule or in any payment file does not necessarily imply that a determination has been made by CMS or its contractors that it is reasonable and necessary and meets the other preconditions to Medicare coverage. Any skin substitute could not

[92] *https://oig.hhs.gov/reports-and-publications/workplan/summary/wp-summary-0000894.asp.*

be covered if it were determined to be unreasonable or unnecessary for a particular beneficiary. Similarly, the use of short descriptors and associated FDA regulatory categories [93] may reflect current FDA regulation but are not intended to imply that FDA has determined that a product meets any specific FDA statutory or regulatory requirements. FDA's statutory and regulatory framework, including, for example, FDA's findings that a product is ''safe and effective,'' is not controlling of Medicare's determination under its own authorities of whether a product is ''reasonable and necessary'' for a Medicare beneficiary and meets all preconditions for Medicare coverage and payment. FDA does not make Medicare coverage or payment determinations, nor do FDA statutes and regulations govern Medicare coverage or payment determinations.

Medicare coverage and payment are also governed under separate statutory authorities and serve fundamentally different purposes. Coverage determinations under section 1862(a)(1)(A) of the Act (and related provisions) of the Act establish whether a service is reasonable and necessary while payment methodologies under section 1848 of the Act (and other applicable payment provisions) of the Act establish the amount Medicare will pay for covered physician services based on considerations such as resource similarity. CMS has determined that setting payment rates on a prospective basis is a different inquiry and exercise with a different set of considerations and that it makes sense here to consider how FDA regulates skin substitute products as a factor in grouping those products in various categories as described below.

We continue to believe that our existing payment policies are unsatisfactory, unsustainable over the long term, and rooted in historical practice established two decades ago prior to significant evolutions in medical technology and practice. After holding a town hall [94] to provide an opportunity for public input, including discussion of potential approaches to the methodology for payment of skin substitute products, as well as reviewing several years of comments in response to CY rulemaking in 2023, 2024, and 2025 on this subject, we developed a proposal that addressed our stated objectives as well as many of the comments we have received.

b. Medicare Part B Payment for Skin Substitutes

(1) Payment for Skin Substitutes When Used During a Covered Application Procedure Under the PFS in the Non-Facility Setting

CMS has historically considered skin substitutes to be biologicals for payment purposes under Medicare Part B. The Medicare Prescription Drug, Improvement, and Modernization Act of 2003 (Pub. L. 108–173) (MMA) established a payment methodology for drugs and biologicals under section 1847A of the Act. Under this methodology, a vast majority of drugs and biologicals separately paid under Medicare Part B are paid at the Average Sales Price (ASP) plus six percent. Section 303 of the MMA, titled ''Payment reform for covered outpatient drugs and biologicals,'' amended Title XVIII of the Act by adding new section 1847A of the Act. In part, this section established the use of the ASP to determine the payment limit for drugs and biologicals described in section 1842(o)(1)(C) of the Act (42 U.S.C. 1395u(o)(1)(C)) (that is, drugs or biologicals billed by a physician, supplier, or any other person and not paid on a cost or prospective payment basis) furnished on or after January 1, 2005. Because Medicare is currently paying for most skin substitutes as biologicals using the methodology under section 1847A of the Act, each skin substitute product receives a unique billing code (typically, a Level II HCPCS code) and payment limit.

Section 401 of Division CC, Title IV of the Consolidated Appropriations Act, 2021 (Pub. L. 116–260) (CAA, 2021) amended section 1847A of the Act to add new section 1847A(f)(2) of the Act, which requires certain manufacturers without a Medicaid drug rebate agreement, such as certain manufacturers of skin substitutes, to report ASP data to CMS for calendar quarters beginning on January 1, 2022, for drugs or biologicals payable under Medicare Part B and described in sections 1842(o)(1)(C), (E), or (G) or 1881(b)(14)(B) of the Act (42 U.S.C. 1395rr(b)(14)(B)), including items, services, supplies, and products that are payable under Part B as a drug or biological. Because most skin substitutes are currently paid as biologicals using the methodology described in section 1847A of the Act, manufacturers of these products are currently required to report their ASP data to CMS every quarter. Prior to this, section 1927(b)(3)(A)(iii)(I) of the Act only required manufacturers with a Medicaid drug rebate agreement to report ASP data to CMS for drugs or biologicals described in section 1842(o)(1)(C) of the Act.

Section 1847A of the Act also includes several relevant definitions. While the definition of ''single-source drug or biological'' provided at section 1847A(c)(6)(D) of the Act includes ''a biological,'' sections 1847A(c)(6)(H) and (I) of the Act offer more insight into the meaning of the term for purposes of this section. Subparagraph (I) of such section defines the term ''reference biological product'' as a biological product licensed under section 351 of the PHS Act (42 U.S.C. 262). Subparagraph (H) of section 1847A(c)(6) defines the term ''biosimilar biological product'' as ''a biological product approved under an abbreviated application for a license of a biological product that relies in part on data or information in an application for another biological product licensed under section 351 of the Public Health Service Act.''

Section 1927 of the Act (42 U.S.C. 1396r–8), which is referred to multiple times in section 1847A of the Act, also references section 351 of the PHS Act when referencing biologicals. The title of section 303 of the MMA, which added section 1847A to the Act, refers to ''covered outpatient drugs,'' defined in section 1927(k)(2) of the Act. Subparagraph (B) of section 1927(k)(2) adds biological products to this definition when those products are licensed under section 351 of the PHS Act, among other requirements.

In the CY 2022 PFS final rule, to address the need to establish a payment mechanism for synthetic skin substitutes in the physician office setting and to be responsive to feedback received from commenters, we finalized an approach for payment of each synthetic skin substitute for which we had received a HCPCS Level II coding application. We finalized that those products would be payable in the physician office setting and billed separately from the procedure to apply them using HCPCS A-codes (86 FR 65120).

[93] The term ''FDA regulatory categories'' is used in this final rule with comment period when referring to the basis for CMS' payment policies but is not intended to reflect or imply that the products discussed within this final rule with comment period are characterized as such or grouped together by FDA.

[94] CMS Skin Substitutes Town Hall, which was held virtually on January 18, 2023. More information regarding the CMS Skin Substitutes Town Hall such as links to recording and transcripts is available at *https://www.cms.gov/medicare/payment/fee-schedules/physician/skin-substitutes#:~:text=The%20CMS%20Skin%20Substitutes%20Town,Physician%20Fee%20Schedule%20(PFS).*

(2) Payment for Skin Substitutes Under the Outpatient Prospective Payment System (OPPS)

Prior to CY 2014, all products considered to be skin substitutes were separately paid under the OPPS as if they were biologicals according to the ASP methodology (78 FR 74930 through 74931). In the CY 2014 OPPS/ASC final rule with comment period (78 FR 74938), we unconditionally packaged skin substitute products furnished in the hospital outpatient setting into their associated application procedures as part of a broader policy to package all drugs and biologicals that function as supplies when used in a surgical procedure. As part of the policy to package skin substitutes, we also finalized a methodology that divides the skin substitutes into a high-cost group and a low-cost group, to ensure adequate resource homogeneity among Ambulatory Payment Classification (APC) assignments for the skin substitute application procedures (78 FR 74933). In the CY 2015 OPPS/ASC final rule with comment period (79 FR 66886), we stated that skin substitutes are best characterized as either surgical supplies or devices because of their required surgical application and because they share significant clinical similarity with other surgical devices and supplies.

Skin substitutes assigned to the high-cost group are described by CPT codes 15271 through 15278. Skin substitutes assigned to the low-cost group are described by HCPCS codes C5271 through C5278. Claims billed with primary CPT codes 15271, 15273, 15275, or 15277 are used to calculate the geometric mean costs for procedures assigned to the high-cost group, and claims billed with primary HCPCS codes C5271, C5273, C5275, or C5277 are used to calculate the geometric mean costs for procedures assigned to the low-cost group (78 FR 74935). The graft skin substitute administration add-on codes, which include ''each additional 25 sq cm'' in the description (that is, CPT codes 15272, 15274, 15276, and 15278; HCPCS codes C5272, C5274, C5276, and C5278), are packaged into the payment rates for the primary administration codes.

For CY 2025, each of the HCPCS codes described earlier are assigned to one of the following three skin procedure APCs according to the geometric mean cost for the code: APC 5053 (Level 3 Skin Procedures): HCPCS codes C5271, C5275, and C5277; APC 5054 (Level 4 Skin Procedures): HCPCS codes C5273, 15271, 15275, and 15277; or APC 5055 (Level 5 Skin Procedures): HCPCS code 15273. In CY 2025, the payment rate for APC 5053 (Level 3 Skin Procedures) is $612.13, the payment rate for APC 5054 (Level 4 Skin Procedures) is $1,829.23, and the payment rate for APC 5055 (Level 5 Skin Procedures) is $3,660.97. Table 111 lists the APC assignments and CY 2025 payment rates for the HCPCS codes describing the skin substitute application procedures. This information is also available in Addenda A and B of the CY 2025 final OPPS/ASC rule with comment period (the Addenda A and B are available on the CMS website *https://www.cms.gov/medicare/payment/prospective-payment-systems/hospital-outpatient/regulations-notices*).

TABLE 111: CY 2025 APC ASSIGNMENTS FOR SKIN SUBSTITUTE APPLICATION HCPCS CODES

APC	APC TITLE	HCPCS CODES	FINAL CY 2025 OPPS PAYMENT RATE
APC 5053	Level 3 Skin Procedures	C5271, C5275, C5277	$612.13
APC 5054	Level 4 Skin Procedures	C5273, CPT codes 15271, 15275, 15277	$1,829.23
APC 5055	Level 5 Skin Procedures	CPT code 15273	$3,660.97

Beginning in CY 2016, we adopted a policy where we determine the high-cost/low-cost status for each skin substitute product based on either a product's geometric mean unit cost (MUC) exceeding the geometric MUC threshold or the product's per day cost (PDC), which is calculated as the total units of a skin substitute multiplied by the mean unit cost and divided by the total number of days, exceeding the PDC threshold. We assign each skin substitute that exceed either the MUC threshold or the PDC threshold to the high-cost group. In addition, we assign any skin substitute with a MUC or a PDC that does not exceed either the MUC threshold or the PDC threshold to the low-cost group (87 FR 71976). We also assign skin substitutes with pass-through payment status to the high-cost category.

We assign skin substitutes with some pricing information but without claims data for which to calculate a geometric MUC or PDC to either the high-cost or low-cost category based on the product's ASP plus 6 percent payment rate as compared to the MUC threshold. If ASP is not available, we use the wholesale acquisition cost (WAC) plus 3 percent to assign a product to either the high-cost or low-cost category. Finally, if neither ASP nor WAC is available, we use 95 percent of average wholesale price (AWP) to assign a skin substitute to either the high-cost or low-cost category.

In the CY 2021 OPPS/ASC final rule with comment period, after the first entirely synthetic skin substitute products were introduced into the market, we revised our description of skin substitutes to include both biological and synthetic products (85 FR 86064 through 86067). Any skin substitute product that is assigned to a code in the HCPCS A2XXX series is assigned to the high-cost skin substitute group, including new products without pricing information. New skin substitutes without pricing information that are not assigned a code in the HCPCS A2XXX series are assigned to the low-cost category until pricing information is available to compare to

the MUC and PDC thresholds (89 FR 94247).

In the CY 2014 OPPS/ASC final rule, we also noted that several skin substitute products are applied as either liquids or powders per milliliter or per milligram and are employed in procedures outside of CPT codes 15271 through 15278. We stated that these products ''. . . will be packaged into the surgical procedure in which they are used.'' (78 FR 74930 through 74931).

We also clarified that our definition of skin substitutes does not include bandages or standard dressings, and that, under the OPPS, these items cannot be assigned to either the high-cost or low-cost skin substitute groups or be reported with either CPT codes 15271 through 15278 or HCPCS codes C5271 through C5278 (85 FR 86066).

c. Current FDA Regulation of Products CMS Considers To Be Skin Substitutes

The FDA regulates products that CMS considers to be skin substitutes based on a variety of factors, including product composition, mode of action, and intended use. Relevant categories of FDA regulation for skin substitute products include the following:

(1) Self-Determination Under Section 361 of the PHS Act and the Regulations in 21 CFR 1271 (361 HCT/Ps)

Human Cells, Tissues, and Cellular and Tissue-Based Products (HCT/Ps) are defined in 21 CFR 1271.3(d) as articles containing or consisting of human cells or tissues that are intended for implantation, transplantation, infusion, or transfer into a human recipient. Examples include bone, ligament, skin, dura mater, heart valve, cornea, hematopoietic stem/progenitor cells derived from peripheral and cord blood, manipulated autologous chondrocytes, epithelial cells on a synthetic matrix, and semen or other reproductive tissue. Pursuant to section 361 of the Public Health Service (PHS) Act, FDA promulgated regulations at 21 CFR 1271, *et seq.* that create an electronic registration and listing system for establishments that manufacture HCT/Ps, regulate donor eligibility, and establish current good tissue practice and other procedures to prevent the introduction, transmission, and spread of communicable diseases by HCT/Ps.

A subset of HCT/Ps are those that are regulated solely under section 361 of the PHS Act and the regulations in 21 CFR 1271 (361 HCT/Ps). The FDA has taken a risk-based, tiered approach in regulating HCT/Ps; as the potential risk posed by a product increases, so does the level of oversight (63 FR 26745). Although FDA is authorized to apply the applicable requirements in the Federal Food, Drug, and Cosmetic Act (FD&C Act) and/or the PHS Act to those products that meet the definition of drug, biological product, or device, under a tiered, risk-based approach, HCT/Ps that meet specific criteria or fall within detailed exceptions do not require premarket review and approval. HCT/Ps that do not meet all the criteria in 21 CFR 1271.10(a) are not regulated solely under section 361 of the PHS Act and the regulations in 21 CFR part 1271. Unless an exception in 21 CFR 1271.15 applies, such products are regulated as drugs, devices, and/or biological products under the FD&C Act and/or the PHS Act and are subject to additional regulation, including applicable premarket review and approval. An HCT/P is regulated solely under section 361 of the PHS Act and 21 CFR part 1271 if it meets all of the following criteria (21 CFR 1271.10(a)):

- The HCT/P is minimally manipulated;
- The HCT/P is intended for homologous use only, as reflected by the labeling, advertising, or other indications of the manufacturer's objective intent;
- The manufacture of the HCT/P does not involve the combination of the cells or tissues with another article, except for water, crystalloids, or a sterilizing, preserving, or storage agent, provided that the addition of water, crystalloids, or the sterilizing, preserving, or storage agent does not raise new clinical safety concerns with respect to the HCT/P; and

Either:

++ The HCT/P does not have a systemic effect and is not dependent upon the metabolic activity of living cells for its primary function; or

++ The HCT/P has a systemic effect or is dependent upon the metabolic activity of living cells for its primary function, and:

-- Is for autologous use;

-- Is for allogeneic use in a first-degree or second-degree blood relative; or

-- Is for reproductive use.

Establishments that manufacture 361 HCT/Ps, as defined by 21 CFR 1271.3(e), must register and list their 361 HCT/Ps in the FDA's electronic Human Cell and Tissue Establishment Registration System (eHCTERS), but premarket review and approval by FDA is not needed. However, FDA acceptance of an establishment registration and 361 HCT/P listing form does not constitute a determination that an establishment is compliant with applicable FDA rules and regulations, that the FDA has agreed with the manufacturer's self-determination as a 361 HCT/P, or that the HCT/P is licensed or approved by FDA (21 CFR 1271.27(b)). When this proposed rule refers to 361 HCT/Ps, it generally refers to products where an establishment has self-determined that their product is a 361 HCT/P.[95] If an HCT/P does not meet the criteria set out in 21 CFR 1271.10(a), and the establishment that manufactures the HCT/P does not qualify for any of the exceptions in 21 CFR 1271.15, the HCT/P will be regulated as a drug, device, and/or biological product under the FD&C Act, and/or section 351 of the PHS Act (42 U.S.C. 262), and applicable regulations, including 21 CFR part 1271, and premarket review generally is required.

(2) 510(k) Premarket Notification Submissions, Premarket Approval Applications, and De Novo Requests

''Devices,'', as defined under 21 U.S.C. 321(h)(1), do not achieve their primary intended purposes through chemical action and are not dependent upon being metabolized for the achievement of their primary intended purposes. Devices may be subject to premarket review through: (1) a 510(k) premarket notification submission (510(k)) in accordance with section 510(k) of the FD&C Act and implementing regulations in subpart E of 21 CFR part 807; (2) a premarket approval application (PMA) under section 515 of the FD&C Act and regulations in 21 CFR part 814; or, potentially, (3) a De Novo classification request (De Novo request) under section 513(f)(2) of the FD&C Act and regulations in subpart D of 21 CFR part 860. A 510(k) is a premarket submission made to the FDA to demonstrate that the device to be marketed is substantially equivalent to a legally marketed device that is not subject to premarket approval (sections 510(k) and 513(i) of the FD&C Act). Premarket approval is the most rigorous type of review and generally is required for class III medical devices. Class III devices are those devices for which insufficient information exists to determine that general controls and special controls would provide a reasonable assurance of safety and effectiveness and are purported or represented to be for a use in supporting or sustaining human life or for a use which is of substantial importance in preventing impairment of human health, or present potential unreasonable risk of illness or injury (section 513(a)(1)(C) of the FD&C Act). De Novo classification is a marketing

[95] We note that establishments may seek feedback from FDA regarding their self-determination analysis and conclusion that a particular product is a 361 HCT/P. See, for example, *https://www.fda.gov/vaccines-blood-biologics/tissue-tissue-products/tissue-reference-group.*

pathway for novel medical devices for which general controls alone (class I), or general and special controls (class II), provide reasonable assurance of safety and effectiveness, but for which there is no legally marketed predicate device. Devices that are classified into class I or class II through a De Novo request may be marketed and used as predicates for future premarket notification (that is, 510(k)) submissions, when applicable.

(3) Biologics License Application

To lawfully introduce or deliver for introduction into interstate commerce a drug that is a biological product, a valid biologics license application (BLA) must be in effect under section 351(a)(1) of the PHS Act, 42 U.S.C. 262(a)(1), unless exempted under 42 U.S.C. 262(a)(3). Such licenses are issued only after showing that the product is safe, pure, and potent. Approval of a biologics license application or issuance of a biologics license shall constitute a determination that the establishment(s) and the product meet applicable requirements to ensure the continued safety, purity, and potency of such products (21 CFR 601.2(d)). Potency has long been interpreted to include effectiveness (21 CFR 600.3(s)).

The definition of the term ''biological product'' in section 351(i) of the PHS Act is: ''a virus, therapeutic serum, toxin, antitoxin, vaccine, blood, blood component or derivative, allergenic product, protein, or analogous product . . . applicable to the prevention, treatment, or cure of a disease or condition of human beings.'' (42 U.S.C. 262(i)). In contrast to the registration and listing requirements for a 361 HCT/P or the substantial equivalence requirements for 510(k)s, products licensed under section 351 of the PHS Act are required to meet stringent pre- and post-market requirements to ensure the products' safety and efficacy when marketed. Table 112 lists several other notable differences between the relevant FDA regulatory categories for products CMS considers to be skin substitutes.

TABLE 112: COMPARISON OF FDA CLASSIFICATIONS

CLASSIFICATION	REVIEW GOAL WITHIN	FY2025 STANDARD APPLICATION FEE
361 HCT/P	N/A[96] (registration required)	N/A
510(k)[97]	90 Days	$24,335
PMA	180 or 320 days[98]	$540,783
BLA (original application for products requiring clinical data)	10 months[99]	$4,310,002[100]

d. Payment of Skin Substitute Products Under the PFS and OPPS

1. Payment for Skin Substitute Products as Incident-to Supplies

We have carefully considered our policy objectives, which include: (1) ensuring a consistent payment approach for skin substitute products across the physician office, hospital outpatient department, and ambulatory surgical center (ASC) settings; (2) ensuring that appropriate HCPCS codes describe skin substitute products; (3) employing a uniform approach across products within the physician office setting, regardless of whether the product is synthetic or comprised of human- or animal-based material; and (4) providing clarity for interested parties on CMS skin substitutes policies and procedures. We proposed, starting January 1, 2026, to separately pay for the provision of certain groups of skin substitute products as incident-to supplies when, for those products that are coverable under Medicare's rules, they are used during a covered application procedure paid under the PFS in the non-facility setting or under the OPPS. This proposal does not apply to biological products licensed under section 351 of the PHS Act, which would continue to be paid as biologicals under the ASP methodology in section 1847A of the Act. While we considered proposing to pay separately for skin substitutes initially under just the PFS in non-facility settings consistent with current practice, one of our primary policy objectives is to ensure a consistent payment approach for skin substitute products across the physician office and hospital outpatient department settings; and so, we ultimately determined that the suite of products referred to as skin substitutes should be treated in a uniform manner across different outpatient care settings, to the extent permitted by applicable law, such as section 1833(t)(2)(B) of the Act. The physician, in consultation with his or her patient, decides the site of service for treatment. While many factors are considered as a part of that decision, substantial differences in payment for the application of the same skin substitute product in one site of service versus another, or between similar skin substitute products, should not be one of them. Establishing a consistent framework for how these products are treated within the non-facility and hospital outpatient settings would empower providers to make the best treatment decisions for their patients, ensure equitable access to needed services, and pay appropriately for these services. We also considered bundling payment for skin substitute products in both the PFS and OPPS as part of this proposal. While supplies are generally bundled into the payment of the service in both the physician office and hospital outpatient departments, for many years skin substitute products

[96] No premarket authorization is required for 361 HCT/Ps.

[97] *https://www.fda.gov/industry/fda-user-fee-programs/medical-device-user-fee-amendments-mdufa.*

[98] These numbers include either a review within 180 days for decisions without advisory committee input or a review within 320 days for decisions with advisory committee input, respectively.

[99] PDUFA performance goals call for FDA to review and act on 90 percent of original BLA submissions within 10 months of the 60-day filing date. Other regulatory pathways may have different timelines. See *https://www.fda.gov/patients/learn-about-drug-and-device-approvals/fast-track-breakthrough-therapy-accelerated-approval-priority-review; https://www.fda.gov/drugs/development-approval-process-drugs.*

[100] *https://www.fda.gov/industry/fda-user-fee-programs/prescription-drug-user-fee-amendments.*

have been paid separately in the physician office setting, where the majority of these products are currently applied. So, we have determined that bundling payment for skin substitute products with their administration procedures across both settings under this new proposal, before efforts are made to address improper utilization patterns, would be premature. Depending on the outcomes of a final policy, we may consider packaging skin substitute products with the related application procedure in both the hospital outpatient setting and non-facility setting in future rulemaking. We sought comments on our proposal to separately pay for the provision of certain groups of skin substitute products as well as on our proposal to implement this policy in both the non-facility and hospital outpatient settings.

In the CY 2014 OPPS/ASC final rule with comment period, we finalized a policy to package the payment for skin substitutes into high- and low-cost administration codes (see 78 FR 74930 through 74931 and 42 CFR 419.2(b)(16)). Under the proposal in the CY 2026 OPPS/ASC proposed rule, the payment for skin substitutes would no longer be packaged into the administration procedures under the OPPS, when performed in the outpatient hospital setting. Rather, we proposed to remove skin substitutes from the list of packaged items and services at 42 CFR 419.2(b)(16) and specify that we will continue to package payment for products that aid wound healing that are not skin substitute products. Accordingly, the C-codes describing the low-cost group, HCPCS codes C5271 through C5278, would be deleted; and skin substitutes assigned to the high-cost group, described by HCPCS codes 15271 through 15278, would remain to describe skin substitute administration procedures. As a result of the unbundling of the skin substitute products from HCPCS codes 15271 through 15278, the costs associated with the HCPCS codes may be impacted, resulting in changes in APC assignments. We refer readers to Addendum B to the CY 2026 OPPS/ASC proposed rule for the APC assignments and associated payment rates for HCPCS codes 15271 through 15278. We also proposed to combine the existing claims data available for the two sets of current OPPS codes, the low-cost and the high-cost administration groups, to set the initial payment rate for the proposed skin substitute administration procedures described by HCPCS codes 15271 through 15278. We believe it is appropriate to combine the available claims data from both the low-cost and high-cost administration groups to calculate the payment rate for the proposed skin substitute administration procedures as both the low-cost and high-cost groups describe skin substitute administration. While HCPCS add-on administration codes 15272, 15274, 15276, and 15278 would still be packaged in the hospital outpatient setting, because add-on codes are generally packaged in the hospital outpatient setting, we anticipate that many of the concerns expressed by presenters at previous meetings of the Advisory Panel on Hospital Outpatient Payment (HOP Panel) and by public commenters on previous rules that providers are discouraged from treating larger wounds in the hospital outpatient setting (89 FR 94247) would be addressed by our proposal to pay separately for codes describing provision of skin substitute products from their associated administration codes. We sought comment on our proposal to pay separately for provision of skin substitutes as incident-to supplies when used as part of an administration procedure in the hospital outpatient setting.

We received public comments on these proposals. The following is a summary of the comments we received and our responses.

Comment: Many commenters expressed strong support for CMS' goal of aligning payment and coding policies across different sites of care. They agree that a consistent, site-neutral payment system empowers providers to choose the most clinically appropriate setting based on patient needs rather than financial incentives. Commenters noted this would reduce the confusion, administrative burden, and disparities in care caused by the current system. They see this policy as a way to establish a fair and uniform standard that centers treatment decisions around the patient.

Many commenters also supported CMS' proposal to pay for skin substitutes separately from the application procedure. Several stated that these products add significant clinical value. They noted that separate payment ensures consistent treatment availability, preserves access for patients, and avoids disincentives for treating larger wounds. Several commenters expressed appreciation that CMS did not move forward with a previous proposal to bundle the products, which they believe would have harmed patients with large wounds. They regarded the proposed policy as a more clinically and operationally sound approach.

Several commenters specifically supported discontinuing the bundling of skin substitute payments in the Hospital Outpatient Department (HOPD) and Ambulatory Surgical Center (ASC) settings. They argued the current system, which bundles payment in the HOPD and ASC settings, but pays separately in the office, has created a disincentive to treat larger wounds in facilities, pushing those cases disproportionately into the physician's office or even more expensive inpatient settings. They applauded the per-square-centimeter methodology for aligning payment with wound size and expanding access across all sites.

Response: We thank commenters for their support.

Comment: Other commenters opposed the move away from bundled payments. MedPAC, for example, did not support unbundling skin substitutes in the facility setting, arguing that paying for items separately undermines payment bundles, can lead to overuse, and shifts financial burden from providers to Medicare and its beneficiaries. Another commenter supported maintaining a bundled approach to align with longstanding policy and statutory authority.

Several commenters recommended that CMS delay any changes to the HOPD payment methodology. They suggested that CMS should first assess the impact of the payment reforms in the non-facility setting before applying them to the hospital outpatient setting to avoid unintended consequences, such as shifting care to more expensive settings.

Response: While we acknowledge the concerns about unbundling raised by commenters, ensuring a consistent payment approach for skin substitute products across the physician office and hospital outpatient department settings has been a long-stated policy objective. As noted above, we determined that it would be premature to bundle payment for skin substitute products with their administration procedures across both settings before efforts are made to address improper utilization patterns. Depending on the outcomes of this policy, we may consider packaging skin substitute products with the related application procedures in the hospital outpatient department setting, ambulatory surgical center setting, and non-facility setting in future rulemaking.

Comment: Many commenters warned that the proposed payment rate for the application codes create a new, major disparity between care settings. They pointed out the large gap between the proposed physician application

payment rate of ~$150 in an office/mobile setting and the combined facility and physician facility setting payment rates of over $800 in an HOPD. They stated this disparity will create a strong financial incentive to shift patient care to the more expensive HOPD setting, which could strain hospital capacity, create access issues for rural and underserved patients, and cause physician offices and mobile practices to shutter. Several commenters highlighted the unique challenges and higher costs faced by providers serving rural and homebound patients. They recommended CMS offer financial incentives, enhance telemedicine reimbursement, and provide add-on payments or grants to ensure these vulnerable populations do not lose access to care. To achieve true site neutrality, they strongly suggested CMS increase the application payment for clinicians in non-facility settings to close this gap.

Other commenters supported the proposed RVUs and payment rates for the application procedure codes in both the HOPD and MPFS settings, finding them to be a fair assessment of clinical resource utilization.

Another commenter stated that CMS should increase the proposed APC payment rates for these procedures in the HOPD setting, as the proposal demotes some codes to lower-paying APCs, which exacerbates existing disincentives for treating wounds in the hospital. The commenter also stated that we had not provided any rationale for reassigning skin substitute application procedures to APCs with lower payment rates. The commenter requested that we revert the APC assignments for CPT code 15271, 15273 and 15275 to the APC assignments finalized in the CY 2025 OPPS/ASC final rule. Specifically, the commenter requested that we assign CPT codes 15271 and 15275 to APC 5054 and assign CPT code 15273 to APC 5055.

One commenter sought clarification on whether APC rates for the skin substitute application procedures, such as CPT codes 15271 through 15278 would be adjusted to maintain budget neutrality.

Response: We acknowledge the disparities in the payment rates for the application codes between settings. As described in section II.B. of this final rule with comment period, we are open to exploring alternative data sources, including use of OPPS cost data, to inform PFS rate setting for certain services in future rulemaking. We also recognize the possibility raised by interested parties that some of the excessive payment for the skin substitute products may have been useful in subsidizing costs associated with providing these services in beneficiaries' home. We look forward to continued dialogue on this point as well as on the point of access to care for homebound and other beneficiaries for whom care is reasonable and necessary.

With regard to specific APC assignments for some of the skin substitute application procedures (HCPCS codes 15271–15278), we remind commenters that we provided a rationale for potential APC reassignments. Specifically, we explained in the CY 2026 OPPS/ASC proposed rule that, as a result of the unbundling of the skin substitute products from HCPCS codes 15271–15278, the costs associated with the HCPCS codes may be impacted, resulting in changes in APC assignments. Such was the case when we ran an updated analysis of the geometric mean costs of HCPCS codes 15271–15278, upon which we update APC assignments, when we unbundled the skin substitute products from the application codes. Once we removed the costs of the skin substitute products, we saw approximately a 50 percent decrease in the geometric mean cost of each of the HCPCS application codes. Stated differently, when skin substitute products were packaged into the payment for the application procedure, they accounted for a significant portion of the cost of the procedure. With the product no longer packaged and instead separately paid, it would be expected that the cost of the procedure would decrease, because the procedure no longer includes the cost of the skin substitute product. Table 113 illustrates this in more granular detail.

TABLE 113. FINAL CY 2025 AND PROPOSED CY 2026 OPPS/ASC APC ASSIGNMENTS AND GEOMETRIC MEAN COSTS FOR SKIN SUBSTITUTE APPLICATION CODES

HCPCS Application Code	CY 2025 OPPS/ASC Final Rule GMC	CY 2025 OPPS/ASC Final Rule APC	Percent Decrease	CY 2026 OPPS/ASC Proposed Rule GMC	CY 2026 OPPS/ASC Proposed Rule APC
15271	$1806.82	APC 5054	49%	$914.97	APC 5053
15273	$4,194.23	APC 5055	50%	$2,068.02	APC 5054
15275	$1,723.70	APC 5054	47%	$905.87	APC 5053
15277	$3,102.43	APC 5054	53%	$1,451.28	APC 5054

We note that, while additional claims have been processed since the CY 2026 OPPS/ASC proposed rule was released, there have not been significant changes to the geometric mean costs of these codes as outlined in the costs statistics files to this final rule available on the CMS OPPS website.

Finally, we are clarifying that the prospective payments for skin substitute products and skin substitute administration procedures based on our CY 2026 OPPS payment policy would be included in budget neutrality as it is typically applied. For more detail, we refer readers to section II.A.4 of this final rule with comment period.

After careful consideration of the comments, we are finalizing our proposal to pay separately for the

provision of certain groups of skin substitute products as well as our proposal to implement this policy in both the non-facility and hospital outpatient settings as proposed. We are also finalizing the proposed APC assignments for HCPCS codes 15271, 15273, 15275, and 15277. Specifically, we are finalizing our proposal to assign HCPCS codes 15271 and 15272 to APC 5053 (Level 3 Skin Procedures) and HCPCS codes 15273 and 15277 to APC 5054 (Level 4 Skin Procedures). The final CY 2026 payment rates can be found in Addendum B to this final rule with comment via the internet on the CMS website. In addition, we refer readers to Addendum D1 of this final rule with comment period for the status indicator meanings for all codes reported under the OPPS. Addendum D1 can also be found via the internet on the CMS website.

In the CY 2014 OPPS/ASC final rule with comment period, we finalized a policy to treat skin substitutes as biologicals that function as supplies when used in a surgical procedure. Similarly, under this proposal, most skin substitutes would be considered incident-to supplies in accordance with section 1861(s)(2)(A) of the Act. Supplies are a large category of items that typically are either for single use or have a shorter use life span than equipment. Supplies can be anything that is not equipment and include not only minor, inexpensive, or commodity-type items but also include a wide range of products used in outpatient settings, including certain implantable medical devices. ''Incident-to supplies'' refers to supplies that are furnished as an integral, although incidental, part of the physician's personal professional services in the course of diagnosis or treatment of an injury or illness, among other requirements at 42 CFR 410.26(b). Because a skin substitute must be used to perform any of the procedures described by a CPT code in the range 15271 through 15278, and the procedure of treating the wound and applying a covering to the wound is the independent service, skin substitute products serve as a necessary supply for these surgical repair procedures.

One purpose of the new proposed policy was to limit some of the current profiteering practices occurring in this industry. For example, as reflected in the last several years of CMS' ASP Pricing Files, we have observed a dramatic increase in launch prices. It is unclear how these prices could be attached to realistic changes in resource costs as many of these new products are allegedly minimally manipulated tissues. Our policy is likely to disincentivize this practice, as well as several other novel industry practices that have come to our attention, by preventing exploitation of skin substitute pricing under section 1847A of the Act, overuse of expensive skin substitute products, and waste resulting from use of more expensive skin substitute products over clinically-appropriate, less expensive alternatives. Notably, there has not been significant growth in payments for skin substitutes in the OPPS, due in part to our packaging principles. We note that the relevant statutory provisions, when considered together, do not require all of these kinds of products to be paid as biologicals under section 1847A of the Act. Therefore, under this policy, unless a skin substitute is approved as a biological product under section 351 of the PHS Act, in which case we would continue to pay for it consistent with section 1847A of the Act, we would consider it a supply for payment purposes under the OPPS with definitions and rates described below. For Medicare purposes, we proposed to codify the definition of ''biological'' as ''a product licensed under section 351 of the Public Health Service Act'' at §§ 414.802 and 414.902. We sought comments on our proposal to limit the application of section 1847A of the Act to skin substitutes that are approved as a biological product under section 351 of the PHS Act and our proposed edits to the regulations.

We received public comments on these proposals. The following is a summary of the comments we received and our responses.

Comment: Many commenters opposed classifying skin substitutes, particularly amniotic and placental-derived products, as supplies. They stated this classification is a misstep that diminishes the products' clinical value, calling the products advanced, life-changing biologic therapies, not simple bandages or dressings. Some stated CMS lacks legal authority, as skin substitutes do not meet the statutory definition of an ''incident-to supply.'' They stated the reclassification is legally, clinically, and definitionally incorrect, as these products are the primary intervention, not an incidental part of a service, and interact directly with body tissues.

Response: Section 1861(s)(2)(A) of the Act defines ''medical and other health services'' as services and supplies furnished incident to a physician's professional service that are commonly furnished in physicians' offices and provided either without charge or as part of a physician's bill. As stated above, supplies are a large category of items that typically are either for single use or have a shorter use life span than equipment. Supplies can be anything that is not equipment and include not only minor, inexpensive, or commodity-type items but also include a wide range of products used in outpatient settings, including certain implantable medical devices such as class III medical devices requiring premarket approval, which is the most rigorous review required of a skin substitute that is also a medical device. ''Incident-to supplies'' refers to supplies that are furnished as an integral part of the physician's professional services in the course of diagnosis or treatment of an injury or illness, among other requirements at 42 CFR 410.26(b). Because a skin substitute must be used to perform any of the procedures described by a CPT code in the range 15271 through 15278, and the procedure of treating the wound and applying a covering to the wound is the independent service, skin substitute products serve as a necessary supply for these surgical repair procedures.

Comment: Many commenters strongly supported the classification of non-BLA skin substitutes as incident-to supplies. They see it as an essential, rational approach to realign incentives away from overuse and toward more clinically appropriate care. They stated that this classification is expected to curb the significant fraud, waste, and abuse that has plagued the current system.

Response: We appreciate the commenters for their feedback on our proposal to treat and pay for all skin substitute products as incident-to supplies. We agree that this proposal will help to resolve issues such as exorbitant price increases and curb fraud, waste, and abuse.

After careful consideration of the comments, we are finalizing our proposal to pay separately for the provision of skin substitutes as incident-to supplies under the OPPS in the hospital outpatient department as proposed.

We received divided comments on our proposal to codify the definition of ''biological'' in regulation. The following is a summary of the comments we received and our responses.

Comment: Several commenters stated that CMS's proposal to narrow the definition of ''biological'' to only include products licensed under section 351 of the PHS Act is a misapplication of the law and conflicts with the Act. They contend that the of the Act itself provides a broader definition in section 1861(t)(1) of the Act, which includes products listed in the U.S. Pharmacopoeia (USP) or approved by hospital P&T committees—a definition

that many skin substitutes meet. Commenters state that if Congress had intended to limit the term ''biological'' to section 351 of the PHS Act products in the payment statute (section 1847A of the Act), it would have done so explicitly, as it has in other parts of the law. Furthermore, they noted that the Consolidated Appropriations Act of 2021 referred to these products as ''drugs and biologicals,'' signaling that the Congress considers them as such for payment purposes. Commenters stated that for decades CMS has appropriately classified and paid for CTPs/skin substitutes as drugs or biologicals under section 1847A of the Act. They state the proposal to abruptly reclassify them is an unexplained reversal of this long-standing policy and is therefore ''arbitrary and capricious.''

Response: Section 1861(t)(1) of the Act states, in relevant part, that the term ''drugs'' and the term ''biologicals'' include only products that are included (or approved for inclusion) in the U.S. Pharmacopoeia, the National Formulary, or the United States Homeopathic Pharmacopoeia, or in New Drugs or certain products listed in the Accepted Dental Remedies, or as are approved by the pharmacy and drug therapeutics committee (or equivalent committee) of the medical staff of the hospital furnishing such drugs and biologicals for use in such hospital; subparagraph (t)(2) adds that the term ''drugs'' includes any drugs or biologicals used in certain anticancer chemotherapeutic regimens in the definition. The definition of these terms does not include certain medical supplies. Reliance on this provision to determine that a skin substitute is a biological payable under section 1847A of the Act is problematic for several reasons. To begin, we note that this provision does not require that *all* products included in the listed compendia are deemed drugs and biologicals. Instead, it states that ''drugs'' and ''biologicals'' include *only* such drugs and biologicals as are included in the compendia. Second, only one of the listed compendia in section 1861(t)(1) of the Act that is still in publication, a combination compendium containing USP and the National Formulary (USP–NF), which contains standards for medicines, dosage forms, drug substances, excipients, biologics, compounded preparations, medical devices, dietary supplements and other therapeutics.[101] The compendia issued a statement in 2018 that it would no longer develop new monographs for biologics unless there is other interested parties consensus supporting its creation, including the support of FDA.[102] As a result, very few of CMS' paid biologicals actually have product-specific monographs in that compendium. Instead of product-specific monographs, the USP primarily develops performance standards and general guidelines to support the quality assessment of biologics. This is also true in the case of skin substitutes. References to these types of products in the USP are not product-specific monographs. Instead, these references are general descriptions of product types. As the source and manufacture of products with biological activity can dramatically change their safety and efficacy, these general references are not sufficient to describe any product with specificity. Therefore, we rely on the language in section 1847A of the Act to authorize payment for products described therein.

The Consolidated Appropriations Act, 2021, Public Law 116–260, division CC, section 401(c), amended section 1847A(f)(A) to state that, manufacturers of drugs or biologicals including items, services, supplies, and products that are payable under Medicare Part B as a drug or biological, that have not entered into a National Medicaid Drug Rebate Agreement are required to report ASP (and WAC) data to CMS. Under this policy, as finalized, skin substitute products (other than those approved via BLA under section 351 of the PHS Act) will no longer be paid as biologicals and will no longer be required to report ASP to us.

Finally, as noted previously, we outlined our HCPCS Level II coding and payment policy objectives for skin substitutes in the CY 2023 PFS proposed rule (87 FR 46249) and stated we believed that our existing payment policies were unsatisfactory, unsustainable over the long term, and rooted in historical practice established two decades ago prior to significant evolutions in medical technology and practice. CMS also hosted a town hall to provide an opportunity for public input, including discussion of potential approaches to the methodology for payment of skin substitute products, and reviewed several years of comments in response to CY rulemaking in 2023, 2024, and 2025 on this subject before developing this proposal to address our stated objectives as well as many of the comments we have received.

Comment: Other commenters agreed with CMS' interpretation. They supported the proposal to reserve the payment methodology under section 1847A of the Act for products that have undergone the rigorous FDA Biologics License Application (BLA) process under section 351 and agreed that non-BLA products do not meet the statutory definition of biologicals contemplated for payment under section 1847A of the Act, making the ''incident-to supply'' classification a rational approach. They believe this accurately reflects the statutory definition of a biological and rightly rewards manufacturers who invest in the highest level of regulatory review. Other commenters requested that CMS clarify that skin substitute products do not fall under the discarded drug or inflation rebate policies.

Response: We appreciate the commenters for their support. We clarify that skin substitute products that are not regulated as biological products under section 351 of the PHS Act and that are paid as incident to supplies are not subject to the Medicare discarded drug policy. At this time, skin substitutes are excluded from Part B inflation rebates as described at § 427.101(b)(5) and as finalized in the CY 2025 PFS final rule (89 FR 98235).

Comment: A commenter warned that continuing to pay for the few BLA-approved products under section 1847A of the Act while moving all others to a flat rate would create a perverse incentive for those manufacturers to continue increasing prices.

Response: As previously described, we believe that the payment methodology described in section 1847A of the Act applies to drugs and biological products approved under a BLA. Further, such licenses are issued only after showing that the product is safe, pure, potent, and may justify a higher payment rate. Finally, between the longer time required to bring these products to market, potential rebate requirements, and the changes to ASP reporting described in the CY 2026 PFS final rule, we believe opportunities for dramatic pricing increases will be significantly curtailed. However, we will continue to monitor pricing trends for products approved under a BLA.

Comment: A commenter requested that CMS codify in regulation that biological products licensed by the FDA under the section 351 BLA process are not considered skin substitutes, are not considered incident-to supplies under the CY 2026 OPPS/ASC proposed rule, and will continue to be eligible for separate payment under section 1847A of the Act (generally, ASP plus 6 percent).

[101] *https://www.uspnf.com/purchase-usp-nf.*

[102] *https://www.usp.org/news/statement-on-monographs-for-biologics#:~:text=Rockville%2C%20MD%20%E2%80%93%20April%202%2C,About%20USP.*

Response: While products licensed under section 351 of the PHS Act may properly be used along with skin substitute application codes, they will continue to be separately paid as biological products using the methodology described in section 1847A of the Act. We also received many comments on the growth in payments for this class of products.

Comment: Many commenters, including ACOs, primary care providers, and health systems, stated that they have witnessed an explosive and unsustainable growth in skin substitute spending, which they attribute to fraud, waste, and abuse. They report seeing products used in clinically questionable circumstances, often by third-party mobile wound clinics that operate without coordination with the patient's primary care team. The commenters identified the ASP-based payment limits as a primary driver of abuse, as it creates financial incentives to use more expensive products, regardless of clinical need. They described a system where manufacturers can launch new, clinically undifferentiated products at inflated prices and offer deep discounts to providers, who then profit from the spread between their acquisition cost and the high Medicare reimbursement rate. Commenters provided examples of significant patient harm resulting from this misuse, including failure to treat the underlying causes of wounds, unnecessary applications, severe infections, sepsis, and even death. They noted a troubling pattern of skin substitutes being applied to vulnerable and terminally ill patients, including those on hospice, where such treatment is inappropriate.

Response: We appreciate the commenters for their input. We believe this policy will dramatically reduce these problematic behaviors in both the physician office and hospital outpatient settings. We also believe this policy has the potential to prevent these harmful practices from occurring in different settings of care, including hospice and home health.

Comment: Several commenters referenced analyses indicating that the vast majority of the spending is driven by a very small number of outlier providers. Commenters referenced one analysis by Tettelbach et al.[103] that found that in 2023, fewer than 3 percent of providers accounted for nearly two-thirds of all Medicare spending on these products. The commenters suggested the problem is not broad utilization but isolated misuse by a few bad actors. Based on the concentration of abuse, some commenters stated that CMS should use targeted program integrity measures, such as audits of outlier providers, NPI-level analytics, and stricter enforcement—rather than implementing sweeping payment cuts that penalize all providers and risk harming patient access. Beyond targeted enforcement, commenters recommended systematic oversight mechanisms. A commenter suggested CMS recognize site accreditation through a self-regulatory organization (SRO) to verify adherence to standard of care, documentation protocols, and product handling, analogous to DMEPOS and CLIA accreditation models. The SRO would conduct inspections, publish outcomes dashboards, and impose sanctions. The commenters contend that slashing payment rates is not a fraud control measure and will disproportionately harm compliant providers and the patients who need these products.

Some commenters caution that increased use of skin substitutes is not, in itself, a negative trend. They stated that the growth also reflects expanded access to care for previously underserved populations (like homebound patients) and increased provider awareness of the products' efficacy in healing chronic wounds.

Response: We agree that not all increased use of skin substitutes is improper. However, it is clear that the dramatic growth in spending is not statutorily required and comes without a clear, consistent, and corresponding benefit. The Agency has a responsibility to the public to be good stewards to the Medicare Trust Fund, so CMS has implemented a coordinated effort across several Centers, such as the Center for Medicare, the Center for Clinical Standards and Quality, and the Center for Program Integrity, to address this issue.

Comment: Several commenters offered feedback on skin substitute billing as it relates to value-based care programs such as the Medicare Shared Savings Program. These comments acknowledged support for the proposals relating to the changes in skin substitute payment policy, but expressed concern related to negative impacts to some ACOs who may be disproportionately impacted by skin substitute billing compared to the national trend. Some commenters also made recommendations for revisions to value-based care programs that could address skin substitute billing and similar future scenarios that may not be captured by the Significant, Anomalous, and Highly Suspect (SAHS) billing activity policy which was finalized in the CY2025 PFS.

Response: As the commenters referenced, on November 1, 2024, we issued the CY 2025 Medicare PFS final rule (89 FR 97710), which included policies discussed under the ''Mitigating the Impact of Significant, Anomalous, and Highly Suspect (SAHS) Billing Activity on Shared Savings Program Financial Calculations in Calendar Year 2024 or Subsequent Calendar Years'' section of the final rule (89 FR 98191). These policies give us the ability to determine that the billing of one or more HCPCS or CPT codes represents significant, anomalous, and highly suspect billing activity for a calendar year that warrants adjustment to calculations made under 42 CFR part 425. Generally, a level of billing for a given HCPCS or CPT code is considered SAHS billing activity when a given HCPCS or CPT code exhibits a level of billing that represents a significant claims increase, either in the volume or dollars, with national or regional impact, and represents a deviation from historical utilization trends that is unexpected and is not clearly attributable to reasonably explained changes in policy or the supply or demand for covered items or services. The billing level must be significant and represent billing activity that would cause significantly inaccurate and inequitable payments and repayment obligations in the Shared Savings Program if not addressed (89 FR 98195).

We assessed the impact of an increase in billing to Medicare for skin substitutes and determined that the billing activity for these services does not represent SAHS billing activity for Performance Year (PY) 2024. Skin Substitute billing can have varying impacts on ACOs' performance and could either contribute to increasing or decreasing shared savings and losses, dependent on ACO-level expenditures and national/regional billing activity impacts.

We established the SAHS billing policy to address certain unexplained billing anomalies that could impact program wide calculations, to be invoked in rare and extreme cases when we identify a code that meets the high bar to be defined as SAHS billing activity (89 FR 98196). Payments that are not excluded under the SAHS policy are also reviewable at the ACOs' request if improper payments are identified after the initial determination is made under the reopening policy (42 CFR 425.315).

[103] Tettelbach W, Armstrong DG, Driver V, et al. Safeguarding access, fiscal responsibility and innovation: a comprehensive reimbursement framework for CAMPs to preserve the Medicare Trust Fund. J Wound Care. 2025;34(10):Ahead of Print. doi:10.12968/jowc.2025.0396.

We will continue to monitor this area with our program integrity partners and to explore options that could mitigate extreme deviations in costs that are outside of the ACOs' control and not addressed through the SAHS policy.

Comment: Some commenters acknowledged that truncation in Medicare Shared Savings Program calculations greatly mitigates a significant amount of outlier billing for skin substitutes. A portion of these commenters also suggested that CMS should apply a lower stop loss truncation threshold in the Medicare Shared Savings Program to address skin substitutes.

Response: To minimize variation in catastrophically large claims, the Medicare Shared Savings Program truncates an assigned beneficiary's total annual Medicare Parts A and B fee-for-service (FFS) per capita expenditures at the 99th percentile of national Medicare Parts A and B FFS expenditures as determined for the applicable performance year for assignable beneficiaries identified for the 12-month calendar year corresponding to the performance year (42 CFR 425.605(a)(3) and 425.610(a)(4)(ii)).

For all benchmark years and performance years, CMS provides ACOs with the number of assigned beneficiaries with truncated expenditures, the total dollar amount truncated, and the percentage of total annualized expenditures truncated. We also provide this truncation information for the National Assignable FFS population. We have examined the impact of the truncation policy on skin substitute expenditures and found that over 50 percent of PY 2024 Part B expenditures for skin substitutes were addressed by truncation. Skin substitute expenditures, on average for PY 2024, represent roughly 1 percent of total Parts A and B expenditures for ACOs, and with truncation applied, the average skin substitute expenditures equate to less than 0.5 percent of total Parts A and B expenditures for ACOs. This information indicates that truncation effectively mitigates large spending associated with skin substitute billing.

Comment: Some commenters also provided feedback requesting a formal process and direct channel for ACOs to report fraud.

Response: Medicare Shared Savings Program ACOs are encouraged to report potential fraud or abuse by submitting a complaint to the CMS Center for Program Integrity (CPI), Fraud Investigations Group (FIG), Division of Provider Investigations (DPI) at *dpi.intake@cms.hhs.gov*. ACOs can also report potential fraud or abuse by submitting a complaint to the Office of Inspector General (OIG) website at *https://oig.hhs.gov/fraud/report-fraud/*, OIG hotline at 1–800–HHS–TIPS (1–800–447–8477), TTY at 1–800–377–4950, by fax at 1–800–223–8164, or by mailing to: Office of Inspector General ATTN: OIG HOTLINE OPERATIONS P.O. Box, 23489 Washington, DC 20026. ACOs suspecting healthcare fraud, waste, or abuse are encouraged to visit the CMS Center for Program Integrity (CPI) website at *https://www.cms.gov/medicare/medicaid-coordination/center-program-integrity* for more information.

After careful consideration of public comments, we are finalizing our proposal to limit application of section 1847A of the Act to skin substitutes that are approved as a biological product under section 351 of the PHS Act and we are finalizing our proposed edits to the regulations as proposed.

2. Payment Categories Based on FDA Regulatory Pathways

Paying separately for skin substitutes in the non-facility setting has led to dramatic price increases for these products, as noted above. Grouping similar products or services into a single billing code and using a single payment amount for them, as we do with many services under the OPPS, some services under the PFS, and all multiple-source drugs under section 1847A of the Act, incentivizes hospitals and prescribers to make more cost-efficient, clinically effective decisions. However, we recognize that grouping dissimilar products and/or services to set payment rates, can limit beneficiaries' access to appropriate care, especially when some groups encompass products and services with significant clinical and resource variability. In the case of skin substitutes, no single product among the wide range of products stands out as typical; so, we have reviewed several methods to group or classify skin substitutes to determine which best reflects clinical and resource similarities between these products.

We proposed that only skin substitute products licensed under section 351 of the PHS Act will be considered drugs and biologicals for Medicare payment purposes. Furthermore, we proposed that, to reflect relevant product characteristics, we would group skin substitutes that are not drugs or biologicals (that is, anything that is not a section 351 product) using three CMS payment categories based on FDA regulatory categories ((PMAs, 510(k)s, and 361 HCT/Ps) to set payment rates. We have previously noted in rulemaking that CMS has no obligation to categorize products based on the FDA's current regulatory framework (74 FR 60476); but, in this case, we have determined that the FDA regulatory categories provide an appropriate level of distinction for a heterogeneous category of products that exhibit clinical and resource variability and that categorizing products based on these categories can ultimately improve the accuracy of payment under the OPPS. Proposing a payment policy that aligns with FDA's current regulatory framework also provides predictability and efficiency for purposes of Medicare payment. Payment for new products, as discussed below, could be achieved quickly and consistently by CMS' capacity to immediately recognize the FDA regulatory categories.

a. 361 HCT/Ps

As described previously, 361 HCT/Ps are a subset of HCT/Ps that are regulated solely under section 361 of the PHS Act and the regulations in 21 CFR 1271 and listed in the FDA's eHCTERS. Currently, registered 361 HCT/Ps generally are dressings intended only to cover and protect a wound. They are not intended to act on the wound to mediate, facilitate, or accelerate wound healing. Their activity is typically limited to that of a physical covering or wrap. A structural tissue intended for wound care is generally limited to the homologous use of cover and protect in order to be a 361 HCT/P.[104] Intended uses such as wound treatment, promotion or acceleration of wound healing, or serving as a skin substitute would generally be non-homologous uses of structural tissues. Instead, products for such intended uses (for example, the treatment of wounds) generally are subject to PMA or BLA requirements.

b. Devices Requiring 510(k) Clearance

A 510(k) is a premarket submission made to the FDA generally by the manufacturer of a device to demonstrate that the device to be marketed is substantially equivalent to legally marketed device that is not subject to premarket approval. (FD&C Act sections 510(k),513(i)). Currently, 510(k)-cleared devices that we are considering for purposes of this proposal generally are dressings intended only to cover and protect a wound, to absorb exudate, and to maintain appropriate moisture balance within the wound. They are not intended to act on the wound to mediate, facilitate, or accelerate wound

[104] See *Regulatory Considerations for HCT/Ps: Minimal Manipulation and Homologous Use, July 2020 (pg. 19).*

healing. Their activity is typically limited to that of a physical covering or wrap. When intended only to cover and protect a wound, to absorb exudate, and to maintain appropriate moisture balance within the wound and otherwise meeting the device definition, generally the FDA's Center for Devices and Radiological Health (CDRH) regulates wound dressings composed of natural biomaterials, including animal and human derived tissue as devices, and they are currently subject to 510(k) requirements. At this time, wound dressings have not been 510(k) cleared by FDA for indications such as wound treatment, promotion or acceleration of wound healing, or serving as a skin substitute.[105] Instead, products for such intended uses generally are subject to PMA or BLA requirements.

For the purposes of this policy, we proposed to group any skin substitutes authorized through the De Novo pathway with those cleared under 510(k)s. Similar to products cleared under 510(k)s, De Novo classification is a marketing pathway for medical devices for which general controls alone (class I), or general and special controls (class II), provide reasonable assurance of safety and effectiveness. While products authorized through the De Novo pathway have no legally marketed predicate device, devices that are classified into class I or class II through a De Novo request may be marketed and used as predicates for future premarket notification (that is, 510(k)) submissions, when applicable. Because of this, we would expect skin substitutes authorized through the De Novo pathway and those cleared under 510(k)s to be similar for payment purposes. We sought comment on our proposal to group skin substitutes into three FDA approval categories, PMA, 510(k), and 361 HCT/P, to set payment rates and our proposal to group any skin substitutes authorized through the De Novo pathway with those cleared under 510(k)s for payment purposes.

c. Products Subject to PMAs

Premarket approval is the most rigorous type of review of a device and generally is required for class III medical devices. Similar to BLA-approved wound care products, PMA-approved wound care products generally are intended to go beyond a simple wound cover to provide some type of direct treatment effect. The FDA has not defined the term ''skin substitute.'' However, the term has been used as a descriptor for certain wound care constructs that are currently approved under a BLA or PMA for treatment of burns or skin ulcers, including ulcers that appear to have failed to heal after standard of care. The intended uses of these products may include scaffold claims, reference to matrix attributes that promote endogenous cell binding, migration, differentiation, or proliferation, and/or activities mediated by matrix-associated regulatory factors that facilitate wound healing. Currently, wound care products intended to interact with the wound to facilitate, promote, or accelerate wound healing generally require approval of a BLA or, in some instances, a PMA. Approval of these products requires demonstration of safety and efficacy for the intended use, which generally requires the performance of clinical studies. So PMA-approved devices can be readily distinguished from 510(k)-cleared devices and 361 HCT/P products, which are intended mainly to cover and protect the wound. They are clinically different, provide different benefits, and would theoretically be used for patients presenting with different clinical scenarios. As discussed, PMA-approved devices also go through a much more rigorous review process before marketing as compared to the substantial equivalence requirements for 510(k)s and lack of premarket review for registered 361 HCT/Ps. This more rigorous review for PMAs, as well as differences in clinical utility, and the associated costs to manufacturers, suggests that the resources involved in furnishing these products could be distinct from 361 HCT/Ps and 510(k)s. We sought comment on our proposal to group skin substitutes (other than those approved via BLA under section 351 of the PHS Act) into three FDA categories, PMA, 510(k), and 361 HCT/P, to set payment rates.

Section 1833(t)(2) requires the Secretary to establish groups so that services classified within each group are comparable clinically and with respect to the use of resources. To effectuate this categorization into a payment policy under the OPPS, we proposed to create three new APCs for HCPCS codes that describe skin substitute products organized by clinical and resource similarity. These three APCs would divide skin substitutes by their FDA regulatory pathway. Specifically, we proposed to create: APC 6000 (PMA Skin Substitute Products); APC 6001 (510(k) Skin Substitute Products); and APC 6002 (361 HCT/P Skin Substitute Products). In addition, as noted previously, we proposed to assign any skin substitutes approved through the De Novo pathway to APC 6001 (510(k) Skin Substitute Products) based on our proposed policy of categorizing products with these two regulatory statuses together. We also proposed to create three new unlisted Q-codes, one to describe skin substitute products in each approval pathway, for new skin substitute products that have received FDA approval or clearance but do not yet have their own code in effect. We proposed to create HCPCS codes Q4431 (formerly placeholder code QXXX1) (Unlisted PMA skin substitute product) and assign it to APC 6000 (PMA Skin Substitute Products); Q4432 (formerly placeholder code QXXX2) (Unlisted 510(k) skin substitute product) and assign it to APC 6001 (510(k) Skin Substitute Products); and Q4433 (formerly placeholder code QXXX3) (Unlisted 361 HCT/P skin substitute product) and assign it to APC 6002 (361 HCT/P Skin Substitute Products). We proposed to create these unlisted codes to prevent delays in Medicare payments for new FDA-approved or cleared skin substitute products. We note that unlisted codes should only be reported when there is no other existing CPT or HCPCS code that adequately describes the service being performed.

We note that device pass-through payment status would still be available to new skin substitutes that meet the pass-through payment criteria in the hospital outpatient setting. However, while skin substitutes approved under device pass-through payment status are currently assigned to the high-cost category, because our proposal would eliminate the low- and high-cost groups, we proposed to pay for skin substitutes approved under device pass-through payment status consistent with other devices approved under that payment pathway. For the purposes of eligibility of skin substitutes for transitional drug pass-through payment, we proposed to define the term ''biological'' consistent with our interpretation of the term under section 1847A of the Act. Under this proposal, skin substitutes with an approved BLA would be considered under transitional drug pass-through payment status and skin substitutes with PMA or 510(k) clearance would continue to be evaluated under transitional device pass-through payment status. See section IV.A. of this final rule with comment period for more information on device pass-through payments under the OPPS and see

[105] FDA Executive Summary Prepared for the October 26 & 27, 2022 Meeting of the General and Plastic Surgery Devices Panel of the Medical Devices Advisory Panel Classification of Wound Dressings with Animal-derived Materials (Section 3). Available at *https://www.fda.gov/media/162539/download*.

section V.A. of this final rule with comment period for more information on drug pass-through payments under the OPPS.

Comment: Many commenters support grouping skin substitutes based on their FDA regulatory categories, viewing it as a clear, logical, and transparent approach. They believe this method acknowledges the different levels of scientific rigor and evidence required for each pathway and can serve as a surrogate for CMS' own evidence review. This framework would allow CMS to differentiate payment over time based on product characteristics and clinical value, which could incentivize competition and innovation. Some suggest a tiered payment structure where products with more rigorous review (like PMA) receive the highest rates, followed by 510(k) and then 361 HCT/P products. One commenter noted that utilizing FDA's existing regulatory paths and associated compliance activities avoids unnecessary duplication of product assessment resources.

Response: We appreciate the commenters for their support.

Comment: Many commenters opposed using FDA pathways to determine payment, stating that regulatory status does not correlate with clinical effectiveness, outcomes, or resource use. Some commenters noted that none of the skin substitute products approved via the PMA pathway have indications for wound healing in their Instructions for Use or FDA intended use/indications. They point out that some older PMA devices have outdated clinical data and may not be superior to newer 361 HCT/P products or products cleared via the 510(k) pathway. Several commenters stated that 510(k) clearance follows a less intensive pathway than PMA but emphasized that the FDA would never permit any device for market use unless the 510(k) submission sufficiently demonstrates patient safety and clinical efficacy. Some commenters noted that receiving 510(k) clearance does not imply inferior quality to a PMA product, and that it is inappropriate to consider a PMA product superior simply because it went through more testing. Another commenter explained that a 510(k) device can sometimes be superior to a PMA device for the same indication despite the less rigorous approval process, due to technological advancements, improved materials and design, real-world data, and improved usability and safety features. Several commenters stated that establishing payment based on regulatory pathways creates potential for instability over time because FDA pathway choice is not voluntary—FDA determines which pathway is appropriate for which product. A commenter stated that CMS already determined that FDA approval pathways are not appropriate for Medicare payment policy decisions in its CY 2014 OPPS/ASC final rule with comment period, referencing the discussion at 78 FR 74933 regarding CMS' decision not to use the FDA regulatory pathway to determine OPPS skin substitute payment policy. Overall, some commenters believed this policy could entrench outdated classifications, create perverse incentives to choose products based on reimbursement instead of clinical evidence, and penalize innovative products that use newer, more streamlined regulatory pathways.

Response: We disagree. The FDA's regulatory framework in this context provides an objective and consistent basis on which to group these products for purposes of development payment rates. Each regulatory path is distinct and provides a specific level/type of information regarding product content and activity that CMS can leverage to inform payment rate decisions. For example, registered 361 HCT/Ps are not approved, cleared or licensed by FDA. There is no premarket review, and manufacturing controls are focused on prevention of infectious disease transmission. These products are often dressings generally intended only to cover and protect a wound. They are not intended to act on the wound to mediate, facilitate, or accelerate wound healing. Similarly, 510(k)-cleared devices [106] relevant to this policy generally are dressings intended only to act as a physical cover to protect a wound, to absorb exudate, and to maintain appropriate moisture balance within the wound. As for 361 HCT/Ps relevant to this policy, activity claims are typically limited to that of a physical covering or wrap. They are also not intended to act on the wound to mediate, facilitate, or accelerate wound healing. The 510(k) review assesses equivalence to other 510(k) products and generally does not evaluate activities that otherwise require a PMA or BLA. PMA-approved wound care products generally are intended to go beyond a simple wound cover to provide some type of direct treatment effect. The intended uses of these products may include physical scaffold claims or reference to structural matrix attributes that promote endogenous cell binding, migration, differentiation, or proliferation. Currently, wound care products intended to interact with the wound to facilitate, promote, or accelerate wound healing generally require approval of a BLA or a PMA when it meets the statutory definition of a device. As an example, Integra® Wound Matrix is indicated for the treatment of certain wounds. Approval of these products requires demonstration of safety and efficacy for the intended use, which generally requires the performance of clinical studies. A determination of pathway is informed, in part, by a sponsor's desired indications and ability to prove them.

Notably, unless a product has obtained approval through a BLA, non-homologous use marketing claims are not allowed. Such claims would directly contradict the regulatory status of registered 361 HCT/Ps, because of the criteria in 21 CFR 1271.10(a)(2). Similarly, 510(k)-cleared devices relevant to this policy generally are dressings intended only to act as a physical cover to protect a wound, to absorb exudate, and to maintain appropriate moisture balance within the wound. Descriptions of purported biological healing factors in these products have not been evaluated by FDA; and there is no guarantee that these factors are present or active and, if present, their concentration because these products are not requires to have undergone purity or potency assessment performed by FDA. Biological products can differ greatly based on their source material and manufacturing, and it is therefore difficult to generalize any conclusions about their safety and effectiveness beyond those allowed by FDA.

Finally, while we have no obligation to categorize products based on the FDA's current regulatory framework, in this case, we have determined that the FDA regulatory categories provide an appropriate level of distinction for a heterogeneous category of products that exhibit clinical and resource variability for purposes of setting payment rates. This methodology can ultimately improve the accuracy of the relative value units under the PFS while also being predictable and efficient.

Comment: Several commenters emphasized that CMS should acknowledge post-FDA clinical investment if considering FDA pathways as a basis for categorization. One commenter noted investing more than $7.5 million over 6 plus years for two seminal RCTs, stating such investment in post-FDA studies alone

[106] A 510(k) is a premarket submission made to the FDA generally by the manufacturer of a new device to demonstrate that the device to be marketed is substantially equivalent to a legally marketed device *that is not subject to premarket approval* (sections 510(k) and 513(i) of the FD&C Act).

exceeds application fees of both PMA and BLA products but is not captured in CMS' FDA pathway analysis. Commenters stated that if an overly generalized distinction is drawn between products approved under different pathways, CMS risks disincentivizing manufacturers from further developing clinical evidence and continuing to innovate improved skin substitute products.

Response: We encourage those entities that have made investments in clinical research to work with the FDA to determine if these studies are sufficient to support approval or clearance through the appropriate FDA regulatory pathway and to ensure that essential manufacturing information and controls are available to support approval of a PMA or BLA.

Comment: Several commenters noted that regulatory pathways for skin substitutes have evolved significantly over time, and since CMS does not oversee FDA regulatory pathways, future changes by FDA could inadvertently affect categorization.

Response: We understand that refinements in categorizations for this policy could be warranted in the future and would, at a minimum, address any potential changes through notice and comment rulemaking.

Comment: Commenters generally supported the use of transitional pass-through (TPT) and other payment pathways, like New Technology Add-on Payments (NTAP), to pay for eligible skin substitute products. One commenter requested that we establish a dedicated pass-through pathway for tribally manufactured skin substitute products.

With regard to the non-facility setting, several commenters urged CMS to leverage existing programs like NTAP and TPT or create a new, parallel program to NTAP/TPT that would provide temporary add-on payments for innovative products used in the physician office setting to ensure site neutrality for new technologies.

Response: We appreciate these comments. We reiterate that drug and device transitional pass-through are available pathways for eligible skin substitute products. With regard to exploring additional payment pathways, we will take commenters' suggestions into consideration as we consider how to incentivize innovation in future rulemaking.

After careful consideration of the comments, we are finalizing our proposal to group skin substitutes (other than those approved via BLA under section 351 of the PHS Act) into three FDA categories, PMA, 510(k), and 361 HCT/Ps, for purposes of developing payment rates in future notice and comment rulemaking, as proposed.

We are also finalizing our proposals regarding drug and device transitional pass-through payments. Specifically, we are finalizing our proposal to pay for skin substitutes approved for device pass-through payment status consistent with other devices approved for device pass-through payment. For the purposes of eligibility of skin substitutes for transitional drug pass-through payment, we are finalizing our proposal to define the term ''biological'' consistent with our interpretation of the term under section 1847A of the Act.

We are also finalizing our proposals to create three new APCs (APCs 6000–6002) and assign skin substitute products, unless the product is licensed under a BLA pursuant to section 351 of the PHS Act, to one of the three clinical APCs based on their FDA regulatory category. We are finalizing our proposal to create three new unlisted codes (HCPCS codes Q4431–Q4433) to describe skin substitute products that are FDA authorized or cleared but have not yet received a specific individual HCPCS or CPT code.

3. Alternative Payment Categories

As a conceptually possible alternative to our proposal to group skin substitutes based on FDA regulatory categories for purposes of payment, we considered aligning these products based on their composition, for example, whether they are non-synthetic or synthetic. Two examples provided by interested parties include grouping the products as allografts (for example, amniotic products, cellular products), xenografts (for example, collagen products derived from animals), synthetics (for example, artificial products made from various biomaterials) and grouping the products as human living/cryopreserved tissue, dehydrated human/amniotic tissue, animal xenografts, and synthetics/polymers. However, as noted previously, skin substitutes are a heterogenous group with an increasing intersection between tissue, bioengineered, and synthetic components. With many products now including both non-synthetic and synthetic components, clear categorization of skin substitutes by composition is no longer feasible. This alternative categorization would be extremely complex to implement because it would be necessary to determine which category would be most appropriate for each individual product based on the components of its composition and an assessment of the importance of each component. In addition, it is unclear if grouping products based solely on their composition would provide accurate differentiation with respect to resource or clinical similarity for the purposes of setting an appropriate payment rate.

Other alternatives we considered include grouping all products together to set a single payment rate or creating two or more categories reflecting product cost, similar to the groupings used currently to set payment rates for skin substitutes in hospital outpatient departments. While these options may offer certain operational advantages for their simplicity, neither recognizes the clinical differences among skin substitutes as reflected by their different intended uses. Paying for similar items and services at a comparable rate is a foundational aspect of our payment systems, but hospital outpatient departments paid under the OPPS and physicians and other practitioners paid under the PFS could potentially have a financial incentive to use the least expensive skin substitute or the product offering the greatest discount, which could negatively affect patient outcomes and disincentivize innovation in this space if clinical differences are not recognized and differential payments rates are not set. In addition, dividing products by cost relies on pricing set by manufacturers. Especially in light of the dramatic growth of skin substitutes' ASP-based payment limits, this method is unlikely to accurately reflect skin substitute resource costs or clinical similarity.

We sought comment on whether adding certain subcategories to the three proposed FDA categories would improve clinical or resource similarity. One potential example is creating certain subcategories for payment based on one or more FDA device product codes, which is a categorization process that FDA uses to group similar products together. Other examples that have come to our attention include setting unique payment rates for 361 HCT/Ps based on the number of tissue layers (for example, one layer, two layers, and three or more tissue layers) or entirely synthetic products versus non-synthetic products for 510(k)s. If significant clinical or resource differences were identified between products in one or more of these categories, CMS could create a separate payment grouping for these products for payment purposes.

We received public comments on this comment solicitation. The following is a summary of the comments we received and our responses.

Comment: Many commenters advocated establishing a single payment rate for all non-BLA skin substitutes.

They stated that a single group creates a level playing field, encouraging product selection based on clinical evidence and patient need rather than on which category receives the highest reimbursement. This approach is seen as simpler and avoids the perverse incentives created by past high/low-cost buckets.

Response: While a single rate would result in an administratively simpler policy and likely would result in the most savings, the differentiation of the products in this space supports subgrouping to better ensure access to products in each group. A flat payment rate also reduces the incentive to innovate, perform relevant studies, and seek an FDA approval requiring proof of wound treatment or healing. However, we can continue to evaluate the appropriateness of maintaining a single rate in future rulemaking.

Comment: Many commenters oppose a single flat rate, characterizing it as a ''one-size-fits-all'' approach that fails to recognize the clinical complexity and diversity of products. They believe it would force providers to use less effective products, stifle innovation, and lead to worse patient outcomes, such as higher amputation rates. They argue that a single rate below acquisition costs for many products will destabilize office-based care and restrict access.

The commenters suggested various alternative categorization schemes:

- Several commenters suggested a tiered system with 2–3 tiers based on product technology, clinical evidence, or cost thresholds. For example, a basic collagen matrix could be in a lower tier, while a cellular product with strong RCT data could be in a higher tier. Another proposal suggested tiers based on whether a product requires one or multiple applications to achieve wound closure.
- Several commenters suggested grouping products based on their composition (for example, human tissue, animal-derived, synthetic) rather than just their FDA pathway. Specific proposals included creating a distinct category for amniotic/placental tissue products or sub-categorizing 361 HCT/P products based on the number of tissue layers (for example, single-layer vs. multi-layer) to better reflect complexity and resource costs.
- A commenter suggested greater aggregation into broader categories like ''synthetic'' vs. ''non-synthetic'' would be sufficient.
- A commenter requested a reimbursement framework that provides higher payment for products supported by product-specific randomized clinical trial (RCT) data.
- A commenter suggested implementing a tiered system based on the strength of clinical evidence (for example, number of RCTs) rather than just regulatory pathway.
- Another commenter suggested using the product's FDA cleared/approved label information (for example, product description, including mechanism of action, and indications for use) as well as supporting level 1 human clinical data.

Response: We agree that long-term use of a single, flat rate has the potential to create access issues for specific types of products and reduces the incentive to innovate. However, the options suggested here are also problematic. As noted previously, skin substitutes are a heterogenous group with an increasing intersection between tissue, bioengineered, and synthetic components. With many products now including both non-synthetic and synthetic components, clear categorization of skin substitutes by composition is no longer feasible. This makes this alternative extremely complex to implement because it would be necessary to determine which category would be most appropriate for each individual product based on the components of its composition and an assessment of the importance of each. In addition, it is unclear if grouping products based solely on their composition would provide accurate differentiation with respect to resource or clinical similarity for the purposes of setting an appropriate payment rate.

In addition, we have concerns about the quality of many of the studies that are being produced as well as whether the results can accurately be extrapolated more broadly. As previously discussed, unless a product has obtained approval through a BLA, non-homologous use marketing claims are not allowed. Such claims would directly contradict the regulatory status of registered 361 HCT/Ps, because of the criteria in 21 CFR 1271.10(a). Similarly, 510(k)-cleared devices relevant to this policy generally are dressings intended only to act as a physical cover to protect a wound, to absorb exudate, and to maintain appropriate moisture balance within the wound. Descriptions of purported biological healing factors in these products have not been evaluated by FDA; and there is no guarantee that these factors are present and active or, if present, their concentrations, because these products have undergone no purity or potency assessment. Biological products can differ greatly based on their source and manufacturing, and it is therefore difficult to generalize any conclusions about their safety and effectiveness beyond those allowed by FDA. While section 1862(a)(1)(A) of the Act directs CMS to make determinations about what is reasonable and necessary for Medicare coverage. FDA's statutorily-defined mandate includes determining the safety, purity, and potency of products such as these. We neither have the resources nor authority to replicate these functions for payment purposes and we believe it would be an inefficient administration of government resources to duplicate them.

Comment: A few commenters suggested ways to further subdivide the three FDA categories such as:

- Creating subcategories for 361 HCT/P products based on tissue composition or number of layers to better reflect resource costs.
- Creating a separate category for amniotic/placental tissue products.
- Creating separate categories for products using one or more of FDA device product codes.

Response: We will take these comments into consideration for future rulemaking as we implement this policy and begin to gather new cost data.

We also sought comments on whether products that are not in sheet form are appropriately considered skin substitutes for the purposes of providing separate payment under this policy. Examples include gel, powder, ointment, foam, liquid, or injected products listed in the nontraditional units of cc, mL, mg, and cm^3. We requested feedback on whether these products could be appropriately used as part of the CPT administration codes in the range 15271 through 15278, despite existing CPT coding guidelines limiting their use, and how these units could be paid using the FDA regulatory category groups. For example, assuming these products were appropriate to administer using the noted CPT administration codes or other administration codes, CMS could include products listed in units of cc, mL, or cm^3 in the applicable FDA categories and equate a single cm^2 unit to each cc, mL, or cm^3 for payment purposes. We sought comments on whether other administration codes could be used to appropriately describe services performed using products with units other than cm^2.

We received public comments on this comment solicitation. The following is a summary of the comments we received and our responses.

Comment: Many commenters recommended CMS include non-sheet product forms (gels, powders, liquids, injectables, 3D-printed constructs etc.) in the definition of skin substitutes eligible for separate payment. They argue these products perform similar

functions to sheets, offer additional treatment options for irregularly shaped or tunneling wounds, and excluding them from separate payment would stifle innovation and limit physician choice.

The commenters highlighted the following significant challenges with billing for non-sheet products under the proposed framework.

- The proposed per-cm² payment does not align with products billed by volume (mL) or weight (mg). Commenters stressed the need for a standardized and fair unit conversion methodology (for example, mL to cm² of coverage) to ensure equitable payment and prevent reimbursement misalignment. One commenter suggested that 1 mL of a particular flowable product should be paid at the rate equivalent to 10 cm² of a sheet product.
- It is unclear if current surgical application codes (CPT 15271–15278) can be used for non-sheet products, creating a risk they may not be payable at all. The CPT manual explicitly excludes powders and injectables from these codes. Commenters recommended CMS either confirm their eligibility, create alternative CPT/HCPCS G-codes for their application, or develop a crosswalk framework pairing product form with appropriate procedure codes.

Response: We agree that it is important to maintain access to non-sheet products performing similar functions to sheet skin substitutes, in cases where application of these products is part of reasonable and necessary care. These products have the potential to be payable as skin substitutes; but we agree that units, as expressed in a product's coding, are difficult to standardize for payment purposes. Therefore, we will maintain the current coding mechanism for these products and will direct the MACs to determine appropriate payment in the physician office, which is generally consistent with how these products are currently paid. In the OPPS, these products will continue to be paid through their current packaged payment mechanism. However, we will continue to evaluate payments for these products to determine if an alternative payment methodology might be better suited to non-sheet products. For now, we are also revising HCPCS code A4100 (Non-sheet form skin substitute, FDA cleared as a device, not otherwise specified (list in addition to primary procedure) to allow billing for non-sheet form skin substitute products that do not yet have a more specific code.

Comment: A commenter recommended that CMS *not* pay separately for non-sheet products as skin substitutes. They stated that procedures for these products are reported with different CPT codes and including them could introduce new opportunities for gaming the system. Another commenter stated that for products cleared via the 510(k) pathway that are classified as gels, liquids, or particulates, reimbursement should follow the existing DME pathway, as these products are not skin substitutes and should not be reimbursed under the skin substitute payment framework.

Response: We disagree that form should be the singular determinant of payment for these products.

Comment: Several commenters stated that CMS has never established a formal definition of ''skin substitutes,'' leading to inconsistent policy, and recommended the agency to develop a comprehensive, clinically grounded definition. Several commenters advocated for defining products based on their clinical function rather than their initial physical form. The commenters cited the cellular, acellular, and matrix-like products (CAMPs) initiative, which defines products by their ability to support tissue regeneration. They stated that a product that forms a ''sheet scaffolding for skin growth'' in situ (in the wound bed) should be considered functionally equivalent to a product pre-packaged as a sheet. Several commenters recommended that the CPT definition and CAMPS definition be adopted as standard references for skin substitute classification, eliminating outdated distinctions based on initial product form, aligning with scientific consensus, and supporting value-based care focused on clinical outcomes and regenerative functionality. Many commenters stated that the American Medical Association CPT definition of skin substitute grafts explicitly includes ''biological products that form a sheet scaffolding for skin growth,'' specifying the operative standard as whether the product forms a sheet scaffolding, not whether it is originally formulated as a sheet.

Response: We recognize that skin substitutes have been described but not defined in previous rulemaking. While a formal definition would provide certain advantages, it might also prematurely and unnecessarily limit an evolving category of products. For example, definitions that require products to obtain claims of treatment or healing of wounds or scaffold claims would exclude large numbers of even sheet-form products currently considered by CMS to be skin substitutes for payment purposes. However, we will continue to consider whether a definition or one or more defining characteristics should be identified in future rulemaking.

After careful consideration of the comments and given the significant challenges with billing for non-sheet products under the proposed framework, we are not finalizing changes to the current payment arrangement under the OPPS for products that are not sheet form at this time. While non-sheet products will continue to be packaged with a separately payable service for CY 2026, we will continue to explore the issue and consider whether to provide separate payment for non-sheet products under the OPPS for future rulemaking.

4. Establishing Initial Payment Rates

We proposed to establish initial payment rates for the three FDA regulatory categories based on the volume-weighted average ASP, with no additional markup, for skin substitute products in each category as submitted by manufacturers, when available. We developed initial payment rates for each group based on the weighted, per-unit average of ASPs for the fourth quarter of calendar year 2024. These initial payment rates were listed in the file titled ''CY 2026 PFS Proposed Rule Skin Substitute Products by FDA Regulatory Category—Updated 08/11/2025'' on the CMS website under downloads for the CY 2026 PFS proposed rule at *https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/PhysicianFeeSched/PFS-Federal-Regulation-Notices.html.* When ASP was not available, we used the MUC, which we currently use to determine the high-cost/low-cost status for each skin substitute product in the hospital outpatient setting to calculate the proposed initial rates. We considered using only the MUC data to calculate payment rates for these products. However, when ASP is reported, it may serve as a better estimate of cost across both settings as the ASP reflects sales to physicians as well as hospitals. We sought comment on our proposal to calculate payment rates for skin substitute products in each of the three FDA regulatory categories using ASP, or MUC when ASP is not available, using per-unit averaged pricing data from the fourth quarter of 2024. We also sought comments on whether these calculations, if finalized, should be updated with the most recently available data at the time the final rule is drafted.

We received public comments on these proposals. The following is a

summary of the comments we received and our responses.

Comment: A few commenters supported prioritizing ASP data but raised concerns about the reliability of MUC data as a fallback option. These commenters stated that hospital outpatient MUC is less accurate than ASP data submitted in compliance with statute and regulation, citing longstanding challenges with hospital charge compression where reported charges often do not reflect actual acquisition costs. A commenter noted that in some cases CMS did not use ASP data reported to CMS to set Medicare payment limits and recommended the agency to rely on reported ASP data whenever available, given that manufacturers submit this information quarterly in accordance with statutory requirements established by the Consolidated Appropriations Act, 2021.

Response: When ASP is available and accurately reported, we generally agree that it may serve as a better estimate of acquisition cost across both settings as the ASP reflects sales to physicians as well as hospitals and is net of certain discounts. However, as discussed in the CY 2026 PFS final rule, we have had concerns with the accuracy of some reported ASP data; specifically, that manufacturers could be classifying certain costs as bona fide service fees (BFSFs) when they should instead be classified as price concessions, which would artificially inflate ASP. Additionally, we cannot expect that all manufacturers of skin substitute products will continue to report ASP data to CMS each quarter. We disagree with the statement that the outpatient hospital MUC is an inaccurate measure of actual acquisition costs. We use cost-to-charge ratios specifically to account for variations in hospital markup, and our use of MUC in this case is consistent with how we price other products in hospital outpatient departments. MUC is a useful alternative based on actual claims data when the ASP is not available. Generally, with limited exceptions, when ASP data was available for a product, it was used to calculate a Medicare Part B payment limit and published on the ASP drug pricing files. An exception is for diagnostic radiopharmaceuticals that are above the packaging threshold, which use MUC. However, for the purposes of this policy, payment rates were determined using pricing for the 361 HCT/P products only.

Comment: A few commenters expressed concern that using ASP without markup removes appropriate overhead and handling costs. They noted that drugs and biologicals payable under Medicare Part B are statutorily paid at ASP+6 percent, and using ASP alone eliminates legitimate indirect costs from both OPPS and MPFS systems.

Response: We appreciate these comments and note that overhead costs related to application of these products are included in the facility fees or PE RVUs for the application procedures. A recent Office of the Inspector General report [107] found that, in the third quarter of 2024, a typical beneficiary received 82 units of skin substitutes, meaning that the typical $74 add-on amount per unit alone was worth over $6,000 per patient. Notably, hospitals have been managing these products without separate markup for years through bundled payments.

Comment: A commenter recommended using the arithmetic mean unit cost (AMUC) for products without an ASP, rather than the geometric mean (MUC), to better align with the ASP calculation methodology. Conversely, another recommended using a volume-weighted geometric mean for the overall calculation because it is less influenced by extreme outliers.

Response: We appreciate the commenters for the additional information and may consider these alternatives in future rulemaking.

Comment: A few commenters supported using Q4 2024 ASP data as the foundation for CY 2026 rate calculations.

Response: CMS thanks commenters for their support.

Comment: Several commenters criticized the use of Q4 2024 ASP data. Some suggested using data from before the recent dramatic increases in price (for example, CY 2019, 2022, 2023, or Q4 2023) to establish a more reasonable baseline free from market distortions. Other commenters stated that more current data (for example, Q3 2025) should be used to reflect real-time market conditions, reasoning that using older data could introduce a systemic underpayment.

Response: We agree that much earlier datasets (for example, CY 2019) do not reflect a significant portion of the recent growth in products and payments for this class of products. However, these datasets also do not reflect many new products that might represent quality additions to the market. To avoid this issue, we instead calculated initial rates using hospital outpatient utilization to weight how much each product's price contributes to the final payment rates for skin substitutes. In this setting, skin substitutes are currently paid in two groups (high- and low-cost) to incentivize cost-effective product selection. No similar incentive currently exists in the non-facility setting for physicians and other suppliers billing under the PFS. That is why we consider the hospital outpatient utilization a better source to weight the average among the products. We used the fourth quarter of 2024 because it was the most recent, substantially complete quarter of data and the most complete ASP reporting is typically in the fourth quarter of each year. Finally, use of a later quarter's file would not have allowed us to match up time periods for utilization patterns, and interested parties were given an opportunity to review and comment on that proposed rate.

After careful consideration of the comments, we are finalizing our proposal to establish PE RVUs and initial payment rates for skin substitute products in each of the three FDA regulatory categories using ASP, or MUC when ASP is not available, using per-unit averaged pricing data from the fourth quarter of 2024 as proposed.

As we proposed to implement this policy for CY 2026 in a site-neutral manner across both the non-facility setting under the PFS and hospital outpatient setting under the OPPS, we included all products used in either setting to calculate the rates. However, when product-specific utilization across both settings is used to calculate volume-weighted average payments, the result is an apparent rank order anomaly; despite having a more rigorous regulatory review process and receiving indications to treat and heal wounds, the PMA category has the lowest average payment. We are concerned that the use of the novel pricing practices noted above has resulted in a decoupling of actual resource costs from the ASP. To address this, as a short-term measure, we proposed to weight the product-specific utilization in calculating the proposed rates using the proportions from only the hospital OPPS data and establish, for CY 2026, a single payment rate that would apply to all skin substitute products in the three FDA regulatory categories, or APCs. We believe the OPPS utilization data may better predict utilization patterns under our proposed policies for non-facility settings because, similar to our proposals, these products are already grouped together for payment purposes under the OPPS. By grouping skin substitutes into high- and low-cost groups in the OPPS, hospitals are

[107] Office of Inspector General, U.S. Department of Health and Human Services. *Medicare Part B Payment Trends for Skin Substitutes Raise Major Concerns About Fraud, Waste, and Abuse.* September 10, 2025.

incentivized to choose either the lowest-cost, clinically appropriate product in the low-cost group or the lowest-cost, clinically appropriate product in the high-cost group. No similar incentive currently exists in the non-facility setting for physicians and other suppliers billing under the PFS. As the proposed policies are intended to mitigate the current patterns of use in the non-facility setting by establishing payment rates for the products in groups instead of individually, we do not believe it would reflect the expected resource costs involved in providing care if we were to base the initial rates on utilization data from the non-facility setting that may have been skewed by aggressive and/or improper billing practices that would be less likely to exist under our policies. For these reasons, we proposed to initially use hospital outpatient utilization to weigh how much each product's price contributes to the proposed payment rates for skin substitutes cleared through the 510(k) pathway, registered 361 HCT/Ps, or approved under a PMA. We sought comments on the use of these product utilization patterns to set payment rates.

We received public comments on this proposal. The following is a summary of the comments we received and our responses.

Comment: Several commenters, including MedPAC, strongly support using only OPPS utilization data to set the initial rate. They agree with CMS that utilization data from the physician office setting (PFS) has been distorted by profiteering practices of certain skin substitute product manufacturers. They believe OPPS data is a better predictor of use patterns under a grouped payment approach because hospitals are already incentivized to choose lower-cost products within the existing high/low-cost categories.

Response: We thank commenters for their support.

Comment: A majority of commenters strongly opposed the exclusion of physician office data, arguing that this methodology is flawed, biased, and not representative of real-world practice. They make several key points:

- The vast majority of skin substitute utilization (nearly 90% in Q4 2024) occurs in the physician office setting, so excluding data from the predominant site of service is unreasonable.
- OPPS data is itself skewed. The current bundled payment system in hospitals disincentivizes the treatment of larger wounds in the hospital setting and the use of more advanced, higher-cost products, artificially driving down the average cost in that setting.
- Hospitals can negotiate lower prices through GPOs, which are unavailable to smaller physician offices. Basing a national rate on hospital acquisition costs will create a payment rate that is unsustainable for non-facility providers.
- Using data from only one setting to create a site-neutral rate for all settings is methodologically unsound and works against the stated goal of a consistent payment approach.

