

FEDERAL REGISTER

Vol. 91

Friday,

No. 59

March 27, 2026

Pages 14755–15518

OFFICE OF THE FEDERAL REGISTER

The **FEDERAL REGISTER** (ISSN 0097-6326) is published daily, Monday through Friday, except official holidays, by the Office of the Federal Register, National Archives and Records Administration, under the Federal Register Act (44 U.S.C. Ch. 15) and the regulations of the Administrative Committee of the Federal Register (1 CFR Ch. I). The Superintendent of Documents, U.S. Government Publishing Office, is the exclusive distributor of the official edition. Periodicals postage is paid at Washington, DC.

The **FEDERAL REGISTER** provides a uniform system for making available to the public regulations and legal notices issued by Federal agencies. These include Presidential proclamations and Executive Orders, Federal agency documents having general applicability and legal effect, documents required to be published by act of Congress, and other Federal agency documents of public interest.

Documents are on file for public inspection in the Office of the Federal Register the day before they are published, unless the issuing agency requests earlier filing. For a list of documents currently on file for public inspection, see www.federalregister.gov.

The seal of the National Archives and Records Administration authenticates the **Federal Register** as the official serial publication established under the Federal Register Act. Under 44 U.S.C. 1507, the contents of the **Federal Register** shall be judicially noticed.

The **Federal Register** is published in paper and on 24x microfiche. It is also available online at no charge at www.govinfo.gov, a service of the U.S. Government Publishing Office.

The online edition of the **Federal Register** is issued under the authority of the Administrative Committee of the Federal Register as the official legal equivalent of the paper and microfiche editions (44 U.S.C. 4101 and 1 CFR 5.10). It is updated by 6:00 a.m. each day the **Federal Register** is published and includes both text and graphics from Volume 1, 1 (March 14, 1936) forward. For more information, contact the GPO Customer Contact Center, U.S. Government Publishing Office. Phone 202-512-1800 or 866-512-1800 (toll free). E-mail, gpocusthelp.com.

The annual subscription price for the **Federal Register** paper edition is \$860 plus postage, or \$929, for a combined **Federal Register**, **Federal Register** Index and List of CFR Sections Affected (LSA) subscription; the microfiche edition of the **Federal Register** including the **Federal Register** Index and LSA is \$330, plus postage. Six month subscriptions are available for one-half the annual rate. The prevailing postal rates will be applied to orders according to the delivery method requested. The price of a single copy of the daily **Federal Register**, including postage, is based on the number of pages: \$11 for an issue containing less than 200 pages; \$22 for an issue containing 200 to 400 pages; and \$33 for an issue containing more than 400 pages. Single issues of the microfiche edition may be purchased for \$3 per copy, including postage. Remit check or money order, made payable to the Superintendent of Documents, or charge to your GPO Deposit Account, VISA, MasterCard, American Express, or Discover. Mail to: U.S. Government Publishing Office—New Orders, P.O. Box 979050, St. Louis, MO 63197-9000; or call toll free 1-866-512-1800, DC area 202-512-1800; or go to the U.S. Government Online Bookstore site, see bookstore.gpo.gov.

There are no restrictions on the republication of material appearing in the **Federal Register**.

How To Cite This Publication: Use the volume number and the page number. Example: 91 FR 12345.

Postmaster: Send address changes to the Superintendent of Documents, Federal Register, U.S. Government Publishing Office, Washington, DC 20402, along with the entire mailing label from the last issue received.

Rules and Regulations

Federal Register

Vol. 91, No. 59

Friday, March 27, 2026

This section of the FEDERAL REGISTER contains regulatory documents having general applicability and legal effect, most of which are keyed to and codified in the Code of Federal Regulations, which is published under 50 titles pursuant to 44 U.S.C. 1510.

The Code of Federal Regulations is sold by the Superintendent of Documents.

DEPARTMENT OF TRANSPORTATION

Federal Aviation Administration

14 CFR Part 39

[Docket No. FAA–2025–2559; Project Identifier MCAI–2025–00053–T; Amendment 39–23295; AD 2026–06–06]

RIN 2120–AA64

Airworthiness Directives; Airbus Canada Limited Partnership (Type Certificate Previously Held by C Series Aircraft Limited Partnership (CSALP); Bombardier, Inc.) Airplanes

AGENCY: Federal Aviation Administration (FAA), DOT.

ACTION: Final rule.

SUMMARY: The FAA is adopting a new airworthiness directive (AD) for certain Airbus Canada Limited Partnership Model BD–500–1A10 and BD–500–1A11 airplanes. This AD was prompted by the discovery on the production line that the electrical system harnesses in lavatory A had reduced bend radii, were not properly secured, and did not meet the requirement for clearance from an oxygen supply line. This AD requires an inspection of the sleeve and electrical harness for chafing damage and incorrect installation, and applicable on-condition actions. The FAA is issuing this AD to address the unsafe condition on these products.

DATES: This AD is effective May 1, 2026.

The Director of the Federal Register approved the incorporation by reference of a certain publication listed in this AD as of May 1, 2026.

ADDRESSES:

AD Docket: You may examine the AD docket at [regulations.gov](https://www.regulations.gov) under Docket No. FAA–2025–2559; or in person at Docket Operations between 9 a.m. and 5 p.m., Monday through Friday, except Federal holidays. The AD docket contains this final rule, the mandatory continuing airworthiness information (MCAI), any comments received, and

other information. The address for Docket Operations is U.S. Department of Transportation, Docket Operations, M–30, West Building Ground Floor, Room W12–140, 1200 New Jersey Avenue SE, Washington, DC 20590.

Material Incorporated by Reference:

- For Transport Canada material identified in this AD, contact Transport Canada, Transport Canada National Aircraft Certification, 159 Cleopatra Drive, Nepean, Ontario K1A 0N5, Canada; telephone 888–663–3639; email TC.AirworthinessDirectives-Consignesdenavigabilite.TC@tc.gc.ca. You may find this material on the Transport Canada website at tc.canada.ca/en/aviation.

- You may view this material at the FAA, Airworthiness Products Section, Operational Safety Branch, 2200 South 216th St., Des Moines, WA. For information on the availability of this material at the FAA, call 206–231–3195. It is also available at [regulations.gov](https://www.regulations.gov) under Docket No. FAA–2025–2559.

FOR FURTHER INFORMATION CONTACT:

Yves Petiote, Aviation Safety Engineer, FAA, 2200 South 216th St., Des Moines, WA 98198; phone: 202–975–4867; email: yves.petiote@faa.gov.

SUPPLEMENTARY INFORMATION:

Background

The FAA issued a notice of proposed rulemaking (NPRM) to amend 14 CFR part 39 by adding an AD that would apply to certain Airbus Canada Limited Partnership Model BD–500–1A10 and BD–500–1A11 airplanes. The NPRM was published in the **Federal Register** on September 29, 2025 (90 FR 46533). The NPRM was prompted by AD CF–2025–45, dated August 29, 2025 (Transport Canada AD CF–2025–45) (also referred to as the MCAI), issued by Transport Canada, which is the aviation authority for Canada. The MCAI states it was discovered on the production line that electrical system harnesses in lavatory A had reduced bend radii, were not properly secured and did not meet the requirement for clearance from an oxygen supply line. Inadequately secured and installed wire harnesses could create a chafing condition leading to a source of ignition, and when combined with an oxygen leak as well as loss of ventilation, may lead to an uncontrolled fire.

In the NPRM, the FAA proposed to require an inspection of the sleeve and

electrical harness for chafing damage and incorrect installation, and applicable on-condition actions, as specified in Transport Canada AD CF–2025–45. The FAA is issuing this AD to address the unsafe condition on these products.

You may examine the MCAI in the AD docket at [regulations.gov](https://www.regulations.gov) under Docket No. FAA–2025–2559.

Discussion of Final Airworthiness Directive

Comments

The FAA received a comment from the Air Line Pilots Association, International (ALPA) who supported the NPRM without change.

The FAA received additional comments from the Citizens Rulemaking Alliance. The following presents the comments received on the NPRM and the FAA's response to each comment.

Request To Justify Forgoing Notice and Comment or Issue an NPRM

The Citizens Rulemaking Alliance requested that the FAA either provide its justification for finding good cause to bypass notice and comment procedures, convert this action to an NPRM, or stay the effective date until 30 days after close of a comment period of at least 45 days. The commenter asserted the FAA has not adequately justified use of the good cause exemption to bypass notice and comment and the 30-day delayed effective date.

The FAA notes the comment was submitted in response to an NPRM for which the FAA provided a 45-day comment period. This final rule is effective 35 days after its publication in the **Federal Register**. Therefore, no change to this AD is necessary.

Request To Make Incorporation by Reference (IBR) Materials Reasonably Available

The Citizens Rulemaking Alliance stated that the FAA's current practices for IBR frequently fail to meet the legal and regulatory standards for reasonable availability. The commenter called on the FAA to guarantee that all IBR materials are easily and freely accessible to the public and affected parties for both commenting and compliance purposes. The commenter also requested that this access be documented in the rulemaking record.

The FAA's practices comply with 5 U.S.C. 552(a) of the Administrative

Procedure Act and 1 CFR part 51. The FAA makes IBR materials available in the AD docket when the final rule is published in the **Federal Register**, following formal approval of the IBR by the Office of the Federal Register. Materials may only be posted before the final rule's publication if they are already publicly available or if there is written consent from the owner of the IBR material. All relevant materials incorporated by reference will be accessible in the AD docket on *Regulations.gov*, which the public can access without registration or fees.

The FAA also provides summaries and access details in the preamble and regulatory text, makes materials available for inspection at FAA and National Archives and Records Administration (NARA) offices, offers publisher contact information, and obtains formal IBR approval from the Office of the Federal Register. These efforts are intended to ensure that all IBR materials meet the “reasonably available” standard required by 1 CFR part 51. The FAA did not change this AD as a result of this comment.

Request To Comply With the Paperwork Reduction Act (PRA)

The Citizens Rulemaking Alliance requested that the FAA revise the AD to comply with the PRA if reporting is required or remove any reporting provisions until PRA requirements are satisfied. If reporting is not required, the commenter requested the FAA clarify that in the AD.

The FAA notes this AD does not require reporting. If an AD were to require reporting, the preamble of the AD would include a paragraph titled “Paperwork Reduction Act” that would provide the applicable OMB control number, required PRA statements, and the estimated time to collect the required information (burden). Any costs associated with the reporting requirement would be included in the Costs of Compliance section in the preamble of the AD. Therefore, the FAA did not change this AD as a result of this comment.

Request To Consider Impact on Small Entities

The commenter requested that the FAA either provide the reasoned basis for its certification under the Regulatory

Flexibility Act (RFA) that the AD will not have a significant economic impact on a substantial number of small entities, or prepare an initial regulatory flexibility analysis if certification cannot be supported.

The FAA disagrees with preparing an initial regulatory flexibility analysis. The RFA of 1980 (5 U.S.C. 601–612), as amended by the Small Business Regulatory Enforcement Fairness Act of 1996 (Pub. L. 104–121) and the Small Business Jobs Act of 2010 (Pub. L. 111–240), requires Federal agencies to consider the effects of the regulatory action on small business and other small entities and to minimize any significant economic impact. The term “small entities” comprises small businesses and not-for-profit organizations that are independently owned and operated and are not dominant in their fields, and governmental jurisdictions with populations of less than 50,000.

The FAA identified two air carriers and two corporate trustees that will be affected by this AD. Based on the Small Business Administration size standard for air carriers and corporate trustees, all four entities are large businesses:

SMALL BUSINESS SIZE STANDARDS ¹

NAICS ² Code	Description	Size standard
481111	Scheduled Passenger Air Transportation	1,500 employees.
523991	Trust, Fiduciary, and Custody Activities	\$47.0 million.

¹ Source: U.S. Small Business Administration, Table of Small Business Size Standards, [https://www.sba.gov/sites/default/files/2023-06/Table%20of%20Size%20Standards Effective%20March%202017%2C%202023%20%282%29.pdf](https://www.sba.gov/sites/default/files/2023-06/Table%20of%20Size%20Standards%20Effective%20March%202017%2C%202023%20%282%29.pdf).
² North American Industrial Classification System.

If an agency determines that a rulemaking will not result in a significant economic impact on a substantial number of small entities, the head of the agency may certify that under section 605(b) of the RFA. Therefore, as provided in section 605(b) and based on the foregoing, the head of FAA certifies that this AD will not result in a significant economic impact on a substantial number of small entities. The FAA did not change this AD as a result of this comment.

Request To Provide Additional Cost Information

The Citizens Rulemaking Alliance requested that the FAA add to the AD docket the methodology and assumptions supporting the estimated cost of the proposed AD and reopen the comment period for public input on the additional cost information. The commenter stated that the FAA should also provide the per airplane labor and parts cost, any assumed downtime or

out-of-service impacts, and the aggregate costs for the U.S. fleet.

The FAA recognizes that, in doing the actions required by an AD, operators might incur indirect or incidental costs in addition to the direct costs. The cost analysis in an AD typically describes only the direct costs of the specific actions required by an AD, which does not include indirect or incidental costs such as downtime, loss of revenue, planning, or time necessitated by other administrative actions since those costs might vary significantly among operators. The number of work hours necessary to do the required actions of an AD is provided by the manufacturer. This number represents the time necessary to perform only the actions actually required by an AD. The cost of parts or special tools, if necessary, to complete the actions required by an AD is also provided by the manufacturer. Further, when the FAA is informed that the manufacturer may cover some or all of the estimated costs of an AD under

warranty, the FAA indicates that in the AD.

In the Cost of Compliance section of the proposed AD, the FAA disclosed the estimated number of work hours, the number of airplanes affected on the U.S. registry, estimated parts cost, and the aggregate costs for the U.S. fleet. Since the FAA has assessed and disclosed the total known costs of the AD requirements in the Costs of Compliance section of the proposed AD, and the commenter did not provide additional cost data for the FAA to consider in its cost analysis, it is not necessary to reopen the comment period or provide additional information in the AD docket. The FAA did not change this AD as a result of this comment.

Conclusion

These products have been approved by the civil aviation authority of another country and are approved for operation in the United States. Pursuant to the FAA’s bilateral agreement with this

State of Design Authority, that authority has notified the FAA of the unsafe condition described in the MCAI referenced above. The FAA reviewed the relevant data, considered any comments received, and determined that air safety requires adopting this AD as proposed. Accordingly, the FAA is issuing this AD to address the unsafe condition on these products. Except for minor editorial changes this AD is adopted as proposed in the NPRM.

None of the changes will increase the economic burden on any operator.

Material Incorporated by Reference Under 1 CFR Part 51

The FAA reviewed Transport Canada AD CF-2025-45, which specifies procedures for an inspection of the sleeve and electrical harness for chafing damage and incorrect installation, and applicable on-condition actions. On-condition actions include repair of

damage and installation of tie-down straps on the electrical harness.

This material is reasonably available because the interested parties have access to it through their normal course of business or by the means identified in the ADDRESSES section.

Costs of Compliance

The FAA estimates that this AD affects 83 airplanes of U.S. registry. The FAA estimates the following costs to comply with this AD:

ESTIMATED COSTS FOR REQUIRED ACTIONS

Labor cost	Parts cost	Cost per product	Cost on U.S. operators
3 work-hour × \$85 per hour = \$85	\$0	\$255	\$21,165

The FAA estimates the following costs to do any necessary on-condition action that would be required based on

the results of any required actions. The FAA has no way of determining the

number of aircraft that might need these on-condition actions:

ESTIMATED COSTS OF ON-CONDITION INSTALLATIONS *

Labor cost	Parts cost	Cost per product
3 work-hours × \$85 per hour = \$255	\$4,935	\$5,190

* The FAA has received no definitive data on which to base the cost estimates for the on-condition repairs specified in this AD.

Authority for This Rulemaking

Title 49 of the United States Code specifies the FAA's authority to issue rules on aviation safety. Subtitle I, section 106, describes the authority of the FAA Administrator. Subtitle VII: Aviation Programs, describes in more detail the scope of the Agency's authority.

The FAA is issuing this rulemaking under the authority described in Subtitle VII, Part A, Subpart III, Section 44701: General requirements. Under that section, Congress charges the FAA with promoting safe flight of civil aircraft in air commerce by prescribing regulations for practices, methods, and procedures the Administrator finds necessary for safety in air commerce. This regulation is within the scope of that authority because it addresses an unsafe condition that is likely to exist or develop on products identified in this rulemaking action.

Regulatory Findings

This AD will not have federalism implications under Executive Order 13132. This AD will not have a substantial direct effect on the States, on the relationship between the national government and the States, or on the distribution of power and responsibilities among the various levels of government.

For the reasons discussed above, I certify that this AD:

- (1) Is not a "significant regulatory action" under Executive Order 12866,
- (2) Will not affect intrastate aviation in Alaska, and
- (3) Will not have a significant economic impact, positive or negative, on a substantial number of small entities under the criteria of the Regulatory Flexibility Act.

List of Subjects in 14 CFR Part 39

Air transportation, Aircraft, Aviation safety, Incorporation by reference, Safety.

The Amendment

Accordingly, under the authority delegated to me by the Administrator, the FAA amends 14 CFR part 39 as follows:

PART 39—AIRWORTHINESS DIRECTIVES

- 1. The authority citation for part 39 continues to read as follows:

Authority: 49 U.S.C. 106(g), 40113, 44701.

§ 39.13 [Amended]

- 2. The FAA amends § 39.13 by adding the following new airworthiness directive:

2026-06-06 Airbus Canada Limited Partnership (Type Certificate Previously Held by C Series Aircraft Limited

Partnership (CSALP); Bombardier, Inc.):
Amendment 39-23295; Docket No. FAA-2025-2559; Project Identifier MCAI-2025-00053-T.

(a) Effective Date

This airworthiness directive (AD) is effective May 1, 2026.

(b) Affected ADs

None.

(c) Applicability

This AD applies to Airbus Canada Limited Partnership (Type Certificate previously held by C Series Aircraft Limited Partnership (CSALP); Bombardier, Inc.) Model BD-500-1A10 and BD-500-1A11 airplanes, certificated in any category, as identified in Transport Canada AD CF-2025-45, dated August 29, 2025 (Transport Canada AD CF-2025-45).

(d) Subject

Air Transport Association (ATA) of America Code 92, Electrical system installation.

(e) Unsafe Condition

This AD was prompted by the discovery on the production line that electrical system harnesses in lavatory A had reduced bend radii, were not properly secured and did not meet the requirement for clearance from an oxygen supply line. The FAA is issuing this AD to address inadequately secured and installed wire harnesses, which if not addressed, could result in a chafing condition leading to a source of ignition, and when combined with an oxygen leak as well

as loss of ventilation, may lead to an uncontrolled fire.

(f) Compliance

Comply with this AD within the compliance times specified, unless already done.

(g) Requirements

Except as specified in paragraph (h) of this AD: Comply with all required actions and compliance times specified in, and in accordance with, Transport Canada AD CF–2025–45.

(h) Exceptions to Transport Canada AD CF–2025–45

(1) Where Transport Canada AD CF–2025–45 refers to its effective date, this AD requires using the effective date of this AD.

(2) Where Transport Canada AD CF–2025–45 refers to January 30, 2025 (the effective date of Transport Canada AD CF–2025–04, dated January 16, 2025), this AD requires using the effective date of this AD.

(i) Additional AD Provisions

The following provisions also apply to this AD:

(1) *Alternative Methods of Compliance (AMOCs)*: The Manager, AIR–520, Continued Operational Safety Branch, FAA, has the authority to approve AMOCs for this AD, if requested using the procedures found in 14 CFR 39.19. In accordance with 14 CFR 39.19, send your request to your principal inspector or responsible Flight Standards Office, as appropriate. If sending information directly to the manager of the Continued Operational Safety Branch, send it to the attention of the person identified in paragraph (j) of this AD and email to: AMOC@faa.gov. Before using any approved AMOC, notify your appropriate principal inspector, or lacking a principal inspector, the manager of the responsible Flight Standards Office.

(2) *Contacting the Manufacturer*: For any requirement in this AD to obtain instructions from a manufacturer, the instructions must be accomplished using a method approved by the Manager, AIR–520, Continued Operational Safety Branch, FAA; or Transport Canada; or Airbus Canada Limited Partnership's Transport Canada Design Approval Organization (DAO). If approved by the DAO, the approval must include the DAO-authorized signature.

(3) *Required for Compliance (RC)*: Except as required by paragraph (i)(2) of this AD, if any material contains procedures or tests that are identified as RC, those procedures and tests must be done to comply with this AD; any procedures or tests that are not identified as RC are recommended. Those procedures and tests that are not identified as RC may be deviated from using accepted methods in accordance with the operator's maintenance or inspection program without obtaining approval of an AMOC, provided the procedures and tests identified as RC can be done and the airplane can be put back in an airworthy condition. Any substitutions or changes to procedures or tests identified as RC require approval of an AMOC.

(j) Additional Information

For more information about this AD, contact Yves Petiote, Aviation Safety Engineer, FAA, 2200 South 216th St., Des Moines, WA 98198; phone: 202–975–4867; email: yves.petiote@faa.gov.

(k) Material Incorporated by Reference

(1) The Director of the Federal Register approved the incorporation by reference of the material listed in this paragraph under 5 U.S.C. 552(a) and 1 CFR part 51.

(2) You must use this material as applicable to do the actions required by this AD, unless this AD specifies otherwise.

(i) Transport Canada AD CF–2025–45, dated August 29, 2025.

(ii) [Reserved]

(3) For Transport Canada material identified in this AD, contact Transport Canada, Transport Canada National Aircraft Certification, 159 Cleopatra Drive, Nepean, Ontario K1A 0N5, Canada; telephone 888–663–3639; email TC.AirworthinessDirectives-Consignesdenavigabilite.TC@tc.gc.ca. You may find this material on the Transport Canada website at tc.canada.ca/en/aviation.

(4) You may view this material at the FAA, Airworthiness Products Section, Operational Safety Branch, 2200 South 216th St., Des Moines, WA. For information on the availability of this material at the FAA, call 206–231–3195.

(5) You may view this material at the National Archives and Records Administration (NARA). For information on the availability of this material at NARA, visit www.archives.gov/federal-register/cfr/ibr-locations or email fr.inspection@nara.gov.

Issued on March 20, 2026.

Peter A. White,

Deputy Director, Integrated Certificate Management Division, Aircraft Certification Service.

BILLING CODE 4910–13–P

DEPARTMENT OF HEALTH AND HUMAN SERVICES

Administration for Children and Families

45 CFR Part 402

RIN 0970–AD28

Reducing Bureaucracy and Burden for Refugee Resettlement Programs

AGENCY: Office of Refugee Resettlement (ORR), Administration for Children and Families (ACF), Department of Health and Human Services (HHS).

ACTION: Direct final rule, request for comments.

SUMMARY: The Department of Health and Human Services, Administration for Children and Families rescinds obsolete provisions of the State Legalization Impact Assistance Grants regulations

(45 CFR part 402). The Administration for Children and Families has undertaken a sweeping review aimed at eliminating outdated rules and reducing unnecessary regulatory burdens to streamline, simplify, and efficiently deregulate across multiple fronts simultaneously to better serve the public. The docket on <https://www.regulations.gov> will include a plain language summary of the direct final rule as required by 5 U.S.C. 553(b)(4).

DATES: Effective May 26, 2026, unless significant adverse comments are received on or before May 26, 2026. In the event the Administration for Children and Families receive significant adverse comments, the Administration for Children and Families will publish a timely withdrawal in the **Federal Register** informing the public the provisions of the rule(s) for which significant adverse comments were received and elimination will not take effect.

ADDRESSES: You may submit written comments, identified by docket number ACF–2026–0166 and/or RIN number 0970–AD28, by one of the following methods:

- *Federal eRulemaking Portal:* Go to <https://www.regulations.gov>. Follow the instructions for submitting comments.

- *Email:* Deregulation@acf.hhs.gov. Include the docket number ACF–2026–0166 and/or RIN number 0970–AD28 in the subject line of the message.

Instructions: All submissions received must include the agency name and docket number or RIN number for this rulemaking. All comments received are a part of the public record and will be posted for public viewing on www.regulations.gov, without change. Please be advised that the substance of the comments and the identity of individuals or entities submitting the comments will be subject to public disclosure. Anonymous comments are accepted.

FOR FURTHER INFORMATION CONTACT:

Adam N. Jones, Deputy Chief of Staff, Immediate Office of the Assistant Secretary, Administration for Children and Families, Department of Health and Human Services, Washington, DC 202–417–0115 or Deregulation@acf.hhs.gov.

SUPPLEMENTARY INFORMATION:

I. Statutory Authority

This final rule is being issued under the authority granted to the Secretary of Health and Human Services by Section 204 the Immigration Reform and Control Act of 1986 (IRCA), as amended, (8 U.S.C. 1255a note), and the subsequent

repeal of Section 204 of IRCA by Section 199(a) of Public Law 105–220.

II. Background

Section 204 of IRCA established a temporary program of State Legalization Impact Assistance Grants (SLIAG) for states. Public Law (Pub. L.) 99–603 (Nov. 6, 1986). Section 201 of IRCA had allowed groups of aliens who had been living in the United States to adjust their immigration status. The purpose of SLIAG was to lessen the financial impact on state and local governments presented by individuals with newly adjusted status seeking public benefits. The SLIAG program provided reimbursement to states for costs of certain public assistance, public health, and education services they had provided these individuals.

IRCA directed HHS to issue regulations establishing a formula for allotting funds to each state and permitted HHS to issue other regulations as long as HHS consulted with state and local governments on any regulations. IRCA 204(b)(1), 204(i). HHS issued 45 CFR part 402 on March 10, 1998. State Legalization Impact Assistance Grants, 53 FR 7832 (Mar. 10, 1988). Part 402 established uniform requirements for grant application, award, and administration, including eligible state uses of SLIAG funds, which included education, health care, and social services. This part also detailed financial management regulations, reporting, and auditing requirements.

Congress appropriated \$4 billion dollars for the SLIAG, starting with \$1 billion appropriated in fiscal year 1988 and another \$1 billion appropriated each year for the next three fiscal years, which states were authorized to obligate through the end of fiscal year 1994. IRCA 204(a)(1), (b)(4). In 1992, Congress amended the legislation to provide that any funds not expended by a state by December 30, 1994, be reallocated to states that had spent their entire SLIAG allotments and still had unreimbursed costs. Labor/Health and Human Services FY 1993, Public Law 102–394 (Oct. 6, 1992). In 1994, Congress provided that all the reallocated funds be spent by July 31, 1995. Labor/Health and Human Services FY 1995 Appropriations Act, Public Law 103–333 (Sept. 30, 1994). After that date, the program ended. In 1998, Congress repealed the program. Workforce Investment Act of 1998, Public Law 105–220 (Aug. 7, 1998).

III. Executive Summary

Effective Date

ACF expects all provisions included in the final rule to become effective 60 days from the date of publication of the final rule.

IV. Discussion of Changes

ORR is removing 45 CFR part 402 in its entirety. The State Legalization Impact Assistance Grants were a time-limited program that operated from 1987 to 1995 to assist state and local agencies with any incurred costs related to the implementation of the Immigration Reform and Control Act of 1986. However, as this program has been inactive and unfunded for over 30 years, the regulatory framework is now obsolete and serves no current purpose. This action will decrease confusion and burden for grantees and will ensure that only actively enforced regulations remain in place.

Waiver of Notice and Comment Process

When engaging in rulemaking, HHS will ordinarily publish a notice of proposed rulemaking in the **Federal Register** to provide a period for public comment before the provisions of a rule take effect in accordance with the Administrative Procedure Act (APA), 5 U.S.C. 553(b).¹ Under the APA,² an agency is not required to provide notice and public comment prior to issuing a direct final rule when it determines, for good cause, that such procedures are impracticable, unnecessary, or contrary to the public interest. In such instances, the agency must include in the rule a statement of its findings and the reasons supporting its determination that the notice and public comment procedure generally required under the APA are impracticable, unnecessary, or contrary to the public interest.

At this point in time when the program is no longer functional, ACF finds that it is unnecessary to provide a public comment period before issuing this direct final rule. Courts have found “good cause” that notice and comment is unnecessary when changes are considered “a routine determination, insignificant in nature and impact, and inconsequential to the industry and to the public.” *Mack Trucks, Inc. v. EPA*, 682 F.3d 87, 94 (D.C. Cir. 2012) (quoting *Utility Solid Waste Activities Grp. v. EPA*, 236 F.3d 749, 755 (D.C. Cir. 2001)); accord *Nat. Res. Def. Council v. Nat’l Highway Traffic Safety Admin.*, 894 F.3d 95, 114 (2d Cir. 2018); *N.C. Growers’ Ass’n, Inc. v. United Farm*

Workers, 702 F.3d 755, 766–67 (4th Cir. 2012); see Attorney General’s APA MANUAL 31 (“‘Unnecessary’ refers to the issuance of a minor rule in which the public is not particularly interested.”); APA LEGISLATIVE HISTORY 200 (“‘Unnecessary’ means unnecessary so far as the public is concerned, as would be the case if a minor or merely technical amendment in which the public is not particularly interested were involved.”).

The rescission of this part is not of interest to the public to provide comment on because the program is no longer funded. Rescinding the outdated requirements related to this program poses no harm or burden to programs or the public.

V. Regulatory Process Matters

Paperwork Reduction Act

Under the Paperwork Reduction Act (44 U.S.C. 3501 *et seq.*, as amended) (PRA), all Departments are required to submit to the Office of Management and Budget (OMB) for review and approval any reporting or recordkeeping requirements inherent in a proposed or final rule. This direct final rule does not contain any information requiring OMB approval under the PRA and, therefore, will not create any new paperwork burdens or modify existing burdens subject to OMB review.

Executive Order 13132

Executive Order 13132 requires federal agencies to consult with state and local government officials if they develop regulatory policies with federalism implications. Federalism is rooted in the belief that issues that are not national in scope or significance are most appropriately addressed by the level of government close to the people. This direct final rule would not have substantial direct impact on the states, on the relationship between the federal government and the states, or on the distribution of power and responsibilities among the various levels of government. This direct final rule would not pre-empt state law. The changes in this direct final rule are removing unnecessary and obsolete regulations from the Office of Refugee Resettlement rules. Therefore, in accordance with section 6 of Executive Order 13132, it is determined that this action does not have sufficient federalism implications to warrant the preparation of a federalism summary impact statement.

¹ <https://www.govinfo.gov/link/uscode/5/553>.

² 5 U.S.C. 553(b)(B).

Assessment of Federal Regulations and Policies on Families

Assessment of Federal Regulations and Policies on Families Section 654 of the Treasury and General Government Appropriations Act of 1999 (Pub. L. 105–277) requires federal agencies to determine whether a policy or regulation may negatively affect family well-being. If the agency determines a policy or regulation negatively affects family well-being, then the agency must prepare an impact assessment addressing seven criteria specified in the law. HHS believes it is not necessary to prepare a family policymaking assessment because the actions in this direct final rule will not have any impact on the autonomy or integrity of the family as an institution.

VI. Regulatory Impact Analysis

We have examined the impacts of this direct final rule under Executive Order 12866, Executive Order 13563, Executive Order 14192, the Regulatory Flexibility Act (5 U.S.C. 601–612), the Unfunded Mandates Reform Act of 1995 (Pub. L. 104–4) and the Congressional Review Act (5 U.S.C. 801, Pub. L. 104–121).

Executive Orders 12866 and 13563 direct us to assess all benefits and costs of available regulatory alternatives and, when regulation is necessary, to select regulatory approaches that maximize net benefits. Rules are “significant” under Executive Order 12866 Section 3(f)(1) if they “have an annual effect on the economy of \$100 million or more; or adversely affect in a material way the economy, a sector of the economy, productivity, competition, jobs, the environment, public health or safety, or state, local, or tribal governments or communities.” Executive Order 14192 requires that any new incremental costs associated with significant new regulations “shall, to the extent permitted by law, be offset by the elimination of existing costs associated with at least ten prior regulations.” The Office of Information and Regulatory Affairs has determined that this direct final rule is a significant action under Executive Order 12866 Section 3(f), but that it does not meet the criteria set forth in 5 U.S.C. 804(2) under the Congressional Review Act. This rule is a deregulatory action under Executive Order 14192 because it eliminates obsolete and unnecessary regulations.

The Regulatory Flexibility Act requires agencies to consider the impact of their regulatory proposals on small entities. Because this action would remove a program that is no longer in existence or funded, the Secretary

certifies that the direct final rule would not have a significant economic impact on a substantial number of small entities.

The Unfunded Mandates Reform Act of 1995 (UMRA) generally requires that each agency conduct a cost-benefit analysis; identify and consider a reasonable number of regulatory alternatives; and select the least costly, most cost-effective, or least burdensome alternative that achieves the objectives of the rule before promulgating any proposed or final rule that includes a Federal mandate that may result in expenditures of more than \$100 million (adjusted for inflation) in at least one year by state, local, and tribal governments, in the aggregate, or by the private sector. Each agency issuing a rule with relevant effects over that threshold must also seek input from state, local, and tribal governments. The current threshold after adjustment for inflation is \$187 million, using the most current (2024) Implicit Price Deflator for the Gross Domestic Product. This direct final rule would not result in an expenditure in any year that meets or exceeds this amount.

VII. Tribal Consultation Statement

Executive Order 13175, Consultation and Coordination with Indian Tribal Governments, requires agencies to consult with Indian tribes when regulations have tribal implications, meaning they have substantial direct effects on one or more Indian tribes, on the relationship between the Federal government and Indian tribes, or on the distribution of power and responsibilities between the Federal Government and Indian tribes. The SLIAG grants were awarded only to the 50 states and the territories, no funds were awarded to tribes. Thus, this change will not have tribal implications.

List of Subjects in 45 CFR Part 402

Education, Grant programs-education, Grant programs-health, Grant programs-social programs, Health care, Immigration, Public assistance programs, Reporting and recordkeeping requirements.

PART 402—[REMOVED AND RESERVED]

■ For the reasons set forth in the preamble, under the authority of section 204 the Immigration Reform and Control Act of 1986 (IRCA), as amended (8 U.S.C. 1255a note), and the subsequent repeal of section 204 of IRCA by section

199(a) of Public Law 105–220, ACF removes and reserves 45 CFR part 402.

RIN 1018–BI08

Marine Mammals; Incidental Take of Northern Sea Otters During Specified Activities; Seward, Sitka, and Kodiak, Alaska

AGENCY: Fish and Wildlife Service, Interior.

ACTION: Final rule.

SUMMARY: In accordance with the Marine Mammal Protection Act of 1972, as amended, and its implementing regulations, we, the U.S. Fish and Wildlife Service, finalize incidental take regulations that facilitate the authorization of nonlethal, incidental, unintentional take by harassment of small numbers of northern sea otters during marine construction and pile driving in Seward, Sitka, and Kodiak, Alaska. Incidental take of northern sea otters may result from in-water noise generated during pile driving and marine construction activities. This rule is effective for 5 years from the date of issuance.

DATES:

Effective date: This rule is effective March 27, 2026 and remains effective through March 27, 2031.

Information Collection Requirements:

If you wish to comment on the information collection requirements in this proposed rule, please note that the Office of Management and Budget (OMB) is required to make a decision concerning the collection of information contained in this proposed rule between 30 and 60 days after publication of this rule in the **Federal Register**. Therefore, comments should be submitted to OMB by April 27, 2026.

ADDRESSES: You may view this rule, the associated final environmental assessment and finding of no significant impact (FONSI), comments received, and other supporting material at <https://www.regulations.gov> under Docket No. FWS–R7–ES–2024–0195, or these

documents may be requested as described under **FOR FURTHER INFORMATION CONTACT**.

Information Collection Requirements: This final rule is effective on the date set forth in **DATES**. We will, however, accept and consider all public comments concerning the information collection requirements received in response to this final rule. Written comments and suggestions on the information collection requirements should be submitted within 30 days of publication of this document to <https://www.reginfo.gov/public/do/PRAMain>. Find this particular information collection by selecting “Currently under Review—Open for Public Comments” or by using the search function. Please provide a copy of your comments to the Service Information Collection Clearance Officer, U.S. Fish and Wildlife Service, 5275 Leesburg Pike, MS: PRB (JAO/3W), Falls Church, VA 22041–3803 (mail); or Info_Coll@fws.gov (email). Please reference “OMB Control Number 1018–BI08/OMB Control No. 1018–0205” in the subject line of your comments.

FOR FURTHER INFORMATION CONTACT: Stephanie Burgess, by email at r7mmmregulatory@fws.gov or by telephone 907–786–3800. Individuals in the United States who are deaf, deafblind, hard of hearing, or have a speech disability may dial 711 (TTY, TDD, or TeleBraille) to access telecommunications relay services. Individuals outside the United States should use the relay services offered within their country to make international calls to the point-of-contact in the United States.

SUPPLEMENTARY INFORMATION:

Executive Summary

In accordance with the Marine Mammal Protection Act of 1972 (MMPA; 16 U.S.C. 1371(a)(5)(A)) and its implementing regulations, we, the U.S. Fish and Wildlife Service (hereafter FWS or we), finalize incidental take regulations (ITR) that facilitate the authorization of nonlethal, incidental, unintentional take by harassment of small numbers of northern sea otters (*Enhydra lutris kenyoni*) during pile driving and marine construction in Seward, Sitka, and Kodiak, Alaska. This rule will be effective for 5 years from the date of issuance.

This rule sets forth permissible methods of incidental nonlethal taking, mitigation measures to ensure the least practicable adverse impacts upon this species, its habitat, and the availability of this species for subsistence uses, and requirements for monitoring and

reporting. This rule is based on our findings that the total takings of sea otters during pile driving and marine construction activities will impact only small numbers of animals, will have a negligible impact on this species, and will not have an unmitigable adverse impact on the availability of this species for subsistence use by Alaska Natives. We base our findings on data from research on this species; potential and documented effects on this species from similar activities; information regarding the natural history and conservation status of sea otters; and data reported from Alaska Native subsistence hunters. We also prepared an environmental assessment (EA) in accordance with National Environmental Policy Act (NEPA) requirements for this rulemaking and, after consideration of public comments, made a finding of no significant impact (FONSI).

Immediate Promulgation

In accordance with the Administrative Procedure Act (5 U.S.C. 553(d)(3)), we find that we have good cause to make this rule effective less than 30 days after publication. Making this rule effective immediately will shorten the amount of time USCG ships must use temporary moorings that do not provide full services. Utilization of these temporary moorings requires funds that would otherwise be used for permanent waterfront construction and subjects ships to greater risk of damage. Thus, there is good cause to make this rule effectively immediately in order to facilitate USCG’s transition of ships to permanent moorings that will reduce costs and risk of damage to the ships.

Background

Section 101(a)(5)(A) of the MMPA (16 U.S.C. 1371(a)(5)(A)) gives the Secretary of the Interior (Secretary) the authority to allow the incidental, but not intentional, taking of small numbers of certain marine mammals, in response to requests by U.S. citizens (as defined in title 50 of the Code of Federal Regulations (CFR) in part 18 (at 50 CFR 18.27(c)) engaged in a specified activity (other than commercial fishing) within a specified geographic region. The Secretary has delegated authority for implementation of the MMPA to the FWS. According to the MMPA, the FWS shall allow this incidental taking for a period of up to 5 consecutive years if we find that the total of such taking:

- (1) will affect only small numbers of individuals of the species or stock;
- (2) will have no more than a negligible impact on the species or stock; and

(3) will not have an unmitigable adverse impact on the availability of the species or stock for taking for subsistence use by Alaska Natives.

If the requisite findings are made, we issue regulations that set forth the following, where applicable:

- (a) permissible methods of taking;
- (b) means of effecting the least practicable adverse impact on the species or stock and its habitat and the availability of the species or stock for subsistence uses; and
- (c) requirements for monitoring and reporting of such taking.

If final regulations allowing such incidental take are issued, we may then subsequently issue letters of authorization (LOA), upon request, to authorize incidental take during the specified activities.

The term “take” means to “harass, hunt, capture, or kill, or attempt to harass, hunt, capture, or kill any marine mammal” (16 U.S.C. 1362(13)). Harassment for activities other than military readiness activities or scientific research conducted by or on behalf of the Federal Government means any act of pursuit, torment, or annoyance that has the potential to injure a marine mammal or marine mammal stock in the wild (the MMPA defines this as “Level A harassment”), or has the potential to disturb a marine mammal or marine mammal stock in the wild by causing disruption of behavioral patterns, including, but not limited to, migration, breathing, nursing, breeding, feeding, or sheltering (the MMPA defines this as “Level B harassment”) (16 U.S.C. 1362(18)).

The U.S. Coast Guard’s (hereafter USCG or the applicant) activities may result in the incidental taking of sea otters. The MMPA does not require that the USCG obtain incidental take authorization prior to conducting these activities; however, any incidental taking that occurs without authorization is a violation of the MMPA. An ITR was issued to the USCG for pile driving and marine construction activities at multiple locations in Alaska including Seward, Sitka, and Kodiak from May 19, 2023, through May 19, 2028 (88 FR 24115, April 19, 2023). The specified activities described in this final ITR are outside the scope of the 2023–2028 USCG ITR, and, therefore, the USCG submitted requests for the incidental take of sea otters during their planned activities. This final rule confirms the preliminary determinations made in the proposed rule (90 FR 26486, June 23, 2025) and amends regulations that are codified at 50 CFR part 18, subpart I (§§ 18.100 to 18.110).

Summary of Request and the Proposed Rule

On March 5, 2024, the FWS received a request prepared by Weston Solutions on behalf of the USCG for the nonlethal, incidental harassment of small numbers of northern sea otters (*Enhydra lutris kenyoni*) (hereafter sea otters unless another sea otter subspecies is specified) from the Southwest Alaska stock that may occur during pile driving and marine construction activities in Womens Bay, Kodiak, Alaska. During discussion with the applicant, a request prepared by WSP Environment and Infrastructure on behalf of the USCG (received January 19, 2024) for the nonlethal, incidental harassment of small numbers of sea otters from the Southcentral Alaska stock that may occur during pile driving and marine construction activities in Seward was combined with the USCG's request prepared by Weston Solutions. Additionally, a request prepared by WSP Environment and Infrastructure on behalf of the USCG (received January 19, 2024) for the nonlethal, incidental harassment of small numbers of sea otters from the Southeast Alaska stock that may occur during pile driving and marine construction activities in Sitka was then merged with the USCG's combined request. The USCG provided additional information regarding project activities, timelines, and mitigation measures for their planned activities in Kodiak, Seward, and Sitka requested by the FWS during correspondence. On October 2, 2024, the FWS received a revised application for activities in Kodiak (hereafter referred to as "Weston Solutions 2024 Request"). On October 3, 2024, the FWS received a revised application for activities in Seward and Sitka (hereafter referred to as "WSP Environment and Infrastructure 2024 Request"). The FWS determined USCG's combined request for activities in Kodiak, Seward, and Sitka to be adequate and complete on October 3, 2024.

Based on our analyses, we published a proposed rule for these ITRs on June 23, 2025 (90 FR 26486). The preamble to the proposed rule provided information on several issues, including the following topics:

- sea otter biology and stocks within the specified region;
- potential impacts to sea otters arising from the specified activities, including effects of underwater and airborne sounds, vessel presence, effects to prey, reactions of sea otters to anthropogenic activities, and consequences of disturbance;

- potential impacts of the specified activities on subsistence uses of sea otters;
- the definitions of incidental take under the MMPA as well as definitions of "negligible impact," "unmitigable adverse impact," "small numbers," and "least practicable adverse impact;"
- methods of analyzing and estimating take by harassment;
- critical assumptions of the analyses; and
- a breakdown of incidental take by harassment at each project location.

Please see the June 23, 2025 (90 FR 26486) proposed rule for further background information related to this rulemaking action.

Response to Comments

During the public comment period, we requested written comments from the public on the proposed rule as well as the draft EA. The comment period opened June 23, 2025, and closed July 23, 2025. We received seven comment submissions on the proposed rule.

Response to Comments

Comment: One commenter stated that permanent threshold shift (PTS) noise thresholds were based on outdated information and should be updated to include the National Marine Fisheries Service's (NMFS) revised thresholds for cumulative sound exposure in the 2024 Update to: Technical Guidance for Assessing the Effects of Anthropogenic Sound on Marine Mammal Hearing (Version 3.0) (NMFS 2024).

Response: We are evaluating the new auditory injury criteria presented in the NMFS (2024) technical guidance to determine whether they are appropriate for FWS trust species. Sea otters, particularly, are not exposed to sound for an entire 24-hour period. On the contrary, activity budgets indicate they are likely to spend an average of 50 percent of their day with their heads above water (Garshelis et al. 1986). Pending the outcome of these evaluations, FWS will continue to use the previous version of the technical guidance (NMFS 2018) in our estimates of potential harassment via in-water noise exposure.

Comment: One commenter stated that the FWS should calculate the harassment zones and ensonified areas caused by in-air noise in addition to those caused by in-water noise, using the weighting functions presented in NMFS (2024) technical guidance.

Response: The FWS has stated in the *Critical Assumptions* of the proposed rule's preamble (90 FR 26486 at 26506, June 23, 2025) that while in-air noise will occur during the specified

activities, harassment zones and ensonified areas attributable to in-air noise will be smaller than those caused by in-water noise, and based on the assumption that a sea otter may be harassed only one time per 24-hour period, we conservatively rely on in-water calculations to estimate potential take.

Comment: One commenter stated that the FWS should use the NMFS continuous sound threshold of 120 decibels (dB) re 1 micropascal (μ Pa) instead of the 160 dB re 1 μ Pa we currently use. In their comment, they state the underlying research used to generate both the 120 dB re 1 μ Pa continuous threshold and the 160 dB re 1 μ Pa impulsive threshold are based on gray whale studies, and thus it is inappropriate to dismiss the 120-dB threshold while accepting the 160-dB threshold. They further cite the Parsons Slough project observations as support that sea otters have been reported to exhibit behavioral responses to vibratory pile driving noise less than 160 dB re 1 μ Pa.

Response: The highest spectral densities for noises generated by vibratory pile driving lie within a range of frequencies at which sea otters have poor hearing ability. In contrast, gray whales, on which the 120-dB threshold is based, are highly sensitive to sounds within this frequency range. We do not dispute that sea otters may hear and may react to noise produced by vibratory pile driving. However, we maintain that it is unlikely that sea otters' reactions will be equivalent to those of gray whales in terms of the noise levels that elicit reactions equivalent to take by harassment. Thus, it is not appropriate to apply the 120-dB threshold to sea otters.

The FWS disagrees with the Marine Mammal Commission's (MMC) conclusions regarding the project in Parsons Slough (ESNERR 2011). After considering the MMC's comments and reviewing the monitoring data (ESNERR 2011 and ESNERR unpublished data 2018), we reaffirm our statement that project-related monitoring of sea otter behavior in areas exposed to underwater sound levels ranging from approximately 135–165 dB during vibratory pile driving (ESNERR 2011) showed no clear pattern of disturbance or avoidance in relation to these levels of underwater sound exposure.

As such, we maintain that use of a 160-dB threshold for both impulsive and non-impulsive sounds is consistent with the best available scientific information.

Comment: One commenter (the MMC) stated that it is inaccurate to associate

takes by Level B harassment with temporary threshold shifts (TTS) and recommended that the FWS remove reference to Level B harassment being due to TTS.

Response: The FWS thanks the MMC for their comment and has modified the characterization of Level B harassment events and the likelihood of TTS in the final rule.

Comment: One commenter (the MMC) stated that the applicants did not include all of the necessary details to estimate the Level A harassment and Level B harassment zones and the FWS did not provide that information either.

Response: The FWS thanks the MMC for their comment and has made the application materials and calculation spreadsheets publicly available on the docket at <https://www.regulations.gov/docket/FWS-R7-ES-2024-0195>.

Comment: One commenter (the MMC) stated that some sound source levels used in the applications and proposed rule were inappropriate and recommended using 144 dB re 1 μ Pa for the single strike sound exposure level (SEL_{ss}) source level for impact driving of 13-inch composite piles and subsequently revising the Level A harassment zones for the final rule. They also recommended that the FWS use 161 dB re 1 μ Pa for vibratory installation of 24-inch steel piles and 167 dB re 1 μ Pa for vibratory installation of 30-inch steel and vibroflot piles and subsequently revise the Level A harassment and Level B harassment zones.

Response: The FWS thanks the MMC for their comment and recognizes the error in the single strike SEL that was used for the calculation of harassment thresholds of impact pile driving of 13-inch composite/plastic piles. The recommendation from the MMC is for a lower single strike SEL that will result in a smaller Level A harassment threshold than what was proposed, and which will still be encompassed by the applicant's proposed 30-meter shutdown zone, so no changes needed to be made to the final rule in response to this comment.

The FWS consulted with the acousticians at the NMFS Office of Protected Resources to determine the most appropriate sound levels to use for project activities. For the vibratory installation of the 24-inch steel piles and 30-inch steel and vibroflot piles, NMFS used the same sound levels in their incidental harassment authorization for the USCG Base Kodiak Homeporting Facility (90 FR 12204, March 14, 2025, and 90 FR 21472, May 20, 2025). We are maintaining these

sound levels for estimates in this final rule.

Comment: One commenter (the MMC) stated that the FWS should revise table 16 in the proposed rule (90 FR 26486 at 26507, June 23, 2025) and the accompanying impact analysis to clarify the maximum number of Level A harassment and Level B harassment events in Kodiak in a single year.

Response: The FWS thanks the MMC for their comment. We have described in detail the proposed activities at Base Kodiak by project year in table 3, and further provided the number of harassment events by activity in tables 14 and 15 (90 FR 26486 at 26491 and 26505–26506, June 23, 2025). In table 16, we provide the largest number of potential harassment events that may occur in a calendar year in order to make our small numbers and negligible impacts determinations using the greatest potential annual impact to the Southwest stock of sea otters. This allows the applicant (USCG) to have flexibility when requesting Letters of Authorization and provides a robust analysis of the potential impact to sea otters.

Comment: One commenter (the MMC) stated that the FWS has greater reporting requirements for injured, dead, or distressed sea otters that are not associated with project activities than for unauthorized take of sea otters associated with project activities. They recommend that the FWS include an additional reporting requirement for unauthorized takes of sea otters associated with project activities that matches the reporting requirements for that of injured, dead, or distressed sea otters not associated with project activities.

Response: The FWS thanks the MMC for their input and has adopted this recommendation in the final rule and in all future incidental take authorizations.

Comment: One commenter stated that the FWS has not sufficiently documented substantive Tribal consultation or engagement and that the positions of Tribes calling for more robust co-management authority has not been acknowledged. They recommend Tribal oversight of project activities.

Response: The FWS has not received any new co-management proposals or requests for sea otters.

The USCG has conducted significant outreach to Tribal organizations. For the work in Kodiak, early public scoping was initiated in September 2020 by sending letters out to a robust contact list announcing the initiation of environmental processes and studies. In 2021, National Historic Preservation Act section 106 consultation was initiated

with Alaska Native Tribes and the State Historic Preservation Office. The USCG has also coordinated with Alaska Native Tribes, Villages, and Corporations in the Kodiak area and worked closely with one Tribe to address concerns related to subsistence species, Tribe-led monitoring during and after construction, and best management and reporting requirements to include in the project.

For the work in Seward, the USCG initiated stakeholder consultation with federally recognized Tribes and Alaska Tribal organizations. Consultation request letters were sent out to Alaska Native organizations, but no replies were received.

For the work in Sitka, the applicant performed consultation with the Sitka Tribe of Alaska—the ancestral inhabitants of Japonski Island where USCG Air Station Sitka is located. They performed a full, detailed section 106 and Executive Order (E.O.) 13175 consultation and worked with the Tribe to identify sacred sites, develop archaeological monitoring plan, and had them as full signatories to a memorandum of agreement to mitigate adverse impacts to cultural resources. The consultation was detailed in section 1.6.7 and 3.5.3.2 of the National Environmental Policy Act (NEPA) compliant environmental assessment (USCG 2024).

Comment: One commenter stated that the proposed rule does not specify spatial and temporal buffers to protect sea otters during sensitive time periods and recommends the FWS impose restrictions to account for subsistence activity and known haul-out areas.

Response: Sea otters are hunted year-round by coastal-dwelling Alaskan Natives; however, as is discussed in the preamble to the proposed rule, the geographic areas in question are immediately adjacent to active USCG facilities, and as such do not allow hunting nearby. Similarly, there is no significant temporal pattern to sea otter pupping in the geographic areas—sea otters pup year-round. The FWS has described in detail the relevant shutdown and monitoring zones that the applicant will implement in § 18.107 below in Regulation Promulgation.

Comment: One commenter stated that the proposed rule's monitoring requirements are insufficient and recommends independent third-party oversight of project activities, incident reports and take logs, and take estimates and LOA renewals.

Response: All reports of project activities, protected species observer (PSO) logs, LOA requests, issued LOAs, and occurrences of takes of sea otters are

publicly available upon request. Third-party observers are not required by the MMPA.

Comment: One commenter stated that due to the change in administration, the FWS has used a circular definition of the small numbers determination and that it is unscientific to expect that regulators will recognize a small number when they see it.

Response: The FWS disagrees. The description of the small numbers determination has not changed. This methodology of determining whether or not a project meets the small numbers determination has been effectively used in numerous incidental take authorizations.

The remaining four comments were not substantive. They expressed support for the protection of sea otters and their ecosystem and general opposition to incidental take authorizations for the take of sea otters.

Summary of Changes From the Proposed Rule

In preparing these final regulations for the incidental take of sea otters, we reviewed and considered comments and information from the public concerning our proposed rule published in the **Federal Register** on June 23, 2025 (90 FR 26486). After the proposed rule was published, we received new information on project activities and sea otter observation data at the USCG Moorings Sitka location from the applicant, which impacted the estimated ensnified areas and estimated take of Southeast Alaska stock sea otters. We reviewed this new information, revised our estimated take for Southeast Alaska stock sea otters, and reevaluated our findings. The new information on project activities represents a logical outgrowth of the activities originally described in the proposed rule, as they still include pile removal and installation by pile driving. As we describe in our reevaluated findings, the anticipated effect of the revised project on sea otters is similar to that described in the proposed rule and remains limited to no more than a negligible impact on a small number of individuals.

We are finalizing these regulations with the following changes from our proposed rule:

- We modified the characterization of the Level B harassment events and likelihood of TTS.
- We updated our reporting requirements for unauthorized take of sea otters to align with reporting requirements for injured, dead, or distressed sea otters that are not associated with project activities.

- We made available more application materials (as described above) in the docket (<https://www.regulations.gov/docket/FWS-R7-ES-2024-0195>).

- We revised the USCG Moorings Sitka project activity description, estimated sea otter density, estimated ensnified areas, estimated take of Southeast Alaska stock sea otters, and mitigation measures incorporating the new information on project activities and sea otter observation data for the USCG Moorings Sitka project.

- We reevaluated our findings with the revised information for the USCG Moorings Sitka project.

Description of the Regulations

These regulations facilitate the authorization of nonlethal, incidental, unintentional take of small numbers of sea otters that may result from the proposed activities based on standards set forth in the MMPA. They do not authorize or “permit” activities. The regulations include:

- (1) Permissible methods of nonlethal taking;
- (2) Measures designed to ensure the least practicable adverse impact on sea otters and their habitat, and on the availability of these species for subsistence uses; and
- (3) Requirements for monitoring and reporting.

Description of Letters of Authorization (LOAs)

An LOA is required to conduct activities pursuant to an ITR. Under these ITRs, the USCG may request LOAs for the authorized nonlethal, incidental, Level B harassment and Level A harassment of sea otters. Requests for LOAs must be consistent with the activity descriptions and mitigation and monitoring requirements of the ITR and be received in writing at least 30 days before the activity is to begin. Requests must include (1) an operational plan for the activity, (2) a digital geospatial file of the project footprint, (3) a site-specific marine mammal monitoring and mitigation plan that specifies the procedures to monitor and mitigate the effects of the activities on sea otters, and, if necessary, (4) plans of cooperation (described below). Once this information has been received, we will evaluate each request and issue the LOA if we find that the level of taking will be consistent with the findings made for the total taking allowable under the ITR. Requests for LOAs may be submitted on an annual basis for additional years of activities within the ITR period. We must receive an after-

action report on the monitoring and mitigation activities within 90 days after the LOA expires. For more information on requesting and receiving an LOA, refer to 50 CFR 18.27(f).

Description of Plans of Cooperation (POCs)

A POC is a documented plan describing measures to mitigate potential conflicts between specified activities and Alaska Native subsistence hunting. The circumstances under which a POC must be developed and submitted with a request for an LOA are described below.

To help ensure that specified activities do not have an unmitigable adverse impact on the availability of the species for Alaska Native subsistence hunting opportunities, all applicants requesting an LOA under this ITR must provide the FWS documentation of communication and coordination with Alaska Native communities potentially affected by the specified activity and, as appropriate, with representative subsistence hunting and co-management organizations. If Alaska Native communities or representative subsistence hunting organizations express concerns about the potential impacts of specified activities on subsistence activities, and such concerns are not resolved during this initial communication and coordination process, then a POC must be developed and submitted with the applicant's request for an LOA. In developing the POC, the USCG will further engage with Alaska Native communities and/or representative subsistence hunting organizations to provide information and respond to questions and concerns. The POC must provide adequate measures to ensure that specified activities will not have an unmitigable adverse impact on the availability of sea otters for Alaska Native subsistence uses.

Description of Specified Geographic Region and Specified Activities

The specified geographic region includes Gulf of Alaska coastal waters of three USCG facilities. The specified activities would occur in the waters and intertidal areas of the eastern shore of Resurrection Bay, Alaska, surrounding the USCG Moorings Seward, the waters and intertidal areas of Sitka Channel, Alaska, surrounding the USCG Moorings Sitka, and the waters and intertidal areas of Womens Bay, Kodiak, Alaska, which surround the USCG Base Kodiak located on the Nyman Peninsula (figure 1, below).

Figure 1—Specific Geographic Region

Three pile driving and marine construction projects would occur within the specified geographic region: Moorings Seward, Moorings Sitka, and Base Kodiak. Brief summaries of each project are provided below, and additional project details for each project may be reviewed in the application materials available as described under **ADDRESSES** or may also be requested as described under **FOR FURTHER INFORMATION CONTACT**.

Moorings Seward Activities

The specified activity (hereafter project) in Seward will include installation and removal of piles for the

construction of shoreside facilities and associated infrastructure at the USCG Moorings Seward in the Seward Marine Industrial Center (SMIC) to homeport 1 fast response cutter (FRC). The project entails construction of a new floating dock parallel to the existing SMIC dock and reconfiguration of the SMIC floating dock to allow for construction of the FRC moorings. For the reconfiguration of the SMIC floating dock, project activities include the removal of up to 10 existing steel guide piles that are no greater than 40.6 centimeters (cm; 16 inches [in]) in diameter and the installation of up to 10 new concrete or steel pipe guide piles that are 76.2 cm (30 in) in diameter. Construction of the

new dock includes installation of up to 20 concrete or steel pipe guide piles that are no greater than 76.2 cm (30 in) in diameter. After the dock is installed, ancillary infrastructure (*i.e.*, electricity, water, sewage) to service the docked FRC will be installed. Pile-driving activities will occur over 22 non-consecutive days for approximately 105 hours. Pile removal will be done with vibratory extraction or cutting at the mud line with a pile clipper or diamond saw. Pile installation will be done with a combination of rock socket down-the-hole (DTH) drilling, impact proofing, and vibratory settling. In-water project activities are summarized in table 1, below.

TABLE 1—USCG MOORINGS SEWARD: PROJECT ACTIVITIES, PILES INSTALLED OR REMOVED, AND ACTIVITY DAYS

Project component	Pile size and material	Activity	Total number of piles	Maximum number of piles per day	Maximum number of activity days
FRC moorings ..	<40.6-cm (<16-in) steel	Removal—vibratory	10	5	2
		Removal—pile clipper		5	
		Removal—diamond wire saw		5	
	76.2-cm (30-in) concrete or steel	Installation—rock socket DTH	10	2	20
		Installation—vibratory settling		2	
		Installation—impact proofing		2	

TABLE 1—USCG MOORINGS SEWARD: PROJECT ACTIVITIES, PILES INSTALLED OR REMOVED, AND ACTIVITY DAYS—Continued

Project component	Pile size and material	Activity	Total number of piles	Maximum number of piles per day	Maximum number of activity days
New dock	76.2-cm (30-in) concrete or steel	Installation—rock socket DTH	20	2	
		Installation—vibratory settling		2	
		Installation—impact proofing		2	

Moorings Sitka Activities

The following description has been updated since the proposed rule with new information on project activities provided by the applicant. The USCG plans to remove a mooring dolphin supported by four steel piles, each of which is 61.0 cm (24 in) in diameter, and a float supported by six timber piles, each of which is 35.6 cm (14 in)

in diameter. A total of 12 steel piles, each of which is 61.0 cm (24 in) in diameter, will be temporarily installed and removed to support installation of the new pier. The USCG plans to install a total of 107 steel piles, each of which will be 61.0 cm (24 in) in diameter, and 60 steel piles, each of which will be 40.6 cm (16 in) in diameter, to support the pier, floating dock, and mooring dolphins. Pile-driving activities will

occur over 113 non-consecutive days. Pile installation will be done with a combination of impact pile driving, vibratory pile driving, and DTH drilling. Temporary and existing piles will be removed by the dead-pull method (a direct lift of the pile using a crane with no vibration), an underwater chainsaw, or vibratory extraction. In-water activities are summarized in table 2, below.

TABLE 2—USCG MOORINGS SITKA: PROJECT ACTIVITIES, PILES INSTALLED OR REMOVED, AND ACTIVITY DAYS

Project component	Pile size and material	Activity	Total number of piles	Maximum number of piles per day	Maximum number of activity days
Demolition	61.0-cm (24-in) steel	Removal—vibratory	4	4	1
	35.6-cm (14-in) timber	Removal—vibratory	6	5	2
Construction	61.0-cm (24-in) steel	Temporary installation—vibratory	12	4	3
		Temporary removal—vibratory	12	4	3
	61.0-cm (24-in) steel	Installation—vibratory	95	6	32
		Installation—impact	95	8	24
		Installation—DTH	25	4	13
	61.0-cm (24-in) steel	Installation—vibratory	4	3	4
		Installation—impact	4	3	4
		Installation—DTH	4	3	4
	61.0-cm (24-in) steel	Installation—vibratory	8	4	4
		Installation—impact	8	6	3
		Installation—DTH	8	4	4
	40.6-cm (16-in) steel	Installation—vibratory	60	8	12

Base Kodiak Activities

The USCG will implement in-water and waterfront improvements at the USCG Base Kodiak to support the commission, temporary and permanent homeporting, and berthing of FRCs and offshore patrol cutters. In-water improvements will consist of replacing and extending existing wharfs,

installing floating docks and camel logs, installing a solid-fill approach bulkhead, and refurbishing small craft floats. In-water activities will include impact pile driving of steel piles and concrete fender piles, vibratory installation and extraction of timber piles, steel piles, steel/concrete piles, concrete piles, and vibroflot columns, and DTH drilling of steel piles. These

activities are anticipated to occur over 339 non-consecutive days from 2 to 5 years. A total of 501 piles of various sizes and types will be removed throughout the project. A total of 918 piles of various sizes and types will be installed throughout the project. In-water activities are summarized in table 3, below.

TABLE 3—USCG BASE KODIAK: PROJECT ACTIVITIES, PILES INSTALLED OR REMOVED, AND ACTIVITY DAYS

Project component	Project year	Pile size and material	Activity	Total number of piles per year	Maximum number of piles per day	Maximum number of activity days per year
Demolition	1	35.6-cm (14-in) timber	Removal—vibratory	158	20	10
		61.0-cm (24-in) timber		24	20	2
		30.5-cm (12-in) steel		147	20	9
		35.6-cm (14-in) steel		30	20	2
Construction		61.0-cm (24-in) steel	Installation—vibratory	22	6	5
			Installation—impact	22	6	5

Estimated Take*Calculating Take***Sea Otter Density**

We reviewed our take estimates for the Kodiak and Seward project areas and determined they remain valid; therefore, we use the same take estimates for those project areas in our analysis for this final rule. In light of the new information on project activities provided by the applicant and new sea otter observation data, we have revised our take estimates for the Sitka project area as described here. In the proposed rule, we estimated an average of 0.85 sea otters/square kilometer (km²) in the Sitka project area based on sea otter abundance estimates published for the Southeast Alaska sea otter stock (Tinker et al. 2019; Eisaguirre et al. 2021). Since the publication of the proposed rule, we have received sea otter observation data that indicates sea otter density may be higher in the Sitka project area.

Information from three marine mammal observation datasets near the Sitka project area were submitted for our review by the applicant. Only one of these three marine mammal observation datasets reported sea otters were observed in the Sitka project area. This marine mammal observation dataset was an unpublished dataset that reported a total of 37 sea otters observed during a float replacement project across 8 days, with a range from 1 to 8 sea otters observed each day. The average number of sea otters observed each day was five sea otters (SolsticeAK unpublished data). The abundance estimate for the Southeast Alaska sea otter stock has generally increased and sea otters have moved into previously unoccupied areas within the Southeast Alaska sea otter stock region over recent years (Eisaguirre et al. 2023; Schuette et al. 2023; 88 FR 53510, August 8, 2023). It is possible that more sea otters than we initially anticipated in the proposed

rule may move into the Sitka project area during the project period based on this current population trend. We used the highest estimate of sea otters recorded in the marine mammal observation datasets provided by the applicant to inform our sea otter density estimate in order to conservatively estimate the number of sea otters that may be present in the Sitka project area. Based on information from the marine mammal observation datasets, we estimate that up to 5 sea otters/km² will be in the Sitka project area.

Sound Levels for the Specified Activities

The new information on project activities at Sitka changed the sound levels we anticipate for this project due to the changes in pile types, pile numbers, and number of activity days. Sound levels for the new project activities in Sitka are listed in table 4, below.

TABLE 4—USCG MOORINGS SITKA: PROJECT ACTIVITIES; SOUND LEVELS, SOURCE, AND TIMING

Project component	Pile size and material	Activity	Sound levels	Source	Timing per pile (nonimpulsive sound sources) or strikes per pile (impulsive sound sources)
Demolition	61.0-cm (24-in) steel.	Removal—vibratory	163 dB RMS	NMFS 2023	30 minutes.
	35.6-cm (14-in) timber.	Removal—vibratory	162 dB RMS	CalTrans 2020	30 minutes.
Construction	61.0-cm (24-in) steel.	Temporary installation—vibratory.	163 dB RMS	NMFS 2023	15 minutes.
		Temporary removal—vibratory.	163 dB RMS.	NMFS 2023.	15 minutes.
	61.0-cm (24-in) steel.	Installation—vibratory	163 dB RMS	NMFS 2023	75 minutes.
		Installation—impact	190 dB RMS; 177 dB SELss; 203 dB peak.	CalTrans 2015	500 strikes.
		Installation—DTH.	167 dB RMS; 159 dB SELss; 184 dB peak.	Heyvaert & Reyff 2021; NMFS 2022.	120 minutes/108,000 strikes.

Ensonified Areas

Distances to below Level A harassment and Level B harassment thresholds with the revised sound levels were calculated for each project activity to determine the ensonified area for a

given project activity. The USCG requested to implement a 20-meter (m; 66-feet [ft]) shutdown zone for all project activities in Sitka to reduce harassment of sea otters by in-water noise and minimize the likelihood that sea otters are impacted by physical

interactions with construction equipment and materials. This shutdown zone will encompass some of the Level A harassment and Level B harassment zones in the Sitka project area (table 5, below).

TABLE 5—USCG MOORINGS SITKA: DISTANCES TO BELOW LEVEL A HARASSMENT AND LEVEL B HARASSMENT ZONES AND SHUTDOWN ZONE *

Project component	Pile size and material	Activity	Distance to below Level A harassment threshold (m)	Distance to below Level B harassment threshold (m)	Distance to below shutdown zone (m)

* Work at the USCG's Moorings Sitka is expected to be completed within 1 year.

We created geospatial files to represent the Sitka project area and ensonified water around the project area clipped by land boundaries. To determine the area in which sea otters may experience Level A harassment during the USCG's project activities, we subtracted the area of the 20-m (66-ft)

shutdown zone from the area ensonified to >232 dB peak sound pressure level or >203 dB cumulative SEL (SEL_{CUM}) re 1μPa for impulsive underwater sound and >219 dB SEL re 1μPa for nonimpulsive underwater sound. Next, we multiplied the remaining ensonified area for Level A harassment by the

estimated sea otter density in the Sitka project area (see *Sea Otter Density*) and the maximum number of project activity days to determine the number of sea otters that may experience Level A harassment (table 6, below).

TABLE 6—USCG MOORINGS SITKA: PROJECT ACTIVITIES AND LEVEL A HARASSMENT EVENTS ANTICIPATED

Project component	Pile size and material	Activity	Maximum number of activity days	Sea otter density	Level A area (km ²)	Level A area minus shutdown zone area (km ²)	Estimated sea otters affected by Level A sound per day (rounded)	Total estimated Level A harassment events
Demolition	61.0-cm (24-in) steel	Removal—vibratory.	1	5 sea otters/km ²	<0.001	0	0	0
	35.6-cm (14-in) timber.	Removal—vibratory.	2		<0.001	0	0	0

* Where the estimated total number of exposures was 0 for 3 or more decimal places (*i.e.*, <0.000X), the total number of exposures was assumed to be 0.

^a Where the estimated total number of exposures expected was greater than 0.001, we rounded to 2 instead to accommodate potential mom and pup pairs of sea otters for project activities.

To estimate the number of sea otters anticipated to experience Level B harassment during the USCG's project activities, we subtracted either the area of the Level A harassment zone or the area of the 20-m (66-ft) shutdown zone

(whichever was greater) from the area ensonified to >160 dB re 1μPa to determine the area in which sea otters may experience Level B harassment. Next, we multiplied the remaining ensonified area for Level B harassment

by the sea otter density for the Sitka project area (see *Sea Otter Density*) and the maximum number of project activity days to determine the number of sea otters that may experience Level B harassment (table 7, below).

TABLE 7—USCG MOORINGS SITKA: PROJECT ACTIVITIES AND LEVEL B HARASSMENT EVENTS ANTICIPATED

Project component	Pile size and material	Activity	Maximum number of activity days	Sea otter density	Level B area (km ²)	Level B area minus Level A/shutdown zone area (km ²)	Estimated sea otters affected by Level B sound per day (rounded)	Total estimated Level B harassment events
Demolition	61.0-cm (24-in) steel.	Removal—vibratory.	1	5 sea otters/km ²	0.005	0	0	0

		Installation—DTH.	4		0.011	0	0	0
	61.0-cm (24-in) steel.	Installation—vibratory.	4		0.005	0	0	0
		Installation—impact.	3		0.604	0.593	3	9
		Installation—DTH.	4		0.011	0	0	0
	40.6-cm (16-in) steel.	Installation—vibratory.	12		0.005	0	0	0

We assumed that the different types of pile-driving activities will occur sequentially and that the total number of activity days would equal the sum of the number of days required to complete each type of pile-driving activity. While it is possible that on some days more than one type of activity will take place, which would reduce the number of days of exposure, we cannot know this information in advance. As such, the estimated number of days is the maximum possible for the planned activity. Where the number of exposures expected per day was 0 to 3 or more decimal places (*i.e.*, <0.000X), the number of exposures per day was assumed to be 0. Where the number of exposures expected per day was greater than 0.001, we rounded to 2 exposures

to accommodate potential mom and pup pairs of sea otters for project activities in Sitka.

Critical Assumptions

In order to conduct this analysis and estimate the maximum anticipated number of takes by Level A harassment and Level B harassment, we added to our critical assumptions described in the proposed rule (90 FR 26486 at 26506, June 23, 2025).

A summary of sea otter observation data during a float replacement project in the Sitka project area was provided without any description of the area in which sea otters were observed (SolsticeAK unpublished data). In order to estimate a sea otter density, we assumed that sea otters were observed

over a 1 km² area. The number of sea otters observed each day of the project ranged from 1 to 8 sea otters, with an average of 5 sea otters observed each day (SolsticeAK unpublished data). Therefore, we estimated that up to 5 sea otters/km² will be in the Sitka project area.

Sum of Harassment From All Sources

The USCG will conduct pile driving and marine construction activities in Seward, Sitka, and Kodiak within the 5-year ITR period. A summary of total numbers of estimated takes by Level A harassment and Level B harassment by project location, year, and 5-year duration of the final ITR is provided in table 8, below.

TABLE 8—FINAL ITR: SEA OTTERS EXPECTED TO BE HARASSED; LEVEL A HARASSMENT AND LEVEL B HARASSMENT EVENTS

Location	Number of sea otters exposed to Level A harassment (single year)	Number of Level A harassment events (single year)	Total number of Level A harassment events (5 years)	Number of sea otters exposed to Level B harassment (single year)	Number of Level B harassment events (single year)	Total number of Level B harassment events (5 years)
Seward (Southcentral AK stock)	0	0	0	80	80	*80
Sitka (Southeast AK stock)	96	96	*96	93	93	*93
Kodiak (Southwest AK stock)	423	433	433	423	4,172	4,172

* Work at the USCG's Moorings Seward and Moorings Sitka is expected to be completed within 1 year.

In a single year, we estimate up to 80 instances of take by Level B harassment of 80 sea otters from the Southcentral Alaska stock, up to 93 instances of take by Level B harassment of 93 sea otters from the Southeast Alaska stock, and up to 4,172 instances of take by Level B harassment of 423 sea otters from the Southwest Alaska stock due to behavioral responses to noise exposure during project activities in Seward, Sitka, and Kodiak. Although multiple instances of Level B harassment of individual sea otters are possible, these events are unlikely to have significant consequences for the health, reproduction, or survival of affected sea otters. The potential effects of multiple Level B harassment noise exposures may include short-term behavioral reactions, displacement of sea otters near active operations, and potential temporary shifts in hearing thresholds. We anticipate that the majority of Level B harassment events will be behavioral responses to noise exposure. Sea otters spend over half of their time above the surface during the summer months (Esslinger et al. 2014), and likely no more than 70 percent of their time foraging during winter months (Gelatt et al. 2002); thus, their ears will not be exposed to continuous noise, thereby reducing their likelihood to experience temporary shifts in hearing thresholds.

Considering the specified activities would occur during a limited amount of time over non-consecutive days and in a localized area, we do not anticipate that the effects of multiple Level B harassment noise exposures would rise to the level of TTS, an injury, or Level A harassment.

In a single year, we estimate no instances of take by Level A harassment of sea otters from the Southcentral Alaska stock, up to 96 instances of take by Level A harassment of 96 sea otters from the Southeast Alaska stock, and up to 433 instances of take by Level A harassment of 423 sea otters from the Southwest Alaska stock due to PTS associated with noise exposure during project activities in Seward, Sitka and Kodiak. While the project activities in Seward will create sound levels above Level A harassment thresholds, the use of acoustic shutdown zones of 85 m (279 ft) for DTH drilling and 30 m (98 ft) for all other activities are expected to preclude Level A harassment events from occurring during these specified activities in Seward. The PSOs will be stationed at multiple vantage points, some elevated, to increase the distances at which sea otters can be reliably detected in Seward. For project activities in Sitka and Kodiak, using soft-start procedures, zone clearance prior to activity startup, and shutdown

zones is likely to decrease both the number of sea otters exposed to noise above Level A harassment thresholds and the exposure time of any sea otters entering the Level A harassment zone. This reduces the likelihood of hearing sensitivity losses that might impact the health, reproduction, or survival of affected sea otters. Despite the implementation of mitigation measures, it is anticipated that some sea otters will experience Level A harassment via exposure to in-water noise above threshold criteria during impact pile driving and DTH drilling activities.

Determinations and Findings

Small Numbers

For our small numbers determination, we considered whether the estimated number of sea otters to be subjected to incidental take is small relative to the population size of the species or stock. More specifically, the FWS compares the number of sea otters anticipated to be taken in each year contemplated by the ITR with the population estimate applicable to each of those years. Here, predicted numbers of sea otters to be taken were determined based on the estimated density of sea otters in the project area and ensonification areas developed using empirical evidence from similar geographic areas. We

estimate that the USCG's projects may annually result in the incidental take of approximately:

- No more than 80 Southcentral Alaska stock sea otters by Level B harassment annually and over the duration of this ITR (see *Sum of Harassment from All Sources*). Annual take of 80 sea otters is 0.37 percent of the best available estimate of the current annual Southcentral Alaska stock size of 21,617 animals (Esslinger et al. 2021; 88 FR 53510, August 8, 2023) $(80 \div 21,617) \times 100 \approx 0.37$ and represents a "small number" of sea otters of that stock.

- No more than 189 Southeast Alaska stock sea otters by Level A harassment and Level B harassment annually and over the duration of this ITR (see *Sum of Harassment from All Sources*). Annual take of 189 sea otters is 0.85 percent of the best available estimate of the current annual Southeast Alaska stock size of 22,359 animals (88 FR 53510, August 8, 2023) $(189 \div 22,359) \times 100 \approx 0.85$ and represents a "small number" of sea otters of that stock.

- No more than 423 Southwest Alaska stock sea otters by Level A harassment and Level B harassment annually and over the duration of this ITR (see *Sum of Take from All Sources*). Annual take of 423 sea otters is 0.81 percent of the best available estimate of the current annual Southwest Alaska stock size of 51,935 animals (88 FR 53510, August 8, 2023) $(423 \div 51,935) \times 100 \approx 0.81$ and represents a "small number" of sea otters of that stock.

Within the specified geographic region, the area of specified activity is expected to be small relative to the range of sea otters. Sea otters range well beyond the boundaries of the specified geographic region. As such, the specified geographic region itself represents only a subset of the potential area in which this species may occur, and we anticipate that only a small proportion of sea otters would be present within the vicinity of the specified activities.

Therefore, we find that the USCG's specified activities will take only small numbers of sea otters because: (1) Only a small proportion of sea otters will overlap with the areas where the specified activities will occur; (2) the estimated number of Southcentral Alaska stock sea otters to be taken will be limited to a total of 80 Southcentral Alaska stock sea otters annually and over the duration of the ITR; (3) the estimated number of Southeast Alaska stock sea otters to be taken will be limited to a total of 189 Southeast Alaska stock sea otters annually and over the duration of the ITR; and (4) the estimated number of Southwest Alaska

stock sea otters to be taken will be limited to a total of 423 Southwest Alaska stock sea otters annually and over the duration of the ITR, which represents a small proportion of each stock of sea otters.

Negligible Impact

For our negligible impact determination, we considered the following:

(1) The documented impacts of previous activities similar to the specified activities on sea otters, taking into consideration cumulative effects, suggests that the types of activities analyzed for this ITR will have minimal effects limited to short-term, temporary behavioral changes, displacement of sea otters near active operations, and potential hearing threshold shifts. This is true not only for Level B harassment, but also Level A harassment. While Level A harassment has the potential to result in the injury of up to 96 sea otters at Sitka and up to 423 sea otters at Kodiak during the ITR period, this type of harassment is not anticipated to result in long-term impacts that are likely to result in mortality. Most sea otters will respond to disturbance by moving away from the sound source, which may cause temporary interruption of foraging, resting, or other natural behaviors. Affected sea otters are expected to resume normal behaviors soon after exposure with no lasting consequences to their survival or reproduction. Sea otters may move in and out of the project area during pile-driving activities, leading to as many as 80 individuals in Seward, 189 individuals in Sitka, and 423 individuals in Kodiak experiencing exposure to noise at levels that may cause harassment. However, it is possible that an individual may enter the ensonification area more than once during the project. At most, if the same sea otter enters the ensonification area every day that pile driving occurs, the sea otter would be exposed to pile driving and marine construction noise for up to 22 non-consecutive days in Seward, 113 non-consecutive days in Sitka, and up to 339 non-consecutive days in Kodiak.

We do not anticipate that sea otters in Seward will be exposed to noise levels equal to or greater than Level A harassment thresholds due to the applicant's implementation of acoustic shutdown zones larger than the Level A harassment zone. It is possible that sea otters in Sitka and Kodiak may be exposed to noise levels equal to or greater than Level A harassment thresholds on multiple days throughout project activities. The potential effects

of multiple Level A harassment noise exposures may include a greater reduction in a sea otter's hearing sensitivity, but this reduction in hearing sensitivity does not equate to total hearing loss. The reduction in sea otter hearing sensitivity caused by PTS would align with the energy produced by pile-driving activities (e.g., low-frequency less than 2 kilohertz (kHz)), which would not impair the majority of a sea otter's hearing range. Sea otters do not rely on sound to orient themselves, locate prey, or communicate under water. Therefore, we do not anticipate PTS from multiple Level A harassment noise exposures would impact sea otters' ability to move, forage, or communicate. Sea otters, especially mothers and pups, do use sound for communication in air (McShane et al. 1995), and sea otters may monitor underwater sound to avoid predators (Davis et al. 1987). However, we anticipate that a sea otter will retain the majority of its hearing range if it experiences PTS from multiple Level A harassment noise exposures and that impacts from PTS will not have long-term consequences to a sea otter's survival and reproduction.

It is possible that sea otters will move away from Level A harassment zones to avoid experiencing PTS. The area that will experience noise levels equal to or greater than Level A harassment thresholds due to pile driving is small (approximately 0.017 km² for Sitka and 0.13 km² for Kodiak), and a sea otter that may be disturbed could escape the noise by moving to nearby quieter areas. Further, sea otters spend over half of their time above the surface during the summer months (Esslinger et al. 2014), and likely no more than 70 percent of their time foraging during winter months (Gelatt et al. 2002); thus, their ears will not be exposed to continuous noise, thereby reducing their likelihood to experience PTS. Some sea otters may exhibit some of the stronger responses typical of Level B harassment, such as fleeing, interruption of feeding, or flushing from a haulout. These responses could have temporary biological impacts for affected individuals but are not anticipated to result in measurable changes in survival or reproduction. The anticipated impacts on sea otters are limited and therefore unlikely to adversely affect annual rates of sea otter survival or recruitment.

(2) The applicant will implement monitoring requirements and mitigation measures designed to reduce the potential impacts of their operations on sea otters. Adaptive mitigation and management responses based on real-

time monitoring of the project areas by PSOs (described in this final rule) will be used to avoid or minimize interactions with sea otters and, therefore, limit potential disturbance of these animals.

(3) The FWS does not anticipate any lethal take or long-term impacts that would remove individual sea otters from the population or prevent their successful reproduction. Incidental harassment events are anticipated to be limited to human interactions that lead to short-term behavioral disturbances, displacement of sea otters near active project operations, and potential hearing threshold shifts. These disturbances would not affect the rates of recruitment or survival for the Southcentral Alaska, Southeast Alaska, and Southwest Alaska stocks of sea otters. This ITR does not authorize take that will likely lead to mortality or lethal take.

We also considered the conjectural or speculative impacts associated with these specified activities. The specific congressional direction described below justifies balancing the probability of such impacts with their severity.

If potential effects of a specified activity are conjectural or speculative, a finding of negligible impact may be appropriate. A finding of negligible impact may also be appropriate if the probability of occurrence is low, but the potential effects may be significant. In this case, the probability of occurrence of impacts must be balanced with the potential severity of harm to the species or stock when determining negligible impact. In applying this balancing test, the FWS will thoroughly evaluate the risks involved and the potential impacts on marine mammal populations. Such determination will be made based on the best available scientific information (53 FR 8474, March 15, 1988; 132 Cong. Rec. S 16304–5 (October 15, 1986)).

The potential effects of most concern here are the potential injury or PTS of sea otters in Sitka and Kodiak resulting from exposure to noise levels equal to or greater than Level A harassment thresholds. The FWS does not anticipate lethal take of sea otters as a result of the USCG's in-water activities. As a result of our analyses presented in the proposed and final rules, we estimate up to 96 takes by Level A harassment may occur annually and up to a total of 96 takes by Level A harassment may occur during project activities in Sitka. We estimate up to 433 takes by Level A harassment may occur annually and up to a total of 433 takes by Level A harassment may occur during project activities in Kodiak. While the FWS found that in-water noise will rise to a level that may cause PTS in the areas

immediately adjacent to pile driving activities, these noise levels will not extend farther than 55.9 m (183.4 ft) from the sound source in Sitka and not farther than 145.1 m (476.0 ft) from the sound source in Kodiak.

The applicant will implement PSO-monitored physical interaction shutdown zones that will encompass the majority of the ensonified areas in which Level A harassment may occur in Sitka and Kodiak, thus minimizing injurious take. Additionally, using soft-start procedures and zone clearance prior to activity startup is likely to decrease both the number of sea otters exposed to noise levels above Level A harassment thresholds and the exposure time of any sea otters entering the Level A harassment zone. These mitigation measures reduce the likelihood of hearing sensitivity losses that might impact the health, reproduction, or survival of affected sea otters. A small number of takes by Level A harassment would be authorized for impact pile driving and DTH drilling activities that have Level A harassment zone radii ranging in size from 20.3 to 55.9 m (66.6 to 183.4 ft) in Sitka and from 21.8 to 145.1 m (71.5 to 476.0 ft) in Kodiak, but mitigation measures would be implemented to minimize take by Level A harassment to the extent possible.

Despite the implementation of mitigation measures, it is anticipated that some sea otters in Sitka and Kodiak will experience Level A harassment via exposure to in-water noise above threshold criteria during impact pile driving and DTH drilling activities. If any sea otters exposed to noise levels above Level A harassment threshold criteria do experience PTS in the sensitivity of their hearing, it does not equate to total hearing loss. We do not anticipate that a reduction in hearing sensitivity would significantly affect a sea otter's health, reproduction, or survival or otherwise cause any population-level effects. Therefore, the FWS does not anticipate that the conjectural or speculative impacts associated with these specified activities warrant a finding of non-negligible impact or otherwise preclude issuance of this ITR.

We reviewed the effects of the specified pile driving and marine construction activities on sea otters, including impacts from pile clipping, use of a wire saw, vibratory pile driving, impact pile driving, and DTH drilling. Based on our review of these potential impacts, past monitoring reports, and the biology and natural history of sea otters, we conclude that the anticipated incidental take from the USCG's specified activities would not affect the

rates of recruitment or survival for the Southwest, Southcentral, and Southeast Alaska stocks of sea otters, and would have a negligible impact on each of those stocks.

Least Practicable Adverse Impacts

We evaluated the practicability and effectiveness of mitigation measures based on the nature, scope, and timing of the specified activities; the best available scientific information; and monitoring data from similar pile driving and marine construction activities. After reviewing the original requests (submitted January 19, 2024, for Seward and Sitka and March 5, 2024, for Kodiak), the FWS discussed additional mitigation measures with the USCG to reduce the potential impacts of the specified activities. These additional mitigation measures included adding more information to the USCG's descriptions of underwater pile cutting operations, vessel activities, and in-water sound levels associated with project support operations (e.g., use of noise-producing hand tools and heavy equipment), deploying noise-dampening materials (e.g., pile caps or cushions) between the pile and hammer during pile-driving activities, and revising sea otter monitoring and shutdown zones. The applicant incorporated these additional mitigation measures in their revised requests and supporting documentation (WSP Environment and Infrastructure 2024 Request; Weston Solutions 2024 Request). We determine that the mitigation measures included within the USCG's request will ensure least practicable adverse impact on sea otters.

In evaluating what mitigation measures are appropriate to ensure the least practicable adverse impact on species or stocks and their habitat, as well as subsistence uses, we considered the manner and degree to which the successful implementation of the measures is expected to achieve this goal. We considered the nature of the potential adverse impact being mitigated (likelihood, scope, range), the likelihood that the measures will be effective if implemented, and the likelihood of effective implementation. We also considered the practicability of the measures for applicant implementation (e.g., cost, impact on operations).

To reduce the potential for disturbance from acoustic stimuli associated with the activities, the applicant has proposed mitigation measures, including the following:

- Using pile caps made of high-density polyethylene or ultra-high-molecular-weight polyethylene

softening materials during impact pile driving;

- Conducting activities that may produce in-water noise during lower tidal conditions as possible to reduce transmission of sound into the water column;
- Using silt curtains or other containment methods to reduce sedimentation and turbidity when conducting DTH drilling and vibroflot column installation;
- Development of marine mammal monitoring and mitigation plans;
- Visual mitigation monitoring by designated PSOs;
- Halting or delaying activity during environmental conditions that may hinder sea otter detection, such as darkness, adverse weather conditions, high sea states, and other times of limited visibility;
- Maintaining the maximum distance practicable between a vessel and raft of sea otters;
- Operating vessels in such a way as to avoid approaching sea otters or impeding sea otter movements when traveling near the shoreline in shallow water (<20 m [66 ft]) whenever practicable;
- Establishment of shutdown and monitoring zones;
- Site clearance before activity startup;
- Soft-start procedures; and
- Shutdown procedures.

A number of additional potential mitigation measures were considered but determined to be not practicable. One proposed mitigation measure for project activities in Sitka was determined to be not practicable after publication of the proposed rule (90 FR 26486, June 23, 2025). All these measures are listed below:

- *Require use of bubble curtains*—At the time of publication of the proposed rule (90 FR 26486, June 23, 2025), the applicant indicated that they were unable to find a contractor with access to bubble curtain equipment for project activities in Seward and Sitka. The applicant indicated that bubble curtains would likely increase turbidity in the Kodiak project area, which may impact water quality and marine life including sea otter prey species. The FWS determined the required use of bubble curtains was not practicable because bubble curtains are impossible to undertake for project activities in Seward and Sitka and bubble curtains would not be effective in reducing the impacts to sea otters during project activities in Kodiak.
- *Require use of other noise-dampening methods*—The FWS determined the required use of other

noise-dampening methods, such as cofferdams, pile-surrounding casings, sound mitigation screens, and nets around piles, was not practicable because these methods were impossible to undertake considering the number of piles being removed or installed and the close proximity of piles to each other for project activities in each of the three locations.

- *Require use of alternate detection methods*—The FWS determined that the required use of alternate detection methods, such as infrared sensors, thermal imaging, or surveys conducted by aircraft, unmanned aircraft system, or vessel, was not practicable considering that these alternate detection methods would not be as effective in reducing impacts to sea otters and the applicant would employ PSOs to monitor the project area for sea otters.

- *Require 500-m minimum distance between vessels and sea otter rafts for Kodiak*—The FWS determined that vessels maintaining a minimum distance of 500 m (1,640 ft) from a raft of sea otters was impossible to undertake considering the width of the project area in Kodiak is approximately 488 m (1,601 ft) wide or less, but the applicant agreed to vessels maintaining the maximum distance between the vessel and rafts of sea otters as practicable. The FWS determined that requiring vessels to avoid traveling in nearshore shallow water (<20 m [<66 ft]) was impossible to undertake considering the project area in Kodiak is located on the shoreline in water less than 20 m (66 ft) deep, but the applicant agreed that vessels would avoid approaching or impeding sea otter movements when traveling near the shoreline in shallow water (<20 m [<66 ft]) whenever practicable.

- *Require acoustic shutdown zones greater than 20 m (66 ft) for Sitka*—The applicant indicated that acoustic shutdown zones greater than 20 m (66 ft) would be difficult to implement in Sitka because of the congested layout of multiple docks and construction barges obscuring the project monitoring area. The FWS determined that acoustic shutdown zones greater than 20 m (66 ft) was not practicable because this mitigation measure would not be effectively implemented for project activities in Sitka.

Impact on Subsistence Use

The specified projects will not preclude access to harvest areas or interfere with the availability of sea otters for harvest by Alaska Native Peoples. Additionally, the USCG facilities are located in developed areas and largely within areas where firearm

use is prohibited. We therefore make a finding that the USCG's anticipated harassment will not have an unmitigable adverse impact on the availability of Southcentral Alaska, Southeast Alaska, or Southwest Alaska stocks of sea otters for subsistence uses by Alaska Native Peoples during the specified timeframe. In making this finding, we considered the timing and location of the specified activities and the timing and location of subsistence harvest activities in the area of the specified project.

Monitoring and Reporting

The purpose of monitoring requirements is to assess the effects of specified activities on sea otters; to ensure that take is consistent with that anticipated in the small numbers, negligible impact, and subsistence use analyses; and to detect any unanticipated effects on the species or stock. Monitoring plans document when and how sea otters are observed, the number of sea otters, and their behavior during the observation. This information allows the FWS to measure encounter rates, examine trends in sea otter activity and distribution in the project areas, and estimate the number of sea otters potentially affected by the specified activities. The USCG is required to report all observations of sea otters. To the extent possible, PSOs will record group size, age, sex, behavior, duration of observation, and closest approach to the project activity. Activities within the specified geographic region may incorporate daily watch logs as well.

Monitoring activities will be summarized and reported in a formal report each year. The USCG must submit a final monitoring report to us no later than 90 days after the expiration of the LOA. We will base each year's monitoring objective on the previous year's monitoring results. We will require an approved plan for monitoring and reporting the effects of pile driving and marine construction activities on sea otters prior to issuance of an LOA. We will require approval of the monitoring results for continued operation under the LOA.

We find that these monitoring and reporting requirements to evaluate the potential impacts of planned activities will ensure that the effects of the activities remain consistent with the rest of the findings.

Required Determinations

National Environmental Policy Act (NEPA)

We have prepared an environmental assessment in accordance with the NEPA (42 U.S.C. 4321 *et seq.*). We have concluded that issuing a final ITR would not significantly affect the quality of the human environment, and, thus, preparation of an environmental impact statement for this incidental take regulation is not required by section 102(2) of NEPA or the Department's NEPA handbook. A copy of the EA and the FWS's FONSI can be obtained at <https://www.regulations.gov> under Docket No. FWS-R7-ES-2024-0195, or these documents may be requested as described under **FOR FURTHER INFORMATION CONTACT**.

Endangered Species Act (ESA)

Under the ESA (16 U.S.C. 1536(a)(2)), all Federal agencies are required to ensure the actions they authorize are not likely to jeopardize the continued existence of any threatened or endangered species or result in destruction or adverse modification of critical habitat. The planned activities occur within the range of Southwest Alaska, Southcentral Alaska, and Southeast Alaska stocks of northern sea otters. The first of these, the Southwest Alaska stock, is listed as threatened under the ESA, whereas the Southcentral Alaska and Southeast Alaska stocks are not listed under the ESA. Prior to issuance of this ITR, the FWS conducted intra-service consultation under section 7 of the ESA on our issuance of an ITR. These evaluations and findings may be requested from the FWS.

Government-to-Government Consultation

It is our responsibility to communicate and work directly on a Government-to-Government basis with federally recognized Alaska Native Tribes and organizations in developing programs for healthy ecosystems. We seek their full and meaningful participation in evaluating and addressing conservation concerns for protected species. It is our goal to remain sensitive to Alaska Native culture, and to make information available to Alaska Natives. Our efforts are guided by the following policies and directives:

- (1) *The Native American Policy of the Service* (January 20, 2016);
- (2) *The Service's Alaska Native Relations Policy* (January 10, 2025);
- (3) *Executive Order (E.O.) 13175* (January 9, 2000);

(4) *Department of the Interior Secretary's Orders 3206* (June 5, 1997), 3225 (January 19, 2001), 3342 (October 21, 2016), and 3403 (November 15, 2021), including *Director's Order 227* (September 8, 2022);

(5) the *Alaska Government-to-Government Policy* (a departmental memorandum issued January 18, 2001); and

(6) the Department of the Interior's policies on consultation with Alaska Native Tribes and organizations in Part 512 of the Departmental Manual, Chapters 4 through 7.

We have evaluated possible effects of the specified activities on federally recognized Alaska Native Tribes and organizations. The FWS has determined that, due to this project's locations and activities, the Tribal organizations and communities near Kodiak, Seward, and Sitka, as well as relevant Alaska Native Claims Settlement Act (ANCSA; 43 U.S.C. 1601 *et seq.*) corporations, will not be impacted by this project. Regardless, the FWS has contacted Tribal organizations in neighboring communities, as well as relevant ANCSA corporations, to inform them of the availability of this authorization and offer them the opportunity to consult.

Regulatory Planning and Review—E.O. 12866 and 13563

E.O. 12866, as reaffirmed by E.O. 13563, provides that the Office of Information and Regulatory Affairs (OIRA) in the Office of Management and Budget (OMB) will review all significant rules. The OIRA has determined that this rulemaking action is not significant.

The OIRA bases its determination of significance upon the following four criteria: (a) Whether the rule will have an annual effect of \$100 million or more on the economy or adversely affect an economic sector, productivity, jobs, the environment, or other units of the government; (b) whether the rule will create inconsistencies with other Federal agencies' actions; (c) whether the rule will materially affect entitlements, grants, user fees, loan programs, or the rights and obligations of their recipients; (d) whether the rule raises novel legal or policy issues.

Expenses will be related to, but not necessarily limited to: the development of requests for LOAs; monitoring, recordkeeping, and reporting activities conducted during pile driving and marine construction; development of activity- and species-specific marine mammal monitoring and mitigation plans; and coordination with Alaska Natives to minimize effects of operations on subsistence hunting. Realistically, costs of compliance with

this rule are minimal in comparison to those related to actual pile driving and marine construction. The actual costs to develop the petition for promulgation of regulations and LOA requests do not exceed \$100,000 per year, short of the "major rule" threshold that would require preparation of a regulatory impact analysis.

Small Business Regulatory Enforcement Fairness Act

We have determined that this rule is not a major rule under 5 U.S.C. 804(2), the Small Business Regulatory Enforcement Fairness Act. The rule is also not likely to result in a major increase in costs or prices for consumers, individual industries, or government agencies or have significant adverse effects on competition, employment, productivity, innovation, or on the ability of United States-based enterprises to compete with foreign-based enterprises in domestic or export markets.

Regulatory Flexibility Act

We have determined that this rule will not have a significant economic effect on a substantial number of small entities under the Regulatory Flexibility Act (5 U.S.C. 601 *et seq.*). The USCG and their contractors conducting pile driving and marine construction in Kodiak, Sitka, and Seward, are the only entities subject to these ITRs. Therefore, neither a regulatory flexibility analysis nor a small entity compliance guide is required.

Takings Implications

This rule does not have takings implications under E.O. 12630 because it authorizes the nonlethal, incidental, but not intentional, take of sea otters by pile driving and marine construction activities and, thereby, exempts the USCG from civil and criminal liability as long as they operate in compliance with the terms of their LOAs. Therefore, a takings implications assessment is not required.

Federalism Effects

This rule does not contain policies with federalism implications sufficient to warrant preparation of a federalism assessment under E.O. 13132. The MMPA gives the FWS the authority and responsibility to protect sea otters.

Unfunded Mandates Reform Act

In accordance with the Unfunded Mandates Reform Act (2 U.S.C. 1501 *et seq.*), this rule will not "significantly or uniquely" affect small governments. A small government agency plan is not required. The FWS has determined and

certifies pursuant to the Unfunded Mandates Reform Act that this rulemaking will not impose a cost of \$100 million or more in any given year on local or State governments or private entities. This rule will not produce a Federal mandate of \$100 million or greater in any year, *i.e.*, it is not a “significant regulatory action” under the Unfunded Mandates Reform Act.

Civil Justice Reform

The Departmental Solicitor’s Office has determined that this rule will not unduly burden the judicial system and meets the applicable standards provided in sections 3(a) and 3(b)(2) of E.O. 12988.

Paperwork Reduction Act

This rule includes new information collections requiring approval by the OMB under the Paperwork Reduction Act of 1995 (44 U.S.C. 3501 *et seq.*). We may not conduct or sponsor, and you are not required to respond to, a collection of information unless it displays a currently valid OMB control number. The FWS will ask OMB to review and approve the new information collection requirements contained in this rulemaking related to incidental take of marine mammals in proposed 50 CFR subpart I.

In accordance with the PRA and its implementing regulations at 5 CFR 1320.8(d)(1), we provide the general public and other Federal agencies with a second opportunity to comment on the proposed information collections contained in this rule. This input will help us assess the impact of our information collection requirements and minimize the public’s reporting burden. It will also help the public understand our information collection requirements and provide the requested data in the desired format.

This is a nonform collection. Respondents must comply with the regulations at 50 CFR part 18, which outline the procedures and requirements for submitting a request. Specific regulations governing authorized incidental take of marine mammal activities are contained in 50 CFR part 18, subpart I (nonlethal, incidental, unintentional take by harassment of small numbers of northern sea otters). These regulations provide the applicant with a detailed description of information that we need to evaluate the proposed activity and determine if it is appropriate to issue specific regulations and, subsequently, LOAs. We use the information to verify the findings required to issue incidental take regulations, to decide if we should issue an LOA, (if an LOA is issued)

what conditions should be included in the LOA, and to monitor compliance with the regulations and LOA(s). In addition, we analyze the information to determine impacts to polar bears, Pacific walruses, northern sea otters, and the availability of those marine mammals for subsistence purposes of Alaska Natives.

In conjunction with this rulemaking, we will request OMB approval of the following:

(1) *Incidental Take of Marine Mammals—Application for Regulations*—Regulations at 50 CFR part 18 require the applicant to provide information on the activity as a whole, which includes, but is not limited to, an assessment of total impacts by all persons conducting the activity. Applicants can find specific requirements in 50 CFR part 18, subpart I. These regulations provide the applicant with a detailed description of information that we need to evaluate the proposed activity and determine whether to issue specific regulations and, subsequently, LOAs. The required information includes:

1. A description of the specific activity or class of activities that can be expected to result in incidental taking of marine mammals.

2. The dates and duration of such activity and the specific geographical region where it will occur.

3. Based on the best available scientific information, each applicant must also provide:

a. An estimate of the species and numbers of marine mammals likely to be taken by age, sex, and reproductive conditions;

b. The type of taking (*e.g.*, disturbance by sound, injury or death resulting from collision, etc.) and the number of times such taking is likely to occur;

c. A description of the status, distribution, and seasonal distribution (when applicable) of the affected species or stocks likely to be affected by such activities;

d. The anticipated impact of the activity upon the species or stocks; and

e. The anticipated impact of the activity on the availability of the species or stocks for subsistence uses.

4. The anticipated impact of the activity upon the habitat of the marine mammal populations and the likelihood of restoration of the affected habitat.

5. The availability and feasibility (economic and technological) of equipment, methods, and manner of conducting such activity or other means of effecting the least practicable adverse impact upon the affected species or stocks, their habitat, and, where relevant, on their availability for

subsistence uses, paying particular attention to rookeries, mating grounds, and areas of similar significance. (The applicant and those conducting the specified activity and the affected subsistence users are encouraged to develop mutually agreeable mitigating measures that will meet the needs of subsistence users.)

6. Suggested means of accomplishing the necessary monitoring and reporting that will result in increased knowledge of the species through an analysis of the level of taking or impacts and suggested means of minimizing burdens by coordinating such reporting requirements with other schemes already applicable to persons conducting such activity.

7. Suggested means of learning of, encouraging, and coordinating research opportunities, plans, and activities relating to reducing such incidental taking from such specified activities, and evaluating its effects.

8. Applicants must develop and implement a site-specific (or umbrella plan addressing site-specific considerations), FWS-approved marine mammal monitoring and mitigation plan to monitor and evaluate the effectiveness of mitigation measures and the effects of activities on marine mammals and the subsistence use of these species.

9. Applicants must also provide trained, qualified, and FWS-approved onsite observers to carry out monitoring and mitigation activities identified in the marine mammal monitoring and mitigation plan. Resumes for candidate PSOs will be made available for the FWS to review. This information is necessary for the FWS to anticipate the impact of the activity on the species or stocks and on the availability of the species or stocks for Alaska Native subsistence uses. Under requirements of the MMPA, we cannot authorize a take unless the total of all takes will have a negligible impact on the species or stocks and, where appropriate, will not have an unmitigable adverse impact on the availability of the species or stocks for subsistence uses. These requirements ensure that applicants are aware of related monitoring and research efforts they can apply to their situation, and that the monitoring and reporting that we impose are the least burdensome to the applicant.

(2) *Requests for Letters of Authorization (LOA)*—LOAs, which may be issued only to U.S. citizens, are required to conduct activities pursuant to any specific regulations established. Once specific regulations are effective, the FWS will, to the maximum extent possible, process subsequent

applications for LOAs within 30 days after receipt of the application by the FWS. All LOAs will specify the period of validity and any additional terms and conditions appropriate for the specific request. Issuance of LOAs will be based on a determination that the level of taking will be consistent with the findings made for the total taking allowable under the specific regulations.

The request for an LOA must comply with the requirements set forth in proposed § 18.103 and must include the following information:

1. An operational plan that describes in detail the activity (e.g., type of project, methods, and types and numbers of equipment and personnel, etc.), the dates and duration of the activity, and the specific locations affected by the activity;
2. A digital geospatial file of the project footprint;
3. A site-specific marine mammal monitoring and mitigation plan that specifies the procedures to monitor and mitigate the effects of the activities on sea otters; and
4. Plan of Cooperation (POC), if required, to mitigate potential conflicts between the activity and subsistence hunting.

(3) *Withdrawal of LOA*—Once issued, the LOA may be withdrawn or suspended if the project activity is modified in a way that undermines the results of the evaluation conducted per proposed § 18.104(a), if the conditions of the regulations in the proposed subpart are not being substantially met, or if the taking allowed is or may be having more than a negligible impact on the affected stock of sea otters or an unmitigable adverse impact on the availability of sea otters for subsistence uses.

(4) *Mitigation—3rd Party Notifications (Community Consultation)*—All applicants for an LOA must contact affected Alaska Native subsistence communities and hunter organizations to discuss potential conflicts caused by the activities and provide the FWS documentation of communications as described in § 18.103.

Documentation must include a summary of any concerns identified by community members and hunter organizations and the applicant's responses to identified concerns. A POC may not be required for an LOA request if no concerns are raised during community consultation regarding impacts to subsistence harvest or Alaska Native communities and subsistence user organizations.

(5) *Mitigation—3rd Party Notifications (Vessel Operations)*—Vessel operators must be provided

written guidance for avoiding collisions and minimizing disturbances to sea otters. Guidance will include measures identified in § 18.107, Mitigation.

(6) *Mitigation—Plan of Cooperation*—When appropriate, a holder of an LOA will be required to develop and implement an FWS-approved POC.

1. The POC must include a description of the procedures by which the holder of the LOA will work and consult with potentially affected subsistence hunters and a description of specific measures that have been or will be taken to avoid or minimize interference with subsistence hunting of marine mammals and to ensure continued availability of the species for subsistence use.

2. The FWS will review the POC to ensure that any potential adverse effects on the availability of the animals are minimized. The FWS will reject POCs if they do not provide adequate safeguards to ensure the least practicable adverse impact on the availability of marine mammals for subsistence use.

(7) *Mitigation—Designation and Training of Protected Species Observers (PSOs)*—The applicant will designate trained and qualified PSOs to monitor for the presence of sea otters, initiate mitigation measures, and monitor, record, and report the effects of the activities on sea otters. The applicant is responsible for providing training to PSOs to carry out mitigation and monitoring.

(8) *Mitigation and Monitoring Plan*—Applicants must have an approved mitigation and monitoring plan on file with the FWS's Marine Mammals Management Program (MMM) and onsite that includes the following information:

1. The type of activity and where and when the activity will occur (i.e., a summary of the plan of operation);
2. Personnel training policies, procedures, and materials;
3. Site-specific sea otter interaction risk evaluation and mitigation measures;
4. Sea otter avoidance and encounter procedures; and
5. Sea otter observation and reporting procedures.

(9) *Onsite Monitoring and Observation Reports*—The regulations also require that each holder of an LOA submit a monitoring report indicating the nature and extent of all takes of marine mammals that occurred incidentally to the specific activity. Since the inception of incidental take authorizations for polar bears (*Ursus maritimus*), Pacific walrus (walrus; *Odobenus rosmarus divergens*), and northern sea otters (otters; *Enhydra lutris kenyoni*), we have required monitoring and reporting during

industrial activities. The purpose of monitoring and reporting requirements is to assess the effects of industrial activities on sea otters to ensure that take is minimal to their populations, and to detect any unanticipated effects of take. The monitoring focus has been site-specific, area-specific, or population-specific. Site-specific monitoring measures animal-human encounter rates, outcomes of encounters, and trends of animal activity in the industrial areas, such as sea otter numbers, behavior, and seasonal use. Area-specific monitoring includes analyzing animal spatial and temporal use trends, sex/age composition, and risk assessment to unpredictable events, such as oil spills. Population-specific monitoring includes investigating species life-history parameters, such as population size, recruitment, survival, physical condition, status, and mortality.

(A) *In-Season Monitoring (Observation Reports)*—Duties of PSOs include watching for and identifying sea otters, recording observation details, documenting presence in any applicable monitoring zone, identifying and documenting potential harassment, and working with operators to implement all appropriate mitigation measures. Information in the observation report must include, but is not limited to:

1. PSOs will monitor a pre-clearance zone for 30 minutes prior to the commencement of in-water noise-generating activities and following periods of inactivity of more than 30 minutes to ensure all sea otters are not within the shutdown zone prior to initiating or resuming in-water noise-generating activities.

2. Observers will collect data using the following procedures:

- i. All data will be recorded onto a field form or database.
- ii. Global positioning system data, sea state, tidal state, wind force, visibility, and weather condition will be recorded at the beginning and end of a monitoring period, at least every hour in between, at the change of an observer, and upon observation of sea otters.
- iii. Observation records of sea otters will include date; time; the observers' locations; sea otter's heading (if moving); weather condition; visibility; number of sea otters; group composition (adults/juveniles); and the location of the sea otters (or distance and direction from the observer).

iv. Observation records will also include initial behaviors of the sea otters, descriptions of project activities and in-water noise levels being generated, the position of sea otters

relative to applicable monitoring and mitigation zones, any mitigation measures applied, and any apparent reactions to the project activities before and after mitigation.

v. For all sea otters in or near a mitigation zone, observers will record the distance from the sound source to the sea otter upon initial observation, the duration of the encounter, and the distance at last observation in order to monitor cumulative sound exposures.

vi. The PSOs will note any instances of sea otters lingering close to or traveling with vessels for prolonged periods of time.

vii. Monitoring of the shutdown zone must continue for 30 minutes following completion of in-water noise-generating activities.

(B) *In-Season Monitoring (Activity Progress Reports)*—Holders of an LOA must:

1. Notify the FWS at least 48 hours prior to the commencement of activities.

2. Provide the FWS monthly progress reports for all months during which noise-generating work takes place. The monthly report will contain and summarize the following information:

i. dates, times, weather, and sea conditions (including the Beaufort Scale sea state and wind force conditions) when sea otters were observed;

ii. the number, location, distance from the sound source, and behavior of the sea otters; and

iii. the associated project activities; and a description of the implementation and effectiveness of mitigation measures with a discussion of any specific behaviors the sea otters exhibited in response to mitigation.

(10) *Final Monitoring Report*—A final report will be submitted to the FWS's MMM within 90 days after the expiration of each LOA. The report will include:

1. A summary of monitoring efforts (hours of monitoring, activities monitored, number of PSOs, and, if requested by the FWS, the daily monitoring logs).

2. A description of all project activities, any additional work yet to be done, factors influencing visibility and detectability of marine mammals (*e.g.*, sea state, fog, glare, and number of observers), and factors correlated with the presence and distribution of sea otters (*e.g.*, weather, sea state, and project activities).

3. An estimate will be included of the number of sea otters exposed to noise at received levels greater than or equal to Level A harassment and Level B harassment (based on visual observation).

4. A description of changes in sea otter behavior resulting from project activities and any specific behaviors of interest.

5. A discussion of the mitigation measures implemented during project activities and their observed effectiveness for minimizing impacts to sea otters. Sea otter observation records will be provided to the FWS in the form of electronic database or spreadsheet files.

6. All reports must be submitted by email to fw7_mmm_reports@fws.gov.

7. Injured, dead, or distressed sea otters that are not associated with project activities (*e.g.*, animals known to be from outside the project area, previously wounded animals, or carcasses with moderate to advanced decomposition or scavenger damage) must be reported to the FWS within 24 hours of the discovery to either the FWS's MMM (1-800-362-5148, business hours); or the Alaska SeaLife Center in Seward (1-888-774-7325, 24 hours a day); or both. Photographs, video, location information, or any other available documentation must be provided to the FWS.

8. Operators must notify the FWS upon project completion or end of the work season.

(11) *Notification of LOA Incident Report*—

1. Except as otherwise provided in the regulations in the subpart, prohibited taking includes the provisions of § 18.11 as well as: intentional take, lethal incidental take of sea otters, and any take that fails to comply with the regulations in this subpart or with the terms and conditions of an LOA.

2. If specified activities cause unauthorized take, the holder of an LOA must:

i. Cease activities immediately (or reduce activities to the minimum level necessary to maintain safety);

ii. Report the details of the incident within 24 hours to the FWS's MMM at 1-800-362-5148 (business hours) or via email at FW7_MMM_Reports@fws.gov. If the unauthorized taking results in a sea otter being injured or killed, call the FWS MMM during business hours or the Alaska SeaLife Center in Seward (1-888-774-7325, 24 hours a day);

iii. Provide photographs, video, location information, and any other available documentation related to the unauthorized take of the sea otter(s) to the FWS; and

iv. Suspend further activities until the FWS has reviewed the circumstances, determined whether additional mitigation measures are necessary to avoid further unauthorized taking, and

notified the LOA holder that project activities may resume.

Title of Collection: Incidental Take of Marine Mammals During Specified Activities (50 CFR 18.27 and 50 CFR 18, Subpart I).

OMB Control Number: 1018-0205.

Form Numbers: None.

Type of Review: New.

Respondents/Affected Public: Federal Government—U.S. Coast Guard.

Total Estimated Number of Annual Respondents: 32.

Total Estimated Number of Annual Responses: 59.

Estimated Completion Time per Response: Completion times vary between 15 minutes and 130 hours, depending on activity.

Total Estimated Number of Annual Burden Hours: 515.

Respondent's Obligation: Required to obtain or retain a benefit.

Frequency of Collection: On occasion.

Total Estimated Annual Non-hour Burden Cost: None.

On June 23, 2025, we published in the **Federal Register** (90 FR 26486) a proposed rule (RIN 1018-BI08) which announced our intention to request OMB approval of the information collections explained in this rule. In that proposed rule, we solicited comments for 60 days on the information collections, ending on August 22, 2025. We did not receive any comments on the proposed information collections in response to that proposed rule.

As part of our continuing effort to reduce paperwork and respondent burdens, and in accordance with 5 CFR 1320.8(d)(1), we invite the public and other Federal agencies to comment on any aspect of this proposed information collection, including:

(1) Whether or not the collection of information is necessary for the proper performance of the functions of the agency, including whether or not the information will have practical utility;

(2) The accuracy of our estimate of the burden for this collection of information, including the validity of the methodology and assumptions used;

(3) Ways to enhance the quality, utility, and clarity of the information to be collected; and

(4) Ways to minimize the burden of the collection of information on those who are to respond, including through the use of appropriate automated, electronic, mechanical, or other technological collection techniques or other forms of information technology, *e.g.*, permitting electronic submission of response.

Comments that you submit in response to this rulemaking are a matter

of public record. Before including your address, phone number, email address, or other personal identifying information in your comment, you should be aware that your entire comment—including your personal identifying information—may be made publicly available at any time. While you can ask us in your comment to withhold your personal identifying information from public review, we cannot guarantee that we will be able to do so.

Send your written comments and suggestions on this information collection by the date indicated in **DATES** to OMB, with a copy to the FWS Information Collection Clearance Officer, U.S. Fish and Wildlife Service, MS: PRB/PERMA (JAO), 5275 Leesburg Pike, Falls Church, VA 22041–3803 (mail); or by email to Info_Coll@fws.gov. Please reference “RIN 1018–BI08/OMB Control No. 1018–0205” in the subject line of your comments.

Energy Effects

E.O. 13211 requires agencies to prepare statements of energy effects when undertaking certain actions. This rule provides exceptions from the MMPA’s taking prohibitions for entities engaged in specified pile driving and marine construction activities in the specified geographic region. By providing certainty regarding compliance with the MMPA, this rule will have a positive effect on the pile driving and marine construction activities. Although the rule requires an applicant to take a number of actions, these actions have been undertaken by pile driving and marine construction activities for many years as part of similar past regulations. Therefore, this rule is not expected to significantly affect energy supplies, distribution, or use and does not constitute a significant

energy action. No statement of energy effects is required.

Regulation Promulgation

For the reasons set forth in the preamble, the U.S. Fish and Wildlife Service amends part 18, subchapter B of chapter 1, title 50 of the Code of Federal Regulations as set forth below.

PART 18—MARINE MAMMALS

■ 1. The authority citation of 50 CFR part 18 continues to read as follows:

Authority: 16 U.S.C. 1361 *et seq.*

■ 2. Amend part 18 by adding subpart I to read as follows:

Subpart I—Nonlethal Taking of Northern Sea Otters Incidental to Pile Driving and Marine Construction in Seward, Sitka, and Kodiak, Alaska

Sec.

- 18.100 Specified activities covered by this subpart.
- 18.101 Specified geographic region where this subpart applies.
- 18.102 Dates this subpart is in effect.
- 18.103 Procedure to obtain a Letter of Authorization (LOA).
- 18.104 How the FWS will evaluate a request for an LOA.
- 18.105 Authorized take allowed under an LOA.
- 18.106 Prohibited take under an LOA.
- 18.107 Mitigation.
- 18.108 Monitoring.

18.109 Reporting requirements.

18.110 Information collection requirements.

§ 18.100 Specified activities covered by this subpart.

Regulations in this subpart apply to the nonlethal incidental, but not intentional, take, as defined in § 18.3 and under section 3 of the Marine Mammal Protection Act (MMPA; 16 U.S.C. 1371 *et seq.*), of small numbers of northern sea otters (*Enhydra lutris kenyoni*; hereafter “sea otters”) by the U.S. Coast Guard (hereafter “USCG” or “the applicant”) while engaged in activities associated with or in support of pile driving and marine construction activities in Seward, Sitka, and Kodiak, Alaska. The applicant is a U.S. citizen as defined in § 18.27(c). A Letter of Authorization (LOA) from the U.S. Fish and Wildlife Service (FWS) is required to authorize incidental take that may occur during the specified activities.

§ 18.101 Specified geographic region where this subpart applies.

The specified geographic region for the incidental take regulations (ITR) in this subpart includes Gulf of Alaska coastal waters of three USCG facilities. The specified activities would occur in the waters and intertidal areas of the eastern shore of Resurrection Bay, Alaska, surrounding the new USCG Moorings Seward, the waters and intertidal areas of Sitka Channel, Alaska, surrounding the USCG Moorings Sitka, and the waters and intertidal areas of Womens Bay, Kodiak, Alaska, which surround the USCG Base Kodiak located on the Nyman Peninsula.

Figure 1 to § 18.101—Map of the ITR region including USCG’s Moorings Seward, Moorings Sitka, and Base Kodiak in Alaska where the activities covered by this subpart will occur.

§ 18.102 Dates this subpart is in effect.

The regulations in this subpart are effective from March 27, 2026 through March 27, 2031.

§ 18.103 Procedure to obtain a Letter of Authorization (LOA).

(a) The applicant must submit the request for an LOA to the FWS Alaska Region, Marine Mammals Management Office (MMM), MS 341, 1011 East Tudor Road, Anchorage, Alaska 99503, at least 30 days prior to the start of the specified activity.

(b) The request for an LOA must comply with the requirements set forth in §§ 18.107 through 18.109 and must include the following information:

(1) An operational plan that describes in detail the activity (e.g., type of project, methods, and types and numbers of equipment and personnel, etc.), the dates and duration of the activity, and the specific locations affected by the activity.

(2) A digital geospatial file of the project footprint.

(3) A site-specific marine mammal monitoring and mitigation plan that specifies the procedures to monitor and

mitigate the effects of the activities on sea otters.

(4) Documentation of the applicant's communication with potentially affected subsistence communities surrounding Seward, Sitka, and Kodiak and appropriate subsistence user organizations to discuss the location, timing, and methods of activities and identify and mitigate any potential conflicts with subsistence sea otter hunting activities.

(i) The applicant must specifically inquire of relevant communities and organizations if the activity will interfere with the availability of sea otters for the subsistence use of those groups.

(ii) Documentation must include a summary of any concerns identified by community members and hunter organizations and the applicant's responses to identified concerns.

(iii) A plan of cooperation (POC) may not be required for an LOA request if no concerns are raised during community consultation regarding impacts to subsistence harvest or Alaska Native communities and subsistence user organizations.

(5) A POC, if required, to mitigate potential conflicts between the activity and subsistence hunting.

§ 18.104 How the FWS will evaluate a request for an LOA.

(a) The FWS will evaluate each request for an LOA to determine if the specified activity is consistent with the analysis and findings we made during the rulemaking process for this subpart.

(1) We will determine whether the level of activity identified in the request exceeds the level that we analyzed in estimating the number of animals to be taken and evaluating whether there will be a negligible impact on the species or stock and an unmitigable adverse impact on the availability of the species or stock for subsistence uses.

(2) If the level of activity is greater, we will evaluate the potential impact of this greater level of activity to determine if the potential impact is consistent with our findings. Depending on the results of the evaluation, we may grant the requested authorization, add further conditions, or deny the request for an LOA. An LOA will be limited to a 1-year

period or less within the period set forth in § 18.102.

(b) The FWS will make decisions concerning withdrawal or suspension of an LOA (see § 18.27(f)(5) and (6)).

§ 18.105 Authorized take allowed under an LOA.

(a) To incidentally take marine mammals pursuant to the regulations in this subpart, the applicant must apply for and obtain an LOA in accordance with §§ 18.27(f), 18.103, and 18.104.

(b) An LOA issued under this subpart allows for the nonlethal, incidental, but not intentional take by harassment, as defined under section 3 of the MMPA (16 U.S.C. 1362), of sea otters during activities specified in § 18.100 within the Seward, Sitka, and Kodiak ITR region of Alaska described in § 18.101.

(c) Each LOA will set forth:

(1) Permissible methods of incidental take;

(2) Means of effecting the least practicable adverse impact on the species, its habitat, and the availability of the species for subsistence uses; and

(3) Requirements for monitoring and reporting.

(d) Allowable take under these regulations is limited to take by Level B harassment and Level A harassment (as those terms are defined at 16 U.S.C. 1362).

(e) Each LOA will identify terms and conditions for each activity and location.

§ 18.106 Prohibited take under an LOA.

(a) Except as otherwise provided in this subpart, prohibited taking includes the provisions of § 18.11 as well as: intentional take, lethal incidental take of sea otters, and any take that fails to comply with the regulations in this subpart or with the terms and conditions of an LOA.

(b) If specified activities cause unauthorized take, the holder of an LOA must:

(1) Cease activities immediately (or reduce activities to the minimum level necessary to maintain safety);

(2) Report the details of the incident within 24 hours to the FWS's MMM at 907-786-3800 (business hours) or via email at FW7_MMM_Reports@fws.gov. If the unauthorized taking results in a sea otter being injured or killed, call the FWS MMM during business hours or the Alaska SeaLife Center in Seward (1-888-774-7325, 24 hours a day);

(3) Provide photographs, video, location information, and any other available documentation related to the unauthorized take of the sea otter(s) to the FWS; and

(4) Suspend further activities until the FWS has reviewed the circumstances,

determined whether additional mitigation measures are necessary to avoid further unauthorized taking, and notified the LOA holder that project activities may resume.

§ 18.107 Mitigation.

(a) *Mitigation measures for all LOAs.* The applicant, including all personnel operating under the applicant's authority (or "operators," including contractors, subcontractors, and representatives) must undertake the following activities to avoid and minimize take of sea otters by harassment.

(1) Implement policies and procedures to avoid interactions with and minimize to the greatest extent practicable adverse impacts on sea otters, their habitat, and the availability of these marine mammals for subsistence uses.

(2) Develop avoidance and minimization policies and procedures, in cooperation with the FWS, that include temporal or spatial activity restrictions to be used in response to the presence of sea otters engaged in a biologically significant activity (e.g., resting, feeding, hauling out, mating, or nursing).

(3) Cooperate with the FWS's MMM Office and other designated Federal, State, and local agencies to monitor and mitigate the impacts of pile driving and marine construction activities on sea otters.

(4) Allow FWS personnel or the FWS's designated representative to board project vessels or visit project worksites for the purpose of monitoring impacts to sea otters and to subsistence uses of sea otters at any time throughout project activities so long as it is safe to do so.

(5) Designate trained and qualified protected species observers (PSOs) to monitor for the presence of sea otters, initiate mitigation measures, and monitor, record, and report the effects of the activities on sea otters. The applicant is responsible for providing training to PSOs to carry out mitigation and monitoring.

(6) Have an approved mitigation and monitoring plan on file with the FWS MMM and onsite that includes the following information:

(i) The type of activity and where and when the activity will occur (i.e., a summary of the plan of operation);

(ii) Personnel training policies, procedures, and materials;

(iii) Site-specific sea otter interaction risk evaluation and mitigation measures;

(iv) Sea otter avoidance and encounter procedures; and

(v) Sea otter observation and reporting procedures.

(b) *Mitigation measures for in-water noise-generating work.* The applicant must carry out the following measures:

(1) Construction activities must be conducted using equipment that generates the lowest practicable levels of in-water noise within the range of frequencies audible to sea otters.

(2) If a sea otter enters or appears likely to enter the shutdown zone, in-water activities must be shut down until either the sea otter has been visually observed outside the shutdown zone or at least 15 minutes have elapsed since the last observation time without redetection of the sea otter.

(i) During in-water activities at Seward, an acoustic shutdown zone of 85 meters (m; 280 feet [ft]) must be enforced during down-the-hole (DTH) drilling of concrete piles, and a shutdown zone of 30 m (99 ft) must be enforced during all other in-water activities.

(ii) During in-water activities at Sitka and Kodiak, regardless of predicted sound levels, a physical interaction shutdown zone of at least 20 m (66 ft) must be enforced.

(3) If the impact driver has been idled for more than 30 minutes, an initial set of three strikes from the impact driver must be delivered (at reduced energy if possible), followed by a 1-minute waiting period. This procedure will be conducted a total of three times before full-powered strikes if practicable. If unsafe working conditions during soft-starts occur (e.g., equipment failure), then the applicant may elect to discontinue soft-starts, and the applicant must notify the FWS if the soft-start procedure is discontinued.

(4) If practicable, a soft-start procedure for vibratory pile-driving activities may be implemented if the vibratory hammer has been idled for more than 30 minutes. During the soft-start procedure, initial noise generation must be limited to 15 seconds (at reduced energy if possible), followed by a 1-minute waiting period. This procedure will be conducted a total of three times before full-powered vibratory pile driving commences. If unsafe working conditions during soft-starts occur (e.g., equipment failure), then the applicant may elect to discontinue soft-starts and the applicant must notify the FWS if the soft-start procedure is discontinued.

(5) In-water activity must be conducted in daylight. If environmental conditions prevent visual detection of sea otters within the shutdown zone, in-water activities must be stopped until visibility is regained.

(6) All in-water work along the shoreline must be conducted during lower tidal conditions when the site is dewatered to the maximum extent practicable.

(7) When practicable, or when required by applicable local, State, or Federal regulations, the applicant must use containment methods (e.g., silt curtains) to isolate areas with high levels of turbidity during DTH drilling and vibroflot column installation.

(c) *Mitigation measures for vessel operations.* Vessel operators must take every precaution to avoid harassment of sea otters during vessel operations. The applicant must carry out the following measures:

(1) Vessels must maintain a minimum distance of 500 m (0.3 mile [mi]) from rafts of 10 or more sea otters unless otherwise needed for safety. If a vessel must transit within 500 m (0.3 mi) from rafts of sea otters, the vessel must travel at a reduced speed and maintain the maximum distance practicable between the vessel and raft of sea otters. Vessels must reduce speed and maintain a minimum distance of 100 m (328 ft) from all sea otters unless otherwise needed for safety.

(2) Vessels must not be operated in such a way as to separate members of a group of sea otters (two or more sea otters) from other members of the group, encircle sea otters, or impede movement of sea otters. Vessels must use established navigation channels or commonly recognized vessel traffic corridors and avoid approaching sea otters or impeding sea otter movements when traveling near the shoreline in shallow water (<20 m [<66 ft]) whenever practicable.

(3) When weather conditions require, such as when visibility drops, vessels must adjust speed accordingly to reduce the likelihood of injury to sea otters.

(4) Vessel operators must be provided written guidance for avoiding collisions and minimizing disturbances to sea otters. Guidance will include measures identified in paragraphs (c)(1) through (4) of this section.

(d) *Mitigation measures for the subsistence use of sea otters.* Holders of an LOA must conduct their activities in a manner that, to the greatest extent practicable, minimizes adverse impacts on the availability of sea otters for subsistence uses.

(1) *Community consultation.* Prior to receipt of an LOA, applicants must consult with potentially affected communities and appropriate subsistence user organizations to discuss potential conflicts with subsistence sea otter hunting caused by the location, timing, and methods of

operations and support activities (see § 18.103 for details). If community concerns suggest that the activities may have an adverse impact on the subsistence uses of this species, the applicant must address conflict avoidance issues through a POC as described in paragraph (d)(2) of this section.

(2) *Plan of cooperation.* Based on community consultations, the holder of an LOA will be required to modify their POC if directed by the FWS.

(i) The POC must include a description of the procedures by which the holder of the LOA will work and consult with potentially affected subsistence hunters and a description of specific measures that have been or will be taken to avoid or minimize interference with subsistence hunting of sea otters and to ensure continued availability of the species for subsistence use.

(ii) The FWS will review the POC to ensure that any potential adverse effects on the availability of sea otters are minimized. The FWS will reject POCs if they do not provide adequate safeguards to ensure the least practicable adverse impact on the availability of sea otters for subsistence use.

§ 18.108 Monitoring.

(a) Operators shall work with PSOs to apply mitigation measures and shall recognize the authority of PSOs up to and including stopping work, except where doing so poses a significant safety risk to personnel.

(b) Duties of PSOs include watching for and identifying sea otters, recording observation details, documenting presence in any applicable monitoring zone, identifying and documenting potential harassment, and working with operators to implement all appropriate mitigation measures.

(c) A sufficient number of PSOs will be available to meet the following criteria: 100 percent monitoring of shutdown zones during all daytime periods of in-water noise-generating work; a maximum of 4 consecutive hours on watch per PSO; a maximum of 12 hours on watch per day per PSO.

(d) All PSOs will complete a training course designed to familiarize individuals with monitoring and data collection procedures. This training will be completed prior to starting work. A field crew leader with prior experience as a sea otter observer will supervise the PSO team. Initially, new or inexperienced PSOs will be paired with experienced PSOs so that the quality of marine mammal observations and data recording is kept consistent. Resumes

for candidate PSOs will be made available for the FWS to review.

(e) The PSOs will be provided with reticule binoculars (7×50 or better), big-eye binoculars or spotting scopes (30×), inclinometers, and range finders. Field guides, instructional handbooks, maps, and a contact list will also be made available.

(f) The PSOs will monitor a pre-clearance zone for 30 minutes prior to the commencement of in-water noise-generating activities and following periods of inactivity of more than 30 minutes to ensure all sea otters are not within the shutdown zone prior to initiating or resuming in-water noise-generating activities.

(g) Observers will collect data using the following procedures:

(1) All data will be recorded onto a field form or database.

(2) Global positioning system data, sea state, tidal state, wind force, visibility, and weather condition will be recorded at the beginning and end of a monitoring period, at least every hour in between, at the change of an observer, and upon observation of sea otters.

(3) Observation records of sea otters will include date; time; the observers' locations; sea otter's heading (if moving); weather condition; visibility; number of sea otters; group composition (adults/juveniles); and the location of the sea otters (or distance and direction from the observer).

(4) Observation records will also include initial behaviors of the sea otters, descriptions of project activities and in-water noise levels being generated, the position of sea otters relative to applicable monitoring and mitigation zones, any mitigation measures applied, and any apparent reactions to the project activities before and after mitigation.

(5) For all sea otters in or near a mitigation zone, observers will record the distance from the sound source to the sea otter upon initial observation, the duration of the encounter, and the distance at last observation in order to monitor cumulative sound exposures.

(6) The PSOs will note any instances of sea otters lingering close to or traveling with vessels for prolonged periods of time.

(7) Monitoring of the shutdown zone must continue for 30 minutes following completion of in-water noise-generating activities.

§ 18.109 Reporting requirements.

(a) Operators must notify the FWS at least 48 hours prior to commencement of activities.

(b) Monthly reports will be submitted to the FWS's MMM for all months

during which noise-generating work takes place. The monthly report will contain and summarize the following information: dates, times, weather, and sea conditions (including the Beaufort Scale sea state and wind force conditions) when sea otters were observed; the number, location, distance from the sound source, and behavior of the sea otters; the associated project activities; and a description of the implementation and effectiveness of mitigation measures with a discussion of any specific behaviors the sea otters exhibited in response to mitigation.

(c) A final report will be submitted to the FWS's MMM within 90 days after the expiration of each LOA. The report will include:

(1) A summary of monitoring efforts (hours of monitoring, activities monitored, number of PSOs, and, if requested by the FWS, the daily monitoring logs).

(2) A description of all project activities, any additional work yet to be done, factors influencing visibility and detectability of marine mammals (*e.g.*, sea state, fog, glare, and number of observers), and factors correlated with the presence and distribution of sea otters (*e.g.*, weather, sea state, and project activities).

(3) An estimate will be included of the number of sea otters exposed to noise at received levels greater than or equal to Level A harassment and Level B harassment (based on visual observation).

(4) A description of changes in sea otter behavior resulting from project activities and any specific behaviors of interest.

(5) A discussion of the mitigation measures implemented during project activities and their observed effectiveness for minimizing impacts to sea otters. Sea otter observation records will be provided to the FWS in the form of electronic database or spreadsheet files.

(d) All reports must be submitted by email to FW7 MMM_Reports@fws.gov.

(e) Injured, dead, or distressed sea otters that are not associated with project activities (*e.g.*, animals known to be from outside the project area, previously wounded animals, or carcasses with moderate to advanced decomposition or scavenger damage) must be reported to the FWS within 24 hours of the discovery to either the FWS's MMM (907-786-3800, business hours); or the Alaska SeaLife Center in Seward (1-888-774-7325, 24 hours a day); or both. Photographs, video, location information, or any other available documentation must be provided to the FWS.

(f) Operators must notify the FWS upon project completion or end of the work season.

§ 18.110 Information collection requirements.

The Office of Management and Budget (OMB) has approved the information collection requirements contained in this part and assigned OMB Control Number 1018-0205. Federal agencies may not conduct or sponsor, and a person is not required to respond to, a collection of information unless it displays a currently valid OMB control number. Direct comments regarding the burden estimate or any other aspect of the information collection to the FWS Information Collection Clearance Officer at the address provided at 50 CFR 2.1(b).

Kevin Lilly,

Principal Deputy Assistant Secretary for Fish and Wildlife and Parks, Exercising the Delegated Authority of the Assistant Secretary for Fish and Wildlife and Parks.

National Oceanic and Atmospheric Administration

50 CFR Part 648

[Docket No. 260324-0089]

RIN 0648-BO34

Fisheries of the Northeastern United States; Framework Adjustment 40 to the Atlantic Sea Scallop Fishery Management Plan

AGENCY: National Marine Fisheries Service (NMFS), National Oceanic and Atmospheric Administration (NOAA), Commerce.

ACTION: Interim final rule.

SUMMARY: NMFS approves and implements Framework Adjustment 40 to the Atlantic Sea Scallop Fishery Management Plan (FMP) that establishes specifications for fishing years 2026 and 2027, including days-at-sea, limited access general category allocations, and modified area designations to optimize yield and to protect juvenile scallops. This action is necessary to prevent overfishing and improve resource yield-per-recruit and management of the fishery.

DATES: Effective April 1, 2026.

Comments must be received by April 27, 2026.

ADDRESSES: The New England Fishery Management Council (Council) has prepared a supplemental information

report (SIR) for this action that describes the measures in Framework 40. Copies of Framework 40, the SIR, and information on the economic impacts of this rulemaking are available upon request by mail from Dr. Cate O'Keefe, Executive Director, New England Fishery Management Council, 50 Water Street, Newburyport, MA 01950 and accessible via the internet at <https://www.nefmc.org/library/scallop-framework-40>. These documents and a plain language summary of this interim final rule are available at <https://www.regulations.gov/docket/NOAA-NMFS-2025-1494>. You may submit comments on the interim final rule, identified by NOAA-NMFS-2025-1494, by the following method:

Electronic Submission: Submit all electronic public comments via the Federal e-Rulemaking Portal. Go to <https://www.regulations.gov> and enter NOAA-NMFS-2025-1494 in the Search box (note: copying and pasting the FDMS Docket Number directly from this document may not yield search results). Click on the "Comment" icon, complete the required fields, and enter or attach your comments.

Instructions: Comments sent by any other method, to any other address or individual, or received after the end of the comment period may not be considered by NMFS. All comments received are a part of the public record and will generally be posted for public viewing on <https://www.regulations.gov> without change. All personal identifying information (*e.g.*, name, address), confidential business information, or otherwise sensitive information submitted voluntarily by the sender will be publicly accessible. NMFS will accept anonymous comments (enter "N/A" in the required fields if you wish to remain anonymous).

FOR FURTHER INFORMATION CONTACT: Emily Keiley, Fishery Policy Analyst, 978-281-9116, email: emily.keiley@noaa.gov.

SUPPLEMENTARY INFORMATION:

Background

The scallop fishery's management unit ranges from the shorelines of Maine through North Carolina to the outer boundary of the Exclusive Economic Zone. The Atlantic Sea Scallop FMP, established in 1982, includes a number of amendments and framework adjustments that have revised and refined the fishery's management. The Council recommends scallop fishery catch limits and other management measures through specifications or framework adjustments that occur annually or biennially. Each year, the

scallop resource is surveyed and area-specific estimates of scallop biomass are produced to support the dynamic management system. These surveys, resulting data, and analysis are critical to the development of science-driven allocations. The Council adopted Framework Adjustment 40 to the Atlantic Sea Scallop FMP on December 3, 2025. Council action on Framework 40 could not be taken until the December meeting because the data and scientific analysis required to support the action was not complete and available until the end of November 2025. The Council submitted the SIR to NMFS on February 4, 2026, for approval. To help ensure that Framework 40 is implemented as close as possible to April 1, 2026, the start of the fishing year, NMFS is implementing Framework 40 through this interim final rule and is also affording the public the opportunity to comment on this action by accepting public comment until April 27, 2026. NMFS will review all of the comments received on this interim

final rule. If substantive comments are received, and NMFS intends to make changes to the rule in response, NMFS will publish a final rule.

NMFS has approved all of the measures in Framework 40 recommended by the Council, as described below. This interim final rule implements Framework 40, which establishes (1) scallop specifications and other measures for fishing years 2026, including changes to the catch, effort, and quota allocations and adjustments to the rotational area management program, and (2) default specifications for fishing year 2027. The measures approved in this action will allow for increased scallop harvest relative to the default specifications set through Framework 39, while continuing to meet the conservation objectives of the FMP.

The default measures established in Framework 39 (90 FR 16644, April 21, 2025) would be effective if NMFS implements these measures after the start of the fishing year. The default allocations for full-time limited access

vessels and limited access general category vessels are significantly lower than the allocations in Framework 40. Additionally, the default Northern Gulf of Maine (NGOM) set-aside is higher than the Framework 40 set-aside. If this action were delayed, the Framework 40 NGOM set-aside could be exceeded within a week, resulting in overharvest of the NGOM. Overharvest of the NGOM set-aside would not only negatively impact the scallop resource, it would also trigger a pound-for-pound payback in fishing year 2027, which would reduce fishing opportunities and have negative socioeconomic impacts on the scallop fleet. Given the size of the anticipated 2027 NGOM set-aside, the overage and resulting payback could eliminate the 2027 NGOM scallop fishing season.

To evaluate the economic impact of this rule, Framework 40 measures were compared to two baselines: default measures that would be effective if this rule were not implemented and status quo (table 1).

TABLE 1—LIMITED ACCESS BASELINE CONDITIONS AND FRAMEWORK 40

	Status quo	Default measures	Framework 40
Days-at-Sea	24	18	36.
Access Area Allocations	24,000 lb	0 lb	0 lb.

Framework 40 is expected to have a positive social and economic impact on the scallop fishery compared to both the default measures that would go into effect if this action were not

implemented and the status quo. This measure will expand access to the resource and is projected to result in a cost savings benefit of \$129 million compared to the default regulation that

would go into effect in its absence. Compared to the status quo a 31 percent increase (\$56 million) in net revenues is projected from implementing the Framework 40 measures.

TABLE 2—NET SCALLOP REVENUE FOR LIMITED ACCESS VESSELS IN FY 2026 AND PERCENT CHANGE FROM THE STATUS QUO

[Revenues in million 2024 dollars, landings in million lbs.]

	Status quo	FY 2026 default (FW 39)	IFR provisions
Estimated scallop annual projected landings (APL) (before set-asides removed)	18.355	10.134	18.686
Estimated Limited Access scallop landings (94.5% net of set asides)	15.827	8.057	16.139
Average No. of Entities (2020–2024), both small and large	152	152	152
Estimated revenues for scallop APL	\$297.475	\$168.673	\$299.909
Estimated Limited Access scallop revenues	\$256.499	\$134.112	\$259.037
Estimated Net Revenue for scallop APL	\$207.060	\$133.126	\$272.055
Estimated Limited Access net scallop revenue	\$178.538	\$105.848	\$234.979
Net scallop revenue per Entity	\$1.364	\$0.877	\$1.792
Change in net revenue compared to Status Quo	0.00%	– 40.71%	31.61%

Source: Table 50, Framework 40 to the Atlantic Sea Scallop FMP SIR.

The impacts of the measures in this IFR on the target species (Atlantic sea scallops) are also expected to be positive. The OFLs and ABCs for fishing years 2026 and 2027 (default) recommended by the Scientific and Statistical Committee (SSC) are

summarized in Table 3. The 2026 and 2027 OFL and ABC values are based on the most updated survey information and model configurations. Although generally the existing and default fishing targets are set lower than the limits in this IFR, they are too liberal for

the NGOM fishery; thus the IFR measures reduce the risk of overfishing and optimize overall yield from the fishery over the long term.

Specification of Scallop Overfishing Limit (OFL), Acceptable Biological Catch (ABC), Annual Catch Limits (ACL), Annual Catch Targets (ACT), Annual Projected Landings (APL) and Set-Asides for the 2026 Fishing Year and Default Specifications for Fishing Year 2027

The OFL is based on a fishing mortality rate (F) of 0.49, equivalent to the F threshold updated through the Northeast Fisheries Science Center's most recent scallop benchmark stock assessment that was completed in 2025 (NEFSC, 2025). The ABC and the equivalent total ACL for each fishing year are based on an F of 0.36, which is the F associated with a 25-percent probability of exceeding the OFL. The SSC recommended scallop fishery ABCs of 28.1 million pounds (lb; 12,757 metric tons (mt)) for 2026 and 31.3 million lb (14,206 mt) for the 2027 fishing year, after accounting for discards and incidental mortality. In support of the development of the next

framework adjustment, the SSC will reevaluate the best available scientific information and, if warranted by the science at that time, the SSC may recommend modifications to the ABC for the 2027 fishing year.

Table 3 outlines the scallop fishery catch limits. After deducting the incidental target total allowable catch (TAC), the research set-aside (RSA), and the observer set-aside, the remaining ACL available to the fishery is allocated according to the following fleet proportions established in amendment 11 to the Atlantic Sea Scallop FMP (72 FR 20090, April 14, 2008): 94.5 percent is allocated to the limited access scallop fleet (*i.e.*, the larger "trip boat" fleet); 5 percent is allocated to the limited access general category (LAGC) individual fishing quota (IFQ) fleet (*i.e.*, the smaller "day boat" fleet); and the remaining 0.5 percent is allocated to limited access scallop vessels that also have LAGC IFQ permits. Amendment 15 (76 FR 43746, July 21, 2011) specified that buffers to

account for management uncertainty are not necessary in setting the LAGC ACLs (*i.e.*, the LAGC ACL is equal to the LAGC ACT). For the limited access fleet, the management uncertainty buffer is based on the F associated with a 75-percent probability of remaining below the F associated with ABC/ACL, which, using the updated Fs applied to the ABC/ACL, now results in an F of 0.29. Amendment 21 to the Atlantic Sea Scallop FMP (87 FR 1688, January 12, 2023) modified the ACL flowchart to account for the scallop biomass in the NGOM as part of the legal limits in the fishery by adding biomass from the area into calculations of the OFL and ABC. That action moved the accounting of the NGOM ACL from within the NGOM OFL only into the OFL and ABC/ACL for the entire fishery. In addition, Amendment 21 created the NGOM Set-Aside to support a directed LAGC fishery (including NGOM and LAGC IFQ permitted vessels) in the NGOM Management Area.

TABLE 3—SCALLOP CATCH LIMITS (mt) FOR FISHING YEARS 2026 AND 2027 FOR THE LIMITED ACCESS AND LAGC IFQ FLEETS

Catch limits	2026 (mt)	2027 (mt) ¹
OFL	19,645	21,741
ABC/ACL (discards removed)	12,757	14,206
Incidental Landings	23	23
RSA	578	578
Observer Set-Aside	128	142
NGOM Set-Aside	199	99
ACL for fishery	12,028	13,463
Limited Access ACL	11,367	12,722
LAGC Total ACL	661	740
LAGC IFQ ACL (5 percent of ACL)	601	673
Limited Access with LAGC IFQ ACL (0.5 percent of ACL)	60	67
Limited Access ACT	10,169	11,026
APL (after set-asides removed)	7,747	(¹)
Limited Access APL (94.5 percent of APL)	7,321	(¹)
Total IFQ Annual Allocation (5.5 percent of APL) ²	426	320
LAGC IFQ Annual Allocation (5 percent of APL) ²	387	290
Limited Access with LAGC IFQ Annual Allocation (0.5 percent of APL) ²	39	29

¹ The catch limits for the 2027 fishing year are subject to change through a future specifications action or framework adjustment. This includes the setting of an APL for 2027 that will be based on the 2026 annual scallop surveys.

² As a precautionary measure, the 2027 IFQ and annual allocations are set at 75 percent of the 2026 IFQ Annual Allocations.

Research Set-Aside

This action deducts 1.275 million lb (578 mt) of scallops annually for 2026 and 2027 from the ABC for use as the Scallop RSA to fund scallop research. Vessels participating in Scallop RSA are compensated through the sale of scallops harvested under RSA projects. Of the 1.275 million-lb (578-mt) 2026 allocation, NMFS has already allocated 482,631 lb (218,918 kg) to previously-funded multi-year projects as part of the 2024 and 2025 RSA awards processes.

This action allows vessels participating in RSA projects to harvest

RSA compensation from the open bottom. No access areas have been allocated for RSA compensation fishing (see explanation of access areas below).

Vessels are prohibited from fishing for RSA compensation in the NGOM, unless the vessel is fishing on an RSA compensation trip using NGOM RSA allocation that was awarded to an RSA project. Lastly, Framework 40 prohibits the harvest of RSA from any rotational area under default 2027 measures. Until a new framework measure is published prior to the 2027 fishing year, RSA compensation may only be harvested

from open areas. The Council and NMFS will re-evaluate this default prohibition measure in the action that would set final 2027 specifications.

Observer Set-Aside

This action deducts one percent of the ABC for the industry-funded observer program to help defray the cost to scallop vessels that carry an observer. When a scallop vessel carries an observer, the vessel is allocated additional days-at-sea (DAS) or quota from the observer set-aside. This additional allocation is intended to help

defray the out-of-pocket costs paid by the vessel for the observer coverage. The observer set-aside is 282,192 lb (128 mt) for 2026 and 313,056 lb (142 mt) for 2027. The Council may adjust the 2027 observer set-aside when it develops specific, non-default measures for 2027.

Open Area Days-at-Sea (DAS) Allocations

This action implements vessel-specific DAS allocations for each of the three limited access scallop DAS permit categories (*i.e.*, full-time, part-time, and occasional) for 2026 and 2027 (table 2). The 2026 DAS allocations are more than those allocated to the limited access fleet in 2025. Framework 40 sets 2027 DAS allocations at 75 percent of fishing year 2026 DAS allocations as a precautionary measure to avoid over-allocating DAS to the fleet in the event that the 2027 specifications action is delayed past the start of the 2027 fishing year. The allocations in table 4 exclude any DAS deductions that are required if the limited access scallop fleet exceeds its 2025 sub-ACL.

TABLE 4—SCALLOP OPEN AREA DAS ALLOCATIONS FOR 2026 AND DEFAULT 2027

Permit category	2026	2027 (default)
Full-Time	36	27
Part-Time	14.4	10.8
Occasional	3	2.25

Changes to Fishing Year 2026 Sea Scallop Rotational Area Program—Access Areas

The formal access area rotational program was established in 2003 to promote optimal yield in the fishery. Under the rotation program, areas with large concentrations of fast-growing, small scallops are closed before the scallops are exposed to fishing. Scallops grow fastest when they are very small and protection of these small scallops through area closures is critical in the rotational management of the scallop resource. After a period of closure, and after evaluation according to the criteria and procedures established in the FMP, the areas can be re-opened for scallop fishing when the scallops are larger and more suitable for harvest. This process boosts scallop meat yield and yield per recruit. When the areas are open for access (*i.e.*, “access areas”), vessels are allocated a number of trips with corresponding trip limits that they may use in those dedicated access areas. Once the high concentrations of scallops in an access area have been fished down, the area may be closed if it appears that the resource will rebound in a few years after protecting any small scallops that may be there, or it could be converted back to an “open area.” where limited access vessels fish for scallops under DAS allocations and LAGC IFQ vessels can fish open area trip limits.

Framework 40 does not open any access areas for fishing year 2026 or identify any access areas that are anticipated to be opened in 2027. The 2025 scallop surveys suggest that there

are no areas of high-density scallops that can support rotational fishing in 2026 comparable to recent years (*i.e.*, access area allocations of 12,000 lb (5,443 kg) or more).

Changes to Fishing Year 2026 Sea Scallop Rotational Area Program—Closed Areas

Framework 40 maintains the closure of Nantucket Lightship-North and Nantucket Lightship-South (table 3) and closes Area II (table 4).

The continued closure of the Nantucket Lightship-North and Nantucket Lightship-South is anticipated to optimize growth of juvenile scallops on Georges Bank with the expectation of supporting scallop fishing in the future. Scallops in the Nantucket Lightship-South are in very high densities and are likely to recruit to the 4-inch ring by the 2027 fishing year. This recruitment event appears to extend up to the boundary with the Nantucket Lightship-North, and a continued closure is expected to help further protect these animals. The growth potential for these juveniles is high if they survive over the next several years. The continued closure of the Nantucket Lightship-North and Nantucket Lightship-South to scallop fishing is intended to support the growth of this cohort of scallops in the absence of fishing pressure.

The closure of Area II allows for the recovery of the area after 6 years of rotational fishing and protect moderate densities of small scallops in the Area II-Extension observed in the 2025 surveys.

TABLE 5—NANTUCKET LIGHTSHIP SCALLOP ROTATIONAL AREA

Point	Latitude	Longitude

² From Point AII2 connected to Point AII3 along the U.S.-Canada Maritime Boundary.

³ The intersection of 40°40' N Lat. and the U.S.-Canada Maritime Boundary, approximately 40°40' N Lat. and 65°52.61' W Long.

Elephant Trunk Closure Converting to Open Area

Framework 40 opens the Elephant Trunk area, which was closed during the 2025 fishing year to allow growth of small scallops observed in the 2024 surveys. The area no longer meets the criteria for either closure or controlled access as defined in 50 CFR 648.55(a)(6). This area is becoming part of the open area and can be fished as part of the DAS program or on LAGC IFQ open area beginning on April 1, 2026.

Area I Rotational Area Converting to Open Area

Framework 40 will revert the Area I Rotational Area to the open area. This area was previously managed as part of the area rotation program; however, there is not enough biomass to support rotational access, nor was there enough recruitment seen in the 2025 annual survey to support keeping this area as part of the program. The area no longer meets the criteria for either closure or controlled access as defined in § 648.55(a)(6). This area will become part of the open area and could be fished as part of the DAS program or on LAGC IFQ open area trips after the 60-day carryover period, *i.e.*, after May 30, 2026.

LAGC Measures

1. ACL and IFQ Allocation for LAGC Vessels With IFQ-Only Permits

This action implements a 1.325 million-lb (601-mt) ACL for 2026, and a 1.484 million-lb (673-mt) default ACL for 2027, for LAGC vessels with IFQ permits (see table 1). These sub-ACLs provide a ceiling on overall landings by the LAGC IFQ fleet. If the fleet were to

exceed this ceiling, any overages would be deducted from the following year's sub-ACL. Framework Adjustment 28 to the FMP (82 FR 15155, March 27, 2017) changed the way the LAGC IFQ allocations are set from a percentage of the ACL to a percentage of the APL. The purpose of this change was to help ensure that the allocation of potential catch between the fleets is more consistent with the concept of spatial management by allocating catch to the LAGC IFQ fleet based on harvestable scallops, all of which are in fishable areas, instead of total biomass, some of which is located in closed areas and unavailable for harvest. Since Framework 28 was implemented in 2017, the LAGC IFQ allocation has been equal to 5.5 percent of the projected landings (5 percent for LAGC IFQ vessels and 0.5 percent for LAGC IFQ vessels that also have a limited access scallop permit). The annual allocation to the LAGC IFQ-only fleet for fishing years 2026 and 2027 based on APL is 853,189 lb (387 mt) for 2026 and 639,341 lb (290 mt) for 2027 (see table 1). Each vessel's IFQ will be calculated from these allocations based on APL.

2. ACL and IFQ Allocation for Limited Access Scallop Vessels With IFQ Permits

This action implements a 132,277-lb (60-mt) ACL for 2026 and a default 147,710-lb (67-mt) ACL for 2027 for limited access scallop vessels with IFQ permits (see table 1). These sub-ACLs provide a ceiling on overall landings by this fleet. If the fleet were to reach this ceiling, any overages would be deducted from the following year's sub-ACL. The annual allocation to limited access scallop vessels with IFQ permits is 85,980 lb (39 mt) for 2026 and 63,934

lb (29 mt) for 2027 (see table 1). Each vessel's IFQ will be calculated from these allocations based on APL. NMFS will notify IFQ permit holders of their Framework 40 IFQ allocations.

3. NGOM Scallop Fishery Landing Limits

This action implements a total allowable landing limit (TAL) in the NGOM of 482,753 lb (218,973 kg) for fishing year 2026. This action deducts 25,000 lb (11,340 kg) of scallops annually for 2026 and 2027 from the NGOM TAL to increase the overall Scallop RSA to fund scallop research. In addition, this action deducts one percent of the NGOM ABC from the NGOM TAL for fishing years 2026 and 2027 to support the industry-funded observer program to help defray the cost to scallop vessels that carry an observer (table 7).

Amendment 21 developed landing limits for all permit categories in the NGOM and established an 800,000-lb (362,874-kg) NGOM Set-Aside trigger for the NGOM directed fishery, with a sharing agreement for access by all permit categories for allocation above the trigger. Allocation above the trigger (*i.e.*, the NGOM APL) is split 5 percent for the NGOM fleet and 95 percent for limited access and LAGC IFQ fleets. Framework 40 sets a NGOM Set-Aside of 437,867 lb (198,613 kg) for fishing year 2026 and a default NGOM Set-Aside of 219,934 lb (99,760 kg) for fishing year 2027. Because the NGOM Set-Aside for fishing years 2026 and 2027 is below the 800,000-lb (362,874-kg) trigger, Framework 40 does not allocate any landings to the NGOM APL. Table 10 describes the breakdown of the NGOM TAL for the 2026 and 2027 (default) fishing years.

TABLE 7—NGOM SCALLOP FISHERY LANDING LIMITS FOR FISHING YEAR 2026 AND 2027

Landings limits	2026		2027 ¹	
	lb	kg	lb	kg
NGOM TAL	482,753	218,973		
1 percent NGOM ABC for Observers	19,886	9,020		
RSA Contribution	25,000	11,340	25,000	11,340
NGOM Set-Aside	437,867	198,613	219,934	99,760
NGOM APL	(²)	(²)	(²)	(²)

¹ The catch limits for the 2027 fishing year are subject to change through a future specifications action or framework adjustment. This includes the setting of an APL for 2027 that will be based on the 2026 annual scallop surveys.

² NGOM APL is set when the NGOM Set-Aside is above 800,000 lb (362,874 kg).

4. Scallop Incidental Landings Target TAL

This action sets a 50,000-lb (22,680-kg) scallop incidental landings target TAL for each respective fishing year, 2026 and 2027, to account for mortality

from vessels that catch scallops while fishing for other species and ensure that F targets are not exceeded. The Council and NMFS may adjust this target TAC in a future action if vessels catch more

scallops under the incidental target TAC than predicted.

Classification

Pursuant to section 304(b)(1)(A) of the Magnuson-Stevens Fishery Conservation and Management Act

(Magnuson-Stevens Act), the NMFS Assistant Administrator has determined that this interim final rule is consistent with the FMP, other provisions of the Magnuson-Stevens Act and other applicable law.

Executive Order 12866

This interim final rule has been determined to be economically significant under Executive Order 12866.

Executive Order 14192

This interim final rule is a routine fishing action exempt from E.O. 14192.

Executive Order 13175

NMFS has determined that this action would not have a substantial direct effect on one or more Indian Tribes, on the relationship between the Federal Government and Indian Tribes, or on the distribution of power and responsibilities between the Federal Government and Indian Tribes; therefore, consultation with Tribal officials under E.O. 13175 is not required, and the requirements of sections (5)(b) and (5)(c) of E.O. 13175 also do not apply. A Tribal summary impact statement under section (5)(b)(2)(B) and section (5)(c)(2) of E.O. 13175 is not required and has not been prepared.

Administrative Procedure Act

The Assistant Administrator for Fisheries has determined under 5 U.S.C. 553(b) that it is contrary to the public interest to provide for prior notice for this action. It is necessary to implement the measures of this rule in an expedited manner to achieve conservation objectives for the scallop fishery. Similarly, the need to implement these measures in a timely manner constitutes good cause, under authority contained in 5 U.S.C. 553(d)(3), to waive the 30-day delay in the date of effectiveness and to make Framework 40 measures effective as soon as possible.

Need for the Rule

Without this rule, on April 1, 2026, the default specifications would be effective for the scallop fishery. The default specifications were previously approved in Framework 39. At the time Framework 39 and its 2026 default specifications were developed, NMFS did not have the survey and assessment information that is now available, and the default specifications do not appropriately allocate scallop effort relative to updated scientific information. Based upon the current best available science, the default

regulations are too restrictive for the limited access and LAGC fleets and too liberal for the NGOM fishery. If this rule were delayed and default specifications were put into place, both of these scenarios would have negative impacts on the resource and fishery.

Limited Access and Limited Access General Category Fisheries

Because most of the default specifications are more conservative than those that would be implemented in Framework 40, delaying the implementation of this action to allow prior notice and opportunity for public comment or a 30-day delay in effective date would be contrary to the public interest because it would cause the scallop fleet to lose the positive economic benefits of immediate implementation and could also negatively impact the area rotation program by delaying fishing in areas where scallops are more abundant. There is good cause to immediately implement the rule rather than delay the effective date by 30-days because this action provides full-time limited access vessels with an additional 18 DAS (36 DAS total), and LAGC IFQ vessels will receive an additional 89-mt (426-mt total) of allocation. Framework 40 will also open the Elephant Trunk area and convert Area I to open bottom. Opening both of these areas provides more access and opportunity for the scallop fleet to fish in areas of higher scallop densities; increased access area flexibility is critical to supporting the scallop industry. Framework 40 could not have been put into place sooner to allow for a 30-day delayed effectiveness because the information and data necessary for the Council to develop the framework were not available in time for this action to be forwarded to NMFS and implemented by April 1, 2026, the beginning of the scallop fishing year. Additionally, because this rule relieves restrictions by increasing these allocations, it is not subject to the 30-day delayed effectiveness provision of the APA pursuant to 5 U.S.C. 553(d)(1).

Northern Gulf of Maine

The 2026 NGOM set-aside implemented by this action is 437,867 lb (198,613 kg), which is lower than the default 2026 NGOM set-aside by 69,196 lb (31,387 kg). If there were a delay in the implementation of this rule, beyond April 1, 2026, there is a high likelihood that the 2026 NGOM set-aside established in Framework 40 would be exceeded within a week of the start of the scallop fishing year. Not only would this result in localized overharvest of the NGOM scallop fishery, it would also

have negative socio-economic impacts on the scallop fishery. An overage of the NGOM set-aside would trigger the accountability measure and require a pound-for-pound pay back as soon as practicable, likely in the 2027 fishing year. The overage payback would result in a significantly lower 2027 NGOM set-aside and diminished opportunity for the scallop fleet in 2027, possibly eliminating scallop fishing in the area in 2027 altogether. Recent biomass trends suggest the 2027 NGOM set-aside could be lower than previous years, exacerbating the effect of any accountability measure. Delaying the implementation of this action to allow prior notice and opportunity for public comment or a 30-day delay in effective date would be contrary to the public interest because it would cause the scallop fleet to lose the future economic benefits and could also negatively impact the scallop resource in the NGOM.

Regulatory Flexibility Act

Because prior notice and opportunity for public comment are not required for this rule by 5 U.S.C. 553, or any other law, the analytical requirements of the Regulatory Flexibility Act, 5 U.S.C. 601 *et seq.*, are inapplicable.

Paperwork Reduction Act

This final rule contains no information collection requirements under the Paperwork Reduction Act of 1995.

List of Subjects 50 CFR Part 648

Fisheries, Fishing, Recordkeeping and reporting requirements.

Dated: March 24, 2026.

Samuel D. Rauch III,

Deputy Assistant Administrator for Regulatory Programs, National Marine Fisheries Service.

For the reasons set out in the preamble, NMFS amends 50 CFR part 648 as follows:

PART 648—FISHERIES OF THE NORTHEASTERN UNITED STATES

■ 1. The authority citation for part 648 continues to read as follows:

Authority: 16 U.S.C. 1801 *et seq.*

Subpart D—Management Measures for the Atlantic Sea Scallop Fishery

■ 2. In § 648.53, revise paragraphs (a)(9), (b)(3), (c)(1), and (c)(2) to read as follows:

§ 648.53 Overfishing limit (OFL), acceptable biological catch (ABC), annual catch limits (ACL), annual catch targets (ACT), annual projected landings (APL), DAS allocations, and individual fishing quotas (IFQ).

(a) * * *

(9) *Scallop fishery catch limits.* The following catch limits will be effective for the 2026 and 2027 fishing years:

TABLE 1 TO PARAGRAPH (a)(9)—SCALLOP FISHERY CATCH LIMITS

Catch limits	2026 (mt)	2027 (mt) ¹
OFL	19,645	21,741
ABC/ACL (discards removed)	12,757	14,206
Incidental Landings	23	23
RSA	578	578
Observer Set-Aside	128	142
NGOM Set-Aside	199	99
ACL for fishery	12,028	13,463
Limited Access ACL	11,367	12,722
LAGC Total ACL	661	740
LAGC IFQ ACL (5 percent of ACL)	601	673
Limited Access with LAGC IFQ ACL (0.5 percent of ACL)	60	67
Limited Access ACT	10,169	11,026
APL (after set-asides removed)	7,747	(¹)
Limited Access APL (94.5 percent of APL)	7,321	(¹)
Total IFQ Annual Allocation (5.5 percent of APL) ²	426	320
LAGC IFQ Annual Allocation (5 percent of APL) ²	387	290
Limited Access with LAGC IFQ Annual Allocation (0.5 percent of APL) ²	39	29

¹ The catch limits for the 2027 fishing year are subject to change through a future specifications action or framework adjustment. This includes the setting of an APL for 2027 that will be based on the 2026 annual scallop surveys. The 2027 default allocations for the limited access component are defined for DAS in paragraph (b)(3) of this section and for access areas in § 648.59(b)(3)(i)(B).

² As specified in paragraph (a)(6)(iii)(B) of this section, the 2027 IFQ annual allocations are set at 75 percent of the 2026 IFQ Annual Allocations.

(b) * * *

(3) *DAS allocations.* The DAS allocations for limited access scallop vessels for fishing years 2026 and 2027 are as follows:

TABLE 2 TO PARAGRAPH (b)(3)—SCALLOP OPEN AREA DAS ALLOCATIONS

Permit category	2026	2027 ¹
Full-Time	36	27
Part-Time	14.4	10.8
Occasional	3	2.25

¹ The DAS allocations for the 2027 fishing year are subject to change through a future specifications action or framework adjustment. The 2027 DAS allocations are set at 75 percent of the 2026 allocation as a precautionary measure.

* * * * *

(c) * * *

(1) *Limited access AM exception.* If NMFS determines that the fishing mortality rate associated with the limited access fleet's landings in a fishing year is less than 0.29, the AM specified in paragraph (c) of this section shall not take effect. The fishing mortality rate of 0.29 is the fishing mortality rate that is one standard deviation below the fishing mortality rate for the scallop fishery ACL, currently estimated at 0.36.

(2) *Limited access fleet AM and exception provision timing.* The Regional Administrator shall determine whether the limited access fleet exceeded its sub-ACL, defined in paragraph (a)(5) of this section, by July of the fishing year following the year for which landings are being evaluated. On or about July 1, the Regional Administrator shall notify the New England Fishery Management Council of the determination of whether or not the sub-ACL for the limited access fleet was exceeded, and the number of landings in excess of the sub-ACL. Upon this notification, the Scallop Plan Development Team (PDT) shall evaluate the overage and determine if the fishing mortality rate associated with total landings by the limited access scallop fleet is less than 0.29. On or about September 1 of each year, the Scallop PDT shall notify the Council of its determination, and the Council, on or about September 30, shall make a recommendation, based on the Scallop PDT findings, concerning whether to invoke the limited access AM exception. If NMFS concurs with the Scallop PDT's recommendation to invoke the limited access AM exception, in accordance with the Administrative Procedure Act (APA), the limited access AM shall not be implemented. If NMFS does not

concur, in accordance with the APA, the limited access AM shall be implemented as soon as possible after September 30 each year.

* * * * *

- 3. Amend § 648.59 by
- a. Removing and reserving paragraph (a)(2)(i) and;
- b. Revising paragraphs (b)(3)(i)(B), (c), (e), and (g)(3)(v);

The revisions read as follows:

§ 648.59 Sea Scallop Rotational Area Management Program and Access Area Program requirements.

(b) * * *

(3) * * *

(i) * * *

(B) There are no scallop rotational areas available for continuous transit for the 2026 and 2027 fishing years.

* * * * *

(c) *Scallop Access Area scallop allocation carryover.* With the exception of vessels that held a Confirmation of Permit History as described in § 648.4(a)(2)(i)(J) for the entire fishing year preceding the carry-over year, a limited access scallop vessel may fish any unharvested Scallop Access Area allocation from a given fishing year within the first 60 days the access area is open in the subsequent fishing year, unless otherwise specified in this section. However, the vessel may not

exceed the Scallop Rotational Area trip possession limit. For example, if a full-time vessel has 7,000 lb (3,175 kg) remaining in the Area II Access Area at the end of fishing year 2025, that vessel may harvest those 7,000 lb (3,175 kg) during the first 60 days that the Area II Access Area is open in fishing year 2026. Area II will be open for carry-over fishing from May 15, 2026, through July 13, 2026. Area I will be open for carry-over fishing from April 1, 2026, through May 30, 2026.

* * * * *

(e) *Sea Scallop Research Set-Aside Harvest in Scallop Access Areas.* Unless otherwise specified, RSA may be harvested in any access area that is open in a given fishing year, as specified

through a specifications action or framework adjustment and pursuant to § 648.56. The amount of scallops that can be harvested in each access area by vessels participating in approved RSA projects shall be determined through the RSA application review and approval process. The access areas open for RSA harvest for fishing years 2026 and 2027 are:

- (1) 2026. No access areas.
(2) 2027. No access areas.

* * * * *

- (g) * * *
(3) * * *

(v) *LAGC IFQ access area allocations.*

There are no LAGC IFQ access area trip allocations for the 2026 and 2027 fishing years.

* * * * *

■ 4. Amend § 648.60 by:

■ a. Removing and reserving paragraphs (a) and (b);

■ b. Redesignating table 3 to paragraph (g)(1) as table 1 to paragraph (g)(1).

■ c. Revising paragraph (h);

The revision read as follows:

§ 648.60 Sea Scallop Rotational Areas.

* * * * *

(h) *Area II Scallop Rotational Area boundary.* The Area II Scallop Rotational Area is defined by straight lines connecting the following points in the order stated (copies of a chart depicting this area are available from the Regional Administrator upon request):

TABLE 2 TO PARAGRAPH (h)

Point	N latitude	W longitude	Note
All1	41°30'	67°20'	
All2	41°30'	(a)	(b)
All3	40°40'	(c)	(b)
All4	40°40'	67°20'	
All1	41°30'	67°20'	

^a The intersection of lat. 41°30' N and the United States-Canada Maritime Boundary, approximately lat. 41°30' N, long. 66°34.73' W.

^b From Point All2 connected to Point All3 along the United States-Canada Maritime Boundary.

^c The intersection of lat. 40°40' N and the United States-Canada Maritime Boundary, approximately lat. 40°40' N and long. 65°52.61' W.

* * * * *

■ 5. Amend § 648.62 by:

■ a. Revising paragraph (b)(1); and

■ b. Removing paragraph (e).

The revision read as follows:

§ 648.62 Northern Gulf of Maine (NGOM) Management Program.

(b) * * *

(1) The following landings limits will be effective for the NGOM for the 2026 and 2027 fishing years.

TABLE 1 TO PARAGRAPH (b)(1)

Landings limits	2026	2027 ^a
NGOM TAL	482,753	
1 percent NGOM ABC for Observers	19,886	
RSA Contribution	25,000	25,000
NGOM Set-Aside	437,867	219,934
NGOM APL	(b)	(b)

^a The landings limits for the 2027 fishing year are subject to change through a future specifications action or framework adjustment. This includes the setting of an APL for 2027 that will be based on the 2026 annual scallop surveys.

^b NGOM APL is set when the NGOM Set-Aside is above 800,000 lb (362,874 kg).

BILLING CODE 3510-22-P

Proposed Rules

Federal Register

Vol. 91, No. 59

Friday, March 27, 2026

This section of the FEDERAL REGISTER contains notices to the public of the proposed issuance of rules and regulations. The purpose of these notices is to give interested persons an opportunity to participate in the rule making prior to the adoption of the final rules.

ENVIRONMENTAL PROTECTION AGENCY

40 CFR Part 751

[EPA-HQ-OPPT-2026-0992; FRL-13023-01-OCSPP]

RIN 2070-AL37

Perchloroethylene (PCE) and Carbon Tetrachloride (CTC); Regulation Under the Toxic Substances Control Act (TSCA); Compliance Date Extensions

AGENCY: Environmental Protection Agency (EPA).

ACTION: Proposed rule.

SUMMARY: The Environmental Protection Agency (EPA or Agency) is proposing to extend certain compliance dates applicable to certain entities subject to the regulation of perchloroethylene (PCE) and carbon tetrachloride (CTC) under the Toxic Substances Control Act (TSCA). EPA is proposing to extend certain Workplace Chemical Protection Program (WCPP) compliance dates for non-federal owners and operators to match the compliance dates for federal agencies and their contractors. For both PCE and CTC, this proposal would extend the compliance date for initial monitoring for inhalation exposure to June 21, 2027, and extend the compliance date to meet the existing chemical exposure limit (ECEL), establish a regulated area, provide any required respiratory personal protective equipment (PPE), and establish a respiratory PPE program to September 20, 2027. For PCE, EPA is also proposing to extend the compliance date for non-federal entities to establish and implement an exposure control plan to December 20, 2027.

DATES: Comments must be received on or before April 27, 2026.

ADDRESSES: Submit your comments, identified by docket identification (ID) number EPA-HQ-OPPT-2026-0992, using the Federal eRulemaking Portal at <https://www.regulations.gov>. Follow the online instructions for submitting comments. Do not submit electronically

any information you consider to be Confidential Business Information (CBI) or other information whose disclosure is restricted by statute. Additional instructions on commenting or visiting the docket, along with more information about dockets generally, is available at <https://www.epa.gov/dockets/>.

For technical information contact: Bennett Thompson, Existing Chemicals Risk Management Division, Office of Pollution Prevention and Toxics, Environmental Protection Agency, 1200 Pennsylvania Ave. NW, Washington, DC 20460-0001; telephone number: (202) 564-1071; email address: PCE.TSCA@epa.gov and CarbonTetrachlorideTSCA@epa.gov.

For general information contact: The TSCA Assistance Information Service Hotline, Goodwill Vision Enterprises, 422 South Clinton Ave., Rochester, NY 14620; telephone number: (800) 471-7127 or (202) 554-1404; email address: TSCA-Hotline@epa.gov.

SUPPLEMENTARY INFORMATION:

I. Executive Summary

A. Does this action apply to me?

You may be potentially affected by this rule if you manufacture, process, distribute in commerce, use, or dispose of PCE, CTC, or products containing these chemicals. TSCA section 3(9) defines the term “manufacture” to mean “to import into customs territory of the United States (as defined in general note 2 of the Harmonized Tariff Schedule of the United States), produce, or manufacture.” Therefore, unless expressly stated otherwise, importers of PCE and CTC are subject to provisions regulating manufacture of PCE and CTC once the chemical enters the customs territory of the United States. Under the following list of North American Industrial Classification System (NAICS) codes, potentially affected entities may include:

- Chemical Manufacturing (NAICS code 325);
- Nonmetallic Mineral Product Manufacturing (NAICS code 327);
- Primary Metal Manufacturing (NAICS code 331);
- Waste Management and Remediation Services (NAICS code 562);
- Crude Petroleum Extraction (NAICS code 21120).

- Support Activities for Oil and Gas Operations (NAICS code 213112).

- Nonwoven Fabric Mills (NAICS code 313230).

- Wood Window and Door Manufacturing (NAICS code 321911).

- Paper Bag and Coated and Treated Paper Manufacturing (NAICS code 322220).

- Commercial Screen Printing (NAICS code 323113).

- Petroleum Refineries (NAICS code 324110).

- Petroleum Lubricating Oil and Grease Manufacturing (NAICS code 324191).

- Petrochemical Manufacturing (NAICS code 325110).

- Industrial Gas Manufacturing (NAICS code 325120).

- Other Basic Inorganic Chemical Manufacturing (NAICS code 325180).

- Cyclic Crude, Intermediate, and Gum and Wood Chemical

- Manufacturing (NAICS code 325194);

- All Other Basic Organic Chemical Manufacturing (NAICS code 325199).

- Plastics Material and Resin

- Manufacturing (NAICS code 325211).

- Synthetic Rubber Manufacturing (NAICS code 325212).

- Pesticide and Other Agricultural Chemical Manufacturing (NAICS code 325320);

- Paint and Coating Manufacturing (NAICS code 325510).

- Adhesive Manufacturing (NAICS code 325520).

- Soap and Other Detergent

- Manufacturing (NAICS code 325611).

- Polish and Other Sanitation Good Manufacturing (NAICS code 325612).

- All Other Miscellaneous Chemical Product and Preparation Manufacturing (NAICS code 325998).

- Unlaminated Plastics Film and Sheet (except Packaging) Manufacturing (NAICS code 326113).

- All Other Plastics Product Manufacturing (NAICS code 326199).

- Rubber and Plastics Hoses and Belting Manufacturing (NAICS code 326220).

- Rubber Product Manufacturing for Mechanical Use (NAICS code 326291).

- All Other Rubber Product Manufacturing (NAICS code 326299).

- Pottery, Ceramics, and Plumbing Fixture Manufacturing (NAICS code 327110).

- Glass Container Manufacturing (NAICS code 327213).

- Cement Manufacturing (NAICS code 327310).
- Ground or Treated Mineral and Earth Manufacturing (NAICS code 327992);
- Nonferrous Metal (except Aluminum) Smelting and Refining (NAICS code 331410);
- Secondary Smelting, Refining, and Alloying of Nonferrous Metal (except Copper and Aluminum) (NAICS code 331492).
- Metal Crown, Closure, and Other Metal Stamping (except Automotive) (NAICS code 332119).
- Metal Kitchen Cookware, Utensil, Cutlery, and Flatware (except Precious) Manufacturing (NAICS code 332215).
- Saw Blade and Handtool Manufacturing (NAICS code 332216).
- Other Fabricated Wire Product Manufacturing (NAICS code 332618).
- Metal Heat Treating (NAICS code 332811).
- Metal Coating, Engraving (except Jewelry and Silverware), and Allied Services to Manufacturers (NAICS code 332812).
- Electroplating, Plating, Polishing, Anodizing, and Coloring (NAICS code 332813).
- Industrial Valve Manufacturing (NAICS code 332911).
- Fluid Power Valve and Hose Fitting Manufacturing (NAICS code 332912).
- Plumbing Fixture Fitting and Trim Manufacturing (NAICS code 332913).
- Other Metal Valve and Pipe Fitting Manufacturing (NAICS code 332919).
- Ball and Roller Bearing Manufacturing (NAICS code 332991).
- Small Arms Ammunition Manufacturing (NAICS code 332992).
- Ammunition (except Small Arms) Manufacturing (NAICS code 332993).
- Small Arms, Ordnance, and Ordnance Accessories Manufacturing (NAICS code 332994).
- Fabricated Pipe and Pipe Fitting Manufacturing (NAICS code 332996).
- All Other Miscellaneous Fabricated Metal Product Manufacturing (NAICS code 332999).
- Other Industrial Machinery Manufacturing (NAICS code 333249).
- Air-Conditioning and Warm Air Heating Equipment and Commercial and Industrial Refrigeration Equipment Manufacturing (NAICS code 333415).
- Machine Tool Manufacturing (NAICS code 333517).
- Measuring, Dispensing, and Other Pumping Equipment Manufacturing (NAICS code 333914).
- Welding and Soldering Equipment Manufacturing (NAICS code 333992).
- Packaging Machinery Manufacturing (NAICS code 333993).
- Industrial Process Furnace and Oven Manufacturing (NAICS code 333994).
- Fluid Power Cylinder and Actuator Manufacturing (NAICS code 333995).
- Fluid Power Pump and Motor Manufacturing (NAICS code 333996).
- All Other Miscellaneous General Purpose Machinery Manufacturing (NAICS code 333999).
- Instruments and Related Products Manufacturing for Measuring, Displaying, and Controlling Industrial Process Variables (NAICS code 334513).
- Analytical Laboratory Instrument Manufacturing (NAICS code 334516).
- Motor Vehicle Body Manufacturing (NAICS code 336211).
- Travel Trailer and Camper Manufacturing (NAICS code 336214).
- Other Motor Vehicle Parts Manufacturing (NAICS code 336390).
- Aircraft Manufacturing (NAICS code 336411).
- Aircraft Engine and Engine Parts Manufacturing (NAICS code 336412).
- Other Aircraft Parts and Auxiliary Equipment Manufacturing (NAICS code 336413).
- Guided Missile and Space Vehicle Manufacturing (NAICS code 336414).
- Guided Missile and Space Vehicle Propulsion Unit and Propulsion Unit Parts Manufacturing (NAICS code 336415).
- Other Guided Missile and Space Vehicle Parts and Auxiliary Equipment Manufacturing (NAICS code 336419).
- Ship Building and Repairing (NAICS code 336611).
- Surgical and Medical Instrument Manufacturing (NAICS code 339112).
- Jewelry and Silverware Manufacturing (NAICS code 339910).
- Sporting and Athletic Goods Manufacturing (NAICS code 339920).
- Doll, Toy, and Game Manufacturing (NAICS code 339930).
- Office Supplies (except Paper) Manufacturing (NAICS code 339940).
- Gasket, Packing, and Sealing Device Manufacturing (NAICS code 339991).
- Musical Instrument Manufacturing (NAICS code 339992).
- Fastener, Button, Needle, and Pin Manufacturing (NAICS code 339993).
- Broom, Brush, and Mop Manufacturing (NAICS code 339994).
- Burial Casket Manufacturing (NAICS code 339995).
- All Other Miscellaneous Manufacturing (NAICS code 339999).
- Motor Vehicle Supplies and New Parts Merchant Wholesalers (NAICS code 423120).
- Home Furnishing Merchant Wholesalers (NAICS code 423220).
- Industrial Supplies Merchant Wholesalers (NAICS code 423840).
- Service Establishment Equipment and Supplies Merchant Wholesalers (NAICS code 423850).
- Other Miscellaneous Durable Goods Merchant Wholesalers (NAICS code 423990).
- Grain and Field Bean Merchant Wholesalers (NAICS code 424510).
- Other Chemical and Allied Products Merchant Wholesalers (NAICS code 424690).
- Petroleum Bulk Stations and Terminals (NAICS code 424710).
- Petroleum and Petroleum Products Merchant Wholesalers (except Bulk Stations and Terminals) (NAICS code 424720).
- New Car Dealers (NAICS code 441110).
- Used Car Dealers (NAICS code 441120).
- Other Gasoline Stations (NAICS code 447190).
- Sporting Goods Stores (NAICS code 451110).
- All Other Miscellaneous Store Retailers (except Tobacco Stores) (NAICS code 453998).
- Scheduled Passenger Air Transportation (NAICS code 481111).
- Scheduled Freight Air Transportation (NAICS code 481112).
- Pipeline Transportation of Natural Gas (NAICS code 486210).
- Teleproduction and Other Postproduction Services (NAICS code 512191).
- Other Motion Picture and Video Industries (NAICS code 512199).
- Miscellaneous Intermediation (NAICS code 523910).
- Other Financial Vehicles (NAICS code 525990).
- Lessors of Other Real Estate Property (NAICS code 531190).
- Offices of Real Estate Agents and Brokers (NAICS code 531210).
- Testing Laboratories (NAICS code 541380).
- Research and Development in the Physical, Engineering, and Life Sciences (except Nanotechnology and Biotechnology) (NAICS code 541715).
- Marketing Research and Public Opinion Polling (NAICS code 541910).
- All Other Professional, Scientific, and Technical Services (NAICS code 541990).
- Offices of Other Holding Companies (NAICS code 551112).
- Solid Waste Combustors and Incinerators (NAICS code 562213).
- General Automotive Repair (NAICS code 811111).
- Automotive Exhaust System Repair (NAICS code 811112).
- Automotive Transmission Repair (NAICS code 811113).

- Other Automotive Mechanical and Electrical Repair and Maintenance (NAICS code 811118).
- Automotive Body, Paint, and Interior Repair and Maintenance (NAICS code 811121).
- Automotive Glass Replacement Shops (NAICS code 811122).
- Automotive Oil Change and Lubrication Shops (NAICS code 811191).
- All Other Automotive Repair and Maintenance (NAICS code 811198).
- Consumer Electronics Repair and Maintenance (NAICS code 811211).
- Computer and Office Machine Repair and Maintenance (NAICS code 811212).
- Communication Equipment Repair and Maintenance (NAICS code 811213).
- Other Electronic and Precision Equipment Repair and Maintenance (NAICS code 811219).
- Commercial and Industrial Machinery and Equipment (except Automotive and Electronic) Repair and Maintenance (NAICS code 811310).
- Home and Garden Equipment Repair and Maintenance (NAICS code 811411).
- Other Personal and Household Goods Repair and Maintenance (NAICS code 811490).
- Drycleaning and Laundry Services (except Coin-Operated) (NAICS code 812320).
- Industrial Launderers (NAICS code 812332).

B. What is the agency's authority for taking this action?

EPA has the authority under TSCA section 6(a) (15 U.S.C. 2605(a)) to conduct rulemaking to address unreasonable risks of injury to health or the environment presented by a chemical substance under its condition(s) of use. EPA must specify compliance dates under TSCA section 6(d) (15 U.S.C. 2605(d)) for any TSCA section 6(a) rule. In 2024, EPA promulgated final risk management rules under TSCA section 6(a) for PCE ("PCE Final Rule") (Ref. 1) and CTC ("CTC Final Rule") (Ref. 2), including compliance dates pursuant to TSCA section 6(d). This action proposes to alter some of the compliance dates finalized in 2024. Unless provided otherwise by law, agencies may change existing positions (*e.g.*, reconsider, revise, or rescind prior rules) provided that they acknowledge the change in position, offer a reasoned explanation for the change, and take any serious reliance interests into account. *See, e.g., FDA v. Wages & White Lion Invs., L.L.C.*, 145 S. Ct. 898, 917 (2025); *Encino Motorcars v. Navarro*, 579 U.S. 211, 221

(2016); *FCC v. Fox Television Stations, Inc.*, 556 U.S. 502, 515 (2009); *Motor Vehicle Mfrs. Ass'n v. State Farm Mut. Auto. Ins. Co.*, 463 U.S. 29 (1983).

C. What action is the agency taking?

1. PCE

EPA is proposing to amend 40 CFR 751.607 to extend certain WCPP compliance dates for non-federal owners and operators to match the compliance dates for federal agencies and their contractors. Specifically, EPA proposes to extend the compliance date for initial monitoring from December 15, 2025, to June 21, 2027; extend the compliance date to meet the ECEL, establish a regulated area, provide any required respiratory PPE, and establish a respiratory PPE program from March 13, 2026, to September 20, 2027; and extend the compliance date to establish and implement an exposure control plan from June 7, 2027, to December 20, 2027. EPA is currently proposing to extend only the PCE WCPP compliance dates related to the ECEL and inhalation exposure, and EPA is not proposing to extend the WCPP compliance dates to implement dermal protection required by the PCE Final Rule.

2. CTC

EPA is also proposing to amend 40 CFR 751.707 to extend certain WCPP compliance dates for non-federal owners and operators for an additional twelve months to match the compliance dates for federal agencies and their contractors. Specifically, EPA proposes to extend the compliance date for initial monitoring from June 11, 2026, to June 21, 2027, and to extend the compliance date to meet the ECEL, establish a regulated area, provide any required respiratory PPE, and establish a respiratory PPE program from September 9, 2026, to September 20, 2027. EPA is currently proposing to extend only the CTC WCPP compliance dates related to the ECEL and inhalation exposure, and EPA is not proposing to extend the WCPP compliance dates to implement dermal protection required by the CTC Final Rule.

D. Why is the agency taking this action?

1. PCE

EPA is proposing to address unanticipated WCPP/ECEL implementation difficulties associated with the PCE Final Rule for non-federal owners and operators due to challenges for facilities implementing WCPP/ECEL requirements for multiple chemicals simultaneously as described in public comments received after the rule was published. As detailed further in Unit

III.A., EPA received comment from industry and trade organizations stating that facilities subject to multiple WCPPs under TSCA section 6 actions may face significant resource constraints and logistical challenges in implementing overlapping requirements on separate timelines. EPA has considered this new information and is taking action to ensure a reasonable transition period for WCPP/ECEL implementation and compliance dates that are as soon as practicable.

2. CTC

EPA is also proposing to address unanticipated WCPP/ECEL implementation difficulties associated with the CTC Final Rule for non-federal owners and operators due to limitations with available monitoring methods to adequately measure CTC exposure during tasks of short duration. As detailed further in Unit III.B., EPA received comment from industry and trade organizations stating that there are no adequate monitoring methods for short-term tasks that can reliably measure down to the ECEL. EPA has considered this new information and is taking action to ensure a reasonable transition period for non-federal owners and operators and an initial monitoring compliance date and subsequent WCPP/ECEL compliance dates that are as soon as practicable.

E. What are the incremental economic impacts?

EPA evaluated the potential incremental economic impacts and determined that these changes would have minimal impacts on the estimated costs and benefits of the existing actions and would primarily result in a delay when those costs and benefits begin accruing. Quantified costs are expected to be the same as estimated in the PCE and CTC Final Rules but will not be incurred until the proposed compliance date extensions expire. Relying on the cost estimates in Section 7 of the economic analysis of the PCE Final Rule (Ref. 3), and Section 3 of the economic analysis of the CTC Final Rule (Ref. 4), EPA estimates the annualized cost savings of extending compliance dates in this action to be \$6.2–8.3 million.

II. Background

A. PCE Final Rule

EPA published the PCE Final Rule on December 18, 2024 (Ref. 1). The PCE Final Rule established, among other things, WCPP requirements for certain conditions of use to protect workers from cancer and non-cancer effects from inhalation exposures. The PCE Final

Rule established different WCPP compliance deadlines for federal and non-federal entities. Non-federal entities were required to conduct initial monitoring by December 15, 2025; meet the ECEL, establish a regulated area, provide any required respiratory PPE, and establish a respiratory PPE program by March 13, 2026; and establish and implement an exposure control plan by June 7, 2027. Federal entities (including contractors acting for or on behalf of the federal government) were required to conduct initial monitoring by June 21, 2027; meet the ECEL, establish a regulated area, provide any required respiratory PPE, and establish a respiratory PPE program by September 20, 2027; and establish and implement an exposure control plan by December 20, 2027. As explained in the PCE Final Rule, EPA understood that federal agencies and their contractors would need additional time to comply due to federal procurement requirements.

After issuing the PCE Final Rule, EPA received several petitions for review that were consolidated in the U.S. Court of Appeals for the Fifth Circuit. On May 12, 2025, EPA filed a declaration advising the Court that the Agency intended to reconsider the PCE Final Rule and to solicit early stakeholder input on a rulemaking to revise the rule. To that end, EPA solicited public comment to inform its reconsideration of the PCE rule (Ref. 5). EPA has initiated action to reconsider aspects of the 2024 PCE Rule and intends to publish a separate Notice of Proposed Rulemaking to potentially amend various aspects of that rule.

B. CTC Final Rule

EPA published the CTC final rule on December 18, 2024 (Ref. 2). The CTC Final Rule established, among other things, WCPP requirements for certain conditions of use to protect workers from cancer and non-cancer effects from inhalation exposures. The CTC Final Rule established different compliance deadlines for federal and non-federal entities. Non-federal entities were required to conduct initial monitoring by June 11, 2026, and meet the ECEL, establish a regulated area, provide any required respiratory PPE, and establish a respiratory PPE program by September 9, 2026. Federal entities were required to conduct initial monitoring by June 21, 2027, and meet the ECEL, establish a regulated area, provide any required respiratory PPE, and establish a respiratory PPE program by September 20, 2027. As explained in the CTC Final Rule, EPA understood that federal agencies and their contractors would need additional time to comply due to

federal procurement requirements. However, both federal and non-federal entities were required to establish and implement an exposure control plan by December 20, 2027.

After issuing the CTC Final Rule, EPA received several petitions for review that were consolidated in the U.S. Court of Appeals for the Eighth Circuit. On September 12, 2025, EPA announced its decision to reconsider the CTC Final Rule through further rulemaking. In that announcement, the Agency expressed its intent to open a comment period on the final rule. To that end, EPA solicited public comment on the requirements and implementation of the CTC Final Rule, including feasibility of exposure monitoring (Ref. 6). EPA has initiated action to reconsider aspects of the 2024 CTC Rule and intends to publish a separate Notice of Proposed Rulemaking to potentially amend various aspects of that rule.

