FEDERAL REGISTER

Vol. 91 Monday,

No. 215 November 9, 2026

Pages 70769–72390

OFFICE OF THE FEDERAL REGISTER

The **FEDERAL REGISTER** (ISSN 0097–6326) is published daily, Monday through Friday, except official holidays, by the Office of the Federal Register, National Archives and Records Administration, under the Federal Register Act (44 U.S.C. Ch. 15) and the regulations of the Administrative Committee of the Federal Register (1 CFR Ch. I). The Superintendent of Documents, U.S. Government Publishing Office, is the exclusive distributor of the official edition. Periodicals postage is paid at Washington, DC.

The **FEDERAL REGISTER** provides a uniform system for making available to the public regulations and legal notices issued by Federal agencies. These include Presidential proclamations and Executive Orders, Federal agency documents having general applicability and legal effect, documents required to be published by act of Congress, and other Federal agency documents of public interest.

Documents are on file for public inspection in the Office of the Federal Register the day before they are published, unless the issuing agency requests earlier filing. For a list of documents currently on file for public inspection, see *www.federalregister.gov.*

The seal of the National Archives and Records Administration authenticates the Federal Register as the official serial publication established under the Federal Register Act. Under 44 U.S.C. 1507, the contents of the **Federal Register** shall be judicially noticed.

The **Federal Register** is published in paper and on 24x microfiche. It is also available online at no charge at *www.govinfo.gov*, a service of the U.S. Government Publishing Office.

The online edition of the **Federal Register** is issued under the authority of the Administrative Committee of the Federal Register as the official legal equivalent of the paper and microfiche editions (44 U.S.C. 4101 and 1 CFR 5.10). It is updated by 6:00 a.m. each day the **Federal Register** is published and includes both text and graphics from Volume 1, 1 (March 14, 1936) forward. For more information, contact the GPO Customer Contact Center, U.S. Government Publishing Office. Phone 202-512-1800 or 866-512-1800 (toll free). E-mail, *gpocusthelp.com.*

The annual subscription price for the **Federal Register** paper edition is $860 plus postage, or $929, for a combined **Federal Register, Federal Register** Index and List of CFR Sections Affected (LSA) subscription; the microfiche edition of the **Federal Register** including the **Federal Register** Index and LSA is $330, plus postage. Six month subscriptions are available for one-half the annual rate. The prevailing postal rates will be applied to orders according to the delivery method requested. The price of a single copy of the daily **Federal Register,** including postage, is based on the number of pages: $11 for an issue containing less than 200 pages; $22 for an issue containing 200 to 400 pages; and $33 for an issue containing more than 400 pages. Single issues of the microfiche edition may be purchased for $3 per copy, including postage. Remit check or money order, made payable to the Superintendent of Documents, or charge to your GPO Deposit Account, VISA, MasterCard, American Express, or Discover. Mail to: U.S. Government Publishing Office—New Orders, P.O. Box 979050, St. Louis, MO 63197-9000; or call toll free 1-866-512-1800, DC area 202-512-1800; or go to the U.S. Government Online Bookstore site, see *bookstore.gpo.gov.*

There are no restrictions on the republication of material appearing in the **Federal Register.**

How To Cite This Publication: Use the volume number and the page number. Example: 91 FR 12345.

Postmaster: Send address changes to the Superintendent of Documents, Federal Register, U.S. Government Publishing Office, Washington, DC 20402, along with the entire mailing label from the last issue received.

Rules and Regulations

Federal Register
Vol. 91, No. 215
Monday, November 9, 2026

This section of the FEDERAL REGISTER contains regulatory documents having general applicability and legal effect, most of which are keyed to and codified in the Code of Federal Regulations, which is published under 50 titles pursuant to 44 U.S.C. 1510.

The Code of Federal Regulations is sold by the Superintendent of Documents.

DEPARTMENT OF AGRICULTURE

Rural Housing Service

7 CFR Part 3555

[Docket No. RHS–26–SFH–0364]

RIN 0575–AD47

Single Family Housing Guaranteed Loan Program-Limited Party Concessions

AGENCY: Rural Housing Service (RHS), U.S. Department of Agriculture (USDA).

ACTION: Final rule.

SUMMARY: Rural Housing Service (RHS or the Agency), a Rural Development (RD) agency of the United States Department of Agriculture (USDA), amends the Single Family Housing Guaranteed Loan Program (SFHGLP) regulation to clarify real estate commission fees are not included in the limit on interested party concessions.

DATES: This final rule is effective November 9, 2026.

FOR FURTHER INFORMATION CONTACT: Laurie Mohr, Finance & Loan Analyst, Single Family Housing Guaranteed Loan Division, Rural Development, U.S. Department of Agriculture, STOP 0784, Room 2250, South Agriculture Building, 1400 Independence Avenue SW, Washington, DC 20250–0784, email: *laurie.mohr@usda.gov,* or Phone: 314–679–6917.

SUPPLEMENTARY INFORMATION:

Abbreviations

CFR Code of Federal Regulations
FR Federal Register
RHS Rural Housing Service
§ Section
SFH Single Family Housing
SFHGLP Single Family Housing Guaranteed Loan Program
USDA U.S. Department of Agriculture

Statutory Authority

SFHGLP is authorized by Section 502(h) of Title V of the Housing Act of 1949 (42 U.S.C. 1472(h)), as amended; and is implemented by 7 CFR part 3555.

Background

RHS offers programs to develop and enhance housing and critical community infrastructure in rural areas. RHS provides loans, grants, and loan guarantees for single and multi-family housing, childcare centers, emergency service facilities, hospitals, libraries, nursing homes, schools, and housing for agricultural workers, among other essential projects. RHS partners with non-profits, tribal governments, and state/federal agencies to provide technical assistance and supplementary financing to local communities.

Section 502(h) of the Housing Act of 1949 (42 U.S.C. 1472(h)) authorizes RHS to provide Single Family Housing (SFH) loan guarantees, providing low- and moderate-income individuals in rural areas an opportunity to own decent, safe, and sanitary dwelling and related facilities. Providing affordable homeownership opportunities promotes prosperity, which in turn creates thriving communities and improves the quality of life in rural areas.

Discussion of Public Comments

RHS published a proposed rule on April 20, 2026 (91 FR 20941) to amend SFHGLP regulation at 7 CFR part 3555. RHS received comments from 11 respondents, including individuals, interested parties, and one association.

The following summary presents the relevant comments:

Public Comment: Ten respondents replied they were in favor of the proposed rule, indicating real estate commission fees should not be included in the limit on interested party concessions.

Agency's Response: RHS appreciates the commenters' support and has determined no action is required.

Public Comment: One respondent agreed the proposal may offer benefits to homebuyers but cautioned the provision could be susceptible to misuse, potentially resulting in improper rebates to homebuyers.

Agency's Response: RHS appreciates this comment. Lenders must follow all consumer financial protection laws and standards enforced by the Consumer Financial Protection Bureau (CFPB) when originating and closing mortgage loans. RHS regulations also prohibit applicants from receiving cash back at closing beyond out-of-pocket costs.

In addition, lenders must set fees and charges which are reasonable and customary pursuant to 7 CFR 3555.101(b)(6), must comply with point and fee limits established by the CFPB, and may not charge amounts higher than those charged to other applicants for comparable transactions. Based on these existing safeguards, RHS has determined no action is required.

Summary of Changes to Rule

RHS amends its regulations to clarify real estate commission fees are excluded from the interested party concession limitation, aligning the policy with prevailing mortgage industry standards. Excluding real estate commission fees from the six percent seller concession limitation allows sellers to contribute more toward borrower closing costs, necessary repairs, or other permissible transaction expenses. This change enables applicants to retain more of their own funds for future investments, home improvements, or the purchase of goods and services, thereby supporting economic activity.

This final rule implements the changes published in the proposed rule (91 FR 20941; April 20, 2026), as follows:

(1) Amend 7 CFR 3555.102(h) by revising the definition of seller concessions to read as follows:

Seller concessions. Purchasing a home if the seller, or other interested third party, contributes more than 6 percent, unless otherwise provided by the Agency, of the property's sales price toward the purchaser's mortgage financing costs, closing costs, escrow accounts, furniture, or other giveaways. Real estate commission fees are excluded from the 6 percent seller concession limitation.

Executive Orders and Statutory Regulatory Review Requirements

Executive Order 12372, Intergovernmental Review of Federal Programs

This program is not subject to the requirements of Executive Order 12372, ''Intergovernmental Review of Federal Programs,'' as implemented under USDA's regulations.

Executive Order 12866, Regulatory Planning and Review

This final rule has been determined to be not significant under section 3(f) of Executive Order 12866 and, therefore, has not been reviewed by the Office of Management and Budget (OMB).

Executive Order 12988, Civil Justice Reform

This final rule was reviewed under Executive Order 12988. In accordance with this rule: (1) unless otherwise specifically provided, all State and local laws that conflict with this rule will be preempted; (2) no retroactive effect will be given to this rule except as specifically prescribed in the rule; and (3) administrative proceedings of the National Appeals Division of the Department of Agriculture (7 CFR part 11) must be exhausted before bringing suit in court that challenges action taken under this rule.

Executive Order 13132, Federalism

The policies contained in this final rule do not have any substantial direct effect on states, on the relationship between the national government and states, or on the distribution of power and responsibilities among the various levels of government. This rule does not impose substantial direct compliance costs on state and local governments. Therefore, consultation with the state is not required.

Executive Order 13175, Consultation and Coordination With Indian Tribal Governments

This final rule was reviewed in accordance with the requirements of Executive Order 13175, ''Consultation and Coordination with Indian Tribal Governments''. Executive Order 13175 requires Federal agencies to consult and coordinate with tribes on a government-to-government basis on policies that have tribal implications, including regulations, legislative comments or proposed legislation, and other policy statements or actions that have substantial direct effects on one or more Indian tribes, on the relationship between the Federal Government and Indian tribes or on the distribution of power and responsibilities between the Federal Government and Indian tribes. Consultation is also required for any regulation that preempts tribal law or that imposes substantial direct compliance costs on Indian tribal governments and that is not required by statute.

The Agency has determined that this rule does not have tribal implications that require formal tribal consultation under Executive Order 13175. If a Tribe requests consultation, the Rural Housing Service will work with the Office of Tribal Relations to ensure meaningful consultation is provided where changes, additions and modifications identified herein are not expressly mandated by Congress.

Assistance Listing Number

The program affected by this final rule is listed in the Assistance Listing (AL) Number 10.410, Very Low- to Moderate-Income Housing Loans (Section 502 Rural Housing Loans).

Civil Rights Impact Analysis

RD has reviewed this final rule in accordance with USDA Regulation 4300–4, Civil Rights Impact Analysis,'' to identify any major civil rights impacts the rule might have on program participants on the basis of age, race, color, national origin, sex, disability, political beliefs, marital status, familial status, parental status, veteran status, religion, reprisal and/or resulting from all or a part of an individual's income being derived from any public assistance program. This final rule is within a Guarantee-based program. Guarantees are not covered under Title VI of the Civil Rights Act of 1964, Section 504 of the Rehabilitation Act of 1973, and Title IX of the Education Amendments Act of 1972, as amended, when the Federal assistance does not include insurance or interest credit loans. Lenders must comply with other applicable Federal laws, including Equal Employment Opportunities, the Equal Credit Opportunity Act, the Fair Housing Act, and the Civil Rights Act of 1964. Guaranteed loans that involve the construction of or addition to facilities that accommodate the public must comply with the Architectural Barriers Act Accessibility Standard. The borrower and lender are responsible for ensuring compliance with these requirements.

Congressional Review Act

Pursuant to the Congressional Review Act (5 U.S.C. 801 *et seq.*), the Office of Information and Regulatory Affairs designated this final rule as not a major rule, as defined by 5 U.S.C. 804(2).

E-Government Act Compliance

Rural Development is committed to the E-Government Act, which requires Government agencies in general to provide the public the option of submitting information or transacting business electronically to the maximum extent possible and to promote the use of the internet and other information technologies to provide increased opportunities for citizen access to Government information and services, and for other purposes.

National Environmental Policy Act

In accordance with the National Environmental Policy Act of 1969, Public Law 91–190, this rule was reviewed in accordance with 7 CFR part 1b (''National Environmental Policy Act''). The Agency has determined that (i) this action meets the criteria established in 7 CFR 1b.4(c)(31) and (ii) no extraordinary circumstances exist. Therefore, the Agency has determined that the action does not have a significant effect on the human environment, and therefore neither an Environmental Assessment nor an Environmental Impact Statement is required.

Paperwork Reduction Act

This final rule contains no new reporting or recordkeeping burden under OMB Control Number 0575–0179 that would require approval under the Paperwork Reduction Act of 1995 (44 U.S.C. Chapter 35).

Regulatory Flexibility Act

This final rule was reviewed with regard to the requirements of the Regulatory Flexibility Act (5 U.S.C. 601–612). The undersigned has determined and certified by signature on this document that this rule will not have a significant economic impact on a substantial number of small entities since this rulemaking action does not involve a new or expanded program, nor does it require any more action on the part of a small business than required of a large entity.

The Reform Act for Unfunded Mandates

Title II of the Unfunded Mandates Reform Act of 1995 (UMRA), Public Law 104–4, establishes requirements for federal agencies to assess the effects of their regulatory actions on state, local, and tribal governments and on the private sector. Under section 202 of the UMRA, the Agency generally must prepare a written statement, including a cost-benefit analysis, for proposed and final rules with ''federal mandates'' that may result in expenditures to state, local, or tribal Governments, in the aggregate, or to the private sector, of $100 million, or more in any one year. When such a statement is needed for a rule, section 205 of the UMRA generally requires the Agency to identify and consider a reasonable number of regulatory alternatives and adopt the least costly, most cost-effective, or least burdensome alternative that achieves the objectives of the rule.

This final rule contains no Federal mandates (under the regulatory provisions of Title II of the UMRA) for state, local, and tribal governments, or for the private sector. Therefore, this rule is not subject to the requirements of sections 202 and 205 of the UMRA.

Non-Discrimination Policy

In accordance with Federal civil rights laws and U.S. Department of Agriculture (USDA) civil rights regulations and policies, the USDA, its Agencies, offices, and employees, and institutions participating in or administering USDA programs are prohibited from discriminating based on race, color, national origin, religion, sex, disability, age, marital status, family/parental status, income derived from a public assistance program, political beliefs, or reprisal or retaliation for prior civil rights activity, in any program or activity conducted or funded by USDA (not all bases apply to all programs). Remedies and complaint filing deadlines vary by program or incident.

Persons with disabilities who require alternative means of communication for program information (*e.g.,* Braille, large print, audiotape, American Sign Language, etc.) should contact the State or local Agency that administers the program or contact USDA through the Telecommunications Relay Service at 711 (voice and TTY). Additionally, program information may be made available in languages other than English.

To file a program discrimination complaint, complete the USDA Program Discrimination Complaint Form, AD–3027, found online at How to File a Program Discrimination Complaint and at any USDA office or write a letter addressed to USDA and provide in the letter all of the information requested in the form. To request a copy of the complaint form, call (866) 632–9992. Submit your completed form or letter to USDA by: (1) mail: U.S. Department of Agriculture, Office of the Assistant Secretary for Civil Rights, 1400 Independence Avenue SW, Mail Stop 9410, Washington, DC 20250–9410; (2) fax: (202) 690–7442; or (3) email: *program.intake@usda.gov.*

USDA is an equal opportunity provider, employer, and lender.

List of Subjects in 7 CFR Part 3555

Administrative practice and procedure, Conflicts of interest, Credit, Environmental impact statements, Fair housing, Flood insurance, Housing, Loan programs—housing and community development, Low- and moderate-income housing, Manufactured homes, Mortgages, Reporting and recordkeeping requirements, Rural areas.

For the reasons discussed in the preamble, RHS amends 7 CFR part 3555 as follows:

PART 3555—GUARANTEED RURAL HOUSING PROGRAM

■ 1. The authority citation for 7 CFR Part 3555 continues to read as follows:

Authority: 5 U.S.C. 301; 42 U.S.C. 1471 *et seq.*

Subpart C—Loan Requirements

■ 2. Amend § 3555.102 by revising paragraph (h) to read as follows:

§ 3555.102 Loan restrictions.

* * * * *

(h) *Seller concessions.* Purchasing a home if the seller, or other interested third party, contributes more than 6 percent, unless otherwise provided by the Agency, of the property's sales price toward the purchaser's mortgage financing costs, closing costs, escrow accounts, furniture, or other giveaways. Real estate commission fees are excluded from the 6 percent seller concession limitation.

George Kelly,

Administrator, Rural Housing Service.

Federal Aviation Administration

14 CFR Part 39

[Docket No. FAA–2026–7230; Project Identifier MCAI–2026–00185–R; Amendment 39–23512; AD 2026–22–10]

RIN 2120–AA64

Airworthiness Directives; Airbus Helicopters Deutschland GmbH (AHD) Helicopters

AGENCY: Federal Aviation Administration (FAA), DOT.

ACTION: Final rule.

SUMMARY: The FAA is superseding Airworthiness Directive (AD) 2024–04–10 which applied to all Airbus Helicopters Deutschland GmbH (AHD) Model EC135P1, EC135P2, EC135P2+, EC135P3, EC135T1, EC135T2, EC135T2+, EC135T3, and EC635T2+ helicopters. AD 2024–04–10 required repetitively inspecting certain part-numbered tail rotor (T/R) blades for a crack and, depending on the results, removing any cracked T/R blade from service. AD 2024–04–10 also prohibits installing certain T/R blades on any helicopter unless certain requirements are met. Since AD 2024–04–10 was issued, it was determined that inspection Method A should be discontinued and that additional limitations shall be provided. This AD retains the actions of AD 2024–04–10 and requires repetitively inspecting a certain tail rotor blade (TRB) assembly for cracks and, depending on the results, removing any cracked TRB assembly from service and replacing an affected part as terminating action for the repetitive inspections. This AD also prohibits installing an affected TRB assembly on any helicopter unless certain requirements are met. The FAA is issuing this AD to address the unsafe condition on these products.

DATES: This AD is effective December 14, 2026.

The Director of the Federal Register approved the incorporation by reference of a certain publication listed in this AD as of December 14, 2026.

ADDRESSES:

AD Docket: You may examine the AD docket at *regulations.gov* under Docket No. FAA–2026–7230; or in person at Docket Operations between 9 a.m. and 5 p.m., Monday through Friday, except Federal holidays. The AD docket contains this final rule, the mandatory continuing airworthiness information (MCAI), any comments received, and other information. The address for Docket Operations is U.S. Department of Transportation, Docket Operations, M–30, West Building Ground Floor, Room W12–140, 1200 New Jersey Avenue SE, Washington, DC 20590.

Material Incorporated by Reference:

- For European Union Aviation Safety Agency (EASA) material identified in this AD, contact EASA, Konrad-Adenauer-Ufer 3, 50668 Cologne, Germany; phone: +49 221 8999 000; email: *ADs@easa.europa.eu;* website: *easa.europa.eu.*
- You may view this material at the FAA, Airworthiness Products Section, Operational Safety Branch, 10101 Hillwood Parkway, Fort Worth, TX 76177. For information on the availability of this material at the FAA, call (817) 222–5110. It is also available at *regulations.gov* under Docket No. FAA–2026–7230.

FOR FURTHER INFORMATION CONTACT: Soban Saeed, Aviation Safety Engineer, FAA, 1600 Stewart Avenue, Suite 410, Westbury, NY 11590; phone: (316) 946–4123; email: *soban.saeed@faa.gov.*

SUPPLEMENTARY INFORMATION:

Background

The FAA issued a notice of proposed rulemaking (NPRM) to amend 14 CFR part 39 to supersede AD 2024–04–10, Amendment 39–22689 (89 FR 15431, March 4, 2024), (AD 2024–04–10). AD 2024–04–10 applied to all AHD Model EC135P1, EC135P2, EC135P2+, EC135P3, EC135T1, EC135T2, EC135T2+, EC135T3, and EC635T2+ helicopters. AD 2024–04–10 required repetitively inspecting T/R blades having part number (P/N) L642A2002111 or P/N L642A2002112 installed for a crack and, depending on the results, removing any cracked T/R blade from service. AD 2024–04–10 also prohibited installing certain T/R blades on any helicopter unless certain requirements are met. The FAA issued AD 2024–04–10 to detect and address cracks in affected T/R blades. The unsafe condition, if not addressed, could result in separation of a T/R blade assembly and subsequently reduced control of the helicopter.

The NPRM was published in the **Federal Register** on July 30, 2026 (91 FR 47994). The NPRM was prompted by an MCAI originated by EASA, which is the Technical Agent for the Member States of the European Union. EASA issued EASA AD 2026–0032, dated February 19, 2026 (EASA AD 2026–0032) (also referred to as the MCAI). The MCAI states that a determination was made by the manufacturer that a previously approved inspection method (Method A) should be discontinued. Method A consisted of a dye-penetrant (with increased temperature) inspection.

In the NPRM, the FAA proposed to retain the requirements of AD 2024–04–10 and also proposed to require repetitively inspecting a certain TRB assembly for cracks and, depending on the results, removing any cracked TRB assembly from service and replacing an affected part as terminating action for the repetitive inspections. In the NPRM, the FAA also proposed to prohibit installing an affected TRB assembly on any helicopter unless certain requirements are met.

You may examine the MCAI in the AD docket at *regulations.gov* under Docket No. FAA–2026–7230.

Discussion of Final Airworthiness Directive

Comments

The FAA received no comments on the NPRM or on the determination of the costs.

Conclusion

These products have been approved by the civil aviation authority of another country and are approved for operation in the United States. Pursuant to the FAA's bilateral agreement with this State of Design Authority, that authority has notified the FAA of the unsafe condition described in the MCAI referenced above. The FAA reviewed the relevant data, considered any comments received, and determined that air safety requires adopting this AD as proposed. Accordingly, the FAA is issuing this AD to address the unsafe condition on these products. Except for minor editorial changes, this AD is adopted as proposed in the NPRM. None of the changes will increase the economic burden on any operator.

Material Incorporated by Reference Under 1 CFR Part 51

The FAA reviewed EASA AD 2026–0032, which specifies procedures for repetitively inspecting the affected TRB assembly for cracks and, if any crack is detected, replacing the affected TRB assembly with a serviceable part. EASA AD 2026–0032 prohibits installing a certain TRB assembly on any helicopter unless certain requirements are met and specifies that replacing an affected TRB assembly with an eligible TRB assembly that is not an affected part is terminating action for certain repetitive inspections.

This material is reasonably available because the interested parties have access to it through their normal course of business or by the means identified in the **ADDRESSES** section.

Differences Between This AD and the MCAI

The MCAI applies to Airbus Helicopters Model EC635 P2+, EC635 P3, EC635 T1, and EC635 T3 helicopters, whereas this AD does not because those models do not have an FAA type certificate.

The MCAI specifies inspecting cracks by performing a visual inspection, dye-penetrant inspection, eddy current inspection, or fluorescent penetrant inspection, whereas this AD requires inspection methods under certain scenarios as outlined in the regulatory text of this AD, which are also described in a Note in the regulatory text of this AD.

Costs of Compliance

The FAA estimates that this AD affects 359 helicopters of U.S. registry.

The FAA estimates the following costs to comply with this AD:

ESTIMATED COSTS

Action	Labor cost	Parts cost	Cost per product	Cost on U.S. operators
Inspect one affected TRB assembly (up to 10 per helicopter).	3 work-hours × $85 per hour = $255.	$50	Up to $305	Up to $109,495.

The FAA estimates the following costs to do any replacements that will be required based on the results of the inspection. The agency has no way of determining the number of helicopters that might need this replacement:

ON-CONDITION COSTS

Action	Labor cost	Parts cost	Cost per product
Replace one TRB assembly (up to 10 per helicopter).	3 work-hours × $85 per hour = $255.	$4,900 per TRB assembly	Up to $51,550.

Authority for This Rulemaking

Title 49 of the United States Code specifies the FAA's authority to issue rules on aviation safety. Subtitle I, section 106, describes the authority of the FAA Administrator. Subtitle VII: Aviation Programs, describes in more detail the scope of the Agency's authority.

The FAA is issuing this rulemaking under the authority described in Subtitle VII, Part A, Subpart III, Section 44701: General requirements. Under that section, Congress charges the FAA with promoting safe flight of civil aircraft in air commerce by prescribing regulations for practices, methods, and procedures the Administrator finds necessary for safety in air commerce. This regulation is within the scope of that authority because it addresses an unsafe condition that is likely to exist or develop on products identified in this rulemaking action.

Regulatory Findings

The FAA has determined that this AD will not have federalism implications under Executive Order 13132. This AD will not have a substantial direct effect on the States, on the relationship between the national government and the States, or on the distribution of power and responsibilities among the various levels of government.

For the reasons discussed above, I certify that this AD:

(1) Is not a ''significant regulatory action'' under Executive Order 12866,

(2) Will not affect intrastate aviation in Alaska and

(3) Will not have a significant economic impact, positive or negative, on a substantial number of small entities under the criteria of the Regulatory Flexibility Act.

List of Subjects in 14 CFR Part 39

Air transportation, Aircraft, Aviation safety, Incorporation by reference, Safety.

The Amendment

Accordingly, under the authority delegated to me by the Administrator, the FAA amends 14 CFR part 39 as follows:

PART 39—Airworthiness Directives

■ 1. The authority citation for part 39 continues to read as follows:

Authority: 49 U.S.C. 106(g), 40113, 44701.

§ 39.13 [Amended]

■ 2. The FAA amends § 39.13 by:

■ a. Removing Airworthiness Directive 2024–04–10, Amendment 39–22689 (89 FR 15431, March 4, 2024); and

■ b. Adding the following new airworthiness directive:

2026–22–10 Airbus Helicopters Deutschland GmbH (AHD):

Amendment 39–23512; Docket No. FAA–2026–7230; Project Identifier MCAI–2026–00185–R.

(a) Effective Date

This airworthiness directive (AD) is effective December 14, 2026.

(b) Affected ADs

This AD replaces AD 2024–04–10, Amendment 39–22689 (89 FR 15431, March 4, 2024) (AD 2024–04–10).

(c) Applicability

This AD applies to all Airbus Helicopters Deutschland GmbH (AHD) Model EC135P1, EC135P2, EC135P2+, EC135P3, EC135T1, EC135T2, EC135T2+, EC135T3, and EC635T2+ helicopters, certificated in any category.

(d) Subject

Joint Aircraft System Component (JASC) Code 6410, Tail rotor blades.

(e) Unsafe Condition

This AD was prompted by a report of a separated tail rotor blade (TRB) assembly due to a crack in the TRB assembly caused by intergranular corrosion. The FAA is issuing this AD to detect and address cracks in the TRB assembly. The unsafe condition, if not addressed, could result in separation of a TRB assembly and reduced control of the helicopter.

(f) Compliance

Comply with this AD within the compliance times specified, unless already done.

(g) Requirements

Except as specified in paragraphs (h) and (i) of this AD: Comply with all required actions and compliance times specified in, and in accordance with, European Union Aviation Safety Agency AD 2026–0032, dated February 19, 2026 (EASA AD 2026–0032).

(h) Exceptions to EASA AD 2026–0032

(1) Where EASA AD 2026–0032 refers to its effective date, this AD requires using the effective date of this AD.

(2) Where EASA AD 2026–0032 refers to January 29, 2024 (the effective date of EASA Emergency AD 2024–0028–E), this AD requires using March 19, 2024 (the effective date of AD 2024–04–10).

(3) Where EASA AD 2026–0032 refers to flight hours, this AD requires using hours time-in-service (TIS).

(4) Where paragraph (1) of EASA AD 2026–0032 specifies ''Before an affected part exceeds 685 FH [flight hours] since first installation on a helicopter'', this AD requires replacing that text with ''Before an affected part accumulates 685 hours TIS since first installation on a helicopter, or within 10 hours TIS after March 19, 2024 (the effective date of AD 2024–04–10), whichever occurs later''.

(5) Where paragraph 4.3 of the material referenced in EASA AD 2026–0032 recommends type II visible dye inspections, this AD requires the inspection methods in paragraphs (h)(5)(i), (ii), or (iii) of this AD, as applicable:

(i) If the affected part has previously been inspected using a type II visible dye method, perform type II visible dye (Method B of the material referenced in EASA AD 2026–0032) or eddy current inspections, instead of fluorescent penetrant inspections.

(ii) If the affected part has not previously been inspected using a type II visible dye inspection, perform eddy current or fluorescent penetrant inspections, instead of type II visible dye inspections.

(iii) If you cannot determine whether the affected part has previously been inspected by a type II visible dye method, clean all surfaces to be inspected and perform an eddy current or a fluorescent penetrant inspection, instead of a type II visible dye inspection.

Note 1 to paragraph (h)(5): The FAA reminds operators of the airworthiness concern regarding type II visible dye inspections of critical parts discussed in FAA Special Airworthiness Information Bulletin (SAIB) CE–18–26R1, dated October 30, 2018 (SAIB CE–18–26R1). SAIB CE–18–26R1 explains the risks associated with using type II visible dye inspection methods, including the prohibition in ASTM E1417 on the use of type II visible dye penetrant prior to the use of type I fluorescent penetrant on the same surface. SAIB CE–18–26R1 also advises of the importance of pre- and post-inspection cleaning to ensure proper detection of cracks. You can find SAIB CE–18–26R1 at *drs.faa.gov*.

Note 2 to paragraph (h)(5): The material referenced in EASA AD 2026–0032 identifies a type II visible dye inspection as Method A (not allowed) or Method B; eddy current inspection as Method C; fluorescent penetrant inspection as Method D; and visual inspection as Method E.

Note 3 to paragraph (h)(5): When entering compliance with the applicable paragraph of the AD into the helicopter maintenance records, documenting that a type II visible dye inspection was performed improves the accuracy of maintenance records.

(6) This AD does not adopt paragraph (3) of EASA AD 2026–0032.

(7) This AD does not adopt the ''Remarks'' section of EASA AD 2026–0032.

(i) No Reporting or Returning of Parts

Where the material referenced in EASA AD 2026–0032 specifies to submit certain information and to send removed parts to the manufacturer, this AD does not include those actions.

(j) Special Flight Permits

Special flight permits, as described in 14 CFR 21.197 and 21.199, are not allowed.

(k) Alternative Methods of Compliance (AMOCs)

(1) The Manager, International Validation Branch, FAA, has the authority to approve AMOCs for this AD, if requested using the procedures found in 14 CFR 39.19. In accordance with 14 CFR 39.19, send your request to your principal inspector or responsible Flight Standards District Office, as appropriate. If sending information directly to the manager of the International Validation Branch, send it to the attention of the person identified in paragraph (l) of this AD and email to *AMOC@faa.gov*.

(2) Before using any approved AMOC, notify your appropriate principal inspector, or lacking a principal inspector, the manager

of the local flight standards district office/certificate holding district office.

(l) Additional Information

For more information about this AD, contact Soban Saeed, Aviation Safety Engineer, FAA, 1600 Stewart Avenue, Suite 410, Westbury, NY 11590; phone: (316) 946–4123; email: *soban.saeed@faa.gov.*

(m) Material Incorporated by Reference

(1) The Director of the Federal Register approved the incorporation by reference of the material listed in this paragraph under 5 U.S.C. 552(a) and 1 CFR part 51.

(2) You must use this material as applicable to do the actions required by this AD, unless the AD specifies otherwise.

(i) European Union Aviation Safety Agency (EASA) AD 2026–0032, dated February 19, 2026.

(ii) [Reserved]

(3) For EASA material identified in this AD, contact EASA, Konrad-Adenauer-Ufer 3, 50668 Cologne, Germany; phone: +49 221 8999 000; email: *ADs@easa.europa.eu;* website: *easa.europa.eu.* You may find the EASA material on the EASA website at *ad.easa.europa.eu.*

(4) You may view this material at the FAA, Airworthiness Products Section, Operational Safety Branch, 10101 Hillwood Parkway, Fort Worth, TX 76177. For information on the availability of this material at the FAA, call (817) 222–5110.

(5) You may view this material at the National Archives and Records Administration (NARA). For information on the availability of this material at NARA, visit *www.archives.gov/federal-register/cfr/ibr-locations* or email *fr.inspection@nara.gov.*

Issued on October 30, 2026.

Steven W. Thompson,

Acting Deputy Director, Compliance & Airworthiness Division, Aircraft Certification Service.

Federal Aviation Administration

14 CFR Part 39

[Docket No. FAA–2026–1335; Project Identifier AD–2025–00825–T; Amendment 39–23511; AD 2026–22–09]

RIN 2120–AA64

Airworthiness Directives; The Boeing Company Airplanes

AGENCY: Federal Aviation Administration (FAA), DOT.

ACTION: Final rule.

SUMMARY: The FAA is adopting a new airworthiness directive (AD) for certain The Boeing Company Model 787–8, 787–9, and 787–10 airplanes. This AD was prompted by reports that the low range radio altimeter (LRRA) system has an increased rate of non-computed data (NCD) outputs at low altitudes during approach and landing, which could cause unreliable altimeter function. This AD requires replacing the left and right LRRA transmit and receive coaxial cables with larger gauge coaxial cables. The FAA is issuing this AD to address the unsafe condition on these products.

DATES: This AD is effective December 14, 2026.

The Director of the Federal Register approved the incorporation by reference of a certain publication listed in this AD as of December 14, 2026.

ADDRESSES:

AD Docket: You may examine the AD docket at *regulations.gov* under Docket No. FAA–2026–1335; or in person at Docket Operations between 9 a.m. and 5 p.m., Monday through Friday, except Federal holidays. The AD docket contains this final rule, any comments received, and other information. The address for Docket Operations is U.S. Department of Transportation, Docket Operations, M–30, West Building Ground Floor, Room W12–140, 1200 New Jersey Avenue SE, Washington, DC 20590.

Material Incorporated by Reference:

- For Boeing material identified in this AD, contact Boeing Commercial Airplanes, Attention: Contractual & Data Services (C&DS), 2600 Westminster Blvd., MC 110–SK57, Seal Beach, CA 90740–5600; telephone 562–797–1717; website *myboeingfleet.com.*
- You may view this material at the FAA, Airworthiness Products Section, Operational Safety Branch, 2200 South 216th St., Des Moines, WA. For information on the availability of this material at the FAA, call 206–231–3195. It is also available at *regulations.gov* under Docket No. FAA–2026–1335.

FOR FURTHER INFORMATION CONTACT: Frank Carreras, Aviation Safety Engineer, FAA, 2200 South 216th St., Des Moines, WA 98198; phone: 206–231–3539; email: *Frank.Carreras@faa.gov.*

SUPPLEMENTARY INFORMATION:

Background

The FAA issued a notice of proposed rulemaking (NPRM) to amend 14 CFR part 39 by adding an AD that would apply to certain The Boeing Company Model 787–8, 787–9, and 787–10 airplanes. The NPRM was published in the **Federal Register** on February 24, 2026 (91 FR 8794). The NPRM was prompted by reports that the LRRA system has an increased rate of NCD outputs at low altitudes during approach and landing, which could cause unreliable altimeter function. In the NPRM, the FAA proposed to require replacing the left and right LRRA transmit and receive coaxial cables with larger gauge coaxial cables. The FAA is issuing this AD to address unreliable data output or in-service disruptions of LRRA functions. The unsafe condition, if not addressed, could result in loss of continued safe flight and landing.

Discussion of Final Airworthiness Directive

Comments

The FAA received comments from the Air Line Pilots Association, International (ALPA) and Boeing who supported the NPRM without change.

The FAA received additional comments from seven commenters, including Air Canada, American Airlines (American), EVA Air, the Foundation for Aviation Safety, Turkish Airlines, United Airlines (United), and an anonymous commenter. The following presents those comments and the FAA's response.

Request To Reference Revised Service Information

Air Canada and United requested the FAA revise the proposed AD to specify that Boeing Alert Service Bulletin B787–81205–SB340062–00, Issue 002, dated August 11, 2025 (Issue 002 of the Service Bulletin) may be used to accomplish the proposed actions. United noted that Issue 002 of the Service Bulletin corrects the required material kits and consumables and updates the installation instructions.

EVA Air requested that the FAA confirm accomplishment of Boeing Alert Requirements Bulletin B787–81205–SB340062–00 RB, Issue 002, dated August 11, 2025 (Issue 002 of the Requirements Bulletin), is acceptable for compliance with the proposed AD. EVA stated it identified multiple deviations and practical implementation issues with Boeing Alert Requirements Bulletin B787–81205–SB340062–00 RB, Issue 001, dated December 23, 2024 (Issue 001 of the Requirements Bulletin).

Turkish Airlines requested that the FAA revise the applicability of the proposed AD to reference Issue 002 of the Requirements Bulletin. Turkish Airlines stated that, due to technical problems in Issue 001 of the Requirements Bulletin, it accomplished some actions using Issue 001 along with approved repair data, and continued implementation using Issue 002 of the Requirements Bulletin.

The FAA agrees that Issue 002 of the Service Bulletin may be used for accomplishing the actions required by

this AD. Tables 1 and 2 of the Accomplishment Instructions of Issue 001 of the Requirements Bulletin refer to Issue 001 of the Service Bulletin or ''later approved issues'' as accepted procedures. Further, the FAA reviewed Issue 002 of the Service Bulletin, which updates work instructions for Group 4 airplanes, revises task tables and illustrations, and updates industry support information without expanding the scope of the AD. Therefore, operators may use the procedures in Issue 002 of the Service Bulletin for compliance with requirements of this AD. The FAA has determined no change to this AD is necessary in regard to Air Canada's and United's requests.

The FAA disagrees with EVA Air's and Turkish Airline's requests. Changes in Issue 002 of the Service Bulletin do not affect the required for compliance (RC) steps in Issue 001 of the Requirements Bulletin. Therefore, Boeing has not released Issue 002 of the Requirements Bulletin. However, as noted in the previous paragraph, later approved issues of the service bulletin provide accepted procedures, and this meets the intent of the requests from EVA Air and Turkish Airlines.

Request To Extend Compliance Time

American, Turkish Airlines, and an anonymous commenter requested that the FAA extend the compliance time of the proposed AD. American stated that Boeing quoted a lead time exceeding 500 days for the required cables, which would shorten the available time to accomplish the proposed requirements. Turkish Airlines stated that it shared its kit needs with Boeing in March 2025 but continued to experience kit supply problems. The anonymous commenter stated that moving the compliance date slightly after the effective date of the final rule would allow operators adequate time to incorporate the required modifications into scheduled maintenance cycles without unnecessary operational disruption.

The FAA disagrees with extending the compliance time. In developing an appropriate compliance time for this action, the FAA considered the recommendations of the manufacturer, the urgency associated with the subject unsafe condition, the availability of required parts, and the practical aspect of accomplishing the required modification within a period of time that corresponds to the normal scheduled maintenance for most affected operators. Further, the FAA has determined that operators have sufficient time within the 5-year compliance period to accomplish the required coaxial cable installation. However, under the provisions of paragraph (i) of this AD, the FAA will consider requests for approval of an extension of the compliance time if sufficient data are submitted to substantiate that the new compliance time would provide an acceptable level of safety. The FAA has not changed this AD in regard to this comment.

Request To Reduce Compliance Time

The Foundation for Aviation Safety noted that the unsafe condition is critical and questioned whether it is necessary to allow up to five years to accomplish the proposed actions that are estimated to take approximately 28 hours.

As discussed in the previous comment, the FAA has determined that the compliance time, as proposed, represents an appropriate amount of time in which the required actions can be performed in a timely manner within the affected fleet while still maintaining an adequate level of safety. The FAA has not changed this AD in regard to this comment.

Request To Allow Continued Operation Under Visual Flight Rules (VFR)

An anonymous commenter requested that the FAA consider permitting continued operation of affected airplanes on routes where both the departure and arrival airports are forecasted to maintain VFR conditions, since pilots operating under VFR rely primarily on visual references rather than sole dependence on radio altimeter data during approach and landing. The commenter stated this approach would maintain safety objectives while minimizing economic and scheduling impacts on operators and passengers during the transition period.

The FAA disagrees because the FAA has determined that LRRA coaxial cables must be replaced to address the unsafe condition. The LRRA is needed for everyday operations including continued operation of affected aircraft on routes where both departure and arrival airports are forecast to maintain VFR conditions. Further, this AD does not prohibit operations of the affected airplanes. The FAA has not changed this AD in regard to this comment.

Additional Changes Made to This Final Rule

Issue 002 of the Service Bulletin includes an update to the estimated work-hours. Therefore, the FAA has revised the Costs of Compliance section in this final rule.

Conclusion

The FAA reviewed the relevant data, considered any comments received, and determined that air safety requires adopting this AD as proposed. Accordingly, the FAA is issuing this AD to address the unsafe condition on these products. Except for minor editorial changes, and any other changes described previously, this AD is adopted as proposed in the NPRM. None of the changes will increase the economic burden on any operator.

Material Incorporated by Reference Under 1 CFR Part 51

The FAA reviewed Boeing Alert Requirements Bulletin B787–81205–SB340062–00 RB, Issue 001, dated December 23, 2024. This material specifies procedures for replacing the existing left and right BMS13–65 Type 0G LRRA transmit and receive coaxial cables with larger gauge Type 0J coaxial cables. This material is reasonably available because the interested parties have access to it through their normal course of business or by the means identified in the **ADDRESSES** section.

Costs of Compliance

The FAA estimates that this AD affects 169 airplanes of U.S. registry. The FAA estimates the following costs to comply with this AD:

ESTIMATED COSTS

Action	Labor cost	Parts cost	Cost per product	Cost on U.S. operators
Replacement	31 work-hours × $85 per hour = $2,635	$15,170	$17,805	$3,009,045

The FAA has included all known costs in its cost estimate. According to the manufacturer, however, some or all of the costs of this AD may be covered under warranty, thereby reducing the cost impact on affected operators.

Authority for This Rulemaking

Title 49 of the United States Code specifies the FAA's authority to issue rules on aviation safety. Subtitle I, section 106, describes the authority of the FAA Administrator. Subtitle VII: Aviation Programs, describes in more detail the scope of the Agency's authority.

The FAA is issuing this rulemaking under the authority described in Subtitle VII, Part A, Subpart III, Section 44701: General requirements. Under that section, Congress charges the FAA with promoting safe flight of civil aircraft in air commerce by prescribing regulations for practices, methods, and procedures the Administrator finds necessary for safety in air commerce. This regulation is within the scope of that authority because it addresses an unsafe condition that is likely to exist or develop on products identified in this rulemaking action.

Regulatory Findings

This AD will not have federalism implications under Executive Order 13132. This AD will not have a substantial direct effect on the States, on the relationship between the national government and the States, or on the distribution of power and responsibilities among the various levels of government.

For the reasons discussed above, I certify that this AD:

(1) Is not a ''significant regulatory action'' under Executive Order 12866,

(2) Will not affect intrastate aviation in Alaska, and

(3) Will not have a significant economic impact, positive or negative, on a substantial number of small entities under the criteria of the Regulatory Flexibility Act.

List of Subjects in 14 CFR Part 39

Air transportation, Aircraft, Aviation safety, Incorporation by reference, Safety.

The Amendment

Accordingly, under the authority delegated to me by the Administrator, the FAA amends 14 CFR part 39 as follows:

PART 39—AIRWORTHINESS DIRECTIVES

■ 1. The authority citation for part 39 continues to read as follows:

Authority: 49 U.S.C. 106(g), 40113, 44701.

§ 39.13 [Amended]

■ 2. The FAA amends § 39.13 by adding the following new airworthiness directive:

2026–22–09 The Boeing Company: Amendment 39–23511; Docket No. FAA–2026–1335; Project Identifier AD–2025–00825–T.

(a) Effective Date

This airworthiness directive (AD) is effective December 14, 2026.

(b) Affected ADs

None.

(c) Applicability

This AD applies to The Boeing Company Model 787–8, 787–9, and 787–10 airplanes, certificated in any category, as identified in Boeing Alert Requirements Bulletin B787–81205–SB340062–00 RB, Issue 001, dated December 23, 2024.

(d) Subject

Air Transport Association (ATA) of America Code 34, Navigation.

(e) Unsafe Condition

This AD was prompted by reports that the low range radio altimeter (LRRA) system has an increased rate of non-computed data (NCD) outputs at low altitudes during approach and landing. The FAA is issuing this AD to address unreliable data output or in-service disruptions of LRRA functions. The unsafe condition, if not addressed, could result in loss of continued safe flight and landing.

(f) Compliance

Comply with this AD within the compliance times specified, unless already done.

(g) Required Actions

Except as specified by paragraph (h) of this AD: At the applicable times specified in the ''Compliance'' paragraph of Boeing Alert Requirements Bulletin B787–81205–SB340062–00 RB, Issue 001, dated December 23, 2024, do all applicable actions identified in, and in accordance with, the Accomplishment Instructions of Boeing Alert Requirements Bulletin B787–81205–SB340062–00 RB, Issue 001, dated December 23, 2024.

Note 1 to paragraph (g): Guidance for accomplishing the actions required by this AD can be found in Boeing Alert Service Bulletin B787–81205–SB340062–00, Issue 01, dated December 23, 2024, which is referred to in Boeing Alert Requirements Bulletin B787–81205–SB340062–00 RB, Issue 001, dated December 23, 2024.

(h) Exception to Requirements Bulletin Specifications

Where the Compliance Time columns of the tables in the ''Compliance'' paragraph of Boeing Alert Requirements Bulletin B787–81205–SB340062–00 RB, Issue 001, dated December 23, 2024, refer to the Issue 001 date of Requirements Bulletin B787–81205–SB340062–00 RB, this AD requires using the effective date of this AD.

(i) Alternative Methods of Compliance (AMOCs)

(1) The Manager, AIR–520, Continued Operational Safety Branch, FAA, has the authority to approve AMOCs for this AD, if requested using the procedures found in 14 CFR 39.19. In accordance with 14 CFR 39.19, send your request to your principal inspector or responsible Flight Standards Office, as appropriate. If sending information directly to the manager of the Continued Operational Safety Branch, send it to the attention of the person identified in paragraph (j)(1) of this AD. Information may be emailed to: *AMOC@faa.gov*. Before using any approved AMOC, notify your appropriate principal inspector, or lacking a principal inspector, the manager of the responsible Flight Standards Office.

(2) An AMOC that provides an acceptable level of safety may be used for any repair, modification, or alteration required by this AD if it is approved by The Boeing Company Organization Designation Authorization (ODA) that has been authorized by the Manager, AIR–520, Continued Operational Safety Branch, FAA, to make those findings. To be approved, the repair method, modification deviation, or alteration deviation must meet the certification basis of the airplane, and the approval must specifically refer to this AD.

(j) Additional Information

(1) For more information about this AD, contact Frank Carreras, Aviation Safety Engineer, FAA, 2200 South 216th St., Des Moines, WA 98198; phone: 206–231–3539; email: *Frank.Carreras@faa.gov.*

(2) Material identified in this AD that is not incorporated by reference is available at the address specified in paragraph (k)(AD.

(k) Material Incorporated by Reference

(1) The Director of the Federal Register approved the incorporation by reference of the material listed in this paragraph under 5 U.S.C. 552(a) and 1 CFR part 51.

(2) You must use this material as applicable to do the actions required by this AD, unless the AD specifies otherwise.

(i) Boeing Alert Requirements Bulletin B787–81205–SB340062–00 RB, Issue 001, dated December 23, 2024.

(ii) [Reserved]

(3) For Boeing material identified in this AD, contact Boeing Commercial Airplanes, Attention: Contractual & Data Services (C&DS), 2600 Westminster Blvd., MC 110–SK57, Seal Beach, CA 90740–5600; telephone 562–797–1717; website *myboeingfleet.com*.

(4) You may view this material at the FAA, Airworthiness Products Section, Operational Safety Branch, 2200 South 216th St., Des Moines, WA. For information on the availability of this material at the FAA, call 206–231–3195.

(5) You may view this material at the National Archives and Records Administration (NARA). For information on the availability of this material at NARA, visit *www.archives.gov/federal-register/cfr/ibr-locations* or email *fr.inspection@nara.gov*.

Issued on October 27, 2026.

Brian Knaup,

Acting Deputy Director, Integrated Certificate Management Division, Aircraft Certification Service.

RIN 2120–AA64

Airworthiness Directives; Rolls-Royce Deutschland Ltd & Co KG Engines

AGENCY: Federal Aviation Administration (FAA), DOT.

ACTION: Final rule.

SUMMARY: The FAA is adopting a new airworthiness directive (AD) for all Rolls-Royce Deutschland Ltd & Co KG (RRD) Model BR700–725A1–12 engines. This AD was prompted by the manufacturer revising the airworthiness limitations section (ALS) of the existing time limits manual (TLM) to introduce new or more restrictive airworthiness limitations and associated thresholds and intervals for life-limited parts. This AD requires revising the ALS of the operator's existing approved engine maintenance or inspection program, as applicable, to incorporate new or more restrictive instructions and associated thresholds and intervals for life-limited parts. The FAA is issuing this AD to address the unsafe condition on these products.

DATES: This AD is effective December 14, 2026.

The Director of the Federal Register approved the incorporation by reference of a certain publication listed in this AD as of December 14, 2026.

ADDRESSES:

AD Docket: You may examine the AD docket at *regulations.gov* under Docket No. FAA–2026–7219; or in person at Docket Operations between 9 a.m. and 5 p.m., Monday through Friday, except Federal holidays. The AD docket contains this final rule, the mandatory continuing airworthiness information (MCAI), any comments received, and other information. The address for Docket Operations is U.S. Department of Transportation, Docket Operations, M–30, West Building Ground Floor, Room W12–140, 1200 New Jersey Avenue SE, Washington, DC 20590.

Material Incorporated by Reference:

- For European Union Aviation Safety Agency (EASA) material identified in this AD, contact EASA, Konrad-Adenauer-Ufer 3, 50668 Cologne, Germany; phone: +49 221 8999 000; email: *ADs@easa.europa.eu;* website: *easa.europa.eu.* You may find this material on the EASA website at *ad.easa.europa.eu.*
- You may view this material at the FAA, Airworthiness Products Section, Operational Safety Branch, 1200 District Avenue, Burlington, MA 01803. For information on the availability of this material at the FAA, call (817) 222–5110. It is also available at *regulations.gov* under Docket No. FAA–2026–7219.

FOR FURTHER INFORMATION CONTACT: Barbara Caufield, Aviation Safety Engineer, FAA, 2200 South 216th Street, Des Moines, WA 98198; phone: (781) 238–7146; email: *barbara.caufield@faa.gov.*

SUPPLEMENTARY INFORMATION:

Background

The FAA issued a notice of proposed rulemaking (NPRM) to amend 14 CFR part 39 by adding an AD that would apply to all RRD Model BR700–725A1–12 engines. The NPRM was published in the **Federal Register** on July 15, 2026 (91 FR 43343). The NPRM was prompted by EASA AD 2024–0136, dated July 11, 2024, issued by EASA, which is the Technical Agent for the Member States of the European Union (EASA AD 2024–0136) (also referred to as the MCAI). The MCAI states that the manufacturer revised the ALS of the existing TLM to introduce new or more restrictive airworthiness limitations and associated thresholds and intervals for life-limited parts.

In the NPRM, the FAA proposed to require revising the ALS of the operator's existing approved engine maintenance or inspection program, as applicable, to incorporate new or more restrictive instructions and associated thresholds and intervals for life-limited parts. The FAA is issuing this AD to address the unsafe condition on these products.

You may examine the MCAI in the AD docket at *regulations.gov* under Docket No. FAA–2026–7219.

Discussion of Final Airworthiness Directive

Comments

The FAA received one comment from an anonymous commenter. The following presents the comment received on the NPRM and the FAA's response to the comment.

Request To Include Non-Destructive Testing Inspections

An individual commenter stated that the FAA focuses primarily on removing parts once they reach the new cycle limit but fails to mandate intermediate non-destructive testing inspections for components approaching the new threshold. The commenter noted that without requiring inspections prior to part removal, the FAA leaves an undetected safety risk for engines that may already have micro-cracks propagating toward failure before reaching the new lower limit. The FAA infers that the commenter is requesting that non-destructive testing inspections be required for parts approaching their life-limit threshold.

The FAA disagrees with this request because the airworthiness limitations section includes inspections at piece part opportunity and life limits which are designed to appropriately mitigate the risk associated with the unsafe condition. The FAA did not change this AD as a result of this comment.

Conclusion

These products have been approved by the civil aviation authority of another country and are approved for operation in the United States. Pursuant to the FAA's bilateral agreement with this State of Design Authority, that authority has notified the FAA of the unsafe condition described in the MCAI referenced above. The FAA reviewed the relevant data, considered any comments received, and determined that air safety requires adopting this AD as proposed. Accordingly, the FAA is issuing this AD to address the unsafe condition on these products. Except for minor editorial changes, this AD is adopted as proposed in the NPRM. None of the changes will increase the economic burden on any operator.

Material Incorporated by Reference Under 1 CFR Part 51

The FAA reviewed EASA AD 2024–0136, which specifies procedures for revising the ALS of the existing approved engine maintenance or inspection program, as applicable, to incorporate new or more restrictive tasks and limitations and associated thresholds and intervals for life-limited parts. This material is reasonably available because the interested parties have access to it through their normal course of business or by the means identified in the **ADDRESSES** section.

Differences Between This AD and the MCAI

Where paragraph (3) of EASA AD 2024–0136 specifies revising the approved Aircraft Maintenance Programme within 12 months after the effective date of EASA AD 2024–0136, this AD requires revising the ALS of the existing approved engine maintenance or inspection program, as applicable, within 30 days after the effective date of this AD.

Costs of Compliance

The FAA estimates that this AD affects 758 engines installed on airplanes of U.S. registry.

The FAA estimates the following costs to comply with this AD:

ESTIMATED COSTS

Action	Labor cost	Parts cost	Cost per product	Cost on U.S. operators
Revise the ALS	1 work-hour × $85 per hour = $85	$0	$85	$64,430

Authority for This Rulemaking

Title 49 of the United States Code specifies the FAA's authority to issue rules on aviation safety. Subtitle I, section 106, describes the authority of the FAA Administrator. Subtitle VII: Aviation Programs, describes in more detail the scope of the Agency's authority.

The FAA is issuing this rulemaking under the authority described in Subtitle VII, Part A, Subpart III, Section 44701: General requirements. Under that section, Congress charges the FAA with promoting safe flight of civil aircraft in air commerce by prescribing regulations for practices, methods, and procedures the Administrator finds necessary for safety in air commerce. This regulation is within the scope of that authority because it addresses an unsafe condition that is likely to exist or develop on products identified in this rulemaking action.

Regulatory Findings

This AD will not have federalism implications under Executive Order 13132. This AD will not have a substantial direct effect on the States, on the relationship between the national government and the States, or on the distribution of power and responsibilities among the various levels of government.

For the reasons discussed above, I certify that this AD:

(1) Is not a ''significant regulatory action'' under Executive Order 12866,

(2) Will not affect intrastate aviation in Alaska, and

(3) Will not have a significant economic impact, positive or negative, on a substantial number of small entities under the criteria of the Regulatory Flexibility Act.

List of Subjects in 14 CFR Part 39

Air transportation, Aircraft, Aviation safety, Incorporation by reference, Safety.

The Amendment

Accordingly, under the authority delegated to me by the Administrator, the FAA amends 14 CFR part 39 as follows:

PART 39—AIRWORTHINESS DIRECTIVES

■ 1. The authority citation for part 39 continues to read as follows:

Authority: 49 U.S.C. 106(g), 40113, 44701.

§ 39.13 [Amended]

■ 2. The FAA amends § 39.13 by adding the following new airworthiness directive:

2026–22–07 Rolls-Royce Deutschland Ltd & Co KG: Amendment 39–23509; Docket No. FAA–2026–7219; Project Identifier MCAI–2024–00404–E.

(a) Effective Date

This airworthiness directive (AD) is effective December 14, 2026.

(b) Affected ADs

None.

(c) Applicability

This AD applies to all Rolls-Royce Deutschland Ltd & Co KG Model BR700–725A1–12 engines.

(d) Subject

Joint Aircraft System Component (JASC) Code 7250, Turbine Section.

(e) Unsafe Condition

This AD was prompted by the manufacturer revising the airworthiness limitations section of the existing time limits manual to introduce new or more restrictive airworthiness limitations and associated thresholds and intervals for life-limited parts. The FAA is issuing this AD to prevent failure of critical rotating parts. The unsafe condition, if not addressed, could result in failure of one or more engines, loss of thrust control, and loss of the airplane.

(f) Compliance

Comply with this AD within the compliance times specified, unless already done.

(g) Required Actions

Except as specified in paragraph (h) of this AD: Perform all required actions within the compliance times specified in, and in accordance with, European Union Aviation Safety Agency (EASA) AD 2024–0136, dated July 11, 2024 (AD 2024–0136).

(h) Exceptions to EASA AD 2024–0136

(1) Where EASA AD 2024–0136 requires compliance from its effective date, this AD requires using the effective date of this AD.

(2) This AD does not require compliance with paragraphs (1), (2), (4), and (5) of EASA AD 2024–0136.

(3) Where paragraph (3) of EASA AD 2024–0136 specifies ''Within 12 months after the effective date of this AD, revise the approved AMP,'' replace that text with ''Within 30 days after the effective date of this AD, revise the airworthiness limitations section of the existing approved engine maintenance or inspection program, as applicable''.

(4) The initial compliance time for doing the tasks specified in paragraph (3) of EASA AD 2024–0136 is on or before the applicable ''limitations'' and ''associated thresholds'' as incorporated by the requirements of paragraph (3) of EASA AD 2024–0136 or within 30 days after the effective date of this AD, whichever occurs later.

(5) This AD does not adopt the ''Remarks'' section of EASA AD 2024–0136.

(i) Provisions for Alternative Actions and Intervals

No alternative actions and associated thresholds and intervals, including life limits, are allowed for compliance with paragraph (g) of this AD unless they are approved as specified in the provisions of the ''Ref. Publications'' section of EASA AD 2024–0136.

(j) Alternative Methods of Compliance (AMOCs)

The Manager, AIR–520 Continued Operational Safety Branch, FAA, has the authority to approve AMOCs for this AD, if requested using the procedures found in 14 CFR 39.19. In accordance with 14 CFR 39.19, send your request to your principal inspector or local Flight Standards District Office, as appropriate. If sending information directly to the manager of the AIR–520 Continued Operational Safety Branch, send it to the attention of the person identified in paragraph (k) of this AD and email to: *AMOC@faa.gov*. Before using any approved AMOC, notify your appropriate principal inspector, or lacking a principal inspector, the manager of the local flight standards district office/certificate holding district office.

(k) Additional Information

For more information about this AD, contact Barbara Caufield, Aviation Safety Engineer, FAA, 2200 South 216th Street, Des

Moines, WA 98198; phone: (781) 238–7146; email: *barbara.caufield@faa.gov.*

(l) Material Incorporated by Reference

(1) The Director of the Federal Register approved the incorporation by reference (IBR) of the material listed in this paragraph under 5 U.S.C. 552(a) and 1 CFR part 51.

(2) You must use this material as applicable to do the actions required by this AD, unless the AD specifies otherwise.

(i) European Union Aviation Safety Agency (EASA) AD 2024–0136, dated July 11, 2024.

(ii) [Reserved]

(3) For EASA material identified in this AD, contact EASA, Konrad-Adenauer-Ufer 3, 50668 Cologne, Germany; phone: +49 221 8999 000; email: *ADs@easa.europa.eu;* website: *easa.europa.eu.* You may find this material on the EASA website at *ad.easa.europa.eu.*

(4) You may view this material at the FAA, Airworthiness Products Section, Operational Safety Branch, 1200 District Avenue, Burlington, MA 01803. For information on the availability of this material at the FAA, call (817) 222–5110.

(5) You may view this material at the National Archives and Records Administration (NARA). For information on the availability of this material at NARA, visit *www.archives.gov/federal-register/cfr/ibr-locations* or email *fr.inspection@nara.gov.*

Issued on October 26, 2026.

Brian Knaup,

Acting Deputy Director, Integrated Certificate Management Division, Aircraft Certification Service.

RIN 2120–AA64

Airworthiness Directives; Airbus Helicopters

AGENCY: Federal Aviation Administration (FAA), DOT.

ACTION: Final rule.

SUMMARY: The FAA is adopting a new airworthiness directive (AD) for all Airbus Helicopters (AH) Model EC130B4 helicopters. This AD was prompted by reports of weaknesses in the locking mechanisms on the left-hand side swinging and sliding door. This AD requires modifying the swing door star support and sliding door star support stringer. This AD also prohibits installing an affected composite door on any helicopter unless certain requirements are met. The FAA is issuing this AD to address the unsafe condition on these products.

DATES: This AD is effective December 14, 2026.

The Director of the Federal Register approved the incorporation by reference of a certain publication listed in this AD as of December 14, 2026.

ADDRESSES:

AD Docket: You may examine the AD docket at *regulations.gov* under Docket No. FAA–2025–7226; or in person at Docket Operations between 9 a.m. and 5 p.m., Monday through Friday, except Federal holidays. The AD docket contains this final rule, the mandatory continuing airworthiness information (MCAI), any comments received, and other information. The address for Docket Operations is U.S. Department of Transportation, Docket Operations, M–30, West Building Ground Floor, Room W12–140, 1200 New Jersey Avenue SE, Washington, DC 20590.

Material Incorporated by Reference:

- For European Union Aviation Safety Agency (EASA) material identified in this AD, contact EASA, Konrad-Adenauer-Ufer 3, 50668 Cologne, Germany; phone: +49 221 8999 000; email: *ADs@easa.europa.eu;* website: *easa.europa.eu.* You may find the EASA material on the EASA website at *ad.easa.europa.eu.*
- You may view this material at the FAA, Airworthiness Products Section, Operational Safety Branch, 10101 Hillwood Parkway, Fort Worth, TX 76177. For information on the availability of this material at the FAA, call (817) 222–5110.

FOR FURTHER INFORMATION CONTACT: Thanh Tran, Aviation Safety Engineer, FAA, 1600 Stewart Avenue, Suite 410, Westbury, NY 11590; phone: (562) 275–5304; email: *thanh.b.tran@faa.gov.*

SUPPLEMENTARY INFORMATION:

Background

The FAA issued a notice of proposed rulemaking (NPRM) to amend 14 CFR part 39 by adding an AD that would apply to all Airbus Helicopters Model EC130B4 helicopters. The NPRM was published in the **Federal Register** on July 23, 2026 (91 FR 46325). The NPRM was prompted by an MCAI issued by EASA, which is the Technical Agent for the Member States of the European Union. EASA issued EASA AD 2024–0232, dated December 5, 2024 (EASA AD 2024–0232), (also referred to as the MCAI). The MCAI states that several incidents on the left-hand side swing and sliding doors have revealed some weaknesses in the locking mechanism. Additionally, the MCAI states that AH [Airbus Helicopters] Model EC130B4 helicopters that have embodied EC MOD [modification] 07 3796 were erroneously excluded from the applicability of a previously issued EASA AD.

In the NPRM, the FAA proposed to require, for all AH Model EC130B4 helicopters, modifying the swing door star support and sliding door star support stringer and proposed to prohibit installing an affected composite door on any helicopter unless certain requirements are met. The FAA is issuing this AD to address failure of the sliding door star support, which could inhibit the operation of the sliding door from the inside, and delay the evacuation of passengers during an emergency.

You may examine the MCAI in the AD docket at *regulations.gov* under Docket No. FAA–2025–7226.

Discussion of Final Airworthiness Directive

Comments

The FAA received comments from one anonymous commenter. The commenter supported the NPRM without change.

Conclusion

These products have been approved by the civil aviation authority of another country and are approved for operation in the United States. Pursuant to the FAA's bilateral agreement with this State of Design Authority, that authority has notified the FAA of the unsafe condition described in the MCAI referenced above. The FAA reviewed the relevant data, considered any comments received, and determined that air safety requires adopting this AD as proposed. Accordingly, the FAA is issuing this AD to address the unsafe condition on these products. Except for minor editorial changes, this AD is adopted as proposed in the NPRM. None of the changes will increase the economic burden on any operator.

Material Incorporated by Reference Under 1 CFR Part 51

The FAA reviewed EASA AD 2024–0232, which specifies procedures for modifying the door locking/unlocking mechanism by installing a reinforcing bracket and replacing rod ends and prohibits installing a composite door on any helicopter unless this modification is accomplished. This material is reasonably available because the interested parties have access to it through their normal course of business or by the means identified in the **ADDRESSES** section.

Differences Between This AD and the MCAI

EASA AD 2024–0232 specifies to accomplish the modification of the locking/unlocking mechanism within 24 months. This AD requires the modification to be accomplished within 460 hours time-in-service (TIS) based on an average of 230 hours TIS per year. The FAA has determined this compliance time represents the maximum interval of time allowable for the affected helicopters to continue to safely operate before the modification is done.

Costs of Compliance

The FAA estimates that this AD affects 214 helicopters of U.S. registry.

The FAA estimates the following costs to comply with this AD:

ESTIMATED COSTS

Action	Labor cost	Parts cost	Cost per product	Cost on U.S. operators
Perform modification	20 work-hours × $85 per hour = $1,700	$642	$2,342	$501,188

Authority for This Rulemaking

Title 49 of the United States Code specifies the FAA's authority to issue rules on aviation safety. Subtitle I, section 106, describes the authority of the FAA Administrator. Subtitle VII: Aviation Programs, describes in more detail the scope of the Agency's authority.

The FAA is issuing this rulemaking under the authority described in Subtitle VII, Part A, Subpart III, Section 44701: General requirements. Under that section, Congress charges the FAA with promoting safe flight of civil aircraft in air commerce by prescribing regulations for practices, methods, and procedures the Administrator finds necessary for safety in air commerce. This regulation is within the scope of that authority because it addresses an unsafe condition that is likely to exist or develop on products identified in this rulemaking action.

Regulatory Findings

This AD will not have federalism implications under Executive Order 13132. This AD will not have a substantial direct effect on the States, on the relationship between the national government and the States, or on the distribution of power and responsibilities among the various levels of government.

For the reasons discussed above, I certify that this AD:

(1) Is not a ''significant regulatory action'' under Executive Order 12866,

(2) Will not affect intrastate aviation in Alaska, and

(3) Will not have a significant economic impact, positive or negative, on a substantial number of small entities under the criteria of the Regulatory Flexibility Act.

List of Subjects in 14 CFR Part 39

Air transportation, Aircraft, Aviation safety, Incorporation by reference, Safety.

The Amendment

Accordingly, under the authority delegated to me by the Administrator, the FAA amends 14 CFR part 39 as follows:

PART 39—AIRWORTHINESS DIRECTIVES

■ 1. The authority citation for part 39 continues to read as follows:

Authority: 49 U.S.C. 106(g), 40113, 44701.

§ 39.13 [Amended]

■ 2. The FAA amends § 39.13 by adding the following new airworthiness directive:

2026–22–08 Airbus Helicopters: Amendment 39–23510; Docket No. FAA–2025–7226; Project Identifier MCAI–2025–01346–R.

(a) Effective Date

This airworthiness directive (AD) is effective December 14, 2026.

(b) Affected ADs

None.

(c) Applicability

This AD applies to all Airbus Helicopters Model EC130B4 helicopters, certificated in any category.

(d) Subject

Joint Aircraft System Component (JASC) Code 5200, Doors.

(e) Unsafe Condition

This AD was prompted by reports of weaknesses in the locking mechanisms on the left-hand side swing and sliding doors. The FAA is issuing this AD to address failure of the sliding door star support, which could inhibit the operation of the sliding door from the inside, and delay the evacuation of passengers during an emergency.

(f) Compliance

Comply with this AD within the compliance times specified, unless already done.

(g) Requirements

Except as specified in paragraphs (h) and (i) of this AD: Comply with all required actions and compliance times specified in, and in accordance with, European Union Aviation Safety Agency AD 2024–0232, dated December 5, 2024 (EASA AD 2024–0232).

(h) Exceptions to EASA AD 2024–0232

(1) Where EASA AD 2024–0232 refers to its effective date, this AD requires using the effective date of this AD.

(2) Where paragraph (1) of EASA AD 2024–0232 specifies to complete the actions within 24 months after its effective date, this AD requires completion within 460 hours time-in-service after the effective date of this AD.

(3) Where the material referenced in EASA AD 2024–0232 specifies performing a dye penetrant inspection, for the purposes of this AD, it is not permitted to use Type 2 colored dye penetrant for inspections required by paragraph (g) of this AD.

(4) Where the material referenced in EASA AD 2024–0232 specifies discarding certain parts, this AD requires removing those parts from service.

(5) Where the material referenced in EASA AD 2024–0232 specifies ''check'', this AD requires replacing that text with ''inspect''.

(6) This AD does not adopt the ''Remarks'' section of EASA AD 2024–0232.

(i) No Reporting Requirement

Although the material referenced in EASA AD 2024–0232 specifies to submit certain information to the manufacturer, this AD does not require that action.

(j) Alternative Methods of Compliance (AMOCs)

(1) The Manager, International Validation Branch, FAA, has the authority to approve AMOCs for this AD, if requested using the procedures found in 14 CFR 39.19. In accordance with 14 CFR 39.19, send your request to your principal inspector or local Flight Standards District Office, as appropriate. If sending information directly to the manager of the International Validation Branch, send it to the attention of the person identified in paragraph (k) of this AD and email to: *AMOC@faa.gov.*

(2) Before using any approved AMOC, notify your appropriate principal inspector, or lacking a principal inspector, the manager of the local flight standards district office/certificate holding district office.

(k) Additional Information

For more information about this AD, contact Thanh Tran, Aviation Safety

Engineer, FAA, 1600 Stewart Avenue, Suite 410, Westbury, NY 11590; phone: (562) 275–5304; email: *thanh.b.tran@faa.gov.*

(l) Material Incorporated by Reference

(1) The Director of the Federal Register approved the incorporation by reference of the material listed in this paragraph under 5 U.S.C. 552(a) and 1 CFR part 51.

(2) You must use this material as applicable to do the actions required by this AD, unless the AD specifies otherwise.

(i) European Union Aviation Safety Agency (EASA) AD 2024–0232, dated December 5, 2024.

(ii) [Reserved]

(3) For EASA material identified in this AD, contact EASA, Konrad-Adenauer-Ufer 3, 50668 Cologne, Germany; phone: +49 221 8999 000; email: *ADs@easa.europa.eu;* website: *easa.europa.eu.* You may find the EASA material on the EASA website at *ad.easa.europa.eu.*

(4) You may view this material at the FAA, Airworthiness Products Section, Operational Safety Branch, 10101 Hillwood Parkway, Fort Worth, TX 76177. For information on the availability of this material at the FAA, call (817) 222–5110.

(5) You may view this material at the National Archives and Records Administration (NARA). For information on the availability of this material at NARA, visit *www.archives.gov/federal-register/cfr/ibr-locations* or email *fr.inspection@nara.gov.*

Issued on October 26, 2026.

Steven W. Thompson,

Acting Deputy Director, Compliance & Airworthiness Division, Aircraft Certification Service.

BILLING CODE 4910–13–P

DEPARTMENT OF TRANSPORTATION

Federal Aviation Administration

14 CFR Part 39

[Docket No. FAA–2026–13797; Project Identifier AD–2026–01052–E; Amendment 39–23515; AD 2026–22–13]

RIN 2120–AA64

Airworthiness Directives; Lycoming Engines

AGENCY: Federal Aviation Administration (FAA), DOT.

ACTION: Final rule; request for comments.

SUMMARY: The FAA is superseding Airworthiness Directive (AD) 2026–17–10, which applied to Lycoming Engines (Lycoming) Model O–235, O–540, and IO–540 engines with a certain piston pin installed. AD 2026–17–10 required replacement of the affected piston pin with a part eligible for installation and, for certain engines, oil change and visual inspection of the engine oil filter, oil pressure screen, and oil suction screen for metal particulates. AD 2026–17–10 also prohibited the installation of an affected piston pin on any engine. Since the FAA issued AD 2026–17–10, the manufacturer has identified additional Lycoming Model engines that are subject to the unsafe condition, and the FAA determined the need to clarify the definition for an ''affected piston pin,'' and include corrective action for engine models that were not listed in the manufacturer's service material. This AD requires replacement of the affected piston pin with a part eligible for installation and, for certain engines, oil change and visual inspection of the engine oil filter, oil pressure screen, and oil suction screen for metal particulates. This AD also prohibits the installation of an affected piston pin on any engine. This AD also expands the applicability to include additional affected engines with a certain piston pin installed. The FAA is issuing this AD to address the unsafe condition on these products.

DATES: This AD is effective November 24, 2026.

The Director of the Federal Register approved the incorporation by reference of a certain publication listed in this AD as of November 24, 2026.

The Director of the Federal Register approved the incorporation by reference of a certain other publication listed in this AD as of September 14, 2026 (91 FR 55451, August 28, 2026).

The FAA must receive comments on this AD by December 24, 2026.

ADDRESSES: You may send comments, using the procedures found in 14 CFR 11.43 and 11.45, by any of the following methods:

- *Federal eRulemaking Portal:* Go to *regulations.gov*. Follow the instructions for submitting comments.
- *Fax:* (202) 493–2251.
- *Mail:* U.S. Department of Transportation, Docket Operations, M–30, West Building Ground Floor, Room W12–140, 1200 New Jersey Avenue SE, Washington, DC 20590.
- *Hand Delivery:* Deliver to Mail address above between 9 a.m. and 5 p.m., Monday through Friday, except Federal holidays.

AD Docket: You may examine the AD docket at *regulations.gov* under Docket No. FAA–2026–13797; or in person at Docket Operations between 9 a.m. and 5 p.m., Monday through Friday, except Federal holidays. The AD docket contains this final rule, any comments received, and other information. The street address for Docket Operations is listed above.

Material Incorporated by Reference:

- For Lycoming material identified in this AD, contact Lycoming Engines, 652 Oliver Street, Williamsport, PA 17701; phone: (800) 258–3279; website: *lycoming.com/contact/knowledge-base/publications.*
- You may view this material at the FAA, Airworthiness Products Section, Operational Safety Branch, 1200 District Avenue, Burlington, MA 01803. For information on the availability of this material at the FAA, call (817) 222–5110. It is also available at *regulations.gov* under Docket No. FAA–2026–13797.

FOR FURTHER INFORMATION CONTACT: Ramanpreet Singh, Aviation Safety Engineer, FAA, 1701 Columbia Avenue, College Park, GA 30337; phone: (516) 228–7300; email: *ECB-COS@faa.gov.*

SUPPLEMENTARY INFORMATION:

Comments Invited

The FAA invites you to send any written data, views, or arguments about this final rule. Send your comments using a method listed under the **ADDRESSES** section. Include ''Docket No. FAA–2026–13797; Project Identifier AD–2026–01052–E'' at the beginning of your comments. The most helpful comments reference a specific portion of the final rule, explain the reason for any recommended change, and include supporting data. The FAA will consider all comments received by the closing date and may amend this final rule because of those comments.

Except for Confidential Business Information (CBI) as described in the following paragraph, and other information as described in 14 CFR 11.35, the FAA will post all comments received, without change, to *regulations.gov*, including any personal information you provide. The agency will also post a report summarizing each substantive verbal contact received about this final rule.

Confidential Business Information

CBI is commercial or financial information that is both customarily and actually treated as private by its owner. Under the Freedom of Information Act (FOIA) (5 U.S.C. 552), CBI is exempt from public disclosure. If your comments responsive to this AD contain commercial or financial information that is customarily treated as private, that you actually treat as private, and that is relevant or responsive to this AD, it is important that you clearly designate the submitted comments as CBI. Please mark each page of your submission containing CBI as ''PROPIN.'' The FAA will treat such marked submissions as confidential under the FOIA, and they will not be placed in the public docket of this AD. Submissions containing CBI

should be sent to Ramanpreet Singh, Aviation Safety Engineer, FAA, 1701 Columbia Avenue, College Park, GA 30337. Any commentary that the FAA receives which is not specifically designated as CBI will be placed in the public docket for this rulemaking.

Background

The FAA issued AD 2026–17–10, Amendment 39–23454 (91 FR 55451, August 28, 2026) (AD 2026–17–10), for Lycoming Model O–235, O–540, and IO–540 engines with a certain piston pin installed. AD 2026–17–10 required replacement of the affected piston pin with a part eligible for installation and, for certain engines, oil change and visual inspection of the engine oil filter, oil pressure screen, and oil suction screen for metal particulates. AD 2026–17–10 was prompted by several reports of piston pin failure that resulted in metal particulate contamination in the engine oil and engine failure. The FAA issued AD 2026–17–10 to prevent failure of the piston pin.

Actions Since AD 2026–17–10 Was Issued

Since the FAA issued AD 2026–17–10, the manufacturer has identified additional Lycoming Model engines that are subject to the unsafe condition and identified Lycoming Model engines that were included in the applicability of AD 2026–17–10 that are not subject to the unsafe condition. Additionally, the FAA determined the need to clarify the applicability, the definition for an ''affected piston pin,'' and corrective actions. The FAA is issuing this AD to address the unsafe condition on these products.

FAA's Determination

The FAA is issuing this AD because the agency determined the unsafe condition described previously is likely to exist or develop in other products of the same type design.

Material Incorporated by Reference Under 1 CFR part 51

The FAA reviewed Lycoming Service Instruction No. 1009BF, dated July 20, 2026, which identifies the compliance times between overhauls for certain Lycoming Model engines.

This AD also requires the following material, which the Director of the Federal Register approved for incorporation by reference as of September 14, 2026 (91 FR 55451, August 28, 2026).

- Lycoming Mandatory Service Bulletin No. (MSB) 667A, dated March 12, 2026 (Lycoming MSB 667A).

This material is reasonably available because the interested parties have access to it through their normal course of business or by the means identified in the **ADDRESSES** section.

AD Requirements

This AD requires replacement of the affected piston pin with a part eligible for installation and, for certain engines, oil change and visual inspection of the engine oil filter, oil pressure screen, and oil suction screen for metal particulates. This AD also prohibits the installation of an affected piston pin on any engine. This AD also expands the applicability to include additional affected engines with a certain piston pin installed.

Differences Between This AD and the Referenced Material

This AD requires oil change and visual inspection of the engine oil filter, oil pressure screen, and oil suction screen for metal particulates within 5 hours time-in-service (TIS), while Lycoming MSB 667A does not have this requirement.

Justification for Immediate Adoption and Determination of the Effective Date

Section 553(b) of the Administrative Procedure Act (APA) (5 U.S.C. 551 *et seq.*) authorizes agencies to dispense with notice and comment procedures for rules when the agency, for ''good cause,'' finds that those procedures are ''impracticable, unnecessary, or contrary to the public interest.'' Under this section, an agency, upon finding good cause, may issue a final rule without providing notice and seeking comment prior to issuance. Further, section 553(d) of the APA authorizes agencies to make rules effective in less than thirty days, upon a finding of good cause.

An unsafe condition exists that requires the immediate adoption of this AD without providing an opportunity for public comments prior to adoption. The FAA has found that the risk to the flying public justifies forgoing notice and comment prior to adoption of this rule because piston pin microcracks and inclusions are difficult to detect prior to failure, and can result in internal damage to the engine, in-flight shutdown, and loss of control of the airplane. The FAA has determined that affected engines will need to be inspected and have affected piston pins replaced within 25 hours TIS or earlier after the effective date of this AD depending on the engine model. Additionally, the compliance time in this AD is shorter than the time necessary for the public to comment and for publication of the final rule. Accordingly, notice and opportunity for prior public comment are impracticable and contrary to the public interest pursuant to 5 U.S.C. 553(b).

In addition, the FAA finds that good cause exists pursuant to 5 U.S.C. 553(d) for making this amendment effective in less than 30 days, for the same reasons the FAA found good cause to forgo notice and comment.

Regulatory Flexibility Act

The requirements of the Regulatory Flexibility Act (RFA) do not apply when an agency finds good cause pursuant to 5 U.S.C. 553 to adopt a rule without prior notice and comment. Because FAA has determined that it has good cause to adopt this rule without prior notice and comment, RFA analysis is not required.

Costs of Compliance

The FAA estimates that this AD affects 957 engines installed on airplanes of U.S. registry.

The FAA estimates the following costs to comply with this AD:

ESTIMATED COSTS

Action	Labor cost	Parts cost	Cost per product	Cost on U.S. operators
Piston pin replacement, oil change, and oil inspection.	25 work-hours × $85 per hour = $2,125	$2,200	$4,325	$4,139,025

The FAA has included all known costs in its cost estimate. According to the manufacturer, however, some of the costs of this AD may be covered under warranty, thereby reducing the cost impact on affected operators.

Authority for This Rulemaking

Title 49 of the United States Code specifies the FAA's authority to issue

rules on aviation safety. Subtitle I, section 106, describes the authority of the FAA Administrator. Subtitle VII: Aviation Programs describes in more detail the scope of the Agency's authority.

The FAA is issuing this rulemaking under the authority described in Subtitle VII, Part A, Subpart III, Section 44701: General requirements. Under that section, Congress charges the FAA with promoting safe flight of civil aircraft in air commerce by prescribing regulations for practices, methods, and procedures the Administrator finds necessary for safety in air commerce. This regulation is within the scope of that authority because it addresses an unsafe condition that is likely to exist or develop on products identified in this rulemaking action.

Regulatory Findings

This AD will not have federalism implications under Executive Order 13132. This AD will not have a substantial direct effect on the States, on the relationship between the national government and the States, or on the distribution of power and responsibilities among the various levels of government.

For the reasons discussed above, I certify that this AD:

(1) Is not a ''significant regulatory action'' under Executive Order 12866, and

(2) Will not affect intrastate aviation in Alaska.

List of Subjects in 14 CFR Part 39

Air transportation, Aircraft, Aviation safety, Incorporation by reference, Safety.

The Amendment

Accordingly, under the authority delegated to me by the Administrator, the FAA amends 14 CFR part 39 as follows:

PART 39—AIRWORTHINESS DIRECTIVES

■ 1. The authority citation for part 39 continues to read as follows:

Authority: 49 U.S.C. 106(g), 40113, 44701.

§ 39.13 [Amended]

■ 2. The FAA amends § 39.13 by:

■ a. Removing Airworthiness Directive 2026–17–10, Amendment 39–23454 (91 FR 55451, August 28, 2026); and

■ b. Adding the following new airworthiness directive:

2026–22–13 Lycoming Engines: Amendment 39–23515; Docket No. FAA–2026–13797; Project Identifier AD–2026–01052–E.

(a) Effective Date

This airworthiness directive (AD) is effective November 24, 2026.

(b) Affected ADs

This AD replaces AD 2026–17–10, Amendment 39–23454 (91 FR 55451, August 28, 2026).

(c) Applicability

This AD applies to Lycoming Engines (Lycoming) Model engines identified in table 1 to paragraph (c) of this AD with an installed piston pin having part number (P/N) LW–13445 that was manufactured between January 7, 2021 to December 15, 2025. If the date of manufacture for the piston pin cannot be determined, this AD is applicable. If the current piston pins (P/N LW–13445) were installed prior to January 7, 2021, this AD is not applicable.

TABLE 1 TO PARAGRAPH (c)—LYCOMING MODEL ENGINES

Engine series	Engine model
O–235	–C1, –C1A, –C1B, –C1C, –C2A, –C2B, –C2C, –E1, –E1B, –E2A, –E2B, –F1, –F1B, –F2A, –F2B, –G1, –G1B, –G2A, –G2B, –H2C, –J2A, –J2B, –K2A, –K2B, –K2C, –L2A, –L2C, –M1, –M2C, –M3C, –N2A, –N2C, –P1, –P2A, –P2C, –P3C.
O–320	–A1A, –A1B, –A2A, –A2B, –A2C, –A2D, –A3A, –A3B, –A3C, –B1A, –B1B, –B2A, –B2B, –B2C, –B2D, –B2E, –B3A, –B3B, –B3C, –D1A, –D1B, –D1C, –D1D, –D1F, –D2A, –D2B, –D2C, –D2F, –D2J, –D3G, –E1A, –E1B, –E1C, –E1F, –E1J, –E2A, –E2B, –E2C, –E2D, –E2F, –E2G, –E2H, –E3D, –E3H.
IO–320	–B1A, –B1C, –B1D, –B1E, –B2A, –C1A,–C1B, –D1A, –D1B, –D1C, –E1A, –E1B, –E2A,–E2B.
AIO–320	–A1B, –B1B, –C1B.
LIO–320	–B1A, –C1A.
AEIO–320	–D1B, –D2B, –E1A, –E1B, –E2A, –E2B.
VO–435	–A1A (O–435–21), –A1B (O–435–6), –A1C (O–435–23, –23A, –23B, –23C), –A1D (O–435–6A), –A1E, –A1F, –B1A.
TVO–435	–A1A, –B1A (O–435–25A), –B1B, –C1A, –D1A, –D1B, –E1A, –F1A, –G1A, –G1B.
O–540	–J1A5D, –J1B5D, –J1C5D, –J1D5D, –J2A5D, –J2B5D, –J2C5D, –J2D5D, –J3A5, –J3A5D, –J3C5D, –L3C5D.
IO–540	–AB1A5, –J4A5, –W1A5, –W1A5D, –W3A5D.

(d) Subject

Joint Aircraft System Component (JASC) Code 8530, Reciprocating Engine Cylinder Section.

(e) Unsafe Condition

This AD was prompted by reports from Lycoming of metal particulates found in the engine oil during oil change and two non-detectable engine failures. The FAA is issuing this AD to prevent failure of the piston pin. The unsafe condition, if not addressed, could result in engine failure, loss of thrust control, in-flight shutdown, damage to the airplane, and loss of control of the airplane.

(f) Compliance

Comply with this AD within the compliance times specified, unless already done.

(g) Definitions

(1) For the purpose of this AD, a ''part eligible for installation'' is one of the following:

(i) A piston pin that does not have P/N LW–13445.

(ii) A piston pin having P/N LW–13445 that was not manufactured between January 7, 2021 to December 15, 2025.

(2) For the purpose of this AD, an ''affected piston pin'' is a piston pin having P/N LW–13445 and one of the following:

(i) A date of manufacture between January 7, 2021 to December 15, 2025.

(ii) A date of manufacture that is unknown.

(3) For the purpose of this AD, Group 1 engines are all affected engines, except engines with an installed piston pin having P/N LW–13445 with a manufacture date between March 23, 2023 to December 15, 2025, or an installed piston pin having P/N LW–13445 with a manufacture date that is unknown.

(4) For the purpose of this AD, Group 2 engines are engines with an installed piston pin having P/N LW–13445 with a manufacture date between March 23, 2023 to December 15, 2025, or an installed piston pin having P/N LW–13445 with a manufacture date that is unknown.

(h) Required Actions

(1) For Group 1 and Group 2 engines, except for Group 2 engines with greater than or equal to 150 hours time in service (TIS)

as of the effective date of this AD, within 5 hours TIS after the effective date of this AD, perform an oil change and visual inspection of the engine oil filter, oil pressure screen, and oil suction screen for metal particulates.

Note 1 to paragraph (h)(1): Guidance for engine oil filter, oil pressure screen, and oil suction screen inspection instructions and identification of metallic solids may be found in Lycoming Mandatory Service Bulletin No. (MSB) No. 480F, dated May 25, 2017.

(2) If any metal particulates are found during the oil change and inspection required by paragraph (h)(1) of this AD, before further flight, replace any affected piston pin with a part eligible for installation in accordance with the Required Action of Lycoming MSB 667A, dated March 12, 2026 (Lycoming MSB 667A), as applicable to engine model.

(3) For Group 1 engines with an installed piston pin with a manufacture date between January 07, 2021, to March 22, 2023, where metal particulates were not found during the oil change and inspection required by paragraph (h)(1) of this AD, at the next maintenance event requiring the removal of a cylinder assembly with an affected piston pin, or at the next engine overhaul not to exceed the time between overhaul specified in Lycoming Service Instruction No. 1009BF, dated July 20, 2026, whichever occurs first after the effective date of this AD, replace any affected piston pin with a part eligible for installation in accordance with the Required Action of Lycoming MSB 667A, as applicable to engine model.

(4) For Group 2 engines with greater than or equal to 150 hours TIS as of the effective date of this AD, before further flight, replace any affected piston pin with a part eligible for installation in accordance with the Required Action of Lycoming MSB 667A, as applicable to engine model.

(5) For Group 2 engines with less than 150 hours TIS as of the effective date of this AD, within 25 hours TIS after the effective date of this AD but before or upon reaching 150 total hours TIS since installation of the affected piston pins, whichever comes first after the effective date of this AD, replace any affected piston pin with a part eligible for installation in accordance with the Required Action of Lycoming MSB 667A, as applicable to engine model.

(i) Installation Prohibition

After the effective date of this AD, do not install an affected piston pin as defined in paragraph (g)(2) of this AD on any engine.

(j) No Return of Parts

Although the service material specifies returning certain parts to the manufacturer, this AD does not include those requirements.

(k) Special Flight Permits

(1) Special flight permits may be issued in accordance with 14 CFR 21.197 and 21.199199 for the replacement requirements of this AD provided no metal particulates are found during the inspection required by this AD. For Group 2 engines that are not affected by paragraph (h)(1) of this AD, an oil change showing that no metal particulates are present would be required prior to issuing a special flight permit.

(2) Special flight permits, as described in 14 CFR 21.197 and 21.199, are not allowed for the visual inspection of the engine oil filter, oil pressure screen, and oil suction screen for metal particulates requirement of this AD.

(l) Alternative Methods of Compliance (AMOCs)

The Manager, East Certification Branch, FAA, has the authority to approve AMOCs for this AD, if requested using the procedures found in14 CFR 39.19. In accordance with 14 CFR 39.19, send your request to your principal inspector or local Flight Standards District Office, as appropriate. If sending information directly to the manager of the East Certification Branch, send it to the attention of the person identified in paragraph (m)(1) of this AD and email to: *AMOC@faa.gov*. Before using any approved AMOC, notify your appropriate principal inspector, or lacking a principal inspector, the manager of the local flight standards district office/certificate holding district office.

(m) Additional Information

(1) For more information about this AD, contact Ramanpreet Singh, Aviation Safety Engineer, FAA, Ramanpreet Singh, Aviation Safety Engineer, FAA, 1701 Columbia Avenue, College Park, GA 30337; phone: (516) 228–7300; email: *ECB-COS@faa.gov.*

(2) Material identified in this AD that is not incorporated by reference is available at the address specified in paragraph (n)(4) of this AD.

(n) Material Incorporated by Reference

(1) The Director of the Federal Register approved the incorporation by reference (IBR) of the material listed in this paragraph under 5 U.S.C. 552(a) and 1 CFR part 51.

(2) You must use this material as applicable to do the actions required by this AD, unless the AD specifies otherwise.

(3) The following material was approved for IBR November 24, 2026.

(i) Lycoming Service Instruction No. 1009BF, dated July 20, 2026.

(ii) [Reserved]

Federal Aviation Administration

14 CFR Part 71

[Docket No. FAA–2025–5571; Airspace Docket No. 25–AWP–172]

RIN 2120–AA66

Amendment of Class D and Establishment of Class E Airspace; Chandler and Phoenix, AZ

AGENCY: Federal Aviation Administration (FAA), DOT.

ACTION: Final rule; correction.

SUMMARY: This action corrects a final rule published by the FAA in the **Federal Register** on October 30, 2026, amending the Class D airspace and establishing Class E airspace at Chandler and Phoenix, AZ. Specifically, this action corrects a statement in the preamble of the rule for greater clarity.

DATES: The effective date of the final rule published in the **Federal Register** on October 30, 2026, remains 0901 UTC, February 18, 2027. The Director of the Federal Register approves this incorporation by reference action under 1 CFR part 51, subject to the annual revision of FAA Order JO 7400.11 and publication of conforming amendments.

ADDRESSES: FAA Order JO 7400.11M, Airspace Designations and Reporting Points, and subsequent amendments can be viewed online at *www.faa.gov/air_traffic/publications/.* You may also contact the Airspace Regulation Group, Operational Policy, Federal Aviation Administration, 800 Independence Avenue SW, Washington DC 20591; telephone: (202) 267–8783.

FOR FURTHER INFORMATION CONTACT: Jeffrey Claypool, Federal Aviation Administration, Operations Support Group, Central Service Center, 10101 Hillwood Parkway, Fort Worth, TX 76177; telephone (817) 222–5711.

SUPPLEMENTARY INFORMATION:

History

The FAA published a final rule in the **Federal Register** (91 FR 68449; October 30, 2026), amending the Class D airspace and establishing Class E airspace at Chandler and Phoenix, AZ. After publication, the FAA determined

that a statement in the preamble discussion requires a correction for greater clarity and alignment with the scope of the action. The final rule stated, ''There are no new instrument procedures in development, and the airspace change does not require new, complex procedures to be developed or implemented at Mesa Gateway Airport.'' While separate instrument flight procedures are planned through normal airport modernization channels, they are entirely independent of this Class D and Class E action. This correction does not make substantive changes or alter the text of the airspace legal descriptions.

Correction to Final Rule

Accordingly, pursuant to the authority delegated to me, the final rule for Docket No. FAA–2025–5571, as published in the **Federal Register** on October 30, 2026 (91 FR 68449; FR Doc. 2026–22197), is corrected as follows:

On page 68452, column 1, within the History section, remove, ''There are no new instrument procedures in development, and the airspace change does not require new, complex procedures to be developed or implemented at Mesa Gateway Airport.'' And replace it with, ''This airspace change does not require new, complex procedures to be developed or implemented at Mesa Gateway Airport.''

Issued in Fort Worth, Texas, on November 5, 2026.

Courtney E. Johns,

Acting Manager, Operations Support Group, ATO Central Service Center.

Technical Corrections of Commercial Space Transportation Regulations

AGENCY: Federal Aviation Administration (FAA), Department of Transportation (DOT).

ACTION: Final rule; technical amendment.

SUMMARY: This final rule contains technical corrections in FAA regulations.

DATES: Effective November 9, 2026.

ADDRESSES: For further information on where to obtain copies of rulemaking document and other information related to this final rule, see ''Additional Information'' in the **SUPPLEMENTARY INFORMATION** section of this document.

FOR FURTHER INFORMATION CONTACT: Lisa Cacciatore, Office of Commercial Space Transportation, Federal Aviation Administration, 1200 New Jersey Avenue SE, Washington, DC 20590; telephone (202) 880–1489; email *Lisa.E.Cacciatore@faa.gov.*

SUPPLEMENTARY INFORMATION:

I. Executive Summary

A. Overview of the Final Rule

FAA is amending the authority citations in parts 413, 414, and 450 to include 51 U.S.C. 50924. In addition, FAA has identified six technical corrections to parts 413, 414, 450, and 460. These technical corrections are non-substantive in nature and are intended to correct typographical errors, clarify regulatory text, and ensure consistency. The changes correct mistakes and omissions and clarify the regulations published in the part 450 final rule.[1]

B. Summary of the Costs and Benefits

This final rule makes non-substantive technical corrections to correct typographical errors, clarify regulatory text, and ensure consistency. FAA expects no additional costs for the public or FAA because these changes do not affect existing regulatory requirements.

II. Authority for This Rulemaking and 5 U.S.C. 553 Implementation Exceptions

A. Authority for This Rulemaking

The Commercial Space Launch Act of 1984, as amended and codified at 51 U.S.C. 50901–50924 (the Act), authorizes the Secretary of Transportation (Secretary) to oversee, license, and regulate commercial launch and reentry activities, and the operation of launch and reentry sites within the United States (U.S.) or as carried out by U.S. citizens. Section 50905 directs the Secretary to exercise this responsibility consistent with public health and safety, safety of property, and the national security and foreign policy interests of the United States. In addition, section 50903 requires the Secretary to encourage, facilitate, and promote commercial space launches and reentries by the private sector. As codified in 49 CFR 1.83(b), the Secretary has delegated authority to the FAA Administrator to carry out these functions.

B. Good Cause Exemption per 5 U.S.C. 553(b)(B)

Section 553(b)(B) of the Administrative Procedure Act (APA) (5 U.S.C.) authorizes agencies to dispense with notice and comment procedures for rulemakings when the agency for ''good cause'' finds those procedures to be ''impracticable, unnecessary, or contrary to the public interest.'' Under this section, an agency, upon finding good cause, may issue a final rule without seeking comment prior to the rulemaking. FAA has concluded that notice and comment is unnecessary for this rulemaking.

Courts have consistently recognized that notice and comment are unnecessary where a rule makes only technical, clerical, or nonsubstantive changes that do not alter the rights or obligations of regulated entities and are unlikely to generate meaningful public input.[2] For example, in *Utility Solid Waste Activities Group* v. *EPA,* the D.C. Circuit explained that the ''unnecessary'' prong applies where the regulated community has ''little or nothing to say'' regarding the agency's action because the rule does not implicate substantive policy choices.[3] In *Mack Trucks, Inc* v. *EPA,* the D.C. Circuit cautioned that the unnecessary exception must be narrowly construed, but made clear that its application is appropriate where notice and comment would serve no practical purpose.[4]

The technical amendments in this final rule correct incorrect words, remove unnecessary references, and clarify the purpose of the text to conform to the statutory requirements. These amendments do not reflect a change in policy judgment, nor do they affect how regulated parties comply with FAA requirements.

Thus, FAA has determined that this rule is suitable for a final rulemaking because these changes are noncontroversial and a notice and comment period is unnecessary.

[1] Streamlined Launch and Reentry License Requirements, 85 FR 79566 (December 10, 2020) (hereby referred to as ''SLR2'').

[2] *Utility Solid Waste Activities Group* v. *EPA,* 236 F.3d 749, 754 (D.C. Cir. 2001); *Mack Trucks, Inc.* v. *EPA,* 682 F. 3d 87, 93 (D.C. Cir. 2012).

[3] 236 F.3d 749, 754 (D.C. Cir. 2001).

[4] Courts have held that the unnecessary prong of good cause must be ''confined to those situations in which the administrative rule is a routine determination, insignificant in nature and impact, and inconsequential to the industry and to the public.'' *Mack Trucks, Inc.* v. *EPA,* 682 F.3d 87, 94 (D.C. Cir. 2012) (quoting Util. Solid Waste Activities Grp., 236 F.3d at 755).

C. Effective Upon Publication per 5 U.S.C. 553(d)(3)

The APA generally requires that a substantive rule be published at least 30 days before its effective date. However, 5 U.S.C. 553(d)(3) permits an agency to make a rule effective less than 30 days after publication for good cause. As discussed in the previous section, FAA has found good cause for forgoing notice and comment under 5 U.S.C. 553(b)(B). For these same reasons, FAA finds good cause under 5 U.S.C. 553(d)(3) to make this rule effective immediately upon publication in the **Federal Register**.

III. Background

A. History

In 2018, Space Policy Directive-2 (SPD–2) directed FAA to streamline and modernize commercial space launch and reentry licensing. As a result, in 2020, FAA published Streamlined Launch and Reentry License Requirements, 85 FR 79566 (the SLR2 final rule). The SLR2 final rule, codified as part 450, streamlined and increased flexibility in FAA commercial space launch and reentry regulations and removed obsolete requirements. It consolidated and revised multiple regulatory parts and applied a single set of licensing and safety regulations across several types of operations and vehicles. Part 450 provides the requirements to obtain a vehicle operator license, the safety requirements, and the terms and conditions of a vehicle operator license.

On August 13, 2025, the President issued Executive Order (E.O.) 14335, ''Enabling Competition in the Commercial Space Industry,'' which requires the Secretary of Transportation to ''reevaluate, amend, or rescind'' the regulations in part 450 for the purpose of further streamlining the commercial licensing process. As part of FAA's response to this directive, FAA is making non-substantive, technical revisions to its regulations to correct errors and improve clarity. These changes do not modify existing compliance obligations or impose new requirements; rather, they are intended to ensure that FAA regulations remain accurate, clear, and effective.

IV. Discussion of the Final Rule

A. Correction to Part 413, License Application Procedures

FAA is amending 14 CFR 413.7(d)(1) through (3) by replacing the term ''safety approval'' with ''safety element approval'' in each instance that it occurs. In the SLR2 final rule, FAA replaced the term ''safety approval'' with ''safety element approval'' in a number of instances to distinguish between two types of approvals falling under the term ''safety approval.'' Prior to the SLR2 final rule, ''safety approval'' could refer to either (1) an FAA determination that an applicant is capable of launching a launch or reentry vehicle and its payload without jeopardizing public health and safety and safety of property or (2) the approval of a ''safety element,'' as that term is defined in § 414.3. The SLR2 final rule differentiated these usages by using the term ''safety approval'' to capture the former meaning, and ''safety element approval'' to capture the latter meaning. However, the SLR2 final rule inadvertently omitted this terminology change in § 413.7(d), which discusses how an applicant may incorporate a safety element approval into a license application.

This rule corrects that omission by replacing the term ''safety approval'' in § 413.7(d) with ''safety element approval'' in each instance that it occurs. The correction does not represent a substantive change in the rule because the other language in § 413.7(d) clearly indicates that the paragraph only relates to safety element approvals.

B. Correction to § 414.43(c), Submissions; Oral Presentations in Safety Element Approval Applications

The procedures by which applicants may obtain a safety element approval and renew and transfer an existing safety element approval are set forth in 14 CFR part 414. Subpart D of part 414 describes the procedures for appealing a decision by FAA regarding safety element approval. Section 414.41(a) states that FAA will give a safety element approval applicant or holder notice of its decision to deny, modify, suspend, or revoke a safety element approval. Section 414.41(b) states that the applicant or holder is entitled to a determination on the record after opportunity for a hearing. Section 414.43 describes the process by which the determination on the record will be handled, including paragraph (c) of that section, which states that ''[p]etitions [for a determination by an administrative law judge] must be filed as soon as practicable, but in no event more than 30 days after issuance of decision or finding under § 414.37.''

FAA is replacing the reference to § 414.37 in § 414.43(c) with a reference to § 414.41. In the SLR2 final rule, FAA renumbered part 414, including renumbering previous § 414.37 as current § 414.41. However, the cross-reference to § 414.37 in § 414.43(c) was inadvertently not updated to match the renumbering. The change is nonsubstantive because FAA has consistently maintained that retention of the cross-reference to § 414.37 was unintentional and the result of a drafting oversight in the SLR2 rulemaking.

C. Correction to § 450.101, Safety Criteria

Section 450.101 provides the safety criteria for launch and reentry vehicles, with launch vehicles addressed in § 450.101(a) and reentry vehicles in § 450.101(b). When the SLR2 final rule was published, it inadvertently included a reference to ''launch vehicle'' in § 450.101(b)(2). Given that § 450.101(b) addresses risk criteria for reentry vehicles, it is incorrect for this section to reference the proposed flight of a launch vehicle. This rule changes the phrase ''flight of a launch vehicle'' to ''deorbit of a reentry vehicle'' in § 450.101(b)(2). FAA intended for ''reentry vehicle'' to be used in § 450.101(b)(2) but inadvertently used the term ''launch vehicle'' instead. Since the adoption of § 450.101(b)(2), FAA has applied the regulation to reentry vehicles as originally intended. This correction will formally remedy the error and reduce the risk of confusion.

D. Correction to § 450.173(f), Mishap Plan—Reporting, Response, and Investigation Requirements

Section 450.173(f) outlines the requirements for an applicant's mishap plan, including reporting, response, and investigation requirements. When the SLR2 final rule was published, FAA used the word ''preventative'' in the title of § 450.173(f), but the word ''preventive'' in the text of § 450.173(f). While both words can be used interchangeably, FAA wants to ensure consistency and clarity in its regulations. This change provides consistent usage by changing the word ''preventive'' in the text of § 450.173(f) to ''preventative,'' so that it matches the title of the subsection.

E. Correction to § 450.207, Human Space Flight Requirements

Section 450.207 requires an applicant be in compliance with part 460 for licensees conducting launches or reentries with humans on board. The regulation is currently written with ''spaceflight'' as one word both in the title and in the text of § 450.207. However, ''space flight'' is two words throughout the rest of part 450. In order to be consistent throughout part 450, this rule changes ''spaceflight'' to

''space flight'' in both the title and text of § 450.207.

F. Corrections to Part 460, Human Space Flight Requirements

Section 460.45 requires that an operator inform each space flight participant in writing about the risks of the launch and reentry, including the safety record of the launch or reentry vehicle type. In the SLR2 final rule, FAA adopted a new definition of ''mishap'' for the purposes of part 450. As part of this, FAA incorporated the prior definitions of accident and incident into the new ''mishap'' definition. In addition, FAA updated the broader part 400 regulations to remove the terms ''accident'' and ''incident'' from regulations that applied to part 450 operations, because those terms were no longer defined. However, FAA inadvertently failed to update § 460.45(e) in the SLR2 final rule. This rule corrects § 460.45(e) by replacing the phrase ''accidents and human space flight incidents'' with the phrase ''events that meet any of paragraph (1), (4), (5), or (8) of the definition of 'mishap' in § 401.7 of this chapter.'' This amendment aligns the language of § 460.45(e) with the defined terms applicable to part 450.