The prevailing recommendation from those opposed to the OPPS-only method is to use a blended approach that incorporates utilization data from *both* the physician office and hospital outpatient settings. To address CMS' concerns about distorted office data, they suggest using safeguards like trimming outliers or using data from a time period before the recent dramatic spending increases (for example, 2019 or 2022).

Response: Although skin substitute products are more commonly used in the physician office setting, as we stated in the proposed rule, we believe that separate payment for these products in the non-facility setting has led to problematic practices that are mitigated by the current OPPS policy of paying for skin substitute products in either high-cost or low-cost groupings. We believe OPPS utilization data better reflects the utilization associated with grouping these products into categories for purposes of payment. As we stated in the CY 2026 OPPS/ASC proposed rule, we do not believe it would reflect the expected resource costs involved in providing care if we were to base the initial rates on utilization data from the non-facility setting. Once updated use patterns reflecting this policy are available to calculate rates, we proposed to use all relevant products and the combined product utilization patterns (OPPS and non-facility) to determine a weighted average per-unit cost by category to set separate payment rates for each of the three categories.

Comment: A few commenters recommended using guardrails to ensure the methodology does not inadvertently embed misaligned historical incentives. These commenters believed CMS has several options to mitigate fraudulent and abusive practices, including trimming for outliers that may signal falsely high utilization, using data only from claims that meet established criteria for completeness and accurate coding, and capping counted square centimeters at 120–150 percent of the CPT-implied wound size.

Response: Because we are using OPPS utilization patterns and the OPPS does not currently stratify payment for each individual product, and, by doing so, promote more efficient care, we believe many of these problematic claims will be mitigated. However, as this policy unbundles skin substitutes from their application codes and pays for them separately, we are concerned about the potential for overuse and waste. We invite additional thoughts about how best to mitigate these issues while products are separately paid and note that we will be monitoring usage as compared to CPT coding moving forward.

Comment: A commenter questioned why all outpatient facility volumes were not used for this policy, including critical access hospitals and other providers, noting that coding for products would be on those claims as well.

Response: We appreciate this comment. We developed the proposed rate using hospital OPPS data since, as we stated above, we believe the structure of payment under the OPPS with payment for these products grouped into two categories best reflects use not potentially influenced by the previous system. Using OPPS data only allows for a consistent data set that reflects the majority of Medicare hospital outpatient services, across a wide variety of geographies and areas of the country.

After careful consideration of the comments, we are finalizing our proposal on the use of the hospital outpatient product utilization patterns to set payment rates for these products under the PFS as proposed.

We also proposed for CY 2026 to establish the same initial APC payment rate for each group of skin substitutes, including 510(k)-cleared devices, registered 361 HCT/Ps, and PMA-approved devices. To ensure we are not underestimating the resources involved in using these products in furnishing care, we proposed to use the highest of the calculated volume-weighted average payment amounts for 510(k) cleared devices, 361 HCT/Ps, and PMA-approved devices to set initial payment valuations. As the 361 HCT/Ps have the highest volume-weighted average payment amount, this average payment rate is reflected in the proposed initial payment rate below. However, we note that, in future notice and comment rulemaking, we intend to propose using claims data to set payment rates for products in these three categories, which would likely result in payment valuations that diverge based on the updated data. Another alternative is to set the payment rate for products in these categories at the volume-weighted average for all three categories, resulting

in a lower initial payment rate for all three groups of products. We sought comment on our proposal to use the 361 HCT/P volume-weighted average payment amount to set the initial payment rates for products in all three categories as well as the alternative of using a pooled average of the three categories to set the initial payment rates.

Alternatively, while the ASP Pricing Files show that skin substitutes across all three of the FDA regulatory categories have increased in cost substantially since 2019, unlike the self-determined 361 HCT/Ps and 510(k)-cleared devices, there has not been a substantial increase in the number of skin substitutes with approved PMAs. Consequently, it is possible that the non-facility utilization of the skin substitutes with approved PMAs is not as distorted as the utilization of the other kinds of skin substitutes. Setting a separate payment rate for this category using combined product utilization patterns (from both OPPS and non-facility settings), would result in a higher initial payment rate for the PMA category. This would rationally order the FDA regulatory categories, based on clinical considerations and some indicators of resource cost, until pricing data removed from these aberrant financial incentives can be incorporated. We seek comment on this alternative policy option.

The proposed calculation methodology would result in an initial payment rate of $125.38/cm² for all three proposed new APCs based on the FDA categories including PMA-approved devices, 361 HCT/Ps, and 510(k) devices. Specifically, this proposal would result in an initial payment rate of $125.38/cm² for each HCPCS code assigned to APC 6000 ''PMA Skin Substitute Products,'' APC 6001 ''510(k) Skin Substitute Products,'' and APC 6002 ''361 HCT/P Skin Substitute Products.'' We sought comments on these proposed initial payment rates.

We determined these proposed rates using product pricing and volume for skin substitutes from paid claims with dates of service in the fourth quarter of 2024 because it was the most recent, substantially complete quarter of data available at the time of the CY 2026 OPPS/ASC proposed rule. For professional claims, we excluded claims without a positive line-level allowed amount, so that we did not inadvertently include volume without presumed costs in the calculation. In addition, in reviewing the ASP pricing files from the first quarter of 2017 through the first quarter of 2025, the most complete ASP reporting is in the fourth quarter of each year. To determine the payment rates, we first used a product's ASP if it was available. If the ASP rate was missing, we used the 2024 MUC for the HCPCS code. We then calculated a single rate for each FDA category by taking the volume-weighted average of the rates for the applicable codes using the hospital outpatient utilization to weight each category. We note that if rather than using the final quarter of CY 2024, we alternatively, were to use pricing and volume from all four quarters of 2024 to determine proposed rates, the rate for all categories would be approximately $114.87/cm². Using a pooled payment rate across all three categories would result in a rate of approximately $65.85/cm², while splitting the categories to pay the PMA category using the combined product utilization patterns and the 510(k) and 361 HCT/P categories using the OPPS utilization patterns would result in rates of approximately $259.47/cm² and $125.38/cm² respectively. We sought comment on our proposed process to calculate initial payment rates as well as these alternatives.

We received public comments on this proposal. The following is a summary of the comments we received and our responses.

Comment: Many commenters stated that the proposed payment rate of approximately $125/cm² is far too low and unsustainable. The commenters stated this rate is well below the actual acquisition and operational costs for most providers, especially smaller practices and mobile units without hospital purchasing power. If implemented, they warn it will make offering these therapies financially impossible, forcing practices to close and severely restrict patient access to care, particularly for homebound, rural, and underserved populations. This could lead to worse outcomes, including more amputations, infections, and hospitalizations, ultimately increasing overall Medicare costs.

Instead, many commenters proposed higher rates. A frequently cited alternative, based on independent analyses, was a payment range of approximately $478 to $704/cm². Commenters stated that this range would still generate over $100 billion in Medicare savings over a decade while preserving patient access and innovation. Other suggestions fell within a similar range, such as $500/cm², $500–$640/cm², or up to $973/cm². Another commenter suggested that CMS calculate the payment rate for skin substitute products using a trimmed mean approach—excluding the top and bottom 10% of reported prices of 130 skin substitute products—to eliminate outliers and better reflect fair value. They suggested that the resulting average price of $865/cm² would reflect a fair market average and urged CMS to set a higher allowed amount of approximately $1,080/cm² to ensure providers can sustain services under Medicare's 80 percent payment structure. A few commenters also suggested that the 20 percent copayments should be waived for treatment with skin substitute products. Several commenters supported the reimbursement methodology outlined in Senate Bill 2561 (Skin Substitute Access and Payment Reform Act of 2025), which would establish rates based on Q4 2023 ASP data volume-weighted according to actual utilization in both the professional and hospital outpatient settings. Commenters stated that the methodology from this legislation would result in a payment range of approximately $500–700/cm². Some commenters proposed tiered pricing structures for HCT/P 361 products based on configuration, with recommendations ranging from $400–$500/cm² for single-layer amniotic products to $800–$900/cm² for full-thickness grafts. Other commenters recommended tiered frameworks incentivizing manufacturers to pursue rigorous FDA pathways with reimbursement increases of 25–100 percent over base pricing of $400–$900/cm². Several commenters cited crosswalks to similar products as valid data points. Commenters noted that CPT codes for placing amniotic membrane on ocular surfaces (65778 and 65779) use amniotic membrane allograft supplies reimbursed at $835 and $1,149 in CY 2025. Since typical amniotic tissue grafts placed in eyes are 14mm diameter discs with surface area of approximately 1.5 cm², commenters calculated these rates equal $557–$776 per square centimeter, stating it would be arbitrary and capricious for CMS to price amniotic tissue grafts for eyes at significantly higher rates than same tissues used for chronic wounds. Some suggest using the higher rate CMS calculated for one of the other FDA categories ($259.47/cm²) as a more reasonable starting point.

Response: We appreciate the many detailed comments we received on this issue, but we do not agree that higher payment rates are warranted at this time for several reasons. First, most of these payment rates use non-facility utilization patterns that have been significantly distorted in recent years by problematic practices. Incorporating this

data into the payment rate would embed these practices into the policy. These practices have largely been mitigated in the OPPS utilization patterns, which is why they were used to develop an initial rate for this policy. Second, manufacturers have demonstrated the ability to offer products well below current ASP levels, which indicates that current prices have considerable room for compression without risking product availability or access. Third, there are a significant number of products with current ASPs below this policy's payment rate already. Finally, many of the more expensive products on the market fall into our 361 HCT/P and 510(k) product categories, but their activity is typically limited to that of a physical covering or wrap. These products are not intended to act on the wound to mediate, facilitate, or accelerate wound healing and the justification for these rates is unclear. However, we do not agree that a product used to cover the cornea and prevent scarring and others used to prevent infection should necessarily be priced at the same rate. Once updated use patterns reflecting this policy are available to calculate rates, we will use all relevant products and the combined product utilization patterns (OPPS and non-facility) to determine a weighted average per-unit cost by category to set separate payment rates for each of the three categories, and we will continue to monitor this product class and propose additional adjustments to the policy as necessary in future rulemaking.

Comment: Many commenters expressed concern that a low, uniform payment rate would stifle innovation. They argued that it would discourage investment in research and development for next-generation products, as manufacturers would be unable to recoup the significant costs associated with bringing novel therapies to market. They stated that this could penalize innovative therapies, favor older and lower-cost alternatives, and ultimately limit patient access to more effective technologies. In contrast, some commenters believe the proposed changes will rightly shift the focus to value-based innovation. They stated that true innovation lies in making highly efficacious products at a reasonable price, not just launching increasingly expensive ones. They contend that manufacturers should be required to show robust clinical evidence to justify payment, and the current proposal encourages this shift.

Response: We agree that our policy should incentivize innovation in this class of products. As noted above, in future notice and comment rulemaking, we intend to use claims data to set separate payment rates for products in the three categories, which would likely result in payment valuations that diverge based on the updated data. As the PMA category is by far the smallest, we would anticipate less competition and potentially higher payment rates for those products. In addition, products marketed under the BLA pathway would continue to receive separate payment under the ASP methodology described in section 1847A of the Act. We also welcome continued dialogue on ways to differentiate a truly innovative product from another that offers no true clinical advance as well as on how to properly recognize innovative products through payment policy under the PFS as we continue to assess how best to identify and value innovative products under the PFS.

Comment: A smaller group of commenters supported the proposed rate, and some even advocated for a lower one. Some commenters cited published cost-effectiveness analyses. A commenter noted a study concluding that interventions using skin substitutes with payment limits below $140/cm^2$ were dominant (less costly, better outcomes) compared to typical care; and, based on cost-effectiveness threshold of $100,000 per quality-adjusted life year, interventions were cost-effective with payment limits up to $430/cm^2$. A commenter stated that a rate of $125/cm^2$ seems ''more than reasonable'' given that manufacturing costs for some products are much lower. Several ACOs and provider groups recommended that CMS use a ''pooled'' average across all product categories, which would result in an even lower rate of ~$65/cm^2$, to more accurately reflect resource costs and further curb overspending. Another commenter recommended a rate of $75/cm^2$.

Response: We appreciate the commenters for their feedback. We disagree that further reduction of the initial payment rate is prudent before updated claims data reflecting the results of this policy can be gathered and evaluated.

Comment: There was a split on whether to use a single rate for all products. Many commenters supported finalizing a single, standardized payment rate for all non-BLA products. They argue this creates a level playing field, where clinical choice is driven by evidence and patient need, not by which category has the highest reimbursement. Commenters believe this approach is simpler and less likely to repeat the high-cost/low-cost bucket system of the past. Some commenters requested that after setting an initial rate for 2026, CMS should maintain that single rate for two additional rulemaking cycles before recommending any changes, allowing time to carefully evaluate claims data. Some comments requested moving to tiered payment rates in CY 2027 after setting an initial flat payment rate for CY 2026. Other commenters argued for immediate implementation of a tiered or differentiated payment system in 2026, rather than waiting until 2027. They believe this better reflects product complexity and clinical evidence and avoids treating all products as if they are the same.

Response: While a single rate would result in an administratively simpler policy and likely would result in the most savings, the differentiation of the products in this space argues for subgrouping to better ensure access to products in each group. A flat payment rate also reduces the incentive to innovate, perform relevant studies, and seek an FDA approval requiring proof of wound treatment or healing. While we do intend to use claims data to set separate payment rates for products in the three categories in future notice and comment rulemaking, we are concerned that use of the novel pricing practices noted above has resulted in a decoupling of actual resource costs from the ASP. To address this, as a short-term measure, we proposed to weight the product-specific utilization in calculating the rates using the proportions from only the hospital OPPS data and establish for CY 2026 a single payment rate that would apply to all skin substitute products in the three FDA regulatory categories. We will propose rates for these three categories through notice and comment rulemaking once updated use patterns reflect this policy.

Comment: To avoid sudden market disruption and access issues, some commenters recommended phasing in the payment reduction over several years (for example, 3 years). This would blend the old ASP plus 6 percent payment with the new flat rate over time, giving providers and manufacturers a chance to adapt.

Response: We do not agree that a phased-in approach is necessary. The nearly 40-fold increase in spending on these products has been concentrated in just the past several years. To allow these damaging practices to continue, even in part, for years longer may only serve to unnecessarily delay efficient purchasing, appropriate utilization, and product selection based on clinical need.

Comment: Several commenters opposed applying geographic

adjustments to skin substitute product payments in any setting, arguing that product costs do not vary by location as manufacturer pricing remains consistent regardless of clinical site or geography. Several commenters stated that geographic adjustments would create access disparities, particularly harming rural and underserved communities where patients may have greater need but providers face lower reimbursement rates. A commenter explained that, given the standard OPPS payment methodology, 60 percent of the payment rate for these products would be geographically adjusted, based on the application of the hospital wage index to the labor-related portion of the OPPS conversion factor prior to the application of the APC relative weight. Per the commenter, this would be a significant departure from current policy, where the supply portion of the APC is not geographically adjusted, and would similarly have negative impacts on patients' ability to access products in areas with lower wage index values. Commenters also recommended that CMS exclude skin substitutes from geographic RVU adjustments, noting that while professional service costs may vary by location, product costs do not.

Response: We understand commenters' concerns and are not applying a geographic adjustment to skin substitute products under the OPPS and ASC, where we are not required by statute to do so. With regard to the non-facility setting, section 1848(e) of the Act requires that the PFS include geographic adjustment factors and account for geographic variations in the costs of furnishing services. We refer commenters to the CY 2026 PFS final rule for more information regarding geographic adjustment factors under the PFS.

Comment: Several commenters raised concerns about maintaining payment consistency between PFS and OPPS. Commenters noted that OPPS receives annual market basket adjustments while PFS does not, questioning how CMS would prevent the rates from diverging over time and creating site-of-service incentives.

Response: We appreciate commenters bringing these concerns to our attention, and while we remind readers that variations in the annual update mechanisms for Medicare payment systems are generally determined by statute, we may consider the interaction between the update factors and the development of future proposed rates for these products for future rulemaking.

Comment: Several commenters raised concerns about transparency in CMS's rate calculation. The commenters stated that the information provided was insufficient to understand or recreate CMS' calculations. Some commenters were unable to replicate the proposed $125.38/cm^2$ rate, while others replicated it within 1 percent. A commenter noted that a supplemental document posted August 11, 2025, created additional confusion by describing steps the proposed rule indicated were not performed and contradicting information in the rule itself. Commenters stated CMS did not publish comparison files showing ASP versus MUC values for each product, which are important for evaluating the proposal. Many commenters recommended CMS provide complete methodology details to enable meaningful comment, with some stating that the lack of transparency violates APA requirements for well-reasoned analysis.

Response: We disagree with the commenters' statement that CMS was unclear in the description of the methodology used to calculate the proposed initial payment rate of $125.38/cm^2$. We provided a substantial amount of detail on our calculations in the proposed rule, including the HCPCS codes that were pulled and the data sources to provide even more detail. We released a supplemental document, ''Additional Description of Calculation of Proposed Payment Rates for Skin Substitutes'' on the CMS website at *https://www.cms.gov/medicare/payment/fee-schedules/physician/federal-regulation-notices/cms-1832-p*, which further explains the methodology used to calculate the payment rates for skin substitute products Several commenters were able to replicate our methodology and stated that they were able to approximate the proposed payment rate based on the information provided.

Comment: Commenters identified several products that CMS had incorrectly categorized in its published lists, suggesting the agency correct these errors before finalizing any rate-setting based on the categories. Commenters noted that HCPCS codes Q4107, Q4108, Q4116, Q4122, Q4142, Q4146, Q4147, Q4159, Q4198, Q4201, Q4225, Q4226, Q4232, Q4238, Q4276, Q4282, and Q4297 were misclassified into the wrong FDA categories. The commenters stated these errors lead to inaccurate payment rates for all products in affected categories and suggested CMS correct all assignments before finalizing the rule.

Response: We appreciate the comments. We reviewed the information provided and acknowledge there were some discrepancies in the grouping of some HCPCS codes for particular products in the CY 2026 OPPS/ASC proposed rule. We conducted additional analyses shifting those FDA categorizations, including those suggested by commenters, some of which caused volatility resulting in significant reductions compared to the proposed rule rates.

After careful consideration of the comments, for CY 2026 we are finalizing rates consistent with the groupings illustrated in the CY 2026 OPPS/ASC proposed rule in the interest of transparency and consistency. Prospectively, however, we will designate these HCPCS to the groupings suggested by commenters. We are finalizing our proposal to use the 361 HCT/P volume-weighted average payment amount, based on the grouping of HCPCS codes in the CY 2026 OPPS/ASC proposed rule, to set the initial payment rates for products in all three categories and calculate the initial payment rates as proposed. We also note, that consistent with the proposed rule, we maintained use of hospital claims volume from services incurred during the fourth quarter 2024. We used an updated version of the hospital claims volume as this is the most recent data available as of the time of drafting this final rule with comment period. We also used fourth quarter 2024 ASP data and 2026 MUC data (based on 2024 claims data), when ASP data was not available, as proposed. Given the volatility around skin substitute products due in part to gaming and the proliferation of coding already discussed in this final rule with comment period, even small changes to the methodologies, such as using a different quarter of ASP data or updating the regulatory categories of only 17 of over 200 skin substitute products, can result in significant changes to the payment rate. Accordingly, we believe maintaining the same framework for setting the payment rate that was used for the CY 2026 OPPS/ASC proposed rule, including the FDA regulatory categorizations and the same time periods for pricing, is consistent with the proposed rate on which the public had an opportunity to comment on compared to the volatility that could occur using different definitions. Prospectively, one of our policy goals is to promote greater stability in the payment for skin substitute products. Therefore, consistent with the framework for the methodology proposed in the CY 2026 OPPS/ASC proposed rule, we are

finalizing a final payment rate for CY 2026 of $127.14/cm².

The full list of codes with the payment groupings used in developing the proposed and final rate calculations are available on the CMS website. Likewise, the full list of codes and their payment groupings prospectively are available on the CMS website and in Addendum B to this final rule with comment period.

After careful consideration of the comments, we are finalizing our proposal to use the 361 HCT/P volume-weighted average payment amount to set the initial payment rates for products in all three categories and calculate the initial payment rates as proposed with the exception of updating the calculation with more recent utilization data available as of the time of drafting this final rule with comment period, which resulted in a final payment rate for CY 2026 of $127.14/cm². Specifically, we also used fourth quarter 2024 ASP data and 2026 MUC data (based on 2024 claims data), when ASP data was not available, weighted by more up to date hospital outpatient claims volume.

We proposed to maintain the current structure of HCPCS codes for skin substitutes, including a process to introduce new product-specific codes and proposed initial valuation based on the typical resource costs (that is, those reflected in ASP and MUC data) of the groups associated with each skin substitute's HCPCS code. We proposed to assign each current HCPCS code that describes an individual skin substitute product to one of the three new APCs based on the product's appropriate FDA regulatory category. For a complete list of codes and FDA categories, please see file entitled ''Skin Substitute Products by FDA Regulatory Category'' available on the CMS website under downloads for the CY 2026 PFS final rule at *https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/PhysicianFeeSched/PFS-Federal-Regulation-Notices.html*. Individual HCPCS coding remains necessary to provide identification on claims and track each product's cost. This will also allow effectuation of any applicable coverage policies and improve our ability to determine if any refinements in payment categories would be appropriate in future rulemaking.

For the most part, materials or supplies furnished incident to a service (for example, a suture, customized surgical kit, scalpel, or clip, other than a radiological site marker) are not paid separately under the OPPS. However, separate payment for products is not novel, since Medicare pays for various components of services through the use of separate HCPCS codes and/or payment modifiers. The most obvious examples of these kinds of payment and coding splits occur in diagnostic tests, radiation treatment services, and blood product services. For example, under the OPPS, blood products receive specific HCPCS codes and are paid separately from other services. In this case, the procedure of applying or administering a skin substitute product would not be described or paid for by a single code. Rather, when a skin substitute product is applied, both the application code as well as the HCPCS code of the skin substitute that is being applied would be billed under the OPPS. For example, when CPT Code 15271 (application of skin substitute graft, leg or ankle) is billed, we would expect for the hospital outpatient department to also report a skin substitute HCPCS code, which would be paid at a payment rate that includes the resources involved in using the skin substitute product. We proposed for skin substitute products to receive a separate payment independent from the payment for the application procedure. To effectuate this proposed payment policy under the OPPS, we proposed to create a new status indicator for HCPCS codes describing skin substitutes that are assigned to one of the three new APCs for skin substitutes based on FDA regulatory pathway. Specifically, we proposed to create status indicator ''S1'' to indicate that the skin substitute product is paid separately from other procedure codes under the OPPS. We proposed to assign all existing HCPCS codes describing skin substitute products to status indicator ''S1'' for CY 2026. The proposed status indicator ''S1,'' along with its descriptor and payment status, is listed in Table 114.

TABLE 114: PROPOSED STATUS INDICATOR FOR SKIN SUBSTITUTE PRODUCTS

PROPOSED STATUS INDICATOR	PROPOSED DESCRIPTOR	PROPOSED OPPS PAYMENT STATUS
S1	Skin substitute product paid separately	Paid under OPPS; separate APC payment. Subject to payment based on FDA regulatory pathway.

We also sought comments on whether we should consider treating the codes describing skin substitute products as add-on codes to the current CPT administration codes (CPT codes 15271–15278). This would more clearly indicate that the only skin substitute products to be paid for and treated as supplies by Medicare are those used in conjunction with the already existing CPT administration codes. If we were to treat these codes as add-on codes to the administration codes, we would effectuate this by revising the code descriptors of the skin substitute products to state ''list separately in addition to the primary procedure.'' While we would normally assign the add-on codes to a status indicator that indicates that payment is packaged (that is, status indicator ''N'' (Items and Services Packaged into APC Rates)), given our proposal to pay separately for skin substitute products as incident-to supplies, we would still propose to assign status indicator ''S1,'' to the skin substitute codes.

We received comments on whether we should treat the skin substitute product codes as add-on codes to the current CPT administration codes. The following is a summary of the comments we received and our responses.

Comment: Some commenters suggested that CMS' alternative approach of establishing payment for skin substitute products as an add-on code to current CPT application codes could have the added benefit of eliminating the bifurcated HCPCS coding system for skin substitute products (that is, Q-codes vs. A-codes), which has created significant administrative burdens and confusion for physicians and MACs, and streamline administrative requirements when physicians utilize and submit claims for skin substitute products. One commenter supported paying for skin substitute products as an add-on service

rather than as a standalone service to allow for packaged payments.

Response: We appreciate the information provided by commenters as to whether skin substitute codes should be considered add-on codes. We note that, for the non-facility setting, we are finalizing conversion of all skin substitute products to add-on codes. To ensure alignment across payment systems, we are also finalizing this change to classify skin substitute products as add-on codes in the hospital outpatient setting. Operationally, this would have the effect of requiring providers to bill an administration code when a skin substitute product is furnished. While we are converting skin substitute product codes to add-on codes, given the proposal to pay separately for skin substitute products as incident-to supplies that we are finalizing, we are assigning skin substitute products to status indicator ''S1'' to indicate separate payment.

Based on the input we received from commenters, we are finalizing classifying skin substitute products as add-on codes in the hospital outpatient setting. Since we are making this change to align with the corresponding change in the non-facility setting but we are still finalizing separate payment for skin substitute products, we are revising 42 CFR 419.2(b)(18) to clarify that skin substitute product add-on codes are not among the ''certain services'' described by add-on codes for which packaged payment is made.

We proposed that new HCPCS codes describing skin substitutes would be categorized based on whether they are PMA-approved, 510(k)-cleared, or registered 361 HCT/Ps and the payment rates that apply to that category would be applied to the new code at the next quarterly update. Currently, HCPCS Level II coding applications are submitted and reviewed during our quarterly and biannual coding cycles. We post our coding determinations for drugs and biologicals on a quarterly basis, and do not routinely review those applications at a HCPCS public meeting. For non-drugs and non-biologicals, we post our coding decisions on a biannual basis. For our biannual cycles for non-drugs and non-biologicals, we post preliminary coding determinations then invite feedback on those preliminary coding determinations at a biannual HCPCS public meeting; final coding determinations are posted following the HCPCS public meeting. CMS has been reviewing skin substitutes marketed as 361 HCT/Ps in the quarterly drugs and biologicals coding cycle and 510(k)-cleared skin substitutes in the biannual, non-drugs and non-biologicals coding cycle. Beginning January 1, 2026, we proposed to review HCPCS Level II coding applications for all skin substitutes marketed as 361 HCT/Ps through our biannual coding cycle for non-drugs and non-biological products, rather than on a quarterly basis. Skin substitutes that received a 510(k) clearance, PMA approval, or a granted De Novo request would continue to be evaluated in the biannual HCPCS Level II coding cycles. Therefore, under this proposal, CMS would evaluate all complete HCPCS Level II applications for skin substitutes in our biannual cycles. Should any products come to market under the BLA, NDA, or ANDA pathways that could potentially be considered skin substitutes, CMS would instead review them in a quarterly HCPCS Level II drugs and biologicals coding cycle.

Before a code is assigned to describe the skin substitute product, not otherwise classified (NOC) codes would be used and the CMS MACs would assign the appropriate payment based on the product's FDA category. We proposed to create three new unlisted codes to describe skin substitute products that are FDA authorized or cleared but have not yet received a specific individual HCPCS or CPT code: HCPCS codes Q4431 (Unlisted PMA skin substitute product), Q4432 (Unlisted 510(k) skin substitute product), and Q4433 (Unlisted 361 HCT/P skin substitute product). We proposed to assign the unlisted HCPCS codes to the appropriate APCs based on the product's FDA approval or clearance. Specifically, we proposed to assign HCPCS code Q4431 to APC 6000 (PMA Skin Substitute Products); Q4432 to APC 6001 (Unlisted 510(k) Skin Substitute Products); and HCPCS Code Q4433 to APC 6002 (Unlisted 361 HCT/P Skin Substitute Products). We proposed to create these unlisted codes to prevent delays in Medicare payments for new FDA-approved or cleared skin substitute products that do not yet have a specific HCPCS or CPT code.

We received public comments on this proposal. The following is a summary of the comments we received and our responses.

Comment: Multiple commenters expressed support for CMS' proposal to maintain the current structure of HCPCS codes for skin substitutes. Several commenters recommended that CMS eliminate the bifurcated coding system where some products have ''Q'' codes and others have ''A'' codes. They urged CMS to reassign all skin substitute products to ''Q'' codes to reduce administrative burden and confusion for providers and MACs.

Response: We appreciate the feedback. We will take comments about the coding differences between the products into consideration for future rulemaking.

Comment: Several commenters opposed CMS's proposal to shift the HCPCS Level II coding application review for 361 HCT/P products from a quarterly to a biannual cycle. Commenters argued that maintaining the quarterly cycle is essential for timely patient access to new therapies, supporting innovation, and aligning with the faster review cadence used for drugs and biologics. Commenters stated a biannual cycle would create lengthy delays (18 months or more) for new products to get a code and be reimbursed, creating a barrier to market entry. Commenters stated that all skin substitutes, regardless of regulatory status, should have the same quarterly review process to maintain a level playing field.

Response: We disagree. We post our coding decisions for all non-drugs and non-biologicals on a biannual basis. While CMS has been reviewing skin substitutes marketed as 361 HCT/Ps in the quarterly drugs and biologicals coding cycle, under this policy, unless a skin substitute is approved as a biological product under section 351 of the PHS Act, we would consider it an incident-to supply for payment and coding purposes under the PFS. Beginning January 1, 2026, CMS will review HCPCS Level II coding applications for all skin substitutes marketed as 361 HCT/Ps through our biannual coding cycle for non-drugs and non-biological products, rather than on a quarterly basis. Skin substitutes that received a 510(k) clearance, PMA approval, or a granted De Novo request will continue to be evaluated in the biannual HCPCS Level II coding cycles.

After careful consideration of the comments, we are finalizing our proposal to evaluate all complete HCPCS Level II applications for skin substitutes in our biannual cycles as proposed.

If skin substitutes that are not licensed under section 351 of the PHS Act are no longer paid as biologicals using the methodology under section 1847A of the Act, as proposed, then the manufacturers of these products would no longer be required to report ASP data to CMS under section 1847A(f)(2) of the Act. However, when ASP data is reported, it may serve as a better estimate of resources across the hospital outpatient and non-facility settings than hospital outpatient MUC data. We proposed to update the rates for the skin substitute categories annually through

rulemaking using the most recently available calendar quarter of ASP data, when available, to set the rates. However, we have concerns that using a single, scheduled quarter of ASP data to set payment rates could encourage gaming. We sought comment on the use of a longer timeframe, such as the most recently available four calendar quarters, to set payment rates in future years. In the event ASP is not available for a particular product, we proposed to use the MUC data. If MUC is not available, we proposed to use the product's WAC or 89.6 percent of AWP if WAC is also unavailable, similar to other products for which ASP is used to calculate a payment rate.[108] Once updated use patterns reflecting this policy are available to calculate rates, we proposed using all relevant products and the combined product utilization patterns (OPPS and non-facility) to determine a weighted average per-unit cost by category to set separate payment rates for each of the three new APC groups. We sought comments on our proposed methodology to set and update the payment rates for skin substitutes as well as the rates themselves.

We received public comments on these proposals. The following is a summary of the comments we received and our responses.

Comment: The most common recommendation was that CMS should update the payment rates annually using an inflation index, such as the Consumer Price Index for Urban Consumers (CPI–U) or the Producer Price Index (PPI), rather than recalculating them based on new ASP data. Commenters stated that an inflationary update would provide stability and predictability for providers and manufacturers, avoiding the significant rate variability that would occur with annual ASP recalculations, and reduce the regulatory burden on both manufacturers and CMS. Also, since the proposal would no longer require manufacturers to report ASP data for these products, commenters stated there would be very little reliable data to use for future updates. They stated that relying on ASP would perpetuate the same system that has been susceptible to gaming and abuse.

Several commenters recommended CMS to abandon any reliance on ASP data for setting future payment rates. They stated that the ASP system itself is flawed and has led to the pricing distortions and ''profiteering'' that CMS is trying to correct. Because the data is distorted, using it to set future rates—even if based on claims—will perpetuate the problem. In contrast, one commenter encouraged CMS to continue collecting ASP data for transparency and to support future reimbursement refinements, even if it is not the primary basis for payment.

Response: We appreciate the commenters for their input. We believe that, over time, the ASP data will more accurately reflect the market impacts of our policy to treat skin substitute products as incident-to supplies. By relying on ASP, payment updates will be responsive to changes in the actual cost of skin substitute products as a result of market pressures, whereas an index like the CPI–U is a general inflation measure that does not account for pricing dynamics. Therefore, we believe that updating the payment rates, based on ASP data will more likely result in payment rates that reflect the changing dynamics of the market rather than anchoring the cost to the initial payment rate for CY 2026 based on data collected prior to the implementation of this policy.

Comment: Several commenters expressed concern that using a single, scheduled quarter of ASP data for updates would encourage gaming. MedPAC recommended that if ASP data is used, it should be from a longer timeframe, such as four calendar quarters, to avoid manipulation.

Response: We agree that, moving forward, using a longer timeframe for collection of ASP data would reduce the opportunity for manipulation. While we may be unable to use a longer timeframe if we propose updated rates for 2027, we will look to use additional quarters of data to set rates in future years.

Comment: Several commenters argued the proposal may violate the Administrative Procedure Act (5 U.S.C. 706(2)(A)), which requires well-reasoned analysis for major policy changes. A commenter argued the drastic reimbursement reduction constitutes a de facto adverse National Coverage Determination without following statutory NCD requirements: public notice, consultation with advisory committees, evidence consideration, and clear basis statements (42 U.S.C. 1395y(l)(3)–(4)).

Response: This rule finalizes a proposed change to payment policy. It neither constitutes, nor is akin to, a national coverage determination as it does not make any coverage determinations but merely makes a change to the amount of payment made for certain covered skin substitutes. Section 1869(f)(1)(B) of the Act (that is, 42 U.S.C. 1395ff(f)(1)(B)) defines the term ''national coverage determination'' as ''a determination by the Secretary with respect to whether or not a particular item or service is covered nationally under this subchapter, but does not include a determination of what code, if any, is assigned to a particular item or service covered under this subchapter or a determination with respect to the amount of payment made for a particular item or service so covered''. The provision the commenters cite, 42 U.S.C. 1395y (section 1862 of the Act) expressly incorporates this definition of the term. See 42 U.S.C. 1395y(a)(25) (section 1862(a)(25) of the Act). Because this is not a ''national coverage determination'', the requirements set forth in 42 U.S.C. 1395y(l)(3)–(4) do not apply on their own terms.

Moreover, we believe our proposal satisfies the requirements of the Administrative Procedure Act and is not arbitrary and capricious because we have, for example: (1) Explicitly considered and responded to a dramatic increase in Medicare spending for this class of products, (2) Provided a reasoned explanation for our classification of non-section 351 products as incident-to supplies rather than biologicals separately payable under section 1847A of the Act, (3) Articulated our rationale for using OPPS utilization data and excluding non-facility utilization because of the profit-maximizing incentives distorting the latter, (4) Explained the methodology for calculating the final payment rate with sufficient detail to allow verification by the public, (5) Offered and analyzed several alternatives and explained why our final approach better serves statutory objectives, (6) Acknowledged potential access concerns while reasonably concluding that a sufficient number of manufacturers have demonstrated the ability to provide these products at or below the final payment rate and the assurance that we will monitor and adjust the policy in future rulemaking as necessary, and, finally, (7) Described and responded to the comments CMS received in response to the CY 2026 OPPS/ASC proposed rule.

Several comments, including those related to coverage and the skin substitute LCDs and requests to change how the FDA regulates products CMS considers skin substitutes for payment purposes were out of scope for purposes of this rulemaking.

[108] 89.6 percent of AWP was calculated by first reducing the usual 95 percent of AWP price by 6 percent to generate a value that is similar to WAC with no percentage markup.

5. Summary

To implement this policy, we are finalizing, starting January 1, 2026, to separately pay for skin substitute products as incident-to supplies in both the non-facility and hospital outpatient settings. Under the OPPS, we are finalizing our proposal to unpackage the skin substitute product from the payment for the administration of the skin substitute product and pay for the administration of the skin substitute product separately from the skin substitute product itself. Accordingly, we are deleting the C-codes describing the skin substitutes assigned to the low-cost group, HCPCS codes C5271 through C5278. We did not propose to delete the HCPCS codes assigned to the high-cost group, described by CPT codes 15271 through 15278, as they would remain to describe skin substitute administration procedures. We are specifying that CPT add-on administration codes 15272, 15274, 15276, and 15278 would still be packaged in the outpatient hospital setting.

We are finalizing our proposal to pay separately for certain groups of skin substitute products as incident-to supplies involved in furnishing services under both the physician non-facility and outpatient hospital settings. Unless a skin substitute meets the definition of a biological in section 1847A, in which case the payment methodology under section 1847A would continue to apply, we are finalizing our proposal to assign sheet-form skin substitute products to one of three clinical APCs we are creating based on FDA regulatory categories: APC 6000 (PMA Skin Substitute Products), APC 6001 (510(k) Skin Substitute Products), and APC 6002 (361 HCT/P Skin Substitute Products). We are finalizing our policy to calculate initial payment rates for the APCs using the volume-weighted average ASP for skin substitute products in each group as submitted by manufacturers, when available, and the MUC when ASP is not available. We are finalizing to use the hospital outpatient utilization patterns to set the payment rates for all three categories of skin substitute products, which we are finalizing to pay at a single rate for CY 2026. For CY 2026, this finalized policy would result in an initial payment rate of $127.14/cm^2 for APCs 6000 (PMA Skin Substitute Products), 6001 (510(k) Skin Substitute Products), and 6002 (361 HCT/P Skin Substitute Products).

We are converting the current HCPCS codes for skin substitute products to add-on codes, for the purpose of ensuring that an administration code is always billed with a product, and assigning the sheet-form codes to the three APCs based on the product's FDA regulatory category. We are also creating three new unlisted codes to describe skin substitute products that are FDA authorized or cleared but have not yet received a specific individual HCPCS or CPT code: HCPCS codes Q4431 (Unlisted PMA skin substitute product), Q4432 (Unlisted 510(k) skin substitute product), and Q4433 (Unlisted 361 HCT/P skin substitute product). We are finalizing our proposal to assign the unlisted HCPCS codes to the appropriate APCs based on the product's FDA approval or clearance. Specifically, we are finalizing our proposal to assign HCPCS code Q4431 to APC 6000 (PMA Skin Substitute Products); Q4432 to APC 6001 (Unlisted 510(k) Skin Substitute Products); and HCPCS Code Q4433 to APC 6002 (Unlisted 361 HCT/P Skin Substitute Products). We are creating these unlisted codes to prevent delays in Medicare payments for new FDA-approved or cleared skin substitute products that do not yet have a specific HCPCS or CPT code. We are creating a new status indicator, ''S1,'' for skin substitute products to allow for separate payment under the OPPS. We are assigning status indicator ''S1'' to all skin substitute products assigned to APCs 6000, 6001, and 6002.

We are finalizing our proposal to update the rates for the skin substitute categories annually through rulemaking using the most recently available calendar quarter of ASP data, when available, to set the rates. In the event ASP data is not available for a particular product, we are finalizing to use the outpatient hospital MUC data. If MUC is not available, we will use the product's WAC or 89.6 percent of AWP if WAC is also unavailable. We are finalizing to include all skin substitute products used across both settings as well as the combined product utilization patterns, as soon as data is available that reflects the results of this policy, to determine a weighted average per-unit cost by group to set the payment rates for each of the three categories. We will evaluate all complete HCPCS Level II applications for skin substitutes in our biannual cycles. We are finalizing our proposal to codify the definition of ''biological'' as ''a product licensed under section 351 of the Public Health Service Act'' at §§ 414.802 and 414.902. Finally, we note that these finalized changes for the CY 2026 OPPS skin substitute policy will affect prospective CY 2026 OPPS payments and weights, and as a result will be budget neutralized through the OPPS weight scaler, which accounts for prospective changes in OPPS payments and payment weight. For a discussion of the OPPS budget neutral weight scaler, see section II.A.5. of the CY 2026 OPPS/ASC final rule. We direct readers to section XIII. of the CY 2026 OPPS/ASC final rule for more information on our proposal for payment for skin substitute products applied in the ASC setting.

10. CY 2026 PFS Proposal Regarding Cell and Gene Therapies

In the CY 2026 PFS proposed rule (90 FR 32546 through 32547), CMS proposed that (1) preparatory procedures for tissue procurement required for manufacturing an autologous cell-based immunotherapy or gene therapy be included in the payment of the product itself and (2) that, beginning January 1, 2026, any preparatory procedures for tissue procurement required for manufacturing an autologous cell-based immunotherapy or gene therapy that were paid for by the manufacturer be included in the calculation of the manufacturer's ASP.

As stated in the CY 2026 OPPS/ASC proposed rule (90 FR 33649 and 33650), we made readers aware of this proposal as it may impact therapies paid under the OPPS and ASC payment system. We directed readers to submit their comments on this topic to the CY 2026 PFS proposed rule. We stated that comments submitted to the PFS rule will be responded to in the CY 2026 PFS final rule with comment period along with the finalized policy.

We refer readers to the CY 2026 PFS final rule with comment period for a summary of comments, our responses, and the finalized policy for CY 2026.

11. Medicare Part B Drugs Without a Medicaid National Drug Rebate Agreement (NDRA)

CMS has reviewed drugs, biologicals, and radiopharmaceuticals with HCPCS codes that meet the definition of a covered outpatient drug (defined at 42 CFR 447.502) and are receiving payment under Medicare Part B. In accordance with section 1927(a)(1) of the Act, for payment to be available under Medicare Part B for covered outpatient drugs of a manufacturer, the manufacturer must have entered into and have in effect a Medicaid NDRA. As of the writing of the notice in the CY 2026 OPPS/ASC proposed rule (90 FR 33650 through 33651), our records indicated that the manufacturers of the single source drugs, biologicals, and radiopharmaceuticals listed in Table 115 did not currently have a Medicaid NDRA in effect. Accordingly, we stated

that if the manufacturers, or labelers, of these products did not promptly enter into a Medicaid NDRA, Medicare Part B payment would no longer be available for these products, which includes payment under the OPPS and ASC payment system. We stated that these HCPCS codes would be assigned to an OPPS status indicator of E1, which indicates a non-payable status by Medicare when submitted on outpatient claims (any outpatient bill type). Similarly, we stated that these HCPCS codes would be assigned to an ASC payment indicator of B5.

BILLING CODE 4120–01–P

TABLE 115: HCPCS CODES DESCRIBING DRUGS MANUFACTURED BY LABELERS WITHOUT A MEDICAID NATIONAL DRUG REBATE AGREEMENT IN THE CY 2026 OPPS/ASC PROPOSED RULE

HCPCS Code	HCPCS Code Long Descriptors
C9293	Injection, glucarpidase, 10 units
J0840	Injection, crotalidae polyvalent immune fab (ovine), up to 1 gram
J1162	Injection, digoxin immune fab (ovine), per vial
J3424	Injection, hydroxocobalamin, intravenous, 25 mg
C9089	Bupivacaine, collagen-matrix implant, 1 mg
C9144	Injection, bupivacaine (posimir), 1 mg
J7674	Methacholine chloride administered as inhalation solution through a nebulizer, per 1 mg
A9521	Technetium tc-99m exametazime, diagnostic, per study dose, up to 25 millicuries
J0716	Injection, centruroides immune f(ab)2, up to 120 milligrams
J0841	Injection, crotalidae immune f(ab')2 (equine), 120 mg
J2850	Injection, secretin, synthetic, human, 1 microgram
C9482	Injection, sotalol hydrochloride, 1 mg
J7353	Anacaulase-bcdb, 8.8% gel, 1 gram
A9592	Copper cu-64, dotatate, diagnostic, 1 millicurie
J1201	Injection, cetirizine hydrochloride, 0.5 mg
J2278	Injection, ziconotide, 1 microgram
J8670	Rolapitant, oral, 1 mg
J9202	Goserelin acetate implant, per 3.6 mg
J9248	Injection, melphalan (hepzato), 1 mg
J9600	Injection, porfimer sodium, 75 mg

BILLING CODE 4120–01–C

We received public comments on this notice. The following is a summary of the comments we received and our responses.

Comment: A few commenters supported CMS publishing this notice

and ensuring manufacturer compliance with statutory obligations. Specifically, one commenter supported CMS actions as they believed it promoted fairness, accountability and consistency across Federal health programs.

Response: We thank commenters for their support.

Comment: Several commenters explained that enforcement of the statute would reduce Medicare Beneficiary access to drug therapies, including those that commenters said had few, or inferior, clinical alternatives. Some of these commenters communicated that participation in a Medicaid NDRA, and the associated 340B agreement, would be financially unsustainable for the manufacturers of these products. A few commenters asked CMS to delay enforcement so CMS could further consider their concerns and so that manufacturers could consider how they may come into compliance, such as considerations regarding implementing the government price reporting infrastructure required and other contractual obligations. Additionally, a commenter stated that they do not believe the 2003 Medicare Prescription Drug and Modernization Act ties Medicare Part B reimbursement to NDRA participation, that past statements from several government agencies do not support that a NDRA is required for Medicare Part B payment, that, in their view, the plain language of the 2021 Consolidated Appropriations Act confirms that Medicare Part B payment is available for manufacturers without NDRAs, and that, in their view, CMS is reinterpreting the statute which places an unconstitutional condition on Medicare Part B payment.

Response: We acknowledge the concerns raised by commenters. However, in accordance with section 1927(a)(1) of the Act, for payment to be available under Medicare Part B for covered outpatient drugs of a manufacturer, the manufacturer must have entered into and have in effect a Medicaid NDRA. For the manufacturers who have not come into compliance with this statutory requirement, Medicare Part B payment for the HCPCS codes that describe their products will be stopped effective April 1, 2026. We note, that if manufacturers satisfy the statutory requirement, Medicare Part B payment will be resumed. We do not believe that an additional postponement is appropriate as this is an existing statutory requirement that manufacturers should have been aware of and already compliant with. In addition, notices were provided to manufacturers in the spring of 2025, and through the CY 2026 OPPS/ASC proposed rule, which have provided manufacturers with more than sufficient time to initiate a Medicaid NDRA.

Comment: One commenter requested additional information from CMS on future enforcement of this statutory requirement and if enforcement will be carried out through notice and comment rulemaking in subsequent years.

Response: Section 1927(a)(1) of the Social Security Act states that for payment to be available under Medicare Part B for covered outpatient drugs of a manufacturer, the manufacturer must have entered into and have in effect a Medicaid NDRA. We believe this requirement is clear, self-implementing, and does not require notice and comment rulemaking to enforce. CMS may, at its discretion, continue to alert manufacturers to any non-compliance we become aware of through notice and comment rulemaking, direct communication to manufacturers, or other means. However, we expect manufacturers that want Medicare Part B payment for their covered outpatient drugs to promptly enter into an NDRA when their product enters the market and maintain that NDRA to continue to receive Part B payment.

Comment: The manufacturer of the product, MACI, stated that MACI is not regulated as a Human Cells, Tissues, and Cellular and Tissue-Based Products by the FDA, and is actually approved by the FDA pursuant to a Biologics License Application under Section 351 of the Public Health Service Act. This commenter believed that HCPCS code J7330 describes their product and is erroneously not being paid by CMS, and they request that CMS make their product a separately payable OPPS drug starting in CY 2026. This commenter did not mention the issue of Medicaid NDRA, rather they generally requested OPPS payment for the product MACI.

Response: We thank the commenter for their engagement. For CMS to pay for this product as a drug under Medicare Part B, the manufacturer must enter into a Medicaid NDRA. As listed in the CY 2026 OPPS/ASC proposed rule, another product manufactured by Vericel was listed as lacking a Medicaid NDRA. This product can be described by HCPCS code J7353 (Anacaulase-bcdb, 8.8 percent gel, 1 gram). Our records do not indicate that the manufacturer, Vericel, of this product, currently has an active NDRA. Therefore, none of the covered outpatient drugs manufactured by this manufacturer can receive payment under Medicare Part B.

After consideration of public comments, we are adhering to the statutory requirement, and CMS is stopping Medicare Part B Payment for HCPCS codes describing products whose manufacturers did not promptly enter into a Medicaid NDRA for their covered outpatient drugs. As of the writing of this CY 2026 OPPS/ASC final rule with comment period, our records indicated that the manufacturers of the single source drugs, biologicals, and radiopharmaceuticals listed in Table 116 do not currently have a Medicaid NDRA in effect. Accordingly, effective April 1, 2026, Medicare Part B payment would no longer be available for these products, which includes payment under the OPPS and ASC payment system. In the April 1, 2026 quarterly OPPS/ASC update, these HCPCS codes will be assigned to an OPPS status indicator of E1, which indicates a non-payable status by Medicare when submitted on outpatient claims (any outpatient bill type). Similarly, these HCPCS codes would be assigned to an ASC payment indicator of B5.

We note that since the notice included in the proposed rule, three of the listed manufacturers came into compliance, describing HCPCS code J2850 (Inj secretin synthetic human), HCPCS codes A9592 (Fluoroestradiol f 18), and J9248(Inj melphalan (hepzato) 1 mg). Therefore, for these three products, we are finalizing a status indicator assignment of ''K'' indicating nonpass-through drugs and nonimplantable biologicals, including radiopharmaceuticals, that are paid under the OPPS through a separate APC payment. We will continue to closely monitor for continued compliance of these products, and all products, with their Medicaid NDRA obligations and will adjust Medicare Part B payment status accordingly. Upon the publication of this final rule, if a manufacturer immediately contacts CMS with the intent to enter into an NDRA, we will aim to maintain their separate payment for January 1, 2026.

However, if a manufacturer does not enter promptly into an NDRA, then Medicare Part B payment will be stopped as discussed in this rule. If a manufacturer comes into compliance and enters into an NDRA, Medicare Part B payment will be reinstated retroactive to the date that the signed and completed NDRA has been received and accepted by CMS. For clarity and transparency to the public, we will also indicate on the CMS ASP Pricing Files [109] and the OPPS Addendum B [110]

[109] *https://www.cms.gov/medicare/payment/part-b-drugs/asp-pricing-files.*

[110] *https://www.cms.gov/medicare/payment/prospective-payment-systems/hospital-outpatient-pps/quarterly-addenda-updates.*

which drugs are non-payable under Medicare Part B due to the manufacturer's lack of effectuation of a Medicaid NDRA. We encourage manufacturers to immediately contact CMS regarding their intent to enter into an NDRA.

BILLING CODE 4120–01–P

TABLE 116: HCPCS CODES DESCRIBING DRUGS MANUFACTURED BY LABELERS WITHOUT A MEDICAID NATIONAL DRUG REBATE AGREEMENT THAT WILL HAVE THEIR MEDICARE PART B PAYMENT STOPPED APRIL 1, 2026.

HCPCS Code	HCPCS Code Long Descriptors

BILLING CODE 4120–01–C

12. Add-On Payment for Technetium-99m (Tc-99m) Derived From Domestically Produced Molybdenum-99 (Mo-99)

As discussed in prior rulemaking, in collaboration with the Department of Energy, National Nuclear Security Administration (DOE/NNSA), CMS provided an additional payment of $10 for the marginal cost for Tc-99m produced by non-Highly Enriched Uranium (HEU) sources in an effort to support access to Technetium-99m (Tc-99m), a critical radioisotope used in the majority of diagnostic imaging services, and produced through the radioactive decay of molybdenum-99 (Mo-99) from CY 2013 to CY 2025. We stated that we believed such an adjustment would ensure equitable payments in light of market influences, cost differentials, and cost variations and their potential to create significant payment inequities among hospitals (77 FR 68323). Accordingly, we established HCPCS

code Q9969 (Tc-99m from non-highly enriched uranium source, full cost recovery add-on per study dose) to describe the Tc-99m radioisotope produced by non-HEU methods and used in a diagnostic procedure.

In January 2022, the Secretary of Energy issued a certification that stated that there is a sufficient global supply of non-HEU-sourced Mo-99 to meet the needs of patients in the United States (86 FR 73270). Additionally, in March 2023, the last major global producer of Mo-99 converted from HEU to low-enriched uranium (LEU) targets, and all Mo-99 used in the United States is now produced without HEU. As such, in the CY 2024 OPPS final rule with comment period (88 FR 81803), we adopted a policy to end the additional $10 add-on payment described by HCPCS code Q9969 (Tc-99m from non-highly enriched uranium source, full cost recovery add-on per study dose) for non-HEU-sourced Tc-99m at the end of CY 2025. We explained that given that all Mo-99 used in the U.S. is now produced without HEU, we believed that starting in CY 2026 the Medicare claims data utilized to set payment rates would only include claims for diagnostic radiopharmaceuticals that utilized non-HEU-sourced Tc-99m, meaning the data would reflect the full cost of the Tc-99m diagnostic radiopharmaceuticals that providers would use in CY 2026. That being the case, we believed there would no longer be a need for the additional $10 add-on payment for non-HEU-sourced Tc-99m for CY 2026 or future years.

In the CY 2025 OPPS/ASC proposed rule with comment period (89 FR 59377 through 59378), we shared that the Department of Energy and other interested parties raised another issue affecting the domestic supply chain for Mo-99 and Tc-99 that, left unaddressed, could also cause payment inequity among outpatient hospital providers. We noted that foreign Mo-99 production has historically been subsidized by foreign governments, resulting in prices below the true cost of production. These artificially low, foreign government-subsidized prices have created a disincentive for domestic investments in Mo-99 production infrastructure and a barrier to entry for new producers, including U.S. companies, which in turn has resulted in unreliable production and periodic shortages. Subsequently, using our equitable adjustment authority under section 1833(t)(2)(E) of the Act, we proposed and finalized a policy to address the payment inequity resulting from the higher cost of Tc-99m derived from domestically produced Mo-99 by establishing a new add-on payment of $10 per dose for radiopharmaceuticals that use Tc-99m derived from domestically produced Mo-99 starting on January 1, 2026. Furthermore, we stated that the Department of Energy, National Nuclear Security Administration (DOE/NNSA) would establish the criteria to certify whether the Tc-99m radiopharmaceutical dose is derived from domestically produced Mo-99 and eligible for the add-on payment, which would be included in the CY 2026 OPPS/ASC proposed rule with comment period. We also stated that we would continue to develop the technical implementation of this additional payment after a definition for domestically produced Tc-99m radiopharmaceutical was established, including any requirements for providers to document that the Tc-99m radiopharmaceutical used in a procedure was domestically produced and could qualify to receive the add-on payment. Additionally, we stated that our intent was to have the regulatory framework for this policy in place prior to the domestic production of Mo-99 and Tc-99m, to increase provider awareness of the availability of additional payments for domestically sourced Tc-99m radiopharmaceuticals. Likewise, producers of domestic Mo-99 would have certainty that the Medicare OPPS payment policy takes into account the additional costs of Tc-99m derived from domestically produced Mo-99.

a. Criteria for Classifying a Tc-99m Radiopharmaceutical Dose as Domestically Produced

As mentioned above, in the CY 2025 OPPS/ASC proposed and final rules with comment period, CMS stated that DOE/NNSA would establish the criteria to certify whether the Tc-99m radiopharmaceutical dose is derived from domestically produced Mo-99 and eligible for the add-on payment, and that the criteria would be included in the CY 2026 OPPS/ASC proposed rule.

In the CY 2026 OPPS proposed rule with comment period (90 FR 33651 through 33653), for purposes of this provision, DOE/NNSA recommended, and CMS proposed, the following definitions:

- Domestically produced dose of Tc-99m: A dose of Tc-99m generated from domestically produced Mo-99;
- Domestically produced Mo-99: Mo-99 that was both irradiated and processed in the U.S.;
- Irradiated: The process of bombarding a uranium or molybdenum target with radiation in order to produce Mo-99, and to specify that irradiation is typically performed with a nuclear reactor or particle accelerator
- Processed: In this context, processed refers to the purification of Mo-99 from irradiated material.

Additionally, DOE/NNSA recommended, and we proposed that a dose of Tc-99m generated from Mo-99 that was irradiated or processed outside the U.S. would not qualify for this add-on payment, even if the Mo-99 was loaded into a Tc-99m generator in the U.S. or if the Tc-99m was eluted [111] at a radiopharmacy in the U.S.

As an example, we noted that Mo-99 imported and shipped separately to a U.S-based generator manufacturer or radiopharmacy, and then loaded into a generator stateside, would not be considered domestically produced Mo-99 for the purposes of this add-on payment. To elaborate, we noted that although the Mo-99 was loaded into a generator or eluted in the U.S., the Mo-99 was irradiated and processed abroad, imported, and then loaded into the domestic generator, and would therefore be excluded from this add-on payment.

Additionally, in the CY 2026 OPPS/ASC proposed rule, as part of the implementation process for the add-on payment for Tc-99m derived from domestically produced Mo-99, per DOE/NNSA's recommended definitions for the purpose of this add-on payment, we proposed to codify the aforementioned definitions and references for domestically produced Mo-99 to § 419.49 to specify when a dose of Tc-99m generated from domestically produced Mo-99 could be eligible for the add-on payment. We received public comments on these proposals.

Comment: We received public comments on DOE/NNSA's recommended definitions for the purpose of this add-on payment and its codification to § 419.49 to specify when a dose of Tc-99m generated from domestically produced Mo-99 would be eligible for the add-on payment. Most commenters, including manufacturers, producers, trade associations, health systems, and providers, were largely supportive of the add-on payment for Tc-99m derived from domestically produced Mo-99 and also supported the proposed technical implementation plan, including the recommended definition, the stated threshold levels, and the codification of eligibility for this add-on payment to § 419.49.

Response: We thank the commenters for their support.

[111] ''Eluted'' refers to the process by which Tc-99m is chemically separated from Mo-99 within the generator and collected in an elution vial.

Comment: We received a few comments requesting that we delay implementation of this add-on payment for Tc-99m derived from domestically produced Mo-99 until domestic production of Mo-99 begins.

Response: As we stated above and in prior rulemaking (89 FR 94258 through 94259), while we recognize that there may not be domestic production of Mo-99 in CY 2026, we believe it is better to have a regulatory framework for this policy in place for when domestic production of Mo-99 begins. This way, providers will be knowledgeable about the availability of additional payments for domestically sourced Tc-99m radiopharmaceuticals, and producers of domestic Mo-99 will be certain that the Medicare OPPS payment policy will take the additional costs of domestic production of Mo-99 into account. We further note that the technical steps that we have taken to operationalize this policy do not mean that payment will be made for Tc-99m derived from domestically produced Mo-99 in CY 2026. We recognize that domestically produced Mo-99 is not yet available.

After review of the public comments, for the purposes of this add-on payment, we are finalizing our proposal without modification to define a domestically produced dose of Tc-99m as a dose of Tc-99m generated from domestically produced Mo-99. Whereas domestically produced Mo-99 means Mo-99 that was both irradiated and processed in the U.S., and ''irradiated'' refers to the process of bombarding a uranium or molybdenum target with radiation in order to produce Mo-99. Specifying that irradiation is typically performed with a nuclear reactor or particle accelerator. Lastly, DOE/NNSA recommended, and we proposed here, to define ''processed'' in this context to refer to the purification of Mo-99 from irradiated material. We are also finalizing our proposal without modification to codify the aforementioned definitions and references for domestically produced Mo-99 to § 419.49 to specify when a dose of Tc-99m generated from domestically produced Mo-99 could be eligible for the add-on payment.

We refer readers to section V.B.12.c of this final rule with comment period for additional discussion of commenters' feedback on policy modifications, including documentation requirements, the add-on payment amount, and implementation guidance.

b. Coding and Documentation for the Add-On Payment for Tc-99m Derived From Domestically Produced Mo-99

As discussed above and in the CY 2026 OPPS/ASC proposed rule, from CY 2013 to CY 2025, CMS provided an additional payment of $10 for the marginal cost for radioisotopes produced by non-HEU sources (77 FR 68323). Under this non-HEU add-on payment policy, hospitals reported HCPCS code Q9969 (Tc-99m from non-highly enriched uranium source, full cost recovery add-on per study dose) once per dose, along with any diagnostic scan or scans furnished using Tc-99m, as long as the Tc-99m doses used could be certified by the hospital to be at least 95 percent derived from non-HEU sources (77 FR 68323).

Consistent with the non-HEU add-on payment policy implementation plan, in the CY 2026 OPPS proposed rule with comment period (90 FR 33651 through 33653), CMS proposed to establish new HCPCS C-code C9176 (Tc-99m from domestically produced non-HEU Mo-99, [minimum 50 percent], full cost recovery add-on, per study dose), effective January 1, 2026. CMS stated that hospitals could report new HCPCS C-code C9176 once per dose, along with any diagnostic scan or scans furnished using Tc-99m derived from domestically produced Mo-99, if they could certify that at least 50 percent of the Mo-99 in the Tc-99m generator to produce the Tc-99m was domestically produced Mo-99.

Similarly, we also stated that we would align the certification and tracking requirements to the non-HEU add-on payment certification and tracking requirements and that we would expect hospitals requesting this additional payment to perform standard due diligence to ensure that their claims are supported by internal records.

We received comments on the establishment of new HCPCS C-code C9176 to facilitate the add-on payment for Tc-99m derived from domestically produced Mo-99.

Comment: Commenters largely supported our proposed establishment of new HCPCS C-code C9176 (Tc-99m from domestically produced non-HEU Mo-99, [minimum 50 percent], full cost recovery add-on, per study dose) to facilitate the add-on payment for Tc-99m derived from domestically produced Mo-99, effective January 1, 2026.

Response: We thank the commenters for their support.

After review of the public comments, for the purposes of this add-on payment, we are finalizing the establishment of new HCPCS C-code C9176 (Tc-99m from domestically produced non-HEU Mo-99, [minimum 50 percent], full cost recovery add-on, per study dose), effective January 1, 2026.

We refer readers to section V.B.12.c of this final rule with comment period for additional discussion of commenters' feedback on policy modifications, including the certification and tracking requirements, the amount of the add-on payment, and requests for additional guidance.

c. Comment Solicitation on the Add-On Payment for Tc-99m Derived From Domestically Produced Mo-99

As stated in prior rulemaking, CMS aims to account for the per-dose cost of Tc-99m derived from domestically produced Mo-99 while limiting administrative burden for hospitals and protecting the Medicare trust fund. In the CY 2026 OPPS/ASC proposed rule, we sought comment on the following:

- We asked commenters to provide any insight regarding the irradiation and processing required to produce Mo-99 that may be relevant.
- As we mentioned in the CY 2025 OPPS/ASC final rule with comment period, available information from the Organization for Economic Co-operation and Development, Nuclear Energy Agency (OECD/NEA) supports an add-on payment amount of $10 as appropriate to address the cost of Tc-99m derived from domestically produced Mo-99 for hospital outpatient departments. However, we sought additional information that could further inform the cost differentials between radioisotopes derived from domestic and foreign-produced Mo-99, including, but not limited to, production, transportation, and storage costs that outpatient hospital departments may incur that would not be accounted for in historical claims data. We stated that CMS may consider reevaluating the amount of the add-on payment if we receive new, substantial information to inform these cost differential factors of Tc-99m derived from domestically produced Mo-99.
- In the CY 2026 OPPS/ASC proposed rule, CMS proposed that 50 percent of the Mo-99 used in the Tc-99m generator to produce the Tc-99m must be domestically produced Mo-99 to qualify for the add-on payment. We sought feedback on the appropriateness of the proposed threshold and additional factors that CMS may consider when defining the eligibility threshold.
- We asked what forms and levels of documentation would be most viable and efficient for tracking and certifying

if the Mo-99 and Tc-99m were domestically produced?

- We asked what additional steps CMS could take to reduce administrative burden or improve tracking of domestically produced Mo-99 for purposes of this add-on payment?

The following is a summary of the comments we received and our responses.

Comment: As stated above, several commenters supported the proposed add-on payment, the intent to support domestic production of Mo-99, and the proposed definitions pertaining to domestically produced Tc-99m. However, while noting their overall support, several commenters also shared feedback regarding potential implementation challenges, including transparency, regulatory guidance, and the potential for administrative burden.

Specifically, some commenters asked CMS to provide clear operational guidance on the documentation that providers must maintain to verify that at least 50 percent of the Mo-99 in Tc-99m generators is domestically sourced and to ensure that this documentation and tracking requirements are straightforward, administratively feasible, and do not create barriers to access. Some commenters cited the guidance related to code Q9969 as an example of clear operational guidance that minimizes the potential for administrative burden. Other commenters requested that CMS continue to engage with industry and other Federal counterparts in the development of future guidance. A few commenters shared high-level workflows and information flows that could pose as challenges or potential gaming opportunities, including opportunities to game the threshold amount. Commenters also suggested potential collaborations and engagement opportunities that could help inform future payment strategies and policy refinements.

Response: We thank commenters for their input. In the CY 2025 OPPS/ASC final rule with comment period (89 FR 94256 through 94259), we stated that we would continue to develop the technical implementation of this additional payment after we established a definition for domestically produced Tc-99m radiopharmaceutical, including any requirements for providers to document that the Tc-99m radiopharmaceutical used in a procedure was derived from domestically produced Mo-99 and could qualify to receive the add-on payment. We will consider the comments received in response to this comment solicitation for future guidance.

Comment: We received several comments regarding the amount of this add-on payment. Most commenters offered support for the initial add-on amount of $10 in addressing the payment inequity resulting from the higher cost of Tc-99m derived from domestically produced Mo-99. Several commenters disagreed with the appropriateness of an additional payment amount of $10 in addressing the payment inequity resulting from the higher cost of Tc-99m derived from domestically produced Mo-99. One commenter stated that there would not be a payment inequity and that the $10 add-on amount was unnecessary. Per this commenter, costs of Tc-99m derived from domestically produced Mo-99 should actually be less expensive than non-domestically produced Mo-99, as the commenter believes that suppliers would not be able to price the domestically produced Mo-99 higher than non-domestically produced Mo-99 given current industry competition and contracts. Other commenters shared concerns that an add-on amount of $10 would be insufficient. These commenters stated that $10 would not be enough to address cost differentials associated with domestic Mo-99 supply, including costs associated with production, transport, and storage. These commenters requested that CMS provide additional analysis to support the amount of the add-on payment and to continue to work with interested parties to evaluate whether $10 continues to be an adequate level of reimbursement to offset increased costs of sourcing domestically produced radioisotopes. Of those commenters who found the proposed add-on amount insufficient, a few of those commenters offered recommendations to improve the amount, including suggestions to increase the Tc-99m add-on amount to $15 per dose and various other suggestions for adjustment methodologies.

Response: We thank commenters for their feedback on this proposal. As previously stated above and in prior rulemaking, we welcome commenters to provide data to inform rate setting and to support assertions that the price differential between domestically produced and foreign produced Mo-99 will be more or less than $10. We reviewed the submitted information and available data on cost differentials associated with domestic Mo-99 supply. We did not find that the information provided was sufficient to demonstrate that the $10 add-on payment was inappropriate to address the additional cost to hospital outpatient departments of utilizing domestically produced Tc-99m radiopharmaceuticals.

We find that $10 remains an appropriate estimate of the incremental per-dose cost for Tc-99m derived from domestically produced Mo-99 given the uncertainties of the true cost of Tc-99m derived from domestically produced Mo-99 at this time. We note that we review our claims data on an annual basis to establish the OPPS payment rates, and we will continue to monitor data related to this add-on payment and potentially adjust the payment amount if warranted in future years.

Comment: Numerous commenters requested an expansion of this add-on payment for Tc-99m derived from domestically produced Mo-99 as a means to extend support for other radiopharmaceuticals, such as Xe-133 and I–131, and other domestically manufactured products, including N95 masks, nitrile gloves, medical gowns, syringes, needles, and other items considered as medical essentials. Commenters stated that such add-on payments would align with Executive Orders and protect beneficiaries by alleviating concerns associated with foreign-made medical products.

Response: We thank the commenters for their input. However, we note that comments related to domestically produced radioisotopes beyond Tc-99m and domestically produced medical products are out of scope for the purposes of the proposed Tc-99m add-on payment policy and comment solicitation.

In conclusion, in accordance with our review and comments from interested parties, using our equitable adjustment authority under section 1833(t)(2)(E) of the Act, we are finalizing our proposed implementation plan for the add-on payment for radiopharmaceuticals that use Tc-99m derived from domestically produced Mo-99 without modification. For the purposes of this add-on payment, we are finalizing our proposed definition of a domestically produced dose of Tc-99m, codification of the definition under § 419.49, and the establishment of new HCPCS C-code C9176 (Tc-99m from domestically produced non-HEU Mo-99, [minimum 50 percent], full cost recovery add-on, per study dose), effective January 1, 2026.

C. Notice of Intent To Conduct Medicare OPPS Drugs Acquisition Cost Survey

Section 1833(t)(14)(A)(iii) of the Act requires the Secretary to set payment rates for specified covered outpatient

drugs (SCODs) [112] beginning in 2006 at the amount the Secretary determines to be the average acquisition cost for the drug for that year, at least when certain hospital acquisition cost survey data is available. To collect the cost survey data for the Secretary to use for 2006 payment rates, section 1833(t)(14)(D)(i)(I) of the Act required the Comptroller General of the U.S. to conduct a survey in each of 2004 and 2005 to determine the hospital acquisition cost for each SCOD. To inform payment rates in later years, section 1833(t)(14)(D)(ii) of the Act requires the Secretary periodically to conduct surveys of hospital acquisition costs for each SCOD. In developing that survey, section 1833(t)(14)(D)(i)(II) of the Act requires the Secretary to take into account certain recommendations from the Comptroller General regarding frequency and methodology of subsequent surveys.

The GAO conducted the required surveys in 2004 and 2005, and, in reporting the results in 2006, recommended that the Secretary thereafter validate, ''on an occasional basis—possibly every 5 or 10 years—ASP data that manufacturers report to CMS for developing SCOD payment rates.'' [113] CMS has not yet conducted a survey of the acquisition costs for each SCOD for all hospitals paid under the OPPS. Additionally, on April 18, 2025, President Trump signed Executive Order (E.O.) 14273, ''Lowering Drug Prices by Once Again Putting Americans First.'' [114] Section 5 of the E.O., ''Appropriately Accounting for Acquisition Costs of Drugs in Medicare,'' directing the Secretary of HHS to publish in the **Federal Register** a plan to conduct a survey under section 1833(t)(14)(D)(ii) of the Act so he can determine the hospital acquisition cost for covered outpatient drugs at hospital outpatient departments.

Accordingly, in the CY 2026 OPPS/ASC proposed rule, we announced that under section 1833(t)(14)(D)(ii) of the Act we would be conducting a survey of the acquisition costs for each separately payable drug acquired by all hospitals paid under the OPPS, including SCODs, and drugs and biologicals CMS historically treats as SCODs. We indicated that this survey would be open starting at the end of CY 2025 to early CY 2026. We also stated that we had reviewed and taken into account the Comptroller General's recommendations regarding the frequency and methodology of these surveys in developing our proposed survey, and that we intended for the survey to be completed in time for the survey results to be used to inform policy making beginning with the CY 2027 OPPS/ASC proposed rule. We indicated that we intended to propose and seek comment on any payment rates for SCODs based on the survey results in CY 2027 rulemaking.

Comment: Most commenters opposed our announcement that we will be conducting a survey of the acquisition costs for each separately payable drug acquired by all hospitals paid under the OPPS, including SCODs, and drugs and biologicals CMS historically treats as SCODs and urged CMS to reconsider the necessity and timing of the proposed survey.

Many of these commenters stated that, given the complexity and scale of the required data collection and analysis, conducting the survey will impose a significant burden on hospitals and that CMS' estimate of that burden grossly underestimates the cost, time and resources that will be necessary to complete the survey. Commenters also claimed that CMS is wrong to assume that the reporting will be done by pharmacy technicians and that the survey will actually be completed by pharmacists that will cost more. One commenter opined that completing the survey would demand the concerted effort of multi-disciplinary teams, including pharmacy, supply chain, finance, legal, and reimbursement professionals, far beyond what pharmacy technicians alone could provide. The commenter stated that CMS' own Information Collection Review document ''acknowledges the breadth of the undertaking but fails to account for the extensive coordination needed with vendors and suppliers, from whom much of the requested data must be sourced. The time and resources required to collect, clean, analyze, and accurately report thousands of distinct drug prices would divert critical personnel from patient care and other essential hospital functions''. Many other commenters emphasized that the cost of completing the survey would come at the expense of the hospital's ability to provide essential care to patients and quoted the GAO's 2006 report to Congress in which the GAO concluded that the surveys it conducted ''created a considerable burden for hospitals'' and that to submit the required price data hospitals ''had to divert staff from their normal duties, thereby incurring additional costs.'' Many commenters stated that the financial burden of completing the survey would be exacerbated by upcoming Medicaid and Medicare reductions under the Inflation Reduction Act.

Response: We take the burdens on hospitals of completing the survey and the GAO's conclusions relating to that burden very seriously in the design and implementation of the survey. We have created a survey instrument and survey process that we think will minimize, to the extent reasonably possible, the staffing and financial burden on hospitals of collecting and reporting the necessary information to CMS. The survey instrument consists of a streamlined online portal, where hospitals can either directly enter acquisition costs or download and reupload an excel template of acquisition costs. There will be technical assistance available for any hospital staff with any issues that arise during the submission process. We have taken the feedback from commenters into careful consideration when finalizing the survey tool.

We are also engaging in robust education and outreach efforts with hospitals to reduce the burden of completing the survey. These activities consist of:

- Obtaining user feedback from hospitals. We worked with a small group of hospital representatives to learn about their operations and business practices so that we could thoughtfully incorporate that knowledge into the survey design.
- Providing hospitals with a comprehensive communications plan. We are outlining thorough communications to support hospital representatives and system users throughout the onboarding, training, and implementation phases of the survey process.
- Providing hospitals with webinar training sessions. We plan to host two webinar sessions to provide more details on the registration and data submission processes for the survey, and to offer hospital representatives an opportunity to ask questions in a dedicated question-and-answer session.
- Providing hospitals with accessible resources. We have created a survey website (*https://www.cms.gov/medicare/payment/prospective-payment-systems/hospital-outpatient-pps/outpatient-prospective-payment-system-opps-drug-acquisition-cost-survey*) to house resources for hospital representatives and system users, including user guides, frequently asked questions, fact sheets, and a data collection template for ease of use.

[112] For the definition of a SCOD, see section 1833(t)(14)(B) of the Act at *https://www.ssa.gov/OP_Home/ssact/title18/1833.htm.*

[113] *https://www.gao.gov/assets/gao-06-372.pdf.*

[114] *https://www.govinfo.gov/content/pkg/FR-2025-04-18/pdf/2025-06837.pdf.*

• Creating a survey instrument with an intuitive design and application support. The survey instrument is being built with ease of use in mind. The screens are simple, featuring enabled tooltips, descriptive error messages, downloadable copies of the user guide, and access to dedicated helpdesk contact information.

• Providing hospitals with dedicated technical support. There is a dedicated Helpdesk email (*OPPSdrugsurvey@cms.hhs.gov*) to support users with any technical issues they may have with the system and a Helpdesk phone number is forthcoming.

But many of commenters' arguments appear to rest on a belief that CMS should *never* conduct a survey. We cannot reconcile that position with the statute, which requires the Secretary to ''conduct periodic surveys,'' or GAO's advice to conduct those surveys every five or 10 years. The Secretary has not yet conducted any such survey. We reiterate that future surveys will be periodic in nature, which will limit the burden that hospitals face on a reoccurring basis.

Comment: Many commenters stated that the reason CMS has never previously conducted a survey of the acquisition costs for each SCOD for all hospitals paid under the OPPS is because of the immense administrative burden it would impose on both hospitals and CMS. One commenter stated that that ''CMS has historically opted out of conducting this survey for several reasons—including undue burdens and inaccuracy of results—and these realities have not changed''. The commenter claimed that the burden of conducting the survey was so significant that GAO recommended that the survey be used only to validate ''ASP data that manufacturers report to CMS for developing SCOD rates'' and that ''CMS declined to conduct a survey between 2006 and 2019, influenced by GAO's analysis, and cited the survey's burden on both hospital staff and the agency.'' The commenter additionally noted that ''[a]s recently as November 2021, HHS publicly acknowledged the significant burden the survey has on the agency and hospitals. During a Supreme Court oral argument, HHS stated that the surveys are 'very burdensome on the study takers', 'very burdensome on the hospitals', and 'do not produce results that are all that accurate.' '' The hospital acquisition cost survey, the commenter concluded, ''would divert resources from patient care, contribute to inefficiencies, and create financial strain on hospitals at a time when it is a CMS priority to actively reduce such inefficiencies and burdens.'' Similarly, several other commenters questioned the choice of conducting a survey that imposes a significant burden on hospitals ''given the Administration's goal of reducing administrative burdens''.

Response: We acknowledge, as we did in the CY 2026 OPPS/ASC proposed rule, that we have not previously conducted a survey of the acquisition costs for each SCOD for all hospitals paid under the OPPS. We also acknowledge that surveys can be administratively burdensome both to recipients and administrators. However, as discussed in our response to the previous comment, we believe that the survey instrument and accompanying process that we have devised will alleviate to the greatest extent possible the staffing and financial burdens identified by the GAO and HHS. Again, regardless of the burden involved, we are required to comply with section 1833(t)(14)(D)(ii) of the Act which requires ''the Secretary to conduct periodic . . . surveys to determine the hospital acquisition cost for each specified covered outpatient drug for use in setting the payment rates.'' E.O. 14273 accordingly directs the Secretary to publish in the **Federal Register** a plan to conduct a survey under section 1833(t)(14)(D)(ii) of the Act so he can determine the hospital acquisition cost for covered outpatient drugs at hospital outpatient departments.

Comment: One commenter stated that the burden of completing the survey would be even greater for 340B covered entities not only because they typically have limited administrative resources, but because the survey would require 340B hospitals to report twice the amount of data as other hospitals.

Response: We understand the commenter's concerns; however, we believe it is prudent to collect all discounts, rebates, and other price concessions that are provided to hospitals, including 340B discounts, so that we have data that reveals the actual acquisition costs of the drugs that hospitals purchase.

Comment: One commenter stated that the survey is broader than permitted by law because it includes drugs that are not included in the definition of specified covered outpatient drugs under section 1833(t)(14)(B) of the Act. The commenter also expressed surprise that CMS is proposing to exclude radiopharmaceuticals from the survey when those drugs are explicitly included within the statutory definition of SCODs. Conversely, one commenter agreed with CMS' decision to exclude radiopharmaceuticals, as the commenter stated that these products present unique characteristics that make their inclusion in a broad hospital acquisition cost survey problematic. They stated that radiopharmaceuticals are used in highly specialized clinical settings, often with low-volume distribution. Another commenter requested that CMS exclude all separately payable radiopharmaceuticals from the survey. The commenter recommended that doing so while using targeted alternative data sources would ensure that OPPS payment rates remain accurate, support continued patient access, and minimize administrative burden on hospitals.

Response: We acknowledge, as we did in the CY 2026 OPPS/ASC proposed rule, that the proposed survey includes both SCODs and drugs and biologicals that we have historically treated as SCODs for payment purposes. As we explained, we have historically treated non-SCOD drugs as SCODs for payment purposes since CY 2006. We believe that drug pricing and payment is a complex and dynamic issue; therefore, CMS, beneficiaries, and taxpayers would benefit from the additional details that the survey will provide on acquisition costs for non-SCODs, which represent the majority of drugs currently separately paid under the OPPS.

As discussed in the draft Supporting Statement A for this data collection, for the NDCs included in the survey template we excluded radiopharmaceutical NDCs from our proposed list of NDCs. Radiopharmaceuticals are unique products with various forms in which they can be purchased—The GAO explicitly acknowledged these unique characteristics in the original survey. While GAO still collected information, and analyzed data, for radiopharmaceuticals, it specifically acknowledged that ''their complex nature as compared with drugs poses challenges for collecting and interpreting cost data'' and the ''GAO found that the diversity of forms in which they can be purchased—ready-to-use unit doses, multidoses, or separately purchased radioactive and non-radioactive substances—complicates CMS' efforts to select a data source that can provide reasonably accurate price data efficiently''.[115] We believe that, due to these unique characteristics and challenges, the burdens of collection for radiopharmaceuticals outweigh the benefits, and so we should not include radiopharmaceuticals in the survey at

[115] Government Accountability Office. ''Medicare Hospital Pharmaceuticals: ''Survey Shows Price Variation and Highlights Data Collection Lessons and Outpatient Rate-Setting Challenges for CMS'' April 2006. Available at *https://www.gao.gov/assets/gao-06-372.pdf.*

this time. This will also reduce hospital reporting burden. We thank the one commenter for their support regarding our proposal, and finalized policy, to exclude radiopharmaceuticals from the OPPS drug acquisition cost survey at this time. With respect to the commenter that suggested that we exclude all radiopharmaceuticals from the survey, we confirm that we are doing so.

Comment: One commenter, noting that the survey does not have an OMB approval number, indicated it had already received email communications regarding the survey and cautioned CMS that it should not be taking efforts to conduct the survey before it has been finalized via rulemaking.

Response: We can assure the commenter that CMS has not begun collecting drug acquisition cost data prior to OMB approval of the survey package. CMS has alerted hospitals paid under the OPPS of our intent to conduct the survey so that they would be aware of the survey if finalized in this rulemaking and assigned an approved OMB control number.

Comment: One commenter stated that CMS' survey methodology contradicts GAO guidance and will consequently lead to unreliable results. The commenter stated that when conducting the 2004 survey, the GAO worked with knowledgeable interested parties to develop a survey instrument before sending it to its sample population. According to the commenter, the GAO pretested the survey instrument, made adjustments based on hospital feedback, and engaged a data collection contractor to pilot the revised instrument with a larger group. As a result of the pilot, the commenter contended, GAO adjusted the instructions and changed its procedures before engaging in a multifaceted effort to collect data from about half as many hospitals as CMS intends to survey. The commenter stated that CMS' survey methodology, instrument, and instructions do not compare, ''although it intends to undertake a larger survey under the same statutory authority, with the same goal, but far more serious consequences.'' To illustrate the alleged deficiencies of CMS' survey as compared to the GAO's, the commenter provided the following example: CMS instructs hospitals to report purchase prices on an NDC-by-NDC basis, net of all discounts, rebates, and price concessions. The commenter pointed out that discounts, rebates and price concessions are not aways reflected in hospitals' purchasing systems. When the GAO faced this same problem in 2004 and 2005, the commenter contended, it determined that ''it was generally not feasible to allocate rebates to specific drugs'' and limited its review solely to hospital purchase price information, excluding any rebates paid after the hospital's receipt of the product. In contrast, the commenter alleged, CMS instructs hospitals to ''estimate the approximate discount received for NDC, deduct that amount from the NDC cost, and report the final cost with all deductions in the template.'' CMS, the commenter concluded, provides no further instructions regarding the estimation methodology or even a field for hospitals to indicate which of their reported prices include estimated discounts.

Response: We thank the commenter for their feedback. As we create a survey instrument, we are engaging with hospitals and experts within the hospital and drug purchasing industry, and we are incorporating the valuable feedback received through the notice and comment rulemaking process. The survey will go through extensive user testing, and there will be a thorough onboarding process once an OMB control number is received, which will involve webinars, user guides, fact sheets, additional communications as well as a dedicated email inbox, phone number, and website in order to ensure hospitals are able to respond to the survey. We disagree with commenters to the extent they suggest the statute requires us to mimic the GAO survey in every particular. The statute instead requires us to craft our survey ''taking into account'' the GAO's recommendations. We have done so. We also note that the world has changed since 2004 and 2005, when GAO conducted its survey tool. For example, hospital systems in 2026 have technology far more advanced and sophisticated than the technology hospitals had over 20 years ago in 2004 and 2005. Similarly, CMS is able to create a more streamlined, sophisticated, and modern survey tool more than 20 years after GAO created its survey tool, while still adhering to relevant principles that GAO used when crafting the original survey in 2004. We thus believe it is reasonable, for example, to require hospitals to report drug discounts to us. Drug pricing and discounts have also drastically changed since 2004 and 2005. For example, according to a GAO Report [116] on Prescription Drug Spending, the amount of money spent on prescription drugs has increased dramatically over the past two decades. They specifically list pharmaceutical rebates as one of the several factors that affect prescription drug prices in the U.S. The rapid growth of drug spending and drug discounts and rebates since the original GAO survey emphasizes the need and increased importance for today's survey to incorporate these factors into the acquisition cost.

Comment: The same commenter faulted the CY 2026 OPPS/ASC proposed rule for failing to recognize the importance of a well-developed survey instrument, clear instructions, and accessible technical support. The commenter found this perplexing, given GAO's experience. The commenter stated that despite the GAO's careful planning and testing, its 2004 survey required extensive, continuous engagement with respondent hospitals: ''On average, [contracted] interviewers called each hospital 8 times before receiving a complete data submission''. It was only after this ''rigorous, labor intensive'' activity by the GAO that the GAO reported that the survey produced accurate hospital drug price data. The commenter stated that it is reasonable to expect that hospitals will similarly need ongoing guidance to navigate the complexities of responding to CMS' proposed survey but states that CMS' proposal gives no indication that hospitals will have any opportunity to seek clarification or technical support during the survey process. This lack of robust instructions and practical support, the commenter alleged, will almost certainly result in inconsistent data, undermining the reliability of the survey results.

Response: We agree with the commenter that it is reasonable to expect that hospitals will need ongoing guidance to navigate the complexities of responding to our proposed survey similarly to how they did with the GAO's survey. However, we disagree that our proposal gives no indication that hospitals will have any opportunity to seek clarification or technical support during the survey process. We also do not agree with the commenter's conclusion that our survey lacks a well-developed survey instrument, clear instructions, and accessible technical support. We have created a survey instrument that we believe minimizes, to the extent reasonably possible, the amount of effort necessary for hospitals to collect and report the required information to CMS. We have established a communication method for the hospitals subject to the survey. We have also established extensive written instructions and several real-time training sessions to provide

[116] *https://www.gao.gov/prescription-drug-spending.*

guidance and receive feedback. For technical assistance we have multiple guidance documents (FAQs, user guides, fact sheets, among others), which will be available on our new dedicated website (*https://www.cms.gov/medicare/payment/prospective-payment-systems/hospital-outpatient-pps/outpatient-prospective-payment-system-opps-drug-acquisition-cost-survey*), as well as a dedicated phone line (forthcoming, to be announced on the above referenced website) and email address (*OPPSdrugsurvey@cms.hhs.gov*) that hospitals can contact for assistance before and throughout the survey process. There will be additional assistance tools available within the survey itself to facilitate the completion of the survey by hospitals.

Comment: The same commenter expressed concern that if CMS performs a ''deficient survey'', it could undermine the purpose of the 340B program. The commenter cited a finding from GAO's 2005 report that it ''could not fully account for rebates or payments from group purchasing organizations''. The commenter stated that many 340B-participating hospitals are subject to a prohibition on purchasing covered outpatient drugs through a group purchasing organization or other group purchasing arrangement, ''so the GPO payment issue may not substantially affect them'' but ''non-340B hospitals may be unable to reasonably allocate GPO payments on an NDC-by-NDC basis, leading to overreporting of their acquisition prices, and creating an artificial gap between 340B and non-340B providers''. The commenter listed other consequences that they alleged would occur as a result of a ''deficient survey''. ''For example, the price discerned through a retrospective acquisition cost survey will not reflect the true net cost to 340B covered entities for any drugs that, in the future, are subject to both the Medicare Drug Price Negotiation Program (DPNP) under Part B and HRSA's proposed 340B rebate pilot program. For such drugs, HRSA has proposed that 340B covered entities will be required to purchase the drugs at the WAC price, then wait for manufacturers to pay rebates to bring the price down to the 340B ceiling price.'' The commenter stated that ''[u]nless every manufacturer pays every covered entity every requested rebate—which seems unlikely for the reasons stated in our letter to HRSA regarding its rebate pilot program, which we incorporate here by reference—covered entities' costs for these drugs will be, on average, higher than the 340B ceiling price. Because the CMS survey is retrospective and based on historical acquisition costs, it will systematically understate the actual net cost to 340B covered entities for these drugs. Any payment rates set using such survey data will therefore fail to accurately reimburse covered entities for their true acquisition costs''. The commenter requested that CMS acknowledge this limitation and, if it proceeds with its survey proposal and anticipated reimbursement cuts, clarify how it will ensure that payment rates for Part B drugs subject to both the DPNP and the 340B rebate pilot will fully account for the additional rebate liability imposed on 340B covered entities. The commenter alleged that the complexities associated with the CY 2026 OPPS/ASC proposed survey have only increased since the GAO's report and that the approach proposed by CMS is the wrong solution to resolve budget shortfalls. ''It serves only to harm 340B covered entities—threatening this country's safety net front line—in contravention of clear Congressional intent. This approach therefore functionally guts the 340B Program's benefits.''