III. Provisions of This Proposed Rule

For any TSCA section 6(a) rule, EPA must specify mandatory compliance dates that are “as soon as practicable,” while allowing for “a reasonable transition period.” 15 U.S.C. 2605(d)(1)(B) and (E). EPA acknowledges that it is proposing a change in position from the PCE Final Rule and the CTC Final Rule. EPA intended that the compliance timeframes in the PCE Final Rule and the CTC Final Rule would be practicable and allow for a reasonable transition period (see Unit III.B.1 of the PCE Final Rule and Unit III.B of the CTC Final Rule). However, the Agency did not fully anticipate the challenges that certain entities are now experiencing in implementing WCPP/ECEL requirements related to exposure monitoring and implementing new WCPP requirements for multiple chemicals on overlapping timeframes. EPA also did not anticipate the additional complications and confusion that would arise by establishing different compliance dates for Federal and non-Federal entities. Accordingly, EPA proposes that the compliance dates detailed below would be more consistent with EPA’s obligations under TSCA section 6(d) for the PCE and CTC rules than those finalized in 2024.

A. Proposed Compliance Date Extensions for PCE

Among the issues raised by stakeholders in response to the Agency’s July 2025 request for public comment was the practicability of the existing compliance dates and the reasonableness of the transition period for the WCPP. One commenter raised

concerns about the suitability of existing exposure monitoring methods for PCE, asserting that additional time is needed for method validation and ensuring laboratory capacity (Ref. 7). Two industry trade organizations (Refs. 8, 9) stated that facilities subject to multiple WCPPs under TSCA section 6 actions may face significant resource constraints and logistical challenges in implementing overlapping requirements on separate timelines. One of these commenters asserted that the 2024 PCE Final Rule had created timelines that are not practically achievable and urged EPA to extend WCPP compliance timeframes so that facilities facing multiple overlapping WCPP obligations can realistically comply (Ref. 8). The other commenter suggested that EPA consider (1) aligning compliance timelines of the WCPPs for commercial entities and federal entities to a single date, (2) extending both sets of compliance dates to provide regulated parties with sufficient time for planning, or (3) phasing in exposure limits over longer timelines to allow business to program and invest in capital-intensive worker protections at the top of the hierarchy of controls, while controlling exposures in the interim (Ref. 9).

EPA recognizes the complexities of implementing multiple WCPP requirements on different timelines. To better ensure a reasonable transition period for WCPP/ECEL implementation and compliance dates that are as soon as practicable, EPA is proposing to extend the WCPP compliance deadlines for non-federal entities to match the current deadlines for federal entities. If finalized as proposed, this would require non-federal entities to:

- Conduct initial monitoring by June 21, 2027;
- Meet the ECEL, establish a regulated area, provide any required respiratory PPE, and establish a respiratory PPE program by September 20, 2027; and
- Establish and implement an exposure control plan by December 20, 2027.

EPA seeks comment on regulated entities’ ability to comply with both the original WCPP/ECEL compliance deadlines and the proposed compliance date extensions for non-federal entities, including whether the extended compliance dates proposed by EPA are “as soon as practicable” and “provide for a reasonable transition period.” EPA also seeks comment on whether, and to what extent, any other interrelated compliance dates should be extended to ensure that the WCPP is fully implementable as soon as practicable with a reasonable transition period (for

example, WCPP compliance date for workplace information and training). EPA is currently proposing to extend only the PCE WCPP compliance dates related to the ECEL and inhalation exposure because the Agency is not aware of any practicability concerns with implementing the dermal protection required by the PCE Final Rule by the current compliance dates. However, EPA welcomes comments on the implementation of dermal protection requirements and whether the current dates applicable to non-federal entities are practicable. Because EPA is proposing to change its position from the PCE Final Rule in 2024, EPA also seeks comment on any reliance interests that may be impacted if EPA finalizes this rule as proposed.

In this action, EPA is only proposing to extend a subset of certain non-federal WCPP compliance dates set forth in 40 CFR 751.607. EPA is actively reconsidering the PCE Final Rule, including comments received in 2025 during the open comment period, and intends to propose amendments to various aspects of the rule in a separate action.

B. Proposed Compliance Date Extensions for CTC

Among the public comments received in response to the Agency's October 2025 request for comment on the requirements and implementation of the CTC Final Rule (Ref. 6) were comments from industry and trade associations stating that there are currently no standard, commercially available in-the-field monitoring devices that can reliably measure to the ECEL, particularly for short-term tasks such as connecting or disconnecting equipment for sampling, loading, unloading, or disposal (Refs. 10, 11, 12, 13). Given the lack of a reliable, commercially available monitoring method for short-term tasks, an industry trade organization recommended alternative risk management approaches for short-term tasks and stated that additional time would be required for implementation. The commenter suggested that the WCPP compliance deadlines for all owners and operators be revised to align with the current compliance dates for federal entities and their contractors or 18 months from the effective date of the revised CTC rule, whichever is later (Ref. 13). In addition, EPA met with the ACC Chlorine Panel on December 17, 2025, where member companies highlighted implementation challenges of the ECEL since analytical monitoring methods are not feasible for short-term tasks, making it uncertain when, and for how long, PPE needs to

be used when performing high-exposure short-term tasks (Ref. 14).

EPA recognizes there are ongoing difficulties in conducting the initial monitoring to implement the WCPP/ECEL given the monitoring challenges associated with short-term tasks. To ensure a reasonable transition period for WCPP implementation and compliance dates that are as soon as practicable, EPA is proposing to extend the initial monitoring compliance deadline for non-federal entities to match the current deadline for federal entities. EPA is proposing to similarly extend the subsequent deadlines for non-federal entities to meet the ECEL, establish a regulated area, provide any required respiratory PPE, and establish a respiratory PPE program, to match the current deadline for federal entities. If finalized as proposed, this would require non-federal entities to conduct initial compliance monitoring by June 21, 2027, and to meet the ECEL, establish a regulated area, provide any required respiratory PPE, and establish a respiratory PPE program by September 20, 2027.

EPA seeks comment on regulated entities' ability to comply with both the original WCPP compliance deadlines—particularly the initial monitoring deadlines—and the proposed compliance date extension for non-federal entities, including whether the proposed compliance dates are “as soon as practicable” and “provide for a reasonable transition period.” EPA is also interested in comments on whether, and to what extent, any other interrelated compliance dates should be extended to ensure the WCPP is fully implementable as soon as practicable with a reasonable transition period (e.g., WCPP compliance date for workplace information and training). Because EPA is changing its position from the CTC Final Rule in 2024, EPA also seeks comment on any reliance interests that may be impacted if EPA finalizes this rule as proposed.

In this proposed rule, EPA is only proposing to extend a subset of certain non-federal WCPP compliance dates in 40 CFR 751.707. EPA is actively reconsidering the 2024 CTC Final Rule, including comments received in 2025 during the open comment period and intends, if appropriate, to propose amendments to various aspects of the rule in a separate action.

V. Statutory and Executive Order Reviews

Additional information about these statutes and Executive Orders can be found at <https://www.epa.gov/laws-regulations/laws-and-executive-orders>.

A. Executive Order 12866: Regulatory Planning and Review and Executive Order 13563: Improving Regulation and Regulatory Review

This action is not a significant regulatory action under Executive Order 12866 (58 FR 51735, October 4, 1993) and was therefore not submitted to the Office of Management and Budget (OMB) for review under Executive Orders 12866 and 13563 (76 FR 3821, January 21, 2011).

B. Executive Order 14192: Unleashing Prosperity Through Deregulation

This action is expected to be an Executive Order 14192 deregulatory action. This proposed rule is expected to provide burden reduction by providing relief against existing compliance deadlines.

C. Paperwork Reduction Act (PRA)

This action does not impose any new information collection activities or burden subject to OMB review and approval under the PRA, 44 U.S.C. 3501 *et seq.* However, this action defers the costs associated with paperwork and recordkeeping burden for two existing information collections because the delayed compliance dates alter the time horizon of the collection's analysis. Burden is defined in 5 CFR 1320.3(b). OMB has previously approved the information collection activities contained in the existing regulations

and associated burden under OMB Control Nos. 2070–0228 (EPA ICR No. 2744.02) and 2070–0233 (EPA ICR No. 2740.02). An agency may not conduct or sponsor, and a person is not required to respond to a collection of information that requires OMB approval under PRA, unless it has been approved by OMB and displays a currently valid OMB control number. The OMB control numbers for EPA's regulations in title 40 of the CFR, after appearing in the **Federal Register**, are listed in 40 CFR part 9, and included on the related collection instrument or form, if applicable.

D. Regulatory Flexibility Act (RFA)

I certify that this action will not have a significant economic impact on a substantial number of small entities under the RFA, 5 U.S.C. 601 *et seq.* In making this determination, EPA concludes that the impact of concern for this action is any significant adverse economic impact on small entities, and the Agency is certifying that this rule will not have a significant economic impact on a substantial number of small entities because the rule relieves regulatory burden on the small entities subject to the rule. This action would extend the PCE final rule non-federal compliance dates for: initial monitoring requirements from December 15, 2025, to June 21, 2027; ECEL, regulated area, respiratory PPE, and respiratory PPE program requirements from March 13, 2026, to September 20, 2027; and exposure control plan requirements from June 7, 2027, to December 20, 2027. This action would also extend the CTC final rule non-federal compliance dates for initial monitoring requirements from June 11, 2026, to June 21, 2027, and ECEL, regulated area, respiratory PPE, and respiratory PPE program requirements from September 9, 2026, to September 20, 2027 (aligning with the current compliance date for Federal agencies and Federal contractors acting for or on behalf of the Federal government). We have therefore concluded that this action will relieve regulatory burden for all directly regulated small entities.

E. Unfunded Mandates Reform Act (UMRA)

This action does not contain an unfunded mandate as described in UMRA, 2 U.S.C. 1531–1538, and does not significantly or uniquely affect small governments. The costs involved in this action are estimated not to exceed \$187 million in 2024\$ (\$100 million in 1995\$, adjusted for inflation using the GDP implicit price deflator) or more in any one year. This action is expected to

relieve regulatory burdens on entities subject to the December 2024 final rules' provisions, as described in Unit III.

F. Executive Order 13132: Federalism

This action does not have federalism implications as specified in Executive Order 13132 (64 FR 43255, August 10, 1999) because it will not have substantial direct effects on the states, on the relationship between the national government and the states, or on the distribution of power and responsibilities among the various levels of government.

G. Executive Order 13175: Consultation and Coordination With Indian Tribal Governments

This action does not have tribal implications as specified in Executive Order 13175 (65 FR 67249, November 9, 2000) because it does not have substantial direct effects on one or more Indian tribes, on the relationship between the Federal Government and Indian tribes, or on the distribution of power and responsibilities between the Federal Government and Indian tribes. Thus, Executive Order 13175 does not apply to this action.

H. Executive Order 13045: Protection of Children From Environmental Health Risks and Safety Risks

Executive Order 13045 (62 FR 19885, April 23, 1997) directs federal agencies to include an evaluation of the health and safety effects of the planned regulation on children in federal health and safety standards and explain why the regulation is preferable to potentially effective and reasonably feasible alternatives. This action is not subject to Executive Order 13045 because it is not a significant regulatory action under section 3(f)(1) of Executive Order 12866, and because the EPA does not believe the environmental health or safety risks addressed by this action present a disproportionate risk to children. This action does not alter the WCPP requirements from the PCE and CTC Final Rules, but delays when non-federal entities must comply with certain provisions. Consequently, EPA's findings that the PCE and CTC Final Rules would not have a disproportionate risk to children are applicable here. In the 2020 Risk Evaluation for PCE (Ref. 15), EPA did not find that the adverse health impacts for children and for men and women of reproductive age was disproportionate in comparison to other populations. In the 2020 Risk Evaluation for CTC (Ref. 16), while the Agency found risks to children and adults from occupational use, the Agency determined that risks to

children were not disproportionate. The CTC Final Rule's health and risk assessments and impacts on both children and adults from occupational use from inhalation and dermal exposures are described in Units II.C.3 and V.A. of the CTC Final Rule (Ref. 2), and the 2020 Risk Evaluation for Carbon Tetrachloride (Ref. 16).

As in the PCE and CTC Final Rules, EPA's Policy on Children's Health applies to this action. Information on how the Policy was applied in the PCE Final Rule and on the action's health and risk assessments are contained in Unit II.D.2.c. of the PCE Final Rule (Ref. 1), the 2020 Risk Evaluation for PCE (Ref. 15), and the Economic Analysis for the PCE Final Rule (Ref. 3). Information on how the Policy was applied in the CTC Final Rule and on the action's health and risk assessments are contained in Unit II.D.2.c. of the CTC Final Rule (Ref. 2), and the 2020 Risk Evaluation for CTC (Ref. 16), and the Economic Analysis for the CTC Final Rule (Ref. 4).

I. Executive Order 13211: Actions Concerning Regulations That Significantly Affect Energy Supply, Distribution, or Use

This action is not subject to Executive Order 13211 (66 FR 28355, May 22, 2001) because it is not a significant regulatory action under Executive Order 12866.

J. National Technology Transfer and Advancement Act (NTTAA)

Pursuant to the NTTAA section 12(d), 15 U.S.C. 272, the Agency has determined that this proposed rulemaking involves environmental monitoring or measurement, specifically for occupational inhalation exposures to carbon tetrachloride and perchloroethylene. Consistent with the Agency's Performance Based Measurement System (PBMS), EPA has decided not to require the use of specific, prescribed analytic methods. Rather, the Agency will allow the use of any method that meets the prescribed performance criteria. The PBMS approach is intended to be more flexible and cost-effective for the regulated community; it is also intended to encourage innovation in analytical technology and improved data quality. EPA is not precluding the use of any method, whether it constitutes a voluntary consensus standard or not, as long as it meets the performance criteria specified.

For this proposed rulemaking, the key consideration for the PBMS approach is the ability to accurately detect and measure airborne concentrations of

carbon tetrachloride at the ECEL, and perchloroethylene at the ECEL and ECEL action level.

List of Subjects in 40 CFR Part 751

Environmental protection, Chemicals, Export notification, Hazardous substances, Import certification, Reporting and recordkeeping.

Lee Zeldin,
Administrator.

For the reasons set forth in the preamble, the EPA proposes to amend 40 CFR part 751 as follows:

PART 751—REGULATION OF CERTAIN CHEMICAL SUBSTANCES AND MIXTURES UNDER SECTION 6 OF THE TOXIC SUBSTANCES CONTROL ACT

■ 1. The authority citation for part 751 continues to read as follows:

Authority: 15 U.S.C. 2605, 15 U.S.C. 2625(l)(4).

■ 2. Amend § 751.607 by revising paragraphs (b)(2), (b)(3)(ii), (b)(4)(i), (d)(1)(i)(A), (d)(2) introductory text, (f)(2)(i), and (f)(2)(iii) to read as follows:

§ 751.607 Workplace Chemical Protection Program (WCPP).

* * * * *

(b) * * *

(2) *Eight-hour time-weighted average (TWA) ECEL.* Beginning September 20, 2027, or beginning four months after introduction of PCE into the workplace if PCE use commences after June 21, 2027, the owner or operator must ensure that no person is exposed to an airborne concentration of PCE in excess of the ECEL, consistent with the requirements of paragraph (d)(1)(i) of this section and, if necessary, paragraph (f) of this section.

(3) * * *

(ii) *Initial monitoring.* By June 21, 2027, or within 30 days of introduction of PCE into the workplace, whichever is later, each owner or operator covered by this section must perform initial monitoring of potentially exposed persons. Where the owner or operator has monitoring results from monitoring conducted within five years prior to February 18, 2025, and the monitoring satisfies all other requirements of this section, the owner or operator may rely on such earlier monitoring results to satisfy the requirements of this paragraph (b)(3)(ii).

* * * * *

(4) * * *

(i) *Establishment.* By September 20, 2027, or within three months after receipt of any exposure monitoring that indicates exposures exceeding the ECEL, the owner or operator must

establish and maintain a regulated area wherever airborne concentrations of PCE exceed, or can reasonably be expected to exceed, the ECEL.

* * * * *

(d) * * *

(1) * * *

(i) * * *

(A) By December 20, 2027, the owner or operator must institute one or a combination of elimination, substitution, engineering controls, or administrative controls to reduce exposure to or below the ECEL except to the extent that the owner or operator can demonstrate that such controls are not feasible, in accordance with the hierarchy of controls.

* * * * *

(2) *Exposure control plan.* By December 20, 2027, each owner and operator must establish and implement an exposure control plan.

* * * * *

(f) * * *

(2) * * *

(i) By September 20, 2027, or within three months after receipt of any exposure monitoring that indicates exposures exceeding the ECEL, if an owner or operator is required to provide respiratory protection pursuant to paragraph (f)(1) of this section, the owner or operator must ensure that each potentially exposed person is provided with a respirator according to the requirements of this section.

* * * * *

(iii) By September 20, 2027, or within three months after receipt of any exposure monitoring that indicates exposures exceeding the ECEL, if an owner or operator is required to provide respiratory protection pursuant to paragraph (f)(1) of this section, the owner or operator must develop and administer a written respiratory protection program consistent with the requirements of 29 CFR 1910.134(c)(1), (c)(3) and (c)(4).

* * * * *

■ 3. Amend § 751.707 by revising paragraphs (b)(1), (b)(2)(ii), (b)(3)(i), (f)(2)(i), and (f)(2)(iii) to read as follows:

§ 751.707 Workplace Chemical Protection Program (WCPP).

* * * * *

(b) * * *

(1) *Eight-hour time-weighted average (TWA) ECEL.* Beginning September 20, 2027, or beginning four months after introduction of carbon tetrachloride into the workplace if carbon tetrachloride use commences after June 21, 2027, the owner or operator must ensure that no person is exposed to an airborne concentration of carbon tetrachloride in

excess of the ECEL, consistent with the requirements of paragraph (d)(1)(i) of this section and, if necessary, paragraph (f) of this section.

(2) * * *

(ii) *Initial monitoring.* By June 21, 2027, or within 30 days of introduction of carbon tetrachloride into the workplace, whichever is later, each owner or operator covered by this section must perform initial monitoring of potentially exposed persons. Where the owner or operator has monitoring results from monitoring conducted within five years prior to February 18, 2025, and the monitoring satisfies all other requirements of this section, the owner or operator may rely on such earlier monitoring results to satisfy the requirements of this paragraph (b)(2)(ii).

* * * * *

(3) * * *

(i) *Establishment.* By September 20, 2027, or within three months after receipt of any exposure monitoring that indicates exposures exceeding the ECEL, the owner or operator must establish and maintain a regulated area wherever airborne concentrations of carbon tetrachloride exceed, or can reasonably be expected to exceed, the ECEL.

* * * * *

(f) * * *

(2) * * *

(i) By September 20, 2027, or within three months after receipt of any exposure monitoring that indicates exposures exceeding the ECEL, if an owner or operator is required to provide respiratory protection pursuant to paragraph (f)(1) of this section, the owner or operator must ensure that each potentially exposed person is provided with a respirator according to the requirements of this section.

* * * * *

(iii) By September 20, 2027, or within three months after receipt of any exposure monitoring that indicates exposures exceeding the ECEL, if an owner or operator is required to provide respiratory protection pursuant to paragraph (f)(1) of this section, the owner or operator must develop and administer a written respiratory protection program consistent with the requirements of 29 CFR 1910.134(c)(1), (c)(3) and (c)(4).

BILLING CODE 6560-50-P

DEPARTMENT OF HEALTH AND HUMAN SERVICES

Administration for Children and Families

45 CFR Parts 211 and 212

RIN 0970-AD40

Reducing Bureaucracy and Burden for Human Services and Emergency Response Programs—Repatriation Program

AGENCY: Office of Human Services Emergency Preparedness and Response (OHSEPR), Administration for Children and Families (ACF), Department of Health and Human Services (HHS).

ACTION: Notice of proposed rulemaking.

SUMMARY: The Department of Health and Human Services, Administration for Children and Families proposes to amend the Care and Treatment of Mentally Ill Nationals of the United States, Returned from Foreign Countries regulations and the Assistance for United States Citizens Returned from Foreign Countries regulations to eliminate unnecessary or obsolete regulations. The docket on <https://www.regulations.gov> will include a plain language summary of the NPRM.

DATES: In order to be considered, written comments on this proposed rule must be received on or before April 27, 2026.

ADDRESSES: You may submit written comments, identified by docket number ACF-2026-0232 and/or RIN number 0970-AD40, by one of the following methods:

- *Federal eRulemaking Portal:* Go to <https://www.regulations.gov>. Follow the instructions for submitting comments.

- *Email:* Deregulation@acf.hhs.gov. Include the docket number ACF-2026-0232 and/or RIN number 0970-AD40 in the subject line of the message.

Instructions: All submissions received must include the agency name and docket number or RIN number for this rulemaking. All comments received are a part of the public record and will be posted for public viewing on www.regulations.gov, without change. Please be advised that the substance of the comments and the identity of individuals or entities submitting the comments will be subject to public disclosure.

FOR FURTHER INFORMATION CONTACT:

Adam N. Jones, Deputy Chief of Staff, Immediate Office of the Assistant Secretary, Administration for Children and Families, Department of Health and Human Services, Washington, DC 202-417-0115 or Deregulation@acf.hhs.gov.

SUPPLEMENTARY INFORMATION:

I. Statutory Authority

This proposed regulation is being issued under the authority granted to the Secretary of Health and Human Services by 74 Stat. 308–310 (24 U.S.C. 321–329) and Sections 1102 and 1113 of the Social Security Act (42 U.S.C. 1302, 42 U.S.C. 1313).

II. Background

45 CFR part 211, “Care and Treatment of Mentally Ill Nationals of the United States, Returned from Foreign Countries” is a comprehensive regulatory framework established under the 74 Stat. 308–310, 42 U.S.C. 321–329. Originally published on July 19, 1974, Part 211 establishes uniform procedures for program applications, including requirements addressing eligibility, procedures for the care and treatment of mentally ill repatriates, and general administrative standards. 45 CFR part 212, “Assistance for United States Citizens Returned from Foreign Countries” is a set of regulations established under the authority of the Social Security Act (42 U.S.C. 1302, 42 U.S.C. 1313) that was designed to implement 42 U.S.C. 1313 by providing more detailed requirements for temporary assistance to United States (U.S.) Citizen repatriates and their dependents.

III. Executive Summary

This NPRM proposes to rescind multiple regulations that are either unnecessary or wholly obsolete. The proposed regulations contained in this NPRM to be rescinded and reserved can be categorized into three groups: those that are duplicative, those that are better suited as a different type of sub-regulatory format, and those that are obsolete.

Duplicative regulations are those that carry no impact as the authority and requirements stated in the regulation exist or are stated elsewhere such as in statute, which would make these existing regulations otherwise unnecessary.

The regulations that are better suited to a different format, *i.e.* as a sub-regulatory document, are those that generally read like a Frequently Asked Questions document or are overly prescriptive and carry technical details that belong in programmatic instruction. ACF proposes to rescind this category of regulations to allow for publication in a more appropriate format following the final rule becoming effective.

The final category are those regulations that are obsolete or outdated. This includes regulations that refer to

grant programs that are no longer funded, practices that are no longer followed, or are otherwise no longer relevant.

Effective Date

ACF expects all provisions included in the proposed rule, if finalized, to become effective 30 days from the date of publication of the final rule.

Severability

The provisions of this NPRM, once it becomes final, are intended to be severable, such that, in the event a court were to invalidate any particular provision or deem it to be unenforceable, the remaining provisions would continue to be valid. None of the provisions contained herein are central to an overall intent of the proposed rule, nor are any provisions dependent on the validity of other, separate provisions.

IV. Discussion of Proposed Changes

45 CFR Part 211 Care and Treatment of Mentally Ill Nationals of the United States, Returned From Foreign Countries

§ 211.1 General Definitions

This Section defines the terms used in this Part. This Section is proposed for repeal due to the fact that many of the terms that are defined are duplicated in 24 U.S.C. 321 “Definitions.” There were a few regulatory definitions that were not defined in statute, but those terms were either commonly defined and did not need to be further defined or were utilized only in Sections that are proposed to be repealed.

§ 211.2 General

This Section specifies that ACF will consult with appropriate agencies to ensure that any aid that is provided is provided by the right organization. This provision is proposed for removal as the text of the regulation is merely rephrasing and restating the language found in the statute that authorizes the creation of the regulation, 24 U.S.C. 321–329. Thus, as the authority to consult with appropriate agencies as well as the other statements described in this Section are already found in statute, this Section is unnecessary and duplicate, and therefore proposed for repeal.

§ 211.4 Notification to Legal Guardian, Spouse, Next of Kin, or Interested Persons

This Section specifies that ACF will notify the next of kin and legal guardians when repatriates with mental health needs arrive in the United States or are transferred between states. This

provision is proposed for removal as the requirement for notifying the next of kin and legal guardian still applies irrespective of this rule. The rescission of this rule will not hinder the ability for next of kin and legal guardians to be notified of the repatriation of their relatives. As such, this rule is unnecessary and thus is proposed for repeal.

§ 211.5 Action Under State Law; Appointment of Guardian

This Section details that ACF will act according to state law on how to act and care for an individual who is unable to give consent, either due to being a minor or due to their mental state, with regard to the appointment of a guardian. As this regulation states that ACF will follow state law, the rescission of this regulation does not impact the necessity to follow state law. In other words, by repealing this Section, state law and the status quo will still be followed. As such, this Section is unnecessary and is proposed to be repealed.

§ 211.7 Transfer and Release of Eligible Person

This Section lists the conditions under which an eligible repatriate will be transferred and released into the care of a relative. Furthermore, this Section details that if an individual is unable to be released to a relative, that the individual may be released to the appropriate state health authority. This Section is proposed for removal as the language and authorization are found to be duplicated in 24 U.S.C. 323 “Care and treatment of eligible persons until transfer and release.” As the regulation simply mirrors the statute, it is unnecessary and duplicate and thus proposed for repeal.

§ 211.8 Continuing Hospitalization

This Section details the appropriate arrangements for placement and treatment of an eligible individual needing continued care in furtherance of the regulations found in § 211.7. Much like § 211.7, this Section is also found to be duplicative of statutory language found at 24 U.S.C. 324 “Care and treatment of eligible persons until transfer and release.” As this Section also mirrors statute, the language found in regulation is simply duplicative and therefore not needed. Thus, this rulemaking proposes to repeal this Section.

§ 211.9 Examination and Reexamination

This Section details the frequency by which an examination must be conducted on any individual admitted

to a hospital pursuant to Part 211. The language requiring that patients be examined no more than five days after their admission and every six months thereafter is a copy of the requirements found at 24 U.S.C. 325 “Examination of persons admitted.” As this is a duplication of existing requirements, this Section is not necessary and is proposed to be repealed.

§ 211.10 Termination of Hospitalization

This Section details that the process for discharge or conditional release of a patient must comply with state laws as well as the requirement to notify the committing court of the release. The first component of this Section requires the hospital to release an individual from care if they are determined to not or no longer require hospitalization, pursuant to state laws and regulations. Thus, this component of the rule requires hospitals to follow existing laws, which they would be required to do irrespective of this regulation. As such, this first component of this Section is unnecessary as it does not carry any requirement that is not found in state specific statutes and is proposed to be repealed.

The second component of this Section that deals with mandating the notification to the committing court duplicates federal law in 24 U.S.C. 327 “Notification to committing court of discharge or conditional release.” As this is purely duplicative, this regulation is not needed, and the repeal will not produce any policy change.

§ 211.11 Request for Release From Hospitalization

This Section describes the process that must be followed when a patient or their next of kin or legal guardian requests a release from hospitalization. This process is described in complete detail already at 24 U.S.C. 326 “Release of patient.” As the regulation merely restates the statutory language, it is duplicative and thus unnecessary. The repeal of this Section will not change policy for those requesting a release from hospitalization.

§ 211.12 Federal Payments

This Section details the requirement that an agreement must be established between an Administrator and a hospital as to how a hospital or agency will be paid for services. This Section is not needed as this describes an outdated approach which predated government-wide regulations at 2 CFR part 200 which describe payment methods, allowable costs, and financial management requirements. As this

Section is both outdated it is proposed to be repealed provide clarity to the public.

§ 211.13 Financial Responsibility of the Eligible Person; Collections, Compromise, or Waiver of Payment

Section 211.13 details the financial responsibility for the eligible person. This Section is proposed to be repealed as it is duplicated in statutory language found at 24 U.S.C. 328 “Payment for care and treatment.” As the requirements for who is liable and what waiver authority of costs exist is stated in both statute and in regulations, the regulations are not needed and are proposed to be repealed.

§ 211.14 Disclosure of Information

This part details the protections against the disclosure of information regarding individuals receiving care. This Section is proposed to be repealed as this information is heavily expanded upon and covered by the Health Insurance Portability and Accountability Act of 1996 (HIPAA). This law prohibits the disclosure of patient information without authorization, which mirrors the intent of the regulation. As both regulations, and statute to a stronger degree, protect patient data and information, the regulation is duplicative and unnecessary. This repeal does not change policy with respect to disclosure of patient information.

§ 211.15 Nondiscrimination

This Section details the prohibition of discrimination based on various characteristics, which is duplicative of federal law found at 42 U.S.C. 2000d. The recission of this part is due to the existence of other protections against discrimination which cover the topics discussed in this Part. As such, this repeal is not intended to, nor will enable, the discrimination of any individual based on the characteristics described therein.

45 CFR Part 212 Assistance for United States Citizens Returned from Foreign Countries

Much like many Sections of Part 211, this Part is found to mirror existing statutory language. The entire Part is found to rephrase and repeat the authorizing statute, 42 U.S.C. 1313 “Assistance for United States citizens returned from foreign countries.” As the regulation is a duplication without providing significant additional clarifying language or detail, it is unnecessary and proposed for repeal.

V. Regulatory Process Matters

Paperwork Reduction Act

Under the Paperwork Reduction Act (44 U.S.C. 3501 *et seq.*, as amended) (PRA), all Departments are required to submit to the Office of Management and Budget (OMB) for review and approval any reporting or recordkeeping requirements inherent in a proposed or final rule. This NPRM does not contain any information requiring OMB approval under the PRA and, therefore, will not create any new paperwork burdens or modify existing burdens subject to OMB review.

Executive Order 13132

Executive Order 13132 requires federal agencies to consult with State and local government officials if they develop regulatory policies with federalism implications. Federalism is rooted in the belief that issues that are not national in scope or significance are most appropriately addressed by the level of government close to the people. This proposed rule would not have substantial direct impact on the States, on the relationship between the federal government and the States, or on the distribution of power and responsibilities among the various levels of government. This NPRM would not pre-empt State law. The changes proposed in the NPRM are removing unnecessary and obsolete regulations from the Office of Human Services Emergency Preparedness and Response Repatriation Program rules. Therefore, in accordance with Section 6 of Executive Order 13132, it is determined that this action does not have sufficient federalism implications to warrant the preparation of a federalism summary impact statement.

Assessment of Federal Regulations and Policies on Families

Assessment of Federal Regulations and Policies on Families Section 654 of the Treasury and General Government Appropriations Act of 1999 (Pub. L. 105–277) requires federal agencies to determine whether a policy or regulation may negatively affect family well-being. If the agency determines a policy or regulation negatively affects family well-being, then the agency must prepare an impact assessment addressing seven criteria specified in the law. HHS believes it is not necessary to prepare a family policymaking assessment because the actions proposed in this NPRM will not have any impact on the autonomy or integrity of the family as an institution.

VI. Regulatory Impact Analysis

We have examined the impacts of the proposed rule under Executive Order 12866, Executive Order 13563, Executive Order 14192, the Regulatory Flexibility Act (5 U.S.C. 601–612), and the Unfunded Mandates Reform Act of 1995 (Pub. L. 104–4).

Executive Orders 12866 and 13563 direct us to assess all benefits and costs of available regulatory alternatives and, when regulation is necessary, to select regulatory approaches that maximize net benefits. Rules are “significant” under Executive Order 12866 Section 3(f)(1) if they “have an annual effect on the economy of \$100 million or more; or adversely affect in a material way the economy, a sector of the economy, productivity, competition, jobs, the environment, public health or safety, or State, local or tribal governments or communities.” Executive Order 14192 requires that any new incremental costs associated with significant new regulations “shall, to the extent permitted by law, be offset by the elimination of existing costs associated with at least ten prior regulations.” The Office of Information and Regulatory Affairs (OIRA) has determined that this proposed rule is not a significant action under Executive Order 12866 Section 3(f). This analysis indicates that the proposed rule, if finalized would be a deregulatory action as defined by Section 3 of Executive Order 14192.

The Regulatory Flexibility Act (RFA) requires agencies to consider the impact of their regulatory proposals on small entities. Because this is simply repealing obsolete and unnecessary language, we propose to certify that the proposed rule would not have a significant economic impact on a substantial number of small entities.

The Unfunded Mandates Reform Act of 1995 (UMRA) generally requires that each agency conduct a cost-benefit analysis; identify and consider a reasonable number of regulatory alternatives; and select the least costly, most cost effective, or least burdensome alternative that achieves the objectives of the rule before promulgating any proposed or final rule that includes a Federal mandate that may result in expenditures of more than \$100 million (adjusted for inflation) in at least one year by State, local, and tribal governments, in the aggregate, or by the private sector. Each agency issuing a rule with relevant effects over that threshold must also seek input from State, local, and tribal governments. The current threshold after adjustment for inflation is \$193 million, using the most current (2025) Implicit Price Deflator for

the Gross Domestic Product. This proposed rule would not result in an expenditure in any year that meets or exceeds this amount.

VII. Tribal Consultation Statement

Executive Order 13175, *Consultation and Coordination with Indian Tribal Governments*, requires agencies to consult with Indian Tribes when regulations have “substantial direct effects on one or more Indian Tribes, on the relationship between the Federal Government and Indian Tribes, or on the distribution of power and responsibilities between the Federal Government and Indian Tribes.” Similarly, ACF’s Tribal Consultation Policy says that consultation is triggered for any legislative proposal, new rule adoption, or other policy change that significantly affects Tribes, meaning there exists a reasonable presumption that it has or may have substantial direct effects on one or more Indian Tribes, on the relationship between the Federal Government and Indian tribes, on the amount or duration of ACF program funding, on the delivery of ACF programs or services to one or more Indian Tribes, or on the distribution of power and responsibilities between the Federal Government and Indian Tribes. However, as this is a deregulatory action, per OMB M–25–36, *Streamlining the Review of Deregulatory Actions*, this action presumptively does not trigger the Tribal Consultation requirements of Executive Order 13175 nor does it meet ACF’s standard for consultation.

List of Subjects

45 CFR Part 211

Grant programs-social programs, Health care, Mental health programs, Public assistance programs.

45 CFR Part 212

Grant programs-social programs, Public assistance programs.

For the reasons set forth in the preamble, ACF proposes to amend 45 CFR parts 211 and 212 as follows:

PART 211—CARE AND TREATMENT OF MENTALLY ILL NATIONALS OF THE UNITED STATES, RETURNED FROM FOREIGN COUNTRIES

■ 1. The authority citation for part 211 continues to read as follows:

Authority: Secs. 1–11, 74 Stat. 308–310; 24 U.S.C. 321–329.

§§ 211.1, 211.2, 211.4, 211.5, and 211.7 through 211.15 [Removed and Reserved]

■ 2. Remove and reserve §§ 211.1, 211.2, 211.4, 211.5, 211.5, and 211.7 through 211.15.

PART 212—[REMOVED AND RESERVED]

■ 3. Under the authority 74 Stat. 308–310 (24 U.S.C. 321–329) and Sections 1102 and 1113 of the Social Security Act (42 U.S.C. 1302, 42 U.S.C. 1313), remove and reserve part 212.

Robert F. Kennedy, Jr.,

Secretary, Department of Health and Human Services.

BILLING CODE 4184–PL–P

DEPARTMENT OF HEALTH AND HUMAN SERVICES

Administration for Children and Families

45 CFR Part 1336

RIN 0970–AD36

Reducing Bureaucracy and Burden for Native American Programs

AGENCY: Administration for Native Americans (ANA), Administration for Children and Families (ACF), Department of Health and Human Services (HHS).

ACTION: Notice of proposed rulemaking.

SUMMARY: The Department of Health and Human Services, Administration for Children and Families proposes to amend the Native American Programs Act regulations (45 CFR part 1336) to eliminate unnecessary or obsolete regulations. The docket on <https://www.regulations.gov> will include a plain language summary of the NPRM as required by 5 U.S.C. 553(b)(4).

DATES: In order to be considered, written comments on this proposed rule must be received on or before April 27, 2026.

ADDRESSES: You may submit written comments, identified by docket number ACF–2026–0133 and/or RIN number 0970–AD36, by one of the following methods:

- *Federal eRulemaking Portal:* Go to <https://www.regulations.gov>. Follow the instructions for submitting comments.
- *Email:* Deregulation@acf.hhs.gov. Include the docket number ACF–2026–0133 and/or RIN number 0970–AD36 in the subject line of the message.

Instructions: All submissions received must include the agency name and docket number or RIN number for this rulemaking. All comments received are a part of the public record and will be posted for public viewing on www.regulations.gov, without change. Please be advised that the substance of

the comments and the identity of individuals or entities submitting the comments will be subject to public disclosure.

FOR FURTHER INFORMATION CONTACT:

Adam N. Jones, Deputy Chief of Staff, Immediate Office of the Assistant Secretary, Administration for Children and Families, Department of Health and Human Services, Washington, DC 202–417–0115 or Deregulation@acf.hhs.gov.

SUPPLEMENTARY INFORMATION:

I. Statutory Authority

This proposed regulation is being issued under the authority granted to the Secretary of Health and Human Services by the Native American Programs Act of 1974, as amended (42 U.S.C. 2991 *et seq.*), hereafter referred to as the “Act.”

II. Background

The Native American Programs Act of 1974 (NAPA), as amended (42 U.S.C. 2991 *et seq.*), authorizes the Administration for Native Americans (ANA) to promote social development and economic self-sufficiency in Native communities through competitive grant funding. Under Section 803 of NAPA (42 U.S.C. 2991b), ANA provides financial assistance on a single-year or multi-year basis to public and nonprofit private agencies, including governing bodies of Indian Tribes on federal and state reservations, Alaska Native villages and regional corporations established under the Alaska Native Claims Settlement Act (43 U.S.C. 1601 *et seq.*), and public and nonprofit agencies serving Native Hawaiians and Indian and Alaska Native organizations in urban or rural areas that are not reservations or Alaska Native villages. ANA implements its mission through competitive discretionary grants that support Native-led, community-based projects aimed at strengthening families and communities and reducing long-term dependency through social and economic development, Native language preservation, and environmental regulatory enhancement. ANA typically provides short-term “seed” funding ranging from 12 to 60 months to help communities launch or expand sustainable efforts. In Federal Fiscal Year (FFY) 2025, ANA awarded a total of \$50,738,495, which included new awards and continued funding for previously awarded projects.

III. Executive Summary

This NPRM proposes to rescind multiple regulations that are either unnecessary or wholly obsolete. These rescissions would impact States,

Territories, and Tribal Lead Agencies. The regulations contained in this NPRM to be removed and reserved can be categorized into three groups: those that are duplicative, those that are better suited as a different type of sub-regulatory format, and those that are obsolete.

The duplicative regulations are those that exist yet, carry no impact as the authority and requirements stated in the regulation exist or are stated elsewhere such as in statute. This renders the language found in the regulation to be either duplicative or otherwise generally unnecessary.

The regulations that are better suited to a different format, *i.e.*, as a sub-regulatory document, are those that generally read like a Frequently Asked Questions document, or are overly prescriptive and carry technical details that belong to programmatic instruction. These documents are being proposed to be removed in order to allow them to be published in the more appropriate format.

Finally, obsolete regulations are those that are outdated. This includes regulations that refer to grant programs that are no longer funded, practices that are no longer followed, or are no longer relevant.

Effective Date

ACF expects all provisions included in the proposed rule, if finalized, to become effective 30 days from the date of publication of the final rule.

Severability

The provisions of this NPRM, once it becomes final, are intended to be severable, such that, in the event a court were to invalidate any particular provision or deem it to be unenforceable, the remaining provisions would continue to be valid. The changes address a variety of issues relevant to the Administration for Native Americans. None of the provisions contained herein are central to an overall intent of the proposed rule, nor are any provisions dependent on the validity of other, separate provisions.

IV. Discussion of Proposed Changes

Subpart B—Purpose of the Native American Programs

§ 1336.20 Program Purpose

This proposed change removes the program's purpose statement. The purpose statement does not carry any policy language that is not already covered in the authorizing statute, the Native American Programs Act of 1974, as amended. See 42 U.S.C. 2991a. As

this Section is needlessly duplicative, it is proposed to be removed.

Subpart C—Native American Projects

§ 1336.30 Eligibility Under Sections 804 and 805 of the Native American Programs Act of 1974

This proposed change removes the regulation that duplicates the statute in that financial assistance made to grantees for research, demonstration and pilot projects as well as technical assistance and training is eligible for public and private agencies. The Act specifically states in Section 803 that funding is available to both public and private non-profit agencies, thus limiting private agencies to non-profits. However, in Sections 804 and 805 of the Act, the terminology is changed to public and private agencies. The removal of the qualifier “non-profit” from Sections 804 and 805 gives statutory authority to allow research, demonstration and pilot projects as well as technical assistance and training dollars to be awarded to for-profit private agencies. Thus, as this Section is needlessly duplicative, it is proposed to be removed and reserved.

§ 1336.31 Project Approval Procedures

This proposed change removes the requirements detailing project approval procedures. This regulation, as it currently exists, has two issues: (1) it essentially states that applicants for financial assistance must submit a work plan that follows the law, which is a statutory requirement, and (2) it states processes and guidelines that are better suited in sub-regulatory documents such as a notice of funding opportunity (NOFO). By moving this kind of unnecessary language out of regulation, grantees and applicants can more easily find important information when reading through CFR. As such, this Section is not needed and is proposed to be removed.

§ 1336.32 Grants

This proposed change removes the requirements detailing the length of grants as well as specific application submission requirements. This type of information is better located in a NOFO than in regulation as other comparable information is historically found in those kinds of sub regulatory documents. If remaining in its current form, grantees and applicants would be required to read the CFR for information that pertains to applications and NOFOs. Thus, this Section is not needed in regulation and is proposed to be removed.

§ 1336.33 Eligible Applicants and Proposed Activities Which Are Ineligible

This proposed change repeals the Section of regulation that details eligible applicants and what proposed activities are ineligible for funding. As this Section is specific to essentially a grant's terms and conditions, and will be found in both locations, it does not make sense to exist in regulation. As such, this Section is being proposed to be removed and inserted into the grant's terms and conditions or into a related NOFO.

Subpart D—Evaluation

§ 1336.40 General

This proposed change removes the unnecessary regulation that applications provide sufficient information for ANA to make a determination as to whether the application meets the standards. This requirement exists irrespective of the regulation as ANA has the authority to review applications and reports and make decisions to award or not award funds for a number of reasons, including the completeness of the application. This Section is being proposed to be removed and reserved as the authority exists with or without the regulation in place.

Subpart E—Financial Assistance Provisions

§ 1336.51 Project Period

This proposed change removes the unneeded regulation specifying that the length of the funding award will be included in the NOFO. This Section is not needed as it is standard practice for agencies to include in the NOFO the length of time for any particular funding opportunity. The removal of this Section will not preclude the duration of the award being included in the NOFOs. As such, this Section is being proposed to be removed and reserved.

Subpart F—Native Hawaiian Revolving Loan Fund Demonstration Project

§ 1336.60 Through § 1336.77

This proposed change removes an outdated and unfunded program titled the Native Hawaiian Revolving Loan Fund. This program had its appropriations end in FY2021 and the demonstration project period has since ended. As such, this regulation serves no current purpose and is proposed to be removed and reserved.

V. Regulatory Process Matters

Paperwork Reduction Act

Under the Paperwork Reduction Act (44 U.S.C. 3501 *et seq.*, as amended)

(PRA), all Departments are required to submit to the Office of Management and Budget (OMB) for review and approval any reporting or recordkeeping requirements inherent in a proposed or final rule. This NPRM does not contain any information collection requirements requiring OMB approval under the PRA and, therefore, will not create any new paperwork burdens or modify existing burdens subject to OMB review.

Executive Order 13132

Executive Order 13132 requires federal agencies to consult with State and local government officials if they develop regulatory policies with federalism implications. Federalism is rooted in the belief that issues that are not national in scope or significance are most appropriately addressed by the level of government close to the people. This proposed rule would not have substantial direct impact on the States, on the relationship between the federal government and the States, or on the distribution of power and responsibilities among the various levels of government. This NPRM would not pre-empt State law. The changes proposed in the NPRM are removing unnecessary and obsolete regulations from the Native American Program rules. Therefore, in accordance with Section 6 of Executive Order 13132, it is determined that this action does not have sufficient federalism implications to warrant the preparation of a federalism summary impact statement.

Assessment of Federal Regulations and Policies on Families

Assessment of Federal Regulations and Policies on Families Section 654 of the Treasury and General Government Appropriations Act of 1999 (Pub. L. 105–277) requires federal agencies to determine whether a policy or regulation may negatively affect family well-being. If the agency determines a policy or regulation negatively affects family well-being, then the agency must prepare an impact assessment addressing seven criteria specified in the law. HHS believes it is not necessary to prepare a family policymaking assessment because the actions proposed in this NPRM will not have any impact on the autonomy or integrity of the family as an institution.

VI. Regulatory Impact Analysis

We have examined the impacts of the proposed rule under Executive Order 12866, Executive Order 13563, Executive Order 14192, the Regulatory Flexibility Act (5 U.S.C. 601–612), and the Unfunded Mandates Reform Act of 1995 (Pub. L. 104–4).

Executive Orders 12866 and 13563 direct us to assess all benefits and costs of available regulatory alternatives and, when regulation is necessary, to select regulatory approaches that maximize net benefits. Rules are “significant” under Executive Order 12866 Section 3(f)(1) if they “have an annual effect on the economy of \$100 million or more; or adversely affect in a material way the economy, a sector of the economy, productivity, competition, jobs, the environment, public health or safety, or State, local or tribal governments or communities.” Executive Order 14192 requires that any new incremental costs associated with significant new regulations “shall, to the extent permitted by law, be offset by the elimination of existing costs associated with at least ten prior regulations.” The Office of Information and Regulatory Affairs (OIRA) has determined that this proposed rule is not a significant action under Executive Order 12866 Section 3(f). This analysis indicates that the proposed rule, if finalized would be a deregulatory action as defined by Section 3 of Executive Order 14192.

The Regulatory Flexibility Act (RFA) requires agencies to consider the impact of their regulatory proposals on small entities. Because this is simply repealing obsolete and unnecessary language, we propose to certify that the proposed rule would not have a significant economic impact on a substantial number of small entities.

The Unfunded Mandates Reform Act of 1995 (UMRA) generally requires that each agency conduct a cost-benefit analysis; identify and consider a reasonable number of regulatory alternatives; and select the least costly, most cost effective, or least burdensome alternative that achieves the objectives of the rule before promulgating any proposed or final rule that includes a Federal mandate that may result in expenditures of more than \$100 million (adjusted for inflation) in at least one year by State, local, and tribal governments, in the aggregate, or by the private sector. Each agency issuing a rule with relevant effects over that threshold must also seek input from State, local, and tribal governments. The current threshold after adjustment for inflation is \$193 million, using the most current (2025) Implicit Price Deflator for the Gross Domestic Product. This proposed rule would not result in an expenditure in any year that meets or exceeds this amount.

VII. Tribal Consultation Statement

Executive Order 13175, Consultation and Coordination with Indian Tribal Governments, requires agencies to

consult with Indian Tribes when regulations have substantial direct effects on one or more Indian tribes, on the relationship between the Federal government and Indian tribes, or on the distribution of power and responsibilities between the Federal Government and Indian Tribes. *Consultation and Coordination With Indian Tribal Governments*, 65 FR 67249. Similarly, ACF’s Tribal Consultation Policy says that consultation is triggered for a new rule adoption that significantly affects tribes, meaning the new rule adoption has substantial direct effects on one or more Indian tribes, on the amount or duration of ACF program funding, on the delivery of ACF programs or services to one or more Indian tribes, or on the distribution of power and responsibilities between the Federal Government and Indian tribes. However, as this is a deregulatory action, per OMB M–25–36, *Streamlining the Review of Deregulatory Actions*, this action presumptively does not trigger the consultation requirements of Executive Order 13175. ACF is nevertheless committed to consulting with Indian Tribes and Tribal leadership on this action to the extent practicable and permitted by law.

List of Subjects in 45 CFR Part 1336

Administrative practice and procedure, American Samoa, Grant programs—Indians, Grant programs—social programs, Guam, Hawaiian Natives, Indians, Northern Mariana Islands, Reporting and recordkeeping requirements.

For the reasons set forth in the preamble, ACF proposes to amend 45 CFR part 1336 as follows:

PART 1336—NATIVE AMERICAN PROGRAMS

- 1. The authority citation for part 1336 continues to read:

Authority: 42 U.S.C. 618, 9858 *et seq.*
* * * * *

- 2. § 1336.20, titled “Program purpose,” is removed and reserved.

* * * * *

- 3. § 1336.30, titled “Eligibility under sections 804 and 805 of the Native American Programs Act of 1974,” is removed and reserved.

* * * * *

- 4. § 1336.31, titled “Project approval procedures,” is removed and reserved.

* * * * *

- 5. § 1336.32, titled “Grants,” is removed and reserved.

* * * * *

■ 6. § 1336.33, titled “Eligible applicants and proposed activities which are ineligible,” is removed and reserved.

* * * * *

■ 7. § 1336.40, titled “General,” is removed and reserved.

* * * * *

■ 8. § 1336.51, titled “Project period,” is removed and reserved.

* * * * *

■ 9. § 1336.60, titled “Purpose of this subpart,” is removed and reserved.

* * * * *

■ 10. § 1336.61, titled “Purpose of the Revolving Loan Fund,” is removed and reserved.

* * * * *

■ 11. § 1336.62, titled “Definitions,” is removed and reserved.

* * * * *

■ 12. § 1336.63, titled “General responsibilities of the Loan Administrator,” is removed and reserved.

* * * * *

■ 13. § 1336.64, titled “Development of goals and strategies: Responsibilities of the Loan Administrator,” is removed and reserved.

* * * * *

■ 14. § 1336.65, titled “Staffing and organization of the Revolving Loan Fund: Responsibilities of the Loan Administrator,” is removed and reserved.

* * * * *

■ 15. § 1336.66, titled “Procedures and criteria for administration of the Revolving Loan Fund: Responsibilities of the Loan Administrator,” is removed and reserved.

* * * * *

■ 16. § 1336.67, titled “Security and collateral: Responsibilities of the Loan Administrator,” is removed and reserved.

* * * * *

■ 17. § 1336.68, titled “Defaults, uncollectible loans, liquidations: Responsibilities of the Loan Administrator,” is removed and reserved.

* * * * *

■ 18. § 1336.69, titled “Reporting requirements: Responsibilities of the Loan Administrator,” is removed and reserved.

* * * * *

■ 19. § 1336.70, titled “Technical assistance: Responsibilities of the Loan Administrator,” is removed and reserved.

* * * * *

■ 20. § 1336.71, titled “Administrative costs,” is removed and reserved.

* * * * *

■ 21. § 1336.72, titled “Fiscal requirements,” is removed and reserved.

* * * * *

■ 22. § 1336.73, titled “Eligible borrowers,” is removed and reserved.

* * * * *

■ 23. § 1336.74, titled “Time limits and interest on loans,” is removed and reserved.

* * * * *

■ 24. § 1336.75, titled “Allowable loan activities,” is removed and reserved.

* * * * *

■ 25. § 1336.76, titled “Unallowable loan activities,” is removed and reserved.

* * * * *

■ 26. § 1336.77, titled “Recovery of funds,” is removed and reserved.

* * * * *

I. Public Participation and Request for Comments

A. Submitting Comments

If you submit a comment, please include the docket number for this proceeding (FMCSA–2021–0050), indicate the specific section of this document to which your comment applies, and provide a reason for each suggestion or recommendation. You may submit your comments and material online or by fax, mail, or hand delivery, but please use only one of these means. FMCSA recommends that you include your name and a mailing address, an email address, or a phone number in the body of your document so FMCSA can contact you if there are questions regarding your submission. To submit your comment online, go to <https://www.regulations.gov/docket/FMCSA-2021-0050/document>, click on this NODA, click “Comment,” and type your comment into the text box on the following screen. If you submit your comments by mail or hand delivery, submit them in an unbound format, no larger than 8½ by 11 inches, suitable for copying and electronic filing.

FMCSA will consider all comments and material received during the comment period.

Confidential Business Information (CBI)

CBI is commercial or financial information that is both customarily and

actually treated as private by its owner. Under the Freedom of Information Act (5 U.S.C. 552), CBI is exempt from public disclosure. If your comments responsive to the NODA contain commercial or financial information that is customarily treated as private, that you actually treat as private, and that is relevant or responsive to the NODA, it is important that you clearly designate the submitted comments as CBI. Please mark each page of your submission that constitutes CBI as "PROPIN" to indicate it contains proprietary information. FMCSA will treat such marked submissions as confidential under the Freedom of Information Act, and they will not be placed in the public docket of the proceeding. Submissions containing CBI should be sent to Mr. Brian Dahlin, Chief, Regulatory Evaluation Division, Office of Policy, FMCSA, 1200 New Jersey Avenue SE, Washington, DC 20590-0001 or via email at brian.g.dahlin@dot.gov. At this time, you need not send a duplicate hardcopy of your electronic CBI submissions to FMCSA headquarters. Any comments FMCSA receives not specifically designated as CBI will be placed in the public docket for this rulemaking.

B. Viewing Comments and Documents

To view any documents mentioned as being available in the docket, go to <https://www.regulations.gov/docket/FMCSA-2021-0050/document> and choose the document to review. To view comments, click this notice, then click "Browse Comments." If you do not have access to the internet, you may view the docket online by visiting Dockets Operations, U.S. Department of

Transportation, 1200 New Jersey Avenue SE, W58-213, Washington, DC 20590-0001, between 9 a.m. and 5 p.m., Monday through Friday, except Federal holidays. To be sure someone is there to help you, please call (202) 366-9317 or (202) 366-9826 before visiting Dockets Operations.

C. Privacy

In accordance with 5 U.S.C. 553(c), DOT solicits comments from the public to better inform its regulatory process. DOT posts these comments, including any personal information the commenter provides, to www.regulations.gov, as described in the system of records notice DOT/ALL 14 (Federal Docket Management System (FDMS)), which can be reviewed at <https://www.transportation.gov/individuals/privacy/privacy-act-system-records-notices>. The comments are posted without edit and are searchable by the name of the submitter.

II. Background

On May 30, 2025, FMCSA published a notice of proposed rulemaking (NPRM) in this proceeding stating the Agency proposed to amend 49 Code of Federal Regulations (CFR) 392.10 by adding an exception for any railroad grade crossing equipped with an active warning device that is not in an activated state (e.g., flashing lights or crossing gates down, indicating the arrival of a train) (90 FR 22914). Under local law, this would permit the commercial motor vehicle (CMV) to proceed across the railroad tracks without slowing or stopping.

The NPRM provided detailed information on the background and

history of FMCSA regulations regarding railroad grade crossings, the proposed amendments, and the legal basis for such amendments. The deadline for submitting comments in response to the NPRM was July 29, 2025.

III. What information is available?

Using data from the Federal Railroad Administration, FMCSA has identified information on vehicle and railroad collisions, rear-end CMV fatal crashes, and signal failures. This information has been summarized and posted to the docket and FMCSA may consider it in the context of further regulatory action.

IV. What is the scope of comments FMCSA is seeking and what supporting documentation do I need to include in my comments?

FMCSA has provided the information identified above and is considering whether to rely upon it in further regulatory action. This NODA is necessary to disclose such possible reliance and to provide the interested public an opportunity to comment on the accuracy and relevance of the information (49 CFR 5.5(a)(1)).

The comment period for the NPRM ended on July 29, 2025. Comments submitted in response to this NODA must be limited to addressing any relevant information identified above. Comments addressing other matters will not be considered by FMCSA.

Issued under authority delegated in 49 CFR 1.87.

Derek Barrs,
Administrator.

[FR Doc. 2026-06013 Filed 3-26-26; 8:45 am]

BILLING CODE 4910-EX-P

Notices

Federal Register

Vol. 91, No. 59

Friday, March 27, 2026

This section of the FEDERAL REGISTER contains documents other than rules or proposed rules that are applicable to the public. Notices of hearings and investigations, committee meetings, agency decisions and rulings, delegations of authority, filing of petitions and applications and agency statements of organization and functions are examples of documents appearing in this section.

DEPARTMENT OF AGRICULTURE

Animal and Plant Health Inspection Service

[Docket No. APHIS–2025–0021]

Bayer CropScience: Determination of Nonregulated Status of MON 95275 Maize (Corn)

AGENCY: Animal and Plant Health Inspection Service, USDA.

ACTION: Notice.

SUMMARY: We are advising the public of our determination that MON 95275 maize (corn), which was developed using genetic engineering to produce two insecticidal proteins and a double-stranded RNA transcript to provide protection from feeding damage caused by targeted coleopteran (corn rootworm) insect pests, is no longer considered regulated. Our determination is based on our evaluation of information and data Bayer CropScience submitted in its petition for a determination of nonregulated status, available scientific data, the plant pest risk assessment, and public comments received in response to a previous notice announcing the availability of the petition for nonregulated status and a draft plant pest risk assessment. This notice announces the availability of our written determination and supporting documents.

DATES: This change in regulatory status is recognized as of March 19, 2026.

ADDRESSES: You may read the petition, our determination referenced in this notice, and supporting documents by any of the following methods:

- *Federal eRulemaking Portal:* Go to www.regulations.gov. Enter APHIS–2025–0021 in the Search field.
- *Postal Mail/Commercial Delivery:* Send your comment to Docket No. APHIS–2025–0021, Regulatory Analysis and Development, PPD, APHIS, 5601

Sunnyside Ave. #AP760, Beltsville, MD 20705.

- Our reading room, located in 1620 of the USDA South Building, 14th Street and Independence Avenue SW, Washington, DC. Normal reading room hours are 8 a.m. to 4:30 p.m., Monday through Friday, except holidays. To be sure someone is there to help you, please call (202) 799–7039 before coming.

FOR FURTHER INFORMATION CONTACT: Mr. Alan Pearson, Biotechnology Regulatory Services, APHIS, USDA, 5601 Sunnyside Avenue, AP100–3–WS–1151, Beltsville, MD 20705; (301) 851–3944; email: alan.pearson@usda.gov.

SUPPLEMENTARY INFORMATION: Under the authority of the plant pest provisions of the Plant Protection Act (7 U.S.C. 7701–7772, 7781–7786) and the regulations in 7 CFR part 340, “Introduction of Organisms and Products Altered or Produced Through Genetic Engineering Which Are Plant Pests or Which There Is Reason to Believe Are Plant Pests,” APHIS regulates, among other things, the introduction (importation, interstate movement, or release into the environment) of organisms and products altered or produced through genetic engineering that are plant pests or that there is reason to believe are plant pests. Such organisms and products are considered “regulated articles.”

Section 340.6(a) of the regulations provides that any person may submit a petition to the Animal and Plant Health Inspection Service (APHIS) seeking a determination that an article should not be regulated under 7 CFR part 340.

APHIS received a petition (APHIS Petition Number 25–083–01p) from Bayer CropScience (Bayer) seeking a determination of nonregulated status for MON 95275 maize (corn), which has been developed using genetic engineering to produce two insecticidal proteins and a double-stranded RNA transcript to provide protection from feeding damage caused by targeted coleopteran (corn rootworm) insect pests. The petition provides information in support of petitioners’ position that MON 95275 is unlikely to pose a plant pest risk and therefore should not be regulated under APHIS’ regulations in 7 CFR part 340.

As part of our decision-making process regarding the organism’s regulatory status, APHIS prepared a draft plant pest risk assessment (PPRA)

to assess the plant pest risk of the organism.

APHIS published the petition and draft PPRA in the **Federal Register** [90 FR 30035, APHIS–2025–0021] and accepted public comments from July 8, 2025, through September 8, 2025. APHIS received 11 comments by the close of the comment period. No comments addressed the PPRA. Five comments from individuals stated general opposition to genetic engineering. These comments are non-substantive and will not be addressed further. One comment specifically opposed deregulating the product and also expressed concerns related to deregulation contributing to carbon dioxide (CO₂) emissions. This comment is addressed in our response to comments. One comment remained neutral regarding the petition, but also expressed concerns related to deregulation contributing to CO₂ emissions. This comment is also addressed in our response to comments. The remaining four comments from non-government organizations expressed support in the deregulation of the corn. We note the support expressed by these commenters to deregulate the corn for the record.

Determination

Based on APHIS’ evaluation in the PPRA of information and data submitted by Bayer in its petition, available scientific data, and public comments received in response to the petition and draft PPRA, APHIS has determined that MON 95275 is unlikely to pose a greater plant pest risk than the unmodified comparator and therefore is no longer subject to the regulations in 7 CFR part 340 governing the introduction of certain organisms developed using genetic engineering.

Copies of the signed determination, PPRA, and response to comments, as well as the previously published petition and supporting documents, are available as indicated in the **ADDRESSES** and **FOR FURTHER INFORMATION CONTACT** sections of this notice.

Authority: 7 U.S.C. 7701–7772 and 7781–7786; 31 U.S.C. 9701; 7 CFR 2.22, 2.80, and 371.3.

Done in Washington, DC, this 25th day of March 2026.

Kelly Moore,

Administrator, Animal and Plant Health Inspection Service.

BILLING CODE 3410-34-P

DEPARTMENT OF AGRICULTURE

Food Safety and Inspection Service

[Docket No. FSIS-2026-0069]

Notice of Request To Renew an Approved Information Collection: Laboratory Assessment Requests

AGENCY: Food Safety and Inspection Service (FSIS), U.S. Department of Agriculture (USDA).

ACTION: Notice and request for comments.

SUMMARY: In accordance with the Paperwork Reduction Act of 1995 and Office of Management and Budget (OMB) regulations, FSIS is announcing its intention to request a renewal of the approved information collection for non-FSIS laboratories (state, local, or private) that test food samples during illness outbreaks and recall investigations. There are no changes to the existing information collection. The approval for this information collection will expire on August 31, 2026.

DATES: Submit comments on or before May 26, 2026.

ADDRESSES: FSIS invites interested persons to submit comments on this **Federal Register** notice. Comments may be submitted by one of the following methods:

- **Federal eRulemaking Portal:** This website provides commenters the ability to type short comments directly into the comment field on the web page or to attach a file for lengthier comments. Go to <https://www.regulations.gov>. Follow the online instructions at that site for submitting comments.

- **Mail:** Send to Docket Clerk, U.S. Department of Agriculture, Food Safety and Inspection Service, 1400 Independence Avenue SW, Mailstop 3758, Washington, DC 20250-3700.

- **Hand- or courier-delivered submittals:** Deliver to 1400 Independence Avenue SW, Jamie L. Whitten Building, Room 350-E, Washington, DC 20250-3700.

Instructions: All items submitted by mail or electronic mail must include the Agency name and docket number FSIS-2026-0069. Comments received in response to this docket will be made available for public inspection and posted without change, including any

personal information, to <https://www.regulations.gov>.

Docket: For access to background documents or comments received, call (202) 286-2255 to schedule a time to visit the FSIS Docket Room at 1400 Independence Avenue SW, Washington, DC 20250-3700.

FOR FURTHER INFORMATION CONTACT: Gina Kouba, Office of Policy and Program Development, Food Safety and Inspection Service, USDA, 1400 Independence Avenue SW, Mailstop 3758, South Building, Washington, DC 20250-3700; 202-720-5046.

SUPPLEMENTARY INFORMATION:

Title: Laboratory Assessment Requests.

OMB Number: 0583-0183.

Type of Request: Renewal of an approved information collection.

Abstract: FSIS has been delegated the authority to exercise the functions of the Secretary (7 CFR 2.18 and 2.53), as specified in the Federal Meat Inspection Act (FMIA) (21 U.S.C. 601 *et seq.*), the Poultry Products Inspection Act (PPIA) (21 U.S.C. 451 *et seq.*), and the Egg Products Inspection Act (EPIA) (21 U.S.C. 1031 *et seq.*). These statutes mandate that FSIS protect the public by verifying that meat, poultry, and egg products are safe, wholesome, and properly labeled.

FSIS is announcing its intention to renew the approved information collection for non-FSIS laboratories (State, local, or private) that test food samples during illness outbreak and recall investigations. There are no changes to the existing information collection. The approval for this information collection will expire on August 31, 2026.

As a public health regulatory agency, FSIS investigates reports of foodborne illness, contamination, and adulteration potentially associated with FSIS-regulated products. During these investigations, non-FSIS laboratories may test FSIS-regulated product and share the results with FSIS. FSIS Office of Public Health Science (OPHS) Microbiological and Chemical Hazards Staff (MCHS) will review the results and associated documentation shared by the non-FSIS laboratory to determine whether FSIS will accept the results. If the MCHS lead investigator determines the non-FSIS laboratory result is acceptable, FSIS may use the result to inform regulatory action (*e.g.*, request a recall or detain product).

As part of the process to determine if the non-FSIS laboratory result is acceptable, the MCHS lead investigator collects information from the non-FSIS laboratory and verifies that the non-FSIS

laboratory can provide the appropriate certifications and documentation of accreditation, such as ISO 17025, or another third-party accreditation entity covering the methods performed. The MCHS lead investigator also verifies that the laboratory has submitted to FSIS all the necessary information, including evidence of chain of custody, and the appropriate laboratory reports with sample identification, final results, and authorization by the responsible official for affirming results. Finally, the MCHS investigator collects and verifies laboratory methods and quality-assurance records documentation from the accredited, non-FSIS laboratory.

FSIS has made the estimates below based on an information collection assessment.

Respondents: Non-FSIS laboratories.
Estimated Number of Respondents: 3.
Estimated Number of Annual Responses per Respondent: 1.
Estimated Total Annual Burden on Respondents: 22.5 hours.

All responses to this notice will be summarized and included in the request for OMB approval. All comments will also become a matter of public record. Copies of this information collection assessment can be obtained from Gina Kouba, Office of Policy and Program Development, Food Safety and Inspection Service, USDA, 1400 Independence Avenue SW, Mailstop 3758, South Building, Washington, DC 20250-3700; 202-720-5046.

Comments are invited on: (a) whether the proposed collection of information is necessary for the proper performance of FSIS' functions, including whether the information will have practical utility; (b) the accuracy of FSIS' estimate of the burden of the proposed collection of information, including the validity of the method and assumptions used; (c) ways to enhance the quality, utility, and clarity of the information to be collected; and (d) ways to minimize the burden of the collection of information, including through the use of appropriate automated, electronic, mechanical, or other technological collection techniques, or other forms of information technology. Comments may be sent to both FSIS, at the addresses provided above, and the Desk Officer for Agriculture, Office of Information and Regulatory Affairs, Office of Management and Budget (OMB), Washington, DC 20253.

Additional Public Notification

Public awareness of all segments of rulemaking and policy development is important. Consequently, FSIS will announce this **Federal Register** publication on-line through the FSIS

web page located at: <https://www.fsis.usda.gov/federal-register>.

FSIS will also announce and provide a link to this **Federal Register** publication through the FSIS *Constituent Update*, which is used to provide information regarding FSIS policies, procedures, regulations, **Federal Register** notices, FSIS public meetings, and other types of information that could affect or would be of interest to our constituents and stakeholders. The *Constituent Update* is available on the FSIS web page. Through the web page, FSIS can provide information to a much broader, more diverse audience. In addition, FSIS offers an email subscription service that provides automatic and customized access to selected food safety news and information. This service is available at: <https://www.fsis.usda.gov/subscribe>. The available information ranges from recalls to export information, regulations, directives, and notices. Customers can add or delete subscriptions themselves and have the option to password protect their accounts.

USDA Non-Discrimination Statement

In accordance with Federal civil rights law and USDA civil rights regulations and policies, the USDA, its Agencies, offices, and employees, and institutions participating in or administering USDA programs are prohibited from discriminating based on race, color, national origin, religion, sex, disability, age, marital status, family/parental status, income derived from a public assistance program, political beliefs, or reprisal or retaliation for prior civil rights activity, in any program or activity conducted or funded by USDA (not all bases apply to all programs). Remedies and complaint filing deadlines vary by program or incident.

Persons with disabilities who require alternative means of communication for program information (e.g., Braille, large print, audiotope, American Sign Language, etc.) should contact the State or local Agency that administers the program or contact USDA through the Telecommunications Relay Service at 711 (voice and TTY). Additionally, program information may be made available in languages other than English.

To file a program discrimination complaint, complete the USDA Program Discrimination Complaint Form, AD-3027, found online at How to File a Program Discrimination Complaint and at any USDA office or write a letter addressed to USDA and provide in the letter all of the information requested in the form. To request a copy of the

complaint form, call (866) 632-9992. Submit your completed form or letter to USDA by: (1) mail: U.S. Department of Agriculture, Office of the Assistant Secretary for Civil Rights, 1400 Independence Avenue SW, Mail Stop 9410, Washington, DC 20250-9410; (2) fax: (202) 690-7442; or (3) email: program.intake@usda.gov.

USDA is an equal opportunity provider, employer, and lender.

Justin Ransom,
Administrator.

BILLING CODE 3410-DM-P

DEPARTMENT OF COMMERCE

Economic Development Administration

Agency Information Collection Activities; Submission for OMB Review; Comment Request; Regional Economic Development Data Collection Instrument

The Department of Commerce will submit the following information collection request to the Office of Management and Budget (OMB) for review and clearance in accordance with the Paperwork Reduction Act of 1995, on or after the date of publication of this notice. We invite the general public and other Federal agencies to comment on proposed, and continuing information collections, which helps us assess the impact of our information collection requirements and minimize the public's reporting burden. Public comments were previously requested via the **Federal Register** on January 23, 2026 during a 60-day comment period. This notice allows for an additional 30 days for public comments.

Agency: Economic Development Administration, Department of Commerce.

Title: Regional Economic Development Data Collection Instrument.

OMB Control Number: 0610-0110.

Form Number(s): None.

Type of Request: Extension of a Currently Approved Collection.

Number of Respondents: A total of 21 coalitions (with a designated lead) will respond.

Average Hours per Response: 2.5 hours per respondent per quarter.

Burden Hours: 210 hours.

Needs and Uses: To effectively administer and monitor its economic development assistance programs, EDA collects certain information from applications for, and recipients of, EDA investment assistance. The purpose of

this notice is to seek comments from the public and other Federal agencies on a request for recipients of awards under the EDA Build Back Better Regional Challenge.

The proposed information collection employs a mixed methods approach to gather traditional metrics in addition to qualitative data on all regions participating in the Build Back Better Regional Challenge program. Secondary data will be gathered and monitored for each of the regions/awardees. A quarterly questionnaire is sent to each of the BBBRC coalition leads which will gather the relevant data and stories for each of the 21 BBBRC coalitions, resulting in coalition regional impact evaluation, resources, and tools for regional economic development decision-makers.

The collection explores several thematic areas for the Build Back Better Regional Challenge, where each of the following areas are based on survey scope of work themes:

1. Accelerating innovation in emerging technologies to gain an understanding of the long-term impact of economic and social sectors.
2. Helping workers access information on new job opportunities, job placement, and job training and prepare for and be hired into jobs.
3. Increasing new business growth and entrepreneurial activities within industry sectors.
4. Building critical infrastructure such as roads, water and sewer miles, business and industries to allow for economic development and growth.
5. Helping businesses adopt new technologies so that they may enter new markets, increasing their economic capacity and overall sustainability.

Coalition leads will respond to the appropriate thematic area, answering questions related to the following process and progress:

- Reflections and updates on the coalition implementation process and progress.
- The ability to secure additional non-federal investments.
- Detailing the programs, training, and curricula developed/launched for job training/workforce development.
- Job creation, wage growth, and existing employee growth and development.

Affected Public: Recipients of Build Back Better Regional Challenge awards, which may include a(n): district organization; Indian Tribe or a consortium of Indian Tribes; state, county, city, or other political subdivision of a State, including a special purpose unit of a state or local government engaged in economic or

infrastructure development activities or a consortium of political subdivisions; institution of higher education or a consortium of institutions of higher education; or public or private non-profit organization or association, including labor unions, acting in cooperation with officials of a political subdivision of a state.

Frequency: Quarterly.
Respondent's Obligation: Mandatory.
Legal Authority: The Public Works and Economic Development Act of 1965 (42 U.S.C. 3121 et seq).

This information collection request may be viewed at www.reginfo.gov. Follow the instructions to view the Department of Commerce collections currently under review by OMB.

Written comments and recommendations for the proposed information collection should be submitted within 30 days of the publication of this notice on the following website www.reginfo.gov/public/do/PRAMain. Find this particular information collection by selecting "Currently under 30-day Review—Open for Public Comments" or by using the search function and entering either the title of the collection or the OMB Control Number 0610–0110.

Sheleen Dumas,
Departmental PRA Compliance Officer, Office of the Under Secretary of Economic Affairs, Commerce Department.

BILLING CODE 3510–34–P

DEPARTMENT OF COMMERCE

International Trade Administration
[C–721–002]

Steel Concrete Reinforcing Bar From Algeria: Final Affirmative Countervailing Duty Determination

AGENCY: Enforcement and Compliance, International Trade Administration, Department of Commerce.
SUMMARY: The U.S. Department of Commerce (Commerce) determines that countervailable subsidies are being provided to producers and exporters of steel concrete reinforcing bar (rebar)

from Algeria. The period of investigation (POI) is January 1, 2024, through December 31, 2024.
DATES: Applicable March 27, 2026.
FOR FURTHER INFORMATION CONTACT: Henry Wolfe or Shane Subler, AD/CVD Operations, Office VIII, Enforcement and Compliance, International Trade Administration, U.S. Department of Commerce, 1401 Constitution Avenue NW, Washington, DC 20230; telephone: (202) 482–0574 or (202) 482–6241, respectively.

SUPPLEMENTARY INFORMATION:

Background

On January 13, 2026, Commerce published in the **Federal Register** the *Preliminary Determination* in this investigation and invited interested parties to comment.¹ Because no comments were submitted by interested parties, we have adopted our *Preliminary Determination* for purposes of this final determination. According, no decision memorandum accompanies this **Federal Register** notice. The deadline for the final determination of this investigation is March 24, 2026.

Scope of the Investigation

The product covered by this investigation is rebar from Algeria. For a complete description of the scope of this investigation, *see* the appendix to this notice.

Scope Comments

No interested party commented on the scope of the investigation as it appeared in the *Preliminary Determination*.² Therefore, we made no changes to the scope of the investigation from that published in the *Preliminary Determination*.

Methodology

Commerce conducted this investigation in accordance with section 701 of the Tariff Act of 1930, as amended (the Act). For each of the subsidy programs found to be countervailable, Commerce determines that there is a subsidy, *i.e.*, a financial contribution by an “authority” that gives rise to a benefit to the recipient, and that the subsidy is specific.³ In

making this final determination, Commerce relied on facts available, including with an adverse inference, pursuant to sections 776(a) and (b) of the Act. For a full discussion of our application of adverse facts available (AFA), *see Preliminary Determination*.⁴

Verification

Because the non-responsive respondent, Tosyali Iron Steel Industry Algeria SPA, did not participate in this investigation and because the Government of Algeria (GOA) did not provide information Commerce requested, Commerce did not conduct a verification in this investigation.⁵

All-Others Rate

Sections 703(d) and 705(c)(5)(A) of the Act provide that Commerce shall determine an estimated all-others rate for companies not individually examined. Pursuant to section 705(c)(5)(A)(ii) of the Act, if the individual estimated countervailable subsidy rates established for all exporters and producers individually examined are zero, *de minimis*, or determined based entirely on section 776 of the Act, Commerce may use any reasonable method to establish the estimated subsidy rate for all other producers or exporters. In this investigation, Commerce has determined the estimated subsidy rate for the individually examined respondent under section 776 of the Act. This is the only rate available in this proceeding for deriving the all-others rate. Consequently, pursuant to sections 703(d) and 705(c)(5)(A)(ii) of the Act, Commerce established the all-others rate by applying the countervailable subsidy rate assigned to the non-responsive company listed below. For a full description of the methodology underlying Commerce’s analysis, *see the Preliminary Determination*.⁶

Final Determination

Commerce determines that the following estimated countervailable subsidy rates exist:

Company	Subsidy rate (percent <i>ad valorem</i>)
Tosyali Iron Steel Industry Algeria SPA	* 72.94

¹ See *Steel Concrete Reinforcing Bar From Algeria: Preliminary Affirmative Countervailing Duty Determination*, 91 FR 1261 (January 13, 2026) (*Preliminary Determination*), and accompanying Preliminary Decision Memorandum (PDM).

² See *Preliminary Determination*, 91 FR at 1261.
³ See sections 771(5)(B) and (D) of the Act regarding financial contribution; section 771(5)(E) of the Act regarding benefit; and section 771(5A) of the Act regarding specificity.

⁴ See *Preliminary Determination* PDM at the section “Use of Facts Otherwise Available and Application of Adverse Inferences.”
⁵ See *Preliminary Determination*, 91 FR at 1262.
⁶ *Id.*, 91 FR at 1261–62.

Company	Subsidy rate (percent <i>ad valorem</i>)
All Others	72.94

* Rate is based on facts available with adverse inferences.

Disclosure

Normally, Commerce discloses to interested parties the calculations performed in a final determination within five days of any public announcement or, if there is no public announcement, within five days of the date of publication of the final determination in the **Federal Register**, in accordance with 19 CFR 351.224(b). However, because the program rates assigned as AFA in the *Preliminary Determination* are unchanged, there are no new calculations to disclose.

Continuation of Suspension of Liquidation

In accordance with sections 703(d)(1)(B) and (d)(2) of the Act, Commerce instructed U.S. Customs and Border Protection (CBP) to collect cash deposits and suspend liquidation of entries of rebar from Algeria, as described in the appendix to this notice, entered, or withdrawn from warehouse, for consumption on or after January 13, 2026, the date of publication of the *Preliminary Determination* in the **Federal Register**, at the cash deposit rate indicated above.

If the U.S. International Trade Commission (ITC) issues a final affirmative injury determination, we will issue a countervailing duty (CVD) order and require a cash deposit of estimated countervailing duties for such entries of subject merchandise in the amounts indicated above, in accordance with section 706(a) of the Act. If the ITC determines that material injury, or threat of material injury, does not exist, this proceeding will be terminated, and all estimated duties deposited or securities posted as a result of the suspension of liquidation will be refunded or canceled.

ITC Notification

In accordance with section 705(d) of the Act, Commerce will notify the ITC of its final affirmative determination that countervailable subsidies are being provided to producers and exporters of rebar from Algeria. As Commerce's final determination is affirmative, in accordance with section 705(b) of the Act, the ITC will determine, within 45 days, whether the domestic industry in the United States is materially injured, or threatened with material injury, by reason of imports of rebar from Algeria.

In addition, we are making available to the ITC all non-privileged and non-proprietary information related to this investigation. We will allow the ITC access to all privileged and business proprietary information in our files, provided the ITC confirms that it will not disclose such information, either publicly or under administrative protective order (APO), without the written consent of the Assistant Secretary for Enforcement and Compliance.

If the ITC determines that material injury or threat of material injury does not exist, this proceeding will be terminated and all cash deposits will be refunded or canceled. If the ITC determines that such injury does exist, Commerce intends to issue a CVD order directing CBP to assess, upon further instruction by Commerce, countervailing duties on all imports of the subject merchandise that are entered, or withdrawn from warehouse, for consumption on or after the effective date of the suspension of liquidation, as discussed above in the "Continuation of Suspension of Liquidation" section.

Administrative Protective Order

In the event that the ITC issues a final negative injury determination, this notice will serve as the only reminder to parties subject to the APO of their responsibility concerning the destruction of proprietary information disclosed under APO, in accordance with 19 CFR 351.305(a)(3). Timely written notification of the return/destruction of APO materials or conversion to judicial protective order is hereby requested. Failure to comply with the regulations and terms of an APO is a violation which is subject to sanction.

Notification to Interested Parties

This determination is issued and published pursuant to sections 705(d) and 777(i) of the Act, and 19 CFR 351.210(c).

Dated: March 24, 2026.

Christopher Abbott,

Deputy Assistant Secretary for Policy and Negotiations, performing the non-exclusive functions and duties of the Assistant Secretary for Enforcement and Compliance.

Appendix

Scope of the Investigation

The merchandise subject to this investigation is steel concrete reinforcing bar imported in either straight length or coil form (rebar) regardless of metallurgy, length, diameter, or grade or lack thereof.

The subject merchandise includes rebar that has been further processed in the subject country or a third country, including but not limited to cutting, grinding, galvanizing, painting, coating, or any other processing that would not otherwise remove the merchandise from the scope of this investigation if performed in the country of manufacture of the rebar.

Specifically excluded are plain rounds (*i.e.*, nondeformed or smooth rebar).

The subject merchandise is classifiable in the Harmonized Tariff Schedule of the United States (HTSUS) primarily under subheadings 7213.10.0000, 7214.20.0000, and 7228.30.8010. The subject merchandise may also enter under other HTSUS subheadings including 221.00.0017, 7221.00.0018, 7221.00.0030, 7221.00.0045, 7222.11.0001, 7222.11.0057, 7222.11.0059, 7222.30.0001, 7227.20.0080, 7227.90.6030, 7227.90.6035, 7227.90.6040, 7228.20.1000, and 7228.60.6000. HTSUS subheadings are provided for convenience and customs purposes; however, the written description of the scope remains dispositive.

Thermal Paper From Germany: Preliminary Results and Rescission, in Part, of Antidumping Duty Administrative Review; 2023–2024

AGENCY: Enforcement and Compliance, International Trade Administration, Department of Commerce.

SUMMARY: The U.S. Department of Commerce (Commerce) preliminarily determines that sales of thermal paper from Germany were not made at less than normal value (NV) during the period of review (POR), November 1, 2023, through October 31, 2024. We are also rescinding this review, in part, with

respect to 14 companies. Interested parties are invited to comment on these preliminary results.

DATES: Applicable March 27, 2026.

FOR FURTHER INFORMATION CONTACT: Anne Entz, AD/CVD Operations, Office IX, Enforcement and Compliance, International Trade Administration, U.S. Department of Commerce, 1401 Constitution Avenue NW, Washington, DC 20230; telephone: (202) 482–3845.

Background

On November 22, 2021, Commerce published in the **Federal Register** the antidumping duty (AD) order on thermal paper from Germany.¹ On December 18, 2024, based on timely requests for review, in accordance with 19 CFR 351.221(c)(1)(i), we initiated an administrative review of the *Order*.² On January 29, 2025, Commerce selected Koehler Paper SE and Koehler Kehl GmbH (collectively, Koehler) and Matra Atlantic GmbH (Matra) as the mandatory respondents in this review.³

Due to the lapse in appropriations and Federal Government shutdown, on November 14, 2025, Commerce tolled all deadlines in administrative proceedings by 47 days.⁴ Additionally, due to a backlog of documents that were electronically filed via Enforcement and Compliance's Antidumping and Countervailing Duty Centralized Electronic Service System (ACCESS) during the Federal Government shutdown, on November 24, 2025, Commerce tolled all deadlines in administrative proceedings by an additional 21 days.⁵ Further, on December 19, 2025, January 16, 2026, February 25, 2026, and March 12, 2026, Commerce extended the time limit for these preliminary results.⁶ Accordingly,

the deadline for the preliminary results is now March 24, 2026.

For a complete description of the events that followed the initiation of this review, *see* the Preliminary Decision Memorandum.⁷ The Preliminary Decision Memorandum is a public document and is on file electronically via ACCESS. ACCESS is available to registered users at <https://access.trade.gov>. In addition, a complete version of the Preliminary Decision Memorandum can be accessed directly at <https://access.trade.gov/public/FRNoticesListLayout.aspx>.

Scope of the Order

The merchandise subject to the *Order* is thermal paper from Germany. For a complete description of the scope of the *Order*, *see* the Preliminary Decision Memorandum.

Rescission of Administrative Review, in Part

In accordance with 19 CFR 351.213(d)(1), Commerce will rescind an administrative review, in whole or in part, if a party who requested a review withdraws its request within 90 days of the date of publication of notice of initiation. On January 2, 2025, pursuant to 19 CFR 351.213(d)(1), Domtar Corporation and Appvion, LLC (collectively, the petitioners) timely withdrew their requests for review for the 14 producers and/or exporters listed in Appendix II.⁸ Because no other party requested a review of these companies, we are rescinding this review with respect to them, pursuant to 19 CFR 351.213(d)(1).

and “Fourth Extension of Deadline for Preliminary Results of 2023–2024 Antidumping Duty Administrative Review,” dated March 12, 2026.

⁷ *See* Memorandum, “Decision Memorandum for the Preliminary Results of the 2023–2024 Administrative Review of the Antidumping Duty Order on Thermal Paper from Germany,” dated concurrently with, and hereby adopted by, this notice (Preliminary Decision Memorandum).

⁸ *See* Petitioners’ Letter, “Partial Withdrawal of Request for Administrative Review,” dated January 2, 2025. On June 30, 2025, Commerce issued a memorandum noting its intent to rescind this administrative review for companies with no suspended entries during the POR, including Koehler Oberkirch GmbH (Koehler Oberkirch). *See* Memorandum, “Notice of Intent to Rescind Review, In Part,” dated June 30, 2025 (Intent to Rescind Memorandum). However, because Koehler Oberkirch is an affiliate of Koehler, we are not rescinding this review for it. Moreover, we note that the petitioners withdrew their requests for review for the remaining companies in the Intent to Rescind Memorandum.

Review-Specific Rate for Non-Examined Companies

The Act and Commerce’s regulations do not address the establishment of a weighted-average dumping margin to be applied to companies not selected for individual examination when Commerce limits its examination in an administrative review pursuant to section 777A(c)(2) of the Tariff Act of 1930, as amended (the Act). Generally, Commerce looks to section 735(c)(5) of the Act, which provides instructions for calculating the all-others rate in a less-than-fair-value (LTFV) investigation, for guidance when calculating the weighted-average dumping margin for companies which were not selected for individual examination in an administrative review. Under section 735(c)(5)(A) of the Act, the all-others rate is normally “an amount equal to the weighted average of the estimated weighted-average dumping margins established for exporters and producers individually investigated, excluding any zero or *de minimis* margins, and any margins determined entirely {on the basis of facts available}.” Therefore, because the rate calculated for Koehler in this administrative review is a zero, consistent with section 735(c)(5)(A) of the Act, for the companies not selected for individual examination in this review (*i.e.*, Convertidoras PCM, S.A. de C.V. (Convertidoras) and Papeles y Conversiones de Mexico, S.A. de C.V. (Papeles)), we are preliminarily assigning the most recent above-*de minimis* rate calculated in this proceeding as the review-specific rate, *i.e.*, 0.76 percent.

Methodology

Commerce is conducting this review in accordance with section 751(a) of the Act. We calculated constructed export price in accordance with section 772 of the Act. We calculated NV in accordance with section 773 of the Act. For a full description of the methodology underlying our conclusions, *see* the Preliminary Decision Memorandum. A list of the topics discussed in the Preliminary Decision Memorandum is attached as Appendix I to this notice.

Preliminary Results of Review

As a result of this review, we preliminarily determine that the following weighted-average dumping margins exist for the period November 1, 2023, through October 31, 2024:

¹ *See Thermal Paper from Germany, Japan, the Republic of Korea, and Spain: Antidumping Duty Orders*, 86 FR 66284 (November 22, 2021) (*Order*).

² *See Initiation of Antidumping and Countervailing Duty Administrative Reviews*, 89 FR 102856 (December 18, 2024).

³ *See* Memorandum, “Respondent Selection,” dated January 29, 2025.

⁴ *See* Memorandum, “Deadlines Affected by the Shutdown of the Federal Government,” dated November 14, 2025.

⁵ *See* Memorandum, “Tolling of all Case Deadlines,” dated November 24, 2025.

⁶ *See* Memoranda, “Extension of Deadline for Preliminary Results of 2023–2024 Antidumping Duty Administrative Review,” dated December 19, 2025; “Second Extension of Deadline for Preliminary Results of 2023–2024 Antidumping Duty Administrative Review,” dated January 16, 2026; “Third Extension of Deadline for Preliminary Results of 2023–2024 Antidumping Duty Administrative Review,” dated February 25, 2026;

Exporter/producer	Weighted-average dumping margin (percent)
Koehler Paper SE; Koehler Kehl GmbH	0.00
Convertidoras PCM, S.A. de C.V.	0.76
Papeles y Conversiones de Mexico, S.A. de C.V.	0.76

Disclosure

Commerce intends to disclose its calculations and analysis performed for these preliminary results to interested parties within five days of any public announcement or, if there is no public announcement, within five days of the date of publication of this notice in the **Federal Register**, in accordance with 19 CFR 351.224(b).

Public Comment

Case briefs or other written comments may be submitted to the Assistant Secretary for Enforcement and Compliance. Pursuant to 19 CFR 351.309(c)(1)(ii), we have modified the deadline for interested parties to submit case briefs to Commerce to no later than 21 days after the date of the publication of this notice.⁹ Rebuttal briefs, limited to issues raised in the case briefs, may be filed no later than five days after the date for filing case briefs.¹⁰ Interested parties who submit case or rebuttal briefs in this proceeding must submit: (1) a table of contents listing each issue; and (2) a table of authorities.¹¹

As provided under 19 CFR 351.309(c)(2)(iii) and (d)(2)(iii), we request that interested parties provide at the beginning of their briefs a public, executive summary for each issue raised in their briefs.¹² Further, we request that interested parties limit their public executive summary of each issue to no more than 450 words, not including citations. We intend to use the public executive summaries as the basis of the comment summaries included in the issues and decision memorandum that will accompany the final determination in this review. We request that interested parties include footnotes for relevant citations in the public executive summary of each issue. Note that Commerce has amended certain of its requirements pertaining to the

service of documents in 19 CFR 351.303(f).¹³

Pursuant to 19 CFR 351.310(c), interested parties who wish to request a hearing must submit a written request to the Assistant Secretary for Enforcement and Compliance, filed electronically via ACCESS, by 5 p.m. Eastern time, within 30 days after the date of publication of this notice. Requests should contain: (1) the party's name, address, and telephone number; (2) the number of participants and whether any participant is a foreign national; and (3) a list of issues to be discussed. Issues raised in the hearing will be limited to those raised in the respective case briefs. If a request for a hearing is made, Commerce will inform interested parties of the scheduled date for the hearing.¹⁴

All submissions, including case and rebuttal briefs, as well as hearing requests, should be filed via ACCESS.¹⁵ An electronically filed document must be received successfully in its entirety in ACCESS by 5:00 p.m. Eastern Time on the established deadline.

Assessment Rates

Upon completion of the administrative review, Commerce shall determine, and CBP shall assess, antidumping duties on all appropriate entries covered by this review. Pursuant to 19 CFR 351.212(b)(1), because Koehler did not report the entered value for all of its U.S. sales, we calculated importer-specific per-unit duty assessment rates by aggregating the total amount of antidumping duties calculated for the examined sales and dividing this amount by the total quantity of those sales. Where either Koehler's weighted-average dumping margin is zero or *de minimis* within the meaning of 19 CFR 351.106(c), or an importer-specific rate is zero or *de minimis*, we will instruct CBP to liquidate the appropriate entries without regard to antidumping duties.

Commerce's "automatic assessment" practice will apply to entries of subject merchandise during the POR produced by Koehler for which it did not know that the merchandise it sold to an intermediary (e.g., a reseller, trading

company, or exporter) was destined for the United States. In such instances, we will instruct CBP to liquidate those entries at the all-others rate if there is no rate for the intermediate company(ies) involved in the transaction.¹⁶

For Convertidoras and Papeles which were not selected for individual review, we will assign an assessment rate based on the most recent above-*de minimis* rate calculated in this proceeding as the review-specific rate, i.e., 0.76 percent, as discussed in the section "Review-Specific Rate for Non-Examined Companies," above.

For the companies listed in Appendix II for which Commerce is rescinding this review, Commerce will instruct CBP to assess antidumping duties on all appropriate entries at a rate equal to the cash deposit of estimated antidumping duties required at the time of entry, or withdrawal from warehouse, for consumption, during the period November 1, 2023, through October 31, 2024, in accordance with 19 CFR 351.212(c)(1)(i). Commerce intends to issue assessment instructions to CBP regarding these companies no earlier than 35 days after the date of publication of this notice in the **Federal Register**.

In accordance with section 751(a)(2)(C) of the Act, the final results of this review shall be the basis for the assessment of antidumping duties on entries of merchandise covered by the final results of this review and for future deposits of estimated duties, where applicable. Commerce intends to issue assessment instructions to CBP regarding Koehler, Convertidoras, and Papeles no earlier than 35 days after the date of publication of the final results of this review in the **Federal Register**. If a timely summons is filed at the U.S. Court of International Trade, the assessment instructions will direct CBP not to liquidate relevant entries until the time for parties to file a request for a statutory injunction has expired (i.e., within 90 days of publication).

Cash Deposit Requirements

The following deposit requirements will be effective for all shipments of the

⁹ Commerce is exercising its discretion to alter the time limit for filing of case briefs. See 19 CFR 351.309(c)(1)(ii).

¹⁰ See 19 CFR 351.309(d); see also *Administrative Protective Order, Service, and Other Procedures in Antidumping and Countervailing Duty Proceedings*, 88 FR 67069, 67077 (September 29, 2023) (*APO and Service Final Rule*).

¹¹ See 19 CFR 351.309(c)(2) and (d)(2).

¹² We use the term "issue" here to describe an argument that Commerce would normally address in a comment of the Issues and Decision Memorandum.

¹³ See *APO and Service Final Rule*.

¹⁴ See 19 CFR 351.310(d).

¹⁵ See 19 CFR 351.303.

¹⁶ For a full discussion of this practice, see *Antidumping and Countervailing Duty Proceedings: Assessment of Antidumping Duties*, 68 FR 23954 (May 6, 2003).

subject merchandise entered, or withdrawn from warehouse, for consumption on or after the publication date of the final results of this administrative review, as provided by section 751(a)(2)(C) of the Act: (1) the cash deposit rate for the companies listed above will be that established in the final results of this review, except if the rate is less than 0.50 percent and, therefore, *de minimis* within the meaning of 19 CFR 351.106(c)(1), in which case the cash deposit rate will be zero; (2) for previously reviewed or investigated companies not covered by this review, the cash deposit rate will continue to be the company-specific rate published for the most recently completed segment of this proceeding in which the company participated; (3) if the exporter is not a firm covered in this review, a prior review, or the LTFV investigation, but the manufacturer is, the cash deposit rate will be the rate established for the most recent segment for the manufacturer of the merchandise; and (4) the cash deposit rate for all other manufacturers and/or exporters will be 6.27 percent, the all-others rate established in the *Amended Final Determination*.¹⁷ These deposit requirements, when imposed, shall remain in effect until further notice.

Notification to Importers

This notice also serves as a preliminary reminder to importers of their responsibility under 19 CFR 351.402(f) to file a certificate regarding the reimbursement of antidumping duties prior to liquidation of the relevant entries during this review period. Failure to comply with this requirement could result in the Commerce's presumption that reimbursement of antidumping duties occurred and the subsequent assessment of double antidumping duties.

Notification to Interested Parties

We are issuing and publishing these results in accordance with sections 751(a)(1) and 777(i)(1) of the Act, and 19 CFR 351.213(d), (h) and 351.221(b)(4).

DEPARTMENT OF COMMERCE

International Trade Administration

[A-570-192, C-570-193]

Erythritol From the People's Republic of China: Antidumping Duty and Countervailing Duty Orders

AGENCY: Enforcement and Compliance, International Trade Administration, Department of Commerce.

SUMMARY: Based on affirmative final determinations by the U.S. Department of Commerce (Commerce) and the U.S. International Trade Commission (ITC), Commerce is issuing antidumping duty (AD) and countervailing duty (CVD) orders on erythritol from the People's Republic of China (China).

DATES: Applicable March 27, 2026.

FOR FURTHER INFORMATION CONTACT: Hannah Lee and Brian Smith (AD), or Christopher Doyle (CVD), AD/CVD Operations, Offices VIII and IX, Enforcement and Compliance, International Trade Administration, U.S. Department of Commerce, 1401 Constitution Avenue NW, Washington, DC 20230; telephone: (202) 482-1216, (202) 482-1766, and (202) 482-5882, respectively.

SUPPLEMENTARY INFORMATION:

Background

In accordance with sections 705(d) and 735(d) of the Tariff Act of 1930, as amended (the Act), on February 10, 2026, Commerce published its affirmative final determination of sales at less than fair value (LTFV) for erythritol from China,¹ and its affirmative final determination that countervailable subsidies are being provided to producers and exporters of erythritol from China.²

On March 23, 2026, pursuant to sections 705(d) and 735(d) of the Act, the ITC notified Commerce of its final affirmative determinations that an industry in the United States is materially injured by reason of LTFV imports of erythritol from China, and subsidized imports of erythritol from China, within the meaning of sections 705(b)(1)(A)(i) and 735(b)(1)(A)(i) of the Act.³

Scope of the Orders

The product covered by these orders is erythritol from China. For a complete description of the scope of the orders, see the appendix to this notice.

AD Order

On March 23, 2026, in accordance with section 735(d) of the Act, the ITC notified Commerce of its final determination that an industry in the United States is materially injured within the meaning of section 735(b)(1)(A)(i) of the Act by reason of imports of erythritol from China that is sold in the United States at LTFV.⁴ Therefore, in accordance with sections 735(c)(2) and 736 of the Act, Commerce is issuing this AD order. Because the ITC determined that imports of erythritol from China are materially injuring a U.S. industry, unliquidated entries of such merchandise from China, entered or withdrawn from warehouse for consumption, are subject to the assessment of antidumping duties.

Therefore, in accordance with section 736(a)(1) of the Act, Commerce intends to direct U.S. Customs and Border Protection (CBP) to assess, upon further instruction by Commerce, antidumping duties equal to the amount by which the normal value of the merchandise exceeds the export price (or constructed

¹ See *Erythritol from the People's Republic of China: Final Affirmative Determination of Sales at Less-Than-Fair-Value*, 91 FR 5895 (February 10, 2026) (*AD Final Determination*).

² See *Erythritol from the People's Republic of China: Final Affirmative Countervailing Duty Determination*, 91 FR 5920 (February 10, 2026).

³ See ITC's Letter, "Notification of ITC Final Determination," dated March 23, 2026 (ITC Notification Letter).

⁴ *Id.*

export price) of the merchandise on all relevant entries of erythritol from China. Antidumping duties will be assessed on unliquidated entries of erythritol from China entered, or withdrawn from warehouse, for consumption on or after July 16, 2025, the date of publication of the *AD Preliminary Determination*,⁵ but will not include entries occurring after the expiration of the provisional measures period and before publication of the ITC's final injury determination, as further described below.

Suspension of Liquidation and Cash Deposits—AD

Except as noted in the “Provisional Measures—AD” section of this notice,

Commerce intends to instruct CBP to reinstitute the suspension of liquidation of erythritol from China, effective on the date of publication of the ITC's final affirmative injury determination in the **Federal Register** in accordance with section 736 of the Act. These instructions suspending liquidations will remain in effect until further notice.

Commerce also intends to instruct CBP to require cash deposits equal to the estimated weighted-average dumping margins indicated in the table below, adjusted by the relevant export subsidy offsets. Accordingly, effective on the date of publication in the **Federal Register** of the notice of the ITC's final

affirmative injury determination, CBP will require, at the same time as importers would normally deposit estimated customs duties on subject merchandise, a cash deposit equal to the rates listed in the table below. The rate for the China-wide entity applies to all producers and exporters not specifically listed, as appropriate. These cash deposit requirements will remain in effect until further notice.

Estimated Weighted-Average Dumping Margins

The estimated weighted-average dumping margins are as follows:

Exporter	Producer	Weighted-average dumping margin (percent)	Cash deposit rate (adjusted for subsidy offsets) (percent) ⁶
Beijing Refine Biology Co., Ltd	Chuzhou Refine Biology Co., Ltd	85.04	84.95
Hunan Nutramax Inc	Hunan Nutramax Inc	85.04	84.95
Shandong Newnature Biotechnology Co., Ltd	Shandong Sanyuan Biotechnology Co., Ltd.	85.04	84.95
Baolingbao Biology Co., Ltd	Baolingbao Biology Co., Ltd	85.04	84.86
China-wide Entity		* 184.26	184.26

* This rate is based on facts available with adverse inferences.

Provisional Measures—AD

Section 733(d) of the Act states that suspension of liquidation pursuant to an affirmative preliminary determination may not remain in effect for more than four months, except where exporters representing a significant proportion of exports of the subject merchandise request that Commerce extend the four-month period to no more than six months. At the request of exporters that accounted for a significant proportion of exports of erythritol from China, Commerce extended the four-month period to no more than six months.⁷ In the underlying investigation, Commerce published the *AD Preliminary Determination* on July 16, 2025. Therefore, the six-month period beginning on the date of the publication of the *AD Preliminary Determination* ended on January 11, 2026. Pursuant to section 737(b) of the Act, the collection of cash deposits at the rates listed above will begin on the date of publication of the ITC's final injury determination. Therefore, in accordance with section 736(a)(1) of the Act and our practice, Commerce will instruct CBP to terminate the suspension of liquidation

and to liquidate, without regard to antidumping duties, unliquidated entries of erythritol from China entered, or withdrawn from warehouse, for consumption on or after January 12, 2026, the first day provisional measures were no longer in effect, until and through the day preceding the date of publication of the ITC's final injury determination in the **Federal Register**. Suspension of liquidation and the collection of cash deposits will resume on the date of publication of the ITC's final determination in the **Federal Register**.

CVD Order

As stated above, on March 23, 2026, the ITC notified Commerce of its final determination that an industry in the United States is materially injured within the meaning of section 705(b)(1)(A)(i) of the Act by reason of subsidized imports of erythritol from China.⁸ Therefore, in accordance with section 705(c)(2) of the Act, Commerce is issuing this CVD order. Moreover, because the ITC determined that imports of erythritol from China are materially injuring a U.S. industry, unliquidated entries of subject

merchandise from China entered, or withdrawn from warehouse, for consumption, are subject to the assessment of countervailing duties.

Therefore, in accordance with section 706(a) of the Act, Commerce intends to direct CBP to assess, upon further instructions by Commerce, countervailing duties on all relevant entries of erythritol from China, which are entered, or withdrawn from warehouse, for consumption on or after May 16, 2025, the date of publication of the *CVD Preliminary Determination*,⁹ but will not include entries occurring after the expiration of the provisional measures period and before the publication of the ITC's final injury determination under section 705(b) of the Act, as further described below.

Suspension of Liquidation and Cash Deposits—CVD

In accordance with section 706 of the Act, Commerce intends to instruct CBP to reinstitute the suspension of liquidation of erythritol from China, effective on the date of publication of the ITC's final affirmative injury determination in the **Federal Register**, and to assess, upon further instruction

⁵ See *Erythritol from People's Republic of China: Preliminary Affirmative Determination of Sales at Less Than Fair Value, Postponement of Final Determination and Extension of Provisional Measures*, 90 FR 31962 (July 16, 2025) (*AD Preliminary Determination*).

⁶ See *AD Final Determination*, 91 FR at 5897.

⁷ See *AD Preliminary Determination*.

⁸ See ITC Notification Letter.

⁹ See *Erythritol from the People's Republic of China: Preliminary Affirmative Countervailing Duty*

Determination, and Alignment of Final Determination with Final Antidumping Duty Determination, 90 FR 21000 (May 16, 2025) (*CVD Preliminary Determination*).

by Commerce, pursuant to section 706(a)(1) of the Act, countervailing duties on each entry of subject merchandise in an amount based on the net countervailable subsidy rates below. These instructions suspending liquidation will remain in effect until further notice.

Commerce also intends, pursuant to section 706(a)(1) of the Act, to instruct CBP to require cash deposits equal to the amounts as indicated below. Accordingly, effective on the date of publication of the ITC's final injury determination in the **Federal Register**, CBP will require, at the same time as importers would normally deposit estimated customs duties on this merchandise, a cash deposit equal to the rates listed in the table below.¹⁰ The all-others rate applies to all producers or exporters not specifically listed below, as appropriate. These cash deposit requirements will remain in effect until further notice.

Estimated Countervailing Subsidy Rates

The estimated countervailing subsidy rates are as follows:

Company	Subsidy rate (percent <i>ad valorem</i>)
Baolingbao Biology Co., Ltd Shandong Sanyuan Bio- technology Co., Ltd	4.54
All Others	8.63
	8.12

Provisional Measures—CVD

Section 703(d) of the Act states that the suspension of liquidation pursuant to an affirmative preliminary determination may not remain in effect for more than four months. Commerce published the *CVD Preliminary Determination* on May 16, 2025.¹¹ As such, the four-month period beginning on the date of the publication of the *CVD Preliminary Determination* ended on September 12, 2025.

Therefore, in accordance with section 703(d) of the Act, we instructed CBP to terminate the suspension of liquidation and to liquidate, without regard to countervailing duties, unliquidated entries of erythritol from China or withdrawn from warehouse, for consumption, on or after September 13, 2025, the first date on which the provisional measures were no longer in effect, until and through the day preceding the date of publication of the ITC's final injury determination in the **Federal Register**. Suspension of liquidation and the collection of cash deposits will resume on the date of

publication of the ITC's final determination in the **Federal Register**.

Establishment of the Annual Inquiry Service Lists

On September 20, 2021, Commerce published the *Final Rule* in the **Federal Register**.¹² On September 27, 2021, Commerce also published the *Procedural Guidance* in the **Federal Register**.¹³ The *Final Rule* and *Procedural Guidance* provide that Commerce will maintain an annual inquiry service list for each order or suspended investigation, and any interested party submitting a scope ruling application or request for circumvention inquiry shall serve a copy of the application or request on the persons on the annual inquiry service list for that order, as well as any companion order covering the same merchandise from the same country of origin.

In accordance with the *Procedural Guidance*, for orders published in the **Federal Register** after November 4, 2021, Commerce will create an annual inquiry service list segment in Commerce's online e-filing and document management system, Antidumping and Countervailing Duty Electronic Service System (ACCESS), available at <https://access.trade.gov>, within five business days of publication of the notice of the order. Each annual inquiry service list will be saved in ACCESS, under each case number, and under a specific segment type called "AISL-Annual Inquiry Service List."¹⁴

Interested parties who wish to be added to the annual inquiry service list for an order must submit an entry of appearance to the annual inquiry service list segment for the order in ACCESS within 30 days after the date of publication of the order. For ease of administration, Commerce requests that law firms with more than one attorney representing interested parties in an order designate a lead attorney to be

included on the annual inquiry service list. Commerce will finalize the annual inquiry service list within five business days thereafter. As mentioned in the *Procedural Guidance*,¹⁵ the new annual inquiry service list will be in place until the following year, when the *Opportunity Notice* for the anniversary month of the order is published.

Commerce may update an annual inquiry service list at any time as needed based on interested parties' amendments to their entries of appearance to remove or otherwise modify their list of members and representatives, or to update contact information. Any changes or announcements pertaining to these procedures will be posted to the ACCESS website at <https://access.trade.gov>.

Special Instructions for the Petitioner and Foreign Governments

In the *Final Rule*, Commerce stated that, "after an initial request and placement on the annual inquiry service list, both petitioners and foreign governments will automatically be placed on the annual inquiry service list in the years that follow."¹⁶ Accordingly, as stated above, the petitioner and the Government of China (GOC) should submit their initial entries of appearance after publication of this notice in order to appear in the first annual inquiry service lists for these orders. Pursuant to 19 CFR 351.225(n)(3), the petitioner and the GOC will not need to resubmit their entries of appearance each year to continue to be included on the annual inquiry service list. However, the petitioner and the GOC are responsible for making amendments to their entries of appearance during the annual update to the annual inquiry service list in accordance with the procedures described above.

Notification to Interested Parties

This notice constitutes the AD and CVD orders with respect to erythritol from China, pursuant to sections 706(a) and 736(a) of the Act. Interested parties can find a list of AD and CVD orders currently in effect at <https://www.trade.gov/datavisualization/adcvd-proceedings>.

These AD and CVD orders are issued and published in accordance with sections 706(a) and 736(a) of the Act, and 19 CFR 351.211(b).

¹⁰ See section 706(a)(3) of the Act.

¹¹ See *CVD Preliminary Determination*.

¹² See *Regulations to Improve Administration and Enforcement of Antidumping and Countervailing Duty Laws*, 86 FR 52300 (September 20, 2021) (*Final Rule*).

¹³ See *Scope Ruling Application; Annual Inquiry Service List; and Informational Sessions*, 86 FR 53205 (September 27, 2021) (*Procedural Guidance*).

¹⁴ This segment will be combined with the ACCESS Segment Specific Information (SSI) field which will display the month in which the notice of the order or suspended investigation was published in the **Federal Register**, also known as the anniversary month. For example, for an order under case number A-000-000 that was published in the **Federal Register** in January, the relevant segment and SSI combination will appear in ACCESS as "AISL-January Anniversary." Note that there will be only one annual inquiry service list segment per case number, and the anniversary month will be pre-populated in ACCESS.

¹⁵ See *Procedural Guidance*, 86 FR at 53206.

¹⁶ See *Final Rule*, 86 FR at 52335.

Dated: March 24, 2026.

Christopher Abbott,

Deputy Assistant Secretary for Policy and Negotiations, performing the non-exclusive functions and duties of the Assistant Secretary for Enforcement and Compliance.

Appendix

Scope of the Orders

The product within the scope of these orders is erythritol, which is a sugar alcohol, commonly referred to as a polyol, typically produced by the fermentation of glucose using enzymes and yeast or yeast-like fungi (though the scope includes erythritol produced using any other feedstock or organism). Erythritol is an organic compound with the molecular formula C₄H₁₀O₄ and a Chemical Abstracts Service (CAS) registry number of 149–32–6. Other names for erythritol include meso-erythritol, (2R, 3S)-butan-1,2,3,4-tetrol, butane-1,2,3,4-tetrol, or meso-1,2,3,4-Tetrahydroxybutane.

Erythritol typically appears as a white crystalline, odorless product that rapidly dissolves in water. While erythritol is typically produced in the crystalline form or as a fine powder or in directly compressible form, the scope of these orders covers all physical forms and grades of erythritol, including organic erythritol.

The merchandise covered by these orders is classifiable under Harmonized Tariff Schedule of the United States (HTSUS) subheading 2905.49.4000. Erythritol may also enter under HTSUS subheading 2106.90.9998. Although the HTSUS subheadings and the CAS registry number are provided for convenience and customs purposes, the written description of the merchandise covered by these orders is dispositive.

Specifically excluded from the scope are certain tabletop sugar substitute products that contain erythritol as an ingredient. Tabletop sugar substitute products include erythritol as an ingredient as well as a high intensity sweetener such as monk fruit, stevia, sucralose, aspartame, and saccharin. The following tabletop sugar substitute products are excluded: finished goods packaged and labeled for retail sale or individual consumption.

Agency Information Collection Activities; Submission to the Office of Management and Budget (OMB) for Review and Approval; Comment Request; Procedures for Importation of Supplies for Use in Emergency Relief Work

The Department of Commerce will submit the following information collection request to the Office of Management and Budget (OMB) for review and clearance in accordance

with the Paperwork Reduction Act of 1995, on or after the date of publication of this notice. We invite the general public and other Federal agencies to comment on proposed, and continuing information collections, which helps us assess the impact of our information collection requirements and minimize the public's reporting burden. Public comments were previously requested via the **Federal Register** on January 21, 2026, during a 60-day comment period. This notice allows for an additional 30 days for public comments.

Agency: International Trade Administration, Department of Commerce.

Title: Procedures for Importation of Supplies for Use in Emergency Relief Work.

OMB Control Number: 0625–0256.

Form Number(s): None.

Type of Request: Regular submission, reinstatement without change.

Number of Respondents: 1.

Average Hours per Response: 15.

Burden Hours: 15.

Needs and Uses: The regulations (19 CFR 358.101–104) provide procedures for requesting the Secretary of Commerce to permit the importation of supplies, such as food, clothing, and medical, surgical, and other supplies, for use in emergency relief work free of antidumping and countervailing duties.

Affected Public: Business or other for-profit organizations.

Frequency: Varies.

Respondent's Obligation: Voluntary.

This information collection request may be viewed at www.reginfo.gov. Follow the instructions to view the Department of Commerce collections currently under review by OMB.

Written comments and recommendations for the proposed information collection should be submitted within 30 days of the publication of this notice on the following website www.reginfo.gov/public/do/PRAMain. Find this particular information collection by selecting “Currently under 30-day Review—Open for Public Comments” or by using the search function and entering either the title of the collection or the OMB Control Number 0635–0256.

Sheleen Dumas,

Departmental PRA Compliance Officer, Office of the Under Secretary for Economic Affairs, Commerce Department.

Polyethylene Terephthalate Film, Sheet, and Strip from India, Taiwan, the People's Republic of China, and the United Arab Emirates: Continuation of Antidumping Duty and Countervailing Duty Orders

AGENCY: Enforcement and Compliance, International Trade Administration, Department of Commerce.

SUMMARY: As a result of determinations by the U.S. Department of Commerce (Commerce) and the U.S. International Trade Commission (ITC) that revocation of the antidumping duty (AD) and countervailing duty (CVD) orders on polyethylene terephthalate film, sheet, and strip (PET film) from India, Taiwan, the People's Republic of China (China), and the United Arab Emirates (UAE) would likely lead to the continuation or recurrence of dumping, countervailable subsidies, and material injury to an industry in the United States, Commerce is publishing a notice of continuation of these AD and CVD orders.

DATES: Applicable March 24, 2026.

FOR FURTHER INFORMATION CONTACT: David De Falco, Trade Agreements Policy and Negotiations, Enforcement and Compliance, International Trade Administration, U.S. Department of Commerce, 1401 Constitution Avenue NW, Washington, DC 20230; telephone: (202) 482–2178.

SUPPLEMENTARY INFORMATION:

Background

On July 1, 2002, Commerce published in the **Federal Register** the AD orders on PET film from India and Taiwan and the CVD order on PET film from India.¹ On November 10, 2008, Commerce published in the **Federal Register** the AD orders on PET film from China and UAE.² On August 1, 2025 the ITC

¹ See Notice of Amended Final Antidumping Duty Determination of Sales at Less Than Fair Value and Antidumping Duty Order: Polyethylene Terephthalate Film, Sheet, and Strip (PET Film) from Taiwan, 67 FR 44174, (July 1, 2002); see also Notice of Amended Final Antidumping Duty Determination of Sales at Less Than Fair Value and Antidumping Duty Order: Polyethylene Terephthalate Film, Sheet, and Strip from India, 67 FR 44175 (July 1, 2002); and Notice of Countervailing Duty Order: Polyethylene Terephthalate Film, Sheet, and Strip (PET Film) from India, 67 FR 44179 (July 1, 2002).

² Id.; see also Polyethylene Terephthalate Film, Sheet, and Strip from Brazil, the People's Republic of China and the United Arab Emirates:

Continued

instituted,³ and Commerce initiated,⁴ the third and fourth sunset review of the *Orders*, pursuant to section 751(c) of the Tariff Act of 1930, as amended (the Act). As a result of its reviews, Commerce determined that revocation of the *Orders* would likely lead to the continuation or recurrence of dumping and countervailable subsidies, and therefore, notified the ITC of the magnitude of the margins of dumping and subsidy rates likely to prevail should the *Orders* be revoked.⁵

On March 24, 2026, the ITC published its determination, pursuant to sections 751(c) and 752(a) of the Act, that revocation of the *Orders* would likely lead to continuation or recurrence of material injury to an industry in the United States within a reasonably foreseeable time.⁶

Scope of the Orders

The products covered by each of these orders are all gauges of raw, pre-treated, or primed PET film, whether extruded or co-extruded. Excluded are metallized films and other finished films that have had at least one of their surfaces modified by the application of a performance-enhancing resinous or inorganic layer more than 0.00001 inches thick. Also excluded is roller transport cleaning film which has at least one of its surfaces modified by application of 0.5 micrometers of SBR latex. Tracing and drafting film is also excluded. PET film is classifiable under subheading 3920.62.00.90 of the Harmonized Tariff Schedule of the United States (HTSUS). While HTSUS subheadings are provided for convenience and customs purposes, our written description of the scope of these orders is dispositive.

Antidumping Duty Orders and Amended Final Determination of Sales at Less Than Fair Value for the United Arab Emirates, 73 FR 66595 (November 10, 2008) (collectively, *Orders*).

⁴ See *Initiation of Five-Year (Sunset) Reviews*, 90 FR 36139 (August 1, 2025).

⁵ See *Polyethylene Terephthalate Film, Sheet, and Strip from the United Arab Emirates and the People's Republic of China: Final Results of the Expedited Third Sunset Reviews of the Antidumping Duty Orders*, 91 FR 5891 (February 10, 2026); *Polyethylene Terephthalate Film, Sheet, and Strip from Taiwan and India: Final Results of the Expedited Fourth Sunset Reviews of the Antidumping Duty Orders*, 91 FR 6620 (February 12, 2026); and *Polyethylene Terephthalate Film, Sheet, and Strip from India: Final Results of the Expedited Fourth Sunset Review of the Countervailing Duty Order*, 91 FR 5890 (February 10, 2026).

⁶ See *Polyethylene Terephthalate Film, Sheet, and Strip from China, India, Taiwan, and the United Arab Emirates; Determination*, 91 FR 14040 (March 24, 2026) (*ITC Final Determination*).

Continuation of the Orders

As a result of the determinations by Commerce and the ITC that revocation of the *Orders* would likely lead to continuation or recurrence of dumping, countervailable subsidies, and material injury to an industry in the United States, pursuant to section 751(d)(2) of the Act, Commerce hereby orders the continuation of the *Orders*. U.S. Customs and Border Protection will continue to collect AD and CVD cash deposits at the rates in effect at the time of entry for all imports of subject merchandise.

The effective date of the continuation of the *Orders* will be March 24, 2026.⁷ Pursuant to section 751(c)(2) of the Act and 19 CFR 351.218(c)(2), Commerce intends to initiate the next five-year reviews of the *Orders* not later than 30 days prior to fifth anniversary of the date of the last determination by the ITC.

Administrative Protective Order (APO)

This notice also serves as a final reminder to parties subject to an APO of their responsibility concerning the return or destruction of proprietary information disclosed under APO in accordance with 19 CFR 351.305(a)(3), which continues to govern business proprietary information in this segment of the proceeding. Timely written notification of the return or destruction of APO materials, or conversion to judicial protective order, is hereby requested. Failure to comply with the regulations and terms of an APO is a violation which is subject to sanction.

Notification to Interested Parties

These five-year (sunset) reviews and this notice are in accordance with sections 751(c) and 751(d)(2) of the Act, and published in accordance with section 777(i) of the Act and 19 CFR 351.218(f)(4).

Dated: March 24, 2026.

Christopher Abbott,

Deputy Assistant Secretary for Policy and Negotiations, performing the non-exclusive functions and duties of the Assistant Secretary for Enforcement and Compliance.

BILLING CODE 3510-DS-P

DEPARTMENT OF COMMERCE

National Oceanic and Atmospheric Administration

[RTID 0648-XF520]

Takes of Marine Mammals Incidental to Specified Activities; Taking Marine Mammals Incidental to Mal Coombs Stairway Replacement Project in Shelter Cove, California

AGENCY: National Marine Fisheries Service (NMFS), National Oceanic and Atmospheric Administration (NOAA), Commerce.

ACTION: Notice; proposed incidental harassment authorization; request for comments on proposed authorization and possible renewal.

SUMMARY: NMFS has received a request from the Bureau of Land Management (BLM) for authorization to take marine mammals incidental to the Mal Coombs Stairway Replacement Project in Shelter Cove, California. Pursuant to the Marine Mammal Protection Act (MMPA), NMFS is requesting comments on its proposal to issue an incidental harassment authorization (IHA) to incidentally take marine mammals during the specified activities. NMFS is also requesting comments on a possible one-time, 1-year renewal that could be issued under certain circumstances and if all requirements are met, as described in Request for Public Comments at the end of this notice. NMFS will consider public comments prior to making any final decision on the issuance of the requested MMPA authorization and agency responses will be summarized in the final notice of our decision.

DATES: Comments and information must be received no later than April 27, 2026.

ADDRESSES: Comments should be addressed to Permits and Conservation Division, Office of Protected Resources, National Marine Fisheries Service and should be submitted via email to ITP.Fleming@noaa.gov. Electronic copies of the application and supporting documents, as well as a list of the references cited in this document, may be obtained online at: <https://www.fisheries.noaa.gov/national/marine-mammal-protection/incidental-take-authorizations-construction-activities>. In case of problems accessing these documents, please call the contact listed below.

Instructions: NMFS is not responsible for comments sent by any other method, to any other address or individual, or received after the end of the comment period. Comments, including all attachments, must not exceed a 25-

⁷ See *ITC Final Determination*.

megabyte file size. All comments received are a part of the public record and will generally be posted online at <https://www.fisheries.noaa.gov/permit/incidental-take-authorizations-under-marine-mammal-protection-act> without change. All personal identifying information (e.g., name, address) voluntarily submitted by the commenter may be publicly accessible. Do not submit confidential business information or otherwise sensitive or protected information.

FOR FURTHER INFORMATION CONTACT: Kate Fleming, Office of Protected Resources, NMFS, (301) 427–8401.

SUPPLEMENTARY INFORMATION:

Background

The MMPA prohibits the “take” of marine mammals, with certain exceptions. Section 101(a)(5)(A) and (D) of the MMPA (16 U.S.C. 1361 *et seq.*) directs the Secretary of Commerce (as delegated to NMFS) to allow, upon request, the incidental, but not intentional, taking of small numbers of marine mammals by U.S. citizens who engage in a specified activity (other than commercial fishing) within a specified geographical region if certain findings are made and either regulations are proposed or, if the taking is limited to harassment, a notice of a proposed IHA is provided to the public for review.

Authorization for incidental takings shall be granted if NMFS finds that the taking will have a negligible impact on the species or stock(s) and will not have an unmitigable adverse impact on the availability of the species or stock(s) for taking for subsistence uses (where relevant). Further, NMFS must prescribe the permissible methods of taking; other “means of effecting the least practicable adverse impact” on the affected species or stocks and their habitat, paying particular attention to rookeries, mating grounds, and areas of similar significance, and on the availability of the species or stocks for taking for certain subsistence uses (referred to as “mitigation”); and requirements pertaining to the monitoring and reporting of the takings. The definitions of all applicable MMPA statutory terms used above are included in the relevant

sections below (see also 16 U.S.C. 1362; 50 CFR 216.3, 216.103).

National Environmental Policy Act

To comply with the National Environmental Policy Act of 1969 (NEPA; 42 U.S.C. 4321 *et seq.*) and NOAA Administrative Order (NAO) 216–6A, NMFS must review our proposed action (*i.e.*, the issuance of an IHA) with respect to potential impacts on the human environment.

This action is consistent with categories of activities identified in Categorical Exclusion B4 (IHAs with no anticipated serious injury or mortality) of the Companion Manual for NAO 216–6A, which do not individually or cumulatively have the potential for significant impacts on the quality of the human environment and for which we have not identified any extraordinary circumstances that would preclude this categorical exclusion. Accordingly, NMFS has preliminarily determined that the issuance of the proposed IHA qualifies to be categorically excluded from further NEPA review.

Summary of Request

On January 15, 2026, NMFS received a request from BLM for an IHA to take marine mammals incidental to Mal Coombs Stairway Replacement Project in Shelter Cove, CA. Following NMFS’ review of the application, BLM submitted a revised version on January 28, 2026. The application was deemed adequate and complete on February 23, 2026. BLM’s initial request was for authorization of take of California sea lion (*Zalophus californianus*), Steller sea lion (*Eumetopias jubatus*), and harbor seal (*Phoca vitulina*). Following additional analysis, NMFS is proposing to authorize take of these species and northern elephant seal (*Mirounga angustirostris*), by Level B harassment only. Neither BLM nor NMFS expect serious injury or mortality to result from this activity and, therefore, an IHA is appropriate.

Description of Proposed Activity

Overview

BLM is proposing construction to replace a pre-existing wooden stairway

that was removed in 2022 with a prefabricated staircase at Mal Coombs Park in Shelter Cove, California. The staircase provides visitors with access to the beach and tidepools. The presence of construction crews and noise from equipment may result in incidental take via behavioral disturbance (take by Level B harassment) of pinnipeds that haul out near the construction site.

Dates and Duration

The proposed IHA would be valid for the statutory maximum of 1 year from the date of effectiveness. It will become effective upon written notification from the applicant to NMFS, but not beginning later than 1 year from the date of issuance or extending beyond 2 years from the date of issuance. Construction is anticipated to occur between August 1, 2026 and October 31, 2026. However, project delays may occur due to a number of factors, including project funding, permitting requirements, availability of equipment and/or materials, weather-related delays, equipment maintenance and/or repair, and other contingencies.

Construction is planned to take place for up to 4 days, for up to 8 daylight hours each day. Two construction segments consisting of two days each will be separated by a 2-week curing period. However, to account for unforeseen delays due to inclement weather, mechanical failures, or slower production rates, NMFS and BLM estimate that the project would be completed in up to 5 days.

Specific Geographic Region

Mal Coombs Park is one of four coastal locations and green spaces that BLM manages within Shelter Cove, California. The BLM maintains a large parking area, two restrooms, an information kiosk, interpretive panels, trash cans, and a large picnic area with barbeque facilities at Mal Coombs Park. The park receives approximately 95,000 visitors annually. The project is planned along the Mal Coombs Stairway Trail, which is a steep coastal access path that leads down to a small, rocky beach and tide pools.

Figure 1 -- Project location at Mal Coombs Park in relation to beach and intertidal rocks where pinnipeds haul out

Detailed Description of the Specified Activity

Stairway replacement on the Mal Coombs Stairway Trail would require construction at three sites:

1. Upper landing: located at the top of the bluff, within a 10 by 10 foot (ft; 3 by 3 meter (m)) section that is south and east of the Mal Coombs Stairway Trail trailhead. The Upper Landing is approximately 90 ft (27 m) from the nearest harbor seal haulout on the beach and approximately 388 ft (118 m) from the sea lion haulout on the intertidal rocks.

2. Middle landing: A 6 by 6 ft (1.8 by 1.8 m) area along the stretch of the Mal Coombs Stairway Trail located halfway between the Upper Landing and the Lower Landing. The Middle Landing is approximately 62 ft (19 m) from the harbor seal haulout on the beach and approximately 375 ft (114 m) from the sea lion haulout on the intertidal rocks.

3. Lower landing: Existing concrete pad at the top of the current staircase. The Lower Landing is approximately 48 ft from the nearest harbor seal haul-out and 348 ft from the sea lion haulout on the intertidal rocks.

A landing would be installed at the Upper Landing site and Middle Landing site (two landings total), as no current landing pad exists at these locations. Concrete piers and steel posts would also be installed at the Upper and

Middle landings, in locations that have been determined as not likely to contain cultural resources. Two sets of stairs would be installed between the Upper and Middle landings and the Middle and Lower landings so that they "float" above the existing trail, limiting further erosion.

On the first day of construction, the Upper and Middle Landing sites would be cleared of vegetation and leveled using hand tools, weed eaters, and shovels.

On the second day of construction, a two-person crew would use an auger to excavate eight 8-inch (in; 20 centimeter (cm)) diameter holes at the Upper landing site and eight 8-inch (20 cm) diameter holes at the Middle landing site to create space for the installation of 8-in by 4 ft (20 cm by 1.2 m) deep concrete piers. BLM estimates that the drilling of each hole could take 30 minutes to 1 hour.

As the auger crew drills and moves to the next pier location, another two- to four-person crew would insert a Sono tube form and pump concrete from a concrete mixing truck located in the parking lot (280 ft (85 m) from the nearest harbor seal haulout), to construct concrete piers. Posts would be set into the concrete piers.

The concrete piers would need a two-week curing period. During this time, no construction activities would be planned at the project site.

After the curing period (approximately 18 days into the construction project), construction would resume at the project site. BLM estimates approximately 2 days of construction would be needed to anchor a metal or Fiber Reinforced Polymer stair landing to the posts and float above the ground and piers, using crews of two to four people. All of these components would be installed manually with standard power tools.

Proposed mitigation, monitoring, and reporting measures are described in detail later in this document (please see Proposed Mitigation and Proposed Monitoring and Reporting).

Description of Marine Mammals in the Area of Specified Activities

The application summarizes available information regarding status and trends, distribution and habitat preferences, and behavior and life history of the potentially affected species. NMFS fully considered all of this information, and we refer the reader to these descriptions, instead of reprinting the information. Additional information regarding population trends and threats may be found in NMFS' Stock Assessment Reports (SARs; <https://www.fisheries.noaa.gov/national/marine-mammal-protection/marine-mammal-stock-assessments>) and more general information about these species (e.g., physical and behavioral descriptions)

may be found on NMFS' website (<https://www.fisheries.noaa.gov/find-species>).

Table 1 lists all species or stocks for which take is expected and proposed to be authorized for this activity and summarizes information related to the population or stock, including regulatory status under the MMPA and Endangered Species Act (ESA) and potential biological removal (PBR), where known. PBR is defined by the MMPA as the maximum number of animals, not including natural mortalities, that may be removed from a marine mammal stock while allowing

that stock to reach or maintain its optimum sustainable population (as described in NMFS' SARs). While no serious injury or mortality is anticipated or proposed to be authorized here, PBR and annual mortality and serious injury (M/SI) from anthropogenic sources are included here as gross indicators of the status of the species or stocks and other threats.

Marine mammal abundance estimates presented in this document represent the total number of individuals that make up a given stock or the total number estimated within a particular study or survey area. NMFS' stock

abundance estimates for most species represent the total estimate of individuals within the geographic area, if known, that comprises that stock. For some species, this geographic area may extend beyond U.S. waters. All managed stocks in this region are assessed in NMFS' U.S. Pacific and Alaska SARs. All values presented in table 1 are the most recent available at the time of publication (including from the draft 2024 SARs) and are available online at: <https://www.fisheries.noaa.gov/national/marine-mammal-protection/marine-mammal-stock-assessments>.

TABLE 1—SPECIES, STOCKS, AND THE STATUS OF MARINE MAMMALS¹ WITH ESTIMATED TAKE FROM THE SPECIFIED ACTIVITIES

Common name	Scientific name	Stock	ESA/ MMPA status; Strategic (Y/N) ²	Stock abundance (CV, N _{min} , most recent abundance survey) ³	PBR	Annual M/SI ⁴
Order Carnivora—Pinnipedia						
<i>Family Otariidae (eared seals and sea lions)</i>						
California sea lion	<i>Zalophus californianus</i> ...	U.S.	–, –, N	257,606 (N/A, 233,515, 2014)	14,011	>321
Steller sea lion	<i>Eumetopias jubatus</i>	Eastern	–, –, N	36,308 (N/A ⁵ , 36,308, 2022)	2,178	93.2
<i>Family Phocidae (earless seals)</i>						
Harbor seal	<i>Phoca vitulina</i>	CA	–, –, N	30,968 (N/A, 27,348, 2012)	1,641	43
Northern elephant seal	<i>Mirounga angustirostris</i> ..	CA Breeding	–, –, N	187,386 (N/A, 85,369, 2013)	5,122	13.7

¹ Information on the classification of marine mammal species can be found on the web page for The Society for Marine Mammalogy's Committee on Taxonomy (<https://marinemammalscience.org/science-and-publications/list-marine-mammal-species-subspecies/>).

² Endangered Species Act (ESA) status: Endangered (E), Threatened (T)/MMPA status: Depleted (D). A dash (–) indicates that the species is not listed under the ESA or designated as depleted under the MMPA. Under the MMPA, a strategic stock is one for which the level of direct human-caused mortality exceeds PBR or which is determined to be declining and likely to be listed under the ESA within the foreseeable future. Any species or stock listed under the ESA is automatically designated under the MMPA as depleted and as a strategic stock.

³ NMFS marine mammal stock assessment reports online at: <https://www.fisheries.noaa.gov/national/marine-mammal-protection/marine-mammal-stock-assessment-reports-region>. CV is coefficient of variation; N_{min} is the minimum estimate of stock abundance.

⁴ These values, found in NMFS's SARs, represent annual levels of human-caused mortality plus serious injury from all sources combined (e.g., commercial fisheries, ship strike). Annual M/SI often cannot be determined precisely and is in some cases presented as a minimum value or range.

⁵ N_{est} is best estimate of counts, which have not been corrected for animals at sea during abundance surveys. Estimates provided are for the U.S. only.

As indicated above, all four species (with four managed stocks) in table 1 temporally and spatially co-occur with the activity to the degree that take is reasonably likely to occur.

California Sea Lion

California Sea lions breed on the offshore islands of southern and central California from May through July (Heath and Perrin, 2008). During the non-breeding season, adult and subadult males and juveniles migrate northward along the coast to central and northern California, Oregon, Washington, and Vancouver Island (Jefferson, *et al.* 1993). Females and some juveniles tend to remain closer to rookeries (Melin *et al.*, 2008). In warm water (El Niño) years, some females are found as far north as Washington and Oregon, presumably following prey.

In preparation for this project, BLM conducted pinniped census surveys of

the beach and intertidal rocks on 12 days between June 3 and September 29, 2025. California sea lions were regular visitors, with animals present on the intertidal rocks on 10 out of 12 survey days. An average of 21 adult California sea lions were present each day (ranging between 0 and 56 adults). A total of 3 California sea lion pups were documented on a single day in late June.

Steller Sea Lion

Steller sea lions are most typically found in coastal waters on the continental shelf, but they also occur and sometimes forage in much deeper continental slopes and pelagic waters. Haulout and rookery sites consist of beaches (gravel, rocky, or sand), ledges, and rocky reefs. They usually return to their natal rookery sites to breed. The eastern stock of Steller sea lions has historically bred on rookeries located in Southeast Alaska, British Columbia,

Oregon, and California. Within the last several years a new rookery has become established on the outer Washington coast (Muto *et al.*, 2020).

During BLM's pinniped census surveys (described above), a total of 7 adult Steller sea lions were observed on the intertidal rocks on just one survey day in mid-July.

Harbor Seal

Harbor seals tend to exhibit strong site fidelity within seasons and across years, generally forage close to haulout sites, and repeatedly visit specific foraging areas (Suryan and Harvey, 1998; Thompson *et al.*, 1998). Harbor seals tend to forage at night and return to the haulout during the day with the highest proportion of seals coming ashore

around low tide (Brown and Mate 1983, Schneider and Payne 1983).

During BLM's pinniped census surveys (described above), harbor seals were found to be regular visitors, with animals hauled out on the beach on 10 out of 12 survey days. An average of 32 adult harbor seals were present each day (ranging between 0 and 104 adults). A total of six harbor seal pups were documented across the first 2 survey days in June.

Northern Elephant Seal

Northern elephant seals (*Mirounga angustirostris*) range widely throughout the eastern Pacific for most of the year to forage. They return to haulout locations along the west coast of the continental United States including the Channel Islands, the central California coast, and islands off Baja California, to breed and molt. Breeding occurs from mid-December through the end of March, with males returning to haulout locations earlier than females to establish dominance hierarchies. Molting occurs from late April to August, with juveniles and adult females returning to haulout locations earlier than adult males.

During BLM's pinniped census surveys (described above), no northern elephant seals were observed. However, single northern elephant seals occasionally haul out on beaches to molt or rest, and there is a known northern elephant seal colony just 35 km to the north of Mal Coombs Park, on the beach below Punta Gorda Lighthouse. As such, it is possible that northern elephant seals could occur in the project area during the project period.

Potential Effects of Specified Activities on Marine Mammals and Their Habitat

This section provides a discussion of the ways in which components of the specified activity may impact marine mammals and their habitat. The Estimated Take of Marine Mammals section later in this document includes a quantitative analysis of the number of individuals that are expected to be taken by this activity. The Negligible Impact Analysis and Determination section considers the content of this section, the Estimated Take of Marine Mammals section, and the Proposed Mitigation section, to draw conclusions regarding the likely impacts of these activities on the reproductive success or survivorship of individuals and whether those impacts are reasonably expected to, or reasonably likely to, adversely affect the species or stock through effects on annual rates of recruitment or survival.

Presence of Humans

Visual and acoustic stimuli generated by the appearance of construction personnel and construction equipment may have the potential to cause Level B harassment of pinnipeds hauled out on the beach and intertidal rocks at Mal Coombs Park. This section includes a summary and discussion of the ways that the types of stressors associated with the specified activity (e.g., personnel presence and noise from use of construction equipment) have been observed to impact marine mammals. This discussion may also include reactions that we consider to rise to the level of a take and those that we do not consider to rise to the level of a take. This section provides background information on potential effects of these activities. For a discussion of the manner in which the mitigation measures will be implemented, and how the mitigation measures will shape the anticipated impacts from this specific activity, see the Proposed Mitigation section below.

Reactions to human presence, if any, depend on species, state of maturity, experience, current activity, reproductive state, time of day, and many other factors (Richardson *et al.*, 1995; Southall *et al.*, 2007; Weilgart 2007). These behavioral reactions from marine mammals are often shown as: changing durations of surfacing and dives, number of blows per surfacing, or moving direction and/or speed; reduced/increased vocal activities; changing/cessation of certain behavioral activities (such as socializing or feeding); visible startle responses or aggressive behavior; avoidance of areas; and/or flight responses (e.g., pinnipeds flushing into the water from haulouts or rookeries). If a marine mammal does react briefly to human presence by changing its behavior or moving a small distance, the impacts of the change are unlikely to be significant to the individual, let alone the stock or population. However, if visual stimuli from human presence displaces marine mammals from an important feeding or breeding area for a prolonged period, impacts on individuals and populations could be significant (e.g., Lusseau and Bejder 2007; Weilgart, 2007). Numerous studies have shown that human activity can flush harbor seals off haulout sites (Allen *et al.*, 1984; Suryan and Harvey, 1999; Ruiz-Mar *et al.*, 2022; Bankhead *et al.*, 2023). The Hawaiian monk seal (*Neomonachus schauinslandi*) has been shown to avoid beaches that have been disturbed often by humans (Kenyon, 1972; Gerrodette and Gilmartin, 1990). In one case, human disturbance

appeared to cause Steller sea lions to desert a breeding area at Northeast Point on St. Paul Island, Alaska (Kenyon, 1962), a behavior demonstrated at other locations as well (Kucey, 2005; Chayahara *et al.*, 2024).

The appearance of personnel may have the potential to cause Level B harassment of any pinnipeds hauled out at research sites. Disturbance may result in reactions ranging from an animal simply becoming alert to the presence of field personnel (e.g., turning the head, assuming a more upright posture) to flushing from the haulout site into the water. NMFS does not consider the lesser reactions to constitute behavioral harassment, or Level B harassment takes, but rather assumes that pinnipeds that flee some distance or change the speed or direction of their movement in response to the presence of field personnel are behaviorally harassed, and thus subject to the taking by Level B harassment. Animals that respond to the presence of field personnel by becoming alert, but do not move or change the nature of locomotion as described, are not considered to have been subject to behavioral harassment.

Avoidance

Avoidance is the displacement of an individual from an area or migration path as a result of the presence of a sound or other stressors, and is one of the most obvious manifestations of disturbance in marine mammals (Richardson *et al.*, 1995). Avoidance is qualitatively different from the flight response, but also differs in the magnitude of the response (*i.e.*, directed movement, rate of travel, *etc.*). Often avoidance is temporary, and animals return to the area once the noise has ceased. Acute avoidance responses have been observed in captive porpoises and pinnipeds exposed to a number of different sound sources (Kastelein *et al.*, 2001; Finneran *et al.*, 2003; Kastelein *et al.*, 2006a; Kastelein *et al.*, 2006b; Kastelein *et al.*, 2015a; Kastelein *et al.*, 2015b; Kastelein *et al.*, 2018). Short-term avoidance of seismic surveys, low frequency emissions, and acoustic deterrents have also been noted in wild populations of odontocetes (Bowles *et al.*, 1994; Goold, 1996; Goold and Fish, 1998; Morton and Symonds, 2002; Hiley *et al.*, 2021) and to some extent in mysticetes (Malme *et al.*, 1984; McCauley *et al.*, 2000; Gailey *et al.*, 2007). Longer-term displacement is possible, however, which may lead to changes in abundance or distribution patterns of the affected species in the affected region if habituation to the presence of the sound does not occur (e.g., Blackwell *et al.*, 2004; Bejder *et al.*,

2006; Teilmann *et al.*, 2006). While NMFS acknowledges that most research and literature cited here is related to cetaceans, who are not expected to be harassed or taken by BLM's specified activities, we include these to provide context as pinnipeds behaviorally react in a similar manner when expected to an external stimulus (*e.g.*, human presence, noise, *etc.*) when onshore or in the water.

While NMFS expects that hauled out pinnipeds may avoid the BLM field personnel, we expect these effects would be temporary. Harbor seals in particular have high site fidelity; any external stimuli would be fleeting, and easily avoidable, meaning that the pinnipeds, if performing avoidance behaviors during activities, would be able to resume their original behaviors once the stimulus has ended.

Flight Response

A flight response is a dramatic change in normal movement to a directed and rapid movement away from the perceived location of a sound source. The flight response differs from other avoidance responses in the intensity of the response (*e.g.*, directed movement, rate of travel). Relatively little information on flight responses of marine mammals to anthropogenic signals exist, although observations of flight responses to the presence of predators have occurred (Connor and Heithaus, 1996). The result of a flight response could range from brief, temporary exertion and displacement from the area where the signal provokes flight to, in extreme cases, marine mammal strandings (Evans and England, 2001). There are limited data on flight response for marine mammals in water; however, there are examples of this response in species on land. For instance, the probability of flight responses in Dall's sheep (*Ovis dalli dalli*) (Frid, 2003), hauled out ringed seals (*Phoca hispida*) (Born *et al.*, 1999), Pacific brant (*Branta bernicla nigricans*), and Canada geese (*B. canadensis*) increased as a helicopter or fixed-wing aircraft more directly approached groups of these animals (Ward *et al.*, 1999). However, it should be noted that response to a perceived predator does not necessarily invoke flight (Ford and Reeves, 2008), and whether individuals are solitary or in groups may influence the response.

Behavioral disturbance can also impact marine mammals in more subtle ways. Increased vigilance may result in costs related to diversion of focus and attention (*i.e.*, when a response consists of increased vigilance, it may come at the cost of decreased attention to other

critical behaviors such as foraging or resting). These effects have generally not been observed in marine mammals, but studies involving fish and terrestrial animals have shown that increased vigilance may substantially reduce feeding rates and efficiency (*e.g.*, Beauchamp and Livoreil, 1997; Fritz *et al.*, 2002; Purser and Radford, 2011). In addition, chronic disturbance can cause population declines through reduction of fitness (*e.g.*, decline in body condition) and subsequent reduction in reproductive success, survival, or both (*e.g.*, Harrington and Veitch, 1992; Daan *et al.*, 1996; Bradshaw *et al.*, 1998).

Many animals perform vital functions, such as feeding, resting, traveling, and socializing, on a diel cycle (24-hour cycle). Disruption of such functions resulting from reactions to stressors such as sound exposure are more likely to be significant if they last more than one diel cycle or recur on subsequent days (Southall *et al.*, 2007). Consequently, a behavioral response lasting less than 1 day and not recurring on subsequent days is not considered particularly severe unless it could directly affect reproduction or survival (Southall *et al.*, 2007). Note that there is a difference between multi-day substantive behavioral reactions and multi-day anthropogenic activities. For example, just because an activity lasts for multiple days does not necessarily mean that individual animals are either exposed to activity-related stressors for multiple days or, further, exposed in a manner resulting in sustained multi-day substantive behavioral responses.

There are other ways in which disturbance, as described previously, could result in more than Level B harassment of marine mammals. They are most likely to be consequences of stampeding (which is typically a response to startle and/or avoidance behaviors), a potentially dangerous occurrence in which large numbers of animals succumb to mass panic and rush away from a stimulus. These situations are: (1) pinnipeds falling when entering the water at high-relief locations (*e.g.*, cliffs); (2) extended separation of mothers and pups; and (3) crushing of pups by larger animals during a stampede. However, NMFS does not expect any of these scenarios to occur at Mal Coombs Park. As stated, there is the risk of injury if animals stampede towards shorelines with precipitous relief; however, at Mal Coombs Park, pinniped out sites are primarily offshore rocks that have little relief, with the harbor seal sites becoming submerged at high tide. While the sea lion haul outs are always exposed, they are not very steep.

Habituation

Habituation can occur when an animal's response to a stimulus wanes with repeated exposure, usually in the absence of unpleasant associated events (Wartzok *et al.*, 2003). Animals are most likely to habituate to sounds that are predictable and unvarying. It is important to note that habituation is appropriately considered as a "progressive reduction in response to stimuli that are perceived as neither aversive nor beneficial," rather than as, more generally, moderation in response to human disturbance (Bejder *et al.*, 2009). The opposite process is sensitization, when an unpleasant experience leads to subsequent responses, often in the form of avoidance, at a lower level of exposure. As noted, behavioral state may affect the type of response. For example, animals that are resting may show greater behavioral change in response to disturbing sound levels than animals that are highly motivated to remain in an area for feeding (Richardson *et al.*, 1995; NRC, 2003; Wartzok *et al.*, 2003). Controlled experiments with captive marine mammals have shown pronounced behavioral reactions, including avoidance of loud sound sources (Ridgway *et al.*, 1997; Finneran *et al.*, 2003). Observed responses of wild marine mammals to loud impulsive sound sources (typically seismic airguns or acoustic harassment devices) have been varied but often consist of avoidance behavior or other behavioral changes suggesting discomfort (Morton and Symonds, 2002; see also Richardson *et al.*, 1995; Nowacek *et al.*, 2007).

Stress Response

An animal's perception of a threat may be sufficient to trigger stress responses consisting of some combination of behavioral responses, autonomic nervous system responses, neuroendocrine responses, or immune responses (*e.g.*, Seyle, 1950; Moberg, 2000). In many cases, an animal's first and sometimes most economical (in terms of energetic costs) response is behavioral avoidance of the potential stressor. Autonomic nervous system responses to stress typically involve changes in heart rate, blood pressure, and gastrointestinal activity. These responses have a relatively short duration and may or may not have a significant long-term effect on an animal's fitness.

Neuroendocrine stress responses often involve the hypothalamus-pituitary-adrenal system. Virtually all neuroendocrine functions that are affected by stress—including immune

competence, reproduction, metabolism, and behavior—are regulated by pituitary hormones. Stress-induced changes in the secretion of pituitary hormones have been implicated in failed reproduction, altered metabolism, reduced immune competence, and behavioral disturbance (e.g., Moberg, 1987; Blecha, 2000). Increases in the circulation of glucocorticoids are also equated with stress (Romano *et al.*, 2004).

The primary distinction between stress (which is adaptive and does not normally place an animal at risk) and “distress” is the cost of the response. During a stress response, an animal uses glycogen stores that can be quickly replenished once the stress is alleviated. In such circumstances, the cost of the stress response would not pose serious fitness consequences. However, when an animal does not have sufficient energy reserves to satisfy the energetic costs of a stress response, energy resources must be diverted from other functions. This state of distress will last until the animal replenishes its energetic reserves sufficient to restore normal function.

Relationships between these physiological mechanisms, animal behavior, and the costs of stress responses are well studied through controlled experiments and for both laboratory and free-ranging animals (e.g., Holberton *et al.*, 1996; Hood *et al.*, 1998; Jessop *et al.*, 2003; Krausman *et al.*, 2004; Lankford *et al.*, 2005). Stress responses due to exposure to anthropogenic sounds or other stressors and their effects on marine mammals have also been reviewed (Fair and Becker 2000; Romano *et al.*, 2002b) and, more rarely, studied in wild populations (e.g., Romano *et al.*, 2002a). For example, Rolland *et al.* (2012) found that noise reduction from reduced ship traffic in the Bay of Fundy was associated with decreased stress in North Atlantic right whales. These and other studies lead to a reasonable

expectation that some marine mammals will experience physiological stress responses upon exposure to acoustic stressors and that it is possible that some of these would be classified as “distress.” However, distress is an unlikely result of these projects based on observations of marine mammals during previous, similar research and monitoring projects.

Marine Mammal Habitat Effects

There are no habitat modifications associated with the proposed activity other than the presence of project personnel to perform the proposed activities and to monitor animals. No substantial construction is anticipated to occur for this proposed project, only activities that rise to the level of maintenance, removal, and installation, which are all expected to occur within a small footprint when compared to the entire size of the available habitat at Mal Coombs Park. Moreover, construction is planned for just 4 days across a 3-week period. Thus, NMFS does not expect that the proposed activity would have any effects on marine mammal habitat and NMFS expects that there will be no long- or short-term physical impacts to pinniped habitat at Mal Coombs Park.

Proposed Activities on Potential Foraging Habitat

Marine mammal prey (e.g., fish) varies by species, season, and location. However, as all of the BLM’s proposed activities are occurring onshore and the prey species for pinnipeds are located in the ocean, NMFS does not expect the proposed activities to affect the habitat, availability, or presence of prey for pinnipeds.

Estimated Take of Marine Mammals

This section provides an estimate of the number of incidental takes proposed for authorization through the IHA, which will inform NMFS’ consideration of “small numbers,” the negligible

impact determinations, and impacts on subsistence uses.

Harassment is the only type of take expected to result from these activities. Except with respect to certain activities not pertinent here, section 3(18) of the MMPA defines “harassment” as any act of pursuit, torment, or annoyance, which (i) has the potential to injure a marine mammal or marine mammal stock in the wild (Level A harassment); or (ii) has the potential to disturb a marine mammal or marine mammal stock in the wild by causing disruption of behavioral patterns, including, but not limited to, migration, breathing, nursing, breeding, feeding, or sheltering (Level B harassment).

Authorized takes would be by Level B harassment only, in the form of behavioral reactions for individual marine mammals resulting from exposure to construction crew and noise associated with the operation of their equipment. Based on the nature of the activity, Level A harassment is neither anticipated nor proposed to be authorized.

As described previously, no serious injury or mortality is anticipated or proposed to be authorized for this activity. Below, in the *Take Estimation* section, we describe how the proposed take numbers are estimated.

Marine Mammal Occurrence

In this section we provide information about the occurrence of marine mammals, including density or other relevant information which will inform the take calculations.

As described in the Description of Marine Mammals in the Area of Specified Activities section, BLM conducted pinniped census surveys of the beach and intertidal rocks at Mal Coombs Park on 12 days between June 3 and September 29. Counts of California sea lions, Steller sea lions, and harbor seals are presented below:

TABLE 2—PINNIPED CENSUS COUNTS AT MAL COOMBS PARK

Survey date	Number of harbor seals (pups)	Number of california sea lions (pups)	Number of steller sea lions
June 3, 2025	80 (4)	6	0
June 20, 2025	85 (2)	10	0
June 25, 2025	12	56 (3)	0
July 9, 2025	104	0	0
July 17, 2025	14	0	0
July 23, 2025	32	16	7
August 19, 2025	0	24	0
August 27, 2025	0	34	0
August 31, 2025	4	28	0
September 16, 2025	11	35	0
September 23, 2025	36	25	0
September 29, 2025	6	15	0

TABLE 2—PINNIPED CENSUS COUNTS AT MAL COOMBS PARK—Continued

Survey date	Number of harbor seals (pups)	Number of California sea lions (pups)	Number of Steller sea lions
Average daily count	33	21	1
Maximum daily count	104	56	7

Take Estimation

Here we describe how the information provided above is synthesized to produce a quantitative estimate of the take that is reasonably likely to occur and proposed for authorization.

Generally, take estimates are the product of marine mammal occurrence and the proposed number of days of construction. Specifically, take estimates are calculated by multiplying the expected daily occurrence of marine mammals in the activity area by the number of construction days planned. A summary of the method is illustrated with the following formula:

Estimated take = Marine mammal occurrence × # of construction days.

In its application, BLM bases marine mammal occurrence assumptions on the

daily average occurrence reported during BLM's 2025 census surveys described above. However, since the duration of this project is very short (just 5 construction days), NMFS bases marine mammal occurrence assumptions on the maximum daily occurrence observed during BLM's 2025 census surveys described above to account for the possibility that larger numbers of pinnipeds could occur on site on the few days when construction activities are implemented.

BLM estimates take by Level B harassment for each species according to Level 2 and Level 3 of the Levels of Pinniped Behavioral Disturbance Scale (see table 4). However, NMFS does not differentiate between these levels when estimating take by Level B harassment.

As such, NMFS and BLM have agreed to revise estimated take by Level B harassment according to the inputs displayed in table 3. Therefore, NMFS proposes to authorize 280 takes by Level B harassment of California sea lions, 35 takes by Level B harassment of Steller sea lions, and 520 takes by Level B harassment of harbor seals.

BLM has not documented northern elephant seals at the haul outs at Mal Coombs Park and BLM and NMFS are not aware of reports of this species occurring at the project site from other sources. However, NMFS proposes to authorize a total of two takes by Level B harassment of northern elephant seals to account for the potential that this species occurs at the project site during the construction period.

TABLE 3—TAKE BY STOCK AND AS A PERCENTAGE OF STOCK ABUNDANCE

Species	Stock	Construction days	Marine mammal occurrence ¹	Total take estimated and proposed for authorization	% Stock
California sea lion	U.S.	5	56	280	<1
Steller sea lion	Eastern	5	7	35	<1
Harbor seal	California	5	104	520	<1
Northern elephant seal	California breeding	N/A	N/A	2	<1

¹ Occurrence of California sea lions, Steller sea lions, and harbor seals is based on the maximum daily occurrence reported from BLM's 2025 pinniped census data.

Proposed Mitigation

In order to issue an IHA under section 101(a)(5)(D) of the MMPA, NMFS must set forth the permissible methods of taking pursuant to the activity, and other means of effecting the least practicable impact on the species or stock and its habitat, paying particular attention to rookeries, mating grounds, and areas of similar significance, and on the availability of the species or stock for taking for certain subsistence uses (latter not applicable for this action). NMFS regulations require applicants for incidental take authorizations to include information about the availability and feasibility (economic and technological) of equipment, methods, and manner of conducting the activity or other means of effecting the least practicable adverse impact upon the affected species or stocks, and their habitat (50 CFR 216.104(a)(11)).

In evaluating how mitigation may or may not be appropriate to ensure the least practicable adverse impact on species or stocks and their habitat, as well as subsistence uses where applicable, NMFS considers two primary factors:

(1) The manner in which, and the degree to which, the successful implementation of the measure(s) is expected to reduce impacts to marine mammals, marine mammal species or stocks, and their habitat. This considers the nature of the potential adverse impact being mitigated (likelihood, scope, range). It further considers the likelihood that the measure will be effective if implemented (probability of accomplishing the mitigating result if implemented as planned), the likelihood of effective implementation (probability implemented as planned); and

(2) The practicability of the measures for applicant implementation, which may consider such things as cost, and impact on operations.

The mitigation requirements described in the following were proposed by BLM in its adequate and complete application or are the result of subsequent coordination between NMFS and BLM. BLM has agreed that all of the mitigation measures are practicable. NMFS has fully reviewed the specified activities and the mitigation measures to determine if the mitigation measures would result in the least practicable adverse impact on marine mammals and their habitat, as required by the MMPA, and has determined the proposed measures are appropriate. NMFS describes these below as proposed mitigation requirements and has included them in the proposed IHA:

- BLM intends to implement the project outside of the harbor seal pupping season, in the late summer, to ensure that any hauled-out harbor seal pups would be old enough to be self sufficient if the colony temporarily flushes into the water. This is described here due to the beneficial effects of project timing, but is considered part of BLM's described specified activity rather than a mitigation measure.

- At least one professional wildlife biologist employed by BLM would serve as a Protected Species Observer (PSO) to monitor for marine mammals.

- The PSO must observe the site from a distance to detect any marine mammals prior to approach to determine if mitigation is required.

- BLM would delay visits to the project site if offshore pinniped predators are observed in the area prior to commencing work.

- BLM would cease or delay visits to the project site if a species for which the number of takes that have been authorized for a species are met, or if a species for which takes were not authorized, is observed.

- Training would be required to ensure that construction supervisors and crews, monitors, and relevant BLM staff are trained prior to the start of activities subject to this IHA, so that responsibilities, communication procedures, monitoring protocols, and operational procedures are clearly understood, and

- Operations would be suspended if a dead or injured marine mammal is found near the project area and the death or injury of the animal could be attributable to BLM activities. Any such takes will immediately be reported to the Office of Protected Resources (PR.ITP.MonitoringReports@noaa.gov and ITP.fleming@noaa.gov) and the West Coast Regional Stranding Coordinator (562-980-3264).

NMFS conducted an independent evaluation of the proposed measures, and has preliminarily determined that

the proposed mitigation measures provide the means of effecting the least practicable impact on the affected species or stocks and their habitat, paying particular attention to rookeries, mating grounds, and areas of similar significance.

Proposed Monitoring and Reporting

In order to issue an IHA for an activity, section 101(a)(5)(D) of the MMPA states that NMFS must set forth requirements pertaining to the monitoring and reporting of such taking. The MMPA implementing regulations at 50 CFR 216.104(a)(13) indicate that requests for authorizations must include the suggested means of accomplishing the necessary monitoring and reporting that will result in increased knowledge of the species and of the level of taking or impacts on populations of marine mammals that are expected to be present while conducting the activities. Effective reporting is critical both to compliance as well as ensuring that the most value is obtained from the required monitoring.

Monitoring and reporting requirements prescribed by NMFS should contribute to improved understanding of one or more of the following:

- Occurrence of marine mammal species or stocks in the area in which take is anticipated (e.g., presence, abundance, distribution, density);
- Nature, scope, or context of likely marine mammal exposure to potential stressors/impacts (individual or cumulative, acute or chronic), through better understanding of: (1) action or environment (e.g., source characterization, propagation, ambient noise); (2) affected species (e.g., life history, dive patterns); (3) co-occurrence of marine mammal species with the activity; or (4) biological or behavioral context of exposure (e.g., age, calving or feeding areas);
- Individual marine mammal responses (behavioral or physiological)

to acoustic stressors (acute, chronic, or cumulative), other stressors, or cumulative impacts from multiple stressors;

- How anticipated responses to stressors impact either: (1) long-term fitness and survival of individual marine mammals; or (2) populations, species, or stocks;

- Effects on marine mammal habitat (e.g., marine mammal prey species, acoustic habitat, or other important physical components of marine mammal habitat); and

- Mitigation and monitoring effectiveness.

The monitoring and reporting requirements described in the following were proposed by BLM in its adequate and complete application and/or are the result of subsequent coordination between NMFS and BLM. BLM has agreed to the requirements. NMFS describes these below as requirements and has included them in the proposed IHA.

Monitoring would be conducted by at least one trained wildlife biologist employed by BLM. Prior to the work crew arriving on site to commence work each day, the PSO would conduct counts of hauled out pinnipeds for at least 10 minutes. The PSO would record all observations of marine mammals, regardless of distance to construction activities.

In addition to the daily pre-activity count data, at least one PSO would monitor for haulout disturbances. This monitoring would continue through the duration of the construction activity. Methods for recording disturbances would follow a three-point scale as shown in table 4. For each disturbance event, the disturbance source and seal response would be recorded and tallied. We specifically note that only observations of disturbance levels 2 and 3 would be recorded as takings.

TABLE 4—LEVELS OF PINNIPED BEHAVIORAL DISTURBANCE

Level	Type of response	Definition
0	Observation	Observation by PSO; no disturbance to pinniped.
1	Alert	Seal head orientation or brief movement in response to disturbance, which may include turning head towards the disturbance, craning head and neck while holding the body rigid in a u-shaped position, changing from lying to a sitting position, or brief movement of less than twice the animal's body length.
2	Movement	Movements in response to the source of disturbance, ranging from short withdrawals at least twice the animal's body length to longer retreats over the beach, or if already moving a change of direction of greater than 90 degrees.
3	Flush	All retreats (flushes) to the water.

Note: Only Levels 2 and 3 would be recorded as takes by Level B harassment.

Reporting

A draft marine mammal monitoring report would be submitted to NMFS within 90 days following the end of the project activities or 60 calendar days prior to the requested issuance of any subsequent IHA for similar activity at the same location, whichever comes first. The draft summary report would include an overall description of the construction activities completed, a narrative regarding marine mammal sightings, and associated raw PSO data sheets (in electronic spreadsheet format). Specifically, the report must include:

- Dates and times (begin and end) of all marine mammal monitoring;
- Start and end time of activity;
- PSO location during marine mammal monitoring;
- Environmental conditions during monitoring periods;
- Seal census data from pre-activity haul-out monitoring including
 - Time of the sighting;
 - Identification of the animal(s) (*e.g.*, genus/species, lowest possible taxonomic level, or unidentified), observer confidence in identification, the composition of the group if there is a mix of species;
 - Estimated number of animals (min/max/best estimate);
 - Estimated number of animals by cohort (*e.g.*, adults, juveniles, neonates, group composition, *etc.*);
 - Details of any marine mammal behavioral disturbances, including information regarding the activity, the estimated distances between the activity and seals when disturbance occurs, the type of behavioral response to the disturbance (according to the 3-point scale as shown in table 2), and the estimated number of seals taken (by species and age class if possible); and
 - Detailed information about implementation of any mitigation, a description of specified actions that ensued, and resulting changes in behavior of the animal(s), if any.

If no comments are received from NMFS within 30 days after the submission of the draft summary report, the draft report would constitute the final report. If BLM receives comments from NMFS, a final summary report addressing NMFS' comments must be submitted within 30 days after receipt of comments.

Additionally, BLM would report all observations of marked or tag-bearing pinnipeds or carcasses and unusual behaviors, or numbers of pinnipeds to the NMFS West Coast Regional Office.

Reporting Injured or Dead Marine Mammals

In the event that personnel involved in the construction activities discover an injured or dead marine mammal, BLM would report the incident to the NMFS Office of Protected Resources (PR.ITP.MonitoringReports@noaa.gov and ITP.Fleming@noaa.gov) and the NMFS West Coast Regional Stranding Coordinator ((562) 980–3230). If death or injury was clearly caused by the specified activity, BLM would immediately cease the specified activities until NMFS is able to review the circumstances of the incident and determine what, if any, additional measures are appropriate to ensure compliance with the terms of the IHAs. The BLM would not resume their activities until notified by NMFS. The report must include the following information:

1. Time, date, and location (latitude/longitude) of the first discovery (and updated location information if known and applicable);
2. Species identification (if known) or description of the animal(s) involved incident;
3. Condition of the animal(s) (including carcass condition if the animal is dead);
4. Observed behaviors of the animal(s), if alive;
5. Photographs or video footage of the animal(s) (if the equipment is available); and
6. General circumstances under which the animal was discovered.

Negligible Impact Analysis and Determination

NMFS has defined negligible impact as an impact resulting from the specified activity that cannot be reasonably expected to, and is not reasonably likely to, adversely affect the species or stock through effects on annual rates of recruitment or survival (50 CFR 216.103). A negligible impact finding is based on the lack of likely adverse effects on annual rates of recruitment or survival (*i.e.*, population-level effects). An estimate of the number of takes alone is not enough information on which to base an impact determination. In addition to considering estimates of the number of marine mammals that might be "taken" through harassment, NMFS considers other factors, such as the likely nature of any impacts or responses (*e.g.*, intensity, duration), the context of any impacts or responses (*e.g.*, critical reproductive time or location, foraging impacts affecting energetics), as well as effects on habitat, and the likely

effectiveness of the mitigation. We also assess the number, intensity, and context of estimated takes by evaluating this information relative to population status. Consistent with the 1989 preamble for NMFS' implementing regulations (54 FR 40338, September 29, 1989), the impacts from other past and ongoing anthropogenic activities are incorporated into this analysis via their impacts on the baseline (*e.g.*, as reflected in the regulatory status of the species, population size and growth rate where known, ongoing sources of human-caused mortality, or ambient noise levels).

To avoid repetition, the discussion of our analysis applies to California sea lions, Steller sea lions and harbor seals, given that the anticipated effects of this activity on these different marine mammal stocks are expected to be similar. There is little information about the nature or severity of the impacts, or the size, status, or structure of any of these species or stocks that would lead to a different analysis for this activity.

Construction activities have the potential to disturb or displace marine mammals. Specifically, the project activities may result in take, in the form of Level B harassment from the construction crew's movements and equipment handling. Potential takes could occur if individuals of these species are present nearby when these activities are underway. No injuries or mortalities are anticipated to occur as a result of BLM's Mal Coombs Stairway Replacement Project, and none are proposed to be authorized.

Typically, even those reactions constituting Level B harassment would result, at most, in a temporary, short-term behavioral disturbance. Construction crew would be present on site for no more than 2 consecutive days, and only four 8-hour construction days are planned in total. Therefore, disturbance of pinnipeds resulting from the presence of construction crew would last only for short periods.

Of the marine mammal species anticipated to occur in the proposed activity areas, none are listed under the ESA, and there are no known areas of biological importance in the project area. Taking into account the planned mitigation measures, effects to marine mammals are generally expected to be restricted to short-term changes in behavior or temporary displacement from haul-out sites, pinnipeds are not expected to permanently abandon any area. No adverse effects to prey species are anticipated as no work would occur in-water, and habitat impacts are limited and highly localized, consisting of the placement of two new landing

pads to support a stairway installation adjacent to the beach where pinniped haul out. Based on this analysis of the likely effects of the specified activity on marine mammals and their habitat, and considering the implementation of the proposed mitigation and monitoring measures, NMFS finds that the total marine mammal incidental take from BLM's construction will not adversely affect annual rates of recruitment or survival. Therefore, such incidental take will have a negligible impact on the affected species or stocks.

In summary and as described above, the following factors primarily support our preliminary determination that the impacts resulting from this activity are not expected to adversely affect any of the species or stocks through effects on annual rates of recruitment or survival:

- No serious injury or mortality is anticipated or authorized;
- No take by Level A harassment is expected, or proposed for authorization;
- The intensity of anticipated takes by Level B harassment is relatively low for all stocks. Level B harassment would be in the form of behavioral disturbance, resulting in temporary avoidance of the haul-out adjacent to the construction site;

- Few pups are expected to be disturbed, and would not be abandoned or otherwise harmed by other seals flushing from the area;

- No prey species (*i.e.*, fish) would be affected by the proposed activities. Therefore any associated impacts on marine mammal foraging is not expected to result in significant or long-term consequences for individuals, or to accrue to adverse impacts on their populations;

- No impacts to pinniped habitat are anticipated; and

- Effects of the construction activities would be limited to short-term, localized behavioral changes;

Based on the analysis contained herein of the likely effects of the specified activity on marine mammals and their habitat, and taking into consideration the implementation of the proposed monitoring and mitigation measures, NMFS preliminarily finds that the total marine mammal take from the proposed activity will have a negligible impact on all affected marine mammal species or stocks.

Small Numbers

As noted previously, only take of small numbers of marine mammals may be authorized under section 101(a)(5)(A) and (D) of the MMPA for specified activities other than military readiness activities. The MMPA does not define small numbers and so, in practice,

where estimated numbers are available, NMFS compares the number of individuals taken to the most appropriate estimation of abundance of the relevant species or stock in our determination of whether an authorization is limited to small numbers of marine mammals. When the predicted number of individuals to be taken is fewer than one-third of the species or stock abundance, the take is considered to be of small numbers (86 FR 5322, January 19, 2021). Additionally, other qualitative factors may be considered in the analysis, such as the temporal or spatial scale of the activities.

NMFS is proposing to authorize incidental take by Level B harassment of four species (four stocks) of marine mammals. The maximum number of instances of takes by Level B harassment, relative to the best available population abundance, is less than one-third for all species and stocks potentially impacted (table 3).

Based on the analysis contained herein of the proposed activity (including the proposed mitigation and monitoring measures) and the anticipated take of marine mammals, NMFS preliminarily finds that small numbers of marine mammals would be taken relative to the population size of the affected species or stocks.

Unmitigable Adverse Impact Analysis and Determination

There are no relevant subsistence uses of the affected marine mammal stocks or species implicated by this action. Therefore, NMFS has determined that the total taking of affected species or stocks would not have an unmitigable adverse impact on the availability of such species or stocks for taking for subsistence purposes.

Endangered Species Act

Section 7(a)(2) of the ESA of 1973 (16 U.S.C. 1531 *et seq.*) requires that each Federal agency ensures that any action it authorizes, funds, or carries out is not likely to jeopardize the continued existence of any endangered or threatened species or result in the destruction or adverse modification of designated critical habitat. To ensure ESA compliance for the issuance of incidental take authorizations, NMFS consults internally whenever we propose to authorize take for ESA-listed species.

No incidental take of ESA-listed species is proposed for authorization or expected to result from this activity. Therefore, NMFS has determined that formal consultation under section 7 of the ESA is not required for this action.

Proposed Authorization

As a result of these preliminary determinations, NMFS proposes to issue an IHA to BLM for conducting the Mal Coombs Stairway Replacement Project at Shelter Cove, CA, provided the previously mentioned mitigation, monitoring, and reporting requirements are incorporated. A draft of the proposed IHA can be found at: <https://www.fisheries.noaa.gov/national/marine-mammal-protection/incidental-take-authorizations-construction-activities>.

Request for Public Comments

We request comment on our analyses, the proposed authorization, and any other aspect of this notice of proposed IHA for the proposed Mal Coombs Stairway Replacement Project. We also request comment on the potential renewal of this proposed IHA as described in the paragraph below. Please include with your comments any supporting data or literature citations to help inform decisions on the request for this IHA or a subsequent renewal IHA.

On a case-by-case basis, NMFS may issue a one-time, 1-year renewal IHA following notice to the public providing an additional 15 days for public comments when (1) up to another year of identical or nearly identical activities as described in the Description of Proposed Activity section of this notice is planned or (2) the activities as described in the Description of Proposed Activity section of this notice would not be completed by the time the IHA expires and a renewal would allow for completion of the activities beyond that described in the *Dates and Duration* section of this notice, provided all of the following conditions are met:

- A request for renewal is received no later than 60 days prior to the needed renewal IHA effective date (recognizing that the renewal IHA expiration date cannot extend beyond 1 year from expiration of the initial IHA).

- The request for renewal must include the following:

1. An explanation that the activities to be conducted under the requested renewal IHA are identical to the activities analyzed under the initial IHA, are a subset of the activities, or include changes so minor (*e.g.*, reduction in pile size) that the changes do not affect the previous analyses, mitigation and monitoring requirements, or take estimates (with the exception of reducing the type or amount of take).

2. A preliminary monitoring report showing the results of the required monitoring to date and an explanation

showing that the monitoring results do not indicate impacts of a scale or nature not previously analyzed or authorized.

- Upon review of the request for renewal, the status of the affected species or stocks, and any other pertinent information, NMFS determines that there are no more than minor changes in the activities, the mitigation and monitoring measures will remain the same and appropriate, and the findings in the initial IHA remain valid.

Dated: March 23, 2026.

Kimberly Damon-Randall,

*Director, Office of Protected Resources,
National Marine Fisheries Service.*

BILLING CODE 3510-22-P

DEPARTMENT OF COMMERCE

National Technical Information Service

Agency Information Collection Activities; Submission to the Office of Management and Budget (OMB) for Review and Approval; Revision of Currently Approved Information Collection; Comment Request; Limited Access Death Master File Certification Program Forms

The Department of Commerce will submit the following information collection request to the Office of Management and Budget (OMB) for review and clearance in accordance with the Paperwork Reduction Act of 1995, on or after the date of publication of this notice. We invite the general public and other Federal agencies to comment on proposed and continuing information collections, which helps us

assess the impact of our information collection requirements and minimize the public's reporting burden. Public comments were previously requested via the **Federal Register** on January 30, 2026, during a 60-day comment period. This notice allows for an additional 30 days for public comments.

Agency: National Technical Information Service (NTIS), Commerce.

Title of Information Collection: Limited Access Death Master File (LADMF) Certification Program Forms

OMB Control Number: 0692-0013

Form Number(s): NTIS FM161, NTIS FM101, NTIS FM100A and NTIS FM100B

Type of Request: Regular Submission. Revision of currently approved collection.

Number of Respondents, Average Hours per Response, Burden Hours, Frequency:

	NTIS FM161	NTIS FM101	NTIS FM100A	NTIS FM100B
<i>Number of Respondents</i>	260	65	250	30
<i>Average Hours Per Response</i>	3 hours	1 hour	3 hours	3 hours
<i>Burden Hours</i>	780	65	750	90
<i>Frequency</i>	Once a year	Every 3 years	Every 3 years	Every 3 years

Needs and Uses: The final rule for the LADMF Certification Program was promulgated under Section 203 of the Bipartisan Budget Act of 2013, Public Law 113-67 (Act) and published on June 1, 2016 (81 FR 34882). The rule became effective on November 28, 2016 (15 CFR part 1110).

The Act prohibits the Secretary of Commerce (Secretary) from disclosing Death Master File (DMF) information during the three-year period following an individual's death (Limited Access DMF or LADMF), unless the person requesting the information has been certified to access the Limited Access DMF pursuant to certain criteria in a program that the Secretary establishes. The Secretary delegated the authority to carry out Section 203 to the Director of NTIS. The final rule requires that:

a. a Person, as defined in 15 CFR 1110.2, seeking access to the LADMF establish a legitimate fraud prevention interest or legitimate business purpose pursuant to a law, governmental rule, regulation, or fiduciary duty. The Certification Form (NTIS FM161) collects information that NTIS will use to evaluate whether the respondent qualifies to receive the LADMF under the rule.

b. a Person seeking certification or a Certified Person, as defined in 15 CFR 1110.2, seeking renewal of a certification must submit a written attestation from an "Accredited

Conformity Assessment Body" (ACAB), as defined in 15 CFR 1110.2, that such Person or Certified Person has information security systems, facilities and procedures in place to protect the security of the Limited Access DMF, as required under 15 CFR 1110.102(a)(2). The ACAB Systems Safeguards Attestation Form (NTIS FM100A) collects information based on an assessment by the ACAB conducted within three years prior to the date of the Person or Certified Person's submission of a completed certification statement under 15 CFR 1110.101(a). This collection includes specific requirements of the final rule, which the ACAB must certify are satisfied, and the provision of specific information by the ACAB, such as the date of the assessment and the auditing standard(s) used for the assessment.

c. the ACAB must be independent of the Person or Certified Person seeking certification, unless it is a conformity assessment body which qualifies for "firewalled status" pursuant to 15 CFR 1110.502.

The Firewalled Status Application Form (NTIS FM101) collects information that NTIS will use to evaluate whether the respondent qualifies for "firewalled status" under the rule, and, therefore, can provide a written attestation in lieu of an independent ACAB's attestation. This information includes specific

requirements of 15 CFR 1110.502(b), which the respondent ACAB must certify are satisfied, and the provision of specific information by the respondent ACAB, such as the identity of the Person or Certified Person that would be the subject of the attestation and the basis upon which the certifications were made.

d. under 15 CFR 1110.501(a)(2), a state or local government office of Auditor General (AG) or Inspector General (IG) and a Person or Certified Person that is a department or agency of the same state or local government, respectively, are not considered to be owned by a common "parent" entity under 15 CFR 1110.501(a)(1)(ii) for the purpose of determining independence, and attestation by the AG or IG is possible. The AG or IG Systems Safeguards Attestation Form (NTIS FM100B) is for the use of a state or local government AG or IG to attest on behalf of a state or local government department or agency Person or Certified Person. The AG or IG Systems Safeguards Attestation Form requires the state or local government AG or IG to attest that a Person seeking certification or a Certified Person seeking renewal of certification has information security systems, facilities and procedures in place to protect the security of the Limited Access DMF, as required under 15 CFR 1110.102(a)(2). The AG or IG Systems Safeguards

Attestation Form collects information based on an assessment by the state or local government AG or IG conducted within three years prior to the date of the Person or Certified Person's submission of a completed certification statement under 15 CFR 1110.101(a). This collection includes specific requirements of the final rule, which the state or local government AG or IG must certify are satisfied, and the provision of specific information by the state or local government AG or IG, such as the date of the assessment.

Affected Public: Anyone seeking access to the Limited Access Death Master File and Accredited Conformity Assessment Bodies and state or local government Auditors General or Inspectors General attesting that a Person seeking certification or a Certified Person seeking renewal of certification under the final rule for the "Certification Program for Access to the Limited Access Death Master File" has information security systems, facilities and procedures in place to protect the security of the Limited Access DMF, as required by the final rule.

Respondent's Obligation: Voluntary.

Legal Authority: Section 203 of the Bipartisan Budget Act of 2013, Public Law 113–67; 15 CFR part 1110.

This information collection request may be viewed at www.reginfo.gov. Follow the instructions to view the Department of Commerce collections currently under review by OMB.

If there is an existing OMB control number: Written comments and recommendations for the proposed information collection should be submitted within 30 days of the publication of this notice on the following website www.reginfo.gov/public/do/PRAMain. Find this particular information collection by selecting "Currently under 30-day Review—Open for Public Comments" or by using the search function and entering either the title of the collection or the OMB Control Number 0692–0013.

Sheleen Dumas,

Departmental PRA Compliance Officer, Office of the Under Secretary for Economic Affairs, Commerce Department.

BILLING CODE 3510–04–P

CORPORATION FOR NATIONAL AND COMMUNITY SERVICE

Agency Information Collection Activities; Submission to the Office of Management and Budget for Review and Approval; Comment Request; Segal Education Award-Related Information Collection Requests

AGENCY: Corporation for National and Community Service.

ACTION: Notice of information collection; request for comment.

SUMMARY: The Corporation for National and Community Service, operating as AmeriCorps, has submitted three information collections associated with the Segal Education Award for renewal: the voucher and payment request form, the forbearance request form, and the interest accrual form.

DATES: Written comments must be submitted to the individual and office listed in the **ADDRESSES** section by April 27, 2026.

ADDRESSES: Written comments and recommendations for the proposed information collection should be sent within 30 days of publication of this notice to www.reginfo.gov/public/do/PRAMain. Find this particular information collection by selecting "Currently under 30-day Review—Open for Public Comments" or by using the search function.

FOR FURTHER INFORMATION CONTACT: Copies of this ICR, with applicable supporting documentation, may be obtained by calling Nahid Jarrett at AmeriCorps, 202–606–6753 or by email to njarrett@americorps.gov.

SUPPLEMENTARY INFORMATION: The OMB is particularly interested in comments which:

- Evaluate whether the proposed collection of information is necessary for the proper performance of the functions of CNCS, including whether the information will have practical utility;
- Evaluate the accuracy of the agency's estimate of the burden of the proposed collection of information, including the validity of the methodology and assumptions;
- Propose ways to enhance the quality, utility, and clarity of the information to be collected; and
- Propose ways to minimize the burden of the collection of information on those who are to respond, including through the use of appropriate automated, electronic, mechanical, or other technological collection techniques or other forms of information technology.

Comments

A 60-day Notice requesting public comment was published in the **Federal Register** on January 15, 2026 at 91 FR 1758. The comment period ended March 16, 2026. AmeriCorps received one public comment that addressed several aspects of the information collection, summarized as follows:

- **Comment:** The burden hour estimates should be increased for each of the forms for the individual to provide details about their loan and loan servicer or calculate accrued interest. **Response:** AmeriCorps did not adjust the burden hour estimates in response to this comment because these information collections do not require the member to provide the detailed information. The loan servicer, who will readily have the information available as a matter of business, provides the detailed information.
- **Comment:** Individuals may submit multiple forbearance or voucher forms within a single award period, so there should be a per-individual annual burden estimate to account for that, and first-time and repeat-user burden should be disaggregated. **Response:** AmeriCorps is not adjusting its estimates in response to this comment because the burden estimate is an estimate of one annual submission per individual for each form. While some individuals do submit multiple forms in a year, others submit only once every few years. AmeriCorps has averaged the time burden to account for both first-time and repeat users.
- **Comment:** AmeriCorps should conduct a structured usability study with individuals of various demographics. **Response:** AmeriCorps has calculated and refined its estimates over years of public consultation and outreach, which have captured the range of respondents' experiences in responding to this information collection.
- **Comment:** Individuals' financial costs are not captured. **Response:** This comment appears to be based on a misunderstanding that individuals must themselves obtain documents from loan servicers to provide to AmeriCorps.
- **Comment:** Student loan servicer burden was excluded. **Response:** The time burden estimate does consider loan servicer burden, including time to review instructions, process payments, and perform any recordkeeping beyond their normal course of business.
- **Comment:** Combine the three forms into one with single unified OMB coverage. **Response:** The three forms cannot be combined without significantly increasing burden because each form serves a distinct purpose. The

voucher form is used to disburse education award funds from the Trust, the forbearance request form allows a member to obtain forbearance on their loan while they are serving in an AmeriCorps program, and the interest form allows AmeriCorps to pay the interest accrued during a member's national service if their loans were in forbearance during that time.

- *Comment:* Integrate MyAmeriCorps with the Federal Student Aid (FSA) and NSLDS. *Response:* AmeriCorps already uses the current information collection to facilitate payments to the FSA network. The NSLDS does not contain information AmeriCorps needs on state-issued student loans.

- *Comment:* The forms handle personal financial information and AmeriCorps has not disclosed the security architecture for handling this data. *Response:* The information collection is covered by the System of Records Notice CNCS-04-CPO-MMF-Member Management Files (MMF) at 85 FR 3896.

- *Comment:* Small businesses employers that hire AmeriCorps alumni face indirect impacts, in that delays in obtaining [members'] education awards affects [employers'] ability to reduce employer tuition assistance obligations. *Response:* AmeriCorps has not identified any correlation between small business employers that hire AmeriCorps alumni and this information collection, nor with the subset of employers that offer tuition assistance.

- *Comment:* Both individuals and loan servicers must maintain records under this information collection. *Response:* The records are maintained in the MyAmeriCorps portal.

The remaining comments were substantively redundant or beyond the scope of this information collection.

Information Collection Abstracts

1. *Title of Collection:* Voucher and Payment Request Form.

OMB Control Number: 3045-0014.

Type of Review: Renewal.

Respondents/Affected Public:

Individuals (AmeriCorps members and alumni who request payment on qualified student loans) and businesses (qualified student loan servicers).

Total Estimated Number of Annual Responses: 34,385.

Average Time per Response: 5 minutes.

Total Estimated Number of Annual Burden Hours: 2,865.

Abstract: The National Service Trust AmeriCorps Voucher and Payment Form/National Service Trust AmeriCorps—Manual Payment Request

Form is used to repay qualified student loans and to pay for the cost of attending eligible post-secondary educational institutions and approved School-to-Work programs. Prior to making the payments, AmeriCorps will review information from the forms and compare it to information taken from the AmeriCorps members' education award account(s) to ensure that the payments meet the requirements of the law. This information collection is not required to be considered for obtaining grant funding support. The currently approved information collection is due to expire on March 31, 2026.

2. *Title of Collection:* Forbearance Request of National Service Form.

OMB Control Number: 3045-0030.

Type of Review: Renewal.

Respondents/Affected Public:

Individuals (AmeriCorps members and alumni who wish to request forbearance on qualified student loans) and businesses (qualified student loan servicers).

Total Estimated Number of Annual Responses: 13,182.

Frequency: One or more per education award.

Average Time per Response: 10 minutes.

Total Estimated Number of Annual Burden Hours: 2,197.

Abstract: The National Service Trust AmeriCorps Forbearance Request for National Service Form is used to certify that AmeriCorps members are eligible for forbearance based on their enrollment in a national service position. AmeriCorps members use the form, or its electronic equivalent, to request forbearance for their loan. This information collection is not required to be considered for obtaining grant funding support. The currently approved information collection is due to expire on March 31, 2026.

3. *Title of Collection:* Interest Accrual Form.

OMB Control Number: 3045-0053.

Type of Review: Renewal.

Respondents/Affected Public:

Individuals (AmeriCorps members and alumni who wish to request forbearance on qualified student loans) and businesses (qualified student loan servicers).

Total Estimated Number of Annual Responses: 320.

Average Time per Response: 5 minutes.

Total Estimated Number of Annual Burden Hours: 27.

Abstract: The National Service Trust Interest Payment Form is used by AmeriCorps members to request payment of accrued interest on qualified student loans and to authorize the

release of loan information to the National Service Trust. Schools and lenders verify eligibility for the payments and both parties verify certain legal requirements. AmeriCorps uses the information from the form to ensure that the accrued interest payment is allowable under law. AmeriCorps seeks to renew the currently approved information collection, which is due to expire on March 31, 2026.

AmeriCorps seeks to renew these current information collections, which will be used in the same manner as the existing approved information collections. AmeriCorps also seeks to continue using the current information collections until the renewals are approved by OMB.

Jerry Prentice,

Director, National Service Trust.

DEPARTMENT OF DEFENSE

Defense Acquisition Regulations System

[Docket Number DARS-2026-0002; OMB Control Number 0704-0369]

Information Collection Requirement; Defense Federal Acquisition Regulation Supplement; Rights in Technical Data and Computer Software

AGENCY: Defense Acquisition Regulations System; Department of Defense (DoD).

ACTION: Notice.

SUMMARY: The Defense Acquisition Regulations System has submitted to OMB for clearance the following proposal for collection of information under the provisions of the Paperwork Reduction Act.

DATES: Consideration will be given to all comments received by April 27, 2026.

ADDRESSES: Written comments and recommendations for the proposed information collection should be sent within 30 days of publication of this notice to <https://www.reginfo.gov/public/do/PRAMain>. Find this particular information collection by selecting "Currently under 30-day Review—Open for Public Comments" or by using the search function.

You may also submit comments, identified by docket number and title, by the following method: Federal eRulemaking Portal: <https://www.regulations.gov>. Follow the instructions for submitting comments.

FOR FURTHER INFORMATION CONTACT: Mr. Reginald T. Lucas, 571-372-7574, or

whs.mc-alex.esd.mbx.dd-dod-information-collections@mail.mil.

SUPPLEMENTARY INFORMATION:

Title and OMB Number: Defense Federal Acquisition Regulation Supplement (DFARS) Subpart 227.71, Rights in Technical Data, and Subpart 227.72, Rights in Computer Software and Computer Software Documentation, and related provisions and clauses of the Defense Federal Acquisition Regulation Supplement (DFARS); OMB Control Number 0704-0369.

Type of Request: Extension of a currently approved collection.

Affected Public: Businesses or other for-profit and not-for-profit institutions.

Respondent's Obligation: Required to obtain or retain benefits.

Frequency: On occasion.

Number of Respondents: 46,534.

Responses per Respondent: 9, approximately.

Annual Responses: 427,717.

Average Burden per Response: 1.6 hours, approximately.

Annual Response Burden Hours: 647,484.

Annual Recordkeeping Burden Hours: 55,841.

Total Annual Burden Hours: 703,325.

Needs and Uses: DFARS subparts 227.71 and 227.72 prescribe the use of solicitation provisions and contract clauses containing information collection requirements that are associated with rights in technical data and computer software. DoD needs this information to implement 10 U.S.C. 3771-3775, Rights in technical data, and 10 U.S.C. 3781-3786, Validation of proprietary data restrictions. DoD uses the information to recognize and protect contractor rights in technical data and computer software that are associated with privately funded developments; and to ensure that technical data delivered under a contract are complete and accurate and satisfy contract requirements. DoD has revised the estimated burden due to use of more current data and correction of mathematical errors.

DoD uses the following DFARS provisions and clauses in solicitations and contracts to require offerors and contractors to identify and mark data or software requiring protection from unauthorized use, release, or disclosure in accordance with 10 U.S.C. 3771-3775:

252.227-7013, Rights in Technical Data—Other Than Commercial Products and Commercial Services.

252.227-7014, Rights in Other Than Commercial Computer Software and Other Than Commercial Computer Software Documentation.

252.227-7017, Identification and Assertion of Use, Release, or Disclosure Restrictions.

252.227-7018, Rights in Other Than Commercial Technical Data and Computer Software—Small Business Innovation Research Program and Small Business Technology Transfer Program.

In accordance with 10 U.S.C. 3771(b)(4), DoD may disclose limited rights data to persons outside the Government, or allow those persons to use data with use, release, or disclosure restrictions, if the recipient agrees not to further release, disclose, or use the data. Therefore, the clause at DFARS 252.227-7013, Rights in Technical Data—Other Than Commercial Products and Commercial Services, requires the contractor to identify and mark data or software that it provides with limited rights.

In accordance with 10 U.S.C. 3781(b), contractors and subcontractors at any tier must be prepared to furnish written justification for any asserted restriction on the Government's rights to use or release data. The following DFARS clauses require contractors and subcontractors to maintain adequate records and procedures to justify any asserted restrictions:

252.227-7019, Validation of Asserted Restrictions—Computer Software.

252.227-7037, Validation of Asserted Restrictions on Technical Data.

In accordance with 10 U.S.C. 3771(b)(2), DoD must protect the rights of contractors that have developed items, components, or processes exclusively at private expense. Therefore, the clause at DFARS 252.227-7025, Limitations on the Use or Disclosure of Government-Furnished Information Marked with Restrictive Legends, requires a contractor or subcontractor to submit a use and nondisclosure agreement when it obtains data from the Government to which the Government has less than unlimited rights. In addition, DFARS 227.7103-7, Use and nondisclosure agreement, requires intended recipients of technical data or computer software delivered to the Government with restrictions on use, modification, reproduction, release, performance, display, or disclosure, to sign the use and nondisclosure agreement at 227.7103-7(c) prior to release or disclosure of the data, unless the recipient is a Government contractor that requires access to a third party's data or software for the performance of a Government contract that contains the clause at 252.227-7025, Limitations on Use or Disclosure of Government-Furnished Information Marked with Restrictive Legends. According to 10

U.S.C. 3771(b)(4), DoD may disclose limited rights data to persons outside the Government, or allow those persons to use limited rights data, if the recipient agrees not to further use, release, or disclose the data.

The provision at DFARS 252.227-7028, Technical Data or Computer Software Previously Delivered to the Government, requires an offeror to identify any technical data or computer software that it previously delivered, or will deliver, under any Government contract. DoD needs this information to avoid paying for rights in technical data or computer software that the Government already owns.

DoD Clearance Officer: Mr. Reginald T. Lucas. Requests for copies of the information collection proposal should be sent to Mr. Lucas at *whs.mc-alex.esd.mbx.dd-dod-information-collections@mail.mil.*

Kimberly R. Ziegler,

Editor/Publisher, Defense Acquisition Regulations System.

BILLING CODE 6001-FR-P

DEPARTMENT OF DEFENSE

Department of the Navy

Meeting of the U.S. Naval Academy Board of Visitors

AGENCY: Department of the Navy, Department of Defense (DoD).

ACTION: Notice of Partially Closed Meeting.

SUMMARY: The DoD is publishing this notice to announce that the following Federal Advisory Committee meeting of the U.S. Naval Academy Board of Visitors, hereafter "Board," will take place.

DATES: Open to the public, April 13, 2026, from 09:00 a.m. to 11:00 a.m. Eastern Time Zone (ET). Closed to the public, April 13, 2026, from 11:00 a.m. to 12:00 p.m. ET.

ADDRESSES: This meeting will be held at the U.S. Naval Academy, Annapolis, MD. The meeting will be handicap accessible. Escort is required.