G. Amendments to Authority Citations

Lastly, FAA is revising the authority citations for parts 413, 414, 450, and 460 from ''51 U.S.C. 50901–50923'' to 51 U.S.C. 509.'' The Commercial Space Launch Act of 1984 (''CSLA''), Public Law 98–575, authorizes the Secretary of Transportation to oversee, license, and regulate commercial launch and reentry activities, and the operation of launch and reentry sites. In 1994, the CSLA was codified at 49 U.S.C. ch. 701 (*see* Pub. L. 103–272), which was subsequently transferred to 51 U.S.C. 509 in 2010 (*see* Pub. L. 111–314). At that time, Chapter 509 contained sections 50901 through 50923. In 2025, a new section 50924 was added to Chapter 509 by Public Law 119–21, commonly known as the One Big Beautiful Bill Act.

FAA is amending the authority citations to account for this new section. However, rather than updating the authority citations to state the number of this new section (*i.e.,* 51 U.S.C. 50901–50924), FAA has determined that the authority citations should instead point to 51 U.S.C. 509. This change will prevent FAA from needing to update the authority citations each time a new section is added to 51 U.S.C. 509.

V. Regulatory Notices and Analyses

A. Regulatory Impact Analysis

E.O. 12866 (''Regulatory Planning and Review'') and E.O. 13563 (''Improving Regulation and Regulatory Review'') require agencies to regulate in the ''most cost-effective manner,'' to make a ''reasoned determination that the benefits of the intended regulation justify its costs,'' and to develop regulations that ''impose the least burden on society.'' The Office of Management and Budget has determined that this rule is not a significant regulatory action as defined in section (3)(f) of E.O. 12866. This final rule is considered an E.O. 14192 deregulatory action.

Table 1 lists the changes to each provision along with their respective impacts. Because these are technical corrections addressing typographical errors, clarifying regulatory text, and ensuring consistency, there are no additional costs to industry and FAA.

TABLE 1—REGULATORY CHANGES AND IMPACT

Provision	Change	Impact
14 CFR 413.7(d)—Correct Safety Element Approval name.	Amends § 413.7(d)(1) through (d)(3), by adding the word ''element'' to the phrase ''safety approval''.	No impact.
14 CFR 414.43—Correction to reference	Amends the reference to § 414.37 in § 414.43(c) by changing it to § 414.41.	No impact.
14 CFR 450.101—Correct error in Reentry Risk Criteria.	Amends § 450.101(b)(2) by changing the phrase ''flight of a launch vehicle'' to ''deorbit of a reentry vehicle''.	Small administrative cost savings because it provides clarity to regulated entities. FAA will not have to provide guidance to clarify any confusion from regulated entities.
14 CFR 450.173(f)—Correct terminology in Mishap Plan.	Corrects § 450.173(f) by changing the word ''preventive'' in the sentence to ''preventative''.	No impact.
14 CFR 450.207—Correct terminology for consistency in Human Space Flight Regulations.	Corrects § 450.207 by changing the word ''spaceflight'' to the phrase ''space flight'' to be consistent with the rest of the final rule.	No impact.
14 CFR 460—Correct Mishap terminology in Human Space Flight Regulations.	Corrects § 460.45(e) by replacing the phrase ''accidents and human space flight incidents'' with the phrase ''events that meet any of paragraph (1), (4), (5), or (8) of the definition of 'mishap' in § 401.7 of this chapter''.	No impact.

B. Regulatory Flexibility Act

The Regulatory Flexibility Act (RFA), in 5 U.S.C. 603, requires an agency to prepare an initial regulatory flexibility analysis describing impacts on small entities whenever 5 U.S.C. 553 or any other law requires an agency to publish a general notice of proposed rulemaking for any proposed rule. Similarly, 5 U.S.C. 604 requires an agency to prepare a final regulatory flexibility analysis when an agency issues a final rule under 5 U.S.C. 553 after that section or any other law requires publication of a general notice of proposed rulemaking. FAA concludes good cause exists to forgo notice and comment and to not delay the effective date for this rule. As 5 U.S.C. 553 does not require notice and comment in this situation, 5 U.S.C. 603 and 604 similarly do not require regulatory flexibility analyses.

C. International Trade Impact Assessment

The Trade Agreements Act of 1979 (Pub. L. 96–39), as amended by the Uruguay Round Agreements Act (Pub. L. 103–465), prohibits Federal agencies from establishing standards or engaging in related activities that create unnecessary obstacles to the foreign commerce of the United States. Pursuant to these Acts, the establishment of standards is not considered an unnecessary obstacle to the foreign commerce of the United States, so long as the standard has a legitimate domestic objective, such as the protection of safety, and does not operate in a manner that excludes imports that meet this objective. The statute also requires consideration of

international standards and, where appropriate, that they be the basis for U.S. standards.

FAA has assessed the potential effect of this rule and determined it ensures the safety of the American public and does not exclude imports that meet this objective. As a result, FAA does not consider this rule as creating an unnecessary obstacle to foreign commerce.

D. Unfunded Mandates Assessment

The Unfunded Mandates Reform Act of 1995 (2 U.S.C. 1531–1538) governs the issuance of Federal regulations that require unfunded mandates. An unfunded mandate is a regulation that requires a State, local, or Tribal government or the private sector to incur direct costs without the Federal Government having first provided the funds to pay those costs. FAA determined the rule will not result in the expenditure of $193,000,000 or more ($100,000,000 adjusted for inflation using the most current Implicit Price Deflator for the Gross Domestic Product) by State, local, or Tribal governments, in the aggregate, or the private sector, in any one year.

E. Paperwork Reduction Act

The Paperwork Reduction Act of 1995 (44 U.S.C. 3507(d)) requires FAA consider the impact of paperwork and other information collection burdens imposed on the public. FAA has determined there is no new requirement for information collection associated with this final rule.

F. International Compatibility

In keeping with U.S. obligations under the Convention on International Civil Aviation, it is FAA policy to conform to International Civil Aviation Organization (ICAO) Standards and Recommended Practices to the maximum extent practicable. FAA has determined there are no ICAO Standards and Recommended Practices that correspond to these regulations.

G. Environmental Analysis

The Department has analyzed the environmental impacts of this final rule pursuant to the National Environmental Policy Act of 1969 (NEPA) (42 U.S.C. 4321 *et seq.*). FAA has determined this rule is categorically excluded pursuant to FAA Order 1050.1G. Categorical exclusions are categories of actions FAA has determined normally do not significantly affect the quality of the human environment and therefore do not require either an environmental assessment (EA) or environmental impact statement (EIS).1 In analyzing the applicability of a categorical exclusion, FAA must also consider whether extraordinary circumstances are present that would warrant the preparation of an EA or EIS.2 This rulemaking, which makes minor nonsubstantive technical edits to FAA's commercial space regulations, is categorically excluded pursuant to FAA Order 1050.1G, Appendix B, Paragraph B–2.6(f), which categorically excludes issuance of regulatory documents. FAA does not anticipate any environmental impacts, and there are no extraordinary circumstances present in connection with this rulemaking.

VI. E.O. Determinations

A. E.O. 13132, Federalism

FAA has analyzed this final rule under the principles and criteria of E.O. 13132, Federalism. FAA has determined this action will not have a substantial direct effect on the States, or the relationship between the Federal Government and the States, or on the distribution of power and responsibilities among the various levels of government, and, therefore, will not have federalism implications.

B. E.O. 13175, Consultation and Coordination With Indian Tribal Governments

Consistent with E.O. 13175, Consultation and Coordination with Indian Tribal Governments,[5] and FAA Order 1210.20, American Indian and Alaska Native Tribal Consultation Policy and Procedures,[6] FAA ensures that Federally Recognized Tribes (Tribes) are given the opportunity to provide meaningful and timely input regarding proposed Federal actions that have the potential to have substantial direct effects on one or more Tribes, on the relationship between the Federal Government and Tribes, or on the distribution of power and responsibilities between the Federal Government and Tribes; or to affect uniquely or significantly their respective Tribes. At this point, FAA has not identified any unique or significant effects, environmental or otherwise, on Tribes resulting from this final rule.

C. E.O. 13211, Regulations That Significantly Affect Energy Supply, Distribution, or Use

FAA analyzed this final rule under E.O. 13211, Actions Concerning Regulations that Significantly Affect Energy Supply, Distribution, or Use (May 18, 2001). FAA has determined it is not a ''significant energy action'' under the E.O. and is not likely to have a significant adverse effect on the supply, distribution, or use of energy.

D. E.O. 13609, Promoting International Regulatory Cooperation

Executive Order 13609, Promoting International Regulatory Cooperation, promotes international regulatory cooperation to meet shared challenges involving health, safety, labor, security, environmental, and other issues and to reduce, eliminate, or prevent unnecessary differences in regulatory requirements. FAA has analyzed this action under the policies and agency responsibilities of E.O. 13609 and has determined this action will have no effect on international regulatory cooperation.

VII. Additional Information

A. Electronic Access and Filing

A copy of this final rule and all background material may be viewed online at *www.regulations.gov* using the docket number listed above. A copy of this final rule will be placed in the docket. Electronic retrieval help and guidelines are available on the website. It is available 24 hours each day, 365 days each year. An electronic copy of this document may also be downloaded from the Office of the Federal Register's website at *www.federalregister.gov* and the Government Publishing Office's website at *www.govinfo.gov.* A copy may also be found on FAA's Regulations and Policies website at *www.faa.gov/regulations_policies.*

Copies may also be obtained by sending a request to the Federal Aviation Administration, Office of Rulemaking, ARM–1, 800 Independence Avenue SW, Washington, DC 20591, or by calling (202) 267–9677. Requesters must identify the docket or amendment number of this rulemaking.

All documents FAA considered in developing this final rule, including economic analyses and technical reports, may be accessed in the electronic docket for this rulemaking.

B. Small Business Regulatory Enforcement Fairness Act

The Small Business Regulatory Enforcement Fairness Act of 1996 (Pub. L. 104–121, 110 Stat. 857, Mar. 29, 1996) requires FAA to comply with small entity requests for information or advice about compliance with statutes and regulations within its jurisdiction. A small entity with questions regarding this document may contact its local FAA official or the person listed under

[5] 65 FR 67249 (Nov. 6, 2000).

List of Subjects

14 CFR Part 413

Confidential business information, Space transportation and exploration.

14 CFR Part 414

Airspace, Aviation safety, Space transportation and exploration.

14 CFR Part 450

Aircraft, Aviation safety, Environmental protection, Investigations, Reporting and recordkeeping requirements, Space transportation and exploration.

14 CFR Part 460

Aircraft, Reporting and recordkeeping requirements, Space transportation and exploration.

The Amendments

For the reasons discussed in the preamble, the Federal Aviation Administration amends chapter III of title 14, Code of Federal Regulations as follows:

PART 413—LICENSE APPLICATION PROCEDURES

■ 1. The authority citation for part 413 is revised to read as follows:

Authority: 51 U.S.C. chapter 509.

■ 2. Amend § 413.7 by revising paragraph (d) to read as follows:

§ 413.7 Application submission.

* * * * *

(d) *Safety element approval.* If the applicant proposes to include a safety element for which the FAA issued a safety element approval under part 414 of this chapter in the proposed license activity, the applicant must—

(1) Identify the safety element approval in the application and explain the proposed use of the approved safety element.

(2) Show that the proposed use of the approved safety element is consistent with the designated scope specified in the safety element approval.

(3) Certify that the safety element will be used according to any terms and conditions of the issued safety element approval.

* * * * *

PART 414—SAFETY ELEMENT APPROVALS

■ 3. The authority citation for part 414 is revised to read as follows:

Authority: 51 U.S.C. chapter 509.

■ 4. Amend § 414.43 by revising paragraph (c) to read as follows:

§ 414.43 Submissions; oral presentations in safety element approval actions.

* * * * *

(c) Petitions must be filed as soon as practicable, but in no event more than 30 days after issuance of decision or finding under § 414.41.

PART 450—LAUNCH AND REENTRY LICENSE REQUIREMENTS

■ 5. The authority citation for part 450 is revised to read as follows:

Authority: 51 U.S.C. chapter 509.

■ 6. Amend § 450.101 by revising the second sentence of paragraph (b)(2) introductory text to read as follows:

§ 450.101 Safety criteria.

* * * * *

(b) * * *

(2) * * * Public risk due to any other hazard associated with the proposed deorbit of a reentry vehicle will be determined on a case-by-case basis.

* * * * *

■ 7. Amend § 450.173 by revising paragraph (f) to read as follows:

§ 450.173 Mishap plan—reporting, response, and investigation requirements.

* * * * *

(f) *Preventative measures.* An operator must identify and implement preventative measures for avoiding recurrence of the mishap prior to the next flight, unless otherwise approved by the Administrator.

* * * * *

■ 8. Revise § 450.207 to read as follows:

§ 450.207 Human space flight requirements.

A licensee conducting a launch or reentry with a human being on board the vehicle must comply with human space flight requirements of part 460 of this chapter as specified in a license or license order.

PART 460—HUMAN SPACE FLIGHT REQUIREMENTS

■ 9. The authority citation for part 460 is revised to read as follows:

Authority: 51 U.S.C. chapter 509.

■ 10. Amend § 460.45 by revising paragraph (e) to read as follows:

§ 460.45 Operator informing space flight participant of risk.

* * * * *

(e) An operator must inform a space flight participant that he or she may request additional information regarding any events that meet any of paragraph (1), (4), (5), or (8) of the definition of ''mishap'' in § 401.7 of this chapter.

[Docket No. 261027–0002]

RIN 0694–AK34

Extension of the Suspension of Expansion of End-User Controls for Affiliates of Certain Listed Entities

AGENCY: Bureau of Industry and Security, Department of Commerce.

ACTION: Final rule; stay.

SUMMARY: The Bureau of Industry and Security (BIS) is extending the suspension of the interim final rule (IFR), ''Expansion of End-User Controls to Cover Affiliates of Certain Listed Entities.'' The suspension was set to end November 9, 2026. This final rule extends the suspension through January 10, 2027.

DATES: Effective November 9, 2026, the amendments to 15 CFR parts 732, 734, 736, 744, and 748 in the interim final rule published at 90 FR 47201, on September 30, 2025, and stayed on November 10, 2025, at 90 FR 50857, are further stayed until January 10, 2027.

FOR FURTHER INFORMATION CONTACT: Noah Jaffe at *noah.jaffe@bis.doc.gov,* Bureau of Industry and Security, Department of Commerce.

SUPPLEMENTARY INFORMATION:

Background

On September 20, 2025, BIS published the IFR, ''Expansion of End-User Controls to Cover Affiliates of Certain Listed Entities,'' (90 FR 47201) (Affiliates Rule). On November 12, 2025, BIS published a final rule titled, ''One Year Suspension of Expansion of End-User Controls for Affiliates of Certain

Listed Entities,'' (90 FR 50857) (Stay of Affiliates Rule), imposing a one-year suspension of the Affiliates Rule, which was set to end November 9, 2026.

BIS is extending the suspension until January 10, 2027.

Export Control Reform Act of 2018

On August 13, 2018, the President signed into law the John S. McCain National Defense Authorization Act for Fiscal Year 2019, which included the Export Control Reform Act of 2018 (ECRA) (50 U.S.C. 4801–4852). ECRA provides the legal basis for BIS's principal authorities and serves as the authority under which BIS issues this rule. In particular, Section 1753 of ECRA (50 U.S.C. 4812) authorizes the regulation of exports, reexports, and transfers (in-country) of items subject to U.S. jurisdiction. Further, Section 1754(a)(1)–(16) of ECRA (50 U.S.C. 4813(a)(1)–(16)) authorizes, inter alia, establishing and maintaining a list of foreign persons and end uses that are determined to be a threat to the national security and foreign policy of the United States pursuant to the policy set forth in Section 1752(2)(A), and restricting exports, reexports, and in-country transfers of any controlled items to any foreign person or end use so listed; apprising the public of changes in policy, regulations, and procedures; and any other action necessary to carry out ECRA that is not otherwise prohibited by law. Pursuant to Section 1762(a) of ECRA (50 U.S.C. 4821(a)), these changes can be imposed in a final rule without prior notice and comment.

Rulemaking Requirements

1. This rule has been determined to be not significant for purposes of Executive Order (E.O.) 12866. This final rule is not a regulatory action pursuant to E.O. 14192 because it is not a significant rule under E.O. 12866.

2. Notwithstanding any other provision of law, no person is required to respond to or be subject to a penalty for failure to comply with a collection of information, subject to the requirements of the Paperwork Reduction Act of 1995 (PRA) (44 U.S.C. 3501 *et seq.*), unless that collection of information displays a currently valid Office of Management and Budget (OMB) Control Number. This rule involves the following OMB-approved collections of information subject to the PRA:

- 0694–0088, ''Simple Network Application Process and Multipurpose Application Form,'' which carries a burden hour estimate of 29.7 minutes for a manual or electronic submission;
- 0694–0096 ''Five Year Records Retention Period,'' which carries a burden hour estimate of less than 1 minute;
- 0607–0152 ''Automated Export System (AES) Program,'' which carries a burden hour estimate of 3 minutes per electronic submission; and
- 0694–0134 ''Procedure for parties on the Entity List or the Unverified List to Request Removal or Modification of their Listing,'' which carries a burden hour estimate of 15 hours per electronic submission.

BIS estimates no changes to these information collections based on the continued suspension of the license requirements and related provisions. Additional information regarding these collections of information—including all background materials—can be found at: *https://www.reginfo.gov/public/do/PRAMain* by using the search function to enter either the title of the collection or the OMB Control Number.

3. This rule does not contain policies with federalism implications as that term is defined in E.O. 13132.

4. Pursuant to Section 1762 of the Export Control Reform Act of 2018, this action is exempt from the Administrative Procedure Act (5 U.S.C. 553) requirements for notice of proposed rulemaking, opportunity for public participation, and delay in effective date. This final rule did not consider public comments received on the Affiliates Rule. Public comments received on the Affiliates Rule will be considered for future, subsequent rulemakings.

5. Because a notice of proposed rulemaking and an opportunity for public comment are not required to be given for this rule by 5 U.S.C. 553, or by any other law, the analytical requirements of the Regulatory Flexibility Act (5 U.S.C. 601, *et seq.*) are not applicable. Accordingly, no final regulatory flexibility analysis is required, and none has been prepared.

Jeffrey I. Kessler,

Under Secretary for Industry and Security.

BILLING CODE 3510–33–P

DEPARTMENT OF LABOR

Office of the Secretary

29 CFR Part 18

RIN 1290–AA36

Rules of Practice and Procedure for Administrative Hearings Before the Office of Administrative Law Judges

AGENCY: Office of the Secretary, Department of Labor.

ACTION: Final rule.

SUMMARY: This action finalizes the Department of Labor's (DOL or Department) proposal to require electronic filing (e-filing) in proceedings before the Office of Administrative Law Judges (OALJ), published on January 11, 2021. The Department has reviewed the comments received in response to the proposal and is now implementing the rule as described in the proposed rule of January 11, 2021, with appropriate exceptions for good cause shown and self-represented parties.

DATES: This final rule is effective on December 9, 2026.

FOR FURTHER INFORMATION CONTACT: Alyssa Kaercher, General Counsel of the Office of Administrative Law Judges, at *Kaercher.Alyssa.J@dol.gov* or 202–693–7347.

SUPPLEMENTARY INFORMATION: This preamble is divided into three sections: Section I provides an overview of this rulemaking and describes its procedural background; Section II provides a summary of the public comments received; and Section III covers the administrative requirements for this rulemaking.

I. Background

On January 11, 2021, the Department published a direct final rule (DFR) (86 FR 1800) and companion notice of proposed rulemaking (NPRM) (86 FR 1862) to require e-filing and make acceptance of electronic service (e-service) automatic by attorneys and lay representatives representing parties in proceedings before the OALJ, and to provide an option for self-represented parties to utilize these electronic capabilities. The rule also would have required advance notice to the parties of the manner of a hearing or prehearing conference, whether in person in the same physical location, by telephone, by videoconference, or by other means. The Department invited written comments from the public for 30 days on the proposed rule. The Department received significant adverse public comments from stakeholders on the direct final

rule. Therefore, the OALJ withdrew the direct final rule on February 25, 2021. The Department has reviewed the comments received in response to the proposal and is now implementing the rule as described in the proposed rule of January 11, 2021, with appropriate exceptions for good cause shown and self-represented parties.

A. Overview

This action finalizes the corresponding NPRM published in the January 11, 2021 issue of the **Federal Register** (86 FR 1862). The e-filing amendments are revising 29 CFR part 18 in order to require e-filing and allow for automatic e-service system for OALJ, as well as require advance notice to the parties of the manner of a hearing or prehearing conference, whether in person, by telephone, by videoconference, or by other means.

A general overview of the legal framework, statements explaining the necessity of this e-filing rule, as well as further background on the rulemaking is available in the Department's NPRM, as published in the **Federal Register** on January 11, 2021, and will not be restated in full herein.

In brief, this final rule requires persons represented by attorney and non-attorney representatives to use the Department's system to file all papers electronically and to receive electronic service of documents unless another form of filing or service is allowed by the presiding judge for good cause or is required by standing order; gives self-represented persons the option to use conventional means of filing, or to use the Department's system to file all papers electronically and to receive electronic service of documents; and provides that a filing made through a person's eFile/eServe system account and authorized by that person, together with that person's name on a signature block, constitutes that person's signature. It also requires advance notice to the parties of the manner of a hearing or prehearing conference, whether in person in the same physical location, by telephone, by videoconference, or by other means, to account for the increase in the use of telephonic and video hearings as a result of the COVID–19 national emergency. See 5 U.S.C. 554(b)(1) (requiring timely notice of the time, place, and nature of the hearing).

The Department notes that, as with all OALJ rules of practice and procedure, the e-filing provisions will not apply if they are ''inconsistent with a governing statute, regulation, or executive order. . . . If a specific Department of Labor regulation governs a proceeding, the provisions of that regulation apply[.]'' 29 CFR 18.10(a). For instance, OALJ will continue to serve decisions via certified mail where required by the governing statute or regulation, including on persons participating in the Department's eFile/eServe system.

B. Procedural History

On January 11, 2021, the Department initially published the e-filing amendments as a DFR (86 FR 1800) without a prior proposal because the Department viewed such amendments as noncontroversial at that time and anticipated no adverse comment. The Department also published a companion NPRM in the ''Proposed Rules'' section of the January 11, 2021 (86 FR 1862) issue to expedite notice-and-comment rulemaking in case significant adverse comments were received from stakeholders. A significant adverse comment for the purposes of these notices is one that explains (1) why the rule is inappropriate, including challenges to the rule's underlying premise or approach; or (2) why the direct final rule will be ineffective or unacceptable without a change. The proposed and direct final rules were substantively identical, and their respective comment periods ran concurrently. The Department is treating comments received on the companion direct final rule as comments regarding the proposed rule, and vice versa.

On February 25, 2021, the Department withdrew the January 11, 2021 DFR due to the receipt of significant adverse comment (86 FR 11426). Accordingly, on March 17, 2021, the Department re-opened the comment period on the January 11, 2021 NPRM for 15 days in order to give the public an additional opportunity to voice concerns regarding the proposed e-filing rule (86 FR 14559). The Department also scheduled listening sessions in order to better understand and address concerns from practitioners and the regulated community.

II. Public Comments Received

The Department invited written comment in its January 11, 2021 DFR and concurrently published NPRM. The proposed and direct final rules were substantively identical, and their comment periods ran contemporaneously from January 11, 2021 to February 10, 2021. On March 17, 2021, each comment period was reopened for fifteen days. Comments were submitted electronically at *http://www.regulations.gov* using docket number DOL–2020–0015. The Department requested comments on all issues related to the rule, including economic or other regulatory impacts of the rule on the regulated community.

In issuing this final action, the Department considered comments received on the DFR and NPRM during both the initial and subsequent comment periods. The Department also considered comments received on the conforming Benefits Review Board (Board) rulemaking because commenters noted that they also practiced before the OALJ. Comments to the conforming Board rulemaking were submitted electronically at *http://www.regulations.gov* using docket number DOL–2020–0013.

The Department received thirty-six unique comments on its OALJ and Board e-filing rules. Of the thirty-six comments received, twelve were determined to be out of scope either because they were comments exclusively on the technical aspects of the Electronic Filing System and did not address the substance of the e-filing rule, addressed issues wholly unrelated to this rulemaking, or were general statements. Of the remaining twenty-four comments, one commenter supported the e-filing rule and twenty-three raised concerns that are discussed below.

A. Comment Supporting the E-Filing Rule

The Department received one comment in support of the rule's e-filing requirement and automation of e-service, and the rule's extension of the provisions to self-represented parties. The commenter attested to the ''overall greater convenience for both parties to use e-filing and e-service, as well as the costs saved by going paperless.'' They observed that ''it is in the public interest for the DOL to create a streamlined procedure'' because ''[a] disarray of inconsistent filing methods is not only burdensome to those processing at DOL, but also to those who would like to track their submitted applications.'' Additionally, the commenter cited to both *Forbes* and the New York City Bar Environmental Law Committee in addressing the range of significant environmental benefits that e-filing provides.

This comment reflects the Department's belief that e-filing will benefit all participants in OALJ matters. The greater utilization of e-filing and e-service will reduce case processing times by eliminating the timeframes required to allow for the delivery of traditional mailings. These time savings will allow the OALJ to more efficiently process appeals without any sacrifice to the quality of their work. It will also

greatly reduce mailing and copying costs for both OALJ and the parties. The Department agrees that the cost, convenience, and efficiency benefits merit this final rule.

B. Comments Raising Concerns About the E-Filing Rule

Nearly all commenters raising concerns about the rule identified themselves as practitioners before OALJ or the Board. These commenters predominately objected to the rule's e-filing mandate at § 18.30, but many expressed support for the Department's efforts to move to e-filing and e-service. Three opposing commenters addressed concerns with other rule provisions.

1. Comments Regarding the Portion of the Rule That Makes E-Filing Mandatory at § 18.30

Twenty-two commenters recommended that the rule's e-filing mandate be delayed or abandoned. Several commenters expressed general support for the efficiency and modernization that e-filing provides. However, commenters expressed frustration with the OALJ and Board e-filing systems, which they found to be time-consuming, resource intensive, and difficult to navigate. Accordingly, commenters asked that the e-filing mandate be abandoned or delayed to allow for the eFile/eServe system's redesign.

Three of the commenters encouraged the continued use of paper filings to accommodate unreliable technology. One practitioner identified the particular technological barriers faced by black lung practitioners, who ''likely have some of the worst internet service in the United States'' and ''[o]ften experience the loss of internet access.'' Another noted, ''[i]f internet service is disrupted, we currently have backup: 'snail mail', wherein dropping a document in the mail constitutes proper service.'' Practitioners also expressed concern that pro se (self-represented) applicants may be disadvantaged if they cannot use the e-filing system successfully.

The Department has acknowledged the commenters' concerns with the e-filing system and has taken initiatives to improve the user experience of the system. All twenty-two comments requesting that the rule be delayed due to concerns about the eFile/eServe system were made during the initial comment period that closed on February 10, 2021. After receiving these comments, the Department held listening sessions for users to provide feedback on the e-filing systems. The Department relied on the information obtained at these listening sessions to make improvements to the eFile/eServe system. The Department is confident that the issues identified have been addressed sufficiently to merit effectuating the e-filing mandate without additional delay.

Additionally, the final rule sufficiently responds to the commenters' technology concerns. First, § 18.30(b)(3) allows attorneys and lay representatives to request an exemption from the e-filing mandate for good cause. Individuals who anticipate technological barriers to e-filing may use this provision to request an exception to the mandate. Second, § 18.30(b)(3)(i)(B) exempts self-represented petitioners from the e-filing mandate, allowing those who cannot navigate the e-filing system to continue submitting paper filings. The Department notes that these concerns were largely Board specific, and that the corresponding Board e-filing rule contains an additional provision addressing technological failures. Overall, the OALJ framework is largely consistent with Federal district court and U.S. Courts of Appeals practice, which generally mandate e-filings for attorneys unless an exception is granted, and provide self-represented parties the option of filing pleadings in paper form.

2. Comments Regarding Portions of the Rule Addressing Filing Deadlines, Public Access, and Service

One commenter asked that the rule's requirement at § 18.32 be changed to allow e-filings to be considered timely if they are filed by 11:59 p.m. based on the time in which the filer is located. Section 18.32 requires that filing deadlines be computed ''using the time zone of the presiding judge's office—or, for cases not yet assigned to an OALJ national or district office—at 11:59:59 p.m. in the time zone of the office of the Chief Judge of OALJ [Eastern Time].'' The commenter supported the rule's definition of the end of the filing day at 11:59 p.m. However, the commenter observed that ''[w]hether the filing is made at 11:59 p.m. East Coast, or 11:59 p.m. West Coast, the Agency personnel who receive the filing will find it the next morning when they report to the office.'' Accordingly, there is ''no harm'' in allowing all filers to file at the end of their local day.

The Department has considered this request and finds that maintaining the rulemaking's filing deadline computation better effectuates its goal of efficiently processing case appeals. Computing filing deadlines by the time zone of the presiding judge's office allows OALJ to expeditiously determine whether a filing is timely. In contrast, a filing deadline based on the filer's location creates an administrative burden because it requires an individualized assessment of the filer's location, which may not be readily apparent in firms with multiple office locations. Using the presiding judge's office, or Eastern Time for unassigned cases, mirrors the approach of Federal courts. *See, e.g.,* Fed. R. App. P. 26(a)(4); Fed. R. Civ. P. 6(a)(4). Further, the preamble to the DFR explained that the Department initially considered standardizing the time for electronic filing at midnight Eastern Time on the last day of the filing period, because the Department's eFile/eServe system is administered in Washington, DC. *Rules of Practice and Procedure for Administrative Hearings Before the Office of Administrative Law Judges,* 86 FR 1800, 1803 (Jan. 11, 2021). However, the Department opted to set the time based on local time ''at the presiding judge's location in order not to reduce hours available for e-filing for persons outside the Eastern Time zone,'' satisfying this commenter's concern. *Id.*

One commenter asserted that requiring separate e-service was inefficient and requested that the Electronic Case Filing System be changed so that service was automatically made on all parties. Section 18.30 allows for e-service to be completed sending a filing to a user registered with the Department's eFile/eServe system. The eFile/eServe system is designed to function similarly to the Case Management/Electronic Case Files (CM/ECF) system used by the Federal district courts and Courts of Appeals. This allows for automatic e-service with minimal exceptions for individuals exempted from e-filing and documents containing sensitive information that must be served through an alternative, secure method. Accordingly, the Department has taken measures to establish automatic service through the eFile/eServe system.

One commenter expressed concern that e-filing would impede public access to OALJ and Board case files because the rule does not allow for general access by non-parties. The Department appreciates this comment. However, the Department believes that public policy concerns merit the level of public access provided, which balances the public's right to know about proceedings and the parties' privacy interests. Here, broad, public access is inappropriate because of the significant personal information contained within OALJ and Board case files. OALJ adjudicates immigrant and non-immigrant employment-related cases, which often contain extensive

information about job applicants, wage documents, personally identifiable information, and similar information of a private, business or financial nature. Black lung and longshore claims also often contain extensive information of a private nature, where general public interest is limited.

Restricting general access by non-parties is consistent with the approach of the federal courts in similar cases. Fed. R. Civ. P. 5.2(c) limits remote public access to electronic files in Social Security and immigration cases due to the significant amount of personal information these files contain. Fed. R. Civ. P. 5.2(c) does not completely bar public access because it permits non-parties to obtain the full case file at the courthouse. Likewise, this rulemaking limits non-parties' remote access to electronic files, while allowing access through an alternative means. The Freedom of Information Act (FOIA) governs public access to agency rules, opinions, orders, records, and proceedings. *See* 5 U.S.C. 552; 29 CFR 70.1 through 70.54. Under FOIA, non-parties may submit a request to obtain OALJ and Board case files subject to the applicable FOIA exceptions. Accordingly, this final rule's restrictions on non-parties' access to electronic records in agency proceedings are consistent with FOIA's public access provisions, the federal court process, and the policy considerations inherent in Fed. R. Civ. P. 5.2(c).

C. Out of Scope Comments

Twelve comments were beyond the scope of this action. Five comments related only to specific concerns about using the Electronic Filing System, rather than the rule's specific e-filing mandate or other procedural amendments. To the extent that these comments refer to the e-filing mandate, these comments do not alter the Department's conclusion for the reasons noted above. One comment appears to pose questions to employers about their ''coronavirus response plan,'' and is therefore out of scope. Finally, six comments made general and vague statements that did not address specific provisions of the OALJ or Board rules, or about e-filing or e-service, and were therefore also out of scope.

D. Removal of Delayed Applicability Date

This final rule will take effect December 9, 2026. Although this is a rule of agency procedure, the Department is using the minimum period provided under section 553(d) of the APA for substantive rules that do not meet a statutory exception. *See* 5 U.S.C. 553(d)(3). The Department is removing the 45-day delayed applicability date included in the initial DFR and NPRM. *See Rules of Practice and Procedure for Administrative Hearings Before the Office of Administrative Law Judges,* 86 FR 1803, 1805; *Rules of Practice and Procedure for Administrative Hearings Before the Office of Administrative Law Judges,* 86 FR 1862, 1865, 1867 (proposed Jan. 11, 2021). The 30-day period between publication and the effective date of this final rule is reasonable and practical because the eFile/eServe system is currently operational. Accordingly, the Department no longer needs additional time to update communications about e-filing or to allow parties time to adjust to the e-filing system. The Department determines that both it and the public are prepared to adhere to the e-filing mandate within 30 days of this rule's publication, obviating the need for a delayed applicability date.

III. Administrative Requirements of the Rulemaking

A. Executive Orders 12866, Regulatory Planning and Review; and 13563, Improving Regulation and Regulatory Review

Executive Orders 12866 and 13563 direct agencies to assess the costs and benefits of available regulatory alternatives and, if regulation is necessary, to select regulatory approaches that maximize net benefits (including potential economic, environmental, public health and safety effects, distributive impacts, and equity). Executive Order 13563 emphasizes the importance of quantifying both costs and benefits, of reducing costs, of harmonizing rules, and of promoting flexibility.

This final rule has been drafted and reviewed in accordance with Executive Order 12866. The Office of Information and Regulatory Affairs of the Office of Management and Budget (OMB) determined that this final rule is not a significant regulatory action under section 3(f) of Executive Order 12866 because the rule will not have an annual effect on the economy of $100 million or more; will not create a serious inconsistency or otherwise interfere with an action taken or planned by another agency; and will not materially alter the budgetary impact of entitlements, grants, user fees, or loan programs or the rights and obligations of recipients thereof. Furthermore, the rule does not raise a novel legal or policy issue arising out of legal mandates, the President's priorities, or the principles set forth in the Executive Order. Accordingly, OMB has waived review.

B. Regulatory Flexibility Act of 1980

Because no notice of proposed rulemaking is required for this rule under section 553(b) of the Administrative Procedure Act, the regulatory flexibility requirements of the Regulatory Flexibility Act, 5 U.S.C. 601, do not apply to this rule. *See* 5 U.S.C. 601(2), 604(a).

C. Paperwork Reduction Act

The Department has determined that this final rule is not subject to the requirements of the Paperwork Reduction Act, 44 U.S.C. 3501 *et seq.,* as this rulemaking involves administrative actions to which the federal government is a party or that occur after an administrative case file has been opened regarding a particular individual. *See* 5 CFR 1320.4(a)(2), (c).

D. Unfunded Mandates Reform Act of 1995 and Executive Order 13132, Federalism

The Department has reviewed this rule in accordance with the requirements of Executive Order 13132 and the Unfunded Mandates Reform Act of 1995, 2 U.S.C. 1501 *et seq.,* and has found no potential or substantial direct effects on the states, on the relationship between the national government and the states, or on the distribution of power and responsibilities among the various levels of government. As there is no federal mandate contained herein that could result in increased expenditures by state, local, and tribal governments, or by the private sector, the Department has not prepared a budgetary impact statement.

E. Executive Order 13175, Consultation and Coordination With Indian Tribal Governments

The Department has reviewed this rule in accordance with Executive Order 13175 and has determined that it does not have ''tribal implications.'' The final rule does not ''have substantial direct effects on one or more Indian tribes, on the relationship between the Federal government and Indian tribes, or on the distribution of power and responsibilities between the Federal government and Indian tribes.''

List of Subjects in 29 CFR Part 18

Administrative practice and procedure, Labor.

For the reasons set out in the Preamble, the Department of Labor amends 29 CFR part 18 as set forth below.

PART 18—RULES OF PRACTICE AND PROCEDURE FOR ADMINISTRATIVE HEARINGS BEFORE THE OFFICE OF ADMINISTRATIVE LAW JUDGES

■ 1. The authority citation for part 18 continues to read as follows:

Authority: 5 U.S.C. 301; 5 U.S.C. 551–553; 5 U.S.C. 571 note; E.O. 12778; 57 FR 7292.

■ 2. Amend § 18.11 by adding definitions in alphabetical order for ''eFile/eServe system'', ''Registered user'', and ''Standing order'' to read as follows:

§ 18.11 Definitions.

* * * * *

eFile/eServe system means the Department of Labor's electronic filing and electronic service system for adjudications.

* * * * *

Registered user means any person registered to file papers using the Department's eFile/eServe system.

* * * * *

Standing order means an order issued by the Chief Judge or District Chief Judge addressing court administration that applies to all cases pending before the Office of Administrative Law Judges (OALJ) or an OALJ district office, and which is in force until changed or withdrawn by a subsequent order.

■ 3. Amend § 18.30 by:

■ a. Revising paragraph (a)(2)(ii)(E);

■ b. Adding paragraph (a)(2)(iii);

■ c. Revising the first sentence in paragraph (b)(1) introductory text and paragraphs (b)(2) and (3); and

■ d. Removing paragraph (b)(4).

The revisions and addition read as follows:

§ 18.30 Service and filing.

(a) * * *

(2) * * *

(ii) * * *

(E) Sending it to a registered user by filing it with the Department's eFile/eServe system or sending it by other electronic means that the person consented to in writing—in either of which events service is complete upon filing or sending, but is not effective if the filer or sender learns that it did not reach the person to be served; or

* * * * *

(iii) *Consent to electronic service.* Any person required to file electronically pursuant to paragraph (b)(3)(i)(A) of this section and any person who opts to file electronically pursuant to paragraph (b)(3)(i)(B) of this section is deemed to have consented to electronic service of documents issued by the judge and papers filed by a registered user of the Department's eFile/eServe system.

* * * * *

(b) * * *

(1) * * * Any paper that is required to be served must be filed no later than a reasonable time after service with a certificate of service. * * *

(2) *Filing: when made—in general.* A paper submitted electronically in the Department's eFile/eServe system is filed when received by the system. Papers submitted by other means are filed when received by the docket clerk or by the judge during a hearing.

(3) *Filing: how made*—(i) *Electronic filing and signing*—(A) *By a represented person—generally required; exceptions.* A person represented by an attorney or non-attorney representative must file using the Department's eFile/eServe system following the instructions on the system's website, unless another form of electronic or non-electronic filing is allowed by the judge for good cause or is allowed or required by standing order.

(B) *By a self-represented person—when allowed or required.* A person not represented by an attorney or non-attorney representative may file using the Department's eFile/eServe system following the instructions on the system's website.

(C) *Signing.* A filing made through a person's eFile/eServe system account and authorized by that person, together with that person's name on a signature block, constitutes the person's signature.

(D) *Same as a written paper.* A paper filed electronically is a written paper for purposes of this section.

(ii) *Other forms of filing.* Persons who are excepted from e-filing under paragraph (b)(3)(i)(A) of this section, or who have opted not to use e-filing as permitted by paragraph (b)(3)(i)(B) of this section, may file papers by mail, courier service, hand delivery, facsimile, or alternative means of electronic delivery. The mailing addresses for OALJ's National and District offices are found at *https://www.dol.gov/agencies/oalj/contacts.*

(A) *Filing by facsimile—cover sheet.* Filings by facsimile must include a cover sheet that identifies the sender, the total number of pages transmitted, the matter's docket number, and the document's title.

(B) *Filing by facsimile—retention of the original document.* The original signed document will not be substituted into the record unless required by law or the judge. Any party filing a facsimile of a document must maintain the original document and transmission record until the case is final. A transmission record is a paper printed by the transmitting facsimile machine that states the telephone number of the receiving machine, the number of pages sent, the transmission time, and an indication that no error in transmission occurred. Upon a party's request or judge's order, the filing party must provide for review the original transmitted document from which the facsimile was produced.

■ 4. Amend § 18.32 by revising paragraph (a)(2) to read as follows:

§ 18.32 Computing and extending time.

(a) * * *

(2) ''*Last day*'' *defined.* Unless a different time is set by a statute, regulation, Executive order, or judge's order, the ''last day'' ends:

(i) For electronic filing, at 11:59:59 p.m. in the time zone of the presiding judge's office—or, for cases not yet assigned to an OALJ national or district office—at 11:59:59 p.m. in the time zone of the office of the Chief Judge of OALJ; and

(ii) For filing by other means, when the clerk's office is scheduled to close.

* * * * *

■ 5. Amend § 18.34 by revising the introductory text to read as follows:

§ 18.34 Format of papers filed.

Papers submitted electronically in the Department's eFile/eServe system must be in a format accepted by the Department's eFile/eServe system. Papers not filed electronically must be printed in black ink on 8.5 x 11-inch opaque white paper. All papers must be legible, and begin with a caption that includes:

* * * * *

■ 6. Revise § 18.40 to read as follows:

§ 18.40 Notice of hearing.

(a) *In general.* Except when the hearing is scheduled by calendar call, the judge must, at least 14 days before the hearing, notify the parties of the hearing's date, time, and place, and of the manner of the hearing, whether in person in the same physical location, by telephone, by videoconference, or by other means. The notice is sent by the means provided for at § 18.30(a), unless the judge determines that circumstances require service by certified mail or other means. The parties may agree to waive the 14-day notice for the hearing.

(b) *Date, time, place, and manner.* The judge must consider the convenience and necessity of the parties and the witnesses in selecting the date, time, place, and manner of the hearing.

■ 7. Amend § 18.41 by revising the section heading and paragraphs (a), (b)

introductory text, and (b)(2) to read as follows:

§ 18.41 Continuances and changes in place or manner of hearing.

(a) *By the judge.* Upon reasonable notice to the parties, the judge may change the time, date, place, and manner of the hearing.

(b) *By a party's motion.* A request by a party to continue a hearing or to change the place or manner of the hearing must be made by motion.

* * * * *

(2) *Change in place or manner of hearing.* A motion to change the place or manner of a hearing must be filed promptly.

■ 8. Amend § 18.44 by revising paragraph (b) to read as follows:

§ 18.44 Prehearing conference.

* * * * *

(b) *Scheduling.* Prehearing conferences may be conducted in person in the same physical location, by telephone, by videoconference, or by other means after reasonable notice of time, place, and manner of conference has been given.

* * * * *

■ 9. Revise § 18.82 to read as follows:

§ 18.82 Exhibits.

(a) *Filing of exhibits to be offered into evidence.* Persons who are required to file electronically pursuant to § 18.30(b)(3)(i)(A)—or who have opted to use e-filing as permitted by § 18.30(b)(3)(i)(B)—must electronically file in the Department's eFile/eServe system any exhibits to be offered in evidence at a hearing, unless that exhibit is not susceptive to filing in electronic form.

(b) *Identification.* All exhibits offered in evidence must be marked with a designation identifying the party offering the exhibit and must be numbered and paginated as the judge orders.

(c) *Electronic data.* By order, the judge may prescribe the format for the submission of data that is in electronic form.

(d) *Exchange of exhibits.* When written exhibits are offered in evidence, one copy must be furnished to the judge and to each of the parties. If the exhibit being offered was previously filed with the judge, either electronically pursuant to paragraph (a) of this section or otherwise, and furnished to the other parties prior to hearing, the exhibit need not be produced at the hearing unless the judge directs otherwise. If the exhibit being offered at the hearing was not furnished to each party or filed with the judge prior to the hearing, a paper copy of that exhibit for the judge and each party must be produced at the hearing unless the judge directs otherwise. If the judge does not fix a date for the exchange of exhibits, the parties must exchange copies of exhibits at the earliest practicable time before the hearing begins.

(e) *Authenticity.* The authenticity of a document identified in a pre-hearing exhibit list is admitted unless a party files a written objection to authenticity at least seven days before the hearing. The judge may permit a party to challenge a document's authenticity if the party establishes good cause for its failure to file a timely written objection.

(f) *Substitution of copies for original exhibits.* The judge may permit a party to withdraw original documents offered in evidence and substitute accurate copies of the originals.

(g) *Designation of parts of documents.* When only a portion of a document contains relevant matter, the offering party must exclude the irrelevant parts to the greatest extent practicable.

(h) *Records in other proceedings.* Portions of the record of other administrative proceedings, civil actions, or criminal prosecutions may be received in evidence, when the offering party shows the copies are accurate.

Keith Sonderling,

Secretary of Labor.

BILLING CODE 4510–HW–P

DEPARTMENT OF HOMELAND SECURITY

Coast Guard

33 CFR Part 165

[Docket No. USCG–2026–1405]

Security Zones; Protection of Military Cargo, Captain of the Port Zone Puget Sound, WA

AGENCY: Coast Guard, DHS.

ACTION: Notification of enforcement of regulation.

SUMMARY: The Coast Guard will enforce security zones for the Protection of Military Cargo from November 8 through November 12, 2026, to provide for the security of life and vessels on navigable waterways during this event. Our regulation for Protection of Military Cargo within the Captain of the Port Zone Puget Sound, WA identifies the security zones for this event in the Blair Waterway and Sitcum Waterway in Commencement Bay, WA. During the enforcement periods, the operator of any vessel in the regulated area must comply with directions from the Captain of the Port or a designated representative.

DATES: The regulations in 33 CFR 165.1321 will be enforced for the security zones identified in the **SUPPLEMENTARY INFORMATION** section below for the dates and times specified.

FOR FURTHER INFORMATION CONTACT: If you have questions about this notification of enforcement, call or email LT Anthony Pinto, Sector Puget Sound Waterways Management Division, U.S. Coast Guard; telephone 206–217–6051, email *sectorpugetsoundWWM@uscg.mil.*

SUPPLEMENTARY INFORMATION: The Coast Guard will enforce security zones in 33 CFR 165.1321 for the Blair Waterway Security Zone (33 CFR 165.1321(c)(1)) and the Sitcum Waterway Security Zone ((c)(2)), for military outloads from 12:01 a.m. on November 8, 2026, through 11:59 p.m. on November 12, 2026. This action is being taken to provide for the security of life and vessels on navigable waterways during this 5-day event. Our regulation for Protection of Military Cargo within the Captain of the Port Zone Puget Sound, WA, § 165.1321, specifies the location of the regulated area for the Military Outloads which encompasses portions of the Blair Waterway and Sitcum Waterway in Commencement Bay, WA. During the enforcement periods, as reflected in § 165.1321(d), if you are the operator of a vessel in the regulated area, you must comply with directions from the Captain of the Port or any Designated Representative to enter, move within, or exit the security zones. Vessels 20 meters or greater in length should seek permission from the COTP or a Designated Representative at least 4 hours in advance. Vessels less than 20 meters in length should seek permission at least 1 hour in advance. VTS Puget Sound may be reached on VHF channel 14.

In addition to this notification of enforcement in the **Federal Register**, the Coast Guard plans to provide notification of this enforcement period via the Local Notice to Mariners.

Michael J. Hunt,

Captain, U.S. Coast Guard, Captain of the Port, Sector Puget Sound.

[FR Doc. 2026–22831 Filed 11–6–26; 8:45 am]

BILLING CODE 9110–04–P

ENVIRONMENTAL PROTECTION AGENCY

40 CFR Part 63

[EPA–HQ–OAR–2002–0037; FRL–5678–03–OAR]

RIN 2060–AR73

National Emission Standards for Hazardous Air Pollutants: Polyvinyl Chloride and Copolymer Production Reconsideration; New Major Source Process Wastewater Standards

AGENCY: Environmental Protection Agency.

ACTION: Final rule.

SUMMARY: The U.S. Environmental Protection Agency (EPA) is finalizing amendments to the national emission standards for hazardous air pollutants (NESHAP) for the Polyvinyl Chloride (PVC) and Copolymer Production source category (''PVC NESHAP'') under Clean Air Act (CAA) section 112. For new major sources, the EPA is finalizing the removal of the total non-vinyl chloride organic hazardous air pollutant (HAP) process wastewater emission limit and the associated testing, monitoring, recordkeeping, and reporting requirements. The EPA is also finalizing that the new major source vinyl chloride emission limit acts as a surrogate for non-vinyl chloride organic HAP emissions from process wastewater. The EPA is not taking final action on other aspects of the reconsideration proposal at this time.

DATES: This final rule is effective on November 9, 2026.

ADDRESSES: The EPA established a docket for this action under Docket ID No. EPA–HQ–OAR–2002–0037. The docket lists all documents at *https://www.regulations.gov.* Although listed, some information is not publicly available, *e.g.,* Confidential Business Information (CBI) or other information whose disclosure is restricted by statute. The EPA does not place certain other material, such as copyrighted material, on the internet; this material is publicly available only as portable document format versions accessible only on EPA computers in the docket office reading room. The public cannot download certain databases and physical items from the docket but may request these items by contacting the docket office at (202) 566–1744. The docket office has 10 business days to respond to such requests. With the exception of such material, publicly available docket materials are available electronically at *https://www.regulations.gov* or on EPA computers in the docket office reading room at the EPA Docket Center, WJC West Building, Room Number 3334, 1301 Constitution Ave. NW, Washington, DC. The Public Reading Room hours of operation are 8:30 a.m. to 4:30 p.m. Eastern Time (ET), Monday through Friday (except Federal holidays). The telephone number for the Public Reading Room is (202) 566–1744, and the telephone number for the EPA Docket Center is (202) 566–1742.

FOR FURTHER INFORMATION CONTACT: For information about this final rule, contact U.S. EPA, Attn: William Gallagher, Mail Drop: Industrial Processing and Power Division (E140C), 109 T.W. Alexander Drive, P.O. Box 12055, Research Triangle Park, North Carolina 27711; telephone number: (919) 541–2336; and email address: *gallagher.william@epa.gov.*

SUPPLEMENTARY INFORMATION:

Preamble acronyms and abbreviations. Throughout this preamble the use of ''we,'' ''us,'' or ''our'' refers to the EPA. The EPA uses multiple acronyms and terms in this preamble. While this list may not be exhaustive, to ease the reading of this preamble and for reference purposes, the EPA defines the following terms and acronyms here:

I. General Information

A. Executive Summary

On April 17, 2012, the EPA codified standards for the PVC and Copolymer Production source category at 40 Code of Federal Regulations (CFR) part 63, subpart HHHHHHH (''2012 Final Rule'').[1] Subsequently, industry

[1] The EPA also finalized revisions to the area source NESHAP, codified at 40 CFR part 63, subpart DDDDDD, in the 2012 Final Rule. 77 FR 22848 (April 17, 2012).

stakeholders notified the EPA that the Agency used data from outside the PVC and Copolymer Production source category to set the total non-vinyl chloride organic HAP process wastewater emission limits for new major sources and new and existing area sources. The EPA agreed with stakeholders, and in February 2015, the Agency issued a direct final rule to rescind the total non-vinyl chloride organic HAP process wastewater emission limits for new and existing PVC and copolymer production area sources (''2015 Final Rule'').[2]

On November 9, 2020, the EPA proposed reconsideration (''2020 Proposal'') of several aspects of the PVC NESHAP in response to petitions for reconsideration on the 2012 Final Rule.[3] As part of that action, the EPA proposed to remove the new and existing major source total non-vinyl chloride organic HAP process wastewater emission limits and the associated testing, monitoring, recordkeeping, and reporting requirements. In addition, the EPA proposed that vinyl chloride can act as a surrogate for non-vinyl chloride organic HAP in PVC and copolymer production process wastewater. This action finalizes the removal of the total non-vinyl chloride organic HAP process wastewater emission limit for new major PVC and copolymer production sources and associated testing, monitoring, recordkeeping, and reporting requirements and finalizes the proposed surrogacy.

This action will have no immediate cost or emissions impacts as it does not affect existing sources, and the EPA is unaware of any new sources currently subject to the rule. If a new major source PVC and copolymer production facility becomes operational in the future, the EPA estimates that this action will save the facility approximately $2,900 in capital/startup costs and $30,000 in annual costs (in 2025 dollars) due to the reduction in total non-vinyl chloride organic HAP testing, monitoring, recordkeeping, and reporting burdens.

B. Does this action apply to me?

Regulated entities. This final action addresses the PVC and Copolymer Production source category regulated under 40 CFR part 63, subpart HHHHHHH. Table 1 of this preamble lists the NESHAP and the associated regulated industrial source category that this action may affect.

TABLE 1—NESHAP AND INDUSTRIAL SOURCE CATEGORY AFFECTED BY THIS FINAL ACTION

NESHAP	Source category	NAICS[a] code
40 CFR part 63, subpart HHHHHHH	PVC and Copolymer Production	325211

[a] North American Industry Classification System (NAICS).

The EPA provides table 1 of this preamble as a guide, not an exhaustive list, of entities that this final rule likely affects for the listed source category. This final rule does not affect Federal, State, local, or Tribal government entities.

To determine whether this action affects your facility, examine the applicability criteria of this NESHAP. If you have any questions regarding the applicability of this NESHAP, contact the appropriate person listed in the **FOR FURTHER INFORMATION CONTACT** section of this preamble.

C. What is the statutory authority for this action?

CAA section 112, as amended, provides the statutory authority for this action.[4] CAA section 112 establishes a multi-stage regulatory process to develop standards for emissions of HAP from stationary sources. Generally, the first stage involves establishing technology-based standards that reflect application of the maximum achievable control technology (MACT) or appropriate alternative.[5] The second stage involves evaluating those standards within 8 years under CAA section 112(f)(2) to determine whether the EPA needs to promulgate standards to address any remaining risk associated with HAP emissions.[6] This second stage is commonly referred to as the ''residual risk review.'' In addition to conducting the residual risk review, pursuant to CAA section 112(d)(6), the EPA must review the standards every 8 years and to ''revise [them] as necessary,'' taking into account any ''developments in practices, processes, and control technologies.'' [7] This review is commonly referred to as the ''technology review.''

In the first stage of the CAA section 112 standard-setting process, the EPA promulgates technology-based standards under CAA section 112(d) for categories of sources identified as emitting one or more of the HAP listed in CAA section 112(b). The CAA refers to sources of HAP emissions as either major sources or area sources. ''Major sources'' are those that emit or have the potential to emit 10 tons per year (tpy) or more of a single HAP or 25 tpy or more of any combination of HAP.[8] All other sources are ''area sources.'' CAA section 112 establishes different requirements for major source standards and area source standards. For major sources, CAA section 112(d)(2) provides that the technology-based NESHAP must reflect the maximum degree of reduction in emissions of HAP achievable (after considering cost, energy requirements, and non-air quality health and environmental impacts). These standards are commonly referred to as MACT standards. In developing MACT standards, CAA section 112(d)(2) directs the EPA to consider the application of measures, processes, methods, systems, or techniques, including, but not limited to, those that reduce the volume of or eliminate HAP emissions through process changes, substitution of materials, or other modifications; enclose systems or processes to eliminate emissions; collect, capture, or treat HAP when released from a process, stack, storage, or fugitive emissions point; are design, equipment, work practice, or operational standards; or any combination of the above.

CAA section 112(d)(3) establishes a minimum control level for MACT standards, known as the MACT ''floor,'' based on emission controls achieved in practice by the best performing sources. For new sources, the MACT floor cannot be less stringent than the emission control achieved in practice by the best-controlled similar source. For existing sources, the MACT standards can be less stringent than floors for new sources, but the standards cannot be less stringent than the average emission limitation achieved by the best-performing 12 percent of existing sources in the category or subcategory (or the best-performing five sources for categories or subcategories with fewer

[4] 42 U.S.C. 7412.
[5] *Id.* 7412(d)(1)–(3).
[6] *Id.* 7412(f)(2).
[7] *Id.* 7412(d)(6).
[8] *Id.* 7412(a)(1).

than 30 sources).[9] In certain instances, as provided in CAA section 112(h), the EPA may set work practice standards in lieu of numerical emission standards. The EPA must also consider control options that are more stringent than the floor, often referred to as ''beyond-the-floor'' standards, and may establish standards more stringent than the floor taking into consideration the cost of achieving the emission reductions, and any non-air quality health and environmental impacts and energy requirements.[10]

In the second stage of the regulatory process, for categories of major sources and any area source categories subject to MACT standards, CAA section 112 requires the EPA to identify and address any remaining (*i.e.,* ''residual'') risk within 8 years pursuant to CAA section 112(f)(2) and to conduct a technology review pursuant to CAA section 112(d)(6). This latter provision requires the EPA to review the technology-based standards and revise them ''as necessary (taking into account developments in practices, processes, and control technologies)'' no less frequently than every 8 years. In conducting the technology review, the EPA is not required to recalculate the MACT floors that the Agency established in earlier rulemakings.[11] The EPA may consider cost in deciding whether to revise the standards pursuant to CAA section 112(d)(6).[12] Finally, the EPA reviews available data to determine if there are certain unregulated emissions of HAP within the major source category and evaluates these data for use in developing new emission standards.[13]

For the residual risk review required by CAA section 112(f), within 8 years of promulgating the technology-based standards for a source category, the EPA must evaluate the risk to public health remaining after the application of the technology-based standards and revise the standards, if necessary, to provide an ample margin of safety to protect public health or to prevent an adverse environmental effect, taking into consideration costs, energy, safety, and other relevant factors. For categories of area sources subject to generally available control technologies or management practices (GACT) standards, the CAA does not require the EPA to address residual risk. However, CAA section 112(d)(6) requires the EPA to conduct a technology review for all standards established under CAA section 112(d), including GACT standards that apply to area sources. For categories of area sources subject to GACT standards, CAA section 112(d)(5) and (f)(5) provide that the EPA is not required to conduct a residual risk review under CAA section 112(f)(2).

The EPA first set MACT standards for the PVC and Copolymer Production major source category in 2002 (''2002 Final Rule'').[14] Upon vacatur and remand by the United States Court of Appeals for the District of Columbia Circuit (''D.C. Circuit''),[15] the EPA promulgated new MACT standards for the PVC and Copolymer Production source category for major sources and revised the area source NESHAP in the 2012 Final Rule.[16] After receiving petitions for reconsideration of the 2012 Final Rule, the EPA proposed reconsideration of several aspects of that rule in the 2020 Proposal.[17] This final action addresses only the proposed reconsideration of the new major source total non-vinyl chloride organic HAP process wastewater emission limit. The EPA intends to address the remaining issues presented in the 2020 Proposal in a separate action.

D. Where can I get a copy of this document and other related information?

In addition to placing this action in the docket, the EPA provides an electronic copy on the internet. Following signature by the EPA Administrator, the Agency will post a copy of this action at *https://www.epa.gov/stationary-sources-air-pollution/polyvinyl-chloride-and-copolymers-production-national-emission.* Following publication in the **Federal Register** (FR), the EPA will post the **Federal Register** version of the final rule and key technical documents at this same website. The EPA has placed in the docket a memorandum showing the ''track changes'' version of the regulatory language that incorporates the changes in this action.[18]

E. Judicial Review and Administrative Reconsideration

Under CAA section 307(b)(1), a party may obtain judicial review of this action only by filing a petition for review in the D.C. Circuit by January 8, 2027. CAA section 307(b)(2) prohibits a party from separately challenging this final rule in any civil or criminal enforcement proceedings that the EPA brings.

CAA section 307(d)(7)(B) provides that, during judicial review, a party may raise only an objection to a rule or procedure that the party raised with reasonable specificity during the period for public comment (including any public hearing). This section also requires the EPA to reconsider the rule if the person raising an objection demonstrates to the Administrator that either it was impracticable to raise the objection during the period for public comment or that the grounds for the objection arose after the period for public comment (but within the time specified for judicial review) and if the objection is of central relevance to the outcome of the rule. Any person seeking to make such a demonstration should submit a petition for reconsideration to the Office of the Administrator, U.S. EPA, Room 3000, WJC South Building, 1200 Pennsylvania Ave. NW, Washington, DC 20460. The person should also send a copy to both the person(s) listed in the **FOR FURTHER INFORMATION CONTACT** section of this preamble, and the Associate General Counsel for the Air and Radiation Law Office, Office of General Counsel (Mail Code 2344A), U.S. EPA, 1200 Pennsylvania Ave. NW, Washington, DC 20460.

II. Background

A. What is the PVC and Copolymer Production source category, and how does the NESHAP regulate HAP emissions from the source category?

The EPA first promulgated the PVC and Copolymer Production source category NESHAP with the 2002 Final Rule and codified the NESHAP at 40 CFR part 63, subpart J.[19] Following judicial review, the D.C. Circuit vacated and remanded the 2002 Final Rule to the EPA after determining that the Agency failed to adequately explain the basis for the decision to use vinyl chloride as a surrogate for other HAP.[20] The EPA separately promulgated an area source NESHAP for the PVC and Copolymer Production source category on January 23, 2007, and codified it at 40 CFR part 63, subpart DDDDDD.[21] With the 2012 Final Rule, the EPA promulgated new major source standards for the PVC and Copolymer Production source category at 40 CFR part 63, subpart HHHHHHH and aligned

the major and area source NESHAP by revising 40 CFR part 63, subpart DDDDDD.

The EPA received multiple petitions for reconsideration of the 2012 Final Rule.[22] To better assess the issues raised for reconsideration, the EPA issued CAA section 114 information collection requests (ICRs) to gather additional information on PVC and copolymer production process vents and wastewater. Additionally, industry stakeholders identified that the EPA used data from outside the PVC and Copolymer Production source category to establish the major and area source total non-vinyl chloride organic HAP process wastewater emission limits. The EPA agreed with industry stakeholders and promulgated the 2015 Final Rule to rescind the total non-vinyl chloride organic HAP process wastewater emission limits for new and existing area sources.[23] In addition, the D.C. Circuit resolved certain contested issues via *Mexichem Specialty Resins, Inc.* v. *EPA* [24] and *U.S. Sugar Corporation* v. *EPA,*[25] thus mooting the need for the EPA to act on requests to reconsider those aspects of the rule. To further address the remaining reconsideration issues and other technical and editorial corrections, the EPA issued the 2020 Proposal to reconsider certain aspects of the major source PVC NESHAP, including the major source total non-vinyl chloride organic HAP process wastewater emission limits.[26] This final action addresses the proposed reconsideration of the new major source total non-vinyl chloride organic HAP process wastewater emission limit. The EPA intends to address the remaining issues presented in the 2020 Proposal in a separate action.

The 2012 Final Rule regulates HAP emissions from PVC and copolymer production process units (PVCPU) that produce PVC and copolymers as their primary product(s). A PVCPU is the collection of process components assembled and connected by hard-piping or duct work used to process raw materials to manufacture PVC and/or PVC copolymers and includes, but is not limited to, polymerization reactors, resin stripping operations, resin blend tanks, resin centrifuges, resin dryers, resin product separators, recovery devices, reactant and raw material charge vessels and tanks, holding tanks, mixing and weighing tanks; finished resin product storage tanks or storage silos; finished resin product loading operations; and connected duct and piping. A PVCPU also includes pumps, compressors, agitators, PRDs, sampling connection systems, open-ended valves or lines, valves and connectors, and instrumentation systems.

PVC is the third most widely produced synthetic polymer in the world and comes in a variety of rigid and flexible forms depending on the application. Vinyl chloride monomer is the primary raw material in PVC and copolymer production, and manufacturers add other components to the polymerization reaction as necessary to modify the properties of the resulting resin to meet product specifications. As such, there are a wide variety of PVC and copolymer resin recipes, and each recipe will result in different HAP present in the PVCPU. There are multiple ways to produce PVC and copolymer resins including bulk polymerization, dispersion polymerization, and suspension polymerization.[27]

The HAP emission sources at PVC and copolymer production facilities include process vents, storage vessels, equipment leaks, heat exchange systems, wastewater, and stripped resin. While all PVC and copolymer production sources emit vinyl chloride, a PVCPU may also emit other HAP such as benzene, formaldehyde, and toluene depending on the specific resin recipes. The PVC NESHAP includes numeric emission limits for process vents, stripped resin, and wastewater; a mixture of numeric emission limits and work practices for storage vessels depending on the volume and pressure; and work practices for equipment leaks and heat exchange systems.

The EPA identified that this action may affect one potential new major source upon construction and startup. However, this potential new source has not yet commenced construction. While existing sources may reconstruct their PVCPU(s) and become subject to the new source standards, the EPA is unaware of any ongoing reconstruction efforts. As such, the EPA does not anticipate that this action will have any immediate cost or emissions impacts (see section IV of this preamble for additional details).

B. What changes did we propose for the PVC and Copolymer Production source category in our 2020 Proposal?

In 2020, the EPA proposed reconsideration of several aspects of the 2012 Final Rule to resolve reconsideration issues that the D.C. Circuit had not addressed.[28] These items included reconsideration of the process vent, stripped resin, and process wastewater emission limits; the process vent emission profile requirements; the pressure vessel provisions; the use of vapor balancing as a method of compliance; and the definition of the affected source. In addition, the EPA proposed technical corrections and clarifications to the alternative emission limit format for compliance with the stripped resin standards, the initial and continuous monitoring requirements for total non-vinyl chloride organic HAP emissions from stripped resin, the fixed and floating roof storage vessel provisions, the equipment leaks practices, and the closed vent system requirements.[29] The EPA also proposed to remove the affirmative defense provisions and to make certain editorial changes to correct errors within the major and area source PVC NESHAP.[30]

This action only addresses the proposed reconsideration of the new major source total non-vinyl chloride organic HAP process wastewater emission limit. On this issue, the EPA proposed to remove the major source total non-vinyl chloride organic HAP process wastewater emission limits and the associated testing, monitoring, recordkeeping, and reporting requirements. Relatedly, the EPA also proposed that vinyl chloride can serve as and is a reasonable surrogate for non-vinyl chloride organic HAP in PVC and copolymer production process wastewater because (1) vinyl chloride is the predominant HAP present in all PVC and copolymer production process wastewater streams, and (2) the best performing steam strippers with respect to vinyl chloride are also the most effective at removing non-vinyl chloride organic HAP. The EPA proposed that focusing the emission limit on vinyl chloride via surrogacy rather than on total non-vinyl chloride organic HAP ensured the Agency could identify the best performing wastewater strippers while still controlling non-vinyl chloride organic HAP air emissions. To that end, the EPA proposed that resin recipes determine the presence of other

non-vinyl chloride organic HAP in the liquid phase exiting the steam stripper (*i.e.,* the stripper bottoms). The EPA proposed that the makeup of the stripper bottoms does not necessarily define the overall effectiveness of the steam stripper and stated that wastewater is more likely to retain the non-vinyl chloride organic HAP that steam stripping does not effectively treat. The EPA further proposed that biological treatment will effectively target and reduce those remaining HAP.

C. What stakeholder engagement took place following the 2020 Proposal?

In January 2026, Olin Corporation contacted the EPA to express concern with the new major source total non-vinyl chloride organic HAP process wastewater emission limit in the PVC NESHAP. A summary of this meeting and subsequent calls is in the docket for this action in the memorandum titled *Meetings and Calls Between U.S. EPA and the Olin Corporation.*

III. What is included in this final rule, and what is our rationale for our final decisions and amendments for the PVC and Copolymer Production source category?

A. What final rule amendments are we finalizing based on our reconsideration?

In this action, the EPA is finalizing aspects of the 2020 Proposal concerning the new major source total non-vinyl chloride organic HAP process wastewater emission limit. The EPA is still considering the relevant information and commenter feedback on other portions of the 2020 Proposal and intends to take action on those other portions at a later date.

B. New Major Source Total Non-Vinyl Chloride Organic HAP Process Wastewater Emission Limit

This section describes what the EPA proposed and what the Agency is finalizing, the EPA's rationale for the final decisions and amendments, and a summary of key comments and responses. The EPA intends to address the remaining comments on the proposed rulemaking when the Agency takes final action on the other aspects of the reconsideration proposal at a later date.

1. What did we propose affecting the new major source wastewater emission limits for the PVC and Copolymer Production source category?

The EPA proposed to revise the approach to regulating new major source total non-vinyl chloride organic HAP process wastewater emissions. Specifically, the EPA proposed to eliminate the new major source total non-vinyl chloride organic HAP process wastewater emission limit; remove the associated testing, monitoring, recordkeeping, and reporting requirements; and establish vinyl chloride as a surrogate for non-vinyl chloride organic HAP in PVC and copolymer production process wastewater. This would mean that new major PVC and copolymer production sources would only have to meet the current new major source vinyl chloride process wastewater emission limit (*i.e.,* process wastewater streams must contain less than 0.28 parts per million by weight (ppmw) vinyl chloride). Refer to section II.B of this preamble, to section III.B of the 2020 Proposal,[31] and to the documents titled *Technical Analysis and Documentation to support EPA's Reconsideration of 40 CFR part 63 Subpart HHHHHHH National Emission Standards for the Polyvinyl Chloride and Copolymers (PVC) Production Source Category*[32] and *Analysis of HAP in PVC Process Wastewater*[33] in the docket for additional information on the proposed changes to the PVC and copolymer production process wastewater standards. At this time, the EPA is not taking final action on the proposal to eliminate the existing major source total non-vinyl chloride organic HAP process wastewater emission limit (110 ppmw total non-vinyl chloride organic HAP); to remove the associated testing, monitoring, recordkeeping, and reporting requirements; and to revise the vinyl chloride emission limits for both new and existing sources (0.28 ppmw and 6.8 ppmw vinyl chloride, respectively) (see section III.B.4 of this preamble for additional details).

How did the approach to the new major source process wastewater emission limit change for the PVC and Copolymer Production source category?

The EPA is finalizing the proposed removal of the total non-vinyl chloride organic HAP process wastewater emission limit and the associated testing, monitoring, recordkeeping, and reporting requirements for new major sources without change. In addition, the EPA is finalizing the proposed vinyl chloride surrogacy without changes.

3. What key comments did we receive on the new major source wastewater emission limits, and what are our responses?

This section provides summaries of and responses to key stakeholder comments regarding the EPA's proposed removal of the major source total non-vinyl chloride organic HAP process wastewater emission limits and the proposed vinyl chloride surrogacy determination.

Comment: Commenters both supported and opposed the EPA's proposal to remove the major source total non-vinyl chloride organic HAP process wastewater emission limits and establish vinyl chloride as a surrogate for non-vinyl chloride organic HAP for major and area sources.

At least two commenters said that vinyl chloride is a reasonable surrogate for non-vinyl chloride organic HAP because: (1) vinyl chloride and individual organic HAP are invariably present in process wastewater, (2) the wastewater strippers used to control vinyl chloride also control other HAP, and (3) wastewater strippers are the only means that PVC affected sources can use to control organic HAP from process wastewater. Other commenters said that they agree with the EPA's analysis of the other organic HAP being treated in the steam strippers.

A commenter cited *Mossville Environmental Action Now* v. *EPA* and said the EPA's proposal (and the accompanying preamble discussion) is responsive to the D.C. Circuit's request that the Agency ''properly explain its methodology for regulating [HAP] emitted in PVC production other than vinyl chloride by use of a surrogate.''[34] Another commenter cited *U.S. Sugar Corporation* v. *EPA*[35] and *National Lime Association* v. *EPA*[36] and said that the D.C. Circuit has held that the EPA may use a surrogate to regulate HAP under CAA section 112 where ''reasonable.'' The commenter added that the variety of resin recipes and products manufactured by PVC MACT affected sources, which require significant variations in ingredients, as well as process parameters, make the use of vinyl chloride as a surrogate the only workable solution. The commenter contended that different resin recipes use widely varying ingredients, with corresponding changes in the HAP profile. The commenter said that individual resin recipes normally

include different reactor temperature profiles, reactor pressure, and other process changes, which impact the HAP emissions. The commenter further noted that the slurry stripper operating parameters are also usually different for different products, including residence time/slurry feed rate, steam feed rate, temperature at various column locations, pressure/vacuum, *etc.*

Commenters confirmed that effluent wastewater from virtually all PVCPUs is eventually routed to secondary treatment facilities with biological destruction capabilities for HAP. The commenters said steam stripping PVC process wastewater for vinyl chloride effectively reduces or removes all organic HAP according to the Fraction Removed (Fr) values in the Hazardous Organic NESHAP (HON).[37] However, a commenter noted an error in the memorandum titled *Analysis of HAP in PVC Process Wastewater* that they claimed could be used to undermine the effectiveness of using vinyl chloride as a surrogate.[38] The commenter said that the average concentration of ethylene glycol in stripped wastewater across the industry as specified in the memorandum (*i.e.,* 9,150 ppmw) is skewed by data from a single facility that is no longer in operation. The commenter said that of 642 samples analyzed, ethylene glycol was found in only 48, and that the concentration of 46 samples ranged from 0.6 to 19.7 ppmw yielding an average ethylene glycol concentration of 3.7 ppm. The commenter added that the high average ethylene glycol concentration is due to the inclusion of two samples, measuring 50,400 ppmw on March 25, 2013, and 64,000 ppmw on April 7, 2013, which were provided by the CertainTeed facility (Westlake, Louisiana) as part of its response to the EPA's November 8, 2012, ICR for wastewater. The commenter said that CertainTeed was the last facility to produce PVC resin using a bulk process, which uses significant amounts of ethylene glycol as a coating agent to concentrate the bulk resins and prevent buildup inside the resin autoclave. The commenter said that ethylene glycol was steam stripped out of the resin in situ in the autoclave and eventually collected in the facility's wastewater. However, the commenter was unsure whether CertainTeed used steam stripping to control its wastewater. The commenter contended that these levels of ethylene glycol are unlikely to reoccur because concentrators and autoclaves are not used by suspension, dispersion, or copolymer resin producers.

Another commenter said that variations in non-vinyl chloride monomer HAP concentrations in the ICR wastewater data that were used to develop emission limitations are attributable to varying resin formulations among producers. Thus, some producer formulations may include a HAP that another producer does not use and vice versa. The commenter also said that various starting concentrations of the same HAP will affect final concentrations. The commenter said that using vinyl chloride monomer as a common HAP (*i.e.,* as a surrogate) allows the EPA to identify the most efficient stripping operations providing the greatest pollutant reductions for all HAP present, and that the surrogacy greatly simplifies sample collection and analysis requirements, data collection, and reporting burdens while still requiring emission reductions equivalent to the best performers.

Another commenter argued that the EPA's failure to set emission limits for HAP other than vinyl chloride is unlawful and that the Agency's claim that vinyl chloride is a surrogate for the other HAP emitted from PVC plants' process wastewater is unlawful. The commenter cited *National Lime Association* v. *EPA* [39] and *Mossville Environmental Action Now* v. *EPA* [40] and argued that the CAA unambiguously requires the EPA's emission standards for a source category to include limits for each HAP that the source category emits. The commenter asserted that under binding D.C. Circuit precedent, the EPA may use standards for surrogates to meet this obligation only if the Agency's limits for the surrogate reflect ''the average level achieved by the best performers with regard to [the target] HAPs.'' [41] The commenter quoted *Sierra Club* v. *EPA,* stating ''if EPA looks only to [the surrogate], but HAPs are reduced [in another] way that does not reduce [the surrogate], the best achieving sources, and what they can achieve with respect to HAPs, might not be properly identified.'' [42]

The commenter contended that, considering this D.C. Circuit precedent, a valid surrogacy relationship between vinyl chloride and total non-vinyl chloride organic HAP does not exist.

The commenter asserted that the EPA does not even attempt to show that its vinyl chloride standards will reduce emissions of such other HAP to ''the average level achieved by the best performers with regard to those HAP.'' The commenter said that the D.C. Circuit has made plain that the best performers are the sources with the lowest emissions.[43] The commenter said that if the EPA could designate the sources that reduce their emissions most through the use of a control technology, the Agency could ignore the many other factors—specifically identified in CAA section 112(d)(2)—that affect sources' actual emission levels, such as the use of cleaner raw materials and fuels and cleaner processes. The commenter said that the D.C. Circuit has explained repeatedly that it is not sufficient for the EPA to only consider sources using MACT controls if factors other than MACT technology influence a source's performance.[44] The commenter said that the D.C. Circuit has stated that the EPA is not required to use the MACT approach and, if it is insufficient to adequately consider the factors influencing source performance, the Agency must devise a different approach.[45]

The commenter said that the EPA made clear in the proposal preamble that emission levels of the other HAP (for which the Agency claims vinyl chloride is a surrogate) are actually determined by at least one factor that is not correlated to vinyl chloride emissions: the various ''resin recipe slates'' that different plants use. The commenter asserted that the record shows that 33 non-vinyl chloride organic HAP are emitted from PVC plants' wastewater, that the top performers ''with regard to'' some of these HAP are achieving emission levels of zero, and that the EPA admits that the effect of different plants' resin recipes on the emissions of HAP other than vinyl chloride is so significant that the sources the Agency has identified as best performers for vinyl chloride—the ones with the best performing steam

strippers—are not the best performers for other organic HAP.[46]

Response: The EPA acknowledges the comments submitted in support of and in opposition to the Agency's proposal to remove the total non-vinyl chloride organic HAP process wastewater emission limits from the major source PVC NESHAP by establishing vinyl chloride as a surrogate for non-vinyl chloride organic HAP. After considering these comments, the EPA is finalizing the removal of the new major source total non-vinyl chloride organic HAP process wastewater emission limit and the proposed surrogacy without changes.

In response to the commenter's concern regarding the average ethylene glycol concentration identified in table 2 of the document titled *Analysis of HAP in PVC Process Wastewater,* the EPA agrees that the two ethylene glycol data points (*i.e.,* concentrations of 50,400 ppm and 64,000 ppm) from the CertainTeed facility skew the average concentration.[47] However, this does not change the EPA's conclusions regarding vinyl chloride's ability to act as a surrogate for non-vinyl chloride organic HAP in PVC and copolymer production process wastewater. The data in table 2 in the document titled *Analysis of HAP in PVC Process Wastewater* demonstrate that steam stripping reduces emissions of the majority of organic HAP in PVC and copolymer production to levels similar to or below that of vinyl chloride. However, it is not necessary to reduce the ethylene glycol concentration below that of vinyl chloride for vinyl chloride to be a valid surrogate, as the EPA explains later in this comment response.

Responding to the commenter's arguments regarding the lawfulness and validity of the proposed (and final) surrogacy, the EPA disagrees that it is unlawful for the Agency to use vinyl chloride as a surrogate for non-vinyl chloride organic HAP in PVC and copolymer production process wastewater.

When considering the surrogacy relationship between particulate matter (PM) and metal HAP, the D.C. Circuit applied three general criteria that clearly demonstrate that a surrogate is reasonable: (1) ''HAP metals are invariably present in . . . PM;'' (2) ''PM control technology indiscriminately captures HAP metals along with other particulates;'' and (3) ''PM control is the only means by which facilities 'achieve' reductions in HAP metal emissions.'' [48] In that situation, PM is the surrogate for metal HAP. Applying these criteria to PVC and copolymer production process wastewater, the EPA interprets similar criteria to be: (1) both non-vinyl chloride organic HAP and vinyl chloride must be present in the wastewater streams; (2) the vinyl chloride control technology must indiscriminately capture both non-vinyl chloride organic HAP and vinyl chloride; and (3) steam stripping is the only means by which affected sources achieve reductions in non-vinyl chloride organic HAP emissions. The EPA notes that other commenters who expressed support for the proposed (and final) surrogacy identified the same criteria.

With respect to the first criterion, the EPA explained in the 2020 Proposal that both vinyl chloride and non-vinyl chloride HAP are invariably present in PVC and copolymer production process wastewater streams.[49] Additionally, the wastewater analyses show that vinyl chloride is present in all of the analyzed wastewater streams (as are acetaldehyde and formaldehyde), yet many other non-vinyl chloride organic HAP (*e.g.,* methanol, chloroform, benzene, hexane) are not.[50] [51] As other commenters noted, vinyl chloride monomer is the primary feedstock for PVC and copolymer resin manufacturing, and the resin recipes dictate the presence of other non-vinyl chloride organic HAP in the resulting process wastewater. When a source does not identify the presence of a particular organic HAP in a wastewater stream, it does not necessarily indicate that the source achieved complete control of the given organic HAP. Instead, it more likely indicates that the resin recipe did not call for that specific HAP, and it was never present in the process. This is particularly relevant considering that steam stripping will remove a similar fraction of HAP from the wastewater for 26 of the 33 HAP identified in table 1 of the wastewater analysis, as the EPA explains later in this comment response.[52] In addition, the EPA notes that while the Agency has the authority to subcategorize process wastewater based on resin type to establish total non-vinyl chloride organic HAP emission limits to address these differences in HAP composition (as the EPA has done for the stripped resin emission limits for the various PVC production types), a single facility may have up to 100 different resin recipes, all of which may require different HAP in different concentrations.[53] The EPA does not have sufficient information to subcategorize by resin type, nor would it be practical to do so given the burden of monitoring for dozens of different emission limits, all applying at different times depending on the batch. Using vinyl chloride as a surrogate will address those concerns by allowing facilities to monitor for a single representative HAP to demonstrate adequate control.

The EPA also notes that it is common for chemical sector rulemakings to have more general standards for streams potentially containing a wide variety of HAP (*e.g.,* the process vent and process wastewater standards in the HON and in the Miscellaneous Organic Chemical Manufacturing NESHAP (MON)).[54] The EPA uses total organic carbon as a surrogate for individual organic HAP in those rules because there is no guarantee that any one HAP will be present in all affected process streams as those rules affect many different manufacturing processes. A similar situation applies for the PVC NESHAP; however, vinyl chloride is the primary feedstock common to all PVC and copolymer production operations, and all process wastewater streams contain vinyl chloride. Thus, while the presence of other organic HAP may vary between sources, measuring control via vinyl chloride provides the best indication of the level of control despite the potential differences in HAP composition between sources.

Addressing the second criterion, regardless of which non-vinyl chloride organic HAP are in a process wastewater stream, steam stripping (the MACT control technology) will control the emissions. The EPA has long held that steam stripping will indiscriminately control all organic HAP, as stated in the 2000 proposal [55] and the 2012 Final Rule [56] with respect to the stripped resin and wastewater standards, respectively, and in the document titled *Analysis of HAP in PVC Process Wastewater,*[57] which is in the docket. The EPA has considered steam stripping as a primary control option for many different chemical sector rulemakings including the HON, the MON, the Polyether

Polyols Productions NESHAP, the Ethylene Production NESHAP, and the Benzene Waste Operations NESHAP, all of which affect sources with differing emission profiles.[58] As such, the EPA has clearly demonstrated that steam stripping will indiscriminately control both vinyl chloride and non-vinyl chloride organic HAP emissions.

Addressing the third criterion, the EPA is unaware of any other technology that will control organic HAP emissions from PVC and copolymer production process wastewater to the same extent as steam stripping. While many, if not all, PVC and copolymer production sources send their stripped wastewater to a secondary biological treatment unit (as confirmed by two commenters), biological treatment does not effectively reduce all organic HAP in PVC and copolymer production process wastewater. Table 3 of the document titled *Analysis of HAP in PVC Process Wastewater* shows the F_r and Fraction Emitted (F_e) values for the HAP in PVC and copolymer production wastewater. The EPA expects that a design steam stripper will remove a fraction of HAP equal to the F_r value from process wastewater streams while the Agency also expects that a wastewater process will emit a fraction of HAP equal to the F_e value as a result of downstream treatment (*i.e.,* biotreatment) and collection processes.[59] The F_e values vary significantly and include two HAP (2,2,4-trimethylpentane and hexane) with F_e values of 1.00. F_e values of 1.00 mean that all of the 2,2,4-trimethylpentane and hexane in the process will be emitted from the biotreatment and collection processes if the source does not control those emissions another way. Therefore, it is not possible for PVC and copolymer production sources to rely solely on biotreatment to control all HAP emissions from process wastewater.

By comparison, 26 of the 33 non-vinyl chloride organic HAP have F_r values and of those, 23 have the same F_r value as vinyl chloride, 0.99, and none have F_r values of zero. For the remaining seven HAP without F_r values, the D.C. Circuit in *National Lime Association* v. *EPA* established that if ''HAP metals are invariably present in cement kiln PM, then even if the ratio of metals to PM is small and variable, or simply unknown, PM is a reasonable surrogate for metals—assuming . . . that PM control technology indiscriminately captures HAP metals along with other particulates.'' [60] In context of the present rulemaking, the EPA applies this rationale to find that vinyl chloride is a reasonable surrogate, even though steam stripping will not control all of the non-vinyl chloride HAP equally as well as vinyl chloride (potentially including those HAP for which the EPA does not have an F_r value), because the control technology (*i.e.,* steam stripping) indiscriminately targets all organic HAP. The EPA notes that non-vinyl chloride organic HAP that are not as well controlled by steam stripping also tend to have low F_e values, indicating that those organic HAP are more likely to remain in the wastewater than volatilize into air emissions.

In addition, the EPA notes that PVC and copolymer production process wastewater enters the biotreatment unit after a steam stripper removes the majority of HAP. By the time the wastewater reaches the biotreatment units, a design steam stripper will have controlled 99 percent of emissions from 24 of the 34 organic HAP in table 1 of the document titled *Analysis of HAP in PVC Process Wastewater.* Although the EPA acknowledges that biotreatment will reduce emissions for certain non-vinyl chloride organic HAP, the Agency maintains that steam stripping is the only technology achieving emission reductions of all organic HAP emitted by PVC and copolymer production wastewater.

Lastly, addressing the commenter's assertion that the EPA failed to demonstrate that the finalized surrogacy will achieve emission reductions reflective of the best performing sources with respect to non-vinyl chloride organic HAP, the F_r and F_e values do not depend on the quantities of the treated HAP. As described in the document titled *Analysis of HAP in PVC Process Wastewater* in the docket for this action, a design steam stripper will reduce organic HAP in the wastewater by an amount equal to the F_r values.[61] So, as sources remove vinyl chloride with a control efficiency equal to the F_r value, they will also be reducing other non-vinyl chloride organic HAP in the wastewater by an amount equal to the F_r values for those HAP (as steam stripping indiscriminately controls all organic HAP). This means that the effectiveness of stream stripping for 23 of the 33 non-vinyl chloride HAP will match the effectiveness of the control technology for vinyl chloride. For the remaining non-vinyl chloride organic HAP, while steam stripping will continue to remove the HAP in quantities approaching the F_r value, the amount of HAP remaining in the wastewater will be greater than if a similar amount of vinyl chloride entered the steam stripper. As such, an elevated concentration of hard-to-strip HAP in a wastewater stream does not necessarily imply the overall performance of the steam stripper is worse than the performance of a steam stripper controlling streams containing similar levels of vinyl chloride (or any of the other 23 HAP with F_r values equal to vinyl chloride's F_r value) but not containing those hard-to-strip HAP. This is especially true because the resin recipes do not include all HAP in each batch of polymer, as discussed previously. Nonetheless, all PVC and copolymer production process wastewater streams will contain vinyl chloride. As such, sources that demonstrate the greatest reductions in vinyl chloride represent those sources with the most effective steam stripping systems. Thus, the standards demonstrate total non-vinyl chloride emission reductions reflective of the best performing sources, so long as the EPA bases the vinyl chloride emission limits on the best performing sources, as the CAA requires.

The EPA notes that while the Agency is not finalizing the proposed changes to the major source vinyl chloride emission limits for PVC and copolymer production process wastewater at this time, the current vinyl chloride emission limits (which have been in place for over a decade) consider the best performing sources with respect to the 2012 final rule. The EPA intends to review the proposed vinyl chloride limits and relevant comments in taking final action on the other reconsideration issues. The EPA will review and determine at that time if it is necessary to revise the standards.

4. What is the rationale for our final approach and final decisions for the new source wastewater emission limits?

The EPA is finalizing the revisions to the approach to regulating new major source total non-vinyl chloride organic HAP process wastewater emissions without change. Specifically, the EPA is finalizing the removal of the total non-vinyl chloride organic HAP process wastewater emission limit for new major PVC and copolymer production sources; the associated testing, monitoring, recordkeeping, and

[58] 40 CFR part 63, subparts F, G, and H; FFFF; PPP; and YY and 40 CFR part 61, subpart FF, respectively.

[59] The EPA developed a ''design steam stripper'' with certain operational and design criteria to assess the efficiency of steam stripping (*i.e.,* the F_r value) as a control option for process wastewater from SOCMI operations subject to the HON. 40 CFR 63.138(d) details the criteria. See document ID Nos. EPA–HQ–OAR–2002–0037–0666 and EPA–HQ–OAR–2002–0037–0664.

[60] *See Nat'l Lime Ass'n,* 233 F.3d at 639.

[61] *See* Document ID No. EPA–HQ–OAR–2002–0037–0681.

reporting requirements; and that vinyl chloride can serve as a surrogate for non-vinyl chloride organic HAP in PVC and copolymer production process wastewater, without change.

This action focuses on the removal of a regulatory barrier for new major source PVC and copolymer production manufacturers. The EPA is not taking final action on the proposed removal of the existing major source total non-vinyl chloride organic HAP process wastewater emission limit at this time. Although the EPA believes that the current new major source vinyl chloride wastewater emission limit ensures sufficient control of non-vinyl chloride organic HAP emissions, the current existing major source vinyl chloride emission limit for PVC and copolymer production process wastewater is 24 times larger than the equivalent emission limit for new major sources (6.8 ppmw vinyl chloride for existing major sources versus 0.28 ppmw vinyl chloride for new major sources). With vinyl chloride acting as a surrogate, this corresponds to potentially 24 times more non-vinyl chloride organic HAP emissions from existing major sources than from new major sources. Although the total existing source non-vinyl chloride organic HAP concentration in the process wastewater must remain below 110 ppmw, the non-vinyl chloride organic HAP emission limit is 16 times greater than the vinyl chloride emission limit. Given that steam stripping removes a similar fraction of HAP for 26 of the 33 non-vinyl chloride organic HAP in PVC process wastewater, if sources are controlling vinyl chloride to just below the existing source emission limit (*i.e.,* 6.8 ppmw), and there are similar amounts of vinyl chloride as other organic HAP in the process wastewater, then wastewater streams at existing major sources could contain 16 organic HAP with concentrations up to 24 times greater than equivalent wastewater streams at new major sources. As such, it is appropriate for existing major sources to continue to test, monitor, and report total non-vinyl chloride organic HAP concentrations in process wastewater and to comply with the associated emission limit at this time. The EPA notes that existing sources have complied with the current existing source vinyl chloride and total non-vinyl chloride organic HAP process wastewater emission limits for over a decade.

Similarly, the EPA is not taking final action on removing the non-vinyl chloride organic HAP process wastewater monitoring requirements for area source PVC and copolymer production manufacturers. The area source vinyl chloride process wastewater emission limits are 7.5 times greater than the new major source vinyl chloride process wastewater emission limit (2.1 ppmw vinyl chloride for new and existing area sources versus 0.28 ppmw for a new major source). This corresponds to potentially 7.5 times more emissions per HAP from area source process wastewater as compared to similar streams at a new major source. In addition, although the EPA rescinded the total non-vinyl chloride organic HAP process wastewater emission limits with the 2015 Final Rule, the NESHAP has required area sources to monitor and report total non-vinyl chloride organic HAP concentrations in process wastewater for more than a decade.[62] As sources have continued the monitoring without major adverse effect, the EPA anticipates continuing to test, monitor, and report total non-vinyl chloride organic HAP concentrations will not be burdensome. Therefore, the EPA believes it is appropriate for area PVC and copolymer production sources to continue monitoring and reporting total non-vinyl chloride organic HAP concentrations at this time.

The EPA is also not taking final action on the proposed revisions to the major source vinyl chloride process wastewater emission limits at this time. The EPA continues to evaluate the comments on the 2020 Proposal and the Agency's identification of the best performing sources with respect to process wastewater. The EPA intends to make final determinations on whether it is appropriate to remove the total non-vinyl chloride organic HAP process wastewater emission limit for existing major sources, revise the vinyl chloride emission limits for new and existing major sources, and remove the associated total non-vinyl chloride organic HAP testing and monitoring requirements in addressing the other aspects of the proposed reconsideration at a later date.

C. What are the effective and compliance dates of the standards?

CAA section 112(i) and 5 United States Code (U.S.C.) 801(3) provide that for the finalized requirements, all new affected sources that commenced construction after May 20, 2011, must comply with all requirements under CAA section 112(d)(2), (3), (6), and 112(h) by November 9, 2026, or upon startup, whichever is later.

[62] 80 FR 5938 (February 4, 2015).

IV. Summary of Environmental and Economic Impacts

A. What are the affected sources?

While no new PVC sources have become operational since the 2012 Final Rule, the EPA is aware that an industry stakeholder has expressed interest in potentially developing, constructing, and operating a new PVC manufacturing facility within the next decade. If constructed, this final rule could impact such a new facility. The EPA approximated the impacts of reducing the testing, monitoring, recordkeeping, and reporting requirements in the rule to provide a conservative estimate of this action's cost-savings on a per facility basis (see section IV.C of this preamble for additional details).

B. What are the air quality impacts?

The EPA does not expect any air quality impacts as a result of this rule, as there will be no change to the total emissions from the PVC and Copolymer Production source category. This action does not affect existing major PVC and copolymer production sources, and so there will be no emission changes from currently operating facilities. While this action will affect new major sources (*i.e.,* sources that commenced construction after May 20, 2011), vinyl chloride will act as a surrogate for non-vinyl chloride organic HAP, and the EPA is not revising the new major source vinyl chloride emission limit. In addition, the EPA is unaware of any new sources currently subject to the rule. As such, there will be no changes to the potential vinyl chloride and non-vinyl chloride organic HAP emissions if a new source becomes operational.

The EPA notes that if stakeholders construct a new PVC and copolymer production facility and it becomes operational, the sector's HAP emissions will increase. However, the EPA cannot speculate on the potential impacts of emissions that may never occur. As such, the EPA does not anticipate any immediate impacts to human health as a consequence of this final rule. If stakeholders construct a new facility and it becomes operational, the EPA will consider the associated emissions when conducting future rulemakings.

C. What are the costs?

The EPA does not anticipate any operational changes for existing PVC and copolymer manufacturing facilities to accommodate the revisions in this final action. As such, existing sources will incur no costs as a result of this final action. In addition, as the EPA is unaware of any new sources currently subject to the rule, new sources will also

incur no cost as a result of this final action. Thus, this action will have no immediate cost impacts.

However, if a new PVC and copolymer production facility becomes operational, the EPA estimates owners and operators would save approximately $2,900 in initial capital/startup costs as well as an estimated $30,000 in annual costs (both in 2025 dollars) compared to the facility's costs if it became operational after May 20, 2011, but prior to this final action due to the reductions in the non-vinyl chloride organic HAP testing, monitoring, recordkeeping, and reporting requirements the Agency is finalizing with this action.

The EPA calculated these cost savings using information from the ICR supporting statement, assuming one respondent (see section V.C of this preamble for additional details).[63] The EPA estimates that the costs for initial total non-vinyl chloride organic HAP testing for stripped wastewater and uncontrolled wastewater are $820 and $2,100, respectively. A new major source subject to the requirements in this final rule would no longer incur those costs. In addition, a new major source would no longer need to conduct monthly total non-vinyl chloride organic HAP monitoring for treated wastewater streams (resulting in $9,800 saved annually) or annual monitoring for untreated wastewater streams ($2,100 saved annually).

Also, new major sources subject to the requirements in this final rule would save on labor costs. The EPA estimated that sampling would require approximately 4 hours per sample and two samples per wastewater stream. Using labor rates from the United States Department of Labor, Bureau of Labor Statistics and inflating them by 110 percent to account for varying industry wage rates and the additional overhead business costs, the EPA estimated that new major sources would save approximately $18,000 in labor costs per year while incurring a one-time cost of $2,000 to read and understand this final action.[64] Finally, the EPA estimated that new major sources would save approximately $1,900 per year in recordkeeping costs due to no longer having to keep, retain, or report total non-vinyl chloride organic HAP concentrations in process wastewater.

D. What are the benefits?

This action removes a regulatory barrier affecting the potential construction of new major source PVC and copolymer production manufacturing facilities. By removing this barrier, the EPA is addressing feasibility concerns and reducing overall regulatory burden by simplifying the NESHAP without increasing the potential total non-vinyl chloride organic HAP emissions from process wastewater from a newly constructed PVC and copolymer production plant.

E. What are the economic impacts?

The EPA anticipates no emission or air quality impacts and no qualitative or quantitative changes in health benefits. Therefore, there are no estimated monetized health or emissions impacts, and the potential costs detailed in section IV.C of this preamble are the only potential economic impacts of this final action.

V. Statutory and Executive Order Reviews

Additional information about these statutes and Executive Orders is available at *https://www.epa.gov/laws-regulations/laws-and-executive-orders.*

A. Executive Order 12866: Regulatory Planning and Review and Executive Order 13563: Improving Regulation and Regulatory Review

This action is not a significant regulatory action and was therefore not submitted to the Office of Management and Budget (OMB) for review.

B. Executive Order 14192: Unleashing Prosperity Through Deregulation

This action is considered an Executive Order 14192 deregulatory action. For regulatory accounting purposes, this action will have no immediate cost impacts as it affects no currently operating sources. However, if a new source becomes operational, the EPA anticipates this action will save the source approximately $2,900 in capital/startup costs and $30,000 in annual costs. Details on the potential cost savings of this final rule can be found in EPA's analysis of the potential costs and benefits associated with this action (see section IV of this preamble).

C. Paperwork Reduction Act (PRA)

The EPA submitted the information collection activities in this rule to OMB for approval under the Paperwork Reduction Act (PRA). OMB has assigned EPA ICR number 2432.08 to the ICR document that the EPA prepared. You can find a copy of the ICR in the docket for this rule, and it is briefly summarized here. The information collection requirements are not enforceable until OMB approves them.

The EPA is finalizing amendments to the PVC NESHAP to remove the new major source total non-vinyl chloride organic HAP process wastewater emission limit and the associated testing and monitoring requirements from the PVC NESHAP. The EPA is also finalizing that vinyl chloride can act as a surrogate for non-vinyl chloride organic HAP in PVC and copolymer production process wastewater. The EPA is no longer collecting this information as it is no longer necessary to ensure compliance with the PVC NESHAP. The EPA notes that the Agency does not anticipate that any new sources will become operational in the next 3 years. As such, there will be no respondents impacted by this ICR, resulting in no cost savings at this time.

Respondents/affected entities: Owners or operators of PVC and PVC copolymer production facilities.

Respondent's obligation to respond: Mandatory (40 CFR part 63, subpart HHHHHHH).

Estimated number of respondents: 0.

Frequency of response: Initially and semiannually.

Total estimated burden: 0 hours (per year). Burden is defined at 5 CFR 1320.3(b).

Total estimated cost: Average annual cost is $0 per year.

An agency may not conduct or sponsor, and a person is not required to respond to, a collection of information unless it displays a currently valid OMB control number. The OMB control numbers for the EPA's regulations in 40 CFR are listed in 40 CFR part 9. When OMB approves this ICR, the Agency will announce that approval in the **Federal Register** and publish a technical amendment to 40 CFR part 9 to display the OMB control number for the approved information collection activities in this final rule.

D. Regulatory Flexibility Act (RFA)

I certify that this action will not have a significant economic impact on a substantial number of small entities under the Regulatory Flexibility Act (RFA). This action will not impose any requirements on small entities, as this is a deregulatory action affecting only new major sources.

E. Unfunded Mandates Reform Act (UMRA)

This action does not contain an unfunded mandate of $100 million (adjusted annually for inflation) or more (in 1995 dollars) as described in the Unfunded Mandates Reform Act (UMRA), 2 U.S.C. 1531–1538, and does not significantly or uniquely affect small governments. The EPA estimates that

[63] *See* Docket ID No. EPA–HQ–OAR–2002–0037.

[64] *https://www.bls.gov/oes/2025/may/oessrci.htm.*

costs involved in this action will not exceed $191 million in 2025 dollars ($100 million in 1995 dollars adjusted for inflation using the GDP implicit price deflator) or more in any one year.

F. Executive Order 13132: Federalism

This action does not have federalism implications. It will not have substantial direct effects on the States, on the relationship between the national government and the States, or on the distribution of power and responsibilities among the various levels of government.

G. Executive Order 13175: Consultation and Coordination With Indian Tribal Governments

This action does not have Tribal implications as specified in Executive Order 13175. None of the facilities that the EPA has identified as being affected by this action are owned or operated by Tribal governments or located within Tribal lands. Thus, Executive Order 13175 does not apply to this action.

H. Executive Order 13045: Protection of Children From Environmental Health Risks and Safety Risks

Executive Order 13045 directs Federal agencies to include an evaluation of the health and safety effects of the planned regulation on children in Federal health and safety standards and explain why the regulation is preferable to potentially effective and reasonably feasible alternatives. This action is not subject to Executive Order 13045 because it is not a significant regulatory action under section 3(f)(1) of Executive Order 12866 and because the EPA does not believe the environmental health or safety risks addressed by this action present a disproportionate risk to children. This action does not affect existing sources. While this action does affect new sources as defined in the 2012 Final Rule (sources that commenced construction after May 20, 2011), the EPA is not aware of any such currently operating source. If a new source were to come online, this action would not affect the process wastewater emissions, as the new source would still need to meet the vinyl chloride emission limit and the control technology (*i.e.,* steam stripping) controls all HAP indiscriminately. With no immediate emissions impacts, this action will not disproportionately affect children's health.

The EPA's Policy on Children's Health applies to this action. The EPA did not conduct an analysis of children's environmental health for this final action as there are no immediate emissions impacts. Thus, the EPA expects no changes in HAP exposure to infants and children as a result of this action.

I. Executive Order 13211: Actions Concerning Regulations That Significantly Affect Energy Supply, Distribution, or Use

This action is not subject to Executive Order 13211, because it is not a significant regulatory action under Executive Order 12866.

J. National Technology Transfer and Advancement Act (NTTAA)

This rulemaking does not involve technical standards.

K. Congressional Review Act (CRA)

This action is subject to the Congressional Review Act (CRA), and the EPA will submit a rule report to each House of the Congress and to the Comptroller General of the United States. This action is not a ''major rule'' as defined by 5 U.S.C. 804(2).

List of Subjects in 40 CFR Part 63

Environmental protection, Administrative practice and procedures, Air pollution control, Hazardous substances, Intergovernmental relations, Reporting and recordkeeping requirements.

Lee Zeldin,

Administrator.

For the reasons stated in the preamble, the Environmental Protection Agency amends part 63 of title 40, chapter I, of the Code of Federal Regulations as follows:

PART 63—NATIONAL EMISSION STANDARDS FOR HAZARDOUS AIR POLLUTANTS FOR SOURCE CATEGORIES

■ 1. The authority citation for part 63 continues to read as follows:

Authority: 42 U.S.C. 7401 *et seq.*

Subpart HHHHHHH—National Emission Standards for Hazardous Air Pollutant Emissions for Polyvinyl Chloride and Copolymers Production

■ 2. Amend § 63.11875 by revising paragraphs (b) and (c) and adding paragraph (e) to read as follows:

§ 63.11875 When must I comply with this subpart?

* * * * *

(b) Except as specified in paragraph (e) of this section, if you start up a new affected source on or before April 17, 2012, you must achieve compliance with the provisions of this subpart no later than April 17, 2012. On or after April 17, 2012, any such new affected source is not subject to the provisions of 40 CFR part 61, subpart F.

(c) Except as specified in paragraph (e) of this section, if you start up a new affected source after April 17, 2012, you must achieve compliance with the provisions of this subpart upon startup of your affected source. Upon startup, any such new affected source is not subject to the provisions of 40 CFR part 61, subpart F.

* * * * *

(e) All new affected sources that commenced construction or reconstruction after May 20, 2011, are subject to the provisions in § 63.11880(d) beginning on November 9, 2026, or initial startup, whichever is later.

■ 3. Amend § 63.11880 by adding paragraph (d) to read as follows:

§ 63.11880 What emission limits, operating limits and standards must I meet?

* * * * *

(d) Beginning no later than the compliance dates specified in § 63.11875(e), new affected sources, as defined in § 63.11870, are no longer required to comply with item 4.b of table 2 to this subpart for process wastewater and the associated total non-vinyl chloride organic HAP testing, monitoring, recordkeeping, and reporting requirements specified in §§ 63.11965(a) through (d), 63.11970(a) and (b), and 63.11975(b) and (c).