Response: We thank the commenter for their detailed comment outlining their concerns. We note that HRSA's 340B pilot program is out of scope for purposes of this rulemaking and CMS defers to HRSA for specifics on this program. This pilot program has yet to go into effect, and the period of the survey does not overlap with the pilot program, but we can consider how to incorporate any potential intersection between that program and Medicare payment policy in future rulemaking or future drug surveys released by us. We acknowledge that drug pricing and payment is dynamic and evolving, but that this survey will provide valuable insight into this topic, and will help address some of the same issues that this commenter raises. The survey will bring greater transparency to drug acquisition costs, which also will help address some of the same broader issues that the commenter raises. Whereas not conducting a survey because it might prove difficult only serves to leave the issue opaque for all interested parties.

Comment: Many commenters stated that the survey results would be unrepresentative or quickly obsolete given the volatility in drug pricing and policy due to various factors such as proposed pharmacy benefit manager reform, the implementation of negotiated drug prices under the IRA, 340B drug pricing program rebate policies, the ''most favored-nation'' policy and pharmaceutical tariffs. They stated that this volatility will preclude a survey conducted in CY 2026 collecting data from 2024 to 2025 from serving as an accurate basis for future Medicare reimbursement policies. Some of these commenters suggested that CMS should use the proposed survey timeframe to instead conduct a test survey, incorporate interested parties' feedback, and learn from GAO's findings of technical challenges while these changes are implemented. Other commenters went further and suggested that the constantly fluctuating nature of drug prices generally would render survey results questionable regardless of when the survey was conducted. These commenters stated that any survey will only yield a point-in-time estimate of a drug's acquisition cost, which can change wildly quarter to quarter and will fail to account for new, expensive drugs that enter the market after the survey is completed.

Response: We acknowledge that surveys are inherently a snapshot of data at a given point in time (indeed, that is their purpose) and that there are multiple factors which can affect drug costs at any given point in time. To a significant extent, the value of a survey is providing a snapshot of data at given point of time which reflects all of the factors that are affecting the data at that point of time. The statute requires that to conduct a survey of drug acquisition costs to inform drug payment amounts to do so on a periodic basis. We note that commenters' observations cut both ways: if drug pricing changes significantly over time, then that supports our decision to collect data now instead of continuing to rely on drug pricing policies set based on GAO surveys from two decades ago. The statute also provides that we do not have to rely solely on survey data to inform our drug pricing policies. For example, as discussed in the CY 2026 OPPS/ASC proposed rule (90 FR 33654), we could consider pricing from the Federal Supply Schedule (FSS), 340B ceiling pricing, ASP plus 6 percent, zero percent or another percentage; or other recognized drug pricing to inform future CMS payment policy. Such policies have been, and will continue to be, set in advance every year through notice and comment rulemaking.

Comment: Some commenters supported our announcement that we will be conducting a survey. These commenters stated that doing so would promote transparency and bring greater alignment of payment with acquisition costs.

Response: We thank commenters for their support.

Comment: Many commenters suggested refinements to various aspects of the proposed survey. Several commenters supported CMS conducting the survey but were concerned about using its results for CY 2027. These commenters cautioned CMS against making ''abrupt changes'' to the 340B payment policy as a result of the survey. These commenters maintained that CY 2027 is too soon to make changes and 1 year of data is an insufficient basis upon which to make changes. These commenters argued that careful consideration of data validity and analysis is necessary before making changes to payment policy and that inaccurate data collection could lead to reimbursement policies that directly impact Medicare beneficiaries rather than correct any inequities in hospital payment.

Response: We agree with commenters that a careful consideration of data validity and analysis of that data is necessary before making changes to payment policy and, as we stated in the CY 2026 OPPS/ASC proposed rule, we intend to propose and seek comment on any payment rates for SCODs, and drugs historically treated as SCODs, after taking into consideration the survey results in CY 2027 rulemaking. We do not agree, however, that 1 year of data is necessarily an insufficient basis upon which to make changes. The commenter cites no statistical support for such a categorical conclusion, which is likely overbroad. And under the statute, we adjust payment rates for drugs on an annual basis, suggesting Congress anticipated year-to-year policy updates. Indeed, the further we get from the survey to make payment policy the more likely it is that we run into the problem of there being too long of a lag. We have to strike an appropriate balance, and 1 full year of data from the most recent year seems reasonable.

Comment: One commenter stated that the proposed start of the survey is too soon. The commenter stated that hospitals need time to identify, validate and coordinate drug cost information across internal departments and that without additional advance notice and technical guidance hospitals may be unable to respond comprehensively within the proposed survey window. The commenter requested that CMS extend the timeline for survey development and hospital response to ensure robust participation and accurate data collection.

Response: We appreciate commenters' concerns about hospitals having sufficient time to identify, validate and coordinate drug cost information across internal departments and the need to provide hospitals with advance notice of the survey and technical guidance with respect to it. However, we do not believe it is necessary to delay the proposed start of the survey to address these concerns. As we have stated in our previous responses to comments, our survey has been designed to minimize the amount of effort required by hospitals to collect and report the information. With respect to notice, in addition to the notice provided by the CY 2026 OPPS/ASC proposed rule itself, we have alerted all hospitals subject to the survey to make them aware of the potential for a survey. With respect to technical assistance, in addition to multiple guidance documents on our website, we will conduct training sessions for hospitals, hold webinars, publish extensive onboarding materials, and we have established a dedicated helpline to provide one-on-one support and assistance.

Comment: Several commenters expressed concern about the length of the survey window, arguing that 90 days was not enough time given that survey completion will require a multi-disciplinary team at any hospital, including but not limited to pharmacy, supply chain, finance, and reimbursement. One commenter argued that smaller/independent 340B-eligible hospitals that lack the appropriate infrastructure or the support of system resources would struggle to meet a 90-day deadline.

Response: As discussed in the previous comment, we have designed our survey to require as little effort as possible on the part of the hospital to collect and report the required data. Consequently, we believe that 90 days is enough time for hospitals to collect and report this data to us. Hospitals have been on notice regarding the fundamentals of the survey since the proposed rule publication in July of 2025, and the associated PRA packaged contains the outline of the survey, which is nearly identical to the final survey. Therefore, in July of 2025 hospitals were aware of the approximate drugs that would be surveyed as well as the information that they would be required to provide. Even if hospitals had not been provided this notice, we still believe 90 days is more than adequate time given that this acquisition cost information should already be at the hospitals disposal and can easily be compiled into the minimal data fields of the survey.

Comment: One commenter supported the CY 2026 OPPS/ASC proposed scope of data to be collected, stating that CMS' proposal to collect data on purchases during a 1-year timeframe of July 1, 2024 through June 30, 2025 was an ''optimal'' timeframe. The commenter stated that since the acquisition costs of drugs frequently change, an average acquisition cost calculated over a shorter timeframe might be skewed by temporary supply-chain issues or other factors that would cause the average acquisition cost to be under-or over-stated. In contrast, the commenter contended, a 1-year acquisition timeframe would appropriately capture the range of acquisition costs for each surveyed drug in that year. The commenter also stated that responding to the survey with acquisition data for a 1-year timeframe would be no more burdensome than responding with acquisition data for a shorter timeframe.

Response: We thank the commenter for their support.

Comment: One commenter also supported CMS' statement that it anticipated conducting the survey no more than every 4 years, noting that this would minimize survey burden. The commenter additionally noted that a revised survey is not necessary to adjust the payment amount under section 1833(t)(14)(A)(iii)(I) of the Act. By statute, the commenter pointed out, the average acquisition costs for the drug and hospital group must be determined ''taking into account the hospital acquisition cost survey data,'' and consequently CMS can use other data to keep payment amounts current. The commenter concluded, ''Thus, if the survey indicates that the average acquisition cost for a particular drug for non-340B hospitals is equal to 3percent more than the ASP, the average acquisition cost should automatically update with CMS' quarterly updates to its ASP data so that it does not fall below or increase above the survey-determined amount of 3 percent more than the ASP.''

Response: We thank the commenter for their support and input on potential ways to adjust payment amounts following the survey.

Comment: One commenter provided input on balancing data validation with confidentiality. The commenter acknowledged that some data transparency is necessary to ensure the integrity of the payment system and appropriateness of payment but expressed concern that if data is identifiable to individual hospitals, it might suppress responses in light of the sensitivity of drug pricing data. To promote a broad response while still ensuring that third parties can replicate CMS' acquisition cost estimates by drug and class of hospital, the commenter recommended that all four data fields

(total units and net acquisition costs for 340B and non-340B drugs) be made available at the hospital level with pseudonymized provider numbers, but that all hospital identifiers (for example, state or location data, NPIs, etc.) be excluded from the data sets that can be accessed by the public or those with data use agreements.

Response: We agree with the commenter that it is necessary to balance data transparency with confidentiality and appreciate the suggestion as to how we might do so. We believe that the survey we have designed achieves this balance. We of course intend to follow relevant privacy laws. Only the Department of Health and Human Services (HHS) and relevant component agencies, their contractors and representatives, and the Executive Office of the President (EOP) will have access to these data unless such data are otherwise required to be released to other parties by law. Following the collection of data and its analysis, the aggregate results of the survey will be considered when determining proposed payment rates. The proposed payment rates and calculations with aggregate data could appear in notice and comment rulemaking to ensure transparency and replicability; however, the confidentiality of individual hospitals and proprietary information would be maintained to the extent permitted by law. To the extent that acquisition costs are deemed sensitive and/or confidential, we do not intend to make such prices available in an individually identifiable manner.

Comment: Another commenter requested that Disproportionate Share (DSH) eligible Covered Entities be allowed to submit unified responses via their system Chain Home Office, be exempted from any consequences of not responding to the survey (as the commenter expects all covered entities will participate) and ''limit the survey to only the information necessary to carry out the Agency's immediate policy objectives.''

Response: We are not treating any hospital type or group differently for purposes of conducting this survey. All hospitals paid under the OPPS are required to respond to the survey. We note that Critical Access Hospitals are not included in the survey pool since they are not paid under the OPPS.

Comment: Many commenters opined that limiting data collection to hospitals would provide an incomplete picture of acquisition costs and that to ensure accuracy and comprehensiveness, CMS should use supplemental data sources and engage drug manufacturers and distributors and other entities involved in the supply chain to incorporate data points such as the cost of goods sold and any applicable discounts and rebates.

Response: We agree with commenters to the extent that CMS should incorporate information from supplemental data sources into the survey, and we have designed our survey to allow for the incorporation of information from supplemental data sources, including manufacturers and distributors, that are available to the hospitals. We encourage hospitals to engage with their partners, such as wholesale distributors, to ensure the accuracy of their survey submission. Additionally, we note that when considering any future payment policy, we will consider taking into account the results of the survey, as well as any additional appropriate external sources of information, such as those suggested by the commenter.

Comment: One commenter requested that CMS provide clear, detailed technical instructions well in advance of the survey opening and asked the following questions about the survey methodology:

- What specific acquisition cost elements will be required (for example, invoice price, discounts, rebates, administrative fees)?
- How will CMS ensure comparability across hospitals with different purchasing arrangements (for example, group purchasing organizations, 340B participation, direct contracts)?
- How will CMS protect sensitive hospital purchasing data from public disclosure?
- How will CMS reconcile acquisition cost data with existing manufacturer reported ASP to avoid duplication or conflicting datasets?

Response: We are asking hospitals to incorporate all rebates and discounts in their acquisition cost for each NDC—including discounts directly applicable to an individual NDC—but also those discounts that are not necessarily linked to a single NDC. That discount could be one linked to a certain invoice, or discounts linked to purchases made over a certain time period such as prompt pay discounts, wholesaler discounts, or other discounts. We understand that certain discounts may depend on whether an eligible patient receives the drug. That is true, for example, for drugs acquired through the 340B program. We are therefore asking for hospitals to separately list their acquisition costs for drug NDCs acquired through the 340B program and those drug NDCs acquired outside of the 340B program in order to ensure that all of the discounts are accurately captured and represent the hospital's acquisition costs.

We will follow all privacy laws. Only the Department of Health and Human Services (HHS) and relevant component agencies, their contractors and representatives, and the Executive Office of the President (EOP) will have access to these data unless release of such data to other parties is otherwise required by law. In accordance with section 1833(t)(14)(A)(iii)(I) of the Act, the agency plans to use the data collected to determine acquisition costs for SCODs, and drugs historically treated as SCODs. Following the collection of data and its analysis, the aggregate results of the survey will be considered when determining proposed payment rates. The proposed payment rates and calculations with aggregate data could appear in notice and comment rulemaking; however, the confidentiality of individual hospitals and proprietary information would be maintained to the extent permitted by law. To the extent that acquisition prices for certain SCODs, and drugs historically treated as SCODs, are deemed sensitive and/or confidential, we do not intend to make such prices available in an individually identifiable manner. Acquisition cost data collected through a survey is directed by sections 1833(t)(14)(A)(iii)(I) and 1833(t)(14)(D)(ii) of the Act. We are authorized to obtain the data to inform payment for drugs paid under the OPPS.

Finally, we note this data collection is separate from ASP data collection where manufacturers submit data to CMS regarding their average sales price.

Comment: One commenter stated that CMS does not need to collect data from all institutions when it could instead use a statistical sampling method and that CMS could avoid the entire survey process by using the 340B ceiling price as the proxy for hospital acquisition costs. Another commenter suggested CMS adopt one of two sampling approaches that would reduce survey burden while ensuring accurate results. Under the first suggested approach, CMS would survey a representative sample of drugs and use the survey data and appropriate statistical analysis to determine the hospital acquisition cost for each drug.

Under the second proposed approach, CMS would confine the survey to those drugs that account for the vast majority of OPPS spending. Under this approach, CMS would use the resulting data to set payments only for the surveyed drugs based on the average acquisition cost for 340B hospitals and for non-340B hospitals pursuant to section

1833(t)(14)(A)(ii) of the Act. Because hospital acquisition cost data for the non-surveyed drugs would not be available to CMS, CMS would be required to continue to set payment for these non-surveyed drugs for all hospitals using its current average sales price methodology pursuant to section 1833(t)(14)(A)(iii)(II) of the Act.

Response: We appreciate commenters' suggested alternatives to conducting a survey of all hospitals paid under the OPPS. As mentioned previously in this section, drug acquisition cost and payment is dynamic, complex, and of great importance. No drug acquisition cost survey has been conducted for decades. Therefore, for this initial survey, we will start by surveying the universe to obtain a comprehensive data set. We intend to conduct surveys periodically, and could consider some of the sampling methodologies suggested by commenters for future surveys once we've established a baseline dataset.

Comment: One commenter referenced the following observation from the GAO's 2006 report: ''Other options available to CMS for validating price data could include audits of manufacturers' price submissions or an examination of proprietary data the agency considers reliable for validation purposes.'' The commenter requested that CMS make it explicit in the final rule as to whether they considered these alternatives and why CMS decided to propose a hospital survey versus those alternatives.

Response: We did consider these alternatives. We decided to proceed with conducting a survey because that is the rate-setting methodology prescribed by statute. We do not believe the statute envisions that the Secretary will rely on surveys from 2004 and 2005 to set payment rates for SCODs forever. As we have stated previously, we intend to conduct surveys periodically, and could consider some of these additional GAO suggestions for future data validation exercises and survey design once we've established a baseline dataset.

Comment: One commenter recommended that CMS refine its instructions on the calculation of the total units purchased and total net acquisition cost to account for certain situations that are not informative of the actual acquisition cost. The commenter indicated that they believed that the reporting of total units purchased should be net of units returned to the manufacturer and that such returns should also be removed from the total net acquisition costs. The commenter alleged that the proposed instructions do not address returned units, and the commenter recommended clarifying that returned units are removed from the total units purchased and from the total net acquisition cost when finalizing the survey. The commenter contended that ''it would be particularly inappropriate to retain returned units in the total unit count but then apply the manufacturer's refund for those units to reduce the net acquisition cost for those drugs. Rather, the data for returned units should be removed from both data points.''

Response: We refer this reader to the Draft Survey Template,[117] where the draft instructions address this scenario. Specifically, the draft instructions stated for ''Total Units Purchased—Non-340B'' to exclude the following: ''Exclude purchases intended only for inpatient use; Exclude purchases that were returned; Exclude purchases made under the 340B Program.''

Comment: Several commenters requested that in the final rule CMS provide transparency regarding survey methodology, intended use of data, and potential impacts on policymaking. The commenters stated that this approach will give interested parties additional insight into the survey and may also encourage broader participation by hospitals. One commenter encouraged CMS to ensure that any survey findings are applied in a manner that is transparent, methodologically sound and reflective of the real-world costs of acquiring and delivering oncology drugs.

Response: We agree with commenters about the importance of providing transparency regarding survey methodology, intended use of data, and potential impacts on policymaking in the final rule. With respect to our survey methodology, as we explained in the CY 2026 OPPS/ASC proposed rule, we will be conducting a survey of the acquisition costs for each separately payable drug acquired by all hospitals paid under the OPPS, including SCODs, and drugs and biologicals CMS historically treats as SCODs. With respect to the intended use of data and potential impacts on policy making, as we stated in the CY 2026 OPPS/ASC proposed rule, we intend for the survey to be completed in time for the survey results to be used to inform policymaking beginning with the CY 2027 OPPS/ASC proposed rule. Any policy that is informed by the survey data will be subject to notice and comment rulemaking. We also appreciate the commenter's suggestion to apply survey findings in a manner that is transparent, methodologically sound and reflective of the real-world costs of acquiring and delivering oncology drugs.

Comment: Several commenters requested that CMS make the survey findings public to provide transparency for policymakers, taxpayers, and providers across care settings. Other commenters requested that time be allowed for commentary by interested parties to review the survey data prior to implementation in CY 2027.

Response: As we indicated in section 10 of Supporting Statement A [118] to our Information Collection Request under the Paperwork Reduction Act (PRA), the proposed payment rates and calculations with aggregate data could appear in future notice and comment rulemaking; however, the confidentiality of individual hospitals and proprietary information would be maintained to the extent permitted by law.

Comment: One commenter urged CMS to revise the proposed survey design to capture other hospital characteristics that might influence drug acquisition costs, rather than the singular focus on the difference between 340B and non-340B acquired drug costs.

Response: We thank the commenter for their suggestion, and we intend to consider many different hospital characteristics when analyzing the results of the data, such as hospital size, location, urban vs rural status, teaching hospital status, etc. These are all hospital characteristics that we routinely consider and analyze for various policies under the OPPS. As such, these hospital characteristics are already known; therefore, to reduce burden on hospitals submitting data, we are not asking them to submit information we already have.

Comment: Another commenter suggested that to improve transparency, hospitals should be required to submit claims data that identifies when 340B-purchased drugs are administered to Medicare patients. A commenter suggested that CMS require either a 340B or non-340B modifier to be appended to a claim in order for it to be considered complete and eligible for payment. They recommended that CMS require this in both the OPPS and PFS and that CMS create a clearinghouse to validate 340B units.

Response: We note that based on the CY 2024 OPPS/ASC final rule with comment period, we require that all

[117] *https://www.cms.gov/medicare/regulations-guidance/legislation/paperwork-reduction-act-1995/pra-listing/cms-10931.*

[118] *https://www.reginfo.gov/public/do/PRAViewDocument?ref_nbr=202507-0938-017.*

340B covered entity hospitals paid under the OPPS report the ''TB'' modifier effective January 1, 2025, for 340B-acquired drugs and biologicals (88 FR 81791 through 81792). We may consider modifications to this policy in future rulemaking.

Comment: One commenter suggested that CMS (1) use a stratified approach with separate, volume-weighted averages for different types of hospitals when analyzing cost data to ensure payment adjustments reflect actual cost differences and do not rely on broad averages; (2) consider implementing blended or graduate payment adjustments rather than applying uniform reductions across all hospitals; and (3) establish mechanisms to monitor how payment changes affect patient access and hospital financial stability, particularly for those serving vulnerable populations.

Response: We thank the commenter for their suggestions. We'll take this feedback into consideration when analyzing and implementing future payment policy informed by the results of the survey.

Comment: One commenter suggested that CMS should further consider and address the methodology recommendations and challenges identified by the Comptroller General. The commenter maintains that while CMS claims to have ''reviewed and taken into account the Comptroller General's recommendations regarding the frequency and methodology of these surveys in developing [its] proposed survey,'' ''[s]uch consideration is not reflected in the proposed OPPS rule.'' The commenter stated that when GAO conducted the survey it did not require 340B costs to be reported separately. According to the commenter, GAO identified several relevant characteristics that impacted acquisition costs, and 340B status was not included in that list. The commenter opined that ''[a] large number of factors outside of covered entity status implicate drug acquisition costs; it's unreasonable to base payments on 340B status alone''. The commenter also contended that CMS fails to address a critical flaw in the GAO survey that would undermine the accuracy of results and misleadingly inflate the difference in relative acquisition cost between 340B and non-340B hospitals. The commenter stated that CMS proposes that hospitals would be required to report the total acquisition cost of each drug, net of rebates and discounts but that in its report GAO stated ''we found that we could not obtain data that would permit calculation of hospitals' acquisition costs, because, in general, hospitals were unable to report accurately or comprehensively on rebates''. The commenter stated that CMS does not acknowledge this issue or address how it proposes to assist hospitals in more accurately reporting on rebates. To the extent non-340B hospitals are more likely to receive discounts through rebates, the survey results will reflect higher than actual acquisition costs for this group as well as an overestimate of the difference from 340B hospital acquisition costs. A survey that does not address this flaw should be questioned by policymakers as a basis for rate setting. The GAO also recommended that the survey be conducted only once or twice per decade and be used only to validate ''ASP data that manufacturers report to CMS for developing SCOD rates''. The commenter remarked it appears that CMS' intention is to conduct the survey periodically and use the hospital acquisition cost data on its own to set payment rates rather than use the survey to validate ASP data that is already used for payments. One commenter indicated that the rebates component of the survey would be challenging to report, ensuring only rebates that were actually paid are considered.

Response: We disagree with the commenter's contention that we have failed to review or take into account the Comptroller General's recommendations regarding the frequency and methodology of these surveys in developing our proposed survey. With respect to methodology, we agree with the commenter that factors other than 340B covered entity status can affect drug acquisition costs and our intent in conducting the survey is to collect drug acquisition cost data which reflects those other factors. We disagree with the commenter's allegation that we are proposing to base future drug payments on 340B status alone. As we have said throughout this rule, the results of the survey will be used to inform future payment policy. We are not prejudging the results of the survey or what we may do with the results of the survey. We are asking hospitals to incorporate all rebates and discounts in their acquisition cost for each NDC—including discounts directly applicable to an individual NDC—but also those discounts that are not necessarily linked to a single NDC. That discount could be one linked to a certain invoice, or discounts linked to purchases made over a certain time period such as prompt pay discounts, wholesaler discounts, or other discounts. With respect to discounts not linked to an individual NDC, we expect hospitals to report these discounts to us as part of this survey. Hospitals are most familiar with their acquisition costs and business practices and are best positioned to determine the method of incorporating discounts received into their NDC specific acquisition costs. However, if hospitals are unable to reasonably incorporate these non-NDC based discounts, rebates, and price concessions, such as those received through a GPO, we are asking hospitals to (1) indicate whether they have such discounts for the reporting time period and, if so, (2) identify what Group Purchasing Organization (GPO) they are a member of and (3) provide the total dollar amount of all non-NDC based discounts for the reporting time period, which will then allow CMS to best determine how to incorporate these non-NDC based discounts We acknowledge that the GAO was unable to obtain data that would permit calculation of hospitals' acquisition costs because, in general, hospitals were unable to report accurately or comprehensively on rebates at that time. However, we believe all of these discounts should be readily available in hospitals' purchasing systems, and with technology advancing considerably in the 20 plus years since the GAO survey we believe it is reasonable for hospitals to determine these types of discounts. Similarly to how there have been significant advances in technology over the past 20 years, there has also been an explosion in 340B drug utilization and spending. When the GAO conducted this survey this type of discount may not have been as prevalent; however, now that the prevalence has increased over the years we believe 340B discounts are required to be tracked similar to other discounts, rebates, and price concessions. With respect to frequency, our proposal to conduct the survey every 4 years is consistent with the GAO's recommendation that the Secretary validate, ''on an occasional basis—possibly every 5 or 10 years—average sales price (ASP) data that manufacturers report to CMS for developing SCOD payment rates.'' [119] Finally, with respect to the commenter's allegation that we might use the hospital acquisition cost data on its own to set payment rates rather than use the survey to validate ASP data that is already used for payments, we emphasize that were we to use survey data to set payment rates in future rulemaking, doing so would be consistent with section 1833(t)(14)(D)(ii) of the Act which requires ''the Secretary to conduct periodic . . . surveys to determine the

[119] *https://www.gao.gov/assets/gao-06-372.pdf.*

hospital acquisition cost for each specified covered outpatient drug for use in setting the payment rates.''

Comment: Many commenters opposed our intent to propose and seek comment on any payment rates for SCODs based on the survey results in CY 2027 rulemaking. These commenters expressed concern about future payment reductions based on the results of the survey and urged CMS to abandon the survey to avoid its results being used to reduce Medicare reimbursements in 2027 and beyond. In these commenters' view, Medicare payment is already too low and further reductions resulting from the survey would be unsustainable. Many commenters expressed concern that future payment reductions would come at the expense of services provided to patients.

Response: We thank the commenters for their input. It is premature to consider the payment consequences of a survey we have not yet completed, and commenters' policy concerns of those payment consequences are therefore out of scope for purposes of this final rule with comment period regarding CY 2026.

Comment: Many commenters expressed concern about the disproportionate effect future payment reductions resulting from the survey would have on safety-net hospitals and rural providers. Some of these commenters asked CMS to exempt all rural hospitals, including SCHs, MDHs, Low-Volume Hospitals (LVHs), Rural Emergency Hospitals (REHs) and small rural hospitals with 100 beds or less from any such reductions. One commenter requested an exemption from any payment reductions resulting from the survey for the three freestanding cancer centers that currently participate in the 340B program.

Response: We thank the commenters for their input. It is premature to consider the payment consequences of a survey we have not yet completed, and commenters' policy concerns of those payment consequences are therefore out of scope for purposes of this final rule with comment period regarding payment amounts for CY 2026.

Comment: One commenter stated that CMS should not use the proposed survey to set OPPS rates because the CY 2026 OPPS/ASC proposed rule discusses use of the survey results in future rate-setting in ways that could be inconsistent with the OPPS statute. The commenter states that while CMS acknowledges the statutory requirement to conduct a survey of acquisition costs on a periodic basis, CMS does not clarify how it would adjust payments outside of survey periods. By contrast, current policy updates payments quarterly based on Medicare's ASP, ensuring payment rates reflect current market drug costs. The CY 2026 OPPS/ASC proposed rule includes no such similar adjustment for routine adjustments to costs. The commenter states that section 1833(t)(14)(A)(iii)(I) of the Act requires that the payment for a specified covered outpatient drug should be equal to the average acquisition cost for the drug for that year. Given the significant changes being implemented by and further proposed by this Administration—such as changes resulting from proposed Pharmacy Benefit Manager (PBM) reform, Medicare fair price negotiations, and international price matching, as noted above—a survey fielded at the start of CY 2026 is unlikely to reflect the acquisition cost even in CY2027, never mind future years.

Response: We thank the commenters for their input. It is premature to consider the payment consequences of a survey we have not yet completed, and commenters' policy concerns of those payment consequences are therefore out of scope for purposes of this final rule with comment period regarding payment amounts for CY 2026.

Comment: Several commenters stated that their experience from the 2018–2022 period demonstrated that reducing 340B payment rates set a dangerous precedent as private pharmacy benefit managers and third-party payers could use such a reduction to justify additional reductions for 340B drugs, further weakening the healthcare safety net.

Response: We thank the commenter for their input. It is premature to consider the payment consequences of a survey we have not yet completed, and commenters' policy concerns of those payment consequences is therefore out of scope for purposes of this final rule with comment period regarding payment amounts for CY 2026.

Comment: Several commenters requested that CMS provide a clear methodology for data use and protections against retroactive payment adjustments based on survey data.

Response: We are not sure what these commenters are requesting. It is premature to speculate on how a survey we have not yet completed might best be used to set future payment policies, and so commenters' concerns about hypothetical uses of the survey is therefore out of scope for purposes of this final rule with comment period regarding payment amounts set without reference to that survey.

Comment: One commenter stated that using the results of the survey as the sole basis to set drug reimbursement rates contravenes the guidance of the U.S. Comptroller General and the GAO as stated in the GAO's 2006 report to Congress: ''A key lesson for CMS that we learned from conducting the 2004 MMA-mandated hospital survey is that such a survey would not be practical for collecting the data needed to set and update SCOD rates routinely. However, it would be useful, on occasion, for CMS to survey hospitals so that the rate-setting data it obtained from other sources could be validated by an independent source.'' The commenter contended that, despite refencing this report in the proposed rule, CMS provides no substantive explanation for disregarding the recommendation and appears poised to use the survey not as a validation mechanism but as the foundation for setting payment rates. The commenter alleged that CMS' failure to address or justify its departure from this key lesson raises serious questions about the methodological soundness of the proposed survey and the legality of this rulemaking exercise. This will ultimately lead to a circumvention of Congressional intent in implementing the 340B Program, which is indisputably intended to support safety net providers—not to reallocate savings intended for them to all Medicare OPPS providers. The commenter stated that other mechanisms, such as surveying wholesaler distributors or using drug manufacturer data based on chargeback and other data commonly used by these entities, should first be used to collect baseline data which should then be validated.

Response: As we note, we anticipate that the results of the survey will be used to inform future payment policy. We also note that we may not rely solely on survey data to inform our drug pricing policies. Any policy to alter OPPS payment rates for drugs informed by this survey would be included in the CY 2027 OPPS/ASC rulemaking, and would be subject to notice and comment rulemaking.

Comment: Several commenters stated that the Congress has not directed the executive branch to reduce payments to 340B providers and did not direct CMS to introduce new policies that seek to reduce the Federal government's commitment to serving low-income Americans.

Response: We thank the commenters for their input. We have not proposed reductions to 340B providers in this final rule with comment period, and so these comments are out of scope.

Comment: Many commenters implored CMS not to use the survey to lower payments to 340B hospitals. One commenter acknowledged that the CY 2026 OPPS/ASC proposed rule does not explicitly state CMS' intent to use the survey to lower payments to 340B-acquired drugs only but alleges that ''the proposed structure of the survey foreshadows CMS' future actions.'' The commenter stated that a reduction in Medicare payment rates to 340B hospitals significantly erodes the intent of the 340B program and that the 340B program is critical to ensuring that low-income and other disadvantaged people have access to the types of services best provided by essential hospitals. The commenter alleges that hospitals participating in the 340B program operate on margins significantly narrower than margins of other hospitals, with many operating at a loss. These hospitals, the commenter contends, which serve a high number of low-income individuals, are already struggling under insufficient Medicare and Medicaid payments. Given the fragile financial position of essential hospitals, policy changes that jeopardize any piece of the patchwork of support on which they rely, including the 340B program, can threaten their ability to maintain critical services. Reducing Medicare payments for 340B hospitals would have many negative consequences for patients and providers and would not save the Medicare program any money. Any changes to OPPS must be made in a budget-neutral manner. Thus, a cut in funding for 340B hospitals does not go back to the Medicare program or directly to beneficiaries; instead, the funds would be redistributed to non-340B hospitals at the expense of 340B hospitals and their patients.

Response: We thank the commenters for their input. We have not proposed reductions to 340B providers in this final rule with comment period, and so these comments, including speculation about legislative intent and policies that could be enacted by future legislation are out of scope for purposes of this CY 2026 OPPS/ASC final rule with comment period.

Comment: Some commenters supported our intent to propose and seek comment on payment rates for SCODs based on survey results in CY 2027 rulemaking. One commenter encouraged CMS to ensure a transparent process in analyzing information obtained from the survey, to the extent possible, in advance of CY 2027 proposed rulemaking.

Response: We appreciate commenters' support.

We noted in the CY 2026 OPPS/ASC proposed rule that under section 1833(t)(14)(D)(iii) of the Act, the surveys must have a large sample of hospitals that is sufficient to generate a statistically significant estimate of the average hospital acquisition cost for each specified covered outpatient drug. Consequently, we stated that we would seek an adequate response rate to the survey and that surveyed hospitals had an obligation to respond to the survey. We indicated that hospitals had ample notice in the CY 2026 OPPS/ASC proposed rule regarding the intent and the details of the OPPS Drug Acquisition Cost Survey so we expected all hospitals would submit their acquisition costs in a timely manner to CMS. We stated that we understood that hospitals have significant drug acquisition costs, and so, consistent with the Comptroller's General experience conducting earlier drug acquisition cost surveys in which 83 percent of the hospitals surveyed provided usable data,[120] we anticipated hospitals would want to respond to the survey to demonstrate to CMS these costs. We requested comment from readers on whether we should make responding to the survey a mandatory requirement of all hospitals paid under the OPPS through 1833(t)(14)(D)(iii) of the Act.

Comment: Many commenters stated that CMS lacks the statutory authority to make the survey mandatory and requested that CMS state in the final rule that the survey is voluntary. These commenters stated that section 1833(t)(14)(D)(iii) simply sets forth the requirements for a survey and does not provide the agency with the authority to mandate hospital responses. These commenters contended that if the Congress wanted to require hospital participation in a drug acquisition cost survey or allow HHS to take action for a non-response, it would have done so, as it has in other contexts. One commenter, referencing the survey previously conducted by GAO, suggested that the level of response to that survey demonstrates that making completion of the survey mandatory is not necessary to ensure sufficient responses. The commenter stated that when GAO previously conducted the survey it provided no incentives or penalties to encourage participation. Even without any incentives in place, GAO received usable data from 83 percent of the hospitals.

Other commenters supported making the survey mandatory, arguing that doing so was critical to ensuring that the wide range of hospital acquisition costs is appropriately accounted for and reflected in the survey results and in CY 2027 OPPS rates. Several commenters stated that making the survey mandatory is the only way for CMS to ensure it collects complete and usable data.

Response: Under section 1833(t)(14)(D) of the Act, the Secretary ''shall conduct periodic surveys'' which ''shall have a large sample of hospitals that is sufficient to generate a statistically significant estimate of the average hospital acquisition cost'' and which the Secretary shall under section 1833(t)(140(A) of the Act ''tak[e] into account'' when determining the average acquisition cost of drugs for a year to set payment policy. Hospitals attempt to read a conditional into the text of the statute: the Secretary may use cost acquisition survey data to set policy ''only if'' that data generates a statistically significant estimate of the average hospital acquisition. But that is not what the statute says. Rather, it provides that the survey sample ''shall'' generate such an estimate. We read that instruction from the Congress to impose obligations on both the Secretary to design such a survey and on hospitals generally to respond the survey, just as they did when GAO conducted the survey in 2004 and 2005. We agree that section 1833(t)(14)(D) of the Act does not itself mandate specific consequences either on CMS for failing to design the survey it describes or on hospitals for failing to respond to that survey. We reiterate the reciprocal obligations imposed by section 1833(t)(14)(D) of the Act on CMS and hospitals alike, however, in light of certain comments suggesting that some hospitals might be planning to coordinate non-responses. The lack of a response to this required survey is still meaningful data to CMS which can be taken into consideration to inform future payment rates in future rulemaking.

In the CY 2026 OPPS/ASC proposed rule, we welcomed comment on how we might propose to interpret non-responses to the survey. For example, since a failure on the part of a hospital to respond to the survey could suggest that the hospital has minimal acquisition costs, or has lower acquisition costs than an otherwise similar hospital that responds to the survey and so is withholding its response strategically, we stated in the CY 2026 OPPS/ASC proposed rule that we might, if the data so suggested, determine that groups of hospitals who do not respond to the survey have lower

[120] *https://www.gao.gov/assets/gao-06-372.pdf.* Page 7.

acquisition costs for SCODs than their otherwise similar counterparts under section 1833(t)(14)(A)(iii)(I) of the Act. In such instances, we stated that we would consider various appropriate ways, taking into account the hospital acquisition cost survey data, to determine the average acquisition cost. One method we said we might consider, depending on the cost survey data, could be to use the lowest acquisition cost reported among otherwise similar responding hospitals as a proxy for the average acquisition costs for hospitals that do not respond to the survey. We also stated that we might also consider supplemental data sources to inform our determination of average acquisition costs for hospitals for whom we lacked cost acquisition survey data. For example, we said we might consider using, as available, pricing from the FSS; [121] 340B ceiling price; [122] ASP plus 6 percent, zero percent or another percentage; or other recognized drug pricing for payment of hospitals that do not respond to the survey.

We stated that we could also consider a hospital's non-response to the survey when determining how to package drug costs for particular hospital groups. We noted that under section 1833(t)(2)(B) of the Act, the OPPS establishes groups of covered HOPD services, namely APC groups, and uses them as the basic unit of payment. In the case of much of the care paid under the OPPS, we indicated that we viewed a complete service as potentially being reported by a combination of two or more HCPCS codes, rather than a single code, and establish payment policies that support this view. We stated that ideally we would consider a complete HOPD service to be the totality of care furnished in a hospital outpatient encounter or in an episode of care. We noted that we generally package payment for items and services that are typically ancillary and supportive into the payment for the primary diagnostic or therapeutic modalities in which they are used rather than pay for them separately. We indicated that as we noted previously in the CY 2026 OPPS/ASC proposed rule, if a hospital does not submit its acquisition cost data, it could suggest that the hospital has minimal acquisition costs. We also noted that if the hospital has minimal acquisition costs for drugs, that could support viewing those costs as ancillary or supportive, and we might, if the data supported it, conclude that hospitals who do not report their drug acquisition costs lack meaningful additional, marginal costs related to their acquisition of these drugs and, as such, their drugs costs should not be paid separately but rather should be packaged into the payment for the associated service.

We sought comment broadly on how to approach payment to hospitals for drugs usually paid under the OPPS absent a hospital's response to the survey.

We received many comments in response to our request for comment.

Comment: Most commenters opposed CMS modifying its payment approach based on non-responses to the survey. Many of these commenters stated that CMS lacks the statutory authority to do so. One commenter stated that the statute does not contemplate CMS ''filling in gaps from non-responses''. In the commenter's view, the statute instructs the agency to collect data from ''a large sample of hospitals that is sufficient to generate a statistically significant estimate of the average hospital acquisition cost for each specified covered drug''. The commenter stated that CMS cannot ''manipulate an otherwise insufficient sample by using other hospitals' proxy data for hospitals that do not respond''. The commenter also stated that the methodology CMS posits to interpret non-responses lacks reasoning. The commenter alleged that CMS points to no evidence for any conclusion that groups of hospitals that do not respond to the survey have lower acquisition costs, and certainly no justification for why ''us[ing] the lowest acquisition cost reported among otherwise similar responding hospitals as a proxy'' would be a remotely accurate methodology. The commenter concludes that the Congress, in section 1833(t)(14)(A)(iii) of the Act, dictates drug reimbursement be based on either hospital acquisition cost data, or the average price of the drug. The commenter contends that substituting data such as ''pricing from the FSS; 340B ceiling price; ASP plus 6 percent, zero percent or another percentage; or other recognized drug pricing for payment of hospitals'' would contravene explicit congressional intent.

Another commenter stated that the statute authorizes CMS to conduct surveys to inform payment rates for specified covered outpatient drugs, but it does not authorize CMS to ''penalize'' hospitals by reducing reimbursement or applying alternative payment methodologies based solely on survey non-participation.'' The commenter claimed that CMS' suggestion that it may pay non-responding hospitals at rates below ASP plus 6 percent or exclude them from future rate-setting processes is not supported by the statutory text and represents an overreach of administrative authority. The commenter explained that hospitals may have legitimate operational, legal, or resource-based reasons for being unable to complete the survey within the prescribed timeframe and that ''imposing financial penalties in response to non-compliance with a voluntary or burdensome survey process, particularly one that lacks finalized rulemaking and OMB approval, would be both unlawful and inequitable.'' The commenter urged CMS to clarify that survey participation would not be used as a basis for punitive reimbursement decisions and to ensure that any future payment methodologies are grounded in statutory authority and fair process. Many other commenters also claimed that CMS' imputing data to a non-response would unfairly penalize hospitals for simply lacking the resources to complete the survey. These commenters pointed out that a non-response is not necessarily indicative of lower acquisition costs as it could reflect data collection challenges or unclear instructions rather than lower costs. One commenter alleged that CMS does not cite any evidence that non-response means minimal acquisition costs. The commenter stated that both GAO and CMS acknowledge the burden of this survey, which could clearly be a reason for non-response. In the commenter's view, interpreting non-responses is an attempt to make the survey effectively mandatory, even though the commenter does not believe CMS has the authority to make the survey mandatory. The commenter contended that CMS is aware that the drugs at issue can be prohibitively expensive, particularly for hospitals serving disproportionate shares of low income individuals, and that if CMS does not pay adequately for hospitals' drug costs it will not only undermine the financial stability of hospitals but will impact Medicare patients' access to critical medications. Moreover, the OPPS statute requires CMS to pay for these drugs either based on the survey or based on ASP; CMS does not have the authority to eliminate payment for these drugs.

Many commenters stated that CMS' imputing data to a non-response would result in a survey that would fail to satisfy the requirement under section 1833(t)(14)(D)(iii) of the Act that the

[121] FSS pricing from the Veteran Affairs' (VA's) pharmaceutical pricing database is publicly available at the NDC level and published at *https://www.va.gov/opal/nac/fss/pharmPrices.asp.*

[122] section 340B(a)(1) of the Public Health Service Act. *https://www.hrsa.gov/about/faqs/what-difference-between-340b-ceiling-price-package-adjusted-price-which-are-both-published-340b.*

survey ''. . . have a large sample of hospitals that is sufficient to generate a statistically significant estimate of the average hospital acquisition cost for each specified covered outpatient drug''. Several commenters stated that absent a statistically significant number of responses, CMS cannot implement changes to reimbursement rates that vary by groups of hospitals for separately payable drugs under the OPPS.

One commenter noted that section 1833(t)(14)(D)(i)(II) of the Act requires the Secretary to take into account recommendations from the Comptroller General regarding the methodology of the survey and that when the GAO conducted its survey, it explicitly excluded non-responses from its price calculations stating it was ''not appropriate for [its] purpose.'' Several commenters requested that non-responding hospitals be excluded from the survey dataset.

One commenter supported using the FSS and other information as a mechanism of determining hospital costs for drugs. Another expressed support for the proposal to use the lowest reported acquisition cost as a proxy for non-responding hospitals.

Several commenters suggested that in instances where hospital pricing information is not sufficiently provided, CMS should (1) for non-responsive 340B hospitals, assume the price of the drug to be the 340B ceiling price and (2) for non-responsive non-340B hospitals, assume the price of the drug to be the average acquisition cost from a similarly situated non-340B hospital (similar size, location, etc.) that responded to the survey. Other commenters suggested that for non-responding non-340B covered entities, CMS should assume the lesser of the median cost or mean cost of similarly situated non-340B hospitals.

Several commenters recommended that just as any estimations used to address non-responses must consider 340B status, any findings derived from this survey should be stratified by whether the reporting hospital participates in the 340B Program.

Response: We thank commenters for their feedback regarding what we might do in the scenario in which we do not receive responses from all hospitals paid under the OPPS. Under section 1833(t)(14)(A)(iii)(I) of the Act, the Secretary may set average drug prices—which may vary by hospital group—by ''taking into account'' the results of survey. We have made no final decision on how, if at all, we will ''tak[e] into account'' non-responses, which is premature before we analyze the data we receive. Any policies based on this discussion will be included in future rulemaking, as soon as CY 2027, if we adopt payments rates based on the results of the survey.

After consideration of public comments, we are finalizing our proposal outlining our intent to conduct a required OPPS drug acquisition cost survey to all hospitals paid under the OPPS, pending final approval from OMB.

Consistent with E.O. 14273 and PRA requirements, additional details of this survey can be found in section XXIII. of this final rule with comment period as well as the Information Collection Request that can be found on *reginfo.gov*. This new information collection request will be submitted to OMB for review under control number 0938–1487 (CMS–10931). The OMB control number will not be valid until formally approved by OMB.

VI. Estimate of OPPS Transitional Pass-Through Spending for Drugs, Biologicals, Radiopharmaceuticals, and Devices

A. Amount of Additional Payment and Limit on Aggregate Annual Adjustment

Section 1833(t)(6)(E) of the Act limits the total projected amount of transitional pass-through payment for drugs, biologicals, and categories of devices for a given year to an ''applicable percentage,'' currently not to exceed 2.0 percent of total program payments estimated to be made for all covered services under the OPPS furnished for that year. If we estimate before the beginning of the calendar year that the total amount of pass-through payments in that year would exceed the applicable percentage, section 1833(t)(6)(E)(iii) of the Act requires a uniform prospective reduction in the amount of each of the transitional pass-through payments made in that year to ensure that the limit is not exceeded. We estimate the pass-through spending to determine whether payments exceed the applicable percentage and the appropriate pro rata reduction to the conversion factor for the projected level of pass-through spending in the following year to ensure that total estimated pass-through spending for the prospective payment year is budget neutral, as required by section 1833(t)(6)(E) of the Act.

For devices, developing a proposed estimate of pass-through spending in CY 2026 entails estimating spending for two groups of items. The first group of items consists of device categories that are currently eligible for pass-through payment and that will continue to be eligible for pass-through payment in CY 2026. The CY 2008 OPPS/ASC final rule with comment period (72 FR 66778) describes the methodology we have used in previous years to develop the pass-through spending estimate for known device categories continuing into the applicable update year. The second group of items consists of devices that we know are newly eligible, or project may be newly eligible, for device pass-through payment in the remaining quarters of CY 2025 or beginning in CY 2026. The sum of the proposed CY 2026 pass-through spending estimates for these two groups of device categories equals the proposed total CY 2026 pass-through spending estimate for device categories with pass-through payment status. We determined the device pass-through estimated payments for each device category based on the amount of payment as required by section 1833(t)(6)(D)(ii) of the Act, and as outlined in previous rules, including the CY 2025 OPPS/ASC final rule with comment period (89 FR 94259 through 94261). We note that, beginning in CY 2010, the pass-through evaluation process and pass-through payment methodology for implantable biologicals newly approved for pass-through payment beginning on or after January 1, 2010, that are surgically inserted or implanted (through a surgical incision or a natural orifice) use the device pass-through process and payment methodology (74 FR 60476). As has been our past practice (76 FR 74335), we include an estimate of any implantable biologicals eligible for pass-through payment in our estimate of pass-through spending for devices. Similarly, we finalized a policy in CY 2015 that applications for pass-through payment for skin substitutes and similar products be evaluated using the medical device pass-through process and payment methodology (76 FR 66885 through 66888). Therefore, as we did beginning in CY 2015, for CY 2026, we also proposed to include an estimate of any skin substitutes and similar products in our estimate of pass-through spending for devices. However, in accordance with the finalized policy in this final rule with comment period to align payment policy for skin substitutes with FDA's regulatory categories, we have separated the pass-through spending estimates into the appropriate pathway, device or drug pass-through. We note that since there are no current skin substitutes eligible for pass-through payments, this estimate for both pathways is zero.

For drugs and biologicals eligible for pass-through payment, section 1833(t)(6)(D)(i) of the Act establishes the pass-through payment amount as the amount by which the amount authorized under section 1842(o) of the Act (or, if the drug or biological is covered under a competitive acquisition contract under section 1847B of the Act, an amount determined by the Secretary equal to the average price for the drug or biological for all competitive acquisition areas and year established under such section as calculated and adjusted by the Secretary) exceeds the portion of the otherwise applicable fee schedule amount that the Secretary determines is associated with the drug or biological. Consistent with current policy, we proposed to apply a rate of ASP plus 6 percent to most drugs and biologicals for CY 2026, and therefore our estimate of drug and biological pass-through payment for CY 2026 for this group of items was $15.2 million.

Payment for certain drugs,[123] specifically contrast agents without pass-through payment status, is packaged into payment for the associated procedures, and these products are not separately paid. In addition, we policy-package non-pass-through drugs and biologicals that function as supplies when used in a diagnostic test or procedure unless a high-cost diagnostic radiopharmaceutical with a per-day cost greater than the finalized per-day threshold, finalized to be $655 for CY 2026 as outlined in section II.A.3.c. of this final rule with comment period, is used for the test or procedure. We policy-package all drugs and biologicals that function as supplies when used in a surgical procedure or for anesthesia, and other categories of drugs and biologicals, as described in section V.B.1.c. of the CY 2026 OPPS/ASC proposed rule (90 FR 33625 through 33626). Consistent with current policy, for CY 2026, we proposed that policy-packaged drugs and biologicals with pass-through payment status will be paid at ASP+6 percent, like other pass-through drugs and biologicals less the policy-packaged drug APC offset amount described below. Our estimate of pass-through payment for policy-packaged drugs and biologicals with pass-through payment status approved prior to CY 2026 is not $0. This is because the pass-through payment amount and the fee schedule amount associated with the drug or biological will not be the same, unlike for separately payable drugs and biologicals. In the CY 2024 OPPS/ASC final rule with comment period (88 FR 81774 through 81776), we discussed our policy to determine if the costs of certain policy-packaged drugs or biologicals are already packaged into the existing APC structure. If we determine that a policy-packaged drug or biological approved for pass-through payment resembles predecessor drugs or biologicals already included in the costs of the APCs that are associated with the drug receiving pass-through payment, we offset the amount of pass-through payment for the policy-packaged drug or biological. For these drugs or biologicals, the APC offset amount is the portion of the APC payment for the specific procedure performed with the pass-through drug or biological, which we refer to as the policy-packaged drug APC offset amount. Consistent with current policy described in section V.A.5. of the CY 2026 OPPS/ASC proposed rule (90 FR 33619 to 33620), if we determine that an offset is appropriate for a specific policy-packaged drug or biological receiving pass-through payment, we proposed to reduce our estimate of pass-through payments for these drugs or biologicals by the APC offset amount.

Similar to pass-through spending estimates for devices, the first group of drugs and biologicals requiring a pass-through payment estimate consists of those products that were recently made eligible for pass-through payment and that will continue to be eligible for pass-through payment in CY 2026. The second group contains drugs and biologicals that we know are newly eligible, or project will be newly eligible, in CY 2026. The sum of the CY 2026 pass-through spending estimates for these two groups of drugs and biologicals equals the total CY 2026 pass-through spending estimate for drugs and biologicals with pass-through payment status.

We did not receive public comments on this provision, and therefore, we are finalizing as proposed.

B. Final Estimate of Pass-Through Spending for CY 2026

For CY 2026, we proposed to set the applicable pass-through payment percentage limit at 2.0 percent of the total projected OPPS payments for CY 2026, consistent with section 1833(t)(6)(E)(ii)(II) of the Act and our OPPS policy from CY 2004 through CY 2025 (89 FR 94260). The pass-through payment percentage limit is calculated using pass-through spending estimates for devices and for drugs and biologicals.

For the first group of devices, consisting of device categories that are currently eligible for pass-through payment and will continue to be eligible for pass-through payment in CY 2026, there are 14 active categories for CY 2026. The active categories are described by HCPCS codes C1600, C1601, C1602, C1603, C1604, C1605, C1606, C8000, C1735, C1736, C1737, C1738, C1739, and C9610. Based on CY 2024 Medicare hospital outpatient claims data available by the time of the proposed rule and information from the device manufacturers provided in their respective pass-through applications regarding the device cost and the projected CY 2026 OPPS utilization, we estimated that HCPCS code C1600 would cost $0.3 million in pass-through expenditures in CY 2026, HCPCS code C1601 would cost $5.0 million in pass-through expenditures in CY 2026, HCPCS code C1602 would cost $0.2 million in pass-through expenditures in CY 2026, HCPCS code C1603 would cost $0.1 million in pass-through expenditures in CY 2026, HCPCS code C1604 would cost $2.0 million in pass-through expenditures in CY 2026, HCPCS code C1605 would cost $113.0 million in pass-through expenditures in CY 2026, HCPCS code C1606 would cost $0.3 million in pass-through expenditures in CY 2026, HCPCS code C8000 would cost $2.9 million in pass-through expenditures in CY 2026, HCPCS code C1735 would cost $16.0 million in pass-through expenditures in CY 2026, HCPCS code C1736 would cost $32.8 million in pass-through expenditures in CY 2026, HCPCS code C1737 would cost $34.1 million in pass-through expenditures in CY 2026, HCPCS code C1738 would cost $0.8 million in pass-through expenditures in CY 2026, HCPCS code C1739 would cost $8.5 million in pass-through expenditures in CY 2026, and HCPCS code C9610 would cost $36.0 million in pass-through expenditures in CY 2026. Therefore, we proposed an estimate for the first group of devices of $252.0 million.

We did not receive any public comments on our proposed estimate. Based on updated CY 2024 Medicare hospital outpatient claims data available for this final rule with comment period and information from the device manufacturers provided in their respective pass-through applications regarding the device cost and the projected CY 2026 OPPS utilization, our final estimated pass through costs are as follows: HCPCS code C1600 will cost

[123] In the CY 2025 OPPS/ASC final rule with comment period, we finalized the high-cost diagnostic radiopharmaceuticals policy to separately pay those products when the per-day costs are greater than a threshold. Please refer to section II.A.3.c. of this final rule with comment period for more information regarding this policy.

$0.3 million in pass-through expenditures in CY 2026, HCPCS code C1601 will cost $4.7 million in pass-through expenditures in CY 2026, HCPCS code C1602 will cost $0.3 million in pass-through expenditures in CY 2026, HCPCS code C1603 will cost $0.1 million in pass-through expenditures in CY 2026, HCPCS code C1604 will cost $2.1 million in pass-through expenditures in CY 2026, HCPCS code C1605 will cost $113.0 million in pass-through expenditures in CY 2026, HCPCS code C1606 will cost $0.3 million in pass-through expenditures in CY 2026, HCPCS code C8000 will cost $2.9 million in pass-through expenditures in CY 2026, HCPCS code C1735 will cost $16.0 million in pass-through expenditures in CY 2026, HCPCS code C1736 will cost $32.8 million in pass-through expenditures in CY 2026, HCPCS code C1737 will cost $34.1 million in pass-through expenditures in CY 2026, HCPCS code C1738 will cost $0.8 million in pass-through expenditures in CY 2026, HCPCS code C1739 will cost $8.5 million in pass-through expenditures in CY 2026, and HCPCS code C9610 will cost $36.0 million in pass-through expenditures in CY 2026.[124] Therefore, we have finalized the CY 2026 spending estimate for the first group of devices of approximately $251.9 million.

In estimating our proposed CY 2026 pass-through spending for device categories in the second group, we included the following: (1) device categories that we assumed at the time of the development of the CY 2026 OPPS/ASC proposed rule would be newly eligible for pass-through payment in CY 2026; (2) additional device categories that we estimated could be approved for pass-through status after the development of the CY 2026 OPPS/ASC proposed rule and before January 1, 2026; and (3) contingent projections for new device categories established in the second through fourth quarters of CY 2026. For CY 2026, we proposed to use the general methodology described in the CY 2008 OPPS/ASC final rule with comment period (72 FR 66778), while also taking into account recent OPPS experience in approving new pass-through device categories. For the CY 2026 OPPS/ASC proposed rule (90 FR 33656), the proposed estimate of CY 2026 pass-through spending for this second group of device categories was $319.8 million.

We did not receive any public comments on this proposed estimate. As stated earlier in section IV.A.2. of this final rule with comment period, we are approving two devices for pass-through payment status in the CY 2026 rulemaking cycle: VasQ and the SCOUT MD™ Surgical Guidance System.[125] In addition, we note that HCPCS codes C1740, C1741 and C1742 were preliminarily approved as part of the device pass-through quarterly review process with an effective date of October 1, 2025.[126] [127] For this final rule with comment period based on information from the device manufacturers provided in their respective pass-through applications regarding the projected CY 2026 OPPS utilization, we estimate that HCPCS code C1740 will cost $31.7 million in pass-through expenditures in CY 2026, HCPCS code C1741 will cost $7.5 million in pass-through expenditures in CY 2026, and HCPCS code C1742 will cost $0.7 million in pass-through expenditures in CY 2026. Therefore, for the reasons explained more below, we are finalizing an estimate of $39.9 million for this second group of devices for CY 2026.

The estimated amount of pass-through spending of $39.9 million for the second group of devices in this final rule with comment period is substantially different from the estimated amount of pass-through spending in the CY 2026 OPPS/ASC proposed rule (90 FR 33656) of $319.8 million because, in the CY 2026 OPPS/ASC proposed rule, we consider that all of the device applications included in that CY 2026 OPPS/ASC proposed rule may receive pass-through status approval in the corresponding CY 2026 OPPS/ASC final rule with comment period, and as such, we include the estimated amount of pass-through spending for each device. For the final rule with comment period, the estimate reflects the estimated amount of pass-through spending for only the devices that were approved for pass-through status. In addition, we updated the estimates to include the estimated pass-through expenditures for any devices that are preliminarily approved as part of the device pass-through quarterly review process after the development of the current CY 2026 OPPS/ASC proposed rule.

To estimate proposed CY 2026 pass-through spending for drugs and biologicals in the first group, specifically those drugs and biologicals recently made eligible for pass-through payment and continuing on pass-through payment status for at least one quarter in CY 2026, we proposed to use the CY 2024 Medicare hospital outpatient claims data regarding their utilization, information provided in their respective pass-through applications, other historical hospital claims data, pharmaceutical industry information, and clinical information regarding these drugs and biologicals to project the CY 2026 OPPS utilization of the products.

For the known drugs and biologicals (excluding policy-packaged contrast agents, drugs, biologicals, radiopharmaceuticals with per-day costs at or below the packaging threshold that function as supplies when used in a diagnostic test or procedure, and drugs and biologicals that function as supplies when used in a surgical procedure) that will be continuing on pass-through payment status in CY 2026, we estimated the pass-through payment amount as the difference between the general payment rate of ASP+6 percent and the payment rate for non-pass-

[124] Estimated costs are updated to reflect the Medicare hospital outpatient claims data for each HCPCS code as such data becomes available. Prior to the availability of Medicare hospital outpatient claims data, estimated costs are based on the device cost and projected CY OPPS utilization provided by the device manufacturer in the device pass-through application, As such, the final estimated pass-through costs for HCPCS codes C1600, C1601, C1602, C1603 and C1604 are updated based on CY 2024 Medicare hospital outpatient claims data available for this final rule with comment period. The final estimated pass-through costs for HCPCS codes C1605, C1606, C8000, C1735, C1736, C1737, C1738, C1739, and C9610 are based on information provided by the device manufacturers in the respective device pass-through applications regarding the device cost and the projected CY 2026 OPPS utilization.

[125] As discussed in section IV.A.2 of this final rule with comment period, the VasQ pass-through application was preliminarily approved for transitional pass-through payment under the alternative pathway effective October 1, 2024, and the SCOUT MD™ Surgical Guidance System pass-through application was preliminarily approved for transitional pass-through payment under the alternative pathway effective January 1, 2025. We are finalizing the approvals for device pass-through payment status for VasQ and the SCOUT MD™ Surgical Guidance System in this final rule with comment period. Due to the timing of the preliminary approvals, the CY 2026 spending estimate for VasQ and the SCOUT MD™ Surgical Guidance System is included in the CY 2026 spending estimate for the first group of devices.

[126] Centers for Medicare & Medicaid Services (2025). Pub 100–04 Medicare Claims Processing, Transmittal 13425, Change Request 14223, dated September 22, 2025. Accessed at *https://www.cms.gov/files/document/r13425cp.pdf*.

[127] Per the CY 2016 OPPS/ASC final rule with comment period, device pass-through applications are still submitted to CMS through the quarterly process, but the applications are subject to notice and comment rulemaking in the next applicable OPPS annual rulemaking cycle. Under this process, all applications that are preliminarily approved upon quarterly review will automatically be included in the next applicable OPPS annual rulemaking cycle (80 FR 70417 through 70418). Applications received after the March 3, 2025, deadline for the remaining 2025 quarters (the quarters beginning June 1, September 1, and December 1 of 2025), will be discussed in the CY 2027 OPPS/ASC proposed rule. As such, we expect to include and discuss the device applications associated with HCPCS codes C1740, C1741 and C1742 in the CY 2027 OPPS/ASC proposed and final rules with comment period.

through drugs and biologicals that would be separately paid. Because we proposed to utilize a payment rate of ASP+6 percent for most separately payable drugs and biologicals in the CY 2026 OPPS/ASC proposed rule, the proposed payment rate difference between the pass-through payment amount and the non-pass-through payment amount was $0 for this group of drugs.

Because payment for policy-packaged drugs and biologicals is packaged if the product is not paid separately due to its pass-through payment status, we proposed to include in the CY 2026 pass-through estimate the difference between payment for the policy-packaged drug or biological at ASP+6 percent (or WAC+6 percent, or 95 percent of AWP, if ASP or WAC information is not available) and the policy-packaged drug APC offset amount, if we determine that the policy-packaged drug or biological approved for pass-through payment resembles a predecessor drug or biological already included in the costs of the APCs that are associated with the drug receiving pass-through payment. Diagnostic radiopharmaceuticals that currently have pass-through status, but would likely be paid separately because of the policy initially established in the CY 2025 OPPS/ASC final rule with comment period (89 FR 93953) to separately pay for diagnostic radiopharmaceuticals with per-day costs greater than the per-day cost threshold and which we are continuing as discussed in section II.A.3.c. of this final rule with comment period, are not considered to be policy-packaged and therefore are not included in this group. For this first group of policy-packaged drugs and biologicals, we estimated a pass-through spending for CY 2026 of $5.2 million.

We did not receive any public comments on our proposed estimate. Using our methodology for this final rule with comment period, we are finalizing the CY 2026 spending estimate for this first group of drugs and biologicals to be $5.2 million.

To estimate proposed CY 2026 pass-through spending for drugs and biologicals in the second group (that is, drugs and biologicals that we knew at the time of development of the proposed rule were newly eligible or recently became eligible for pass-through payment in CY 2025, additional drugs and biologicals that we estimated could be approved for pass-through status subsequent to the development of the proposed rule and before January 1, 2026, and projections for new drugs and biologicals that could be initially eligible for pass-through payment in the second through fourth quarters of CY 2026), we proposed to use utilization estimates from pass-through applicants, pharmaceutical industry data, clinical information, recent trends in the per unit ASPs of hospital outpatient drugs, and projected annual changes in service volume and intensity as our basis for making the CY 2026 pass-through payment estimate. We also proposed to consider the most recent OPPS experience in approving new pass-through drugs and biologicals. Using our proposed methodology for estimating CY 2026 pass-through payments for this second group of drugs, we calculated a proposed spending estimate for this second group of drugs and biologicals of approximately $10 million.

We did not receive any public comments on our proposed estimate. Using our methodology for this final rule with comment period, we are finalizing our estimate of pass-through spending for the second group of drugs and biologicals to be $10 million.

We estimated for the CY 2026 OPPS/ASC proposed rule (90 FR 33656) that the amount of pass-through spending for the device categories and the drugs and biologicals that are continuing to receive pass-through payment in CY 2026 and the amount of pass-through spending for those device categories, drugs, and biologicals that first become eligible for pass-through payment during CY 2026 would be approximately $587.0 million (approximately $571.8 million for device categories and approximately $15.2 million for drugs and biologicals), which represents only 0.59 percent of total projected OPPS payments for CY 2026 (approximately $100 billion). Therefore, we estimated that pass-through spending in CY 2026 will not exceed the 2.0 percent of total projected OPPS CY 2026 program spending limit provided for in section 1833(t)(6)(E) of the Act.

We are finalizing our estimate for this final rule with comment period that the amount of pass-through spending for the device categories and the drugs and biologicals that are continuing to receive pass-through payment in CY 2026 and the amount of pass-through spending for those device categories, drugs, and biologicals that first become eligible for pass-through payment during CY 2026 will be approximately $307.0 million (approximately $291.8 million for device categories and approximately $15.2 million for drugs and biologicals), which represents only 0.30 percent of total projected OPPS payments for CY 2026 (approximately $101.0 billion). Therefore, we estimate that pass-through spending in CY 2026 will not exceed the 2.0 percent of total projected OPPS CY 2026 program spending limit provided for in section 1833(t)(6)(E) of the Act.

The estimated amount of $307.0 million of pass-through spending for the device categories and the drugs and biologicals that are continuing to receive pass-through payment in CY 2026 and the amount of pass-through spending for those device categories, drugs, and biologicals that first become eligible for pass-through payment during CY 2026 in this final rule is substantially different from the estimated amount of pass-through spending in the CY 2026 OPPS/ASC proposed rule (90 FR 33656) of $587.0 million mainly because, the updated estimated amount of pass-through spending for the second group of devices only includes the estimated pass-through spending for the devices that were approved for pass-through status in this final rule and the estimated pass-through expenditures for devices that are preliminarily approved as part of the device pass-through quarterly review process after the development of the CY 2026 OPPS/ASC proposed rule.

Comment: A commenter stated CMS's estimate of aggregate pass-through spending and application of statutory limits should not be allowed to restrict patient access to high-value therapies. The commenter additionally noted that to ensure safeguards are appropriately calibrated, CMS should publish analyses showing how spending caps affect specific categories such as oncology, rare diseases, and advanced diagnostics. The commenter elaborated that this would help interested parties assess whether limits create unintended barriers and inform any mid-course corrections that might be needed.

Response: We note the spending limit for pass-through is not considered during the pass-through application evaluation process and therefore, would not impact our final determination of pass-through payment status for any eligible technology. The spending limit is considered for the purposes of assessing the total amount of pass-through payments in a given calendar year for technologies which are currently eligible for pass-through payment status. If, before the beginning of the calendar year, we estimate that the total amount of pass-through payments in that year will exceed the applicable percentage, section 1833(t)(6)(E)(iii) of the Act requires a uniform prospective reduction in the amount of each of the transitional pass-through payments made in that year to ensure that the limit is not exceeded.

VII. OPPS Payment for Hospital Outpatient Visits and Critical Care Services

For CY 2026, we proposed to continue our current clinic and emergency department (ED) hospital outpatient visit payment policies. For a description of these policies, we referred readers to the CY 2016 OPPS/ASC final rule with comment period (80 FR 70298). We also proposed to continue our payment policy for critical care services for CY 2026. For a description of this policy, we referred readers to the CY 2016 OPPS/ASC final rule with comment period (80 FR 70298), and for the history of this payment policy, we referred readers to the CY 2014 OPPS/ASC final rule with comment period (78 FR 75043).

As we stated in the CY 2022 OPPS/ASC final rule with comment period (86 FR 63663), the volume control method for clinic visits furnished by excepted off-campus provider-based departments (PBDs) applies for CY 2022 and subsequent years. More specifically, we finalized a policy to continue to utilize a PFS-equivalent payment rate for the hospital outpatient clinic visit service described by HCPCS code G0463 when it is furnished by these departments for CY 2022 and subsequent years. The PFS-equivalent rate for CY 2026 is 40 percent of the proposed OPPS payment. Under this policy, these departments will be paid approximately 40 percent of the OPPS rate for the clinic visit service in CY 2026. For CY 2026, we proposed to implement a volume control method for additional services furnished by excepted PBDs. For more information on this policy, we refer readers to section X.A. of this final rule with comment period.

In the CY 2023 OPPS/ASC final rule with comment period (87 FR 71748), we finalized a policy that excepted off-campus PBDs (departments that bill the modifier ''PO'' on claim lines) of rural Sole Community Hospitals (SCHs), as described under 42 CFR 412.92 and designated as rural for Medicare payment purposes, are exempt from the clinic visit payment policy that applies a PFS-equivalent payment rate for the clinic visit service, as described by HCPCS code G0463, when provided at an off-campus PBD excepted from section 1833(t)(21) of the Act. For the full discussion of this policy, we refer readers to the CY 2023 OPPS/ASC final rule with comment period (87 FR 72047 through 72051). For CY 2026, we proposed to exempt excepted off-campus PBDs (departments that bill the modifier ''PO'' on claim lines) of rural SCHs, as described under 42 CFR 412.92 and designated as rural for Medicare payment purposes, from any additional services subject to our volume control method payment policy. For more information on this policy, we refer readers to section X.A. of this final rule with comment period.

We did not receive specific public comment on our existing clinic and ED hospital outpatient visits payment policies outside of the context of the proposed expansion of our volume control method to other services, and therefore, we are finalizing as proposed to continue these policies. For discussion of the existing clinic visit policy in the context of the proposed expansion of our volume control method to other services, please see section X.A. of this final rule with comment period.

VIII. Payment for Partial Hospitalization and Intensive Outpatient Services

This section discusses payment for partial hospitalization services as well as intensive outpatient services. Since CY 2000, Medicare has paid for partial hospitalization services under the OPPS. Beginning in CY 2024, as authorized by section 4124 of the Consolidated Appropriations Act (CAA), 2023 (Pub. L. 117–328), Medicare began paying for intensive outpatient services furnished by hospital outpatient departments, community mental health centers, Federally qualified health centers, and rural health clinics in addition to opioid treatment programs. Additional background on the partial hospitalization and intensive outpatient benefits is included in the following paragraphs.

A. Background

1. Partial Hospitalization

A partial hospitalization program (PHP) is an intensive outpatient program of psychiatric services provided as an alternative to inpatient psychiatric care for individuals who have an acute mental illness, which includes, but is not limited to, conditions such as depression, schizophrenia, and substance use disorders (SUD). Section 1861(ff)(1) of the Act defines partial hospitalization services as the items and services described in paragraph (2) prescribed by a physician and provided under a program described in paragraph (3) under the supervision of a physician pursuant to an individualized, written plan of treatment established and periodically reviewed by a physician (in consultation with appropriate staff participating in such program), which sets forth the physician's diagnosis, the type, amount, frequency, and duration of the items and services provided under the plan, and the goals for treatment under the plan. Section 1861(ff)(2) of the Act describes the items and services included in partial hospitalization services. Section 1861(ff)(3)(A) of the Act specifies that a PHP is a program furnished by a hospital to its outpatients or by a community mental health center (CMHC), as a distinct and organized intensive ambulatory treatment service, offering less than 24-hour-daily care, in a location other than an individual's home or inpatient or residential setting. Section 1861(ff)(3)(B) of the Act defines a CMHC for purposes of this benefit. We refer readers to sections 1833(t)(1)(B)(i), 1833(t)(2)(B), 1833(t)(2)(C), and 1833(t)(9)(A) of the Act and 42 CFR 419.21, for additional information regarding PHP.

PHP policies and payment have been addressed under OPPS since CY 2000. In CY 2008, we began efforts to strengthen the PHP benefit through extensive data analysis, along with policy and payment changes, by implementing two refinements to the methodology for computing the PHP median. For a detailed discussion on these policies, we refer readers to the CY 2008 OPPS/ASC final rule with comment period (72 FR 66670 through 66676). In CY 2009, we implemented several regulatory, policy, and payment changes. For a detailed discussion on these policies, we refer readers to the CY 2009 OPPS/ASC final rule with comment period (73 FR 68688 through 68697). In CY 2010, we retained the two-tier payment approach for partial hospitalization services and used only hospital-based PHP data in computing the PHP APC per diem costs, upon which PHP APC per diem payment rates are based (74 FR 60556 through 60559). In CY 2011 (75 FR 71994), we established four separate PHP APC per diem payment rates: two for CMHCs (APC 0172 and APC 0173) and two for hospital-based PHPs (APC 0175 and APC 0176). We also instituted a 2-year transition period for CMHCs to the CMHC APC per diem payment rates. For a detailed discussion, we refer readers to section X.B. of the CY 2011 OPPS/ASC final rule with comment period (75 FR 71991 through 71994). In CY 2012, we determined the relative payment weights for partial hospitalization services provided by CMHCs based on data derived solely from CMHCs and the relative payment weights for partial hospitalization services provided by

hospital-based PHPs based exclusively on hospital data (76 FR 74348 through 74352). In the CY 2013 OPPS/ASC final rule with comment period, we finalized our proposal to base the relative payment weights that underpin the OPPS APCs, including the four PHP APCs (APCs 0172, 0173, 0175, and 0176), on geometric mean costs rather than on the median costs. For a detailed discussion on this policy, we refer readers to the CY 2013 OPPS/ASC final rule with comment period (77 FR 68406 through 68412).

In the CY 2014 OPPS/ASC proposed rule (78 FR 43621 and 43622) and CY 2015 OPPS/ASC final rule with comment period (79 FR 66902 through 66908), we continued to apply our established policies to calculate the four PHP APC per diem payment rates based on geometric mean per diem costs using the most recent claims data for each provider type. For a detailed discussion on this policy, we refer readers to the CY 2014 OPPS/ASC final rule with comment period (78 FR 75047 through 75050). In the CY 2016 OPPS/ASC final rule with comment period (80 FR 70453 through 70467), we described our extensive analysis of the claims and cost data and ratesetting methodology, corrected a cost inversion that occurred in the final rule with comment period data with respect to hospital-based PHP providers, and renumbered the PHP APCs. In the CY 2017 OPPS/ASC final rule with comment period (81 FR 79687 through 79691), we continued to apply our established policies to calculate the PHP APC per diem payment rates based on geometric mean per diem costs and finalized a policy to combine the Level 1 and Level 2 PHP APCs for CMHCs and for hospital-based PHPs. We also implemented an eight-percent outlier cap for CMHCs to mitigate potential outlier billing vulnerabilities. For a comprehensive description of PHP payment policy, including a detailed methodology for determining PHP per diem amounts, we refer readers to the CY 2016 and CY 2017 OPPS/ASC final rules with comment period (80 FR 70453 through 70455 and 81 FR 79678 through 79680, respectively).

In the CYs 2018 and 2019 OPPS/ASC final rules with comment period (82 FR 59373 through 59381 and 83 FR 58983 through 58998, respectively), we continued to apply our established policies to calculate the PHP APC per diem payment rates based on geometric mean per diem costs, designated a portion of the estimated 1.0 percent hospital outpatient outlier threshold specifically for CMHCs, and proposed updates to the PHP allowable HCPCS codes. We finalized these proposals in the CY 2020 OPPS/ASC final rule with comment period (84 FR 61352).

In the CY 2020 OPPS/ASC final rule with comment period (84 FR 61339 through 61350), we finalized a proposal to use the calculated CY 2020 CMHC geometric mean per diem cost and the calculated CY 2020 hospital-based PHP geometric mean per diem cost, but with a cost floor equal to the CY 2019 final geometric mean per diem costs as the basis for developing the CY 2020 PHP APC per diem rates. Also, we continued to designate a portion of the estimated 1.0 percent hospital outpatient outlier threshold specifically for CMHCs, consistent with the percentage of projected payments to CMHCs under the OPPS, excluding outlier payments.

In the April 30, 2020 interim final rule with comment (85 FR 27562 through 27566), effective as of March 1, 2020 and for the duration of the COVID–19 Public Health Emergency (PHE), hospital and CMHC staff were permitted to furnish certain outpatient therapy, counseling, and educational services (including certain PHP services), incident to a physician's services, to beneficiaries in temporary expansion locations, including the beneficiary's home, as long as the location met all conditions of participation to the extent not waived. A hospital or CMHC could furnish such services using telecommunications technology to a beneficiary in a temporary expansion location if that beneficiary was registered as an outpatient. In the CY 2023 OPPS/ASC final rule with comment period (87 FR 72247), we confirmed that these provisions applied only for the duration of the COVID–19 PHE. On May 11, 2023, the COVID–19 PHE ended, and accordingly, these flexibilities ended as well.

In the CY 2021 OPPS/ASC final rule with comment period (85 FR 86073 through 86080), we continued our current methodology to utilize cost floors, as needed. In the CY 2022 OPPS/ASC final rule with comment period (86 FR 63665 and 63666), as a result of the COVID–19 PHE, we finalized our proposal to calculate the PHP per diem costs using the year of claims consistent with the calculations that would be used for other OPPS services, by using the CY 2019 claims and the cost reports that were used for CY 2021 final rulemaking to calculate the CY 2022 PHP per diem costs. In addition, for CY 2022 and subsequent years, we finalized our proposal to use cost and charge data from the Hospital Cost Report Information System (HCRIS) as the source for the CMHC cost-to-charge ratios (CCRs), instead of using the Outpatient Provider Specific File (OPSF) (86 FR 63666).

In the CY 2023 OPPS/ASC final rule with comment period (87 FR 71995), we finalized our proposal to use the latest available CY 2021 claims but use the cost information from prior to the COVID–19 PHE for calculating the CY 2023 CMHC and hospital-based PHP APC per diem costs. The application of the OPPS standard methodology, including the effect of budget neutralizing all other OPPS policy changes unique to CY 2023, resulted in the final calculated CMHC PHP APC payment rate being unexpectedly lower than the CY 2022 final CMHC PHP APC rate. Therefore, we finalized utilizing the equitable adjustment authority of section 1833(t)(2)(E) of the Act to appropriately pay for CMHC PHP services at the same payment rate as for CY 2022, that is, $142.70. In addition, we clarified the payment under the OPPS for new HCPCS codes that designate non-PHP services provided for the purposes of diagnosis, evaluation, or treatment of a mental health disorder and are furnished to beneficiaries in their homes by clinical staff of the hospital that would not be recognized as PHP services; however, none of the PHP regulations would preclude a patient that is under a PHP plan of care from receiving other reasonable and medically necessary non-PHP services from a hospital (87 FR 72001 and 72002).

In the CY 2024 OPPS/ASC final rule with comment period (88 FR 81811), we revised the regulation at § 424.24(e)(1)(i) to require the physician certification for PHP services to include a certification that the patient requires such services for a minimum of 20 hours per week, as required by section 1861(ff)(1) of the Act, as amended by section 4124(a) of Division FF of the CAA, 2023. In addition, we modified the regulations for PHP at § 410.43 to include references to SUD. In the same CY 2024 OPPS/ASC final rule with comment period, we also established separate payment rates for PHP days with 3 services and days with 4 or more services. Accordingly, we established four separate PHP APC per diem payment rates: one for CMHCs for 3-service days and another for CMHCs for 4-service days (APC 5853 and APC 5854, respectively), and one for hospital-based PHPs for 3-service days and another for hospital-based PHPs for 4-service days (APC 5863 and APC 5864, respectively). We also finalized a policy to utilize the separate CMHC rates for 3-service and 4-service PHP days as the Medicare Physician Fee Schedule (MPFS) rates, depending upon whether a nonexcepted off-campus

hospital outpatient department furnishes 3 or 4 PHP services in a day. Lastly, we finalized several changes beginning in CY 2024 to align coding, billing, and payment between PHPs and intensive outpatient programs.

In the CY 2025 OPPS/ASC final rule with comment period (89 FR 94266 through 94268), we maintained the coding and billing policies for PHP as established in the CY 2024 OPPS/ASC final rule with comment period.

2. Intensive Outpatient Program Services

Section 4124(b) of the CAA, 2023, amended section 1861(ff) of the Act, establishing Medicare coverage for intensive outpatient services effective for items and services furnished on or after January 1, 2024. An intensive outpatient program (IOP) is a distinct and organized program of psychiatric services for individuals who have an acute mental illness, which includes, but is not limited to, conditions such as depression, schizophrenia, and SUD. Intensive outpatient services are not required to be provided in lieu of inpatient hospitalization. Section 1861(ff)(4) of the Act defines intensive outpatient services as the items and services described in paragraph (2) of section 1861(ff) prescribed by a physician for an individual determined (not less frequently than every other month) by a physician to have a need for such services for a minimum of 9 hours per week and provided under a program described in paragraph (3) under the supervision of a physician pursuant to an individualized, written plan of treatment established and periodically reviewed by a physician (in consultation with appropriate staff participating in such program), which plan sets forth the physician's diagnosis, the type, amount, frequency, and duration of the items and services provided under the plan, and the goals for treatment under the plan. Section 1861(ff)(2) of the Act describes the items and services included in intensive outpatient services. Section 1861(ff)(4)(C) of the Act specifies that an IOP is a program furnished by a hospital to its outpatients, by a CMHC, by a Federally qualified health center (FQHC), or by a rural health clinic (RHC) as a distinct and organized intensive ambulatory treatment service, offering less than 24-hour-daily care, in a location other than an individual's home or inpatient or residential setting. Section 1861(ff)(3)(B) of the Act defines a CMHC for purposes of this benefit. We refer readers to sections 1833(t)(1)(B)(i), 1833(t)(2)(B), 1833(t)(2)(C), and 1833(t)(9)(A) of the Act and 42 CFR 419.21, for additional information regarding IOP.

In the CY 2024 OPPS/ASC final rule with comment period (88 FR 81812 through 81857), we established payment and program requirements for the IOP benefit furnished by a hospital to its outpatients, or by a CMHC, an FQHC, or an RHC. In addition, we established Medicare Part B coverage for IOP services provided by Opioid Treatment Programs (OTPs) for the treatment of opioid use disorder (OUD).

Consistent with the statutory definition of intensive outpatient services under section 1861(ff)(4) of the Act, we finalized regulations at 42 CFR 410.44 to set forth the conditions and exclusions applicable for intensive outpatient services, and at § 424.24 to set forth the content of the certification and plan of treatment requirements for intensive outpatient services. We also revised certain existing regulations at §§ 410.2, 410.3, 410.10, 410.27, 410.150, and 419.21 to add a regulatory definition of intensive outpatient services and to include intensive outpatient services in the regulations for medical and other health services paid for under Medicare Part B, and in the case of § 419.21, under the OPPS. Additionally, we created regulations at § 410.111 to establish the requirements for coverage of IOP services furnished in CMHCs, and at § 410.173 to establish conditions of payment for IOP services furnished in CMHCs. Lastly, we revised § 410.155 to exclude IOP services from the outpatient mental health treatment limitation, consistent with the statutory requirement of section 1833(c)(2) of the Act, as amended by section 4124(b)(3) of the CAA, 2023.

In addition, as discussed in greater detail in the following sections, we established coding, billing, and payment policies for IOP that align with the policies established for PHP provided in the same settings. Specifically, we established four separate IOP APC per diem payment rates at the same rates we proposed for the PHP APCs: one for CMHCs for 3-service days and another for CMHCs for 4-service days (APC 5851 and APC 5852, respectively), and one for hospital-based IOPs for 3-service days and another for hospital-based IOPs for 4-service days (APC 5861 and APC 5862, respectively). Similar to the policy finalized for PHP, we finalized a policy to utilize the CMHC rates for 3-service and 4-service IOP days as the MPFS rates, depending upon whether a nonexcepted hospital outpatient department furnishes 3 or 4 IOP services in a day.

For IOP services provided by an RHC or FQHC, we established a 3-service per day payment rate based on the same rate as APC 5861, which is the 3-service hospital-based IOP rate (§ 405.2462(j)). In the CY 2025 PFS final rule, we established a 4 or more services per day payment rate for an IOP provided by an RHC or FQHC based on the same rate as APC 5862, which is the 4 or more services hospital-based IOP rate (89 FR 98017 and 98018). Information regarding payment policies for IOP services furnished by FQHCs and RHCs, including information regarding proposed CY 2026 policies for those settings, can be found in the MPFS proposed rule, which is published elsewhere in the **Federal Register**.

Furthermore, in the CY 2024 OPPS/ASC final rule with comment period, we established a payment adjustment for IOPs provided by an OTP based on three times the payment rate for APC 5861 beginning in CY 2024 (§ 410.67(d)(4)(i)(F)). We finalized regulations at § 410.67(d)(4)(ii) to add that the payment amount for OTP intensive outpatient services will be geographically adjusted using the Geographic Adjustment Factor (GAF) described in § 414.26. Lastly, we amended § 410.67(d)(4)(iii) to add that payment for OTP intensive outpatient services is updated annually using the Medicare Economic Index described in § 405.504(d). Payment rates for IOP provided in the OTP setting are updated as part of the OTP fee schedule and are not addressed in this CY 2026 OPPS/ASC proposed rule.

Lastly, in the CY 2025 OPPS/ASC final rule with comment period (89 FR 94266 through 94268), we maintained the coding and billing policies for IOP as established in the CY 2024 OPPS/ASC final rule with comment period.

B. Coding and Billing for PHP and IOP Services Under the OPPS

In the CY 2024 OPPS/ASC final rule with comment period, we finalized a billing requirement that all providers use condition code 41 to indicate that a claim is for partial hospitalization services and use condition code 92 to identify intensive outpatient claims, effective January 1, 2024. Since the statutory definitions of both IOP and PHP generally include the same types of items and services covered, we stated in the CY 2024 OPPS/ASC final rule with comment period that we believe it is appropriate to align the programs using a consistent list of services, so that level of intensity would be the only differentiating factor between partial hospitalization services and intensive outpatient services. The use of condition codes 41 for PHP claims and 92 for IOP claims allows us to

differentiate between these services for billing purposes.

We recognize that the level of intensity of mental health services that a patient requires may vary over time; therefore, we believe utilizing a consolidated list of HCPCS codes to identify services under both the IOP and PHP benefits supports a smooth transition for patients when a change in the intensity of their services is necessary to best meet their needs. For example, a patient receiving IOP services may experience an acute mental health need that necessitates more intense services through a PHP. Alternatively, an IOP patient that no longer requires the level of intensity provided by the IOP can access less intense mental health services, such as individual mental health services. The full list of HCPCs codes recognized under the PHP and IOP benefits can be found in the Medicare Claims Processing Internet Only Manual, Chapter 4, sections 260.1 and 261.1, respectively, and their subsections, available at *https://www.cms.gov/regulations-and-guidance/guidance/manuals/downloads/clm104c04.pdf*.

To qualify for payment for the IOP APC (5851, 5852, 5861, or 5862) or the PHP APC (5853, 5854, 5863, or 5864), one service provided that day must be from the Partial Hospitalization and Intensive Outpatient Primary list. We refer readers to the CY 2024 OPPS final rule with comment period for further discussion regarding our expectation that at least one of the services on the PHP and IOP Primary list will be indicated per day for patients who need the level of care offered by a PHP or IOP program. The PHP and IOP Primary List can be found in the CY 2024 OPPS/ASC final rule with comment period at 88 FR 81821.

Beginning in CY 2024, we recognized caregiver training services and Principal Illness Navigation (PIN) services as PHP and IOP services. We explained that the reported costs associated with providing such services are included when we calculate the PHP and IOP payment rates; however, these services do not count toward the determination of whether a PHP or IOP day is paid at the 3-service or 4-service rate. We refer readers to the CY 2024 OPPS/ASC final rule with comment period for a detailed discussion of this policy (88 FR 81823 through 81825).

As finalized in the CY 2024 OPPS/ASC final rule with comment period (88 FR 81821 and 81822), if new codes are established that represent the PHP and IOP services described under §§ 410.43(a)(4) and 410.44(a)(4), respectively, such codes are added to the list of codes recognized for payment for PHP or IOP through sub-regulatory guidance. We note that coding updates frequently occur outside of the standard rulemaking timeline. We adopted this sub-regulatory process to pay expeditiously when new codes are created that describe any of the services enumerated at §§ 410.43(a)(4) and 410.44(a)(4), which PHPs and IOPs, respectively, would provide. We explained that this policy applies to new codes that are cross walked to a previously included code, or whose code descriptor is substantially similar to a descriptor for a code on the list or describes a service on the list. We stated that any additional services not described at § 410.43(a)(4) or § 410.44(a)(4) would be added to the lists in regulation through notice and comment rulemaking.

In the CY 2025 OPPS/ASC final rule with comment period (89 FR 94266 through 94268), we did not add any new services not described at § 410.43(a)(4) or § 410.44(a)(4) to the list of PHP and IOP services.

We did not propose to add any new services to the list of PHP and IOP services for CY 2026. The following is a summary of the comments we received regarding these policies and our responses.

Comment: One commenter expressed support for our coding policies for occupational therapy services furnished in PHPs and IOPs, noting that these policies reinforce the importance of occupational therapy services in PHPs and IOPs. This commenter also advocated for including measures specific to occupational therapy in quality reporting programs.

Response: We thank the commenter for their support of our coding policies for occupational therapy services furnished in PHPs and IOPs. We will take the commenter's suggestions into consideration to potentially inform future rulemaking about quality measures.

Comment: One commenter advocated for coverage for virtual PHPs and IOPs to increase access to services, particularly for patients in rural areas who may have to travel for several hours to access behavioral health or SUD services.

Response: As we have previously discussed in the CY 2023 OPPS/ASC final rule with comment period (87 FR 72000), section 1861(ff)(3)(A) of the Act, which defines partial hospitalization services, specifies that a PHP is a program furnished by a hospital to its outpatients or by a community mental health center (CMHC), as a distinct and organized intensive ambulatory treatment service, offering less than 24-hour-daily care, in a location other than an individual's home or inpatient or residential setting. Section 1861(ff)(4) of the Act defines IOP with reference to that is, IOP services must be furnished in a location other than an individual's home or inpatient or residential setting.

C. CY 2026 Payment Rates for PHP and IOP

We proposed for CY 2026 to maintain the current payment rate methodology that we use for calculating PHP and IOP payment rates for hospital-based providers. For CMHCs, we proposed to revise our methodology for calculating PHP and IOP payment rates. Specifically, we proposed to apply the 40 percent MPFS Relativity Adjuster to calculate PHP and IOP payment rates for CMHCs. In the CY 2026 OPPS/ASC proposed rule (90 FR 33660), we explained that we would multiply the CY 2026 rates for the hospital-based PHP and IOP APCs by 0.4 to calculate the payment rates for the CMHC PHP and IOP APCs.