FOR FURTHER INFORMATION CONTACT: Major Shawn C. Wehrle, USMC, Executive Secretary to the Board of Visitors, Office of the Superintendent, U.S. Naval Academy, Annapolis, MD 21402-5000, 410-293-1503, *wehrle@usna.edu*.

SUPPLEMENTARY INFORMATION: This meeting is being held under the provisions of the Federal Advisory Committee Act (FACA) (5 U.S.C. 1001-

1014), the Government in the Sunshine Act of 1976 (5 U.S.C. 552b, as amended), and the General Services Administration's Federal Advisory Committee Management Final Rule (41 CFR part 102-3).

Purpose of Meeting: The U.S. Naval Academy Board of Visitors will meet to make such inquiry, as the Board deems necessary, into the state of morale and discipline, the curriculum, instruction, physical equipment, fiscal affairs, and academic methods of the Naval Academy.

Agenda

Proposed meeting agenda for April 13, 2026.

- 9:00 a.m.—Call to Order (Open to Public)
- 9:00–10:50 a.m.—Opening Meeting (Open to Public)
- 10:50–11:00 a.m.—Break (Open to Public)
- 11:00–12:00 a.m.—Closed Meeting (Closed to Public)

The closed meeting from 11:00–12:00 p.m. ET will consist of discussions of new and pending administrative or minor disciplinary infractions and non-judicial punishments involving midshipmen attending the Naval Academy to include but not limited to, individual honor or conduct violations within the Brigade, the disclosure of which would constitute a clearly unwarranted invasion of personal privacy. For this reason, a portion of this meeting will be closed to the public, as the discussion of such information cannot be adequately segregated from other topics, which precludes opening the closed meeting to the public. The Principal Deputy General Counsel has determined in writing that the meeting shall be partially closed to the public because the discussions during the closed meeting from 11:00 a.m.–12:00 p.m. ET will be concerned with matters protected under sections 552b(c) (5), (6), and (7) of title 5, U.S.C.

Authority: 5 U.S.C. 552b.

Meeting Accessibility: Pursuant to FACA and 41 CFR 102-3.140, this meeting is open to the public. Please contact the Executive Secretary five business days prior to the meeting at Admin-Routing@usna.edu to coordinate access to the meeting.

Written Statements: Pursuant to 5 U.S.C. 1009(a)(3), interested persons may submit a written statement for consideration at any time, but it should be received by the Designated Federal Officer at least five business days prior to the meeting date so that the comments may be made available to the Board for their consideration prior to

the meeting. Written statements should be submitted via mail to 121 Blake Rd., Annapolis, MD 21402. Please note that since the Board operates under the provisions of the FACA, as amended, all submitted comments and public presentations may be treated as public documents and may be made available for public inspection, including, but not limited to, being posted on the board website.

Dated: March 25, 2026.

A.R. DeMaio,

Lieutenant Commander, Judge Advocate General's Corps, U.S. Navy, Federal Register Liaison Officer.

BILLING CODE 3810-FF-P

DEPARTMENT OF EDUCATION

[Docket No.: ED-2025-SCC-1339]

Agency Information Collection Activities; Submission to the Office of Management and Budget for Review and Approval; Comment Request; Fiscal Operations Report for 2025–2026 and Application To Participate 2027–2028 (FISAP) and Reallocation Form

AGENCY: Federal Student Aid (FSA), Department of Education (ED).

ACTION: Notice.

SUMMARY: In accordance with the Paperwork Reduction Act (PRA) of 1995, the Department is proposing an extension without change of a currently approved information collection request (ICR).

DATES: Interested persons are invited to submit comments on or before April 27, 2026.

ADDRESSES: Written comments and recommendations for proposed information collection requests should be submitted within 30 days of publication of this notice. Click on this link www.reginfo.gov/public/do/PRAMain to access the site. Find this information collection request (ICR) by selecting “Department of Education” under “Currently Under Review,” then check the “Only Show ICR for Public Comment” checkbox. Reginfo.gov provides two links to view documents related to this information collection request. Information collection forms and instructions may be found by clicking on the “View Information Collection (IC) List” link. Supporting statements and other supporting documentation may be found by clicking on the “View Supporting Statement and Other Documents” link.

FOR FURTHER INFORMATION CONTACT: For specific questions related to collection activities, please contact Carolyn Rose, (202) 453-5967.

SUPPLEMENTARY INFORMATION: The Department is especially interested in public comment addressing the following issues: (1) is this collection necessary to the proper functions of the Department; (2) will this information be processed and used in a timely manner; (3) is the estimate of burden accurate; (4) how might the Department enhance the quality, utility, and clarity of the information to be collected; and (5) how might the Department minimize the burden of this collection on the respondents, including through the use of information technology. Please note that written comments received in response to this notice will be considered public records.

Title of Collection: Fiscal Operations Report for 2025–2026 and Application to Participate 2027–2028 (FISAP) and Reallocation Form.

OMB Control Number: 1845-0030.

Type of Review: Extension without change of a currently approved ICR.

Respondents/Affected Public: State, Local, and Tribal Governments; Private Sector.

Total Estimated Number of Annual Responses: 3,691.

Total Estimated Number of Annual Burden Hours: 84,756.

Abstract: The Higher Education Act of 1965, as amended, requires participating Title IV institutions to apply for funds and report expenditures for the Federal Perkins Loan (Perkins), the Federal Supplemental Educational Opportunity Grant (FSEOG) and the Federal Work-Study (FWS) Programs on an annual basis. The data submitted electronically in the Fiscal Operations Report and Application to Participate (FISAP) is used by the Department of Education to determine the institution's funding need for the award year and monitor program effectiveness and accountability of fund expenditures. The data is used in conjunction with institutional program reviews to assess the administrative capability and compliance of the applicant. There are no other resources for collecting this data.

The HEA requires that if an institution anticipates not using all of its allocated funds for the FWS, and FSEOG programs by the end of an award year, it must specify the anticipated remaining unused amount to the

Secretary, who reduces the institution's allocation accordingly.

Ross Santy,

Chief Data Officer, Office of Planning, Evaluation and Policy Development.

[FR Doc. 2026–06000 Filed 3–26–26; 8:45 am]

BILLING CODE 4000–01–P

DEPARTMENT OF EDUCATION

[Docket No.: ED–2026–SCC–0827]

Agency Information Collection Activities; Comment Request; Vocational Rehabilitation Financial Report (RSA–17)

AGENCY: Office of Special Education and Rehabilitative Services, Department of Education (ED).

ACTION: Notice.

SUMMARY: In accordance with the Paperwork Reduction Act (PRA) of 1995, the Department is proposing an extension without change of a currently approved information collection request (ICR).

DATES: Interested persons are invited to submit comments on or before May 26, 2026.

ADDRESSES: To access and review all the documents related to the information collection listed in this notice, please use <http://www.regulations.gov> by searching the Docket ID number ED–2026–SCC–0827. Comments submitted in response to this notice should be submitted electronically through the Federal eRulemaking Portal at <http://www.regulations.gov> by selecting the Docket ID number or via postal mail, commercial delivery, or hand delivery. If the www.regulations.gov site is not available to the public for any reason, the Department will temporarily accept comments at ICDocketMgr@ed.gov. Please include the docket ID number and the title of the information collection request when requesting documents or submitting comments. Please note that comments submitted after the comment period will not be accepted. Written requests for information or comments submitted by postal mail or delivery should be addressed to the Rehabilitation Services Administration, U.S. Department of Education, 400 Maryland Ave. SW, LBJ, Room 4B104, Washington, DC 20202–1200.

FOR FURTHER INFORMATION CONTACT: For specific questions related to collection activities, please contact David Steele, 202–245–6358.

SUPPLEMENTARY INFORMATION: The Department, in accordance with the

Paperwork Reduction Act of 1995 (PRA) (44 U.S.C. 3506(c)(2)(A)), provides the general public and Federal agencies with an opportunity to comment on proposed, revised, and continuing collections of information. This helps the Department assess the impact of its information collection requirements and minimize the public's reporting burden. It also helps the public understand the Department's information collection requirements and provide the requested data in the desired format. The Department is soliciting comments on the proposed information collection request (ICR) that is described below. The Department is especially interested in public comment addressing the following issues: (1) is this collection necessary to the proper functions of the Department; (2) will this information be processed and used in a timely manner; (3) is the estimate of burden accurate; (4) how might the Department enhance the quality, utility, and clarity of the information to be collected; and (5) how might the Department minimize the burden of this collection on the respondents, including through the use of information technology. Please note that written comments received in response to this notice will be considered public records.

Title of Collection: Vocational Rehabilitation Financial Report (RSA–17).

OMB Control Number: 1820–0017.

Type of Review: An extension without change of a currently approved ICR.

Respondents/Affected Public: State, Local, and Tribal Governments.

Total Estimated Number of Annual Responses: 312.

Total Estimated Number of Annual Burden Hours: 10,193.

Abstract: The Vocational Rehabilitation Financial Report (RSA–17) collects data on the State Vocational Rehabilitation (VR) Services program activities for agencies funded under the Rehabilitation Act of 1973 (Rehabilitation Act), as amended by title IV of the Workforce Innovation and Opportunity Act (WIOA). The Rehabilitation Services Administration (RSA) of the Office of Special Education and Rehabilitative Services (OSERS), U.S. Department of Education (Department) uses the data to evaluate and monitor the financial and programmatic performance of VR agencies. This report is used in lieu of the SF–425 Federal Financial Report because the SF–425 does not capture the required data elements necessary to ensure compliance with the financial requirements of the VR program. The data collected via the RSA–17 are necessary to ensure Federal

requirements imposed by the Rehabilitation Act and its implementing Federal regulations are satisfied; including matching, maintenance of effort, carryover, and earmarking.

This is a request for revision of the RSA–17 form with extension of the revised form for three years. RSA identified a unique circumstance where a VR grantee may not receive credit for non-Federal expenditures for establishment or construction expenditures when the grantee's compliance with the maintenance of effort requirement is calculated. The current RSA–17 form does not collect the data element necessary to address this unique circumstance. The proposed revision to the form corrects this issue by providing the ability to track unliquidated obligations and liquidations for the Establishment and Construction of Facilities for Community Rehabilitation Program (CRP) purposes through revisions to lines 28, 32 and 33. In addition, the revisions remove reporting element, line 15(a), Required and Coordination Pre-employment Transition Service Activities and Other VR Services that Support Access to and Participation in Pre-Employment Transition Services and include minor typographical edits.

Ross Santy,

Chief Data Officer, Office of Planning, Evaluation and Policy Development.

BILLING CODE 4000–01–P

DEPARTMENT OF ENERGY

[Docket No. 16–28–LNG]

Venture Global Plaquemines LNG, LLC; Application for Limited Amendment of Authorization To Export Liquefied Natural Gas to Non-Free Trade Agreement Nations

AGENCY: Hydrocarbons and Geothermal Energy Office, Department of Energy.

ACTION: Notice of application.

SUMMARY: The Hydrocarbons and Geothermal Energy Office (formerly the Office of Fossil Energy and Carbon Management) of the Department of Energy (DOE) gives notice (Notice) of receipt of an application (Application) filed by Venture Global Plaquemines LNG, LLC (Plaquemines LNG) on March 5, 2026. Plaquemines LNG asks DOE to amend its existing authorization to export domestically produced liquefied natural gas (LNG) from the Plaquemines LNG Terminal (Export Terminal or Project), located on the west bank of the Mississippi River, near river mile

marker 55, in Plaquemines Parish, Louisiana, to non-free trade agreement countries set forth in DOE/FE Order No. 4446, as amended. Specifically, Plaquemines LNG asks DOE to authorize additional exports in a volume equivalent to approximately 467.67 billion cubic feet per year (Bcf/yr) of natural gas. Plaquemines LNG filed the Application under the Natural Gas Act (NGA).

DATES: Protests, motions to intervene, or notices of intervention, as applicable, and written comments are to be filed electronically as detailed in the Public Comment Procedures section no later than 4:30 p.m., Eastern time, May 26, 2026.

ADDRESSES:

Electronic Filing by email (Strongly encouraged): fergas@hq.doe.gov.

Postal Mail, Hand Delivery, or Private Delivery Services (e.g., FedEx, UPS, etc.) U.S. Department of Energy (EX-31), Office of Global Energy Security, Hydrocarbons and Geothermal Energy Office, Forrestal Building, Room 3E-056, 1000 Independence Avenue SW, Washington, DC 20585.

Due to potential delays in DOE's receipt and processing of mail sent through the U.S. Postal Service, we encourage respondents to submit filings electronically to ensure timely receipt.

FOR FURTHER INFORMATION CONTACT:

Jennifer Wade or Peri Ulrey, U.S. Department of Energy (EX-31), Office of Global Energy Security, Office of Strategic Resources, Hydrocarbons and Geothermal Energy Office, Forrestal Building, Room 3E-042, 1000 Independence Avenue SW, Washington, DC 20585, (202) 586-4749 or (202) 586-7893, jennifer.wade@hq.doe.gov or peri.ulrey@hq.doe.gov.

Ajoke Agboola, U.S. Department of Energy (GC-76), Office of the Assistant General Counsel for Energy Delivery and Resilience, Forrestal Building, Room 6D-033, 1000 Independence Avenue SW, Washington, DC 20585, (240) 805-2147, ajoke.agboola@hq.doe.gov.

SUPPLEMENTARY INFORMATION: On October 16, 2019, in Order No. 4446 (Order),¹ DOE's Office of Fossil Energy (now known as the Hydrocarbons and Geothermal Energy Office)² authorized

Plaquemines LNG to export domestically produced LNG in a volume equivalent to 1,240 Bcf/yr of natural gas by vessel from the then-proposed Project to any country with which the United States does not have a free trade agreement (FTA) requiring national treatment for trade in natural gas, which currently has or in the future develops the capacity to import LNG, and with which trade is not prohibited by U.S. law or policy (non-FTA countries), for a 20-year term, pursuant to NGA section 3(a).³ On October 21, 2020, in Order No. 4446-A, DOE extended the term of the authorization through December 31, 2050.⁴ On March 13, 2026, in Order No. 4446-B, DOE amended Plaquemines LNG's authorization to increase its non-FTA export volume from 1,240 Bcf/yr to 1405.33 Bcf/yr.⁵

In the Application,⁶ as relevant here,⁷ Plaquemines LNG asks DOE to increase its authorized non-FTA volume by the equivalent of 467.67 Bcf/yr of natural gas, from 1,405.33 Bcf/yr to 1,873 Bcf/yr of natural gas.⁸ Plaquemines LNG states that its requested increase "reflects a refined analysis of the peak liquefaction capacity of the authorized Project facilities under optimal conditions."⁹ Plaquemines LNG adds that it has asked the Federal Energy Regulatory Commission (FERC) to increase its authorized liquefaction capacity from 27.2 metric tons per annum (MTPA) of LNG to 35.0 MTPA of LNG, which equals the volume increase for which it now seeks DOE's authorization.¹⁰

the Hydrocarbons and Geothermal Energy Office (HCEO). DOE uses the acronym in effect at the time of each order or action discussed herein.

³ 15 U.S.C. 717b(a).

⁴ *Venture Global Plaquemines LNG, LLC*, DOE/FE Order No. 4446-A, Docket No. 16-28-LNG, Order Extending Export Term for Authorization to Non-Free Trade Agreement Nations Through December 31, 2050, at 9-10 (Ordering Para. C) (Oct. 21, 2025).

⁵ *Venture Global Plaquemines LNG, LLC*, DOE/HCEO Order No. 4446-B, Docket No. 16-28-LNG, Order Amending Long Term Authorization to Export Liquefied Natural Gas to Non-Free Trade Agreement Nations (Mar. 13, 2026).

⁶ *Venture Global Plaquemines LNG, LLC*, Application for Limited Amendment of Authorizations to Export Liquefied Natural Gas to Free Trade and Non-Free Trade Agreement Nations, Docket No. 16-28-LNG (Mar. 5, 2026) [hereinafter App.].

⁷ This Notice applies only to the portion of the Application requesting an amendment to Plaquemines LNG's non-FTA authorization under NGA section 3(a). DOE will review the portion of the Application requesting an amendment to Plaquemines LNG's existing authorization to export LNG to FTA countries separately pursuant to NGA section 3(c), 15 U.S.C. 717b(c).

⁸ App. at 3 & n.9. *See also* App. at 13.

⁹ App. at 2.

¹⁰ *See id.* at 2 & n.5; *see also id.* at 3. FERC, having previously approved the Terminal's 24.0 MTPA capacity, approved Plaquemines LNG's

Plaquemines LNG states that this proposed increase in its non-FTA export volume "does not require the construction of any new facilities or the material modification of any existing facilities."¹¹

Additional details can be found in Plaquemines LNG's Application, posted on the DOE website at <https://www.energy.gov/sites/default/files/2026-03/VG%20Plaquemines%20Uprate%20DOE%20Application%20%283.4.26%29.pdf>.

DOE Evaluation

In reviewing the Application, DOE will consider any issues required by law or policy under NGA section 3(a), DOE's regulations, and any other documents deemed appropriate.

Parties that may oppose the Application should address these issues and documents in their comments and/or protests, as well as other issues deemed relevant to the Application.

The National Environmental Policy Act (NEPA), 42 U.S.C. 4321 *et seq.*, requires DOE to give appropriate consideration to the environmental effects of its proposed decisions. No final decision will be issued in this proceeding until DOE has met its NEPA responsibilities.

Public Comment Procedures

In response to this Notice, any person may file a protest, comments, or a motion to intervene or notice of intervention, as applicable, addressing the Application. Interested parties will be provided 60 days from the date of publication of this Notice in the **Federal Register** in which to submit comments, protests, motions to intervene, or notices of intervention.

Any person wishing to become a party to this proceeding evaluating the Application must file a motion to intervene or notice of intervention.¹² The filing of comments or a protest with respect to the Application will not serve to make the commenter or protestant a party to this proceeding, although protests and comments received from persons who are not parties will be considered in determining the appropriate action to be taken on the Application. All protests, comments, motions to intervene, or notices of intervention must meet the requirements specified by DOE's regulations in 10 CFR part 590, including the service requirements.

Filings may be submitted using one of the following methods:

requested capacity increase from 24.0 MTPA to 27.2 MTPA in February 2025. *See id.* at 2 & n.5.

¹¹ *Id.* at 12.

¹² 10 CFR 590.303.

¹ *Venture Global Plaquemines LNG, LLC*, DOE/FE Order No. 4446, Docket No. 16-28-LNG, Opinion and Order Granting Long-Term Authorization to Export Liquefied Natural Gas to Non-Free Trade Agreement Nations (Oct. 16, 2019).

² The Office of Fossil Energy (FE) changed its name to the Office of Fossil Energy and Carbon Management (FECM) on July 4, 2021. Subsequently, on November 20, 2025, FECM changed its name to

(1) Submitting the filing electronically at fergas@hq.doe.gov;

(2) Mailing the filing to the Office of Global Energy Security at the address listed in the **ADDRESSES** section; or

(3) Hand delivering the filing to the Office of Global Energy Security at the address listed in the **ADDRESSES** section.

For administrative efficiency, DOE prefers filings to be filed electronically. All filings must include a reference to “Docket No. 16–28–LNG” or “Plaquemines LNG Second Uprate Application” in the title line. Filings must be submitted in English to be considered.¹³

For electronic submissions: Please include all related documents and attachments (e.g., exhibits) in the original email correspondence. Please do not include any active hyperlinks or password protection in any of the documents or attachments related to the filing. All electronic filings submitted to DOE must follow these guidelines to ensure that all documents are filed in a timely manner.

The Application, and any filed protests, motions to intervene, notices of intervention, and comments will be available electronically on the DOE website at www.energy.gov/hgeo/regulation.

A decisional record on the Application will be developed through responses to this Notice by parties, including the parties’ written comments and replies thereto. Additional procedures will be used as necessary to achieve a complete understanding of the facts and issues. If an additional procedure is scheduled, notice will be provided to all parties. If no party requests additional procedures, a final Order may be issued based on the official record, including the Application and responses filed by parties pursuant to this Notice, in accordance with 10 CFR 590.316.

Signed in Washington, DC, on March 24, 2026.

Amy Sweeney,

*Director, Office of Global Energy Security,
Office of Strategic Resources.*

BILLING CODE 6450–01–P

DEPARTMENT OF ENERGY

[Docket No. 26–28–LNG]

Argent LNG, LLC; Application for Long-Term Authorization To Export Liquefied Natural Gas to Non-Free Trade Agreement Nations

AGENCY: Hydrocarbons and Geothermal Energy Office, Department of Energy.

ACTION: Notice of application.

SUMMARY: The Hydrocarbons and Geothermal Energy Office (H GEO) (formerly the Office of Fossil Energy and Carbon Management (FECM)) of the Department of Energy (DOE) gives notice (Notice) of receipt of an application (Application), filed by Argent LNG, LLC (Argent LNG) on March 10, 2026. Argent LNG requests long-term, multi-contract authorization to export domestically produced liquefied natural gas (LNG) in a volume equivalent to approximately 1,293.75 billion cubic feet (Bcf) of natural gas per year (Bcf/yr). Argent LNG seeks to export this LNG from its proposed natural gas liquefaction and LNG export terminal, Argent LNG Project (Project), to be located at Port Fourchon in Lafourche Parish, Louisiana. Argent LNG filed the Application under the Natural Gas Act (NGA).

DATES: Protests, motions to intervene, or notices of intervention, as applicable, and written comments are to be filed electronically as detailed in the Public Comment Procedures section no later than 4:30 p.m., Eastern time, May 26, 2026.

ADDRESSES:

Electronic Filing by email (Strongly encouraged): fergas@hq.doe.gov.

Postal Mail, Hand Delivery, or Private Delivery Services (e.g., FedEx, UPS, etc.) U.S. Department of Energy (EX–31), Office of Global Energy Security, Hydrocarbons and Geothermal Energy Office, Forrestal Building, Room 3E–056, 1000 Independence Avenue SW, Washington, DC 20585.

Due to potential delays in DOE’s receipt and processing of mail sent through the U.S. Postal Service, we encourage respondents to submit filings electronically to ensure timely receipt.

FOR FURTHER INFORMATION CONTACT:

Jennifer Wade or Peri Ulrey, U.S.

Department of Energy (EX–31), Office of Global Energy Security, Office of Strategic Resources, Hydrocarbons and Geothermal Energy Office, Forrestal Building, Room 3E–042, 1000 Independence Avenue SW, Washington, DC 20585, (202) 586–4749 or (202) 586–7893,

jennifer.wade@hq.doe.gov or peri.ulrey@hq.doe.gov.

Ajoke Agboola, U.S. Department of Energy (GC–76), Office of the Assistant General Counsel for Energy Delivery and Resilience, Forrestal Building, Room 6D–033, 1000 Independence Avenue SW, Washington, DC 20585, (240) 805–2147, ajoke.agboola@hq.doe.gov.

SUPPLEMENTARY INFORMATION: Argent LNG requests authorization to export domestically produced LNG from its proposed Project, which will be constructed on an approximately 900-acre parcel under long-term lease by Argent LNG, at Port Fourchon in Lafourche Parish, Louisiana, adjacent to Belle Pass and Bayou Lafourche.¹ Argent LNG states that the proposed Project will consist of pre-treatment facilities, 12 modular liquefaction units, two full-containment LNG storage tanks, a simple-cycle gas turbine power generation facility, two marine loading berths capable of accommodating LNG carriers, as well as smaller LNG bunkering vessels, and supporting infrastructure.² Argent LNG seeks to export LNG in a volume equivalent to 1,293.75 Bcf/yr of natural gas (equivalent to approximately 25 million metric tons per annum) by ocean-going vessel on a non-additive basis to: (i) any country with which the United States has entered into a free trade agreement (FTA) requiring national treatment for trade in natural gas (FTA countries), and (ii) any other country with which trade is not prohibited by U.S. law or policy (non-FTA countries).³ This Notice applies only to the portion of the Application requesting authority to export LNG to non-FTA countries pursuant to section 3(a) of the NGA.⁴ DOE will review Argent LNG’s request for authorization to export LNG to FTA countries separately pursuant to NGA section 3(c).⁵

Argent LNG seeks this authorization on its own behalf and as agent for other entities that will hold title to the LNG at the time of export.⁶ Argent LNG requests authorization for a 20-year term following the commencement of commercial operation of the Project, plus a three-year Make-Up Period at the end of that term.⁷

Additional details can be found in Argent LNG's Application, posted on the DOE website at https://www.energy.gov/sites/default/files/2026-03/Argent%20LNG%20LLC%20-%20DOE%20FTA%20and%20Non-FTA%20Final%20Application%20-%202023.10.2026_.pdf.

DOE Evaluation

In reviewing the Application, DOE will consider any issues required by law or policy under NGA section 3(a), DOE's regulations, and any other documents deemed appropriate.

Parties that may oppose the Application should address these issues and documents in their comments and/or protests, as well as other issues deemed relevant to the Application.

The National Environmental Policy Act (NEPA), 42 U.S.C. 4321 *et seq.*, requires DOE to give appropriate consideration to the environmental effects of its proposed decisions. No final decision will be issued in this proceeding until DOE has met its NEPA responsibilities.

Public Comment Procedures

In response to this Notice, any person may file a protest, comments, or a motion to intervene or notice of intervention, as applicable, addressing the Application. Interested parties will be provided 60 days from the date of publication of this Notice in the **Federal Register** in which to submit comments, protests, motions to intervene, or notices of intervention.

Any person wishing to become a party to this proceeding evaluating the Application must file a motion to intervene or notice of intervention.⁸ The filing of comments or a protest with respect to the Application will not serve to make the commenter or protestant a party to this proceeding, although protests and comments received from persons who are not parties will be considered in determining the appropriate action to be taken on the Application. All protests, comments, motions to intervene, or notices of intervention must meet the requirements specified by DOE's regulations in 10 CFR part 590, including the service requirements.

Filings may be submitted using one of the following methods:

(1) Submitting the filing electronically at fergas@hq.doe.gov;

(2) Mailing the filing to the Office of Global Energy Security at the address listed in the **ADDRESSES** section; or

(3) Hand delivering the filing to the Office of Global Energy Security at the address listed in the **ADDRESSES** section.

For administrative efficiency, DOE prefers filings to be filed electronically. All filings must include a reference to "Docket No. 26–28–LNG" or "Argent LNG, LLC Application" in the title line. Filings must be submitted in English to be considered.⁹

For electronic submissions: Please include all related documents and attachments (e.g., exhibits) in the original email correspondence. Please do not include any active hyperlinks or password protection in any of the documents or attachments related to the filing. All electronic filings submitted to DOE must follow these guidelines to ensure that all documents are filed in a timely manner.

The Application, and any filed protests, motions to intervene, notices of intervention, and comments will be available electronically on the DOE website at www.energy.gov/hgeo/regulation.

A decisional record on the Application will be developed through responses to this Notice by parties, including the parties' written comments and replies thereto. Additional procedures will be used as necessary to achieve a complete understanding of the facts and issues. If an additional procedure is scheduled, notice will be provided to all parties. If no party requests additional procedures, a final Order may be issued based on the official record, including the Application and responses filed by parties pursuant to this Notice, in accordance with 10 CFR 590.316.

Signed in Washington, DC, on March 24, 2026.

Amy Sweeney,

*Director, Office of Global Energy Security,
Office of Strategic Resources.*

Combined Notice of Filings

Take notice that the Commission has received the following Natural Gas Pipeline Rate and Refund Report filings:

Filings Instituting Proceedings

Docket Numbers: CP26–142–000.

Applicants: Port Arthur Pipeline, LLC.

Description: Application of Port Arthur Pipeline, LLC for an Amended Limited Jurisdiction Certificate of Public Convenience and Necessity.

Filed Date: 3/20/26.

Accession Number: 20260320–5402.

Comment Date: 5 p.m. ET 4/3/26.

Docket Numbers: RP26–664–000.

Applicants: Southwest Gas Storage Company.

Description: § 4(d) Rate Filing: Update Tariff Map Links to be effective 4/23/2026.

Filed Date: 3/23/26.

Accession Number: 20260323–5166.

Comment Date: 5 p.m. ET 4/6/26.

Docket Numbers: RP26–665–000.

Applicants: Sea Robin Pipeline Company, LLC.

Description: § 4(d) Rate Filing: Update Tariff Map Links to be effective 4/23/2026.

Filed Date: 3/23/26.

Accession Number: 20260323–5167.

Comment Date: 5 p.m. ET 4/6/26.

Docket Numbers: RP26–666–000.

Applicants: Stingray Pipeline Company, L.L.C.

Description: § 4(d) Rate Filing: Update Tariff Map Link to be effective 4/23/2026.

Filed Date: 3/23/26.

Accession Number: 20260323–5174.

Comment Date: 5 p.m. ET 4/6/26.

Docket Numbers: RP26–667–000.

Applicants: Horizon Pipeline Company, L.L.C.

Description: Compliance filing: Horizon Penalty Revenue Crediting Report for Year 2025 to be effective N/A.

Filed Date: 3/24/26.

Accession Number: 20260324–5043.

Comment Date: 5 p.m. ET 4/6/26.

Docket Numbers: RP26–668–000.

Applicants: Kern River Gas Transmission Company.

Description: 2025 Annual Fuel and Unaccounted for Gas Report of Kern River Gas Transmission Company.

Filed Date: 3/24/26.

Accession Number: 20260324–5081.

Comment Date: 5 p.m. ET 4/6/26.

Docket Numbers: RP26–669–000.

Applicants: Natural Gas Pipeline Company of America LLC.

Description: Compliance filing: Penalty Revenue Crediting Report From July Through December 2025 to be effective N/A.

Filed Date: 3/24/26.

Accession Number: 20260324–5087.

Comment Date: 5 p.m. ET 4/6/26.

Any person desiring to intervene, to protest, or to answer a complaint in any

⁸ 10 CFR 590.303.

⁹ Executive Order 14224 of March 1, 2025, *Designating English as the Official Language of the United States*, 90 FR 11363 (Mar. 6, 2025).

of the above proceedings must file in accordance with Rules 211, 214, or 206 of the Commission's Regulations (18 CFR 385.211, 385.214, or 385.206) on or before 5:00 p.m. Eastern time on the specified comment date. Protests may be considered, but intervention is necessary to become a party to the proceeding.

DEPARTMENT OF ENERGY

Federal Energy Regulatory Commission

[Docket No. RM98–1–000]

Records Governing Off-the-Record Communications; Public Notice

This constitutes notice, in accordance with 18 CFR 385.2201(b), of the receipt of prohibited and exempt off-the-record communications.

Order No. 607 (64 FR 51222, September 22, 1999) requires Commission decisional employees, who make or receive a prohibited or exempt off-the-record communication relevant to the merits of a contested proceeding, to deliver to the Secretary of the Commission, a copy of the communication, if written, or a

summary of the substance of any oral communication.

Prohibited communications are included in a public, non-decisional file associated with, but not a part of, the decisional record of the proceeding. Unless the Commission determines that the prohibited communication and any responses thereto should become a part of the decisional record, the prohibited off-the-record communication will not be considered by the Commission in reaching its decision. Parties to a proceeding may seek the opportunity to respond to any facts or contentions made in a prohibited off-the-record communication and may request that the Commission place the prohibited communication and responses thereto in the decisional record. The Commission will grant such a request only when it determines that fairness so requires. Any person identified below as having made a prohibited off-the-record communication shall serve the document on all parties listed on the official service list for the applicable proceeding in accordance with Rule 2010, 18 CFR 385.2010.

Exempt off-the-record communications are included in the decisional record of the proceeding, unless the communication was with a cooperating agency as described by 40 CFR 1501.6, made under 18 CFR 385.2201(e) (1) (v).

The following is a list of off-the-record communications recently received by the Secretary of the Commission. Each filing may be viewed on the Commission's website at <http://www.ferc.gov> using the eLibrary link. Enter the docket number, excluding the last three digits, in the docket number field to access the document. For assistance, please contact FERC Online Support at FERCOnlineSupport@ferc.gov or toll free at (866) 208–3676, or for TTY, contact (202) 502–8659.

BILLING CODE 6717–01–P

DEPARTMENT OF ENERGY

Western Area Power Administration

2028 Resource Pool—Parker-Davis Project, Final Power Allocations

AGENCY: Western Area Power Administration, Department of Energy (DOE).

ACTION: Notice of Parker-Davis Project final 2028 resource pool power allocations.

SUMMARY: Western Area Power Administration (WAPA), a Federal Power Marketing Administration of the Department of Energy (DOE), announces its Parker-Davis Project (P-DP) final 2028 resource pool power allocations, developed under the requirements of the Final 2028 P-DP Power Marketing Plan. This notice also includes a summary of all comments received on WAPA's Proposed 2028 Resource Pool Allocations and WAPA's responses.

DATES: This final 2028 resource pool power allocations decision will become effective April 27, 2026 and service will begin on October 1, 2028.

FOR FURTHER INFORMATION CONTACT: Jennifer Henn, Power Marketing Advisor, Desert Southwest Region, Western Area Power Administration, phone: (602) 812–2348, or email: pdp-remarketing@wapa.gov.

SUPPLEMENTARY INFORMATION:

Background

WAPA published the Final 2028 P-DP Power Marketing Plan (Final 2028 Plan) on November 12, 2024 (89 FR 88999), to define how WAPA will market hydropower from the P-DP beginning October 1, 2028, and ending September 30, 2048. The current marketing plan and contracts expire on September 30, 2028. As part of the Final 2028 Plan, WAPA adjusted each existing preference contractor's Contract Rate of Delivery (CROD) by applying a pro rata share of an anticipated 3,750-

kilowatt (kW) capacity increase at Davis Dam Unit 3 and then reduced the adjusted CROD by two percent to create a resource pool. The resulting resource pool included 5,259 kW of summer season capacity, including 748 kW of summer season withdrawable capacity, and 4,041 kW of winter season capacity, including 146 kW of winter season withdrawable capacity, for allocation to new allottees.

WAPA published a call for resource pool applications in the **Federal Register** on November 12, 2024 (89 FR 88999), and applications were due by January 31, 2025. In response to the call for resource pool applications, WAPA received four applications for the 2028 resource pool. After reviewing and considering the applications using the Eligibility Criteria and Allocation Criteria for Resource Pool Allocations described in the Final 2028 Plan, WAPA published the P-DP Proposed 2028 Resource Pool Power Allocation in the **Federal Register** on September 3, 2025 (90 FR 42576), and opened a 45-day comment period. The comment period ended on October 20, 2025. Summaries of the comments received and WAPA's responses are provided below. After considering all comments, WAPA has finalized the proposed power allocations as discussed herein.

Response to Comments on Resource Pool Proposed Power Allocations

During the public comment period, WAPA received two comments on the Proposed 2028 Resource Pool Power Allocations. The comments are available on WAPA's website at www.wapa.gov/about-wapa/regions/dsw/pdpremarketing. There were no comments made during the public comment forum held on October 3, 2025. Transcripts from the public meetings are also available on WAPA's website.

The following is a summary of the comments received during the comment period, and WAPA's responses to those comments. Comments are paraphrased for brevity.

Comments and Responses

Comment: A commenter commended WAPA for its adherence to federal statutes and regulations throughout the

evaluation of resource pool applications and for following the 2028 Resource Pool Eligibility Criteria. The commenter stated that the process was clearly communicated, inclusive of stakeholder engagement, and consistent with the criteria and principles outlined in the Proposed 2028 Marketing plan.

Response: WAPA appreciates the feedback.

Comment: A commenter liked that WAPA set aside power for new groups, but felt two percent was too small and requested WAPA give access to underserved and tribal communities and make the rules clearer, so smaller utilities have a fair chance.

Response: Thank you for the comment. WAPA published a Proposed 2028 P-DP Power Marketing Plan (89 FR 43841) with a proposal for the resource pool size and eligibility criteria and accepted public comments from May 20, 2024, through August 19, 2024. WAPA balanced its statutory obligation to encourage widespread use of federal hydropower with the current challenging hydrological conditions in the Colorado River Basin. As detailed in the Final 2028 Plan, energy deliveries from the P-DP have been significantly impacted by drought. A larger resource pool would necessitate a greater reduction in allocations for existing contractors, who are already facing reduced energy deliveries under the new Quarterly Energy methodology.

WAPA is committed to fostering widespread use of federal power, including for underserved and tribal communities. The Eligibility Criteria for Resource Pool Allocations (Section III.C of the Final 2028 Plan) specifically includes Native American tribes as qualified applicants, exempting them from the requirement to achieve electric utility status and have a distribution system in place. This provision is designed to remove potential barriers to participation for tribal communities.

Final 2028 Resource Pool Power Allocations

The final 2028 resource pool allottees and capacity allocations for firm electric service (FES) are listed in the following table:

Allottees	Final Parker-Davis Project post-2028 pool capacity allocations					
	Summer			Winter		
	Non-withdrawable FES allocation (kW)	Withdrawable FES allocation (kW)	Total FES allocation (kW)	Non-withdrawable FES allocation (kW)	Withdrawable FES allocation (kW)	Total FES allocation (kW)
Industry Public Utilities	703	304	1,007	936	73	1,009

Allottees	Final Parker-Davis Project post-2028 pool capacity allocations					
	Summer			Winter		
	Non-withdrawable FES allocation (kW)	Withdrawable FES allocation (kW)	Total FES allocation (kW)	Non-withdrawable FES allocation (kW)	Withdrawable FES allocation (kW)	Total FES allocation (kW)
San Pasqual Band of Indians	703	304	1,007	936	73	1,009
Total 2028 Resource Pool	1,406	608	2,014	1,872	146	2,018

The resource pool final power allocations, listed in the table above, are based on the P–DP marketable resource available at this time. If the P–DP marketable resource is adjusted in the future, P–DP power allocations may be adjusted accordingly. The CROD adjustments for existing contractors are posted on DSW’s website at www.wapa.gov/about-wapa/regions/dsw/pdpremarketing. The existing CROD for Priority Use Power contractors will remain unchanged.

All allocations, including the new resource pool allocations, will be based on P–DP marketable capacity deemed to be available effective October 1, 2028.

Contracting Process

After the effective date of this notice, DSW will start contract development. All allocations are subject to the execution of a contract in accordance with the General Criteria and Contract Principles contained in the Final 2028 Plan. Energy associated with the new resource pool will be based on a pro rata share of the allottee’s seasonal CROD and published in the form of Quarterly Energy, as defined in the Final 2028 Plan.

WAPA solely determines the terms, conditions, rates, or charges of its power contracts. Each allottee is responsible for obtaining transmission arrangements beyond WAPA’s system for the delivery of federal power to the allottee’s load. WAPA must receive a letter of commitment from each allottee’s serving utility or their transmission provider by January 31, 2028, confirming the allottee will be able to receive the benefit of WAPA’s 2028 resource pool, unless otherwise agreed to in writing by WAPA. Upon request, WAPA may assist an allottee in obtaining transmission arrangements for the delivery of power.

Allottees will be required to execute an electric service contract no later than May 31, 2028, unless otherwise agreed to in writing by WAPA. Electric service contracts will be effective upon WAPA’s signature, and service will begin on October 1, 2028, and continue through September 30, 2048.

Consistent with the Final 2028 Plan, allottees will be required to prepay for service according to the applicable rate schedule. Allottees may participate in advance funding of WAPA’s and Reclamation’s operation and maintenance expenses by agreeing to sign the existing Advancement of Funds (AOF) agreement. The existing AOF agreement will continue for current signatories in the new marketing plan.

Legal Authorities

The Final 2028 Plan was established under the Department of Energy Organization Act (42 U.S.C. 7101, *et seq.*); the Reclamation Act of June 17, 1902 (ch. 1093, 32 Stat. 388), as amended and supplemented by subsequent enactments, particularly section 9(c) of the Reclamation Project Act of 1939 (43 U.S.C. 485h(c)); and other acts specifically applicable to the projects involved. Allocating power from the resource pool falls within the Final 2028 Plan and is covered by this authority.

Regulatory Procedure Requirements Environmental Compliance

WAPA has determined this final action fits within the following categorical exclusions listed in appendix B to 10 CFR part 1021 and appendix B of DOE’s National Environmental Policy Act (NEPA) implementing procedures published on June 30, 2025: B4.1 (Contracts, policies, and marketing and allocation plans for electric power) and B4.4 (Power marketing services and activities). Under 10 CFR 1021.102, categorically excluded projects and activities do not require preparation of either an environmental impact statement or an environmental assessment.¹ A copy of the categorical exclusion determination is available on WAPA’s website under the categorical exclusion 2024 menu at www.wapa.gov/about-wapa/regions/dsw/environment.

¹ The determination was done in compliance with NEPA (42 U.S.C. 4321–4347) and DOE NEPA Implementing Procedures, including 10 CFR part 1021.

Determination Under Executive Order 12866

WAPA has an exemption from centralized regulatory review under Executive Order 12866; accordingly, no clearance of this **Federal Register** notice by the Office of Management and Budget is required.

Signing Authority

This document of the Department of Energy was signed on March 24, 2026, by Tracey A. LeBeau, Administrator, Western Area Power Administration. The document, with the original signature and date, is maintained by DOE. For administrative purposes only, and in compliance with requirements of the Office of the Federal Register, the undersigned DOE Federal Register Liaison Officer has been authorized to sign and submit the document in electronic format for publication, as an official document of the Department of Energy. This administrative process in no way alters the legal effect of this document upon publication in the **Federal Register**.

Signed in Washington, DC, on March 25, 2026.

Jennifer Hartzell,

*Alternate Federal Register Liaison Officer,
U.S. Department of Energy.*

ENVIRONMENTAL PROTECTION AGENCY

[EPA–HQ–OPP–2026–1420; EPA–HQ–OPP–2026–0991; EPA–HQ–OPP–2026–1256; FRL–13274–01–OCSPP]

Pesticide Product Registration; Emergency Exemption Request and Application for a New Active Ingredient

AGENCY: Environmental Protection Agency (EPA).

ACTION: Notice of receipt and request for comment.

SUMMARY: This document announces the Agency’s receipt of and solicits comment on an application from the

United States Department of Agriculture (USDA) to register a new pesticide product containing an unregistered pesticide, NovoFly male-only genetically engineered (GE) New World screwworm (NWS) in USDA's Sterile Insect Technique (SIT) programs. Additionally, the Agency received a Section 18 quarantine emergency exemption application requesting use of the same pesticide to maintain broad suppression of and help prevent the pest from moving further northward from Mexico toward the United States. The Agency is providing this notice in accordance with the Federal Insecticide, Fungicide, and Rodenticide Act (FIFRA). Due to the urgent nature of the emergency, the limited time available to authorize the Section 18 quarantine emergency exemption request, and the related FIFRA Section 3 product registration application under review for the same use, EPA is waiving the comment period associated with the emergency exemption request, but is soliciting public comment in conjunction with the application for Section 3 product registration of NovoFly.

DATES: Comments must be received on or before April 27, 2026.

ADDRESSES: Submit your comments on the Section 3 product registration application, identified by the docket identification (ID) number, EPA-HQ-OPP-2026-0991 and the *EPA File Symbol*, 91213-L, as shown in Unit II. of this document, online at <https://www.regulations.gov>. Follow the online instructions for submitting comments. Do not submit electronically any information you consider to be Confidential Business Information (CBI) or other information whose disclosure is restricted by statute. Additional instructions on commenting and visiting the docket, along with more information about dockets generally, are available at <https://www.epa.gov/dockets>.

FOR FURTHER INFORMATION CONTACT: Each application summary in Unit II. specifies a contact division. The appropriate division contacts are identified as follows:

- BPPD (Biopesticides and Pollution Prevention Division) (Mail Code 7511M); Shannon Borges; main telephone number: (202) 566-1400; email address: BPPDFRNotices@epa.gov.
- RD (Registration Division) (Mail Code 7505T); Charles Smith; main telephone number: (202) 566-1030; email address: RDFRNotices@epa.gov.

SUPPLEMENTARY INFORMATION:

I. Executive Summary

A. Does this action apply to me?

This action provides information that is directed to the public in general.

B. What is the Agency's authority for taking this action?

EPA is taking this action pursuant to section 3(c)(4) of the Federal Insecticide, Fungicide, and Rodenticide Act (FIFRA), 7 U.S.C. 136a(c)(4), and 40 CFR 152.102.

C. What action is the Agency taking?

EPA is hereby providing notice of receipt of an application to register a new Section 3 pesticide product containing an unregistered active ingredient in addition to receipt of an application requesting authorization of a Section 18 quarantine emergency exemption. EPA is providing an opportunity to comment on the application to register a new Section 3 pesticide product containing an unregistered active ingredient. This document identifies applications that were received and are currently being evaluated by EPA in accordance with FIFRA. Notice of receipt of these applications does not imply a decision by the Agency on either the Section 3 pesticide product registration or Section 18 quarantine emergency exemption applications. For the Section 3 product registration being evaluated under EPA's public participation process, there will be an additional opportunity for public comment on the proposed decisions. Please see EPA's public participation website for additional information on this process (<https://www.epa.gov/pesticide-registration/public-participation-process-registration-actions>).

D. What should I consider as I prepare my comments for EPA?

1. *Submitting CBI.* Do not submit CBI to EPA through <https://www.regulations.gov> or email. If you wish to include CBI in your comment, please follow the applicable instructions at <https://www.epa.gov/dockets/commenting-epa-dockets#rules> and clearly mark the information that you claim to be CBI. In addition to one complete version of the comment that includes CBI, a copy of the comment without CBI must be submitted for inclusion in the public docket. Information marked as CBI will not be disclosed except in accordance with procedures set forth in 40 CFR part 2.

2. *Tips for preparing your comments.* When preparing and submitting your comments, see the commenting tips at

<https://www.epa.gov/dockets/commenting-epa-dockets>.

II. Applications To Register and Authorize New Pesticide Product and Section 18 Quarantine Emergency Exemption, Respectively

This unit provides the following information about each application received: The EPA File Symbol or Emergency Exemption Number; EPA docket ID number for the application; Name and address of the applicant; Name of the active ingredient, product type and proposed uses; and the division to contact for that application. Additional information about the application may also be available in the docket for the application as identified in this unit.

A. Application for a New Active Ingredient

File Symbol: 91213-L. *Docket ID number:* EPA-HQ-OPP-2026-0991. *Applicant:* United States Department of Agriculture—Agricultural Research Service (USDA-ARS), George Washington Carver Center, 5601 Sunnyside Ave., Beltsville, MD 20706. *Product Name:* NovoFly. *Active Ingredients:* (1) Lshid^{Ala2} protein and the genetic material necessary to produce the protein in vivo in female embryos *Cochliomyia hominivorax*; and (2) tTAo protein and the genetic material necessary to produce the protein in vivo in female embryos *Cochliomyia hominivorax*. *Product Type:* Biopesticide. *Proposed Use:* *Cochliomyia hominivorax* (New World Screwworm) female lethal trait to be used as part of wide area sterilization and eradication program. *Date of Receipt:* January 30, 2026. *Contact:* BPPD.

B. Section 18 Emergency Exemption

Under section 18 of the Federal Insecticide, Fungicide, and Rodenticide Act (FIFRA) (7 U.S.C. 136p), at the discretion of the EPA Administrator, a Federal or State agency may be exempted from any provision of FIFRA if the EPA Administrator determines that emergency conditions exist which require the exemption. This notice does not constitute a decision by EPA on the application itself. The regulations governing FIFRA section 18 require publication of a notice of receipt of an application for a quarantine exemption proposing a new use of a pesticide (*i.e.*, an active ingredient) which has not been registered by EPA. Due to the urgent nature of the emergency, the limited time available to authorize the Section 18 quarantine emergency exemption request, and the related FIFRA Section

3 product registration application under review for the same use, EPA is waiving the comment period associated with the emergency exemption request, but is soliciting public comment in conjunction with the application for product registration of NovoFly.

As part of this request, the applicant asserts that the NWS (*Cochliomyia hominivorax*) is a devastating pest that causes serious and often deadly damage to livestock, wildlife, pets, and in rare cases, humans. Recent detections have been identified, spreading north in Mexico, thereby threatening re-emergence in the United States and necessitating new tools to stop it. If NWS enters and establishes in the United States, widespread economic losses are expected; each outbreak can cause millions of dollars in production losses and economic damage. It has been calculated that an outbreak in Texas would cost \$1.8 billion to the Texas economy today. USDA-ARS has developed the NovoFly GE NWS using sterile insect technique (SIT), which results in all flies raised being males. Use of male-only NWS populations in SIT effectively doubles the output of traditional SIT (which is dependent on sterile male NWS), providing a significant efficiency. The NovoFly males will be sterilized through irradiation prior to release, which will achieve rapid population control. Current registered insecticides can be applied to animals to control adult flies or kill larvae developing in animal wounds. However, because NWS has been eradicated from the U.S. for so long, many of the products historically applied to animals are no longer available.

File Symbol: 26DA05. *Docket ID number:* EPA-HQ-OPP-2026-1256. *Applicant:* United States Department of Agriculture—Agricultural Research Service (USDA-ARS), George Washington Carver Center, 5601 Sunnyside Ave., Beltsville, MD 20706. *Product Name:* NovoFly. *Active Ingredients:* (1) Lshid^{Ala2} protein and the genetic material necessary to produce the protein in vivo in female embryos *Cochliomyia hominivorax*; and (2) tTAo protein and the genetic material necessary to produce the protein in vivo in female embryos *Cochliomyia hominivorax*. *Product Type:* Biopesticide. *Proposed Use:* *Cochliomyia hominivorax* (New World Screwworm) female lethal trait to be used as part of wide area sterilization and eradication program across areas where NWS is detected, and sterile insect dispersal areas to maintain broad suppression and help prevent the pest from moving further north from Mexico

toward the United States. NovoFly NWS *Cochliomyia hominivorax* carry traits that allow inducible sex-selection which is lethal to female NWS at the embryonic stage during production. This genetically engineered trait allows for the controlled mass-rearing of male-only populations of NWS. NovoFly males are sterilized through irradiation using typical SIT procedures prior to release, making them incapable of reproducing. Use of male-only NWS populations in SIT effectively doubles the output of traditional SIT (which is dependent on sterile male NWS), providing a significant efficiency. USDA ARS is requesting that sterile male-only NovoFly be integrated into existing or future mass-rearing and SIT programs to prevent the establishment of, and to control NWS (*Cochliomyia hominivorax*), a devastating pest that causes serious and often deadly damage to livestock, wildlife, pets, and in rare cases, humans. The applicant proposes the use of a new active ingredient in a pesticide which has not been registered by EPA.

Area-wide releases of sterile, male-only Novofly will follow typical SIT procedures. According to the USDA, sterile insect technique, when paired with surveillance, animal movement restrictions, and education and outreach, is a proven and effective tool for controlling and eradicating NWS. Female NWS flies only mate once in their lives, so if they mate with a sterile male, they lay unfertilized eggs that do not hatch. USDA currently produces sterile flies for dispersal through aerial or ground releases. The historical range (prior to eradication) of NWS is 45° N and 45° S, and NWS could remain established during mild winters as far north as 35° N. USDA closely evaluates the location and circumstances of each new case to adjust sterile insect release efforts and locations as needed. USDA's Animal and Plant Health Inspection Service (APHIS) determines the SIT dispersal area based on NWS detections. Changes to the sterile insect dispersal area, or polygon, occur as needed to maintain broad suppression and help prevent the pest from moving further north toward the United States. For the current dispersal polygon see the current status page on [screwworm.gov](https://www.screwworm.gov) (<https://www.aphis.usda.gov/livestock-poultry-disease/stop-screwworm/current-status>).

The applicant proposes to release NovoFly males from aircraft and/or via ground releases. Flies are released from the aircraft at a rate of 1500 to 3000 flies per nautical mile. Flight plans typically cover 665 nautical miles flying parallel lines over the specified release polygon.

Ground releases utilize hanging chambers which hold up to 10 liters of pupae (roughly 90,000 pupae). For male-only releases, 5 liters (roughly 45,000 pupae) are recommended. As adults emerge, they disperse and provide localized control 2–5 kilometers in radius from the release point. Typically, release chambers are refilled once per week for three subsequent weeks when targeting specific cases. The total release polygon can vary in size from 25 million to 40 million acres. At a maximum production capacity of 5.72 billion flies per year, annual release density is 143 to 229 flies per acre if the site remains with the polygon. The active ingredients contained in Novofly are (1) Lshid^{Ala2} protein and the genetic material necessary to produce the protein in vivo in female embryos *Cochliomyia hominivorax*, <0.00007%; and (2) tTAo protein and the genetic material necessary to produce the protein in vivo in female embryos *Cochliomyia hominivorax*, <0.00003%. *Date of Receipt:* January 30, 2026. *Contact:* RD.

Authority: 7 U.S.C. 136 *et seq.*

Dated: March 25, 2026.

Edward Messina,

Director, Office of Pesticide Programs.

Product Cancellation Order for Certain Pesticide Registrations (From July 31, 2025, Notice)

AGENCY: Environmental Protection Agency (EPA).

ACTION: Notice.

SUMMARY: This notice announces EPA's order for the cancellations, voluntarily requested by the registrant and accepted by the Agency, of the products listed in Table 1 of Unit II, pursuant to the Federal Insecticide, Fungicide, and Rodenticide Act (FIFRA). This cancellation order follows a July 31, 2025, **Federal Register** Notice of Receipt of Requests from the registrant listed in Table 2 of Unit II, to voluntarily cancel these product registrations. In the July 31, 2025, notice, EPA indicated that it would issue an order implementing the cancellations, unless the Agency received substantive comments within the 180-day comment period that would merit its further review of these requests, or unless the registrant

withdrew their requests. The registrant did not withdraw their requests. Accordingly, EPA hereby issues in this notice a cancellation order granting the requested cancellations. Any distribution, sale, or use of the products subject to this cancellation order is permitted only in accordance with the terms of this order, including any existing stocks provisions.

DATES: The cancellations are effective March 27, 2026.

FOR FURTHER INFORMATION CONTACT:

Christopher Green, Regulatory & Information Services Division, Office of Mission Critical Operations, Environmental Protection Agency, 1200 Pennsylvania Ave. NW, Washington, DC 20460-0001; telephone number: (202) 566-2707; email address: green.christopher@epa.gov.

SUPPLEMENTARY INFORMATION:

I. General Information

A. Does this action apply to me?

This action is directed to the public in general and may be of interest to a wide range of stakeholders including environmental, human health, and agricultural advocates; the chemical industry; pesticide users; and members of the public interested in the sale, distribution, or use of pesticides. Since others also may be interested, the Agency has not attempted to describe all the specific entities that may be affected by this action.

B. How can I get copies of this document and other related information?

The docket for this action, identified by docket identification (ID) number EPA-HQ-OPP-2025-0030, is available at <https://www.regulations.gov> or at the Office of Pesticide Programs Regulatory Public Docket (OPP Docket) in the

Environmental Protection Agency Docket Center (EPA/DC), West William Jefferson Clinton Bldg., Rm. 3334, 1301 Constitution Ave. NW, Washington, DC 20460-0001. The Public Reading Room is open from 8:30 a.m. to 4:30 p.m., Monday through Friday, excluding legal holidays. The telephone number for the Public Reading Room is (202) 566-1744, and the telephone number for the OPP Docket is (202) 566-1744. Please review the visitor instructions and additional information about the docket available at <https://www.epa.gov/dockets>.

II. What action is the Agency taking?

This notice announces the cancellation, as requested by registrants, of products registered under FIFRA section 3 (7 U.S.C. 136a). These registrations are listed in sequence by registration number in Table 1 of this unit.

TABLE 1—PRODUCT CANCELLATIONS

Registration No.	Company No.	Product name	Active ingredient
100-1192	100	Tilt Bravo SE	Chlorothalonil (081901/1897-45-6)—(38.5%), Propiconazole (122101/60207-90-1)—(2.9%).
5481-599	5481	Image 1.5 LC Herbicide	3-Quinolinecarboxylic acid, 2-(4,5-dihydro-4-methyl-4-(1-methylethyl)-5-oxo-1H-imidazol-2-yl)-, monoammonium salt (128840/81335-47-9)—(17.3%).

Table 2 of this unit includes the name and address of record for the registrants of the products in Table 1 of this unit,

in sequence by EPA company number. This number corresponds to the first part of the EPA registration numbers of

the products listed in Table 1 of this unit.

TABLE 2—REGISTRANTS OF CANCELLED PRODUCTS

Company No.	Company name and address
100	Syngenta Crop Protection, LLC, 410 Swing Road, P.O. Box 18300, Greensboro, NC 27419-8300.
5481	Amvac Chemical Corporation, 4695 MacArthur Court, Suite 1200, Newport Beach, CA 92660-1706.

III. Summary of Public Comments Received and Agency Response to Comments

During the public comment period provided, EPA received eight comments in response to the July 31, 2025, **Federal Register** notice announcing the Agency's receipt of the requests for voluntary cancellations of the products listed in Table 1 of Unit II. Comments number one and number six, regarded broader questions and concerns related to PFAS usage. Our response. This action is based on requests from the registrant to voluntarily cancel these product registrations, and as such, those comments are outside of the scope of this action. Comments number two, number three, number seven and number eight regarded broader questions and concerns related to

pesticide usage. Our response. This action is based on requests from the registrant to voluntarily cancel these product registrations, and as such, those comments are outside of the scope of this action. For comment number four the cancellation process was supported; however, it suggests listing the products being canceled and explaining how existing stocks can be used. Our response. The specific products being canceled in this action are listed in Table 1, and provisions for disposition of existing stocks are provided in Unit VI. For comment number five, the comment is a request for EPA to issue more information concerning the reasons for Section 6(f) cancellations and alleges that many registrants use voluntary cancellation to avoid situations in which the Agency might seek involuntary cancellation,

suspension, or some other restriction on products. The comment specifically requests that FIFRA be amended. Our response. Only Congress may amend FIFRA. FIFRA Section 6(f) sets out specific procedures that EPA must follow, after it receives a voluntary request to cancel a pesticide product. Registrants are not required to provide the Agency with a particular reason for seeking voluntary cancellation.

IV. Cancellation Order

Pursuant to FIFRA section 6(f) (7 U.S.C. 136d(f)), EPA hereby approves the requested cancellations of the registrations identified in Table 1 of Unit II. Accordingly, the Agency hereby orders that the product registrations identified in Table 1 of Unit II are canceled. The effective date of the cancellations that are the subject of this

notice is March 27, 2026. Any distribution, sale, or use of existing stocks of the products identified in Table 1 of Unit II, in a manner inconsistent with any of the provisions for disposition of existing stocks set forth in Unit VI, will be a violation of FIFRA.

V. What is the Agency's authority for taking this action?

Section 6(f)(1) of FIFRA (7 U.S.C. 136d(f)(1)) provides that a registrant of a pesticide product may at any time request that any of its pesticide registrations be canceled or amended to terminate one or more uses. FIFRA further provides that, before acting on the request, EPA must publish a notice of receipt of any such request in the **Federal Register**. Thereafter, following the public comment period, the EPA Administrator may approve such a request. The notice of receipt for this action was published for comment in the **Federal Register** of July 31, 2025, (90 FR 36045) (FRL-12880-01-OCSP). The comment period ends on January 27, 2026.

VI. Provisions for Disposition of Existing Stocks

Existing stocks are those stocks of registered pesticide products which are currently in the United States, and which were packaged, labeled, and released for shipment prior to the effective date of the cancellation action. The existing stocks provisions for the products subject to this order are as follows.

The registrants may continue to sell and distribute existing stocks of the products listed in Table 1 of Unit II, until March 29, 2027, which is 1 year after the publication of the Cancellation Order in the **Federal Register**. Thereafter, the registrants are prohibited from selling or distributing the products listed in Table 1 of Unit II, except for export in accordance with FIFRA section 17 (7 U.S.C. 136o), or proper disposal.

People other than the registrant may sell, distribute, or use existing stocks of products listed in Table 1 of Unit II, until existing stocks are exhausted, provided that such sale, distribution, or use is consistent with the terms of the previously approved labeling on, or that accompanied, the canceled products.

BILLING CODE 6560-50-P

EXPORT-IMPORT BANK

Privacy Act of 1974; System of Records

AGENCY: Export Import Bank of the United States.

ACTION: Notice of a modified system of records.

SUMMARY: Pursuant to the Privacy Act of 1974, the Export Import Bank of the United States ("EXIM", "EXIM Bank", or "The Bank") proposes to update a system of records notice ("SORN"). The updated system of records described in this notice, EXIM Federal Personnel Payroll System (FPPS) enables EXIM's Security Office staff to process EXIM's personnel, payroll, and time and labor data to facilitate payments, benefits, and pensions. FPPS also provides personnel and payroll data to the FPPS Datamart application which EXIM uses to perform

queries and report on FPPS information. FPPS is an online personnel and payroll system providing support to Federal agency customers through interagency agreement with the IBC. FPPS is customized to meet customer needs for creating and generating the full life cycle of personnel transactions. FPPS allows for immediate updates and edits of personnel and payroll data. FPPS also handles regulatory requirements such as specialized pay, garnishments, and special appointment programs. FPPS also operates in batch mode for performing close of business, payroll calculation, and other processes. FPPS customers can use a web-enabled interface, WebFPPS, to access FPPS through a web browser to perform personnel and payroll tasks. FPPS is a major application that consists of several minor applications to include time and attendance applications, a system for creating retirement cards and updating retirement records, a system for converting client data for integration into FPPS. The purpose of this system is to ensure proper payment of salary and benefits to EXIM personnel, and to track time worked, leave, or other absences for reporting and compliance purposes. Use of this system will streamline EXIM Bank's personnel, payroll and other human resources functions into a unified, secure system, thereby improving employee input into these systems while enhancing data integrity and security and improving operational efficiency.

DATES: The system of records described herein will become effective March 27, 2026. The deadline to submit comments on this system of records, as well as the date on which the below routine uses will become effective, will be 30 days after **Federal Register** publication.

ADDRESSES: You may submit written comments to EXIM Bank by any of the following methods:

- *Federal e-Rulemaking Portal:* <https://www.regulations.gov>. Follow the website instructions for submitting comments.

- *Email:* Sorn.Comments@exim.gov. Refer to SORN in the subject line.

- *Mail or Hand Delivery:* Address letters to the Freedom of Information Act Office and the Office of Information Management and Technology, Export Import Bank of the United States, 811 Vermont Avenue NW, Washington, DC 20571.

Commenters are strongly encouraged to submit public comments electronically. EXIM Bank expects to have limited personnel available to process public comments that are submitted on paper through mail. Until

further notice, any comments submitted on paper will be considered to the extent practicable.

All submissions must include the agency's name (Export Import Bank of the United States, or EXIM Bank) and reference this notice. Comments received will be posted without change to EXIM Bank's website. Do not submit comments that include any Personally Identifiable Information (PII) or confidential business information. Copies of comments may also be obtained by writing to the Freedom of Information Act Office and the Office of Information Management and Technology, Export Import Bank of the United States, 811 Vermont Avenue NW, Washington, DC 20571.

FOR FURTHER INFORMATION CONTACT: For further information, contact Michael Soybel, Acting Assistant General Counsel for Administration, at michael.soybel@exim.gov or (202) 565-3475 or by going to the website: <https://exim.gov/about/freedom-information-act/privacy-act-requests/pia-notice-assessments>.

SUPPLEMENTARY INFORMATION: EXIM FPPS processes EXIM's personnel, payroll, and time and labor data to facilitate payments, benefits, and pensions. FPPS also provides personnel and payroll data to the FPPS Datamart application which EXIM uses to perform queries and report on FPPS information.

The report of this update to this system of records has been submitted to the Committee on Oversight and Government Reform of the House of Representatives, the Committee on Homeland Security and Governmental Affairs of the Senate, and the Office of Management and Budget, pursuant to OMB Circular A-108, "Federal Agency Responsibilities for Review, Reporting, and Publication under the Privacy Act" (Dec. 2016) and the Privacy Act, 5 U.S.C. 552a(r).

The purpose of this notice is to update the routine uses of this system to comport to the requirements of M-25-32—Preventing Improper Payments and Protecting Privacy through the Do Not Pay—issued by OMB on August 20, 2025.

SYSTEM NAME AND NUMBER:

System Name: EXIM Federal Personnel Payroll System (FPPS)
System Number: N/A

SECURITY CLASSIFICATION:

Unclassified.

SYSTEM LOCATION:

This electronic system will be used via a web interface by EXIM staff from the HQ of the Export Import Bank of the

United States, 811 Vermont Avenue NW, Washington, DC 20571, through an electronic database managed by the DOI IBC in Denver, Colorado. FPPS customers will use a web-enabled interface, WebFPPS, to access FPPS through a web browser to perform personnel and payroll tasks. The FPPS functionality of certain applications are only accessible via the IBC or EXIM Bank intranets, and interconnections with the FPPS are outlined in the Interconnection Security Agreement and/or Memorandum of Understanding between EXIM Bank and IBC. The system is located and managed at U.S. Department of the Interior, Interior Business Center, Human Resources and Payroll Services, 7301 W Mansfield Ave. MS D-2000 Denver, CO 80235.

SYSTEM MANAGER(S):

Nakia Burton, Deputy Chief Human Capital Officer (DCHCO),
Export-Import Bank of the United States, 811 Vermont Avenue NW, Washington, DC 20571 Email: Nakia.Burton@exim.gov.
Telephone number: (202)565-3335.

AUTHORITY FOR MAINTENANCE OF THE SYSTEM:

EXIM requests the information in this application under the following authorization: The Export-Import Bank Act of 1945, as amended (12 U.S.C. 635 *et seq.*; 5 U.S.C. 5101, *et seq.*, 5501 *et seq.*, 5525 *et seq.*, and 6301 *et seq.*; 31 U.S.C. 3512; Executive Order 9397 as amended by Executive Order 13478, relating to Federal agency use of Social Security numbers. 31 U.S.C. 3512 *et seq.*; and 5 CFR part 293; and Executive Order (E.O.) 14249, Protecting America's Bank Account Against Fraud, Waste, and Abuse.

PURPOSE(S) OF THE SYSTEM:

EXIM Federal Personnel Payroll System (FPPS) processes EXIM's personnel, payroll, and time and labor data to facilitate payments, benefits, and pensions. FPPS also provides personnel and payroll data to the FPPS Datamart application which EXIM uses to perform queries and report on FPPS information.

FPPS is an online personnel and payroll system providing support to Federal agency customers through interagency agreement with the IBC. FPPS is customized to meet customer needs for creating and generating the full life cycle of personnel transactions. FPPS allows for immediate updates and edits of personnel and payroll data. FPPS also handles regulatory requirements such as specialized pay, garnishments, and special appointment programs. FPPS also operates in batch mode for performing close of business,

payroll calculation, and other processes. FPPS customers can use a web-enabled interface, WebFPPS, to access FPPS through a web browser to perform personnel and payroll tasks. FPPS is a major application that consists of several minor applications to include time and attendance applications, a system for creating retirement cards and updating retirement records, a system for converting client data for integration into FPPS. The purpose of this system is to ensure proper payment of salary and benefits to EXIM personnel, and to track time worked, leave, or other absences for reporting and compliance purposes. Use of this system will streamline EXIM Bank's personnel, payroll and other human resources functions into a unified, secure system, thereby improving employee input into these systems while enhancing data integrity and security and improving operational efficiency.

CATEGORIES OF INDIVIDUALS COVERED BY THE SYSTEM:

The FPPS system data contains Personally Identifiable Information (PII) on current and former EXIM Bank employees, including volunteers and emergency employees, and limited information regarding employee spouses, dependents, emergency contact, or in the case of an estate, a trustee.

CATEGORIES OF RECORDS IN THE SYSTEM:

Categories of Records in the FPPS System include:

- Name
- Citizenship
- Sex
- Birth Date
- Marital Status
- Other Names Used
- Truncated SSN
- Legal Status
- Place of Birth
- Security Clearance
- Spouse Information
- Financial Information
- Medical Information

- Mailing/Home Address
- Taxpayer Identification Number
- Bank Account Information such as Routing and Account Numbers
- Beneficiary Information
- Savings Bond Co-Owner Name(S) and Information

- Family Member and Dependents Information
- Professional Licensing and Credentials
 - Family Relationships
 - Age
 - Involuntary Debt (Garnishments or Child Support Payments)
 - Court Order Information
 - Back Pay Information
 - User ID
 - Time and Attendance Data
 - Leave Time Information
 - Employee Common Identifier (ECI)
 - Volunteer Emergency Contact Information
 - Person Number which is a unique number that identifies a person within FPPS
 - Person Number-Emergency which is a unique number identifying an individual within FPPS for a Leave Share Occurrence
 - Person Number-Volunteer which is a unique number identifying an individual within the FPPS Volunteer Database.

RECORD SOURCE CATEGORIES:

The source of the information maintained in EXIM FPPS is the Individual/employee, HR staff personnel and other: state courts for garnishments.

ROUTINE USES OF RECORDS MAINTAINED IN THE SYSTEM, INCLUDING CATEGORIES OF USERS AND PURPOSES OF SUCH USES:

In addition to those disclosures that are generally permitted under 5 U.S.C. 552a(b) of the Privacy Act, all or a portion of the records or information contained in this system may be disclosed to authorized entities, as is determined to be relevant and necessary, outside EXIM as a routine use pursuant to 5 U.S.C. 552a(b)(3) as follows:

a. To the Department of Justice (DOJ) when:

- (1) EXIM, or
- (2) Any employee of EXIM in his or her official capacity, or
- (3) Any employee of EXIM in his or her individual capacity when the DOJ has been asked, or has agreed, to represent the employee, or
- (4) The United States, when EXIM determines that litigation is likely to affect the agency, is a party to litigation, or has an interest in such litigation, and the use of such records by the DOJ is deemed by EXIM to be relevant and necessary to the litigation.

b. To a court or adjudicative body in a proceeding, when:

- (1) EXIM, or
- (2) Any employee of EXIM in his or her official capacity,

(3) Any employee of EXIM in his or her individual capacity when the EXIM has agreed to represent the employee, or

(4) The United States, when EXIM determines that litigation is likely to affect EXIM, is a party to litigation or has an interest in such litigation, and the use of such records by the DOJ is deemed by EXIM to be relevant and necessary to the litigation.

c. Except as noted on Standard Forms SF 85, 85-P, 86, and 86-C, when a record, alone or in conjunction with other records, indicates a violation or potential violation of law, whether civil, criminal, or regulatory in nature, and whether arising by general statute or particular program statute, or by regulation, rule, or order issued pursuant to such a statute, to the appropriate public authority, whether federal, state, local, foreign, tribal, or otherwise, responsible for enforcing, investigating or prosecuting such violation or charged with enforcing or implementing the statute, or rule, regulation, or order issued pursuant to the statute, if the information disclosed is relevant to any enforcement, regulatory, investigative or prosecutorial responsibility of the receiving entity.

d. To a congressional office in response to an inquiry from that office made at the written request of the constituent about whom the record is maintained.

e. To the National Archives and Records Administration (NARA) for records management functions authorized by laws, regulations, and policies governing NARA operations and agency records management responsibilities.

f. To contractors or other authorized individuals performing work on a contract, service, cooperative agreement, job, or other activity on behalf of the EXIM Bank who have a need to access the information in the performance of their duties or activities.

g. To a court, magistrate, or administrative tribunal during an administrative proceeding or judicial proceeding, including disclosures to opposing counsel or witnesses (including expert witnesses) during discovery or other pre-hearing exchanges of information, litigation, or settlement negotiations, where relevant and necessary to a proceeding, or in connection with criminal law proceedings.

h. To any source or potential source from which information is requested in the course of an investigation concerning the retention of an employee or other personnel action (other than hiring), or the retention of a security clearance, contract, grant, license, or

other benefit, to the extent necessary to identify the individual, inform the source of the nature and purpose of the investigation, and to identify the type of information requested.

i. To a Federal, State, local, foreign, or Tribal or other public authority to the extent that this system of records contains information relevant to the retention of an employee, the retention of a security clearance, the letting of a contract, or the issuance or retention of a license, grant, or other benefit. The other agency or licensing organization may then make a request supported by the written consent of the individual for the entire record if it so chooses. No disclosure will be made unless the information has been determined to be sufficiently reliable to support a referral to another office within the agency or to another federal agency for criminal, civil, administrative personnel or regulatory action.

j. To the news media or the general public, factual information the disclosure of which would be in the public interest, and which would not constitute an unwarranted invasion of personal privacy, consistent with Freedom of Information Act standards.

k. To a Federal, State, or local agency, or other appropriate entities or individuals, or through established liaison channels to selected foreign governments, in order to enable an intelligence agency to carry out its responsibilities under the National Security Act of 1947 as amended, the CIA Act of 1949 as amended, Executive Order 12333 or any successor order, applicable national security directives, or classified implementing procedures approved by the Attorney General and promulgated pursuant to such statutes, orders.

l. To appropriate agencies, entities, and persons when: (1) EXIM suspects or has confirmed that there has been a breach of the system of records; (2) EXIM has determined that as a result of the suspected or confirmed breach there is a risk of harm to individuals, EXIM (including its information systems, programs, and operations), the Federal Government, or national security; and (3) the disclosure made to such agencies, entities, and persons is reasonably necessary to assist in connection with EXIM's efforts to respond to the suspected or confirmed breach or to prevent, minimize, or remedy such harm.

m. To Another Federal agency or Federal entity, when EXIM determines that information from this system of records is reasonably necessary to assist the recipient agency or entity in (a) responding to a suspected or confirmed

breach or (b) preventing, minimizing, or remedying the risk of harm to individuals, the recipient agency or entity (including its information systems, programs, and operations), the Federal Government, or national security, resulting from a suspected or confirmed breach.

n. To the U.S. Department of the Treasury when disclosure of the information is relevant to review payment and award eligibility through the Do Not Pay Working System for the purposes of identifying, preventing, or recouping improper payments to an applicant for, or recipient of, Federal funds, including funds disbursed by a state (meaning a state of the United States, the District of Columbia, a territory or possession of the United States, or a federally recognized Indian tribe) in a state-administered, federally funded program.

POLICIES AND PRACTICES FOR STORAGE OF RECORDS:

Data maintained in FPPS will be stored electronically by IBC. Data is protected by the following electronic security systems: Password, Firewall, Encryption, User ID, Intrusion Detection System, Virtual Private Network (VPN), Public Key Infrastructure (PKI) Certificates, Personal Identity Verification (PIV) Card.

POLICIES AND PRACTICES FOR RETRIEVAL OF RECORDS:

FPPS authorized users, including EXIM authorized Human Capital personnel, may retrieve information on an individual using full name, SSN and Employee Common Identifier (ECI).

Certain personnel within EXIM and IBC, involved in operations and maintenance of FPPS payroll operations, can retrieve information on an individual using:

- ECI—unique number identifying employees across Federal automated systems
- SSN and full name
- Person Number—unique number which identifies a person within FPPS
- Person Number-Emergency—unique number identifying an individual within FPPS for a leave share occurrence
- Person Number-Volunteer—unique number identifying an individual within the FPPS volunteer database
- Taxpayer Identification Number (TIN)—unique number identifying a trustee for the estate of a deceased employee

Additionally, reports can be produced on an individual containing many of the data elements in FPPS. FPPS also routinely generates a variety of reports

related to employment that are required by law, such as Internal Revenue Service (IRS) forms (1099—MISC and W-2); reports of withholdings and contributions for benefits and union dues; and reports on individuals who are delinquent on child-support payments. Access to the reports is limited to employees who process or file the reports and individuals who are granted access on a need-to-know basis. Copies of the reports may also be provided to government entities as required by law, such as tax forms to the IRS.

POLICIES AND PRACTICES FOR RETENTION AND DISPOSAL OF RECORDS:

Records are archived/disposed of during the routine data sync for individuals who are no longer employees or contractors of EXIM. Otherwise, records are maintained and destroyed in accordance with the National Archives and Record Administration's ("NARA") Basic Laws and Authorities (44 U.S.C. 3301, *et seq.*) or an EXIM Bank records disposition schedule approved by NARA.

EXIM Bank is responsible for purging employee data according to the records schedule after an employee's access authority is terminated or the employee retires, changes jobs, or dies. The IBC may purge or delete any customer payroll or personnel records if it is agreed upon in the Inter-Agency Agreement with the IBC.

ADMINISTRATIVE, TECHNICAL, AND PHYSICAL SAFEGUARDS:

- Information about individuals whose data is in FPPS cannot be retrieved without knowing specific information about the employee. FPPS supports a full suite of human resources functions, including calculating payroll. The data in FPPS is necessary to perform those functions and to comply with related Federal laws and regulations. To prevent misuse, (*e.g.*, unauthorized browsing) EXIM Bank signed a Service Level Agreement (SLA) with the IBC to clearly establish and document IBC and client security roles and responsibilities. Most of the employee data in FPPS is collected from individuals and entered into FPPS by an authorized Federal human resource professional with access to the system.

- Access to FPPS related records is restricted to HR personnel. Access to the records is restricted to those with specific roles in the Personal Identity Verification (PIV) process, requires access to background investigation forms to perform their duties, and who have been given a password and PIV

card to access applicable files within the system.

- The FPPS system has undergone a formal Security Authorization and Accreditation and has been granted an authority to operate by DOI in accordance with FISMA and NIST standards. FPPS is rated as FISMA moderate based upon the type of data, and it requires strict security and privacy controls to protect the confidentiality, integrity, and availability of the sensitive PII contained in the system.

- The security of the information being stored and transmitted in FPPS is protected through the use of FIPS 140-2 approved encryption mechanisms.

RECORD ACCESS PROCEDURES:

Requests to access records under the Privacy Act must be submitted in writing and must be signed by the requestor. Requests should be addressed to the Freedom of Information Act Office and the Office of Information Management and Technology, Export Import Bank of the United States, 811 Vermont Avenue NW, Washington, DC 20571. The request must comply with the requirements of 12 CFR 404.14.

CONTESTING RECORD PROCEDURES:

Individuals seeking to contest and/or amend records under the Privacy Act must submit a request in writing. The request must be signed by the requestor and should be addressed to the Freedom of Information Act Office and the Office of Information Management and Technology, Export Import Bank of the United States, 811 Vermont Avenue NW, Washington, DC 20571. The request must comply with the requirements of 12 CFR 404.14.

NOTIFICATION PROCEDURES:

Individuals wishing to determine whether this system of records contains information about them may do so by submitting a written request to the Freedom of Information Act Office and the Office of Information Management and Technology, Export Import Bank of the United States, 811 Vermont Avenue NW, Washington, DC 20571. The written request must include the following:

1. Name;
2. Type of information requested;
3. Address to which the information should be sent; and
4. Signature.

EXEMPTIONS PROMULGATED FOR THE SYSTEM:

None.

BILLING CODE 6690-01-P

EXPORT-IMPORT BANK**Privacy Act of 1974; System of Records**

AGENCY: Export Import Bank of the United States.

ACTION: Notice of a modified system of records.

SUMMARY: Pursuant to the Privacy Act of 1974, the Export Import Bank of the United States ("EXIM", "EXIM Bank", or "The Bank") proposes to update a system of records notice ("SORN"). The updated system of records described in this notice, EXIM Financial Management System- Next Generation, supports flexible financial accounting, control and disbursement of funds, management accounting, loan and guarantee servicing, and financial report processes. Information contained in Financial Management System—Next Generation include but is not limited to: Customer name, the name of the "Care Of" entity, U.S. address, foreign address, and foreign contact name, bank account information, Corporate Name, Corporate Address, Phone Number, Employer Identification Number (EIN), and banking account and banking routing number. The purpose of this notice is to update the routine uses of this system to comport to the requirements of M-25-32—Preventing Improper Payments and Protecting Privacy through the Do Not Pay—issued by OMB on August 20, 2025.

DATES: The system of records described herein will become effective March 27, 2026. The deadline to submit comments on this system of records, as well as the date on which the below routine uses will become effective, will be 30 days after **Federal Register** publication.

ADDRESSES: You may submit written comments to EXIM Bank by any of the following methods:

- *Federal e-Rulemaking Portal:* <https://www.regulations.gov>. Follow the website instructions for submitting comments.

- *Email:* SORN.Comments@exim.gov. Refer to SORN in the subject line.

- *Mail or Hand Delivery:* Address letters to the Freedom of Information Act Office and the Office of Information Management and Technology, Export Import Bank of the United States, 811

Vermont Avenue NW, Washington, DC 20571.

Commenters are strongly encouraged to submit public comments electronically. EXIM Bank expects to have limited personnel available to process public comments that are submitted on paper through mail. Until further notice, any comments submitted on paper will be considered to the extent practicable.

All submissions must include the agency's name (Export Import Bank of the United States, or EXIM Bank) and reference this notice. Comments received will be posted without change to EXIM Bank's website. Do not submit comments that include any Personally Identifiable Information (PII) or confidential business information. Copies of comments may also be obtained by writing to the Freedom of Information Act Office and the Office of Information Management and Technology, Export Import Bank of the United States, 811 Vermont Avenue NW, Washington, DC 20571.

FOR FURTHER INFORMATION CONTACT: For further information, contact Michael Soybel, Acting Assistant General Counsel for Administration, at michael.soybel@exim.gov or (202) 565-3475 or by going to the website: <https://exim.gov/about/freedom-information-act/privacy-act-requests/pia-notice-assessments>.

SUPPLEMENTARY INFORMATION: The update to system of records described in this notice, EXIM Financial Management System— Next Generation, to support flexible financial accounting, control and disbursement of funds, management accounting, loan and guarantee servicing, and financial report processes. The report of this update to a system of records has been submitted to the Committee on Oversight and Government Reform of the House of Representatives, the Committee on Homeland Security and Governmental Affairs of the Senate, and the Office of Management and Budget, pursuant to OMB Circular A-108, "Federal Agency Responsibilities for Review, Reporting, and Publication under the Privacy Act" (Dec. 2016) and the Privacy Act, 5 U.S.C. 552a(r).

The purpose of this notice is to update the routine uses of this system to comport to the requirements of M-25-32—Preventing Improper Payments and Protecting Privacy through the Do Not Pay—issued by OMB on August 20, 2025.

SYSTEM NAME AND NUMBER:

System Name: EXIM Financial Management System—Next Generation (FMS—NG).

System Number: N/A.

SECURITY CLASSIFICATION:

Unclassified.

SYSTEM LOCATION:

This electronic system is used via a web interface by EXIM staff from the HQ of the Export Import Bank of the United States, 811 Vermont Avenue NW, Washington, DC 20571.

SYSTEM MANAGER(S):

Dae Sung Batoff, IT Program Manager, Export Import Bank of the United States, 811 Vermont Avenue NW, Washington, DC 20571.

Email: daesung.batoff@exim.gov.

Telephone number: (202) 860-5870.

AUTHORITY FOR MAINTENANCE OF THE SYSTEM:

EXIM requests the information in this application under the following authorization: Export-Import Bank Act of 1945, as amended (12 U.S.C. 635 et seq.).¹ 5 U.S.C. 301. Executive Order 9397 as amended by Executive Order 13478 signed by President George W. Bush on November 18, 2008, relating to Federal agency use of Social Security Numbers.

PURPOSE(S) OF THE SYSTEM:

Financial Management System— Next Generation (FMS—NG) is a custom configured COTS solution, which supports flexible financial accounting, control and disbursement of funds, management accounting, loan and guarantee servicing, and financial report processes. More specifically, FMS—NG maintains EXIM's spending budget, supports buying of goods and services, vendor payments, records general ledger entries, reports to Department of Treasury, Office of Management and Budget, other agencies, and external parties, is used to verify data accuracy, properly clears and closes ledgers and journals, and provides complete loan and guarantee servicing over the entire life of a credit.

CATEGORIES OF INDIVIDUALS COVERED BY THE SYSTEM:

The FMS—NG system holds information on EXIM customers, employees, contractors, vendors, and invitational travelers who have been asked to speak at or attend a function at the request of EXIM and who are seeking reimbursements for expenses incurred.

¹ More specifically, sections 635(a)(1) and 635a(j)(1)(C) of the Export-Import Bank Act of 1945, as amended.

CATEGORIES OF RECORDS IN THE SYSTEM:

FMS-NG contains customer information related to the financial obligations of the Bank to and from individuals and corporate entities, starting from the point of obligation through final disbursement. It provides complete loans and guarantees servicing throughout the entire life of a credit. The FMS-NG system stores Personally Identifiable Information (PII) about Ex-Im Bank employees, public individuals with pre-authorized reimbursable expenses, Ex-Im product applicants, contracted suppliers, and other business partners.

(1) Administrative and Employee-Related Records

These records relate to employees and individuals who receive payments, reimbursements, or other financial actions through FMS-NG:

- Employee Name
- Employee Address
- Employee email address
- Employee Phone Number
- Employee Bank Account Number (for payroll or reimbursements)
- Travel reimbursement and expense records linked to an identifiable individual

(2) Vendor/Payee Records (Individuals and Sole Proprietors Only)

The following records are included only when the vendor or payee is an individual or sole proprietor, and the record is retrieved using an individual identifier:

- Individual Vendor Name
- Vendor ID assigned to an individual
- Tax Identification Number (individual or sole proprietor)
- Bank Account Holder Name (individual only)

- Bank Account Number
- Bank Routing/SWIFT Code

(3) Individual Beneficiary or Applicant Records

• Records related to individuals who receive or apply for EXIM financial services, disbursements, or program benefits:

- Name
- Address
- Contact Information
- Payment or disbursement information

• Records necessary to determine eligibility or process financial transaction

RECORD SOURCE CATEGORIES:

The source of the record information in EXIM FMS-NG system is coming from interconnected EXIM financial business applications. The record information contained in the FMS-NG is obtained using one of two methods: Manual entry, and through data

consumption from source flat files imported after validating data with business rules using PLSQL procedural upload to the FMS-NG database.

ROUTINE USES OF RECORDS MAINTAINED IN THE SYSTEM, INCLUDING CATEGORIES OF USERS AND PURPOSES OF SUCH USES:

In addition to those disclosures that are generally permitted under 5 U.S.C. 552a(b) of the Privacy Act, all or a portion of the records or information contained in this system may be disclosed to authorized entities, as is determined to be relevant and necessary, outside EXIM as a routine use pursuant to 5 U.S.C. 552a(b)(3) as follows:

a. To the Department of Justice (DOJ) when:

- (1) EXIM, or
- (2) Any employee of EXIM in his or her official capacity, or
- (3) Any employee of EXIM in his or her individual capacity when the DOJ has been asked, or has agreed, to represent the employee, or
- (4) The United States, when EXIM determines that litigation is likely to affect the agency, is a party to litigation, or has an interest in such litigation, and the use of such records by the DOJ is deemed by EXIM to be relevant and necessary to the litigation.

b. To a court or adjudicative body in a proceeding, when:

- (1) EXIM, or
- (2) Any employee of EXIM in his or her official capacity,
- (3) Any employee of EXIM in his or her individual capacity when the EXIM has agreed to represent the employee, or
- (4) The United States, when EXIM determines that litigation is likely to affect EXIM, is a party to litigation or has an interest in such litigation, and the use of such records by the DOJ is deemed by EXIM to be relevant and necessary to the litigation.

c. Except as noted on Standard Forms SF 85, 85-P, 86, and 86-C, when a record, alone or in conjunction with other records, indicates a violation or potential violation of law, whether civil, criminal, or regulatory in nature, and whether arising by general statute or particular program statute, or by regulation, rule, or order issued pursuant to such a statute, to the appropriate public authority, whether federal, state, local, foreign, tribal, or otherwise, responsible for enforcing, investigating or prosecuting such violation or charged with enforcing or implementing the statute, or rule, regulation, or order issued pursuant to the statute, if the information disclosed is relevant to any enforcement, regulatory, investigative or prosecutorial responsibility of the receiving entity.

d. To a congressional office in response to an inquiry from that office made at the written request of the constituent about whom the record is maintained.

e. To the National Archives and Records Administration (NARA) for records management functions authorized by laws, regulations, and policies governing NARA operations and agency records management responsibilities.

f. To contractors or other authorized individuals performing work on a contract, service, cooperative agreement, job, or other activity on behalf of the EXIM Bank who have a need to access the information in the performance of their duties or activities.

g. To a court, magistrate, or administrative tribunal during an administrative proceeding or judicial proceeding, including disclosures to opposing counsel or witnesses (including expert witnesses) during discovery or other pre-hearing exchanges of information, litigation, or settlement negotiations, where relevant and necessary to a proceeding, or in connection with criminal law proceedings.

h. To any source or potential source from which information is requested in the course of an investigation concerning the retention of an employee or other personnel action (other than hiring), or the retention of a security clearance, contract, grant, license, or other benefit, to the extent necessary to identify the individual, inform the source of the nature and purpose of the investigation, and to identify the type of information requested.

i. To a Federal, State, local, foreign, or Tribal or other public authority to the extent that this system of records contains information relevant to the retention of an employee, the retention of a security clearance, the letting of a contract, or the issuance or retention of a license, grant, or other benefit. The other agency or licensing organization may then make a request supported by the written consent of the individual for the entire record if it so chooses. No disclosure will be made unless the information has been determined to be sufficiently reliable to support a referral to another office within the agency or to another federal agency for criminal, civil, administrative personnel or regulatory action.

j. To the news media or the general public, factual information the disclosure of which would be in the public interest, and which would not constitute an unwarranted invasion of personal privacy, consistent with Freedom of Information Act standards.

k. To a Federal, State, or local agency, or other appropriate entities or individuals, or through established liaison channels to selected foreign governments, in order to enable an intelligence agency to carry out its responsibilities under the National Security Act of 1947 as amended, the CIA Act of 1949 as amended, Executive Order 12333 or any successor order, applicable national security directives, or classified implementing procedures approved by the Attorney General and promulgated pursuant to such statutes, orders.

l. To appropriate agencies, entities, and persons when: (1) EXIM suspects or has confirmed that there has been a breach of the system of records; (2) EXIM has determined that as a result of the suspected or confirmed breach there is a risk of harm to individuals, EXIM (including its information systems, programs, and operations), the Federal Government, or national security; and (3) the disclosure made to such agencies, entities, and persons is reasonably necessary to assist in connection with EXIM's efforts to respond to the suspected or confirmed breach or to prevent, minimize, or remedy such harm.

m. To Another Federal agency or Federal entity, when EXIM determines that information from this system of records is reasonably necessary to assist the recipient agency or entity in (a) responding to a suspected or confirmed breach or (b) preventing, minimizing, or remedying the risk of harm to individuals, the recipient agency or entity (including its information systems, programs, and operations), the Federal Government, or national security, resulting from a suspected or confirmed breach.

n. To the U.S. Department of the Treasury when disclosure of the information is relevant to review payment and award eligibility through the Do Not Pay Working System for the purposes of identifying, preventing, or recouping improper payments to an applicant for, or recipient of, Federal funds, including funds disbursed by a state (meaning a state of the United States, the District of Columbia, a territory or possession of the United States, or a federally recognized Indian tribe) in a state-administered, federally funded program.

POLICIES AND PRACTICES FOR STORAGE OF RECORDS:

The records are stored digitally in encrypted format in FMS-NG Amazon Web Services (AWS) FedRAMP authorized cloud environment. The storage records for FMS-NG production

database resides on a virtual server running Redhat Linux on AWS US East hosted in Northern Virginia.

POLICIES AND PRACTICES FOR RETRIEVAL OF RECORDS:

Comprehensive electronic records are maintained by EXIM Office Of Chief Financial Officer stored in the FMS-NG database. Access to the records is restricted to those with specific roles. To access FMS-NG data multifactor authentication is required. Primary access to FMS-NG data is via FMS-NG forms and reports. FMS-NG users that have been granted access can retrieve data by personal identifiers (*e.g.*, Customer's EIN). The identifiers used are:

- *Name:* Used as the unique identifier.
- *Banking Information:* Employee and supplier bank account numbers are stored in a hashed/masked format (*e.g.*, "XXXXXX9913").
- *Employee work email address:* Work email address used for all employee records.

POLICIES AND PRACTICES FOR RETENTION AND DISPOSAL OF RECORDS:

Records are archived/disposed of during the routine data sync for individuals who are no longer employees or contractors of EXIM. Otherwise, records are maintained and destroyed in accordance with the National Archives and Record Administration's ("NARA") Basic Laws and Authorities (44 U.S.C. 3301, *et seq.*) or an EXIM Bank records disposition schedule approved by NARA.

FMS-NG data is considered a temporary Federal Record with the retention period subject to the applicable Record Schedules. FMS-NG is designed to mark records inactive when no longer required for EXIM business, whereupon these records become subject to the retention period as defined by the applicable Records Schedule. Records that are at the end of the specified legal retention period will be deleted by following the procedures documented in Oracle Financials Application Guides, based on the built-in criteria categories:

- Invoice Purge Criteria
- Payment Purge Criteria
- Supplier Purge Criteria
- Requisition Purge Criteria
- Purchase Order Purge Criteria
- Supplier Schedules Purge Criteria

ADMINISTRATIVE, TECHNICAL, AND PHYSICAL SAFEGUARDS:

Information will be stored in electronic format within the FMS-NG. FMS-NG has configurable responsibilities-based (processes and

data) user access rules. User access is granted only to the authorized internal users. The authorized FMS-NG users will have restricted access only to the data subset necessary to perform their job function. This access is managed via Oracle Application System Administration, User and Responsibility security functions. The infrastructure that FMS-NG is installed on, AWS, is compliant with the Federal Risk and Authorization Management Program (FedRAMP). The PII information in FMS-NG is stored encrypted in place. HTTPS protocol is employed in accessing FMS-NG.

RECORD ACCESS PROCEDURES:

Requests to access records under the Privacy Act must be submitted in writing and must be signed by the requestor. Requests should be addressed to the Freedom of Information Act Office and the Office of Information Management and Technology, Export Import Bank of the United States, 811 Vermont Avenue NW, Washington, DC 20571. The request must comply with the requirements of 12 CFR 404.14.

CONTESTING RECORD PROCEDURES:

Individuals seeking to contest and/or amend records under the Privacy Act must submit a request in writing. The request must be signed by the requestor and should be addressed to the Freedom of Information Act Office and the Office of Information Management and Technology, Export Import Bank of the United States, 811 Vermont Avenue NW, Washington, DC 20571. The request must comply with the requirements of 12 CFR 404.14.

NOTIFICATION PROCEDURES:

Individuals wishing to determine whether this system of records contains information about them may do so by submitting a written request to the Freedom of Information Act Office and the Office of Information Management and Technology, Export Import Bank of the United States, 811 Vermont Avenue NW, Washington, DC 20571. The written request must include the following:

1. Name.
2. Type of information requested.
3. Address to which the information should be sent; and
4. Signature.

EXEMPTIONS PROMULGATED FOR THE SYSTEM:

None.

BILLING CODE 6690–01–P**FEDERAL COMMUNICATIONS COMMISSION****[OMB 3060–0236; FR ID 337308]****Information Collection Being Reviewed by the Federal Communications Commission****AGENCY:** Federal Communications Commission.**ACTION:** Notice; request for comments.

SUMMARY: As part of its continuing effort to reduce paperwork burdens, and as required by the Paperwork Reduction Act (PRA) of 1995, the Federal Communications Commission (FCC or Commission) invites the general public and other Federal agencies to take this opportunity to comment on the following information collections. Comments are requested concerning: whether the proposed collection of information is necessary for the proper performance of the functions of the Commission, including whether the information shall have practical utility; the accuracy of the Commission's burden estimate; ways to enhance the quality, utility, and clarity of the information collected; ways to minimize the burden of the collection of information on the respondents, including the use of automated collection burden on small business concerns with fewer than 25 employees.

The FCC may not conduct or sponsor a collection of information unless it displays a currently valid OMB control number. No person shall be subject to any penalty for failing to comply with a collection of information subject to the PRA that does not display a valid OMB control number.

DATES: Written PRA comments should be submitted on or before May 26, 2026. If you anticipate that you will be submitting comments but find it difficult to do so within the period of time allowed by this notice, you should advise the contact listed below as soon as possible.

ADDRESSES: Direct all PRA comments to Cathy Williams, FCC, via email PRA@fcc.gov and to Cathy.Williams@fcc.gov.

FOR FURTHER INFORMATION CONTACT: For additional information about the information collection, contact Cathy Williams at (202) 418–2918.

SUPPLEMENTARY INFORMATION:*OMB Control Number:* 3060–0236.*Title:* Sections 74.703 Interference.*Form Number:* Not applicable.*Type of Review:* Revision of a currently approved collection.*Respondents:* Businesses or other for-profit entities, State, local or Tribal Governments and Not for-profit institutions.*Number of Respondents and Responses:* 50 respondents; 50 responses.*Estimated Time per Response:* 2 hours.*Frequency of Response:* On occasion reporting requirement.*Obligation to Respond:* Required to obtain or retain benefits. The statutory authority for this collection is contained in Section 154(i) of the Communications Act of 1934, as amended.*Total Annual Burden:* 100 hours.*Total Annual Cost:* 100,000.

Needs and Uses: The Commission adopted on April 17, 2023, the *Report and Order (R&O)*, In the Matter of Amendment of Parts 73 and 74 of the Commission's Rules to Establish Rules for Digital Low Power Television and Television Translator Stations, Update of Parts 74 of the Commission's Rules Related to Low Power Television and Television Translator Stations, MB Docket Nos. 03–185 and 22–261, FCC 23–25. The *Report and Order* adopted the following revision to 47 CFR 74.703(h): 47 CFR 74.703(h) requires in each instance where suspension of operation is required, the licensee shall submit a full report to the FCC via a Resumption of Operations notice in the Commission's Licensing and Management System (LMS) after operation is resumed, containing details of the nature of the interference, the source of the interfering signals, and the remedial steps taken to eliminate the interference.

The Commission is revising OMB control number 3060–0236. The Commission adopted on October 25, 2021, the *Order (Order)*, In the Matter of Expanding the Economic and Innovation Opportunities of Spectrum Through Incentive Auction, GN Docket No. 12–268. The *Order* adopted a number of changes, including removing 47 CFR 74.703(f) and 74.703(g). This means that collection 3060–0236 now only covers the information collection

requirements covered under 47 CFR 74.703(h).

Federal Communications Commission.

Marlene Dortch,*Secretary, Office of the Secretary.*

Re: Notice of Debarment, File No. EB-IHD-24-00036796

Dear Mr. Klein:

The Enforcement Bureau (Bureau) of the Federal Communications Commission (Commission or FCC) hereby notifies you that, pursuant to section 54.8 of the Commission's rules, you are prohibited from participating in activities associated with or related to the federal schools and libraries universal service support mechanism (E-Rate program) and any other program funded by federal universal service support mechanisms for three years, commencing on either the date of your receipt of this Notice of Debarment or of its publication in the Federal Register, whichever comes first (Debarment Date).¹

On April 16, 2025, the Bureau sent you a notice of suspension and initiation of debarment proceeding (*Notice of Suspension*) that was published in the Federal Register on April 29, 2025.² The *Notice of Suspension* suspended you from participating in or receiving any benefit associated with the E-Rate program as well as any other program funded by federal universal service support mechanisms.³ It also described the basis for initiating the debarment proceeding against you, the applicable debarment procedures, and the effect of debarment.⁴

As discussed in the *Notice of Suspension*, on January 24, 2020, you pleaded guilty to a wire fraud conspiracy that involved knowingly and willingly devising a scheme to obtain money from the E-Rate program fraudulently.⁵ This scheme resulted in the fraudulent award of more than \$14 million paid to

¹ 47 CFR 54.8 (e), (g); 47 CFR 0.111 (delegating to the Bureau authority to resolve universal service suspension and debarment proceedings). In 2007, the Commission extended the debarment rules to apply to all federal universal service support mechanisms, including the E-Rate program. See *Comprehensive Review of the Universal Service Fund Management, Administration, & Oversight*, Report and Order, 22 FCC Rcd 16372, 16410–12 (2007) (*Program Management Order*) (renumbering Section 54.521 of the universal service debarment rules as Section 54.8 and amending subsections (a)(1), (a)(5), (c), (d), (e)(2)(i), (e)(3), (e)(4), and (g)).

² Letter from Christopher J. Sova, Acting Chief, Investigations and Hearings Division, FCC Enforcement Bureau, to Ben Klein, Notice of Suspension and Initiation of Debarment Proceeding, 90 Fed. Reg. 17798 (April 29, 2025) (*Notice of Suspension*).

³ *Id.*

⁴ *Id.*

⁵ See *United States v. Goldbrener et al.*, Case No. 7:18-cr-00614, Judgment in a Criminal Case (S.D.N.Y., filed Dec. 6, 2022) (detailing Ben Klein's plea agreement with the government); see also *Notice of Suspension*.

corporations which in turn paid hundreds of thousands of dollars to you and your co-conspirators for participating in the scheme.⁶ You enriched yourself at the expense of the underprivileged children the program was designed to serve by causing the disbursement of millions of dollars for services and equipment that were not provided.⁷ Pursuant to section 54.8(c) of the Commission's rules, your conviction of criminal conduct in connection with the E-Rate program is the basis for this debarment.⁸

In accordance with the Commission's debarment rules, you were required to file with the Commission any opposition to the suspension or its scope, or to the proposed debarment or its scope, no later than 30 calendar days from either the date of your receipt of the *Notice of Suspension* or of its publication in the Federal Register, whichever date occurred first.⁹ The Commission received no opposition.

For the above reasons, you are debarred from involvement with the E-Rate program for three years from the Debarment Date.¹⁰ During this debarment period, you are excluded from participating in any activities associated with or related to the E-Rate program and any other program funded by federal universal service support mechanisms, including the receipt of funds or discounted services through the E-Rate program, or consulting with, assisting, or advising applicants or service providers regarding the E-Rate program.¹¹

Sincerely yours,

Christopher J. Sova
Chief
Investigations and Hearings Division
Enforcement Bureau

FEDERAL RESERVE SYSTEM**Change in Bank Control Notices; Acquisitions of Shares of a Bank or Bank Holding Company**

The notificants listed below have applied under the Change in Bank Control Act (Act) (12 U.S.C. 1817(j)) and § 225.41 of the Board's Regulation Y (12 CFR 225.41) to acquire shares of a bank or bank holding company. The factors that are considered in acting on the applications are set forth in paragraph 7 of the Act (12 U.S.C. 1817(j)(7)).

The public portions of the applications listed below, as well as other related filings required by the Board, if any, are available for immediate inspection at the Federal Reserve Bank(s) indicated below and at the offices of the Board of Governors. This information may also be obtained on an expedited basis, upon request, by contacting the appropriate Federal Reserve Bank and from the Board's Freedom of Information Office at <https://www.federalreserve.gov/foia/request.htm>. Interested persons may express their views in writing on the standards enumerated in paragraph 7 of the Act.

Comments received are subject to public disclosure. In general, comments received will be made available without change and will not be modified to remove personal or business information including confidential, contact, or other identifying information. Comments should not include any information such as confidential information that would not be appropriate for public disclosure.

Comments regarding each of these applications must be received at the Reserve Bank indicated or the offices of the Board of Governors, Benjamin W. McDonough, Secretary of the Board, 20th Street and Constitution Avenue NW, Washington DC 20551-0001, not later than April 13, 2026.

A. *Federal Reserve Bank of St. Louis* (Holly A. Rieser, Senior Manager) P.O. Box 442, St. Louis, Missouri 63166-2034. Comments can also be sent electronically to Comments@stls.frb.org.

1. *Ismet ("Michael") I. Sema, Miami Beach, Florida*; to retain voting shares of Brighton Bancorp, Inc., and thereby indirectly retain voting shares of Brighton Bank, both of Brighton, Tennessee.

Board of Governors of the Federal Reserve System.

Michele Taylor Fennell,

Associate Secretary of the Board.

BILLING CODE P

DEPARTMENT OF THE TREASURY**Office of the Comptroller of the Currency****FEDERAL RESERVE SYSTEM****FEDERAL DEPOSIT INSURANCE CORPORATION****Proposed Agency Information Collection Activities; Comment Request**

AGENCY: Office of the Comptroller of the Currency (OCC), Treasury; Board of Governors of the Federal Reserve System (Board); and Federal Deposit Insurance Corporation (FDIC).

ACTION: Joint notice and request for comment.

SUMMARY: The agencies are publishing in today's **Federal Register** issuance two proposals: Regulatory Capital Rules: Category I and II Banking Organizations, Banking Organizations with Significant Trading Activity, and Optional Adoption for Other Banking Organizations (Expanded Risk-Based Proposal); and Regulatory Capital and Standardized Approach for Risk-weighted Assets (Standardized Approach Proposal). In accordance with the requirements of the Paperwork Reduction Act of 1995 (PRA), the OCC, the Board, and the FDIC (together, the agencies) may not conduct or sponsor, and the respondent is not required to respond to, an information collection unless it displays a currently valid Office of Management and Budget (OMB) control number. In connection with the above proposals, the agencies are therefore concurrently seeking comment on a proposal to extend for three years, with revision, the following information collections: Reporting, Recordkeeping, and Disclosure Requirements Associated with Regulatory Capital Rules (OMB Nos. 1557-0318 (OCC), 7100-0313 (Board), and 3064-0153 (FDIC)), and Reporting, Recordkeeping, and Disclosure Requirements Associated with Market Risk Capital Rules (OMB Nos. 1557-0247 (OCC), 7100-0314 (Board), and 3064-0178 (FDIC)).

DATES: Comments must be submitted on or before May 26, 2026.

ADDRESSES: Interested parties are invited to submit written comments to any or all of the agencies. All comments, which should refer to the "Regulatory Capital Rules: Category I and II Banking Organizations, Banking Organizations with Significant Trading Activity, and Optional Adoption for Other Banking Organizations and Regulatory Capital

and Standardized Approach for Risk-weighted Assets," will be shared among the agencies.

OCC: You may submit comments, which should refer to "Regulatory Capital Rules: Category I and II Banking Organizations, Banking Organizations with Significant Trading Activity, and Optional Adoption for Other Banking Organizations and Regulatory Capital and Standardized Approach for Risk-weighted Assets," by any of the following methods:

- **Email:** prainfo@occ.treas.gov.
- **Mail:** Chief Counsel's Office, Office of the Comptroller of the Currency, Attention: 1557-0318 and 1557-0247, 400 7th Street SW, Suite 3E-218, Washington, DC 20219.
- **Hand Delivery/Courier:** 400 7th Street SW, suite 3E-218, Washington, DC 20219.
- **Fax:** (571) 293-4835.

Instructions: You must include "OCC" as the agency name and "1557-0318 and 1557-0247" in your comment. In general, the OCC will publish comments on www.reginfo.gov without change, including any business or personal information provided, such as name and address information, email addresses, or phone numbers. Comments received, including attachments and other supporting materials, are part of the public record and subject to public disclosure. Do not include any information in your comment or supporting materials that you consider confidential or inappropriate for public disclosure.

You may review comments and other related materials that pertain to this information collection beginning on the date of publication of the second notice for this collection by the following method:

- **Viewing Comments Electronically:** Go to www.reginfo.gov. Hover over the "Information Collection Review" tab and click on "Information Collection Review" from the drop-down menu. From the "Currently under Review" drop-down menu, select "Department of the Treasury" and then click "submit." This information collection can be located by searching OMB control number "1557-0318" or "1557-0247." Upon finding the appropriate information collection, click on the related "ICR Reference Number." On the next screen, select "View Supporting Statement and Other Documents" and then click on the link to any comment listed at the bottom of the screen.

For assistance in navigating www.reginfo.gov, please contact the Regulatory Information Service Center at (202) 482-7340.

Board: You may submit comments, which should refer to “Regulatory Capital Rules: Category I and II Banking Organizations, Banking Organizations with Significant Trading Activity, and Optional Adoption for Other Banking Organizations and Regulatory Capital and Standardized Approach for Risk-weighted Assets,” by any of the following methods:

- **Agency website:** <https://www.federalreserve.gov/apps/proposals/>. Follow the instructions for submitting comments, including attachments. *Preferred Method.*
- **Mail:** Benjamin W. McDonough, Secretary, Board of Governors of the Federal Reserve System, 20th Street and Constitution Avenue NW, Washington, DC 20551.
- **Hand Delivery/Courier:** Same as mailing address.
- **Other Means:** publiccomments@frb.gov. You must include the docket number in the subject line of the message.

Comments received are subject to public disclosure. In general, comments received will be made available on the Board’s website at <https://www.federalreserve.gov/apps/proposals/> without change and will not be modified to remove personal or business information including confidential, contact, or other identifying information. Comments should not include any information such as confidential information that would be not appropriate for public disclosure. Public comments may also be viewed electronically or in person in Room M–4365A, 2001 C St. NW, Washington, DC 20551, between 9 a.m. and 5 p.m. during Federal business weekdays.

FDIC: You may submit comments, which should refer to “Regulatory Capital Rules: Category I and II Banking Organizations, Banking Organizations with Significant Trading Activity, and Optional Adoption for Other Banking Organizations and Regulatory Capital and Standardized Approach for Risk-weighted Assets,” by any of the following methods:

- **Agency website:** <https://www.fdic.gov/regulations/laws/federal/>. Follow the instructions for submitting comments on the FDIC’s website.
- **Federal eRulemaking Portal:** <https://www.regulations.gov>. Follow the instructions for submitting comments.
- **Email:** comments@FDIC.gov.

Include “Regulatory Capital Rules: Category I and II Banking Organizations, Banking Organizations with Significant Trading Activity, and Optional Adoption for Other Banking Organizations and Regulatory Capital

and Standardized Approach for Risk-weighted Assets,” in the subject line of the message.

- **Mail:** Robert Meiers, Regulatory Counsel, MB–3013, Federal Deposit Insurance Corporation, 550 17th Street NW, Washington, DC 20429.
- **Hand Delivery:** Comments may be hand delivered to the guard station at the rear of the 550 17th Street Building (located on F Street) on business days between 7:00 a.m. and 5:00 p.m.
- **Public Inspection:** All comments received will be posted without change to <https://www.fdic.gov/regulations/laws/federal/> including any personal information provided. Paper copies of public comments may be requested from the FDIC Public Information Center by telephone at (877) 275–3342 or (703) 562–2200.

Additionally, commenters may send a copy of their comments to the OMB desk officers for the agencies by mail to the Office of Information and Regulatory Affairs, U.S. Office of Management and Budget, New Executive Office Building, Room 10235, 725 17th Street NW, Washington, DC 20503; by fax to (202) 395–6974; or by email to oira_submission@omb.eop.gov.

FOR FURTHER INFORMATION CONTACT: For further information about the proposed revisions to the information collections discussed in this notice, please contact any of the agency staff whose names appear below.

OCC: Kevin Korzeniewski, Counsel, Chief Counsel’s Office, (202) 649–5490.

Board: Nuha Elmaghrabi, Federal Reserve Board Clearance Officer, (202) 452–3884, Office of the Chief Data Officer, Board of Governors of the Federal Reserve System, 20th and C Streets NW, Washington, DC 20551. Telecommunications Device for the Deaf (TDD) users may call (202) 263–4869.

FDIC: Robert Meiers, Regulatory Counsel, MB–3013, Federal Deposit Insurance Corporation, 550 17th Street NW, Washington, DC 20429.

SUPPLEMENTARY INFORMATION:

I. Affected Information Collections

This notice seeks comment on a three-year extension of and proposed revisions to the following information collections: (1) Reporting, Recordkeeping, and Disclosure Requirements Associated with Regulatory Capital Rules (OMB Nos. 1557–0318, 3064–0153, and 7100–0313), and (2) Reporting, Recordkeeping, and Disclosure Requirements Associated with Market Risk Capital Rules (OMB Nos. 1557–0247, 3064–0178, and 7100–0314).

II. Current Actions

A. Reporting, Recordkeeping, and Disclosure Requirements Associated With Regulatory Capital Rules (OMB Nos. 1557–0318, 3064–0153, and 7100–0313)

The current estimated total annual burdens associated with OMB Nos. 1557–0318, 3064–0153, and 7100–0313 are 87,087 hours, 93,621 hours, and 76,250 hours, respectively.

1. Expanded Risk-Based Proposal Overview—Regulatory Capital Rules

The Expanded Risk-Based Proposal would streamline the risk-based capital requirements applicable to Category I and II banking organizations. Currently, these banking organizations are subject to two sets of risk-based capital ratio requirements: one based on the standardized approach (which also generally applies to other banking organizations) and the other based on an internal models framework, the advanced approaches.¹ Under the proposal, Category I and II banking organizations would be subject to a single set of risk-based capital ratio requirements based on the “expanded risk-based approach”—which would include requirements for credit risk, equity risk, and operational risk—and the revised market risk framework.² The standardized approach would no longer apply to these banking organizations, and the advanced approaches would be removed from the regulatory capital framework. Other banking organizations could also choose to adopt the expanded risk-based approach.³

With respect to the PRA, the Expanded Risk-Based Proposal would modify the regulatory capital rules by revising existing reporting, recordkeeping, and disclosure requirements. Please see the Expanded Risk-Based Proposal for a detailed description of the proposed revisions.

OCC:

The net PRA burden associated with the Expanded Risk-Based Proposal is –24,142 hours.

Board:

The net PRA burden associated with the Expanded Risk-Based Proposal is –14,516 hours.

FDIC:

¹ See 12 CFR part 3, subparts D and E (OCC); 12 CFR part 217, subparts D and E (Board); 12 CFR part 324, subparts D and E (FDIC).

² For purposes of this discussion, unless otherwise noted, the revised market risk framework is inclusive of requirements for credit valuation adjustment risk, as applicable.

³ Banking organizations that choose to adopt the expanded risk-based approach would also be subject to the definition of capital that applies to Category I and II banking organizations.

The net PRA burden associated with the Expanded Risk-Based Proposal is –904 hours.

2. Standardized Approach Proposal Overview—Regulatory Capital Rules

The Standardized Approach Proposal would revise certain elements of the calculation of the denominator of the risk-based capital ratios (risk-weighted assets) under the standardized approach and make certain adjustments to the definition of regulatory capital. The proposed changes aim to improve risk sensitivity while generally retaining the simplicity of the current framework.

With respect to the PRA, the Standardized Approach Proposal would modify the regulatory capital rules by adding new requirements and revising existing recordkeeping and disclosure requirements. Please see the Standardized Approach Proposal for a detailed description of the proposed revisions.

OCC:

The net PRA burden associated with the Standardized Approach Proposal is –6,637 hours.

Board:

The net PRA burden associated with the Standardized Approach Proposal is –6,911 hours.

FDIC:

The net PRA burden associated with the Standardized Approach Proposal is –33,602 hours.

3. Additional Changes to the Information Collections

In connection with this notice, the agencies are proposing to change how certain provisions are accounted for under the PRA. These proposed revisions increased the calculation of “burden hours” under the PRA but do not reflect changes to the existing requirements in the agencies’ respective information collections. Instead, the revisions reflect existing requirements in the capital rule, and their proposed addition to the agencies’ information collections are purely administrative, to ensure compliance with the legal requirements of the PRA.

OCC:

The net PRA burden associated with these changes is 26,996 hours.

Board:

The net PRA burden associated with these changes is 34,589 hours.

FDIC:

The net PRA burden associated with these changes is 52,234 hours.

 ongoing).⁴

*B. Reporting, Recordkeeping, and
 Disclosure Requirements Associated
 With Market Risk Capital Rules (OMB
 Nos. 1557–0247, 3064–0178, and 7100–
 0314)*

The current estimated total annual
 burdens associated with OMB Nos.
 1557–0247, 3064–0178, and 7100–0314
 are 33,388 hours, 428 hours, and 36,236
 hours, respectively.

**I. Expanded Risk-Based Overview—
 Market Risk Capital Rules**

The Expanded Risk-Based Proposal
 also introduces a revised market risk
 framework, which would be applicable
 to Category I and II depository
 institution holding companies and to
 other banking organizations with
 significant trading activity. Significant
 trading activity would be defined to
 mean (1) more than \$5 billion in trading
 activity⁵ or (2) trading activity equal to
 or higher than 10 percent of the banking
 organization's total assets.

The new market risk framework
 would include a new standardized
 approach for market risk and a revised
 models-based approach for market risk
 that may be used only with supervisory
 approval.

With respect to the PRA, the
 Expanded Risk-Based Proposal would
 modify the market risk capital
 requirements by revising existing
 reporting, recordkeeping, and disclosure
 requirements. Please see the Expanded
 Risk-Based Proposal for a detailed
 description of the proposed revisions.

OCC:

The net PRA burden associated with
 the Market Risk Capital Rules is –28,248
 hours.

Board:

The net PRA burden associated with
 the Market Risk Capital Rules is –21,634
 hours.

FDIC:

The net PRA burden associated with
 the Market Risk Capital Rules is 167
 hours.

**Proposed Extension for Three Years,
 with Revision**

Collection title: Reporting,
 Recordkeeping, and Disclosure

⁴ The total estimated annual burden for 3064–0153 is derived as follows: 93,621 hours from the currently cleared annual burden + 52,234 hours from net additional changes, as described above –904 hours from net changes in the Expanded Risk-Based Proposal, and –33,602 hours from net changes in the Standardized Approach proposal.

⁵ The current market risk framework includes a monetary trading activity threshold of \$1 billion.

III. Request for Comment

Public comment is requested on all aspects of this joint notice. Comment is specifically invited on:

(a) Whether the proposed revisions to the information collections that are the subject of this notice are necessary for the proper performance of the agencies' functions, including whether the information has practical utility;

(b) The accuracy of the agencies' estimates of the burden of the information collections as they are proposed to be revised, including the validity of the methodology and assumptions used for purposes of determining such estimates;

(c) Ways to enhance the quality, utility, and clarity of the information to be collected;

(d) Ways to minimize the burden of information collections on respondents, including through the use of automated collection techniques or other forms of information technology; and

(e) Estimates of capital or start-up costs and costs of operation, maintenance, and purchase of services to provide information.

Comments submitted in response to this joint notice will be shared among the agencies. At the end of the comment period for this notice, the agencies will review any comments received to determine whether to modify the proposal in response to such comments. Comments that are not related to these information collections but that are

⁶ The 595 estimated annual burden hours include 428 previously cleared annual hours + 167 hours from changes in the Expanded Risk-Based Proposal.

related to the connected proposals, Regulatory Capital Rules: Category I and II Banking Organizations, Banking Organizations with Significant Trading Activity, and Optional Adoption for Other Banking Organizations and Regulatory Capital; and Standardized Approach for Risk-weighted Assets, should be submitted on those proposals, rather than on this notice, which only addresses the related PRA revisions.

Carl Kaminski,

Assistant Director, Office of the Comptroller of the Currency.

Benjamin W. McDonough,

Secretary of the Board, Federal Deposit Insurance Corporation.

Dated at Washington, DC on March 19, 2026.

Jennifer M. Jones,

Deputy Executive Secretary.

BILLING CODE P

DEPARTMENT OF HEALTH AND HUMAN SERVICES

Centers for Disease Control and Prevention

Advisory Committee on Immunization Practices; Cancellation of Meeting

AGENCY: Centers for Disease Control and Prevention (CDC), Department of Health and Human Services (HHS).

ACTION: Notice.

SUMMARY: This is to notify the public that pursuant to the preliminary order issued on March 16, 2026, in *American Academy of Pediatrics et al. v. Kennedy et al.*, No. 1:25–cv–11916 (D. Mass.), the ACIP meeting previously scheduled for March 18–19, 2026, has been stayed until further notice.

FOR FURTHER INFORMATION CONTACT: ACIP Secretariat, Advisory Committee on Immunization Practices, Centers for Disease Control and Prevention, 1600 Clifton Road NE, Mailstop H21–12, Atlanta, Georgia, 30329–4027. Email: ACIP@cdc.gov.

SUPPLEMENTARY INFORMATION: Notice is hereby given of a change in the meeting of the Advisory Committee on Immunization Practices; March 18, 2026, from 8 a.m. to 5:00 p.m., EST, and March 19, 2026, from 8 a.m. to 5 p.m., EST, in the original **Federal Register** notice.

The meeting notice was published in the **Federal Register** on February 26, 2026, 91 FR 9617 and 9618.

The Director, Office of Strategic Business Initiatives, Office of the Chief Operating Officer, Centers for Disease

Control and Prevention, has been delegated the authority to sign **Federal Register** notices pertaining to announcements of meetings and other committee management activities, for both the Centers for Disease Control and Prevention and the Agency for Toxic Substances and Disease Registry.

Kalwant Smagh,

Director, Office of Strategic Business Initiatives, Office of the Chief Operating Officer, Centers for Disease Control and Prevention

DEPARTMENT OF HEALTH AND HUMAN SERVICES

Centers for Disease Control and Prevention

Lead Exposure and Prevention Advisory Committee; Notice of Charter Renewal

AGENCY: Centers for Disease Control and Prevention (CDC), Department of Health and Human Services (HHS).

ACTION: Notice of charter renewal.

SUMMARY: The Centers for Disease Control and Prevention (CDC), within the Department of Health and Human Services (HHS), announces the renewal of the charter of the Lead Exposure and Prevention Advisory Committee (LEPAC).

FOR FURTHER INFORMATION CONTACT: Paul Allwood, Ph.D., MPH, Designated Federal Officer, National Center for Environmental Health, Centers for Disease Control and Prevention, Department of Health and Human Services, 1600 Clifton Road NE, MS S106–5, Atlanta, Georgia 30329–4018. Telephone (770) 488–6774; PAllwood@cdc.gov.

SUPPLEMENTARY INFORMATION: CDC is providing notice under 5 U.S.C. 1001–1014 of the renewal of the charter of the Lead Exposure and Prevention Advisory Committee, Centers Disease Control and Prevention, Department of Health and Human Services. This charter has been renewed for a two-year period through March 11, 2028.

The Director, Office of Strategic Business Initiatives, Office of the Chief Operating Officer, Centers for Disease Control and Prevention, has been delegated the authority to sign **Federal Register** notices pertaining to announcements of meetings and other committee management activities, for both the Centers for Disease Control and

Prevention and the Agency for Toxic Substances and Disease Registry.

BILLING CODE 4163–18–P

DEPARTMENT OF HEALTH AND HUMAN SERVICES

Centers for Medicare & Medicaid Services

[Document Identifier: CMS–1957]

Agency Information Collection Activities: Proposed Collection; Comment Request

AGENCY: Centers for Medicare & Medicaid Services, Health and Human Services (HHS).

ACTION: Notice.

SUMMARY: The Centers for Medicare & Medicaid Services (CMS) is announcing an opportunity for the public to comment on CMS' intention to collect information from the public. Under the Paperwork Reduction Act of 1995 (PRA), federal agencies are required to publish notice in the **Federal Register** concerning each proposed collection of information (including each proposed extension or reinstatement of an existing collection of information) and to allow 60 days for public comment on the proposed action. Interested persons are invited to send comments regarding our burden estimates or any other aspect of this collection of information, including the necessity and utility of the proposed information collection for the proper performance of the agency's functions, the accuracy of the estimated burden, ways to enhance the quality, utility, and clarity of the information to be collected, and the use of automated collection techniques or other forms of information technology to minimize the information collection burden.

DATES: Comments must be received by May 26, 2026.

ADDRESSES: When commenting, please reference the document identifier or OMB control number. To be assured consideration, comments and recommendations must be submitted in any one of the following ways:

1. *Electronically.* You may send your comments electronically to <http://www.regulations.gov>. Follow the instructions for “Comment or Submission” or “More Search Options” to find the information collection

document(s) that are accepting comments.

2. By *regular mail*. You may mail written comments to the following address: CMS, Office of Strategic Operations and Regulatory Affairs, Division of Regulations Development, Attention: Document Identifier: /OMB Control Number: , Room C4–26–05, 7500 Security Boulevard, Baltimore, Maryland 21244–1850.

To obtain copies of a supporting statement and any related forms for the proposed collection(s) summarized in this notice, please access the CMS PRA website by copying and pasting the following web address into your web browser: <https://www.cms.gov/Regulations-and-Guidance/Legislation/PaperworkReductionActof1995/PRA-Listing>.

FOR FURTHER INFORMATION CONTACT: William N. Parham at (410) 786–4669.

SUPPLEMENTARY INFORMATION:

Contents

This notice sets out a summary of the use and burden associated with the following information collections. More detailed information can be found in each collection's supporting statement and associated materials (see **ADDRESSES**).

Under the PRA (44 U.S.C. 3501–3520), federal agencies must obtain approval from the Office of Management and Budget (OMB) for each collection of information they conduct or sponsor. The term “collection of information” is defined in 44 U.S.C. 3502(3) and 5 CFR 1320.3(c) and includes agency requests or requirements that members of the public submit reports, keep records, or provide information to a third party. Section 3506(c)(2)(A) of the PRA requires federal agencies to publish a 60-day notice in the **Federal Register** concerning each proposed collection of information, including each proposed extension or reinstatement of an existing collection of information, before submitting the collection to OMB for approval. To comply with this requirement, CMS is publishing this notice.

Information Collection

1. *Type of Information Collection Request:* Revision of a currently approved collection; *Title of Information Collection:* Social Security Office (SSO) Report of State Buy-in

Problems; *Use:* A State can enter into an agreement to provide Medicare protection to individuals who are members of a Buy-in coverage group, as specified in the State's Buy-in agreement. When problems arise that cannot be resolved through the normal data exchange process, clerical actions are required. This collection is intended to help identify and resolve beneficiary complaints and inquiries regarding State Buy-in eligibility. *Form Number:* CMS–1957 (OMB control number: 0938–0035); *Frequency:* On occasion; *Affected Public:* Individuals and households; *Number of Respondents:* 1,400; *Total Annual Responses:* 1,400; *Total Annual Hours:* 467. (For policy questions regarding this collection contact Keith Johnson at 410–786–1148.)

William N. Parham, III,

Director, Division of Information Collections and Regulatory Impacts, Office of Strategic Operations and Regulatory Affairs.

[FR Doc. 2026–06018 Filed 3–26–26; 8:45 am]

BILLING CODE 4120–01–P

DEPARTMENT OF HEALTH AND HUMAN SERVICES

Administration for Children and Families

Proposed Information Collection Activity; Temporary Assistance for Needy Families (TANF) Pilot Evaluation

AGENCY: Office of Planning, Research, and Evaluation; Administration for Children and Families; U.S. Department of Health and Human Services.

ACTION: Request for public comments.

SUMMARY: The Office of Planning, Research, and Evaluation (OPRE), Administration for Children and Families (ACF), U.S. Department of Health and Human Services (HHS), is proposing to collect data for the new Temporary Assistance for Needy Families (TANF) Pilot Evaluation.

DATES: Comments due May 26, 2026.

ADDRESSES: In compliance with the requirements of the Paperwork Reduction Act of 1995, ACF is soliciting public comment on the specific aspects of the information collection described above. You can obtain copies of the proposed collection of information and submit comments by emailing opreinfocollection@acf.hhs.gov. Identify

all requests by the title of the information collection.

SUPPLEMENTARY INFORMATION:

Description: The *TANF Pilot Evaluation* will include implementation and outcomes studies of pilot programs authorized under the Fiscal Responsibility Act (FRA) of 2023 (Pub. L. 118–5), which authorizes HHS to select up to five states to test new outcomes-based performance benchmarks in the TANF program. The implementation study will describe pilot design, staffing, service provision, partnerships, contextual details, and factors that support or hinder the pilot's implementation. The outcomes study will assess changes in participant outcomes using surveys and administrative data. This new information collection request includes a semi-structured discussion guide, staff survey, time-use survey, cost and resource workbooks, and in-depth participant interview guide for the implementation study. It also includes a 12-month post-TANF-exit survey for the outcomes study. These instruments will provide information on how states implement the pilots, how services and staffing evolve, and how outcomes change under the new performance benchmarks. The data will be used to produce a report on outcomes to be submitted to Congress, as required by the FRA; inform future TANF policy development; and contribute to the broader evidence base on outcomes-based performance monitoring.

Respondents: Most of the implementation study data collection instruments will be conducted with TANF staff including state and local-level leadership staff, data specialists, supervisors, and frontline staff. The in-depth interview guide will be conducted with TANF participants. The 12-month post-TANF-exit survey will be conducted with TANF participants who provided contact information through the Study Information Form, which was approved under ACF's generic clearance for formative research (Office of Management and Budget #: 0970–0356), and agreed to be contacted for this survey.

Annual Burden Estimates

Instruments 1, 2, and 5 will be tailored based on the respondent and, therefore, the burden table shows the breakdown by respondent type.

Instrument	Respondent	Total number of respondents	Total number of responses per respondent	Average burden per response	Total burden hours (3 years)	Annual burden hours
Instrument 1: Semi-structured program discussion guide.	state-level leadership staff	50	6	1.5	450	150
	local-level leadership staff	200	6	1.5	1,800	600
	data specialists	10	6	1	60	20
	supervisors	100	6	1	600	200
	frontline staff	200	6	1	1,200	400
Instrument 2: Leadership and staff survey	local-level leadership staff	500	2	0.33	330	110
	supervisors	500	2	0.33	330	110
	frontline staff	2,140	2	0.33	1412	471
Instrument 3: Staff survey	frontline staff	2,140	9	0.17	3274	1,091
Instrument 4: Staff time use survey	state-level leadership staff	10	3	4	120	40
	local-level leadership staff	10	3	4	120	40
Instrument 5: Pilot costs and resources workbook	participants	100	1	1.25	125	42
Instrument 6: In-depth participant interview guide	participants	3,000	1	0.75	2,250	750
Instrument 7: 12-Month Post-TANF-Exit Survey						4,024
Estimated Total Annual Burden Hours						

Comments: The Department specifically requests comments on (a) whether the proposed collection of information is necessary for the proper performance of the functions of the agency, including whether the information shall have practical utility; (b) the accuracy of the agency's estimate of the burden of the proposed collection of information; (c) the quality, utility, and clarity of the information to be collected; and (d) ways to minimize the burden of the collection of information on respondents, including through the use of automated collection techniques or other forms of information technology. Consideration will be given to comments and suggestions submitted within 60 days of this publication.

(Authority: 42 U.S.C. 613.)

Mary C. Jones,

ACF/OPRE Certifying Officer.

[FR Doc. 2026-05938 Filed 3-26-26; 8:45 am]

BILLING CODE 4184-09-P

DEPARTMENT OF HEALTH AND HUMAN SERVICES

Administration for Children and Families

[Office of Management and Budget #: 0970-0604]

Submission for Office of Management and Budget Review; Administration for Children and Families Congressionally Directed Community Projects—Uniform Project Description

AGENCY: Office of Planning, Research, and Evaluation, Administration for

Children and Families, U.S. Department of Health and Human Services.

ACTION: Request for public comments.

SUMMARY: The Administration for Children and Families (ACF) Office of Planning, Research, and Evaluation (OPRE) is requesting a 3-year extension with revisions to the information collection activities approved by the Office of Management and Budget (OMB): ACF Congressionally Directed Community Projects—Universal Project Description (CDCP-UPD)(OMB#: 0970-0604, expiration March 31, 2026). Revisions are based on lessons learned from previous years. Language is simplified for application requirements. This is expected to reduce the application burden.

DATES: *Comments due April 27, 2026.*

ADDRESSES: The public may view and comment on this information collection request at: https://www.reginfo.gov/public/do/PRAViewICR?ref_nbr=202603-0970-013. You can also obtain copies of the proposed collection of information by emailing opreinfocollection@acf.hhs.gov. Identify all emailed requests by the title of the information collection.

SUPPLEMENTARY INFORMATION:

Description: CDCP-UPD recipients are identified annually by Congress through Appropriations for ACF. The CDCP-UPD provides standard language and sections available for use by ACF program offices to solicit the required project description and project budget information from recipients of CDCP projects. Applications are required for CDCP as prescribed by HHS regulations 2 CFR 200.206. In addition to the

information required by regulation, the CDCP-UPD provides a selection of text options for the program offices to communicate the application requirements to the recipients, as required by 2 CFR 200.207.

The CDCP-UPD gathers information regarding the CDCP recipients' project activities, timeline, organizational capacity, and budget justification. The CDCP-UPD ensures sufficient information is obtained to assess risk, identify needs for technical assistance and monitoring, and address other requirements of Congress, ACF, HHS, OMB, and funding and statutory regulation.

The CDCP-UPD has been streamlined and revised to improve navigation and usability. Critical required information is highlighted and easier to find, unnecessary or redundant information removed, language simplified and some sections reformatted for easier reading.

Respondents: The CDCP-UPD recipients are organizations identified annually by Congress under annual appropriations. It is estimated that 125 CDCP recipients will be identified annually in future ACF appropriations.

Annual Burden Estimates

The revisions will reduce respondent burden by decreasing the average time required to complete the application. The streamlined format will improve navigability, allowing applicants to more easily identify required information. Simplified language and formatting will clarify application requirements and reduce the submission of unnecessary information.

Instrument	Annual number of respondents	Total number of responses per respondent	Average burden hours per response	Annual burden hours
CDCP-UPD	125	1	20	2,500

Authority: Social Security Act § 1110 [42 U.S.C. 1310].

Mary C. Jones,

ACF/OPRE Certifying Officer.

BILLING CODE 4184–78–P

DEPARTMENT OF HEALTH AND HUMAN SERVICES

National Institutes of Health

Proposed Collection: 30-Day Comment Request; The Clinical Trials Reporting Program (CTRP) Database (NCI)

AGENCY: National Institutes of Health, HHS.

ACTION: Notice.

SUMMARY: In compliance with the requirement of the Paperwork Reduction Act of 1995 to provide an opportunity for public comment on proposed data collection projects, the National Institutes of Health, National Cancer Institute (NCI) will publish periodic summaries of proposed projects to be submitted to the Office of Management and Budget (OMB) for review and approval.

DATES: Comments regarding this information collection are best assured of having their full effect if received by April 27, 2026.

ADDRESSES: Written comments and recommendations for the proposed information collection should be sent

within 30 days of publication of this notice to www.reginfo.gov/public/do/PRAMain. Find this particular information collection by selecting “Currently under 30-day Review—Open for Public Comments” or by using the search function.

FOR FURTHER INFORMATION CONTACT: To request more information on the proposed project or to obtain a copy of the data collection plans and instruments, contact Melissa Park, PRA Liaison, Office of Management Policy and Compliance, National Cancer Institute, 9609 Medical Center Drive, Room 2E196, Bethesda, MD 20892 or call non-toll-free number (240) 276–5717 or email your request, including your address to: melissa.park@nih.gov. Formal requests for additional plans and instruments must be requested in writing.

SUPPLEMENTARY INFORMATION: This proposed information collection was previously published in the **Federal Register** on December 23, 2025 (Vol. 90, No. 244, FR 60112) and allowed 60 days for public comment. No public comments were received. The purpose of this notice is to allow an additional 30 days for public comment. The National Cancer Institute (NCI), National Institutes of Health, may not conduct or sponsor, and the respondent is not required to respond to, an information collection that has been extended, revised, or implemented on or

after October 1, 1995, unless it displays a currently valid OMB control number.

In compliance with Section 3507(a)(1)(D) of the Paperwork Reduction Act of 1995, the National Institutes of Health (NIH) has submitted to the Office of Management and Budget (OMB) a request for review and approval of the information collection listed below.

Proposed Collection Title: The Clinical Trials Reporting Program (CTRP) Database, 0925–0600, Expiration Date 02/28/2026—REINSTATEMENT WITH CHANGE, National Cancer Institute (NCI), National Institutes of Health (NIH).

Need and Use of Information Collection: The Clinical Trials Reporting Program (CTRP) is an electronic resource that serves as a single, definitive source of information about all NCI-supported clinical research. This resource allows the NCI to consolidate reporting, aggregate data, and reduce redundant submissions. Clinical research administrators submit information as designees of clinical investigators who conduct NCI-supported clinical research. The designees can electronically access the CTRP website to complete the initial trial registration. After registration, three amendments and four study subject accrual updates occur per trial annually.

OMB approval is requested for three years. There are no costs to respondents other than their time. The estimated annualized burden hours are 18,000.

ESTIMATED ANNUALIZED BURDEN HOURS

Form name	Type of respondents	Number of respondents	Number of responses per respondent	Average time per response (in hours)	Total annual burden hours
Initial Trial Registration	Individuals	3,000	1	1	3,000
Trial Registration Update		1,500	3	1	4,500
Trial Registration Amendment		1,500	3	1	4,500
Accrual Updates		3,000	4	30/60	6,000
Totals		9,000	24,000		18,000

Dated: March 24, 2026.

Melissa M. Park,

Project Clearance Liaison, National Cancer Institute, National Institutes of Health.

DEPARTMENT OF HEALTH AND HUMAN SERVICES

National Institutes of Health

Center for Scientific Review; Notice of Closed Meetings

Pursuant to section 1009 of the Federal Advisory Committee Act, as amended, notice is hereby given of the following meetings.

The meetings will be closed to the public in accordance with the provisions set forth in sections

552b(c)(4) and 552b(c)(6), Title 5 U.S.C., as amended. The grant applications and the discussions could disclose confidential trade secrets or commercial property such as patentable material, and personal information concerning individuals associated with the grant applications, the disclosure of which would constitute a clearly unwarranted invasion of personal privacy.

Name of Committee: Emerging Technologies and Training Neurosciences Integrated Review Group; Neuromodulation

and Imaging of Neuronal Circuits Study Section.

Date: April 16–17, 2026.

Time: 9:00 a.m. to 6:00 p.m.

Agenda: To review and evaluate grant applications.

Address: National Institutes of Health, Rockledge II, 6701 Rockledge Drive, Bethesda, MD 20892.

Meeting Format: Virtual Meeting.

Contact Person: Pablo Miguel Blazquez Gamez, Ph.D., Scientific Review Officer, Center for Scientific Review, National Institutes of Health, 6701 Rockledge Drive, Bethesda, MD 20892, (301) 435–1042, pablo.blazquezgamez@nih.gov.

Name of Committee: Center for Scientific Review Special Emphasis Panel; Program Project: Cancer Research.

Date: April 22, 2026.

Time: 9:00 a.m. to 6:00 p.m.

Agenda: To review and evaluate grant applications.

Address: National Institutes of Health, Rockledge II, 6701 Rockledge Drive, Bethesda, MD 20892.

Meeting Format: Virtual Meeting.

Contact Person: Sandhya Sanghi, Ph.D., Scientific Review Officer, Center for Scientific Review, National Institutes of Health, 6701 Rockledge Drive, Bethesda, MD 20892, (301) 496–2879, sandhya.sanghi@nih.gov.

Name of Committee: Center for Scientific Review Special Emphasis Panel; Metabolic-Associated Liver Disease.

Date: April 22, 2026.

Time: 9:00 a.m. to 6:30 p.m.

Agenda: To review and evaluate grant applications.

Address: National Institutes of Health, Rockledge II, 6701 Rockledge Drive, Bethesda, MD 20892.

Meeting Format: Virtual Meeting.

Contact Person: Murali Ganesan, Ph.D., Scientific Review Officer, Center for Scientific Review, National Institutes of Health, 6701 Rockledge Drive, Bethesda, MD 20892, murali.ganesan@nih.gov.

Name of Committee: Center for Scientific Review Special Emphasis Panel; PAR Panel: Research Enhancement Award and SuRE Programs (R15 and R16).

Date: April 22, 2026.

Time: 9:00 a.m. to 6:00 p.m.

Agenda: To review and evaluate grant applications.

Address: National Institutes of Health, Rockledge II, 6701 Rockledge Drive, Bethesda, MD 20892.

Meeting Format: Virtual Meeting.

Contact Person: Susan Wohler Sunnarborg, Ph.D., Scientific Review Officer, Center for Scientific Review (CSR), National Institutes of Health, 6701 Rockledge Drive, Bethesda, MD 20892, (301) 827–7987, susan.sunnarborg@nih.gov.

Name of Committee: Center for Scientific Review Special Emphasis Panel; Special: Topics in pathophysiology, imaging, and therapeutic strategies for eye diseases.

Date: April 22, 2026.

Time: 9:00 a.m. to 5:00 p.m.

Agenda: To review and evaluate grant applications.

Address: National Institutes of Health, Rockledge II, 6701 Rockledge Drive, Bethesda, MD 20892.

Meeting Format: Virtual Meeting.

Contact Person: Sindhu Kizhakke Madathil, Ph.D., Scientific Review Officer, Center for Scientific Review, National Institutes of Health, 6701 Rockledge Drive, Bethesda, MD 20892, (301) 827–5702, sindhu.kizhakkemadathil@nih.gov.

Name of Committee: Center for Scientific Review Special Emphasis Panel; Special: Respiratory Topics.

Date: April 22, 2026.

Time: 9:00 a.m. to 6:30 p.m.

Agenda: To review and evaluate grant applications.

Address: National Institutes of Health, Rockledge II, 6701 Rockledge Drive, Bethesda, MD 20892.

Meeting Format: Virtual Meeting.

Contact Person: Prashant Sharma, Ph.D., Scientific Review Officer, Center for Scientific Review, National Institutes of Health, 6701 Rockledge Drive, Bethesda, MD 20892, (240) 275–6351, prashant.sharma@nih.gov.

Name of Committee: Risk, Prevention and Health Behavior Integrated Review Group; Interventions to Prevent and Treat Addictions Study Section.

Date: April 22–23, 2026.

Time: 9:30 a.m. to 5:30 p.m.

Agenda: To review and evaluate grant applications.

Address: National Institutes of Health, Rockledge II, 6701 Rockledge Drive, Bethesda, MD 20892.

Meeting Format: Virtual Meeting.

Contact Person: Izabella Zandberg, Ph.D., Scientific Review Officer, Center for Scientific Review, National Institutes of Health, 6701 Rockledge Drive, Bethesda, MD 20892, (301) 594–0359, izabella.zandberg@nih.gov.

Name of Committee: Population Sciences and Epidemiology Integrated Review Group; Analytics and Statistics for Population Research Panel B Study Section.

Date: April 22–23, 2026.

Time: 10:00 a.m. to 5:30 p.m.

Agenda: To review and evaluate grant applications.

Address: National Institutes of Health, Rockledge II, 6701 Rockledge Drive, Bethesda, MD 20892.

Meeting Format: Virtual Meeting.

Contact Person: Ivan Tadeu Rebustini, Ph.D., Scientific Review Officer, Center for Scientific Review, National Institutes of Health, 6701 Rockledge Drive Bethesda, MD 20892, (301) 827–1641, ivan.rebustini@nih.gov.

Name of Committee: Center for Scientific Review Special Emphasis Panel; T32 Institutional Training Grant Review.

Date: April 22, 2026.

Time: 10:00 a.m. to 12:00 p.m.

Agenda: To review and evaluate grant applications.

Address: National Institutes of Health, Rockledge II, 6701 Rockledge Drive, Bethesda, MD 20892.

Meeting Format: Virtual Meeting.

Contact Person: Kan Ma, Ph.D., Scientific Review Officer, Center for Scientific Review,

National Institutes of Health, 6701 Rockledge Drive, Bethesda, MD 20892, (301) 451–4838, mak2@mail.nih.gov.

Name of Committee: Center for Scientific Review Special Emphasis Panel; Member Conflict: Topics in Molecular Virology, Pathogenesis, and Vaccine Development.

Date: April 22, 2026.

Time: 10:00 a.m. to 2:00 p.m.

Agenda: To review and evaluate grant applications.

Address: National Institutes of Health, Rockledge II, 6701 Rockledge Drive, Bethesda, MD 20892.

Meeting Format: Virtual Meeting.

Contact Person: Joshua D Powell, Ph.D., Scientific Review Officer, Center for Scientific Review, National Institutes of Health, 6701 Rockledge Drive, Bethesda, MD 20892, (301) 594–5370, josh.powell@nih.gov.

Name of Committee: Center for Scientific Review Special Emphasis Panel; Topics in Addiction Risks and Mechanisms.

Date: April 22, 2026.

Time: 10:00 a.m. to 2:00 p.m.

Agenda: To review and evaluate grant applications.

Address: National Institutes of Health, Rockledge II, 6701 Rockledge Drive, Bethesda, MD 20892.

Meeting Format: Virtual Meeting.

Contact Person: Li Jia, Ph.D., Scientific Review Officer, Center for Scientific Review, National Institutes of Health, 6701 Rockledge Drive, Bethesda, MD 20892, (301) 451–2854, li.jia@nih.gov.

Name of Committee: Center for Scientific Review Special Emphasis Panel; Member Conflict: Topics in Infectious Diseases.

Date: April 22, 2026.

Time: 10:00 a.m. to 4:00 p.m.

Agenda: To review and evaluate grant applications.

Address: National Institutes of Health, Rockledge II, 6701 Rockledge Drive, Bethesda, MD 20892.

Meeting Format: Virtual Meeting.

Contact Person: Dayadevi Jirage, Ph.D., Scientific Review Officer, Center for Scientific Review, National Institutes of Health, 6701 Rockledge Drive, Room 4422, Bethesda, MD 20892, (301) 867–5309, jiragedb@csr.nih.gov.

Name of Committee: Center for Scientific Review Special Emphasis Panel; Training: Immunology and Infectious Diseases C.

Date: April 22, 2026.

Time: 10:00 a.m. to 6:00 p.m.

Agenda: To review and evaluate grant applications.

Address: National Institutes of Health, Rockledge II, 6701 Rockledge Drive, Bethesda, MD 20892.

Meeting Format: Virtual Meeting.

Contact Person: Susham Shankarrao Ingavale, Ph.D., Scientific Review Officer, Center for Scientific Review, National Institutes of Health, 6701 Rockledge Drive, Bethesda, MD 20892, (240) 961–1172, susham.ingavale@nih.gov.

BILLING CODE 4140-01-P

DEPARTMENT OF HOMELAND SECURITY

Notice of Adoption of Categorical Exclusions Under Section 109 of the National Environmental Policy Act

AGENCY: Office of the Secretary, Department of Homeland Security.

ACTION: Notice of Adoption of Categorical Exclusions pursuant to Section 109 of the National Environmental Policy Act, 42 U.S.C. 4336c.

SUMMARY: The Department of Homeland Security (DHS) is notifying the public and documenting the adoption of five categorical exclusions (CEs) under the National Environmental Policy Act (NEPA). This notice identifies the types of actions to which DHS will apply the CEs, the considerations that DHS will use in determining the applicability of the CEs, and the consultation between the agencies on the use of the CEs, including application of extraordinary circumstances.

DATES: The adoption is effective March 27, 2026.

FOR FURTHER INFORMATION CONTACT: Jennifer DeHart Hass, Director, Environmental Planning Branch, by email at jennifer.hass@hq.dhs.gov or by telephone at (202) 834-4346.

SUPPLEMENTARY INFORMATION:

I. Background

National Environmental Policy Act and Categorical Exclusions

The National Environmental Policy Act, 42 U.S.C. 4321-4347, as amended (NEPA), requires, with respect to major federal actions significantly affecting the quality of the human environment, all Federal agencies to assess the environmental impacts of their proposed actions before deciding whether and how to proceed. Congress enacted NEPA to encourage productive and enjoyable harmony between humans and the environment, recognizing the profound impact of human activity and the critical importance of restoring and maintaining environmental quality to the overall welfare of humankind. 42 U.S.C. 4321, 4331. NEPA's aims are to ensure that agencies consider the potential environmental effects of their proposed

actions in their decision-making processes and inform and involve the public in that process. 42 U.S.C. 4332. To comply with NEPA, agencies determine the appropriate level of review for a proposed action. 42 U.S.C. 4336. Where required, these levels of review may be documented in an environmental impact statement (EIS), an environmental assessment (EA), or categorical exclusion. 42 U.S.C. 4336. If a proposed action is likely to have significant environmental effects, the agency must prepare an EIS and document its decision in a record of decision. 42 U.S.C. 4336(b)(1). If the proposed action is not likely to have significant environmental effects or where the level of significance is unknown, the agency may instead prepare an EA, which involves preparing a concise public document that may reach a finding of no significant impact. 42 U.S.C. 4336(b)(2). If, following preparation of an EA, the agency finds that the proposed action may have significant effects, then an EIS is required.

Under NEPA, a Federal agency may establish categorical exclusions—categories of actions that the agency has determined normally do not significantly affect the quality of the human environment—in its agency NEPA procedures. 42 U.S.C. 4336e (1). If an agency determines that a categorical exclusion covers a proposed action, the agency will then evaluate the proposed action for any extraordinary circumstances in which a normally excluded action may have a significant effect. If no extraordinary circumstances are present or if further analysis determines that the extraordinary circumstances do not involve the potential for significant environmental impacts, the agency may rely on the categorical exclusion to approve the proposed action without preparing an EA or EIS. 42 U.S.C. 4336(a)(2). If the extraordinary circumstances have the potential to result in significant effects, the agency is required to prepare an EA or EIS.

Section 109 of NEPA, 42 U.S.C. 4336c, enacted as part of the Fiscal Responsibility Act of 2023, allows a Federal agency to “adopt a categorical exclusion listed in another agency’s NEPA procedures for a category of proposed agency actions for which the categorical exclusion was established.” 42 U.S.C. 4336c. To adopt another agency’s categorical exclusion under section 109, the adopting agency must: (1) identify the relevant categorical exclusion listed in another agency’s (“establishing agency”) NEPA procedures “that covers a category of

proposed actions or related actions”; (2) consult with the establishing agency “to ensure that the proposed adoption of the categorical exclusion to a category of actions is appropriate”; (3) “identify to the public the categorical exclusion that the [adopting] agency plans to use for its proposed actions”; and (4) document adoption of the categorical exclusion. 42 U.S.C. 4336c.

This notice documents the Department’s adoption of five CEs for DHS use and notifies the public of these adoptions. One CE for adoption was established by the Department of the Interior (DOI), Bureau of Reclamations (BOR) at DOI NEPA Handbook Appendix 2 paragraph 14.5.D(17). One CE for adoption was established by DOI, Fish and Wildlife Services (USFWS) at DOI NEPA Handbook Appendix 2 B(4). One CE for adoption was established by the Department of Agriculture (USDA), Farm Service Agency (FSA) at 7 CFR Subtitle A 1b.4(d)(1). Two CEs for adoption were established by the National Aeronautics and Space Administration (NASA) at 14 CFR part 1216.304(d)(2)(ix) and 14 CFR part 1216.304(d)(5)(i).

The DHS NEPA procedures are contained within Department of Homeland Security Directive 023-01 Rev 01 and the Instruction Manual 023-01-001-01 Rev 01, *Implementing the National Environmental Policy Act* (DHS NEPA Instruction Manual). The Department maintains a list of categorical exclusions available to all DHS Components in the DHS NEPA Instruction Manual.

II. Identification of the Categorical Exclusions

DHS has identified the following five CEs for adoption.

BOR Categorical Exclusion for Adoption

DHS has identified 516 DOI NEPA Handbook Appendix 2 paragraph 14.5.D(17) “*Minor safety of dam construction activities where the work is confined to the dam, abutment areas, or appurtenant features, and where no major change in reservoir or downstream operation is anticipated as a result of construction activities.*”

DHS intends to use this CE to cover rehabilitation activities for dams, abutment areas, and appurtenances funded by the Federal Emergency Management Agency (FEMA) High Hazard Potential Dam Program.

USFWS Categorical Exclusions for Adoption

DHS has identified DOI NEPA Handbook Appendix 2 paragraph B(4). “*The use of prescribed burning for*

habitat improvement purposes, when conducted in accordance with local and State ordinances and laws.”

DHS intends to use this CE to cover actions described in the CE. Per consultation with USFWS, this CE should be applied for actions with the purpose of habitat restoration or enhancement. FEMA would use this CE to support limited fire prevention activities under the Hazard Mitigation Assistance program, where the purpose of the project is also habitat restoration or enhancement.

FSA Categorical Exclusions for Adoption

DHS has identified 7 CFR Subtitle A 1b.4(d)(1) “Construction or ground disturbance actions.

- (i) Bridges;
- (ii) Chiseling and subsoiling in areas not previously tilled;
- (iii) Construction of a new farm storage facility;
- (iv) Dams;
- (v) Dikes and levees;
- (vi) Diversions;
- (vii) Drop spillways;
- (viii) Dugouts;
- (ix) Excavation;
- (x) Grade stabilization structures;
- (xi) Grading, leveling, shaping and filling in areas or to depths not previously disturbed;
- (xii) Installation of structures designed to regulate water flow such as pipes, flashboard risers, gates, chutes, and outlets;
- (xiii) Irrigation systems;
- (xiv) Land smoothing;
- (xv) Line waterways or outlets;
- (xvi) Lining;
- (xvii) Livestock crossing facilities;
- (xviii) Pesticide containment facility;
- (xix) Pipe drop;
- (xx) Pipeline for watering facility;
- (xxi) Ponds, including sealing and lining;
- (xxii) Precision land farming with ground disturbance;
- (xxiii) Riparian buffer establishment;
- (xxiv) Roads, including access roads;
- (xxv) Rock barriers;
- (xxvi) Rock filled infiltration trenches;
- (xxvii) Sediment basin;
- (xxviii) Sediment structures;
- (xxix) Site preparation for planting or seeding in areas not previously tilled;
- (xxx) Soil and water conservation structures;
- (xxxi) Stream bank and shoreline protection;
- (xxxii) Structures for water control;
- (xxxiii) Subsurface drains;
- (xxxiv) Surface roughening;
- (xxxv) Terracing;
- (xxxvi) Underground outlets;
- (xxxvii) Watering tank or trough installation, if in areas not previously disturbed;

(xxxviii) Wells; and
(xxxix) Wetland restoration.”

DHS intends to use this CE to cover a broad range of ground disturbance activities with potential for extraordinary circumstances requiring review, including bridges, dams, excavation, and more. DHS and Components would use this CE to cover routine and maintenance projects with small footprints or limited areas of disturbance (e.g., small bridges authorized by United States Coast Guard) that would not require an EA or EIS. Areas with larger footprints or areas of disturbance that may result in potentially adverse effects may require additional environmental review and consultation.

NASA Categorical Exclusions for Adoption

DHS has identified 14 CFR part 1216.304(d)(2)(ix) for adoption “Routine maintenance, repair, and operation of vessels (including unmanned autonomous surface vessels), aircraft (including unmanned aircraft systems), overland/surface transportation vehicles, and other transportation systems as applicable. Examples include but are not limited to transportation or relocation of NASA equipment and hardware by barge, aircraft, or surface transportation system (e.g., tractor trailer or railroad); retrieval of spent solid rocket boosters by vessel; repair or overhaul of vessel, aircraft, or surface transportation systems that do not result in a change in the environmental impacts of their normal operation.”

DHS intends to use this CE to cover routine maintenance, repair, and operation of transportation platforms (such as unmanned aircraft systems) completed by DHS Components. Per consultation with NASA, NASA administrative records limit this CE to small unmanned aircraft systems within Category 1 or Category 2. DHS will document each application of NASA CEs and their consistency with NASA limitations in the DHS Environmental Planning and Historic Preservation Decision Support System. DHS will only apply this CE for routine maintenance, repair, and operation of Category 1 or Category 2 aircraft systems.

DHS has identified 14 CFR part 1216.304(d)(5)(i) for adoption “Periodic aircraft (including unmanned aircraft systems) flight activities, including training and research and development, which are routine and comply with applicable Federal, state, Tribal, or local laws or requirements, and Executive Orders.”

DHS intends to use this CE to cover flight activities (such as those completed by unmanned aircraft systems) completed by DHS Components.

III. Consideration of Extraordinary Circumstances

When applying these categorical exclusions, DHS will evaluate the proposed actions for whether there are any extraordinary circumstances. The Department’s extraordinary circumstances are listed within the DHS Instruction Manual and include, in part, consideration of impacts on public health and safety; listed species and migratory birds; historic or cultural resources; Indian sacred sites; environmentally sensitive areas, such as historic properties prime or unique agricultural lands, coastal zones, designated wilderness or wilderness study areas, wild and scenic rivers, 100-year floodplains, wetlands, sole source aquifers, Marine Sanctuaries, National Wildlife Refuges, National Parks, National Monuments, essential fish habitat; violations of a Federal, State, or local law or requirement imposed to protect the environment; certain levels of controversy in terms of scientific validity; precedent for future decision-making; context of scope and size of the particular action; and degradation of already existing poor environmental conditions.

DHS’s list of extraordinary circumstances is comparable to those of DOI, found at 43 CFR 46.215; However, one DOI extraordinary circumstance 43 CFR 46.215(i), which considers the introduction of noxious weeds or non-native invasive species, is not explicitly covered under in DHS extraordinary circumstances.

To ensure DHS application of DOI CEs is consistent with DOI extraordinary circumstances, DHS will evaluate whether the action will result in the introduction of noxious weeds or non-native invasive species as described in 43 CFR 46.215(i). Consistent with the DHS NEPA Instruction Manual, DHS will document each application of DOI CEs and their consistency with DOI extraordinary circumstances in the DHS Environmental Planning and Historic Preservation Decision Support System. If DHS determines that a CE is not appropriate to support a decision on a particular proposed action due to extraordinary circumstances, DHS would prepare an EA or EIS.

DHS’s list of extraordinary circumstances is comparable to those of USDA, found at 7 CFR Subtitle A Part 1b.3(f), and NASA, found at 14 CFR part 1216.304(c).

Therefore, only the DHS NEPA Instruction Manual and the extraordinary circumstances contained therein would be reviewed as to whether the proposed action has the potential to result in significant effects for actions DHS is intending to apply a USDA or a NASA CE. If DHS determines that a CE is not appropriate to support a decision on a particular proposed action due to extraordinary circumstances, DHS would prepare an EA or EIS. Consistent with the DHS NEPA Instruction Manual, DHS will document each application of these CEs in the DHS Environmental Planning and Historic Preservation Decision Support System.

IV. Consultation With Agencies and Determination of Appropriateness

In July, August, and December of 2025 and January of 2026, DHS consulted with BOR, FSA, USFWS, and NASA about the appropriateness of the Department's adoption of their respective categorical exclusions. Those consultations each included a review of each agency's or bureau's experience in establishing and applying the categorical exclusions, as well as DHS's intended uses for the categorical exclusions. Based on those consultations and reviews, DHS has determined that the types of activities DHS proposes to authorize are substantially similar to the activities for which BOR, USFWS, FSA, and NASA have applied their respective categorical exclusions. Accordingly, the impacts of the DHS actions would be substantially similar to the impacts of each establishing agency's actions, which are not significant, absent the existence of extraordinary circumstances. Therefore, DHS has determined that DHS's proposed use of the CEs, as described within this notice is appropriate.

V. Notice to the Public and Documentation of Adoption

This notice serves to identify to the public and document DHS's adoption of BOR, USFWS, FSA, and NASA categorical exclusions and identifies the types of actions to which DHS contemplates applying the actions at this time. Upon issuance of this notice, the adopted BOR, USFWS, FSA, and NASA categorical exclusions will be available to DHS and accessible on [DHS.gov](https://www.dhs.gov/ocrso/eed/epb/nepa) at <https://www.dhs.gov/ocrso/eed/epb/nepa>.

Tracey L. Watkins,
Chief Readiness Support Officer, Department of Homeland Security.

BILLING CODE 9112-FF-P

DEPARTMENT OF HOMELAND SECURITY

U.S. Citizenship and Immigration Services

[CIS No. 2824-25; DHS Docket No. USCIS-2025-0009]

Notice of Approval of New Credentialing Organization for Health Care Workers for Certain Immigration Purposes

AGENCY: U.S. Citizenship and Immigration Services, Department of Homeland Security.

ACTION: Notice.

SUMMARY: The Department of Homeland Security (DHS or the Department), U.S. Citizenship and Immigration Services (USCIS) is issuing this document to inform the public of the approval of a new credentialing organization, The Evaluation Company, for certain health care workers for immigration purposes. **DATES:** USCIS approved the application from The Evaluation Company on March 27, 2026.

FOR FURTHER INFORMATION CONTACT: Business and Foreign Workers Division, Office of Policy and Strategy, U.S. Citizenship and Immigration Services, Department of Homeland Security, 5900 Capital Gateway Drive, Camp Springs, MD 20746; or by phone at 240-721-3000.

SUPPLEMENTARY INFORMATION: Sections 212(a)(5)(C) and 212(r) of the Immigration and Nationality Act (the Act), 8 U.S.C. 1182(a)(5)(C) and (r), as well as the DHS regulations at 8 CFR 214.1(i) and (j) and 212.15(a) and (n)(3), require that an alien who seeks admission to the United States as a nonimmigrant or immigrant, or who is the beneficiary of a change of status request, or who is applying for adjustment of status, for the purpose of performing labor in certain health care occupations is inadmissible unless he or she presents a certificate from an authorized credentialing organization. DHS regulations at 8 CFR 212.15(e)(1) through (3) expressly authorize the Commission on Graduates of Foreign Nursing Schools (CGFNS),¹ the National Board for Certification in Occupational Therapy (NBCOT), and the Foreign Credentialing Commission on Physical Therapy (FCCPT) to issue such certificates. In addition, DHS regulations list CGFNS as authorized to issue alternative certified statements

under INA section 212(r), 8 U.S.C. 1182(r). See 8 CFR 212.15(h).

DHS regulations also establish detailed standards for the approval of additional credentialing organizations after consultation with the Secretary of Health and Human Services, and USCIS has created an adjudicatory framework for the filing and adjudication of those applications using Form I-905, *Application for Authorization to Issue Certification for Health Care Workers*. 8 CFR 212.15(j) and (k). The regulations also provide for periodic review and, if necessary, termination of credentialing organizations. 8 CFR 212.15(l) and (m). Finally, the regulations direct DHS to notify the public of the approval of additional credentialing organizations by publishing notices in the **Federal Register**. 8 CFR 212.15(e) and (h).

USCIS maintains a complete list of organizations authorized to issue health care certifications and certified statements on its website along with guidance on certificates for health care workers at <https://www.uscis.gov/working-in-the-united-states/temporary-workers/health-care-worker-certification>.

In accordance with 8 CFR 212.15(e) and (h), USCIS is providing notice that on March 27, 2026, following its review of the Form I-905, *Application for Authorization to Issue Certification for Health Care Workers*, submitted by The Evaluation Company and consultation with the Secretary of Health and Human Services, it has approved the application from The Evaluation Company as an organization authorized to issue certificates and certified statements under sections 212(a)(5)(C) and 212(r) of the Act, 8 U.S.C. 1182(a)(5)(C) and (r), for aliens seeking to enter the United States for the primary purpose of working as registered nurses, licensed practical nurses, and licensed vocational nurses. Pursuant to 8 CFR 212.15(k), the authorization is valid for 5 years starting on March 27, 2026, and ending on Thursday, March 27, 2031.

Joseph B. Edlow,

Director, U.S. Citizenship and Immigration Services, U.S. Department of Homeland Security.

DEPARTMENT OF THE INTERIOR**Bureau of Land Management**

[A2407–014–004–065516, #O2509–014–004–125222; LLAk980200 L14100000.HM0000 234]

Agency Information Collection Activities; Alaska Native Vietnam-Era Veterans Allotments

AGENCY: Bureau of Land Management, Interior.

ACTION: Notice of information collection; request for comment.

SUMMARY: In accordance with the Paperwork Reduction Act of 1995, the Bureau of Land Management (BLM) proposes extending an information collection.

DATES: Interested persons are invited to submit comments on or before May 26, 2026.

ADDRESSES: Send your written comments on this information collection request (ICR) by mail to Darrin King, Information Collection Clearance Officer, U.S. Department of the Interior, Bureau of Land Management, Attention PRA Office, 440 W 200 S #500, Salt Lake City, UT 84101; or by email to BLM_HQ_PRA_Comments@blm.gov. Please reference Office of Management and Budget (OMB) Control Number 1004–0216 in the subject line of your comments. Please note that the electronic submission of comments is recommended.

FOR FURTHER INFORMATION CONTACT: To request additional information about this Information Collection Request (ICR), contact Michael Everett, by email at meverett@blm.gov, or by telephone at (907) 271–3786. Individuals in the United States who are deaf, deafblind, hard of hearing, or have a speech disability may dial 711 (TTY, TDD, or TeleBraille) to access telecommunications relay services. Individuals outside the United States should use the relay services offered within their country to make international calls to the point-of-contact in the United States. You may also view the ICR at <http://www.reginfo.gov/public/do/PRAMain>.

SUPPLEMENTARY INFORMATION: In accordance with the Paperwork Reduction Act of 1995 (PRA, 44 U.S.C. 3501 *et seq.*) and 5 CFR 1320.8(d)(1), all information collections require approval under the PRA. We may not conduct or sponsor and you are not required to respond to a collection of information unless it displays a currently valid OMB control number.

As part of our continuing effort to reduce paperwork and respondent burdens, we invite the public and other Federal agencies to comment on new, proposed, revised, and continuing collections of information. This helps us assess the impact of our information collection requirements and minimize the public's reporting burden. It also helps the public understand our information collection requirements and provide the requested data in the desired format.

We are especially interested in public comments addressing the following:

(1) Whether the collection of information is necessary for the proper performance of the functions of the agency, including whether the information will have practical utility;

(2) The accuracy of our estimate of the burden for this collection of information, including the validity of the methodology and assumptions used;

(3) Ways to enhance the quality, utility, and clarity of the information to be collected; and

(4) How the agency might minimize the burden of the collection of information on those who are to respond, including the use of appropriate automated, electronic, mechanical, or other technological collection techniques or other forms of information technology, *e.g.*, permitting electronic submission of response.

Comments that you submit in response to this notice are a matter of public record. We will include or summarize each comment in our request to OMB to approve this ICR. Before including your address, phone number, email address, or other personally identifiable information in your comment, you should be aware that your entire comment—including your personally identifiable information—may be made publicly available at any time. While you can ask us in your comment to withhold your personally identifiable information from public review, we cannot guarantee that we will be able to do so.

Abstract: Under this OMB Control Number BLM collects information related to Native veteran land allotment applications. The authority for this Program is section 1119 of the John D. Dingell, Jr. Conservation, Management, and Recreation Act of March 12, 2019, Public Law 116–9, codified at 43 U.S.C. 1629g–1. This OMB Control Number is currently scheduled to expire on July 31, 2026. The BLM plans to request that OMB renew this OMB Control Number for an additional three (3) years.

Title of Collection: Alaska Native Vietnam-Era Veterans Allotments (43 CFR 2569).

OMB Control Number: 1004–0216.

Form Numbers: Alaska Native Vietnam-Era Veterans Allotments Application, AK 2569–10.

Type of Review: Extension of a currently approved collection.

Respondents/Affected Public: Individuals and State/Local/Tribal governments.

Total Estimated Number of Annual Respondents: 1,265.

Total Estimated Number of Annual Responses: 1,265.

Estimated Completion Time per Response: Varies from 4.5 hours to 30 minutes per response.

Respondent's Obligation: Required to obtain or retain a benefit.

Frequency of Collection: On occasion.

Total Estimated Number of Annual Hours: 3,828.

Total Estimated Annual Non-hour Burden Cost: \$55,000.

The authority for this action is the Paperwork Reduction Act of 1995 (44 U.S.C. 3501 *et seq.*).

Darrin A. King,

Information Collection Clearance Officer.

Notice of Intended Repatriation: The University of Maine, Orono, ME

AGENCY: National Park Service, Interior.

ACTION: Notice.

SUMMARY: In accordance with the Native American Graves Protection and Repatriation Act (NAGPRA), the University of Maine, Orono, intends to repatriate certain cultural items that meet the definition of unassociated funerary objects and that have a cultural affiliation with the Indian Tribes or Native Hawaiian organizations in this notice.

DATES: Repatriation of the cultural items in this notice may occur on or after April 27, 2026.

ADDRESSES: Send additional, written requests for repatriation of the cultural items in this notice to Dr. Bonnie Newsom, Anthropology Department, University of Maine, 5773 South Stevens Hall, Orono, ME 04469, email bonnie.newsom@maine.edu.

SUPPLEMENTARY INFORMATION: This notice is published as part of the National Park Service's administrative

responsibilities under NAGPRA. The determinations in this notice are the sole responsibility of the University of Maine, Orono, and additional information on the determinations in this notice, including the results of consultation, can be found in the summary or related records. The National Park Service is not responsible for the determinations in this notice.

Abstract of Information Available

A total of 184 cultural items has been requested for repatriation. These items include artifacts, soil and other samples, and casts of funerary objects that were donated to the University of Maine over its history by collectors such as Walter B. Smith and materials left from Dr. Brian Robinson's research into funerary practices in Maine and New England prior to European Contact.

A total of 26 unassociated funerary items could not be associated with a known archaeological site but are reasonably assumed to be from sites located in Maine based on regional typologies and research interests of Northeastern archaeology faculty. The 26 unassociated funerary objects include two ocher-stained gouges, an ocher-stained celt, an atlatl weight, an ocher-stained ground stone preform, 16 bifaces, a rounded pebble, a slate point fragment, and three abraders.

A total of 113 items are from the Godfrey Cemetery site, dated to approximately 3800 BP, and located in Old Town, Penobscot County, Maine. The 113 unassociated funerary objects include a small lithic flake from a stone tool, a limonite sample with insect pupae from a fire-starting kit, two sediment samples, one charcoal sample, 19 plaster artifact casts, and 89 wax flakes scraped from funerary objects after making casts of the objects.

A total of 45 plaster casts created directly from funerary objects are from the Overlock Cemetery site located in Warren, Knox County, Maine. The site dates to approximately 3800–3600 BP.

Determinations

The University of Maine, Orono, has determined that:

- The 184 unassociated funerary objects described in this notice are reasonably believed to have been placed intentionally with or near human remains, and are connected, either at the time of death or later as part of the death rite or ceremony of a Native American culture according to the Native American traditional knowledge of a lineal descendant, Indian Tribe, or Native Hawaiian organization. The unassociated funerary objects have been identified by a preponderance of the

evidence as related to human remains, specific individuals, or families, or removed from a specific burial site or burial area of an individual or individuals with cultural affiliation to an Indian Tribe or Native Hawaiian organization.

- There is a connection between the cultural items described in this notice and the Houlton Band of Maliseet Indians; Mi'kmaq Nation (previously listed as Aroostook Band of Micmacs); Passamaquoddy Tribe; and the Penobscot Nation.

Requests for Repatriation

Additional, written requests for repatriation of the cultural items in this notice must be sent to the authorized representative identified in this notice under **ADDRESSES**. Requests for repatriation may be submitted by any lineal descendant, Indian Tribe, or Native Hawaiian organization not identified in this notice who shows, by a preponderance of the evidence, that the requestor is a lineal descendant or a culturally affiliated Indian Tribe or Native Hawaiian organization.

Repatriation of the cultural items in this notice to a requestor may occur on or after April 27, 2026. If competing requests for repatriation are received, the University of Maine, Orono, must determine the most appropriate requestor prior to repatriation. Requests for joint repatriation of the cultural items are considered a single request and not competing requests. The University of Maine, Orono, is responsible for sending a copy of this notice to the Indian Tribes and Native Hawaiian organizations identified in this notice and to any other consulting parties.

Authority: Native American Graves Protection and Repatriation Act, 25 U.S.C. 3004 and the implementing regulations, 43 CFR 10.9.

Dated: March 20, 2026.

Melanie O'Brien,

Manager, National NAGPRA Program.

Notice of Intended Repatriation: Los Angeles County Museum of Natural History, Los Angeles, CA

AGENCY: National Park Service, Interior.

ACTION: Notice.

SUMMARY: In accordance with the Native American Graves Protection and Repatriation Act (NAGPRA), the Los Angeles County Museum of Natural History (LACMNH) intends to repatriate a certain cultural item that meets the definition of an object of cultural patrimony and that has a cultural affiliation with the Indian Tribes or Native Hawaiian organizations in this notice.

DATES: Repatriation of the cultural item in this notice may occur on or after April 27, 2026.

ADDRESSES: Send additional, written requests for repatriation of the cultural item in this notice to Amy E. Gusick, NAGPRA Officer, Los Angeles County Museum of Natural History, 900 Exposition Boulevard, Los Angeles, CA 90007, email agusick@nhm.org.

SUPPLEMENTARY INFORMATION: This notice is published as part of the National Park Service's administrative responsibilities under NAGPRA. The determinations in this notice are the sole responsibility of the LACMNH, and additional information on the determinations in this notice, including the results of consultation, can be found in the summary or related records. The National Park Service is not responsible for the determinations in this notice.

Abstract of Information Available

A total of one cultural item has been requested for repatriation. The one object of cultural patrimony is a twined water bottle woven with *juncus textilis* and coated with asphaltum (A.2562.58–143). The basket was collected by Douglas S. Adams during the 1900s and donated to LACMNH in 1958 as part of a larger donation of baskets originating from the western part of North America. Based on Indigenous knowledge learned during Tribal consultation, museum documentation, and anthropological and archaeological knowledge, LACMNH determined that the basket is of Chumash origin.

Determinations

The LACMNH has determined that:

- The one object of cultural patrimony described in this notice has ongoing historical, traditional, or cultural importance central to the Native American group, including any constituent sub-group (such as a band, clan, lineage, ceremonial society, or other subdivision), according to the Native American traditional knowledge of an Indian Tribe or Native Hawaiian organization.

- There is a connection between the cultural item described in this notice

and the Santa Ynez Band of Chumash Mission Indians of the Santa Ynez Reservation, California.

Requests for Repatriation

Additional, written requests for repatriation of the cultural item in this notice must be sent to the authorized representative identified in this notice under **ADDRESSES**. Requests for repatriation may be submitted by any lineal descendant, Indian Tribe, or Native Hawaiian organization not identified in this notice who shows, by a preponderance of the evidence, that the requestor is a lineal descendant or a culturally affiliated Indian Tribe or Native Hawaiian organization.

Repatriation of the cultural item in this notice to a requestor may occur on or after April 27, 2026. If competing requests for repatriation are received, the LACMNH must determine the most appropriate requestor prior to repatriation. Requests for joint repatriation of the cultural item are considered a single request and not competing requests. The LACMNH is responsible for sending a copy of this notice to the Indian Tribes and Native Hawaiian organizations identified in this notice and to any other consulting parties.

Authority: Native American Graves Protection and Repatriation Act, 25 U.S.C. 3004 and the implementing regulations, 43 CFR 10.9.

Notice of Intended Repatriation: Center for Natural Lands Management, Temecula, CA

AGENCY: National Park Service, Interior.

ACTION: Notice.

SUMMARY: In accordance with the Native American Graves Protection and Repatriation Act (NAGPRA), the Center for Natural Lands Management intends to repatriate certain cultural items that meet the definition of unassociated funerary objects, sacred objects, and/or objects of cultural patrimony and that have a cultural affiliation with the Indian Tribes or Native Hawaiian organizations in this notice.

DATES: Repatriation of the cultural items in this notice may occur on or after April 27, 2026.

ADDRESSES: Send additional, written requests for repatriation of the cultural items in this notice to Deborah Rogers, Center for Natural Lands Management, 27258 Via Industria, Suite B, Temecula, CA 92590, email drogers@cnlm.org.

SUPPLEMENTARY INFORMATION: This notice is published as part of the National Park Service's administrative responsibilities under NAGPRA. The determinations in this notice are the sole responsibility of the Center for Natural Lands Management, and additional information on the determinations in this notice, including the results of consultation, can be found in the summary or related records. The National Park Service is not responsible for the determinations in this notice.

Abstract of Information Available

A total of approximately 55 cultural items have been requested for repatriation. The 54 lots of unassociated funerary objects are ceramics, lithics, bone, groundstone, beads, and shells. The one sacred object is the contents of a Shaman's pipe. The objects were likely found in Riverside County, California, in the vicinity of Thousand Palms Oasis. When the Center for Natural Lands Management acquired the Thousand Palms Oasis Preserve, the objects were found to have been collected in boxes in the Palm House. There is no evidence of hazardous substances being used to treat any of the items.

Determinations

The Center for Natural Lands Management has determined that:

- The 54 unassociated funerary objects described in this notice are reasonably believed to have been placed intentionally with or near human remains, and are connected, either at the time of death or later as part of the death rite or ceremony of a Native American culture according to the Native American traditional knowledge of a lineal descendant, Indian Tribe, or Native Hawaiian organization. The unassociated funerary objects have been identified by a preponderance of the evidence as related to human remains, specific individuals, or families, or removed from a specific burial site or burial area of an individual or individuals with cultural affiliation to an Indian Tribe or Native Hawaiian organization.

- The one sacred object described in this notice are specific ceremonial objects needed by a traditional Native

American religious leader for present-day adherents to practice traditional Native American religion, according to the Native American traditional knowledge of a lineal descendant, Indian Tribe, or Native Hawaiian organization.

- There is a connection between the cultural items described in this notice and the Agua Caliente Band of Cahuilla Indians of the Agua Caliente Indian Reservation, California.

Requests for Repatriation

Additional, written requests for repatriation of the cultural items in this notice must be sent to the authorized representative identified in this notice under **ADDRESSES**. Requests for repatriation may be submitted by any lineal descendant, Indian Tribe, or Native Hawaiian organization not identified in this notice who shows, by a preponderance of the evidence, that the requestor is a lineal descendant or a culturally affiliated Indian Tribe or Native Hawaiian organization.

Repatriation of the cultural items in this notice to a requestor may occur on or after April 27, 2026. If competing requests for repatriation are received, the Center for Natural Lands Management must determine the most appropriate requestor prior to repatriation. Requests for joint repatriation of the cultural items are considered a single request and not competing requests. The Center for Natural Lands Management is responsible for sending a copy of this notice to the Indian Tribes and Native Hawaiian organizations identified in this notice and to any other consulting parties.

Notice of Inventory Completion: Illinois State Museum, Springfield, IL

AGENCY: National Park Service, Interior.

ACTION: Notice.

SUMMARY: In accordance with the Native American Graves Protection and Repatriation Act (NAGPRA), the Illinois State Museum has completed an inventory of human remains and has determined that there is a cultural affiliation between the human remains and Indian Tribes in this notice.

DATES: Repatriation of the human remains in this notice may occur on or after April 27, 2026.

ADDRESSES: Send written requests for repatriation of the human remains in this notice to Dr. Brooke M. Morgan, Illinois State Museum Research & Collections Center, 1011 East Ash Street, Springfield, IL 62703, email brooke.morgan@illinois.gov.

SUPPLEMENTARY INFORMATION: This notice is published as part of the National Park Service's administrative responsibilities under NAGPRA. The determinations in this notice are the sole responsibility of the Illinois State Museum, and additional information on the determinations in this notice, including the results of consultation, can be found in its inventory or related records. The National Park Service is not responsible for the determinations in this notice.

Abstract of Information Available

Human remains representing, at minimum, 16 individuals have been identified. No associated funerary objects are present. The human remains were removed from the Fisher Site (11WI5), Will County, IL, by George Langford and by the University of Chicago on an unknown date prior to 1941. They were part of the University of Chicago teaching collection until 1948. They were then in private hands until 2007, when they were donated to the Illinois State Museum. They were not recognized as being from the Fisher site until a collections review in 2026. The human remains date to the Upper Mississippian period of site occupation. No hazardous substances are known to have been used to treat any of the human remains.

Cultural Affiliation

Based on the information available and the results of consultation, cultural affiliation is clearly identified by the information available about the human remains described in this notice.

Determinations

The Illinois State Museum has determined that:

- The human remains described in this notice represent the physical remains of at least 16 individuals of Native American ancestry.

- There is a connection between the human remains described in this notice and the Absentee Shawnee Tribe of Oklahoma; Citizen Potawatomi Nation, Oklahoma; Eastern Shawnee Tribe of Oklahoma; Forest County Potawatomi Community, Wisconsin; Hannahville Indian Community, Michigan; Ho-Chunk Nation of Wisconsin; Iowa Tribe of Kansas and Nebraska; Iowa Tribe of Oklahoma; Kickapoo Traditional Tribe of Texas; Kickapoo Tribe of Indians of the Kickapoo Reservation in Kansas; Kickapoo Tribe of Oklahoma; Match-E-Be-Nash-She-Wish Band of Pottawatomi (previously listed as Match-E-Be-Nash-She-Wish Band of Pottawatomi Indians of Michigan); Miami Tribe of Oklahoma; Minnesota Chippewa Tribe, Minnesota (Fond du Lac Band; Mille Lacs Band); Nottawaseppi Huron Band of the Potawatomi, Michigan; Omaha Tribe of Nebraska; Otoe-Missouria Tribe of Indians, Oklahoma; Peoria Tribe of Indians of Oklahoma; Pokagon Band of the Potawatomi Indians, Michigan and Indiana; Prairie Band Potawatomi Nation; Sac & Fox Nation of Missouri in Kansas and Nebraska; Sac & Fox Nation, Oklahoma; Sac & Fox Tribe of the Mississippi in Iowa; Shawnee Tribe; and the Winnebago Tribe of Nebraska.

Requests for Repatriation

Written requests for repatriation of the human remains in this notice must be sent to the authorized representative identified in this notice under

ADDRESSES. Requests for repatriation may be submitted by:

1. Any one or more of the Indian Tribes identified in this notice.
2. Any lineal descendant or Indian Tribe not identified in this notice who shows, by a preponderance of the evidence, that the requestor is a lineal descendant or an Indian Tribe with cultural affiliation.

Repatriation of the human remains described in this notice to a requestor may occur on or after April 27, 2026. If competing requests for repatriation are received, the Illinois State Museum must determine the most appropriate requestor prior to repatriation. Requests for joint repatriation of the human remains are considered a single request and not competing requests. The Illinois State Museum is responsible for sending a copy of this notice to the Indian Tribes identified in this notice.

Authority: Native American Graves Protection and Repatriation Act, 25 U.S.C. 3003, and the implementing regulations, 43 CFR 10.10.

Dated: March 20, 2026.

Melanie O'Brien,

Manager, National NAGPRA Program.

Notice of Inventory Completion: San Bernardino County Museum, Redlands, CA

AGENCY: National Park Service, Interior.

ACTION: Notice.

SUMMARY: In accordance with the Native American Graves Protection and Repatriation Act (NAGPRA), San Bernardino County Museum has completed an inventory of human remains and associated funerary objects and has determined that there is a cultural affiliation between the human remains and associated funerary objects and Indian Tribes or Native Hawaiian organizations in this notice.

DATES: Repatriation of the human remains and associated funerary objects in this notice may occur on or after April 27, 2026.

ADDRESSES: Send written requests for repatriation of the human remains and associated funerary objects in this notice to Gabrielle Carpentier, San Bernardino County Museum, 2024 Orange Tree Lane, Redlands, CA 92374, email gabrielle.carpentier@sbc.sbcounty.gov.

SUPPLEMENTARY INFORMATION: This notice is published as part of the National Park Service's administrative responsibilities under NAGPRA. The determinations in this notice are the sole responsibility of San Bernardino County Museum, and additional information on the determinations in this notice, including the results of consultation, can be found in its inventory or related records. The National Park Service is not responsible for the determinations in this notice.

Abstract of Information Available

Human remains representing, at least, one individual have been identified. The one associated funerary object is a stirrup. The ancestral remains were removed in 1951 by Benjamin McCown. The stirrup found with the collection contains a note that appears to read, "Lettean Canyon 1951." SBCM staff believe this note is referring to Letteau Canyon, from a privately owned ranch named Lannan Ranch. Based on

archaeological context and information learned from consultations, this individual is Native American. Archaeologists have asserted that Serrano and Tataviam peoples have continuously occupied the San Gabriel Mountains and the surrounding areas for up to 5,000–6,000 years BP. Linguistic sources demonstrate a strong continuous shared group identity between those people using Agua Dulce roughly 3000 years ago and modern Native Americans of Serrano and Tataviam descent. Ethnographic evidence and Traditional Knowledge document the Agua Dulce region as home to Serrano and Tataviam peoples since time immemorial.

Human remains representing, at least, one individual have been identified. The eight associated funerary objects are ground stone, faunal bone, shell, shell beads, a pipe stem fragment, ceramic sherds, lithics, and quartz. This collection, CA–SBR–00183 (SBCM–72), is from Bryman Rd in Helendale, CA. Records from 1940 state: “This was probably the rancharia of Topiabit that was mentioned by Rr. Joaquin Pasqual Nuez. Kroeber places it in the Serrano dialect, and the surface indications resemble those of the other camp sites on up the Mojave River.”

Human remains representing, at least, eight individuals have been identified. The one associated funerary object is shell. This collection was previously unprovenanced. With the assistance of forensic anthropologist Dr. Alexis Gray, the ancestral remains were determined to be Native American. Dr. Gray also determined the ancestral remains to be likely from San Bernardino County, particularly around the Newberry Springs area, based on visual examination of the soil type present in the collection.

Cultural Affiliation

Based on the information available and the results of consultation, cultural affiliation is reasonably identified by the geographical location or acquisition history of the human remains and associated funerary objects described in this notice.

Determinations

San Bernardino County Museum has determined that:

- The human remains described in this notice represent the physical remains of 10 individuals of Native American ancestry.
- The 10 objects described in this notice are reasonably believed to have been placed intentionally with or near individual human remains at the time of

death or later as part of the death rite or ceremony.

- There is a connection between the human remains and associated funerary objects described in this notice and the Morongo Band of Mission Indians, California and the Yuhaaviatam of San Manuel Nation (previously listed as San Manuel Band of Mission Indians, California).

Requests for Repatriation

Written requests for repatriation of the human remains and associated funerary objects in this notice must be sent to the authorized representative identified in this notice under **ADDRESSES**. Requests for repatriation may be submitted by:

1. Any one or more of the Indian Tribes or Native Hawaiian organizations identified in this notice.
2. Any lineal descendant, Indian Tribe, or Native Hawaiian organization not identified in this notice who shows, by a preponderance of the evidence, that the requestor is a lineal descendant or an Indian Tribe or Native Hawaiian organization with cultural affiliation.

Repatriation of the human remains and associated funerary objects described in this notice to a requestor may occur on or after April 27, 2026. If competing requests for repatriation are received, San Bernardino County Museum must determine the most appropriate requestor prior to repatriation. Requests for joint repatriation of the human remains and associated funerary objects are considered a single request and not competing requests. San Bernardino County Museum is responsible for sending a copy of this notice to the Indian Tribes and Native Hawaiian organizations identified in this notice and any other consulting parties.

Authority: Native American Graves Protection and Repatriation Act, 25 U.S.C. 3003, and the implementing regulations, 43 CFR 10.10.

Notice of Proposed Transfer or Reinterment: New York State Office of Parks, Recreation & Historic Preservation, Waterford, NY

AGENCY: National Park Service, Interior.

ACTION: Notice.

SUMMARY: In accordance with the Native American Graves Protection and Repatriation Act (NAGPRA), the New York State Office of Parks, Recreation & Historic Preservation (NYOPRHP) proposes to transfer human remains listed in notices of inventory completion published in the **Federal Register** on June 27, 2024 and December 18, 2025.

DATES: Repatriation, transfer, or reinterment of the human remains in this notice may occur on or after April 27, 2026.

ADDRESSES: Send written request for repatriation of the human remains to Jessica Vavrsek, New York State Office of Parks, Recreation & Historic Preservation, Peebles Island State Park, P.O. Box 189, Waterford, NY 12188–0189, email Jessica.Vavrsek@parks.ny.gov.

SUPPLEMENTARY INFORMATION: This notice is published as part of the National Park Service's administrative responsibilities under NAGPRA. The determinations in this notice are the sole responsibility of the NYOPRHP and additional information on the determinations in this notice, including the results of consultation, can be found in its inventory or related records. The National Park Service is not responsible for the determinations in this notice.

Abstract of Information Available

This notice follows publication of two notices of inventory completion in the **Federal Register** (89 FR 53636, June 27, 2024 and 90 FR 59177, December 18, 2025). Human remains representing, at least, three individuals have been identified. A suspected Native American scalp was discovered during periodic cleaning of 80+ year old exhibit dedicated to Dan Beard located within Bear Mountain State Park as well as a necklace containing suspected Native American hand and foot bones with blue glass trade beads in-between the remains. The scalp was discovered within a riker box inside of a cardboard box with “Indian Scalp” written on the

outside in pencil. The necklace was discovered hung on a replica mantle display. No information is available as to where, when, or how they were acquired.

Consultation

Invitations to consult were sent to the Delaware Nation, Oklahoma; Delaware Tribe of Indians; and the Stockbridge Munsee Community, Wisconsin. The Delaware Nation, Oklahoma; Delaware Tribe of Indians, and the Stockbridge Munsee Community, Wisconsin all responded yes to NYOPRHP's request for consultation on this matter with all three Nations agreeing that the Stockbridge Munsee Community, Wisconsin would take the lead during this consultation.

Cultural Affiliation

The following types of information about the cultural affiliation of the human remains in this notice are available: geographical and historical. The information, including the results of consultation, identified:

1. No earlier group connected to the human remains.
2. No Indian Tribe or Native Hawaiian organization connected to the human remains.
3. No relationship of shared group identity between the earlier group and the Indian Tribe or Native Hawaiian organization that can be reasonably traced through time.

Determinations

The NYOPRHP has determined that:

- The human remains described in this notice represent the physical remains of three individuals of Native American ancestry.
- No known lineal descendant who can trace ancestry to the human remains in this notice has been identified.
- No Indian Tribe or Native Hawaiian organization with cultural affiliation to the human remains in this notice has been clearly or reasonably identified.
- The Stockbridge Munsee Community, Wisconsin have requested transfer of the human remains described in this notice.

Requests for Repatriation

Written requests for repatriation of the human remains in this notice must be sent to the authorized representative identified in this notice under

ADDRESSES. Requests for repatriation may be submitted by any lineal descendant, Indian Tribe, or Native Hawaiian organization who shows, by a preponderance of the evidence, that the requestor is a lineal descendant or an Indian Tribe or Native Hawaiian organization with cultural affiliation.

Repatriation, transfer, or reinterment of the human remains described in this notice may occur on or after April 27, 2026. If requests for repatriation are received, the NYOPRHP must evaluate the requests and respond in writing to the requestors. The NYOPRHP is responsible for sending a copy of this notice to the Indian Tribes or Native Hawaiian organizations identified in this notice.

Authority: Native American Graves Protection and Repatriation Act, 25 U.S.C. 3003, and the implementing regulations, 43 CFR 10.10.

Notice of Inventory Completion: S'edav Va'aki Museum, City of Phoenix, Phoenix, AZ

AGENCY: National Park Service, Interior.

ACTION: Notice.

SUMMARY: In accordance with the Native American Graves Protection and Repatriation Act (NAGPRA), the S'edav Va'aki Museum (formerly Pueblo Grande Museum), City of Phoenix has completed an inventory of human remains and associated funerary objects and has determined that there is a cultural affiliation between the human remains and associated funerary objects and Indian Tribes or Native Hawaiian organizations in this notice.

DATES: Repatriation of the human remains and associated funerary objects in this notice may occur on or after April 27, 2026.

ADDRESSES: Send written requests for repatriation of the human remains and associated funerary objects in this notice to Lindsey Vogel-Teeter, S'edav Va'aki Museum, 4619 East Washington Street, Phoenix, AZ 85034, email lindsey.vogel-teeter@phoenix.gov.

SUPPLEMENTARY INFORMATION: This notice is published as part of the National Park Service's administrative responsibilities under NAGPRA. The determinations in this notice are the sole responsibility of the S'edav Va'aki Museum, City of Phoenix, and additional information on the determinations in this notice, including

the results of consultation, can be found in its inventory or related records. The National Park Service is not responsible for the determinations in this notice.

Abstract of Information Available

Human remains representing, at least, four individuals and seven associated funerary objects have been identified in the collections of S'edav Va'aki Museum (SVM). The human remains and associated funerary objects were removed from multiple archaeological sites in Maricopa County, AZ during three archaeological excavations. These archaeological sites are associated with the Hohokam archaeological culture (A.D. 450 to 1450).