■ 4. Amend § 63.11900 by revising paragraphs (c) and (d) to read as follows:

§ 63.11900 By what date must I conduct initial performance testing and monitoring, establish any applicable operating limits and demonstrate initial compliance with my emission limits and work practice standards?

* * * * *

(c) For new or reconstructed affected sources, you must establish any applicable operating limits required in § 63.11880, and demonstrate initial compliance with the emission limits and standards specified in tables 2 and 3 to this subpart, as applicable, no later than 180 days after the compliance date specified in § 63.11875 or within 180 days after startup of the source, whichever is later, according to § 63.7(a)(2)(ix).

(d) For new and reconstructed affected sources, you must demonstrate initial compliance with any applicable work practice standards required in § 63.11880 no later than the compliance date specified in § 63.11875 and according to the applicable provisions in § 63.7(a)(2).

* * * * *

■ 5. Revise § 63.11965 to read as follows:

§ 63.11965 What are my general compliance requirements for wastewater?

(a) *General requirements for process wastewater.* Except as specified in § 63.11880(d), the concentration of vinyl chloride and total non-vinyl chloride organic HAP in each process wastewater stream containing greater than the limits specified in table 1 or 2 to this subpart, measured immediately as it leaves a piece of process equipment and before being mixed with any other process wastewater stream, must be reduced to the limits specified in table 1 or 2 to this subpart. The applicable limits in table 1 or 2 to this subpart must be met before the process wastewater stream is mixed with any other process wastewater stream containing vinyl chloride or total non-vinyl chloride organic HAP concentrations less than the applicable limits specified in table 1 or 2 to this subpart, before being exposed to the atmosphere, and before being discharged from the affected source.

(b) *Initial determination of process wastewater streams that need to be treated.* Except as specified in § 63.11880(d), you must determine which process wastewater streams require treatment as specified in paragraphs (b)(1) and (2) of this section and meet the requirements of paragraphs (c) and (d) of this section.

(1) You must collect process wastewater samples as specified in paragraphs (b)(1)(i) and (ii) of this section.

(i) For treated process wastewater streams, you must collect process wastewater samples at the outlet of the treatment process and before the process wastewater stream is mixed with any other process wastewater stream containing vinyl chloride or total non-vinyl chloride organic HAP concentrations less than the applicable limits specified in table 1 or 2 to this subpart, before being exposed to the atmosphere, and before being discharged from the affected source.

(ii) For untreated process wastewater streams, you must collect process wastewater samples at the location immediately as the stream leaves a piece of process equipment, before being mixed with any other process stream or process wastewater stream, before being exposed to the atmosphere, and before being discharged from the affected source.

(2) You must measure the concentration of vinyl chloride and total non-vinyl chloride organic HAP using the test methods and procedures specified in § 63.11980.

(c) *Requirements for process wastewater streams that must be treated.* Except as specified in § 63.11880(d), you must treat each process wastewater stream that has a vinyl chloride or total non-vinyl chloride organic HAP concentration equal to or greater than the applicable emission limits specified in table 1 or 2 to this subpart as determined pursuant to paragraph (b) of this section, to reduce the concentration below the applicable emission limits specified in table 1 or 2 to this subpart. You must route wastewater streams through hard-piping to the treatment process and route the vent stream from the treatment process to a closed vent system and control device meeting the requirements of §§ 63.11925 through 63.11950. You must also meet the initial and continuous compliance requirements specified in §§ 63.11970(a) and 63.11975(a) and (b).

(d) *Requirements for process wastewater streams that do not need to be treated.* Except as specified in § 63.11880(d), for each process wastewater stream that has a vinyl chloride or total non-vinyl chloride organic HAP concentration less than the applicable emission limits specified in table 1 or 2 to this subpart as determined pursuant to paragraph (b) of this section, you must meet the initial and continuous compliance requirements specified in §§ 63.11970(b) and 63.11975(c).

(e) *Maintenance wastewater.* You must comply with the requirements specified in § 63.105.

(f) *Determination of total non-vinyl chloride organic HAP.* If you are subject to the emission limits specified in table 1 or 2 to this subpart, then you must develop a facility-specific list of HAP that are expected to be present in each process wastewater stream at your PVCPU and comply with paragraph (f)(1) of this section. This list must be continuously updated and must be available for inspection by the Administrator. This list must include the identification of each HAP expected to be present in each process wastewater stream, and the CAS number for each HAP.

(1) For the purposes of demonstrating initial and continuous compliance as required in §§ 63.11970 and 63.11975, you must meet the requirements specified in paragraphs (f)(1)(i) and (ii) of this section.

(i) You must analyze each process wastewater sample for all table 10 HAP using the test methods specified in § 63.11980(a)(2) and (3).

(ii) You must also analyze each process wastewater sample for any HAP that are not table 10 HAP but are expected to be present in that sample based on your facility-specific list of HAP using the appropriate test method specified in § 63.11980(a)(2).

(2) [Reserved]

■ 6. Revise § 63.11970 to read as follows:

§ 63.11970 What are my initial compliance requirements for process wastewater?

(a) *Demonstration of initial compliance for process wastewater streams that must be treated.* Except as specified in § 63.11880(d), for each process wastewater stream that must be treated as specified in § 63.11965(b) and (c), you must conduct an initial performance test for the wastewater treatment process, measuring the concentration of vinyl chloride and total non-vinyl chloride organic HAP in the wastewater stream at the outlet of the wastewater treatment process before the wastewater is exposed to the atmosphere, mixed with any other process stream, and before being discharged from the affected facility, using the test method and procedures specified in § 63.11980(a).

(b) *Demonstration of initial compliance for process wastewater streams that are not required to be treated.* Except as specified in § 63.11880(d), for each process wastewater stream that has a vinyl chloride or total non-vinyl chloride organic HAP concentration less than the applicable emission limits specified in table 1 or 2 to this subpart, you must use the collection and measurement procedures specified in § 63.11965(b)(1)(ii) and (b)(2) to demonstrate initial compliance.

■ 7. Revise § 63.11975 to read as follows:

§ 63.11975 What are my continuous compliance requirements for process wastewater?

(a) For each process wastewater stream that must be treated as specified in § 63.11965(b) and (c), you must demonstrate continuous compliance as specified in paragraph (b) of this section. For each process wastewater stream for which you initially determine in § 63.11970(b) that treatment is not required, you must demonstrate continuous compliance as specified in paragraph (c) of this section.

(b) Except as specified in § 63.11880(d), for each process wastewater stream that must be treated according to § 63.11965(b) and (c), you must demonstrate continuous compliance with the emission limits specified in table 1 or 2 to this subpart

by following the procedures specified in paragraphs (b)(1) and (2) of this section.

(1) Following your demonstration of initial compliance in § 63.11970(a), make monthly measurements of the vinyl chloride and total non-vinyl chloride organic HAP concentrations using the procedures and methods specified in § 63.11965(b)(1)(i) and (b)(2).

(2) You must demonstrate continuous compliance with the emission limits in table 1 or 2 to this subpart on a monthly basis, using the monthly concentration measurement specified in paragraph (b)(1) of this section.

(c) Except as specified in § 63.11880(d), for each wastewater stream for which you initially determine in § 63.11970(b) that treatment is not required, you must demonstrate continuous compliance as specified in paragraphs (c)(1) and (2) of this section.

(1) Conduct annual performance tests, measuring the vinyl chloride and total non-vinyl chloride organic HAP concentrations using the procedures and methods specified in § 63.11965(b)(1)(ii) and (b)(2).

(2) If any annual performance test conducted as specified in paragraph (c)(1) of this section results in a concentration of vinyl chloride or total non-vinyl chloride organic HAP in the process wastewater stream that is greater than or equal to the applicable emission limits in table 1 or 2 to this subpart, then you must meet the requirements of § 63.11965(c).

■ 8. Amend § 63.11980 by revising paragraphs (a)(1) and (b) to read as follows:

§ 63.11980 What are the test methods and calculation procedures for process wastewater?

(a) * * *

(1) You must conduct performance tests during worst-case operating conditions for the PVCPU when the process wastewater treatment process is operating as close as possible to maximum representative operating conditions. If the wastewater treatment process will be operating at several different sets of operating conditions, you must supplement the testing with additional testing, modeling or engineering assessments to demonstrate compliance with the emission limits.

* * * * *

(b) *Method for calculating total non-vinyl chloride organic HAP concentration.* If you are subject to the emission limits specified in table 1 or 2 to this subpart, then for each process wastewater stream analyzed using the methods specified in paragraph (a) of this section, calculate the sum of the measured concentrations of each HAP analyzed as required in § 63.11965(f)(1) by using the following equation:

Equation 1 to Paragraph (b)

$$C_{TNVCH} = \sum_{i=1}^{n} C_i$$

Where:

C_{TNVCH} = Concentration of total non-vinyl chloride organic HAP, in parts per million by weight (ppmw).

C_i = Concentration of individual HAP present in the sample analyzed pursuant to § 63.11965(f)(1) excluding vinyl chloride, in ppmw, where a value of zero should be used for any HAP concentration that is below the detection limit.

■ 9. Amend § 63.11985 by revising paragraphs (a)(8)(ii) and (b)(8) to read as follows:

§ 63.11985 What notifications and reports must I submit and when?

* * * * *

(a) * * *

(8) * * *

(ii) You must include results of the initial sampling used to determine initial compliance with the vinyl chloride and, if applicable, total non-vinyl chloride organic HAP limits in table 1 or 2 to this subpart.

* * * * *

(b) * * *

(8) For wastewater operations, you must include the results of monthly vinyl chloride and, if applicable, monthly total non-vinyl chloride organic HAP concentration results for each process wastewater stream discharged from the affected source that did not meet the process wastewater emission limits in table 1 or 2 to this subpart.

* * * * *

■ 10. Amend § 63.11990 by:

■ a. Revising paragraph (i) introductory text and paragraph (i)(4); and

■ b. Removing paragraph (i)(5).

The revisions read as follows:

§ 63.11990 What records must I keep?

* * * * *

(i) *Process wastewater.* For treatment processes, you must maintain the records specified in paragraphs (i)(1) through (4) of this section.

* * * * *

(4) All testing data, including monthly measurements of the concentrations of vinyl chloride, and if applicable, the concentration of total non-vinyl chloride organic HAP in each process wastewater stream required to be measured, as specified in § 63.11975.

* * * * *

■ 11. Amend table 2 to subpart HHHHHHH of part 63 by revising the entry ''4. Process Wastewater'' and adding footnote c to read as follows:

TABLE 2 TO SUBPART HHHHHHH OF PART 63—EMISSION LIMITS AND STANDARDS FOR NEW AFFECTED SOURCES

For this type of emission point . . .	And for this air pollutant . . .	And for an affected source producing this type of PVC resin . . .	You must meet this emission limit . . .
* *	* *	* *	*
4. Process Wastewater	a. Vinyl chloride	All resin types	0.28 ppmw.
	b. Total non-vinyl chloride organic HAP [c].	All resin types	0.018 ppmw.
* *	* *	* *	*

[c] For new affected sources, as defined in § 63.11870, the total non-vinyl chloride organic HAP emission limit does not apply as specified in § 63.11880(d).

BILLING CODE 6560–50–P

Proposed Rules

Federal Register
Vol. 91, No. 215
Monday, November 9, 2026

This section of the FEDERAL REGISTER contains notices to the public of the proposed issuance of rules and regulations. The purpose of these notices is to give interested persons an opportunity to participate in the rule making prior to the adoption of the final rules.

DEPARTMENT OF AGRICULTURE

Agricultural Marketing Service

7 CFR Part 986

[Doc. No. AMS–SC–25–0881]

Pecans Grown in the States of Alabama, Arkansas, Arizona, California, Florida, Georgia, Kansas, Louisiana, Missouri, Mississippi, North Carolina, New Mexico, Oklahoma, South Carolina, and Texas; Changes to Membership and Handling Requirements

AGENCY: Agricultural Marketing Service, USDA.

ACTION: Proposed rule.

SUMMARY: This proposed rule would implement recommendations from the American Pecan Council (Council) to eliminate regional and size designations for sheller members, modify the nomination process for sheller members, adjust the requirements of the inter-handler transfer report form, and establish a late fee and interest charges for unpaid assessments. The rule will also propose two technical corrections.

DATES: Comments must be received by December 9, 2026.

ADDRESSES: Interested persons are invited to submit written comments concerning this proposed rule. Comments can be sent to the Docket Clerk, Market Development Division, Specialty Crops Program, AMS, USDA, 1400 Independence Avenue SW, STOP 0237, Washington, DC 20250–0237. Comments can also be sent to the Docket Clerk electronically by email: *MarketingOrderComment@usda.gov* or via the internet at: *https://www.regulations.gov.* Comments should reference the document number and the date and page number of this issue of the **Federal Register**. Comments submitted in response to this proposed rule will be included in the record, will be made available to the public, and can be viewed at: *https://www.regulations.gov.* Please be advised that comments are posted to *regulations.gov* without change.

FOR FURTHER INFORMATION CONTACT: Jennie M. Varela, Marketing Specialist, or Christian D. Nissen, Chief, Southeast Region Branch, Market Development Division, Specialty Crops Program, AMS, USDA; telephone: (863) 324–3375; or email: *Jennie.Varela@usda.gov* or *Christian.Nissen@usda.gov.*

SUPPLEMENTARY INFORMATION: This action, pursuant to 5 U.S.C. 553, proposes to amend regulations issued to carry out a marketing order as defined in 7 CFR 900.2(j). This proposed rule is issued under the Agricultural Marketing Agreement Act of 1937, as amended (7 U.S.C. 601–674) (the Act), amending Marketing Order No. 986 (7 CFR part 986) (the Order), which regulates the handling of pecans grown in Alabama, Arkansas, Arizona, California, Florida, Georgia, Kansas, Louisiana, Missouri, Mississippi, North Carolina, New Mexico, Oklahoma, South Carolina, and Texas. The Council locally administers the Order and is comprised of growers and handlers of pecans operating within the production area, as well as one accumulator member and one public member.

This proposed action is exempt from the Office of Management and Budget (OMB) review process required by Executive Order 12866. This proposed rule would amend existing Marketing Order No. 986, as amended (7 CFR part 986), ''Pecans Grown in the States of Alabama, Arkansas, Arizona, California, Florida, Georgia, Kansas, Louisiana, Missouri, Mississippi, North Carolina, New Mexico, Oklahoma, South Carolina, and Texas,'' and is necessary for the continued operation of the Order. Additionally, this proposed action is exempt from the requirements of Executive Order 14192, ''Unleashing Prosperity Through Deregulation,'' pursuant to section 5(c).

This proposed rule has been reviewed under Executive Order 13175, ''Consultation and Coordination with Indian Tribal Governments,'' which requires Federal agencies to consider whether their rulemaking actions would have Tribal implications. The Agricultural Marketing Service (AMS) has determined this proposed rule is unlikely to have substantial direct effects on one or more Indian Tribes, on the relationship between the Federal Government and Indian Tribes, or on the distribution of power and responsibilities between the Federal Government and Indian Tribes.

This proposed rule has been reviewed under Executive Order 12988, ''Civil Justice Reform.'' This proposed rule is not intended to have a retroactive effect.

This proposed rule would eliminate regional and size designations for sheller members, modify the nomination process for sheller members, adjust the requirements of the inter-handler transfer report form, and establish a late fee and interest charges for unpaid assessments. In addition, this proposed rule would make administrative corrections to § 986.178 to remove an inadvertently duplicated paragraph and a paragraph that was previously incorporated under § 986.177(b).

Section 986.45 of the Order establishes Council membership, with two sheller seats currently allocated to each of the three regions as defined in § 986.33: Eastern, Central, and Western. Section 986.45(b)(2) provides that each region is represented by two sheller seats, with one seat allocated to a sheller who handles more than 12.5 million pounds of pecans per year, and one seat allocated to a sheller handling 12.5 million pounds or less of pecans per year. Each member has an alternate. Section 986.45(c) also authorizes the Council to recommend, with the approval of the Secretary, changes to the requirements for grower and sheller seats to accommodate changes within the industry.

Section 986.46 of the Order outlines the nomination procedures for the Council and § 986.46(b)(8) authorizes the Council to recommend, subject to the approval of the Secretary, changes to the member nomination process. Section 986.58 authorizes the Council to recommend, with the approval of the Secretary, reapportionment and reestablishment of the regions specified in § 986.33.

The Council and Order's activities are funded through handler assessments as authorized in § 986.61. Each handler in the production area pays a pro rata share based on their weight of inshell pecans handled. Section 986.61(g) authorizes the Council, with the approval of the Secretary, to establish a late payment and/or interest charge when assessments are not paid on time. The current assessment rates and due

dates are codified in §§ 986.161 and 986.177, respectively, of the Order's rules and regulations. Assessments are due at the time of reporting and monthly reports are due on the 10th day of the month following the month the pecans were handled.

Section 986.62 provides for the inter-handler transfers of pecans and allows for the transferring handler to shift the reporting and payment of assessments for these pecans to the receiving handler. Under § 986.162, handlers are required to file reports the month following the first transfer between two handlers to indicate a transfer was completed during the season, regardless of the frequency of transfers or weight transferred.

Pursuant to the authorities listed above, the Council recommended revising the rules and regulations under the Order. The Council met on August 14, 2025, and unanimously recommended, with a vote of 14 in favor and none opposed, to eliminate the regional and size designation requirements for sheller seats and modify the nomination process to reflect these changes; to revise the inter-handler transfer report from an annual to monthly submission and include information on the weight and type of inshell of pecans transferred; and to establish a five percent one-time late fee for unpaid assessments and a one percent monthly interest charge on any outstanding balances. The Council recommended these changes to increase sheller representation on the Council, improve data collection accuracy, and encourage timely payment of assessments.

During the original promulgation of the Order in 2016 (81 FR 51298, August 4, 2016), representative membership was a principal issue. As a result, Council membership structure was established to represent distinctive production areas as well as maintain a balance between grower and handler interests. To represent handlers, the Order included six regional seats for shellers and one at-large seat for accumulators. Understanding the dynamic nature of the industry, the Order included provisions for reapportionment and reestablishment if needed in the future.

Since the current membership requirements were established in 2016, the pecan industry has experienced consolidation and change, particularly among shelling operations. As of August 2025, fewer than 30 shellers remain in business, down from 50 in 2016. Due to the decline in the number of shellers, the Council has experienced challenges filling sheller member positions during its nomination cycles, resulting in several vacancies on the Council over the last few years.

When sheller seat vacancies occur, the Council believes it lacks the benefit of additional perspectives in its deliberations. The Council considered solutions to resolve the issue of sheller vacancies, including reducing the weight of inshell pecans required to be considered a large sheller. However, after reviewing the breakdown of active shellers, the Council determined this adjustment would not fully address the problem and that there would still be a shortage of eligible shellers to fill available seats.

At the August 14, 2025, meeting, the Council indicated that many of the remaining shellers now source pecans from multiple regions, operating multiple facilities with some in multiple regions. These changes make the regional affiliations for sheller members required under the Order less applicable. Further, the distribution of shellers throughout the regions is not uniform, making filling seats in some regions more challenging.

During its discussions, the Council also determined that the large and small designations on the sheller seats reduced the number of candidates available for nomination. Because there are fewer large shellers than small, the Council reported that it was difficult finding enough large shellers to fill all the available large sheller member and alternate seats. Consequently, the Council determined that the three regions and size distinctions are no longer representative of the sheller portion of the industry and impede the Council's nominations process.

Accordingly, this proposal would combine the three sheller regions into one sheller region, which would consist of all states within the production area, and remove the large and small sheller seat allocations. All six sheller seats would be open to any qualified sheller, regardless of location or size. This is similar to the accumulator seat on the Council, which is an at-large position that is not limited by location or size. The Council believes these proposed changes would help increase participation on the Council and ensure full sheller representation. During Council discussions on August 14, 2025, it was noted the National Pecan Shellers Association had also expressed support for the proposal.

Implementing these changes would require changes to the sheller member nomination process. Therefore, this proposal would adjust the nomination process to reflect one region with six sheller member seats and six alternate seats. All shellers would be able to nominate and vote on all seats regardless of their size or location. To implement this proposed change, the Council also recommended staggering the initial terms of the new sheller seats, with half serving two-year terms of office and the other half serving the full four-year term of office, so that half of the sheller seats will be up for nomination every two years. Accordingly, this proposed rule would add §§ 986.145 and 986.146 to the administrative provisions under the Order's rules and regulations to establish a single region for sheller seats and a modified nomination process, respectively.

Because the grower segment of industry has not experienced the same level of changes that the sheller segment has, these changes would pertain solely to the sheller seats and nomination process. Thus, the proposal would not redefine the existing regions for growers or modify the grower nomination qualifications and process.

The Order also authorizes specific reporting requirements, with handlers reporting pecans received, shipped, and in inventory to the Council to provide valuable aggregated data to the industry. Assessments are paid according to the reports of pecans received by handlers. The Order's inter-handler transfer provisions allow handlers to shift responsibility for reporting and payment of assessments to another handler when transferring loads of pecans. Having this flexibility has been particularly useful for small entities selling to larger handlers.

The inter-handler transfer provides a way to document the transfer of pecans, ensure transferred pecans are reported as received, and that the associated assessments are paid. Council members agreed these provisions are useful to handlers of all sizes, particularly when lots of pecans need to be redistributed to meet customer needs. Without this record, it would be difficult for the Council to verify which pecans have already been reported and assessed.

Currently, the Order requires the inter-handler transfer form, APC Form #4, to be submitted once during the season, in the month following the initial transfer between the handlers involved. In practice, however, the Council reported the submission of this report is frequently delayed. This creates difficulty for the Council when verifying assessments due and completing handler compliance audits, as there may have been transfers that have not yet been reported. Further, because the current reporting requirement does not include the weight

or type of inshell pecans transferred, the Council must conduct additional follow-up with handlers to determine if the proper assessments are being paid and to ensure the transferred pecans are not being overreported when tracking industry inventory.

During discussions on the issue, the Council reflected on the original intent of the inter-handler transfer report and determined that a monthly report documenting the handler parties involved, as well as the weight and type of inshell pecans transferred, would ensure proper and more accurate accounting of pecans handled and assessments paid. The Council anticipates this proposed change to § 986.162 would enable handlers to better maintain complete records, as required under the Order, as well as assist Council staff in identifying reporting discrepancies. Additionally, because transfers typically occur from November to February, for many handlers, this monthly reporting requirement would only apply to about four months of the year. The Council also noted that the proposed change would not be overly burdensome for handlers and their operations, as the report is completed using readily available information. Accordingly, on August 14, 2025, the Council unanimously recommended making the inter-handler transfer report due monthly and requiring that the weight and type of inshell pecans transferred be reported.

Regarding the timely payment of assessments, the Council reported that some handlers are repeatedly late in paying assessments. Chronic late payments increase administrative burden, disrupt cash flow, and force the Council to devote additional staff resources to collections. Currently, there are no consequences for late payments unless a full compliance case is filed with USDA for consideration of civil penalties, as would be warranted and appropriate under the Act. Although it does not wish to create a financial burden on the industry, the Council believes it is unfair to handlers paying on time to allow handlers who are late submitting their payments to incur no penalty.

To address this, the Council discussed adding a five percent one-time late fee for each occurrence of unpaid assessments that are 30 days past due, as well as a one percent monthly interest charge on the outstanding balance until paid. While late payment penalties and interest fees might be more burdensome on small handlers that are already experiencing cash flow problems, just as assessments are based on a pro rata share of the program's cost, the Council believes the proposed penalties should also apply proportionally. While it is an additional cost, the Council agreed this type of penalty would ensure fairness for all handlers, promote on-time assessment payments, and reduce Council resources spent managing delinquent handlers. The proposed late fee and interest charge would also be consistent with those in place for the industry's Federal research and promotion program. After discussing various options, including extending the allowable payment period, the Council unanimously recommended on August 14, 2025, implementing a five percent one-time late fee for each occurrence of assessments that are 30 days past due and a one percent monthly interest charge on the outstanding balance until paid. These requirements would be codified in a new § 986.163 of the Order's administrative provisions.

Additionally, this rule would also make administrative corrections to § 986.178. A final rule published in the **Federal Register** on April 8, 2020 (85 FR 19651, 19654), made changes to several reporting requirements prescribed under the Order, and inadvertently duplicated a paragraph in § 986.178 and failed to remove language from this section that was incorporated under § 986.177(b). This rule would remove paragraph (b) from § 986.178, which was inadvertently duplicated from paragraph (a) in the section, as well as remove paragraph (c), which was previously consolidated under § 986.177(b). These corrections are administrative in nature and would not have an effect on the other changes proposed in this rulemaking and would not alter reporting requirements.

Therefore, this proposed rule would revise the rules and regulations under the Order by eliminating the regional and size designation requirements for sheller seats and modifying the nomination process to reflect these changes; revising the inter-handler transfer report from an annual to monthly submission and to include information on the weight and type of inshell pecans transferred; and establishing a five percent one-time late fee for unpaid assessments and a one percent monthly interest charge on any outstanding balances. The proposal would also include administrative corrections to § 986.178 to remove an inadvertently duplicated paragraph and a paragraph that was previously incorporated under § 986.177(b).

Initial Regulatory Flexibility Analysis

Pursuant to requirements set forth in the Regulatory Flexibility Act (RFA) (5 U.S.C. 601–612), AMS has considered the economic impact of this proposed rule on small entities. Accordingly, AMS has prepared this initial regulatory flexibility analysis.

The purpose of the RFA is to fit regulatory actions to the scale of businesses subject to such actions in order that small businesses will not be unduly or disproportionately burdened. Marketing orders issued pursuant to the Act are unique regulations in that they are brought about through group action of typically small entities acting on their own behalf.

There are approximately 4,500 growers of pecans in the production area and approximately 110 handlers subject to regulation under the Order. At the time this analysis was prepared, the Small Business Administration (SBA) defined small agricultural growers as those having annual receipts equal to or less than $3,750,000 (North American Industry Classification System (NAICS) code 111335, Tree Nut Farming) (13 CFR 121.201). Small agricultural service firms a were defined by the SBA as those having annual receipts equal to or less than $34,000,000 (NAICS code 115114, Postharvest Crop Activities).

Based on data from the National Agricultural Statistics Service (NASS), the average annual grower price for pecans utilized for processing during the 2023–2024 season was approximately $1.77 per pound. With a total utilization of 264,980,000 pounds for the 2023–2024 fiscal year, the total 2023–2024 value of the crop utilized for processing is estimated at $469,014,600 ($1.77 per pound multiplied by $264,980,000 pounds). Dividing the crop value by the estimated number of pecan growers yields an estimated average receipt per grower of $104,225 ($469,014,600 divided by 4,500 pecan growers). Thus, the majority of growers would be classified as small entities.

Based on AMS Market News shipping point and terminal market data for 2024 and 2025, AMS has determined a grower to handler price markup estimate of 25 percent. Adding this margin to the average grower price of $1.77 for in-shell pecans yields an estimated handler price of $2.21 per pound ($1.77 per pound multiplied by 0.25 equals $0.44, added to $1.77). With a total 2023–2024 utilization of 264,980,000 pounds, the total value of handled pecans for the fiscal year was $585,605,800 ($2.21 per pound multiplied by 264,980,000 pounds). Dividing this figure by the number of

handlers yields an estimated average annual handler receipt of $5,323,689 ($585,605,800 divided by 110 pecan handlers). Thus, the majority of handlers would be classified as small entities.

This proposed rule would eliminate regional and size designations for sheller members, modify the nomination process for sheller members, adjust the requirements of the inter-handler transfer report form, and establish a late fee and interest charges for unpaid assessments. In addition, this proposed rule would include administrative corrections to § 986.178 to remove an inadvertently duplicated paragraph and a paragraph that was previously incorporated under § 986.177(b). At its August 14, 2025, meeting, the Council unanimously voted 14 in favor, and none opposed to recommend the proposed changes.

Apart from imposing late fees and interest charges for unpaid assessments, it is not anticipated that this proposed rule would result in any additional cost for the industry. This proposed rule would combine the three sheller regions into one region and remove the designated seats for small and large shellers. While this proposal would modify the nomination process for sheller seats, it would not prohibit any qualified sheller, regardless of size or location, from seeking nomination on the Council. The Council believes this change would help increase sheller representation and participation and create opportunities for more shellers to serve on the Council. Grower seats and regions would remain unchanged.

The proposed rule would also modify the reporting requirements for inter-handler transfers. Rather than be submitted annually, the report would instead be submitted monthly and would include the weight and type of inshell pecans transferred. While this could increase the reporting burden for some handlers, this change would contribute to ensuring the Council's monthly industry reports are accurate and assist with program compliance, which would be beneficial to the industry. Additionally, because transfers typically occur from November to February, the monthly reporting requirement for handlers would apply to about four months of the year. The Council also noted that the proposed change would not be overly burdensome for handlers and their operations, as the report is completed using readily available information. The Council anticipates this change would enable handlers to better maintain complete records, as required under the Order, as well as assist Council staff in identifying reporting discrepancies.

Finally, the proposed rule would add a five percent one-time late fee on assessments that are more than 30 days past due and a one percent monthly interest charge on the outstanding balance until paid. However, these additional costs would only apply to those handlers who are not timely complying with the Order's assessment requirements. Handler assessments represent a pro rata share of the costs of operating the Order and are applied based on the weight of inshell pecans handled. Similarly, the penalties for delinquent assessments would be proportional to the weight of inshell of pecans handled and assessments due. The Council anticipates that establishing these penalties would help deter nonpayment of assessments.

The Council considered alternatives to the recommended changes made at its August 14, 2025, meeting. Regarding sheller membership, the Council previously recommended removing the regional distinctions but leaving the large and small seat designations. However, Council records indicated such a change would not solve the issue of repeated vacancies, as few remaining shellers meet the large sheller definition.

In reviewing the inter-handler transfer provisions, the Council considered removing the inter-handler transfer reporting requirement altogether but determined that small handlers may have difficulty complying with the additional reporting and tracking of assessments due on their own. The Council also considered leaving the report unchanged but found with more frequent reporting and the inclusion of the weight and type of inshell pecans transferred, the Council could improve its compliance processes and industry reports.

When discussing penalties for delinquent assessments, the Council considered changing the due dates for assessments, applying a longer period before assessing penalties, or not taking any additional action. However, the Council determined that these alternatives would not encourage timely payments or resolve the issue of unpaid assessments. For these reasons, the Council rejected all other alternatives.

Council meetings are widely publicized throughout the pecan industry. All interested persons are invited to attend meetings and participate in Council deliberations. Like all Council meetings, the August 14, 2025, meeting was a public meeting and all entities, both large and small, were able to express their views on these issues. Finally, interested persons are invited to submit comments on this proposed rule, including the regulatory and informational impacts of this action on small businesses.

In accordance with the Paperwork Reduction Act of 1995 (44 U.S.C. chapter 35), the Order's information collection requirements have been previously approved by OMB and assigned OMB No. 0581–0291, ''Federal Marketing Order for Pecans.'' This proposed rule would require changes to the Council's existing forms. Specifically, the proposed rule would make nominal adjustments to two sheller nomination forms, Forms SC–308 and SC–310, and the inter-handler transfer form, APC Form #4. The proposed changes to the sheller nomination forms would not increase the reporting burden. For the inter-handler transfer report, the changes would be minor and the currently approved burden for the form would be minimally increased by the proposed changes. The revised forms have been submitted to OMB for approval.

This proposed rule, if finalized, may impose some additional reporting or recordkeeping requirements on either small or large pecan handlers. However, the Council anticipates the changes to APC Form #4 and the inter-handler transfer reporting requirements would help ensure the Council's monthly industry reports are accurate and assist with program compliance, which would be beneficial to the industry. Additionally, because transfers typically occur from November to February, for many handlers, this monthly reporting requirement would only apply to about four months of the year. The Council also noted that the proposed change would not be overly burdensome for handlers and their operations, as the report is completed using readily available information. The Council anticipates this change would enable handlers to better maintain complete records, as required under the Order, as well as assist Council staff in identifying reporting discrepancies. As with all Federal marketing order programs, reports and forms are periodically reviewed to reduce information requirements and duplication by industry and public sector agencies.

AMS is committed to complying with the E-Government Act to promote the use of the internet and other information technologies to provide increased opportunities for citizen access to Government information and services and for other purposes.

AMS has not identified any relevant Federal rules that duplicate, overlap, or conflict with this proposed rule.

After consideration of all relevant material presented, including the information and recommendations submitted by the Council and other available information, AMS has determined that this proposed rule would be consistent with and would effectuate the purposes of the Act.

A 30-day comment period is provided to allow interested persons to respond to this proposed rule. All written comments timely received will be considered before a final determination is made on this action.

List of Subjects in 7 CFR Part 986

Marketing agreements, Nuts, Pecans, Reporting and recordkeeping requirements.

For the reasons set forth in the preamble, AMS proposes to amend 7 CFR part 986 as follows:

PART 986—PECANS GROWN IN THE STATES OF ALABAMA, ARKANSAS, ARIZONA, CALIFORNIA, FLORIDA, GEORGIA, KANSAS, LOUISIANA, MISSOURI, MISSISSIPPI, NORTH CAROLINA, NEW MEXICO, OKLAHOMA, SOUTH CAROLINA, AND TEXAS

■ 1. The authority citation for part 986 continues to read as follows:

Authority: 7 U.S.C. 601–674.

■ 2. Add § 986.145 to subpart B to read as follows:

§ 986.145 Reapportionment and reestablishment of sheller regions.

Pursuant to § 986.58, beginning with the first nomination cycle following the effective date of this section, the sheller region shall include all states in the production area. This region shall have six at-large sheller members and alternates.

■ 3. Add § 986.146 to subpart B to read as follows:

§ 986.146 Nomination procedure for sheller seats.

Beginning with the first nomination cycle following the effective date of this section, nomination of sheller members and alternates shall follow the procedure set forth in this section. All nominees must meet the requirements set forth in § 986.48.

(a) After nominations have been submitted to the Council using the provisions of § 986.46(b)(1), the Council shall mail to all known shellers within the production area a sheller ballot indicating the nominees for the sheller seats, along with voting instructions. Shellers may cast ballots on approved ballot forms either at meetings of shellers, by mail, or by email as designated by the Council. For ballots to be considered, they must be submitted on the approved forms with all required information, including signatures.

(b) Sheller Seats 1, 2, and 3 and their alternates will be selected for an initial two-year term, and Seats 4, 5, and 6 and their alternates will be selected for a four-year term of office. Following the initial selection, sheller member and alternate seats will continue the rotation with half of the sheller member and alternate seats expiring every two years, with members and alternates serving a four-year term of office.

■ 4. Revise § 986.162 to read as follows:

§ 986.162 Inter-handler transfers.

Pursuant to § 986.62, handlers shall submit to the Council, by the tenth day of the month following the month of transfer, a report of inter-handler transfer. Should the tenth day of the month fall on a weekend or holiday, reports are due by the first business day following the tenth day of the month. The transfer shall be reported to the Council on APC Form 4 and contain the following information:

(a) Month of transfer;

(b) Weight and type of inshell pecans transferred;

(c) The names and signatures for both the transferring and receiving handler; and

(d) Handler assuming the reporting and assessment obligations on the pecans transferred.

■ 5. Add § 986.163 to read as follows:

§ 986.163 Delinquent assessments.

(a) Each handler shall submit assessments to the American Pecan Council monthly as required in § 986.177.

(b) A late payment charge will be imposed on any handler who fails to make timely remittance to the Council of the total assessments for which they are liable. The late payment will be imposed on any assessments not received within 30 calendar days of the date when assessments are due. This one-time late payment charge will be five percent of the assessments due before interest charges have accrued.

(c) In addition to the late payment charge, a one percent per month interest charge on the outstanding balance, including any late payment and accrued interest, will be added to any accounts for which payment has not been received within 30 calendar days of the date when assessments are due. Interest will continue to accrue monthly until the outstanding balance is paid to the Council.

■ 6. Revise § 986.178 to read as follows:

§ 986.178 Other reports.

Exports by country of destination. Handlers shall submit to the Council, by the tenth day of the month following the month of shipment, a report of exports. Should the tenth day of the month fall on a weekend or holiday, reports are due by the first business day following the tenth day of the month. The report shall be reported to the Council on APC Form 3 and contain the following information:

(a) The name and address of the handler;

(b) The month covered by the report;

(c) The total weight of pecans shipped for export, whether inshell, shelled, or substandard during the reporting period;

(d) The total weight of pecans shipped for export, whether inshell, shelled, or substandard during the previous period and year to date; and

(e) The destination(s) of such exports.

Erin Morris,

Administrator, Agricultural Marketing Service.

Conditional Expected Casualty Exception for Failures Resulting in an Uncontrolled Atmospheric Return

AGENCY: Federal Aviation Administration (FAA), U.S. Department of Transportation (DOT).

ACTION: Notice of proposed rulemaking (NPRM).

SUMMARY: FAA proposes to amend its commercial space launch and reentry licensing regulations to streamline the licensing process and reduce regulatory burden for license applicants. Specifically, FAA proposes to allow a launch and reentry vehicle operator to protect against high consequence events during an uncontrolled atmospheric return by showing that there would be sufficient breakup of the vehicle to ensure protection against a single event expected to produce multiple casualties.

DATES: Send comments on or before December 9, 2026.

ADDRESSES: Send comments identified by docket number FAA–2026–9942 using any of the following methods:

- *Federal eRulemaking Portal:* Go to *www.regulations.gov* and follow the online instructions for sending your comments electronically.
- *Mail:* Send comments to Docket Operations; U.S. Department of Transportation (DOT), 1200 New Jersey Avenue SE, West Building, 5th Floor (W58–213), Washington, DC 20590–0001.
- *Hand Delivery or Courier:* Take comments to Docket Operations in Room W58–213 of the West Building, 5th Floor at 1200 New Jersey Avenue SE, Washington, DC 20590 between 9 a.m. and 5 p.m., Monday through Friday, except Federal holidays.
- *Fax:* Fax comments to Docket Operations at (202) 493–2251.

Privacy: In accordance with 5 U.S.C. 553(c), DOT solicits comments from the public to inform its rulemaking process better. DOT posts these comments, without edit, including any personal information the commenter provides, to *www.regulations.gov,* as described in the system of records notice (DOT/ALL–14 FDMS), which can be reviewed at *www.dot.gov/privacy.*

Docket: Background documents or comments received may be read at *www.regulations.gov* at any time. Follow the online instructions for accessing the docket or go to the Docket Operations in Room W58–213 of the West Building 5th Floor at 1200 New Jersey Avenue SE, Washington, DC 20590 between 9 a.m. and 5 p.m., Monday through Friday, except Federal holidays.

FOR FURTHER INFORMATION CONTACT: Lisa E. Cacciatore, Office of Commercial Space Transportation, Federal Aviation Administration, 1200 New Jersey Avenue SE, Washington, DC 20590; telephone (202) 880–1489; email *Lisa.E.Cacciatore@faa.gov*.

SUPPLEMENTARY INFORMATION:

I. Overview

In accordance with Executive Order (E.O.) 14335 ''Enabling Competition in the Commercial Space Industry,'' FAA proposes to amend its commercial space launch and reentry regulations at 14 CFR part 450 to further streamline the commercial licensing process. Specifically, FAA proposes to add an option by which applicants may comply with the high consequence event protection requirements in § 450.101(c). The proposed rule would allow an applicant to meet the requirement for an uncontrolled atmospheric return (UAR), commonly called a ''random reentry,'' by showing that the UAR would result in sufficient breakup of the vehicle, including all vehicle components and undeployed payloads, to ensure protection against a single event expected to produce multiple casualties.

II. Authority for This Rulemaking

The Commercial Space Launch Act of 1984, as amended and codified at 51 U.S.C. 50901–50924, authorizes the Secretary of Transportation to oversee, license, and regulate commercial launch and reentry activities, and the operation of launch and reentry sites within the United States (U.S.) or as carried out by U.S. citizens. Section 50905 directs the Secretary to exercise this responsibility consistent with public health and safety, safety of property, and the national security and foreign policy interests of the United States. In addition, section 50903 requires the Secretary to encourage, facilitate, and promote commercial space launches and reentries by the private sector. As codified in 49 CFR 1.83(b), the Secretary has delegated authority to the FAA Administrator to carry out these functions.

III. Background

FAAhasestablishedcommercial space regulations governing licensing of launch and reentry in 14 CFR chapter III. On December 10, 2020, FAA issued a final ruleconsolidatingall substantive launch and reentry licensing regulations into a new part 450 (85 FR 79566) that went into effect on March 10, 2021.

On August 13, 2025,the President issued E.O. 14335, ''Enabling Competition in the Commercial Space Industry,'' requiring the Secretary of Transportation to ''reevaluate, amend, or rescind'' the part 450 regulations for the purpose of further streamlining the commercial licensing process. This proposed rule is being published in furtherance of this executive order.

In accordance with current FAA guidance, high consequence events include incidents that could involve multiple casualties, massive toxic exposures, extensive property or environmental damage, or events that jeopardize the national security or foreign policy interests of the United States.[1] The term ''high consequence events'' does not generally include incidents that result in only one casualty. The potential for any casualties remains covered by the individual and collective risk criteria in § 450.101(a) and (b). The objective of high consequence protection is to provide additional constraints beyond the individual and collective risk criteria.

Currently, in accordance with § 450.101(c), an operator must protect against a high consequence event by one of three methods: flight abort, ensuring that conditional expected casualties (CE_C) would fall below a specified threshold, or demonstrated reliability. However, these three methods are not well-attuned for protection against high consequence events during a UAR. A UAR, commonly called a ''random reentry,'' occurs when a vehicle makes an uncontrolled descent from orbit as a result of natural orbital decay, rather than as a result of action by the operator.

Currently, no UARs are close to attaining the demonstrated reliability necessary to protect against high consequence events, which makes compliance with § 450.101(c)(3) improbable at this time. Likewise, any vehicle flight that could be aborted in accordance with § 450.101(c)(1) is not a UAR because the operator is able to accomplish a controlled end to the flight; a UAR is always an uncontrolled end to flight. Thus, operators currently must comply with the CE_C requirement in § 450.101(c)(2), which can be a labor-intensive calculation.

IV. Discussion of the Proposal

The proposed rule would amend § 450.101(c)(2) to allow an operator to demonstrate protection against a high consequence event resulting from a UAR by showing that the UAR would result in sufficient breakup of the vehicle, including all vehicle components and payloads, to ensure protection against a single event expected to produce multiple casualties. The proposed method of demonstrating compliance to high consequence events for UARs provides an equivalent level of safety to the current requirements.

An uncontrolled atmospheric return is fundamentally a return in which the operator has no control over the eventual impact site of the vehicle. Accordingly, the proposal would define ''uncontrolled atmospheric return'' in § 401.7 to include two characteristics that limit the definition to cover only those returns over which the operator exercises no control. The first proposed defining characteristic of a UAR would be that only natural forces cause the orbit of an object to decay and eventually impact the Earth or burn up in the atmosphere. Natural forces that cause orbital decay include aerodynamic drag, gravitational variations, solar radiation, and third-body gravitational effects. A perigee of

[1] See Advisory Circular 450.101–1B, ''High Consequence Event Protection,'' dated May 03, 2024, available at: *www.faa.gov/documentLibrary/media/Advisory_Circular/AC_450.101–1B.pdf;* see also Footnote 65 in final rule titled ''Streamlined Launch and Reentry Requirements'' (85 FR 79566).

70 nautical miles (nm) or greater is considered the threshold of being in orbit (see definition of ''Deorbit'' in § 401.7). Thus, a scenario in which propulsion (which is not a natural force) reduces the perigee below the 70 nm threshold would not be considered a UAR. However, a propulsion system that fails before the perigee reaches the threshold could result in a UAR. The second proposed defining characteristic of a UAR would be that the operator lacks control over the trajectory. Thus, a flight that uses orientation to control aerodynamic forces to reduce the perigee below the 70 nm threshold would not be considered a UAR. Likewise, a vehicle that falls out of orbit due to natural forces, but which an operator may abort or otherwise guide, would not be considered a UAR.

The proposed method of demonstrating compliance to high consequence events at proposed § 450.101(c)(2)(ii) would only be available for UARs (as opposed to controlled returns) because UARs have unique properties. First, the impact probability distributions from a UAR, which are the subject of § 450.123(b), are extremely large. It is most likely that debris would impact in areas with relatively low population density because high-density populations are concentrated in small areas. In addition, when multiple fragments survive deorbit during a UAR, they are generally dispersed over a large geographical area, so it is unlikely that separate fragments would injure multiple people from the same UAR as long as the collective risk safety criterion in § 450.101(a) or (b) is satisfied.

The proposed requirement for operators to demonstrate sufficient breakup of the vehicle acts as an added layer of protection against multiple casualty events. Typically, deorbit produces extreme aerothermal and inertial forces that cause extensive breakup of vehicles that were not designed to survive substantially intact. However, extensive break-up is not always a guaranteed outcome. Therefore, an operator would be required to demonstrate that each piece of resulting debris from a UAR has a small enough effective casualty area to make multiple casualties an unlikely outcome. This demonstration would use the information already required by the debris analysis in accordance with § 450.121 and consequence analysis in § 450.135(b), so no additional analysis or application requirements would be needed.

V. Regulatory Notices and Analyses

A. Regulatory Impact Analysis

E.O. 12866 (''Regulatory Planning and Review'') and E.O. 13563 (''Improving Regulation and Regulatory Review'') require agencies to regulate in the ''most cost-effective manner,'' to make a ''reasoned determination that the benefits of the intended regulation justify its costs,'' and to develop regulations that ''impose the least burden on society.'' The Office of Management and Budget has determined this proposed rule is not a significant regulatory action as defined in Section 3(f) of E.O. 12866. FAA is seeking comments on the following analysis.

Currently, most applicants meet the requirement in § 450.101(c) to protect against high consequence events by ensuring that the consequence of any reasonably foreseeable failure mode, in any significant period of flight, is no greater than 1×10^{-3} CE_C. The proposed rule would allow an applicant to forgo this demonstration for a UAR if the applicant shows that there is sufficient breakup of the launch or reentry vehicle, including all vehicle components and undeployed payloads.

The applicant would make the showing using the information already required by the debris analysis in accordance with § 450.121 and consequence analysis in § 450.135(b). Consequently, no additional analysis or application requirements would be needed.

FAA estimates that forgoing the CE_C demonstration for a UAR would save each applicant around 60 hours of labor. An aerospace engineer would complete this work. The base 2024 wage rate of a private industry worker working full-time as an aerospace engineer is $67.88 per hour.[2] When including benefits, the total compensation for an aerospace engineer[3] is $96.28 per hour. Therefore, the total cost savings for industry would be $5,777 per application.

For FAA, an aerospace engineer would take about 30 hours to provide guidance and review the data. The aerospace engineer is on the FAA Core Compensation Plan at a J band[4] with a base hourly rate of $95.33. FAA uses a factor of 1.3625 for benefits[5] which results in a total loaded hourly wage of $129.88. This results in total cost savings of $3,897 per application for FAA. Therefore, the total cost savings between FAA and an applicant would be $9,674 per application. Any cost savings would only impact new applicants, and FAA expects about 40 new applications in the next 5 years. However, not all applicants would apply to conduct operations where UARs are possible. Therefore, the total number of applications impacted would be less than 40.

B. Regulatory Flexibility Act

Under the Regulatory Flexibility Act (RFA) (5 U.S.C. 601–612), agencies must prepare and make available for public comment a regulatory flexibility analysis that describes the effect of the rulemaking on small entities (*i.e.,* small businesses, small organizations, and small government jurisdictions). No regulatory flexibility analysis is required, however, if the head of an agency certifies that the proposed rule would not have a significant economic impact on a substantial number of small entities. FAA has concluded and hereby certifies that this proposed rule would not have a significant economic impact on a substantial number of small entities; therefore, an analysis is not included.

C. International Trade Impact Assessment

The Trade Agreements Act of 1979 (Pub. L. 96–39), as amended by the Uruguay Round Agreements Act (Pub. L. 103–465), prohibits Federal agencies from establishing standards or engaging in related activities that create unnecessary obstacles to the foreign commerce of the United States. Pursuant to these Acts, the establishment of standards is not considered an unnecessary obstacle to the foreign commerce of the United States, so long as the standard has a legitimate domestic objective, such as

[2] ''Employer Costs for Employee Compensation—May 2024,'' Bureau of Labor Statistics, Employee costs for private industry workers in Series: 17–2011 Aerospace Engineers, available at: *data.bls.gov/oes/#/industry/000000.*

[3] The total compensation includes Bureau of Labor Statistics (BLS) compensation data. For 2024, BLS estimates that wages make up 70.5 percent of total compensation while benefits make up 29.5 percent. Employer Costs for Employee Compensation—December 2024, available at: *www.bls.gov/news.release/archives/ecec_03142025.htm.* To calculate total compensation, FAA multiplies the base wage by a factor of 1.42 (rounded from 100/70.5). Therefore, the total compensation for an aerospace engineers is 96.28 per hour ($67.88 per hour × 1.42).

[4] FAA Engineering Pay Band J with Washington DC locality; effective Jan. 2026, maximum salary $198,281, available at: *www.faa.gov/jobs/working_here/benefits/pay/core_salary_with_conversion.xlsx.*

[5] Update to Civilian Position Full Fringe Benefit Cost Factor, Federal Pay Raise Assumptions, and Inflation Factors used in OMB Circular No. A–76, ''Performance of Commercial Activities'', Office of Management and Budget, March 11, 2008, available at: *www.whitehouse.gov/wp-content/uploads/legacy_drupal_files/omb/memoranda/2008/m08-13.pdf.*

the protection of safety, and does not operate in a manner that excludes imports that meet this objective. The statute also requires consideration of international standards and, where appropriate, they be the basis for U.S. standards.

FAA has assessed the potential effect of this proposed rule and determined that it would not create unnecessary obstacles to the foreign commerce of the United States.

D. Unfunded Mandates Assessment

The Unfunded Mandates Reform Act of 1995 (2 U.S.C. 1531–1538) governs the issuance of Federal regulations that require unfunded mandates. An unfunded mandate is a regulation that requires a State, local, or Tribal government or the private sector to incur direct costs without the Federal Government having first provided the funds to pay those costs. FAA determined the proposed rule would not result in the expenditure of $193,000,000 or more ($100,000,000 adjusted for inflation using the most current Implicit Price Deflator for the Gross Domestic Product) by State, local, or Tribal governments, in the aggregate, or the private sector, in any one year.

E. Paperwork Reduction Act

The Paperwork Reduction Act of 1995 (44 U.S.C. 3507(d)) requires FAA consider the impact of paperwork and other information collection burdens imposed on the public. FAA has determined there would be no new requirement for information collection associated with this proposed rule.

F. International Compatibility

In keeping with U.S. obligations under the Convention on International Civil Aviation, it is FAA policy to conform to International Civil Aviation Organization (ICAO) Standards and Recommended Practices to the maximum extent practicable. FAA has determined there are no ICAO Standards and Recommended Practices that correspond to these proposed regulations.

G. Environmental Analysis

The Department has analyzed the environmental impacts of this notice of proposed rulemaking pursuant to the National Environmental Policy Act of 1969 (NEPA) (42 U.S.C. 4321, *et seq.*). FAA has determined this proposed rule is categorically excluded pursuant to FAA Order 1050.1G. Categorical exclusions are categories of actions FAA has determined normally do not significantly affect the quality of the human environment and therefore do not require either an environmental assessment (EA) or environmental impact statement (EIS). In analyzing the applicability of a categorical exclusion, FAA must also consider whether extraordinary circumstances are present that would warrant the preparation of an EA or EIS. This rulemaking, which would allow a launch and reentry vehicle operator to protect against high consequence events during an uncontrolled atmospheric return by showing that there would be sufficient breakup of the vehicle to ensure protection against a single event expected to produce multiple casualties, is categorically excluded pursuant to FAA Order 1050.1G, Appendix B, Paragraph B–2.6(f), which categorically excludes issuance of regulatory documents. FAA does not anticipate any environmental impacts, and there are no extraordinary circumstances present in connection with this rulemaking.

VI. E.O. Determinations

A. E.O. 13132, Federalism

FAA has analyzed this proposed rule under the principles and criteria of E.O. 13132, Federalism. FAA has determined this action would not have a substantial direct effect on the States, or the relationship between the Federal Government and the States, or on the distribution of power and responsibilities among the various levels of government, and, therefore, would not have federalism implications.

B. E.O. 13175, Consultation and Coordination With Indian Tribal Governments

Consistent with E.O. 13175, Consultation and Coordination with Indian Tribal Governments,[6] and FAA Order 1210.20, American Indian and Alaska Native Tribal Consultation Policy and Procedures,[7] FAA ensures Federally Recognized Tribes (Tribes) are given the opportunity to provide meaningful and timely input regarding proposed Federal actions that have the potential to affect uniquely or significantly their respective Tribes. At this point, FAA has not identified any unique or significant effects, environmental or otherwise, on Tribes resulting from this proposed rule.

C. E.O. 13211, Regulations That Significantly Affect Energy Supply, Distribution, or Use

FAA analyzed this proposed rule under E.O. 13211, Actions Concerning Regulations that Significantly Affect Energy Supply, Distribution, or Use (May 18, 2001). FAA has determined it would not be a ''significant energy action'' under the E.O. and would not be likely to have a significant adverse effect on the supply, distribution, or use of energy.

D. E.O. 13609, Promoting International Regulatory Cooperation

E.O. 13609, Promoting International Regulatory Cooperation, promotes international regulatory cooperation to (1) meet shared challenges involving health, safety, labor, security, environmental, and other issues and to reduce, eliminate, or (2) prevent unnecessary differences in regulatory requirements. FAA has analyzed this action under the policies and agency responsibilities of E.O. 13609 and has determined this action would have no effect on international regulatory cooperation.

E. E.O. 14192, Unleashing Prosperity Through Deregulation

This proposed rule, if finalized as proposed, is expected to be an E.O. 14192 deregulatory action because it has total costs less than zero as it streamlines the licensing process and reduces regulatory burden for license applicants.

VII. Additional Information

A. Comments Invited

FAA invites interested persons to participate in this rulemaking by submitting written comments, data, or views. FAA also invites comments relating to the economic, environmental, or federalism impacts that might result from adopting the proposals in this document. The most helpful comments reference a specific portion of the proposal, explain the reason for any recommended change, and include supporting data. To ensure the docket does not contain duplicate comments, commenters should submit only one time if comments are filed electronically, or commenters should send only one copy of written comments if comments are filed in writing.

FAA will file in the docket all comments it receives, as well as a report summarizing each substantive public contact with FAA personnel concerning this proposed rule. Before acting on this proposal, FAA will consider all

[6] 65 FR 67249 (November 6, 2000).

[7] FAA Order No. 1210.20 (January 28, 2004), available at: *www.faa.gov/documentLibrary/media/1210.pdf.*

comments it receives on or before the closing date for comments. FAA will consider comments filed after the comment period has closed if it is possible to do so without incurring expense or delay. FAA may change this proposal in light of the comments it receives.

B. Confidential Business Information

Confidential Business Information (CBI) is commercial or financial information that is both customarily and actually treated as private by its owner. Under the Freedom of Information Act (FOIA) (5 U.S.C. 552), CBI is exempt from public disclosure. If your comments responsive to this NPRM contain commercial or financial information that is customarily treated as private, that you actually treat as private, and is relevant or responsive to this NPRM, it is important you clearly designate the submitted comments as CBI. Please mark each page of your submission containing CBI as ''PROPIN.'' FAA will treat such marked submissions as confidential under the FOIA, and they will not be placed in the public docket of this NPRM. Submissions containing CBI should be sent to the person in the **FOR FURTHER INFORMATION CONTACT** section of this document. Any commentary FAA receives that is not specifically designated as CBI will be placed in the public docket for this rulemaking.

C. Electronic Access and Filing

A copy of this NPRM, all comments received, any final rule, and all background material may be viewed online at *www.regulations.gov* using the docket number listed above. Electronic retrieval help and guidelines are available on the website. It is available 24 hours each day, 365 days each year. An electronic copy of this document may also be downloaded from the Office of the Federal Register's website at *www.federalregister.gov* and the Government Publishing Office's website at *www.govinfo.gov.* A copy may also be found at FAA's Regulations and Policies website at *www.faa.gov/regulations_policies.*

Copies may also be obtained by sending a request to the Federal Aviation Administration, Office of Rulemaking, ARM–1, 800 Independence Avenue SW, Washington, DC 20591, or by calling (202) 267–9677. Requesters must identify the docket or notice number of this rulemaking.

All documents FAA considered in developing this proposed rule, including economic analyses and technical reports, may be accessed in the electronic docket for this rulemaking.

D. Small Business Regulatory Enforcement Fairness Act

The Small Business Regulatory Enforcement Fairness Act of 1996 (Pub. L. 104–121, 110 Stat. 857, Mar. 29, 1996) requires FAA to comply with small entity requests for information or advice about compliance with statutes and regulations within its jurisdiction. A small entity with questions regarding this document may contact its local FAA official or the person listed under the **FOR FURTHER INFORMATION CONTACT** heading at the beginning of the preamble. To find out more about SBREFA on the internet, visit *www.faa.gov/regulations_policies/rulemaking/sbre_act/.*

List of Subjects

14 CFR Part 401

Organization and functions (Government agencies), Space transportation and exploration.

14 CFR Part 450

Aircraft, Aviation safety, Environmental protection, Investigations, Reporting and recordkeeping requirements, Space transportation and exploration.

The Proposed Amendments

For the reasons discussed in the preamble, the Federal Aviation Administration proposes to amend chapter III of title 14, Code of Federal Regulations, as follows:

PART 401—ORGANIZATION AND DEFINITIONS

■ 1. The authority citation for part 401 is revised to read as follows:

Authority: 51 U.S.C. Chapter 509.

■ 2. Amend § 401.7 by adding the definition for ''Uncontrolled atmospheric return'' in alphabetical order to read as follows:

§ 401.7 Definitions.

* * * * *

Uncontrolled atmospheric return means the passive descent of a launch or reentry vehicle from orbit that occurs as a result of natural orbital decay and where there is no ability to control the vehicle's trajectory.

* * * * *

PART 450—LAUNCH AND REENTRY LICENSE REQUIREMENTS

■ 3. The authority citation for part 450 is revised to read as follows:

Authority: 51 U.S.C. Chapter 509.

■ 4. Amend § 450.101 by revising paragraph (c) to read as follows:

§ 450.101 Safety criteria.

* * * * *

(c) *High consequence event protection.* An operator must protect against a high consequence event in uncontrolled areas for each phase of flight by:

(1) Using flight abort as a hazard control strategy in accordance with the requirements of § 450.108;

(2) Ensuring the consequence of any reasonably foreseeable failure mode, in any significant period of flight:

(i) Is no greater than 1×10^{-3} conditional expected casualties; or

(ii) Results in sufficient breakup of the launch or reentry vehicle, including all vehicle components and undeployed payloads, during an uncontrolled atmospheric return; or

(3) Establishing the launch or reentry vehicle has sufficient demonstrated reliability as agreed to by the Administrator based on conditional expected casualties criteria during that phase of flight.

* * * * *

Issued under authority provided by 49 U.S.C. 106(f) and 51 U.S.C. chapter 509 in Washington, DC.

Flight Abort Burden Reducing Clarification on End of Flight Safety Limits

AGENCY: Federal Aviation Administration (FAA), U.S. Department of Transportation (DOT).

ACTION: Notice of proposed rulemaking (NPRM).

SUMMARY: FAA proposes to amend its commercial space launch and reentry licensing regulations to streamline the licensing process and reduce regulatory burden for license applicants. Specifically, FAA proposes to clarify the conditions under which a vehicle operator is not required to abort a flight.

DATES: Send comments on or before December 9, 2026.

ADDRESSES: Send comments identified by docket number FAA–2026–9943 using any of the following methods:

- *Federal eRulemaking Portal:* Go to *www.regulations.gov* and follow the online instructions for sending your comments electronically.
- *Mail:* Send comments to Docket Operations; U.S. Department of Transportation (DOT), 1200 New Jersey Avenue SE, West Building, 5th Floor (W58–213), Washington, DC 20590–0001.
- *Hand Delivery or Courier:* Take comments to Docket Operations in Room W58–213 of the West Building, 5th Floor at 1200 New Jersey Avenue SE, Washington, DC 20590 between 9 a.m. and 5 p.m., Monday through Friday, except Federal holidays.
- *Fax:* Fax comments to Docket Operations at (202) 493–2251.

Privacy: In accordance with 5 U.S.C. 553(c), DOT solicits comments from the public to inform its rulemaking process better. DOT posts these comments, without edit, including any personal information the commenter provides, to *www.regulations.gov,* as described in the system of records notice (DOT/ALL–14 FDMS), which can be reviewed at *www.dot.gov/privacy.*

Docket: Background documents or comments received may be read at *www.regulations.gov* at any time. Follow the online instructions for accessing the docket or go to the Docket Operations in Room W58–213 of the West Building 5th Floor at 1200 New Jersey Avenue SE, Washington, DC 20590 between 9 a.m. and 5 p.m., Monday through Friday, except Federal holidays.

FOR FURTHER INFORMATION CONTACT: Lisa E. Cacciatore, Office of Commercial Space Transportation, Federal Aviation Administration, 1200 New Jersey Avenue SE, Washington, DC 20590; telephone (202) 880–1489; email *Lisa.E.Cacciatore@faa.gov*.

SUPPLEMENTARY INFORMATION:

I. Overview

In accordance with Executive Order (E.O.) 14335 ''Enabling Competition in the Commercial Space Industry,'' FAA proposes to amend its commercial space launch and reentry regulations at 14 CFR part 450 to further streamline the commercial licensing process. Currently, 14 CFR 450.108(e) provides that a vehicle operator using flight abort as a hazard control strategy is not required to initiate flight abort to protect against high consequence events once certain conditions are met. The proposed rule would clarify that the exception in paragraph (e) applies only to a phase of flight in which the conditions are present.

II. Authority for This Rulemaking

The Commercial Space Launch Act of 1984, as amended and codified at 51 U.S.C. 50901–50924, authorizes the Secretary of Transportation to oversee, license, and regulate commercial launch and reentry activities, and the operation of launch and reentry sites within the United States (U.S.) or as carried out by U.S. citizens. Section 50905 directs the Secretary to exercise this responsibility consistent with public health and safety, safety of property, and the national security and foreign policy interests of the United States. In addition, section 50903 requires the Secretary to encourage, facilitate, and promote commercial space launches and reentries by the private sector. As codified in 49 CFR 1.83(b), the Secretary has delegated authority to the FAA Administrator to carry out these functions.

III. Background

FAA has established commercial space regulations governing licensing of launch and reentry in 14 CFR chapter III. On December 10, 2020, FAA issued a final rule consolidating all substantive launch and reentry licensing regulations into a new part 450 (85 FR 79566) that went into effect on March 10, 2021.

On August 13, 2025, the President issued E.O. 14335, ''Enabling Competition in the Commercial Space Industry,'' requiring the Secretary of Transportation to ''reevaluate, amend, or rescind'' the part 450 regulations for the purpose of further streamlining the commercial licensing process. This proposed rule is being published in furtherance of this E.O.

Section 450.101(c) provides that an operator may use flight abort as a hazard control strategy to protect against a high consequence event in uncontrolled areas. Flight abort accomplishes a controlled ending to vehicle flight, such as through explosive destruct. Section 450.108 provides requirements for flight abort, including requirements for flight safety limits. Flight safety limits, in this context, define the criteria under which a vehicle operator must initiate flight abort.

For some mission scenarios, at some point in flight, flight abort can no longer mitigate risk, and applicants may wish to turn off the flight abort system to prevent accidental initiation of the abort system. This possibility is addressed by § 450.108(e), which states that a flight does not need to be aborted to protect against high consequence events beginning immediately after critical vehicle parameters are validated, if the vehicle is able to achieve a useful mission, and if, for the remainder of flight: (1) flight abort would not materially decrease the risk from a high consequence event; and (2) there are no key flight safety events.

To meet the first condition that flight abort would not materially decrease the risk of a high consequence event for the remainder of flight, an operator should perform a comparison of the risk (*i.e.,* expected casualties (E_C)) with and without flight abort from failure modes that produce conditional expected casualties (CE_C) greater than 0.01. If flight abort would not reduce E_C associated with each failure mode materially, then this condition is met. To meet the second condition, an operator must demonstrate that the remainder of flight does not include any ''key flight safety event,'' which is defined in 14 CFR 401.7 to mean ''a flight activity that has an increased likelihood of causing a failure compared with other portions of flight.'' However, even if these conditions are satisfied for the remainder of flight, an operator is only permitted to switch off the flight abort system if, during flight, the operator is able to validate ''critical vehicle parameters,'' meaning parameters that demonstrate the vehicle is capable of completing safe flight through the upcoming phase of flight where population is exposed to hazardous debris effects from reasonably foreseeable failure modes.

IV. Discussion of the Proposal

The proposed rule maintains the essential requirements and structure of § 450.108(e), with two minor revisions. First, the proposed rule would change the title of § 450.108(e) from ''End of flight abort'' to ''End of flight safety limits'' to match the intention of the paragraph more closely. Paragraph (e) does not require an operator to turn off flight abort capability or eliminate flight abort as a hazard control strategy, as unintentionally suggested by the current title, but rather describes conditions under which an operator is not required to set flight safety limits to protect against high consequence events in uncontrolled areas during some subsequent phases of flight.

Second, the proposed rule would also scope paragraph (e) to apply only to a phase of flight rather than ''the remainder of flight,'' as the paragraph currently states. Current paragraph (e) was drafted with the understanding that most operators would only turn off the flight abort capability at the end of a

flight, such as the phase immediately before orbital insertion. However, FAA anticipates that operators may seek to turn off flight abort capability during one phase of flight and turn it back on during a subsequent phase. As such, this revision would provide additional flexibility to operators while preserving public safety by explicitly accommodating this practice. This proposal, therefore, would amend paragraph (e) to say that a flight does not need to be aborted for the remainder of a phase of flight if the specified conditions are present during that phase.

V. Regulatory Notices and Analyses

A. Regulatory Impact Analysis

E.O. 12866 (''Regulatory Planning and Review'') and E.O. 13563 (''Improving Regulation and Regulatory Review'') require agencies to regulate in the ''most cost-effective manner,'' to make a ''reasoned determination that the benefits of the intended regulation justify its costs,'' and to develop regulations that ''impose the least burden on society.'' The Office of Management and Budget has determined this proposed rule is not a significant regulatory action as defined in Section 3(f) of E.O. 12866.

The proposed rule would change the title of § 450.108(e) from ''End of flight abort'' to ''End of flight safety limits'' to match the intention of the paragraph more closely. Paragraph (e) does not require an operator to turn off flight abort capability or eliminate flight abort as an option during any subsequent phase of flight, as suggested by the current title, but rather describes conditions under which an operator is not required to set flight safety limits to protect against high consequence events in uncontrolled areas during a specified phase of flight. In addition, the proposed rule would amend § 450.108(e) so that the section only applies to a phase of flight rather than ''the remainder of flight,'' as the paragraph currently states. This proposed rule would not impose incremental costs. However, there may be minimal cost savings. FAA estimates that the change would save FAA time in providing guidance per licensee. The proposed rule would provide operators the additional flexibility to turn off flight abort capability during one phase of flight and turn it back on during a subsequent phase of flight. In addition, FAA estimates that the change would also save licensees time in seeking and receiving guidance. FAA requests public comments on these assumptions.

B. Regulatory Flexibility Act

Under the Regulatory Flexibility Act (RFA) (5 U.S.C. 601–612), agencies must prepare and make available for public comment a regulatory flexibility analysis that describes the effect of the rulemaking on small entities (*i.e.,* small businesses, small organizations, and small government jurisdictions). No regulatory flexibility analysis is required, however, if the head of an agency certifies that the proposed rule would not have a significant economic impact on a substantial number of small entities. FAA has concluded and hereby certifies that this proposed rule would not have a significant economic impact on a substantial number of small entities; therefore, an analysis is not included.

C. International Trade Impact Assessment

The Trade Agreements Act of 1979 (Pub. L. 96–39), as amended by the Uruguay Round Agreements Act (Pub. L. 103–465), prohibits Federal agencies from establishing standards or engaging in related activities that create unnecessary obstacles to the foreign commerce of the United States. Pursuant to these Acts, the establishment of standards is not considered an unnecessary obstacle to the foreign commerce of the United States, so long as the standard has a legitimate domestic objective, such as the protection of safety, and does not operate in a manner that excludes imports that meet this objective. The statute also requires consideration of international standards and, where appropriate, they be the basis for U.S. standards.

FAA has assessed the potential effect of this proposed rule and determined that it would not create unnecessary obstacles to the foreign commerce of the United States.

D. Unfunded Mandates Assessment

The Unfunded Mandates Reform Act of 1995 (2 U.S.C. 1531–1538) governs the issuance of Federal regulations that require unfunded mandates. An unfunded mandate is a regulation that requires a State, local, or Tribal government or the private sector to incur direct costs without the Federal Government having first provided the funds to pay those costs. FAA determined the proposed rule would not result in the expenditure of $193,000,000 or more ($100,000,000 adjusted for inflation using the most current Implicit Price Deflator for the Gross Domestic Product) by State, local, or Tribal governments, in the aggregate, or the private sector, in any one year.

E. Paperwork Reduction Act

The Paperwork Reduction Act of 1995 (44 U.S.C. 3507(d)) requires FAA consider the impact of paperwork and other information collection burdens imposed on the public. FAA has determined there would be no new requirement for information collection associated with this proposed rule.

F. International Compatibility

In keeping with U.S. obligations under the Convention on International Civil Aviation, it is FAA policy to conform to International Civil Aviation Organization (ICAO) Standards and Recommended Practices to the maximum extent practicable. FAA has determined there are no ICAO Standards and Recommended Practices that correspond to these proposed regulations.

G. Environmental Analysis

The Department has analyzed the environmental impacts of this notice of proposed rulemaking pursuant to the National Environmental Policy Act of 1969 (NEPA) (42 U.S.C. 4321, *et seq.*). FAA has determined this rule is categorically excluded pursuant to FAA Order 1050.1G. Categorical exclusions are categories of actions FAA has determined normally do not significantly affect the quality of the human environment and therefore do not require either an environmental assessment (EA) or environmental impact statement (EIS). In analyzing the applicability of a categorical exclusion, FAA must also consider whether extraordinary circumstances are present that would warrant the preparation of an EA or EIS. This proposed rulemaking, which would clarify the conditions under which a vehicle operator is not required to abort a flight, is categorically excluded pursuant to FAA Order 1050.1G, Appendix B, Paragraph B–2.6(f), which categorically excludes issuance of regulatory documents. FAA does not anticipate any environmental impacts, and there are no extraordinary circumstances present in connection with this rulemaking.

VI. E.O. Determinations

A. E.O. 13132, Federalism

FAA has analyzed this proposed rule under the principles and criteria of E.O. 13132, Federalism. FAA has determined this action would not have a substantial direct effect on the States, or the relationship between the Federal Government and the States, or on the

distribution of power and responsibilities among the various levels of government, and, therefore, would not have federalism implications.

B. E.O. 13175, Consultation and Coordination With Indian Tribal Governments

Consistent with E.O. 13175, Consultation and Coordination with Indian Tribal Governments,[1] and FAA Order 1210.20, American Indian and Alaska Native Tribal Consultation Policy and Procedures,[2] FAA ensures Federally Recognized Tribes (Tribes) are given the opportunity to provide meaningful and timely input regarding proposed Federal actions that have the potential to affect uniquely or significantly their respective Tribes. At this point, FAA has not identified any unique or significant effects, environmental or otherwise, on Tribes resulting from this proposed rule.

C. E.O. 13211, Regulations That Significantly Affect Energy Supply, Distribution, or Use

FAA analyzed this proposed rule under E.O. 13211, Actions Concerning Regulations that Significantly Affect Energy Supply, Distribution, or Use (May 18, 2001). FAA has determined it would not be a ''significant energy action'' under the E.O. and would not be likely to have a significant adverse effect on the supply, distribution, or use of energy.

D. E.O. 13609, Promoting International Regulatory Cooperation

E.O. 13609, Promoting International Regulatory Cooperation, promotes international regulatory cooperation to (1) meet shared challenges involving health, safety, labor, security, environmental, and other issues and to reduce, eliminate, or (2) prevent unnecessary differences in regulatory requirements. FAA has analyzed this action under the policies and agency responsibilities of E.O. 13609 and has determined this action would have no effect on international regulatory cooperation.

E. E.O. 14192, Unleashing Prosperity Through Deregulation

This proposed rule, if finalized as proposed, is expected to be an E.O. 14192 deregulatory action.

[1] 65 FR 67249 (November 6, 2000).

[2] FAA Order No. 1210.20 (January 28, 2004), available at: *www.faa.gov/documentLibrary/media/1210.pdf.*

VII. Additional Information

A. Comments Invited

FAA invites interested persons to participate in this rulemaking by submitting written comments, data, or views. FAA also invites comments relating to the economic, environmental, or federalism impacts that might result from adopting the proposals in this document. The most helpful comments reference a specific portion of the proposal, explain the reason for any recommended change, and include supporting data. To ensure the docket does not contain duplicate comments, commenters should submit only one time if comments are filed electronically, or commenters should send only one copy of written comments if comments are filed in writing.

FAA will file in the docket all comments it receives, as well as a report summarizing each substantive public contact with FAA personnel concerning this proposed rule. Before acting on this proposal, FAA will consider all comments it receives on or before the closing date for comments. FAA will consider comments filed after the comment period has closed if it is possible to do so without incurring expense or delay. FAA may change this proposal in light of the comments it receives.

B. Confidential Business Information

Confidential Business Information (CBI) is commercial or financial information that is both customarily and actually treated as private by its owner. Under the Freedom of Information Act (FOIA) (5 U.S.C. 552), CBI is exempt from public disclosure. If your comments responsive to this NPRM contain commercial or financial information that is customarily treated as private, that you actually treat as private, and is relevant or responsive to this NPRM, it is important you clearly designate the submitted comments as CBI. Please mark each page of your submission containing CBI as ''PROPIN.'' FAA will treat such marked submissions as confidential under the FOIA, and they will not be placed in the public docket of this NPRM. Submissions containing CBI should be sent to the person in the **FOR FURTHER INFORMATION CONTACT** section of this document. Any commentary FAA receives that is not specifically designated as CBI will be placed in the public docket for this rulemaking.

C. Electronic Access and Filing

A copy of this NPRM, all comments received, any final rule, and all background material may be viewed online at *www.regulations.gov* using the docket number listed above. Electronic retrieval help and guidelines are available on the website. It is available 24 hours each day, 365 days each year. An electronic copy of this document may also be downloaded from the Office of the Federal Register's website at *www.federalregister.gov* and the Government Publishing Office's website at *www.govinfo.gov.* A copy may also be found at FAA's Regulations and Policies website at *www.faa.gov/regulations_policies.*

Copies may also be obtained by sending a request to the Federal Aviation Administration, Office of Rulemaking, ARM–1, 800 Independence Avenue SW, Washington, DC 20591, or by calling (202) 267–9677. Requesters must identify the docket or notice number of this rulemaking.

All documents FAA considered in developing this proposed rule, including economic analyses and technical reports, may be accessed in the electronic docket for this rulemaking.

D. Small Business Regulatory Enforcement Fairness Act

The Small Business Regulatory Enforcement Fairness Act of 1996 (Pub. L. 104–121, 110 Stat. 857, Mar. 29, 1996) requires FAA to comply with small entity requests for information or advice about compliance with statutes and regulations within its jurisdiction. A small entity with questions regarding this document may contact its local FAA official or the person listed under the **FOR FURTHER INFORMATION CONTACT** heading at the beginning of the preamble. To find out more about SBREFA on the internet, visit *www.faa.gov/regulations_policies/rulemaking/sbre_act/.*

List of Subjects in 14 CFR Part 450

Aircraft, Aviation safety, Environmental protection, Investigations, Reporting and recordkeeping requirements, Space transportation and exploration.

The Proposed Amendments

For the reasons discussed in the preamble, the Federal Aviation Administration proposes to amend chapter III of title 14, Code of Federal Regulations, as follows:

PART 450—LAUNCH AND REENTRY LICENSE REQUIREMENTS

■ 1. The authority citation for part 450 is revised to read as follows:

Authority: 51 U.S.C. Chapter 509.

■ 2. Revise § 450.108(e) to read as follows:

§ 450.108 Flight abort.

* * * * *

(e) *End of flight safety limits.* A flight does not need to be aborted to protect against high consequence events in uncontrolled areas for the remainder of a phase of flight beginning immediately after critical vehicle parameters are validated, if the vehicle is able to achieve a useful mission and the following conditions are met for the remainder of the phase:

* * * * *

Issued under authority provided by 49 U.S.C. 106(f) and 51 U.S.C. chapter 509 in Washington, DC.

Anh Minh Ngoc Nguyen,

Deputy Associate Administrator, Office of Commercial Space Transportation.

[Docket No.: FAA–2026- 9937; Notice No. 26–24]

RIN 2120–AM43

Flight Safety Limits Objectives Burden Reducing Clarification

AGENCY: Federal Aviation Administration (FAA), U.S. Department of Transportation (DOT).

ACTION: Notice of proposed rulemaking (NPRM).

SUMMARY: FAA proposes to amend its commercial space launch and reentry licensing regulations to streamline the licensing process and reduce regulatory burden for license applicants. Specifically, FAA proposes to clarify the requirements for establishing flight safety limits that define when a vehicle operator must initiate flight abort.

DATES: Send comments on or before December 9, 2026.

ADDRESSES: Send comments identified by docket number FAA–2026–9937 using any of the following methods:

- *Federal eRulemaking Portal:* Go to *www.regulations.gov* and follow the online instructions for sending your comments electronically.
- *Mail:* Send comments to Docket Operations; U.S. Department of Transportation (DOT), 1200 New Jersey Avenue SE, West Building, 5th Floor (W58–213), Washington, DC 20590–0001.
- *Hand Delivery or Courier:* Take comments to Docket Operations in Room W58–213 of the West Building, 5th Floor at 1200 New Jersey Avenue SE, Washington, DC 20590 between 9 a.m. and 5 p.m., Monday through Friday, except Federal holidays.
- *Fax:* Fax comments to Docket Operations at (202) 493–2251.

Privacy: In accordance with 5 U.S.C. 553(c), DOT solicits comments from the public to inform its rulemaking process better. DOT posts these comments, without edit, including any personal information the commenter provides, to *www.regulations.gov,* as described in the system of records notice (DOT/ALL–14 FDMS), which can be reviewed at *www.dot.gov/privacy.*

Docket: Background documents or comments received may be read at *www.regulations.gov* at any time. Follow the online instructions for accessing the docket or go to the Docket Operations in Room W58–213 of the West Building 5th Floor at 1200 New Jersey Avenue SE, Washington, DC 20590 between 9 a.m. and 5 p.m., Monday through Friday, except Federal holidays.

FOR FURTHER INFORMATION CONTACT: Lisa E. Cacciatore, Office of Commercial Space Transportation, Federal Aviation Administration, 1200 New Jersey Avenue SE, Washington, DC 20590; telephone (202) 880–1489; email *Lisa.E.Cacciatore@faa.gov*.

SUPPLEMENTARY INFORMATION:

I. Overview

In accordance with Executive Order (E.O.) 14335, ''Enabling Competition in the Commercial Space Industry,'' FAA proposes to amend its commercial space launch and reentry regulations at 14 CFR part 450 to further streamline the commercial licensing process. The regulations at 14 CFR 450.108(c) require a vehicle operator to determine flight safety limits that define when the operator must initiate flight abort. To address applicant confusion about the meaning of 14 CFR 450.108(c)(4), FAA proposes to reword the paragraph to clarify which inputs are necessary for establishing flight safety limits to prevent high consequence events.

II. Authority for This Rulemaking

The Commercial Space Launch Act of 1984, as amended and codified at 51 U.S.C. 50901–50924, authorizes the Secretary of Transportation to oversee, license, and regulate commercial launch and reentry activities, and the operation of launch and reentry sites within the United States or as carried out by U.S. citizens. Section 50905 directs the Secretary to exercise this responsibility consistent with public health and safety, safety of property, and the national security and foreign policy interests of the United States. In addition, section 50903 requires the Secretary to encourage, facilitate, and promote commercial space launches and reentries by the private sector. As codified in 49 CFR 1.83(b), the Secretary has delegated authority to the FAA Administrator to carry out these functions.

III. Background

FAA has established commercial space regulations governing licensing of launch and reentry in 14 CFR chapter III. On December 10, 2020, FAA issued a final rule consolidating all substantive launch and reentry licensing regulations into a new part 450 (85 FR 79566) that went into effect on March 10, 2021.

On August 13, 2025, the President issued E.O. 14335, ''Enabling Competition in the Commercial Space Industry,'' requiring the Secretary of Transportation to ''reevaluate, amend, or rescind'' the part 450 regulations for the purpose of further streamlining the commercial licensing process. This proposed rule is being published in furtherance of this E.O.

Section 450.101(c) provides that an operator may use flight abort as a hazard control strategy to protect against a high consequence event in uncontrolled areas.[1] Flight abort accomplishes a controlled ending to vehicle flight, such as through explosive destruct. Section 450.108 provides requirements for flight abort, including requirements for flight safety limits. Flight safety limits, in this context, define the criteria under which a vehicle operator must initiate flight abort.

One of the requirements for flight abort, located at § 450.108(c)(4), provides that an operator must determine and use flight safety limits defining when the operator must initiate flight abort ''to prevent conditional expected casualties (CE_C) greater than 1×10^{-2} in uncontrolled areas due to flight abort or due to flight outside the limits of a useful mission from any reasonably foreseeable off-trajectory failure mode in any significant period of flight . . . .'' The purpose of § 450.108(c)(4) is to ensure that, when an operator cannot develop flight safety limits that prevent hazards from affecting uncontrolled areas, the flight safety limits nonetheless protect against

[1] As defined by 14 CFR 401.7, an ''uncontrolled area'' is ''an area of land not controlled by a launch or reentry operator, a launch or reentry site operator, an adjacent site operator, or other entity by agreement.''

high consequence events in uncontrolled areas. The paragraph asks operators to compute the CE_C in each significant period of flight [2] where flight abort or flight outside the limits of a useful mission [3] may be an outcome for each reasonably foreseeable off-trajectory failure mode.[4] If the maximum CE_C developed through this method is not greater than 1×10^{-2}, an operator can demonstrate high consequence event protection. If this analysis does not demonstrate compliance with high consequence event protection, an operator may modify the limits of a useful mission or flight safety limits, and an operator should update the flight safety limits analysis accordingly until compliance with § 450.108(c)(4) can be demonstrated.

However, the phrasing of paragraph (c)(4) has led some applicants to misinterpret the paragraph as requiring two separate CE_C calculations: one for outcomes resulting in flight abort and one for outcomes that result in flight outside the limits of a useful mission. Meanwhile, other applicants have interpreted the paragraph to mean that an applicant may select only one of these two outcomes and ignore the other in CE_C calculations. In AC 450.108–1, *Flight Abort Rule Development,* FAA attempted to clarify the requirement, writing that ''[t]he CE_C results from various end states, such as break-up due to aerodynamic loads or FSS activation, from flight abort and flight outside the limits of a useful mission should be averaged together to compute the mean CE_C for each significant period of flight.'' However, misinterpretations of the rule have persisted and led to repeated exchanges with the applicants, requiring additional time and effort to develop an acceptable application.

IV. Discussion of the Proposal

The proposed rule would reword § 450.108(c)(4) to reduce confusion among applicants regarding how to comply with the requirement. The proposed rule would clarify that the CE_C should be calculated as an average that accounts for both breakup states due to flight abort and any outcomes involving flight outside the limits of a useful mission—but not breakups within the limits of a useful mission—and evaluated against the threshold for each failure mode within each significant period of flight. This clarification would ensure that both outcomes are combined and accounted for as a single CE_C for each failure mode within each significant period of flight.

V. Regulatory Notices and Analyses

A. Regulatory Impact Analysis

E.O. 12866 (''Regulatory Planning and Review'') and E.O. 13563 (''Improving Regulation and Regulatory Review'') require agencies to regulate in the ''most cost-effective manner,'' to make a ''reasoned determination that the benefits of the intended regulation justify its costs,'' and to develop regulations that ''impose the least burden on society.'' The Office of Management and Budget has determined this proposed rule is not a significant regulatory action as defined in Section 3(f) of E.O. 12866. FAA is seeking comments on the following analysis.

Currently, 14 CFR 450.108(c) requires a vehicle operator to determine flight safety limits that define when the operator must initiate flight abort. The proposed rule would reword 14 CFR 450.108(c)(4) to clarify which inputs are necessary for establishing flight safety limits to prevent high consequence events. The current wording has caused confusion among vehicle operators, which has prompted operators to seek guidance from FAA.

The analysis first provides an estimate of the cost savings per operator. This is a one-time cost savings per operator because they would only seek this guidance once. FAA estimates the labor time, per operator, to provide this guidance is eight hours for FAA and operators each. For FAA, an analyst at a G-Band would complete this work at an hourly wage with benefits of $72.80.[5] This amounts to $582 per operator. For an operator, an aerospace engineer would seek this guidance from FAA. At an hourly wage rate [6] with benefits [7] of $96.28, the aerospace engineer cost is $770 per applicant.[8] Thus, the cost savings per operator would be $1,347.

The cost savings would be minimal because FAA expects there to be 40 new license applications over the next 5 years. Assuming eight applications per year, the total undiscounted cost savings would be $53,880. At a seven percent discount rate, the total cost savings would be $50,355, and $48,888 at a three percent discount rate.

B. Regulatory Flexibility Act

Under the Regulatory Flexibility Act (RFA) (5 U.S.C. 601–612), agencies must prepare and make available for public comment a regulatory flexibility analysis that describes the effect of the rulemaking on small entities (*i.e.,* small businesses, small organizations, and small government jurisdictions). No regulatory flexibility analysis is required, however, if the head of an agency certifies that the proposed rule would not have a significant economic impact on a substantial number of small entities. FAA has concluded and hereby certifies that this proposed rule would not have a significant economic impact on a substantial number of small entities; therefore, an analysis is not included.

---

[2] As discussed in the final rule establishing part 450 ''Streamlined Launch and Reentry Requirements'' (85 FR 79566), a period of flight is considered significant if it is long enough for a mitigation, such as flight abort, to decrease the public risks or consequences materially from any reasonably foreseeable failure mode (85 FR 79566, 79604).

[3] As defined by 14 CFR 401.7, a ''useful mission'' means ''a mission that can attain one or more objectives.'' The ''limits of a useful mission,'' as defined by that section, means ''the trajectory data or other parameters that bound the performance of a useful mission, including flight azimuth limits.'' The limits of a useful mission are developed as part of the flight safety analysis under 14 CFR 450.119.

[4] As discussed in the final rule establishing part 450 ''Streamlined Launch and Reentry Requirements'' (85 FR 79566), an off-trajectory failure is a failure ''for which a vehicle deviates from its intended flight path—for example, due to failures of the guidance, navigation, or control systems'' (85 FR 79566, 79620). Failure modes are categories of hazardous events that share significant similarity in cause and system response, prior to consideration of mitigations or hazard control strategies. Therefore an ''off-trajectory failure mode'' is a failure mode where a vehicle deviates from its intended flight path. AC 450.101–1, *High Consequence Event Protection,* provides additional background on ''failure modes'' and how applicants may identify ''reasonably foreseeable'' failure modes.

[5] FAA Technical Pay Band, G Band with Washington DC locality; effective Jan. 2026, maximum salary of $111,138. The government overhead rate is 36.25 percent. This results in the loaded salary of $151,426 ($111,138 * 1.3625 = $151,426). The total loaded salary of $151,426 is divided by 2,080 hours to get the $72.80 hourly wage. 2026 FAA Core Compensation Plan Pay Bands, available at: *www.faa.gov/jobs/working_here/benefits/pay/core_salary_with_conversion.xlsx;* Office of Management and Budget, *Update to Civilian Position Full Fringe Benefit Cost Factor, Federal Pay Raise Assumptions, and Inflation Factors Used in OMB Circular No. A–76, ''Performance of Commercial Activities''* (Mar. 11, 2008), available at: *www.whitehouse.gov/wp-content/uploads/legacy_drupal_files/omb/memoranda/2008/m08-13.pdf.*

[6] Bureau of Labor Statistics (BLS), *Occupational Employment and Wage Statistics—May 2024, Industry: Cross-industry, Private, Federal, State, and Local Government, Aerospace Engineers (17–2011),* available at: *data.bls.gov/oes/#/industry/000000.*

[7] The total wage includes BLS compensation data. For 2024, BLS has wages at 70.5 percent of total compensation, while benefits are 29.5 percent. See BLS, *Employer Costs for Employee Compensation—December 2024,* available at: *www.bls.gov/news.release/archives/ecec_03142025.htm* (Mar. 14, 2025).

[8] The hourly salary is $67.88. The total loaded factor is 1.42 (1/0.705 = 1.42). Therefore, the total overhead wage is $96.28 (1.42 * $67.88 = $96.28).

C. International Trade Impact Assessment

The Trade Agreements Act of 1979 (Pub. L. 96–39), as amended by the Uruguay Round Agreements Act (Pub. L. 103–465), prohibits Federal agencies from establishing standards or engaging in related activities that create unnecessary obstacles to the foreign commerce of the United States. Pursuant to these Acts, the establishment of standards is not considered an unnecessary obstacle to the foreign commerce of the United States, so long as the standard has a legitimate domestic objective, such as the protection of safety, and does not operate in a manner that excludes imports that meet this objective. The statute also requires consideration of international standards and, where appropriate, they be the basis for U.S. standards.

FAA has assessed the potential effect of this proposed rule and determined that it would not create unnecessary obstacles to the foreign commerce of the United States.

D. Unfunded Mandates Assessment

The Unfunded Mandates Reform Act of 1995 (2 U.S.C. 1531–1538) governs the issuance of Federal regulations that require unfunded mandates. An unfunded mandate is a regulation that requires a State, local, or Tribal government or the private sector to incur direct costs without the Federal Government having first provided the funds to pay those costs. FAA determined the proposed rule would not result in the expenditure of $193,000,000 or more ($100,000,000 adjusted for inflation using the most current Implicit Price Deflator for the Gross Domestic Product) by State, local, or Tribal governments, in the aggregate, or the private sector, in any one year.

E. Paperwork Reduction Act

The Paperwork Reduction Act of 1995 (44 U.S.C. 3507(d)) requires FAA consider the impact of paperwork and other information collection burdens imposed on the public. FAA has determined there would be no new requirement for information collection associated with this proposed rule.

F. International Compatibility

In keeping with U.S. obligations under the Convention on International Civil Aviation, it is FAA policy to conform to International Civil Aviation Organization (ICAO) Standards and Recommended Practices to the maximum extent practicable. FAA has determined there are no ICAO Standards and Recommended Practices that correspond to these proposed regulations.

G. Environmental Analysis

The Department has analyzed the environmental impacts of this notice of proposed rulemaking pursuant to the National Environmental Policy Act of 1969 (NEPA) (42 U.S.C. 4321, *et seq.*). FAA has determined this proposed rule is categorically excluded pursuant to FAA Order 1050.1G. Categorical exclusions are categories of actions FAA has determined normally do not significantly affect the quality of the human environment and therefore do not require either an environmental assessment (EA) or environmental impact statement (EIS). In analyzing the applicability of a categorical exclusion, FAA must also consider whether extraordinary circumstances are present that would warrant the preparation of an EA or EIS. This rulemaking, which would clarify the requirements for establishing flight safety limits that define when a vehicle operator must initiate flight abort, is categorically excluded pursuant to FAA Order 1050.1G, Appendix B, Paragraph B–2.6(f), which categorically excludes issuance of regulatory documents. FAA does not anticipate any environmental impacts, and there are no extraordinary circumstances present in connection with this rulemaking.

VI. E.O. Determinations

A. E.O. 13132, Federalism

FAA has analyzed this proposed rule under the principles and criteria of E.O. 13132, Federalism. FAA has determined this action would not have a substantial direct effect on the States, or the relationship between the Federal Government and the States, or on the distribution of power and responsibilities among the various levels of government, and, therefore, would not have federalism implications.

B. E.O. 13175, Consultation and Coordination With Indian Tribal Governments

Consistent with E.O. 13175, Consultation and Coordination with Indian Tribal Governments,[9] and FAA Order 1210.20, American Indian and Alaska Native Tribal Consultation Policy and Procedures,[10] FAA ensures Federally Recognized Tribes (Tribes) are given the opportunity to provide meaningful and timely input regarding proposed Federal actions that have the potential to affect uniquely or significantly their respective Tribes. At this point, FAA has not identified any unique or significant effects, environmental or otherwise, on Tribes resulting from this proposed rule.

C. E.O. 13211, Regulations That Significantly Affect Energy Supply, Distribution, or Use

FAA analyzed this proposed rule under E.O. 13211, Actions Concerning Regulations that Significantly Affect Energy Supply, Distribution, or Use (May 18, 2001). FAA has determined it would not be a ''significant energy action'' under the E.O. and would not be likely to have a significant adverse effect on the supply, distribution, or use of energy.

D. E.O. 13609, Promoting International Regulatory Cooperation

E.O. 13609, Promoting International Regulatory Cooperation, promotes international regulatory cooperation to (1) meet shared challenges involving health, safety, labor, security, environmental, and other issues and to reduce, eliminate, or (2) prevent unnecessary differences in regulatory requirements. FAA has analyzed this action under the policies and agency responsibilities of E.O.13609 and has determined this action would have no effect on international regulatory cooperation.

E. E.O. 14192, Unleashing Prosperity Through Deregulation

This proposed rule, if finalized as proposed, is expected to be an E.O. 14192 deregulatory action.

VII. Additional Information

A. Comments Invited

FAA invites interested persons to participate in this rulemaking by submitting written comments, data, or views. FAA also invites comments relating to the economic, environmental, or federalism impacts that might result from adopting the proposals in this document. The most helpful comments reference a specific portion of the proposal, explain the reason for any recommended change, and include supporting data. To ensure the docket does not contain duplicate comments, commenters should submit only one time if comments are filed electronically, or commenters should send only one copy of written comments if comments are filed in writing.

FAA will file in the docket all comments it receives, as well as a report summarizing each substantive public contact with FAA personnel concerning

[9] 65 FR 67249 (November 6, 2000).

[10] FAA Order No. 1210.20 (January 28, 2004), available at *www.faa.gov/documentLibrary/media/1210.pdf.*

this proposed rule. Before acting on this proposal, FAA will consider all comments it receives on or before the closing date for comments. FAA will consider comments filed after the comment period has closed if it is possible to do so without incurring expense or delay. FAA may change this proposal in light of the comments it receives.

B. Confidential Business Information

Confidential Business Information (CBI) is commercial or financial information that is both customarily and actually treated as private by its owner. Under the Freedom of Information Act (FOIA) (5 U.S.C. 552), CBI is exempt from public disclosure. If your comments responsive to this NPRM contain commercial or financial information that is customarily treated as private, that you actually treat as private, and is relevant or responsive to this NPRM, it is important you clearly designate the submitted comments as CBI. Please mark each page of your submission containing CBI as ''PROPIN.'' FAA will treat such marked submissions as confidential under the FOIA, and they will not be placed in the public docket of this NPRM. Submissions containing CBI should be sent to the person in the **FOR FURTHER INFORMATION CONTACT** section of this document. Any commentary FAA receives that is not specifically designated as CBI will be placed in the public docket for this rulemaking.

C. Electronic Access and Filing

A copy of this NPRM, all comments received, any final rule, and all background material may be viewed online at *www.regulations.gov* using the docket number listed above. Electronic retrieval help and guidelines are available on the website. It is available 24 hours each day, 365 days each year. An electronic copy of this document may also be downloaded from the Office of the Federal Register's website at *www.federalregister.gov* and the Government Publishing Office's website at *www.govinfo.gov.* A copy may also be found at FAA's Regulations and Policies website at *www.faa.gov/regulations_policies.*

Copies may also be obtained by sending a request to the Federal Aviation Administration, Office of Rulemaking, ARM–1, 800 Independence Avenue SW, Washington, DC 20591, or by calling (202) 267–9677. Requesters must identify the docket or notice number of this rulemaking.

All documents FAA considered in developing this proposed rule, including economic analyses and technical reports, may be accessed in the electronic docket for this rulemaking.

D. Small Business Regulatory Enforcement Fairness Act

The Small Business Regulatory Enforcement Fairness Act of 1996 (Pub. L. 104–121, 110 Stat. 857, Mar. 29, 1996) requires FAA to comply with small entity requests for information or advice about compliance with statutes and regulations within its jurisdiction. A small entity with questions regarding this document may contact its local FAA official or the person listed under the **FOR FURTHER INFORMATION CONTACT** heading at the beginning of the preamble. To find out more about SBREFA on the internet, visit *www.faa.gov/regulations_policies/rulemaking/sbre_act/.*

Aircraft, Aviation safety, Environmental protection, Investigations, Reporting and recordkeeping requirements, Space transportation and exploration.

The Proposed Amendments

For the reasons discussed in the preamble, the Federal Aviation Administration proposes to amend chapter III of title 14, Code of Federal Regulations, as follows:

PART 450—LAUNCH AND REENTRY LICENSE REQUIREMENTS

■ 1. The authority citation for part 450 is revised to read as follows:

Authority: 51 U.S.C. Chapter 509.

■ 2. Revise § 450.108(c)(4) to read as follows:

§ 450.108 Flight abort.

* * * * *

(c) * * *

(4) To prevent conditional expected casualties in uncontrolled areas, averaged over outcomes that result in either flight abort or flight outside the limits of a useful mission, greater than 1×10^{-2} from any reasonably foreseeable off-trajectory failure mode in any significant period of flight; and

* * * * *

Issued under authority provided by 49 U.S.C. 106(f) and 51 U.S.C. chapter 509 in Washington, DC.

Anh Minh Ngoc Nguyen,

Deputy Associate Administrator, Office of Commercial Space Transportation.

31 CFR Parts 1010 and 1020

RIN 1506–AB41

Threshold for the Requirement To Collect, Retain, and Transmit Information on Funds Transfers and Transmittals of Funds That Begin or End Outside the United States, and Clarification of the Requirement To Collect, Retain, and Transmit Information on Transactions Involving Convertible Virtual Currencies and Digital Assets With Legal Tender Status; Withdrawal

AGENCY: Financial Crimes Enforcement Network (FinCEN), Treasury; Board of Governors of the Federal Reserve System (Board).

ACTION: Proposed rule; withdrawal.

SUMMARY: FinCEN and the Board (collectively, the ''Agencies'') are withdrawing the joint notice of proposed rulemaking (NPRM) published on October 27, 2020, that proposed modifying the threshold in the Agencies' rules implementing the Bank Secrecy Act (BSA) requiring financial institutions to collect and retain information on certain funds transfers and transmittals of funds. The NPRM would have reduced this threshold from $3,000 to $250 for funds transfers and transmittals of funds that begin or end outside the United States. FinCEN additionally proposed reducing from $3,000 to $250 the threshold in FinCEN's rule requiring financial institutions to transmit to other financial institutions in the payment chain information on funds transfers and transmittals of funds that begin or end outside the United States. The NPRM also would have clarified the meaning of ''money'' as used in the Agencies' rules to specify that the rules apply to domestic and cross-border transactions involving convertible virtual currency (CVC) and digital assets that have legal tender status to a recipient. The Agencies will not take further action on this NPRM.

DATES: FinCEN and the Board are withdrawing the NPRM published at 85 FR 68005 (October 27, 2020), as of November 9, 2026.

FOR FURTHER INFORMATION CONTACT:

FinCEN: The FinCEN Regulatory Support Section by submitting an inquiry at *www.fincen.gov/contact.*

Board: Evan Winerman, Deputy Associate General Counsel, (202) 872–7578, Legal Division, Board of

Governors of the Federal Reserve System, 20th Street and Constitution Avenue NW, Washington, DC 20551. Users of Telecommunication Device for Deaf (TDD) only, call (202) 263–4869.

SUPPLEMENTARY INFORMATION:

I. Background

Certain Federal regulations—often referred to as the ''Recordkeeping Rule'' and ''Travel Rule''—collectively require banks and nonbank financial institutions to collect, retain, and transmit information on funds transfers and transmittals of funds in amounts of $3,000 or more.[1] The Recordkeeping Rule, which requires banks and nonbank financial institutions to collect and retain information related to funds transfers and transmittals of funds that begin or end outside the United States, is jointly issued by both the Board and FinCEN. The Travel Rule, which requires banks and nonbank financial institutions to transmit information on funds transfers and transmittals of funds that begin or end outside the United States, is issued by FinCEN.

On October 27, 2020, FinCEN and the Board published a joint NPRM that proposed modifying the Recordkeeping Rule to reduce the threshold at which banks and nonbank financial institutions must collect and retain certain information from $3,000 to $250.[2] FinCEN additionally proposed to modify the Travel Rule to change the threshold at which banks and nonbank financial institutions must transmit information from $3,000 to $250.[3] The Agencies also proposed clarifying the meaning of ''money'' in these rules by revising the definitions of ''payment order'' and ''transmittal order'' to specify that the Recordkeeping Rule and Travel Rule apply to domestic and cross-border transactions involving CVC or any digital asset having legal tender status to a recipient.[4]

II. Summary of Public Comments

The Agencies received nearly 3,000 comments on the proposal from depository institutions, money services businesses, trade associations, individuals, and others.[5]

Commenters generally opposed the proposal to reduce the thresholds applicable to the Recordkeeping Rule and Travel Rule for international transactions. Many comments argued that a threshold of $250 would impose a significant regulatory burden on financial institutions, particularly smaller financial institutions; would disrupt the ability of consumers to send remittances overseas (and could potentially drive consumers into less regulated marketplaces); would significantly increase the number of transactions subject to the provisions of the Recordkeeping Rule and Travel Rule; and would increase the liability exposure of financial institutions required to maintain personally identifiable information. Many comments also noted that some potentially illicit transactions under the $3,000 threshold were already being reported to FinCEN through Suspicious Activity Reports (SARs). A number of commenters asserted that the Agencies did not provide sufficient analysis or data to justify the proposed reduction in the threshold. Several commenters stated that, rather than decrease the threshold, the Agencies should adopt a higher threshold due to the effects of inflation since the original threshold was adopted in 1995.

Commenter sentiment was mixed with respect to the proposal to specify that the Recordkeeping Rule and Travel Rule apply to CVC transactions. In general, companies that provide CVC-related services (and related trade associations) opposed this aspect of the proposal, while some depository institutions, money services businesses, and related trade associations supported this aspect of the proposal. Commenters opposed to this aspect of the proposal stated that implementing the proposal would be challenging (*e.g.,* due to technological limitations and the lack of an international messaging standard for CVC transactions), that the proposal would inhibit CVC innovation, and that the Agencies should improve coordination with other regulators who were, at that time, simultaneously developing rules affecting the CVC industry.

Many commenters offered more general comments on the proposal, including that the proposal would constitute an unwarranted invasion of privacy or an unreasonable search and seizure in violation of the Fourth Amendment. Many commenters also stated that the comment period on the proposal was insufficient, and that, if the Agencies finalize the proposal, the proposed implementation period should be extended.

III. Withdrawal of NPRM

The Agencies have reconsidered the proposal in light of the public comments received and have determined to withdraw the joint NPRM for two primary reasons. First, more than five years have passed since the issuance of the NPRM, and the Agencies believe that additional feedback from the public would be useful before the Agencies adopted any amendments to the Recordkeeping Rule or Travel Rule that are similar to the proposed amendments. The proposal is being withdrawn to provide certainty to the public that no final rule will be issued without an additional opportunity for public comment.

Second, and relatedly, the Agencies believe that there have been significant recent developments in the CVC industry since the proposal was issued. For example, CVC markets have continued to mature, and new legal frameworks are emerging.[6] The Agencies believe that any future, potential amendments to the Recordkeeping Rule and Travel Rule related to CVC should be considered in light of these recent developments to ensure that such amendments are fit for purpose.[7]

Because the Agencies no longer intend to issue a final rule with respect to this proposal, the NPRM published at 85 FR 68005 is hereby withdrawn.

Jimmy L. Kirby,

Deputy Director, Financial Crimes Enforcement Network.

Jointly issued by:

By order of the Board of Governors of the Federal Reserve System.

Benjamin McDonough,

Secretary of the Board.

Medicare Program; Implementation of Sections 6219, 6220, and 6224 of the Consolidated Appropriations Act, 2026; Correction

AGENCY: Centers for Medicare & Medicaid Services (CMS), Department of Health and Human Services (HHS).

ACTION: Proposed rule; correction.

SUMMARY: This document corrects a typographical error in the proposed rule that appeared in the October 20, 2026 **Federal Register** titled ''Medicare Program; Implementation of Sections 6219, 6220, and 6224 of the Consolidated Appropriations Act, 2026''.