1. Background on the Current Payment Rate Methodology for PHP and IOP

Beginning in CY 2024, we established four separate PHP APC per diem payment rates: one for CMHCs for 3-service days and another for CMHCs for 4-service days (APC 5853 and APC 5854, respectively), and one for hospital-based PHPs for 3-service days and another for hospital-based PHPs for 4-service days (APC 5863 and APC 5864, respectively). In addition, for hospital-based PHPs, we finalized a policy to calculate payment rates using the broader OPPS data set, instead of using hospital-based PHP data only. We explained that using the broader OPPS data set allows CMS to capture data from claims not identified as PHP, but that also include the service codes and intensity required for a PHP day. Because we established consistent coding and payment between the PHP and IOP benefits, we considered all OPPS data for PHP days and non-PHP days that include 3 or more of the same service codes. We established four separate IOP APC per diem payment rates at the same rates we proposed for the PHP APCs: one for CMHCs for 3-service days and another for CMHCs for 4-service days (APC 5851 and APC 5852, respectively), and one for hospital-based IOPs for 3-service days and another for hospital-based IOPs for 4-service days (APC 5861 and APC 5862, respectively).

In the CY 2024 OPPS/ASC final rule with comment period (88 FR 81829 and 81830), we noted that the standard PHP

day is typically four services or more per day. We explained that we have historically provided payment for three services a day for extenuating circumstances when a beneficiary would be unable to complete a full day of PHP treatment. As we stated in the CY 2008 OPPS/ASC final rule with comment period (72 FR 66672), it was never our intention that days with only three units of service should represent the number of services provided in a typical PHP day. Our intention was to cover days that consisted of three units of service only in certain limited circumstances. For example, as we noted in the CY 2009 OPPS/ASC proposed rule (73 FR 41513), we believe 3-service days may be appropriate when a patient is transitioning towards discharge (or days when a patient is at the beginning of his or her PHP stay). Another example of when it may be appropriate for a program to provide only three units of service in a day is when a patient is required to leave the PHP early for the day due to an unexpected medical appointment.

In the same CY 2024 OPPS/ASC final rule with comment period, we also explained that prior to CY 2024, we historically prepared the data by first applying PHP-specific trims and data exclusions and assessing CCRs. We direct the reader to the CY 2016 OPPS/ASC final rule with comment period (80 FR 70463 through 70465) for a more complete discussion of these trims, data exclusions, and CCR adjustments. In prior rules, we typically included a discussion of PHP-specific data trims, exclusions, and CCR adjustments; we did not include that discussion in the CY 2024 OPPS/ASC proposed rule or final rule with comment period. We stated that these PHP-specific data trims and exclusions addressed limitations as well as anomalies in the PHP data. However, as noted earlier, we finalized a methodology for CY 2024 to calculate hospital-based PHP payment rates for 3 services per day and 4 services per day based on cost per day using the broader OPPS data set. Accordingly, we did not apply PHP-specific trims and data exclusions, but rather we applied the same trims and data exclusions consistent with the OPPS.

We stated in the CY 2024 OPPS/ASC final rule with comment period (88 FR 81830) that while no IOP benefit existed prior to the CAA, 2023, the types of items and services included in IOP had been, and were, paid for by Medicare either as part of the PHP benefit or under the OPPS more generally. Additionally, we stated that prior to the CAA, 2023, CMS had begun gathering information from interested parties on IOP under Medicare. In the CY 2023 OPPS/ASC proposed rule (87 FR 44679), we issued a comment solicitation on intensive outpatient mental health treatment, including SUD treatment furnished by IOPs, to collect information regarding whether there are any gaps in coding that may be limiting access to needed levels of care for treatment of mental health disorders or SUDs for Medicare beneficiaries, and specific information about IOP services, such as the settings of care in which these programs typically furnish services, the range of services typically offered, and the range of practitioner types that typically furnish these services.

In addition, in the same CY 2024 OPPS/ASC final rule with comment period, we explained that along with the requirements for IOP mandated by the CAA, 2023, we took into consideration the information we received from the comment solicitation to construct an appropriate data set to develop proposed rates for IOP. Since IOPs furnish the same types of services as PHP, just at a lower intensity, we stated that we believe it was appropriate to use the same data and methodology for calculating payment rates for both PHP and IOP for CY 2024. We explained that although PHP claims can be specifically identified, there was no specific identifier or billing code to indicate IOP services that may have been provided before CY 2024. However, we noted that hospitals have been permitted to furnish and bill for many of these services as outpatient services under the OPPS. Thus, we analyzed a broader set of data that included both PHP and non-PHP days with 3 or more services in order to calculate proposed payment for PHP services. To establish consistent payment between PHP and IOP, we set IOP payment rates at the same rates as PHP. We stated that the primary goal in developing the payment rate methodology for IOP and PHP services was to pay providers an appropriate amount relative to the patients' needs, and to avoid cost inversion in future years. We stated that setting the IOP payment rates equal to the PHP payment rates was appropriate because IOP was a newly established benefit, and we did not have definitive data on utilization. However, we explained that both programs utilize the same services, but furnish them at different levels of intensity, with different numbers of services furnished per day and per week, depending on the program. Therefore, we stated that we expect it would be appropriate to pay the same per diem rates for IOP and PHP services unless future data analysis supports calculating rates independently.

In the CY 2024 OPPS/ASC final rule with comment period (88 FR 81833) we established a policy of applying the 4-service day payment rate (that is, payment for PHP APCs 5854 for CMHCs and 5864 for hospitals, and IOP APCs 5852 for CMHCs and 5862 for hospitals) for days with 4 or more services. For days with three or fewer services, we apply the 3-service day payment rate (that is, payment for PHP APCs 5853 for CMHCs and 5863 for hospitals, and IOP APCs 5851 for CMHCs and 5861 for hospitals). As we noted in the CY 2024 OPPS/ASC final rule with comment period, we expect days with fewer than three services would be very infrequent, and we intend to monitor the provision of these days among providers and individual patients.

In the CY 2025 OPPS/ASC final rule with comment period (89 FR 94269), for beneficiaries in a PHP or IOP, we maintained the payment rate methodology finalized in the CY 2024 OPPS/ASC final rule with comment period.

2. Analysis of PHP and IOP Costs Under the Current Methodology

In the CY 2026 OPPS/ASC proposed rule (90 FR 33661), we explained that when following the current cost structure, the calculated CY 2026 geometric mean per diem cost for hospital-based PHP and IOP providers that provide 3 services per day would be $340.90, which we proposed to use for calculating the payment rate for the 3-service day hospital-based PHP APC 5863 and the 3-service day hospital-based IOP APC 5861, as discussed in the following section. Likewise, the calculated CY 2026 geometric mean per diem cost for hospital-based PHP and IOP providers that provide 4 services per day would be $424.60, which we proposed to use for calculating the payment rate for the 4-service day hospital-based PHP APC 5864 and the 4-service day hospital-based IOP APC 5862, as discussed in the following section.

In the CY 2026 OPPS/ASC proposed rule (90 FR 33661), we explained that the calculated CY 2026 geometric mean per diem cost for CMHC PHP and IOP providers would result in an inversion, with the CMHC 3-service geometric mean per diem costs equaling $191.83 and the CMHC 4-service geometric mean per diem costs equaling $110.39. We stated that we believe the inverted geometric mean per diem costs were influenced by the small number of CMHCs that bill Medicare for PHP and IOP services, as well as CMHCs with

low costs that first began billing Medicare for services in CY 2024. Table 117 summarizes the PHP and IOP geomean costs calculated using the current methodology as set forth in the CY 2026 OPPS/ASC proposed rule.

TABLE 117: CY 2026 PROPOSED RULE PHP AND IOP APC GEOMETRIC MEAN PER DIEM COSTS USING CURRENT METHODOLOGY

CY 2026 APC	Group Title	PHP and IOP APC Geometric Mean Per Diem Costs
5851	Intensive Outpatient (3 services per day) for CMHCs	$191.83
5852	Intensive Outpatient (4 or more services per day) for CMHCs	$110.39
5853	Partial Hospitalization (3 services per day) for CMHCs	$191.83
5854	Partial Hospitalization (4 or more services per day) for CMHCs	$110.39
5861	Intensive Outpatient (3 services per day) for hospital-based IOPs	$340.90
5862	Intensive Outpatient (4 or more services per day) for hospital-based IOPs	$424.60
5863	Partial Hospitalization (3 services per day) for hospital-based PHPs	$340.90
5864	Partial Hospitalization (4 or more services per day) for hospital-based PHPs	$424.60

3. CY 2026 Payment Rate Methodology for PHP and IOP

For CY 2026, we proposed to maintain our current methodology of calculating separate rates for hospitals and CMHCs. For the four hospital-based PHP and IOP APCs (that is, APCs 5861, 5862, 5863, and 5864), we proposed using the latest available cost information, from cost reports beginning three fiscal years prior to the year that is the subject of the rulemaking, and CY 2024 OPPS claims to update the payment rates. We explained that this proposal was consistent with the overall proposed use of cost data for the OPPS, which is discussed in section II.A.1.a. of the CY 2026 OPPS/ASC proposed rule (90 FR 33485 and 33486).

In accordance with the methodology finalized in the CY 2024 OPPS/ASC final rule with comment period, we proposed to base the payment rate for each hospital-based PHP APC on the geometric mean per diem cost for days with three services and four or more services. We proposed to use the broader set of OPPS data to calculate the geometric mean costs for hospital outpatient departments, and we proposed to apply the same trims and exclusions consistent with the OPPS. We also proposed to set the payment rates for the hospital-based IOP APCs based on the geometric mean per diem cost for PHP days with three services and four or more services.

For the four CMHC PHP and IOP APCs (that is, APCs 5851, 5852, 5853, and 5854), we proposed to calculate the CY 2026 geometric mean per diem costs based on 40 percent of the corresponding hospital-based PHP and IOP APCs (APCs 5861, 5862, 5863, and 5864, respectively). We proposed this change in methodology for calculating the four CMHC PHP and IOP APCs because using the current methodology would result in inverted costs for CMHCs (that is, the cost for 3-service days would be greater than the cost for 4-service days), as discussed in the preceding section. As we discuss further in the following section of this final rule with comment period, we believe this methodology would be generally appropriate for estimating CMHC costs and would align with the methodology that is used for other nonexcepted OPPS services furnished by a nonexcepted off-campus hospital outpatient department.

Lastly, we proposed that if more recent hospital cost data subsequently became available after the publication of the CY 2026 OPPS/ASC proposed rule (90 FR 33476, July 17, 2025), we would consider using such updated data to determine the CY 2026 payment rates for the four PHP APCs and the four IOP APCs.

We received public comments on these proposals. The following is a summary of the comments we received and our responses.

Comment: A few commenters generally supported our proposal to maintain the current methodology of calculating hospital-based and CMHC-based PHP and IOP payment rates for 3 services per day and 4 services per day. One commenter encouraged CMS to continue to pay for those days of service when patients receive only 3 services per day.

Response: We thank commenters for their support. We did not propose any changes to the structure of our payment rate methodology for CY 2026, and we are not finalizing any changes in this final rule with comment period. As we discussed in section VIII.C.1. of this final rule with comment period, we believe utilizing the three-service payment rate (that is, payment for PHP APCs 5853 for CMHCs and 5863 for hospitals, and IOP APCs 5851 for CMHCs and 5861 for hospitals) for days with three or fewer services would accommodate occasional instances when a patient is unable to complete a full day of PHP or IOP.

Comment: Multiple commenters stated that CMHC cost estimates do not reflect the actual costs of providing PHP and IOP and that the resources involved are comparable to those required for hospital-based programs. Commenters stated that CMS' policy of paying separate rates for hospitals and CMHCs creates arbitrary incentives for PHP and IOP services in settings other than CMHCs.

Response: We disagree with the commenters who believe CMS policy creates an incentive for PHP and IOP services in settings other than CMHCs. As discussed earlier in this section and in the CY 2026 OPPS/ASC proposed rule (90 FR 33662), our longstanding payment policies reflect the cost

differences between the CMHC and hospital settings, based on our observation of CMHCs incurring significantly different costs than hospitals in the provision of PHP services. We believe that the stark difference between hospital and CMHC costs for PHP and IOP services that we continue to observe in the data reflects the actual cost structure differences between facility types.

Final Decision: After consideration of public comments, we are finalizing the payment rate methodology for CY 2026 as proposed.

4. CY 2026 PHP and IOP APC Geometric Mean Per Diem Costs

In the CY 2024 OPPS/ASC final rule with comment period (88 FR 81831), we anticipated there would be significant differences between CMHCs' and hospitals' costs of furnishing IOP, based on our observation of CMHCs incurring significantly different costs than hospitals in the provision of PHP services. Our longstanding payment policies reflect those differences. In the CY 2026 OPPS/ASC proposed rule (90 FR 33662), we noted that for CY 2026, we continue to observe significant cost structure differences between hospitals and CMHCs in the provision of PHP and IOP services. That is, we continue to see lower PHP and IOP costs in the CMHC setting as compared to the hospital setting. However, as we noted earlier in this final rule with comment period, if we were to apply our current methodology for calculating the CY 2026 geometric mean per diem costs for CMHC PHP and IOP APCs, those costs would be inverted (that is, the cost for 3-service days would be greater than the cost for 4-service days).

We believe it is appropriate to continue to recognize the differences in cost structures for different providers of PHP and IOP. This is of particular importance not only to the Medicare program, but also for the Medicare beneficiaries that CMHCs serve, who are subject to a 20 percent coinsurance requirement on all PHP and IOP services under Part B. However, as we previously explained, one of our goals is to avoid cost inversion because we would expect that the geometric mean per diem costs when providing three services per day would be lower than the geometric mean per diem costs when providing four or more services per day. We note that our current estimates are significantly impacted by a small number of CMHCs with low estimated costs who first began billing Medicare for services in CY 2024.[128] In the CY 2026 OPPS/ASC proposed rule (90 FR 33662), we explained that we were concerned that these cost estimates may not best reflect the costs of providing PHP and IOP in CY 2026. As such, we stated that we believe that using CMHC data to establish the CMHC payment rates is not appropriate for CY 2026, given the cost inversion. For CY 2026, we considered alternative methodological approaches to estimate the costs for PHP and IOP services furnished by CMHCs.

Section 1833(t)(9)(A) of the Act requires the Secretary to annually review and revise the relative payment weights by considering new cost data, and other relevant information and factors. We note that in creating the original APC for PHP services (APC 0033), the initial relative payment weight for PHP services provided in hospital-based and CMHC-based settings was based on hospital data only. Subsequently, we have, in prior rulemaking, exercised our authority under section 1833(t)(9)(A) of the Act to change the data source for the relative payment weights for hospital-based and CMHC-based PHP services as new cost data became available. We refer readers to the CY 2012 OPPS/ASC final rule with comment period (76 FR 74350 and 74351) for more details on the history of changes in the data sources for relative payment weights for PHP services.

For CY 2026, we considered alternative methodological approaches for calculating the CMHC costs that could avoid cost inversions and provide greater stability for CMHC payment rates. We believe the stability of CMHC payment rates and the avoidance of cost inversions are important for CMHCs to more easily anticipate future payments associated with the PHP and IOP benefits. For CY 2026, we considered whether the 40 percent MPFS Relativity Adjuster would appropriately estimate CMHC PHP and IOP costs.

First, we considered the similarities between CMHCs and nonexcepted off-campus hospital outpatient departments. CMHCs are freestanding entities that are not part of a hospital, but they provide the same PHP and IOP services as hospital-based PHP and IOPs. As we noted in the CY 2017 OPPS/ASC final rule with comment period (81 FR 79717), this is similar to the differences between freestanding entities paid under the MPFS that furnish other services also provided by hospital-based entities. Similarly, to other entities currently paid for their technical component services under the MPFS, we believe CMHCs would typically have lower cost structures than hospital-based PHP and IOPs, largely due to lower overhead costs and other indirect costs such as administration, personnel, and security.

The 40 percent MPFS Relativity Adjuster was established in the CY 2018 PFS final rule (82 FR 53030) and applies to payments for nonexcepted items and services furnished in nonexcepted off-campus provider-based departments, including a hospital outpatient department. In that same final rule, we discussed our rationale for finalizing the MPFS Relativity Adjuster at 40 percent (82 FR 53026 through 53030). We explained that we believe a 40 percent adjuster would reflect a middle ground between the CY 2017 PFS Relativity Adjuster of 50 percent (selected to ensure adequate payment to hospitals) and the proposed CY 2018 PFS Relativity Adjuster of 25 percent (selected to ensure that hospitals are not paid more than others would be paid through the PFS non-facility rate).

Application of the 40 percent MPFS Relativity Adjuster to determine the CMHC geometric mean per diem costs bases the relative payment weights for PHP and IOP services furnished by CMHCs on hospital cost data, which we note has been more stable than CMHC cost data in recent years. In the CY 2026 OPPS/ASC proposed rule (90 FR 33662), we explained that the stability of the hospital cost data is primarily driven by the larger number of providers and the fact that hospital-based providers more consistently bill for PHP and IOP services from one year to the next. We stated that we believe this methodology would appropriately stabilize CMHC payment rates by setting them relative to hospital-based rates, while avoiding cost inversions in future years. We also stated that we believe applying the 40 percent MPFS Relativity Adjuster to calculate payment rates for the CMHC PHP and IOP APCs would support our longstanding goal to pay providers an appropriate amount relative to the patients' needs.

Application of the 40 percent MPFS Relativity Adjuster to the hospital-based PHP and IOP geometric mean per diem costs resulted in proposed CY 2026 CMHC costs of $136.36 for a 3-service day and $169.84 for a 4-service day. These proposed CY 2026 CMHC costs are generally in line with the CY 2025 CMHC costs, which were $112.59 for a 3-service day and $170.37 for a 4-service

[128] As we discussed in the CY 2023 OPPS/ASC final rule with comment period, our longstanding ratesetting methodology defaults any CMHC CCR that is not available or any CMHC CCR greater than one to the Statewide hospital CCR associated with the provider's urban/rural designation and their State location.

day. Additionally, we observed on average, the CY 2024 and CY 2025 geometric mean costs for the CMHC PHP and IOP APCs were 40 percent of the CY 2024 and CY 2025 geometric mean costs for the hospital-based PHP and IOP APCs. Therefore, we stated in the CY 2026 OPPS/ASC proposed rule (90 FR 33663), that applying the 40 percent Relativity Adjuster to hospital-based PHP and IOP costs would better approximate CMHC cost structures than the latest available CMHC cost data would. As we previously noted, the latest available CMHC cost data is influenced by the small number of CMHCs that bill Medicare for PHP and IOP services, as well as by CMHCs with low costs that first began billing Medicare for services in CY 2024.

Therefore, for the reasons discussed in the prior paragraphs, we proposed to apply the 40 percent MPFS Relativity Adjuster to the hospital-based PHP and IOP costs for the purposes of calculating the proposed geometric mean per diem costs for the CMHC PHP and IOP APCs for CY 2026 and subsequent years.

Given the requirements of section 1833(t)(9)(A) of the Act, we stated that we believe it would be appropriate to revise our methodology for setting the relative payment weights for the OPPS rates for PHP and IOP services furnished by CMHCs based on new cost data and other relevant information and factors. Specifically, we proposed to base this calculation on hospital cost data and the observed relationship between PHP and IOP costs in the hospital and CMHC settings, which as we noted earlier has been approximately 40 percent in recent years.

We noted in the CY 2026 OPPS/ASC proposed rule that we intend to monitor the provision of services in both PHP and IOP programs to better understand utilization patterns and would reevaluate our payment rate methodology if necessary. We also explained that if more recent data became available for the CY 2026 OPPS/ASC final rule that mitigated the cost inversion for CMHC geometric mean per diem costs, we may consider using such data as a basis for finalizing a payment rate methodology based on CMHC costs, rather than based on hospital costs adjusted by the 40 percent MPFS Relativity Adjuster.

We solicited comments on our current and proposed payment rate methodologies for PHP and IOP services furnished by CMHCs. We also solicited comments on potential methodological changes or changes to data that could avoid or mitigate future cost inversions and instability for CMHC payment rates. We received public comments on these proposals. The following is a summary of the comments we received and our responses.

Comment: A few commenters generally supported the proposed calculated geometric mean per diem costs for hospital-based PHP and IOP APCs.

Response: We thank commenters for their support.

Comment: Multiple commenters urged CMS to implement a site-neutral payment for CMHCs and hospital-based providers for PHP and IOP services. Some commenters stated that CMHCs are entitled under sections 1832(a)(2)(J) and 1833(a)(2)(B)(iii) of the Act to receive payment for PHP/IOP under the same methodology as hospital outpatient departments. A few commenters cited 1833(t)(2)(B) and stated that CMS has the discretion to create APC codes for different classes of services, but not to create distinct APC codes based on where a service is provided. Some commenters further stated that because of the small number of CMHCs billing for PHP and IOP services, paying CMHCs at the same higher rate as hospitals for these services would have a negligible impact on the Medicare program.

Response: It has been our longstanding policy since CY 2011 to pay separate PHP APC per diem payment rates for CMHCs and hospital-based PHPs. In the CY 2011 OPPS/ASC final rule with comment period (75 FR 71992), we stated that section 1833(t)(9)(A) of the Act requires the Secretary to ''review not less often than annually and revise the groups, the relative payment weights, and the wage and other adjustments described in paragraph (2) to take into account changes in medical practice, changes in technology, the addition of new services, new cost data, and other relevant information and factors.'' We stated that we believe we have authority to revise the groups and relative payment weights and to make other adjustments to the payment rates for PHP services, including basing rates on hospital-based PHP data only, combined hospital-based PHP and CMHC data, or CMHC data only, to take into account relevant information and factors that would allow us to more appropriately pay providers for the resource costs associated with providing PHP services. Accordingly, we finalized separate PHP APC per diem payment rates for hospital OPDs and CMHCs, and we have maintained that structure for payment since CY 2011. Beginning in CY 2024, we applied this payment structure to IOP because we expected (and subsequently have observed) differences in resource use between CMHCs and hospital OPDs for the provision of both PHP and IOP services.

In response to the commenters who cited to section 1833(t)(2)(B) of the Act, we believe we have authority to create APC codes as shown by our longstanding methodology for PHP and IOP. CMS data shows that PHP and IOP services furnished at hospital OPDs differ with respect to the use of resources from PHP and IOP services furnished at CMHCs; therefore, payment rates that recognize these resource differences are consistent with the statutory requirements under section 1833(t) of the Act.

We also disagree that paying CMHCs at the same higher rate as hospitals for these services would have a negligible impact on the Medicare program. Despite the small number of CMHCs billing Medicare, the volume of PHP and IOP services that they provide is significant. Our data from CY 2024 OPPS claims shows that CMHCs furnished approximately 38 percent of all PHP and IOP days that were paid under the OPPS. If we were to increase payment for these PHP and IOP days by 150 percent, as commenters have suggested, it would cause a significant increase in the total amount of PHP and IOP payments, both from the Medicare program and from Medicare beneficiaries in the form of coinsurance payments.

Comment: Some commenters stated that, given inflation and increased labor costs, the proposed rate is too low for CMHCs to effectively and appropriately staff and deliver PHPs and IOPs. The commenters stated that applying the 40 percent relativity adjuster could reduce CMHC payment rates compared to the hospital-based PHP and IOP payment rates.

Response: We appreciate the commenters' concerns; however, we disagree that the proposed rates are inadequate. We note that the OPPS payment rates are adjusted annually for inflation. In the CY 2026 OPPS/ASC proposed rule, we explained that the proposed CY 2026 CMHC costs were generally in line with the CY 2025 CMHC costs and noted that the proposed geometric mean per diem cost for CMHC IOP days with 4 or more services was $169.84, calculated by applying the 40 percent MPFS Relativity Adjuster (90 FR 33663). We performed further analysis of CMHC PHP and IOP claims which showed that CMHCs furnish PHP and IOP days with 4 or more services more frequently than days with 3 or fewer services. According to our analysis, the proposed CMHC geometric mean per diem cost for days

with 4 or more services would reimburse CMHCs at or above cost for approximately 75 percent of days with 4 or more services. Therefore, we believe applying the 40 percent MPFS Relativity Adjuster to the hospital-based PHP and IOP costs for the purposes of calculating the proposed geometric mean per diem costs for the CMHC PHP and IOP APCs results in adequate payment rates for CMHCs. We remind readers that due to the OPPS budget neutrality adjustments and the application of the final market basket update for CY 2026, the final APC payment rates may be higher or lower than their estimated APC geometric mean costs.

Comment: Some commenters stated that they do not believe the 40 percent MPFS Relativity Adjuster is relevant for calculating the geometric mean per diem costs for the CMHC PHP and IOP APCs rates.

Response: We disagree with commenters that the 40 percent MPFS Relativity Adjuster is not relevant for calculating the geometric mean per diem costs for the CMHC PHP and IOP APC rates. In the CY 2026 OPPS/ASC proposed rule (90 FR 33662), we noted the similarities between CMHCs and nonexcepted off-campus hospital outpatient departments. Additionally, we observed on average, the CY 2024 and CY 2025 geometric mean costs for the CMHC PHP and IOP APCs were 40 percent of the CY 2024 and CY 2025 geometric mean costs for the hospital-based PHP and IOP APCs. Therefore, we believe that applying the 40 percent Relativity Adjuster to hospital-based PHP and IOP costs better approximates CMHC cost structures than the latest available CMHC cost data does. We continue to believe this methodology appropriately stabilizes CMHC payment rates by setting them relative to hospital-based rates, while avoiding cost inversions in future years.

We note that the OPPS is subject to budget neutral adjustments to the weight scaler as described in section II.A.5. of this final rule with comment period, and APC payment rates are calculated using the OPPS conversion factor described in section II.B. of this final rule with comment period. As a result of the OPPS budget neutrality adjustments, the proposed and final APC payment rates may be higher or lower than their estimated APC geometric mean costs.

The final payment rates for the PHP and IOP APCs can be found in Addendum A of this CY 2026 OPPS/ASC final rule with comment period.

Comment: Commenters expressed concern that reduced CMHC payments could impact access to PHP and IOP services to patients in underserved communities. In addition, one commenter urged CMS to monitor utilization and outcomes stratified by geography and population characteristics such as age, disability status, and language proficiency to ensure that CMS payment policies translate into improved access to PHP and IOP services for all Medicare beneficiaries.

Response: We appreciate the concerns that commenters raised about Medicare beneficiaries' access to behavioral and mental health services. However, we do not believe that this policy reduces access to behavioral health services, because similarly other entities currently paid for their technical component services under the MPFS, we believe CMHCs typically have lower cost structures than hospital-based PHPs and IOPs, largely due to lower overhead costs and other indirect costs such as administration, personnel, and security. As we noted earlier, we believe the proposed payment rates for CMHCs provide adequate payment that reflects the level of cost in that setting. We intend to continue monitoring access to PHP and IOP services and may consider changes in future rulemaking, as appropriate.

Comment: Multiple commenters voiced concerns that administrative barriers (specifically, conditions of participation), contribute to the low number of CMHCs participating in the PHP and IOP benefits. The commenters suggested CMS change its interpretation, and clarify where needed, to state that the conditions of participation apply only to services that are billed by the CMHC.

Response: We thank commenters for their feedback. However, these comments are outside the scope of this rulemaking.

Final Decision: After consideration of the public comments we received, we are finalizing the payment rate methodology for CY 2026 as proposed. We will monitor the effects of this policy and will consider proposing modifications in future rulemaking if appropriate. Table 118 shows the final calculated geometric mean per diem costs for hospital-based PHP and IOP APCs, and the final geometric mean per diem costs for CMHC PHP and IOP APCs based on the application of the 40 percent MPFS Relativity Adjuster for this CY 2026 OPPS/ASC final rule with comment period. Additional information about the data trims, data exclusions, and CCR adjustments applicable to the data used for this final rule can be found online at *https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/HospitalOutpatientPPS/index.html*.[129]

TABLE 118: FINAL CY 2026 PHP AND IOP APC GEOMETRIC MEAN PER DIEM COSTS

CY 2026 APC	Group Title	Final PHP and IOP APC Geometric Mean Per Diem Costs
5851	Intensive Outpatient (3 services per day) for CMHCs	$128.73
5852	Intensive Outpatient (4 or more services per day) for CMHCs	$168.67
5853	Partial Hospitalization (3 services per day) for CMHCs	$128.73
5854	Partial Hospitalization (4 or more services per day) for CMHCs	$168.67
5861	Intensive Outpatient (3 services per day) for hospital-based IOPs	$321.83
5862	Intensive Outpatient (4 or more services per day) for hospital-based IOPs	$421.67
5863	Partial Hospitalization (3 services per day) for hospital-based PHPs	$321.83
5864	Partial Hospitalization (4 or more services per day) for hospital-based PHPs	$421.67

D. Outlier Policy for CMHCs

For CY 2026, we proposed to maintain the calculations of the CMHC outlier percentage, cutoff point and percentage payment amount, outlier reconciliation, outlier payment cap, and fixed dollar threshold according to previously established policies to include PHP and IOP services. We refer readers to the CY 2024 OPPS/ASC final rule with comment period (88 FR 81834 through 81836) for more details on CMHC outlier policies, and to section II.G. of this final rule with comment period for our general policies for hospital outpatient outlier payments.

1. Background

As discussed in the CY 2004 OPPS final rule with comment period (68 FR 63469 and 63470), we created a separate outlier policy specific to the estimated costs and OPPS payments provided to CMHCs. We designated a portion of the estimated OPPS outlier threshold specifically for CMHCs, consistent with the percentage of projected payments to CMHCs under the OPPS each year, excluding outlier payments, and established a separate outlier threshold for CMHCs.

2. CMHC Outlier Percentage

In the CY 2018 OPPS/ASC final rule with comment period (82 FR 59267 and 59268), we described the current outlier policy for hospital outpatient payments and CMHCs. We note that we also discussed our outlier policy for CMHCs in more detail in section VIII.C. of that same final rule (82 FR 59381). We set our projected target for all OPPS aggregate outlier payments at 1.0 percent of the estimated aggregate total payments under the OPPS (82 FR 59267). This same policy was also reiterated in the CY 2019 OPPS/ASC final rule with comment period (83 FR 58996), the CY 2020 OPPS/ASC final rule with comment period (84 FR 61350), and the CY 2021 OPPS/ASC final rule with comment period (85 FR 86082). We did not propose any changes to the CMHC outlier percentage policy for CY 2026 and did not receive any public comments on this provision.

3. Cutoff Point and Percentage Payment Amount

Also described in the CY 2018 OPPS/ASC final rule with comment period (82 FR 59381), our policy has been to pay CMHCs for outliers if the estimated cost of the day exceeds a cutoff point. In CY 2006, we set the cutoff point for outlier payments at 3.4 times the highest CMHC PHP APC payment rate implemented for that calendar year (70 FR 68551). For CY 2018, the highest CMHC PHP APC payment rate was the payment rate for CMHC PHP APC 5853. In addition, in CY 2002, the final OPPS outlier payment percentage for costs above the multiplier threshold was set at 50 percent (66 FR 59889). In CY 2018, we continued to apply the same 50 percent outlier payment percentage that applies to hospitals to CMHCs and continued to use the existing cutoff point (82 FR 59381). Therefore, for CY 2018, we continued to pay for partial hospitalization services that exceeded 3.4 times the CMHC PHP APC payment rate at 50 percent of the amount of CMHC PHP APC geometric mean per diem costs over the cutoff point. This same policy was also reiterated in the CY 2019 OPPS/ASC final rule with comment period (83 FR 58996 and 58997), the CY 2020 OPPS/ASC final rule with comment period (84 FR 61351), the CY 2021 OPPS/ASC final rule with comment period (85 FR 86082 and 86083), the CY 2022 OPPS/ASC final rule with comment period (86 FR 63670), the CY 2023 OPPS/ASC final rule with comment period (87 FR 72004), and the CY 2024 OPPS/ASC final rule with comment period (88 FR 81835). In the CY 2024 OPPS/ASC final rule with comment period, we extended this policy to intensive outpatient services. We did not propose any changes to the cutoff point and payment amount policy for CY 2026 and did not receive any public comments on this provision.

4. Outlier Reconciliation

In the CY 2009 OPPS/ASC final rule with comment period (73 FR 68594 through 68599), we established an outlier reconciliation policy to address charging aberrations related to OPPS outlier payments. We addressed vulnerabilities in the OPPS outlier payment system that led to differences between billed charges and charges included in the overall CCR, which are used to estimate cost and apply to all hospitals and CMHCs paid under the OPPS. We initiated steps to ensure that outlier payments appropriately account for the financial risk when providing an extraordinarily costly and complex service but are only being made for services that legitimately qualify for the additional payment.

For a comprehensive description of outlier reconciliation, we refer readers to the CY 2023 OPPS/ASC and CY 2019 OPPS/ASC final rules with comment period (83 FR 58874 and 58875 and 81 FR 79678 through 79680, respectively). We did not propose any changes to the outlier reconciliation policy for CY 2026

and did not receive any public comments on this provision.

5. Outlier Payment Cap

In the CY 2017 OPPS/ASC final rule with comment period, we implemented a CMHC outlier payment cap to be applied at the provider level, such that in any given year, an individual CMHC will receive no more than a set percentage of its CMHC total per diem payments in outlier payments (81 FR 79692 through 79695). Our analysis of CY 2014 claims data found that CMHC outlier payments began to increase similarly to the way they had prior to CY 2004. This was due to inflated costs from three CMHCs that accounted for 98 percent of all CMHC outlier payments that year and received outlier payments that ranged from 104 percent to 713 percent of their total per diem payments. To balance our concern about disadvantaging CMHCs with our interest in protecting the benefit from excessive outlier payments and to mitigate potential inappropriate outlier billing vulnerabilities, we finalized the CMHC outlier payment cap at 8 percent of the CMHC's total per diem payments (81 FR 79694 and 79695) to limit the impact of inflated CMHC charges on outlier payments. This cap was established after detailed analysis of claims data, which showed that a cap set at 8 percent would effectively address excessive outlier payments while minimally impacting CMHCs with legitimate high-cost cases. The cap applies to each CMHC's total per diem payments, which include both the Medicare payment portion and the beneficiary cost-sharing amount. The 8 percent cap continues to be calculated and applied on a calendar year basis, with outlier payments monitored throughout the year to ensure compliance with the cap.

This outlier payment cap only affects CMHCs; it does not affect other provider types (that is, hospital-based PHPs) and is in addition to and separate from the current outlier policy and reconciliation policy in effect. We did not propose any changes to the outlier payment cap for CY 2026 and did not receive any public comments on this provision.

6. Fixed-Dollar Threshold

In the CY 2018 OPPS/ASC final rule with comment period (82 FR 59267 and 59268), for the hospital outpatient outlier payment policy, we set a fixed-dollar threshold in addition to an APC multiplier threshold. Fixed-dollar thresholds are typically used to drive outlier payments for very costly items or services, such as cardiac pacemaker insertions. Currently, for CY 2025, CMHC PHP APCs (5853 or 5854) and IOP APCs (5851 or 5852) are the only APCs for which CMHCs may receive payment under the OPPS, and these APCs are for providing a defined set of services that are relatively low cost when compared to other OPPS services. Because of the relatively low cost of CMHC services that are used to comprise the structure of CMHC PHP APCs (5853 or 5854) and IOP APCs (5851 or 5852), it is not necessary to also impose a fixed-dollar threshold on CMHCs. Therefore, in the CY 2018 OPPS/ASC final rule with comment period, we did not set a fixed-dollar threshold for CMHC outlier payments (82 FR 59381). This same policy was also reiterated in the CY 2020 OPPS/ASC final rule with comment period (84 FR 61351), the CY 2021 OPPS/ASC final rule with comment period (85 FR 86083), the CY 2022 OPPS/ASC final rule with comment period (86 FR 63508), the CY 2023 OPPS/ASC final rule with comment period (87 FR 72004), the CY 2024 OPPS/ASC final rule with comment period (88 FR 81836), and the CY 2025 OPPS/ASC final rule with comment period (89 FR 94271). We did not propose any changes to the fixed-dollar threshold policy for CY 2026 and did not receive any public comments on this provision.

IX. Services That Will Be Paid Only as Inpatient Services

A. Background

The Inpatient Only (IPO) list was established in rulemaking as part of the initial implementation of the Outpatient Prospective Payment System (OPPS) in 2000, pursuant to the Secretary's authority under section 1833(t)(1)(B)(I) of the Act (65 FR 18455). The IPO list was created to identify services for which Medicare will make payment only when furnished in the inpatient hospital setting because of the invasive nature of the procedures, the underlying physical condition of the Medicare patient, or the need for at least 24 hours of postoperative recovery time or monitoring before the patient can be safely discharged (70 FR 68695). The creation of the IPO list was based on the premise (rooted in the practice of medicine at that time) that Medicare should not pay for procedures furnished as outpatient services which are performed on an inpatient basis virtually all of the time for the Medicare population because performing these procedures on an outpatient basis would not be safe or appropriate, and therefore not reasonable and necessary under Medicare rules (86 FR 63671; 63 FR 47571). Designation of a service as inpatient only does not preclude the service from being furnished in a hospital outpatient setting but means that Medicare will not make payment for the service if it is furnished to a Medicare beneficiary in the hospital outpatient setting (65 FR 18443). Conversely, the absence of a procedure from the list should not be interpreted as identifying that procedure as appropriately performed only in the hospital outpatient setting (70 FR 68696). Rather, from the beginning, we have emphasized our expectation that, in every case, the physician or surgeon and hospital will exercise their professional judgment and assess the risk of the procedure or service to the individual patient, taking into account the site of service and act in that patient's best interest (65 FR 18456). We have also previously stated that for procedures that are not included on the inpatient list, we rely on the practitioner's judgment to determine on a patient-by-patient basis whether or not a particular procedure would be most appropriately performed in the inpatient setting (70 FR 68698).

The IPO list policy has elicited both opposition and support in public comments since its establishment in CY 2000. In 2000, some commenters stated that they believed that CMS (then, the Health Care Financing Administration) was making decisions, such as the site of service for a particular medical procedure, which should be left to the discretion of surgeons and their patients (65 FR 18455). In 2011, certain comments suggested that regulations should not supersede the physician's level of knowledge and assessment of the patient's condition, and that the physician can appropriately determine whether a procedure can be performed in a hospital outpatient setting, and many commenters suggested that the inpatient only list be eliminated in its entirety (76 FR 74354). Again, in 2013, some commenters requested that the IPO list be eliminated in its entirety (78 FR 75055). From the beginning, several interested parties have also stated that the exclusion of services from payment under the OPPS is unnecessary and could have an adverse effect on advances in surgical care (65 FR 18442). Others have noted that the existence of the IPO list suggests that services that are not on the list or have been removed from the list should be/must be provided in the outpatient setting, regardless of the clinical judgment of the physician or the needs of the patient (85 FR 86084). Other commenters have defended the need for the list, stating that the IPO list serves as an important programmatic safeguard and maintains a

common standard in the Medicare program (85 FR 86086).

In the CY 2021 OPPS/ASC final rule with comment period, published in the **Federal Register** on December 29, 2020 (85 FR 86084 through 86088), we finalized a policy to eliminate the IPO list over the course of 3 years (85 FR 86093). We revised our regulation at 42 CFR 419.22(n) to state that, effective January 1, 2021, the Secretary shall eliminate the list of services and procedures designated as requiring inpatient care through a 3-year transition. As part of the first phase of this elimination of the IPO list, we removed 298 codes, including 266 musculoskeletal-related services, from the list beginning in CY 2021.

In the 2022 OPPS/ASC final rule with comment period, published on November 16, 2021, we halted the elimination of the IPO list and, after clinical review of the services removed from the IPO list in CY 2021 as part of the first phase of eliminating the IPO list, we returned most services removed from the IPO list in 2021 back to the IPO list beginning in CY 2022 (86 FR 63671 through 63736). We amended the regulation at § 419.22(n) to remove the reference to the elimination of the list of services and procedures designated as requiring inpatient care through a 3-year transition. We also finalized our proposal to codify the five longstanding criteria for determining whether a service or procedure should be removed from the IPO list in the regulation at § 419.23 (86 FR 63678). For CY 2023 through CY 2025, we maintained the IPO list and continued to evaluate services brought forth by interested parties for removal using the five longstanding criteria (87 FR 72004 through 72012; 88 FR 81858 through 81863; and 89 FR 94271 through 92475).

B. Current Methodology for Identifying Appropriate Changes to the IPO List

Currently, there are approximately 1,731 services on the IPO list. Under our longstanding policy and current regulations, we annually review the IPO list to identify any services that should be removed from, or added to, the list, based on the most recent data and medical evidence available. We have established five criteria to determine whether a procedure should be removed from the IPO list (65 FR 18455), which we codified in the CY 2022 OPPS/ASC final rule with comment period (86 FR 63676). As noted in the CY 2012 OPPS/ASC final rule with comment period (76 FR 74353), we assess whether a procedure or service met these criteria to determine if it should be removed from the IPO list and assign to an APC group for payment under the OPPS when provided in the hospital outpatient setting. We have explained that while we only require a service to meet one criterion to be considered for removal, satisfying only one criterion does not guarantee that the service will be removed; instead, the case for removal is strengthened with the more criteria the service meets. The criteria for assessing procedures for removal from the IPO list are:

- Most outpatient departments are equipped to provide the service or procedure to the Medicare population.
- The simplest service or procedure described by the code may be performed in most outpatient departments.
- The service or procedure is related to codes that CMS has already removed from the Inpatient Only list.
- CMS determines that the service or procedure is being performed in numerous hospitals on an outpatient basis.
- CMS determines that the service or procedure can be appropriately and safely performed in an ambulatory surgical center, and is specified as a covered ambulatory surgical procedure, or CMS has proposed to specify it as a covered ambulatory surgical procedure.

We encouraged interested parties, including professional societies, hospitals, surgeons, hospital associations, and beneficiary advocacy groups, to evaluate the IPO list and determine whether services should be added to or removed from the list. We requested that they submit corresponding evidence in support of their claims that a code or group of codes met the longstanding criteria for removal from the IPO list and is safe to perform on the Medicare population in the hospital outpatient setting—including, but not limited to case reports, operative reports of actual cases, peer-reviewed medical literature, medical professional analysis, clinical criteria sets, and patient selection protocols (67 FR 66740). Our clinicians thoroughly reviewed all information submitted within the context of the established criteria and if, following this review, we determined that there was sufficient evidence to confirm that the medical procedure represented by the code could be safely and appropriately performed on an outpatient basis, we assigned the service to an APC and included it as a payable procedure under the OPPS (67 FR 66740). We determined the APC assignment for services removed from the IPO list by evaluating the clinical similarity and resource costs of the service compared to other services paid under the OPPS and reviewing the Medicare Severity Diagnosis Related Groups (MS–DRG) rate for the service under the IPPS. It should be noted, however, that we would generally expect the cost to provide a service in the outpatient setting to be less than the cost to provide the service in the inpatient setting (67 FR 66740).

As we have stated in prior rulemaking, over time, given advances in technology and surgical technique, we will continue to evaluate services to determine whether they should be removed from the IPO list. We have made it clear that, insofar as advances in medical practice mitigate concerns about these procedures being performed on an outpatient basis, we are prepared to remove procedures from the IPO list and provide for payment for them under the OPPS (65 FR 18443).

C. CY 2026 Changes to IPO List

1. CY 2026 Proposal To Eliminate the IPO List

Since the IPO list was established in 2000, it has been our policy that, regardless of how a procedure is classified for the purposes of payment, we expect in every case the surgeon and the hospital will assess the risk of a procedure or service to the individual patient, taking site of service into account, and will act in that patient's best interests (65 FR 18456). We have reiterated this expectation in rulemaking over the years, including in our discussion of the removal of total knee arthroplasty (TKA) from the IPO list in the CY 2018 OPPS/ASC final rule with comment period, total hip arthroplasty (THA) from the IPO list in the CY 2020 OPPS/ASC final rule with comment period, and lumbar spine fusion, shoulder joint reconstruction, and ankle reconstruction in CY 2021 (82 FR 59383; 84 FR 61354; 85 FR 86093). In those rules, we stated that the decision regarding the most appropriate care setting for a given surgical procedure is a complex medical judgment made by the physician based on the beneficiary's individual clinical needs and preferences and on the general coverage rules requiring that any procedure be reasonable and necessary.

Over the course of the years since the establishment of the IPO list, we have received comments from some interested parties who believe that we should eliminate the IPO list entirely and, instead, defer to the clinical judgment of physicians for decisions regarding site of service. For example, in the CY 2000 final rule with comment period, in response to the establishment of the IPO list, certain commenters stated that they believed CMS was

making decisions, such as the appropriate site of service for a particular medical procedure, that should be left to the discretion of surgeons and their patients (65 FR 18442 and 18455). In its 2001 and 2002 public meetings, the Advisory Panel on APC Groups supported eliminating the IPO list (67 FR 66722). We refer readers to the CY 2021 OPPS/ASC final rule with comment period for additional discussion of the opposition to the IPO list, including its lack of deference to physician judgment, its adverse effect on advances in surgical care, and the expectation it can create that non-IPO services must be furnished in the outpatient setting (85 FR 86084 through 86089).

Other interested parties have supported maintaining the IPO list and consider it an important tool to indicate which services are appropriate to furnish in the outpatient setting and to ensure that Medicare beneficiaries receive quality care. They have stated that many of the procedures that we currently designate as ''inpatient only'' are currently performed appropriately and safely only in the inpatient setting (65 FR 18442). We refer readers to the CY 2022 OPPS/ASC final rule with comment period for a summary of recent commenter concerns related to patient safety and quality of care in the absence of the IPO list (86 FR 63674).

Interested parties have also supported the use of the IPO list because services included on the IPO list are an exception to the 2-midnight rule and, as such, are considered appropriate for payment under Medicare Part A, regardless of the expected length of stay. As a result, many procedures are not subject to medical review by Medicare review contractors for ''patient status'' (that is, site-of-service). We note that, in the CY 2020 OPPS/ASC final rule with comment period, we finalized a policy to exempt procedures that have been removed from the IPO list from certain medical review activities for 2 calendar years following their removal from the IPO list. In the CY 2021 OPPS/ASC final rule with comment period, we finalized a policy to indefinitely exempt such procedures from those medical review activities while the IPO list was eliminated over 3 years.

For CY 2026 and subsequent years, we proposed to eliminate the IPO list through a 3-year transition, completing the elimination by January 1, 2029. While we agreed with commenters in previous rulemakings that the IPO list was necessary, and that it would be inappropriate for us to establish payment rates for those services under the OPPS (78 FR 75055, 86 FR 63673), we have reconsidered the various comments from interested parties requesting that we eliminate the IPO list, and reevaluated the need for CMS to restrict payment for certain procedures in the hospital outpatient setting. As a result of that reconsideration, we no longer believe there is a need for the IPO list to identify services that require inpatient care. We agree with past commenters that the physician should use clinical knowledge and judgment, together with consideration of the beneficiary's specific needs, to determine whether a procedure can be performed appropriately in a hospital outpatient setting or whether inpatient care is required for the beneficiary, subject to the general coverage rules requiring that any procedure be reasonable and necessary. We believe that this change would ensure maximum availability of services to beneficiaries in the outpatient setting.

Although we decided to halt the elimination of the IPO list in the 2022 OPPS/ASC final rule with comment period, for the reasons we discussed in the CY 2026 OPPS/ASC proposed rule and later in this section, we have come to believe with greater certainty that, since the IPO list was established, there have been significant developments in the practice of medicine that have allowed numerous services to now be provided safely and effectively in the outpatient setting. We acknowledged in the CY 2000 OPPS/ASC final rule with comment period that we believed that emerging new technologies and innovative medical practice were blurring the difference between the need for inpatient care and the sufficiency of outpatient care for many services (65 FR 18456). We also stated in the CY 2001 OPPS/ASC interim final rule with comment period that, over time, given advances in technology and surgical technique, many of the procedures that were on the IPO list at the time may eventually be performed safely in a hospital outpatient setting and that we would continue to evaluate services to determine whether they should be removed from the IPO list (65 FR 67826). Specifically, we stated that, insofar as advances in medical practice mitigate concerns about these services being furnished on an outpatient basis, we would be prepared to remove them from the IPO list and provide for payment under the OPPS (65 FR 67826).

Over the course of the last 25 years, these expectations have been borne out. There have been many new technologies and advances in surgical techniques and surgical care protocols, including the use of minimally invasive surgical procedures such as laparoscopy, improved perioperative anesthesia, expedited rehabilitation protocols, as well as significant enhancements to postoperative processes such as improvements in pain management, that have reduced the inpatient length of stay and the need for postoperative care following a surgical service. In consideration of these advancements, we have removed certain services from the IPO list that were previously considered to require inpatient care, including musculoskeletal procedures such as TKA in CY 2018 (82 FR 59385), THA in CY 2020 (84 FR 61355), and lumbar spine fusion, shoulder joint reconstruction, and ankle reconstruction in CY 2021 (85 FR 86093).

Since we previously considered elimination of the IPO list in the CY 2021 OPPS/ASC rule final rule with comment period, there have also been other innovations in the practice of medicine; for example, innovations in infection control spurred by the COVID–19 PHE (87 FR 72194). During that time, CMS issued flexibilities in the furnishing of acute hospital services at different locations, including the patient's home. While this Acute Hospital at Home Initiative was originally spurred by the necessity of expanding hospital capacity, it has demonstrated an increased ability to deliver certain services outside of the traditional inpatient setting. These advances have heightened awareness of practices that can increase patient safety across provider types, ensuring that clinicians emphasize these considerations in the practice of medicine, including site of service decisions. As medical practice continues to develop, we believe that the difference between the need for inpatient care and the appropriateness of outpatient care will continue to be less and less distinct for many services. Therefore, we stated in the CY 2026 OPPS/ASC proposed rule that we believe that the IPO list is no longer necessary to identify services that require inpatient care.

In recent years, there have also been certain procedures which we have decided to remove from the IPO list multiple times. For example, we removed several maxillofacial procedures in CY 2023, after originally removing them from the IPO list in CY 2021 and adding them back in CY 2022 (87 FR 72009). This frequency of change in policy can cause an uncertain regulatory landscape in which hospitals and providers are unclear on the policy and whether or not certain procedures are paid for in the hospital outpatient setting, potentially impacting access to

care for beneficiaries. Eliminating the IPO list and the related annual review process would mitigate this issue, offering more regulatory certainty for Medicare beneficiaries and providers.

Enabling IPO list services to be delivered outside of the inpatient setting, when clinically appropriate, can also advance important goals related to access to care. In the past, we have noted longstanding concerns over the closures of rural hospitals, which has prompted other policy actions to maximize access to care in rural or underserved areas (87 FR 72160). The experience of the COVID–19 PHE has also highlighted the importance of assisting areas and populations that suffer from a lower supply of medical services, which we addressed with temporary flexibilities during the COVID–19 PHE. Allowing for a greater exercise of clinical judgment will increase the ability of hospitals to provide Medicare-reimbursed services on an outpatient basis when clinically appropriate, while preserving inpatient beds for individual patients who truly need to be admitted. This will increase the availability of such services and additionally provide facilities with greater experience and flexibility that can be particularly crucial during future public health emergencies that constrict the supply of medical care.

We acknowledge the seriousness of the concerns regarding patient safety and quality of care that various interested parties have expressed regarding removing procedures from the IPO list or eliminating the IPO list altogether. However, as stated in the CY 2026 OPPS/ASC proposed rule, we believe that the evolving nature of the practice of medicine has mitigated and continues to mitigate patient safety and quality of care risks. That allows more procedures to be performed on an outpatient basis with a shorter recovery time. This trend, combined with physician judgment, State and local licensure requirements, accreditation requirements, hospital conditions of participation (CoPs), medical malpractice laws, and CMS quality and monitoring initiatives and programs, will continue to ensure the safety of beneficiaries in both the inpatient and outpatient settings, even in the absence of the IPO list. As mentioned previously in this section, we have consistently believed that it is important for physicians to exercise their clinical expertise based on the circumstances of individual patients and in light of these protections. We refer readers to the CY 2021 OPPS/ASC final rule with comment period for a full discussion of how these factors provide extensive safeguards for patients receiving services from Medicare enrolled providers, including hospital CoPs in 42 CFR part 482 (such as the requirement at § 482.30 that hospitals conduct a utilization review on medical necessity of admission, length of stay, and services rendered, and the most efficient use of available health facilities and services) (85 FR 48910).

2. CY 2026 Proposal To Use a 3-Year Transition To Eliminate the IPO List

We proposed to eliminate the IPO list over a 3-year transition period, beginning in CY 2026. We also proposed eliminating the criteria for removing procedures from the IPO list currently codified at § 419.23, as a conforming change.

Given the significant number of services on the list and that we would establish new reimbursement rates for those services under the OPPS, we recognize that interested parties may need time to adjust to the removal of procedures from the list. Providers may need time to prepare to furnish newly removed procedures on an outpatient basis, update their billing systems, and gain experience with newly removed procedures eligible to be paid under either the IPPS or OPPS. Therefore, we proposed to transition services off the IPO list over a 3-year period, with the list completely eliminated by CY 2029. In accordance with this proposal, we proposed to amend § 419.22(n) to state that effective beginning on January 1, 2026, the Secretary shall eliminate the list of services and procedures designated as requiring inpatient care through a 3-year transition, with the full list eliminated in its entirety by January 1, 2029.

For CY 2026, we proposed that musculoskeletal services would be the first group of services that would be removed from the IPO list, as we had done in the CY 2021 OPPS/ASC final rule with comment period. We stated in the CY 2026 OPPS/APS proposed rule that we believe it is appropriate to remove this group of services first for several reasons. In recent years, due to new technologies and advances in surgical care protocols, expedited rehabilitation protocols, improved infection control practices, and significant enhancements to postoperative processes, we have removed TKA and THA, both musculoskeletal services, from the IPO list. During the COVID–19 PHE, there was an accelerated decrease in short-length inpatient stays associated with musculoskeletal procedures—a decrease which was about four times faster than before the COVID–19 PHE (14.5 percent from 2020 to 2021). The number of Medicare ASCs specializing in orthopedic or musculoskeletal services also roughly doubled between 2016 and 2021. These trends suggest a shift in musculoskeletal services from inpatient to outpatient settings.[130]

Furthermore, during the notice and comment process of removing TKA and THA from the IPO list, interested parties continually requested that CMS remove other musculoskeletal services from the IPO list as well, citing shortened length of stay times, advancements in technologies and surgical techniques, and improved postoperative processes. Additionally, we note that, more often than not, interested parties' historical requests for removals of medical procedures from the IPO list were for musculoskeletal services. Further, there is already a set of C–APCs for musculoskeletal services for payment in the outpatient setting, which facilitates the removal of these types of services from the IPO list for CY 2026. Specifically, because we have previously removed codes corresponding to musculoskeletal services from the IPO list that are similar clinically and in terms of resource cost and assigned them to these C–APCs, these APCs generally describe appropriate ranges and placements for these musculoskeletal codes proposed for removal in CY 2026, which will allow for appropriate payment. As discussed in section III.E.3. of the CY 2026 OPPS/ASC proposed rule, we also proposed to establish a 7 level Musculoskeletal Procedures APC series, which will allow for the assignment of musculoskeletal procedures removed from the IPO list to an APC with an applicable range of estimated costs. We had previously finalized the removal of 266 musculoskeletal procedures from the IPO list in the 2021 OPPS/ASC final rule with comment period. Although we largely reversed this action in the 2022 OPPS/ASC final rule based on our halting of the elimination of the IPO list and re-evaluation of our removal criteria at the time, we maintained the removal of seven musculoskeletal procedures, and their related anesthesia services, from the IPO list. In the CY 2023 OPPS/ASC final rule with comment period, we removed 11 more musculoskeletal services from the IPO list. As we explained in the CY 2026 OPPS/ASC proposed rule, we now believe the entire IPO list should be eliminated over a 3-year transition period. Our previous consideration of removing

[130] *https://www.medpac.gov/wp-content/uploads/2023/03/Mar23_MedPAC_Report_To_Congress_SEC.pdf.*

musculoskeletal procedures from the IPO list, and the continued removal of such procedures from it, suggests that we should begin the elimination and transition from the IPO list with the removal of these procedures from the list.

For CY 2026, we identified 285 mostly musculoskeletal services that we proposed to remove from the IPO list, including 16 non-musculoskeletal services that were recommended by the 2020 HOP Panel and removed from the IPO list in CY 2021 (85 FR 86089 through 86092). These 16 services, which include cardiovascular, lymphatic, digestive, gynecological, and endovascular procedures, were added back to the IPO list when the elimination of the IPO list was halted in CY 2022. The 285 services that we proposed to remove from the IPO list for CY 2026 and subsequent years, including the CPT/HCPCS codes, long descriptors, and the proposed CY 2026 payment indicators, are included in Table 69 of the CY 2026 OPPS/ASC proposed rule. These services and their proposed status indicators and APC assignments (if applicable) are included in Addendum B of the CY 2026 OPPS/ASC proposed rule. The complete list of codes that describe services that were proposed to be paid by Medicare in CY 2026 as inpatient only services is included as Addendum E to the CY 2026 OPPS/ASC proposed rule, which is available on the CMS website.[131]

We received public comments on these proposals. The following is a summary of the comments we received and our responses.

Comment: Many commenters supported our proposal to eliminate the IPO list and defer to physicians' judgment on site of service determinations. These commenters stated that CMS' proposal would provide patients with greater flexibility to receive affordable care and allows for more patient-centered care. The commenters also believed the proposed change could potentially decrease overall healthcare costs and improve clinical outcomes for patients. Some commenters stated that there is no clinical difference between a surgery performed in an inpatient setting and an outpatient setting, and that eliminating the IPO list would create more flexibility for physicians and beneficiaries. These commenters also stated that there were already safeguards in place to ensure patient safety, such as State and local regulations, hospital conditions of participation (CoPs), and quality and monitoring initiatives. We also received comments in support of the removal of several specific codes from the IPO list for CY 2026, stating that these procedures can be or are already being performed safely in the outpatient setting.

Response: We thank the commenters for their support.

Comment: Numerous commenters, including hospital associations and systems, opposed the elimination of the IPO list due to patient safety concerns, stating that the IPO list serves as an important programmatic safeguard. These commenters stated that high-risk, invasive procedures that require post-operative monitoring that are currently included on the IPO list would not be safe to perform on Medicare beneficiaries in the outpatient setting. Additionally, commenters stated that there are several procedures on the IPO list that could never be performed in the outpatient setting, due to the complexity or need for postoperative inpatient care. Commenters were also concerned that we were removing services from the IPO list without data or literature to support that these could be safely performed in the outpatient setting and that there was not an evidence-based review process to determine which procedures to remove from the IPO list. These commenters requested that CMS maintain its current process and criteria for evaluating and removing procedures from the IPO list through rulemaking.

Response: We thank the commenters for their input. As we previously stated in the CY 2021 OPPS/ASC final rule with comment period (85 FR 86087), we continue to believe that physicians can and should use their clinical knowledge and judgment to appropriately determine whether a procedure can be performed in a hospital outpatient setting or whether inpatient care is required for the beneficiary based on the beneficiary's specific needs and preferences, subject to the general coverage rules requiring that any procedure be reasonable and necessary, and that payment should be made pursuant to the otherwise applicable payment policies. We believe that patient safety and quality of care will be safeguarded by the physician's assessment of the risk of a procedure or service to the individual beneficiary and their selection of the most appropriate setting of care based on this risk, in addition to State and local licensure requirements, accreditation requirements, hospital conditions of participation (CoPs), medical malpractice laws, and CMS quality and monitoring initiatives and programs. In addition, as we have stated in previous rulemaking (82 FR 59384; 84 FR 61354), the removal of a service from the IPO list does not require the service to be performed only on an outpatient basis. Rather, it allows for payment under the OPPS when the service is performed in an outpatient setting. Services that are removed from the IPO list can be and are performed on individuals who are admitted as inpatients (as well as individuals who are registered hospital outpatients), based on the physician's clinical knowledge and judgment. We also continue to believe that there have been significant developments in the practice of medicine that have allowed numerous services that were previously provided on an inpatient basis to now be provided safely and effectively in the outpatient setting. Therefore, at this time, we do not believe it is necessary for CMS to maintain an IPO list, nor do we currently believe that it is necessary to require specific HCPCS codes to remain payable only when furnished in the inpatient setting.

Comment: Some commenters were also concerned about the financial impact and administrative burden that this proposal would have on hospitals. Commenters had concerns that eliminating the IPO list could push healthier and less complex patients into outpatient settings, skewing the inpatient population to become a higher percentage of more complex patients that the existing MS–DRG reimbursement rates would not accurately cover. A few commenters also expressed concerns on the impact of this proposal on payment for Graduate Medical Education (GME) if inpatient stays and procedures decrease. Many commenters were also concerned with the potential burden of increased claim denials for inpatient claims for procedures that are no longer on the IPO list, along with potential breakdowns in the current administrative and pre-operative workflow for current inpatient-only procedures. Many commenters also shared concerns that physicians may be pressured by hospital administrations and commercial payors to perform formerly IPO procedures in lower cost settings, instead of prioritizing patient safety.

Response: As stated previously, we have repeatedly recognized that the decision regarding the most appropriate care setting for a given surgical procedure is a complex medical judgment made by the physician based on the beneficiary's individual clinical needs and on the general coverage rules

[131] In this rulemaking, we proposed to eliminate, the IPO list, beginning in CY 2026, with all services being removed from the list over the course of a three-year transition period. The CY 2026 IPO List can be found here: Hospital Outpatient PPS, *https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/HospitalOutpatientPPS/index.*

requiring that any procedure be reasonable and necessary. We continue to believe that deference should be given to physicians and medical professionals in these determinations. In accordance with section 1801 of the Act, we do not control or supervise the practice of medicine or the manner in which medical services are provided. We also reiterate that we do not require services that are no longer included on the IPO list to be performed solely in the outpatient setting and that, following elimination of the IPO list, services that were previously identified as inpatient only can continue to be performed in the inpatient setting. It is not CMS' policy to require services that are removed from the IPO list to be performed only in the outpatient setting. Instead, we aim to offer providers enhanced flexibility and choice in determining the safest, most efficient setting of care for Medicare beneficiaries, whether that is the inpatient or outpatient setting. It would be a misinterpretation of CMS payment policy for providers to create policies or guidelines that establish the outpatient setting as the baseline or default site of service for a procedure based on its removal from the IPO list or the elimination of the IPO list. As stated in previous rulemaking (84 FR 61354; 82 FR 59384; 81 FR 79697), services that are no longer included on the IPO list are payable in either the inpatient or outpatient setting subject to the general coverage rules requiring that any procedure be reasonable and necessary, and payment should be made pursuant to the otherwise applicable payment policies.

We believe there are sufficient guardrails, including State and local regulations, hospital CoPs, accreditation requirements, and medical malpractice laws, to ensure that physicians are able to prioritize patient safety when determining the site of service. In regard to concerns about increased administrative burden due to inpatient claims denials, as discussed below and in section X.D. of this final rule with comment period, we are continuing to exempt procedures that have been removed from the IPO list from certain medical review activities to assess compliance with the 2-midnight rule until the Secretary determines that the service or procedure is more commonly performed in the Medicare population in the outpatient setting. Regarding changes made by commercial insurance providers and site selection for outpatient services as a result of CMS eliminating the IPO list, while we believe that these comments are outside the scope of the OPPS/ASC proposed rule, we note that commercial providers establish their own rules regarding payment for services.

Comment: Multiple commenters requested, if CMS finalizes the proposal to eliminate the IPO list, that CMS provides guidance on the patient selection criteria, including clinical and social factors, for determining the appropriate site of service for procedures removed from the IPO list. Commenters also recommended that CMS monitor the safety impacts and surgical outcomes of moving procedures off the IPO list, including surgical complications and hospital readmissions.

Response: We thank the commenters for their feedback. As we have previously stated (86 FR 63675), we note the balance between several factors on this important issue, namely, the prohibition on CMS interfering with the practice of medicine in Section 1801 of the Act, the need to provide clear information about CMS billing and payment rules that ensure hospitals, physicians, and other interested parties can understand and operate within them, and our belief that the specific decision about the most appropriate care setting for a given surgical procedure is a complex medical judgment made by the physician based on the beneficiary's individual clinical needs and preferences and on the general coverage rules requiring that any procedure be reasonable and necessary.

We also thank the commenters for their recommendations on monitoring safety data related to the elimination of the IPO list. We would welcome and use any patient outcomes data, analyses, or recommendations that interested parties would like to share with us to help inform IPO decision-making going forward. We will take these recommendations into consideration for future rulemaking and are open to receiving any relevant data in the interim.

Comment: We received comments requesting that we assign services newly removed from the IPO list to New Technology APCs until sufficient data is collected to assign these services to clinical APCs. One commenter suggested that we make an appropriate New Technology APC assignment for their technology based upon inpatient charges converted to cost and then maintain the APC assignment for at least two years. We also received comments with alternative methodologies for making APC assignment determinations, including crosswalking procedures to ICD–10–PCS codes and using IPPS claims with shorts stays to calculate payment rates.

Response: We thank the commenters for their input. As we previously stated in the CY 2021 OPPS/ASC final rule with comment period (85 FR 86093), consistent with our regulation at 42 CFR 419.31(a)(1), we classify outpatient services and procedures that are comparable clinically and in terms of resource use into APC groups. As we stated in the CY 2012 OPPS/ASC final rule with comment period (76 FR 74224), the OPPS is a prospective payment system that provides payment for groups of services that share clinical and resource use characteristics. It should be noted that for all codes newly paid under the OPPS, including codes removed from the IPO list, our policy has been to assign the service or procedure to an APC based on feedback from a variety of sources, including but not limited to, review of the clinical similarity of the service to existing procedures; advice from CMS medical advisors; information from interested specialty societies; and review of all other information available to us, including information provided to us by the public, whether through meetings with interested parties or additional information that is mailed or otherwise communicated to us (84 FR 61229). Therefore, we believe assigning procedures removed from the IPO list to existing clinical APCs that are similar in clinical characteristics and resource costs is appropriate. We note that procedures assigned to New Technology APCs cannot be placed in clinical APCs due to insufficient clinical and cost data, unlike the procedures that are transitioning from the IPO list.

While we disagree with assigning these procedures to New Technology APCs at this time, we will take commenters' suggestions regarding alternative methodologies for assigning former IPO procedures to clinical APCs under consideration for future rulemaking.

Comment: Commenters disagree with certain proposed APC assignments for procedures proposed to be removed from the IPO list and stated that CMS did not provide sufficient detail as to how the proposed APC placements were determined. Some commenters also believed that the proposed APC payments did not adequately reflect the resource costs associated with providing the procedure in the outpatient setting. We received the following APC reassignment requests:

- Reassign CPT codes 0202T, 22610, 22800, 22802, 22808, and 27703 to APC 5117 (Level 7 Musculoskeletal Procedures).

- Reassign CPT codes 23474, 27132, 27134, 27137, 27138, 27450, 27486, 27487 to APC 5116 (Level 6 Musculoskeletal Procedures).
- Reassign CPT codes 23334, 23335, 27236, 27244, 27245, 27248, 27254, 27269, 27450, 27506, 27507, 27511, 27513, 27514, 27535, 27536, and 27540 to APC 5115 (Level 5 Musculoskeletal Procedures).
- Reassign CPT codes G0413, G0414, and G0415 to APC 5114 (Level 4 Musculoskeletal Procedures) or higher.
- Reassign CPT code 61624 to APC 1577 (New Technology—Level 40 ($20,001–$25,000)).
- Reassign CPT code 37182 to APC 5194 (Level 4 Endovascular Procedures) or 1576 (New Technology—Level 39 ($15,001–$20,000)).

Response: As we have previously stated, we determine the APC assignment for services removed from the IPO list by evaluating the clinical similarity and resource costs of the service compared to other services paid under the OPPS and by reviewing the MS–DRG rate for the service under the IPPS, though we note we would generally expect the cost to provide a service in the outpatient setting to be less than the cost to provide the service in the inpatient setting. After further clinical review and review of the limited available claims data for these procedures, we believe that we have appropriately assigned the codes in the APC reassignment requests listed above, with the exception of the following updates:

- We are reassigning CPT codes 23334 and 23335 from APC 5073 (Level 3 Excision/Biopsy/Incision and Drainage) to APC 5114 (Level 4 Musculoskeletal Procedures).
- We are reassigning CPT code 27254 from APC 5113 (Level 3 Musculoskeletal Procedures) to APC 5114 (Level 4 Musculoskeletal Procedures).
- We are reassigning CPT code 27487 from APC 5115 (Level 5 Musculoskeletal Procedures) to APC 5116 (Level 6 Musculoskeletal Procedures).
- We are reassigning CPT codes 27511, 27513, and 27514 from APC 5114 (Level 4 Musculoskeletal Procedures) to APC 5115 (Level 5 Musculoskeletal Procedures).
- We are reassigning CPT code 37182 from APC 5193 (Level 3 Endovascular Procedures) to APC 5194 (Level 4 Endovascular Procedures).

Final APC assignments, status indicator assignments, and long descriptors for all procedures removed from the IPO list for CY 2026 can be found in Table 119.

Comment: Numerous commenters raised concerns about the impact of the elimination of the IPO list on the 3-day stay requirement for skilled nursing facility (SNF) care. By statute, beneficiaries must have a prior inpatient hospital stay of no fewer than three consecutive days to be eligible for Medicare coverage of inpatient SNF care. Commenters expressed concerns that the elimination of the IPO list may have a significant impact on Medicare beneficiaries' ability to satisfy the 3-day inpatient stay requirement to qualify for SNF care.

Response: While we believe that these comments are outside the scope of the OPPS/ASC proposed rule, we reiterate that removal of procedures from the IPO list does not require the procedures to be performed only on an outpatient basis. Removal of procedures from the IPO list allows for payment of the procedure in either the inpatient setting or the outpatient setting. A prior 3-day inpatient hospital stay remains a statutory requirement for SNF coverage. As stated in the CY 2018 final rule with comment period (82 FR 59384), in our discussion of the removal of TKA from the IPO list, we stated that we would expect that those Medicare beneficiaries identified as appropriate candidates to receive a surgical procedure in the outpatient setting would not be expected to require SNF care following surgery. Instead, we expect that these beneficiaries would be appropriate for discharge to home (with outpatient therapy) or home health care. Therefore, we do not anticipate that Medicare beneficiaries receiving the procedures we are proposing to remove from the IPO list for CY 2026 in the outpatient setting would require SNF care following the procedure.

Comment: We received comments regarding the potential impact of eliminating the IPO list on our transitional device pass-through policy. One commenter requested clarification on if devices associated with procedures removed from the IPO list would be eligible for device pass-through status. Other commenters requested that CMS reinstate certain expired device category codes, arguing that associated procedures being on the IPO list created a ''verifiable delay in U.S. market availability'' for these devices as referenced in § 419.66(b)(1) for the outpatient hospital setting.

Response: We thank the commenters for their feedback. Devices that are reported only with codes that are removed from the IPO list will not be precluded from applying for or receiving transitional device pass-through payment status. However, we note that all devices must meet the eligibility criteria described in § 419.66 to be eligible for transitional device pass-through payment status, including the requirement that the pass-through payment application must be submitted within 3 years from the date of the initial FDA marketing authorization. We do not believe that an IPO designation for procedures associated with devices creates a ''verifiable delay in U.S. market availability'' for these devices as referenced in § 419.66(b)(1), because these devices have been available on the market, even if the associated procedures have not been performed, or the associated procedures are performed in low volumes in the outpatient setting. We do not believe the elimination of the IPO list warrants changes to our device pass-through policy. We also do not agree with commenters' suggestions to reinstate device pass-through payment status for certain device codes due to procedures being removed from the IPO list because. consistent with section 1833(t)(6)(B)(iii) of the Act and 42 CFR 419.66(g), the period for which a device category for transitional pass-through payments under the OPPS can be in effect is at least 2 years, but not more than 3 years, beginning on the first date on which pass-through payment is made. Once 3 years has passed since a device category first received transitional pass-through payments, the device category is no longer eligible for pass-through payments, and we utilize the established policy (67 FR 66763) to package the costs of the devices that are no longer eligible for pass-through payments into the costs of the procedures with which the devices are reported in the claims data used to set the payment rates. We note that device pass-through payment status is intended to be temporary, and we consider the cost data to be included in the payment rates regardless of whether the technology's use in the Medicare population has been frequent or infrequent during the time period under which a device was receiving transitional pass-through payments. We cannot reinstate the pass-through payment status of expired device category codes where reinstatement would make the pass-through payment status effective longer than the maximum 3-year period permitted under section 1833(t)(6)(B)(iii) of the Act and § 419.66(g).

3. Effect on Beneficiary Cost-Sharing

As noted in the CY 2021 OPPS/ASC final rule with comment period, some interested parties have shared concerns with us that removing procedures from the IPO list and allowing them to be

paid under the OPPS when performed in the outpatient setting may result in an increased financial burden for beneficiaries for certain complex services (85 FR 86086). Under current law, the OPPS cost-sharing for a service is capped at the applicable Part A hospital inpatient deductible amount for that year for each service. This cap applies to individual services, and some commenters have expressed concern in the past that if a Medicare beneficiary receives multiple separately payable OPPS services, it is possible that the aggregate cost-sharing for a beneficiary may be higher for services provided in the outpatient setting than it would be had the services been furnished during an inpatient stay. However, as we stated in the CY 2026 OPPS/ASC proposed rule, we emphasize that services included on the IPO list tend to be surgical procedures that would typically be the focus of the hospital outpatient stay and would likely be assigned to a comprehensive APC (C–APC) when they are removed from the IPO list. As such, these services would likely be considered a single episode of care with one payment rate and one copayment amount, instead of multiple copayments for each individual service. In most instances, we expect that beneficiaries will not be responsible for multiple copayments for individual ancillary services removed from the IPO list since, because of their assignment to C–APCs, the inpatient deductible cap will apply to the entire hospital claim which is billed and paid as a comprehensive service or procedure. In the event there are separately payable OPPS services included on a claim with a service assigned to a C–APC, the policy that the OPPS cost-sharing for an individual service is capped at the applicable Part A hospital inpatient deductible amount for that year for each service remains applicable, which is that the OPPS cost-sharing for an individual service is capped at the applicable Part A hospital inpatient deductible amount for that year for each service. For further information regarding beneficiary copayments, please refer to section II.I. of this final rule with comment period.

Comment: We received one comment that expressed concern about the potential for increased beneficiary cost-sharing when complex procedures are performed in outpatient settings. The commenter stated that beneficiaries may still face unexpected financial burdens, particularly if multiple services are required or complications arise.

Response: As stated previously, services included on the IPO list tend to be surgical procedures that, if performed on an outpatient basis, would typically be the focus of the hospital outpatient stay and would likely be assigned to a comprehensive APC (C–APC) when they are removed from the IPO list. As such, these services would likely be considered a single episode of care with one payment rate and one copayment amount. In most instances, we expect that beneficiaries will not be responsible for multiple copayments for individual ancillary services associated with services removed from the IPO list, because the primary service will be assigned to a C–APC and the inpatient deductible cap will apply to the entire hospital claim, which is paid as a comprehensive service. The majority of procedures being removed from the IPO list for CY 2026 are assigned to C–APCs or packaged into payment for other services, which will result in beneficiaries paying one copayment amount. Therefore, we do not believe that beneficiaries will be significantly impacted through increased cost sharing for services that were removed from the IPO list and are furnished in the hospital outpatient department setting.

Also, as stated previously, in the event there are separately payable OPPS services included on a claim with a service assigned to a C–APC, OPPS cost-sharing for an individual service is capped at the applicable Part A hospital inpatient deductible amount for that year for each service.

4. Exemption From Certain Medical Review Activities for Services Removed From the IPO List

To further address concerns from interested parties, we proposed to continue to exempt procedures that have been removed from the IPO list from certain medical review activities to assess compliance with the 2-midnight rule until the Secretary determines that the service or procedure is more commonly performed in the Medicare population in the outpatient setting. Specifically, we proposed to continue the indefinite exemption from site-of-service claim denials, referrals to Recovery Audit Contractors (RACs), and RAC reviews for ''patient status'' for procedures that are removed from the IPO list under the OPPS beginning on January 1, 2021, as part of the transition away from the IPO list (85 FR 86120). Pursuant to this exemption, initial medical review contractors may continue to review claims for procedures previously on the IPO list to provide education for practitioners and providers regarding compliance with the 2-midnight rule, but will not deny claims identified as noncompliant with respect to the site-of-service under Medicare Part A. We proposed that this exemption will continue for all services or procedures removed from the IPO list until the Secretary determines that the exemption is no longer appropriate for each specific service or procedure because it is more commonly performed in the outpatient setting. We also sought comment on whether other exemption periods may be more warranted. For more information on the 2-midnight rule and comment responses, please refer to section X.D. of this final rule with comment period.

As stated in the CY 2026 OPPS/ASC proposed rule, although we believe it is important to pause certain medical review activities related to patient status to allow providers time to adjust to the proposed changes to the IPO list, we note that initial medical review contractors routinely address, and will continue to address, any beneficiary quality of care complaints that include concerns about treatment as a hospital inpatient or outpatient, not receiving expected services, early discharge, and discharge planning. CMS' case management system currently allows initial medical review contractors and CMS to monitor the frequency and status of beneficiary quality of care complaints and other beneficiary appeals by topic, provider type, and geographic area. These numbers are currently compiled by the BFCC–QIO national coordinating and oversight review contractor and reported to the QIOs and CMS leadership on a weekly basis for monitoring purposes. As previously noted, although we proposed to continue to indefinitely exempt procedures removed from the IPO list beginning on January 1, 2021, from site-of-service claim denials, referrals to RACs, and RAC reviews of ''patient status,'' medical review contractors would continue to conduct initial medical reviews concerning the medical necessity of both the services and the site of service, and will continue to be permitted and expected to deny claims if the service itself is determined not to be reasonable and medically necessary, as noted in the CY 2021 OPPS/ASC final rule with comment period (85 FR 86118). Therefore, given CMS' increasing ability to measure the safety of procedures performed in the outpatient setting and to monitor the quality of care, in addition to the other safeguards detailed previously in this section, we stated in the CY 2026 OPPS/ASC proposed rule that we now believe that quality of care is unlikely to be negatively affected by the elimination of the IPO list. However, we requested that commenters submit evidence on what effect, if any, they believe eliminating

the IPO list may have on the quality of care.

We received several comments on our proposal to continue to exempt procedures that have been removed from the IPO list from certain medical review activities to assess compliance with the 2-midnight rule until the Secretary determines that the service or procedure is more commonly performed in the Medicare population in the outpatient setting. Please refer to section X.D. of this final rule with comment period for a summary of these comments and our responses.

5. Comment Solicitation on Order of Removal of Additional Clinical Families From the IPO List During the Transition to Complete Elimination of the IPO List

As stated previously in this section, we proposed to eliminate the current IPO list of 1,731 services, starting with the 285 mostly musculoskeletal-related services as provided in Table 69 of the CY 2026 OPPS/ASC proposed rule. We requested comments from the public on whether 3 years is an appropriate time frame for the transition, whether there are other services that would be ideal candidates for removal from the IPO list in the near term, given known technological and other advances in care, and the order of removal of additional clinical families of services, and/or specific services, for each of the CY 2027 and CY 2028 rulemakings, until the IPO list is completely eliminated. Additionally, we sought comment on whether we should restructure or create any new APCs or C–APCs to allow for efficient OPPS payment for services that are removed from the IPO list. As discussed in section III.E.3. of the CY 2026 OPPS/ASC proposed rule, we proposed to establish a 7 level Musculoskeletal Procedures APC series for CY 2026.

Comment: A few commenters supported the 3-year transition period, stating that it would give hospitals and physicians sufficient time to adjust.

Response: We thank the commenters for their support.

Comment: A few commenters disagreed with our 3-year transition period. Some commenters recommended that we proceed with the elimination of the IPO list at a slower pace, with a few commenters recommending at least 4 years. One commenter recommended we proceed with eliminating the IPO list in total, stating that a transition over multiple years could cause confusion regarding which procedures have or have not been removed.

Response: We thank the commenters for their feedback. We continue to believe, as discussed previously, that gradually removing services from the IPO list over the 3-year phase-out period will allow for adequate time for providers to prepare to furnish newly removed procedures on an outpatient basis, update their billing systems, and gain experience with newly removed procedures eligible to be paid under either the IPPS or OPPS.

Comment: One commenter recommended that CMS remove CPT codes 58548 (Laparoscopy, surgical, with radical hysterectomy, with bilateral total pelvic lymphadenectomy and para-aortic lymph node sampling (biopsy), with removal of tube(s) and ovary(s), if performed) and 58575 (Laparoscopy, surgical, total hysterectomy for resection of malignancy (tumor debulking), with omentectomy including salpingo-oophorectomy, unilateral or bilateral, when performed) from the IPO list for CY 2026, stating that they are safe to perform in outpatient settings.

Response: We thank the commenter for their suggestion. We will take this into consideration in future rulemaking.

Comment: Some commenters suggested that we review procedures on the IPO list for procedures that have claims data that show a high volume of 1–2 day stays and remove those procedures first. One commenter requested that we wait to remove certain invasive procedures involving a craniectomy, craniotomy, and/or burr holes until the last phase. Another commenter recommended that we remove cardiovascular procedures during the last phase.

Response: We thank the commenters for their suggestions. We will take these into consideration in future rulemaking.

Comment: Several commenters expressed support for our proposal to create a Level 7 Musculoskeletal APC. A few of those commenters requested that we continue to review those APCs for cost and clinical homogeneity, and the need for additional APCs.

Response: We appreciate the commenters' support. After consideration of the public comments, we are finalizing our proposal to create a Level 7 Musculoskeletal APC. We note that we will continue to monitor the APC series as updated claims data continues to be available. The complete list of codes assigned to APC 5117 (Level 7 Musculoskeletal Procedures) can be found in Addendum B of this final rule with comment period, which is available on the CMS website.

6. Comment Solicitation on Changes to IPO List Removal Criteria

In addition to our proposal to eliminate the IPO list over a 3-year period, we proposed to eliminate the codified criteria for removing procedures from the IPO list at § 419.23. As mentioned previously in this section, we finalized the adoption of these longstanding criteria for removal procedures from the list in the CY 2022 OPPS/ASC final rule with comment period when we decided to halt the elimination of the IPO list (86 FR 63678). However, as we noted in the CY 2026 OPPS/ASC proposed rule, if we finalize our proposal to eliminate the IPO list in its entirety, there would no longer be any need to maintain a list of criteria for removing individual procedures from the list in any given year. However, we acknowledged that some commenters may disagree with our proposed approach to the IPO list. Therefore, we wished to consider other methods to provide greater deference to the medical judgment of clinicians besides eliminating the IPO list completely. We solicited comment on other approaches to provide greater flexibility in making site-of-service decisions, such as updating the list of criteria for removing procedures from the IPO list.

Comment: We received comments that requested, as an alternative to removing the five criteria at § 419.23(b), that CMS establish criteria that factor in clinical and social factors, such as comorbidities, age, and home support. Some commenters suggested updating the criteria to allow for a smaller version of the IPO list or to maintain a shortened list with just procedures that would never be performed in the outpatient setting, such as organ transplants. Some commenters suggested that instead of eliminating the IPO list, CMS instead provide a process to allow physicians to override the IPO designation in certain situations.

Response: We will take this into consideration in future rulemaking.

7. Summary of IPO List Changes

In summary, and after consideration of the comments received, given recent developments in surgical technique and technological advances in the practice of medicine, innovations in infection control and site of service shifts to the outpatient setting spurred by the COVID–19 PHE, as well as the various safeguards discussed previously in this section, we finalize eliminating the IPO list over the course of the next 3 years, starting with the removal of 285 mostly musculoskeletal-related services, as

provided in Table 119, for CY 2026. We finalize our proposal eliminating the criteria for removing procedures from the IPO list currently codified at § 419.23, as a conforming change. We are also finalizing amending § 419.22(n) to state that, effective on January 1, 2026, the Secretary shall eliminate the list of services and procedures designated as requiring inpatient care through a 3-year transition period, with the list eliminated in its entirety by January 1, 2028. We believe that there are a number of safety mechanisms that will continue to ensure the safety of our beneficiaries and the quality of care, including physician judgment, State and local regulations, accreditation requirements, medical malpractice laws, hospital conditions of participation, and other CMS initiatives.

The services removed from the IPO list for CY 2026 and their final status indicators and APC assignments (if applicable) are included in Addendum B of this final rule with comment period, which is available on the CMS website. The complete list of codes that describe services that are finalized to be paid by Medicare in CY 2026 as inpatient only services is included as Addendum E to this CY 2026 OPPS/ASC final rule with comment period, which is available on the CMS website.