In May 1976, at least two individuals and six associated funerary objects were removed from site AZ T:12:1(ASM), during a salvage archaeological project conducted by employees of the City of Phoenix. The cultural items were identified in collections at SVM in 1998. The six associated funerary objects include two lots ceramic sherds, two lots lithics, one faunal bone, and one shell bracelet fragment. The human remains were identified in 2023 during a review of the faunal collection.

In 2004, at least one individual was removed from AZ T:12:215(ASM) also known as AZ T:12:1(ASM) during archaeological data recovery which took place prior to a construction project. No associated funerary objects are present. No human remains were identified during the archaeological project. The human remains were transferred with the collection to SVM in 2005, but they were not identified until 2022 when they were located during a review of the faunal collection.

In 2004, at least one individual and one associated funerary object were removed from site AZ T:12:50(ASM) during archaeological data recovery prior to the sale of land. No human remains were identified during the archaeological project. The human remains and associated funerary object were transferred to SVM with the collection in 2015, but they were not identified until 2022 when they were located during a review of the faunal collection. The one associated funerary object is a lot of faunal bone.

Cultural Affiliation

Based on the information available and the results of consultation, cultural affiliation is clearly identified by the information available about the human remains and associated funerary objects described in this notice.

Determinations

The SVM has determined that:

- The human remains described in this notice represent the physical remains of four individuals of Native American ancestry.
- The seven objects described in this notice are reasonably believed to have been placed intentionally with or near individual human remains at the time of death or later as part of the death rite or ceremony.
- There is a connection between the human remains and associated funerary objects described in this notice and the Ak-Chin Indian Community; Gila River Indian Community of the Gila River Indian Reservation, Arizona; Hopi Tribe of Arizona; Salt River Pima-Maricopa Indian Community of the Salt River Reservation, Arizona; Tohono O'odham Nation of Arizona; and the Zuni Tribe of the Zuni Reservation, New Mexico.

Requests for Repatriation

Written requests for repatriation of the human remains and associated funerary objects in this notice must be sent to the authorized representative identified in this notice under **ADDRESSES**. Requests for repatriation may be submitted by:

1. Any one or more of the Indian Tribes or Native Hawaiian organizations identified in this notice.
2. Any lineal descendant, Indian Tribe, or Native Hawaiian organization not identified in this notice who shows, by a preponderance of the evidence, that the requestor is a lineal descendant or an Indian Tribe or Native Hawaiian organization with cultural affiliation.

Repatriation of the human remains and associated funerary objects described in this notice to a requestor may occur on or after April 27, 2026. If competing requests for repatriation are received, the SVM must determine the most appropriate requestor prior to repatriation. Requests for joint repatriation of the human remains and associated funerary objects are considered a single request and not competing requests. The SVM is responsible for sending a copy of this notice to the Indian Tribes and Native Hawaiian organizations identified in this notice and any other consulting parties.

Authority: Native American Graves Protection and Repatriation Act, 25 U.S.C. 3003, and the implementing regulations, 43 CFR 10.10.

Dated: March 20, 2026.

Notice of Intended Repatriation: Denver Art Museum, Denver, CO

AGENCY: National Park Service, Interior.

ACTION: Notice.

SUMMARY: In accordance with the Native American Graves Protection and Repatriation Act (NAGPRA), the Denver Art Museum intends to repatriate certain cultural items that meet the definition of sacred objects and that have a cultural affiliation with the Indian Tribes or Native Hawaiian organizations in this notice.

DATES: Repatriation of the cultural items in this notice may occur on or after April 27, 2026.

ADDRESSES: Send additional, written requests for repatriation of the cultural items in this notice to Jennifer (Jennie) Trujillo, Denver Art Museum, 100 W 14th Avenue Parkway, Denver, CO 80204, email jtrujillo@denverartmuseum.org.

SUPPLEMENTARY INFORMATION: This notice is published as part of the National Park Service's administrative responsibilities under NAGPRA. The determinations in this notice are the sole responsibility of the Denver Art Museum and additional information on the determinations in this notice, including the results of consultation, can be found in the summary or related records. The National Park Service is not responsible for the determinations in this notice.

Abstract of Information Available

A total of 18 cultural items have been requested for repatriation. The 18 sacred objects are two 'umeke lā'au (wood bowls), 10 kapa, one pahu (drum), two stone tools, one lei hulu (feather lei), one Lei niho palaoa (pendant necklace) and one moena (mat).

One wood bowl was acquired about 1899 from Mrs. A.C. Cass of Colorado, who then gifted it to the museum. The second bowl was purchased by the museum in 1948 from Altman Antiques in Los Angeles, California. Museum records have no additional information for either bowl. Five of the kapa came to the Denver Art Museum via an exchange with the British Museum in 1949. Oceanic works exchanged in 1949 with British Museum were taken from pool designated "duplicates collection" used for exchanges and was an

unregistered group with no catalogue records or detailed listings. Documentation provided has minimal provenance information. Consultation has confirmed their cultural affiliation with Hawaii. One kapa and the moena mat were gifts to the museum in 1942 from Mrs. Helen Stanford Canfield of Estes Park, Colorado. The kapa and moena mat were given to Mrs. Canfield's mother, Mrs. Josiah W. Stanford in Hawaii in 1898 by Mrs. Irene'i Holloway, a friend of Queen Lili'uokalani.

Two other kapa, the pahu, and the lei hulu were purchased by the museum from art dealer Julius Carlebach in 1949. There is no additional information about the kapa. The pahu is from the Fred Harvey collection that was exhibited at the San Francisco Fair in 1915. The lei hulu is said to have been acquired by an unnamed whaling family around 1800 and was brought to New Bedford Massachusetts in 1860. The lei hulu has tested positive for lead. One kapa was a gift from Mrs. Garetta Stoeve of La Jolla, California. It was collected by Mrs. Stoeve's father-in-law, Dr. Henry von H. Stoeve, in Hawaii in the 1890's. The final kapa was acquired by exchange in 1959 from the University of Pennsylvania Museum of Archaeology and Anthropology. There is no further provenance information in the DAM's records. The stone tools, a ko'i (adze) and a pōhaku ku'i 'ai (pounder) were gifted to the museum by Frederic H. Douglas, of Denver, Colorado. This collection of Hawaiian stone implements was acquired by Douglas from Altman Antiques of Los Angeles. Altman received them from an auctioneer who had sold the contents of a house owned by a man who once lived in Hawaii. No further history was provided. Finally, the Lei niho palaoa was gifted to the museum in 1954 by Theodore B. Pittman of Massachusetts. It is uncertain if this was a gift of Theodore Pittman Sr. or T. Pittman Jr. Theodore "Ted" Baldwin "Hoolulu" Pitman Jr. (1917-1997) of Swampscott, born in Hawaii and great-grandson of the High Chieftess Kinoole-o-Liliha Pitman of Hilo, Hawaii.

Determinations

The Denver Art Museum has determined that:

- The 18 sacred objects described in this notice are specific ceremonial objects needed by a traditional Native American religious leader for present-day adherents to practice traditional Native American religion, according to the Native American traditional knowledge of a lineal descendant,

Indian Tribe, or Native Hawaiian organization.

- There is a connection between the cultural items described in this notice and the Hui Iwi Kuamo'o.

Requests for Repatriation

Additional, written requests for repatriation of the cultural items in this notice must be sent to the authorized representative identified in this notice under **ADDRESSES**. Requests for repatriation may be submitted by any lineal descendant, Indian Tribe, or Native Hawaiian organization not identified in this notice who shows, by a preponderance of the evidence, that the requestor is a lineal descendant or a culturally affiliated Indian Tribe or Native Hawaiian organization.

Repatriation of the cultural items in this notice to a requestor may occur on or after April 27, 2026. If competing requests for repatriation are received, the Denver Art Museum must determine the most appropriate requestor prior to repatriation. Requests for joint repatriation of the cultural items are considered a single request and not competing requests. The Denver Art Museum is responsible for sending a copy of this notice to the Indian Tribes and Native Hawaiian organizations identified in this notice and to any other consulting parties.

Authority: Native American Graves Protection and Repatriation Act, 25 U.S.C. 3004 and the implementing regulations, 43 CFR 10.9.

Notice of Intended Repatriation: Missouri Department of Natural Resources, Jefferson City, MO

AGENCY: National Park Service, Interior.

ACTION: Notice.

SUMMARY: In accordance with the Native American Graves Protection and Repatriation Act (NAGPRA), the Missouri Department of Natural Resources (MoDNR) intends to repatriate certain cultural items that meet the definition of sacred objects/objects of cultural patrimony and that have a cultural affiliation with the

Indian Tribes or Native Hawaiian organizations in this notice.

DATES: Repatriation of the cultural items in this notice may occur on or after April 27, 2026.

ADDRESSES: Send additional, written requests for repatriation of the cultural items in this notice to Caroline Crecelius, Repatriation Coordinator for the Missouri Department of Natural Resources, 1659 E Elm St., Jefferson City, MO 65101, email caroline.crecelius@dnr.mo.gov.

SUPPLEMENTARY INFORMATION: This notice is published as part of the National Park Service's administrative responsibilities under NAGPRA. The determinations in this notice are the sole responsibility of the Missouri Department of Natural Resources and additional information on the determinations in this notice, including the results of consultation, can be found in the summary or related records. The National Park Service is not responsible for the determinations in this notice.

Abstract of Information Available

A total of 235 cultural items have been requested for repatriation. The 235 sacred objects/objects of cultural patrimony include projectile points to blankets, bags, tools, photographs, jewelry, clothing and regalia, many of which are intricately beaded and/or woven. This collection was gifted by Ms. Owen to the museum in 1929. Through research of her published work, "Folklore of the Musquakie Indians of North America, And Catalogue of Musquakie Beadwork and Other Objects in the Collection of the Folklore Society (1904)," along with review of her unpublished field notes, it has been determined that the most likely origin of these belongings is the Sac & Fox Tribe of the Mississippi in Iowa in Tama, IA.

Determinations

The Missouri Department of Natural Resources has determined that:

- The 235 sacred objects/objects of cultural patrimony described in this notice are, according to the Native American traditional knowledge of an Indian Tribe or Native Hawaiian organization, specific ceremonial objects needed by a traditional Native American religious leader for present-day adherents to practice traditional Native American religion, and have ongoing historical, traditional, or cultural importance central to the Native American group, including any constituent sub-group (such as a band, clan, lineage, ceremonial society, or other subdivision).

- There is a connection between the cultural items described in this notice and the Sac & Fox Tribe of the Mississippi in Iowa.

Requests for Repatriation

Additional, written requests for repatriation of the cultural items in this notice must be sent to the authorized representative identified in this notice under **ADDRESSES**. Requests for repatriation may be submitted by any lineal descendant, Indian Tribe, or Native Hawaiian organization not identified in this notice who shows, by a preponderance of the evidence, that the requestor is a lineal descendant or a culturally affiliated Indian Tribe or Native Hawaiian organization.

Repatriation of the cultural items in this notice to a requestor may occur on or after April 27, 2026. If competing requests for repatriation are received, the Missouri Department of Natural Resources must determine the most appropriate requestor prior to repatriation. Requests for joint repatriation of the cultural items are considered a single request and not competing requests. The Missouri Department of Natural Resources is responsible for sending a copy of this notice to the Indian Tribes and Native Hawaiian organizations identified in this notice and to any other consulting parties.

Authority: Native American Graves Protection and Repatriation Act, 25 U.S.C. 3004 and the implementing regulations, 43 CFR 10.9.

Notice To Rescind a Notice of Inventory Completion: Oregon Health & Sciences University, Portland, OR

AGENCY: National Park Service, Interior.

ACTION: Notice.

SUMMARY: Oregon Health & Sciences University (OHSU) is rescinding a Notice of Inventory Completion published in the **Federal Register** on January 3, 2024.

ADDRESSES: Send written requests for repatriation of the human remains in this notice to Alice Cuprill Comas,

Oregon Health & Science University, 3181 SW Sam Jackson Park Road, Portland, OR 97239, email legal@ohsu.edu.

SUPPLEMENTARY INFORMATION: This notice is published as part of the National Park Service's administrative responsibilities under the Native American Graves Protection and Repatriation Act (NAGPRA). The determinations in this notice are the sole responsibility of OHSU, and additional information on the determinations in this notice, including the results of consultation, can be found in its inventory or related records. The National Park Service is not responsible for the determinations in this notice.

OHSU is rescinding a Notice of Inventory Completion published in the **Federal Register** (89 FR 389–390, January 3, 2024), and all paragraphs are deleted in their entirety. The human remains were removed from unknown locations in Oregon or Washington. Transfer of control of the human remains in this notice has not occurred.

OHSU is responsible for notifying the Big Pine Paiute Tribe of the Owens Valley; Bishop Paiute Tribe; Bridgeport Indian Colony; Burns Paiute Tribe; Cedarville Rancheria, California; Chemehuevi Indian Tribe of the Chemehuevi Reservation, California; Coeur D'Alene Tribe; Confederated Tribes and Bands of the Yakama Nation; Confederated Tribes of Siletz Indians of Oregon; Confederated Tribes of the Chehalis Reservation; Confederated Tribes of the Colville Reservation; Confederated Tribes of the Coos, Lower Umpqua and Siuslaw Indians; Confederated Tribes of the Grand Ronde Community of Oregon; Confederated Tribes of the Umatilla Indian Reservation; Confederated Tribes of the Warm Springs Reservation of Oregon; Coquille Indian Tribe; Cow Creek Band of Umpqua Tribe of Indians; Cowlitz Indian Tribe; Duckwater Shoshone Tribe (previously listed as Duckwater Shoshone Tribe of the Duckwater Reservation, Nevada); Eastern Shoshone Tribe of the Wind River Reservation, Wyoming; Ely Shoshone Tribe of Nevada; Fort Bidwell Indian Community of the Fort Bidwell Reservation of California; Fort Independence Indian Community of Paiute Indians of the Fort Independence Reservation, California; Fort McDermitt Paiute and Shoshone Tribes of the Fort McDermitt Indian Reservation, Nevada and Oregon; Hoh Indian Tribe; Jamestown S'Klallam Tribe; Kaibab Band of Paiute Indians of the Kaibab Indian Reservation, Arizona; Kalispel Indian Community of the Kalispel

Reservation; Klamath Tribes; Las Vegas Tribe of Paiute Indians of the Las Vegas Indian Colony, Nevada; Lone Pine Paiute-Shoshone Tribe; Lovelock Paiute Tribe of the Lovelock Indian Colony, Nevada; Lower Elwha Tribal Community; Lummi Tribe of the Lummi Reservation; Makah Indian Tribe of the Makah Indian Reservation; Moapa Band of Paiute Indians of the Moapa River Indian Reservation, Nevada; Modoc Nation; Muckleshoot Indian Tribe; Nez Perce Tribe; Nisqually Indian Tribe; Nooksack Indian Tribe; Northwestern Band of the Shoshone Nation; Paiute Indian Tribe of Utah (Cedar Band of Paiutes, Kanosh Band of Paiutes, Koosharem Band of Paiutes, Indian Peaks Band of Paiutes, and Shivwits Band of Paiutes); Paiute-Shoshone Tribe of the Fallon Reservation and Colony, Nevada; Port Gamble S'Klallam Tribe; Puyallup Tribe of the Puyallup Reservation; Pyramid Lake Paiute Tribe of the Pyramid Lake Reservation, Nevada; Quartz Valley Indian Community of the Quartz Valley Reservation of California; Quileute Tribe of the Quileute Reservation; Quinault Indian Nation; Reno-Sparks Indian Colony, Nevada; Samish Indian Nation; San Juan Southern Paiute Tribe of Arizona; Sauk-Suiattle Indian Tribe; Shoalwater Bay Indian Tribe of the Shoalwater Bay Indian Reservation; Shoshone-Bannock Tribes of the Fort Hall Reservation; Shoshone-Paiute Tribes of the Duck Valley Reservation, Nevada; Skokomish Indian Tribe; Snoqualmie Indian Tribe; Spokane Tribe of the Spokane Reservation; Squaxin Island Tribe of the Squaxin Island Reservation; Stillaguamish Tribe of Indians of Washington; Summit Lake Paiute Tribe of Nevada; Suquamish Indian Tribe of the Port Madison Reservation; Susanville Indian Rancheria, California; Swinomish Indian Tribal Community; Te-Moak Tribe of Western Shoshone Indians of Nevada (Four constituent bands: Battle Mountain Band; Elko Band; South Fork Band; and Wells Band); Timbisha Shoshone Tribe; Tulalip Tribes of Washington; Twenty-Nine Palms Band of Mission Indians of California; Upper Skagit Indian Tribe; Utu Utu Gwaitu Paiute Tribe of the Benton Paiute Reservation, California; Walker River Paiute Tribe of the Walker River Reservation, Nevada; Winnemucca Indian Colony of Nevada; Yerington Paiute Tribe of the Yerington Colony & Campbell Ranch, Nevada; and the Yomba Shoshone Tribe of the Yomba Reservation, Nevada that this notice has been published.

Notice of Inventory Completion: S'edav Va'aki Museum, City of Phoenix, Phoenix, AZ

AGENCY: National Park Service, Interior.

ACTION: Notice.

SUMMARY: In accordance with the Native American Graves Protection and Repatriation Act (NAGPRA), the S'edav Va'aki Museum (formerly Pueblo Grande Museum), City of Phoenix has completed an inventory of human remains and associated funerary objects and has determined that there is a cultural affiliation between the human remains and associated funerary objects and Indian Tribes or Native Hawaiian organizations in this notice.

DATES: Repatriation of the human remains and associated funerary objects in this notice may occur on or after April 27, 2026.

ADDRESSES: Send written requests for repatriation of the human remains and associated funerary objects in this notice to Lindsey Vogel-Teeter, S'edav Va'aki Museum, 4619 East Washington Street, Phoenix, AZ 85034, email lindsey.vogel-teeter@phoenix.gov.

SUPPLEMENTARY INFORMATION: This notice is published as part of the National Park Service's administrative responsibilities under NAGPRA. The determinations in this notice are the sole responsibility of the S'edav Va'aki Museum, City of Phoenix, and additional information on the determinations in this notice, including the results of consultation, can be found in its inventory or related records. The National Park Service is not responsible for the determinations in this notice.

Abstract of Information Available

Human remains representing, at least, six individuals and two associated funerary objects have been identified in the collections of S'edav Va'aki Museum (SVM). The human remains and

associated funerary objects have no collecting history and were either found in the collections of SVM or transferred to SVM from the Phoenix Museum of History (PMOH). PMOH closed in 2009 and no longer exists. The acquisition history of these individuals and associated funerary objects geographically locates the individuals and associated objects in Maricopa County, AZ.

Around 1960, at least one individual was documented in an exhibition at SVM. In 1995 this same individual was documented in collections at SVM. No associated funerary objects are present and there is no other acquisition information. Bioarchaeological documentation suggests that this individual is not consistent with the Hohokam archaeological culture but may be consistent with archaic and/or hunter/gatherer populations. These human remains are coated with Alvar, an acrylic resin that is not known to be toxic. The Alvar was likely applied by SVM staff between the 1930s and 1960s.

In 1970, at least one individual was documented in collections at SVM. No associated funerary objects are present and there is no other acquisition information. Bioarchaeological documentation suggests that this individual is not consistent with the Hohokam archaeological culture. These human remains are coated with Alvar, an acrylic resin that is not known to be toxic. The Alvar was likely applied by SVM staff between the 1930s and 1960s.

On December 10, 2005, at least one individual was documented at SVM. No associated funerary objects are present. The human remains were abandoned, overnight, by an unknown person and were found at the driveway entrance gate to SVM. A note with the human remains stated "This Native American skull [sic] was found by hunter in the 1960s, that is all that is known. Please take proper care of it Thx [sic]." There is no other information.

On August 24, 2006, at least one individual was documented in the estate of Donald Hiser and transferred to SVM. No associated funerary objects are present. Donald Hiser was the former City of Phoenix Archaeologist and worked at SVM from 1960 to 1983. Bioarchaeological documentation suggests that this individual is not consistent with the Hohokam archaeological culture. These human remains are coated with Alvar, an acrylic resin that is not known to be toxic. The Alvar was likely applied by Museum staff between the 1930s and 1960s. The human remains are also labeled with an unknown ink.

On January 16, 2002, at least one individual and one associated funerary object were identified in the collection of the PMOH. On September 10, 2009, the human remains and associated funerary object were transferred from the PMOH to the SVM. The human remains are cremated and bioarchaeological documentation suggests that the human remains are unusual in presentation and more consistent with the practice of 19th and 20th century cremation. The one associated funerary object is a Playas incised jar, a type of ceramic associated with the Jornada Mogollon archaeological culture. However, secondary cremations are not associated with the Jornada Mogollon archaeological culture therefore it is unlikely that the individual is associated with that archaeological culture. There is no other information.

On January 16, 2002, at least one individual and one associated funerary object were identified in the collection of the PMOH. On September 10, 2009, the human remains and associated funerary object were transferred from the PMOH to the SVM. The one associated funerary object is a faunal bone. There is no other information.

Cultural Affiliation

Based on the information available and the results of consultation, cultural affiliation is reasonably identified by the geographical location or acquisition history of the human remains and associated funerary objects described in this notice.

Determinations

The SVM has determined that:

- The human remains described in this notice represent the physical remains of six individuals of Native American ancestry.
- The two objects described in this notice are reasonably believed to have been placed intentionally with or near individual human remains at the time of death or later as part of the death rite or ceremony.
- There is a connection between the human remains and associated funerary objects described in this notice and the Ak-Chin Indian Community; Gila River Indian Community of the Gila River Indian Reservation, Arizona; Salt River Pima-Maricopa Indian Community of the Salt River Reservation, Arizona; and the Tohono O'odham Nation of Arizona.

Requests for Repatriation

Written requests for repatriation of the human remains and associated funerary objects in this notice must be sent to the authorized representative identified in

this notice under **ADDRESSES**. Requests for repatriation may be submitted by:

1. Any one or more of the Indian Tribes or Native Hawaiian organizations identified in this notice.
2. Any lineal descendant, Indian Tribe, or Native Hawaiian organization not identified in this notice who shows, by a preponderance of the evidence, that the requestor is a lineal descendant or an Indian Tribe or Native Hawaiian organization with cultural affiliation.

Repatriation of the human remains and associated funerary objects described in this notice to a requestor may occur on or after April 27, 2026. If competing requests for repatriation are received, the SVM must determine the most appropriate requestor prior to repatriation. Requests for joint repatriation of the human remains and associated funerary objects are considered a single request and not competing requests. The SVM is responsible for sending a copy of this notice to the Indian Tribes and Native Hawaiian organizations identified in this notice and any other consulting parties.

Authority: Native American Graves Protection and Repatriation Act, 25 U.S.C. 3003, and the implementing regulations, 43 CFR 10.10.

Notice of Inventory Completion: Marshall University, Huntington, WV

AGENCY: National Park Service, Interior.

ACTION: Notice.

SUMMARY: In accordance with the Native American Graves Protection and Repatriation Act (NAGPRA), Marshall University has completed an inventory of human remains and associated funerary objects and has determined that there is a cultural affiliation between the human remains and associated funerary objects and Indian Tribes or Native Hawaiian organizations in this notice.

DATES: Repatriation of the human remains and associated funerary objects in this notice may occur on or after April 27, 2026.

ADDRESSES: Send written requests for repatriation of the human remains and associated funerary objects in this notice to Dr. Marion Coe, Marshall University, One John Marshall Drive, Huntington, WV 25755, email coem@marshall.edu.

SUPPLEMENTARY INFORMATION: This notice is published as part of the National Park Service's administrative responsibilities under NAGPRA. The determinations in this notice are the sole responsibility of Marshall University, and additional information on the determinations in this notice, including the results of consultation, can be found in its inventory or related records. The National Park Service is not responsible for the determinations in this notice.

Abstract of Information Available

Human remains representing at least 21 individuals have been identified from the Clover Site (46-CB-40) in Cabell County, WV. The 21 items and lots of associated funerary objects are one lot burned faunal, one lot ceramics, one lot charcoal, one lot charred botanicals, one lot charred wood, one lot copper, one lot corn cob, one lot European ceramics, one lot faunal, one lot fire-cracked rock, one lot ground stone, one lot hematite, one lot iron ore, one lot lithics, one lot (red cedar or juniper), one lot modern ceramic, one lot possible ochre, one lot sandstone, one lot shell, one lot slate, and one lot soil samples. The Clover Site spans multiple archaeological phases of occupation with habitation documented in the early Archaic through the Late Prehistoric. It is best known in the archaeological community for its Fort Ancient component. This Late Prehistoric village site is located on a high flood terrace of the Ohio River, within the Green Bottom Wildlife Management Area. It is designated as a National Historic Landmark for the Fort Ancient Complex component. In 2018, Marshall University described six Ancestors and 53 funerary belongings in an Inventory and Notice of Inventory Completion. At that time this was thought to represent the extent of human remains and cultural items in the possession and control of Marshall University. In 2024, Marshall conducted a campus-wide survey and audit of all cultural collections. In July 2024, housing containing additional Ancestors and funerary belongings from Clover was identified.

Human remains representing at least one individual have been identified from near Point Pleasant in Mason County, WV. The three associated funerary objects are one lot ceramic

fragments, one lot faunal fragments, and one lot shell fragments. During a detailed collections assessment conducted in July 2024, human remains and associated funerary objects were identified in the Biological Sciences Department. A note in the housing dated the Ancestors to 1320 AD.

Human remains representing at least two individuals have been identified from Sycamore Creek near Hurricane, Putnam County, WV. The two associated funerary objects are one burnt pottery fragment and one strap handle sherd fragment. On an unknown date, these individuals and funerary objects were collected by F.M. Riddle.

Human remains representing at least one individual has been identified. No associated funerary objects are present. The individual is from an unknown location in West Virginia.

Human remains representing at least two individuals have been identified. No associated funerary objects are present. No location information is available for these individuals.

Marshall University has no knowledge or record of the presence of any potentially hazardous substances used to treat any of the human remains or associated funerary objects.

Cultural Affiliation

Based on the information available and the results of consultation, cultural affiliation is reasonably identified by the geographical location and acquisition history of the human remains and associated funerary objects described in this notice.

Determinations

Marshall University has determined that:

- The human remains described in this notice represent the physical remains of 27 individuals of Native American ancestry.
- The 26 objects described in this notice are reasonably believed to have been placed intentionally with or near individual human remains at the time of death or later as part of the death rite or ceremony.
- There is a connection between the human remains and associated funerary objects described in this notice and the Absentee-Shawnee Tribe of Indians of Oklahoma; Bay Mills Indian Community, Michigan; Catawba Indian Nation; Cayuga Nation; Cherokee Nation; Chickahominy Indian Tribe—Eastern Division; Chippewa Cree Indians of the Rocky Boy's Reservation, Montana; Delaware Tribe of Indians; Eastern Band of Cherokee Indians; Eastern Shawnee Tribe of Oklahoma; Grand Traverse Band of Ottawa and

Chippewa Indians, Michigan; Kaw Nation, Oklahoma; Keweenaw Bay Indian Community, Michigan; Lac Courte Oreilles Band of Lake Superior Chippewa Indians of Wisconsin; Lac du Flambeau Band of Lake Superior Chippewa Indians of the Lac du Flambeau Reservation of Wisconsin; Little Shell Tribe of Chippewa Indians of Montana; Minnesota Chippewa Tribe, Minnesota (Component reservations: Bois Forte Band (Nett Lake); Fond du Lac Band; Grand Portage Band; Leech Lake Band; White Earth Band); Monacan Indian Nation; Nansemond Indian Nation; Omaha Tribe of Nebraska; Oneida Indian Nation; Oneida Nation; Onondaga Nation; Pamunkey Indian Tribe; Ponca Tribe of Indians of Oklahoma; Ponca Tribe of Nebraska; Red Cliff Band of Lake Superior Chippewa Indians of Wisconsin; Red Lake Band of Chippewa Indians, Minnesota; Saginaw Chippewa Indian Tribe of Michigan; Saint Regis Mohawk Tribe; Sault Ste. Marie Tribe of Chippewa Indians, Michigan; Seneca Nation of Indians; Seneca-Cayuga Nation; Shawnee Tribe; St. Croix Chippewa Indians of Wisconsin; The Osage Nation; Tonawanda Band of Seneca; Tunica-Biloxi Indian Tribe; Turtle Mountain Band of Chippewa Indians of North Dakota; Tuscarora Nation; United Keetoowah Band of Cherokee Indians in Oklahoma; and the Wyandotte Nation.

Requests for Repatriation

Written requests for repatriation of the human remains and associated funerary objects in this notice must be sent to the authorized representative identified in this notice under **ADDRESSES**. Requests for repatriation may be submitted by:

1. Any one or more of the Indian Tribes or Native Hawaiian organizations identified in this notice.
2. Any lineal descendant, Indian Tribe, or Native Hawaiian organization not identified in this notice who shows, by a preponderance of the evidence, that the requestor is a lineal descendant or an Indian Tribe or Native Hawaiian organization with cultural affiliation.

Repatriation of the human remains and associated funerary objects described in this notice to a requestor may occur on or after April 27, 2026. If competing requests for repatriation are received, Marshall University must determine the most appropriate requestor prior to repatriation. Requests for joint repatriation of the human remains and associated funerary objects are considered a single request and not competing requests. Marshall University is responsible for sending a copy of this notice to the Indian Tribes and Native

Hawaiian organizations identified in this notice and any other consulting parties.

Authority: Native American Graves Protection and Repatriation Act, 25 U.S.C. 3003, and the implementing regulations, 43 CFR 10.10.

Dated: March 20, 2026.

Notice of Inventory Completion: Huntington Museum of Art, Huntington, WV

AGENCY: National Park Service, Interior.

ACTION: Notice.

SUMMARY: In accordance with the Native American Graves Protection and Repatriation Act (NAGPRA), the Huntington Museum of Art (HMoA) has completed an inventory of human remains and associated funerary objects and has determined that there is a cultural affiliation between the human remains and associated funerary objects and Indian Tribes or Native Hawaiian organizations in this notice.

DATES: Repatriation of the human remains and associated funerary objects in this notice may occur on or after April 27, 2026.

ADDRESSES: Send written requests for repatriation of the human remains and associated funerary objects in this notice to Liz Simmons, Executive Director, HMoA, 2033 McCoy Road, Huntington, WV 25701, email lsimmons@hmoa.org or nagpra@hmoa.org.

SUPPLEMENTARY INFORMATION: This notice is published as part of the National Park Service's administrative responsibilities under NAGPRA. The determinations in this notice are the sole responsibility of the HMoA, and additional information on the determinations in this notice, including the results of consultation, can be found in its inventory or related records. The National Park Service is not responsible for the determinations in this notice.

Abstract of Information Available

Human remains representing, at least, two individuals have been identified. The 82 associated funerary objects are: one lot antler awls; one lot antler beads;

one antler handle; one lot antler pendants; one lot antler scraper; one lot antler, modified; one lot anvil stones; one lot bird stone; one lot bone (faunal); one lot bone (faunal) awls; one lot bone (faunal) beads; one lot bone (faunal) dowels; one lot bone (faunal) fishhooks; one lot bone (faunal) gorgets; one lot bone (faunal) pendants; one lot bone (faunal) pins; one lot bone (faunal) scrapers; one lot bone (faunal) tinkers; one lot; bone (faunal) whistles; one lot bone (faunal), modified; one lot cannel coal claws/teeth; one cannel coal discoidal; one lot cannel coal pendants; one clay discoidal; one lot clay effigies; one lot clay effigy rattles; one lot clay pipes; one lot copper effigy pendants; one lot copper fragments, modified; one copper gorget; one lot copper pendants; one lot copper tinkers; one lot copper tubes; one lot corn cobs; one flaked glass; one fossil bead; one lot fragmented elk teeth from necklace; one lot geodes; one glass bead; one lot hammerstones; one lot hematite blocks; one lot hematite sinkers; one lot incised (faunal) bones; one incised shell; one lot incised stones; one iron item, modified; one lot lithic flakes; one lot lithic points; one necklace of deer leg bones; one possible chunky stone; one lot pottery sherds; one raw potter's clay; one lot red stone pendants; one lot shaped clay items; one lot shell beads; one lot shell disks; one shell gorget incised with a rattlesnake; one lot shell gorgets; one lot shell hoes; one lot shell pendants; one shell, unmodified; one lot stone adzes; one stone atlatl weight; one lot stone axes; one lot stone beads; one lot stone celts; one lot stone chisels; one lot stone discoidals; one lot stone drills; one lot stone effigies; one stone fishhook; one lot stone gorgets; one lot stone harpoon/spear points; one stone pestle; one lot stone pipes; one lot stone plummets; one lot stone scrapers; one lot stones, modified; one lot teeth (faunal); one lot teeth (faunal) pendants; one lot turtle shells; and one lot whetstones. The human remains (Ancestors) and associated funerary objects (funerary belongings) were removed from the Clover Site (46CB40) in Cabell County, WV. John J. Adams was an avocational archaeologist and charter member of the West Virginia and Ohio Archaeological Societies. Beginning in the 1930s, Adams collected Native American cultural material, Ancestors, and funerary belongings from the Clover Site. Adams reportedly collected primarily from the surface and there is no known documentation of his collecting strategy. A minimum of one Ancestor was donated by Adams to the HMoA in

October 1980. In 1990, during a West Virginia Archaeology interview about the Adams Collection at the HMoA, Thomas Kuhn, Adam's friend and former archaeology faculty member at Marshall University, described a beamer made of human bone collected by Adams from the Clover Site. It is not clear whether the Ancestor mentioned by Kuhn was included in the Adams Collection donated to the HMoA. The Ancestor is considered missing in collection. Glues, polyvinyl acetate, and enamels were potentially used to display and reconstruct some associated funerary objects in the past. Apart from this, HMoA has no knowledge or record of the presence of any potentially hazardous substances used to treat the human remains or associated funerary objects.

Human remains representing, at least, two individuals have been identified. The 35 associated funerary objects are: one beaded article of leather clothing (missing); one beaded leather moccasin (missing); one boat stone; one lot bone (faunal) beads; one bone (faunal) spearhead; one canine (faunal); one clay effigy; one clay pipe shaft; one copper spearhead; one coral fossil; one drilled shell, possibly a mask; one effigy gorget incised with owl, turtles, and tipi; one four-legged clay bowl; one lot gorgets; one lot hammerstones; one lot lithic flakes; one lot lithic points; one oval nut stone; one lot plummet stones; one lot pottery sherds; one lot stone adzes; one stone axe with wood handle; one lot stone axes; one lot stone celts; one lot stone discoidals; one lot stone drills; one stone effigy; one lot stone pendants; one lot stone pestles; one lot stone pipes; one lot stone scrapers; one lot stones, modified; one wood bow (missing); one wooden handle; and one worked leather strap. On an unknown date, the human remains (Ancestors) and associated funerary objects (funerary belongings) were removed from the Ceredo region, Wayne County, West Virginia. In the late 1800's to early 1900's, the Hord and Stark families owned railway, timber, and mineral claims in the Ceredo region. It is thought the Ancestors and funerary belongings were collected by members of the Hord and Stark families during industry-led excavations in the Ceredo region. Mr. and Mrs. Pitt Stark donated the Ancestors and funerary belongings to the HMoA on May 28, 1970. An undamaged Hanes Excelsior Civil War Grenade was originally stored in the same box as one of the individuals. While the grenade is inactive and was moved to isolation, it may be a source of residue contamination. Additionally,

glues, polyvinyl acetate, and enamels were potentially used to display and reconstruct some associated funerary objects in the past. Apart from this, HMoA has no knowledge or record of any additional potentially hazardous substances being used to treat the human remains or associated funerary objects.

Human remains representing, at least, one individual have been identified. No associated funerary objects are present. On an unknown date, human remains (Ancestor) were removed from an unknown location. On an unknown date, the Ancestor was transferred to the HMoA by an unknown individual. On August 29, 1988, the HMoA filled out an American Association of Museums Collections Survey documenting the presence of the Ancestor. Based on the acquisition history of the HMoA Native American Collection, it is possible the Ancestor was removed from West Virginia. The Ancestor is missing in collection. HMoA has no knowledge or record of the presence of any potentially hazardous substances used to treat the human remains.

Cultural Affiliation

Based on the information available and the results of consultation, cultural affiliation is reasonably identified by the geographical location and acquisition history of the human remains and associated funerary objects described in this notice.

Determinations

The HMoA has determined that:

- The human remains described in this notice represent the physical remains of five individuals of Native American ancestry.
- The 117 objects described in this notice are reasonably believed to have been placed intentionally with or near individual human remains at the time of death or later as part of the death rite or ceremony.
- There is a connection between the human remains and associated funerary objects described in this notice and the Absentee-Shawnee Tribe of Indians of Oklahoma; Bay Mills Indian Community, Michigan; Catawba Indian Nation; Cayuga Nation; Cherokee Nation; Chickahominy Indian Tribe—Eastern Division; Chippewa Cree Indians of the Rocky Boy's Reservation, Montana; Delaware Tribe of Indians; Eastern Band of Cherokee Indians; Eastern Shawnee Tribe of Oklahoma; Grand Traverse Band of Ottawa and Chippewa Indians, Michigan; Kaw Nation, Oklahoma; Keweenaw Bay Indian Community, Michigan; Lac Courte Oreilles Band of Lake Superior

Chippewa Indians of Wisconsin; Lac du Flambeau Band of Lake Superior Chippewa Indians of the Lac du Flambeau Reservation of Wisconsin; Little Shell Tribe of Chippewa Indians of Montana; Minnesota Chippewa Tribe, Minnesota (Component reservations: Bois Forte Band (Nett Lake); Fond du Lac Band; Grand Portage Band; Leech Lake Band; White Earth Band); Monacan Indian Nation; Nansemond Indian Nation; Omaha Tribe of Nebraska; Oneida Indian Nation; Oneida Nation; Onondaga Nation; Pamunkey Indian Tribe; Ponca Tribe of Indians of Oklahoma; Ponca Tribe of Nebraska; Red Cliff Band of Lake Superior Chippewa Indians of Wisconsin; Red Lake Band of Chippewa Indians, Minnesota; Saginaw Chippewa Indian Tribe of Michigan; Saint Regis Mohawk Tribe; Sault Ste. Marie Tribe of Chippewa Indians, Michigan; Seneca Nation of Indians; Seneca-Cayuga Nation; Shawnee Tribe; St. Croix Chippewa Indians of Wisconsin; The Osage Nation; Tonawanda Band of Seneca; Tunica-Biloxi Indian Tribe; Turtle Mountain Band of Chippewa Indians of North Dakota; Tuscarora Nation; United Keetoowah Band of Cherokee Indians in Oklahoma; and the Wyandotte Nation.

Requests for Repatriation

Written requests for repatriation of the human remains and associated funerary objects in this notice must be sent to the authorized representative identified in this notice under **ADDRESSES**. Requests for repatriation may be submitted by:

1. Any one or more of the Indian Tribes or Native Hawaiian organizations identified in this notice.
2. Any lineal descendant, Indian Tribe, or Native Hawaiian organization not identified in this notice who shows, by a preponderance of the evidence, that the requestor is a lineal descendant or an Indian Tribe or Native Hawaiian organization with cultural affiliation.

Repatriation of the human remains and associated funerary objects described in this notice to a requestor may occur on or after April 27, 2026. If competing requests for repatriation are received, the HMoA must determine the most appropriate requestor prior to repatriation. Requests for joint repatriation of the human remains and associated funerary objects are considered a single request and not competing requests. The HMoA is responsible for sending a copy of this notice to the Indian Tribes and Native Hawaiian organizations identified in this notice and any other consulting parties.

Authority: Native American Graves Protection and Repatriation Act, 25 U.S.C. 3003, and the implementing regulations, 43 CFR 10.10.

Notice of Inventory Completion: California State University, Chico, Chico, CA

AGENCY: National Park Service, Interior.

ACTION: Notice.

SUMMARY: In accordance with the Native American Graves Protection and Repatriation Act (NAGPRA), California State University, Chico (Chico State) has completed an inventory of associated funerary objects and has determined that there is a cultural affiliation between the associated funerary objects and Indian Tribes or Native Hawaiian organizations in this notice.

DATES: Repatriation of the associated funerary objects in this notice may occur on or after April 27, 2026.

ADDRESSES: Send written requests for repatriation of the associated funerary objects in this notice to Michelle Hansen, Chico State, 400 West First Street, Chico, CA 95929, email mcampbell19@csuchico.edu.

SUPPLEMENTARY INFORMATION: This notice is published as part of the National Park Service's administrative responsibilities under NAGPRA. The determinations in this notice are the sole responsibility of Chico State, and additional information on the determinations in this notice, including the results of consultation, can be found in its inventory or related records. The National Park Service is not responsible for the determinations in this notice.

Abstract of Information Available

The two associated funerary objects are one lot of modified obsidian pieces and one lot of shells. The associated funerary objects originate from Siskiyou County. The associated funerary objects were located with human remains also originating from Siskiyou County who were previously determined to be of the Karuk Tribe and currently being repatriated.

The University is unaware of any treatment of the associated funerary objects listed above with pesticides, preservatives, or other substances that represent a potential hazard to the objects or to persons handling the objects.

Cultural Affiliation

Based on the information available and the results of consultation, cultural affiliation is reasonably identified by the geographical location or acquisition history of the associated funerary objects described in this notice.

Determinations

Chico State has determined that:

- The two lots of objects described in this notice are reasonably believed to have been placed intentionally with or near individual human remains at the time of death or later as part of the death rite or ceremony.
- There is a connection between the associated funerary objects described in this notice and the Karuk Tribe.

Requests for Repatriation

Written requests for repatriation of the associated funerary objects in this notice must be sent to the authorized representative identified in this notice under **ADDRESSES**. Requests for repatriation may be submitted by:

1. Any one or more of the Indian Tribes or Native Hawaiian organizations identified in this notice.
2. Any lineal descendant, Indian Tribe, or Native Hawaiian organization not identified in this notice who shows, by a preponderance of the evidence, that the requestor is a lineal descendant or an Indian Tribe or Native Hawaiian organization with cultural affiliation.

Repatriation of the associated funerary objects described in this notice to a requestor may occur on or after April 27, 2026. If competing requests for repatriation are received, Chico State must determine the most appropriate requestor prior to repatriation. Requests for joint repatriation of the associated funerary objects are considered a single request and not competing requests. Chico State is responsible for sending a copy of this notice to the Indian Tribes and Native Hawaiian organizations identified in this notice and any other consulting parties.

Authority: Native American Graves Protection and Repatriation Act, 25 U.S.C. 3003, and the implementing regulations, 43 CFR 10.10.

Dated: March 20, 2026.

INTERNATIONAL TRADE COMMISSION

[Investigation No. 337-TA-563; Investigation No. 337-TA-763; Investigation No. 337-TA-975; Investigation No. 337-TA-977; Investigation No. 337-TA-1256]

Certain Portable Power Stations and Packaging Therefor; Certain Radio Control Hobby Transmitters and Receivers and Products Containing Same; Certain Computer Cables, Chargers, Adapters, Peripheral Devices and Packaging Containing the Same; Certain Arrowheads with Deploying Blades and Components Thereof; Certain Portable Battery Jump Starters and Components Thereof; Notice of Request for Written Submissions on Whether Certain Commission Exclusion Orders Should Be Modified or Rescinded, in Whole or in Part, Based on Changed Conditions of Fact or Law or the Public Interest

AGENCY: U.S. International Trade Commission.

ACTION: Notice.

SUMMARY: Notice is hereby given that the U.S. International Trade Commission ("Commission") is requesting submissions on whether the exclusion orders issued in the above-captioned Commission investigations should be modified or rescinded, in whole or in part, based on changed conditions of fact or law, or the public interest.

FOR FURTHER INFORMATION CONTACT:

Edward S. Jou, Esq., Office of the General Counsel, U.S. International Trade Commission, 500 E Street SW, Washington, DC 20436, telephone (202) 205-3316. Copies of non-confidential documents filed in connection with this investigation may be viewed on the Commission's electronic docket (EDIS) at <https://edis.usitc.gov>. For help accessing EDIS, please email EDIS3Help@usitc.gov. General information concerning the Commission may also be obtained by accessing its internet server at <https://www.usitc.gov>. Hearing-impaired persons are advised that information on this matter can be obtained by contacting the Commission's TDD terminal on (202) 205-1810.

SUPPLEMENTARY INFORMATION: The Commission issued exclusion orders in each of the following investigations based on complaints alleging violations of section 337 of the Tariff Act of 1930, as amended, 19 U.S.C. 1337 ("section 337"), by reason of trademark infringement, as well as patent infringement and/or copyright infringement in certain investigations:

Certain Portable Power Stations and Packaging Therefor, Inv. No. 337-TA-563, Limited Exclusion Order (Trademark, Copyright, and Patent) (Nov. 6, 2006); *Certain Radio Control Hobby Transmitters and Receivers and Products Containing Same*, Inv. No. 337-TA-763, Limited Exclusion Order (Trademark, Copyright, and Patent) (Sept. 27, 2011); *Certain Computer Cables, Chargers, Adapters, Peripheral Devices and Packaging Containing the Same*, Inv. No. 337-TA-975, Limited Exclusion Order (Trademark Only) (Oct. 13, 2016); *Certain Arrowheads with Deploying Blades and Components Thereof*, Inv. No. 337-TA-977, General Exclusion Order (Trademark and Patent) (Apr. 6, 2017); *Certain Portable Battery Jump Starters and Components Thereof*, Inv. No. 337-TA-1256, Limited Exclusion Order (Trademark Only) (Aug. 29, 2022). Each exclusion order requires that the complainant(s) in the investigation make annual filings with the Commission stating, *inter alia*, whether they continue to use the trademarks listed in the exclusion orders in commerce.

In each of these investigations, the complainants have recently failed to comply with the annual filing requirement, and the Commission has notified the respective complainants of their non-compliance but received no response from any complainant. In addition, in Inv. No. 337-TA-563 the asserted patent appears to have expired, and the asserted trademark has been canceled by the U.S. Patent and Trademark Office due to a failure to file a declaration of continued use. *See* U.S. Trademark Registration No. 2,594,538, Canceled/Expired (USPTO Trademark Status & Document Retrieval, Feb. 22, 2013).

The Commission is therefore requesting submissions from the public, including the current owners of the trademarks at issue, on whether these exclusion orders should be modified or rescinded under 19 U.S.C. 1337(k) and 19 CFR 210.76, in whole or in part, to account for any trademarks that have been abandoned, cancelled, or rendered invalid or unenforceable. The Commission notes that some of the exclusion orders also cover copyrights and patents. Accordingly, the Commission is also requesting submissions from the public, including the parties to the investigations, the current owners of the copyrights and patents named in the orders, or successors-in-interest, interested government agencies, and any other interested parties on whether these exclusion orders should be modified or rescinded, in whole or in part, based on

changed conditions of fact or law, or based on the public interest, pursuant to 19 U.S.C. 1337(k) and 19 CFR 210.76.

The public interest factors that will be considered by the Commission in determining whether to rescind the exclusion orders are the following: (1) the public health and welfare, (2) competitive conditions in the U.S. economy, (3) U.S. production of articles that are like or directly competitive with those that are subject to investigation, and (4) U.S. consumers.

Written Submissions: The parties to the investigations, the current trademark holders, copyright holders, and/or patent holders or successors-in-interest, interested government agencies, and any other interested parties are encouraged to file written submissions on whether the Commission should rescind the exclusion orders at issue, in whole or in part, based on changed conditions of fact or law or the public interest. The written submissions must be filed no later than close of business on May 26, 2026. Reply submissions must be filed no later than the close of business on June 26, 2026. No further submissions on any of these issues will be permitted unless otherwise ordered by the Commission.

Persons filing written submissions must file the original document electronically on or before the deadlines stated above pursuant to 19 CFR 210.4(f). Submissions should refer to the relevant investigation number (Inv. No. 337-TA-563, 763, 975, 977, or 1256) in a prominent place on the cover page and/or the first page. (See Handbook for Electronic Filing Procedures, https://www.usitc.gov/documents/handbook_on_filing_procedures.pdf). Persons with questions regarding filing should contact the Secretary, (202) 205-2000.

Any person desiring to submit a document to the Commission in confidence must request confidential treatment by marking each document with a header indicating that the document contains confidential information. This marking will be deemed to satisfy the request procedure set forth in Rules 201.6(b) and 210.5(e)(2) (19 CFR 201.6(b) & 210.5(e)(2)). Documents for which confidential treatment by the Commission is properly sought will be treated accordingly. Any non-party wishing to submit comments containing confidential information must serve those comments on the parties to the investigation pursuant to the applicable Administrative Protective Order. A redacted non-confidential version of the document must also be filed with the Commission and served on any parties to the investigation within two business

days of any confidential filing. All information, including confidential business information and documents for which confidential treatment is properly sought, submitted to the Commission for purposes of this investigation may be disclosed to and used: (i) by the Commission, its employees and Offices, and contract personnel (a) for developing or maintaining the records of this or a related proceeding, or (b) in internal investigations, audits, reviews, and evaluations relating to the programs, personnel, and operations of the Commission including under 5 U.S.C. Appendix 3; or (ii) by U.S. government employees and contract personnel, solely for cybersecurity purposes. All contract personnel will sign appropriate nondisclosure agreements. All nonconfidential written submissions will be available for public inspection on EDIS.

The Commission vote for this determination took place on March 24, 2026.

The authority for the Commission's determination is contained in section 337 of the Tariff Act of 1930, as amended (19 U.S.C. 1337), and in Part 210 of the Commission's Rules of Practice and Procedure (19 CFR part 210).

By order of the Commission.

Issued: March 24, 2026.

Lisa Barton,

Secretary to the Commission.

[FR Doc. 2026-05950 Filed 3-26-26; 8:45 am]

BILLING CODE 7020-02-P

INTERNATIONAL TRADE COMMISSION

[Investigation Nos. 731-TA-1229-1230 (Second Review)]

Monosodium Glutamate From China and Indonesia; Scheduling of Expedited Five-Year Reviews

AGENCY: United States International Trade Commission.

ACTION: Notice.

SUMMARY: The Commission hereby gives notice of the scheduling of expedited reviews pursuant to the Tariff Act of 1930 ("the Act") to determine whether revocation of the antidumping duty orders on monosodium glutamate from China and Indonesia would be likely to lead to continuation or recurrence of material injury within a reasonably foreseeable time.

DATES: February 23, 2026.

FOR FURTHER INFORMATION CONTACT: Rachel Devenney (202-205-3172), Office of Investigations, U.S.

International Trade Commission, 500 E Street SW, Washington, DC 20436. Hearing-impaired persons can obtain information on this matter by contacting the Commission's TDD terminal on 202-205-1810. Persons with mobility impairments who will need special assistance in gaining access to the Commission should contact the Office of the Secretary at 202-205-2000. General information concerning the Commission may also be obtained by accessing its internet server (<https://www.usitc.gov>). The public record for this proceeding may be viewed on the Commission's electronic docket (EDIS) at <https://edis.usitc.gov>.

SUPPLEMENTARY INFORMATION:

Background.—On February 23, 2026, the Commission determined that the domestic interested party group response to its notice of institution (90 FR 47334, October 1, 2025) of the subject five-year reviews was adequate and that the respondent interested party group response was inadequate. The Commission did not find any other circumstances that would warrant conducting full reviews.¹ Accordingly, the Commission determined that it would conduct expedited reviews pursuant to section 751(c)(3) of the Act (19 U.S.C. 1675(c)(3)).

For further information concerning the conduct of these reviews and rules of general application, consult the Commission's Rules of Practice and Procedure, part 201, subparts A and B (19 CFR part 201), and part 207, subparts A, D, E, and F (19 CFR part 207).

Staff report.—A staff report containing information concerning the subject matter of the reviews has been placed in the nonpublic record, and will be made available to persons on the Administrative Protective Order service list for these reviews on April 1, 2026. A public version will be issued thereafter, pursuant to § 207.62(d)(4) of the Commission's rules.

Written submissions.—As provided in § 207.62(d) of the Commission's rules, interested parties that are parties to the reviews and that have provided individually adequate responses to the notice of institution,² and any party other than an interested party to the reviews may file written comments with

¹ A record of the Commissioners' votes, the Commission's statement on adequacy, and any individual Commissioner's statements will be available from the Office of the Secretary and at the Commission's website.

² The Commission has found the response submitted on behalf of Ajinomoto Health & Nutrition North America, Inc. to be individually adequate. Comments from other interested parties will not be accepted (see 19 CFR 207.62(d)(2)).

the Secretary on what determination the Commission should reach in the reviews. Comments are due on or before 5:15 p.m. on April 8, 2026 and may not contain new factual information. Any person that is neither a party to the five-year reviews nor an interested party may submit a brief written statement (which shall not contain any new factual information) pertinent to the reviews by April 8, 2026. However, should the Department of Commerce ("Commerce") extend the time limit for its completion of the final results of its reviews, the deadline for comments (which may not contain new factual information) on Commerce's final results is three business days after the issuance of Commerce's results. If comments contain business proprietary information (BPI), they must conform with the requirements of §§ 201.6, 207.3, and 207.7 of the Commission's rules. The Commission's *Handbook on Filing Procedures*, available on the Commission's website at https://www.usitc.gov/documents/handbook_on_filing_procedures.pdf, elaborates upon the Commission's procedures with respect to filings.

In accordance with §§ 201.16(c) and 207.3 of the rules, each document filed by a party to the reviews must be served on all other parties to the reviews (as identified by either the public or BPI service list), and a certificate of service must be timely filed. The Secretary will not accept a document for filing without a certificate of service.

Determination.—The Commission has determined these reviews are extraordinarily complicated and therefore has determined to exercise its authority to extend the review period by up to 90 days pursuant to 19 U.S.C. 1675(c)(5)(B).

Authority: These reviews are being conducted under authority of title VII of the Tariff Act of 1930; this notice is published pursuant to § 207.62 of the Commission's rules.

By order of the Commission.

Issued: March 24, 2026.

Lisa Barton,

Secretary to the Commission.

BILLING CODE 7020-02-P

NATIONAL SCIENCE FOUNDATION

Agency Information Collection Activities: Comment Request; Grantee Reporting Requirements for the Industry-University Cooperative Research Centers (IUCRC) Program

AGENCY: National Science Foundation.

ACTION: Notice.

SUMMARY: The National Science Foundation (NSF) is announcing plans to renew this collection. In accordance with the requirements of the Paperwork Reduction Act of 1995, we are providing opportunity for public comment on this action. After obtaining and considering public comment, NSF will prepare the submission requesting Office of Management and Budget (OMB) clearance of this collection for no longer than 3 years.

DATES: Written comments on this notice must be received by May 26, 2026 to be assured consideration. Comments received after that date will be considered to the extent practicable. Send comments to address below.

FOR FURTHER INFORMATION CONTACT: Suzanne H. Plimpton, Reports Clearance Officer, National Science Foundation, Randolph Building, 401 Dulaney Street, Alexandria, Virginia 22314; telephone (703) 292-7556; or send email to splimpto@nsf.gov. Individuals who use a telecommunications device for the deaf (TDD) may call the Federal Information Relay Service (FIRS) at 1-800-877-8339, which is accessible 24 hours a day, 7 days a week, 365 days a year (including Federal holidays).

SUPPLEMENTARY INFORMATION:

Title of Collection: Grantee Reporting Requirements for the Industry-University Cooperative Research Centers (IUCRC) Program.

OMB Number: 3145-0088.

Expiration Date of Approval: June 30, 2026.

Type of Request: Revision to and extension of approval of an information collection.

Proposed Project

The IUCRC program provides a structure for academic researchers to conduct fundamental, pre-competitive research of shared interest to industry and government organizations. These organizations pay membership fees to a consortium so that they can collectively envision and fund research, with at least 90% of Member funds allocated to the direct costs of these shared research projects.

IUCRCs are formed around research areas of strategic interest to U.S. industry. Industry is defined very broadly to include companies (large and small), startups and non-profit organizations. Principal Investigators form a Center around emerging research topics of current research interest, in a pre-competitive space but with clear pathways to applied research and commercial development. Industry

partners join at inception, as an existing Center grows, or they inspire the creation of a new Center by recruiting university partners to leverage NSF support. Government agencies participate in IUCRCs as Members or by partnering directly with NSF at the strategic level.

Universities, academic researchers, and students benefit from IUCRC participation through the research funding, the establishment and growth of industry partnerships, and educational and career placement opportunities for students. Industry Members benefit by accessing knowledge, facilities, equipment, and intellectual property in a highly cost-efficient model; leveraging Center research outcomes in their future proprietary projects; interacting in an informal, collaborative way with other private sector and government entities with shared interests; and identifying and recruiting talent. NSF provides funding to support Center administrative costs and a governance framework to manage membership, operations, and evaluation.

Sites within Centers will be required to provide data to NSF and/or its authorized representatives (contractors and/or grantees) annually—after the award expires for their fiscal year of activity.

Information collected are both quantitative and descriptive; they will provide cognizant Program Directors a means to monitor the operational and financial states of the Centers and ensure that the award is in good standing. These data will also allow NSF to assess the Centers in terms of intellectual, broader, and commercial impacts that are core to NSF's review criteria. Finally, in compliance with the Evidence Act of 2019, information collected will be used in satisfying congressional requests, and supporting the agency's policymaking and reporting needs.

In addition to the agency's annual report requirement, Principal Investigators (IUCRC Center and Site Directors) of the awards are required to provide the following information:

Center-related Information:

- Center Data Reporting
 - A comprehensive annual survey collecting information on structure, funding, membership, personnel, and outcomes of the Center during a given reporting period. A Center must submit data for each fiscal year no later than September 30 of each year of operation, as well as after the award expires to describe its final year of activity.

- Certification of Membership

○ A list of members and membership fees collected by the Center and certified by the respective university's Sponsored Research Office (SRO), Total Program Income collected during the reporting period, In-kind Contributions during the reporting period, Allocation and Expenditures of each Site's research funds by project.

- Site Research Projects Summary
 - A list of all projects in which the Site participated, including each project's goals; research tasks; key milestones, metrics/deliverables; developing results or outcomes; project budgets; and personnel.
- Assessment Coordinator Report
 - An independent assessment of the annual Center activities (this report is done by an independent evaluator, and uploaded by the Principal Investigator as part of the NSF annual reporting requirement).

Logistical Information:

- IUCRC Directory
 - IUCRCs must provide accurate and current information for the online IUCRC directory. The IUCRC program helps awardees to get their information updated on the website.

Optional:

- IUCRC Impact Stories for Public Distribution

IUCRCs are highly encouraged to submit information on their emerging research highlights and significant breakthrough stories to NSF to showcase their impact to the public and industry (see <https://iucrc.nsf.gov/centers/achievements/>) including new products, technology creation and/or enhancements, intellectual property of significant commercial relevance, and major improvements in cost-savings, efficiency, sustainability, productivity, and job growth.

Not only do these data provide valuable information on program activities, products, outcomes, and impact, they also help to paint a detailed longitudinal view of the program, provide insights for benchmarking individual Center performance, advancing industry-university engagement approaches, strengthening future workforce, and contributing to the Nation's research and technology ecosystem.

Use of the Information: The information collected is for internal use by NSF, sharing with the U.S. public, responding to congressional requests, and for program evaluation and assessment. Survey data is collected and published at <https://iucrcstats.org>, made possible through NSF grant award 2410788.

Estimate Burden on the Public: Estimated at 16 hours per award for 230 sites for a total of 3,680 hours (per year).

Respondents: IUCRC Awardees (Academic Institutions).

Estimated Number of Respondents: One from each IUCRC site (estimated: 230 active sites).

Comments: Comments are invited on (a) whether the proposed collection of information is necessary for the proper performance of the functions of the Agency, including whether the information shall have practical utility; (b) the accuracy of the Agency's estimate of the burden of the proposed collection of information; (c) ways to enhance the quality, utility, and clarity of the information on respondents, including through the use of automated collection techniques or other forms of information technology; and (d) ways to minimize the burden of the collection of information on those who are to respond, including through the use of appropriate automated, electronic, mechanical, or other technological collection techniques or other forms of information technology.

Dated: March 25, 2026.

Suzanne H. Plimpton,

Reports Clearance Officer, National Science Foundation.

BILLING CODE 7555-01-P

NUCLEAR REGULATORY COMMISSION

[Docket No. 70-7033; CEQ ID EISX-429-00-000-1754990851; NRC-2025-1007]

Global Laser Enrichment, LLC; Paducah Laser Enrichment Facility; Draft Environmental Impact Statement

AGENCY: Nuclear Regulatory Commission.

ACTION: Notice; request for comment.

SUMMARY: The U.S. Nuclear Regulatory Commission (NRC) is issuing for public comment a draft Environmental Impact Statement (EIS) regarding a license application from Global Laser Enrichment, LLC (GLE) to construct and operate the Paducah Laser Enrichment Facility (PLEF). The draft EIS evaluates the environmental impacts of the proposed action of issuing a license that would authorize GLE to construct and operate a uranium enrichment facility on a 322-acre site located in McCracken County, Kentucky, approximately 5 miles west of Paducah. The environmental impacts of the no-action alternative (*i.e.*, denying the license application) are also evaluated.

DATES: Members of the public are invited to submit comments by May 11, 2026. Comments received after that date will be considered if it is practical to do so, but the NRC is able to ensure consideration only for comments received on or before that date.

ADDRESSES: You may submit comments by any of the following methods; however, the NRC encourages electronic comment submission through the Federal rulemaking website:

- *Federal Rulemaking Website:* Go to <https://www.regulations.gov> and search for Docket ID NRC-2025-1007. Address questions about Docket IDs in *Regulations.gov* to Bridget Curran; telephone: 301-415-1003; email: Bridget.Curran@nrc.gov. For technical questions, contact the individual listed in the **FOR FURTHER INFORMATION**

CONTACT section of this document.

- *Email:* Comments may be submitted to the NRC electronically using the email address GLE-PLEF-EIS@nrc.gov.

- *Mail comments to:* Office of Administration, Mail Stop: TWFN-5-A85, U.S. Nuclear Regulatory Commission, Washington, DC 20555-0001, ATTN: Program Management, Announcements and Editing Staff.

For additional direction on obtaining information and submitting comments, see "Obtaining Information and Submitting Comments" in the **SUPPLEMENTARY INFORMATION** section of this document.

FOR FURTHER INFORMATION CONTACT:

Amy Minor, Office of Nuclear Material Safety and Safeguards, U.S. Nuclear Regulatory Commission, Washington, DC 20555-0001; telephone: 817-200-1454; email: Amy.Minor@nrc.gov.

SUPPLEMENTARY INFORMATION:

I. Obtaining Information and Submitting Comments

A. Obtaining Information

Please refer to Docket ID NRC-2025-1007 when contacting the NRC about the availability of information regarding this document. You may obtain publicly available information related to this action using any of the following methods:

- *Federal Rulemaking Website:* Go to <https://www.regulations.gov> and search for Docket ID NRC-2025-1007.
- *NRC's Agencywide Documents Access and Management System (ADAMS):* You may obtain publicly available documents online in the ADAMS Public Documents collection at <https://www.nrc.gov/reading-rm/adams.html>. To begin the search, select "Begin ADAMS Public Search." For problems with ADAMS, please contact the NRC's Public Document Room (PDR)

reference staff at 1-800-397-4209, at 301-415-4737, or by email to PDR.Resource@nrc.gov. The draft EIS is available in ADAMS under Accession No. ML26061A085.

- **NRC's PDR:** The PDR, where you may examine and order copies of publicly available documents, is open by appointment. To make an appointment to visit the PDR, please send an email to PDR.Resource@nrc.gov or call 1-800-397-4209 or 301-415-4737, between 8 a.m. and 4 p.m. eastern time (ET), Monday through Friday, except Federal holidays.

- **Public Library:** A copy of the draft EIS will be available for public review at the McCracken County Public Library, 555 Washington St., Paducah, KY 42003.

B. Submitting Comments

The NRC encourages electronic comment submission through the Federal Rulemaking website (<https://www.regulations.gov>). Please include Docket ID NRC-2025-1007 in your comment submission.

The NRC cautions you not to include identifying or contact information that you do not want to be publicly disclosed in your comment submission. The NRC will post all comment submissions at <https://www.regulations.gov> as well as enter the comment submissions into ADAMS. The NRC does not routinely edit comment submissions to remove identifying or contact information.

If you are requesting or aggregating comments from other persons for submission to the NRC, then you should inform those persons not to include identifying or contact information that they do not want to be publicly disclosed in their comment submission. Your request should state that the NRC does not routinely edit comment submissions to remove such information before making the comment submissions available to the public or entering the comment into ADAMS.

II. Discussion

The NRC has prepared a draft EIS as part of its environmental review of GLE's application for a license to construct and operate a uranium enrichment facility on a 322-acre greenfield site in McCracken County, Kentucky. This draft EIS assesses the potential environmental impacts of the GLE license application and the associated proposal to construct, operate, and decommission the enrichment facility, as well as the no-action alternative to the proposed action (*i.e.*, denying the license application).

The proposed Federal action is the issuance of a license that would authorize GLE to receive title to, own, acquire, receive, possess, use, transfer, and/or deliver source material, special nuclear material, and byproduct material as specified in the license for the purposes of constructing, and then operating for up to 40 years, a facility that uses laser-based isotope separation technology to enrich uranium. The facility would be authorized to re-enrich depleted uranium hexafluoride (DUF₆) tails to natural levels and enrich natural-grade UF₆ up to 8 percent uranium-235 (U-235) by weight.

The draft EIS contains the NRC staff's preliminary analysis of the environmental impacts of the proposed action and the no-action alternative to the proposed action. The draft EIS also contains the NRC staff's preliminary recommendation on the proposed action, which is based on the following factors:

- The NRC staff's review of GLE's environmental report (included as part of the GLE license application) and associated responses from GLE to requests from the NRC staff for clarifying information;
- The NRC staff's review of comments received as part of the scoping process;
- The NRC staff's communications with Federal, State, and local agencies, as well as Tribal officials; and
- The NRC staff's independent environmental review.

The NRC staff's preliminary recommendation, unless safety issues mandate otherwise, is that the NRC issue the license to construct and operate the proposed enrichment facility to GLE.

Dated: March 24, 2026.

For the Nuclear Regulatory Commission.

Robert Sun,

Chief, Environmental Project Management Branch 2, Division of Rulemaking, Environmental, and Financial Support, Office of Nuclear Material Safety, and Safeguards.

BILLING CODE 7590-01-P

NUCLEAR REGULATORY COMMISSION

[NRC-2026-0001]

Sunshine Act Meetings

TIME AND DATE: Week of March 23, 2026.

PLACE: Via Teleconference.

STATUS: Open.

MATTERS TO BE CONSIDERED:

Week of March 23, 2026

Wednesday, March 25, 2026.

3:30 p.m. Affirmation Session (Public Meeting) (Tentative)

(a) **Final Rule:** Categorical Exclusions from Environmental Review (Tentative)

(b) **Final Rule:** Risk-Informed, Technology-Inclusive Regulatory Framework for Advanced Reactors (Tentative) (Contact: Wesley Held: 301-287-3591)

ADDITIONAL INFORMATION: By a vote of 5-0 on March 25, 2026, the Commission determined pursuant to 5 U.S.C. 552b(e)(1) and 10 CFR 9.107 that this item be affirmed with less than one week notice to the public. The item will be affirmed in the meeting being held on March 25, 2026. The public is invited to attend the Commission's meeting live; via teleconference. Details for joining the teleconference in listen only mode can be found at <https://www.nrc.gov/pmns/mtg>.

CONTACT PERSON FOR MORE INFORMATION:

For more information or to verify the status of meetings, contact Wesley Held at 301-287-3591 or via email at Wesley.Held@nrc.gov. The schedule for Commission meetings is subject to change on short notice.

The NRC Commission Meeting Schedule can be found on the internet at: <https://www.nrc.gov/public-involve/public-meetings/schedule.html>.

The NRC provides reasonable accommodation to individuals with disabilities where appropriate. If you need a reasonable accommodation to participate in these public meetings or need this meeting notice or the transcript or other information from the public meetings in another format (*e.g.*, braille, large print), please contact the Reasonable Accommodations Resource by email at Reasonable_Accommodations.Resource@nrc.gov. Determinations on requests for reasonable accommodation will be made on a case-by-case basis.

Members of the public may request to receive this information electronically. If you would like to be added to the distribution, please contact the Nuclear Regulatory Commission, Office of the Secretary, Washington, DC 20555, at 301-415-1969, or by email at Betty.Thweatt@nrc.gov or Samantha.Miklaszewski@nrc.gov.

The NRC is holding the meetings under the authority of the Government in the Sunshine Act, 5 U.S.C. 552b.

Dated: March 25, 2026.

SECURITIES AND EXCHANGE COMMISSION

[Release No. 34-105071; File No. SR-NYSEAMER-2026-22]

Self-Regulatory Organizations; NYSE American LLC; Notice of Filing and Immediate Effectiveness of a Proposed Rule Change To Adopt a New Methodology for Assessment and Collection of the Options Regulatory Fee (ORF)

March 24, 2026.

Pursuant to Section 19(b)(1)¹ of the Securities Exchange Act of 1934 (the “Act”),² and Rule 19b-4 thereunder,³ notice is hereby given that on March 16, 2026, NYSE American LLC (“NYSE American” or the “Exchange”) filed with the Securities and Exchange Commission (the “Commission”) a proposed rule change as described in Items I and II below, which Items have been prepared by the Exchange. The Commission is publishing this notice to solicit comments on the proposed rule change from interested persons.

I. Self-Regulatory Organization’s Statement of the Terms of Substance of the Proposed Rule Change

The Exchange proposes to amend the NYSE American Options Fee Schedule (“Fee Schedule”) regarding the Options Regulatory Fee (“ORF”). The proposed rule change is available on the Exchange’s website at www.nyse.com and at the principal office of the Exchange.

II. Self-Regulatory Organization’s Statement of the Purpose of, and Statutory Basis for, the Proposed Rule Change

In its filing with the Commission, the self-regulatory organization included statements concerning the purpose of, and basis for, the proposed rule change and discussed any comments it received on the proposed rule change. The text of those statements may be examined at the places specified in Item IV below. The Exchange has prepared summaries, set forth in sections A, B, and C below, of the most significant parts of such statements.

A. Self-Regulatory Organization’s Statement of the Purpose of, and the Statutory Basis for, the Proposed Rule Change

1. Purpose

The Exchange proposes to amend the Fee Schedule⁴ to amend its methodology of assessment and collection of the ORF to assess ORF only for options transactions that occur on the Exchange and that are cleared in the Customer range at The Options Clearing Corporation (“OCC”), in alignment with new ORF methodology proposed by other options exchanges.⁵ Consistent with that methodology, the Exchange intends to collect ORF under its current methodology until at least June 30, 2026. The Exchange is prepared to implement the new ORF methodology, as proposed in this filing, effective July 1, 2026, provided that all U.S. options exchanges charging an ORF have filed to modify their current methodologies of assessing ORF to limit the fee to transactions occurring on their respective exchange by April 1, 2026.⁶ If all other options exchanges have not filed to adopt a similar methodology by such date, the Exchange will delay implementation commensurate with the additional time required for other options exchanges to adopt a similar method for collection and assessment of ORF (and will continue collecting ORF under its current methodology until such time that the new ORF methodology is implemented).⁷ In this

⁴ The Exchange previously filed to amend the Fee Schedule on March 2, 2026 (SR-NYSEAMER-2026-16) and withdrew such filing on March 16, 2026.

⁵ See, e.g., Securities Exchange Act Release No. 103558 (July 28, 2025), 90 FR 36080 (July 31, 2025) (SR-ISE-2025-20) (Notice of Filing and Immediate Effectiveness of a Proposed Rule Change To Amend the Methodology for Its Options Regulatory Fee (ORF) as of January 2, 2026); 104417 (December 17, 2025) (SR-CBOE-2025-086) (Notice of Filing and Immediate Effectiveness of a Proposed Rule Change to Adopt a New Methodology for Assessment and Collection of the Options Regulatory Fee (ORF)); 104707 (January 28, 2026), 90 FR 4754 (February 2, 2026) (SR-MIAX-2026-01) (Notice of Filing and Immediate Effectiveness of a Proposed Rule Change To Adopt a New Methodology for Assessment and Collection of the Options Regulatory Fee (ORF)); 104745 (January 29, 2026), 90 FR 4985 (February 3, 2026) (SR-MEMX-2026-02) (Notice of Filing and Immediate Effectiveness of a Proposed Rule Change To Amend the Exchange’s Fee Schedule To Adopt a New Methodology for Assessment and Collection of the Options Regulatory Fee (ORF)).

⁶ The Exchange notes that, as of the date of this filing, all U.S. options exchanges have filed proposed rule changes to adopt similar new ORF methodology.

⁷ The Exchange may also delay implementation if certain currently unresolved operational issues remain so and impact the industry’s ability to transition to the new methodology on July 1, 2026, commensurate with any additional time required to resolve such issues (and will continue collecting

filing, the Exchange proposes only to amend the method by which it will assess and collect ORF as of July 1, 2026. The Exchange will file a separate rule filing with the ORF rate that would take effect on July 1, 2026, in advance of assessing and collecting ORF under the new methodology. As is the case today, the Exchange will provide at least 30 days’ notice of the applicable rate by Trader Update.

Background

As a general matter, the Exchange may only use regulatory funds such as the ORF “to fund the legal, regulatory, and surveillance operations” of the Exchange.⁸ More specifically, the ORF is designed to recover a material portion, but not all, of the Exchange’s costs for the supervision and regulation of ATP Holders’ Customer options business, including the Exchange’s regulatory program and legal expenses associated with Customer options regulation, such as the costs related to in-house staff, third-party service providers, and technology that facilitate regulatory functions such as surveillance, investigation, examinations, and enforcement (collectively, the “ORF Costs”). ORF Costs may also include indirect expenses such as human resources and other administrative costs related to the supervision and regulation of Customer activity. The Exchange monitors the amount of ORF collection to ensure that this amount, in combination with other regulatory fees and fines, does not exceed regulatory costs.

Today, the ORF is assessed on ATP Holders for options transactions that are cleared by the ATP Holder through the OCC in the Customer range regardless of the exchange on which the transaction occurs and is collected from ATP Holder clearing firms by the OCC on behalf of NYSE American.⁹ All options transactions must clear via a clearing firm, and such clearing firms can then

ORF under its current methodology until such time that the new ORF methodology is implemented).

⁸ The Exchange considers surveillance operations part of regulatory operations. The limitation on the use of regulatory funds also provides that they shall not be distributed. See Thirteenth Amended and Restated Operating Agreement of NYSE American LLC, Article IV, Section 4.05 and Securities Exchange Act Release No. 87993 (January 16, 2020), 85 FR 4050 (January 23, 2020) (SR-NYSEAMER-2020-04).

⁹ See Fee Schedule, Section VII.A., Options Regulatory Fee (“ORF”), available at: https://www.nyse.com/publicdocs/nyse/markets/american-options/NYSE_American_Options_Fee_Schedule.pdf. The Exchange uses reports from OCC when assessing and collecting the ORF. The ORF is not assessed on outbound linkage trades. An ATP Holder is not assessed the fee until it has satisfied applicable technological requirements necessary to commence operations on NYSE American. See *id.*

¹ 15 U.S.C. 78s(b)(1).

² 15 U.S.C. 78a.

³ 17 CFR 240.19b-4.

choose to pass through all, a portion, or none of the cost of the ORF to its Customers, *i.e.*, the entering firms. The Exchange notes that the costs relating to monitoring ATP Holders with respect to Customer trading activity are generally higher than the costs associated with monitoring ATP Holders that do not engage in Customer trading activity, which tends to be more automated and less labor-intensive. By contrast, regulating ATP Holders that engage in Customer trading activity is generally more labor-intensive and requires a greater expenditure of human and technical resources as the Exchange needs to review not only the trading activity on behalf of Customers, but also the ATP Holder's relationship with its Customers via more labor-intensive exam-based programs.¹⁰ As a result, the costs associated with administering the Customer component of the Exchange's overall regulatory program are materially higher than the costs associated with administering the non-Customer component (*e.g.*, ATP Holder proprietary transactions) of its regulatory program.

Because the ORF is based on options transactions volume, the amount of ORF collected is variable. For example, if options transactions reported to OCC in a given month increase, the ORF collected from ATP Holders will likely increase as well. Similarly, if options transactions reported to OCC in a given month decrease, the ORF collected from ATP Holders will likely decrease as well. Accordingly, the Exchange monitors the amount of ORF collected to ensure that it does not exceed a material portion of ORF Costs. If the Exchange determines the amount of ORF collected exceeds or may exceed a material portion of ORF Costs, the Exchange will, as appropriate, adjust the ORF by submitting a fee change filing to the Securities and Exchange Commission (the "Commission"). Exchange rules establish that market participants must be notified of any change in the ORF via Trader Update at

least 30 calendar days prior to the effective date of the change.¹¹

To illustrate how the ORF, which is currently set at \$0.0026 per contract,¹² is currently assessed and collected, the Exchange provides the following set of scenarios.

Scenario 1

Executing (or Give-Up) Firm is *not* an ATP Holder. The Executing Firm does not "give-up" or "CMTA" the transaction to another clearing firm.¹³

No ORF is assessed.

Scenario 2

Executing Firm is an ATP Holder. The Executing Firm "give-ups" or "CMTAs" the transaction to another clearing firm that is *not* an ATP Holder.

No ORF is assessed.

Scenario 3

The Executing (or Give-Up) Firm is an ATP Holder. The Executing Firm does not "give-up" or "CMTA" the transaction to another clearing firm.

ORF is assessed on the self-clearing Executing Firm.

Scenario 4

The Executing (or Give-Up) Firm is an ATP Holder. The Executing Firm "give-ups" or "CMTAs" the transaction to another clearing firm that is also an ATP Holder.

ORF is assessed on the CMTA (clearing) firm.

Scenario 5

The Executing (or Give-Up) Firm is *not* an ATP Holder. The Executing Firm "give-ups" or "CMTAs" the transaction to another clearing firm that is an ATP Holder.

ORF is assessed on the CMTA (clearing) firm.

As illustrated above, the Exchange does not assess the ORF on non-ATP Holders that self-clear transactions, even if the executing firm is an ATP Holder; the Exchange likewise does not impose the ORF if both the executing firm and

the firm that clears the transaction on its behalf are non-ATP Holders.¹⁴

Proposed Rule Change

The Exchange proposes to adopt a new methodology for assessing and collecting ORF that would align with the methodology proposed by other options exchanges, effective July 1, 2026.¹⁵ As noted above, this rule filing sets forth the proposed method by which it will assess and collect ORF as of July 1, 2026, and the Exchange will file a separate rule filing with the ORF rate that would take effect on July 1, 2026 at least 30 days prior to such date. The Exchange proposes to continue to assess ORF for options transactions cleared by OCC in the Customer range, but ORF would be assessed only for executions that occur on the Exchange. Specifically, the ORF would be collected by OCC on behalf of the Exchange from ATP Holders and non-ATP Holders for all Customer transactions executed on the Exchange. ORF would be assessed and collected on all ultimately cleared Customer contracts, taking into account adjustments for CMTA that were provided to the Exchange the same day as the trade.¹⁶ Further, the Exchange would bill ORF according to the clearing instructions provided on the execution. The Exchange proposes to assess ORF based on the clearing instruction provided on the execution on trade date and would not take into consideration CMTA changes or transfers that occur at OCC.¹⁷

To illustrate how the ORF would be assessed and collected under the proposed methodology, the Exchange provides the following set of scenarios.

¹⁴ Although the Exchange believes that its broad regulatory responsibilities would support applying the ORF to transactions that are executed (even if not ultimately cleared) by an ATP Holder, the Exchange only imposes the ORF on transactions ultimately cleared by ATP Holders at this time. The Exchange's regulatory responsibilities are the same regardless of whether an ATP Holder enters a transaction or clears a transaction. The Exchange regularly reviews all such activities, including monitoring surveillance for position limit violations, manipulation, front-running, contrary exercise advice violations and insider trading. These activities span across multiple exchanges.

¹⁵ See note 5, *supra*.

¹⁶ Adjustments to CMTA that occur at OCC would not be taken into account. CMTA transfers that occur at OCC do not necessarily contain reliable information regarding the exchange on which the original transaction occurred, and without specific information as to where such transaction occurred, the Exchange would not be able to accurately account for CMTA transfers that occur at OCC. Accordingly, the Exchange proposes to only account for CMTAs that occur on the Exchange and exclude CMTAs occurring at OCC, consistent with other options exchanges' proposals.

¹⁷ Adjustments that were made the same day as the trade on the Exchange will be taken into account.

¹⁰ The Exchange notes that many of the Exchange's market surveillance programs require the Exchange to look at and evaluate activity across all options markets, such as surveillance for position limit violations, manipulation, front-running, and contrary exercise advice violations/expiring exercise declarations. The Exchange and other options SROs are parties to a 17d-2 agreement allocating among the SROs regulatory responsibilities relating to compliance by the common members with rules for expiring exercise declarations, position limits, OCC trade adjustments, and Large Option Position Report reviews. See, *e.g.*, Securities Exchange Act Release No. 85097 (February 11, 2019), 84 FR 4871 (February 19, 2019).

¹¹ See Fee Schedule, note 9, *supra*.

¹² See Securities Exchange Act Release No. 104361 (December 11, 2025), 90 FR 58361 (December 16, 2025) (SR-NYSEAMER-2025-70) (Notice of Filing and Immediate Effectiveness of a Proposed Rule Change To Lower the Options Regulatory Fee (ORF)). The Exchange also proposes in this filing to delete language in the Fee Schedule describing an ORF waiver period that has elapsed, as well as now-extraneous language specifying that the current ORF rate took effect on January 1, 2026.

¹³ A CMTA or Clearing Member Trade Assignment is an agreement by which an investor may enter derivative trades with a limited number of different brokers and later consolidate these trades with one brokerage house for clearing.

Scenario 1

An ATP Holder executes a Customer transaction on the Exchange and is the clearing member on record on the transaction on the Exchange.

ORF will be assessed to the ATP Holder.

Scenario 2

An ATP Holder executes a Customer transaction on the Exchange and a different ATP Holder is the clearing member on record on the transaction on the Exchange.

ORF will be assessed to and collected from the ATP Holder that is the clearing member on record on the transaction and not the ATP Holder that executes the transaction.

Scenario 3

An ATP Holder executes a Customer transaction on the Exchange, and a non-ATP Holder is the clearing member on record on the transaction on the Exchange.

ORF will be assessed to the non-ATP Holder who is the clearing member on record on the transaction and not the ATP Holder who executes the transaction.

Scenario 4

An ATP Holder executes a Customer transaction on another exchange (*i.e.*, not NYSE American).

No ORF is assessed, regardless of how the transaction is cleared.

As is the case today, OCC will collect ORF from OCC clearing members on behalf of the Exchange based on the Exchange's instructions.

Consistent with current practice, the Exchange will continue to monitor the amount of ORF collected to ensure that it, in combination with other regulatory fees and fines, does not exceed a material portion of ORF Costs. If the Exchange determines the amount of ORF collected exceeds or may exceed a material portion of ORF Costs, the Exchange will, as appropriate, adjust the ORF by submitting a fee change filing to the Commission and, as is the case today, provide ATP Holders with 30 days' advance notice. The Exchange will notify ATP Holders of this proposed change by Trader Update at least 30 calendar days prior to the effective date.

2. Statutory Basis

The Exchange believes that the proposed rule change is consistent with the provisions of Section 6(b)¹⁸ of the Act, in general, and Section 6(b)(4) and (5)¹⁹ of the Act, in particular, in that it

is designed to provide for the equitable allocation of reasonable dues, fees, and other charges among its members and other persons using its facilities and does not unfairly discriminate between customers, issuers, brokers, or dealers.

The Exchange believes the proposed new ORF methodology to be assessed effective July 1, 2026 is reasonable, equitable, and not unfairly discriminatory for various reasons. First, the Exchange believes that continuing to assess ORF only on Customer transactions is reasonable because Customer transactions account for a material portion of ORF Costs. A large portion of ORF Costs relate to Customer activity because obtaining Customer information may be more time-intensive. For example, non-Customer market participants are subject to various regulatory and reporting requirements which provides the Exchange certain data with respect to these market participants. In contrast, Customer information is known by ATP Holders of the Exchange, but is not readily available to the Exchange. Accordingly, the Exchange may have to take additional steps to understand the facts surrounding particular trades involving a Customer, which may require requesting such information from a broker-dealer. Further, Customers require more Exchange regulatory services based on the amount of options business they conduct. For example, there are costs associated with main office and branch office examinations (*e.g.*, staff expenses), as well as investigations into Customer complaints and the terminations of registered persons. As a result, ORF Costs associated with administering the Customer component of the Exchange's overall regulatory program are materially higher than those associated with administering the non-Customer component when coupled with the amount of volume attributed to such Customer transactions.

Under the Exchange's proposal, the amount of ORF Costs allocated to on-exchange Customer transactions is significant. Also, with respect to Customer transactions, options volume continues to surpass volume from other options participants. Additionally, the Exchange has rules that deal exclusively with Customer transactions, such as rules involving doing business with a Customer, which would not apply to Non-Customer transactions.²⁰

Although the Exchange acknowledges that there is a cost to regulate Market Makers, unlike other market participants, Market Makers are subject

to different Exchange fees (such as application fees, permit fees, and connectivity fees) and have various regulatory requirements with respect to quoting. Specifically, Market Makers have certain quoting requirements with respect to their assigned options series as provided in Rule 925.1NYP (Market Maker Quotations). In addition, unlike other market participants, Market Makers have obligations to compete with other Market Makers to improve the market in all series of options classes to which the Market Maker is appointed and to update market quotations in response to changed market conditions in all series of options classes to which the Market Maker is appointed.²¹

The Exchange similarly acknowledges that there is a cost to regulate Firm and Broker Dealer transactions, but notes that these market participants' transactions do not involve significant volume when compared to Customer transactions. The Exchange further notes that Firm and Broker Dealer market participants tend to be more sophisticated than Customers and do not require the same protections as Customer transactions do. Accordingly, the regulation of Firm and Broker Dealer transactions is less resource-intensive than the regulation of Customer transactions and accounts for a smaller percentage of ORF Costs.

Finally, the Exchange believes that assessing ORF on Customer executions that occur on the Exchange is reasonable, equitable, and not unfairly discriminatory because it will avoid overlapping ORFs that would otherwise be assessed by the Exchange and other options exchanges that also assess an ORF. With this proposal, Customer executions that occur on other exchanges would no longer be subject to an ORF assessed by the Exchange.

The Exchange believes that its proposal continues to ensure that ORF collection, in combination with other regulatory fees and fines, does not exceed ORF Costs. Fines collected by the Exchange in connection with a disciplinary matter will continue to offset ORF Cost. The Exchange will, under the new ORF methodology, continue to monitor and review ORF collection and, if the Exchange determines the amount of ORF collected exceeds or may exceed a material portion of ORF Costs, the Exchange will, as appropriate, adjust the ORF (via a rule change filed with the Commission).

¹⁸ 15 U.S.C. 78f(b).

¹⁹ 15 U.S.C. 78f(b)(4) and (5).

²⁰ See, *e.g.*, Section 7. Conduct of Accounts.

²¹ See Rule 923NY (Appointment of Market Makers).

B. Self-Regulatory Organization's Statement on Burden on Competition

The Exchange does not believe that the proposed rule change will impose any burden on competition that is not necessary or appropriate in furtherance of the purposes of the Act.

The Exchange believes that the proposed change to adopt a new methodology for the assessment and collection of ORF does not impose an undue burden on intermarket competition because ORF is a regulatory fee that supports regulation in furtherance of the purposes of the Act. The Exchange notes, however, the proposed change is not designed to address any competitive issues. The Exchange is obligated to ensure that the amount of ORF collected, in combination with its other regulatory fees and fines, does not exceed ORF Costs. Continuing to assess ORF only on Customer executions that occur on the Exchange does not impose an undue burden on intramarket competition. Customer transactions account for a large portion of the Exchange's ORF Costs. With respect to Customer transactions, options volume continues to surpass volume from other options participants. Additionally, the Exchange has rules that deal exclusively with Customer transactions, such as rules involving doing business with a Customer, which would not apply to non-Customer transactions.²²

For these reasons, regulating Customer trading activity is more labor-intensive and therefore, more costly. Further, the Exchange believes that a large portion of the ORF Costs relate to Customer allocation because obtaining Customer information may be more time-intensive. For example, non-Customer market participants are subject to various regulatory and reporting requirements which provides the Exchange certain data with respect to these market participants. In contrast, Customer information is known by ATP Holders and is not readily available to the Exchange.²³ The Exchange may have to take additional steps to understand the facts surrounding particular trades involving a Customer which may require requesting such information from a broker-dealer. Further, Customers require more Exchange regulatory services based on the amount of options business they conduct. For example, there are ORF Costs associated with main office and branch office examinations (e.g., staff expenses), as well as investigations into Customer

complaints and the terminations of registered persons. As a result, the ORF Costs associated with administering the Customer component of the Exchange's overall regulatory program are materially higher than the ORF Costs associated with administering the non-Customer component when coupled with the amount of volume attributed to such Customer transactions. Not attributing significant ORF Costs to Customers for activity that may occur across options markets does not impose an undue burden on intra-market competition because the Exchange's Customer regulation occurs to a large extent on Exchange.

The Exchange believes that not assessing ORF on Market Makers does not impose an undue burden on intramarket competition because these liquidity providers are critical market participants required to provide liquidity to the Exchange and necessary for opening the market. Excluding Market Maker transactions from ORF does not impose an intramarket burden on competition, and instead allows these market participants to manage their costs and consequently their business model more effectively, thereby enabling them to better allocate resources to, for example, technologies that allow them to manage risk and capacity to ensure their continued ability to compete effectively on the Exchange to provide displayed liquidity. Unlike other market participants, Market Makers have various regulatory requirements with respect to quoting. Specifically, Market Makers have certain quoting requirements with respect to their assigned options series as provided in Rule 925.1NYP (Market Maker Quotations). Further, unlike other market participants, Market Makers have obligations to compete with other Market Makers to improve the market in all series of options classes to which the Market Maker is appointed and to update market quotations in response to changed market conditions in all series of options classes to which the Market Maker is appointed.²⁴

The Exchange believes that not assessing ORF on Firm and Broker Dealer market participants does not impose an undue burden on intramarket competition because the regulation of Firm and Broker Dealer transactions is less resource-intensive than the regulation of Customer transactions. The volume generated from Firm and Broker Dealer transactions is not significant when compared to Customer

transactions. Therefore, excluding Firm and Broker Dealer transactions from ORF does not impose an undue burden on intramarket competition, as Customer transactions account for a material portion of the Exchange's ORF Costs.²⁵ The Exchange's proposal to assess ORF only on Customer executions that occur on the Exchange does not impose an intramarket burden on competition because the amount of activity surveilled across exchanges is small when compared to the overall number of Exchange rules that are surveilled by the Exchange for on-Exchange activity. Limiting the amount of ORF assessed to activity that occurs on the Exchange avoids overlapping ORFs that would otherwise be assessed by the Exchange and other options exchanges that also assess an ORF.

Further, the proposed ORF does not impose an intra-market burden on competition as this collection accounts for the collection only on Customer executions. The Exchange will monitor and review ORF collection and amend the ORF if it finds that ORF collection exceeds its projections.²⁶

C. Self-Regulatory Organization's Statement on Comments on the Proposed Rule Change Received From Members, Participants, or Others

No written comments were solicited or received with respect to the proposed rule change.

III. Date of Effectiveness of the Proposed Rule Change and Timing for Commission Action

The foregoing rule change has become effective pursuant to Section 19(b)(3)(A) of the Act²⁷ and paragraph (f) of Rule 19b-4²⁸ thereunder. At any time within 60 days of the filing of the proposed rule change, the Commission summarily may temporarily suspend such rule change if it appears to the Commission that such

²⁵ The Exchange notes that the regulatory costs relating to monitoring ATP Holders with respect to Customer trading activity are generally higher than the regulatory costs associated with ATP Holders that do not engage in Customer trading activity, which tends to be more automated and less labor-intensive. By contrast, regulating ATP Holders that engage in Customer trading activity is generally more labor-intensive and requires a greater expenditure of human and technical resources because the Exchange needs to review not only the trading activity on behalf of Customers, but also the ATP Holders' relationship with its Customers via more labor-intensive exam-based programs. As a result, the costs associated with administering the Customer component of the Exchange's overall regulatory program are materially higher than the costs associated with administering the non-Customer component of the regulatory program.

²⁶ The Exchange would submit a rule change to the Commission to amend ORF rates.

²⁸ 17 CFR 240.19b-4(f).

²² See, e.g., Section 7. Conduct of Accounts.

²³ Know Your Customer or "KYC" provision is the obligation of the broker-dealer.

²⁴ See Rule 923NY (Appointment of Market Makers).

action is necessary or appropriate in the public interest, for the protection of investors, or otherwise in furtherance of the purposes of the Act. If the Commission takes such action, the Commission shall institute proceedings to determine whether the proposed rule change should be approved or disapproved.

IV. Solicitation of Comments

Interested persons are invited to submit written data, views and arguments concerning the foregoing, including whether the proposed rule change is consistent with the Act. Comments may be submitted by any of the following methods:

Electronic Comments

- Use the Commission's internet comment form (<https://www.sec.gov/rules/sro.shtml>); or
- Send an email to rule-comments@sec.gov. Please include file number SR-NYSEAMER-2026-22 on the subject line.

Paper Comments

- Send paper comments in triplicate to Secretary, Securities and Exchange Commission, 100 F Street NE, Washington, DC 20549-1090.

All submissions should refer to file number SR-NYSEAMER-2026-22. This file number should be included on the subject line if email is used. To help the Commission process and review your comments more efficiently, please use only one method. The Commission will post all comments on the Commission's internet website (<https://www.sec.gov/rules/sro.shtml>). Copies of the filing will be available for inspection and copying at the principal office of the Exchange. Do not include personal identifiable information in submissions; you should submit only information that you wish to make available publicly. We may redact in part or withhold entirely from publication submitted material that is obscene or subject to copyright protection. All submissions should refer to file number SR-NYSEAMER-2026-22 and should be submitted on or before April 17, 2026.

For the Commission, by the Division of Trading and Markets, pursuant to delegated authority.²⁹

Sherry R. Haywood,

Assistant Secretary.

BILLING CODE 8011-01-P

SECURITIES AND EXCHANGE COMMISSION

[Release No. 34-105070; File No. SR-NYSEARCA-2026-30]

Self-Regulatory Organizations; NYSEArca, Inc.; Notice of Filing and Immediate Effectiveness of a Proposed Rule Change To Adopt a New Methodology for Assessment and Collection of the Options Regulatory Fee (ORF)

March 24, 2026.

Pursuant to Section 19(b)(1) ¹ of the Securities Exchange Act of 1934 (the "Act"),² and Rule 19b-4 thereunder,³ notice is hereby given that on March 16, 2026, NYSE Arca, Inc. ("NYSE Arca" or the "Exchange") filed with the Securities and Exchange Commission (the "Commission") a proposed rule change as described in Items I and II below, which Items have been prepared by the Exchange. The Commission is publishing this notice to solicit comments on the proposed rule change from interested persons.

I. Self-Regulatory Organization's Statement of the Terms of Substance of the Proposed Rule Change

The Exchange proposes to amend the NYSE Arca Options Fee Schedule ("Fee Schedule") regarding the Options Regulatory Fee ("ORF"). The proposed rule change is available on the Exchange's website at www.nyse.com and at the principal office of the Exchange.

II. Self-Regulatory Organization's Statement of the Purpose of, and Statutory Basis for, the Proposed Rule Change

In its filing with the Commission, the self-regulatory organization included statements concerning the purpose of, and basis for, the proposed rule change and discussed any comments it received on the proposed rule change. The text of those statements may be examined at the places specified in Item IV below. The Exchange has prepared summaries, set forth in sections A, B, and C below, of the most significant parts of such statements.

A. Self-Regulatory Organization's Statement of the Purpose of, and the Statutory Basis for, the Proposed Rule Change

1. Purpose

The Exchange proposes to amend the Fee Schedule ⁴ to amend its methodology of assessment and collection of the ORF to assess ORF only for options transactions that occur on the Exchange and that are cleared in the Customer range at The Options Clearing Corporation ("OCC"), in alignment with new ORF methodology proposed by other options exchanges.⁵ Consistent with that methodology, the Exchange intends to collect ORF under its current methodology until at least June 30, 2026. The Exchange is prepared to implement the new ORF methodology, as proposed in this filing, effective July 1, 2026, provided that all U.S. options exchanges charging an ORF have filed to modify their current methodologies of assessing ORF to limit the fee to transactions occurring on their respective exchange by April 1, 2026.⁶ If all other options exchanges have not filed to adopt a similar methodology by such date, the Exchange will delay implementation commensurate with the additional time required for other options exchanges to adopt a similar method for collection and assessment of ORF (and will continue collecting ORF under its current methodology until such time that the new ORF methodology is implemented).⁷ In this

⁴ The Exchange previously filed to amend the Fee Schedule on March 2, 2026 (SR-NYSEARCA-2026-24) and withdrew such filing on March 16, 2026.

⁵ See, e.g., Securities Exchange Act Release No. 103558 (July 28, 2025), 90 FR 36080 (July 31, 2025) (SR-ISE-2025-20) (Notice of Filing and Immediate Effectiveness of a Proposed Rule Change To Amend the Methodology for Its Options Regulatory Fee (ORF) as of January 2, 2026); 104417 (December 17, 2025) (SR-CBOE-2025-086) (Notice of Filing and Immediate Effectiveness of a Proposed Rule Change To Adopt a New Methodology for Assessment and Collection of the Options Regulatory Fee (ORF)); 104707 (January 28, 2026), 90 FR 4754 (February 2, 2026) (SR-MIAX-2026-01) (Notice of Filing and Immediate Effectiveness of a Proposed Rule Change To Adopt a New Methodology for Assessment and Collection of the Options Regulatory Fee (ORF)); 104745 (January 29, 2026), 90 FR 4985 (February 3, 2026) (SR-MEMX-2026-02) (Notice of Filing and Immediate Effectiveness of a Proposed Rule Change To Amend the Exchange's Fee Schedule To Adopt a New Methodology for Assessment and Collection of the Options Regulatory Fee (ORF)).

⁶ The Exchange notes that, as of the date of this filing, all U.S. options exchanges have filed proposed rule changes to adopt similar new ORF methodology.

⁷ The Exchange may also delay implementation if certain currently unresolved operational issues remain so and impact the industry's ability to transition to the new methodology on July 1, 2026, commensurate with any additional time required to resolve such issues (and will continue collecting ORF under its current methodology until such time that the new ORF methodology is implemented).

¹ 15 U.S.C. 78s(b)(1).

² 15 U.S.C. 78a.

³ 17 CFR 240.19b-4.

²⁹ 17 CFR 200.30-3(a)(12).

filing, the Exchange proposes only to amend the method by which it will assess and collect ORF as of July 1, 2026. The Exchange will file a separate rule filing with the ORF rate that would take effect on July 1, 2026, in advance of assessing and collecting ORF under the new methodology. As is the case today, the Exchange will provide at least 30 days' notice of the applicable rate by Trader Update.

Background

As a general matter, the Exchange may only use regulatory funds such as the ORF “to fund the legal, regulatory, and surveillance operations” of the Exchange.⁸ More specifically, the ORF is designed to recover a material portion, but not all, of the Exchange's costs for the supervision and regulation of OTP Holders' and OTP Firms' (collectively, “OTP Holders”) Customer options business, including the Exchange's regulatory program and legal expenses associated with Customer options regulation, such as the costs related to in-house staff, third-party service providers, and technology that facilitate regulatory functions such as surveillance, investigation, examinations, and enforcement (collectively, the “ORF Costs”). ORF Costs may also include indirect expenses such as human resources and other administrative costs related to the supervision and regulation of Customer activity. The Exchange monitors the amount of ORF collection to ensure that this amount, in combination with other regulatory fees and fines, does not exceed regulatory costs.

Today, the ORF is assessed on OTP Holders for options transactions that are cleared by the OTP Holder through the OCC in the Customer range regardless of the exchange on which the transaction occurs and is collected from OTP Holder clearing firms by the OCC on behalf of NYSE Arca.⁹ All options transactions must clear via a clearing firm, and such clearing firms can then choose to pass through all, a portion, or none of the cost of the ORF to its

Customers, *i.e.*, the entering firms. The Exchange notes that the costs relating to monitoring OTP Holders with respect to Customer trading activity are generally higher than the costs associated with monitoring OTP Holders that do not engage in Customer trading activity, which tends to be more automated and less labor-intensive. By contrast, regulating OTP Holders that engage in Customer trading activity is generally more labor-intensive and requires a greater expenditure of human and technical resources as the Exchange needs to review not only the trading activity on behalf of Customers, but also the OTP Holder's relationship with its Customers via more labor-intensive exam-based programs.¹⁰ As a result, the costs associated with administering the Customer component of the Exchange's overall regulatory program are materially higher than the costs associated with administering the non-Customer component (*e.g.*, OTP Holder proprietary transactions) of its regulatory program.

Because the ORF is based on options transactions volume, the amount of ORF collected is variable. For example, if options transactions reported to OCC in a given month increase, the ORF collected from OTP Holders will likely increase as well. Similarly, if options transactions reported to OCC in a given month decrease, the ORF collected from OTP Holders will likely decrease as well. Accordingly, the Exchange monitors the amount of ORF collected to ensure that it does not exceed a material portion of ORF Costs. If the Exchange determines the amount of ORF collected exceeds or may exceed a material portion of ORF Costs, the Exchange will, as appropriate, adjust the ORF by submitting a fee change filing to the Securities and Exchange Commission (the “Commission”). Exchange rules establish that market participants must be notified of any change in the ORF via Trader Update at least 30 calendar days prior to the effective date of the change.¹¹

To illustrate how the ORF, which is currently set at \$0.0026 per contract,¹² is currently assessed and collected, the Exchange provides the following set of scenarios.

Scenario 1

Executing (or Give-Up) Firm is *not* an OTP Holder. The Executing Firm does not “give-up” or “CMTA” the transaction to another clearing firm.¹³ No ORF is assessed.

Scenario 2

Executing Firm is an OTP Holder. The Executing Firm “give-ups” or “CMTAs” the transaction to another clearing firm that is *not* an OTP Holder. No ORF is assessed.

Scenario 3

The Executing (or Give-Up) Firm is an OTP Holder. The Executing Firm does not “give-up” or “CMTA” the transaction to another clearing firm. ORF is assessed on the self-clearing Executing Firm.

Scenario 4

The Executing (or Give-Up) Firm is an OTP Holder. The Executing Firm “give-ups” or “CMTAs” the transaction to another clearing firm that is also an OTP Holder.

ORF is assessed on the CMTA (clearing) firm.

Scenario 5

The Executing (or Give-Up) Firm is *not* an OTP Holder. The Executing Firm “give-ups” or “CMTAs” the transaction to another clearing firm that is an OTP Holder.

ORF is assessed on the CMTA (clearing) firm.

As illustrated above, the Exchange does not assess the ORF on non-OTP Holders that self-clear transactions, even if the executing firm is an OTP Holder; the Exchange likewise does not impose the ORF if both the executing firm and the firm that clears the transaction on its behalf are non-OTP Holders.¹⁴

⁸ The Exchange considers surveillance operations part of regulatory operations. The limitation on the use of regulatory funds also provides that they shall not be distributed. See Bylaws of NYSE Arca, Inc., Art. II, Sec. 2.03.

⁹ See Fee Schedule, NYSE Arca GENERAL OPTIONS and TRADING PERMIT (OTP) FEES, Regulatory Fees, Options Regulatory Fee (“ORF”), available here, https://www.nyse.com/publicdocs/nyse/markets/arca-options/NYSE_Arca_Options_Fee_Schedule.pdf. The Exchange uses reports from OCC when assessing and collecting the ORF. The ORF is not assessed on outbound linkage trades. An OTP Holder is not assessed the fee until it has satisfied applicable technological requirements necessary to commence operations on NYSE Arca. See *id.*

¹⁰ The Exchange notes that many of the Exchange's market surveillance programs require the Exchange to look at and evaluate activity across all options markets, such as surveillance for position limit violations, manipulation, front-running, and contrary exercise advice violations/ expiring exercise declarations. The Exchange and other options SROs are parties to a 17d-2 agreement allocating among the SROs regulatory responsibilities relating to compliance by the common members with rules for expiring exercise declarations, position limits, OCC trade adjustments, and Large Option Position Report reviews. See, *e.g.*, Securities Exchange Act Release No. 85097 (February 11, 2019), 84 FR 4871 (February 19, 2019).

¹¹ See Fee Schedule, note 9, *supra*.

¹² See Securities Exchange Act Release No. 104362 (December 11, 2025), 90 FR 58336 (December 16, 2025) (SR-NYSEARCA-2025-82) (Notice of Filing and Immediate Effectiveness of a Proposed Rule Change To Lower the Options Regulatory Fee (ORF)). The Exchange also proposes in this filing to delete language in the Fee Schedule describing an ORF waiver period that has elapsed, as well as now-extraneous language specifying that the current ORF rate took effect on January 1, 2026.

¹³ A CMTA or Clearing Member Trade Assignment is an agreement by which an investor may enter derivative trades with a limited number of different brokers and later consolidate these trades with one brokerage house for clearing.

¹⁴ Although the Exchange believes that its broad regulatory responsibilities would support applying

Proposed Rule Change

The Exchange proposes to adopt a new methodology for assessing and collecting ORF that would align with the methodology proposed by other options exchanges, effective July 1, 2026.¹⁵ As noted above, this rule filing sets forth the proposed method by which it will assess and collect ORF as of July 1, 2026, and the Exchange will file a separate rule filing with the ORF rate that would take effect on July 1, 2026 at least 30 days prior to such date. The Exchange proposes to continue to assess ORF for options transactions cleared by OCC in the Customer range, but ORF would be assessed only for executions that occur on the Exchange. Specifically, the ORF would be collected by OCC on behalf of the Exchange from OTP Holders and non-OTP Holders for all Customer transactions executed on the Exchange. ORF would be assessed and collected on all ultimately cleared Customer contracts, taking into account adjustments for CMTA that were provided to the Exchange the same day as the trade.¹⁶ Further, the Exchange would bill ORF according to the clearing instructions provided on the execution. The Exchange proposes to assess ORF based on the clearing instruction provided on the execution on trade date and would not take into consideration CMTA changes or transfers that occur at OCC.¹⁷

To illustrate how the ORF would be assessed and collected under the proposed methodology, the Exchange provides the following set of scenarios.

Scenario 1

An OTP Holder executes a Customer transaction on the Exchange and is the

the ORF to transactions that are executed (even if not ultimately cleared) by an OTP Holder, the Exchange only imposes the ORF on transactions ultimately cleared by OTP Holders at this time. The Exchange's regulatory responsibilities are the same regardless of whether an OTP Holder enters a transaction or clears a transaction. The Exchange regularly reviews all such activities, including monitoring surveillance for position limit violations, manipulation, front-running, contrary exercise advice violations and insider trading. These activities span across multiple exchanges.

¹⁵ See note 5, *supra*.

¹⁶ Adjustments to CMTA that occur at OCC would not be taken into account. CMTA transfers that occur at OCC do not necessarily contain reliable information regarding the exchange on which the original transaction occurred, and without specific information as to where such transaction occurred, the Exchange would not be able to accurately account for CMTA transfers that occur at OCC. Accordingly, the Exchange proposes to only account for CMTAs that occur on the Exchange and exclude CMTAs occurring at OCC, consistent with other options exchanges' proposals.

¹⁷ Adjustments that were made the same day as the trade on the Exchange will be taken into account.

clearing member on record on the transaction on the Exchange.

ORF will be assessed to the OTP Holder.

Scenario 2

An OTP Holder executes a Customer transaction on the Exchange and a different OTP Holder is the clearing member on record on the transaction on the Exchange.

ORF will be assessed to and collected from the OTP Holder that is the clearing member on record on the transaction and not the OTP Holder that executes the transaction.

Scenario 3

An OTP Holder executes a Customer transaction on the Exchange, and a non-OTP Holder is the clearing member on record on the transaction on the Exchange.

ORF will be assessed to the non-OTP Holder who is the clearing member on record on the transaction and not the OTP Holder who executes the transaction.

Scenario 4

An OTP Holder executes a Customer transaction on another exchange (*i.e.*, not NYSE Arca).

No ORF is assessed, regardless of how the transaction is cleared.

As is the case today, OCC will collect ORF from OCC clearing members on behalf of the Exchange based on the Exchange's instructions.

Consistent with current practice, the Exchange will continue to monitor the amount of ORF collected to ensure that it, in combination with other regulatory fees and fines, does not exceed a material portion of ORF Costs. If the Exchange determines the amount of ORF collected exceeds or may exceed a material portion of ORF Costs, the Exchange will, as appropriate, adjust the ORF by submitting a fee change filing to the Commission and, as is the case today, provide OTP Holders with 30 days' advance notice. The Exchange will notify OTP Holders of this proposed change by Trader Update at least 30 calendar days prior to the effective date.

2. Statutory Basis

The Exchange believes that the proposed rule change is consistent with the provisions of Section 6(b)¹⁸ of the Act, in general, and Section 6(b)(4) and (5)¹⁹ of the Act, in particular, in that it is designed to provide for the equitable allocation of reasonable dues, fees, and other charges among its members and

¹⁸ 15 U.S.C. 78f(b).

¹⁹ 15 U.S.C. 78f(b)(4) and (5).

other persons using its facilities and does not unfairly discriminate between customers, issuers, brokers, or dealers.

The Exchange believes the proposed new ORF methodology to be assessed effective July 1, 2026 is reasonable, equitable, and not unfairly discriminatory for various reasons. First, the Exchange believes that continuing to assess ORF only on Customer transactions is reasonable because Customer transactions account for a material portion of ORF Costs. A large portion of ORF Costs relate to Customer activity because obtaining Customer information may be more time-intensive. For example, non-Customer market participants are subject to various regulatory and reporting requirements which provides the Exchange certain data with respect to these market participants. In contrast, Customer information is known by OTP Holders of the Exchange, but is not readily available to the Exchange. Accordingly, the Exchange may have to take additional steps to understand the facts surrounding particular trades involving a Customer, which may require requesting such information from a broker-dealer. Further, Customers require more Exchange regulatory services based on the amount of options business they conduct. For example, there are costs associated with main office and branch office examinations (*e.g.*, staff expenses), as well as investigations into Customer complaints and the terminations of registered persons. As a result, ORF Costs associated with administering the Customer component of the Exchange's overall regulatory program are materially higher than those associated with administering the non-Customer component when coupled with the amount of volume attributed to such Customer transactions.

Under the Exchange's proposal, the amount of ORF Costs allocated to on-exchange Customer transactions is significant. Also, with respect to Customer transactions, options volume continues to surpass volume from other options participants. Additionally, the Exchange has rules that deal exclusively with Customer transactions, such as rules involving doing business with a Customer, which would not apply to Non-Customer transactions.²⁰

Although the Exchange acknowledges that there is a cost to regulate Market Makers, unlike other market participants, Market Makers are subject to different Exchange fees (such as application fees, permit fees, and connectivity fees) and have various

²⁰ See, *e.g.*, Section 7. Conduct of Accounts.

regulatory requirements with respect to quoting. Specifically, Market Makers have certain quoting requirements with respect to their assigned options series as provided in Rule 6.37AP–O (Market Maker Quotations). In addition, unlike other market participants, Market Makers have obligations to compete with other Market Makers to improve the market in all series of options classes to which the Market Maker is appointed and to update market quotations in response to changed market conditions in all series of options classes to which the Market Maker is appointed.²¹

The Exchange similarly acknowledges that there is a cost to regulate Firm and Broker Dealer transactions, but notes that these market participants' transactions do not involve significant volume when compared to Customer transactions. The Exchange further notes that Firm and Broker Dealer market participants tend to be more sophisticated than Customers and do not require the same protections as Customer transactions do. Accordingly, the regulation of Firm and Broker Dealer transactions is less resource-intensive than the regulation of Customer transactions and accounts for a smaller percentage of ORF Costs.

Finally, the Exchange believes that assessing ORF on Customer executions that occur on the Exchange is reasonable, equitable, and not unfairly discriminatory because it will avoid overlapping ORFs that would otherwise be assessed by the Exchange and other options exchanges that also assess an ORF. With this proposal, Customer executions that occur on other exchanges would no longer be subject to an ORF assessed by the Exchange.

The Exchange believes that its proposal continues to ensure that ORF collection, in combination with other regulatory fees and fines, does not exceed ORF Costs. Fines collected by the Exchange in connection with a disciplinary matter will continue to offset ORF Cost. The Exchange will, under the new ORF methodology, continue to monitor and review ORF collection and, if the Exchange determines the amount of ORF collected exceeds or may exceed a material portion of ORF Costs, the Exchange will, as appropriate, adjust the ORF (via a rule change filed with the Commission).

B. Self-Regulatory Organization's Statement on Burden on Competition

The Exchange does not believe that the proposed rule change will impose

any burden on competition that is not necessary or appropriate in furtherance of the purposes of the Act.

The Exchange believes that the proposed change to adopt a new methodology for the assessment and collection of ORF does not impose an undue burden on intermarket competition because ORF is a regulatory fee that supports regulation in furtherance of the purposes of the Act. The Exchange notes, however, the proposed change is not designed to address any competitive issues. The Exchange is obligated to ensure that the amount of ORF collected, in combination with its other regulatory fees and fines, does not exceed ORF Costs. Continuing to assess ORF only on Customer executions that occur on the Exchange does not impose an undue burden on intramarket competition. Customer transactions account for a large portion of the Exchange's ORF Costs. With respect to Customer transactions, options volume continues to surpass volume from other options participants. Additionally, the Exchange has rules that deal exclusively with Customer transactions, such as rules involving doing business with a Customer, which would not apply to non-Customer transactions.²²

For these reasons, regulating Customer trading activity is more labor-intensive and therefore, more costly. Further, the Exchange believes that a large portion of the ORF Costs relate to Customer allocation because obtaining Customer information may be more time-intensive. For example, non-Customer market participants are subject to various regulatory and reporting requirements which provides the Exchange certain data with respect to these market participants. In contrast, Customer information is known by OTP Holders and is not readily available to the Exchange.²³ The Exchange may have to take additional steps to understand the facts surrounding particular trades involving a Customer which may require requesting such information from a broker-dealer. Further, Customers require more Exchange regulatory services based on the amount of options business they conduct. For example, there are ORF Costs associated with main office and branch office examinations (*e.g.*, staff expenses), as well as investigations into Customer complaints and the terminations of registered persons. As a result, the ORF Costs associated with administering the Customer component of the Exchange's

overall regulatory program are materially higher than the ORF Costs associated with administering the non-Customer component when coupled with the amount of volume attributed to such Customer transactions. Not attributing significant ORF Costs to Customers for activity that may occur across options markets does not impose an undue burden on intra-market competition because the Exchange's Customer regulation occurs to a large extent on Exchange.

The Exchange believes that not assessing ORF on Market Makers does not impose an undue burden on intramarket competition because these liquidity providers are critical market participants required to provide liquidity to the Exchange and necessary for opening the market. Excluding Market Maker transactions from ORF does not impose an intramarket burden on competition, and instead allows these market participants to manage their costs and consequently their business model more effectively, thereby enabling them to better allocate resources to, for example, technologies that allow them to manage risk and capacity to ensure their continued ability to compete effectively on the Exchange to provide displayed liquidity. Unlike other market participants, Market Makers have various regulatory requirements with respect to quoting. Specifically, Market Makers have certain quoting requirements with respect to their assigned options series as provided in Rule 6.37AP–O (Market Maker Quotations). Further, unlike other market participants, Market Makers have obligations to compete with other Market Makers to improve the market in all series of options classes to which the Market Maker is appointed and to update market quotations in response to changed market conditions in all series of options classes to which the Market Maker is appointed.²⁴

The Exchange believes that not assessing ORF on Firm and Broker Dealer market participants does not impose an undue burden on intramarket competition because the regulation of Firm and Broker Dealer transactions is less resource-intensive than the regulation of Customer transactions. The volume generated from Firm and Broker Dealer transactions is not significant when compared to Customer transactions. Therefore, excluding Firm and Broker Dealer transactions from ORF does not impose an undue burden on intramarket competition, as

²¹ See Rule 6.35–O (Appointment of Market Makers).

²² See, *e.g.*, Section 7. Conduct of Accounts.

²³ Know Your Customer or "KYC" provision is the obligation of the broker-dealer.

²⁴ See Rule 6.35–O (Appointment of Market Makers).

Customer transactions account for a material portion of the Exchange's ORF Costs.²⁵ The Exchange's proposal to assess ORF only on Customer executions that occur on the Exchange does not impose an intramarket burden on competition because the amount of activity surveilled across exchanges is small when compared to the overall number of Exchange rules that are surveilled by the Exchange for on-Exchange activity. Limiting the amount of ORF assessed to activity that occurs on the Exchange avoids overlapping ORFs that would otherwise be assessed by the Exchange and other options exchanges that also assess an ORF.

Further, the proposed ORF does not impose an intra-market burden on competition as this collection accounts for the collection only on Customer executions. The Exchange will monitor and review ORF collection and amend the ORF if it finds that ORF collection exceeds its projections.²⁶

C. Self-Regulatory Organization's Statement on Comments on the Proposed Rule Change Received From Members, Participants, or Others

No written comments were solicited or received with respect to the proposed rule change.

III. Date of Effectiveness of the Proposed Rule Change and Timing for Commission Action

The foregoing rule change has become effective pursuant to Section 19(b)(3)(A) of the Act²⁷ and paragraph (f) of Rule 19b-4²⁸ thereunder. At any time within 60 days of the filing of the proposed rule change, the Commission summarily may temporarily suspend such rule change if it appears to the Commission that such action is necessary or appropriate in the public interest, for the protection of investors, or otherwise in furtherance of the purposes of the Act. If the

²⁵ The Exchange notes that the regulatory costs relating to monitoring OTP Holders with respect to Customer trading activity are generally higher than the regulatory costs associated with OTP Holders that do not engage in Customer trading activity, which tends to be more automated and less labor-intensive. By contrast, regulating OTP Holders that engage in Customer trading activity is generally more labor-intensive and requires a greater expenditure of human and technical resources because the Exchange needs to review not only the trading activity on behalf of Customers, but also the OTP Holders' relationship with its Customers via more labor-intensive exam-based programs. As a result, the costs associated with administering the Customer component of the Exchange's overall regulatory program are materially higher than the costs associated with administering the non-Customer component of the regulatory program.

²⁶ The Exchange would submit a rule change to the Commission to amend ORF rates.

²⁷ 15 U.S.C. 78s(b)(3)(A).

²⁸ 17 CFR 240.19b-4(f).

Commission takes such action, the Commission shall institute proceedings to determine whether the proposed rule change should be approved or disapproved.

IV. Solicitation of Comments

Interested persons are invited to submit written data, views and arguments concerning the foregoing, including whether the proposed rule change is consistent with the Act. Comments may be submitted by any of the following methods:

Electronic Comments

- Use the Commission's internet comment form (<https://www.sec.gov/rules/sro.shtml>); or
- Send an email to rule-comments@sec.gov. Please include file number SR-NYSEARCA-2026-30 on the subject line.

Paper Comments

- Send paper comments in triplicate to Secretary, Securities and Exchange Commission, 100 F Street NE, Washington, DC 20549-1090.

All submissions should refer to file number SR-NYSEARCA-2026-30. This file number should be included on the subject line if email is used. To help the Commission process and review your comments more efficiently, please use only one method. The Commission will post all comments on the Commission's internet website (<https://www.sec.gov/rules/sro.shtml>). Copies of the filing will be available for inspection and copying at the principal office of the Exchange. Do not include personal identifiable information in submissions; you should submit only information that you wish to make available publicly. We may redact in part or withhold entirely from publication submitted material that is obscene or subject to copyright protection. All submissions should refer to file number SR-NYSEARCA-2026-30 and should be submitted on or before April 17, 2026.

For the Commission, by the Division of Trading and Markets, pursuant to delegated authority.²⁹

Sherry R. Haywood,
Assistant Secretary.

BILLING CODE 8011-01-P

SECURITIES AND EXCHANGE COMMISSION

[Release No. 34-105069; File No. SR-IEX-2026-08]

Self-Regulatory Organizations; Investors Exchange LLC; Notice of Filing and Immediate Effectiveness of Proposed Rule Change To Amend IEX Rules To Reflect the Name Change of Nasdaq BX to Nasdaq Texas

March 24, 2026.

Pursuant to Section 19(b)(1)¹ of the Securities Exchange Act of 1934 (the "Act")² and Rule 19b-4 thereunder,³ notice is hereby given that, on March 16, 2026, the Investors Exchange LLC ("IEX" or the "Exchange") filed with the Securities and Exchange Commission (the "Commission") the proposed rule change as described in Items I and II below, which Items have been prepared by the self-regulatory organization. The Commission is publishing this notice to solicit comments on the proposed rule change from interested persons.

I. Self-Regulatory Organization's Statement of the Terms of Substance of the Proposed Rule Change

Pursuant to the provisions of Section 19(b)(1) under the Act,⁴ and Rule 19b-4 thereunder,⁵ the Exchange is filing with the Commission a proposed rule to amend IEX Rules 2.220(a)(7) and 11.410(a) to make conforming changes reflecting the name change of Nasdaq BX, Inc. ("Nasdaq BX") to Nasdaq Texas, LLC ("Nasdaq Texas"), replace obsolete references to "NASDAQ" with the current name "Nasdaq," and make a conforming change in Rule 2.220(a)(7). The Exchange has designated this rule change as "non-controversial" under Section 19(b)(3)(A) of the Act⁶ and provided the Commission with the notice required by Rule 19b-4(f)(6) thereunder.⁷

The text of the proposed rule change is available at the Exchange's website at <https://www.iexexchange.io/resources/regulation/rule-filings> and at the principal office of the Exchange.

II. Self-Regulatory Organization's Statement of the Purpose of, and the Statutory Basis for, the Proposed Rule Change

In its filing with the Commission, the self-regulatory organization included

¹ 15 U.S.C. 78s(b)(1).

² 15 U.S.C. 78a.

³ 17 CFR 240.19b-4.

⁴ 15 U.S.C. 78s(b)(1).

⁵ 17 CFR 240.19b-4.

⁷ 17 CFR 240.19b-4.

²⁹ 17 CFR 200.30-3(a)(12).

statements concerning the purpose of and basis for the proposed rule change and discussed any comments it received on the proposed rule change. The text of these statements may be examined at the places specified in Item IV below. The self-regulatory organization has prepared summaries, set forth in Sections A, B, and C below, of the most significant aspects of such statements.

A. Self-Regulatory Organization's Statement of the Purpose of, and the Statutory Basis for, the Proposed Rule Change

1. Purpose

Nasdaq BX, Inc. recently converted from a corporation organized under the laws of the state of Delaware to a limited liability company organized under the laws of the state of Texas and changed its legal name to "Nasdaq Texas, LLC."⁸ The Exchange proposes conforming changes to its rules to reflect this name change by amending Rules 2.220(a)(7) and 11.410(a) to reflect the name change of "NASDAQ BX" to "Nasdaq Texas." Rule 2.220(a)(7) lists the away trading centers that IEX Services LLC ("IEX Services") routes to as outbound router for the Exchange and Rule 11.410(a) specifies the market data sources for each away trading center that the Exchange uses for necessary price reference points.

Specifically, the Exchange proposes to amend Rule 2.220(a)(7) by replacing the reference to "NASDAQ BX" with "Nasdaq Texas"⁹ in the list of away trading centers to which IEX Services routes orders. The Exchange also proposes to amend Rule 11.410(a) by replacing the reference to "NASDAQ BX" with "Nasdaq Texas" in the table of market data sources the Exchange uses to determine its Top of Book quotation, NBBO, and for certain reporting, regulatory, and compliance systems within IEX. The Exchange will continue to utilize the proprietary market data feed for Nasdaq Texas, as it did for Nasdaq BX, as set forth in Rule 11.410(a)(2).

The Exchange is also proposing to replace obsolete references to "NASDAQ" in Rules 2.220(a)(7) and 11.410(a) with the current name, "Nasdaq,"¹⁰ as follows:

- Rules 2.220(a)(7) and 11.410(a): references to "NASDAQ PSX" will be changed to "Nasdaq PSX";
 - Rule 11.410(a): references to "NASDAQ Stock Market" will be changed to "The Nasdaq Stock Market"; and
 - Rule 2.220(a)(7): references to "NASDAQ Stock Exchange" will be changed to "The Nasdaq Stock Market."
- The Exchange is not proposing any other changes to IEX Rules 2.220(a)(7) and 11.410(a). The proposed changes do not alter the manner in which orders are handled or routed by the Exchange.

2. Statutory Basis

IEX believes that the proposed rule changes are consistent with the provisions of Section 6(b)¹¹ of the Act in general, and further the objectives of Section 6(b)(5) of the Act¹² in particular, in that they are designed to promote just and equitable principles of trade, to remove impediments to and perfect the mechanism of a free and open market and a national market system, and, in general, to protect investors and the public interest.

For the reasons discussed in the Purpose section, the Exchange believes that the proposed rule changes remove impediments to and perfect the mechanism of a free and open market and protect investors and the public interest because changing references to "NASDAQ BX" to "Nasdaq Texas," "NASDAQ PSX" to "Nasdaq PSX," and "NASDAQ Stock Market" to "The Nasdaq Stock Market" in the table in Rule 11.410(a) designating those exchanges' proprietary data feeds as the primary source of market data the Exchange will use to determine away trading center Top of Book quotes, the NBBO, and for certain regulatory, reporting and compliance systems within IEX, will facilitate the Exchange's compliance with the applicable requirements of Regulation NMS.

Additionally, changing references to "NASDAQ BX" to "Nasdaq Texas," "NASDAQ PSX" to "Nasdaq PSX," and "NASDAQ Stock Exchange" (Rule 2.220(a)(7)) and "NASDAQ Stock Market" (Rule 11.410(a)) to "The Nasdaq Stock Market" in the list of away trading centers to which IEX

routes and in the table designating those exchanges' proprietary data feeds as the primary source of market data the Exchange will use to determine away trading center Top of Book quotes, the NBBO, and for certain regulatory, reporting and compliance systems within IEX, provides transparency and avoids confusion with respect to the away trading centers to which IEX Services may route orders and the source of market data the Exchange will use to determine those exchanges' Top of Book quotes. As noted in the Purpose section, the proposed changes are nonsubstantive and do not alter the manner in which orders are handled or routed by the Exchange.

B. Self-Regulatory Organization's Statement on Burden on Competition

IEX does not believe that the proposed rule changes will result in any burden on competition that are not necessary or appropriate in furtherance of the purposes of the Act. The Exchange believes that the proposed updates do not impact competition in any respect since the purpose is to enhance transparency with respect to the operation of the Exchange and its use of market data feeds, and to update an away market name referenced in IEX Rules.

C. Self-Regulatory Organization's Statement on Comments on the Proposed Rule Change Received From Members, Participants, or Others

Written comments were neither solicited nor received.

III. Date of Effectiveness of the Proposed Rule Change and Timing for Commission Action

Pursuant to Section 19(b)(3)(A) of the Act¹³ and Rule 19b-4(f)(6)¹⁴ thereunder, the Exchange has designated this proposal as one that effects a change that: (i) does not significantly affect the protection of investors or the public interest; (ii) does not impose any significant burden on competition; and (iii) by its terms, does not become operative for 30 days after the date of the filing, or such shorter time as the Commission may designate if consistent with the protection of investors and the public interest.

A proposed rule change filed under Rule 19b-4(f)(6)¹⁵ normally does not become operative prior to 30 days after the date of the filing. However, pursuant to Rule 19b-4(f)(6)(iii),¹⁶ the

⁸ See Securities Exchange Act Release No. 104736 (January 29, 2026), 91 FR 4980 (February 3, 2026) (SR-BX-2026-005).

⁹ In 2017, NASDAQ BX amended its rules and certain corporate documents to change its name from "NASDAQ BX" to "Nasdaq BX." Securities Exchange Act Release No. 81948 (October 25, 2017), 82 FR 50468 (October 31, 2017) (SR-BX-2017-046).

¹⁰ In 2017, the Nasdaq Stock Market and Nasdaq PHIX amended their rules and certain corporate documents to replace "NASDAQ" with "Nasdaq"

in their exchange names. See Securities Exchange Act Release No. 81917 (October 27, 2017), 82 FR 49879 (October 23, 2017) (SR-NASDAQ-2017-111) (changing "The NASDAQ Stock Market LLC" to "The Nasdaq Stock Market LLC"); Securities Exchange Act Release No. 81938 (October 24, 2017), 82 FR 50185 (October 30, 2017) (SR-PHLX-2017-83) (changing "NASDAQ PSX" to "Nasdaq PSX").

¹¹ 15 U.S.C. 78f.

¹² 15 U.S.C. 78f(b)(5).

¹³ 15 U.S.C. 78s(b)(3)(A).

¹⁴ 17 CFR 240.19b-4(f)(6).

¹⁵ 17 CFR 240.19b-4(f)(6).

¹⁶ 17 CFR 240.19b-4(f)(6)(iii).

Commission may designate a shorter time if such action is consistent with the protection of investors and the public interest. The Exchange has asked the Commission to waive the 30-day operative delay so that the proposed rule changes may become operative upon filing. In the filing, the Exchange stated it is proposing non-substantive, conforming changes to reflect the name change of Nasdaq BX to Nasdaq Texas, replace obsolete references to "NASDAQ" to Nasdaq, and make a conforming change in Rule 2.220(a)(7). These non-substantive conforming changes do not impose any significant burden on competition because they apply evenly to all Equity Members. The proposed rule changes do not raise any novel issues as the Nasdaq name changes have already occurred, and waiver of the operative delay allows for the immediate clarification of the Exchange's rules to reflect these changes, and therefore, waiver of the 30-day operative delay is consistent with the protection of investors and the public interest. Accordingly, the Commission hereby waives the operative delay and designates the proposal operative upon filing.¹⁷

At any time within 60 days of the filing of the proposed rule change, the Commission summarily may temporarily suspend such rule change if it appears to the Commission that such action is necessary or appropriate in the public interest, for the protection of investors, or otherwise in furtherance of the purposes of the Act. If the Commission takes such action, the Commission shall institute proceedings under Section 19(b)(2)(B)¹⁸ of the Act to determine whether the proposed rule change should be approved or disapproved.

IV. Solicitation of Comments

Interested persons are invited to submit written data, views and arguments concerning the foregoing, including whether the proposed rule change is consistent with the Act. Comments may be submitted by any of the following methods:

Electronic Comments

- Use the Commission's internet comment form (<https://www.sec.gov/rules/sro.shtml>); or
- Send an email to rule-comments@sec.gov. Please include file number SR-IEX-2026-08 on the subject line.

¹⁷ For purposes only of waiving the 30-day operative delay, the Commission has considered the proposed rule's impact on efficiency, competition, and capital formation. See 15 U.S.C. 78c(f).

¹⁸ 15 U.S.C. 78s(b)(2)(B).

Paper Comments

- Send paper comments in triplicate to Secretary, Securities and Exchange Commission, 100 F Street NE, Washington, DC 20549-1090.

All submissions should refer to file number SR-IEX-2026-08. This file number should be included on the subject line if email is used. To help the Commission process and review your comments more efficiently, please use only one method. The Commission will post all comments on the Commission's internet website (<https://www.sec.gov/rules/sro.shtml>). Copies of the filing will be available for inspection and copying at the principal office of the Exchange. Do not include personal identifiable information in submissions; you should submit only information that you wish to make available publicly. We may redact in part or withhold entirely from publication submitted material that is obscene or subject to copyright protection. All submissions should refer to file number SR-IEX-2026-08 and should be submitted on or before April 17, 2026.

For the Commission, by the Division of Trading and Markets, pursuant to delegated authority.¹⁹

Sherry R. Haywood,

Assistant Secretary.

BILLING CODE 8011-01-P

SECURITIES AND EXCHANGE COMMISSION

[Release No. 34-105072; File No. SR-IEX-2025-30]

Self-Regulatory Organizations; Nasdaq ISE, LLC; Order Approving a Proposed Rule Change, as Modified by Amendment Nos. 1 and 2, Regarding the Adoption of Listing Criteria for Options on Commodity-Based Trusts That Hold Multiple Crypto Assets

March 24, 2026.

I. Introduction

On September 26, 2025, Nasdaq ISE, LLC ("ISE" or "Exchange") filed with the Securities and Exchange Commission ("Commission"), pursuant to Section 19(b)(1) of the Securities Exchange Act of 1934 ("Act" or "Exchange Act")¹ and Rule 19b-4 thereunder,² a proposed rule change to adopt listing criteria for options on Commodity-Based Trusts that hold multiple crypto assets. The proposed

rule change was published for comment in the **Federal Register** on October 1, 2025.³ On November 3, 2025, pursuant to Section 19(b)(2) of the Exchange Act,⁴ the Commission designated a longer period within which to approve the proposed rule change, disapprove the proposed rule change, or institute proceedings to determine whether to disapprove the proposed rule change.⁵ On December 17, 2025, the Exchange filed Amendment No. 1 to the proposed rule change ("Amendment No. 1"), which supersedes the original filing in its entirety.⁶ On December 23, 2025, the Commission issued notice of filing of Amendment No. 1 to the proposed rule change and instituted proceedings pursuant to Section 19(b)(2)(B) of the Act⁷ to determine whether to approve or disapprove the proposed rule change, as modified by Amendment No. 1.⁸ The Commission received no comments regarding the proposed rule change. On December 23, 2025, the Exchange filed Amendment No. 2 to the proposed rule change ("Amendment No. 2").⁹ This order approves the proposed rule change, as modified by Amendment Nos. 1 and 2.

II. Description of the Proposed Rule Change, as Modified by Amendment Nos. 1 and 2

Currently, ISE Options 4, Section 3(h)(vi) allows the Exchange to list options on shares that represent interests in a Commodity-Based Trust that meets the generic criteria of The

³ See Securities Exchange Act Release No. 104107 (Sept. 26, 2025), 90 FR 47456.

⁴ 15 U.S.C. 78s(b)(2).

⁵ See Securities Exchange Act Release No. 104173, 90 FR 51424 (Nov. 17, 2025). The Commission designated December 30, 2025, as the date by which the Commission shall approve or disapprove, or institute proceedings to determine whether to disapprove, the proposed rule change.

⁶ Amendment No. 1 revises the proposal to: delete proposed ISE Options 4, Section 3(h)(vii) and incorporate the proposed change to provide for the listing of options on Commodity-Based Trusts that hold multiple crypto assets into existing ISE Options 4, Section 3(h)(vi); amend Options 4, Section 3(h)(3) to apply the requirements in Options 4, Section 3(h)(3) to each crypto asset that a Commodity-Based Trust holds; correct an erroneous cross-reference in Options 4, Section 4(g); add new Options 4, Section 4(g)(3) to establish a continued listing requirement for options listed pursuant to Options 4, Section 3(h)(vi); and renumber the remaining subparagraphs in Options 4, Section 4(g).

⁷ 15 U.S.C. 78s(b)(2)(B).

⁸ See Securities Exchange Act Release No. 104505, 90 FR 61483 (Dec. 31, 2025) ("Order Instituting Proceedings").

⁹ Amendment No. 2 revises the proposal to correct erroneous cross-references in proposed Options 4, Section 4(g)(3). Because Amendment No. 2 is technical in nature, it is not subject to notice and comment. Amendment No. 2 is available at: <https://www.sec.gov/rules-regulations/public-comments/sr-ise-2025-30>.

¹⁹ 17 CFR 200.30-3(a)(12), (59).

¹ 15 U.S.C. 78s(b)(1).

² 17 CFR 240.19b-4.

Nasdaq Stock Market LLC (“Nasdaq”) Rule 5711(d), except that the Commodity-Based Trust holds a single crypto asset, as defined in ISE Options 4, Section 3(h)(3), and provided that (A) the global supply of the crypto asset held by the Commodity-Based Trust has an average daily market value of at least \$700 million over the last 12 months; and (B) the crypto asset held by the Commodity-Based Trust underlies a derivatives contract that trades on a market with which the Exchange has a comprehensive surveillance sharing agreement, whether directly or through common membership in the Intermarket Surveillance Group (“ISG”).¹⁰ As described more fully in the Order Instituting Proceedings,¹¹ the Exchange proposes to amend ISE Options 4, Section 3(h) to allow the Exchange to list and trade options on a Commodity-Based Trust that holds multiple crypto assets.¹² The proposal would allow the Exchange to list and trade these options without additional approval from the Commission.¹³ Under the proposal, each crypto asset that the Commodity-Based Trust holds must meet the criteria in ISE Options 4, Section 3(h)(3).¹⁴ Accordingly, each of the Commodity-Based Trust’s crypto assets must: (A) have an average daily market value of at least \$700 million over the last 12 months; and (B) underlie a derivatives contract that trades on a market with which the Exchange has a comprehensive surveillance sharing agreement, whether directly or through common membership in ISG.¹⁵ The proposed Commodity-Based Trust share options also must satisfy the Exchange’s initial and continued listing standards applicable to all options on exchange-traded funds (“ETFs”).¹⁶ ISE Options 4,

Section 3(h) requires the shares of an ETF underlying listed options to trade on a national securities exchange and to be an “NMS stock,” as defined in Rule 600 of Regulation NMS under the Exchange Act. In addition, ISE Options 4, Section 3(h)(1) requires the shares of an ETF to meet the listing criteria in ISE Options 4, Sections 3(a) and (b)¹⁷ or ISE Options 4, Section 3(h)(1)(ii).¹⁸

The continued listing criteria in proposed ISE Options 4, Section 4(g)(3)

“exchange-traded fund” to refer to several types of investment products, including Commodity-Based Trusts. See ISE Options 4, Section 3(h).

¹⁷ See Order Instituting Proceedings, 90 FR at 61484. ISE Options 4, Section 3(a) states that underlying securities with respect to which put or call options contracts are approved for listing and trading on the Exchange must meet the following criteria: (1) the security must be registered and be an “NMS stock” as defined in Rule 600 of Regulation NMS under the Exchange Act; and (2) the security shall be characterized by a substantial number of outstanding shares that are widely held and actively traded. ISE Options 4, Section 3(b) states, among other things, that, absent exceptional circumstances, an underlying security will not be selected for Exchange options transactions unless: (1) there are a minimum of seven (7) million shares of the underlying security which are owned by persons other than those required to report their stock holdings under Section 16(a) of the Exchange Act; (2) there are a minimum of 2,000 holders of the underlying security; (3) the issuer is in compliance with any applicable requirements of the Exchange Act; (4) trading volume (in all markets in which the underlying security is traded) has been at least 2,400,000 shares in the preceding twelve (12) months; and (5) either: (i) if the underlying security is a “covered security” as defined under Section 18(b)(1)(A) of the Securities Act of 1933: (A) the market price per share of the underlying security has been at least \$3.00 for the previous three consecutive business days preceding the date on which the Exchange submits a certificate to the Clearing Corporation for listing and trading, as measured by the closing price reported in the primary market in which the underlying security is traded; however, (B) the requirements set forth in (5)(i)(A) will be waived during the three days following its initial public offering day for an underlying security having a market capitalization of at least \$3 billion based upon the offering price of its initial public offering, and may be listed and traded starting on or after the second business day following the initial public offering day; or (ii) if the underlying security is not a “covered security,” the market price per share of the underlying security has been at least \$7.50 for the majority of business days during the three calendar months preceding the date of selection, as measured by the lowest closing price reported in any market in which the underlying security traded on each of the subject days.

¹⁸ ISE Options 4, Section 3(h)(ii) states that the shares of an ETF are available for creation or redemption each business day from or through the issuing trust, investment company, commodity pool or other entity in cash or in kind at a price related to net asset value, and the issuer is obligated to issue ETF shares in a specified aggregate number even if some or all of the investment assets and/or cash required to be deposited have not been received by the issuer, subject to the condition that the person obligated to deposit the investment assets has undertaken to deliver them as soon as possible and such undertaking is secured by the delivery and maintenance of collateral consisting of cash or cash equivalents satisfactory to the issuer of the ETF shares, all as described in the ETF shares’ prospectus.

will allow the Exchange to suspend opening transactions in options on Commodity-Based Trust shares if any crypto asset held by the Commodity-Based Trust (A) no longer has an average daily market value of at least \$700 million over the last 12 months, as determined by the Exchange on a monthly basis; or (B) no longer underlies a derivatives contract that trades on a market with which the Exchange has a comprehensive surveillance sharing agreement, whether directly or through common membership in ISG. The Exchange states that requiring the average daily market value criterion to be met on a monthly basis is reasonable given that the Exchange believes that it is unlikely that a crypto asset with an average daily market value of at least \$700 million over the previous twelve months would fail to meet that standard as a result of trading over a relatively short period of time.¹⁹

Options on Commodity-Based Trust shares also will be subject to the continued listing standards in ISE Options 4, Sections 4(g).²⁰ Under ISE Options 4, Section 4(g), shares of an ETF approved for options trading pursuant to ISE Options 4, Section 3(h) would not meet the requirements for continued approval if the shares were delisted from trading as provided in ISE Options 4, Section 4(b)(4) because the underlying security was no longer an NMS stock, as defined in Rule 600 of Regulation NMS under the Exchange Act, or if the shares were halted or suspended from trading on their primary market.²¹ Further, ISE Options 4, Section 4(g)(4) (renumbered as ISE Options 4, Section 4(g)(5)) would allow the Exchange to consider suspending opening transactions in options on Commodity-Based Trust shares if the Exchange believes that further dealing in the options on the Exchange is inadvisable.²²

The Exchange states that the proposed options on Commodity-Based Trust shares would trade in the same manner as other ETF options on the Exchange and will be subject to Exchange rules that currently apply to the listing and trading of ETF options, including

¹⁹ See Order Instituting Proceedings, 90 FR at 61484. For example, the Exchange states that a crypto asset with market capitalization of \$500 million for 15 days in a 20-day trading month could lose up to 88% of its value and continue to meet the criteria. See *id.*

²⁰ See *id.*

²¹ See ISE Options 4, Section 4(g). See also Order Instituting Proceedings, 90 FR at 61484. The Exchange also proposes to correct an erroneous cross-reference in Options 4, Section 4(g).

²² See Order Instituting Proceedings, 90 FR at 61485.

¹⁰ See ISE Options 4, Section 3(h)(3). ISE Options 4, Section 3(h)(3) defines the term “crypto asset” to mean “an asset that is generated, issued and/or transferred using a blockchain or similar distributive ledger technology network, including but not limited to, assets known as ‘tokens,’ ‘digital assets,’ ‘virtual currencies,’ and ‘coins’ and that relies on cryptographic protocols.” See *id.*

¹¹ See *supra* note 8.

¹² The proposal also corrects a grammatical error in ISE Options 4, Section 3(h)(3).

¹³ See Order Instituting Proceedings, 90 FR at 61486.

¹⁴ See proposed ISE Options 4, Section 3(h)(3).

¹⁵ See proposed ISE Options 4, Section 3(h)(3). The Exchange states that the market value for each crypto asset that a Commodity-Based Trust holds will be calculated by taking the total global supply of the crypto asset multiplied by the token price of that asset. The Exchange states that the total supply of a crypto asset includes all crypto assets currently issued and does not include unissued crypto assets. See Order Instituting Proceedings, 90 FR at 61484.

¹⁶ See Order Instituting Proceedings, 90 FR at 61486–7. In its proposal, the Exchange refers to Commodity-Based Trust Shares as ETFs. See *id.* at 61485, 61487. The Exchange’s rules use the term

Exchange rules governing, for example, expirations, exercise prices, minimum increments, position and exercise limits, margin requirements, customer accounts, and trading halt procedures.²³ The Exchange states that position and exercise limits for options on Commodity-Based Trust shares will be determined pursuant to Options 9, Sections 13 and 15.²⁴

The Exchange represents that the same surveillance procedures applicable to all ETF options currently listed and traded on the Exchange will apply to the trading of options on Commodity-Based Trust shares that are approved subject to ISE Options 4, Section 3(h)(vi).²⁵ The Exchange states that its existing surveillance and reporting safeguards are designed to deter and detect possible manipulative behavior which might potentially arise from listing and trading options on Commodity-Based Trust shares that are approved subject to Options 4, Section 3(h)(vi).²⁶ The Exchange states that it may obtain information from designated contract markets that are members of the ISG related to a financial instrument that is based, in whole or in part, upon an interest in or performance of a crypto asset, as applicable.²⁷ In addition, the Exchange states that it currently lists options that would qualify for listing under proposed ISE Options 4, Section 3(h)(vi), and that it has not identified any issues with the listing and trading of these options.²⁸

The Exchange states that both the Exchange and the Options Price Reporting Authority (“OPRA”) have the necessary systems capacity to handle the additional traffic associated with the listing of the proposed options on the Commodity-Based Trust shares.²⁹

III. Discussion and Commission Findings

After careful review, the Commission finds that the proposed rule change, as modified by Amendment Nos. 1 and 2, is consistent with the requirements of the Act and the rules and regulations thereunder applicable to a national securities exchange.³⁰ Specifically, the

Commission finds that the proposed rule change is consistent with Section 6(b)(5) of the Act,³¹ which requires, among other things, that the rules of a national securities exchange be designed to prevent fraudulent and manipulative acts and practices, to remove impediments to and perfect the mechanism of a free and open market, and, in general, to protect investors and the public interest.

The Exchange proposes to amend ISE Options 4, Section 3(h)(vi) to permit the Exchange to list options on shares of a Commodity-Based Trust that holds multiple crypto assets, provided that the Commodity-Based Trust meets certain requirements, as described above. The proposal will allow ISE to list options on shares of these Commodity-Based Trusts without further approval from the Commission, thereby permitting the Exchange to list these options soon after Nasdaq lists the underlying Commodity-Based Trust shares. Permitting the listing and trading of these options on the Exchange will provide investors with an additional vehicle for gaining and hedging exposure to the underlying Commodity-Based Trust shares.

Options on shares of Commodity-Based Trusts that hold multiple crypto assets will be subject to the same initial and continued listing requirements for options on Commodity-Based Trusts that hold a single crypto asset except that each crypto asset that a Commodity-Based Trust holds must (A) have an average daily market value of at least \$700 million over the last 12 months; and (B) underlie a derivatives contract that trades on a market with which the Exchange has a comprehensive surveillance sharing agreement, whether directly or through common membership in ISG. The requirements in proposed Options 4, Section 3(h)(3)(A) are designed to help ensure that each of the crypto assets that a Commodity-Based Trust holds is sufficiently liquid that the creation and redemption process for shares of the Commodity-Based Trust will operate without disruption and that Commodity-Based Trust shares will be available to options market makers and other market participants that may use Commodity-Based Trust shares to hedge their positions. The Exchange will consider suspending opening transactions in Commodity-Based Trust share options if the requirements in proposed ISE Options 4, Section 3(h)(3) are no longer satisfied.³²

impact on efficiency, competition, and capital formation. See 15 U.S.C. 78c(f).

³¹ 15 U.S.C. 78f(b)(5).

³² See proposed ISE Options 4, Section 4(g)(3).

The Exchange represents that the same surveillance procedures applicable to ETF options currently listed and traded on the Exchange will apply to the trading of options on Commodity-Based Trust shares.³³ The Exchange states that its existing surveillance and reporting safeguards are designed to deter and detect possible manipulative behavior that might arise from listing and trading options on ETFs, including the listing of options on Commodity-Based Trust shares.³⁴ As discussed above, each crypto asset held by a Commodity-Based Trust must underlie a derivatives contract that trades on a market with which the Exchange has a comprehensive surveillance sharing agreement, whether directly or through common membership in ISG.³⁵ This requirement, in addition to the Exchange’s existing surveillance procedures, should assist the Exchange in investigating suspected manipulations or other trading abuses in Commodity-Based Trust share options.

Finally, the proposed changes to correct a grammatical error in ISE Options 3, Section 3(h)(vi) and to revise the erroneous cross-reference in ISE Options 4, Section 4(g) will help to ensure the accuracy of the Exchange’s rules.

IV. Conclusion

It is therefore ordered, pursuant to Section 19(b)(2) of the Act,³⁶ that the proposed rule change (SR-ISE-2025-30), as modified by Amendment Nos. 1 and 2, is approved.

For the Commission, by the Division of Trading and Markets, pursuant to delegated authority.³⁷

Sherry R. Haywood,

Assistant Secretary.

SECURITIES AND EXCHANGE COMMISSION

[Release No. 34–105073; File No. SR–24X–2026–08]

Self-Regulatory Organizations; 24X National Exchange LLC; Notice of Filing and Immediate Effectiveness of a Proposed Rule Change To Amend Exchange Rule 11.6 to Clarify the Handling of Certain Orders and Update References to Regulation NMS

March 24, 2026.

Pursuant to Section 19(b)(1) of the Securities Exchange Act of 1934 (the “Act”),¹ and Rule 19b–4 thereunder,² notice is hereby given that, on March 16, 2026, 24X National Exchange LLC (“24X” or the “Exchange”) filed with the Securities and Exchange Commission (the “Commission”) the proposed rule change as described in Items I and II below, which Items have been prepared by the Exchange. The Exchange filed the proposal as a “non-controversial” proposed rule change pursuant to Section 19(b)(3)(A)(iii) of the Act³ and Rule 19b–4(f)(6) thereunder.⁴ The Commission is publishing this notice to solicit comments on the proposed rule change from interested persons.

I. Self-Regulatory Organization’s Statement of the Terms of Substance of the Proposed Rule Change

The Exchange proposes to amend 24X Rule 11.6 to update references to Regulation NMS and to clarify the handling of orders that contain both a Post Only order handling instruction and either (i) no additional instruction or (ii) an additional Display-Price Sliding or Cancel Back instruction to facilitate compliance with Rule 610(e) of Regulation NMS. The proposed rule change is available on the Exchange’s website at <https://equities.24exchange.com/regulation> and at the principal office of the Exchange.

II. Self-Regulatory Organization’s Statement of the Purpose of, and Statutory Basis for, the Proposed Rule Change

In its filing with the Commission, the self-regulatory organization included statements concerning the purpose of and basis for the proposed rule change and discussed any comments it received on the proposed rule change. The text of those statements may be examined at the places specified in Item IV below.

The Exchange has prepared summaries, set forth in sections A, B, and C below, of the most significant parts of such statements.

A. Self-Regulatory Organization’s Statement of the Purpose of, and Statutory Basis for, the Proposed Rule Change

1. Purpose

The purpose of the proposed rule change is to amend 24X Rule 11.6 to update references to Regulation NMS and to clarify the handling of orders that contain both a Post Only order handling instruction and either (i) no additional instruction or (ii) an additional Display-Price Sliding or Cancel Back instruction to facilitate compliance with Rule 610(e) of Regulation NMS.

As background, the current rules state that an order entered with a Post Only instruction does not remove liquidity, except when the order is an order to buy or sell a security priced below \$1.00, or when executing as the taker of liquidity would be economically beneficial to the firm entering the order—i.e., if the value of such execution when removing liquidity equals or exceeds the value of such execution if the order instead posted to the 24X Book and subsequently provided liquidity, including the applicable fees charged or rebates provided.⁵ Today, the Exchange’s rules state that this handling applies to Post Only orders entered with a Display-Price Sliding⁶ instruction, which is a re-pricing instruction used for compliance with Regulation NMS. Thus, an executable order entered with a Post Only instruction is eligible to remove liquidity in the circumstances described in Rule 11.6(l)(2) instead of having its ranked price or display price adjusted pursuant to those order handling instruction.

However, the Exchange also offers a Cancel Back instruction that is not covered by 24X Rule 11.6(l)(2). An order entered with a Cancel Back instruction is immediately cancelled instead of re-priced when displaying the order at its

limit price would create a violation of Regulation NMS, or if the order could not otherwise be executed or posted at its limit price.⁷ Even if Users select the Cancel Back instruction, however, orders entered with a Post Only instruction are handled in the same manner regardless of whether the Display-Price Sliding or Cancel Back instruction is selected.⁸ The Exchange therefore proposes to amend 24X Rule 11.6(l)(2) to eliminate the reference to Display-Price Sliding, given that such an instruction is not required for a Post Only instruction to remove liquidity under the noted circumstances.⁹

The Exchange believes that removing the reference to this instruction in the rule would reduce potential confusion as the order handling described in the rule today applies to all orders entered with a Post Only instruction, and not a specific subset of those orders. No changes to the Exchange’s trading or other systems are contemplated by the proposed rule change, which is instead designed to increase transparency around the Exchange’s process. This proposed change is based on the rules of MEMX LLC (“MEMX”).¹⁰

In addition, the Exchange proposes to amend the references to Rule 610(d) of Regulation NMS that appear in 24X Rule 11.6(a), (b), (e), and (j) to reflect the fact that on September 18, 2024, the Commission adopted several amendments to Regulation NMS.¹¹

⁷ “Cancel Back” is an instruction the User may attach to an order instructing the System to immediately cancel the order when, if displayed by the System on the 24X Book at the time of entry, or upon return to the System after being routed away, would create a violation of Rule 610(e) of Regulation NMS or Rule 201 of Regulation SHO, or the order cannot otherwise be executed or posted by the System to the 24X Book at its limit price. See 24X Rule 11.6(a).

⁸ Rule 11.6(j)(1)(A)(iv) states that any display-eligible order with a Post Only instruction that would be a Locking Quotation or Crossing Quotation of the Exchange upon entry will be cancelled. In the event the NBBO changes such that an order with a Post Only instruction subject to Display-Price Sliding instruction would be ranked at a price at which it could remove displayed liquidity from the 24X Book, the order will be cancelled.

⁹ MEMX and Cboe EDGX Exchange, Inc. similarly filed to remove the reference to Display Price Sliding from their rule text, and allow all Post Only orders to remove liquidity if economically beneficial to the firm entering the order. See Securities Exchange Act Release No. 103968 (September 15, 2025), 90 FR 45069 (September 18, 2025) (SR–MEMX–2025–29); Securities Exchange Release No. 88515 (April 4, 2019), 84 FR 14427 (April 10, 2019) (SR–CboeEDGX–2019–014).

¹⁰ The proposed rule text is substantially similar to MEMX Rule 11.6(l)(2).

¹¹ See Securities Exchange Act Release No. 101070 (Sept. 18, 2024), 89 FR 81620 (Oct. 8, 2024) (File No. S7–30–22) (Regulation NMS: Minimum Pricing Increments, Access Fees, and Transparency

¹ 15 U.S.C. 78s(b)(1).

² 17 CFR 240.19b–4.

³ 15 U.S.C. 78s(b)(3)(A).

⁴ 17 CFR 240.19b–4.

⁵ See 24X Rule 11.6(l)(2). To determine at the time of a potential execution whether the value of such execution when removing liquidity equals or exceeds the value of such execution if the order instead posted to the 24X book and subsequently provided liquidity, the Exchange uses the highest possible rebate paid and the highest possible fee charged for such executions on the Exchange.

⁶ “Display-Price Sliding” is an order instruction requiring that where an order would be a Locking Quotation or Crossing Quotation of an external market if displayed by the System on the 24X Book at the time of entry, will be ranked at the Locking Price in the 24X Book and displayed by the System at one Minimum Price Variation lower (higher) than the Locking Price for orders to buy (sell). See 24X Rule 11.6(j)(1)(A).

which became effective on February 2, 2026.¹² These amendments resulted in the renumbering of former Rule 610(d) (“Locking or crossing quotations”) as Rule 610(e). The Exchange proposes to correspondingly amend its rules so that all references to former Rule 610(d) now correctly refer to Rule 610(e).

2. Statutory Basis

The Exchange believes that the proposed rule change is consistent with the requirements of Section 6(b) of the Act,¹³ in general, and Section 6(b)(5) of the Act,¹⁴ in particular, in that it is designed to remove impediments to and perfect the mechanism of a free and open market and a national market system, to promote just and equitable principles of trade, and, in general, to protect investors and the public interest.

Specifically, the Exchange believes that the proposed rule change is consistent with the public interest and the protection of investors as it would avoid potential confusion about how an order is handled if entered with both a Post Only and Cancel Back instruction or no additional instruction at all. Today, the Exchange’s rules provide that an order entered into the 24X Book with a Post Only instruction would remove liquidity in certain circumstances, such as when economically beneficial for the firm entering the order. In addition, the rules specify that this handling applies to orders entered with a Post Only and a Display-Price Sliding instruction. The rules, however, are silent as to the handling applied if an order with a Post Only instruction contains a Cancel Back instruction or no additional instruction at all. The Exchange’s order handling is, in fact, the same regardless of which of these instructions are chosen by the member. As such, the Exchange believes that it is appropriate to amend 24X Rule 11.6(l)(2) to eliminate the reference to the Display-Price Sliding instruction, thereby making clear that this handling applies to all orders entered with a Post Only instruction and not only those that also contain a Display-Price Sliding instruction.

The Exchange believes that this order handling is appropriate regardless of whether an order entered with a Post

Only instruction also contains a Display-Price Sliding, Cancel Back, or no additional instruction. Specifically, the Exchange believes that it is consistent with just and equitable principles of trade to permit an order entered with a Post Only instruction to remove liquidity when the order is an order to buy or sell a security priced below \$1.00, or when executing as the taker of liquidity would be economically beneficial to the firm entering the order. This handling is designed to ensure that orders entered with a Post Only instruction are eligible to trade in certain circumstances where the entering firm may have an interest in securing an execution on entry—*i.e.*, as the taker of liquidity—notwithstanding the member’s use of the Post Only instruction. Although the Exchange’s rules currently mention order handling for the Display-Price Sliding instruction specifically, this functionality should be applied equally to any order entered with a Post Only instruction. Thus, amending the rule as proposed would provide additional transparency into a feature offered by the Exchange that is potentially beneficial to members that utilize the Post Only instruction.

The Exchange also believes that the proposed change to update references to Rule 610(e) of Regulation NMS is consistent with the Act because it will update references that are currently out of date and reduce confusion surrounding such references, thereby removing impediments to and perfecting the mechanism of a free and open market and a national market system.

B. Self-Regulatory Organization’s Statement on Burden on Competition

The Exchange does not believe that the proposed rule change will impose any burden on competition that is not necessary or appropriate in furtherance of the purposes of the Act. Rather, the proposed rule change would remove ambiguity and outdated references in the 24X rules. No change to the Exchange’s order handling is contemplated by this proposed rule change. The Exchange therefore believes that the proposed rule change would increase transparency around the operation of the Exchange to the benefit of members and investors without imposing any significant burden on competition.

C. Self-Regulatory Organization’s Statement on Comments on the Proposed Rule Change Received From Members, Participants, or Others

No written comments were solicited or received with respect to the proposed rule change.

III. Date of Effectiveness of the Proposed Rule Change and Timing for Commission Action

The Exchange has filed the proposed rule change pursuant to Section 19(b)(3)(A) of the Act¹⁵ and Rule 19b-4(f)(6)¹⁶ thereunder. Because the foregoing proposed rule change does not: (i) significantly affect the protection of investors or the public interest; (ii) impose any significant burden on competition; and (iii) become operative for 30 days from the date on which it was filed, or such shorter time as the Commission may designate, if consistent with the protection of investors and the public interest, the proposed rule change has become effective pursuant to Section 19(b)(3)(A) of the Act¹⁷ and Rule 19b-4(f)(6)¹⁸ thereunder.

A proposed rule change filed under Rule 19b-4(f)(6)¹⁹ normally does not become operative prior to 30 days after the date of the filing. However, pursuant to Rule 19b-4(f)(6)(iii),²⁰ the Commission may designate a shorter time if such action is consistent with the protection of investors and the public interest. The Exchange requested that the Commission waive the 30-day operative delay so that the proposed rule change may become operative immediately upon filing. The Exchange states that waiver of the operative delay is consistent with the protection of investors and the public interest because it would allow the Exchange to immediately amend its rules to avoid potential confusion around the operation of the Post Only instruction. The Commission believes that waiving the 30-day operative delay is consistent with the protection of investors and the public interest because the proposal will clarify the current handling of orders entered with a Post Only instruction and does not raise any novel regulatory

of Better Priced Orders.” (“Rule 610(d) Adopting Release”).

¹² See Securities Exchange Act No. 104172 (Oct. 31, 2025), 90 FR 51418 (Nov. 17, 2025) (Order Granting Temporary Exemptive Relief, Pursuant to Section 36(a)(1) of the Securities Exchange Act of 1934 and Rules 610(f) and 612(d) of Regulation NMS, From Compliance With Rule 600(b)(89)(i)(F), Rule 610(c), Rule 610(d) and Rule 612 of Regulation NMS, as Amended).

¹³ 15 U.S.C. 78f(b).

¹⁴ 15 U.S.C. 78f(b)(5).

¹⁵ 15 U.S.C. 78s(b)(3)(A).

¹⁶ 17 CFR 240.19b-4(f)(6).

¹⁷ 15 U.S.C. 78s(b)(3)(A).

¹⁸ 17 CFR 240.19b-4(f)(6). In addition, Rule 19b-4(f)(6)(iii) requires the Exchange to give the Commission written notice of its intent to file the proposed rule change, along with a brief description and text of the proposed rule change, at least five business days prior to the date of filing of the proposed rule change, or such shorter time as designated by the Commission. The Exchange has satisfied this requirement.

¹⁹ 17 CFR 240.19b-4(f)(6).

²⁰ 17 CFR 240.19b-4(f)(6)(iii).

issues and will allow the Exchange to immediately update outdated references. Accordingly, the Commission hereby waives the operative delay and designates the proposed rule change to be operative upon filing.²¹

At any time within 60 days of the filing of the proposed rule change, the Commission summarily may temporarily suspend such rule change if it appears to the Commission that such action is necessary or appropriate in the public interest, for the protection of investors, or otherwise in furtherance of the purposes of the Act. If the Commission takes such action, the Commission shall institute proceedings to determine whether the proposed rule change should be approved or disapproved.

IV. Solicitation of Comments

Interested persons are invited to submit written data, views and arguments concerning the foregoing, including whether the proposed rule change is consistent with the Act. Comments may be submitted by any of the following methods:

Electronic Comments

- Use the Commission's internet comment form (<https://www.sec.gov/rules/sro.shtml>); or
- Send an email to rule-comments@sec.gov. Please include file number SR-24X-2026-08 on the subject line.

Paper Comments

- Send paper comments in triplicate to Secretary, Securities and Exchange Commission, 100 F Street NE, Washington, DC 20549-1090.
- All submissions should refer to file number SR-24X-2026-08. This file number should be included on the subject line if email is used. To help the Commission process and review your comments more efficiently, please use only one method. The Commission will post all comments on the Commission's internet website (<https://www.sec.gov/rules/sro.shtml>). Copies of the filing will be available for inspection and copying at the principal office of the Exchange. Do not include personal identifiable information in submissions; you should submit only information that you wish to make available publicly. We may redact in part or withhold entirely from publication submitted material that is obscene or subject to copyright protection.

²¹ For purposes only of waiving the 30-day operative delay, the Commission also has considered the proposed rule's impact on efficiency, competition, and capital formation. See 15 U.S.C. 78c(f).

All submissions should refer to file number SR-24X-2026-08 and should be submitted on or before April 17, 2026.

For the Commission, by the Division of Trading and Markets, pursuant to delegated authority.²²

Sherry R. Haywood,

Assistant Secretary.

SMALL BUSINESS ADMINISTRATION

Data Collection Available for Public Comments

AGENCY: U.S. Small Business Administration.

ACTION: 30-Day notice; request for comments.

SUMMARY: The Small Business Administration (SBA) will submit the information collection described below to the Office of Management and Budget (OMB) for review and clearance in accordance with the Paperwork Reduction Act of 1995, as amended, on or after the date of publication of this notice. SBA is publishing this notice to allow all interested members of the public an additional 30 days to provide comments on the collection of information.

DATES: Submit comments on or before April 27, 2026.

ADDRESSES: Written comments and recommendations for this information collection request should be sent within 30 days of publication of this notice to www.reginfo.gov/public/do/PRAMain. Find this particular information collection request by selecting "Small Business Administration"; "Currently Under Review," then select the "Only Show ICR for Public Comment" checkbox. This information collection can be identified by title and/or OMB Control Number, which are provided below.

FOR FURTHER INFORMATION CONTACT: You may obtain information including a copy of the forms and supporting documents from the Interim Agency Clearance Officer, Shauniece Carter, at (202) 205-6536, or shauniece.carter@sba.gov, or from www.reginfo.gov/public/do/PRAMain.

SUPPLEMENTARY INFORMATION: The Office of Investment and Innovation of the SBA is required to examine small business investment companies (SBICs) pursuant to section 310(c) of the Small Business Investment Act of 1958, as

amended, 15 U.S.C. 687b(c), and the implementing regulations 13 CFR 107.690 to 107.692. The purpose of the examination as stated in the statute is to determine, in part, whether or not the SBIC has engaged "solely in lawful activities and those [activities] contemplated" by title III of the Small Business Investment Act. SBA collects information on Forms 856 and 856A as part of its effort to meet this statutory requirement.

Summary of Information Collection

OMB Control Number: 3245-0118.

Title: Disclosure Statement Leveraged Licensees; Disclosure Statement Non-Leveraged Licensees.

Description of Respondents: Small Business Investment Company (SBIC).

Form Number: Form 856 and Form 856a.

Estimated Annual Respondents: 323.

Estimated Annual Hour Burden: 307.

Solicitation of Public Comments

SBA invites the public to submit comments, including specific and detailed suggestions on ways to improve the collection and reduce the burden on respondents. Commenters should also address (i) whether the information collection is necessary for the proper performance of SBA's functions, including whether it has any practical utility; (ii) the accuracy of the estimated burdens; (iii) ways to enhance the quality, utility, and clarity of the information to be collected; and (iv) the use of automated collection techniques or other forms of information technology to minimize the information collection burden on those who are required to respond.

Shauniece Carter,

Interim Agency Clearance Officer.

BILLING CODE 8026-09-P

SMALL BUSINESS ADMINISTRATION

[License No. 40002379]

First In Ventures Fund 3 SBIC Critical Technologies LP; Notice Seeking Exemption Under Section 312 of the Small Business Investment Act, Conflicts of Interest

Notice is hereby given that First In Ventures Fund 3 SBIC Critical Technologies LP, 11450 SE Dixie Hwy, Suite 201, Hobe Sound, FL 33455, Federal Licensee under the Small Business Investment Act of 1958, as amended ("the Act"), in connection with financings of a small business, has sought an exemption under Section 312

²² 17 CFR 200.30-3(a)(12) and (59).

of the Act and 13 CFR 107.730, *Financings which Constitute Conflicts of Interest* of the Code of Federal Regulations. First In Ventures Fund 3 SBIC Critical Technologies LP proposes to provide financing to SCATR Corporation, 26391 Curtiss Wright Parkway Suite 108, Cleveland, OH 44143 to support the company's growth.

The financing is brought within the purview of 13 CFR 107.730(a) of the regulations because First In Ventures Fund II LP and First in SCATR 2024 LLC, Associates of First In Ventures Fund 3 SBIC Critical Technologies LP, own more than ten percent of SCATR Corporation. First in Ventures Fund II LP and First in SCATR 2024 LLC are Associates by virtue of Common Control, as those terms are defined in 13 CFR 107.50. Therefore, this transaction is considered a financing which constitutes a conflict of interest.

Notice is hereby given that any interested person may submit written comments on the transaction, within fifteen days of the date of this publication, to the Associate Administrator for Investment, U.S. Small Business Administration, 409 Third Street SW, Washington, DC 20416.

Paul Salgado,

BILLING CODE P

SOCIAL SECURITY ADMINISTRATION

[Docket No. SSA-2025-0034]

Privacy Act of 1974; Matching Program

AGENCY: Social Security Administration (SSA).

ACTION: Notice of a new matching program.

SUMMARY: In accordance with the provisions of the Privacy Act, as amended, this notice announces a re-establishment of a matching program with the Department of Veterans Affairs (VA), Veterans Benefits Administration (VBA). Under this matching program, VA will provide SSA with compensation and pension payment data necessary to administer Supplemental Security Income (SSI) and Special Veterans Benefits (SVB) and to fulfill SSA's obligations for the Medicare Savings Program (MSP) and Medicare Prescription Drug (Medicare Part D) subsidy (Extra Help).

DATES: The deadline to submit comments on the proposed matching program is April 27, 2026.

The matching program will be applicable on May 11, 2026, or once a minimum of 30 days after publication of this notice has elapsed, whichever is later. The matching program will be in effect for a period of 18 months.

ADDRESSES: You may submit comments by any one of three methods—internet, fax, or mail. Do not submit the same comments multiple times or by more than one method. Regardless of which method you choose, please state that your comments refer to Docket No. SSA-2025-0034 so that we may associate your comments with the correct regulation. **CAUTION:** You should be careful to include in your comments only information that you wish to make publicly available. We strongly urge you not to include in your comments any personal information, such as Social Security numbers or medical information.

1. *Internet:* We strongly recommend that you submit your comments via the internet. Please visit the Federal eRulemaking portal at <https://www.regulations.gov>. Use the *Search* function to find docket number SSA-2025-0034 and then submit your comments. The system will issue you a tracking number to confirm your submission. You will not be able to view your comment immediately because we must post each submission manually. It may take up to a week for your comments to be viewable.

2. *Fax:* Fax comments to (833) 410-1631.

3. *Mail:* Matthew Ramsey, Head of Privacy and Disclosure Policy, Law and Policy, Social Security Administration, 6401 Security Boulevard, Baltimore, MD 21235-6401, or emailing Matthew.Ramsey@ssa.gov. Comments are also available for public viewing on the Federal eRulemaking portal at <https://www.regulations.gov> or in person, during regular business hours, by arranging with the contact person identified below.

FOR FURTHER INFORMATION CONTACT:

Interested parties may submit general questions about the matching program to Andrea Huseth, Division Director, Privacy and Disclosure Policy, Law and Policy, Social Security Administration, 6401 Security Boulevard, Baltimore, MD 21235-6401, at telephone: (410) 608-9675, or send an email to Andrea.Huseth@ssa.gov.

SUPPLEMENTARY INFORMATION: This notice announces the re-establishment of a matching program that is set to expire between SSA and VA, which supports SSA's efficient administration of its SSI and SVB programs and to

fulfill SSA's obligations for the MSP and Extra Help.

Matthew Ramsey,

Head, Privacy and Disclosure Policy, Law and Policy.

Participating Agencies: SSA and VA/VBA.

Authority for Conducting the Matching Program: The legal authorities for SSA to conduct the matching program are sections 806(b), 1144, 1631(e)(1)(B) and (f), and 1860D-14(a)(3) of the Social Security Act (Act) (42 U.S.C. 1006(b), 1320b-14, 1383(e)(1)(B) and (f), and 1395w-114(a)(3)).

The legal authority for VA to disclose information under the matching program is section 1631(f) of the Act (42 U.S.C. 1383(f)), which requires Federal agencies to provide such information as the Commissioner of Social Security needs for purposes of determining eligibility for or amount of benefits, or verifying other information with respect thereto.

Section 1144(a)(1) and (b)(1) of the Act (42 U.S.C. 1320b-14(a)(1) and (b)(1)) requires SSA to take actions to notify individuals about the availability of Medicare cost-sharing and subsidies for low-income individuals under Title XVIII of the Act (Medicare), including MSP and Extra Help.

Section 1860D-14(a)(3) of the Act (42 U.S.C. 1395w-114(a)(3)) sets forth the eligibility determination requirements for Extra Help.

Purpose(s): Under this matching program, VA will provide SSA with compensation and pension payment data necessary to administer SSI and SVB and to fulfill SSA's obligations for the MSP and Extra Help. SSA will use VA compensation and pension payment data to verify eligibility, or amount of payments, for SSI and SVB recipients. SSA will also use the VA compensation and pension payment data to verify an individual's self-certification of eligibility for Extra Help. Additionally, SSA will use the VA compensation and pension payment data to identify individuals who may qualify for Medicare cost-sharing assistance through the MSP or Extra Help to contact these individuals about the availability of these programs.

Categories of Individuals: The individuals whose information is involved in this matching program are those individuals who are receiving VA compensation or pension benefits and are matched with data in SSA's SSI Record and SVB system of records (SOR) or SSA's Medicare database SOR.

Categories of Records: VA will provide SSA with electronic files

containing compensation and pension payment data. SSA will match the VA data with its SSI/SVB payment information and Medicare database information. SSA will conduct the match using the Social Security number, name, date of birth, and VA claim number on the VA file, the SSI Record and SVB SOR, and the Medicare database SOR.

System(s) of Records: VA will provide SSA with electronic files containing compensation and pension payment data from its SOR entitled the “Compensation, Pension, Education, and Veteran Readiness and Employment Records-VA” (58VA21/22/28), republished with updated name at 74 FR 14865 (April 1, 2009), and amended at 86 FR 61858 (November 8, 2021) and 90 FR 44464 (September 15, 2025).

SSA will match the VA compensation and pension payment data with SSI/SVB payment information maintained in its SOR entitled “Supplemental Security Income Record and Special Veterans Benefits,” 60–0103, last fully published at 71 FR 1830 (January 11, 2006), and amended at 72 FR 69723 (December 10, 2007), 83 FR 31250–31251 (July 3, 2018), 83 FR 54969 (November 1, 2018), 89 FR 825 (January 5, 2024), 89 FR 14554 (February 27, 2024) and 90 FR 53413–53415 (November 25, 2025).

SSA will also match the VA information with its Medicare Database (MDB) File, 60–0321, last fully published at 71 FR 42159 (July 25, 2006), and amended at 72 FR 69723 (December 10, 2007), 83 FR 54969 (November 1, 2018), and 90 FR 53413–53415 (November 25, 2025).

BILLING CODE 4191–02–P

SURFACE TRANSPORTATION BOARD

[Docket No. FD 36906]

Connecticut Southern Railroad, Inc.— Change of Operators Exemption— Central New England Railroad, Inc.

Connecticut Southern Railroad, Inc. (CSO), a Class III carrier, has filed a verified notice of exemption under 49 CFR 1150.41 to lease from the State of Connecticut Department of Transportation (CT DOT) and operate approximately 8.64 miles of rail line extending between milepost 0.0 at Hartford, Conn. and milepost 8.64 at Griffins, Conn., known as the Griffins Industrial Track (the Line). Central New England Railroad, Inc. (CNZR), currently operates the Line. *See Cent. New England R.R.—Operation*

Exemption—Line Owned by State of Conn. Dep’t of Transp., FD 33680 (STB served Jan. 28, 1999).¹

CSO states that the agreement between CNZR and CT DOT is ending and that CSO will become the new operator of the Line. According to CSO, CNZR has authorized CSO to represent that CNZR does not object to the verified notice, which will result in CSO obtaining authority to operate the Line as a common carrier and releasing CNZR from its common carrier obligation to operate the Line.

CSO certifies that its lease with CT DOT does not impose or include an interchange commitment. CSO also certifies that its projected annual revenues as a result of this transaction will not result in the creation of a Class II or Class I rail carrier and will exceed \$5 million. Under 49 CFR 1150.42(b), a change in operators exemption requires that notice be given to shippers. CSO states there are no shippers on the Line.

The transaction may be consummated on or after April 21, 2026, the effective date of the exemption (60 days after CSO certified its compliance with the labor notice requirements of 49 CFR 1150.42(e)).

If the verified notice contains false or misleading information, the exemption is void ab initio. Petitions to revoke the exemption under 49 U.S.C. 10502(d) may be filed at any time. The filing of a petition to revoke will not automatically stay the effectiveness of the exemption. Petitions for stay must be filed by April 14, 2026 (at least seven days before the exemption becomes effective).

All pleadings, referring to Docket No. FD 36906, must be filed with the Surface Transportation Board either via e-filing on the Board’s website or in writing addressed to 395 E Street SW, Washington, DC 20423–0001. In addition, a copy of each pleading must be served on CSO’s representative, Justin J. Marks, Clark Hill PLC, 1001 Pennsylvania Avenue NW, Suite 1300 South, Washington, DC 20004.

According to CSO, this action is categorically excluded from environmental review under 49 CFR 1105.6(c) and from historic preservation reporting requirements under 49 CFR 1105.8(b).

¹ CSO submitted a letter on March 18, 2026, noting that the notice of exemption in Docket No. FD 33680 describes the Line as extending to milepost 8.7 at Griffins. CSO states that its understanding is that the reference to milepost 8.7 in that case “is a historical error because anything beyond milepost 8.64 was apparently abandoned in 1938 and there is no evidence to suggest that any rail operations have taken place beyond milepost 8.64 in the last twenty-seven years.” (CSO Letter 1, Mar. 18, 2026.)

Board decisions and notices are available at www.stb.gov.

Decided: March 24, 2026.

By the Board, Anika S. Cooper, Chief Counsel, Office of Chief Counsel.

Jeffrey Herzig,
Clearance Clerk.

[FR Doc. 2026–05999 Filed 3–26–26; 8:45 am]

BILLING CODE 4915–01–P

SURFACE TRANSPORTATION BOARD

[Docket No. AB 1266 (Sub-No. 2X); Docket No. AB 1349X]

Canonie Atlantic Co.—Abandonment Exemption—in the City of Virginia Beach and the City of Norfolk, Va.; Buckingham Branch Railroad Company—Discontinuance Exemption—in the City of Virginia Beach and the City of Norfolk, Va.

On March 9, 2026, Canonie Atlantic Co. (CAC), a Class III rail carrier, and Buckingham Branch Railroad Company (Buckingham Branch), a Class III rail carrier (collectively, Petitioners), jointly filed a petition under 49 U.S.C. 10502 for exemption from the prior approval requirements of 49 U.S.C. 10903 for CAC to abandon and for Buckingham Branch to discontinue service over approximately 2.3 miles of rail line in the City of Virginia Beach and the City of Norfolk, Va. (the Line). The Line extends between approximately milepost 95.0 at Little Creek, Va. (City of Virginia Beach), and milepost 97.6 at Camden Heights, Va. (City of Norfolk).¹ Two stations exist on the Line: Camden Heights at milepost SN 5.2 and Little Creek at milepost SN 7.2. The Line traverses U.S. Postal Service Zip Codes 23455 and 23502.

According to Petitioners, CAC has owned the Line since 1985,² but it has never operated the Line, although it acknowledges that it holds a residual common carrier obligation. (Pet. 2.) Petitioners state that CAC has leased the Line to various carriers to provide service, and Buckingham Branch has been the lessee-operator of the Line since 2018.³ (Pet. 2.) Petitioners further state that Buckingham Branch’s lease of the Line includes various Section 10906-yard tracks and facilities (the

¹ Petitioners state that the milepost designations reflect the historical mileposts assigned to the Line, and that the length of the Line as currently measured is slightly shorter than the historical milepost designations would suggest. (Pet. 1 n.1.)

² *See Canonie Atl. Co.—Exemption from 49 U.S.C. 10901, 11301, & 11343*, FD 30709 (ICC served Sept. 11, 1985).

³ *See Buckingham Branch R.R.—Change in Operators Exemption—Cassatt Mgmt., LLC*, FD 36202 (STB served July 18, 2018).

Little Creek Yard) located at the northern end of the Line. (*Id.*) According to Petitioners, the Little Creek Yard provides Buckingham Branch with track and land that can be used for rail-to-truck transloading services and serves as the base of Buckingham Branch's local operations, serving as its only locomotive staging and servicing point in the Tidewater area and affording it with immediately adjacent office facilities to support administrative functions and local crew reporting. (*Id.*)

Petitioners state that the Line is stub-ended and handles no overhead traffic, and its local traffic derives from two shippers that have used the Line in the last two years: USRL Virginia Beach VA, LLC, and Greenbridge. (*Id.* at 2–3.) Petitioners represent that Buckingham Branch operates the Line as the higher-traffic volume part of its Norfolk Division, together with a 4.2-mile connecting line that Buckingham Branch leases from Norfolk Southern Railway Company.⁴ (Pet. 3.)

According to Petitioners, in the spring of 2025, the U.S. Navy (Navy) approached CAC regarding its need and desire to acquire a portion of the Line and the Little Creek Yard, identified as Parcel 4B in the petition, for national security purposes and to extend the Navy's control of the waterfront. (*Id.* at 4.) According to Petitioners, Buckingham Branch determined that without Parcel 4B it would become operationally and economically impracticable to operate the remainder of the Line. (*Id.*) Petitioners state that CAC does not have the resources to operate the Line itself and does not believe it could find another carrier willing and able to operate the remainder of the Line. (*Id.*) As a result, Petitioners agreed to terminate the lease for the entirety of the Line and further agreed that Buckingham Branch would seek discontinuance authority and CAC would seek abandonment authority for the Line. (*Id.*)

According to Petitioners, based on information in their possession, the Line does not contain federally granted rights-of-way. (*Id.* at 5.) Petitioners state that any documentation in their possession related to the issue of federally granted rights-of-way will be made available to those requesting it. (*Id.*)

The interest of railroad employees will be protected by the conditions set forth in *Oregon Short Line Railroad*—

Abandonment Portion Goshen Branch Between Firth & Ammon, in Bingham & Bonneville Counties, Idaho, 360 I.C.C. 91 (1979).

By issuing this notice, the Board is instituting an exemption proceeding pursuant to 49 U.S.C. 10502(b). A final decision will be issued no later than June 26, 2026.⁵

Any offer of financial assistance (OFA) under 49 CFR 1152.27(b)(2) will be due no later than 120 days after the filing of the petition for exemption, or 10 days after service of a decision granting the petition for exemption, whichever occurs sooner. Persons interested in submitting an OFA must first file a formal expression of intent to file an offer by April 6, 2026, indicating the type of financial assistance they wish to provide (*i.e.*, subsidy or purchase) and demonstrating that they are preliminarily financially responsible. See 49 CFR 1152.27(c)(1)(i).

The Line may be suitable for other public use, including interim trail use. Any request for a public use condition under 49 CFR 1152.28 or for interim trail use/railbanking under 49 CFR 1152.29 will be due no later than April 16, 2026.⁶

All pleadings, referring to Docket Nos. AB 1266 (Sub-No. 2X) and AB 1349X, must be filed with the Surface Transportation Board either via e-filing on the Board's website or in writing addressed to 395 E Street SW, Washington, DC 20423–0001. In addition, a copy of each pleading must be served on CAC's representative, Justin J. Marks, Clark Hill PLC, 1001 Pennsylvania Ave. NW, Suite 1300 South, Washington, DC 20004, and on Buckingham Branch's representative, Robert A. Wimbish, Fletcher & Sippel LLC, 29 N Wacker Drive, Suite 800, Chicago, IL 60606. Replies to the petition are due on or before April 16, 2026.

Persons seeking further information concerning abandonment and discontinuance procedures may contact the Board's Office of Public Assistance, Governmental Affairs, and Compliance at (202) 245–0238 or refer to the full abandonment and discontinuance regulations at 49 CFR part 1152. Questions concerning environmental issues may be directed to the Board's Office of Environmental Analysis (OEA) at (202) 245–0294. If you require an accommodation under the Americans

with Disabilities Act, please call (202) 245–0245.

OEA will prepare an environmental assessment (EA) (or environmental impact statement (EIS), if necessary), which will be served upon all parties of record and upon any other agencies or persons who comment during its preparation. Other interested persons may contact OEA to obtain a copy of the EA (or EIS). EAs in abandonment proceedings normally will be made available within 60 days of the filing of the petition. The deadline for submission of comments on the EA generally will be within 30 days of its service.

Board decisions and notices are available at www.stb.gov.

Decided: March 24, 2026.

By the Board, Anika S. Cooper, Chief Counsel, Office of Chief Counsel.

Regena Smith-Bernard,
Clearance Clerk.

BILLING CODE 4915–01–P

SURFACE TRANSPORTATION BOARD

[Docket No. FD 36914]

Cando Holdings (U.S.) Inc. and Alberta Investment Management Corporation, et al.—Control Exemption—Savage Bingham & Garfield Railroad LLC and Savage Tooele Railroad LLC

Cando Holdings (U.S.) Inc. (Cando) and Alberta Investment Management

Corporation and various of its intermediate holding companies (collectively, AIMCo),¹ each noncarriers, filed a verified notice of exemption under 49 CFR 1180.2(d)(2) to obtain control of Savage Bingham & Garfield Railroad LLC (SBG)² and Savage Tooele Railroad LLC (STR),³ both Class III carriers, from their current owner Savage Infrastructure LLC (Savage), a noncarrier.

The verified notice states that, pursuant to an Equity and Asset

¹ According to the verified notice, Cando is an indirect subsidiary of Alberta Investment Management Corporation. There are a total of 12 intermediate holding companies between Alberta Investment Management Corporation and Cando: PIP7PX Holdings Ltd.; AIMCo Global Infrastructure Partnership; PIP7 Rowboat Trust 2; PIP7 Rowboat Trust 1; PIP7 Rowboat Ltd.; Paddle LP; Cando Holdings Ltd.; Cando Midco C Ltd.; Cando Midco B Ltd.; Cando Midco A Ltd.; Cando Rail & Terminals Ltd. (Cando RTL); and Cando Rail & Terminals (U.S.) ULC.

² SBG operates approximately 21 miles of trackage in the vicinity of Salt Lake City, Utah.

³ STR received authority to construct and operate an approximately 11-mile rail line in Tooele County, Utah. See *Savage Tooele R.R.—Constr. & Operation Exemption—Line of R.R. in Tooele Cnty., Utah*, FD 36616 (STB served Apr. 1 2024).

⁴ Concurrent with the joint petition in this proceeding, Buckingham Branch filed a petition, in Docket No. AB 1349 (Sub-No. 1X), seeking an exemption to discontinue service over this connecting line.

⁵ Petitioners state that the Navy has “has expressed urgency to acquire Parcel 4B,” and accordingly request that the Board consider the joint petition on an expedited basis. (Pet. 11.)

⁶ Filing fees for OFAs and trail use requests can be found at 49 CFR 1002.2(f)(25) and (27), respectively.

Purchase Agreement (EAPA),⁴ Cando will acquire from Savage all of the issued and outstanding equity interests in SBG and STR, and certain other entities owned directly or indirectly by Savage. Currently, Cando and AIMCo control one rail carrier, Cando Rail & Terminals Inc. (Cando RT), which holds authority to operate as a rail carrier in Arkansas.⁵ Pursuant to the EAPA, Cando would assume direct control, and AIMCo would assume indirect control, of SBG and STR.

Cando states that: (1) the rail lines of SBG and STR do not connect with each other or with the trackage over which Cando RT has operating rights; (2) the proposed transaction is not part of a series of anticipated transactions that would result in such a connection; and (3) the transaction does not involve a Class I rail carrier. Therefore, the proposed transaction is exempt from the prior approval requirements of 49 U.S.C. 11323. *See* 49 CFR 1180.2(d)(2).

The earliest this transaction may be consummated is April 10, 2026, the effective date of the exemption (30 days after the verified notice was filed).

Under 49 U.S.C. 10502(g), the Board may not use its exemption authority to relieve a rail carrier of its statutory obligation to protect the interests of its employees. However, 49 U.S.C. 11326(c) does not provide for labor protection for transactions under 49 U.S.C. 11324 and 11325 that involve only Class III rail carriers. Because this transaction involves Class III rail carriers only, the Board, under the statute, may not impose labor protective conditions for this transaction.

If the verified notice contains false or misleading information, the exemption is void ab initio. Petitions to revoke the exemption under 49 U.S.C. 10502(d) may be filed at any time. The filing of a petition to revoke will not automatically stay the effectiveness of the exemption. Petitions for stay must be filed by April 3, 2026 (at least seven days before the exemption becomes effective).

All pleadings, referring to Docket No. FD 36914, should be filed with the Surface Transportation Board via e-filing on the Board's website or in writing addressed to 395 E Street SW, Washington, DC 20423-0001. In

addition, a copy of each pleading must be served on Cando and AIMCo's representative, Thomas J. Litwiler, Fletcher & Sippel LLC, 29 North Wacker Drive, Suite 800, Chicago, IL 60606-3208.

According to Cando and AIMCo this action is categorically excluded from environmental review under 49 CFR 1105.6(c) and from historic preservation reporting requirements under 49 CFR 1105.8(b).

BILLING CODE 4915-01-P

SURFACE TRANSPORTATION BOARD

[Docket No. AB 1349 (Sub-No. 1X)]

Buckingham Branch Railroad Company—Discontinuance Exemption—in the City of Virginia Beach and the City of Norfolk, Va.

On March 9, 2026, Buckingham Branch Railroad Company (Buckingham Branch), a Class III rail carrier, filed a petition under 49 U.S.C. 10502 for exemption from the prior approval requirements of 49 U.S.C. 10903 to discontinue service over approximately 4.2 miles of rail line in the City of Virginia Beach and the City of Norfolk, Va. (the Line). The Line extends between milepost SN 6.7 at Diamond Springs (Virginia Beach), Va., to milepost SN 2.5 at Coleman Place (Norfolk), Va. Two stations exist on the Line: Coleman Place (milepost SN 2.4) and Diamond Springs (milepost SN 5.2). The Line traverses U.S. Postal Service Zip Codes 23455 and 23502.

According to Buckingham Branch, the Line is owned by Norfolk Southern Railway Company (NSR), and it has operated the Line under a lease with NSR since 2018.¹ (Pet. 1–2.) Buckingham Branch states that the Line is stub-ended but handles overhead traffic originating or terminating on a connecting line segment (CAC Line), which Buckingham Branch leases from the Canonic Atlantic Co. (CAC). (*Id.* at 2.) Buckingham Branch further states that the Line's local traffic derives from a single shipper, Gordon Paper. (*Id.*)

According to Buckingham Branch, it operates the Line as part of its Norfolk

Division, together with the CAC Line, and the vast majority of Norfolk Division traffic derives from shippers on the CAC Line. (*Id.* at 2–3.) According to Buckingham Branch, the U.S. Navy (Navy) desires to acquire a portion of the CAC Line and related yard property (Parcel 4B) for national security purposes and to extend the Navy's control of the waterfront.² (Pet. 3.) Buckingham Branch contends that once the abandonment and discontinuance authority sought in Docket No. AB 1266 (Sub-No. 2X) et al. is authorized and Parcel 4B is sold to the Navy, its continued operation of the Line will not be operationally or economically feasible. (*Id.* at 3–4.)

Buckingham Branch states that, based on the information in its possession, it does not believe that the Line contains federally granted rights-of-way. (*Id.* at 2.) Buckingham Branch further states that any documentation in its possession related to federally granted rights-of-way will be made available to those requesting it. (*Id.*)

As a condition to this exemption, any employee adversely affected by the discontinuance in service will be protected by the conditions set forth in *Oregon Short Line Railroad—Abandonment Portion Goshen Branch Between Firth & Ammon, in Bingham & Bonneville Counties, Idaho*, 360 I.C.C. 91 (1979).

By issuance of this notice, the Board is instituting an exemption proceeding pursuant to 49 U.S.C. 10502(b). A final decision will be issued no later than June 26, 2026.³

Because this is a discontinuance proceeding and not an abandonment, interim trail use/railbanking and public use conditions are not appropriate. Because there will be an environmental review during any subsequent abandonment, this discontinuance does not require an environmental review. *See* 49 CFR 1105.6(c)(5), 1105.8(b).