FOR FURTHER INFORMATION CONTACT: Kristy Nishimoto, (206) 615–2367.

I. Background and Summary of Errors

In FR Doc. 2026–21420 of October 20, 2026 (91 FR 66408), we are correcting a typographical error in the docket number that may be used for submitting public comments on the proposed rule.

III. Correction of Errors

In FR Doc. 2026–21420 of October 20, 2026 (91 FR 66408), we are making the following correction:

1. On page 66408, first column, 13th full paragraph (**ADDRESSES** section), line 4, the number ''CMS–2026–2533'' is corrected to read ''CMS–2026–3533''.

BILLING CODE 4169–69–P

FEDERAL COMMUNICATIONS COMMISSION

47 CFR Part 73

[MB Docket No. 26–302; RM–12034; DA 26–1169; FR ID 375916]

Television Broadcasting Services Odessa, Texas

AGENCY: Federal Communications Commission.

ACTION: Proposed rule.

SUMMARY: This document proposes to amend the Table of TV Allotments (Table) of the Federal Communications Commission's (Commission) rules in response to a petition for rulemaking filed by Gray Television Licensee, LLC (Gray), the licensee of KOSA–TV (KOSA–TV), Odessa, Texas (Odessa). Gray held a construction permit to construct a facility on UHF channel 31 at Odessa, and now requests that the Bureau substitute VHF channel 7 for UHF channel 31 in the Table, with the technical parameters as set forth in KOSA–TV's current license. The Media Bureau previously granted a petition for rulemaking submitted by Gray to substitute UHF channel 31 for VHF channel 7 at Odessa. Gray states that it is unable to complete construction of its new channel within the time specified on the construction permit, and therefore requests amendment of the Table to allow it to continue to operate on VHF channel 7 at its currently licensed technical parameters to provide uninterrupted service to viewers. Given that the Licensee proposes to utilize its currently licensed parameters, we believe VHF channel 7 can be substituted for UHF channel 31 at Odessa as proposed, in compliance with the principal community coverage requirements of the Commission's rules. In addition, we find that this channel change meets the technical requirements set forth in the Commission's rules.

DATES: Comments must be filed on or before December 9, 2026 and reply comments on or before December 24, 2026.

ADDRESSES: Federal Communications Commission, Office of the Secretary, 45 L Street NE, Washington, DC 20554. In addition to filing comments with the FCC, interested parties should serve counsel for the Petitioner as follows: Joan Stewart, Wiley Rein LLP, 2050 M Street NW, Washington, DC 20036.

FOR FURTHER INFORMATION CONTACT: Emily Harrison at *Emily.Harrison@fcc.gov,* (202) 418–1665 or Mark Colombo at *Mark.Colombo@fcc.gov,* (202) 418–7611.

SUPPLEMENTARY INFORMATION: This is a synopsis of the Commission's *Notice of Proposed Rulemaking,* MB Docket No. 26–302; RM–12034; DA 26–1169, adopted October 28, 2026, and released October 28, 2026. The full text of this document is available online at *https://www.fcc.gov/edocs.*

This document does not contain information collection requirements subject to the Paperwork Reduction Act of 1995, Public Law 104–13. In addition, therefore, it does not contain any proposed information collection burden ''for small business concerns with fewer than 25 employees,'' pursuant to the Small Business Paperwork Relief Act of 2002, Public Law 107–198, *see* 44 U.S.C. 3506(c)(4). Provisions of the Regulatory Flexibility Act of 1980, 5 U.S.C. 601–612, do not apply to this proceeding.

Members of the public should note that all *ex parte* contacts are prohibited from the time a notice of proposed rulemaking is issued to the time the matter is no longer subject to Commission consideration or court review, *see* 47 CFR 1.1208. There are, however, exceptions to this prohibition, which can be found in § 1.1204(a) of the Commission's rules, 47 CFR 1.1204(a).

See §§ 1.415 and 1.420 of the Commission's rules for information regarding the proper filing procedures for comments, 47 CFR 1.415 and 1.420.

Providing Accountability Through Transparency Act: The Providing Accountability Through Transparency Act, Public Law 118–9, requires each agency, in providing notice of a rulemaking, to post online a brief plain-language summary of the proposed rule. The required summary of this notice of proposed rulemaking is available at *https://www.fcc.gov/proposed-rulemakings.*

DEPARTMENT OF COMMERCE

National Oceanic and Atmospheric Administration

50 CFR Part 665

[Docket No. 261104–0005]

RIN 0648–BN99

Pacific Island Fisheries; Commercial Fishing in the Pacific Remote Islands Marine National Monument Expansion

AGENCY: National Marine Fisheries Service (NMFS), National Oceanic and Atmospheric Administration (NOAA), Commerce.

ACTION: Proposed rule, request for comments.

SUMMARY: NMFS proposes to amend regulations that prohibit commercial fishing in the Pacific Remote Islands Marine National Monument Expansion (PRIMNM Expansion), which comprises waters of the U.S. exclusive economic zone (EEZ) between 50 to 200 nautical miles (nmi; 93 to 370 kilometers (km)) around Johnston Atoll and Wake and Jarvis Islands. This action is necessary to conform fishing regulations with Presidential Proclamation 10918 of April 17, 2025—Unleashing American Commercial Fishing in the Pacific, as amended by Presidential Proclamation 11035 of June 11, 2026—Restoring American Commercial Fishing in the Pacific, and in light of a court order. Fisheries in the PRIMNM Expansion would be regulated pursuant to existing fishing regulations under the Magnuson-Stevens Fishery Conservation and Management Act (Magnuson-Stevens Act), the Western and Central Pacific Fisheries Convention Implementation Act (WCPFCIA), the South Pacific Tuna Act (SPTA), and other applicable laws, that apply to all U.S. commercial fishing vessels but were superseded and made inapplicable when the commercial fishing prohibition for the PRIMNM Expansion was established. The proposed rule supports the long-term sustainability of U.S. fisheries and provides for the proper care and management of the PRIMNM and PRIMNM Expansion and the objects of historic or scientific interest therein, as directed by Proclamation 10918, as amended by Proclamation 11035.

DATES: NMFS must receive comments by December 9, 2026.

ADDRESSES: A plain language summary of this proposed rule is available at *https://www.regulations.gov/docket/NOAA-NMFS-2026-2410.* You may submit comments on this document, identified by NOAA–NMFS–2026–2410, by either of the following methods:

- *Electronic Submission:* Submit all electronic public comments via the Federal e-Rulemaking Portal. Visit *https://www.regulations.gov* and type NOAA–NMFS–2026–2410 in the Search box, Click the ''Comment'' icon, complete the required fields, and enter or attach your comments.
- *Mail:* Submit written comments to Sarah Malloy, Regional Administrator, NMFS Pacific Islands Regional Office (PIRO), 1845 Wasp Blvd. Bldg. 176, Honolulu, HI 96818.

Instructions: Comments sent by any other method, to any other address or individual, or received after the end of the comment period, may not be considered by NMFS. All comments received are a part of the public record and will generally be posted for public viewing on *https://www.regulations.gov* without change. All personal identifying information (*e.g.,* name, address), confidential business information, or otherwise sensitive information submitted voluntarily by the sender will be publicly accessible. NMFS will accept anonymous comments (enter ''N/A'' in the required fields if you wish to remain anonymous). NMFS has voluntarily prepared an environmental assessment (EA) that discusses the impact on the quality of the human environment as a result of this proposed rule and the resumption of commercial fishing under applicable regulations in PRIMNM Expansion. The EA, and other supporting documents referenced in this rule are available at *https://www.regulations.gov.*

FOR FURTHER INFORMATION CONTACT: Jarad Makaiau, NMFS PIRO Sustainable Fisheries, 808–725–5000.

SUPPLEMENTARY INFORMATION: Since the 1980s, NMFS and the Western Pacific Fishery Management Council (Council) have managed fisheries in the U.S. EEZ in the Western Pacific through five species-based fishery management plans (FMP) consistent with the provisions of the Magnuson-Stevens Act—the Bottomfish and Seamount Groundfish FMP, the Crustaceans FMP, the Precious Corals FMP, the Coral Reef Ecosystems FMP, and the Pelagic FMP. Pursuant to section 303(a) of the Magnuson-Stevens Act, an FMP, FMP amendment and the issuance of implementing regulations, or modification to regulations under section 303(c) are undertaken when necessary and appropriate for the conservation and management of the fishery to prevent overfishing and rebuild overfished stocks, and to protect, restore, and promote the long-term health and stability of the fishery, consistent with the Magnuson-Stevens Act's National Standards. NMFS, in cooperation with the Council, implements or amends FMP regulations that prevent overfishing while achieving on a continuing basis the optimum yield from each fishery for the U.S. fishing industry when the best scientific information available indicate it is necessary or appropriate.

In 2009, the Council recommended, and NMFS approved the restructuring of the five species-based FMPs by incorporating the conservation and management measures of the species-based FMPs into five place-based fishery ecosystem plans (FEP)—the American Samoa FEP, the Hawaii FEP, the Marianas FEP, the Pacific Remote Islands Area FEP (PRIA FEP) and the Pelagics FEP (75 FR 2198, January 14, 2010). In developing these FEPs, NMFS also prepared an environmental impact statement that evaluated the potential environmental effects of fishing under the five place-based FEPs.

The PRIA FEP governs fishing in the U.S. EEZ (0 to 200 nmi; 0 to 370 km) around the Pacific Remote Island Areas (PRIA) of Baker, Jarvis, Wake and Howland Islands, Kingman Reef, and Johnston and Palmyra Atolls and establishes conservation and management measures for coral reef fish, bottomfish, crustacean, and precious coral fisheries, including permit and reporting requirements, marine protected areas, gear restrictions, at-sea observer requirements and other measures to ensure sustainable fishing. Since 2010, the PRIA FEP has been amended three times and NMFS has evaluated the potential environmental effects of fishing under the amended FEP consistent with the Magnuson-Stevens Act, the National Environmental Policy Act (NEPA), the Endangered Species Act (ESA) and other applicable laws.

Similarly, the Pelagics FEP establishes conservation and management measures for pelagic fisheries and includes limited access programs, gear restrictions, protected species mitigation measures, prohibited area management and other measures to ensure sustainable fishing. Since 2010, the Pelagics FEP has been amended 12 times and NMFS has evaluated the potential environmental effects of

fishing under the amended FEP consistent with the Magnuson-Stevens Act, NEPA, ESA and other applicable laws. Regulations implementing the PRIA FEP and Pelagics FEP are found at 50 CFR part 665 subparts E and F, respectively. General Magnuson-Steven Act regulations prohibiting the use of any gear or participation in a fishery not on the list of authorized fisheries and gear under a fishery management plan are also found at 50 CFR 600.725.

In addition, U.S. fisheries for highly migratory species (HMS), including tunas and billfish in the U.S. EEZ around the PRIA, and on the adjacent high seas are also subject to regulations implementing the WCPFCIA, the SPTA and other applicable laws. Regulations implementing conservation and management measures pursuant to these Acts are found in 50 CFR 300 subparts D and O, respectively. When these regulations were codified, NMFS likewise evaluated the potential environmental effects of fishing for HMS consistent with the WCPFCIA, the SPTA, NEPA, ESA and other applicable laws.

On January 6, 2009, Presidential Proclamation 8336 established the PRIMNM for the purpose of protecting objects of historic or scientific interest identified in the proclamation, including corals, fish, shellfish, marine mammals, seabirds, water birds, land birds, insects, and vegetation not found elsewhere (74 FR 1565, January 12, 2009). At that time, the PRIMNM comprised the waters and submerged and emergent lands of Wake Island, Baker Island, Howland Island, Jarvis Island, Johnston Atoll, Kingman Reef, and Palmyra Atoll seaward to a distance approximately 50 nmi (93 km) from the mean low water line around each island, reef, and atoll. Proclamation 8336 directed the Secretaries of Commerce and the Interior to prohibit commercial fishing within the boundaries of the PRIMNM and authorized the Secretaries to permit non-commercial fishing, including recreational fishing in the PRIMNM. The proclamation also directed the Secretaries to take appropriate action pursuant to their respective authorities under the Antiquities Act and the Magnuson-Stevens Act, and such other authorities as may be available to implement this proclamation, to regulate fisheries, and to provide for the proper care and management of the monument. Proclamation 8336 had the effect of making the existing regulations authorizing and regulating sustainable commercial fishing in the U.S. EEZ in the PRIMNM inapplicable (50 CFR 665 subparts E and F). The Council did not, however, recommend nor did NMFS take action to amend those regulations, and they remain codified in the Code of Federal Regulations.

On June 3, 2013, NMFS published a final rule establishing requirements for fishing in the PRIMNM (78 FR 32996). Specifically, the final rule added regulatory provisions to codify the non-discretionary prohibition on commercial fishing and established new management measures for non-commercial fishing, including recreational fishing, including permit and reporting requirements and other discretionary measures NMFS, with input from the Council, deemed necessary and appropriate to regulate non-commercial fishing in the PRIMNM (78 FR 32996, June 3, 2013; 78 FR 39583, July 2, 2013).

On September 25, 2014, Presidential Proclamation 9173 expanded the boundaries of the PRIMNM around Wake Island, Johnston Atoll, and Jarvis Island to the seaward limit of the U.S. EEZ to establish the PRIMNM Expansion (79 FR 58645, September 29, 2014). The purpose of the PRIMNM Expansion was to provide an expanded area for the protection of objects of scientific interest identified in the proclamation, including seamounts, deep sea corals, sea turtles, seabirds, and other migratory species. Proclamation 9173 directed the Secretaries of Commerce and the Interior to prohibit commercial fishing within the boundaries of the PRIMNM Expansion and authorized the Secretaries to permit non-commercial fishing and provide a process to ensure recreational fishing continues to be managed as a sustainable activity in the PRIMNM and PRIMNM Expansion. The proclamation also directed the Secretaries to take appropriate action pursuant to their respective authorities under the Antiquities Act and the Magnuson-Stevens Act, and such other authorities as may be available to implement the proclamation, to regulate fisheries, and to provide for the proper care and management of the monument. Proclamation 9173 had the effect of making the existing regulations authorizing and regulating sustainable commercial fishing in the U.S. EEZ in the PRIMNM Expansion inapplicable (50 CFR 665 subparts E and F). The Council did not, however, recommend nor did NMFS take action to amend those regulations, and they also remain codified in the Code of Federal Regulations.

On March 25, 2015, NMFS published a final rule establishing requirements for fishing in the PRIMNM Expansion (80 FR 15694). Specifically, the final rule added regulatory provisions to codify the non-discretionary prohibition on commercial fishing in the PRIMNM Expansion and established new management measures for non-commercial fishing, including recreational fishing in the PRIMNM Expansion, including permit and reporting requirements among other discretionary measures NMFS, with input from the Council, deemed necessary and appropriate to regulate non-commercial fishing in the PRIMNM Expansion.

On April 17, 2025, Presidential Proclamation 10918—Unleashing American Commercial Fishing in the Pacific (90 FR 16987, April 22, 2025) provided that a prohibition on commercial fishing in the PRIMNM Expansion ''is not, at this time, necessary for the proper care and management of the Monument or the objects of historic or scientific interest therein'' and declared the ''section entitled 'Management of the Marine National Monument' in Proclamation 9173 is deleted and replaced'' with a provision that includes direction that the Secretary of Commerce not prohibit commercial fishing. Specifically, Proclamation 10918 provides: ''Between 50 to 200 nautical miles from the landward boundaries of the Monument, the Secretary of Commerce shall not prohibit commercial fishing within the boundaries of the Monument and the Monument Expansion in those areas where the Monument and Monument Expansion is coterminous with the Exclusive Economic Zone of the United States.'' Proclamation 10918 also directed the Secretaries of Commerce and the Interior to take appropriate action pursuant to their respective authorities under the Antiquities Act, the Magnuson-Stevens Act, and such other authorities as may be available to implement the proclamation, to regulate fisheries, and to provide for the proper care and management of the PRIMNM Expansion.

On April 25, 2025, due to inquiries from the regulated fishing industry on whether fishermen could fish in the PRIMNM Expansion given Proclamation 10918, NMFS issued a letter to the regulated community notifying fishermen that regulations implementing the prohibition on commercial fishing in Proclamation 9173 are no longer effective. NMFS further indicated it planned to expeditiously initiate rulemaking to bring fishing regulations into compliance with Proclamation 9173 as amended by Proclamation 10918. NMFS's letter was subsequently challenged in court by various

individuals and environmental groups in *Kapa'a* v. *Trump,* 794 F. Supp. 3d 793 (D. Haw. 2025). The U.S. District Court for the District of Hawaii found the plaintiffs were ''entitled to participate in a notice and comment'' process on whether commercial fishing in the PRIMNM Expansion would be appropriately managed to provide for the proper care and management of monument resources (*Kapa'a,* 794 F. Supp. 3d at 823).

At its 206th meeting held March 24–26, 2026, in Honolulu, the Council considered management alternatives to amend fisheries regulations at 50 CFR part 665 to restore commercial fishing in the PRIMNM Expansion consistent with Presidential Proclamation 10918. Before making final recommendations, the Council provided opportunity for public testimony and comment (91 FR 11046, March 6, 2026). The public comments received reflected both support and opposition to the resumption of commercial fishing in the PRIMNM Expansion.

After considering public comments, the Council recommended revising commercial fishing prohibitions to authorize commercial fishing in the PRIMNM Expansion subject to the regulatory requirements that had been superseded and made inapplicable by commercial fishing prohibitions established in Presidential Proclamation 9173.

Before the Council transmitted its proposed regulations for Secretarial review pursuant to Section 303(c) of the Magnuson-Stevens Act, on June 11, 2026, the President issued Proclamation 11035, ''Restoring American Commercial Fishing in the Pacific,'' (91 FR 36741, June 17, 2026). Proclamation 11035 amended Proclamation 10918 ''to clarify that the proclamation itself removes monument-based prohibitions on commercial fishing and agency rulemaking is intended to amend or repeal inconsistent regulations.'' Accordingly, NMFS has no discretion and must ''amend or repeal existing regulations that are inconsistent with this proclamation's removal of monument-based prohibitions on commercial fishing'' (91 FR 36742, June 17, 2026). Thus, notice and comment rulemaking to amend monument-based prohibitions on commercial fishing would not be necessary. However, out of an abundance of caution and in light of an Order by the U.S. District Court for the District of Hawaii in *Kapa'a* v. *Trump,* NMFS is providing the public with prior notice and an opportunity to comment on this proposed rule. NMFS is also requesting public comment on whether the resumption of commercial fishing under the Council and NMFS's existing regulations and restrictions provide for the proper care and management of the PRIMNM and monument resources, consistent with Proclamation 10918.

Consistent with the directives in Proclamations 10918, as amended by Proclamation 11035, this proposed rule would amend Magnuson-Stevens Act regulations at 50 CFR 665 subpart H (§§ 665.930–665.936) that prohibit commercial fishing in the PRIMNM Expansion. When finalized, commercial fisheries operating in the PRIMNM Expansion will be subject to existing fishing regulations and restrictions at 50 CFR 665 subpart A (§§ 665.1–665.20), implementing general requirements for fisheries in the Western Pacific; 50 CFR 665 subpart E (§§ 665.598–665.669) and 50 CFR subpart F (§§ 665.798–665.819), implementing the PRIA FEP and Pelagics FEP, respectively; 50 CFR 600.725, implementing Magnuson-Stevens Act general prohibitions; 50 CFR 300 subpart D (§§ 300.30–300.46), implementing the SPTA and subpart O (§§ 300.210–300.230), implementing WCPFCIA.

Under the proposed action, commercial fishing shoreward of 50 nmi (93 km) around Wake Island, Johnston Atoll and Jarvis Island in the PRIMNM will continue to be prohibited by regulations at 50 CFR 665 subpart H (§§ 665.933–665.934) implementing the PRIMNM, consistent with Presidential Proclamation 10918, as amended by Presidential Proclamation 11035. For this reason, NMFS anticipates only longline and purse seine fishing for highly migratory species such as tunas and billfish would resume in the PRIMNM Expansion because the habitat to support non-pelagic species managed under the PRIA FEP, including bottomfish, crustacean, coral reef and precious corals are found entirely within 50 nmi (93 km) from shore, which will remain closed to commercial fishing.

NMFS anticipates the resumption of commercial fishing by pelagic longline and purse seine vessels in the PRIMNM Expansion under the proposed action would have no effect on terrestrial resources, coral reefs, shallow water coral reef ecosystem resources, reef fish, shellfish, and outer reef slope communities because these monument resources are found entirely within 12 nmi (22 km) from the shoreline, well within the 50 nmi (93 km) boundary where commercial fishing will remain prohibited and are spatially separated from commercial fishing activities. Similarly, NMFS does not anticipate the resumption of commercial fishing in the PRIMNM Expansion would result in adverse impacts to seamounts, deep sea coral communities and demersal habitats because pelagic fishing gear is deployed in the water column within 985 ft (300 m) of the surface and does not come into contact with the ocean floor. As such, commercial fishing activities are spatially separated from these resources and unlikely to affect them.

In addition, reverting to existing management measures for resuming commercial fishing in the PRIMNM Expansion is in accordance with the Magnuson-Stevens Act, ESA of 1973, and Marine Mammal Protection Act of 1972 (MMPA). NMFS evaluates the impacts of fishing activity on the population of target stocks and protected species throughout the entirety of their range. Under the proposed action, NMFS expects the combined amount of catch of target stocks and other marketable fishery resources by longline and purse seine fisheries within the PRIMNM Expansion would remain within historical levels and would not cause a change in the sustainability of fish populations throughout their range as currently assessed in accordance with the Magnuson-Stevens Act and other domestic and international requirements.

Similarly, NMFS expects the shift of fishing effort by longline and purse seine fishing vessels from the high seas into the PRIMNM Expansion would result in a negligible change in the amount of fishery interactions over the range of ESA-listed species, including sea turtles, sharks and rays, marine mammals, and seabirds. And we anticipate interactions would remain within the levels that do not exceed thresholds established under ESA consultations. Based on ESA consultations and analyses, the overall effects on protected species are expected to be negligible.

NMFS expects a likely minor, beneficial impact to fisheries operations and management. For longline and purse seine vessels, the proposed action would restore 2.04 percent and 1.55 percent of historical fishing areas, respectively. The longline and purse seine fisheries will also experience minor beneficial impacts due to reduced competition with foreign fleets, which are prohibited from fishing in U.S. waters of the PRIMNM Expansion and access to fishing areas closer to home ports, reducing transit times and overall fuel and operational costs.

NMFS estimates up to a maximum of 6 percent of the total effort of the purse seine fishery to shift to the Jarvis Island

EEZ and up to a maximum of 6 percent of the total effort of longline fisheries to shift to the Johnston Atoll from areas currently accessible to the fisheries. Because the functional restraints, including catch and effort limits and limited entry permits on the fisheries will not change as a result of this action, NMFS expects negligible impacts on fisheries catch and effort and target fish populations.

Thus, NMFS expects the resumption of commercial fishing in the PRIMNM Expansion would not result in a substantial increase in vessel traffic or fishing gear entering the PRIMNM Expansion and is expected to have negligible effects on monument resources, given the limited increase in fishing activity expected, and spatial protective boundary within 50 nmi (93 km). Additionally, Federal protections under current laws governing vessel operations, marine pollution, refuge management, and gear management and disposal would limit impacts by vessels operating in the PRIMNM Expansion.

NMFS also expects resumption of commercial fishing in the PRIMNM Expansion would have negligible effects on activities managed under authorities other than the Magnuson-Stevens Act, as directed by Proclamation 10918. This is because within the PRIMNM Expansion, transiting of maritime vessels, including innocent passage is the primary non-fishing activity that occurs in this area, and NMFS anticipates transiting vessels would avoid vessels actively engaged in fishing so as to avoid collisions.

To the extent that other non-fishing activities may occur, they would be subject to management by the U.S. Fish and Wildlife Service. NMFS believes that the commercial fishing that would resume under the proposed action would not interfere with other non-fishing activities managed by the U.S. Fish and Wildlife Service.

NMFS further expects impacts on cultural resources would be negligible due to the geographic separation from fishing activities and land-based practices and the low likelihood of encounters between cultural practitioners and voyagers and fishing vessels in the PRIMNM Expansion. Since the establishment of the PRIMNM Expansion, zero cultural practitioners have sought Special Use Permits for cultural activities.

Finally, NMFS expects the resumption of commercial fishing in the PRIMNM Expansion under the proposed action would result in minor beneficial impacts on fishery economics, as vessels could save cost on fuel by fishing closer to home ports instead of on the high seas and purse seine vessels may avoid daily access fees required for fishing in foreign EEZs adjacent to the PRIMNM Expansion.

As discussed above, regulations at 50 CFR 665 subpart A (§§ 665.1–665.20), 50 CFR 665 subpart E (§§ 665.598–665.669); 50 CFR subpart F (§§ 665.798–665.819); 50 CFR 600.725; 50 CFR 300 subpart D (§§ 300.30–300.46); and 50 CFR 300 subpart O (§§ 300.210–300.230) provide the conservation and management measures developed and evaluated under the Magnuson-Stevens Act and other applicable law, including NEPA, the ESA, and MMPA. Under these existing regulations and restrictions, NMFS believes that commercial fisheries operating in the PRIMNM and PRIMNM Expansion would be appropriately managed and that monument resources would receive proper care and management, consistent with the direction in Proclamation 10918.

NMFS invites public comment on whether these existing regulations and restrictions appropriately manage commercial fishing and would provide for the proper care and management of monument resources in the PRIMNM and PRIMNM Expansion, consistent with the proclamation.

NMFS will consider public comments on this proposed rule and will announce the final rule in the **Federal Register**. NMFS must receive any comments by the date provided in the **DATES**.

Classification

Magnuson-Stevens Act

NMFS is proposing this rule pursuant to 305(d) of the Magnuson-Stevens Act to carry out section 303(a)(1)(C). This action is necessary to ensure that MSA regulations implementing the PRIA FEP and Pelagics FEP are carried out consistent with Presidential Proclamation 10918, as amended by Proclamation 11035, directing the removal of monument-based prohibitions on commercial fishing in the PRIMNM Expansion. Accordingly, this proposed rule would amend those regulations that are inconsistent with Proclamation 10918, as amended by Proclamation 11035. The Assistant Administrator for Fisheries, NOAA has determined that this rule is consistent with, and conforms to Presidential Proclamation 10918, as amended by Proclamation 11035, the Antiquities Act, the PRIA and Pelagics FEPs, other provisions of the Magnuson-Stevens Act, and other applicable laws.

NEPA

This proposed action is to bring Magnuson-Stevens Act implementing regulations in conformity with applicable law—specifically Presidential Proclamation 10918—as amended by Proclamation 11035, which removed prohibitions on commercial fishing described in Presidential Proclamation 9173, and specified that agency rulemaking is intended to amend inconsistent regulations. NMFS has voluntarily prepared an EA that discusses the impact on the quality of the human environment as a result of this rule and the resumption of commercial fishing under applicable regulations in the PRIMNM Expansion. NMFS considered two alternatives: the proposed action to amend regulations that restrict commercial fishing in the PRIMNM Expansion, which would restore commercial fishing under existing regulations and taking no action which would maintain existing commercial fishing prohibitions in the PRIMNM Expansion.

A copy of the EA is available from NMFS (See **ADDRESSES**).

Executive Order 12866

This proposed rule has been determined to be significant for purposes of Executive Order 12866 section 3(f). However, it has not been found to be economically significant under section 3(f)(1) because it would not likely result in an annual effect on the economy of $100 million or more, or adversely affect in a material way the economy, a sector of the economy, productivity, competition, jobs, the environment, public health or safety, or State, local, or tribal governments or communities.

Executive Order 14192

This proposed rule is considered an Executive Order 14192 deregulatory action because it would amend regulations that prohibit commercial fishing between 50 to 200 nautical miles (nmi; 93 to 370 kilometers (km)) around Johnston Atoll and Wake and Jarvis Islands and restore access to these areas for U.S. commercial fishermen.

Regulatory Flexibility Act

The Senior Lead Counsel for Regulation of the Department of Commerce certified to the Chief Counsel for Advocacy of the Small Business Administration that this proposed rule, if adopted, would not have a significant economic impact on a substantial number of small entities.

The proposed rule would amend regulations under the Magnuson-Stevens Act that prohibit commercial

fishing between 50 to 200 nmi (93 to 370 km) around Wake Island, Johnston Atoll and Jarvis Island in the PRIMNM Expansion. This action, which would expand areas open to commercial fishing by over 300,000 square nmi (1,030,000 square km), is necessary to conform U.S. fishing regulations with Presidential Proclamation 10918 of April 17, 2025—Unleashing American Commercial Fishing in the Pacific, and Presidential Proclamation 11035 of June 11, 2026—Restoring American Commercial Fishing in the Pacific, and in light of the U.S. District Court of Hawaii's Order in *Kapa'a* v. *Trump,* 794 F. Supp. 3d 793 (D. Haw. 2025), which found the plaintiffs were entitled to participate in a notice and comment process on whether commercial fishing in the PRIMNM Expansion would be appropriately managed to provide for the proper care and management of monument resources.

The proposed action would apply to all fisheries managed under the PRIA FEP and Pelagics FEP, as well as the U.S. purse seine and longline vessels operating under the SPTA and the WCPFCIA. However, given the remote location of the monument and considerable distance from U.S. ports, the fisheries affected are essentially limited to longline and purse seine fisheries; the areas between 50 to 200 nmi (93 to 370 km) around Wake Island, Johnston Atoll and Jarvis Island that would be reopened by this action (hereafter the PRIMNM Expansion) are generally inaccessible to small boat fisheries managed under the Pelagics FEP. While the proposed action would apply to as many as 224 longline vessels and 40 purse seine vessels, given recent fishing activities, it would likely affect only the 163 permitted and active longline vessels and 13 licensed and active purse seine vessels. The Hawaii and American Samoa longline fisheries are limited entry fisheries. The Hawaii longline fishery is capped at 164 vessels with 149 currently permitted. The American Samoa longline fishery is capped at 60 vessels with 20 currently permitted. Six of those 20 current permit holders are dual permitted so they also possess current Hawaii longline vessel permits. The purse seine fleet is limited to a total of 40 licenses under the SPTA, with 13 active licensed vessels. There has historically been only very limited fishing by the Pelagics FEP small boat fisheries and none by the PRIA FEP fisheries within the PRIMNM Expansion. This is because habitat to support species managed under the PRIA FEP, including bottomfish, crustacean, coral reef fish and precious corals are found entirely within 50 nmi (93 km) from shore, which will remain closed to commercial fishing.

NMFS has established a small business size standard for businesses, including their affiliates, whose primary industry is commercial fishing (see 50 CFR 200.2). A business primarily engaged in commercial fishing (North American Industry Classification System code 11411) is classified as a small business if it is independently owned and operated, is not dominant in its field of operation (including its affiliates), and has combined annual receipts not in excess of $11 million for all its affiliated operations worldwide. Based on available information, NMFS believes that most of the affected fish harvesting businesses are small entities under the NMFS standard, as they are engaged in the business of fish harvesting, independently owned or operated, are not dominant in their field of operation, and have annual gross receipts not in excess of $11 million. In 2025, the Hawaii longline fishery earned $109 million fleetwide ($731,543 per vessel on average) while the American Samoa longline fishery earned approximately $3 million ($150,000 per vessel on average). With regard to the purse seine fleet, the majority, but not all vessels, could be considered small entities. For the 11 vessels that operated between 2022 and 2024 and were still active in 2025, the average per vessel revenue was almost $10 million. Seven of those 11 vessels could be considered small entities with estimated revenues of less than $11 million. Even though this proposed action may apply to a substantial number of entities, based on our analysis the implementation of this action would not result in significant adverse economic impacts on individual entities.

The primary benefit for fishermen under the proposed action is a modest increase in the available U.S. EEZ waters where U.S. fishing vessels do not have to compete with foreign fleets for access to fish. This benefit primarily applies to longline fleets based in Hawaii, where the majority of U.S. EEZ waters are closed due to the longline exclusion zone around the main Hawaiian Islands (50 CFR 665.806(a)(2)) and prohibitions on commercial fishing in the PRIMNM (50 CFR 665.933), Papahānaumokuākea Marine National Monument (50 CFR 404) and Papahānaumokuākea National Marine Sanctuary (15 CFR 922 subpart W—Papahānaumokuākea National Marine Sanctuary). From the purse seine fishery perspective, the major benefit is related to avoiding costs associated with fishing in the EEZs of foreign nations that, under the SPTA, charge daily access fees for fishing activity. These access fees range from $10,000 to $13,000 per day, depending on the EEZ or groups of EEZs that are fished. Considered relative to daily average revenue for purse seine vessels ($68,000), these fees are about 14 to 19 percent of daily revenue, on days that these vessels fish in the EEZs of foreign nations that charge daily access fees.

The amount of annual effort shifted to the action area from current fishing locations under the proposed action is expected to range from 0 to about 6 percent of overall fleetwide effort in both the longline and purse seine fisheries given past fishing in the action area prior to the initial commercial fishery prohibitions in 2009 and further expansion of fishing restrictions in 2014. In longline fisheries, deep- and shallow-set fisheries combined averaged 22,020 sets over the last 5 years (2020–2024). This suggests that the number of sets that could shift to areas that open as a result of implementing the proposed action could range from 0 to 1,321 longline sets fleetwide. For purse seine fisheries, the number of sets has averaged 1,753 in the last 5 years (2020–2024). Implementing the proposed action could shift the number of purse seine sets in these waters ranging from 0 to 105 sets fleetwide.

With regard to longline vessels, there could potentially be some savings in fuel costs associated with this anticipated switched effort; however, both Johnston Atoll and Jarvis Island are far from Honolulu relative to where the majority of longline effort is concentrated. The anticipated fuel cost differences for shifted effort under the proposed action are difficult to estimate, but fuel represents about 50 percent of the total costs of a fishing trip and therefore does represent a substantial portion of operating costs.

For purse seine vessels, a similar magnitude minor shift in effort under the proposed action may affect fuel costs. In general, purse seine fishing is concentrated in the productive skipjack tuna fishing waters to the west and south of the PRIMNM Expansion; inside the EEZs of countries party to the South Pacific Tuna Treaty. Transit distances to Jarvis Island from the center of purse seine effort would be significant, but the lack of daily access fees in the PRIMNM Expansion may increase the economic value of reopened areas around Jarvis Island. If we assume that all effort shifted to the PRIMNM Expansion under the proposed action moved from areas where a daily access fee was required, the total savings fleetwide could be as high as $1,367,340. Based

on 13 currently licensed and active purse seine vessels, each vessel could save up to $105,180 per year in access fees, or roughly 1 percent of a vessel's average annual revenue of $10 million. Revenue gains would be on the higher end of the potential range if purse seine vessels decide to fully transition away from foreign EEZs upon reopening commercial fishing in the PRIMNM Expansion, and closer to zero if they do not. Because fishing location choice is based on many factors, and fishermen are unlikely to fully transition away from foreign EEZs, the fleet-wide revenue gain as a result of the expanded locations available for commercial fishing as a result of this proposed action, would likely be less than $1,367,340, and individual vessel revenue gains would be lower than $105,180 (*i.e.,* lower than 1 percent).

The proposed action does not duplicate, overlap, or conflict with other Federal rules and is not expected to have a significant impact on small entities, organizations or government jurisdictions. The proposed action also will not place a substantial number of small entities at a significant competitive disadvantage nor disproportionately flow to large entities because the expansion of fishing areas would provide minor benefits to all entities without regard to the size of each individual entity.

For the reasons above, NMFS does not expect the proposed action to have a significant economic impact on a substantial number of small entities.

As a result, an initial regulatory flexibility analysis is not required, and none has been prepared.

Paperwork Reduction Act

This proposed rule contains no information collection requirements under the Paperwork Reduction Act of 1995.

Coastal Zone Management Act

Because this proposed rule affects fisheries that occur outside the coastal zone of any State and will not have reasonably foreseeable effects on any coastal use or resource, NMFS is not required to coordinate with State agencies under section 307 of the Coastal Zone Management Act.

ESA

Fishing activities conducted pursuant to this rule will not affect endangered and/or threatened species or critical habitat under the ESA in a manner that would result in effects that have not previously been considered in current ESA section 7 consultations.

Under the proposed rule, NMFS anticipates only longline and purse seine fishing for HMS such as tunas and billfish would be resumed in the PRIMNM Expansion because the habitat to support non-pelagic species such as bottomfish, crustacean, coral reef and precious corals are found entirely within 50 nmi (93 km) from shore, which will remain closed to commercial fishing.

NMFS previously evaluated the potential impact of longline and purse seine fisheries on ESA-listed species and designated critical habitat in areas of the Pacific Ocean where fishing vessels fish and transit on their way to fishing grounds. NMFS determined these fisheries are not likely to jeopardize the continued existence of ESA-listed species or result in adverse modification of designated critical habitat.

NMFS does not expect that resuming commercial longline and purse seine fishing under existing fishing regulations in the PRIMNM Expansion would cause an effect on endangered and/or threatened species or critical habitat beyond that considered in applicable consultations for these fisheries. This conclusion is reached in part because there is no designated critical habitat for ESA-listed species in the PRIMNM Expansion for pelagic longline and purse seine fisheries to affect. Additionally, some ESA-listed species such as corals are only found in shallow nearshore waters around the islands and well within 50 nmi (93 km) of shore where commercial fishing remains prohibited. This buffer provides spatial separation that prevents their exposure to fishing activities occurring 50 to 200 nmi (93 to 370 km) offshore.

Many of the ESA-listed species, such as sea turtles, sharks and manta rays are highly migratory, and the PRIMNM Expansion represents just a small fraction of their range. For this reason, existing ESA consultations account for the potential population level impacts of fishing activities on ESA-listed species that may visit the PRIMNM Expansion but are exposed to fishing activities throughout their range.

Historically, annual fishing effort in the PRIMNM waters prior to monument designation represented up to a maximum of 6 percent of total fishing effort for longline and purse seine fisheries. As both longline and purse seine fisheries are limited entry fisheries with maximum caps on the number of vessels that can fish, we expect that fishing in the restored areas of the PRIMNM Expansion will reflect effort by existing vessels shifting from currently open fishing areas into the PRIMNM, as opposed to additional increased fishing effort.

Therefore, the shift in some fishing effort from outside the PRIMNM Expansion into the PRIMNM Expansion is expected to result in a negligible change in the amount of fishery interactions over the range of ESA-listed species and would remain within the levels considered and analyzed in the current ESA section 7 consultations for these fisheries. The results of the ESA consultations for Pacific Island longline and purse seine fisheries are detailed in the EA developed for this action (see **ADDRESSES**).

Executive Order 13175

NMFS has determined that this action would not have a substantial direct effect on one or more Indian Tribes, on the relationship between the Federal Government and Indian Tribes, or on the distribution of power and responsibilities between the Federal Government and Indian Tribes; therefore, consultation with Tribal officials under E.O. 13175 is not required, and the requirements of sections (5)(b) and (5)(c) of E.O. 13175 also do not apply. A Tribal summary impact statement under section (5)(b)(2)(B) and section (5)(c)(2) of E.O. 13175 is not required and has not been prepared.

List of Subjects in 50 CFR Part 665

Administrative practice and procedure, Commercial fishing, Fisheries, Monuments and memorials, Pacific Remote Islands.

Dated: November 5, 2026.

Samuel D. Rauch III,

Deputy Assistant Administrator for Regulatory Programs, National Marine Fisheries Service.

For the reasons set out in the preamble, NMFS proposes to amend 50 CFR part 665 as follows:

PART 665—FISHERIES IN THE WESTERN PACIFIC

■ 1. The authority citation for 50 CFR Part 665 continues to read as follows:

Authority: 16 U.S.C. 1801 *et seq.*

■ 2. Amend § 665.932 by revising the definition of ''Proclamations'' to read as follows:

§ 665.932 Definitions.

* * * * *

Proclamations means Presidential Proclamation 8336 of January 6, 2009, ''Establishment of the Pacific Remote Islands Marine National Monument,'' Presidential Proclamation 9173 of September 29, 2014, ''Pacific Remote Islands Marine National Monument

Expansion,'' Presidential Proclamation 10918 of April 17, 2025 ''Unleashing American Commercial Fishing in the Pacific,'' and Presidential Proclamation 11035 of June 11, 2026, ''Restoring American Commercial Fishing in the Pacific.''

■ 3. Amend § 665.933 by revising paragraph (a) to read as follows:

§ 665.933 Prohibitions.

* * * * *

(a) Commercial fishing in prohibited areas. Commercial fishing is prohibited in the areas of the Monument as defined in paragraphs (a)(1) through (a)(5) of this paragraph.

(1) *Wake Island.* Commercial fishing is prohibited in the Wake Island unit of the Monument within an area defined by straight lines connecting the following coordinates in the order listed:

ID	Longitude—east	Latitude—north
1	165°42′56″	20°9′27″
2	167°32′23″	20°9′27″
3	167°32′23″	18°25′51″
4	165°42′56″	18°25′51″
1	165°42′56″	20°9′27″

(2) *Howland and Baker Islands.* Commercial fishing is prohibited in the Howland and Baker units of the Monument as defined in 50 CFR 931(b).

(3) *Jarvis Island.* Commercial fishing is prohibited in the Jarvis Island unit of the Monument within an area defined by straight lines connecting the following coordinates in the order listed:

ID	Longitude—west	Latitude
1	160°50′52″	0°28′39″ N
2	159°8′53″	0°28′39″ N
3	159°8′53″	1°13′15″ S
4	160°50′52″	1°13′15″ S
1	160°50′52″	0°28′39″ N

(4) *Johnston Atoll.* Commercial fishing is prohibited in the Johnston Atoll unit of the Monument within an area defined by straight lines connecting the following coordinates in the order listed:

ID	Longitude—west	Latitude—north
1	170°24′37″	17°35′39″
2	168°37′32″	17°35′39″
3	168°37′32″	15°53′26″

Notices

Federal Register
Vol. 91, No. 215
Monday, November 9, 2026

This section of the FEDERAL REGISTER contains documents other than rules or proposed rules that are applicable to the public. Notices of hearings and investigations, committee meetings, agency decisions and rulings, delegations of authority, filing of petitions and applications and agency statements of organization and functions are examples of documents appearing in this section.

DEPARTMENT OF AGRICULTURE

Animal and Plant Health Inspection Service

[Docket No. APHIS–2026–1288]

Pioneer Hi-Bred International, Inc.: Availability of a Petition for a Determination of Nonregulated Status and Draft Plant Pest Risk Assessment for Insect Resistant COR-ØØ121–4 Maize (Zea mays)

AGENCY: Animal and Plant Health Inspection Service, USDA.

ACTION: Notice of availability.

SUMMARY: We are advising the public that the Animal and Plant Health Inspection Service has received a petition from Pioneer Hi-Bred International, Inc. seeking a determination of nonregulated status for COR-ØØ121–4 maize (corn), which has been developed using genetic engineering to express the IPD083Cb protein for protection against certain susceptible lepidopteran pests and the phosphomannose isomerase protein that was used as a selectable marker. We are making the petition and draft plant pest risk assessment available for public review and comment.

DATES: We will consider all comments that we receive on or before January 8, 2027.

ADDRESSES: You may submit comments by either of the following methods:

- *Federal eRulemaking Portal:* Go to *www.regulations.gov.* Enter APHIS–2026–1288 in the Search field. Select the Documents tab, then select the Comment button in the list of documents.
- *Postal Mail/Commercial Delivery:* Send your comment to Docket No. APHIS–2026–1288, Regulatory Analysis and Development, PPD, APHIS, 5601 Sunnyside Avenue #AP760, Beltsville, MD 20705.

The petition, draft plant pest risk assessment, and any comments we receive on this docket may be viewed at *www.regulations.gov,* or in our reading room, which is located in 1620 of the USDA South Building, 14th Street and Independence Avenue SW, Washington, DC. Normal reading room hours are 8 a.m. to 4:30 p.m., Monday through Friday, except holidays. To be sure someone is there to help you, please call (202) 799–7039 before coming.

FOR FURTHER INFORMATION CONTACT: Mr. Alan Pearson, Biotechnology Regulatory Services, APHIS, USDA, 5601 Sunnyside Avenue, AP100–3–WS–1151, Beltsville, MD 20705; (301) 851–3944; email: *alan.pearson@usda.gov.*

SUPPLEMENTARY INFORMATION: Under the authority of the plant pest provisions of the Plant Protection Act (7 U.S.C. 7701 *et seq.*), the regulations in 7 CFR part 340, ''Introduction of Organisms and Products Altered or Produced Through Genetic Engineering Which Are Plant Pests or Which There Is Reason to Believe Are Plant Pests,'' regulate, among other things, the introduction (importation, interstate movement, or release into the environment) of organisms and products altered or produced through genetic engineering that are plant pests or that there is reason to believe are plant pests. Such organisms and products are considered ''regulated articles.''

Section 340.6(a) of the regulations provides that any person may submit a petition to the Animal and Plant Health Inspection Service (APHIS) seeking a determination that an article should not be regulated under 7 CFR part 340. Paragraphs (b) and (c) of § 340.6 describe the form that a petition for a determination of nonregulated status must take and the information that must be included in the petition.

APHIS has received a petition (APHIS Petition Number 26–084–01p) from Pioneer Hi-Bred International, Inc. seeking a determination of nonregulated status for COR-ØØ121–4 maize (corn), referred to as COR121 maize, which has been developed using genetic engineering to express the IPD083Cb protein for protection against certain susceptible lepidopteran pests and the phosphomannose isomerase protein that was used as a selectable marker. The petition states that the information provided indicates that COR121 maize is unlikely to pose a plant pest risk and therefore should not be regulated under APHIS' regulations in 7 CFR part 340.

As part of our decision-making process regarding the organism's regulatory status, APHIS prepared a draft plant pest risk assessment (PPRA) to assess the plant pest risk of the organism. APHIS' draft PPRA compared the pest risk posed by COR121 maize with that of the unmodified variety from which it was derived. The draft PPRA concluded that COR121 maize is unlikely to pose an increased plant pest risk compared to the unmodified corn.

Paragraph (d) of § 340.6 provides that APHIS will publish a notice in the **Federal Register** providing 60 days for public comment on petitions for a determination of nonregulated status. In accordance with § 340.6(d), we are publishing this notice to inform the public that APHIS will accept written comments regarding the petition and draft PPRA from interested or affected persons for a period of 60 days from the date of this notice. The petition and draft PPRA are available for public review and comment, and copies are available as indicated under **ADDRESSES** and from the individual listed under the **FOR FURTHER INFORMATION CONTACT** section of this notice. We are particularly interested in receiving comments regarding biological or ecological issues, and we encourage the submission of scientific data, studies, or research to support your comments.

After the comment period closes, APHIS will review and evaluate any information received during the comment period and any other relevant information. Based upon available information, APHIS will respond to the petitioner either approving or denying the petition. APHIS will post its regulatory determination on its website and publish a notice of availability in the **Federal Register**.

Authority: 7 U.S.C. 7701–7772 and 7781–7786; 31 U.S.C. 9701; 7 CFR 2.22, 2.80, and 371.3.

Done in Washington, DC, this 26th day of October 2026.

Kelly Moore,

Administrator, Animal and Plant Health Inspection Service.

CIVIL RIGHTS COLD CASE RECORDS REVIEW BOARD

[Agency Docket Number: CRCCRRB–2027–0003–N]

Notice of Formal Determination on Records Release

AGENCY: Civil Rights Cold Case Records Review Board.

ACTION: Notice.

SUMMARY: The Civil Rights Cold Case Records Review Board received 11,428 pages of records and one video recording from the National Archives and Records Administration (NARA) related to two civil rights cold case incidents to which the Review Board assigned the unique identifiers 2024–003–008 and 2024–003–060. NARA proposed 1,864 postponements including postponements of sealed federal grand jury information in the records. After consultation with the Review Board, NARA withdrew 64 postponements. On October 23, 2026, the Review Board approved 1,772 postponements and portions of 2 additional postponements. It determined that 9,696 pages in full and 27 pages and one video recording in part should be publicly disclosed in the Civil Rights Cold Case Records Collection. The Review Board will request that the Attorney General petition the relevant court to unseal federal grand jury information in the records for incident 2024–003–008. By issuing this notice, the Review Board complies with the Civil Rights Cold Case Records Collection Act of 2018 that requires the Review Board to publish in the **Federal Register** its determinations on the disclosure or postponement of records in the Collection no more than 14 days after the date of its decision.

FOR FURTHER INFORMATION CONTACT: Stephannie Oriabure, Chief of Staff, Civil Rights Cold Case Records Review Board, 1800 F Street NW, Washington, DC 20405, (771) 221–0014, *info@coldcaserecords.gov.*

COMMISSION ON CIVIL RIGHTS

Notice of Public Meetings of the Maryland Advisory Committee to the U.S. Commission on Civil Rights

AGENCY: Commission on Civil Rights.

ACTION: Announcement of meetings.

SUMMARY: Notice is hereby given, pursuant to the provisions of the rules and regulations of the U.S. Commission on Civil Rights (Commission) and the Federal Advisory Committee Act, that the Maryland Advisory Committee (Committee) to the Commission will hold public meetings via Zoom. The purpose is for the committee to begin hearing expert testimony and continue briefing planning on the committee's chosen topic of artificial intelligence and its application in voting administration.

DATES:

Monday, November 9, 2026; 2:00 p.m.

Registration Link (Audio/Visual): https://www.zoomgov.com/webinar/register/WN_aUz6unNTRl6IHLKot7u__w.

• *Join by Phone (Audio Only):* 1–833–435–1820 USA Toll Free; Webinar ID: 165 799 0113 #.

Tuesday, December 1, 2026; 10:00 a.m.–12:00 p.m.: Panel 2

Registration Link (Audio/Visual): https://www.zoomgov.com/webinar/register/WN_5LdD85bSraH84Hn3Wd8Qw.

• *Join by Phone (Audio Only):* 1–833–435–1820 USA Toll Free; Webinar ID: 165 301 2797 #.

Tuesday, December 8, 2026; 10:00 a.m.–12:00 p.m.: Panel 3

Registration Link (Audio/Visual): https://www.zoomgov.com/webinar/register/WN_eobL-aFoQ0K2RvXgjGuIow.

• *Join by Phone (Audio Only):* 1–833–435–1820 USA Toll Free; Webinar ID: 165 732 8304 #.

Agendas: https://usccr.box.com/s/apmfnfyjmh2i44huqf8354o23sbh88hn (note: final meeting agendas will be available prior to the meeting dates).

FOR FURTHER INFORMATION CONTACT: Brooke Peery, Designated Federal Officer, at *bpeery@usccr.gov* or 1–202–701–1376.

SUPPLEMENTARY INFORMATION: Virtual committee meetings are available to the public through the registration links above. Any interested member of the public may join at the links to listen to meetings. Open comment periods for each date will be provided to allow members of the public to make statements as time allows. Pursuant to the Federal Advisory Committee Act, public minutes of the meetings will include a list of persons who are present at the meetings. If joining via phone, callers can expect to incur regular charges for calls they initiate over wireless lines, according to their wireless plan. The Commission will not refund any incurred charges. Callers will incur no charge for calls they initiate over land-line connections to the toll-free telephone number. Closed captioning is available by selecting ''CC'' in the Zoom meeting platform. To request additional accommodations, please email *ebohor@usccr.gov* at least 10 business days prior to each meeting.

Members of the public are entitled to submit written comments; the comments must be received in the regional office within 30 days following the scheduled meeting. Written comments may be emailed to Evelyn Bohor at *ebohor@usccr.gov.* Persons who desire additional information may contact the Regional Programs Coordination Unit at (202) 809–9618.

Records generated from these meetings may be inspected and reproduced at the Regional Programs Coordination Unit Office, as they become available, both before and after meetings. Records of meetings will be available via the file sharing website: *https://tinyurl.com/mnshz8n9* as well as at: *www.facadatabase.gov* under the Commission on Civil Rights, selecting the Advisory Committee of interest. Persons interested in the work of this Committee are directed to the Commission's website, *http://www.usccr.gov,* or may contact the Regional Programs Coordination Unit at *ebohor@usccr.gov.*

Exceptional Circumstance: Pursuant to 41 CFR 102–3.150, the notice for the November meeting is given fewer than 7 calendar days prior to the meeting because of the exceptional circumstances of staffing shortage.

Dated: November 5, 2026

David Mussatt,

Supervisory Chief, Regional Programs Unit.

DEPARTMENT OF COMMERCE

Foreign-Trade Zones Board

[S–425–2026]

Foreign-Trade Zone 27; Approval of Subzone Status; Persimmon Technologies Corporation; Bedford, Massachusetts

On August 28, 2026, the Executive Secretary of the Foreign-Trade Zones (FTZ) Board docketed an application submitted by the Massachusetts Port Authority, grantee of FTZ 27, requesting subzone status subject to the existing activation limit of FTZ 27, on behalf of Persimmon Technologies Corporation, in Bedford, Massachusetts.

The application was processed in accordance with the FTZ Act and Regulations, including notice in the **Federal Register** inviting public comment (91 FR 56424, September 2, 2026). The FTZ staff examiner reviewed the application and determined that it meets the criteria for approval. Pursuant

to the authority delegated to the FTZ Board Executive Secretary (15 CFR 400.36(f)), the application to establish Subzone 27U was approved on November 2, 2026, subject to the FTZ Act and the Board's regulations, including section 400.13, and further subject to FTZ 27's 129-acre activation limit.

Dated: November 3, 2026.

Colin Agostisi,

Executive Secretary.

BILLING CODE 3510–DS–P

DEPARTMENT OF COMMERCE

International Trade Administration

C–570–244]

Certain Wooden Fence Components From the People's Republic of China: Initiation of Countervailing Duty Investigation

AGENCY: Enforcement and Compliance, International Trade Administration, Department of Commerce.

DATES: Applicable November 3, 2026.

FOR FURTHER INFORMATION CONTACT: Suresh Maniam, Office I, AD/CVD Operations, Enforcement and Compliance, International Trade Administration, U.S. Department of Commerce, 1401 Constitution Avenue NW, Washington, DC 20230; telephone: (202) 482–0176.

SUPPLEMENTARY INFORMATION:

The Petition

On September 24, 2026, the U.S. Department of Commerce (Commerce) received a countervailing duty (CVD) petition concerning imports of certain wooden fence components [1] from the People's Republic of China (China), filed in proper form on behalf of the American Alliance of Wooden Fence Producers (the petitioner),[2] the members of which are domestic producers of certain wooden fence components.[3] The CVD Petition was accompanied by an antidumping duty (AD) petition concerning imports of certain wooden fence components from China.[4]

On October 13, 2026, Commerce extended the initiation deadline by 20 days to further examine the issue of industry support, because it was not clear from the Petition whether the industry support criteria had been met.[5]

Between September 29 and October 29, 2026, Commerce requested supplemental information pertaining to certain aspects of the Petition in supplemental questionnaires.[6] Between October 4 and 30, 2026, the petitioner filed timely responses to these requests for additional information.[7]

In accordance with section 702(b)(1) of the Tariff Act of 1930, as amended (the Act), the petitioner alleges that the Government of China (GOC) is providing countervailable subsidies, within the meaning of sections 701 and 771(5) of the Act, to producers of certain wooden fence components from China, and that such imports are materially injuring, or threatening material injury to, the domestic industry producing certain wooden fence components in the United States. Consistent with section 702(b)(1) of the Act and 19 CFR 351.202(b), for those alleged programs on which we are initiating a CVD investigation, the Petition was accompanied by information reasonably available to the petitioner supporting its allegations.

Commerce finds that the petitioner filed the Petition on behalf of the domestic industry, because the petitioner is an interested party, as defined in section 771(9)(F) of the Act.[8] Commerce also finds that the petitioner demonstrated sufficient industry support with respect to the initiation of the requested CVD investigation.[9]

Period of Investigation (POI)

Because the Petition was filed on September 24, 2026, the POI is January 1, 2025, through December 31, 2025.[10]

Scope of the Investigation

The products covered by this investigation are certain wooden fence components from China. For a full description of the scope of this investigation, *see* the appendix to this notice.

Comments on the Scope of the Investigation

Between September 29 and October 14, 2026, Commerce requested information and clarification from the petitioner regarding the proposed scope to ensure that the scope language in the Petition is an accurate reflection of the products for which the domestic industry is seeking relief.[11] Between October 4 and 19, 2026, the petitioner provided clarifications and/or revised the scope.[12] The description of merchandise covered by this investigation, as described in the appendix to this notice, reflects these clarifications.

As discussed in the *Preamble* to Commerce's regulations, we are setting aside a period for interested parties to raise issues regarding product coverage (*i.e.,* scope).[13] Commerce will consider all scope comments received from interested parties and, if necessary, will consult with interested parties prior to the issuance of the preliminary determination. If scope comments include factual information, all such factual information should be limited to public information.[14] Commerce requests that interested parties provide at the beginning of their scope comments a public executive summary for each comment or issue raised in

[14] *See* 19 CFR 351.102(b)(21) (defining ''factual information'').

their submission. Commerce further requests that interested parties limit their public executive summary of each comment or issue to no more than 450 words, not including citations. Commerce intends to use the public executive summaries as the basis of the comment summaries included in the analysis of scope comments. To facilitate preparation of its questionnaires, Commerce requests that scope comments be submitted by 5:00 p.m. Eastern Time (ET) on November 23, 2026, which is 20 calendar days from the signature date of this notice. Any rebuttal comments, which may include factual information, and should also be limited to public information, must be filed by 5:00 p.m. ET on December 3, 2026, which is 10 calendar days from the initial comment deadline.

Commerce requests that any factual information that parties consider relevant to the scope of this investigation be submitted during that period. However, if a party subsequently finds that additional factual information pertaining to the scope of the investigation may be relevant, the party must contact Commerce and request permission to submit the additional information. All scope comments must be filed simultaneously on the records of the concurrent AD and CVD investigations.

Filing Requirements

All submissions to Commerce must be filed electronically via Enforcement and Compliance's Antidumping Duty and Countervailing Duty Centralized Electronic Service System (ACCESS), unless an exception applies.[15] An electronically filed document must be received successfully in its entirety by the time and date it is due.

Consultations

Pursuant to sections 702(b)(4)(A)(i) and (ii) of the Act, Commerce notified the GOC of the receipt of the Petition and provided an opportunity for consultations with respect to the Petition.[16] The GOC filed consultation remarks in lieu of consultations on October 13, 2026.[17]

Determination of Industry Support for the Petition

Section 702(b)(1) of the Act requires that a petition be filed on behalf of the domestic industry. Section 702(c)(4)(A) of the Act provides that a petition meets this requirement if the domestic producers or workers who support the petition account for: (i) at least 25 percent of the total production of the domestic like product; and (ii) more than 50 percent of the production of the domestic like product produced by that portion of the industry expressing support for, or opposition to, the petition. Moreover, section 702(c)(4)(D) of the Act provides that, if the petition does not establish support of domestic producers or workers accounting for more than 50 percent of the total production of the domestic like product, Commerce shall: (i) poll the industry or rely on other information in order to determine if there is support for the petition, as required by subparagraph (A); or (ii) determine industry support using a statistically valid sampling method to poll the ''industry.''

Section 771(4)(A) of the Act defines the ''industry'' as the producers as a whole of a domestic like product. Thus, to determine whether a petition has the requisite industry support, the statute directs Commerce to look to producers and workers who produce the domestic like product. The U.S. International Trade Commission (ITC), which is responsible for determining whether ''the domestic industry'' has been injured, must also determine what constitutes a domestic like product in order to define the industry. While both Commerce and the ITC apply the same statutory definition regarding the domestic like product,[18] they do so for different purposes and pursuant to a separate and distinct authority. In addition, Commerce's determination is subject to limitations of time and information. Although this may result in different definitions of the like product, such differences do not render the decision of either agency contrary to law.[19]

Section 771(10) of the Act defines the domestic like product as ''a product which is like, or in the absence of like, most similar in characteristics and uses with, the article subject to an investigation under this title.'' Thus, the reference point from which the domestic like product analysis begins is ''the article subject to an investigation'' (*i.e.,* the class or kind of merchandise to be investigated, which normally will be the scope as defined in the petition).

With regard to the domestic like product, the petitioner does not offer a definition of the domestic like product distinct from the scope of the investigation.[20] Based on our analysis of the information submitted on the record, we have determined that certain wooden fence components, as defined in the scope, constitute a single domestic like product, and we have analyzed industry support in terms of that domestic like product.[21]

As noted above, on October 13, 2026, Commerce extended the initiation deadline by 20 days to further examine the issue of industry support. In determining whether the petitioner has standing under section 702(c)(4)(A) of the Act, we considered the industry support data contained in the Petition with reference to the domestic like product as defined in the ''Scope of the Investigation,'' in the appendix to this notice. To establish industry support, the petitioner provided the 2025 production of the domestic like product for the U.S. producers that support the Petition and compared this to the estimated total production of the domestic like product by the U.S. certain wooden fence components industry.[22] We relied on data provided by the petitioner for purposes of measuring industry support.[23]

Our review of the data provided in the Petition, the First General Issues Supplement, and the Third General Issues Supplement, and other information readily available to Commerce indicates that the petitioner has established industry support for the Petition.[24] First, the Petition established support from domestic producers (or

[22] *Id.*

[23] *Id.*

[24] *Id.*

workers) accounting for more than 50 percent of the total production of the domestic like product and, as such, Commerce is not required to take further action in order to evaluate industry support (*e.g.,* polling).[25] Second, the domestic producers (or workers) have met the statutory criteria for industry support under section 702(c)(4)(A)(i) of the Act because the domestic producers (or workers) who support the Petition account for at least 25 percent of the total production of the domestic like product.[26] Finally, the domestic producers (or workers) have met the statutory criteria for industry support under section 702(c)(4)(A)(ii) of the Act because the domestic producers (or workers) who support the Petition account for more than 50 percent of the production of the domestic like product produced by that portion of the industry expressing support for, or opposition to, the Petition.[27] Accordingly, Commerce determines that the Petition was filed on behalf of the domestic industry within the meaning of section 702(b)(1) of the Act.[28]

Injury Test

Because China is a ''Subsidies Agreement Country'' within the meaning of section 701(b) of the Act, section 701(a)(2) of the Act applies to this investigation. Accordingly, the ITC must determine whether imports of the subject merchandise from China materially injure, or threaten material injury to, a U.S. industry.

Allegations and Evidence of Material Injury and Causation

The petitioner alleges that imports of the subject merchandise are benefiting from countervailable subsidies and that such imports are causing, or threaten to cause, material injury to the U.S. industry producing the domestic like product. In addition, the petitioner alleges that subject imports exceed the negligibility threshold provided for under section 771(24)(A) of the Act.[29]

The petitioner contends that the industry's injured condition is illustrated by significant increase in the volume of subject imports; significant market share by subject imports and reduced market share for the domestic industry; underselling and price depression and suppression; negative impact on financial performance; lost sales and revenue; and decline in production, U.S. shipments, capacity utilization, and employment variables.[30] We assessed the allegations and supporting evidence regarding material injury, threat of material injury, causation, as well as negligibility, and we have determined that these allegations are properly supported by adequate evidence, and meet the statutory requirements for initiation.[31]

Initiation of CVD Investigation

Based upon the examination of the Petition and supplemental responses, we find that they meet the requirements of section 702 of the Act. Therefore, we are initiating a CVD investigation to determine whether imports of certain wooden fence components from China benefit from countervailable subsidies conferred by the GOC. In accordance with section 703(b)(1) of the Act and 19 CFR 351.205(b)(1), unless postponed, we will make our preliminary determination no later than 65 days after the date of this initiation.

Based on our review of the Petition, we find that there is sufficient information to initiate a CVD investigation on 37 programs alleged by the petitioner. For a full discussion of the basis for our decision to initiate on each program, *see* the China CVD Initiation Checklist. A public version of the initiation checklist for this investigation is available on ACCESS.

Respondent Selection

In the Petition, the petitioner identified 80 companies in China.[32] Commerce intends to follow its standard practice in CVD investigations and calculate company-specific subsidy rates in the investigation. In the event Commerce determines that the number of companies is large, and it cannot individually examine each company based upon Commerce's resources, Commerce intends to select mandatory respondents based on U.S. Customs and Border Protection (CBP) data for imports under the appropriate Harmonized tariff Schedule of the United States (HTSUS) subheading(s) listed in the ''Scope of the Investigation,'' in the appendix.

On November 3, 2026, Commerce released CBP data on imports of certain wooden fence components from China under administrative protective order (APO) to all parties with access to information protected by APO and indicated that interested parties wishing to comment on CBP data and/or respondent selection must do so within three days of the publication date of the notice of initiation of this investigation.[33] Comments must be filed electronically using ACCESS. An electronically filed document must be received successfully in its entirety via ACCESS by 5:00 p.m. ET on the specified deadline. Commerce will not accept rebuttal comments regarding the CBP data or respondent selection.

Interested parties must submit applications for disclosure under APO in accordance with 19 CFR 351.305(b). Instructions for filing such applications may be found on Commerce's website at *https://www.trade.gov/administrative-protective-orders.*

Distribution of a Copy of the Petition

In accordance with section 702(b)(4)(A) of the Act and 19 CFR 351.202(f), a copy of the public version of the Petition has been provided to the GOC via ACCESS. To the extent practicable, we will attempt to provide a copy of the public version of the Petition to each exporter named in the Petition, as provided under 19 CFR 351.203(c)(2).

ITC Notification

Commerce will notify the ITC of its initiation, as required by section 702(d) of the Act.

Preliminary Determination by the ITC

The ITC will preliminarily determine, within 25 days after the date on which it receives notice of initiation of this investigation, whether there is a reasonable indication that imports of certain wooden fence components from China are materially injuring, or threatening material injury to, a U.S. industry.[34] A negative ITC determination will result in the investigation being terminated.[35] Otherwise, this CVD investigation will proceed according to statutory and regulatory time limits.

Submission of Factual Information

Factual information is defined in 19 CFR 351.102(b)(21) as: (i) evidence submitted in response to questionnaires; (ii) evidence submitted in support of allegations; (iii) publicly available information to value factors of production under 19 CFR 351.408(c) or to measure the adequacy of remuneration under 19 CFR

[35] *Id.*

351.511(a)(2); (iv) evidence placed on the record by Commerce; and (v) evidence other than factual information described in (i)–(iv). Section 351.301(b) of Commerce's regulations requires any party, when submitting factual information, to specify under which subsection of 19 CFR 351.102(b)(21) the information is being submitted [36] and, if the information is submitted to rebut, clarify, or correct factual information already on the record, to provide an explanation identifying the information already on the record that the factual information seeks to rebut, clarify, or correct.[37] Time limits for the submission of factual information are addressed in 19 CFR 351.301, which provides specific time limits based on the type of factual information being submitted. Interested parties should review the regulations prior to submitting factual information in this investigation.

Extensions of Time Limits

Parties may request an extension of time limits before the expiration of a time limit established under 19 CFR 351.301, or as otherwise specified by Commerce. In general, an extension request will be considered untimely if it is filed after the expiration of the time limit established under 19 CFR 351.301, or as otherwise specified by Commerce.[38] For submissions that are due from multiple parties simultaneously, an extension request will be considered untimely if it is filed after 10:00 a.m. ET on the due date. Under certain circumstances, Commerce may elect to specify a different time limit by which extension requests will be considered untimely for submissions which are due from multiple parties simultaneously. In such a case, we will inform parties in a letter or memorandum of the deadline (including a specified time) by which extension requests must be filed to be considered timely. An extension request must be made in a separate, standalone submission; under limited circumstances we will grant untimely filed requests for the extension of time limits, where we determine, based on 19 CFR 351.302, that extraordinary circumstances exist. Parties should review Commerce's regulations concerning the extension of time limits and the *Time Limits Final Rule* prior to submitting factual information in this investigation.[39]

Certification Requirements

Any party submitting factual information in an AD or CVD proceeding must certify to the accuracy and completeness of that information.[40] Parties must use the certification formats provided in 19 CFR 351.303(g).[41] Commerce intends to reject factual submissions if the submitting party does not comply with the applicable certification requirements.

Notification to Interested Parties

Interested parties must submit applications for disclosure under APO in accordance with 19 CFR 351.305. Parties wishing to participate in this investigation should ensure that they meet the requirements of 19 CFR 351.103(d) (*e.g.,* by filing the required letters of appearance). Note that Commerce has amended certain of its requirements pertaining to the service of documents in 19 CFR 351.303(f).[42]

This notice is issued and published pursuant to sections 702 and 777(i) of the Act, and 19 CFR 351.203(c).

Dated: November 3, 2026.

Scot Fullerton,

Acting Deputy Assistant Secretary for Antidumping and Countervailing Duty Operations.

Appendix

Scope of the Investigation

The scope of this investigation includes certain wooden fence components (commonly referred to as wooden fence pickets), finished and unfinished, whether assembled or unassembled. Wooden fence pickets included in this scope are made of one or more wood species, typically from Cryptomeria japonica (Japanese Cedar or Sugi), but can also be made from other wood species, including but not limited to Western Red Cedar, Redwood, Incense Cedar, Douglas Fir, Western Hemlock, Sitka Spruce, and Cunninghamia lanceolata (Chinese Fir). Wooden fence pickets are included within the scope of this investigation regardless of form or shape, including, but not limited to flat top (also known as square or square top), pointed, dog ear, gothic (including but not limited to French gothic, French gothic blunt point) and stockade.

Generally, assembled wooden fence pickets contain at least one fence picket attached to one or more cross rails, framing lumber, or other fencing materials, and can include fully pre-assembled fence panels. Unassembled wooden fence pickets consist of one or more wooden fence pickets, not attached to any framing lumber, whether sold individually, bundled, or in a kit with framing lumber.

The finished products covered by the scope of this investigation have the following dimensions: a thickness of no more than 1 inch, a width of no more than 12 inches, and a length of at least 3 feet. The products covered by the scope are typically a length of 5 feet, 6 feet, or 8 feet when finished.

Wooden fence pickets are included within the scope of this investigation regardless of whether they have been painted, stained, pressure-treated, or otherwise coated or treated. Subject merchandise also includes wooden fence pickets that have been further processed in a third country, including but not limited to trimming, cutting, notching, sanding, planing or any other processing that would not otherwise remove the merchandise from the scope of this investigation if performed in the country of manufacture of the in-scope product.

Excluded from the scope of this investigation are wooden fence pickets made exclusively of bamboo (including, but not limited to, Phyllostachys edulis, Bambusa textilis, and Bambusa oldhamii), Brazilian Pine (Paraná pine), or Southern Yellow Pine (including Shortleaf Pine (Pinus echinata), Slash Pine (Pinus ellioti), Longleaf Pine (Pinus palustris), or Loblolly Pine (Pinus taeda)).

Also excluded from the scope of this investigation are wood mouldings and millwork products covered by the antidumping and countervailing duty orders on wood mouldings and millwork products from the People's Republic of China. *See Wood Mouldings and Millwork Products from the People's Republic of China: Amended Final Antidumping Duty Determination and Antidumping Duty Order,* 86FR 9486 (February 16, 2021) (amended final antidumping duty determination and antidumping duty order); *Wood Mouldings and Millwork Products from the People's Republic of China: Countervailing Duty Order,* 86 FR 9484 (February 16, 2021) (countervailing duty order).

Imports of subject merchandise are typically classified under Harmonized Tariff Schedule of the United States (HTSUS) statistical numbers 4404.10.0040, 4407.19.0092, 4421.99.7020, and 4421.99.7040. Although the HTSUS subheadings are provided for convenience and customs purposes, the written description of the scope of this investigation is dispositive.

DEPARTMENT OF COMMERCE

International Trade Administration

Agency Information Collection Activities; Submission to the Office of Management and Budget (OMB) for Review and Approval; Comment Request; Domestic and International Client Global Trade Services and Customized Forms Revision

The Department of Commerce will submit the following information collection request to the Office of Management and Budget (OMB) for review and clearance in accordance with the Paperwork Reduction Act of 1995, on or after the date of publication of this notice. We invite the general public and other Federal agencies to comment on proposed and continuing information collections, which helps us assess the impact of our information collection requirements and minimize the public's reporting burden. Public comments were previously requested via the **Federal Register** on August 27, 2026, during a 60-day comment period. This notice allows for an additional 30 days for public comments.

Agency: International Trade Administration, Commerce.

Title: Domestic and International Client Global Trade Services & Customized Forms.

OMB Control Number: 0625–0143.

Form Number(s): None.

Type of Request: Regular submission with revision to a currently approved collection.

Number of Respondents: 100,020.

Average Hours per Response: 10 minutes.

Burden Hours: 34,133 (annual).

Needs and Uses: The International Trade Administration's (ITA) is mandated by Congress to broaden and deepen the U.S. exporter base and to attract inward foreign direct investment. ITA accomplishes this by providing counseling, programs and services to help U.S. organizations conduct business globally and to be successful in overseas markets. This information collection package enables ITA to provide appropriate global trade services to U.S. businesses and international buyers.

ITA offers a variety of services to enable clients to begin exporting and trading globally or to expand existing export and global trade efforts. Clients may learn about available services from business related entities such as the National Association of Manufacturers, Federal Express, State Economic Development offices, the internet or word of mouth. ITA provides a standard set of services to assist clients with identifying potential overseas partners, establishing meeting programs with appropriate overseas business contacts and providing due diligence reports on potential overseas business partners. ITA also provides other global trade related services considered to be of a ''customized nature'' because they do not fit into the standard set of services but are driven by unique business needs of individual clients.

The dissemination of international market information and potential business opportunities for U.S. companies interested and actively conducting business globally are critical components of the ITA's global trade assistance programs and services. U.S. companies can conveniently access and indicate their interest in services by completing the appropriate forms through various methods, including via a website (*e.g.* trade.gov), web-based survey or form links, or paper-based forms.

Affected Public: Business or other for-profit organizations; Not-for-profit institutions; State, Local, or Tribal government.

Frequency: On occasion.

Respondent's Obligation: Voluntary.

Legal Authority: Public Law 15 U.S.C. et seq and 15 U.S.C. 171 *et seq.*

This information collection request may be viewed at *www.reginfo.gov.* Follow the instructions to view the Department of Commerce collections currently under review by OMB.

Written comments and recommendations for the proposed information collection should be submitted within 30 days of the publication of this notice on the following website *www.reginfo.gov/public/do/PRAMain.* Find this particular information collection by selecting ''Currently under 30-day Review—Open for Public Comments'' or by using the search function and entering either the title of the collection or the OMB Control Number 0625–0143.

Sheleen Dumas,

Departmental PRA Compliance Officer, Office of the Under Secretary for Economic Affairs, Commerce Department.

Mattresses From Cambodia, Malaysia, Serbia, Thailand, the Republic of Türkiye, the People's Republic of China, and the Socialist Republic of Vietnam: Continuation of Antidumping Duty and Countervailing Duty Orders

AGENCY: Enforcement and Compliance, International Trade Administration, Department of Commerce.

SUMMARY: As a result of the determinations by the U.S. Department of Commerce (Commerce) and the U.S. International Trade Commission (ITC) that revocation of the antidumping duty (AD) orders on mattresses from Cambodia, Malaysia, Serbia, Thailand, the Republic of Türkiye, and the Socialist Republic of Vietnam and the countervailing duty (CVD) order on mattresses from the People's Republic of China would likely lead to the continuation or recurrence of dumping or countervailable subsidies, and material injury to an industry in the United States, Commerce is publishing a notice of continuation of these AD and CVD orders.

DATES: Applicable November 2, 2026.

FOR FURTHER INFORMATION CONTACT: Katerina Katsiadas, AD/CVD Operations, Office VIII, Enforcement and Compliance, International Trade Administration, U.S. Department of Commerce, 1401 Constitution Avenue NW, Washington, DC 20230; telephone: (202) 482–4929.

SUPPLEMENTARY INFORMATION:

Background

On May 14, 2021, Commerce published in the **Federal Register** the AD orders on mattresses from Cambodia, Malaysia, Serbia, Thailand, the Republic of Türkiye, and the Socialist Republic of Vietnam, and the CVD order on mattresses from the People's Republic of China.[1] On April 1, 2026, the ITC instituted,[2] and

[1] *See Mattresses from Cambodia, Indonesia, Malaysia, Serbia, Thailand, the Republic of Turkey, and the Socialist Republic of Vietnam: Antidumping Duty Orders and Amended Final Affirmative Antidumping Determination for Cambodia,* 86 FR 26460 (May 14, 2021); *see also Mattresses from the People's Republic of China: Countervailing Duty Order,* 86 FR 26463 (May 14, 2021) (collectively, *Orders*).

[2] *See Mattresses from Cambodia, China, Malaysia, Serbia, Thailand, Turkey, and Vietnam; Institution of Five-Year Reviews,* 91 FR 16229 (April 1, 2026).

Commerce initiated,[3] the first sunset review of the *Orders,* pursuant to section 751(c) of the Tariff Act of 1930, as amended (the Act). As a result of its reviews, Commerce determined that revocation of the *Orders* would likely lead to the continuation or recurrence of dumping and countervailable subsidies, and therefore, notified the ITC of the magnitude of the margins of dumping likely to prevail should the *Orders* be revoked.[4]

On October 27, 2026, the ITC published its determination, pursuant to sections 751(c) and 752(a) of the Act, that revocation of the *Orders* would likely lead to continuation or recurrence of material injury to an industry in the United States within a reasonably foreseeable time.[5]

Scope of the Orders

The products covered by these *Orders* are all types of youth and adult mattresses. The term ''mattress'' denotes an assembly of materials that at a minimum includes a ''core,'' which provides the main support system of the mattress, and may consist of innersprings, foam, other resilient filling, or a combination of these materials. Mattresses may also contain: (1) ''upholstery,'' the material between the core and the top panel of the ticking on a single-sided mattress; or between the core and the top and bottom panel of the ticking on a double-sided mattress; and/or (2) ''ticking,'' the outermost layer of fabric or other material (*e.g.,* vinyl) that encloses the core and any upholstery, also known as a cover.

The scope of these *Orders* is restricted to only ''adult mattresses'' and ''youth mattresses.'' ''Adult mattresses'' are frequently described as ''twin,'' ''extra-long twin,'' ''full,'' ''queen,'' ''king,'' or ''California king'' mattresses. ''Youth mattresses'' are typically described as ''crib,'' ''toddler,'' or ''youth'' mattresses. All adult and youth mattresses are included regardless of size and size description.

The scope encompasses all types of ''innerspring mattresses,'' ''non-innerspring mattresses,'' and ''hybrid mattresses.'' ''Innerspring mattresses'' contain innersprings, a series of metal springs joined together in sizes that correspond to the dimensions of mattresses. Mattresses that contain innersprings are referred to as ''innerspring mattresses'' or ''hybrid mattresses.'' ''Hybrid mattresses'' contain two or more support systems as the core, such as layers of both memory foam and innerspring units.

''Non-innerspring mattresses'' are those that do not contain any innerspring units. They are generally produced from foams (*e.g.,* polyurethane, memory (viscoelastic), latex foam, gel-infused viscoelastic (gel foam), thermobonded polyester, polyethylene) or other resilient filling.

Mattresses covered by the scope of these *Orders* may be imported independently, as part of furniture or furniture mechanisms (*e.g.,* convertible sofa bed mattresses, sofa bed mattresses imported with sofa bed mechanisms, corner group mattresses, day-bed mattresses, roll-away bed mattresses, high risers, trundle bed mattresses, crib mattresses), or as part of a set in combination with a ''mattress foundation.'' ''Mattress foundations'' are any base or support for a mattress. Mattress foundations are commonly referred to as ''foundations,'' ''boxsprings,'' ''platforms,'' and/or ''bases.'' Bases can be static, foldable, or adjustable. Only the mattress is covered by the scope if imported as part of furniture, with furniture mechanisms, or as part of a set in combination with a mattress foundation.

Excluded from the scope of these *Orders* are ''futon'' mattresses. A ''futon'' is a bi-fold frame made of wood, metal, or plastic material, or any combination thereof, that functions as both seating furniture (such as a couch, love seat, or sofa) and a bed. A ''futon mattress'' is a tufted mattress, where the top covering is secured to the bottom with thread that goes completely through the mattress from the top through to the bottom, and it does not contain innersprings or foam. A futon mattress is both the bed and seating surface for the futon.

Also excluded from the scope are airbeds (including inflatable mattresses) and waterbeds, which consist of air- or liquid-filled bladders as the core or main support system of the mattress.

Also excluded is certain multifunctional furniture that is convertible from seating to sleeping, regardless of filler material or components, where that filler material or components are upholstered, integrated into the design and construction of, and inseparable from, the furniture framing, and the outermost layer of the multifunctional furniture converts into the sleeping surface. Such furniture may, and without limitation, be commonly referred to as ''convertible sofas,'' ''sofabeds,'' ''sofa chaise sleepers,'' ''futons,'' ''ottoman sleepers'' or a like description.

Also excluded from the scope of these *Orders* are any products covered by the existing antidumping duty orders on uncovered innerspring units from China or Vietnam. *See Uncovered Innerspring Units from the People's Republic of China: Notice of Antidumping Duty Order,* 74 FR 7661 (February 19, 2009); *Antidumping Duty Order: Uncovered Innerspring Units from the Socialist Republic of Vietnam,* 73 FR 75391 (December 11, 2008).

Also excluded from the scope of these *Orders* are bassinet pads with a nominal length of less than 39 inches, a nominal width less than 25 inches, and a nominal depth of less than 2 inches.

Additionally, also excluded from the scope of these *Orders* are ''mattress toppers.'' A ''mattress topper'' is a removable bedding accessory that supplements a mattress by providing an additional layer that is placed on top of a mattress. Excluded mattress toppers have a height of four inches or less.

The products subject to these *Orders* are currently properly classifiable under HTSUS subheadings: 9404.21.0010, 9404.21.0013, 9404.29.1005, 9404.29.1013, 9404.29.9085, and 9404.29.9087. Products subject to these *Orders* may also enter under HTSUS subheadings: 9404.21.0095, 9404.29.1095, 9404.29.9095, 9401.40.0000, and 9401.90.5081. Although the HTSUS subheadings are provided for convenience and customs purposes, the written description of the merchandise covered by these *Orders* is dispositive.

Continuation of the Orders

As a result of the determinations by Commerce and the ITC that revocation of the *Orders* would likely lead to continuation or recurrence of dumping, countervailable subsidies, and material injury to an industry in the United States, pursuant to section 751(d)(2) of the Act, Commerce hereby orders the continuation of the *Orders.* U.S. Customs and Border Protection will continue to collect AD and CVD cash deposits at the rates in effect at the time of entry for all imports of subject merchandise.

[3] *See Initiation of Five-Year (Sunset) Reviews,* 91 FR 16181 (April 1, 2026).

[4] *See Mattresses from Cambodia, Malaysia, Serbia, Thailand, the Republic of Türkiye, and the Socialist Republic of Vietnam: Final Results of the Expedited First Sunset Reviews of the Antidumping Duty Orders,* 91 FR 48370 (July 31, 2026), and accompanying Issues and Decision Memorandum (IDM); *see also Mattresses from the People's Republic of China: Final Results of the Expedited First Sunset Review of the Countervailing Duty Order,* 91 FR 46769 (July 24, 2026) and accompanying IDM.

[5] *See Mattresses from Cambodia, China, Malaysia, Serbia, Thailand, Turkey, and Vietnam; Determinations,* 91 FR 67611 (October 27, 2026) (*ITC Final Determination*).

The effective date of the continuation of the *Orders* will be October 27, 2026.[6] Pursuant to section 751(c)(2) of the Act and 19 CFR 351.218(c)(2), Commerce intends to initiate the next five-year reviews of the *Orders* not later than 30 days prior to fifth anniversary of the date of the last determination by the ITC.

Administrative Protective Order (APO)

This notice also serves as a final reminder to parties subject to an APO of their responsibility concerning the return or destruction of proprietary information disclosed under APO in accordance with 19 CFR 351.305(a)(3), which continues to govern business proprietary information in this segment of the proceeding. Timely written notification of the return or destruction of APO materials, or conversion to judicial protective order, is hereby requested. Failure to comply with the regulations and terms of an APO is a violation which is subject to sanction.

Notification to Interested Parties

These five-year (sunset) reviews and this notice are in accordance with sections 751(c) and 751(d)(2) of the Act and published in accordance with section 777(i) of the Act, and 19 CFR 351.218(f)(4).

Dated: November 4, 2026.

Scot Fullerton,

Acting Deputy Assistant Secretary for Antidumping and Countervailing Duty Operations.

Crystalline Silicon Photovoltaic Cells, Whether or Not Assembled Into Modules From India, Indonesia, and the Lao People's Democratic Republic: Countervailing Duty Orders

AGENCY: Enforcement and Compliance, International Trade Administration, Department of Commerce.

SUMMARY: Based on affirmative final determinations by the U.S. Department of Commerce (Commerce) and U.S. International Trade Commission (ITC), Commerce is issuing countervailing duty (CVD) orders on crystalline silicon photovoltaic cells, whether or not assembled into modules (solar cells) from India, Indonesia, and the Lao People's Democratic Republic (Laos).

DATES: Applicable November 9, 2026.

FOR FURTHER INFORMATION CONTACT: Jinny Ahn or Amber Hodak (India), Office VI, telephone: (202) 482–0339 or (202) 482–8034, respectively; Ted Pearson (Indonesia), Office I, telephone: (202) 482–2631; and Shane Subler or Laurel Smalley (Laos), Office VIII, telephone: (202) 482–6241 or (202) 482–3456, respectively; AD/CVD Operations, Enforcement and Compliance, International Trade Administration, U.S. Department of Commerce, 1401 Constitution Avenue NW, Washington, DC 20230.

SUPPLEMENTARY INFORMATION:

Background

In accordance with sections 705(d) and 777(i) of the Tariff Act of 1930 as amended (the Act) on September 16, 2026, Commerce published in the **Federal Register** its affirmative final determinations in the CVD investigations of solar cells from India, Indonesia, and Laos.[1] On November 2, 2026, the ITC notified Commerce of its final determinations, pursuant to sections 705(d) of the Act, that an industry in the United States is materially injured within the meaning of section 705(b)(1)(A)(i) of the Act by reason of imports of solar cells from India, Indonesia, and Laos.[2]

Scope of the Orders

The products covered by these orders are solar cells from India, Indonesia, and Laos. For a full description of the scope of these orders, *see* the appendix to this notice.

Countervailing Duty Orders

Based on the affirmative final determinations by the ITC that an industry in the United States is materially injured by reason of subsidized imports of solar cells from India, Indonesia, and Laos,[3] in accordance with sections 705(c)(2) and 706(a) of the Act, Commerce is issuing these CVD orders. Because the ITC determined that imports of solar cells from India, Indonesia, and Laos are materially injuring a U.S. industry, unliquidated entries of such merchandise entered, or withdrawn from warehouse, for consumption, are subject to the assessment of countervailing duties.

Therefore, in accordance with section 706(a)(1) of the Act, Commerce will direct U.S. Customs and Border Protection (CBP) to assess, upon further instructions by Commerce, countervailing duties on certain unliquidated entries of solar cells from India, Indonesia, and Laos, that were entered, or withdrawn from warehouse, for consumption on or after February 26, 2026,[4] the date of publication of the *Preliminary Determinations,*[5] but will not include entries occurring after the expiration of the provisional measures period and before the publication of the ITC's final injury determination under section 705(b) of the Act, as further described below.

Critical Circumstances

In the *Final Determinations,* Commerce found that critical circumstances exist with respect to: (1) Mundra Solar Energy Limited and Mundra Solar PV Limited;[6] (2) PT Blue Sky Solar Indonesia (Blue Sky) and all other producers and/or exporters of solar cells from Indonesia;[7] and (3)

[1] *See Crystalline Silicon Photovoltaic Cells, Whether or Not Assembled Into Modules, from India: Final Affirmative Countervailing Duty Determination and the Final Affirmative Critical Circumstances Determination, in Part,* 91 FR 58643 (September 16, 2026) (*India Final Determination*); *see also Crystalline Silicon Photovoltaic Cells, Whether or Not Assembled Into Modules from Indonesia: Final Affirmative Countervailing Duty Determination and Final Affirmative Determination of Critical Circumstances, in Part,* 91 FR 58647 (September 16, 2026) (*Indonesia Final Determination*); and *Crystalline Silicon Photovoltaic Cells, Whether or Not Assembled Into Modules from the Lao People's Democratic Republic: Final Affirmative Countervailing Duty Determination and Final Affirmative Determination of Critical Circumstances, in Part,* 91 FR 58638 (September 16, 2026) (*Laos Final Determination*); and (collectively, *Final Determinations*).

[2] *See* ITC's Letter, ''Notification of ITC Final Determinations,'' dated November 2, 2026.

[3] *Id.*

[4] In addition, Commerce intends to apply retroactive duties for certain unliquidated entries of solar cells from Indonesia due to affirmative findings for critical circumstances. *See* ''Critical Circumstances,'' *infra.*

[5] *See Crystalline Silicon Photovoltaic Cells, Whether or Not Assembled Into Modules, from India: Preliminary Affirmative Countervailing Duty Determination, Preliminary Affirmative Critical Circumstances Determination, in Part, and Alignment of Final Determination with Final Antidumping Duty Determination,* 91 FR 9555 (February 26, 2026) (*India Preliminary Determination*); *see also Crystalline Silicon Photovoltaic Cells, Whether or Not Assembled Into Modules from Indonesia: Preliminary Affirmative Countervailing Duty Determination, Preliminary Affirmative Critical Circumstances Determination, in Part, and Alignment of Final Determination with Antidumping Duty Determination,* 91 FR 9564 (February 26, 2026) (*Indonesia Preliminary Determination*); and *Crystalline Silicon Photovoltaic Cells, Whether or Not Assembled Into Modules from the Lao People's Democratic Republic: Preliminary Affirmative Countervailing Duty Determination, Preliminary Negative Critical Circumstances Determination, and Alignment of Final Determination with Final Antidumping Duty Determination,* 91 FR 9568 (February 26, 2026) (*Laos Preliminary Determination*) (collectively, *Preliminary Determinations*).

[6] *See India Final Determination,* 91 FR at 58643–58644.

[7] *See Indonesia Final Determination,* 91 FR at 58648.

[6] *See ITC Final Determination.*

Vietnam Sunergy Joint Stock Company and all other producers and/or exporters of solar cells from Laos.[8]

The ITC found that critical circumstances do not exist with respect to imports of solar cells from India and Laos. As a result, for India and Laos, we intend to instruct CBP to lift the suspension of liquidation and to refund all cash deposits for estimated countervailing duties with respect to all suspended entries of subject merchandise entered, or withdrawn from warehouse, for consumption on or after November 28, 2025 (*i.e.,* 90 days prior to the date of publication of the *India Preliminary Determination* and *Laos Preliminary Determination*), but before February 26, 2026 (*i.e.,* the date of publication of the *India Preliminary Determination* and *Laos Preliminary Determination*).

In addition, the ITC found that critical circumstances do exist with respect to imports of solar cells from Indonesia. As a result of Commerce's affirmative critical circumstances determination under section 705(a)(2) of the Act and the ITC's affirmative critical circumstances determination under section 705(b)(4)(A) of the Act, retroactive duties will be applied with respect to suspended entries of subject merchandise entered, or withdrawn from warehouse, for consumption on or after November 28, 2025 (*i.e.,* 90 days prior to February 26, 2026, the date of the publication of *Indonesia Preliminary Determination*), for imports from Blue Sky and all other producers and/or exporters of solar cells from Indonesia.[9]

Suspension of Liquidation and Cash Deposits

In accordance with section 706 of the Act, Commerce intends to instruct CBP to reinstitute the suspension of liquidation of solar cells from India, Indonesia, and Laos, effective on the date of publication of the ITC's final affirmative injury determination in the **Federal Register**, and to assess, upon further instruction by Commerce, pursuant to section 706(a)(1) of the Act, countervailing duties on each entry of subject merchandise in an amount based on the net countervailable subsidy rates below. These instructions suspending liquidation will remain in effect until further notice.

Commerce also intends, pursuant to section 706(a)(1) of the Act, to instruct CBP to require cash deposits equal to the amounts as indicated below. Accordingly, effective on the date of publication of the ITC's final affirmative injury determination in the **Federal Register**, CBP will require, at the same time as importers would normally deposit estimated customs duties on the subject merchandise, a cash deposit for each entry of subject merchandise equal to the subsidy rates listed below.[10] The all-others rates apply to all producers or exporters not specifically listed below, as appropriate.

Estimated Countervailable Subsidy Rates

The estimated countervailable subsidy rates are as follows:

INDIA

Company	Subsidy rate (percent *ad valorem*)
Mundra Solar Energy Limited	126.09*
Mundra Solar PV Limited	126.09*
All Others	126.09*

* Rate based on facts available with adverse inferences.

INDONESIA

Company	Subsidy rate (percent *ad valorem*)
PT Blue Sky Solar Indonesia	173.70*
PT REC Solar Energy Indonesia	73.20
All Others	73.20

* Rate based on facts available with adverse inferences.

LAOS

Company	Subsidy rate (percent *ad valorem*)
Solarspace Technology (Laos) Sole Co. Ltd.	82.03
Vietnam Sunergy Joint Stock Company	153.67*
All Others	82.03

* Rate based on facts available with adverse inferences.

Provisional Measures

Section 703(d) of the Act states that the suspension of liquidation pursuant to an affirmative preliminary determination may not remain in effect for more than four months. In the underlying investigations, Commerce published the *Preliminary Determinations* on February 26, 2026.[11] As such, the four-month period beginning on the date of the publication of the *Preliminary Determinations* ended on June 25, 2026. Therefore, entries of solar cells from India, Indonesia, and Laos made on or after June 26, 2026, and prior to the date of publication of the ITC's final

[8] *See Laos Final Determination,* 91 FR at 58639.

[9] *See* Statement of Administrative Action Accompanying the Uruguay Round Agreements Act, H.R. Doc. 103–316, Vol. 1 (1994) at 876 (''If both agencies make affirmative critical circumstances determinations in their final investigations, retroactive duties will be applied for a period ninety days prior to suspension of liquidation.'').

[10] *See* section 706(a)(3) of the Act.

[11] *See Preliminary Determinations.*

determinations in the **Federal Register**, are not subject to the assessment of countervailing duties due to Commerce's discontinuation of the suspension of liquidation

In accordance with section 703(d) of the Act, Commerce instructed CBP to terminate the suspension of liquidation and to liquidate, without regard to countervailing duties, certain unliquidated entries of solar cells from India, Indonesia, and Laos entered, or withdrawn from warehouse, for consumption on or after June 26, 2026, the date on which the provisional CVD measures expired, until and through the day preceding the date of publication of the ITC's final injury determinations in the **Federal Register**. Suspension of liquidation and the collection of cash deposits will resume on the date of publication of the ITC final injury determinations in the **Federal Register**.

Establishment of the Annual Inquiry Service List

On September 20, 2021, Commerce published the *Final Rule* in the **Federal Register**.[12] On September 27, 2021, Commerce also published the *Procedural Guidance* in the **Federal Register**.[13] The *Final Rule* and *Procedural Guidance* provide that Commerce will maintain an annual inquiry service list for each order or suspended investigation, and any interested party submitting a scope ruling application or request for circumvention inquiry shall serve a copy of the application or request on the persons on the annual inquiry service list for that order, as well as any companion order covering the same merchandise from the same country of origin.[14]

In accordance with the *Procedural Guidance,* for orders published in the **Federal Register** after November 4, 2021, Commerce will create an annual inquiry service list segment in Commerce's online e-filing and document management system, Antidumping and Countervailing Duty Electronic Service System (ACCESS), available at *https://access.trade.gov,* within five business days of publication of the order. Each annual inquiry service list will be saved in ACCESS, under each case number, and under a specific segment type called ''AISL-Annual Inquiry Service List.'' [15]

Interested parties who wish to be added to the annual inquiry service list for an order must submit an entry of appearance to the annual inquiry service list segment for the order in ACCESS within 30 days after the date of publication of the order. For ease of administration, Commerce requests that law firms with more than one attorney representing interested parties in an order designate a lead attorney to be included on the annual inquiry service list. Commerce will finalize the annual inquiry service list within five business days thereafter. As mentioned in the *Procedural Guidance,* the new annual inquiry service list will be in place until the following year, when the *Opportunity Notice* for the anniversary month of the order is published.

Commerce may update an annual inquiry service list at any time as needed based on interested parties' amendments to their entries of appearance to remove or otherwise modify their list of members and representatives, or to update contact information. Any changes or announcements pertaining to these procedures will be posted to the ACCESS website.

Special Instructions for Petitioners and Foreign Governments

In the *Final Rule,* Commerce stated that, ''after an initial request and placement on the annual inquiry service list, both petitioners and foreign governments will automatically be placed on the annual inquiry service list in the years that follow.'' [16] Accordingly, as stated above, the petitioners and foreign governments should submit their initial entry of appearance after publication of this notice in order to appear in the first annual inquiry service list. Pursuant to 19 CFR 351.225(n)(3), the petitioners and foreign governments will not need to resubmit their entries of appearance each year to continue to be included on the annual inquiry service list. However, the petitioners and foreign governments are responsible for making amendments to their entries of appearance during the annual update to the annual inquiry service list in accordance with the procedures described above.

Notification to Interested Parties

This notice constitutes the CVD orders with respect to solar cells from India, Indonesia, and Laos pursuant to section 706(a) of the Act. Interested parties can find a list of CVD orders currently in effect at *https://www.trade.gov/data-visualization/adcvd-proceedings.*

These CVD orders are published in accordance with section 706(a) of the Act and 19 CFR 351.211(b).

Dated: November 4, 2026.

Scot Fullerton,

Acting Deputy Assistant Secretary for Antidumping and Countervailing Duty Operations.

Appendix

Scope of the Orders

The products covered by these orders are crystalline silicon photovoltaic cells, and modules, laminates, and panels, consisting of crystalline silicon photovoltaic cells, whether or not partially or fully assembled into other products, including, but not limited to, modules, laminates, panels and building integrated materials.

These orders cover crystalline silicon photovoltaic cells of thickness equal to or greater than 20 micrometers, having a p/n junction formed by any means, whether or not the cell has undergone other processing, including, but not limited to, cleaning, etching, coating, and/or addition of materials (including, but not limited to, metallization and conductor patterns) to collect and forward the electricity that is generated by the cell.

Merchandise under consideration may be described at the time of importation as parts for final finished products that are assembled after importation, including, but not limited to, modules, laminates, panels, building-integrated modules, building integrated panels, or other finished goods kits. Such parts that otherwise meet the definition of merchandise under consideration are included in the scope of the orders.

Excluded from the scope of the orders are thin film photovoltaic products produced from amorphous silicon (a-Si), cadmium telluride (CdTe), or copper indium gallium selenide (CIGS).

Also excluded from the scope of the orders are crystalline silicon photovoltaic cells, not exceeding 10,000 mm^2 in surface area, that are permanently integrated into a consumer good whose function is other than power generation and that consumes the electricity generated by the integrated crystalline silicon photovoltaic cell. Where more than one cell is permanently integrated into a consumer good, the surface area for purposes of this exclusion shall be the total combined surface area of all cells that are integrated into the consumer good.

[12] *See Regulations to Improve Administration and Enforcement of Antidumping and Countervailing Duty Laws,* 86 FR 52300 (September 20, 2021) (*Final Rule*).

[13] *See Scope Ruling Application; Annual Inquiry Service List; and Informational Sessions,* 86 FR 53205 (September 27, 2021) (*Procedural Guidance*).

[14] *Id.*

[15] This segment will be combined with the ACCESS Segment Specific Information (SSI) field which will display the month in which the notice of the order or suspended investigation was published in the **Federal Register**, also known as the anniversary month. For example, for an order under case number A–000–000 that was published in the **Federal Register** in January, the relevant segment and SSI combination will appear in ACCESS as ''AISL-January Anniversary.'' Note that there will be only one annual inquiry service list segment per case number, and the anniversary month will be pre-populated in ACCESS.

[16] *See Final Rule,* 86 FR at 52335.

Additionally, excluded from the scope of the orders are panels with surface area from 3,450 mm^2 to 33,782 mm^2 with one black wire and one red wire (each of type 22 AWG or 24 AWG not more than 206 mm in length when measured from panel extrusion), and not exceeding 2.9 volts, 1.1 amps, and 3.19 watts. For the purposes of this exclusion, no panel shall contain an internal battery or external computer peripheral ports.

Also excluded from the scope of the orders are:

(1) Off grid CSPV panels in rigid form with a glass cover, with the following characteristics: (A) a total power output of 100 watts or less per panel; (B) a maximum surface area of 8,000 cm^2 per panel; (C) do not include a built-in inverter; (D) must include a permanently connected wire that terminates in either an 8 mm male barrel connector, or a two-port rectangular connector with two pins in square housings of different colors; (E) must include visible parallel grid collector metallic wire lines every 1–4 millimeters across each solar cell; and (F) must be in individual retail packaging (for purposes of this provision, retail packaging typically includes graphics, the product name, its description and/or features, and foam for transport); and

(2) Off grid CSPV panels without a glass cover, with the following characteristics: (A) a total power output of 100 watts or less per panel; (B) a maximum surface area of 8,000 cm^2 per panel; (C) do not include a built-in inverter; (D) must include visible parallel grid collector metallic wire lines every 1–4 millimeters across each solar cell; and (E) each panel is (1) permanently integrated into a consumer good; (2) encased in a laminated material without stitching, or (3) has all of the following characteristics: (i) the panel is encased in sewn fabric with visible stitching, (ii) includes a mesh zippered storage pocket, and (iii) includes a permanently attached wire that terminates in a female USB–A connector.

In addition, the following CSPV panels are excluded from the scope of the orders: off-grid CSPV panels in rigid form with a glass cover, with each of the following physical characteristics, whether or not assembled into a fully completed off-grid hydropanel whose function is conversion of water vapor into liquid water: (A) a total power output of no more than 80 watts per panel; (B) a surface area of less than 5,000 square centimeters (cm^2) per panel; (C) do not include a built-in inverter; (D) do not have a frame around the edges of the panel; (E) include a clear glass back panel; and (F) must include a permanently connected wire that terminates in a twoport rectangular connector.

Additionally excluded from the scope of these orders are off-grid small portable crystalline silicon photovoltaic panels, with or without a glass cover, with the following characteristics: (1) a total power output of 200 watts or less per panel; (2) a maximum surface area of 16,000 cm^2 per panel; (3) no built-in inverter; (4) an integrated handle or a handle attached to the package for ease of carry; (5) one or more integrated kickstands for easy installation or angle adjustment; and (6) a wire of not less than 3 meters either permanently connected or attached to the package that terminates in an 8 mm diameter male barrel connector.

Also excluded from the scope of these orders are off-grid crystalline silicon photovoltaic panels in rigid form with a glass cover, with each of the following physical characteristics, whether or not assembled into a fully completed off-grid hydropanel whose function is conversion of water vapor into liquid water: (A) a total power output of no more than 180 watts per panel at 155 degrees Celsius; (B) a surface area of less than 16,000 square centimeters (cm^2) per panel; (C) include a keep-out area of approximately 1,200 cm^2 around the edges of the panel that does not contain solar cells; (D) do not include a built-in inverter; (E) do not have a frame around the edges of the panel; (F) include a clear glass back panel; (G) must include a permanently connected wire that terminates in a two-port rounded rectangular, sealed connector; (H) include a thermistor installed into the permanently connected wire before the twoport connector; and (I) include exposed positive and negative terminals at opposite ends of the panel, not enclosed in a junction box.

Further excluded from the scope of the orders are:

(1) Off grid rigid CSPV panels with a glass cover, with the following characteristics: (A) a total power output of 200 watts or less per panel, (B) a maximum surface area of 10,500 cm^2 per panel, (C) do not include a built-in inverter, (D) must include a permanently connected wire that terminates in waterproof connector with a cylindrical positive electrode and a rectangular negative electrode with the positive and negative electrodes having an interlocking structure, (E) must include visible parallel grid collector metallic wire lines every 1–4 millimeters across each solar cell, and (F) must be in individual retail packaging (for purposes of this provision, retail packaging typically includes graphics, the product name, its description and/or features); and

(2) Off-grid small portable crystalline silicon photovoltaic panels, with or without a glass cover, with the following characteristics: (A) a total power output of 200 watts or less per panel, (B) a maximum surface area of 16,000 cm^2 per panel, (C) no built-in inverter, (D) an integrated handle or a handle attached to the package for ease of carry, (E) one or more integrated kickstands for easy installation or angle adjustment, and (F) a wire either permanently connected or attached to the package terminates in waterproof connector with a cylindrical positive electrode and a rectangular negative electrode with the positive and negative electrodes having an interlocking structure.