BILLING CODE 4120–01–P

TABLE 119: FINAL PROCEDURES FOR REMOVAL FROM THE IPO LIST FOR CY 2026

HCPCS Code	Long Descriptor	Final CY 2026 SI	Final CY 2026 APC
00192	Anesthesia for procedures on facial bones or skull; radical surgery (including prognathism)	N	N/A
00474	Anesthesia for partial rib resection; radical procedures (eg, pectus excavatum)	N	N/A
00604	Anesthesia for procedures on cervical spine and cord; procedures with patient in the sitting position	N	N/A
00904	Anesthesia for; radical perineal procedure	N	N/A
0095T	Removal of total disc arthroplasty (artificial disc), anterior approach, each additional interspace, cervical (list separately in addition to code for primary procedure)	N	N/A
0098T	Revision including replacement of total disc arthroplasty (artificial disc), anterior approach, each additional interspace, cervical (list separately in addition to code for primary procedure)	N	N/A
01140	Anesthesia for interpelviabdominal (hindquarter) amputation	N	N/A
01150	Anesthesia for radical procedures for tumor of pelvis, except hindquarter amputation	N	N/A
01212	Anesthesia for open procedures involving hip joint; hip disarticulation	N	N/A
01232	Anesthesia for open procedures involving upper two-thirds of femur; amputation	N	N/A
01234	Anesthesia for open procedures involving upper two-thirds of femur; radical resection	N	N/A
01274	Anesthesia for procedures involving arteries of upper leg, including bypass graft; femoral artery embolectomy	N	N/A
01404	Anesthesia for open or surgical arthroscopic procedures on knee joint; disarticulation at knee	N	N/A
01634	Anesthesia for open or surgical arthroscopic procedures on humeral head and neck, sternoclavicular joint, acromioclavicular joint, and shoulder joint; shoulder disarticulation	N	N/A
01636	Anesthesia for open or surgical arthroscopic procedures on humeral head and neck, sternoclavicular joint, acromioclavicular joint, and shoulder joint; interthoracoscapular (forequarter) amputation	N	N/A
0164T	Removal of total disc arthroplasty, (artificial disc), anterior approach, each additional interspace, lumbar (list separately in addition to code for primary procedure)	N	N/A
0165T	Revision including replacement of total disc arthroplasty (artificial disc), anterior approach, each additional interspace, lumbar (list separately in addition to code for primary procedure)	N	N/A
01756	Anesthesia for open or surgical arthroscopic procedures of the elbow; radical procedures	N	N/A
0202T	Posterior vertebral joint(s) arthroplasty (eg, facet joint[s] replacement), including facetectomy, laminectomy, foraminotomy, and vertebral column fixation, injection of bone cement, when performed, including fluoroscopy, single level, lumbar spine	J1	5115

HCPCS Code	Long Descriptor	Final CY 2026 SI	Final CY 2026 APC
0219T	Placement of a posterior intrafacet implant(s), unilateral or bilateral, including imaging and placement of bone graft(s) or synthetic device(s), single level; cervical	J1	5115
0220T	Placement of a posterior intrafacet implant(s), unilateral or bilateral, including imaging and placement of bone graft(s) or synthetic device(s), single level; thoracic	J1	5115
0656T	Anterior lumbar or thoracolumbar vertebral body tethering; up to 7 vertebral segments	J1	5116
0657T	Anterior lumbar or thoracolumbar vertebral body tethering; 8 or more vertebral segments	J1	5116
0790T	Revision (eg, augmentation, division of tether), replacement, or removal of thoracolumbar or lumbar vertebral body tethering, including thoracoscopy, when performed	J1	5116
20661	Application of halo, including removal; cranial	Q1	5112
20664	Application of halo, including removal, cranial, 6 or more pins placed, for thin skull osteology (eg, pediatric patients, hydrocephalus, osteogenesis imperfecta)	Q1	5112
20802	Removal of total disc arthroplasty (artificial disc), anterior approach, each additional interspace, cervical (list separately in addition to code for primary procedure)	J1	5116
20805	Revision including replacement of total disc arthroplasty (artificial disc), anterior approach, each additional interspace, cervical (list separately in addition to code for primary procedure)	J1	5116
20808	Replantation, hand (includes hand through metacarpophalangeal joints), complete amputation	J1	5116
20816	Replantation, digit, excluding thumb (includes metacarpophalangeal joint to insertion of flexor sublimis tendon), complete amputation	J1	5112
20824	Replantation, thumb (includes carpometacarpal joint to mp joint), complete amputation	J1	5112
20827	Replantation, thumb (includes distal tip to mp joint), complete amputation	J1	5112
20838	Replantation, foot, complete amputation	J1	5116
20955	Bone graft with microvascular anastomosis; fibula	J1	5114
20956	Bone graft with microvascular anastomosis; iliac crest	J1	5114
20957	Bone graft with microvascular anastomosis; metatarsal	J1	5114
20962	Bone graft with microvascular anastomosis; other than fibula, iliac crest, or metatarsal	J1	5114
20969	Free osteocutaneous flap with microvascular anastomosis; other than iliac crest, metatarsal, or great toe	J1	5114
20970	Free osteocutaneous flap with microvascular anastomosis; iliac crest	J1	5114
21045	Excision of malignant tumor of mandible; radical resection	J1	5165
21145	Reconstruction midface, lefort i; single piece, segment movement in any direction, requiring bone grafts (includes obtaining autografts)	J1	5165
21146	Reconstruction midface, lefort i; 2 pieces, segment movement in any direction, requiring bone grafts (includes obtaining autografts) (eg, ungrafted unilateral alveolar cleft)	J1	5165

HCPCS Code	Long Descriptor	Final CY 2026 SI	Final CY 2026 APC
21147	Reconstruction midface, lefort i; 3 or more pieces, segment movement in any direction, requiring bone grafts (includes obtaining autografts) (eg, ungrafted bilateral alveolar cleft or multiple osteotomies)	J1	5165
21151	Reconstruction midface, lefort ii; any direction, requiring bone grafts (includes obtaining autografts)	J1	5165
21154	Reconstruction midface, lefort iii (extracranial), any type, requiring bone grafts (includes obtaining autografts); without lefort i	J1	5165
21155	Reconstruction midface, lefort iii (extracranial), any type, requiring bone grafts (includes obtaining autografts); with lefort i	J1	5165
21159	Reconstruction midface, lefort iii (extra and intracranial) with forehead advancement (eg, mono bloc), requiring bone grafts (includes obtaining autografts); without lefort i	J1	5165
21160	Reconstruction midface, lefort iii (extra and intracranial) with forehead advancement (eg, mono bloc), requiring bone grafts (includes obtaining autografts); with lefort i	J1	5165
21179	Reconstruction, entire or majority of forehead and/or supraorbital rims; with grafts (allograft or prosthetic material)	J1	5165
21180	Reconstruction, entire or majority of forehead and/or supraorbital rims; with autograft (includes obtaining grafts)	J1	5165
21182	Reconstruction of orbital walls, rims, forehead, nasoethmoid complex following intra- and extracranial excision of benign tumor of cranial bone (eg, fibrous dysplasia), with multiple autografts (includes obtaining grafts); total area of bone grafting less than 40 sq cm	J1	5165
21183	Reconstruction of orbital walls, rims, forehead, nasoethmoid complex following intra- and extracranial excision of benign tumor of cranial bone (eg, fibrous dysplasia), with multiple autografts (includes obtaining grafts); total area of bone grafting greater than 40 sq cm but less than 80 sq cm	J1	5165
21184	Reconstruction of orbital walls, rims, forehead, nasoethmoid complex following intra- and extracranial excision of benign tumor of cranial bone (eg, fibrous dysplasia), with multiple autografts (includes obtaining grafts); total area of bone grafting greater than 80 sq cm	J1	5165
21188	Reconstruction midface, osteotomies (other than lefort type) and bone grafts (includes obtaining autografts)	J1	5165
21247	Reconstruction of mandibular condyle with bone and cartilage autografts (includes obtaining grafts) (eg, for hemifacial microsomia)	J1	5165
21268	Orbital repositioning, periorbital osteotomies, unilateral, with bone grafts; combined intra- and extracranial approach	J1	5165
21343	Open treatment of depressed frontal sinus fracture	J1	5165
21344	Open treatment of complicated (eg, comminuted or involving posterior wall) frontal sinus fracture, via coronal or multiple approaches	J1	5165
21348	Open treatment of nasomaxillary complex fracture (lefort ii type); with bone grafting (includes obtaining graft)	J1	5165
21423	Open treatment of palatal or maxillary fracture (lefort i type); complicated (comminuted or involving cranial nerve foramina), multiple approaches	J1	5165

HCPCS Code	Long Descriptor	Final CY 2026 SI	Final CY 2026 APC
21431	Closed treatment of craniofacial separation (lefort iii type) using interdental wire fixation of denture or splint	J1	5165
21432	Open treatment of craniofacial separation (lefort iii type); with wiring and/or internal fixation	J1	5165
21433	Open treatment of craniofacial separation (lefort iii type); complicated (eg, comminuted or involving cranial nerve foramina), multiple surgical approaches	J1	5165
21435	Open treatment of craniofacial separation (lefort iii type); complicated, utilizing internal and/or external fixation techniques (eg, head cap, halo device, and/or intermaxillary fixation)	J1	5165
21436	Open treatment of craniofacial separation (lefort iii type); complicated, multiple surgical approaches, internal fixation, with bone grafting (includes obtaining graft)	J1	5165
21510	Incision, deep, with opening of bone cortex (eg, for osteomyelitis or bone abscess), thorax	J1	5113
21602	Excision of chest wall tumor involving rib(s), with plastic reconstruction; without mediastinal lymphadenectomy	J1	5114
21603	Excision of chest wall tumor involving rib(s), with plastic reconstruction; with mediastinal lymphadenectomy	J1	5114
21615	Excision first and/or cervical rib;	J1	5114
21616	Excision first and/or cervical rib; with sympathectomy	J1	5114
21620	Ostectomy of sternum, partial	J1	5113
21627	Sternal debridement	J1	5113
21630	Radical resection of sternum	J1	5114
21705	Division of scalenus anticus; with resection of cervical rib	J1	5114
21740	Reconstructive repair of pectus excavatum or carinatum; open	J1	5114
21750	Closure of median sternotomy separation with or without debridement (separate procedure)	J1	5114
21825	Open treatment of sternum fracture with or without skeletal fixation	J1	5114
22010	Incision and drainage, open, of deep abscess (subfascial), posterior spine; cervical, thoracic, or cervicothoracic	J1	5114
22015	Incision and drainage, open, of deep abscess (subfascial), posterior spine; lumbar, sacral, or lumbosacral	J1	5114
22110	Partial excision of vertebral body, for intrinsic bony lesion, without decompression of spinal cord or nerve root(s), single vertebral segment; cervical	J1	5114
22112	Partial excision of vertebral body, for intrinsic bony lesion, without decompression of spinal cord or nerve root(s), single vertebral segment; thoracic	J1	5114
22114	Partial excision of vertebral body, for intrinsic bony lesion, without decompression of spinal cord or nerve root(s), single vertebral segment; lumbar	J1	5114
22116	Partial excision of vertebral body, for intrinsic bony lesion, without decompression of spinal cord or nerve root(s), single vertebral segment; each additional vertebral segment (list separately in addition to code for primary procedure)	N	N/A

HCPCS Code	Long Descriptor	Final CY 2026 SI	Final CY 2026 APC
22206	Osteotomy of spine, posterior or posterolateral approach, 3 columns, 1 vertebral segment (eg, pedicle/vertebral body subtraction); thoracic	J1	5114
22207	Osteotomy of spine, posterior or posterolateral approach, 3 columns, 1 vertebral segment (eg, pedicle/vertebral body subtraction); lumbar	J1	5114
22208	Osteotomy of spine, posterior or posterolateral approach, 3 columns, 1 vertebral segment (eg, pedicle/vertebral body subtraction); each additional vertebral segment (list separately in addition to code for primary procedure)	N	N/A

27030	Arthrotomy, hip, with drainage (eg, infection)	J1	5114
27036	Capsulectomy or capsulotomy, hip, with or without excision of heterotopic bone, with release of hip flexor muscles (ie, gluteus medius, gluteus minimus, tensor fascia latae, rectus femoris, sartorius, iliopsoas)	J1	5114
27054	Arthrotomy with synovectomy, hip joint	J1	5113
27070	Partial excision, wing of ilium, symphysis pubis, or greater trochanter of femur, (craterization, saucerization) (eg, osteomyelitis or bone abscess); superficial	J1	5113
27071	Partial excision, wing of ilium, symphysis pubis, or greater trochanter of femur, (craterization, saucerization) (eg, osteomyelitis or bone abscess); deep (subfascial or intramuscular)	J1	5113
27075	Radical resection of tumor; wing of ilium, 1 pubic or ischial ramus or symphysis pubis	J1	5114
27076	Radical resection of tumor; ilium, including acetabulum, both pubic rami, or ischium and acetabulum	J1	5114
27077	Radical resection of tumor; innominate bone, total	J1	5114
27078	Radical resection of tumor; ischial tuberosity and greater trochanter of femur	J1	5114
27090	Removal of hip prosthesis; (separate procedure)	J1	5114
27091	Removal of hip prosthesis; complicated, including total hip prosthesis, methylmethacrylate with or without insertion of spacer	J1	5115
27120	Acetabuloplasty; (eg, whitman, colonna, haygroves, or cup type)	J1	5115
27122	Acetabuloplasty; resection, femoral head (eg, girdlestone procedure)	J1	5114
27125	Hemiarthroplasty, hip, partial (eg, femoral stem prosthesis, bipolar arthroplasty)	J1	5115
27132	Conversion of previous hip surgery to total hip arthroplasty, with or without autograft or allograft	J1	5115

HCPCS Code	Long Descriptor	Final CY 2026 SI	Final CY 2026 APC
27134	Revision of total hip arthroplasty; both components, with or without autograft or allograft	J1	5115
27137	Revision of total hip arthroplasty; acetabular component only, with or without autograft or allograft	J1	5115
27138	Revision of total hip arthroplasty; femoral component only, with or without allograft	J1	5115
27140	Osteotomy and transfer of greater trochanter of femur (separate procedure)	J1	5114
27146	Osteotomy, iliac, acetabular or innominate bone;	J1	5114
27147	Osteotomy, iliac, acetabular or innominate bone; with open reduction of hip	J1	5114
27151	Osteotomy, iliac, acetabular or innominate bone; with femoral osteotomy	J1	5114
27156	Osteotomy, iliac, acetabular or innominate bone; with femoral osteotomy and with open reduction of hip	J1	5114
27158	Osteotomy, pelvis, bilateral (eg, congenital malformation)	J1	5114
27161	Osteotomy, femoral neck (separate procedure)	J1	5114
27165	Osteotomy, intertrochanteric or subtrochanteric including internal or external fixation and/or cast	J1	5114
27170	Bone graft, femoral head, neck, intertrochanteric or subtrochanteric area (includes obtaining bone graft)	J1	5114
27175	Treatment of slipped femoral epiphysis; by traction, without reduction	J1	5113
27176	Treatment of slipped femoral epiphysis; by single or multiple pinning, in situ	J1	5113
27177	Open treatment of slipped femoral epiphysis; single or multiple pinning or bone graft (includes obtaining graft)	J1	5113
27178	Open treatment of slipped femoral epiphysis; closed manipulation with single or multiple pinning	J1	5113
27181	Open treatment of slipped femoral epiphysis; osteotomy and internal fixation	J1	5114
27185	Epiphyseal arrest by epiphysiodesis or stapling, greater trochanter of femur	J1	5113
27187	Prophylactic treatment (nailing, pinning, plating or wiring) with or without methylmethacrylate, femoral neck and proximal femur	J1	5114
27222	Closed treatment of acetabulum (hip socket) fracture(s); with manipulation, with or without skeletal traction	T	5111
27226	Open treatment of posterior or anterior acetabular wall fracture, with internal fixation	J1	5114
27227	Open treatment of acetabular fracture(s) involving anterior or posterior (one) column, or a fracture running transversely across the acetabulum, with internal fixation	J1	5114
27228	Open treatment of acetabular fracture(s) involving anterior and posterior (two) columns, includes t-fracture and both column fracture with complete articular detachment, or single column or transverse fracture with associated acetabular wall fracture, with internal fixation	J1	5114
27232	Closed treatment of femoral fracture, proximal end, neck; with manipulation, with or without skeletal traction	J1	5112
27236	Open treatment of femoral fracture, proximal end, neck, internal fixation or prosthetic replacement	J1	5114

HCPCS Code	Long Descriptor	Final CY 2026 SI	Final CY 2026 APC
27240	Closed treatment of intertrochanteric, peritrochanteric, or subtrochanteric femoral fracture; with manipulation, with or without skin or skeletal traction	J1	5112
27244	Treatment of intertrochanteric, peritrochanteric, or subtrochanteric femoral fracture; with plate/screw type implant, with or without cerclage	J1	5114
27245	Treatment of intertrochanteric, peritrochanteric, or subtrochanteric femoral fracture; with intramedullary implant, with or without interlocking screws and/or cerclage	J1	5114
27248	Open treatment of greater trochanteric fracture, includes internal fixation, when performed	J1	5114
27253	Open treatment of hip dislocation, traumatic, without internal fixation	J1	5113
27254	Open treatment of hip dislocation, traumatic, with acetabular wall and femoral head fracture, with or without internal or external fixation	J1	5114
27258	Open treatment of spontaneous hip dislocation (developmental, including congenital or pathological), replacement of femoral head in acetabulum (including tenotomy, etc);	J1	5113
27259	Open treatment of spontaneous hip dislocation (developmental, including congenital or pathological), replacement of femoral head in acetabulum (including tenotomy, etc); with femoral shaft shortening	J1	5113
27268	Closed treatment of femoral fracture, proximal end, head; with manipulation	J1	5112
27269	Open treatment of femoral fracture, proximal end, head, includes internal fixation, when performed	J1	5114
27280	Arthrodesis, sacroiliac joint, open, includes obtaining bone graft, including instrumentation, when performed	J1	5116
27282	Arthrodesis, symphysis pubis (including obtaining graft)	J1	5113
27284	Arthrodesis, hip joint (including obtaining graft);	J1	5115

G0415	Open treatment of posterior pelvic bone fracture and/or dislocation, for fracture patterns which disrupt the pelvic ring, unilateral or bilateral, includes internal fixation, when performed (includes ilium, sacroiliac joint and/or sacrum)	J1	5113

BILLING CODE 4120–01–C

X. Nonrecurring Policy Changes

A. Method To Control Unnecessary Increases in the Volume of Outpatient Services Furnished in Excepted Off-Campus Provider-Based Departments (PBDs)

1. Background

In the CY 2019 OPPS/ASC final rule with comment period (83 FR 59004 through 59014), we adopted a method to control unnecessary increases in the volume of clinic visit services furnished in excepted off-campus provider-based departments (PBDs). We refer readers to the CY 2019 OPPS/ASC final rule with comment period for a detailed discussion of the background, legislative provisions, and payment policies we developed to address increases in the volume of covered outpatient department (OPD) services. Below we discuss the policy we finalized in the CY 2019 OPPS/ASC final rule with comment period and its application under the OPPS for CY 2020 and subsequent years.

In the CY 2019 OPPS/ASC final rule with comment period, we finalized a policy to use our authority under section 1833(t)(2)(F) of the Act to adopt a method to control unnecessary increases in the volume of covered outpatient department services. We applied an amount equal to the site-specific Medicare Physician Fee Schedule (PFS) payment rate for nonexcepted items and services furnished by a nonexcepted off-campus PBD (the PFS payment rate) for the clinic visit service, as described by HCPCS code G0463, when provided at an off-campus PBD excepted from section 1833(t)(21) of the Act (departments that bill the modifier ''PO'' on claim lines). However, we phased in the application of the reduction in payment for the clinic visit service described by HCPCS code G0463 in the excepted provider-based department setting over 2 years. For CY 2019, the payment reduction was phased-in by applying 50 percent of the total reduction in payment that would have applied if these departments were paid the site-specific PFS rate for the clinic visit service. The PFS equivalent rate was 40 percent of the OPPS payment for CY 2019 (that is, 60 percent less than the OPPS rate). We provided for a 2-year phase-in of this policy under which one-half of the total 60 percent payment reduction (a 30 percent reduction) was applied in CY 2019. These departments were paid approximately 70 percent of the OPPS rate (100 percent of the OPPS rate minus the 30 percent payment reduction that was applied in CY 2019) for the clinic visit service in CY 2019.

For CY 2020, the second year of the 2-year phase-in, we stated that we would apply the total reduction in payment that is applied if these departments (departments that bill the modifier ''PO'' on claims lines) are paid the site specific PFS rate for the clinic visit service described by HCPCS code G0463. For CY 2020 and subsequent years, the PFS-equivalent rate was 40 percent of the proposed OPPS payment (that is, 60 percent less than the OPPS rate).

In addition, as we stated in the CY 2019 OPPS/ASC final rule with comment period (83 FR 58818), we implemented this policy in a non-budget neutral manner. We did so to ensure that our method for controlling the unnecessary growth in the volume of clinic visits furnished by excepted off-campus PBDs does not simply increase other unnecessary expenditures within the OPPS, thus driving different utilization-distorting decisions.

In the CY 2023 OPPS/ASC final rule with comment period (87 FR 71748), we finalized a policy which provided that off-campus PBDs (departments that bill the modifier ''PO'' on claim lines) of rural Sole Community Hospitals (SCHs), as described under 42 CFR 412.92 and designated as rural for Medicare payment purposes, are exempt from the clinic visit payment policy that applies a Physician Fee Schedule-equivalent payment rate for the clinic visit service, as described by HCPCS code G0463, when provided at an off-campus PBD excepted from section 1833(t)(21) of the Act. For the full discussion of this

policy, we refer readers to the CY 2023 OPPS/ASC final rule with comment period (87 FR 72047 through 72051). For CY 2024 and CY 2025, we continued to exempt excepted off-campus PBDs of rural SCHs from the clinic visit payment policy.

We noted in the CY 2026 OPPS/ASC proposed rule that we continued to believe that section 1833(t)(2)(F) of the Act provides authority to implement this policy. The U.S. Court of Appeals for the District of Columbia Circuit held in *American Hospital Association* v. *Azar* that a service-specific, non-budget-neutral reduction of the reimbursement rate for OPD services ''qualifies as a 'method for controlling unnecessary increases in the volume of covered [outpatient] services' '' under that provision. 964 F.3d 1230, 1245 (D.C. Cir. 2020) (quoting 42 U.S.C. 1395*l*(t)(2)(F)). The D.C. Circuit reasoned in part that ''[t]he lower the reimbursement rate for a service, the less the incentive to provide it, all else being equal[,]'' and ''[r]educing particular the reimbursement rate . . . is naturally suited to addressing unnecessary increases in the overall volume of a service provided by hospitals.'' *Id.* at 1241. It ultimately concluded that the policy ''falls comfortably within the plain text'' of section 1833(t)(2)(F) of the Act, *id.* at 1241, ''and 'fits the design of the statute as a whole and its object and policy,' '' *id.* at 45 (quoting *Good Samaritan Hosp.* v. *Shalala,* 508 U.S. 402, 418 (1993)). We noted in the CY 2026 OPPS/ASC proposed rule that we continued to believe that our interpretation of the Act was the best one, and that this policy falls well within the Act's delegation to the Secretary to ''develop a method for controlling unnecessary increases in the volume of covered OPD services''.

2. Expanding the Method To Control Unnecessary Increases in the Volume of Outpatient Services Furnished in Excepted Off-Campus Provider-Based Departments

As described in the CY 2019 OPPS/ASC final rule with comment period, we previously found that earlier rulemaking efforts were insufficient to control the unnecessary growth of certain covered OPD services and as a result we implemented a method to control for unnecessary growth in covered OPD services by adjusting the payment rate for clinic visits in excepted off-campus PBDs to be at the PFS-equivalent rate rather than the higher OPPS rate. While this regulatory change had a positive impact, we noted in CY 2026 OPPS/ASC proposed rule that there is evidence of continued growth in the volume of OPD services driven by site of service payment differentials rather than clinical need. We continued to be concerned that beneficiaries are being driven into a higher cost setting of care because of financial incentives when they could safely receive care in a lower cost setting. This creates greater financial burden both for Medicare and for the beneficiary in the form of increased coinsurance. Volume increases that seek to take advantage of financial incentives created by payment policy rather than clinical need are unnecessary and therefore warrant policy changes to halt and address these increases. As the D.C. Circuit explained, ''[i]t is reasonable to think that Congress . . . would have wanted the agency to avoid causing unnecessary volume growth with its own reimbursement practices''. *Am. Hosp. Ass'n,* 964 F.3d at 1245. Accordingly, we proposed to remove this differential for drug administration services delivered in excepted PBDs.

Many healthcare services can be performed in multiple settings. Even when there is little variation in the service provided across settings, the Medicare Trust Fund and Medicare beneficiaries typically pay more when that service is performed in an OPD than when the same service is performed in a physician office. That payment differential creates an incentive for providers to shift the care of beneficiaries to an OPD rather than a physician office or ASC, even if the services can be safely performed in the physician office or an ASC. Generally, 20 percent of any increased payment is the responsibility of the beneficiary in the form of coinsurance. Taking into account that any payment differential occurs across millions of claims for drug administration and other services each year, this threatens to create a significant source of unnecessary spending both by Medicare beneficiaries in the form of unnecessarily high copayments and by Medicare in the form of unnecessarily high Medicare payments for services that can be performed safely in a different setting.

In the CY 2019 OPPS/ASC final rule with comment period, we discussed vertical consolidation and the practice of hospitals purchasing freestanding physician practices and converting the billing from the PFS to higher paying OPD visits. These conversions shift market share from freestanding physician offices to OPDs. We stated that we believed there was a correlation among the increasing volume of OPD clinic visits, vertical integration, and the higher OPPS payment rates for clinic visits. More favorable reimbursement for hospital-owned sites compared to physician-owned sites has been shown to encourage hospitals' acquisition of physician practices.[132] [133] Once a practice is acquired and designated as an outpatient department, physician services can be billed at higher hospital-based rates. This type of consolidation has been associated with higher Medicare spending and more intense treatment patterns.[134] [135] [136] The impact of vertical integration and the increases in volume of outpatient services extends beyond just the clinic visit. In the CY 2019 OPPS/ASC final rule with comment period, we cited our concern that beneficiaries receiving chemotherapy administration, a high-volume service within the drug administration APC family, receive more sessions on average when treated in the OPD. Chemotherapy days per beneficiary were an estimated 9 to 12 percent higher in the hospital outpatient department than the physician office setting.[137] From 2003–2015 the rate of hospital or health system ownership of cancer care practices doubled from about 30 percent to about 60 percent.[138] For some drug administration services for cancer care, provider consolidation increases the cost of outpatient chemotherapy treatment.[139]

Our policy in the CY 2019 OPPS/ASC final rule with comment period to pay for clinic visits in excepted off-campus PBDs at the PFS-equivalent rate addressed the financial incentive for only one type of service in one outpatient setting. However, the share of other ambulatory services billed under the OPPS has continued to increase. For example, in its 2023 report, MedPAC stated that the share of chemotherapy services furnished in OPDs has grown from 35.2 percent in 2012 to 51.9 percent in 2021. HCPCS code 96413—which describes chemotherapy administration, intravenous infusion technique; up to 1 hour, single or initial substance/drug—is one of the most frequently billed drug administration codes in the OPPS. In 2025 this service

[138] *https://www.healthaffairs.org/doi/10.1377/hlthaff.2016.0830.*

[139] *https://www.healthaffairs.org/doi/10.1377/hlthaff.2016.0830.*

has a physician office payment rate of around $119 dollars and an OPPS payment rate of approximately $341, making the same chemotherapy infusion service almost three times more expensive in the OPD than in the physician office. Similarly, between 2012 and 2021, the OPD share of nuclear cardiography services has grown from 33.9 percent to 47.6 percent, and the OPD share of echocardiography services has grown from 31.6 percent to 43.1 percent.[140]

We are not aware of any clinical or other substantive change in the services provided that would have led to these increases in the share of these services furnished in OPDs, as opposed to in other settings. Thus, we noted in the CY 2026 OPPS/ASC proposed rule that we believed that these changes are in large part a result of financial incentives and therefore represent unnecessary increases in the volume of OPD services.

We stated in the CY 2026 OPPS/ASC proposed rule that we believe that financial incentives have driven volume from the office setting to the higher paying OPD setting, creating unnecessary increases in the volume of OPD services. We also stated that we believe that this problem is pervasive and exists across a number of services. Any time a service is provided in the higher cost OPD when it could be provided safely in the physician office, but it is not because of financial incentives, that potentially represents unnecessary utilization of the OPD setting. In CY 2019, we chose to start tackling this problem by addressing the clinic visit when provided in excepted PBDs. In that case, it was practical to address only a single code, G0463, the clinic visit. For CY 2026, we proposed to address drug administration services provided at excepted PBDs a bit more generally. We proposed to address payment for these services across the APC family, as we believe this volume control method should apply to all drug administration services at excepted PBDs.

Our authority under section 1833(t)(2)(F) of the Act to adopt a method to control unnecessary increases in the volume of covered outpatient department services authorizes us to address the consequences of these payment inequalities. Given these continued disparities, we proposed in the CY 2026 OPPS/ASC to further examine and refine our volume control method by identifying additional covered OPD services at high risk of unnecessarily shifting to the hospital setting based on financial incentives rather than medical necessity. We analyzed several families of services paid under the OPPS and presented our findings on the utilization and payment of drug administration services, which we discuss in the later in this section.

3. Utilization of Drug Administration Services

The high volume of drug administration services and the fact that Medicare pays approximately 200–300 percent more for the administration of drugs in the OPD setting than in the physician office setting incentivizes providers to migrate this family of services to the OPD setting.

Drug administration includes the intravenous or intramuscular administration of a range of medicines. Drug administration can be performed in either physician offices or OPDs. The process of administering a drug does not meaningfully differ between a physician office or OPD. In the OPPS, drug administration is categorized into four levels of complexity. Payments are set at a category level, called an Ambulatory Payment Classification (APC). The APCs for drug administration are 5691, 5692, 5693, and 5694. Currently, 61 Healthcare Common Procedure Coding System (HCPCS) codes make up the four drug administration APCs. HCPCS codes that are similar in terms of cost and clinical attributes are placed in the same APC. All HCPCS codes in the same APC have the same OPPS payment rate. The individual HCPCS and APC assignments are available in Addendum B to this final rule with comment period.

We evaluated the growth in volume and spending for multiple families of APCs in OPDs across multiple years of claims data. Should commenters wish to replicate any of our analyses, the CMS website includes information about obtaining the ''Limited Data Set,'' *https://www.cms.gov/data-research/files-for-order/data-disclosures-and-data-use-agreements-duas/limited-data-set-lds* through which OPPS claims data is available for purchase. We found that the volume of services paid through the drug administration APCs (5691–5694) has increased over time, which would indicate that these services have migrated to the OPD setting. Specifically, from 2011 to 2019 the volume of drug administration services paid under these APCs grew by almost 35 percent. This growth persisted even with the introduction of the PFS-equivalent rate for PBDs subject to section 603 of the Bipartisan Budget Act of 2015 (BBA) starting in 2017. The growth also persisted after the COVID–19 Public Health Emergency (PHE). Between 2018 and 2024 the number of beneficiaries enrolled in fee-for-service Medicare decreased by over 14 percent.[141] But since 2020 we have simultaneously seen increases in the volume of drug administration services provided in OPDs utilized per beneficiary.[142] Between 2020 and 2023 the utilization of drug administration services grew per beneficiary by over 30 percent. That means that while there are now fewer Medicare fee-for-service beneficiaries than there were prior to the COVID–19 PHE, each beneficiary on average receives more drug administration services in the OPD setting than they were prior to the COVID–19 PHE. There was also growth prior to the COVID–19 PHE. The utilization of drug administration services per beneficiary also grew by 30 percent between 2011 and 2019.

In addition to looking at the growth in volume and spending at the APC level, we looked at the growth in volume at the HCPCS code-level and found that some HCPCS codes within the drug administration APCs have experienced particularly significant growth. As we stated earlier, HCPCS code 96413—which describes chemotherapy administration, intravenous infusion technique; up to 1 hour, single or initial substance/drug—is the most frequently billed HCPCS code within any of the drug administration APCs at excepted PBDs. This code has seen an almost 70 percent increase in volume from 2011 to 2023.[143] In 2025 this service has a physician office payment rate of around $119 dollars and an OPPS payment rate of approximately $341. That makes the same chemotherapy infusion service 186 percent more expensive in the OPD than in the physician office. We concluded that this 70 percent increase in excepted hospital outpatient department volume over a 10-year period was at least partially driven by the payment differential between the physician office and OPD setting. The HCPCS codes representing chemotherapy administration grew more generally in volume by 64 percent in the OPPS between 2011 and 2023.[144] The chemotherapy administration codes

[142] Based on our analysis of claims data and Medicare FFS enrollment.

[143] Based on our analysis of claims data.

[144] HCPCS included in the chemotherapy administration category are: 96423, 96549, 96401, 96402, 96405, 96411, 96415, 96417, 96406, 96409, 96422, 96542, 96413, 96416, 96420, 96425, 96440, 96446, 96450, G0498.

represent some of the highest-cost and most-frequently billed services within the drug administration APCs. MedPAC found that from 2015 to 2021, the volume of chemotherapy administration in freestanding clinician offices, the ambulatory setting for which payment rates are usually lowest, fell 14.2 percent.[145] We concluded that if there was not a difference in payment rates, fewer of these services would have shifted to the hospital outpatient setting and the corresponding increase in Medicare payments and beneficiary cost-sharing would not have occurred.

We were also concerned about beneficiaries who pay higher cost sharing because of the payment incentives driving them to OPDs. Drug administration services are skewed toward a small portion of the population with high utilization. Cancer patients receiving chemotherapy are among the highest utilizers of these services. The administration of chemotherapy highlights that a small portion of the population is disproportionately harmed by the current state of drug administration payment in the OPPS. A meaningful number of beneficiaries in this cohort are paying substantially more per year in cost sharing than they would had they received the same treatments at freestanding facilities or non-excepted off-campus PBDs.[146] Focusing on the cost sharing of chemotherapy patients demonstrates how this cohort is disproportionately impacted by the current payment structure and is uniquely positioned to benefit from an appropriate application of our authority to control for unnecessary increases in the volume of OPD services. Indeed, one study found that ''in 2021, approximately 74,000 Medicare FFS chemotherapy patients utilized excepted off-campus OPDs and would have had cost sharing expenses that were $292 lower per patient had site neutrality applied. For the highest utilizing 5,000 patients who received chemotherapy most frequently at excepted off-campus OPDs, cost sharing would have been $1,055 lower per patient if payments had been site neutral''.[147]

While there have been increases in the volume of drug administration services in the hospital outpatient setting in recent years, drug administration services are still frequently provided in freestanding facilities. One study found that in 2023, 68 percent of drug administration services occurred in physician offices, indicating that they are (and can be) safely performed in multiple settings.[148] In its 2023 report, MedPAC examined APCs for which it might be appropriate to make a site neutral payment. To identify appropriate APCs they compared the volume of services in each APC that was provided in OPDs, ASCs, and freestanding offices over the period of 2016 through 2021, but omitted 2020 because the coronavirus pandemic affected the volume of care in ambulatory settings. If freestanding offices had the highest volume for an APC, they concluded that the services in that APC could be provided safely in freestanding offices for most beneficiaries and that beneficiaries would be able to access the services in that APC. Therefore, for those services, it would be reasonable to align the OPPS payment rates with the PFS payment rates. MedPAC found that all four of the drug administration APCs had higher volume in freestanding facilities than in OPDs, indicating that these services can be safely provided to beneficiaries in a lower cost setting of care. We believed MedPAC's analysis aligns well with the rationale CMS adopted in the CY 2019 OPPS/ASC final rule with comment period: we consider OPPS utilization unnecessary if the beneficiary can safely receive the same services in a lower cost setting but instead receives care in the hospital outpatient setting because of payment differentials that result in the unnecessary consumption of OPD services.

In our review of the utilization of drug administration services in excepted PBDs we found increases in the volume of services over time, increases in the volume of services provided per beneficiary, and cases of significant volume growth for some individual HCPCS codes within the drug administration APC family. We believed that these changes represent unnecessary increases in the volume of covered outpatient department drug administration services and that it would be appropriate to apply our volume control method to these services.

4. Payment for Drug Administration Services at PBDs

As discussed in the CY 2017 OPPS/ASC final rule with comment period (81 FR 33648), we established a PFS relativity adjuster that is applied to the OPPS rate for the billed non-excepted items and services furnished in a non-excepted off-campus PBD to calculate payment rates under the PFS. The PFS relativity adjuster reflects the estimated overall difference between the payment that would otherwise be made to a hospital under the OPPS for the non-excepted items and services furnished in non-excepted off-campus PBDs and the resource-based payment under the PFS for the technical aspect of those services with reference to the difference between the facility and nonfacility (office) rates and policies under the PFS. The current PFS relativity adjuster is set at 40 percent of the amount that would have been paid under the OPPS (82 FR 53028). Non-excepted PBDs are required to use the modifier ''PN'' so that the PFS relativity adjuster is applied to the payment of their claim. Excepted PBDs use the modifier ''PO'' on their claims to indicate that the service was provided at an excepted off-campus PBD and that payment should generally be made at the OPPS rate.

In the CY 2019 OPPS/ASC final rule with comment period, we stated that we consider the shift of services from the physician office to the hospital outpatient department unnecessary if the beneficiary can safely receive the same services in a lower cost setting but is instead receiving services in the higher paid setting due to payment incentives.[149] In the CY 2026 OPPS proposed rule (90 FR 33476), to better understand the migration of services in OPDs we analyzed claims data for drug administration services to assess whether increases in volume and spending could be driven by payment incentives. We examined the top twenty most frequently billed HCPCS codes in the drug administration APC family at both excepted and non-excepted off-campus PBDs. Twenty HCPCS codes account for over 98 percent of the volume of drug administration services in off-campus PBDs. We found that the top twenty most frequently billed HCPCS codes in the drug administration APCs when provided at an off-campus PBD excepted from section 1833(t)(21) of the Act (departments that bill the modifier ''PO'' on claim lines) and off-campus PBDs that are not excepted from

section 603 of the BBA (departments that bill the modifier ''PN''), are the same with slight variations in the order based on volume. We knew that the overwhelming majority of HCPCS codes in the drug administration APCs were being billed with both the ''PO'' and ''PN'' modifiers. Meaning that these drug administration services were being provided in both excepted and non-excepted PBDs. That indicates that the payment rate in non-excepted PBDs is sufficient and can support the provision of these services in an off-campus PBD. We further used the PFS payment rates for the top twenty most frequently billed drug administration HCPCS codes by excepted PBDs (departments that bill the modifier ''PO'' on claim lines) and volume weighted them to create a PFS proxy APC payment rate for each of the four drug administration APCs. We found that for each of the four APC payment levels, the same services were paid 200–300 percent higher under the OPPS than under the PFS. The volume-weighted PFS payment for the drug administration APCs ranged from 24 percent to 33 percent of the OPPS payment.

We concluded that the differential in our payment rates had created a payment incentive that had led to unnecessary growth for the services in the drug administration APCs. If the PFS payment rate for drug administration APCs ranges from 24 percent to 33 percent of the OPPS payment, then payment using the PFS relativity adjuster of 40 percent should sufficiently cover the cost of these services. We considered the shift of services from the physician office to the hospital outpatient department unnecessary if the beneficiary can safely receive the same services in a lower cost setting but is instead routinely receiving services in the higher paid setting due to payment incentives. We believed the OPPS payment rate for drug administration APCs being several times greater than the PFS rate provides this payment incentive and that the growth in drug administration services paid under the OPPS over time is unnecessary.

5. Patient Severity and Cost of Care

In comments to the CY 2019 OPPS/ASC proposed rule and subsequent rulemaking, we heard from commenters that the higher payments for services in hospital outpatient settings are justified by the level of care patients need, the higher costs of providing care in hospitals, and the costs of maintaining emergency care and standby capacity. We recognize that OPDs serve unique patient populations and provide services to medically complex beneficiaries; however, there is no evidence to demonstrate the need for higher payment for services provided in OPDs that could also be provided in lower-cost settings. In general, despite marked differences in payment rates for a range of services, identical services are being delivered to very similar patients across physicians' offices, hospital outpatient departments, and ASCs.[150] [151] Moreover, a 2023 literature review found no peer-reviewed evidence that shows differences in the quality of services delivered across hospital outpatient departments and physicians' offices.[152] In their 2023 report, MedPAC evaluated risk scores from the CMS hierarchical condition category (CMS–HCC) risk-adjustment model to compare the medical complexity of OPD patients with patients in freestanding offices. They found that, on average, OPD patients have higher risk scores, which suggests that OPD patients are potentially more medically complex than those in physician offices. However, they also found substantial overlap in the CMS–HCC risk scores of patients in these two settings, which suggests that the difference in patient severity between settings is small. Their analysis showed that the effects of patient severity on cost of care for the aligned services is not statistically significant as the services, like drug administration, are generally of low complexity. In addition, if there is a need to bill for more complex cases, under the OPPS providers can often bill separately for additional services that a patient might need.

6. Impact of Unnecessary Increases in Volume on the OPPS

Our concern with unnecessary increases in the volume of drug administration services was tied to the health and sustainability of the OPPS. In the CY 2019 OPPS/ASC final rule with comment period, we found that the mean and median annual increase in the volume and intensity of hospital outpatient services was about 5.5 percent and 5.4 percent, respectively, from 2011 to 2019. During this time period, the estimated increase in aggregate annual hospital reimbursements incurred through Medicare Fee for Service (FFS) Part B was $28.2 billion.[153] As stated in the CY 2026 OPPS/ASC proposed rule (90 FR 33476) and in Table 120, we projected that between 2019 and 2027, the cost of outpatient hospital services per FFS enrollee would grow at a mean of about 7.3 percent per year and a median of 8.1 percent per year. This accounts for a $27.2 billion increase in aggregate annual incurred reimbursements for hospitals in FFS Part B during that time, far exceeding the growth of other categories of Part B services in FFS in dollar terms.[154]

TABLE 120: GROWTH IN HOSPITAL OUTPATIENT COSTS PER FEE-FOR-SERVICE ENROLLEE[155]

Calendar Year	Percent Increase
2019	5.2
2020	-5.6
2021	19.8
2022	4.3
2023	9.1
2024	8.3
2025 (Estimated)	7.9
2026 (Estimated)	8.1
2027 (Estimated)	8.4

There was evidence that increased volume and intensity of certain covered OPD services was likely driven by financial incentives to furnish services in hospitals in order to receive higher reimbursement, rather than making site-of-service decisions based on medical necessity. The OPPS was originally designed to manage Medicare spending growth by replacing a cost-based system with a prospective payment system. Contrary to this Congressional purpose, the OPPS had continued to be the one of the fastest growing sectors of Medicare payments out of all payment systems under Medicare Parts A and B.[156] Furthermore, we were concerned that the persistent rate of growth relative to other payment systems suggests that payment incentives, rather than patient acuity or medical necessity, continue to affect site-of-service decision-making. This site-of-service selection had an impact on not only the Medicare program, but also on Medicare beneficiary out-of-pocket spending. Therefore, to the extent that there were lower-cost sites-of-service available, we continued to believe that beneficiaries and the physicians treating them should have that choice and not be encouraged to receive or provide care in higher paid settings solely for financial reasons. Our authority to implement volume control methods was an important tool in combating unnecessary OPPS utilization. We had seen success in stemming the unnecessary growth in the volume of off-campus clinic visits and believed off-campus drug administration services were in need of similar examination.

Therefore, given the unnecessary increases in the volume of drug administration services in hospital outpatient departments, for the CY 2026 OPPS, we proposed to use our authority under section 1833(t)(2)(F) of the Act to apply an amount equal to the site-specific PFS payment rate for nonexcepted items and services furnished by a non-excepted off-campus PBD (the PFS payment rate) for any HPCPCs codes assigned to the drug administration services APCs, when provided at an off-campus PBD excepted from section 1833(t)(21) of the Act (departments that bill the modifier ''PO'' on claim lines). Table 121 shows the specific APCs that we proposed to identify for this policy, which are APCs 5691–5694. Off-campus PBDs that are not excepted from section 603 of the BBA (departments that bill the modifier ''PN'') already received a PFS-equivalent payment rate for any HCPCS codes assigned to the drug administration services APCs. Additionally, we noted that this proposal aligned with President Trump's Executive Order (E.O.) 14273, ''Lowering Drug Prices by Once Again Putting Americans First''.[157] Section 11 of the E.O., ''Reducing Costly Care for Seniors'', directs the Secretary to ''evaluate and, if appropriate and consistent with applicable law, proposed regulations to ensure that payment within the Medicare program is not encouraging a shift in drug administration volume away from less costly physician office settings to more expensive hospital outpatient departments''.

TABLE 121: APCS PAID THE PFS-EQUIVALENT RATE FOR SERVICES PROVIDED AT EXCEPTED OFF-CAMPUS PBDS

APC	APC Description
5691	Level 1 Drug Administration
5692	Level 2 Drug Administration
5693	Level 3 Drug Administration
5694	Level 4 Drug Administration

We proposed to implement this proposed method to address the unnecessary increases in utilization of drug administration services in the OPD setting in a non-budget neutral manner, similar to the CY 2019 OPPS/ASC final rule with comment period approach to address unnecessary increases in utilization of clinic visits (83 FR 58818). We proposed to continue our interpretation that while section 1833(t)(9)(B) of the Act requires that

[155] Available in Table IV.B3. at *https://www.cms.gov/oact/tr/2024.*

[156] *https://www.gpo.gov/fdsys/pkg/FR-2018-11-21/pdf/2018-24243.pdf.*

[157] *https://www.govinfo.gov/content/pkg/FR-2025-04-18/pdf/2025-06837.pdf.*

certain changes made under the OPPS be made in a budget neutral manner, this section does not apply to the volume control method under section 1833(t)(2)(F) of the Act. In particular, section 1833(t)(9)(A) of the Act, titled ''Periodic review,'' provides, in part, that the Secretary must annually review and revise the groups, the relative payment weights, and *the wage and other adjustments* described in paragraph (2) to take into account changes in medical practice, changes in technology, the addition of new services, new cost data, and other relevant information and factors'' (emphasis added). Section 1833(t)(9)(B) of the Act, titled ''Budget neutrality adjustment'' provides that if ''the Secretary makes *adjustments* under paragraph (A), then the *adjustments* for a year may not cause the estimated amount of expenditures under this part for the year to increase or decrease from the estimated amount of expenditures under this part that would have been made if the adjustments had not been made'' (emphasis added). However, a volume-control method under section 1833(t)(2)(F) of the Act is not an ''adjustment'' under paragraph (2). Unlike the wage adjustment under section 1833(t)(2)(D) of the Act and the outlier, transitional pass-through, and equitable adjustments under section 1833(t)(2)(E) of the Act, section 1833(t)(2)(F) of the Act refers to a ''method'' for controlling unnecessary increases in the volume of covered OPD services, not an adjustment. Likewise, sections 1833(t)(2)(D) and (E) of the Act also explicitly require the adjustments authorized by those paragraphs to be budget neutral, while the volume control method authority at section 1833(t)(2)(F) of the Act does not. Therefore, the volume control method proposed under section 1833(t)(2)(F) of the Act is not one of the adjustments under section 1833(t)(2) of the Act that is referenced under section 1833(t)(9)(A) of the Act that must be included in the budget neutrality adjustment under section 1833(t)(9)(B) of the Act. Moreover, section 1833(t)(9)(C) of the Act specifies that if the Secretary determines under methodologies described in paragraph (2)(F) that the volume of services paid for under this subsection increased *beyond* amounts established through those methodologies, the Secretary *may* appropriately adjust the update to the conversion factor otherwise applicable in a *subsequent* year. We interpreted this provision to mean that the Secretary can implement a volume control method under section 1833(t)(2)(F) of the Act in a nonbudget neutral manner in the year in which the method is implemented, and that the Secretary may then make further adjustments to the conversion factor in a subsequent year to account for volume increases that are *beyond* the amounts estimated by the Secretary under the volume control method.

We stated in the CY 2019 OPPS/ASC final rule with comment period (83 FR 58818) that we believed implementing a volume control method in a budget neutral manner would not appropriately reduce the overall unnecessary volume of covered OPD services, and instead would simply shift the movement of the volume within the OPPS system in the aggregate, a concern similar to the one we discussed in the CY 2008 OPPS/ASC final rule with comment period (72 FR 66613). We believed that concern applies to drug administration services just the same. The estimated payment impact for various provider classifications is displayed in Table 167: Estimated Impact of the Final CY 2026 Changes for Services Provided in the Hospital Outpatient Prospective Payment System of this final rule with comment period. The 10-year estimated impact of this policy is displayed in Table 166: Estimated Effect of Changes to Drug Administration Services when Furnished at Excepted Off-Campus Providers. For CY 2026, the estimated savings are $290 million, with $220 million of the savings accruing to Medicare, and $70 million saved by Medicare beneficiaries in the form of reduced beneficiary coinsurance.[158] To effectively establish a method for controlling the unnecessary growth in the volume of drug administration services furnished by excepted off-campus PBDs that does not simply reallocate expenditures that are unnecessary within the OPPS, we believed that this method must be adopted in a nonbudget neutral manner. The impact associated with this proposal is further described in section XXV. of this final rule with comment period.

While we were refining our method to control for unnecessary increases in the volume of hospital outpatient department services, we continued to recognize the importance of not impeding development or beneficiary access to new innovations. We solicited public comments on other ways to exercise the Secretary's statutory authority under section 1833(t)(2)(F) of the Act:

- Are there other services for which CMS should develop a method to control unnecessary increases in the volume of covered OPD services by paying a PFS-equivalent rate for services provided at excepted off-campus PBDs?
- Of particular concern for us are the services within the imaging without contrast APCs (APCs 5521–5524). Imaging without contrast services are some the most costly and frequently provided services at excepted PBDs. We believe that there is a high likelihood that there has been unnecessary growth in this space and that a volume control method would be appropriate to apply here in the future. Would it be appropriate to apply this method to the Imaging Without Contrast APCs?

We received public comments on these proposals. The following is a summary of the comments we received and our responses.

Comment: We received a number of comments in response to our comment solicitation on other services for which the Secretary's should exercise his statutory authority under section 1833(t)(2)(F) of the Act. Commenters shared their views on whether there have been unnecessary increases in volume for certain other services and whether it would be appropriate to apply our volume control method to those services.

Response: We thank commenters for their interest and engagement on this important issue. Given the wide array of information presented through this public comment process, we may take the technical recommendations and other detailed feedback provided regarding other services that could potentially have unnecessary increases in volume under consideration for future notice and comment rulemaking.

Comment: Numerous commenters, including organizations representing private health insurance plans, physician associations, specialty medical associations, and individual Medicare beneficiaries, supported the proposal to apply a volume control method for drug administration APCs. Some commenters commended CMS for its proposal, which they believed will help to control costs for both beneficiaries and the Medicare program, as well as foster greater competition in the physician services market. Commenters agreed that this method will help to control the unnecessary increases in volume of services in excepted off-campus PBDs when beneficiaries can generally safely receive these same services in a lower

[158] In comparison—in CY 2020 when the clinic visit volume control method was fully phased-in the estimated savings was approximately $800 million, with approximately $640 million of the savings accruing to Medicare, and approximately $160 million saved by Medicare beneficiaries in the form of reduced copayments.

cost setting but instead receive care in a higher cost setting due to payment incentives. Commenters stated that higher payments to OPDs for lower-complexity services directly has translated into higher costs for Medicare beneficiaries and taxpayers, as hospitals shift care towards higher-paid OPDs. Commenters cited studies showing that this has indirectly driven up Medicare spending and out-of-pocket costs for beneficiaries by incentivizing consolidation of independent physician practices into hospitals, which is associated with higher prices.[159] [160] [161] Commenters noted that consolidation has the downstream effect of shifting more billing from the lower physician office rates to higher OPD rates, further increasing total Medicare spending and beneficiary cost-sharing. Several commenters flagged that consolidation is further driven by incentives in the 340B program, where participating hospitals profit by acquiring physician offices, converting them into outpatient clinics, purchasing discount drugs and funneling drug administration services to this site of care.

Commenters wrote that our proposed policy would help to address long-standing payment disparities between OPDs and office-based infusion centers, where commenters believe the same services are delivered at lower cost to Medicare and beneficiaries without compromising quality. Others believed that addressing the unnecessary increases in the volume of these services would help address the ramifications of market distortions that restrict the availability of lower-cost care and increase costs for patients and taxpayers without adding quality improvements. Commenters advocated that non-hospital settings of care often deliver the same or better quality of care at lower cost and rebalancing the effects of unnecessary utilization would enhance the overall value of Medicare spending and direct resources toward lower-cost and effective care models. Commenters asserted that off-campus PBDs are often indistinguishable from physician offices aside from the hospital signage; commenters stated that nothing about the site of care justifies the higher payment rates. Commenters stated that off-campus PBDs are often indistinguishable from physician offices aside from the hospital signage and nothing about the site of care has meaningfully changed to justify their higher payment rates. Because of this, commenters stated that off-campus PBDs are not providing true hospital-based care and do not require additional payment for 24/7 capacity or emergency standby services. Other commenters claimed that the office setting is the most cost-effective and patient-centered site of service for drug administration services. They wrote that delivering drug therapies in the office setting not only saves the health care system money, but also avoids unnecessary risks such as hospital-acquired infections—risks that are particularly concerning for immune-compromised patients receiving drug administration services.

Several commenters also supported implementing this policy in a non-budget neutral manner, as this would allow CMS to protect and preserve the Part B trust fund rather than simply redistributing funds. Commenters state that by aligning payment for routine services with the PFS rate CMS could help discourage site-of-service shifts driven by financial incentives rather than clinical need, promote competition, and create a more level playing field for providers across care settings. Many commenters encouraged CMS to consider expansions of this policy for additional services in excepted off-campus PBDs and to on-campus OPDs in the future.

Response: We appreciate the commenters' support. As mentioned in the CY 2026 OPPS/ASC proposed rule, we share the commenters' concern that payment incentives, rather than patient acuity or medical necessity, are affecting site-of-service decision-making and the downstream effect these payment disparities create. As we noted in the CY 2019 OPPS/ASC proposed rule (83 FR 37138 through 37143), ''[a] large source of growth in spending on services furnished in hospital outpatient departments (OPDs) appears to be the result of the shift of services from (lower cost) physician offices to (higher cost) OPDs''. We continue to believe that these shifts in site of service are unnecessary if the beneficiary can safely receive the same services in a lower cost setting but instead receives care in a higher cost setting due to payment incentives. In addition to the concern that the difference in payment is leading to unnecessary increases in the volume of covered outpatient department services, we remain concerned that this shift in care setting increases beneficiary cost-sharing liability because Medicare payment rates for the same or similar services are generally higher in hospital outpatient departments than in physician offices.

We appreciate the comments supporting the implementation of this policy in a nonbudget neutral manner. As we stated in the CY 2026 OPPS/ASC proposed rule (83 FR 37138 through 37143), we believe implementing a volume control method in a budget neutral manner would not appropriately reduce the overall unnecessary volume of covered OPD services, and instead would simply shift the volume of services within the OPPS system in the aggregate. As detailed later in this section, we are finalizing our proposal, without modification, in response to public comments. We will continue to take information submitted by the commenters into consideration for future study.

Comment: In their comment letter the Medicare Payment Advisory Commission (MedPAC) noted their support for expanding the PFS equivalent payment rate for drug administration services that are provided in excepted off-campus PBDs. They highlighted their June 2023 Report to Congress in which they included a framework they suggested could be helpful in identifying services for which it might be safe and appropriate to align payment rates. They noted that CMS should consult with clinicians, industry, and other interested parties when determining which services to choose.

MedPAC stated that payment parity between the OPPS and PFS should not adversely affect hospitals' ability to be available 24/7 for emergency care, with particular attention paid to safety-net and rural providers. Additionally, they recommended maintaining the packaging of ancillary items in the OPPS. MedPAC reiterated a point from their June 2023 report to the Congress, in which they noted some benefits they see in making budget-neutral adjustments for some OPPS services in conjunction with site-neutral payments. For example, applying a budget-neutral payment adjustment with a site-neutral policy would increase OPPS payment rates for other services including emergency department visits, which would support hospitals' emergency care and standby capacity.

Response: We thank MedPAC for its comment and support of this policy. We have continued to find their work

valuable as we further identify services that may have experienced unnecessary increases in volume in the OPPS. In the CY 2026 OPPS/ASC proposed rule, we requested information from interested parties on other services for which CMS should develop a method to control unnecessary increases in the volume of covered OPD services by paying a PFS-equivalent rate for services provided at excepted off-campus PBDs. We will continue to work with clinicians and industry interested parties when making choices about which services to examine in the future.

We believe that our volume control method will not adversely impact hospitals' ability to provide 24/7 emergency care and, as discussed later in this section, we are finalizing our proposal to exempt rural Sole Community Hospitals from this expanded policy, which we believe addresses MedPAC's concern that a non-budget neutral volume control method will adversely affect rural providers. We are applying our volume control method to a limited set of services provided in a limited set of OPD departments and do not believe that the financial impact of this provision will significantly impact hospitals' ability to provide 24/7 emergency care. Our final policy will only impact drug administration services billed with the ''PO'' modifier.

We understand that MedPAC's June 2023 recommendation proposed to make some site-neutral adjustments in a budget neutral manner. However, we are using our authority under section 1833(t)(2)(F) of the Act to implement a volume control method to control unnecessary utilization in drug administration. Under sections 1833(t)(2)(F) and (9)(C) of the Act, we are not required to budget neutralize the volume-control method here, and as we stated in the CY 2019 OPPS ASC final rule with comment period (83 FR 59013), we believe implementing a volume control method in a budget neutral manner would not reduce the overall unnecessary volume of covered OPD services, and instead would simply shift services within the OPPS system because of payment rather than medical necessity.

We received several comments which provided detailed legal rationales as to why CMS lacks the statutory authority to reduce payments to excepted off-campus PBDs, particularly in a non-budget neutral manner. We discuss these comments below.

Comment: Commenters suggested that legal developments since the U.S. Court of Appeals for the District of Columbia decision in *American Hospital Association* v. *Azar,* 964 F. 3d 1230 (D.C. Cir. 2020), which had supported the agency's interpretation of section 1833(t)(2)(F) of the Act, now may not be viable and undermine the agency's reliance on section 1833(t)(2)(F) of the Act for the proposed volume-control methodology.

Commenters argued that the D.C. Circuit in *American Hospital Association* v. *Azar* reviewed HHS' interpretation ''under *Chevron's* two-step framework.'' *Id.* at 1241. But *Chevron* has since been overruled. *See Loper Bright Enterprises* v. *Raimondo,* 603 U.S. 369, 412 (2024). Consequently, ''courts need not and under the [Administrative Procedures Act (APA)] may not defer to an agency interpretation of the law simply because a statute is ambiguous''. *Id.* at 413. Commenters assert that is what the D.C. Circuit impermissibly did in *American Hospital Association* v. *Azar. See* 964 F.3d at 1244.

Commenters contend that the agency's reading of section 1833(t)(2)(F) of the Act is not the best interpretation of the law. For reasons previously offered through public comment and litigation, commenters described that the best interpretation of the law is that section 1833(t)(2)(F) of Act does not authorize HHS to lower payments only for certain services performed by certain providers, including and especially those grandfathered under the law.

Commenters go on to argue that other precedential developments cast doubt on the D.C. Circuit's decision in *American Hospital Association* v. *Azar.* Commenters explained that the D.C. Circuit did not adequately address what they believed was the district court's correct conclusion that CMS' interpretation of section 1833(t)(2)(F) of the Act assumes the authority to ''supersede Congress' carefully crafted relative payment system'' based on a single sentence in the U.S. Code. *Id.* at 158.

Commenters posit that, under HHS' view, a provision that gives the agency authority to adopt a ''method[s] for controlling unnecessary increases in the volume'' of covered outpatient services permits it to ignore the entire OPPS system and make non-budget-neutral reductions to particular services. Echoing the district court, commenters stated this would massively ''upend'' the OPPS system (rejecting HHS' attempt to ''acquire unilateral authority to pick and choose what to pay for OPD services, which clearly was not Congress' intention'').

Commenters argue that the Supreme Court rulings in *West Virginia* v. *EPA* and *Biden* v. *Nebraska* ''double-down'' on the legal principles described above. Commenters describe HHS as claiming unfettered power to depart from the OPPS based on a vague provision buried elsewhere in the statute. They contend that HHS will not be able to do so because the Congress does not ''use oblique or elliptical language to empower an agency to make a 'radical or fundamental change' to a statutory scheme''. *West Virginia,* 597 U.S. at 723 (quoting *MCI Telecommunications Corp.* v. *American Telephone & Telegraph Co.,* 512 U.S. 218, 229 (1994)).

Response: We continue to believe that section 1833(t)(2)(F) of the Act gives the Secretary authority to develop a method for controlling unnecessary increases in the volume of covered OPD services, including a method that controls unnecessary volume increases by removing a payment differential that is driving a site-of-service decision and, as a result, is unnecessarily increasing service volume.

As we noted in the CY 2019 OPPS/ASC final rule with comment period (83 FR 58818) and in our decision to complete the two-year phase of this policy in the CY 2020 OPPS/ASC final rule with comment period (84 FR 61142), ''[a] large source of growth in spending on services furnished in hospital outpatient departments (OPDs) appears to be the result of the shift of services from (lower cost) physician offices to (higher cost) OPDs''. We continue to believe that these shifts in the sites of service are unnecessary if the beneficiary can safely receive the same services in a lower cost setting but instead receives care in a higher cost setting due to payment incentives. In most cases, the difference in payment is leading to unnecessary increases in the volume of covered outpatient department services, and we remain concerned that this shift in care setting increases beneficiary cost-sharing liability because Medicare payment rates for the same or similar services are generally higher in hospital outpatient departments than in physician offices. We continue to believe that our method addresses the concerns described in the CY 2019 OPPS/ASC final rule with comment period (83 FR 59005).

As we stated in the CY 2019 OPPS ASC final rule with comment period (83 FR 59013), we believe implementing a volume control method in a budget neutral manner would not appropriately reduce the overall unnecessary volume of covered OPD services, and instead would simply shift services within the OPPS system because of payment rather than medical necessity. We also outlined in the CY 2019 OPPS/ASC

final rule with comment period (83 FR 59013) that while section 1833(t)(9)(B) of the Act requires that certain changes made under the OPPS be made in a budget neutral manner, this section does not apply to the volume control method under section 1833(t)(2)(F) of the Act.

As noted, the D.C. Circuit previously held that our regulation was a reasonable interpretation of section 1833(t)(2)(F)'s of the Act authority to adopt a method to control for unnecessary increases in the volume of the relevant service. *See AHA* v. *Azar,* 964 F.3d at 1241–45. *Loper Bright* does not change the result. As an initial matter, while *Loper Bright* changed certain aspects of the interpretative framework the D.C. Circuit used, the Supreme Court cautioned that the ''holdings of those cases that specific agency actions are lawful . . . are still subject to statutory *stare decisis* despite our change in interpretive methodology''. 144 S. Ct. at 2273. *AHA*'s holding that our volume-control methodology complies with section 1833(t)(2)(F) of the Act is therefore still good law.

Even interpreting section 1833(t)(2)(F) of the Act anew under the new *Loper Bright* framework, the Supreme Court clarified that the Congress ''often'' enacts statutes that ''delegate[ ] discretionary authority to an agency.'' *Id.* at 2263. Section 1833(t)(2)(F) of the Act is just such a statute. By instructing the Secretary to ''develop a method for controlling unnecessary increases in the volume of covered OPD services'' without specifying the method, the statute delegates discretionary authority to the Secretary. Because, as the D.C. Circuit explained, our policy ''falls comfortably within the plain text of subparagraph (2)(F)'' and is further supported by its structure, 964 F.3d at 1241, it does not fall outside the ''outer statutory bounds'' of the delegation, as discussed in *Loper Bright.* We thus read *AHA* to apply the *Chevron* framework because that was the law at the time and to suggest that if the court had analyzed this matter under the new *Loper Bright* framework, the result would have been the same. That aspect of the D.C. Circuit's holding, particularly when coupled with the *stare decisis* principles discussed previously in the final rule with comment period, indicate that there is no reason to doubt the continued validity of our policy. 144 S. Ct. at 2268.

Nor do we agree that the major question doctrine or related interpretation principles undermine our interpretation of section 1833(t)(2)(F) of the Act. As the Supreme Court recently reiterated, those principles do not apply in the ''ordinary'' case; only in ''extraordinary cases'' will courts apply a ''different approach'' from usual to arrive at the best meaning of a statute. *W. Virginia,* 597 U.S. at 721. Here, neither the '''history and the breadth of the authority that [the agency] has asserted,'' nor the ''economic and political significance'' of that authority militate against our reading of section 1833(t)(2)(F) of the Act. Unlike the novel debt-relief authority the court rejected in *Biden* v. *Nebraska,* 600 U.S. at 500–01, we have not offered in this final rule with comment period a novel interpretation of section 1833(t)(2)(F) of the Act, or even a novel methodology to control volume increases. Instead, we extend a judicially-endorsed methodology to another context. We are not ''restructur[ing] the American energy market,'' like the agency in *West Virginia,* 597 U.S. at 724, but preventing a particular payment system manipulation—unnecessary volume increases—that the Congress expressly required us to address. And section 1833(t)(2)(F) of the Act lacks any term carrying ''a connotation of increment or limitation'' like the statute in *Biden* v. *Nebraska,* 600 U.S. at 494 (internal quotation marks omitted). Here, the Congress authorized the agency to put in place a ''methodology'' that accomplishes the goal of controlling unnecessary volume-increases. Following the Congress' instruction to accomplish its stated goal does not ''upend'' the payment system the Congress crafted or make radical changes to it; it helps to vindicate it. By focusing on the length of section 1833(t)(2)(F) of the Act, commenters confuse the number of words the Congress used with the substantive authority those words communicate. ''Brevity,'' whether in regulatory documents or legislation, ''should not be mistaken for lack of detail.'' *Seven Cnty. Infrastructure Coal.* v. *Eagle Cnty., Colorado,* 145 S. Ct. 1497, 1512 (2025).

Here, the agency has identified an unnecessary increase in volume in a set of OPPS payment codes based on payment differentials between the OPPS and the PFS. It has tailored a methodology to eliminate that unnecessary volume increase by eliminating its cause. As the D.C. Circuit already found, that falls comfortably within the agency's delegated authority under the best reading of section 1833(t)(2)(F) of the Act.

Comment: Commenters outlined that the D.C. Circuit failed to account for section 603 of the BBA. Commenters explained that the BBA of 2015 created two categories of provider-based departments (PBDs): (1) those established before November 2015 and (2) those established after November 2015. For those PBDs in existence prior to November 2015, commenters stated that the Congress required CMS to continue paying off-campus PBDs (referred to in the statute as ''excepted'' off-campus PBDs) at the same rate as hospitals; for post-November 2015 PBDs, the Congress required CMS to pay PBDs at the same rate as independent physicians' offices. Commenters believed that the Congress reinforced this policy choice by providing that ''mid-build'' PBDs should be paid at the same rates as existing, pre-November 2015 off-campus PBDs, that is, the same rate as hospitals. Some commenters asserted that section 603 of the BBA, represents the Congress' thoughtful consideration of MedPAC's recommendation to eliminate the difference in payment between hospital outpatient departments and physician's offices in certain circumstances, and CMS' proposal undermines the balance struck by the Congress. Again, commenters state the D.C. Circuit ruled incorrectly and that the agency should not be able to use the decision in *American Hospital Association* v. *Azar* to deflect from addressing this issue. They take issue with the fact the D.C. Circuit treated section 603 of the BBA as an ''alternative'' argument and relegated its analysis of that provision to a separate section of its opinion from its analysis of section 1833(t)(2)(F) of the Act. Commenters opined that the court of appeals answered the section 1833(t)(2)(F) of the Act question both as if it were wholly distinct from the section 603 of the BBA question and with a heavy thumb on the scale due to *Chevron* deference.

Going forward, they proclaim that the agency cannot rely solely on *American Hospital Association* v. *Azar* and must instead provide a more fulsome legal explanation than the D.C. Circuit for why the text and history of section 603 of the BBA do not foreclose its authority here.

Response: As we stated in the CY 2019 OPPS/ASC final rule with comment period (83 FR 59005) we continue to believe the changes required by section 603 of the BBA made in section 1833(t) of the Act had the effect of addressing some of the concerns related to shifts in settings of care and overutilization of services in the hospital outpatient setting for new off-campus PBDs that began billing Medicare for OPPS services after November 1, 2015. In passing section 603 of the BBA, Congress addressed the specific circumstances that lead to the proliferation of new off-campus

provider-based departments. As we stated in the CY 2017 OPPS/ASC final rule with comment period (81 FR 79562), we believe Congress may have been trying to address the incentive for hospitals to purchase physician's offices and convert them to OPDs without changing their location or patient population with section 603 of the BBA. In 2019 and now in 2025, we are addressing new and separate circumstances, the over utilization of certain services in the OPPS.

We disagree with commenters that by passing legislation a decade ago that does not reference section 1833(t)(2)(F) of the Act, Congress impliedly meant to circumscribe our authority under that provision. As the D.C. Circuit explained when rejecting a similar argument, ''[n]othing in the text of section 603 of the BBA indicates that preexisting off-campus PBDs are forever exempt from adjustments to their reimbursement'' and instead ''leav[es] the exempted providers subject to all the provisions of the OPPS statute, including subparagraph (2)(F).'' *AHA,* 946 F.3d at 1246.

Additionally, as the D.C. Circuit explained, even assuming that section 603 of the BBA could be read to judge increases in volume at preexisting off-campus PBDs are not ''unnecessary'' under section 1833(t)(2)(F) of the Act, that judgment would extend only to 2015 and ''would not mean that Congress considered acceptable the continued volume increases later taking place'' in other years. *Id.* When the Congress passed the BBA of 2015, Medicare OPPS expenditures were $56 billion and growing at an annual rate of about 7.3 percent. In addition, the percentage increase in volume and intensity of outpatient services was increasing at 3.4 percent. In 2019 without the volume control method, OPPS expenditures would have been approximately $74.5 billion, growing at a rate of 9.1 percent, with the volume and intensity of outpatient services increasing at 5.4 percent. For 2026, we estimate that, without an expansion of this policy to drug administration services, OPPS expenditures would be $101.0 billion, growing at a rate of 8.6 percent, with the volume and intensity of outpatient services increasing at 6.8 percent. A review of claims processed in CY 2022 showed that only 2.3 percent of payments for outpatient services are made at the PFS equivalent rate for off-campus PBDs.[162] We would not be able to adequately address the unnecessary increases in the volume of clinic visits in OPDs after 2015 if we did not apply this policy to all off-campus OPDs.

Finally, the hospitals are also wrong that *Loper Bright* undermines the D.C. Circuit's analysis of section 603 of the BBA. Nothing in the court's analysis of section 603 of the BBA suggests that it found the provision ambiguous or incorrectly deferred to the agency's interpretation of it. *See id.* And contrary to the commenters' suggestion, the court fully considered any impact of section 603 of the BBA on the agency's authority under the OPPS statute, even if it characterized the section 603 argument as ''alternative''.

Comment: Commenters reiterated their objections from the CY 2019 OPPS/ASC proposed and final rules with comment period that these existing and proposed 60 percent payment cuts constitute ''adjustments'' that are subject to the budget neutrality requirements set forth in section 1833(t)(9)(B) of the Act, and urged CMS to return the OPPS to the budget neutral payment system required by the Congress.

Response: As we stated in the CY 2019 OPPS/ASC final rule with comment period (83 FR 59005), we maintain that while section 1833(t)(9)(B) of the Act does require that many changes made under the OPPS be made in a budget neutral manner, this provision does not apply to the volume control method under section 1833(t)(2)(F) of the Act as outlined through our proposals in CY 2019 and CY 2026 rulemakings. As we noted in the CY 2019 OPPS/ASC proposed rule (83 FR 37138 through 37143), unlike the wage adjustment under section 1833(t)(2)(D) of the Act and the outlier, transitional pass-through, and equitable adjustments under section 1833(t)(2)(E) of the Act, section 1833(t)(2)(F) of the Act refers to a ''method'' for controlling unnecessary increases in the volume of covered OPD services, not an adjustment. Likewise, sections 1833(t)(2)(D) and (E) of the Act also explicitly require the adjustments authorized by those paragraphs to be budget neutral, while the volume control method authority at section 1833(t)(2)(F) of the Act does not include such a requirement. Therefore, we maintain that the volume control method proposed under section 1833(t)(2)(F) of the Act is not one of the adjustments under section 1833(t)(2) of the Act that is referenced under section 1833(t)(9)(A) of the Act that must be included in the budget neutrality adjustment under section 1833(t)(9)(B) of the Act. Moreover, section 1833(t)(9)(C) of the Act specifies that if the Secretary determines under methodologies described in paragraph (2)(F) of section 1833(t) of the Act that the volume of services paid for under this subsection increased beyond amounts established through those methodologies, the Secretary may appropriately adjust the update to the conversion factor otherwise applicable in a subsequent year. We continue to interpret this provision to mean that the Secretary will have implemented a volume control method under section 1833(t)(2)(F) of the Act in a nonbudget neutral manner in the year in which the method is implemented. Further, as we stated in the CY 2019 OPPS/ASC proposed rule (83 FR 37138 through 37143), we believe that implementing a volume control method in a budget neutral manner would not appropriately reduce the overall unnecessary volume of covered OPD services, and instead would simply shift the volume within the OPPS system in the aggregate.

In addition, the D.C. Circuit has held not only that budget neutrality is not required under a volume control method, making that method budget neutral would be contrary to the purpose and intent of the Medicare statute. For example, the court emphasized that subparagraph (2)(F) of the Act ''says nothing about budget-neutrality,'' and specifically rejected the hospitals' argument that volume-control methods must be budget neutral. *AHA,* 964 F.3d at 1241. After all, it would be ''anomalous'' for the statute to require a rate cut made for purposes of volume control to be ''implemented budget-neutrally'' because, if we were required ''to redistribute the costs traceable to the provisions of unnecessary services throughout the OPPS,'' the result would be ''no net savings to Medicare,'' ''largely negating the point of reducing reimbursement in the first place''. *Id.* at 1241 through 1242. (*See* 83 FR 37142 through 37143). This common-sense interpretation is thus supported by the text and structure of the OPPS statute, as both we and the D.C. Circuit have explained.

Comment: Some commenters were particularly concerned with using only the most recent claims data as this does not address the vertical consolidation trend whereby hospitals acquired many physician offices that were later reclassified as hospital outpatient departments (OPDs). Commenters stated that only using more recent data ''bakes in'' the higher number of services provided by OPDs as a result of this consolidation resulting in more claims paid at the higher OPPS rate. Commenters suggest using a time period or a range of years prior to the

[162] *https://advisory.avalerehealth.com/insights/cms-site-neutral-payments-affect-small-share-of-spending.*

consolidation trend (for example, 2010 through 2014), as this captures the volume of service before the vertical consolidation trend. Commenters stated this timeframe provides a more appropriate baseline for analyzing the site of care and corresponding fee schedule since it better illustrates the landscape before consolidation trends resulted in shifts to care settings for the financial benefit of the hospitals. Other commenters suggested that in order for CMS to understand which services can be appropriately provided in freestanding office settings a reasonable place to begin is with understanding where procedures have been historically performed. But in doing so, commenters stated, CMS must not permit the provider consolidation dynamic that has driven the need for site neutrality to hobble CMS' efforts to address the consequences of that dynamic.

Conversely some commenters raised concerns related to the data we presented in the CY 2026 OPPS/ASC proposed rule. Specifically, commenters stated a belief that the timeframe we used to analyze the volume of drug administration services, which largely was periods of time between 2012–2024, was not appropriate because that timeframe encompasses growth trends that are not relevant to current utilization. Commenters contend that utilization prior to the implementation of section 603 of the BBA should not be evaluated because the BBA fully addressed any overutilization that may have been occurring.

Some commenters stated that their analysis contradicted our findings of volume increases for drug administration services. Commenters cited the CMS finding that there has been a 70 percent increase in the volume of chemotherapy claims billed with HCPCS code 96413 (chemotherapy administration, intravenous infusion technique; up to 1 hour, single or initial substance/drug) for services furnished in excepted PBDs between 2011 and 2023. Commenters review of claims data indicated that claims for this service in excepted, off-campus PBDs are declining. In 2020 they believe that approximately 550,000 units of this code were reported for chemotherapy administrations in excepted PBDs, and this number fell to 546,000 units in 2024. Their data analysis shows that there was not a single year in this 5-year period where excepted PBD claims for this HCPCS code have exceeded 2020 utilization.

Response: We thank the commenters for their input. Based on these comments, we have looked at a wider timeframe to determine whether it changes our conclusion that the unnecessary volume of a service has increased. OPPS spending by traditional Medicare and its beneficiaries increased 71 percent from 2012 to 2022, and spending per Medicare Part B beneficiary under the OPPS grew rapidly, at an annual rate of 6.9 percent, during this period.[163] Disregarding the growth from this time period and how it has impacted the baseline of OPPS spending would be unwise and would not account for the factors that led to this extreme and often unnecessary growth. We do not believe that it would be appropriate to only examine data from 2020 and later years as some commenters did. In our CY 2026 OPPS?ASC proposed rule analysis, we started our claims review in CY 2011 in order to examine what volume looked like prior and during the intense period of consolidation prior to the passage of the BBA of 2015 and in the subsequent years. Commenters indicated that data spanning the roll-out of section 603 of the BBA and the mid-build exception in 2017 through at least 2019 would naturally report growth arising from providers' acquisition or construction of off-campus PBDs. Rather than a reason to exclude this data, we believe fully understanding how the growth of excepted off-campus PBDs impacted the volume of drug administration services is crucial in examining unnecessary increases in the volume of outpatient services. We note that MedPAC has also used 2012 as a baseline year for their analyses.

Looking only at data from CYs 2020–2024 removes the context for the changes that were occurring in the OPPS over the prior decade. Even if volume leveled off for a particular service in recent years, we would assert that if utilization grew unnecessarily from 2011–2019 and that overutilization is built into the baseline of the OPPS services being provided in recent years, then recent year utilization still reflects unnecessary increases in volume. Stated differently, we do not believe it would matter for purposes of this provision if an increase in volume over ten years happened steadily at the same rate each year, or if the volume fluctuated over those ten years, but ended up at the same increased amount in the final year.

Looking at a wider timeframe only further supports our analysis as presented in the CY 2026 OPPS/ASC proposed rule. As we discussed earlier, we found that there has been an increase in volume of services paid through the drug administration APCs (5691–5694) over time, which would indicate that there has been migration of these services to the OPD setting. From 2011 to 2019 the volume of drug administration services paid under these APCs grew by almost 35 percent. This growth persisted even with the introduction of the PFS-equivalent rate for PBDs subject to section 603 of the BBA starting in 2017. The COVID–19 PHE did impact utilization across the OPPS, but we have seen the volume of drug administration services rebound and return to this pattern of growth and also believe that overutilization has become entrenched in the baseline of the OPPS for some services and APCs. Between 2018 and 2024 the number of beneficiaries enrolled in fee-for-service Medicare decreased by over 14 percent.[164] Since 2022, we have simultaneously seen increases in the volume of drug administration services provided in OPDs utilized per beneficiary.[165] Between 2020 and 2023 the utilization of drug administration services per beneficiary grew by over 30 percent. Meaning that while there are now fewer Medicare fee-for-service beneficiaries than there were prior to the COVID–19 PHE, each beneficiary on average is receiving more drug administration services in the OPD setting than they were prior to the COVID–19 PHE. There was also growth prior to the COVID–19 PHE. The utilization of drug administration services per beneficiary also grew by 30 percent between 2011 and 2019.

Again, as stated earlier, some HCPCS codes within the drug administration APCs have experienced significant growth. HCPCS code 96413—which describes chemotherapy administration, intravenous infusion technique; up to 1 hour, single or initial substance/drug—is the most frequently billed HCPCS code within any of the drug administration APCs at excepted PBDs. This code has seen an almost 70 percent increase in volume from 2011 to 2023.[166] In 2025, this service has a physician office payment rate of around $119 dollars and an OPPS payment rate of approximately $341. That makes the same chemotherapy infusion service 186 percent more expensive in the OPD than in the physician office. We conclude that this 70 percent increase in excepted hospital outpatient department volume over a 10-year period was at least partially driven by the payment

[165] Based on our analysis of claims data and Medicare FFS enrollment.

[166] Based on our analysis of claims data.

differential between the physician office and OPD setting. The HCPCS codes representing chemotherapy administration grew in volume by 64 percent in the OPPS between 2011 and 2023.[167] These changes and the context in which they occurred, illustrate our continued belief that shifts in the sites of service are inherently unnecessary if the beneficiary can safely receive the same services in a lower cost setting but instead receives care in a higher cost setting due to the payment incentives created by the difference in payment amounts.

Comment: Commenters also examined physician billing across from CYs 2020 to 2024 for HCPCS code 96413 and their findings indicate that approximately 1.85 million units of this service were furnished in the physician office setting in 2020, and that physician office utilization grew to 1.87 million units in 2024. Thus they conclude, over the same 5-year period, there is stable growth in physician office utilization (+0.6 percent) and stable to declining utilization of the same service in excepted PBDs (−0.6 percent). They ultimately conclude that the distribution of this service among ambulatory settings has remained stable over the past 5 years. They state that despite our emphasis on HCPCS code 96413 in the CY 2026 OPPS/ASC proposed rule, they believe that recent utilization data on HCPCS code 96413 directly undercuts CMS' assertion that there is ''unnecessary growth'' in utilization justifying the proposed payment cut.

In other cases, commenters cited data that shows growth in utilization in the physician office setting alongside more modest growth in excepted PBDs. Commenters gave the example of CPT code 96405 (chemotherapy administration; intralesional, up to and including 7 lesions) where utilization increased by approximately 156 percent in the physician office setting, but only increased by approximately 34 percent in excepted PBDs.

In their data analysis, commenters found contractions and growth in drug administration services furnished in excepted PBDs and physician offices. Commenters thus conclude that you could not support a finding of unnecessary growth in drug administration services furnished in excepted PBDs. Commenters also contend that the drug claims billed along with these drug administration codes reflect significant medical advancements and changes in treatment protocols, with new drugs being approved by the FDA and used in hospitals and physician offices for the first time during this five-year period. Where CMS states that ''increases in the volume of drug administration services provided in OPDs utilized per beneficiary'' since 2022 are an example of unnecessary utilization, commenters contend that there may be medical reasons for these changes (including new drugs and new drug regimens).

Commenters also note that the proposed payment reduction would apply to some services that are not currently furnished in excepted off-campus PBDs. Between 2020 and 2023, there were no Medicare claims for excepted PBDs for the following HCPCS codes: 37195, 90473, 95144, 95170, 96371, 96422, 96423, 96440, and G0012. Commenters state that even if a payment reduction can constitute a ''method for controlling unnecessary increases in the volume of covered OPD services'', the payment reductions cannot be applied to services with negligible utilization. Furthermore, commenters cited that some of the HCPCS codes had negligible to no utilization in the physician office setting, including HCPCS codes 96446, 96542, and C8957, which might indicate that it is not reasonable to expect that these services would be provided more often in the physician office setting but for the higher payment rate for these services in the OPPS.

Response: We thank the commenters for their input. We draw a different conclusion from the cases made above. As stated earlier, using 2020–2024 as a time frame for utilization review, even if just for comparison, would not allow us to adequately evaluate whether there has been unnecessary utilization in the OPPS. It would be difficult to fully appreciate the trends in the physician office without acknowledging the baseline for what the volume of services would have been absent the impact of consolidation. We would reason that stability in the physician market shows that the mechanisms in force are persistent and not driving care into the lower cost setting. As commenters note, the provision of these services in the physician office is stable, safe, and being done at a substantial volume. This furthers our belief that some services in the OPD are inherently unnecessary if the beneficiary can safely receive the same services in a lower cost setting but instead receives care in a higher cost setting due to the payment incentives created by the difference in payment amounts.

We do not believe that the inference that growth in utilization in the physician office setting in comparison to more modest growth in excepted PBDs indicates that there is no unnecessary utilization in the excepted PBD. Again, taking the data out of its full historical context does not give you an accurate gauge of the actual growth of that service in excepted PBDs.

As we stated in the CY 2026 OPPS/ASC proposed rule, our review of the utilization of drug administration services in excepted PBDs found increases in the volume of services over time, increases in the volume of services provided per beneficiary, and cases of significant volume growth for some individual HCPCS codes within the drug administration APC family. We believe that these changes represent unnecessary increases in the volume of covered outpatient department drug administration services and that it would be appropriate to apply our volume control method to these services.

In the CY 2026 OPPS/ASC proposed rule we discussed how we examined the twenty most frequently billed HCPCS codes in the drug administration APC family at both excepted and non-excepted off-campus PBDs. We found that twenty HCPCS codes account for over 98 percent of the volume of drug administration services in off-campus PBDs. We found that the twenty most frequently billed HCPCS codes in the drug administration APCs when provided at an off-campus PBD excepted from section 1833(t)(21) of the Act (departments that bill the modifier ''PO'' on claim lines) and off-campus PBDs that are not excepted from section 603 of the BBA (departments that bill the modifier ''PN''), are the same with slight variations in the order based on volume. We know that there is claims volume for the overwhelming majority of HCPCS codes in the drug administration APCs with both the ''PO'' and ''PN'' modifiers. There are approximately 61 HCPCS codes within the four levels of the drug administration APCs. Meaning that the remaining 41 codes account for only 2 percent of the volume of drug administration services for PBDs. We have evaluated unnecessary utilization at the APC level and found unnecessary increases in utilization. In the CY 2026 OPPS/ASC proposed rule, we noted specific HCPCS codes that experienced significant increases in volume. We believe this data supports the proposed method to control unnecessary increases in volume for all codes in the drug administration APCs.

[167] HCPCS included in the chemotherapy administration category are: 96423, 96549, 96401, 96402, 96405, 96411, 96415, 96417, 96406, 96409, 96422, 96542, 96413, 96416, 96420, 96425, 96440, 96446, 96450, G0498.

We intentionally chose to apply the volume control method for drug administration services at the APC level, rather than at the service level. While we exercised our volume control authority for the first time by applying it to a single code, G0463 (clinic visit), we believe that the most practical and efficient way to apply this method for drug administration services is to apply it to all drug administration services at the APC level. As such, even if a few less frequently used codes in those APCs are rarely utilized in either the outpatient setting or the physician office setting, that does not detract from the larger point that the drug administration services in these APCs have seen unnecessary growth in the volume of outpatient services and that it would be appropriate to apply our volume control method to the services in these APCs.

Comment: A few commenters suggested that, to control unnecessary volume increases, CMS would need to identify a necessary rate of increase for the volume of drug administration services. Absent that benchmark, commenters stated that this is payment reduction rather than a method to control volume under section 1833 (t)(2)(F) of the Act. Commenters were further concerned that CMS has excluded year-to-year monitoring of volume from the proposed policy.

Response: We disagree that we need to determine a specific increase in volume that is necessary before determining that there has been unnecessary increases in volume under section 1833(t)(2)(F) of the Act. Because the effects of site-of-service payment differentials are pervasive throughout the OPPS it would be extremely difficult, on a HCPCs or APC level, to measure what volume should have been absent that influence. Retroactively creating a benchmark would not substantively improve our efforts to measure unnecessary increases in volume. Using a benchmark could lead to similar issues as seen with the Medicare sustainable growth rate (SGR) formula that was used under the Medicare Physician Fee Schedule (MPFS). This formula set annual benchmarks for Medicare physician spending based on growth in the gross domestic product (GDP). The Congress chose to eliminate in the SGR in 2015 after multiple years where they intervened to delay cuts and provide increases to physician payments. Setting a benchmark and then retroactively holding providers to it may actually be harder on providers than simply using a volume control method to prospectively set OPPS rates for these services at a PFS equivalent rate.

We continue to believe shifts of services to the off-campus OPD setting are unnecessary if the beneficiary can safely receive the same services in a lower cost setting but instead receives care in a higher cost setting due to the payment incentives created by the difference in payment amounts. As we noted in the CY 2019 OPPS/ASC final rule with comment period (83 FR 37138 through 37143), we have developed many payment policies, such as packaging policies and comprehensive APCs, to address the rapid growth of services in the OPPS. However, these policies have not been able to control for unnecessary increases in volume that are due to site-of-service payment differentials, which create an incentive to furnish a service in the OPD that could be furnished in a lower cost setting based solely on the higher payment amount available under the OPPS. We previously made the case that the clinic visit service had experienced this shift in site-of-service. We likewise believe that drug administration services furnished in excepted off-campus PBDs are the same as drug administration services furnished in nonexcepted off-campus PBDs. We believe that applying an amount equal to the site-specific PFS payment rate for nonexcepted items and services furnished by a nonexcepted off-campus PBD (the PFS payment rate) for drug administration services, as described by APCs 5691–5694, when provided at an off-campus PBD excepted from section 1833(t)(21) of the Act, is an appropriate method to control the unnecessary increase in the volume of outpatient services. Just as we have monitored the impacts on volume for the clinic visit volume control policy, we will monitor the impacts of this policy on drug administration services.

Comment: A few commenters noted that CMS has previously acknowledged the risk that payment cuts could unintentionally increase volume. Comments cited the CY 2008 OPPS/ASC final rule (72 FR 66580), where CMS declined to adopt a sustainable growth rate (SGR) like methodology. They quoted that final rule:

''*implementing such a system could have the potentially undesirable effect of escalating service volume as payment rates stagnate and hospital costs rise, thus actually resulting in a growth in volume rather than providing an incentive to control volume. Therefore, this approach to addressing the volume growth under the OPPS could inadvertently result in the exact opposite of our desired outcome*''.

Commenters concluded that subsection 1833 (t)(2)(F) of the Act only authorizes a method for controlling unnecessary increases in volume, following CMS' logic, they stated a policy that increases volume through price reductions would not be a permissible volume-control method.

Response: As discussed above, the Medicare SGR formula was used under the Medicare (MPFS and set annual targets for Medicare physician spending based on growth in the GDP. Under the SGR, if physician spending exceeded its target in a given year, payment rates would be cut the following year, while spending that was below the target led to increased rates. The Medicare Access and CHIP Reauthorization Act of 2015 permanently eliminated the SGR formula for the PFS. In the CY 2008 OPPS/ASC rulemaking we did not propose to adopt a sustainable growth rate (SGR) like methodology for the OPPS. We were referring to the September 8, 1998 proposed rule, proposing the establishment of the OPPS (63 FR 47585), where we did consider creating a system that mirrors the SGR methodology applied to the MPFS update to control unnecessary growth in service volume. While in 1998 we may have contemplated the effects that implementing an SGR methodology might have had on the OPPS, that does not mean that we viewed that any future payment reductions would necessarily result in increases in the volume of services.

In 2008 we were concerned about the continued double digit increases in the growth in expenditures in the OPPS from CY 2001–2008. This was coupled with increases in the volume and intensity of services in that same timeframe that ranged from 3.5 percent to 10.1 percent. In 2008, we stated we were hopeful that expanded packaging and, ultimately, greater bundling under the OPPS may result in sufficient moderation of growth in volume and spending that further volume controls would not be needed. However, we noted that if spending were to continue to escalate at the current rates, even after we have exhausted our options for increased packaging and bundling, we are considering multiple options under our authority to address these issues, including the possibility of imposing external controls that could link growth in volume to reduced payments under the OPPS in the future.

As we noted in the CY 2026 OPPS/ASC proposed rule, from 2011–2019, the time of the greatest provider consolidation and growth of excepted PBDs, the mean and median annual increase in the volume and intensity of hospital outpatient services was about 5.5 percent and 5.4 percent,

respectively, from 2011 to 2019. During this time period, the estimated increase in aggregate annual hospital reimbursements incurred through Medicare Fee for Service (FFS) Part B was $28.2 billion.[168] We would contend that spending has continued to increase, especially from 2011 through 2019, and we have done exactly as we stated we would. We have considered and implemented other options under 1833(t)(2)(F) of the Act authority to address unnecessary growth.

Comment: Some commenters stated that the volume control method for clinic visits was not an effective method to control volume as their data analysis indicated that volume did not decrease. One commenter cited a study which found that only 1.5 percent of OPPS payments from 2017 through 2020 were to non-excepted PBDs as evidence that policies that align payment across sites of care do not reduce volume. Commenters opined that since the clinic visit policy did not effectively control volume increases, the drug administration policy should be abandoned. Other commenters asserted that it is not a ''method'' at all and that it addresses a purported volume increase that the Congress had already addressed under section 603 of the BBA.

Response: Our data indicates that clinic visit volume in excepted off-campus PBDs has decreased since 2021 both in absolute volume and in relative volume compared to the total of OPPS and PFS volume. Additionally, we note that it is difficult to ascertain the impact of a policy such as this without a clear counterfactual. That is to say, we cannot state what the trend of clinic visits at excepted off-campus PBDs would be outside of the existence of this policy. However, given both on-campus and non-excepted PBDs have experienced increases in volume for the clinic visit, while excepted off-campus has experienced a decrease, we believe that our clinic visit volume control method has reduced the unnecessary increases in off-campus PBDs and, likely, overall volume. As we discussed in the CY 2019 OPPS/ASC final rule with comment period, we continue to believe that section 1833(t)(2)(F) of the Act gives the Secretary broad authority to develop a method for controlling unnecessary increases in the volume of covered OPD services, including a method that controls unnecessary volume increases by removing a payment differential that is driving a site-of-service decision, and as a result, is unnecessarily increasing service volume. We believe that applying an amount equal to the site-specific PFS payment rate for nonexcepted items and services furnished by a nonexcepted off-campus PBD (the PFS payment rate) for the clinic visit service, as described by HCPCS code G0463, when provided at an off-campus PBD excepted from section 1833(t)(21) of the Act is an appropriate method to control the unnecessary increase in the volume of outpatient services. Further, we believe this method can be applied to control the unnecessary increases in the volume of drug administration services.