Any offer of financial assistance (OFA) for subsidy under 49 CFR 1152.27(b)(2) will be due no later than 120 days after the filing of the petition for exemption, or 10 days after service of a decision granting the petition for

² Concurrent with the petition in this proceeding, CAC and Buckingham Branch filed a joint petition, in Docket No. AB 1266 (Sub-No. 2X) et al., for CAC to abandon and for Buckingham Branch to discontinue service over the CAC Line.

³ Buckingham Branch states that it will consummate the discontinuance of service on the Line and on the CAC Line simultaneously. (Pet. 10.) In light of the Navy's "expressed urgency to acquire Parcel 4B," and CAC and Buckingham Branch's request for expedited consideration of the joint petition in Docket No. AB 1266 (Sub-No. 2X) et al., Buckingham Branch requests prompt consideration of its petition. (*Id.*)

⁴ A highly confidential, unredacted version of the EAPA was submitted under seal concurrently with a motion for protective order. In its motion Cando and AIMCo request a waiver of the requirement to submit a redacted, public version of the EAPA with the verified notice. The motion for protective order and request for waiver will be addressed in a separate decision.

⁵ *See* Cando Rail Servs.—Operation Exemption—Georgia-Pacific Consumer Operations, LLC, FD 36313 (STB served Aug. 2, 2019).

¹ *See* Buckingham Branch R.R.—Change in Operators Exemption—Cassatt Mgmt., LLC, FD 36202 (STB served July 18, 2018).

exemption, whichever occurs sooner.⁴ Persons interested in submitting an OFA must first file a formal expression of intent to file an offer by April 6, 2026, indicating the intent to file an OFA for subsidy and demonstrating that they are preliminarily financially responsible. See 49 CFR 1152.27(c)(1)(i).

All pleadings, referring to Docket No. AB 1349 (Sub-No. 1X), must be filed with the Surface Transportation Board either via e-filing on the Board's website or in writing addressed to 395 E Street SW, Washington, DC 20423-0001. In addition, a copy of each pleading must be served on Buckingham Branch's representative, Robert A. Wimbish, Fletcher & Sippel LLC, 29 N Wacker Drive, Suite 800, Chicago, IL 60606. Replies to the petition are due on or before April 16, 2026.

Persons seeking further information concerning discontinuance procedures may contact the Board's Office of Public Assistance, Governmental Affairs, and Compliance at (202) 245-0238 or refer to the full abandonment and discontinuance regulations at 49 CFR part 1152. Questions concerning environmental issues may be directed to the Board's Office of Environmental Analysis at (202) 245-0294. If you require an accommodation under the Americans with Disabilities Act, please call (202) 245-0245.

Board decisions and notices are available at www.stb.gov.

By the Board, Anika S. Cooper, Chief Counsel, Office of Chief Counsel.

Decided: March 24, 2026.

BILLING CODE 4910-13-P

DEPARTMENT OF TRANSPORTATION

Office of the Secretary

[Docket No. DOT-OST-2026-1222]

Agency Information Collection Activities: DOT Technical Assistance PRA

AGENCY: Office of the Secretary (OST), Department of Transportation (DOT).

ACTION: Notice and request for comments.

SUMMARY: In accordance with the Paperwork Reduction Act of 1995, this notice announces the intention of the Office of the Secretary (OST) to request the Office of Management and Budget's (OMB) approval to renew a currently approved information collection titled "DOT Technical Assistance PRA", with OMB control number 2105-0584.

DATES: Comments must be submitted on or before May 29, 2026.

ADDRESSES: You may send comments within 60 days of publication of this notice to the Office of Information and Regulatory Affairs, Office of Management and Budget, 725 17th Street NW, Washington, DC 20503, Attention DOT Desk Officer. All comments received are part of the public record. Comments will generally be posted without change. All comments should include the Docket number DOT-OST-2022-0120.

FOR FURTHER INFORMATION CONTACT: Please email victor.austin@dot.gov or contact Victor Austin at (771) 216-1242.

Office hours are from 8 a.m. to 5 p.m. ET, Monday through Friday, except for Federal holidays.

SUPPLEMENTARY INFORMATION:

Title: DOT Technical Assistance PRA.

OMB Control Number: 2105-0584.

Type of Request: Renewal of information collection.

Background: The Infrastructure Investment and Jobs Act (IIJA, Public Law 117-58) created several programs at the U.S. Department of Transportation (DOT) that allow local governments, non-profit organizations, tribal governments, and other political subdivisions of state or local governments to apply directly for DOT discretionary grant funding.

For the Asset Concession and Innovative Finance Assistance Program (also known as the Innovative Finance and Asset Concession Program), project sponsors will make an application in response to a Notice of Funding Opportunity (NOFO). Successful applicants will receive reimbursable grants to hire staff or procure technical assistance to develop projects. Preparation of each NOFO response is estimated to require 30 hours of staff time. Successful applicants must also prepare progress reports as a condition of funding. Progress reporting is estimated to require four hours per year. Each grant has a three-year period of performance.

For the Rural and Tribal Assistance Pilot Program, project sponsors will make an application in response to a NOFO. The application process is streamlined for this program and is estimated to require 19 hours to complete. Successful applicants must also prepare progress reports as a condition of funding. Progress reporting is estimated to require four hours per year. Each grant has a three-year or two-year period of performance.

Asset Concession and Innovative Finance Grant Program

Estimated Number of Respondents to NOFO: 100.

Estimated Burden Hours per NOFO Respondent: 30.

Estimated Total Annual Burden Hours for NOFO respondents: 3,000.

Estimated Successful Applicants: 50.

Estimated Hours for Progress Reporting, per Award per Year: 4.

Estimated Annual Burden Hours for Progress Reporting: 200.

Estimated Total Annual Cost: \$409,600.

Rural and Tribal Assistance Grants

Estimated Number of Respondents to NOFO: 700.

Estimated Burden Hours per NOFO Respondent: 19.

⁴ The filing fee for OFAs can be found at 49 CFR 1002.2(f)(25).

Estimated Total Annual Burden Hours for NOFO Respondents: 13,300.
Estimated Successful Applicants: 50.
Estimated Hours for Progress Reporting, per Award per Year: 4.
Estimated Annual Burden Hours for Progress Reporting: 200.
Estimated Total Annual Cost: \$1,728,000.

Total for All Technical Assistance Programs

Estimated Total Hours: 16,700.
Estimated Total Cost: \$2,137,600.
Public Comments Invited: You are asked to comment on any aspect of this information collection, including: (1) Whether the proposed collection is necessary for DOT's performance; (2) the accuracy of the estimated burdens; (3) ways for DOT to enhance the quality, usefulness, and clarity of the collected information; and (4) ways that the burden could be minimized, including the use of electronic technology, without reducing the quality of the collected information. The agency will summarize and/or include your comments in the request for OMB's clearance of this information collection.
Authority: The Paperwork Reduction Act of 1995; 44 U.S.C. chapter 35, as amended; 23 U.S.C. 134 and 135; and 23 CFR chapter 1, subchapter E, part 450.

Duane Callender,

Director, Build America Bureau, Office of the Secretary, U.S. Department of Transportation.

BILLING CODE P

DEPARTMENT OF VETERANS AFFAIRS

[Docket No. VA-2026-VACO-0001]

Notice of Exception to Date of Receipt Rule

AGENCY: Department of Veterans Affairs.

ACTION: Notice.

SUMMARY: Beginning November 15, 2024, a strike led by the Canadian Union of Postal Workers (CUPW) resulted in a delay of mail delivery from Canada Post. In response, the Veterans Benefits Administration (VBA) is establishing a temporary exception to the date of receipt provisions to ensure that veterans or claimants residing within the Canada Post mailing jurisdiction do not have an adverse effect to benefits. VBA recognizes the potential impact in the claim process resulting from the inability to send or receive mail. The strike ran from November 15, 2024, through December 17, 2024. On January 6, 2025, Canada

Post returned to full-service levels, and the United States Postal Service (USPS) resumed acceptance of mail and packages to and from Canada.

FOR FURTHER INFORMATION CONTACT: Jadine Piper, Acting Assistant Director, Policy, Compensation Service, Veterans Benefits Administration, (202) 461-9700.

SUPPLEMENTARY INFORMATION: On November 15, 2024, CUPW initiated a national strike affecting Canada's postal system, causing stoppages and significant delays in the processing and delivery of mail. On November 29, 2024, USPS announced an immediate suspension, temporarily halting mail acceptance to and from Canada, affecting the processing or delivery of mail services to millions of Canadian customers. On January 6, 2025, Canada Post reinstated full-service levels for domestic mail and accelerated processing for international mail. In conjunction, on January 6, 2025, USPS resumed the acceptance of mail and packages to and from Canada.

Although Canada Post has resumed regular mail processing and delivery services, VBA understands the negative impact these disruptions may have caused certain veterans or claimants residing within the Canadian postal jurisdiction during the time of the strike. Potential impact includes preventing the timely filing of VBA claims submissions and claim-related evidence or receiving claim-related or other pertinent VBA benefit information. Therefore, VBA is instituting a temporary exception for determining acceptable dates of receipt for correspondence sent through postal or other mail processing services for veterans or claimants residing within the jurisdiction of Canada.

Ordinarily, "date of receipt" means the date on which a Department of Veterans Affairs (VA) office receives a claim, information, or evidence. Under 38 CFR 3.1(r), the Under Secretary for Benefits may establish exceptions to VA's rule on the date of receipt of claims, information, or evidence by publishing a notice in the **Federal Register**. Section 3.1(r) states that an exception may be established when a natural or man-made interference with the normal channels through which VBA ordinarily receives correspondence has resulted in one or more VBA regional offices experiencing extended delays in the receipt of claims, information, or evidence to an extent that, if not addressed, would adversely affect veterans and claimants through no fault of their own.

The CUPW national strike significantly disrupted mail services for millions of Canada Post customers. VBA acknowledges that veterans or claimants residing within a Canadian postal jurisdiction may have experienced unusual hardships in submitting correspondence containing a claim, evidence, or other information throughout the course of the strike. VBA further acknowledges that letters sent in the days before the strike may also have been impacted. Therefore, VA has established exceptions to the standard date of receipt rule for correspondence from veterans or claimants affected by the CUPW strike. VA recognizes a disruption in mail services from November 11, 2024, the first business day of the week in which mail service disruptions commenced, through March 10, 2025, 60 calendar days from the date following full reinstatement of Canadian mail services.

Exceptions to Date of Receipt Rule for Claimants Affected by the Canadian Postal Strike

Under 38 CFR 3.109(b), if there is good cause, VA may provide claimants or beneficiaries an extension of time when submitting information applicable to the processing of a claim or a decision. This applies to veterans, claimants, or beneficiaries residing in a Canadian postal jurisdiction during the strike. The disruption in mail services provides good cause to support the need for extending time limits based on mail delays. VBA grants a time limit extension by establishing this exception.

VBA gives notice that, for purposes of determining entitlement to benefits, any correspondence received by VBA, during the period of November 11, 2024, through March 10, 2025, from a veteran or claimant residing within a Canadian postal jurisdiction that contains an impacted claim, information, or evidence, will be considered received on the postmark date or November 15, 2024, whichever is earlier.

In accordance with 38 CFR 3.110, computation of the extended timeframe for receipt of correspondence or other pertinent evidence excludes the first day of the affected period. This means VBA will make exceptions to the date of receipt rule beginning November 15, 2024, extending through March 10, 2025, the next succeeding workday following the 60-day period after full resumption of Canadian mail services.

If VBA solicited submission of information or evidence from a veteran or claimant residing within a Canadian postal jurisdiction any time on or after November 11, 2024, and the date for submission of such information or

evidence expired between November 15, 2024, and March 10, 2025, receipt of such information or evidence will be considered as timely if it is postmarked by March 10, 2025. In the event there is no mail postmark or date stamp by the USPS, VBA will consider any such solicited evidence or information as received no later than March 10, 2025, or the latest date on which a timely response to VBA's request for information could be received. For any decision notification letter sent during the impacted period of November 11, 2024, to March 10, 2025, VA will consider March 10, 2025, as the date of the decision notice for a subsequently submitted decision review option.

Signing Authority

Douglas A. Collins, Secretary of Veterans Affairs, approved this document on March 11, 2026, and authorized the undersigned to sign and submit the document to the Office of the Federal Register for publication electronically as an official document of the Department of Veterans Affairs.

Gabriela DeCuir,

*Alternate Federal Register Liaison Officer,
Department of Veterans Affairs.*

BILLING CODE 8320-01-P

DEPARTMENT OF VETERANS AFFAIRS

[OMB Control No. 2900-NEW]

Agency Information Collection Activity Under OMB Review: Application for High-Technology Veterans Education, Training and Skills (VET TEC 2.0) Program

AGENCY: Veterans Benefits Administration, Department of Veterans Affairs.

ACTION: Notice.

SUMMARY: In compliance with the Paperwork Reduction Act (PRA) of 1995, this notice announces that the Veterans Benefits Administration

(VBA), Department of Veterans Affairs, will submit the collection of information abstracted below to the Office of Management and Budget (OMB) for review and comment. The PRA submission describes the nature of the information collection and its expected cost and burden, and it includes the actual data collection instrument.

DATES: Comments and recommendations for the proposed information collection should be sent by April 27, 2026.

ADDRESSES: To submit comments and recommendations for the proposed information collection, please type the following link into your browser: www.reginfo.gov/public/do/PRAMain, select "Currently under Review—Open for Public Comments", then search the list for the information collection by Title or "OMB Control No. 2900-XXXX."

FOR FURTHER INFORMATION CONTACT: VA PRA information: Dorothy Glasgow, 202-461-1084, VAPRA@va.gov

SUPPLEMENTARY INFORMATION:

Title: Application for Veteran Employment Through Technology Education Courses (VET TEC 2.0) High Technology Program, VA Form 22-10297.

OMB Control Number: 2900-NEW, <https://www.reginfo.gov/public/do/PRAsearch>.

Type of Review: New Collection.

Abstract: On January 2, 2025, the Elizabeth Dole Field and Community Based Services for Veterans and Caregivers Act (Pub. L. 118-210) was signed into law. The legislation can be identified as the DOLE Act. This legislation established a new Veteran Technology program titled "High-Technology Veterans Education, Training and Skills (VET TEC 2.0) Program". VET TEC 2.0 allows Veterans to enroll in courses outside the traditional definition of higher education to obtain skillsets highly desired by employers. The DOLE Act authorizes VA to provide educational

assistance for these high technology programs of education that begin prior to September 30, 2027. The eligibility requirements to qualify for the program apply to an individual who is a Veteran under age 62 who has served at least 3 years (36 months) on Active Duty; or a Service member who is within 180 days of discharge who has or will serve 3 years (36 months) by their discharge date; and who has received a discharge under conditions other than dishonorable. The DOLE Act requires VA to develop mechanisms for Veteran application for VET TEC 2.0, to include selection of a specific training provider and program and a Participation Agreement for Training Providers who wish to seek approval for their programs under VET TEC 2.0. It also requires VA to develop enrollment processing mechanisms and the ability to track the number of enrollees in real time due to annual participation limits. Lastly, VA must submit a report to Congress no later than January 2, 2026, and each year thereafter on the operation of the program.

An agency may not conduct or sponsor, and a person is not required to respond to a collection of information unless it displays a currently valid OMB control number. The **Federal Register** Notice with a 60-day comment period soliciting comments on this collection of information was published at 90 FR 58373, December 16, 2025.

Affected Public: Individuals and households.

Estimated Annual Burden: 4,412 hours.

Estimated Average Burden per Respondent: 30 minutes.

Frequency of Response: Once.

Estimated Number of Respondents: 4,412.

Authority: 44 U.S.C. 3501 *et seq.*

Shunda Willis,

Alternate, VA PRA Clearance Officer, Office of Information Technology, Data Governance Analytics, Department of Veterans Affairs.

No. 59

March 27, 2026

Part II

Federal Reserve System

12 CFR Part 217

Regulatory Capital Rule (Regulation Q): Risk-Based Capital Surcharges for Global Systemically Important Bank Holding Companies; Systemic Risk Report (FR Y-15); Proposed Rule

FEDERAL RESERVE SYSTEM**12 CFR Part 217****[Docket No. 1889]****RIN 7100-AH22****Regulatory Capital Rule (Regulation Q): Risk-Based Capital Surcharges for Global Systemically Important Bank Holding Companies; Systemic Risk Report (FR Y-15)****AGENCY:** Board of Governors of the Federal Reserve System.**ACTION:** Notice of proposed rulemaking.

SUMMARY: The Board of Governors of the Federal Reserve System (Board) is inviting public comment on a notice of proposed rulemaking to amend the Board's rule that identifies and establishes risk-based capital surcharges for U.S. global systemically important bank holding companies (GSIBs). The proposal would also amend the Systemic Risk Report (FR Y-15), which is the source of inputs to the implementation of the GSIB framework under the capital rule. The proposal would make several changes to better align surcharges with risk. First, it would modify certain coefficients used to calculate GSIB surcharges under method 2 of the GSIB surcharge framework to reflect changes in the financial system and the economy and provide for annual adjustments for real economic growth and inflation going forward. Second, the proposal would modify the measurement and weighting of the weighted short-term wholesale funding systemic indicator. Third, for certain systemic indicators currently measured as of a single date each year, the proposal would require measurement based on average values to reduce the effects of temporary changes to indicator values around measurement dates. Fourth, the proposal would reduce cliff effects and enhance the sensitivity of the surcharge to changes in a GSIB's systemic risk profile. Fifth, to improve risk capture, the proposal would also make improvements to the measurement of some systemic indicators used in the GSIB surcharge framework and the framework for determining prudential standards for large banking organizations. In addition to these changes, the proposal would make several amendments to the FR Y-15 to improve the consistency of data reporting and streamline the reporting process.

DATES: Comments must be received on or before June 18, 2026.**ADDRESSES:** You may submit comments, identified by Docket No. 1889 and RIN

7100-AH22, by any of the following methods:

- *Agency Website:* <https://www.federalreserve.gov/apps/proposals/>. Follow the instructions for submitting comments, including attachments. *Preferred Method.*
- *Mail:* Benjamin W. McDonough, Secretary, Board of Governors of the Federal Reserve System, 20th Street and Constitution Avenue NW, Washington, DC 20551.
- *Hand Delivery/Courier:* Same as mailing address.
- *Other Means:* publiccomments@frb.gov. You must include the docket number in the subject line of the message.

Comments received are subject to public disclosure. In general, all public comments will be made available on the Board's website at <https://www.federalreserve.gov/apps/proposals/> without change and will not be modified to remove personal or business information including confidential, contact, or other identifying information. Public comments may also be viewed electronically or in person in Room M-4365A, 2001 C St. NW, Washington, DC 20551, between 9:00 a.m. and 5:00 p.m. during Federal business weekdays.

I. Introduction

The Board of Governors of the Federal Reserve System (Board) is proposing modifications to the methodology used to calculate risk-based capital surcharges for U.S. global systemically important bank holding companies (GSIBs) and the measurement and reporting of certain systemic indicators used in this calculation and in the determination of regulatory tailoring categories. The proposed changes seek to improve the framework's measurement of systemic risk and better align surcharges with GSIBs' systemic risk profiles.

A. Background on the GSIB Surcharge Framework

Section 165 of the Dodd-Frank Wall Street Reform and Consumer Protection Act (Dodd-Frank Act) directs the Board to establish enhanced prudential standards for large bank holding companies and for nonbank financial companies that the Financial Stability Oversight Council has designated for supervision by the Board (nonbank financial companies supervised by the Board).¹ These standards must include risk-based capital requirements as well as other enumerated standards.² The standards must be more stringent than those applicable to other bank holding companies and to nonbank financial companies that do not present similar risks to U.S. financial stability.³ The standards must also increase in stringency based on several factors, including the size and risk characteristics of a company subject to the rule, and the Board must take into account the differences among bank holding companies and nonbank

financial companies.⁴ Furthermore, various statutory authorities provide the Board with broad authority to set capital requirements and standards for depository institution holding companies.⁵

The Board adopted a final rule in 2015 that established a methodology for identifying GSIBs and assigning them a risk-based capital surcharge.⁶ The GSIB surcharge framework requires a GSIB to maintain additional capital in order to avoid restrictions on certain distributions and discretionary bonus payments. This capital buffer strengthens a firm's resiliency, reducing the probability of its failure and the risks that the firm's failure or distress could pose to the U.S. financial system.

The methodology to identify a GSIB (method 1) uses five equally weighted categories that are correlated with systemic importance: (1) size, (2) interconnectedness, (3) substitutability, (4) complexity, and (5) cross-jurisdictional activity. The methodology subdivides certain categories into systemic indicators. Generally, a bank holding company subject to Category I, II, or III capital standards must calculate its method 1 score annually.⁷ A bank

holding company calculates each systemic indicator by dividing its own measure of the indicator by an aggregate global measure for that indicator.⁸ The resulting value for each systemic indicator is then multiplied by the prescribed weighting in the capital rule and by 10,000 to reflect the result in basis points. A bank holding company then sums the weighted values for the twelve systemic indicators to determine its method 1 score.⁹ A bank holding company is identified as a GSIB if its method 1 score equals or exceeds 130 basis points.¹⁰

If a bank holding company is identified as a GSIB, it must also calculate its method 2 score.¹¹ Method 2 measures a bank holding company's systemic risk profile using the same systemic indicators as method 1, except that the substitutability category is replaced with a measurement of reliance on short-term wholesale funding.¹² Method 2 also uses fixed coefficient values to scale the systemic indicators for size, interconnectedness, complexity, and cross-jurisdictional activity, rather than multiplying indicators by a measure that changes each year based on the aggregate global measure for that indicator.¹³ A GSIB multiplies its indicator values for size, interconnectedness, complexity, and cross-jurisdictional activity by the respective fixed coefficients to calculate an indicator score. The firm then aggregates these indicator scores with the GSIB's short-term wholesale funding score to compute its total method 2 score. A GSIB's short-term wholesale funding score is calculated by dividing the firm's average weighted short-term wholesale funding amount by the firm's average risk-weighted assets and

⁴ See 12 U.S.C. 5365(a)(1)(B). Under section 165(a)(1)(B) of the Dodd-Frank Act, the enhanced prudential standards must increase in stringency based on the considerations listed in section 165(b)(3).

⁵ See, e.g., 12 U.S.C. 1467a(g)(1) (savings and loan holding companies); 12 U.S.C. 1844(b) (bank holding companies); 12 U.S.C. 3902(1)–(2), 3907(a), 3909(a), (c)(1)–(2) (depository institutions; affiliates of depository institutions, including holding companies; and certain U.S. operations of foreign banking organizations); 12 U.S.C. 5371 (insured depository institutions, depository institution holding companies, and nonbank financial companies supervised by the Board).

⁶ Regulatory Capital Rules: Implementation of Risk-Based Capital Surcharges for Global Systemically Important Bank Holding Companies, 80 FR 49082 (Aug. 14, 2015). See 12 CFR part 217, subpart H.

⁷ 12 CFR 217.400 and 217.402. In 2019, the Board, with the Office of the Comptroller of the Currency (OCC) and the Federal Deposit Insurance Corporation (FDIC), adopted rules establishing four categories of capital standards for U.S. banking organizations with \$100 billion or more in total assets and foreign banking organizations with \$100 billion or more in combined U.S. assets. Under this framework, Category I capital standards apply to U.S. GSIBs and their depository institution subsidiaries. Category II standards apply to banking organizations with at least \$700 billion in total consolidated assets or at least \$75 billion in cross-jurisdictional activity and their depository institution subsidiaries. Category III standards apply to banking organizations with total consolidated assets of at least \$250 billion or at least \$75 billion in weighted short-term wholesale funding, nonbank assets, or off-balance sheet exposure and their depository institution subsidiaries. Category IV standards apply to banking organizations with total consolidated assets of at least \$100 billion that do not meet the thresholds for a higher category and their depository institution subsidiaries. See 12 CFR

252.5 and 238.10; see also “Prudential Standards for Large Bank Holding Companies, Savings and Loan Holding Companies, and Foreign Banking Organizations,” 84 FR 59032 (November 1, 2019); and “Changes to Applicability Thresholds for Regulatory Capital and Liquidity Requirements,” 84 FR 59230 (Nov. 1, 2019).

⁸ 12 CFR 217.404. The Board annually publishes the aggregate global measures.

⁹ 12 CFR 217.404. Scores are rounded to the nearest basis point according to standard rounding rules for the purposes of assigning levels. That is, fractional amounts between zero and one-half are rounded down to zero, while fractional amounts at or above one-half are rounded to one. A bank holding company's substitutability category score is capped at 100 basis points. See also 80 FR at 49088 (Aug. 14, 2015).

¹⁰ 12 CFR 217.402.

¹¹ 12 CFR 217.403.

¹² 12 CFR 217.405 and 406.

¹³ 12 CFR 217.405; see also 80 FR at 49087–88 (Aug. 14, 2015).

¹ See 12 U.S.C. 5365. Originally, section 165 applied to bank holding companies with \$50 billion or more in total consolidated assets. The Economic Growth, Regulatory Relief, and Consumer Protection Act revised this threshold to \$250 billion and granted the ability to apply enhanced prudential standards under section 165 to bank holding companies with \$100 billion or more in total consolidated assets under certain circumstances. See Public Law 115–174, Sec. 401.

² See 12 U.S.C. 5365(b).

³ See 12 U.S.C. 5365(a)(1)(A).

multiplying the result by a fixed factor of 350.¹⁴

A GSIB's applicable surcharge is the larger of the surcharges that apply based on its method 1 score and method 2 score. A GSIB is subject to a minimum surcharge of 1.0 percent, and surcharges increase with GSIB scores under both method 1 and method 2. Method 1 surcharges increase in increments of 0.5 percentage points for each 100-basis point method 1 score band, up to a method 1 surcharge of 2.5 percent, which is associated with a method 1 score ranging from 430 to 529 basis points. If a GSIB's method 1 score exceeds 529, the GSIB's method 1 surcharge equals 3.5 percent, plus 1.0 percentage point for every further 100-basis point increase in score. Like the method 1 surcharge, the method 2 surcharge uses score band ranges of 100 basis points, with the lowest score band ranging from 130 to 229 basis points. The method 2 surcharge increases in increments of 0.5 percentage points per score band.¹⁵

B. Systemic Risk Report (FR Y-15)

The Systemic Risk Report form (FR Y-15) collects systemic risk data from U.S. bank holding companies and covered savings and loan holding companies¹⁶ with total consolidated assets of \$100 billion or more, any U.S.-based bank holding company designated as a GSIB that does not meet that consolidated assets threshold, and foreign banking organizations with combined U.S. assets of \$100 billion or more.¹⁷ The FR Y-15 collects data on a firm's structure, activities, and funding that is consistent and comparable among firms and often unavailable from other sources. Respondents must submit the FR Y-15 quarterly.

Under the GSIB surcharge framework, any U.S.-based top-tier bank holding

company that qualifies as a Category I, II, or III Board-regulated institution must annually compute its method 1 score using the values for the systemic indicators (in each of the size, interconnectedness, substitutability, complexity, and cross-jurisdictional activity categories) that it reported on its FR Y-15 as of December 31 of the prior year.¹⁸ A GSIB must also determine its method 2 score and its GSIB surcharge based on the data reported on its FR Y-15 as of the same date.

Data reported on the FR Y-15 are also used to determine the applicable category of prudential standards for U.S. banking organizations with total consolidated assets of \$100 billion or more and foreign banking organizations with combined U.S. assets of \$100 billion or more, under the framework adopted by the Board in 2019.¹⁹ Specifically, the measures for cross-jurisdictional activity, weighted short-term wholesale funding, and off-balance sheet exposure, which are used to determine whether a banking organization is subject to Category II or III standards, use or include data reported on the FR Y-15.²⁰

In addition, the data collected on the FR Y-15 are used to identify other firms that may present significant systemic risk and to analyze the systemic risk implications of proposed mergers and acquisitions.

C. Overview of the Proposal

The proposal includes revisions to the GSIB framework that would improve the framework's measurement of systemic risk and better align GSIB surcharges with firms' systemic risk profiles.²¹ First, the proposal would adjust the fixed coefficients in the method 2 GSIB surcharge framework to account for changes in the financial system and the economy. Additionally, going forward,

the proposal would apply an annual adjustment to the coefficients based on real economic growth and inflation.

Second, to mitigate unintended effects of the current calculation, the proposal would modify the short-term wholesale funding systemic indicator by measuring it as an absolute amount rather than as a ratio scaled to a firm's average risk-weighted assets. The proposal would also set a new coefficient for this indicator that approximates 20 percent of the weighted basis points of total method 2 scores for banking organizations identified as GSIBs, consistent with the intended weighting of the category.

Third, to better reflect the risk profile of a firm and reduce incentives for a firm to reduce its GSIB surcharge by making temporary adjustments to reported indicators of systemic risk at year end, the proposal would require firms to calculate certain systemic indicators as an annual average of their daily or monthly values. Firms currently calculate these indicators on a point-in-time basis at year end.

Fourth, to reduce cliff effects and increase the sensitivity of the GSIB surcharge to changes in a firm's systemic risk profile, the proposal would introduce narrower method 2 score band ranges.

Finally, the proposal would improve the measurement of certain systemic indicators and would amend the FR Y-15 to improve the clarity of instructions and consistency of data reporting and systemic indicator measurement.²²

II. Description of the Proposal

A. Method 2 Coefficients

Method 2 in the Board's GSIB surcharge framework uses a fixed approach for measuring systemic indicator scores instead of measuring relative to annually updated aggregate

¹⁴ The short-term wholesale funding score uses a different methodology from the other systemic indicators because inclusion of short-term wholesale funding for GSIB surcharge purposes is specific to the United States, and the Basel Committee on Banking Supervision (Basel Committee)'s framework does not include a corresponding measure for short-term wholesale funding. As a result, there is no equivalent global aggregate indicator measure for short-term wholesale funding.

¹⁵ 12 CFR 217.403.

¹⁶ Covered savings and loan holding companies are those that are not substantially engaged in insurance or commercial activities. For more information, see the definition of "covered savings and loan holding company" provided in 12 CFR 238.2.

¹⁷ The mandatory FR Y-15 is authorized by sections 163 and 165 of the Dodd-Frank Wall Street Reform and Consumer Protection Act (Dodd-Frank Act) (12 U.S.C. 5463 and 5365), the International Banking Act (12 U.S.C. 3106 and 3108), the Bank Holding Company Act (12 U.S.C. 1844), and the Home Owners' Loan Act (HOLA) (12 U.S.C. 1467a).

¹⁸ There are certain circumstances under which a depository institution that is not required to report the FR Y-15 would be subject to standards based on calculation methodologies contained in the FR Y-15. See, e.g., 12 CFR 217.2, "Category III Board-regulated institution."

¹⁹ See 12 CFR part 252, subpart A, and 12 CFR 238.10.

²⁰ See *id.*

²¹ The proposal would also be responsive to comments received in response to the Economic Growth and Regulatory Paperwork Reduction Act (EGRPRA) public notices. Public Law 104-208, Div. A, Title II, section 2222, 110 Stat. 3009-414, (1996) (codified at 12 U.S.C. 3311). See also Regulatory Publication and Review Under the Economic Growth and Regulatory Paperwork Reduction Act of 1996, 90 FR 35241 (Jul. 25, 2025). In 2023, the Board published a proposal to revise the GSIB framework. 88 FR 60385 (Sept. 1, 2023). The Board is rescinding the 2023 proposal. Members of the public that seek to submit comments on the current proposal must submit comments in line with the procedures described in this proposal.

²² As discussed in section I.B of this SUPPLEMENTARY INFORMATION, certain indicators that the proposal would modify are also used to determine prudential standards for large banking organizations. The proposed changes include revisions consistent with the framework used by the Basel Committee to identify GSIBs and assess their systemic importance. The Basel Committee is a committee comprised of central banks and banking supervisory authorities, which was established by the central bank governors of the G-10 countries in 1975. Among other roles, the Basel Committee provides a forum for coordination on banking regulation and supervision across jurisdictions. The Basel Committee developed a methodology, available at <https://www.bis.org/bcbis/gsib/>, that uses an indicator-based measurement approach for assessing the systemic importance of global systemically important banks. In July 2018, the Basel Committee made revisions to its methodology, which are available at <https://www.bis.org/bcbis/publ/d445.htm>.

global indicators as under method 1.²³ This fixed approach uses coefficients that are based on the average of the aggregate global indicator amounts for each indicator other than short-term wholesale funding for year-end 2012 and year-end 2013 and exchange rate data for 2011–2013.²⁴ Method 2 also takes into account a measure of a banking organization's reliance on short-term wholesale funding relative to the banking organization's risk-weighted assets, rather than to a global aggregate measure.²⁵

The 2015 final rule adopted the fixed coefficients approach for method 2 to help provide more certainty regarding the actions that a U.S. GSIB could take to reduce its GSIB surcharge, so that a firm's method 2 score would be affected only by its own systemic indicators rather than by both its own systemic indicators and the aggregate level of systemic indicators of a set of global firms. The fixed coefficients thus seek to improve the predictability of method 2 scores and facilitate capital planning by GSIBs.²⁶

However, fixed coefficients do not account for changes in the economy or financial system that can affect a firm's systemic risk profile. Therefore, as the 2015 final rule observed, scores calculated under the fixed approach could be influenced over time by factors that do not represent changes in a firm's systemic risk.²⁷ For example, GSIBs may report higher method 2 scores over time that are not commensurate with their systemic risk due to factors such as inflation, real economic growth, or other macroeconomic changes. These effects can compound and increase over time. The Board stated in the 2015 final

rule that it would periodically reevaluate the GSIB surcharge framework to ensure that factors unrelated to systemic risk do not have unintended effects on a bank holding company's method 2 scores and that it would make adjustments as appropriate.²⁸

To help ensure that method 2 scores better reflect systemic risk, the proposal would adjust the fixed method 2 coefficients for changes in the financial system and the economy and automatically index the coefficients going forward on an annual basis. First, the proposal would update the fixed method 2 coefficients for the size, interconnectedness, complexity, and cross-jurisdictional activity categories based on a one-time downward adjustment of the method 2 coefficients by a factor of 1.2. Second, the proposal would implement a mechanism to annually adjust the method 2 coefficients, including the proposed new coefficient for short-term wholesale funding described in section II.B of this SUPPLEMENTARY INFORMATION, based on nominal U.S. gross domestic product going forward. Overall, as a result of these proposed changes to the method 2 coefficients, method 2 scores would better account for changes in the U.S. economy and financial system.

i. One-Time Adjustment to Fixed Method 2 Coefficients

The proposal would update the fixed method 2 coefficients for the size, interconnectedness, complexity, and cross-jurisdictional activity categories by a one-time downward adjustment by a factor of 1.2 to reflect changes in the financial system and economy since the introduction of the framework.

The Board periodically reviews its regulatory capital framework to ensure requirements are appropriate and the

framework is functioning as intended. The Board considered several elements of the GSIB surcharge framework. These included updating components of the framework to reflect changes in the financial system and the broader economy since the framework's implementation, the relationship between regulatory measures of systemic risk profiles, and other enhancements to improve the effectiveness and efficiency of the framework.

Starting in 2020, there was a notable change in GSIBs' balance sheets. These changes occurred concurrently with the onset of the global COVID-19 pandemic and the subsequent monetary and fiscal policy actions in response to the pandemic and its economic effects.²⁹ Figure 1 shows that the size of GSIBs has expanded substantially since 2020, with the growth of these banking organizations exceeding its historical trend.³⁰

Figure 1: Evolution of GSIBs' Total Assets Over Time (in Trillion Dollars)

This figure shows how the aggregate total assets of the eight current GSIBs changed from 2009 to 2024. The dotted line is a linear trendline fitted to the time series over the period from the fourth quarter of 2009 ("Q4 2009") to the fourth quarter of 2019 ("Q4 2019").

²⁸ See *id.* at 49088.

Related to this rapid expansion of GSIBs' balance sheets, method 2 scores have meaningfully increased relative to method 1 scores since the end of 2019.

As Figure 2 shows, whereas method 1 and method 2 scores evolved largely in parallel between the fourth quarter of 2016 and the fourth quarter of 2019, the two scores have diverged since then. Indeed, from the fourth quarter of 2019 to the fourth quarter of 2024, the method 2 scores of the eight GSIBs increased by 18 percent, in aggregate,

which is equivalent to a 3.4 percent annual increase. By contrast, over the same period, the method 1 scores of the eight GSIBs have been relatively stable, decreasing by 3 percent, in aggregate, which is equivalent to a 0.6 percent annual decrease. As a result of the divergent trends in method 1 and method 2 scores, the cumulative growth of method 2 scores has exceeded the cumulative growth of method 1 scores

by about 20 percentage points, on average, since the end of 2019.³¹

Figure 2: Evolution of Method 1 and Method 2 Scores Over Time

This figure shows how the aggregate method 1 and method 2 scores of the eight current GSIBs changed from 2016 to 2024. Both aggregate method 1 and method 2 scores are expressed as a percentage of their corresponding values as of the fourth quarter of 2019 ("Q4 2019").

³¹ Because method 1 and method 2 scores evolved largely in parallel until 2019, the difference in their

cumulative growth is also about 20 percentage points over a longer period, such as the period from

the fourth quarter of 2014 to the fourth quarter of 2024.

The divergence of method 1 and method 2 scores is primarily due to their different calculation methodologies. The aggregate method 1 scores of the eight GSIBs have been relatively stable over time because the method 1 score calculation uses systemic indicator coefficients that are based on aggregate global systemic indicator amounts, which historically increased at about the same rate as the systemic indicator amounts of U.S. GSIBs. By contrast, the method 2 score calculation uses systemic indicator coefficients that have been constant since the implementation of the GSIB surcharge framework in 2015, which creates a direct link between the dollar amounts of systemic indicators and method 2 scores.

This direct link could pose a challenge for using method 2 scores to measure changes in systemic risk profiles because it implies that method 2 scores signal an increase in GSIBs' systemic risk as their systemic indicators increase, regardless of how the banking system, financial markets, or the economy may concurrently change. This dynamic, solely driven by changes in the dollar amounts of systemic indicators, could lead to the mismeasurement of systemic risk, which is inherently a relative concept. For example, the current method 2 score calculation does not take into account that the U.S. economy tends to expand

over time, through both real economic growth and inflation. Such potential economic expansion could render GSIBs relatively smaller and therefore less systemic, even if their method 2 scores increase, which could result in GSIB surcharges that are not commensurate with the systemic risk posed by GSIBs.

Considering the broad economic changes affecting the banking system since 2020, the observed divergence between method 1 and method 2 scores suggests that some of the recent increase in GSIBs' method 2 scores is attributable to the method 2 score calculation's lack of adjustment for such changes, rather than increases in GSIBs' systemic risk profiles. Therefore, consistent with the Board's longstanding objective to ensure that method 2 scores do not capture the effects of factors unrelated to systemic risk, the proposal would apply a one-time downward adjustment of the method 2 coefficients by a factor of 1.2. The proposed adjustment factor would equal the observed 20-percentage-point difference between the cumulative growth of aggregate method 2 and method 1 scores since the fourth quarter of 2019.

ii. Annual Indexing of Method 2 Coefficients by Nominal GDP Growth

As discussed above, under the current GSIB surcharge framework, a U.S. GSIB's method 2 score can increase over time when the scale of the firm's activities increases, even if the firm's

systemic indicator values grow more slowly than the overall economy. However, economic expansion can make GSIBs' systemic profiles smaller on a relative basis even if their method 2 scores increase. This dynamic can result in GSIB surcharges that are not commensurate with the systemic risk profile of the GSIBs. To address this effect and limit the need for future adjustments through rulemaking, the proposal would adopt a mechanism to automatically adjust the method 2 coefficients going forward.

Specifically, the proposal would annually adjust the method 2 coefficients to reflect real economic growth and inflation.³² The annual adjustment would be based on a three-year moving average of annual nominal U.S. gross domestic product (GDP) growth.³³ Thereby, under the proposed approach, a firm's method 2 scores would remain unchanged if the firm's systemic risk indicators grow at the same rate as average nominal U.S. GDP growth, because the proposed indexing would adjust the method 2 coefficients at the rate of average annual nominal

³² The proposed annual indexing would also apply to the proposed new coefficient for short-term wholesale funding, described in section II.B of this SUPPLEMENTARY INFORMATION.

³³ The proposed annual indexing to the annual nominal U.S. GDP growth is equivalent to adjusting method 2 coefficients for the annual real U.S. GDP growth plus annual changes in the cumulative U.S. GDP implicit price deflator.

U.S. GDP growth. Indexing under this approach would help ensure that changes in method 2 scores reflect changes in a U.S. GSIB's systemic risk profile relative to the size of the U.S. economy. Such an approach would provide a simple way to account for changes in the economy and financial system that could affect the measurement of a GSIB's systemic risk profile.

In the 2015 final rule, the Board observed that an unintended consequence of automatically adjusting the method 2 coefficients based on economic growth could be that in the event of an economic contraction, U.S. GSIB scores would increase in a procyclical way, potentially raising surcharges in a manner that could further exacerbate the economic downturn. In order to avoid that scenario, the proposed mechanism would not adjust the coefficients if the three-year moving average of nominal U.S. GDP growth is negative. This approach would reduce the potential for procyclicality in capital requirements during a prolonged period of economic contraction. To further mitigate the potential procyclical effect over short timeframes, the annual mechanism would use a three-year moving average of annual nominal U.S. GDP growth, which would reduce volatility and improve the predictability of adjustments.³⁴

To ensure an accurate and predictable measure, the Board would generally use the most current estimate of nominal U.S. GDP for a given calendar year published by the Bureau of Economic Analysis on or before September 30 of the year of the publication of the scalar.³⁵ The Board would calculate the value for the GDP growth adjustment scalar as a ratio of the average nominal U.S. GDP estimates for the three calendar years directly preceding the year in which the scalar is published, divided by the average nominal U.S. GDP for the three most recent calendar years preceding the effective date of any final rule for which estimates are available. For example, if the Board were to adopt a final rule with an effective date of 2027 for the updated

method 2 coefficients described in section II.A.i. of this **SUPPLEMENTARY INFORMATION**, the Board would calculate the GDP growth adjustment scalar in 2028 by dividing the average nominal U.S. GDP in calendar years 2025, 2026, and 2027 by the average nominal U.S. GDP in calendar years 2024, 2025, and 2026.³⁶

The Board would calculate and publish a GDP growth adjustment scalar, along with updated method 2 coefficients, each year.³⁷ Each calendar year, a GSIB would calculate its method 2 score using the updated coefficients published by the Board and the firm's systemic indicator data reported as of the end of the previous calendar year. For example, in 2028, when a GSIB calculates its method 2 score using systemic indicator data reported as of December 31, 2027, the GSIB would use the most recent adjusted method 2 coefficients published by the Board in the fourth quarter of 2028.

iii. Alternative Approach To Adjust Method 2 Coefficients

The Board requests comment on all aspects of the proposed approach for adjusting the method 2 coefficients, as well as alternative approaches. For example, as an alternative to the one-time update and annual adjustments to the method 2 coefficients to reflect economic growth described above, the Board seeks comment on an approach that would adjust the method 2 coefficients based on inflation since 2015 and annually going forward.

To account for the effects of inflation, the method 2 coefficients could be updated using the non-seasonally adjusted Consumer Price Index for Urban Wage Earners and Clerical Workers (CPI-W), which is a measure of prices paid by urban wage earners and clerical workers.³⁸ This index measures the price level of goods and services purchased by urban households, reflecting price changes from a consumer's perspective. A consumer price index (CPI) is widely used to account for changes in the U.S. dollar

over time. The U.S. Bureau of Labor Statistics publishes different versions of CPI, which capture price changes in different economic segments. The Board, with the OCC and FDIC (together, the agencies), is simultaneously issuing two risk-based capital proposals (the expanded risk-based proposal and standardized approach proposal, together, the capital proposals) which, among other things, would index certain thresholds in the capital rule using CPI-W. Using CPI-W to adjust the method 2 coefficients would promote simplicity and consistency by providing a single indexing mechanism within the capital rule.³⁹

Indexing the method 2 coefficients by CPI-W would account for changes in the price level, which over time has tended to be lower than the rate of economic expansion in the United States. It would not, however, automatically account for other changes in the financial system and economy that could affect a GSIB's systemic risk profile. Using CPI-W to index the method 2 coefficients, therefore, could result in a GSIB experiencing higher method 2 scores if its systemic indicators grew in line with economic growth.

Under an approach to adjust the coefficients by inflation, the Board could calculate the cumulative percent change of the non-seasonally adjusted CPI-W to create an index for inflation that increases based on the cumulative change in the price index.⁴⁰ Going forward, this alternative approach could index the method 2 coefficients using CPI-W on an annual basis. To avoid increasing capital requirements during a time of economic contraction, annual adjustments under this alternative approach could reflect only positive net cumulative changes in CPI-W, and the approach would not automatically adjust coefficients upward in the event of a negative year-over-year change in the index.⁴¹ To ensure an accurate and

³⁴ Because this approach would be based on cumulative change in average nominal U.S. GDP following the effective date of a final rule, it would still account for periods of negative growth. Downward adjustments to the coefficients would only occur when there is a positive net cumulative change.

³⁵ See Bureau of Economic Analysis, Gross Domestic Product, <https://www.bea.gov/data/gdp/gross-domestic-product>. The Board may elect to use a comparable value in instances such as where a nominal U.S. GDP growth estimate from the Bureau of Economic Analysis is unavailable.

³⁶ The proposal includes a definition of the GDP growth adjustment, which sets forth the way in which the adjustment would be calculated each year.

³⁷ The Board expects that it would publish the adjustment and the updated coefficients annually on the Board's public website and in the **Federal Register** concurrent with the release of the annual method 1 aggregate global indicator amounts.

³⁸ See Bureau of Labor Statistics, Consumer Price Index, <https://www.bls.gov/cpi/data.htm> and Social Security Administration, Consumer Price Index for Urban Wage Earners and Clerical Workers (CPI-W), <https://www.ssa.gov/oact/STATS/cpiw.html>. The Board may elect to use a comparable value in instances such as where CPI-W data are unavailable.

³⁹ In addition, CPI-W is used for inflation adjustments in other banking regulations, such as Regulation CC, Regulation M, Regulation Z, and the Community Reinvestment Act regulations, as well as for regulations and programs such as the Social Security Administration's annual cost of living adjustments. See, e.g., 12 CFR 229.11(a) (Regulation CC), 12 CFR 213.2(e)(1) (Regulation M), 12 CFR 226.3(b)(1)(ii) (Regulation Z), 12 CFR Appendix-G-to-Part-228(u)(2) (Community Reinvestment), 20 CFR 404.272(a)(1) (Social Security Administration).

⁴⁰ To calculate the inflation index, the non-seasonally adjusted CPI-W index for December 2024 would be divided by the non-seasonally adjusted CPI-W index for December 2015.

⁴¹ Because this approach would be based on cumulative change in CPI-W, it would still account for periods of deflation. Downward adjustments to

predictable measure, in the fourth quarter of a calendar year, this alternative approach could use the most current non-seasonally adjusted CPI-W data published by the Bureau of Labor Statistics for December of the preceding calendar year to calculate and publish the cumulative percent change.⁴²

Question 1: What are the advantages and disadvantages of applying a one-time downward adjustment by a factor of 1.2 to the method 2 coefficients under the proposal? What alternative approaches should the Board consider, and why? Please provide any alternative approaches the Board should consider to adjust the coefficients, noting in particular how changes to the financial system and economy since the adoption of the GSIB framework would be accounted for in any potential adjustment, and the advantages and disadvantages of such an approach.

Question 2: What would be the advantages and disadvantages of updating the method 2 coefficients based on the most recent available aggregate global indicator amounts for the systemic indicators in the size, interconnectedness, complexity, and cross-jurisdictional activity categories?

Question 3: What are the advantages and disadvantages of using nominal U.S. GDP as the basis to annually adjust the method 2 coefficients? What are the advantages or disadvantages of using a three-year moving average of nominal U.S. GDP as the measurement of real economic growth and inflation to adjust the method 2 coefficients? What alternative measures of real economic growth and inflation should the Board consider, and why?

Question 4: What are the advantages and disadvantages of using the data published by the Bureau of Economic Analysis as proposed? What alternatives or other data sources should the Board consider, and why?

Question 5: What would be the advantages and disadvantages of an alternative approach that would adjust the method 2 coefficients based on inflation using CPI-W? What other measurements of inflation should the Board consider and why?

Question 6: What are the advantages and disadvantages of the proposed approach to annually adjust the method 2 coefficients so that they do not change to reflect a period of negative average U.S. nominal GDP growth? Under what circumstances, if any, should the

adjustment methodology increase the method 2 coefficients to reflect negative average U.S. nominal GDP growth, and why?

Question 7: What are the advantages and disadvantages of publishing the updated method 2 coefficients together with the aggregate global indicator amounts in the fourth quarter of each calendar year? What alternatives should the Board consider with respect to publication of the adjustment data, and why?

Question 8: The capital proposals would utilize an indexing methodology that would adjust certain dollar-based thresholds using CPI-W. Specifically, the dollar thresholds would be adjusted at the end of every consecutive two-year period, which is meant to capture changes in price levels over time while reducing the frequency with which thresholds are adjusted. What would be the advantages or disadvantages of aligning the frequency and timing of the adjustments to the method 2 coefficients with the frequency of adjustments in the capital proposals?

Question 9: What, if any, operational challenges are associated with the proposed approach? What adjustments could the Board make to the proposed approach to address such challenges?

B. Changes to the Short-Term Wholesale Funding Measure

The method 2 framework includes a measure of a firm's reliance on short-term wholesale funding as an indicator of systemic risk. The 2007–09 financial crisis highlighted how banking organizations' reliance on short-term wholesale funding can create vulnerabilities during periods of stress that undermine financial stability.⁴³ Banking organizations that face funding stress are often forced to sell assets under duress at fire-sale prices, resulting in losses or collateral calls for other market participants. This dynamic can create an adverse cycle of mark-to-market losses, margin calls, forced deleveraging, and additional losses, amplifying stress throughout the financial system. When these dynamics occur at large, interconnected banking organizations, they can impose negative externalities on counterparties, other market participants, and the financial

system more broadly, particularly in periods of market turmoil.

The short-term wholesale funding indicator measures a banking organization's reliance on wholesale funding sources that are generally less stable than longer-term funding or retail deposits during periods of stress. Short-term wholesale funding includes funding sources such as wholesale deposits, brokered and sweep deposits, securities sold under agreements to repurchase, certain short positions, and other short-term borrowings.⁴⁴ Under the method 2 framework, the short-term wholesale funding score calculation uses the ratio of a banking organization's average weighted short-term wholesale funding amount⁴⁵ to its average risk-weighted assets over the preceding four quarters. This approach measures a banking organization's dependence on short-term wholesale funding relative to the risk-adjusted size of its balance sheet.

i. Modification of the Short-Term Wholesale Funding Score To Remove the Risk-Weighted Assets Denominator

The proposal would remove the average risk-weighted assets denominator from the calculation of a firm's short-term wholesale funding score. Under the proposal, a banking organization's short-term wholesale funding score would be equal to its average weighted short-term wholesale funding amount multiplied by a coefficient. This approach would simplify the calculation of the indicator and use the same calculation method used for the other method 2 systemic indicators. It would also address an effect of the current calculation, which can produce results not aligned with risk as described below. The proposed approach would be consistent with the goal of the GSIB framework to measure the expected impact of a banking organization's failure and would align with the calculation methodology for the weighted short-term wholesale funding risk-based indicator in the regulatory tailoring framework.⁴⁶

⁴⁴ Components of a GSIB's short-term wholesale funding amount generally align with the definitions of the liquidity coverage ratio framework and with items that are reported on the Board's Complex Institution Liquidity Monitoring Report on Form FR 2052a.

⁴⁵ A firm's weighted short-term wholesale funding amount is determined by calculating its short-term wholesale funding amount for each business day over the prior calendar year, applying the appropriate weighting by short-term wholesale funding source and remaining maturity, and averaging this amount over the prior calendar year.

⁴⁶ The weighted short-term wholesale funding indicator in the regulatory tailoring framework uses a banking organization's weighted short-term

the coefficients would only occur when there was a positive net cumulative change in the index.

⁴² The Board may use a comparable value in instances such as where CPI-W from the Bureau of Labor Statistics is unavailable.

⁴³ See Adrian, Tobias, and Hyun Song Shin. "The Changing Nature of Financial Intermediation and the Financial Crisis of 2007–2009." Federal Reserve Bank of New York Staff Report No. 439 (March 2010). Huang, Rocco, and Lev Ratnovski. "The Dark Side of Bank Wholesale Funding." International Monetary Fund Working Paper No. WP/10/170 (July 2010). Damar, H. Evren, Césaire A. Meh, and Yaz Terajima. "Leverage, Balance Sheet Size and Wholesale Funding." Bank for International Settlements Conference Paper (March 2013).

Using a banking organization's weighted short-term wholesale funding amount would improve the measurement of a banking organization's systemic risk profile relative to the current approach of using average risk-weighted assets in the denominator. Measuring the total amount of a banking organization's weighted short-term wholesale funding would provide a direct measurement of the potential transmission effect of fire-sales described above that would result from a GSIB's failure.⁴⁷

The use of risk-weighted assets in the denominator of the current approach can result in outcomes that may not align with measuring systemic risk. Under the current approach, a banking organization with higher risk-weighted assets than a firm with lower risk-weighted assets and a similar amount of short-term wholesale funding is assigned a lower short-term wholesale funding indicator score. This outcome may not appropriately reflect the size and systemic importance of the two firms' respective funding profiles.

Further, if a banking organization's risk-weighted assets increase, its short-term wholesale funding score can correspondingly decrease, even though its volume of short-term wholesale funding remains unchanged. Conversely, if a banking organization's risk-weighted assets decrease, its short-term wholesale funding score can increase. The proposed approach would prevent these outcomes in the method 2 framework going forward.

As discussed in section II.A.ii of this **SUPPLEMENTARY INFORMATION**, the proposal would index method 2 systemic indicator coefficients, including the proposed short-term wholesale funding indicator coefficient, to changes in nominal U.S. GDP. By incorporating a coefficient calibrated to the amount of a banking organization's weighted short-term wholesale funding amount, the proposal's annual

wholesale funding amount reported on the FR Y–15, without dividing by average risk-weighted assets. See 12 CFR 252.2 “Weighted short-term wholesale funding.”

⁴⁷ See Begalle, Brian, Antoine Martin, James McAndrews, and Sarah McLaughlin. “The Risk of Fire Sales in the Tri-Party Repo Market.” *Contemporary Economic Policy*, 34 (July 2016), <https://onlinelibrary.wiley.com/doi/10.1111/coep.12126>. Raddatz, Claudio. “Liquidity and the Use of Wholesale Funds in the Transmission of the U.S. Subprime Crisis.” The World Bank Development Research Group (February 2010), <https://www.bis.org/events/ccaconf2012/raddatz.pdf>. Duarte, Fernando and Thomas M. Eisenbach. “Fire Sales in a Model of Systemic Risk.” Federal Reserve Bank of New York Staff Report (2013), https://www.newyorkfed.org/media/library/media/research/conference/2013/fire_sales/Paper_Duarte_Eisenbach.pdf.

adjustment to reflect nominal U.S. GDP would apply to all ten method 2 indicators coefficients, including the short-term wholesale funding systemic indicator. The proposed approach would not increase a banking organization's reporting burden because it would continue to use the same reporting requirements for weighted short-term wholesale funding currently used in the FR Y–15.

Question 10: What are the advantages and disadvantages of using an absolute level of weighted short-term wholesale funding as opposed to the current approach, which divides a firm's amount of weighted short-term wholesale funding by its average risk-weighted assets? What other approaches to measure a banking organization's weighted short-term wholesale funding should the Board consider, and why? For example, what would be the advantages and disadvantages of retaining a ratio-based approach but replacing risk-weighted assets with average total consolidated assets or total leverage exposure? Please provide any relevant data and rationale, particularly of why maintaining a ratio-based approach would be more appropriate than the proposed approach.

ii. Weight the Short-Term Wholesale Funding Score To Represent Approximately 20 Percent of Total Method 2 GSIB Scores

Under the proposal, a banking organization's short-term wholesale funding score would equal the average of its weighted short-term wholesale funding amount over the prior year multiplied by the coefficient for this category. The coefficient for the short-term wholesale funding category would be initially set at 23.003. The proposal would use this coefficient in order to calibrate the weighted short-term wholesale funding category at approximately twenty percent of aggregate total method 2 scores for U.S. GSIBs based on reported FR Y–15 data as of December 31, 2024.⁴⁸ The use of this value would align with the as-of date for the adjustments to the other method 2 coefficients described in section II.A of this **SUPPLEMENTARY INFORMATION**.

This proposed coefficient and calibration of the short-term wholesale funding systemic indicator would be consistent with the approach described

⁴⁸ The updated coefficient reflects the changes in GSIBs' method 2 scores from the coefficient adjustments and amendments to the systemic indicators described in section F of this **SUPPLEMENTARY INFORMATION**. See Section III.C for more information on the methodology used to recalibrate the other method 2 coefficients.

in the 2015 final rule.⁴⁹ Specifically, the 2015 final rule included a conversion factor for the short-term wholesale funding indicator that was intended to result in the indicator comprising 20 percent of method 2 scores for banking organizations identified as GSIBs, consistent with the weighting of the other systemic indicators.⁵⁰ However, due to factors such as limited data availability when the conversion factor was calibrated,⁵¹ the short-term wholesale funding score has constituted approximately 30 percent of aggregate method 2 scores across U.S. GSIBs since the adoption of the GSIB framework.⁵² The proposed coefficient value would address the current overweighting of the short-term wholesale funding category by using a calibration consistent with the initial 20 percent objective.

Question 11: What are the advantages and disadvantages of calibrating the coefficient for the short-term wholesale funding indicator to target a 20 percent share of method 2 scores as of December 2024? What alternative weighting or calibration methodologies should the Board consider, and why?

Question 12: What would be the advantages and disadvantages of calibrating the coefficient value for the short-term wholesale funding indicator based on a different as-of date than December 2024 or a different period than calendar 2024? Please provide any rationale or data that may be helpful to inform the Board's consideration.

⁴⁹ See 80 FR 49082, at 49088 (Aug. 14, 2015). “The conversion factor was intended to weight the short-term wholesale funding amount such that the short-term wholesale funding score receives an equal weight as the other systemic indicators within method 2 (i.e., 20 percent), and is based upon estimates of short-term wholesale funding levels at the eight bank holding companies currently identified as GSIBs.”

⁵⁰ See *id.* at 49101. Unlike the other systemic risk indicators that incorporated data from the Basel Committee's global denominators for each indicator in setting the coefficient, the short-term wholesale funding indicator did not have a corresponding Basel Committee global denominator.

⁵¹ Prior to the full implementation of the Board's GSIB surcharge rule, banking organizations did not report certain systemic indicators, including the short-term wholesale funding amount. Because firms were still establishing internal controls, measurement methodologies, and reporting infrastructure for these indicators, the initial data collection period was characterized by varying levels of data quality.

⁵² As of year-end 2016, the short-term wholesale funding category represented 30.7 percent of firms' estimated method 2 GSIB surcharge scores on a size-weighted basis. As of year-end 2024, the short-term wholesale funding category's share had decreased to 28.9 percent of firms' method 2 GSIB scores. Under the method 1 surcharge framework, each of the five categories of systemic importance receive an equal weight of 20 percent. Under the method 2 framework, the relative contribution of each indicator or category can be different over time than the weight used at the inception of the framework.

C. Data Averaging of Certain Systemic Indicators

Under the current GSIB surcharge framework, FR Y-15 filers report many of the data values used to calculate a firm's method 1 or method 2 score on a point-in-time basis, reflecting the firm's amount for the indicators as of the end of the reporting quarter. Indicators currently calculated on a point-in-time basis include intra-financial system assets, intra-financial system liabilities, securities outstanding, assets under custody, notional amount of over-the-counter (OTC) derivatives, trading and available-for-sales securities, Level 3 assets, cross-jurisdictional claims, and cross-jurisdictional liabilities. A firm's method 1 and 2 score calculations use as inputs the value of these indicators

as of December 31 of the previous calendar year.⁵³

Point-in-time indicator values, whether year-end or quarter-end, may not accurately reflect a firm's systemic risk profile because such values can be meaningfully different from values on other dates throughout the year, for example due to seasonality. Furthermore, measuring indicators only as of a single date each year creates incentives for a firm to manage the values of its systemic indicators on December 31 to reduce the amount of its GSIB surcharge in a manner that may not be commensurate with the firm's systemic risk profile on other days of the year.

⁵³ Generally, a bank holding company subject to Category I, II, or III prudential standards must calculate its method 1 score annually. A bank holding company is identified as a GSIB if its method 1 score equals or exceeds 130 basis points. If a bank holding company is identified as a GSIB, it must also calculate its method 2 score.

To address this issue, the proposal would require U.S. GSIBs to report certain indicators as averages of daily or monthly values rather than point-in-time measurements.⁵⁴ In addition, it would require the calculation of method 1 and method 2 scores using average values over a calendar year, rather than values only as of December 31. Table 1 displays the systemic indicator by categories and the proposed reporting requirements for GSIBs relative to the current requirements. Reporting these indicators as an average of daily or monthly values over the previous year would result in GSIB scores and associated surcharges that are more commensurate with each firm's level of systemic risk.

BILLING CODE 6201-01-P

⁵⁴ Unless otherwise noted, references to averaging of "daily" values in this **SUPPLEMENTARY INFORMATION** section refer to averaging of values for each business day.

Table 1: Measurement of GSIB Surcharge Inputs for GSIBs

Category	Systemic Indicator	Current U.S. Reporting	Proposal
Size	Total exposures	For on-balance sheet items, average of daily values over the fourth quarter.	No changes in reporting
		For off-balance sheet items, average of the three month-end balances over the fourth quarter.	No changes in reporting.
Interconnectedness	Intra-financial system assets	For on-balance sheet items, as of December 31	For on-balance sheet items, average of daily values over the reporting quarter.
		For off-balance sheet items, as of December 31	For off-balance sheet items, average of month-end values over the reporting quarter.
	Intra-financial system liabilities	For on-balance sheet items, as of December 31	For on-balance sheet items, average of daily values over the reporting quarter.
		For off-balance sheet items, as of December 31	For off-balance sheet items, average of month-end values over the reporting quarter.
	Securities outstanding	As of December 31	Average of month-end values over the reporting quarter.
Substitutability (Method 1 Only)	Payments activity	Total gross value of all cash payments sent via large-value payment systems over the last year.	No changes in reporting.
	Assets under custody	As of December 31	Average of month-end values over the reporting quarter.
	Underwritten transactions in debt and equity markets	Total underwriting over the last year.	No changes in reporting.
Short-Term Wholesale Funding (Method 2 Only)	Short-term wholesale funding metric	Average of daily values for weighted short-term wholesale funding over the preceding four quarters in the numerator. Four-quarter average of total risk-weighted assets in the denominator.	Averages of daily values for weighted short-term wholesale funding over the preceding quarter in the numerator. (Denominator would no longer be applicable.)

Table 1: Measurement of GSIB Surcharge Inputs for GSIBs

Category	Systemic Indicator	Current U.S. Reporting	Proposal
Complexity	Notional amount of over-the-counter (OTC) derivatives	As of December 31	Average of daily values over the reporting quarter.
	Trading and available-for-sale securities	As of December 31	Average of daily values over the reporting quarter.
	Level 3 assets	As of December 31	Average of month-end values over the reporting quarter.
Cross-Jurisdictional Activity	Cross-jurisdictional claims	As of December 31	Average of month-end values over the reporting quarter.
	Cross-jurisdictional liabilities	As of December 31	Average of month-end values over the reporting quarter.

BILLING CODE 6201-01-C

Historical empirical evidence indicates that some U.S. and foreign GSIBs have reported lower indicator amounts at year end than at other times during the year.⁵⁵ In particular, one analysis shows that U.S. GSIBs, on average, reduce their notional amounts of OTC derivatives at year end more than non-GSIB firms.⁵⁶ Overall, the findings in these empirical studies suggest that, in certain circumstances, applicable GSIB surcharges can be based on systemic indicator values that do not accurately reflect GSIBs' systemic risk profiles throughout the year. In addition, these end-of-year patterns in GSIBs' activities can also lead to liquidity disruptions in certain financial markets.⁵⁷

⁵⁵ See, e.g., Luis Garcia, Ulf Lewrick, and Taja Sečnik, *Is Window Dressing by Banks Systemically Important*, *BIS Working Papers*, 960 (August 2021); Markus Behn, Giacomo Mangiante, Laura Parisi, and Michael Wedow, *Behind the Scenes of the Beauty Contest: Window Dressing and the G-SIB Framework*, *International Journal of Central Banking*, 76 (December 2022).

⁵⁶ See, e.g., Jared Berry, Akber Khan, and Marcelo Rezende, *How Do U.S. Global Systemically Important Banks Lower Their Capital Surcharges*, *FEDS Notes*, Board of Governors of the Federal Reserve System (January 31, 2020).

⁵⁷ See, e.g., Erik Bostrom, David Bowman, Amy Rose, and Andy Xia, *What Happens on Quarter-Ends in the Repo Market*, *FEDS Notes*, Board of Governors of the Federal Reserve System (June 6, 2025); Matthew Naylor, Renzo Corrias, and Peter Wells, *Banks' Window-Dressing of the G-SIB*

Taken together, the existing empirical analyses and the economic analysis described in section III.E.i of this **SUPPLEMENTARY INFORMATION** suggest that the proposed data averaging requirement would result in indicator values that are more consistent with GSIBs' systemic risk profiles. Using averages of daily or monthly values rather than point-in-time measurements of systemic indicators to calculate GSIB scores would likely result in GSIB scores and capital surcharges that are better aligned with GSIBs' systemic risk profiles. For each systemic indicator, the proposed frequency of data to be averaged seeks to balance the risks of indicator values that are not representative of a GSIB's systemic risk profile, as described above, against the operational burden for firms to calculate and report averaged values.

As noted in Table 1, the proposal would require a GSIB to report the intra-financial system assets, intra-financial system liabilities, notional amount of OTC derivatives, and trading and available-for-sale securities indicators on the FR Y-15 as the average of daily values of the indicator over the reporting quarter, instead of quarter-end

Framework: Causal Evidence from a Quantitative Impact Study, Working Paper 42, Basel Committee on Banking Supervision (March 7, 2024).

point-in-time values.⁵⁸ Generally, these are data items the value of which a firm could more easily manage as of a quarterly reporting date; for example, many of the positions in these data items are relatively highly liquid and easily tradeable.⁵⁹ The Board expects that these indicators would also generally present less operational complexity and cost for GSIBs to report using averages of more frequent data (for example, averages of daily rather than averages of monthly values). For instance, U.S. GSIBs currently must report or maintain daily data for OTC derivatives and trading and available-for-sale securities for other purposes, including regulatory reporting requirements and risk management.⁶⁰ Similarly, for the intra-financial system assets and intra-financial system liabilities indicators, GSIBs currently must maintain much of this information for accounting purposes or regulatory

⁵⁸ For certain off-balance sheet items, a U.S. GSIB would report the average of month-end values over the reporting quarter, rather than an average of daily values (see Table 1).

⁵⁹ For example, trading and available-for-sale securities are generally bought and sold with a relatively high degree of certainty of settlement.

⁶⁰ Trading and available-for-sale securities are also reported on the Complex Institution Liquidity Monitoring Report (FR 2052a). Additionally, firms report trading assets as an average of either daily or weekly values on the Consolidated Financial Statements for Holding Companies (FR-Y9C), Schedule HC-K, item 4(a).

purposes, which reduces the operational complexity of reporting these indicators based on a higher frequency of data.⁶¹ For example, GSIBs currently must track exposures to individual counterparties on a daily basis in order to calculate compliance with the Board's single counterparty credit limits rule; many of these exposures are also captured in the intra-financial system assets indicator.⁶²

For some indicators, the benefits of more precise measurement may not warrant the added operational costs for GSIBs to report averages of daily data. For instance, cross-jurisdictional claims can be complex for firms to report if they manually account for multiple different types of risk transfers, such as the identity and location of guarantors or collateral, for purposes of the reporting form. Furthermore, in some cases, averages of daily values may not meaningfully improve systemic risk measurement relative to averages of monthly values. For example, Level 3 assets are by definition illiquid and difficult to value, relying on unobservable inputs. Similarly, firms are likely to have a limited ability to manage values of the securities outstanding indicator as of a given date because a significant portion of that indicator value is based on a firm's market capitalization (which can be affected by exogenous factors).

Accordingly, as noted in Table 1, the proposal would require a GSIB to report the securities outstanding, assets under custody, Level 3 assets, cross-jurisdictional claims, and cross-jurisdictional liabilities indicators on the FR Y-15 as the average of monthly values of the indicator over the reporting quarter.⁶³ Requiring averages of monthly, rather than daily, values for these indicators seeks to balance the benefits of improved measurement of systemic risk and reduced incentives for firms to adjust year-end indicator amounts with the operational

complexity and cost of reporting average values based on higher-frequency data.

The proposal would not change the current reporting methodology for items that measure flows (payments activity and underwritten transactions in debt and equity markets) and short-term wholesale funding.⁶⁴

The proposed changes to require reporting of average data would apply only to GSIBs identified under the Board's GSIB framework.⁶⁵ The proposal would not change the regulatory reporting methodology for firms that are subject to Category II, III, or IV standards. It would require a bank holding company subject to Category II or III standards to calculate its method 1 GSIB score by using the average of its four quarterly reported values for each systemic indicator for the year. The scope of the proposed data averaging requirements seeks to balance the risks of indicator values that are not representative of a GSIB's systemic risk profile, as described above, against the operational complexity for firms to calculate and report averaged data. GSIBs have the greatest incentives to manage the values of their systemic indicators on measurement dates because these values directly affect the firm's capital requirements. Additionally, GSIBs have, and are expected to maintain, greater operational capabilities to report averages of more frequent data. For non-GSIBs, both the incentives to manage point-in-time systemic indicator values and the operational capabilities to report averaged data are generally more limited. Accordingly, for non-GSIBs, the benefits of averaged data are less likely to outweigh these operational costs.

Question 13: How would the proposed averaging requirement of daily values and monthly values for indicators affect the ability to of the GSIB framework to identify and measure the systemic risk profile of banking organizations? What other measurement approaches for the systemic indicators should the Board consider to improve the measurement of a large banking organization's level of systemic risk?

⁶⁴ For these indicators, where firms currently report items as 12-month sums or averages, the proposal would require reporting of values for the reporting quarter only, with a separate line item to include the 12-month sum or averages, to align with the proposed reporting of other indicators and improve clarity. As discussed in section II.B. of this SUPPLEMENTARY INFORMATION, the proposal would make other changes to the short-term wholesale funding indicator.

⁶⁵ See 12 CFR 217.402. A firm that newly becomes a GSIB would be required to begin reporting averages of daily or monthly values as of the first quarter following its identification as a GSIB.

Question 14: For each systemic indicator, what alternative frequency of data to be averaged should the Board consider, and why? For example, what would be the advantages and disadvantages of using averages of daily, weekly, or monthly values instead of the proposed data frequencies?

Question 15: For each systemic indicator, what additional operational burdens would be required to report according to the proposed averaging frequency, relative to what banking organizations already do to track this information? To what extent would the operational burdens of reporting averages of daily, weekly, monthly, or quarterly values differ for the different indicators? What other changes, if any, could reduce the additional costs of reporting average values for a particular indicator? Please provide relevant data or analysis, including specific information regarding the operational burden of different frequencies for any indicator.

Question 16: What modifications, if any, should the Board consider to the proposed data averaging framework to account for material changes in systemic indicator values that occur over the course of a calendar year, for example, due to a corporate transaction such as a merger, acquisition, or material sale?

Question 17: The Basel Committee issued a consultative document in March 2024 that included potential approaches to increase the frequency of data averaging in the international GSIB framework. What are the advantages and disadvantages of alignment with international standards in this area? If the Board were to consider aligning to the international standard, what considerations should the Board take into account? Please provide any relevant data or analysis.

i. Currency Conversion of Aggregate Global Indicator Amounts

Each year, the Board publishes aggregate global indicator amounts used in the calculation of method 1 scores, which are based on data collected by the Basel Committee.⁶⁶ The Basel Committee amounts are determined based on the sum of the systemic indicator amounts reported by the 75 largest U.S. and foreign banking organizations as measured by the Basel

⁶⁶ See, e.g., 2025 Aggregate Global Indicators Amount, <https://www.federalregister.gov/documents/2025/12/16/2025-22964/regulation-q-regulatory-capital-rule-risk-based-capital-surcharges-for-global-systemically-important>. The Board also maintains this information at its website, <https://www.federalreserve.gov/supervisionreg/basel/denominators.htm>.

⁶¹ For example, GSIBs are currently required to report certain intra-financial system liabilities on a daily basis on the FR 2052a.

⁶² 12 CFR 252.78(a)(1).

⁶³ For exposures reported on the FR Y-15 based on their U.S. GAAP carrying value, the proposal would not change the frequency of valuation required by U.S. GAAP for the exposure. Rather, the proposal in certain cases would modify the frequency at which these exposures must be identified for purposes of calculating average values based on the U.S. GAAP carrying value at the time of measurement. The proposed averaging frequencies for the purposes of reporting on the FR Y-15 are not intended to affect firms' internal valuation frequencies for exposures. For example, firms would not be expected to revalue Level 3 assets on a monthly basis as a regulatory reporting requirement.

Committee, and any other banking organization the Basel Committee includes in its sample total for that year. The Basel Committee publicly releases these amounts, denominated in euros, each year.⁶⁷

As discussed in the 2015 final rule, the Board uses a conversion rate provided by the Basel Committee to convert aggregate global indicators published by the Basel Committee in euros to the U.S. dollar-denominated aggregate global indicator amounts used in the method 1 GSIB score calculation.⁶⁸ The conversion rate is the prevailing exchange rate, as calculated by the Basel Committee, between euros and U.S. dollars on December 31 of an applicable year. As discussed above, under the proposal, most systemic indicators would use an average of values over a calendar year as opposed to year-end point-in-time values. To better align with the use of average values for systemic indicators, the Board is proposing to update its internal methodology to use annual average exchange rates to convert aggregate global indicator amounts from euros to

U.S. dollars. Under this approach, the Board would rely on the annual average exchange rate published by the Basel Committee rather than the year-end exchange rate published by the Basel Committee.⁶⁹

Question 18: What are the advantages or disadvantages of using annual average exchange rates to convert aggregate global indicator amounts from euros to U.S. dollars, rather than year-end spot exchange rates? What alternative approaches, if any, should the Board consider, and why?

D. Reducing Cliff Effects in the Calculation of Method 2 GSIB Surcharges

As described in the 2015 final rule, the Board chose to assign GSIB surcharges using 100-basis point score band sizes so that modest changes in a firm's systemic indicators would generally not cause a change in its surcharge and surcharges would be reasonably sensitive to changes in a firm's systemic risk profile.⁷⁰ In practice, the Board has observed that firms' method 2 scores tend to cluster

close to the upper limit of a score band range, especially at year-end.

In order to increase the sensitivity of a firm's surcharge to its systemic risk profile and reduce cliff effects around changing score bands, the Board is proposing to make the method 2 score band ranges narrower.⁷¹ Instead of 100-basis point score band ranges corresponding to 0.5-percentage point increments in the surcharge (1.0%, 1.5%, 2.0%, etc.), the proposal would modify the ranges in method 2 to 20-basis point ranges that would correspond to 0.1-percentage point increments (1.0%, 1.1%, 1.2%, etc.).

Under this approach, the lowest score band range would be method 2 scores of 189 basis points or less, corresponding to a 1.0 percent surcharge, the lowest applicable surcharge for a GSIB. If the method 2 score of a GSIB equaled or exceeded 190 basis points, the method 2 surcharge would equal the sum of 1.1 percent and an additional 0.1 percent for each additional 20 basis points by which the GSIB's method 2 score exceeded 190 basis points. Expressed mathematically, this is equivalent to:

$$= \begin{cases} 1\% + 0.1\% * \text{ceiling} \left(\frac{\text{method 2 GSIB score} - 189}{20} \right), & \text{if method 2 score} \geq 190 \\ 1\%, & \text{if method 2 score} \leq 189 \end{cases}$$

Where *ceiling* means to round the fraction to the nearest integer above or equal to it.⁷² Table 2 illustrates the

application of this formula up to a score of 1129.

BILLING CODE 6201-01-P

⁶⁷ The values published by the Basel Committee are available at <https://www.bis.org/bcbs/gsib/denominators.htm>.

⁶⁸ See 80 FR 49085.

⁶⁹ The Basel Committee publishes the prevailing year-end and average annual exchange rates on its public website. See https://www.bis.org/bcbs/gsib/reporting_instructions.htm.

⁷⁰ See 80 FR 49082, at 49091 (Aug. 14, 2015).

⁷¹ The proposal would not amend the score band ranges for method 1, as discussed further below.

⁷² For example, 2.1 rounds up to 3; 4.7 rounds up to 5; 6 does not require rounding.

Table 2: Proposed revised method 2 surcharge score band ranges

Method 2 Score Range	Method 2 Surcharge		Method 2 Score Range	Method 2 Surcharge	
	Current	Proposed		Current	Proposed
Less than 189	1.0%	1.0%	630 - 649	3.5%	3.3%
190 - 209		1.1%	650 - 669		3.4%
210 - 229		1.2%	670 - 689		3.5%
230 - 249	1.5%	1.3%	690 - 709		3.6%
250 - 269		1.4%	710 - 729		3.7%
270 - 289		1.5%	730 - 749	4.0%	3.8%
290 - 309		1.6%	750 - 769		3.9%
310 -329	1.7%	770 - 789	4.0%		
330 - 349	2.0%	1.8%	790 - 809	4.5%	4.1%
350 - 369		1.9%	810 - 829		4.2%
370 - 389		2.0%	830 - 849		4.3%
390 - 409		2.1%	850 - 869		4.4%
410 - 429	2.5%	2.2%	870 - 889		5.0%
430 - 449		2.3%	890 - 909	4.6%	
450 - 469		2.4%	910 - 929	4.7%	
470 - 489		2.5%	930 - 949	4.8%	
490 - 509		2.6%	950 - 969	4.9%	
510 - 529	3.0%	2.7%	970 - 989	5.5%	5.0%
530 - 549		2.8%	990 - 1009		5.1%
550 - 569		2.9%	1010 - 1029		5.2%
570 - 589		3.0%	1030 - 1049		5.3%
590 - 609		3.1%	1050 - 1069		5.4%
610 - 629		3.2%	1070 - 1089		5.5%
			1090 - 1109		5.6%
			1110 - 1129	5.7%	

BILLING CODE 6201-01-C

The proposed method 2 score band range structure would result in a surcharge equivalent to that under the current method 2 surcharge score band range structure when a method 2 score is in the middle quintile of the current score band range, as displayed in Table 2. For example, a method 2 score of 280 basis points is near the center of the current 2.5 percent surcharge score band range and would likewise receive a 2.5 percent surcharge under the proposal. Under the proposal, method 2 scores at the lower end of a current method 2 score band range would receive a modest GSIB surcharge reduction. Method 2 scores at the higher end of a current method 2 score band range

would receive a modest GSIB surcharge increase under the proposal.

The proposed revision is not meant to alter the overall calibration of the method 2 surcharge, as reflected by the fact that the surcharge for a proposed score band range that is at the center of a current score band range would remain unchanged. Rather, the proposal would apply a more continuous approach to determining a firm's GSIB surcharge that would reduce cliff-effects in the framework and increase its risk sensitivity.

The proposal would not amend the score band ranges for method 1. Because method 1 is structured to be generally consistent with the methodology used

by other major jurisdictions to calculate GSIB surcharges and with the GSIB surcharge standard published by the Basel Committee, the proposal would keep the existing score band ranges for method 1 to promote international consistency.

Question 19: What are the advantages and disadvantages of the proposed approach to method 2 surcharges, including for firms' capital planning? What alternative approaches, if any, should the Board consider for reducing cliff effects and better reflecting a firm's systemic risk profile in its GSIB surcharge?

E. Amendments to Systemic Indicators

The Board is proposing to revise various aspects of the systemic indicators, as implemented in certain

cases through the data collected on the FR Y–15. This section discusses these revisions, grouped by systemic indicator category. Unless otherwise noted, each proposed modification in this section

would apply to all filers of the FR Y–15. Table 3 summarizes the proposed modifications to the GSIB framework and the FR Y–15 reporting.⁷³

BILLING CODE 6201–01–P

Table 3: Proposed Amendments to Systemic Indicators

Proposed Amendments	Affected Systemic Indicators
Revise definition of “financial institutions” for interconnectedness category and treatment of holdings of securities issued by an exchange-traded fund	Intra-financial system assets; intra-financial system liabilities
Incorporate the standardized approach for counterparty credit risk (SA-CCR) to measure derivative exposures ⁷⁴	Intra-financial system assets; intra-financial system liabilities
Update treatment of non-cash collateral in over-the-counter (OTC) derivatives transactions	Intra-financial system assets; intra-financial system liabilities
Update treatment of certificates of deposit	Securities outstanding
Clarify scope for reporting of preferred shares	Securities outstanding
Introduce two trading volume indicators	Trading volume
Update list of currencies	Payments activity
Add derivative exposures	Cross-jurisdictional claims; cross-jurisdictional liabilities
Streamline reporting of the cross-jurisdictional liabilities systemic indicator	Cross-jurisdictional liabilities
Update the FR Y-15 instructions for reporting the weighted short-term wholesale funding amount	Short-term wholesale funding

⁷³ In addition to the proposed amendments listed in Table 3, the proposal would modify the FR Y–15 instructions related to the total exposures systemic indicator to remove unintended differences from the calculation of total leverage

exposure under the Board’s capital rule. *See* 12 CFR 217.10(c)(2).

⁷⁴ The capital rule currently requires banking organizations subject to Category I and II standards to use SA–CCR to calculate standardized total risk-weighted assets and total leverage exposure and to

use SA–CCR or the internal models methodology to calculate their advanced approach total risk-weighted assets. Firms subject to Category III or IV standards may, but are not required to, use SA–CCR. *See* 12 CFR 217.34(a) (applicability of SA–CCR); 12 CFR 217.132(c) (SA–CCR).

BILLING CODE 6201-01-C

i. Interconnectedness

a. Definition of “Financial Institution” and Treatment of Exchange-Traded Funds

Banking organizations often enter into transactions with other financial sector entities, giving rise to a range of obligations. These transactions can serve many purposes and can also serve as transmission channels for stress. Financial distress at a banking organization can materially raise the likelihood of distress at other financial institutions given the network of obligations throughout the financial system.⁷⁵ Accordingly, the GSIB framework includes as a measure of a banking organization’s systemic risk profile indicators of its interconnectedness with other financial institutions and the financial sector as a whole.

The GSIB surcharge framework measures interconnectedness using three systemic indicators: intra-financial system assets, intra-financial system liabilities, and securities outstanding. For purposes of the intra-financial system assets and intra-financial system liabilities indicators, the FR Y–15 instructions currently define “financial institutions” as depository institutions, bank holding companies, securities brokers, securities dealers, insurance companies, mutual funds, hedge funds, pension funds, investment banks, and central counterparties. The definition excludes central banks and other public sector bodies, such as multilateral development banks and the Federal Home Loan Banks but includes state-owned commercial banks. The definition also excludes stock exchanges, though stock exchanges may have subsidiaries that are included, such as securities dealers or central counterparties.

The proposal would modify the definition of “financial institution” to provide clearer and more consistent treatment of positions with financial sector counterparties. Specifically, the proposal would amend the definition of “financial institution” to include savings and loan holding companies, private equity funds, asset management companies, exchange-traded funds, and other asset management entities that

engage in similar activities to those listed in the definition.

The proposed inclusion of savings and loan holding companies would clarify that a reporting banking organization should include positions with these financial institutions in the same manner as other depository institution holding companies, since a banking organization’s positions with these financial institutions can act as a similar channel for transmission of distress that can undermine financial stability.

The proposed inclusion of private equity funds in the intra-financial system assets and intra-financial system liabilities indicators would be consistent with the purpose of the interconnectedness category to holistically assess a banking organization’s exposures to and from other financial sector entities.⁷⁶ Private equity funds are engaged in asset management activities, which are a financial activity, and they typically have transactions or relationships with a broad set of other financial market participants and generally hold financial assets. Like with other asset management entities, perceptions of distress at a private equity fund could affect market perceptions of the soundness of other financial market participants. Private equity funds can present a similar channel for transmission of distress and financial instability as other asset management entities and other types of entities included in the definition of “financial institution.”

The proposed change regarding asset management companies would similarly reflect that positions with asset management companies, in addition to positions with the underlying funds managed by the companies, represent sources of financial sector interconnectedness.

To improve clarity, the proposal would modify the FR Y–15 instructions to specify that exchange-traded funds are included in the definition of “financial institution,” and would include in the line items for holdings of securities issued by other financial institutions (within the intra-financial system assets indicator) holdings of securities of an exchange-traded fund. Currently, the instructions for this line item state not to include bond exchange-traded funds. Although the redemption structures for shares of exchange-traded funds generally differ from the structure

of an open-ended mutual fund, asset management entities can have a variety of redemption structures and still act as a source of financial sector interconnectedness. In addition, mutual funds, which are currently included in the FR Y–15 instruction’s definition of “financial institution,” and exchange-traded funds are generally covered by the Investment Company Act of 1940 and subject to similar regulatory requirements. Given that there is no material distinction between exchange-traded funds and other asset management entity types in terms of their legal structure and the fact that exchange-traded funds engage in similar activities as mutual funds, the inclusion of exchange-traded funds would ensure consistent treatment across different types of asset management entities for the purposes of the interconnectedness indicators. This change would improve the clarity of reporting instructions and the consistency of treatment of asset management entities and provide a more complete measure of a banking organization’s interconnectedness.

Finally, the current definition of “financial institution” in the FR Y–15 relies on descriptions of certain asset management entity types (for example, mutual funds and hedge funds) using general, rather than specific, terminology, which may result in inconsistencies in the identification and inclusion of financial sector counterparties across banking organizations (for example, regarding the treatment of foreign equivalents or other asset management entities that engage in similar activities). To promote consistent treatment based on substance, the proposal would clarify that asset management entities that engage in similar activities to those listed are also included in the definition.

The proposal would implement these changes through revisions to the instructions of the FR Y–15 that would apply to all filers.

Question 20: What other types of entities beyond those mentioned should be included in the definition of “financial institution,” and why?

Question 21: What are the advantages and disadvantages of the proposed clarification regarding asset management entities similar to those listed in the definition of “financial institution”? What entities, if any, would be scoped in by this approach that would not be consistent with the purposes of the intra-financial system assets and intra-financial systems liabilities indicators? What additional compliance burden would result from such an approach, and how could such

⁷⁵ See Rochet, J.-C., & Tirole, J. (1996). Interbank Lending and Systemic Risk. *Journal of Money, Credit and Banking*, 28(4), 733–762. <https://doi.org/10.2307/2077918>. Li, M., Milne, F., & Qui, J. (2016). Uncertainty in an Interconnected Financial System, Contagion, and Market Freezes. *Journal of Money, Credit and Banking*, 48(6), 1135–1168. <http://www.jstor.org/stable/43862647>.

⁷⁶ The proposed change would not include the portfolio companies of a private equity fund unless a portfolio company itself meets the definition of “financial institution.”

burden be reduced? What alternative terms should the Board consider to clarify the identification and inclusion of different asset management or investment entities that ensures consistent treatment of similar counterparties across banking organizations?

Question 22: What other changes should the Board consider to improve the identification and inclusion of financial sector counterparties for purposes of the intra-financial system assets and intra-financial system liabilities indicators? For example, what would be the advantages and disadvantages of aligning the definition of “financial institution” in the FR Y–15 with the definition used in the capital rule (12 CFR 217.2)? Under such an approach, the Board could add to the definition used in the FR Y–15 a functional prong similar to parts (4)(ii) and (6) of the capital rule’s definition of “financial institution,” which would scope in companies that are predominantly engaged in certain financial activities. Alternatively, the FR Y–15 could use the capital rule’s definition of “financial institution,” replacing the exclusions in part (7) of the capital rule’s definition with the list of excluded entity types in the current FR Y–15 definition. What would be the advantages and disadvantages of such an approach? What other alternatives should the Board consider to capture the types of financial counterparties that reflect a firm’s interconnectedness, and why? For example, what would be the advantages or disadvantages of aligning with criteria or defined terms used in other parts of the Board’s regulatory framework? Please provide examples of financial sector counterparties that would be included under any alternative approaches that are not included by the current definition in the FR Y–15, and the appropriateness of including or not including these counterparty types. In addition, please provide information on the reporting burden of potential approaches relative to the current reporting requirements.

Question 23: What other changes should the Board consider to the definition of “financial institution” and other instructions for the interconnectedness indicators to clarify instructions, improve measurement, and promote more consistent reporting?

b. Derivatives

The proposal would update the reporting of derivative positions in the intra-financial system assets and intra-financial system liabilities indicators in the interconnectedness category to align

with amendments to the capital rule in 2019 that adopted the standardized approach for counterparty credit risk (SA–CCR).⁷⁷ The indicators for intra-financial system assets and intra-financial system liabilities include the net fair value and potential future exposure of OTC derivatives with other financial institutions, as calculated under the capital rule. The current instructions specify that firms should use the current exposure method to calculate the potential future exposure of these positions.⁷⁸ The proposal would update the instructions for the relevant line items in the intra-financial system assets and intra-financial system liabilities indicators to provide instead for calculation using SA–CCR for a banking organization that uses SA–CCR to calculate its risk-weighted assets under the capital rule. Specifically, the proposal would state that a banking organization should report the exposure amount of derivatives in accordance with the capital rule, 12 CFR 217.34(a). This change would align the measurement of derivatives in the interconnectedness category with that used in the size category, as well as in the calculation of risk-weighted assets and total leverage exposure in the capital rule.

The proposal would allow a banking organization to recognize, for purposes of the intra-financial system assets and intra-financial system liabilities indicators, the value of non-cash collateral to offset the net fair value of derivatives if such collateral is financial collateral (as defined in the capital rule, 12 CFR 217.2) and if adjusted for the applicable haircuts under SA–CCR or the current exposure method, depending on which methodology the banking organization uses, in accordance with the capital rule, 12 CFR 217.34(a). Specifically, the proposal would revise relevant line items in the interconnectedness category of the FR Y–15. This change would provide recognition of risk mitigants that reduce the impact to other financial institutions of a banking organization’s failure.

Question 24: Currently, firms are unable to recognize netting of exposures across derivatives and securities financing transactions contained within the same legal netting set for the purposes of certain systemic indicators in their GSIB surcharge score calculations. The capital proposals include changes to the ability of firms subject to SA–CCR to recognize under the capital rule offsetting of certain exposures across different product types

(for example, certain derivatives and repo-style transactions). What changes, if any, should the Board make to the FR Y–15 to permit recognition of such offsetting in the interconnectedness and size indicators or any other systemic indicators? What would be the advantages and disadvantages of such changes?

c. Securities Outstanding

The proposal would revise the scope of certain exposures measured under the securities outstanding systemic indicator in the interconnectedness category. First, the proposal would revise the FR Y–15 instructions to indicate that banking organizations should not report a certificate of deposit in the securities outstanding indicator if the certificate of deposit is not due to or held by a financial institution and is non-transferable. This modification would exclude such certificates of deposit from the interconnectedness category because they are not, and cannot become, exposures due to or held by a financial institution.

Consistent with the purpose of the interconnectedness indicators to measure a banking organization’s intra-financial system transactions and contractual relationships, banking organizations would continue to include in the securities outstanding indicator a certificate of deposit that is issued to a financial institution and a certificate of deposit that is transferable.

The proposal would also modify the instructions for other items included in the securities outstanding systemic indicator to provide greater clarity to banking organizations. Specifically, the proposal would require banking organizations to include preferred shares that have a determinable fair value in the securities outstanding systemic indicator, even if the preferred shares are not registered with the Securities and Exchange Commission or listed on a securities exchange. The current FR Y–15 instructions for this line item require banking organizations to report publicly traded instruments. The proposed change would include instruments for which banking organizations can easily determine a fair value, which can be done for securities for which there is an active market. This change would be consistent with the intent of the securities outstanding indicator to accurately measure issued and outstanding debt and equity instruments of a banking organization and would align with the instructions for this line item under the Basel Committee’s GSIB surcharge framework.

Question 25: What further modifications or clarifications to the

⁷⁷ See 85 FR 4362 (Jan. 24, 2020).

⁷⁸ See 12 CFR 217.34.

securities outstanding systemic indicator should the Board consider, and why?

Question 26: What other changes to the interconnectedness category indicators should the Board consider, and why?

ii. Substitutability

a. Trading Volume

The substitutability category used in method 1 measures the extent to which a banking organization provides critical financial services and infrastructure to third parties and the broader financial system that would be difficult to substitute in a period of financial stress or failure. Currently, there are three indicators in the substitutability category: (1) payments activity; (2) assets under custody; and (3) underwritten transactions in debt and equity markets.

The proposal would revise the substitutability category to introduce two new systemic indicators, “trading volume—fixed income” and “trading volume—equity and other,” as a complement to the existing indicator for underwritten transactions in debt and equity markets.

The proposed inclusion of trading volume in the substitutability category in addition to underwritten transactions in debt and equity markets would provide a broader measure of the extent to which a banking organization’s activities contribute to liquidity in the primary market (underwriting) and secondary market (trading). The permitted trading activity of banking organizations, such as market making, can promote market liquidity, thereby enhancing price discovery and permitting market participants to manage financial risk more holistically. The provision of market-making services can require substantial investments in information technology and infrastructure, making it difficult to substitute in a period of financial stress or firm default. The proposal would include separate indicators for trading volume in fixed income and in equities and other securities to avoid disproportionate impact due to differences in overall trading volumes in the two markets.

The FR Y–15 sections for the substitutability indicators (Schedules C and J) currently include these measures as memorandum line items. The proposal would move these line items into the main section of Schedule C to reflect their inclusion as new systemic indicators.⁷⁹ The indicator for trading

volume in fixed income securities includes money market instruments, certificates of deposit, bills, bonds, and other fixed income securities, such as commercial paper, corporate bonds, syndicated corporate loans, covered bonds, convertible debt, and securitized products.⁸⁰ This indicator includes securities issued by public sector entities (as defined in 12 CFR 217.2) as well as securities issued or guaranteed by government-sponsored agencies, multilateral development banks, and state and local governments, but does not include securities issued by a sovereign, as defined in 12 CFR 217.2. The indicator for trading volume of equities and other securities includes all publicly traded equities (as defined in 12 CFR 217.2), including American depositary receipts (ADRs) and global depositary receipts (GDRs), unlisted equity securities, preferred stock, trust preferred securities, and securities issued by investment funds, as defined in 12 CFR 217.2.⁸¹

The proposal would modify the weighting of the indicators for the substitutability category in a firm’s method 1 GSIB score calculation to reflect the addition of the two new indicators. Currently, the indicator for underwritten transactions in debt and equity markets receives a 6.67 percent weight. The proposal would reallocate a portion of this weighting to the two new indicators: the indicator for underwritten transactions in debt and equity markets would receive a 3.33 percent weight, and the trading volume—fixed income and trading volume—equity and other systemic indicators would each receive a 1.67 percent weight. The remaining indicators in the substitutability category would retain their current weight of 6.67 percent each. The inclusion of the proposed indicators for trading volume would not affect a GSIB’s method 2 score calculation, as method 2 does not include the substitutability category of indicators.

Question 27: What are the advantages and disadvantages of the proposed trading volume systemic indicators as measures of a banking organization’s substitutability, based on its contributions to efficient market functioning? What alternative indicators, if any, should the Board consider?

Question 28: What, if any, other trading instruments and exposures

proposal would remove Schedule J to streamline reporting by foreign banking organizations.

⁸⁰ See FR Y–15 Instructions, Schedule C, line items M5, M5(a), M5(b), and M6.

⁸¹ See FR Y–15 Instructions, Schedule C, line items M5, M5(c), M5(d), and M7.

besides those mentioned above should the proposed systemic indicators for trading volume include, and why?

b. Currencies Included in the Payments Activity Systemic Indicator and Associated Memoranda Items

The payments activity indicator includes the value of all cash payments sent via large-value payment systems, along with the value of all cash payments sent through an agent (for example, using a correspondent or nostro account), over the calendar year in major global currencies. To determine which currencies to include in this indicator, the payments activity indicator uses factors such as the extent to which a currency represents a material share of global foreign exchange market turnover, among other factors.⁸² In identifying major currencies, the payment activity indicator takes into account the list of major currencies announced by the Basel Committee for purposes of the international GSIB surcharge standard, including updates typically announced by the Basel Committee every three years.⁸³ The FR Y–15 also collects payments activity for certain other currencies (memorandum item currencies) that are not used at sufficient volumes to be included in the payments activity metric, to help inform the selection of major currencies in the future and monitor activity more consistently over time in currencies that may become major currencies in the future.

The proposal would update the list of currencies included in the payments activity systemic indicator to reflect changes in the materiality of certain currencies’ share of global foreign exchange market turnover. The proposal would also update the list of currencies collected as memorandum item currencies that are not included in the payments activity systemic indicator.

The proposal would revise the payments activity systemic indicator to include the Singapore dollar, based on its use in global foreign exchange markets, and to remove the Brazilian real, the Mexican peso, and the Swedish krona from the systemic indicator, based on their reduced relative use in global foreign exchange markets. Based on the 2025 Triennial Central Bank Survey published by the Bank for International Settlements (BIS), the Singapore dollar accounted for over 2 percent of foreign

⁸² For example, a currency may also be considered a major currency if it represents a material share of global nominal GDP.

⁸³ See Basel Committee, G–SIB Assessment Reporting Instructions, https://www.bis.org/bcbis/gsib/reporting_instructions.htm.

⁷⁹ As discussed in section II.G of this SUPPLEMENTARY INFORMATION section below, the

exchange market turnover.⁸⁴ The Mexican peso and the Swedish krona, which the FR Y–15 currently includes in the payments systemic indicator, respectively accounted for slightly less than 2 percent of foreign exchange market turnover. The Brazilian real, which the FR Y–15 also currently includes in the payments systemic indicator, accounted for significantly less than 2 percent of foreign exchange market turnover.

Under the proposal, the FR Y–15 would continue to collect data on payments in the Mexican peso and the Swedish krona as memoranda item currencies, based their share of foreign exchange market turnover. The proposal would also add payments activity in South Korean won as a memorandum item currency on the FR Y–15. This currency accounted for slightly less than 2 percent of foreign exchange market turnover, based on the Triennial Central Bank Survey. Like other memoranda item currencies, the South Korean won would not be included in the payments activity systemic indicator under the proposal.

The proposal would amend the FR Y–15 to no longer collect data on payments activity in Russian rubles and the Brazilian real, as the foreign exchange market turnover for these currencies is significantly less than the other currencies for which the FR Y–15 collects information.

Question 29: Which, if any, other currencies should the Board add or remove in the payments activity systemic indicator or as memorandum item currencies, and why?

c. Clarifications for the Payments Activity Indicator

The proposal would make additional changes to the FR Y–15 instructions for the payments activity indicator to improve clarity for filers. First, the proposal would modify the instructions for payments made in the last four quarters to more clearly state the current requirement that filers should include in their reported values the quarter including the as-of date of the report. This clarification would make no

substantive change to the current instructions. Additionally, the proposal would update a footnote in the instructions for line item 1, which cites a report published by the Bank for International Settlements' Committee on Payment and Settlement Systems, to reflect a change in the name of this body to the Committee on Payments and Market Infrastructures and to provide an updated hyperlink. The proposal would also provide additional information on how a firm may convert payments activity into U.S. dollars using average exchange rates.

Question 30: What other changes should the Board consider to improve the quality and efficiency of the data collected in the payments activity indicator? For example, what would be the advantages and disadvantages of permitting firms to collect the daily flow data for each reporting currency included in the payments activity indicator and converting the data for each currency using daily exchange rate quotations?

iii. Cross-Jurisdictional Activity

a. Cross-Jurisdictional Derivatives Activity

Banking organizations with large cross-border activities and exposures may be more difficult and costly to resolve than domestically focused banking organizations in the event of a failure. The greater a banking organization's exposures are across borders and to non-domestic counterparties, the more difficult it can be to coordinate its resolution were it to fail. In addition, cross-jurisdictional activity can add complexity and present channels for transmission of distress with parties in different jurisdictions. The two systemic indicators included in this category—cross-jurisdictional claims and cross-jurisdictional liabilities—measure a banking organization's global profile by considering its activity and exposures outside of the United States.

Under the current FR Y–15 instructions, neither of these indicators for cross-jurisdictional activity include derivative exposures. Omission of derivatives from the systemic indicators for cross-jurisdictional activity can materially understate this measure for a banking organization, and also present opportunities for a banking organization to use derivatives to structure its exposures in a manner that reduces the value of its systemic indicators without reducing the risks the indicator is intended to measure. In the context of cross-jurisdictional activity, derivative exposures increase a firm's cross-

jurisdictional claims and liabilities and can increase or transmit distress in the same manner as—or even to a greater extent than—other cross-jurisdictional assets and liabilities by amplifying the effect of a banking organization's failure.⁸⁵

Accordingly, the proposal would revise the systemic indicators for cross-jurisdictional claims and cross-jurisdictional liabilities to include derivative exposures. As a result of this change, these indicators would provide a more accurate and comprehensive measure of a banking organization's cross-jurisdictional activity and the associated risks intended to be captured. In addition to its usage in the GSIB surcharge framework, cross-jurisdictional activity as reported on the FR Y–15 also serves as a risk-based indicator in the Board's framework for determining the applicable category of prudential standards for large banking organizations. Specifically, a banking organization that has cross-jurisdictional activity of \$75 billion or more is subject to Category II standards.⁸⁶ The proposed change would also have the effect of improving the measurement of cross-jurisdictional activity for the purposes of determining the application of prudential standards for large banking organizations.

The proposal would implement the modification to include derivative exposures in the cross-jurisdictional activity category systemic indicators through revisions to the FR Y–15, which currently collects information regarding cross-jurisdictional derivative exposures as memoranda items. Under the proposal, a banking organization would generally recognize collateral associated with derivative exposures consistently with the methodology for reporting other cross-jurisdictional claims and liabilities on the FR Y–15. Specifically, a banking organization would report cross-jurisdictional derivative claims and liabilities gross of collateral, given that a banking organization may be engaged in significant cross-jurisdictional derivatives business even if its cross-jurisdictional claims and

⁸⁴ The BIS Triennial Central Bank Survey is a comprehensive source of information on the size and structure of global over-the-counter markets in foreign exchange and interest rate derivatives. The BIS coordinates the Triennial Survey every three years. The foreign exchange turnover part of the 2025 Triennial Survey took place in April 2025 and involved central banks and other authorities in 52 jurisdictions. These authorities collected data from more than 1,100 banks and other dealers and reported national aggregates to the BIS for inclusion in global aggregates. See *Triennial Central Bank Survey*, September 2025, https://www.bis.org/statistics/rpfx25_fx.htm.

⁸⁵ The failure of Lehman Brothers during the 2007–09 financial crisis is an example of how cross-border derivatives can increase the effect of a banking organization's failure. See Summe, K. (2012). "An Examination of Lehman Brothers' Derivatives Portfolio Post-Bankruptcy." In K. Scott & J. Taylor (Eds.), *Bankruptcy Not Bailout: A Special Chapter 14* (pp. 97–125). Hoover Institution Press, Wiggins and Metrick (2014). *The Lehman Brothers Bankruptcy G: The Special Case of Derivatives*. Yale Program on Financial Stability.

⁸⁶ See 12 CFR 252.2. Cross jurisdictional activity is measured as the sum of a banking organization's cross-jurisdictional claims and cross-jurisdictional liabilities.

liabilities are relatively small net of collateral. This approach would better measure the underlying scale of a banking organization's cross-jurisdictional derivatives activity.⁸⁷

Foreign banking organizations would report cross-jurisdictional derivative claims and liabilities with affiliates outside the reporting group in a consistent manner with other cross-jurisdictional claims and liabilities, to reflect the structural differences between foreign banking organizations' U.S. operations and domestic holding companies.⁸⁸

Question 31: What are the advantages and disadvantages of modifying the scope of the cross-jurisdictional claims and cross-jurisdictional liabilities indicators to include derivative exposures?

Question 32: What are the advantages and disadvantages of modifying the scope of the cross-jurisdictional activity risk-based indicator in the Board's framework for determining the applicable category of prudential standards for large banking organizations to include derivative exposures? What adjustments, if any, should the Board consider to the reporting of a firm's cross-jurisdictional derivative exposures, including by type of firm, and why would such adjustments more appropriately capture cross-jurisdictional activity? Please provide data or relevant information.

Question 33: What other modifications, if any, would improve measurement of the cross-jurisdictional activity indicators?

b. Other Changes to Measurement of Cross-Jurisdictional Activity Indicators

Currently, the FR Y-15 instructions direct filers to measure cross-jurisdictional liabilities by referencing instructions for the Treasury

International Capital reports and the Country Exposure Report (FFIEC 009). To streamline the reporting instructions for cross-jurisdictional liabilities, the proposal would remove references to the Treasury International Capital reports, consolidate line items related to cross-jurisdictional liabilities, and apply definitions consistent with the FFIEC 009 for the measurement of cross-jurisdictional liabilities. This approach would result in a consistent methodology for measuring the consolidated cross-jurisdictional liabilities of firms while simplifying the reporting instructions.

As part of this change, the proposal would revise the scope of the cross-jurisdictional liabilities indicator to include total liabilities booked at foreign offices regardless of whether payment is guaranteed at locations outside the country of the office. Foreign office liabilities may present complexity or increase the difficulty and cost of resolving a banking organization in the event of a failure regardless of whether payments are guaranteed at locations outside the country of the office. Therefore, this revision would better reflect a banking organization's cross-jurisdictional activities and exposures.

iv. Short-Term Wholesale Funding

In addition to the proposed changes outlined in II.B of this **SUPPLEMENTARY INFORMATION**, the proposal would make additional amendments to the short-term wholesale funding indicator and its associated FR Y-15 instructions to improve the consistency of data measurement and reporting, reduce operational burden, and improve the clarity of reporting instructions.

a. Alignment With Other Requirements

To improve consistency of data measurement and reporting and reduce operational burden for filers, the proposal would align the maturity categories used to calculate a firm's short-term wholesale funding score under the GSIB surcharge framework and reported on the FR Y-15 with the maturity categories used for liquidity data reporting on the Complex Institution Liquidity Monitoring Report (FR 2052a) and for purposes of the net stable funding ratio (NSFR) rule,⁸⁹ by moving the start and end dates for certain categories by one day.

The Board in 2021 amended the FR 2052a to align the report with the NSFR rule. As a result of those changes, there is currently a one-day difference

between the start and end dates for certain maturity categories for reporting data items on the FR Y-15 and the FR 2052a. Specifically, one of the maturity categories in the FR 2052a and under the NSFR rule includes a lower bound of 180 days. The short-term wholesale funding indicator under the GSIB surcharge framework and the FR Y-15 reporting form, however, include a category for remaining maturity of 181 to 365 days.

The proposal would modify the maturity category of 91 to 180 days under the GSIB surcharge framework and FR Y-15 to a remaining maturity of 91 to 179 days, and the maturity category of 181 to 365 days to a maturity of 180 to 364 days, to align with the FR 2052a. This change would improve consistency and reduce operational burden, for example, by allowing banking organizations to use data from the FR 2052a to complete FR Y-15 reporting.

b. Instructions Update to the Calculation of the Weighted Short-Term Wholesale Funding Amount

The proposal would revise the General Instructions and certain line items in Schedule G in addition to updating and adding definitions in the Glossary of the FR Y-15 to simplify the instructions for calculating the short-term wholesale funding indicator score. Currently, under the method 2 framework, a firm reports its short-term wholesale funding amount on the FR Y-15 and also calculates its short-term wholesale funding amount for the purposes of its method 2 score for the indicator based on the regulatory text in 12 CFR 217.406.

The proposal would remove the current regulatory text section 12 CFR 217.406, as well as certain definitions associated with the short-term wholesale funding indicator from 12 CFR 217.401.⁹⁰ Under the proposal, the coefficient for the short-term wholesale funding indicator would be in 12 CFR 217.405 and updated annually consistent with the proposed indexing process outlined in section II.A.ii of this **SUPPLEMENTARY INFORMATION**. The FR Y-15 instructions for Schedule G would maintain the current line items in the reporting form and include additional information on how to report these items. The separate regulatory text would not be necessary for the weighted short-term wholesale funding indicator in light of the proposed changes

⁸⁷ Consistent with the current FR Y-15 and the FFIEC 009 instructions, the positive fair value of derivative contracts can be offset against the negative fair value of derivative contracts if the transactions are executed under a legally enforceable master netting agreement and the offsetting is in accordance with ASC Subtopics 815-10 and 210-20.

⁸⁸ Under the Board's tailoring framework, a foreign banking organization may exclude from the cross-jurisdictional claims indicator claims on an affiliate outside the reporting group (U.S. intermediate holding company or combined U.S. operations, as applicable) to the extent that these claims are secured by financial collateral, in accordance with the methodology for collateralized transactions under the capital rule (see instructions for line item 1(a) of Schedule L of the FR Y-15). A foreign banking organization may exclude cross-jurisdictional liabilities for which the counterparty is an affiliate outside the reporting group (see instructions for line item 2(a) of Schedule L of FR Y-15). For more information, see also SR Letter 20-2, Attachment B, <https://www.federalreserve.gov/supervisionreg/srletters/sr2002.htm>.

⁸⁹ See 12 CFR part 249; see also Net Stable Funding Ratio: Liquidity Risk Measurement Standards and Disclosure Requirements, 86 FR 9120 (Feb. 11, 2021).

⁹⁰ All proposed removals of current definitions from 12 CFR 217.401 would be added as definitions in the Glossary of the FR Y-15 to ensure consistency in the scope of reporting the short-term wholesale funding indicator.

described in section II.B.i-ii of this **SUPPLEMENTARY INFORMATION.**

Question 34: In addition to the proposed changes, what additional changes, if any, should the Board consider making to the FR Y-15, and why—for example, to improve the measurement of indicators and systemic risk or to reduce operational burden?

F. Clarification for Reduction in GSIB Surcharge Calculated During the Year Between Calculation and Effective Date of a GSIB Surcharge Increase

Under the current rule, if a GSIB's systemic risk profile changes from one year to the next such that it would be subject to a higher GSIB surcharge, the higher surcharge is not applicable for a full year (that is, two years from the systemic indicators measurement year). Alternatively, if a GSIB's systemic risk profile changes from one year to the next such that it would be subject to a lower GSIB surcharge, the lower surcharge is applicable beginning on January 1 of the next calendar year (that is, one year from the systemic indicators measurement year). Providing an additional year before a GSIB surcharge increase takes effect helps to facilitate firms' capital planning and allows for more gradual increases in capital requirements, whereas immediately applying surcharge decreases recognizes firms' reductions in actual systemic risk profile. In addition, the one-year difference in application between an increase and a decrease provides firms the opportunity to reduce their systemic risk profile in order to not be subject to an increased capital buffer requirement.

The proposal would amend section 217.403 of the capital rule to clarify these mechanics, without changing the substance. The amendatory text would specify that a firm's GSIB surcharge in effect for a calendar year is the surcharge calculated in the immediately prior calendar year, unless the surcharge calculated in the calendar year two years prior was lower, in which case the GSIB surcharge calculated in the calendar year two years prior shall be in effect.

For example, consider a GSIB that in 2026 has an effective GSIB surcharge of 2.0 percent. Based on data reported as of the fourth quarter of 2026, if the firm calculates a GSIB score that would result in a GSIB surcharge of 2.2 percent, the higher GSIB surcharge would take effect on January 1, 2029. If, based on data reported as of the fourth quarter of 2027, that GSIB calculates a GSIB score that would result in a GSIB surcharge of 2.1 percent (or lower), the GSIB's effective surcharge on January 1, 2029, would be the 2.1 percent

calculated as of the fourth quarter of 2027, instead of the 2.2 percent calculated as of the fourth quarter of 2026.

G. Foreign Banking Organization Reporting Requirements

In 2019, in connection with the final rule establishing categories and thresholds for determining prudential standards for large banking organizations, the Board added new Schedules H through N to the FR Y-15, which apply solely to foreign banking organizations and their U.S. intermediate holding companies. The new schedules were intended to simplify reporting for foreign banking organizations and their intermediate holding companies. However, to reduce technical challenges and operational burden and improve administration and consistency of reporting the Board is proposing to consolidate FR Y-15 reporting for U.S. and foreign banking organizations on a single set of schedules.

To simplify and streamline the reporting form and its instructions, the proposal would remove Schedules H through N and make adjustments to accommodate reporting by foreign banking organizations using the same schedules as domestic firms, Schedules A through G. Under the proposal, a foreign banking organization would file Schedules A through G for its combined U.S. operations and separately for any U.S. intermediate holding company required to be formed pursuant to the Board's Regulation YY. This change would only reorganize the way that foreign banking organizations report the FR Y-15 and would not change the actual information collected. The proposal would make corresponding updates to the FR Y-15 instructions to reflect this change.

Question 35: The Board invites comment on the removal of Schedules H through N from the FR Y-15 reporting form, including the operational and administrative costs for foreign banking organizations to report the form. How would the removal of these schedules affect regulatory reporting processes, including resource allocation, system requirements, and compliance costs?

Question 36: What other changes to the FR Y-15 should the Board consider making to remove unnecessary reporting burden and why?

H. Implementation and Timing

The proposal's amendments to the capital rule, FR Y-15 reporting form, and FR Y-15 instructions would take effect two calendar quarters after the date of adoption of a final rule. This

effective date timing would give firms a minimum of two quarters to make the required changes to their systems and processes. During the initial three quarters following the effective date, items that require a four-quarter average or sum would include data from quarters for which the underlying reporting instructions differ. Banking organizations would not be required to adjust data reported in previous quarters when calculating these four-quarter averages or sums. A banking organization that does not have data for an indicator for a previous quarter would be required to use a pro-rata approach.⁹¹

Question 37: What alternative implementation timing should the Board consider and why?

I. Interaction With Other Proposals

The Board, with the OCC and FDIC, is separately issuing the capital proposals, which would substantially revise the capital requirements applicable to banking organizations operating in the United States. The revisions set forth in the capital proposals would improve the calculation of risk-based capital requirements to better reflect the risks of banking organizations' exposures, reduce the complexity of the framework, enhance the consistency of requirements across these banking organizations, and facilitate more effective supervisory and market assessments of capital adequacy.

Among other things, the capital proposals would modify the conversion factors applicable to equity and credit commitments. The capital proposals would introduce a 40 percent conversion factor for all equity and credit commitments regardless of maturity that are not unconditionally cancellable, which would be applicable to all FR Y-15 filers. This would replace the current capital rule's 20 percent and 50 percent equity and credit conversion factors for equity and credit commitments that are not unconditionally cancellable.

Given that the GSIB surcharge framework's size indicator generally aligns with the total leverage exposure

⁹¹ A reporting organization that does not have 12 months of data to report would use an annualized pro-rata approach to calculate line items that are a four-quarter sum or average. For each line item that is an average, the approach would consist of using the average value over the period during the prior 12 months for which the banking organization has reported data. For example, if a firm only has two quarters of data for Level 3 Assets (Schedule D, line item 14), its average amount for the year would be equal to the average of values for the two quarters for which the firm has reported data on the FR Y-15.

calculation, in connection with the capital proposals, the Board plans to propose revisions to the FR Y–15 Schedule A (Size Category) to align with these proposed changes to the credit conversion factors by adding a line item for off-balance sheet exposures subject to a conversion factor of 40 percent and removing the line items for conversion factors of 20 and 50 percent.

Question 38: What other modifications, if any, should the Board consider to this proposal due to the capital proposals?

III. Economic Analysis

A. Introduction

The proposal's primary objective is to improve the measurement of systemic risk profiles in the GSIB surcharge framework. Specifically, as discussed in section I of this **SUPPLEMENTARY INFORMATION**, the proposal would make multiple adjustments to the calculation of method 1 and method 2 scores so that these scores, and the related GSIB surcharges, more accurately reflect the systemic risk profiles of GSIBs.

The accurate measurement of systemic risk profiles is crucial for the functioning of the GSIB surcharge framework. In particular, accurate systemic risk measurement helps achieve the framework's objective that GSIBs that pose higher systemic risk are subject to higher capital buffer requirements, which reduces their probability of distress in order to moderate and equalize across GSIBs the expected systemic losses from such potential distress. Additionally, accurate systemic risk measurement makes GSIBs better internalize such potential systemic losses, which creates incentives for them to better manage their systemic risk.

The economic analysis is structured as follows. Section III.B describes the baseline for the analysis, which is the current GSIB surcharge framework, and the data used. Sections III.C and III.D present the proposed policy change and three reasonable alternatives. Section III.E estimates the changes in systemic indicators, method 1 and method 2 scores, and GSIB surcharges under the proposal and the alternatives relative to the baseline. Sections III.F and III.G evaluate the economic benefits and costs of the proposal and the policy alternatives. Section III.H assesses potential interactions between the proposal and other rules, such as the total loss-absorbing capacity framework and the regulatory tailoring framework. Section III.I concludes the analysis, and section III.J is an appendix that

describes the quantitative impact estimation methodology in detail.

B. Baseline and Data

The economic analysis uses the current regulatory framework as baseline, including the current U.S. GSIB surcharge framework, described in section I.A of this **SUPPLEMENTARY INFORMATION**. The baseline represents the current state of GSIBs in the absence of any policy change. Accordingly, throughout the analysis, the Board assesses the economic impact of the proposal and the policy alternatives considered, described in sections III.C and III.D of this **SUPPLEMENTARY INFORMATION**, by comparing outcomes estimated under the proposal and the alternatives to the outcome estimated under the baseline.

The economic analysis does not reflect the effects of the expanded risk-based proposal, which would interact with the impact of this proposal, for example, by changing risk-weighted asset amounts. The economic analysis in the expanded risk-based proposal assesses potential interactions between the two proposals as well as the combined impact of the two proposals.

The economic analysis uses the most recent year-end financial information available on the eight U.S. bank holding companies that are GSIBs as of 2025 ("current GSIBs") to estimate the method 1 and method 2 scores, as well as the GSIB surcharges of these holding companies under the baseline, the proposal, and the policy alternatives considered.⁹² The analysis focuses on method 1 and method 2 scores calculated using data from the fourth quarter of 2024 and investigates how these scores would change under the proposal and the alternatives relative to the baseline. Additionally, the analysis estimates the impact of the proposal and the alternatives on GSIB surcharges applicable in 2026, which also requires the calculation of method 1 and method 2 scores using data from the fourth quarter of 2023.⁹³ The remainder of this subsection describes the data used in these calculations and then presents

⁹² Section J of this **SUPPLEMENTARY INFORMATION** describes the impact estimation methodology used in different subsections of the economic analysis and the data used in the subsection assessing the proposal's potential interaction with the total loss-absorbing capacity framework.

⁹³ Under the baseline, estimating GSIB surcharges applicable in any given year requires the estimation of method 1 and method 2 scores in the two preceding years because increases in GSIB surcharges are applicable only with a one-year delay, whereas decreases are applicable without a delay. See 12 CFR 217.403(d). The proposal and the alternatives would maintain this lag in the applicability of surcharge increases.

summary statistics across the eight GSIBs under the baseline.

The analysis uses multiple data sources to calculate method 1 and method 2 scores under the baseline, the proposal, and the policy alternatives considered. The analysis primarily relies on publicly available data on systemic indicator line items and memorandum items reported in FR Y–15 filings as of the fourth quarters of 2023 and 2024.⁹⁴ Additionally, the analysis uses quarterly systemic indicator data from the first quarter of 2017 through the fourth quarter of 2024 to estimate the effect of the proposed data averaging of certain systemic indicators. The analysis estimates the impact of the proposed changes to certain systemic indicators by using confidential supervisory information from the Board's special data collection as of the second quarter of 2023.⁹⁵ The calculation of method 1 scores uses the aggregate global indicator amounts published by the Federal Reserve.⁹⁶ Furthermore, the analysis estimates the impact of one policy alternative using the aggregate global indicator amounts published by the Bank for International Settlements.⁹⁷ The analysis converts these euro-denominated global indicator amounts to U.S. dollars by using exchange rate data published by the European Central Bank.⁹⁸ The analysis estimates the impact of the proposed changes on the dollar amount of GSIB surcharges by using publicly available data on total risk-weighted assets reported in FR Y–9C filings as of the fourth quarter of 2024.⁹⁹

Finally, the analysis uses publicly available macroeconomic data to calculate adjustments to method 2 systemic indicator coefficients under

⁹⁴ The specific line items used from FR Y–15 filings are RISK Y832, M362, M359, M370, M367, M376, M374, M390, M378, Y835, M405, M408, MV93, MV95, M411, N255, G506, M422, KW54, M426, KY50, Y894, and Y896.

⁹⁵ See <https://www.federalreserve.gov/newsevents/pressreleases/bcreg20231020b.htm>. The specific line items used from the Board's special data collection are Items 1 and 7–11. Additionally, for the estimation of the proposal's impact on the payments activity indicator, the analysis uses confidential supervisory information on payments activity in Singapore dollars as of the fourth quarter of 2024, reported on a voluntary basis in Item 6.k of the Basel Committee on Banking Supervision's annual GSIB assessment exercise, for which the reporting templates and filing instructions are available at https://www.bis.org/bcbbs/gsib/reporting_instructions.htm.

⁹⁶ See <https://www.federalreserve.gov/supervisionreg/basel/denominators.htm>.

⁹⁷ See <https://www.bis.org/bcbbs/gsib/denominators.htm>.

⁹⁸ See https://www.ecb.europa.eu/stats/policy_and_exchange_rates/euro_reference_exchange_rates/html/eurofxref-graph-usd.en.html.

⁹⁹ The specific line items used from FR Y–9C filings are BHCA A223 and BHCW A223.

the proposal and one of the policy alternatives considered. Specifically, in these calculations, the analysis uses the annual, seasonally-adjusted U.S. Gross Domestic Product (GDP) published by the U.S. Bureau of Economic Analysis and the Consumer Price Index for All Urban Wage Earners and Clerical

Workers (CPI-W) published by the U.S. Bureau of Labor Statistics.¹⁰⁰

Table 4 presents summary statistics under the baseline, indicating a high dispersion of both method 1 and method 2 scores across the eight GSIBs, which creates a high cross-sectional dispersion of applicable GSIB surcharges. Notably, method 2 surcharges are, on average, about twice

as high as their method 1 counterparts. Related to the discussion in section II.B of this **SUPPLEMENTARY INFORMATION**, the relative share of the short-term wholesale funding score in method 2 scores is, in aggregate, about 30 percent, which is meaningfully higher than the 20 percent weight targeted in the proposal.¹⁰¹

Table 4: Method 1 Scores, Method 2 Scores, and GSIB Surcharges Under the Baseline

This table shows summary statistics for method 1 and method 2 scores, method 1 and method 2 surcharges, as well as GSIB surcharges across the eight current GSIBs under the current GSIB surcharge framework, which serves as a baseline throughout the economic analysis. The table also presents summary statistics on the percentage share of the short-term wholesale funding (“SWTF”) score within method 2 scores across GSIBs. Scores and surcharges are calculated applying the methodology described in 12 CFR Part 217 Subpart H. All scores and surcharges are calculated using data from the fourth quarter of 2024, except the GSIB surcharges applicable in 2026 (shown in the last row), which are based on method 1 and method 2 scores calculated using data from the fourth quarters of 2023 and 2024.

	Lowest	Average	Highest
Method 1 scores (as of the fourth quarter of 2024)	143	249	461
Method 2 scores (as of the fourth quarter of 2024)	222	557	985
<i>Percentage share of the STWF score in method 2 scores</i>	13%	34%	59%
Method 1 surcharges (as of the fourth quarter of 2024)	1.0%	1.5%	2.5%
Method 2 surcharges (as of the fourth quarter of 2024)	1.0%	2.8%	5.0%
GSIB surcharges (applicable in 2026)	1.0%	2.7%	4.5%

C. Proposed Policy Change

The proposal would revise multiple elements of the GSIB surcharge framework. First, as described in section II.F of this **SUPPLEMENTARY INFORMATION**, the proposal would make amendments to the systemic indicators by revising the reporting instructions for the measurement of certain existing systemic indicators and introducing two additional systemic indicators in the substitutability category of the method 1 score. Second, as Table 1 shows, under the proposal, certain systemic indicators that are currently calculated on a point-

in-time basis at year end would be calculated as annual averages of their daily or monthly values (“data averaging”).¹⁰² Third, the proposal would make a one-time downward adjustment to method 2 systemic indicator coefficients by a factor of 1.2 and subsequently make annual adjustments to the coefficients based on the cumulative growth in U.S. nominal GDP. Fourth, the proposal would change the calculation of the short-term wholesale funding score by removing the risk-weighted asset scaling factor and instead taking the product of the

weighted short-term wholesale funding dollar amount and a revised coefficient. Specifically, the proposal would calibrate this coefficient so as to make the aggregate share of short-term wholesale funding scores within the method 2 scores of current GSIBs equal to 20 percent as of the fourth quarter of 2024, after all other proposed changes to method 2 scores. Finally, as Table 2 shows, the proposal would reduce method 2 surcharge increments from 50 basis points to 10 basis points by using 20-point “narrow” score bands in the

¹⁰⁰ See https://apps.bea.gov/national/Release/XLS/Survey/Section1All_xls.xlsx (GDP) and [https://download.bls.gov/pub/time.series/cw/cw.data.0.Current\(CPI-W\)](https://download.bls.gov/pub/time.series/cw/cw.data.0.Current(CPI-W)).

¹⁰¹ The aggregate share of the short-term wholesale funding score has been consistently around 30 percent since the 2015 implementation of the GSIB surcharge framework.

¹⁰² Additionally, for the size indicator, the proposal would use the average value taken over the entire year, rather than the average value taken over the fourth quarter of the year, as measured under the baseline.

method 2 surcharge schedule, which would replace the 100-point score bands used under the baseline.¹⁰³

D. Reasonable Alternatives

The analysis considers three alternatives to the proposed policy change, assessing the expected benefits and costs of these alternatives relative to the baseline and comparing them to the expected benefits and costs of the proposal.

Alternative 1 (“inflation indexing” approach) would change systemic indicators and the short-term wholesale funding score the same way as the proposal, but it would not make the proposal’s one-time adjustment to method 2 systemic indicator coefficients, described earlier, and instead adjust the coefficients based on the cumulative growth in the CPI–W index since December 2015. Consistently, going forward, this alternative would make annual adjustments to method 2 systemic indicator coefficients using the CPI–W index, rather than U.S. nominal GDP, which would be used under the proposal.

Alternative 2 (“global denominators” approach) would change systemic indicators and the short-term wholesale funding score the same way as the proposal, but it would adjust method 2 systemic indicator coefficients by using the calibration methodology applied in the 2015 GSIB surcharge final rule.¹⁰⁴ Specifically, this alternative would use the aggregate global indicator amounts from the latest two years to revise method 2 systemic indicator coefficients.

Alternative 3 (“reference bank” approach) would change systemic indicators and the short-term wholesale funding score the same way as the proposal, but it would reduce all method 2 systemic indicator coefficients by 40 percent, which is the cumulative growth rate differential between the method 2 scores and the method 1 scores of the “reference bank” used in the original calibration of the GSIB

surcharge framework, estimated from the fourth quarter of 2015 to the fourth quarter of 2024.¹⁰⁵ This reduction in method 2 coefficients is algebraically equivalent to increasing the reference bank score, which serves as a baseline for measuring the systemic risk profiles of GSIBs and the determination of their GSIB surcharges.

All of the policy alternatives considered would redefine and recalibrate the short-term wholesale funding score using the same methodology as the proposal, setting the weight of the short-term wholesale funding score to 20 percent.¹⁰⁶

Question 39: The economic analysis does not specify how Alternatives 2 and 3 would adjust the method 2 coefficients going forward. If these alternatives were combined with the proposal’s approach of adjusting the method 2 coefficients in the future based on nominal U.S. GDP growth or a different approach, to what extent would that change the analysis?

E. Estimated Changes in GSIB Scores and Surcharges

i. Estimated Impact of Changes to Systemic Indicators

This subsection of the analysis estimates how the proposal would affect method 1 and method 2 scores through data averaging and the amendments to systemic indicators, detailed in sections II.C and II.E of this **SUPPLEMENTARY INFORMATION**, respectively. Because the effects of the various changes may interact with one another, the analysis assesses the effects of data averaging and the amendments both separately and combined.¹⁰⁷ Furthermore, the analysis creates a detailed breakdown of the estimated percentage changes in

both individual systemic indicator scores and GSIB scores relative to the baseline.¹⁰⁸ Notably, the estimates are the same under the proposal and the policy alternatives considered because the alternatives would make the same changes to the systemic indicators.

The estimates in Table 5 indicate that, relative to the baseline, the proposed data averaging would increase method 1 scores by 2 to 3 percent, and the amendments to systemic indicators would increase method 1 scores by about 4 percent, for a combined increase of about 6 percent, on average across GSIBs. Data averaging would mostly affect systemic indicators in the complexity category, including and especially the “notional amount of OTC derivatives” indicator. This estimate is consistent with the empirical evidence in the literature cited in section II.C of this **SUPPLEMENTARY INFORMATION**, which shows that the nominal amount of the OTC derivatives indicator is prone to end-of-year reductions. The systemic indicator amendments would mostly affect indicators in the substitutability and cross-jurisdictional activity categories, with the scores of cross-jurisdictional liabilities increasing somewhat more than the scores of cross-jurisdictional claims, on average across GSIBs.¹⁰⁹

BILLING CODE 6201–01–P

¹⁰⁸ For the assessment of increases in the intra-financial system assets and intra-financial system liabilities systemic indicator amounts that would be due to the expanded definition of financial institutions under the proposal, described in section II.E.i of this **SUPPLEMENTARY INFORMATION**, the analysis estimates increases in the indicator amounts that would be due to the proposed addition of saving and loan holding companies, private equity funds, asset management companies, and exchange-traded funds to the definition of financial institutions, as reflected by the Board’s special data collection. As such, the estimates do not reflect potential increases in these systemic indicator amounts that would result from capturing further intra-financial assets and liabilities under the expanded definition of financial institutions.

¹⁰⁹ The impact of the proposed amendments to substitutability indicators would not be fully expressed in method 1 scores due to the cap on the combined score of substitutability indicators applied in the method 1 score calculation. Specifically, the cap is at one hundred points, and it would be binding for five out of the eight current GSIBs under the proposal.

¹⁰³ Under the proposal, the lowest method 2 score band would be from 130 to 189 points, corresponding to a one percent method 2 surcharge.

¹⁰⁴ See 80 FR 49082.

¹⁰⁵ The Board estimated the 40 percent growth rate differential for the reference bank by using the same methodology and the same three non-GSIB bank holding companies as the Board’s 2015 white paper, <https://www.federalreserve.gov/aboutthefed/boardmeetings/gsib-methodology-paper-20150720.pdf>.

¹⁰⁶ Because these alternatives would adjust method 2 systemic indicator coefficients differently than the proposal, they would also result in different method 2 coefficients for the weighted short-term wholesale funding amount.

¹⁰⁷ Sections III.J.i and III.J.ii of this **SUPPLEMENTARY INFORMATION** describe the estimation of these “partial” and combined effects of the proposed changes to systemic indicators.

Table 5: Estimated Impact on Method 1 Scores Due to the Systemic Indicator Changes

This table shows the impact of the proposed data averaging and systemic indicator amendments on the method 1 scores of the eight current GSIBs, estimated as of the fourth quarter of 2024. The table also presents estimates for the major indicator-level effects of the proposed changes, also aggregating these effects to the indicator category level. The bottom two rows summarize the estimated method 1 score changes both on average and in aggregate across the eight GSIBs. The impact estimates are calculated using the data described in section III.B, and the estimation methodology is described in sections III.J.i and III.J.ii of this **SUPPLEMENTARY INFORMATION**.

Systemic Indicator Categories	Averaging	Amendments	Combined
Size	−0.2%		−0.2%
Interconnectedness	0.0%	−0.3%	−0.3%
<i>Intra-Financial System Assets</i>	0.2%	0.2%	0.4%
<i>Intra-Financial System Liabilities</i>	0.1%	0.2%	0.2%
<i>Securities Outstanding</i>	−0.3%	−0.6%	−0.9%
Substitutability	−0.1%	2.2%	2.1%
Complexity	2.2%		2.2%
<i>Notional Amount of OTC Derivatives</i>	1.2%		1.2%
<i>Trading and Available-for-Sale Securities</i>	0.8%		0.8%
<i>Level 3 Assets</i>	0.2%		0.2%
Cross-jurisdictional activity	0.7%	1.7%	2.5%
<i>Cross-Jurisdictional Claims</i>	0.4%	0.6%	1.0%
<i>Cross-Jurisdictional Liabilities</i>	0.3%	1.1%	1.5%
Aggregate Change in Method 1 Scores	2.6%	3.7%	6.4%
Average Change in Method 1 Scores	1.9%	4.1%	6.0%

The estimates in Table 6 indicate that, relative to the baseline, the proposed data averaging and amendments to systemic indicators would increase method 2 scores by about 2 percent and about 1 percent, respectively, for a combined increase of about 3 to 4 percent, on average across GSIBs. Similar to the estimates for method 1

scores, data averaging would mostly affect systemic indicators in the complexity category, whereas the proposed amendments would mostly affect the indicators for cross-jurisdictional activity. Despite this similarity, the estimated combined impact on method 2 scores is lower than the estimated combined impact on

method 1 scores. This difference is mainly because method 2 scores do not include systemic indicators in the substitutability category, which would increase by more than 2 percent under the proposed amendments, on average across GSIBs.

Table 6: Estimated Impact on Method 2 Scores Due to the Systemic Indicator Changes

This table shows the impact of the proposed data averaging and systemic indicator amendments on the method 2 scores of the eight current GSIBs, estimated as of the fourth quarter of 2024. The table also presents estimates for the major indicator-level effects of the proposed changes, also aggregating these effects to the indicator category level. The bottom two rows summarize the estimated method 2 score changes both in aggregate and on average across the eight GSIBs. The impact estimates are calculated using the data described in section III.B, and the estimation methodology is described in sections III.J.i and III.J.ii of this **SUPPLEMENTARY INFORMATION**.

Systemic Indicator Categories	Averaging	Amendments	Combined
Size	−0.2%		−0.2%
Interconnectedness	−0.1%	−0.5%	−0.5%
<i>Intra-Financial System Assets</i>	0.2%	0.2%	0.4%
<i>Intra-Financial System Liabilities</i>	0.1%	0.1%	0.2%
<i>Securities Outstanding</i>	−0.3%	−0.8%	−1.1%
Complexity	1.8%		1.8%
<i>Notional Amount of OTC Derivatives</i>	0.9%		0.9%
<i>Trading and Available-for-Sale Securities</i>	0.7%		0.7%
<i>Level 3 Assets</i>	0.2%		0.2%
Cross-jurisdictional activity	0.8%	1.8%	2.7%
<i>Cross-Jurisdictional Claims</i>	0.4%	0.7%	1.2%
<i>Cross-Jurisdictional Liabilities</i>	0.3%	1.1%	1.5%
Aggregate Change in Method 2 Scores	2.2%	1.3%	3.8%
Average Change in Method 2 Scores	1.6%	1.2%	2.9%

BILLING CODE 6201–01–C

Question 40: The analysis uses the Board's special data collection to estimate the increase in the intra-financial system assets and intra-financial system liabilities systemic indicator amounts due to the proposed addition of savings and loan holding companies, private equity funds, asset management companies, and exchange-traded funds to the definition of financial institutions. What further increases in these systemic indicator amounts, if any, should the analysis consider to assess the impact of expanding the definition of financial institutions under the proposal?

ii. Estimated Impact of Changes to the Method 2 Score Calculation

This subsection of the analysis estimates how the proposal and the policy alternatives considered would affect method 2 scores through (i) the changes to systemic indicators, assessed in the previous subsection; (ii) the adjustments to method 2 systemic indicator coefficients;¹¹⁰ and (iii) the changes to the short-term wholesale funding score.¹¹¹ Because the effects of these changes may interact with one another, the analysis assesses the effects both sequentially and combined.¹¹² As section III.D of this **SUPPLEMENTARY INFORMATION** describes, the alternatives would change systemic indicators and the short-term wholesale funding score

the same way as the proposal and only differ from the proposal in how they would adjust method 2 systemic indicator coefficients.

The estimates in Table 7 indicate that, after the small increases in method 2 scores due to the proposed changes to systemic indicators, assessed in detail in section III.E.i of this **SUPPLEMENTARY INFORMATION**, method 2 scores would decrease meaningfully through the other two adjustments under the proposal. The estimated reduction in method 2 scores is 22 percent, in aggregate, and 29 percent, on average across GSIBs, to which the proposed method 2 systemic indicator coefficient adjustments and short-term wholesale funding changes would contribute about equally.

¹¹⁰ Section III.J.iii of this **SUPPLEMENTARY INFORMATION** describes the estimation of the method 2 score impact of these coefficient changes under the proposal and the alternatives.

¹¹¹ Section III.J.iv of this **SUPPLEMENTARY INFORMATION** describes the estimation of the method 2 score impact of the proposed changes to the short-term wholesale funding score.

¹¹² Section III.J.v of this **SUPPLEMENTARY INFORMATION** describes the estimation of the combined method 2 score impact of all changes under the proposal and the alternatives.

Table 7: Estimated Impact on Method 2 Scores Due to the Different Changes

This table summarizes the aggregate method 2 score impact of the different changes to the calculation of method 2 scores under the proposal and the policy alternatives considered, estimated across the eight current GSIBs as of the fourth quarter of 2024. The impact estimates are broken down into the incremental effect of each proposed change on aggregate method 2 scores. The last two rows summarize the estimated method 2 score changes both in aggregate and on average across GSIBs. The impact estimates are calculated using the data described in section III.B, and the estimation methodology corresponding to each change is described in sections III.J.iii, III.J.iv, and III.J.v of this **SUPPLEMENTARY INFORMATION**.

	Proposal	Policy Alternatives		
		#1	#2	#3
Systemic Indicator Changes	3.8%	3.8%	3.8%	3.8%
Method 2 Coefficient Adjustments	–12.0%	–18.2%	–8.5%	–20.6%
Short-Term Wholesale Funding Changes	–14.6%	–17.6%	–13.0%	–18.9%
Aggregate Change in Method 2 Scores	–22.0%	–30.1%	–17.4%	–33.2%
Average Change in Method 2 Scores	–28.6%	–36.0%	–24.5%	–38.9%

In addition to these aggregate effects, the proposed removal of the risk-weighted asset denominator from the calculation of the short-term wholesale funding score calculation would have a meaningful distributional effect across GSIBs. In particular, GSIBs with relatively small dollar amounts of risk-weighted assets would see a substantial decrease in their short-term wholesale funding scores under the proposal, whereas the opposite effect would manifest for GSIBs with relatively large dollar amounts of risk-weighted assets.

Alternative 1 (“inflation indexing”) would lead to a somewhat larger (about 30 percent in aggregate and 36 percent on average) reduction in method 2 scores than the proposal because this alternative would adjust method 2 systemic indicator coefficients based on the 34 percent cumulative increase in the CPI-W index since December 2015, which is greater than the 20 percent downward adjustment to these coefficients under the proposal. Alternative 2 (“global denominators”) would lead to a smaller (about 17 percent in aggregate and 25 percent on average) reduction in method 2 scores than the proposal because this alternative would adjust method 2 systemic indicator coefficients by the cumulative growth of the global denominators, which is smaller, on average, than the 20 percent downward adjustment under the proposal. Alternative 3 (“reference bank”) would lead to a larger (about 33 percent in aggregate and 39 percent on average) reduction in method 2 scores than the proposal because this alternative would

apply a 40 percent downward adjustment to method 2 systemic indicator coefficients, rather than the 20 percent downward adjustment under the proposal.

The impact estimates in Table 7 also demonstrate the interaction between the proposed changes in that the estimated effect of the method 2 systemic indicator coefficient adjustments (shown in the second row of the table) amplifies the estimated effect of the changes to the short-term wholesale funding calculation (shown in the third row of the table). This interaction effect manifests because if the method 2 systemic indicator coefficient adjustments reduce the affected systemic indicator scores more, then the percentage share of the short-term wholesale funding score within the method 2 score becomes higher. In turn, however, a higher share of the short-term wholesale funding score necessitates a larger reduction to this score component to set its aggregate share to 20 percent in aggregate, as targeted by both the proposal and the alternatives.

iii. Estimated Changes in GSIB Surcharges

This subsection of the analysis assesses how the proposal and the policy alternatives considered would affect GSIB surcharges applicable in 2026.¹¹³ In particular, the surcharge

¹¹³ As described in section III.B of this **SUPPLEMENTARY INFORMATION**, the analysis estimates method 1 and method 2 scores as of the fourth quarters of 2023 and 2024 under the baseline, the proposal, and the policy alternatives considered to

estimates reflect the effects of all changes to method 1 and method 2 scores discussed in the previous subsections, as well as the effect of the narrow score bands, which both the proposal and the alternatives would implement.¹¹⁴ Notably, any changes in GSIB surcharges would solely be driven by changes in method 2 surcharges because the estimated changes to method 1 scores would not lead to a change in method 1 surcharges.¹¹⁵

When expressed in percentage points, the estimated GSIB surcharges would not be affected by the concurrent expanded risk-based proposal because both the proposal and the alternatives would change the calculation of the short-term wholesale funding score such that it would not use the ratio of the weighted short-term wholesale funding amount and the risk-weighted asset amount, as it does under the baseline. However, when expressed in dollar terms, the GSIB surcharge estimates

estimate the impact on GSIB surcharges applicable in 2026.

¹¹⁴ Section III.J.vi of this **SUPPLEMENTARY INFORMATION** describes the estimation of the combined GSIB surcharge impact of all changes under the proposal and the alternatives.

¹¹⁵ Relatedly, because the proposal and the policy alternatives considered would not change method 1 surcharges, they also would not have an effect on the eSLR buffer requirements for GSIBs and their subsidiary depository institutions, which depend on method 1 surcharges under the recent eSLR final rule. See Regulatory Capital Rule: Modifications to the Enhanced Supplementary Leverage Ratio Standards for U.S. Global Systemically Important Bank Holding Companies and Their Subsidiary Depository Institutions; Total Loss-Absorbing Capacity and Long-Term Debt Requirements for U.S. Global Systemically Important Bank Holding Companies, 90 FR 55248 (December 1, 2025).

could be affected by potential changes to risk-weighted asset amounts under the expanded risk-based proposal because GSIB surcharge requirements are the products of percentage-point GSIB surcharges and risk-weighted asset amounts. The economic analysis in the expanded risk-based proposal assesses the combined impact of the two

concurrent proposals, including this interaction effect.

The estimates in Table 8 indicate that the proposal would reduce GSIB surcharges by 40 basis points, on average, relative to the baseline. This effect corresponds to a \$23 billion (10 percent) reduction in the aggregate dollar amount of GSIB surcharges, calculated using risk-weighted asset amounts as of the fourth quarter of 2024.

Furthermore, as the proposal would reduce method 2 surcharges, method 1 surcharges would become binding for two of the eight GSIBs, whereas method 2 surcharges are binding for all eight GSIBs under the baseline. The proposed narrow score bands would lead to slight changes in surcharges for some GSIBs, with an average estimated effect of zero.¹¹⁶

Table 8: Estimated GSIB Surcharges Applicable in 2026

This table shows summary statistics for the GSIB surcharges applicable in 2026, estimated for the eight current GSIBs under the baseline, the proposal, and the policy alternatives considered. Specifically, from left to right, the table shows the lowest, the average, and the highest estimated GSIB surcharge across the eight GSIBs; the number of GSIBs for which the method 1 surcharge would be higher than the method 2 surcharge; the aggregate dollar amount of the estimated GSIB surcharges; and the percentage change in the aggregate surcharge amount relative to the baseline. The estimated GSIB surcharges are calculated using the data described in section III.B, and the estimation methodology is described in sections III.J.vi of this **SUPPLEMENTARY INFORMATION**.

	GSIB Surcharge (percent of risk-weighted assets)			Number of GSIBs Bound by Method 1	Aggregate GSIB Surcharge	
	Lowest	Average	Highest		billion dollars	percent change
Baseline	1.0%	2.7%	4.5%	0	235	
Proposal	1.0%	2.3%	4.3%	2	212	−10.0%
Alternative 1	1.0%	2.1%	3.9%	2	193	−17.8%
Alternative 2	1.0%	2.4%	4.7%	2	230	−2.4%
Alternative 3	1.0%	2.0%	3.7%	2	183	−22.3%

Under the policy alternatives considered, the GSIB surcharge impact estimates are consistent with the method 2 score impact estimates presented in Table 7 above. Under Alternative 1 (“inflation indexing”), the estimated reduction in GSIB surcharges would be somewhat larger (60 basis points, on average, and about 18 percent, in aggregate) than under the proposal. Under Alternative 2 (“global denominators”), the estimated reduction in GSIB surcharges would be smaller (30 basis points, on average, and 2.4 percent, in aggregate) than under the proposal. Partly because of the proposed narrow score bands, the surcharge for one GSIB would slightly increase under this alternative relative to the baseline. Under Alternative 3 (“reference bank”)

the estimated reduction in GSIB surcharges would be larger (70 basis points, on average, and about 22 percent, in aggregate) than under the proposal. Similar to the proposal, under the alternatives, method 1 surcharges would become binding for two GSIBs.

F. Benefits

The Board anticipates that the proposal would have several economic benefits. First, the proposal would enhance systemic risk measurement in the GSIB surcharge framework and thus improve the accuracy of GSIB surcharges, which could in turn improve the framework’s efficiency at mitigating the systemic risk of GSIBs. Second, by bringing the level of method 2 scores, and thus GSIB surcharges,

closer to their initial calibration, the proposal could enable some GSIBs to increase their economic activities and supply of financial services. Third, the proposed data averaging would reduce incentives for some GSIBs to temporarily reduce the end-of-year values of certain systemic indicators, which could reduce the economic costs of such indicator adjustments. Fourth, the proposed narrow score bands would reduce “cliff effects” around the boundaries of surcharge buckets and create smoother transitions in GSIB surcharges over time. Fifth, the proposed amendments to systemic indicators would improve the U.S. GSIB surcharge framework’s consistency with the international standard published by the Basel Committee. The rest of this

¹¹⁶ The point-in-time impact of the proposed narrow score bands on a GSIB’s surcharge would depend on the GSIB’s point-in-time location relative to the score band boundaries used in the applicable GSIB surcharge schedule. On average, at

any given point in time, this effect would be close to zero because it would slightly increase or decrease GSIB surcharges across GSIBs, relative to the baseline. Similarly, for any GSIB over time, this effect would be close to zero because it would

slightly increase or decrease the surcharge relative to the baseline, depending on the GSIB’s time-varying location along the GSIB surcharge schedule in the future.

section discusses these benefits in detail, also assessing how they could potentially be different under the policy alternatives considered.

The proposal would enhance the measurement of GSIBs' systemic risk profiles and thereby improve the accuracy of GSIB surcharges through multiple changes.¹¹⁷ The proposed data averaging and amendments to systemic indicators would better align the systemic indicator scores of large U.S. holding companies with the systemic implications of their potential distress. In particular, data averaging would reduce measurement errors in systemic indicator scores due to year-end patterns by ensuring that the indicators reflect systemic exposures throughout the calendar year. Additionally, through the annual indexing of systemic indicator coefficients to U.S. nominal GDP growth, the proposal would render systemic risk measurement in the GSIB surcharge framework robust to U.S. economic growth, consistent with the discussion in section II.A of this **SUPPLEMENTARY INFORMATION**. Moreover, as discussed in section II.B of this **SUPPLEMENTARY INFORMATION**, by redefining the short-term wholesale funding score and setting its aggregate weight to 20 percent in the method 2 score calculation, the proposal would improve the measurement of systemic exposures captured by this method 2 score component. Finally, the proposed narrow score bands would improve the alignment of GSIBs' surcharges with their systemic risk profiles, as measured by GSIB scores, by reducing score differences across GSIBs that fall in the same band.

Through the enhanced measurement of systemic risk profiles and more accurate GSIB surcharges, the proposal would improve the efficiency of the GSIB surcharge framework. Because the

framework requires that GSIBs have capital buffers commensurate with their systemic risk, the mismeasurement of their systemic risk profiles could create economic deadweight losses and inefficiencies. Specifically, underestimating the systemic risk posed by certain economic activities and financial services could create incentives for GSIBs to excessively engage in such activities and oversupply such services, whereas overestimating systemic risk could discourage GSIBs from engaging in such activities and lead to the under-provision of such services. Relatedly, through more accurate GSIB surcharges, the proposal would set the probability of GSIBs' potential distress closer to an optimum, in line with the discussion in the 2015 white paper on the calibration of the GSIB surcharge framework.¹¹⁸

As a further expected benefit, the proposal would bring the level of method 2 scores closer to the initial calibration of the GSIB surcharge framework and reduce GSIB surcharges, which could enable GSIBs to increase their economic activities and supply of financial services. In specific, as estimated in section III.E of this **SUPPLEMENTARY INFORMATION**, primarily through method 2 coefficient adjustments and short-term wholesale funding score changes, the proposal would reduce method 2 scores by about 29 percent and GSIB surcharges by about 40 basis points, on average across GSIBs. This reduction in risk-based capital buffer requirements would likely reduce GSIBs' marginal funding costs, which could enable some GSIBs to increase their economic activities and supply of financial services, which could in turn increase aggregate economic surplus.¹¹⁹

Moreover, the proposal would reduce incentives for some GSIBs to temporarily reduce the end-of-year values of certain systemic indicators, as discussed in section II.C of this **SUPPLEMENTARY INFORMATION**. This incentive effect would manifest because the proposed data averaging would reduce GSIBs' ability to lower their risk-

based capital buffer requirements by engaging in such end-of-year indicator management. Therefore, there would likely to be a decrease in the fluctuations historically observed in some indicators at year end, which could reduce potential deadweight losses from such fluctuations. Hence, by reducing incentives for end-of-year indicator management, the proposal could lead to a more stable supply of financial services by GSIBs, which could improve the liquidity and contribute to the smooth functioning of financial markets at year end.¹²⁰

Additionally, by implementing narrow score bands, the proposal would reduce "cliff effects" around the boundaries of GSIB surcharge buckets. In particular, narrow score bands would create a more continuous correspondence between GSIB scores and surcharges, which would result in smoother surcharge transitions between score bands. These smoother transitions would ensure that firms with similar systemic risk are assigned similar capital surcharges and could also enable GSIBs to do better capital planning by reducing the size of GSIB surcharge changes as firms cross score band boundaries.

Finally, the proposal would improve the consistency of the calculation of systemic indicators used in the U.S. GSIB surcharge framework with the international standard published by the Basel Committee, which could reduce potential undesired economic effects due to differences across jurisdictions.

Turning to the policy alternatives considered, the Board anticipates that some of the proposal's economic benefits would also manifest under the alternatives because of their common elements with the proposal. Specifically, through data averaging, the alternatives would also reduce incentives for some GSIBs to temporarily lower the end-of-year values of certain systemic indicators; through narrow score bands, the alternatives would also reduce "cliff effects;" and, through the amendments to certain systemic indicators, the alternatives would also enhance

¹¹⁷ The academic literature recognizes both the importance and challenges of accurately measuring the systemic risk of large banking organizations. In particular, the Global Financial Crisis of 2007–09 highlighted the importance of measuring systemic risk along dimensions other than the size indicator. See, e.g., Andrew W. Lo, *The Feasibility of Systemic Risk Measurement*, U.S. Congress: Committee on Financial Services (October 19, 2009); Viral V. Acharya, Markus K. Brunnermeier, and Diane Pierret, *Systemic Risk Measures: From the Panic of 1907 to the Banking Stress of 2023*, *Annual Review of Financial Economics*, 17 (August 11, 2025). For example, expected shortfall metrics estimate an organization's capital loss under a period of stress, whereas the conditional value-at-risk metric estimates the systemic spillover effects of an organization's potential distress. See Viral V. Acharya, Lasse H. Pedersen, Thomas Philippon, and Matthew Richardson, *Measuring Systemic Risk*, *The Review of Financial Studies*, 30(1) (October 19, 2016); Viral V. Acharya, Lasse H. Pedersen, Thomas Tobias Adrian, and Markus K. Brunnermeier, *CoVaR*, *The American Economic Review*, 106(7) (July 2016).

¹¹⁸ See Board of Governors of the Federal Reserve System, *Calibrating the GSIB Surcharge* (July 20, 2015), <https://www.federalreserve.gov/aboutthefed/boardmeetings/gsib-methodology-paper-20150720.pdf>.

¹¹⁹ For example, lower GSIB surcharges could lead to an increase in GSIBs' loan supply, as suggested by the empirical study of Giovanni Favara, Ivan Ivanov, and Marcelo Rezende, *GSIB Surcharges and Bank Lending: Evidence from U.S. Corporate Loan Data*, *Journal of Financial Economics*, 142(3) (December 2021), which estimates a negative effect of GSIB surcharges on the commercial and industrial loan supply of GSIBs.

¹²⁰ For example, GSIBs play an important role as liquidity providers and "lenders of second-to-last resort" in the U.S. Treasury repurchase agreement and foreign exchange swap markets, as discussed in Ricardo Correa, Wenxin Du, and Gordon Y. Liao, *U.S. Banks and Global Liquidity*, *National Bureau of Economic Research Working Paper*, 27491 (July 2020). Relatedly, the study by Claudio Bassi, Claudio, Markus Behn, Michael Grill, and Martin Waibel, *Window Dressing of Regulatory Metrics: Evidence from Repo Markets*, *Journal of Financial Intermediation*, 58 (April 2024) finds that GSIB surcharges drive GSIBs to significantly contract their repo books at year ends, which can in turn affect repo market volumes and price dynamics.

international consistency. However, the alternatives would differ from the proposal in their economic benefits resulting from the enhanced measurement of systemic risk profiles and lower GSIB surcharges.

In particular, the alternatives would make different adjustments to method 2 systemic indicator coefficients than the proposal in order to make the measurement of systemic risk more consistent between method 1 and method 2 scores, related to the discussion in section II.A.i of this **SUPPLEMENTARY INFORMATION**.

Alternative 1 (“inflation indexing”) would make annual adjustments to method 2 coefficients such that method 2 scores would not reflect the effect of U.S. inflation, as measured by the CPI–W index. This alternative would reduce GSIB surcharges more than the proposal in the short run, but it would likely lead to smaller annual adjustments to method 2 indicator coefficients than the proposal in the long run. The short-run effect of Alternative 1 would be larger than that of the proposal because the alternative would adjust method 2 indicator coefficients based on the 34 percent cumulative increase in the CPI–W index since December 2015, which is greater than the 20 percent one-time downward adjustment to these coefficients under the proposal. In the long run, the annual adjustments to method 2 coefficients under Alternative 1 would likely be smaller than under the proposal because the alternative would make the adjustments based on the CPI–W index, which tends to grow more slowly than U.S. nominal GDP.¹²¹ Therefore, in the short run, consistent with the relatively larger estimated reduction in GSIB surcharges under Alternative 1, presented in Table 8 above, the alternative would enable GSIBs to expand their economic activities and supply of financial services more than the proposal. However, in the long run, these benefits would become larger under the proposal because of the faster annual downward adjustment based on U.S. nominal GDP growth.

Alternative 2 (“global denominators”) would adjust method 2 coefficients such that method 2 scores would measure changes in GSIBs’ systemic risk relative to the growth of the global banking

system. As estimated in Table 8 above, this alternative would reduce GSIB surcharges less than the proposal, which implies that the potential increase in GSIBs’ activities and services would be smaller under this alternative than under the proposal. Alternative 3 (“reference bank”) would adjust method 2 coefficients such that method 2 scores would measure changes in GSIBs’ systemic risk relative to the change in the systemic risk of the reference bank. As estimated in Table 8, this alternative would reduce GSIB surcharges substantially more than the proposal, and therefore the potential increase in GSIBs’ activities and services would be larger under this alternative than under the proposal.

Compared to the proposal, which focuses on U.S. GSIBs and would apply a simple methodology to adjust the method 2 score calculation for changes in the U.S. economy and financial system, the systemic risk measurement benefits of the alternatives would be limited. Alternative 1 would only take into account U.S. inflation and disregard the potentially distortive effects of U.S. real economic growth on method 2 scores. Alternative 2 would adjust the method 2 score calculation based on the historical change in each aggregate global systemic indicator amount. This alternative would be more complex than the proposal, which would adjust the method 2 score calculation for the divergence of method 2 and method 1 scores shown in Figure 2 in order to more directly take into account the effect of recent economic changes on the systemic risk measurement of GSIBs by method 2. Alternative 3 would adjust the method 2 score calculation using imprecise estimates for the reference bank’s score, relying on the proxy measures for the short-term wholesale funding amount used in the initial calibration of the GSIB surcharge framework in 2014. Hence, the methodology applied under this alternative could result in method 2 scores that provide an inaccurate measure for systemic risk profiles.

G. Costs

The Board anticipates that the proposal could have the following economic costs. First, by reducing risk-based capital buffer requirements for GSIBs, the proposal could potentially lead to a decrease in the resilience of both individual GSIBs and the U.S. financial system. Relatedly, the proposal could increase the unintended “too-big-to-fail” effect and its economic implications, discussed in more detail below. Finally, the proposed data averaging could modestly increase the

cost of compliance for GSIBs. The rest of this section discusses these costs in detail, also assessing how they could potentially be different under the policy alternatives considered.

The proposal could potentially lead to a decrease in firm resilience and systemic stability by reducing risk-based capital buffer requirements for GSIBs.

As section III.E.iii of this **SUPPLEMENTARY INFORMATION** estimates, the proposal would reduce GSIB surcharges by 40 basis points, on average, and 10 percent, in aggregate. This reduction in risk-based capital buffer requirements would enable most GSIBs to increase their risk-weighted asset amounts or reduce their equity capital, which could in turn decrease their resilience against economic shocks.¹²² Because GSIBs are systemically important banking organizations, such potential decrease in their resilience could decrease the stability of the U.S. financial system and thus increase the probability and severity of financial crises.

Through both this potential decrease in the resilience of GSIBs and by enabling GSIBs to increase their economic activities and supply of financial services, discussed earlier in the benefit section, the proposal could also increase the unintended “too-big-to-fail” effect related to these large banking organizations.¹²³ Specifically, if GSIBs become less resilient or expand their business in response to the reduction in their capital surcharges under the proposal, that could increase the probability and magnitude of potential government interventions in the event GSIBs face financial distress.

Finally, the proposed data averaging could modestly increase the cost of compliance for GSIBs by increasing their administrative burden. In particular, reporting the affected systemic indicators and related line items on an average basis, as shown in Table 1, would require the collection and processing of the underlying financial information at higher (daily or monthly) frequencies than under the baseline. Although some GSIBs may

¹²² For GSIBs, changing risk-based capital requirements is relevant and could affect their risk-taking and capital structure decisions because risk-based capital requirements are the highest (that is, binding) capital requirements for most of these holding companies under the baseline.

¹²³ See, e.g., Maureen O’Hara and Wayne Shaw, Deposit Insurance and Wealth Effects: The Value of Being “Too Big to Fail,” *The Journal of Finance*, 45(5) (December 1990); Priyank Gandhi and Hanno Lustig, Size Anomalies in U.S. Bank Stock Returns, *The Journal of Finance*, 70(2) (December 5, 2015); João AC Santos, Evidence From the Bond Market on Banks’ “Too-Big-To-Fail Subsidy”, *Economic Policy Review* 20(2) (April 4, 2014).

¹²¹ Over time, the CPI–W index tends to grow more slowly than U.S. nominal GDP because the CPI–W only reflects price inflation, whereas U.S. nominal GDP reflects both real economic growth and inflation. Accordingly, over the past decade, the annual growth rate of U.S. GDP exceeded the CPI–W index’s annual growth rate by about 2 percentage points. Between 1950 and 2025, this annual growth rate differential was about 3 percentage points.

already collect and process sufficient data to report some of the affected indicators at these higher frequencies under the baseline, some GSIBs could incur additional one-time and recurring costs under the proposal. For example, some GSIBs may face one-time expenses as they make additional investments in their human resources and information technology infrastructure to comply with the proposed data averaging requirement. Furthermore, some GSIBs may face additional recurring costs as they maintain the resources and infrastructure needed for compliance. Overall, considering the large scale of GSIBs, and because the proposal would tailor the data averaging requirement to the specifics of each systemic indicator, the Board anticipates that a potential increase in GSIBs' compliance costs would be modest.

Turning to the policy alternatives considered, the Board anticipates that the potential economic costs described above would also manifest under these alternatives, but the strength of these effects would vary across the alternatives. As discussed earlier in the benefit section, Alternative 1 ("inflation indexing") would reduce GSIB surcharges more than the proposal in the short run, but this difference would likely revert in the long run. Hence, the potential reduction in firm resilience and systemic stability would be larger in the short run and smaller in the long run under this alternative than under the proposal. The estimated reduction in GSIB surcharges under Alternative 2 ("global denominators") is smaller than under the proposal, which implies that this alternative would affect firm resilience and systemic stability less than the proposal. The estimated reduction in GSIB surcharges is larger under Alternative 3 ("reference bank") than under the proposal, and therefore this alternative could reduce firm resilience and systemic stability more than the proposal. Finally, because all of the policy alternatives considered would implement the proposed data averaging, they could modestly increase compliance costs for GSIBs similarly to the proposal.

H. Interactions With Other Rules and Proposed Rulemakings

This section of the analysis assesses potential interactions between the proposal and other existing rules or proposed rulemakings. As section III.B of this **SUPPLEMENTARY INFORMATION** discusses, the proposal (in this section, referred to as the "GSIB surcharge proposal") would interact with the expanded risk-based proposal, which assesses the combined economic impact

of the two proposals. The following subsections assess interactions between the two proposals and the existing total-loss absorbing capacity (TLAC) framework for GSIBs;¹²⁴ and between the GSIB surcharge proposal and the existing regulatory tailoring framework.¹²⁵

i. Interaction With TLAC and Long-Term Debt Requirements

The analysis assesses how the GSIB surcharge proposal and the expanded risk-based proposal would interact with the existing TLAC framework for GSIBs.¹²⁶ Specifically, the analysis estimates baseline TLAC and long-term debt requirements as of the second quarter of 2025, also reflecting recent changes to these requirements under the eSLR final rule.¹²⁷ Both the TLAC and long-term debt requirements consist of a risk-based and a leverage-based minimum requirement. Beyond TLAC minimum requirements, GSIBs also have risk-based and leverage-based TLAC buffer requirements.¹²⁸ Unless noted otherwise, in the following discussion, the term "TLAC requirement" refers to the sum of these TLAC minimum and corresponding TLAC buffer requirements.

Under the baseline, the estimated aggregate TLAC requirement for GSIBs is about \$1.79 trillion. For five out of the eight current GSIBs, the risk-based TLAC requirement is higher than the leverage-based requirement. Under the baseline, the estimated aggregate long-term debt requirement for GSIBs is \$717 billion. For six out of the eight current GSIBs, the risk-based long-term debt requirement is higher than the leverage-based requirement.

The analysis assesses the combined impact of the GSIB surcharge proposal and the expanded risk-based proposal on TLAC and long-term debt requirements for GSIBs. Relative to the baseline, the aggregate TLAC requirement for GSIBs would decrease by about \$46 billion, or 2.6 percent, with the TLAC requirement decreasing

for five GSIBs and increasing for one GSIB. The number of GSIBs bound by the risk-based TLAC requirement would increase from five to six. These changes would be driven entirely by the expanded risk-based proposal's adjustments to risk-weighted assets, which would affect the required quantity of TLAC because risk-based TLAC requirements are specified as a percentage of risk-based assets.¹²⁹ Relative to the baseline, the analysis estimates that the two proposals would reduce the long-term debt requirement for GSIBs by about \$17 billion, or 2.3 percent, in aggregate, by lowering the requirement for five GSIBs and increasing it for one GSIB. The proposals would change the binding long-term debt requirement from risk-based to leverage-based for three GSIBs. These changes would be driven by both the expanded risk-based proposal's adjustments to risk-weighted assets and the GSIB surcharge proposal's changes to method 2 GSIB surcharges.¹³⁰

Furthermore, the analysis examines the partial impact of the two proposals on TLAC and long-term debt requirements. As discussed above, the GSIB surcharge proposal would not have an impact on TLAC requirements, and therefore the expanded risk-based proposal's impact drives the combined impact of the two proposals on TLAC requirements. Relative to the baseline, the analysis estimates that the GSIB surcharge proposal by itself would reduce the long-term debt requirement for GSIBs by about \$13 billion, or 1.7 percent, in aggregate, by lowering the requirement for four GSIBs. Relative to the baseline, the analysis estimates that the expanded risk-based proposal by itself would reduce the long-term debt requirement for GSIBs by about \$2 billion, or 0.2 percent, in aggregate.

The analysis now turns to assessing the potential economic effects of the proposals.¹³¹ If some GSIBs reduce their loss-absorbing capacity in response to

¹²⁴ See 12 CFR part 252, subpart G.

¹²⁵ See 84 FR 59032 (November 1, 2019); 84 FR 59230 (November 1, 2019).

¹²⁶ Section III.J.vii of this **SUPPLEMENTARY INFORMATION** describes the data and methodology used to estimate these interaction effects in detail.

¹²⁷ The analysis needs to estimate baseline TLAC and long-term debt requirements because the baseline also includes the eSLR final rule, which was adopted on November 25, 2025, and goes into effect on April 1, 2026, whereas the reporting data as of the second quarter of 2025 do not reflect the effect of the eSLR final rule. For a detailed analysis of this effect, see section IV.1 of the supplementary information to the eSLR final rule. See 90 FR 55248 (December 1, 2025).

¹²⁸ In the current regulatory framework, there are no long-term debt buffer requirements.

¹²⁹ Even though the GSIB surcharge proposal could potentially affect TLAC requirements, which depend on method 1 surcharges, this effect would not manifest because method 1 surcharges would not change under the proposal. Specifically, although the proposal would increase method 1 scores by about 6 percent, on average across GSIBs, as discussed in section III.E.i of this **SUPPLEMENTARY INFORMATION**, this change would not lead to an increase method 1 surcharges because of the score bands used in the GSIB surcharge framework.

¹³⁰ Risk-based long-term debt requirements depend in part on method 2 surcharges, which would change under the GSIB surcharge proposal.

¹³¹ Much of the rationale behind this discussion of the combined effect extends to the individual proposals in isolation. The costs and benefits of the two proposals by themselves are expected to be broadly proportional in size to their estimated marginal impact on requirements.

the reduction in their TLAC requirements, the proposals could decrease the funding costs of these firms. On the one hand, the academic and policy literature finds that this potential reduction in funding costs could increase lending and support economic activity.¹³² On the other hand, many of these same studies indicate that the potential reduction in loss-absorbing capacity may increase risks to safety and soundness and financial stability, as well as associated social costs. Nevertheless, because the estimated decrease in aggregate TLAC requirements under the two proposals is relatively small, the related economic effects would likely be modest.

Additionally, the reduction in their long-term debt requirements would provide GSIBs more flexibility over their TLAC composition. Given the modest overall change in long-term debt requirements, the economic effects of such changes would likely be small. Moreover, the additional flexibility could enhance GSIBs' resilience because, holding TLAC requirements unchanged, any reduction in long-term debt used to meet TLAC requirements would need to be replaced with tier 1 capital, which has greater loss absorbency.

ii. Interaction With the Regulatory Tailoring Framework

The proposal would also interact with the existing regulatory tailoring framework for large banking organizations by amending the definitions of the cross-jurisdictional claims and liabilities systemic indicator amounts, which determine the cross-jurisdictional activity risk-based indicator amount used in the framework.¹³³ Specifically, the proposal could change the tailoring categories of some banking organizations if it results in their cross-jurisdictional activity risk-based indicators crossing above or below the \$75 billion threshold for Category II prudential standards. The

analysis assesses this potential effect on the cross-jurisdictional activity risk-based indicators of banking organizations subject to Category II to IV prudential standards as of the second quarter of 2025.¹³⁴

The estimates indicate that the proposal would increase the cross-jurisdictional activity risk-based indicators of banking organizations subject to Category II to IV prudential standards by about 3 percent, on average. The estimated increase would not change the tailoring category of any domestic banking organization or U.S. intermediate holding company of a foreign banking organization. The estimated increase could result in the combined U.S. operations of one foreign banking organization currently subject to Category III prudential standards becoming subject to Category II prudential standards because its cross-jurisdictional activity indicator could exceed the \$75 billion threshold. However, such potential change in tailoring category would not result in a change in regulatory requirements for this banking organization.

I. Conclusion

The proposal would adjust the calculation of method 1 and method 2 scores, and the related GSIB surcharges, in order to improve the measurement of systemic risk profiles in the GSIB surcharge framework, both across individual firms and over time. Thereby, the proposal would improve the framework's efficiency at mitigating the systemic risk of GSIBs, while also enabling them to increase economic activities and supply of financial services. Additionally, the proposed data averaging would reduce incentives for some GSIBs to temporarily reduce the end-of-year values of certain systemic indicators, and the proposed narrow score bands would reduce unintended "cliff effects." Furthermore, the proposed amendments to systemic indicators would improve the consistency of the U.S. GSIB surcharge framework with the international standard published by the Basel Committee.

The proposal's costs are mainly driven by the estimated decrease in GSIB surcharges, which could potentially lead to a decrease in the resilience of both individual GSIBs and the U.S. financial system, as well as a related increase in the "too-big-to-fail" effect. Additionally, the proposed data

averaging could modestly increase the cost of compliance for GSIBs by increasing their administrative burden.

Overall, the Board assesses that the benefits of the proposal justify its costs.

Regarding the reasonable policy alternatives considered, the economic analysis suggests that the proposal best balances the trade-offs inherent to the GSIB surcharge framework. The analysis shows that Alternative 1 ("inflation indexing") would have a larger short-run and a smaller long-run economic impact, on both the benefit and the cost side, than the proposal. As discussed in section III.F of this **SUPPLEMENTARY INFORMATION**, the alternative's short-run effect would be larger than that of the proposal because it would reduce GSIB surcharges more than the proposal. However, in the long run, the effect of Alternative 1 would likely become smaller than the proposal's effect because this alternative would make annual adjustments to method 2 indicator coefficients base on the CPI-W index, whereas the proposal would adjust the coefficients based on U.S. nominal GDP growth, which tends to exceed inflation. Alternative 2 ("global denominators") would have a smaller impact than the proposal because this alternative would reduce GSIB surcharges less than the proposal and thus have smaller economic benefits. Conversely, Alternative 3 ("reference bank") would have a larger impact than the proposal because this alternative would reduce GSIB surcharges more than the proposal and thus reduce firm resilience potentially more. Finally, because only the proposal would make a targeted downward adjustment to method 2 scores, none of the policy alternatives considered would exactly offset the observed cumulative growth differential between method 1 and method 2 scores discussed in section II.A.i of this **SUPPLEMENTARY INFORMATION**.

J. Appendix: Estimation Methodology

This section describes the methodology applied to calculate the quantitative impact estimates used in sections III.E and III.H of this **SUPPLEMENTARY INFORMATION**. The analysis estimates the impact of the proposal and the policy alternatives considered relative to the baseline at a single point in time, using the most recent data available.¹³⁵ Specifically, as section III.B of this **SUPPLEMENTARY INFORMATION** describes, the analysis

¹³² See, e.g., Simon Firestone, Amy Lorenc, and Ben Ranish, *An Empirical Economic Assessment of the Costs and Benefits of Bank Capital in the United States*, 101 Federal Reserve Bank of St. Louis Rev. 203, 203–30 (2018); Martin Brooke, Oliver Bush, Robert Edwards, Jas Ellis, Bill Francis, Rashmi Harimohan, Katharine Neiss & Caspar Siebert, *Measuring the Macroeconomic Costs and Benefits of Higher UK Bank Capital Requirements*, Bank of England, Financial Stability Paper No. 35, (Dec. 2015); David Miles, Jing Yand, & Gilberto Marcheggiano, *Optimal Bank Capital*, 123 Econ. J. 1, 29 & Table 10 (Mar. 2013); Financial Stability Board, *Assessing the Economic Costs and Benefits of TLAC Implementation* (Nov. 2015) ("FSB (2015)").

¹³³ See 12 CFR 252.5(c) for how a Category II banking organization is defined based on the cross-jurisdictional activity risk-based indicator.

¹³⁴ Section III.J.viii of this **SUPPLEMENTARY INFORMATION** describes the data and methodology used for the estimation of this interaction effect in detail.

¹³⁵ The analysis uses the current regulatory framework as baseline, which includes the current U.S. GSIB surcharge framework described in section I.A of this **SUPPLEMENTARY INFORMATION**.

primarily relies on data from the fourth quarters of 2023 and 2024 to estimate potential changes in method 1 and method 2 scores, which determine corresponding changes in method 1 and method 2 surcharges, which in turn yield estimates for GSIB surcharges applicable in 2026. The analysis uses data from the second quarter 2025 to estimate the interaction effects assessed in section III.H of this **SUPPLEMENTARY INFORMATION**. The following subsections provide a detailed description of each step of the analysis, presented in order of application.

i. Partial Effects of Changes to Systemic Indicators

As a first step, this part of the analysis estimates the standalone (“partial”) effects of the proposed data averaging and each of the amendments to each systemic indicator, described in sections II.C and II.E of this **SUPPLEMENTARY INFORMATION**, respectively. These partial effects measure the percent changes in each systemic indicator amount relative to the baseline, presented in Tables 5 and 6 in section III.E.i of this **SUPPLEMENTARY INFORMATION**.

The analysis estimates the partial effect of the proposed data averaging on each systemic indicator for each GSIB based on the historical differences between each GSIB’s reported indicator amounts as of the fourth quarter and other quarters of each year from 2017 to 2024.¹³⁶ Specifically, the analysis estimates the proposed data averaging’s effect by calculating the percent difference between the average of the indicator amounts pooled across the first to the third quarters of all sample years and the average of the indicator amounts pooled across the fourth quarters of all sample years for each GSIB.¹³⁷ However, if this former difference is negative, then the analysis estimates the proposed data averaging’s effect by calculating the percent difference between the average of the indicator amounts pooled across the first to the fourth quarters of all sample years and the average of the indicator amounts pooled across the fourth quarters of all sample years.

This approach used to estimate the effect of the proposed data averaging has multiple advantages. First it is simple and non-parametric. Second, by taking

into account whether the data are indicative of end-of-year indicator management, the estimation approach flexibly allows for the possibility that only some GSIBs manage only some indicators at year end. Specifically, if an indicator’s average value in the fourth quarter is lower than in other quarters, the analysis interprets the downward bias as suggestive evidence for end-of-year management. Accordingly, assuming that such end-of-year patterns would cease as a result of the proposed data averaging, the analysis excludes the fourth quarter and uses the indicator’s average value from the first to the third quarters to estimate its level under the proposal.¹³⁸ However, if the indicator’s average value in the fourth quarter is higher than in other quarters, the analysis assumes that there is no downward bias due to end-of-year indicator management in its fourth-quarter values and uses the indicator’s average value over the entire year to estimate its level under the proposal. Third, the estimated effect of the proposed data averaging is robust to the potential presence of linear trends in systemic indicator amounts because the estimation approach quantifies the deviation between the indicator’s actual fourth-quarter values and its counterfactual fourth-quarter values, implicitly estimated through linear interpolation using the actual indicator values from the other quarters of the year. Finally, the estimated effect of the proposed data averaging is robust to idiosyncratic year-fixed effects because the estimation approach uses averages taken over a multiyear sample period, which reduces the influence of potential outlier years on the estimates.

The analysis estimates the partial effect of each proposed amendment to each systemic indicator by calculating the percent difference between the indicator’s reported amount under the baseline and its estimated amount under a revised definition that incorporates the effect of only the given amendment.¹³⁹ These partial effect

estimates facilitate a granular assessment of the proposal’s impact because some indicators would be affected by multiple amendments.¹⁴⁰

Finally, the proposal would introduce two new trading volume systemic indicators and reduce the weight of the underwriting activity systemic indicator in the substitutability category of the method 1 score calculation. This first step of the analysis does not create estimates for the partial effects of these indicator changes because they would not affect existing indicator amounts; rather, the analysis incorporates the effect of these changes in the updated method 1 score calculation described in section III.J.v of this **SUPPLEMENTARY INFORMATION**.

ii. Combined Effects of Changes to Systemic Indicators

This step of the analysis estimates the combined effect of all proposed changes to each systemic indicator, summarized in Tables 5 and 6 in section III.E.i and Table 7 in section III.E.ii of this **SUPPLEMENTARY INFORMATION**. To this end, the analysis first combines the partial effects estimated in the previous step to estimate updated systemic indicator amounts under the proposal. For each affected indicator, the analysis estimates the indicator’s updated amount by multiplying the indicator’s baseline amount and the product of one plus the estimated partial effect of each proposed change to the indicator, including the proposed data averaging and the amendments to systemic

and the Basel Committee on Banking Supervision’s GSIB assessment exercise, described in section III.B of this **SUPPLEMENTARY INFORMATION**. For some indicators, the revised amount as of the fourth quarter of 2023 (or 2024) is reported, or calculated from data reported, in FR Y–15 filings and the GSIB assessment exercise. For other indicators, the analysis estimates the revised amount as of the fourth quarter of 2023 (or 2024) using data reported on the Board’s special data collection as of the second quarter of 2023 by applying the following methodology. First, the analysis calculates the percent difference between a given indicator’s baseline and revised amount as of the second quarter of 2023, reported in FR Y–15 filings and the Board’s special data collection, respectively. If a proposed amendment only affects a subcomponent of an indicator, then the analysis calculates this percent difference for that particular component; otherwise, the analysis calculates the percent difference for the entire indicator. Second, the analysis estimates the indicator’s revised amount as of the fourth quarter of 2023 (or 2024) by multiplying the indicator’s, or its subcomponent’s, baseline amount as of the fourth quarter of 2023 (or 2024) by one plus the percent change calculated in the first step.

¹⁴⁰ As section II.F of this **SUPPLEMENTARY INFORMATION** describes in detail, the proposal would make multiple changes to the intra-financial system assets and intra-financial system liabilities systemic indicators.

¹³⁶ The analysis uses a panel of full calendar years so that quarter-fixed and year-fixed effects are represented equally in the estimation sample.

¹³⁷ In this context, “pooling” means that the analysis uses all quarterly observations of a specific systemic indicator across all sample years to calculate the overall average value for the indicator, assigning an equal weight to each quarterly observation.

¹³⁸ By assuming that potential end-of-year indicator patterns would cease under the proposed data averaging, the analysis produces high-end estimates for the effect of data averaging because some of the end-of-year patterns may not be due to the lack of data averaging under the baseline GSIB surcharge framework. Rather, some of these end-of-year patterns may persist even under the proposed data averaging, in which case the difference between the indicator’s average value in the first quarter and other quarters would overestimate the proposal’s impact.

¹³⁹ The analysis obtains the baseline amount of each indicator from FR Y–15 filings as of the fourth quarters of 2023 (or 2024). By contrast, depending on the specific proposed amendment, the analysis obtains the revised amount of each indicator from FR Y–15 filings, the Board’s special data collection,

indicators as applicable.¹⁴¹ The analysis then estimates the combined effect of all proposed changes to each systemic indicator by calculating the percent difference between the indicator's updated and baseline amounts.

iii. Incremental Effect of Adjusting Method 2 Coefficients

This step of the analysis estimates the incremental effect of adjusting method 2 systemic indicator coefficients under the proposal and the policy alternatives considered, summarized in Table 7 in section III.E.ii of this **SUPPLEMENTARY INFORMATION**.

$$\text{Coefficient}_i^* = 20,000 \times \frac{\text{Indicator Weight}_i}{\text{Avg Aggregate Global Indicator Amount}_i^{2023-2024} \times \text{Avg EUR/USD Rate}_{2022-2024}}$$

Where *Coefficient*^{*}_{*i*} is the updated coefficient for systemic indicator, *Indicator Weight*_{*i*} is the weight of the indicator, *Avg Aggregate Global Indicator Amount*_{*i*}^{2023–2024} is the average of the corresponding euro-denominated aggregate global indicator amounts as of the end of 2023 and 2024, and *Avg EUR/USD Rate*_{2022–2024} is the average of daily euro-dollar exchange rates from 2022 to 2024. Note that this currency conversion methodology is different from the one used to calculate the U.S. dollar-denominated global systemic indicator amounts published annually by the Federal Reserve, which uses year-end exchange rates instead. Under Alternative 3, the analysis calculates the updated coefficients by dividing the baseline coefficients by a factor of 1.4, consistent with the description of this alternative in section III.D of this **SUPPLEMENTARY INFORMATION**.

For each GSIB, the analysis estimates the incremental effect of the coefficient adjustment on method 2 scores, under both the proposal and the alternatives, as the percent change from the baseline method 2 score to the updated method 2 score, calculated by adding the baseline short-term wholesale funding score to the sum of the products of the updated method 2 systemic indicator amounts estimated in section III.J.iii of this **SUPPLEMENTARY INFORMATION** and the corresponding updated method 2

To this end, the analysis first calculates, under both the proposal and the alternatives, the updated coefficients for each of the nine indicators used in the method 2 score calculation.¹⁴² Under the proposal, the analysis calculates the updated coefficients by dividing the corresponding baseline coefficients by the 1.2 factor described in section II.D.i of this **SUPPLEMENTARY INFORMATION**.¹⁴³ Under Alternative 1, the analysis calculates the updated coefficients by multiplying the corresponding baseline coefficients by the ratio of the CPI–W index's value as

of December 31, 2015, to the CPI–W index's value as of December 31, 2024. Under Alternative 2, the analysis calculates the updated coefficients by multiplying the indicator's weight by 20,000 and dividing the result by the product of the average of the corresponding euro-denominated aggregate global indicator amounts as of the end of 2023 and 2024 published by the Bank for International Settlements and the average of daily euro-U.S. dollar exchange rates from 2022 to 2024. The analysis used the following formula:¹⁴⁴

systemic indicator coefficients estimated in this subsection.¹⁴⁵

iv. Incremental Effect of Changing the Short-Term Wholesale Funding Score

This step of the analysis estimates, for each GSIB, the incremental effect of changing the short-term wholesale funding score under the proposal and the policy alternatives considered, summarized in Table 7 in section III.E.ii of this **SUPPLEMENTARY INFORMATION**. Under the proposal and the alternatives, the analysis calculates the updated short-term wholesale funding score for each GSIB by multiplying the updated coefficient for the short-term wholesale funding component by the average of its weighted short-term wholesale funding amount. As discussed in section II.B.ii of this **SUPPLEMENTARY INFORMATION**, this updated coefficient is 23.003 under the proposal, calculated using the following methodology. Under each alternative, the analysis applies the same methodology to calculate the updated coefficient.

Under both the proposal and the alternatives, the updated coefficient for the short-term wholesale funding component results from the following calculation. First, the analysis calculates each GSIB's updated method 2 scores excluding the short-term wholesale funding component by multiplying each updated method 2 systemic indicator

amount estimated in section III.J.ii in this **SUPPLEMENTARY INFORMATION** by the corresponding updated method 2 systemic indicator coefficient calibrated in section III.J.iii of this **SUPPLEMENTARY INFORMATION** and then summing the resulting products. Second, the analysis calculates the aggregate updated method 2 score excluding the short-term wholesale funding component and the aggregate average weighted short-term wholesale funding amount across the eight current GSIBs.¹⁴⁶ Finally, the analysis calculates the updated short-term wholesale funding coefficient by multiplying 25 percent by the aggregate updated method 2 score excluding the short-term wholesale funding component and dividing the result by the aggregate average weighted short-term wholesale funding amount.¹⁴⁷

For each GSIB, the analysis estimates the incremental effect of changing the short-term wholesale funding score on method 2 scores, under both the proposal and the alternatives, as the percent change from the baseline method 2 score to the updated method 2 score. The analysis calculates the updated method 2 score by adding the updated short-term wholesale funding score, estimated in this subsection, to the sum of the products of the updated method 2 systemic indicator amounts and the corresponding updated method 2 systemic indicator coefficients,

¹⁴¹ The analysis applies the formula: $\text{Indicator}_i^* = \text{Indicator}_i \times \Pi_j (1 + \text{Partial Impact}_j)$, where Indicator_i^* is the estimate for indicator *i*'s revised amount, Indicator_i is indicator *i*'s baseline amount, and Partial Impact_j is the estimated partial impact, expressed as a decimal number, of the *j*th proposed change to indicator *i*. This estimation methodology assumes that there would be a multiplicative interaction across the effects of the proposed indicator changes.

¹⁴² Total exposures, intra-financial system assets, intra-financial system liabilities, securities

outstanding, notional amount of over-the-counter derivatives, trading and available-for-sale securities, level 3 assets, cross-jurisdictional claims, and cross-jurisdictional liabilities.

¹⁴³ See 12 CFR 217.405(b)(2) for the baseline method 2 coefficients.

¹⁴⁴ Method 2 coefficient calibration methodology in the 2015 GSIB surcharge final rule (see 80 FR 49082).

¹⁴⁵ See 12 CFR 217.406(a) for the baseline definition of the short-term wholesale funding score.

¹⁴⁶ See 12 CFR 217.406(a)(1) for the definition of the short weighted short-term wholesale funding amount, which would remain unchanged under the proposal and the alternatives.

¹⁴⁷ Algebraically, this ensures that the updated short-term wholesale funding coefficient is such that the aggregate percentage share of updated short-term wholesale funding scores within the updated method 2 scores of the current eight GSIBs equals 20 percent.

respectively estimated in sections III.J.ii and III.J.iii of this **SUPPLEMENTARY INFORMATION**.

v. Combined Impact on Method 1 and Method 2 Scores

This step of the analysis estimates the combined effect of all changes to method 1 and method 2 scores under the proposal and the policy alternatives considered as the percent change from the respective baseline method 1 and method 2 scores to the respective updated method 1 and method 2 scores for each GSIB. The last rows of Tables 5 and 7 in section III.E.ii of this **SUPPLEMENTARY INFORMATION** summarize the estimated combined effects on method 1 and method 2 scores, respectively.

The analysis calculates the updated method 1 score as follows. For method 1 systemic indicators that would be affected by the proposed data averaging and indicator amendments, the analysis calculates updated indicator scores by dividing the updated indicator amounts, estimated in section III.J.ii of this **SUPPLEMENTARY INFORMATION**, by the corresponding aggregate global indicator amounts published by the Federal Reserve, multiplying the resulting values by the corresponding systemic indicator weights, and then multiplying the resulting values by 10,000. Next, the analysis calculates the updated score for the underwriting activity indicator by dividing the indicator's baseline amount by the corresponding aggregate global indicator amount, multiplying the resulting value by the corresponding updated (reduced) indicator weight, and then multiplying the resulting value by 10,000. Then, the analysis calculates the scores for the two new trading volume indicators under the proposal by dividing the indicator amounts by the corresponding aggregate global indicator amounts, multiplying the resulting values by the corresponding proposed indicator weights described in section II.E.ii.a of this **SUPPLEMENTARY INFORMATION**, and then multiplying the resulting value by 10,000.¹⁴⁸ Finally, the analysis calculates the updated method 1 score by taking the sum of (i) the updated scores for indicators that would be affected by the proposed data averaging and indicator amendments; (ii) the updated score for the

underwriting activity indicator; and (iii) the scores of the two new trading volume indicators, while applying the cap on the total score of indicators in the substitutability category, which includes the underwriting activity and the two new trading volume indicators.

The analysis calculates the updated method 2 scores by adding the updated short-term wholesale funding score, estimated in section III.J.iv of this **SUPPLEMENTARY INFORMATION**, to the sum of the products of the updated method 2 systemic indicator amounts and the corresponding updated method 2 systemic indicator coefficients, respectively estimated in sections III.J.iii and III.J.iv of this **SUPPLEMENTARY INFORMATION**.

vi. GSIB Surcharges Under the Proposal and the Alternatives

The analysis estimates GSIB surcharges applicable in 2026 under both the proposal and the policy alternatives considered for each GSIB, summarized in Table 8 in section III.E.iii of this **SUPPLEMENTARY INFORMATION**. To this end, the analysis first calculates updated method 1 and method 2 surcharges by applying the baseline method 1 surcharge schedule and the proposed method 2 surcharge schedule, which is shown in Table 2 in Section II.D of this **SUPPLEMENTARY INFORMATION**, to the respective updated method 1 and method 2 scores, which are estimated in Section III.J.v of this **SUPPLEMENTARY INFORMATION**. The analysis then calculates the updated method 1 and method 2 surcharges as of the fourth quarters of 2023 and 2024, which determine GSIB surcharges applicable in 2026 because of the lagged application of surcharge increases.¹⁴⁹ Specifically, for each GSIB, the updated GSIB surcharge applicable in 2026 is the minimum of (i) the higher of the

updated method 1 and method 2 surcharges as of the fourth quarter of 2023 and (ii) the higher of the updated method 1 and method 2 surcharges as of the fourth quarter of 2024.

vii. Interaction With the TLAC Framework

As discussed in section III.H.i of this **SUPPLEMENTARY INFORMATION**, the analysis assesses potential interaction effects between the existing TLAC framework for GSIBs, the GSIB surcharge proposal, and the expanded risk-based proposal. As discussed in section III.H.i of this **SUPPLEMENTARY INFORMATION**, the analysis assesses potential interaction effects between the existing TLAC framework for GSIBs, the GSIB surcharge proposal, and the expanded risk-based proposal. The analysis estimates these interaction effects by calculating TLAC and long-term debt requirements for GSIBs under the baseline and comparing these baseline requirements to the respective requirements estimated under both the individual proposals and the combination of the two proposals as of the second quarter of 2025. Although the proposals would not change the baseline calculations of TLAC and long-term debt requirements for GSIBs, the proposals would affect some of the inputs to the calculations. Accordingly, this subsection describes the calculations of these requirements and then explains how the calculation inputs would differ under the baseline and the proposals.

Under both the baseline and the proposals, the analysis calculates the TLAC requirement for each GSIB by taking the greater of its (i) risk-based TLAC requirement and (ii) leverage-based TLAC requirement. The risk-based TLAC requirement for the GSIB is the sum of 18 percent and its risk-based TLAC buffer requirement, both expressed as a percentage of total risk-weighted assets.¹⁵⁰ The risk-based TLAC buffer requirement for the GSIB is the sum of 2.5 percent, the firm's method 1 surcharge, and the countercyclical capital buffer requirement, which is zero as of 2025. The leverage-based TLAC requirement for the GSIB is the sum of 7.5 percent and its leverage-based buffer requirement, both expressed as a percentage of total leverage exposures. The leverage-based TLAC buffer requirement for the GSIB is equal to

¹⁴⁸ The two new trading volume systemic indicator amounts are reported in FR Y-15 filings under line items RISK MV93 and RISK MV95. Additionally, the calculation uses the euro-denominated global indicator amounts published by the Bank for International Settlements for the two trading volume indicators, converted to U.S. dollars using year-end exchange rate data published by the European Central Bank.