Also excluded from the scope of the orders are:

(1) Off grid rigid CSPV panels with a glass cover, with the following characteristics: (A) a total power output of 200 watts or less per panel, (B) a maximum surface area of 10,500 cm^2 per panel, (C) do not include a built-in inverter, (D) must include a permanently connected wire that terminates in waterproof connector with a cylindrical positive electrode and a rectangular negative electrode with the positive and negative electrodes having an interlocking structure, (E) must include visible parallel grid collector metallic wire lines every 1–4 millimeters across each solar cell, and (F) must be in individual retail packaging (for purposes of this provision, retail packaging typically includes graphics, the product name, its description and/or features); and

(2) Small off-grid panels with glass cover, with the following characteristics: (A) surface area from 3,450 mm^2 to 33,782 mm^2, (B) with one black wire and one red wire (each of type 22AWG or 28 AWG not more than 350 mm in length when measured from panel extrusion), (C) not exceeding 10 volts, (D) not exceeding 1.1 amps, (E) not exceeding 6 watts, and (F) for the purposes of this exclusion, no panel shall contain an internal battery or external computer peripheral ports.

Additionally excluded from the scope of the orders are:

(1) Off grid rigid CSPV panels with a glass cover, with the following characteristics: (A) a total power output of 175 watts or less per panel, (B) a maximum surface area of 9,000 cm^2 per panel, (C) do not include a built-in inverter, (D) must include a permanently connected wire that terminates in waterproof connector with a cylindrical positive electrode and a rectangular negative electrode with the positive and negative electrodes having an interlocking structure; (E) must include visible parallel grid collector metallic wire lines every 1–4 millimeters across each solar cell, and (F) must be in individual retail packaging (for purposes of this provision, retail packaging typically includes graphics, the product name, its description and/or features); and

(2) Off grid CSPV panels without a glass cover, with the following characteristics, (A) a total power output of 220 watts or less per panel, (B) a maximum surface area of 16,000 cm^2 per panel, (C) do not include a built-in inverter, (D) must include visible parallel grid collector metallic wire lines every 1–4 millimeters across each solar cell, and (E) each panel is encased in a laminated material without stitching.

Also excluded from the scope of these orders are off-grid CSPV panels in rigid form, with or without a glass cover, permanently attached to an aluminum extrusion that is an integral component of an automation device that controls natural light, whether or not assembled into a fully completed automation device that controls natural light, with the following characteristics:

(1) a total power output of 20 watts or less per panel;

(2) a maximum surface area of 1,000 cm^2 per panel;

(3) does not include a built-in inverter for powering third party devices.

Modules, laminates, and panels produced in a third-country from cells produced in a subject country are covered by the orders; however, modules, laminates, and panels produced in a subject country from cells produced in a third-country are not covered by the orders.

Also excluded from the scope of this orders are all products covered by the scope of the antidumping and countervailing duty orders on *Crystalline Silicon Photovoltaic Cells, Whether or Not Assembled into Modules,*

from the People's Republic of China: Amended Final Determination of Sales at Less Than Fair Value, and Antidumping Order, 77 FR 73018 (December 7, 2012); and *Crystalline Silicon Photovoltaic Cells, Whether or Not Assembled into Modules, from the People's Republic of China: Countervailing Duty Order,* 77 FR 73017 (December 7, 2012).

Also excluded from the scope of these orders are all products covered by the scope of the antidumping and countervailing duty orders on *Crystalline Silicon Photovoltaic Cells, Whether or Not Assembled into Modules from the Socialist Republic of Vietnam: Amended Final Antidumping Duty Determination; Crystalline Silicon Photovoltaic Cells, Whether or Not Assembled into Modules from Cambodia, Malaysia, Thailand, and the Socialist Republic of Vietnam: Antidumping duty Orders,* 90 FR 26786 (June 24, 2025); *Crystalline Silicon Photovoltaic Cells, Whether or Not Assembled into Modules from the Socialist Republic of Vietnam: Amended Final Antidumping Duty Determination; Crystalline Silicon Photovoltaic Cells, Whether or Not Assembled into Modules from Cambodia, Malaysia, Thailand, and the Socialist Republic of Vietnam: Antidumping Duty Orders; Correction,* 90 FR 29843 (July 7, 2025); and *Crystalline Silicon Photovoltaic Cells, Whether or Not Assembled into Modules, from Malaysia and Thailand: Amended Final Countervailing Duty Determinations; Crystalline Silicon Photovoltaic Cells, Whether or Not Assembled into Modules, from Cambodia, Malaysia, Thailand, and the Socialist Republic of Vietnam: Countervailing Duty Orders,* 90 FR 26791 (June 24, 2025).

Merchandise covered by the orders is currently classified in the Harmonized Tariff System of the United States (HTSUS) under subheadings 8541.42.0010 and 8541.43.0010. Imports of the subject merchandise may enter under HTSUS subheadings 8501.71.0000, 8501.72.1000, 8501.72.2000, 8501.72.3000, 8501.72.9000, 8501.80.1000, 8501.80.2000, 8501.80.3000, 8501.80.9000, 8507.20.8010, 8507.20.8031, 8507.20.8041, 8507.20.8061, and 8507.20.8091. These HTSUS subheadings are provided for convenience and customs purposes; the written description of the scope of the orders is dispositive.

SUPPLEMENTARY INFORMATION:

The Petition

On October 15, 2026, the U.S. Department of Commerce (Commerce) received a countervailing duty (CVD) petition concerning imports of seamless carbon and alloy steel standard, line, and pressure pipe (seamless standard, line, and pressure pipe) from India, filed in proper form on behalf of Tenaris USA (Tenaris), Vallourec Star LP (Vallourec), and the United Steel, Paper and Forestry, Rubber, Manufacturing, Energy, Allied Industrial and Service Workers International Union, AFL–CIO, CLC (USW) (collectively, the petitioners), domestic producers of seamless standard, line, and pressure pipe and a certified union, which represents workers engaged in the production of seamless standard, line, and pressure pipe in the United States.[1] The CVD Petition was accompanied by antidumping duty (AD) petitions concerning imports of seamless standard, line, and pressure pipe from Georgia and India.[2]

Between October 20 and 26, 2026, Commerce requested supplemental information pertaining to certain aspects of the Petition in supplemental questionnaires.[3] Between October 22 and 28, 2026, the petitioners filed timely responses to these requests for additional information.[4]

In accordance with section 702(b)(1) of the Tariff Act of 1930, as amended (the Act), the petitioners allege that the Government of India (GOI) is providing countervailable subsidies, within the meaning of sections 701 and 771(5) of the Act, to producers of seamless standard, line, and pressure pipe from India, and that such imports are materially injuring, or threatening material injury to, the domestic industry producing seamless standard, line, and pressure pipe in the United States. Consistent with section 702(b)(1) of the Act and 19 CFR 351.202(b), for those alleged programs on which we are initiating a CVD investigation, the Petition was accompanied by information reasonably available to the petitioners supporting their allegations.

Commerce finds that the petitioners filed the Petition on behalf of the domestic industry, because the petitioners are interested parties, as defined in sections 771(9)(C) and (D) of the Act.[5] Commerce also finds that the petitioners demonstrated sufficient industry support with respect to the initiation of the requested CVD investigation.[6]

Period of Investigation (POI)

Because the Petition was filed on October 15, 2026, the POI is January 1, 2025, through December 31, 2025.[7]

Scope of the Investigation

The product covered by this investigation is seamless standard, line, and pressure pipe from India. For a full description of the scope of this investigation, *see* the appendix to this notice.

Comments on the Scope of the Investigation

On October 20 and 26, 2026, Commerce requested information and clarification from the petitioners regarding the proposed scope to ensure that the scope language in the Petition is an accurate reflection of the products for which the domestic industry is seeking relief.[8] On October 22 and 28, 2026, the petitioners provided clarifications and revised the scope.[9] The description of merchandise covered by this investigation, as described in the appendix to this notice, reflects these clarifications.

As discussed in the *Preamble* to Commerce's regulations, we are setting

[3] *See* Commerce's Letters, ''Supplemental Questions,'' dated October 20, 2026 (First General Issues Supplemental Questionnaire); ''Supplemental Questions,'' dated October 21, 2026 (India CVD Supplemental Questionnaire); and ''Second Supplemental Questions,'' dated October 26, 2026 (Second General Issues Questionnaire).

[4] *See* Petitioners' Letters, ''Petitioners' Response to General Issues Supplemental Questions,'' dated October 22, 2026 (First General Issues Supplement); ''Responses to Volume IV Supplemental Questions,'' dated October 26, 2026 (India CVD Supplement); and ''Petitioners' Response to General Issues Second Supplemental Questions,'' dated October 28, 2026 (Second General Issues Supplement).

[5] Tenaris and Vallourec are interested parties under section 771(9)(C) of the Act. The USW is a certified union representing workers engaged in the production of seamless standard, line, and pressure pipe in the United States and therefore is an interested party under section 771(9)(D) of the Act.

[6] *See* section on ''Determination of Industry Support for the Petition,'' *infra.*

[7] *See* 19 CFR 351.204(b)(2).

[8] *See* First General Issues Questionnaire; *see also* Second General Issues Questionnaire.

[9] *See* First General Issues Supplement at 2–3 and Exhibit I–SUPP–9; *see also* Second General Issues Supplement at 1–3 and Exhibit I–SUPP2–9.

aside a period for interested parties to raise issues regarding product coverage (*i.e.,* scope).[10] Commerce will consider all scope comments received from interested parties and, if necessary, will consult with interested parties prior to the issuance of the preliminary determination. If scope comments include factual information, all such factual information should be limited to public information.[11] Commerce requests that interested parties provide at the beginning of their scope comments a public executive summary for each comment or issue raised in their submission. Commerce further requests that interested parties limit their public executive summary of each comment or issue to no more than 450 words, not including citations. Commerce intends to use the public executive summaries as the basis of the comment summaries included in the analysis of scope comments. To facilitate preparation of its questionnaires, Commerce requests that scope comments be submitted by 5:00 p.m. Eastern Time (ET) on November 24, 2026, which is 20 calendar days from the signature date of this notice. Any rebuttal comments, which may include factual information, and should also be limited to public information, must be filed by 5:00 p.m. ET on December 4, 2026, which is 10 calendar days from the initial comment deadline.

Commerce requests that any factual information that parties consider relevant to the scope of this investigation be submitted during that period. However, if a party subsequently finds that additional factual information pertaining to the scope of the investigation may be relevant, the party must contact Commerce and request permission to submit the additional information. All scope comments must be filed simultaneously on the records of the concurrent AD and CVD investigations.

Filing Requirements

All submissions to Commerce must be filed electronically via Enforcement and Compliance's Antidumping Duty and Countervailing Duty Centralized Electronic Service System (ACCESS), unless an exception applies.[12] An electronically filed document must be received successfully in its entirety by the time and date it is due.

Consultations

Pursuant to sections 702(b)(4)(A)(i) and (ii) of the Act, Commerce notified the GOI of the receipt of the Petition and provided an opportunity for consultations with respect to the Petition.[13] Commerce held consultations with the GOI on November 3, 2026.[14]

Determination of Industry Support for the Petition

Section 702(b)(1) of the Act requires that a petition be filed on behalf of the domestic industry. Section 702(c)(4)(A) of the Act provides that a petition meets this requirement if the domestic producers or workers who support the petition account for: (i) at least 25 percent of the total production of the domestic like product; and (ii) more than 50 percent of the production of the domestic like product produced by that portion of the industry expressing support for, or opposition to, the petition. Moreover, section 702(c)(4)(D) of the Act provides that, if the petition does not establish support of domestic producers or workers accounting for more than 50 percent of the total production of the domestic like product, Commerce shall: (i) poll the industry or rely on other information in order to determine if there is support for the petition, as required by subparagraph (A); or (ii) determine industry support using a statistically valid sampling method to poll the ''industry.''

Section 771(4)(A) of the Act defines the ''industry'' as the producers as a whole of a domestic like product. Thus, to determine whether a petition has the requisite industry support, the statute directs Commerce to look to producers and workers who produce the domestic like product. The U.S. International Trade Commission (ITC), which is responsible for determining whether ''the domestic industry'' has been injured, must also determine what constitutes a domestic like product in order to define the industry. While both Commerce and the ITC apply the same statutory definition regarding the domestic like product,[15] they do so for different purposes and pursuant to a separate and distinct authority. In addition, Commerce's determination is subject to limitations of time and information. Although this may result in different definitions of the like product, such differences do not render the decision of either agency contrary to law.[16]

Section 771(10) of the Act defines the domestic like product as ''a product which is like, or in the absence of like, most similar in characteristics and uses with, the article subject to an investigation under this title.'' Thus, the reference point from which the domestic like product analysis begins is ''the article subject to an investigation'' (*i.e.,* the class or kind of merchandise to be investigated, which normally will be the scope as defined in the petition).

With regard to the domestic like product, the petitioners do not offer a definition of the domestic like product distinct from the scope of the investigation.[17] Based on our analysis of the information submitted on the record, we have determined that seamless standard, line, and pressure pipe, as defined in the scope, constitutes a single domestic like product, and we have analyzed industry support in terms of that domestic like product.[18]

In determining whether the petitioners have standing under section 702(c)(4)(A) of the Act, we considered the industry support data contained in the Petition with reference to the domestic like product as defined in the ''Scope of the Investigation,'' in the appendix to this notice. To establish industry support, the petitioners provided the 2025 shipments of the domestic like product for the U.S. producers that support the Petitions, and compared this to the estimated total 2025 shipments of the domestic like

[17] For a discussion of the domestic like product analysis as applied to this case and information regarding industry support, *see* Checklist, ''Countervailing Duty Investigation Initiation Checklist: Seamless Carbon and Alloy Steel Standard, Line, and Pressure Pipe from India,'' dated concurrently with, and hereby adopted by, this notice (India CVD Initiation Checklist), at Attachment II, Analysis of Industry Support for the Antidumping and Countervailing Duty Petitions Covering Seamless Carbon and Alloy Steel Standard, Line, and Pressure Pipe from Georgia and India (Attachment II). This checklist is on file electronically via ACCESS.

[18] For further discussion, *see* Attachment II of the India CVD Initiation Checklist.

product for the entire domestic industry.[19] Because total production data for the domestic like product for 2025 are not reasonably available to the petitioners, and the petitioners have established that shipments are a reasonable proxy for production data,[20] we relied on data provided by the petitioners for purposes of measuring industry support.[21]

Our review of the data provided in the Petition, the First General Issues Supplement, and other information readily available to Commerce indicates that the petitioners have established industry support for the Petition.[22] First, the Petition established support from domestic producers and supporters accounting for more than 50 percent of the total production of the domestic like product and, as such, Commerce is not required to take further action in order to evaluate industry support (*e.g.,* polling).[23] Second, the domestic producers and supporters have met the statutory criteria for industry support under section 702(c)(4)(A)(i) of the Act because the domestic producers and supporters who support the Petition account for at least 25 percent of the total production of the domestic like product.[24] Finally, the domestic producers and supporters have met the statutory criteria for industry support under section 702(c)(4)(A)(ii) of the Act because the domestic producers and supporters who support the Petition account for more than 50 percent of the production of the domestic like product produced by that portion of the industry expressing support for, or opposition to, the Petition.[25] Accordingly, Commerce determines that the Petition was filed on behalf of the domestic industry within the meaning of section 702(b)(1) of the Act.[26]

Injury Test

Because India is a ''Subsidies Agreement Country'' within the meaning of section 701(b) of the Act, section 701(a)(2) of the Act applies to this investigation. Accordingly, the ITC must determine whether imports of the subject merchandise from India materially injure, or threaten material injury to, a U.S. industry.

Allegations and Evidence of Material Injury and Causation

The petitioners allege that imports of the subject merchandise are benefiting from countervailable subsidies and that such imports are causing, or threaten to cause, material injury to the U.S. industry producing the domestic like product. In addition, the petitioners allege that subject imports exceed the negligibility threshold provided for under section 771(24)(A) of the Act.[27]

The petitioners contend that the industry's injured condition is illustrated by a significant increase in the volume of subject imports; underselling and price depression and/or suppression; negative impact on financial performance; and declines in production, U.S. shipments, and employment variables.[28] We assessed the allegations and supporting evidence regarding material injury, threat of material injury, causation, as well as negligibility, and we have determined that these allegations are properly supported by adequate evidence, and meet the statutory requirements for initiation.[29]

Initiation of CVD Investigation

Based upon the examination of the Petition and supplemental responses, we find that they meet the requirements of section 702 of the Act. Therefore, we are initiating a CVD investigation to determine whether imports of seamless standard, line, and pressure pipe from India benefit from countervailable subsidies conferred by the GOI. In accordance with section 703(b)(1) of the Act and 19 CFR 351.205(b)(1), unless postponed, we will make our preliminary determination no later than 65 days after the date of this initiation.

Based on our review of the Petition, we find that there is sufficient information to initiate a CVD investigation on 24 programs alleged by the petitioners. For a full discussion of the basis for our decision to initiate on each program, *see* the India CVD Initiation Checklist. A public version of the initiation checklist for this investigation is available on ACCESS.

Respondent Selection

In the Petition, the petitioners identified 16 companies in India.[30] Commerce intends to follow its standard practice in CVD investigations and calculate company-specific subsidy rates in this investigation. In the event that Commerce determines that the number of companies is large and it cannot individually examine each company based on Commerce's resources, where appropriate, Commerce intends to select mandatory respondents based on quantity and value (Q&V) questionnaires issued to the potential respondents. Commerce normally selects mandatory respondents in CVD investigations using U.S. Customs and Border Protection (CBP) entry data for U.S. imports under the appropriate Harmonized Tariff Schedule of the United States (HTSUS) subheadings listed in the ''Scope of the Investigation,'' in the appendix. However, for this investigation, some of the main HTSUS subheadings under which the subject merchandise would enter (7304.19.1020, 7304.19.1030, 7304.19.1045, 7304.19.1060, 7304.19.5020, 7304.19.5050, 7304.31.6050, 7304.39.0016, 7304.39.0020, 7304.39.0024, 7304.39.0028, 7304.39.0032, 7304.39.0036, 7304.39.0040, 7304.39.0044, 7304.39.0048, 7304.39.0052, 7304.39.0056, 7304.39.0062, 7304.39.0068, 7304.39.0072, 7304.51.5005, 7304.51.5060, 7304.59.6000) are basket categories under which non-subject merchandise may also enter. Therefore, instead of relying on CBP entry data in selecting respondents, we intend to issue Q&V questionnaires to each potential respondent for which there is complete address information on the record.

Commerce will post the Q&V questionnaire along with filing instructions on Commerce's website at *https://www.trade.gov/ec-adcvd-qv-questionnaire.* Producers/exporters of seamless standard, line, and pressure pipe from India that do not receive Q&V questionnaires may still submit a response to the Q&V questionnaire and can obtain a copy of the Q&V questionnaire from Commerce's website. Responses to the Q&V questionnaire must be submitted by the relevant Indian producers/exporters no later than 5:00 p.m. ET on November 18, 2026, which is two weeks from the signature date of this notice. All Q&V questionnaire responses must be filed electronically via ACCESS. An

electronically filed document must be received successfully, in its entirety, by ACCESS no later than 5:00 p.m. ET on the deadline noted above.

Interested parties must submit applications for disclosure under administrative protective order (APO) in accordance with 19 CFR 351.305(b). Instructions for filing such applications may be found on Commerce's website at *https://www.trade.gov/administrative-protective-orders.*

Distribution of a Copy of the Petition

In accordance with section 702(b)(4)(A) of the Act and 19 CFR 351.202(f), a copy of the public version of the Petition has been provided to the GOI via ACCESS. To the extent practicable, we will attempt to provide a copy of the public version of the Petition to each exporter named in the Petition, as provided under 19 CFR 351.203(c)(2).

ITC Notification

Commerce will notify the ITC of its initiation, as required by section 702(d) of the Act.

Preliminary Determination by the ITC

The ITC will preliminarily determine, within 45 days after the date on which the Petition was filed, whether there is a reasonable indication that imports of seamless standard, line, and pressure pipe from India are materially injuring, or threatening material injury to, a U.S. industry.[31] A negative ITC determination will result in the investigation being terminated.[32] Otherwise, this CVD investigation will proceed according to statutory and regulatory time limits.

Submission of Factual Information

Factual information is defined in 19 CFR 351.102(b)(21) as: (i) evidence submitted in response to questionnaires; (ii) evidence submitted in support of allegations; (iii) publicly available information to value factors of production under 19 CFR 351.408(c) or to measure the adequacy of remuneration under 19 CFR 351.511(a)(2); (iv) evidence placed on the record by Commerce; and (v) evidence other than factual information described in (i)–(iv). Section 351.301(b) of Commerce's regulations requires any party, when submitting factual information, to specify under which subsection of 19 CFR 351.102(b)(21) the information is being submitted [33] and, if the information is submitted to rebut, clarify, or correct factual information already on the record, to provide an explanation identifying the information already on the record that the factual information seeks to rebut, clarify, or correct.[34] Time limits for the submission of factual information are addressed in 19 CFR 351.301, which provides specific time limits based on the type of factual information being submitted. Interested parties should review the regulations prior to submitting factual information in this investigation.

Extensions of Time Limits

Parties may request an extension of time limits before the expiration of a time limit established under 19 CFR 351.301, or as otherwise specified by Commerce. In general, an extension request will be considered untimely if it is filed after the expiration of the time limit established under 19 CFR 351.301, or as otherwise specified by Commerce.[35] For submissions that are due from multiple parties simultaneously, an extension request will be considered untimely if it is filed after 10:00 a.m. ET on the due date. Under certain circumstances, Commerce may elect to specify a different time limit by which extension requests will be considered untimely for submissions which are due from multiple parties simultaneously. In such a case, we will inform parties in a letter or memorandum of the deadline (including a specified time) by which extension requests must be filed to be considered timely. An extension request must be made in a separate, standalone submission; under limited circumstances we will grant untimely filed requests for the extension of time limits, where we determine, based on 19 CFR 351.302, that extraordinary circumstances exist. Parties should review Commerce's regulations concerning the extension of time limits and the *Time Limits Final Rule* prior to submitting factual information in this investigation.[36]

Certification Requirements

Any party submitting factual information in an AD or CVD proceeding must certify to the accuracy and completeness of that information.[37] Parties must use the certification formats provided in 19 CFR 351.303(g).[38] Commerce intends to reject factual submissions if the submitting party does not comply with the applicable certification requirements.

Notification to Interested Parties

Interested parties must submit applications for disclosure under APO in accordance with 19 CFR 351.305. Parties wishing to participate in this investigation should ensure that they meet the requirements of 19 CFR 351.103(d) (*e.g.,* by filing the required letters of appearance). Note that Commerce has amended certain of its requirements pertaining to the service of documents in 19 CFR 351.303(f).[39]

This notice is issued and published pursuant to sections 702 and 777(i) of the Act, and 19 CFR 351.203(c).

Dated: November 4, 2026.

Scot Fullerton,

Acting Deputy Assistant Secretary for Antidumping and Countervailing Duty Operations.

Appendix

Scope of the Investigation

The merchandise covered by this investigation is seamless carbon and alloy steel (other than stainless steel) pipes and redraw hollows, less than or equal to 16 inches (406.4 mm) in nominal outside diameter, regardless of wall-thickness, manufacturing process (*e.g.,* hot finished or cold-drawn), end finish (*e.g.,* plain end, beveled end, upset end, threaded, or threaded and coupled), or surface finish (*e.g.,* bare, lacquered or coated). Redraw hollows are any unfinished carbon or alloy steel (other than stainless steel) pipe or ''hollow profiles'' suitable for cold finishing operations, such as cold drawing, to meet the American Society for Testing and Materials (ASTM) or American Petroleum Institute (API) specifications referenced below, or comparable specifications. Specifically included within the scope are seamless carbon and alloy steel (other than stainless steel) standard, line, and pressure pipes produced to the ASTM A–53, ASTM A–106, ASTM A–333, ASTM A–334, ASTM A–589, ASTM A–795, ASTM A–1024, and the API 5L specifications, or comparable specifications, and meeting the physical parameters described above, regardless of application, with the exception of the exclusions discussed below.

Specifically excluded from the scope of this investigation are: (1) all pipes meeting

aerospace, hydraulic, and bearing tubing specifications, including: (a) aerospace tubing produced to SAE Aerospace Material Specifications (AMS) 6360, 6361, and 6362; (b) hydraulic tubing produced to ASTM A–822, SAE J524, and EN 10305–4 specifications; and (c) bearing tubing produced to the SAE AMS 6440 specification, including bearing tubing manufactured from steel meeting the chemical and metallurgical requirements of ASTM A–295; (2) all pipes meeting the chemical requirements of ASTM A–335, whether finished or unfinished; (3) unattached couplings; (4) all mechanical, boiler, condenser and heat exchange tubing, except when such products conform to the dimensional requirements, *i.e.,* outside diameter and wall thickness, of ASTM A–53, ASTM A–106 or API 5L specifications; (5) oil country tubular goods consisting of drill pipe, casing, tubing, and coupling stock; and (6) all pipes meeting the chemical requirements of ASTM A–335 regardless of their conformity to the dimensional requirements of ASTM A–53, ASTM A–106 or API 5L.

Subject seamless standard, line, and pressure pipe are normally entered under Harmonized Tariff Schedule of the United States (HTSUS) subheadings 7304.19.1020, 7304.19.1030, 7304.19.1045, 7304.19.1060, 7304.19.5020, 7304.19.5050, 7304.31.6050, 7304.39.0016, 7304.39.0020, 7304.39.0024, 7304.39.0028, 7304.39.0032, 7304.39.0036, 7304.39.0040, 7304.39.0044, 7304.39.0048, 7304.39.0052, 7304.39.0056, 7304.39.0062, 7304.39.0068, 7304.39.0072, 7304.51.5005, 7304.51.5060, 7304.59.6000, 7304.59.8010, 7304.59.8015, 7304.59.8020, 7304.59.8025, 7304.59.8030, 7304.59.8035, 7304.59.8040, 7304.59.8045, 7304.59.8050, 7304.59.8055, 7304.59.8060, 7304.59.8065, and 7304.59.8070. Subject merchandise may also enter under HTSUS subheadings 7304.31.6010, 7304.39.0002, 7304.39.0004, 7304.39.0006, 7304.39.0008, 7304.51.5015, 7304.51.5045, 7304.59.2030, 7304.59.2040, 7304.59.2045, 7304.59.2055, and 7304.59.2060. The HTSUS subheadings and specifications are provided for convenience and customs purposes; the written description of the scope is dispositive.

SUPPLEMENTARY INFORMATION:

The Petition

On September 24, 2026, the U.S. Department of Commerce (Commerce) received an antidumping duty (AD) petition concerning imports of certain wooden fence components [1] from the People's Republic of China (China), filed in proper form on behalf of the American Alliance of Wooden Fence Producers (the petitioner),[2] the members of which are domestic producers of certain wooden fence components.[3] The AD Petition was accompanied by a countervailing duty (CVD) petition concerning imports of certain wooden fence components from China.[4]

On October 13, 2026, Commerce extended the initiation deadline by 20 days to further examine the issue of industry support, because it was not clear from the Petition whether the industry support criteria had been met.[5]

Between September 29 and October 14, 2026, Commerce requested supplemental information pertaining to certain aspects of the Petition in supplemental questionnaires.[6] Between October 4 and 21, 2026, the petitioner filed timely responses to these requests for additional information.[7]

In accordance with section 732(b) of the Tariff Act of 1930, as amended (the Act), the petitioner alleges that imports of certain wooden fence components from China are being, or are likely to be, sold in the United States at less than fair value (LTFV) within the meaning of section 731 of the Act, and that imports of such products are materially injuring, or threatening material injury to, the certain wooden fence components industry in the United States. Consistent with section 732(b)(1) of the Act, the Petition was accompanied by information reasonably available to the petitioner supporting its allegations.

Commerce finds that the petitioner filed the Petition on behalf of the domestic industry, because the petitioner is an interested party, as defined in section 771(9)(F) of the Act.[8] Commerce also finds that the petitioner demonstrated sufficient industry support for the initiation of the requested LTFV investigation.[9]

Period of Investigation (POI)

Because the Petition was filed on September 24, 2026, and because China is a non-market economy (NME) country pursuant to 19 CFR 351.204(b)(1), the POI for the LTFV investigation is January 1, 2026, through June 30, 2026.

Scope of the Investigation

The products covered by this investigation are certain wooden fence components from China. For a full description of the scope of this investigation, *see* the appendix to this notice.

Comments on the Scope of the Investigation

Between September 29 and October 14, 2026, Commerce requested information and clarification from the petitioner regarding the proposed scope to ensure that the scope language in the Petition is an accurate reflection of the products for which the domestic

[9] *See* section on ''Determination of Industry Support for the Petition,'' *infra.*

industry is seeking relief.[10] Between October 4 and 19, 2026, the petitioner provided clarifications and/or revised the scope.[11] The description of merchandise covered by this investigation, as described in the appendix to this notice, reflects these clarifications.

As discussed in the *Preamble* to Commerce's regulations, we are setting aside a period for interested parties to raise issues regarding product coverage (*i.e.,* scope).[12] Commerce will consider all scope comments received from interested parties and, if necessary, will consult with interested parties prior to the issuance of the preliminary determination. If scope comments include factual information, all such factual information should be limited to public information.[13] Commerce requests that interested parties provide at the beginning of their scope comments a public executive summary for each comment or issue raised in their submission. Commerce further requests that interested parties limit their public executive summary of each comment or issue to no more than 450 words, not including citations. Commerce intends to use the public executive summaries as the basis of the comment summaries included in the analysis of scope comments. To facilitate preparation of its questionnaires, Commerce requests that scope comments be submitted by 5:00 p.m. Eastern Time (ET) on November 23, 2026, which is 20 calendar days from the signature date of this notice. Any rebuttal comments, which may include factual information, and should also be limited to public information, must be filed by 5:00 p.m. ET on December 3, 2026, which is 10 calendar days from the initial comment deadline.

Commerce requests that any factual information that parties consider relevant to the scope of this investigation be submitted during that period. However, if a party subsequently finds that additional factual information pertaining to the scope of the investigation may be relevant, the party must contact Commerce and request permission to submit the additional information. All scope comments must be filed simultaneously on the records of the concurrent LTFV and CVD investigations.

Filing Requirements

All submissions to Commerce must be filed electronically via Enforcement and Compliance's Antidumping Duty and Countervailing Duty Centralized Electronic Service System (ACCESS), unless an exception applies.[14] An electronically filed document must be received successfully in its entirety by the time and date it is due.

Comments on Product Characteristics

Commerce is providing interested parties an opportunity to comment on the appropriate physical characteristics of certain wooden fence components to be reported in response to Commerce's AD questionnaires. This information will be used to identify the key physical characteristics of the subject merchandise in order to report the relevant factors of production (FOP) accurately, as well as to develop appropriate product comparison criteria.

In order to consider the suggestions of interested parties in developing and issuing the AD questionnaires, all product characteristics comments must be filed by 5:00 p.m. ET on November 23, 2026, which is 20 calendar days from the signature date of this notice. Any rebuttal comments must be filed by 5:00 p.m. ET on December 3, 2026, which is 10 calendar days from the initial comment deadline. All comments and submissions to Commerce must be filed electronically using ACCESS, as explained above, on the record of the LTFV investigation.

Determination of Industry Support for the Petition

Section 732(b)(1) of the Act requires that a petition be filed on behalf of the domestic industry. Section 732(c)(4)(A) of the Act provides that a petition meets this requirement if the domestic producers or workers who support the petition account for: (i) at least 25 percent of the total production of the domestic like product; and (ii) more than 50 percent of the production of the domestic like product produced by that portion of the industry expressing support for, or opposition to, the petition. Moreover, section 732(c)(4)(D) of the Act provides that, if the petition does not establish support of domestic producers or workers accounting for more than 50 percent of the total production of the domestic like product, Commerce shall: (i) poll the industry or rely on other information in order to determine if there is support for the petition, as required by subparagraph (A); or (ii) determine industry support using a statistically valid sampling method to poll the ''industry.''

Section 771(4)(A) of the Act defines the ''industry'' as the producers as a whole of a domestic like product. Thus, to determine whether a petition has the requisite industry support, the statute directs Commerce to look to producers and workers who produce the domestic like product. The U.S. International Trade Commission (ITC), which is responsible for determining whether ''the domestic industry'' has been injured, must also determine what constitutes a domestic like product in order to define the industry. While both Commerce and the ITC apply the same statutory definition regarding the domestic like product,[15] they do so for different purposes and pursuant to a separate and distinct authority. In addition, Commerce's determination is subject to limitations of time and information. Although this may result in different definitions of the like product, such differences do not render the decision of either agency contrary to law.[16]

Section 771(10) of the Act defines the domestic like product as ''a product which is like, or in the absence of like, most similar in characteristics and uses with, the article subject to an investigation under this title.'' Thus, the reference point from which the domestic like product analysis begins is ''the article subject to an investigation'' (*i.e.,* the class or kind of merchandise to be investigated, which normally will be the scope as defined in the petition).

With regard to the domestic like product, the petitioner does not offer a definition of the domestic like product distinct from the scope of the investigation.[17] Based on our analysis of

[17] For a discussion of the domestic like product analysis as applied to this case and information regarding industry support, see Checklist,

the information submitted on the record, we have determined that certain wooden fence components, as defined in the scope, constitute a single domestic like product, and we have analyzed industry support in terms of that domestic like product.[18]

As noted above, on October 13, 2026, Commerce extended the initiation deadline by 20 days to further examine the issue of industry support. In determining whether the petitioner has standing under section 732(c)(4)(A) of the Act, we considered the industry support data contained in the Petition with reference to the domestic like product as defined in the ''Scope of the Investigation,'' in the appendix to this notice. To establish industry support, the petitioner provided the 2025 production of the domestic like product for the U.S. producers that support the Petition and compared this to the estimated total production of the domestic like product by the U.S. certain wooden fence components industry.[19] We relied on data provided by the petitioner for purposes of measuring industry support.[20]

Our review of the data provided in the Petition, the First General Issues Supplement, Third General Issues Supplement, and other information readily available to Commerce indicates that the petitioner has established industry support for the Petition.[21] First, the Petition established support from domestic producers (or workers) accounting for more than 50 percent of the total production of the domestic like product and, as such, Commerce is not required to take further action in order to evaluate industry support (*e.g.,* polling).[22] Second, the domestic producers (or workers) have met the statutory criteria for industry support under section 732(c)(4)(A)(i) of the Act because the domestic producers (or workers) who support the Petition account for at least 25 percent of the total production of the domestic like product.[23] Finally, the domestic producers (or workers) have met the statutory criteria for industry support under section 732(c)(4)(A)(ii) of the Act because the domestic producers (or workers) who support the Petition account for more than 50 percent of the production of the domestic like product produced by that portion of the industry expressing support for, or opposition to, the Petition.[24] Accordingly, Commerce determines that the Petition was filed on behalf of the domestic industry within the meaning of section 732(b)(1) of the Act.[25]

Allegations and Evidence of Material Injury and Causation

The petitioner alleges that the U.S. industry producing the domestic like product is being materially injured, or is threatened with material injury, by reason of the imports of the subject merchandise sold at LTFV. In addition, the petitioner alleges that subject imports exceed the negligibility threshold provided for under section 771(24)(A) of the Act.[26]

The petitioner contends that the industry's injured condition is illustrated by a significant increase in the volume of subject imports; significant market share by subject imports and reduced market share for the domestic industry; underselling and price depression and suppression; negative impact on financial performance; lost sales and revenue; declines in production, U.S. shipments, capacity utilization, and employment variables; and the magnitude of the alleged dumping margins.[27] We assessed the allegations and supporting evidence regarding material injury, threat of material injury, causation, as well as negligibility, and we have determined that these allegations are properly supported by adequate evidence, and meet the statutory requirements for initiation.[28]

Allegations of Sales at LTFV

The following is a description of the allegations of sales at LTFV upon which Commerce based its decision to initiate LTFV investigation of imports of certain wooden fence components from China. The sources of data for the deductions and adjustments relating to U.S. price and normal value (NV) are discussed in greater detail in the China AD Initiation Checklist.

U.S. Price

The petitioner based export price (EP) on pricing information for certain wooden fence components produced in China and sold or offered for sale in the U.S. market.[29] The petitioner made certain adjustments to U.S. price to calculate a net ex-factory U.S. price, where applicable.[30]

Normal Value

Commerce considers China to be an NME country.[31] In accordance with section 771(18)(C)(i) of the Act, any determination that a foreign country is an NME country shall remain in effect until revoked by Commerce. Therefore, we continue to treat China as an NME country for purposes of the initiation of the LTFV investigation. Accordingly, we base NV on FOPs valued in a surrogate market economy country in accordance with section 773(C) of the Act.

The petitioner claims that Brazil, Mexico, and the Republic of Türkiye (Türkiye) are appropriate surrogate countries for China because they are market economy countries that are at a level of economic development comparable to that of China and are significant producers of comparable merchandise.[32] The petitioner provided publicly available information from Brazil, Mexico, and Türkiye to value all FOPs.[33] Based on the information provided by the petitioner, we believe it is appropriate to use Brazil, Mexico, and Türkiye as surrogate countries for China to value all FOPs for initiation purposes.

Interested parties will have the opportunity to submit comments regarding surrogate country selection and, pursuant to 19 CFR 351.301(c)(3)(i), will be provided an opportunity to submit publicly available information to value FOPs within 30 days before the scheduled date of the preliminary determination.

''Antidumping Duty Investigation Initiation Checklist: Certain Wooden Fence Components from the People's Republic of China,'' dated concurrently with, and hereby adopted by, this notice (China AD Initiation Checklist), at Attachment II, Analysis of Industry Support for the Antidumping and Countervailing Duty Petitions Covering Certain Wooden Fence Components from the People's Republic of China (Attachment II). This checklist is on file electronically via ACCESS.

[33] *Id.*

Factors of Production

Because information regarding the volume of inputs consumed by Brazilian, Mexican, and Turkish producers/exporters was not reasonably available, the petitioner used the production experience and product-specific consumption rates of a U.S. producer of certain wooden fence components as a surrogate to value Chinese manufacturers' FOPs.[34] Additionally, the petitioner calculated factory overhead, selling, general, and administrative (SG&A) expenses, and profit based on the experiences of Brazilian and Turkish producers of comparable merchandise.[35]

Fair Value Comparisons

Based on the data provided by the petitioner, there is reason to believe that imports of certain wooden fence components from China are being, or are likely to be, sold in the United States at LTFV. Based on comparisons of EP to NV in accordance with sections 772 and 773 of the Act, after accounting for certain revisions made by Commerce, the estimated dumping margins for certain wooden fence components from China covered by this initiation range from (1) China (Brazil surrogate) 217.40 to 232.23 percent; (2) China (Mexico surrogate) 122.64 to 131.81 percent; and (3) China (Türkiye surrogate) 109.01 to 117.41 percent.[36]

Initiation of LTFV Investigation

Based upon the examination of the Petition and supplemental responses, we find that they meet the requirements of section 732 of the Act. Therefore, we are initiating an LTFV investigation to determine whether imports of certain wooden fence components from China are being, or are likely to be, sold in the United States at LTFV. In accordance with section 733(b)(1)(A) of the Act and 19 CFR 351.205(b)(1), unless postponed, we will make our preliminary determination no later than 140 days after the date of this initiation.

Respondent Selection

In the Petition, the petitioner identified 80 companies in China as producers and/or exporters of certain wooden fence components.[37] Our standard practice for respondent selection in an AD investigation involving an NME country is to select respondents based on quantity and value (Q&V) questionnaires in cases where Commerce has determined that the number of companies is large, and it cannot individually examine each company based upon its resources. Therefore, considering the number of producers and/or exporters identified in the Petition, Commerce will solicit Q&V information that can serve as a basis for selecting exporters for individual examination in the event that Commerce determines that the number is large and decides to limit the number of respondents individually examined pursuant to section 777A(c)(2) of the Act. Given the number of producers and/or exporters identified in the Petition, Commerce has determined that it will issue Q&V questionnaires to the largest producers and/or exporters that are identified in the U.S. Customs and Border Protection entry data for which there is complete address information on the record.[38]

Commerce will post the Q&V questionnaires along with filing instructions on Commerce's website at *https://www.trade.gov/ec-adcvd-qv-questionnaire.* Producers/exporters of certain wooden fence components from China that do not receive Q&V questionnaires may still submit a response to the Q&V questionnaire and can obtain a copy of the Q&V questionnaire from Commerce's website. Responses to the Q&V questionnaire must be submitted by the relevant Chinese producers/exporters no later than 5:00 p.m. ET on November 17, 2026, which is two weeks from the signature date of this notice. All Q&V questionnaire responses must be filed electronically via ACCESS. An electronically filed document must be received successfully in its entirety by ACCESS no later than 5:00 p.m. ET on the deadline noted above.

Interested parties must submit applications for disclosure under administrative protective order (APO) in accordance with 19 CFR 351.305(b). Instructions for filing such applications may be found on Commerce's website at *https://www.trade.gov/administrative-protective-orders.*

Separate Rates

In order to obtain separate rate status in an NME investigation, exporters and producers must submit a separate rate application. The specific requirements for submitting a separate rate application in an NME investigation are outlined in detail in the application itself, which is available on Commerce's website at *https://www.trade.gov/non-market-economy-separate-rate-applications-and-certifications.* Note that Commerce recently promulgated new regulations pertaining to separate rates, including the separate rate application deadline and eligibility for separate rate status, in 19 CFR 351.108.[39] Pursuant to 19 CFR 351.108(d)(1), the separate rate application will be due 21 days after publication of this initiation notice.[40] Exporters and producers must file a timely separate rate application if they want to be considered for individual examination. In addition, pursuant to 19 CFR 351.108(e), exporters and producers who submit a separate rate application and have been selected as mandatory respondents will be eligible for consideration for separate rate status only if they fully respond to all parts of Commerce's AD questionnaire and participate in the LTFV proceeding as mandatory respondents.[41] Commerce requires that companies from China submit a response both to the Q&V questionnaire and to the separate rate application by the respective deadlines to receive consideration for separate rate status. Companies not filing a timely Q&V questionnaire response will not receive separate rate consideration.

Use of Combination Rates

Commerce will calculate combination rates for certain respondents that are eligible for a separate rate in an NME investigation. The Separate Rates and Combination Rates Bulletin states:

> {w}hile continuing the practice of assigning separate rates only to exporters, all separate rates that {Commerce} will now assign in its NME investigation will be specific to those producers that supplied the exporter during the period of investigation. Note, however, that one rate is calculated for the exporter and all of the producers which supplied subject merchandise to it during the period of investigation. This practice applies both to mandatory respondents receiving an individually calculated separate rate as well as the pool of non-investigated firms receiving the {weighted average} of the individually calculated rates. This practice is referred to as the application of ''combination rates'' because such rates apply to specific combinations of exporters and one or more producers. The cash-deposit rate assigned to an exporter will apply only to merchandise both exported by the firm in question and produced by a firm that supplied the exporter during the period of investigation.[42]

Distribution of Copies of the Petition

In accordance with section 732(b)(3)(A) of the Act and 19 CFR 351.202(f), a copy of the public version of the Petition has been provided to the Government of China via ACCESS. To the extent practicable, we will attempt to provide a copy of the public version of the Petition to each exporter named in the Petition, as provided under 19 CFR 351.203(c)(2).

ITC Notification

Commerce will notify the ITC of our initiation, as required by section 732(d) of the Act.

Preliminary Determination by the ITC

The ITC will preliminarily determine, within 25 days after the date on which the ITC receives notice from Commerce of initiation of the investigation, whether there is a reasonable indication that imports of certain wooden fence components from China are materially injuring, or threatening material injury to, a U.S. industry.[43] A negative ITC determination will result in the investigation being terminated.[44] Otherwise, this LTFV investigation will proceed according to statutory and regulatory time limits.

Submission of Factual Information

Factual information is defined in 19 CFR 351.102(b)(21) as: (i) evidence submitted in response to questionnaires; (ii) evidence submitted in support of allegations; (iii) publicly available information to value factors under 19 CFR 351.408(c) or to measure the adequacy of remuneration under 19 CFR 351.511(a)(2); (iv) evidence placed on the record by Commerce; and (v) evidence other than factual information described in (i)–(iv). Section 351.301(b) of Commerce's regulations requires any party, when submitting factual information, to specify under which subsection of 19 CFR 351.102(b)(21) the information is being submitted [45] and, if the information is submitted to rebut, clarify, or correct factual information already on the record, to provide an explanation identifying the information already on the record that the factual information seeks to rebut, clarify, or correct.[46] Time limits for the submission of factual information are addressed in 19 CFR 351.301, which provides specific time limits based on the type of factual information being submitted. Interested parties should review the regulations prior to submitting factual information in this investigation.

Extensions of Time Limits

Parties may request an extension of time limits before the expiration of a time limit established under 19 CFR 351.301, or as otherwise specified by Commerce. In general, an extension request will be considered untimely if it is filed after the expiration of the time limit established under 19 CFR 351.301, or as otherwise specified by Commerce.[47] For submissions that are due from multiple parties simultaneously, an extension request will be considered untimely if it is filed after 10:00 a.m. ET on the due date. Under certain circumstances, Commerce may elect to specify a different time limit by which extension requests will be considered untimely for submissions which are due from multiple parties simultaneously. In such a case, we will inform parties in a letter or memorandum of the deadline (including a specified time) by which extension requests must be filed to be considered timely. An extension request must be made in a separate, standalone submission; under limited circumstances we will grant untimely filed requests for the extension of time limits, where we determine, based on 19 CFR 351.302, that extraordinary circumstances exist. Parties should review Commerce's regulations concerning the extension of time limits and the *Time Limits Final Rule* prior to submitting factual information in this investigation.[48]

Certification Requirements

Any party submitting factual information in an AD or CVD proceeding must certify to the accuracy and completeness of that information.[49] Parties must use the certification formats provided in 19 CFR 351.303(g).[50] Commerce intends to reject factual submissions if the submitting party does not comply with the applicable certification requirements.

Notification to Interested Parties

Interested parties must submit applications for disclosure under APO in accordance with 19 CFR 351.305. Parties wishing to participate in this investigation should ensure that they meet the requirements of 19 CFR 351.103(d) (*e.g.,* by filing the required letter of appearance). Note that Commerce has amended certain of its requirements pertaining to the service of documents in 19 CFR 351.303(f).[51]

This notice is issued and published pursuant to sections 732(c)(2) and 777(i) of the Act, and 19 CFR 351.203(c).

Dated: November 3, 2026.

Scot Fullerton,

Acting Deputy Assistant Secretary for Antidumping and Countervailing Duty Operations.

Appendix

Scope of the Investigation

The scope of this investigation includes certain wooden fence components (commonly referred to as pickets), finished and unfinished, whether assembled or unassembled. Wooden fence pickets included in this scope are made of one or more wood species, typically from Cryptomeria japonica (Japanese Cedar or Sugi), but can also be made from other wood species, including but not limited to Western Red Cedar, Redwood, Incense Cedar, Douglas Fir, Western Hemlock, Sitka Spruce, and Cunninghamia lanceolata (Chinese Fir). Wooden fence pickets are included within the scope of this investigation regardless of form or shape, including, but not limited to flat top (also known as square or square top), pointed, dog ear, gothic (including but not limited to French gothic, French gothic blunt point) and stockade.

Generally, assembled wooden fence pickets contain at least one fence picket attached to one or more cross rails, framing lumber, or other fencing materials, and can include fully pre-assembled fence panels. Unassembled wooden fence pickets consist of one or more wooden fence pickets, not attached to any framing lumber, whether sold individually, bundled, or in a kit with framing lumber.

The finished products covered by the scope of this investigation have the following dimensions: a thickness of no more than 1 inch, a width of no more than 12 inches, and a length of at least 3 feet. The products covered by the scope are typically a length of 5 feet, 6 feet, or 8 feet when finished.

Wooden fence pickets are included within the scope of this investigation regardless of whether they have been painted, stained, pressure-treated, or otherwise coated or

treated. Subject merchandise also includes wooden fence pickets that have been further processed in a third country, including but not limited to trimming, cutting, notching, sanding, planing or any other processing that would not otherwise remove the merchandise from the scope of this investigation if performed in the country of manufacture of the in-scope product.

Excluded from the scope of this investigation are wooden fence pickets made exclusively of bamboo (including, but not limited to, Phyllostachys edulis, Bambusa textilis, and Bambusa oldhamii), Brazilian Pine (Paraná pine), or Southern Yellow Pine (including Shortleaf Pine (Pinus echinata), Slash Pine (Pinus ellioti), Longleaf Pine (Pinus palustris), or Loblolly Pine (Pinus taeda)).

Also excluded from the scope of this investigation are wood mouldings and millwork products covered by the antidumping and countervailing duty orders on wood mouldings and millwork products from the People's Republic of China. *See Wood Mouldings and Millwork Products from the People's Republic of China: Amended Final Antidumping Duty Determination and Antidumping Duty Order,* 86FR 9486 (February 16, 2021) (amended final antidumping duty determination and antidumping duty order); *Wood Mouldings and Millwork Products from the People's Republic of China: Countervailing Duty Order,* 86 FR 9484 (February 16, 2021) (countervailing duty order).

Imports of subject merchandise are typically classified under Harmonized Tariff Schedule of the United States (HTSUS) statistical numbers 4404.10.0040, 4407.19.0092, 4421.99.7020, and 4421.99.7040. Although the HTSUS subheadings are provided for convenience and customs purposes, the written description of the scope of this investigation is dispositive.

Seamless Carbon and Alloy Steel Standard, Line, and Pressure Pipe From Georgia and India: Initiation of Less-Than-Fair-Value Investigations

AGENCY: Enforcement and Compliance, International Trade Administration, Department of Commerce.

DATES: Applicable November 4, 2026.

FOR FURTHER INFORMATION CONTACT: Rebecca Janz at (202) 482–2972 (Georgia) and Aislin Salassi at (202) 482–1882 (India), AD/CVD Operations, Enforcement and Compliance, International Trade Administration, U.S. Department of Commerce, 1401 Constitution Avenue NW, Washington, DC 20230.

SUPPLEMENTARY INFORMATION:

The Petitions

On October 15, 2026, the U.S. Department of Commerce (Commerce) received antidumping duty (AD) petitions concerning imports of seamless carbon and alloy steel standard, line, and pressure pipe (seamless standard, line, and pressure pipe) from Georgia and India, filed in proper form on behalf of Tenaris USA (Tenaris), Vallourec Star LP (Vallourec), and the United Steel, Paper and Forestry, Rubber, Manufacturing, Energy, Allied Industrial and Service Workers International Union, AFL–CIO, CLC (USW) (collectively, the petitioners), domestic producers of seamless standard, line, and pressure pipe and a certified union, which represents workers engaged in the production of seamless standard, line, and pressure pipe in the United States.[1] The Petitions were accompanied by a countervailing duty (CVD) petition concerning imports of seamless standard, line, and pressure pipe from India.[2]

Between October 20 and 26, 2026, Commerce requested supplemental information pertaining to certain aspects of the Petitions in supplemental questionnaires.[3] Between October 22 and 28, 2026, the petitioners filed timely responses to these requests for additional information.[4]

In accordance with section 732(b) of the Tariff Act of 1930, as amended (the Act), the petitioners allege that imports of seamless standard, line, and pressure pipe from Georgia and India are being, or are likely to be, sold in the United States at less than fair value (LTFV) within the meaning of section 731 of the Act, and that imports of such products are materially injuring, or threatening material injury to, the seamless standard, line, and pressure pipe industry in the United States. Consistent with section 732(b)(1) of the Act, the Petitions were accompanied by information reasonably available to the petitioners supporting their allegations.

Commerce finds that the petitioners filed the Petitions on behalf of the domestic industry, because the petitioners are interested parties, as defined in sections 771(9)(C) and (D) of the Act.[5] Commerce also finds that the petitioners demonstrated sufficient industry support for the initiation of the requested LTFV investigations.[6]

Periods of Investigations (POI)

Because the Petitions were filed on October 15, 2026, pursuant to 19 CFR 351.204(b)(1), the POI for the India LTFV investigation is October 1, 2025, through September 30, 2026. Because Georgia is a non-market economy (NME) country, pursuant to 19 CFR 351.204(b)(1), the POI for the Georgia LTFV investigation is April 1, 2026, through September 30, 2026.

Scope of the Investigations

The product covered by these investigations is seamless standard, line, and pressure pipe from Georgia and India. For a full description of the scope of these investigations, *see* the appendix to this notice.

Comments on the Scope of the Investigations

On October 20 and 26, 2026, Commerce requested information and clarification from the petitioners regarding the proposed scope to ensure that the scope language in the Petitions is an accurate reflection of the products for which the domestic industry is seeking relief.[7] On October 22 and 28, 2026, the petitioners provided clarifications and revised the scope.[8] The description of merchandise covered by these investigations, as described in the appendix to this notice, reflects these clarifications.

As discussed in the *Preamble* to Commerce's regulations, we are setting aside a period for interested parties to raise issues regarding product coverage

[1] *See* Petitioners' Letter, ''Petitions for the Imposition of Antidumping and Countervailing Duties,'' dated October 15, 2026 (Petitions).

[3] *See* Commerce's Letters, ''Supplemental Questions,'' dated October 20, 2026 (First General Issues Questionnaire); Georgia AD Supplemental Questionnaire, dated October 20, 2026 (Georgia AD Questionnaire), and India AD Supplemental Questionnaire, dated October 20, 2026 (India AD Questionnaire); and ''Second Supplemental Questions,'' dated October 26, 2026 (Second General Issues Questionnaire).

[4] *See* Petitioners' Letters, ''Petitioners' Response to General Issues Supplemental Questions,'' dated October 22, 2026 (First General Issues Supplement); ''Responses to Supplemental Questions,'' dated October 22, 2026 (Georgia AD Supplement); ''Responses to Supplemental Questions,'' dated October 22, 2026 (India AD Supplement); ''Petitioners' Response to General Issues Second Supplemental Questions,'' dated October 28, 2026 (Second General Issues Supplement).

[5] Tenaris and Vallourec are interested parties under section 771(9)(C) of the Act. The USW is a certified union representing workers engaged in the production of seamless standard, line, and pressure pipe in the United States and therefore is an interested party under section 771(9)(D) of the Act.

(*i.e.,* scope).[9] Commerce will consider all scope comments received from interested parties and, if necessary, will consult with interested parties prior to the issuance of the preliminary determinations. If scope comments include factual information, all such factual information should be limited to public information.[10] Commerce requests that interested parties provide at the beginning of their scope comments a public executive summary for each comment or issue raised in their submission. Commerce further requests that interested parties limit their public executive summary of each comment or issue to no more than 450 words, not including citations. Commerce intends to use the public executive summaries as the basis of the comment summaries included in the analysis of scope comments. To facilitate preparation of its questionnaires, Commerce requests that scope comments be submitted by 5:00 p.m. Eastern Time (ET) on November 24, 2026, which is 20 calendar days from the signature date of this notice. Any rebuttal comments, which may include factual information, and should also be limited to public information, must be filed by 5:00 p.m. ET on December 4, 2026, which is 10 calendar days from the initial comment deadline.

Commerce requests that any factual information that parties consider relevant to the scope of these investigations be submitted during that period. However, if a party subsequently finds that additional factual information pertaining to the scope of the investigations may be relevant, the party must contact Commerce and request permission to submit the additional information. All scope comments must be filed simultaneously on the records of the concurrent LTFV and CVD investigations.

Filing Requirements

All submissions to Commerce must be filed electronically via Enforcement and Compliance's Antidumping Duty and Countervailing Duty Centralized Electronic Service System (ACCESS), unless an exception applies.[11] An electronically filed document must be received successfully in its entirety by the time and date it is due.

Comments on Product Characteristics

Commerce is providing interested parties an opportunity to comment on the appropriate physical characteristics of seamless standard, line, and pressure pipe to be reported in response to Commerce's AD questionnaires. This information will be used to identify the key physical characteristics of the subject merchandise in order to report the relevant factors of production (FOP) or cost of production (COP) accurately, as well as to develop appropriate product comparison criteria.

Interested parties may provide any information or comments that they feel are relevant to the development of an accurate list of physical characteristics. Specifically, they may provide comments as to which characteristics are appropriate to use as: (1) general product characteristics; and (2) product comparison criteria. We note that it is not always appropriate to use all product characteristics as product comparison criteria. We base product comparison criteria on meaningful commercial differences among products. In other words, although there may be some physical product characteristics utilized by manufacturers to describe seamless standard, line, and pressure pipe, it may be that only a select few product characteristics take into account commercially meaningful physical characteristics. In addition, interested parties may comment on the order in which the physical characteristics should be used in matching products. Generally, Commerce attempts to list the most important physical characteristics first and the least important characteristics last.

In order to consider the suggestions of interested parties in developing and issuing the AD questionnaires, all product characteristics comments must be filed by 5:00 p.m. ET on November 24, 2026, which is 20 calendar days from the signature date of this notice. Any rebuttal comments must be filed by 5:00 p.m. ET on December 4, 2026, which is 10 calendar days from the initial comment deadline. All comments and submissions to Commerce must be filed electronically using ACCESS, as explained above, on the record of the each of the LTFV investigations.

Determination of Industry Support for the Petitions

Section 732(b)(1) of the Act requires that a petition be filed on behalf of the domestic industry. Section 732(c)(4)(A) of the Act provides that a petition meets this requirement if the domestic producers or workers who support the petition account for: (i) at least 25 percent of the total production of the domestic like product; and (ii) more than 50 percent of the production of the domestic like product produced by that portion of the industry expressing support for, or opposition to, the petition. Moreover, section 732(c)(4)(D) of the Act provides that, if the petition does not establish support of domestic producers or workers accounting for more than 50 percent of the total production of the domestic like product, Commerce shall: (i) poll the industry or rely on other information in order to determine if there is support for the petition, as required by subparagraph (A); or (ii) determine industry support using a statistically valid sampling method to poll the ''industry.''

Section 771(4)(A) of the Act defines the ''industry'' as the producers as a whole of a domestic like product. Thus, to determine whether a petition has the requisite industry support, the statute directs Commerce to look to producers and workers who produce the domestic like product. The U.S. International Trade Commission (ITC), which is responsible for determining whether ''the domestic industry'' has been injured, must also determine what constitutes a domestic like product in order to define the industry. While both Commerce and the ITC apply the same statutory definition regarding the domestic like product,[12] they do so for different purposes and pursuant to a separate and distinct authority. In addition, Commerce's determination is subject to limitations of time and information. Although this may result in different definitions of the like product, such differences do not render the decision of either agency contrary to law.[13]

Section 771(10) of the Act defines the domestic like product as ''a product which is like, or in the absence of like, most similar in characteristics and uses with, the article subject to an investigation under this title.'' Thus, the reference point from which the domestic like product analysis begins is

[10] *See* 19 CFR 351.102(b)(21) (defining ''factual information'').

[11] *See Antidumping and Countervailing Duty Proceedings: Electronic Filing Procedures; Administrative Protective Order Procedures,* 76 FR 39263 (July 6, 2011); *see also Enforcement and Compliance; Change of Electronic Filing System Name,* 79 FR 69046 (November 20, 2014), for details of Commerce's electronic filing requirements, effective August 5, 2011. Information on using ACCESS can be found at *https://access.trade.gov/help* and a handbook can be found at *https://access.trade.gov/ACCESS%20Handbook%20on%20Electronic%20Filing%20Procedures_March2026.pdf.*

[12] *See* section 771(10) of the Act.

[13] *See USEC, Inc.* v. *United States,* 132 F.Supp.2d 1, 8 (CIT 2001) (citing *Algoma Steel Corp., Ltd.* v. *United States,* 688 F.Supp. 639, 644 (CIT 1988), *aff'd Algoma Steel Corp., Ltd.* v. *United States,* 865 F.2d 240 (Fed. Cir. 1989)).

''the article subject to an investigation'' (*i.e.,* the class or kind of merchandise to be investigated, which normally will be the scope as defined in the petition).

With regard to the domestic like product, the petitioners do not offer a definition of the domestic like product distinct from the scope of the investigations.[14] Based on our analysis of the information submitted on the record, we have determined that corrugated die-cut boxes, as defined in the scope, constitute a single domestic like product, and we have analyzed industry support in terms of that domestic like product.[15]

In determining whether the petitioners have standing under section 732(c)(4)(A) of the Act, we considered the industry support data contained in the Petitions with reference to the domestic like product as defined in the ''Scope of the Investigations,'' in the appendix to this notice. To establish industry support, the petitioners provided their own shipments of seamless standard, line, and pressure pipe in 2025 and compared this to the estimated total shipments of the domestic like product for the entire domestic industry.[16] Because total production data for the domestic like product for 2025 are not reasonably available to the petitioners, and the petitioners have established that shipments are a reasonable proxy for production data,[17] we relied on data provided by the petitioners for purposes of measuring industry support.[18]

Our review of the data provided in the Petitions, the First General Issues Supplement, and other information readily available to Commerce indicates that the petitioners have established industry support for the Petitions.[19] First, the Petitions established support from domestic producers (or workers) accounting for more than 50 percent of the total production of the domestic like product and, as such, Commerce is not required to take further action in order to evaluate industry support (*e.g.,* polling).[20] Second, the domestic producers (or workers) have met the statutory criteria for industry support under section 732(c)(4)(A)(i) of the Act because the domestic producers (or workers) who support the Petitions account for at least 25 percent of the total production of the domestic like product.[21] Finally, the domestic producers (or workers) have met the statutory criteria for industry support under section 732(c)(4)(A)(ii) of the Act because the domestic producers (or workers) who support the Petitions account for more than 50 percent of the production of the domestic like product produced by that portion of the industry expressing support for, or opposition to, the Petitions.[22] Accordingly, Commerce determines that the Petitions were filed on behalf of the domestic industry within the meaning of section 732(b)(1) of the Act.[23]

Allegations and Evidence of Material Injury and Causation

The petitioners allege that the U.S. industry producing the domestic like product is being materially injured, or is threatened with material injury, by reason of the imports of the subject merchandise sold at LTFV. In addition, the petitioners allege that subject imports exceed the negligibility threshold provided for under section 771(24)(A) of the Act.[24]

The petitioners contend that the industry's injured condition is illustrated by a significant increase in the volume of subject imports; underselling and price depression and/or suppression; negative impact on financial performance; and declines in production, U.S. shipments, and employment variables.[25] We assessed the allegations and supporting evidence regarding material injury, threat of material injury, causation, cumulation, as well as negligibility, and we have determined that these allegations are properly supported by adequate evidence, and meet the statutory requirements for initiation.[26]

Allegations of Sales at LTFV

The following is a description of the allegations of sales at LTFV upon which Commerce based its decision to initiate LTFV investigations of imports of seamless standard, line, and pressure pipe from Georgia and India. The sources of data for the deductions and adjustments relating to U.S. price and normal value (NV) are discussed in greater detail in the Georgia AD Initiation Checklist and India AD Initiation Checklist.

U.S. Price

For Georgia and India, the petitioners based export price (EP) on POI average unit values derived from official import statistics for imports of seamless standard, line, and pressure pipe from each of the respective countries.[27] For each country, the petitioners made certain adjustments to U.S. price to calculate a net ex-factory U.S. price, where applicable.

Normal Value [28]

For India, the petitioners based NV on home market pricing information they obtained for seamless standard, line, and pressure pipe produced in and sold, or offered for sale, in India during the POI.[29] The petitioners provided information indicating that the prices for seamless standard, line, and pressure pipe sold or offered for sale in India were below the COP. Therefore, for India, the petitioners calculated NV based on CV. For further discussion of CV, *see* the section ''Normal Value Based on Constructed Value.''

Commerce considers Georgia to be an NME country.[30] In accordance with section 771(18)(C)(i) of the Act, any determination that a foreign country is

[14] For a discussion of the domestic like product analysis as applied to these cases and information regarding industry support, *see* Checklists, ''Antidumping Duty Investigation Initiation Checklists: Seamless Carbon and Alloy Steel Standard, Line, and Pressure Pipe from Georgia and India,'' dated concurrently with, and hereby adopted by, this notice (Country-Specific AD Initiation Checklists), at Attachment II, Analysis of Industry Support for the Antidumping and Countervailing Duty Petitions Covering Seamless Carbon and Alloy Steel Standard, Line, and Pressure Pipe from Georgia and India (Attachment II). These checklists are on file electronically via ACCESS.

[15] For further discussion, *see* Attachment II of the Country-Specific AD Initiation Checklists.

[24] For further discussion, *see* Country-Specific AD Initiation Checklists at Attachment III, Analysis of Allegations and Evidence of Material Injury and Causation for the Antidumping and Countervailing Duty Petitions Covering Seamless Carbon and Alloy Steel Standard, Line, and Pressure Pipe from Georgia and India.

[25] *Id.*

[26] *Id.*

[27] *Id.*

[28] In accordance with section 773(b)(2) of the Act, for the India investigation, Commerce will request information necessary to calculate the constructed value (CV) and COP to determine whether there are reasonable grounds to believe or suspect that sales of the foreign like product have been made at prices that represent less than the COP of the product.

[29] *See* India AD Initiation Checklist.

[30] Georgia, formerly part of the Union of Soviet Socialist Republics (USSR), assumed the NME status of the USSR upon the dissolution of the USSR, and, at that time, Commerce explained that such status would remain in effect until revoked. *See Preliminary Determinations of Sales at less Than Fair Value: Uranium from Kazakhstan, Kyrgyzstan, Russia, Tajikistan, Ukraine and Uzbekistan; and Preliminary Determinations of Sales at Not Less Than Fair Value: Uranium from Armenia, Azerbaijan, Byelarus, Georgia, Moldova and Turkmenistan,* 57 FR 23380, 23383 (June 3, 1992). To date, Commerce has not revoked the NME status of Georgia.

an NME country shall remain in effect until revoked by Commerce. Therefore, we continue to treat Georgia as an NME country for purposes of the initiation of the LTFV investigation. Accordingly, we base NV in Georgia on FOPs valued in surrogate market economy countries in accordance with section 773(C) of the Act.

The petitioners claim that Brazil, Colombia, and Malaysia are appropriate surrogate countries for Georgia because they are market economy countries that are at a level of economic development comparable to that of Georgia and are significant producers of comparable merchandise.[31] The petitioners provided publicly available information from Brazil, Colombia, and Malaysia to value all FOPs. Based on the information provided by the petitioners, we believe it is appropriate to use Brazil, Colombia, and Malaysia as surrogate countries for Georgia to value all FOPs for initiation purposes.

Interested parties will have the opportunity to submit comments regarding surrogate country selection and, pursuant to 19 CFR 351.301(c)(3)(i), will be provided an opportunity to submit publicly available information to value FOPs within 30 days before the scheduled date of the preliminary determination.

Factors of Production

Because information regarding the volume of inputs consumed by Brazilian, Colombian, and Malaysian producers/exporters were not reasonably available, the petitioners used a U.S. producer's production experience and product-specific consumption rates as a surrogate to value the Georgia manufacturer's FOPs.[32] Additionally, for Georgia, the petitioners calculated factory overhead, selling, general, and administrative (SG&A) expenses, and profit based on the experiences of Brazilian, Colombian, and Malaysian producers of comparable merchandise.[33]

Normal Value Based on Constructed Value

As noted above, the petitioners provided information indicating that the prices for seamless standard, line, and pressure pipe sold or offered for sale in India were below the COP. Therefore, the petitioners calculated NV based on CV.[34]

Pursuant to section 773(e) of the Act, the petitioners calculated CV as the sum of the cost of manufacturing, SG&A expenses, financial expenses, and profit.[35] In calculating the cost of manufacturing, the petitioners relied on a U.S. producer's production experience and input consumption rates for seamless standard, line, and pressure pipe, valued using publicly available information applicable to India.[36] In calculating SG&A expenses, financial expenses, and profit ratios, the petitioners relied on the fiscal year 2025–26 financial statements of a producer of comparable merchandise domiciled in India.

Fair Value Comparisons

Based on the data provided by the petitioners, there is reason to believe that imports of seamless standard, line, and pressure pipe from Georgia and India, are being, or are likely to be, sold in the United States at LTFV. Based on comparisons of EP to NV in accordance with sections 772 and 773 of the Act, the estimated dumping margins for seamless standard, line, and pressure pipe for each of the countries covered by this initiation are as follows: (1) Georgia (Brazil Surrogate)—173.72 to 188.52 percent; Georgia (Colombia Surrogate)—113.87 to 133.00 percent; Georgia (Malaysia Surrogate)—277.69 to 286.29 percent; and (2) India—41.03 to 63.57 percent.[37]

Initiation of LTFV Investigations

Based upon the examination of the Petitions and supplemental responses, we find that they meet the requirements of section 732 of the Act. Therefore, we are initiating LTFV investigations to determine whether imports of seamless standard, line, and pressure pipe from Georgia and India are being, or are likely to be, sold in the United States at LTFV. In accordance with section 733(b)(1)(A) of the Act and 19 CFR 351.205(b)(1), unless postponed, we will make our preliminary determinations no later than 140 days after the date of this initiation.

Respondent Selection

Georgia

In the Petitions, the petitioners identified three companies in Georgia as producers and/or exporters of seamless standard, line, and pressure pipe.[38] Our standard practice in an AD investigation involving an NME country is to select respondents based on quantity and value (Q&V) questionnaires in cases where Commerce has determined that the number of companies is large, and it cannot individually examine each company based upon its resources. Therefore, considering the number of producers and/or exporters identified in the Petitions, Commerce will solicit Q&V information that can serve as a basis for selecting exporters for individual examination in the event that Commerce determines that the number is large and decides to limit the number of respondents individually examined pursuant to section 777A(c)(2) of the Act. Given the number of producers and/or exporters identified in the Petitions, Commerce has determined that it will issue Q&V questionnaires to each potential respondent for which there is complete address information on the record.

Commerce will post the Q&V questionnaire along with filing instructions on Commerce's website at *https://www.trade.gov/ec-adcvd-qv-questionnaire.* Producers/exporters of seamless standard, line, and pressure pipe from Georgia that do not receive Q&V questionnaires may still submit a response to the Q&V questionnaire and can obtain a copy of the Q&V questionnaire from Commerce's website. Responses to the Q&V questionnaire must be submitted by the relevant Georgian producers/exporters no later than 5:00 p.m. ET on November 18, 2026, which is two weeks from the signature date of this notice. All Q&V questionnaire responses must be filed electronically via ACCESS. An electronically filed document must be received successfully, in its entirety, by ACCESS no later than 5:00 p.m. ET on the deadline noted above.

Interested parties must submit applications for disclosure under administrative protective order (APO) in accordance with 19 CFR 351.305(b). Instructions for filing such applications may be found on Commerce's website at *https://www.trade.gov/administrative-protective-orders.*

India

In the Petitions, the petitioners identified 16 companies in India as producers and/or exporters of seamless standard, line, and pressure pipe.[39] In the event Commerce determines that the number of companies is large, and it cannot individually examine each company based on Commerce's resources, where appropriate, Commerce intends to select mandatory respondents based on Q&V questionnaires issued to potential

[31] *See* Georgia AD Initiation Checklist.

[39] *See* Petitions at Volume I (page 15 and Exhibit I–14).

respondents. Following the standard practice in AD investigations involving market economy countries, Commerce would normally select respondents based on U.S. Customs and Border Protection (CBP) entry data for imports under the appropriate HTSUS subheadings listed in the scope of the investigations. However, for these investigations, some of the main HTSUS subheadings under which the subject merchandise would enter (7304.19.1020, 7304.19.1030, 7304.19.1045, 7304.19.1060, 7304.19.5020, 7304.19.5050, 7304.31.6050, 7304.39.0016, 7304.39.0020, 7304.39.0024, 7304.39.0028, 7304.39.0032, 7304.39.0036, 7304.39.0040, 7304.39.0044, 7304.39.0048, 7304.39.0052, 7304.39.0056, 7304.39.0062, 7304.39.0068, 7304.39.0072, 7304.51.5005, 7304.51.5060, 7304.59.6000) are basket categories under which non-subject merchandise may also enter. Therefore, instead of relying on CBP entry data in selecting respondents, we intend to issue Q&V questionnaires to each potential respondent for which there is complete address information on the record.

Commerce will post the Q&V questionnaire along with filing instructions on Commerce's website at *https://www.trade.gov/ec-adcvd-qv-questionnaire.* Producers/exporters of seamless standard, line, and pressure pipe from India that do not receive Q&V questionnaires may still submit a response to the Q&V questionnaire and can obtain a copy of the Q&V questionnaire from Commerce's website. Responses to the Q&V questionnaire must be submitted by the relevant Indian producers/exporters no later than 5:00 p.m. ET on November 18, 2026, which is two weeks from the signature date of this notice. All Q&V questionnaire responses must be filed electronically via ACCESS. An electronically filed document must be received successfully, in its entirety, by ACCESS no later than 5:00 p.m. ET on the deadline noted above.

Interested parties must submit applications for disclosure under APO in accordance with 19 CFR 351.305(b). Instructions for filing such applications may be found on Commerce's website at *https://www.trade.gov/administrative-protective-orders.*

Separate Rates

In order to obtain separate rate status in an NME investigation, exporters and producers must submit a separate rate application. The specific requirements for submitting a separate rate application in an NME investigation are outlined in detail in the application itself, which is available on Commerce's website at *https://www.trade.gov/non-market-economy-separate-rate-applications-and-certifications.* Note that Commerce recently promulgated new regulations pertaining to separate rates, including the separate rate application deadline and eligibility for separate rate status, in 19 CFR 351.108.[40] Pursuant to 19 CFR 351.108(d)(1), the separate rate application will be due 21 days after publication of this initiation notice.[41] Exporters and producers must file a timely separate rate application if they want to be considered for individual examination. In addition, pursuant to 19 CFR 351.108(e), exporters and producers who submit a separate rate application and have been selected as mandatory respondents will be eligible for consideration for separate rate status only if they fully respond to all parts of Commerce's AD questionnaire and participate in the LTFV proceeding as mandatory respondents.[42] Commerce requires that companies from Georgia submit a response to the Q&V questionnaire and a separate rate application by the respective deadlines to receive consideration for separate rate status. Companies not filing a timely Q&V questionnaire response will not receive separate rate consideration.

Use of Combination Rates

Commerce will calculate combination rates for certain respondents that are eligible for a separate rate in an NME investigation. The Separate Rates and Combination Rates Bulletin states:

> {w}hile continuing the practice of assigning separate rates only to exporters, all separate rates that {Commerce} will now assign in its NME investigation will be specific to those producers that supplied the exporter during the period of investigation. Note, however, that one rate is calculated for the exporter and all of the producers which supplied subject merchandise to it during the period of investigation. This practice applies both to mandatory respondents receiving an individually calculated separate rate as well as the pool of non-investigated firms receiving the {weighted average} of the individually calculated rates. This practice is referred to as the application of ''combination rates'' because such rates apply to specific combinations of exporters and one or more producers. The cash-deposit rate assigned to an exporter will apply only to merchandise both exported by the firm in question and produced by a firm that supplied the exporter during the period of investigation.[43]

Distribution of Copies of the Petitions

In accordance with section 732(b)(3)(A) of the Act and 19 CFR 351.202(f), copies of the public versions of the Petitions have been provided to the Governments of Georgia and India via ACCESS. To the extent practicable, we will attempt to provide copies of the public versions of the Petitions to each exporter named in the Petitions, as provided under 19 CFR 351.203(c)(2).

ITC Notification

Commerce will notify the ITC of our initiation, as required by section 732(d) of the Act.

Preliminary Determinations by the ITC

The ITC will preliminarily determine, within 45 days after the date on which the Petitions were filed, whether there is a reasonable indication that imports of seamless standard, line, and pressure pipe from Georgia and/or India are materially injuring, or threatening material injury to, a U.S. industry.[44] A negative ITC determination for any country will result in the investigation being terminated with respect to that country.[45] Otherwise, these LTFV investigations will proceed according to statutory and regulatory time limits.

Submission of Factual Information

Factual information is defined in 19 CFR 351.102(b)(21) as: (i) evidence submitted in response to questionnaires; (ii) evidence submitted in support of allegations; (iii) publicly available information to value factors under 19 CFR 351.408(c) or to measure the adequacy of remuneration under 19 CFR 351.511(a)(2); (iv) evidence placed on the record by Commerce; and (v) evidence other than factual information described in (i)–(iv). Section 351.301(b) of Commerce's regulations requires any party, when submitting factual information, to specify under which subsection of 19 CFR 351.102(b)(21) the information is being submitted [46] and, if the information is submitted to rebut, clarify, or correct factual information already on the record, to provide an explanation identifying the information already on the record that the factual

[41] *See* 19 CFR 351.108(d)(1).

[42] *See* 19 CFR 351.108(e).

[43] *See* Enforcement and Compliance's Policy Bulletin No. 05.1, regarding, ''Separate-Rates Practice and Application of Combination Rates in Antidumping Investigation involving NME Countries,'' (April 5, 2005), at 6 (emphasis added), available on Commerce's website at *https://www.trade.gov/enforcement-and-compliance-policy-bulletins-0.*

[44] *See* section 733(a) of the Act.

[45] *Id.*

[46] *See* 19 CFR 351.301(b).

information seeks to rebut, clarify, or correct.[47] Time limits for the submission of factual information are addressed in 19 CFR 351.301, which provides specific time limits based on the type of factual information being submitted. Interested parties should review the regulations prior to submitting factual information in these investigations.

Particular Market Situation Allegation

Section 773(e) of the Act addresses the concept of particular market situation (PMS) for purposes of CV, stating that ''if a particular market situation exists such that the cost of materials and fabrication or other processing of any kind does not accurately reflect the cost of production in the ordinary course of trade, the administering authority may use another calculation methodology under this subtitle or any other calculation methodology.'' When an interested party submits a PMS allegation pursuant to section 773(e) of the Act (*i.e.,* a cost-based PMS allegation), the submission must be filed in accordance with the requirements of 19 CFR 351.416(b), and Commerce will respond to such a submission consistent with 19 CFR 351.301(c)(2)(v). If Commerce finds that a cost-based PMS exists under section 773(e) of the Act, then it will modify its dumping calculations appropriately.

Neither section 773(e) of the Act, nor 19 CFR 351.301(c)(2)(v), sets a deadline for the submission of cost-based PMS allegations and supporting factual information. However, in order to administer section 773(e) of the Act, Commerce must receive PMS allegations and supporting factual information with enough time to consider the submission. Thus, should an interested party wish to submit a cost-based PMS allegation and supporting new factual information pursuant to section 773(e) of the Act, it must do so no later than 20 days after submission of a respondent's initial section D questionnaire response

We note that a PMS allegation filed pursuant to sections 773(a)(1)(B)(ii)(III) or 773(a)(1)(C)(iii) of the Act (*i.e.,* a sales-based PMS allegation) must be filed within 10 days of submission of a respondent's initial section B questionnaire response, in accordance with 19 CFR 351.301(c)(2)(i) and 19 CFR 351.404(c)(2).

Extensions of Time Limits

Parties may request an extension of time limits before the expiration of a time limit established under 19 CFR 351.301, or as otherwise specified by Commerce. In general, an extension request will be considered untimely if it is filed after the expiration of the time limit established under 19 CFR 351.301, or as otherwise specified by Commerce.[48] For submissions that are due from multiple parties simultaneously, an extension request will be considered untimely if it is filed after 10:00 a.m. ET on the due date. Under certain circumstances, Commerce may elect to specify a different time limit by which extension requests will be considered untimely for submissions which are due from multiple parties simultaneously. In such a case, we will inform parties in a letter or memorandum of the deadline (including a specified time) by which extension requests must be filed to be considered timely. An extension request must be made in a separate, standalone submission; under limited circumstances we will grant untimely filed requests for the extension of time limits, where we determine, based on 19 CFR 351.302, that extraordinary circumstances exist. Parties should review Commerce's regulations concerning the extension of time limits and the *Time Limits Final Rule* prior to submitting factual information in these investigations.[49]

Certification Requirements

Any party submitting factual information in an AD or CVD proceeding must certify to the accuracy and completeness of that information.[50] Parties must use the certification formats provided in 19 CFR 351.303(g).[51] Commerce intends to reject factual submissions if the submitting party does not comply with the applicable certification requirements.

Notification to Interested Parties

Interested parties must submit applications for disclosure under APO in accordance with 19 CFR 351.305. Parties wishing to participate in these investigations should ensure that they meet the requirements of 19 CFR 351.103(d) (*e.g.,* by filing the required letter of appearance). Note that Commerce has amended certain of its requirements pertaining to the service of documents in 19 CFR 351.303(f).[52]

This notice is issued and published pursuant to sections 732(c)(2) and 777(i) of the Act, and 19 CFR 351.203(c).

Dated: November 4, 2026.

Scot Fullerton,

Acting Deputy Assistant Secretary for Antidumping and Countervailing Duty Operations.

Appendix

Scope of the Investigations

The merchandise covered by these investigations is seamless carbon and alloy steel (other than stainless steel) pipes and redraw hollows, less than or equal to 16 inches (406.4 mm) in nominal outside diameter, regardless of wall-thickness, manufacturing process (*e.g.,* hot finished or cold-drawn), end finish (*e.g.,* plain end, beveled end, upset end, threaded, or threaded and coupled), or surface finish (*e.g.,* bare, lacquered or coated). Redraw hollows are any unfinished carbon or alloy steel (other than stainless steel) pipe or ''hollow profiles'' suitable for cold finishing operations, such as cold drawing, to meet the American Society for Testing and Materials (ASTM) or American Petroleum Institute (API) specifications referenced below, or comparable specifications. Specifically included within the scope are seamless carbon and alloy steel (other than stainless steel) standard, line, and pressure pipes produced to the ASTM A–53, ASTM A–106, ASTM A–333, ASTM A–334, ASTM A–589, ASTM A–795, ASTM A–1024, and the API 5L specifications, or comparable specifications, and meeting the physical parameters described above, regardless of application, with the exception of the exclusions discussed below.

Specifically excluded from the scope of these investigations are: (1) all pipes meeting aerospace, hydraulic, and bearing tubing specifications, including: (a) aerospace tubing produced to SAE Aerospace Material Specifications (AMS) 6360, 6361, and 6362; (b) hydraulic tubing produced to ASTM A–822, SAE J524, and EN 10305–4 specifications; and (c) bearing tubing produced to the SAE AMS 6440 specification, including bearing tubing manufactured from steel meeting the chemical and metallurgical requirements of ASTM A–295; (2) all pipes meeting the chemical requirements of ASTM A–335, whether finished or unfinished; (3) unattached couplings; (4) all mechanical, boiler, condenser and heat exchange tubing, except when such products conform to the dimensional requirements, *i.e.,* outside diameter and wall thickness, of ASTM A–53, ASTM A–106 or API 5L specifications; (5) oil country tubular goods consisting of drill pipe, casing, tubing, and coupling stock; and

International Trade Administration

[A–533–942, A–560–846, A–553–003]

Crystalline Silicon Photovoltaic Cells, Whether or Not Assembled Into Modules, From the Lao People's Democratic Republic: Amended Final Determination of Sales at Less Than Fair Value; Crystalline Silicon Photovoltaic Cells, Whether or Not Assembled Into Modules, From India, Indonesia, and the Lao People's Democratic Republic: Antidumping Duty Orders

AGENCY: Enforcement and Compliance, International Trade Administration, Department of Commerce.

SUMMARY: Based on affirmative final determinations by the U.S. Department of Commerce (Commerce) and the U.S. International Trade Commission (ITC), Commerce is issuing antidumping duty (AD) orders on crystalline silicon photovoltaic cells, whether or not assembled into modules (solar cells), from India, Indonesia, and the Lao People's Democratic Republic (Laos). In addition, Commerce is amending its final determination with respect to solar cells from Laos to correct a ministerial error.

DATES: Applicable November 9, 2026.

FOR FURTHER INFORMATION CONTACT: Myrna Lobo (202) 482–2371 (Indonesia), Jonathan Schueler (202) 482–9175 (India), and Lilit Astvatsatrian at (202) 482–6412 (Laos), AD/CVD Operations, Offices VII, VIII, and IX, respectively, Enforcement and Compliance, International Trade Administration, U.S. Department of Commerce, 1401 Constitution Avenue NW, Washington, DC 20230.

SUPPLEMENTARY INFORMATION:

Background

In accordance with sections 735(d) and 777(i) of the Tariff Act of 1930, as amended (the Act), on September 16, 2026, Commerce published its affirmative final determinations in the less-than-fair-value (LTFV) investigations of solar cells from India, Indonesia, and Laos.[1] On September 16, 2026, the Alliance for American Solar Manufacturing and Trade (the petitioner) timely alleged that Commerce made ministerial errors in the *Laos Final Determination*.[2] Section 351.224(f) of Commerce's regulations define ministerial errors as errors in addition, subtraction, or other arithmetic function, clerical errors resulting from inaccurate copying, duplication, or the like, and any other type of unintentional error which Commerce considers ministerial. We reviewed the allegations and determined that we made a ministerial error in the *Laos Final Determination*. *See* ''Amendment to the Laos Final Determination'' section below for further discussion.

On November 2, 2026, pursuant to section 735(d) of the Act, the ITC notified Commerce of its final affirmative determinations that an industry in the United States is materially injured by reason of LTFV imports of solar cells from India, Indonesia, and Laos within the meaning of section 735(b)(1)(A)(i) of the Act.[3]

Scope of the Orders

The merchandise covered by these orders is solar cells from India, Indonesia, and Laos. For a complete description of the scope of the orders, *see* the appendix to this notice.

Amendment to the Laos Final Determination

On September 16, 2026, the petitioner timely submitted ministerial error allegations in the *Laos Final Determination*.[4] Commerce reviewed the record and, on October 13, 2026, agreed that one of the petitioner's alleged errors constituted a ministerial error within the meaning of section 735(e) of the Act and 19 CFR 351.224(f).[5] Specifically, Commerce determined that it had erred in removing section 201 duties from reported U.S. duties for all of Solarspace Technology (Laos) Sole Co., Ltd.'s (Solarspace) U.S. sales, instead of limiting the deduction to those U.S. sales which incurred these duties, as the petitioner alleged; however, Commerce also determined that, because the petitioner's allegation regarding the exclusion of Solarspace's U.S. sales through Trina Solar Science & Technology (Thailand) Company Limited and Trina Solar Energy Development Pte. Ltd. in the margin calculation pertained to a methodological decision, it was not a ministerial error.[6] Pursuant to 19 CFR 351.224(e), Commerce is amending the *Laos Final Determination* to reflect the correction of the ministerial error, as described in the Ministerial Error Memorandum.[7] Correcting this error changes Solarspace's final dumping margin. In addition, in the *Laos Final Determination,* because we based the rate for the non-examined separate rate respondents and the Laos-wide entity on the dumping margin calculated for Solarspace,[8] we have also revised the rate assigned to these entities. The amended weighted-average dumping margins for Laos are listed in the ''Estimated Weighted-Average Dumping Margins'' section, below.

Antidumping Duty Orders

As stated above, based on the ITC's affirmative final determinations that an

[5] *See* Memorandum, ''Less-Than-Fair-Value Investigation of Crystalline Silicon Photovoltaic Cells, Whether or Not Assembled into Modules, from the Lao People's Democratic Republic: Analysis of Ministerial Error Allegations,'' dated October 13, 2026 (Ministerial Error Memorandum).

[6] *Id.*

[7] *Id.*

[8] *See Laos Final Determination,* 91 FR at 58634–35.

industry in the United States is materially injured within the meaning of section 735(b)(1)(A)(i) of the Act by reason of LTFV imports of solar cells from India, Indonesia, and Laos,[9] in accordance with section 735(c)(2) of the Act, Commerce is issuing these AD orders. Because the ITC determined that imports of solar cells from India, Indonesia, and Laos are materially injuring a U.S. industry, unliquidated entries of subject merchandise from India, Indonesia, and Laos entered, or withdrawn from warehouse, for consumption, are subject to the assessment of antidumping duties.

Therefore, in accordance with section 736(a)(1) of the Act, Commerce intends to direct U.S. Customs and Border Protection (CBP) to assess, upon further instructions by Commerce, antidumping duties equal to the amount by which the normal value of the merchandise exceeds the export price (or constructed export price) of the merchandise, on all relevant entries of solar cells from India, Indonesia, and Laos, which are entered, or withdrawn from warehouse, for consumption, on or after April 28, 2026, the date of publication of the *Preliminary Determinations,*[10] but will not include entries after the expiration of the provisional measures period and before publication of the ITC's final injury determinations under section 735(d) of the Act, as further described in the ''Provisional Measures'' section of this notice.

Continuation of Suspension of Liquidation and Cash Deposits

Except as noted in the ''Provisional Measures'' section of this notice, in accordance with section 735(c)(1)(B) of the Act, Commerce intends to instruct CBP to continue to suspend liquidation on all relevant entries of solar cells from India, Indonesia, and Laos. These instructions suspending liquidation will remain in effect until further notice.

Commerce will also instruct CBP to require cash deposits equal to the estimated weighted-average dumping margins indicated in the tables below. Effective on the date of publication in the **Federal Register** of the notice of the ITC's final affirmative injury determinations, CBP will require, at the same time as importers would normally deposit estimated customs duties on subject merchandise, a cash deposit equal to the rates listed in the table below.

Estimated Weighted-Average Dumping Margins

The estimated weighted-average dumping margins are as follows:

INDIA

Exporter/producer	Weighted-average dumping margin (percent)	Cash deposit rate (adjusted for subsidy offsets) (percent)
Mundra Solar PV Limited	123.04 *	107.17
Mundra Solar Energy Limited	123.04 *	107.17
Kowa Company Ltd	123.04 *	107.17
Premier Energies Photovoltaic Private Limited	123.04 *	107.17
All Others	123.04	107.17

* Rate based on facts available with adverse inferences.

INDONESIA

Exporter/producer	Weighted-average dumping margin (percent)
PT Blue Sky Solar Indonesia	94.36 *
PT REC Solar Energy Indonesia	94.36 *
All Others	94.36

Laos-Wide Entity		65.76	65.36

Provisional Measures

Section 733(d) of the Act states that suspension of liquidation pursuant to an affirmative preliminary determination may not remain in effect for more than four months, except where exporters representing a significant proportion of exports of the subject merchandise request that Commerce extend the four-month period to no more than six months. At the request of exporters that account for a significant proportion of exports of solar cells from India, Indonesia, and Laos, Commerce extended the four-month period to six months in each of these investigations.[11]

The extended provisional measures period, beginning on the date of publication of the *Preliminary Determinations* on April 28, 2026,[12] ended on October 24, 2026. Therefore, in accordance with section 736(a)(1) of the Act and our practice,[13] Commerce will instruct CBP to terminate the suspension of liquidation and to liquidate, without regard to antidumping duties, unliquidated entries of solar cells from India, Indonesia, and Laos entered, or withdrawn from warehouse, for consumption on or after October 25, 2026, the date on which the provisional measures expired, until and through the day preceding the date of publication of the ITC's final affirmative injury determinations in the **Federal Register**. Suspension of liquidation and the collection of cash deposits will resume on the date of publication of the ITC's final determinations in the **Federal Register**.

Establishment of the Annual Inquiry Service Lists

On September 20, 2021, Commerce published the *Final Rule* in the **Federal Register**.[14] On September 27, 2021, Commerce also published the *Procedural Guidance* in the **Federal Register**.[15] The *Final Rule* and *Procedural Guidance* provide that Commerce will maintain an annual inquiry service list for each order or suspended investigation, and any interested party submitting a scope ruling application or request for circumvention inquiry shall serve a copy of the application or request on the persons on the annual inquiry service list for that order, as well as any companion order covering the same merchandise from the same country of origin.

In accordance with the *Procedural Guidance,* for orders published in the **Federal Register** after November 4, 2021, Commerce will create an annual inquiry service list segment in Commerce's online e-filing and document management system, Antidumping and Countervailing Duty Electronic Service System (ACCESS), available at *https://access.trade.gov,* within five business days of publication of the notice of the order. Each annual inquiry service list will be saved in ACCESS, under each case number, and under a specific segment type called ''AISL-Annual Inquiry Service List.'' [16]

Interested parties who wish to be added to the annual inquiry service list for an order must submit an entry of appearance to the annual inquiry service list segment for the order in ACCESS within 30 days after the date of publication of the order. For ease of administration, Commerce requests that law firms with more than one attorney representing interested parties in an order designate a lead attorney to be included on the annual inquiry service list. Commerce will finalize the annual inquiry service list within five business days thereafter. As mentioned in the *Procedural Guidance,*[17] the new annual inquiry service list will be in place until the following year, when the *Opportunity Notice* for the anniversary month of the order is published.

Commerce may update an annual inquiry service list at any time as needed based on interested parties' amendments to their entries of appearance to remove or otherwise modify their list of members and representatives, or to update contact information. Changes or announcements pertaining to these procedures will be posted to the ACCESS website at *https://access.trade.gov.*

Special Instructions for the Petitioner and Foreign Governments

In the *Final Rule,* Commerce stated that, ''after an initial request and placement on the annual inquiry service list, both petitioners and foreign governments will automatically be placed on the annual inquiry service list in the years that follow.''[18] Accordingly, as stated above, the petitioner and foreign governments should submit their initial entry of appearance after publication of this notice in order to appear in the first annual inquiry service lists for these orders. Pursuant to 19 CFR 351.225(n)(3), the petitioner and foreign governments will not need to resubmit their entries of appearance each year to continue to be included on the annual inquiry service list. However, the petitioners and foreign governments are responsible for making amendments to their entries of appearance during the annual update to the annual inquiry service list in accordance with the procedures described above.

Notification to Interested Parties

This notice constitutes the AD orders with respect to solar cells from India, Indonesia, and Laos pursuant to section 736(a) of the Act. Interested parties can

The amended Laos final determination and these AD orders are published in accordance with sections 735(e) and 736(a) of the Act, and 19 CFR 351.224(e) and 19 CFR 351.211(b).

Dated: November 4, 2026.

Scot Fullerton,

Acting Deputy Assistant Secretary for Antidumping and Countervailing Duty Operations.

Appendix

Scope of the Orders

The merchandise covered by these orders is crystalline silicon photovoltaic cells, and modules, laminates, and panels, consisting of crystalline silicon photovoltaic cells, whether or not partially or fully assembled into other products, including, but not limited to, modules, laminates, panels and building integrated materials.

These orders covers crystalline silicon photovoltaic cells of thickness equal to or greater than 20 micrometers, having a p/n junction formed by any means, whether or not the cell has undergone other processing, including, but not limited to, cleaning, etching, coating, and/or addition of materials (including, but not limited to, metallization and conductor patterns) to collect and forward the electricity that is generated by the cell.

Merchandise under consideration may be described at the time of importation as parts for final finished products that are assembled after importation, including, but not limited to, modules, laminates, panels, building-integrated modules, building integrated panels, or other finished goods kits. Such parts that otherwise meet the definition of merchandise under consideration are included in the scope of the orders.

Excluded from the scope of these orders are thin film photovoltaic products produced from amorphous silicon (a-Si), cadmium telluride (CdTe), or copper indium gallium selenide (CIGS).

Also excluded from the scope of these orders are crystalline silicon photovoltaic cells, not exceeding 10,000 mm^2 in surface area, that are permanently integrated into a consumer good whose function is other than power generation and that consumes the electricity generated by the integrated crystalline silicon photovoltaic cell. Where more than one cell is permanently integrated into a consumer good, the surface area for purposes of this exclusion shall be the total combined surface area of all cells that are integrated into the consumer good.

Additionally, excluded from the scope of these orders are panels with surface area from 3,450 mm^2 to 33,782 mm^2 with one black wire and one red wire (each of type 22 AWG or 24 AWG not more than 206 mm in length when measured from panel extrusion), and not exceeding 2.9 volts, 1.1 amps, and 3.19 watts. For the purposes of this exclusion, no panel shall contain an internal battery or external computer peripheral ports.

Also excluded from the scope of these orders are:

(1) Off grid CSPV panels in rigid form with a glass cover, with the following characteristics: (A) a total power output of 100 watts or less per panel; (B) a maximum surface area of 8,000 cm^2 per panel; (C) do not include a built-in inverter; (D) must include a permanently connected wire that terminates in either an 8 mm male barrel connector, or a two-port rectangular connector with two pins in square housings of different colors; (E) must include visible parallel grid collector metallic wire lines every 1–4 millimeters across each solar cell; and (F) must be in individual retail packaging (for purposes of this provision, retail packaging typically includes graphics, the product name, its description and/or features, and foam for transport); and

(2) Off grid CSPV panels without a glass cover, with the following characteristics: (A) a total power output of 100 watts or less per panel; (B) a maximum surface area of 8,000 cm^2 per panel; (C) do not include a built-in inverter; (D) must include visible parallel grid collector metallic wire lines every 1–4 millimeters across each solar cell; and (E) each panel is (1) permanently integrated into a consumer good; (2) encased in a laminated material without stitching, or (3) has all of the following characteristics: (i) the panel is encased in sewn fabric with visible stitching, (ii) includes a mesh zippered storage pocket, and (iii) includes a permanently attached wire that terminates in a female USB–A connector.

In addition, the following CSPV panels are excluded from the scope of these orders: off-grid CSPV panels in rigid form with a glass cover, with each of the following physical characteristics, whether or not assembled into a fully completed off-grid hydropanel whose function is conversion of water vapor into liquid water: (A) a total power output of no more than 80 watts per panel; (B) a surface area of less than 5,000 square centimeters (cm^2) per panel; (C) do not include a built-in inverter; (D) do not have a frame around the edges of the panel; (E) include a clear glass back panel; and (F) must include a permanently connected wire that terminates in a twoport rectangular connector.

Additionally excluded from the scope of these orders are off-grid small portable crystalline silicon photovoltaic panels, with or without a glass cover, with the following characteristics: (1) a total power output of 200 watts or less per panel; (2) a maximum surface area of 16,000 cm^2 per panel; (3) no built-in inverter; (4) an integrated handle or a handle attached to the package for ease of carry; (5) one or more integrated kickstands for easy installation or angle adjustment; and (6) a wire of not less than 3 meters either permanently connected or attached to the package that terminates in an 8 mm diameter male barrel connector.

Also excluded from the scope of these orders are off-grid crystalline silicon photovoltaic panels in rigid form with a glass cover, with each of the following physical characteristics, whether or not assembled into a fully completed off-grid hydropanel whose function is conversion of water vapor into liquid water: (A) a total power output of no more than 180 watts per panel at 155 degrees Celsius; (B) a surface area of less than 16,000 square centimeters (cm^2) per panel; (C) include a keep-out area of approximately 1,200 cm^2 around the edges of the panel that does not contain solar cells; (D) do not include a built-in inverter; (E) do not have a frame around the edges of the panel; (F) include a clear glass back panel; (G) must include a permanently connected wire that terminates in a two-port rounded rectangular, sealed connector; (H) include a thermistor installed into the permanently connected wire before the twoport connector; and (I) include exposed positive and negative terminals at opposite ends of the panel, not enclosed in a junction box.

Further excluded from the scope of these orders are:

(1) Off grid rigid CSPV panels with a glass cover, with the following characteristics: (A) a total power output of 200 watts or less per panel, (B) a maximum surface area of 10,500 cm^2 per panel, (C) do not include a built-in inverter, (D) must include a permanently connected wire that terminates in waterproof connector with a cylindrical positive electrode and a rectangular negative electrode with the positive and negative electrodes having an interlocking structure, (E) must include visible parallel grid collector metallic wire lines every 1–4 millimeters across each solar cell, and (F) must be in individual retail packaging (for purposes of this provision, retail packaging typically includes graphics, the product name, its description and/or features); and

(2) Off-grid small portable crystalline silicon photovoltaic panels, with or without a glass cover, with the following characteristics: (A) a total power output of 200 watts or less per panel, (B) a maximum surface area of 16,000 cm^2 per panel, (C) no built-in inverter, (D) an integrated handle or a handle attached to the package for ease of carry, (E) one or more integrated kickstands for easy installation or angle adjustment, and (F) a wire either permanently connected or attached to the package terminates in waterproof connector with a cylindrical positive electrode and a rectangular negative electrode with the positive and negative electrodes having an interlocking structure.

Also excluded from the scope of these orders are:

(1) Off grid rigid CSPV panels with a glass cover, with the following characteristics: (A) a total power output of 200 watts or less per panel, (B) a maximum surface area of 10,500 cm^2 per panel, (C) do not include a built-in inverter, (D) must include a permanently connected wire that terminates in waterproof connector with a cylindrical positive electrode and a rectangular negative electrode with the positive and negative electrodes having an interlocking structure, (E) must include visible parallel grid collector metallic wire lines every 1–4 millimeters across each solar cell, and (F) must be in individual retail packaging (for purposes of this provision, retail packaging typically includes graphics, the product name, its description and/or features); and

(2) Small off-grid panels with glass cover, with the following characteristics: (A) surface

area from 3,450 mm² to 33,782 mm², (B) with one black wire and one red wire (each of type 22AWG or 28 AWG not more than 350 mm in length when measured from panel extrusion), (C) not exceeding 10 volts, (D) not exceeding 1.1 amps, (E) not exceeding 6 watts, and (F) for the purposes of this exclusion, no panel shall contain an internal battery or external computer peripheral ports.

Additionally excluded from the scope of these orders are:

(1) Off grid rigid CSPV panels with a glass cover, with the following characteristics: (A) a total power output of 175 watts or less per panel, (B) a maximum surface area of 9,000 cm2 per panel, (C) do not include a built-in inverter, (D) must include a permanently connected wire that terminates in waterproof connector with a cylindrical positive electrode and a rectangular negative electrode with the positive and negative electrodes having an interlocking structure; (E) must include visible parallel grid collector metallic wire lines every 1–4 millimeters across each solar cell, and (F) must be in individual retail packaging (for purposes of this provision, retail packaging typically includes graphics, the product name, its description and/or features); and

(2) Off grid CSPV panels without a glass cover, with the following characteristics, (A) a total power output of 220 watts or less per panel, (B) a maximum surface area of 16,000 cm² per panel, (C) do not include a built-in inverter, (D) must include visible parallel grid collector metallic wire lines every 1–4 millimeters across each solar cell, and (E) each panel is encased in a laminated material without stitching.

Also excluded from the scope of these orders are off-grid CSPV panels in rigid form, with or without a glass cover, permanently attached to an aluminum extrusion that is an integral component of an automation device that controls natural light, whether or not assembled into a fully completed automation device that controls natural light, with the following characteristics:

(1) a total power output of 20 watts or less per panel;

(2) a maximum surface area of 1,000 cm² per panel;

(3) does not include a built-in inverter for powering third party devices.

Modules, laminates, and panels produced in a third-country from cells produced in a subject country are covered by these orders; however, modules, laminates, and panels produced in a subject country from cells produced in a third-country are not covered by these orders.

Also excluded from the scope of these orders are all products covered by the scope of the antidumping and countervailing duty orders on *Crystalline Silicon Photovoltaic Cells, Whether or Not Assembled into Modules, from the People's Republic of China: Amended Final Determination of Sales at Less Than Fair Value, and Antidumping Order,* 77 FR 73018 (December 7, 2012); and *Crystalline Silicon Photovoltaic Cells, Whether or Not Assembled into Modules, from the People's Republic of China: Countervailing Duty Order,* 77 FR 73017 (December 7, 2012).

Also excluded from the scope of these orders are all products covered by the scope of the antidumping and countervailing duty orders on *Crystalline Silicon Photovoltaic Cells, Whether or Not Assembled into Modules from the Socialist Republic of Vietnam: Amended Final Antidumping Duty Determination; Crystalline Silicon Photovoltaic Cells, Whether or Not Assembled into Modules from Cambodia, Malaysia, Thailand, and the Socialist Republic of Vietnam: Antidumping duty Orders,* 90 FR 26786 (June 24, 2025); *Crystalline Silicon Photovoltaic Cells, Whether or Not Assembled into Modules from the Socialist Republic of Vietnam: Amended Final Antidumping Duty Determination; Crystalline Silicon Photovoltaic Cells, Whether or Not Assembled into Modules from Cambodia, Malaysia, Thailand, and the Socialist Republic of Vietnam: Antidumping Duty Orders; Correction,* 90 FR 29843 (July 7, 2025); and *Crystalline Silicon Photovoltaic Cells, Whether or Not Assembled into Modules, from Malaysia and Thailand: Amended Final Countervailing Duty Determinations; Crystalline Silicon Photovoltaic Cells, Whether or Not Assembled into Modules, from Cambodia, Malaysia, Thailand, and the Socialist Republic of Vietnam: Countervailing Duty Orders,* 90 FR 26791 (June 24, 2025).