Comment: Some commenters raised concerns related to the use of the PFS relativity adjuster for this volume control method. Commenters indicated that it was not an appropriate unit of payment for services furnished at OPDs as the OPPS payments include far more packaged costs than similar services paid under the PFS. Specifically, commenters indicated that, because the OPPS packages costs, OPPS payment includes things other than the strict payment for the CPT/HCPCS code available under the PFS, and indicated a belief that a relativity adjuster based on a direct comparison would not be appropriate. One commenter stated that over 98.7 percent of the OPPS payment rate is for packaged services and that it would be more accurate to consider the OPPS payment for the chemotherapy administration alone as approximately $5 compared to the $119 paid to physicians' offices. One commenter noted that the estimates presented in the CY 2026 OPPS/ASC proposed rule for the relative difference between the OPPS and PFS payment rate for drug administration codes were generally lower than the 40 percent PFS equivalent payment rate and instead suggested we directly use the technical component of the PFS payment, with some exceptions for packaging.

Other commenters took issue with the overall comparison between OPPS and PFS payment rates as commenters believe they reflect fundamentally different approaches to valuing services. Commenters believe that there is no basis for substituting payment rates from one system to the other. Some commenters were concerned that the Medicare PFS payment rates are not sustainable for physicians. One commenter, a large medical association, stated that while it generally supported site neutral payments, it did not ''believe that it is possible to sustain a high-quality health care system if site neutrality is defined as shrinking all payments to the lowest amount paid in any setting''. The commenter went on to state that ''CMS should not implement site neutrality in a way that reduces payment to the lowest common denominator and should reinvest savings from lowering facility payments to other Part B services, including payments under the physician fee schedule''.

Response: We appreciate the commenters' concerns about the PFS relativity adjuster. We conducted an analysis for the CY 2026 OPPS/ASC proposed rule which indicated that the 40 percent PFS relativity adjuster was a reasonable equation of OPPS to PFS payments for the same services. This analysis included accounting for packaged services which are separately payable under the PFS. Specifically, when comparing the OPPS and PFS relative payment rates, we reduced the OPPS payment rate used for the analysis by the percentage of that payment rate which we identified as attributable to other HCPCS frequently billed on the same day which would be packaged in the APC. We are uncertain where the one commenter's assertion that 98.7 percent of the OPPS payment rate is packaged costs, our analysis indicated that the amount is generally between 0 and 50 percent based on the specific HCPCS code. Accordingly, we reduced the OPPS payment rate by the percentage attributable to packaged codes which are separately payable under the PFS for our analysis.

While there was some variation in PFS payments for different HCPCS codes (as there is variation in geometric mean costs for HCPCS codes within a single APC under the OPPS) the range of relative costs between the OPPS and the PFS overall for each of the four drug administration APCs was between 24 and 33 percent. This would indicate to us that 40 percent is a reasonable PFS equivalence factor for the purposes of our volume control method. We do not believe it would be appropriate to use the technical component of the PFS payment rate directly as we believe that accounting for frequently packaged services for each APC would be unnecessarily complex. We believe that aligning the payment rate under our volume control method with the payment rate for nonexcepted off-campus PBDs is appropriate as our data indicates that the payment rate is sufficient for off-campus PBDs to continue to provide drug administration services while removing the payment incentives that drive the unnecessary volume this policy is intended to control.

As we stated in the CY 2019 OPPS/ASC final rule with comment period (83

[168] Available in Table IV.B6 at *https://www.cms.gov/Research-Statistics-Data-and-Systems/Statistics-Trends-and-Reports/ReportsTrustFunds/Downloads/TR2019.pdf.*

FR 59005), to the extent that similar services can be safely provided in more than one setting, we do not believe it is prudent for the Medicare program to pay more for these services in one setting than another. We believe the increase in the volume of clinic visits, in particular, was due to the payment incentive that exists to provide this service in the higher cost setting. Because these services could likely be safely provided in a lower cost setting, we believed that the growth in clinic visits paid under the OPPS was unnecessary. Further, we believed that setting the OPPS payment at the PFS-equivalent rate would be an effective method to control the volume of these unnecessary services because the payment differential that is driving the site-of-service decision would be removed.

We note that the overall amount of Medicare payments to physicians and other entities made under the PFS is determined by the PFS statute, and the rates for individual services are determined based on the resources involved in furnishing these services relative to other services paid under the PFS. To the extent the commenter believes that the PFS rate for a particular service is misvalued relative to other PFS services, we encourage the commenter to nominate the service for review as a potentially misvalued service under the PFS.

Comment: One commenter discussed the Oncology Care Model and stated a belief that the model's results indicated that payment incentives would not change the volume of drug administration services.

Response: The Center for Medicare & Medicaid Innovation (CMS Innovation Center) develops payment and delivery models designed to improve the effectiveness and efficiency of specialty care. Among those specialty models was the Oncology Care Model, which aimed to provide higher quality, more highly coordinated oncology care at the same or lower cost to Medicare. Under the Oncology Care Model (OCM), physician practices entered into payment arrangements that included financial and performance accountability for episodes of care surrounding chemotherapy administration to cancer patients. CMS also partnered with commercial payers in the model. We do not believe that the structured payment incentives of the OCM serve as a reasonable comparison for the drug administration volume control policy. We believe the clinic visit volume control policy is a more reasonable direct comparison and, as discussed previously, we have strong evidence to suggest that policy did have a material impact on clinic visit volume at excepted off-campus PBDs.

Comment: We received several comments attesting to the continuing negative effects of vertical consolidation, which is the practice of hospitals acquiring physician practices. Commenters stated that the current payment differentials have fueled consolidation by hospitals and health systems, which frequently acquire independent practices to shift infusion services into higher-paying outpatient departments. Commenters believe that this consolidation is further driven by incentives in the 340B program. Between 2012 and 2024, commenters noted, the share of physicians working in a physician-owned practice declined from over 60 percent to 42 percent.[169] Commenters were concerned with the direct impact this shift has continued to have on patients and beneficiaries. Commenters believe that consolidation has led to markets across the country becoming increasingly concentrated, or dominated by a limited number of enterprises. This, they contend, has reduced competition for healthcare services and greater market share by large hospitals and health systems is associated with greater out-of-pocket costs for patients and greater costs to Federal programs, without any improvements in quality.[170] Consolidation, they stated, has been associated with a 4.9 percent increase in Medicare enrollee spending, and a 14.1 percent increase in the price of services in the commercial market. One insurer was particularly concerned about the impact of consolidation on their State's market. They noted that in their State there is a 47 percent higher use of hospital outpatient visits, on a per capita basis, compared to the U.S. average.

Response: We thank the commenters for their thoughts and share their concerns about the ongoing negative effects of vertical integration on the OPPS. Similar to clinic visits, we believe there is a correlation among the increasing volume of OPD drug administration services, vertical integration, and the higher OPPS payment rates for drug administration services.

A 2021 report by the American Medical Association found that more than 50 percent of U.S. physicians are employed by a hospital or health system, a roughly 20 percent increase from 2012.[171] The percentage of physicians in practices owned by hospitals or health systems increased from 23 to 29 percent in 2010 to 44 to 48 percent in 2018, depending on physicians' specialties.[172]

Multiple studies have found increases in prices after vertical consolidation by hospitals acquiring or sharing ownership with physician practice groups.[173] [174] [175] [176] [177] [178] A key driver of higher prices among vertically consolidated entities is a shift in the site-of-service to higher-cost settings, specifically the on-campus hospital setting or OPD where the hospital can bill for both professional and facility fees. Results from multiple studies suggest that physicians working in hospital-owned practices are more likely to refer patients to hospitals than freestanding facilities.[179] [180] Furthermore, studies have found that physicians integrated with hospitals changed their referral patterns, steering more patients to the owning hospitals.[181] [182] Results from one study also suggest that those owning hospitals are more likely to be higher-cost, less convenient, and lower-quality options.[183]

Similar to the studies of the effect of vertical consolidation on price, multiple studies have found increases in spending associated with vertical consolidation.[184] [185] [186] [187] [188] [189] [190] [191] [192] One study found higher Medicare expenditures for physicians working at acquired practices and for acquiring hospitals following consolidation.[193] Another study found that physicians who primarily practice at hospitals had higher Medicare reimbursement amounts.[194] There continues to be a link between integration and increased costs. Coupling the increases in integration with the migration and growth of drug administration services leads us to believe that the growth of drug administration services in the OPPS represents unnecessary utilization. As we discuss below, we believe that the 340B program has added an additional incentive, outside of OPPS payment rates, for hospitals to acquire physician office practices and shift drug administration services from the lower cost physician office setting to the higher cost OPD.

Comment: Several commenters suggested that drug administration services in particular have experienced shifts in the site-of-service and unnecessary increases in volume due in part to the combination of vertical integration and the 340B program. Commenters asserted that hospital-physician vertical integration is not just fueled by the payment incentives that exist between the two settings. Consolidation, commenters stated, is further driven by incentives in the 340B program, where hospitals profit by acquiring physician offices and converting them into PBDs. Commenters cited studies that found that hospitals newly participating in the 340B program shifted the site of cancer drug administration to OPDs and increased spending on other cancer care.[195] Commenters stated that the shift in the delivery of chemotherapy drugs to outpatient settings also implicates the 340B Drug Pricing program and potential interactions it may have with this proposed policy. This commenter noted a study, which currently is under peer review, that found hospitals newly participating in 340B, compared to non-participating hospitals, led to a higher volume of drug administration services in off-campus OPDs, even though they were subject to site-neutral payments. This could indicate that 340B participation offers hospitals an additional incentive to increase drug administration services at off-campus OPDs even when site-neutral payment is in place.

One commenter stated that 340B eligibility should be prohibited for future off-campus PBDs. This commenter explained that many 340B hospitals have purchased physician practices, retained their pre-existing off-site locations (often even the name of the practice), and commenced providing drug administration services at these ''child sites'' or off-campus outpatient facilities, which are then eligible for 340B drug discounts from manufacturers. This, the commenter explains, generates revenue for the hospital but does not necessarily benefit patients. They conclude that just as the Congress has closed the loophole for new off-campus PBDs with respect to Medicare reimbursement, it should also close the loophole that allows these off-campus outpatient facilities to benefit from 340B drug pricing—a major driver of hospital acquisition of physician practices and infusion clinics. Specifically, they recommend that any future acquisitions of physician practices by a 340B eligible hospital be ineligible for the 340B program if they continue to treat patients in an off-campus facility that is the same location where the practice provided care prior to the acquisition.

Response: We thank the commenters for their input. The 340B Drug Pricing Program requires pharmaceutical manufacturers to sell outpatient prescription drugs to participating health care facilities at discounted prices. Facilities that participate in the 340B program are hospitals, clinics, and other providers of health care services as well as other organizations that purchase drugs, such as those affiliated with State and local governments. About 90 percent of health care facilities that participate in the 340B program also participate in the Prime Vendor Program (PVP). Through that program, the Health Resources and Services Administration contracts with an external organization, known as the prime vendor, to support 340B operations. These off-site outpatient clinics are often off-campus provide-based departments.

Commenters mainly suggest statutory changes for Congress. They do, however, raise that policies like the 340B program could be contributing to growth in the volume of drug administration services. Our initial review revealed studies that suggest that the 340B program shifted the site of cancer drug administration to OPDs and increased spending on other cancer care.[196] But neither that study nor commenters suggest that the 340B program is responsible for the entire shift in volume from physician offices to OPDs. Instead, this information suggests at most that for drug administration services, the payment incentives might be layered. We address in this rule the incentive to shift volume away from physician practices and into hospital OPDs for drug administration services that could be safely provided in either setting based just on the differences between PFS and OPPS payment for drug administration services. Concerns that the 340B program might further incentivize an additional shift in volume away from physicians practices and towards more expensive hospital OPDs are outside the scope of this rulemaking and would need to be considered in future rulemaking.

Comment: One commenter noted a possible error in CMS' calculation of the estimated effect of the proposed drug administration policy. Commenters stated that they believe there may have been in error in the savings shown in Table 111 of the CY 2026 OPPS/ASC proposed rule. This table shows the estimated annual and 10-year impacts of the proposed drug administration services policy. In particular, commenters were unable to understand the substantial savings that accrue to the Part B Trust Fund for 2027 and future years.

Response: Beginning in 2027, the savings from this policy begin to flow into the baseline for Medicare Advantage rates, thus resulting in a significant increase in savings for 2027 compared to 2026. For 2026, the Medicare Advantage rates had already been calculated at the time of the CY 2026 OPPS/ASC proposed rule and thus the 2026 Medicare Advantage rates are not impacted by this proposed policy.

Comment: Several commenters asserted that CMS fails to consider other explanations for increases in the volume of drug administration services in PBDs.

Commenters disagreed that that higher payments for drug administration services under the OPPS are incentivizing hospital acquisition of independent physician offices and, therefore, leading to an ''unnecessary increase in the volume of services''. Commenters offered that when hospitals acquire independent physician offices, it is not because there is a financial incentive to do so, but is instead because physician practices are failing. Commenters placed the blame on poor payer mix, increasing regulatory and administrative burden, and declines in payment. Commenters also believe disproportionate attention has been placed on hospitals' acquisition of physician practices. They note that other entities, such as commercial insurers and private equity have invested heavily in physician practice acquisitions. Commenters cite one study that contends that private equity, physician groups, and health insurers, acquired the vast majority of physician practices from 2019 to 2023, while hospitals and health systems accounted for only 6 percent of acquisitions during this period.

Response: As discussed earlier in this section and in the CY 2019 OPPS/ASC final rule with comment period, we continue to believe there is sufficient evidence that consolidation and the payment disparity between the OPPS and PFS rates has driven unnecessary utilization in the OPPS. Hospitals did, in large quantities, acquire physician practices and convert them into PBDs. A financial incentive to make these conversions did exist. While physician practices may be acquired by private equity or commercial insurers, only hospitals are able to move payments to the practice from the PFS to the OPPS as a result of the acquisition. The OPPS was intended to pay for services provided in the hospital outpatient setting, it has no mandate to subsidize care or the cost of providing that care as a result of broader economic forces or the perceived inadequacy of other forms of payment.

We have seen providers react to the financial incentives created by these payment differentials. In January 2019, we began the phase-in of our volume control method for the clinic visit (G0463) and began paying the PFS equivalent rate to excepted PBDs for this service. Non-excepted PBDs were already being paid at the PFS equivalent rate for this service. We found that between 2018–2024 the volume of clinic visit services provided in excepted PBDs billing with modifier ''PO'' (excluding rural SCHs) decreased by almost 27 percent. This indicates to us that our volume control method was successful and can address unnecessary increases in the volume of outpatient services.

Comment: Commenters stated that CMS inappropriately equates drug administration services provided in OPDs with what they described as less comprehensive and complex care provided in freestanding physician offices. Commenters explained that hospital and health system costs are higher than physician office costs because hospitals invest significant resources to meet the stricter regulatory requirements and safety standards to which they are subject. Commenters contend that the factors below contribute to the increased operating costs for off-campus PBDs compared to physician offices:

- Standby services and emergency care.
- Comprehensive staff and equipment.
- Licensing, accreditation regulatory requirements.
- Drug acquisition and storage.
- Complex patient care.

Therefore, they contend that such care is not equivalent, and current OPPS payment rates appropriately account for these significant differences.

Commenters cited specific measures that hospitals must take to ensure that medications are prepared and administered safely while also providing important care coordination services for their patients. Commenters noted that hospitals must take steps to ensure that a licensed pharmacist supervises drug preparation, rooms are cleaned with positive air pressure to prevent microbial contamination, and employees are protected from exposure to hazardous drugs. In addition they note that hospitals must remain in compliance with important safety standards. Commenters also highlighted the different requirements for safe preparation, administration, care coordination, and oversight that applies to hospitals and physician offices who administer drugs.

Commenters stressed that hospitals and health systems invest significant resources to provide essential benefits and advanced levels of healthcare to their communities. They note hospitals must cover their costs through direct patient care revenue and that OPPS payment rates must be sufficient to support the higher standards of care that CMS and other regulators require to be met in hospital-based settings. Commenters state that these obligations incur additional costs that are not reflected in the MPFS rate, making site-neutral payments inequitable and unsustainable.

Response: We appreciate that some off-campus hospitals outpatient departments sometimes incur costs that physician offices do not. But the issue we are addressing here is whether the difference between OPPS payment rates and PFS payment rates for drug administration services distorts the market and incentivizes providers to shift volume to the higher-paying setting unnecessarily. We note again that we found that drug administration services were not just paid more in the OPD setting, but that the same services were paid 200–300 percent higher under the OPPS than under the PFS. We would note that aspects of the OPD setting that the commenters identify—standby and emergency services; comprehensive staff and equipment; licensing, accreditation regulatory requirements; drug acquisition and storage; and complex patient care—do not change the fact that a specific drug administration service provided in an off-campus provider-based department of a hospital is clinically similar to the provision of that same drug administration service when provided in a physician office. We believe that these drug administration services are safe to perform in the physician office setting and that physician offices also incur costs to adhere to regulatory and safety standards and ensure that they are fully equipped to provide drug administration services. While some hospital off-campus hospital outpatient departments may have additional costs that physician offices do not, we believe that hospitals also have some efficiencies physician offices do not, such as greater purchasing power than physician offices, and likely are able to achieve cost savings through those efficiencies that may offset some of the additional costs identified by commenters. And we do not agree that because hospitals might use profits stemming from increases in the volume of drug administration services to indirectly subsidize other activities that this renders the increase in volume in drug administration services necessary.

Comment: Commenters stated that CMS failed to consider that OPDs are more likely to serve Medicare patients who are sicker, more clinically complex, and more likely to be disabled or living in poorer, rural communities than patients treated in independent physician offices.

Commenters cited two studies which were prepared for the American Hospital Association. The first study commenters cited stated that when comparing beneficiaries treated in OPDs

to beneficiaries treated in independent physician offices, beneficiaries receiving care in OPDs are:

- 54 percent more likely to be under 65 and disabled.
- 60 percent more likely to reside in a rural county.
- 61 percent more likely to be dually eligible for Medicare and Medicaid.
- 67 percent more likely to have multiple serious chronic conditions, including heart disease, diabetes, and cancer.
- More likely to have recently used hospital care, including:

++ 73 percent more likely to have prior emergency department visits.

++ 114 percent more likely to have prior inpatient hospitalizations.

The second study cited by commenters compared beneficiaries with cancer treated in OPDs to beneficiaries with cancer treated in physician offices. This study concluded that beneficiaries with cancer receiving care in OPDs are:

- 131 percent more likely to be under 65 and disabled,
- 75 percent more likely to reside in a rural county,
- 125 percent more likely to be dually eligible for Medicare and Medicaid,
- 63 percent more likely to have multiple serious chronic conditions, and
- More likely to have recently used hospital care, including:

++ 63 percent more likely to have prior emergency department visit.

++ 113 percent more likely to have prior inpatient hospitalizations.

Commenters assert that these sicker beneficiaries, who they note are more commonly treated in OPDs, require a greater level of care. Therefore, commenters stated, that to the extent that these differences result in variations in the cost of care, site-neutral payments would have adverse effects on patient access to care.

Response: We appreciate that OPDs serve unique patient populations and provide services to medically complex beneficiaries, however the data provided by the commenter does not demonstrate how these factors necessitate a higher payment for all drug administration services provided in OPDs. While commenters indicate that these patients are more frequently treated in OPDs, they do not show how OPDs alone are clinically capable of treating complex patients or how physician offices would be unequipped to safely treat these same beneficiaries. As we stated in the CY 2019 OPPS/ASC final rule with comment period, we continue to believe shifts in the sites of service described in the preceding paragraphs are inherently unnecessary if the beneficiary can safely receive the same services in a lower cost setting but instead receives care in a higher cost setting due to the payment incentives created by the difference in payment amounts. Further, the OPPS contains mechanisms to pay providers for complex care. Hospitals can receive outlier payments to help hospitals mitigate financial risks associated with complex and costly procedures that exceed the normal payment amount. We also use complexity adjustments to provide increased payment for certain comprehensive services.

Comment: Commenters state that CMS fails to provide any deference to physician's judgment as to the clinical necessity of the OPD setting. Commenters explained that our discussion of the proposed payment reduction for chemotherapy and other drug administration services furnished in excepted, off-campus PBDs too heavily equates outpatient services furnished in physicians' offices and those furnished in hospital outpatient departments.

Commenters stated that aligning payment would treat an OPD and a physician's office as virtually interchangeable. This approach, commenters stated, fails to acknowledge the difference in the resources and level of care offered by hospital outpatient departments and the variability in the acuity and needs of patients undergoing chemotherapy or other drug administrations represented by these codes.

Commenters contend that there are certain services that cannot be furnished in a physician's office, as demonstrated by the fact that there is no non-facility payment rate under the PFS for those services, and there are instances where a physician, in his or her judgment, would determine that a hospital outpatient department, not a physician's office, is the appropriate setting for a particular patient. This decision may be based on the patient's needs, the presence of comorbidities, or a desire for the resources available in an outpatient department. Commenters stated that with respect to drug administration services more specifically, a physician may refer a patient to the hospital for a particular infusion or other drug administration because of the acquisition cost of the drugs, the equipment needed to safely store and mix the drugs, and the inherent danger and complexity that the handling and mixing of chemotherapy drugs poses to the patient and staff.

Response: We thank the commenters for their input; however we believe that payment should have no influence on what setting of care a physician decides is most appropriate for their patient. That decision should be based on the medical needs of the patient. Our proposed policy does not prevent beneficiaries from receiving these services in an OPD if it is medically necessary. Studies examining the role of vertical integration on physicians' choice of care setting show that physicians are much more likely to admit a given patient to their acquiring hospital and that these same hospitals tend to be higher cost, less convenient, and lower quality than nearby options—suggesting negative patient welfare effects.[197] We are simply removing an incentive that unnecessarily increases outpatient volume for drug administration services. Across the OPPS we are finalizing policies, like the elimination of the Inpatient Only List and changes to the Ambulatory Surgical Center Covered Procedures List, to empower physicians to have the ultimate say in what site of service is best for their patients.

Comment: Some commenters were concerned about the financial impact this proposal would have on providers. This reduction, commenters stated, threatens the financial viability of hospitals, particularly those serving underserved communities. Commenters stated that CMS should monitor the impact of this policy on hospitals and the availability of impacted services and develop additional exemption processes if needed.

Response: We appreciate commenters concerns about the financial viability of hospitals and their ability to serve vulnerable populations. As discussed below, we are finalizing our proposal to exempt rural Sole Community Hospitals from this policy as we have previously determined that rural Sole Community Hospitals have higher costs than other outpatient hospitals. We will continue to monitor the effect of this change in Medicare payment policy, including the volume of these types of OPD services, in the future and may revisit this policy in future rulemaking.

Comment: We received several comments suggesting that CMS should phase-in this policy over multiple years and not implement the full payment reduction in CY 2026. Commenters suggested that this would be consistent with the precedent for clinic visit.

Response: While we did phase in the clinic visit payment reduction over 2 years, we do not believe that is necessary for drug administration services. At the time we stated we

[197] *https://doi.org/10.1016/j.jhealeco.2016.08.006.*

would use a phase-in to balance the immediate need to address the unnecessary increases in the volume of clinic visits with providers' need for time to adjust to these payment changes. The clinic visit is the most frequently billed service in the OPPS and that weighed heavily in our decision to phase in the implementation of this policy. We believe that the provider community is capable of adapting to the change in payment for drug administration services, which is smaller in magnitude than the clinic visit payment reduction and, as a result, we do not believe that a phase-in is necessary.

After consideration of the public comments we received, we are finalizing our proposal to use our authority under section 1833(t)(2)(F) of the Act to apply an amount equal to the site-specific PFS payment rate for nonexcepted items and services furnished by a nonexcepted off-campus PBD (the PFS payment rate) for HCPCs codes assigned to the drug administration services APCs, when provided at an off-campus PBD excepted from section 1833(t)(21) of the Act (departments that bill the modifier ''PO'' on claim lines) without modification. In addition, we are finalizing our proposal to implement this policy in a nonbudget neutral manner without modification. We will monitor the impacts of this policy to ensure that beneficiaries continue to have access to quality care.

7. Request for Information: Expanding the Method To Control for Unnecessary Increases in the Volume of Covered OPD Services to On-Campus Clinic Visits

As discussed above, we finalized a method to control unnecessary increases in the volume of covered OPD services under section 1833(t)(2)(F) of the Act in the CY 2019 OPPS/ASC final rule with comment period. This method was to pay the PFS-equivalent payment rate for clinic visit services furnished by excepted off-campus PBDs, removing the payment incentive to furnish clinic visit services in these PBDs. In the above discussion, we note that the volume of covered OPD services is still unnecessarily high for other services, and we proposed a similar policy for drug administration services furnished by excepted off-campus PBDs. For the reasons explained above, we believe that drug administration is the next most appropriate service to include in our method for volume at excepted off-campus PBDs. However, we recognized that the clinic visit is still the most utilized service across the OPPS and over 60 percent of clinic visits furnished under the OPPS are furnished on-campus. These on-campus clinic visits are not impacted by the existing volume control policy. Given the volume for clinic visits is so significant, we requested information on whether it would be appropriate to address unnecessary increases in the volume of covered OPD services by expanding the method to control unnecessary increases in volume to on-campus clinic visits. We requested information on the potential impact of a policy to pay the PFS-equivalent rate of 40 percent of the OPPS rate for clinic visit services furnished in on-campus OPDs. We noted that we intended to use the responses to this request to inform future rulemaking. Specifically, we requested feedback on the following topics:

- Given clinic visits can safely be performed in other, lower cost settings, to what extend are clinic visits performed at OPDs ''necessary'' or ''unnecessary''? Is it appropriate to include on-campus clinic visits when considering how to address unnecessary volume increases at OPDs? How would commenters suggest that CMS could identify which clinic visits may be necessary to be provided on-campus at an OPD? Are there such clinic visits?
- What would be the impact on providers of such a policy? Would any category of hospital be impacted more than others, for example, those in rural areas? Would such a policy result in lower on-campus OPD volume for clinic visits?
- What would be the impact on beneficiaries of such a policy? To what extent would removing any payment incentive from site-of-service determination provide beneficiaries with greater access at sites other than on-campus? To what extent would lower payments for on-campus clinic visits reduce beneficiary access at on-campus OPDs? To what extent would lower co-payments for on-campus clinic visits improve beneficiary access by reducing cost as a potential barrier to care?
- Are there additional costs associated with on-campus clinic visits? If there are additional costs associated with on-campus clinic visits, to what extent could these clinic visits be furnished in a lower-cost setting, for example an off-campus PBD or a physician's office?
- Rural SCHs are excluded from the off-campus clinic visit policy. Should rural SCHs be excluded from any similar on-campus policy? Should any other type of hospital be excluded? Are there any types of hospitals where clinic visits would be more likely to represent ''necessary'' volume despite being able to be furnished in a lower-cost setting?

We thank commenters for their detailed comments regarding expanding the method to control for unnecessary increases in the volume of covered OPD services. We received a range of comments on expanding the method to the on-campus setting for clinic visits, imagining without contrast in off-campus PBDs, and other services that may have experienced unnecessary growth. We intend to take these comments into consideration as we develop our proposals for future rulemaking.

8. Exemption for Rural Sole Community Hospitals

We proposed to expand our method to control unnecessary increases in the volume of covered OPD services by paying a PFS-equivalent payment rate for drug administration services furnished in excepted off-campus PBDs. As discussed earlier in this section, we believe that this policy is an appropriate method for controlling unnecessary volume of these drug administration services in excepted off-campus PBDs because beneficiaries can generally safely receive these same services in a lower cost setting but instead receive care in a higher cost setting due to payment incentives. In these cases, we explained that, similar to the clinic visit policy established in the CY 2019 OPPS/ASC final rule with comment period (83 FR 37142), to the extent similar services can be safely provided in more than one setting, we do not believe it is prudent for the Medicare program to pay more for these services in one setting than another. We continue to believe the difference in payment for these services is a significant factor in the shift in services from the physician's office setting to the hospital outpatient department.

In the CY 2023 OPPS/ASC final rule with comment period (87 FR 72047 through 72051), we stated that we believe that the volume of the clinic visit service in PBDs of rural Sole Community Hospitals (SCHs) has been driven by factors other than the payment differential for that service. In that rule, we finalized an exemption to our clinic visit volume control method and to instead pay the full OPPS payment rate, rather than the PFS-equivalent rate, when the clinic visit is furnished in excepted PBDs. In that rule, we explained that rural SCHs have historically received special payment treatment to account for their higher costs and the disproportionately harmful impact that payment reductions could have on them. Because we

proposed a volume control payment policy for drug administration services, we have additionally considered whether a similar policy for rural SCHs or other provider types would be appropriate.

a. Special Payment Treatment for Rural SCHs

Across the various Medicare payment systems, CMS has established a number of special payment provisions for rural providers to ensure access to high quality care for beneficiaries in rural areas. CMS administers five statutory hospital payment designations in which rural or isolated hospitals that meet specified eligibility criteria receive higher reimbursement for hospital services than they otherwise would receive under Medicare's standard payment methodologies. A rural hospital may qualify as a Critical Access Hospital (CAHs),[198] Sole Community Hospital (SCH),[199] Rural Emergency Hospital (REH),[200] or Medicare Dependent Hospital [201]—each of which has different eligibility criteria and payment methodologies. With the exception of CAHs, rural hospitals may also qualify as Low Volume Hospitals [202] and Rural Referral Centers (RRCs),[203] which qualify these hospitals for additional payments or exemptions. Not all rural or isolated hospitals receive special payment treatment under the OPPS. For instance, CAHs are not paid under the OPPS and are reimbursed at 101 percent of reasonable costs for outpatient services. PBDs of CAHs are not subject to section 603 of the BBA.

Rural SCHs are a hospital type that has received special payment treatment under the OPPS to account for their higher costs and the disproportionately harmful impact that payment reductions could have on them. In the CY 2006 OPPS final rule with comment period (70 FR 68556 through 68561), we finalized a payment increase for rural SCHs of 7.1 percent for all services and procedures paid under the OPPS, excluding separately payable drugs and biologicals, items paid at charges reduced to costs, and devices paid under the pass-through payment policy. This policy was adopted under section 1833(t)(13)(B) of the Act, which required the Secretary, by January 1, 2006, to provide for an appropriate adjustment under paragraph (t)(2)(E) to reflect the higher costs of hospitals in rural areas if the Secretary determined, pursuant to a study required by section 1833(t)(13)(A) of the Act, that the costs to rural hospitals by APC exceeded those costs for hospitals in urban areas. Our analysis revealed that rural SCHs had significantly higher costs per unit than urban hospitals. We have continued to adjust payments for rural SCHs by 7.1 percent each year since 2006. As discussed in section II.E. of this final rule with comment period, for CY 2026 we proposed to continue the current policy of utilizing a 7.1 percent payment adjustment for rural SCHs.

As noted above, in the CY 2023 OPPS/ASC final rule with comment period we finalized an exemption to our policy to pay the PFS-equivalent rate for the clinic visit service at excepted off-campus PBDs to control unnecessary increases in the volume of covered OPD services. Commenters were generally supportive of this proposal and noted that rural SCHs are typically the chief, if not sole, source of community outpatient care for rural residents and opined that this exemption would be vital to ensuring continued access to the care they need. Some commenters stated that the exemption should be extended to other types of hospitals, including urban SCHs. In that rule, we explained that our analysis did not find that urban SCHs had the additional resource costs for covered outpatient department services that rural SCHs have, and only finalized applying the clinic visit policy exemption to rural SCHs.

b. Utilization of Drug Administration Services in Off-Campus Provider-Based Departments of Rurals SCHs

Earlier in this section, where we proposed the volume control method policy for drug administration services, we stated that to the extent there are lower-cost sites of service available, beneficiaries and the physicians treating them should be able to choose the appropriate care setting and not be encouraged to receive or provide care in settings for which payment rates are higher solely for financial reasons. However, many rural providers, and rural SCHs in particular, are often the only source of care in their communities,[204] which means beneficiaries and providers are not choosing between a higher paying off-campus PBD of a hospital and a lower paying physicians' office setting. The closure of inpatient departments of hospitals and the shortage of primary care providers in rural areas likely further drives utilization to off-campus PBDs in areas where rural SCHs are located.

We have reviewed utilization data for drug administration services at rural SCHs and have not found strong evidence that drug administration services are being utilized at an unnecessary volume at excepted off-campus PBDs of rural SCHs. As with clinic visits, we do not believe that rural SCH site-of-service decisions for drug administration are being made solely based on payment rates. Rural areas often experience lower availability of health care professionals and hospitals than urban areas.[205] Hospital closures in rural communities are associated with lower access to health care and worse health outcomes.[206] Access to outpatient services, particularly in rural areas, is vital to keeping beneficiaries from being admitted as an inpatient because beneficiaries in rural settings face unique challenges that impact their health. In the CY 2023 OPPS/ASC final rule with comment period, we explained that we believe that exempting rural SCHs from the clinic visit policy would help to maintain access to care in rural areas by ensuring rural providers are paid for clinic visit services provided at off-campus PBDs at rates comparable to those paid at on-campus departments (87 FR 72049). We believe that a similar exemption is warranted for the drug administration policy for similar reasons. Specifically, we proposed to exempt rural SCHs from payment of the site-specific PFS-equivalent payment for drug administration services, as described by APC family 569X, when furnished at an off-campus PBD exempted from section 1833(t)(21) of the Act (departments that bill the modifier ''PO'' on claim lines). Under this proposed policy, a rural SCH would continue to bill services in APC family 569X with the ''PO'' modifier for CY 2026 and the payment rate for such services would continue be the full OPPS payment without the PFS relativity adjustment.

This exemption results in higher payments to excepted off-campus PBDs of rural SCHs compared to if it were not finalized and rural SCHs were subject to the proposed volume control method. The proposed CY 2026 OPPS full payment rates for drug administration APCs 5691, 5692, 5693, and 5694 were $47.83, $74.57, $216.49, $341.52,

[206] Mills CA, Yeager VA, Unroe KT, Holmes A, Blackburn J. The impact of rural general hospital closures on communities—A systematic review of the literature. *J Rural Health.* 2024;40:238–248. *https://doi.org/10.1111/jrh.12810.*

respectively. The PFS-equivalent rates for these APCs, calculated by applying the 40 percent relativity adjuster to the OPPS payment rates for rural SCHs, would have been $19.13, $29.83, $86.60, $136.61, respectively. By exempting rural SCHs, the Medicare payments for these services would remain at the OPPS level. We estimate that exempting rural SCHs from the method to control unnecessary volume of drug administration services is a difference of approximately $16 million for CY 2026. Per treatment, exempting rural SCHs from this policy results in beneficiary cost sharing remaining between $5.74 and $40.98 higher than it would be should we not finalize this exemption, depending on the service. We note, however, that these figures do not represent increases in costs to Medicare or the beneficiaries above the current policy, as our proposed exemption would maintain current payment rates at excepted off-campus PBDs of rural SCHs of 107.1 percent of the OPPS payment rate for these services. These figures were solely for the purpose of comparing potential savings should we implement a method to control unnecessary volume in drug administration services without such an exemption.

We invited comments on all aspects of the proposed exemption for rural SCHs from the method to control unnecessary volume of drug administration services. Specifically, we requested comments on whether such an exemption is appropriate for rural SCHs, what the impact on SCHs would be should we finalize the method without an exemption for rural SCHs, and whether we should consider any other hospital types for an exemption to either of the policies to control unnecessary volume of outpatient services at off-campus PBDs. Additionally, we requested comments on whether the current exemption for rural SCHs from the method to control unnecessary volume of clinic visit services remains appropriate.

We received public comments on these proposals. The following is a summary of the comments we received and our responses.

Comment: The majority of commenters supported our proposal to exempt rural Sole Community Hospitals (rural SCHs) from payment of the site-specific Medicare PFS-equivalent payment for any HCPCs codes assigned to the drug administration services APCs, when furnished at an off-campus PBD excepted from section 1833(t)(21) of the Act (departments that bill the modifier ''PO'' on claim lines). Several commenters opposed the policy in general but stated that should CMS finalize the volume control method for drug administration services, we should also finalize the proposed exemption for rural SCHs. Some commenters opined on the appropriateness of this exemption and noted that rural SCHs have higher costs and are important for access in rural areas. One commenter discussed urban-rural reclassifications and supported reclassified-rural hospitals receiving the exemption. Only one commenter expressed explicit opposition to the exemption for rural SCHs; this commenter stated that any exemptions to the volume control methodology should be targeted for specific, independent hospitals.

Response: We thank the commenters for their support of the exemption for rural SCHs. As discussed in the CY 2026 OPPS/ASC proposed rule, our historical analysis indicated that rural SCHs have higher costs and we agree that their financial health is vital to ensure continued access to care in rural areas. We acknowledge the nuanced perspective that many commenters took in supporting the proposed exemption while disagreeing with the volume control methodology overall. We appreciate the discussion of reclassifications in regard to this policy and agree that any exemption for rural SCHs would include those SCHs that have reclassified as rural, consistent with our rural SCH exception for the clinic visit volume control method. While we appreciate the one commenter's opinion that any exemption should be targeted, we believe the rural SCH designation generally indicates a hospital has additional costs and is vital for access in rural areas. We disagree with the commenters that exemptions should only be made for independent hospitals, as we believe that rural SCHs, which can be part of a larger chain, also face similarly heightened costs, according to our analysis. We intend to continue to monitor costs at rural SCHs and to ensure that this exemption continues to be warranted both for the clinic visit and drug administration policies.

Comment: Several commenters suggested additional types of hospitals for which they believed further exemptions would be warranted. Such hospital types included urban SCHs, Medicare Dependent Hospitals (MDHs), urban and rural safety-net hospitals, REHs, FQHCs, and all rural hospitals. One commenter noted that there were very few urban SCHs which were not reclassified as rural. Some commenters discussed how hospitals other than rural SCHs can be important for access, generally in rural areas. A few commenters requested a new CMS designation for essential hospitals and requested we except those from the volume control method.

Response: As we discussed in the CY 2026 OPPS/ASC proposed rule, our historical analysis has found that rural SCHs have higher costs which we believe is appropriate to consider when developing a payment policy such as this. Rural SCHs have historically received special treatment under the OPPS due to these higher costs. As we stated in the CY 2023 OPPS/ASC final rule with comment period (87 FR 72047 through 72051) we believe exempting rural SCHs, which have demonstrated additional resource costs, is appropriate to ensure these hospitals can remain open to serve the beneficiaries who rely on them for their care. We share commenters' concerns about the financial difficulties associated with maintaining access to care in medically vulnerable communities. However, in each of these cases, the Congress has not previously determined that any of these hospital types required additional payments for outpatient services.

We proposed a narrow exception to our clinic visit policy largely based upon the historical treatment and documented additional resource costs of rural SCHs under the OPPS. We are only excepting rural SCHs because we continue to believe in the underlying principles of the clinic visit policy—that same rationale continues to justify application of the volume control method for clinic visits to other services. These same principles apply to the exemption for drug administration services. Where the difference in payment is leading to unnecessary increases in the volume of covered outpatient department services, we remain concerned that this shift in care setting increases beneficiary cost-sharing liability because Medicare payment rates for the same or similar services are generally higher in hospital outpatient departments than in physician offices. Further, we do not believe that commenters provided sufficient reasoning or data to show that the other provider types suggested (Medicare Dependent Hospitals, Urban Sole Community Hospitals, Rural Referral Centers, Medicaid DSH, Medicare DSH, and Low-Volume Adjustment Hospitals) demonstrate the additional resource costs that rural SCHs do and should therefore also be exempted from this OPPS payment policy. We share commenters' concerns about maintaining access to care in urban and rural settings and enhancing access to care in medically vulnerable communities. We will continue to study

access and cost to see if further exemptions to the volume control policy are appropriate in the future.

Comment: Some commenters suggested other criteria for exemptions which would not be based on hospital type. Several commenters discussed certain drug administration services which they believe should qualify for an exemption, such as biologics which were only given to high acuity patients or cell and gene therapy. One commenter suggested that CMS should exempt drug administration services associated with oncology, immunotherapy, and other high-acuity treatments where they contend immediate access to hospital resources is essential. A different commenter requested exemptions for high-risk patients. Another commenter suggested the volume control methodology should be targeted only for hospitals which do not maintain the same comprehensive services as hospital outpatient departments.

Response: We appreciate the thoughtful suggestions and will consider them for potential future rulemaking. We are concerned that exempting a small subset of services from the volume control methodology could inadvertently incentivize an increase in the provision of those services in the higher cost setting of care. Furthermore, there is no clear clinical justification for exempting certain services while leaving others non-exempted, and we believe it would be most transparent to propose any service-specific exceptions through notice and comment rulemaking. As for the other suggestions related to high risk patients and low service hospitals, we are not certain of how we would identify such patients or hospitals; however, we would appreciate further input these suggestions in the future.

Comment: Several commenters discussed the impact of the proposed method to control volume for drug administration on cancer and children's hospitals. Commenters highlighted that payment for cancer hospitals is based on a payment-to-cost ratio and that lowering payment would indirectly impact these cancer hospitals.

Response: We appreciate the discussion of the impact of this policy on cancer and children's hospitals. We note that any reduced initial OPPS payment to PPS-exempt cancer hospitals as a result of this policy would lower a PPS-exempt cancer hospital's payment-to-cost ratio and would result is an offsetting increased adjustment at cost report settlement. We believe that the impact of this policy on the target payment-to-cost ratio, by lowering non-cancer hospital's payment-to-cost ratios, would be relatively small and that, as we believe the reduced payment for non-cancer hospitals for these services is appropriate, likewise the lower target payment-to-cost ratio would be appropriate.

After consideration of public comments we received, we are finalizing our proposal to exempt rural Sole Community Hospitals (rural SCHs) from payment of the site-specific Medicare PFS-equivalent payment for any HCPCs codes assigned to the drug administration services APCs, when furnished at an off-campus PBD excepted from section 1833(t)(21) of the Act (departments that bill the modifier ''PO'' on claim lines). We believe that exempting rural SCHs from the volume control policy for drug administration services will help to maintain access to care in rural areas by ensuring rural providers are paid for drug administration services provided at off-campus PBDs at same rate paid when the service is furnished in on-campus departments. Finalizing this policy also aligns with the special payment treatment rural SCHs receive under the OPPS. We will continue to monitor the effects of this change in Medicare payment policy.

B. Request for Information: Adjusting Payment Under the OPPS for Services Predominately Performed in the Ambulatory Surgical Center or Physician Office Settings

In general, Medicare payments to hospital outpatient departments under the Outpatient Prospective Payment System (OPPS) are higher than payments made to ASCs under the ASC payment system or to physician offices under the Physician Fee Schedule (PFS) for the same services. As discussed in section X.A. of this final rule with comment period, CMS has taken steps to address payment disparities between hospital outpatient departments and the physician office setting. While we believe that our regulatory efforts to control for unnecessary utilization in Medicare payments for OPD services has had a positive impact, there is evidence of continued growth in the volume of OPD services driven by site-of-service payment differentials. Building on the CY 2019 OPPS/ASC final rule with comment period policy for clinic visits, in section X.A. of this final rule with comment period we are finalizing our proposal to pay off-campus PBDs otherwise excepted under section 603 of the BBA at the equivalent of the site-specific PFS rate for drug administration services.

While we have implemented volume control policies to pay for certain hospital outpatient clinic visits at a rate closer to that under the PFS and proposed to expand this policy to drug administration services, we sought feedback in the CY 2026 OPPS/ASC proposed rule for future rulemaking on the development of a more systematic process for identifying ambulatory services at high risk of shifting to the hospital setting based on financial incentives rather than medical necessity and adjusting payments according. Specifically, we sought feedback on the following questions:

1. What items and services paid under the OPPS may have experienced unnecessary increases in volume? Should any policies that address those increases be more targeted to those services that have the most notable increases in volume indicative of shifting care from the ASC or physician office setting to the hospital OPD setting?

2. Should we limit OPPS payment for certain services to the payment made for that service under the ASC payment system or the PFS—depending on the setting where the service is performed most frequently? We note that the OPPS currently does not have a payment policy to limit OPPS payment rates to the rate under ASC payment system for procedures that are predominantly performed in an ASC. For example, while a simple cataract removal with insertion of an intraocular lens is a commonly-performed hospital outpatient surgical procedure, 82 percent of all such procedures that Medicare beneficiaries receive are performed in an ASC setting. In general, ASC payment rates are roughly 55 percent of the payment rate under the OPPS (86 FR 63485).

3. If we were to adjust payment based on the setting-specific volume of ambulatory services, should we pay the ASC payment amount if the service is predominantly performed in the ASC setting; and if the service is predominantly performed in the physician office setting, should we continue to calculate the PFS-equivalent rate using a PFS relativity adjuster that we would periodically update?

4. In determining the setting in which a service is performed most frequently, should we use the most recent data available or should we use data that is 5 or even 10 years prior to the rate-setting year? For example, as noted above, the share of chemotherapy administration services billed under the OPPS increased from 35.2 percent to 51.9 percent between 2012 and 2021, so using only more recent data may lead to

the conclusion that most of these services take place in the hospital OPD setting, even if that was not historically true. For services that experienced this type of migration, we believe it may be prudent to attempt to address the accumulation of past unnecessary increases in volume rather than allow that shift and the underlying financial incentive that caused it to remain permanent. Should we use solely Medicare FFS data for our analysis or should we explore and potentially incorporate Medicare Advantage data into our work (to the extent feasible and practicable)?

5. How could we account for the availability of OPDs, ASCs, and physician offices in a geographic area when determining the setting in which a service is most frequently performed? If there is a shortage of one of these settings of care in a geographic area, would it be appropriate to tie payment for a service to a setting of care that may not be readily available to a beneficiary?

6. What are the best ways to address different packaging and bundling policies across ambulatory payment systems? The PFS has less packaging of ancillary items than the OPPS and ASC payment system and tends to provide separate payment more frequently. Conversely, certain surgical procedures that have a global code in the PFS may not be packaged in the OPPS or ASC payment systems and the packaging policies of the OPPS and ASC payment system are not based on the period of time elapsed before or after the procedure or service. We could consider retaining the original payment rate that would apply absent any expanded site neutral policies, or we could apply a payment adjustment that approximates the impact of the packaging policies in the payment system whose rate would apply to the item or service under the proposed ambulatory payment adjustment.

7. Should we exempt certain services from a larger site neutral policy if such services are delivered in relation to emergent care, trauma-related care, or other care where the hospital is the most appropriate setting regardless of whether the item or service is typically furnished in a different setting? We note that physicians are appropriately responsible for making site-of-service decisions based on their clinical expertise and may determine that the hospital OPD setting is most appropriate for their patient's circumstances regardless of the level of Medicare payment. We solicited comment on the best way to designate items and services as being emergent or trauma-related and whether to include other categories of care or circumstances where certain items or services would be most appropriately paid at the OPPS rate regardless of the typical setting of care where they are furnished.

8. Should we apply OPPS site neutral policies more broadly to all hospital OPDs or should we instead consider applying this payment adjustment to only certain hospital OPDs, such as excepted off-campus hospital PBDs?

9. Should we exempt certain types of hospitals from a larger site neutral policy, such as rural Sole Community Hospitals, Medicare Dependent Hospitals, or Rural Emergency Hospitals? Currently, rural Sole Community Hospitals are exempted from the clinic visit site neutrality policy and instead are paid the full OPPS rate when such visits are furnished in excepted off-campus PBDs of these hospitals.

10. What other methods may be warranted to control unnecessary increases in the volume of outpatient services besides changes to payment rates, including prior authorization or other utilization management policies?

11. What impact would the proposed ambulatory payment adjustment have on beneficiaries and the health care market, including the development of or beneficiary access to new health care innovations?

We received approximately 43 pieces of correspondence that were submitted in response to the RFI questions. We thank all interested parties for their comments and may take them into consideration for future rulemaking.

C. Virtual Direct Supervision of Cardiac Rehabilitation (CR), Intensive Cardiac Rehabilitation (ICR), Pulmonary Rehabilitation (PR) Services and Diagnostic Services Furnished to Hospital Outpatients

1. Background

a. Virtual Direct Supervision of CR, ICR and PR Services Furnished to Hospital Outpatients (42 CFR 410.27(a)(1)(iv)(B)(*1*))

In the interim final rule with comment period titled ''Policy and Regulatory Provisions in Response to the COVID–19 Public Health Emergency,'' published on April 6, 2020 (the April 6th COVID–19 IFC) (85 FR 19230, 19246, 19286), we changed the regulation at 42 CFR 410.27(a)(1)(iv)(D) [207] to provide that, during a Public Health Emergency (PHE) as defined in 42 CFR 400.200, the presence of the physician for purposes of the direct supervision requirement for PR, CR, and ICR services includes virtual presence through audio/video real-time communications technology when use of such technology is indicated to reduce exposure risks for the beneficiary or health care provider. Specifically, the required direct physician supervision can be provided through virtual presence using audio/video real-time communications technology (excluding audio-only) subject to the clinical judgment of the supervising practitioner. We further amended § 410.27(a)(1)(iv)(B) [208] in the CY 2021 OPPS/ASC final rule with comment period to provide that this flexibility continues until the later of the end of the calendar year in which the PHE as defined in § 400.200 ends or December 31, 2021 (85 FR 86113 and 86299). In the CY 2021 OPPS/ASC final rule with comment period we also clarified that this flexibility excluded the presence of the supervising practitioner via audio-only telecommunications technology (85 FR 86113).

In the CY 2023 OPPS/ASC final rule with comment period, we finalized a policy to extend the revised definition of direct supervision of CR, ICR, and PR services to include the presence of the supervising physician through two-way, audio/video telecommunications technology (excluding audio-only) until December 31, 2023 (87 FR 72019 and 72020).

In the CY 2024 OPPS/ASC final rule with comment period, we finalized a policy to further revise § 410.27(a)(1)(iv)(B)(*1*) to continue to allow for the direct supervision requirement for CR, ICR, and PR services to include the virtual presence of the physician through audio-video real-time communications technology (excluding audio-only) through December 31, 2024 and to extend this policy to the nonphysician practitioners, that is NPs, PAs, and CNSs, who were eligible to supervise these services beginning in CY 2024 (88 FR 81863 through 81867).

In the CY 2025 OPPS/ASC final rule with comment period, we finalized a policy to continue to allow for the direct supervision of CR, ICR, PR services to include the virtual presence of the physician (or other nonphysician practitioner) through audio-video real-

[207] In the CY 2023 OPPS/ASC final rule with comment period, we removed § 410.27(a)(1)(iv)(D) in its entirety and added its language regarding pulmonary rehabilitation, cardiac rehabilitation, and intensive cardiac rehabilitation services and the virtual presence of a physician through audio/video real-time communications technology during the PHE to the newly designated § 410.27(a)(1)(iv)(B)(*1*) (87 FR 72024).

[208] Ibid.

time communications technology (excluding audio-only) through December 31, 2025 (89 FR 94280).

b. Virtual Direct Supervision of Diagnostic Services Furnished to Hospital Outpatients (42 CFR 410.28(e)(2)(iii))

In the April 6th, 2020 COVID–19 IFC, for consistency with the revisions made to 42 CFR 410.27(a)(1)(iv)(D) [209] described above and § 410.32(b)(3)(ii) (revising the definition of direct supervision of diagnostic services furnished in a physician's office to include virtual supervision for the duration of the PHE), we changed the regulation at 42 CFR 410.28(e) to provide that, during a PHE as defined in 42 CFR 400.200, the presence of the physician for purposes of the direct supervision requirement for diagnostic services includes virtual presence through audio/video real-time communications technology when use of such technology is indicated to reduce exposure risks for the beneficiary or health care provider (85 FR 19245 and 19246).

To ensure consistency with additional revisions made to 42 CFR 410.27(a)(1)(iv)(B)(*1*) and 410.32(b)(3)(ii) extending the end date of the flexibility allowing for the virtual supervision of the services governed by those regulations, the CY 2023 OPPS/ASC final rule with comment period (87 FR 72024 through 72026), CY 2024 OPPS/ASC final rule with comment period (88 FR 81866 and 81867), and CY 2025 OPPS/ASC final rule with comment period (89 FR 94278 and 94280) subsequently extended the end date of the flexibility allowing for direct supervision to include the virtual supervision of outpatient diagnostic services through audio/video real-time communications technology (excluding audio-only) through December 31, 2025.

2. CY 2026 Virtual Direct Supervision of CR, ICR, PR Services and Diagnostic Services Furnished to Hospital Outpatients

In the CY 2026 PFS proposed rule (90 FR 32393 through 32395), we proposed to revise the definition of direct supervision at § 410.26(a)(2) and § 410.32(b)(3)(ii) to make permanent the availability of virtual direct supervision of therapeutic and diagnostic services under the PFS, except for services that have a global surgery indicator of 010 or 090. This information can be found in the PFS PPRVU public use file (*https://www.cms.gov/medicare/payment/fee-schedules/physician/pfs-relative-value-files*). These global surgery indicators are defined in IOM Pub. 100–04, chapter 23, section 50.6 as 010 ''Minor procedure with preoperative relative values on the day of the procedure and postoperative relative values during a 10-day postoperative period included in the fee schedule amount; evaluation and management services on the day of the procedure and during this 10-day postoperative period generally not payable'' and 090 ''Major surgery with a 1-day preoperative period and 90-day postoperative period included in the fee schedule payment amount''. As explained in that rule, this proposal was made in response to overwhelming support and requests to extend this policy permanently for a wider set of services than the ones that were finalized in the CY 2025 PFS final rule and would build on the incremental approach of making the virtual supervision of certain services permanent which we began in the CY 2025 PFS final rule. As noted in the CY 2026 PFS proposed rule, we believed that adopting this approach would recognize that virtual supervision has been available and widely utilized since the beginning of the PHE while excluding certain services to ensure quality of care and patient safety, and in particular, the ability of the supervising practitioner to intervene if complications arise, particularly in complex, high-risk instances where unexpected or adverse events may occur or for procedures that may be riskier or more intense since a patient's clinical status can quickly change. For the complete discussion of the proposed revisions to § 410.26(a)(2) and § 410.32(b)(3)(ii), we refer readers to the CY 2026 PFS proposed rule (90 FR 32393 through 32395).

In addition to desiring uniformity under the PFS and OPPS in how regulations are applied to similarly situated clinicians and providers, we agreed in the CY 2026 OPPS proposed rule that the approach proposed in the CY 2026 PFS proposed rule struck the appropriate balance between recognizing that the virtual supervision of diagnostic services has been available and widely utilized since the beginning of the PHE and ensuring quality of care and patient safety. Consequently, we proposed to revise § 410.27(a)(1)(iv)(B)(*1*) and § 410.28(e)(2)(iii) to make the availability of the direct supervision of CR, ICR, PR services and diagnostic services via audio-video real-time communications technology (excluding audio-only) permanent, except for diagnostic services that have a global surgery indicator of 010 or 090. We noted in the CY 2026 OPPS/ASC proposed rule that permanently adopting a definition of direct supervision that allows ''immediate availability'' of the supervising practitioner using audio/video real-time communications technology (excluding audio-only), for CR, ICR, PR and diagnostic services described under § 410.28, except for diagnostic services that have a global surgery indicator of 010 or 090 did not mean that it was appropriate to allow virtual presence for every service for every Medicare beneficiary in every clinical scenario. As always, we stated, the physician or nonphysician practitioner should use his or her complex professional judgment to determine the appropriate supervision modality on a case-by-case basis.

We received public comments on this proposal. The following is a summary of the comments we received and our responses to those comments.

Comment: Nearly all commenters supported our proposal to revise § 410.27(a)(1)(iv)(B)(*1*) and § 410.28(e)(2)(iii) to make the availability of the direct supervision of CR, ICR, PR services and diagnostic services via audio-video real-time communications technology (excluding audio-only) permanent, except for diagnostic services that have a global surgery indicator of 010 or 090. These commenters stated that virtual direct supervision does not inherently give rise to patient safety issues and indicated that making the availability of virtual direct supervision permanent would improve patient access to historically underutilized services, particularly in rural and other underserved areas where workforce shortages remain acute, enhance workforce efficiency, reduce burden on providers, provide the certainty needed to maintain existing programs and encourage new adoption by rural providers who may have been hesitant. Several of these commenters suggested additional refinements to the proposal such as retiring the requirement for a service-level modifier to identify when direct supervision is provided via appropriate telehealth technology, more precisely defining ''immediate availability'' in the context of virtual direct supervision, adding a requirement that virtual supervision of CR and ICR services be preceded by an in-person E/M consultation for the development of a care plan for which CR or ICR services will be rendered and ensuring that trained and authorized

[209] *https://www.ecfr.gov/current/title-42/chapter-IV/subchapter-B/part-410/subpart-B/section-410.27#p-410.27(a)(1)(iv)(D).*

staff are present in the event of an adverse reaction to injected contrast.

Response: We thank commenters for their support and suggestions of how we might refine our policy and will take their input under consideration for future rulemaking.

Comment: One commenter opposed the proposal. Reiterating concerns previously expressed in comments to the CY 2025 OPPS/ASC final rule with comment period, the commenter opposed our proposal to permanently allow for the virtual direct supervision of CR, ICR, PR and diagnostic services because doing so would increase the amount of physician ''incident to'' billing (a Medicare billing provision that applies in the office or clinic setting and allows medical services to be performed by auxiliary personnel as an incident to the services of the billing practitioner and under their supervision) for services provided by Physician Assistants (PAs) and Nurse Practitioners (NPs), which would obscure the extent to which PAs and NPs are actually performing the services. This commenter suggested that CMS allow for virtual supervision only of medical professionals who are unauthorized to bill Medicare or, alternatively, establish a method through which CMS is able to collect the information of the health professional actually providing the service under ''incident to.''

Response: We appreciate the commenter's input regarding the appropriate attribution of services performed by PAs and NPs when those services are billed ''incident to'' a physician's service. However, we note that these nonphysician practitioners (as well as clinical nurse specialists (CNSs)) are authorized by statute to supervise these services and we think that any potential obscuration of the extent to which PAs and NPs are providing virtual direct supervision resulting from incident to billing is outweighed by the flexibility and enhanced access to services resulting from allowing these practitioners to provide virtual direct supervision. We are also not persuaded that the commenter's concerns warrant CMS establishing a method through which we would collect the information of the health professional actually providing the service under ''incident to.''

Comment: Several commenters requested that CMS make clear that Advanced Practice Registered Nurses can conduct virtual direct supervision of rehabilitation services in hospital outpatient settings.

Response: PAs, NPs and CNSs can conduct virtual direct supervision of CR, ICR and PR in hospital outpatient settings. Section 410.27(a)(1)(iv)(B)(*1*) defines direct supervision for the purpose of therapeutic services provided in the outpatient setting and states that ''[f]or pulmonary rehabilitation, cardiac rehabilitation, and intensive cardiac rehabilitation services, direct supervision must be furnished as specified in §§ 410.47 and 410.49, respectively.'' Sections 410.47(a) and 410.49(a), specifically list the individual practitioners (PA, NP, and CNS) that are included in the term ''nonphysician practitioner'' for the purposes of the supervision of ICR, CR and PR.

Comment: One commenter requested that CMS continue to monitor the impact of virtual direct supervision to ensure it supports high quality, safe and accessible diagnostic care for all beneficiaries. Another commenter suggested that CMS monitor outcomes such as patient satisfaction, program completion rates, and safety indicators to ensure quality is maintained.

Response: We appreciate the commenters' concerns about monitoring the impact of virtual direct supervision to ensure quality of care. We plan on continuing to do so.

Comment: Several commenters, as they have in comments to previous proposed rules, advocated for the removal of what they refer to as referral barriers to certain non-physician practitioners ordering CR, ICR, PR. These commenters point out that while NPs, PAs and CNSs can supervise CR, ICR and PR services, they cannot order those services for Medicare patients. These commenters identify CMS' previous interpretation of ''physician-prescribed exercise'' under section 1861(fff)(2)(A) of the Act (for PR) and section 1861(eee)(3)(A) of the Act (for CR/ICR) as the barrier preventing NA, PAs and CNSs from referring patients to CR, ICR, and PR services and stated that CMS should change its interpretation of these sections of the statute to allow these practitioners to order CR, ICR, and PR services. One commenter stated that CMS can interpret ''physician-prescribed'' to allow NAs, PAs and CNSs to order CR, ICR and PR services because there is a distinction between the referral for physician-prescribed exercise and the physician's prescription for exercise.

Response: As we have explained previously in the CY 2024 OPPS/ASC final rule with comment period (88 FR 81864 through 81865) and CY 2024 PFS final rule (88 FR 79088), we do not believe that there is a reasonable interpretation of the statute that would allow NAs, PAs and CNSs to order CR, ICR, and PR services. We encourage interested parties to work with the Congress to explore further statutory changes to support these requests.

Comment: Several commenters encouraged CMS to consider additional services that could be safely supervised virtually in future years, additional policies that might support virtual care in the hospital outpatient setting and the possibility of reinstating the virtual delivery of CR, ICR, and PR services furnished by hospital outpatient departments.

Response: We thank the commenter for their input and will consider taking it under consideration in future rulemaking.

Comment: One commenter requested that CMS extend the definition of direct supervision to include real-time virtual presence via audio/video technology for all therapeutic radiation therapy services for sites of service paid under the OPPS and MPFS.

Response: We thank the commenter for their comment and note that for therapeutic services under § 410.27, ICR, CR and PR, are the only services that are subject to direct supervision requirements when furnished to hospital outpatients.

After consideration of the public comments we received, we are finalizing, without modification, our proposal to revise § 410.27(a)(1)(iv)(B)(*1*) and § 410.28(e)(2)(iii) to make the availability of the direct supervision of CR, ICR, PR services and diagnostic services via audio-video real-time communications technology (excluding audio-only) permanent, except for diagnostic services that have a global surgery indicator of 010 or 090.

D. Medical Review of Certain Inpatient Hospital Admissions Under Medicare Part A for CY 2026 and Subsequent Years

1. Background on the 2-Midnight Rule

In the FY 2014 IPPS/LTCH PPS final rule (78 FR 50944 through 50952), we clarified our policy regarding when an inpatient admission is considered reasonable and necessary for purposes of Medicare Part A payment. Under this policy, we established a benchmark providing that surgical procedures, diagnostic tests, and other treatments would be generally considered appropriate for payment under Medicare Part A when the physician expects the patient to require a stay that crosses at least 2 midnights and admits the patient as an inpatient based upon that expectation. Conversely, when a beneficiary enters a hospital for a surgical procedure not designated as an

inpatient-only (IPO) procedure as described in 42 CFR 419.22(n), a diagnostic test, or any other treatment, and the physician expects to keep the beneficiary in the hospital for only a limited period of time that does not cross 2 midnights, the services would be generally inappropriate for payment under Medicare Part A, regardless of the hour that the beneficiary came to the hospital or whether the beneficiary used a bed. With respect to services designated under the OPPS as IPO procedures, we explained that because of the intrinsic risks, recovery impacts, or complexities associated with such services, these procedures would continue to be appropriate for payment under Medicare Part A regardless of the expected length of stay. We also indicated that there might be further ''rare and unusual'' exceptions to the application of the benchmark, which would be detailed in subregulatory guidance.

In the FY 2014 IPPS/LTCH PPS final rule (78 FR 50944 through 50952), we also finalized the 2-midnight presumption, which is related to the 2-midnight benchmark but is a separate medical review policy. The 2-midnight benchmark represents guidance to reviewers to identify when an inpatient admission is generally reasonable and necessary for purposes of Medicare Part A payment, while the 2-midnight presumption relates to instructions to medical reviewers regarding the selection of claims for medical review. Specifically, under the 2-midnight presumption, inpatient hospital claims with lengths of stay greater than 2 midnights after the formal admission following the order are presumed to be appropriate for Medicare Part A payment and are not the focus of medical review efforts, absent evidence of systematic gaming, abuse, or delays in the provision of care in an attempt to qualify for the 2-midnight presumption. We refer readers to the CY 2021 OPPS/ASC final rule with comment period for additional discussion about the distinction between the 2-midnight presumption and benchmark (85 FR 86113 through 86114).

In the CY 2016 OPPS/ASC final rule with comment period (80 FR 70538 through 70545), we revisited the previous rare and unusual exceptions policy and finalized a proposal to allow for case-by-case exceptions to the 2-midnight benchmark, whereby Medicare Part A payment may be made for inpatient admissions where the admitting physician does not expect the patient to require hospital care spanning 2 midnights, if the documentation in the medical record supports the physician's determination that the patient nonetheless requires inpatient hospital care. We stated that the following criteria would be relevant to determining whether an inpatient admission with an expected length of stay of less than 2 midnights is nonetheless appropriate for Medicare Part A payment:

- Complex medical factors such as history and comorbidities;
- The severity of signs and symptoms;
- Current medical needs; and
- The risk of an adverse event.

In other words, for purposes of Medicare payment, an inpatient admission is payable under Part A if the documentation in the medical record supports either the admitting physician's reasonable expectation that the patient will require hospital care spanning at least 2 midnights, or the physician's determination based on factors such as those identified previously that the patient nonetheless requires care on an inpatient basis. The exceptions for procedures on the IPO list and for ''rare and unusual'' circumstances designated by CMS as national exceptions were unchanged by the CY 2016 OPPS/ASC final rule with comment period.

As we stated in the CY 2016 OPPS/ASC final rule with comment period, the decision to formally admit a patient to the hospital is subject to medical review. Specifically, for inpatient admissions not related to a surgical procedure specified by Medicare as an IPO procedure under § 419.22(n) and for which there is not a national exception, payment of the claim under Medicare Part A is subject to the clinical judgment of the medical reviewer to determine whether the medical record supports a reasonable expectation of the need for hospital care crossing at least 2 midnights or otherwise supports a need for inpatient care. The medical reviewer's clinical judgment involves the synthesis of all submitted medical record information (for example, progress notes, diagnostic findings, medications, nursing notes, and other supporting documentation) to make a medical review determination on whether the clinical requirements in the relevant policy have been met. In addition, Medicare review contractors must abide by CMS' policies in making payment determinations. While Medicare review contractors may continue to use commercial screening tools to help evaluate the inpatient admission decision for purposes of payment under Medicare Part A, such tools are not binding on the hospital, CMS, or its review contractors. This type of information also may be appropriately considered by the physician as part of the complex medical judgment that guides his or her decision to keep a beneficiary in the hospital and formulation of the expected length of stay.

2. Current Policy for Medical Review of Inpatient Hospital Admissions for Procedures Removed From the Inpatient Only List

In the CY 2020 OPPS/ASC final rule with comment period, we finalized a policy to exempt procedures that have been removed from the IPO list from certain medical review activities to assess compliance with the 2-midnight rule within the 2 calendar years following their removal from the IPO list. We stated that these procedures would be exempted from site-of-service claim denials under Medicare Part A, eligibility for Beneficiary and Family-Centered Care Quality Improvement Organizations (BFCC–QIOs) referrals to Recovery Audit Contractors (RACs) for noncompliance with the 2-midnight rule, and RAC reviews for ''patient status'' (that is, site-of-service). We explained that during this 2-year period, BFCC–QIOs would have the opportunity to review such claims in order to provide education for practitioners and providers regarding compliance with the 2-midnight rule, but claims identified as noncompliant would not be denied with respect to the site-of-service under Medicare Part A.

For CY 2021, in conjunction with our proposal to eliminate the IPO list, we modified our proposal to continue the 2-year exemption, and instead finalized a policy under which procedures removed from the IPO list on or after January 1, 2021, would be indefinitely exempted from the above described medical review activities. We explained that the elimination of the IPO list was a large-scale change that created brand new considerations for providers regarding site-of-service determinations. We believed a change of this significance required us to reevaluate our stance on the exemption period for procedures removed from the IPO list, resulting in our decision to finalize an indefinite exemption period rather than continuing the previous 2-year exemption period. We stated that this exemption would last with respect to each procedure removed from the IPO list until we had Medicare claims data indicating that the procedure was more commonly performed in the outpatient setting than the inpatient setting. Thus, for the exemption to end for a specific procedure, in a single calendar year we would need to have Medicare claims

data indicating that the procedure was performed more than 50 percent of the time in the outpatient setting. We noted that the end of the exemption period for each procedure removed from the IPO list on or after January 1, 2021 would be announced via rulemaking.

Consequently, in the CY 2021 OPPS/ASC final rule with comment period, we amended 42 CFR 412.3(d)(2) to clarify when a procedure removed from the IPO list is exempt from the identified medical review activities. To account for the previous exemption policy that was in effect for CY 2020, we added § 412.3(d)(2)(i) which stated that for ''those services and procedures removed between January 1 and December 31, 2020, this exemption will last for 2 years from the date of such removal.'' To implement the change to an indefinite exemption period that we finalized in CY 2021, we added § 412.3(d)(2)(ii) which stated that for ''those services and procedures removed on or after January 1, 2021, this exemption will last until the Secretary determines that the service or procedure is more commonly performed in the outpatient setting.''

In the CY 2022 OPPS/ASC final rule with comment period (86 FR 63736 through 63740), given our decision in that rule to halt the elimination of the IPO list, and the fact that we were accordingly no longer removing an unprecedented number of procedures from the list at one time, we proposed to return to the 2-year exemption period from the specified medical review activities for procedures removed from the IPO list. Under the circumstances of that final rule with comment period, we believed that a 2-year exemption period was adequate to enable providers to gain experience with the application of the 2-midnight rule to those procedures that have been newly removed from the IPO list. We also stated that we believed that a 2-year exemption from the medical review activities was also sufficient time for providers and BFCC–QIOs to understand the documentation necessary to support Part A payment for those patients for which the admitting physician determines that the procedures should be furnished in an inpatient setting.

In the preamble to the CY 2022 OPPS/ASC final rule with comment period (86 FR 63739), we stated that we were amending § 412.3(d)(2) to clarify ''that for all services and procedures removed after January 1, 2020, this exemption would last for 2 years from the date of such removal. This would include those services and procedures removed on or after January 1, 2021, for which this exemption would also be for 2 years from the date of such removal''. Accordingly, § 412.3(d)(2)(i) was revised to read ''for those services and procedures removed on or after January 1, 2020, the exemption in this paragraph (d)(2) will last for 2 years from the date of such removal.'' However, due to a drafting oversight, we failed to correspondingly remove § 412.3(d)(2)(ii): ''For those services and procedures removed on or after January 1, 2021, the exemption in this paragraph (d)(2) will last until the Secretary determines that the service or procedure is more commonly performed in the outpatient setting.'' As a result of this error, the exemption period was not changed to two years as we intended and instead remained the indefinite exemption period that was finalized in the CY 2021 OPPS/ASC final rule with comment period.

3. Medical Review of Inpatient Hospital Admissions for Procedures Removed From the Inpatient Only List for CY 2026 and Subsequent Years

As stated earlier in this section, services on the IPO list are not subject to the 2-midnight rule for purposes of determining whether payment is appropriate under Medicare Part A. However, the 2-midnight rule is applicable once services have been removed from the IPO list. Outside of the exemption periods discussed above, services that have been removed from the IPO list are currently subject to initial medical reviews of claims for short-stay inpatient admissions conducted by Medicare review contractors.[210]

MACs' current typical process is to perform reviews on a sample of Medicare pre-payment Part A claims as part of the MAC Targeted Probe and Educate (TPE) program. For more details on this program see: *https://www.cms.gov/data-research/monitoring-programs/medicare-fee-service-compliance-programs/medical-review-and-education/targeted-probe-and-educate-tpe.* MACs may refer any provider that fails to improve after three rounds of targeted audits and education to CMS for next steps. CMS actions may include additional prepay review, extrapolation, referral to a Recovery Auditor, or other action.

However, as finalized in the CY 2021 OPPS/ASC final rule with comment period, procedures that have been removed from the IPO list on January 1, 2021 or later were indefinitely exempted from site-of-service claim denials under Medicare Part A, eligibility for referrals to RACs for noncompliance with the 2-midnight rule, and RAC reviews for ''patient status'' (that is, site-of-service). We stated that this exemption would last for each procedure until we have Medicare claims data indicating that the procedure is more commonly performed in the outpatient setting than the inpatient setting.

As stated in section IX. of the CY 2026 OPPS/ASC proposed rule, we proposed to eliminate the IPO list in CY 2026 with a transitional period of 3 years. For CY 2026, we proposed to remove all musculoskeletal procedures from the IPO list. Prior to the CY 2020 exemption for services removed from the IPO list, the elimination of the IPO list would have meant that procedures currently on the IPO list would be subject to the 2-midnight rule (both the 2-midnight benchmark and 2-midnight presumption) upon removal from the IPO list.

We believe that with the elimination of the IPO list, which we are finalizing, as discussed in section IX. of this final rule with comment period, the 2-midnight benchmark remains an important metric to help guide when Part A payment for inpatient hospital admissions is appropriate. As technology advances and more services may be safely performed in the hospital outpatient setting and paid under the OPPS, it is increasingly important for physicians to exercise their clinical judgment in determining the appropriate clinical setting for their patient to receive a procedure, whether that be as an inpatient or on an outpatient basis. Importantly, removal of a service from the IPO list has never meant that a beneficiary cannot receive the service as a hospital inpatient—as always, the physician should use his or her complex medical judgment to determine the appropriate setting on a case-by-case basis.

As finalized in the CY 2021 OPPS/ASC final rule with comment period, procedures removed from the IPO list after January 1, 2021, were indefinitely exempted from site-of-service claim denials under Medicare Part A,

[210] On May 22, 2025, CMS announced that responsibility for short-stay reviews will be transitioned from the BFCC–QIOs to the MACs, as of September 1, 2025. *https://www.cms.gov/data-research/monitoring-programs/medicare-fee-service-compliance-programs/medical-review-and-education/hospital-patient-status-reviews.* BFCC–QIOs will continue to review post-payment inpatient hospital claims for higher weighted Diagnosis Related Groups, hospital discharge and service termination appeals, and quality of care concerns. While the BFCC–QIO will not specifically select short stay claims for the purpose of assessing compliance with the two-midnight rule, if the BFCC–QIO encounters a hospital short inpatient stay claim when reviewing for other reasons, the medical record will also be reviewed for compliance with the two-midnight rule.

eligibility for Medicare review contractor referrals to RACs for noncompliance with the 2-midnight rule, and RAC reviews for ''patient status'' (that is, site-of-service). These procedures are not considered by the Medicare review contractors in determining whether a provider exhibits persistent noncompliance with the 2-midnight rule for purposes of referral to the RAC nor will claims for these procedures be reviewed by RACs for ''patient status.'' During the exemption period, Medicare review contractors have the opportunity to review such claims in order to provide education for practitioners and providers regarding compliance with the 2-midnight rule, but claims identified as noncompliant are not denied with respect to the site-of-service under Medicare Part A. Again, information gathered by the Medicare review contractor when reviewing procedures as they are newly removed from the IPO list can be used for educational purposes but will not result in a claim denial during the exemption period.

When we previously finalized elimination of the IPO list in the CY 2021 OPPS/ASC final rule with comment period, we received numerous comments that suggested a longer exemption period would be appropriate, due to the unprecedented volume of procedures becoming subject to the 2-midnight rule. Therefore, we finalized an indefinite exemption period for procedures removed from the IPO list during the 3-year transition from the list to allow providers to become more familiar with how to comply with the 2-midnight rule and with the availability of payment under both the hospital inpatient and outpatient payment systems for procedures removed from the IPO list. Our proposal in the CY 2026 OPPS/ASC proposed rule to eliminate the IPO list over a 3-year period warranted similar considerations. Accordingly, we proposed to maintain the indefinite exemption period under 42 CFR 412.3(d)(2)(ii) for procedures that are removed from the IPO list that is currently in effect. In the interest of clarity, we proposed to delete § 412.3(d)(2)(i) and (ii) and revise § 412.3(d)(2) to read ''An inpatient admission for a surgical procedure specified by Medicare as inpatient only under § 419.22(n) of this chapter is generally appropriate for payment under Medicare Part A regardless of the expected duration of care. Procedures no longer specified as inpatient only under § 419.22(n) of this chapter are appropriate for payment under Medicare Part A in accordance with paragraph (d)(1) or (3) of this section. Claims for services and procedures removed from the inpatient only list under § 419.22 of this chapter on or after January 1, 2021 are exempt from certain medical review activities until the Secretary determines that the service or procedure is more commonly performed in the outpatient setting.'' As indicated in the CY 2021 OPPS/ASC final rule with comment period, the determination of the Secretary that a service or procedure is more commonly performed in the outpatient setting is based on claims data that demonstrates that the service or procedure is being performed more than 50 percent of the time in the outpatient setting in a single calendar year (85 FR 86117 and 86119). We noted in the CY 2026 OPPS/ASC proposed rule, that this would be an exemption from certain medical review activities, not an exception to the 2-midnight rule. Providers are still required to comply with the 2-midnight rule during the exemption period, and CMS or its contractors may still conduct patient status medical review in cases in which there is evidence of systemic fraud or abuse occurring. Additionally, we noted that other types of medical review, unrelated to patient status, would not be impacted by the proposed exemption. We proposed to announce in subregulatory guidance when the exemption is ending for a particular service or procedure prior to the effective date of the end of the exemption for the particular service or procedure. We invited commenters to indicate whether and why they believed an indefinite exemption period, or another time period, would be most appropriate.

In summary, for CY 2026 and subsequent years, we proposed to continue the indefinite exemption from site-of-service claim denials, initial medical review contractor referrals to RACs, and RAC reviews for ''patient status'' (that is, site-of-service) finalized in the CY 2021 OPPS/ASC final rule with comment period for procedures that are removed from the IPO list in CY 2021 or later under the OPPS. We also proposed to remove § 412.3(d)(2)(i) and (ii) and revise § 412.3(d)(2) to clarify that claims for services and procedures removed from the IPO list on or after January 1, 2021 are exempt from certain medical review activities until the Secretary determines that the service or procedure is more commonly performed in the outpatient setting than the inpatient setting. Finally, we sought comment on whether other exemption periods may be warranted.

We received public comments on this proposal. The following is a summary of the comments we received and our responses.

Comment: Many commenters supported our proposal to continue the indefinite exemption from site-of-service claim denials, initial medical review contractor referrals to RACs, and RAC reviews for ''patient status'' (that is, site-of-service) finalized in the CY 2021 OPPS/ASC final rule with comment period for procedures that are removed from the IPO list in CY 2021 or later under the OPPS. Some of these commenters stated that maintaining this exemption would help ensure that providers are not penalized for exercising clinical discretion and alleviate concerns regarding 2-midnight audits and claims denials from influencing the site of-surgery. One of these commenters stated that by acknowledging the foremost expertise of physicians in determining the most appropriate site of care through this indefinite exemption along with other existing policies related to the 2-midnight rule, CMS is taking an important step toward increasing choice and improving quality of care. Other commenters noted that the proposal would facilitate a smoother transition for procedures newly eligible for outpatient reimbursement, allow time for practice patterns and infrastructure to adapt, reduce confusion and avoid additional, unnecessary administrative burden on physicians. One commenter indicated that the exemption period was necessary to ensure that physicians are appropriately educated on the change of policy and to inform facilities and their compliance departments on the totality of the 2-midnight rule and all of its exceptions. Another commenter underscored the importance of the proposal because it appropriately recognizes the unprecedented volume of procedures that would newly be subject to the 2-midnight rule if the IPO list is eliminated.

Response: We thank commenters for their support.

Comment: One commenter supported an indefinite exemption but expressed concern that the exemption would end when CMS determines that the service or procedure is more commonly performed in the Medicare population in the outpatient setting. The commenter's concern was that certain patients may require inpatient level care, including intensive care unit (ICU) level care, even if some patients may appropriately receive the service in a lower-acuity setting.

Response: We appreciate the commenter's concern and emphasize, as

we did in the CY 2016 final OPPS/ASC rule, that that the 2-midnight benchmark does not override the clinical judgment of the physician regarding the need to keep the beneficiary at the hospital, to order specific services, or to determine appropriate levels of nursing care or physical locations within the hospital. This physician judgment is recognized in 42 CFR 412.3(d)(3) which states that ''[w]here the admitting physician expects a patient to require hospital care for only a limited period of time that does not cross 2 midnights, an inpatient admission may be appropriate for payment under Medicare Part A based on the clinical judgment of the admitting physician and medical record support for that determination.'' Even when a procedure loses its exemption from certain medical review activities as a result of being determined by the Secretary to be more commonly performed in the outpatient setting, it can still be deemed appropriate for payment under Medicare Part A under 42 CFR 412.3(d)(3) for patients the physician has determined need to receive the service in an inpatient setting despite the physician not having the expectation that the inpatient stay will cross 2 midnights.

Comment: Many commenters asked for additional clarification on the proper application of the case-by-case exception to the 2-midnight benchmark under 42 CFR 412.3(d)(3). This exception allows for Medicare Part A payment on a case-by-case basis for inpatient admissions that do not satisfy the 2-midnight benchmark, if the documentation in the medical record supports the admitting physician's determination that the patient requires inpatient hospital care despite an expected length of stay that is less than 2 midnights. Most of these commenters emphasized that this additional clarity was necessary due to Medicare Advantage plans historically ignoring the 2-midnight rule.

Response: CMS has recently reminded the Medicare Administrative Contractors (MACs) responsible for conducting inpatient short stay medical reviews of CMS' longstanding policy that recognizes the important role of physician judgment and individual patient needs in the hospital admission decision-making process. Providers should ensure that they clearly articulate in the medical record their rationale for admission to assist reviewers in understanding why admission for inpatient care is appropriate despite an expected length of stay that is less than two midnights. In other words, the medical record should reflect exactly what the current medical needs and/or other complex medical factors are that the physician/qualified practitioner is concerned about which would justify a case-by-case exception to the two-midnight rule (that is, that inpatient care is needed, despite an expected length of stay that is less than two midnights).

CMS has also instructed the MACs to continue to follow other longstanding guidance that they review the reasonableness of the inpatient admission for the purposes of Part A payment based on the information known to the physician at the time of admission. We have informed the MACs that the expectation of time and the determination of the underlying need for inpatient care despite an expected length of stay that is less than two midnights should be supported by patient-specific complex medical factors such as history and comorbidities, the severity of signs and symptoms, current medical needs, and the risk of an adverse event. MACs will expect such factors to be documented in the medical record. The entire medical record may be reviewed to support or refute the reasonableness of the physician's/qualified practitioner's expectation, but entries after the point of the admission order are only used in the context of interpreting what the physician/qualified practitioner knew and expected at the time of admission. Additionally, we have provided guidance to MACs that comorbidities and other complex medical factors are to be considered in the context of their contribution to the need for hospital services.

With respect to commenters' concerns regarding Medicare Advantage plans ignoring the 2-midnight rule, we emphasize here, as we have previously, that Medicare Advantage plans are required to comply with the 2-midnight benchmark. In the final rule titled 'Medicare Program; Contract Year 2024 Policy and Technical Changes to the Medicare Advantage Program, Medicare Prescription Drug Benefit Program, Medicare Cost Plan Program, and Programs of All-Inclusive Care for the Elderly'' which appeared in the **Federal Register** on April 12, 2023 (88 FR 22120), we clarified that ''MA plans must comply with general coverage and benefit conditions included in Traditional Medicare laws, unless superseded by laws applicable to MA plans'' and that ''this includes coverage criteria for inpatient admissions at 42 CFR 412.3 . . .'' (88 FR 22191). We additionally stated that ''[i]n regards to inpatient admissions at § 412.3, we confirm that the criteria listed at § 412.3(a)–(d) apply to MA.'' (88 FR 22191). In that final rule, we codified this requirement by revising 42 CFR 422.101(b)(2) to state that each MA organization must comply ''with general coverage and benefit conditions included in Traditional Medicare laws, unless superseded by laws applicable to MA plans. This includes criteria for determining whether an item or service is a benefit available under Traditional Medicare. For example, this includes payment criteria for inpatient admissions at 42 CFR 412.3 . . .''

Comment: Several commenters offered suggestions about how CMS should provide notice that an exemption period is ending for a service when the service has been determined by the Secretary to be more commonly performed in the outpatient setting. One commenter suggested a ''transparent process of advance notification'' for providers when a service has been determined to be more commonly performed in the outpatient setting. Two commenters stated that CMS should use notice and comment rulemaking, not sub-regulatory guidance as proposed, to end exemption periods. These commenters did not provide a reason for this recommendation, other than one commenter's statement that ''[w]e oppose audit policy changes to procedures removed from the IPO list being issued through CMS or Medicare Area Contractor 'guidance.' '' Two of these commenters additionally suggested that CMS include in this notice and comment rulemaking the quality and patient safety data it relied on to determine that the procedure can be safely performed in the outpatient setting. Two commenters urged CMS not to end the exemption until at least two years after the Secretary determines that the service is more commonly performed in the outpatient setting to allow hospitals time to update their billing systems and gain experience with respect to the newly removed procedures consistent with CMS' past practice with respect to procedures removed from the IPO list based on clinical considerations.

Response: We agree with the need for a transparent process of advance notification to the public when a service has been determined to be more commonly performed in the outpatient setting. We appreciate commenters' suggestion that such notice be provided through rulemaking rather than subregulatory guidance as well as their request for the exemption period to extend at least 2 years after the service has been determined to be more commonly performed in the outpatient setting. Since we have not yet gone

through the process of ending the exemption period for an indefinitely exempted procedure, we will establish that process, including the effective date of the end of the exemption period, through notice and comment rulemaking the first year that the Secretary determines that a procedure is more commonly performed in the outpatient setting than the inpatient setting. We will address the process for subsequent years at that time.

Comment: Three commenters supported the proposal but urged CMS to exempt hospitals that utilize certain clinical decision support tools from patient status review for the 2-midnight policy. The commenters argue that clinical decision support technology exists to achieve the same program integrity and patient safety goals as the 2-midnight rule without the uncertainty around coverage for patients.

Response: We appreciate the commenters' suggestion and enthusiasm for clinical decision support technology, however we do not think clinical decision support tools are an appropriate substitute for patient status review by CMS or Medicare review contractors for compliance with the 2-midnight rule.

Comment: One commenter noted that in our summary of major provisions section discussing our proposal to continue the indefinite exemption from the 2-midnight rule for certain medical review activities we referred to ''Beneficiary and Family-Centered Care Quality Improvement Organization (BFCC–QIO) referrals to Recovery Audit Contractor (RAC).'' The commenter indicated that since, as of September 1, 2025, those 2-midnight reviews will be performed by the MACs and not the BFCC–QIOs, the reference to BFCC–QIOs should be replaced with MACs.

Response: We thank the commenter for pointing this out and the change has been made.

After consideration of the public comments we received, we are finalizing our proposal with modification. We are finalizing our proposal to (1) continue the indefinite exemption from site-of-service claim denials, initial medical review contractor referrals to RACs, and RAC reviews for ''patient status'' (that is, site-of-service) finalized in the CY 2021 OPPS/ASC final rule with comment period for procedures that are removed from the IPO list in CY 2021 or later under the OPPS; and (2) remove § 412.3(d)(2)(i) and (ii) and revise § 412.3(d)(2) to clarify that claims for services and procedures removed from the IPO list on or after January 1, 2021 are exempt from certain medical review activities until the Secretary determines that the service or procedure is more commonly performed in the outpatient setting than the inpatient setting. We are not finalizing our proposal to announce in subregulatory guidance when an exemption is ending for a particular service or procedure. Instead, the first time that the Secretary determines that a service or procedure is more commonly performed in the outpatient setting than the inpatient setting, we will make the announcement that the exemption is ending for the service or procedure through notice and comment rulemaking. We will address the process for subsequent years at that time.

E. Coding and Payment for Category B IDE Devices and Studies

We proposed to revise the section heading and paragraph (a) introductory text at § 419.47 to correct two errors that occurred when this regulation was revised in the CY 2025 OPPS/ASC final rule with comment period (89 FR 94304 through 94307).

In the CY 2025 OPPS/ASC final rule with comment period, we finalized our proposal to codify our coding and payment policy for Category B Investigational Device Exemption (IDE) clinical trials with control arms through revisions to § 419.47. Specifically, we revised § 419.47's paragraph (a) introductory text to specify that our policy only applies to IDE studies with a placebo control arm and where a payment adjustment is necessary to preserve the scientific validity of such a study. However, in making these revisions, we inadvertently deleted existing regulatory text that was not changed in the CY 2025 OPPS/ASC final rule with comment period. Specifically, we inadvertently deleted § 419.47(a)(1) ''The Medicare coverage IDE study criteria in § 405.212 of this chapter are met'' and paragraph (2) ''A new or revised code is necessary to preserve the scientific validity of such a study, such as by preventing the unblinding of the study.'' Therefore, effective January 1, 2026, we proposed to amend the regulatory text at § 419.47(a) to restore these two inadvertently removed paragraphs.