¹⁴⁹ To estimate method 1 and method 2 surcharges as of the fourth quarter of 2023, the analysis respectively calculates method 1 and method 2 scores as of the fourth quarter of 2023, applying the methodology described in sections III.J.i to III.J.v of this **SUPPLEMENTARY INFORMATION** with the following modifications. Under Alternative 1, the analysis calculates updated method 2 systemic indicator coefficients by using the ratio of the CPI-W index as of December 31, 2015, and December 31, 2023 (instead of December 31, 2024). Under Alternative 2, the analysis calculates updated method 2 indicator coefficients by using the average of the euro-denominated aggregate global indicator amounts as of the end of 2022 and 2023 (instead of 2023 and 2024) and the average of daily euro-dollar exchange rates from 2021 to 2023 (instead of 2022 to 2024). The analysis uses the updated coefficient for the short-term wholesale funding component calculated as of the fourth quarter of 2024 because the aggregate weight of this component would be calibrated to 20 percent as of this date under both the proposal and the alternatives.

¹⁵⁰ See 12 CFR 252.63.

one-half of the firm's method 1 surcharge.¹⁵¹

The analysis applies this methodology to calculate baseline TLAC requirements for GSIBs using their total risk-weighted assets and total leverage exposures reported in FR Y-9C filings, and baseline method 1 surcharges, calculated under the current GSIB surcharge framework, described in section I.A of this **SUPPLEMENTARY INFORMATION**.¹⁵² Under the GSIB surcharge proposal, the analysis calculates TLAC requirements using the same methodology and inputs as under the baseline, except using the method 1 surcharges estimated in section III.J.vi of this **SUPPLEMENTARY INFORMATION**. The analysis in this **SUPPLEMENTARY INFORMATION** calculates TLAC requirements under the expanded risk-based proposal using the same methodology and inputs as under the baseline, except using the risk-weighted asset amounts estimated in the **SUPPLEMENTARY INFORMATION** of the expanded risk-based proposal.

Under both the baseline and the proposals, the analysis calculates the long-term debt requirement for each GSIB by taking the greater of the firm's (i) risk-based long-term debt requirement and (ii) leverage-based long-term debt requirement. The risk-based long-term debt requirement for the GSIB is the sum of 6 percent and the firm's GSIB surcharge, both expressed as a percentage of total risk-weighted assets.¹⁵³ The leverage-based long-term debt requirement for the GSIB is the sum of 2.5 percent and one-half of the firm's method 1 surcharge, both expressed as a percentage of total leverage exposures.¹⁵⁴

The analysis applies this methodology to calculate baseline long-term debt requirements for GSIBs using their total risk-weighted assets and total leverage exposures reported in FR Y-9C filings, and baseline method 1 surcharges and GSIB surcharges, calculated under the current GSIB surcharge framework, described in section I.A of this

SUPPLEMENTARY INFORMATION.¹⁵⁵ Under the GSIB surcharge proposal, the analysis calculates long-term debt requirements using the same methodology and inputs as under the baseline, except using the method 1 surcharges and GSIB surcharges estimated in section III.J.vi of this **SUPPLEMENTARY INFORMATION**. The analysis in this **SUPPLEMENTARY INFORMATION** calculates TLAC requirements under the expanded risk-based proposal using the same methodology and inputs as under the baseline, except using the risk-weighted asset amounts estimated in the supplementary information of the expanded risk-based proposal.

viii. Interaction With the Regulatory Tailoring Framework

As discussed in section III.H.ii of this **SUPPLEMENTARY INFORMATION**, for the assessment of potential interaction effects between the proposal and the existing regulatory tailoring framework for large banking organizations, the analysis estimates the "updated" cross-jurisdictional activity risk-based indicator amounts for each banking organization subject to Category II to IV prudential standards as of the second quarter of 2025 that reflects the effect of the proposed amendments to the cross-jurisdictional claims and cross-jurisdictional liabilities systemic indicators.¹⁵⁶ In addition to the data sources described in section III.B of this **SUPPLEMENTARY INFORMATION**, the interaction analysis uses further publicly available data reported in FR Y-15 filings as of the second quarter of 2023 and the fourth quarter of 2024.¹⁵⁷ Furthermore, the analysis uses additional confidential line items reported in the Board's special data collection, described earlier, as of the second quarter of 2023.¹⁵⁸

For each banking organization, the analysis estimates the updated cross-jurisdictional activity risk-based indicator amount as follows. First, the analysis estimates the updated cross-jurisdictional claims and liabilities systemic indicator amounts as of the

second quarter of 2023 by using data from FR Y-15 filings and the Board's special data collection.¹⁵⁹ Next, the analysis calculates the updated cross-jurisdictional activity risk-based indicator amount as of the second quarter of 2023 as the sum of the updated cross-jurisdictional claims and liabilities systemic indicator amounts. Then, the analysis estimates the proposal's impact on the cross-jurisdictional activity risk-based indicator as the percent change from its baseline amount to its updated amount as of the second quarter of 2023.¹⁶⁰ Finally, the analysis estimates the updated cross-jurisdictional activity risk-based indicator amount as of the second quarter of 2025 by multiplying the indicator's baseline amount as of the second quarter of 2025 by one plus the proposal's effect on the indicator, estimated using the methodology described in section III.J.ii of this **SUPPLEMENTARY INFORMATION**.¹⁶¹ The updated cross-jurisdictional activity risk-based indicator is the same under the proposal and the alternatives because the proposal and the alternatives would implement the same amendments to the cross-jurisdictional claims and liabilities systemic indicators.

IV. Administrative Law Matters

A. Paperwork Reduction Act

Certain provisions of the proposed rule contain "collections of information" within the meaning of the Paperwork Reduction Act of 1995

¹⁵⁹ If there are not sufficient data in the Board's special data collection to estimate the updated cross-jurisdictional claims and liabilities systemic indicator amounts for a banking organization, the analysis imputes these indicator amounts using (i) baseline data in the firm's FR Y-15 filings; (ii) for certain proposed indicator amendments, the partial effects of the amendments, estimated using data in the firm's FR Y-15 filings; and (iii) for the rest of the indicator amendments, the median value of the estimated partial effects of the amendments on banking organizations for which there are sufficient data in the Board's special data collection to estimate these effects. Furthermore, if a banking organization reported a positive amount for cross-jurisdictional non-derivative liabilities in its FR Y-15 filings but zero in the Board's special data collection, the analysis assumes that the cross-jurisdictional non-derivative liabilities amount under the proposal would be equal to its baseline amount. This assumption is conservative because it increases the proposal's estimated impact on this specific line item.

¹⁶⁰ The baseline amounts of the cross-jurisdictional activity risk-based indicator are reported in FR Y-15 filings under line items RISK KY49, RISK KY49, and RISO KY49 by domestic holding companies, as well as the U.S. intermediate holding companies and combined U.S. operations of foreign banking organizations, respectively.

¹⁶¹ The analysis estimates the proposal's effect on the cross-jurisdictional activity indicator as of the second quarter of 2023 because that is the date of the Board's special data collection.

¹⁵¹ This calculation of the TLAC leverage-based buffer requirement reflects the effect of the eSLR final rule, adopted on November 25, 2025. See 90 FR 55248. Before the eSLR final rule's effective date of April 1, 2026, the buffer requirement is 2 percent of a GSIB's total leverage exposures.

¹⁵² The specific FR Y-9C line items for risk-weighted assets and total leverage exposure are BHCA A223, BHCW A223, and BHCA LE88.

¹⁵³ See 12 CFR 252.62.

¹⁵⁴ This calculation of the leverage-based long-term debt requirement reflects the effect of the eSLR final rule, adopted on November 25, 2025. See 90 FR 55248. Before the eSLR final rule's effective date of April 1, 2026, the requirement is 4.5 percent of a GSIB's total leverage exposure.

¹⁵⁵ The specific FR Y-9C line items for risk-weighted assets and total leverage exposure are BHCA A223, BHCW A223, and BHCA LE88.

¹⁵⁶ Under the regulatory tailoring framework, cross-jurisdictional activity is the sum of cross-jurisdictional claims and liabilities, calculated in accordance with the instructions to the FR Y-15 reporting form. See 84 FR 59032 (November 1, 2019); 84 FR 59230 (November 1, 2019).

¹⁵⁷ The line items used from FR Y-15 filings are RISK M422, KW54, M426, KW57, and KW56; RISK M423, M424, LA95, KW54, M426, KW57, KW56; and RISO LA95, KW54, M423, M424, M426, KW57, and KW56.

¹⁵⁸ The specific line items used from the special data collection are Items 1, 1.a, 2, and 3.

(PRA).¹⁶² The Board may not conduct or sponsor, and a respondent is not required to respond to, an information collection unless it displays a currently valid Office of Management and Budget (OMB) control number. The Board reviewed the proposed rule under the authority delegated to the Board by OMB.

The proposed rule contains reporting requirements subject to the PRA. To implement these requirements, the Board proposes to revise the Systemic Risk Report (FR Y-15; OMB No. 7100-0352).

Comments are invited on the following:

(a) Whether the proposed collections of information are necessary for the proper performance of the Board's functions, including whether the information has practical utility;

(b) The accuracy of the estimates of the burden of the proposed information collections, including the validity of the methodology and assumptions used;

(c) Ways to enhance the quality, utility, and clarity of the information to be collected;

(d) Ways to minimize the burden of the information collections on respondents, including using automated collection techniques or other forms of information technology; and

(e) Estimates of capital or startup costs and costs of operation, maintenance, and purchase of services to provide information.

Comments on aspects of this proposed rule that may affect reporting or recordkeeping requirements and burden estimates should be sent to the addresses listed in the **ADDRESSES** section of the **SUPPLEMENTARY INFORMATION**. A copy of the comments may also be submitted to the OMB desk officer for the Agencies: By mail to U.S. Office of Management and Budget, 725 17th Street NW, #10235, Washington, DC 20503 or by facsimile to (202) 395-5806, Attention, Federal Banking Agency Desk Officer.

Proposed Revision, With Extension, of the Following Information Collection

Collection title: Systemic Risk Report.

Collection identifier: FR Y-15.

OMB control number: 7100-0352.

General description of report: The FR Y-15 quarterly report collects systemic risk data from U.S. bank holding companies and covered savings and loan holding companies with \$100 billion or more in total consolidated assets, foreign banking organizations with \$100 billion or more in combined U.S. assets, and any U.S.-based bank

holding company designated as a GSIB that otherwise does not meet the consolidated assets threshold for bank holding companies.¹⁶³ The primary purpose of the FR Y-15 is to facilitate the implementation of the GSIB surcharge. The FR Y-15 also collects data on a firm's structure, activities, and funding that is consistent and comparable among firms. In addition, the data collected on the FR Y-15 are used to identify firms that may present significant systemic risk, to analyze the systemic risk implications of proposed mergers and acquisitions, and to determine the application of prudential standards to large banking organizations.

Proposed effective date: Two full quarters after the adoption of the final rule.

Frequency: Quarterly.

Respondents: Top-tier U.S. bank holding companies and covered savings and loan holding companies with \$100 billion or more in total consolidated assets, any U.S.-based bank holding company designated as a GSIB that does not meet that consolidated assets threshold, and foreign banking organizations with combined U.S. assets of \$100 billion or more.

Estimated number of respondents: 52.

Estimated average hours per response: Reporting—23 hours for GSIBs, 15 hours for domestic Category II and Category III firms, 17 hours for domestic Category IV firms, 20 hours for foreign banking organizations, and around 17 hours for U.S. intermediate holding companies of foreign banking organizations. Recordkeeping—0.25 hours.

Estimated annual burden hours:

Reporting—3,851 hours;¹⁶⁴

Recordkeeping—52 hours.

Estimated change in total burden: 81 hours.

Legal authorization and confidentiality:

The FR Y-15 report is authorized pursuant to sections 5(b) and (c) of the Bank Holding Company Act (BHC Act),¹⁶⁵ sections 102(a)(1) and 165 of the Dodd-Frank Act, as amended by the Economic Growth, Regulatory Relief, and Consumer Protection Act,¹⁶⁶ section 8(a) of the International Banking Act (IBA),¹⁶⁷ and section 10 of the Home Owners' and Loan Act (HOLA).¹⁶⁸

¹⁶³ See 12 CFR 217.402.

¹⁶⁴ This estimated total annual burden reflects adjustments that have been made to the Board's burden methodology for the FR Y-15 that provide a more consistent estimate of respondent burden across different regulatory reports.

¹⁶⁵ 12 U.S.C. 1844(b) & (c).

¹⁶⁶ 12 U.S.C. 5311(a)(1) & 5365.

¹⁶⁷ 12 U.S.C. 3106(a).

¹⁶⁸ 12 U.S.C. 1467a(b)(2).

The Board is authorized to require bank holding companies to file the FR Y-15 reports pursuant to sections 5(b) and 5(c) of the BHC Act and section 165 of the Dodd-Frank Act. Section 5(b) of the BHC Act authorizes the Board to issue regulations and orders relating to capital requirements for bank holding companies.¹⁶⁹ Section 5(c) of the BHC Act authorizes the Board to require a bank holding company and any subsidiary of such company to submit reports to keep the Board informed of the bank holding company's financial condition, systems for controlling financial and operating risks, transactions with depository institution subsidiaries of the bank holding company, and compliance with law.¹⁷⁰ The Board is further authorized by the Dodd-Frank Act to consider risk to U.S. financial stability in regulating and examining bank holding companies and foreign banking organizations with \$100 billion or more in consolidated assets and nonbank financial companies supervised by the Board,¹⁷¹ and to impose prudential standards for such entities and to differentiate among companies on an individual basis or by category, taking into consideration their capital structure, riskiness, complexity, financial activities, size, and any other risk-related factors that the Board deems appropriate.¹⁷² Sections 165(b)(1)(B) and 165(f) of the Dodd-Frank Act authorize the Board to establish enhanced public disclosures for companies subject to prudential standards under section 165 of the Dodd-Frank Act.¹⁷³

Section 8(a) of the IBA allows the Board to apply the requirements of section 5(b) of the BHC Act to foreign banking organizations.¹⁷⁴ Similarly,

¹⁶⁹ 12 U.S.C. 1844(b).

¹⁷⁰ 12 U.S.C. 1844(c).

¹⁷¹ 12 U.S.C. 5363 & 5365. The Board may, by order or rule, apply any enhanced prudential standard established under section 165 of the Dodd-Frank Act to any bank holding company with total consolidated assets equal to or greater than \$100 billion. 12 U.S.C. 5365(a)(2)(C).

¹⁷² 12 U.S.C. 5365(a)(2)(C). The Board is required to establish prudential standards for bank holding companies with assets equal to or greater than \$250 billion and nonbank financial companies supervised by the Board that (1) are more stringent than the standards and requirements applicable to nonbank financial companies and bank holding companies that do not present similar risks to the financial stability of the United States; and (2) increase in stringency based on the considerations enumerated in section 165(b)(3) of the Dodd-Frank Act, as amended. 12 U.S.C. 5365(a)(1).

¹⁷³ 12 U.S.C. 5365(b)(1)(B) and (f).

¹⁷⁴ 12 U.S.C. 3106(a). This provision specifies that (1) any foreign bank that maintains a branch or agency in a state, (2) any foreign bank or foreign company controlling a foreign bank that controls a commercial lending company organized under the

Continued

¹⁶² 44 U.S.C. 3501-3521.

section 102(a)(1) of the Dodd-Frank Act allows the Board to apply the requirements of section 165 to U.S. intermediate holding companies that are treated as bank holding companies under section 8(a) of the IBA.¹⁷⁵

The Board has authority to require savings and loan holding companies to file the FR Y-15 reports pursuant to section 10(b) of HOLA, as amended by the Dodd-Frank Act. Section 10(b) of HOLA authorizes the Board to require savings and loan holding companies to file “such reports as may be required by the Board” containing “such information concerning the operations of such [savings and loan holding company] . . . as the Board may require.”¹⁷⁶

The FR Y-15 report is mandatory.

Information collected on the FR Y-15 is generally made available to the public. A reporting banking organization may request confidential treatment for items on the FR Y-15 or on the form from which the data are obtained that fall, in whole or in part, within the scope of one or more of the exemptions from disclosure under the Freedom of Information Act (FOIA),¹⁷⁷ pursuant to the Board’s Rules Regarding Availability of Information.¹⁷⁸ The exempt categories include (but are not limited to) “trade secrets and commercial or financial information obtained from a person and privileged and confidential” (exemption 4), and information that, if disclosed, “would constitute unwarranted invasion of personal privacy” (exemption 6).¹⁷⁹ A request for line-item confidentiality must be submitted in writing prior to, or concurrently with, the electronic submission of the report. The request must discuss in writing the justification for which confidentiality is requested and must demonstrate the specific

nature of the harm that would result from public release of the information.

Current Actions: The Board is proposing to amend the FR Y-15 form and instructions to align with the proposed rulemaking which would amend the Board’s GSIB surcharge requirement under the Board’s capital rule. See section II of the proposal for a description of the changes to the FR Y-15.

B. Regulatory Flexibility Act

The Board is providing an initial regulatory flexibility analysis with respect to this proposed rule. The Regulatory Flexibility Act (RFA)¹⁸⁰ requires an agency to consider whether the rule it proposes will have a significant economic impact on a substantial number of small entities.¹⁸¹ In connection with a proposed rule, the RFA requires an agency to prepare and invite public comment on an initial regulatory flexibility analysis describing the impact of the rule on small entities, unless the agency certifies that the proposed rule, if promulgated, would not have a significant economic impact on a substantial number of small entities. An initial regulatory flexibility analysis must contain (1) a description of the reasons why action by the agency is being considered; (2) a succinct statement of the objectives of, and legal basis for, the proposed rule; (3) a description of, and, where feasible, an estimate of the number of small entities to which the proposed rule will apply; (4) a description of the projected reporting, recordkeeping, and other compliance requirements of the proposed rule, including an estimate of the classes of small entities that will be subject to the requirement and the type of professional skills necessary for preparation of the report or record; (5) an identification, to the extent practicable, of all relevant Federal rules which may duplicate, overlap with, or conflict with the proposed rule; and (6) a description of any significant alternatives to the proposed rule which accomplish the stated objectives of applicable statutes and minimize any

significant economic impact of the proposed rule on small entities.¹⁸²

The Board has considered the potential impact of the proposed rule on small entities in accordance with the RFA. Based on its analysis and for the reasons stated below, the Board believes that this proposed rule will not have a significant economic impact on a substantial number of small entities. Nevertheless, the Board is publishing and inviting comment on this initial regulatory flexibility analysis.

As discussed in detail above, the proposed rule would amend the Board’s rule that identifies and establishes risk-based capital surcharges for GSIBs, as well as related regulatory reports. The proposed rule would improve the precision of the GSIB surcharge and better measure systemic risk under the GSIB framework, including by adjusting the method 2 coefficients to account for changes in the economy and financial system and apply annual adjustments going forward, modifying the short-term wholesale funding systemic indicator to better align with risk, changing the reporting of certain values from point-in-time indicators to longer-term averages, making additional improvements to certain systemic risk indicators, and reducing cliff effects by implementing narrower score band ranges. The proposal would also make corresponding changes to the Board’s reporting forms.

Section 165 of the Dodd-Frank Act directs the Board to establish enhanced prudential standards for large bank holding companies and for nonbank financial companies that the Financial Stability Oversight Council has designated for supervision by the Board (nonbank financial companies supervised by the Board).¹⁸³ These standards must include risk-based capital requirements as well as other enumerated standards.¹⁸⁴ The standards must be more stringent than those applicable to other bank holding companies and to nonbank financial companies that do not present similar risks to U.S. financial stability.¹⁸⁵ The standards must also increase in stringency based on several factors, including the size and risk

law of a state, and (3) any company of which a company falling under category (1) or (2) is a subsidiary, shall be subject to the provisions of the BHC Act. *Id.*

¹⁷⁵ 12 U.S.C. 5311(a)(1).

¹⁷⁶ 12 U.S.C. 1467a(b)(2)(A).

¹⁷⁷ 5 U.S.C. 552.

¹⁷⁸ 12 CFR 261.17. Several data items in the FR Y-15 are retrieved from the FR Y-9C, and other items may be retrieved from the FFIEC 101. Confidential treatment will also extend to any automatically calculated items on the FR Y-15 that have been derived from confidential data items and that, if released, would reveal the underlying confidential data.

¹⁷⁹ 5 U.S.C. 552(b)(4) & (b)(6). Information provided in items 1 through 4 of Schedule G previously was automatically treated as confidential prior to the first reporting date after the implementation of the final liquidity coverage ratio disclosure standard. There are currently no reporting entities whose information provided in items 1 through 4 of Schedule G is kept confidential.

¹⁸⁰ 5 U.S.C. 601 *et seq.*

¹⁸¹ Under regulations issued by the U.S. Small Business Administration (SBA), a small entity includes a bank holding company with total assets of \$850 million or less. See 13 CFR 121.201. Consistent with the SBA’s General Principles of Affiliation, the Board includes the assets of all domestic and foreign affiliates toward the size threshold when determining whether to classify a particular entity as a small entity. See 13 CFR 121.103. As of the second quarter of 2025, there were approximately 2,796 small bank holding companies and approximately 157 small savings and loan holding companies, and approximately 443 small state member banks.

¹⁸² 5 U.S.C. 603(b)–(c).

¹⁸³ See 12 U.S.C. 5365. Originally, section 165 applied to bank holding companies with \$50 billion or more in total consolidated assets. The Economic Growth, Regulatory Relief, and Consumer Protection Act revised this threshold to \$250 billion and granted the ability to apply enhanced prudential standards under section 165 to bank holding companies with \$100 billion or more in total consolidated assets under certain circumstances. See Public Law 115–174, Sec. 401.

¹⁸⁴ See 12 U.S.C. 5365(b).

¹⁸⁵ See 12 U.S.C. 5365(a)(1)(A).

characteristics of a company subject to the rule, and the Board must take into account the differences among bank holding companies and nonbank financial companies.¹⁸⁶ Furthermore, various statutory authorities provide the Board with broad authority to set capital requirements and standards for depository institution holding companies.¹⁸⁷

As discussed in this **SUPPLEMENTARY INFORMATION**, the Board is proposing to revise its GSIB surcharge framework under its capital rule and related regulatory reports. The only companies subject to these rules and reports, and thus potentially impacted by the proposal, are GSIBs; holding companies subject to Category II, III, and IV standards; and foreign banking organizations with combined U.S. assets of \$100 billion or more. Companies that would be impacted by the proposal therefore substantially exceed the \$850 million asset threshold at which a banking entity is considered a “small entity” under SBA regulations.¹⁸⁸ The proposed rule therefore would not impose mandatory requirements on any small entities.

As discussed previously in the Paperwork Reduction Act section, the proposed rule includes proposed changes to the Systemic Risk Report (FR Y-15). The Board is aware of no other Federal rules that duplicate, overlap, or conflict with the proposed rule. Because the proposed rule generally would not apply to any small entities supervised by the Board, the Board believes that the proposed rule would not have a significant economic impact on small entities supervised by the Board. Therefore, the Board believes that there are no significant alternatives to the proposed rule that would reduce the economic impact on small entities supervised by the Board.

The Board welcomes comment on all aspects of its analysis. In particular, the Board requests that commenters describe the nature of any impact on small entities and provide empirical data to illustrate and support the extent of the impact.

¹⁸⁶ See 12 U.S.C. 5365(a)(1)(B). Under section 165(a)(1)(B) of the Dodd-Frank Act, the enhanced prudential standards must increase in stringency based on the considerations listed in section 165(b)(3).

¹⁸⁷ See, e.g., 12 U.S.C. 1467a(g)(1) (savings and loan holding companies); 12 U.S.C. 1844(b) (bank holding companies); 12 U.S.C. 3902(1)–(2), 3907(a), 3909(a), (c)(1)–(2) (depository institutions; affiliates of depository institutions, including holding companies; and certain U.S. operations of foreign banking organizations); 12 U.S.C. 5371 (insured depository institutions, depository institution holding companies, and nonbank financial companies supervised by the Board).

¹⁸⁸ 13 CFR 121.201.

C. Plain Language

Section 722 of the Gramm-Leach-Bliley Act (Pub. L. 106–102, 113 Stat. 1338, 1471, 12 U.S.C. 4809) requires the Federal banking agencies to use plain language in all proposed and final rules published after January 1, 2000. The Board has sought to present the proposed rule in a simple and straightforward manner and invites comment on the use of plain language. For example:

- *Is the material organized to suit your needs? If not, how could the Board present the proposed rule more clearly?*
- *Are the requirements in the proposed rule clearly stated? If not, how could the proposed rule be more clearly stated?*
- *Does the proposal contain technical language or jargon that is not clear? If so, which language requires clarification?*
- *Would a different format (grouping and order of sections, use of headings, paragraphing) make the proposed rule easier to understand? If so, what changes would achieve that?*
- *Is this section format adequate? If not, which of the sections should be changed and how?*
- *What other changes can the Board incorporate to make the proposed rule easier to understand?*

D. Providing Accountability Through Transparency Act of 2023

The Providing Accountability Through Transparency Act of 2023 (12 U.S.C. 553(b)(4)) requires that a notice of proposed rulemaking include the internet address of a summary of not more than 100 words in length of the proposed rule, in plain language, that shall be posted on the internet website under section 206(d) of the E-Government Act of 2002 (44 U.S.C. 3501 note).

In summary, in the proposal the Federal Reserve Board requests comment on a proposal that would make certain adjustments to the calculation of the capital surcharge for the largest and most complex banks. The changes would better align the surcharge to each bank’s systemic risk profile, including by measuring a bank’s systemic importance averaged over the entire year, instead of only at the year-end value.

The proposal and such a summary can be found at <https://www.regulations.gov> and <https://www.federalreserve.gov/supervisionreg/reglisting.htm>.

List of Subjects in 12 CFR Part 217

Administrative practice and procedure, Banks, Banking, Capital,

Federal Reserve System, Holding companies.

Authority and Issuance

For the reasons set forth in the preamble, the Board of Governors of the Federal Reserve System proposes to amend part 217 of title 12 of the Code of Federal Regulations as follows:

PART 217—CAPITAL ADEQUACY OF BANK HOLDING COMPANIES, SAVINGS AND LOAN HOLDING COMPANIES, AND STATE MEMBER BANKS (REGULATION Q)

- 1. The authority citation for Part 217 is revised to read as follows:

Authority: 12 U.S.C. 248(a), 321–338a, 481–486, 1462a, 1467a, 1818, 1828, 1831n, 1831o, 1831p–l, 1831w, 1835, 1844(b), 1851, 3904, 3906–3909, 4808, 5365, 5368, 5371, 5371 note, and sec. 4012, Pub. L. 116–136, 134 Stat. 281.

Subpart H—Risk-Based Capital Surcharge for Global Systemically Important Bank Holding Companies

- 2. Remove the authority citation for part 217, subpart H.
 ■ 3. Revise § 217.401 to read as follows:

§ 217.401 Definitions.

Aggregate global indicator amount means, for each systemic indicator, the aggregate measure of that indicator, which is equal to the most recent annual dollar figure published by the Board that represents the sum of systemic indicator values of:

- (1) The 75 largest global banking organizations, as measured by the Basel Committee on Banking Supervision; and
- (2) Any other banking organization that the Basel Committee on Banking Supervision includes in its sample total for that year.

Assets under custody means the value reported as “Assets under custody—systemic indicator amount” on Schedule C of the FR Y-15.

Consolidated subsidiary has the meaning set forth in 12 CFR 249.3.

Cross-jurisdictional claims means the value reported as “Total cross-jurisdictional claims—systemic indicator amount” on Schedule E of the FR Y-15.

Cross-jurisdictional liabilities means the value reported as “Total cross-jurisdictional liabilities—systemic indicator amount” on Schedule E of the FR Y-15.

GAAP means generally accepted accounting principles as used in the United States.

GDP growth adjustment means the most recent annual scalar published by the Board equal to the greater of:

(1) The ratio of:

(i) The average of nominal United States gross domestic product in the three calendar years prior to publication of the scalar, as reflected by the most current estimates published by the Bureau of Economic Analysis on or before September 30th of the year of the publication of the scalar, or a comparable value; to

(ii) The average of nominal United States gross domestic product in the three calendar years prior to [the effective date of a final rule], as reflected by the most current estimates published by the Bureau of Economic Analysis; or

(2) The GDP growth adjustment published by the Board the prior calendar year.

Intra-financial system assets means the value reported as “Total intra-financial system assets—systemic indicator amount” on Schedule B of the FR Y–15.

Intra-financial system liabilities means the value reported as “Total intra-financial system liabilities—systemic indicator amount” on Schedule B of the FR Y–15.

Level 3 assets means the value reported as “Total Level 3 assets—systemic indicator amount” on Schedule D of the FR Y–15.

Notional amount of over-the-counter (OTC) derivatives means the value reported as “Total notional amount of over-the-counter (OTC) derivative contracts—systemic indicator amount” on Schedule D of the FR Y–15.

Payments activity means the value reported as “Payments activity—systemic indicator amount” on Schedule C of the FR Y–15.

Securities outstanding means the value reported as “Total securities outstanding—systemic indicator amount” on Schedule B of the FR Y–15.

Systemic indicator includes the following indicators included on the FR Y–15:

- (1) Total exposures;
- (2) Intra-financial system assets;
- (3) Intra-financial system liabilities;
- (4) Securities outstanding;
- (5) Payments activity;
- (6) Assets under custody;
- (7) Underwritten transactions in debt and equity markets;
- (8) Trading volume—equity and other;
- (9) Trading volume—fixed income;
- (10) Notional amount of over-the-counter (OTC) derivatives;
- (11) Trading and available-for-sale (AFS) securities;
- (12) Level 3 assets;
- (13) Cross-jurisdictional claims;
- (14) Cross-jurisdictional liabilities; or
- (15) Weighted short-term wholesale funding amount.

Total exposures means the value reported as “Total exposures—systemic indicator amount” on Schedule A of the FR Y–15.

Trading and AFS securities means the value reported as “Total trading and available-for-sale (AFS) securities—systemic indicator amount” on Schedule D of the FR Y–15.

Trading volume—equity and other means the value reported as “Trading volume—equities and other securities—systemic indicator amount” on Schedule C of the FR Y–15.

Trading volume—fixed income means the value reported as “Trading volume—fixed income—systemic indicator amount” on Schedule C of the FR Y–15.

Underwritten transactions in debt and equity markets means the value reported as “Underwriting activity—systemic indicator amount” on Schedule C of the FR Y–15.

Weighted short-term wholesale funding amount means the value

reported as “Total weighted short-term wholesale funding amount—systemic indicator amount” on Schedule G of the FR Y–15.

■ 4. In § 217.403:

■ a. Remove Table 2 to § 217.403; and

■ b. Revise paragraphs (c) and (d).

The revisions read as follows:

§ 217.403 GSIB Surcharge.

* * * * *

(c) *Method 2 surcharge*—(1) *General*. The method 2 surcharge of a global systemically important BHC is 1.0 percent if the method 2 score of the global systemically important BHC is 189 basis points or less.

(2) *Higher method 2 surcharges*. To the extent that the method 2 score of a global systemically important BHC equals or exceeds 190 basis points, the method 2 surcharge equals the sum of:

(i) 1.1 percent; and

(ii) An additional 0.1 percent for each 20 basis points that the global systemically important BHC’s score exceeds 190 basis points.

(d) *Effective date of an adjusted GSIB surcharge*. As of January 1 of a calendar year, the GSIB surcharge in effect (*i.e.*, incorporated into the maximum payout ratio under § 217.11) for a global systemically important BHC for that year is the GSIB surcharge calculated by the global systemically important BHC in the immediately prior calendar year, unless the GSIB surcharge calculated by the global systemically important BHC in the calendar year two years prior was lower, in which case the GSIB surcharge calculated in the calendar year two years prior shall be in effect.

■ 5. In § 217.404, revise table 1 to § 217.404 to read as follows:

§ 217.404 Method 1 Score.

* * * * *

TABLE 1 TO § 217.404: SYSTEMIC INDICATOR WEIGHTS

Category	Systemic indicator	Indicator weight (%)
Size	Total exposures	20
Interconnectedness	Intra-financial system assets	6.67
	Intra-financial system liabilities	6.67
	Securities outstanding	6.67
	Payments activity	6.67
	Assets under custody	6.67
Substitutability	Underwritten transactions in debt and equity markets	3.33
	Trading volume—fixed income	1.67
	Trading volume—equity and other	1.67
	Notional amount of over-the-counter (OTC) derivatives	6.67
Complexity	Trading and available-for-sale (AFS) securities	6.67
	Level 3 assets	6.67
Cross-jurisdictional activity	Cross-jurisdictional claims	10
	Cross-jurisdictional liabilities	10

* * * * *

■ 6. Section 217.405 is revised to read as follows:

§ 217.405 Method 2 score.

(a) *General.* A global systemically important BHC's method 2 score is equal to the sum of the global systemically important BHC's systemic indicator scores for the ten systemic indicators set forth in Table 1 of this section, as determined under Table 1 of this section.

(b) *Systemic indicator score.* A global systemically important BHC's score for a systemic indicator is equal to:

- (1) The amount of the systemic indicator, as reported by the bank holding company as of December 31 of the previous calendar year, expressed in billions of dollars;
- (2) Multiplied by the coefficient corresponding to the systemic indicator set forth in paragraph (c) of this section.

(c) *Coefficients for systemic indicators.* In a given calendar year, the coefficient corresponding to a given systemic indicator is equal to:

- (1) The coefficient value for that systemic indicator set forth in Table 1 of this section;
- (2) Divided by the GDP growth adjustment published by the Board in that year.

TABLE 1 TO § 217.405—COEFFICIENTS FOR SYSTEMIC INDICATORS AS OF DECEMBER 31, 202[X]

Category	Systemic indicator	Coefficient value (%)
Size	Total exposures	3.686
Interconnectedness	Intra-financial system assets	10.006
	Intra-financial system liabilities	10.408
Complexity	Securities outstanding	7.547
	Notional amount of over-the-counter (OTC) derivatives	0.129
	Trading and available-for-sale (AFS) securities	25.141
	Level 3 assets	134.314
Cross-jurisdictional activity	Cross-jurisdictional claims	7.731
	Cross-jurisdictional liabilities	8.272
Short-term Wholesale Funding	Weighted short-term wholesale funding amount	23.003

§ 217.406 [Removed]

■ 7. Remove § 217.406.

By order of the Board of Governors of the Federal Reserve System.

Benjamin W. McDonough,
Secretary of the Board.

Regulatory Capital Rule: Category I and II Banking Organizations, Banking Organizations With Significant Trading Activity, and Optional Adoption for Other Banking Organizations

AGENCY: Office of the Comptroller of the Currency (OCC), Treasury; the Board of Governors of the Federal Reserve System (Board); and the Federal Deposit Insurance Corporation (FDIC).

ACTION: Notice of proposed rulemaking.

SUMMARY: The Office of the Comptroller of the Currency, the Board of Governors of the Federal Reserve System, and the Federal Deposit Insurance Corporation are proposing to modernize the capital requirements applicable to Category I and II depository institution holding companies and depository institutions, as well as revise the market risk capital framework for banking organizations with significant trading activity (the proposal). The proposal would improve the regulatory capital framework for covered banking organizations by enhancing its risk sensitivity and consistency and by simplifying core components of its design. The agencies expect the proposal would support the safety and soundness of covered banking organizations and U.S. financial stability while promoting lending and other financial intermediation activities in the banking system over a range of economic conditions.

DATES: Comments must be received by June 18, 2026.

ADDRESSES: Comments should be directed to:

• *OCC:* Commenters are encouraged to submit comments through the Federal eRulemaking Portal, if possible. Please

use the title “Regulatory Capital Rule: Category I and II Banking Organizations, Banking Organizations With Significant Trading Activity, and Optional Adoption for Other Banking Organizations” to facilitate the organization and distribution of the comments and identify the number of the specific question(s) to which you are responding. You may submit comments by any of the following methods:

Federal eRulemaking Portal—Regulations.gov:

Go to <https://regulations.gov/>. Enter Docket ID “OCC–2026–0265” in the Search Box and click “Search.” Public comments can be submitted via the “Comment” box below the displayed document information or by clicking on the document title and then clicking the “Comment” box on the top-left side of the screen. Go to <https://regulations.gov/>. Enter Docket ID “OCC–2026–0265” in the Search Box and click “Search.” Click on the “Dockets” tab and then the document’s title. After clicking the document’s title, click the “Browse All Comments” tab. Comments can be viewed and filtered by clicking on the “Sort By” drop-down on the right side

of the screen or the “Refine Comments Results” options on the left side of the screen. Supporting materials can be viewed by clicking on the “Browse Documents” tab. Click on the “Sort By” drop-down on the right side of the screen or the “Refine Results” options on the left side of the screen checking the “Supporting & Related Material” checkbox. For assistance with the *Regulations.gov* site, please call 1–866–498–2945 (toll free) Monday–Friday, 9 a.m.–5 p.m. EST, or email regulationshelpdesk@gsa.gov.

The docket may be viewed after the close of the comment period in the same manner as during the comment period.

Board: You may submit comments, identified by Docket No. R–1887, and RIN 7100–AH20 by any of the following methods:

• *Agency website:* <https://www.federalreserve.gov/apps/proposals/>. Follow the instructions for submitting comments, including attachments. Preferred Method.

• *Mail:* Benjamin W. McDonough, Secretary, Board of Governors of the Federal Reserve System, 20th Street and Constitution Avenue NW, Washington, DC 20551.

• *Hand Delivery/Courier:* Same as mailing address.

• *Other Means:* publiccomments@frb.gov. You must include the docket number in the subject line of the message.

Comments received are subject to public disclosure. In general, comments received will be made available on the Board’s website at <https://www.federalreserve.gov/apps/proposals/> without change and will not be modified to remove personal or business information including confidential, contact, or other identifying information. Comments should not include any information such as confidential information that would be not appropriate for public disclosure. Comments should identify the number for the specific question(s) to which they respond. Public comments may also be viewed electronically or in person in Room M–4365A, 2001 C St. NW, Washington, DC 20551, between 9 a.m. and 5 p.m. during Federal business weekdays.

FDIC: You may submit comments to the FDIC, identified by RIN 3064–AF29 and identify the number for the specific question(s) to which you are responding, by any of the following methods:

Agency website: <https://www.fdic.gov/resources/regulations/federal-register-publications>. Follow instructions for submitting comments on the FDIC’s website.

Mail: Jennifer M. Jones, Deputy Executive Secretary, Attention: Comments/Legal OES (RIN 3064–AF29), Federal Deposit Insurance Corporation, 550 17th Street NW, Washington, DC 20429.

Hand Delivered/Courier: Comments may be hand-delivered to the guard station at the rear of the 550 17th Street NW, building (located on F Street NW) on business days between 7 a.m. and 5 p.m.

Email: comments@FDIC.gov. Include the RIN 3064–AF29 on the subject line of the message.

Public Inspection: Comments received, including any personal information provided, may be posted without change to <https://www.fdic.gov/resources/regulations/federal-register-publications>. Commenters should submit only information that the commenter wishes to make available publicly. The FDIC may review, redact, or refrain from posting all or any portion of any comment that it may deem to be inappropriate for publication, such as irrelevant or obscene material. The FDIC may post only a single representative example of identical or substantially identical comments, and in such cases will generally identify the number of identical or substantially identical comments represented by the posted example. All comments that have been redacted, as well as those that have not been posted, that contain comments on the merits of this document will be retained in the public comment file and will be considered as required under all applicable laws. All comments may be accessible under the Freedom of Information Act.

I. Introduction

The Office of the Comptroller of the Currency (OCC), the Board of Governors of the Federal Reserve System (Board), and the Federal Deposit Insurance Corporation (FDIC) (collectively, the agencies) are proposing to modernize the capital requirements applicable to Category I and II depository institution holding companies and depository institutions (henceforth Category I and II banking organizations) and the market risk capital framework applicable to banking organizations with significant trading activity.¹ The proposal would improve the regulatory capital framework for covered banking organizations by enhancing its risk sensitivity and consistency, as well as by simplifying core components of its design.² Improving the risk sensitivity of the regulatory capital framework would mean that a banking organization's capital requirements

¹ In 2019, the agencies adopted rules establishing four categories of capital standards for U.S. banking organizations with \$100 billion or more in total consolidated assets and foreign banking organizations with \$100 billion or more in combined U.S. assets. Under this framework, Category I standards apply to U.S.-domiciled bank holding companies identified as global systemically important BHCs and their depository institution subsidiaries. Category II standards apply to banking organizations with at least \$700 billion in total consolidated assets or at least \$75 billion in cross-jurisdictional activity and their depository institution subsidiaries. Category III standards apply to banking organizations with total consolidated assets of at least \$250 billion or at least \$75 billion in weighted short-term wholesale funding, nonbank assets, or off-balance sheet exposures and their depository institution subsidiaries. Category IV standards apply to banking organizations with total consolidated assets of at least \$100 billion that do not meet the thresholds for a higher category and their depository institution subsidiaries. See 12 CFR 3.2 (OCC); 12 CFR 217.400, 238.10, 252.5, (Board); 12 CFR 324.2 (FDIC); “Prudential Standards for Large Bank Holding Companies, Savings and Loan Holding Companies, and Foreign Banking Organizations,” 84 FR 59032 (Nov. 1, 2019); “Changes to Applicability Thresholds for Regulatory Capital and Liquidity Requirements,” 84 FR 59230 (Nov. 1, 2019).

² The term covered banking organizations refers to Category I and II banking organizations, banking organizations with significant trading activity, and banking organizations that elect to use the expanded risk-based approach (as discussed further below).

more readily increase or decrease due to changes in the risk of its business activities. Improving the consistency of the regulatory capital framework would mean that the regulatory capital framework would apply similar capital requirements to exposures with similar risks across different banking organizations.

Elements of the proposal would address comments received from the Economic Growth and Regulatory Paperwork Reduction Act (EGRPA) public notices.³ Consistent with other recent efforts to modify the regulatory capital framework, the agencies expect the proposal would support the safety and soundness of covered banking organizations and U.S. financial stability while promoting lending and other financial intermediation activities by covered banking organizations over a range of economic conditions.⁴

Requirements under the proposal would generally be consistent with international capital standards issued by the Basel Committee on Banking Supervision (Basel Committee).⁵ Where appropriate, however, the proposal may differ from the standards published by the Basel Committee (Basel standards) to reflect specific characteristics of U.S. markets, requirements under U.S. generally accepted accounting

³ The agencies, together with the Federal Financial Institutions Examination Council, commenced a review under the Economic Growth and Regulatory Paperwork Reduction Act of 1996 in 2024 to identify outdated or otherwise unnecessary regulatory requirements. The agencies will continue reviewing and considering these comments as part of any final rulemaking. Public Law 104–208, Div. A, Title II, section 2222, 110 Stat. 3009–414, (1996) (codified at 12 U.S.C. 3311). See also Regulatory Publication and Review Under the Economic Growth and Regulatory Paperwork Reduction Act of 1996, 90 FR 35241 (Jul. 25, 2025).

⁴ Other recent initiatives to modernize the capital framework include the finalized changes to the enhanced supplementary leverage ratio standards, which would reinforce the role of leverage requirements as a backstop to risk-based capital requirements and address unintended incentive effects (see 90 FR 55248 (Dec. 1, 2025)); the community bank leverage ratio proposal, which would reduce regulatory burden while continuing to ensure the safety and soundness of community banks (see 90 FR 55048 (Dec. 1, 2025)); and recent proposals to revise the Board's stress testing framework, which would improve its transparency and reduce excess volatility in the stress capital buffer requirement (see 90 FR 16843 (Apr. 22, 2025) and 90 FR 51856 (Nov. 18, 2025)).

⁵ The Basel Committee is a committee composed of central banks and banking supervisory authorities, which was established by the central bank governors of the G–10 countries in 1975. The consolidated Basel framework is available at https://www.bis.org/basel_framework/. For additional discussion of the revisions to the Basel framework with which this proposal would align, see also <https://www.bis.org/bcb/publ/d424.htm>, <https://www.bis.org/bcb/publ/d457.htm>, and <https://www.bis.org/bcb/publ/d507.htm>.

principles (GAAP),⁶ practices of U.S. banking organizations, and U.S. statutory mandates and policy objectives. For example, the proposal would remove the current requirement to deduct mortgage servicing assets (MSAs) from regulatory capital and instead subject all MSAs to a 250 percent risk weight. This aspect of the proposal is intended to remove a regulatory disincentive for residential mortgage servicing and origination, reducing impacts on broader policy objectives regarding the U.S. housing market.

The agencies expect that the proposal would increase the common equity tier 1 capital requirements of Category I and II holding companies by about 1.2 percent, while decreasing corresponding requirements for Category I and II subsidiary depository institutions by 5.1 percent.⁷ Together with the GSIB surcharge proposal and the stress testing changes proposed in October 2025,⁸ the Board expects that the common equity tier 1 capital requirements for Category I and II holding companies would decline by 5.0 percent (see section VII for additional discussion of capital impact).⁹ The agencies performed extensive economic analysis to assess the potential effects of the proposal, including together with related proposals (see section VIII). The improvements in risk sensitivity, simplicity, transparency and consistency of risk-based capital requirements expected to result from the proposal justify its expected costs.

The agencies seek comment on all aspects of the proposal.¹⁰

A. Statutory Authority

Congress has authorized the agencies to establish risk-based capital requirements and standards for banking

organizations subject to this proposal. Section 165 of the Dodd-Frank Wall Street Reform and Consumer Protection Act (Dodd-Frank Act),¹¹ as amended by section 401 of the Economic Growth, Regulatory Relief, and Consumer Protection Act,¹² requires the Board to establish enhanced prudential standards that include risk-based capital requirements for bank holding companies with \$250 billion or more in total consolidated assets.¹³ The prompt corrective action framework in section 38 of the Federal Deposit Insurance Act (FDI Act) requires the agencies to prescribe capital standards for insured depository institutions that include a risk-based capital requirement and provides that the agencies may establish any additional relevant capital measures to carry out the purpose of that section.¹⁴ Various other statutory authorities provide the agencies with broad discretionary authority to set capital requirements and standards for banking organizations supervised by the agencies, including national banking associations, state-chartered banks, savings associations, and depository institution holding companies.¹⁵

¹¹ Dodd-Frank Wall Street Reform and Consumer Protection Act, Public Law 111–203, 124 Stat. 1376 (2010).

¹² Economic Growth, Regulatory Relief, and Consumer Protection Act, Public Law 115–174, 132 Stat. 1296 (2018).

¹³ See 12 U.S.C. 5365(a)(1), (b)(1)(A)(i). Section 165 of the Dodd-Frank Act also provides that the Board may apply any prudential standard established under section 165 to any bank holding company with \$100 billion or more in total consolidated assets to which the prudential standard does not otherwise apply, under certain circumstances. 12 U.S.C. 5365(a)(2)(C). Section 165, in relevant part, also applies to foreign banks or companies that are treated as a bank holding company for purposes of the Bank Holding Company Act. See 12 U.S.C. 3106(a), 5311(a)(1). See also section 401(g) of the Economic Growth, Regulatory Relief, and Consumer Protection Act (regarding the Board's authority to establish enhanced prudential standards for foreign banking organizations with total consolidated assets of \$100 billion or more). 12 U.S.C. 5365 note.

¹⁴ See 12 U.S.C. 1831o(c)(1)(A), (c)(1)(B)(i).

¹⁵ See 12 U.S.C. 93a (national banking associations); 12 U.S.C. 248(i), 324, 327, 329 (state member banks); 12 U.S.C. 1463 (savings associations); 12 U.S.C. 1467a(g)(1) (savings and loan holding companies); 12 U.S.C. 1844(b) (bank holding companies); 12 U.S.C. 3106 (certain U.S. operations of foreign banking organizations); 12 U.S.C. 3902(1)–(2), 3907(a), 3909(a), (c)(1)–(2) (depository institutions; affiliates of depository institutions, including holding companies; and certain U.S. operations of foreign banking organizations); 12 U.S.C. 5371 (insured depository institutions, depository institution holding companies, and nonbank financial companies supervised by the Board). Additional statutory authorities relevant to the agencies' capital rule can be found in the authority citations in the capital rule. See 12 CFR part 3 (OCC); 12 CFR part 217 (Board); 12 CFR part 324 (FDIC).

B. Objectives of the Proposal

The proposal aims to improve the capital framework for covered banking organizations by enhancing its risk sensitivity, reducing complexity, and improving transparency and consistency.

Risk sensitivity is a core feature of risk-based capital requirements. The proposed framework aims to improve the alignment of regulatory capital requirements with the risks presented by banking organizations' exposures. Such alignment could help promote safe and sound banking organizations that can lend through a range of economic conditions.

To further improve the capital framework, the proposal seeks to reduce complexity by simplifying its overall design. Redundant or unnecessarily complex requirements, such as multiple risk-based capital frameworks applying to the same banking organization, add costs that outweigh any incremental benefits presented by such an approach, whereas a simpler framework reduces compliance burden and strengthens transparency. Clear and transparent requirements support safety and soundness by making it easier for supervisors, investors, and other stakeholders to assess the financial condition of banking organizations. A central element of the proposal's effort to reduce redundancy is better integration with the Board's stress testing framework, which is achieved by considering jointly the calibrations of this proposal and the proposed stress test model changes that would inform stress capital buffer requirements.

The proposal would also promote consistency. Consistent capital requirements hold banking organizations with similar risk profiles to similar standards, thereby reducing unwarranted divergence. Consistency is also valuable internationally. The proposal is generally aligned with the Basel standards, with some differences as discussed in section II.F of this Supplementary Information. Broadly consistent regulatory frameworks should reduce complexity and compliance costs for banking organizations with cross-border operations, including both U.S. banking organizations operating abroad and foreign banking organizations operating in the United States.

By improving risk-based capital requirements, the proposal would bolster the role of large U.S. banking organizations in supporting the broader economy. The reforms that followed the 2007–09 financial crisis substantially increased the resilience of the U.S.

⁶ GAAP often serve as a foundational measurement component for U.S. capital requirements. See also 12 U.S.C. 1831n (generally requiring that financial reports required by the agencies from banking organizations use U.S. GAAP).

⁷ The revisions introduced by the proposal to the calculation of risk-weighted assets would also modify Category I bank holding companies' total loss-absorbing capacity (TLAC) requirements and long-term debt requirements.

⁸ See 90 FR 51856 (Nov. 18, 2025).

⁹ A banking organization for which the Board is the primary Federal supervisor must maintain capital ratios above the sum of its minimum requirements and buffer requirements to avoid restrictions on capital distributions and discretionary bonus payments.

¹⁰ In 2023, the agencies published a proposal to revise the capital rule based on the Basel Committee framework. 88 FR 64028 (Sept. 18, 2023). The agencies are rescinding the 2023 proposal. Members of the public that seek to submit comments on the current proposal must submit comments in line with the procedures described in this proposal.

banking system. However, in some cases, these post-crisis reforms have imposed burdens that contributed to the migration of some activities, such as mortgage origination and servicing, outside of the regulated banking sector.¹⁶ Revising the regulatory capital framework to better align requirements with risks—and in so doing easing requirements on some lower-risk, traditional banking activities—would contribute to U.S. banking organizations becoming better positioned to support the economy.

C. Overview of the Proposal

The proposal would streamline the risk-based capital requirements applicable to Category I and II banking organizations. Currently, these banking organizations are subject to two sets of risk-based capital ratio requirements: one based on the standardized approach (which also generally applies to other banking organizations) and the other based on an internal models framework, the advanced approaches.¹⁷ Under the proposal, Category I and II banking organizations would be subject to a single set of risk-based capital ratio requirements based on the “expanded risk-based approach”—which would include requirements for credit risk, equity risk, and operational risk—and the revised market risk framework.¹⁸ The standardized approach would no longer apply to these banking organizations, and the advanced approaches would be removed from the regulatory capital framework. As discussed further below, other banking organizations could choose to adopt the expanded risk-based approach that would be required for Category I and II banking organizations.

The expanded risk-based approach is a standardized framework that would promote the simplicity, risk sensitivity, transparency, and consistency objectives of the proposal. This approach would improve risk sensitivity

relative to the current standardized approach by varying capital requirements according to several new risk factors, such as loan-to-value ratios for real estate exposures, repayment history for retail exposures, and assessed creditworthiness for corporate exposures. Unlike the current standardized approach, the expanded risk-based approach would include a specific operational risk capital requirement. This difference, in part, supports the different calibration of credit risk weights under the expanded risk-based approach relative to the risk weights under the standardized approach.

The proposal would also revise the market risk framework, which would be applicable to Category I and II depository institution holding companies and to other banking organizations with significant trading activity. Significant trading activity would be defined to mean (1) more than \$5 billion in trading activity or (2) trading activity equal to or higher than 10 percent of the banking organization’s total assets. The new framework would improve risk sensitivity and consistency by revising the models-based approach for market risk and introducing a standardized approach for market risk. To reduce burden without a meaningful loss in resilience, the proposal would raise the threshold for applicability of the market risk framework from having trading activity of at least \$1 billion to having trading activity of at least \$5 billion.

As part of the revised market risk framework, the proposal would include a risk-sensitive and consistent framework for capturing the risks associated with credit valuation adjustment risk for derivative exposures.¹⁹ This framework would apply to (1) Category I and II depository institution holding companies, (2) depository institutions that are subsidiaries of Category I or II depository institution holding companies and have significant trading activity, and (3) other banking organizations with significant trading activity that also have at least \$1 trillion in notional derivative exposure.

The proposal would retain banking organizations’ ability to use internal models, with supervisory approval, to calculate market risk capital requirements. Market risk is more effectively modeled than credit and operational risk because relevant data is

observed at a much higher frequency and depth, providing the basis for both model calibration and empirical verification of model appropriateness.

The agencies consider the proposed requirements under the expanded risk-based approach to be appropriate for Category I and II banking organizations given their risk profiles, complexity, risk management resources, and international activities. The agencies recognize that the risk-sensitive requirements under the expanded risk-based approach may appeal to other banking organizations with certain business models and risk management systems. Therefore, the proposal would allow other banking organizations to elect to use the expanded risk-based approach. Banking organizations that choose this option would also be subject to the definition of capital that applies to Category I and II banking organizations.²⁰

In addition to the changes to the calculation of risk-weighted assets, the proposal would change the definition of regulatory capital applicable to Category I and II banking organizations by removing the threshold-based deduction for mortgage servicing assets. Thus, all mortgage servicing assets would receive a 250 percent risk weight under the proposal, consistent with the risk weight in the current capital rule for MSAs that do not exceed the deduction thresholds. This proposed revision would eliminate a strong disincentive for mortgage origination and mortgage servicing by banking organizations.

The proposal would also amend certain dollar-based regulatory thresholds, where appropriate, to reflect inflation and ensure that such thresholds preserve their intended application in real terms over time.²¹ Consistent with this proposal, the agencies are reviewing other thresholds throughout out the regulatory framework.

Finally, the proposal would revise disclosure requirements to facilitate market participants’ understanding of the financial condition and risk management practices of banking organizations subject to the expanded risk-based approach.²² In addition, to align with these revisions, the agencies anticipate proposing revisions to the

¹⁶ According to the 2024 Financial Stability Oversight Council report on nonbank mortgage servicing, nonbank mortgage companies originated approximately two-thirds of mortgages in the United States and owned the servicing rights on 54 percent of mortgage balances in 2022. In 2008, nonbank mortgage companies only accounted for 39 percent of mortgage originations and owned the servicing rights on 4 percent of mortgage balances. See page 3 FSOCC Report on Nonbank Mortgage Servicing 2024 at <https://home.treasury.gov/system/files/261/FSOC-2024-Nonbank-Mortgage-Servicing-Report.pdf>.

¹⁷ See 12 CFR part 3, subparts D and E (OCC); 12 CFR part 217, subparts D and E (Board); 12 CFR part 324, subparts D and E (FDIC).

¹⁸ For purposes of this discussion, unless otherwise noted, the revised market risk framework is inclusive of requirements for credit valuation adjustment risk, as applicable.

¹⁹ Credit valuation adjustment risk is the exposure to changes in the valuation of derivative contracts driven by changes in counterparty credit risk.

²⁰ This definition of capital would include the requirement to reflect accumulated other comprehensive income in regulatory capital and to use the deductions framework that applies to Category I and II banking organizations.

²¹ Certain thresholds in FDIC regulations are also indexed to reflect inflation. See 90 FR 55789 (Dec. 1, 2025).

²² The disclosure requirements would only apply to the top tier of a consolidated banking organization.

reporting forms of the Federal Financial Institutions Examination Council (FFIEC) that would apply to covered banking organizations.

In a separate rulemaking, the agencies are proposing modifications to the standardized approach risk-based capital requirements (standardized approach proposal), which would apply to banking organizations that do not use the expanded risk-based approach. Also, the Board is separately issuing a notice of proposed rulemaking that would revise the U.S. global systemically important banking holding company (GSIB) surcharge calculation applicable to Category I bank holding companies and the systemic risk report applicable to large holding companies (GSIB surcharge proposal).

Question 1: The agencies invite comment on the interaction of the revisions in the proposal with other existing rules and with other notices of proposed rulemaking.

Question 2: What would be an appropriate amount of time between the publication of any final rule and its effective date, and why?

II. Scope, Design, and Other Overarching Issues

A. Scope of Application

The proposal would require Category I and II banking organizations to use the expanded risk-based approach. These banking organizations present substantial systemic risks due to their size, complexity, interconnectedness, and cross-jurisdictional activity. Application of the expanded risk-based approach to them would provide granular, risk-sensitive, and standardized requirements that align with international standards.

While the expanded risk-based approach was designed for application to banking organizations that operate globally across multiple business lines, such as Category I and II banking organizations, the agencies are aware that the more differentiated treatments for traditional banking exposures such as mortgage, corporate, and retail exposures may appeal to certain smaller banking organizations. Therefore, the proposal would provide all banking organizations subject to the capital rule with the option of adopting the expanded risk-based approach in its entirety.

Under the proposal, a banking organization that chooses to adopt the expanded risk-based approach would become subject to the same definition of capital as Category I and II banking organizations and, therefore, be required to reflect most elements of accumulated

other comprehensive income in regulatory capital even if it subsequently changes to the standardized approach. This is consistent with the one-time election to recognize accumulated other comprehensive income in regulatory capital in the current standardized approach and avoids changes in accumulated other comprehensive income recognition based on interest rate cycles. For a banking organization that chooses to adopt the proposed expanded risk-based approach, the inclusion of most elements of other accumulated other comprehensive income in regulatory capital would be subject to a transition period of five years from the effective date of any final rule.²³

To align with a banking organization's annual capital planning processes, any change in election between the expanded risk-based approach and the standardized approach would take effect 12 months after the date on which the banking organization provides written notice of the change in election to its primary Federal supervisor. This requirement would help ensure that any change in election reflects structural balance sheet considerations and not short-term capital reductions.

Banking organizations with significant trading activities face an elevated level of market risk and, therefore, would continue to be subject to the market risk framework. The proposal would increase the current dollar-based threshold for the application of market risk capital requirements from \$1 billion to \$5 billion or more of trading assets and trading liabilities. The proposal would also revise the calculation of the dollar-based threshold amount to be based on four-quarter averages of trading assets and trading liabilities instead of point-in-time amounts. Banking organizations would continue to be subject to market risk capital requirements if their trading assets and trading liabilities represent 10 percent or more of total assets. Banking organizations that do not meet the thresholds for being subject to market risk capital requirements would calculate risk-weighted assets for trading exposures under the standardized approach or the expanded risk-based approach, as applicable. Additionally, under the proposal, Category I and II depository institution holding companies would be subject to

market risk capital requirements regardless of the amount of their trading activities.

The proposal would apply capital requirements for credit valuation adjustment risk to all Category I and II depository institution holding companies, as well as to their subsidiary depository institutions that are subject to the market risk framework. In addition, capital requirements for credit valuation adjustment risk would apply to other banking organizations subject to the market risk framework that have over-the-counter derivative notional amounts of \$1 trillion or more. Due to their substantial derivative portfolios, these banking organizations have meaningful exposure to losses resulting from changes to their credit valuation adjustment accounting reserve. This threshold aims to balance coverage of credit valuation adjustment risk and burden. According to data reported in the FR Y-9C form, depository institution holding companies above this threshold accounted for over 98 percent of the over-the-counter derivative exposures of depository institution holding companies as of 2025Q2.

Question 3: What are the advantages and disadvantages of the proposed scope of application of the expanded risk-based approach?

Question 4: What are the advantages and disadvantages of allowing all banking organizations to adopt the expanded risk-based approach? What are the challenges associated with adopting the expanded risk-based approach for Category III, IV, and smaller banking organizations? To what extent would this optionality limit the transparency and consistency of the risk-based capital requirements? What limitations or restrictions on how frequently a banking organization could switch from the expanded risk-based approach to the standardized approach and vice versa should the agencies include and why?

B. Single Set of Risk-Based Requirements

Under the proposal, banking organizations would be subject to a single set of risk-based capital ratio requirements.²⁴ This contrasts with the current framework, which requires Category I and II banking organizations to calculate two sets of risk-based capital ratios: one using the standardized approach and the other

²³ This transition period would mirror the transition period under the standardized approach proposal provided to Category III and IV banking organizations that do not currently recognize accumulated other comprehensive income in regulatory capital.

²⁴ This revision would be consistent with comments received under EGRPRA as commenters requested that banking organizations be required to calculate risk-weighted assets under a single approach.

using the internal models-based advanced approaches. By employing risk-sensitive, simplified, consistent, and transparent requirements, aligned with international standards, the expanded risk-based approach would result in an appropriate stand-alone requirement.

The capital conservation buffer requirement would apply to the risk-based capital ratios of Category I and II banking organizations in the same manner as it currently applies to the standardized approach ratios. For Category I depository institution holding companies, the capital conservation buffer requirement would continue to consist of the stress capital buffer requirement, the countercyclical capital buffer (if activated), and the GSIB surcharge. For Category II depository institution holding companies, the capital conservation buffer would continue to consist of the stress capital buffer requirement plus the countercyclical capital buffer (if activated). For the subsidiary depository institutions of Category I or II depository institution holding companies, the capital conservation buffer requirement would continue to equal 2.5 percent plus the countercyclical capital buffer requirement (if activated).

C. Removal of Internal Models for Credit and Operational Risk

The proposal would eliminate the advanced approaches framework and introduce in its place the expanded risk-based approach to improve the consistency and transparency of the risk-based capital requirements applicable to Category I and II banking organizations. This approach would help address many of the challenges associated with the use of internal models to calculate risk-based capital requirements for credit risk and operational risk.

In 2007, the agencies jointly issued a final rule requiring large, internationally active banking organizations to calculate risk-based capital requirements for credit risk and operational risk under the advanced approaches.²⁵ In seeking to ensure that these banking organizations are adequately capitalized, the advanced approaches require banking organizations to estimate their exposure to severe

unexpected losses.²⁶ However, available information since adoption of this rule suggests that the advanced approaches do not always result in consistent minimum requirements across U.S. banking organizations with similar risk profiles.²⁷ While internal models to calculate risk-based capital requirements for credit risk and operational risk do provide valuable information and may be more accurate in some cases than standardized approaches, as discussed below the severity of the outcomes the advanced approaches rule requires banking organizations to model coupled with data limitations and the subjectivity embedded in modeling assumptions has presented substantial challenges.

Financial risk models designed to capture severe loss events can suffer from substantial uncertainty.²⁸ Such uncertainty can result in substantial and unwarranted differences in capital requirements across similar exposures that are unrelated to differences in risk.

The advanced approaches require banking organizations to estimate loss given default conditional on an economic downturn. Ensuring that banking organizations' loss given default estimates are consistent with the risk of their exposures has proven challenging for several reasons, including (1) limited data on loss given default and its drivers under downturn conditions; (2) inconsistencies in constructing the loss given default variables, arising from factors such as methodological differences and difficulties in capturing all cash inflows and outflows after default;²⁹ and (3) difficulty in verifying certain modeling assumptions, such as the time window used to calculate loss given default in an economic downturn. To a lesser degree, verifying the appropriateness of banking organizations' probability of default models is challenging in some cases due

to limited data for certain low default portfolios and varying practices in identifying defaults across banking organizations.^{30 31}

For operational risk, banking organizations subject to the advanced approaches are required to estimate the 99.9th percentile of the distribution of the aggregated annual operational losses under the advanced measurement approaches (AMA). This requirement has presented substantial challenges for banking organizations and supervisors as a considerable amount of relevant data would be needed to empirically verify model performance. Given the severe outcome that the requirement is designed to estimate, model and parameter uncertainty can result in substantial divergence in model outcomes and, consequently, substantial divergence in capital requirements.³² In addition, infrequent large operational loss events tend to have substantial influence on model outcomes and can result in substantial volatility.³³ Together, these factors result in substantial uncertainty in internally modeled operational risk capital requirements and likely inconsistent requirements across banking organizations with similar operational risk profiles.

Taken together, the severe outcomes that the advanced approaches rule expects banking organizations to model, the limitations of available data, and the subjectivity of modeling assumptions

³⁰ For example, banking organizations have followed different practices regarding whether to count technical defaults (which are situations where the borrower failed to uphold an aspect of the loan agreement but has not failed to make regularly scheduled payments) as defaults for purposes of modeling probability of default.

³¹ Various analyses conducted by the Basel Committee, to which the agencies contributed, demonstrated significant divergence across banking organizations in credit risk-weighted assets calculated under the internal models-based approaches that could not be explained by differences in the riskiness of banking organizations' portfolios. See <https://www.bis.org/publ/bcbst56.pdf> and <https://www.bis.org/bcbst/publ/d363.pdf>.

³² See G. Mignola, and R. Ugoccioni, "Sources of Uncertainty in Modeling Operational Risk Losses," *Journal of Operational Risk* 1(2): 33–50 (2006); J. Nešlehová, P. Embrechts, and V. Chavez-Demoulin, "Infinite Mean Models and the LDA for Operational Risk," *Journal of Operational Risk* 1(1): 3–25 (2006); and E. Cope, G. Mignola, G. Antonini, and R. Ugoccioni, "Challenges and Pitfalls in Measuring Operational Risk from Loss Data," *Journal of Operational Risk* 4(4): 3–27 (2009).

Opdyke, and A. Cavallo, "Estimating Operational Risk Capital: The Challenges of Truncation, the Hazards of Maximum Likelihood Estimation, and the Promise of Robust Statistics," *Journal of Operational Risk* 7(3): 3–90 (2012).

²⁵ See Risk-Based Capital Standards: Advanced Capital Adequacy Framework—Basel II, 72 FR 69288 (Dec. 7, 2007). The agencies subsequently revised certain aspects of the advanced approaches framework in the rulemakings that established the current capital rule. See 78 FR 62018 (Oct. 11, 2013).

²⁶ For both credit risk and operational risk, the advanced approaches capital requirements aimed to cover the risk of loss over a one-year window at the 99.9th percentile level. See 72 FR 69288 (Dec. 7, 2007); 12 CFR part 3 (OCC); part 217 (Board); part 324 (FDIC).

²⁷ See, e.g., Tobias Berg, and Philipp Koziol "An analysis of the consistency of banks' internal ratings," *Journal of Banking and Finance* 78, 27–41 (2017), <https://dx.doi.org/10.1016/j.jbankfin.2017.01.013>; and Barbora Stepankova, and Petr Teply, "Consistency of Banks' Internal Probability of Default Estimates: Empirical Evidence from the COVID-19 crisis," *Journal of Banking and Finance* 154, 106969 (2023), <https://doi.org/10.1016/j.jbankfin.2023.106969>.

²⁸ See Jon Danielsson, "Blame the Models," *Journal of Financial Stability*, 321–28 (2008), <https://doi.org/10.1016/j.jfs.2008.09.003>.

²⁹ For example, horizontal supervisory reviews have found material deviations in loss rates at different banking organizations with respect to the same defaulted exposure.

contribute to concerns about the reliability of internal model outputs and unwarranted divergences in risk-based capital requirements for credit and operational risk across banking organizations.

The application of the stress capital buffer requirement to Category I and II bank holding companies also reduces the usefulness of retaining the advanced approaches for these banking organizations. Under the proposal, the stress capital buffer requirement would apply to the single set of risk-based capital ratios to which these bank holding companies would be subject, providing risk-sensitive capital requirements that reflect a granular, forward-looking assessment of risks. In this context, removing the advanced approaches simplifies the framework without reducing the resilience of Category I and II bank holding companies.

Under the current capital rule, banking organizations are required to maintain capital commensurate with the level and nature of all risks to which they are exposed³⁴ and to have a process for assessing their overall capital adequacy in relation to their risk profile and a comprehensive strategy for maintaining an appropriate level of capital.³⁵ In addition, certain large banking organizations are required to develop and maintain a capital plan³⁶ and conduct internal stress tests.³⁷ The proposal would not change these requirements. As discussed above, the advanced approaches have limitations as a means to set consistent minimum risk-based capital requirements. However, internal models can provide valuable information to a banking organization's internal risk management, stress testing, and planning functions and can be used to complement minimum capital requirements in assessing a banking organization's capital adequacy. Category I and II banking organizations, as well as other banking organizations, should continue to employ internal modeling capabilities for sound risk management as appropriate for the complexity of their activities.

The proposal would continue to allow the use of internal models to calculate market risk capital requirements, but only for trading desks where modeling can be demonstrated to be appropriate.

Market risk is more easily and effectively modeled than credit and operational risk because data on trading positions are observed at a much higher frequency and depth, in particular for commonly traded instruments. Trading creates price observations, which in turn provide daily feedback on model calibration and performance to support empirical verification through techniques such as back-testing. For these reasons, the benefits of retaining models are larger for market risk than for other exposure types.

Question 5: What are the advantages and disadvantages of removing internal models for credit risk and operational risk? Are there alternatives that the agencies should consider and if so, why?

Question 6: The Basel standards include a floor to risk-weighted assets, the "output floor," which corresponds to 72.5 percent of risk-weighted assets calculated only using standardized approaches. The proposal would not include this output floor because proposed requirements would be almost completely standardized and, therefore, the output floor would be unlikely to bind in most situations. What would be the advantages and disadvantages of including a floor to risk-weighted assets corresponding to 72.5 percent of the risk-weighted assets calculated using only the standardized approaches in the proposal.

D. Overlaps With the Stress Capital Buffer Requirement

In proposing these revised risk-based capital requirements for Category I and II banking organizations, the Board is mindful of the overlaps between the capital and stress testing frameworks. Together, this proposal and a recent proposal to enhance the transparency and public accountability of the Board's stress test,³⁸ which requested public comment on certain revisions to the Board's stress test models, aim to improve risk sensitivity of requirements in a way that considers the cumulative effect of the entire capital framework.

The stress capital buffer requirement represents an explicitly forward-looking element in the risk-based capital requirements of large bank holding companies. Informed by the Board's stress testing framework, the stress capital buffer requirement aims to capture exposures comprehensively and

granularly under conditions of severe stress.

Under the current rule, a bank holding company's stress capital buffer requirement is applied to its risk-based capital ratios calculated under the standardized approach, which do not include a specific requirement for operational risk, and is not applied to the bank holding company's requirements under the advanced approaches. This historical choice was motivated, in part, by the goal of limiting redundancy between the stress capital buffer requirement, based on the Board's forward-looking assessment of stress risks, and the bank holding company's modeling of tail risks under the advanced approaches.³⁹

Consistent with international standards, the proposed expanded risk-based approach would include a specific measure of operational risk in risk-weighted assets. Also, the proposed changes to the market risk framework would improve the measurement of tail risks in ways that are expected to raise minimum market risk capital requirements for the most complex banking organizations.

The outstanding Board stress testing proposal would introduce meaningful revisions to stress test models and scenarios, including the models for operational risk and trading positions. Operational risk modeling would be enhanced by focusing on the more robust historical simulation model. Similarly, the stress test proposal would improve the modeling of trading positions under the global market shock component of the severely adverse scenario by better measuring their liquidity horizons. Both proposed revisions, on their own and independent of other factors, are projected to somewhat reduce aggregate projected stress capital buffer requirements.⁴⁰

³⁹ "In addition, both the supervisory stress test and the advanced approaches are calibrated to reflect tail risks; thus it could be duplicative to require a firm to meet the requirements of the advanced approaches on a post-stress basis." 83 FR 18160 (Apr. 25, 2018).

⁴⁰ As the Board noted in October 2025, in aggregate, the proposed stress test model and scenario changes inform the Board's determination of a firm's stress capital buffer requirement and are not expected materially change capital requirements for firms subject to the supervisory stress test, across various stress test scenarios and jump-off conditions at the start of the test. That proposal included illustrative analysis that considered the potential effects of the proposed stress test model changes, independent of other factors and components that inform the Board's stress capital buffer determinations for specific firms, within the 2024 and 2025 supervisory stress tests. In that analysis, implementing the proposed model changes and proposed revisions to the global

Continued

³⁴ See 12 CFR 3.10(e)(1) (OCC); 12 CFR 217.10(e)(1) (Board); 12 CFR 324.10(e)(1) (FDIC).

³⁵ See 12 CFR 3.10(e)(2) (OCC); 12 CFR 217.10(e)(2) (Board); 12 CFR 324.10(e)(2) (FDIC).

³⁶ See 12 CFR 225.8; 12 CFR 238.170.

³⁷ See 12 CFR part 46 (OCC); 12 CFR part 238, subparts P and R, and 12 CFR part 252, subparts B and F (Board); 12 CFR part 325 (FDIC).

³⁸ See Enhanced Transparency and Public Accountability of the Supervisory Stress Test Models and Scenarios; Modifications to the Capital Planning and Stress Capital Buffer Requirement Rule, Enhanced Prudential Standards Rule, and Regulation LL, 90 FR 51856 (Nov. 18, 2025).

In summary, this proposal is projected to increase the minimum requirements for operational risk and market risk, while the stress test proposal's analysis of the proposed model changes estimated a decrease in related requirements for these risks, as they inform the stress capital buffer requirement. The Board expects both sets of revisions to improve risk sensitivity and coherence of the capital framework, while the revisions in this proposal would contribute to international consistency. The capital impact of these revisions would largely offset each other, and the Board considers that the combined calibration of these risks would be appropriate (see section VII for additional analysis of the cumulative calibration of requirements by risk type).

Question 7: The current Board stress testing methodology reflects a constant balance sheet assumption and assumes that a banking organization's risk-weighted assets generally remain unchanged over the nine-quarter projection horizon. What would be the advantages and disadvantages of adjusting the stress testing methodology to project changes in risk-weighted assets for banking organizations subject to the expanded risk-based approach and banking organizations subject to the market risk framework? For example, what would be the advantages and disadvantages of projecting changes in the risk-weighted assets applicable to credit exposures to better reflect deteriorations in obligors' credit quality during a stress period (such as migrating corporate exposures in the investment grade 65 percent risk weight category into the general corporate category or from the general corporate category into the past due category)? What would be the advantages and disadvantages of adjusting risk-weighted assets for operational risk by

market shock component of the severely adverse scenario in the 2024 and 2025 stress tests would have, independent of other factors, increased the aggregate projected common equity tier 1 (CET1) stress ratio, on average, by 29 basis points, which would have corresponded to a reduction in stress capital buffer requirements of approximately 23 basis points or approximately 2.2 percent of current required capital. See 90 *Federal Register* 51856, 51874–51877 (Nov. 18, 2025). The analysis estimates that the proposed model changes would reduce stress capital buffer requirements by approximately 13 basis points and that the proposed revisions to the global market shock scenario component would reduce stress capital buffer requirements by approximately 10 basis points. For U.S. GSIBs, the analysis estimates a decline of 25 basis points in stress capital buffer requirements. See also Federal Reserve Board—Federal Reserve Board requests comment on proposals to enhance the transparency and public accountability of its annual stress test; Dodd-Frank Act Stress Tests 2026 (Dec. 1, 2025).

projecting lower income amounts during a stress period? What, if any, changes should the Board consider to better project risk-weighted assets for trading positions and derivatives during a stress period in light of the proposed market risk framework, including the proposed credit valuation adjustment risk requirement (these may include revisions to reflect changes in modelability of risk factors and volatility)?

E. Indexing of Thresholds

The proposal uses certain thresholds to differentiate requirements based on a banking organization's size, risk profile, and complexity as well as on the characteristics of the exposures. However, static dollar-based thresholds can lead to unintended consequences if threshold levels are not periodically updated or indexed to inflation. For example, banking organizations can become subject to additional requirements and burden over time for reasons unrelated to changes in their risk profile. Under the proposal, certain dollar-based thresholds would be adjusted in the future to reflect inflation, pursuant to a pre-determined indexing methodology.⁴¹ Indexing dollar-based thresholds would preserve threshold levels in real terms, which would efficiently and transparently preserve the thresholds' intended application and align with intended policy objectives over time.

The proposed indexing methodology would adjust thresholds based on the consumer price index for urban wage earners and clerical workers (CPI-W) published by the U.S. Bureau of Labor Statistics. The use of CPI-W to index thresholds is consistent with other bank regulations, such as those relating to the Community Reinvestment Act and the Board's Regulation CC.⁴² Further, the indexing methodology included under the proposal would generally align with the methodology used to adjust certain thresholds within FDIC regulations.⁴³

⁴¹ This revision would also be consistent with comments received under EGRPA as commenters requested indexing of thresholds going forward to reflect inflation.

⁴² The agencies' regulations that implement the Community Reinvestment Act define small and intermediate-small banks by reference to asset-size criteria expressed in dollar amounts, which are adjusted annually based on the year-to-year change in inflation through a *Federal Register* notice. Specifically, this adjustment corresponds to the average of the Consumer Price Index for Urban Wage Earners and Clerical Workers, not seasonally adjusted, for each 12-month period ending in November, with rounding to the nearest million. See, e.g., Community Reinvestment Act Regulations Asset-Size Thresholds, 89 FR 106480, 106481 (Dec. 30, 2024). See also 12 CFR 229.11.

⁴³ See Adjusting and Indexing Certain Regulatory Thresholds, 90 FR 55789 (Dec. 1, 2025).

Specifically, certain dollar thresholds would be adjusted at the end of every consecutive two-year period based on the cumulative percent change of the non-seasonally adjusted CPI-W since the effective date of any final rule. This two-year period is intended to provide an appropriate cadence for capturing meaningful changes in inflation on a timely basis while minimizing the burden of adjustment. To address the possibility of periods of unusual inflation, the indexing methodology would also allow for discretionary adjustment to thresholds by the agencies during an off year. The proposal would also not lower thresholds in the event of deflation.⁴⁴ Additionally, thresholds adjusted under the proposed indexing methodology would be rounded based on the size of the threshold (e.g., billions, millions, thousands), generally, to the nearest two significant digits, as appropriate.⁴⁵

The proposal would index the following thresholds: (1) the \$1 million threshold for a retail exposure to qualify as regulatory retail; (2) the \$50 million annual revenue threshold for a borrower to qualify as a small or medium-sized entity; (3) the \$10 million threshold used to determine whether a company in which a covered banking organization owns equity instruments meets the definition of financial institution; (4) the \$1 billion and the \$30 billion business indicator thresholds that determine the marginal coefficients applicable for the calculation of the business indicator component in the operational risk capital requirement; (5) the \$20,000 threshold for mandatory collection of operational loss events; (6) the \$5 billion trading activity threshold for application of the market risk framework; (7) the \$1 trillion derivatives exposure threshold for application of the credit valuation adjustment risk requirement; (8) the \$20 million threshold above which net short positions must be included in the market risk framework; and (9) the \$2 billion threshold for an equity issuer to be classified as having large market capitalization in the market risk standardized approach.

To effectuate threshold changes under the proposal, the agencies would announce threshold adjustments pursuant to the indexing methodology by publishing the updated thresholds.

⁴⁴ Any periods of deflation would be reflected in future threshold increases, as threshold adjustments in the future would be based on the positive net cumulative change in CPI-W.

⁴⁵ For example, a threshold that would otherwise be calculated as \$5.964 million would be rounded to \$6.0 million, or the nearest \$0.1 million.

Threshold adjustments would be calculated based on cumulative CPI-W data through August of the year in which the adjustment is made, relative to the same initial baseline.⁴⁶

Question 8: What are the advantages and disadvantages of the proposed approach for indexing thresholds? What alternatives should the agencies consider and why? What are the advantages and disadvantages of using a different index for adjusting thresholds, such as nominal GDP or the GDP deflator, instead of CPI-W?

Question 9: Are there specific thresholds within the proposal that can result in an increase in operational burden when indexed? If so, which are they and why?

Question 10: What are the advantages and disadvantages of discretionary off-year adjustments for periods of unusual inflation? Should the agencies consider a framework for adjustment in off years, such as based on inflation or other threshold and, if so, why?

F. The Role of International Standards in Developing U.S. Capital Requirements

The agencies participate in international fora, including the Basel Committee, that support broadly aligned prudential financial regulation across major economies, consistent with the agencies' mandates and various statutory authorizations.⁴⁷ Standards issued by these international fora are not binding under U.S. law. The agencies routinely consider the potential benefits of such standards as part of a reasoned decision-making process when developing domestic rulemakings to implement prudential requirements.

Where appropriate and consistent with the agencies' statutory authorities and policy objectives, maintaining consistency between domestic financial regulatory policy and international standards can generate significant benefits, particularly regarding large, internationally active banking organizations. Large, internationally active banks and the U.S. financial system more broadly are highly interconnected with the global financial system. Promoting the application of suitable and robust prudential standards across jurisdictions can enhance the resilience of the U.S. financial system by reducing the likelihood of distress or

other problems that arise in a foreign jurisdiction having negative effects in the United States.⁴⁸

Comparability of standards across jurisdictions can also reduce complexity and compliance costs for banking organizations with significant cross-border operations or activities.⁴⁹ In particular, similar prudential standards enable the agencies and foreign supervisors to look to home country capital regimes when such requirements are generally consistent with international standards.⁵⁰ For example, similar prudential standards help to facilitate the Board's assessment of the capital adequacy of foreign banking organizations in connection with applications to establish operations within the United States.⁵¹ In addition, consistent standards help ensure that foreign banking organizations with U.S. operations are subject to standards at the consolidated level that promote safety and soundness and competitive equity with U.S. banking organizations. The adoption of similar prudential standards across many jurisdictions means that, consistent with section 165 of the Dodd-Frank Wall Street Reform and Consumer Protection Act (Dodd-Frank Act),⁵² the Board's enhanced prudential standards for large foreign banking organizations may rely on the home country capital and stress testing regimes applicable to a foreign banking organization, avoiding unnecessary duplication of requirements.⁵³

⁴⁶ The Basel Committee was originally formed after the failure of Herstatt Bank in Germany in 1974, which contributed to serious disruptions to foreign currency and banking markets within and beyond Germany, demonstrating the need for better coordination among bank regulators in different jurisdictions. See <https://www.bis.org/bcbshistory.htm>.

⁴⁹ See GAO Report "Bank Capital Requirements—Potential Effects of New Changes on Foreign Holding Companies and U.S. Banks Abroad" (Jan. 2012), <https://www.gao.gov/assets/gao-12-235.pdf>; see also GAO Report "International Banking—International Coordination of Bank Supervision: The Record to Date" (Feb. 1986), <https://www.gao.gov/assets/nsiad-86-40.pdf>.

⁵⁰ See, e.g., Board of Governors of the Federal Reserve System and U.S. Department of the Treasury, "Capital Equivalency Report" (June 1992), <https://fraser.stlouisfed.org/title/capital-equivalency-report-9009>; 12 U.S.C. 3105(j).

⁵¹ See, e.g., 12 CFR 211.24, 225.2(r)(3).

⁵² Public Law 111–203, 124 Stat. 1376 (2010). In applying section 165 to a foreign-based bank holding company, the Dodd-Frank Act directs the Board to give due regard to the principle of national treatment and equality of competitive opportunity, and to take into account the extent to which the foreign banking organization is subject, on a consolidated basis, to home country standards that are comparable to those applied to financial companies in the United States. See 12 U.S.C. 5365(b)(2).

⁵³ See, e.g., 12 CFR 252.143(a). Absent home-country standards consistent with the Basel Capital Framework, a foreign banking organization would

Additionally, comparability of standards across jurisdictions helps home country and host country supervisors, along with banking organization management and public markets, understand and monitor positions and risks across jurisdictions by providing all parties with a set of shared principles, concepts, and measuring tools.⁵⁴

Notwithstanding these benefits, the agencies have, at various times, concluded that departures from international standards are appropriate and desirable in light of domestic requirements or considerations, or where U.S. regulators simply believe different standards are more appropriate. Consistent with previous rulemakings that implemented aspects of the Basel standards in the United States,⁵⁵ the proposal may differ from the Basel standards in certain areas to reflect factors such as specific characteristics of U.S. markets, requirements under GAAP,⁵⁶ practices of U.S. banking organizations, and U.S. legal requirements and policy objectives.⁵⁷

G. Treatments Retained From the Current Standardized Approach

Taking the current standardized approach as a starting point, the proposal would generally adopt treatments consistent with the Basel standards when they would improve the risk sensitivity and consistency of the requirements applicable to covered banking organizations, do not conflict with existing U.S. law, and are appropriate for U.S. banking organizations. Many elements of the expanded risk-based approach would be consistent with the Basel standards and different in some respects from the treatment under the current standardized approach. In some cases, the current standardized approach is

be required to demonstrate to the Board's satisfaction that it would meet Basel Capital Framework standards at the consolidated level were those standards to apply. See 79 FR 17240 (Mar. 27, 2014).

⁵⁴ See GAO Report "International Banking—International Coordination of Bank Supervision: The Record to Date" (Feb. 1986), <https://www.gao.gov/assets/nsiad-86-40.pdf>.

⁵⁵ For example, the GSIB surcharge framework adopted by the Board includes a second method for calculating GSIB surcharges that is different from the Basel GSIB surcharge methodology. See 80 FR 49082 (Aug. 14, 2015). Additionally, alignment with the Basel standards can be achieved without using all methods specified in them and, in the past, the agencies have chosen not to adopt some methods included within the Basel standards. See, e.g., 61 FR 47358 (Sept. 6, 1996), 72 FR 69288 (Dec. 7, 2007), and 78 FR 62018 (Oct. 11, 2013).

⁵⁶ See 12 U.S.C. 1831n.

⁵⁷ See, e.g., 12 U.S.C. 1831bb and 5371; 15 U.S.C. 78o–7 note.

⁴⁶ The U.S. Bureau of Labor Statistics publishes the CPI-W on a monthly basis.

⁴⁷ See, e.g., 12 U.S.C. 1828 note, 3901, 3907, 3911, and 5373; see also 22 U.S.C. 9522 note; Federal Deposit Insurance Corporation Improvement Act of 1991 § 305(b)(2), Public Law 102–242, 105 Stat. 2236, 2355.

appropriately risk sensitive for application to Category I and II banking organizations and, therefore, the agencies are retaining those treatments with minimal or no change.⁵⁸

III. Definition of Capital

Under the proposal, all banking organizations required to apply the expanded risk-based approach, or that choose to adopt the expanded risk-based approach, would be subject to the same definition of capital. The proposal would broadly maintain the definition of capital for Category I and II banking organizations in the current capital rule, with one modification to eliminate the requirement to deduct MSAs⁵⁹ above a threshold from common equity tier 1 capital.⁶⁰ Banking organizations that choose to adopt the expanded risk-based approach would, therefore, be required to include most components of accumulated other comprehensive income in regulatory capital.

Under the current capital rule, Category I and II banking organizations must deduct from common equity tier 1 capital amounts of MSAs, temporary difference DTAs that the banking organization could not realize through net operating loss carrybacks, and significant investments in the capital of unconsolidated financial institutions in the form of common stock (collectively, threshold items) that individually exceed 10 percent of the banking organization's common equity tier 1 capital minus certain deductions and adjustments. In addition, these banking organizations must deduct from common equity tier 1 capital the aggregate amount of the threshold items that exceeds 15 percent of common equity tier 1 capital.

Under the proposal, Category I and II banking organizations would no longer be required to deduct any amount of MSAs from common equity tier 1 capital and would not consider MSAs when calculating the aggregate deduction amount for temporary difference DTAs and significant

investments in the capital of unconsolidated financial institutions in the form of common stock. Instead, MSAs would be subject to a 250 percent risk weight, consistent with the treatment in the current capital rule for MSAs that do not exceed the deduction thresholds.⁶¹ MSAs can be a useful tool for banking organizations to manage interest rate risk. The value of MSAs generally increases when interest rates rise, which extends the expected duration of related servicing fees. As a result, they may provide a hedge against losses on other assets that decline in value in the same interest rate environment.

Moreover, MSAs are important for banking organizations to maintain their relationship with borrowers by retaining customer-facing relationships even after transferring the underlying loans, allowing cross-selling of products. Banking organizations can also improve efficiency by increasing scale. A deduction approach for MSAs can discourage banking organizations from creating economies of scale, which can hinder their ability to compete in mortgage underwriting or servicing businesses and to manage risks.

At the same time, MSAs have long been subject to elevated capital requirements because of the high level of uncertainty regarding the ability of banking organizations to realize value from these assets, especially under adverse financial conditions. MSAs may face significant valuation risk, which mainly stems from prepayment risk, default risk, and liquidity risk. For example, increased refinancing of mortgage loans due to lower interest rates can quickly erode the value of MSA portfolios, as can increased incidents of mortgage defaults. MSAs can also be difficult to value, as banking organization portfolios of MSAs can be heterogeneous and MSA valuations rely on assessments of future economic variables. Maintaining the 250 percent risk weight for MSAs would promote regulatory capital requirements that are commensurate with the risk of these assets.⁶²

Question 11: What are the advantages and disadvantages of the proposed treatment of MSAs? What are the implications of the proposed treatment of MSAs for banking organizations' mortgage origination business? To what extent does the 250 percent risk weight appropriately reflect the risk of these assets throughout the economic cycle? Given the potential volatility of MSAs under certain circumstances, what are the advantages and disadvantages of the agencies imposing a higher limit on MSA as a percentage of common equity tier 1 capital (for example, 100 percent) and why? What are the advantages and disadvantages of differentiating the treatment of MSAs based on the size of the banking organization (for example, banking organizations with assets under \$10 billion or over \$100 billion) or applicable capital framework (for example, banking organizations that elect the community bank leverage ratio framework)?

IV. Calculation of Risk-Weighted Assets Under the Expanded Risk-Based Approach

A. Credit Risk

Credit risk arises from the possibility that an obligor, including a borrower or counterparty, will fail to perform on an obligation. While loans are a significant source of credit risk, other products, activities, and services also expose banking organizations to credit risk, including investments in debt securities and other credit instruments, credit derivatives, and cash management services. Off-balance sheet activities, such as letters of credit, unfunded loan commitments, and the undrawn portion of lines of credit, also expose banking organizations to credit risk. Certain transactions give rise to counterparty credit risk, which generally refers to the risk that a counterparty to a transaction will default before the final settlement of the transaction and will fail to make all the payments required by the transaction. Transactions that give rise to counterparty credit risk include repo-style transactions, eligible margin loans, and derivatives transactions. Counterparty credit exposure is determined by the market value of the transaction, which fluctuates with market conditions. Thus, the current exposure to a counterparty's default continuously changes and the future exposure is uncertain.

Under the proposal, a banking organization subject to the expanded

⁵⁸ For example, the expanded risk-based approach would treat sovereign exposures, certain exposures to government-sponsored entities, and exposures to public sector entities the same as the current standardized approach.

⁵⁹ An MSA arises when a banking organization sells a loan to a third party but retains the obligation to service the loan in exchange for a fee. Banking organizations may also purchase, sell, or transfer MSAs separately from the underlying mortgage loans.

⁶⁰ In addition, the proposal would require a banking organization to deduct from common equity tier 1 capital any portion of a credit-enhancing interest only strip that does not constitute an after-tax-gain-on sale, as discussed in section IV.B.5.f. of this **SUPPLEMENTARY INFORMATION**.

⁶¹ The agencies' standardized approach proposal would make the same modification to the definition of regulatory capital for all other banking organizations.

⁶² In the 2013 capital rule (78 FR 62069, Oct 11, 2013), in connection with section 475 of the Federal Deposit Insurance Corporation Improvement Act of 1991 (12 U.S.C. 1828 note), the agencies made a finding that the treatment under the capital rule of readily marketable purchased MSAs would not have an adverse effect on the Deposit Insurance Fund or the safety and soundness of insured depository institutions. The proposal would continue to apply a 250 percent risk weight to all MSAs, while removing the threshold deduction,

and the agencies continue to consider the proposed treatment to not have an adverse effect on the Deposit Insurance Fund or the safety and soundness of insured depository institutions.

risk-based approach would follow similar mechanics to those in the current standardized approach to determine its risk-weighted assets for credit risk. Such a banking organization would first determine the exposure amount of each on-balance sheet exposure, derivative contract, and off-balance sheet commitment, trade and transaction-related contingency, guarantee, repo-style transaction, financial standby letter of credit, forward agreement, or other similar transaction (excluding certain transaction types or exposures as specified in the proposed rule). In certain cases, exposure amount is measured at the netting-set level. The banking organization would then multiply the exposure amount by the risk weight appropriate to the exposure based on the exposure type or counterparty. In addition, the proposal would allow for the recognition of certain credit risk mitigants through adjustments to the risk-weighted asset amount for protected exposures.

Section IV.A.1. of this **SUPPLEMENTARY INFORMATION** describes in general terms the approaches for determining exposure amount under the proposal; section IV.A.2. of this **SUPPLEMENTARY INFORMATION** describes the risk-weight treatment for credit exposures under the proposal; section IV.A.3. of this **SUPPLEMENTARY INFORMATION** describes the proposed exposure measurement of off-balance sheet exposures; section IV.A.4. of this **SUPPLEMENTARY INFORMATION** describes the proposed exposure measurement for counterparty credit risk-related exposures; and section IV.A.5. of this **SUPPLEMENTARY INFORMATION** describes the available approaches for recognizing the benefits of credit risk mitigants including certain guarantees, certain credit derivatives, financial collateral, and prepaid credit protection arrangements.

1. Exposure Amounts

a. On-Balance Sheet Exposure Amount

Under the proposal, as under the current standardized approach, the exposure amount of an on-balance sheet exposure would generally be the banking organization's carrying value ⁶³

⁶³ Carrying value under § _____. 2 of the current capital rule means, with respect to an asset, the value of the asset on the balance sheet of the banking organization as determined in accordance with GAAP. For all assets other than available-for-sale debt securities or purchased credit deteriorated assets, the carrying value is not reduced by any associated credit loss allowance that is determined in accordance with GAAP. See 12 CFR 3.2 (OCC); 12 CFR 217.2 (Board); 12 CFR 324.2 (FDIC). The exposure amount arising from an OTC derivative contract; a repo-style transaction or an eligible margin loan; a cleared transaction; a default fund

of the exposure, consistent with the value of the asset on the balance sheet as determined in accordance with GAAP. Continuing to use the carrying value of an asset under GAAP to determine a banking organization's exposure amount would minimize burden and provide a consistent framework that can be easily applied across all banking organizations because, in most cases, GAAP serves as the basis for the information presented in financial statements and regulatory reports.⁶⁴

b. Off-Balance Sheet Exposure Amount

In addition to on-balance sheet exposures, banking organizations are exposed to credit risk associated with off-balance sheet exposures. Banking organizations often enter into contractual arrangements with obligors or counterparties to provide credit or other support. Such arrangements may not be recorded on-balance sheet under GAAP until the arrangement is drawn upon. These off-balance sheet exposures often include commitments, contingent items, guarantees, certain repo-style transactions, financial standby letters of credit, and forward agreements. Under the proposal, consistent with the current standardized approach, in most cases a banking organization determines the exposure amount for an off-balance sheet component of an exposure by multiplying the notional amount of the off-balance sheet component by the appropriate credit conversion factor specified in the rule. The proposed credit conversion factors would range from 10 percent to 100 percent to reflect the likelihood that a given off-balance sheet item would become an on-balance sheet credit exposure, taking into account the contractual features of the off-balance sheet item. For example, a 100 percent credit conversion factor would apply to a guarantee provided by a banking organization because the banking organization is effectively assuming the risk of the guaranteed exposure and thus such an off-balance

contribution; or a securitization exposure would be calculated in accordance with §§ _____. 113, 121, or 131 of the proposal, respectively, as described in sections IV.A.4., IV.A.5.b., and IV.B. of this Supplementary Information. The standardized approach proposal also includes a technical amendment that would modify the term adjusted allowance for credit losses (AACL) and carrying value to exclude allowance for credit losses (ACLs) on purchased seasoned loans (PSLs) in addition to those on purchased credit deteriorated (PCD) assets and available-for-sale (AFS) debt securities. The standardized approach proposal also amends the definition of AACL and carrying value to provide the same treatment as PCD assets to other assets that may in the future become subject to the gross approach following a change to GAAP by FASB.

⁶⁴ See 12 U.S.C. 1831n.

sheet item should be converted at the full amount. In contrast, with respect to commitments, often an obligor does not draw down on the commitment or only draws down a portion of the available credit, so such off-balance sheet items would be converted at less than 100 percent. Thus, the proposal would vary the credit conversion factors according to the likelihood that different types of off-balance sheet items may become on-balance sheet credit exposures.

c. Approaches for Determining Exposure Amount for Counterparty Credit Risk-Related Transactions

The current capital rule includes several approaches that a banking organization may use to calculate the exposure amount for repo-style transactions, eligible margin loans, derivative transactions, and netting sets of such transactions. These approaches take into account the offsetting of positions and financial collateral that meets the criteria in the rule within a netting set and incorporate both current and potential future exposure. For purposes of the expanded risk-based approach, the proposal would continue to include the collateral haircut approach for eligible margin loans and repo-style transactions, and netting sets of such transactions, and the standardized approach for counterparty credit risk (SA-CCR) for derivative contracts, netting sets of such transactions, and would expand SA-CCR to qualifying cross-product netting sets of derivative transactions and certain repo-style transactions, with modifications further described below in section IV.A.4. of this **SUPPLEMENTARY INFORMATION**.

To determine the exposure amount for eligible margin loans, repo-style transactions, or the netting sets of such transactions, the proposed expanded risk-based approach would include the collateral haircut approach with two proposed modifications to increase risk sensitivity: (1) adjustments to the market price volatility haircuts; and (2) a modified formula that reflects netting and diversification benefits, each further described below in section IV.A.4.a. of this **SUPPLEMENTARY INFORMATION**. A banking organization would have the option of applying SA-CCR to certain repo-style transactions that are subject to a qualifying cross-product master netting agreement that includes derivative transactions.

To determine the exposure amount for derivative contracts, the proposed expanded risk-based approach would require banking organizations to apply SA-CCR, with certain modifications to better reflect evolving market dynamics

and the potential for increased central clearing. The agencies are proposing to revise SA-CCR to permit the netting of collateralized-to-market and settled-to-market client-facing derivative transactions and incorporate non-cleared repo-style transactions. Specifically, the agencies are proposing to permit a banking organization to elect to treat as a derivative contract any non-cleared repo-style transaction subject to a qualifying cross-product master netting agreement that also contains a derivative contract. These proposed amendments and other proposed technical revisions to SA-CCR are described below in section IV.A.4.b. of this **SUPPLEMENTARY INFORMATION**.

As stated earlier, the proposal would increase simplicity, transparency, consistency, and comparability of capital requirements by reducing banking organization's use of models. Therefore, the proposal does not include the internal models methodology (IMM) or the simple value-at-risk (VaR) methodology for measuring counterparty credit risk or the use of a banking organization's own estimates of haircuts for purposes of the collateral haircut approach.

2. Proposed Risk Weights for Credit Risk

The proposed expanded risk-based approach would introduce credit risk weights that generally align with the Basel standards and use many of the same definitions in § _____.2 of the current capital rule. Some elements of the proposed expanded risk-based approach for credit risk would apply the same risk weights provided in the current standardized approach, including exposures to sovereigns, specified supranational entities⁶⁵ and multilateral development banks,⁶⁶

⁶⁵ Under the proposal, specified supranational entities would include the Bank for International Settlements, the European Central Bank, the European Commission, the International Monetary Fund, the European Stability Mechanism, and the European Financial Stability Facility. Consistent with the current capital rule, exposures to such entities would continue to be subject to a zero percent risk weight for the purposes of the expanded risk-based approach.

⁶⁶ Under the proposal, multilateral development bank would include International Bank for Reconstruction and Development, the Multilateral Investment Guarantee Agency, the International Finance Corporation, the Inter-American Development Bank, the Asian Development Bank, the African Development Bank, the European Bank for Reconstruction and Development, the European Investment Bank, the European Investment Fund, the Nordic Investment Bank, the Caribbean Development Bank, the Islamic Development Bank, the Council of Europe Development Bank, and any other multilateral lending institution or regional development bank in which the U.S. government is a shareholder or contributing member or which the primary Federal supervisor determines poses comparable credit risk. Consistent with the current

government sponsored entities (GSEs) in the form of senior debt and guaranteed exposures, Federal Home Loan Bank (FHLB) and Federal Agricultural Mortgage Corporation (Farmer Mac) equity exposures,⁶⁷ public sector entities (PSEs), exposures that are 90 days or more past due or in nonaccrual,⁶⁸ and certain insurance assets. Consistent with statutory mandates, the proposal would also maintain the same risk-weight treatment provided in the current standardized approach to pre-sold construction loans, statutory multifamily mortgages, and high-volatility commercial real estate (HVCRE) exposures.

Relative to the advanced approaches under the current capital rule, the proposed expanded risk-based approach would result in more consistent and transparent capital requirements for credit risk exposures across banking organizations. The proposal would also facilitate comparisons of capital adequacy across banking organizations by reducing excessive, unwarranted divergence in risk-weighted assets for similar exposures. Relative to the current standardized approach, the proposal would incorporate more granular risk factors to allow for a broader range of risk weights.

Specifically, the expanded risk-based approach would introduce new risk weights for exposures to depository institutions, foreign banks, and credit unions; subordinated exposures, including those to GSEs; and real estate, retail, and corporate exposures. The proposed risk weights for each of these categories are described in the following sections of this **SUPPLEMENTARY INFORMATION**.

Question 12: What are the pros and cons of continuing the risk-weights in the current standardized approach for sovereigns, specified supranational entities and multilateral development banks, GSEs in the form of senior debt and guaranteed exposures, FHLB and Farmer Mac equity exposures, PSEs, exposures that are 90 days or more past due or in nonaccrual, insurance assets, and other exposures?

Question 13: To enhance the risk sensitivity of the rule, what alternatives to "exposures that are 90 days or more

capital rule, exposures to these entities would continue to be subject to a zero percent risk weight for the purposes of the expanded risk-based approach

⁶⁷ For treatment of other exposures to GSEs, see discussion related to equity exposures in section IV.C. and subordinated exposures in section IV.A.2.f. of this **SUPPLEMENTARY INFORMATION**.

⁶⁸ Certain residential mortgage exposures that are 90 days past due or in nonaccrual would receive a higher risk weight under the proposal. See section IV.A.2.c.v of this **SUPPLEMENTARY INFORMATION**.

past due or in nonaccrual" should the agencies consider to identify exposures in or near default? What are the advantages and disadvantages of using an approach similar to the definition of defaulted exposures in the advanced approaches, that would include exposures where (a) the banking organization has taken a partial charge-off, write-down of principal, or negative fair value adjustment on the exposure for credit-related reasons, until the banking organization has reasonable assurance of repayment and performance for all contractual principal and interest payments on the exposure; or (b) a distressed restructuring of the exposure was agreed to by the banking organization, until the banking organization has reasonable assurance of repayment and performance for all contractual principal and interest payments on the exposure as demonstrated by a sustained period of repayment performance, provided that a distressed restructuring includes the following made for credit-related reasons: forgiveness or postponement of principal, interest, or fees, or an interest rate reduction?

a. Exposures to Government-Sponsored Enterprises

The proposal would assign a 20 percent risk weight to most GSE⁶⁹ exposures, consistent with the current standardized approach. GSE exposures that are subordinated exposures or equity exposures, however, would receive higher risk weights. As discussed later in sections IV.C. and IV.A.2.f. of this **SUPPLEMENTARY INFORMATION**, equity exposures and subordinated exposures would generally be subject to an increased risk weight to reflect their heightened risk relative to senior credit exposures. As an exception to this general rule, the proposal would apply a 20 percent risk weight to all exposures to FHLB or Farmer Mac, including equity exposures and exposures to subordinated debt instruments, which is consistent with the treatment under the current standardized approach.

b. Exposures to Depository Institutions, Foreign Banks, and Credit Unions

The proposal would define the scope of exposures to depository institutions,

⁶⁹ Government-sponsored enterprise (GSE) under § _____. 2 of the current capital rule means an entity established or chartered by the U.S. government to serve public purposes specified by the U.S. Congress but whose debt obligations are not explicitly guaranteed by the full faith and credit of the U.S. government. See 12 CFR 3.2 (OCC); 12 CFR 217.2 (Board); 12 CFR 324.2 (FDIC).

foreign banks, and credit unions in a manner that is consistent with the definitions and scope of exposures covered under the current capital rule. Under the proposal, a bank exposure would mean an exposure (such as a receivable, guarantee, letter of credit, loan, OTC derivative contract, or senior debt instrument) to a depository institution, foreign bank, or credit union.^{70 71}

The proposed treatment for bank exposures supports the simplicity, transparency, and consistency objectives of the proposal in a manner that is appropriately risk sensitive. The proposal would provide three categories for bank exposures that are ranked from the highest to the lowest in terms of creditworthiness: Grade A, Grade B, and Grade C. The assignment of a bank exposure to a category would be based on the indicators of creditworthiness of the obligor depository institution, foreign bank, or credit union. As outlined below, the proposal would rely on the current capital rule's definition of investment grade and the proposed definition of speculative grade for differentiating the credit risk of bank exposures. In addition, the proposal would incorporate publicly disclosed capital levels to differentiate the financial strength of a depository institution, foreign bank, or credit union in a manner that is both objective and transparent to supervisors and the public.

More specifically, a Grade A bank exposure would mean a bank exposure for which the obligor depository institution, foreign bank, or credit union (1) is investment grade, and (2) whose most recent publicly disclosed capital ratios meet or exceed the higher of: (a) the minimum capital requirements and any additional amounts necessary to not be subject to limitations on distributions and discretionary bonus payments under the capital rules established by

the prudential supervisor of the depository institution, foreign bank, or credit union, and (b) if applicable, the capital ratio requirements for the well-capitalized category under the agencies' prompt corrective action framework,⁷² or under similar rules of the National Credit Union Administration.⁷³ For a bank exposure to be considered investment grade, a banking organization would have to determine that the obligor has adequate capacity to meet financial commitments, consistent with the current rule.⁷⁴ Further, a bank exposure to a depository institution that had opted into the community bank leverage ratio (CBLR) framework and is investment grade would be considered to be a Grade A bank exposure, including if the obligor depository institution were in the grace period under the CBLR framework.⁷⁵ As a result, under the proposal, a depository institution that uses the CBLR framework would not be required to calculate or disclose risk-based capital ratios for purposes of qualifying as a Grade A bank exposure. Additionally, as described further in the next paragraph, a Grade A exposure to depository institutions that have opted into the CBLR framework would receive a reduced risk weight relative to other Grade A exposures.

Certain Grade A exposures to depository institutions, foreign banks, and credit unions would be subject to a 30 percent risk weight, whereas the others would be assigned a 40 percent risk weight. Specifically, a banking organization could assign a 30 percent risk weight to Grade A exposures to: (1) Category I, II, or III depository institutions with a common equity tier 1 capital ratio of 14 percent or higher and a supplementary leverage ratio (SLR) of five percent or higher; (2) depository institutions that have opted into the CBLR framework; and (3) depository institutions not subject to the SLR or CBLR framework with a common

equity tier 1 capital ratio of 14 percent or higher and a tier 1 leverage ratio of five percent or higher.⁷⁶ To qualify for the 30 percent risk weight, a foreign bank obligor would have to meet the same requirements of having a 14 percent or higher common equity tier 1 capital ratio and a five percent or higher leverage ratio as determined by the applicable capital standards of the foreign bank's home country jurisdiction.⁷⁷ Under this proposed criteria, 68.3 percent of U.S. depository institutions would meet the criteria for a highly capitalized bank exposure and be assigned a 30 percent risk weight, based on Call Report data as of June 30, 2025. Grade A exposures to credit unions would be subject to the 30 percent risk weight if the obligor credit union has a net worth ratio of 9 percent or higher.⁷⁸ These requirements would be broadly consistent with those in the Basel standards and provide a preferential risk weight for institutions presenting a materially lower credit risk than other Grade A bank exposures. The 30 percent risk weight for exposures to banks with materially higher capital levels would increase risk sensitivity while maintaining competitive equity across various sizes of obligor institutions.

A Grade B bank exposure would mean a bank exposure that is not a Grade A bank exposure and for which the obligor depository institution, foreign bank, or credit union (1) is speculative grade or investment grade, and (2) whose most recent publicly disclosed capital ratios meet or exceed the higher of: (a) the applicable minimum capital requirements under capital rules established by the prudential supervisor of the depository institution, foreign bank, or credit union, and (b) if applicable, the capital ratio requirements for the adequately-

⁷⁰ Under § _____.2 of the current capital rule, a depository institution means a depository institution as defined in section 3 of the Federal Deposit Insurance Act, a foreign bank means a foreign bank as defined in section 211.2 of the Federal Reserve Board's Regulation K (12 CFR 211.2) (other than a depository institution), and a credit union means an insured credit union as defined under the Federal Credit Union Act (12 U.S.C. 1751 *et seq.*). See 12 CFR 3.2 (OCC); 12 CFR 217.2 (Board); 12 CFR 324.2 (FDIC). Exposures to other financial institutions, such as bank holding companies, savings and loans holding companies, and securities firms, generally would be considered corporate exposures. See 78 FR 62087 (Oct. 11, 2013).

⁷¹ The proposal would require banking organizations to apply a 150 percent risk weight to bank exposures that are either subordinated exposures, as described in section IV.A.2.f. of this SUPPLEMENTARY INFORMATION, or covered debt instruments that are not deducted.

⁷² The capital ratios used for this determination are the ratios on the depository institution's most recent quarterly Consolidated Report of Condition and Income (Call Report).

⁷³ See 12 CFR part 702 (National Credit Union Administration).

⁷⁴ Under § _____.2 of the current capital rule, "investment grade" means that the entity to which the banking organization is exposed through a loan or security, or the reference entity with respect to a credit derivative, has adequate capacity to meet financial commitments for the projected life of the asset or exposure. Such an entity or reference entity has adequate capacity to meet financial commitments if the risk of its default is low and the full and timely repayment of principal and interest is expected.

⁷⁵ See 12 CFR 3.12(a)(1) (OCC); 12 CFR 217.12(a)(1) (Board); 12 CFR 324.12(a)(1) (FDIC). See also 90 FR 55048 (Dec. 1, 2025).

⁷⁶ An exposure to a depository institution that has not opted into the CBLR framework and is not required to calculate a common equity tier 1 ratio and a SLR or tier 1 leverage ratio, as applicable, under the agencies' capital rule would not qualify for the 30 percent risk weight.

⁷⁷ The Grade A foreign bank would have to meet the five percent Basel leverage ratio level for the 30 percent risk weight, as implemented by the foreign bank's home country. The Basel leverage ratio is substantially similar to the supplementary leverage ratio under the agencies' capital rule.

⁷⁸ For comparison, a well-capitalized credit union must have a net worth ratio (NWR) of 7 percent or greater. A NWR of 9 percent was selected given that is the level used in their Complex Credit Union Leverage Ratio (CCULR) framework. The average NWR of Risk-Based Capital reporters was 9.83 percent as of 2025 Q2. See Quarterly Credit Union Data Summary 2025 Q2 (Page 20) and Risk-Based Capital Frequently Asked Questions | NCUA.

capitalized category⁷⁹ under the agencies’ prompt corrective action framework, or under similar rules of the National Credit Union Administration.

For a foreign bank to qualify as a Grade A or Grade B bank exposure, the proposal would require the applicable capital standards imposed by the home country supervisor to be broadly consistent with international capital standards issued by the Basel Committee. This requirement aims to maintain competitive equity and recognize creditworthiness of institutions subject to capital standards that are broadly consistent—the capital standards issued by the Basel Committee are comparable to U.S. capital rules.

Under the proposal, an exposure to a foreign bank that is a Grade A or Grade B bank exposure and is a self-liquidating, trade-related contingent item that arises from the movement of goods and that has a maturity of three months or less may be assigned a risk weight that is lower than the risk weight applicable to other exposures to the same foreign bank. The proposed approach to providing a preferential risk weight for short-term self-liquidating,

trade-related contingent items would be consistent with the current standardized approach.

In addition, an exposure would not qualify as a Grade A or Grade B bank exposure if: (1) the obligor depository institution, foreign bank, or credit union does not have capital ratios that are publicly disclosed within the last six months; or (2) the external auditor of the depository institution, foreign bank, or credit union has issued an adverse audit opinion or has expressed substantial doubt about the ability of the depository institution, foreign bank, or credit union to continue as a going concern within the previous 12 months.

A Grade C bank exposure would mean a bank exposure that does not qualify as a Grade A or Grade B bank exposure.

The proposal would address the risk that capital and foreign exchange controls imposed by a sovereign entity in which a foreign bank is located could prevent or materially impede the ability of the foreign bank to convert its currency to meet its obligations or transfer funds. The proposal would, therefore, provide a risk weight floor for foreign bank exposures based on the risk weight applicable to a sovereign

exposure for the jurisdiction where the foreign bank is incorporated when (1) the exposure is not in the local currency of the jurisdiction where the foreign bank is incorporated; or (2) for an exposure to a branch of a foreign bank in a foreign jurisdiction that is not the home country of the foreign bank, the exposure is in the local currency of the jurisdiction in which the foreign branch operates.⁸⁰ The risk weight floor would not apply to short-term self-liquidating, trade-related contingent items that arise from the movement of goods.

As provided in Table 1, the proposed risk weights for bank exposures generally would range from 20 percent to 150 percent. The proposal provides more granular and higher risk weights for bank exposures compared to the standardized approach to better reflect the range of credit risks presented by these exposures. In addition, the proposal better accounts for financial system interconnectedness inherent in exposures to depository institutions, foreign banks, and credit unions, which can pose systemic risk to the financial system.

Table 1 — Proposed Risk Weights for Bank Exposures

	Grade A Bank Exposure Meeting Additional Criteria	Grade A Bank Exposure	Grade B Bank Exposure	Grade C Bank Exposure
Base risk weight	30%	40%	75%	150%
Risk weight for a foreign bank exposure that is a self-liquidating, trade-related contingent item that arises from the movement of goods and that has a maturity of three months or less	20%	20%	50%	150%

The proposed risk weights in Table 1 for exposures to depository institutions, credit unions and foreign banks, especially those that are Grade A, reflect that those institutions present reduced credit risk relative to exposures to other types of financial institutions or companies. U.S. depository institutions

and credit unions are subject to strong capital requirements, are subject to robust federal supervision, and have limitations in the types of riskier financial transactions in which they can engage. Foreign banks that qualify as Grade A would have broadly consistent capital standards as U.S. depository

institutions and also would be subject to regulatory and supervisory frameworks broadly equivalent with those in the Basel standards. Additionally, the proposed risk weights for bank exposures under the expanded risk-based approach would be more risk sensitive than the current standardized

⁷⁹ See 12 CFR 6.4(b)(2) (OCC); 12 CFR 208.43(b)(2) (Board); 12 CFR 324.403(b)(2) (FDIC).

⁸⁰ See Table 1 in § _____.111 for the proposed sovereign risk-weight table, which is identical to Table 1 to § _____.32 in the current capital rule.

approach as the expanded risk-based approach incorporates more credit-risk indicators and characteristics of the obligor depository institution, foreign bank, or credit union.

Question 14: What would be the advantages and disadvantages of the agencies treating an exposure to a nonbank financial institution such as foreign holding companies or broker dealer subsidiary institutions that are located in a foreign jurisdiction as a foreign bank exposure, when that foreign jurisdiction has determined that the given type of financial institution is regulated and supervised in that jurisdiction in a manner equivalent to banks?

Question 15: What are the advantages and disadvantages of assigning a 30 percent risk weight to Grade A bank exposures meeting the additional criteria discussed above? To what extent would the lower 30 percent risk weight contribute to the pro-cyclicality of bank capital requirements? To what extent might the risk weight contribute to credit contraction during economic downturns and credit acceleration during economic expansions?

Question 16: The agencies seek comment on the appropriateness of the additional requirements that must be met to for Grade A bank exposures to qualify for a 30 percent risk weight. What alternative calibration of common equity tier 1 capital ratio and supplementary leverage ratio levels would be appropriate for Category I, II, and III Grade A depository institutions to receive a 30 percent risk weight? What alternative calibration of common equity tier 1 capital ratio and tier 1 leverage ratio levels would be appropriate for depository institutions not subject to the CBLR framework or SLR to receive a 30 percent risk weight? Please provide analytical support.

Question 17: The agencies seek comment on whether the proposed treatment for exposures to depository institutions, foreign banks, and credit unions is appropriate for uninsured trust banks that do not have capital ratios that were publicly disclosed within the last six months, including such entities that issue payment stablecoins. What alternative calibrations or approaches should the agencies consider to differentiate the financial strength of uninsured trust banks that would be appropriately risk-sensitive and consistent with the objective of establishing simple, transparent, and consistent requirements?

Question 18: What would be the advantages and disadvantages of the agencies requiring broadly consistent

capital standards in the foreign jurisdiction, as well as robust regulatory and supervisory frameworks that are consistent with international capital standards issued by the Basel Committee for certain foreign banks to qualify as Grade A and Grade B? What are appropriate alternative indicators that could be used to determine whether a foreign bank qualifies for a Grade A classification? What are the advantages and disadvantages of looking to the applicable capital requirements in foreign jurisdictions for determining if a Grade A foreign bank meets the thresholds described above to be eligible to apply a 30 percent risk weight? What alternatives should the agencies consider to determine whether a foreign bank has sufficient capital to warrant applying a 30 percent risk weight to a Grade A foreign bank exposure?

c. Real Estate Exposures

The proposal would define a real estate exposure as an exposure that is neither a sovereign exposure nor an exposure to a PSE and that is (1) a residential mortgage exposure, (2) primarily secured by collateral in the form of real estate,⁸¹ (3) a pre-sold construction loan,⁸² (4) a statutory multifamily mortgage,⁸³ (5) a high volatility commercial real estate (HVCRE) exposure,⁸⁴ or (6) an acquisition, development, or construction (ADC) exposure. A pre-sold construction loan, a statutory multifamily mortgage, and an HVCRE exposure are collectively referred to as statutory real estate exposures for purposes of this **SUPPLEMENTARY INFORMATION**. Under the proposal, the

⁸¹ For purposes of the proposal, “primarily secured by collateral in the form of real estate” should be interpreted in a manner that is consistent with the current definition for “a loan secured by real estate” in the Call Report and Consolidated Financial Statements for Holding Companies (FR Y-9C) instructions.

⁸² The Resolution Trust Corporation Refinancing, Restructuring, and Improvement Act of 1991 (RTCRI Act) mandates that each agency provide in its capital regulations (i) a 50 percent risk weight for certain one-to-four-family residential pre-sold construction loans that meet specific statutory criteria in the RTCRI Act and any other underwriting criteria imposed by the agencies, and (ii) a 100 percent risk weight for one-to-four-family residential pre-sold construction loans for residences for which the purchase contract is cancelled. See 12 U.S.C. 1831n note.

⁸³ The RTCRI Act mandates that each agency provide in its capital regulations a 50 percent risk weight for certain multifamily residential loans that meet specific statutory criteria in the RTCRI Act and any other underwriting criteria imposed by the agencies. See 12 U.S.C. 1831n note.

⁸⁴ Section 214 of the Economic Growth, Regulatory Relief, and Consumer Protection Act imposes certain requirements on high volatility commercial real estate acquisition, development, or construction loans. Section 214 of Public Law 115–174, 132 Stat. 1296 (2018). See 12 U.S.C. 1831bb.

risk weight treatment for statutory real estate exposures would be unchanged from the current standardized approach.

Risks related to exposures secured by real estate depend on what type of real estate secures the exposure. Residential real estate loans generally have lower historical charge off rates than commercial real estate exposures.⁸⁵ Residential real estate exposures are generally amortizing, often have stricter underwriting standards for leverage than commercial real estate, and often are easier to value. In addition, residential and commercial real estate exposures that are deemed prudently underwritten reflect reduced credit risk relative to those real estate exposures that are not prudently underwritten.⁸⁶ The proposal would therefore differentiate the credit risk of real estate exposures that are not statutory real estate exposures by introducing the following categories: regulatory residential real estate exposures, regulatory commercial real estate exposures, ADC exposures, and other real estate exposures. The applicable risk weight for these real estate exposures would depend on (1) whether the real estate exposure meets the definitions of regulatory residential real estate exposure, regulatory commercial real estate exposure, ADC exposure, or other real estate exposure, described below; (2) whether the repayment of such exposures is dependent on the cash flows generated by the underlying real estate (such as rental properties, leased properties, and hotels); and (3) in the case of regulatory residential or regulatory commercial real estate exposures, the loan-to-value (LTV) ratio of the exposure.

The proposed criteria for differentiating the credit risk of real estate exposures would be based on information already collected and maintained by a banking organization as part of its mortgage lending activities and underwriting practices. Under the proposal, regulatory residential and regulatory commercial real estate exposures would be required to meet prudential criteria that are intended to reduce the likelihood of default relative to other real estate exposures. These criteria include a requirement that loans are made in accordance with prudent underwriting standards as described in

⁸⁵ See “Charge Off Rates for Loans and Leases at Commercial Banks,” <https://www.federalreserve.gov/releases/chargeoff/delallsa.htm>.

⁸⁶ See sections IV.A.2.c.i. and ii of this **SUPPLEMENTARY INFORMATION** for more information about the prudential criteria differentiating regulatory residential and regulatory commercial real estate exposures.

the existing Interagency Guidelines for Real Estate Lending Policies (real estate lending guidelines).⁸⁷ Loans that are prudently underwritten are less likely to lead to credit losses. Thus, the risk weights proposed for these exposures are lower than for other real estate exposures.

Moreover, real estate loans for which repayment is dependent on the cash flows generated by the real estate can expose a banking organization to elevated credit risk relative to real estate exposures where repayment is not dependent on cash flows generated by the property,⁸⁸ as the obligor may be unable to meet its financial commitments when cash flows from the property decrease, such as when tenants default or properties are unexpectedly vacant.⁸⁹ Exposures that are dependent on the cash flows generated by real estate to repay the loan can also be affected by local market conditions and, thus, present elevated credit risk relative to exposures that are serviceable by the income, cash, or other assets of the obligor. For example, an increase in the supply of competitive rental property can lower demand and suppress cash flows needed to support repayment of a loan.

In addition, LTV ratios are a meaningful risk indicator for the credit quality of a real estate exposure because the amount of an obligor's equity in a real estate property is negatively correlated with default risk and provides banking organizations with a degree of protection against losses.⁹⁰ LTV ratios are also one of several key factors that market participants,

including banking organizations, consider for differentiating credit risk.⁹¹ Therefore, under the proposal, exposures with lower LTV ratios generally would receive a lower risk weight than comparable real estate exposures with higher LTV ratios.

The proposed scope, risk drivers, and risk weights described below are generally consistent with those in the Basel standards.

i. Regulatory Residential Real Estate Exposures

Under the proposal, a regulatory residential real estate exposure would be defined as a first-lien residential mortgage exposure (as defined in § _____.2 of the current capital rule) that is not an ADC exposure, a pre-sold construction loan, a statutory multifamily mortgage, or an HVCRE exposure, provided the exposure meets certain prudential criteria.⁹² First, the loan would be required to be secured by a residential property that is either owner-occupied or rented. Second, the exposure would be required to be made in accordance with prudent underwriting standards, including standards relating to the supervisory LTVs as described in the interagency real estate lending guidelines.⁹³ Third, during the underwriting process, the banking organization would be required to apply underwriting policies that account for the ability of the obligor to repay based on clear and measurable underwriting standards that enable the banking organization to evaluate these credit factors. The agencies expect these underwriting standards to be consistent with the agencies' safety and soundness and real estate lending guidelines.⁹⁴ Fourth, the property must be valued in accordance with the proposed requirements included in the proposed LTV ratio calculation, as discussed below in section IV.A.2.c.iv. of this

SUPPLEMENTARY INFORMATION. Finally, the loan must not have been modified or restructured.⁹⁵

As discussed, residential real estate exposures that meet these criteria present relatively lower credit risk than other residential real estate exposures. Loans on property that are owner-occupied or rented have both a consistent expected flow of payments on the loan, as well as an occupant of the property that is present. Evaluating the ability of the obligor to repay using consistent and transparent metrics allows banking organizations and supervisors to more easily compare the obligor's ability to repay with other borrowers in the banking organization's loan portfolio. Modified or restructured loans reflect that there might be deterioration in the ability of the borrower to repay and, though not necessarily indications of likely default, merit higher applicable risk weights than those that have no such indications of potential deterioration in credit quality.

ii. Regulatory Commercial Real Estate Exposures

The proposal would define a regulatory commercial real estate exposure as a real estate exposure that is not a regulatory residential real estate exposure, an ADC exposure, a pre-sold construction loan, a statutory multifamily mortgage, or an HVCRE exposure, provided the exposure meets several prudential criteria. First, the exposure would be required to be primarily secured by fully completed real estate.⁹⁶ Second, the banking organization would be required to hold a first priority security interest in the property that is legally enforceable in all relevant jurisdictions.⁹⁷ Third, the exposure would be required to be made in accordance with prudent underwriting standards, including standards relating to supervisory LTVs. Fourth, during the underwriting process, the banking organization would be required to apply underwriting policies that account for the ability of the obligor to repay in a timely manner

⁸⁷ See 12 CFR part 34, appendix A to subpart D (OCC); 12 CFR part 208, appendix C (Board); 12 CFR part 365, appendix A (FDIC).

⁸⁸ Loans secured by real estate where the repayment of the loan does not depend on cash flows generated by the real estate include owner-occupied properties, where repayment of the loan is generally based on the income or revenue of the borrower. See additional discussion of dependent on the cash flows generated by the real estate in section IV.A.2.c.iii. of this **SUPPLEMENTARY INFORMATION.**

⁹² Consistent with the standardized approach in the capital rule, under the proposal, when a banking organization holds the first-lien and junior-lien(s) residential mortgage exposures and no other party holds an intervening lien, the banking organization must combine the exposures and treat them as a single first-lien regulatory residential real estate exposure, if the first-lien meets all of the criteria for a regulatory residential real estate exposure.

⁹³ For more information on determining the value of the property, see section IV.A.2.c.iv. of this **SUPPLEMENTARY INFORMATION.**

⁹⁴ See 12 CFR part 30, appendix C and 12 CFR part 34, appendix A to subpart D (OCC); 12 CFR part 208, appendix C (Board); 12 CFR parts 364 and 365 (FDIC).

⁹⁵ Consistent with the current standardized approach, a residential real estate loan that is modified or restructured solely pursuant to the U.S. Treasury's Home Affordable Mortgage Program is not modified or restructured under this criterion for regulatory residential real estate exposures.

⁹⁶ Commercial properties where the construction is complete and the property is ready for its intended use.

⁹⁷ When the banking organization also holds a junior security interest in the same property and no other party holds an intervening security interest, the banking organization must treat the exposures as a single first-lien regulatory commercial real estate exposure, if the first lien meets all the criteria for a regulatory commercial real estate exposure.

based on clear and measurable underwriting standards that enable the banking organization to evaluate these credit factors. The agencies expect that these underwriting standards would be consistent with the agencies' safety and soundness and real estate lending guidelines. The property would be required to be valued in accordance with the requirements included in the proposed LTV ratio calculation, as discussed below. Finally, the loan must not have been modified or restructured.

As previously discussed, commercial real estate exposures that meet these criteria would present relatively lower credit risk than other commercial real estate exposures. Loans on property that is still under construction are reliant on the completion of the property for repayment of the loan, which can be delayed or interrupted by many factors such as changes in market condition or financial difficulty of the obligor.⁹⁸ A perfected, first priority security interest would provide the banking organization with priority for repayment in the case of bankruptcy of the obligor.⁹⁹ Evaluating the ability of the obligor to repay using consistent and transparent metrics allows banking organizations and supervisors to more easily compare the obligor's ability to repay with other borrowers in the banking organization's loan portfolio. As with residential exposures, permanent commercial real estate loans that have been modified or restructured indicate there might be a deterioration in the ability of the borrower to repay, meriting higher applicable risk weights than those that have no such indications.

Question 19: What are the pros and cons of the proposed requirements for real estate exposures to qualify as regulatory commercial real estate exposures? How would the requirement for the banking organization to hold a first-priority security interest in the property that is legally enforceable in all relevant jurisdictions impact loans to different types of commercial borrowers? For those commercial real estate exposures where banking organizations do not hold a first priority security interest in the underlying property, what, if any, alternatives should the agencies consider that would result in the same priority for repayment in the case of bankruptcy of the obligor?

⁹⁸ See, e.g., <https://www.occ.gov/publications-and-resources/publications/comptrollers-handbook/files/commercial-real-estate-lending/pub-ch-commercial-real-estate.pdf>.

⁹⁹ See, e.g., <https://www.occ.treas.gov/static/ots/exam-handbook/ots-exam-handbook-214aa.pdf>.

iii. Exposures That Are Dependent on the Cash Flows Generated by the Real Estate

As noted above, the proposal would differentiate the risk weight of regulatory residential, regulatory commercial, and other real estate exposures based on whether the obligor's ability to service the loan is dependent on cash flows generated by the real estate.

If the underwriting process at origination of the real estate exposure considers any cash flows generated by the real estate securing the loan, such as from lease or rental payments or from the sale of the real estate, as a source of repayment, then the exposure would meet the proposal's definition of dependent on the cash flows generated by the real estate. Evaluating the dependence on cash flows generated from the real estate is a conservative and straightforward measure of credit risk. Reliance on cash flows from the property for repayment of a loan indicates increased risk of nonpayment relative to when the borrower has sufficient funds from other sources, such as income or business profits, for full repayment of the loan. Given their increased credit risk, the proposal would assign higher risk weights to exposures that are dependent on proceeds or cash flows generated from the real estate itself to service the loan.

Under the proposal, additional loan characteristics can affect whether an exposure would be considered dependent on cash flows generated by the real estate. The proposal's definition of dependent on the cash flows generated by the real estate would exclude any residential mortgage exposure that is secured by the obligor's principal residence, as such mortgage exposures present reduced credit risk relative to real estate exposures that are secured by the obligor's non-principal residence.¹⁰⁰ For residential properties that are not the obligor's principal residence, including vacation homes and other second homes, such properties would be considered dependent on the cash flows generated by the real estate unless the banking organization has relied solely on the

¹⁰⁰ See Breck Robinson, Federal Reserve Bank of Richmond, and Richard M. Todd, Federal Reserve Bank of Minneapolis, "The Role of Non-Owner-Occupied Homes in the Current Housing and Foreclosure Cycle," Pg. 6, which cites multiple studies that loans on non-owner occupied properties have higher loss rates on mortgages to non-occupant owners than on mortgages to owner-occupants, at least after controlling for credit scores and other standard underwriting criteria. https://www.richmondfed.org/~media/richmondfedorg/publications/research/working_papers/2010/pdf/wp10-11.pdf.

obligor's personal income and resources, rather than rental income (or resale or refinance of the property), to ascertain the obligor's capacity to repay the loan.¹⁰¹

For regulatory commercial real estate exposures, the applicable risk weights similarly would be determined based on whether repayment is dependent on the cash flows generated by the real estate. For example, the agencies would expect that rental office buildings, hotels, and shopping centers leased to tenants are often dependent on the cash flows generated by the real estate for repayment of the loan. In the case of a loan to an obligor to purchase or refinance real estate where the obligor will operate a business, such as a retail store or factory, and rely solely on the revenues from the business or resources of the obligor other than rental, resale, or other income from the real estate for repayment, the exposure would not be considered dependent on the cash flows generated by the real estate under the proposal. Similarly, a loan to the owner-operator of a farm would not be considered dependent on the cash flows generated by the real estate under the proposal if the obligor will rely solely on the sale of products from the farm or other resources of the obligor other than rental, resale, or other income from the real estate for repayment.

Question 20: What are the pros and cons of the agencies establishing a "materially" dependent on cash flows test that would consider the source of repayment to be partly from the borrower's own resources and partly from the cash flows/income generated by the real estate? What, if any, quantitative threshold should the agencies consider in determining whether a real estate exposure is dependent on cash flows generated by the real estate (for example, the cash flows generated from real estate reflect between 5 and 50 percent of amount needed for repayment of the loan)? Further, if the agencies decide to adopt a quantitative threshold, either for regulatory residential or regulatory commercial real estate exposures, what should the agencies consider when calibrating such a threshold for regulatory residential, and separately for regulatory commercial real estate

¹⁰¹ For example, if (1) a borrower purchases a two-unit property with the intention of making one unit their principal residence, (2) the borrower intends to rent out the second unit to a third party, and (3) the banking organization considered the cash flows from the rental unit as a source of repayment, the exposure would not meet the proposal's definition of dependent on the cash flows generated by the real estate because the property securing the exposure is the borrower's principal residence.

exposures, and what would be the appropriate calibration levels for each? Provide specific examples, including calculations and supporting data. Relatedly, please provide views on how to define cash flows and what expenses, if any, the agencies should consider.

iv. Calculating the Loan-to-Value Ratio

The proposal would require a banking organization to use LTV ratios to assign a risk weight to a regulatory residential or regulatory commercial real estate exposure. The proposed calculation of the LTV ratio would be generally consistent with the real estate lending guidelines except with respect to the recognition of private mortgage insurance, as described below.

Under the proposal, an LTV ratio would be calculated as the extension of credit divided by the value of the property. The extension of credit would mean the total outstanding amount of the loan including the notional total of any undrawn committed amount of the loan. The total outstanding amount of the loan would reflect the current amortized balance as the loan pays down, which would allow a banking organization to assign a lower risk weight to a loan over time as the principal is repaid. Similarly, if an extension of credit increases, a banking organization would reflect that increase in the LTV ratio.

For purposes of the LTV ratios in Tables 2, 3, 4, 5 below, a banking organization would calculate the loan amount without making any adjustments for credit loss provisions or private mortgage insurance. Not recognizing private mortgage insurance for these purposes would be consistent with the current capital rule's definition of eligible guarantor, which does not recognize an insurance company engaged predominately in the business of providing credit protection (such as a monoline bond insurer or re-insurer).¹⁰² During the 2007–2009 housing market stress, the performance of private mortgage insurance deteriorated at the same time as the underlying exposures.¹⁰³ Under the proposal and consistent with the current capital rule, private mortgage insurance is considered when banking

organizations identify if a residential mortgage exposure is made in accordance with prudent underwriting standards. As discussed earlier, under the proposal a residential mortgage exposure must be made in accordance with prudent underwriting standards and must meet other requirements to be considered regulatory residential real estate exposures and therefore eligible to be risk weighted according to the LTV table described below.¹⁰⁴

The value of the property would mean the value at the time of origination of all real estate properties securing the extension of credit, including the increased estimated value of the property if the property is being improved by an extension of credit. The value of the property would also include the fair value of any readily marketable collateral and other acceptable collateral, as defined in the real estate lending guidelines, that secures the extension of credit.

For exposures subject to the Real Estate Lending, Appraisal Standards, and Minimum Requirements for Appraisal Management Companies or Appraisal Standards for Federally Related Transactions (collectively, the appraisal rule),¹⁰⁵ the market value of real estate would be a valuation that meets all requirements of that rule. For exposures not subject to the appraisal rule, the proposal would require that (1) the market value of real estate be obtained from an independent valuation of the property using prudently conservative valuation criteria; and (2) the valuation be done independently from the banking organization's origination and underwriting process. Most real estate exposures held by insured depository institutions are subject to the agencies' appraisal rule, which also provides for evaluations in some cases, and provides for certain exceptions, such as where a lien on real estate is taken out of an abundance of caution. To help ensure that the value of the real estate is determined in a prudently conservative manner, the proposal would also provide that, for exposures not subject to the appraisal rule, the valuations of the real estate properties would need to exclude expectations of price increases and be

adjusted downward to take into account the potential for the current market prices to be significantly above the values that would be sustainable over the life of the loan.

In addition, when the real estate exposure finances the purchase of the property, the value would be the lower of (1) the actual acquisition cost of the property and (2) the market value obtained from either (i) the valuation requirements under the appraisal rule (if applicable) or (ii) as described above, an independent valuation of the property using prudently conservative valuation criteria and that is separate from the banking organization's origination and underwriting process.

Using the value of a property at origination when calculating the LTV ratio protects against volatility risk or short-term market price inflation. For purposes of the LTV ratio calculation, the proposal would require banking organizations to use the value of the property at the time of origination, except under the following circumstances: (1) the banking organization's primary Federal supervisor requires the banking organization to revise the property value downward; (2) an extraordinary event occurs resulting in a permanent reduction of the property value (for example, a natural disaster); or (3) modifications are made to the property that increase its market value and are supported by a new appraisal or independent evaluation using prudently conservative criteria. These proposed exceptions are intended to constrain the use of values other than the value of the property at loan origination only to exceptional circumstances that are sufficiently material to warrant use of a revised valuation.

For purposes of determining the value of the property, the proposal would use the definition of readily marketable collateral and other acceptable collateral from the real estate lending guidelines. Therefore, readily marketable collateral would mean insured deposits, financial instruments, and bullion in which the banking organization has a perfected security interest. Financial instruments and bullion would need to be salable under ordinary circumstances with reasonable promptness at a fair market value determined by quotations based on actual transactions, by an auction, or by a similarly available daily bid and ask price market. Other acceptable collateral would mean any collateral in which the banking organization has a perfected security interest that has a quantifiable value and is accepted by the banking organization in accordance with safe and sound lending practices.

¹⁰² A guarantor is not an eligible guarantor under the current capital rule if the guarantor's creditworthiness is positively correlated with the credit risk of the exposures for which it has provided guarantees. 78 FR 62141 (Oct. 11, 2013).

¹⁰³ See Laurie Goodman and Karan Kuhl, "Sixty Years of Private Mortgage Insurance in the United States," The Urban Institute Housing Finance Policy Center, August 2017. Pg. 7, https://www.urban.org/sites/default/files/publication/92676/2017_08_18_sixty_years_of_pmi_finalizedv3_3.pdf.

¹⁰⁴ As described in section IV.A.2.c.i. of this **SUPPLEMENTARY INFORMATION**, regulatory residential mortgage exposures must be made in accordance with prudent underwriting standards, including standards relating to supervisory LTVs, which allow for the consideration of private mortgage insurance for permanent mortgage or home equity loans on owner-occupied, 1- to 4-family residential properties.

¹⁰⁵ See 12 CFR part 34, subpart C or subpart G (OCC); 12 CFR part 208, subpart E or 12 CFR part 225, subpart G (Board); 12 CFR part 323 (FDIC).

Under the proposal, other acceptable collateral would include, among other items, unconditional irrevocable standby letters of credit for the benefit of the banking organization. Readily marketable collateral and other acceptable collateral must be appropriately discounted by the banking organization consistent with the banking organization's usual practices for making loans secured by such collateral. The reasonableness of a banking organization's underwriting criteria would continue to be reviewed through the supervisory process to help ensure its real estate lending policies are consistent with safe and sound banking practices.

Question 21: What other approaches should the agencies consider to recognize private mortgage insurance in the determination of the risk weight of residential mortgage exposures? What would be the pros and cons of providing

explicit recognition of private mortgage insurance in the calculation of LTV ratio for purposes of determining the risk weights for regulatory real estate exposures? What, if any, increases in procyclicality and incentives for increased risk-taking by banking organizations might such recognition create? What conditions could the agencies impose on such recognition to mitigate concerns about the wrong-way risk of monoline credit insurance? In recognition that private mortgage insurance may not provide protection under all relevant stress events, what are the advantages and disadvantages of recognizing a portion (such as 50 percent) of the value of the private mortgage insurance in determining the total outstanding amount of the loan in the calculation of the LTV ratio? Please provide any data and analysis supporting alternative approaches.

v. Risk Weights for Regulatory Residential Real Estate Exposures

Under the proposal, a banking organization would assign a risk weight to a regulatory residential real estate exposure based on the exposure's LTV ratio without PMI and whether the exposure is dependent on the cash flows generated by the real estate, in accordance with Tables 2 and 3 below.¹⁰⁶ LTV ratios and dependence on cash flows generated by the real estate would factor into the risk-weight treatment for real estate exposures under the proposal because these risk factors are meaningful determinants of credit risk for real estate exposures. The proposed risk weights in each LTV ratio category are intended to reflect differences in the credit risk of these exposures.¹⁰⁷

Table 2. Proposed Risk Weights for Regulatory Residential Real Estate Exposures That Are Not Dependent on the Cash Flows of the Real Estate

	LTV Ratio ≤ 50%	50% < LTV Ratio ≤ 60%	60% < LTV Ratio ≤ 80%	80% < LTV Ratio ≤ 90%	90% < LTV Ratio ≤ 100%	LTV Ratio > 100%
Risk Weight	20%	25%	30%	40%	50%	70%

Table 3. Proposed Risk Weights for Regulatory Residential Real Estate Exposures That Are Dependent on the Cash Flows of the Real Estate

	LTV Ratio ≤ 50%	50% < LTV Ratio ≤ 60%	60% < LTV Ratio ≤ 80%	80% < LTV Ratio ≤ 90%	90% < LTV Ratio ≤ 100%	LTV Ratio > 100%
Risk Weight	30%	35%	45%	60%	75%	105%

The proposed risk weights in Tables 2 and 3 would appropriately balance the benefits of risk sensitivity, transparency, and consistency in the risk weight for real estate exposures across banking organizations subject to the expanded risk-based approach. Applying lower risk weights to loans with lower LTVs aligns the credit risk of the loan with the applicable risk weight, and relying on

cash flows from the property for repayment has historically indicated increased credit risk that merits higher risk weights.

The proposal would also recognize the reduction in credit risk of regulatory residential real estate exposures due to amortization, as the obligor pays down principal and builds equity.¹⁰⁸ The risk weights for such exposures could

decrease throughout the life of the respective loans as obligors make payments. For example, analysis by the agencies indicates that residential mortgage loans issued in the 90 percent to 100 percent LTV ratio category would have a lifetime average risk weight approximately five percentage points

¹⁰⁶ Residential real estate exposures that are 90 days past due or in nonaccrual would be assigned a 150 percent risk weight, unless the exposure is a residential mortgage exposure that is not dependent on the cash flows generated by the real estate, which would be assigned a 100 percent risk weight.

¹⁰⁷ The risk weight assigned to loans does not impact the appropriate treatment of loans under the

agencies' other regulations and guidance, such as the supervisory LTV limits under the real estate lending guidelines.

¹⁰⁸ For purposes of the LTV ratio calculation, the proposal would require banking organizations to use the value of the property at the time of origination, except under limited circumstances. See also Luis Otero González, Pablo Durán

Santomil, Milagros Vivel Búa and Rubén Lado Sestayo, "The Impact of Loan-to-Value on The Default Rate of Residential MBS" Journal of Credit Risk (July 2016), <https://www.risk.net/journal-of-credit-risk/2465626/the-impact-of-loan-to-value-on-the-default-rate-of-residential-mortgage-backed-securities>.

lower than the applicable risk weight at origination.¹⁰⁹

The agencies recognize that some home buyers, especially low- and moderate-income home buyers or those in historically underserved markets, are more likely to be obligors of loans with higher LTV ratios and thus higher risk weights under the approach described above. As a result, borrowing costs for some low- and moderate-income home buyers could be higher relative to obligors with lower LTV ratios. However, many low-to-moderate income borrowers obtain mortgages through loan programs administered by the Federal Housing Administration (FHA) or Department of Veterans Affairs (VA). Consistent with the current capital rule, banking organizations generally would apply a 20 percent risk weight to real estate exposures guaranteed by the U.S. government through the FHA or VA under the proposal. In addition, the proposed risk weights applicable to regulatory residential real estate exposures that have high LTV ratios would be generally consistent with the applicable risk weights under the current standardized approach for residential real estate exposures. The agencies estimate that the proposed risk-

based capital requirements for regulatory residential real estate exposures that are not dependent on the cash flows of the real estate—reflecting both credit risk weights and estimated operational risk requirements—would be lower than the applicable risk-based capital requirements for residential real estate mortgages exposures under the current standardized approach for exposures with LTV ratios at or below 90 percent and very similar for such exposures with LTV ratios between 90 and 99 percent.¹¹⁰

Question 22: Given the proposed treatment of residential real estate exposures, how, if at all, would the proposed risk weights impact home affordability and home ownership opportunities, particularly for low-to-moderate income obligors or customers in other historically underserved markets? Please provide supporting data.

Question 23: What alternative approaches for determining applicable risk weights to residential real estate exposures should the agencies consider and why? Please provide data supporting alternative approaches, including factors that were the basis for underwriting the loans and the

historical repayment performance of the loans.

vi. Risk Weights for Regulatory Commercial Real Estate Exposures

Similar to the proposed approach to regulatory residential real estate exposure, the proposal would require a banking organization to assign a risk weight to a regulatory commercial real estate exposure based on the exposure's LTV ratio and whether the exposure is dependent on the cash flows generated by the real estate, in accordance with Tables 4 and 5 below. Further, in the case of a regulatory commercial real estate exposure that is not dependent on cash flows generated by the real estate for repayment, a banking organization would be required to assign the risk weight applicable to the obligor, as reflected in Table 4. If the LTV ratio of such an exposure is greater than 60 percent, and the banking organization does not have sufficient information about the exposure to determine what the risk weight applicable to the obligor would be, the banking organization would be required to assign a 100 percent risk weight to the exposure unless the exposures is 90 days more past due or in nonaccrual.¹¹¹

Table 4: Proposed Risk Weights for Regulatory Commercial Real Estate Exposures That Are Not Dependent on the Cash Flows of the Real Estate

Risk weight	LTV ratio ≤ 60%	LTV ratio > 60%
	Lesser of 60% risk weight or the risk weight applicable to the obligor	Risk weight applicable to the obligor

Table 5: Proposed Risk Weights for Regulatory Commercial Real Estate Exposures That Are Dependent on the Cash Flows of the Real Estate

Risk weight	LTV ratio ≤ 60%	60% < LTV ratio ≤ 80%	LTV ratio > 80%
	70%	90%	110%

Regulatory commercial real estate exposures not dependent on cash flows generated by the real estate often involve situations where the borrowing

¹⁰⁹ See section VII of this **SUPPLEMENTARY INFORMATION** for more information explaining the analysis of the estimated “effective” risk weights applicable to residential mortgage exposures under the proposal.

¹¹⁰ According to agency analysis, effective risk weights, which reflect both credit risk weights and

entity occupies the property or the obligor has significant other cash flows to repay the loan that the banking organization considered when

estimated add-ons to reflect operational risk, are relatively constant or falling for almost all types of mortgage obligors relative to the applicable 50 percent risk weight for prudently underwritten residential mortgage exposures in the current standardized framework. For instance, for low-to-moderate income obligors, the total equivalent risk weight under the proposal is estimated to be 46

underwriting the loan. While these exposures generally present lower credit risk relative to exposures to commercial real estate dependent on cash flows

percent (42 percent from credit risk and 4 percent from operational risk). See the economic analysis presented in section VIII.D.2 of this **SUPPLEMENTARY INFORMATION**.

¹¹¹ Commercial real estate exposures that are 90 days past due or in nonaccrual would be assigned a 150 percent risk weight.

generated by the real estate, or other types of corporate exposures where real estate collateral is not present, the risk profile of the obligor impacts the applicable risk weight to appropriately reflect the credit quality of the obligor in addition to the real estate collateral. Therefore, the applicable risk weights in Table 4 for regulatory commercial real estate exposures not dependent on cash flows generated by the real estate reflect both the LTV ratio and the risk profile of the obligor. In contrast, because the risks of commercial real estate exposures dependent on cash flows generated by the real estate are more dependent on the property, the risk weights in Table 5 reflect only the LTV ratio as a risk driver and generally are higher relative to Table 4.

vii. ADC Exposures That Are Not HVCRE Exposures

Under the proposal, the agencies would define an ADC exposure as an exposure secured by real estate for the purpose of acquiring, developing, or constructing residential or commercial real estate properties, as well as all land development loans, and all other land loans. Some ADC exposures meet the definition of HVCRE exposure in § _____.2 of the capital rule and would be assigned a 150 percent risk weight.¹¹² Real estate exposures that meet the definition of ADC exposure but do not meet the definition of HVCRE exposure and are not 90 days past due or in nonaccrual would be assigned a 100 percent risk weight under the proposal. The proposed regulatory treatment for ADC exposures would not take into consideration cash flow dependency or the LTV ratio. ADC exposures are mostly short-term or bridge loans to cover construction or development, or lease up or sales phases of a real estate project, rather than amortizing permanent loans for completed residential or commercial real estate. ADC exposures have heightened risk compared to permanent commercial real estate exposures, reflecting uncertainty for unforeseen issues with construction or market conditions, compared to the expected cash flow on a fully leased and constructed commercial property. The proposal would be consistent with the current standardized approach, as ADC exposures are generally subject to a risk

weight of 100 percent or more under the current standardized approach.¹¹³

viii. Other Real Estate Exposures

The proposal would define other real estate exposures as real estate exposures that are not regulatory commercial real estate exposures, regulatory residential real estate exposures, ADC exposures, or any of the statutory real estate exposures.

An exposure meeting the proposed definition of other real estate exposure poses heightened credit risk as a result of not meeting the definitions of regulatory residential and regulatory commercial real estate, respectively, and accordingly would be assigned a higher risk weight. Specifically, the proposal would require a banking organization to assign a 150 percent risk weight to an other real estate exposure, unless the exposure is a residential mortgage exposure that is not dependent on the cash flows generated by the real estate, which would be assigned a 100 percent risk weight.

For example, a banking organization would assign a 150 percent risk weight to real estate exposures that are dependent on the cash flows generated by the underlying real estate, such as a rental property, and that do not meet the regulatory residential or regulatory commercial real estate exposure definitions. Loans for the purpose of acquiring real estate and reselling it at higher value that do not qualify as ADC loans and do not meet the definition of regulatory residential real estate exposures would be assigned a 150 percent risk weight as other real estate exposures. The proposed 150 percent risk weight also would provide a regulatory capital incentive for banking organizations to originate real estate exposures in accordance with the prudent qualification requirements for regulatory residential and commercial real estate exposures, respectively.

The 100 percent risk weight would apply to other real estate exposures that are a residential mortgage exposure that is not dependent on the cash flows generated by the real estate, which could include junior lien home equity lines of credit (where the banking organization does not also hold the first lien) and other second mortgages, as these exposures reflect heightened credit risk compared to first-lien exposures because the banking organization would receive repayment

only after more senior creditors in the instance of the obligor defaulting. In addition, if a banking organization does not adequately evaluate the creditworthiness of an obligor for an owner-occupied residential mortgage exposure, or if the obligor has inadequate creditworthiness or capacity to repay the loan, the exposure would not be considered prudently underwritten and would be assigned a 100 percent risk weight instead of the lower risk weights included in Table 2 for regulatory residential mortgage exposures not dependent on the cash flows generated by the real estate.

d. Retail Exposures

The proposal would increase the credit risk sensitivity of the capital requirements applicable to retail exposures by assigning risk weights that would vary depending on product type and the degree of portfolio diversification. The proposal would introduce a new definition of retail exposure, which would be defined as an exposure that is not a real estate exposure, and is an exposure to a natural person or persons or an exposure to a small or medium-sized entity (SME)¹¹⁴ that meets the proposed definition of a regulatory retail exposure described below. Including an exposure to an SME in the definition of a retail exposure recognizes that many small companies have characteristics more similar to those of a natural person than of a larger corporation with respect to financial resources and the time horizon under which it operates. The proposed definition of a retail exposure would be narrower in scope than the current capital rule's existing definition of a retail exposure under the advanced approaches, which includes a broader range of exposures, including residential real estate-related exposures. Because the proposal would include separate risk-weight treatments for real estate exposures that account for the underlying collateral, the proposed definition of a retail exposure would not include real estate exposures.

The proposal would differentiate the risk-weight treatment for retail exposures based on whether the exposure (1) qualifies as a regulatory

¹¹² Section 214 of the Economic Growth, Regulatory Relief, and Consumer Protection Act (EGRRCPA) imposes certain requirements on high volatility commercial real estate acquisition, development, or construction loans. Section 214 of Public Law 115–174, 132 Stat. 1296 (2018); 12 U.S.C. 1831bb.

¹¹³ OCC Commercial Real Estate Lending Handbook 2.0, <https://www.occ.gov/publications-and-resources/publications/comptrollers-handbook/files/commercial-real-estate-lending/pub-ch-commercial-real-estate.pdf>.

¹¹⁴ Under the proposal, an SME would mean an entity in which the reported annual revenues or sales for the consolidated group of which the entity is a part are less than or equal to \$50 million for the most recent fiscal year. This scope is generally consistent with the definition of an SME under the Basel standards and also corresponds with the maximum receipts-based size standard for small businesses set by the Small Business Administration, which varies by industry and does not exceed \$47 million per year. See 13 CFR part 121.

retail exposure, (2) further qualifies as a transactor exposure; or (3) does not qualify for either of the previous categories and therefore is treated as an other retail exposure. The proposed risk weights assigned to retail exposures consider characteristics such as payment history and exposure size the latter of which is individually generally small in dollar-per-loan volume for exposures captured within the scope of the proposal's retail exposure definition. The proposed definitions of a regulatory retail exposure and a transactor exposure outlined below include key criteria for broadly categorizing the relative credit risk of retail exposures.

To qualify as a regulatory retail exposure, the proposal would require an exposure to be in the form of any of the following credit products: a revolving credit or line of credit (such as a credit card, charge card, or overdraft) or a term loan or lease (such as an installment loan, auto loan or lease, or student or educational loan). In addition, under the proposal, the amount of retail exposures to a single obligor and its affiliates that a banking organization could treat as regulatory retail exposures would be limited. Specifically, the regulatory retail exposure category would exclude any retail exposure to a single obligor and its affiliates that, in the aggregate with any other retail exposures to that obligor or its affiliates, including both on- and off-balance sheet exposures, exceeds a combined total of \$1 million (aggregate limit).¹¹⁵ Limiting the types of products and the dollar amount of exposures to a single obligor that would qualify as regulatory retail exposures under the proposal would help ensure that the regulatory retail treatment applies only to a set of small exposures to a diversified group of obligors. A banking organization would include all outstanding and committed but unfunded regulatory retail exposures in determining the aggregated total to a single obligor and its affiliates.

Under the proposal, if an exposure to an SME does not meet the eligible product criterion and the aggregate limit criterion described above, then none of the exposures to that SME would qualify as retail exposures and all the exposures to that SME would be treated as corporate exposures.

¹¹⁵ The \$1 million threshold for a retail exposure to qualify as regulatory retail would be indexed using CPI-W. See section II.E. of this

SUPPLEMENTARY INFORMATION. For an off-balance sheet exposure, the full notional amount of the exposure would apply towards the \$1 million threshold. If a retail exposure to a single obligor and its affiliates does exceed the \$1 million threshold, then none of the exposures to that obligor would qualify as regulatory retail exposures.

The proposal would define a transactor exposure as a regulatory retail exposure that is a credit facility where the balance has been repaid in full at each scheduled repayment date for the previous twelve months or an overdraft facility where there has been no drawdown over the previous twelve months. If a single obligor had both a credit facility and an overdraft facility from the same banking organization, the banking organization would separately evaluate each facility to determine whether it meets the definition of a transactor exposure. An exposure would not be a transactor exposure if the credit facility has a balance or the facility includes installment payments, even if the obligor was not required to make a payment, including when the credit facility had a promotional offer such as a zero percent interest.

Under the proposal, a banking organization would assign a risk weight of 45 percent to a regulatory retail exposure that is a transactor exposure and a 75 percent risk to a regulatory retail exposure that is not a transactor exposure. All other retail exposures would be assigned a 100 percent risk weight. The proposed relatively low 45 percent risk weight for a transactor exposure is appropriate because such obligors have a demonstrated history of full and timely repayment. A regulatory retail exposure that is not a transactor exposure warrants the proposed 75 percent risk weight, which would be lower than the proposed 100 percent risk weight for all other retail exposures, due to mitigating factors related to size or concentration risk. Any retail exposure that would not qualify as a regulatory retail or a transactor exposure warrants a risk weight of 100 percent. The proposed retail categories, risk weights, and risk indicators are largely consistent with the Basel standards.

Question 24: What, if any, additional criteria or alternatives should the agencies consider to help ensure that the regulatory retail treatment is limited to a group of diversified retail obligors? What alternative thresholds or calibrations should the agencies consider for purposes of retail exposures? Please provide supporting data in your response.

Question 25: What, if any, changes to the methodology for the aggregate limit calculation should the agencies consider? What are the pros and cons of treating the amount of retail exposures to a single obligor, when aggregated, below \$1 million as regulatory retail exposures, while the amount of exposures above \$1 million to the same obligor in aggregate would be treated as other retail exposures? The agencies

seek comment on whether there is a differentiation of risk to the same obligor for exposures above and below the aggregate limit.

e. Corporate Exposures

A corporate exposure under the proposal would be an exposure to a company that does not fall under any other exposure category under the proposal. This scope would be consistent with the definition found in § _____.2 of the current capital rule. For example, an exposure to a company that also meets the proposed definition of a real estate exposure would be a real estate exposure rather than a corporate exposure for purposes of the proposal.

As described in more detail below, the proposal would differentiate the risk weights of corporate exposures based on credit risk by considering such factors as the general creditworthiness of the obligor; each exposure's level of subordination and the expected source of repayment.¹¹⁶ First, a banking organization would be permitted to assign a 65 percent risk weight to a corporate exposure that is an exposure to a company that is investment grade based on the banking organization's internal ratings system, subject to the criteria outlined further below. Second, consistent with the current standardized approach, a banking organization would assign risk weights of 2 percent or 4 percent to certain exposures to a qualifying central counterparty.¹¹⁷ Third, a banking organization would assign a 100 percent risk weight to a project finance exposure that is in the operational phase; otherwise, such an exposure would receive a 130 percent risk weight.

Fourth, a banking organization would assign a 100 percent risk weight to a corporate exposure that is for the purpose of acquiring or financing equipment or physical commodities where repayment of the exposure is dependent on the physical assets being financed or acquired. This would include exposures that finance income-producing assets or projects that engage in non-real estate activities where the

¹¹⁶ The proposal would require banking organizations to apply a 150 percent risk weight to corporate exposures that are either subordinated exposures, as described in section IV.A.2.f. of this **SUPPLEMENTARY INFORMATION**, or covered debt instruments that are not deducted. See the Federal Reserve Board's rule on "Total Loss-Absorbing Capacity, Long-Term Debt, and Clean Holding Company Requirements for Systemically Important U.S. Bank Holding Companies and Intermediate Holding Companies of Systemically Important Foreign Banking Organizations" 12 CFR part 252.

¹¹⁷ See 12 CFR 3.32(f)(2) and (3) (OCC); 12 CFR 217.32(f)(2) and (3) (Board); 12 CFR 324.32(f)(2) and (3) (FDIC).

obligor entity itself has no independent capacity to repay the loan.

Finally, a banking organization would assign a 100 percent risk weight to all other corporate exposures. Assigning a 100 percent risk weight to all other corporate exposures broadly reflects the relative risk of such corporate exposures, as exposures not deemed investment grade generally pose greater credit risk than that of investment grade corporate exposures.

i. Investment Grade Companies

Under the proposal, a banking organization would be permitted to assign a 65 percent risk weight to a corporate exposure that is not a subordinated exposure and is an exposure to a company that the banking organization, using one or more internal credit risk rating systems that meet certain requirements, determines is investment grade, as that term is defined in § _____.2 of the capital rule. The definition of investment grade, which would remain unchanged under the proposal, requires that the entity has adequate capacity to meet its financial commitments for the projected life of the asset or exposure.¹¹⁸ The rule further provides that an entity has adequate capacity to meet financial commitments if the risk of its default is low and the full and timely repayment of principal and interest is expected. Thus, the investment grade classification is intended to apply to companies of high credit quality.¹¹⁹

Corporate exposures typically exhibit significant differences in default probabilities, loss severities, and correlation with broader economic conditions based on many factors

including the financial strength and stability of the obligor. An investment grade designation would provide a mechanism to increase risk sensitivity in the capital framework by subdividing corporate exposures by credit risk. Further, assigning separate risk weights for corporate exposures to investment grade companies and non-investment grade companies would align capital requirements more closely with actual risk.

To help promote the consistency and reliability of a banking organization's investment grade determinations for purposes of assigning a 65 percent risk weight to a corporate exposure and to promote comparability in such determinations across banking organizations, the proposal would set forth requirements for any internal credit risk rating system used by banking organizations for such purposes. Additionally, a banking organization would have to meet proposed requirements when validating such systems.

The proposal would require that the internal credit risk rating system that a banking organization would rely upon to make investment grade determinations also be used to inform material business or risk management decisions, such as those related to accounting, regulatory reporting, risk management and measurement, loan loss reserve estimation, capital planning, loan pricing, or supporting board of directors' decision making. Using existing systems would allow banking organizations to leverage existing data on obligors that are used for other purposes to support their investment grade determinations under the proposal, thus reducing regulatory burden. In addition, given their importance in fundamental business processes, such systems are subject to internal controls, oversight, and validation processes that help ensure their reliability.

The banking organization would be required to define which obligor rating grades within its internal credit risk rating system(s) are considered to be investment grade, as that term is defined in § _____.2 of the capital rule. Because the rating assessment and the corresponding determination of investment grade would occur at the obligor level, such determinations would not include exposure level loss given default factors, such as credit enhancements, transaction structure, and collateral.¹²⁰ The proposal would

require the internal credit risk rating system to assign a rating grade for each obligor in an accurate and timely manner, no less frequently than annually and whenever the banking organization receives new material information regarding the creditworthiness of the obligor. The proposal would also require the internal credit risk rating system to incorporate both quantitative and qualitative factors relating to the historical and projected patterns of payment behaviors, the financial situation and performance of each obligor, and any relevant developments that affect the investment grade determination. Examples of quantitative risk factors fitting these characteristics include, but are not limited to, metrics relating to cash flow available to cover debt obligations, levels of equity relative to debt, and quantities of liquid assets relative to liabilities. Qualitative risk factors could include the business model and economic sector of the obligor, the obligor's willingness to repay, and market conditions. A banking organization would not be permitted to rely solely on third-party assessments of credit risk in its rating of obligors for purposes of determining investment grade status. The proposal would require a banking organization, at least annually, to validate the robustness, consistency, and reliability of its internal credit risk rating system, using data from at least one full credit cycle and taking care to ensure that benign and stressful periods are appropriately represented.

As part of the validation of the internal credit rating system, the proposal would require a banking organization to evaluate whether the performance of the obligors identified by the internal credit risk rating system as investment grade is consistent with the definition of investment grade in § _____.2 of the capital rule, including by benchmarking the investment grade ratings resulting from the internal credit risk rating system with external information relating to the creditworthiness of obligors. Such benchmarking may include comparisons to external credit ratings of obligors produced by third parties. Using external information as part of validating the internal credit risk rating system could identify areas for improvement in the system and may enhance consistency in investment

¹¹⁸ See 12 CFR 3.2 (definition of investment grade) (OCC); 12 CFR 217.2 (definition of investment grade) (Board); 12 CFR 324.2 (definition of investment grade) (FDIC).

¹¹⁹ The use of the investment grade definition in the current capital rule was expanded in 2013 as part of a set of alternatives to external credit ratings for calculating risk-weighted assets for certain exposures, to implement section 939A of the Dodd Frank Act. These alternative creditworthiness standards were designed to be consistent with safety and soundness while also exhibiting risk sensitivity similar to external credit rating categories. See 15 U.S.C. 78o–7 note. Prior to the 2013 capital rule, investment grade was used in several areas of the capital rule, including in the market risk framework, the treatment of securitization and equity exposures, and in the requirements for recognizing certain guarantees and collateral in the calculation of risk-weighted assets. See Risk-Based Capital Guidelines: Market Risk, 77 FR 53060 (Aug. 30, 2012) (when the concept was initially introduced). In the now-superseded capital rule that contained such references, a long-term credit rating of BBB- or better and a short-term credit rating of A3 or better were provided as examples of credit ratings considered to be investment grade. See Risk-Based Capital Standards: Advanced Capital Adequacy Framework—Basel II, 72 FR 69288, (Dec. 7, 2007).

¹²⁰ Under the proposal, credit risk mitigation techniques could not be used to support investment grade determinations. See section IV.A.5. of this

SUPPLEMENTARY INFORMATION for a description of how credit risk mitigants, such as guarantees and collateral, can reduce the risk-weighted asset amount for certain exposures.

grade determinations across banking organizations.

Also, as part of the validation, the proposal would require a banking organization to assess the reliability, accuracy, completeness, timeliness, and appropriateness of the data sources used as part of the investment grade determinations. The proposal would require a banking organization to incorporate available information that is reasonably expected to support a robust evaluation of the internal credit rating system, including information regarding the performance of companies that have ceased operations or that have been sold to a third party to address potential survivorship bias. Properly accounting for obligors that are sold to a third party or that cease operations would reduce the likelihood of rating grades being skewed.

The proposal also would require a banking organization to ensure that the validation process is independent of the internal credit risk system's development, implementation, and operation, or subject the validation process to an independent review of its adequacy and effectiveness. These requirements around independence would help ensure the objectivity, reliability, and integrity of the validation process.

Consistent with requirements under the current advanced approaches, the proposal would require the validation process to incorporate default data covering a period of at least five years and include a period of stress. If the banking organization has relevant data that extends beyond the five-year period, it would be required to incorporate that data into the validation process. The banking organization also would not be permitted to place undue weight on data from periods of favorable or benign economic conditions relative to economic downturn conditions. Appropriately reflecting and balancing all relevant data over at least five years would help support an accurate credit assessment.

Question 26: The agencies seek comment on the proposed treatment of corporate exposures to companies that the banking organization determines are investment grade. What, if any, operational challenges might the proposed approach pose for banking organizations? How should the agencies consider addressing such challenges?

Question 27: The agencies seek comment on the pros and cons of an alternative approach to determining eligibility for the 65 percent risk weight that would include requirements that banking organizations demonstrate that the obligors meet certain quantitative

thresholds using commonly defined metrics such as probability of default in order to demonstrate if the obligor merits an investment grade rating. What, if any, operational challenges or limitations might numerical threshold requirements pose for banking organizations in meeting the proposed ratings criteria?

Question 28: What would be the pros and cons of requiring a banking organization to receive prior approval of its internal credit risk rating system from its primary Federal supervisor before applying the preferential 65 percent risk weight compared to evaluation of its compliance with the capital rule requirements by its primary Federal supervisor during routine supervisory review processes? The agencies are seeking feedback on the benefits that a preapproval process may provide versus the operational burden imposed by such a process.

ii. Project Finance Exposures

The proposal would define a project finance exposure as a corporate exposure for which the banking organization relies on the revenues generated by a single project (typically a large and complex installation, such as a power plant, manufacturing plant, transportation infrastructure, telecommunications installation, or other similar installation), both as the source of repayment and as security for the exposure. A project finance exposure could take the form of financing the construction of a new installation or a refinancing of an existing installation, with or without improvements. In addition, a project finance exposure also must: (1) be to an obligor entity that was created specifically to finance the project, operate the physical assets of the project, or do both, and (2) the borrowing entity must only have an immaterial amount of assets, activities, or sources of income, apart from revenues from the activities of the project being financed. The primary determinant of credit risk for a project finance exposure is the variability of the cash flows expected to be generated by the project being financed rather than the general creditworthiness of the borrowing entity or the market value or sale of the project or the real estate on which the project sits.¹²¹

Under the proposal, a project finance exposure would receive a 130 percent risk weight during the pre-operational

phase and a 100 percent risk weight during the operational phase of the project. The proposal would define a project finance operational phase exposure as a project finance exposure for which the project has a positive net cash flow that is sufficient to support the debt service and expenses of the project and any other remaining contractual obligations, in accordance with the banking organization's applicable loan underwriting criteria for permanent financings, and for which the outstanding long-term debt of the project is declining. Prior to the operational phase classification, the proposal would require a banking organization to treat a project finance exposure as being in the pre-operational phase and assign a 130 percent risk weight to the exposure. The pre-operational phase would be the period between the origination of the loan and the time at which the banking organization determines that the project has entered the operational phase. Relative to the operational phase, the pre-operational phase presents increased uncertainty that the project will be completed in a timely and cost-effective manner, and produce expected revenue, which warrants the application of a higher risk weight. For example, market conditions could change significantly between commencement and completion of the project. In addition, unanticipated supply shortages or other challenges could disrupt timely completion of the project and the expected timing of the transition to the operational phase. These unanticipated changes could impact the ability of the project to generate cash flows as projected and to repay creditors.

Under the proposal, an exposure that is considered to be secured by collateral in the form of real estate¹²² where the banking organization relies on real estate collateral to grant credit, would not be considered a project finance exposure and would be assigned a risk weight as described in section IV.A.2.c. of this **SUPPLEMENTARY INFORMATION**.

¹²² Although it is common for the banking organization to take a mortgage over the real property and a lien against other assets of the project for security and lender control purposes, a project finance exposure would not be considered a real estate exposure because the banking organization does not rely on real estate collateral to grant credit. As noted in section IV.A.2.c of this Supplementary Information, for purposes of the proposal, "secured by collateral in the form of real estate" in the context of the proposed real estate exposure definition should be interpreted in a manner that is consistent with the current definition for "a loan secured by real estate" in the Call Report and FR Y-9C instructions.

¹²¹ Exposures that are guaranteed by the government or considered a general obligation or revenue obligation exposure to a PSE would not qualify as a project finance exposure.

f. Subordinated Exposures

The proposal would introduce a definition and risk weight treatment for subordinated exposures. Subordinated exposures present a greater risk of loss to an investing banking organization relative to more senior exposures to the same issuer or borrower because subordinated exposures have a lower priority of repayment in the event of default. The proposed definition of a subordinated exposure would capture exposures that are financial instruments, such as debt securities and loans, and present heightened credit risk but are not equity exposures, as outlined in section IV.C. of this **SUPPLEMENTARY INFORMATION**. The proposal would define a subordinated exposure as a corporate exposure, a bank exposure, or an exposure to a GSE, that is subordinated by its terms or separate intercreditor agreement to the general creditors of the obligor, or an exposure to preferred stock that is not an equity exposure. A subordinated exposure would not include a retail exposure or a debt security issued by a sovereign, public sector entity, multilateral development bank, or supranational entity, or an exposure that would be captured under the securitization framework.

For these purposes, an exposure would be subordinated if the documentation creating or evidencing such indebtedness (or a separate intercreditor agreement) provides for the issuer's or obligor's general creditors to rank senior to the payment of such indebtedness in the event the issuer or obligor becomes the subject of a bankruptcy or other insolvency proceeding. The scope of the definition of a subordinated exposure is meant to capture the types of entities that issue subordinated instruments and for which the level of subordination is a meaningful determinant of the credit risk of the instrument. The definition also captures instances where a banking organization makes or purchases a loan that is subordinated to the general creditors of the obligor. Limiting the scope of subordinated exposures to those junior to general creditors, as proposed, would apply a heightened risk weight to only those exposures for which subordination results in a heightened credit risk relative to general creditors.

The proposal would apply a 150 percent risk weight to exposures that meet the definition of a subordinated exposure, consistent with the Basel standards. Relative to the current standardized approach, the proposal provides more risk-sensitive approaches

for several exposure categories, including bank exposures, corporate exposures, and exposures to GSEs, as described above in sections IV.A.2.a.–c. of this **SUPPLEMENTARY INFORMATION**. The relative risk associated with those exposures and the applicable risk weights for those exposures are based on those exposures being in a senior loss position. Therefore, the applicable risk weights for a subordinated exposure should reflect the heightened credit risk of such exposures.

Question 29: The agencies seek comment on the scope of the proposed definition of a subordinated exposure. What, if any, operational challenges might the proposed definition pose for banking organizations, and how should the agencies consider addressing such challenges? The agencies seek comment on what, if any, exposures the proposed definition would capture that commenters believe would not reflect heightened credit risk that merits a heightened risk weight? The agencies also seek comment on what, if any, subordinated exposures the agencies have excluded from the proposed definition that merit a heightened risk weight?

3. Off-Balance Sheet Exposures

The proposal would better capture the risk of certain off-balance sheet exposures relative to the current standardized approach by revising the definition of commitment to clarify the off-balance sheet exposures that would be subject to risk-based capital requirements, modifying the credit conversion factors applicable to commitments, and introducing an exposure methodology for commitments without pre-set limits.

a. Definition of Commitment

The current capital rule defines a commitment as any legally binding arrangement that obligates a banking organization to extend credit or to purchase assets.¹²³ Such an arrangement is treated as a commitment even when the banking organization has the unilateral right to cancel the arrangement at any time. The agencies have received questions from banking organizations regarding whether certain types of arrangements, such as advised credit lines and uncommitted lines, would be commitments even if they are unconditionally cancelable. In addition, the agencies have observed an inconsistent application of the current definition of commitment. The proposal would revise the definition of

commitment to clarify that any contractual arrangement under which a banking organization and an obligor agree to the terms applicable to one or more future extensions of credit, purchases of assets, or issuances of credit substitutes by the banking organization is a commitment, whether or not the arrangement is unconditionally cancelable. Consistent with the current capital rule, an unconditionally cancelable commitment would include a commitment that permits a banking organization to, at any time, with or without cause, refuse to extend credit, purchase assets, or issue credit substitutes under the arrangement (to the extent permitted under applicable law). Similarly, the proposal clarifies that a contractual arrangement to extend credit, purchase assets, or issue credit substitutes, but which does not obligate the banking organization to do so, is also considered a commitment that is unconditionally cancelable.¹²⁴ This approach would promote comparable treatment across banking organizations subject to the capital rule.

Commitments represent an arrangement where the banking organization could expect to purchase assets or to extend credit to an obligor, in which case the credit becomes an on-balance sheet asset. The scope of the definition is, therefore, not intended to be limited to those situations in which the banking organization is obligated to provide some amount of credit to an obligor. The agencies do not, however, intend for the definition of commitment to include arrangements where a banking organization has merely offered potential terms to a potential obligor or that continue to be subject to negotiation between the parties. For the purpose of the regulatory capital rule, a commitment does not and would not include pre-approval letters for residential mortgage loans, credit card offers, or other offers that have not yet been agreed upon by both parties to the transaction.

Examples of arrangements that would generally be considered commitments under the proposal include fronting commitments, where a banking organization agrees to fund the obligations of other members of a syndicate of lenders, and commitment letters, where a banking organization agrees to provide financing in connection with an acquisition or other transaction to be entered into by the

¹²³ See 12 CFR 3.2 (OCC); 12 CFR 217.2 (Board); 12 CFR 324.2 (FDIC).

¹²⁴ The proposal would remove the definition of "unconditionally cancelable," and revise the definition of "commitment" to indicate which commitments are considered unconditionally cancelable.

obligor. The proposal would also include other off-balance sheet activities such as advised lines or “uncommitted” facilities as commitments (even if they are unconditionally cancelable or provide that the banking organization is not obligated to perform). For example, an arrangement under which a banking organization retains full discretion as to whether to extend credit to a potential borrower, but under which the banking organization and the potential borrower have agreed to the material terms on which such lending would take place if the banking organization chose to extend credit, is an unconditionally cancelable commitment under the proposal. An unconditionally cancelable commitment also includes an arrangement where a banking organization provides an initial line of credit with an additional amount that the banking organization may extend in the future subject to prior approval by the banking organization, with the agreed upon terms of the future unconditionally cancelable line.

Exposures without pre-set limits on the amount of credit that can be extended would also be unconditionally cancelable commitments under the proposal. With some retail products, such as with charge cards, the banking organization does not disclose a pre-set credit limit to its obligors. For charge cards, or similar types of off-balance sheet exposures, each attempt to borrow by an obligor is individually underwritten at the time of purchase and requires the approval of the banking organization. Nevertheless, because the banking organization and the borrower have agreed to the material terms on which such lending would take place, such arrangements meet the definition of commitment and, therefore, should be treated as unconditionally cancelable commitments for regulatory capital purposes.¹²⁵

Question 30: The agencies seek comment on the proposed definition of commitment. Does the proposal appropriately capture as off-balance sheet exposures arrangements where the banking organization is not legally obligated to extend credit, purchase assets, or issue credit substitutes but which nonetheless arise out of a contractual arrangement to extend credit or purchase assets? To what extent would the proposed definition affect a banking organization’s business practices regarding commitments and similar arrangements, including how

banking organizations treat such arrangements for regulatory capital and reporting purposes? Please provide any rationale or data that may be helpful for the agencies to consider.

b. Credit Conversion Factors

Consistent with the current rule, under the proposed rule a banking organization would calculate the exposure amount of an off-balance sheet exposure by multiplying the off-balance sheet component, which is usually the contractual amount, by the applicable credit conversion factor. The resulting exposure amount would then be assigned to the relevant risk-weight category for the exposure. The proposed expanded risk-based approach would incorporate the same credit conversion factors from the current capital rule, except with respect to commitments.¹²⁶

Relative to the current standardized approach and consistent with the Basel standards, the proposal would simplify the credit conversion factors applicable to the unused portion of a commitment that is not unconditionally cancelable relative to the current standardized approach. For these commitments, the proposal would no longer differentiate credit conversion factors by original maturity of one year or less and greater than one year.¹²⁷ Under the proposal, a commitment that is not unconditionally cancelable would be subject to a credit conversion factor of 40 percent regardless of the maturity of the facility.¹²⁸ This would remove the one-year mark as a dividing line between substantially different treatments, which

¹²⁶ Note issuance facilities and revolving underwriting facilities are forms of revolving credit. Notes issued under note issuance facilities and revolving underwriting facilities are short-term instruments issued under a legally binding medium-term contractual arrangement. Under a revolving underwriting facility, the underwriting banking organization agrees to provide loans should the issue fail, but under a note issuance facility the banking organization could either lend to the issuer or purchase the outstanding notes. Consistent with the current rule and with the Basel standards, the proposal would require banking organizations to apply a 50 percent credit conversion factor to the off-balance sheet amount of note issuance facilities and revolving underwriting facilities, regardless of whether a lower credit conversion factor would otherwise apply.

¹²⁷ Currently, commitments that are not unconditionally cancelable with an original maturity of one year or less receive a 20 percent credit conversion factor and those with an original maturity of more than one year receive a 50 percent credit conversion factor. 12 CFR 3.33(b)(2) (OCC); 12 CFR 217.33(b)(2) (Board); 12 CFR 324.33(b)(2) (FDIC).

¹²⁸ Under the proposal, a 40 percent CCF would also apply to commitments that are not unconditionally cancelable commitments for purposes of calculating the total leverage exposure for the supplementary leverage ratio framework and for the calculation of the Size Category of the FR Y-15 Systemic Risk Report form.

would remove any regulatory incentive to structure transactions around that line. The 40 percent credit conversion factor would align with international standards and reflect that most outstanding commitments that are not unconditionally cancelable have a maturity greater than one year.¹²⁹

For the unused portion of a commitment that is unconditionally cancelable¹³⁰ by the banking organization, the proposal would require a banking organization to apply a credit conversion factor of 10 percent. Under the current capital rule, unconditionally cancelable commitments receive a credit conversion factor of zero percent. Although unconditionally cancelable commitments allow banking organizations to cancel such commitments at any time without prior notice, subject to compliance with consumer protection laws, in practice, risk management practices of the banking organization may constrain the organization’s willingness to cancel such commitments.¹³¹ In addition, banking organizations may extend credit or provide funding to support the viability of obligors to which the banking organization has significant ongoing exposure, even when obligors are under economic stress. For example, banking organizations may have incentives to preserve substantial or core customer relationships when there is a deterioration in creditworthiness that may otherwise, such as for less substantial customer relationships, cause the banking organization to cancel a commitment. For these reasons, the agencies are proposing nonzero credit conversion factors for unconditionally cancelable commitments.

Under the proposal, certain retail credit card exposures would be subject to reduced risk-weights relative to the current standardized approach, as

¹²⁹ The FR Y-9C indicates (see HC-R Part II items 18.a and b) that prior to application of the credit conversion factor, as of Q2 2025, 84 percent of the exposure and 85 percent of the standardized risk-weighted assets of Category I and II bank holding companies have original maturity exceeding one year.

¹³⁰ As discussed in section IV.A.3.a. of this **SUPPLEMENTARY INFORMATION**, the proposal would provide that a commitment is unconditionally cancelable if by its terms, it either: (a) provides that a banking organization is not obligated to extend credit, purchase assets, or issue credit substitutes; or (b) permits a banking organization to, at any time, with or without cause, refuse to extend credit, purchase assets, or issue credit substitutes under the arrangement (to the extent permitted under applicable law).

¹³¹ See, e.g., 12 CFR 1002.9 (adverse action notices), 12 CFR 1026.9(c) (subsequent disclosure requirements for open-end credit), and 12 CFR 1026.40(f) (limitations on changes to home equity lines of credit).

¹²⁵ See section IV.A.3.c. of this **SUPPLEMENTARY INFORMATION** for the proposed methodology to determine the exposure amount for retail exposures with no pre-set limit.

discussed in section IV.A.2.d. of this **SUPPLEMENTARY INFORMATION**. However, the overall risk-weighted asset amount associated with such exposures may be higher relative to the current standardized approach due to the increase in the credit conversion factors described above.¹³²

Question 31: What additional factors, if any, should the agencies consider for determining the applicable credit conversion factors for commitments?

Question 32: What other approaches to setting a credit conversion factor for unconditionally cancelable commitments should the agencies consider and why? To what extent and under what circumstances should an obligor's historical usage patterns for unconditionally cancelable commitments that are transactor exposures affect the credit conversion factor for such exposures? What average utilization rate (for example, 10 percent) over what time period (for example, 24 months) would support a credit conversion factor lower than 10 percent? Please include any relevant data.

Question 33: What are the advantages and disadvantages relative to the proposal of using the current treatment for commitments, that are not unconditionally cancelable which differentiates credit conversion factors based on maturity, and would apply a 20 percent credit conversion factor to those commitments with an original maturity of one year or less, and a 50 percent credit conversion factor to those with an original maturity of more than one year?

Question 34: What are the advantages and disadvantages of applying the proposed 40 percent credit conversion factor for commitments regardless of maturity that are not unconditionally cancelable to the supplementary leverage ratio framework and to the Size Category of the FR Y-15?

c. Commitments With No Pre-Set Limit

Most off-balance sheet exposures, such as credit card lines, allow obligors to borrow up to a specified amount. However, some off-balance sheet exposures such as charge cards do not have an explicit contractual pre-set credit limit. For commitments that are retail exposures that do not have an express contractual maximum amount or pre-set limit, the proposal would include an approach to calculate a proxy for the committed but undrawn

amount of the commitment (undrawn exposure amount).

For commitments that are retail exposures, the undrawn exposure amount would be calculated by using the exposure's highest drawn amount over the previous 24 months as an indicator of the amount of credit a banking organization is likely to extend to an obligor in the future. Specifically, under the proposal, a banking organization would first identify the largest drawn amount by a retail obligor over the prior 24 months or, if the banking organization has offered the product to the obligor for fewer than 24 months, the largest drawn amount since the commitment was first issued. The off-balance sheet exposure amount would be calculated by first subtracting the current drawn amount from the largest drawn amount and then multiplying this difference by the applicable credit conversion factor.¹³³ The risk-weighted asset amount would be the off-balance sheet exposure amount multiplied by the applicable risk weight for the obligor.

A substantial share of uncapped commitments are in the form of retail charge cards, and these exposures have characteristics that suggest the highest drawn balance method described above is a reasonable proxy to estimate the undrawn exposure amount. A charge card does not have a pre-set credit limit, its balance is generally required to be paid in full at the end of each statement period, and charge card transactions are generally underwritten separately and reviewed by the issuing banking organization for approval or denial. Therefore, a charge card obligor's spending pattern, which reflects a banking organization's approval of the charge card obligor's usage, is indicative of the off-balance sheet exposure amount for a retail charge card.

As an example of the proposed treatment, assume a retail obligor's charge card had a maximum drawn amount of \$4,000 during the period of the prior 24 months and a current drawn amount of \$3,000.¹³⁴ To determine the off-balance sheet exposure amount of the charge card, a banking organization would (1) identify the maximum drawn amount over the prior 24 months (\$4,000), (2) subtract

the applicable drawn amount of \$3,000 from \$4,000 (\$1,000), and (3) multiply \$1,000 by the applicable credit conversion factor (assuming a credit conversion factor of 10 percent, \$100). For this example, assume the obligor's charge card would qualify as a regulatory retail exposure that is a transactor exposure. Applying the proposed 45 percent risk weight for transactor exposures to the off-balance sheet exposure amount of \$100 would result in a risk-weighted asset amount of \$45, which would apply in addition to the risk-weighted asset amount of \$1,350 for the on-balance sheet exposure (the drawn amount of \$3,000).

Question 35: What are the advantages and disadvantages of the proposed treatment for commitments to retail obligors with no express contractual maximum amount or pre-set limit? What other time period or approach should the agencies consider for calculating the highest drawn amount (for example, using month-end balance or statement balances), and why?

Question 36: What would be the advantages and disadvantages of applying a multiplier to the highest drawn amount to calculate the off-balance sheet exposure amount (for example, multiplying the highest drawn balance by a figure between 1.5 and 3) to calculate the off-balance sheet exposure amount?¹³⁵ If applied, how should such multiplier be calibrated? What data should the agencies use to calibrate such a multiplier?

Question 37: The agencies seek feedback on commitments that contain no express contractual maximum amount but also contain features such as a "pay over time" limit, which allows a borrower to carry a balance with interest on certain charges. What would be the advantages and disadvantages of incorporating the "pay over time" limit as a floor when calculating the highest drawn amount under the proposal? For example, assume the maximum drawn amount over the prior 24 months is \$4,000 and the "pay over time" limit is \$5,000. Under this alternative, the applicable drawn amount would be subtracted from \$5,000 instead of \$4,000.

Question 38: The proposal would apply the specific treatment described above to commitments to retail obligors with no contractual maximum or pre-set

¹³² For additional considerations of the proposed approach, data on credit conversion factors, and on the impact of the proposal on credit cards, see the economic analysis presented in section VIII.E.1. of this **SUPPLEMENTARY INFORMATION**.

¹³³ Under the proposal, the methodology for calculating the undrawn exposures amount for retail commitments with no explicit contractual pre-set limit would also apply for purposes of calculating total leverage exposure for the supplementary leverage ratio.

¹³⁴ The maximum balance would reflect the highest drawn amount on any date during the previous 24 months for the retail account with no pre-set limit over the period.

¹³⁵ If a multiplier of two were applied to the maximum drawn amount over the prior 24 months, under the example presented above, the off-balance sheet exposure amount would equal \$5,000, which corresponds to \$4,000 times two minus \$3,000. The other steps of the process would remain unchanged and would result in a risk-weight asset amount of \$225 for the off-balance sheet exposure.

limit. The agencies seek comment on the appropriate treatment for commitments to non-retail obligors with no contractual maximum amount or pre-set limit. The agencies request comment on the product types, structures, risks, materiality, and loss history of commitments to non-retail obligors with no contractual maximum amount or pre-set limit. Please provide specific product examples and relevant data. What would be the advantages and disadvantages of applying the proposed treatment for commitments to retail obligors with no pre-set limit to such commitments to non-retail obligors? What would be the advantages and disadvantages of using the average total drawn amount over the period since the commitment to a non-retail obligor was created or the prior 24 months, whichever period is shorter, for the committed but undrawn amount? What would be the advantages and disadvantages of applying a multiplier to the highest drawn amount (for example, multiplying the highest drawn balance by a figure between 1.5 and 3) to calculate the off-balance sheet exposure amount? If applied, how should such multiplier be calibrated? What other alternative treatments should the agencies consider, and why? Please provide any rationale or data that may be helpful for the agencies to consider.

4. Counterparty Credit Risk-Related Exposures

Under the current capital rule, a covered banking organization is required to use the standardized approach to counterparty credit risk (SA-CCR) to calculate the exposure

amount of derivative contracts. The proposal would retain this treatment, with the following modification. For noncleared repo-style transactions that are included in a qualifying cross-product netting set that includes derivatives, a banking organization may elect to use SA-CCR to calculate the exposure amount of the netting set. Where a banking organization does not make such an election, it would use the collateral haircut approach to calculate the exposure amount for a repo-style transaction. Consistent with the current capital rule, the proposal would continue to allow banking organizations to use either the collateral haircut approach or the simple approach to calculate the exposure amount for eligible margin loans and repo-style transactions, provided that the banking organization uses the same approach for similar exposures or transactions.

a. Collateral Haircut Approach

Under the proposal, as under the current capital rule, a banking organization would be permitted to recognize the credit risk-mitigation benefits of collateral supporting repo-style transactions, eligible margin loans, and netting sets of such transactions by adjusting its exposure amount to its counterparty to recognize financial collateral received and any collateral posted to the counterparty. The expanded risk-based approach would incorporate the collateral haircut approach in the current standardized approach with some modifications that are generally consistent with the Basel standards. The collateral haircut approach would continue to require a banking organization to adjust the fair

value of the collateral received and posted to account for any potential market price volatility in the value of the collateral during the margin period of risk, as well as to address any currency mismatch. To increase the risk-sensitivity of the collateral haircut approach, the proposal would modify certain of the standard market price volatility haircuts. At the same time, to reduce unwarranted divergence in risk-weighted assets, the proposal would no longer allow a banking organization to use its own internal estimates for calculating haircuts.

i. Formula for Determining Exposure Amount

The proposal would introduce a new formula for calculating the exposure amount of eligible margin loans, repo-style transactions, or netting sets thereof. The proposed exposure amount equation is revised from the current formula to improve the recognition of the risk-mitigating benefits of netting and portfolio diversification. The proposed formula would revert to the current collateral haircut approach formula in cases where there are no variables to populate the second and the third components as described below. The modification would increase the risk sensitivity of the capital requirement for such transactions relative to the current collateral haircut approach. Under the proposal, the exposure amount (E^*) of a netting set of eligible margin loans or repo-style transactions or an individual transaction that is not part of a netting set would be determined according to the following formula:

$$E^* = \max \left\{ 0; \left(\sum_i E_i - \sum_i C_i \right) + (0.4 \times net_{exposure}) + \left(0.6 \times \frac{gross_{exposure}}{\sqrt{N}} \right) + \left(\sum_{fx} (E_{fx} \times H_{fx}) \right) \right\}$$

Where:

- E^* is the exposure amount of the eligible margin loan, repo-style transaction, or netting set after credit risk mitigation.
- E_i is the current fair value of the instrument, cash, or gold the banking organization has lent, sold subject to repurchase, or posted as collateral to the counterparty.
- C_i is the current fair value of the instrument, cash, or gold the banking organization has borrowed, purchased

subject to resale, or taken as collateral from the counterparty.