Merchandise covered by these orders is currently classified in the Harmonized Tariff System of the United States (HTSUS) under subheadings 8541.42.0010 and 8541.43.0010. Imports of the subject merchandise may enter under HTSUS subheadings 8501.71.0000, 8501.72.1000, 8501.72.2000, 8501.72.3000, 8501.72.9000, 8501.80.1000, 8501.80.2000, 8501.80.3000, 8501.80.9000, 8507.20.8010, 8507.20.8031, 8507.20.8041, 8507.20.8061, and 8507.20.8091. These HTSUS subheadings are provided for convenience and customs purposes; the written description of the scope of these orders is dispositive.

BILLING CODE 3510–DS–P

DEPARTMENT OF COMMERCE

Patent and Trademark Office

Agency Information Collection Activities; Submission to the Office of Management and Budget for Review and Approval; Comment Request; International Design Applications (Hague Agreement)

AGENCY: United States Patent and Trademark Office, Department of Commerce.

ACTION: Notice of information collection; request for comments.

SUMMARY: The United States Patent and Trademark Office (hereafter ''USPTO'' or ''Agency''), as required by the Paperwork Reduction Act of 1995, invites comments on the extension and revision of an existing information collection: 0651–0075 (International Design Applications (Hague Agreement)). The purpose of this notice is to allow 60 days for public comments preceding submission of the information collection to the Office of Management and Budget (OMB).

DATES: To ensure consideration, you must submit comments regarding this information collection on or before January 8, 2027.

ADDRESSES: Interested persons are invited to submit written comments by any of the following methods. Do not submit Confidential Business Information or otherwise sensitive or protected information.

- *Email: InformationCollection@uspto.gov.* Include ''0651–0075 comment'' in the subject line of the message.
- *Federal eRulemaking Portal: https://www.regulations.gov.*
- *Mail:* Justin Isaac, Office of the Chief Administrative Officer, United States Patent and Trademark Office, P.O. Box 1450, Alexandria, VA 22313–1450.
- *Telephone:* Rafael Bacares, Senior Legal Advisor, 571–272–3276.

FOR FURTHER INFORMATION CONTACT: Requests for additional information should be directed to Rafael Bacares, Senior Legal Advisor, at: United States Patent and Trademark Office, P.O. Box 1450, Alexandria, VA 22313–1450; 571–272–3276; or *rafael.bacares@uspto.gov* with ''0651–0075 comment'' in the subject line. Additional information about this information collection is also available at *https://www.reginfo.gov* under ''Information Collection Review.''

SUPPLEMENTARY INFORMATION:

I. Abstract

Title I of The Patent Law Treaties Implementation Act of 2012 [1] (PLTIA) amended the patent laws to implement the provisions of the Geneva Act of the Hague Agreement Concerning International Registration of Industrial Designs (hereafter ''Hague Agreement''). The Hague Agreement is an international registration system which offers the possibility of obtaining protection for up to 100 industrial designs in designated member countries and intergovernmental organizations (referred to as ''Contracting Parties'') by filing a single international design application either directly with the International Bureau of the World Intellectual Property Organization (WIPO) or indirectly through the office of an applicant's Contracting Party. The United States is a Contracting Party to

[1] *https://www.congress.gov/112/plaws/publ211/PLAW-112publ211.pdf.*

the Hague Agreement, which took effect with respect to the United States on May 13, 2015. The Hague Agreement is administrated by the International Bureau (IB) of WIPO located in Geneva, Switzerland.

Under the Hague Agreement, a U.S. applicant can file an international design application indirectly through the United States Patent and Trademark Office (USPTO), which will forward the application to the IB upon satisfaction of certain requirements, or directly with the IB. All international design applications are subject to the following fees: (1) a basic fee, (2) a publication fee, and (3) in respect of each Contracting Party designated for protection, either a standard or individual designation fee. An international design application is also subject to an additional per word fee where the description exceeds 100 words. A transmittal fee is also required for international design applications filed indirectly through the USPTO. The fees required by the IB may be paid either directly to the IB in Swiss currency or through the USPTO as an office of indirect filing in U.S. dollars. If applicants want to pay the required fees through the USPTO as an office of indirect filing, the fees must be paid no later than the date of payment of the transmittal fee. The fees will then be forwarded to the IB after conversion to Swiss currency.

Where the U.S. is designated, the applicant will be required to pay a first part U.S. designation fee to the IB. The first part U.S. designation fee, established in Swiss currency, is based on the combined amounts of the basic filing fee (37 CFR 1.16(b)), search fee (§ 1.16(l)), and examination fee (§ 1.16(p)) for a design application. See § 1.1031(f)(1). Upon issuance of a notice of allowance by the USPTO, payment of a second part U.S. designation fee (*i.e.,* the issue fee) will be required. See § 1.1031(f)(2). The second part U.S. designation fee may be paid either directly to the USPTO in U.S. dollars or through the IB in Swiss currency.

The IB examines international design application for compliance with the applicable formal requirements under the Hague Agreement. If the applicable requirements are satisfied, the IB registers the international design to the International Register. Thereafter, the IB will publish the international registration in the International Designs Bulletin based on the publication timing selected by the applicant. The IB will provide a copy of the publication of the international registration to each Contracting Party designated by the application.

A designated Contracting Party may or may not perform a substantive examination of the international design registration. The USPTO will perform a substantive examination for patentability of the international design application, as in the case of regular U.S. design applications.

This information collection covers all the necessary information required for an international design application that is filed either through the USPTO as an office of indirect filing or directly with the IB. The information in this collection is used to register industrial designs under the provisions of the Hague Agreement. The USPTO manages two forms in this information collection, and the rest are forms managed by the IB.

II. Method of Collection

Items in this information collection may be submitted as electronic submissions. Applicants may also submit the information in paper form by mail, fax, or hand delivery.

III. Data

OMB Control Number: 0651–0075.

Forms: (PTOL = Patent Trademark Official Legal Forms; WIPO = World Intellectual Property Organization).

- PTO–1595 (Recordation Form Cover Sheet—Patents). PTO–1595 is also approved for use under USPTO information collection 0651–0027.
- PTOL–85 Part B (Fee(s) Transmittal). PTOL–85 Part B is also approved for use under USPTO information collection 0651–0033.
- WIPO DM/1 (Application for International Registration)
- WIPO DM/1/I (Annex I: Oath or Declaration of the Creator under Rule 8(1)(a)(ii) of the Regulations)
- WIPO DM/1/II (Annex II: Supporting Document(s) Concerning a Declaration to the Exception to Lack of Novelty under Section 408(c)(ii) of the Administrative Instructions)
- WIPO DM/1/III (Annex III: Information On Eligibility For Protection under Rule 7(5)(g) and Section 408(d) of the Administrative Instructions)
- WIPO DM/1/IV (Annex IV: Reduction of United States Individual Designation Fee under Section 408(b) of the Administrative Instructions)
- WIPO DM/1/V (Annex V: Supporting Document(s) Concerning Priority Claim under Article 4 of the Paris Convention)
- WIPO DM/7 (Appointment of a Representative (Power of Attorney))

Type of Review: Extension and revision of a currently approved information collection.

Affected Public: Private sector.

Respondent's Obligation: Required to obtain or retain benefits.

Frequency: On occasion.

Estimated Number of Annual Respondents: 5,633 respondents.

Estimated Number of Annual Responses: 5,633 responses.

Estimated Time per Response: The USPTO estimates that the responses for this information collection will take the public approximately 15 minutes (0.25 hours) to 6 hours to complete. This includes the time to gather the necessary information, create the document, and submit the completed item(s) to the USPTO.

Estimated Total Annual Respondent Burden Hours: 25,393 hours.

Estimated Total Annual Respondent Hourly Cost Burden: $13,966,150.

TABLE 1—TOTAL REPORTING BURDEN HOURS AND HOURLY COSTS TO PRIVATE SECTOR RESPONDENTS

Item No.	Item	Estimated annual respondents (a)	Responses per respondent (b)	Estimated annual responses (a) × (b) = (c)	Estimated time for response (hours) (d)	Estimated burden (hour/year) (c) × (d) = (e)	Rate [2] ($/hour) (f)	Estimated annual respondent cost burden (e) × (f) = (g)

	Totals	5,633	.....	5,633	.....	25,393	.....	13,966,150

Estimated Total Annual Respondent Non-hourly Cost Burden: $13,607,168. There are no capital start-up costs, maintenance costs, or recordkeeping costs associated with this information collection. However, the USPTO estimates that the total annual non-hourly cost burden for this information collection, in the form of filing fees, drawing costs, and postage, is $13,607,168.

Filing Fees

The filing fees associated with this information collection that are paid to the USPTO are listed in the table below.

[2] *2025 Report of the Economic Survey,* published by the Committee on Economics of Legal Practice of the American Intellectual Property Law Association; pg. F–35. The USPTO uses the average billing rate for intellectual property work in all firms which is $550 per hour (*https://www.aipla.org/detail/journal-issue/2025-report-of-the-economic-survey*).

		Totals	5,730	.....	5,586,426

The USPTO also collects one fee associated with applications for international registrations that are indirectly filed to WIPO through the USPTO. The USPTO does not intake any of the money associated with this fee. Instead, the USPTO transfers the fee amounts to WIPO on behalf of the applicant filing indirectly. That fee amount is indicated here as part of this information collection but is not directly counted as part of the collection's final non-hourly cost burden total.

TABLE 3—FILING FEES PAID TO WIPO

Item No.	Fee code	Item	Estimated annual responses (a)	Filing fee ($) (b)	Non-hourly cost burden (a) × (b) = (c)
1	WIPO	Application for International Registration (electronic) filed indirectly through the USPTO—International design application fees payable to WIPO.	140	Variable [6]	Variable.
	Totals	.....	140	.....	Variable.

[3] Applications for international registration prepared in other contracting parties that are filed directly with the IB designating the U.S. The estimate time for preparation and response varies from country to country. The USPTO uses 6 hours as an estimate to account for the time for foreign applicants to prepare the applications.

[4] Applications for international registration that are filed directly with the IB and then electronically transmitted to the USPTO are prepared in other countries. The hourly rates associated with that preparation vary from country to country. The USPTO uses the $550 hourly rate to account for the estimated hourly costs.

[5] WIPO fees are required to be paid in Swiss francs (CHF). For the purposes of this information collection, the USPTO will show the current WIPO rate in CHF as well as the current conversion rate from CHF to the U.S. dollar. The USPTO is using the Wise Currency Converter to determine the appropriate exchange rate. This converter can be found here: *https://wise.com/us/currency-converter/chf-to-usd-rate.* The exchange rate used was taken on July 24, 2026.

[6] This fee amount is determined based on specific elements set under the Hague System including the basic fee, publication fee, designation fees (the amount depends on which Hague Contracting parties are designated) and additional description fee (if the description exceeds 100 words, an additional fee per word over the limit is charged by WIPO). The fees are expressed in Swiss francs and can be affected by the payment method/currency conversion.

Drawing Costs

The USPTO estimates that the costs to produce design drawings can range from $50 to $350 per sheet. Taking the average of this range, the USPTO estimates that it can cost $200 per sheet to produce design drawings. On average, 10 sheets of drawings are submitted for an application resulting in an average cost of $2,000 to produce the design drawings. The USPTO estimates that 140 respondents will file international design applications indirectly through the USPTO for transmission to the IB. The USPTO further estimates that it will receive approximately 3,870 international design applications from the IB where applicants have designated the U.S., accompanied by payment of the first part of the designated fee for substantive examination by the USPTO. The USPTO estimates that all of the 4,010 design applications will be submitted with drawings. Overall, the costs associated with submitting these drawings are estimated to be $8,020,000.

Postage Costs

Although the USPTO prefers that the items in this information collection be submitted electronically, responses may be submitted by mail through the United States Postal Service. The USPTO estimates that 1% of the 5,633 items in this information collection will be submitted in the mail, resulting in 56 mailed items. The USPTO estimates that the average postage cost for a mailed submission, using a Priority Mail legal flat-rate envelope, will be $13.25. Therefore, the USPTO estimates the total mailing costs for this information collection is $742.

IV. Request for Comments

The USPTO is soliciting public comments to:

(a) Evaluate whether the collection of information is necessary for the proper performance of the functions of the Agency, including whether the information will have practical utility;

(b) Evaluate the accuracy of the Agency's estimate of the burden of the collection of information, including the validity of the methodology and assumptions used;

(c) Enhance the quality, utility, and clarity of the information to be collected; and

(d) Minimize the burden of the collection of information on those who intend to respond, including through the use of appropriate automated, electronic, mechanical, or other technological collection techniques or other forms of information technology, *e.g.,* permitting electronic submission of responses.

All comments submitted in response to this notice are a matter of public record. The USPTO will include or summarize each comment in the request to OMB to approve this information collection. Before including an address, phone number, email address, or other personally identifiable information (PII) in a comment, be advised that the entire comment—including PII—may be made publicly available at any time. While one may request in a comment to withhold PII from public view, the USPTO cannot guarantee that it will be able to do so.

Justin Isaac,

Information Collections Officer, Office of the Chief Administrative Officer, United States Patent and Trademark Office.

BILLING CODE 3510–16–P

COMMITTEE FOR THE IMPLEMENTATION OF TEXTILE AGREEMENTS

Determination Under the Textile and Apparel Commercial Availability Provision of the Dominican Republic-Central America-United States Free Trade Agreement (''CAFTA–DR'')

AGENCY: The Committee for the Implementation of Textile Agreements.

ACTION: Determination to add a product in unrestricted quantities to Annex 3.25 of the CAFTA–DR.

SUMMARY: The Committee for the Implementation of Textile Agreements (''CITA'') has determined that certain woven wrinkle free cotton/polyester fabric, as specified below, is not available in commercial quantities in a timely manner in the CAFTA–DR countries. The product is added to the list in Annex 3.25 of the CAFTA–DR in unrestricted quantities.

DATES: *Applicable date:* November 9, 2026.

ADDRESSES: *https://otexaprod.trade.gov/otexacapublicsite/requests/cafta* under ''Approved Requests,'' File Number: CA2026009.

FOR FURTHER INFORMATION CONTACT: Kayla Johnson, Office of Textiles and Apparel, U.S. Department of Commerce, (202) 510–3829 or *Kayla.Johnson@trade.gov.*

SUPPLEMENTARY INFORMATION:

Authority: The CAFTA–DR; Section 203(o)(4) of the Dominican Republic-Central America-United States Free Trade Agreement Implementation Act (''CAFTA–DR Implementation Act''), Public Law 109–53; the Statement of Administrative Action accompanying the CAFTA–DR Implementation Act; and Presidential Proclamation 7987 (February 28, 2006).

Background: The CAFTA–DR provides a list in Annex 3.25 for fabrics, yarns, and fibers that the Parties to the CAFTA–DR have determined are not available in commercial quantities in a timely manner in the territory of any Party. The CAFTA–DR provides that this list may be modified pursuant to Article 3.25.4, when the United States determines that a fabric, yarn, or fiber is not available in commercial quantities in a timely manner in the territory of any Party. *See* Annex 3.25 of the CAFTA–DR; *see also* section 203(o)(4)(C) of the CAFTA–DR Implementation Act.

The CAFTA–DR Implementation Act requires the President to establish procedures governing the submission of a request and providing opportunity for interested entities to submit comments and supporting evidence before a commercial availability determination is made. In Presidential Proclamation 7987, the President delegated to CITA the authority under section 203(o)(4) of CAFTA–DR Implementation Act for modifying the Annex 3.25 list. Pursuant to this authority, on September 15, 2008, CITA published modified procedures it would follow in considering requests to modify the Annex 3.25 list of products determined to be not commercially available in the territory of any Party to the CAFTA–DR (*Modifications to Procedures for Considering Requests Under the Commercial Availability Provision of the Dominican Republic-Central America-United States Free Trade Agreement,* 73 FR 53200) (''CITA's Procedures'').

On September 29, 2026, CITA received a Commercial Availability Request (''Request'') from Dillard's Inc. (''Dillard's) and its supplier JAM Apparel LLC (''JAM'') for certain woven wrinkle free cotton/polyester fabric, as specified below. On October 1, 2026, in accordance with CITA's Procedures, CITA notified interested parties of the Request, which was posted on the dedicated website for CAFTA–DR Commercial Availability proceedings. In its notification, CITA advised that any Response with an Offer to Supply (''Response'') must be submitted by October 14, 2026, and any Rebuttal to a Response (''Rebuttal'') must be submitted by October 20, 2026, in accordance with sections 6 and 7 of CITA's Procedures. No interested entity submitted a Response to the Request advising CITA of its objection to the

Request with an offer to supply the subject product.

In accordance with section 203(o)(4)(C) of the CAFTA–DR Implementation Act, and section 8(c)(2) of CITA's Procedures, as no interested entity submitted a Response objecting to the Request and providing an offer to supply the subject product, CITA has determined to add the specified fabric to the list in Annex 3.25 of the CAFTA–DR.

The subject product has been added to the list in Annex 3.25 of the CAFTA–DR Agreement in unrestricted quantities. A revised list has been posted on the dedicated website for CAFTA–DR Commercial Availability proceedings, at *https://otexaprod.trade.gov/otexacapublicsite/shortsupply/cafta.*

Specifications: Certain Woven Wrinkle Free Cotton/Polyester Fabric

HTS: 5210.32.00; 5210.49.10; 5210.59.10.

Fiber Content: 51–75% Cotton, 25–49% Polyester.

Yarn Size—Warp: 127/2 to 212/2 metric (75/2 to 125/2 English count) Staple fiber yarns in Cotton or Cotton/Polyester.

Yarn Size—Weft: in one of the following 2 options:

—Option #1: 68/1 to 110/1 metric (40/1 to 65/1 English count) Staple fiber yarns in Polyester or Cotton/Polyester

—Option #2: 120/1 to 51.4/1 metric (75 Denier to 175 Denier) Filament yarns in Polyester

Weave Type: Twill or herringbone.

Weight: between 80 to 165 grams per sq. meter (2.36oz/sq. yd to 4.87oz/sq. yd).

Width: 137 to 157 cm (54 to 62 inch).

Coloration: Piece dyed and/or yarn dyed and/or printed.

Finishing Process: Mercerized + Wrinkle Free Finish.

Performance (include all test methods and standards that apply):

* Shrinkage +1% to −5% using AATCC 135
* Minimum Durable Press 3.0 after 3 launderings using AATCC 128–17E

Joshua Kroon,

Chairman, Committee for the Implementation of Textile Agreements.

COMMITTEE FOR THE IMPLEMENTATION OF TEXTILE AGREEMENTS

Determination Under the Textile and Apparel Commercial Availability Provision of the Dominican Republic-Central America-United States Free Trade Agreement (''CAFTA–DR'')

AGENCY: The Committee for the Implementation of Textile Agreements.

ACTION: Determination to add a product in unrestricted quantities to Annex 3.25 of the CAFTA–DR.

SUMMARY: The Committee for the Implementation of Textile Agreements (''CITA'') has determined that certain woven wrinkle free cotton/polyester/spandex fabric, as specified below, is not available in commercial quantities in a timely manner in the CAFTA–DR countries. The product is added to the list in Annex 3.25 of the CAFTA–DR in unrestricted quantities.

DATES: *Applicable date:* November 9, 2026.

ADDRESSES: *https://otexaprod.trade.gov/otexacapublicsite/requests/cafta* under ''Approved Requests,'' File Number: CA2026010.

FOR FURTHER INFORMATION CONTACT: Kayla Johnson, Office of Textiles and Apparel, U.S. Department of Commerce, (202) 510–3829 or *Kayla.Johnson@trade.gov.*

SUPPLEMENTARY INFORMATION:

Authority: The CAFTA–DR; Section 203(o)(4) of the Dominican Republic-Central America-United States Free Trade Agreement Implementation Act (''CAFTA–DR Implementation Act''), Public Law 109–53; the Statement of Administrative Action accompanying the CAFTA–DR Implementation Act; and Presidential Proclamation 7987 (February 28, 2006).

Background: The CAFTA–DR provides a list in Annex 3.25 for fabrics, yarns, and fibers that the Parties to the CAFTA–DR have determined are not available in commercial quantities in a timely manner in the territory of any Party. The CAFTA–DR provides that this list may be modified pursuant to Article 3.25.4, when the United States determines that a fabric, yarn, or fiber is not available in commercial quantities in a timely manner in the territory of any Party. *See* Annex 3.25 of the CAFTA–DR; *see also* section 203(o)(4)(C) of the CAFTA–DR Implementation Act.

The CAFTA–DR Implementation Act requires the President to establish procedures governing the submission of a request and providing opportunity for interested entities to submit comments and supporting evidence before a commercial availability determination is made. In Presidential Proclamation 7987, the President delegated to CITA the authority under section 203(o)(4) of CAFTA–DR Implementation Act for modifying the Annex 3.25 list. Pursuant to this authority, on September 15, 2008, CITA published modified procedures it would follow in considering requests to modify the Annex 3.25 list of products determined to be not commercially available in the territory of any Party to the CAFTA–DR (*Modifications to Procedures for Considering Requests Under the Commercial Availability Provision of the Dominican Republic-Central America-United States Free Trade Agreement,* 73 FR 53200) (''CITA's Procedures'').

On September 29, 2026, CITA received a Commercial Availability Request (''Request'') from Dillard's Inc. (''Dillard's) and its supplier JAM Apparel LLC (''JAM'') for certain woven wrinkle free cotton/polyester/spandex fabric, as specified below. On October 1, 2026, in accordance with CITA's Procedures, CITA notified interested parties of the Request, which was posted on the dedicated website for CAFTA–DR Commercial Availability proceedings. In its notification, CITA advised that any Response with an Offer to Supply (''Response'') must be submitted by October 14, 2026, and any Rebuttal to a Response (''Rebuttal'') must be submitted by October 20, 2026, in accordance with sections 6 and 7 of CITA's Procedures. No interested entity submitted a Response to the Request advising CITA of its objection to the Request with an offer to supply the subject product.

In accordance with section 203(o)(4)(C) of the CAFTA–DR Implementation Act, and section 8(c)(2) of CITA's Procedures, as no interested entity submitted a Response objecting to the Request and providing an offer to supply the subject product, CITA has determined to add the specified fabric to the list in Annex 3.25 of the CAFTA–DR.

The subject product has been added to the list in Annex 3.25 of the CAFTA–DR Agreement in unrestricted quantities. A revised list has been posted on the dedicated website for CAFTA–DR Commercial Availability proceedings, at *https://otexaprod.trade.gov/otexacapublicsite/shortsupply/cafta.*

Specifications: Certain Woven Wrinkle Free Cotton/Polyester/Spandex Fabric

BILLING CODE P

DEPARTMENT OF DEFENSE

Office of the Secretary

President's Military Spouse Commission; Notice of Federal Advisory Committee Meeting

AGENCY: Under Secretary of Defense for Personnel and Readiness, Department of Defense (DoD).

ACTION: Notice of Federal Advisory Committee meeting.

SUMMARY: The Department of War (formerly the DoD) is publishing this notice to announce that the following Federal Advisory Committee meeting of the President's Military Spouse Commission (''the Commission'') will take place.

DATES: Open to the public via livestream, Monday, November 16, 2026, from 1 p.m. to 2 p.m.

ADDRESSES: This meeting will be held at the White House and viewable by the public at *https://www.whitehouse.gov/military-spouse-commission/.* Registration is not required.

FOR FURTHER INFORMATION CONTACT: The Commission at *https://www.whitehouse.gov/military-spouse-commission/contact/or* Josie Beets, Designated Federal Officer, at *osd.mc-alex.ousd-p-r.mbx.spouse-employment-team@mail.mil.*

SUPPLEMENTARY INFORMATION: This meeting is being held under the provisions of the Federal Advisory Committee Act (FACA) of 1972 (5 U.S.C. Appendix, as amended), the Government in the Sunshine Act of 1976 (5 U.S.C. 552b, as amended), and 41 CFR 102–3.140 and 102–3.150.

Purpose of the Meeting: The purpose of the meeting is to execute the provisions of Executive Order 14417. Per the Executive Order, the Commission will discuss strengthening military families, improving retention, and ensuring military spouses and families are ready to meet any challenge. The Commission will advise and assist the President on policies affecting military spouses and military families by identifying challenges and developing policy recommendations to address housing, employment, healthcare, education, childcare, and deployment-related support.

Agenda: Monday, November 16, 2026, from 1:00 p.m. to 2:00 p.m. Official Call to Order, Opening Remarks, Executive Director Welcome, Administrative Session Briefing, Briefing: Public Submissions & Survey Updates, Commission Participation, Adjournment.

Meeting Accessibility: Pursuant to 5 U.S.C. 552b and 41 CFR 102–3.140 through 102–3.165, this meeting is open to the public from 1:00 p.m. to 2:00 p.m. on November 16, 2026, via livestream at *https://www.whitehouse.gov/military-spouse-commission.*

Written Statements: Written comments may be received by the President's Military Spouse Commission at any time and may be made available to the Commission members for their consideration prior to the meeting. Written comments may be submitted via *https://www.whitehouse.gov/military-spouse-commission/contact/.* Please note that since the Commission operates under the provisions of the FACA, all written comments received will be treated as public documents and will be made available for public inspection. Those who make submissions are requested to avoid including personally identifiable information such as names of adults and children, phone numbers, addresses, Social Security Numbers and other contact information within the body of the written statement.

Dated: November 5, 2026.

Aaron T. Siegel,

Alternate OSD Federal Register Liaison Officer, Department of Defense.

[FR Doc. 2026–22834 Filed 11–6–26; 8:45 am]

BILLING CODE 6001–FR–P

DEPARTMENT OF ENERGY

[OE Docket No. EA–532]

Application for Authorization To Export Electric Energy; KPT Energy LLC

AGENCY: Office of Electricity, Department of Energy.

ACTION: Notice of application.

SUMMARY: KPT Energy LLC (the Applicant or KPT Energy) has applied for renewed authorization to transmit electric energy from the United States to Canada pursuant to the Federal Power Act.

DATES: Comments must be submitted on or before December 9, 2026.

ADDRESSES: Comments or requests for more information should be addressed

by electronic mail to *Electricity.Exports@hq.doe.gov.*

FOR FURTHER INFORMATION CONTACT: Marina Fennel, (240) 702–6156, *Electricity.Exports@hq.doe.gov.*

SUPPLEMENTARY INFORMATION: The United States Department of Energy (DOE) regulates electricity exports from the United States to foreign countries in accordance with section 202(e) of the Federal Power Act (FPA) (16 U.S.C. 824a(e)) and regulations thereunder (10 CFR 205.300). Sections 301(b) and 402(f) of the DOE Organization Act (42 U.S.C. 7151(b) and 7172(f)) transferred this regulatory authority, previously exercised by the now-defunct Federal Power Commission, to DOE.

Section 202(e) of the FPA provides that an entity which seeks to export electricity must obtain an order from DOE authorizing that export (16 U.S.C. 824a(e)). On January 8, 2026, the authority to issue such orders was delegated to the DOE's Assistant Secretary for the Office of Electricity by Redelegation Order No. S3–DEL–OE1–2026.

On July 24, 2026, KPT Energy filed an application (Application or App.) with DOE for authorization to transmit electric energy from the United States to Canada for a term of five years.

KPT Energy is a Delaware limited liability company ''with its principal place of business in Toronto, Canada.'' App at 1. KPT Energy is ''formed to be a power marketer engaging in the purchase and sale of physical and/or virtual energy in wholesale electricity markets.'' App. at 2. KPT Energy is directly and wholly owned by KPT Energy LP, which is wholly and directly owned by KPT Energy Holdings Inc. KPT Energy Holdings Inc. is directly owned by DTFC Holdings Inc. and Boof & Doof Corp., both organized under the laws of Canada. App. at 1–2. KPT Energy states that ''neither KPT Energy nor its affiliates own or operate generation or transmission facilities, nor do they have a franchised electric power service area'' and that it is ''not seeking authorization to export power on behalf of, or in conjunction with, any partners or partnerships.'' KPT energy affirms it will ''make all necessary commercial arrangements and will obtain any and all other regulatory approvals required in order to schedule and deliver power exports.'' *Id.* at 4.

The existing international transmission facilities to be utilized by the Applicant have been previously authorized by Presidential permits issued pursuant to Executive Order 10485, as amended, and are appropriate for open access transmission by third parties. *See* App. at Exhibit A.

Procedural Matters: Any person desiring to be heard in this proceeding should file a comment to the Application at *Electricity.Exports@hq.doe.gov.*

Comments concerning KPT Energy's Application should be clearly marked with OE Docket No. EA–532. Comments will be posted along with the relevant application on the program website at *www.energy.gov/oe/pending-applications.*

A final decision will be made on the requested authorization after the environmental impacts have been evaluated consistent with the National Environmental Policy Act (NEPA) of 1969, as amended (42 U.S.C. 4321, *et seq.*), the DOE NEPA regulations at 10 CFR part 1021, and the DOE's Implementing Procedures (June 2026) and after DOE evaluates whether the proposed action will have an adverse impact on the sufficiency of supply or reliability of the United States electric power supply system.

Copies of this Application are available on the program website at *www.energy.gov/oe/pending-applications* or by emailing *Electricity.Exports@hq.doe.gov.*

Signing Authority

This document of the Department of Energy was signed on October 30, 2026, by Gilbert Bindewald III, Principal Deputy Assistant Secretary, Office of Electricity, pursuant to delegated authority from the Secretary of Energy. That document with the original signature and date is maintained by DOE. For administrative purposes only, and in compliance with requirements of the Office of the Federal Register, the undersigned DOE Federal Register Liaison Officer has been authorized to sign and submit the document in electronic format for publication, as an official document of the Department of Energy. This administrative process in no way alters the legal effect of this document upon publication in the **Federal Register**.

Signed in Washington, DC, on November 5, 2026.

Treena V. Garrett,

Federal Register Liaison Officer, U.S. Department of Energy.

[FR Doc. 2026–22796 Filed 11–6–26; 8:45 am]

BILLING CODE 6450–01–P

DEPARTMENT OF ENERGY

Environmental Management Site-Specific Advisory Board, Northern New Mexico

AGENCY: Office of Environmental Management, Department of Energy.

ACTION: Notice of open meeting.

SUMMARY: This notice announces a virtual meeting of the Environmental Management Site-Specific Advisory Board (EM SSAB), Northern New Mexico. The Federal Advisory Committee Act requires that public notice of this meeting be announced in the **Federal Register**.

DATES: Wednesday, December 2, 2026, 1 p.m. to 4 p.m. MST.

ADDRESSES: This meeting will be held virtually. To receive the virtual access information, please contact Bridget Maestas, Northern New Mexico Citizens Advisory Board (NNMCAB) Executive Director, at the telephone number or email listed below at least two days prior to the meeting.

FOR FURTHER INFORMATION CONTACT: Bridget Maestas, NNMCAB Executive Director, by Phone: 505–709–7466 or Email: *bridget.maestas@em.doe.gov.*

SUPPLEMENTARY INFORMATION: *Purpose of the Board:* At the request of the Assistant Secretary or Field Managers, the Board may provide community-based advice and recommendations concerning any EM program activities, such as clean-up activities and environmental restoration; waste management and disposition; excess facilities; future land use and long-term stewardship; communications; and budget priorities. The Board also provides an avenue to fulfill public participation requirements outlined in the Comprehensive Environmental Response, Compensation, and Liability Act (CERLA), Federal Facility Agreements, Consent Orders, Consent Decrees and Settlement Agreements.

Tentative Agenda: (agenda topics are subject to change; please contact Bridget Maestas for the most current agenda)

- Presentation to the Board
- Agency Updates

Public Participation: The meeting is open to the public and public comment can be given orally or in writing. Fifteen minutes are allocated during the meeting for public comment and those wishing to make oral comment will be given a minimum of two minutes to speak. Written comments received at least two working days prior to the meeting will be provided to the members and included in the meeting minutes. Written comments received

within two working days after the meeting will be included in the minutes. For additional information on public comment and to submit written comment, please contact Bridget Maestas. The EM SSAB, Northern New Mexico, welcomes the attendance of the public at its meetings and will make every effort to accommodate persons with physical disabilities or special needs. If you require special accommodations due to a disability, please contact Bridget Maestas at least seven days in advance of the meeting.

Meeting conduct: The Designated Federal Officer is empowered to conduct the meeting in a fashion that will facilitate the orderly conduct of business. Questioning of board members or presenters by the public is not permitted.

Minutes: Minutes will be available at the following website: *https://www.energy.gov/em/nnmcab/northern-new-mexico-citizens-advisory-board.*

Signing Authority: This document of the Department of Energy was signed on November 4, 2026, by David Borak, Committee Management Officer, pursuant to delegated authority from the Secretary of Energy. That document with the original signature and date is maintained by DOE. For administrative purposes only, and in compliance with requirements of the Office of the Federal Register, the undersigned DOE Federal Register Liaison Officer has been authorized to sign and submit the document in electronic format for publication, as an official document of the Department of Energy. This administrative process in no way alters the legal effect of this document upon publication in the **Federal Register**.

Signed in Washington, DC on November 5, 2026.

Jennifer Hartzell,

Alternate Federal Register Liaison Officer, U.S. Department of Energy.

National Coal Council

AGENCY: Hydrocarbons and Geothermal Energy Office (HGEO), Department of Energy.

ACTION: Notice of open meeting.

SUMMARY: This notice announces a meeting of the National Coal Council. The Federal Advisory Committee Act requires that public notice of this meeting be announced in the **Federal Register**.

DATES: Monday, January 11, 2027; 8 a.m. to 4:30 p.m. (EDT).

ADDRESSES: The Eau Palm Beach Resort, 100 South Ocean Boulevard, Manalapan, FL 33462. The meeting will be held in the Grand Ballroom. In-person meeting. Information to access a live stream of the meeting proceedings will be available at: *https://nationalcoalcouncil.energy.gov/ncc/future-meetings*.

FOR FURTHER INFORMATION CONTACT: Mr. Joseph Giove, U.S. Department of Energy, telephone: (301) 903–4130 or email: *joseph.giove@doe.gov*.

SUPPLEMENTARY INFORMATION:

Purpose of the Committee: To provide advice, information, and recommendations to the Secretary of Energy on matters relating to coal and the coal industry.

Purpose of the Meeting: The National Coal Council will hold a meeting on January 11, 2027, to present, discuss and possibly finalize one subcommittee report, and to discuss a new report to be conducted in the future.

Tentative Agenda:

- Welcome from the Acting Assistant Secretary (HGEO) and Meeting Room Logistics
- Welcome and Congratulatory Remarks from the Secretary of Energy; Secretary of Interior, and other senior officials
- Presentation/Discussion/Vote on one NCC subcommittee study
- Announcement of one new NCC study
- Lunch (on your own)
- Several invited speakers
- Public Statements, if any; and
- Dismissal.

Public Participation: The meeting will be accessible to the public via live stream, and will be conducted by the Council Chair to ensure an orderly flow of business. To make an oral statement on any agenda item, please contact Mr. Joseph Giove (using the contact details listed above) at least fourteen (14) days prior to the meeting. Approximately 10 minutes will be reserved for public comments; individual speaking times will depend on the number of requests received but will not exceed three minutes per speaker. If you wish to attend the meeting in person, you must register fourteen (14) days in advance, as space is limited, so please contact Mr. Giove to reserve a space. Written comments are also welcome either before or after the meeting and may be submitted directly to Mr. Giove for distribution to the committee.

Minutes: The minutes of the meeting will be available at: *https://nationalcoalcouncil.energy.gov/ncc/past-meetings-and-events* or by contacting Mr. Giove. He may be reached at the email address or telephone number listed previously.

Signing Authority: This document of the Department of Energy was signed on November 4 2026, by David Borak, Committee Management Officer, pursuant to delegated authority from the Secretary of Energy. That document with the original signature and date is maintained by DOE. For administrative purposes only, and in compliance with requirements of the Office of the Federal Register, the undersigned DOE Federal Register Liaison Officer has been authorized to sign and submit the document in electronic format for publication, as an official document of the Department of Energy. This administrative process in no way alters the legal effect of this document upon publication in the **Federal Register**.

Signed in Washington, DC, November 5, 2026.

Treena V. Garrett,

Federal Register Liaison Officer, U.S. Department of Energy.

Federal Energy Regulatory Commission

[Project No. 12626–002]

Northern Illinois Hydropower, LLC; Notice of Request for Extension of Time To Commence and Complete Construction Accepted for Filing, Soliciting Comments, Motions To Intervene, and Protests

Take notice that the following hydroelectric application has been filed with the Commission and is available for public inspection:

a. *Application Type:* Request for Extension of Time.

b. *Project No:* 12626–002.

c. *Date Filed:* June 23, 2026.

d. *Applicant:* Northern Illinois Hydropower, LLC.

e. *Name of Project:* Dresden Island Hydroelectric Project.

f. *Location:* The unconstructed project will be located at the U.S. Army Corps of Engineers' (Corps) Dresden Island Lock and Dam on the Illinois River, near the town of Morris, in Grundy County, Illinois. The project will occupy federal land administered by the Corps.

g. *Filed Pursuant to:* Pub. L No. 119–90, 1020, 140 Stat. 820–21.

h. *Applicant Contact:* Jeremy King, Current Hydro LLC, (706) 835–8516 *Jeremy@currenthydro.com.*

i. *FERC Contact:* Zeena Aljibury, (202) 502–6065, *Zeena.aljibury@ferc.gov.*

j. *Deadline for filing comments:* December 4, 2026 5:00 p.m. Eastern Time.

The Commission strongly encourages electronic filing. Please file comments, motions to intervene, and protests using the Commission's eFiling system at *http://www.ferc.gov/docs-filing/efiling.asp.* Commenters can submit brief comments up to 6,000 characters, without prior registration, using the eComment system at *http://www.ferc.gov/docs-filing/ecomment.asp.* For assistance, please contact FERC Online Support at *FERCOnlineSupport@ferc.gov,* (866) 208–3676 (toll free), or (202) 502–8659 (TTY). In lieu of electronic filing, you may submit a paper copy. Submissions sent via the U.S. Postal Service must be addressed to: Debbie-Anne A. Reese, Secretary, Federal Energy Regulatory Commission, 888 First Street NE, Room 1A, Washington, DC 20426. Submissions sent via any other carrier must be addressed to: Debbie-Anne A. Reese, Secretary, Federal Energy Regulatory Commission, 12225 Wilkins Avenue, Rockville, MD 20852. The first page of any filing should include the docket number P–12626–002. Comments emailed to Commission staff are not considered part of the Commission record.

The Commission's Rules of Practice and Procedure require all intervenors filing documents with the Commission to serve a copy of that document on each person whose name appears on the official service list for the project. Further, if an intervenor files comments or documents with the Commission relating to the merits of an issue that may affect the responsibilities of a particular resource agency, they must also serve a copy of the document on that resource agency.

k. *Description of Request:* The licensee requests that the Commission grant a two-year extension of time from the existing deadline to commence and complete construction pursuant to Article 301 of the license of September 23, 2026, and September 23, 2029, respectively. Therefore, the licensee requests an extension until September 23, 2028, to commence construction of the project, and until September 23, 2031, to complete construction of the project. This would be the first extension of time authorized by Public Law 119–90.

l. *Locations of the Application:* This filing may be viewed on the Commission's website at *https://www.ferc.gov* using the ''eLibrary'' link. Enter the docket number excluding the last three digits in the docket number field to access the document. You may also register online at *http://www.ferc.gov/docs-filing/esubscription.asp* to be notified via email of new filings and issuances related to this or other pending projects. For assistance, call 1–866–208–3676 or email *FERCOnlineSupport@ferc.gov,* for TTY, call (202) 502–8659. Agencies may obtain copies of the application directly from the applicant.

m. Individuals desiring to be included on the Commission's mailing list should so indicate by writing to the Secretary of the Commission.

n. *Comments, Protests, or Motions to Intervene:* Anyone may submit comments, a protest, or a motion to intervene in accordance with the requirements of Rules of Practice and Procedure, 18 CFR 385.210, .211, .214, respectively. In determining the appropriate action to take, the Commission will consider all protests or other comments filed, but only those who file a motion to intervene in accordance with the Commission's Rules may become a party to the proceeding. Any comments, protests, or motions to intervene must be received on or before the specified comment date for the particular application.

o. *Filing and Service of Documents:* Any filing must (1) bear in all capital letters the title ''COMMENTS'', ''PROTEST'', or ''MOTION TO INTERVENE'' as applicable; (2) set forth in the heading the name of the applicant and the project number of the application to which the filing responds; and (3) otherwise comply with the requirements of 18 CFR 385.2001 through 385.2005. All comments, motions to intervene, or protests must set forth their evidentiary basis. Any filing made by an intervenor must be accompanied by proof of service on all persons listed in the service list prepared by the Commission in this proceeding, in accordance with 18 CFR 385.2010.

p. For public inquiries and assistance with making filings such as interventions, comments, or requests for rehearing, contact the Office of Public Participation at (202)502–6595 or *OPP@ferc.gov.*

(Authority: 18 CFR 2.1)

Dated: November 4, 2026.

Debbie-Anne A. Reese,

Secretary.

Combined Notice of Filings #1

Take notice that the Commission received the following Exempt Wholesale Generator filings:

Docket Numbers: EG27–29–000.
Applicants: TX Nazareth Solar, LLC.
Description: TX Nazareth Solar, LLC submits Notice of Self-Certification of Exempt Wholesale Generator Status.
Filed Date: 11/3/26.
Accession Number: 20261103–5155.
Comment Date: 5 p.m. ET 11/24/26.

Take notice that the Commission received the following Electric Rate filings:

Docket Numbers: ER10–1107–013.
Applicants: Pacific Gas and Electric Company.
Description: Notice of Change in Status of Pacific Gas and Electric Company.
Filed Date: 10/30/26.
Accession Number: 20261030–5478.
Comment Date: 5 p.m. ET 11/20/26.

Docket Numbers: ER10–1290–016.
Applicants: San Diego Gas & Electric Company.
Description: Notice of Non-Material Change in Status of San Diego Gas & Electric Company.
Filed Date: 10/30/26.
Accession Number: 20261030–5475.
Comment Date: 5 p.m. ET 11/20/26.

Docket Numbers: ER10–2249–016.
Applicants: Portland General Electric Company.
Description: Notice of Change in Status of Portland General Electric Company.
Filed Date: 10/29/26.
Accession Number: 20261029–5299.
Comment Date: 5 p.m. ET 11/19/26.

Docket Numbers: ER10–2437–028.
Applicants: Arizona Public Service Company.
Description: Notice of Change in Status of Arizona Public Service Company.
Filed Date: 10/29/26.
Accession Number: 20261029–5300.
Comment Date: 5 p.m. ET 11/19/26.

Docket Numbers: ER10–2881–049; ER10–2882–048; ER10–2883–046; ER10–2884–046; ER16–2509–017; ER17–2400–018; ER17–2401–018; ER17–2403–018; ER17–2404–017.
Applicants: SP Sandhills Solar, LLC, SP Pawpaw Solar, LLC, SP Decatur Parkway Solar, LLC, SP Butler Solar, LLC, Rutherford Farm, LLC, Georgia Power Company, Mississippi Power Company, Southern Power Company, Alabama Power Company.

Description: Notice of Change in Status of Alabama Power Company, et al.

Filed Date: 10/30/26.

Accession Number: 20261030–5473.

Comment Date: 5 p.m. ET 11/20/26.

g. *Filed Pursuant to:* Public Law No. 119–90, 1020, 140 Stat. 820–21.

h. *Applicant Contact:* Erik Steimle, Rye Development, *erik@ryedevelopment.com.*

i. *FERC Contact:* Zeena Aljibury, (202) 502–6065, *Zeena.aljibury@ferc.gov.*

j. *Deadline for filing comments:* December 4, 2026 5:00 p.m. Eastern Time.

The Commission strongly encourages electronic filing. Please file comments, motions to intervene, and protests using the Commission's eFiling system at *http://www.ferc.gov/docs-filing/efiling.asp.* Commenters can submit brief comments up to 6,000 characters, without prior registration, using the eComment system at *http://www.ferc.gov/docs-filing/ecomment.asp.* For assistance, please contact FERC Online Support at *FERCOnlineSupport@ferc.gov,* (866) 208–3676 (toll free), or (202) 502–8659 (TTY). In lieu of electronic filing, you may submit a paper copy. Submissions sent via the U.S. Postal Service must be addressed to: Debbie-Anne A. Reese, Secretary, Federal Energy Regulatory Commission, 888 First Street NE, Room 1A, Washington, DC 20426. Submissions sent via any other carrier must be addressed to: Debbie-Anne A. Reese, Secretary, Federal Energy Regulatory Commission, 12225 Wilkins Avenue, Rockville, MD 20852. The first page of any filing should include the docket number P–13757–002. Comments emailed to Commission staff are not considered part of the Commission record.

The Commission's Rules of Practice and Procedure require all intervenors filing documents with the Commission to serve a copy of that document on each person whose name appears on the official service list for the project. Further, if an intervenor files comments or documents with the Commission relating to the merits of an issue that may affect the responsibilities of a particular resource agency, they must also serve a copy of the document on that resource agency.

k. *Description of Request:* The licensee requests that the Commission grant a two-year extension of time from the existing deadline to commence and complete construction pursuant to Article 301 of the license of May 5, 2027, and May 5, 2030, respectively. Therefore, the licensee requests an extension until May 5, 2029, to commence construction of the project, and until May 5, 2032, to complete construction of the project. This would be the first extension of time authorized by Public Law 119–90.

l. *Locations of the Application:* This filing may be viewed on the Commission's website at *http://www.ferc.gov* using the ''eLibrary'' link. Enter the docket number excluding the last three digits in the docket number field to access the document. You may also register online at *http://www.ferc.gov/docs-filing/esubscription.asp* to be notified via email of new filings and issuances related to this or other pending projects. For assistance, call 1–866–208–3676 or email *FERCOnlineSupport@ferc.gov,* for TTY, call (202) 502–8659. Agencies may obtain copies of the application directly from the applicant.

m. Individuals desiring to be included on the Commission's mailing list should so indicate by writing to the Secretary of the Commission.

n. *Comments, Protests, or Motions to Intervene:* Anyone may submit comments, a protest, or a motion to intervene in accordance with the requirements of Rules of Practice and Procedure, 18 CFR 385.210, .211, .214, respectively. In determining the appropriate action to take, the Commission will consider all protests or other comments filed, but only those who file a motion to intervene in accordance with the Commission's Rules may become a party to the proceeding. Any comments, protests, or motions to intervene must be received on or before the specified comment date for the particular application.

o. *Filing and Service of Documents:* Any filing must (1) bear in all capital letters the title ''COMMENTS'', ''PROTEST'', or ''MOTION TO INTERVENE'' as applicable; (2) set forth in the heading the name of the applicant and the project number of the application to which the filing responds; and (3) otherwise comply with the requirements of 18 CFR 385.2001 through 385.2005. All comments, motions to intervene, or protests must set forth their evidentiary basis. Any filing made by an intervenor must be accompanied by proof of service on all persons listed in the service list prepared by the Commission in this proceeding, in accordance with 18 CFR 385.2010.

p. For public inquiries and assistance with making filings such as interventions, comments, or requests for rehearing, contact the Office of Public Participation at (202) 502–6595 or *OPP@ferc.gov.*

DEPARTMENT OF ENERGY

Federal Energy Regulatory Commission

[AD26–8–000]

Reliability Technical Conference; Notice Inviting Post-Technical Conference Comments

On Wednesday, October 21, 2026, the Federal Energy Regulatory Commission (Commission) convened its annual Commissioner-led Reliability Technical Conference to discuss policy issues related to the reliability and security of the Bulk-Power System.

All interested persons are invited to file post-technical conference comments to address issues raised during the technical conference or identified in the Third Supplemental Notice for this Technical Conference issued on October 15, 2026. Commenters are invited to reference material previously filed in this docket but are encouraged to avoid repetition or replication of their previous comments. Comments must be submitted on or before 30 days from the date of this Notice.

Comments, identified by docket number, may be filed electronically or paper filed. Electronic filing through *https://www.ferc.gov* is preferred. Documents must be filed in acceptable native applications and print-to-.pdf, but not in scanned or picture format. Instructions are available on the Commission's website: *http://www.ferc.gov/docs-filing/efiling.asp.*

Although the Commission strongly encourages electronic filing, documents may also be paper-filed. To paper-file, submissions sent via the U.S. Postal Service must be addressed to: Federal Energy Regulatory Commission, Office of the Secretary, 888 First Street NE, Washington, DC 20426. Submissions sent via any other carrier must be addressed to:

Federal Energy Regulatory Commission, Office of the Secretary, 12225 Wilkins Avenue, Rockville, Maryland 20852.

For more information about this Notice, please contact:

Lodie White (Technical Information), Office of Energy Reliability, Federal Energy Regulatory Commission, 888 First Street, NE, Washington, DC 20426, (202) 502–8453, *Lodie.White@ferc.gov.*

Hampden T. Macbeth (Legal Information), Office of the General Counsel, Federal Energy Regulatory Commission, 888 First Street, NE, Washington, DC 20426, (202) 502–8957, *Hampden.Macbeth@ferc.gov.*

(Authority: 16 U.S.C. 825h.)

[Project No. 13160–004]

Red River Hydro LLC; Notice of Request for Extension of Time To Commence and Complete Construction Accepted for Filing, Soliciting Comments, Motions To Intervene, and Protests

Take notice that the following hydroelectric application has been filed with the Commission and is available for public inspection:

a. *Application Type:* Request for Extension of Time.

b. *Project No:* 13160–004.

c. *Date Filed:* May 18, 2026.

d. *Applicant:* Red River Hydro LLC.

e. *Name of Project:* Overton Lock and Dam Project.

f. *Location:* The unconstructed project is located at the U.S. Army Corps of Engineers' (Corps) John H. Overton Lock and Dam on the Red River in Rapides Parish, Louisiana. The project occupies federal land managed by the Corps.

g. *Filed Pursuant to:* Public Law 119–90, 1020, 140 Stat. 820–21.

h. *Applicant Contact:* Erik Steimle, Rye Development, *erik@ryedevelopment.com.*

i. *FERC Contact:* Zeena Aljibury, (202) 502–6065, *Zeena.aljibury@ferc.gov.*

j. *Deadline for filing comments:* December 4, 2026 5:00 p.m. Eastern Time.

The Commission strongly encourages electronic filing. Please file comments, motions to intervene, and protests using the Commission's eFiling system at *http://www.ferc.gov/docs-filing/efiling.asp.* Commenters can submit brief comments up to 6,000 characters, without prior registration, using the eComment system at *http://www.ferc.gov/docs-filing/*

ecomment.asp. For assistance, please contact FERC Online Support at *FERCOnlineSupport@ferc.gov,* (866) 208–3676 (toll free), or (202) 502–8659 (TTY). In lieu of electronic filing, you may submit a paper copy. Submissions sent via the U.S. Postal Service must be addressed to: Debbie-Anne A. Reese, Secretary, Federal Energy Regulatory Commission, 888 First Street NE, Room 1A, Washington, DC 20426. Submissions sent via any other carrier must be addressed to: Debbie-Anne A. Reese, Secretary, Federal Energy Regulatory Commission, 12225 Wilkins Avenue, Rockville, MD 20852. The first page of any filing should include the docket number P–13160–004. Comments emailed to Commission staff are not considered part of the Commission record.

The Commission's Rules of Practice and Procedure require all intervenors filing documents with the Commission to serve a copy of that document on each person whose name appears on the official service list for the project. Further, if an intervenor files comments or documents with the Commission relating to the merits of an issue that may affect the responsibilities of a particular resource agency, they must also serve a copy of the document on that resource agency.

k. Description of Request: The licensee requests that the Commission grant two consecutive two-year extensions of time to commence and complete project construction since the last extension of time required the licensee to start construction by April 2, 2024, and a single 2-year extension deadline would be April 2, 2026, which already passed. Therefore, the licensee requests an extension until April 2, 2028, for starting construction. Additionally, the licensee requests an extension of time to April 2, 2030 to complete project construction. This would be the first extension of time authorized by Public Law 119–90.

l. *Locations of the Application:* This filing may be viewed on the Commission's website at *http://www.ferc.gov* using the ''eLibrary'' link. Enter the docket number excluding the last three digits in the docket number field to access the document. BILLING CODE 6717–01–P

ENVIRONMENTAL PROTECTION AGENCY

[EPA–HQ–OPP–2026–0067; FRL–13510–01–OCSPP]

Pesticides; Notice of Receipt of Requests to Voluntarily Cancel Certain Pesticide Registrations and/or Amend Registrations To Terminate Certain Uses With a 30-Day Comment Period (June 2026)

AGENCY: Environmental Protection Agency (EPA).

ACTION: Notice.

SUMMARY: This document announces the Agency's receipt of and solicits comments on requests by registrants to voluntarily cancel their pesticide registration of certain products and/or to amend their product registrations to terminate one or more uses. In accordance with the Federal Insecticide, Fungicide, and Rodenticide Act (FIFRA), EPA provides a periodic notice of receipt addressing requests received by EPA since the last notice of receipt was issued and uses the month and year in the title to help distinguish one document from the other. EPA intends to grant these requests at the close of the comment period for this announcement unless the Agency receives substantive comments during the comment period that would merit further review of the requests or the request is withdrawn by the registrant. If these requests are granted, EPA will issue an order in the **Federal Register** cancelling the listed product registrations, after which any sale, distribution, or use of the products listed in this document will only be permitted after the registrations have been cancelled if such sale, distribution, or use is consistent with the terms as described in the final order.

DATES: Comments and withdrawal requests must be received on or before December 9, 2026.

ADDRESSES: Submit your comments, identified by docket identification (ID) number EPA–HQ–OPP–2026–0067, online at *https://www.regulations.gov.* Follow the online instructions for submitting comments. Do not submit electronically any information you consider to be Confidential Business Information (CBI) or other information whose disclosure is restricted by statute. Additional instructions on commenting and visiting the docket, along with more information about dockets generally, are available at *https://www.epa.gov/dockets.*

FOR FURTHER INFORMATION CONTACT: Christopher Green, Regulatory & Information Services Division, Office of Mission Critical Operations, Environmental Protection Agency, 1200 Pennsylvania Ave. NW, Washington, DC 20460–0001; telephone number: (202) 566–2707; email address: *green.christopher@epa.gov.*

SUPPLEMENTARY INFORMATION:

I. Executive Summary

A. Does this action apply to me?

This action is directed to the public and may be of interest to a wide range of stakeholders including environmental, human health, and

agricultural advocates; the chemical industry; pesticide users; and members of the public interested in the sale, distribution, or use of pesticides.

B. What action is the Agency taking?

This document announces receipt by EPA of requests from registrants to voluntarily cancel their pesticide registration and/or amend their product registrations to terminate one or more uses of the products listed in Unit II, that are currently registered under FIFRA section 3 (7 U.S.C. 136a) or section 24(c) (7 U.S.C. 136v(c)). Unless the Agency determines that there are substantive comments that warrant further review of the requests or the registrants withdraw their requests, EPA intends to issue an order in the **Federal Register** canceling and/or amending the affected registrations.

C. What is EPA's authority for taking this action?

FIFRA section 6(f)(1) (7 U.S.C. 136d(f)(1)) provides that a registrant of a pesticide product may at any time request that any of its pesticide registrations be canceled. Before acting on a request for voluntary cancellation, EPA must provide at least a 30-day public comment period on the request. FIFRA further provides that, before acting on a request for voluntary cancellation or termination of any minor agricultural use, EPA must provide a 180-day comment period unless:

1. The registrants request a waiver of the comment period, or

2. The EPA Administrator determines that continued use of the pesticide would pose an unreasonable adverse effect on the environment.

The registrants in Table 3 of Unit II have requested that EPA waive the 180-day comment period. Accordingly, this document provides a 30-day comment period on these requests.

D. What should I consider as I prepare my comments for EPA?

1. *Submitting CBI.* Do not submit this information to EPA through email or *https://www.regulations.gov.* If you wish to include CBI in your comment, please follow the applicable instructions at *https://www.epa.gov/dockets/commenting-epa-dockets#rules* and clearly mark the information that you claim to be CBI. In addition to one complete version of the comment that includes CBI, a copy of the comment without CBI must be submitted for inclusion in the public docket. Information marked as CBI will not be disclosed except in accordance with procedures set forth in 40 CFR part 2.

2. *Tips for preparing your comments.* When preparing and submitting your comments, see the commenting tips at *https://www.epa.gov/dockets/commenting-epa-dockets.*

E. How can a registrant withdraw their request for voluntary cancellation?

Registrants who choose to withdraw their request for voluntary cancellation should submit a withdrawal request in writing to the person listed under **FOR FURTHER INFORMATION CONTACT**. If the products have been subject to a previous cancellation action, the effective date of cancellation and all other provisions of any earlier cancellation action are controlling.

II. Requests to Voluntarily Cancel and/or Amend Certain Registrations

The registrations with pending voluntary requests for cancellation are listed in sequence by registration number (or company number and 24(c) number) in Table 1 of this unit.

TABLE 1—REGISTRATIONS WITH PENDING VOLUNTARY REQUESTS FOR CANCELLATION

Registration No.	Company No.	Product name	Active ingredient
100–1067	100	Paraquat Concentrate ES	Paraquat dichloride (061601/1910–42–5)—(45.6%).
241–341	241	Pendulum 3.3 EC Herbicide	Pendimethalin (108501/40487–42–1)—(37.4%).
241–360	241	Pre-M 3.3 EC Turf Herbicide	Pendimethalin (108501/40487–42–1)—(37.4%).

III. Provisions for Disposition of Existing Stocks

Existing stocks are those stocks of registered pesticide products that are currently in the United States, and that were packaged, labeled, and released for shipment prior to the effective date of the cancellation, which will be the date of publication of the cancellation order in the **Federal Register**. In any order issued in response to these requests, EPA anticipates including the following provisions for the treatment of any existing stocks of the products listed in Unit II:

For voluntary cancellations of the registrations listed in Table 1 of Unit II, registrants will be permitted to sell and distribute existing stocks of voluntarily canceled products for 1 year after the effective date of the cancellation order. Thereafter, registrants will be prohibited from selling or distributing the products identified in Table 1 of Unit II, except for export consistent with FIFRA section 17 (7 U.S.C. 136o) or for proper disposal.

For the product identified in Table 1A of Unit II, the registrant has requested 18 months after the date of publication of the cancellation order in the **Federal Register** to sell existing stocks. Thereafter, the registrants will be prohibited from selling or distributing the product identified in Table 1A of Unit II, except for export consistent with FIFRA section 17 (7 U.S.C. 136o) or for proper disposal.

Once EPA has approved labels for the products listed in Table 2 of Unit II, (amended to reflect the requested amendments to terminate uses), registrants will be permitted to sell or distribute products under the previously approved labeling for a period of 18 months after the date of publication of the cancelation order in the **Federal Register**, unless other restrictions have been imposed. Thereafter, registrants will be prohibited from selling or distributing the products whose labels include the terminated uses identified in Table 2 of Unit II, except for export consistent with FIFRA section 17 (7 U.S.C. 136o) or for proper disposal.

Persons other than the registrant will generally be allowed to sell, distribute, or use existing stocks of the canceled

products and/or products whose labels include the terminated uses until supplies are exhausted, provided that such sale, distribution, or use is consistent with the terms of the previously approved labeling on, or that accompanied, the canceled products and/or terminated uses.

Authority: 7 U.S.C. 136 *et seq.*

Dated: November 4, 2026.

Charles Smith,

Director, Registration Division, Office of Pesticide Programs.

FEDERAL RESERVE SYSTEM

Change in Bank Control Notices; Acquisitions of Shares of a Bank or Bank Holding Company

The notificants listed below have applied under the Change in Bank Control Act (Act) (12 U.S.C. 1817(j)) and § 225.41 of the Board's Regulation Y (12 CFR 225.41) to acquire shares of a bank or bank holding company. The factors that are considered in acting on the applications are set forth in paragraph 7 of the Act (12 U.S.C. 1817(j)(7)).

The public portions of the applications listed below, as well as other related filings required by the Board, if any, are available for immediate inspection at the Federal Reserve Bank(s) indicated below and at the offices of the Board of Governors. This information may also be obtained on an expedited basis, upon request, by contacting the appropriate Federal Reserve Bank and from the Board's Freedom of Information Office at *https://www.federalreserve.gov/foia/request.htm.* Interested persons may express their views in writing on the standards enumerated in paragraph 7 of the Act.

Comments received are subject to public disclosure. In general, comments received will be made available without change and will not be modified to remove personal or business information including confidential, contact, or other identifying information. Comments should not include any information such as confidential information that would not be appropriate for public disclosure.

Comments regarding each of these applications must be received at the Reserve Bank indicated or the offices of the Board of Governors, Benjamin W. McDonough, Secretary of the Board, 20th Street and Constitution Avenue NW, Washington, DC 20551–0001, not later than November 24, 2026.

A. Federal Reserve Bank of San Francisco (Keith Dudley, Vice President), 101 Market Street, San Francisco, California 94105–1579. Comments can also be sent electronically to *SF.Supervision.Comments.Applications@sf.frb.org:*

1. *James M. Edmunds, Seattle, Washington; and Megan F. Clubb and Clifford W. Kontos, both of Walla Walla, Washington;* as a group acting in concert, to retain voting shares of Baker Boyer Bancorp, and thereby indirectly retain voting shares of Baker Boyer National Bank, both of Walla Walla, Washington.

Board of Governors of the Federal Reserve System.

Michele Taylor Fennell,

Associate Secretary of the Board.

BILLING CODE 6210–01–P

GENERAL SERVICES ADMINISTRATION

[OMB Control No. 3090–0300; Docket No. 2026–0562; Sequence No. 1]

Information Collection; General Services Administration Acquisition Regulation; Implementation of Information Technology Security Requirements

AGENCY: Office of Acquisition Policy, General Services Administration (GSA).

ACTION: Notice; request for comments.

SUMMARY: In accordance with the Paperwork Reduction Act of 1995 and OMB regulations, GSA invites the public to comment on an extension concerning the implementation of information technology security requirements. GSA invites comments on: whether the proposed collection of information is necessary, including whether the information will have practical utility; the accuracy of the estimate of the burden of the proposed information collection; ways to enhance the quality, utility, and clarity of the information to be collected; and ways to minimize the burden of the information collection on respondents, including the use of automated collection techniques or other forms of information technology. OMB has approved this information collection for use through March 31, 2027. GSA proposes that OMB extend its approval for use for three additional years beyond the current expiration date.

DATES: GSA will consider all comments received by January 8, 2027.

ADDRESSES: GSA invites interested persons to submit comments on this collection through *https://www.regulations.gov* and follow the instructions on the site. This website provides the ability to type short comments directly into the comment field or attach a file for lengthier comments. If there are difficulties submitting comments, contact the GSA Regulatory Secretariat Division at *GSARegSec@gsa.gov.*

Instructions: All items submitted must cite OMB Control No. 3090–0163, Contract Solicitation Information. Comments received generally will be posted without change to *https://www.regulations.gov,* including any personal and/or business-confidential information provided. To confirm receipt of your comment(s), please check *www.regulations.gov,* approximately two-to-three days after submission to verify posting.

FOR FURTHER INFORMATION CONTACT: Thomas O'Linn, Procurement Analyst, at telephone 816–589–3783 (Ext. 13291), or *GSARpolicy@gsa.gov.*

SUPPLEMENTARY INFORMATION:

A. OMB Control Number, Title, and any Associated Form(s)

OMB Control No. 3090–0300, Implementation of Information Technology Security Requirements.

B. Needs and Uses

The General Services Acquisition Regulations (GSAR) requires that contractors accessing information systems that support the operations and assets of GSA, another agency, contractor, or other source, to comply with GSA's IT security policies including GSA IT's security policies outlined in CIO 09–48, IT Security Procedural Guide: Security and Privacy IT Acquisition Requirements and CIO 12–2018, IT Policy Requirements Guide.

Due to the Revolutionary GSAR Overhaul (RGO), there are no program changes. Once RGO rulemaking is complete, GSA will assess and revise this information collection as needed.

C. Annual Burden

Respondents: *35.*

Responses Per Respondent: *2.*

Total Annual Responses: *70.*

Hours Per Response: *5.*

Total Burden Hours: *350.*

Obtaining Copies: Requesters may obtain a copy of the information collection documents from the Regulatory Secretariat Division (MVCB), at *GSARegSec@gsa.gov.* Please cite OMB Control No. 3090–0300, Implementation

of Information Technology Security Requirements, in all correspondence.

Richard Speidel,

Deputy Chief Data Officer, General Services Administration.

BILLING CODE 6820–61–P

DEPARTMENT OF HEALTH AND HUMAN SERVICES

Centers for Disease Control and Prevention

[60Day–27–1319; Docket No. CDC–2026–1783]

Proposed Data Collection Submitted for Public Comment and Recommendations

AGENCY: Centers for Disease Control and Prevention (CDC), Department of Health and Human Services (HHS).

ACTION: Notice with comment period.

SUMMARY: The Centers for Disease Control and Prevention (CDC), as part of its continuing effort to reduce public burden and maximize the utility of government information, invites the general public and other federal agencies the opportunity to comment on a continuing information collection, as required by the Paperwork Reduction Act of 1995. This notice invites comment on an existing information collection project titled National Surveillance of Community Water Systems and Corresponding Populations with the Recommended Fluoridation Level. This surveillance program collects the fluoridation status of, and population served by the nation's 52,000 community water systems (CWS) which serve the 50 states and the District of Columbia.

DATES: CDC must receive written comments on or before January 8, 2027.

ADDRESSES: You may submit comments, identified by Docket No. CDC–2026–1783 by either of the following methods:

- *Federal eRulemaking Portal: www.regulations.gov.* Follow the instructions for submitting comments.
- *Mail:* Jeffrey M. Zirger, Information Collection Review Office, Centers for Disease Control and Prevention, 1600 Clifton Road NE, MS–H21–8, Atlanta, Georgia 30329.

Instructions: All submissions received must include the agency name and Docket Number. CDC will post, without change, all relevant comments to *www.regulations.gov.*

Please note: Submit all comments through the Federal eRulemaking portal (*www.regulations.gov*) or by U.S. mail to the address listed above.

FOR FURTHER INFORMATION CONTACT: To request more information on the proposed project or to obtain a copy of the information collection plan and instruments, contact Jeffrey M. Zirger, Information Collection Review Office, Centers for Disease Control and Prevention, 1600 Clifton Road NE, MS–H21–8, Atlanta, Georgia 30329; phone: 404–639–7570; Email: *omb@cdc.gov.*

SUPPLEMENTARY INFORMATION: Under the Paperwork Reduction Act of 1995 (PRA) (44 U.S.C. 3501–3520), federal agencies must obtain approval from the Office of Management and Budget (OMB) for each collection of information they conduct or sponsor. In addition, the PRA also requires federal agencies to provide a 60-day notice in the **Federal Register** concerning each proposed collection of information, including each new proposed collection, each proposed extension of existing collection of information, and each reinstatement of previously approved information collection before submitting the collection to the OMB for approval. To comply with this requirement, we are publishing this notice of a proposed data collection as described below.

The OMB is particularly interested in comments that will help:

1. Evaluate whether the proposed collection of information is necessary for the proper performance of the functions of the agency, including whether the information will have practical utility;

2. Evaluate the accuracy of the agency's estimate of the burden of the proposed collection of information, including the validity of the methodology and assumptions used;

3. Enhance the quality, utility, and clarity of the information to be collected;

4. Minimize the burden of the collection of information on those who are to respond, including through the use of appropriate automated, electronic, mechanical, or other technological collection techniques or other forms of information technology, *e.g.,* permitting electronic submissions of responses; and

5. Assess information collection costs.

Proposed Project

National Surveillance of Community Water Systems and Corresponding Populations with the Recommended Fluoridation Level—(OMB Control No 0920–1319, Exp. 2/28/2027)—Extension—National Center for Chronic Disease Prevention and Health Promotion (NCCDPHP), Centers for Disease Control and Prevention (CDC).

Background and Brief Description

Community water fluoridation is the process of adjusting the fluoride concentration of a Community Water Systems (CWS) to the level beneficial for prevention of dental caries as recommended by the US Public Health Service (PHS). Community water fluoridation is a major factor contributing to the large decline in caries in the U.S. in the past 75 years and is recognized as one of 10 great public health achievements of the twentieth century. Community water fluoridation reduces dental caries by 25% and is a safe, and is the most cost-effective way to deliver fluoride to people of all ages, regardless of education and income level. It is especially important for populations with limited access to preventive dental measures. CDC is authorized to collect the information under the Public Health Service Act. This data collection aligns with CDC's strategy to use public health surveillance to inform programs and policies to improve the oral health of the nation by reducing disparities and expanding access to effective prevention programs.

CDC uses the Water Fluoridation Reporting System (WFRS) to collect water fluoridation coverage and quality throughout the U.S. Respondents to the information collection are state fluoridation managers or other state government officials designated by the state dental director or drinking water administrator. State participation in the data collection is voluntary. This data allows CDC and states to monitor the performance and efficiency of their water fluoridation programs, which will improve and extend program delivery.

CDC requests OMB approval for an estimated 2,783 annual burden hours. There is no cost to respondents other than their time to participate.

ESTIMATED ANNUALIZED BURDEN HOURS

Type of respondents	Form name	Number of respondents	Number of responses per respondent	Average burden per response (in hours)	Total burden (in hours)
State Official	Fluoridation status and population	50	1	37.5	1,875
State Official	Fluoride testing data	33	1	27.5	908
Total					2,783

Jeffrey M. Zirger,

Lead, Information Collection Review Office, Office of Public Health Ethics and Regulations, Office of Science, Centers for Disease Control and Prevention.

[FR Doc. 2026–22821 Filed 11–6–26; 8:45 am]

BILLING CODE 4163–18–P

DEPARTMENT OF HEALTH AND HUMAN SERVICES

Centers for Disease Control and Prevention

Meeting of the Advisory Board on Radiation and Worker Health, National Institute for Occupational Safety and Health

AGENCY: Centers for Disease Control and Prevention (CDC), Department of Health and Human Services (HHS).

ACTION: Notice of meeting.

SUMMARY: In accordance with the Federal Advisory Committee Act, the Centers for Disease Control and Prevention (CDC) announces the following meeting of the Advisory Board on Radiation and Worker Health (ABRWH). This is a virtual meeting. It is open to the public, limited only by the space available and the number of audio conference lines and internet conference access, with a public comment period. The public is welcome to submit written comments in advance of the meeting, to the contact person below. The public is also welcome to listen to the meeting by joining the audio conference (information below). The audio conference line has 150 ports for callers.

DATES: The meeting will be held on December 2, 2026, from 10 a.m. to 6:15 p.m., EST and a public comment session will be held at 5:15 p.m., EST, and will conclude at 6:15 p.m., EST, or following the final call for public comment, whichever comes first. Written comments must be received on or before November 19, 2026.

ADDRESSES: You may submit comments by mail to: Rashaun Roberts, Ph.D., Designated Federal Officer, National Institute for Occupational Safety and Health, Centers for Disease Control and Prevention, 1090 Tusculum Avenue, Mailstop C–24, Cincinnati, Ohio 45226. Email: *ocas@cdc.gov*.

Written comments received in advance of the meeting will be included in the official record of the meeting.

Meeting Information: The USA toll-free dial-in numbers are: +1 404 718 3800 (U.S. East Coast) and +1 888 994 4478 (U.S West Coast), passcode 792 701 067#. The meeting ID is: 290 652 778 894 9670; passcode is 4T4aq29X; and the Web conference by Teams meeting connection is: *https://teams.microsoft.com/meet/290652778894967 0?p=4sri51vlDfNwtk0bqZ*.

FOR FURTHER INFORMATION CONTACT: Rashaun Roberts, Ph.D., Designated Federal Officer, National Institute for Occupational Safety and Health, Centers for Disease Control and Prevention, 1090 Tusculum Avenue, Mailstop C–24, Cincinnati, Ohio 45226, Telephone: (513) 533–6800, Email: *ocas@cdc.gov*.

SUPPLEMENTARY INFORMATION:

Background: The Advisory Board was established under the Energy Employees Occupational Illness Compensation Program Act of 2000 to advise the President on a variety of policy and technical functions required to implement and effectively manage the compensation program. Key functions of the Advisory Board include providing advice on the development of probability of causation guidelines, which have been promulgated by the Department of Health and Human Services (HHS) as a final rule; advice on methods of dose reconstruction, which have also been promulgated by HHS as a final rule; advice on the scientific validity and quality of dose estimation and reconstruction efforts being performed for purposes of the compensation program; and advice on petitions to add classes of workers to the Special Exposure Cohort (SEC). In December 2000, the President delegated responsibility for funding, staffing, and operating the Advisory Board to HHS, which subsequently delegated this authority to the CDC. NIOSH implements this responsibility for CDC.

The charter was issued on August 3, 2001, renewed at appropriate intervals, and rechartered under Executive Order 14109 (September 29, 2023) on March 22, 2024. Unless continued by the President, the Advisory Board will terminate on September 30, 2027, consistent with Executive Order 14354 of September 29, 2025.

Purpose: The Advisory Board is charged with a) providing advice to the Secretary, HHS, on the development of guidelines under Executive Order 13179; b) providing advice to the Secretary, HHS, on the scientific validity and quality of dose reconstruction efforts performed for this program; and c) upon request by the Secretary, HHS, advising the Secretary on whether there is a class of employees at any Department of Energy facility who were exposed to radiation but for whom it is not feasible to estimate their radiation dose, and on whether there is reasonable likelihood that such radiation doses may have endangered the health of members of this class.

Matters to be Considered: The agenda will include discussions on the following: NIOSH program, Department of Labor, Department of Energy, and Special Exposure Cohort (SEC) petitions status updates; procedure reviews finalization/document approvals; IREP Rounding Update; United Nuclear Corporation SEC #00267 Petition Evaluation Report and Board Work Session. Agenda items are subject to change as priorities dictate. For additional information, please contact Toll Free 1–800–232–4636.

The Director, Office of Strategic Business Initiatives, Office of the Chief Operating Officer, Centers for Disease Control and Prevention, has been delegated the authority to sign **Federal Register** notices pertaining to announcements of meetings and other committee management activities, for both the Centers for Disease Control and Prevention and the Agency for Toxic Substances and Disease Registry.

Kalwant Smagh,

Director, Office of Strategic Business Initiatives, Office of the Chief Operating Officer, Centers for Disease Control and Prevention.

[FR Doc. 2026–22775 Filed 11–6–26; 8:45 am]

BILLING CODE 4163–18–P

DEPARTMENT OF HEALTH AND HUMAN SERVICES

Centers for Disease Control and Prevention

[30Day–27–1461]

Agency Forms Undergoing Paperwork Reduction Act Review

In accordance with the Paperwork Reduction Act of 1995, the Centers for Disease Control and Prevention (CDC) has submitted the information collection request titled ''Overdose Response Strategy Data Collection'' to the Office of Management and Budget (OMB) for review and approval. CDC previously published a ''Proposed Data Collection Submitted for Public Comment and Recommendations'' notice on August 20, 2026, to obtain comments from the public and affected agencies. CDC received four public comments related to the previous notice. This notice serves to allow an additional 30 days for public and affected agency comments.

CDC will accept all comments for this proposed information collection project. The Office of Management and Budget is particularly interested in comments that:

(a) Evaluate whether the proposed collection of information is necessary for the proper performance of the functions of the agency, including whether the information will have practical utility;

(b) Evaluate the accuracy of the agencies estimate of the burden of the proposed collection of information, including the validity of the methodology and assumptions used;

(c) Enhance the quality, utility, and clarity of the information to be collected;

(d) Minimize the burden of the collection of information on those who are to respond, including, through the use of appropriate automated, electronic, mechanical, or other technological collection techniques or other forms of information technology, *e.g.,* permitting electronic submission of responses; and

(e) Assess information collection costs.

To request additional information on the proposed project or to obtain a copy of the information collection plan and instruments, call (404) 639–7570. Comments and recommendations for the proposed information collection should be sent within 30 days of publication of this notice to *www.reginfo.gov/public/do/PRAMain*. Find this particular information collection by selecting ''Currently under 30-day Review—Open for Public Comments'' or by using the search function. Direct written comments and/or suggestions regarding the items contained in this notice to the Attention: CDC Desk Officer, Office of Management and Budget, 725 17th Street NW, Washington, DC 20503 or by fax to (202) 395–5806. Provide written comments within 30 days of notice publication.

Proposed Project

Overdose Response Strategy Data Collection (OMB Control No. 0920—1461. Exp. 8/31/2028)—Revision—National Center for Injury Prevention and Control (NCIPC), Centers for Disease Control and Prevention (CDC).

Background and Brief Description

Drug overdose death rates, including those involving synthetic opioids (such as fentanyl) and stimulants (such as cocaine and methamphetamine) rose over the past several decades in the United States, becoming a topic of national importance. Drug overdoses remain the leading cause of injury-related death in the United States. CDC predicts that around 67,000 Americans died from a drug overdose in the 12-month period ending April 2026.

The Overdose Response Strategy (ORS) is a unique collaboration between public health and public safety agencies designed to help local communities reduce drug overdoses and save lives by sharing timely data, pertinent intelligence, and evidence-based and innovative strategies.

ORS teams support public health and public safety entities in their jurisdictions by:

- Sharing data systems to inform rapid and effective community overdose prevention efforts.
- Supporting immediate, evidence-based response efforts that can directly reduce overdose deaths.
- Designing and using promising strategies at the intersection of public health and public safety.
- Disseminating information to support the implementation of evidence-informed overdose prevention strategies.

As the ORS is one of CDC's flagship overdose prevention programs, and partnering with public safety is one of CDC's key overdose prevention strategies, a greater understanding of the impact and effectiveness of the ORS is needed to inform program enhancements and improvements.

This ICR focuses on a survey and a reporting tool that ORS teams and their partners will complete to provide critical data to CDC for program monitoring, to inform technical assistance and guidance documents produced by CDC or other partners, and to assess the extent to which the ORS program is achieving the goal of supporting public health and public safety partnerships to reduce drug overdose. It will also provide CDC with the capacity to respond in a timely manner to requests for information about the program from the Department of Health and Human Services (HHS), the White House, Congress, and other sources. Information collected will be disseminated to ORS teams and to the public via an annual Program Evaluation Report and an ORS Annual Report. Data from both reports will largely be used to develop programmatic reports, tools, and implementation guides for the purposes of program improvement.

We are requesting changes to the approved OMB data collection instruments and updating the approved data collection instruments to align with the program's updated logic model and evaluation questions, which resulted from strategic planning activities and evaluation planning activities carried out in 2025 and 2026. Revisions requested are to update the logic model, revise and streamline surveys to better align with updated logic model, and to update data collection and analysis by combining previously approved surveys. These changes are expected to significantly improve the efficiency and utility of the data collection activities. Based on these changes, CDC requests OMB approval for a reduction in annual burden from 653 hours to 327 hours. There is no cost to respondents other than their time to participate.

BILLING CODE 4163–18–P

DEPARTMENT OF HEALTH AND HUMAN SERVICES

Centers for Disease Control and Prevention

[30Day–27–1359]

Agency Forms Undergoing Paperwork Reduction Act Review

In accordance with the Paperwork Reduction Act of 1995, the Centers for Disease Control and Prevention (CDC) has submitted the information collection request titled ''National Survey of Syringe Services Programs (NSSSP)'' to the Office of Management and Budget (OMB) for review and approval. CDC previously published a ''Proposed Data Collection Submitted for Public Comment and Recommendations'' notice on June 2, 2026 to obtain comments from the public and affected agencies. CDC received 26 comments related to the previous notice. This notice serves to allow an additional 30 days for public and affected agency comments.

CDC will accept all comments for this proposed information collection project. The Office of Management and Budget is particularly interested in comments that:

(a) Evaluate whether the proposed collection of information is necessary for the proper performance of the functions of the agency, including whether the information will have practical utility;

(b) Evaluate the accuracy of the agencies estimate of the burden of the proposed collection of information, including the validity of the methodology and assumptions used;

(c) Enhance the quality, utility, and clarity of the information to be collected;

(d) Minimize the burden of the collection of information on those who are to respond, including, through the use of appropriate automated, electronic, mechanical, or other technological collection techniques or other forms of information technology, *e.g.,* permitting electronic submission of responses; and

(e) Assess information collection costs.

To request additional information on the proposed project or to obtain a copy of the information collection plan and instruments, call (404) 639–7570. Comments and recommendations for the proposed information collection should be sent within 30 days of publication of this notice to *www.reginfo.gov/public/do/PRAMain*. Find this particular information collection by selecting ''Currently under 30-day Review—Open for Public Comments'' or by using the search function. Direct written comments and/or suggestions regarding the items contained in this notice to the Attention: CDC Desk Officer, Office of Management and Budget, 725 17th Street NW, Washington, DC 20503 or by fax to (202) 395–5806. Provide written comments within 30 days of notice publication.

Proposed Project

The National Survey of Syringe Services Programs (NSSSP) (OMB Control No. 0920–1359, Exp. 1/31/2027)—Revision—National Center for HIV, Viral Hepatitis, STD, and TB Prevention (NCHHSTP), Centers for Disease Control and Prevention (CDC).

Background and Brief Description

The primary purpose of the National Survey of Syringe Services Programs (NSSSP) is to strengthen and improve the ability of CDC and local and state partners to monitor and evaluate syringe services programs (SSPs) nationally, with the overall goal of supporting, sustaining, and improving SSPs nationwide and reducing infectious disease and other harms related to drug use. Findings from the 2022–2025 survey successfully characterized operational characteristics and services, funding resources, community relations, and key operational successes and challenges. The 2026 survey is currently being implemented. Revisions are being requested to address the increasing number of SSPs nationwide, updated infectious disease and substance use prevention, testing, and treatment modalities, additional SSP services provided, and additional information on overdose prevention and reversals.

The project will include all SSPs that are listed in a publicly available directory of all known SSPs in the United States maintained by the North American Syringe Exchange Network (NASEN; *https://nasen.org*). The project will also include SSPs in NASEN's directory that do not wish to be publicly listed but have agreed to be contacted for research purposes, SSPs belonging to NASEN's buyers' club that are not part of the directory, respondents to prior RTI Arnold Ventures Surveys of SSPs that are not part of NASEN's directory, and other SSPs proactively identified through searching state health department websites, funding agencies, state and regional networks, regional conferences, partner organization networks or webinars and via social media.

SSPs will be sent a letter of invitation to participate in a 35-minute program survey. Participating programs will have the option of completing the survey via different modalities to enhance feasibility and comfort in completing the survey, for example via the Research Electronic Data Capture (REDCap) or a similarly secure web-based application. Other modalities for survey administration will include a coordinated telephone or videoconferencing interview. SSPs will be sent reminder letters for an approximately 6-month data collection period.

The survey will include questions on operational characteristics and services, funding resources, community relations,

and key operational successes and challenges. Approximately 1000 SSPs will be able to participate in the survey. We anticipate that approximately 20% of SSPs will decline to complete the survey, yielding 800 completed surveys per year. However, given that it is challenging to predict future response rates, we are requesting enough burden hours to allow 100% of SSPs to respond to the survey. We estimate that it will take 35 minutes to complete the survey, regardless of how the respondent chooses to complete it (*i.e.,* self-administered online or interviewer-administered by phone or videoconferencing). SSPs that do not respond to the initial survey invitation will be given reminders to complete the survey over the duration of the survey implementation period.

CDC requests OMB approval for an estimated 583 annualized burden hours. Participation of respondents is voluntary and there is no cost to the respondents other than their time.

ESTIMATED ANNUALIZED BURDEN HOURS

Type of respondents	Form name	Number of respondents	Number of responses per respondent	Average burden per response (in hours)
All participating SSPs	National Survey of Syringe Services Programs	1,000	1	35/60

BILLING CODE 4163–18–P

DEPARTMENT OF HEALTH AND HUMAN SERVICES

Centers for Medicare & Medicaid Services

[Document Identifier: CMS–R–21]

Agency Information Collection Activities: Proposed Collection; Comment Request

AGENCY: Centers for Medicare & Medicaid Services, Health and Human Services (HHS).

ACTION: Notice.

SUMMARY: The Centers for Medicare & Medicaid Services (CMS) is announcing an opportunity for the public to comment on CMS' intention to collect information from the public. Under the Paperwork Reduction Act of 1995 (PRA), federal agencies are required to publish notice in the **Federal Register** concerning each proposed collection of information (including each proposed extension or reinstatement of an existing collection of information) and to allow 60 days for public comment on the proposed action. Interested persons are invited to send comments regarding our burden estimates or any other aspect of this collection of information, including the necessity and utility of the proposed information collection for the proper performance of the agency's functions, the accuracy of the estimated burden, ways to enhance the quality, utility, and clarity of the information to be collected, and the use of automated collection techniques or other forms of information technology to minimize the information collection burden.

DATES: Comments must be received by January 8, 2027.

ADDRESSES: When commenting, please reference the document identifier or OMB control number. To be assured consideration, comments and recommendations must be submitted in any one of the following ways:

1. *Electronically.* You may send your comments electronically to *http://www.regulations.gov*. Follow the instructions for ''Comment or Submission'' or ''More Search Options'' to find the information collection document(s) that are accepting comments.

2. *By Regular Mail.* You may mail written comments to the following address: CMS, Office of Strategic Operations and Regulatory Affairs, Division of Regulations Development, Attention: Document Identifier: __/OMB Control Number: __, Room C4–26–05, 7500 Security Boulevard, Baltimore, Maryland 21244–1850.

To obtain copies of a supporting statement and any related forms for the proposed collection(s) summarized in this notice, please access the CMS PRA website by copying and pasting the following web address into your web browser: *https://www.cms.gov/Regulations-and-Guidance/Legislation/PaperworkReductionActof1995/PRA-Listing*.

FOR FURTHER INFORMATION CONTACT: William N. Parham at (410) 786–4669.

SUPPLEMENTARY INFORMATION:

Contents

This notice sets out a summary of the use and burden associated with the following information collections. More detailed information can be found in each collection's supporting statement and associated materials (see **ADDRESSES**).

Under the PRA (44 U.S.C. 3501–3520), federal agencies must obtain approval from the Office of Management and Budget (OMB) for each collection of information they conduct or sponsor. The term ''collection of information'' is defined in 44 U.S.C. 3502(3) and 5 CFR 1320.3(c) and includes agency requests or requirements that members of the public submit reports, keep records, or provide information to a third party. Section 3506(c)(2)(A) of the PRA requires federal agencies to publish a 60-day notice in the **Federal Register** concerning each proposed collection of information, including each proposed extension or reinstatement of an existing collection of information, before submitting the collection to OMB for approval. To comply with this requirement, CMS is publishing this notice.

Information Collection

1. *Type of Information Collection Request:* Extension of a currently approved collection; *Title of Information Collection:* Withholding Medicare Payments to Recover Medicaid Overpayments and Supporting Regulations in 42 CFR 447.31; *Use:* Certain Medicaid providers that are subject to offsets for the collection of Medicaid overpayments may terminate or substantially reduce their participation in Medicaid, leaving the state Medicaid agency unable to recover the amounts due. Recovery procedures allow for determining the amount of overpayments and offsetting the overpayments by withholding the provider's Medicare payments. To effectuate the withholding, the state agency must provide their respective CMS regional office with certain documentation that identifies the provider and the Medicaid overpayment amount. The agency must also demonstrate that the provider was

notified of the overpayment and that demand for the overpayment was made. An opportunity to appeal the overpayment determination must be afforded to the provider by the Medicaid state agency. Lastly, Medicaid state agencies must notify CMS when to terminate the withholding; *Form Number:* CMS–R–21 (OMB control number: 0938–0287); *Frequency:* Occasionally; *Affected Public:* State, Local, or Tribal Governments; *Number of Respondents:* 54; *Total Annual Responses:* 27; *Total Annual Hours:* 81. (For policy questions regarding this collection contact Stuart Goldstein at 410–786–0694.)

William N. Parham, III

Director, Division of Information Collections and Regulatory Impacts, Office of Strategic Operations and Regulatory Affairs.

National Institutes of Health

National Institute of Arthritis and Musculoskeletal and Skin Diseases; Notice of Meeting

Pursuant to section 1009 of the Federal Advisory Committee Act, as amended, notice is hereby given of a meeting of the National Arthritis and Musculoskeletal and Skin Diseases Advisory Council.

The meeting will be partially open to the public as indicated below, with attendance limited to space available. Individuals who plan to attend and need special assistance, such as sign language interpretation or other reasonable accommodations, should notify the Contact Person listed below in advance of the meeting. The open session will be videocast and can be accessed from the NIH Videocasting and Podcasting website: *https://videocast.nih.gov/watch/d7d1c3b9-bb39-11f1-82c0-124f0a52e769.*

The meeting will be closed to the public in accordance with the provisions set forth in sections 552b(c)(4) and 552b(c)(6), Title 5 U.S.C., as amended. The grant applications and the discussions could disclose confidential trade secrets or commercial property such as patentable material, and personal information concerning individuals associated with the grant applications, the disclosure of which would constitute a clearly unwarranted invasion of personal privacy.

Name of Committee: National Arthritis and Musculoskeletal and Skin Diseases Advisory Council.

Date: January 26, 2027.

Open: 9:30 a.m. to 3:30 p.m.

Agenda: Call to Order; Consideration of Minutes; NIAMS Director's Report and Discussion; Concepts; Open Discussion.

Address: National Institutes of Health, 6701 Democracy Blvd., Bethesda, MD 20892.

Meeting Format: Virtual Meeting.

Closed: 3:30 p.m. to 4:30 p.m.

Agenda: To review and evaluate grant applications and/or proposals.

Address: National Institutes of Health, 6701 Democracy Blvd., Bethesda, MD 20892.

Meeting Format: Virtual Meeting.

Contact Person: Timothy Erik Edgerton, MBA, Acting Deputy Director, Division of Extramural Activities, Grants Management Branch, Division of Extramural Activities, 6701 Democracy Blvd., Suite 838, Bethesda, MD 20892, (301) 594–7760, *edgertont@mail.nih.gov.*

Registration is not required to attend the open portion of this meeting.

Any interested person may file written comments with the committee by forwarding the statement to the Contact Person listed on this notice. The statement should include the name, address, telephone number and when applicable, the business or professional affiliation of the interested person.

Information is also available on the Institute's/Center's home page: *https://www.niams.nih.gov/about/working-groups/advisory-council,* where an agenda and any additional information for the meeting will be posted when available.

(Catalogue of Federal Domestic Assistance Program Nos. 93.846, Arthritis, Musculoskeletal and Skin Diseases Research; 93.AR4, Arthritis, Musculoskeletal and Skin Diseases Research—Training Institutional (TI); 93.AR6, Arthritis, Musculoskeletal and Skin Diseases Research—Other Research (OR); 93.AR5, Arthritis, Musculoskeletal and Skin Diseases Research—Research Centers (RC); 93.AR7, Arthritis, Musculoskeletal and Skin Diseases Research—SBIR/STTR; 93.AR1, Arthritis, Musculoskeletal and Skin Diseases Research—Research Projects; 93.AR3, Arthritis, Musculoskeletal and Skin Diseases Research—Training Individual (TR), National Institutes of Health, HHS)

Dated: November 5, 2026.

BILLING CODE 4167–05–P

DEPARTMENT OF HOMELAND SECURITY

Coast Guard

[Docket No. USCG–2025–0147]

Collection of Information Under Review by Office of Management and Budget; OMB Control Number: 1625–0100

AGENCY: Coast Guard, DHS.

ACTION: Thirty-day notice requesting comments.

SUMMARY: In compliance with the Paperwork Reduction Act of 1995 the U.S. Coast Guard is forwarding an Information Collection Request (ICR), abstracted below, to the Office of Management and Budget (OMB), Office of Information and Regulatory Affairs (OIRA), requesting an extension of its approval for the following collection of information: 1625–0100, Advanced Notice of Vessel Arrival; without change. Our ICR describes the information we seek to collect from the public. Review and comments by OIRA ensure we only impose paperwork burdens commensurate with our performance of duties.

DATES: You may submit comments to the Coast Guard and OIRA on or before December 9, 2026.

ADDRESSES: Comments to the Coast Guard should be submitted using the Federal eRulemaking Portal at *https://www.regulations.gov.* Search for docket number [USCG–2025–0147]. Written comments and recommendations to OIRA for the proposed information collection should be sent within 30 days of publication of this notice to *https://www.reginfo.gov/public/do/PRAMain.*

Find this particular information collection by selecting ''Currently under 30-day Review—Open for Public Comments'' or by using the search function.

A copy of the ICR is available through the docket on the internet at *https://www.regulations.gov.* Additionally,

copies are available from: COMMANDANT (CG–C5I–P), ATTN: PAPERWORK REDUCTION ACT MANAGER, U.S. COAST GUARD, 2703 MARTIN LUTHER KING JR. AVE SE, STOP 7710, WASHINGTON, DC 20593–7710.

FOR FURTHER INFORMATION CONTACT: A.L. Craig, Office of Privacy Management, telephone (571) 607–4058, or email *hqs-dg-m-cg-61-pii@uscg.mil.*

SUPPLEMENTARY INFORMATION:

Public Participation and Request for Comments

This notice relies on the authority of the Paperwork Reduction Act of 1995; 44 U.S.C., chapter 35, as amended. An ICR is an application to OIRA seeking the approval, extension, or renewal of a Coast Guard collection of information (Collection). The ICR contains information describing the Collection's purpose, the Collection's likely burden on the affected public, an explanation of the necessity of the Collection, and other important information describing the Collection. There is one ICR for each Collection.

The Coast Guard invites comments on whether this ICR should be granted based on the Collection being necessary for the proper performance of Departmental functions. In particular, the Coast Guard would appreciate comments addressing: (1) the practical utility of the Collection; (2) the accuracy of the estimated burden of the Collection; (3) ways to enhance the quality, utility, and clarity of information subject to the Collection; and (4) ways to minimize the burden of the Collection on respondents, including the use of automated collection techniques or other forms of information technology. These comments will help OIRA determine whether to approve the ICR referred to in this Notice.

We encourage you to respond to this request by submitting comments and related materials. Comments to Coast Guard or OIRA must contain the OMB Control Number of the ICR. They must also contain the docket number of this request, USCG–2025–0147, and must be received by December 9, 2026.

Submitting Comments

We encourage you to submit comments through the Federal eRulemaking Portal at *https://www.regulations.gov.* If your material cannot be submitted using *https://www.regulations.gov,* contact the person in the **FOR FURTHER INFORMATION CONTACT** section of this document for alternate instructions. Documents mentioned in this notice, and all public comments, are in our online docket at *https://www.regulations.gov* and can be viewed by following that website's instructions. If you go to the online docket and sign up for email alerts, you will be notified when comments are posted.

We accept anonymous comments. Comments we post to *https://www.regulations.gov* will include any personal information you have provided. For more about privacy and submissions to the Coast Guard in response to this document, see DHS's eRulemaking System of Records notice (85 FR 14226, March 11, 2020). For more about privacy and submissions to OIRA in response to this document, see the *https://www.reginfo.gov,* comment-submission web page. OIRA posts its decisions on ICRs online at *https://www.reginfo.gov/public/do/PRAMain* after the comment period for each ICR. An OMB Notice of Action on each ICR will become available via a hyperlink in the OMB Control Number: 1625–0100.

Previous Request for Comments

This request provides a 30-day comment period required by OIRA. The Coast Guard published the 60-day notice (90 FR 25061, June 13, 2025) required by 44 U.S.C. 3506(c)(2). That notice elicited two submissions. One submission was unrelated to the notice, and one submission had four ICR-related comments. First, the commenter stated that they appreciate the ongoing efforts to reduce administrative burdens and streamline reporting requirements to U.S. Authorities. Second, the commenter supports the implementation of Maritime Single Windows (MSW) and emphasizes their critical role in enhancing customs and port cooperation. Third, the commenter supports the development of international standards to allow for the systematic collection of Advance Passenger Information (API) and Booking Reservation Information (BRI) from cruise passenger vessel operators and the alignment of any passenger and crew data standards with the International Maritime Organization Facilitation Convention. Fourth, the commenter recommends that the Coast Guard add to its website a point of contact to resolve data transmission challenges. To assist vessel operators in the submission of advance notice of arrival data and resolve any data transmission challenges, the Coast Guard currently has on our National Vessel Movement Center (NVMC) web page (*www.nvmc.uscg.gov*) links to User Guides, Frequently Asked Questions, an email address and contact phone numbers that are staffed 24/7. Accordingly, no changes have been made to the Collection.

Information Collection Request

Title: Advanced Notice of Vessel Arrival.

OMB Control Number: 1625–0100.

Summary: 46 U.S.C. 70001 authorizes the Coast Guard to require pre-arrival messages from any vessel entering a port or place in the United States.

Need: This information is required under 33 CFR 146 and 33 CFR 160 subpart C to control vessel traffic, develop contingency plans, and enforce regulations.

Forms: None.

Affected Public: Vessel owners and operators.

Number of Respondents: 16,105 Unique Vessels.

Notice of Arrival (Initial and Update): 13,705.

Waiver Request: 1,200.

Notice of Hazardous Conditions: 1,200.

Frequency: On occasion.

Number of Responses per Respondent:

Notice of Arrival (Initial): 8.312.

Notice of Arrival (Update): 12.156.

Waiver Request: 1.

Notice of Hazardous Conditions: 1.

Estimated Time per Response:

Notice of Arrival (Initial): 1.03 hours.

Notice of Arrival (Update): 12 minutes.

Waiver Request: 1 hour.

Notice of Hazardous Conditions: 30 minutes.

Hour Burden Estimate: The estimated burden has decreased from 202,021 hours to 152,155 hours a year; due to a decrease in the estimated annual number of responses.

Authority: The Paperwork Reduction Act of 1995; 44 U.S.C. chapter 35, as amended.

Dated: November 4, 2026.

Bradley E. White,

Chief, Office of Privacy Management, U.S. Coast Guard.

DEPARTMENT OF HOUSING AND URBAN DEVELOPMENT

[Docket No. FR–7094–N–11; OMB Control No. 2506–0219]

60-Day Notice of Proposed Information Collection: Youth Homelessness System Improvement (YHSI)

AGENCY: Office of Community Planning and Development, HUD.

ACTION: Notice.

SUMMARY: HUD is seeking approval from the Office of Management and Budget (OMB) for the information collection described below. In accordance with the Paperwork Reduction Act, HUD is requesting comment from all interested parties on the proposed collection of information. The purpose of this notice is to allow for 60 days of public comment.

DATES: *Comments Due Date:* January 8, 2027.

ADDRESSES: Interested persons are invited to submit comments regarding this proposal. Written comments and recommendations for the proposed information collection can be sent within 60 days of publication of this notice to *www.regulations.gov.* Interested persons are also invited to submit comments regarding this proposal and comments should refer to the proposal by name and/or OMB Control Number and should be sent to: Urnell Johnson, PRA Supervisor, Correspondence Unit, Department of Housing and Urban Development, 451 7th Street SW, Room 7232, Washington, DC 20410.

FOR FURTHER INFORMATION CONTACT: Karen DeBlasio, Director, Office of Special Needs Assistance Programs, Office of Community Planning and Development, Department of Housing and Urban Development, 451 7th Street SW, Room 7262, Washington, DC 20410; email *Karen.M.DeBlasio@hud.gov,* telephone (202) 402–4773 (This is not a toll-free number). HUD welcomes and is prepared to receive calls from individuals who are deaf or hard of hearing, as well as individuals with speech or communication disabilities. To learn more about how to make an accessible telephone call, please visit *https://www.fcc.gov/consumers/guides/telecommunications-relay-service-trs.*

Copies of available supporting documents for the proposed collection may be obtained from Ms. DeBlasio.

SUPPLEMENTARY INFORMATION: This notice informs the public that HUD is seeking approval from OMB for the information collection described in Section A.

A. Overview of Information Collection

Title of Information Collection: Youth Homeless Systems Improvement (YHSI).

OMB Approval Number: 2506–0219.

Type of Request: Renewal.

Form Number: SF–424 Application for Federal Assistance.

Description of the need for the information and proposed use:

Congress appropriated funds to the Department of Housing and Urban Development in FY2022–FY2026 to competitively award funds to selected communities to support them in establishing and implementing a response system for youth homelessness or for improving their existing response system. The YHSI projects focus on systems change to improve the capacity and increase collaboration with youth in the community; establish partnership with other youth-serving systems; connect housing and homelessness service providers to education, job training, and employment skills organizations; improve the centralized or coordinated assessment system also known as the Coordinated Entry Systems (CES); and improve data collection and use between systems that work with at-risk and homeless youth. This information collection revision is to monitor the progress of funded YHSI projects.

Estimated Number of Respondents: 86 YHSI grant recipients.

Estimated Number of Responses: 172.

Frequency of Response: Biannual.

Average Hours per Response: 2.

Total Estimated Burdens: $22,482.12.

B. Solicitation of Public Comment

This notice is soliciting comments from members of the public and affected parties concerning the collection of information described in Section A on the following:

(1) Whether the proposed collection of information is necessary for the proper performance of the functions of the agency, including whether the information will have practical utility;

(2) The accuracy of the agency's estimate of the burden of the proposed collection of information;

(3) Ways to enhance the quality, utility, and clarity of the information to be collected; and

(4) Ways to minimize the burden of the collection of information on those who are to respond; including through the use of appropriate automated collection techniques or other forms of information technology, *e.g.,* permitting electronic submission of responses.

HUD encourages interested parties to submit comment in response to these questions.

C. Authority

44 U.S.C. 3507.

DEPARTMENT OF THE INTERIOR

Fish and Wildlife Service

[Docket No. FWS–R4–ES–2026–2542; FXES11130400000–278–FF04E00000]

Endangered and Threatened Wildlife and Plants; Initiation of 5-Year Status Reviews for 81 Southeastern Species

AGENCY: Fish and Wildlife Service, Interior.

ACTION: Notice of initiation of status reviews.

SUMMARY: We, the U.S. Fish and Wildlife Service, are initiating 5-year status reviews under the Endangered Species Act of 1973, as amended, for 81 species (ESA; 16 U.S.C. 1531 *et seq.*). A 5-year status review is based on an assessment of the best scientific and commercial data available at the time of the review. We ask the public to submit any new information relevant to the status of any of the species listed in this notice or their habitats.

DATES: These status reviews were announced on November 9, 2026.

ADDRESSES: We will accept new information about these or any listed species at any time. For instructions on how and where to submit information for a species named in these status reviews, see table 1 in the **SUPPLEMENTARY INFORMATION** section. Additional information on status reviews is available at *https://www.fws.gov/project/five-year-status-reviews.*

FOR FURTHER INFORMATION CONTACT: To request information, contact the

appropriate person in Table 1 in the **SUPPLEMENTARY INFORMATION** section. For general information or to submit information by mail, contact Bradly Potter, via phone at 517–643–7965, via email at *R4Recovery@fws.gov,* or via U.S. mail at U.S. Fish and Wildlife Service, 1875 Century Boulevard, Atlanta, GA 30345.

Individuals in the United States who are deaf, deafblind, hard of hearing, or have a speech disability may dial 711 (TTY, TDD, or TeleBraille) to access telecommunications relay services. Individuals outside the United States should use the relay services offered within their country to make international calls to the point-of-contact in the United States.

SUPPLEMENTARY INFORMATION: We, the U.S. Fish and Wildlife Service, are announcing 5-year status reviews under the ESA for 81 species which include 47 animal species and 34 plant species. A 5-year status review is based on the best scientific and commercial data available at the time of the review. We ask the public to submit at any time any new information relevant to the status of any of the species listed in Table 1 below.

Why do we conduct 5-year status reviews?

Under the ESA, we maintain Lists of Endangered and Threatened Wildlife and Plants (which we collectively refer to as the List) in title 50 of the Code of Federal Regulations (CFR) at 50 CFR 17.11 (for wildlife) and 50 CFR 17.12 (for plants). Section 4(c)(2)(A) of the ESA requires us to review each listed species' status at least once every 5 years. Our regulations at 50 CFR 424.21 require that we publish a notice in the **Federal Register** announcing species under active review. For additional information about 5-year status reviews, refer to our fact sheet at *https://www.fws.gov/project/five-year-status-reviews.*

What information do we consider in our reviews?

A 5-year status review considers the best scientific and commercial data regarding the species. Such information includes:

(A) Species biology, including but not limited to population trends, distribution, abundance, demographics, habitat requirements, tolerance thresholds, and genetics;

(B) Habitat conditions, including but not limited to amount, distribution, and suitability;

(C) Conservation measures that have been or are planned to be implemented to benefit the species;

(D) Current threats and trends in relation to the five listing factors (as defined in section 4(a)(1) of the ESA (16 U.S.C. 1533(a)(1)); and

(E) Other new information, data, or corrections, including, but not limited to, taxonomic or nomenclature changes, identification of erroneous information contained in the List, and any improved analytical methods.

Any new information will be considered during the 5-year status review and ongoing recovery programs for the species.

Which species are under review?

This notice announces 5-year status reviews for the species listed in Table 1. For additional information on the species, see our website at *https://ecos.fws.gov/ecp/* and enter the species name in the search box.