Additionally, in the CY 2025 OPPS/ASC final rule with comment period, we did not finalize our CY 2025 OPPS/ASC proposal to extend our coding and payment policy to drugs and devices that are being studied in clinical trials under a Coverage with Evidence Development (CED) National Coverage Determination (NCD) [211] for which the trial includes a treatment and control arm for CY 2025. However, despite our intent to remove all proposed revisions relating to this extension of the policy in the final rule, we inadvertently revised the section heading at § 419.47 to state that the policy applied to ''devices/drugs studies.'' Since we did not finalize the policy for CY 2025, we proposed, effective January 1, 2026, to delete ''and devices/drugs studies'' from the section heading at § 419.47.

We note that the revisions described previously in this section to § 419.47 were inadvertently omitted from the proposed regulation text in the CY 2026 OPPS/ASC proposed rule but that regulatory text has been included in this final rule with comment period.

We did not receive public comments on this proposal, and therefore, we are finalizing as proposed for CY 2026.

XI. CY 2026 OPPS Payment Status and Comment Indicators

A. CY 2026 OPPS Payment Status Indicator Definitions

Payment status indicators (SIs) that we assign to HCPCS codes and APCs serve an important role in determining payment for services under the OPPS. They indicate whether a service represented by a HCPCS code is payable under the OPPS or another payment system and whether particular OPPS policies apply to the code.

For CY 2026 and subsequent years, we proposed to create a new status indicator ''S1''. We proposed this new status indicator to indicate that a skin substitute product is paid separately from other procedure codes under the OPPS. We proposed to assign all existing HCPCS codes describing skin substitute products to status indicator ''S1'' for CY 2026. This policy is further discussed in section V.B.10. of this final rule with comment period. We solicited public comments on the proposed definitions of the OPPS payment status indicators for CY 2026. We did not propose to make any additional changes to the existing definitions of status indicators that were listed in Addendum D1 to the CY 2026 OPPS/ASC proposed rule, which is available on the CMS website at *https://www.cms.gov/medicare/payment/prospective-payment-systems/hospital-outpatient/regulations-notices.*

We did not receive any public comments related to the definition of status indicator ''S1''. Therefore, we are finalizing our proposed definition for status indicator ''S1'' without modification for CY 2026. The final definition and payment status of status

[211] *https://www.cms.gov/medicare/coverage/evidence.*

indicator ''S1'' can be found in Table 122.

TABLE 122: FINALIZED DEFINITION AND PAYMENT STATUS OF STATUS INDICATOR S1

Final Status Indicator	Final Descriptor	Final OPPS Payment Status
S1	Skin substitute product paid separately	Paid under OPPS; separate APC payment. Subject to payment based on FDA regulatory pathway.

The complete list of CY 2026 payment status indicators and their definitions is displayed in Addendum D1 to this final rule with comment period, which is available on the CMS website at *https://www.cms.gov/medicare/payment/prospective-payment-systems/hospital-outpatient/regulations-notices*. CY 2026 payment status indicator assignments for APCs and HCPCS codes are shown in Addendum A and Addendum B, respectively, to this final rule with comment period, which are available on the CMS website at *https://www.cms.gov/medicare/payment/prospective-payment-systems/hospital-outpatient/regulations-notices*.

B. CY 2026 Comment Indicator Definitions

We proposed to use four comment indicators for the CY 2026 OPPS. These comment indicators, ''CH,'' ''NC,'' ''NI,'' and ''NP,'' are in effect for CY 2025; and we proposed to continue their use in CY 2026. The proposed CY 2026 OPPS comment indicators are as follows:

- ''CH''—Active HCPCS code in current and next calendar year, status indicator and/or APC assignment has changed; or active HCPCS code that will be discontinued at the end of the current calendar year.
- ''NC''—New code for the next calendar year or existing code with substantial revision to its code descriptor in the next calendar year, as compared to current calendar year for which we requested comments in the CY 2026 OPPS/ASC proposed rule; final APC assignment; comments will not be accepted on the final APC assignment for the new code.
- ''NI''—New code for the next calendar year or existing code with substantial revision to its code descriptor in the next calendar year, as compared to current calendar year, interim APC assignment; comments will be accepted on the interim APC assignment for the new code.
- ''NP''—New code for the next calendar year or existing code with substantial revision to its code descriptor in the next calendar year, as compared to current calendar year, proposed APC assignment; comments will be accepted on the proposed APC assignment for the new code.

We solicited public comments on our proposed definitions of the OPPS comment indicators for CY 2026.

We did not receive public comments on this provision, and therefore, we are finalizing those definitions without modification for CY 2026. The definitions of OPPS comment indicators for CY 2026 are listed in Addendum D2 to this final rule with comment period, which is available on the CMS website at *https://www.cms.gov/medicare/payment/prospective-payment-systems/hospital-outpatient/regulations-notices*.

XII. MedPAC Recommendations

The Medicare Payment Advisory Commission (MedPAC) was established under section 1805 of the Act in large part to advise the U.S. Congress on issues affecting the Medicare program. As required under the statute, MedPAC submits reports to the Congress no later than March and June of each year that present its Medicare payment policy recommendations. The March report typically provides discussion of Medicare payment policy across different payment systems and the June report typically discusses selected Medicare issues. We are including this section to make interested parties aware of certain MedPAC recommendations for the OPPS and ASC payment systems as discussed in its March 2025 report.

Comments received from MedPAC for other OPPS or ASC payment system policies are discussed in the applicable sections of this final rule with comment period.

A. OPPS Payment Rates Update

The March 2025 MedPAC ''Report to the Congress: Medicare Payment Policy,'' recommended that the Congress update Medicare OPPS payment rates by the amount specified in current law plus 1 percent. We refer readers to the March 2025 report for a complete discussion of this recommendation.[212] We appreciate MedPAC's recommendation and, as discussed further in section II.B. of this final rule with comment period, we are finalizing our proposal to increase the OPPS payment rates by the amount specified in current law.

B. Medicare Safety Net Index

In the March 2025 MedPAC ''Report to the Congress: Medicare Payment Policy,'' MedPAC stated that their recommended update to IPPS and OPPS payment rates of current law plus 1 percent may not be sufficient to ensure the financial viability of some Medicare safety-net hospitals with a poor payer mix. MedPAC recommended redistributing the current Medicare safety-net payments (disproportionate share hospital and uncompensated care payments) using the MedPAC-developed Medicare Safety-Net Index (MSNI) for hospitals. In addition, MedPAC recommended adding $4 billion to this MSNI pool of funds to help maintain the financial viability of Medicare safety-net hospitals and recommended to the Congress transitional approaches for an MSNI policy. The FY 2026 IPPS/LTCH proposed and final rule with comment period (90 FR 18002 and 90 FR 36536) provides additional information regarding statutory requirements for disproportionate share hospital and uncompensated care payments. We look forward to working with the Congress on these matters.

[212] Medicare Payment Advisory Committee. March 2025 Report to the Congress. Chapter 3: Hospital inpatient and outpatient services, pp. 61–94. Available at *https://www.medpac.gov*.

XIII. Updates to the Ambulatory Surgical Center (ASC) Payment System

A. Background, Legislative History, Statutory Authority, and Prior Rulemaking for the ASC Payment System

For a detailed discussion of the legislative history and statutory authority related to payments to ASCs under Medicare, we refer readers to the CY 2012 OPPS/ASC final rule with comment period (76 FR 74377 through 74378) and the June 12, 1998 proposed rule (63 FR 32291 through 32292). For a discussion of prior rulemaking on the ASC payment system, we refer readers to the CYs 2012 to 2025 OPPS/ASC final rules with comment period (76 FR 74378 through 74379; 77 FR 68434 through 68467; 78 FR 75064 through 75090; 79 FR 66915 through 66940; 80 FR 70474 through 70502; 81 FR 79732 through 79753; 82 FR 59401 through 59424; 83 FR 59028 through 59080; 84 FR 61370 through 61410; 85 FR 86121 through 86179; 86 FR 63761 through 63815; 87 FR 72054 through 72096; 88 FR 81900 through 81961; and 89 FR 94309 through 94367).

B. ASC Treatment of New and Revised Codes

1. Background on Process for New and Revised HCPCS Codes

We update the lists and payment rates for covered surgical procedures and covered ancillary services in ASCs in conjunction with the annual proposed and final rulemaking process to update the OPPS and the ASC payment systems (§ 416.173; 72 FR 42535). We base ASC payment and policies for most covered surgical procedures, drugs, biologicals, and certain other covered ancillary services on the OPPS payment policies, and we use quarterly change requests (CRs) to update services paid for under the OPPS. We also provide quarterly update CRs for ASC covered surgical procedures and covered ancillary services throughout the year (January, April, July, and October). We release new and revised Level II HCPCS codes and recognize the release of new and revised CPT codes by the American Medical Association (AMA) and make these codes effective (that is, the codes are recognized on Medicare claims) via these ASC quarterly update CRs. We recognize the release of new and revised Category III CPT codes in the July and January CRs. These updates implement newly created and revised Level II HCPCS and Category III CPT codes for ASC payments and update the payment rates for separately paid drugs and biologicals based on the most recently submitted ASP data. New and revised Category I CPT codes, except vaccine codes, are released only once a year, and are implemented only through the January quarterly CR update. New and revised Category I CPT vaccine codes are released twice a year and are implemented through the January and July quarterly CR updates. We refer readers to Table 41 in the CY 2012 OPPS/ASC proposed rule for an example of how this process is used to update HCPCS and CPT codes, which we finalized in the CY 2012 OPPS/ASC final rule with comment period (76 FR 42291; 76 FR 74380 through 74384).

In our annual updates to the ASC list of covered surgical procedures and covered ancillary services, we undertake a review of excluded surgical procedures, new codes, and codes with revised descriptors, to identify any that we believe meet the criteria for designation as ASC covered surgical procedures or covered ancillary services. Updating the lists of ASC covered surgical procedures and covered ancillary services, as well as their payment rates, in association with the annual OPPS rulemaking cycle, is particularly important because the OPPS relative payment weights and, in some cases, payment rates, are used as the basis for the payment of many covered surgical procedures and covered ancillary services under the revised ASC payment system. This joint update process ensures that the ASC updates occur in a regular, predictable, and timely manner.

Payment for ASC procedures, services, and items are generally based on medical billing codes, specifically, HCPCS codes, that are reported on ASC claims. The HCPCS is divided into two principal subsystems, referred to as Level I and Level II. Level I is comprised of CPT (Current Procedural Terminology) codes, a numeric and alphanumeric coding system maintained by the AMA, and includes Category I, II, and III CPT codes. Level II of the HCPCS, which is maintained by CMS, is a standardized coding system that is used primarily to identify products, supplies, and services not included in the CPT codes. Together, Level I and II HCPCS codes are used to report procedures, services, items, and supplies under the ASC payment system. Specifically, we recognize the following codes on ASC claims:

- Category I CPT codes, which describe surgical procedures, diagnostic and therapeutic services, and vaccine codes;
- Category III CPT codes, which describe new and emerging technologies, services, and procedures; and
- Level II HCPCS codes (also known as alpha-numeric codes), which are used primarily to identify drugs, devices, supplies, temporary procedures, and services not described by CPT codes.

We finalized a policy in the August 2, 2007 ASC final rule with comment period (72 FR 42533 through 42535) to evaluate each year all new and revised Category I and Category III CPT codes and Level II HCPCS codes that describe surgical procedures, and to make preliminary determinations during the annual OPPS/ASC rulemaking process regarding whether or not they meet the criteria for payment in the ASC setting as covered surgical procedures and, if so, whether or not they are office-based procedures. In addition, we identify new and revised codes as ASC covered ancillary services based upon the final payment policies of the revised ASC payment system. In prior rulemakings, we refer to this process as recognizing new codes. However, this process has always involved the recognition of new and revised codes. We consider revised codes to be new when they have substantial revision to their code descriptors that necessitate a change in the current ASC payment indicator. To clarify, we refer to these codes as new and revised in this CY 2026 OPPS/ASC proposed rule.

We have separated our discussion below based on when the codes are released and whether we propose to solicit public comments in the proposed rule (and respond to those comments in this final rule with comment period) or whether we will be soliciting public comments in this CY 2026 OPPS/ASC final rule with comment period (and responding to those comments in the CY 2027 OPPS/ASC final rule with comment period).

2. April 2025 HCPCS Codes Proposed Rule Comment Solicitation

For the April 2025 update, there were no new CPT codes; however, there were several new Level II HCPCS codes. In the April 2025 ASC quarterly update (Transmittal 13181, dated April 25, 2025, CR 14017), we added one new Level II HCPCS code to the list of covered ancillary services. Table 73 (New Level II HCPCS Codes for ASC Covered Surgical Procedures and Ancillary Services Effective April 1, 2025) of the CY 2026 OPPS/ASC proposed rule (90 FR 33701) displayed the new Level II HCPCS codes that were implemented April 1, 2025. These new codes that were effective April 1, 2025, were assigned to comment indicator

''NP'' in Addendum BB to the CY 2026 OPPS/ASC proposed rule to indicate that the codes were assigned to an interim APC assignment and that comments would be accepted on their interim APC assignments. In addition, we note that the entire ASC addenda, which consist of the addenda listed below, are available via the internet on the CMS website, specifically, at *https://www.cms.gov/medicare/payment/prospective-payment-systems/hospital-outpatient/regulations-notices*:

- ASC Addendum AA: ASC Covered Surgical Procedures (Including Surgical Procedures for Which Payment is Packaged).
- ASC Addendum BB: ASC Covered Ancillary Services Integral to Covered Surgical Procedures (Including Ancillary Services for Which Payment is Packaged).
- ASC Addendum DD1: ASC Payment Indicators (PI).
- ASC Addendum DD2: ASC Comment Indicators (CI).
- ASC Addendum EE: Surgical Procedures to be Excluded from Payment in ASCs.
- ASC Addendum FF: ASC Device Offset Percentages.
- Addendum O: Long Descriptors for New Category I CPT Codes, Category III CPT Codes, C-Codes, and G-Codes Effective January 1, 2026.

We invited public comments on the proposed interim payment indicators for the new HCPCS codes that were recognized as ASC covered ancillary services in April 2025 through the quarterly update CRs, as listed in Table 123 (New Level II HCPCS Codes for ASC Covered Surgical Procedures and Ancillary Services Effective April 1, 2025). The new codes that were effective April 1, 2025, were assigned to comment indicator ''NP'' in ASC Addendum BB to the CY 2026 OPPS/ASC proposed rule to indicate that the codes are assigned to interim payment indicators and comments would be accepted on their interim assignments. We proposed to finalize the payment indicators in this final rule with comment period. We did not receive any comments on the proposed ASC payment indicator assignments for the new Level II HCPCS codes implemented in April 2025 and are finalizing the proposed ASC payment indicator assignments for these codes. We note in prior years we included the final ASC payment indicators in the coding tables in the preamble, but because we include the same information in the ASC addenda, we have not included them in Table 123. Therefore, readers are advised to refer to the ASC addenda for the final ASC payment indicators and payment rates for all codes reported under the ASC payment system. The list of ASC payment indicators and definitions used under the ASC payment system can be found in the ASC addenda. We note that the ASC addenda (AA, BB, DD1, DD2, EE, and FF) are available via the internet on the CMS website.

BILLING CODE 4120–01–P

TABLE 123: NEW LEVEL II HCPCS CODES FOR ASC COVERED SURGICAL PROCEDURES AND ANCILLARY SERVICES EFFECTIVE APRIL 1, 2025

April 2025 HCPCS Code	CY 2026 HCPCS Code	CY 2026 Long Descriptor
A2030	A2030	Miro3d fibers, per milligram
A2031	A2031	Mirodry wound matrix, per square centimeter
A2032	A2032	Myriad matrix, per square centimeter
A2033	A2033	Myriad morcells, 4 milligrams
A2034	A2034	Foundation drs solo, per square centimeter
A2035	A2035	Corplex p or theracor p or allacor p, per milligram
C8004	C8004	Simulation angiogram with use of a pressure-generating catheter (e.g., one-way valve, intermittently occluding), inclusive of all radiological supervision and interpretation, intraprocedural roadmapping, and imaging guidance necessary to complete the angiogram, for subsequent therapeutic radioembolization of tumors
C9302	C9302	Injection, zanidatamab-hrii, 2 mg
C9303	C9303	Injection, zolbetuximab-clzb, 1mg
C9304	C9304	Injection, marstacimab-hncq, subcutaneous, 0.5 mg
J0281	J0281	Injection, aminocaproic acid, 1 gram
J1072	J1072	Injection, testosterone cypionate (azmiro), 1 mg
J1271	J1271	Injection, doxycycline hyclate, 1 mg
J1299	J1299	Injection, eculizumab, 2 mg
J1308	J1308	Injection, famotidine, 0.25 mg
J1808	J1808	Injection, folic acid, 0.1 mg
J1938	J1938	Injection, furosemide, 1 mg
J2351	J2351	Injection, ocrelizumab, 1 mg and hyaluronidase-ocsq
J2428	J2428	Injection, paliperidone palmitate extended release (erzofri), 1 mg
J2804	J2804	Injection, rifampin, 1 mg
J2865	J2865	Injection, sulfamethoxazole 5 mg and trimethoprim 1 mg
J7521	J7521	Tacrolimus, granules, oral suspension, 0.1 mg
J9024	J9024	Injection, atezolizumab, 5 mg and hyaluronidase-tqjs
J9054	J9054	Injection, bortezomib (boruzu), 0.1 mg
Q4354	Q4354	Palingen dual-layer membrane, per square centimeter
Q4355	Q4355	Abiomend xplus membrane and abiomend xplus hydromembrane, per square centimeter
Q4356	Q4356	Abiomend membrane and abiomend hydromembrane, per square centimeter
Q4357	Q4357	Xwrap plus, per square centimeter
Q4358	Q4358	Xwrap dual, per square centimeter
Q4359	Q4359	Choriply, per square centimeter
Q4360	Q4360	Amchoplast fd, per square centimeter
Q4361	Q4361	Epixpress, per square centimeter
Q4362	Q4362	Cygnus disk, per square centimeter
Q4363	Q4363	Amnio burgeon membrane and hydromembrane, per square centimeter
Q4364	Q4364	Amnio burgeon xplus membrane and xplus hydromembrane, per square centimeter
Q4365	Q4365	Amnio burgeon dual-layer membrane, per square centimeter
Q4366	Q4366	Dual layer amnio burgeon x-membrane, per square centimeter
Q4367	Q4367	Amniocore sl, per square centimeter
Q5147	Q5147	Injection, aflibercept-ayyh (pavblu), biosimilar, 1 mg

3. July 2025 HCPCS Codes Proposed Rule Comment Solicitation

In the July 2025 ASC quarterly update (Transmittal 13344, Change Request 14101, August 1, 2025), we added several separately payable CPT and Level II HCPCS codes to the list of covered surgical procedures and covered ancillary services. Table 74 (New HCPCS Codes for ASC Covered Surgical Procedures and Ancillary Services Effective July 1, 2025) of the CY 2026 OPPS/ASC proposed rule (90 FR 33702), displayed the new HCPCS codes that are effective July 1, 2025. We invited public comments on the proposed payment indicators for these Level II HCPCS codes, and indicated that the proposed comment indicators, payment indicators, and payment rates for these codes were listed in

Addendum AA and Addendum BB of the proposed rule. These new codes that were effective July 1, 2025, were assigned to comment indicator ''NP'' in ASC Addendum AA and Addendum BB to the CY 2026 OPPS/ASC proposed rule to indicate that the codes were assigned to interim payment indicators and comments would be accepted on their interim assignments. We further stated that we proposed to finalize the payment indicators in final rule with comment period. We note in prior years we included the final ASC payment indicators in the coding preamble tables, however, because the same information can be found in Addendum AA and Addendum BB, we are no longer including them in Table 124. Therefore, readers are advised to refer to the ASC addenda for the final ASC payment indicators and payment rates for all codes reported under the ASC payment system.

We did not receive any comments on the proposed interim ASC payment indicator assignments for the new CPT and Level II HCPCS codes that were added to the list of covered surgical procedures and ancillary services implemented in July 2025. Therefore, we are finalizing the proposed ASC payment indicator assignments for the codes.

TABLE 124: NEW HCPCS CODES FOR ASC COVERED SURGICAL PROCEDURES AND COVERED ANCILLARY SERVICES EFFECTIVE JULY 1, 2025

July 2025 HCPCS Code	CY 2026 HCPCS Code	CY 2026 Long Descriptor
0950T	0950T	Ablation of benign prostate tissue, transrectal, with high intensity–focused ultrasound (HIFU), including ultrasound guidance
0956T	0956T	Partial craniectomy, channel creation, and tunneling of electrode for sub-scalp implantation of an electrode array, receiver, and telemetry unit for continuous bilateral electroencephalography monitoring system, including imaging guidance
0957T	0957T	Revision of sub-scalp implanted electrode array, receiver, and telemetry unit for electrode, when required, including imaging guidance
0958T	0958T	Removal of sub-scalp implanted electrode array, receiver, and telemetry unit for continuous bilateral electroencephalography monitoring system, including imaging guidance
0959T	0959T	Removal or replacement of magnet from coil assembly that is connected to continuous bilateral electroencephalography monitoring system, including imaging guidance
0960T	0960T	Replacement of sub-scalp implanted electrode array, receiver, and telemetry unit with tunneling of electrode for continuous bilateral electroencephalography monitoring system, including imaging guidance
0961T	0961T	Shortwave infrared radiation imaging, surgical pathology specimen, to assist gross examination for lymph node localization in fibroadipose tissue, per specimen (List separately in addition to code for primary procedure)
0963T	0963T	Anoscopy with directed submucosal injection of bulking agent into anal canal
0964T	0964T	Impression and custom preparation of jaw expansion oral prosthesis for obstructive sleep apnea, including initial adjustment; single arch, without mandibular advancement mechanism
0965T	0965T	Impression and custom preparation of jaw expansion oral prosthesis for obstructive sleep apnea, including initial adjustment; dual arch, with additional mandibular advancement, non-fixed hinge mechanism
0966T	0966T	Impression and custom preparation of jaw expansion oral prosthesis for obstructive sleep apnea, including initial adjustment; dual arch, with additional mandibular advancement, fixed hinge mechanism
0967T	0967T	Transanal insertion of endoluminal temporary colorectal anastomosis protection device, including vacuum anchoring component and flexible sheath connected to external vacuum source and monitoring system
0970T	0970T	Ablation, benign breast tumor (eg, fibroadenoma), percutaneous, laser, including imaging guidance when performed, each tumor
0971T	0971T	Ablation, malignant breast tumor(s), percutaneous, laser, including imaging guidance when performed, unilateral
0973T	0973T	Selective enzymatic debridement, partial-thickness and/or full-thickness burn eschar, requiring anesthesia (ie, general anesthesia, moderate sedation), including patient monitoring, trunk, arms, legs; first 100 sq cm
0974T	0974T	Selective enzymatic debridement, partial-thickness and/or full-thickness burn eschar, requiring anesthesia (ie, general anesthesia, moderate sedation), including patient monitoring, trunk, arms, legs; each additional 100 sq cm (List separately in addition to code for primary procedure)
0975T	0975T	Selective enzymatic debridement, partial-thickness and/or full-thickness burn eschar, requiring anesthesia (ie, general anesthesia, moderate sedation), including patient monitoring, scalp, neck, hands, feet, and/or multiple digits; first 100 sq cm
0976T	0976T	Selective enzymatic debridement, partial-thickness and/or full-thickness burn eschar, requiring anesthesia (ie, general anesthesia, moderate sedation), including patient monitoring, scalp, neck, hands, feet, and/or multiple digits;each additional 100 sq cm (List separately in addition to code for primary procedure)

July 2025 HCPCS Code	CY 2026 HCPCS Code	CY 2026 Long Descriptor
0981T	0981T	Transcatheter implantation of wireless inferior vena cava sensor for long-term hemodynamic monitoring, including deployment of the sensor, radiological supervision and interpretation, right heart catheterization, and inferior vena cava venography, when performed
0984T	0984T	Intravascular imaging of extracranial cerebral vessels using optical coherence tomography (OCT) during diagnostic evaluation and/or therapeutic intervention, including all associated radiological supervision, interpretation, and report; initial vessel (List separately in addition to code for primary procedure)
0985T	0985T	Intravascular imaging of extracranial cerebral vessels using optical coherence tomography (OCT) during diagnostic evaluation and/or therapeutic intervention, including all associated radiological supervision, interpretation, and report;each additional vessel (List separately in addition to code for primary procedure)
0986T	0986T	Intravascular imaging of intracranial cerebral vessels using optical coherence tomography (OCT) during diagnostic evaluation and/or therapeutic intervention, including all associated radiological supervision, interpretation, and report; initial vessel (List separately in addition to code for primary procedure)
0987T	0987T	Intravascular imaging of intracranial cerebral vessels using optical coherence tomography (OCT) during diagnostic evaluation and/or therapeutic intervention, including all associated radiological supervision, interpretation, and report;each additional vessel (List separately in addition to code for primary procedure)
C9174	C9174	Injection, datopotamab deruxtecan-dlnk, 1 mg
C9175	C9175	Injection, treosulfan, 50 mg
J0165	J0165	Injection, epinephrine, not otherwise specified, 0.1 mg
J0166	J0166	Injection, epinephrine (bpi), not therapeutically equivalent to j0165, 0.1 mg
J0167	J0167	Injection, epinephrine (hospira), not therapeutically equivalent to j0165, 0.1 mg
J0168	J0168	Injection, epinephrine (international medication systems), not therapeutically equivalent to j0165, 0.1 mg
J0169	J0169	Injection, epinephrine (adrenalin), not therapeutically equivalent to j0165, 0.1 mg
J0616	J0616	Injection, metoprolol tartrate, 1 mg
J0618	J0618	Injection, calcium chloride, 2 mg
J1163	J1163	Injection, diltiazem hydrochloride, 0.5 mg
J1326	J1326	Injection, zolbetuximab-clzb, 2 mg
J2312	J2312	Injection, naloxone hydrochloride, not otherwise specified, 0.01 mg
J2313	J2313	Injection, naloxone hydrochloride (zimhi), 0.01 mg
J3373	J3373	Injection, vancomycin hydrochloride, 10 mg
J3374	J3374	Injection, vancomycin hydrochloride (mylan) not therapeutically equivalent to j3373, 10 mg
J3375	J3375	Injection, vancomycin hydrochloride (xellia), not therapeutically equivalent to j3373, 10 mg
J7172	J7172	Injection, marstacimab-hncq, 0.5 mg
J7356	J7356	Injection, foscarbidopa 0.25 mg/foslevodopa 5 mg
J9174	J9174	Injection, docetaxel (beizray), 1 mg
J9220	J9220	Injection, indigotindisulfonate sodium, 1 mg
J9276	J9276	Injection, zanidatamab-hrii, 2 mg
J9289	J9289	Injection, nivolumab, 2 mg and hyaluronidase-nvhy
J9342	J9342	Injection, thiotepa, not otherwise specified, 1 mg
J9382	J9382	Injection, zenocutuzumab-zbco, 1 mg
Q4368	Q4368	Amchothick, per square centimeter
Q4369	Q4369	Amnioplast 3, per square centimeter
Q4370	Q4370	Aeroguard, per square centimeter

July 2025 HCPCS Code	CY 2026 HCPCS Code	CY 2026 Long Descriptor
Q4371	Q4371	Neoguard, per square centimeter
Q4372	Q4372	Amchoplast excel, per square centimeter
Q4373	Q4373	Membrane wrap lite, per square centimeter
Q4375	Q4375	Duograft ac, per square centimeter
Q4376	Q4376	Duograft aa, per square centimeter
Q4377	Q4377	Trigraft ft, per square centimeter
Q4378	Q4378	Renew ft matrix, per square centimeter
Q4379	Q4379	Amniodefend ft matrix, per square centimeter
Q4380	Q4380	Advograft one, per square centimeter
Q4382	Q4382	Advograft dual, per square centimeter
Q5099	Q5099	Injection, ustekinumab-stba (steqeyma), biosimilar, 1 mg
Q5100	Q5100	Injection, ustekinumab-kfce (yesintek), biosimilar, 1 mg

4. October 2025 HCPCS Codes Final Rule Comment Solicitation

For CY 2026, consistent with our established policy, we proposed in the CY 2026 OPPS/ASC proposed rule (90 FR 33704) that the Level II HCPCS codes that will be effective October 1, 2025, would be flagged with comment indicator ''NI'' in Addendum BB to this final rule with comment period to indicate that we have assigned the codes an interim ASC payment status for CY 2026. In the October 2025 ASC quarterly update (Transmittal1349, Change Request 14246, dated September 22, 2025), we added several separately payable Level II HCPCS codes to the list of covered surgical procedures and covered ancillary services. Table 125 lists the codes that were effective October 1, 2025. We are inviting public comments on this final rule with comment period on the interim payment indicators, which would be finalized in the CY 2027 OPPS/ASC final rule with comment period. We note these codes will be subject to comment in the CY 2027 OPPS/ASC proposed rule with comment period, which would be finalized in the CY 2027 OPPS/ASC final rule with comment period.

TABLE 125: NEW LEVEL II HCPCS CODES FOR ASC COVERED SURGICAL PROCEDURES AND ANCILLARY SERVICES EFFECTIVE OCTOBER 1, 2025

October 2025 HCPCS Code	CY 2026 HCPCS Code	CY 2026 Long Descriptor
A9616	A9616	Gallium ga-68 gozetotide (gozellix), diagnostic, 1 millicurie
C8006	C8006	Insertion of pleural-peritoneal shunt with intercostal pump chamber, including imaging, injection(s) of contrast with radiological supervision and interpretation, when performed
C9305	C9305	Injection, nipocalimab-aahu, 3 mg
C9306	C9306	Injection, telisotuzumab vedotin-tllv, 1 mg
J0458	J0458	Injection, aztreonam/avibactam, 7.5 mg/2.5 mg (10 mg)
J0614	J0614	Injection, treosulfan, 50 mg
C9088	J0668	Instillation, bupivacaine and meloxicam, 1 mg/0.03 mg
J0675	J0675	Injection, carboprost tromethamine, 0.1 mg
J0681	J0681	Injection, ceftobiprole medocaril sodium, 3 mg
J0738	J0738	Injection, lenacapavir, 1 mg, fda approved prescription, only for use as hiv pre-exposure prophylaxis (not for use as treatment for hiv)
J0752	J0752	Oral, lenacapavir, 300 mg, fda approved prescription, only for use as hiv pre-exposure prophylaxis (not for use as treatment for hiv)
C9248	J0759	Injection, clevidipine butyrate, 1 mg
J1612	J1612	Injection, glucagon (gvoke), 0.01 mg
J1807	J1807	Injection, ethacrynate sodium, 1 mg
J1809	J1809	Injection, fosdenopterin, 0.1 mg
J1834	J1834	Injection, isoniazid, 1 mg
J3403	J3403	Revakinagene taroretcel-lwey, per implant
J7173	J7173	Injection, concizumab-mtci, 0.5 mg
J7174	J7174	Injection, fitusiran, 0.04 mg
C9174	J9011	Injection, datopotamab deruxtecan-dlnk, 1 mg
Q5157	Q5157	Injection, denosumab-bmwo (stoboclo/osenvelt), biosimilar, 1 mg
Q5158	Q5158	Injection, denosumab-bnht (bomyntra/conexxence), biosimilar, 1 mg

BILLING CODE 4120–01–C

5. January 2026 HCPCS Codes

a. New Level II HCPCS Codes Final Rule Comment Solicitation

As has been our practice in the past, we incorporate those new Level II HCPCS codes that are effective January 1 in the final rule with comment period, thereby updating the ASC payment system for the calendar year. We note that unlike the CPT codes that are effective January 1 and are included in the OPPS/ASC proposed rules, and except for the G-codes listed in Addendum O to the CY 2026 OPPS/ASC proposed rule, most Level II HCPCS codes are not released until sometime around November to be effective January 1. Because these codes are not available until November, we are unable to include them in the OPPS/ASC proposed rule; however, the codes are flagged with comment indicator ''NI'' in ASC Addendum AA and Addendum BB to this final rule with comment period to indicate that we are assigning them an interim payment status, which is subject to public comment. Therefore, as we stated in the CY 2025 OPPS/ASC proposed rule, these Level II HCPCS codes that will be effective January 1, 2026 are included in this final rule with comment period and will also be released to the public through the January 2026 ASC Update CR and the CMS HCPCS website. We are inviting public comments in this final rule with comment period on the payment indicator assignments, which would be finalized in the CY 2027 OPPS/ASC final rule with comment period. Similar to the codes effective October 1, 2025, these new Level II HCPCS codes that will be effective January 1, 2026 will be subject to comment in the CY 2027 OPPS/ASC proposed rule, which would be finalized in the CY 2027 OPPS/ASC final rule with comment period.

b. New CY 2026 CPT Codes Proposed Rule Comment Solicitation

For the CY 2026 ASC update, we received the CPT codes that will be effective January 1, 2026, from the AMA in time to be included in the CY 2026 OPPS/ASC proposed rule. The new, revised, and deleted CPT codes can be found in ASC Addendum AA and Addendum BB to the CY 2026 OPPS/

ASC proposed rule, which are available via the internet on the CMS website. We note that the new and revised CPT codes are assigned to comment indicator ''NP'' in ASC Addendum AA and Addendum BB of the CY 2026 OPPS/ASC proposed rule to indicate that the code is new for the next calendar year, or the code is an existing code with substantial revision to its code descriptor in the next calendar year as compared to the current calendar year with a proposed payment indicator assignment. We stated that we would accept comments and finalize the payment indicators in this final rule with comment period. Further, we remind readers that the CPT code descriptors that appeared in Addendum AA and Addendum BB are short descriptors and do not describe the complete procedure, service, or item described by the CPT code. Therefore, we included the 5-digit placeholder codes and their long descriptors for the new CY 2026 CPT codes in Addendum O to the CY 2026 OPPS/ASC proposed rule (which is available via the internet on the CMS website) so that the public could comment on our proposed payment indicator assignments. The 5-digit placeholder codes were listed in Addendum O to the CY 2026 OPPS/ASC proposed rule, specifically under the column labeled ''CY 2026 OPPS/ASC Proposed Rule 5-Digit Placeholder Code.'' We also stated that we would include the final CPT code numbers in this CY 2026 OPPS/ASC final rule with comment period.

We did not receive any comments on the proposed ASC payment indicators for the new CPT codes effective January 1, 2026, so we are finalizing these codes as proposed.

Finally, in Table 126, we summarize our process for updating codes through our ASC quarterly update CRs, seeking public comments, and finalizing the treatment of these new codes under the ASC payment system.

TABLE 126: COMMENT AND FINALIZATION TIMEFRAMES FOR NEW AND REVISED ASC-RELATED HCPCS CODES

ASC Quarterly Update CR	Type of Code	Effective Date	Comments Sought	When Finalized
April 2025	HCPCS (CPT and Level II codes)	April 1, 2025	CY 2026 OPPS/ASC proposed rule	CY 2026 OPPS/ASC final rule with comment period
July 2025	HCPCS (CPT and Level II codes)	July 1, 2025	CY 2026 OPPS/ASC proposed rule	CY 2026 OPPS/ASC final rule with comment period
October 2025	HCPCS (CPT and Level II codes)	October 1, 2025	CY 2026 OPPS/ASC final rule with comment period	CY 2027 OPPS/ASC final rule with comment period
January 2026	CPT Codes	January 1, 2026	CY 2026 OPPS/ASC proposed rule	CY 2026 OPPS/ASC final rule with comment period
	Level II HCPCS Codes	January 1, 2026	CY 2026 OPPS/ASC final rule with comment period	CY 2027 OPPS/ASC final rule with comment period

6. ASC Payment and Comment Indicators

a. Background

In addition to the payment indicators that we introduced in the August 2, 2007 ASC final rule with comment period, we created final comment indicators for the ASC payment system in the CY 2008 OPPS/ASC final rule with comment period (72 FR 66855). We created Addendum DD1 to define ASC payment indicators that we use in Addenda AA and BB to provide payment information regarding covered surgical procedures and covered ancillary services, respectively, under the revised ASC payment system. The ASC payment indicators in Addendum DD1 are intended to capture policy-relevant characteristics of HCPCS codes that may receive packaged or separate payment in ASCs, such as whether they were on the ASC CPL prior to CY 2008; payment designation, such as device-intensive or office-based, and the corresponding ASC payment methodology; and their classification as separately payable ancillary services, including radiology services, brachytherapy sources, OPPS pass-through devices, corneal tissue acquisition services, drugs or biologicals, NTIOLs, or qualifying non-opioid devices.

We also created Addendum DD2 that lists the ASC comment indicators. The ASC comment indicators included in Addenda AA and BB to the proposed rules and final rules with comment period serve to identify, for the revised ASC payment system, the status of a specific HCPCS code and its payment indicator with respect to the timeframe when comments will be accepted. The comment indicator ''NI'' is used in the OPPS/ASC final rule with comment period to indicate new codes for the next calendar year for which the interim payment indicator assigned is subject to comment. The comment indicator ''NI'' also is assigned to existing codes with substantial revisions to their descriptors such that we consider them to be describing new services, and the interim payment indicator assigned is subject to comment, as discussed in the CY 2010 OPPS/ASC final rule with comment period (74 FR 60622).

The comment indicator ''NP'' is used in the OPPS/ASC proposed rule to indicate new codes for the next calendar year for which the proposed payment indicator assigned is subject to comment. The comment indicator ''NP'' also is assigned to existing codes with substantial revisions to their descriptors, such that we consider them to be describing new services, and the

proposed payment indicator assigned is subject to comment, as discussed in the CY 2016 OPPS/ASC final rule with comment period (80 FR 70497).

The ''CH'' comment indicator is used in Addenda AA and BB to the proposed rule (these addenda are available via the internet on the CMS website) to indicate that the payment indicator assignment has changed for an active HCPCS code in the current year and the next calendar year, for example, if an active HCPCS code is newly recognized as payable in ASCs or an active HCPCS code is discontinued at the end of the current calendar year. The ''CH'' comment indicators that are published in the final rule are provided to alert readers that a change has been made from one calendar year to the next, but do not indicate that the change is subject to comment.

In the CY 2021 OPPS/ASC final rule with comment period, we finalized the addition of ASC payment indicator ''K5''—Items, Codes, and Services for which pricing information and claims data are not available. No payment made—to ASC Addendum DD1 (which is available via the internet on the CMS website) to indicate those services and procedures that CMS anticipates will become payable when claims data or payment information becomes available.

In CY 2024 OPPS/ASC final rule with comment period, we finalized the addition of two ASC payment indicators, ''D1''—''Ancillary dental service/item; no separate payment made'' and ''D2''—''Non office-based dental procedure added in CY 2024 or later'', for new dental codes for CY 2024 and subsequent calendar years to indicate potentially payable dental services and procedures in the ASC setting (88 FR 81907). We added these two codes to Addendum DD1 (which is available via the internet on the CMS website).

In CY 2025 OPPS/ASC final rule with comment period, we finalized the modification of the descriptor of ASC payment indicator ''L6'' to ''Special payment; New Technology Intraocular Lens (NTIOL) or qualifying non-opioid devices'', to account for non-opioid devices paid for under the ASC payment system pursuant to section 4135 of the Consolidated Appropriations Act (CAA), 2023 (89 FR 94317). We added this code to Addendum DD1 (which is available via the internet on the CMS website).

b. Final ASC Payment and Comment Indicators for CY 2026

For CY 2026, we proposed new and revised Category I and III CPT codes as well as new and revised Level II HCPCS codes. Proposed Category I and III CPT codes that are new and revised for CY 2026 and any new and existing Level II HCPCS codes with substantial revisions to the code descriptors for CY 2026, compared to the CY 2025 descriptors, are included in ASC Addenda AA and BB to the CY 2026 OPPS/ASC proposed rule and labeled with comment indicator ''NP'' to indicate that these CPT and Level II HCPCS codes were open for comment as part of the CY 2026 OPPS/ASC proposed rule.

As discussed in section III. of the CY 2026 OPPS/ASC proposed rule, we proposed to create APC groups to pay separately for certain skin substitutes under the OPPS and, as discussed in section XIII.D. of the CY 2026 OPPS/ASC proposed rule, we also proposed to pay separately for skin substitute supplies in the ASC payment system and add such supplies to the ancillary items and services list for CY 2026.

Under the ASC payment system, skin substitute products are currently packaged and assigned an ASC payment indicator of ''N1'' (Packaged service/item; no separate payment made). We do not believe there is an existing payment indicator available that would adequately describe these supplies and provide the correct separate payment under the ASC payment system. Under this new policy, payment under the ASC payment system for separately payable skin substitute products would be based on the OPPS conversion factor, not on the ASC conversion factor. Additionally, payment for these skin substitute products would not be subject to the ASC wage index. Therefore, for CY 2026 and subsequent years, we proposed to create a new ASC payment indicator ''S2''—(Skin substitute supply group; paid separately when provided integral to a surgical procedure on ASC list; payment based on OPPS rate)—to Addendum DD1 to this final rule with comment period to describe skin substitute products paid separately in an ASC. This ''S2'' payment indicator would indicate a separately payable ancillary skin substitute supply when provided integral to a separately payable ASC covered surgical procedure.

We did not receive public comments on our proposal to create a new ''S2'' payment indicator. Therefore, we are finalizing our proposal to indicate a separately payable ancillary skin substitute supply when provided integral to a separately payable ASC covered surgical procedure beginning CY 2026. We refer readers to Addenda DD1 and DD2 of this final rule with comment period (these addenda are available via the internet on the CMS website) for the complete list of ASC payment and comment indicators finalized for the CY 2026 update.

C. Payment Policies Under the ASC Payment System

1. Final ASC Payment for Covered Surgical Procedures

a. Background

Our ASC payment policies for covered surgical procedures under the revised ASC payment system are described in the CY 2008 OPPS/ASC final rule with comment period (72 FR 66828 through 66831). Under our established policy, we use the ASC standard ratesetting methodology of multiplying the ASC relative payment weight for the procedure by the ASC conversion factor for that same year to calculate the national unadjusted payment rates for procedures with payment indicators ''G2'' and ''A2.'' Payment indicator ''A2'' was developed to identify procedures that were included on the list of ASC covered surgical procedures in CY 2007 and, therefore, were subject to transitional payment prior to CY 2011. Although the 4-year transitional period has ended and payment indicator ''A2'' is no longer required to identify surgical procedures subject to transitional payment, we have retained payment indicator ''A2'' because it is used to identify procedures that are exempted from the application of the office-based designation.

Payment rates for office-based procedures (payment indicators ''P2,'' ''P3,'' and ''R2'') are the lower of the PFS nonfacility PE RVU-based amount or the amount calculated using the ASC standard rate setting methodology for the procedure. As detailed in section XIII.C.3.b. of this final rule with comment period, we update the payment amounts for office-based procedures (payment indicators ''P2,'' ''P3,'' and ''R2'') using the most recent available PFS and OPPS data. We compare the estimated current year rate for each of the office-based procedures, calculated according to the ASC standard rate setting methodology, to the PFS nonfacility PE RVU-based amount to determine which is lower and, therefore, would be the current year payment rate for the procedure under our final policy for the revised ASC payment system (§ 416.171(d)).

The rate calculation established for device-intensive procedures (payment indicator ''J8'') is structured so only the service (non-device) portion of the rate is subject to the ASC conversion factor. We update the payment rates for device-intensive procedures to incorporate the most recent device offset percentages calculated under the ASC standard

ratesetting methodology, as discussed in section XIII.C.4. of this final rule with comment period.

In the CY 2014 OPPS/ASC final rule with comment period (78 FR 75081), we finalized our proposal to calculate the CY 2014 payment rates for ASC covered surgical procedures according to our established methodologies, with the exception of device removal procedures. For CY 2014, we finalized a policy to conditionally package payment for device removal procedures under the OPPS. Under the OPPS, a conditionally packaged procedure (status indicators ''Q1'' and ''Q2'') describes a HCPCS code where the payment is packaged when it is provided with a significant procedure but is separately paid when the service appears on the claim without a significant procedure. Because ASC services always include a covered surgical procedure, HCPCS codes that are conditionally packaged under the OPPS are generally packaged (payment indicator ''N1'') under the ASC payment system. Under the OPPS, device removal procedures are conditionally packaged and, therefore, would be packaged under the ASC payment system. There is no Medicare payment made when a device removal procedure is performed in an ASC without another surgical procedure included on the claim; therefore, no Medicare payment would be made if a device was removed but not replaced. To ensure that the ASC payment system provides separate payment for surgical procedures that only involve device removal—conditionally packaged in the OPPS (status indicator ''Q2'')—we have continued to provide separate payment since CY 2014 and assign the current ASC payment indicators associated with these procedures.

b. Update to ASC Covered Surgical Procedure Payment Rates for CY 2026

We proposed to update ASC payment rates for CY 2026 and subsequent years using the established rate calculation methodologies under § 416.171 and using our definition of device-intensive procedures, as discussed in section XIII.C.4. of this final rule with comment period. As the proposed OPPS relative payment weights are generally based on geometric mean costs, we proposed that the ASC payment system will generally use the geometric mean cost to determine proposed relative payment weights under the ASC standard methodology. We proposed to continue to use the amount calculated under the ASC standard ratesetting methodology for procedures assigned payment indicators ''A2'' and ''G2''.

We proposed to calculate payment rates for office-based procedures (payment indicators ''P2,'' ''P3,'' and ''R2'') and device-intensive procedures (payment indicator ''J8'') according to our established policies and to identify device-intensive procedures using the methodology discussed in section XIII.C.4. of this final rule with comment period. Therefore, we proposed to update the payment amount for the service portion (the non-device portion) of the device-intensive procedures using the standard ASC ratesetting methodology and the payment amount for the device portion based on the proposed CY 2026 device offset percentages that have been calculated using the standard OPPS APC ratesetting methodology. We proposed that payment for office-based procedures would be at the lesser of the proposed CY 2026 PFS nonfacility PE RVU-based amount or the proposed CY 2026 ASC payment amount calculated according to the ASC standard ratesetting methodology.

As we did for CYs 2014 through 2025, for CY 2026, we proposed to continue our policy for device removal procedures, such that device removal procedures that are conditionally packaged in the OPPS (status indicators ''Q1'' and ''Q2'') will be assigned the current ASC payment indicators associated with those procedures and will continue to be paid separately under the ASC payment system.

c. Final Payment for ASC Add-On Procedures Eligible for Complexity Adjustments Under the OPPS

In this section, we discuss the policy to provide increased payment under the ASC payment system for combinations of certain ''J1'' service codes and add-on procedure codes that are eligible for a complexity adjustment under the OPPS.

(1) OPPS C–APC Complexity Adjustment Policy

Under the OPPS, complexity adjustments are utilized to provide increased payment for certain comprehensive services. As discussed in section II.A.2.b. of this final rule with comment period, we apply a complexity adjustment by promoting qualifying paired ''J1'' service code combinations or paired code combinations of ''J1'' services and add-on codes from the originating Comprehensive APC (C–APC) (the C–APC to which the designated primary service is first assigned) to the next higher paying C–APC in the same clinical family of C–APCs. A ''J1'' status indicator refers to a hospital outpatient service paid through a C–APC. We package payment for all add-on codes, which are codes that describe a procedure or service always performed in addition to a primary service or procedure, into the payment for the C–APC. However, certain combinations of primary service codes and add-on codes may qualify for a complexity adjustment.

We apply complexity adjustments when the paired code combination represents a complex, costly form or version of the primary service when the frequency and cost thresholds are met. The frequency threshold is met when there are 25 or more claims reporting the code combination, and the cost threshold is met when there is a violation of the 2 times rule, as specified in section 1833(t)(2) of the Act and described in section III.A.2.b. of this final rule with comment period, in the originating C–APC. These paired code combinations that meet the frequency and cost threshold criteria represent those that exhibit materially greater resource requirements than the primary service. After designating a single primary service for a claim, we evaluate that service in combination with each of the other procedure codes reported on the claim that are either assigned to status indicator ''J1'' or add-on codes to determine if there are paired code combinations that meet the complexity adjustment criteria. Once we have determined that a particular combination of ''J1'' services, or combinations of a ''J1'' service and add-on code, represents a complex version of the primary service because it is sufficiently costly, frequent, and a subset of the primary comprehensive service overall according to the criteria described previously, we promote the claim to the next higher cost C–APC within the clinical family unless the primary service is already assigned to the highest cost APC within the C–APC clinical family or assigned to the only C–APC in a clinical family. We do not create new C–APCs with a comprehensive geometric mean cost that is higher than the highest geometric mean cost (or only) C–APC in a clinical family just to accommodate potential complexity adjustments. Therefore, the highest payment for any claim including a code combination for services assigned to a C–APC would be the highest paying C–APC in the clinical family (79 FR 66802).

As previously stated, we package payment for add-on codes into the C–APC payment rate. If any add-on code reported in conjunction with the ''J1'' primary service code does not qualify for a complexity adjustment, payment for the add-on service continues to be packaged into the payment for the

primary service and the primary service code reported with the add-on code is not reassigned to the next higher cost C–APC. We list the final complexity adjustments for ''J1'' and add-on code combinations for CY 2026, along with all of the other final complexity adjustments, in Addendum J to this final rule with comment period (which is available via the internet on the CMS website at *https://www.cms.gov/medicare/payment/prospective-payment-systems/hospital-outpatient/regulations-notices*).

(2) CY 2026 ASC Special Payment Policy Proposal for OPPS Complexity-Adjusted C–APCs

For CY 2026, we proposed to continue the special payment policy and methodology for OPPS complexity-adjusted C–APCs that was finalized in the CY 2023 OPPS/ASC final rule with comment period (87 FR 72078 through 72080).

For those ASC complexity adjustment codes for which we have claims data, we proposed to use the claims data to calculate the code combination utilization and estimated payments for the ASC payment system budget neutrality calculations for CY 2026. The ASC complexity adjustment budget neutrality calculations are discussed further in section XIII.H.2.a. of this final rule with comment period. The full list of the proposed ASC complexity adjustment codes for CY 2026 can be found in the CY 2026 proposed ASC Addendum AA and the supplemental policy file, which also includes both the existing ASC complexity adjustment codes and proposed additions and published on the CMS website at *https://www.cms.gov/medicare/medicare-fee-for-service-payment/ascpayment/asc-regulations-and-notices*. Since the complexity adjustment assignments change each year under the OPPS, the proposed list of ASC complexity adjustment codes eligible for the proposed payment policy changed slightly from the previous year. Additionally, since complexity adjustment assignments may change between the proposed rule and final rule under the OPPS, the final list of ASC complexity adjustment codes eligible for this payment policy may be slightly different than the proposed list of ASC complexity adjustment codes.

We received public comments on these proposals. The following is a summary of the comments we received and our responses.

Comment: A commenter recommended adjustments to our device-intensive determination for ASC complexity adjustment codes. The commenter stated that the current methodology fails to recognize the device-intensive status of add-on codes associated with significant device costs and that failure to capture these costs could present a financial challenge for ASCs who wish to offer these services in the setting that is preferred by many beneficiaries.

Response: We appreciate the commenter's recommendation. We did not propose to calculate the device portion of an ASC complexity adjustment code based on both the device costs of packaged add-on procedures and the device costs of the primary procedure but we will take this suggestion into consideration for future rulemaking.

After consideration of public comments we received, we are finalizing the ASC special payment policy for OPPS complexity-adjusted C–APCs, as proposed. The final ASC complexity adjustment codes, based on the most recent data available for this final rule with comment period, can be found on the CMS website at: *https://www.cms.gov/medicare/payment/prospective-payment-systems/ambulatory-surgicalcenter-asc/annual-policy-files*. Existing ASC complexity adjustment codes that do not meet our criteria for separate payment for CY 2026 because the code combination is not eligible for a complexity adjustment under the OPPS for CY 2026 will be non-payable and assigned a status indicator of ''B5''—''Alternative code may be available; no payment made''—for CY 2026. Additionally, proposed ASC complexity adjustment codes that met our criteria based on data available for the CY 2026 OPPS/ASC proposed rule but do not meet our criteria based on claims data available for this final rule with comment period will not be finalized.

d. Final Low Volume APCs and Limit on ASC Payment Rates for Procedures Assigned to Low Volume APCs

As stated in section XIII.D.1.b. of the CY 2025 OPPS/ASC proposed rule, the ASC payment system generally uses OPPS geometric mean costs under the standard methodology to determine proposed relative payment weights under the standard ASC ratesetting methodology.

In the CY 2022 OPPS/ASC final rule with comment period (86 FR 63743 through 63747), we adopted a universal Low Volume APC policy for CY 2022 and subsequent calendar years. Under our policy, we expanded the low volume adjustment policy that is applied to procedures assigned to New Technology APCs to also apply to clinical and brachytherapy APCs. Specifically, a clinical APC or brachytherapy APC with fewer than 100 claims per year would be designated as a Low Volume APC. For items or services assigned to a Low Volume APC, we use up to 4 years of claims data to establish a payment rate for the APC as we currently do for low volume services assigned to New Technology APCs. The payment rate for a Low Volume APC or a low volume New Technology procedure would be based on the highest of the median cost, arithmetic mean cost, or geometric mean cost calculated using multiple years of claims data.

Based on claims data available for the CY 2026 OPPS/ASC proposed rule, we proposed to designate six brachytherapy APCs and four clinical APCs as Low Volume APCs under the ASC payment system. The four clinical APCs and six brachytherapy APCs met our criteria of having fewer than 100 single claims in the relevant claims year (CY 2024 for the CY 2026 OPPS/ASC proposed rule) and therefore, we proposed that they would be subject to our universal Low Volume APC policy and the APC cost metric would be based on the greater of the median cost, arithmetic mean cost, or geometric mean cost using up to 4 years of claims data. Nine of the ten APCs were designated as Low Volume APCs in CY 2025. Based on data for the CY 2026 OPPS/ASC proposed rule, APC 2645 (Brachytx, non-stranded, gold-198) had 103 single claims and no longer met our criteria to be designated as a Low Volume APC; however, APC 2643 (Brachytx, non-stranded, c-131) had only 88 single claims and met our criteria to be designated as a Low Volume APC.

We did not receive any comments on our proposal. Based on claims data available for this final rule with comment period, we are finalizing our proposal to designate the four clinical APCs and six brachytherapy APCs shown in Table 127 as Low Volume APCs under the ASC payment system, because they continue to meet our criteria of having fewer than 100 single claims in the relevant claims year (CY 2024). Table 127 includes the CY 2024 claims available for ratesetting for each of the APCs we are finalizing to be designated as a Low Volume APCs for CY 2026. The cost statistics for our Low Volume APCs, such as the median, arithmetic mean, and geometric mean cost are available for download with this final rule with comment period on the CMS website at: *https://www.cms.gov/medicare/payment/prospective-payment-systems/ambulatory-surgical-center-asc/*

ascregulations-and-notices; click on the relevant regulation to download the Low Volume APC cost statistics under the standard (ASC) ratesetting methodology in the ''Downloads'' section of the web page.

TABLE 127: LOW VOLUME APCS USING STANDARD (ASC) RATESETTING METHODOLOGY FOR CY 2026

APC	APC Description	CY 2024 Claims Available for Ratesetting
2632	Iodine I-125 sodium iodide	1
2635	Brachytx, non-str, HA, P-103	9
2636	Brachy linear, non-str, P-103	0
2642	Brachytx, stranded, C-131	49
2643	Brachytx, non-stranded,c-131	88
2647	Brachytx, NS, Non-HDRIr-192	3
5244	Level 4 Blood Product Exchanges and Related Services	1
5494	Level 4 Intraocular Procedures	9
5495	Level 5 Intraocular Procedures	34
5496	Level 6 Intraocular Procedures	11

2. Payment for Covered Ancillary Services

a. Background

Our payment policies under the ASC payment system for covered ancillary services generally vary according to the particular type of service and its payment policy under the OPPS. Our overall policy provides separate ASC payment for certain ancillary items and services integrally related to the provision of ASC covered surgical procedures that are paid separately under the OPPS and provides packaged ASC payment for other ancillary items and services that are packaged or conditionally packaged (status indicators ''N,'' ''Q1,'' and ''Q2'') under the OPPS.

In the CY 2013 OPPS/ASC rulemaking (77 FR 45169 and 77 FR 68457 through 68458), we further clarified our policy regarding the payment indicator assignment for procedures that are conditionally packaged in the OPPS (status indicators ''Q1'' and ''Q2''). Under the OPPS, a conditionally packaged procedure describes a HCPCS code where the payment is packaged when it is provided with a significant procedure but is separately paid when the service appears on the claim without a significant procedure. Because ASC services always include a surgical procedure, HCPCS codes that are conditionally packaged under the OPPS are generally packaged (payment indicator ''N1'') under the ASC payment system (except for device removal procedures, as discussed in the CY 2022 OPPS/ASC proposed rule (86 FR 42083)). Thus, our policy generally aligns ASC payment bundles with those under the OPPS (72 FR 42495). In all cases, in order for ancillary items and services also to be paid, the ancillary items and services must be provided integral to the performance of ASC covered surgical procedures for which the ASC bills Medicare.

Our ASC payment policies generally provide separate payment for drugs and biologicals that are separately paid under the OPPS at the OPPS rates and package payment for drugs and biologicals for which payment is packaged under the OPPS. However, as discussed in the CY 2022 OPPS/ASC final rule with comment period, for CY 2022, we finalized a policy to unpackage and pay separately at ASP plus 6 percent for the cost of non-opioid pain management drugs and biologicals that function as a supply when used in a surgical procedure as determined by CMS under § 416.174 (86 FR 63483).

We generally pay for separately payable radiology services at the lower of the PFS nonfacility PE RVU-based (or technical component) amount or the rate calculated according to the ASC standard ratesetting methodology (72 FR 42497). However, as finalized in the CY 2011 OPPS/ASC final rule with comment period (75 FR 72050), payment indicators for all nuclear medicine procedures (defined as CPT codes in the range of 78000 through 78999) that are designated as radiology services that are paid separately when provided integral to a surgical procedure on the ASC list are set to ''Z2'' so that payment is made based on the ASC standard ratesetting methodology rather than the PFS nonfacility PE RVU amount (''Z3''), regardless of which is lower (§ 416.171(d)(1)).

Similarly, we also finalized our policy to set the payment indicator to ''Z2'' for radiology services that use contrast agents so that payment for these procedures will be based on the OPPS relative payment weight using the ASC standard ratesetting methodology and, therefore, will include the cost for the contrast agent (§ 416.171(d)(2)).

ASC payment policy for brachytherapy sources mirrors the payment policy under the OPPS. ASCs are paid for brachytherapy sources provided integral to ASC covered surgical procedures at prospective rates adopted under the OPPS or, if OPPS rates are unavailable, at contractor-priced rates (72 FR 42499). Since December 31, 2009, ASCs have been paid for brachytherapy sources provided integral to ASC covered surgical procedures at prospective rates adopted under the OPPS.

Our ASC policies also provide separate payment for: (1) certain items and services that CMS designates as contractor-priced, including, but not limited to, the procurement of corneal tissue; and (2) certain implantable items that have pass-through payment status under the OPPS. These categories do not have prospectively established ASC payment rates according to ASC payment system policies (72 FR 42502 and 42508 through 42509; § 416.164(b)). Under the ASC payment system, we have designated corneal tissue acquisition and hepatitis B vaccines as contractor-priced. Corneal tissue

acquisition is contractor-priced based on the invoice costs for acquiring the corneal tissue for transplantation. Hepatitis B vaccines are contractor-priced based on invoiced costs for the vaccine.

Devices that are eligible for pass-through payment under the OPPS are separately paid under the ASC payment system and are contractor-priced. Under the revised ASC payment system (72 FR 42502), payment for the surgical procedure associated with the pass-through device is made according to our standard methodology for the ASC payment system, based on only the service (non-device) portion of the procedure's OPPS relative payment weight if the APC weight for the procedure includes other packaged device costs. We also refer to this methodology as applying a ''device offset'' to the ASC payment for the associated surgical procedure. This ensures that duplicate payment is not provided for any portion of an implanted device with OPPS pass-through payment status.

In the CY 2015 OPPS/ASC final rule with comment period (79 FR 66933 through 66934), we finalized that, beginning in CY 2015, certain diagnostic tests within the medicine range of CPT codes for which separate payment is allowed under the OPPS are covered ancillary services when they are integral to an ASC covered surgical procedure. We finalized that diagnostic tests within the medicine range of CPT codes include all Category I CPT codes in the medicine range established by CPT, from 90000 to 99999, and Category III CPT codes and Level II HCPCS codes that describe diagnostic tests that crosswalk or are clinically similar to procedures in the medicine range established by CPT. In the CY 2015 OPPS/ASC final rule with comment period, we also finalized our policy to pay for these tests at the lower of the PFS nonfacility PE RVU-based (or technical component) amount or the rate calculated according to the ASC standard ratesetting methodology (79 FR 66933 through 66934). We finalized that the diagnostic tests for which the payment is based on the ASC standard ratesetting methodology be assigned to payment indicator ''Z2'' and revised the definition of payment indicator ''Z2'' to include a reference to diagnostic services and those for which the payment is based on the PFS nonfacility PE RVU-based amount be assigned payment indicator ''Z3,'' and revised the definition of payment indicator ''Z3'' to include a reference to diagnostic services.

b. Final Payment for Covered Ancillary Items and Services for CY 2026

We proposed to update the ASC payment rates and to make changes to ASC payment indicators, as necessary, to maintain consistency between the OPPS and ASC payment system regarding the packaged or separately payable status of services and the proposed CY 2026 OPPS and ASC payment rates and subsequent years' payment rates. We proposed to continue to set the CY 2026 ASC payment rates and subsequent years' payment rates for brachytherapy sources and separately payable drugs and biologicals equal to the OPPS payment rates for CY 2026 and subsequent years' payment rates.

Comment: A commenter stated that there is currently no CMS-level guidance on how MACs should establish separate payment under the ASC payment system for devices that are eligible for pass-through payment under the OPPS.

Response: Devices that are eligible for pass-through payment under the OPPS may be separately paid under the ASC payment system and are contractor-priced. Currently, MACs have been instructed to pay for such devices in the ASC setting based on invoice or cost of the approved transitional pass-through device category. While we understand that many products with different price points may use the same approved transitional pass-through device category, we rely on the MACs to efficiently process these claims such that ASCs can be paid in a timely manner for the services provided and that payment for these pass-through devices is justified with supporting documentation. We believe the current guidance provided in Chapter 14, section 50 of the Medicare Claims Processing Manual (Pub. 100–04) is sufficient.

After consideration of the public comments we received, we are finalizing our proposal to update the ASC payment rates and to make changes to ASC payment indicators, as necessary, to maintain consistency between the OPPS and ASC payment system regarding the packaged or separately payable status of services and the final CY 2026 OPPS and ASC payment rates and subsequent years' payment rates. We are also finalizing our proposal without modification to continue to set the CY 2026 ASC payment rates for brachytherapy sources and separately payable drugs and biologicals equal to the OPPS payment rates for CY 2026 and subsequent years.

Covered ancillary services and their final payment indicators for CY 2026 are listed in Addendum BB of this final rule with comment period (which is available via the internet on the CMS website). For those covered ancillary services where the payment rate is the lower of the rate under the ASC standard rate setting methodology and the PFS proposed rates (similar to our office-based payment policy), the final payment indicators and rates set forth in this final rule with comment period are based on a comparison using the final PFS rates effective January 1, 2026. For a discussion of the PFS rates, we refer readers to the CY 2026 PFS final rule with comment period which is available on the CMS website at *https://www.cms.gov/medicare/payment/fee-schedules/physician/federal-regulation-notices.*

3. Covered Surgical Procedures Designated as Office-Based Procedures

a. Background

In the August 2, 2007 ASC final rule with comment period, we finalized our policy to designate as ''office-based'' those procedures that are added to the ASC Covered Procedures List (CPL) in CY 2008 or later years that we determine are furnished predominantly (more than 50 percent of the time) in physicians' offices based on consideration of the most recently available volume and utilization data for each individual procedure code and/or, if appropriate, the clinical characteristics, utilization, and volume of related codes. In that final rule, we also finalized our policy to exempt all procedures on the CY 2007 ASC list from application of the office-based classification (72 FR 42512). The procedures that were added to the ASC CPL beginning in CY 2008 that we determined were office-based were identified in Addendum AA to that final rule with payment indicator ''P2'' (Office-based surgical procedure added to ASC list in CY 2008 or later with PFS nonfacility PE RVUs; payment based on OPPS relative payment weight); ''P3'' (Office-based surgical procedures added to ASC list in CY 2008 or later with PFS nonfacility PE RVUs; payment based on PFS nonfacility PE RVUs); or ''R2'' (Office-based surgical procedure added to ASC list in CY 2008 or later without PFS nonfacility PE RVUs; payment based on OPPS relative payment weight), depending on whether we estimated the procedure would be paid according to the ASC standard ratesetting methodology based on its OPPS relative payment weight or at the PFS nonfacility PE RVU-based amount.

Consistent with our final policy to annually review and update the ASC

CPL to include all covered surgical procedures eligible for payment in ASCs, each year we identify covered surgical procedures as either temporarily office-based (these are new procedure codes with little or no utilization data that we have determined are clinically similar to other procedures that are permanently office-based), permanently office-based, or nonoffice-based, after taking into account updated volume and utilization data.

b. CY 2026 Final Office-Based Procedures

In developing the CY 2026 OPPS/ASC proposed rule, we followed our policy to annually review and update the covered surgical procedures for which ASC payment is made and to identify new procedures that may be appropriate for ASC payment, including their potential designation as office-based. Historically, we also review the most recent claims volume and utilization data (CY 2024 claims) and the clinical characteristics for all covered surgical procedures that are currently assigned a payment indicator in CY 2025 of ''G2'' (Non office-based surgical procedure added in CY 2008 or later; payment based on OPPS relative payment weight) as well as for those procedures assigned one of the temporary office-based payment indicators, specifically ''P2,'' ''P3,'' or ''R2'' in the CY 2025 OPPS/ASC final rule with comment period (89 FR 94322 through 94326).

Our review of the CY 2024 volume and utilization data of covered surgical procedures currently assigned a payment indicator of ''G2'' (Non office-based surgical procedure added in CY 2008 or later; payment based on OPPS relative payment weight) resulted in the identification of one surgical procedure—CPT code 21930 (Excision, tumor, soft tissue of back or flank, subcutaneous; less than 3 cm)—that we believed met the criteria for designation as permanently office-based. The data indicated that this procedure is performed more than 50 percent of the time in physicians' offices, and the services are of a level of complexity consistent with other procedures performed routinely in physicians' offices. We have included CPT code 21930 in our list of surgical procedures to permanently designate as office-based for CY 2026 in Table 128.

As discussed in the August 2, 2007 ASC final rule with comment period (72 FR 42533 through 42535), we finalized our policy to designate certain new surgical procedures as temporarily office-based until adequate claims data are available to assess their predominant sites of service, whereupon if we confirm their office-based nature, the procedures are permanently assigned to the list of office-based procedures. In the absence of claims data, we use other available information, including our clinical advisors' judgment, predecessor CPT and Level II HCPCS codes, information submitted by representatives of specialty societies and professional associations, and information submitted by commenters during the public comment period.

In Table 153 of the CY 2025 OPPS/ASC final rule with comment period, we finalized assigning temporary office-based designations to nine surgical procedures for CY 2025 (89 FR 94325 through 94326). As discussed in section XIII.B. of the CY 2026 OPPS/ASC proposed rule (90 FR 33710 through 33713), two of the nine procedures were deleted effective April 2025—HCPCS codes G0564 and G0565. For two of the remaining seven surgical procedures, interested parties submitted information that suggested CPT code 15013 (Preparation of skin cell suspension autograft, requiring enzymatic processing, manual mechanical disaggregation of skin cells, and filtration; first 25 sq cm or less of harvested skin) and its automated counterpart HCPCS C8002 (Preparation of skin cell suspension autograft, automated, including all enzymatic processing and device components (do not report with manual suspension preparation)) are not most similar to CPT code 11310 (Shaving of epidermal or dermal lesion, single lesion, face, ears, eyelids, nose, lips, mucous membrane; lesion diameter 0.5 cm or less) as we stated in the CY 2025 OPPS/ASC final rule with comment period (89 FR 94322 through 94324) since CPT code 15013 must be performed with other skin cell suspension autograft procedure codes and the entirety of the procedure—harvesting of skin, preparation and application of the skin cell suspension autograft—is not expected to be predominantly performed in an office setting. After reviewing the information and consulting with our medical officers, we agree that the entirety of the procedure is not expected to be performed in a physician office setting and that CPT code 11310 would not be an accurate crosswalk for site-of-service utilization. Therefore, as shown in Table 78 of the CY 2026 OPPS/ASC proposed rule (90 FR 33712), we proposed to permanently remove the temporarily office-based designation for CPT code 15013 and HCPCS code C8002.

We reviewed CY 2024 volume and utilization data for the remaining five surgical procedures designated as temporarily office-based in the CY 2025 OPPS/ASC final rule with comment period. As shown in Table 77 and Table 78 of the CY 2026 OPPS/ASC proposed rule (90 FR 33711 through 33712), for one of the five surgical procedures—CPT code 0864T—there are greater than 50 claims available and the volume and utilization indicated this procedure was performed predominantly in the office setting. Therefore, we proposed to no longer designate this procedure as temporarily office-based and to permanently designate this procedure as office-based and assign one of the office-based payment indicators, specifically ''P2'', ''P3'', or ''R2.''

We did not receive any public comments on our proposed permanent office-based designations and proposal to no longer designate the procedures in Table 129 as temporarily office-based; therefore, we are finalizing our proposal to designate the procedures in Table 128 as permanently office-based beginning in CY 2026 and to no longer designate the procedures in Table 129 as temporarily office-based.

BILLING CODE 4120–01–P

TABLE 128: ASC COVERED SURGICAL PROCEDURES TO BE NEWLY DESIGNATED AS PERMANENTLY OFFICE-BASED FOR CY 2026

CY 2026 CPT/HCPCS Code	Long Descriptor	Final CY 2025 ASC Payment Indicator	Final CY 2026 ASC Payment Indicator*
21930	Excision, tumor, soft tissue of back or flank, subcutaneous; less than 3 cm	G2	P3*
0864T	Low-intensity extracorporeal shock wave therapy involving corpus cavernosum, low energy	R2	R2*

* Payment indicators were based on a comparison of the final rates according to the ASC standard ratesetting methodology and the CY 2026 PFS final rates.

TABLE 129: ASC COVERED SURGICAL PROCEDURES TO BE NO LONGER DESIGNATED AS TEMPORARILY OFFICE-BASED FOR CY 2026

CY 2026 CPT/HCPCS Code	Long Descriptor	Final CY 2025 ASC Payment Indicator	Final CY 2026 ASC Payment Indicator*
0864T	Low-intensity extracorporeal shock wave therapy involving corpus cavernosum, low energy	R2	R2*
15013	Preparation of skin cell suspension autograft, requiring enzymatic processing, manual mechanical disaggregation of skin cells, and filtration; first 25 sq cm or less of harvested skin	R2	G2
C8002	Preparation of skin cell suspension autograft, automated, including all enzymatic processing and device components (do not report with manual suspension preparation)	R2	G2

* Payment indicators were based on a comparison of the final rates according to the ASC standard ratesetting methodology and the CY 2026 PFS final rates.

For the remaining four procedures that were designated as temporarily office-based in the CY 2025 OPPS/ASC final rule with comment period and temporarily assigned one of the office-based payment indicators, specifically ''P2,'' ''P3,'' or ''R2,'' there were fewer than 50 claims; therefore, there was an insufficient number of claims to determine if the office setting was the predominant setting of care for these procedures. Therefore, as shown in Table 79 of the CY 2026 OPPS/ASC proposed rule (90 FR 33713), we proposed to continue to designate such procedures as temporarily office-based for CY 2026 and assign one of the office-based payment indicators. Additionally, for CY 2026, we did not propose to designate any new CY 2026 CPT codes for ASC covered surgical procedures as temporarily office-based.

We did not receive public comments on this provision, and therefore, we are finalizing our proposed temporarily office-based designation to the procedures shown below in Table 130. The procedures for which the final office-based designation for CY 2026 is temporary are also indicated by an asterisk in Addendum AA to this final rule with comment period (which is available via the internet on the CMS website at *https://www.cms.gov/Medicare/Medicare-Feefor-Service-Payment/ASCPayment/ASCRegulations-and-Notices*).

TABLE 130: CY 2026 PAYMENT INDICATORS FOR NEW AND EXISTING ASC COVERED SURGICAL PROCEDURES DESIGNATED AS TEMPORARILY OFFICE-BASED

CY 2026 CPT/HCPCS Code	Long Descriptor	Final CY 2025 ASC Payment Indicator	Final CY 2026 ASC Payment Indicator*
0588T	Revision or removal of integrated single device neurostimulation system including electrode array and receiver or pulse generator, including analysis, programming, and imaging guidance when performed, posterior tibial nerve	R2	R2*
53866	Catheterization with removal of temporary device for ischemic remodeling (ie, pressure necrosis) of bladder neck and prostate	P3	P3*
64598	Revision or removal of neurostimulator electrode array, peripheral nerve, with integrated neurostimulator	R2	R2*
67229	Treatment of extensive or progressive retinopathy, 1 or more sessions, preterm infant (less than 37 weeks gestation at birth), performed from birth up to 1 year of age (e.g., retinopathy of prematurity), photocoagulation or cryotherapy	R2	R2*

* Payment indicators were based on a comparison of the final rates according to the ASC standard ratesetting methodology and the CY 2026 PFS final rates.

BILLING CODE 4120–01–C

4. Device-Intensive ASC Covered Surgical Procedures

a. Background

We refer readers to the CY 2019 OPPS/ASC final rule with comment period (83 FR 59040 through 59041), for a summary of our existing policies regarding ASC covered surgical procedures that are designated as device-intensive.

In the CY 2019 OPPS/ASC final rule with comment period (83 FR 59040 through 59043), we modified our criteria for device-intensive procedures to better capture costs for procedures with significant device costs. We adopted a policy to allow procedures that involve surgically inserted or implanted, high-cost, single-use devices to qualify as device-intensive procedures. In addition, we modified our criteria to lower the device offset percentage threshold from 40 percent to 30 percent. The device offset percentage is the percentage of device costs within a procedure's total costs. Specifically, for CY 2019 and subsequent years, we adopted a policy that device-intensive procedures would be subject to the following criteria:

- All procedures must involve implantable or insertable devices assigned a CPT or HCPCS code;
- The required devices (including single-use devices) must be surgically inserted or implanted; and
- The device offset amount must be significant, which is defined as exceeding 30 percent of the procedure's mean cost. Corresponding to this change in the cost criterion, we adopted a policy that the default device offset for new codes that describe procedures that involve the implantation of medical devices will be 31 percent beginning in CY 2019. For new codes describing procedures that are payable when furnished in an ASC and involve the implantation of a medical device, we adopted a policy that the default device offset would be applied in the same manner as the policy we adopted in section IV.B.2 of the CY 2019 OPPS/ASC final rule with comment period (83 FR 58944 through 58948). We amended § 416.171(b)(2) of the regulations to reflect these new device criteria.

In addition, as also adopted in section IV.B.2. of the CY 2019 OPPS/ASC final rule with comment period, to further align the device-intensive policy with the criteria used for device pass-through status, we specified, for CY 2019 and subsequent years, that for purposes of satisfying the device-intensive criteria, a device-intensive procedure must involve a device that:

- Has received FDA marketing authorization, has received an FDA investigational device exemption (IDE) and has been classified as a Category B device by FDA in accordance with 42 CFR 405.203 through 405.207 and 405.211 through 405.215, or meets another appropriate FDA exemption from premarket review;
- Is an integral part of the service furnished;
- Is used for one patient only;
- Comes in contact with human tissue;
- Is surgically implanted or inserted (either permanently or temporarily); and
- Is not any of the following:

++ Equipment, an instrument, apparatus, implement, or item of this type for which depreciation and financing expenses are recovered as depreciable assets as defined in Chapter 1 of the Medicare Provider Reimbursement Manual (CMS Pub. 15–1); or

++ A material or supply furnished incident to a service (for example, a suture, customized surgical kit, scalpel, or clip, other than a radiological site marker).

In the CY 2022 OPPS/ASC final rule with comment period (86 FR 63773 through 63775), we modified our approach to assigning device-intensive status to surgical procedures under the ASC payment system. First, we adopted a policy of assigning device-intensive status to procedures that involve surgically inserted or implanted, high-cost, single-use devices if their device offset percentage exceeds 30 percent under the ASC standard ratesetting methodology, even if the procedure is not designated as device-intensive under the OPPS. Second, we adopted a policy that if a procedure is assigned device-intensive status under the OPPS, but has a device offset percentage below the device-intensive threshold under the standard ASC ratesetting methodology, the procedure will be assigned device-intensive status under the ASC payment system with a default device offset percentage of 31 percent. The policies were adopted to provide consistency between the OPPS and ASC payment system and provide a more appropriate payment rate for surgical procedures with significant device costs under the ASC payment system.

In the CY 2023 OPPS/ASC final rule with comment period (87 FR 72078 through 72080), we finalized our policy to create certain C-codes, or ASC complexity adjustment codes that describe certain combinations of a primary covered surgical procedure as well as a packaged (payment indicator = ''N1'') procedure that are otherwise eligible for a complexity adjustment under the OPPS (as listed in Addendum J). Each ASC complexity adjustment code's APC assignment is based on its corresponding OPPS complexity adjustment code's APC assignment. In the CY 2023 OPPS/ASC final rule with comment period, we stated our belief that it would be appropriate for these ASC complexity adjustment codes to qualify for device-intensive status under the ASC payment system if the primary procedure of the code was also designated as device-intensive. Under our current policy, the ASC complexity adjustment code retains the device portion of the primary procedure (also called the ''device offset amount'') and not the device offset percentage. Therefore, for device-intensive ASC complexity adjustment codes, we set the device portion of the combined procedure equal to the device portion of the primary procedure and calculate the device offset percentage by dividing the device portion by the ASC complexity adjustment code's APC payment rate. Further, we apply our standard ASC payment system ratesetting methodology to the non-device portion of the ASC complexity adjustment code's APC payment rate; that is, we multiply the OPPS relative weight by the ASC budget neutrality adjustment and the ASC conversion factor and sum that amount with the device portion to calculate the ASC payment rate.

In the CY 2025 OPPS/ASC final rule with comment period, we finalized a modification to our policy regarding default device offset percentages for new codes that meet our criteria for device-intensive status. Under both the OPPS and ASC payment system, for new device-intensive procedures that lack claims data, or lack claims data from a predecessor code or a clinically-similar code that uses the same device, we apply the greater of the APC-wide device offset percentage or 31 percent (the previous default device offset percentage). We believe that an APC-wide average device offset percentage is, in most cases, a better reflection of device costs when the typical device costs of procedures assigned to such APC are significantly greater than 31 percent. This policy does not apply to new device-intensive procedures assigned to New Technology APCs.

b. CY 2026 Final Device Intensive Procedures

In section V.B. of this final rule with comment period, we discuss the implementation of the Final Remedy for the 340B-Acquired Drug Payment Policy for Calendar Years 2018–2022 rule and the impact of the OPPS conversion factor on the ASC payment system. Since most ASC payment rates for surgical procedures are constructed from OPPS relative weights or the PFS unadjusted nonfacility PE RVU-based amount, the remedy's proposed prospective offset to the OPPS conversion has a very limited impact on the ASC payment system. The only impact of the proposed reduction to the OPPS conversion factor is the payment rate for device-intensive procedures under the ASC payment system. Since the ASC payment system holds device portions constant between the two settings, the device portion is the device offset percentage multiplied by the OPPS payment rate.

Historically, in our proposed rules, device portions for device-intensive procedures would be based on the proposed prospective OPPS conversion factor multiplied by the proposed prospective OPPS relative weights. However, for the CY 2026 OPPS/ASC proposed rule, we believed it would be inaccurate and inappropriate to use OPPS payment rates that have been reduced by the remedy's prospective offset since this could accumulate to have a potentially noticeable impact on ASC payment rates for certain device-intensive procedures over time. Since the ASC payment system would otherwise set the device portion in the ASC setting at the amount without the proposed offset reduction to OPPS payment rates, we believe it would not be an accurate reflection of the device costs of covered surgical procedures in the ASC setting if we were to incorporate the prospective offset that we proposed in the CY 2026 OPPS/ASC proposed rule. Further, we are concerned beneficiaries could have access issues to certain device-intensive procedures in the ASC setting if we maintained a reduction to the payment rates for device-intensive procedures for each calendar year we applied the prospective offset. Therefore, we proposed that the OPPS payment rates used for ratesetting under the ASC payment system for CY 2026 and subsequent years would not incorporate the prospective offset to the OPPS conversion factor as a result of the 340B remedy offset that we proposed to implement in the proposed rule. For the proposed CY 2026 device offset percentages, which include device offset percentages based on CY 2024 claims processed through March 31, 2025, we refer readers to Addendum FF of the CY 2026 OPPS/ASC proposed rule. Final CY 2026 device offset percentages may differ from the proposed percentages, as we rely on the most recently available claims data for the CY 2026 OPPS/ASC final rule with comment period (CY 2024 claims data processed through June 30th).

We received public comments on our proposal. The following is a summary of the comments we received and our responses.

Comment: A commenter requested that CMS use manufacturer invoices to set the OPPS and ASC device offset amounts/percentages for CPT code 64728 (placeholder code 647XX) (Decompression; median nerve at the carpal tunnel, percutaneous, with intracarpal tunnel balloon dilation, including ultrasound guidance), stating

that the device offset percentage should be significantly higher than the proposed default of 31 percent to ensure appropriate ASC payment and Medicare beneficiary access to CTR–US in ASCs.

Response: We are not accepting the commenter's recommendation. Notwithstanding the rare circumstances of an extremely costly device, we believe the application of our default device offset percentage policy for device-intensive procedures is a reasonable and appropriate approach for determining the device portions of procedures without claims data. Our default device offset percentage policy allows us to both estimate the approximate cost of the device but also supports cost containment objectives that our packaging policies aim to achieve under both the OPPS and ASC payment systems.

Comment: Commenters requested that CMS designate CPT code 43889 (Gastric restrictive procedure, transoral, endoscopic sleeve gastroplasty (ESG), including argon plasma coagulation, when performed) as device-intensive by assigning status indicator ''J8'' instead of the proposed ''G2'' status, stating that the procedure includes multiple single-use devices with hospital acquisition costs of $4,000 to $7,000 per patient, including an endoscopic suturing system, tissue helix, polypropylene sutures, and suture anchors. The commenter noted that CMS should not rely on the aberrant and very low volume data set from predecessor HCPCS code C9784 (Gastric restrictive procedure, endoscopic sleeve gastroplasty, with esophagogastroduodenoscopy and intraluminal tube insertion, if performed, including all system and tissue anchoring components), which showed inconsistent device offset percentages ranging from 12.03 percent to 52.94 percent across different years that do not approximate actual device costs. The commenter requested that CMS apply the default device offset amount of 31 percent to CPT code 43889 based on documented invoice cost of the device rather than unreliable claims data.

Response: We are not accepting the commenter's recommendation. CPT code 43889 has available CY 2024 claims data from predecessor code C9784. The device offset percentage of such claims data does not exceed our device-intensive threshold; therefore, we are not accepting the commenter's recommendation to assign device-intensive status to CPT code 43889.

Comment: A commenter recommended that CPT codes 22802 (Arthrodesis, posterior, for spinal deformity, with or without cast; 7 to 12 vertebral segments), 22804 (Arthrodesis, posterior, for spinal deformity, with or without cast; 13 or more vertebral segments), 22810 (Arthrodesis, anterior, for spinal deformity, with or without cast; 4 to 7 vertebral segments), and 22812 (Arthrodesis, anterior, for spinal deformity, with or without cast; 8 or more vertebral segments) receive device-intensive status when added to the ASC CPL. The commenter requested that CMS apply device offsets of 55.46 percent to CPT codes 22802 and 22804 (equivalent to clinically similar CPT code 22800) and 56.97 percent to CPT codes 22810 and 22812 (equivalent to clinically similar CPT code 22808), stating that CMS should use device offsets from clinically similar codes that use the same devices when claims data is not available for procedures recently removed from the IPO list. The commenter emphasized that device offset data frequently may not be available for procedures recently removed from the IPO list, and recommended that CMS use the greater of the APC-wide device offset percentage or the default device offset percentage of 31 percent if clinically similar code data is not available.

Response: We agree with the commenters that such procedures would have significant device costs. We will rely on CY 2024 claims data, where available, for establishing the device portions for CPT codes 22802, 22804, 22810, and 22812 for CY 2026. Where claims data is unavailable, we will rely on default device offset percentage methodology for determining the device portion. We are accepting the commenter's recommendations to assign device-intensive status to CPT codes 22802, 22804, 22810, and 22812 for CY 2026.

Comment: Some commenters recommended that we maintain the device offset percentage for CPT code 0621T (Trabeculostomy ab interno by laser).

Response: Where available, we rely on hospital claims data for determining the device offset percentages for procedures under the ASC payment system. Based on CY 2024 claims data available for this final rule with comment period, we are finalizing device-intensive status for CPT code 0621T as this procedure meets our criteria for device-intensive status. The device offset percentages for CPT code 0621T are based on CY 2024 claims data and can be found in Addendum FF to this final rule with comment period.

Comment: A commenter recommended that we revise the ASC payment indicators for CPT codes 19281 (Placement of breast localization device(s) (*e.g.,* clip, metallic pellet, wire/needle, radioactive seeds), percutaneous; first lesion, including mammographic guidance) and 19285 (Placement of breast localization device(s) (*e.g.,* clip, metallic pellet, wire/needle, radioactive seeds), percutaneous; first lesion, including ultrasound guidance) from their current designation to J8—''Device-intensive procedure added to ASC list in CY 2008 or later; paid at adjusted rate''—to permit Medicare ASC payment for these services. The commenter noted these codes have significant device costs (51.01 percent and 53.87 percent respectively), but current lack of ASC payment prevents Medicare patients from accessing wire-free, nonradioactive soft tissue localization services in the cost-effective ASC setting.

Response: We are not accepting the commenter's recommendation. As we stated in previous rulemaking (78 FR 75081), under the OPPS, a conditionally packaged procedure (status indicators ''Q1'' and ''Q2) describes a HCPCS code where the payment is packaged when it is provided with a significant procedure but is separately paid when the service appears on the claim without a significant procedure. Because ASC services always include a covered surgical procedure, HCPCS codes that are conditionally packaged under the OPPS are generally packaged (payment indicator ''N1'') under the ASC payment system and their costs are packaged into the cost for the covered surgical procedure and reflected in the payment rate.

Comment: A few commenters supported the designation of CPT code 31295 (Nasal/sinus endoscopy, surgical, with dilation (*e.g.,* balloon dilation); maxillary sinus ostium, transnasal or via canine fossa) as ''device intensive,'' stating this accurately recognizes device costs and results in appropriate payment. However, commenters expressed concerns regarding the removal of CPT code 31298 (Nasal/sinus endoscopy, surgical, with dilation (*e.g.,* balloon dilation); frontal and sphenoid sinus ostia) from the device intensive list, stating that this procedure continues to involve high device costs and should retain its classification to maintain predictable ASC payments and patient access. The commenter requested CMS reexamine Medicare claims data for accuracy, noting that CPT 31298 should have a device offset greater than 30 percent since it is more device intensive than CPT 31296 (which has a 28.5 percent offset) because it includes both frontal and sphenoid sinuses rather than just frontal.

Response: We appreciate the commenter's recommendation. Based on our review of CY 2024 claims data available for this final rule with comment period, the device offset percentage for CPT code 31298 does not exceed our device-intensive threshold; therefore, we are not assigning device-intensive status to CPT code 31298 for CY 2026.

Comment: A few commenters requested that CMS verify the accuracy of its device offset calculations for CPT code 66174 (Transluminal dilation of aqueous outflow canal (*e.g.,* canaloplasty); without retention of device or stent) and assign device-intensive status (J8) if the device offset exceeds the 30 percent threshold. Both commenters expressed concerns about under-reporting of hospital device costs and inappropriate coding processes that have resulted in denial of device-intensive status despite the procedure requiring advanced microcatheters or permanently implanted devices, which limits Medicare patient access to these procedures in the cost-effective ASC setting.

Response: Based on our review of CY 2024 claims data available for this final rule with comment period, the device offset percentage for CPT code 66174 does not exceed our device-intensive threshold; therefore, we are not accepting the commenter's recommendation to assign device-intensive status to CPT code 66174 for CY 2026.

Comment: A few commenters requested that CMS assign device-intensive status to HCPCS code C9785 (Endoscopic outlet reduction, gastric pouch application, with endoscopy and intraluminal tube insertion, if performed, including all system and tissue anchoring components) and HCPCS code C9901 (Endoscopic defect closure within the entire gastrointestinal tract, including upper endoscopy (including diagnostic, if performed) or colonoscopy (including diagnostic, if performed), with all system and tissue anchoring components) instead of the proposed G2 payment indicator, stating that the procedures includes multiple single-use devices with hospital acquisition costs of $4,000 to $7,000 per patient, including an endoscopic suturing system, tissue helix, polypropylene sutures, cobalt chromium and stainless-steel alloy suture anchors, and polyetheretherketone (PEEK) suture cinches. The commenters noted that the current claims data is insufficient due to extremely low volume (fewer than 10 single frequency claims in 2025 and fewer than 50 in 2026) and should not be used to determine device intensive status. Both commenters requested that CMS apply the default device offset of 31 percent.