- $net_{exposure} = |\sum_s E_s H_s|$
- $gross_{exposure} = \sum_s E_s |H_s|$
- E_s is the absolute value of the net position in a given instrument or in gold (where the net position in a given instrument or gold equals the sum of the current fair values of the instrument or gold the banking organization has lent, sold subject to repurchase, or posted as collateral to the counterparty, minus the sum of the current fair values of that

same instrument or gold the banking organization has borrowed, purchased subject to resale, or taken as collateral from the counterparty).

- H_s is the haircut appropriate to E_s as described in Table 1 to § _____.115, as applicable. H_s has a positive sign if the instrument or gold is net lent, sold subject to repurchase, or posted as collateral to the counterparty; H_s has a negative sign if the instrument or gold is net borrowed, purchased subject to

resale, or taken as collateral from the counterparty.

- N is the number of instruments with a unique Committee on Uniform Securities Identification Procedures (CUSIP) designation or foreign equivalent, with certain exceptions. N includes any instrument with a unique CUSIP that the banking organization lends, sells subject to repurchase, or posts as collateral, as well as any instrument with a unique CUSIP that the banking organization borrows, purchases subject to resale, or takes as collateral. However, N would not include collateral instruments that the banking organization is not permitted to include within the credit risk mitigation framework (such as nonfinancial collateral that is not part of a repo-style transaction included in the banking organization's market risk weighted assets) or elects not to include within the credit risk mitigation framework. The number of instruments for N would also not include any instrument (or gold) for which the value E_s is less than one-tenth of the value of the largest E_s in the netting set. Any amount of gold would be given a value of one.
- E_{fx} is the absolute value of the net position in each currency f_x different from the settlement currency.
- H_{fx} is the haircut appropriate for currency mismatch of currency f_x .

The first component in the above formula ($\sum_i E_i - \sum_i C_i$) would capture the baseline exposure of eligible margin loans, repo-style transactions, or netting

sets thereof, after accounting for the value of any collateral received. The second ($0.4 \times \text{net}_{\text{exposure}}$) and third ($0.6 \times (\text{gross}_{\text{exposure}}/N)$) components in the above formula would allow for the partial recognition of the netting and diversification benefit of instruments exchanged between a banking organization and a given counterparty within a netting set. The net exposure component partially recognizes the offsetting of gross exposures between a given instrument that is both lent and received as collateral within a netting set. Additionally, because the contribution from the gross exposure component to the exposure amount would decrease proportionally with an increase in the number of unique instruments by CUSIP designations or foreign equivalent, the gross exposure component would capture the impact of diversification in the types of instruments lent or received. The fourth component ($\sum_{fx} (E_{fx} \times H_{fx})$) would capture any adjustment to reflect currency mismatch, if applicable.

When determining the market price volatility and currency mismatch haircuts, the banking organization would use the market price volatility haircuts described in the following section and a standard 8 percent currency mismatch haircut, subject to certain adjustments.

Question 39: What are the pros and cons of basing N for purposes of the collateral haircut approach on the number of unique CUSIPs in a netting set? What alternatives should the agencies consider and how would such alternatives align with the goal of identifying the number of instruments for purposes of measuring diversification in the pool?

ii. Market Price Volatility Haircuts

Under the proposal, a banking organization would apply the market price volatility haircut appropriate for the type of collateral, as provided in Table 1 to § _____.115 below, when calculating the exposure amount for repo-style transactions, eligible margin loans, and netting sets thereof using the collateral haircut approach and in the calculation of the net independent collateral amount and the variation margin amount for collateralized derivative transactions using SA-CCR. Consistent with the current capital rule, the proposal would require banking organizations to apply an 8 percent supervisory haircut, subject to adjustments, to the absolute value of the net position in each currency that is different from the settlement currency.

Proposed Table 1 to § _____.115

¹³⁶ Includes a foreign PSE that receives a zero percent risk weight.

¹³⁷ Includes senior securitization exposures with a risk weight greater than or equal to 100 percent and sovereign exposures with a risk weight greater than 100 percent.

Market Price Volatility Haircuts

(Haircuts in percent)

Residual Maturity		Securities issued by a sovereign or an issuer described in § __.111(b) ¹³⁶ (percent)			Other investment-grade securities (percent)		
		Issuer risk weight of zero	Issuer risk weight of 20 or 50	Issuer risk weight of 100	GSE exposures	Exposures other than GSE or securitization exposures	Senior securitization exposures with risk weight <100
Debt Securities	Less than or equal to 1 year	0.5	1.0	15.0	1.0	2.0	4.0
	Greater than 1 year and less than or equal to 3 years	2.0	3.0	15.0	4.0	4.0	12.0
	Greater than 3 years and less than or equal to 5 years					6.0	
	Greater than 5 years and less than or equal to 10 years	4.0	6.0	15.0	8.0	12.0	24.0
	Greater than 10 years					20.0	
Main index equities (including convertible bonds) and gold					20.0		
Other publicly traded equities and convertible bonds					30.0		
Mutual funds and exchange traded funds					Highest haircut applicable to any security in which the fund can invest, unless the banking organization can apply the full look-through approach for equity exposures to investment funds in § __.142(b), in which case the banking organization may use a weighted average of haircuts applicable to the securities held by the fund.		
Cash on deposit					0.0		
Other exposure types ¹³⁷					30.0		

The proposed haircuts would strike a balance between simplicity and risk sensitivity relative to the supervisory haircuts in the current capital rule by

introducing additional granularity with respect to residual maturity, which is a meaningful driver for distinguishing between the market price volatility of

different instruments, and by streamlining other aspects of the collateral haircut approach where the exposure's risk weight figures less

prominently in the instrument's market price volatility, as described below.

The proposal would apply haircuts primarily based on residual maturity, rather than a combination of residual maturity and underlying risk weight as under the current capital rule, for non-sovereign investment grade debt securities. These haircuts are derived from observed stress volatilities during 10-business day periods during the 2008 financial crisis. Debt securities with longer maturities are subject to higher price volatility from changes in both interest rates and the creditworthiness of the issuer.

Because securitization exposures tend to be more volatile than corporate debt, the proposal would provide a distinct category of market price volatility haircuts for certain securitization exposures consistent with the current capital rule. The proposal would distinguish between non-senior and senior securitization exposures to enhance risk sensitivity. Because senior securitization exposures absorb losses only after more junior securitization exposures, these exposures have an added layer of security and distinct market price volatility. Therefore, the proposal would only specify term-based haircuts for investment grade senior securitization exposures that receive a risk weight of less than 100 percent under the securitization framework. Other securitization exposures would receive the 30 percent market price volatility haircut applicable to "other" exposure types.

The proposal would require a banking organization to apply market price volatility haircuts of 20 percent for main index equities (including convertible bonds) and gold, 30 percent for other publicly traded equities and convertible bonds, and 30 percent for other exposure types. Equities in a main index typically are more liquid than those that are not included in a main index, in part because investors may seek to replicate the index by purchasing the referenced equities or engaging in derivative transactions involving the index or equities within the index. The lower haircuts for equities included in a main index under the proposal would reflect the higher liquidity of those securities compared to other publicly traded equities or exposure types, which would generally help to reduce losses to banking organizations when liquidating those securities during stress conditions.

For collateral in the form of mutual fund shares, the proposal would be consistent with the current collateral haircut approach in which a banking organization would apply the highest

haircut applicable to any security in which the fund can invest. Under the proposal, a banking organization could treat exchange traded fund (ETF) shares in the same manner as mutual fund shares and apply haircuts based on the underlying instruments in the fund. Given that ETFs (like mutual funds) benefit from diversification and tend to have lower levels of price volatility compared to non-pooled investment vehicles, a look-through approach is more risk sensitive than applying the publicly traded equities haircut for ETF shares. The proposal also would include an alternative method available to a banking organization if the mutual fund or ETF qualifies for the full look-through approach described in section IV.C. of this **SUPPLEMENTARY INFORMATION**. This alternative method would provide a more risk-sensitive calculation of the haircut on fund shares collateral by using the weighted average of haircuts applicable to the instruments held by the fund.¹³⁸

In addition, consistent with the Basel standards, the proposal would require a banking organization to apply a market price volatility haircut of 30 percent to address the potential market price volatility for any instruments that the banking organization has lent, sold subject to repurchase, or posted as collateral that is not of a type otherwise specified in Table 1 to § _____.¹¹⁵

b. Standardized Approach to Counterparty Credit Risk

The agencies incorporated SA-CCR for calculating the exposure amount of derivative contracts into the capital rule in 2020.¹³⁹ This change required advanced approaches banking organizations to use SA-CCR instead of the current exposure methodology when calculating standardized total risk-weighted assets and total leverage exposure. Similarly, the proposal would require a covered banking organization to use SA-CCR to determine the exposure amount for derivatives under the expanded risk-based approach and the supplementary leverage ratio.¹⁴⁰ The proposal would also revise SA-CCR in

certain ways to better reflect risks associated with evolving market practices. Specifically, for risk-based capital purposes, the proposal would revise SA-CCR to recognize qualifying cross-product master netting agreements for non-cleared transactions and incorporate certain non-cleared (such as client-facing) repo-style transactions. Additionally, the proposal would revise SA-CCR to permit the netting of collateralized-to-market and settled-to-market client-facing derivative transactions. The agencies are also proposing technical revisions to assist banking organizations in implementing SA-CCR in a consistent manner and more appropriately reflect the counterparty credit risk posed by derivative transactions.

Question 40: Consistent with the current rule, the proposal would require a banking organization to multiply the sum of the replacement cost of a netting set, calculated as stipulated by the SA-CCR framework, and the potential future exposure of a netting set by a factor of 1.4 if the relevant counterparty is not a commercial end-user, versus a factor of 1.0 if the counterparty is a commercial end-user. Currently, the SA-CCR framework of the capital rule requires banking organizations to identify whether counterparties are commercial end-users. What would be the advantages or disadvantages of allowing banking organizations to apply the higher factor of 1.4 for all derivative transactions, rather than having to distinguish based on whether the counterparty qualifies as a commercial end-user? Please provide any rationale or data that may be helpful for the agencies to consider.

Question 41: For purposes of the supplementary leverage ratio, the proposal would not modify SA-CCR to recognize qualifying cross-product master netting agreements for non-cleared transactions or to incorporate certain non-cleared (including client-facing) repo-style transactions, given that it is meant to serve as a non-risk-based measure. What are the advantages and disadvantages of modifying the supplementary leverage ratio to recognize such cross-product netting? If the agencies were to consider such recognition, what if any adjustments to the measure should be considered to align with the supplementary leverage ratio's non-risk-based nature and why?

¹³⁸ If the mutual fund qualifies for the full look-through approach under the proposed equity framework, as described in section IV.C. of this **SUPPLEMENTARY INFORMATION**, but would be treated as a market risk covered position as described in section V.A.4. of this **SUPPLEMENTARY INFORMATION** if the banking organization held the mutual fund directly, the banking organization is permitted to apply the alternative method to calculate the haircut.

¹³⁹ 85 FR 4362 (Jan. 24, 2020).

¹⁴⁰ 12 CFR 3.10(c)(2)(ii)–(iii), 12 CFR 3.34(a) (OCC); 12 CFR 217.10(c)(2)(ii)–(iii), 12 CFR 217.34(a) (Board); 12 CFR 324.10(c)(2)(ii)–(iii), 12 CFR 324.34(a)(a) (FDIC).

i. Amend SA-CCR To Recognize the Netting of Non-Cleared Repo-Style Transactions and Derivative Transactions

A netting set refers to a group of transactions between a banking organization and a single counterparty governed by a qualifying master netting agreement. Qualifying master netting agreements create a single net legal obligation for all individual transactions covered by the agreement and allow for close-out netting upon the event of default. By treating all transactions under the agreement as one combined obligation, these agreements recognize risk-offsets between transactions.

Cross-product netting is a risk management technique that involves the inclusion of multiple types of financial products in one netting set. Generally, cross-product netting reduces risk exposure by allowing banking organizations to recognize offsets between positive and negative exposures across different financial product types and to calculate a single net exposure amount for collateral and default management. Cross-product netting sets allow the benefits of qualifying master netting agreements (such as close-out netting) to apply for a broader set of transactions than those included in a single-product netting set.¹⁴¹ For example, if a banking organization has a \$5 million positive exposure to a counterparty under one swap transaction and a \$2 million negative exposure to the same counterparty under a repo-style transaction, cross-product netting would allow for a net exposure of only \$3 million to be recognized, rather than two separate exposures of \$5 million and \$2 million. Recognizing the risk-mitigating benefits of cross-product netting better aligns capital requirements with risk because it allows offsetting risks between products to be recognized and capitalized jointly rather than separately.

Consolidating exposures across products into a single netting set can also simplify risk management processes for banking organizations and reduce operational burden. The quantity of netting sets would generally be reduced, as banking organizations would be able to net transactions with multiple products together. Thus, a banking organization's net exposure to a single counterparty typically would be lower, reducing counterparty credit risk. Additionally, cross-product netting allows banking organizations to improve

collateral management and expand liquidity efficiency across different product types. Instead of calculating collateral requirements and posting collateral for transactions of each product type (such as derivative and repo-style transactions) separately, cross-product netting allows for collateral requirements to be determined on a net basis for all transaction types in the same netting set.

The capital rule currently recognizes cross-product netting in the advanced approaches, under which banking organizations can measure counterparty credit exposure of a cross-product netting set using the internal models methodology (IMM). Since the agencies' are proposing to remove the IMM from the capital rule, the proposed revisions to SA-CCR to recognize qualifying cross-product master netting agreements and incorporate certain repo-style transactions for risk-based capital purposes would provide an avenue for banking organizations to recognize the benefits of cross-product netting in a standardized, transparent manner rather than through a banking organization's internal model. The proposed modifications to the exposure amount calculation in SA-CCR would recognize the risk-mitigating benefits of cross-product netting for banking organizations helping to facilitate market liquidity.

Recognizing the benefits of cross-product netting in SA-CCR would also allow banking organizations to better serve in their role as clearing members. Many clients of clearing members do not meet the requirements to become a clearing member of a central counterparty. As a result, without a clearing member stepping in to act as an intermediary, money market funds, pension funds, insurance funds, hedge funds, and other clients may not have access to central counterparty services and market access more broadly. The proposed revision to permit the netting of derivatives and non-cleared repo-style transactions would include clearing members' intermediation-related transactions, which are typically considered client-facing transactions under the capital rule.¹⁴² Permitting cross-product netting for derivative transactions and repo-style transactions in SA-CCR promotes smooth market functioning and liquidity and better aligns the risk-based capital treatment of

intermediation-related transactions with their economics.

To incorporate non-cleared repo-style transactions subject to a qualifying cross-product master netting agreement in SA-CCR, the proposal would treat them as forward derivative transactions with the security underlying the repo-style transaction determining the SA-CCR asset class.¹⁴³

The agencies are proposing to include a restriction on the amount of offsetting for recognized between derivatives and repo-style transactions within SA-CCR to capture the mismatch between maturities of repo-style transactions and those of derivative contracts.¹⁴⁴ In addition, for an entire cross-product netting set, banking organizations would have to calculate the exposure amount for the subset of the cross-product netting set that includes only derivative contracts and the exposure amount for the subset of the cross-product netting set that includes only repo-style transactions. The exposure amount for the entire cross-product netting set

¹⁴³ Under the current capital rule, a qualifying cross-product master netting agreement is generally defined, as a qualifying master netting agreement that provides for termination and close-out netting rights across multiple types of financial transactions. As a type of qualifying master netting agreement, a qualifying cross-product master netting agreement would be required, among other provisions, to create, upon an event of default, a single legal obligation for all individual transactions covered by the agreement and to provide the banking organization with the right to liquidate or set-off any collateral provided in respect of any of the transactions covered by the agreement against the net amount owed across all the individual transactions. Accordingly, if a banking organization's rights upon an event of default to net certain transaction types (e.g., derivatives) against other transaction types (e.g., repo-style transactions), or to apply collateral provided in respect of one type of transaction against amounts owed on other types of transactions, were restricted or limited under the relevant contractual agreements or applicable law, a banking organization would not be permitted recognize cross-product netting.

¹⁴⁴ The SA-CCR framework allows for offsetting positions to net for purposes of measuring exposure. In general, such netting can occur at a particular moment in time, so no short-term transaction can have any impact on exposure at long time horizons. Because of this, time averaging for the purposes of exposure calculation should be performed after exposure contributions of individual transactions are aggregated to the netting set exposure for each future time point. However, to simplify calculations, SA-CCR performs time averaging for each transaction in the netting set prior to the aggregation. This leads to a possibility of short-term transactions materially offsetting the risk of long-term transactions. This is not a major concern for netting sets of derivatives, which often have medium and long-term durations. However, because repo-style transactions are primarily short-term (often overnight), applying SA-CCR to a cross-product netting set would likely overstate the impact of repo-style transactions on the netting set exposure. The proposed maturity mismatch restriction on cross-product netting would mitigate this overstatement.

¹⁴¹ Under the proposal, cross-product netting sets would be governed by qualifying cross-product master netting agreements as described below.

¹⁴² Client-facing transactions are not considered cleared transactions under the capital rule. See 12 CFR 3.2 cleared transaction, (2) (OCC); 12 CFR 217.2 cleared transaction, (2) (Board); 12 CFR 324.2 cleared transaction, (2) (FDIC).

would be a weighted average of two exposure numbers. One exposure amount would be the combined exposure for repo-style transactions and derivatives in the cross-product netting set using SA-CCR, weighted by a maturity ratio (MR). The other exposure amount would be the sum of the exposure amounts of the repo-style transactions in the netting set using the collateral haircut approach and the exposure amounts of derivatives transactions in the netting set using SA-CCR, weighted by $(1-MR)$. MR would be the maturity ratio factor determined by the ratio of the notional average weighted maturity of the repo-style transactions to the notional average weighted maturity of the derivatives contracts or repo-style transactions within the cross-product netting set, whichever is longer. The maturities calculated this way would be floored by 10 business days and capped by 1 year. The MR would be capped at 1.

Permitting the netting of repo-style transactions and derivative transactions subject to qualifying cross-product master netting agreements in SA-CCR and the proposed limitation on offsetting transactions promotes responsible counterparty credit risk mitigation and ensures the capital requirement better reflects such transactions' risk profile and economic relationship. Recognizing cross-product netting in SA-CCR would create capital efficiency for banking organizations, align with banking organizations' risk management practices for counterparty credit risk, and promote smooth market functioning and liquidity.

The agencies have proposed to permit the netting of repo-style transactions and derivative transactions subject to qualifying master netting agreements in SA-CCR, and not to recognize cross product netting of eligible margin loans. Although eligible margin loans have similarities to repo-style transactions, such as both being collateralized by liquid and readily marketable securities, they differ from repo-style and derivative transactions in that eligible margin loans are not typically included in qualifying master netting arrangements. The agencies are seeking input on whether and how cross-product netting should be recognized for eligible margin loans. The proposal also would not permit cross-product netting for cleared transactions, as cleared transactions are typically not included in netting sets with non-cleared transactions. The agencies are seeking feedback on the scope of the proposed recognition of cross-product netting, including whether the scope of cross-product netting should be

expanded to include cleared transactions.

Question 42: The agencies seek comment on what, if any, challenges banking organizations may face in using SA-CCR to determine exposure amounts for counterparty credit risk (e.g., whether SA-CCR could underestimate or overstate the exposure amount for some portfolios). What are the advantages and disadvantages of retaining the IMM for counterparty credit risk? If the IMM were retained, what corresponding modifications should the agencies make to the current version of the IMM to maintain appropriate alignment between SA-CCR and IMM?

Question 43: What, if any, additional changes should be made to the scope of cross-product netting recognition under SA-CCR? For example, if the scope of cross-product netting recognition in SA-CCR were expanded to eligible margin loans, what would be the advantages and disadvantages of this expanded scope? What are the advantages and disadvantages of extending cross-product netting recognition in SA-CCR to cleared transactions?

Question 44: Are there any modifications to the operational requirements for qualifying cross-product master netting agreements that the agencies should consider in connection with the recognition of netting of certain repo-style transactions in SA-CCR?

ii. Netting of Collateralized-to-Market (CTM) and Settled-to-Market (STM) Client-Facing Derivative Transactions

Under SA-CCR in the current capital rule, the exposure amount of a derivative netting set is calculated as the sum of replacement cost and potential future exposure (PFE) multiplied by an alpha factor. While the capital rule allows netting of all derivative contracts within a netting set in the replacement cost calculations, netting across margined and unmargined derivative contracts in the same netting set is limited to cleared transactions for purposes of the PFE calculations.

Settled-to-market derivative contracts are those in which daily payments are made to settle the mark-to-market exposure. These payments are made on a periodic basis to reflect changes in exposure that arise from marking a derivative contract to fair value, and they are similar to traditional exchanges of variation margin, except that, in a settled-to-market contract, the payment to the receiving party extinguishes the amount owed to the receiving party arising from the change in fair value and thus effectively settles the outstanding

amount due on the contract. In contrast, a collateralized-to-market derivative contract is a form of derivative transaction for which exchanges of variation margin that occur on a periodic (often daily) basis collateralize any outstanding payment obligation of a counterparty. The counterparties in a collateralized-to-market contract secure, but do not settle, mark-to-market exposures as they arise. Settled-to-market derivative contracts and collateralized-to-market derivative contracts are functionally and economically similar from a counterparty credit risk perspective. SA-CCR therefore allows a clearing member banking organization to elect, at the netting set level, to treat all cleared settled-to-market derivative contracts within the netting set as subject to a variation margin agreement and receive the benefits of netting with cleared collateralized-to-market derivative contracts for the purposes of PFE calculations, provided that both sets of contracts share the same margin period of risk.¹⁴⁵

The exposure of a clearing member to its client when facilitating a client's cleared transaction (a client-facing derivative transaction) is treated as a non-cleared transaction under the capital rule because the clearing member's exposure is to the client, not the central counterparty. Because some clearing members enter into client-facing derivative transactions in the form of settled-to-market and collateralized-to-market transactions, there can be situations where both types of derivatives are a part of the same netting set. Because client-facing derivative transactions are not cleared transactions, banking organizations currently do not have the option to treat client-facing derivative transactions that are settled-to-market contracts as if subject to a variation margin agreement, and clearing member banking organizations therefore cannot net client-facing settled-to-market derivative contracts and collateralized-to-market derivative contracts for purposes of SA-CCR.

The proposal would amend SA-CCR to allow clearing member banking organizations the option to treat client-facing settled-to-market derivative contracts as collateralized-to-market (i.e., margined) derivative contracts, thus permitting netting between client-facing settled-to-market and

¹⁴⁵ 12 CFR 3.132(c)(5)(v) (OCC); 12 CFR 217.132(c)(5)(v) (Board); 12 CFR 324.132(c)(5)(v) (FDIC). This would also be consistent with comments received under EGRPRA as commenters requested allowance of netting of settled-to-market and collateralized-to-market.

collateralized-to-market contracts for the purposes of PFE calculations. This proposed approach would align the netting treatment of cleared derivative exposures with the netting treatment of their related client-facing derivative exposures, as well as facilitate efficient hedging. This proposed revision is also important for cross-product netting, as certain derivative transactions are settled-to-market, whereas repo-style transactions are often collateralized-to-market.

Question 45: What are the advantages and disadvantages of permitting banking organizations to treat bilateral settled-to-market derivative transactions as collateralized-to-market derivative transactions for purposes of SA-CCR?

iii. Potential Change to the Hypothetical Capital Requirement for QCCP Default Fund Contribution Calculation

Financial market participants are increasingly exploring cross-margining arrangements, which facilitate the aggregation of positions across multiple central counterparties and allow for initial margin to be determined on a net basis, with recognition of risk-offsets that exist among different positions.¹⁴⁶ Cross-margining agreements generally allow a clearing member to post initial margin to multiple central counterparties on a net basis, taking into account offsetting positions the clearing member holds with each central counterparty. As a result, cross-margining agreements may more accurately reflect the economic risk of the transactions associated with each central counterparty subject to the relevant cross-margining agreement. Although cross-margining has historical precedent, in recent years there have been significant developments, refinements, and increased adoption of cross-margining practices across the financial industry. Cross-margining arrangements may involve netting sets that contain multiple products, as central counterparties in the United States generally specialize in clearing a single specific product type such as repo-style transactions or derivatives.¹⁴⁷ For example, under a cross-margining agreement, a clearing member with an agreement to sell a U.S. Treasury security at one QCCP could recognize risk-offsets that exist with an interest rate future at a different QCCP in determining the margin it posts at each QCCP. Cross-margining agreements also

generally include policies and procedures for QCCPs participating in such agreements to manage the default of a clearing member.

Central counterparties use default funds, to which clearing members contribute, to cover potential losses that may arise if a clearing member defaults. Clearing members are generally required to contribute to the default funds in proportion to each clearing member's share of the central counterparty's transactions, whether in the form of bilateral transactions or clearing member client transactions guaranteed by the clearing member. The capital rule defines such default fund contributions as the funds contributed to, or commitments made by a clearing member, to a central counterparty's mutualized loss sharing arrangement. Banking organizations that are clearing members are required to include in risk-weighted assets an amount representing the risk of their default fund contributions. For contributions to qualifying central counterparties (QCCPs), the risk-weighted asset amount is derived using the hypothetical capital requirement of a qualifying central counterparty, Kccp, representing its counterparty credit risk exposures to all its clearing members and their clients. Kccp incorporates an exposure amount for each transaction cleared by the QCCP, reduced by initial margin, variation margin, and funded default fund contributions.

Under the current capital rule, clearing member banking organizations are not able to reflect the risk-offsets recognized by cross-margining programs in their Kccp calculations. Together with lower margin requirements resulting from cross-margining programs, this may result in banking organizations being required to hold additional capital when engaging in offsetting activities. As cross-margining arrangements are increasingly adopted, this potential misalignment could become increasingly consequential.

Without revisions to the default fund contribution framework's Kccp formula, clearing member banking organizations would not be able to reflect potential risk-reductions recognized by cross-margining arrangements in their hypothetical capital requirement calculation. A consequence could be that banking organizations may be less likely to intermediate transactions as clearing members, which could be problematic for money market funds, pension funds, insurance funds, hedge funds, and other clients that may not have direct access to central counterparty services and market access more broadly.

The agencies are therefore seeking comment on potential modifications to the capital rule's requirements related to default fund contributions to recognize cross-margining arrangements among QCCPs that meet certain criteria. QCCPs are either regulated and supervised as designated financial market utilities, or, if the QCCP is located outside of the United States, in a manner equivalent to a designated financial market utility. Such supervision and regulations can include evaluation of margining practices. Accordingly, the agencies are seeking feedback on proposed revisions to the Kccp formula described below, if a QCCP's cross-margining arrangements are subject to appropriate oversight by the QCCP's primary regulators.

More specifically, the agencies are requesting comment on the below potential approach for calculating the exposure amount for derivatives and repo-style transactions that are subject to a valid cross-margining agreement for purposes of Kccp. The formula used in this approach would allow for the recognition of the risk-mitigating benefits of cross-margining programs and portfolio diversification relative to the current Kccp formula.

$$K_{CCP_i} = \sum_j exposure_{QCCP_{i,j}} * 1.6\% \\ exposure_{QCCP_{i,j}} = exposure_{Non-XM_{i,j}} + Allocation Factor_{i,j} * exposure_{XM_{i,j}}$$

Where:

$exposure_{QCCP_{i,j}}$ represents the exposure amount of QCCPi to each of its clearing members j,

$exposure_{Non-XM_{i,j}}$ represents the exposure amount for positions not subject to a cross-margining agreement at QCCPi for clearing member j,

$exposure_{XM_{i,j}}$ represents the exposure amount for positions subject to a cross-margining agreement at QCCPi for clearing member j.

$Allocation Factor_{i,j}$ is the allocation factor for clearing member j at QCCPi which is assigned based on the ratio of gross notional positions held at QCCPi divided by the sum of all gross notional positions held across all QCCPs subject to the cross-margining agreement. This allocation factor must be between 0 and 1.

Question 46: What are the advantages and disadvantages of recognizing the benefits of cross-margining arrangements, for Kccp purposes, under the capital rule?

Question 47: If the agencies were to permit recognition of offsetting positions that are facilitated by cross-margining agreements among QCCPs that satisfy certain criteria, what criteria and operational requirements should the agencies establish for a qualifying cross-margining agreement? For example, should the agencies require that a qualifying cross-margining agreement be

¹⁴⁶ See <https://www.dtcc.com/news/2025/december/15/dtcc-files-to-expand-cme-group-cross-margining-arrangement>.

¹⁴⁷ See <https://investor.cmegroup.com/news-releases/news-release-details/cme-group-and-dtcc-launch-enhanced-treasury-cross-margining>.

approved by the QCCPs' primary regulator or regulators? Alternatively, should the agencies require that banking organizations receive a legal opinion verifying the validity and enforceability of the agreement under applicable law of the relevant jurisdictions, or that banking organizations conduct sufficient legal review, including ongoing due diligence, to have a well-founded basis for concluding the agreement would be enforceable under applicable law?

Question 48: What revisions, if any, should the agencies make to the cleared transactions framework in consideration of cross-margining agreements? What are the advantages and disadvantages of extending recognition of cross-margining agreements for default fund contribution capital requirements to cleared transaction capital requirements?

Question 49: What alternatives to the allocation factor described in the proposed formula for the hypothetical capital requirement for cross-margined portfolios should the agencies consider and why?

iv. Proposed Technical Revisions

I. Treatment of Collateral Held by a Qualifying Central Counterparty (QCCP)

Under the current capital rule, a clearing member banking organization using SA-CCR must determine its capital requirement for a default fund contribution to a QCCP based on the hypothetical capital requirement for the QCCP (K_{CCP}) using SA-CCR.¹⁴⁸ The calculation of K_{CCP} requires calculating the exposure amount of the QCCP to each of its clearing members. In the calculation of the exposure amount, the capital rule allows the exposure amount of the QCCP to each clearing member to be reduced by all collateral held by the QCCP posted by the clearing member

and by the amount of prefunded default fund contributions provided by the clearing member to the QCCP. However, this treatment is inconsistent with the calculation of the exposure amount for a netting set, because collateral is a component of the calculations of both the replacement cost and PFE. It does not make sense to reduce that exposure amount further by subtracting collateral held by the QCCP.

The proposal would therefore change how collateral posted to a QCCP by clearing members and the amount of clearing members' prefunded default fund contributions factor into the calculation of K_{CCP} . This treatment would allow for the appropriate recognition of collateral in calculating the exposure amount of a QCCP to its clearing members and would be consistent with the calculation of the exposure amount for a netting set. Specifically, for the purpose of calculating the exposure amount of a QCCP to a clearing member, the net independent collateral amount that appears in the replacement cost and PFE calculations would be replaced by the sum of:

(1) the fair value amount of the independent collateral posted to a QCCP by a clearing member;

(2) the fair value amount of the independent collateral posted to a QCCP by a clearing member on behalf of a client, in connection with derivative contracts for which the clearing member has provided a guarantee to the QCCP; and

(3) the amount of the prefunded default fund contribution of the clearing member to the QCCP.

Both the amount of independent collateral and the prefunded default fund contribution would be adjusted by the standard market price volatility haircuts under Table 1 to § _____.¹¹⁵ of the proposal, as applicable.

II. Treatment of Collateral Held in a Bankruptcy-Remote Manner

Both the standardized approach and the advanced approaches under the current capital rule require a banking organization to determine the trade exposure amount for cleared derivative transactions.

When calculating its trade exposure amount for a cleared transaction, a banking organization under the current capital rule may exclude collateral posted to the CCP that is held in a bankruptcy-remote manner by the CCP or a custodian. In the SA-CCR framework of the capital rule, the agencies inadvertently imposed heightened requirements for the exclusion of collateral from the trade exposure amount posted by a clearing member banking organizations to a CCP under the advanced approaches.¹⁴⁹ The expanded risk-based approach would not include these heightened requirements and would align the requirements for the exclusion of collateral from the trade exposure amount of banking organizations under the expanded risk-based approach with the standardized approach.

III. Supervisory Delta for Collateralized Debt Obligation (CDO) Tranches

Under the capital rule, a banking organization must apply a supervisory delta adjustment to account for the sensitivity of a derivative contract (scaled to unit size) to the underlying primary risk factor, including the correct sign (positive or negative) to account for the direction of the derivative contract amount relative to the primary risk factor.¹⁵⁰

For a derivative contract that is a CDO tranche, the supervisory delta adjustment is calculated using the formula below:

15

$$\text{Supervisory delta adjustment} = \frac{15}{(1+14*A) * (1+14*D)}$$

where A is the attachment point and D is the detachment point.

The capital rule applies a positive sign to the resulting amount if the banking organization purchased the CDO tranche and applies a negative sign

if the banking organization sold the CDO tranche. However, the appropriate sign to account for the purchase or sale of CDO tranches can be ambiguous: purchasing a CDO tranche can be interpreted as selling credit protection,

while selling a CDO tranche can be interpreted as purchasing credit protection. In order to ensure the correct sign of the supervisory delta adjustment for CDO tranches the proposal would revise the sign specification for the

¹⁴⁸ See 12 CFR 3.133(d) (OCC); 12 CFR 217.133(d) (Board); 12 CFR 324.133(d) (FDIC).

¹⁴⁹ 12 CFR 3.133(c)(4)(i) (OCC); 12 CFR 217.133(c)(4)(i) (Board); 12 CFR 324.133(c)(4)(i) (FDIC).

¹⁵⁰ For the supervisory delta adjustment, a banking organization applies a positive sign to the derivative contract amount if the derivative contract is long the risk factor and a negative sign if the derivative contract is short the risk factor. A derivative contract is long the primary risk factor

if the fair value of the instrument increases when the value of the primary risk factor increases. A derivative contract is short the primary risk factor if the fair value of the instrument decreases when the value of the primary risk factor increases.

supervisory delta adjustment for CDO tranches as follows: positive if the CDO tranches were used by the banking organization to purchase credit protection and negative if the CDO tranches were used by the banking organization to sell credit protection.

IV. Supervisory Delta for Options Contracts

The supervisory delta adjustment for option contracts in SA-CCR is calculated based on the Black-Scholes formulas for delta sensitivity of European call and put option contracts. The original Black-Scholes formula for a European option contract's delta sensitivity assumes a lognormal probability distribution for the value of the instrument or risk factor underlying the option contract, thus precluding negative values for both the current value of the underlying instrument or risk factor and the strike price of the option contract. SA-CCR uses modified Black-Scholes formulas that are based on a shifted lognormal probability distribution, which allows negative values of the underlying instrument or risk factor with the magnitude not exceeding the value of a shift parameter λ (lambda). The capital rule sets λ to zero (thus precluding negative values) for all asset classes except the interest rate asset class, which has exhibited negative values in some currencies in recent years. For the interest rate asset class, a banking organization must set the value of λ for a given currency equal to the greater of (i) the negative of the lowest value of the strike prices and the current values of the interest rate underlying all interest rate options in a given currency that the banking organization has with all counterparties plus 0.1 percent; and (ii) zero.

Negative values of the instrument or risk factor underlying an option contract can occur in other asset classes as well. For example, whenever an option contract references the difference between the values of two instruments or risk factors, the underlying spread of this option contract can be negative. Such option contracts include option contracts on the spread between two commodity prices and on the difference in performance across two equity indices. Under the current capital rule, banking organizations cannot calculate the supervisory delta adjustment for any option contract other than an interest rate derivative contract if the strike price or the current value of the underlying instrument or risk factor is negative because the capital rule only allows a non-zero value for λ for interest rate derivative contracts.

To ensure that a banking organization is able to calculate the supervisory delta adjustment for option contracts when the underlying instrument or risk factor has a negative value, the proposal would extend the use of the shift parameter λ to all asset classes. More specifically, for non-interest-rate asset classes, the proposal would require a banking organization to use the same value of λ for all option contracts that reference the same underlying instrument or risk factor. If the value of the underlying instrument or risk factor cannot be negative, the value of λ would be set to zero. Otherwise, to determine the value of λ for a given risk factor or instrument, the proposal would require a banking organization to find the lowest value L of the strike price and the current value of the underlying instrument or risk factor of all option contracts that reference this instrument or risk factor with all counterparties. The proposal would require a banking organization to set λ for this instrument or risk factor according to the formula $\lambda = \max\{-1.1 \cdot L, 0\}$. The purpose of multiplying negative L by 1.1 (thus, resulting in $-1.1 \cdot L$) is the same as that for adding 0.1 percent in the case of interest rate derivative contracts under the capital rule: to set the lowest possible value of the underlying instrument or risk factor slightly below the lowest observed value. Because non-interest-rate instruments and risk factors can have vastly different magnitudes and, moreover, be expressed in different units (e.g., different currencies), it is challenging to determine a universal additive offset value for all values of non-interest-rate instruments and risk factors. Because of this, the offset would be performed via multiplication for asset classes other than the interest rate asset class.

The proposal would also permit a banking organization, with the prior approval of its primary Federal supervisor, to specify a different value for λ for purposes of the supervisory delta adjustment for option contracts other than interest rate option contracts, if a different value for λ would be more appropriate, considering the range of values for the instrument or risk factor underlying option contracts. A banking organization that specifies a different value for λ would be required to assign the same value for λ to all option contracts with the same underlying instrument or risk factor, as applicable, with all counterparties. This proposed provision is intended to permit a banking organization, with approval from its primary Federal supervisor, to account for unanticipated outcomes in

the supervisory delta adjustment of certain asset classes while avoiding arbitrage between assets in that class.

Question 50: What other approaches should the agencies consider to calibrate the lambda parameter for non-interest-rate asset classes, such as a formula that is different from the proposed formula of $\lambda = \max\{-1.1 \cdot L, 0\}$, and why? What values besides 1.1, if any, should the agencies consider for the value of the multiplier in the proposed formula? Why?

V. Decomposition of Credit, Equity, and Commodity Indices

Under SA-CCR, banking organizations are permitted to decompose indices within credit, equity, and commodity asset classes, such that a banking organization would treat each component of the index as a separate single-name derivative contract.¹⁵¹ The capital rule requires that if a banking organization elects to decompose indices within the credit, equity, and commodity asset classes, the banking organization must perform all calculations in determining the exposure amount based on the underlying instrument rather than the index. While this is possible for linear indices, for non-linear index contracts (for example, those with optionality and CDS index tranches) it is not mathematically possible to calculate the supervisory delta for an underlying component, as the delta associated with the non-linear index applies at the instrument level. In recognition of this fact, the agencies are clarifying that the option to decompose a non-linear index is not available under SA-CCR. Additionally, the agencies are clarifying that if electing to decompose a linear index, banking organizations must apply the weights used by the index when determining the exposure amounts for the underlying instrument.

5. Credit Risk Mitigation

The current capital rule permits banking organizations to recognize certain types of credit risk mitigants, such as guarantees, credit derivatives, and collateral, for risk-based capital purposes provided the credit risk mitigants satisfy the qualification standards under the rule.¹⁵² Credit derivatives and guarantees can reduce

¹⁵¹ See 12 CFR 3.132(c)(5)(vi) (OCC); 12 CFR 217.132(c)(5)(vi) (Board); 12 CFR 324.132(c)(5)(vi) (FDIC).

¹⁵² Consistent with the current capital rule, the proposal would not require banking organizations to recognize a credit risk mitigant that it has obtained. Credit derivatives that a banking organization cannot or chooses not to recognize as a credit risk mitigant would be subject to a separate counterparty credit risk capital requirement.

the credit risk of an exposure by placing a legal obligation on a third-party protection provider to compensate the banking organization for losses associated with a credit event of the original obligor.¹⁵³ Similarly, the use of collateral often can reduce the credit risk of an exposure by creating the right of a banking organization to take ownership of and liquidate the collateral in the event of a default by the counterparty. Prudent use of such mitigants can help a banking organization reduce the credit risk of an exposure and in some circumstances reduce the risk-based capital requirement associated with that exposure.

Credit risk mitigants recognized for risk-based capital purposes must be of sufficiently high quality to effectively reduce credit risk. For guarantees and credit derivatives, the current capital rule primarily looks to the creditworthiness of the guarantor and the features of the underlying contract to determine whether these forms of credit risk mitigation may be recognized for risk-based capital purposes (eligible guarantee or eligible credit derivative). With respect to collateralized transactions, the current capital rule primarily looks to the liquidity profile and quality of the collateral received (such as the creditworthiness of the issuer of the collateral) and the nature of the banking organization's security interest to determine whether the collateral qualifies as financial collateral that may be recognized for purposes of risk-based capital.¹⁵⁴

The proposal would largely incorporate the treatments for collateralized transactions, guarantees, and credit derivatives from the current capital rule's standardized approach with enhancements to increase risk sensitivity. For eligible guarantees and eligible credit derivatives, the proposal would generally retain the substitution approach from the standardized approach of the current capital rule with two modifications. Specifically, the proposal would modify the treatment for eligible credit derivatives that do not include restructuring as a credit event and no longer permit the recognition of credit protection from nth-to-default credit derivatives.¹⁵⁵

For collateralized transactions where financial collateral secures exposures

that are not derivative contracts or netting sets of derivative contracts, the proposal would generally retain the simple approach from the current capital rule's standardized approach with the following two modifications.¹⁵⁶ First, the proposal would replace the requirement that financial collateral be subject to a collateral agreement with conditions including the requirement that the banking organization have the right to liquidate or take legal possession of the collateral upon an event of default. Second, the proposal would permit banking organizations to recognize, under the simple approach, the credit risk mitigation benefits of financial collateral with a maturity or currency mismatch, after applying certain adjustments.

The proposal would also introduce eligible prepaid credit protection arrangements as a credit risk mitigant available to all exposure types, including securitizations, and permit banking organizations to recognize the credit risk mitigation benefits of the protection amount of the prepaid credit protection arrangement, discounted to reflect any applicable maturity and currency mismatch adjustments.

a. Guarantees and Credit Derivatives

i. Substitution Approach

Consistent with the standardized approach in the current capital rule, the proposal would permit a banking organization to recognize the credit-risk-mitigation benefits of eligible guarantees and eligible credit derivatives by substituting the risk weight applicable to the eligible guarantor or counterparty to the eligible credit derivative (protection provider) for the risk weight applicable to the hedged exposure. To recognize the risk mitigating benefits of a guarantee or credit derivative for risk-based capital purposes, the proposal would continue to require the issuer of or counterparty to the eligible guarantee or eligible credit derivative, respectively, to be an eligible guarantor.¹⁵⁷ The proposal would rely on the definition of eligible guarantor in

§ _____.2 of the capital rule, which, among other criteria, requires an entity to have issued and outstanding an unsecured debt security without credit enhancement that is investment grade at the time the guarantee is issued or anytime thereafter.¹⁵⁸

Question 51: The agencies seek comment on the requirement that the entity has issued and outstanding an unsecured debt security without credit enhancement that is investment grade to meet the definition of an eligible guarantor. What, if any, alternatives to this requirement should the agencies consider to help to ensure that eligible guarantors can be expected to perform on guarantees and what would the pros and cons of those alternatives be?

ii. Adjustment for Credit Derivatives Without Restructuring as a Credit Event

Credit derivative contracts in certain jurisdictions include debt restructuring as a credit event that triggers a payment obligation by the protection provider to the protection purchaser. Such restructurings of the hedged exposure may involve forgiveness or postponement of principal, interest, or fees that results in a loss to investors. Consistent with the current capital rule, the proposal would generally require a banking organization that seeks to recognize the credit risk-mitigation benefits of an eligible credit derivative that does not include a restructuring of the reference exposure as a credit event to reduce the effective notional amount of the credit derivative by 40 percent to account for any unmitigated losses that could occur as a result of a restructuring of the hedged exposure.

Under the proposal, however, the 40 percent adjustment would not apply to eligible credit derivatives without restructuring as a credit event if both of the following requirements are satisfied: (1) the terms of the hedged exposure (and the reference exposure, if different from the hedged exposure) allow the maturity, principal, coupon, currency, or seniority status to be amended outside of receivership, insolvency, liquidation, or similar proceeding only by unanimous consent of all parties; and (2) the banking organization has conducted sufficient legal review to conclude with a well-founded basis

¹⁵³ Credit events are defined in the documents governing the credit risk mitigant and often include events such as failure to pay principal and interest and entry into insolvency or similar proceedings.

¹⁵⁴ See 12 CFR 3.2, 217.2, and 324.2 for the definition of financial collateral.

¹⁵⁵ See section IV.B.5.b. of this Supplementary Information.

¹⁵⁶ The collateral haircut approach also would be available to banking organizations to recognize the benefits of collateral for eligible margin loans and for repo-style transactions. For netting sets containing certain repo-style transactions and derivative contracts that are subject to a qualifying cross product master netting agreement, a banking organization also would be able to determine its exposure amount using SA-CCR as described in section IV.A.4.b. of this **SUPPLEMENTARY INFORMATION**.

¹⁵⁷ Under the advanced approaches framework in the current capital rule, an eligible guarantee need not be issued by an eligible guarantor unless the exposure is a securitization exposure. Under the proposal, an eligible guarantee would need to be issued by an eligible guarantor.

¹⁵⁸ A banking organization would not have to apply the proposed internal credit risk rating system criteria, as described in section IV.A.2.e. of this **SUPPLEMENTARY INFORMATION**, in order to determine whether an entity satisfies the investment grade requirement included in the definition of eligible guarantor. The proposed internal credit risk rating system criteria would be required in order for the 65 percent risk weight to be available for purposes of the substitution approach.

(and maintains sufficient written documentation of that legal review) that the hedged exposure is subject to the U.S. Bankruptcy Code or a domestic or foreign insolvency regime with similar features that allows for a company to reorganize or restructure and provides for an orderly settlement of creditor claims.

The unanimous consent requirement would mean that, for restructurings occurring outside of an insolvency proceeding, all holders of the hedged exposure (and the reference exposure, if different from the hedged exposure) must agree to any restructuring for the restructuring to occur, and no holder can vote against the restructuring or abstain. This unanimous consent requirement would reduce the risk that a banking organization would suffer a credit loss on the hedged exposure that would not be offset by a payment under the eligible credit derivative. Banking organizations generally would only be incentivized to vote for a restructuring if the terms of the restructuring provide a more beneficial outcome to the banking organization relative to insolvency proceedings that would trigger payment under the eligible credit derivative. Additionally, the unanimous consent requirement for the reference exposure, if different from the hedged exposure, would provide an additional layer of security by significantly reducing the probability of reaching a restructuring agreement that results in a loss of principal or interest for creditors without triggering payment under the eligible credit derivative. The unanimous consent requirement would need to be satisfied through the terms of the hedged exposure (and the reference exposure, if different from the hedged exposure), which could be accomplished through a contractual provision of the exposure or the operation of the applicable law.

The requirement that the hedged exposure be subject to the U.S. Bankruptcy Code or a similar domestic or foreign insolvency regime would help to ensure that any restructuring is done in an orderly, predictable, and regulated process. In the event that the obligor of the hedged exposure defaults and the default is not cured, the obligor would either be required to enter insolvency proceedings, which would trigger payment under the credit derivative, or the obligor would be required to pursue restructuring outside of insolvency, which could not occur without the banking organization's consent. Together, the proposed conditions are intended to ensure that credit derivatives that do not include restructuring as a credit event but

provide similarly effective protection as those that do contain such provisions would be afforded similar recognition under the capital framework.

Question 52: The agencies seek comment on allowing banking organizations to recognize in full the effective notional amount of credit derivatives that do not include restructuring as a credit event, if certain conditions are met. What are the cost and benefits of this approach? What, if any, less restrictive conditions for receiving full recognition should the agencies consider that would more appropriately capture credit derivatives that provide similar protection as those that include restructuring as a credit event receive and why? For example, what would be the advantages and disadvantages of requiring the consent of all parties directly and adversely affected by a restructuring, rather than the unanimous consent of all parties? What would be the advantages and disadvantages of requiring the consent of all parties affected by any change in lien position or priority in the hedged or referenced exposure?

Question 53: To what extent is the proposed treatment of eligible credit derivatives that do not include restructuring of the reference exposure as a credit event relevant outside of the United States and how should this be considered for purposes of the proposal?

Question 54: In order for a banking organization to recognize the credit risk mitigation benefits of an eligible credit derivative, the current capital rule requires that legally-enforceable cross-default or cross-acceleration clauses be in place and that the reference exposure and the hedged exposure be to the same legal entity. What would be the advantages and disadvantages of allowing recognition of credit derivatives where (1) the reference exposure is to a different legal entity than the hedged exposure, (2) the reference exposure's legal entity is guaranteed by its parent company, and (3) the parent company is subject to a binding cross-default or cross-acceleration provision related to the hedged exposure's debt.

b. Collateralized Transactions

Consistent with the current capital rule, a banking organization would be permitted to recognize the risk-mitigating benefits of financial collateral using the simple approach by substituting the risk weight applicable to an exposure with the risk weight applicable to the financial collateral

securing the exposure, generally subject to a 20 percent floor.¹⁵⁹

Under the current capital rule, a requirement for recognizing the credit risk mitigation benefit of financial collateral under the simple approach is that the collateral must be subject to a collateral agreement for at least the life of the exposure. The proposal would not include this requirement under the simple approach because the requirement is overly broad and not relevant for certain transaction types. For example, while the right to close out a transaction would be relevant with respect to a repurchase agreement, it may not be relevant with respect to a loan. Instead, the proposal would require that the legal mechanism by which the financial collateral is pledged or transferred be enforceable and provide the banking organization with an ability to exercise its applicable legal rights with respect to the collateral in a timely manner upon an event of default. Depending on the characteristics of the type of exposure and the financial collateral in question, those rights may include the right to liquidate or take legal possession of the financial collateral, to set off amounts owed by the banking organization against amounts owed by the obligor, and to close out the underlying transaction. However, not all of these rights may be applicable with respect to all types of exposures and financial collateral, and a banking organization would only be required to have those rights that are applicable for the type of exposure and financial collateral in question. This requirement, in combination with the definition of financial collateral—which, in part, requires a banking organization to have a perfected, first-priority security interest (or the legal equivalent thereof) in the collateral—and the other requirements of § _____.121(b)(1) would provide a sufficient basis for recognizing the collateral under the simple approach.

The requirement under the current capital rule that financial collateral be subject to a collateral agreement often prevents a banking organization from recognizing financial collateral as a credit risk mitigant under the simple

¹⁵⁹ A banking organization would not have to apply the proposed internal credit risk rating system criteria in order to determine whether the issuer of long-term or short-term debt securities that are not securitization exposures is investment grade and are eligible to be considered financial collateral under the capital rule. However, the proposed internal credit risk rating system criteria would be required in order for the 65 percent risk weight to be available for purposes of risk weight substitution. See definition of financial collateral in § _____.2 of the capital rule. 12 CFR 3.2 (OCC); 12 CFR 217.2 (Board); 12 CFR 324.2 (FDIC).

approach if the banking organization's exercise of its rights may be stayed in a bankruptcy of the obligor. This has generally meant that a banking organization could not use the simple approach to recognize financial collateral in respect of collateralized loans because the exercise of a banking organization's collateral rights with respect to a loan would often be subject to a stay in the bankruptcy or insolvency of a borrower under the applicable law. Under the proposal, the fact that a banking organization's rights may be subject to a stay in the event of an obligor's bankruptcy would not preclude the banking organization from recognizing the credit risk mitigation benefits of financial collateral, provided the banking organization has a well-founded basis for concluding that it will be able to exercise its rights in a timely manner. The proposed change would permit banking organizations to recognize the credit risk mitigation benefits of financial collateral that protects exposures arising from many types of loans and traditional credit products. Other elements of the simple approach, such as the 20 percent risk-weight floor, help to address the risk of declines in the value of collateral.

Typically, financial collateral in respect of a collateralized transaction is pledged by the obligor of that exposure. In some cases, collateral may be pledged or transferred by a party other than the obligor. A third-party pledgor may be the parent or an affiliate of an obligor or an unrelated party that is providing credit risk protection to the banking organization. While collateral provided by a third party may be an effective credit risk mitigant, it may also pose unique risks. In particular, depending on the laws of the applicable jurisdictions and the terms of the relevant legal agreements, the bankruptcy or insolvency of a pledgor prior to an event of default of the obligor may terminate or impair the banking organization's rights to the collateral. In these circumstances, financial collateral does not provide an effective credit risk mitigant. Consequently, the proposal would require that the bankruptcy or insolvency of a third-party pledgor not result in the termination or impairment of the banking organization's rights in respect of the financial collateral.

There may be situations where obligors have the ability to remove collateral that they are contractually obligated to maintain when a banking organization is experiencing stress. This risk is most apparent when financial collateral takes the form of cash on deposit at a banking organization, where a banking organization's deposit

systems may not reflect the obligor's contractual obligation to maintain the deposit at the banking organization. It may also arise, in respect of other types of financial collateral, depending on the custody arrangement and associated controls in respect of the collateral. Financial collateral is not an effective credit risk mitigant if a banking organization cannot appropriately safeguard its rights in respect of such financial collateral. Consequently, the proposal would also require a banking organization to be able to reasonably demonstrate the ability to protect and enforce its rights in respect of any financial collateral.

Other safeguards relating to the simple approach are intended to sufficiently calibrate the benefits of the proposal's recognition of financial collateral for a broader scope of products. For example, the maturity mismatch adjustment, which is described in greater detail below, reduces the benefit of financial collateral based on the difference between the residual maturity of the legal mechanism by which financial collateral is pledged and that of the secured exposure. Additionally, for a situation with a maturity mismatch, the proposal would only allow for recognition of the credit risk mitigant where the original maturity of the legal mechanism is greater than or equal to one year and the residual maturity of the legal mechanism is greater than three months. These requirements, taken together with the other requirements in section _____.121 of the proposal, would incentivize banking organizations to utilize credit risk mitigants that provide effective credit risk transfer.

Question 55: Under the simple approach, the current capital rule requires that collateral be revalued at least every six months. The agencies recognize that, in practice, most collateral agreements for liquid collateral provide for more frequent valuation. The proposal would remove the requirement for collateral agreements. Given that financial collateral is generally liquid, what would be the advantages and disadvantages of requiring a more frequent minimum revaluation interval—such as quarterly—under the simple approach? Please provide rationale supporting or opposing a more frequent revaluation requirement.

Question 56: The proposal would maintain the current capital rule's definition of financial collateral and allow banking organizations to recognize the risk-mitigating benefits of cash on deposit, including cash held by

a third-party custodian or trustee. The agencies invite comment on whether the definition of financial collateral is sufficiently clear with respect to cash collateral held for a banking organization by a third-party custodian or trustee. What would be the advantages or disadvantages of revising the "cash on deposit" prong of the definition of financial collateral to explicitly recognize cash on deposit at any third-party depository institution, regardless of whether it is a custodian or trustee? In addition, what would be the appropriate risk weight for the collateralized exposure where the financial collateral is, directly or indirectly, in the form of a deposit claim on a third-party depository institution and why? What would be the advantages and disadvantages of subjecting the collateralized exposure to the 20 percent risk weight floor? What, if any, other alternative approaches should the agencies consider and why?

Question 57: The agencies seek comment on the appropriateness of the calibration of the market price volatility haircuts. Commenters are encouraged to submit data with their response.

c. Prepaid Credit Protection

The proposal would introduce eligible prepaid credit protection arrangements as an additional type of credit risk mitigant. The proposal would define a prepaid credit protection arrangement as a contractual agreement in which a protection purchaser receives an initial amount in cash from a protection provider that the protection purchaser is required to repay, less any losses that the protection purchaser incurs due to a credit event on the protected exposures, such as borrower default on the protected exposures. In this type of arrangement, the amount paid by the protection provider is not collateral that secures a future obligation of the protection provider; rather, it is consideration for a right to future payments, contingent on the performance of the protected exposure(s), from the protection purchaser. This form of credit risk mitigant effectively transfers credit risk to the protection provider, as the banking organization's liability created by the prepaid credit protection arrangement generally would be reduced at the same time the banking organization incurs a loss on the protected exposure(s). A common example of a prepaid credit protection arrangement are fully funded credit-linked notes issued by a banking organization that transfer the credit risk of a reference exposure or portfolio of

reference exposures to third party investors.¹⁶⁰

Under the proposal, a prepaid credit protection arrangement would be required to meet specific requirements to be recognized for risk-based capital purposes as an eligible prepaid credit protection arrangement. Specifically, the proposal would define an eligible prepaid credit protection arrangement as a prepaid credit protection arrangement that:

- (1) Is written;
- (2) Is unconditional;
- (3) Covers all or a pro rata portion of all contractual payments due to be paid on the reference exposure or reference exposures;
- (4) Provides that the amount and timing of payments due from the protection purchaser to the protection provider are incorporated into the arrangement and the arrangement only allows these terms to change in the event of a breach of the arrangement by the protection purchaser;
- (5) Provides that entry of the protection provider into receivership, insolvency, liquidation, conservatorship, or similar proceeding does not change the amounts or timing of payments due by the protection purchaser under the arrangement;
- (6) Is legally valid and enforceable under applicable law of the relevant jurisdictions;
- (7) Upon a failure by the obligor on the one or more reference exposures to make a contractually required payment, or the occurrence of other credit events as described in the arrangement, allows the protection purchaser promptly to reduce the outstanding balance of the initial principal amount due to the protection provider by the loss of the protection purchaser on the reference exposures without input from the protection provider; and
- (8) Does not increase the protection purchaser's cost of credit protection in response to deterioration in the credit quality of any of the reference exposures.

The protection amount of an eligible prepaid credit protection arrangement would be the effective notional amount of the prepaid credit protection, reduced to reflect any currency mismatch or maturity mismatch. The effective notional amount for an eligible prepaid credit protection arrangement would be

the lesser of the contractual notional amount of the credit risk mitigant and the exposure amount of the reference exposure(s), multiplied by the percentage coverage of the credit risk mitigant.

Under the proposal, if the protection amount of the eligible prepaid credit protection arrangement is greater than or equal to the exposure amount of the reference exposure, a banking organization would be allowed to assign a zero percent risk weight to the exposure.

If the protection amount of the eligible prepaid credit protection arrangement is less than the exposure amount of the reference exposure(s) and any losses are shared on a pro rata basis between the banking organization and the protection provider,¹⁶¹ the proposal would require the banking organization to treat the reference exposure(s) as two separate exposures, protected and unprotected, in order to recognize the credit risk mitigation benefit of the eligible prepaid credit protection arrangement. In such cases, a banking organization would apply a zero percent risk weight to the protected exposure. The banking organization would calculate its risk-weighted asset amount for the unprotected exposure under the expanded risk-based approach using the risk weight assigned to the exposure and an exposure amount equal to the exposure amount of the original reference exposure minus the protection amount.

Question 58: Under the definition of eligible prepaid credit protection arrangement, the proposal would require that a protection purchaser be able to reduce the outstanding balance due to the protection provider promptly upon realizing or otherwise recognizing a loss on the reference exposure, in the event that the obligor on one or more reference exposures fails to make a contractually required payment, or the occurrence of other credit events as described in the arrangement. What, if any, are the exposure types in respect of which, or circumstances when, a protection purchaser may be exposed to losses before such losses are manifested in a way that would permit a reduction in the protection purchaser's repayment obligation? For example, what would be the instances where nonpayment or other loss on the reference exposure may not always result in an accounting write-down of the eligible prepaid credit protection arrangement at the same

time? What, if any, changes to the proposed definitions of prepaid credit protection arrangement and eligible prepaid credit protection arrangement should the agencies consider to further ensure that a protection purchaser would be able to reduce its repayment obligation on a prepaid credit protection arrangement as contemporaneously as possible with the manifestation of losses in respect of a reference exposure?

Question 59: The proposal would define the protection amount of an eligible prepaid credit protection arrangement to mean the effective notional amount of the prepaid credit protection. Certain credit-linked notes that may qualify as eligible prepaid credit protection under the proposal, are sometimes accounted for on a fair value basis. The fair value of such credit-linked notes may be affected by factors other than losses or credit events (for example, a change in interest rates) in respect of the reference exposure. As a result, at the time that credit losses in respect of the reference exposure are realized, the fair value of the credit-linked note, and the amount by which the banking organization may set off its losses in respect of the reference exposure, may be less than the notional amount of the note. What, if any, modifications to the proposal should the agencies consider to address the risk that a banking organization may not be able to set off losses on a reference exposure against the full notional amount of a prepaid credit protection instrument? What would be the advantages and disadvantages of defining the protection amount of an eligible prepaid credit protection instrument to be the instrument's carrying value (For example, the fair value if the banking organizations elects this accounting treatment)?

Question 60: The definition of prepaid credit protection requires that the protection purchaser is obligated to repay the initial principal amount to the protection provider on or before the maturity date of the transaction, less any losses that the protection purchaser realizes or otherwise recognizes due to nonpayment of all contractual payments due to be paid on the reference exposure by the obligors. The agencies seek comment as to whether the definition is sufficiently broad to capture the types of prepaid credit protection arrangements that banking organizations may enter into to transfer credit risk. For example, may prepaid credit protection arrangements be structured to allow for a reduction in the initial principal amount of the arrangement upon the recognition of losses on one or more reference

¹⁶⁰ See, e.g., Frequently Asked Questions, 12 CFR part 217, Q2 and Q3, <https://www.federalreserve.gov/supervisionreg/legalinterpretations/reg-q-frequently-asked-questions.htm>. This revision would also be consistent with comments received under EGRPRA as commenters requested recognition of the risk-mitigation benefits of credit-linked notes.

¹⁶¹ Exposures on which there is a tranching of credit risk (reflecting at least two different levels of seniority) generally are securitization exposures, as described in section IV.B. of this **SUPPLEMENTARY INFORMATION**.

exposures due to credit quality deterioration of the exposures, even in the absence of any nonpayment. If so, what if any changes to the definition of prepaid credit protection should the agencies consider?

d. Maturity and Currency Mismatch Adjustment

The simple approach in the current capital rule does not permit a banking organization to recognize credit risk mitigation benefits where the transaction is subject to a collateral agreement that has a shorter tenor than that of the secured exposure.¹⁶² To improve the risk-sensitivity of the simple approach, the proposal would permit banking organizations to recognize financial collateral and prepaid credit protection with a maturity mismatch after adjusting the fair value of the financial collateral or the effective notional amount of the eligible prepaid credit protection arrangement to reflect any maturity mismatch.¹⁶³

Under the proposal, the residual maturity of an eligible prepaid credit protection arrangement would be determined in the same manner as applies to eligible credit derivatives and eligible guarantees under the current capital rule. For financial collateral that is not cash on deposit at the banking organization, but including cash held for the banking organization by a third-party custodian or trustee, the residual maturity of any amount of such financial collateral would be the earliest date on which the banking organization's rights in respect of such amount of financial collateral may be terminated without the pledgor being

subject to a contemporaneous requirement to pledge additional financial collateral. For financial collateral that is cash on deposit at the banking organization, the residual maturity of any amount of such collateral would be the earliest date on which a depositor may withdraw such amount, notwithstanding any notice requirements or early withdrawal fees or penalties. For example, if an obligor is subject to a loan covenant requiring the obligor to maintain a certain deposit balance at the banking organization until the maturity of the loan, the residual maturity of the cash on deposit would be the remaining maturity of the loan. Any amount of a deposit balance that an obligor is contractually permitted to withdraw, however, would have a residual maturity of the earliest date on which the deposit may be withdrawn. If an obligor may withdraw a deposit at any time, including where an obligor may be subject to a notice period or an early withdrawal fee or penalty, the residual maturity would be zero, notwithstanding any stated maturity date of the deposit instrument.

Under the proposal, a banking organization would be required to apply the same adjustment to reduce the fair value of the financial collateral or the effective notional amount of the prepaid credit protection arrangement as currently applies to eligible credit derivatives and eligible guarantees under the substitution approach:

$$P_m = E \times [(t - 0.25) / (T - 0.25)]$$

Where:

- P_m = fair value of the financial collateral or effective notional amount of the eligible prepaid credit protection arrangement, adjusted for maturity mismatch;
- E = fair value of the financial collateral or effective notional amount of the eligible prepaid credit protection arrangement;
- t = the lesser of T or the residual maturity of the credit risk mitigant, expressed in years; and
- T = the lesser of five or the residual maturity of the secured exposure or reference exposure, as applicable, expressed in years.

Similarly, the proposal would eliminate the current capital rule's requirement that financial collateral be denominated in the same currency as the secured exposure for a banking organization to use the simple approach. The proposal would permit banking organizations to recognize the credit risk mitigation benefits of financial collateral and eligible prepaid credit protection arrangements when denominated in a different currency than the currency of the secured exposure, after adjusting the fair value or the effective notional

amount, as applicable, to reflect any currency mismatch. Under the proposal, a banking organization would use the following formula to adjust the fair value of the financial collateral or the effective notional amount of the eligible prepaid credit protection arrangement:

$$P_c = P_r \times (1 - H_{FX})$$

Where:

- P_c = fair value of the financial collateral or effective notional amount of the eligible prepaid credit protection arrangement, adjusted for currency mismatch (and maturity mismatch, if applicable).
- P_r = fair value of the financial collateral or effective notional amount of the eligible prepaid credit protection arrangement (adjusted for maturity mismatch, if applicable).
- H_{FX} = haircut appropriate for the currency mismatch between the financial collateral and the secured exposure or the eligible prepaid credit protection arrangement and the reference exposure.

Consistent with substitution approach for guarantees and credit derivatives in the current capital rule, the proposal would require banking organizations to use a standard supervisory haircut of 8 percent for HFX (based on a ten business-day holding period and daily marking-to-market and remargining). If a banking organization revalues the financial collateral or eligible prepaid credit protection arrangement less frequently than once every 10 business days, the proposal would require the banking organization to scale up the haircut using the following square root of time formula:

$$H_{FX} = 8\% \times \sqrt{\frac{T_M}{10}}$$

Where:

- T_M = the greater of 10 or the number of business days between revaluations.

Question 61: The agencies seek comment on the effectiveness of the credit risk mitigation of collateral and eligible prepaid credit protection arrangement when there is a maturity mismatch between the credit risk mitigant and the hedged reference portfolio, for example, longer-dated assets that are protected by a shorter-dated prepaid credit protection arrangement. The agencies seek comment on whether the banking organization has effectively mitigated credit risk if the losses on the assets are estimated to occur after the expiration of the prepaid credit protection arrangement. Does the proposed maturity mismatch adjustment sufficiently capitalize for the residual risks of hedging longer-dated assets with shorter-term prepaid credit protection

¹⁶² For determining maturity mismatch, the comparison is between the remaining maturity of the protected exposure against the remaining maturity of the legal mechanism by which financial collateral is pledged. For example, if the legal mechanism by which financial collateral is pledged to a 5-year loan has a 5-year term, even if the remaining maturity of the collateral is 2 years, there would be no maturity mismatch under the proposal as long as the security interest transfers without any breaks to the proceeds of the matured collateral or replacement collateral.

¹⁶³ The proposal would define residual maturity as the longest possible remaining time before the obligated party of the secured exposure is scheduled to fulfill its obligation on the reference exposure. If a contract has embedded options that may reduce its term, the proposal would require the banking organization to adjust the residual maturity of the contract. If a call is at the discretion of the protection provider, the residual maturity of the contract would be at the first call date. If the call is at the discretion of the banking organization, but the terms of the arrangement at origination of the contract contain a positive incentive for the banking organization to cancel the contract before contractual maturity, the remaining time to the first call date would be the residual maturity of the contract.

arrangement? Please provide supporting data and analysis.

B. Securitization Framework

The securitization framework is designed to produce capital requirements for exposures that involve tranching of the credit risk of one or more underlying financial exposures.¹⁶⁴ The risk and complexity posed by securitizations differ relative to direct exposures to the underlying financial exposures because the credit risk of those exposures is divided into different levels of risk using a wide range of structural mechanisms.¹⁶⁵ The performance of a securitization exposure depends not only on the structure of the securitization, but also on the performance of the underlying exposures¹⁶⁶ and certain parties to the securitization structure, including the asset servicer and any liquidity facility provider. Such structural features and the involvement of these parties makes securitization exposures susceptible to additional risks as compared to direct

¹⁶⁴ To segment the credit risk of the underlying financial exposures ("reference portfolio"), securitization exposures divide the reference portfolio into different slices (known as "tranches") such that any cash flows or losses are allocated to the various tranches based on a predetermined order of priority. This payment structure is sometimes referred to as the cash flow waterfall (or simply the "waterfall") and dictates the manner in which interest or principal payments from the reference portfolio must be allocated, creating different risk-return profiles for each tranche.

¹⁶⁵ For example, assume a banking organization extends a loan to a bankruptcy remote special purpose entity which holds financial exposures (including equity securities) and the fair value of the underlying financial assets exceeds that of the loan. Under this transaction, the underlying financial exposures are pledged as collateral to the lender. As the excess collateral would initially absorb any losses arising from non-payment on the loan (after which the banking organization would be exposed to any subsequent losses), the loan would generally be viewed as tranching and could qualify as a securitization exposure under the proposal, if the transaction satisfies all of the other applicable requirements. Consistent with the current capital rule, to the extent the fair value of the collateral declines such that it no longer exceeds the outstanding principal balance of the banking organization's exposure to the borrower, the transaction would no longer involve tranching of credit or equity risk—and thus would not qualify as a securitization exposure under the proposal. Rather, the banking organization would be required to calculate risk-based capital requirements for the exposure using the general credit risk framework as described in section IV.A. of this **SUPPLEMENTARY INFORMATION**.

¹⁶⁶ Consistent with the current capital rule, the proposal would define equity exposure to include exposures to equity instruments that do not have mandatory contractual payments, among other requirements. Accordingly, under the proposal, the performance of underlying equity exposures would refer to both changes in the fair value of the equity exposures and whether the issuer(s) of the equity exposures is subject to a bankruptcy or insolvency proceeding.

exposures to the underlying financial exposures.

The proposed securitization framework would incorporate the securitization framework in the current standardized approach with the following modifications: (1) a revised definition of and additional operational requirements for synthetic securitizations; (2) a modified treatment for resecuritizations that meet the operational requirements; (3) a modified definition of an eligible clean-up call; (4) a new securitization standardized approach (SEC-SA), as a replacement to the standardized supervisory formula approach (SSFA), which includes, relative to the SSFA, modified definitions of attachment point and detachment point, a modified definition of the W parameter, modifications to the definition of KG, a lower risk-weight floor for securitization exposures that are not resecuritization exposures, and a higher risk-weight floor for resecuritization exposures; (5) a revised treatment for purchased and sold nth-to-default credit derivatives that would prohibit banking organizations from recognizing any risk-mitigating benefit for such exposures; (6) a revised treatment for certain derivative contracts that are not credit derivatives and a new treatment for derivative contracts that do not provide credit enhancement; (7) new provisions to expand the scope of securitization exposures for which a banking organization may apply the overlapping exposure treatment; (8) a new treatment and eligibility criteria for certain senior securitization exposures (the "look-through approach"); (9) a modification to the treatment for credit-enhancing interest only strips; and (10) a new framework for non-performing loan securitizations. The proposal would also introduce certain minor technical edits to the definitions of traditional securitization and synthetic securitization to clarify the existing scope of exposures subject to the securitization framework under the current capital rule.

1. Definitions

The proposal would generally retain the existing definitions of traditional securitization and synthetic securitization under the current capital rule, except for (1) revising the definition of synthetic securitization to include prepaid credit protection arrangements, and (2) introducing technical modifications to the definitions of traditional securitization and synthetic securitization that are intended to clarify the existing scope of exposures subject to the securitization

framework under the current capital rule.

a. Synthetic Securitization

As discussed in section IV.A.5. of this **SUPPLEMENTARY INFORMATION**, the proposal would permit banking organizations to recognize risk mitigating benefits of eligible prepaid credit protection arrangements. Consistent with these provisions, the proposal would revise the definitional and operational criteria for synthetic securitizations to include prepaid credit protection arrangements as structures that can qualify as synthetic securitizations and to include eligible prepaid credit protection arrangements as an eligible credit risk mitigant within the securitization framework. Under the proposal, a transaction would meet the definitional and operational criteria of synthetic securitization if all or a portion of the credit risk of one or more underlying exposures is transferred to one or more third parties through prepaid credit protection arrangements, and the transaction satisfies all other requirements of the securitization framework under the proposal.

b. Technical Modifications

The proposal would modify paragraph (3) within the definitions of traditional securitization and synthetic securitization to clarify that the performance of the securitization exposure is expected to depend solely upon the performance of the underlying exposures, aside from the performance of common supporting transaction participants such as servicers and trustees. For example, a transaction would not satisfy this criterion if there is an expectation that any sources outside of the underlying exposures would fund the interest or principal payments due on the securitization exposures.

Consistent with the current capital rule, the proposed modification would continue to permit certain transactions where a party provides a specified amount of credit protection to qualify as a securitization exposure. As an example, consider a multi-seller ABCP conduit that funds itself entirely with a single class of commercial paper and purchases assets such as wholesale loan exposures from multiple sellers. As is typical in such multi-seller ABCP conduits, each seller provides first-loss protection by over-collateralizing its loans sold to the conduit. To ensure a high credit rating on the commercial paper issued by the ABCP conduit, a banking organization sponsor may provide either a pool-specific liquidity facility or a program-wide credit

enhancement such as a guarantee on a portion of the losses not protected by the seller over-collateralization. Consistent with the current capital rule, under the proposal, commercial paper issued by the ABCP conduit with a pool-specific liquidity facility generally would be a securitization exposure because the pool-specific liquidity facility represents a tranche of the credit risk of the underlying exposures (that is the repayment of the liquidity facility depends upon the underlying exposures) and losses are allocated through subordination. Conversely, if the sponsor provides a program-wide credit enhancement that covers all credit losses across multiple asset pools without reference to asset-level performance (not just those above the seller-provided credit enhancement) or seller-specific subordination, the commercial paper generally would not be a securitization exposure, as the commercial paper holders are primarily exposed to the default risk of the sponsor instead of the underlying exposures and the commercial paper does not represent a tranching risk position. The proposed modification is intended to clarify that a securitization exposure to such program-wide guarantees, including guarantees provided by an operating company to a special purpose entity it establishes, generally would not satisfy the definition of traditional or synthetic securitization.

Additionally, the proposal would modify paragraph (1) of the definition of traditional securitization to clarify that a transaction transferring equity risk could be subject to the securitization framework if all of the other definitional criteria are satisfied. The securitization framework generally applies to exposures to companies with material liabilities that are not operating companies,¹⁶⁷ and whose underlying exposures are primarily financial exposures (including when all or substantially all of the underlying assets are equity exposures). For exposures to companies with material liabilities that are not operating companies and whose underlying exposures are all or substantially all financial exposures, the risk-based capital treatment under the current capital rule reflects how the risk of exposures to such entities depends primarily on the degree of leverage employed by the company. Accordingly, the current capital rule generally requires banking organizations to apply the securitization framework to determine the risk-weighted asset amount for exposures to non-operating

companies with material liabilities, unless the primary Federal supervisor determines that the exposure is not a traditional securitization based on the transaction's leverage, risk profile or economic substance. The proposal would modify paragraph (1) of definition of traditional securitization to clarify that this treatment would also apply to exposures to such companies with material liabilities, where all or a portion of the credit or equity risk of one or more underlying exposures is transferred to one or more third parties (other than through the use of credit derivatives or guarantees or prepaid credit protection arrangements).¹⁶⁸ As a result, the proposed definition of traditional securitization would continue to include exposures to companies with material liabilities that are not operating companies, where all or substantially all of the underlying assets are financial exposures, and whose funding structure results in the risk associated with the underlying exposures being separated into at least two tranches with different levels of seniority.

Question 62: What additional clarifications, if any, should the agencies consider for the proposed modification to paragraph (3) of the definition of traditional and synthetic securitization and why?

Question 63: What additional clarifications, if any, should the agencies consider for the proposed modification to paragraph (1) of the definition of traditional securitization and why? What would be the advantages and disadvantages of making similar changes to paragraph (1) of the definition of synthetic securitization?

Question 64: The agencies seek comment on the appropriateness of requiring covered banking organizations to use the general risk-weight framework for certain overcollateralized exposures if the fair value of underlying equity exposures declines such that there is no longer overcollateralization? What would be the advantages and disadvantages of requiring covered banking organizations to use the general risk-weight framework (rather than the securitization framework) to determine the applicable risk weight for securitization exposures where the

underlying exposures are primarily equity exposures and the fair value of the underlying equity exposures has significantly declined? What criteria should the agencies consider to capture only those securitization exposures for which such an approach would more appropriately capture the risk and why?

2. Operational Requirements

The proposed operational requirements would be consistent with the operational requirements in the standardized approach of the current capital rule, with five exceptions as described below and directly above in section IV.A.1.a. of this **SUPPLEMENTARY INFORMATION**. In addition, for resecuritization exposures that meet the operational requirements, the proposal would eliminate the option for banking organizations to treat the exposures as if they had not been securitized.¹⁶⁹

a. Early Amortization Provisions

Early amortization provisions cause investors in securitization exposures to be repaid before the original stated maturity when certain conditions are triggered. For example, many securitizations of revolving credit facilities, most commonly credit-card receivable securitizations, contain provisions that require the securitization to be wound down and investors repaid on an accelerated basis if excess spread falls below a certain threshold. This decrease in excess spread would typically be caused by credit deterioration in the underlying exposures. Such provisions can expose the originating banking organization to increased credit and liquidity risk and potentially increased capital requirements after the early amortization is triggered as the banking organization could be obligated to fund the borrowers' future draws on the revolving lines of credit.¹⁷⁰ In such an instance, the originating banking organization may have to either find a new funding source, whether internal or external, to cover the new draws or

¹⁶⁹ In the case of non-performing loan securitizations, as described in section IV.B.5.g. of this **SUPPLEMENTARY INFORMATION**, the proposal would allow a banking organization that meets the operational requirements to choose to hold risk-based capital against the transferred exposures as if they had not been securitized and deduct from common equity tier 1 capital any after-tax gain-on-sale resulting from the transaction.

¹⁷⁰ Under the capital rule, an originating banking organization, with respect to a securitization, means a banking organization that: (1) directly or indirectly originated or securitized the underlying exposures included in the securitization; or (2) serves as an ABCP program sponsor to the securitization. See 12 CFR 3.2 (OCC); 12 CFR 217.2 (Board); 12 CFR 324.2 (FDIC).

¹⁶⁷ See 78 FR 62018, 62112 (Oct. 11, 2013).

¹⁶⁸ Consistent with the current capital rule, under the proposal, a banking organization would use the equity framework to calculate risk-based capital requirements for equity exposures to companies where all or substantially all of the underlying assets are financial assets and that have no material liabilities. See definition of investment fund in § _____.2 of the current capital rule and the treatment of equity exposures to investment funds in § _____.142 of the proposed rule.

reduce the borrowers' credit line availability.

The proposal would expand the applicability of the operational requirements regarding early amortization provisions to synthetic securitizations, similar to their application to traditional securitizations under the standardized approach of the current capital rule. The current capital rule defines an early amortization provision as a provision in the documentation governing a securitization that, when triggered, causes investors in the securitization exposures to be repaid before the original stated maturity of the securitization exposures, with certain exceptions.¹⁷¹ Under the proposal, if a synthetic securitization includes an early amortization provision and references one or more underlying exposures in which the borrower is permitted to vary the drawn amount within an agreed limit under a line of credit, the banking organization would be required to hold risk-based capital against the underlying exposures as if they had not been synthetically securitized. Aligning this treatment for both traditional and synthetic securitizations would provide greater consistency within the securitization framework and reduce the likelihood that a banking organization would provide implicit support for synthetic securitization exposures.

Question 65: What, if any, additional exceptions to the early amortization provision definition should the agencies consider and why, provided such exceptions would not incentivize a banking organization to provide implicit support to a securitization exposure? In particular, is the current rule's exception where early amortization "is triggered solely by events not directly related to the performance of the underlying exposures or the originating institution (such as material changes in tax laws or regulations)" sufficiently clear? What types of early termination events should qualify as events not directly related to either the performance of the underlying exposures or the originating banking organization? Should events not directly related to the performance of the

underlying exposures or the originating banking organization include customary provisions designed to protect against non-performance of various contractual obligations by one of the parties facilitating the securitization (including the originating banking organization, if it has such a transaction facilitating role, for example by acting as a servicer)? Commenters are also asked to describe under what circumstances could a provision in a revolving loan securitization that, when triggered, causes investors in the securitization exposures to be repaid before the original stated maturity of the securitization exposures, leaves investors "fully exposed to future draws by borrowers on the underlying exposures even after the provision is triggered", or otherwise should be deemed not to be an early amortization provision. What are the advantages and disadvantages of "fully exposed" encompassing only cash-funded exposures versus also including exposures in the form of contractual commitments to provide funding?

b. Synthetic Excess Spread

The proposal would prohibit an originating banking organization from recognizing the risk-mitigating benefits of a synthetic securitization that includes synthetic excess spread. Synthetic excess spread would be defined as any contractual provision in a synthetic securitization that is designed to absorb losses prior to any of the tranches of the securitization structure. Synthetic excess spread is a form of credit enhancement provided by the originating banking organization to the investors in the synthetic securitization; therefore, the originating banking organization should maintain capital against the credit exposure represented by the synthetic excess spread. However, a risk-based capital requirement for synthetic excess spread may not be determinable with sufficient precision to promote comparability across banking organizations because the amount of synthetic excess spread made available to investors in the synthetic securitization would depend upon the maturity of the underlying exposures, which itself depends on whether any of the underlying exposures have defaulted or prepaid. In particular, the total amount of synthetic excess spread made available at inception to investors over the life of the transaction may not be known *ex ante*, as the outstanding balance of the securitization in future years is unknown. Therefore, if a synthetic securitization structure includes synthetic excess spread, the proposal

would require the banking organization to maintain capital against all the underlying exposures as if they had not been synthetically securitized.

Question 66: What clarifications or modifications should the agencies consider for the above proposed definition of synthetic excess spread and why?

Question 67: What are the advantages and disadvantages of the proposed treatment of synthetic securitizations with synthetic excess spread? If the agencies were to permit originating banking organizations to recognize the credit risk-mitigation benefits of securitizations with synthetic excess spread, how should the exposure amount of the synthetic excess spread be calculated, and what would be the appropriate capital requirement for synthetic excess spread?

c. Minimum Payment Threshold

Under the proposal, the operational requirements for synthetic securitizations would include a new requirement that any applicable minimum payment threshold for the credit risk mitigant be consistent with standard market practice.¹⁷² A contractual minimum payment threshold refers to the delinquency condition that must exist before a credit event is deemed to have occurred under the terms of the credit protection. The proposed minimum payment threshold criterion is intended to prohibit an originating banking organization from recognizing any risk mitigating benefit for a synthetic securitization whose minimum payment threshold is so large that it allows for material losses to occur without triggering the credit protection acquired by the protection purchaser, as such provisions would interfere with an effective transfer of credit risk.

Question 68: What are the benefits and drawbacks of the proposed minimum payment threshold criterion? What, if any, additional criteria or clarifications should the agencies consider and why?

d. Resecuritization Exposures

For a resecuritization exposure arising from a traditional securitization, if the operational requirements have been met, an originating banking organization would be required to exclude the transferred exposures from the

¹⁷¹ Under the capital rule, the exceptions to the definition of early amortization provision are a provision that: (1) is triggered solely by events not directly related to the performance of the underlying exposures or the originating banking organization (such as material changes in tax laws or regulations); or (2) leaves investors fully exposed to future draws by borrowers on the underlying exposures even after the provision is triggered. See definition of early amortization provision in § _____.2 of the capital rule. 12 CFR 3.2 (OCC); 12 CFR 217.2 (Board); 12 CFR 324.2 (FDIC).

¹⁷² For example, for derivative contracts written under ISDA Master Agreement documentation, standard market practice for contractual minimum payment thresholds would generally be \$1 million (or the equivalent in other currencies), such as established in ISDA Credit Derivatives Definitions. See ISDA Credit Derivatives Definitions Section 4.5 "Failure to Pay" and Section 4.9(d) "Payment Requirement."

calculation of its risk-weighted assets and maintain risk-based capital against any credit risk it retains in connection with the securitization. Unlike in the case of a securitization exposure that is not a resecuritization exposure, the proposal would not provide the option for a banking organization to elect to treat a resecuritization exposure as if the underlying exposures had not been re-securitized. While a securitization of non-securitized assets can be used to diversify or transfer credit risk of those exposures, a resecuritization might not offer similar risk reduction or diversification benefits, particularly if the underlying exposures reflect similar high-risk tranches of other securitizations. Therefore, these resecuritization exposures warrant a higher regulatory capital requirement than that applicable to the underlying exposures.

Similarly, for a resecuritization that is a synthetic securitization, if the operational requirements have been met, an originating banking organization would be required to recognize for risk-based capital purposes the use of a credit risk mitigant to hedge the underlying exposures and must hold capital against any credit risk of the resecuritization exposures it retains in connection with the synthetic securitization. These proposed operational requirements for resecuritization exposures are consistent with the Basel standards.

e. Clean-Up Calls

The proposal would use the definition of a clean-up call in the current capital rule without change. The capital rule defines a clean-up call as a contractual provision that permits an originating banking organization or servicer to call securitization exposures before their stated maturity date or call date. For an originating banking organization to exclude the underlying exposures from its risk-based capital calculation, any clean-up call associated with a securitization must be an eligible clean-up call.

The proposal would expand the definition of an eligible clean-up call. Under the current capital rule, an eligible clean-up call is defined as a clean-up call that is exercisable solely at the discretion of the originator or servicer, is not structured to avoid allocating losses to securitization exposures held by investors or otherwise structured to provide credit

enhancement to the securitization, and is only exercisable when 10 percent or less of the principal amount of the initial pool of underlying or reference exposures is outstanding. The proposal would expand the definition of an eligible clean-up call to also include clean-up calls exercisable when certain regulatory and tax events occur, in addition to the existing criteria under the current capital rule. Specifically, the modification would permit the exercise of a clean-up call upon the occurrence of (1) a regulatory event that significantly changes the risk-weighted asset amount for the securitization exposure under applicable risk-weighted asset standards of the agencies, or (2) a tax event that significantly changes the tax treatment of the securitization exposure under applicable tax laws. The events must represent final actions, such as a final rule adopted by the agencies or taxing authority, or a law enacted by Congress. Proposed rules or legislative bills would not satisfy this requirement.

Question 69: What, if any, other modifications should the agencies consider for the definition of an eligible clean-up call and why?

3. Exposure Amount of a Securitization Exposure

The proposal would maintain the exposure calculation methodology in the current capital rule for both on-balance-sheet and off-balance-sheet securitization exposures. The exposure amount for an on-balance-sheet securitization exposure that is not a repo-style transaction, an eligible margin loan, or a derivative contract (other than a credit derivative) would equal the carrying value of the exposure. For off-balance-sheet securitization exposures that are not a repo-style transaction, eligible margin loan, or derivative contract (other than a credit derivative), the exposure amount would equal the notional amount of the exposure.¹⁷³ For a securitization exposure that is a repo-style transaction, eligible margin loan, or derivative contract (other than a credit derivative), the exposure amount would be calculated based on the proposed counterparty credit risk framework, described in section IV.A.4. of this

SUPPLEMENTARY INFORMATION.

Question 70: What, if any, clarifications should the agencies consider regarding the determination of the exposure amount for securitization

exposures where one or more of the underlying exposures are off-balance sheet exposures (such as unfunded commitments)? Specifically, what are the advantages and disadvantages of a modification that would clarify that banking organizations could apply the same credit conversion factors described in section IV.A.1.b. of this

SUPPLEMENTARY INFORMATION when calculating the components of the SEC-SA (G_G , W parameter, attachment point A and detachment point D) for a securitization exposure where one or more of the underlying exposures are off-balance sheet exposures? What would be the effect of such a clarification on the volatility of the capital requirements?

4. Securitization Standardized Approach (SEC-SA)

Under the proposal, a banking organization would determine the capital requirements for most securitization exposures under the SEC-SA, which is generally consistent with the Basel standards. The SEC-SA would be substantively similar to the SSFA in the current capital rule except for certain changes as discussed below. Under the SEC-SA, a banking organization would determine the risk weight for a securitization exposure based on the risk weight of the underlying exposures that are adjusted to reflect (1) delinquencies in such exposures, (2) the securitization exposure's subordination level in the allocation of losses, and (3) the heightened correlation and additional risks inherent in securitizations relative to direct exposures to the underlying financial exposures.

To calculate the risk weight for a securitization exposure using the SEC-SA, a banking organization would be required to have accurate information on the parameters used in the SEC-SA calculation. If the banking organization cannot, or chooses not to, apply the SEC-SA, the banking organization would be required to apply a 1,250 percent risk weight to the securitization exposure. For synthetic securitizations, the proposal would permit banking organizations to choose not to recognize the credit risk mitigant and hold risk-based capital against the underlying exposures as if they had not been synthetically securitized.

Under the proposed SEC-SA, the risk weight assigned to a securitization exposure, or portion of a securitization

through approach for senior securitization exposures) are intended to better reflect the risk of such exposures.

¹⁷³ The proposal would generally maintain the current capital rule's treatment for off-balance sheet securitization exposures to ABCP programs, with certain exceptions. The proposal would not include

the specific treatments provided for such exposures in ____42(c)(3)(ii)–(iii) and ____44 in the current capital rule. The other elements of the proposed securitization framework (for example, the look

exposure, would be determined according to the formula under

§ _____.133(a) of the proposed rule, expressed as:

$$RW_{SEC-SA} = \begin{cases} \max(RW_{FLOOR}, 1,250\% \cdot K_{SEC-SA}), & K_A \leq A \\ \max\left(RW_{FLOOR}, \left(\frac{K_A - A}{D - A}\right) \cdot 1,250\% + \left(\frac{D - K_A}{D - A}\right) \cdot 1,250\% \cdot K_{SEC-SA}\right), & A < K_A < D \\ 1,250\%, & D \leq K_A \end{cases}$$

Where:

- RW_{FLOOR} is equal to 100 percent for resecuritization exposures and 15 percent for all other securitization exposures.

- K_A represents the delinquency-adjusted, weighted-average capital requirement of the underlying exposures, as described in section IV.B.4.c. of this **SUPPLEMENTARY INFORMATION**.
- A represents the attachment point of the securitization exposure, as described in

section IV.B.4.a. of this **SUPPLEMENTARY INFORMATION**.

- D represents the detachment point of the securitization exposure, as described in section IV.B.4.a. of this **SUPPLEMENTARY INFORMATION**.

- $K_{SEC-SA} = \frac{e^{au} - e^{al}}{a \cdot (u-l)}$
- $a = -\frac{1}{p \cdot K_A}$, where p equals 1.5 for a resecuritization exposure and 0.5 for all

other securitization exposures.

- $u = D - K_A$
- $l = \max(A - K_A, 0)$
- e equals the base of the natural logarithm.

a. Definition of Attachment Point and Detachment Point

Under the current capital rule, the attachment point (parameter A) of a securitization exposure equals the ratio of (1) the current dollar amount of underlying exposures that are subordinated to the exposure of the banking organization to (2) the current dollar amount of underlying exposures. Any reserve account funded by the accumulated cash flows from the underlying exposures that is subordinated to the banking organization's securitization exposure may be included in the calculation of parameter A to the extent that cash is present in the account. The current capital rule generally requires a banking organization to recognize cash or securities that are included in a reserve account in the calculation of parameter A .¹⁷⁴

¹⁷⁴ Consistent with the current capital rule, the proposal would require banking organizations to treat any assets that are included in a reserve account as underlying exposures of the securitization exposure, which must be reflected in parameters A and D as well as KG and the W parameter.

The proposal would generally retain the existing definitions of attachment point and detachment point under the current capital rule, with one modification. Specifically, the proposal would not allow a banking organization to include interest rate derivative contracts and exchange rate derivative contracts, or the cash collateral accounts related to these instruments, in the calculation of parameters A and D . The agencies are proposing this treatment because assets held in a funded reserve account, whether cash or securities, can provide credit enhancement to a securitization exposure, whereas interest rate and foreign exchange derivatives (and any cash collateral held against these derivatives) do not.¹⁷⁵

b. Definition of W Parameter

Under the current capital rule, parameter W , which is expressed as a decimal value between zero and one, reflects the proportion of underlying

¹⁷⁵ For example, assume a securitization has assets denominated in U.S. dollars and liabilities denominated in euros, and that the securitization executes a USD-EUR foreign exchange swap with a banking organization. The transaction would serve to hedge the foreign exchange risk of the securitization's assets and liabilities, but would not provide credit enhancement to any of the tranches of the securitization.

exposures that are not performing or are delinquent, according to criteria outlined in the rule.¹⁷⁶ The proposal would retain the current capital rule's definition of parameter W , with two modifications. Specifically, the proposal would revise the definition of parameter W to (1) exclude any exposure that is directly and unconditionally guaranteed by the U.S. government, its central bank, or a U.S. government agency from the calculation of W , up to the amount of the guarantee; and (2) clarify that for resecuritization exposures, any underlying exposure that is a securitization exposure would only be included in the denominator of the ratio and would be excluded from the numerator of the ratio.

¹⁷⁶ Consistent with the current capital rule, the proposal would define equity exposure to include exposures to equity instruments that do not have mandatory contractual payments, among other requirements. Accordingly, under the proposal, for purposes of determining the W parameter for a securitization exposure, a banking organization would not treat an underlying equity exposure as being past due or in default on payments, but could treat an underlying equity exposure as subject to a bankruptcy or insolvency proceeding if the issuer of the equity exposure were subject to such a proceeding. See definition of equity exposure in § _____.2 of the capital rule. 12 CFR 3.2 (OCC); 12 CFR 217.2 (Board); 12 CFR 324.2 (FDIC).

Under the proposal, a banking organization would exclude from the calculation of parameter W any exposure that is directly and unconditionally guaranteed by the U.S. government, its central bank, or a U.S. government agency, up to the amount of the guarantee. By allowing banking organizations to reflect the risk mitigation effects of the U.S. government's guarantee, the proposed modification is intended to more appropriately align the capital requirement with the risk of such securitization exposures. For example, when a banking organization invests in a securitization exposure where all of the underlying exposures are unconditionally guaranteed by the U.S. government, the banking organization may set parameter W equal to zero.

For resecuritization exposures, parameter W would be the ratio of the sum of the current dollar amount of any underlying exposures of the resecuritization that meet any of the criteria in paragraphs _____.133(b)(1)(i) through (vi) of the proposal that are not securitization exposures to the current dollar amount of all underlying exposures. Underlying securitization exposures do not need to be included in the numerator of parameter W because the risk weight of the underlying securitization exposure as calculated by the SEC-SA would already reflect the impact of any delinquent or otherwise nonperforming loans within the underlying securitization exposure. For example, if a resecuritization with a notional amount of \$10 million includes underlying securitization exposures with a notional amount of \$5 million and underlying non-securitization exposures with a notional amount of \$5 million, and if \$500,000 of the non-securitization exposures are delinquent, the numerator for the W parameter would be \$500,000 while the denominator for the W parameter would be \$10 million. This reflects the fact that the risk associated with securitization exposures generally arises from the underlying assets failing to perform as expected, resulting in investors receiving less cashflow than expected from the securitization exposure, rather than from securitization exposure itself failing to make payments due to investors.

Question 71: The agencies seek comment on the appropriateness of requiring banking organizations to only include equity exposures when the issuer is subject to a bankruptcy or insolvency proceeding in the W parameter calculation. What, if any, alternative approaches (such as requiring banking organizations to

include equity exposures when the issuer has an obligation to the banking organization that is 90-days or more past due) should the agencies consider that would more appropriately capture the proportion of underlying exposures that are not performing or are delinquent and why? What, if any, operational concerns could such alternatives pose?

c. Delinquency-Adjusted (K_A) and Non-Adjusted (K_G) Weighted-Average Capital Requirement of the Underlying Exposures

Under the proposal, K_A would reflect the delinquency-adjusted, weighted-average capital requirement of the underlying exposures and would be a function of K_G and parameter W. Under this approach, in order to calculate parameter W, and thus K_A , the banking organization must know the delinquency status of all underlying exposures in the securitization. K_G would equal the weighted average total capital requirement of the underlying exposures (with the unpaid principal used as the weight for each exposure), calculated using the proposed risk weights in the expanded risk-based approach, as described in section IV.A.2. of this **SUPPLEMENTARY INFORMATION**.

The proposal would retain the current capital rule's definition of K_G , with two modifications. First, for interest rate derivative contracts and exchange rate derivative contracts, the proposal would require banking organizations to include in the numerator of K_G (and exclude from the denominator of K_G) the product of (1) the positive current exposure, (2) the risk weight of the counterparty, and (3) by 0.08, consistent with the Basel standards. This accounts for the issue where, if amounts related to interest rate and exchange rate derivative contracts were included in both the numerator and denominator of K_G , these contracts could reduce the capital requirement of securitization exposures even though interest rate and exchange rate derivative contracts do not provide any credit enhancement to a securitization.

Second, the proposal would clarify the existing requirement that banking organizations must determine the risk weight applicable to an underlying equity exposure under the simple risk-weight approach, as described in section IV.C.2. of this **SUPPLEMENTARY INFORMATION**, based on the characteristics of the underlying equity exposure. Consistent with the treatment under the current capital rule, banking organizations would not be able to consider the underlying equity

exposures as a non-significant equity exposure that receive a 100 percent risk weight when determining K_G . Unlike equity exposures to investment funds (as defined), traditional securitizations can include transactions with companies that have material liabilities and structures that allocate losses based on a predetermined order of priority (rather than on a pro-rata basis). Accordingly, unlike the look-through approaches applicable to underlying equity securities held by investment funds, the proposal would clarify that banking organizations may not calculate risk-based capital requirements for securitization exposures with underlying equity exposures as though the underlying equity exposures were on the banking organization's balance sheet. This clarification to the current capital rule promotes the risk sensitivity of the securitization framework by requiring banking organizations to reflect a risk weight based on the underlying exposure's risk characteristics and appropriately differentiates between the risk-based capital treatment applicable to investment funds and to securitization exposures.

Question 72: Recognizing that banking organizations may not always know the delinquency status of each underlying exposure, what would be the benefits and drawbacks of allowing a banking organization to use the SEC-SA if the banking organization knows the delinquency status for most, but not all, of the underlying exposures? For example, if the banking organization knew the delinquency status of 95 percent of the exposures, what would be the benefits and drawbacks of allowing the banking organization to (1) split the underlying exposures into two subpools, (2) calculate a weighted average of the K_A of the subpool comprising the underlying exposures for which the delinquency status is known, (3) assign a value of 1 for K_A of the other subpool comprising exposures for which the delinquency status is unknown, and (4) assign a K_A for the entire pool equal to the weighted average of the K_A for each subpool? What other approaches, if any, should the agencies consider and why?

Question 73: The agencies seek comment on the appropriateness of requiring banking organizations to reflect underlying past due exposures in both the K_G and the W parameter components when calculating K_A . To what extent could including past due exposures in both components result in overly punitive capital requirements for such exposures under SEC-SA? What, if any, alternatives (such as not applying the heightened 150 risk weight for past

due exposures for purposes of calculating K_G) should the agencies consider and why? Commenters are encouraged to provide specific examples, including calculations and supporting data.

d. Supervisory Risk-Weight Floors

Consistent with the SSFA in the current capital rule, the SEC-SA would require banking organizations to apply a risk-weight floor to all securitization exposures. The proposed risk-weight floor is intended to ensure that banking organizations maintain a minimum level of capital to account for risks that may not otherwise be captured by SEC-SA, such as modeling risks and correlation. The proposal would apply a risk-weight floor of 15 percent for securitization exposures that are not resecuritization exposures. The 15 percent risk-weight floor is most relevant for more senior securitization exposures. While junior tranches can absorb a significant amount of credit or equity risk, senior tranches are still exposed to some amount of credit or equity risk on the underlying exposures. Therefore, a minimum capital requirement continues to be appropriate for all securitization exposures.

For resecuritization exposures, the proposed SEC-SA approach would require banking organizations to apply a risk-weight floor of 100 percent. The proposed 100 percent supervisory risk-weight floor for resecuritization exposures is intended to capture the greater complexity of such exposures and heightened correlation risks inherent in the underlying securitization exposures.¹⁷⁷

Question 74: The agencies seek comment on the proposed 100 percent risk-weight floor for resecuritization exposures. What modifications, if any, should the agencies consider to the 100 percent risk-weight floor for resecuritization exposures and why? For example, what would be the pros and cons of excluding certain types of resecuritization exposures—such as resecuritizations of servicer cash

¹⁷⁷ In a typical securitization exposure that is not a resecuritization, each underlying exposure is subject to idiosyncratic default risks (for example, the employment status of each obligor) which may exhibit lower relative default correlation. In a resecuritization exposure, the underlying exposures, which are typically tranches of securitizations, usually have credit enhancement from more junior tranches that protects against many idiosyncratic risks. Systematic risks are more likely to generate defaults in the underlying exposures of resecuritizations than idiosyncratic risks, but systematic risks are also much more likely to be correlated due to their system-wide nature; therefore, resecuritizations can be expected to have higher default correlations than other types of securitizations.

advance receivables—from the 100 percent risk-weight floor and why? Commenters are encouraged to provide data (such as loss history) to support their recommendations.

5. Exceptions to the SEC-SA Risk-Based Capital Treatment for Securitization Exposures

Securitization exposures sometimes contain features that, if not accounted for, could produce inconsistent outcomes under the SEC-SA, or in some cases make the calculation of the risk weight inoperable. Therefore, the proposal would include additional approaches for certain types of securitization exposures to more appropriately align the capital requirement with the risk of such securitization exposures.

a. Purchased Credit Derivatives

As discussed previously in section IV.B.1.b. of this **SUPPLEMENTARY INFORMATION**, the proposal would modify paragraph (1) of the definition of traditional securitization to clarify that the securitization framework generally applies to exposures to companies with material liabilities that are not operating companies, and whose underlying exposures are primarily financial exposures. To further clarify the scope of exposures subject to the securitization framework under the current capital rule, the proposal would also remove the definition of securitization special purpose entity (SPE).

Under the current capital rule, if a banking organization purchases a credit derivative (other than an nth-to-default credit derivative) that is recognized as a credit risk mitigant (including via recognized collateral) under the securitization framework, the banking organization is not required to compute a separate counterparty credit risk capital requirement. For purchased credit derivatives that a banking organization cannot or chooses not to recognize as a credit risk mitigant under the securitization framework, the current capital rule requires the banking organization to calculate an exposure amount using SA-CCR and to determine the applicable risk weight based on whether or not the counterparty is a securitization SPE.¹⁷⁸ Specifically, if the

¹⁷⁸ Securitization SPE under § ____ . 2 of the current capital rule means a corporation, trust, or other entity organized for the specific purpose of holding underlying exposures of a securitization, the activities of which are limited to those appropriate to accomplish this purpose, and the structure of which is intended to isolate the underlying exposures held by the entity from the credit risk of the seller of the underlying exposures

counterparty is a securitization SPE, the banking organization must determine the risk weight based on the securitization framework; if the counterparty is not a securitization SPE, the banking organization must apply the risk weight applicable to the counterparty under the general credit risk framework.

Consistent with the proposed technical modification to the definition of traditional securitization,¹⁷⁹ the proposal would (1) remove the definition of securitization SPE, and (2) clarify that the risk weight applicable to purchased credit derivatives that a banking organization cannot or chooses not to recognize as a credit risk mitigant would be based on whether the counterparty is a securitization (that is, a non-operating company that holds the underlying exposures of a securitization transaction).

b. Nth-to-Default Credit Derivatives

Nth-to-default credit derivatives provide credit protection on a group of reference exposures only after a specific number (n) of the reference exposures default.¹⁸⁰ As nth-to-default credit derivatives tranche the credit risk of the reference exposures based on the order in which defaults occur within the group of reference exposures, such credit derivatives would generally qualify as securitization exposures under the proposal, consistent with the current capital rule. Under the current capital rule, banking organizations that have purchased credit protection in the form of an nth-to-default credit derivative may recognize the risk-mitigating benefit of that derivative under the credit risk mitigation framework applicable to securitization exposures if certain conditions are met. If a banking organization sells protection in the form of an nth-to-default credit derivative, the current capital rule requires the banking

to the entity. See 12 CFR 3.2 (OCC); 12 CFR 217.2 (Board); 12 CFR 324.2 (FDIC).

¹⁷⁹ The proposal would retain the existing definition of securitization exposure under the current capital rule. Under § ____ . 2 of the current capital rule, securitization exposure means (1) an on-balance sheet or off-balance sheet credit exposure (including credit-enhancing representations and warranties) that arises from a traditional securitization or synthetic securitization (including a resecuritization), or (2) an exposure that directly or indirectly references a securitization exposure described in paragraph (1) of this definition. See 12 CFR 3.2 (OCC); 12 CFR 217.2 (Board); 12 CFR 324.2 (FDIC).

¹⁸⁰ Consistent with the current capital rule, the proposal would define an nth-to-default credit derivative as a credit derivative that provides credit protection only for the nth-defaulting reference exposure in a group of reference exposures. See 12 CFR 3.2 (OCC); 12 CFR 217.2 (Board); 12 CFR 324.2 (FDIC).

organization to calculate risk-weighted assets as the product of (1) the exposure amount produced by SA-CCR, and (2) either the risk weight produced by the SSFA or a 1,250 percent risk weight.

Nth-to-default credit derivatives provide protection only for a limited number of default event(s) and, therefore, do not provide continuous or comprehensive coverage of credit risk for the entire basket of reference exposures. Furthermore, the current capital treatment of nth-to-default credit derivatives may not appropriately capture the default correlation among the reference exposures. For example, assume a banking organization with exposure to five corporate entities purchases an nth-to-default credit derivative that pays out upon the default of the second of the five corporate entities. In such a case, the banking organization would remain exposed to any losses incurred upon the first corporate entity default, as well as losses from any defaults beyond the second corporate entity default, if applicable. Conversely, a banking organization that sells an nth-to-default credit derivative that provides protection against the default of the second corporate entity could incur losses exceeding the premiums collected from the protection purchaser if the defaults of the underlying corporates are highly correlated. Furthermore, the risk weight produced by the SEC-SA may not appropriately capture the risk of sold nth-to-default credit derivatives, which are priced based on the expected default correlation among the reference exposures.¹⁸¹

Accordingly, consistent with the Basel standards, while nth-to-default credit derivatives would continue to be securitization exposures, the proposal would not permit banking organizations to recognize any risk-mitigating benefit for nth-to-default credit derivatives for which the banking organization is the protection purchaser under the proposed securitization framework. Rather, the proposal would require banking organizations to calculate risk-weighted assets for counterparty credit risk using the exposure amount produced by SA-CCR, as described in

section IV.A.4.b. of this **SUPPLEMENTARY INFORMATION** and the risk weight applicable to the protection provider under the general credit risk framework.

Similarly, consistent with the Basel standards, while nth-to-default credit derivatives in which the banking organization is the seller of protection would continue to be securitization exposures, the proposal would prohibit the banking organization from using the SEC-SA to determine the applicable risk weight. Rather, the proposal would generally require banking organizations to calculate the risk-weighted asset amount by multiplying the notional amount of the protection provided by the nth-to-default credit derivative by the sum of the risk weights applicable to each of the underlying reference exposures, up to a maximum of 1,250 percent. In aggregating the risk weights for second-or-later-to-default credit derivatives, the proposal would permit banking organizations to exclude the (n-1) assets with the lowest risk weights from the calculation.¹⁸² This approach would require a banking organization to maintain capital based on the risk characteristics of all the underlying reference exposures in the basket on which it is providing protection, while recognizing that the banking organization is not required to make a payment unless “n” names in the basket default.

c. Derivative Contracts That Do Not Provide Credit Enhancements

The proposal would revise the risk weight for securitization exposures that are derivative contracts (other than protection provided by a banking organization in the form of a credit derivative) that have a first priority claim on the cash flows from the underlying exposures, notwithstanding amounts due under interest rate or currency derivative contracts, fees, or other similar payments. The current capital rule permits banking organizations to assign a risk-weighted asset amount for such securitization exposures equal to the exposure amount

calculated under SA-CCR (corresponding to a 100 percent risk weight). The proposal would eliminate this option. Instead, a banking organization would determine the risk-weighted asset amount by multiplying (1) the exposure amount produced by the counterparty credit risk framework, as described in section IV.A.4. of this **SUPPLEMENTARY INFORMATION**, and (2) either the risk weight applicable to the exposure under the securitization framework or a 1,250 percent risk weight. The proposed treatment would be more risk sensitive and more accurately reflect the risks of such exposures than a flat 100 percent risk weight.

Additionally, the proposal would provide a new treatment for certain interest rate or foreign exchange derivative contracts that qualify as securitization exposures. Some securitizations either make payments to investors in a different currency from the underlying exposures or make fixed payments to investors when the cash flows received on the underlying exposures are linked to a floating interest rate. To neutralize these foreign exchange or interest rate risks, a securitization may enter into a derivative contract that mirrors the currency or interest rate mismatch between the exposures and the tranches. Cash flows required to be paid to the derivative counterparty tend to have a claim senior to the investors in the cash flow waterfall, and therefore tend not to provide credit enhancement.

The proposal would require a banking organization that acts as a counterparty to these types of interest rate and foreign exchange derivatives to set the risk weight on such derivatives equal to the risk weight calculated under the SEC-SA for a securitization exposure that is *pari passu* to the derivative contract or, if such an exposure does not exist, the risk weight of the next subordinated tranche of the securitization exposure. A banking organization may otherwise not be able to calculate a risk weight for these derivative contracts using the SEC-SA because the attachment and detachment points under the proposed formula could equal one another, rendering the formula inoperable. The proposed treatment, consistent with the Basel standards, is intended to appropriately reflect how the credit risk associated with these derivative contracts would be commensurate with or less than the credit risk associated with a *pari passu* tranche or the next subordinated tranche of a securitization exposure.

Question 75: The current capital rule provides banking organizations the

¹⁸¹ As a standardized approach, the SEC-SA calculation does not explicitly capture default correlation among the underlying exposures (such as the possibility that multiple underlying exposures will default simultaneously or that the default of one underlying exposure may affect the likelihood of another underlying exposure defaulting). Instead, default correlation effects are implicitly incorporated through the supervisory parameter (p) in the SEC-SA calculation, which serves as a proxy for the concentration and correlation of the underlying exposures.

¹⁸² For example, assume a banking organization sells a first-to-default credit derivative that provides protection on three underlying corporate entities, two of which would be subject to a 65 percent risk weight and one to a 100 percent risk weight under the proposal. The proposal would require the banking organization to multiply the sum of the three risk-weights (230 percent) by the notional amount of protection provided by the first-to-default credit derivative. If the banking organization sold a second-to-default credit derivative that provided protection on the same three corporate entities, the proposal would require the banking organization to multiply the sum of the two highest applicable risk-weights (165 percent) by the notional amount of protection provided by the second-to-default credit derivative.

option to assign a 100 percent risk weight to securitization exposures that are derivative contracts (other than protection provided by a banking organization in the form of a credit derivative) that have a first priority claim on the cash flows from the underlying exposures (notwithstanding amounts due under interest rate or currency derivative contracts, fees, or other similar payments). The agencies seek comment on the advantages and disadvantages of retaining this option. What, if any, operational burden would banking organizations face if this option were retained or eliminated? What, if any, clarifications should the agencies consider regarding the determination of the attachment point and detachment point for such securitization exposures, and why?

d. Overlapping Exposures

To enhance the risk sensitivity of the securitization framework, the proposal would introduce new provisions to address instances where one of the banking organization's securitization exposures would preclude the banking organization from incurring losses under all circumstances on one or more separate securitization exposures also held by the banking organization (overlapping exposures). The standardized approach of the current capital rule includes provisions to limit the double counting of risks in situations involving overlapping securitization exposures. If a banking organization has multiple securitization exposures that provide duplicative coverage to the underlying exposures of a securitization (such as when a banking organization provides a program-wide credit enhancement and multiple pool-specific liquidity facilities to an ABCP program), the banking organization is not required to hold duplicative risk-based capital against the overlapping position. Instead, the banking organization may apply to the overlapping position the applicable risk-based capital treatment under the securitization framework that results in the highest risk-based capital requirement.

Consistent with the Basel standards, the proposal would expand the treatment of overlapping exposures to allow banking organizations to also apply this treatment (1) where one or more of the overlapping securitization exposures would be subject to the expanded risk-based approach and other(s) to the proposed market risk framework, and (2) to securitization exposures that partially overlap for purposes of the expanded risk-based approach.

First, to the extent that one or more of the such securitization exposures would be subject to the expanded risk-based approach and others to the revised market risk framework, the proposal would allow banking organizations to reflect only the greater of the risk-based capital requirement produced by the expanded risk-based approach or the market risk capital framework, provided the banking organization is able to calculate and compare the capital requirements for the relevant exposures.

Second, if a banking organization has two or more securitization exposures that partially overlap, the proposal would permit the banking organization to treat the exposures as overlapping exposures, provided the banking organization can demonstrate that one of its securitization exposures can fully absorb losses arising from its other securitization exposures. For example, if a banking organization provides a program-wide credit enhancement to an ABCP conduit that covers only the portion of the losses above the seller-provided protection¹⁸³ and the banking organization also holds commercial paper issued by the ABCP conduit, the banking organization would be permitted to reflect the risk-weighted asset amount only for the program-wide credit enhancement, provided the banking organization demonstrates, for purposes of calculating risk-based capital requirements, that the program-wide credit enhancement would require the banking organization to fully absorb any losses arising from the ABCP conduit. As the risk-based capital requirement for the program-wide credit enhancement would be treated as covering any losses on the commercial paper, the proposal would not require the banking organization to also maintain additional risk-based capital against the securitization exposure(s) arising from the commercial paper.

In this regard, the proposal aims to increase risk-sensitivity by allowing banking organizations to appropriately reflect the risk of such overlapping exposures within the calculation of risk-weighted assets while also providing sufficient flexibility if doing so would impose significant burden.¹⁸⁴

¹⁸³ For example, typically in the case of multi-seller ABCP conduits, each seller provides first-loss protection by over-collateralizing the conduit to which it sells loans.

¹⁸⁴ For example, the proposed market risk capital framework would require banking organizations to calculate risk-based capital requirements at the trading desk level. Thus, the cost associated with requiring banking organizations to calculate market risk capital requirements for an individual securitization exposure may outweigh any improvement in risk sensitivity associated with the

Question 76: What challenges, if any, would the option to recognize an overlap between market risk covered and noncovered positions introduce? To what degree do banking organizations anticipate recognizing overlaps between market risk covered and noncovered positions?

e. Look-Through Approach for Senior Securitization Exposures

Consistent with the Basel standards, the proposal would introduce a provision that would allow a banking organization to assign to a senior securitization exposure a risk weight equal to the weighted average risk weight of the underlying exposures, provided that the banking organization has knowledge of the composition of all of the underlying exposures (also referred to as the "look-through approach"). For purposes of calculating the weighted-average risk weight, the proposal would require a banking organization to use (1) the unpaid principal amount of underlying exposures as the weight for each exposure, and (2) determine the risk weight applicable to an underlying equity exposure based on the characteristics of the underlying equity exposure.¹⁸⁵

The proposal would define a senior securitization exposure as an exposure that has a first priority claim on the cash flows from the underlying exposures. When determining whether a securitization exposure has a first priority claim on the cash flows from the underlying exposures, a banking organization would not be required to consider amounts due under interest rate derivative contracts, currency derivative contracts, and servicer cash advance facility contracts,¹⁸⁶ or any fees and other similar payments to be made by the securitization to other parties. Both the most senior commercial paper issued by an ABCP program and a liquidity facility that supports the ABCP program may be senior securitization exposures if the liquidity facility provider's right to reimbursement of the

proposed treatment for overlapping exposures described above.

¹⁸⁵ As discussed in section IV.B.4.c. of this **SUPPLEMENTARY INFORMATION**, the non-significant equity exposure treatment does not apply to equity securities underlying a securitization.

¹⁸⁶ Consistent with the current capital rule, the proposal would define a servicer cash advance facility as a facility under which the servicer of the underlying exposures of a securitization may advance cash to ensure an uninterrupted flow of payments to investors in the securitization, including advances made to cover foreclosure costs or other expenses to facilitate the timely collection of the underlying exposures. See 12 CFR 3.2 (OCC); 12 CFR 217.2 (Board); 12 CFR 324.2 (FDIC).

drawn amounts is senior to all claims on the cash flows from the underlying exposures, except amounts due under interest rate derivative contracts, currency derivative contracts, and servicer cash advance facility contracts, fees due, and other similar payments. Accordingly, under the proposed look-through approach, if a senior securitization exposure's underlying exposures consists solely of past due loans with a weighted-average risk weight of 150 percent, the risk weight for the senior securitization exposure would be no more than 150 percent.

Consistent with the proposed 15 percent floor under the SEC-SA, the proposal would require banking organizations to floor the total risk-based capital requirement under the look-through approach at 15 percent. The proposed 15 percent floor is intended to appropriately reflect the minimum amount of risk-based capital that a banking organization should maintain for senior securitization exposures given that the process of securitization can introduce risks that are not present in directly holding the underlying exposures. For example, the transformation of risk profiles through the securitization process and the introduction of payment waterfalls, among other structural features, can add complexity to modeling and correlation assumptions.

Question 77: What are the advantages and disadvantages of the proposed 15 percent risk weight floor in the look-through approach and why?

f. Credit-Enhancing Interest Only Strips

The proposal would require a banking organization to deduct from common equity tier 1 capital any portion of a credit-enhancing interest-only strip¹⁸⁷ that does not constitute an after-tax-gain-on-sale, regardless of whether the securitization exposure meets the proposed operational requirements. The proposed treatment for credit-enhancing interest-only strips would be different than under standardized approach in the current capital rule, which requires a risk weight of 1,250 percent for these items. The proposal would require

banking organizations to deduct credit-enhancing interest-only strips from common equity tier 1 capital because valuations of credit-enhancing interest-only strips can include a high degree of subjectivity and, just like assets subject to deduction under the current capital rule such as goodwill and other intangible assets, banking organizations may not be able to fully realize value from credit-enhancing interest-only strips based on their balance sheet carrying amounts. While a deduction is generally equivalent to a 1,250 percent risk weight when the banking organization maintains an 8 percent risk-based capital ratio, given the various capital ratios, buffers, and add-ons applicable to banking organizations subject to the proposed expanded risk-based approach, applying a deduction provides a more consistent treatment across capital ratios and greater consistency with the Basel standards.

g. Non-Performing Loan Securitizations

The proposal would define a non-performing loan securitization as a traditional securitization, that is not a resecuritization, where parameter W for the underlying exposures is greater than or equal to 90 percent at the origination cut-off date¹⁸⁸ and at any subsequent date on which exposures are added to or removed from the pool of underlying exposures due to replenishment or restructuring. A securitization exposure that meets the definition of a resecuritization exposure would be excluded from the definition of a non-performing loan securitization.

In a typical non-performing loan securitization, the originating banking organization sells non-performing loans to a securitization at a significant discount to the outstanding loan balances, reflecting the nonperforming nature of the underlying exposures. This nonrefundable purchase price discount functions as a form of credit enhancement to investors. Unlike securitizations of performing loans, which principally depend on the cash flows of the underlying loans, the performance of non-performing loan securitizations depends in part on the performance of workouts on defaulted loans and on the liquidation of underlying collateral for those loans which are unable to be cured, both of which are uncertain and could be volatile.

¹⁸⁸ Cut-off date is the date on which the composition of the underlying exposures collateralizing a securitization transaction is established. This means that all exposures to be included in a securitization must already be in existence and meet the non-performing loan criteria as of that date.

Consistent with the Basel standards, the proposal would introduce a specific capital treatment for non-performing loan securitization exposures. A banking organization would assign a risk weight of 100 percent to a non-performing loan securitization exposure if the following conditions are satisfied: (1) the transaction structure meets the definition of a traditional securitization; (2) the securitization contains a credit enhancement in the form of a nonrefundable purchase price discount greater than or equal to 50 percent of the outstanding balance of the underlying exposures at inception of the transaction; and (3) the banking organization's securitization exposure is a senior securitization exposure, as described in section IV.B.5.e. of this **SUPPLEMENTARY INFORMATION**.¹⁸⁹

Applying the SEC-SA to senior securitizations of non-performing loans that meet these criteria would result in capital requirements that do not appropriately reflect the nonrefundable purchase price discount associated with these transactions. The SEC-SA is calibrated on the assumption that the underlying exposures at origination of the securitization are generally performing and is therefore inappropriate for senior exposures to securitizations of non-performing loans that meet these criteria.

If the non-performing loan securitization exposure is not a senior securitization exposure or the nonrefundable purchase price discount is less than 50 percent, the banking organization would be required to apply the SEC-SA to determine the applicable risk weight (including by reflecting all delinquent exposures in the calculation of parameter W), subject to a risk weight floor of 100 percent. Compared to other securitizations, the higher supervisory risk-weight floor of 100 percent for non-performing loan securitization exposures reflects the greater dependence of non-performing loan securitizations on the servicer's ability to generate recovery cashflows through loan workouts, borrower renegotiations, or enforcement against collateral. If the securitization exposure does not meet the requirements for use of the SEC-SA, the proposal would require the banking

¹⁸⁹ If the banking organization is an originating banking organization with respect to the non-performing loan securitization, the banking organization may maintain risk-based capital against the transferred exposures as if they had not been securitized and must deduct from common equity tier 1 capital any after-tax gain-on-sale resulting from the transaction and any portion of a CEO strip that does not constitute an after-tax gain-on-sale.

¹⁸⁷ Consistent with the current capital rule, the proposal would define a credit-enhancing interest-only strip as an on-balance sheet asset that, in form or in substance (1) represents a contractual right to receive some or all of the interest and no more than a minimal amount of principal due on the underlying exposures of a securitization; and (2) exposes the holder of the CEO to credit risk directly or indirectly associated with the underlying exposures that exceeds a pro rata share of the holder's claim on the underlying exposures, whether through subordination provisions or other credit-enhancement techniques. See 12 CFR 3.2 (OCC); 12 CFR 217.2 (Board); 12 CFR 324.2 (FDIC).

organization to assign a risk weight of 1,250 to the securitization exposure.

Question 78: The agencies seek comment on the proposed 100 percent risk-weight floor for non-performing loan securitization exposures. What modifications, if any, should the agencies consider to the 100 percent risk-weight floor for non-performing loan securitization exposures and why? Commenters are encouraged to provide data (such as loss history) to support their recommendations.

i. Attachment and Detachment Points for NPL Securitizations Subject to the SEC-SA

Under the proposal, the nonrefundable purchase price discount would equal the difference between the outstanding principal balance of the underlying exposures at the time of sale and the price at which these exposures are sold by the securitization originator¹⁹⁰ on a final basis, without recourse, to a company the activities of which are limited to those appropriate for the specific purpose of holding the underlying exposures of a securitization. The purchase price discount would be considered non-refundable when neither the securitization originator nor the original lender are reimbursed with respect to that difference. For any given tranche of the securitization, a banking organization may take into account only the initial sale from the securitization originator in the determination of the non-refundable purchase price discount. In cases where the securitization originator underwrites tranches of a non-performing loan securitization for subsequent sale, an investing banking organization may include in the calculation of the nonrefundable purchase price discount the difference between the outstanding principal balance of the underlying exposures at time of sale and the price at which the securitization originator subsequently sells all of the underwritten tranches to unrelated third parties.

Because the calculation of both parameters A and D depend on the current dollar amount of the underlying exposures, any nonrefundable purchase price discount associated with a securitization would be included in both the numerator and denominator of parameters A and D. For example, assume an originating banking organization sells on a final basis, without recourse, a pool of mortgage

loans with an outstanding principal balance of \$100 million to a securitization at a price of \$60 million. The nonrefundable purchase price discount would be the difference between the outstanding principal balances of the underlying mortgages at the time of sale to the securitization and the price at which the originating banking organization sold these mortgages to the securitization company (that is, \$40 million). Assume that the securitization company issues \$60 million in securitization tranches of which the originating banking organization purchases the senior \$50 million tranche and an investing banking organization purchases the \$10 million subordinate tranche. Parameter A for the investing banking organization's exposure would equal 40 percent (that is, the ratio of \$40 million to \$100 million). In this case, the purchase price discount functions as the effective first-loss position in the securitization structure. Likewise, the originating banking organization would treat both the nonrefundable purchase price discount and the investing banking organization's tranche as subordinate and would set parameter A at 50 percent.

If, in the example above, after selling the \$100 million pool of mortgage loans to a securitization company at a price of \$60 million, the originating banking organization underwrites both the senior tranche and the subordinate tranche and later sells both tranches to third parties at a 20 percent discount (that is, the \$10 million subordinated tranche is sold for a price of \$8 million and the \$50 million senior tranche is sold for a price of \$40 million), the proposal would allow the investing banking organizations to assign an attachment point that reflects the extent to which losses have effectively been absorbed by the non-refundable purchase price discount, as measured by the difference between the outstanding principal amount of the underlying exposures (\$100 million) and the aggregate price at which the originating bank subsequently sells those securitization tranches to unrelated third parties (\$48 million). The originating banking organization as underwriter absorbs the additional 20 percent price discount at the sale of the tranches.¹⁹¹ Thus, the investing banking

organization that purchases the \$8 million subordinate tranche would be permitted to assign an attachment point of 52 percent and a detachment point of 60 percent to its securitization exposure; the investing banking organization that purchases the \$40 million senior tranche would be permitted to assign an attachment point of 60 percent and a detachment point of 100 percent to its securitization exposure.

6. Credit Risk Mitigation for Securitization Exposures

The proposal would incorporate the credit risk mitigation framework for securitization exposures in the current standardized approach, with one exception.¹⁹² A banking organization that purchases or sells tranced credit protection, whether hedged or unhedged, referencing part of a senior tranche would not be allowed to treat the lower-priority portion that the credit protection does not reference as a senior securitization exposure. For example, if a banking organization holds a securitization exposure with an attachment point of 20 percent and a detachment point of 100 percent and the banking organization purchases an eligible guarantee with an attachment point of 50 percent and a detachment point of 100 percent, the banking organization's residual exposure, which attaches at 20 percent and detaches at 50 percent, would be considered a non-senior securitization exposure, and the banking organization would not be permitted to apply the look-through approach to this exposure. A banking organization that purchases a mezzanine tranche that attaches at 20 percent and detaches at 50 percent has a similar economic exposure to a banking organization that purchases a senior

from the sale of the tranches to third-party investors, the purchase price discount would not qualify as a non-refundable purchase price discount and the investing banking organizations would not be permitted to recognize such a discount in the calculation of parameters A and D.

¹⁹² As discussed in section IV.A.4. of this **SUPPLEMENTARY INFORMATION**, the proposal would increase consistency and comparability of capital requirements by reducing the use of bank models. Therefore, the proposal does not include the model-based approaches currently contained in the credit risk mitigation framework under the advanced approaches (such as allowing banking organizations to use their own internal estimates for calculating haircuts under the collateral haircut approach and allowing the use of the internal models methodology or simple value at risk methodology for measuring counterparty credit risk). Instead, consistent with the standardized approach in the current capital rule, the proposed credit risk mitigation framework for securitization exposures would permit the recognition of a credit risk mitigant only to the extent consistent with the requirements of § _____.120 or 121, as applicable, as well as the requirements of the proposed securitization framework.

¹⁹⁰ While originator typically refers to the party originating the underlying loans, in the non-performing loan context it refers to the party arranging the non-performing loan securitization (that is, the securitizer).

¹⁹¹ Under the proposal, a purchase price discount would only qualify as a non-refundable purchase price discount if neither the securitization originator nor the original lender receive reimbursement of the discount. If, in the above example, the securitization company repays the originating banking organization, acting in its role as underwriter, for the purchase price discount

tranche that attaches at 20 percent and detaches at 100 percent and then purchases credit protection that attaches at 50 percent and detaches at 100 percent. Because the former transaction would not be considered a senior securitization exposure eligible for the look-through approach, the latter transaction likewise should not be eligible for the look-through approach. Alternatively, the banking organization may choose not to recognize the tranching credit protection. In this case, the proposal would allow the banking organization to treat the securitization exposure (which attaches at 20 percent and detaches at 100 percent) as a senior securitization exposure.

C. Equity Exposures

Equity exposures present a greater risk of loss relative to credit exposures, as equity exposures represent an ownership interest in the issuer of an equity instrument and is a residual claim on the assets and income of the issuer. An equity exposure entitles a banking organization to no more than the pro-rata residual value of a company after all other creditors are repaid.¹⁹³ As a result, consistent with the current capital rule, the proposal would generally assign higher risk weights to equity exposures than exposures subject to the proposed credit risk framework.

¹⁹³ For example, exposures that could be characterized as an equity exposure under the current capital rule and under the proposal include a short position in an equity security or an equity total return swap. See 12 CFR 3.2 (OCC); 12 CFR 217.2 (Board); 12 CFR 324.2 (FDIC) for the definition of equity exposure.

Under the proposal, for banking organizations subject to the market risk framework, material publicly traded equity exposures would generally be subject to the proposed market risk framework¹⁹⁴ described in section V.A. of this **SUPPLEMENTARY INFORMATION**, unless restrictions exist on the tradability of such exposures. Similarly, equity exposures to investment funds would be subject to the proposed market risk framework when the following conditions are met: (1) the banking organization has access to the investment fund's prospectus, partnership agreement, or similar contract that defines the fund's permissible investments and investment limits, and (2) the banking organization is either able to calculate a market risk capital requirement for its proportional ownership share of each exposure held by the investment fund, or obtain daily price quotes. For banking organizations with significant trading activity, the proposed equity framework would therefore primarily cover illiquid or infrequently traded equity exposures. For banking organizations without significant trading activity, the proposed equity framework would be used to calculate risk-weighted assets for all equity exposures.

The proposed framework would largely maintain the current standardized approach equity framework. The proposal would make one targeted modification to align the treatment of commitments within the expanded risk-based approach.

¹⁹⁴ See § _____.202 for the proposed definition of market risk covered position.

Specifically, the proposal would simplify the current rule's conversion factors for conditional commitments to acquire an equity exposure.

1. Adjusted Carrying Value

The proposal would retain the risk-weighted asset amount calculation under the current capital rule.¹⁹⁵ In addition, the proposal would maintain the current capital rule's methods for calculating the adjusted carrying value for equity exposures, with one exception. Consistent with the update to credit conversion factors described in section IV.A.3.b. of this **SUPPLEMENTARY INFORMATION**, the proposal would simplify the treatment of conditional commitments to acquire an equity exposure by removing the differentiation of conversion factors by maturity. The proposal would require a banking organization to multiply the effective notional principal amount of a conditional commitment by a 40 percent conversion factor to calculate its adjusted carrying value. This change is consistent with the Basel standards, promoting international alignment, and removes incentives for firms to structure commitments based on maturity date to avoid the higher 50 percent conversion factor under the current rule in favor of the lower 20 percent conversion factor.

Under the proposal, the adjusted carrying value of an equity exposure, including equity exposures to investment funds, would be based on the type of exposure, as described in Table 1 below.

¹⁹⁵ See 78 FR 62124.

Table 1: Adjusted Carrying Value for Equity Exposures

Equity exposure type	Adjusted carrying value
On-balance sheet component of an equity exposure	The carrying value of the exposure.
Unconditional commitment to acquire an equity exposure	The effective notional principal amount ¹⁹⁶ of the exposure multiplied by a 100 percent conversion factor.
Conditional commitment to acquire an equity exposure	The effective notional principal amount of the exposure multiplied by a 40 percent conversion factor.
Off-balance sheet component of an equity exposure that is not an equity commitment ¹⁹⁷	The effective notional principal amount of the exposure, the size of which is equivalent to a hypothetical on-balance sheet position in the underlying equity instrument that would evidence the same change in fair value (measured in dollars) for a given small change in the price of the underlying equity instrument, minus the adjusted carrying value of the on-balance sheet component of the exposure.

2. Simple Risk-Weight Approach (SRWA)

Under the proposal, the risk-weighted asset amount for an equity exposure,

except for equity exposures to investment funds, would be the product of the adjusted carrying value of the equity exposure multiplied by the lowest applicable risk weight, as

described in Table 2 below. The proposed simple risk-weight approach maintains the same risk weights applicable to equity exposures under the current capital rule.

¹⁹⁶ Consistent with the current capital rule, the proposal includes the concept of the effective notional principal amount of the off-balance sheet portion of an equity exposure to provide a uniform method for banking organizations to measure the on-balance sheet equivalent of an off-balance sheet exposure. For example, if the value of a derivative contract referencing the common stock of company X changes the same amount as the value of 150 shares of common stock of company X, for a small change (for example, 1.0 percent) in the value of the

common stock of company X, the effective notional principal amount of the derivative contract is the current value of 150 shares of common stock of company X, regardless of the number of shares the derivative contract references. The adjusted carrying value of the off-balance sheet component of this derivative is the current value of shares of common stock of company X minus the adjusted carrying value of any on-balance sheet amount associated with the derivative.

¹⁹⁷ Consistent with the current capital rule, the proposal would allow a banking organization to choose not to hold risk-based capital against the counterparty credit risk of equity derivative contracts, as long as it does so for all such contracts. Where the equity derivative contracts are subject to a qualified master netting agreement, the proposal would require the banking organization to either include all or exclude all of the contracts from any measure used to determine counterparty credit risk exposure. See § _____.114(d) of the proposal.

Table 2: Risk Weights Applicable to Equity Exposures under the Simple Risk-Weight**Approach (SRWA)**

Risk Weight	Equity Exposure
0%	An equity exposure to a sovereign, specified supranational entity, ¹⁹⁸ a multilateral development bank, and any other entity whose credit exposures receive a zero percent risk weight under § __. 111 of the proposal.
20%	An equity exposure to a Public Sector Entity, Federal Home Loan Bank, or the Federal Agricultural Mortgage Corporation.
100%	An equity exposure that qualifies as a community development investment under section 24 (Eleventh) of the National Bank Act.
	Non-significant equity exposures. ¹⁹⁹
	The effective portion of a hedge pair.
250%	Significant investments in the capital of unconsolidated financial institutions in the form of common stock that are not deducted from capital pursuant to § __.22(d)(2)(i)(B) under the proposal.
300%	A publicly traded equity exposure. ²⁰⁰
400%	An equity exposure that is not publicly traded.
600%	An equity exposure to an investment firm that: • Would meet the definition of a traditional securitization were it not for the application of paragraph (8) of that definition; and • Has greater than immaterial leverage.

a. Alternative Approach

The proposal would maintain the current capital rule's treatment of non-significant equity exposures. Non-significant equity exposures means equity exposures to the extent that the aggregate adjusted carrying value of the banking organization's equity exposure does not exceed 10 percent of the

¹⁹⁸ Under the proposal, specified supranational entities would include the Bank for International Settlements, the European Central Bank, the European Commission, the International Monetary Fund, the European Stability Mechanism, and the European Financial Stability Facility. Consistent with the current capital rule, equity exposures to such entities would continue to be subject to a zero percent risk weight for the purposes of the simple risk weight approach.

banking organization's total capital.²⁰¹ Non-significant equity exposures receive a 100 percent risk weight under the current capital rule.

To increase the risk sensitivity of the proposed equity framework, the agencies considered the following alternative approach: (1) remove the 100 percent risk weight for non-significant equity exposures, (2) introduce a 100 percent risk weight for certain tax equity financing transactions and equity

¹⁹⁹ See 78 FR 62124 (Oct. 11, 2013).

²⁰⁰ The proposal would rely on the existing definition of publicly traded under the current capital rule. See 12 CFR 3.2 (OCC); 12 CFR 217.2 (Board); 12 CFR 324.2 (FDIC).

²⁰¹ See ___.141(b).

exposures to Small Business Investment Companies,²⁰² (3) lower the risk weight for publicly traded equity exposures from 300 percent to 250 percent,²⁰³ and (4) increase the risk weight applicable to equity exposures to investment firms with greater than immaterial leverage

²⁰² Under the current capital rule, when determining which equity exposures are "non-significant" and thus eligible for a 100 percent risk weight, a banking organization first must include equity exposures to an unconsolidated small business investment company or held through a consolidated small business investment company described in section 302 of the Small Business Investment Act of 1958 (15 U.S.C. 682).

²⁰³ The 250 percent risk weight for publicly traded equities would be consistent with the Basel standards.

and that would meet the definition of a traditional securitization were it not for the application of paragraph (8) of that definition from 600 percent to 1,250 percent. Outside of those changes under consideration, the agencies would retain the current capital rule's risk weights for equity exposures, the hedge pair treatment, and look-through approaches for equity investment in funds. This alternative approach would increase risk sensitivity by requiring banking organizations to apply a risk weight based on the characteristics of each equity exposure, rather than only for those in excess of 10 percent of the banking organization's total capital. Conversely, the agencies recognize that implementing this alternative approach would increase the operational burden associated with the proposal as banking organizations have developed internal reporting systems and processes to apply the current capital rule's 100 percent risk weight for non-significant equity exposures.

Given that the proposed equity framework captures a more limited set of exposures compared to the current rule,²⁰⁴ the agencies determined that the cost associated with replacing the current treatment for non-significant equity exposures may be higher than the improvement in risk sensitivity associated with the alternative approach described above. As such, to balance risk sensitivity with burden, the proposed simple risk weight approach retains the current capital rule's treatment for non-significant equity exposures.

Question 79: What are the advantages and disadvantages of the proposed 40 percent conversion factor for calculating the adjusted carrying value of conditional equity commitments? How appropriate is this proposed conversion factor for capturing the risk that such commitments will become on-balance sheet equity exposures? What alternative approaches or conversion factor values might better reflect the risk profile of conditional equity commitments, and what would be the potential costs and benefits of such alternatives?

Question 80: What are the advantages and disadvantages of using a treatment for conditional commitments which differentiates conversion factors based on maturity, and would apply a 20 percent credit conversion factor to those commitments with an original maturity of one year or less, and a 50 percent

conversion factor to those with an original maturity of more than one year?

Question 81: The agencies request comment on the proposed 100 percent risk weight for non-significant equity exposures. What are the advantages or disadvantages of replacing the proposed treatment of equity exposures with the alternative approach described above? What other alternatives should the agencies consider, and what would be the advantages and disadvantages of such alternatives?

Question 82: For what, if any, types of exposures would a 100 percent risk weight and classification as non-significant equity exposure be inappropriate and why? What specific characteristics of these exposures would warrant a different risk weight treatment?

Question 83: Certain equity exposures, such as certain tax equity financing transactions, may have a different risk profile than general equity exposures. What types of equity exposures have risk profiles that differ materially from general equity exposures? What risk weights would be appropriate for such exposures, and what are the benefits and costs of applying different risk weight treatments? Please provide relevant data to support your views, including historical loss data and information on risk characteristics of these exposures.

D. Operational Risk

The proposal would include an operational risk capital requirement. Operational risk is defined in the current capital rule as the risk of loss resulting from inadequate or failed internal processes, people, and systems, or from external events.²⁰⁵ It includes a wide range of risks, such as fraud, system failures, business disruptions, damage to physical assets, cyberattacks, and litigation. Operational risk is present across banking products, activities, processes, and systems and has resulted in substantial financial losses for large banking organizations in the United States.²⁰⁶

²⁰⁵ See 12 CFR 3.101 (OCC); 217.101 (Board); 12 CFR 324.101 (FDIC). Under the proposal, the definition of operational risk would include legal risk, but exclude strategic risk.

²⁰⁶ There are several examples of large banking organizations experiencing severe operational losses. Multiple banking organizations have suffered substantial losses due to rogue trading. Large U.S. banking organizations have also experienced billions of dollars in operational losses from legal settlements relating to improper loan origination, securitization, and foreclosure practices associated with the 2007–09 global financial crisis. Some banking organizations have experienced substantial losses from legal settlements relating to the violation of sanctions put in place by the United States. Additionally, a large banking organization

experienced substantial operational losses due to a fake-accounts scandal.

See, e.g., M. Jeremy, "Leeson pleads guilty to two charges in Barings collapse, and may cooperate," *The Wall Street Journal* (Dec. 1, 1995); and Nicola Clark and David Jolly, "French Bank Says Rogue Trader Lost \$7 Billion," *The New York Times*, (Jan. 25, 2008).

See, e.g., U.S. Dep't of Justice, Press Release, Federal Government and State Attorneys General Reach \$25 Billion Agreement with Five Largest Mortgage Servicers to Address Mortgage Loan Servicing and Foreclosure Abuses (Feb. 9, 2012), <https://www.justice.gov/opa/pr/federal-government-and-state-attorneys-general-reach-25-billion-agreement-five-largest>; U.S. Dep't of Justice, Press Release, Justice Department, Federal and State Partners Secure Record \$13 Billion Global Settlement with JPMorgan for Misleading Investors About Securities Containing Toxic Mortgages (Nov. 9, 2013), <https://www.justice.gov/opa/pr/justice-department-federal-and-state-partners-secure-record-13-billion-global-settlement>; FHFA, Press Release, FHFA Announces \$9.3 Billion Settlement With Bank of America Corporation (Mar. 26, 2014), <https://www.fhfa.gov/news/news-release/fhfa-announces-9.3-billion-settlement-with-bank-of-america-corporation>; U.S. Dep't of Justice, Press Release, Bank of America to Pay \$16.65 Billion in Historic Justice Department Settlement for Financial Fraud Leading up to and During the Financial Crisis (Aug. 21, 2014), <https://www.justice.gov/opa/pr/bank-america-pay-1665-billion-historic-justice-department-settlement-financial-fraud-leading>; U.S. Dep't of Justice, Press Release, Justice Department, Federal and State Partners Secure Record \$7 Billion Global Settlement with Citigroup for Misleading Investors About Securities Containing Toxic Mortgages (July 14, 2014), <https://www.justice.gov/opa/pr/justice-department-federal-and-state-partners-secure-record-7-billion-global-settlement>; U.S. Dep't of Justice, Press Release, BNP Paribas Sentenced for Conspiring to Violate the International Emergency Economic Powers Act and the Trading with the Enemy Act (May 1, 2015), <https://www.justice.gov/opa/pr/bnp-paribas-sentenced-conspiring-violate-international-emergency-economic-powers-act-and>; U.S. Dep't of Justice, Press Release, Morgan Stanley Agrees to Pay \$2.6 Billion Penalty in Connection with Its Sale of Residential Mortgage Backed Securities (Feb. 11, 2016), <https://www.justice.gov/opa/pr/morgan-stanley-agrees-pay-26-billion-penalty-connection-its-sale-residential-mortgage-backed>; U.S. Dep't of Justice, Press Release, Deutsche Bank Agrees to Pay \$7.2 Billion for Misleading Investors in its Sale of Residential Mortgage-Backed Securities (Jan. 17, 2017), <https://www.justice.gov/opa/pr/deutsche-bank-agrees-pay-72-billion-misleading-investors-its-sale-residential-mortgage-backed>; U.S. Dep't of Justice, Press Release, Credit Suisse Agrees to Pay \$5.28 Billion in Connection with its Sale of Residential Mortgage-Backed Securities (Jan. 18, 2017), <https://www.justice.gov/opa/pr/deutsche-bank-agrees-pay-72-billion-misleading-investors-its-sale-residential-mortgage-backed>; U.S. Dep't of Justice, Press Release, Credit Suisse Agrees to Pay \$5.28 Billion in Connection with its Sale of Residential Mortgage-Backed Securities (Jan. 18, 2017), <https://www.justice.gov/opa/pr/credit-suisse-agrees-pay-528-billion-connection-its-sale-residential-mortgage-backed>; and U.S. Dep't of Treasury, Office of Foreign Assets Control, Press Release, Settlement Agreement between the U.S. Department of the Treasury's Office of Foreign Assets Control and JPMorgan Chase Bank, N.A. (JPMC), and Finding of Violation issued to JPMC (Oct. 5, 2018), <https://ofac.treasury.gov/recent-actions/20181005> (each

²⁰⁴ A significant portion of publicly traded equity exposures and equity investment in funds exposures will be considered market risk covered positions. See § _____.202 for the proposed definition of market risk covered position.

In total, Category I and II holding companies have experienced over \$308 billion in operational losses between 2007Q1 and 2025Q2.²⁰⁷ These totals include large operational losses from activities that typically do not result in substantial credit or market risk-weighted assets, such as certain fee-based activities, indicating that operational risk can represent the main source of risk for activities that have a limited balance sheet footprint.

In addition to their substantial stand-alone materiality, empirical academic research supports that operational losses tend to increase during economic downturns.²⁰⁸ In some cases, operational losses only become apparent once a banking organization is

describing a settlement between the U.S. government and large banking organizations involving substantial payments by banking organizations to resolve allegations of misconduct).

See, e.g., Jackie Wattles, Ben Geir, Matt Egan, and Danielle Wiener-Bronner, "Wells Fargo's 20-Month Nightmare," CNN Money (Apr. 24, 2018).

²⁰⁷ The \$308 billion figure was calculated by adding together all operational loss events that resulted in a net loss amount of \$20,000 or more and were reported in the FR Y-14Q form.

²⁰⁸ Using a summary measure for the macroeconomic environment, Abdymomunov et al. (2020) find that operational losses increase by 16.5 percent for a one standard deviation decrease in the macroeconomic measure. Similarly, Allen and Bali (2007) find that operational risk is cyclical and relates to measures of the macroeconomy and systemic risk. Chernobai et al. (2011) find that operational risk is higher for firms with higher credit risk. Hess (2011) finds that measures of operational risk for several business lines increased meaningfully after the 2007–09 financial crisis. Cope and Carrivick (2013) find that operational loss frequency and severity increased due to the 2007–09 financial crisis. And Aldosoro et al. (2023) find that operational losses peaked during the 2007–09 financial crisis and that operational losses increase after periods of accommodative monetary policy. Relatedly, Berger et al. (2022) find that operational losses increase the systemic risk posed by large U.S. banking organizations. See Abdymomunov, Azamat, Filippo Curti, and Atanas Mihov, "U.S. Banking Sector Operational Losses and the Macroeconomic Environment," *Journal of Money, Credit, and Banking*, Vol. 52, No. 1, pages 115–144 (2020); Allen, Linda, and Turan G. Bali, "Cyclicality in catastrophic and operational risk measurements," *Journal of Banking & Finance* 31, pages 1191–1235 (2007); Chernobai, Anna, Philippe Jorion, and Fan Yu, "The Determinants of Operational Risk in U.S. Financial Institutions," *Journal of Financial and Quantitative Analysis*, Vol. 46, No. 6, pages 1683–1725 (2011); Hess, Christian, "The impact of the financial crisis on operational risk in the financial services industry: empirical evidence," *The Journal of Operational Risk*, Volume 6, Number 1, pages 23–35 (2011); Cope, Eric W., and Luke Carrivick, "Effects of the financial crisis on banking operational losses," *Journal of Operational Risk* 8(3), pages 3–29 (2013); Aldosoro, Inaki, Leonardo Gambacorta, Paolo Giudici, and Thomas Leach, "Operational and Cyber Risks in the Financial Sector," *International Journal of Central Banking* Vol. 19, No. 5, pages 341–402 (2023); Berger, Allen N., Filippo Curti, Atanas Mihov, and John Sedunov, "Operational Risk is More Systemic than You Think: Evidence from U.S. Bank Holding Companies," *Journal of Banking and Finance* 143, 106619 (2022).

otherwise under stress, with economic downturns and reductions in asset values exposing previous operational failures and fraud.²⁰⁹ For example, the operational failures and fraud of a rogue trader within Barings Bank only became known after the fall in asset values within Asian financial markets following the 1995 Kobe earthquake. These operational losses ultimately resulted in the bank's failure.²¹⁰ Similarly, substantial operational losses followed from the Enron and Worldcom fraud scandals, which coincided with a stock market downturn in the early 2000s.²¹¹ The fall in asset values during the 2007–09 financial crisis was a key factor in exposing Bernard Madoff's ponzi scheme and mortgage servicing abuses, which led to severe operational losses for certain large banking organizations.²¹²

For these reasons, the agencies are proposing to account for operational risk together with credit risk and market risk in the capital framework applicable to Category I and II banking organizations to help ensure their safety and soundness and bolster U.S. financial stability.

²⁰⁹ See Paul Povel, Rajdeep Singh, and Andrew Winton, "Booms, Busts, and Fraud" *The Review of Financial Studies*, 1219–1254 (2007); and Robert T. Stewart, "Bank fraud and the macroeconomy," *Journal of Operational Risk* 11(1), 71–82 (2016).

²¹⁰ The inclusion of operational risk in the Basel II standards was driven in part by Barings Bank's failure in 1995. Barings Bank, originally founded in 1762, collapsed after discovering that one of its Singapore branch traders lost \$1.3 billion in unauthorized derivatives trades made through the bank's error accounts. One of the lessons from the failure of Barings Bank is that a bank's capital could be depleted through rogue traders and other operational events, not just through credit and market losses. See Michael S. Barr, Howell E. Jackson, Margaret E. Tahyar, *Financial Regulation: Law and Policy* (2021).

Under the current capital rule, Category I and II banking organizations are required to calculate risk-weighted assets for operational risk using the AMA,²¹³ which is based on a banking organization's internal models. The AMA results in significant challenges for banking organizations, market participants, and the supervisory process. AMA exposure estimates can present substantial uncertainty and volatility, introducing challenges to capital planning processes.²¹⁴ In addition, the AMA's reliance on internal models has resulted in a lack of transparency and comparability across banking organizations. As a result, supervisors and market participants experience challenges in evaluating the adequacy of operational risk capital across banking organizations. To address these concerns, the proposal would remove the AMA and introduce a standardized approach for operational risk that seeks to address the operational risks currently covered by the AMA.

Consistent with the Basel standards, risk-weighted assets for operational risk would be equal to 12.5 times the business indicator component.^{215,216} The business indicator component would provide a measure of the operational risk exposure of the banking organization and would be calculated based on its business indicator multiplied by scaling factors that increase with the business indicator. The business indicator would serve as a proxy for a banking organization's business volume and would be based on inputs compiled from a banking organization's financial statements.

Banking organizations with higher overall business volume are larger and more complex, which is likely to result in more operational risk exposure.²¹⁷

²¹³ The agencies adopted the AMA for operational risk as part of the advanced approaches capital framework in 2007. See 72 FR 69288 (Dec. 7, 2007).

²¹⁴ See, e.g., Cope, E., G. Mignola, G. Antonini, and R. Ugocioni. 2009. Challenges and Pitfalls in Measuring Operational Risk from Loss Data. *Journal of Operational Risk* 4(4): 3–27; and Opdyke, J., and A. Cavallo. 2012. Estimating Operational Risk Capital: The Challenges of Truncation, the Hazards of Maximum Likelihood Estimation, and the Promise of Robust Statistics. *Journal of Operational Risk* 7(3): 3–90.

²¹⁵ 12.5 is the amount by which the measure of operational risk exposure needs to be multiplied so that the risk-weighted assets it generates are equivalent to an 8 percent total capital requirement.

²¹⁶ The proposal would not include the internal loss multiplier that was included under the agencies' 2023 proposal, which is equivalent to setting the internal loss multiplier equal to one.

²¹⁷ Recent research connecting operational risk to higher business volume includes Frame, McLemore, and Mihov (2020), Haste Makes Waste: Banking Organization Growth and Operational Risk, Federal Reserve Bank of Dallas, <https://www.dallasfed.org/>

Continued

Higher business volumes present more opportunities for operational risk to manifest. In addition, the complexities associated with a higher business volume can give rise to gaps or other deficiencies in internal controls that result in operational losses. Therefore, the proposal would set a banking organization's operational risk capital requirement in line with its business volume.

Question 84: The Basel standards includes an optional scalar called the internal loss multiplier, which is calculated based on a banking organization's historical internal operational losses. The internal loss multiplier would scale the business indicator component in the calculation of risk-weighted assets for operational risk. The internal loss multiplier is calculated as follows:

Internal loss multiplier = $\ln(\exp(1) - 1 + (15 * \text{average annual total net operational losses/business indicator component})^{0.8})$

where $\ln$ is the natural logarithm and $\exp(1)$ is the Euler's number, which is approximately equal to 2.7183.

Should the agencies include the internal loss multiplier in the calculation of operational risk-weighted assets and, if so, why? If the internal loss multiplier is included in the calculation of the operational risk-weighted assets, should the "15" factor included in its calculation be adjusted to better reflect the operational risks of U.S. Category I and II banking organizations, within a range between 5 and 15? Please provide any analysis justifying a recommendation.

1. Business Indicator

Under the proposal, the business indicator would be based on the sum of the following two components: an interest, lease, and dividend component and a noninterest component. Each component would serve as a measure of a broad category of activities in which banking organizations typically engage. Given that operational risk is inherent to banking products, activities, processes, and systems, these components aim to comprehensively capture a banking organization's financial activities and thus serve as a proxy for its business volume. The interest, lease, and

dividend component aims to capture lending and investment activities through measures of interest income, interest expense, interest-earning assets, and dividends. The noninterest component aims to capture fee and commission-based activities, trading activity and other activities that are associated with a banking organization's assets and liabilities.

Under the proposal, all inputs to the business indicator would be based on three-year rolling averages. For example, a business indicator input reported at the end of the third calendar quarter of 2025 would be the average of the values for the fourth quarter of 2022 through the third quarter of 2023, the fourth quarter of 2023 through the third quarter of 2024, and the fourth quarter of 2024 through the third quarter of 2025. The one exception are interest-earning assets, which would be calculated as the average of the quarter-end values of interest-earning assets for the previous 12 quarters.²¹⁸

The use of three-year averages would capture a banking organization's activities over time and help reduce the impact of temporary fluctuations. Basing the business indicator on a shorter time period, such as a single year of data, would likely result in a more volatile capital requirement, which could challenge the incorporation of the operational risk capital requirement into capital planning processes and result in unduly low or high operational risk capital requirements given temporary changes in a banking organization's activities. Alternatively, basing the business indicator on too many years of data could reduce its responsiveness to changes in a banking organization's activities, which could in turn weaken the relationship between the capital requirements and the banking organization's risk profile. The use of three-year averages aims to balance the stability and responsiveness of the operational risk capital requirement.

As described below, the inputs used in each component of the business indicator would, in most cases, use information contained in line items from schedules RI and RC of the Call Report and schedules HI and HC of the FR Y–9C report, as applicable. The

agencies are planning to separately propose modifications to the FFIEC 101 report so that all inputs to the business indicator would be publicly reported as separate inputs to the applicable calculations.

The inputs to each component of the business indicator would not overlap. Income and expenses would not be counted in more than one component of the business indicator, consistent with instructions to the regulatory reports and the principles of accounting. The inputs used to calculate the business indicator would include data for entities that have been acquired by, or merged with, the banking organization over the period prior to the acquisition or merger that is relevant to the calculation of the business indicator.

a. The Interest, Lease, and Dividend Component

Under the proposal, the interest, lease, and dividend component would account for activities that produce interest, lease, and dividend income and would be calculated as follows:

Interest, lease, and dividend component

$$= \min(\text{Avg3y}(\text{Abs}(\text{total interest income} - \text{total interest expense})), 0.0225 * \text{Avg3y}(\text{interest-earning assets})) + \text{Avg3y}(\text{dividend income})$$

where Avg3y refers to the three-year average of the quantity in parentheses; Abs refers to the absolute value of the quantity in parentheses; *total interest income* would mean interest income from all financial assets and other interest income;²¹⁹ *total interest expense* would mean interest expenses related to all financial liabilities and other interest expenses;²²⁰ *interest-earning assets* would mean the sum of all gross outstanding loans and leases, securities that pay interest, interest-bearing balances, Federal funds sold, and securities purchased under agreements to resell;²²¹ and *dividend income* would mean all dividends

²¹⁹ Total interest income would correspond to total interest income in the FR Y–9C (holding companies) and Call Report, excluding dividend income as defined in the proposal.

²²⁰ Total interest expense would correspond to total interest expense in the FR Y–9C (holding companies) and Call Report.

²²¹ Interest-earning assets would equal the sum of interest-bearing balances in U.S. offices, interest-bearing balances in foreign offices, Edge and agreement subsidiaries, and IBFs, Federal funds sold in domestic offices, securities purchased under agreements to resell, loans and leases held for sale, loans and leases held for investment, total held-to-maturity securities at amortized cost (only including securities that pay interest), total available-for-sale securities at fair value (only including securities that pay interest), and total trading assets (only including trading assets that pay interest) in the FR Y–9C (holding companies) and Call Report.

research/papers/2020/wp2023; Curti, Frame, and Mihov (2019), Are the Largest Banking Organizations Operationally More Risky?, *Journal of Money, Credit and Banking* Vol. 54, Issue 5, 1223–1259, <https://doi.org/10.1111/jmcb.12933>; and Abdymomunov and Curti (2020), Quantifying and Stress Testing Operational Risk with Peer Banks' Data, *Journal of Financial Services Research* Vol. 57, 287–313, <https://link.springer.com/article/10.1007/s10693-019-00320-w>.

²¹⁸ Unlike the other inputs used to calculate the business indicator, interest-earning assets are balance-sheet items, rather than income statement items, and thus their use in the business indicator does not represent a flow over a one-year period, but rather a point-in-time value. The use of average interest-earning assets for the previous 12 quarters instead of, for example, the average interest-earning assets for the ending quarter of the last three years aims to increase the robustness of the average used in the calculation.

received on securities not consolidated in the banking organization's financial statements.²²²

The interest, lease, and dividend component would capture a banking organization's interest income and expenses from financial assets and liabilities, as well as dividend income from investments in stocks and mutual funds.

The interest income and expense portion of the interest, lease, and dividend component would be calculated as the absolute value of the difference between total interest income and total interest expense (which constitutes net interest income) and be subject to a ceiling equal to 2.25 percent of the banking organization's interest-earning assets. Net interest income is a useful indicator of a banking organization's operational risk because a higher volume of business is associated with higher operational risk. Given that operational risk is unlikely to increase proportionally to increases in net interest margin, the net interest income input would be capped at 2.25 percent of interest-earning assets, consistent with the Basel standards.

The proposal would add dividend income to the net interest income input to capture investment activities that produce dividends instead of interest income (for example, investment in equities and mutual funds).

Question 85: The proposal would include interest income and expenses in the interest component and noninterest income and certain noninterest expenses in the noninterest component. Income and expenses relating to operating leases are typically characterized as noninterest income and noninterest expenses, respectively, in regulatory reports. However, income and certain expenses relating to operating leases are included in the interest component under the Basel standards. What would be the advantages and disadvantages of including (1) income from operating leases and (2) depreciation and impairments relating to operating leased assets in the interest component rather than the noninterest component?

b. The Noninterest Component

Under the proposal, the noninterest component would account for fee and commission-based activities, trading activity, and other activities that are associated with a banking organization's assets and liabilities and would be calculated as follows:

Noninterest component =

Avg3y(Abs(total noninterest income + realized gains (losses) on held-to-maturity securities + realized gains (losses) on available-for-sale debt securities – noninterest expense for BI – 0.7(total noninterest income from investment management, investment services, and non-lending treasury services – noninterest expense for BI from investment management, investment services, and non-lending treasury services)) + total operational losses)*

where Avg3y refers to the three-year average of the quantity in parentheses; Abs refers to the absolute value of the quantity in parentheses; *total noninterest income, realized gains (losses) on held-to-maturity securities, and realized gains (losses) on available-for-sale debt securities* are as reported in the consolidated financial statements of the banking organization;²²³ *noninterest expense for BI* means expense reported as other noninterest expense, excluding expenses that relate to non-financial services received by the banking organization and total operational losses;²²⁴ *investment management* means activities related to asset management, wealth management and private banking, including the professional management of mutual funds and institutional accounts, and professional portfolio management and advisory services for individuals; *investment services* means activities related to asset servicing (which include custody, fund services, securities lending, liquidity services, collateral management, and other asset servicing; as well as recording keeping services for 401K and employee benefit plans, but exclude funding or guarantee products offered to such clients), issuer services (which include corporate trust, shareowner services, depository receipts, and other issuer services), and other investment services (which include clearing and other investment services); *non-lending treasury services* means activities related to cash management, global payments, and deposit services (and excludes any

lending or card activities); and *total operational losses* equals the sum of all operational losses within the relevant period.

The netting of income and expenses in the calculation of the noninterest component would provide two main benefits relative to how the Basel standards treats these sources of income in the calculation of the business indicator. First, this net treatment would be similar to the approach used for the interest, lease, and dividend component and, therefore, would improve the consistency of treatments between the two components. Second, the one-step netting of all noninterest income and expenses would help ensure that the operational risk requirements treat noninterest income and expenses consistently despite the range of acceptable accounting practices across banking organizations. For example, certain expenses are accounted for as “contra revenues” by some banking organizations, but not by others.²²⁵ The proposed approach would avoid the variability in the calculation of risk-weighted assets for operational risk that could result from inconsistent accounting classification of more granular items.

The operational risk capital requirement is designed to reflect all operational risks to which a banking organization is exposed, regardless of the activity or legal entity in which this risk resides. The proposal would, therefore, include the income and expense of a banking organization's insurance activities within the business indicator calculation.

The agencies have received feedback from the public regarding the relative operational risk of certain activities. In particular, industry experts have argued that investment management (including asset management and wealth management), investment services (including custody), and treasury services pose low operational risk. In considering this feedback, the agencies reviewed the operational loss and income data currently reported by Category I and II bank holding companies in the FR Y-14Q. The aggregate ratio of operational losses to business line income for all Category I and II holding companies was calculated from 2009Q1 to 2025Q2.²²⁶

²²³ The total noninterest income, realized gains (losses) on held-to-maturity securities, and realized gains (losses) on available-for-sale debt securities to be used in the calculation of the noninterest component align with the corresponding values in the banking organization's Call Report or FR Y-9C report. Ahead of the implementation of any final rule, the agencies plan to issue an update to the FFIEC 101 report, which would include reporting instructions for all items relevant to the calculation of risk-weighted assets for operational risk.

²²⁴ Other noninterest expense is as reported in the consolidated financial statements of the banking organization.

²²⁵ Contra revenues are reductions to a revenue account in an accounting statement (typically, most expenses are included in accounting statements through expense accounts).

²²⁶ Operational loss data was obtained from FR Y-14Q Schedule E. Income data was obtained from FR Y-14Q Schedule G. Only observations for which both the operational losses and the necessary

²²² Dividend income is currently included in total interest income in the FR Y-9C (holding companies) and Call Report.

This analysis shows that the aggregate ratio of historical operational losses to income for investment management

activities, investment services, and treasury services is approximately 32 percent of the same ratio for the

Category I and II holding companies as a whole.

Aggregate operational losses and income: investment management, investment services, and treasury services vs. all business lines

	Operational losses (\$ billion)	Income (\$ billion)	Ratio of operational losses to income
Investment management, investment services, and treasury services	15.5	1,981	0.78%
All business lines	144.6	5,937	2.44%

Notes:

Aggregates reflect data from 2009Q1 to 2025Q2 for Category I and II holding companies.

Operational losses for “all business lines” reflect all operational losses reported in Schedule E of the FR Y-14Q form that are assigned to a business line (that is, not included under the “corporate level” business line).

Operational losses from investment management, investment services, and treasury services include all operational losses classified as from BL5 “Payment and Settlement,” BL6 “Agency Services,” BL7 “Asset Management,” BL8 “Retail Brokerage,” or BL32 “Private Banking” in Schedule E of the FR Y-14Q form.

Income from all business lines reflects income reported in item 27 “Total Revenues” in Schedule G of the FR Y-14Q form minus the income reported in items 9 and 22 “Insurance Services,” 10 and 23 “Retirement / Corporate Benefits Products,” 11 and 24 “Corporate / Other,” and 12 and 25 “Optional Immaterial Business Segments” of the same form.

Income for investment management, investment services, and treasury services reflects income reported in items 6 and 19 “Investment Management,” 7 and 20 “Investment Services,” and 8 and 21 “Treasury Services” in Schedule G of the FR Y-14Q form.

Only observations for which both the operational losses and the necessary income elements were reported are included in this analysis.

Only operational loss events that resulted in a net loss amount of \$20,000 or more over the period from 2009Q1 to 2025Q2 and were reported in the FR Y-14Q form are included.

Considering the findings of this analysis, the proposal would reduce by 70 percent the noninterest income and expenses from investment management, investment services, and non-lending treasury services used in the calculation of the noninterest income component and, thereby, reflect the lower operational risk that these activities have presented historically.²²⁷

There are substantial practical difficulties in designing and implementing scalars to differentiate the contribution of business lines to the operational risk capital requirement.

The existing segmentation of business lines for purposes of reporting operational losses, income, and expenses does not align in all cases. Also, banking organizations’ practices around classification of operational losses and income vary, and there may be meaningful variability across banking organizations with respect to the ratio of operational losses to income at the business line level. In addition, introducing differentiated scalars across multiple business lines could introduce inconsistency across banking organizations, as the business line

classification of income or expense would have risk-based capital consequences. Addressing such potential inconsistency would necessitate significant supervisory review of business line income and expense classification, which would result in additional compliance costs for banking organizations. Further, differentiation of operational risk requirements across business lines would introduce additional inconsistencies relative to the Basel standards. Given these considerations, the proposal would only differentiate

income elements were reported are included in this analysis.

²²⁷ The definition of treasury services currently employed in the FR Y-14 includes certain lending

activities such as trade finance and corporate and commercial credit cards. To ensure that lending activities are treated consistently by the operational risk framework, the proposal would not include

lending activities within treasury services in the scope of activities whose contribution to the noninterest component would be reduced by 70 percent.

the contribution of investment management, investment services, and non-lending treasury services activities to the noninterest component.

The proposal would reflect operational losses within the business indicator. Empirical research suggests observed operational losses are a meaningful indicator of a banking organization's operational risk exposure.²²⁸ Including expenses related to operational loss events in the business indicator is therefore consistent with the operational risk requirement's objective of supporting a banking organization's resilience to operational risk. Specifically, the proposal would add *total operational losses* within the noninterest component. This approach is consistent with how operational losses contribute positively to *other operating expense* under the Basel standards and, therefore, would contribute positively to the business indicator under the Basel standards when *other operating expense* is higher than *other operating income*.²²⁹

The proposed noninterest component, including the downscaling of income net of expenses from investment management, investment services, and non-lending treasury services activities, would improve the consistency of requirements across Category I and II banking organizations and better reflect the operational risk of their activities.

Question 86: What are the advantages and disadvantages of the proposed design of the noninterest component, including any impact on specific business models? Which alternatives, if

any, should the agencies consider and why? Please provide supporting data with your response.

Question 87: What are the advantages and disadvantages of the proposed downscaling of the income and expense from investment management, investment services, and non-lending treasury services activities? What are the advantages and disadvantages of the proposed calibration approach? Should the agencies consider differentiated scalars (both increasing and decreasing requirements) across multiple business lines and why? What alternatives, if any, should the agencies consider and why? Please include data to support your views.

C. Exclusions From the Business Indicator

Consistent with the Basel standards, the business indicator under the proposal would reflect the volume of financial activities of a banking organization; therefore, the business indicator would exclude expenses that do not relate to financial services received by the banking organization. Excluded expenses would include staff expenses, expenses to outsource non-financial services (such as logistical, human resources, and information technology), administrative expenses (such as utilities, telecommunications, travel, office supplies, and postage), expenses relating to premises and fixed assets, and depreciation of tangible and intangible assets.

Also consistent with the Basel standards, the proposal would exclude loss provisions and reversal of provisions (except for those related to operational loss events) or changes in goodwill from the business indicator, as these items reflect accounting adjustments rather than financial transactions. In addition, the business indicator would be neutral relative to applicable income taxes by excluding them from the expense considered.

With prior supervisory approval, the proposal would allow banking

organizations to exclude activities that they have ceased to conduct, whether directly or indirectly, from the calculation of the business indicator, provided that the banking organization demonstrates that such activities do not carry legacy legal exposure. Supervisory approval would not be granted when, for example, legacy business activities are subject to potential or pending legal or regulatory enforcement action. The supervisory approval requirement would help ensure that a banking organization's operational risk capital requirement aligns with its existing operational risk exposure.

Question 88: Under what circumstances, if any, would it be appropriate for the business indicator to also exclude income relating to non-financial activities provided by a banking organization, such as an exclusion for income relating to non-financial activities provided to foreign affiliates or parents (recharge income)? What are the advantages and disadvantages of such exclusion, and what distinguishes such potentially excluded income from other income relating to non-financial activities? Please provide any data that would be useful to consider on this issue, including data that would allow the agencies to estimate the impact of such exclusion.

2. Business Indicator Component

Under the proposal, the business indicator component would rise with the size of the business indicator, but at three different rates. It would increase by 12 percent for each unit of business indicator up to \$1 billion, by 15 percent for each unit above \$1 billion and up to \$30 billion, and by 18 percent for each unit above \$30 billion. As described in section II.E., these thresholds would be indexed to inflation over time. Table 3 below presents the formulas that can be used to calculate the business indicator component given a banking organization's business indicator.

²²⁸ See Filippo Curti and Marco Migueis, "The Information Value of Past Losses in Operational Risk," *Journal of Operational Risk* Volume 18, Number 2, 1–36 (2023), <https://doi.org/10.21314/JOP.2022.033>.

²²⁹ Subtracting operational losses from the noninterest component (and thereby the business indicator)—as would occur if operational losses were retained within *noninterest expense for BI*—would not be appropriate because operational losses would generally be reducing risk-weighted assets for operational risk.

Table 3 – Business Indicator Component by Business Indicator Range

Business indicator range	Business indicator component ²³⁰
\$0 to \$1 billion	0.12 * Business Indicator (BI)
\$1 billion to \$30 billion	\$120 million + 0.15 * (BI - \$1 billion)
> \$30 billion	\$4.47 billion + 0.18 * (BI - \$30 billion)

The proposed higher rate of increase of the business indicator component as a banking organization's business indicator rises above \$1 billion and \$30 billion reflects operational risk generally increasing more than proportionally with a banking organization's overall business volume, in part due to the increased complexity of large banking organizations. This approach is supported by analysis undertaken by the Basel Committee.²³¹ Similarly, academic studies have found that larger U.S. bank holding companies have higher operational losses per dollar of total assets.²³²

3. Alternative Simple Approaches

In developing the proposal, the agencies considered alternative approaches to the proposed framework for determining a banking organization's operational risk capital requirement. These alternatives would rely on simpler measures of size and complexity that may provide an appropriate proxy for operational risk exposure. Specifically, the agencies considered an income-based approach and an asset-based approach as alternatives. Each of these approaches could provide a simple alternative for determining operational risk capital, which could easily be measured from existing regulatory reporting.

Under an income-based approach, size and complexity—and associated operational risk exposure—could be measured using a broad measure of

income, such as gross income, similar to the Basel Committee's basic indicator approach.²³³ Under the Basel Committee's basic indicator approach, risk-weighted assets for operational risk equal 15 percent of average annual gross income, defined as net interest income plus net noninterest income, over the previous three years where annual gross income is positive, multiplied by 12.5. Notably, the definition of gross income under the basic indicator approach excludes certain income statement items.²³⁴

In an income-based alternative closest to the Basel Committee's basic indicator approach, the agencies would define gross income in a given year as net-interest income plus noninterest income minus noninterest expense, where noninterest expense excludes salaries and employee benefits, expenses of premises and fixed assets, goodwill impairment losses, and amortization expense and impairment losses for other intangible assets. Like in the Basel Committee's basic indicator approach, the calculation of risk-weighted assets for operational risk under this approach would equal the product of the gross income scalar and average annual gross income over the previous three years where annual gross income is positive, multiplied by 12.5.

²³³ See Basel Committee on Banking Supervision (2006): "International Convergence of Capital Measurement and Capital Standards," <https://www.bis.org/publ/bcbs128.htm>. Upon the adoption of the new approach for calculating operational risk capital to the Basel standards, the basic indicator approach is no longer part of the Basel framework.

The agencies have previously considered simple options for operational risk, including the basic indicator approach. See 73 FR 43982, <https://www.govinfo.gov/content/pkg/FR-2008-07-29/pdf/E8-16262.pdf>.

²³⁴ The basic indicator approach specifies that gross income should (1) be gross of any provisions (for example, for unpaid interest), (2) be gross of operating expenses, including fees paid to outsourcing service providers, (3) exclude realized gains or losses from the sale of securities in the banking book such as from securities classified as "held to maturity" and "available for sale," and (4) exclude extraordinary or irregular items as well as income derived from insurance.

To appropriately calibrate an operational risk capital requirement based on gross income, the agencies considered two alternatives. In the first alternative, the scalar determining the capital requirement would be calibrated to result in a similar amount of aggregate required capital as under the proposed standardized approach for operational risk. Analysis by the agencies suggests that a scalar between 15 and 20 percent would be necessary to achieve the target calibration.²³⁵ As a second alternative, the gross income scalar could be set to cover the operational risk exposure of Category I and II banking organizations demonstrated by their historical operational losses.

The agencies also considered potential modifications to gross income. For example, gross income could be defined solely as net-interest income plus net-noninterest income, with no exclusions for noninterest expenses. Based on agency analysis of FR Y-9C data between 2022Q3 to 2025Q2, such an approach would require a gross-income scalar between 35 and 45 percent to result in a similar amount of aggregate required capital as under the proposed standardized approach for operational risk.

Separately, both gross income definitions discussed above could be modified to add operational losses (similar to the methodology within the noninterest component under the proposal's operational risk standardized approach). Such a modification would ensure that operational losses are positively reflected in operational risk capital requirements and could incentivize better operational risk management. Under such a

²³⁵ Based on data from form FR Y-9C, Schedule HI, between 2022Q3 to 2025Q2. Net-interest income would correspond to line 3 from Schedule HI, noninterest income to line 5.m, and noninterest expense excluding salaries and employee benefits, expenses of premises and fixed assets, goodwill impairment losses, and amortization expense and impairment losses for other intangible assets to line 7.d.

²³⁰ \$120 million is equal to 0.12 * \$1 billion. \$4.47 billion is equal to 0.12 * \$1 billion + 0.15 * (\$30 billion - \$1 billion).

²³¹ See Basel Committee (2014), "Operational risk—Revisions to the simpler approaches," <https://www.bis.org/publ/bcbs291.htm> and Basel Committee (2016), "Standardized Measurement Approach for operational risk," <https://www.bis.org/bcbs/publ/d355.htm>.

²³² See Curti, Mih, and Mihov (2022), "Are the Largest Banking Organizations Operationally More Risky?", *Journal of Money, Credit and Banking*, DOI: 10.1111/jmcb.12933; and Frame, McLemore, and Mihov (2020), "Haste Makes Waste: Banking Organization Growth and Operational Risk," Federal Reserve Bank of Dallas, <https://www.dallasfed.org/research/papers/2020/wp2023>.

modification, operational losses would be excluded from noninterest expense.

The agencies also considered an alternative that would use an institution's balance sheet, rather than income, for calculating the operational risk capital requirement. Such an approach could use total consolidated assets as an alternative, simple measure of size and complexity and, therefore, as a proxy for operational risk exposure. Asset size is a common proxy for size and complexity in the agencies' regulatory framework.

In an asset-based approach, a scalar would be applied to total assets to determine the operational risk capital requirement. To result in a similar aggregate amount of required capital as under the proposed standardized approach for operational risk, analysis by the agencies suggests that a scalar between 0.4 percent and 0.5 percent would be appropriate. Similar to the income-based approach, the scalar in an asset-based approach could be calibrated to cover the operational risk exposure of Category I and II banking organizations demonstrated by their historical operational losses.

An approach based on total assets could be modified to capture off-balance sheet activities, which may improve how the requirement captures operational risk exposure at the cost of some additional complexity.²³⁶

Relative to an approach based on income, an approach based on the balance sheet of a banking organization may not appropriately capture the operational risks associated with activities with small footprint in terms of on-balance sheet assets and few quantifiable off-balance sheet exposures.

Using gross income or total assets instead of the business indicator to set the operational risk capital requirement would result in a simpler method for calculating the operational risk requirement than the proposal. However, such approaches may be less risk sensitive than the proposed requirement based on the business indicator. Also, use of the business indicator as a proxy for operational risk exposure provides for greater alignment with the Basel standard than these alternatives, consistent with a broader objective of the proposal. Still, the agencies welcome comments on all

aspects of these potential alternatives and on alternative calibrations.

Question 89: The agencies invite comments on the use of a simple approach for determining a banking organization's operational risk capital requirement. Are there any aspects associated with using a simple approach that should be considered? What are the advantages and disadvantages of a simple approach relative to the proposed standardized approach for operational risk? Which aspects of the proposed standardized approach for operational risk would provide for greater risk sensitivity relative to the simple approaches discussed above? To what extent should risk sensitivity be an objective for the operational risk capital requirement, and how should that be weighed against complexity?

Question 90: The agencies invite comments on an approach based on gross income for determining a banking organization's operational risk capital requirement. What are the advantages and disadvantages of such an approach? What are the advantages and disadvantages of excluding salaries and employee benefits, expenses of premises and fixed assets, goodwill impairment losses, and amortization expense and impairment losses for other intangible assets from the definition of gross income? What are the advantages and disadvantages of adding operational losses to gross income in the calculation of the operational risk capital requirement? Provide any analysis supporting your recommendation.

Question 91: The agencies invite comments on an asset-based approach for determining a banking organization's operational risk capital requirement. What are the advantages and disadvantages of such an approach? What are the advantages and disadvantages of including off-balance sheet exposures on the size proxy used in such an approach? How should off-balance sheet exposures be measured under such an alternative? Provide any analysis supporting your recommendation.

Question 92: The agencies invite comments on how to calibrate an income-based or an assets-based approach, if such an approach were to be adopted. What are the advantages and disadvantages of using projected requirements under the proposed standardized approach as the basis for calibration?

For calibration of an income-based approach: (1) In a gross income variant where salaries and employee benefits, expenses of premises and fixed assets, goodwill impairment losses, and

amortization expense and impairment losses for other intangible assets are excluded from the calculation, would a scalar between 15 percent and 20 percent be appropriate and why?(2) In a gross income variant where gross income does not have the exclusions under (1), would a scalar between 35 and percent and 45 be appropriate and why?

For the calibration of an asset-based approach would a scalar between 0.4 percent and 0.5 percent be appropriate and why?

What are the advantages and disadvantages of calibrating the operational risk capital requirement such that it would capture operational risk exposure as demonstrated by banking organizations' historical operational losses? If the agencies were to follow such a calibration approach, which methodology should be used to estimate operational risk exposure and why? Provide any analysis supporting your recommendations.

4. Operational Risk Management

The agencies consider effective operational risk management to be critical to ensuring the financial and operational resilience of banking organizations, particularly for large banking organizations.²³⁷ Thus, consistent with the current advanced approaches qualification requirements applicable to Category I and II banking organizations, the proposal would require that banking organizations subject to the expanded risk-based approach have an operational risk management function that is independent of business line management. This independent operational risk management function would design, implement, and oversee the comprehensiveness and accuracy of operational loss event data and its collection processes and oversee other aspects of the banking organization's operational risk management. In addition, banking organizations subject to the expanded risk-based approach would be required to report operational loss events and other relevant operational risk information to business unit management, senior management, and the board of directors (or a designated committee of the board). Lastly, the proposal would require banking organizations subject to the expanded risk-based approach to have

²³⁶ The current capital rule applies certain adjustments to capture off-balance sheet activities. For example, the standardized approach for credit risk utilizes credit conversion factors to incorporate off-balance sheet activities into risk-weighted assets. Similarly, the supplementary leverage ratio incorporates off-balance sheet activities into the calculation of total leverage exposure.

²³⁷ The interagency paper titled "Sound Practices to Strengthen Operational Resilience" (Nov. 2, 2020) notes that operational resilience "is the outcome of effective operational risk management combined with sufficient financial and operational resources to prepare, adapt, withstand, and recover from disruptions."

operational loss event data collection processes that meet certain requirements.

V. Calculation of Risk-Weighted Assets Under the Market Risk Framework

A. Market Risk

1. Background

a. Description of Market Risk

Market risk for a banking organization results from exposure to price movements caused by changes in market conditions, market events, and issuer events that affect asset prices. Losses resulting from market risk can affect a banking organization's capital strength, liquidity, and profitability. To help ensure that a banking organization maintains a sufficient amount of capital to withstand adverse market risks and consistent with amendments to the Basel Capital Accord, the agencies adopted risk-based capital standards for market risk in 1996 (1996 rule).²³⁸ Although adoption of the 1996 rule was a constructive step in capturing market risk for risk-based capital standards, the 1996 rule did not sufficiently capture the risks associated with financial instruments that became prevalent in the years following its adoption. This became evident during the 2007–2009 financial crisis, when the 1996 rule did not fully capture banking organizations' increased exposures to traded credit and other structured products, such as collateralized debt obligations (CDO), credit default swaps (CDS), mortgage-related securitizations, and exposures to other less liquid products.

In August 2012, the agencies issued a final rule that modified the capital rule to address these deficiencies.²³⁹ Specifically, the rule added a stressed value-at-risk (VaR) measure, a capital requirement for default and migration risk (the incremental risk capital requirement), a comprehensive risk measurement for correlation trading portfolios, a modified definition of covered position, a definition of trading position, an expanded set of requirements for internal models to reflect advances in risk management, and revised requirements for regulatory backtesting. These changes enhanced the calibration of market risk capital requirements by incorporating stressed conditions into VaR and increasing the comprehensiveness and quality of the

standards for internal models used to calculate market risk capital requirements.²⁴⁰

While these updates to the rule addressed certain pressing deficiencies in the calculation of market risk capital requirements, a number of structural shortcomings that came to light during the crisis remained unaddressed (such as an inability of a VaR metric to adequately capture tail risks beyond the VaR confidence level). To address these shortcomings, the Basel Committee established minimum capital requirements for market risk.²⁴¹ To increase risk sensitivity, transparency, and consistency of the market risk capital requirements, the proposal would replace the existing market risk capital framework within the capital rule with a new framework that is based on the revised framework of the Basel Committee (Basel standards).

b. Overview of the Proposal

The proposal would improve the risk sensitivity and calibration of market risk capital requirements relative to the current capital rule. The proposal would introduce a simple, transparent, and risk-sensitive standardized methodology for calculating risk-weighted assets for market risk (standardized measure for market risk) and a new models-based methodology (models-based measure for market risk) to replace the market risk capital framework in the current capital rule. The proposed standardized and models-based measures would improve the risk-sensitivity of market risk capital requirements by replacing the VaR-based measure of market risk with an expected shortfall-based measure that better accounts for extreme losses.²⁴² In

addition, the proposal would replace the fixed ten-business-day liquidity horizon in the current capital rule with liquidity horizons that vary based on the underlying risk factors to appropriately capture the market risk of less liquid positions.²⁴³

The standardized measure for market risk would be the default methodology for calculating market risk capital requirements for all banking organizations subject to market risk capital requirements. A banking organization would be required to obtain prior approval from its primary Federal supervisor to use the models-based measure for market risk to determine its market risk capital requirements.²⁴⁴

In contrast to the current framework which, subject to approval by the primary Federal supervisor, allows the use of internal models at the level of the consolidated banking organization, the proposal would provide for enhanced risk sensitivity by introducing the concept of a trading desk and restricting application of the proposed models-based approach to the trading desk level. Under the proposal, a banking organization would be required to conduct and successfully pass two quantitative tests (a backtesting requirement²⁴⁵ and a profit and loss attribution (PLA) requirement²⁴⁶) at the trading desk level in order to use the models-based approach. The trading desk-level approach is intended to limit use of the models-based approach to only those trading desks that can appropriately capture the risk of market risk covered positions in banking organizations' internal models. The

exceeding the VaR at a given confidence level and over a specified horizon. The risk weights within the standardized measure were calibrated based on the expected shortfall-based measure in the models-based measure for market risk.

²⁴³ The proposal would define liquidity horizon as the time required to exit or hedge a market risk covered position without materially affecting market prices in stressed market conditions.

²⁴⁴ A banking organization that has regulatory approval to use internal models to measure market risk under the current rule would be required to obtain new approval to use the models-based measure for market risk under the proposed framework.

²⁴⁵ The proposed desk-level backtesting requirements are intended to measure the accuracy and conservatism of the forecasting assumptions and valuation methods used in the desk's internal models.

²⁴⁶ The proposed desk-level PLA testing requirements are intended to measure the accuracy of the potential future profits or losses estimated by the valuation models used for internal risk management purposes relative to those produced by the financial reporting models. For purposes of this **SUPPLEMENTARY INFORMATION**, the term "financial reporting model" refers to the valuation methods used to report actual profits and losses for financial reporting purposes.

²³⁸ Risk-Based Capital Standards: Market Risk, 61 FR 47358 (Sept. 6, 1996). The agencies' market risk capital rules were located at 12 CFR part 3, appendix B (OCC), 12 CFR part 208, appendix E and 12 CFR part 225, appendix E (Board), and 12 CFR part 325, appendix C (FDIC).

²³⁹ Risk-Based Capital Guidelines: Market Risk, 77 FR 53059 (Aug. 30, 2012).

²⁴⁰ The rule was subsequently modified in 2013 with changes that included moving the market risk requirements from the agencies' respective appendices to subpart F of the capital rule; making savings associations and covered savings and loan holding companies with material exposure to market risk subject to the market risk rule, 78 FR 62018 (Oct. 11, 2013); addressing changes to the country risk classifications, clarifying the treatment of certain traded securitization positions; revising the definition of covered position, and clarifying the timing of the market risk disclosure requirements, 78 FR 76521 (Dec. 18, 2013).

²⁴¹ The Basel Committee has published three consultative documents on the review and to address the structural shortcomings identified. "Fundamental review of the trading book," May 2012, www.bis.org/publ/bcbs219.pdf; "Fundamental review of the trading book: A revised market risk framework," October 2013, www.bis.org/publ/bcbs265.pdf; and, "Fundamental review of the trading book: Outstanding issues," December 2014, www.bis.org/bcbs/publ/d305.pdf. The Basel Committee published a new, more robust framework, which established minimum capital requirements for market risk, "Minimum capital requirements for market risk," January 2016, www.bis.org/bcbs/publ/d352.pdf.

²⁴² The proposal would define expected shortfall as a measure of the average of all potential losses

agencies recognize the potential difficulties that a banking organization could experience when performing the proposed desk-level PLA test. To improve the ability of banking organizations to use more risk-sensitive modeled approaches, where appropriate, the proposal would provide a three-year transition period during which there would be no automatic consequences based on PLA test results. This extended transition period for implementation of the PLA test would allow banking organizations to gain experience with the test, provide time to improve their systems and processes, and address any potential gaps in data and model performance. The delayed transition would also provide the agencies an additional opportunity to monitor the effectiveness of the PLA test metric and thresholds.

The proposal would also revise the criteria for determining whether a banking organization is subject to the market risk capital requirements to (1) reflect the inflation since 1996 and growth in the capital markets as well as to reflect CPI-W going forward; (2) provide a more reliable and stable measure of banking organizations' trading activity by introducing a four-quarter average requirement, and (3) incorporate measures of risk identified as part of the agencies' 2019 regulatory tailoring rule.²⁴⁷ In general, the revised criteria would take into account the prudential benefits of the proposed market risk capital requirements and the potential costs, including compliance costs.

In addition, the proposal would help promote consistency and comparability in market risk capital requirements across banking organizations by strengthening the criteria for identifying positions subject to the proposed market risk capital requirement and by proposing a risk-based capital treatment of transfers of risk between a trading desk and another unit within the same banking organization (internal risk transfers). The proposal would also improve the transparency of market risk capital requirements through enhanced disclosures.

2. Scope and Application of the Proposed Rule

a. Scope of the Proposed Rule

Under the current capital rule, any banking organization with aggregate trading assets and trading liabilities that, as of the most recent calendar quarter, equal \$1 billion or more, or 10 percent or more of the banking

organization's total consolidated assets, is required to calculate market risk capital requirements.

The proposal would revise the criteria for determining whether a banking organization is subject to market risk capital requirements. Under the proposal, a Category I or Category II depository institution holding company would be subject to market risk capital requirements. In addition, a banking organization with average aggregate trading assets and trading liabilities, excluding customer and proprietary broker-dealer reserve bank accounts,²⁴⁸ over the previous four calendar quarters equal to \$5 billion or more or equal to 10 percent or more of total consolidated assets at quarter end as reported on the most recent quarterly regulatory report would be subject to market risk capital requirements.²⁴⁹

The proposed scope is designed to apply market risk capital requirements to the largest and most complex banking organizations. As the agencies noted in the preamble to the final tailoring rule, due to their operational scale or global presence, banking organizations subject to Category I or II capital standards pose heightened risks to U.S. financial stability which necessitate more stringent capital requirements.²⁵⁰ Further, because such banking organizations are generally the most internationally active and interconnected banking organizations, the proposed scope of the market risk capital requirements (which are based largely on the international framework adopted by the Basel Committee), should help promote competitive equity among U.S. banking organizations and their foreign peers and competitors, and reduce opportunities for regulatory arbitrage across jurisdictions.

In addition to applying market risk capital requirements to the largest banking organizations, the proposed rule would retain and increase the trading activity threshold from \$1 billion to \$5 billion to reflect inflation since 1996 and growth in the capital markets. The agencies are also proposing to index the \$5 billion trading activity threshold based on the CPI-W going forward. Additionally, a banking organization whose trading assets and trading liabilities are equal to 10 percent

or more of its total assets would continue to be subject to market risk capital requirements under the proposal. This means that any subsidiary depository institution of a Category I and II depository institution holding company or any banking organization that is not a Category I or II banking organization would be subject to market risk capital requirements if it has trading activity that exceeds either of these quantitative thresholds. The proposed trading activity dollar threshold would be measured using the average aggregate trading assets and trading liabilities of a banking organization, calculated in accordance with the instructions to the FR Y-9C or Call Report, as applicable, over the prior four consecutive quarters, rather than using only the single most recent quarter.²⁵¹ This approach would provide a more reliable and stable measure of the banking organization's trading activities than the current capital rule's quarter-end measure.²⁵² Furthermore, for purposes of determining applicability of market risk capital requirements, a banking organization would exclude from its calculation of aggregate trading assets and trading liabilities securities related to certain segregated accounts established by a subsidiary of a banking organization pursuant to SEC Rule 15c3-3 and CFTC Regulation 1.20 (customer and proprietary broker-dealer reserve bank accounts). To protect customers against losses arising from a broker-dealer's use of customer assets and cash, the SEC's and CFTC's requirements for customer and proprietary broker-dealer reserve bank accounts limit the ability of a banking organization to benefit or suffer loss from short-term price movements on the assets held in such accounts. When such accounts constitute the vast majority of a banking organization's trading activities, the prudential benefit of requiring the banking organization to

²⁵¹ For purposes of the proposed scoping criteria, aggregate average trading assets and trading liabilities would mean the sum of the amount of trading assets and the amount of trading liabilities as reported by the banking organization on the Consolidated Financial Statements for Holding Companies (sum of line items 5 and 15 on schedule HC of the Y-9C) or on the Consolidated Reports of Condition and Income (*i.e.*, the sum of line items 5 and 15 on schedule RC of the FFIEC 031, the FFIEC 041, or the FFIEC 051), as applicable.