TABLE 1—SPECIES UNDER REVIEW

Taxonomic group	Common name	Scientific name	Listing status (see note)	Locations where the species is known to occur	Email contact
		Animals			
Amphibian	Guajon	*Eleutherodactylus cooki*	T	PR	*caribbean_es@fws.gov.*
Amphibian	Golden coqui	*Eleutherodactylus jasperi*	T	PR	*caribbean_es@fws.gov.*
Amphibian	Puerto Rican crested toad	*Peltophryne lemur*	T	PR	*caribbean_es@fws.gov.*
Birds	White-necked crow	*Corvus leucognaphalus*	E	Dominican Republic, Haiti.	*caribbean_es@fws.gov.*
Birds	Elfin-woods warbler	*Setophaga angelae*	T	PR	*caribbean_es@fws.gov.*
Birds	Roseate tern	*Sterna dougallii dougallii*	T	FL, PR, VI	*caribbean_es@fws.gov.*
Clams	Cumberland elktoe	*Alasmidonta atropurpurea*	E	KY, TN.	*cookeville@fws.gov.*
Clams	Appalachian elktoe	*Alasmidonta raveneliana*	E	NC, SC, TN	*fw4esasheville@fws.gov.*
Clams	Tapered pigtoe	*Fusconaia burkei*	T	AL, FL	*Florida_5YR@fws.gov.*
Clams	Finerayed pigtoe	*Fusconaia cuneolus*	E	AL, TN, VA	*cookeville@fws.gov.*
Clams	Narrow pigtoe	*Fusconaia escambia*	T	AL, FL	*Florida_5YR@fws.gov.*
Clams	Atlantic pigtoe	*Fusconaia masoni*	T	NC, VA	*Raleigh_ES@fws.gov.*
Clams	Southern sandshell	*Hamiota australis*	T	AL, FL	*Florida_5YR@fws.gov.*
Clams	Louisiana pearlshell	*Margaritifera hembeli*	T	LA	*lafayette@fws.gov.*
Clams	Suwannee moccasinshell	*Medionidus walkeri*	T	FL, GA	*Florida_5YR@fws.gov.*
Clams	Choctaw bean	*Obovaria choctawensis*	E	AL, FL	*Florida_5YR@fws.gov.*
Clams	Canoe Creek clubshell	*Pleurobema athearni*	E	AL	*alabama@fws.gov*
Clams	Fuzzy pigtoe	*Pleurobema strodeanum*	T	AL, FL	*Florida_5YR@fws.gov.*
Clams	Cumberland pigtoe	*Pleuronaia gibber*	E	TN	*cookeville@fws.gov.*
Clams	Southern kidneyshell	*Ptychobranchus jonesi*	E	AL, FL	*Florida_5YR@fws.gov.*
Clams	Round ebonyshell	*Reginaia rotulata*	E	AL, FL	*Florida_5YR@fws.gov.*
Crustaceans	Slenderclaw crayfish	*Cambarus cracens*	E	AL	*alabama@fws.gov.*
Crustaceans	Squirrel Chimney Cave shrimp.	*Palaemonetes cummingi*	T	FL	*Florida_5YR@fws.gov.*
Crustaceans	Kentucky cave shrimp	*Palaemonias ganteri*	E	KY	*kentuckyes@fws.gov.*
Crustaceans	Panama City crayfish	*Procambarus econfinae*	T	FL	*Florida_5YR@fws.gov.*
Fishes	Atlantic Sturgeon (Gulf subspecies).	*Acipenser oxyrinchus (=oxyrhynchus) desotoi.*	T	AL, FL, GA, LA, MS	*Florida_5YR@fws.gov.*
Fishes	Bluemask (=jewel) darter	*Etheostoma akatulo*	E	TN	*cookeville@fws.gov.*

New Information

To ensure that a 5-year status review is based on the best available scientific and commercial information, we ask that any new information is submitted using one of the methods identified under **ADDRESSES** (also see **FOR FURTHER INFORMATION CONTACT**). When submitting information, please support said information by supplying documentation such as maps; references; methods used to gather and analyze the data; and/or copies of any pertinent scientific journal articles, other publications, reports, or letters by knowledgeable sources. Before including your address, phone number, email address, or other personal identifying information in your submission, you should be aware that your entire submission—including your personal identifying information—may be made publicly available at any time.

Authority

We publish this notice under the authority of the Endangered Species Act of 1973, as amended (16 U.S.C. 1531 *et seq.*).

Michael Oetker,

Regional Director, Southeast Region, U.S. Fish and Wildlife Service.

National Park Service

[NPS–WASO- BSD–CONC—NPS0043831; PPWOBSADC0 PPMVSCS1Y.Y00000; OMB Control Number 1024–NEW]

Agency Information Collection Activities; National Park Service Concessioner Services Customer Satisfaction Survey

AGENCY: National Park Service, Interior.

ACTION: Notice of information collection; request for comment.

SUMMARY: In accordance with the Paperwork Reduction Act of 1995, we, the National Park Service (NPS) are proposing a new a information collection.

DATES: Interested persons are invited to submit comments, which NPS must receive on or before December 9, 2026.

ADDRESSES: Written comments and suggestions on the information collection requirements should be submitted by the date specified above in DATES to *https://www.reginfo.gov/public/do/PRAMain.* Find this particular information collection by selecting ''Currently under Review—Open for Public Comments'' or by using the search function. Please provide a copy of your comments to the NPS Information Collection Clearance Officer (ADIR–ICCO), 13461 Sunrise Valley Drive, (MS–263) Herndon, VA 20191 (mail); or *phadrea_ponds@nps.gov* (email). Please reference Office of Management and Budget (OMB) Control Number 1024–NEW in the subject line of your comments.

FOR FURTHER INFORMATION CONTACT: Katy Canetta, Concession Specialist, WASO Commercial Services Program, Contract Management Branch, at katy_canetta@*nps.gov* (email) or (307) 250–6535 (telephone). Please reference OMB Control Number 1024–NEW (Concessioner's Satisfaction Survey) in the subject line of your comments. Individuals in the United States who are deaf, deafblind, hard of hearing, or have a speech disability may dial 711 (TTY, TDD, or TeleBraille) to access telecommunications relay services. Individuals outside the United States should use the relay services offered within their country to make international calls to the point-of-contact in the United States. You may also view the Information Collection Request (ICR) at *http://www.reginfo.gov/public/do/PRAMain*

SUPPLEMENTARY INFORMATION: In accordance with the Paperwork Reduction Act of 1995 (PRA, 44 U.S.C. 3501 *et seq.*) and 5 CFR 1320.8(d)(1), all information collections require approval under the PRA. As part of our continuing effort to reduce paperwork and respondent burdens, we invite the public and other Federal agencies to comment on new, proposed, revised, and continuing collections of information. This helps us assess the impact of our information collection requirements and minimize the public's reporting burden. It also helps the public understand our information collection requirements and provide the requested data in the desired format.

A *FederalRegister* notice with a 60-day public comment period soliciting comments on this collection of information was published on July 25, 2024 (89 FR 60449). No comments were received.

We are especially interested in public comment addressing the following:

(1) Whether or not the collection of information is necessary for the proper performance of the functions of the agency, including whether or not the information will have practical utility.

(2) The accuracy of our estimate of the burden for this collection of information, including the validity of the methodology and assumptions used.

(3) Ways to enhance the quality, utility, and clarity of the information to be collected.

(4) How might the agency minimize the burden of the collection of information on those who are to respond, including through the use of appropriate automated, electronic, mechanical, or other technological collection techniques or other forms of information technology, *e.g.,* permitting electronic submission of response.

Comments that you submit in response to this notice are a matter of public record. We will include or summarize each comment in our request to OMB to approve this information collection request (ICR). Before including your address, phone number, email address, or other personal identifying information in your comment, you should be aware that your entire comment—including your personal identifying information—may be made publicly available at any time. While you can ask us in your comment to withhold your personal identifying information from public review, we cannot guarantee that we will be able to do so.

A*bstract:* The National Park Service (NPS) is responsible for preserving park resources and ensuring they remain unimpaired for future generations, as required under the 1916 Organic Act and the 1970 General Authorities Act. Through its Commercial Services Program (CSP), the NPS manages more than 400 concession contracts that provide essential visitor services, including lodging, food, retail, and guided recreation. To meet statutory requirements—such as those outlined in the Concessions Management Improvement Act of 1998—the NPS evaluates concessioner performance and ensures that services are delivered safely, lawfully, and at reasonable prices.

The proposed information collection will help the CSP and individual parks assess visitor experiences with concession-provided services. Feedback gathered through this collection will allow the NPS to evaluate concessioner performance, understand visitor expectations, and identify areas for improvement. These insights will guide management decisions that enhance service quality and support positive visitor experiences across the National Park System.

Title of Collection: National Park Service Concessioner Services Customer Satisfaction Survey.

OMB Control Number: 1024–NEW.

Form Number: None.

Type of Review: New Collection

Respondents/Affected Public: Individuals and Households.

Total Estimated Number of Annual Responses: 522,000.

Estimated Completion Time per Response: 5 minutes.

Total Estimated Number of Annual Burden Hours: 43,500.

Respondent's Obligation: Voluntary.

Frequency of Collection: On occasion.

Total Estimated Annual Non hour Burden Cost: None.

An agency may not conduct or sponsor and a person is not required to respond to a collection of information unless it displays a currently valid OMB control number.

The authority for this action is the Paperwork Reduction Act of 1995 (44 U.S.C. 3501 *et seq.*).

Phadrea Ponds,

Information Collection Clearance Officer, National Park Service.

BILLING CODE 4312–52–P

INTERNATIONAL TRADE COMMISSION

[Investigation No. 337–TA–1512]

Certain Foundry Coke; Notice of a Commission Determination Not To Review an Initial Determination Granting Complainants' Motion To Amend the Complaint and Notice of Investigation and To Terminate the Investigation as to Certain Claims

AGENCY: U.S. International Trade Commission.

ACTION: Notice.

SUMMARY: Notice is hereby given that the U.S. International Trade Commission has determined not to review the presiding administrative law judge's (''ALJ'') initial determination (''ID'') (Order No. 10) granting Complainants' motion to amend the Complaint and Notice of Investigation to assert claims 1–5 and 7–13 of U.S. Patent No. 12,600,915 (''the '915 patent'') against Respondents MTX Group a.s., OKK Koksovny, a.s., METALIMEX a.s., METALIMEX Deutschland GmbH, and AMEX Coal Sp. z o.o. (collectively, ''MTX Group''), and Complainants' motion to terminate the investigation as to all asserted claims of U.S. Patent No. 12,331,367 (''the '367 patent'') with respect to all Respondents.

FOR FURTHER INFORMATION CONTACT: Cathy Chen, Office of the General Counsel, U.S. International Trade Commission, 500 E Street SW, Washington, DC 20436, telephone 202–205–2392. Copies of non-confidential documents filed in connection with this investigation may be viewed on the Commission's electronic docket (EDIS) at *https://edis.usitc.gov.* For help accessing EDIS, please email *EDIS3Help@usitc.gov.* General information concerning the Commission may also be obtained by accessing its internet server at *https://www.usitc.gov.* Hearing-impaired persons are advised that information on this matter can be obtained by contacting the Commission's TDD terminal on (202) 205–1810.

SUPPLEMENTARY INFORMATION: The Commission instituted this investigation on July 20, 2026, based on a complaint filed on behalf of SunCoke Technology and Development LLC and Jewell Coke Company L.P. (collectively, ''SunCoke''), both of Lisle, Illinois. 91 FR 45,282–283 (July 20, 2026). The complaint, as supplemented, alleges violations of section 337 of the Tariff Act of 1930, as amended, 19 U.S.C. 1337, in the importation into the United States, the sale for importation, and the sale within the United States after importation of certain foundry coke by reason of the infringement of certain claims of the '915 patent and the '367 patent. The complaint further alleges that an industry in the United States exists as required by the applicable Federal Statute. The Commission's notice of investigation names the following seven (7) respondents: MTX Group, a.s. of Prague, Czech Republic; OKK Koksovny, a.s. of Ostrava-Přívoz, Czech Republic; METALIMEX a.s. of Prague, Czech Republic; METALIMEX Deutschland GmbH of Duisburg, Germany; AMEX Coal Sp. z o.o. of Sopot, Poland; Italiana Coke S.r.l. of Genova, Italy; and Terminal Alti Fondali Savona S.r.l. of Savona, Italy. The Office of Unfair Import Investigations is not named as a party in this investigation.

On September 21, 2026, SunCoke filed a motion to amend the Complaint and Notice of Investigation to assert claims 15 and 7–13 of the '915 patent against Respondents MTX Group and to terminate this investigation in part as to all asserted claims of the '367 patent with respect to all Respondents. No party opposed the motion.

On October 5, 2026, the ALJ issued the subject ID (Order No. 10) granting SunCoke's motion to amend the Complaint and Notice of Investigation to add allegations of infringement of claims 1–5 and 7–13 of the '915 patent against MTX Group and to terminate the investigation in part as to all asserted claims of the '367 patent with respect to all Respondents. The ID found SunCoke demonstrated good cause for amending the Complaint and Notice of Investigation and SunCoke's proposed amendments will not prejudice the public interest or the rights of the parties participating in this investigation. ID at 4. The ID also found the motion is unopposed, complies with the Commission's Rules, and that there are no extraordinary circumstances that prevent terminating the investigation as to all asserted claims of the '367 patent. *Id.* at 4–5. No petitions for review were filed.

The Commission has determined not to review the subject ID. The Notice of Investigation shall be amended to add allegations of infringement as to claims 1–5 and 7–13 of the '915 patent against MTX Group. Moreover, all claims, including claims 1–4, 7–10, 12, and 14–21, of the '367 patent are hereby terminated from the investigation.

The Commission vote for this determination took place on November 4, 2026.

The authority for the Commission's determination is contained in section 337 of the Tariff Act of 1930, as amended, 19 U.S.C. 1337, and in Part 210 of the Commission's Rules of Practice and Procedure, 19 CFR part 210.

By order of the Commission.

Issued: November 4, 2026.

Lisa Barton,

Secretary to the Commission.

[FR Doc. 2026–22730 Filed 11–6–26; 8:45 am]

BILLING CODE 7020–02–P

INTERNATIONAL TRADE COMMISSION

[Investigation No. 337–TA–1442]

Certain Glow Fish Tape Systems, Safety Helmet Systems, and Components Thereof; Notice of a Final Determination Finding a Violation of Section 337; Issuance of a Limited Exclusion Order and Cease and Desist Order; Termination of Investigation

AGENCY: U.S. International Trade Commission.

ACTION: Notice.

SUMMARY: Notice is hereby given that the U.S. International Trade Commission (''the Commission'') has determined that respondent Milwaukee Electric Tool Corporation of Brookfield, Wisconsin (''Milwaukee'') has violated section 337 of the Tariff Act of 1930, as amended, by importing, selling for importation, or selling in the United States after importation certain glow fish tape systems and components thereof that infringe claim 6 of U.S. Patent No. 12,187,573 (''the '573 patent''). The Commission has determined that the appropriate remedies are a limited exclusion order (''LEO'') and cease and desist order (''CDO'') against Milwaukee, and that the public interest factors do not preclude issuance of such remedial orders. The Commission has also determined to set a bond in the amount of 100 percent (100%) of the entered value of the covered products imported during the period of Presidential review. This investigation is hereby terminated.

FOR FURTHER INFORMATION CONTACT: Carl Bretscher, Office of the General Counsel, U.S. International Trade Commission, 500 E Street SW, Washington, DC 20436, telephone 202–205–2382. Copies of non-confidential documents filed in connection with this investigation may be viewed on the Commission's electronic docket (EDIS) at *https://edis.usitc.gov.* For help accessing EDIS, please email *EDIS3Help@usitc.gov.*

General information concerning the Commission may also be obtained by accessing its internet server at *https://www.usitc.gov.* Hearing-impaired persons are advised that information on this matter can be obtained by contacting the Commission's TDD terminal on (202) 205–1810.

SUPPLEMENTARY INFORMATION: On March 19, 2025, the Commission instituted this investigation based on a complaint, as supplemented, filed by Klein Tools, Inc. of Lincolnshire, Illinois (''Klein''), accusing Milwaukee of violating section 337 of the Tariff Act of 1930, as amended, 19 U.S.C. 1337 (''section 337''), by importing into the United States, selling for importation, or selling in the United States after importation certain glow fish tape systems, safety helmet systems, and components thereof by reason of the infringement of the asserted claims of the '573 patent and U.S. Patent Nos. 11,713,209 (''the '209 patent'') and 11,452,327 (''the '327 patent''). 90 FR 12790 (Mar. 19, 2025). The complaint further alleges that a domestic industry exists. *Id.* The Office of Unfair Import Investigations did not participate in the investigation. *Id.*

On May 30, 2025, the Commission amended the notice of investigation to include allegations of infringement of certain asserted claims of U.S. Patent No. 12,268,265 (''the '265 patent''). Order No. 6 (May 1, 2025), *unreviewed by* Comm'n Notice (May 30, 2025). The '265 patent and related '327 patent are collectively referred to as the ''Helmet Patents.'' The '209 patent and related '573 patent are collectively referred to as the ''Glow Fish Tape Patents.''

The Commission subsequently partially terminated the investigation with respect to certain asserted claims of the '327 patent, '209 patent, and '573 patent due to Klein's withdrawal of the complaint with respect to those claims. Order No. 14 (Nov. 20, 2025), *unreviewed by* Comm'n Notice (Dec. 12, 2025); Order No. 19 (Jan. 5, 2026), *unreviewed by* Comm'n Notice (Jan. 28, 2026).

On January 20, 2026, the Commission granted Klein's motion for summary determination that it has satisfied the technical and economic prongs of the domestic industry requirement for the Glow Fish Tape Patents. Order No. 17 (Dec. 19, 2025), *unreviewed by* Comm'n Notice (Jan. 20, 2026).

The presiding Chief Administrative Law Judge (''CALJ'') held an evidentiary hearing from January 5–8, 2026. At the time of the hearing, the asserted claims of the Helmet Patents still at issue were claims 8, 10, and 17 of the '327 patent and claims 1–4 of the '265 patent. The asserted claims of the Glow Fish Tape Patents still at issue were claim 6 of the '209 patent and claim 6 of the '573 patent.

On June 5, 2026, the CALJ issued a final Initial Determination on Violation of Section 337 (''FID'') and a Recommendation on Remedy and Bond (''RD''). With respect to the Helmet Patents, the FID finds that: (i) Milwaukee infringed the '265 patent but not the '327 patent; (ii) the asserted claims of the Helmet Patents are not invalid as obvious or for failing the written description requirement under 35 U.S.C. 112; and (iii) Klein has satisfied both the technical and economic prongs of the domestic industry requirement for both Helmet Patents. With respect to the Glow Fish Tape Patents, the FID finds that: (i) Milwaukee did not infringe the '209 patent or '573 patent; (ii) the asserted claims of the Glow Fish Tape Patent are not invalid as obvious under 35 U.S.C. 103 or for failing the written description requirement; and (iii) Klein has satisfied the technical prong of the domestic industry requirement with respect to claim 6 of each Glow Fish Tape Patent (to supplement the CALJ's earlier summary determination that Klein has satisfied both the economic and technical prongs with respect to claims 1 and 5 of the Glow Fish Tape Patents in Order No. 17, *supra*). The FID concludes that Milwaukee has violated section 337 with respect to the '265 patent (a Helmet Patent) but not the '327 patent or either of the Glow Fish Tape Patents.

The RD recommends that, if a violation is found, the Commission issue an LEO and a CDO against Milwaukee. The RD also recommends that the Commission set a bond in the amount of 100 percent of the entered value of covered products that are imported during the 60-day period of Presidential review.

On June 22, 2026, both Milwaukee and Klein filed petitions and/or contingent petitions for review of certain adverse findings in the FID. On June 30, 2026, each party filed its respective response to the opposing party's petition.

On July 10, 2026, Klein's counsel submitted a letter to the Commission identifying certain allegedly false statements in Milwaukee's opposition to Klein's petition. On the same date, Milwaukee's counsel submitted a response, to which it attached a copy of a letter to Klein's counsel dated July 8, 2026, explaining why Milwaukee's representations are allegedly correct. Upon review of the letters, the Commission declined to consider them because they are not permissible under the Commission's rules.

The parties did not submit statements concerning the public interest pursuant to Commission Rule 210.50(a)(4)(i), 19 CFR 210.50(a)(4)(i). The Commission also did not receive any submissions in response to its request for submissions from interested third parties or government agencies on remedy and the public interest factors. 91 FR 43402–03 (July 15, 2026).

On September 9, 2026, the Commission determined to review the FID in part. 91 FR 57383 (Sept. 9, 2026). With respect to the Helmet Patents, the Commission determined to review the FID's findings that: (i) the asserted claims of the '265 patent and '327 patent are not obvious under 35 U.S.C. 103; and (ii) Klein satisfied the economic prong of the domestic industry requirement. With respect to the Glow Fish Tape Patents, the Commission determined to review: (i) the construction of the claim term ''wherein at least a portion of the case is configured to allow the luminescent material to be energized by light passing through the portion'' in the '573 patent and related infringement and validity findings; (ii) the FID's finding of non-infringement of the '209 and '573 patents, both literal and under the doctrine of equivalents; and (iii) the FID's finding that the asserted claims of the Glow Fish Tape Patents are not invalid as obvious. The Commission determined not to review, and thereby adopted, the other findings in the FID. The Commission directed the parties to brief certain violation issues on review and remedy, the public interest, and bond.

Pursuant to the Commission's directions, the parties filed their initial responses to the Commission's questions on September 18, 2026, and their respective replies to the opposing party's initial response on September 25, 2026.

Having reviewed the FID, the parties' submissions, and the record below, the Commission has determined to reverse the FID and find that Milwaukee has violated section 337 by importing into the United States, selling for importation, or selling in the United States after importation certain glow fish tape products and components thereof that infringe claim 6 of the '573 patent (a Glow Fish Tape Patent). As further explained in the Commission Opinion issued concurrently herewith, the Commission has also determined to adopt the FID's findings that the asserted claims of the Glow Fish Tape Patents are not invalid as obvious and to adopt, with modifications, the FID's

finding that claim 6 of the '209 patent is not infringed. With respect to the Helmet Patents, the Commission has determined to reverse the FID's finding that Milwaukee has violated section 337 with respect to the '265 patent and to find instead that the asserted claims of the '265 patent are invalid as obvious. The Commission, having previously determined to adopt the FID's finding that the asserted claims of the '327 patent are not infringed (91 FR at 57384), takes no position on whether the '327 patent claims are also invalid as obvious or whether Klein has satisfied the domestic industry requirement with respect to the Helmet Patents.

The Commission has determined that the appropriate remedy is: (i) an LEO prohibiting the importation of certain glow fish tape products and components thereof that infringe claim 6 of the '573 patent; and (ii) a CDO against Milwaukee. The Commission has determined that the public interest factors do not preclude issuance of a remedy. The Commission has set a bond in the amount of 100 percent (100%) of the entered value of infringing products imported during the period of Presidential review (19 U.S.C. 1337(j)).

The Commission issues its opinion herewith setting forth its determinations on certain issues. This investigation is hereby terminated.

The Commission's orders and opinion were delivered to the President and United States Trade Representative on the day of their issuance.

The Commission vote for this determination took place on November 4, 2026.

The authority for the Commission's determination is contained in section 337 of the Tariff Act of 1930, as amended (19 U.S.C. 1337), and in Part 210 of the Commission's Rules of Practice and Procedure (19 CFR part 210).

By order of the Commission.
Issued: November 4, 2026.

Lisa Barton,

Secretary to the Commission.

BILLING CODE 7020–02–P

DEPARTMENT OF JUSTICE

Antitrust Division

United States of America, et al. v. RealPage, Inc., et al.; Response of the United States to Public Comments

Notice is hereby given pursuant to the Antitrust Procedures and Penalties Act, 15 U.S.C. 16(b)–(h), that the Response of the United States to Public Comments on the Proposed Final Judgment in *United States of America et al.* v. *RealPage et al.,* Civil Action No. 24–cv–00710, regarding Defendant Willow Bridge Property Company, LLC, has been filed in the United States District Court for the Middle District of North Carolina, together with the comments. Copies of the public comments and the United States' Response are also available for inspection on the Antitrust Division's website at *http://www.justice.gov/atr.*

Suzanne Morris,

Deputy Director Civil Enforcement Operations, Antitrust Division.

In the United States District Court for the Middle District of North Carolina

UNITED STATES OF AMERICA Plaintiff, vs. *WILLOW BRIDGE PROPERTY COMPANY, LLC,* Defendant.

No. 1:24–cv–00710

Response of Plaintiff United States to Public Comments on the Proposed Final Judgment

Pursuant to the requirements of the Antitrust Procedures and Penalties Act (the ''APPA'' or ''Tunney Act''), 15 U.S.C. 16(b)–(h), the United States submits this response to the two public comments received regarding the proposed Final Judgment as to Defendant Willow Bridge Property Company, LLC (Doc. 200–1).[1]

After careful consideration of the submitted comments, the United States continues to believe that the proposed Final Judgment will provide an effective and appropriate remedy for the antitrust violations alleged in the Complaint.

After this response and the public comments have been published in the **Federal Register** pursuant to 15 U.S.C § 16(d), the United States will move the Court to enter the proposed Final Judgment.

I. Procedural History

On August 23, 2024, the United States, along with several States (''Plaintiffs''), filed a civil antitrust Complaint against RealPage, Inc. (''RealPage'') (Doc. 1). On January 7, 2025, Plaintiffs amended their civil Complaint (the ''Complaint'') to add Willow Bridge Property Company, LLC (''Willow Bridge'') and five other landlords as Defendants (Doc. 47) alleging that Willow Bridge's agreements with RealPage and other landlords to share information and align pricing violate Section 1 of the Sherman Act, 15 U.S.C. 1. The Complaint seeks to enjoin Defendants from sharing and exploiting competitively sensitive data.

On July 6, 2026, the United States filed a proposed Final Judgment (Doc. 200–1) as to Willow Bridge, which is designed to remedy the loss of competition alleged in the Complaint due to Willow Bridge's conduct, and a Stipulation and Proposed Order (Doc. 200), in which Willow Bridge consented to entry of the proposed Final Judgment after compliance with the requirements of the Tunney Act.[2] Also on the same date, the United States filed a Competitive Impact Statement describing the proposed Final Judgment as to Willow Bridge. (Doc. 202)

The United States arranged for the publication of the Complaint, proposed Final Judgment, and Competitive Impact Statement in the **Federal Register** on July 16, 2026, see 15 U.S.C. 16(b)–(c); 91 FR 43,774 (July 16, 2026), and caused notice regarding the same, together with directions for the submission of written comments relating to the proposed Final Judgment, to be published in the *Washington Post* and the *Greensboro News and Record* from July 14 to July 21, 2026. The 60-day period for public comment has now ended. The United States received two comments in response, which are described below and attached as Exhibits 1 & 2 hereto.

II. The Complaint and The Proposed Final Judgment

The Complaint alleges that, by unlawfully sharing its confidential and competitively sensitive information with RealPage for use in its and competing landlords' pricing, Willow Bridge violated Section 1 of the Sherman Act, 15 U.S.C. 1. Under their licensing agreements with RealPage, Willow Bridge and competing landlords have provided RealPage with daily, competitively sensitive, nonpublic information for use in RealPage's revenue management software relating to the landlords' leasing businesses, including details like how many leases have been renewed, for what terms, and at what price. The transactional data that Willow Bridge and other landlords have agreed to provide to RealPage includes current, forward-looking, granular, and highly competitively sensitive information. RealPage has

[1] The United States has redacted personally identifiable information from the comments prior to filing them with this response. If the Court requests unredacted versions, the United States will provide unredacted comments under seal.

[2] The Stipulation and Proposed Order, and the proposed Final Judgment, pertain only to Willow Bridge's conduct. They do not propose to resolve the anticompetitive conduct alleged in the Complaint against any other Defendant. Nor do they resolve the claims of any other Plaintiff besides the United States.

used Willow Bridge's competitively sensitive, nonpublic information to influence rental prices and other recommendations across rental properties managed by competing landlords. Willow Bridge's rental prices and related recommendations were likewise influenced by its competitors' competitively sensitive, nonpublic information obtained from RealPage. In each relevant market, RealPage and participating landlords, including Willow Bridge, have sufficient market power, including market and data penetration, to harm renters and the competitive process through this unlawful sharing of confidential and competitively sensitive information. Moreover, Willow Bridge and other landlords can achieve any procompetitive objective of revenue management software without sharing this kind of information.

The Complaint also alleges that Willow Bridge and other landlords, by adopting and using RealPage's revenue management software, agreed with RealPage to align their pricing and thereby violate Section 1 of the Sherman Act, 15 U.S.C. 1. RealPage has entered into agreements with Willow Bridge and its competing landlords relating to how to price rental units, including through the licensing of its revenue management software—AI Revenue Management (''AIRM''), YieldStar, and Lease Rent Options (''LRO'')—to landlords, and the provision by landlords of their competitively sensitive, nonpublic transactional data to RealPage for training and running its revenue management software. Adoption and use of RealPage's revenue management software by Willow Bridge and other landlords have the likely effect of causing competing landlords to employ the same or very similar strategies, processes, and decisions relating to their pricing of rental units. Willow Bridge and other landlord users understand this likely effect, which here dampens the competitive process that benefits renters.

The proposed Final Judgment imposes several requirements and restrictions on Willow Bridge that address the United States' anticompetitive concerns regarding Willow Bridge's conduct alleged in the Complaint. Specifically:

i. Willow Bridge must not license or use any revenue management product that uses third-party nonpublic data to recommend or set prices;

ii. Willow Bridge must not license or use any revenue management product that pools information from Willow Bridge properties that have different owners;

iii. Willow Bridge must not disclose, solicit, or use competitively sensitive information from competitors that can be used to set rental prices or generate pricing;

iv. Willow Bridge must cooperate in this civil antitrust proceeding (*United States et al.* v. *RealPage et al.*);

v. Willow Bridge must adopt a written antitrust compliance policy and designate a chief antitrust compliance officer who will train Willow Bridge employees on the policy;

vi. Willow Bridge must allow the United States to inspect its documents and to interview its employees to ensure compliance with the Final Judgment;

vii. If Willow Bridge uses a revenue management product, Willow Bridge will be subject to a monitor unless Willow Bridge obtains a certification that meets certain requirements, including an affirmation that the product complies with all required limitations regarding use of competitors' competitively sensitive data; and

viii. If, in the future, the Court finds that Willow Bridge has violated the terms of the proposed Final Judgment, Willow Bridge will be subject to a court-appointed monitor.

Under the terms of the Stipulation and Order, Willow Bridge must abide by and comply with the provisions of the proposed Final Judgment until it is entered by the Court or until the time for all appeals of any Court ruling declining entry of the proposed Final Judgment has expired.

The United States and Willow Bridge have stipulated that the proposed Final Judgment may be entered by the Court after compliance with the APPA. Entry of the proposed Final Judgment will terminate this action with respect to the United States' claims against Willow Bridge, except that the Court will retain jurisdiction to construe, modify, or enforce the provisions of the proposed Final Judgment and to punish violations thereof by Willow Bridge.

III. Standard of Judicial Review

The Clayton Act, as amended by the APPA, requires that proposed consent judgments in antitrust cases brought by the United States be subject to a 60-day comment period, after which the Court shall determine whether entry of the proposed Final Judgment ''is in the public interest.'' 15 U.S.C. 16(e)(1). In making that determination, the Court, in accordance with the Tunney Act as amended in 2004, is required to consider:

(A) the competitive impact of such judgment, including termination of alleged violations, provisions for enforcement and modification, duration of relief sought, anticipated effects of alternative remedies actually considered, whether its terms are ambiguous, and any other competitive considerations bearing upon the adequacy of such judgment that the court deems necessary to a determination of whether the consent judgment is in the public interest; and

(B) the impact of entry of such judgment upon competition in the relevant market or markets, upon the public generally and individuals alleging specific injury from the violations set forth in the complaint including consideration of the public benefit, if any, to be derived from a determination of the issues at trial.

15 U.S.C. 16(e)(1)(A) & (B). In considering these statutory factors, the Court's inquiry is necessarily a limited one, as the government is entitled to ''broad discretion to settle with the defendant within the reaches of the public interest.'' *United States* v. *Microsoft Corp.,* 56 F.3d 1448, 1461 (D.C. Cir. 1995); *United States* v. *Hewlett Packard Enterprise Co.,* No. 25–CV–00951–PCP, 2026 WL 2349970, at *16 (N.D. Cal. Aug. 12, 2026); *United States* v. *U.S. Airways Grp., Inc.,* 38 F. Supp. 3d 69, 75 (D.D.C. 2014) (explaining that the ''court's inquiry is limited'' in Tunney Act settlements); *United States* v. *InBev N.V./S.A.,* No. 08–1965 (JR), 2009 U.S. Dist. LEXIS 84787, at *3 (D.D.C. Aug. 11, 2009) (noting that a court's review of a consent judgment is limited and only inquires ''into whether the government's determination that the proposed remedies will cure the antitrust violations alleged in the complaint was reasonable, and whether the mechanism to enforce the final judgment are clear and manageable''); *United States* v. *Keyspan Corp.,* 763 F. Supp. 2d 633, 637–38 (S.D.N.Y. 2011); *see SEC* v. *Citigroup Global Markets Inc.,* 673 F.3d 158, 168 (2d Cir. 2012) (''We are bound in such matters to give deference to an executive agency's assessment of the public interest.'').

As the U.S. Court of Appeals for the District of Columbia Circuit has held, under the APPA, a court considers, among other things, the relationship between the remedy secured and the specific allegations in the government's complaint, whether the proposed Final Judgment is sufficiently clear, whether its enforcement mechanisms are sufficient, and whether it may positively harm third parties. *See Microsoft,* 56 F.3d at 1458–62; *United States* v. *Apple, Inc.,* 889 F. Supp. 2d 623, 631 (S.D.N.Y. 2012) (citing *Microsoft,* 56 F.3d at 1458, 1461–62). With respect to the adequacy of the relief secured by the proposed

Final Judgment, a court may ''not make de novo determination of facts and issues.'' *United States* v. *W. Elec. Co.,* 993 F.2d 1572, 1577 (D.C. Cir. 1993) (quotation marks omitted); *see also Microsoft,* 56 F.3d at 1460–62; *United States* v. *Alcoa, Inc.,* 152 F. Supp. 2d 37, 40 (D.D.C. 2001); *United States* v. *Enova Corp.,* 107 F. Supp. 2d 10, 16 (D.D.C. 2000); *InBev,* 2009 U.S. Dist. LEXIS 84787, at *3. Instead, ''[t]he balancing of competing social and political interests affected by a proposed antitrust consent decree must be left, in the first instance, to the discretion of the Attorney General.'' *W. Elec. Co.,* 993 F.2d at 1577 (quotation marks omitted). ''The court should bear in mind the *flexibility* of the public interest inquiry: the court's function is not to determine whether the resulting array of rights and liabilities is one that will *best* serve society, but only to confirm that the resulting settlement is within the *reaches* of the public interest.'' *Microsoft,* 56 F.3d at 1460 (quotation marks omitted); *see also United States* v. *Deutsche Telekom AG,* No. 19–2232 (TJK), 2020 WL 1873555, at *7 (D.D.C. Apr. 14, 2020). More demanding requirements would ''have enormous practical consequences for the government's ability to negotiate future settlements,'' contrary to congressional intent. *Microsoft,* 56 F.3d at 1456. ''The Tunney Act was not intended to create a disincentive to the use of the consent decree.'' *Id.*[3]

''Because enforcement by consent decree is an alternative to enforcement by trial or abandonment of the litigation altogether and often reflects the United States's assessment of litigation risk, a proposed settlement does not need to replicate the full relief that [the] United States sought in its complaint.'' *Hewlett Packard Enter.,* 2026 WL 2349970, at *17. The United States' predictions about the efficacy of the remedy are to be afforded deference by the Court. *See, e.g., Microsoft,* 56 F.3d at 1461 (recognizing courts should give ''due respect to the Justice Department's . . . view of the nature of its case''); *United States* v. *Iron Mountain, Inc.,* 217 F. Supp. 3d 146, 152–53 (D.D.C. 2016) (''In evaluating objections to settlement agreements under the Tunney Act, a court must be mindful that [t]he government need not prove that the settlements will perfectly remedy the alleged antitrust harms[;] it need only provide a factual basis for concluding that the settlements are reasonably adequate remedies for the alleged harms.'') (internal citations omitted); *United States* v. *Republic Servs., Inc.,* 723 F. Supp. 2d 157, 160 (D.D.C. 2010) (noting ''the deferential review to which the government's proposed remedy is accorded''); *United States* v. *Archer-Daniels-Midland Co.,* 272 F. Supp. 2d 1, 6 (D.D.C. 2003) (''A district court must accord due respect to the government's prediction as to the effect of proposed remedies, its perception of the market structure, and its view of the nature of the case''). In determining whether a proposed settlement is in the public interest, a district court ''is not permitted to reject the proposed remedies merely because the court believes other remedies are preferable.'' *United States* v. *Morgan Stanley,* 881 F. Supp. 2d 563, 567 (S.D.N.Y. 2012) (quoting *United States* v. *Abitibi–Consol. Inc.,* 584 F. Supp. 2d 162, 165 (D.D.C. 2008)). The ultimate question is whether ''the remedies [obtained by the Final Judgment are] so inconsonant with the allegations charged as to fall outside of the 'reaches of the public interest.' '' *Microsoft,* 56 F.3d at 1461 (*quoting W. Elec. Co.,* 900 F.2d at 309).

Moreover, the Court's role under the APPA is limited to reviewing the remedy in relationship to the violations that the United States has alleged in its complaint and does not authorize the Court to ''construct [its] own hypothetical case and then evaluate the decree against that case.'' *Microsoft,* 56 F.3d at 1459; *see also U.S. Airways,* 38 F. Supp. 3d at 75 (noting that the court must simply determine whether there is a factual foundation for the government's decisions such that its conclusions regarding the proposed settlements are reasonable); *United States* v. *Keyspan Corp.,* 763 F. Supp. 2d 633 637–38 (S.D.N.Y. 2011) (''The Court's function is not to determine whether the proposed [d]ecree results in the balance of rights and liabilities that is the one that will best serve society, but only to ensure that the resulting settlement is 'within the reaches of the public interest.'' (quoting *United States* v. *Alex. Brown & Sons, Inc.,* 963 F. Supp. 235, 238 (S.D.N.Y. 1997)); *InBev,* 2009 U.S. Dist. LEXIS 84787, at *20 (''the 'public interest' is not to be measured by comparing the violations alleged in the complaint against those the court believes could have, or even should have, been alleged''). Because the ''court's authority to review the decree depends entirely on the government's exercising its prosecutorial discretion by bringing a case in the first place,'' it follows that ''the court is only authorized to review the decree itself,'' and not to ''effectively redraft the complaint'' to inquire into other matters that the United States did not pursue. *Microsoft,* 56 F.3d at 1459–60. *See also Heckler* v. *Chaney,* 470 U.S. 821, 832 (1985) (quoting U.S. Const. art. II, § 3) (recognizing that the decision about which claims to bring ''has long been regarded as the special province of the Executive Branch.'').

In its 2004 amendments to the APPA, Congress made clear its intent to preserve the practical benefits of using consent judgments proposed by the United States in antitrust enforcement, Public Law 108–237 § 221, and added the unambiguous instruction that ''[n]othing in this section shall be construed to require the court to conduct an evidentiary hearing or to require the court to permit anyone to intervene.'' 15 U.S.C. 16(e)(2); *see also U.S. Airways,* 38 F. Supp. 3d at 76 (indicating that a court is not required to hold an evidentiary hearing or to permit intervenors as part of its review under the Tunney Act). This language explicitly wrote into the statute what Congress intended when it first enacted the Tunney Act in 1974. As Senator Tunney explained: ''[t]he court is nowhere compelled to go to trial or to engage in extended proceedings which might have the effect of vitiating the benefits of prompt and less costly settlement through the consent decree process.'' 119 Cong. Rec. 24,598 (1973) (statement of Sen. Tunney). ''A court can make its public interest determination based on the competitive impact statement and response to public comments alone.'' *U.S. Airways,* 38 F. Supp. 3d at 76 (citing *Enova Corp.,* 107 F. Supp. 2d at 17).

IV. Summary of Public Comments and the United States' Response

The United States received two public comments in response to the proposed Final Judgment. The comments were submitted by private individuals, whom the United States will refer to by each individual's initials: MC (''MC Comment'') and JD (''JD Comment'').

A. The MC Comment

MC's comment requests that the United States consider whether the proposed Final Judgment adequately addresses the role of pricing algorithms in renewal pricing, including situations where renewal prices offered are materially higher than prices quoted to prospective tenants for the same apartment unit, and ''whether monitoring under the decree should

[3] *See also United States* v. *BNS, Inc.,* 858 F.2d 456, 464 (9th Cir. 1988) (holding that the court's ''ultimate authority under the [APPA] is limited to approving or disapproving the consent decree''); *United States* v. *Gillette Co.,* 406 F. Supp. 713, 716 (D. Mass. 1975) (noting that, in this way, the court is constrained to ''look at the overall picture not hypercritically, nor with a microscope, but with an artist's reducing glass'').

examine the differences between renewal and new-tenant prices.'' [4] The terms of the proposed Final Judgment with Willow Bridge do not make a distinction between renewal pricing and new-tenant pricing. Therefore, the limitations imposed on the use, disclosure, pooling, combination, or training of Nonpublic Data apply equally to recommendations regarding renewal pricing and new-tenant pricing generated by revenue management software.[5]

Furthermore, the Complaint did not allege anticompetitive conduct related to differences between renewal pricing and new-tenant pricing. (*See, e.g.,* Doc. 47, ¶ 62 (''Every morning, the landlord's property manager chooses whether to accept the floor plan price recommendation, keep the previous day's rent, or override the recommendation. These options are the same for new leases and renewal leases.'') & ¶ 107 (''Specifically, he urged the group to 'push up new and renewal pricing where demand [is] solid' and warned against over-relying on concessions. They were instead to 'trust the science' of YieldStar.'').) MC's requests therefore are not relevant to the United States' claims and not germane to Tunney Act review.

The fact that Willow Bridge may choose to price its apartment units differently to existing tenants and prospective tenants does not, in of itself, present a competitive concern, absent evidence that such a pricing strategy uses Nonpublic Data shared by Willow Bridge's competitors or aligns with the pricing strategy used by Willow Bridge's competitors in a local rental market. The terms of the proposed Final Judgment ensure that any differential pricing of renewals and new leases by Willow Bridge is not a result of the types of anticompetitive conduct alleged in the Complaint.

MC further requests that the United States consider whether the proposed Final Judgment should require Willow Bridge to provide notification to tenants on a property's use of ''automated revenue management systems.'' [6] Such a requirement would go beyond addressing the United States' claims regarding the sharing of competitively sensitive data among landlords and the use of revenue management software to align their pricing. The use of an ''automated revenue management system'' or software with a rental property, standing alone, does not raise competitive concerns. What matters is whether such a system or software is being trained on or otherwise uses Nonpublic Data shared by Willow Bridge's competitors and whether such a system or software, during operation, ''automates'' pricing recommendations and/or decision-making for Willow Bridge and its competitors who are also using the system or software. The proposed Final Judgment effectively addresses such scenarios associated with Willow Bridge's use of an ''automated revenue management system.'' More is therefore not required.

Finally, MC requests that the United States consider whether the proposed Final Judgment should require Willow Bridge to provide ''meaningful human review'' of renewal prices.[7] Similar to MC's other requests, this request questions whether a landlord like Willow Bridge should be allowed to use revenue management software, and specifically software that may automatically generate pricing recommendations for renewals and new leases. As explained above, the United States' Complaint does not allege that Willow Bridge's use of a revenue management system or software, standing alone, is anticompetitive. What matters is whether such a system or software is being trained on or otherwise uses Nonpublic Data shared by Willow Bridge's competitors and whether such a system or software, during operation, ''automates'' pricing recommendations and/or decision-making for Willow Bridge and its competitors who are also using the system or software. The proposed Final Judgment effectively addresses such scenarios associated with Willow Bridge's use of revenue management software, and a requirement of ''meaningful human review'' is neither relevant nor necessary to address the competitive concerns raised by the Complaint.

B. The JD Comment

JD first requests that the United States investigate whether their specific rental property uses a RealPage or other third-party revenue management product and whether their specific property's rental prices were calculated with the use of competitively sensitive information.[8] JD further requests that the United States explain ''whether potentially affected renters will have any process to learn whether their property or its data was within the investigation or remedial program.'' [9] A renter can ''evaluate whether the decree protects that renter.'' [10] In the United States' judgment, the type of process requested by JD is not necessary. The proposed Final Judgment applies to *all* conventional multifamily rental properties, located within the United States or its territories, that are serviced by Willow Bridge (defined as ''Willow Bridge Properties'').[11] It therefore would apply to JD's specific rental property if it is a Willow Bridge Property. As for JD's request for any investigative information specific to their rental property, the United States is prohibited by statute from disclosing these materials.[12] The United States notes, however, that the Complaint identifies multiple geographic markets in Appendices A & B, which the public may consult to understand the scope and extent of the competitive harms being addressed by the proposed Final Judgment.

JD also requests that the proposed Final Judgment require independent technical verification of third-party revenue management products.[13] Although the proposed Final Judgment does not require independent technical verification, it requires third-party revenue management providers to provide certifications that the software complies with the terms of the proposed Final Judgment.[14] Furthermore, the United States has the right to obtain and inspect the code and pseudocode of Willow Bridge's proprietary revenue management software.[15]

JD recommends that the United States require Willow Bridge's internal annual audit to include a ''statistically and operationally meaningful sample.'' [16] The proposed Final Judgment requires an internal audit of employees ''engaged in or overseeing Willow Bridge's revenue management of multifamily rental properties in the United States and its territories,'' and at least 12 ''randomly selected, local, regional, or supervisory employees who manage property operations.'' [17] This is sufficient to capture the scope and diversity of Willow Bridge's revenue management operations, and there is no need to expand or otherwise modify the

[16] JD Comment at 3.

[17] Willow Bridge Proposed Final Judgment ¶ VII.A (Doc. 200–1).

audit requirement. Importantly, the proposed Final Judgment provides the United States broad rights to ensure compliance with the Final Judgment. These include access to ''electronic copies of all books, ledgers, accounts, records, data, and documents'' and to Willow Bridge's employees for interviews relating to any matters contained in the Final Judgment.[18]

JD also requests that Willow Bridge be required to provide a public annual compliance report. The compliance report should include, according to the commenter, ''the number of properties and units under each category of revenue-management product'' and information regarding compliance and corrective actions.[19] An annual compliance report of this nature is not necessary. Moreover, such a report would be at odds with the proposed Final Judgment's prohibitions against public disclosure of information and documents obtained pursuant to any of its provisions.[20] Disclosure would also create a risk that competitively sensitive information relating to Willow Bridge will be made public which could lead to coordination among competing landlords.

JD recommends that the proposed Final Judgment make ''unmistakably clear'' that structured datasets containing competitors' nonpublic information may not be accessed, used, combined, retained without controls, and require ''documented segregation, access restriction, deletion or defensible inaction, and testing to prevent legacy data from entering recommendations or model training.'' [21] The proposed Final Judgment already includes such a provision. Paragraph VI.C. of states that Willow Bridge must not ''use or access, as part of setting rental prices or generating rental pricing recommendations for any Willow Bridge property, any External Nonpublic Data . . . including such data derived from any RealPage Revenue Management Product.'' [22]

JD also points to the definition of ''Willow Bridge Property'' and notes that it excludes ''student, affordable, age-restricted or senior, and military housing.'' [23] The commenter requests that if ''operational differences justify particular exceptions, those exceptions should be narrowly tailored.'' The United States' Complaint alleges a product market for conventional multifamily conventional housing that does not include student, age-restricted, and military housing (Doc. 47, ¶ 183). This portion of the commenter's request is therefore outside the scope of the Complaint and is not subject to Tunney Act consideration.

JD proposes that early termination of the Final Judgment by the United States should be based on a ''reasoned public determination,'' and involve a process that includes ''public notice.'' [24] The proposed Final Judgment already provides that a request for early termination would involve a public notice to the Court (and to Willow Bridge) that continuation of the Final Judgment is no longer necessary or in the public interest.[25]

JD questions the proposed Final Judgment's cap of 15 employees and 60 total hours for cooperation with the litigation.[26] This comment fails to recognize that cooperation is not the only way that the United States can develop evidence. In any investigation or litigation, the United States always has procedural tools to compel the production of documents and testimony.[27] The cap in the proposed Final Judgment, which is the product of a negotiated settlement, does not in any way hamstring the United States' ability to obtain discovery in its litigation against any other defendant in this action.

Finally, JD asks why the proposed Final Judgment does not include any monetary relief.[28] The proposed Final Judgment does not provide for restitution because it is not one of the remedies sought by the United States in its Complaint.

* * * * *

To the extent that commenters wish to raise the possibility of additional unlawful conduct not addressed by the Complaint brought in this matter, members of the public are encouraged to submit information about any antitrust violation, including potentially unlawful exchanges of information between competitors, to the Department of Justice Antitrust Division's Citizen Complaint Center (*https://www.justice.gov/atr/webform/pcsf-citizen-complaint*).

V. Conclusion

After careful consideration of the public comments, the United States continues to believe that the proposed Final Judgment provides an effective and appropriate remedy for the antitrust violations alleged in the Complaint against Willow Bridge and is therefore in the public interest. The United States will move this Court to enter the proposed Final Judgment after the comments and this response are published in a manner approved by the Court, as required by 15 U.S.C. 16(d).

EXHIBIT 1—MC Comment (Redacted)

From: [REDACTED]
To: ATR-Public-Comments-Tunney-Act-MB
Subject: [EXTERNAL] Public Comment—Willow Bridge Proposed Final Judgment—1:24–cv–00710
Date: Monday, September 14, 2026 11:54:14 p.m.
Attachments: image0.png, image1.png, image2.png, image3.png

Good evening,

I am submitting this comment regarding the proposed Final Judgment involving Willow Bridge Property Company LLC in *United States et al.* v. *RealPage, Inc. et al.,* Civil Action No. 1:24–cv–00710.

I am a current resident of [REDACTED] in Dallas, Texas, a Willow Bridge-managed community.

My current lease expires [REDACTED]. On [REDACTED], I received a renewal offer for my apartment that included the following rates:

[18] Willow Bridge Proposed Final Judgment ¶ X.A (Doc. 200–1).

[19] JD Comment at 3–4.

[20] Willow Bridge Proposed Final Judgment ¶ XI (Doc. 200–1).

[21] JD Comment at 4.

[22] Willow Bridge Proposed Final Judgment ¶ VI.C (Doc. 200–1).

[23] JD Comment at 4.

[24] *Id.*

[25] Willow Bridge Proposed Final Judgment ¶ XIV (Doc. 200–1).

[26] JD Comment at 4.

[27] *See* 15 U.S.C. 1312, Fed. R. Civ. P. 30, 34 & 45.

[28] JD Comment at 4.

10 months—$1,734/month
11 months—$1,628/month
13 months—$1,622/month
14 months—$1,629/month
15 months—$1,631/month

I recently checked my property's public website and discovered that my exact apartment, is already being marketed to a prospective new resident, with availability beginning [REDACTED].

The publicly advertised rates for Apartment [REDACTED] include:

10 months—$1,536/month
11 months—$1,526/month
13 months—$1,517/month
14 months—$1,524/month
15 months—$1,527/month
16 months—$1,517/month

Thus, Willow Bridge is currently offering prospective new renters materially lower rents for the exact same apartment than it offered me to remain in the apartment. Additionally, a concession of 4 weeks free is being offered to all one bedroom floor plans that has been explicitly denied to me.

For example, my 10-month renewal rate was $1,734, while the publicly advertised 10-month rate for my apartment is $1,536—a difference of $198 per month. My 14-month renewal rate was $1,629 compared with an advertised $1,524, and my 15-month renewal rate was $1,631 compared with an advertised $1,527.

I have screenshots of the public listing and a copy of my written renewal offer documenting these amounts.

I do not know whether my renewal rates or the currently advertised rates were generated, recommended, or influenced by RealPage, AIRM, YieldStar, or another revenue-management system. I am not asserting that this pricing discrepancy alone proves an antitrust violation.

However, because the government's allegations against Willow Bridge concern algorithmic rental pricing and the use of competitively sensitive information in determining rents, I believe this current pricing experience is relevant to whether the proposed Final Judgment adequately protects renters.

In particular, I respectfully ask the Department to consider whether the proposed decree adequately addresses:

1. pricing algorithms used for lease renewals, not merely rents quoted to prospective tenants;

2. situations in which incumbent tenants are offered materially higher prices than the contemporaneous public price for their own apartment;

3. whether tenants should be told when an automated revenue-management system materially influenced their renewal rate;

4. whether Willow Bridge should be required to provide meaningful human review of renewal prices; and

5. whether monitoring under the decree should examine differences between renewal pricing and new-tenant pricing at the same property.

I am providing this information so that the Department and Court have the benefit of a current Willow Bridge resident's experience while evaluating whether the proposed relief is sufficient to protect competition and renters.

Thank you for considering my comment.
[REDACTED]
Dallas, Texas

Exhibit 2—JD Comment (Redacted)
From: [REDACTED]
To: ATR-Public-Comments-Tunney-Act-MB
Subject: [EXTERNAL] Public Comment—Proposed Willow Bridge Final Judgment—*U.S.* v. *RealPage*, No. 1:24–cv–00710
Date: Friday, September 11, 2026 1:27:48 p.m.

Dear Ms. Hauck:

I am a [REDACTED] resident of [REDACTED] in Chula Vista, California, a multifamily community publicly listed/managed by Willow Bridge Property Company.

I have lived at [REDACTED] for approximately one year, and Willow Bridge has managed the community throughout my residency. My own tenancy has raised unresolved financial and pricing-related concerns involving Willow Bridge's administration of rent and other housing charges. I do not claim in this comment that those concerns resulted from RealPage, competitor data, or an antitrust violation. They are why the adequacy and verifiability of this decree are concrete questions for me rather than abstract policy concerns. I am willing to provide relevant records through a nonpublic channel if the Department determines that a property-level inquiry is warranted.

I respectfully ask the Antitrust Division to *strengthen the proposed Final Judgment with Willow Bridge Property Company LLC,* or explain on the public record why the existing provisions are sufficient, before asking the Court to find the settlement in the public interest.

My relationship to a Willow Bridge-managed community explains why the decree matters to me; it is not offered as evidence that the alleged antitrust conduct occurred at [REDACTED]. This comment relies only on the public record: the amended complaint, proposed Final Judgment, Competitive Impact Statement, **Federal Register** notice, Willow Bridge's public property listing, and the Department's public case materials. It does not ask the Department to decide any private tenancy dispute. The amended complaint contains allegations, not adjudicated facts, and Willow Bridge's consent to the proposed judgment is not an admission of liability. Those limits make independent verification of future compliance more important, not less.

Property-Specific Public-Interest Question: [REDACTED]

My concern is not abstract. Willow Bridge's current public website presents [REDACTED] as one of its communities. The California Department of Real Estate currently lists the [REDACTED] address as a branch of Willow Bridge Management Inc., a corporation using the DBAs ''Willow Bridge'' and ''Willow Bridge Property Company.'' A 2022 City of Chula Vista staff report described [REDACTED] as a [REDACTED] property owned by John Hancock Life Insurance Company (U.S.A.) since 2015. I cite the City report as a dated public representation, not as proof of current title.

DOJ's amended complaint alleges that Willow Bridge used RealPage's AIRM and YieldStar products. It also alleges more broadly that RealPage obtained confidential transactional data through products including OneSite, Performance Analytics with Benchmarking, and Business Intelligence—including data from units that did not necessarily use AIRM or YieldStar—and made such data available for pricing recommendations. The complaint does not identify [REDACTED] or Chula Vista, and I do not claim that [REDACTED] used any of these products or that its data entered the challenged system. The absence of property-level public information is precisely why I ask DOJ to examine the question.

I respectfully request that the Department, within its existing investigative, preservation, and compliance authority:

1. determine whether [REDACTED] used AIRM, YieldStar, LRO, OneSite, Performance Analytics with Benchmarking, Business Intelligence, or another RealPage or third-party revenue-management or data product during the period relevant to the complaint and proposed judgment;

2. determine whether [REDACTED] nonpublic rents, concessions, applications, lease terms, renewals, occupancy, availability, or other competitively sensitive information were transmitted, pooled, benchmarked, used for model training, or made available to generate recommendations for [REDACTED] or competing properties;

3. determine whether pricing or leasing recommendations used at [REDACTED] were influenced by competitors' nonpublic information;

4. preserve the relevant property-level contracts, product records, data-flow records, configurations, recommendations, overrides, communications, and audit trails, and ensure that the decree's legacy-data and compliance provisions reach [REDACTED] and similarly situated properties managed for third-party owners; and

5. to the extent consistent with law-enforcement and confidentiality constraints, explain in DOJ's response to public comments whether potentially affected renters will have any process to learn whether their property or its data was within the investigation or remedial program.

These requests do not assume the answers. They ask DOJ to test a concrete property against the precise data flows, products, owner-manager relationships, and renter harms alleged in its own complaint.

They also expose a practical transparency problem: a renter cannot evaluate whether the decree protects that renter if property-level coverage is known only to Willow Bridge, its vendors, and the government.

Voucher-Assisted Residents and Public Funds

[REDACTED] makes the property-level pricing question more consequential. In the federal [REDACTED] program, the public housing agency may not approve the initial rent until it determines that the rent to owner

is reasonable, must redetermine reasonableness before an increase, and must compare the requested rent with comparable unassisted units. The payment standard and gross rent also affect the housing-assistance-payment calculation. See 24 CFR 982.505 and 982.507.

Accordingly, if competitor-informed or algorithmically influenced pricing affected a requested initial rent, renewal increase, comparable-unit submission, concession, or other pricing input for a voucher-assisted unit, the effects could reach the resident's housing cost, the agency's rent-reasonableness process, and the expenditure of public subsidy funds. I do not assert that this occurred in my tenancy. I ask DOJ to determine whether it occurred at [REDACTED] or other Willow Bridge-managed properties and, if the evidence indicates an effect on assisted units or agency rent determinations, to coordinate as appropriate with HUD and the administering public housing agencies.

The final judgment should also require Willow Bridge to identify whether covered products or data practices were used in connection with voucher-assisted units at otherwise conventional properties. Its exclusion of ''affordable housing'' must not be interpreted to remove an entire conventional property—or individual units—from the decree merely because some residents use tenant-based rental assistance.

I have separately submitted housing-accountability reports to the HUD Office of Inspector General and VA Office of Inspector General and initiated a housing intake with the California Civil Rights Department. These are distinct processes. I do not represent that any of those agencies has opened an investigation, accepted a formal complaint, or made findings. I identify them only because overlapping voucher, rent, property-management, and communications records may warrant preservation or appropriate interagency referral if DOJ identifies a nexus to the conduct alleged in this case.

The proposed judgment contains meaningful protections. It broadly restricts the use and disclosure of competitors' nonpublic, property-specific information; limits revenue-management products that pool data across different owners; prohibits agreements with other property managers or owners to use a product; restricts price floors, automatic acceptance, and financial incentives tied to accepting recommendations; bars participation in RealPage meetings; preserves Department inspection rights; and provides contempt and cost-shifting remedies. These are material safeguards.

The public-interest question, however, is whether those safeguards can be verified and enforced across Willow Bridge's national operating footprint. The Competitive Impact Statement states that Willow Bridge manages more than 240,000 units. Against that scale, several provisions appear too dependent on self-reporting, vendor assurances, small samples, and nonpublic oversight.

1. Require Independent Technical Verification and an Initial Monitoring Period

The proposed judgment permits Willow Bridge to use a third-party revenue-management product if the provider certifies that the product meets the decree's requirements. It also appears to permit use of a RealPage product without a separate certification if a final judgment is entered against RealPage. A monitoring trustee is not automatic: monitoring is principally tied to use of an uncertified product or a judicial finding of a violation.

Vendor certification is useful evidence, but it is not independent verification. The alleged conduct involved data flows, model training, product settings, information exchanges, and operational practices that can change after a certification is issued. Reliance on a separate judgment against RealPage also does not establish that Willow Bridge's configuration and use of a product are compliant in practice.

I ask the Department to require:

—independent technical validation before initial use and after material product, model, data-source, or configuration changes;
—testing of actual data inputs, model-training data, access controls, recommendation settings, overrides, and outputs—not only review of a vendor's written representations; and
—an independent monitoring trustee for at least the first two years, with risk-based authority to examine products and practices whether or not a violation has already been proved.

If the Department believes these protections are unnecessary, its response should explain how vendor certification and a contingent monitor provide equivalent assurance.

2. Scale the Audit Program to Willow Bridge's Footprint and Risk

The proposed judgment requires an annual audit of revenue-management personnel and at least 12 randomly selected local, regional, or supervisory property-operations employees. A minimum sample of 12 employees is difficult to reconcile with a company managing more than 240,000 units. Random selection alone can also miss markets, properties, transition periods, or teams presenting the greatest risk.

The final judgment should require a statistically and operationally meaningful sample tied to the number of properties, units, markets, products, and owners involved. The sample should include risk-based selections, not merely random ones, and should test management transitions, complaints, unusual override patterns, product changes, and markets where multiple competing properties use the same software. The audit should examine owners' instructions and approvals when those instructions affect product use or pricing practices.

3. Add Public, Aggregated Compliance Reporting

The proposed judgment gives the Department access to significant nonpublic information, but it does not appear to require a public annual compliance report. Monitoring reports are generally protected from disclosure, and the public may never learn whether a monitor was appointed, what products were used, whether violations were detected, or whether corrective action occurred.

Confidential business information should remain protected. But confidentiality does not require complete public opacity. The final judgment should require an annual public report stating, in aggregated and noncommercial terms:

—the number of properties and units using each category of revenue-management product;
—the number and type of audits, technical tests, complaints, and substantiated violations;
—the general nature and completion status of corrective actions;
—whether a monitoring trustee is serving and the scope of completed review; and
—whether the Department has granted, rejected, or conditioned any request affecting compliance.

Public reporting would allow affected renters and the Court to assess whether the decree is functioning without disclosing rents, algorithms, personal data, or competitively sensitive information.

4. Clarify Legacy-Data Controls and the Housing-Category Exclusions

The proposed judgment requires Willow Bridge to identify certain structured datasets containing competitors' nonpublic information, but states that the identification provisions do not apply to data maintained in OneSite, Yardi Voyager, or other property-management software. The final judgment should make unmistakably clear that this storage-location language is not permission to access, use, combine, retain without controls, or repurpose prohibited information. It should require documented segregation, access restriction, deletion or defensible inactivation, and testing sufficient to prevent legacy data from entering recommendations or model training.

The definition of ''Willow Bridge Property'' also excludes student, affordable, age-restricted or senior, and military housing. The public record should explain why residents and owners in those sectors do not require the decree's core protections against competitor data exchange and cross-owner pooling. The judgment should also clarify that an otherwise conventional multifamily property is not excluded merely because individual households use tenant-based rental assistance. If operational differences justify particular exceptions, those exceptions should be narrowly tailored; the core information-sharing prohibitions should apply wherever the competitive risk exists.

5. Condition Any Early Termination on a Public Compliance Record

The proposed judgment lasts five years but permits termination after three years upon notice by the United States. Early termination should require a reasoned public determination based on completed independent testing, a record of corrective action, and the absence of unresolved material violations. The Department should provide public notice before early termination and give the Court and the public a meaningful opportunity to assess the compliance record.

6. Explain the Limits of the Remedy and Cooperation Provisions

The proposed judgment requires cooperation but caps voluntary interviews under that provision at 15 employees and 60 total hours. Formal discovery and civil investigative demands remain available. Even so, given the alleged duration, nationwide scope, and technical nature of the conduct, the Department should explain why those ceilings are appropriate for voluntary cooperation, or replace them with a reasonable-necessity standard.

The Competitive Impact Statement also recognizes that private parties may pursue damages and that the proposed judgment will have no prima facie effect in private litigation. The settlement contains no restitution or monetary relief for renters. I recognize that a Tunney Act review is not an individual claims process and that the Court's role is not to rewrite the government's case. Still, the Department should explain why forward-looking relief without monetary redress is adequate in light of the complaint's allegations and what public compliance information will allow potentially affected renters to understand whether the challenged practices have actually stopped.

Requested Disposition

I respectfully ask the Department to modify the proposed Final Judgment to include the safeguards above before entry. At minimum, the Department's response to public comments should address each concern with enough specificity for the Court to evaluate whether the decree's verification, transparency, duration, coverage, and cooperation provisions are adequate for a company of Willow Bridge's scale.

The decree should not depend on the public simply trusting the participants and vendors whose future conduct it is designed to constrain. Durable relief requires independent testing, proportionate auditing, limited but meaningful transparency, and a public basis for any early termination.

Respectfully submitted,

[REDACTED]

DEPARTMENT OF JUSTICE

[OMB Number 1105–0095]

Agency Information Collection Activities; Proposed eCollection; eComments Requested; Reinstatement of a Previously Approved Collection; Title: National Standards To Prevent, Detect, and Respond to Prison Rape Feedback Package

AGENCY: Office of Justice Programs, Department of Justice.

ACTION: 60-Day notice.

SUMMARY: The Office of Justice Programs (OJP), Bureau of Justice (BJA), Department of Justice (DOJ), will be submitting the following information collection request to the Office of Management and Budget (OMB) for review and approval in accordance with the Paperwork Reduction Act of 1995.

DATES: Comments are encouraged and will be accepted for 60 days until January 8, 2027.

FOR FURTHER INFORMATION CONTACT: If you have additional comments, especially on the estimated public burden or associated response time, suggestions, or need a copy of the proposed information collection instrument with instructions or additional information, please contact Leanetta Jessie, 999 N Capitol St NE, *leanetta.jessie@usdoj.gov;* or (202) 598–1160.

SUPPLEMENTARY INFORMATION: Written comments and suggestions from the public and affected agencies concerning the proposed collection of information are encouraged. Your comments should

address one or more of the following four points:

—Evaluate whether the proposed collection of information is necessary for the proper performance of the functions of the (component), including whether the information will have practical utility;

—Evaluate the accuracy of the agency's estimate of the burden of the proposed collection of information, including the validity of the methodology and assumptions used;

—Evaluate whether and if so how the quality, utility, and clarity of the information to be collected can be enhanced; and

—Minimize the burden of the collection of information on those who are to respond, including through the use of appropriate automated, electronic, mechanical, or other technological collection techniques or other forms of information technology, *e.g.,* permitting electronic submission of responses.

Overview of This Information Collection

1. *Type of Information Collection:* Reinstatement of a previously approved collection.

2. *The Title of the Form/Collection:* Prison Rape Elimination Act (PREA).

3. *The agency form number, if any, and the applicable component of the Department sponsoring the collection:* OMB #1105–0095.

Affected Public who will be asked or required to respond, as well as a brief abstract:

Affected Public: Federal, State, and Tribal.

Abstract: The information collected through the PREA OAS is used by DOJ-certified PREA auditors to assess whether confinement facilities comply with the PREA Standards. Facilities submit documentation and responses through the system, and auditors review those materials, conduct interviews, perform on-site assessments, evaluate compliance with individual standards, and prepare audit reports.

The information enables auditors to:

—Assess facility policies, procedures, and operational practices against PREA Standards;

—Verify implementation of safeguards designed to prevent, detect, and respond to sexual abuse and sexual harassment;

—Document compliance findings and corrective actions;

—Generate standardized audit reports; and

—Provide information necessary for DOJ oversight of PREA auditors and PREA implementation efforts nationwide.

The information collection also supports state and local correctional agencies in demonstrating compliance with PREA and assists states, territories, and the District of Columbia in meeting statutory certification requirements associated with PREA implementation.

4. *Obligation to Respond:* Affected public the affected public are individuals. The obligation to respond is voluntary.

5. *Total Estimated Number of Respondents:* 13,000. One PREA Coordinator per facility.

6. *Estimated Time per Respondent:* 8 Hours.

7. *Frequency:* Once every three years.

8. *Total Estimated Annual Time Burden:* 104,000 hours.

9. *Total Estimated Annual Other Costs Burden:*

If additional information is required contact: Darwin Arceo, Department Clearance Officer, United States Department of Justice, Enterprise Portfolio Management, Two Constitution Square, 145 N Street NE, 4W–218, Washington, DC.

Dated: November 5, 2026.

Darwin Arceo,

Department Clearance Officer for PRA, U.S. Department of Justice.

BILLING CODE 4410–18–P

OFFICE OF PERSONNEL MANAGEMENT

Privacy Act of 1974; System of Records

AGENCY: U.S. Office of Personnel Management.

ACTION: Notice of a modified system of records.

SUMMARY: In accordance with the Privacy Act of 1974, the Office of Personnel Management (OPM) proposes to modify and republish in full a system of records previously titled ''OPM/Central-21, Federal Employee Viewpoint Survey'' which will be renamed ''OPM/Central-21, Annual Employee Survey.'' The modification is necessary to reflect the replacement of OPM's centrally administered Federal Employee Viewpoint Survey (FEVS) with the Annual Employee Survey (AES). Under the revised model, executive agencies administer the AES to their own employees and provide OPM and the Office of Management and Budget (OMB) only de-identified data for governmentwide analysis and reporting. OPM/Central-21 will cover identifiable records OPM maintains when administering the AES to OPM employees and retained records from prior FEVS administrations. It will not cover identifiable AES records maintained by other agencies.

DATES: Submit comments on or before December 9, 2026. These changes are effective December 10, 2026.

ADDRESSES: You may submit written comments using the Federal eRulemaking Portal at *https://www.regulations.gov.* All submissions received must include the agency name and docket number for this **Federal Register** document. The general policy for comments and other submissions from members of the public is to make these submissions available for public viewing on the internet at *https://www.regulations.gov* without change, including any personal identifiers.

FOR FURTHER INFORMATION CONTACT: For general questions, please contact Jeanne Jacobson, Acting Deputy Associate Director, Workforce Strategy, Design, and Insights, Workforce Policy and Innovation, by email at *wsdi@opm.gov* or by mail at Deputy Associate Director, Workforce Strategy, Design, and Insights, Office of Personnel Management, 1900 E Street NW, Washington, DC 20415–0001.

SUPPLEMENTARY INFORMATION: In accordance with the Privacy Act of 1974, the OPM proposes to modify and republish in full a system of records previously titled ''OPM/Central-21, Federal Employee Viewpoint Survey'' which will be renamed ''OPM/Central-21, Annual Employee Survey.''

Section 1128 of the National Defense Authorization Act for Fiscal Year 2004 requires executive agencies to conduct an annual employee survey and requires OPM to prescribe common survey questions. OPM previously administered the Federal Human Capital Survey and then the FEVS as centralized governmentwide surveys that included the required annual employee survey items. Beginning with the AES, each agency will administer OPM's common form questions to its own employees using the methodology and platform selected by that agency. Participating agencies may maintain the identifiers they use to administer their surveys. Agencies will submit to OPM and OMB only the following fields: individual respondent level records for each required AES item, survey methodology information as it applies (survey administration dates, distribution method, eligible population size and description, sample or census, number of respondents, survey completion requirements, sampling approach, sample size, nonresponse bias study results) and weighting

methodology as it applies (poststratification method and know limitations). The submission will contain aggregate responses and combine individual respondent level data at the agency level for the 10 required items. OPM will apply protections to ensure no individual employees can be identified in any governmentwide reporting. OPM will separately administer the AES to its own employees and may maintain limited identifying information for that administration. OPM will also continue to maintain legacy FEVS records until they are disposed of in accordance with applicable records schedules.

This notice changes the system name; updates the system location, system manager, authority, purpose, categories of individuals and records, record sources, storage, retrieval, retention, safeguards, and access and amendment procedures; and revises routine use (h). The revisions distinguish current AES records from legacy FEVS records and clarify that de-identified AES data received from other agencies are outside this system when they do not identify individual respondents and OPM does not retrieve them by an individual identifier.

In accordance with 5 U.S.C. 552a(r), OPM has provided notice of the modified system of records to the Office of Management and Budget and to Congress. The modified system of records will be included in OPM's updated inventory of record systems.

Signing Statement

The Director of OPM, Scott Kupor, reviewed and approved this document and has authorized the undersigned to electronically sign and submit this document to the Office of the Federal Register for publication.

U.S. Office of Personnel Management.

Alexys Stanley,

Federal Register Liaison.

SYSTEM NAME AND NUMBER:

OPM/Central-21, Annual Employee Survey.

SECURITY CLASSIFICATION:

Unclassified.

SYSTEM LOCATION:

Records are maintained by Workforce Strategy, Design, and Insights, Workforce Policy and Innovation, Office of Personnel Management, 1900 E Street NW, Washington, DC 20415–0001.

SYSTEM MANAGER(S):

Deputy Associate Director, Workforce Strategy, Design, and Insights, Workforce Policy and Innovation, U.S. Office of Personnel Management, 1900 E. Street NW, Washington, DC 20415–0001.

AUTHORITY FOR MAINTENANCE OF THE SYSTEM:

5 U.S.C. 1103 and 4702; section 1128 of the National Defense Authorization Act for Fiscal Year 2004, Public Law 108–136, set out as a note to 5 U.S.C. 7101; 5 CFR 5.2(b) and 9.2; and 5 CFR part 250, subparts B and C.

PURPOSE(S) OF THE SYSTEM:

The purpose of the system is to permit OPM to administer the voluntary Annual Employee Survey (AES) to OPM employees; determine eligibility and distribute invitations and reminders; collect and maintain voluntary survey responses; evaluate leadership, management practices, and employee satisfaction; analyze OPM's results; publish aggregate OPM survey results; and produce aggregate survey results or de-identified survey data for OMB's governmentwide analysis, workforce planning, and reporting. The system also permits OPM to maintain and analyze retained records from prior FEVS administrations for authorized statistical, workforce planning, research, reporting, and historical purposes. AES data received from other agencies are outside this system only when they do not identify an individual and OPM does not retrieve them by an individual's name, assigned identifying number or symbol, respondent code, linkage key, or other identifying particular. OPM will assess whether small groups or combinations of reported attributes could permit an individual to be identified and will require aggregation or suppression as needed. Removing direct identifiers alone does not make records de-identified if OPM can still link them to an individual.

OPM will provide its employees with a Privacy Act Statement with the AES invitation and survey instrument, identifying the authority, purposes, and routine uses of the collection; that participation is voluntary, and the effect of not responding. Agencies administering their own AES will provide an appropriate notice for their collections and separately assess applicable Privacy Act notice, privacy compliance documentation, and vendor requirements.

CATEGORIES OF INDIVIDUALS COVERED BY THE SYSTEM:

Current or former OPM employees whose AES records are maintained in this system and current or former Federal employees whose records remain in retained legacy FEVS datasets.

CATEGORIES OF RECORDS IN THE SYSTEM:

Current AES records maintained by OPM may include:

a. Full name;

b. OPM work email address;

c. OPM organization, work unit name, or code;

d.The minimum employment information obtained from OPM personnel or human resources records that OPM uses to determine AES eligibility and assign results to organizational reporting units: Employment information needed to identify the survey population, survey eligibility, administer the survey, or calculate survey results, including tenure, type of appointment, appointment authority, service computation date, duty location, occupation classification or series, organizational/work component names and codes, pay status, work schedule, pay plan, pay grade, step, and supervisory status. ;

e. Responses to the AES common form questions and any OPM-approved supplemental questions; and

f. Survey administration and technical information retained by OPM:a system-generated survey record identifier, invitation and reminder status, completion status, date and time participant interacts with the survey, last page viewed, and information about the device being used (operating system, browser information, pointing method). OPM uses these fields for the survey software to operate, troubleshooting technical issues and limited research purposes to better understand survey participation, retains them indefinitely for trending and research purposes and limits access to only authorized OPM personnel whose official duties require access. As an anonymous, open link, survey there is nothing collected by the survey software that would identify an individual for the 10 prescribed items. In some certain circumstances, specific responses to demographics may create the potential for identification in the system.

Legacy FEVS records retained by OPM may include:

a. Full name;

b. Email address;

c. Social Security number, or other unique employee identification number;

d. Agency;

e. Agency subcomponent;

f. Organizational/Work component names and codes (up to nine levels of work unit information may be obtained);

g. Appointment authority;

h. Type of appointment;

i. Work schedule;

j. Tenure;

k. Service computation date;

l. Duty location and core based statistical area;
m. Occupational classification or series;
n. Personnel Office identifier;
o. Pay status;
p. Grade level;
q. Pay plan;
r. Base and adjusted salary;
s. Retirement plan;
t. Supervisory status;
u. Ethnicity and Race/National Origin indicator;
v. Sex;
w. Date of birth;
x. Responses to the FEVS survey questions, including demographic information.

RECORD SOURCE CATEGORIES:

Current AES records maintained by OPM are obtained from OPM personnel or human resources records used to establish eligibility and administer the survey and from OPM employees who voluntarily respond. Legacy FEVS records were obtained from OPM's Enterprise Human Resource Integration system, participating Federal agencies, and individuals who voluntarily completed the FEVS. De-identified AES data received from other agencies are outside this system when they do not identify individual respondents and OPM does not retrieve them by an individual's name, assigned identifying number or symbol, or other identifying particular. Removing direct identifiers alone does not exclude records that OPM retrieves by an individual identifier, including a respondent code.

ROUTINE USES OF RECORDS MAINTAINED IN THE SYSTEM, INCLUDING CATEGORIES OF USERS AND PURPOSES OF SUCH USES:

In addition to those disclosures generally permitted under 5 U.S.C. 552a(b) of the Privacy Act, all or a portion of the records or information contained in this system may be disclosed outside OPM as a routine use pursuant to 5 U.S.C. 552a(b)(3) as follows:

a. To the Department of Justice, including Offices of the U.S. Attorneys; another Federal agency conducting litigation or in proceedings before any court, adjudicative, or administrative body; another party in litigation before a court, adjudicative, or administrative body; or to a court, adjudicative, or administrative body. Such disclosure is permitted only when it is relevant or necessary to the litigation or proceeding and one of the following is a party to the litigation or has an interest in such litigation:

(1) OPM, or any component thereof;

(2) Any employee or former employee of OPM in his or her official capacity;

(3) Any employee or former employee of OPM in his or her individual capacity where the Department of Justice or OPM has agreed to represent the employee;

(4) The United States, a Federal agency, or another party in litigation before a court, adjudicative, or administrative body, upon the OPM General Counsel's approval, pursuant to 5 CFR part 295 or otherwise.

b. To the appropriate Federal, State, or local agency responsible for investigating, prosecuting, enforcing, or implementing a statute, rule, regulation, or order, when a record, either on its face or in conjunction with other information, indicates or is relevant to a violation or potential violation of civil or criminal law or regulation.

c. To a member of Congress from the record of an individual in response to an inquiry made at the request of the individual to whom the record pertains.

d. To the National Archives and Records Administration (NARA) for records management inspections being conducted under the authority of 44 U.S.C. 2904 and 2906.

e. To appropriate agencies, entities, and persons when (1) OPM suspects or has confirmed that there has been a breach of the system of records, (2) OPM has determined that as a result of the suspected or confirmed breach there is a risk of harm to individuals, OPM (including its information systems, programs, and operations), the Federal Government, or national security; and (3) the disclosure made to such agencies, entities, and persons is reasonably necessary to assist in connection with OPM's efforts to respond to the suspected or confirmed breach or to prevent, minimize, or remedy such harm.

f. To another Federal agency or Federal entity, when OPM determines that information from this system of records is reasonably necessary to assist the recipient agency or entity in (1) responding to a suspected or confirmed breach or (2) preventing, minimizing, or remedying the risk of harm to individuals, the recipient agency or entity (including its information systems, programs, and operations), the Federal Government, or national security, resulting from a suspected or confirmed breach.

g. To contractors, grantees, experts, consultants, or volunteers performing or working on a contract, service, grant, cooperative agreement, or other assignment for OPM when OPM determines that it is necessary to accomplish an agency function related to this system of records. Individuals provided information under this routine use are subject to the same Privacy Act requirements and limitations on disclosure as are applicable to OPM employees.

h. To a Federal agency whose current or former employees' legacy FEVS records are maintained in this system, when OPM determines that the disclosure is necessary to resolve a specific legacy survey administration issue or prepare a legacy survey report. OPM will disclose only the minimum information necessary and will use aggregate information when it is sufficient.

POLICIES AND PRACTICES FOR STORAGE OF RECORDS:

Records are stored electronically in OPM-authorized information systems. Access is limited to authorized personnel whose official duties require access to the records.

POLICIES AND PRACTICES FOR RETRIEVAL OF RECORDS:

Before or during AES survey administration, OPM retrieves records by name, work email address, or a unique identifier. If OPM retains a code or linkage key that permits it to locate an individual's response after AES administration, that response remains retrievable by an individual identifier. OPM retrieves retained FEVS records by name, email address, or other unique identifier (SSN or equivalent personnel identifier) for authorized analysis and reporting, subject to current access controls. OPM may also search retained FEVS survey data by work unit or other characteristics to produce statistical results. . Removal of direct identifiers does not prevent individual retrieval if an assigned identifier or retained linkage key still permits OPM to locate an individual's records.

POLICIES AND PRACTICES FOR RETENTION AND DISPOSAL OF RECORDS:

OPM retains and disposes of AES records and legacy FEVS records under the applicable National Archives and Records Administration (NARA) Records Schedule Number N1–478–92–001.

ADMINISTRATIVE, TECHNICAL, AND PHYSICAL SAFEGUARDS:

OPM limits access to OPM-maintained AES records to authorized personnel whose official duties require access. The OPM AES platform uses multifactor authentication, encryption, audit monitoring, security and privacy training, and physical safeguards. The AES platform is part of the TTEC Humanify Enterprise—Government (Humanify Enterprise—G) Platform which is FedRAMP Certified These safeguards comply with the Federal

Information Security Modernization Act of 2014, applicable OMB policies, and standards and guidance issued by the National Institute of Standards and Technology (NIST).

RECORD ACCESS PROCEDURES:

Individuals seeking access to their records in this system may email a request to *foia@opm.gov* or mail a request to the Office of Personnel Management, Office of the Chief Information Officer-FOIA, 1900 E Street NW, Washington, DC 20415–0001. The email or letter should include the words ''Privacy Act Request,'' state that the request relates to ''OPM/Central-21, Annual Employee Survey,'' and clearly describe the requested records. To help locate the records, the request should identify the work email address used for the survey, if known, the current or former employing Federal agency, and the approximate survey year. Requesters must provide identity verification information in accordance with 5 CFR 297.201, including full name, signature, home address, date and place of birth, and other applicable identifying information. Social Security number requirements will be applied in accordance with 5 CFR 297.201(b)(2) for records in this system that include that identifier. OPM may be unable to locate an individual's survey response if neither direct identifiers nor retained respondent codes or linkage keys permit retrieval of that response by an individual identifier.

Individuals requesting access must also comply with OPM's Privacy Act regulations regarding verification of identity and access to records (5 CFR 297).

CONTESTING RECORD PROCEDURES:

Individuals seeking to amend records about themselves may email a request to *foia@opm.gov* or mail a request to the Office of Personnel Management, Office of the Chief Information Officer-FOIA, 1900 E Street NW, Washington, DC 20415–0001 and provide the record-location and identity-verification information described under ''Record Access Procedures.'' The request must precisely identify the information to be amended, state the requested correction and the reasons for it, and include available supporting documentation.

OPM may be unable to locate an individual's survey response for amendment if neither direct identifiers nor retained respondent codes or linkage keys permit retrieval of that response by an individual identifier. Individuals requesting amendment must also follow OPM's Privacy Act regulations regarding verification of identity and amendment to records (5 CFR 297).

NOTIFICATION PROCEDURES:

See ''Record Access Procedures.''

SECURITIES AND EXCHANGE COMMISSION

[Release No. 34–106815; File No. SR–FICC–2026–011]

Self-Regulatory Organizations; Fixed Income Clearing Corporation; Notice of Filing and Immediate Effectiveness of a Proposed Rule Change To Remove a Requirement That Sponsoring Members Report Certain Events Impacting Their Sponsored Members

November 4, 2026.

Pursuant to Section 19(b)(1) of the Securities Exchange Act of 1934 (''Act'')[1] and Rule 19b–4 thereunder,[2] notice is hereby given that on October 29, 2026, Fixed Income Clearing Corporation (''FICC'') filed with the Securities and Exchange Commission (''Commission'') the proposed rule change as described in Items I, II and III below, which Items have been prepared by the clearing agency. FICC filed the proposed rule change pursuant to Section 19(b)(3)(A) of the Act[3] and Rule 19b–4(f)(6) thereunder.[4] The Commission is publishing this notice to solicit comments on the proposed rule change from interested persons.

I. Clearing Agency's Statement of the Terms of Substance of the Proposed Rule Change

The proposed rule change consists of modifications to FICC's Government Securities Division (''GSD'') Rulebook (''Rules'')[5] to remove the requirement that Sponsoring Members provide FICC with written notice of certain events impacting their Sponsored Members.

II. Clearing Agency's Statement of the Purpose of, and Statutory Basis for, the Proposed Rule Change

In its filing with the Commission, the clearing agency included statements concerning the purpose of and basis for the proposed rule change and discussed any comments it received on the proposed rule change. The text of these statements may be examined at the places specified in Item IV below. The clearing agency has prepared summaries, set forth in sections A, B, and C below, of the most significant aspects of such statements.

(A) Clearing Agency's Statement of the Purpose of, and Statutory Basis for, the Proposed Rule Change

1. Purpose

FICC is proposing changes to Rule 3A, which describes GSD's sponsored membership service (''Sponsored Service''). Specifically, the proposed rule change would remove the requirement that a Sponsoring Member provide FICC with written notice (i) when it becomes aware that its Sponsored Member is no longer in compliance with applicable requirements of Rule 3A, and (ii) before the effective date of any ''Reportable Event'' applicable to a Sponsored Member.[6] As described below, FICC has implemented changes to the requirements applicable to Sponsored Members and has enhanced its monitoring of Sponsored Members. As a result of such previously implemented changes, FICC believes these reporting requirements for Sponsoring Members are no longer necessary.

Overview of Sponsored Service, Sponsored Member Requirements and FICC Monitoring

FICC, through GSD, serves as a central counterparty and provides real-time trade matching, clearing, risk management and netting for cash purchases and sales of U.S. Treasury securities as well as repurchase and reverse repurchase transactions involving U.S. Treasury securities (''repos'').[7] GSD's central counterparty services are available directly to entities that are approved to be Netting Members and indirectly to other market participants through its indirect access

[1] 15 U.S.C. 78s(b)(1).

[2] 17 CFR 240.19b–4.

[3] 15 U.S.C. 78s(b)(3)(A).

[4] 17 CFR 240.19b–4(f)(6).

[5] Terms not defined herein are defined in the Rules, *available at http://www.dtcc.com/legal/rules-and-procedures.*

[6] ''Reportable Event'' is defined in Rule 1 as ''an event that would effect a change in control of a Netting Member or could have a substantial impact on such Member's business and/or financial condition, including, but not limited to: (a) material organizational changes including mergers, acquisitions, changes in corporate form, name changes, changes in the ownership of a Netting Member or its Affiliates, and material changes in management, (b) material changes in business lines, including new business lines undertaken, and (c) status as a defendant in litigation which could reasonably impact the Netting Member's financial condition or ability to conduct business.'' *Id.*

[7] GSD also clears and settles certain transactions on securities issued or guaranteed by U.S. government agencies and government sponsored enterprises.

models—the Sponsored Service or Agent Clearing Service.[8]

The Sponsored Service permits Netting Members, approved by FICC as ''Sponsoring Members,'' to sponsor firms, referred to as ''Sponsored Members,'' into GSD membership.[9] The Sponsoring Member is permitted to submit to FICC for comparison, novation and netting certain types of eligible transactions. For operational and administrative purposes, a Sponsored Member appoints its Sponsoring Member to act as processing agent with respect to the Sponsored Member's satisfaction of its securities and funds-only settlement obligations.

A Sponsored Member is an Indirect Participant of GSD and the legal counterparty to FICC for any submitted transactions. However, the Sponsoring Member unconditionally guarantees to FICC the Sponsored Member's performance under a Sponsoring Member Guaranty, which guarantees to FICC the payment and performance of a Sponsored Member's obligations to FICC. Therefore, FICC relies on the financial resources of the Sponsoring Member in relying upon the Sponsoring Member Guaranty.

FICC recently adopted enhancements to its access models designed to facilitate access to clearance and settlement services of all eligible secondary market transactions in U.S. Treasury securities in accordance with the Securities and Exchange Commission's final rule regarding Standards for Covered Clearing Agencies for U.S. Treasury Securities and Application of the Broker-Dealer Customer Protection Rule With Respect to U.S. Treasury Securities.[10] Among these enhancements, FICC removed the eligibility requirement that Sponsored Members either be ''qualified institutional buyers,'' as such term is defined by Rule 144A under the Securities Act of 1933, or otherwise satisfy the financial requirements of such definition.[11] With this change, Section 3(a) of Rule 3A now provides only that a Person shall be eligible to become a Sponsored Member if it is sponsored into membership by a Sponsoring Member, as provided under the Rules.

FICC monitors the risks presented by its Indirect Participants in various ways, consistent with the requirements of Rule 17ad–22(e)(19) under the Act.[12] For example, FICC may request information from direct clearing members periodically through its annual or ad hoc due diligence requests, as required by Section 2(d) of Rule 3A and Section 2 of Rule 3.[13] This monitoring may include the request and review of information related to direct clearing members' Indirect Participants, where applicable, and controls the direct clearing member has in place to monitor and manage the risk presented by those Indirect Participants.[14]

FICC also maintains procedures pursuant to which it actively monitors adverse news events impacting Sponsored Members. FICC has recently enhanced these procedures to use Sponsored Members' Legal Entity Identifiers (''LEIs'') in that monitoring. By relying on a Sponsored Member's LEI, rather than its legal name, FICC can continue to identify adverse news events even after a Sponsored Member has changed its name.[15] FICC uses a compliance tool sourced from a third-party vendor to conduct this monitoring.

Proposed Changes To Remove Sponsored Member Reporting

FICC is proposing to amend Section 2(g) of Rule 3A by removing the requirement that a Sponsoring Member submits written notice to FICC (i) when it becomes aware that a Sponsored Member is no longer in compliance with the requirements of Section 3(a) of Rule 3A, and (ii) prior to the effective date of any Reportable Event applicable to a Sponsored Member.

First, the proposal to remove the requirement that FICC be notified when a Sponsoring Member becomes aware of a Sponsored Member is no longer in compliance with the requirements of Section 3(a) of Rule 3A would correct an error in the Rules. FICC has already removed the requirements applicable to Sponsored Members that were in Section 3(a) of Rule 3A.[16] Therefore, this part of the reporting requirement is no longer applicable. The proposed changes would also remove a statement from Section 3(b) of Rule 3A that refers to the requirements that were previously in Section 3(a) of Rule 3A and was also left in the Rules in error.

Second, the proposal to remove the requirement that FICC be notified prior to the effective date of any Reportable Event applicable to a Sponsored Member could facilitate greater access to this indirect participation model by removing an obligation for Sponsoring Members that has limited value in managing the risks presented by the Sponsored Service.

As noted above, FICC employs a daily monitoring tool that identifies instances of adverse news impacting a Sponsored Member. Such adverse news includes regulatory enforcement actions and when a Sponsored Member is named as a defendant in criminal litigation. These events are among the types of events that are captured in the definition of Reportable Event, as these events could have a ''substantial impact'' on the Sponsored Member's business or financial condition and include when the Sponsored Member is named as a defendant in litigation. Therefore, FICC does not believe it is necessary to require separate reporting of these events by Sponsoring Members.

Additionally, FICC has recently enhanced this monitoring to use Sponsored Members' LEIs to ensure its monitoring continues to be effective even if a Sponsored Member has changed its legal name. Therefore, notice of any changes to a Sponsored Member's name, which are also included in the Reportable Event reporting requirement, is no longer required to ensure this monitoring remains effective.

FICC has considered the other organizational events that may be considered a Reportable Event and has determined that it is not necessary to receive reporting on these events to effectively manage the risks presented by its limited relationship with Sponsored Members. As described above, FICC risk manages the Sponsored Service primarily at the Sponsoring Member level, not the Sponsored Member level. For example, a Sponsoring Member is responsible under Section 10 of Rule 3A for posting to FICC the Required Fund Deposit for its sponsored activity and, while

[8] *See* Rule 2 (Members) (providing that FICC shall make its services available to entities that are approved to be Members of GSD); Rule 3A (Sponsoring Members and Sponsored Members) (describing the Sponsored Service) and Rule 8 (Agent Clearing Service) (describing the Agent Clearing Service), *supra* note 5.

[9] *See* Rule 3A, *supra* note 5.

[10] Securities Exchange Act Release No. 99149 (Dec. 13, 2023), 89 FR 2714 (Jan. 16, 2024) (S7–23–22).

[11] *See* Securities Exchange Act Release No. 101694 (Nov. 21, 2024), 89 FR 93784 (Nov. 27, 2024) (SR–FICC–2024–005).

[12] 17 CFR 240.17ad–22(e)(19).

[13] *See supra* note 5.

[14] *See* Rule 3 (Ongoing Membership Requirements), Section 2 (requiring Netting Members to submit to FICC information that FICC may reasonably require); and Rule 3A (Sponsoring Members and Sponsored Members), Section 2(d) (requiring Sponsoring Members to submit reports and information within timeframes and in formats required by FICC) and Section 2(f) (requiring that Sponsoring Members' books and records, as related to Sponsored Member Trades, shall be open to the inspection of FICC), *supra* note 5.

[15] *See* Rule 3A, Section 2(d) (requiring that Sponsoring Members submit to FICC the LEI for each Sponsored Member, such that FICC has a current LEI for each Sponsored Member at all times), *supra* note 5.

[16] *See supra* note 11.

Sponsored Members are principally liable to FICC for their settlement obligations, the Sponsoring Member is also required under Section 2(c) of Rule 3A to provide a guaranty to FICC for such obligations.[17]

Further, pursuant to Sections 2(d) and 2(f) of Rule 3A and Section 2 of Rule 3, Sponsoring Members may be required to provide to FICC reports or other information that FICC may require, including, for example, responses to annual or ad hoc due diligence requests.[18] FICC utilizes these due diligence requests to identify, monitor and manage the risks Sponsoring Members and their Sponsored Members may present to it. FICC may take action where it identifies risks through this due diligence process, which could include, for example, outreach to the Sponsoring Members, additional reporting from the Sponsoring Members or other appropriate risk management measures permitted by the Rules.

Therefore, FICC believes its existing monitoring and risk management practices with respect to the Sponsored Service, which do not directly rely on Sponsoring Member reporting of Reportable Events impacting a Sponsored Member, continue to facilitate effective risk management of exposures created through the Sponsored Service without this reporting requirement.

2. Statutory Basis

FICC believes the proposed rule change is consistent with the requirements of the Act and the rules and regulations thereunder applicable to a registered clearing agency. In particular, FICC believes the proposed rule change is consistent with Section 17A(b)(3)(F) of the Act [19] and Rule 17ad–22(e)(19), promulgated under the Act,[20] for the reasons described below.

Section 17A(b)(3)(F) of the Act requires, in part, that the rules of a clearing agency be designed to promote the prompt and accurate clearance and settlement of securities transactions.[21] The proposed rule change would remove a reporting requirement from the Rules because that part of that requirement is no longer applicable and refers to a membership requirement that has already been removed from the Rules. The proposal would therefore ensure the Rules remain accurate and clear. When the Rules clearly and accurately set forth the rights and obligations of GSD Members, including Sponsoring Members, the Rules support the prompt and accurate clearance and settlement of securities transactions, consistent with Section 17A(b)(3)(F) of the Act.[22]

FICC has determined that the other part of the reporting requirement that would be removed from the Rules has limited risk management value relative to FICC's existing and enhanced monitoring tools and in light of FICC's approach to risk manage the Sponsored Service primarily at the Sponsoring Member level, not the Sponsored Member level. In this way, the proposal would also ensure that the obligations of membership are reasonable and necessary. Having reasonable membership obligations encourages participation in central clearing. Therefore, FICC believes the proposed rule change would promote the prompt and accurate clearance and settlement of securities transactions, consistent with Section 17A(b)(3)(F) of the Act.[23]

Rule 17ad–22(e)(19) under the Act requires that FICC establish, implement, maintain and enforce written policies and procedures reasonably designed to identify, monitor, and manage the material risks to the covered clearing agency arising from arrangements in which firms that are indirect participants in the covered clearing agency rely on the services provided by direct participants to access the covered clearing agency's payment, clearing, or settlement facilities.[24] By eliminating requirements that are both no longer applicable and are no longer reasonable and necessary, the proposal would ensure that the Rules are reasonably designed to manage the risks arising from indirect participation models. FICC has evaluated its existing and enhanced risk management measures and believes that they adequately address the risks that these requirements were originally designed to mitigate. Therefore, FICC believes the proposed changes are consistent with Rule 17ad–22(e)(19) under the Act.[25]

(B) Clearing Agency's Statement on Burden on Competition

FICC does not believe the proposed rule changes would have any impact on competition. The proposed changes would apply equally to all Sponsoring Members by removing a reporting obligation that currently applies to all Sponsoring Members with respect to their Sponsored Members. Therefore, the change does not create any disproportionate impact on certain firms versus other firms with the same membership type at FICC. As described above, the proposal to remove this reporting obligation is to correct an error in the Rules that continues to refer to a membership requirement that has been removed, and to remove a requirement that has limited value in managing the risks presented by Sponsored Members that are adequately managed through FICC's existing and enhanced monitoring tools. FICC does not believe such proposed changes would have any effect on participants' respective competitive positions.

(C) Clearing Agency's Statement on Comments on the Proposed Rule Change Received From Members, Participants, or Others

FICC has not received or solicited any written comments relating to this proposal. If any written comments are received, they will be publicly filed as Exhibit 2 to this filing, as required by Form 19b–4 and the General Instructions thereto.

Persons submitting comments are cautioned that, according to Section IV (Solicitation of Comments) of the Exhibit 1A in the General Instructions to Form 19b–4, the Commission does not edit personal identifying information from comment submissions. Commenters should submit only information that they wish to make available publicly, including their name, email address, and any other identifying information.

All prospective commenters should follow the Commission's instructions on how to submit comments, *available at www.sec.gov/rules-regulations/how-submit-comment.* General questions regarding the rule filing process or logistical questions regarding this filing should be directed to the Main Office of the SEC's Division of Trading and Markets at *tradingandmarkets@sec.gov* or 202–551–5777.

FICC reserves the right to not respond to any comments received.

III. Date of Effectiveness of the Proposed Rule Change, and Timing for Commission Action

Because the foregoing proposed rule change does not:

(i) significantly affect the protection of investors or the public interest;

(ii) impose any significant burden on competition; and

(iii) become operative for 30 days from the date on which it was filed, or such shorter time as the Commission may designate, it has become effective pursuant to Section 19(b)(3)(A) of the

Act [26] and Rule 19b–4(f)(6) thereunder.[27]

At any time within 60 days of the filing of the proposed rule change, the Commission summarily may temporarily suspend such rule change if it appears to the Commission that such action is necessary or appropriate in the public interest, for the protection of investors, or otherwise in furtherance of the purposes of the Act.

IV. Solicitation of Comments

Interested persons are invited to submit written data, views and arguments concerning the foregoing, including whether the proposed rule change is consistent with the Act. Comments may be submitted by any of the following methods:

Electronic Comments

- Use the Commission's internet comment form (*www.sec.gov/rules/sro.shtml*); or
- Send an email to *rule-comments@sec.gov.* Please include File Number SR–FICC–2026–011 on the subject line.

Paper Comments

- Send paper comments in triplicate to Secretary, Securities and Exchange Commission, 100 F Street, NE, Washington, DC 20549.

All submissions should refer to File Number SR–FICC–2026–011. This file number should be included on the subject line if email is used. To help the Commission process and review your comments more efficiently, please use only one method. The Commission will post all comments on the Commission's internet website (*www.sec.gov/rules/sro.shtml*). Copies of the filing will be available for inspection and copying at the principal office of FICC and on DTCC's website (*www.dtcc.com/legal/sec-rule-filings*). Do not include personal identifiable information in submissions; you should submit only information that you wish to make available publicly. We may redact in part or withhold entirely from publication submitted material that is obscene or subject to copyright protection. All submissions should refer to File Number SR–FICC–2026–011 and should be submitted on or before November 30, 2026.

For the Commission, by the Division of Trading and Markets, pursuant to delegated authority.[28]

Sherry R. Haywood,

Assistant Secretary.

SECURITIES AND EXCHANGE COMMISSION

[Release No. 34–106810; File No. SR–IEX–2026–45]

Self-Regulatory Organizations; Investors Exchange LLC; Notice of Filing and Immediate Effectiveness of Proposed Rule Change To Amend Rule 11.271 Regarding the Resumption of Trading Following a Level 3 Market-Wide Circuit Breaker Halt

November 4, 2026.

Pursuant to Section 19(b)(1) [1] of the Securities Exchange Act of 1934 (the ''Act'') [2] and Rule 19b–4 thereunder,[3] notice is hereby given that, on November 2, 2026, the Investors Exchange LLC (''IEX'' or the ''Exchange'') filed with the Securities and Exchange Commission (the ''Commission'') the proposed rule change as described in Items I and II below, which Items have been prepared by the self-regulatory organization. The Commission is publishing this notice to solicit comments on the proposed rule change from interested persons.

I. Self-Regulatory Organization's Statement of the Terms of Substance of the Proposed Rule Change

Pursuant to the provisions of Section 19(b)(1) of the Act,[4] and Rule 19b–4 thereunder,[5] the Exchange proposes to amend Rule 11.271 (''Trading Halts Due to Extraordinary Market Volatility'') concerning the resumption of trading following a Level 3 market-wide circuit breaker halt in connection with the upcoming expansion of trading by other national securities exchanges to 23 hours per day, 5 days per week. The Exchange has designated this proposal as non-controversial pursuant to Section 19(b)(3)(A)(iii) of the Act [6] and provided the Commission with the notice required by Rule 19b–4(f)(6)(iii) thereunder.[7]

The text of the proposed rule change is available at the Exchange's website at *https://www.iex.io/resources/regulation/rule-filings* and at the principal office of the Exchange.

II. Self-Regulatory Organization's Statement of the Purpose of, and the Statutory Basis for, the Proposed Rule Change

In its filing with the Commission, the self-regulatory organization included statements concerning the purpose of and basis for the proposed rule change and discussed any comments it received on the proposed rule change. The text of these statements may be examined at the places specified in Item IV below. The self-regulatory organization has prepared summaries, set forth in Sections A, B, and C below, of the most significant aspects of such statements.

A. Self-Regulatory Organization's Statement of the Purpose of, and the Statutory Basis for, the Proposed Rule Change

1. Purpose

The Exchange proposes to amend Rule 11.271 (''Trading Halts Due to Extraordinary Market Volatility'') concerning the resumption of trading following a Level 3 market-wide circuit breaker (''MWCB'') halt in connection with the upcoming extension of trading by other national securities exchanges to 23 hours per day, 5 days per week. Although only some exchanges will offer overnight trading, the uniform Level 3 MWCB rules of every exchange are being modified, as explained further below.

Background

The MWCB mechanism under Rule 11.271 provides an important, automatic mechanism that is invoked to promote stability and investor confidence during a period of significant stress when U.S. securities markets experience extreme broad-based declines. All U.S. equity exchanges and FINRA (collectively, the self-regulatory organizations or ''SROs'') adopted uniform rules relating to the MWCB mechanism in 2012, which are designed to slow the effects of extreme price movement through coordinated trading halts across U.S. securities markets when severe price declines reach levels that may exhaust market liquidity.[8] Currently, market-wide

IEX's MWCB rule has been effective since its approval for registration as a national securities exchange in 2016. *See* Securities

circuit breaker rules provide for trading halts in all U.S. cash equities and equity options markets during a severe market decline as measured by a single-day decline in the S&P 500 Index during Regular Market Hours.

Pursuant to Rule 11.271, a market-wide trading halt will be triggered if the S&P 500 Index declines in price by specified percentages from the prior day's closing price of that index. Currently, the triggers are set at three circuit breaker thresholds: 7% (Level 1), 13% (Level 2), and 20% (Level 3). A market decline that triggers a Level 1 or Level 2 halt after 9:30 a.m. Eastern Time and before 3:25 p.m. Eastern Time would halt market-wide trading for 15 minutes, while a similar market decline at or after 3:25 p.m. Eastern Time would not halt market-wide trading. If a Level 3 Market Decline occurs at any time during the trading day, trading in all stocks will halt on the Exchange for the remainder of the trading day, and will resume the following trading day at 8:00 a.m. Eastern Time.