Response: We rely on hospitals to accurately report device costs for OPPS/ASC ratesetting and for determining device offset percentages. Based on our review of CY 2024 claims data available for this final rule with comment period, the device offset percentage for HCPCS codes C9785 does not exceed our device-intensive threshold; therefore, we are not accepting the commenter's recommendations to assign device-intensive status to HCPCS codes C9785 for CY 2026. However, the device offset percentage for C9901 based on claims data available for this final rule with comment period does exceed our device-intensive threshold. Based on the more recent claims data, we are finalizing device-intensive status under the ASC payment system for HCPCS code C9901 for CY 2026.

Comment: A commenter requested that CMS re-evaluate device-intensive status to CPT code 55880 (Ablation of malignant prostate tissue, transrectal, with high intensity-focused ultrasound (hifu), including ultrasound guidance) stating that the procedure is as device-intensive as other procedures that treat malignancies through the prostate.

Response: Based on our review of CY 2024 claims data available for this final rule with comment period, the device offset percentages for CPT code 55880 does not exceed our device-intensive threshold; therefore, we are not assigning device-intensive status to CPT code 55880 for CY 2026.

Comment: Commenters recommended adding CPT codes 0582T (Transurethral ablation of malignant prostate tissue by high-energy water vapor thermotherapy, including intraoperative imaging and needle guidance), 0786T (Insertion or replacement of percutaneous electrode array, sacral, with integrated neurostimulator, including imaging guidance, when performed), and 0991T (Cystourethroscopy, with low-energy lithotripsy and acoustically actuated microspheres, including imaging) to the ASC CPL and assigning device-intensive status to each of the CPT codes.

Response: We have reviewed the clinical characteristics and devices required of these procedures and are accepting the commenter's recommendations. As shown in Table 131 we are adding CPT codes 0582T, 0786T, and 0991T to the ASC CPL. We believe these procedures have significant device costs and are assigning these device-intensive status for CY 2026. In the absence of claims data for these three procedures, we are using our default device offset methodology to assign the device offset percentages to CPT codes 0582T, 0786T, and 0991T for CY 2026.

Comment: A commenter requested that we assign device-intensive status to CPT codes 0951T (Totally implantable active middle ear hearing implant; initial placement, including mastoidectomy, placement of and attachment to sound processor), 0952T (Totally implantable active middle ear hearing implant; revision or replacement, with mastoidectomy and replacement of sound processor), 0953T (Totally implantable active middle ear hearing implant; revision or replacement, without mastoidectomy and replacement of sound processor), and 0954T (Totally implantable active middle ear hearing implant; replacement of sound processor only, with attachment to existing transducers) under the ASC payment system.

Response: These codes are not separately payable under the OPPS; therefore, these procedures are not eligible to be added to the ASC CPL and be assigned device-intensive status under the ASC payment system. We are not accepting the commenters' recommendations to assign device-intensive status to CPT codes 0951T, 0952T, 0953T, or 0954T under the ASC payment system for CY 2026.

Comment: A commenter recommended that CMS establish a drug-intensive policy for ASC rate setting, similar to the current device-intensive policy, stating that the logic behind device-intensive procedures should equally apply to situations where a costly drug is packaged into a procedure payment since ASCs typically do not pay less than hospitals for expensive drugs. The commenter noted that just as the device-intensive policy allows ASC payment rates to better reflect device costs by applying the ASC conversion factor only to the non-device portion of the OPPS rate, a similar drug-intensive mechanism would ensure ASC rates more accurately represent the costs of costly packaged drugs.

Response: We are not accepting this recommendation. Unlike device costs, which are always packaged into the primary procedure (with the exception of devices on transitional pass-through status), many costly drugs that may be packaged under the OPPS into a Comprehensive APC are separately payable under the ASC payment system.

After consideration of public comments, we are finalizing our proposal to not incorporate the prospective offset to the OPPS conversion factor or device-related

portion as a result of the 340B remedy offset that we are finalizing to implement in this final rule with comment period. For final CY 2026 device offset percentages based on claims data for this final rule with comment period, CY 2024 claims processed through June 30, 2025, we refer readers to Addendum FF of this final rule with comment period.

c. Adjustment to ASC Payments for No Cost/Full Credit and Partial Credit Devices

Our ASC payment policy for costly devices implanted or inserted in ASCs at no cost/full credit or partial credit is set forth in § 416.179 of our regulations and is consistent with the OPPS policy that was in effect until CY 2014. We refer readers to the CY 2008 OPPS/ASC final rule with comment period (72 FR 66845 through 66848) for a full discussion of the ASC payment adjustment policy for no cost/full credit and partial credit devices. ASC payment is reduced by 100 percent of the device offset amount when a hospital furnishes a specified device without cost or with a full credit and by 50 percent of the device offset amount when the hospital receives partial credit in the amount of 50 percent or more of the cost for the specified device.

Effective CY 2014, under the OPPS, we finalized our proposal to reduce OPPS payment for applicable APCs by the full or partial credit a provider receives for a device, capped at the device offset amount. Although we finalized our proposal to modify the policy of reducing payments when a hospital furnishes a specified device without cost or with full or partial credit under the OPPS, in the CY 2014 OPPS/ASC final rule with comment period (78 FR 75076 through 75080), we finalized our proposal to maintain our ASC policy for reducing payments to ASCs for specified device-intensive procedures when the ASC furnishes a device without cost or with full or partial credit. Unlike the OPPS, there is currently no mechanism within the ASC claims processing system for ASCs to submit to CMS the amount of the actual credit received when furnishing a specified device at full or partial credit. Therefore, under the ASC payment system, we finalized our proposal for CY 2014 to continue to reduce ASC payments by 100 percent or 50 percent of the device offset amount when an ASC furnishes a device without cost or with full or partial credit, respectively.

Under current ASC policy, all ASC device-intensive covered surgical procedures are subject to the no cost/full credit and partial credit device adjustment policy. Specifically, when a device-intensive procedure is performed to implant or insert a device that is furnished at no cost or with full credit from the manufacturer, the ASC appends the HCPCS ''FB'' modifier on the line in the claim with the procedure to implant or insert the device. The contractor reduces payment to the ASC by the device offset amount that we estimate represents the cost of the device when the necessary device is furnished without cost or with full credit to the ASC. We continue to believe that the reduction of ASC payment in these circumstances is necessary to pay appropriately for the covered surgical procedure furnished by the ASC.

In the CY 2019 OPPS/ASC final rule with comment period (83 FR 59043 through 59044) we adopted a policy to reduce the payment for a device-intensive procedure for which the ASC receives partial credit by one-half of the device offset amount that would be applied if a device was provided at no cost or with full credit if the credit to the ASC is 50 percent or more (but less than 100 percent) of the cost of the new device. The ASC will append the HCPCS ''FC'' modifier to the HCPCS code for the device-intensive surgical procedure when the facility receives a partial credit of 50 percent or more (but less than 100 percent) of the cost of a device. To report that the ASC received a partial credit of 50 percent or more (but less than 100 percent) of the cost of a new device, ASCs have the option of either: (1) submitting the claim for the device-intensive procedure to their Medicare contractor after the procedure's performance, but prior to manufacturer acknowledgment of credit for the device, and subsequently contacting the contractor regarding a claim adjustment, once the credit determination is made; or (2) holding the claim for the device implantation or insertion procedure until a determination is made by the manufacturer on the partial credit and submitting the claim with the ''FC'' modifier appended to the implantation procedure HCPCS code if the partial credit is 50 percent or more (but less than 100 percent) of the cost of the device. Beneficiary coinsurance would be based on the reduced payment amount. As finalized in the CY 2015 OPPS/ASC final rule with comment period (79 FR 66926), to ensure our policy covers any situation involving a device-intensive procedure where an ASC may receive a device at no cost or receive full credit or partial credit for the device, we apply our ''FB''/''FC'' modifier policy to all device-intensive procedures.

In the CY 2019 OPPS/ASC final rule with comment period (83 FR 59043 through 59044) we stated we would reduce the payment for a device-intensive procedure for which the ASC receives partial credit by one-half of the device offset amount that would be applied if a device was provided at no cost or with full credit, if the credit to the ASC is 50 percent or more (but less than 100 percent) of the cost of the device. In the CY 2020 OPPS/ASC final rule with comment period, we finalized continuing our existing policies for CY 2020. We note that we inadvertently omitted language that this policy would apply not just in CY 2019 but also in subsequent calendar years. We intended to apply this policy in CY 2019 and subsequent calendar years. Therefore, we finalized our proposal to apply our policy for partial credits specified in the CY 2019 OPPS/ASC final rule with comment period (83 FR 59043 through 59044) in CY 2022 and subsequent calendar years (86 FR 63775 through 63776). Specifically, for CY 2022 and subsequent calendar years, we would reduce the payment for a device-intensive procedure for which the ASC receives partial credit by one-half of the device offset amount that would be applied if a device was provided at no cost or with full credit, if the credit to the ASC is 50 percent or more (but less than 100 percent) of the cost of the device. To report that the ASC received a partial credit of 50 percent or more (but less than 100 percent) of the cost of a device, ASCs have the option of either: (1) submitting the claim for the device intensive procedure to their Medicare contractor after the procedure's performance, but prior to manufacturer acknowledgment of credit for the device, and subsequently contacting the contractor regarding a claim adjustment, once the credit determination is made; or (2) holding the claim for the device implantation or insertion procedure until a determination is made by the manufacturer on the partial credit and submitting the claim with the ''FC'' modifier appended to the implantation procedure HCPCS code if the partial credit is 50 percent or more (but less than 100 percent) of the cost of the device. Beneficiary coinsurance would be based on the reduced payment amount.

We did not receive any comments on our policies related to no cost/full credit or partial credit devices, and we are finalizing the continuation of our existing policies for CY 2026 without modification.

5. Requirement in the Physician Fee Schedule CY 2026 Final Rule for HOPDs and ASCs To Report Discarded Amounts of Certain Single-Dose or Single-Use Package Drugs

Section 90004 of the Infrastructure Investment and Jobs Act (Pub. L. 117–9, November 15, 2021) (''the Infrastructure Act'') amended section 1847A of the Act to re-designate subsection (h) as subsection (i) and insert a new subsection (h), which requires manufacturers to provide a refund to CMS for certain discarded amounts from a refundable single-dose container or single-use package drug.

The CY 2026 PFS proposed rule included proposals related to the discarded drug refund policy, including proposals that may impact hospital outpatient departments (HOPDs) and ambulatory surgical centers (ASCs). Similar to our CY 2023, CY 2024, and CY 2025 notices in the OPPS/ASC proposed rules (87 FR 71988, 88 FR 49760, and 89 FR 59421 through 59422), we included a notice in the CY 2026 OPPS/ASC proposed rule to ensure interested parties were aware of these proposals and knew to refer to the CY 2026 PFS proposed rule for a full description of the proposed policy. Interested parties were asked to submit comments on any proposals to further implement section 90004 of the Infrastructure Act to the CY 2026 PFS proposed rule. Public comments on these proposals are addressed in the CY 2026 PFS final rule with comment period. We note that this same notice appeared in section V.B. of the CY 2025 OPPS/ASC proposed rule (90 FR 33716).

We refer readers to the CY 2026 PFS final rule with comment period for a summary of comments, our responses, and the finalized policy for CY 2026.

D. Final Additions to ASC Covered Surgical Procedures and Covered Ancillary Services Lists

1. Current Review Process for the List of ASC Covered Surgical Procedures

Section 1833(i)(1) of the Act requires us, in part, to specify, in consultation with appropriate medical organizations, surgical procedures that are appropriately performed on an inpatient basis in a hospital but that can also be safely performed in an ASC, a CAH, or an HOPD, and to review and update the list of ASC covered surgical procedures at least every 2 years. We evaluate the ASC covered procedures list (ASC CPL) each year to determine whether procedures should be added to or removed from the list, and changes to the list are often made in response to specific concerns raised by interested parties.

Under our regulations at §§ 416.2 and 416.166, covered surgical procedures furnished on or after January 1, 2022, are surgical procedures that meet the general standards specified in § 416.166(b) and are not excluded under the general exclusion criteria specified in § 416.166(c). Specifically, under § 416.166(b), the general standards provide that covered surgical procedures are surgical procedures specified by the Secretary and published in the **Federal Register** and/or via the internet on the CMS website that are separately paid under the OPPS, that would not be expected to pose a significant safety risk to a Medicare beneficiary when performed in an ASC, and for which standard medical practice dictates that the beneficiary would not typically be expected to require active medical monitoring and care at midnight following the procedure.

Section 416.166(c) sets out the general exclusion criteria used under the ASC payment system to evaluate the safety of procedures for performance in an ASC. The general exclusion criteria provide that covered surgical procedures do not include those surgical procedures that: (1) generally result in extensive blood loss; (2) require major or prolonged invasion of body cavities; (3) directly involve major blood vessels; (4) are generally emergent or life-threatening in nature; (5) commonly require systemic thrombolytic therapy; (6) are designated as requiring inpatient care under § 419.22(n); (7) can only be reported using a CPT unlisted surgical procedure code; or (8) are otherwise excluded under § 411.15.

In the CY 2019 OPPS/ASC final rule with comment period (83 FR 59029 through 59030), we defined a surgical procedure under the ASC payment system as any procedure described within the range of Category I CPT codes that the CPT Editorial Panel of the AMA defines as ''surgery'' (CPT codes 10000 through 69999) (72 FR 42476), as well as procedures that are described by Level II HCPCS codes or by Category I CPT codes or by Category III CPT codes that directly crosswalk or are clinically similar to procedures in the CPT surgical range that we determined met the general standards established in previous years for addition to the ASC CPL.

For a detailed discussion of the history of our policies for adding surgical procedures to the ASC CPL, we refer readers to the CY 2021 through CY 2025 OPPS/ASC final rules with comment period (85 FR 86143 through 86145; 86 FR 63777 through 63805; 87 FR 72068 through 72076; 88 FR 81923 through 81945; and 89 FR 94331 through 94334).

2. Final Changes to the List of ASC Covered Surgical Procedures for CY 2026

Historically, we have reviewed the clinical characteristics of procedures and consulted with appropriate medical organizations, other interested parties, and our clinical advisors to determine if those procedures would meet our existing regulatory criteria under 42 CFR 416.2 and 42 CFR 416.166.

In the CY 2021 OPPS/ASC final rule with comment period, we significantly revised our policy for adding surgical procedures to the ASC CPL. Specifically, we revised our regulatory criteria by removing certain general standard and general exclusion criteria at 42 CFR 416.166(b) and (c), moving them to a new section as nonbinding physician considerations for patient safety (85 FR 86143 through 86153). We also stated that we would add surgical procedures when we identified a surgical procedure that met general standards criteria or when we were notified of a surgical procedure that could meet general standards criteria and we confirmed that the procedure met those requirements.

In the CY 2022 OPPS/ASC final rule with comment period, we reinstated the general standard and general exclusion criteria as part of the review process, rather than safety factors for physicians to consider, and renamed the notifications process finalized in the CY 2021 rule as a nominations process, later re-named the ''Pre-Proposed Rule CPL Recommendation Process'' (86 FR 63776 through 63782). Under this process, which became effective in CY 2024, an external party can recommend a surgical procedure by March 1 of a calendar year for the list of ASC covered surgical procedures for the following calendar year. As a result of the reinstatement of the general standard and general exclusion criteria, we finalized the removal of 255 procedures that had been added to the ASC CPL in CY 2021. We also maintained these criteria and the Pre-Proposed Rule CPL Recommendation Process during the CY 2023 through CY 2025 rulemaking cycles.

In the CY 2022 OPPS/ASC final rule with comment period, commenters were largely split on the issue of reinstating the general standard and general exclusion criteria at § 416.166 that were in place prior to CY 2021. Many commenters opposed this proposal and recommended that CMS not re-adopt these criteria. Commenters contended

that this policy may substitute administrative criteria for physician clinical judgment, reduce beneficiary choice, and increase costs since the lack of payment in the ASC setting may push these procedures to be performed in the higher-cost hospital setting.

For CY 2026, we proposed to revise our regulatory criteria at 42 CFR 416.166 to evaluate potential additions to the ASC CPL, similar to the changes we finalized in the CY 2021 OPPS/ASC final rule with comment period. Specifically, we proposed to revise our regulatory criteria by removing certain general standard and general exclusion criteria at 42 CFR 416.166(b) and (c), moving them to a new section as nonbinding physician considerations for patient safety. Under the revised criteria, we proposed to add certain surgical procedures to the ASC CPL, beginning in CY 2026, in order to expand access, while maintaining the safety for Medicare beneficiaries through the nonbinding physician considerations for patient safety.

a. ASC CPL Review Process for CY 2026

(1) Final Changes to General Standards and Exclusion Criteria for CY 2026

For CY 2026, we continued to build on our efforts to maximize patient and physician choice and access to care by exploring broader approaches to adding procedures to the ASC CPL in order to further increase the availability of ASCs as an alternative and often lower cost site of care for Medicare beneficiaries, while maintaining patient safety as required by section 1833(i) of the Act. An expansion of the ASC CPL would maximize the ability of ASCs to divert patients that can be safely treated in an ASC setting away from the hospital setting, which would preserve the capacity of hospitals to treat more acute patients. Expanding the procedures placed on the ASC CPL would also build on the policy changes we have made in recent years to further site neutrality between the HOPD and ASC settings.

In light of these objectives, we proposed to modify the existing general standard criteria under 42 CFR 416.166(b) that currently require covered surgical procedures to be surgical procedures specified by the Secretary and published in the **Federal Register** and/or via the internet on the CMS website, separately paid under the OPPS, not expected to pose a significant safety risk to a Medicare beneficiary when performed in an ASC, and for which standard medical practice dictates that the beneficiary would not typically be expected to require active medical monitoring and care at midnight following the procedure. We retained the condition that procedures be separately paid under the OPPS and moved the latter two standards to a new section outlining possible physician considerations in making site-of-service decisions.

We also proposed to eliminate five of the current general exclusion criteria at 42 CFR 416.166(c)(1) through (c)(5) and move them to the new physician considerations section. We believe these five exclusionary criteria may no longer be necessary to determine what procedures can be safely added to the ASC CPL because many ASCs are currently able to safely provide services with these characteristics, based on prior interested parties' feedback and public comments we have received. This would also allow physicians practicing in the ASC setting, who have the greatest familiarity and insight into the needs of individual beneficiaries, to use their complex medical judgement to determine whether they can safely perform a procedure in the ASC, given the entirety of the circumstances, including the clinical profile of the patient, the surgical back-up available at the ASC, and the ability to safely and timely respond to unexpected complications.

Under this proposal, we would keep the remaining three general exclusion criteria at § 416.166(c)(6) through (c)(8) because the original reasons we adopted them in CY 2008 continue to exist, subject to the proposed modifications to § 416.166(c)(6). These criteria would continue to exclude certain procedures from the ASC CPL, namely those that are designated as requiring inpatient care under 42 CFR 419.22(n), can only be reported using a CPT unlisted surgical procedure code, or are otherwise excluded under 42 CFR 411.15. We believe that these proposed criteria are sufficient guardrails to ensure, along with appropriate patient selection and complex medical judgement of the physician, that the procedure can be performed safely on an ambulatory basis, including procedures that involve these five currently excluded characteristics. We believe that this proposal could advance the goals of increasing physician and patient choice and expanding site neutral options in conjunction with patient safety considerations.

With respect to the existing general exclusion at § 416.166(c)(6), which excludes procedures designated as requiring inpatient care under § 419.22(n) from classification as covered surgical procedures, this proposal would modify this standard since the IPO list is proposed for elimination beginning in CY 2026 with a 3-year transition period, as described in section IX. of this final rule with comment period. While we recognize the need to revisit the criterion at § 416.166(c)(6) following the elimination of the IPO list, we believe that maintaining this criterion for CY 2026 would allow for consistency between the two lists during the 3-year phaseout period. We note that if a service comes off the IPO list at any time, then the general exclusion at § 416.166(c)(6) would cease to apply to the service.

We acknowledge that this approach is a departure from the existing criteria that we established effective beginning in 2008, and from our policy finalized in the CY 2022 OPPS/ASC rule. However, we believe that this approach would expand and build upon our 2008 policy intent. Although there are some differences when comparing our CY 2008 criteria and the proposed CY 2026 criteria, such as removing the general standards and several of the original general exclusion criteria, permitting the addition of procedures to the ASC CPL that would have been prohibited by those criteria, and the different accreditation requirements and conditions of participation requirements between HOPDs and ASCs, these concerns have largely been addressed by the progress in medical practice and ASC capabilities in the 17 years since the criteria were developed as previously noted. In particular, given advances in the practice of medicine and the evolving nature of ASCs, we believe ASCs are now better equipped to safely perform procedures that were once too complex or risky to be performed safely on Medicare beneficiaries in the ASC setting. As previously mentioned, although ASCs and hospitals have different health and safety requirements, many ASCs often undergo accreditation as a condition of State licensure and share some similar licensure and compliance requirements with hospitals. Each of these requirements provides additional safeguards for the health and safety of Medicare beneficiaries receiving surgical procedures in an ASC. Additionally, in the CY 2022 OPPS/ASC final rule with comment period, when we reinstated the ASC CPL criteria that were in effect during CY 2020, we stated that many of the surgical procedures added to the list in CY 2021 may pose a significant safety risk to a typical Medicare beneficiary when performed in an ASC (86 FR 63777). However, we believe that these procedures are safe to

perform in an ASC setting because all procedures identified are already payable in the HOPD setting and, therefore, are already safely performed on an ambulatory basis, consistent with the statutory requirement under section 1833(i)(1) of the Act. In addition, while several of the identified procedures may typically require hospital care that lasts beyond midnight, we expect that appropriately selected patient populations in the ASC setting would be healthier and less complex and would likely not require active monitoring or medical care past midnight beyond the procedure.

Comment: Several commenters, including ASCs, ambulatory surgery associations, and professional societies supported our proposal to revise the ASC CPL criteria under § 416.166 and add 547 surgery or surgery-like procedures to the ASC CPL for CY 2026. Some commenters believed that clinical and technological advances have enabled both outpatient hospital departments and ambulatory surgical centers to deliver equivalent patient outcomes and maintain similar standards of care quality, and allow for procedures to be performed in the ASC setting that previously could not. There was also support for allowing the physician's clinical judgment to make the site of service determinations for these procedures. Some commenters also stated that expanding the ASC CPL would allow for certain procedures to shift from higher-cost inpatient settings to lower-cost outpatient settings, which would also increase access and beneficiary choice. This would also lower hospital burden and preserve hospital capacity for higher acuity patients.

Response: We thank the commenters for their support.

Comment: Many commenters, including hospital systems, hospital associations, and professional societies were opposed to our proposal to expand the ASC CPL by revising the ASC CPL criteria under § 416.166, with patient safety being the primary concern. Some commenters urged CMS not to treat ASCs as the equivalent of hospital outpatient departments because they are not regulated as hospitals and do not have the necessary resources on site to provide the higher level of care necessary to perform many of the surgical procedures proposed for addition to the ASC CPL. Commenters also stated that the ASC CPL serves as an important guardrail for patient safety. A commenter stated that while recognizing a physician's clinical judgement is important, the ASC CPL and the criteria at § 416.166 act as a roadmap for the physician's decision-making. Commenters were concerned removing certain general standards and exclusion criteria could lead to procedures being inappropriately performed in the ASC setting. Commenters supported maintaining the current criteria and review process, as they stated it allowed the ASC CPL to expand while restricting procedures that cannot be safely performed in the ASC setting. One commenter gave the example that for exclusion criteria (5) ''commonly require systemic thrombolytic therapy'', despite advances in care, there are still significant safety risks with performing these procedures in the ASC setting. A commenter was also concerned that CMS was not fulfilling the statutory obligation to limit procedures on the ASC CPL to those that can be safely performed in an ASC.

Commenters were also concerned about our proposal to add procedures removed from the IPO list to the ASC CPL, as we proposed to eliminate the IPO list over a 3-year period. Commenters suggested that we implement a 2-year period between removing a code from the IPO list and adding it to the ASC CPL or wait until the procedure was being performed at least 50 percent of the time in the outpatient setting. Commenters also suggested waiting until we have more data on these procedures in the outpatient setting before adding them to the ASC CPL.

Response: We thank the commenters for their input. As we previously stated in the CY 2021 OPPS/ASC final rule with comment period, while these are important considerations in determining whether a surgical procedure may be safely performed in an ASC, we are finalizing the proposed approach because ASCs are currently and increasingly able to safely provide services that would be covered under the revised criteria when considered appropriate for a patient by their physician. Since these general standard and exclusionary criteria will simply be moved to a different section of § 416.166, we believe these criteria will still act as a roadmap for physician decision-making. We also believe there are sufficient guardrails for ASCs, including State and local regulations, Conditions for Coverage (CfCs), accreditation requirements, and medical malpractice laws, to ensure that physicians are able to prioritize patient safety when determining the site of service.

We have previously recognized the importance of maintaining flexibility in our review of procedures that can be safely performed in the ASC setting. In recent years, we have been able to add surgical procedures to the ASC CPL that were once considered solely hospital inpatient procedures, including, for example, total knee arthroplasty, which is currently one of the most frequently performed procedures in ASCs, or certain coronary intervention procedures involving major blood vessels. We believe it is important that we continue to adapt the ASC CPL in light of the significant advances in medical practice, surgical techniques, and ASC capabilities that have enabled some ASCs to safely perform procedures involving major blood vessels and other general exclusion criteria that were once too complex for the ASC setting. As we have heard from several interested parties, many procedures that are currently only payable as hospital outpatient services under Medicare are safely performed in the ASC setting for other payors. We acknowledge that non-Medicare patients tend to be younger and have fewer comorbidities than the Medicare population, but believe that careful patient selection can identify Medicare beneficiaries who are suitable candidates to receive these services in the ASC setting. We have long recognized the importance of ensuring that the health care system has as many access points and patient choices for all Medicare beneficiaries as possible, and we believe it is important that we continue to support both greater flexibility for physicians and patients to choose ASCs as the site of care and patient safety in supporting those important goals.

We recognize commenters' concerns regarding our proposal to add procedures to the ASC CPL that were proposed for removal from the IPO list for CY 2026 as part of the first phase of the elimination of the IPO list. We believe that adding these procedures to the ASC CPL as the IPO list is phased-out allows for greater consistency and less confusion between the two lists. We also believe that current guardrails in place are sufficient to ensure patient safety.

Comment: Some commenters also had concerns about the financial and administrative burden this proposal would have on hospitals. Commenters were concerned that allowing certain procedures to be performed in the ASC setting could increase the burden on hospitals if they face increased transfers from ASC facilities if there are increases in complications from ASCs performing procedures that are not safe in that setting. Commenters were also concerned that this proposal would allow certain higher paying procedures to move over to the ASC setting,

negatively affecting hospitals and their ability to offset lower paying procedures. Additionally, many commenters stated that physicians may face financial and administrative pressure to prioritize performing procedures in lower-cost settings over patient safety.

Response: We disagree that this proposal would negatively impact hospitals due to higher paying procedures being shifted to the ASC setting. Given that physicians will be exercising their judgment to determine the cases and procedures that may be safely performed in the ASC setting, we anticipate that hospitals will continue to provide high paying procedures that will offset lower paying procedures. We have also heard from interested parties that certain procedures we proposed to add to the ASC CPL setting are already being performed safely in the ASC setting. Therefore, given that physicians will be using their clinical judgment to determine the appropriate site of service, we believe that any shifts to the ASC setting that may occur with the expansion of the ASC CPL will be clinically appropriate and reflect ongoing trends. We believe that this proposal will incentivize efficiency and foster access, while continuing to maintain patient safety. Additionally, we would welcome any data or analyses on the effects of potential shifts of high cost procedures to the ASC setting that interested parties would like to share.

We also emphasize that the fact that a procedure is added to the ASC CPL should not be interpreted to mean the procedure is only appropriately performed in ASC setting or that the ASC setting is the most appropriate setting for a beneficiary and instead defer to the clinical judgment of physician. We believe that current safeguards, such as facility accreditations, State licensures, CfCs, medical malpractice laws, and professional guidelines, will prevent inappropriate shifts in the site of service and allow physicians to prioritize patient safety.

Comment: Multiple commenters requested that, if we were to finalize our proposal to revise the criteria and expand the ASC CPL, that CMS provide additional monitoring and guidance. Commenters requested that CMS monitor site of service data to observe any shifts as the ASC CPL is expanded. Commenters also requested that CMS monitor for safety and quality concerns for beneficiaries, such as emergency department admissions following procedures performed in ASCs. Additionally, commenters requested that CMS provide guidance on determining the appropriate site of service selection for procedures being added to the ASC CPL, including considerations for clinical and social factors.

Response: We thank the commenters for their feedback. We agree with the value of monitoring this data, including tracking the complications or readmission rates as procedures are adding the ASC CPL. We would welcome any patient outcomes data, analyses, or recommendations that interested parties would like to share. We will take these recommendations into consideration for future rulemaking.

In regards to providing further guidance, we note the balance between several factors on this important issue, namely, the prohibition on CMS interfering with the practice of medicine in section 1801 of the Act, the need to provide clear information about CMS billing and payment rules that ensure hospitals, physicians, and other interested parties can understand and operate within them, and our belief that the specific decision about the most appropriate care setting for a given surgical procedure is a complex medical judgment made by the physician based on the beneficiary's individual clinical needs and preferences and on the general coverage rules requiring that any procedure be reasonable and necessary. Additionally, we believe that input received from interested parties suggests physicians are sufficiently capable of making the requisite site of service determinations for their patients, and as such, further guidance is not needed.

Comment: Some commenters expressed concern about the potential for increased coinsurance obligations for beneficiaries if we finalize our proposal to expand the ASC CPL. These commenters also recommended CMS ensure beneficiaries are informed in advance that, unlike under the OPPS, ASC cost-sharing is not capped at the inpatient deductible and could exceed cost sharing in the hospital outpatient setting for the same procedure.

Response: We are aware that beneficiaries may incur greater cost-sharing for procedures in an ASC setting that we proposed to add to the ASC CPL, but note that this is not an occurrence that is unique to these procedures. As we stated in the CY 2018 OPPS/ASC final rule with comment period (82 FR 59389), section 4011 of the 21st Century Cures Act (Pub. L. 114–255) amended section 1834 of the Act by adding a new subsection (t), which requires the Secretary to make available to the public via a searchable website, with respect to an appropriate number of items and services, the estimated payment amount for the item or service under the OPPS and ASC payment system and the estimated beneficiary liability applicable to the item or service. We implemented this provision by providing our Outpatient Procedure Price Lookup tool available via the internet at *https://www.medicare.gov/procedure-price-lookup*. This web page allows beneficiaries to compare their potential cost-sharing liability for procedures performed in the hospital outpatient setting versus the ASC setting. We believe this tool helps inform beneficiaries of potential cost-sharing amounts for receiving a service in the ASC setting compared to the outpatient setting, and note that this tool would include a comparison of cost-sharing liability for procedures in the outpatient hospital and ASC settings in the future.

(2) Final Procedure Additions for CY 2026

CMS will add surgical procedures to the ASC CPL in rulemaking as we become aware of new surgical procedures that meet the four criteria requirements at § 416.166(b)(2). A member of the public may also notify CMS of a surgical procedure they believe meets the requirements at new § 416.166(b)(2) through the pre-proposed rule recommendation process or the public comment period. CMS will confirm whether the procedure does meet those requirements and will add it to the ASC CPL if it does meet that criteria. In accordance with the new proposed regulatory text at § 416.166(d), physicians would then assess whether their specific patients can or cannot safely receive such covered surgical procedure in the ASC setting, based on patient-specific considerations.

For CY 2026, we proposed to update the ASC CPL by adding 276 potential surgery or surgery-like codes to the list that we believe would meet the proposed revised ASC CPL criteria under 42 CFR 416.166. This includes procedures submitted through our pre-proposed rule nominations process for addition to the ASC CPL under the proposed revised criteria. Additionally, we proposed to add 271 surgery or surgery-like codes to the CPL that are currently on the IPO list, if we finalize our proposal to remove these services from the IPO list for CY 2026.

Comment: We received comments in support of specific codes that we proposed to add to the ASC CPL for CY 2026, with many commenters supporting the addition of cardiac ablation codes.

Response: We thank the commenters for their support.

Comment: Multiple commenters recommended specific codes to be added to the ASC CPL including, echocardiography, electrophysiological studies, and percutaneous coronary interventions. We received 44 procedure recommendations for the CPL, listed in Table 155, below.

Response: We thank commenters for their recommendations. We individually assessed each of the recommended procedures to determine whether these procedures meet each of the revised regulatory criteria at the § 416.166. Based on our review of the clinical characteristics of the procedures and their similarity to other procedures that are currently on the ASC CPL, we believe that 13 procedures out of the 44 procedure recommendations we received meet the general standards and exclusion criteria for the ASC CPL as set forth in the revised § 416.166(b) and (c), respectively. These procedures, listed in Table 131, are:

- CPT code 92960 (Cardioversion, elective, electrical conversion of arrhythmia; external);
- CPT code 92961 (Cardioversion, elective, electrical conversion of arrhythmia; internal (separate procedure));
- CPT code 92924 (Percutaneous transluminal coronary atherectomy, with coronary angioplasty when performed; single major coronary artery or branch);
- CPT code 92933 (Percutaneous transluminal coronary atherectomy, with intracoronary stent, with coronary angioplasty when performed; single major coronary artery or branch);
- CPT code 92937 (Percutaneous transluminal revascularization of or through coronary artery bypass graft (internal mammary, free arterial, venous), any combination of intracoronary stent, atherectomy and angioplasty, including distal protection when performed; single vessel);
- CPT code 92943 (Percutaneous transluminal revascularization of chronic total occlusion, coronary artery, coronary artery branch, or coronary artery bypass graft, any combination of intracoronary stent, atherectomy and angioplasty; single vessel);
- CPT code 92973 (Percutaneous transluminal coronary thrombectomy mechanical (list separately in addition to code for primary procedure));
- CPT code 92974 (Transcatheter placement of radiation delivery device for subsequent coronary intravascular brachytherapy (list separately in addition to code for primary procedure));
- CDT code D7440 (Excision of malignant tumor-lesion diameter up to 1.25 cm);
- CDT code D7441 (Excision of malignant tumor-lesion diameter greater than 1.25 cm);
- CPT code 0582T (Transurethral ablation of malignant prostate tissue by high-energy water vapor thermotherapy, including intraoperative imaging and needle guidance);
- CPT code 0786T (Insertion or replacement of percutaneous electrode array, sacral, with integrated neurostimulator, including imaging guidance, when performed); and
- CPT code 0991T (Cystourethroscopy, with low-energy lithotripsy and acoustically actuated microspheres, including imaging).

In the upcoming section, we explain our rationale for not including the 26 recommended procedures, organized by category. We note that while we did not add these codes to the ASC CPL, we did determine some of these codes are appropriate to add to list of covered ancillary procedures, as discussed in section XIII.D.3. of this final rule with comment period.

- 13 cardiovascular codes, including electrophysiological studies, transesophageal echocardiography, and 3D predictive modeling for procedure planning. As these procedures are non-surgical, they would not qualify as separately payable surgical procedures on the ASC CPL. Additionally, 2 cardiovascular procedures requested are currently packaged procedures on the ASC CPL. As these procedures are add-on codes, they would not qualify for separate payment on the ASC CPL.
- 2 circulatory assist and one percutaneous coronary intervention procedures. As these procedures will remain on the IPO list for CY 2026, they would not qualify as payable surgical procedures on the ASC CPL.
- 4 percutaneous coronary intervention and 2 thrombolysis procedures. The codes associated with these procedures are scheduled to be deleted for CY 2026.
- 1 pharmacologic agent administration procedure. As this procedure is non-surgical, it would not qualify as a separately payable surgical procedures on the ASC CPL.
- 1 neurostimulator analysis procedure. As this procedure is non-surgical, it would not qualify as a separately payable surgical procedures on the ASC CPL.
- 5 middle ear implant procedures. These procedures are currently nonpayable under the OPPS and would not qualify as payable surgical procedures on the ASC CPL.

After consideration of the public comments, we are finalizing our proposal, with modification, to revise the ASC CPL criteria under § 416.166 by modifying the general standard criteria and eliminating five of the general exclusion criteria and to add the proposed 547 procedures to the ASC CPL for CY 2026. We are also finalizing adding an additional 13 codes recommended by commenters to the ASC CPL for CY 2026. These codes, along with their long descriptors and final payment indicator assignments, are listed in Tables 131, 132, and 133. We believe that these finalized policies will increase the flexibility for physicians to exercise their complex medical judgment, factoring in patient safety considerations, and for patients have more choice in which setting to receive surgical procedures.

BILLING CODE 4120–01–P

TABLE 131: FINAL ADDITIONS TO THE LIST OF ASC COVERED PROCEDURES FOR CY 2026

HCPCS Code	Long Descriptor	Final CY 2026 PI
0582T	Transurethral ablation of malignant prostate tissue by high-energy water vapor thermotherapy, including intraoperative imaging and needle guidance	J8
0786T	Insertion or replacement of percutaneous electrode array, sacral, with integrated neurostimulator, including imaging guidance, when performed	J8
0991T	Cystourethroscopy, with low-energy lithotripsy and acoustically actuated microspheres, including imaging	J8
20100	Exploration of penetrating wound (separate procedure); neck	G2
20101	Exploration of penetrating wound (separate procedure); chest	G2
20102	Exploration of penetrating wound (separate procedure); abdomen/flank/back	G2
20660	Application of cranial tongs, caliper, or stereotactic frame, including removal (separate procedure)	G2
21049	Excision of benign tumor or cyst of maxilla; requiring extra-oral osteotomy and partial maxillectomy (eg, locally aggressive or destructive lesion[s])	G2
21141	Reconstruction midface, lefort i; single piece, segment movement in any direction (eg, for long face syndrome), without bone graft	G2
21142	Reconstruction midface, lefort i; 2 pieces, segment movement in any direction, without bone graft	J8
21143	Reconstruction midface, lefort i; 3 or more pieces, segment movement in any direction, without bone graft	G2
21172	Reconstruction superior-lateral orbital rim and lower forehead, advancement or alteration, with or without grafts (includes obtaining autografts)	G2
21175	Reconstruction, bifrontal, superior-lateral orbital rims and lower forehead, advancement or alteration (eg, plagiocephaly, trigonocephaly, brachycephaly), with or without grafts (includes obtaining autografts)	G2
21193	Reconstruction of mandibular rami, horizontal, vertical, c, or l osteotomy; without bone graft	G2
21196	Reconstruction of mandibular rami and/or body, sagittal split; with internal rigid fixation	G2
21255	Reconstruction of zygomatic arch and glenoid fossa with bone and cartilage (includes obtaining autografts)	J8
21256	Reconstruction of orbit with osteotomies (extracranial) and with bone grafts (includes obtaining autografts) (eg, micro-ophthalmia)	J8
21261	Periorbital osteotomies for orbital hypertelorism, with bone grafts; combined intra- and extracranial approach	G2
21263	Periorbital osteotomies for orbital hypertelorism, with bone grafts; with forehead advancement	G2
21346	Open treatment of nasomaxillary complex fracture (lefort ii type); with wiring and/or local fixation	G2
21347	Open treatment of nasomaxillary complex fracture (lefort ii type); requiring multiple open approaches	J8
21366	Open treatment of complicated (eg, comminuted or involving cranial nerve foramina) fracture(s) of malar area, including zygomatic arch and malar tripod; with bone grafting (includes obtaining graft)	J8
21385	Open treatment of orbital floor blowout fracture; transantral approach (caldwell-luc type operation)	G2
21386	Open treatment of orbital floor blowout fracture; periorbital approach	G2
21387	Open treatment of orbital floor blowout fracture; combined approach	G2

HCPCS Code	Long Descriptor	Final CY 2026 PI
21395	Open treatment of orbital floor blowout fracture; periorbital approach with bone graft (includes obtaining graft)	G2
21408	Open treatment of fracture of orbit, except blowout; with bone grafting (includes obtaining graft)	G2
21422	Open treatment of palatal or maxillary fracture (lefort i type);	J8
21470	Open treatment of complicated mandibular fracture by multiple surgical approaches including internal fixation, interdental fixation, and/or wiring of dentures or splints	J8
21601	Excision of chest wall tumor including rib(s)	G2
21742	Reconstructive repair of pectus excavatum or carinatum; minimally invasive approach (nuss procedure), without thoracoscopy	J8
21743	Reconstructive repair of pectus excavatum or carinatum; minimally invasive approach (nuss procedure), with thoracoscopy	J8
22100	Partial excision of posterior vertebral component (eg, spinous process, lamina or facet) for intrinsic bony lesion, single vertebral segment; cervical	G2
22101	Partial excision of posterior vertebral component (eg, spinous process, lamina or facet) for intrinsic bony lesion, single vertebral segment; thoracic	G2
22630	Arthrodesis, posterior interbody technique, including laminectomy and/or discectomy to prepare interspace (other than for decompression), single interspace, lumbar;	J8
22632	Arthrodesis, posterior interbody technique, including laminectomy and/or discectomy to prepare interspace (other than for decompression), single interspace, lumbar; each additional interspace (list separately in addition to code for primary procedure)	N1
22633	Arthrodesis, combined posterior or posterolateral technique with posterior interbody technique including laminectomy and/or discectomy sufficient to prepare interspace (other than for decompression), single interspace, lumbar;	J8
22848	Pelvic fixation (attachment of caudal end of instrumentation to pelvic bony structures) other than sacrum (list separately in addition to code for primary procedure)	N1
23473	Revision of total shoulder arthroplasty, including allograft when performed; humeral or glenoid component	J8
24150	Radical resection of tumor, shaft or distal humerus	G2
24935	Stump elongation, upper extremity	G2
25170	Radical resection of tumor, radius or ulna	G2
25909	Amputation, forearm, through radius and ulna; re-amputation	G2
27027	Decompression fasciotomy(ies), pelvic (buttock) compartment(s) (eg, gluteus medius-minimus, gluteus maximus, iliopsoas, and/or tensor fascia lata muscle), unilateral	G2
27057	Decompression fasciotomy(ies), pelvic (buttock) compartment(s) (eg, gluteus medius-minimus, gluteus maximus, iliopsoas, and/or tensor fascia lata muscle) with debridement of nonviable muscle, unilateral	J8
27179	Open treatment of slipped femoral epiphysis; osteoplasty of femoral neck (heyman type procedure)	G2
27235	Percutaneous skeletal fixation of femoral fracture, proximal end, neck	G2
27477	Arrest, epiphyseal, any method (eg, epiphysiodesis); tibia and fibula, proximal	J8
27485	Arrest, hemiepiphyseal, distal femur or proximal tibia or fibula (eg, genu varus or valgus)	G2
27722	Repair of nonunion or malunion, tibia; with sliding graft	J8
28360	Reconstruction, cleft foot	J8

HCPCS Code	Long Descriptor	Final CY 2026 PI
28805	Amputation, foot; transmetatarsal	G2
31241	Nasal/sinus endoscopy, surgical; with ligation of sphenopalatine artery	G2
31292	Nasal/sinus endoscopy, surgical, with orbital decompression; medial or inferior wall	G2
31293	Nasal/sinus endoscopy, surgical, with orbital decompression; medial and inferior wall	G2
31294	Nasal/sinus endoscopy, surgical, with optic nerve decompression	G2
31584	Laryngoplasty; with open reduction and fixation of (eg, plating) fracture, includes tracheostomy, if performed	G2
31587	Laryngoplasty, cricoid split, without graft placement	G2
31600	Tracheostomy, planned (separate procedure);	G2
31601	Tracheostomy, planned (separate procedure); younger than 2 years	G2
31610	Tracheostomy, fenestration procedure with skin flaps	G2
31660	Bronchoscopy, rigid or flexible, including fluoroscopic guidance, when performed; with bronchial thermoplasty, 1 lobe	J8
31661	Bronchoscopy, rigid or flexible, including fluoroscopic guidance, when performed; with bronchial thermoplasty, 2 or more lobes	J8
31785	Excision of tracheal tumor or carcinoma; cervical	G2
32551	Tube thoracostomy, includes connection to drainage system (eg, water seal), when performed, open (separate procedure)	G2
32560	Instillation, via chest tube/catheter, agent for pleurodesis (eg, talc for recurrent or persistent pneumothorax)	G2
32561	Instillation(s), via chest tube/catheter, agent for fibrinolysis (eg, fibrinolytic agent for break up of multiloculated effusion); initial day	G2
32562	Instillation(s), via chest tube/catheter, agent for fibrinolysis (eg, fibrinolytic agent for break up of multiloculated effusion); subsequent day	G2
32601	Thoracoscopy, diagnostic (separate procedure); lungs, pericardial sac, mediastinal or pleural space, without biopsy	G2
32604	Thoracoscopy, diagnostic (separate procedure); pericardial sac, with biopsy	G2
32606	Thoracoscopy, diagnostic (separate procedure); mediastinal space, with biopsy	G2
32607	Thoracoscopy; with diagnostic biopsy(ies) of lung infiltrate(s) (eg, wedge, incisional), unilateral	G2
32608	Thoracoscopy; with diagnostic biopsy(ies) of lung nodule(s) or mass(es) (eg, wedge, incisional), unilateral	G2
32609	Thoracoscopy; with biopsy(ies) of pleura	G2
33244	Removal of single or dual chamber implantable defibrillator electrode(s); by transvenous extraction	G2
33272	Removal of subcutaneous implantable defibrillator electrode	G2
34101	Embolectomy or thrombectomy, with or without catheter; axillary, brachial, innominate, subclavian artery, by arm incision	G2
34111	Embolectomy or thrombectomy, with or without catheter; radial or ulnar artery, by arm incision	G2
34201	Embolectomy or thrombectomy, with or without catheter; femoropopliteal, aortoiliac artery, by leg incision	J8
34203	Embolectomy or thrombectomy, with or without catheter; popliteal-tibio-peroneal artery, by leg incision	J8
34421	Thrombectomy, direct or with catheter; vena cava, iliac, femoropopliteal vein, by leg incision	J8

HCPCS Code	Long Descriptor	Final CY 2026 PI
34471	Thrombectomy, direct or with catheter; subclavian vein, by neck incision	G2
34501	Valvuloplasty, femoral vein	G2
34510	Venous valve transposition, any vein donor	G2
34520	Cross-over vein graft to venous system	G2
34530	Saphenopopliteal vein anastomosis	G2
35011	Direct repair of aneurysm, pseudoaneurysm, or excision (partial or total) and graft insertion, with or without patch graft; for aneurysm and associated occlusive disease, axillary-brachial artery, by arm incision	G2
35045	Direct repair of aneurysm, pseudoaneurysm, or excision (partial or total) and graft insertion, with or without patch graft; for aneurysm, pseudoaneurysm, and associated occlusive disease, radial or ulnar artery	G2
35180	Repair, congenital arteriovenous fistula; head and neck	G2
35184	Repair, congenital arteriovenous fistula; extremities	G2
35190	Repair, acquired or traumatic arteriovenous fistula; extremities	G2
35201	Repair blood vessel, direct; neck	G2
35206	Repair blood vessel, direct; upper extremity	G2
35226	Repair blood vessel, direct; lower extremity	G2
35231	Repair blood vessel with vein graft; neck	G2
35236	Repair blood vessel with vein graft; upper extremity	G2
35256	Repair blood vessel with vein graft; lower extremity	G2
35261	Repair blood vessel with graft other than vein; neck	G2
35266	Repair blood vessel with graft other than vein; upper extremity	G2
35286	Repair blood vessel with graft other than vein; lower extremity	G2
35321	Thromboendarterectomy, including patch graft, if performed; axillary-brachial	G2
35860	Exploration for postoperative hemorrhage, thrombosis or infection; extremity	G2
35879	Revision, lower extremity arterial bypass, without thrombectomy, open; with vein patch angioplasty	G2
35881	Revision, lower extremity arterial bypass, without thrombectomy, open; with segmental vein interposition	J8
35883	Revision, femoral anastomosis of synthetic arterial bypass graft in groin, open; with nonautogenous patch graft (eg, polyester, eptfe, bovine pericardium)	G2
35884	Revision, femoral anastomosis of synthetic arterial bypass graft in groin, open; with autogenous vein patch graft	G2
35903	Excision of infected graft; extremity	G2
36460	Transfusion, intrauterine, fetal	G2
36838	Distal revascularization and interval ligation (dril), upper extremity hemodialysis access (steal syndrome)	G2
37183	Revision of transvenous intrahepatic portosystemic shunt(s) (tips) (includes venous access, hepatic and portal vein catheterization, portography with hemodynamic evaluation, intrahepatic tract recannulization/dilatation, stent placement and all associated imaging guidance and documentation)	J8
37191	Insertion of intravascular vena cava filter, endovascular approach including vascular access, vessel selection, and radiological supervision and interpretation, intraprocedural roadmapping, and imaging guidance (ultrasound and fluoroscopy), when performed	J8
37195	Thrombolysis, cerebral, by intravenous infusion	G2

HCPCS Code	Long Descriptor	Final CY 2026 PI
37213	Transcatheter therapy, arterial or venous infusion for thrombolysis other than coronary, any method, including radiological supervision and interpretation, continued treatment on subsequent day during course of thrombolytic therapy, including follow-up catheter contrast injection, position change, or exchange, when performed;	G2
37214	Transcatheter therapy, arterial or venous infusion for thrombolysis other than coronary, any method, including radiological supervision and interpretation, continued treatment on subsequent day during course of thrombolytic therapy, including follow-up catheter contrast injection, position change, or exchange, when performed; cessation of thrombolysis including removal of catheter and vessel closure by any method	G2
37244	Vascular embolization or occlusion, inclusive of all radiological supervision and interpretation, intraprocedural roadmapping, and imaging guidance necessary to complete the intervention; for arterial or venous hemorrhage or lymphatic extravasation	J8
37565	Ligation, internal jugular vein	G2
37600	Ligation; external carotid artery	G2
37605	Ligation; internal or common carotid artery	G2
37606	Ligation; internal or common carotid artery, with gradual occlusion, as with selverstone or crutchfield clamp	G2
37615	Ligation, major artery (eg, post-traumatic, rupture); neck	G2
37619	Ligation of inferior vena cava	G2
38120	Laparoscopy, surgical, splenectomy	G2
38207	Transplant preparation of hematopoietic progenitor cells; cryopreservation and storage	G2
38208	Transplant preparation of hematopoietic progenitor cells; thawing of previously frozen harvest, without washing, per donor	G2
38209	Transplant preparation of hematopoietic progenitor cells; thawing of previously frozen harvest, with washing, per donor	G2
38210	Transplant preparation of hematopoietic progenitor cells; specific cell depletion within harvest, t-cell depletion	G2
38211	Transplant preparation of hematopoietic progenitor cells; tumor cell depletion	G2
38212	Transplant preparation of hematopoietic progenitor cells; red blood cell removal	G2
38213	Transplant preparation of hematopoietic progenitor cells; platelet depletion	G2
38214	Transplant preparation of hematopoietic progenitor cells; plasma (volume) depletion	G2
38215	Transplant preparation of hematopoietic progenitor cells; cell concentration in plasma, mononuclear, or buffy coat layer	G2
38240	Hematopoietic progenitor cell (hpc); allogeneic transplantation per donor	G2
38720	Cervical lymphadenectomy (complete)	G2
39401	Mediastinoscopy; includes biopsy(ies) of mediastinal mass (eg, lymphoma), when performed	G2
39402	Mediastinoscopy; with lymph node biopsy(ies) (eg, lung cancer staging)	G2
42842	Radical resection of tonsil, tonsillar pillars, and/or retromolar trigone; without closure	G2
42844	Radical resection of tonsil, tonsillar pillars, and/or retromolar trigone; closure with local flap (eg, tongue, buccal)	G2
43020	Esophagotomy, cervical approach, with removal of foreign body	G2

HCPCS Code	Long Descriptor	Final CY 2026 PI
43280	Laparoscopy, surgical, esophagogastric fundoplasty (eg, nissen, toupet procedures)	G2
43281	Laparoscopy, surgical, repair of paraesophageal hernia, includes fundoplasty, when performed; without implantation of mesh	G2
43282	Laparoscopy, surgical, repair of paraesophageal hernia, includes fundoplasty, when performed; with implantation of mesh	G2
43420	Closure of esophagostomy or fistula; cervical approach	G2
43497	Lower esophageal myotomy, transoral (ie, peroral endoscopic myotomy [poem])	G2
43510	Gastrotomy; with esophageal dilation and insertion of permanent intraluminal tube (eg, celestin or mousseaux-barbin)	G2
43647	Laparoscopy, surgical; implantation or replacement of gastric neurostimulator electrodes, antrum	J8
43648	Laparoscopy, surgical; revision or removal of gastric neurostimulator electrodes, antrum	G2
43651	Laparoscopy, surgical; transection of vagus nerves, truncal	G2
43652	Laparoscopy, surgical; transection of vagus nerves, selective or highly selective	G2
43770	Laparoscopy, surgical, gastric restrictive procedure; placement of adjustable gastric restrictive device (eg, gastric band and subcutaneous port components)	J8
43772	Laparoscopy, surgical, gastric restrictive procedure; removal of adjustable gastric restrictive device component only	G2
43773	Laparoscopy, surgical, gastric restrictive procedure; removal and replacement of adjustable gastric restrictive device component only	G2
43830	Gastrostomy, open; without construction of gastric tube (eg, stamm procedure) (separate procedure)	G2
43831	Gastrostomy, open; neonatal, for feeding	G2
44180	Laparoscopy, surgical, enterolysis (freeing of intestinal adhesion) (separate procedure)	G2
44186	Laparoscopy, surgical; jejunostomy (eg, for decompression or feeding)	G2
44950	Appendectomy;	G2
44955	Appendectomy; when done for indicated purpose at time of other major procedure (not as separate procedure) (list separately in addition to code for primary procedure)	N1
44970	Laparoscopy, surgical, appendectomy	G2
47370	Laparoscopy, surgical, ablation of 1 or more liver tumor(s); radiofrequency	G2
47371	Laparoscopy, surgical, ablation of 1 or more liver tumor(s); cryosurgical	G2
47490	Cholecystostomy, percutaneous, complete procedure, including imaging guidance, catheter placement, cholecystogram when performed, and radiological supervision and interpretation	G2
47550	Biliary endoscopy, intraoperative (choledochoscopy) (list separately in addition to code for primary procedure)	N1
49185	Sclerotherapy of a fluid collection (eg, lymphocele, cyst, or seroma), percutaneous, including contrast injection(s), sclerosant injection(s), diagnostic study, imaging guidance (eg, ultrasound, fluoroscopy) and radiological supervision and interpretation when performed	G2
49323	Laparoscopy, surgical; with drainage of lymphocele to peritoneal cavity	G2
49405	Image-guided fluid collection drainage by catheter (eg, abscess, hematoma, seroma, lymphocele, cyst); visceral (eg, kidney, liver, spleen, lung/mediastinum), percutaneous	G2

HCPCS Code	Long Descriptor	Final CY 2026 PI
49491	Repair, initial inguinal hernia, preterm infant (younger than 37 weeks gestation at birth), performed from birth up to 50 weeks postconception age, with or without hydrocelectomy; reducible	G2
49492	Repair, initial inguinal hernia, preterm infant (younger than 37 weeks gestation at birth), performed from birth up to 50 weeks postconception age, with or without hydrocelectomy; incarcerated or strangulated	G2
50020	Drainage of perirenal or renal abscess, open	G2
50541	Laparoscopy, surgical; ablation of renal cysts	G2
50542	Laparoscopy, surgical; ablation of renal mass lesion(s), including intraoperative ultrasound guidance and monitoring, when performed	G2
50543	Laparoscopy, surgical; partial nephrectomy	G2
50544	Laparoscopy, surgical; pyeloplasty	G2
50945	Laparoscopy, surgical; ureterolithotomy	G2
51060	Transvesical ureterolithotomy	G2
51845	Abdomino-vaginal vesical neck suspension, with or without endoscopic control (eg, stamey, raz, modified pereyra)	G2
51860	Cystorrhaphy, suture of bladder wound, injury or rupture; simple	G2
51990	Laparoscopy, surgical; urethral suspension for stress incontinence	G2
53500	Urethrolysis, transvaginal, secondary, open, including cystourethroscopy (eg, postsurgical obstruction, scarring)	G2
54332	1-stage proximal penile or penoscrotal hypospadias repair requiring extensive dissection to correct chordee and urethroplasty by use of skin graft tube and/or island flap	G2
54336	1-stage perineal hypospadias repair requiring extensive dissection to correct chordee and urethroplasty by use of skin graft tube and/or island flap	G2
54411	Removal and replacement of all components of a multi-component inflatable penile prosthesis through an infected field at the same operative session, including irrigation and debridement of infected tissue	J8
54417	Removal and replacement of non-inflatable (semi-rigid) or inflatable (self-contained) penile prosthesis through an infected field at the same operative session, including irrigation and debridement of infected tissue	J8
54535	Orchiectomy, radical, for tumor; with abdominal exploration	G2
55866	Laparoscopy, surgical prostatectomy, retropubic radical, including nerve sparing, includes robotic assistance, when performed	G2
55867	Laparoscopy, surgical prostatectomy, simple subtotal (including control of postoperative bleeding, vasectomy, meatotomy, urethral calibration and/or dilation, and internal urethrotomy), includes robotic assistance, when performed	G2
57106	Vaginectomy, partial removal of vaginal wall;	G2
57107	Vaginectomy, partial removal of vaginal wall; with removal of paravaginal tissue (radical vaginectomy)	G2
57109	Vaginectomy, partial removal of vaginal wall; with removal of paravaginal tissue (radical vaginectomy) with bilateral total pelvic lymphadenectomy and para-aortic lymph node sampling (biopsy)	G2
57284	Paravaginal defect repair (including repair of cystocele, if performed); open abdominal approach	J8
57285	Paravaginal defect repair (including repair of cystocele, if performed); vaginal approach	G2
57292	Construction of artificial vagina; with graft	G2
57330	Closure of vesicovaginal fistula; transvesical and vaginal approach	G2

HCPCS Code	Long Descriptor	Final CY 2026 PI
57423	Paravaginal defect repair (including repair of cystocele, if performed), laparoscopic approach	G2
57555	Excision of cervical stump, vaginal approach; with anterior and/or posterior repair	G2
58263	Vaginal hysterectomy, for uterus 250 g or less; with removal of tube(s), and/or ovary(s), with repair of enterocele	G2
58270	Vaginal hysterectomy, for uterus 250 g or less; with repair of enterocele	G2
58290	Vaginal hysterectomy, for uterus greater than 250 g;	G2
58291	Vaginal hysterectomy, for uterus greater than 250 g; with removal of tube(s) and/or ovary(s)	G2
58292	Vaginal hysterectomy, for uterus greater than 250 g; with removal of tube(s) and/or ovary(s), with repair of enterocele	G2
58294	Vaginal hysterectomy, for uterus greater than 250 g; with repair of enterocele	G2
58770	Salpingostomy (salpingoneostomy)	G2
58920	Wedge resection or bisection of ovary, unilateral or bilateral	G2
58925	Ovarian cystectomy, unilateral or bilateral	G2
59030	Fetal scalp blood sampling	G2
59409	Vaginal delivery only (with or without episiotomy and/or forceps);	G2
59612	Vaginal delivery only, after previous cesarean delivery (with or without episiotomy and/or forceps);	G2
60252	Thyroidectomy, total or subtotal for malignancy; with limited neck dissection	G2
60271	Thyroidectomy, including substernal thyroid; cervical approach	G2
60502	Parathyroidectomy or exploration of parathyroid(s); re-exploration	G2
60520	Thymectomy, partial or total; transcervical approach (separate procedure)	G2
61623	Endovascular temporary balloon arterial occlusion, head or neck (extracranial/intracranial) including selective catheterization of vessel to be occluded, positioning and inflation of occlusion balloon, concomitant neurological monitoring, and radiologic supervision and interpretation of all angiography required for balloon occlusion and to exclude vascular injury post occlusion	J8
61626	Transcatheter permanent occlusion or embolization (eg, for tumor destruction, to achieve hemostasis, to occlude a vascular malformation), percutaneous, any method; non-central nervous system, head or neck (extracranial, brachiocephalic branch)	J8
61720	Creation of lesion by stereotactic method, including burr hole(s) and localizing and recording techniques, single or multiple stages; globus pallidus or thalamus	G2
61891	Revision or replacement of skull-mounted cranial neurostimulator pulse generator or receiver with connection to depth and/or cortical strip electrode array(s)	J8
61892	Removal of skull-mounted cranial neurostimulator pulse generator or receiver with cranioplasty, when performed	G2
62000	Elevation of depressed skull fracture; simple, extradural	G2
62351	Implantation, revision or repositioning of tunneled intrathecal or epidural catheter, for long-term medication administration via an external pump or implantable reservoir/infusion pump; with laminectomy	J8
63011	Laminectomy with exploration and/or decompression of spinal cord and/or cauda equina, without facetectomy, foraminotomy or discectomy (eg, spinal stenosis), 1 or 2 vertebral segments; sacral	G2

HCPCS Code	Long Descriptor	Final CY 2026 PI
63012	Laminectomy with removal of abnormal facets and/or pars inter-articularis with decompression of cauda equina and nerve roots for spondylolisthesis, lumbar (gill type procedure)	G2
63015	Laminectomy with exploration and/or decompression of spinal cord and/or cauda equina, without facetectomy, foraminotomy or discectomy (eg, spinal stenosis), more than 2 vertebral segments; cervical	G2
63016	Laminectomy with exploration and/or decompression of spinal cord and/or cauda equina, without facetectomy, foraminotomy or discectomy (eg, spinal stenosis), more than 2 vertebral segments; thoracic	G2
63017	Laminectomy with exploration and/or decompression of spinal cord and/or cauda equina, without facetectomy, foraminotomy or discectomy (eg, spinal stenosis), more than 2 vertebral segments; lumbar	G2
63035	Laminotomy (hemilaminectomy), with decompression of nerve root(s), including partial facetectomy, foraminotomy and/or excision of herniated intervertebral disc; each additional interspace, cervical or lumbar (list separately in addition to code for primary procedure)	N1
63040	Laminotomy (hemilaminectomy), with decompression of nerve root(s), including partial facetectomy, foraminotomy and/or excision of herniated intervertebral disc, reexploration, single interspace; cervical	G2
63043	Laminotomy (hemilaminectomy), with decompression of nerve root(s), including partial facetectomy, foraminotomy and/or excision of herniated intervertebral disc, reexploration, single interspace; each additional cervical interspace (list separately in addition to code for primary procedure)	N1
63048	Laminectomy, facetectomy and foraminotomy (unilateral or bilateral with decompression of spinal cord, cauda equina and/or nerve root[s], [eg, spinal or lateral recess stenosis]), single vertebral segment; each additional vertebral segment, cervical, thoracic, or lumbar (list separately in addition to code for primary procedure)	N1
63057	Transpedicular approach with decompression of spinal cord, equina and/or nerve root(s) (eg, herniated intervertebral disc), single segment; each additional segment, thoracic or lumbar (list separately in addition to code for primary procedure)	N1
63064	Costovertebral approach with decompression of spinal cord or nerve root(s) (eg, herniated intervertebral disc), thoracic; single segment	G2
63066	Costovertebral approach with decompression of spinal cord or nerve root(s) (eg, herniated intervertebral disc), thoracic; each additional segment (list separately in addition to code for primary procedure)	N1
63075	Discectomy, anterior, with decompression of spinal cord and/or nerve root(s), including osteophytectomy; cervical, single interspace	G2
63076	Discectomy, anterior, with decompression of spinal cord and/or nerve root(s), including osteophytectomy; cervical, each additional interspace (list separately in addition to code for primary procedure)	N1
63265	Laminectomy for excision or evacuation of intraspinal lesion other than neoplasm, extradural; cervical	G2
63266	Laminectomy for excision or evacuation of intraspinal lesion other than neoplasm, extradural; thoracic	G2
63267	Laminectomy for excision or evacuation of intraspinal lesion other than neoplasm, extradural; lumbar	G2
63268	Laminectomy for excision or evacuation of intraspinal lesion other than neoplasm, extradural; sacral	G2
63741	Creation of shunt, lumbar, subarachnoid-peritoneal, -pleural, or other; percutaneous, not requiring laminectomy	J8
64804	Sympathectomy, cervicothoracic	G2

HCPCS Code	Long Descriptor	Final CY 2026 PI
64911	Nerve repair; with autogenous vein graft (includes harvest of vein graft), each nerve	J8
69725	Decompression facial nerve, intratemporal; including medial to geniculate ganglion	G2
69955	Total facial nerve decompression and/or repair (may include graft)	G2
69960	Decompression internal auditory canal	G2
69970	Removal of tumor, temporal bone	G2
92924	Percutaneous transluminal coronary atherectomy, with coronary angioplasty when performed; single major coronary artery or branch	J8
92933	Percutaneous transluminal coronary atherectomy, with intracoronary stent, with coronary angioplasty when performed; single major coronary artery or branch	J8
92937	Percutaneous transluminal revascularization of or through coronary artery bypass graft (internal mammary, free arterial, venous), any combination of intracoronary stent, atherectomy and angioplasty, including distal protection when performed; single vessel	J8
92943	Percutaneous transluminal revascularization of chronic total occlusion, coronary artery, coronary artery branch, or coronary artery bypass graft, any combination of intracoronary stent, atherectomy and angioplasty; single vessel	J8
92973	Percutaneous transluminal coronary thrombectomy mechanical (list separately in addition to code for primary procedure)	N1
92974	Transcatheter placement of radiation delivery device for subsequent coronary intravascular brachytherapy (list separately in addition to code for primary procedure)	N1
92960	Cardioversion, elective, electrical conversion of arrhythmia; external	G2
92961	Cardioversion, elective, electrical conversion of arrhythmia; internal (separate procedure)	G2
93650	Intracardiac catheter ablation of atrioventricular node function, atrioventricular conduction for creation of complete heart block, with or without temporary pacemaker placement	J8
93653	Comprehensive electrophysiologic evaluation with insertion and repositioning of multiple electrode catheters, induction or attempted induction of an arrhythmia with right atrial pacing and recording and catheter ablation of arrhythmogenic focus, including intracardiac electrophysiologic 3-dimensional mapping, right ventricular pacing and recording, left atrial pacing and recording from coronary sinus or left atrium, and his bundle recording, when performed; with treatment of supraventricular tachycardia by ablation of fast or slow atrioventricular pathway, accessory atrioventricular connection, cavo-tricuspid isthmus or other single atrial focus or source of atrial re-entry	J8
93654	Comprehensive electrophysiologic evaluation with insertion and repositioning of multiple electrode catheters, induction or attempted induction of an arrhythmia with right atrial pacing and recording and catheter ablation of arrhythmogenic focus, including intracardiac electrophysiologic 3-dimensional mapping, right ventricular pacing and recording, left atrial pacing and recording from coronary sinus or left atrium, and his bundle recording, when performed; with treatment of ventricular tachycardia or focus of ventricular ectopy including left ventricular pacing and recording, when performed	J8
93655	Intracardiac catheter ablation of a discrete mechanism of arrhythmia which is distinct from the primary ablated mechanism, including repeat diagnostic maneuvers, to treat a spontaneous or induced arrhythmia (list separately in addition to code for primary procedure)	N1

HCPCS Code	Long Descriptor	Final CY 2026 PI
93656	Comprehensive electrophysiologic evaluation with transseptal catheterizations, insertion and repositioning of multiple electrode catheters, induction or attempted induction of an arrhythmia including left or right atrial pacing/recording, and intracardiac catheter ablation of atrial fibrillation by pulmonary vein isolation, including intracardiac electrophysiologic 3-dimensional mapping, intracardiac echocardiography with imaging supervision and interpretation, right ventricular pacing/recording, and his bundle recording, when performed	J8
93657	Additional linear or focal intracardiac catheter ablation of the left or right atrium for treatment of atrial fibrillation remaining after completion of pulmonary vein isolation (list separately in addition to code for primary procedure)	N1
0184T	Excision of rectal tumor, transanal endoscopic microsurgical approach (ie, tems), including muscularis propria (ie, full thickness)	G2
0221T	Placement of a posterior intrafacet implant(s), unilateral or bilateral, including imaging and placement of bone graft(s) or synthetic device(s), single level; lumbar	J8
0222T	Placement of a posterior intrafacet implant(s), unilateral or bilateral, including imaging and placement of bone graft(s) or synthetic device(s), single level; each additional vertebral segment (list separately in addition to code for primary procedure)	N1
0505T	Endovenous femoral-popliteal arterial revascularization, with transcatheter placement of intravascular stent graft(s) and closure by any method, including percutaneous or open vascular access, ultrasound guidance for vascular access when performed, all catheterization(s) and intraprocedural roadmapping and imaging guidance necessary to complete the intervention, all associated radiological supervision and interpretation, when performed, with crossing of the occlusive lesion in an extraluminal fashion	J8
0515T	Insertion of wireless cardiac stimulator for left ventricular pacing, including device interrogation and programming, and imaging supervision and interpretation, when performed; complete system (includes electrode and generator [transmitter and battery])	J8
0516T	Insertion of wireless cardiac stimulator for left ventricular pacing, including device interrogation and programming, and imaging supervision and interpretation, when performed; electrode only	J8
0517T	Insertion of wireless cardiac stimulator for left ventricular pacing, including device interrogation and programming, and imaging supervision and interpretation, when performed; both components of pulse generator (battery and transmitter) only	J8
0518T	Removal of pulse generator for wireless cardiac stimulator for left ventricular pacing; battery component only	G2
0519T	Removal and replacement of pulse generator for wireless cardiac stimulator for left ventricular pacing, including device interrogation and programming; both components (battery and transmitter)	G2
0520T	Removal and replacement of pulse generator for wireless cardiac stimulator for left ventricular pacing, including device interrogation and programming; battery component only	J8
0645T	Transcatheter implantation of coronary sinus reduction device including vascular access and closure, right heart catheterization, venous angiography, coronary sinus angiography, imaging guidance, and supervision and interpretation, when performed	G2
0692T	Therapeutic ultrafiltration	G2

HCPCS Code	Long Descriptor	Final CY 2026 PI
0744T	Insertion of bioprosthetic valve, open, femoral vein, including duplex ultrasound imaging guidance, when performed, including autogenous or nonautogenous patch graft (eg, polyester, eptfe, bovine pericardium), when performed	G2
0861T	Removal of pulse generator for wireless cardiac stimulator for left ventricular pacing; both components (battery and transmitter)	G2
0862T	Relocation of pulse generator for wireless cardiac stimulator for left ventricular pacing, including device interrogation and programming; battery component only	G2
0863T	Relocation of pulse generator for wireless cardiac stimulator for left ventricular pacing, including device interrogation and programming; transmitter component only	G2
C9602	Percutaneous transluminal coronary atherectomy, with drug eluting intracoronary stent, with coronary angioplasty when performed; single major coronary artery or branch	J8
C9603	Percutaneous transluminal coronary atherectomy, with drug-eluting intracoronary stent, with coronary angioplasty when performed; each additional branch of a major coronary artery (list separately in addition to code for primary procedure)	N1
C9604	Percutaneous transluminal revascularization of or through coronary artery bypass graft (internal mammary, free arterial, venous), any combination of drug-eluting intracoronary stent, atherectomy and angioplasty, including distal protection when performed; single vessel	J8
C9605	Percutaneous transluminal revascularization of or through coronary artery bypass graft (internal mammary, free arterial, venous), any combination of drug-eluting intracoronary stent, atherectomy and angioplasty, including distal protection when performed; each additional branch subtended by the bypass graft (list separately in addition to code for primary procedure)	N1
C9607	Percutaneous transluminal revascularization of chronic total occlusion, coronary artery, coronary artery branch, or coronary artery bypass graft, any combination of drug-eluting intracoronary stent, atherectomy and angioplasty; single vessel	J8
C9608	Percutaneous transluminal revascularization of chronic total occlusion, coronary artery, coronary artery branch, or coronary artery bypass graft, any combination of drug-eluting intracoronary stent, atherectomy and angioplasty; each additional coronary artery, coronary artery branch, or bypass graft (list separately in addition to code for primary procedure)	N1
C9760	Non-randomized, non-blinded procedure for nyha class ii, iii, iv heart failure; transcatheter implantation of interatrial shunt, including right and left heart catheterization, transeptal puncture, trans-esophageal echocardiography (tee)/intracardiac echocardiography (ice), and all imaging with or without guidance (e.g., ultrasound, fluoroscopy), performed in an approved investigational device exemption (ide) study	G2
C9779	Endoscopic submucosal dissection (esd), including endoscopy or colonoscopy, mucosal closure, when performed	G2
C9780	Insertion of central venous catheter through central venous occlusion via inferior and superior approaches (e.g., inside-out technique), including imaging guidance	J8
C9782	Blinded procedure for new york heart association (nyha) class ii or iii heart failure, or canadian cardiovascular society (ccs) class iii or iv chronic refractory angina; transcatheter intramyocardial transplantation of autologous bone marrow cells (e.g., mononuclear) or placebo control, autologous bone marrow harvesting and preparation for transplantation, left heart catheterization including ventriculography, all laboratory services, and all imaging with or	J8

HCPCS Code	Long Descriptor	Final CY 2026 PI
	without guidance (e.g., transthoracic echocardiography, ultrasound, fluoroscopy), performed in an approved investigational device exemption (ide) study	
C9783	Blinded procedure for transcatheter implantation of coronary sinus reduction device or placebo control, including vascular access and closure, right heart catheterization, venous and coronary sinus angiography, imaging guidance and supervision and interpretation when performed in an approved investigational device exemption (ide) study	G2
C9785	Endoscopic outlet reduction, gastric pouch application, with endoscopy and intraluminal tube insertion, if performed, including all system and tissue anchoring components	G2
C9792	Blinded or nonblinded procedure for symptomatic new york heart association (nyha) class ii, iii, iva heart failure; transcatheter implantation of left atrial to coronary sinus shunt using jugular vein access, including all imaging necessary to intra procedurally map the coronary sinus for optimal shunt placement (e.g., tee or ice ultrasound, fluoroscopy), performed under general anesthesia in an approved investigational device exemption (ide) study)	G2
C9901	Endoscopic defect closure within the entire gastrointestinal tract, including upper endoscopy (including diagnostic, if performed) or colonoscopy (including diagnostic, if performed), with all system and tissue anchoring components	J8
D7440	Excision of malignant tumor-lesion diameter up to 1.25 cm	D2
D7441	Excision of malignant tumor-lesion diameter greater than 1.25 cm	D2
G0413	Percutaneous skeletal fixation of posterior pelvic bone fracture and/or dislocation, for fracture patterns which disrupt the pelvic ring, unilateral or bilateral, (includes ilium, sacroiliac joint and/or sacrum)	J8

TABLE 132: IPO LIST REMOVALS ADDED TO THE LIST OF ASC COVERED PROCEDURES FOR CY 2026

HCPCS Code	Long Descriptor	Final CY 2026 PI
0095T	Removal of total disc arthroplasty (artificial disc), anterior approach, each additional interspace, cervical (list separately in addition to code for primary procedure)	N1
0098T	Revision including replacement of total disc arthroplasty (artificial disc), anterior approach, each additional interspace, cervical (list separately in addition to code for primary procedure)	N1
0164T	Removal of total disc arthroplasty, (artificial disc), anterior approach, each additional interspace, lumbar (list separately in addition to code for primary procedure)	N1
0165T	Revision including replacement of total disc arthroplasty (artificial disc), anterior approach, each additional interspace, lumbar (list separately in addition to code for primary procedure)	N1
0202T	Posterior vertebral joint(s) arthroplasty (eg, facet joint[s] replacement), including facetectomy, laminectomy, foraminotomy, and vertebral column fixation, injection of bone cement, when performed, including fluoroscopy, single level, lumbar spine	J8
0219T	Placement of a posterior intrafacet implant(s), unilateral or bilateral, including imaging and placement of bone graft(s) or synthetic device(s), single level; cervical	J8
0220T	Placement of a posterior intrafacet implant(s), unilateral or bilateral, including imaging and placement of bone graft(s) or synthetic device(s), single level; thoracic	J8
0656T	Anterior lumbar or thoracolumbar vertebral body tethering; up to 7 vertebral segments	J8
0657T	Anterior lumbar or thoracolumbar vertebral body tethering; 8 or more vertebral segments	J8
0790T	Revision (eg, augmentation, division of tether), replacement, or removal of thoracolumbar or lumbar vertebral body tethering, including thoracoscopy, when performed	J8
20661	Application of halo, including removal; cranial	J8
20664	Application of halo, including removal, cranial, 6 or more pins placed, for thin skull osteology (eg, pediatric patients, hydrocephalus, osteogenesis imperfecta)	J8

HCPCS Code	Long Descriptor	Final CY 2026 PI
20802	Replantation, arm (includes surgical neck of humerus through elbow joint), complete amputation	J8
20805	Replantation, forearm (includes radius and ulna to radial carpal joint), complete amputation	J8
20808	Anesthesia for interpelviabdominal (hindquarter) amputation	J8
20816	Replantation, digit, excluding thumb (includes metacarpophalangeal joint to insertion of flexor sublimis tendon), complete amputation	J8
20824	Replantation, thumb (includes carpometacarpal joint to mp joint), complete amputation	J8
20827	Replantation, thumb (includes distal tip to mp joint), complete amputation	G2
20838	Anesthesia for open procedures involving upper two-thirds of femur; radical resection	J8
20955	Bone graft with microvascular anastomosis; fibula	J8
20956	Bone graft with microvascular anastomosis; iliac crest	J8
20957	Bone graft with microvascular anastomosis; metatarsal	J8
20962	Bone graft with microvascular anastomosis; other than fibula, iliac crest, or metatarsal	J8
20969	Free osteocutaneous flap with microvascular anastomosis; other than iliac crest, metatarsal, or great toe	J8
20970	Free osteocutaneous flap with microvascular anastomosis; iliac crest	J8
21045	Excision of malignant tumor of mandible; radical resection	G2
21145	Reconstruction midface, lefort i; single piece, segment movement in any direction, requiring bone grafts (includes obtaining autografts)	J8
21146	Reconstruction midface, lefort i; 2 pieces, segment movement in any direction, requiring bone grafts (includes obtaining autografts) (eg, ungrafted unilateral alveolar cleft)	J8
21147	Reconstruction midface, lefort i; 3 or more pieces, segment movement in any direction, requiring bone grafts (includes obtaining autografts) (eg, ungrafted bilateral alveolar cleft or multiple osteotomies)	J8

HCPCS Code	Long Descriptor	Final CY 2026 PI
21151	Reconstruction midface, lefort ii; any direction, requiring bone grafts (includes obtaining autografts)	J8
21154	Reconstruction midface, lefort iii (extracranial), any type, requiring bone grafts (includes obtaining autografts); without lefort i	J8
21155	Reconstruction midface, lefort iii (extracranial), any type, requiring bone grafts (includes obtaining autografts); with lefort i	J8
21159	Reconstruction midface, lefort iii (extra and intracranial) with forehead advancement (eg, mono bloc), requiring bone grafts (includes obtaining autografts); without lefort i	J8
21160	Reconstruction midface, lefort iii (extra and intracranial) with forehead advancement (eg, mono bloc), requiring bone grafts (includes obtaining autografts); with lefort i	J8
21179	Reconstruction, entire or majority of forehead and/or supraorbital rims; with grafts (allograft or prosthetic material)	J8
21180	Reconstruction, entire or majority of forehead and/or supraorbital rims; with autograft (includes obtaining grafts)	J8
21182	Reconstruction of orbital walls, rims, forehead, nasoethmoid complex following intra- and extracranial excision of benign tumor of cranial bone (eg, fibrous dysplasia), with multiple autografts (includes obtaining grafts); total area of bone grafting less than 40 sq cm	J8
21183	Reconstruction of orbital walls, rims, forehead, nasoethmoid complex following intra- and extracranial excision of benign tumor of cranial bone (eg, fibrous dysplasia), with multiple autografts (includes obtaining grafts); total area of bone grafting greater than 40 sq cm but less than 80 sq cm	J8
21184	Reconstruction of orbital walls, rims, forehead, nasoethmoid complex following intra- and extracranial excision of benign tumor of cranial bone (eg, fibrous dysplasia), with multiple autografts (includes obtaining grafts); total area of bone grafting greater than 80 sq cm	J8
21188	Reconstruction midface, osteotomies (other than lefort type) and bone grafts (includes obtaining autografts)	J8
21247	Reconstruction of mandibular condyle with bone and cartilage autografts (includes obtaining grafts) (eg, for hemifacial microsomia)	G2
21268	Orbital repositioning, periorbital osteotomies, unilateral, with bone grafts; combined intra- and extracranial approach	J8
21343	Open treatment of depressed frontal sinus fracture	J8
21344	Open treatment of complicated (eg, comminuted or involving posterior wall) frontal sinus fracture, via coronal or multiple approaches	G2
21348	Open treatment of nasomaxillary complex fracture (lefort ii type); with bone grafting (includes obtaining graft)	J8
21423	Open treatment of palatal or maxillary fracture (lefort i type); complicated (comminuted or involving cranial nerve foramina), multiple approaches	J8
21431	Closed treatment of craniofacial separation (lefort iii type) using interdental wire fixation of denture or splint	J8
21432	Open treatment of craniofacial separation (lefort iii type); with wiring and/or internal fixation	J8

HCPCS Code	Long Descriptor	Final CY 2026 PI
21433	Open treatment of craniofacial separation (lefort iii type); complicated (eg, comminuted or involving cranial nerve foramina), multiple surgical approaches	J8
21435	Open treatment of craniofacial separation (lefort iii type); complicated, utilizing internal and/or external fixation techniques (eg, head cap, halo device, and/or intermaxillary fixation)	J8
21436	Open treatment of craniofacial separation (lefort iii type); complicated, multiple surgical approaches, internal fixation, with bone grafting (includes obtaining graft)	J8
21510	Incision, deep, with opening of bone cortex (eg, for osteomyelitis or bone abscess), thorax	G2
21602	Excision of chest wall tumor involving rib(s), with plastic reconstruction; without mediastinal lymphadenectomy	J8
21603	Excision of chest wall tumor involving rib(s), with plastic reconstruction; with mediastinal lymphadenectomy	J8
21615	Excision first and/or cervical rib;	G2
21616	Excision first and/or cervical rib; with sympathectomy	G2
21620	Ostectomy of sternum, partial	G2
21627	Sternal debridement	G2
21630	Radical resection of sternum	G2
21705	Division of scalenus anticus; with resection of cervical rib	G2
21740	Reconstructive repair of pectus excavatum or carinatum; open	J8
21750	Closure of median sternotomy separation with or without debridement (separate procedure)	J8
21825	Open treatment of sternum fracture with or without skeletal fixation	J8
22010	Incision and drainage, open, of deep abscess (subfascial), posterior spine; cervical, thoracic, or cervicothoracic	G2
22015	Incision and drainage, open, of deep abscess (subfascial), posterior spine; lumbar, sacral, or lumbosacral	G2
22110	Partial excision of vertebral body, for intrinsic bony lesion, without decompression of spinal cord or nerve root(s), single vertebral segment; cervical	G2
22112	Partial excision of vertebral body, for intrinsic bony lesion, without decompression of spinal cord or nerve root(s), single vertebral segment; thoracic	G2
22114	Partial excision of vertebral body, for intrinsic bony lesion, without decompression of spinal cord or nerve root(s), single vertebral segment; lumbar	G2
22116	Partial excision of vertebral body, for intrinsic bony lesion, without decompression of spinal cord or nerve root(s), single vertebral segment; each additional vertebral segment (list separately in addition to code for primary procedure)	N1
22206	Osteotomy of spine, posterior or posterolateral approach, 3 columns, 1 vertebral segment (eg, pedicle/vertebral body subtraction); thoracic	G2
22207	Osteotomy of spine, posterior or posterolateral approach, 3 columns, 1 vertebral segment (eg, pedicle/vertebral body subtraction); lumbar	G2
22208	Osteotomy of spine, posterior or posterolateral approach, 3 columns, 1 vertebral segment (eg, pedicle/vertebral body subtraction); each additional vertebral segment (list separately in addition to code for primary procedure)	N1

HCPCS Code	Long Descriptor	Final CY 2026 PI
22210	Osteotomy of spine, posterior or posterolateral approach, 1 vertebral segment; cervical	J8
22212	Osteotomy of spine, posterior or posterolateral approach, 1 vertebral segment; thoracic	J8
22214	Osteotomy of spine, posterior or posterolateral approach, 1 vertebral segment; lumbar	J8
22216	Osteotomy of spine, posterior or posterolateral approach, 1 vertebral segment; each additional vertebral segment (list separately in addition to primary procedure)	N1
22220	Osteotomy of spine, including discectomy, anterior approach, single vertebral segment; cervical	J8
22222	Osteotomy of spine, including discectomy, anterior approach, single vertebral segment; thoracic	G2
22224	Osteotomy of spine, including discectomy, anterior approach, single vertebral segment; lumbar	G2
22226	Osteotomy of spine, including discectomy, anterior approach, single vertebral segment; each additional vertebral segment (list separately in addition to code for primary procedure)	N1
22318	Open treatment and/or reduction of odontoid fracture(s) and or dislocation(s) (including os odontoideum), anterior approach, including placement of internal fixation; without grafting	G2
22319	Open treatment and/or reduction of odontoid fracture(s) and or dislocation(s) (including os odontoideum), anterior approach, including placement of internal fixation; with grafting	J8
22325	Open treatment and/or reduction of vertebral fracture(s) and/or dislocation(s), posterior approach, 1 fractured vertebra or dislocated segment; lumbar	J8
22326	Open treatment and/or reduction of vertebral fracture(s) and/or dislocation(s), posterior approach, 1 fractured vertebra or dislocated segment; cervical	G2
22327	Open treatment and/or reduction of vertebral fracture(s) and/or dislocation(s), posterior approach, 1 fractured vertebra or dislocated segment; thoracic	J8
22328	Open treatment and/or reduction of vertebral fracture(s) and/or dislocation(s), posterior approach, 1 fractured vertebra or dislocated segment; each additional fractured vertebra or dislocated segment (list separately in addition to code for primary procedure)	N1
22532	Arthrodesis, lateral extracavitary technique, including minimal discectomy to prepare interspace (other than for decompression); thoracic	G2
22533	Arthrodesis, lateral extracavitary technique, including minimal discectomy to prepare interspace (other than for decompression); lumbar	G2
22534	Arthrodesis, lateral extracavitary technique, including minimal discectomy to prepare interspace (other than for decompression); thoracic or lumbar, each additional vertebral segment (list separately in addition to code for primary procedure)	N1
22548	Arthrodesis, anterior transoral or extraoral technique, clivus-c1-c2 (atlas-axis), with or without excision of odontoid process	J8
22556	Arthrodesis, anterior interbody technique, including minimal discectomy to prepare interspace (other than for decompression); thoracic	J8
22558	Arthrodesis, anterior interbody technique, including minimal discectomy to prepare interspace (other than for decompression); lumbar	J8
22586	Arthrodesis, pre-sacral interbody technique, including disc space preparation, discectomy, with posterior instrumentation, with image guidance, includes bone graft when performed, l5-s1 interspace	J8
22590	Arthrodesis, posterior technique, craniocervical (occiput-c2)	J8
22595	Arthrodesis, posterior technique, atlas-axis (c1-c2)	G2
22600	Arthrodesis, posterior or posterolateral technique, single level; cervical below c2 segment	J8

HCPCS Code	Long Descriptor	Final CY 2026 PI
22610	Arthrodesis, posterior or posterolateral technique, single level; thoracic (with lateral transverse technique, when performed)	J8
22800	Arthrodesis, posterior, for spinal deformity, with or without cast; up to 6 vertebral segments	J8
22802	Arthrodesis, posterior, for spinal deformity, with or without cast; 7 to 12 vertebral segments	J8
22804	Arthrodesis, posterior, for spinal deformity, with or without cast; 13 or more vertebral segments	J8
22808	Arthrodesis, anterior, for spinal deformity, with or without cast; 2 to 3 vertebral segments	J8
22810	Arthrodesis, anterior, for spinal deformity, with or without cast; 4 to 7 vertebral segments	J8
22812	Arthrodesis, anterior, for spinal deformity, with or without cast; 8 or more vertebral segments	J8
22818	Kyphectomy, circumferential exposure of spine and resection of vertebral segment(s) (including body and posterior elements); single or 2 segments	G2
22819	Kyphectomy, circumferential exposure of spine and resection of vertebral segment(s) (including body and posterior elements); 3 or more segments	G2
22830	Exploration of spinal fusion	J8
22836	Anterior thoracic vertebral body tethering, including thoracoscopy, when performed; up to 7 vertebral segments	J8
22837	Anterior thoracic vertebral body tethering, including thoracoscopy, when performed; 8 or more vertebral segments	J8
22838	Revision (eg, augmentation, division of tether), replacement, or removal of thoracic vertebral body tethering, including thoracoscopy, when performed	J8
22841	Internal spinal fixation by wiring of spinous processes (list separately in addition to code for primary procedure)	N1
22843	Posterior segmental instrumentation (eg, pedicle fixation, dual rods with multiple hooks and sublaminar wires); 7 to 12 vertebral segments (list separately in addition to code for primary procedure)	N1