²⁵² If the banking organization has not reported trading assets and trading liabilities for each of the preceding four calendar quarters, the threshold would be based on the average amount of trading assets and trading liabilities over the quarters that the banking organization has reported, unless the primary Federal supervisor notifies the banking organization in writing to use an alternative method.

²⁴⁷ See 84 FR 59230, 59249 (Nov. 1, 2019).

²⁴⁸ The proposal would define customer and proprietary broker-dealer reserve bank accounts as segregated accounts established by a subsidiary of a banking organization that fulfill the requirements of 17 CFR 240.15c3-3 (SEC Rule 15c3-3) or 17 CFR 1.20 (CFTC Regulation 1.20).

²⁴⁹ See section I.I.E. of this **SUPPLEMENTARY INFORMATION** for a more detailed discussion on indexing nominal thresholds in the proposal going forward to reflect CPI-W.

²⁵⁰ See 84 FR 59230, 59249 (Nov. 1, 2019).

measure risk-weighted assets for market risk would be limited. The proposal would only allow a banking organization to exclude these amounts from proposed trading activity thresholds for the purpose of determining whether the banking organization is subject to market risk capital requirements. If a banking organization exceeds either of the proposed trading threshold criteria after excluding such accounts, the proposal would require the banking organization to include such accounts when calculating its market risk capital requirements.

b. Application of Proposed Rule

The proposal would require a banking organization to comply with the market risk capital requirements (as well as the related reporting and public disclosure requirements) beginning the quarter after the banking organization meets any of the proposed scoping criteria. To avoid volatility in requirements, a banking organization that is not a Category I or II depository institution holding company would remain subject to market risk capital requirements unless and until its trading activity falls below the threshold criteria for each of the prior four consecutive quarters.

Implementing the proposed market risk capital requirements would require significant operational preparation. Therefore, the agencies expect that a banking organization would monitor its aggregate trading assets and trading liabilities on an ongoing basis and work with its primary Federal supervisor as it approaches any of the proposed scoping criteria to prepare for compliance.

While the proposed threshold criteria for application of market risk capital requirements would help reasonably identify a banking organization with significant levels of trading activity given the current risk profile of the banking organization, there may be unique instances where a banking organization either should or should not be required to reflect market risk in its risk-based capital requirements. To continue to allow the agencies to address such instances on a case-by-case basis, the proposal would retain, without modification, the authority under the market risk framework of the current capital rule for the primary Federal supervisor to either: (1) require a banking organization that does not meet the proposed criteria to calculate a market risk capital requirement, or (2) exclude a banking organization that meets the proposed criteria from such calculation, as appropriate.

Question 93: The agencies seek comment on the appropriateness of the

proposed scope of application thresholds. Given the compliance costs associated with the proposal, what, if any, alternative thresholds should the agencies consider and why?

Question 94: What are the advantages or disadvantages of using a four-quarter rolling average for the \$5 billion aggregate trading assets and trading liabilities scope of application threshold? What different methodologies and time periods should the agencies consider for purposes of this threshold?

3. Measure for Market Risk

Under the current capital rule, a banking organization subject to market risk capital requirements must use one or more internal models to calculate market risk capital requirements for its covered positions.²⁵³ A banking organization's market risk-weighted assets equal the sum of the VaR-based capital requirement, the stressed VaR-based capital requirement, specific risk add-ons, the incremental risk capital requirement, the comprehensive risk capital requirement, and the capital requirement for de minimis exposures, plus any additional capital requirement established by the primary Federal supervisor, multiplied by 12.5. The primary Federal supervisor may require the banking organization to maintain an overall amount of capital that differs from the amount otherwise required under the rule, if the supervisor determines that the banking organization's market risk-based capital requirements under the rule are not commensurate with the risk of the banking organization's covered positions, a specific covered position, or portfolios of such positions, as applicable.

The proposal would introduce a standardized methodology for calculating market risk capital requirements (standardized measure for market risk) and a new models-based methodology (models-based measure for market risk) to replace the market risk capital framework of the current capital rule. A banking organization with no model-eligible trading desks would calculate market risk capital requirements under the standardized measure for market risk. Alternatively, with prior approval from its primary Federal supervisor, a banking organization that has one or more model-eligible trading desks would be

required to calculate market risk capital requirements under the models-based measure for market risk.²⁵⁴

If a trading desk does not receive approval to use the models-based non-default capital requirement or fails to meet the operational requirements of the models-based non-default capital requirement on an on-going basis, the desk would be required to use the standardized non-default capital requirement to calculate its market risk capital requirements. The agencies view the proposed standardized non-default capital requirement as sufficiently risk sensitive to serve as a credible alternative to the models-based non-default capital requirement given the conservative calibration of the risk weights and correlations applied to market risk covered positions under the standardized non-default capital requirement. Additionally, by relying in part on inputs a banking organization uses for its own internal risk management or financial reporting purposes, the proposed standardized non-default capital requirement would help ensure market risk capital requirements appropriately capture a banking organization's actual market risk exposure in a manner that minimizes compliance burden and enhances risk-capture. Furthermore, the proposed standardized measure for market risk would promote comparability in market risk capital requirements across banking organizations subject to the proposal.

The proposed models-based measure for market risk would provide important improvements to the risk sensitivity and calibration of risk-weighted assets for market risk. In addition to replacing the VaR-based measure with an expected shortfall measure to capture tail risk better, the models-based measure for market risk would replace the fixed ten business-day liquidity horizon in the market risk capital framework of the current capital rule with liquidity horizons that vary based on the underlying risk factors in order to adequately capture the market risk of less liquid positions. The proposal also would limit the regulatory capital benefit of hedging and portfolio diversification across different asset classes, which may dissipate in stress periods.

At a high level, both the proposed standardized measure and the models-based measure for market risk would consist of a non-default capital

²⁵³ Notably, for securitization positions subject to the market risk capital framework, the current capital rule provides a standardized measurement method for capturing specific risks and a models-based measure for capturing general risks for purposes of calculating market risk-weighted assets.

²⁵⁴ The proposal would require a banking organization to calculate the standardized measure for market risk on a weekly basis and the models-based measure for market risk, if applicable, on a daily basis.

requirement specific to each measure; a default risk capital requirement, which would be the same under both the standardized and models-based measures for market risk; a fallback capital requirement; and a capital add-

on for re-designations. Each measure would include any additional capital requirement established by the primary Federal supervisor. Figure 1 illustrates the components of the standardized measure for market risk and Figure 2

illustrates the components of the models-based measure for market risk. Each of the components is described below in this section.

Figure 1

Figure 2

a. Standardized Non-Default Capital Requirement

Under the proposal, the standardized non-default capital requirement would consist of two components: a sensitivities-based method capital requirement and a residual risk add-on, each further described in section V.A.7. of this **SUPPLEMENTARY INFORMATION**. The sensitivities-based capital requirement captures non-default market risk based on the estimated losses produced by risk factor sensitivities²⁵⁵ under regulatorily determined stressed conditions.²⁵⁶ The residual risk add-on serves to produce a simple, conservative capital requirement for any other known risks that are not already captured by the sensitivities-based method capital requirement or the default risk capital requirement, including gap risk, correlation risk, and behavioral risks, such as prepayments.

b. Non-Default Capital Requirement Under the Models-Based Measure

Under the proposal, a banking organization that has received prior supervisory approval to use the models-based measure for market risk could have some trading desks that are eligible for the models-based non-default capital requirement (model-eligible trading desks) and others that are not (model-ineligible trading desks).²⁵⁷ The proposal would limit use of the models-based non-default capital requirement to those trading desks that can appropriately capture the risks of

market risk covered positions in internal models and that satisfy the model eligibility criteria and processes (for example, desk-level backtesting) introduced under the proposal, as described in section V.A.6.d. of this **SUPPLEMENTARY INFORMATION**.

Specifically, if the primary Federal supervisor were to approve a banking organization to calculate market risk capital requirements for one or more model-eligible trading desks under the models-based non-default capital requirement, the banking organization would be required to calculate the entity-wide market risk capital requirement under the models-based measure for market risk, which would incorporate the capital requirements for model-eligible and model-ineligible positions, according to the following formula, as provided under § _____.204(c) of the proposed rule:

Models-based measure for market risk =

$$NDCR + DRC + \text{fallback capital requirement} + \text{capital add-on for redesignations}$$

Consistent with the standardized non-default capital requirement as discussed above, the non-default capital requirement under the models-based measure (*NDCR*) is intended to capture potential losses arising from changes in risk factors under severe stress conditions. More specifically, the proposal would set the non-default capital requirement under the models-based measure equal to the sum of (1) the models-based non-default capital requirement for model-eligible positions ($IMA_{G,A}$) and (2) the difference between the standardized non-default capital requirement for all trading desks ($SA_{all\ desks}$) and the standardized non-default capital requirement for model-eligible positions ($SA_{G,A}$).

$$NDCR = IMA_{G,A} + (SA_{all\ desks} - SA_{G,A})$$

The agencies recognize that simply adding the standardized non-default capital requirements for model-ineligible positions and the models-based non-default capital requirements for model-eligible positions ($IMA_{G,A}$) together would disregard potential diversification effects between these two types of market risk covered positions. In order to appropriately reflect the marginal contribution of model-ineligible positions subject to the standardized non-default capital requirement, the proposal would require a banking organization to calculate the standardized non-default capital requirement for all market risk covered positions on all trading desks ($SA_{all\ desks}$) and subtract the amount required under the standardized non-default capital

requirement for model-eligible positions ($SA_{G,A}$). To appropriately capture implied diversification benefits between model-eligible and model-ineligible positions across trading desks, the proposal would require a banking organization to calculate the non-default capital requirement as the sum of the models-based non-default capital requirement for model-eligible positions ($IMA_{G,A}$) and the adjusted standardized non-default capital requirement for model ineligible positions ($SA_{all\ desks} - SA_{G,A}$).

In some circumstances, non-default capital requirement for model-eligible positions ($IMA_{G,A}$) may exceed the standardized non-default capital requirement for model-eligible positions ($SA_{G,A}$). In such cases, the non-default capital requirement under the models-based measure (*NDCR*) would exceed the standardized non-default capital requirement for all market risk covered positions on all trading desks ($SA_{all\ desks}$). While there can be merit in requiring a banking organization to reflect higher capital requirements produced by the models-based non-default capital requirement for model-eligible positions, there could be instances when the higher capital requirements are not commensurate with the risk profile of the banking organization's market risk covered positions. To address such situations, the proposal would allow a banking organization, with prior approval from the primary Federal supervisor, to cap the amount of capital required under the non-default capital requirement of the models-based measure (*NDCR*) at the standardized non-default capital requirement for all trading desks ($SA_{all\ desks}$). To receive approval to cap the non-default capital requirement under the models-based measure, a banking organization would be required to demonstrate to the primary Federal supervisor that the aggregate market risk capital requirement with the cap would be adequate with respect to the risk profile of the banking organization's market risk covered positions and consistent with safety and soundness.²⁵⁸

Question 95: The agencies seek comment on the recognition of diversification benefits between model-eligible and model-ineligible positions across trading desks. What are the advantages and disadvantages of

²⁵⁵ A risk factor sensitivity is the change in value of an instrument given a small movement in a risk factor that affects the instrument's value.

²⁵⁶ Under the proposal, the market risk capital requirement for the sensitivities-based method would equal the sum of the capital requirements for a given risk factor for delta (a measure of impact on a market risk covered position's value from small changes in underlying risk factors), vega (a measure of the impact on a market risk covered position's value from small changes in volatility) and curvature (a measure of the additional change in the positions' value not captured by delta arising from changes in the value of an option or an embedded option). As discussed further in section V.A.6.d.i. of this **SUPPLEMENTARY INFORMATION**, model-eligible trading desk would be allowed to hold insignificant amounts of model-ineligible positions such as securitization positions, correlation trading positions, or certain equity positions in investment funds. The proposal would require a banking organization to calculate the non-default capital requirement for model-ineligible positions using the standardized non-default capital requirement.

²⁵⁷ As discussed further in section V.A.6.d.i. of this **SUPPLEMENTARY INFORMATION**, model-eligible trading desk would be allowed to hold insignificant amounts of model-ineligible positions such as securitization positions, correlation trading positions, or certain equity positions in investment funds. The proposal would require a banking organization to calculate the non-default capital requirement for model-ineligible positions using the standardized non-default capital requirement.

²⁵⁸ For example, periods of sudden and extreme market volatility (such as the COVID pandemic) may significantly increase the number of aggregate trading portfolio backtesting exceptions, which can result in models-based non-default capital requirement being unduly conservative relative to the market risk to which the banking organization is exposed.

requiring a banking organization to calculate the models-based non-default capital requirement as the sum of the models-based non-default capital requirement for model-eligible positions ($IMA_{G,A}$) and the adjusted standardized non-default capital requirement for model ineligible positions ($SA_{all desks} - SA_{G,A}$), and why? If the agencies were to consider not recognizing any diversification benefits between model-eligible and model-ineligible positions across trading desks, should the agencies consider adopting the following formula:

Models Based Non – Default Capital Requirement = $\min((IMA_{G,A} + PLA \text{ add-on} + SA_U), SA_{all desks}) + \max((IMA_{G,A} - SA_{G,A}), 0)$

Where, SA_u would be the standardized approach capital requirement for market risk covered positions for model-ineligible trading desks.

What are the advantages and disadvantages of calculating the models-based non-default capital requirement as the sum of the models-based non-default capital requirement for model-eligible trading desks and the standardized non-default capital requirement for model-ineligible trading desks, capped at the capital requirement for all trading desks under the standardized non-default capital requirement, plus the difference between the models-based non-default capital requirement for model-eligible desks and the standardized non-default capital requirement for model-eligible desks? If the agencies were to consider this alternative, what adjustments should be made? Why? Please include any supporting empirical data, including during periods of market stress, and rationale that would be helpful for evaluating this alternative.

Question 96: The agencies seek comment on allowing a banking organization to cap the non-default risk capital requirement under the models-based measure at the amount required by the standardized non-default capital requirement for all trading desks upon approval by the primary Federal supervisor. What are the advantages and disadvantages of the proposed cap, and why? If the agencies were to consider allowing the cap to be in effect in all circumstances, without prior approval, what are the advantages and disadvantages of the proposed supervisory approval requirement, and why? Commenters are encouraged to provide supporting rationale and data.

Question 97: In order to provide appropriate incentives for banking organizations to use internal models, what, if any, alternatives to capping the

amount of capital required under the non-default risk capital requirement within the models-based measure at the amount required by the standardized non-default capital requirement for all trading desks should the agencies consider, and why?

c. Default Risk Capital Requirement

The default risk capital requirement, further described in section V.A.9. of this **SUPPLEMENTARY INFORMATION**, would capture losses on credit and equity positions in the event of issuer default for purposes of both the standardized measure for market risk and the models-based measure for market risk. To recognize offsetting of long and short positions across model-eligible and model-ineligible positions, the models-based measure for market risk would require banking organizations to perform a single calculation of the default risk capital requirement that includes all market risk covered positions.

d. Fallback Capital Requirement

The agencies recognize that a banking organization may not be able to calculate market risk capital requirements for one or more of its market risk covered positions under the standardized non-default capital requirement, the models-based non-default capital requirement, or the default risk capital requirement. For example, a banking organization may not be able to calculate some risk factor sensitivities or components for one or more market risk covered positions due to an operational issue or a calculation failure. Such issues could arise when a new market product is introduced and the banking organization has not had sufficient time to develop models and analytics to produce the required sensitivities or the new data feeds for the proposed market risk capital calculations. In such cases, the proposal would require a banking organization to apply the fallback capital requirement to the affected market risk covered positions, as further described below.

For purposes of calculating the standardized measure for market risk, the proposal would require a banking organization to apply the fallback capital requirement to each of the affected positions and exclude such positions from the standardized non-default capital requirement and the default risk capital requirement.²⁵⁹

For purposes of calculating the models-based measure for market risk,

²⁵⁹ The respective components of the standardized non-default capital requirement are the sensitivities-based method capital requirement and the residual risk add-on.

the proposal would require the banking organization to apply the fallback capital requirement to each market risk covered position for which it is not able to apply the models-based non-default capital requirement, the standardized non-default capital requirement, or the default risk capital requirement, as applicable, and exclude such positions from the respective components of models-based measure for market risk.

The fallback capital requirement would equal the sum of the absolute value of the fair value of each position subject to the fallback capital requirement, unless the banking organization receives prior approval from its primary Federal supervisor to use an alternative method to quantify the market risk capital requirement for such positions. The fallback capital requirement would only apply in instances where a banking organization is not able to capture all relevant risks of market risk covered positions under the standardized non-default capital requirement, the models-based non-default capital requirement, or the default risk capital requirement. As such, the agencies consider that applying a separate capital treatment for such positions is appropriate to ensure that they are conservatively incorporated into the market risk capital requirement. The agencies also recognize that using the fair value for derivatives can materially underestimate the exposure to the derivative positions given the fair market value of any given derivatives can change daily, often with a magnitude much greater than their current fair value. Therefore, for derivative positions that represent more than de-minimis exposure, the banking organizations should notify their primary Federal supervisor. In such cases, the banking organization can propose an alternative methodology (subject to approval from the primary Federal supervisor) or the primary Federal supervisor can mandate a methodology for the banking organization to adopt for the fallback capital requirement.

Question 98: The fair value for derivative positions may materially underestimate the exposure because the fair value of derivatives is generally lower than the derivatives' potential exposure (for example, fair value of a derivative swap contract is generally zero at origination). What are the advantages and disadvantages of using the absolute fair value of the derivative positions for the calculation of the fallback capital requirement? What could be alternative methodologies for the fallback capital requirements for

derivative positions? What, if any, alternative techniques would more appropriately measure the market risk associated with market risk covered positions for which the standardized non-default capital requirement cannot be applied?

Question 99: What are the advantages and disadvantages of asking a banking organization to notify its primary Federal supervisor if the banking organization has derivative positions that represent more than de-minimis exposure and it plans to use an alternative methodology to calculate the fallback capital requirement, and why? What are the advantages and disadvantages of requiring a banking organization to notify its primary Federal supervisor, and why?

e. Capital Add-On for Re-Designations

The proposal would require a banking organization to have clearly defined policies and procedures for identifying positions that are market risk covered positions and those that are not, as well as for determining whether, after such initial designation, a position needs to be re-designated as being a market risk covered position or not.

A position's effect on risk-weighted assets can vary based on whether it is a market risk covered position. Therefore, to offset any potential capital benefit that otherwise might be received from re-designating a position, the proposal would introduce the capital add-on requirement to compensate for any re-designation. The capital add-on requirement for re-designations would apply in cases where a banking organization re-classifies an instrument after initial designation as being subject either to the market risk capital requirements or to the capital requirements under the standardized approach or the expanded risk-based approach, respectively. With prior notification to the primary Federal supervisor, the proposal would not require a banking organization to apply the capital add-on for re-designations arising from circumstances that are outside of the banking organization's control (for example, changes in accounting standards or in the characteristics of the instrument itself, such as an equity being listed or delisted). The agencies expect re-designations to be extremely rare, and recognize that re-designations could occur, for example, due to the termination of a business activity applicable to the instrument. Given the very limited circumstances under which re-designations would occur, any re-designation would be irrevocable, unless the banking organization receives

prior approval from its primary Federal supervisor.

To calculate the capital add-on for a re-designation, a banking organization would be required to calculate its total capital requirements for the re-designated positions separately under the standardized approach or the expanded risk-based approach, as applicable, and under market risk capital framework before and immediately after the re-designation of a position. If the total capital requirement is lower as a result of the re-designation, then the difference between the two would be the capital add-on for the re-designation to avoid any resultant reduction in market risk capital requirements.

The proposal would require a banking organization to calculate the capital add-on requirement at the time of the re-designation. The capital add-on requirement would decline proportionate to the balance sheet value relative to the time of the re-designation. This could occur when an instrument matures, pays down, amortizes, or expires, or the banking organization sells or exits (in whole or in parts) the position.

Question 100: What, if any, operational challenges could the proposed capital add-on calculation pose? What, if any, changes should the agencies consider making to the proposed exceptions to the capital add-on, such as to address additional circumstances in which the capital add-ons for re-designations should not apply, and why? For example, what would be advantages and disadvantages of exempting transactions in high quality liquid assets (HQLA) between a business unit of a banking organization that engages in asset-liability management and internal trading desk from the re-designation framework, and why?

Question 101: The agencies seek comment on whether the re-designation framework should include a grace period (for example, 10 business days) that would allow a banking organization to identify and correct any errors during the initial re-designation process. What are the advantages and disadvantages of the grace period and why?

f. Additional Capital Requirement and Other Provisions

As part of the proposal's reservation of authority provisions, the primary Federal supervisor may require a banking organization to maintain an overall amount of capital that differs from the amount otherwise required under the proposal, if the primary Federal supervisor determines that the

banking organization's market risk capital requirements under the proposal are not commensurate with the risk of the banking organization's market risk covered positions, a specific market risk covered position, or categories of positions, as applicable.

The primary Federal supervisor also would have the authority to require a banking organization to calculate capital requirements for specific positions or categories of positions under either the standardized approach or the expanded risk-based approach instead of under the market risk capital framework, or under the market risk capital framework instead of under the standardized approach or the expanded risk-based approach, as applicable, to more appropriately reflect the risks of the positions. Alternatively, under the proposal, the primary Federal supervisor may require a banking organization to apply a capital add-on for re-designations of specific positions or portfolios. These proposed provisions would help the primary Federal supervisor ensure that a banking organization's risk-based capital requirements appropriately reflect the risks of such positions.

Additionally, for a banking organization that uses the models-based measure for market risk, the agencies would reserve the authority to require such a banking organization to modify its observation period or methodology (including the stress period) used to measure market risk, when calculating the expected shortfall measure or stressed expected shortfall. In this way, the proposal would help the primary Federal supervisor ensure that a banking organization's internal models remain sufficiently robust to capture risks in a dynamic market environment and appropriately reflect the risks of such positions. Furthermore, the primary Federal supervisor could require a banking organization that has one or more model-eligible trading desks to calculate the standardized non-default risk capital requirement for each model-eligible trading desk as if that trading desk were a standalone regulatory portfolio. This situation could arise when, for example, a banking organization is unable to empirically justify the correlation of a trading desk's losses with other model-eligible trading desks.

4. Market Risk Covered Position

Market risk capital requirements under the current capital rule apply to a banking organization's covered positions, which are defined to include, subject to certain restrictions: (i) any trading asset or trading liability as

reported on a banking organization's regulatory reports that is a trading position²⁶⁰ or that hedges another covered position and is free of any restrictive covenants on its tradability or for which the material risk elements may be hedged by the banking organization in a two-way market, and (ii) any foreign exchange²⁶¹ or commodity position regardless of whether such position is a trading asset or trading liability. The definition of a covered position also explicitly excludes certain positions. Thus, the definition is structured into three broad categories, each subject to certain conditions: trading assets or liabilities that are covered positions, positions that are covered positions regardless of whether they are trading assets or trading liabilities, and exclusions.

The proposal would retain the structure and major elements of the existing definition of covered position (re-designated as "market risk covered position") with several modifications. These modifications aim to better align the definition of market risk covered position with those positions the agencies consider should be subject to the market risk capital requirements, as well as to reflect other proposed changes to the framework (for example, to incorporate the proposed treatment of internal risk transfers). The proposed revisions would capture positions that have exposures to market risk and also help promote consistency and comparability in the risk-based capital treatment of positions across banking organizations.

a. Trading Assets and Trading Liabilities That Would Be Market Risk Covered Positions Under the Proposal

The proposed definition of market risk covered position would explicitly include any trading asset or trading liability that is held for the purpose of

regular dealing or making a market in securities or other instruments.²⁶² In general, such positions are held to facilitate sales to customers or otherwise to support the banking organization's trading activities, for example by hedging its trading positions, and, therefore, expose a banking organization to market risk.

b. Positions That Would Be Market Risk Covered Positions Under the Proposal Regardless of Whether They are Trading Assets or Trading Liabilities

The proposal would include as market risk covered positions certain positions or hedges of such positions regardless of whether the position is a trading asset or trading liability.²⁶³ Consistent with the current capital rule, such positions would continue to include foreign exchange and commodity positions with certain exclusions. In particular, the proposal would continue to allow a banking organization to exclude structural positions in a foreign currency from market risk covered positions with prior approval from its primary Federal supervisor. To incentivize prudent hedging and sound risk management, the proposal would also exclude foreign exchange and commodity positions that are CVA hedges from the definition of market risk covered position.²⁶⁴

The proposal would also expand the types of positions that would be market risk covered positions, even if not categorized as trading assets or trading liabilities, to include the following, each discussed further below: (i) certain equity positions in an investment fund;²⁶⁵ (ii) net short risk positions; (iii)

certain publicly traded equity positions;²⁶⁶ (iv) certain embedded derivatives on instruments issued by the banking organization that relate to credit or equity risk and that the banking organization bifurcates for accounting purposes or elects the fair value option for purposes of financial reporting;²⁶⁷ (v) certain positions associated with internal risk transfer under the proposal;²⁶⁸ and (vi) certain instruments resulting from securities underwriting commitments.

First, the proposal would include as a market risk covered position an equity position in an investment fund for which the banking organization has access to the fund's prospectus, partnership agreement, or similar contract that defines the fund's permissible investments and investment limits, and which meets one of two conditions. Specifically, the banking organization would either need to (i) be able to use the look-through approach to calculate a market risk capital requirement for its proportional ownership share of each exposure held by the investment fund, or (ii) obtain daily price quotes for the investment fund.

The current covered position definition relies in part on the legal form of the investment fund by referencing the Investment Company Act of 1940²⁶⁹ to determine whether an equity position in such a fund is a covered position. In contrast, the proposed criteria would capture equity positions for which there is sufficient transparency for the positions to be reliably valued on a daily basis. This valuation could come either from an observable market price for the equity position in the investment fund itself or

life insurance owned by an affiliate, or that the banking organization has acquired for the purpose of providing such fund with sufficient initial equity to permit the fund to attract unaffiliated investors and held for less than five years ("seed capital investments") and any hedges of such positions that qualify for effective hedge pair treatment under § _____.52(c) of the current rule or § _____.141(c) of the proposal would not be included in the scope of market risk covered position.

²⁶⁶ Equity positions arising from deferred compensation plans and hedges of such positions that qualify for effective hedge pair treatment under § _____.52(c) of the current rule or § _____.141(c) of the proposal would not be included in the scope of market risk covered position.

²⁶⁷ With prior approval from its primary Federal supervisor, the proposal would allow a banking organization to include in the scope of market risk covered positions an entire instrument with an embedded derivative issued by the banking organization and that relates to credit or equity risk and for which the banking organization elects the fair value option for purposes of financial reporting.

²⁶⁸ See section V.A.5. of this **SUPPLEMENTARY INFORMATION** for further detail on eligible internal risk transfer positions.

²⁶⁹ 15 U.S.C. 80a–1 *et seq.*

²⁶⁰ The current capital rule defines a trading position as one that is held by a banking organization for the purpose of short-term resale or with the intent of benefiting from actual or expected short-term price movements or to lock-in arbitrage profits.

²⁶¹ With prior approval from its primary Federal supervisor, the proposal would allow a banking organization to exclude from its market risk covered positions any structural position in a foreign currency, which is defined as a position that is not a trading position and that is (i) a subordinated debt, equity or minority interest in a consolidated subsidiary that is denominated in a foreign currency; (ii) capital assigned to foreign branches that is denominated in a foreign currency; (iii) a position related to an unconsolidated subsidiary or another item that is denominated in a foreign currency and that is deducted from the banking organization's tier 1 or tier 2 capital, or (iv) a position designed to hedge a banking organization's capital ratios or earnings against the effect of adverse exchange rate movements on (i), (ii), or (iii).

²⁶² Consistent with the current capital rule, the proposal also would require such a position to be free of any restrictive covenants on its tradability or for the banking organization to be able to hedge the material risk elements of such a position in a two-way market.

²⁶³ A position that hedges a trading position would be required to be within the scope of the banking organization's hedging strategy as described in § _____.203(a)(2) of the proposed rule. Extending market risk covered positions to also include such hedges is intended to encourage sound risk management by allowing a banking organization to capture both the underlying market risk covered position and any associated hedge(s) when calculating its market risk capital requirements. Consistent with current practice, the agencies would review a banking organization's hedging strategies to ensure the appropriate designation of positions subject to market risk capital requirements.

²⁶⁴ The proposal would define CVA hedge as a transaction that a banking organization enters into with a third party or an internal trading desk and manages for the purpose of mitigating CVA risk. Thus, the proposal would exclude from market risk capital requirements any CVA hedge—regardless of whether or not a banking organization is subject to CVA risk capital requirements.

²⁶⁵ Equity positions in investment funds arising from bank-owned life insurance, corporate owned-

from the banking organization's ability to identify the underlying positions held by the investment fund.

Second, the proposal would introduce a new term, net short risk positions, to describe credit and equity exposures that are outright short positions or over-hedges of credit and equity exposures that are not market risk covered positions. As the hedged exposures from which such positions originate are not traded, net short risk positions would not meet the definition of trading position even though they expose the banking organization to market risk.²⁷⁰ The agencies propose to include any net short risk position of at least \$20 million, adjusted to reflect CPI-W, in market risk covered positions in order to help ensure that such exposures are appropriately reflected in banking organizations' risk-based capital requirements.²⁷¹

For example, assume a banking organization purchases an eligible credit derivative (for example, a credit default swap) to mitigate the credit risk arising from a loan that is not a market risk covered position and the notional amount of protection provided by the credit default swap exceeds the loan exposure amount. The banking organization is exposed to additional market risk on the exposure arising from the difference between the amount of protection purchased and the amount of protected exposure because the value of the protection would fall if the credit spread of the credit default swap narrows. Neither the standardized approach nor the expanded risk-based approach would require the banking organization to reflect this risk in risk-weighted assets. To capture the market risk arising from net short risk positions, the proposal would require the banking organization to treat such positions that meet or exceed the proposed dollar threshold described above as market risk covered positions.

To calculate the exposure amount of a net short risk position, the proposal would require a banking organization to compare the notional amounts of its long and short credit positions and the adjusted notional amounts of its long and short equity positions that are not market risk covered positions.²⁷² For

purposes of this calculation, the notional amounts would include the total funded and unfunded commitments for loans that are not market risk covered positions. Additionally, as a banking organization may hedge exposures at either the single-name level or the portfolio level, the proposal would require a banking organization to identify separately net short risk positions for single-name exposures and for index hedges. For single-name exposures, a banking organization would need to evaluate its long and short equity and credit exposures for all positions referencing a single name or obligor to determine if it has a net short risk position. For index hedges, a banking organization would need to evaluate its long and short equity and credit exposures for all positions that are not market risk covered positions in the hedged portfolio (aggregating across all relevant individual exposures) to determine if it has a net short risk position for any hedged portfolio.

Exposures arising from net short risk positions are a potential area where a banking organization may maintain insufficient capital relative to the market risk. The agencies nonetheless recognize that requiring a banking organization to capture every net short exposure that may arise, regardless of size or duration, when calculating its market risk capital requirements could be burdensome. Accordingly, the proposed \$20 million threshold is intended to help ensure that individual net short risk exposures that could materially impact the risk-based capital requirements of a banking organization would be appropriately reflected in the proposed market risk capital requirements. Additionally, the proposed \$20 million threshold is intended to strike a balance between over-hedging concerns and aligning incentives for banking organizations to prudently hedge and manage risk while capturing positions for which a market risk capital requirement would be appropriate. For example, if a loan amortizes more quickly than expected, due to a borrower making additional payments to pay down principal, the amount of notional protection would only constitute a net short risk position if it exceeds the amount of the total committed loan balance by \$20 million or more. The operational burden of requiring a banking organization to capture temporary or small differences due to accelerated amortization within

its market risk capital requirements could inhibit the banking organization from engaging in prudential hedging and sound risk management. The proposal would require a banking organization to calculate net short risk positions on a spot, quarter-end basis, consistent with regulatory reporting, in order to reduce the operational burden of identifying such positions subject to the proposed market risk capital requirements.²⁷³

Third, the proposal generally would include as market risk covered positions all publicly traded equity positions²⁷⁴ regardless of whether they are trading assets or trading liabilities, provided that there are no restrictions on the tradability of such positions.

Fourth, a banking organization may issue hybrid instruments that contain an embedded derivative related to credit or equity risk and a host contract, and bifurcate the derivative and the host contract for accounting purposes under GAAP or elect the fair value option for such an embedded derivative for purposes of financial reporting.²⁷⁵ Under such circumstances, the proposal would include the embedded derivative in the definition of market risk covered position regardless of whether GAAP treats the derivative as a trading asset or a trading liability.²⁷⁶ This approach

²⁷³ For net short-risk positions, banking organizations may use their spot, quarter-end calculations for the purposes of their weekly calculations of the standardized measure for market risk or daily calculations of the models-based measure for market risk.

²⁷⁴ The proposal would not change the current capital rule's definition of publicly traded as traded on: (1) any exchange registered with the SEC as a national securities exchange under section 6 of the Securities Exchange Act of 1934 (15 U.S.C. 78f); or (2) any non-U.S.-based securities exchange that is registered with, or approved by, a national securities regulatory authority and that provides a liquid, two-way market for the instrument in question. Consistent with the current capital rule, the proposal would define a two-way market as a market where there are independent bona fide offers to buy and sell so that a price reasonably related to the last sales price or current bona fide competitive bid and offer quotations can be determined within one day and settled at that price within a relatively short time frame conforming to trade custom.

²⁷⁵ This would apply to hybrid contracts containing an embedded derivative that must be separated from the host contract and accounted for as a derivative instrument under ASC Topic 815, Derivatives and Hedging (formerly FASB Statement No. 133 "Accounting for Derivative Instruments and Hedging Activities," as amended).

²⁷⁶ For purposes of regulatory reporting, the instructions to the FR Y-9C and Call Report require a banking organization to classify as trading securities all debt securities that a banking organization has elected to report at fair value under a fair value option with changes in fair value reported in current earnings, regardless of whether such positions are held with trading intent. ASC 815-15-25-4 permits both issuers of and investors in hybrid financial instruments that would

²⁷⁰ The proposal would retain, without modification, the existing definition of trading position in the market risk capital framework of the current capital rule. See 12 CFR 3.202 (OCC); 12 CFR 217.202 (Board); 12 CFR 324.202 (FDIC).

²⁷¹ As discussed in section II.E. of this **SUPPLEMENTARY INFORMATION**, the proposal would index the \$20 million threshold for net short risk positions going forward on an annual basis to reflect CPI-W.

²⁷² For equity derivatives, the adjusted notional amount would be the product of the current price

of one unit of the stock (for example, a share of equity) and the number of units referenced by the trade.

would capture the market risk of embedded derivatives a banking organization faces when it issues such hybrid instruments while being sensitive to the operational challenges of requiring banking organizations to calculate the fair value of such derivatives on a daily basis, and also appropriately exclude conventional instruments with an embedded derivative for which the capital requirements under the standardized approach or the expanded risk-based approach, as applicable, would be appropriate.²⁷⁷ If a banking organization elects to report the entire hybrid instrument at fair value under the fair value option for accounting purposes (rather than bifurcating the derivative and host contract), the proposal would allow the banking organization to treat the entire instrument (and any associated hedges) as a market risk covered position with prior approval from the primary Federal supervisor. The agencies recognize such hybrid instruments can also present market risk, which banking organizations may choose to hedge either at the level of the embedded derivative or the entire instrument. To encourage sound risk management without unduly increasing operational burden or decreasing the overall capital required under the market risk framework,²⁷⁸ the proposal would allow banking organizations to treat the entire instrument (as well as any associated hedges) as a market risk covered position with prior approval from the primary Federal supervisor.²⁷⁹

Fifth, the proposed definition of market risk covered position would include certain transactions of internal risk transfers, as described in section V.A.5. of this **SUPPLEMENTARY INFORMATION**, based in certain cases on the eligibility of the internal risk transfers. The market risk covered position would explicitly include (1) the trading desk segment of an eligible internal risk transfer of credit risk, interest rate risk, or CVA risk;²⁸⁰ and (2)

certain external transactions²⁸¹ based on eligibility of the risk transfers, executed by a trading desk related to an internal risk transfer of credit or interest rate risk. This aspect of the proposal is intended to help promote consistency and comparability in the risk-based capital treatment of such positions across banking organizations and ensure the appropriate capitalization of such positions under the standardized approach, the expanded risk-based approach, or the market risk capital framework of the capital rule.

Sixth, the proposed definition of market risk covered position would include instruments resulting from securities underwriting commitments where the securities are expected to be purchased by the banking organization on the settlement date, except those that a banking organization expects to classify as held to maturity or available for sale upon purchase. In general, such positions are held for sale or otherwise to support the banking organization's trading activities and, therefore, expose a banking organization to significant market risk. The agencies recognize that there may be circumstances under which the banking organization, as underwriter, might hold securities for investment purposes that it could not sell in the distribution. As such securities are not reflective of a banking organization's trading activity, the proposal would exclude instruments that a banking organization expects to purchase for held to maturity or available for sale purposes from the definition of market risk covered position.

c. Exclusions From the Proposed Definition of Market Risk Covered Position

The definition of a covered position in the current capital rule explicitly excludes certain positions.²⁸² These excluded instruments and positions generally reflect the fact that they are

either deducted from regulatory capital, explicitly addressed under the standardized approach and advanced approaches of the current capital rule, have significant constraints in terms of a banking organization's ability to liquidate them readily and value them reliably on a daily basis, or are not held with trading intent.

Consistent with the current capital rule, the proposal would continue to exclude from the definition of market risk covered positions: (1) any intangible asset, including any servicing asset; (2) any hedge of a trading position that the banking organization's primary Federal supervisor determines to be outside the scope of the banking organization's trading and hedging strategy; (3) any instrument that, in form or substance, acts as a liquidity facility that provides support to asset-backed commercial paper; (4) any position a banking organization holds with the intent to securitize; and (5) any CVA hedge.²⁸³ The proposed definition would also continue to exclude from market risk covered positions any direct real estate holdings.²⁸⁴ Consistent with past guidance from the agencies, indirect investments in real estate, such as through REITs or special purpose vehicles, would not be direct real estate holdings and could be market risk covered positions if they meet the proposed definition.²⁸⁵

The proposed definition would also exclude the following from the definition of market risk covered position: (1) any non-publicly traded equity positions, other than certain equity positions in investment funds, (2) any publicly traded equity position that has restrictions on tradability; (3) any publicly traded equity position that is a significant investment in the capital of an unconsolidated financial institution in the form of common stock not deducted from regulatory capital, as applicable, (4) any equity position in an investment fund that is not a trading asset or trading liability or that otherwise does not meet the requirements to be a market risk covered position,²⁸⁶ and (5) equity positions that

otherwise require bifurcation of an embedded derivative to elect at acquisition, issuance or a new basis event to carry such instrument at fair value with all changes in fair value reported in earnings.

²⁷⁷ For example, a conventional mortgage loan contains an embedded prepayment or call option.

²⁷⁸ For example, a banking organization can choose to hedge structured notes issued by a banking organization that are linked to credit or equity risk with trading instruments even if the banking organization does not view the structured note as a trading position.

²⁷⁹ The agencies anticipate that such approval would be granted in limited circumstances such as where the instrument or associated hedges trade or may be hedged in liquid, two-way markets.

²⁸⁰ Under the proposal, only banking organizations subject to CVA risk capital requirements would be required to treat the trading

desk segment of an eligible internal risk transfer of CVA risk as a market risk covered position, as described in section V.B.2. of this **SUPPLEMENTARY INFORMATION**. The proposed definition of market risk covered position would not include the trading desk segment of an eligible internal risk transfer of CVA risk for banking organizations subject to the market risk framework but not CVA risk framework.

²⁸¹ An external transaction generally refers to a transaction between a banking organization and an unaffiliated third party (except that in the case of a banking organization that is a depository institution, a transaction with an affiliate that is not a direct or indirect subsidiary of the depository institution would also be an external transaction for purposes of the depository institution's stand-alone capital requirement).

²⁸² See 77 FR 53060, 53064–65 (Aug. 30, 2012) for a more detailed discussion on these exclusions under the market risk capital rule.

²⁸³ See definition of "CVA hedge" and "market risk covered position" under § _____.202 of the proposal rule.

²⁸⁴ Direct real estate holdings include real estate for which the banking organization holds title, such as "other real estate owned" held from foreclosure activities, and bank premises used by the bank as part of its ongoing business activities.

²⁸⁵ See 77 FR 53060, 53065 (August 30, 2012) for the agencies' interpretive guidance on the treatment of such indirect holdings under the market risk capital framework of the capital rule.

²⁸⁶ For example, the proposal would exclude equity positions in investment funds arising from

Continued

qualify as effective hedges pursuant to § _____.52(c) of the current capital rule or § _____.141(c) of the proposal.

The proposed definition would add an exclusion for any derivative instrument or exposure to an investment fund that has material exposures to any of the preceding excluded instruments or positions discussed in this section. The proposal would also add an exclusion for instruments held for the purpose of hedging a particular risk of a position in any of the preceding excluded types of instruments discussed in this section.

*Question 102: The agencies seek comment on the appropriateness of the proposed definition of market risk covered position. What, if any, practical challenges might the proposed definition pose for banking organizations, such as the ability to fair value daily any of the proposed instruments that would be captured by the definition?*²⁸⁷

bank-owned life insurance and corporate owned-life insurance owned by an affiliate from the scope of market risk covered position. Such positions are held for the purpose of covering the cost of providing benefits to employees and retirement planning, and not with trading intent. Similarly, the proposal would exclude equity positions in investment funds arising from seed capital investments from the definition of market risk covered position. A banking organization typically invests a limited amount of its own capital as part of organizing the fund to produce investment performance as a record of the fund's investment strategy ("track record"). Only once a track record is established would the banking organization market the fund to investors with trading intent. As investors may demand a track record of at least five years before investing in the fund, the proposal would exclude equity positions in investment funds arising from seed capital investments, if the banking organization has held the fund for less than five years from the date on which the investment adviser or similar entity to the fund begins making initial investments pursuant to the written strategy of the fund upon its establishment. The exclusion is not intended to be used in situations where an investment manager provides additional capital to a fund after the fund has developed a track record. See (2)(x) and (2)(xiv) within the definition of market risk covered position under § _____.202 of the proposal.

²⁸⁷ For banking organizations subject to market risk capital requirements under the capital rule, the Volcker Rule defines the scope of instruments subject to the proprietary trading prohibition (trading account) based on two prongs: market risk capital rule covered positions that are trading positions, and instruments purchased or sold in connection with the business of a dealer, swap dealer, or securities-based swap dealer that require it to be licensed or registered as such. The proposed revisions to the definition of covered positions (re-designated as "market risk covered position"), as described in section V.A.4. of this **SUPPLEMENTARY INFORMATION**, could alter the scope of financial instruments deemed to be in the trading account under the Volcker Rule, but only to the extent that a market risk covered position is also a trading position and the position is not otherwise excluded from the Volcker rule definition of trading account. See 12 CFR 44.3(b) (OCC); 12 CFR 248.3(b) (Board); 12 CFR 351.3(b) (FDIC).

Question 103: The proposal would include as a market risk covered position an equity position in an investment fund that satisfies the conditions described in the definition of "market risk covered position" in § _____.202. Consistent with the definition of "investment fund" under the current capital rule, to be an eligible market risk covered position, an equity position must be in a company (1) where all or substantially all of the assets of the company are financial assets, and (2) that has no material liabilities. The agencies seek comment on whether a more specific definition of eligible "investment fund" would be appropriate for market risk covered positions. For example, what other vehicles that do not meet the criteria of the "investment fund" definition but would be subject to market risk capital requirements, in a manner that such positions would be most appropriately subject to market risk capital requirements, such as an investment fund with material liabilities? What are the advantages and disadvantages of subjecting such investment funds to market risk capital requirements, and why? Alternatively, what additional conditions or limitations should the agencies consider to place on investment funds eligible for being a market risk covered position, beyond those currently in the proposal?

Question 104: The agencies seek comment on the extent to which limiting the proposed definition of market risk covered position to include equity positions in investment funds only for which a banking organization has access to the fund's investments limits (as specified in the fund's prospectus, partnership agreement, or similar contract that define the fund's permissible investments) appropriately captures the types of positions that should be subject to regulatory capital requirements under the proposed market risk framework. What types of investment funds, if any, would a banking organization have the ability to value reliably on a daily basis that do not meet this condition? In addition, what are the advantages and disadvantages of excluding equity positions in investment funds arising from bank-owned life insurance or corporate-owned life insurance from the definition of market risk covered positions?

Question 105: For the purposes of determining whether certain positions are within the definition of market risk covered position, is the proposed definition of net short risk position appropriate, and why? What, if any, alternative measures should the

agencies consider to identify net short risk positions and why would these be more appropriate?

Question 106: The agencies seek comment on whether the proposed \$20 million threshold is an appropriate measure for identifying significant net short risk exposures that warrant capitalization under the market risk framework. What alternative thresholds or methods should the agencies consider for identifying significant net short risk positions, and why would these alternatives be more appropriate than the proposed \$20 million threshold?

Question 107: What, if any, challenges might banking organizations face in calculating the market risk capital requirement for net short risk positions? In particular, what, if any, alternatives to the total commitment for loans should the agencies consider using to calculate notional amount—for example, delta notional values rather than notional amount, present value, sensitivities—and why would any such alternatives be a better metric? Please provide specific details on the mechanics of and rationale for any suggested methodology. In addition, which, if any, of the items to be included in a banking organization's net short credit or equity risk position may present operational difficulties and what is the nature of such difficulties? How could such concerns be mitigated?

5. Internal Risk Transfers

A banking organization may choose to hedge the risks of certain positions²⁸⁸ held by a banking unit or a CVA desk by having one of its trading desks obtain the hedge for a banking unit or a CVA desk exposure. The current capital rule does not address the transfers of risk from a banking unit or a CVA desk (or a functional equivalent thereof) to a trading desk within the same banking organization²⁸⁹ (internal risk transfers), for example between a mortgage banking unit and a rates trading desk. Thus, market risk-weighted assets do not reflect the market risk of such internal transactions and capture only

²⁸⁸ Such risks can include credit, interest rate, or CVA risk arising from exposures that are subject to risk-based requirements under the standardized approach, the expanded risk-based approach, or the market risk capital framework of the capital rule.

²⁸⁹ For example, if the banking organization is a depository institution within a holding company structure, transactions conducted between the depository institution and an affiliated broker-dealer entity that is not a subsidiary of the depository institution would not qualify as transactions within the same banking organization for the depository institution. Such transactions would qualify as transactions within the same banking organization for the consolidated holding company.

the external portion of the hedge, potentially misrepresenting the risk position of the banking organization.

Accordingly, the proposal would define internal risk transfers and establish a set of requirements including documentation and other conditions for a banking organization to recognize certain types of internal risk transfers in risk-based capital requirements. The proposal would define internal risk transfers as transfers executed through internal derivatives trades of credit risk or interest rate risk arising from an exposure capitalized under the standardized approach of the capital rule or the proposed expanded risk-based approach to a trading desk, or a transfer of CVA risk arising from a CVA desk (or the functional equivalent if the banking organization does not have any CVA desks) to a trading desk.²⁹⁰ The proposed definition of internal risk transfer would not include transfers of risk from a trading desk to a banking unit or between trading desks because such transactions present the types of risks appropriately captured in market risk-weighted assets.²⁹¹

In practice, for internal risk management purposes, most banking organizations already document the source of risk being hedged and the trading desk providing the hedge.²⁹² As a result, the agencies do not expect the proposed documentation requirements for such transactions to qualify as eligible internal risk transfers, as described in more detail below, to pose a significant compliance burden on banking organizations. The agencies encourage prudent risk management and view that this aspect of the proposal will help promote consistency and comparability in the risk-based capital treatment of such internal transactions across banking organizations and ensure the appropriate capitalization of such positions.

²⁹⁰ An internal risk transfer transaction would comprise two perfectly offsetting segments—one segment for each of two parties to the transaction.

²⁹¹ As described in section V.A.7.b.ii. of this **SUPPLEMENTARY INFORMATION**, for transfers of risk between a trading desk that uses the standardized non-default capital requirement and a trading desk that uses the models-based non-default capital requirement, a banking organization may exclude the leg of the transaction acquired by the trading desk using the standardized non-default capital requirement from the residual risk add-on.

²⁹² The agencies recognize that some internal risk transfers will be executed by means of legally binding contracts entered into between affiliates, while others will be executed between business units within the same legal entity under other arrangements, and that the form of documentation used by a banking organization may vary accordingly.

a. Internal Risk Transfers of Credit Risk

The Basel standards introduce a risk-based capital treatment for internal transfers of credit risk executed from a banking unit to a trading desk to hedge the credit risk arising from exposures in the banking unit. The proposal is generally consistent with the Basel standards in specifying the criteria for internal risk transfer eligibility and clarifying the scope of exposures subject to market risk capital requirements. Specifically, a banking organization would be required to maintain documentation identifying the underlying exposure under the standardized approach or the expanded risk-based approach, as applicable, being hedged and its sources of credit risk. In addition, a trading desk would be required to enter into an external hedge that meets the requirements of § _____.36 of the current capital rule or § _____.120 of the proposed rule and matches the terms, other than amount, of the internal credit risk transfer at trade initiation. The agencies recognize that under certain circumstances a banking organization could choose to novate to a CCP an external transaction entered into in connection with an internal risk transfer. Because such transactions could be subject to compression, the terms of the internal risk transfer, aside from amount, would not be identical to the terms of the external hedge of credit risk post trade initiation. As such, the proposal would require the terms of the external hedge and the internal risk transfer to be identical only at trade initiation.

When these requirements are met, the transaction would qualify as an eligible internal risk transfer, for which the banking unit would be allowed to recognize the amount of the hedge position received from the trading desk as a credit risk mitigant when calculating the risk-based capital requirements for the underlying exposure under the standardized approach or the expanded risk-based approach. Because the trading desk enters into external hedges to manage credit risk arising from banking unit exposures, such external hedges would be included in the scope of market risk covered positions along with the internal risk transfer (the trading desk segment), where they would cancel out each other provided the amounts and terms of both transactions match. Nevertheless, if the internal risk transfer results in a net short credit position greater than \$20 million for the banking unit, the trading desk would be required to calculate market risk-based capital requirements for such positions. A net

short risk credit position results when the external hedge exceeds the amount required by the banking unit to hedge the underlying exposure under the standardized approach or the expanded risk-based approach.

For transactions that do not meet these requirements, the proposal would require a banking organization to disregard the internal risk transfer (the trading desk segment) from the market risk covered positions. The proposal would subject the entire amount of the external hedge acquired by the trading desk to the proposed market risk capital requirements and disallow any recognition of risk mitigation benefits of the internal credit risk transfer under the standardized approach or the expanded risk-based approach, as applicable.

b. Internal Risk Transfers of Interest Rate Risk

The proposal would specify the risk-based capital treatment of internal transfers of interest rate risk from a banking unit to the trading desk to hedge the interest rate risk arising from the banking unit. When a banking organization executes an internal interest rate risk transfer between a banking unit and a trading desk, the transferred interest rate risk exposure would be considered an eligible risk transfer that the banking organization may treat as a market risk covered position only if such internal risk transfer meets a set of requirements. Specifically, the banking organization would be required to maintain documentation of the underlying exposure being hedged and its sources of interest rate risk.²⁹³ In addition, given the complexity of tracking the direction of internal transfers of interest rate risk, the proposal would allow a banking organization to establish a dedicated notional trading desk for conducting internal risk transfers to hedge interest rate risk. If a banking organization conducts internal transfers of interest rate risk on a dedicated notional trading desk, the proposal would require a banking organization to calculate market risk capital requirements for such positions on the dedicated notional trading desk on a standalone basis apart from all other market risk covered positions. Specifically, a banking organization would be required to calculate either the standardized measure for market risk or the models-based measure for market risk, if

²⁹³ The proposal would not require a banking organization to purchase the hedge from a third party for such transactions to qualify as an internal risk transfer, because tracking interest rate risk transfers can be operationally burdensome.

applicable, for the internal risk transfer positions on the dedicated notional trading desk separate from all other market risk covered positions.

When these requirements are met, the internal risk transfer would qualify as an eligible internal interest rate risk transfer, for which the banking organization may recognize the hedge benefit of an internal derivative transaction. A trading desk that conducts internal risk transfers of interest rate risk may enter into external hedges to mitigate the risk but would not be required to do so under the proposal. As the amount transferred to the trading desk from the banking unit to hedge the underlying exposure under the standardized approach or the expanded risk-based approach, as applicable, would be a market risk covered position, any such external hedges would also be market risk covered positions and thus also subject to the proposed market risk capital requirements.²⁹⁴

For transactions that do not meet these requirements, a banking organization would be required to exclude the internal interest rate risk transfer (the trading desk segment) from its market risk covered positions. The entire amount of any external hedge of an ineligible internal risk transfer would be a market risk covered position.

c. Internal Risk Transfers of CVA Risk

For banking organizations that are subject to CVA risk capital requirements, the proposal would specify the capital treatment of internal CVA risk transfers executed between a CVA desk (or the functional equivalent thereof) and a trading desk to hedge CVA risk arising from exposures that are subject to the proposed capital requirements for CVA risk.²⁹⁵

Under the proposal, an internal CVA risk transfer would involve two perfectly offsetting positions of a derivative transaction executed between a CVA desk and a trading desk: the position of the CVA desk (the CVA segment) and the position of the trading desk (the trading desk segment). For the

CVA desk to recognize the risk mitigation benefits of the internal risk transfer under the risk-based capital requirements for CVA risk, the proposal would require the banking organization to have a dedicated CVA desk or the functional equivalent thereof that, along with other functions performed by the desk, manages internal risk transfers of CVA risk. In either case, such a desk would not need to satisfy the proposed trading desk definition, given the proposed risk-based capital requirements for CVA risk are not calibrated at the trading desk level. Additionally, the proposal would require a banking organization to maintain, at either the desk or portfolio level, an internal written record of internal derivative transaction(s) executed between the CVA desk and the trading desk, including identifying the underlying exposure(s) being hedged by the CVA desk and the sources of such risk.

In addition to the above-mentioned requirements for the internal transaction to qualify as an eligible internal risk transfer of CVA risk, the proposal sets forth general requirements for the recognition of CVA hedges that would be applicable to both internal transfers of CVA risk and external CVA hedges. The proposal specifies these requirements for both the basic approach for CVA risk and standardized approach for CVA risk, as described in section V.B.3. of this **SUPPLEMENTARY INFORMATION**.²⁹⁶

For eligible internal risk transfers of CVA risk, the banking organization would be required to treat the CVA segment as an eligible CVA hedge when calculating the CVA risk capital requirement and treat the trading desk segment as a market risk covered position. In this way, the proposal would allow the CVA desk to recognize the risk-mitigating benefit of the hedge position received from the trading desk when calculating risk-based capital requirements for CVA risk.

For transactions that do not meet these requirements or the general hedge eligibility requirements under the basic approach for CVA risk or the standardized approach for CVA risk, a banking organization would be required to exclude both the trading desk segment and the CVA segment of the internal transfer of CVA risk from

market risk-weighted assets, thus disregarding the ineligible internal CVA risk transfer. In addition, the CVA desk would not be able to recognize any risk mitigation or offsetting benefit from the ineligible internal risk transfer in its capital requirements for CVA risk.

d. Internal Risk Transfers of Equity Risk

The agencies are not proposing to allow a banking organization to recognize any risk mitigation benefits for internal equity risk transfers executed between a trading desk and a banking unit to hedge exposures that are subject to either the standardized approach or the expanded risk-based approach, as applicable. The proposed definition of market risk covered position would generally include equity positions that are publicly traded with no restrictions on tradability, with a few exceptions.²⁹⁷ Given the expanded scope of equity positions that would be subject to the proposed market risk capital requirements, primarily illiquid or irregularly traded equity positions would remain subject to the standardized approach or the expanded risk-based approach, as applicable.²⁹⁸ In general, banking organizations would not be able to hedge the material risk elements of illiquid or irregularly traded equity positions in a liquid, two-way market. For publicly traded equity exposures still subject to the standardized approach or the expanded risk-based approach, as applicable, banking organizations may apply the hedge pair treatment, which allows for the recognition of risk-mitigating benefits of hedged transactions. Given the narrower scope of equity positions subject to the standardized approach or the expanded risk-based approach, as applicable, and the option to apply hedge pair treatment for publicly traded exposures, the proposal would not allow a banking organization to recognize internal transfers of equity risk of such positions.

Question 108: The agencies seek comment on any operational challenges

²⁹⁷ For example, the proposed market risk covered position would exclude equity positions arising from deferred compensation plans and hedges of such positions that qualify for effective hedge pair treatment under § _____.52(c) of the current capital rule and under § _____.141(c) of the proposed rule. See section V.A.4.b. of this **SUPPLEMENTARY INFORMATION** for the proposed definition of market risk covered position.

²⁹⁸ Consistent with the current capital rule, the proposed equity risk framework under the expanded risk-based approach would allow firms to apply the effective hedge pair treatment to equity exposures not subject to market risk capital requirements for which the banking organization can demonstrate that the hedge transaction at initiation satisfies one of the three hedge effectiveness tests.

²⁹⁴ As the trading desk segments of eligible internal risk transfers of interest rate risk would be market risk covered positions, to the extent a trading desk enters into external hedges to mitigate the risk of such positions, the external hedge would also be subject to the market risk capital rule and could in whole or in part offset the market risk of the eligible internal risk transfer.

²⁹⁵ Under the proposal, the requirements for internal CVA risk transfers would not apply to banking organizations that are not subject to the proposed CVA risk capital requirement. See section V.B.2. of this **SUPPLEMENTARY INFORMATION** for the scope of banking organizations that would be subject to CVA risk capital requirements under the proposal.

²⁹⁶ While the basic approach for CVA applies certain restrictions on eligible instrument types for hedges to be recognized as eligible, the standardized approach for CVA risk allows for a broader set of hedging instruments. Moreover, the standardized approach for CVA risk would also recognize as eligible hedges instruments that are used to hedge the exposure component of CVA risk.

of the proposed internal risk transfer framework, in particular any potential difficulties related to internal risk transfers executed before implementation of the proposed market risk capital rule. What is the nature of such difficulties and how could they be mitigated?

Question 109: The agencies seek comment on the extent to which the proposed internal risk transfer framework would incentivize hedging and prudent risk management and/or potentially misrepresent the risk profile of a banking organization. What, if any, additional requirements or other modifications should the agencies consider?

Question 110: The agencies seek comment on the appropriateness of the proposed eligibility requirements for a banking unit to recognize the risk mitigation benefit of an eligible internal risk transfer of credit risk. What, if any, additional requirements or other modifications should the agencies consider, and why?

Question 111: What, if any, operational burden might the proposed exclusion for the credit risk segment of internal risk transfers pose for banking organizations? What, if any, alternatives should the agencies consider that would appropriately exclude the types of positions that should be captured under the standardized approach or the expanded risk-based approach, as applicable, and also impose less operational burden relative to the proposal?

Question 112: The agencies seek comment on subjecting the internal risk transfers of interest rate risk to the market risk capital requirements on a standalone basis. What are the benefits and costs associated with this requirement? What would be an alternative approach for calculating a standalone capital requirement for internal transfers of interest rate risk? What would be the advantages and disadvantages of allowing a banking organization to calculate the market risk capital requirements for the internal risk transfers of interest rate risk together with other market risk exposures, and why?

Question 113: The agencies seek comment on the proposed documentation requirements for an internal risk transfer of credit risk, interest rate risk, or CVA risk to qualify as an eligible internal risk transfer. What, if any, changes to the proposed documentation requirements should the agencies consider, particularly in cases in which CVA risk is hedged on a portfolio basis? What, if any, alternatives should the agencies

consider that would appropriately capture the types of positions that should be recognized under the standardized approach or the expanded risk-based approach, as applicable?

Question 114: The agencies seek comment on not allowing a banking organization to recognize any risk mitigation benefits for internal equity risk transfers executed between a trading desk and a banking unit to hedge exposures that are subject to either the standardized approach or the expanded risk-based approach, as applicable. Given the proposed scope of equity positions that would be subject to the proposed market risk capital requirements and the retention of effective hedge pair treatment, under what circumstances would there be a need for internal equity risk transfers? What would be advantages and disadvantages of including the concept of internal risk transfer to equity risk and why?

6. General Requirements for Market Risk

The current capital rule requires a banking organization to satisfy certain general risk management requirements related to the identification of trading positions, active management of covered positions, stress testing, control and oversight, and documentation. The proposal would maintain these requirements, as well as introduce additional requirements. The additional requirements are designed to further strengthen a banking organization's risk management of market risk covered positions and to appropriately reflect other changes under the proposal such as the definition of market risk covered position and the introduction of the trading desk concept, as described in sections V.A.4. and V.A.6.b. of this **SUPPLEMENTARY INFORMATION**. The proposal would also make certain technical corrections related to the requirements around valuation of market risk covered positions.²⁹⁹

a. Identification of Market Risk Covered Positions

The current capital rule requires a banking organization to have clearly defined policies and procedures for determining which trading assets and trading liabilities are trading positions and which trading positions are

correlation trading positions, as well as for actively managing all positions subject to the rule.

The proposal would expand these requirements to reflect the proposed scope and definition of market risk covered position as described in section V.A.4. of this **SUPPLEMENTARY INFORMATION**. A banking organization also would be required to update its policies and procedures for identifying market risk covered positions at least annually and to identify positions that must be excluded from market risk covered positions. In addition, the proposal would introduce a new requirement for a banking organization to establish a formal framework for re-designating a position after its initial designation as being subject to the market risk capital framework or to the standardized approach or the expanded risk-based approach, as applicable, of the capital rule. Specifically, the proposal would require a banking organization to establish policies and procedures that describe the events or circumstances under which a re-designation would be considered, a process for identifying such events or circumstances, any restrictions on re-designations, and the process for obtaining senior management approval as well as for notifying the primary Federal supervisor of material re-designations. These proposed requirements are intended to complement the proposed capital requirement for re-designations described in section V.A.3.e. of this **SUPPLEMENTARY INFORMATION** by ensuring re-designations would occur in only those circumstances identified by the banking organization's senior management as appropriate to merit re-designation.³⁰⁰

In addition to the requirements for identifying market risk covered positions, the proposal would require a banking organization to have clearly defined trading and hedging strategies for its market risk covered positions that are approved by the banking organization's senior management. Consistent with the current capital rule, the trading strategy would need to specify the expected holding period and the market risk of each portfolio of market risk covered positions, and the hedging strategy would need to specify

²⁹⁹ Specifically, to align with the GAAP considerations for valuation of market risk covered positions, the proposal would eliminate the market risk capital rule requirement that a banking organization's process for valuing covered positions must consider, as appropriate, unearned credit spreads, close-out costs, early termination costs, investing and funding costs, liquidity, and model risk. See 12 CFR 3.203(b)(2) (OCC); 12 CFR 217.203(b)(2) (Board); 12 CFR 324.203(b)(2) (FDIC).

³⁰⁰ As described in further detail in section V.A.3.e. of this **SUPPLEMENTARY INFORMATION**, the proposal would introduce a capital requirement (the capital add-on for re-designations) to offset any potential capital benefit that a banking organization otherwise might have received from re-classifying an instrument previously treated under the standardized approach or the expanded risk-based approach of the capital rule, as applicable, as a market risk covered position.

the level of market risk that the banking organization is willing to accept for each portfolio of market risk covered positions, along with the instruments, techniques, and strategies for hedging such risk.

b. Trading Desk

i. Trading Desk Definition

To limit overreliance on internal models, support more prudent market risk management practices, and better align operational requirements with the level at which trading activity is conducted, the proposal would introduce the concept of a trading desk and apply the proposed models-based non-default capital requirement at the trading desk level. Regardless of whether a banking organization uses the standardized or the models-based measure for market risk, the proposal would require the banking organization to satisfy certain general operational requirements for each trading desk, as described below in section V.A.6.c. of this **SUPPLEMENTARY INFORMATION**. The proposal would also require the banking organization to satisfy certain additional operational requirements, as described below in section V.A.6.d. of this **SUPPLEMENTARY INFORMATION**, in order for the banking organization to calculate the market risk capital requirements for trading desks under the models-based non-default capital requirement.

The proposal would define a trading desk as a unit of organization of a banking organization that purchases or sells market risk covered positions and satisfies three requirements. First, the proposal would require a banking organization to structure a trading desk pursuant to a well-defined business strategy. In general, a well-defined business strategy would include a written description of the trading desk's general strategy, including the economics behind the business strategy, the trading and hedging strategies and a list of the types of instruments and activities that the desk will use to accomplish its objectives. Second, the proposal would require a trading desk to be organized to ensure the appropriate setting, monitoring, and management review of the desk's trading and hedging limits and strategies. Third, the proposal would require that a trading desk be characterized by a clearly-defined unit of organization that: (1) engages in coordinated trading activity with a unified approach to the key elements of the proposed rule's requirements for trading desk policies and active management of market risk covered positions; (2) operates subject to a common and calibrated set of risk

metrics, risk levels, and joint trading limits; (3) submits compliance reports and other information as a unit for monitoring by management; and (4) books its trades together.

The proposed trading desk definition is intended to help ensure that a banking organization structures its trading desks to capture the level at which trading activities are managed and operated and at which the profit and loss of the trading strategy is attributed.³⁰¹ This approach would recognize the different strategies and objectives of discrete units in a banking organization's trading operations. The proposed parameters provide sufficient specificity to enable more precise measures of market risk for the purpose of determining risk-based capital requirements, while taking into account the potential variation in trading practices across banking organizations. In this regard, the proposal aims to reduce the regulatory compliance burden for banking organizations by providing flexibility to align the proposed trading desk definition with the organizational structure that banking organizations may already have in place to carry out their trading activities.

Question 115: What, if any, changes should the agencies consider making to the definition of a trading desk and why? What, if any, other key factors do banking organizations typically use to define trading desks for business purposes that the agencies should consider including in the trading desk definition to clarify the designation of trading desks for purposes of the market risk capital framework?

Question 116: The agencies seek comment on any implementation challenges banking organizations with cross-border operations could face in applying the proposed trading desk definition. What are the advantages and disadvantages of permitting a U.S. subsidiary of a foreign banking organization to apply trading desk designations consistent with its home country's regulatory requirements, provided those requirements are consistent with the Basel standards?

ii. Notional Trading Desk Definition

The proposed definition of market risk covered position would include certain types of instruments and

positions that may not arise from, and may be unrelated to, a banking organization's trading activities, such as net short risk positions, certain embedded derivatives on instruments issued by the banking organization that relate to credit or equity risk, as well as foreign exchange and commodity exposures that are not trading assets or trading liabilities. When a banking organization enters into such positions, it may do so in a manner that causes these positions to appear not to originate from a banking organization's existing trading desks.

To address the issue that certain trading desk-level requirements are not applicable to these types of activities and positions, the proposal would introduce the concept of a notional trading desk³⁰² to which such positions would be allocated. Under the proposal, notional trading desks would be subject to only a subset of the general risk management requirements applicable to trading desks. Specifically, the proposal would require a banking organization to identify any such positions and activities allocated to notional trading desks, as described in section V.A.6.b.iii. of this **SUPPLEMENTARY INFORMATION**, but would not require a banking organization to establish policies and procedures describing the trading strategy or risk management for the notional trading desks or require a notional trading desk to satisfy the requirements for active management of market risk covered positions. Nevertheless, to qualify for use of the models-based non-default capital requirement, the proposal would require a notional trading desk to satisfy all of the general requirements for trading desks, as well as those applicable for the models-based measure.³⁰³

The agencies are proposing to require a banking organization to identify any notional trading desks as part of the trading desk structure requirement, described in section V.A.6.b.iii. of this **SUPPLEMENTARY INFORMATION**, to help

³⁰² The proposal would define a notional trading desk as a trading desk created for regulatory capital purposes to account for market risk covered positions arising under the standardized approach or the expanded risk-based approach of the capital rule, as applicable, such as net short risk positions, certain embedded derivatives on instruments that the banking organization issued that relate to credit or equity risk, instruments with an embedded derivative that the banking organization issued that relate to credit or equity risk that it elects the fair value option for purposes of financial reporting, and foreign exchange positions and commodity positions that are not trading assets or trading liabilities.

³⁰³ See section V.A.6.d. of this **SUPPLEMENTARY INFORMATION** for further discussion on the additional operational requirements applicable to model-eligible trading desks.

³⁰¹ A banking organization subject to the market risk capital requirements under the proposal would be required to use the same trading desk structure it establishes pursuant to the proposed market risk capital framework to demonstrate compliance with the prohibitions and restrictions on proprietary trading under the Volcker Rule. See 12 CFR 44.3(e)(14) (OCC); 12 CFR 248.3(e)(14) (Board); 12 CFR 351.3(e)(14) (FDIC).

ensure that a banking organization appropriately treats all market risk covered positions under the capital rule. The agencies would review a banking organization's trading desk structure, including notional trading desks and trading desks used for internal risk transfers, to help ensure that they have been appropriately identified.

Question 117: What, if any, additional requirements should apply to notional trading desks to clarify the level at which market risk capital requirements must be calculated? What, if any, additional types of positions should be assigned to the notional trading desk and why?

iii. Trading Desk Structure

The proposal would require a banking organization to define its trading desk structure. Specifically, the structure must define each constituent trading desk and identify: (1) model-eligible trading desks that are used in the models-based measure for market risk, (2) model-ineligible trading desks used in both the standardized measure and models-based measure for market risk,³⁰⁴ (3) trading desks that are used for internal risk transfers (as applicable), and (4) notional trading desks (as applicable).³⁰⁵

Additionally, before calculating market risk capital requirements under the models-based measure for market risk, the proposal would require a banking organization to receive prior approval from the primary Federal supervisor of its trading desk structure. As part of the model approval process described in section V.A.6.d.iv. of this **SUPPLEMENTARY INFORMATION**, the primary Federal supervisor would consider whether the level at which a banking organization is proposing to establish its trading desks is consistent with the level at which trading activities are actively managed and operated. The primary Federal supervisor would also consider whether the level at which the banking organization defines each trading desk is sufficiently granular to

allow the banking organization and the primary Federal supervisor to assess the adequacy of the internal models used by the trading desk. For example, a banking organization's proposed trading desk structure may be considered insufficiently detailed if it reflects risk limits, internal controls, and ongoing management at one or more organizational levels above the routine management of the trading desk (for example, at the division-wide or entity level).

iv. Trading Desk Policies

The current capital rule requires a banking organization to have clearly defined trading and hedging strategies for its trading positions that are approved by senior management. In addition to applying these requirements at the trading desk level for trading desks that are not notional trading desks, the proposal would require policies and procedures for each trading desk to describe the strategy and risk management framework established for overseeing the risk-taking activities of the trading desk.

For each trading desk that is not a notional trading desk, the proposal would require a banking organization to have a clearly defined policy, approved by senior management, that describes the general strategy of the trading desk, the risk and position limits established for the trading desk, and the internal controls and governance structure established to oversee the risk-taking activities of the trading desk.³⁰⁶ At a minimum, this would include the business strategy for each trading desk;³⁰⁷ a clearly defined trading strategy that details the market risk covered positions in which the trading desk is permitted to trade, identifies the main types of market risk covered positions purchased and sold by the trading desk, and articulates the expected holding period of, and market risk associated with, each portfolio of market risk covered positions held by the trading desk; a clearly defined hedging strategy that articulates the acceptable level of market risk and details the instruments, techniques, and strategies that the trading desk will use to hedge the risks of the portfolio; and a brief description of the general strategy of the trading desk that addresses the economics of its business

strategy, primary activities, and trading and hedging strategies.

Together, the proposed requirements are intended to help ensure that each trading desk engages only in those activities that are permitted by senior management and that any exceptions would be elevated to the appropriate organizational level. For example, the proposed requirement for a banking organization to document trading, hedging, and business strategies, including the internal controls established to manage the risks arising from the trading strategy, at the level of the organization responsible for implementing the general business strategy, is intended to help ensure appropriate monitoring of the risk limits set by senior management. Additionally, the proposed requirements would help to assist the primary Federal supervisor in monitoring compliance, particularly when assessing whether the trading activities conducted by a trading desk are consistent with the general strategy of the desk and the appropriateness of the limits established for the desk. For example, the requirement for a trading desk to list the types of instruments traded by the desk to hedge risks arising from its business strategy would help to assist the primary Federal supervisor in providing effective supervisory oversight of the trading desk's activities.

c. Operational Requirements

The current capital rule requires a banking organization to satisfy certain operational requirements for active management of market risk covered positions, stress testing and internal assessment of capital adequacy, control and oversight, and documentation. The proposal would maintain these requirements and introduce revisions designed to complement changes under the proposed standardized and models-based measures for market risk (including the application of calculations at the trading desk level in the case of the models-based measure for market risk), and to support the proposed requirements described in section V.A.6.a. of this **SUPPLEMENTARY INFORMATION** that would help ensure a banking organization maintains robust risk management processes for identifying and appropriately managing its market risk covered positions.

A key assumption of the proposed market risk framework is that the financial reporting and internal risk management models³⁰⁸ used by banking

³⁰⁴ The list of model-ineligible trading desks should include both those for which the banking organization has elected to calculate market risk capital requirements under the standardized non-default capital requirement as well as any trading desks that previously received approval to use the models-based non-default capital requirement but subsequently reported the PLA test metric in the red zone, as described in more detail in section V.A.8.e. of this **SUPPLEMENTARY INFORMATION**. A banking organization should maintain a list of all trading desks and make it available for the primary Federal supervisor for review upon request.

³⁰⁵ A banking organization could also seek approval for a notional trading desk to be a model-eligible trading desk. Any such desk that is approved would be subject to backtesting and profit and loss attribution testing at the trading desk level.

³⁰⁶ Under the proposal, these requirements would generally not apply to notional trading desks, except those with prior approval from the primary Federal supervisor to use the models-based non-default capital requirement.

³⁰⁷ Under the proposal, the business strategy must include regular reports on the revenue, costs, and market risk capital requirements of the trading desk.

³⁰⁸ The proposal would define internal risk management model as a valuation model that the independent risk control unit within the banking

organizations provide an adequate basis for determining risk-based capital requirements for market risk covered positions.³⁰⁹ To help ensure such adequacy, the proposal would reinforce a banking organization's prudent valuation practices by incorporating requirements that build on the agencies' overall framework for market risk management.³¹⁰ In addition to facilitating the regulatory review process, the proposed revisions are intended to assist a banking organization's independent risk control unit and audit functions in providing appropriate review of and challenge to model risk management, thereby promoting effective model risk management.

The general risk management requirements described in this section would apply to all banking organizations subject to the proposed market risk capital framework.

i. Active Management of Market Risk Covered Positions

The current capital rule requires a banking organization to have clearly defined policies and procedures for actively managing all positions subject to market risk capital requirements, including establishing and conducting daily monitoring of position limits.³¹¹ These requirements are appropriate to support active management and monitoring under the current framework; the proposal adds enhancements to support active management and monitoring at the trading desk level.

Accordingly, the proposal would require a banking organization to have clearly defined policies and procedures that describe its internal controls, as well as its ongoing monitoring,

management, and authorization procedures, including escalation procedures, for the active management of all market risk covered positions. At a minimum, these policies and procedures must identify key groups and personnel responsible for overseeing the activities of the banking organization's trading desks that are not notional trading desks.

Further, the proposal would specify a broader set of risk metrics for the monitoring requirement, which would apply at the trading desk level. Specifically, at a minimum, the proposal would require that a banking organization establish and conduct daily monitoring by trading desks of: (1) trading limits, limit usage, and remedial actions taken in response to limit breaches; (2) sensitivities to risk factors; (3) market risk covered positions and transaction volumes; and, as applicable, (4) VaR and expected shortfall; (5) backtesting and *p*-values³¹² at the trading desk level and at the aggregate level for all model-eligible trading desks; and (6) comprehensive profit-and-loss attribution (each as described in sections V.A.8.d.–f. of this **SUPPLEMENTARY INFORMATION**). These risk metrics are the minimum elements necessary to support adequate daily monitoring of market risk covered positions at the trading desk level.

Consistent with the current capital rule, for a banking organization that has approval for at least one model-eligible trading desk, the proposal would require the banking organization's policies and procedures to describe the establishment and monitoring of backtesting and *p*-values at the trading desk level and at the aggregate level for all model-eligible trading desks. Daily information on the probability of observing a loss greater than that which occurred on any given day is a useful metric for a banking organization and supervisors to assess the quality of a banking organization's VaR model. For example, if a banking organization that used a historical simulation VaR model using the most recent 500 business days experienced a loss equal to the second worst day of the 500, it would assign a probability of 0.004 (2/500) to that loss based on its VaR model. Applying this process many times over a long interval provides information about the adequacy of the VaR model's ability to characterize the entire distribution of losses, including information on the size

and number of backtesting exceptions. The requirement to create and retain this information at the entity-wide and trading desk level for model-eligible trading desks may help identify particular products or business lines for which a model does not adequately measure risk. The agencies view active management of model risk at the trading desk level as the best mechanism to address potential risks of reliance on models, such as the possible adverse consequences (including financial loss) of decisions based on models that are incorrect or misused.

ii. Stress Testing and Internal Assessment of Capital Adequacy

The current capital rule requires a banking organization to have a rigorous process for assessing its overall capital adequacy in relation to its market risk. The process must take into account market concentration and liquidity risks under stressed market conditions as well as other risks arising from the banking organization's trading activities that may not be fully captured by a banking organization's internal models. At least quarterly, a banking organization must conduct stress tests at the entity-wide level of the market risk of its covered positions.

The proposal would enhance the current stress testing and internal assessment of capital adequacy requirements to reflect both the entity-wide and the trading-desk level elements for model-eligible positions within the proposed market risk capital requirement calculation. Specifically, the proposal would require a banking organization to stress-test the market risk of its market risk covered positions at both the entity-wide and trading-desk level for model-eligible positions on at least a quarterly basis. The proposal also would require that results of such stress testing be reviewed by senior management of the banking organization and reflected in the policies and limits set by the banking organization's management and the board of directors, or a committee thereof. In addition to concentration and liquidity risks, the proposal would require stress tests to take into account risks arising from a banking organization's trading activities that may not be adequately captured in the standardized or the models-based measure for market risk, as applicable.

The proposed requirements are intended to help ensure that each trading desk only engages in those activities that are permitted by the banking organization's senior management, and that any weaknesses revealed by the stress testing results would be elevated to the appropriate

organization uses to report market risks and risk-theoretical profits and losses to senior management. See § _____.202 of the proposed rule.

³⁰⁹ As a banking organization's financial reporting models are already subject to requirements to support the accuracy of the financial data produced (such as the requirements from the Sarbanes-Oxley Act of 2002, Pub. L. 107–204), such models would satisfy the proposed independent validation requirements described in more detail in section V.A.6.c.iii. of this **SUPPLEMENTARY INFORMATION**.

³¹⁰ The supervisory guidance set forth in the Board's Supervision and Regulation (SR) Letter 11–7 and OCC's Bulletin 2011–12, Supervisory Guidance on Model Risk Management includes prudent valuation practices for banking organizations subject to market risk capital requirements.

³¹¹ The proposal would retain certain other requirements with modifications such as policies and procedures for active management of trading positions subject to the market risk requirements which include, but are not limited to, ongoing assessment of the ability to hedge market risk covered positions and portfolio risks. See 12 CFR 3.203(b)(1) (OCC); 12 CFR 217.203(b)(1) (Board); 12 CFR 324.203(b)(1) (FDIC).

³¹² Under the proposal, *p*-value would be defined as the probability, when using the VaR-based measure for purposes of backtesting, of observing a profit that is less than, or a loss that is greater than, the profit or loss that actually occurred on a given date.

management levels of the banking organization and addressed in a timely manner.

iii. Control and Oversight

The current capital rule requires a banking organization to maintain a risk control unit that reports directly to senior management and is independent of the business trading units. The internal audit function is responsible for assessing, at least annually, the effectiveness of the controls supporting the banking organization's market risk measurement systems (including the activities of the business trading units and independent risk control unit), compliance with the banking organization's policies and procedures, and the calculation of the banking organization's market risk capital requirements. At least annually, the internal audit function must report its findings to the banking organization's board of directors (or a committee thereof).

The proposal largely would retain the control, oversight, and validation requirements in the capital rule, including the requirement that a banking organization maintain an independent risk control unit. The proposal would expand the required oversight responsibilities of the independent risk control unit to include the design and implementation of market risk management systems that are used for identifying, measuring, monitoring, and managing market risk. The proposed change is intended to complement other changes under the proposal, in particular allowing a banking organization to calculate risk-based requirements using standardized and models-based measures for market risk (for example, the inclusion of more rigorous model eligibility tests that apply at the trading desk level), as well as the introduction of a capital add-on requirement for re-designations.

Further, the proposal would enhance the internal review and challenge responsibilities of a banking organization by requiring it to maintain conceptually sound systems and processes for identifying, measuring, monitoring, and managing market risk. In addition to the current requirements in the capital rule, the banking organization's internal audit function would have to assess at least annually the effectiveness of the designations and re-designations of market risk covered positions, and the calculation of the banking organization's measures for market risk, including the mapping of risk factors to liquidity horizons, as applicable. The proposal would enhance the validation requirements by

requiring a banking organization to maintain independent validation of its valuation models and valuation adjustments or reserves.³¹³

The agencies intend for these elements of the proposal to enhance the accountability of the banking organization's independent risk control unit and internal audit function and provide banking organizations with sufficient flexibility to incorporate the risk management processes required for regulatory capital purposes within those daily risk management processes used by the banking organization, such that managing market risk would be more consistent with the banking organization's overall risk profile and business model.

iv. Documentation

Similar to the enhancements to policies and procedures described above, the proposal would enhance the documentation requirements in the capital rule to reflect the proposed market risk capital framework. Specifically, a banking organization would be required to document adequately all material aspects of its identification, management, and valuation of market risk covered positions, including internal risk transfers and any re-designations of positions between the market risk capital framework and the standardized approach or the expanded risk-based approach of the capital rule, as applicable. Consistent with the current capital rule, the proposal would require a banking organization to document adequately all material aspects of its internal models, and its control, oversight, validation, and review processes and results, as well as its internal assessment of capital adequacy. The proposal also would require a banking organization to document an explanation of the empirical techniques used to measure market risk. Further, a banking organization would be required to establish and document its trading desk structure, including identifying which trading desks are model-eligible, model-ineligible, used for internal risk transfers, or constitute notional trading desks, as well as document policies describing how each desk satisfies

applicable requirements. These enhancements would help ensure that a banking organization appropriately treats all market risk covered positions under the capital rule.

d. Additional Operational Requirements for the Models-Based Measure for Market Risk

Under the current capital rule, a banking organization must use an internal VaR-based model to calculate risk-based capital requirements for its covered positions. Under the proposal, only a banking organization that receives approval from its primary Federal supervisor to use the models-based non-default capital requirement for at least one model-eligible trading desk would be required to calculate market risk capital requirements under the models-based measure for market risk.

As a condition for use of the models-based non-default capital requirement, the proposal would require a trading desk to satisfy certain additional operational requirements, which are intended to help ensure that the banking organization has allocated sufficient resources for the desk to develop and rely on internal models that appropriately capture the market risk of its market risk covered positions. Specifically, the additional operational requirements, as well as the proposed profit and loss attribution and backtesting requirements described in sections V.A.8.e. and V.A.8.f. of this **SUPPLEMENTARY INFORMATION**, would help ensure that the internal models used to calculate a trading desk's risk-based capital requirements are sufficiently accurate and conservative relative to the models used to report actual profits and losses for financial reporting purposes (financial reporting models).³¹⁴ In this way, the additional operational requirements are intended

³¹³ A banking organization's financial reporting models provide an appropriate basis for determining risk-based capital requirements because such models are subject to requirements intended to enhance the accuracy of the financial data produced by the models, such as the requirements from the Sarbanes-Oxley Act of 2002, Pub. L. 107-204. Accordingly, banking organizations that rely on financial reporting models for purposes of calculating risk-based capital requirements would satisfy the proposed prudent valuation requirement.

³¹⁴ The proposed backtesting requirements are intended to measure the conservatism of the forecasting assumptions and valuation methods in the internal models used to determine risk-based capital requirements relative to those used in the financial reporting models. The proposed PLA testing requirement is intended to measure the accuracy of the potential future profits or losses estimated by the valuation models used for internal risk management purposes (internal risk management models) relative to those produced by the valuation models used for financial reporting. If a trading desk fails to satisfy either the backtesting requirements or, after the three-year transition period, the proposed PLA test requirements, it would no longer be able to calculate risk-based capital requirements using the models-based non-default capital requirement. In this way, the proposal would only allow trading desks for which the internal models are sufficiently conservative and accurate to use the models-based non-default capital requirement to calculate market risk capital requirements.

to help ensure that the internal models of a trading desk properly measure all material risks of the market risk covered positions to which they are applied, and the sophistication of the internal models is commensurate with the complexity and extent of trading activity conducted by the trading desk.

As described above, the proposal would require eligibility for use of the models-based non-default capital requirement to be determined at the trading desk level, rather than for the entire banking organization. By aligning the level at which a banking organization may be permitted to model market risk capital requirements with the level at which the banking organization applies the controls used for financial reporting, the proposed requirements would enhance prudent capital management for banking organizations that use the models-based measure for market risk.

i. Trading Desk Identification

As part of the model approval process, the proposal would require a banking organization to identify all trading desks within its trading desk structure that it would designate as model-eligible and for which it would seek approval to use the models-based non-default capital requirement from the primary Federal supervisor.

Additionally, the proposal generally would prohibit a banking organization from seeking model approval for trading desks that hold securitization positions, correlation trading positions, or certain equity positions in investment funds (together “model-ineligible positions”), with one exception.³¹⁵ Given the operational difficulties of requiring a banking organization to bifurcate trading desks that hold an insignificant amount of model-ineligible positions pursuant to their trading or hedging strategy, the proposal would allow the banking organization to designate such desks as model-eligible. If the primary Federal supervisor were to approve the use of models-based non-default capital requirement for such desks, the proposal would require the banking organization to separately calculate market risk capital requirements for such model-ineligible positions held by a model-eligible trading desk under either the standardized non-default capital requirement or the fallback capital requirement, and otherwise treat

such positions as if they were not held by the desk.³¹⁶

Question 118: The agencies seek comment on the benefits and drawbacks of requiring trading desks that hold an insignificant amount of model-ineligible positions to exclude from the models-based non-default capital requirement such positions and any related hedges, if applicable, in order for such desks to request approval to calculate market risk capital requirements under the models-based measure for market risk. Commenters are encouraged to provide data to support their responses.

ii. Review, Risk Management, and Validation

To help ensure that the internal models appropriately capture a model-eligible trading desk’s market risk exposure on an ongoing basis, the proposal would require a banking organization to satisfy additional model review and validation standards for model-eligible trading desks to use the models-based non-default risk capital requirement to calculate market risk capital requirements.

Specifically, a banking organization that uses the models-based measure for market risk would be required to (1) review its internal models at least annually and enhance them, as appropriate, to help ensure the models continue to satisfy the regulatory requirements and employ risk measurement methodologies that are the most appropriate for the banking organization’s market risk covered positions, (2) integrate its internal models used for calculating the expected shortfall-based measure for market risk into its daily risk management process, and (3) independently³¹⁷ validate its internal

³¹⁶ Specifically, the proposal would require a banking organization to exclude any insignificant amount of model-ineligible positions held by the model-eligible trading desk from the aggregate trading portfolio backtesting and the relevant desk-level backtesting and profit and loss attribution metric, unless the banking organization receives approval from its primary Federal supervisor to include such positions.

³¹⁷ Either the validation process itself would have to be independent, or the validation process would have to be subjected to independent review of its adequacy and effectiveness. The independence of the banking organization’s validation process would be characterized by separateness from and impartiality to the development, implementation, and operation of the banking organization’s internal models, or otherwise by independent review of its adequacy and effectiveness, though the personnel conducting the validation would not necessarily be required to be external to the banking organization. As a banking organization’s financial reporting models provide an appropriate basis for determining risk-based capital requirements because such models are subject to the requirements of the Sarbanes-Oxley Act of 2002, including external audit, banking organizations that

models both initially and on an ongoing basis, and revalidate them when there is a material change to a model, a significant structural change in the market, or changes in the composition of the banking organization’s market risk covered positions that might result in the internal models no longer adequately capturing the market risk of the market risk covered positions held by the model-eligible trading desk.

The proposal also would require a banking organization to establish a validation process that, at a minimum, includes an evaluation of the internal models’ (1) conceptual soundness³¹⁸ and (2) adequacy in appropriately capturing and reflecting all material risks, including ensuring that the assumptions are appropriate and do not underestimate risks. Additionally, the proposal would require a banking organization to perform ongoing monitoring to review and verify processes, including by comparing the outputs of the internal models with relevant internal and external data sources or estimation techniques. The results of this comparison provide a valuable diagnostic tool for identifying potential weaknesses in a banking organization’s models. As part of this comparison, a banking organization would be expected to investigate the source of differences between the model estimates and the relevant internal or external data or estimation techniques and whether the extent of the differences is appropriate.

In addition, the proposal would expand on the outcomes analysis requirements of the current capital rule by requiring validation to include not only any outcomes analysis that includes backtesting at the aggregated level of all model-eligible trading desks, but also backtesting and profit and loss attribution testing at the trading desk level for each model-eligible trading desk. The agencies recognize that financial markets and modeling technologies undergo continual development. Accordingly, a banking organization needs to continually ensure that its models are appropriate. The ongoing review, risk management, and validation requirements in the proposal are intended to help ensure that the internal models used accurately reflect the risks of market risk covered positions in evolving markets.

rely on financial reporting models for purposes of calculating risk-based capital requirements would satisfy the proposed prudent valuation requirement.

³¹⁸ The process should include evaluation of empirical evidence supporting the methodologies used and evidence of a model’s strengths and weaknesses.

³¹⁵ As described in section V.A.10.e.ii. of this SUPPLEMENTARY INFORMATION, an equity position in an investment fund could be a model-eligible position to the extent a banking organization is able to identify the underlying positions held by an investment fund on a quarterly basis.

iii. Documentation

In addition to the general documentation requirements applicable to all banking organizations described in section V.A.6.c.iv. of this

SUPPLEMENTARY INFORMATION, the proposal would require a banking organization that uses the models-based measure for market risk to document policies and procedures regarding (1) the determination of which risk factors are modellable and which are not modellable (risk factor quantitative and qualitative tests), including a description of how the banking organization maps real price observations to risk factors; (2) the alignment of the profits and losses reported by financial reporting models and the internal risk management models for purposes of the PLA test;³¹⁹ and (3) the assignment of risk factors to liquidity horizons, and any empirical correlations recognized with respect to risk factor classes.

As with the other enhanced operational requirements applicable to a banking organization that uses the models-based measure for market risk, these requirements are designed to help ensure the use of models-based non-default capital requirement only applies to those trading desks for which the banking organization is able to demonstrate that the internal models appropriately capture the market risk of the market risk covered positions held by the trading desk.

iv. Model Eligibility

For a banking organization to use the models-based measure for market risk, the proposal would require the banking organization to receive the prior approval from its primary Federal supervisor for at least one trading desk to apply the models-based non-default capital requirement. Accordingly, the proposal would establish a framework for such approval.

I. Initial Approval

Under the proposal, the approval for a banking organization to use internal models would be granted at the individual trading desk level.³²⁰ For the primary Federal supervisor to approve an internal model, the proposal would

require a banking organization to demonstrate that (1) the internal model properly measures all the material risks of the market risk covered positions to which it would be applied; (2) the internal model has been properly validated in accordance with the validation requirements; (3) the level of sophistication of the internal model or methodology is commensurate with the complexity and amount of the market risk covered positions to which it would be applied; and (4) the internal model or methodology meets all applicable requirements.

To receive approval as a model-eligible trading desk, the proposal would require a trading desk to satisfy one of the following criteria.³²¹ The banking organization could provide to the primary Federal supervisor at least 250 business days of backtesting and PLA test results for the trading desk. Alternatively, the banking organization could either (1) provide at least 125 business days of backtesting and PLA test results for the trading desk and demonstrate to the satisfaction of the primary Federal supervisor that the internal models would be able to satisfy the backtesting and PLA requirements on an ongoing basis; (2) demonstrate that the trading desk consists of market risk covered positions similar to those of another trading desk that has received approval from the primary Federal supervisor and such other trading desk has provided at least 250 business days of backtesting and PLA results, or (3) subject the trading desk to the PLA add-on until the desk provides at least 250 business days of backtesting and PLA test results that pass the trading-desk level backtesting requirements and produce a PLA metric in the green zone, as further described in sections V.A.8.e. and V.A.8.f. of this **SUPPLEMENTARY INFORMATION**, respectively.³²²

³²¹ As discussed in section V.A.8.e. of this **SUPPLEMENTARY INFORMATION**, to receive approval as a model-eligible desk during the three-year PLA test transition period, the proposal would require the banking organization to provide backtesting results for the trading desk and demonstrate to the satisfaction of the primary Federal supervisor that the internal models would be able to satisfy the backtesting requirements on an on-going basis. During the three-year transition period, a banking organization would not be required to submit PLA test results to its primary Federal supervisor in order to receive approval to use an internal model by the trading desk. The proposal would nevertheless require a banking organization to submit quarterly PLA test results to its primary Federal supervisor for monitoring purposes without automatic consequences for PLA test results.

³²² Under the proposal, there would be no automatic consequences for the PLA test results during the three-year transition period. Accordingly, during the transition period, a banking organization would not be able to seek model approval for trading desks with less than six

The proposed criteria would hold trading desks to robust modeling requirements, while providing a banking organization sufficient flexibility to satisfy the standard over time and as the banking organization adapts its business structure. The agencies recognize that when initially requesting approval and in subsequent requests (for example, after a reorganization or upon entering into a new business), a banking organization may not always be able to provide a full year of backtesting and PLA test results for each trading desk, even if the internal models used by the desk provide an adequate basis for determining risk-based capital requirements. The proposed criteria would allow a banking organization to seek model approval for trading desks with at least a six-month track record demonstrating (using the PLA and backtesting results) the accuracy and conservatism of the internal models used by the desk as well as for trading desks that consist of similar market risk covered positions to another trading desk, for which the banking organization has provided at least 250 business days of trading desk level PLA test and backtesting results and has received approval from its primary Federal supervisor. The internal models used by trading desks that meet all the requirements to the satisfaction of the primary Federal supervisor except the PLA test and backtesting requirements would be subject to a PLA add-on until the desk produces one year of satisfactory PLA test and backtesting results in the green zone.³²³ Thus, the trading desk would remain subject to an additional capital requirement until it provides sufficient evidence demonstrating the appropriateness of the internal models, at which time application of the PLA add-on would automatically cease.

II. Ongoing Eligibility and Changes to Trading Desk Structure or Internal Models and Stressed Expected Shortfall Methodologies

The current capital rule requires a banking organization to promptly notify its primary Federal supervisor when (1) extending the use of a model that the primary Federal supervisor has approved to an additional business line

months of backtesting results and that do not consist of market risk covered positions similar to those of another trading desk that has received approval as model-eligible.

³²³ Based on the PLA test results, a banking organization would be required to allocate each model-eligible trading desk to a PLA test zone (green, amber, or red) as set out in Table 1 to § _____.213 of the proposed rule.

³¹⁹ See section V.A.8.e. of this **SUPPLEMENTARY INFORMATION** for a more detailed description of the proposed PLA test.

³²⁰ The proposal would require a banking organization to receive approval from the primary Federal supervisor for both the expected shortfall internal model and the stressed expected shortfall methodology used by the trading desk. As the initial approval process for each would be the same, for simplicity, the term "internal models" used throughout this section is intended to refer to both.

or product type, (2) making any change to an internal model that would result in a material change in the banking organization's total risk-weighted asset amount for an exposure type, or (3) making any material change to its modelling assumptions.

The proposal would expand on these requirements to require a banking organization to receive prior approval from its primary Federal supervisor before implementing any change to its trading desk structure, internal models or methodologies (including any material change to its modelling assumptions) that would (1) in the case of trading desk structure, materially impact the market risk capital requirements for a portfolio of market risk covered positions; or (2) in the case of internal models or methodologies, result in a material change in the banking organization's expected shortfall-based measure for a trading desk, the internally modelled capital calculation, or the stressed expected shortfall calculation under the models-based non-default capital requirement. Additionally, the proposal would require a banking organization to promptly notify its primary Federal supervisor of any change, including non-material changes, to its internal models, modelling assumptions, or trading desk structure.³²⁴ Whether a banking organization would be required to receive prior approval or promptly notify the primary Federal supervisor before extending the use of an approved model to an additional business line or product type would depend on the nature of and impact of such a change.

The proposal also would require a model-eligible trading desk to perform and successfully pass quarterly backtesting and PLA testing requirements on an ongoing basis in order to maintain its approval status.³²⁵ As banking organizations' quarterly review of backtesting and PLA test results would take place after a quarter is over, the proposal would permit a banking organization to rely on the models-based non-default capital requirement for model-eligible trading

desks that previously received approval from the primary Federal supervisor during the 30 calendar day period following the end of a calendar quarter while updating its use of internal models based on the results of the quarterly review.

Even if a model-eligible trading desk were to satisfy the above requirements, a banking organization's primary Federal supervisor could determine that the desk no longer complies with any of the proposed applicable requirements for use of the models-based measure for market risk or that the banking organization's internal model for the trading desk or methodology fails to either comply with any of the applicable requirements or to accurately reflect the risks of the desk's market risk covered positions. In such cases, the primary Federal supervisor could (1) rescind the desk's model approval and require the desk to calculate market risk capital requirements under the standardized non-default capital requirement, or (2) subject the desk to a PLA add-on capital requirement until it restores the desk's full approval, in the case of trading desk noncompliance.³²⁶

The agencies recognize that even if a banking organization's internal model for a trading desk satisfies the proposed backtesting, PLA testing, and operational requirements, the model may not appropriately capture the risk of the market risk covered positions held by the desk (for example, if the model develops specific shortcomings in risk identification, risk aggregation and representation, or validation). Thus, as an alternative to requiring a trading desk to use the standardized non-default capital requirement, the proposal would allow the primary Federal supervisor to subject the trading desk to the PLA add-on if the desk were to continue to satisfy all of the proposed backtesting, PLA testing, and operational requirements for use of the models-based non-default capital requirement. In this way, the proposal would help to ensure that the market risk capital requirements for the trading desk appropriately reflect the materiality of the shortcomings of the internal model, as the PLA add-on would apply until such time that the banking organization enhances the accuracy and conservatism of the trading desk's internal model to the satisfaction of its primary Federal supervisor.

Similarly, after approving a banking organization's stressed expected shortfall methodology to capture non-modellable risk factors for use by one or more trading desks, as described in section V.A.8.c. of this **SUPPLEMENTARY INFORMATION**, the primary Federal supervisor may subsequently determine that the methodology no longer complies with the operational requirements for use of the models-based measure for market risk or that the methodology fails to accurately reflect the risks of the market risk covered positions held by the trading desk. In such cases, the proposal would allow the primary Federal supervisor to rescind its approval of the banking organization's methodology and require the affected trading desk(s) to calculate market risk capital requirements for the trading desk under the standardized non-default capital requirement. As the methodologies used to capture the market risk of non-modellable risk factors would not be subject to the proposed PLA testing requirements, which inform the calibration of the PLA add-on as described in section V.A.8.e. of this **SUPPLEMENTARY INFORMATION**, the PLA add-on would not be an alternative if the primary Federal supervisor rescinds its approval of such a methodology.

7. Standardized Non-Default Capital Requirement

Under the proposal, the standardized non-default risk capital requirement would comprise two components: (1) the sensitivities-based capital requirement, which captures non-default market risk based on the estimated losses produced by risk factor sensitivities under regulatorily determined stressed conditions, and (2) the residual risk add-on, which serves to produce a simple, conservative capital requirement for any other risks that are not already fully captured by sensitivities-based measure or the default risk capital requirement, such as gap risk, correlation risk, and behavioral risks such as prepayments.

a. Sensitivities-Based Method

Conceptually, the proposed sensitivities-based method is similar to a simple stress test in which a banking organization estimates the change in value of its market risk covered positions by applying standardized shocks to relevant market risk covered positions. The sensitivities-based method uses risk weights that represent the standardized shocks, with each prescribed risk weight calibrated to a defined liquidity time horizon consistent with the expected shortfall

³²⁴ In such cases, a banking organization should notify the primary Federal supervisor in writing, in a manner acceptable to the supervisor (such as through email, where appropriate).

³²⁵ The desk-level backtesting and PLA testing requirements are described in sections V.A.8.e. and V.A.8.f. of this **SUPPLEMENTARY INFORMATION**, respectively. While the proposal would require a banking organization to submit quarterly PLA test results to its primary Federal supervisor during the three-year transition period, a banking organization's model-eligible trading desk would only be required to successfully pass quarterly backtesting requirements on an on-going basis to maintain its approval status during that three-year transition period.

³²⁶ Under the proposal, there would be no automatic consequences for the PLA test results during the three-year transition period. Thus, the PLA add-on would not be an alternative if the primary Federal supervisor rescinds its approval during the three-year transition period.

measurement framework under stressed conditions. To help ensure consistency in the application of risk-based capital requirements across banking organizations, the proposal would establish the following process to determine the sensitivities-based capital requirement: (1) identify all relevant risk factors associated with a market risk covered position and allocate them to one of seven risk classes; (2) allocate such risk factors to a corresponding bucket within the appropriate risk classes; (3) calculate the sensitivity of a market risk covered position for each of the prescribed risk factors by applying regulatory prescribed risk weights to the net sensitivity of risk factors within each bucket; (4) aggregate the weighted sensitivities across risk factors within a corresponding bucket (bucket-level capital requirement); (5) aggregate the bucket-level risk positions for each risk class (risk class-level capital requirement); and (6) aggregate the risk class-level capital requirements for each risk class under each correlation scenario.

First, under the proposal, a banking organization would identify all relevant risk factors associated with its market risk covered positions and then assign such risk factors to one or more of seven risk classes. The seven prescribed risk classes, which are based on standard industry classifications, are interest rate risk, credit spread risk for non-securitization positions,³²⁷ credit spread risk for correlation trading positions, credit spread risk for securitization positions that are not correlation trading positions, equity risk, commodity risk, and foreign exchange risk. The risk factors are separately defined to measure their individual impact on market risk covered positions' value from small changes in the value of a risk factor (the movement in price (delta) and, where applicable, the movement in volatility (vega)), and the additional change in the positions' value not captured by delta for each relevant risk factor (curvature) in stress.³²⁸ For example, the price of a typical corporate

bond fluctuates primarily due to changes in interest rates and issuer credit spreads. Therefore, a position in a corporate bond would be placed in two separate risk classes, one for interest rate risk and one for credit spread risk for non-securitization positions.³²⁹

Second, the proposal would require a banking organization to allocate all identified risk factors associated with a market risk covered positions to a corresponding bucket within the appropriate risk class. The proposal specifies buckets for each risk class, which represent common risk characteristics of a given risk class, in recognition that positions sharing such risk characteristics are highly correlated and therefore their values tend to change in substantially the same manner. Further, the proposed buckets correspond to common industry practice as large trading banking organizations often use bucketing structures similar to those set forth in the proposal. For example, for positions within the credit spread non-securitization risk class, a banking organization would group the corporate bond position and other positions with similar credit quality and issuers operating in the same sector together in one bucket. Further, the banking organization would apply the proposed risk factors to each position within that bucket based on credit spread curves and tenors of each position.

Third, a banking organization would calculate the sensitivity of a market risk covered position as prescribed under the proposal to each of the proposed risk factors for delta, vega, and curvature sensitivities, as applicable. The proposed sensitivity calculations for delta, vega, and curvature risk factors are intended to estimate how much a market risk covered position's value might change as a result of a specified change in the risk factor, assuming all other relevant risk factors remain constant. For each risk factor, the banking organization would separately sum the resulting delta, vega, and curvature sensitivities for all market risk covered positions within the same bucket to produce a net sensitivity for each risk factor, which is the potential value impact on all of the banking organization's market risk covered positions in the bucket as a result of a uniform change in a risk factor.³³⁰

³²⁹ Under the proposal, a banking organization would have to separately calculate the potential losses arising from the position's sensitivity to changes in interest rates and changes in the issuer's credit spread.

³³⁰ The proposed risk factors are intended to be sufficiently granular such that only long and short

To capture how much the risk factor might change over a defined time horizon in stress conditions and how that would change the value of the market risk covered position, a banking organization would multiply the net delta sensitivity and the net vega sensitivity, respectively, for each risk factor within a bucket by the proposed standardized risk weight for the bucket. The proposed risk weights are intended to capture the amount that a risk factor would be expected to move during the liquidity horizon of the risk factor in stress conditions.³³¹ To capture curvature risk, a banking organization would be required to aggregate the incremental loss above the delta capital requirement from applying larger upward and downward shock scenarios to each risk factor.

Fourth, to account for the potential price impact of interactions between the risk factors, the proposal would prescribe aggregation formulas for calculating the total delta, vega, and curvature capital requirements within buckets and across buckets. Specifically, the risk-weighted sensitivities for delta, vega, and curvature risk, respectively, first would be summed for a risk factor, then aggregated across risk factors with common characteristics within their respective buckets to arrive at bucket-level risk positions. Lastly, these bucket-level risk positions would then be aggregated for each risk class using the prescribed aggregation formulas to produce the respective delta, vega, and curvature risk capital requirements.

The aggregation formulas prescribe offsetting and diversification benefits via correlation parameters. Under the proposal, the correlation parameters specified for each risk factor pair are

exposures without basis risk would be able to fully offset for purposes of calculating the net sensitivity to a risk factor. For example, by defining the risk factors for equity risk at the issuer level, the proposal would allow long and short equity risk exposures to the same issuer to fully offset for purposes of calculating the net equity risk factor sensitivity, but only partially offset (correlations than one) for exposures to different issuers with the same level of market capitalization, the same type of economy, and the same market sector (such as those within the same equity risk bucket).

³³¹ The prescribed risk weights represent the estimated change in the value of the market risk covered position as a result of a standardized shock to the risk factor based on characteristics of the position and historic price movements. Additionally, the proposed risk weights are intended to help ensure comparability with the proposed models-based non-default capital requirement described in section V.A.8. of this **SUPPLEMENTARY INFORMATION**, which generally would require banking organizations' internal models to follow a methodology similar to the one used to calibrate the risk weights when determining risk-based requirements for market risk covered positions under the standardized non-default capital requirement.

³²⁷ Under the proposal, a non-securitization position would be defined as a market risk covered position that is not a securitization position or a correlation trading position and that has a value that reacts primarily to changes in interest rates or credit spreads.

³²⁸ Vega and curvature risk estimates are required for instruments with optionality or embedded prepayment option risk. For example, for an equity option, the proposed delta risk factor (equity spot price) would capture the impact on the option's value from changes in the equity spot price, the proposed vega risk factor (implied volatility) would capture the impact from changes in the implied volatility, and the proposed curvature risk factors (equity spot prices for the issuer) would capture other higher-order factors from nonlinear risks.

intended to limit the risk-mitigating benefit of hedges and diversification, given that the hedge relationship between an underlying position and its hedge, as well as the relationship between different types of risk factors, could decrease or become less effective in a time of stress. Specifically, taking into account prescribed correlation parameters, a banking organization would need to calculate the aggregate requirements first within a bucket and then across buckets within one risk class to produce the risk-class-level capital requirement for delta, vega, and curvature risk. The resulting capital requirements for delta, vega, and curvature risk then would be summed across risk classes, respectively, with no recognition of any diversification benefits, because in stress diversification across different risk classes may become less effective.

To capture the potential for risk factor correlations to increase or decrease in periods of stress, the calculation of bucket-level capital requirements and risk class-level capital requirements for each risk class would be calculated using three different correlation scenarios—assuming high, medium and low correlations between risk factor shocks. The banking organization would use this process to calculate the overall delta, vega, and curvature capital requirements for all risk classes and determine the overall capital requirement for each scenario. The prescribed correlation parameters in the intra-bucket and inter-bucket aggregation formulas would be those used in the medium correlation scenario. For the high and low correlation scenarios, a banking organization generally would increase and decrease the medium correlation parameters by 25 percent, respectively, to appropriately reflect the potential changes in the historical correlations during a crisis.³³²

Finally, to determine the overall capital requirements for each of the three correlation scenarios, the banking organization would sum the separately calculated delta, vega, and curvature capital requirements for all risk classes without recognition of any diversification benefits, given that delta, vega, and curvature sensitivities are intended to separately capture different

risks. The sensitivities-based capital requirement would be the largest capital requirement resulting from the three correlation scenarios.

Question 119: The agencies seek comment on the sensitivities-based method for market risk. To what extent does the sensitivities-based method appropriately capture the risks of positions subject to the market risk capital requirement? What additional features, adjustments (such as to the treatment of diversification of risks), or alternative methodology could the sensitivities-based method include to reflect these risks more appropriately and why? Commenters are encouraged to provide supporting data.

Question 120: The agencies seek comment on approaches to allow further recognition of diversification between risk classes that are not eligible for the models-based non-default capital requirement (such as securitizations) and risk classes that are eligible for the models-based non-default capital requirement within the sensitivities-based method of the standardized non-default capital requirement. What other areas in the sensitivities-based method should the agencies consider where it would be prudent to enhance the recognition of diversification, and why? Commenters should provide evidence to demonstrate the additional recognition of diversification is commensurate with the risk of the combined positions both in normal times and under stress.

i. Risk Factors

The proposal would require a banking organization to map all relevant risk factors associated with a market risk covered position to a risk class and then allocate such risk factors to a corresponding bucket within the appropriate risk classes in order to calculate the capital requirements for delta, vega, and curvature. The proposed risk factors differ for each risk class to reflect the specific market risk variables relevant for each risk class (for example, no tenor is specified for the delta risk factor for equity risk as equities do not have a stated maturity, whereas the proposed tenors for credit spread delta risk reflect the common maturities of positions within those risk classes). The granular level at which the proposed risk factors would be defined is intended to promote consistency and comparability in regulatory capital requirements across banking organizations and to help ensure the appropriate capitalization of market risk covered positions.

For risk classes that include specific tenors or maturities as risk factors (for

example, delta risk factors for interest rate risk), the proposal would require a banking organization to assign the risk factors to the proposed tenors through linear interpolation or a method that is consistent with the pricing functions used by the internal risk management models. The banking organization's internal risk management models, which are used by risk control units and reviewed by auditors and regulators, would provide an appropriate basis for determining regulatory capital requirements, without imposing the operational burden of the time-consuming methods used by the financial reporting models. Additionally, relying on banking organizations' internal risk management models, rather than the financial reporting models, to identify the relevant risk factors would help ensure that a control function that is independent of business-line management would determine the regulatory capital requirement for market risk.

I. Interest Rate Risk

Under the proposal, the delta risk factors for interest rate risk would be separately defined for each currency along two dimensions: tenor and interest rate curve. To value market risk covered positions with interest rate risk, the proposal would require a banking organization to construct and use interest rate curves for the each currency in which interest rate-sensitive market risk covered positions are denominated. By defining each interest rate curve as a distinct risk factor, the proposed delta risk factors for interest rate risk would require banking organizations to reflect the basis risk between different interest rate curves (for example, interest rate curves from the overnight index swap curve (OIS) or an alternative reference rate curve).

As interest rate curves incorporate nominal inflation, an additional delta risk factor would be required for instruments with cash flows that are functionally dependent on a measure of inflation (such as TIPS) to appropriately account for inflation risk. Furthermore, the proposal would require an additional delta risk factor for instruments with cash flows in different currencies to appropriately reflect the cross-currency basis risk of each currency over USD or EUR.³³³ Under

³³² As the degree to which a pair of variables are linearly related (the correlation) can only range from negative one to one, the proposal would cap the correlation parameters under the high scenario at no more than one (100 percent) and floor those under the low scenario at no less than negative one. For highly correlated positions, the low correlation scenario also would not always reduce the correlation parameter by 25 percent.

³³³ Cross-currency basis is a basis added to a yield curve in order to evaluate a swap for which the two legs are paid in two different currencies. Market participants use cross-currency basis to price cross currency interest rate swaps paying a fixed or a floating leg in one currency, receiving a fixed or a floating leg in a second currency, and including an

the proposal, a banking organization would not recognize the term structure for inflation risk and cross-currency basis risk for each currency. A banking organization would be required to consider the inflation risk factor and the cross-currency basis risk factor, if applicable, in addition to the sensitivity for the other delta risk factors for the interest rate risk (currency, tenor and interest rate curve) of the market risk covered position. Accordingly, a banking organization would be required to allocate the sensitivities for inflation risk and cross-currency basis risk to the interest rate bucket for each currency.

The vega risk factors for interest rate risk would be the implied volatilities of options referencing the interest rate of the underlying instrument. The implied volatilities of inflation rate risk-sensitive options and cross-currency basis risk-sensitive options would be defined along the maturity of the option, whereas the implied volatilities of interest-rate risk-sensitive options would be defined along two dimensions: the maturity of the option and the residual maturity of the underlying instrument at the expiration date of the option. For example, a banking organization would calculate the vega sensitivity of a European interest rate swaption that expires in 12 months referring to a one-year swap based on the maturity of the option (12 months) as well as the residual maturity of the underlying instrument (the swap's maturity of 12 months).

The proposal would define the curvature risk factors for interest rate risk along one dimension: the interest rate curve of each currency (no term structure would be considered).

II. Credit Spread Risk

The proposal would separately define the credit spread risk factors for non-securitization positions,³³⁴ securitization positions that are not correlation trading positions (securitization positions non-CTP), and correlation trading positions. The proposal would define the delta risk factors for credit spread risk for non-securitization positions along two dimensions: the credit spread curve of a relevant issuer and the tenor of the position. The delta risk factors for credit spread risk for securitization positions

non-CTP would be defined also along two dimensions: the credit spread curve of the tranche and the tenor of the tranche. Lastly, the delta risk factors for credit spread risk for correlation trading positions would be defined along two dimensions: the credit spread curve of the underlying name and the tenor of the underlying name. Under the proposal, the vega risk factors for credit spread risk are the implied volatilities of options referencing the credit spreads,³³⁵ defined along one dimension: the option's maturity.

The proposal would define the curvature risk factors for credit spread risk for non-securitization positions along one dimension: the credit spread curve of the issuer. The curvature risk factors for credit spread risk for securitization positions non-CTP would be defined along the relevant bond and CDS credit spread curve of the tranche, and for correlation trading positions along the bond and CDS credit spread curve of each underlying name. The agencies recognize that requiring a banking organization to estimate the bond-CDS basis for each issuer would impose a significant operational burden with limited benefit in terms of risk capture. To simplify the sensitivities-based method calculation for curvature risk in these cases, the proposal would require banking organizations to ignore any bond-CDS basis that may exist between the bond and CDS spreads and to calculate the credit spread risk sensitivity as a single spread curve across the relevant tenor points.

III. Equity Risk

Similar to interest rate risk, the delta risk factors for equity risk would be separately defined for each issuer as the spot prices of each equity (for example, for cash equity positions) and an equity repo rate (for example, for term repo-style transactions), as appropriate. Under the proposal, the vega risk factors for equity risk would be the implied volatilities of options referencing the equity spot price, defined along the maturity of the option. The curvature risk factors for equity risk would be the equity spot price. There are no curvature risk factors for equity repo rates.

IV. Commodity Risk

Similar to interest rate and equity risk, the delta risk factors for commodity risk would be separately defined for each commodity type³³⁶ along two dimensions: the contracted delivery location of the commodity and the remaining maturity of the contract. A banking organization could only treat separate contracts as having the same delivery location if both contracts allow delivery in all of the same locations.³³⁷ Additionally, the proposal would follow the established pricing convention for commodities and require a banking organization to use the remaining maturity of the contract to measure the delta sensitivity for instruments with commodity risk. As the price impact of risk factor changes varies significantly between different types of commodities, the proposal would define the delta risk factors for each commodity type to limit offsetting across commodity types, as such offsetting could drastically understate the potential losses arising from those positions.

To measure the price sensitivity of a commodity market risk covered position, the proposal would require a banking organization to use either the spot price or the forward price, depending on which risk factor is used by the internal risk management models to price commodity transactions. For example, if the internal risk management model typically values electricity contracts based on forward prices (rather than spot prices), the proposal would require the banking organization to compute the delta capital requirement using the current prices for futures and forward contracts. Similar to equity risk, the proposal would define the commodity vega risk factors based on the implied volatilities of commodity-sensitive options as defined along the maturity of the option and the curvature risk factors based on the constructed curve per commodity spot price.

³³⁶ Under the proposal, any two commodities would be considered distinct if the underlying commodity to be delivered would cause the market to treat the two contracts as distinct (for example, West Texas Intermediate oil and Brent oil).

³³⁷ For example, a contract that can be delivered in four ports may have less sensitivity to each location defined risk factor than a contract that can only be delivered in three of those ports. If a banking organization has entered into a contract to deliver 1000 barrels of oil in port A, B, C or D, and a hedge contract to receive 1000 barrels of oil on the same date in port A, B or C, if on delivery day ports A, B and C are closed, the banking organization is exposed to commodity risk in that it must deliver 1000 barrels of oil to port D without receiving 1000 barrels. As a result, the two contracts would have different sensitivity to location defined risk factors.

exchange of the notional amount in the two currencies at the start date and at the end date of the swap.

³³⁴ Under the proposal, a non-securitization position would be defined as a market risk covered position that is not a securitization position or a correlation trading position and that has a value that reacts primarily to changes in interest rates or credit spreads.

³³⁵ When calculating the sensitivity for securitization positions non-CTP, a banking organization would calculate the sensitivities for credit spread risk based on the embedded subordination of the position, such as the spread of the tranche. For correlation trading positions, the credit spread risk sensitivity would be based on the underlying names in the securitization position, or nth-to-default position.

V. Foreign Exchange Risk

The proposal would define the delta risk factors for foreign exchange risk as the exchange rate between the currency in which the market risk covered position is denominated and the reporting currency of the banking organization. For market risk covered positions that reference two currencies other than the reporting currency, the banking organization generally would be required to calculate the delta risk factors for foreign exchange risk using the exchange rates between each of the non-reporting currencies and the reporting currency. For example, for a foreign exchange forward referencing EUR/JPY, the relevant risk factors for a USD-reporting banking organization would be the exchange rates for USD/EUR and USD/JPY.

To reduce operational burden, the proposal would allow a banking organization to calculate delta risk factors for foreign exchange risk relative to a base currency instead of the reporting currency, if approved by the primary Federal supervisor.³³⁸ In this case, after designating a single currency as the base currency, a banking organization would calculate the foreign exchange risk for all currencies relative to the base currency, and then convert the foreign exchange risk into the reporting currency using the spot exchange rate (reporting currency/base currency). For example, if a USD-reporting banking organization receives approval to calculate foreign exchange risk using JPY as the base currency, for a foreign exchange forward referencing EUR/JPY, the banking organization would calculate separate deltas for the EUR/JPY exchange rate risk and USD/JPY foreign exchange translation risk and then translate the resulting capital

requirement to USD at the USD/JPY spot exchange rate.

The proposal would define the vega risk factors for foreign exchange risk as the implied volatility of options that reference exchange rates between currency pairs along one dimension: the maturity of the option. For curvature, the foreign exchange risk factors would be all exchange rates between the currency in which a market risk covered position is denominated and the reporting currency (or the base currency, if approved by the primary Federal supervisor).

ii. Risk Factor Sensitivities

A fundamental element of the sensitivities-based method is the risk factor sensitivity calculation, which estimates the change in the value of a market risk covered position as a result of a regulatorily prescribed change in the value of a risk factor, assuming all other risk factors are held constant. To help ensure consistency and conservatism across banking organizations, the proposal would set requirements on the valuation models, currency, inputs, and sensitivity calculation, as applicable, that a banking organization could use to measure the risk factor sensitivity of a market risk covered position.

The proposal would require a banking organization to calculate risk factor sensitivities using either the valuation methods used in its financial reporting models or internal risk management models.³³⁹ The agencies recognize that a banking organization can calculate risk sensitivities for delta and vega or estimate curvature using valuation methods and systems from equivalent internal risk management models. Accordingly, the proposal would also permit a banking organization to use the valuation methods used in its internal risk management models to calculate delta and vega sensitivities and curvature scenarios.

For consistency and comparability in risk-based capital requirements across banking organizations, the proposal would require each banking

organization to calculate all risk factor sensitivities in the reporting currency of the banking organization, except for the foreign exchange risk class where, with prior approval of the primary Federal supervisor, the banking organization may calculate the sensitivities relative to a base currency instead of the reporting currency. To appropriately capture a banking organization's exposure to market risk, the proposal would require banking organizations to use fair values that exclude CVA in the calculation of risk factor sensitivities.

Question 121: The agencies seek comment on the advantages and disadvantages of allowing a banking organization to use the risk factor sensitivities from the previous day in limited circumstances when a banking organization is unable to calculate such sensitivity for the day, and why?

I. Delta

Under the proposal, a banking organization would calculate the delta capital requirement using the steps previously outlined in section V.A.7.a. of this **SUPPLEMENTARY INFORMATION** for its market risk covered positions except those whose value exclusively depends on risk factors not captured by any of the proposed risk classes (exotic exposures).³⁴⁰ The proposal would require a banking organization to separately calculate the market risk capital requirements for such positions under the residual risk add-on as described in section V.A.7.b. of this **SUPPLEMENTARY INFORMATION**.

For purposes of calculating the delta capital requirement, the proposal would require a banking organization to calculate the delta sensitivity of a position using the sensitivity definitions provided in the proposal for each risk factor. Based on the proposed sensitivity definitions, the delta sensitivity would reflect the change in the value of a market risk covered position resulting from a small specified shift of one basis point or one percent change to a risk factor, assuming all other relevant risk factors are held at the current level, divided by the same specified shift to the risk factor.

For the equity spot price, commodity, and foreign exchange risk factors, the delta sensitivity would equal the change in value of a market risk covered position due to a one percentage point increase in the risk factor divided by one percentage point. For the interest rate, credit spread, and equity repo rate

³³⁸ A banking organization would have to demonstrate to its primary Federal supervisor that calculating foreign exchange risk relative to its base currency provides an appropriate risk representation of the banking organization's market risk covered positions and that the foreign exchange risk between the base currency and the reporting currency is addressed. In general, the base currency would be the functional currency in which the banking organization generates or expends cash. For example, a multinational banking organization headquartered in the United States that primarily transacts in and uses EUR to value its assets and liabilities for internal accounting and risk management purposes could use EUR as its base currency. As its consolidated financial statement must be reported in USD, this multinational banking organization would need to translate the value of those assets and liabilities from the base currency (EUR) to the reporting currency (USD). Because exchange rates fluctuate continuously, this conversion could increase or decrease the value of those assets and liabilities and thus generate foreign exchange gains (or losses) from non-operating activity.

³³⁹ The proposal would require banking organizations to have a prudent valuation process, including the independent validations of the valuation models used in the standardized non-default capital requirement. The financial reporting models provide an appropriate basis for determining risk-based capital requirements because such models are subject to requirements intended to enhance the accuracy of the financial data produced by the models, such as the requirements from the Sarbanes-Oxley Act of 2002, Public Law 107-204. Accordingly, banking organizations that rely on financial reporting models for purposes of calculating risk factor sensitivities would satisfy the proposed prudent valuation requirement.

³⁴⁰ Examples of exotic exposures not captured by any of the proposed risk classes include but are not limited to longevity, weather, and natural disasters derivatives.

risk factors, the delta sensitivity would equal the change in value of a market risk covered position due to a one basis point increase in the risk factor divided by one basis point. In the case of credit spread risk for securitizations non-CTP, a banking organization would calculate the delta sensitivity for the positions with respect to the credit spread of the tranche rather than the credit spread of the underlying positions. For credit spread risk for correlation trading positions, the delta sensitivity for credit spread risk would be computed using a one basis point shift in the credit spreads of the individual underlying names of the securitization position or nth-to-default position.

When calculating the delta sensitivity for positions with optionality, a banking organization would apply either the sticky strike rule,³⁴¹ the sticky delta rule,³⁴² or, with the prior approval from its primary Federal supervisor, another assumption that is consistent with the banking organization's internal models. Each of these methods, or various combinations of such methods, is intended to measure appropriately the sensitivity of a risk factor within any of the risk classes.

II. Vega

For market risk covered positions with optionality, the vega sensitivity to a risk factor would equal the vega of an option, which represents approximately the change in the option's value as the result of a one percentage point increase in the value of the option's volatility, multiplied by the volatility of the option. To measure the vega sensitivity of a market risk covered position, the proposal would require a banking organization to use either the at-the-money volatility of an option or the implied volatility of an option, depending on which is used by the financial reporting models or the internal risk management models to determine the intrinsic value of volatility in the price of the option.

The vega capital requirement would only apply to options or instruments with embedded optionality, including instruments with material prepayment risk. For purposes of calculating the vega capital requirement, a banking organization would follow the steps

previously outlined for purposes of calculating the delta capital requirements and use the same buckets for each risk class as those specified for the delta capital calculation and use the corresponding vega risk weights.

Callable and puttable bonds that are priced based on the yield to maturity of the instrument would not be subject to the vega capital requirement. The agencies recognize that in practice a banking organization may not be able to calculate vega risk for callable and puttable bonds, as implied volatility for credit spread typically is not used as an input for the pricing of such instruments, and thus implied volatility is not captured by the internal models. Therefore, the proposal would allow banking organizations to exclude from the vega capital requirement callable and puttable bonds that are priced based on the yield to maturity of the instrument, as the delta capital requirement in these cases would be sufficiently conservative to capture the potential vega risk arising from such exposures.

The proposal would require a banking organization to assign the sensitivity to implied volatility based on the option maturity. As the proposal defines the vega risk factors for interest rate risk along two dimensions: the maturity (or expiry) of the option and the maturity of the option's underlying instrument—a banking organization would be required to group options within the interest rate risk class along both of these two dimensions. To help ensure appropriately conservative capital requirements, the proposal would require a banking organization to (1) assign instruments with optionality that either do not have a stated maturity (for example, cancelable swaps) or that have an undefined maturity to the longest prescribed maturity tenor for vega, and (2) subject such instruments to the residual risk add-on, as described in section V.A.7.b. of this **SUPPLEMENTARY INFORMATION**. Similarly, for options that do not have a stated strike price or that have multiple strike prices, or that are barrier options, the proposal would require a banking organization to apply the maturity and strike price used in either its financial reporting models or internal risk management models to value the position and apply a residual risk add-on.³⁴³ The agencies are proposing these constraints as a simple and conservative approach for market

risk covered positions that are difficult to value in practice.

Question 122: The agencies solicit comment on the appropriateness of relying on a banking organization's internal pricing methods for determining the maturity and strike price of positions without a stated strike price or with multiple strike prices. What, if any, alternative approaches (such as using the average maturity of options with multiple exercise dates) would better serve to promote consistency and comparability in risk-based capital requirements across banking organizations? What are the benefits and drawbacks of such alternatives compared to the proposed reliance on the internal pricing models of banking organizations?

III. Curvature

The proposed curvature capital requirements are intended to capture the price risks inherent in instruments with optionality that are not already captured by delta (for example, the change in the value of an option that exceeds what can be explained by the delta of the option alone). Under the proposal, only options or positions that contain embedded optionality, including positions with material prepayment risk, would be subject to the curvature capital requirement because they present material price risks not captured by delta. While linear instruments may also exhibit a certain degree of non-linearity, it is not always material for such instruments. Therefore, to allow for a more accurate representation of risk, the proposal would permit a banking organization, at its discretion, to make an election for a trading desk³⁴⁴ to include instruments without optionality in the curvature capital requirement, provided that the trading desk consistently includes such positions through time.

The proposal would require a banking organization to use the same buckets applied in the delta capital calculation to calculate curvature capital requirements. To calculate the risk-weighted sensitivity for each curvature risk factor within a bucket, the proposal would require a banking organization to fully revalue all of its market risk

³⁴¹ Under the sticky strike rule, a banking organization would assume that the implied volatility for an option remains unaffected by changes in the underlying asset price for any given strike price.

³⁴² Under the sticky delta rule, the banking organization would assume that the implied volatility for a particular maturity depends only on the ratio of the price of the underlying asset to the strike price (sometimes called the moneyness of the option).

³⁴³ Tranches of correlation trading positions that do not have an implied volatility would not be subject to the vega risk capital requirement. Such instruments would not be exempt from delta and curvature capital requirements.

³⁴⁴ For a banking organization that has established a trading desk structure with a single trading desk that uses the standardized measure to calculate market risk capital requirements, the proposal would allow such banking organization to make such an election for the entire organization rather than on a trading desk by trading desk basis. If such an election is made at the enterprise-wide level, the proposal would require the banking organization to consistently include positions without optionality within the curvature calculation.

covered positions with optionality as well as any market risk covered position that a banking organization has elected to include in the calculation of its curvature capital requirement, as applicable, after applying an upward shock and a downward shock to the current value of the market risk covered

position. To avoid double counting, the banking organization would calculate the incremental loss in excess of that already captured by the delta capital requirement for all market risk covered positions subject to the curvature capital requirements. The larger incremental loss resulting from the upward and the

downward shock would be the curvature risk-weighted sensitivity.³⁴⁵ The below graphic provides a conceptual illustration of the calculation of the curvature risk-weighted sensitivity based on the upward and the downward shock scenarios.

Graphic 1: Calculation of curvature risk-weighted sensitivity in upward and downward shock scenarios

In calculating the curvature risk-weighted sensitivity for the interest rate, credit spread, and commodity risk classes, a banking organization would apply the upward and downward shocks assuming a relative shift of all tenors for each curve based on the highest prescribed delta risk weight for the applicable bucket.^{346 347} The proposal would require a banking organization to apply the highest risk weight for each bucket to all tenor points along the curve to help ensure the curvature capital requirements reflect incremental losses from curvature and not those due to changes in the shape or slope of the curve. The proposal would require a banking organization to perform this calculation at the bucket level (not the risk class level). To the extent that applying the downward shocks results in negative credit spreads, the proposal would allow a banking organization to floor credit spreads at zero, which is the

natural floor for credit spreads given that negative CDS spreads are not meaningful.

For the foreign exchange and equity risk classes, the upward and downward shocks represent a relative shift of the foreign exchange spot prices or equity spot prices, respectively, equal to the delta risk weight prescribed for the risk factor. The agencies recognize that the conversion of other currencies into either the reporting currency or base currency, if applicable, would capture exchange rate fluctuations, and thus overstate the sensitivity for foreign exchange risk. Thus, for options that do not reference the reporting or base currency of the banking organization as an underlying exposure, the proposal would allow the banking organization to divide the net curvature risk positions by a scalar of 1.5, provided that the banking organization consistently applies the scalar to all market risk

covered positions with foreign exchange risk through time.

To aggregate the bucket-level capital requirements and risk class-level capital requirements for curvature, a banking organization would bifurcate positions into those with positive curvature and those with negative curvature. For the purposes of calculating risk-based capital requirements for curvature, positions with negative curvature represent a capital benefit—as they reduce rather than increase risk, and thus lower risk-based capital requirements. For example, the downward shock as depicted in the above graphic produces less of an estimated price reduction under the curvature scenario than under the linear delta shock (negative curvature). To limit the effect of negative curvature capital requirements on the overall capital required under the sensitivities-based method, both the intra-bucket and inter-bucket aggregation formulas would

³⁴⁵ To promote consistency and comparability in regulatory capital requirements across banking organizations, the proposal would require that in cases where the incremental loss resulting from the upward and the downward shock is the same, the banking organization must select the scenario in which the sum of the capital requirements of the curvature risk factors is greater.

³⁴⁶ As described in section V.A.7.a.iii.I. of this SUPPLEMENTARY INFORMATION, the proposed bucket

structure used to group the delta risk factors for interest rate risk (and the corresponding risk weight for each bucket) is solely based on the tenor of market risk covered position. For purposes of calculating the curvature sensitivity for interest rate risk, the proposal would require a banking organization to disregard the bucketing structure and apply the highest prescribed delta risk weight (the 1.7 percent risk weight applicable to the 0.25-year tenor, or 1.7 percent divided by $\sqrt{2}$ if the interest rate curve references a currency that is

eligible for a reduced risk weight) to all tenors simultaneously for each yield curve.

³⁴⁷ As the curvature capital requirements would capture an option's change in the value above that captured by delta, a banking organization would calculate the curvature sensitivity to credit spread risk for securitization positions non-CTP and correlation trading positions using the spread of the tranche and the spread of the underlying names, respectively.

floor the curvature capital requirement at zero. Additionally, both formulas include a variable³⁴⁸ to allow a banking organization to recognize the risk-reducing benefits of market risk covered positions with negative curvature in offsetting those with positive curvature, while limiting the reduction in the overall capital resulting from the aggregation of market risk covered positions with negative curvature.

Question 123: For consistency with flooring credit spreads at zero when the downward shock for curvature results in negative credit spreads, the agencies seek comment on whether the agencies should allow banking organizations to cap the level of shock (for example, $RW_K^{Curvature}$) at the difference between the current level of the credit spread risk curvature risk factor and zero when calculating the curvature risk. What would be advantages and disadvantages of this cap and why?

Question 124: The agencies solicit comment on the appropriateness of calculating the curvature risk-weighted sensitivity for the commodity risk class using the upward and downward shocks assuming a parallel shift of all tenors for each curve. Would a relative shift be more appropriate for calculating risk-weighted sensitivity for the commodity risk class and why?

iii. Buckets and Corresponding Risk Weights

After determining the net sensitivity for each of the proposed risk factors within each risk class, a banking organization would calculate the risk-weighted sensitivity by multiplying the net sensitivity for each risk factor by the risk weight prescribed for the applicable bucket.³⁴⁹ The proposed buckets and corresponding risk weights are largely consistent with the framework issued by the Basel Committee. However, to reflect the potential systematic risks that positions may experience in a time of stress and avoid reliance on external ratings in accordance with U.S. law, the agencies are proposing to use alternative criteria to define the bucketing structure for risk factors related to credit spread risk and to clarify the application of the credit spread buckets for certain U.S. products, as described in section

V.A.7.a.iii.II. of this **SUPPLEMENTARY INFORMATION**.³⁵⁰ Additionally, to appropriately reflect a jurisdiction's stage of economic development, the agencies are proposing to use objective market economy criteria to define the bucketing structure for risk factors related to equity risk, as described in section V.A.7.a.iii.III. of this **SUPPLEMENTARY INFORMATION**.

Furthermore, the proposal would include electricity in the same bucket as gaseous combustibles in view of the inherent relationship between the price of electricity and natural gas and to simplify the proposal, as described in section V.A.7.a.iii.IV. of this **SUPPLEMENTARY INFORMATION**.

The proposed buckets and associated risk weights are intended to appropriately capture the specific, idiosyncratic risks of market risk covered positions (for example, negative betas or variations in capital structure). These components of the proposal also are largely consistent with the Basel standards and would promote consistency and comparability in market risk capital requirements among banking organizations domestically and across jurisdictions. The sections that follow describe the proposed buckets and associated risk weights for each risk factor.

I. Interest Rate Risk

Table 1 to § _____.209 of the proposed rule sets forth the ten proposed buckets for the interest rate risk factors of market risk covered positions and the corresponding risk weight applicable to each bucket.³⁵¹ The proposal would require a banking organization to use separate buckets for each currency, for each of ten proposed tenors to capture most commonly traded instruments across market risk covered positions held by a banking organization and align with bucketing structures used by trading firms.

By delineating interest rate risk factors based on currency³⁵² and tenor, the granularity of the proposed buckets is intended to appropriately balance the risk sensitivity of the proposed framework with providing consistency in risk-based requirements across banking organizations by assigning

similar risk weights to similar kinds of positions.

Factors such as the stage of the economic cycle and the role of exchange rates can cause interest rate risk to diverge significantly across different currencies, particularly in stress periods. Accordingly, the proposal would require banking organizations to establish separate interest rate buckets for each currency.

OTC interest rate derivatives for liquid currencies have significant trading activity relative to non-liquid currencies, which means a banking organization faces a shorter liquidity horizon to offload exposure to interest rate risk factors in liquid currencies. Therefore, the proposal would allow a banking organization to divide the proposed risk weight applicable to each interest rate risk factor bucket by the square root of two if the interest rate risk factor relates to a liquid currency listed in § _____.209(b)(1)(iv) of the proposed rule or any other currencies specified by the primary Federal supervisor. This approach would allow a banking organization to apply a lower risk weight for purposes of the delta, vega, and curvature capital requirements, as applicable, for interest rate risk factors for the listed liquid currencies and any other currencies specified by the primary Federal supervisor.

II. Credit Spread Risk

Tables 3, 5, and 7 to § _____.209 of the proposed rule set forth the buckets and corresponding risk weights for the credit spread risk factors of non-securitization positions, correlation trading positions, and securitization positions non-CTP, respectively. Under the proposal, a banking organization would group the credit spread risk factors for non-securitization positions, correlation trading positions, and securitization positions non-CTP into one of twenty, sixteen, or twenty-five proposed buckets, respectively, based on market sector and credit quality.

The credit quality of a market risk covered position in a given sector is inversely related to its credit spread. Accordingly, the buckets for credit spread risk consider the credit quality of a given market risk covered position. More specifically, the proposal would generally use the same approach to delta credit spread buckets and corresponding risk weights provided in the Basel standards for non-securitization positions, correlation trading positions, and securitization positions non-CTP, except that the proposal would define the buckets using alternative criteria to capture the creditworthiness of the obligor. The delta credit spread buckets

³⁴⁸ Specifically, this refers to the psi variable (Ψ) within the intra and inter-bucket aggregation formulas in § _____.206(d)(2) and § _____.206(d)(3) of the proposed rule.

³⁴⁹ Vega and curvature capital requirements would use the same risk buckets as prescribed for delta. See § _____.209(c) and (d) of the proposed rule. Table 11 to § _____.209 of the proposed rule provides the proposed vega risk weights for each risk class, which incorporate the liquidity horizons for each risk class (risk of market illiquidity) from the Basel standards.

³⁵⁰ See 15 U.S.C. 78o–7 note.

³⁵¹ The buckets reflect that interest rates at a longer tenor have less uncertainty and thus lower volatility than interest rates at a shorter tenor that are more receptive to changes in interest rate risk.

³⁵² As noted in section V.A.7.a.i.I. of this **SUPPLEMENTARY INFORMATION**, under the proposal, each currency would represent a separate risk factor for interest rate risk.

in the Basel standards are defined based on the applicable credit ratings of the reference entity. Section 939A of the Dodd-Frank Act required the agencies to remove references to credit ratings in Federal regulations.³⁵³ Therefore, the agencies are proposing an approach that would allow for a level of risk sensitivity in the delta credit spread buckets and corresponding risk weights that would be generally consistent with the Basel standards and not rely on external credit ratings. Specifically, the proposal would categorize the delta credit spread buckets and corresponding risk weights for non-securitizations, correlation trading positions, and securitization positions non-CTP based on the definitions for investment grade as defined in the agencies' existing capital rule³⁵⁴ and the definitions of speculative grade³⁵⁵ and sub-speculative grade³⁵⁶ as defined in the proposal.

The credit spread risks of industries within the proposed sectors react similarly to the same market or economic events by principle of shared economic risk factors (for example, technology and telecommunications). Furthermore, the proposal would provide sectors similar to those contained in the Basel standards and specify a treatment for certain U.S.-specific sectors (for example, GSE debt and public sector entities). Specifically, the proposal would include GSE debt and public sector entities in the sector for government-backed non-financials, education, and public administration to appropriately reflect the potential variability in the credit spreads of such positions. Accordingly, assigning the same risk weight to these positively correlated sectors would reduce administrative burden and not have a material effect on risk sensitivity. Relative to the Basel standards, the proposal would expand the scope of the financials, including government-

backed financials, bucket to apply to real estate activities. This clarification aligns the treatment of real estate activities across the credit spread risk sector buckets and equity sector buckets.

Some of the proposed sector buckets consist of different industries, for example basic materials, energy, industrials, agriculture, manufacturing, and mining and quarrying. Positions within the same sector that are the same credit quality would be assigned to the same bucket because from a market risk perspective an economic event causing volatility in a sector tends to similarly affect all positions in the industries operating in that sector, even if there may be differences in credit quality between individual issuers within a sector. When calculating the delta and curvature capital requirements for securitization indices, the proposal would allow a banking organization to apply the look-through approach or treat the index as a single position, as described in section V.A.10.d.i. of this **SUPPLEMENTARY INFORMATION**.

The agencies recognize that there may be sectors that are not expressly categorized by the proposed buckets, and that specifying all sectors for such purpose may not be possible. The proposed buckets would include an "other sector" category for market risk covered positions that do not belong to any of the other buckets.

The proposed risk weights are based on empirical data which reflect the historical stress period for which the risk factors within the bucket caused the largest cumulative loss at various liquidity horizons. As such, for speculative grade sovereign exposures, multilateral development banks, and specified supranational entities³⁵⁷ the agencies are proposing a 3 percent risk weight for such positions that are non-securitization positions (Table 3 to § ___.209) and a 13 percent risk weight for such positions that are correlation trading positions (Table 5 to § ___.209).³⁵⁸ Based on the agencies'

quantitative analysis of the historical data, the credit spreads of speculative grade sovereign bonds have typically widened more than 200 basis points after a downgrade, and significantly more for sub-speculative grade sovereigns.³⁵⁹ Multilateral development banks and specified supranational entities exhibit similar credit spread risk as sovereign exposures and merit similar risk weights. Additionally, for non-securitization positions and correlation trading positions, the proposal would include separate buckets with higher risk weights (7 percent and 16 percent, respectively) for sub-speculative grade sovereign exposures, multilateral development banks, and specified supranational entities than for those of speculative grade, because of the additional risk posed by sub-speculative exposures.

For securitization positions non-CTP (Table 7 to § ___.209), the proposal would clarify the treatment of personal loans and dealer floorplan loans within the delta credit spread buckets. Specifically, the proposal would require a banking organization to include personal loans within the bucket for credit card securitizations and dealer floorplans within the bucket for auto securitizations in order to appropriately

stressed expected shortfall specified in the models-based non-default capital requirement. For calibration, the agencies used IHS Markit credit default swap data and calculated ten-day overlapping absolute changes in sovereign credit default swap spreads. For the period of stress, the agencies used the period from May 2011 to May 2012 during the European sovereign debt crisis, which is representative of stress risk for these exposures. The agencies calibrated the risk weight by multiplying the standard deviation of the absolute changes in sovereign spreads over the stress period by 2.34 and by the square root of the applicable liquidity horizon divided by ten days. The agencies multiplied the standard deviation by 2.34 to ensure the risk weight was calibrated to the same 97.5 percent threshold required in the expected shortfall measure and to align with the calculation of other risk weights. The multiplication by the square root of the ratio of the liquidity horizon to ten days was done to convert the metric to the appropriate liquidity horizon specified in the models-based non-default capital requirement.

³⁵⁹ The result of calibration based on the IHS Markit credit default swap data is a seven percent risk weight for sub-speculative grade. Credit default swap data were used for sub-speculative sovereign exposures because credit default swap spreads generally reflect the credit spread risk characteristics of sub-speculative grade sovereign issuers. For speculative grade sovereign exposures, the proposal would assign a three percent risk weight, rather than the two percent risk weight specified in the Basel standards, because the analysis described above shows that the credit spreads of speculative grade sovereign bonds have typically widened more than two percent after a downgrade. In addition, the proposed three percent risk weight for such exposures would support the agencies' objectives of ensuring an appropriate level of conservativeness while also differentiating between the relative risks of speculative and sub-speculative grade sovereign exposures.

³⁵³ 15 U.S.C. 78o–7 note.

³⁵⁴ See 12 CFR 3.2 (OCC); 12 CFR 217.2 (Board); 12 CFR 324.2 (FDIC).

³⁵⁵ The proposal would define speculative grade to mean that the entity to which a banking organization is exposed through a loan or security, or the reference entity with respect to a credit derivative, has adequate capacity to meet financial commitments in the near term, but is vulnerable to adverse economic conditions, such that should economic conditions deteriorate, the issuer or the reference entity would present an elevated default risk.

³⁵⁶ The proposal would define sub-speculative grade to mean that the entity to which a banking organization is exposed through a loan or a security, or the reference entity with respect to a credit derivative, depends on favorable economic conditions to meet its financial commitments, such that should economic conditions deteriorate, the issuer or the reference entity likely would default on its financial commitments.

³⁵⁷ Under the proposal, specified supranational entities would include the Bank for International Settlements, the European Central Bank, the European Commission, the International Monetary Fund, the European Stability Mechanism, and the European Financial Stability Facility. Consistent with the current capital rule, exposures to such entities would continue to be subject to a zero percent risk weight for purposes of general credit risk under the proposal.

³⁵⁸ The agencies calibrated the credit spread risk weights for speculative and sub-speculative sovereign exposures by applying a methodology similar to what the Basel Committee used for calibrating risk weights for other asset classes. In particular, the agencies used a methodology that aligned the sensitivities-based method risk weight calibration to the liquidity horizon-adjusted

reflect the lower credit spread risk of these positions relative to those within the other sector bucket.³⁶⁰

For securitization positions non-CTP, the proposal would also clarify the delta credit spread buckets for residential mortgage-backed securities to help ensure consistency in bucketing assignments across banking organizations. Specifically, the proposal would define prime residential mortgage-backed securities based on the definition of qualified residential mortgages in the credit risk retention rule³⁶¹ and would define sub-prime residential mortgage-backed securities based on the definitions of higher-priced mortgage loans and high-cost mortgages in Regulation Z,³⁶² respectively.

Under the proposal, prime residential mortgage-backed securities would be defined as securities in which the underlying exposures consist primarily of qualified residential mortgages as defined under the credit risk retention rule. The eligibility criteria of the qualified residential mortgage definition are designed to help ensure the borrower's ability to repay.³⁶³ Residential mortgage-backed securities that are primarily backed by qualified residential mortgage loans carry significantly lower credit risk than those backed primarily by non-qualifying loans. Therefore, the proposal would use the existing definition of qualified residential mortgage in the credit risk retention rule, which refers to the Regulation Z definition of qualified mortgage to identify residential mortgage-backed securities that are primarily backed by underlying loans with sufficiently low credit risk to be classified as prime.

Similarly, the proposal would define a sub-prime residential mortgage-backed security as a security in which the underlying exposures consist primarily

of higher-priced mortgage loans as defined under Regulation Z (12 CFR 1026.35), high-cost mortgages as defined under Regulation Z (12 CFR 1026.32), or both. In general, Regulation Z defines higher-priced mortgage loans³⁶⁴ and high-cost mortgages³⁶⁵ to include consumer credit transactions secured by the consumer's principal dwelling with an annual percentage rate³⁶⁶ that exceeds the average prime offer rate (APOR)³⁶⁷ for a comparable transaction. Consistent with Regulation Z, the subprime market is identified by loan price rather than by borrower characteristics, which could present operational difficulties and other problems. Therefore, the proposal would use the existing definitions in Regulation Z, which rely on a loan's annual percentage rate and other characteristics, to identify residential mortgage-backed securities that are primarily backed by underlying loans with sufficiently high credit risk to be classified as sub-prime. In addition, the proposal would reduce compliance burden for banking organizations by allowing them to leverage criteria already being used to evaluate mortgage

loans for coverage under the prescribed Regulation Z thresholds.

The agencies recognize that a securitization vehicle that holds residential mortgage-backed securities may hold assets other than the residential mortgage loans, such as interest rate swaps, to support its liabilities. Furthermore, not all mortgage loans that satisfy the requirements of the proposed definitions when the securitization vehicle acquires the residential mortgage-backed securities will continue to do so throughout the lifecycle of the position. To minimize variability in risk-based capital requirements, reduce the operational burdens imposed on banking organizations and help ensure consistency and comparability in risk-based capital requirements across banking organizations, the proposal would define prime and sub-prime as those vehicles that primarily hold qualified residential mortgages or high-priced mortgage loans and high-cost mortgages, respectively. All other mortgage-backed securities would be defined as mid-prime mortgage-backed securities.

Question 125: The agencies seek comment on the appropriateness of adding the sub-speculative grade category for non-securitizations and for correlation trading positions. What, if any, operational challenges might the proposed bucketing structure pose for banking organizations and why? What, if any, alternatives should the agencies consider to better capture the risk of these positions?

Question 126: The agencies seek comment on the treatment of certain sovereign exposures. What would be the advantages and disadvantages of applying a zero percent credit spread risk weight to short-term (less than one year) U.S. sovereign exposures such as U.S. Treasury securities that are investment grade, and why? What, if any, alternative risk weight treatment should the agencies consider for sovereign exposures that are primarily exposed to interest rate risk, rather than credit spread risk, and why?

Question 127: The agencies seek comment on the risk weight for covered bonds. What, if any, alternative approaches would better serve to differentiate the credit quality of highly rated covered bonds without referring to credit ratings and why?

Question 128: The agencies seek comment on whether the proposed definitions for each sector bucket appropriately capture the characteristics to distinguish between the categories of residential mortgage-backed securities. What would be the

³⁶⁰ The other sector risk bucket refers to bucket 25 in Table 7 to § __.209 of the proposed rule.

³⁶¹ The credit risk retention rule generally requires a securitizer to retain not less than 5 percent of the credit risk of certain assets that the securitizer, through the issuance of an asset-backed security, transfers, sells, or conveys to a third party. See 12 CFR part 43 (OCC); 12 CFR part 244 (Board); 12 CFR part 373 (FDIC).

³⁶² To help ensure that credit terms are disclosed in a meaningful way so consumers can compare credit terms more readily and knowledgeably, Regulation Z mandates regulations on how lenders may calculate and disclose loan costs. See 12 CFR part 1026.

³⁶³ Under the general definition for qualified mortgages in 12 CFR 1026.43(e)(2), a creditor must satisfy the statutory criteria restricting certain product features and points and fees on the loan, consider and verify certain underwriting requirements that are part of the general ability-to-repay standard, and meet certain other requirements.

³⁶⁴ Under Regulation Z, a higher-priced mortgage loan is defined as a closed-end consumer credit transaction secured by the consumer's principal dwelling with an annual percentage rate that exceeds the average prime offer rate for a comparable transaction as of the date the interest rate is set by a certain amount of percentage points depending on the type of loan. See 12 CFR 1026.35(a)(1).

³⁶⁵ Under Regulation Z, a high-cost mortgage is defined as a closed- or open-end consumer credit transaction secured by the consumer's principal dwelling and in which the annual percentage rate exceeds the average prime offer rate for a comparable transaction by a certain amount, or the transaction's total points and fees exceed a certain amount, or under the terms of the loan contract or open-end credit agreement, the creditor can charge a prepayment penalty more than 36 months after consummation or account opening, or prepayment penalties that can exceed, in total, more than 2 percent of the amount prepaid. See 12 CFR 1026.32(a).

³⁶⁶ Annual percentage rates are derived from average interest rates, points, and other loan pricing terms currently offered to consumers by a representative sample of creditors for mortgage transactions that have low-risk pricing characteristics. Other pricing terms include commonly used indices, margins, and initial fixed-rate periods for variable-rate transactions. Relevant pricing characteristics include a consumer's credit history and transaction characteristics such as the loan-to-value ratio, owner-occupant status, and purpose of the transaction.

³⁶⁷ Loans with higher annual percentage rates or that have higher points and fees or prepayment penalties generally are extended to less creditworthy borrowers (for example, weaker borrower credit histories, higher borrower debt-to-income ratios, higher loan-to-value ratios, less complete income or asset documentation, less traditional loan terms or payment schedules, or combinations of these or other risk factors) and thus pose higher credit risk.

benefits and drawbacks of using the definition of qualified residential mortgage in the credit risk retention rule? What, if any, alternative approaches should the agencies consider to more appropriately distinguish between the categories of residential mortgage-backed securities?

Question 129: The agencies seek comment on whether the proposed sector bucket definitions for residential mortgage-backed securities are sufficiently clear. What, if any, additional criteria should the agencies consider to define “primarily” in the context of residential mortgage-backed securities (for example, quantitative limits or other thresholds) and what are the associated benefits and drawbacks of doing so?

Question 130: What, if any, operational challenges might the proposed sector bucket definitions pose for banking organizations in allocating the credit spread risk sensitivities of existing mortgage exposures to the respective buckets and why? To what extent would using one metric (for example, average prime offer rate) to define the sector buckets address any such concerns?

Question 131: What, if any, other sector buckets require additional clarification, and why?

III. Equity Risk

Table 8 to § __.209 of the proposed rule provides the proposed delta buckets and corresponding risk weights for market risk covered positions with equity risk, which would be generally consistent with those in the Basel standards.³⁶⁸ Under the proposal, a banking organization would group the equity risk factors for market risk covered positions into one of thirteen buckets based on market capitalization, market economy, and sector.

The proposed sector buckets and associated risk weights would differentiate between large and small market capitalization issuers to appropriately reflect the relatively higher volatility and increased equity risk of small market capitalization issuers.³⁶⁹ Under the proposal, issuers

with a consolidated market capitalization equal to or greater than \$2 billion, adjusted to reflect CPI-W,³⁷⁰ would be classified as large market capitalization issuers, and all other issuers would be classified as small market capitalization issuers. The proposed large market capitalization designation would help ensure an amount of information and trading activity related to an issuer that is suitable for differentiating risks between large and small market capitalization issuers. The market capitalization data of publicly traded firms is readily available and therefore would not be burdensome to identify.

For purposes of the market economy criteria, the proposal would differentiate between “liquid market economy” countries and territorial entities and emerging market economy countries and territorial entities to appropriately reflect the higher volatility associated with emerging market equities. Under the proposal, a banking organization would use the following criteria to identify annually a country or territorial entity with a liquid market economy: (1) \$10,000 or more in per capita income, (2) \$95 billion or more in market capitalization of all domestic stock markets, (3) no single export sector or commodity comprises more than 50 percent of the country or entity’s total annual exports, (4) no material controls on liquidation of direct investment, and (5) free of sanctions imposed by the U.S. Office of Foreign Assets Control against a sovereign entity, public sector entity, or sovereign-controlled enterprise of the country or territorial entity.³⁷¹ Countries or territorial entities that satisfy all five criteria or that are in a currency union³⁷² with at least one country or territorial entity that satisfies all five criteria would be classified as liquid

with a durable business model. During downturns in the economic cycle, such complications can increase the volatility (and therefore the equity risk) of investments in such issuers.

³⁷⁰ See section I.I.E. of this **SUPPLEMENTARY INFORMATION** for a more detailed discussion on indexing nominal thresholds in the proposal going forward to reflect CPI-W.

³⁷¹ According to the agencies’ analysis of the data, the initial list of “Liquid Market Economies” would include: United States, Canada, Mexico, the 19 Euro area countries (Austria, Belgium, Cyprus, Estonia, Finland, France, Germany, Greece, Ireland, Italy, Latvia, Lithuania, Luxembourg, Malta, the Netherlands, Portugal, Slovakia, Slovenia, and Spain), non-Eurozone, western European nations (the United Kingdom, Sweden, Denmark and Switzerland), Japan, Australia, New Zealand, Singapore, Israel, South Korea, Taiwan, Chile, and Malaysia.

³⁷² The proposal would define a currency union as an agreement by treaty among countries or territorial entities, under which the members agree to use a single currency, where the currency used is described in § __.209(b)(1)(i) of the proposed rule.

market economies, and all others would be classified as emerging market economies.

In relying on a set of objective criteria, the proposed approach for market economy buckets is designed to increase risk sensitivity by distinguishing between equities with lower volatility or higher volatility in a manner consistent with the Basel standards while also providing sufficient flexibility to reflect changes to the list of market economies as countries’ profiles evolve.

For market risk covered positions with exposure to large market capitalization issuers, the proposal would group equity risk factors into one of four sectors for each of the emerging market and liquid market economy categories: (1) consumer goods and services, transportation and storage, administrative and support service activities, healthcare, and utilities; (2) telecommunications and industrials; (3) basic materials, energy, agriculture, manufacturing, and mining and quarrying; and (4) financials including government-backed financials, real estate activities, and technology.

The proposed equity buckets are intended to reflect differences in the extent to which equity prices in varying sectors are affected by the business cycle (such as GDP growth). Differentiating sectors for purposes of assigning risk weights to exposures to large market capitalization issuers is relevant because some sectors are more sensitive than others to the given phase in a business cycle. The proposal groups together industries into sectors that tend to have similar economic sensitivities and therefore are sufficiently homogenous from a risk perspective. Conversely, among small market capitalization issuers, volatility is more attributable to whether a market risk covered position is related to an emerging market economy or liquid market economy, regardless of the sector. Therefore, the proposed buckets for small market capitalization issuers delineate emerging market economies from liquid market economies but do not delineate sectors.

In addition, the proposal includes three buckets representing other sectors; equity indices that are both large market capitalization and liquid market economy (non-sector specific); and other equity indices (non-sector specific). As is the case with credit spread buckets, the agencies recognize that specifying all sectors for the purpose of applying buckets is infeasible. Accordingly, the last three buckets set forth in Table 8 to § __.209 are intended to strike a balance between risk sensitivity and operational burden.

³⁶⁸ Vega and curvature capital requirements use the same buckets as prescribed for delta. See § __.209(c)(1), (d)(1) of the proposed rule.

³⁶⁹ Relative to large market capitalization issuers, instruments issued by those with small market capitalization are typically less liquid and thus pose greater equity risk, as investors holding these instruments may encounter difficulty in buying or selling shares particularly during a stress event. Small market capitalization issuers also typically have less access to capital (such that they are less capable of obtaining sufficient financing to bridge gaps in cash flow) and have a relatively shorter operational history and thereby less evidence of a

Equity indices aggregate risk across different sectors and accordingly require separate treatment from sector-specific buckets. Nonetheless, equity indices that are both large market capitalization and liquid market economy are relatively less risky than other equity indices and can be identified in the course of determining large market capitalization issuers and liquid market economies, such that it would not impose a great burden to delineate them as a separate bucket.

Question 132: The agencies solicit comment on the proposed definition of liquid market economy. Specifically, would the proposed criteria sufficiently differentiate between economies that have liquid and deep equity markets? What, if any, alternative criteria should the agencies consider and why? What, if any, of the proposed criteria should the agencies consider eliminating and why?

Question 133: The agencies solicit comment related to the proposed bucket structure for equity risk. What, if any, other relationships should the agencies consider for highly correlated risks among different equity types that are currently in different buckets and why? Please describe the historical correlations between such equities, and historical price shocks for purposes of assigning the appropriate risk weight.

Question 134: The agencies solicit comment related to the use of materiality criteria to identify annually a country or territorial entity with a liquid market economy. What are the advantages and disadvantages of indexing such thresholds in the proposal to reflect CPI-W going forward, and why?

IV. Commodity Risk

Table 9 to § __.209 of the proposed rule provides the proposed delta buckets and corresponding risk weights for positions with commodity risk. Under the proposal, a banking organization would group commodity risk factors into one of twelve buckets based on the following commodity classes: energy—solid combustibles; energy—liquid combustibles; energy—carbon trading; freight; metals—non-precious; gaseous combustibles and electricity; precious metals (including gold); grains and oilseed; livestock and dairy; forestry and agricultural; and commodity index.

The proposed buckets and associated risk weights for commodity risk would be distinguished by the underlying commodity types described above to appropriately reflect differences in volatility (and therefore market risk) between those commodity types. In general, the price sensitivity of a

commodity to changes in global supply and demand can vary between commodity types due to production and storage cycles, along with other factors. For example, energy commodities are generally delivered year-round, whereas grain production is seasonal such that deliverable futures contracts are available on dates to coincide with harvest. Further, commodities within the proposed commodity types have generally historically similar levels of volatility and high correlation. The proposed commodity buckets are intended to strike a balance between the risk sensitivity of measuring market risk for the delineated commodity groups and the operational burden of capturing the market risk of all commodities. As is the case with credit spread buckets and equity buckets, the agencies recognize that specifying all commodities for the purpose of applying buckets is operationally difficult. Accordingly, the proposal includes an additional “other commodity” bucket to conservatively capture the risk of additional commodities that are not otherwise specified and a commodity index bucket to include indexes that may track multiple commodities. The commodity index bucket is introduced to capture the diversified risk of pooling several commodities together that do not concentrate into a particular sector.

As is the case with other buckets, the proposed risk weights for commodity risk factors are based on empirical data during historical periods of stress. The agencies are proposing to align the delta risk factor buckets and corresponding risk weights with those provided in the Basel standards, with two exceptions. First, the Basel standards prescribe separate buckets with different risk weights for electricity and gaseous combustibles. The proposal would include a single bucket for electricity and gaseous combustibles to allow for greater recognition of hedges between these two commodities.³⁷³ The proposed bucketing structure would reflect appropriately the inherent relationship between the price of electricity and natural gas, as empirical evidence demonstrates a strong correlation between price movements of

natural gas and electricity contracts.³⁷⁴ Second, the proposal would introduce a bucket for commodity indices with a prescribed risk weight of 30 percent and intra bucket correlation of 50 percent.³⁷⁵

Question 135: The agencies solicit comment related to the proposed bucket structure and risk weights for commodities. What, if any, other relationships should the agencies consider for highly correlated risks among different commodity types that are currently in different buckets and why? Please describe the historical correlations between such commodities,

³⁷⁴ The calibration of the risk weight for the gas and electricity commodity risk bucket in the sensitivities-based method followed the stressed expected shortfall calibration methodology specified in the models-based non-default capital requirement, accounting for variations in liquidity horizons. The agencies used Thomson Reuters to obtain spot price data for electricity and gas risk factors and calculated ten-day overlapping returns constructed as $r_t = (p_t - p_{t/10})/p_{t/10}$, where r is the return, p is the spot price for gas and electricity risk factors for the most recent outcome, denoted as t , and for the date that is 10 business days prior to t , denoted as $t/10$. The 97.5 percent expected shortfall was calculated as the average of the m worst returns, where $m = n * 2.5$ percent rounded to the nearest integer, and n is the number of ten-day returns that had all values for both p_t and $p_{t/10}$. For the period of stress, the agencies used the period between September 1, 2008 and August 31, 2009, when the S&P Goldman Sachs Commodity Index had the highest month-end 99th percentile VaR. The resulting estimated risk weight for electricity and gas was 48 percent. For the calibration of the intra-bucket correlation parameter between natural gas and electricity, the agencies used Bloomberg to source data on 10 series of commodity futures (five series for each commodity, representing five distinct markets with high trading activity for both natural gas and electricity, specifically, the United States, United Kingdom, France, Germany, and the Netherlands) and calculated ten-day overlapping returns for each series as $r_t = (p_t - p_{t/10})/p_{t/10}$. To estimate the pairwise correlation between gas and electricity, the agencies used the period between January 2018 and December 2022, which included the time of unprecedented commodity market volatility. The resulting estimated average pairwise correlation between electricity and natural gas was 66 percent.

³⁷⁵ The agencies are applying a similar methodology for the calibration of the commodity index bucket risk weight as the Basel Committee used for calibrating risk weights for all asset classes, which aligns the sensitivities-based method risk weight calibration to the liquidity horizon adjusted stressed expected shortfall specified in the internal model approach. When calibrating commodity risk weights the Basel Committee used data on prices and calculated ten day overlapping returns (such as relative changes in prices). For the period of stress, the agencies used the second half of 2008 and the first half 2009 stress period. The standard deviation obtained was multiplied by 2.34 to reflect the expected shortfall quantile of 97.5. The estimate was adjusted to meet the commodity liquidity horizon specified for internal models. The last step takes the average of the estimates across several commodity indices. The intra-bucket correlation was calibrated following the Basel Committees methodology of calculating long term correlations for the sensitivities-based method. Specifically, the index bucket intra-bucket correlation was estimated for returns over the period starting in late 2000 to early 2024.

³⁷³ The agencies are proposing to include electricity and gas in the same bucket based on an analysis of correlations between natural gas and electricity futures prices pairs across multiple geographical regions. The analysis shows that pairwise correlations between gas and electricity prices within the same region are high and stable and in excess of the inter bucket correlation that would be applied if the two financial instruments were bucketed separately.

and historical price shocks for purposes of assigning the appropriate risk weight.

Question 136: The agencies solicit comment on the bucket for energy—carbon trading. To what extent is the proposed 60 percent risk weight reflective of the risk in carbon trading under stressed conditions?

V. Foreign Exchange Risk

The proposal would require a banking organization to establish separate buckets for each exchange rate between the currency in which a market risk covered position is denominated and the reporting currency (or, as applicable, alternative base currency). To calculate the risk-weighted delta sensitivity for foreign exchange risk, the proposal would require a banking organization to apply a 15 percent risk weight to each currency pair, with one exception. Similar to the proposed risk weights for interest rate risk, the proposal would allow a banking organization to divide the proposed 15 percent risk weight by the square root of two for certain liquid currency pairs specified under the proposal,³⁷⁶ as well as any additional currencies specified by the primary Federal supervisor. Given high trading activity and use of such liquid currency pairs relative to non-liquid pairs, the proposal incorporates the effect of a shorter liquidity horizon for liquid currency pairs and would allow a banking organization to appropriately reflect the lower foreign exchange risk posed by such liquid currency pairs.

iv. Correlation Parameters

To appropriately reflect the risk-mitigating benefits of hedges and diversification, the proposal would prescribe the correlation parameters³⁷⁷ that a banking organization would be required to use for each risk factor pair when calculating the aggregate bucket and risk class level capital requirements for delta, vega, and curvature.³⁷⁸ The proposed correlation parameters which closely follow those in the Basel standards are calibrated to capture market correlations observed over a long time horizon that included a period of

stress based on empirical data.³⁷⁹ To determine the applicable correlation parameter for purposes of calculating the bucket or risk class level capital requirements, a banking organization would apply the same criteria used to define the risk factors within each risk class, as described in section V.A.7.a.i. of this **SUPPLEMENTARY INFORMATION**, with two exceptions.

First, in addition to the proposed risk factors for credit spread risk of non-securitizations, securitization positions non-CTP, and correlation trading positions,³⁸⁰ the proposal would require a banking organization to consider the name (in the case of non-securitization positions and correlation trading positions) and tranche (in the case of securitization positions non-CTP) to determine the applicable correlation parameters for risk factors within the same bucket when calculating the aggregate bucket level capital requirements for delta and vega.

In the case of credit spread risk for securitization positions non-CTP, the agencies generally are proposing to require a 100 percent intra-bucket correlation parameter for securitization positions in the same bucket and related to the same securitization tranche with more than 80 percent overlap in notional terms and a 40 percent intra-bucket correlation parameter otherwise. Furthermore, in the case of credit spread risk for non-securitization and correlation trading positions, the proposal would allow banking organizations to treat Uniform Mortgage-Backed Security (UMBS) positions, including to-be-announced (TBA) securities and UMBS-eligible deliverable pools,³⁸¹ as exposures to a single obligor, regardless of the issuing entity of the UMBS. The single security initiative led by Fannie Mae and Freddie Mac has homogenized the mortgage pool and security characteristics for UMBS, such that positions issued by different obligors

have immaterial observed basis risk.³⁸² In addition, because mortgage pools delivered by either Fannie Mae or Freddie Mac can satisfy an UMBS TBA security, no significant pricing difference has been observed since the introduction of the single security initiative, as shown by empirical studies on agency mortgage-backed securities.³⁸³

Second, for risk factors allocated to the “other sector” bucket within the credit spread and equity risk classes,³⁸⁴ the bucket level capital requirement would equal the sum of the absolute values of the risk-weighted sensitivities for both the delta capital requirement and the vega capital requirement (no correlation parameters would apply to such exposures). Additionally, the proposal would require a banking organization to assign a zero percent correlation parameter when aggregating the delta risk-weighted sensitivity of exposures within the “other sector” bucket with those in any of the other bucket-level capital requirements for credit spread and equity risk.

The agencies consider that the proposed correlation parameters are sufficiently conservative to appropriately capture the potential interactions between risk factors that the market risk covered positions may experience in a time of stress.

Question 137: Related to securitization positions non-CTP, the agencies seek comments on requiring banking organizations to apply a 100 percent delta correlation parameter for cases where the securitization positions are in the same bucket, are related to the same securitization tranche, and have more than 80 percent overlap in notional terms. What, if any, alternative criteria should the agencies consider for application of the 100 percent correlation parameter and why? For example, what are benefits and drawbacks of allowing a banking organization to apply a 100 percent delta correlation parameter if the securitization tranches can offset all or substantially all of the price risk of the

³⁷⁶ The proposal would allow a banking organization to apply a lower risk weight for any currency pair formed of the following currencies: USD, EUR, JPY, GBP, AUD, CAD, CHF, MXN, CNY, NZD, HKD, SGD, TRY, KRW, SEK, ZAR, INR, NOK, and BRL.

³⁷⁷ The correlation parameter measures how different risk factors (for example, interest rates at various points on a curve) move together and determines how banking organizations could diversify risk and offset risks with each other.

³⁷⁸ As there is only one risk factor prescribed for foreign exchange risk, the proposal does not specify an intra-bucket correlation parameter.

³⁷⁹ For example, the correlation parameters for vega, curvature, delta interest rate risk, and delta equity risk are identical to those in the Basel standards.

³⁸⁰ As described in section V.A.7.a.i.II. of this **SUPPLEMENTARY INFORMATION**, the proposal would define the delta risk factors for credit spread risk along two dimensions: the credit spread curve of the reference entity and the tenor of the position.

³⁸¹ Chapter 8 of the Securities Industry and Financial Markets Association (SIFMA) Uniform Practices guidelines states that all UMBS and Supers, which are single class, pass-through, TBA-eligible securities, are good delivery for an UMBS TBA trade, regardless of issuer. See SIFMA, Chapter 8: Standard Requirements for Delivery on Settlements of UMBS and Ginnie Mae Securities, Uniform Practices (2024), <https://www.sifma.org/wp-content/uploads/2023/02/uniform-practices-2023-chapter-8.pdf>.

³⁸² See, e.g., Haoyang Liu, Zhaogang Song, and James Vickery, “Defragmenting Markets: Evidence from Agency MBS” (December 2021), https://www.newyorkfed.org/research/staff_reports/sr965.html. The research paper finds that Fannie Mae mortgage-backed securities command a liquidity premium over Freddie Mac, of about 17 cents per \$100 face value in price and about 4 basis points in yield. Furthermore, the difference in trading costs between Fannie Mae and Freddie Mac in the TBA market overall is extremely small, only 2 basis points.

³⁸³ See id.

³⁸⁴ The other sector buckets refer to buckets 18 and 16 in Tables 3 and 5, respectively, as well as buckets 25 and 11 in Tables 7 and 8, respectively, of § __.209 of the proposed rule.

position? What challenges exist, if any, with respect to banking organizations' ability to implement such criteria? What quantitative measures can be used to implement these criteria? How would a market stress impact the basis risk between securitization tranches within the same buckets, and the ability to adequately hedge all or substantially all of the price risk using similar but unrelated securitized tranches?

Question 138: The agencies request comment on the appropriateness of allowing banking organizations to apply a higher intra-bucket correlation parameter of 99.5 percent to 99.9 percent for energy—carbon trading. What would be the benefits and drawbacks of such a higher correlation parameter relative to the correlation parameter of 40 percent currently contained in the proposal?

Question 139: The agencies request comment on requiring banking organizations to apply a 35 percent correlation parameter for Uniform Mortgage Backed Securities. What alternative correlation parameter should the agencies consider for Uniform Mortgage Backed Securities and why?

b. Residual Risk Capital Requirement

It is not possible in a standardized methodology, such as the sensitivities-based method, to sufficiently specify all relevant distinctions between different market risks to capture appropriately existing and future financial products. Accordingly, the proposed residual risk add-on capital requirement (residual risk add-on) is intended to reflect risks that would not be fully reflected in the sensitivities-based capital requirement or the default risk capital requirement, as described in sections V.A.7.a. and V.A.9. of this **SUPPLEMENTARY INFORMATION**, respectively. Specifically, the residual risk add-on is intended to capture exotic risks, such as weather, longevity, and natural disasters, as well as other residual risks, such as gap risk, correlation risk, and behavioral risks such as prepayments.

To calculate the residual risk add-on, the proposal would require a banking organization to risk weight the gross effective notional amount of a market risk covered position by 1 percent for market risk covered positions that have an exotic exposure³⁸⁵ and by 0.1 percent for other market risk covered positions with residual risks (described

in the next section). The total residual risk add-on capital requirement would equal the sum of such capital requirements across subject market risk covered positions.

i. Positions Subject to the Residual Risk Add-on

The proposal would require a banking organization to calculate a residual risk add-on for market risk covered positions that have an exotic exposure, and those with known residual risks that are not captured by the sensitivities-based method or the default risk capital requirement. As the potential losses of market risk covered positions with exotic exposures (longevity risk, weather, natural disaster, among many) would not be adequately captured under the sensitivities-based method, the proposed residual risk add-on capital requirement would equal to 1 percent of the gross effective notional amount of the market risk covered position, which is intended as an appropriately conservative capital requirement for such exposures.

In contrast, market risk covered positions with other residual risks would include those for which the primary risk factors are mostly captured under the sensitivities-based method or the default risk capital requirement, but for which there are additional risks that are not fully captured by those components. Specifically, under the proposal, market risk positions with other residual risks would include: (1) correlation trading positions with three or more underlying exposures that are not hedges of correlation trading positions; (2) options or positions with embedded optionality, where the payoffs could not be replicated by a finite linear combination of vanilla options or the underlying instrument; and (3) options or positions with embedded optionality that do not have a stated maturity or strike price or barrier, or that have multiple strike prices or barriers.³⁸⁶ As the residual risk add-on is intended as a supplement to the capital requirements under the sensitivities-based method or default risk capital requirement for these known risks, the residual risk add-on capital requirement for market risk covered positions with other residual risks would equal to 0.1 percent of the gross

effective notional amount of the market risk covered position.

Furthermore, in situations when a banking organization cannot use the look-through approach to calculate the market risk capital requirements for an equity position in investment fund and when the investment fund's mandate permits the fund to invest in exposures with exotic or other residual risks, the proposal would require a banking organization to subject that portion of the exposure amount resulting from an equity position in an investment fund to the residual risk add-on.

In addition to positions with exotic or other residual risks, a primary Federal supervisor may require a banking organization to subject other market risk covered positions to the residual risk add-on, if the proposed framework would not otherwise appropriately capture the material risks of such positions. While the proposed definitions are intended to reasonably identify positions with risks not appropriately captured by other aspects of the proposed framework, there could be instances where a market risk covered position should be subject to the residual risk add-on in order to capture appropriately the associated market risk of the exposure in risk-based capital requirements. To allow the agencies to address such instances on a case-by-case basis, the proposal would allow the primary Federal supervisor to make such determinations, as appropriate.

ii. Excluded Positions

To promote appropriate capitalization of risk, the proposal would allow certain market risk covered positions to be excluded from the calculation of the residual risk add-on if such positions meet the following set of exclusions. Specifically, the proposal would permit a banking organization to exclude market risk covered positions, other than those that have an exotic exposure, from the residual risk add-on, if the position is (1) listed on an exchange; (2) eligible to be cleared by a CCP or QCCP; or (3) an option that has two or fewer underlying positions and does not contain path dependent pay-offs. The proposed exclusions would permit a banking organization to exclude simple options, such as spread options, which have two underlying positions, but not those for which the payoffs cannot be replicated by a combination of traded instruments. As spread options would be subject to the vega and curvature requirements under the sensitivities-based method, subjecting spread options to the residual risk add-on would be incommensurate with the risks of such

³⁸⁵ Under the proposal, an exotic exposure means an underlying exposure that is not in scope of any of the risk classes under the sensitivities-based capital requirement or is not captured by the default risk capital requirement, which includes, but is not limited to, longevity risk, weather risk, and natural disaster risk.

³⁸⁶ As proposed, the criteria are intended to capture (1) correlation risks for basket options, best of options, basis options, Bermudan options, and quanto options; (2) gap risks for path dependent options, barrier options, Asian options and digital options; and (3) behavior risks that might arise from early exercise (call or put features, or pre-payment).

positions and could increase inappropriately the cost of hedging without a corresponding reduction in risk. Additionally, as most agency mortgage-backed securities and certain convertible instruments (for example, callable bonds) are eligible to be cleared, the proposal would allow a banking organization to exclude these instruments that are eligible to be cleared from the residual risk add-on, despite the pre-payment risk of such instruments.³⁸⁷

The proposal would also allow a banking organization to exclude market risk covered positions, including those with exotic exposures, from the residual risk add-on if the banking organization has entered into a third-party transaction that exactly matches the market risk covered position (a back-to-back transaction). As the long position and short position of two identical trades would completely offset, excluding such transactions from the residual risk add-on would appropriately reflect the lack of residual risk inherent in such transactions.

Furthermore, the proposal would allow a banking organization to exclude certain offsetting positions that may exhibit insignificant residual risks and for which the residual risk add-on would be overly punitive. Specifically, the proposal would allow a banking organization to exclude the following from the residual risk add-on: (1) positions that can be delivered into a derivative contract where the positions are held as hedges of the banking organization's obligation to fulfill the derivative contract (for example, TBA and security interests in associated mortgage pools) as well as the associated derivative exposure; (2) any debt issued or guaranteed by a GSE or any securities issued and guaranteed by the U.S. government; (3) positions subject to the fallback capital requirement; (4) internal transactions between two trading desks, if only one trading desk is model-eligible; and (5) any other types of positions that the primary Federal supervisor determines are not required to be subject to the residual risk add-on, as the material risks would be sufficiently captured under other aspects of the proposed market risk framework. Based on these criteria, the agencies expect that a banking organization would not need to calculate a residual risk add on for the

following risks: risks from cheapest-to-deliver options; volatility smile risk; correlation risk arising from multi-underlying European or American plain vanilla options; dividend risk; and index and multi-underlying options that are well-diversified or listed on exchanges for which sensitivities are captured by the capital requirement under the sensitivities-based method.

Question 140: The agencies seek comment on all aspects of the proposed residual risk add-on. Specifically, the agencies request comment on whether there are alternative methods to identify more precisely exotic exposures and other residual risks for which the residual risk capital requirement is appropriate. What, if any, additional instruments and offsetting positions should be excluded from the residual risk add-on and why? What, if any, quantitative measures should the agencies consider to identify or distinguish residual risks and why?

Question 141: Would characterizing volatility and variance swaps as bearing other residual risk more appropriately reflect the risks of such exposures and why?

8. Models-Based Non-Default Capital Requirement

Under the proposal, the models-based non-default capital requirement for model-eligible positions ($IMA_{G,A}$)³⁸⁸ would consist of four components: (1) the internally modelled capital calculation (IMCC); (2) the stressed expected shortfall (SES); (3) the aggregate trading portfolio backtesting capital multiplier; and (4) the PLA add-on.

Like the sensitivities-based method in the standardized non-default capital requirement, the first two components, IMCC and SES, are intended to capture the potential losses arising from changes in risk factors during a period of substantial market stress. The IMCC and SES would distinguish between risk factors for which there is appropriate data for the twelve-month historical stress period used by the model and a sufficient number of real prices in the current period to qualify as modellable risk factors and those for which there is not (non-modellable risk factors or

NMRFs).³⁸⁹ The proposal would generally require banking organizations to separately calculate the capital requirement for both types of risk factors using an expected shortfall methodology. Under the proposal, the capital requirement for both modellable and non-modellable risk factors would reflect the losses calibrated to a 97.5 percent threshold over a twelve-month period of substantial market stress and incorporate the prescribed liquidity horizons applicable to each risk factor.

Relative to the IMCC for modellable risk factors, the SES calculation for non-modellable risk factors would provide significantly less recognition of hedging and portfolio diversification due to the lower quality inputs to the expected shortfall models; for example, limited data on the market prices observed or quoted during the twelve-month historical stress period are available to estimate the correlations between non-modellable risk factors used by the expected shortfall model. These data limitations can increase the possibility that a banking organization's expected shortfall models overstate the diversification benefits or understate price volatility (and therefore, understate the magnitude of potential losses) of such non-modellable risk factors. Furthermore, the conservative treatment of non-modellable risk factors that do not meet the proposed data quality standards would provide appropriate incentives for banking organizations to enhance the quality of data inputs used in the expected shortfall models.

Under the proposal, the overall capital required under the models-based non-default capital requirement ($IMA_{G,A}$) would equal the sum of the capital requirements for modellable and non-modellable risk factors and the PLA add-on to address shortcomings in the valuation models used to determine regulatory capital, if applicable. The capital requirements for modellable and non-modellable risk factors would equal the greater of (i) the sum of such capital requirements as of the most recent reporting date ($IMCC_{t-1}$ and SES_{t-1} , respectively), or (ii) the sum of the average of such capital requirements for non-modellable risk factors over the prior 60 business days ($SES_{average}$) and the product of the average capital requirements for modellable risk factors over the prior 60 business days

³⁸⁷ As discussed in section V.A.7.a.ii.II. of this **SUPPLEMENTARY INFORMATION**, callable bonds that are priced as yield to maturity would not be subject to vega risk, as the risk factors for such instruments would already be sufficiently captured by the delta capital requirement under the sensitivities-based method.

³⁸⁸ As described in section V.A.3.b. of this **SUPPLEMENTARY INFORMATION**, the total non-default capital requirement under the models-based measure generally would equal to the sum of (1) the models-based non-default capital requirement ($IMA_{G,A}$) and (2) the difference between the standardized non-default capital requirement for all trading desks ($SA_{all\ desks}$) and the standardized non-default capital requirement for model-eligible positions ($SA_{G,A}$).

³⁸⁹ Non-modellable risk factors for which there is appropriate data for the twelve-month historical stress period used by the expected shortfall models, but insufficient real prices in the current period (type A non-modellable risk factors) would be subject to both IMCC and SES as described in section V.A.8.a. of this **SUPPLEMENTARY INFORMATION**.

($IMCC_{average}$) and a multiplication factor (m_c) of at least 1.5, which serves to capture a model's performance over time based on the aggregate trading portfolio backtesting.³⁹⁰ The overall capital requirement under the models-based non-default capital requirement can be expressed by the following formula:

$$IMA_{G,A} = \max((IMCC_{G,A} + SES_{t-1}), ((m_c \times IMCC_{average}) + SES_{average})) + PLA \text{ add-on}$$

Due to the capital multiplier (m_c), the agencies generally expect the capital requirements for modellable and non-modellable risk factors to reflect those based on the prior 60 business day average, which would reduce quarterly variation. The proposal would require a banking organization to take into account the capital requirements as of the most recent reporting date to capture situations where the banking organization has significantly increased its risk taking relative to the prior 60-day average with the capital multiplier. Thus, the max function in the above formula would capture cases where risk has risen significantly throughout the quarter such that the average over the quarter is significantly less than the risk the banking organization faces at the end of the quarter.

Question 142: The agencies seek comment on the models-based non-default capital requirement. To what extent does the approach appropriately capture the risks of positions subject to the market risk capital requirement? What additional features, adjustments (such as to the treatment of diversification of risks), or alternative methodology could the approach include to reflect these risks more appropriately and why? Commenters are encouraged to provide supporting data.

a. Risk Factor Identification and Model Eligibility

Under the proposal, a banking organization that intends to use the models-based non-default capital requirement would be required to identify an appropriate set of risk factors that is sufficiently representative of the risks inherent in all of the model-eligible positions on model-eligible trading desks. Specifically, the proposal would require a banking organization's expected shortfall models to include all

the applicable risk factors specified in the sensitivities-based method under the standardized non-default capital requirement as well as those used in either the banking organization's financial reporting or internal risk management models. If the risk factors specified in the sensitivities-based method are not included in the expected shortfall models, the banking organization would be required to justify the exclusions to the satisfaction of its primary Federal supervisor. To help ensure that the expected shortfall models appropriately capture the market risk of a banking organization's model-eligible positions held by model-eligible trading desks,³⁹¹ model-eligible trading desks would be subject to PLA test³⁹² and backtesting requirements, which would help ensure the accuracy and conservatism of the risk-based capital requirements estimated by the banking organization's expected shortfall models.

For each identified risk factor, a banking organization would conduct two separate risk factor eligibility tests to determine whether the risk factor is subject to the IMCC, SES, or both. The first is a qualitative test, which determines whether the data and other information used to calibrate the expected shortfall models for IMCC appropriately capture the risk factor. The second is a quantitative test, which determines whether there are a sufficient number of real prices over the prior twelve months that are representative of the risk factor to infer the value of the risk factor.³⁹³ A risk factor that satisfies both tests would be classified as a modellable risk factor and would be subject to the IMCC, but not SES. Non-modellable risk factors would be classified as either type A or type B. Type A non-modellable risk factors would be those that satisfy the qualitative test but not the quantitative test and would be subject to both IMCC and SES; all other risk factors would be

type B non-modellable risk factors and would be subject to SES.

The agencies recognize that requiring banking organizations to exclude all non-modellable risk factors from expected shortfall models used to calculate the IMCC could be operationally burdensome and can render the models-based non-default risk capital requirement relatively unstable given that some modelling approaches rely on co-dependencies between risk factors that are modellable and non-modellable. Accordingly, the proposal would require type A non-modellable risk factors to be included in the calculation of both the IMCC and SES. The inclusion of type A non-modellable risk factors in IMCC is intended to reflect the higher quality data available for such risk factors relative to type B non-modellable risk factors. The agencies also recognize that if type A non-modellable risk factors are not included in the calculation of the IMCC, it could create perverse incentives for banking organizations to claim a modellable risk factor that is highly correlated with other risk factors as a type A non-modellable risk factor to receive more favorable diversification treatment in the SES under the proposal. As such, requiring type A non-modellable risk factors to be included in the IMCC would help address regulatory arbitrage concerns by ensuring that capital requirements would not fall in response to a modellable risk factor becoming a type A non-modellable risk factor.

The agencies recognize, however, that type A non-modellable risk factors may have inherently higher risk than typical modellable risk factors due to infrequent price observations that can lead to model risk and a more elevated liquidity risk. Therefore, the proposal would also require type A non-modellable risk factors to be included in SES to account for any additional risks that might not be fully captured within the IMCC calculation. Given that the IMCC calculation captures model-estimated correlations among risk factors, type A non-modellable risk factors would therefore receive full diversification (zero correlation) within the SES calculation. The remaining type B non-modellable risk factors would be subject to a more conservative treatment with a supervisory correlation, or rho, of 0.36.

To capture the inherently higher risk associated with type A non-modellable risk factors in the models-based non-default capital requirement, the agencies also considered an alternative approach that would only require banking organizations to capture type A non-modellable risk factors in IMCC but not

³⁹¹ For example, unlike the proposed standardized non-default capital requirement, which would require a banking organization to use a prescribed set of risk buckets and correlation parameters, as described in section V.A.7.a.iii. of this **SUPPLEMENTARY INFORMATION**, the models-based non-default capital requirement would allow a banking organization to use its own bucketing structure and correlation parameters.

³⁹² As described in section V.A.1.b. of this **SUPPLEMENTARY INFORMATION**, the proposal would provide a three-year transition period during which there would be no automatic consequences for PLA test results.

³⁹³ Evidence of a sufficient number of real prices demonstrates the liquidity of the underlying risk factor and helps to ensure there is a sufficient quantity of historical data to appropriately capture the risk factor under expected shortfall models used in the IMCC calculation.

³⁹⁰ The size of the multiplication factor could vary from 1.5 to 2 based on the results of the entity-wide backtesting for all model-eligible positions. See section V.A.8.d. of this **SUPPLEMENTARY INFORMATION** for further discussion on the entity-wide backtesting for all model-eligible positions, otherwise known as the aggregate trading portfolio backtesting multiplier.

in the SES. The alternative approach would instead require banking organizations to assign minimum liquidity horizons to type A non-modellable risk factors that are one-level higher than those required for modellable risk factors in the IMCC calculation, as described in section V.A.8.b.ii. of this **SUPPLEMENTARY INFORMATION**, unless the position's maturity is shorter than the respective liquidity horizon.³⁹⁴ As the proposed IMCC calculation limits model-estimated diversification across risk classes, assigning higher minimum liquidity horizons to type A non-modellable risk factors could appropriately capture the inherently higher model and liquidity risk of such risk factors.

The agencies recognize that implementing this alternative approach could increase the operational burden associated with the proposal. This alternative may also increase variability in the market risk capital requirements across banking organizations, if banking organizations are also allowed to increase the minimum liquidity horizon assigned to modellable risk factors to align with the higher minimum liquidity horizon assigned to type A non-modellable risk factors, as under the current proposal. Accordingly, to capture the elevated model and liquidity risk of type A non-modellable risk factors in a consistent manner across banking organizations without

imposing undue operational burden, the proposal would require banking organizations to include type A non-modellable risk factors in both IMCC and SES.

Question 143: The agencies request comment on the appropriateness of the proposed requirements for the risk factors included in the models-based non-default capital requirement. What, if any, alternative requirements should the agencies consider, such as requiring risk factor coverage to align with the financial reporting models, and why? Specifically, please describe any operational challenges and impact on banking organizations' minimum capital requirements that requiring the expected shortfall model to align with the financial reporting models would create relative to the proposal.

Question 144: The agencies seek comment on whether it is appropriate to include type A non-modellable risk factors within IMCC and SES calculations. What, if any, adjustments (such as permitting banking organizations to treat type A non-modellable risk factors as type B non-modellable risk factors) should the agencies consider to more appropriately reflect type A non-modellable risk factors within the models-based non-default capital requirement and why? Commenters are encouraged to provide supporting data.

Question 145: The agencies seek comment on whether the alternative approach described above would more

appropriately capture the inherently higher model and liquidity risk associated with a type A non-modellable risk factors due to infrequent price observations. What would be advantages and disadvantages of requiring a higher minimum liquidity horizon for type A non-modellable risk factors to capture their risks within IMCC? How would banking organizations implement and ensure consistency in the appropriate treatment of these risk factors when there is already flexibility to scale up liquidity horizons above the minimum requirement for both modellable risk factors and non-modellable risk factors? What would be the impact on capital requirements of capturing type A non-modellable risk factors with a higher minimum liquidity horizon only within the IMCC calculation? What, if any, other alternative approaches should the agencies consider to more appropriately capture the risks of type A non-modellable risk factors (for example, applying capital multiplier (mc) adjustment to the 60-day average IMCC when it incorporates type A non-modellable risk factors), and why? In such cases, what would be the appropriate higher capital multiplier for the IMCC? What are the advantages and disadvantages of using a higher capital multiplier (mc) adjustment to the 60-day average IMCC as shown in the example table below in place of the higher minimum liquidity horizon?

Number of Backtesting Exceptions	Multiplication factor for (m_c)
0	1.70
1	1.70
2	1.70
3	1.70
4	1.70
5	1.90
6	1.96
7	2.03
8	2.08
9	2.12
10 or more	2.20

a. Qualitative Test

To help ensure the appropriateness of the data and other information used to calibrate the expected shortfall models

for the IMCC, the proposal would establish data quality requirements for risk factors to be eligible for inclusion within the IMCC. A risk factor that fails

required to assign a liquidity horizon of sixty days rather than forty days, if the associated credit

to meet any of the following six proposed data quality requirements would be a type B non-modellable risk factor, excluded from the calculation of