Proposal

The Exchange now proposes to amend Rule 11.271 to reflect the upcoming extended trading hours, *i.e.,* 23/5 trading, that other exchanges will participate in. When 23/5 trading begins on December 6, 2026, the Exchange's current trading sessions will not change. The Exchange operates three separate trading sessions between 8:00 a.m. Eastern Time and 5:00 p.m. Eastern Time. These are the Pre-Market Session, which operates from 8:00 a.m. Eastern Time to 9:30 a.m. Eastern Time; the Regular Market Session, which operates from 9:30 a.m. Eastern Time to 4:00 p.m. Eastern Time; and the Post-Market Session, which operates from 4:00 p.m. Eastern Time to 5:00 p.m. Eastern Time.[9] Consistent with the uniform rules in place across all SROs, current Rule 11.271(b)(2) provides that if a Level 3 MWCB occurs at any time during the trading day, trading in all stocks will halt on the Exchange for the remainder of the trading day. Currently, that means that the earliest that any exchange would re-open trading after a Level 3 MWCB is at 4:00 a.m. Eastern Time the following day, since no SROs are open for trading before 4:00 a.m. Eastern Time.

Unless amended, when 23/5 trading is launched, the current rule's reference to halting ''for the remainder of the trading day'' would require SROs participating in 23/5 trading to re-open trading at an earlier time, *i.e.,* 9:00 p.m. Eastern Time on the same calendar day, when those SROs' systems would generally become available for overnight trading. The Exchange does not believe that this is an expected or desired result and is therefore amending this rule in coordination with the other SROs such that trading on any SRO will not resume until 4:00 a.m. Eastern Time or later on the following trading day, consistent with current market practice. This proposed rule change is therefore not intended to make any substantive changes to the MWCB mechanism. Rather, the proposed rule change would preserve the current resumption time following a Level 3 MWCB.

To effect this change, the Exchange proposes to delete the language in Rule 11.271(b)(2) that provides that trading in all stocks will halt on the Exchange ''for the remainder of the trading day'' if a Level 3 MWCB occurs at any time during the trading day, and replace it with new language that explicitly provides that trading in all stocks would halt on the Exchange until 4:00 a.m. Eastern Time or later on the following trading day.

2. Statutory Basis

The Exchange believes that the proposed rule change is consistent with the requirements of the Act and the rules and regulations thereunder that are applicable to a national securities exchange, and, in particular, with the requirements of Section 6(b) of the Act.[10] Specifically, the Exchange believes the proposed rule change is consistent with Section 6(b)(5) of the Act[11] in that it is designed to promote just and equitable principles of trade, to remove impediments to, and perfect the mechanism of, a free and open market and a national market system, and, in general, to protect investors and the public interest.

The MWCB mechanism described in Rule 11.271 is an important, automatic mechanism that is invoked to promote stability and investor confidence during periods of significant stress when U.S. securities markets experience extreme broad-based declines. The proposed rule change, when applied uniformly by all SROs, would ensure that the current 4:00 a.m. Eastern Time resumption time following a Level 3 halt continues to apply under 23/5 trading, notwithstanding current rule text implying that the resumption time would coincide with the start of overnight trading on SROs operating an overnight session.

Rather than leave the rule in place as is, which would result in an earlier resumption time than originally contemplated when the rule was adopted, the Exchange, the other U.S. equity exchanges, and FINRA met alongside industry representatives to determine the appropriate resumption time. Following those discussions, the collective decision was made to retain the 4:00 a.m. Eastern Time resumption time, notwithstanding the fact that an earlier resumption time would be possible with the introduction of 23/5 trading. The proposed rule change codifies this decision into the Exchange's rules. The Exchange understands that the other SROs will also be filing similar proposed rule changes. As a result, the market as a whole, including on- and off-exchange, will continue to be subject to harmonized rules for the resumption of trading following a Level 3 MWCB.

While the SROs had previously decided to tie the resumption time following a Level 3 halt to an SRO's normal hours of operation, the upcoming transition to 23/5 trading raises various concerns that warrant a change from the current approach.

First, the Exchange notes that the MWCB mechanism was designed to provide a cooling off period where market participants would be provided with additional time to evaluate the market events that led to the decline before determining how to position their trading activity for the next day. With the introduction of 23/5 trading and the start of overnight trading on some SROs at 9:00 p.m. Eastern Time, however, this cooling-off period could be materially shortened, reducing one of the key benefits that the MWCB mechanism was designed to provide in the first place. Rather than shorten the cooling-off period and risk this benefit, the Exchange believes the market would be better served by a change to the length of the associated trading halt that mirrors current market practice. Under the proposed rule, as is the case today, after a Level 3 halt, all SROs would re-open trading at 4:00 a.m. Eastern Time or later, and no SRO would offer an overnight trading session starting on the day of a Level 3 halt.

Second, overnight trading may be subject to different liquidity and participation considerations than the current pre-market sessions that start at or after 4:00 a.m. Eastern Time. Notably, while retail investors have expressed interest in overnight trading, the Exchange expects that institutional investors will take more time to

Exchange Act Release No. 78101 (June 17, 2016), 81 FR 41142 (June 23, 2016) (File No. 10–222).

[9] *See* Rules 1.160(z), (aa), and (gg). The IEX Rule Book uses the terms ''Regular Market Hours'' and ''Regular Market Session'' interchangeably. *See* Rule 1.160(gg).

[11] 15 U.S.C. 78f(b)(5).

transition to a round-the-clock model. However, such institutional participation may be of heightened importance following a Level 3 halt, as these investors are likely to have views on the underlying market events that led to the Level 3 MWCB in the first place. The Exchange is concerned that opening during hours that such participants do not normally trade may impact the quality of price discovery at a time of significant market volatility. Waiting until 4:00 a.m. Eastern Time to resume trading would facilitate broader participation and therefore price discovery.

Finally, the Exchange notes that the Commission recently approved an amendment to the Plan to Address Extraordinary Market Volatility (''LULD Plan'') that would establish new price protections from 9:00 p.m. Eastern Time to 4:00 a.m. Eastern Time.[12] While these price bands would help to assure a fair and orderly market during normal market conditions, it is possible that they would instead prevent normal price discovery following a Level 3 MWCB. Rather than allowing trading to resume with such price bands in effect, which would represent a change from the current trading reopening following a Level 3 MWCB, the Exchange believes that requiring SROs to wait until 4:00 a.m. Eastern Time or later to resume trading would ensure that price discovery can occur unimpeded during pre-market trading, as it does today, which may further inform prices going into the opening auction and regular market hours trading following a Level 3 halt.

Given the factors discussed above, the Exchange believes that trading in all securities on the Exchange should not resume before 4:00 a.m. Eastern Time on the trading day after a Level 3 halt. This decision, which the Exchange understands will also be reflected in the rules of the other SROs, would promote a fair and orderly market at a time of significant market volatility, and thereby protect investors and the public interest. In addition, while the actual Level 3 resumption time would not be changing in practice—as proposed, the current resumption time and future resumption time would both be 4:00 a.m. Eastern Time at the earliest—the Exchange believes that it is appropriate to amend its rules to ensure that its rules reflect the upcoming changes due to 23/5 trading. Without this change, market participants may mistakenly believe that the Exchange intends for trading to re-open on overnight trading exchanges at 9:00 p.m. Eastern Time following a Level 3 halt. The proposed rule change would therefore facilitate operational transparency while providing for a fair and orderly market.

B. Self-Regulatory Organization's Statement on Burden on Competition

The Exchange does not believe that the proposed rule change will impose any burden on competition that is not necessary or appropriate in furtherance of the purposes of the Act because the proposal would ensure the continued, uninterrupted operation of a consistent mechanism to halt trading across U.S. securities markets. Further, the Exchange understands that the other SROs intend to file proposed rule changes to ensure a consistent resumption time at 4:00 a.m. Eastern Time or later across markets. Thus, the proposed rule change will help to ensure consistency across market centers without implicating any competitive issues.

C. Self-Regulatory Organization's Statement on Comments on the Proposed Rule Change Received From Members, Participants, or Others

Written comments were neither solicited nor received.

III. Date of Effectiveness of the Proposed Rule Change and Timing for Commission Action

The Exchange has designated this rule filing as non-controversial under Section 19(b)(3)(A) of the Act[13] and Rule 19b-4(f)(6) thereunder.[14] Because the proposed rule change does not: (i) significantly affect the protection of investors or the public interest; (ii) impose any significant burden on competition; and (iii) become operative for 30 days from the date on which it was filed, or such shorter time as the Commission may designate, it has become effective pursuant to Section 19(b)(3)(A) of the Act and Rule 19b–4(f)(6) thereunder.[15]

At any time within 60 days of the filing of the proposed rule change, the Commission summarily may temporarily suspend such rule change if it appears to the Commission that such action is necessary or appropriate in the public interest, for the protection of investors, or otherwise in furtherance of the purposes of the Act. If the Commission takes such action, the Commission shall institute proceedings under Section 19(b)(2)(B)[16] of the Act to determine whether the proposed rule change should be approved or disapproved.

IV. Solicitation of Comments

Interested persons are invited to submit written data, views and arguments concerning the foregoing, including whether the proposed rule change is consistent with the Act. Comments may be submitted by any of the following methods:

Electronic Comments

- Use the Commission's internet comment form (*https://www.sec.gov/rules/sro.shtml*); or
- Send an email to *rule-comments@sec.gov.* Please include file number SR–IEX–2026–45 on the subject line.

Paper Comments

- Send paper comments in triplicate to Secretary, Securities and Exchange Commission, 100 F Street NE, Washington, DC 20549–1090.

All submissions should refer to file number SR–IEX–2026–45. This file number should be included on the subject line if email is used. To help the Commission process and review your comments more efficiently, please use only one method. The Commission will post all comments on the Commission's internet website (*https://www.sec.gov/rules/sro.shtml*). Copies of the filing will be available for inspection and copying at the principal office of the Exchange. Do not include personal identifiable information in submissions; you should submit only information that you wish to make available publicly. We may redact in part or withhold entirely from publication submitted material that is obscene or subject to copyright protection. All submissions should refer to file number SR–IEX–2026–45 and should be submitted on or before November 30, 2026.

For the Commission, by the Division of Trading and Markets, pursuant to delegated authority.[17]

Sherry R. Haywood,

Assistant Secretary.

SECURITIES AND EXCHANGE COMMISSION

[Release No. 34–106825; File No. SR–ICC–2026–013]

Self-Regulatory Organizations; ICE Clear Credit LLC; Notice of Filing and Immediate Effectiveness of Proposed Rule Change Relating to ICC's Fee Schedule

November 4, 2026.

Pursuant to Section 19(b)(1) of the Securities Exchange Act of 1934,[1] and Rule 19b–4,[2] notice is hereby given that on October 27, 2026, ICE Clear Credit LLC (''ICC'' or ''ICE Clear Credit'') filed with the Securities and Exchange Commission (''Commission'') the proposed rule change as described in Items I, II and III below, which Items have been prepared primarily by ICC. ICC filed the proposed rule change pursuant to Section 19(b)(3)(A) of the Act[3] and paragraph (f)(2) of Rule 19b–4 thereunder,[4] such that the proposed rule change was immediately effective upon filing with the Commission. The Commission is publishing this notice to solicit comments on the proposed rule change from interested persons.

I. Clearing Agency's Statement of the Terms of Substance of the Proposed Rule Change

The principal purpose of the proposed rule change is to modify its Client Volume Incentive Program within its credit default swap (''CDS'') client fee schedule (the ''client fee schedule'') for the CDS Clearing Service. These revisions do not require any changes to the CDS Clearing Participant fee schedule[5] or the ICC CDS Clearing Rules.[6]

II. Clearing Agency's Statement of the Purpose of, and Statutory Basis for, the Proposed Rule Change

In its filing with the Commission, ICC included statements concerning the purpose of and basis for the proposed rule change and discussed any comments it received on the proposed rule change. The text of these statements may be examined at the places specified in Item IV below. ICC has prepared summaries, set forth in sections (A), (B), and (C) below, of the most significant aspects of these statements.

(A) Clearing Agency's Statement of the Purpose of, and Statutory Basis for, the Proposed Rule Change

(a) Purpose

ICC proposes to modify its Client Volume Incentive Program within ICC's client fee schedule. ICC maintains a client fee schedule[7] that is publicly available on its website, which ICC proposes to update in connection with the proposed amendments to the Client Volume Incentive Program. Such proposed changes to the Client Volume Incentive Program are set forth in Exhibit 5 and described in detail as follows. ICC proposes to make such changes effective following any applicable regulatory review or approval process.[8]

Currently, clearing fees applicable to clients of Clearing Participants are charged in accordance with the product, amount and currency set out in the client fee schedule and subject to any incentive programs or fee discounts described in the client fee schedule. In particular, the Client Volume Incentive Program in the client fee schedule applies automatically to all clients of Clearing Participants, without further action by clients or Clearing Participants, and provides a tiered discount schedule (the ''Discount Schedule'') based on client fees billed during the calendar year. Specifically, for any client with annual billed fees across all ICC CDS instrument categories (*i.e.,* index CDS, single name CDS, and index option CDS) that exceed U.S. dollar (''USD'') equivalent of $1 million, such client is entitled to a fee discount as follows: (i) for billed annual fees greater than $1 million USD equivalent and less than or equal to $6.94 million USD equivalent, a progressive discount from 1% to 100%: the discount percentage increases by 1% for each $60,000 in billed client fees; [9] and (ii) for billed annual fees greater than $6.94 million USD equivalent, a 100% discount. The Client Volume Incentive Program applies to client clearing activity only, and Clearing Participants are not eligible to participate in the program.

The proposed changes are designed to provide additional discounts under the Client Volume Incentive Program. The Discount Schedule described above will remain unchanged. Instead, ICC proposes to make additional discounts available to clients who meet any of the following criteria. ICC proposes a footnote to specify that these additional discounts begin in 2027. On January 1, 2027, the following changes would be implemented, and such footnote would be automatically removed.

ICC proposes the following discounts under the Client Volume Incentive Program for clients that satisfy the following proposed criteria. Under the first proposed criteria, clients that achieve a 100% discount[10] in the preceding calendar year will qualify for a lower fee cap of $3 million USD equivalent for this calendar year. To re-qualify for such lower fee cap for the subsequent calendar year, clients must achieve a 100% discount based on the Discount Schedule for this calendar year. Under the second proposed criteria, clients whose paid clearing fees after rebate reach $3 million USD equivalent by September 30 of this calendar year based on the Discount Schedule are not subject to additional clearing fees for the remainder of this calendar year. ICC proposes an additional clarification to add ''Discount Schedule'' as a defined term to refer to the chart under the Client Incentive Program that sets out the tiered discount schedule. The Client Volume Incentive Program will continue to apply to client clearing activity only, and Clearing Participants are not eligible to participate in the program.

(b) Statutory Basis

ICC believes that the proposed changes are consistent with the requirements of the Act, including Section 17A of the Act[11] and the regulations thereunder applicable to it. More specifically, the proposed rule change establishes or changes a member due, fee or other charge imposed by ICC under Section 19(b)(3)(A)(ii) of the Act[12] and Rule 19b–4(f)(2)[13] thereunder. ICC believes the proposed rule change is consistent with the requirements of the Act and the rules and regulations thereunder applicable to

[1] 15 U.S.C. 78s(b)(1).

[2] 17 CFR 240.19b–4.

[3] 15 U.S.C. 78s(b)(3)(A).

[4] 17 CFR 240.19b–4(f)(2).

[5] Clearing Participant fee details available at *https://www.theice.com/publicdocs/clear_credit/ICE_Clear_Credit_Fees_Clearing_Participant.pdf.*

[6] ICC's CDS Clearing Rules are available on ICC's public website at *https://www.ice.com/publicdocs/clear_credit/ICE_Clear_Credit_Rules.pdf.*

[7] Client fee details available at: *https://www.theice.com/publicdocs/clear_credit/ICE_Clear_Credit_Fees.pdf.* As specified, all fees are charged directly to a client's Clearing Participant.

[8] The proposed rule change is filed for immediate effectiveness but will not be implemented until the change is certified in accordance with Commodity Futures Trading Commission Regulation 40.6.

[9] As an example, a client that is billed a total of $1,120,000.00 in fees would be entitled to a 1% discount for the first $60,000 in fees over $1 million (or $600) and a 2% discount for the second $60,000 in fees over $1 million (or $1,200), for a total discount of $1,800.

[10] A 100% discount is achieved once a client's billed annual fees in USD equivalent reach $6.94 million. This results in a client's paid clearing fees capping (''fee cap'') at $3.97 million USD equivalent.

[11] 15 U.S.C. 78q–1.

[12] 15 U.S.C. 78s(b)(3)(A)(ii).

[13] 17 CFR 240.19b–4(f)(2).

ICC, in particular, to Section 17A(b)(3)(D),[14] which requires that the rules of the clearing agency provide for the equitable allocation of reasonable dues, fees, and other charges among its participants.

ICC believes that the additional discounts in the client fee schedule have been set at an appropriate level. In determining the appropriate discount level and program structure, ICC took into account factors such as client clearing volume, related revenue, costs and expenses, and the goal of increasing market participation in the clearing service, including the expected impacts of different fee levels. In ICC's view, its client fees, after taking into account the updated discounts under the incentive program, will be reasonable and appropriate for its business as the discounts take into account anticipated volumes, costs and expenses, and revenues under each contract type, and they consider current and past market activity as well as anticipated market activity with respect to clearing CDS contracts at ICC. The Client Volume Incentive Program continues to be designed to encourage the clearing of contracts at ICC by clients while properly compensating ICC for the risks, costs and expenses of clearing CDS contracts.

Moreover, the updated discount will be available to all clients clearing contracts at ICC, based on their clearing activity. The Client Volume Incentive Program under the amended client fee schedule will continue to automatically, and without further action by clients or Clearing Participants, apply to all clients. ICC's fee schedules, including the proposed additional discounts under the incentive program, will continue to be transparent and to apply equally to market participants clearing indexes, single names, and index option CDS contracts at ICC. Therefore, the proposed rule change provides for the equitable allocation of reasonable dues, fees and other charges among participants, within the meaning of Section 17A(b)(3)(D) of the Act.[15] ICC therefore believes that the proposed rule change is consistent with the requirements of Section 17A of the Act[16] and the regulations thereunder applicable to it and is appropriately filed pursuant to Section 19(b)(3)(A) of the Act[17] and paragraph (f)(2) of Rule 19b–4[18] thereunder.

(B) Clearing Agency's Statement on Burden on Competition

ICC does not believe the proposed rule change would have any impact, or impose any burden, on competition not necessary or appropriate in furtherance of the purpose of the Act. As discussed above, the proposed changes to ICC's client fee schedule modify the Client Volume Incentive Program for clearing all categories of CDS contracts at ICC and which continues to be available to all clients based on their clearing activity. The implementation of such changes does not preclude other market participants from offering similar incentive programs. Moreover, ICC does not believe that the amendments would adversely affect the cost of clearing for clients, the ability of market participants to access clearing services, or the market for cleared services generally. Accordingly, ICC does not believe the amendments impose any burden on competition not necessary or appropriate in furtherance of the purpose of the Act.

(C) Clearing Agency's Statement on Comments on the Proposed Rule Change

Written comments relating to the proposed rule change have not been solicited or received. ICC will notify the Commission of any written comments received by ICC.

III. Date of Effectiveness of the Proposed Rule Change

The foregoing rule change has become effective pursuant to Section 19(b)(3)(A) of the Act[19] and paragraph (f) of Rule 19b–4[20] thereunder. At any time within 60 days of the filing of the proposed rule change, the Commission summarily may temporarily suspend such rule change if it appears to the Commission that such action is necessary or appropriate in the public interest, for the protection of investors, or otherwise in furtherance of the purposes of the Act.

IV. Solicitation of Comments

Interested persons are invited to submit written data, views, and arguments concerning the foregoing, including whether the proposed rule change is consistent with the Act. Comments may be submitted by any of the following methods:

Electronic Comments

- Use the Commission's internet comment form (*http://www.sec.gov/rules/sro.shtml*); or
- Send an email to *rule-comments@sec.gov.* Please include File Number SR–ICC–2026–013 on the subject line.

Paper Comments

Send paper comments in triplicate to Secretary, Securities and Exchange Commission, 100 F Street NE, Washington, DC 20549.

All submissions should refer to File Number SR–ICC–2026–013. This file number should be included on the subject line if email is used. To help the Commission process and review your comments more efficiently, please use only one method. The Commission will post all comments on the Commission's internet website *(http://www.sec.gov/rules/sro.shtml*). Copies of such filings will be available for inspection and copying at the principal office of ICE Clear Credit and on ICE Clear Credit's website at *https://www.ice.com/clear-credit/regulation.*

Do not include personal identifiable information in submissions; you should submit only information that you wish to make available publicly. We may redact in part or withhold entirely from publication submitted material that is obscene or subject to copyright protection.

All submissions should refer to File Number SR–ICC–2026–013 and should be submitted on or before November 30, 2026.

For the Commission, by the Division of Trading and Markets, pursuant to delegated authority.[21]

Sherry R. Haywood,

Assistant Secretary.

Sapphire'' or ''Exchange'') filed with the Securities and Exchange Commission (''Commission'') a proposed rule change as described in Items I, II, and III below, which Items have been prepared by the Exchange. The Commission is publishing this notice to solicit comments on the proposed rule change from interested persons.

I. Self-Regulatory Organization's Statement of the Terms of Substance of the Proposed Rule Change

The Exchange proposes to amend the MIAX Sapphire Options Exchange Fee Schedule (''Fee Schedule'') to: (1) increase the per contract fee assessed to Floor Market Makers for QFO and cQFO transactions in non-Penny classes that trade against all other origins; and (2) increase the per contract Floor Broker Breakup Credit for QFO and cQFO transactions in non-Penny classes (all terms defined below).

The text of the proposed rule change is available on the Exchange's website at *https://www.miaxglobal.com/markets/us-options/miax-sapphire/rule-filings,* and at the Exchange's principal office.

II. Self-Regulatory Organization's Statement of the Purpose of, and Statutory Basis for, the Proposed Rule Change

In its filing with the Commission, the Exchange included statements concerning the purpose of and basis for the proposed rule change and discussed any comments it received on the proposed rule change. The text of these statements may be examined at the places specified in Item IV below. The Exchange has prepared summaries, set forth in sections A, B, and C below, of the most significant aspects of such statements.

A. Self-Regulatory Organization's Statement of the Purpose of, and Statutory Basis for, the Proposed Rule Change

1. Purpose

The Exchange proposes to amend the Fee Schedule to: (1) increase the per contract fee assessed to Floor Market Makers [3] for Qualified Floor Order (''QFO'') [4] and Complex Qualified Floor Order (''cQFO'') [5] transactions [6] in non-Penny classes [7] that trade against all other origins; and (2) increase the per contract Floor Broker [8] Breakup Credit for QFO and cQFO transactions in non-Penny classes. The Exchange originally filed this proposal on August 31, 2026.[9] On October 27, 2026, the Exchange withdrew SR–SAPPHIRE–2026–35 and refiled this proposal.

Background of Fees and Rebates for Transactions on the Trading Floor

The Exchange assesses fees for transactions on the Trading Floor [10] based on origin and provides rebates in certain situations. Currently, for Priority Customers [11] and Professional Customers,[12] the Exchange does not assess a per contract fee for QFO and cQFO transactions in SPY/QQQ/IWM, Penny classes (excluding SPY/QQQ/IWM), and non-Penny classes. The Exchange assesses a $0.25 per contract fee for QFO and cQFO transactions in SPY/QQQ/IWM, Penny classes (excluding SPY/QQQ/IWM), and non-Penny classes for Away Market Maker,[13] Firm, and Broker-Dealer origins. The Exchange does not assess a fee for QFO and cQFO transactions in SPY/QQQ/IWM, Penny classes (excluding SPY/QQQ/IWM), and non-Penny classes for Firm and Broker-Dealer origins that are facilitating a Priority Customer or Professional Customer order. The Exchange assesses Floor Market Makers a fee of $0.50 per contract for QFO and cQFO transactions in all classes that trade against all other origins.[14] The Exchange provides a rebate of ($0.10) per contract for QFO and cQFO transactions in SPY/QQQ/IWM, Penny classes (excluding SPY/QQQ/IWM), and non-Penny classes for Floor Broker origins on both the agency and contra sides when that side is billable. The Exchange provides a Floor Broker Breakup Credit of ($0.20) per contract for QFO and cQFO transactions in SPY/QQQ/IWM, Penny classes (excluding SPY/QQQ/IWM), and non-Penny classes.[15] The Exchange also assesses lower fees for Away Market Maker Facilitation transactions based on the monthly percentage of order volume that is broken up and depending on whether certain volume thresholds are met for each qualifying QFO or cQFO. The Away Market Maker Facilitation rates apply to any Trading Floor transaction where a Member firm Away Market Maker directs a paired order to the Trading Floor, where the agency order is a customer of the affiliated Member firm, and where the contra-side of the transaction is the Away Market Maker of the Member firm.[16]

Proposal to Increase the Floor Market Maker Fee for QFO and cQFO Transactions in Non-Penny Classes

The Exchange proposes to amend the table of QFO and cQFO fees and rebates in section 1)c)i) of the Fee Schedule to increase the fee assessed to Floor Market Makers for QFO and cQFO transactions in non-Penny classes that trade against all other origins. Currently, the Exchange assesses Floor Market Makers a fee of $0.50 per contract for QFO and cQFO transactions in non-Penny classes that trade against all other origins. The Exchange now proposes to assess Floor Market Makers a fee of $0.94 per contract for QFO and cQFO transactions in non-Penny classes that trade against all other origins. The purpose of this change is for business and competitive reasons. The Exchange believes that even with the proposed increased fee,

[3] The term ''Floor Market Maker'' means a Floor Participant of the Exchange located on the Trading Floor who has received permission from the Exchange to trade in options for his own account. *See* the Definitions section of the Fee Schedule and Exchange Rule 2105.

[4] *See* Exchange Rule 2040.

[5] *See* Exchange Rule 2040(a)(4).

[6] A QFO or cQFO must be entered as a two-sided order, with an initiating side and a contra side and the QFO and cQFO fees, rebates, and applicable fee and rebate caps will apply to both sides of the order. Further, cQFO fees and rebates are per executed side per leg. *See* Fee Schedule, Section 1)c)i).

[7] *See* Exchange Rule 510(c).

[8] The term ''Floor Broker'' means an individual who is registered with the Exchange for the purpose, while on the Trading Floor, of accepting and handling options orders. A Floor Broker must be registered as a Floor Participant prior to registering as a Floor Broker. A Floor Broker may take into his own account, and subsequently liquidate, any position that results from an error made while attempting to execute, as Floor Broker, an order. *See* the Definitions section of the Fee Schedule and Exchange Rule 2015. The term ''Floor Participant'' means Floor Brokers as defined in Rule 2015 and Floor Market Makers as defined in Rule 2105(b). *See id.* and Exchange Rule 100.

[9] *See* Securities Exchange Act Release No. 106314 (September 9, 2026), 91 FR 58231 (September 14, 2026) (SR–SAPPHIRE–2026–35).

[10] The term ''Trading Floor'' or ''Floor'' means the physical trading floor of the Exchange located in Miami, Florida. The Trading Floor shall consist of one ''Crowd Area'' or ''Pit'' where Floor Participants will be located and option contracts will be traded. The Crowd Area or Pit shall be marked with specific visible boundaries on the Trading Floor, as determined by the Exchange. A Floor Broker must represent all orders in an ''open outcry'' fashion in the Crowd Area. *See* the Definitions section of the Fee Schedule and Exchange Rule 100.

[11] The term ''Priority Customer'' means a person or entity that (i) is not a broker or dealer in securities, and (ii) does not place more than 390 orders in listed options per day on average during a calendar month for its own beneficial account(s). *See id.*

[12] The term ''Professional Customer'' for the purposes of the Fee Schedule, shall mean a Public Customer that is not a Priority Customer. *See* the Definitions section of the Fee Schedule. The term ''Public Customer'' means a person that is not a broker or dealer in securities. *See id.*

[13] The term ''Away Market Maker'' for the purposes of the Fee Schedule, shall mean a non MIAX Sapphire Market Maker.

[14] *See* Fee Schedule, Section 1)c)i).

[15] The Floor Broker Breakup Credit will apply to the Floor Broker that submits the QFO or cQFO instead of the Floor Broker rebate for executions that trade with a Floor Market Maker. *See id.*

[16] *See* Fee Schedule, Section 1)c)i), Away Market Maker Facilitation Breakup Table.

the Exchange's transaction fees for Floor Market Makers will remain competitive with the fees assessed by other equity options exchanges that offer trading floors for transactions by their market makers in non-penny classes when trading against all other origins.[17]

Proposal To Increase the Floor Broker Breakup Credit for QFO and cQFO Transactions in Non-Penny Classes

Next, the Exchange proposes to amend the table of QFO and cQFO fees and rebates in section 1)c)i) of the Fee Schedule to increase the per contract Floor Broker Breakup Credit for QFO and cQFO transactions in non-Penny classes. Currently, the Exchange provides a Floor Broker Breakup Credit of ($0.20) per contract for QFO and cQFO transactions in SPY/QQQ/IWM, Penny classes (excluding SPY/QQQ/IWM), and non-Penny classes. The Exchange now proposes to increase the Floor Broker Breakup Credit to ($0.25) per contract for QFO and cQFO transactions in non-Penny classes. The purpose of this change is for business and competitive reasons. The Exchange believes this change may encourage additional Floor Broker liquidity in non-Penny Classes. Additional liquidity in non-Penny classes may benefit all market participants because it will attract additional liquidity to the Exchange by providing more trading opportunities. Further, additional liquidity helps contribute to a robust trading environment on the Exchange's Trading Floor, particularly as it continues to ramp up operations, having launched only a year ago.

* * * * *

The proposed changes are immediately effective.

2. Statutory Basis

The Exchange believes that the proposed rule change is consistent with Section 6(b) of the Act,[18] in general, and furthers the objectives of Section 6(b)(5) of the Act,[19] in particular, in that it is not designed to permit unfair discrimination among customers, brokers, or dealers. The Exchange also believes that its proposal is consistent with Section 6(b)(4) of the Act[20] because it represents an equitable allocation of reasonable dues, fees and other charges among its Members or issuers using its facilities.

Proposal To Increase the Floor Market Maker Fee for QFO and cQFO Transactions in Non-Penny Classes

The Exchange believes the proposal to amend the Floor Market Maker origin to increase the fee to $0.94 per contract for QFO and cQFO transactions in non-Penny classes is reasonable, equitably allocated, and not unfairly discriminatory because, even with the proposed increase, the Exchange believes the proposed fee will not discourage Floor Market Maker order flow. The Exchange notes that even with the proposed increase to the Floor Market Maker fee for transactions in non-Penny classes proposed herein, the Exchange's proposed fee of $0.94 per contract for the Floor Market Maker origin in non-Penny classes remains competitive with, and lower than (in at least one instance), the fee charged by other equity options exchanges to their floor market makers for transactions in non-penny classes.[21]

The Exchange believes that increasing fees for QFO and cQFO transactions by Floor Market Makers in non-Penny classes, but not for other market participants, represents an equitable, non-discriminatory allocation of fees because the proposal is based on the type of business transacted by Floor Market Makers on the Exchange, and Floor Market Makers are not obligated to engage in transactions on the Trading Floor. Rather, Floor Market Makers trade for their own accounts and benefit from having access to interact with orders that are made available in open outcry on the Trading Floor. Despite higher fees for certain Floor Market Maker transactions since this proposal was initially established for September 1st effectiveness, the Exchange has continued to observe consistent Floor Market Maker interest on the Trading Floor in non-Penny classes where the fee was specifically increased, demonstrating that this fee has not deterred, and likely will not deter Floor Market Maker participation.

Proposal To Increase the Floor Broker Breakup Credit for QFO and cQFO Transactions in Non-Penny Classes

The Exchange believes the proposal to increase the Floor Broker Breakup Credit to ($0.25) per contract for QFO and cQFO transactions in non-Penny classes is reasonable, equitably allocated and not unfairly discriminatory because the Exchange believes this change may encourage additional Floor Broker liquidity in non-Penny Classes. The Exchange believes additional liquidity in non-Penny classes, to the extent the proposed change accomplishes this goal, may benefit all Floor Participants because it will attract additional liquidity to the Exchange by providing more trading opportunities. Further, additional liquidity helps contribute to a robust trading environment on the Exchange's Trading Floor, particularly as it continues to ramp up operations, having launched only a year ago. The Exchange believes the proposed increased Floor Broker Breakup Credit in non-Penny classes is equitable and not unfairly discriminatory because it will apply equally to all Floor Brokers who submit orders in non-Penny classes on the Trading Floor and have those orders broken up by trading with a Floor Market Maker.

In addition, the proposal is also consistent with Section 6(b)(5) of the Act[22] because it perfects the mechanisms of a free and open market and a national market system and protects investors and the public interest because it applies equally to all eligible Floor Broker QFOs and cQFOs that are broken up and access to the Exchange is offered on terms that are not unfairly discriminatory. The Exchange believes it is equitable to apply the proposed enhanced breakup credit only to Floor Brokers and not Floor Market Makers. Floor Market Makers represent their own interest on the Trading Floor and, therefore, the Exchange believes these market participants may not need a similar incentive. Additionally, Floor Market Makers may choose to conduct their business on a trading floor or in an electronic market, unlike Floor Brokers, who have a business model that is naturally tied to the physical trading space. The Exchange believes the proposed rule change is equitable because the proposed enhanced breakup credit applies to all Floor Brokers who submit orders that are broken up, regardless of the type of business transacted on the Exchange. The Exchange also believes that providing

[17] *See* Nasdaq PHLX LLC (''PHLX'') Rules, Options 7: Pricing Schedule, Section 4 (assessing PHLX market makers a fee of $1.00 per contract for floor transactions in non-penny symbols); BOX Exchange LLC (''BOX'') Fee Schedule, Section V.A. (assessing BOX market makers a fee of $1.00 per contract for manual transactions in non-penny classes); NYSE American LLC (''NYSE American'') Options Fee Schedule, Section I.A. (assessing NYSE American market makers a fee of $0.90 per contract for manual transactions in non-penny classes); NYSE Arca, Inc. (''NYSE Arca'') Options Fees and Charges, page 6, Transaction Fee for Manual Executions—Per Contract (assessing NYSE Arca market makers a fee of $0.90 per contract for manual transactions in non-penny classes).

[18] 15 U.S.C. 78f(b).

[19] 15 U.S.C. 78f(b)(5).

[20] 15 U.S.C. 78f(b)(4).

[21] *See supra* note 17.

[22] 15 U.S.C. 78f(b)(5).

the proposed breakup credit to Floor Brokers is equitable because it is intended to support Floor Brokers' role in facilitating the execution of open outcry orders, a function which benefits all market participants on the Trading Floor.

The Exchange believes the Floor Broker Breakup Credit is consistent with Section 6(b)(4) of the Act [23] because it will continue to encourage market participants to execute orders on the Trading Floor. The Exchange believes that the Floor Broker Breakup Credit could continue to improve liquidity on the Exchange to the benefit of all market participants. The Exchange notes that providing breakup credits to certain market participants is not new or novel. The Exchange's affiliate, Miami International Securities Exchange, LLC (''MIAX Options''), provides for a similar concept in its fee schedule. For example, MIAX Options encourages market participants to participate in PRIME and cPRIME Auctions and provides a higher breakup credit to market participants for breakups in non-penny classes.[24] Further, for PRIME Auctions, MIAX Options offers a higher breakup credit in non-penny classes for Members that submit Priority Customer orders as compared to other origins if a certain breakup threshold is met.[25] In addition, the proposal is also consistent with Section 6(b)(5) of the Act [26] because it perfects the mechanisms of a free and open market and a national market system and protects investors and the public interest because it applies equally to all Floor Broker QFOs and cQFOs which are subject to a breakup and access to the Exchange is offered on terms that are not unfairly discriminatory.

B. Self-Regulatory Organization's Statement on Burden on Competition

The Exchange does not believe that the proposed rule change will impose any burden on competition that is not necessary or appropriate in furtherance of the purposes of the Act.

Inter-Market Competition

The Exchange believes the proposed changes do not impose an undue burden on inter-market competition because the changes are to remain competitive with other options exchanges that offer a trading floor. The Exchange believes the proposed changes will help the Exchange remain competitive in order to be able to provide market participants with another choice of where to execute such floor transactions. The Exchange notes that it operates in a highly competitive market in which market participants can readily favor competing venues if they deem fee levels at a particular venue to be excessive, or rebate opportunities available at other venues to be more favorable. In such an environment, the Exchange must continually adjust its fees and rebates to remain competitive with other exchanges that offer trading floors. Because competitors are free to modify their own fees or rebates in response to this proposal, and because market participants may readily adjust their order routing practices, the Exchange believes that the degree to which fee and rebate changes in this market may impose any burden on competition is limited.

Intra-Market Competition

In accordance with Section 6(b)(8) of the Act, the Exchange does not believe that the proposed rule changes would impose any burden on competition that is not necessary or appropriate in furtherance of the purposes of the Act. The Exchange believes the proposed change to amend the Floor Market Maker origin to increase the fee to $0.94 per contract for QFO and cQFO transactions in non-Penny classes will not discourage Floor Market Maker order flow. This is because even with the change, the Exchange's proposed fee of $0.94 per contract for the Floor Market Maker origin in non-Penny classes remains competitive with, and lower than (in at least one instance), the fee charged by other equity options exchanges to their floor market makers for transactions in non-penny classes.[27]

The Exchange believes the proposed change to increase the Floor Broker Breakup Credit for QFO and cQFO transactions in non-Penny classes will encourage the submission of additional non-Penny class liquidity to a public exchange's Trading Floor, thereby promoting market depth, price discovery and transparency and enhancing order execution opportunities for all Floor Participants, especially as the Trading Floor continues to ramp up operations since it launched in September 2025. As a result, the Exchange believes that the proposed changes further the Commission's goal in adopting Regulation NMS of fostering integrated competition among orders.

The Exchange believes that the proposed fee assessed to Floor Market Maker QFOs and cQFOs in non-Penny classes and the proposed enhanced Floor Broker break credit in non-Penny classes may encourage Floor Broker open outcry order flow and would not disincentivize Floor Market Maker activity on the Trading Floor. The Exchange does not believe that Floor Market Makers will be discouraged from transacting on the Trading Floor, as Floor Market Makers trade for their own accounts and benefit from having access to interact with orders that are made available in open outcry on the Trading Floor. The Exchange also believes that Floor Market Maker fees relative to other market participants do not impose an undue burden on competition because Floor Market Makers are not obligated to engage in transactions on the Trading Floor. To the extent that there is an additional competitive burden on Floor Market Makers, the Exchange believes that any such burden would be appropriate because Floor Brokers serve an important function in facilitating the execution of orders and price discovery for all market participants. Further, to the extent this proposal is successful, it may increase trading opportunities for Floor Market Makers because Floor Market Makers trade for their own accounts and benefit from having the opportunity to interact with orders that are made available in open outcry on the Trading Floor. Greater liquidity benefits all market participants on the Exchange and increased order flow would increase opportunities for execution of other trading interest. The proposed modifications would apply and be available to all similarly-situated market participants that execute open outcry orders on the Trading Floor, and, accordingly, the proposed changes would not impose a disparate burden on competition among market participants on the Exchange.

C. Self-Regulatory Organization's Statement on Comments on the Proposed Rule Change Received From Members, Participants, or Others

No written comments were either solicited or received.

III. Date of Effectiveness of the Proposed Rule Change and Timing for Commission Action

The foregoing rule change has become effective pursuant to Section 19(b)(3)(A)(ii) of the Act,[28] and Rule 19b–4(f)(2) [29] thereunder. At any time within 60 days of the filing of such proposed rule change, the Commission

[23] 15 U.S.C. 78f(b)(4).

summarily may temporarily suspend such rule change if it appears to the Commission that such action is necessary or appropriate in the public interest, for the protection of investors, or otherwise in furtherance of the purposes of the Act. If the Commission takes such action, the Commission shall institute proceedings to determine whether the proposed rule should be approved or disapproved.

IV. Solicitation of Comments

Interested persons are invited to submit written data, views and arguments concerning the foregoing, including whether the proposed rule change is consistent with the Act. Comments may be submitted by any of the following methods:

Electronic Comments

- Use the Commission's internet comment form (*https://www.sec.gov/rules/sro.shtml*); or
- Send an email to *rule-comments@sec.gov.* Please include file number SR–SAPPHIRE–2026–37 on the subject line.

Paper Comments

- Send paper comments in triplicate to Secretary, Securities and Exchange Commission, 100 F Street NE, Washington, DC 20549–1090.

All submissions should refer to file number SR–SAPPHIRE–2026–37. This file number should be included on the subject line if email is used. To help the Commission process and review your comments more efficiently, please use only one method. The Commission will post all comments on the Commission's internet website (*https://www.sec.gov/rules/sro.shtml*). Copies of the filing will be available for inspection and copying at the principal office of the Exchange. Do not include personal identifiable information in submissions; you should submit only information that you wish to make available publicly. We may redact in part or withhold entirely from publication submitted material that is obscene or subject to copyright protection.

All submissions should refer to file number SR–SAPPHIRE–2026–37 and should be submitted on or before November 30, 2026.

SECURITIES AND EXCHANGE COMMISSION

[Release No. 34–106822; File No. SR–NasdaqTX–2026–054]

Self-Regulatory Organizations; Nasdaq Texas, LLC; Notice of Filing and Immediate Effectiveness of Proposed Rule Change To Introduce Conforming Changes to Nasdaq Texas Rules in Connection With the Establishment of Fees for Nasdaq TotalView Plus and Nasdaq Basic Plus

November 4, 2026.

Pursuant to Section 19(b)(1) of the Securities Exchange Act of 1934 (''Act''),[1] and Rule 19b–4 thereunder,[2] notice is hereby given that on October 27, 2026, Nasdaq Texas, LLC (''Nasdaq Texas'' or ''Exchange'') filed with the Securities and Exchange Commission (''SEC'' or ''Commission'') the proposed rule change as described in Items I, II, and III, below, which Items have been prepared by the Exchange. The Commission is publishing this notice to solicit comments on the proposed rule change from interested persons.

I. Self-Regulatory Organization's Statement of the Terms of Substance of the Proposed Rule Change

The Exchange proposes to amend the Exchange's fees at (i) Equity 7, Section 119 to waive the market data distributor fees for Nasdaq Texas TotalView for firms that consolidate it with certain other feeds for external redistribution; (ii) Equity 7, Section 123 to waive the fees for firms purchasing Nasdaq TotalView Plus; (iii) Equity 7, Section 139 to reflect the addition of Nasdaq Basic Plus as a product offering subject to a consolidation fee; and (iv) Equity 7, Section 147 to clarify that firms that receive Nasdaq Last Sale Plus or Nasdaq Basic Plus or both shall pay monthly administrative fees and data consolidation fees, each as described further below.[3]

The text of the proposed rule change is available on the Exchange's website at *https://listingcenter.nasdaq.com/rulebook/nasdaqtx/rulefilings,* and at the principal office of the Exchange.

[1] 15 U.S.C. 78s(b)(1).

[2] 17 CFR 240.19b–4.

[3] This filing replaces SR–NasdaqTX–2026–043, which was withdrawn and replaced on October 27, 2026. It was previously filed as SR–NasdaqTX–2026–041, which was withdrawn and replaced on September 8, 2026, and SR–NasdaqTX–2026–040, which was withdrawn on August 31, 2026.

II. Self-Regulatory Organization's Statement of the Purpose of, and Statutory Basis for, the Proposed Rule Change

In its filing with the Commission, the Exchange included statements concerning the purpose of and basis for the proposed rule change and discussed any comments it received on the proposed rule change. The text of these statements may be examined at the places specified in Item IV below. The Exchange has prepared summaries, set forth in sections A, B, and C below, of the most significant aspects of such statements.

A. Self-Regulatory Organization's Statement of the Purpose of, and Statutory Basis for, the Proposed Rule Change

1. Purpose

The purpose of the proposed rule change is to introduce conforming changes to Nasdaq Texas rules in connection with the establishment of fees for Nasdaq TotalView Plus and Nasdaq Basic Plus by the Nasdaq Stock Exchange. Specifically, the Exchange proposes to amend fees at (i) Equity 7, Section 119 to waive the market data distributor fees for Nasdaq Texas TotalView for firms that consolidate it with certain other feeds for external redistribution; (ii) Equity 7, Section 123 to waive the fees for firms purchasing Nasdaq TotalView Plus; (iii) Equity 7, Section 139 to reflect the addition of Nasdaq Basic Plus as a product offering subject to a consolidation fee; and (iv) Equity 7, Section 147 to clarify that firms that receive Nasdaq Last Sale Plus or Nasdaq Basic Plus or both shall pay monthly administrative fees and data consolidation fees, each as described further below.

Nasdaq TotalView Plus and Nasdaq Basic Plus Fees

The Nasdaq Stock Market LLC (''Nasdaq'') recently introduced two new products, Nasdaq TotalView Plus and Nasdaq Basic Plus,[4] which consolidate Depth-of-Book [5] and Top-of-Book [6] information currently

[4] *See* Securities Exchange Act Release No. 105997 (July 28, 2026), 91 FR 48466 (July 31, 2026) (SR–Nasdaq–2026–061) (a proposal to introduce Nasdaq TotalView Plus and Nasdaq Basic Plus, two new data feeds which will offer consolidated Top-of-Book and Depth-of-Book information currently disseminated by Nasdaq, Nasdaq Texas and Nasdaq PSX).

[5] The underlying Depth-of-Book products are Nasdaq TotalView, Nasdaq Texas TotalView, and PSX TotalView.

[6] The underlying Top-of-Book products are Nasdaq Basic (which includes both best bid and offer and last sale information), Nasdaq Texas BBO,

disseminated by Nasdaq, the Exchange, and Nasdaq PHLX LLC equities (''Nasdaq PSX''). Nasdaq has submitted to the Commission a fee filing designed to set fees for Nasdaq TotalView Plus and Nasdaq Basic Plus at or below fees currently charged for the Depth-of-Book and Top-of-Book products offered by Nasdaq, Nasdaq Texas, and Nasdaq PSX. This, together with the networking and connectivity savings inherent in lowering the number of data feeds, is designed to maximize the distribution of consolidated data feeds to investors throughout the 23 hour, 5 days per week schedule set to begin in December 2026.

Nasdaq will offer Nasdaq TotalView Plus for the same Professional and Non-Professional Subscriber and enterprise license fees as Nasdaq TotalView.[7] To ensure that market data vendors will be able to offer competing consolidated data products, any firm that certifies to Nasdaq that it will consolidate Nasdaq TotalView, Nasdaq Texas TotalView and Nasdaq PSX TotalView into a data feed solely for external redistribution shall be exempt from Nasdaq Texas Market Data Distributor Fees[8] and Nasdaq PSX Market Data Distributor Fees,[9] and the Monthly External Distributor Fees for the Nasdaq Stock Market LLC at Equity 7, Section 119(b) shall be reduced by $350 per month.[10] These three discounts will ensure that vendors will be able to cover the cost of consolidating the underlying fees.

Nasdaq will offer Nasdaq Basic Plus for the same Professional and Non-Professional Subscriber, enterprise license, and Distributor fees as Nasdaq Basic. To ensure that other market data vendors will be able to offer competing consolidated data products, Nasdaq proposes to charge the same monthly administrative and data consolidation fees for Nasdaq Basic Plus as are currently charged for Nasdaq Last Sale Plus to both Internal Distributors[11] and External Distributors[12] to cover the costs of data feed consolidation to be incurred by market data vendors.

With respect to the Market Data Enterprise License for Display Usage,[13] which currently offers both Nasdaq TotalView and Nasdaq Basic in the same enterprise license, Nasdaq proposes to offer the Nasdaq TotalView Plus and Nasdaq Basic Plus feeds for the same fees currently charged for the Nasdaq TotalView and Nasdaq Basic.

As a result of the introduction of Nasdaq TotalView Plus and Nasdaq Basic Plus and their related fees, the Exchange is proposing amendments to Equity 7, Sections 119, 123, 139, and 147 to make conforming changes to its fee schedule to align with the fees outlined in Nasdaq's Equity 7, Sections 123, 132, 139, and 147 for these new products.

Market Data Distributor Fees

The purpose of the first fee amendment is to issue a fee waiver for External Market Data Distributor Fees of $1,620 per month, in Equity 7, Section 119, for vendors that certify to Nasdaq that they will consolidate Nasdaq TotalView, Nasdaq Texas TotalView and Nasdaq PSX TotalView into a data feed solely for external redistribution. The same discount would not apply to non-vendors. Vendors would be able to apply this fee reduction, together with the waiver of Nasdaq PSX Market Data Distributor Fees, and the $350 per month reduction in Monthly External Distributor Fees for the Nasdaq Stock Market, to cover the cost of forming their own consolidated feed, thereby allowing vendors to compete with Nasdaq in the sale of consolidated data products using the depth of book data from Nasdaq affiliates.

Nasdaq Texas TotalView Fees

The purpose of the second fee amendment is to issue a fee waiver for Nasdaq Texas TotalView fees in Equity 7, Section 123 to any firm that purchases Nasdaq TotalView Plus. Nasdaq Texas TotalView disseminates all individual Nasdaq Texas Equities System participant orders and quotes displayed in the system, the aggregate size of such orders and quotes at each price level, and the trade data for executions that occur within the Nasdaq Texas Equities System.[14] This will be a fee waiver of (i) monthly Subscriber fees of $22.25 (operative January 1, 2026), and $22.25 (operative January 1, 2026) for NYSE and regional issues for display usage or non-display usage not based upon Direct Access,[15] and (ii) Non-Display Usage fees of $58.50 (operative January 1, 2026) per month for each Professional Subscriber.[16]

This is to ensure that Nasdaq can offer Nasdaq TotalView Plus for the same Subscriber fees as Nasdaq TotalView.

Administrative and Consolidation Fees

The purpose of the third and fourth fee amendments is to clarify that firms that receive Nasdaq Basic Plus, in addition to or in lieu of Nasdaq Last Sale Plus, will also pay the monthly administrative fee applicable to Nasdaq Texas Last Sale and Nasdaq Texas BBO, and that distributors of Nasdaq Last Sale Plus or Nasdaq Basic Plus will pay a data consolidation fee of $350 per month. Currently, firms that receive Nasdaq Last Sale Plus must pay the administrative and consolidation fees,[17] and this amendment extends the same to purchasers of Nasdaq Basic Plus,[18] as both Nasdaq Last Sale Plus and Nasdaq Basic Plus contain the same Nasdaq Texas Last Sale and Nasdaq Texas BBO feeds. The Nasdaq Texas BBO Feeds consist of real-time market information from the Nasdaq Texas Market Center.[19]

This fee is designed to cover the data consolidation costs of market data vendors to ensure that they will be able to offer competing consolidated data products to the new Nasdaq Basic Plus product, which contains both NTX Last Sale and Nasdaq Texas BBO.

As a conforming change, the Exchange proposes to modify both Equity 7, Section 139(b)(1) and Equity 7, Section 147(b) to state that firms that receive Nasdaq Last Sale Plus or Nasdaq Basic Plus or both shall pay the monthly administrative fees for NTX Last Sale and Nasdaq Texas BBO, as well as a data consolidation fee of $350 per month.

2. Statutory Basis

The Exchange believes that its proposal is consistent with Section 6(b) of the Act,[20] in general, and furthers the objectives of Sections 6(b)(4) and 6(b)(5) of the Act,[21] in particular, in that it

Nasdaq Texas Last Sale, PSX BBO, and PSX Last Sale.

[7] Internal and External Distributor, as well as Direct Access fees, may apply to purchasers of Nasdaq Plus products depending on the customer's use case. *See* Nasdaq Rules, Equity 7, Section 119(b).

[8] *See* Equity 7, Section 119(a).

[9] *See* Nasdaq PHLX Rules, Equity 7, Section 3 (Market Data Distributor Fees).

[10] *See* Nasdaq Stock Market Rules, Equity 7, Sections 119(b) and 119(d). There are two Monthly External Distributor Fees at Section 119(b), one for Nasdaq-listed security depth entitlements and one for Non Nasdaq-listed security depth entitlements.

[11] ''Internal Distributors'' are Distributors that receive Nasdaq Last Sale Plus or Nasdaq Basic Plus data and then distribute that data to one or more Subscribers within the Distributor's own entity.

[12] ''External Distributors'' are Distributors that receive Nasdaq Last Sale Plus or Nasdaq Basic Plus data and then distribute that data to one or more Subscribers outside the Distributor's own entity.

[13] *See* Nasdaq Stock Market Rules, Equity 7, Section 132.

[14] *See* Equity 7, Section 123.

[15] *See* Equity 7, Section 123(a)(1).

[16] *See* Equity 7, Section 123(a)(2).

[17] *See* Equity 7, Section 139(b).

[18] Firms that receive Nasdaq Last Sale Plus or Nasdaq Basic Plus would either be liable for Nasdaq Last Sale fees or Nasdaq Basic fees, but not both.

[19] *See* Equity 7, Section 147. ''Nasdaq Texas BBO for Nasdaq'' contains the Nasdaq Texas's best bid and offer for Nasdaq-listed securities. ''Nasdaq Texas BBO for NYSE'' contains Nasdaq Texas's best bid and offer for NYSE-listed securities. ''Nasdaq Texas BBO for Amex'' contains Nasdaq Texas's best bid and offer for Amex-listed securities.

[20] 15 U.S.C. 78f(b).

[21] 15 U.S.C. 78f(b)(4) and (5).

provides for the equitable allocation of reasonable dues, fees and other charges among members and issuers and other persons using any facility, and is not designed to permit unfair discrimination between customers, issuers, brokers, or dealers because the proposal: (i) offers more customer choice; (ii) protects competition by covering the data consolidation costs of market data vendors; (iii) does not increase the fee for any Nasdaq Texas product, but simply waives certain fees or applies consolidation costs to firms purchasing certain data feeds; (iv) conforms fees for Nasdaq Texas products to the recent Nasdaq filings related to the offer of Nasdaq TotalView Plus and Nasdaq Basic Plus; and (v) offers products to all market participants on a non-discriminatory basis.

1. More Customer Choice

The proposal will expand choice by allowing customers to select whether to purchase best bid and offer information through the separate data feeds of Nasdaq Basic, Nasdaq Texas Last Sale, Nasdaq Texas BBO, and PSX Last Sale, and PSX BBO (or any combination thereof) separately or in a single feed. Purchasing Nasdaq Basic Plus or Nasdaq TotalView Plus will allow some customers to optimize consumption by ingesting information from multiple markets in a single connection, which may result in cost savings for subscribers based on a more efficient configuration of data feeds. Nothing in this proposal will change the quantity or quality of Depth-of-Book or Top-of-Book information available in the market, as the underlying feeds will remain available, and the proposed feeds are simply amalgamations of those underlying feeds.

2. No Competitive Advantage Relative To Market Data Vendors

In offering Nasdaq Basic Plus and Nasdaq TotalView Plus, Nasdaq will be acting as a redistributor of Depth-of-Book [22] and Top-of-Book [23] products from Nasdaq, Nasdaq Texas, and Nasdaq PSX.[24]

Nasdaq Basic Plus and Nasdaq TotalView Plus will be compiled from the same underlying feeds from Nasdaq, Nasdaq Texas, and Nasdaq PSX that are distributed to the purchasers of those feeds. With respect to speed, the path for the distribution of the information by the Exchange will not be faster than the path for distribution that would be used by a market data vendor to distribute similar, independently created products.

With respect to information, the same source of the market data to be used by the Exchange to create the two proposed products will also be available to any other market data vendor. The Nasdaq system that will create and support Nasdaq Basic Plus and Nasdaq TotalView Plus will access the underlying feeds from Nasdaq, Nasdaq Texas, and Nasdaq PSX from the same point as any market data vendor.

With respect to cost, Nasdaq will ensure that market data vendors are able to compete with the proposed fees by introducing waivers of distributor fees for Nasdaq Texas and Nasdaq PSX and a reduction of $350 per month in external distributor fees for the Nasdaq Stock Market, for distributors of Nasdaq TotalView Plus and a consolidation fee for Nasdaq Basic Plus. These proposals will allow vendors to cover the costs of consolidation for Depth-of-Book and Top-of-Book feeds, respectively.[25] The Exchange is filing this proposal to implement conforming changes for a Nasdaq Stock Exchange proposal filed separately.

The proposed fee waiver for Nasdaq TotalView Plus will exempt any firm that certifies to Nasdaq that it will consolidate Nasdaq TotalView, Nasdaq Texas TotalView and Nasdaq PSX TotalView into a data feed solely for external redistribution from Nasdaq Texas Market Data Distributor Fees [26] and Nasdaq PSX Market Data Distributor Fees,[27] and shall also receive a fee reduction of $350 per month in External Distributor fees from the Nasdaq Stock Market. This substantial savings in distributor fees offered only to external distributors—$1,620 per month for Nasdaq Texas,[28] $1,390 per month for PSX TotalView,[29] and $350 for the Nasdaq Stock Market—will allow vendors to cover the cost of consolidation of Depth-of-Book feeds and will ensure that market data vendors will be able to offer consolidated data products that compete with Nasdaq TotalView Plus.

The proposed fees for Nasdaq Basic Plus include monthly administrative fees for Nasdaq Last Sale, NTX Last Sale, and PSX Last Sale and a data consolidation fee of $350 per month for Internal Distributors and External Distributors of Nasdaq Basic Plus.[30] This is the current fee charged for Nasdaq Last Sale Plus to ensure that market data vendors will be able to offer competing feeds.

Nasdaq introduced a consolidation fee for both Nasdaq Basic Plus and Nasdaq Last Sale Plus because Nasdaq Basic Plus includes last sale information. Nasdaq expects vendors to use the same processes and servers to consolidate both best bid and offer and last sale information, and therefore the same consolidation fee should be sufficient to cover all data consolidation costs, enabling vendors to compete in consolidating and distributing data from multiple exchanges. The Exchange is proposing to amend its rules to permit that competition.

3. No Fee Increases

Nothing in the proposal involves an increase to the fees currently charged by Nasdaq Texas for its data feeds. Any subscriber to solely a Nasdaq Texas feed will continue to pay the same fees as are currently set, without any change. The subscriber fee waivers and consolidation fees proposed herein are to ensure that any purchaser of a *compiled* product, whether it is Nasdaq TotalView Plus, Nasdaq Basic Plus, or the feeds necessary to compile a competing product containing the same information as Nasdaq TotalView Plus and/or Nasdaq Basic Plus, is not at a cost disadvantage compared to other purchasers of the same information.

The proposed data consolidation fee for Nasdaq Basic Plus is exactly the same fee as currently charged for Nasdaq Last Sale Plus, and customers of Nasdaq Last Sale Plus would pay no additional consolidation fee for Nasdaq Basic Plus. These consolidation and administrative fees are not new, but are simply being expanded to Nasdaq's new product, and do not increase the fees charged to purchasers of Nasdaq Texas data.

Rather, the proposed set of fee waivers of external distributor fees for Nasdaq Texas and Nasdaq PSX and $350 reduction for the Nasdaq Stock Market for data vendors lowers fees below current fees.

[22] The underlying Depth-of-Book products are Nasdaq TotalView, Nasdaq Texas TotalView, and PSX TotalView.

[23] The underlying Top-of-Book products are Nasdaq Basic (which includes both best bid and offer and last sale information), Nasdaq Texas BBO, Nasdaq Texas Last Sale, PSX BBO, and PSX Last Sale.

[24] *See* Securities Exchange Act Release No. 105997 (July 28, 2026), 91 FR 48466 (July 31, 2026) (SR–Nasdaq–2026–061); SR–NASDAQ–2026–065.

[25] There is no consolidation fee for Nasdaq TotalView because the waiver of distributor fees is sufficient to cover the costs of consolidation without any additional fee.

[26] *See* Equity 7, Section 119.

[27] *See* Nasdaq PHLX Rules, Equity 7, Section 3.

[28] *See* Equity 7, Section 119(a).

[29] *See* Nasdaq PHLX Rules, Equity 7, Section 3 (Market Data Distributor Fees).

[30] Firms that receive Nasdaq Last Sale Plus or Nasdaq Basic Plus would either be liable for Nasdaq Last Sale fees or Nasdaq Basic fees, but not both.

The proposed waiver of all subscriber fees, including both Professional and Non-Professional fees, Non-Display Usage fees, and enterprise license fees for Nasdaq Texas data for Nasdaq TotalView Plus will actually lower fees further, as purchasers of Nasdaq TotalView Plus will be charged the same fees as currently charged for Nasdaq TotalView alone. The proposed Nasdaq TotalView Plus fees therefore offer customers a discount below current fees.

4. Conforming Amendments

The proposal conforms fees for Nasdaq Texas products to the recent Nasdaq filings related to the offer of Nasdaq TotalView Plus and Nasdaq Basic Plus.[31] In order for Nasdaq's proposed fees to be effective,[32] Nasdaq Texas must update its rules to ensure that they do not conflict with Nasdaq's. The proposed amendments to Equity 7, Sections 119, 123, 139, and 147 are conforming changes made to align the Exchange's rules to Nasdaq's.

5. No Unfair Discrimination

The proposal is not designed to permit unfair discrimination between customers, issuers, brokers, or dealers because the proposed feeds are optional data fees available to all market participants on a non-discriminatory basis.

In summary, the proposal provides for the equitable allocation of reasonable dues, fees and other charges among members and issuers and other persons using any facility, and is not designed to permit unfair discrimination between customers, issuers, brokers, or dealers because the proposal: (i) offers more customer choice; (ii) protects competition by reducing fees for market data vendors; (iii) does not increase the fee for any Nasdaq Texas product, but simply waives certain fees or applies consolidation costs to firms purchasing certain data feeds; (iv) conforms fees for Nasdaq Texas products to the recent Nasdaq filings related to the offer of Nasdaq TotalView Plus and Nasdaq Basic Plus; and (v) offers products to all market participants on a non-discriminatory basis.

B. Self-Regulatory Organization's Statement on Burden on Competition

The Exchange does not believe that the proposed rule change will impose any burden on competition not necessary or appropriate in furtherance of the purposes of the Act.

Nothing in the proposal burdens inter-market competition (the competition among self-regulatory organizations) because approval of the proposal does not impose any burden on the ability of other exchanges to compete. The proposal merely implements fee waivers for certain purchasers and consolidation and administrative fees for others, which any other exchange could propose.

Nothing in the Proposal burdens intra-market competition (the competition among consumers of exchange data), because the products related to the fee changes—Nasdaq TotalView Plus and Nasdaq Basic Plus—will be offered to all market participants at the same price and any market participant that elects to purchase either Nasdaq TotalView Plus or Nasdaq Basic Plus may do so on a non-discriminatory basis.

Moreover, as explained above, the proposed fees offer no competitive advantage relative to market data vendors, and are in fact designed to promote competition. There is no change to (or advantage in) speed or information. With respect to cost, the Exchange proposes to ensure that market data vendors are able to compete with the proposed fees by introducing a set of fee waivers and a fee reduction for Nasdaq TotalView Plus that is exclusively available to market data vendors and a consolidation fee for Nasdaq Basic Plus. These Nasdaq feeds are completely voluntary products in that Nasdaq is not required by any rule or regulation to make this data available and potential subscribers may purchase it only if they voluntarily choose to do so. Information is compiled from underlying feeds from Nasdaq, Nasdaq Texas, and Nasdaq PSX, which will remain available for purchase.

C. Self-Regulatory Organization's Statement on Comments on the Proposed Rule Change Received From Members, Participants, or Others

No written comments were either solicited or received.

III. Date of Effectiveness of the Proposed Rule Change and Timing for Commission Action

The foregoing rule change has become effective pursuant to Section 19(b)(3)(A)(ii) of the Act.[33]

At any time within 60 days of the filing of the proposed rule change, the Commission summarily may temporarily suspend such rule change if it appears to the Commission that such action is: (i) necessary or appropriate in the public interest; (ii) for the protection of investors; or (iii) otherwise in furtherance of the purposes of the Act. If the Commission takes such action, the Commission shall institute proceedings to determine whether the proposed rule should be approved or disapproved.

IV. Solicitation of Comments

Interested persons are invited to submit written data, views and arguments concerning the foregoing, including whether the proposed rule change is consistent with the Act. Comments may be submitted by any of the following methods:

Electronic Comments

- Use the Commission's internet comment form (*https://www.sec.gov/rules/sro.shtml*); or
- Send an email to *rule-comments@sec.gov*. Please include file number SR–NasdaqTX–2026–054 on the subject line.

Paper Comments

- Send paper comments in triplicate to Secretary, Securities and Exchange Commission, 100 F Street NE, Washington, DC 20549–1090.

All submissions should refer to file number SR–NasdaqTX–2026–054. This file number should be included on the subject line if email is used. To help the Commission process and review your comments more efficiently, please use only one method. The Commission will post all comments on the Commission's internet website (*https://www.sec.gov/rules/sro.shtml*). Copies of the filing will be available for inspection and copying at the principal office of the Exchange. Do not include personal identifiable information in submissions; you should submit only information that you wish to make available publicly. We may redact in part or withhold entirely from publication submitted material that is obscene or subject to copyright protection. All submissions should refer to file number SR–NasdaqTX–2026–054 and should be submitted on or before November 30, 2026.

For the Commission, by the Division of Trading and Markets, pursuant to delegated authority.[34]

Sherry R. Haywood,

Assistant Secretary.

SECURITIES AND EXCHANGE COMMISSION

[Release No. 34–106821; File No. S7–2026–26]

Order Under Section 36 of the Securities Exchange Act of 1934 (the ''Exchange Act'') Granting Conditional Exemptive Relief From Section 15(c)(3) of and Rule 15c3–3a, Note H Under the Exchange Act Relating to Certain Centrally Cleared U.S. Treasury Transactions

November 4, 2026.

I. Introduction

A. Overview of Exemptive Order

The Securities and Exchange Commission (''Commission'') is granting exemptive relief to broker-dealers from certain provisions of Note H to Item 15 of Exhibit A to Exchange Act Rule 15c3–3 (''Rule 15c3–3a, Note H'' or ''Note H'') pursuant to section 36 [1] of the Exchange Act. More specifically, the Commission is granting exemptive relief from the application of Exchange Act section 15(c)(3) [2] and Rule 15c3–3a, Note H(b)(1) and (b)(2)(i) thereunder to permit broker-dealers to include a debit in their Rule 15c3–3a customer and proprietary securities accounts of other broker-dealers (''PAB'') [3] reserve computations (collectively ''reserve computations'') for margin required and on deposit with a qualified clearing agency [4] resulting from transactions in U.S. Treasury securities in customer accounts that have been cleared, settled, and novated by the clearing agency in cases where the qualified clearing agency has calculated customer margin on either a net, omnibus or gross, customer-by-customer basis, and the broker-dealer has delivered the margin collateral on a net, omnibus basis.[5]

B. Background

Rule 15c3–3 under the Exchange Act, the broker-dealer customer protection rule, requires broker-dealers that hold customer cash and securities (''carrying broker-dealers'') to treat these assets in a manner that facilitates their prompt return to the customers if the broker-dealer fails financially. To meet this objective, Rule 15c3–3 requires a carrying broker-dealer to take two primary steps to safeguard customer assets, which are designed to protect customers by segregating their securities and cash from the carrying broker-dealer's proprietary business activities. The first step requires carrying broker-dealers to maintain physical possession or control over customers' fully paid and excess margin securities.[6] The second step requires that a carrying broker-dealer maintain a reserve of cash or qualified securities (*e.g.,* U.S. Treasury securities) in an account at a third-party bank that is at least equal in value to the net cash owed to customers determined by a computation pursuant to a formula set forth in Exchange Act Rule 15c3–3a, the customer reserve computation.[7] The goal of Rule 15c3–3 is to place a broker-dealer in a position where it is able to wind down and return customer assets in an orderly self-liquidation without the need for financial assistance.

On December 13, 2023, the Commission adopted rules under the Exchange Act to amend the standards applicable to certain clearing agencies to enhance risk management practices for central counterparties in the U.S. Treasury market and facilitate additional clearing of U.S. Treasury securities.[8] In the Treasury Clearing Adopting Release, the Commission adopted amendments to Rule 15c3–3a to permit margin required and on deposit at qualified clearing agencies providing central counterparty services for U.S. Treasury securities to be included by broker-dealers as a debit in the reserve computations, subject to certain conditions.[9]

i. Gross vs. Net Customer Position Margin Requirement

Among the conditions necessary for including customer position margin as a debit in the reserve computations is that customer position margin must be treated in accordance with rules that must be adopted by the qualified clearing agency.[10] Paragraph (b)(2)(i) of Note H requires the qualified clearing agency to calculate a separate margin amount for each customer of the broker-dealer on a gross basis, and requires the broker-dealer to deliver that amount of margin for each customer on a gross, customer-by-customer basis.[11] The Commission adopted this requirement to ensure that the risk of one customer's positions could not be offset by the risk of another customer's positions in determining the amount of customer margin the broker-dealer would need to have on deposit at the qualified clearing agency.[12] Thus, under existing Note H requirements, a broker-dealer is not permitted to deliver assets belonging to one customer to meet the margin requirement of another customer, and margin must be calculated and delivered on a gross basis.[13]

ii. Delivery of Customer Cash or Securities on Customer-by-Customer Basis

Another condition, set forth in paragraph (b)(1) of Note H, provides that the customer position margin must consist of any of the following when delivered by the broker-dealer to meet a margin requirement resulting from that particular customer's U.S. Treasury securities positions that have cleared, settled, and novated at the qualified clearing agency: (i) cash owed to the customer; or (ii) U.S. Treasury securities or qualified customer securities held in custody by the broker-dealer for the customer.[14] Paragraph (b)(1) of Note H

---

[1] 15 U.S.C. 78mm. Section 36(a)(1) of the Exchange Act gives the Commission the authority to exempt any person, security or transaction or any class or classes of persons, securities or transactions, conditionally or unconditionally, from any Exchange Act provision by rule, regulation or order, to the extent that the exemption is necessary or appropriate in the public interest and consistent with the protection of investors.

[2] 15 U.S.C. 78o(c)(3).

[3] *See* 17 CFR 15c3–3(a)(16) (defining PAB account as a proprietary securities account of a broker-dealer (which includes a foreign broker-dealer, or a foreign bank acting as a broker-dealer) other than a delivery-versus-payment account or a receipt-versus-payment account. The term does not include an account that has been subordinated to the claims of creditors of the carrying broker-dealer.)

[4] *See* Note H(a) (defining a ''qualified clearing agency'' as a clearing agency registered with the Commission under section 17A of the Exchange Act that clears, settles, and novates transactions in U.S. Treasury securities).

[5] *See* Note H(b)(2)(i) to Exhibit A to Rule 15c3–3, 17 CFR 240.15c3–3a.

[6] *See* 17 CFR 240.15c3–3(d).

[7] *See* 17 CFR 240.15c3–3a (Formula for determination of customer and PAB account reserve requirements of broker-dealers under 17 CFR 240.15c3–3.).

[8] *See Standards for Covered Clearing Agencies for U.S. Treasury Securities and Application of the Broker-Dealer Customer Protection Rule With Respect to U.S. Treasury Securities,* Exchange Act Release No. 99149 (Dec. 13, 2023), 89 FR 2714 (Jan. 16, 2024) (''Treasury Clearing Adopting Release'').

[9] *See id.* at 2760–68. *See also* Note H to Exhibit A to Rule 15c3–3, 17 CFR 240.15c3–3a. The following types of transactions in U.S. Treasury securities in customer accounts that have been cleared, settled, and novated by the clearing agency are covered by the Item 15 debit: (1) purchases and sales of U.S. Treasury securities; and (2) U.S. Treasury securities repurchase and reverse repurchase agreements (together ''customer position margin'').

[10] *See* Treasury Clearing Adopting Release, at 2764. *See also* Note H(b)(2) to Exhibit A to Rule 15c3–3, 17 CFR 240.15c3–3a.

[11] *See* Note H(b)(2)(i) to Exhibit A to Rule 15c3–3, 17 CFR 240.15c3–3a.

[12] *See* Treasury Clearing Adopting Release, 89 FR at 2764. For a discussion of the Commission's consideration of the alternative of tailoring the requirement to permit a debit based on a margin amount posted to the qualified clearing agency that is calculated on a net basis across all the broker-dealer's customers, as is the case under Item 13 and Note F in Rule 15c3–3a for margin required and on deposit with the Options Clearing Corporation for all option contracts written or purchased in customer accounts, *see id.* at 2764–65.

[13] *See* Treasury Clearing Adopting Release, 89 FR at 2764.

[14] *See* Note H(b)(1)(i) and (ii).

also permits a broker-dealer to temporarily prefund a specific customer's margin requirement, subject to strict limitations.[15]

iii. Commission Approval of Qualified Clearing Agency Rules

The final condition to the application of the Item 15 debit, set out in paragraph (b)(3) of Note H, requires the Commission to have approved rules of the qualified clearing agency that meet the conditions of Note H and has published (and not subsequently withdrawn) a notice that broker-dealers may include the debit permitted by Note H.[16] At present, the Commission has published notices approving the rules of three qualified clearing agencies under paragraph (b)(3) of Note H, and has not subsequently withdrawn any of them.[17]

C. SIFMA's Application for Exemptive Relief

Pursuant to procedures set forth in Rule 240.0–12 of the Exchange Act, the Securities Industry and Financial Markets Association (''SIFMA'') filed an application for exemptive relief from section 15(c)(3) of the Exchange Act and Rule 15c3–3a, Note H(b)(1) and (2)(i) thereunder pursuant to section 36 of the Exchange Act on June 24, 2026.[18] SIFMA requested that the Commission grant exemptive relief to permit broker-dealers to include an Item 15 debit in their customer reserve computation in cases where the broker-dealer has delivered the margin collateral on a net, omnibus basis, rather than on a gross, customer-by-customer basis.[19] The requested relief would apply to customer accounts at a qualified clearing agency where the qualified clearing agency calculates customer margin on either a net, omnibus or gross, customer-by-customer basis that otherwise meets the conditions of Note H (*i.e.,* the conditions that are not exempted under SIFMA's proposed request).[20] Further, SIFMA requested that any exemptive order issued by the Commission provide broker-dealers with the same relief as to their PAB account holders and PAB reserve computation under Rule 15c3–3a, subject to the same conditions.[21]

Section 36 of the Exchange Act authorizes the Commission to conditionally or unconditionally exempt any person, security, or transaction, or any class or classes of persons, securities, or transactions, from certain provisions of the Exchange Act or certain rules or regulations thereunder, by rule, regulation, or order, to the extent that such exemption is necessary or appropriate in the public interest, and is consistent with the protection of investors.

On July 24, 2026, the Commission issued a Notice of Application seeking comment on the Application. The Notice of Application was published in the **Federal Register** on July 30, 2026 to provide interested persons the opportunity to comment.[22] The Commission did not receive any comments on the Notice of an Application.[23]

II. Discussion of Exemptive Relief

A. Statement of Relief

Since the Commission's adoption of the Treasury Clearing Adopting Release, broker-dealers undertaking implementation have raised concerns in letters and meetings with Commission staff about the inefficiencies and costs of the gross basis requirement.[24] For example, SIFMA stated in its Application that implementing a strict customer-by-customer framework would require broker-dealers to use highly granular systems to map customer positions, margin requirements, and collateral flows to individual customers across all clearance, settlement, and internal records, as well as complex intraday reconciliation and enhanced data infrastructure.[25] In a letter sent to the Commission before submitting its Application, SIFMA also stated that the cost concerns raised from individual segregation due to the requirement to calculate customer margin and deliver margin collateral on a gross, customer-by-customer basis would discourage broker-dealers from onboarding smaller market participants, who typically rely on qualified clearing agency direct netting members for clearing U.S. Treasury transactions.[26] As a result, SIFMA added, a qualified clearing agency's direct participants would be unable to apply the reserve formula debit for these indirect participant accounts, leading to increased capital constraints for broker-dealers in meeting customer margin requirements.[27]

SIFMA further indicated in its Application that the systems and infrastructure needed to fulfill the gross,

[15] *See* Note H(b)(1)(iii). Specifically, if delivering proprietary U.S. Treasury securities to the qualified clearing agency as margin collateral, the broker-dealer must: (1) not use other types of securities collateral acceptable to the qualified clearing agency; (2) not owe the customer or hold in custody for the customer sufficient cash, U.S. Treasury securities, and/or qualified customer securities to meet a margin requirement resulting from that customer's U.S. Treasury securities positions cleared, settled, and novated at the qualified clearing agency at the time the margin requirement arose; and (3) call for the customer to deliver a sufficient amount of cash, U.S. Treasury securities, and/or qualified customer securities to meet the margin requirement on the day the margin requirement arose, and must receive a sufficient amount of cash, U.S. Treasury securities, and/or qualified customer securities to meet the margin requirement by the close of the next business day after the margin requirement arose. *See also* Treasury Clearing Adopting Release, 89 FR at 2763.

[27] *See id. See* also Letter from Kevin Zambrowicz, Deputy General Counsel, SIFMA, to the Honorable Paul Atkins, Chair, Commission (Nov. 19, 2025) (Treasury Clearing—The OCC-Model Approach under Rule 15c3–3), available at: *https://www.sec.gov/comments/S7-23-22/s72322-834300-2549193.pdf* (stating that the ability of broker-dealers to reflect a reserve formula debit in instances where customer margin for U.S. Treasury transactions is delivered to a qualified clearing agency through an omnibus segregated account structure is critical to ensuring that broker-dealers can continue to intermediate cleared access for indirect participants, particularly buy-side clients and smaller market participants, without facing undue liquidity strain stemming from the current inability to reflect the reserve formula debit—an operational gap leading to reserve requirements that do not accurately reflect the actual risk posed to broker-dealers and the financial system.).

customer-by-customer margin calculation and posting requirements are not aligned with the existing net, omnibus-based operational models used in the intermediation of U.S. Treasury securities transactions, and would become increasingly difficult to scale as clearing expands to a broader set of market participants and intermediated relationships.[28] Where broker-dealers elect not to fully implement the systems and processes necessary to support gross, customer-level margining (and thus cannot use the Item 15 debit), SIFMA has indicated that the resulting reserve computation treatment may not reflect the economic substance of customer facilitation activity in U.S. Treasury clearing, which could lead to duplicative capital and liquidity requirements misaligned with the actual risk exposure to broker-dealers intermediating customer access to central clearing.[29]

The Commission finds that allowing the inclusion of a debit in Item 15 of the reserve computations where a qualified clearing agency has calculated the required customer margin on either a net, omnibus or gross, customer-by-customer basis, and the broker-dealer has delivered the required customer margin collateral on a net, omnibus basis, when subject to the conditions detailed below, is necessary or appropriate in the public interest, and is consistent with the protection of investors.

The operational complexities and challenges of the gross, customer-by-customer margin and delivery requirements have proven greater than anticipated before broker-dealers began to implement them. While the Commission originally adopted Note H to require posting margin on a gross, customer-by-customer basis for customer protection, the operational complexity of the gross calculation and delivery approach and the attendant potential negative impact for clearing of U.S. Treasury securities transactions warrant allowing alternative margin calculation and delivery approaches, with the enumerated conditions to ensure that the exemptions in this order do not diminish the customer protection objectives of Rules 15c3–3 and 15c3–3a.

This relief would also provide broker-dealers with more flexibility to efficiently intermediate access to centrally cleared U.S. Treasury markets while preserving the customer protection framework under Rule 15c3–3. Further, this relief would alleviate certain capital and operational constraints that can arise through a gross, customer-by-customer margining and delivery requirement, particularly when broker-dealers serve smaller or indirect customers, thereby supporting broader market access, enhancing liquidity, and advancing the Commission's goal of promoting a deep, resilient, and inclusive U.S. Treasury market. Finally, the alternative margin calculation and delivery approaches will support a broker-dealer's customer facilitation activity in U.S. Treasury clearing, particularly in light of the expansion of these activities and the increased number of qualified clearing agencies.

The conditions of this order, discussed below in section II.B, are designed to permit the Item 15 debit only in circumstances that provide protections to customers consistent with the customer protection objectives of Rules 15c3–3 and 15c3–3a without requiring a gross, customer-by-customer calculation and collection of customer margin. For example, Rule 15c3–3 requires broker-dealers to take steps to safeguard customer assets by segregating their securities and cash from the carrying broker-dealer's proprietary business activities.[30] The conditions in this order are designed to ensure that customer margin is appropriately segregated and that a broker-dealer cannot use customer cash and securities to finance its proprietary business activities. Further, consistent with the conditions in Note H not exempted under this order, the conditions of this order explicitly limit the exemption to customer margin required and on deposit with a qualified clearing agency for customer transactions in U.S. Treasury securities. These conditions help reduce the likelihood of certain risks that may undermine the customer protection objectives of Rule 15c3–3, including that broker-dealers may not appropriately safeguard customer cash and securities or may improperly include debits in their customer reserve computation.

Accordingly, after careful consideration of the Application, the Commission is issuing, pursuant to section 36 of the Exchange Act, conditional exemptive relief to permit broker-dealers to include an Item 15 debit in their customer reserve computation in cases where a qualified clearing agency has calculated customer margin on either a net, omnibus or gross, customer-by-customer basis, and the broker-dealer has delivered the margin collateral on a net, omnibus basis, rather than on a gross, customer-by-customer basis. Further, the Commission is providing broker-dealers with the same relief as to their PAB account holders and PAB reserve computation under Rule 15c3–3a, subject to the same conditions. This relief will permit either: (1) the calculation and delivery of customer margin on a net, omnibus basis,[31] or (2) the calculation of margin on a gross, customer-by-customer basis and the delivery of margin on a net, omnibus basis. The following discussion describes conditions of the exemptive relief provided by this order.

B. Discussion of Conditions

The first condition limits the relief to margin that is required and on deposit with a qualified clearing agency in connection with (1) purchases and sales of U.S. Treasury securities; and (2) U.S. Treasury securities repurchase and reverse repurchase agreements in customer accounts that have been cleared, settled, and novated by the qualified clearing agency. This condition is designed to reflect that the relief provided hereby is limited to only those transactions covered under Item 15 of Rule 15c3–3a and Note H.[32] This condition also will continue to ensure that margin required and on deposit at a qualified clearing agency as a result of the broker-dealer's proprietary positions may not be included as a debit in the reserve computations. Therefore, this condition is designed to effectuate a fundamental aspect of Rule 15c3–3 that a broker-dealer cannot use customer cash or securities to finance its proprietary business activities.[33]

The second condition provides that the broker-dealer must deliver the following types of cash and securities to the qualified clearing agency to meet the

[28] *See* Application at 3–4.

[29] *See id.* at 4. As SIFMA further stated in the Application, the frictions caused by these constraints and increased costs of central clearing could ultimately reduce participation and liquidity in the U.S. Treasury market, which would undermine the Commission's initial policy objectives in the Treasury Clearing Adopting Release of expanded central clearing, by discouraging efficient access pathways and increasing operational burdens without a corresponding reduction in systemic risk. *See id.*

[30] *See* section I.B. of this order. *See also* Treasury Clearing Adopting Release, 89 FR at 2761.

[31] Margin calculated on a ''net, omnibus basis'' refers to margin calculations where the transactions in U.S. Treasury securities for different customers are netted together as one combined portfolio to calculate initial margin requirements at a qualified clearing agency.

[32] *See* 17 CFR 240.15c3–3a, Item 15. This condition also will continue to limit the relief to *required* margin which prevents the broker-dealer from depositing cash or securities at a qualified clearing agency that are not needed to meet a margin requirement in order to artificially increase the debit (which could potentially reduce the broker-dealer's required deposit).

[33] *See* Treasury Clearing Adopting Release, 89 FR at 2761.

customer margin requirement: (1) cash; (2) U.S. Treasury securities; (3) qualified customer securities; [34] or (4) any combination of items (1)–(3).[35] This condition limits the scope of assets that are permissible to use as collateral delivered to the qualified clearing agency to those currently permitted under Note H to Rule 15c3–3a. The Commission is retaining the limitation on the permitted use of proprietary securities as margin collateral to U.S. Treasury securities to ensure that only the safest, most liquid securities of the broker-dealer are ever commingled with the customer cash and securities.[36]

The third condition limits the amount the broker-dealer is permitted to include in the Item 15 debit in the reserve computations to equal the least of: (1) the amount of margin collected from customers in connection with customer U.S. Treasury securities transactions; (2) the amount of margin required for customer U.S. Treasury securities positions; or (3) the total of: (a) cash, (b) U.S. Treasury securities, and (c) qualified customer securities delivered by the broker-dealer to meet a margin requirement arising from customer U.S. Treasury securities positions.[37]

Given the greater operational flexibility that net, omnibus margining and posting entails, this third condition is designed to make sure that the permitted Item 15 debit is conservative and directly related to customer-related credit items consistent with the requirements of Rule 15c3–3.[38] Specifically, the condition is designed to protect investors by specifying that broker-dealers can only obtain the full amount of the potential debit under Item 15 when they collect from customers the full amount of margin required for their U.S. Treasury securities positions, and subsequently deliver the full amount of that margin to the qualified clearing agency to meet such margin requirements.

The ''least of'' structure under the third condition will permit broker-dealers to post margin collateral on a net, omnibus basis, which may result in one customer's collateral being used to cover another customer's margin requirement. However, customers will continue to be afforded the customer protections provided by Rule 15c3–3, as well as the other provisions of Note H, which remain applicable under this exemptive relief. This includes the protections afforded to customers by the continued requirement that broker-dealers include free credit balances and other credit balances in customers' securities accounts as credits in Item 1, and the market value of customers' securities on deposit at a qualified clearing agency in Item 2, of their customer reserve computations.[39]

Further, the third condition explicitly limits the permitted Item 15 debit to permissible cash and securities collateral delivered to a qualified clearing agency. Consistent with the first condition, the broker-dealer may not include in the Item 15 debit amounts on deposit at a qualified clearing agency that exceed the margin requirement resulting from its customers' cleared U.S. Treasury securities positions.

The fourth condition requires that the broker-dealer must maintain books and records sufficient to identify the amount of customer margin collected and delivered to the qualified clearing agency. These books and records will permit the Commission, Commission staff or the broker-dealer's designated examining authority to examine for compliance with the specific conditions of this exemptive order. This condition also will facilitate compliance with the third condition to this order by helping ensure the broker-dealer only includes in the Item 15 debit the appropriate, permitted amount within its reserve computations. In doing so, this fourth condition will also help ensure that the relief provided in this order remains consistent with the customer protection objectives of Rule 15c3–3 by better ensuring compliance with both the conditions of this exemptive order and the other requirements of Rule 15c3–3 and Note H thereunder.

The fifth condition requires that the rules of the qualified clearing agency must have been amended as necessary to reflect the conditions of this exemptive order. This condition is designed to require that broker-dealers may only include an Item 15 debit in their reserve computations pursuant to this order where the rules of the qualified clearing agency have been amended to reflect the conditions of this exemptive order. This will also ensure that the rules of a qualified clearing agency that are amended in accordance with the conditions of this order adequately implement the customer protection objectives of Rule 15c3–3 and Rule 15c3–3a.[40]

The fifth condition also is designed, for similar reasons to those discussed in the Treasury Clearing Adopting Release pertaining to adoption of paragraph (b)(3) of Note H, which, as discussed in section I.B.iii. above, requires the Commission to have approved rules of the qualified clearing agency that meet the conditions of Note H and publish a notice (and not subsequently withdrawn the notice) that broker-dealers may include an Item 15 debit in their reserve computations for a particular qualified clearing agency.[41] The Commission is not hereby withdrawing any previously published notices approving the rules of any qualified clearing agency that meet the conditions of Note H, and broker-dealers may continue to rely upon them to include a debit in Item 15 of their reserve computations when complying with the requirements of Note H.[42] To the extent a qualified clearing agency amends its rules to comply with the conditions of this order, broker-dealers may include an Item 15 debit in their reserve computations if they comply with the other conditions of this order, including the seventh condition, discussed below, which conditions this exemptive relief on continued compliance with the other applicable conditions of Note H not exempted under this order.

The sixth condition provides that the broker-dealer must adopt and implement written policies and

[34] As used in Note H, the term ''qualified customer securities'' means the securities of a customer of the broker-dealer (other than U.S. Treasury securities) that are held in custody by the broker-dealer for the customer and that under the rules of the qualified clearing agency are eligible to be used to margin U.S. Treasury securities positions of the customer that are cleared, settled, and novated by the qualified clearing agency. *See* Note H(c) to Rule 15c3–3a.

[35] The words ''proprietary or customer'' were omitted before the words ''cash'' or ''U.S. Treasury securities'' as described in the Application, because the eligible collateral under this exemptive relief that is cash or U.S. Treasury securities would necessarily be either proprietary or customer assets. As this exemptive relief is to permit broker-dealers to deliver the margin collateral to a qualified clearing agency on a net, omnibus basis, the use of these terms within the scope of this condition is unnecessary.

[36] *See* Treasury Clearing Adopting Release, 89 FR at 2763.

[37] The word ''customer'' was omitted before the words ''cash'' or ''U.S. Treasury securities'' as described in the Application. Eligible collateral under this exemptive relief that is cash or U.S. Treasury securities would be either proprietary or customer assets, as this exemptive relief is to permit broker-dealers to deliver the margin collateral to a qualified clearing agency on a net, omnibus basis.

[38] *See* paragraph (e)(2) to Rule 15c3–3 (stating that ''with respect to each computation required pursuant to paragraph (e)(1) of Rule 15c3–3, a broker-dealer must not accept or use any of the amounts under items comprising total credits under the formula referred to in paragraph (e)(1) of Rule 15c3–3 except for the specified purposes indicated under items comprising total debits under the formula''.).

[39] *See* 17 CFR 240.15c3–3a, Items 1 and 2.

[40] *See* Treasury Clearing Adopting Release, 89 FR at 2768.

[41] *See* Note H(b)(3) to Exhibit A to Rule 15c3–3, 17 CFR 240.15c3–3a. *See also* Treasury Clearing Adopting Release, 89 FR at 2767–68.

[42] *See* FICC Note H Approval Notice, CME Securities Clearing Inc. Note H Approval Notice, and ICE Clear Credit LLC Note H Approval Notice.

procedures reasonably designed to ensure ongoing compliance with the conditions of this exemptive order. This condition will help ensure firms develop the operational and process controls necessary to ensure that they can comply with the conditions of this order on an ongoing basis.

The seventh condition provides that to the extent a broker-dealer delivers margin to a qualified clearing agency pursuant to this relief, such margin must remain subject to the other applicable conditions of Note H not exempted under this order, including paragraphs (b)(2)(ii) through (v). The Commission is adopting this condition to explicitly reflect the limitation on the scope of the exemptive relief this order provides. Further, this condition is designed to ensure that broker-dealers comply with the other applicable conditions of Note H not exempted under this order, which were designed to permit a debit under circumstances that provide protections to customers.

The relief is narrowly tailored to what is necessary to permit a broker-dealer to include an Item 15 debit in the reserve computations without a gross calculation and delivery requirement, in a manner that is consistent with the customer protection objectives of Rule 15c3–3.

For the reasons discussed above, providing this exemption is necessary or appropriate in the public interest, and is consistent with the protection of investors.

III. Conclusion

Accordingly, *it is hereby ordered*, pursuant to section 36(a)(1) of the Exchange Act, that a broker-dealer is exempt from the requirement in paragraph (b)(2)(i) of Note H of Rule 15c3–3a to deliver the separate margin amount for each customer of the broker-dealer calculated by the qualified clearing agency on a gross, customer-by-customer basis, as well as the requirement in paragraph (b)(1) of Note H of Rule 15c3–3a for a broker-dealer to deliver customer cash or securities to a qualified clearing agency on a gross, customer-by-customer basis or to temporarily prefund a specific customer's margin requirement, provided the conditions below are met. Under this conditional exemption, broker-dealers may include a debit in their reserve computations for margin required and on deposit with a qualified clearing agency resulting from transactions in U.S. Treasury securities in customer accounts that have been cleared, settled, and novated by the clearing agency, in cases where the broker-dealer has delivered the margin collateral on a net, omnibus basis. This relief applies to customer accounts at a qualified clearing agency where the qualified clearing agency calculates margin on either a net, omnibus or gross, customer-by-customer basis, subject to the following conditions:

(1) *Eligibility Limitation:* The relief applies solely to margin required and on deposit with a qualified clearing agency in connection with the following types of transactions in U.S. Treasury securities in customer accounts that have been cleared, settled, and novated by the qualified clearing agency: (1) purchases and sales of U.S. Treasury securities; and (2) U.S. Treasury securities repurchase and reverse repurchase agreements.

(2) The broker-dealer delivers the following cash and securities to the qualified clearing agency to meet the customer margin requirement:

(i) cash;

(ii) U.S. Treasury securities;

(iii) qualified customer securities; or

(iv) any combination of clauses (i) through (iii) above.

(3) *Permitted Debit.* The amount the broker-dealer includes in the Item 15 debit in the reserve computations must equal the least of:

(i) the amount of margin collected from customers in connection with U.S. Treasury securities transactions of the broker-dealer's customers that are cleared, settled, and novated by the qualified clearing agency;

(ii) the amount of margin required for U.S. Treasury securities positions of the broker-dealer's customers that are cleared, settled, and novated by the qualified clearing agency; or

(iii) the total of: (A) cash, (B) U.S. Treasury securities, and (C) qualified customer securities delivered by the broker-dealer to the qualified clearing agency to meet margin requirements arising from U.S. Treasury positions of the broker-dealer's customers that are cleared, settled and novated at the qualified clearing agency.

(4) *Documentation:* The broker-dealer must maintain books and records sufficient to identify the amount of customer margin collected and delivered to the qualified clearing agency.

(5) *Qualified Clearing Agency Rulebook Amendments.* The rules of the qualified clearing agency must have been amended to reflect the conditions of this exemptive order.

(6) *Procedures:* The broker-dealer must adopt and implement written policies and procedures reasonably designed to ensure ongoing compliance with the conditions of this exemptive order.

(7) To the extent a broker-dealer delivers margin to a qualified clearing agency consistent with this exemptive order, such margin must remain subject to the other applicable conditions of Note H not exempted under this order, including paragraphs (b)(2)(ii) through (v).

By the Commission.

Sherry R. Haywood,

Assistant Secretary.

[FR Doc. 2026–22740 Filed 11–6–26; 8:45 am]

BILLING CODE 8011–01–P

SECURITIES AND EXCHANGE COMMISSION

[Release No. 34–106809; File No. SR–CBOE–2026–084]

Self-Regulatory Organizations; Cboe Exchange, Inc.; Notice of Filing and Immediate Effectiveness of a Proposed Rule Change To Amend the Definition of Clearing Corporation in its Rules and Make Corresponding Changes Throughout its Rules

November 4, 2026.

Pursuant to Section 19(b)(1) of the Securities Exchange Act of 1934 (''Act''),[1] and Rule 19b–4 thereunder,[2] notice is hereby given that on October 23, 2026, Cboe Exchange, Inc. (the ''Exchange'' or ''Cboe Options'') filed with the Securities and Exchange Commission (''SEC'' or ''Commission'') the proposed rule change as described in Items I and II below, which Items have been prepared by the Exchange. The Commission is publishing this notice to solicit comments on the proposed rule change from interested persons.

I. Self-Regulatory Organization's Statement of the Terms of Substance of the Proposed Rule Change

Cboe Exchange, Inc. (the ''Exchange'' or ''Cboe Options'') proposes to amend the definition of Clearing Corporation in its Rules and make corresponding changes throughout its Rules, as well as update Rule 5.2 regarding units of trading. The text of the proposed rule change is provided in Exhibit 5.

The text of the proposed rule change is also available on the Commission's website (*https://www.sec.gov/rules/sro.shtml*), the Exchange's website (*https://www.cboe.com/us/options/regulation/rule_filings/cone/*), and at the principal office of the Exchange.

[1] 15 U.S.C. 78s(b)(1).

[2] 17 CFR 240.19b–4.

II. Self-Regulatory Organization's Statement of the Purpose of, and Statutory Basis for, the Proposed Rule Change

In its filing with the Commission, the Exchange included statements concerning the purpose of and basis for the proposed rule change and discussed any comments it received on the proposed rule change. The text of these statements may be examined at the places specified in Item IV below. The Exchange has prepared summaries, set forth in sections A, B, and C below, of the most significant aspects of such statements.

A. Self-Regulatory Organization's Statement of the Purpose of, and Statutory Basis for, the Proposed Rule Change

1. Purpose

The Exchange proposes to amend the definition of Clearing Corporation in its Rules and make corresponding changes throughout its Rules, as well as update Rule 5.2 regarding units of trading. For background, Rule 1.1 currently defines the ''Clearing Corporation and OCC'' as The Options Clearing Corporation. Prior to October 22, OCC was the only clearing corporation registered under Section 17A of the Securities and Exchange Act to clear options listed on a national securities exchange.[3] However, the Securities and Exchange Commission (the ''Commission'') recently approved an application of Cboe Clear US, LLC (''CCUS'') seeking temporary registration as a clearing agency under Section 17A of the Act.[4] Further, it is possible additional entities could register as a clearing agency under the Act to clear listed options. As indicated in a separate Exchange rule filing the Commission recently approved,[5] the Exchange intends to clear certain options through CCUS. This proposed rule change would accommodate the clearing of options listed for trading on the Exchange and cleared by either OCC or CCUS (or any other clearing agencies that become registered under Section 17A of the Act).

The proposed rule change amends the definition of Clearing Corporation in Rule 1.1 to mean the clearing agency registered to clear listed options under Section 17A of the Act that is the issuer of and clearing agency for the applicable option or at which a Clearing Trading Permit Holder[6] is a clearing member. The proposed rule change separately defines OCC as The Options Clearing Corporation, as the Exchange retains certain references to OCC with respect to certain options that will continue to be issued and cleared by OCC. Additionally, the proposed Rule change amends the definition of Rules of the Clearing Corporation in Rule 1.1 to mean the governing documents and rules of the Clearing Corporation, and all written interpretations thereof, as they may be in effect from time to time; in other words, the rules of the Clearing Corporation will refer to the governing documents and rules of the applicable registered clearing agency. The proposed rule change amends various other rule provisions to refer to the Clearing Corporation rather than OCC and to otherwise modify those provisions so they contemplate multiple registered clearing agencies (*e.g.,* add that a reference to Clearing Corporation means the ''applicable'' Clearing Corporation or the Clearing Corporation ''that is the issuer of the applicable options'').[7] Pursuant to the proposed definition of Clearing Corporation, these Rules, as well as current Rules that reference Clearing Corporation, will refer to the applicable registered clearing agency in the context of the Rule rather than OCC.

The proposed rule change similarly amends Rule 3.61 regarding letters of guarantee and authorization to account for the existence of multiple registered clearing agencies that clear options listed on the Exchange and Clearing TPHs being Clearing Members of more than one of such clearing agencies. First, subparagraph (a)(4) currently provides if the Clearing Corporation restricts the activities of a Clearing TPH or suspends a Clearing TPH as a Clearing Member of the Clearing Corporation, the Exchange may take action as necessary to give effect to the restriction or suspension. For example, if the Clearing Corporation restricts transactions cleared by a clearing Trading Permit Holder that is a Clearing Member of that Clearing Corporation to ''closing only'' transactions, the Exchange may similarly restrict transactions on the Exchange for clearance by that Clearing TPH as a Clearing Member of the Clearing Corporation to ''closing only'' transactions. Similarly, if the Clearing Corporation suspends a Clearing TPH, the Exchange may prevent access and connectivity to the Exchange by the suspended Clearing TPH. The proposed rule change amends this provision so actions the Exchange may take against a Clearing TPH pursuant to this provision are in response to actions taken by the specific Clearing Corporation that took action against the Clearing TPH. While the proposed rule change provides that the Exchange may restrict transactions to closing only in options a Clearing Corporation issues if that Clearing Corporation similarly restricts that Clearing TPH, the proposed rule change does not prevent the Exchange from exercising its authority to impose restrictions on a Clearing TPH provided by other Rules. Further, if the Exchange prevents access and connectivity to the Exchange by a Clearing TPH that is suspended by one Clearing Corporation, that Clearing TPH will not be able to access and connect to the Exchange to participate in transactions in options issued by another Clearing Corporation. If a CTPH is suspended as a Clearing Member by one Clearing Corporation in accordance with rules of that Clearing Corporation, the Exchange believes such action by that Clearing Corporation makes it appropriate for the Exchange to prevent access to the Exchange in all options, even if another Clearing Corporation does not take similar action against that CTPH.

[3] 15 U.S.C. 78q–1.

[4] *See* Securities Exchange Act Release No. 106723 (October 22, 2026) (Order Granting an Application, as Amended, for Temporary Registration as a Clearing Agency under Section 17A of the Securities Exchange Act of 1934).

[5] *See* Securities Exchange Act Release No. 106659 (October 13, 2026), 91 FR 65854 (October 16, 2026) (SR–CBOE–2026–061).

[6] A Clearing Trading Permit Holder is a Trading Permit Holder (as defined in the Exchange's Bylaws) (''TPH'') that has been admitted to membership in the Clearing Corporation pursuant to the provisions of the Rules of the Clearing Corporation and is self-clearing or that clears transactions for other Trading Permit Holders. *See* Rule 1.1. Pursuant to the proposed rule change, a Clearing TPH is a TPH admitted to membership in any registered clearing agency and could clear transactions in options issued and cleared by that registered clearing agency. The proposed rule change makes minor updates to the definition of Clearing TPH in Rule 1.1 to account for the possibility of multiple registration clearing agencies that clear options listed on the Exchange.

[7] *See* Rules 1.1 (definitions of Capacity and Rules of the Clearing Corporation), 3.61(a) and (d), 4.5, Interpretation and Policy .04, 4.6, 5.2 (the Exchange notes there are certain instances in which the Exchange may establish the unit of trading for an option rather than the applicable Clearing Corporation, as set forth in the Exchange and Clearing Corporation Rules), 5.10, 5.11, 5.53(a)(2) (the proposed rule change also makes nonsubstantive changes to this provision to provide that Market-Makers must comply with ''applicable'' Rules of the Exchange and adds the phrase ''rules of'' before ''the Federal Reserve Board,'' in addition streamlining the provision by replacing ''as well as the'' with a comma), 5.65 (which leaves the reference to OCC but adds that an exchange may clear options through any other Clearing Corporation to account for the possibility that options trading on a national securities exchange that would be subject to linkage rules may clear through a registered clearing agency other than OCC), 6.3, 6.4 (modifying the name of the Rule), 8.30, Interpretation and Policy .04(a)(9) (which also makes the term ''national securities exchange'' lower-cased since it is not a defined term), 10.3(a)(9) and Interpretations and Policies .03 and .06

Similarly, the proposed rule change amends subparagraphs (a)(5) and (6) to account for the possibility of multiple clearing agencies by providing that the effectiveness of a Clearing TPH's letters of guarantee and authorization is tied to that Clearing TPH's status as a Clearing Member at the Clearing Corporation to which those letters relate. In other words, if a Clearing TPH is a Clearing Member of two Clearing Corporations, it will have letters of guarantee and authorization on file with the Exchange for each such Clearing Corporation. If the Clearing TPH's status as a Clearing Member of one Clearing Corporation is terminated or suspended (but the Clearing TPH remains an active Clearing Member the other Clearing Corporation), only the letters of guarantee and authorization on file with the Exchange with respect to the Clearing Corporation at which the Clearing TPH's membership was terminated will be invalidated. The Exchange believes it is appropriate for the effectiveness of a Clearing TPH's letters of guarantee and authorization to be dependent on the Clearing TPH's membership at the Clearing Corporation to which those letters apply. This ultimately results in the same action that occurs today and merely applies these rule provisions to each Clearing Corporation separately.[8]

2. Statutory Basis

The Exchange believes the proposed rule change is consistent with the Securities Exchange Act of 1934 (the ''Act'') and the rules and regulations thereunder applicable to the Exchange and, in particular, the requirements of Section 6(b) of the Act.[9] Specifically, the Exchange believes the proposed rule change is consistent with the Section 6(b)(5) [10] requirements that the rules of an exchange be designed to prevent fraudulent and manipulative acts and practices, to promote just and equitable principles of trade, to foster cooperation and coordination with persons engaged in regulating, clearing, settling, processing information with respect to, and facilitating transactions in securities, to remove impediments to and perfect the mechanism of a free and open market and a national market system, and, in general, to protect investors and the public interest.

Additionally, the Exchange believes the proposed rule change is consistent with the Section 6(b)(5) [11] requirement that the rules of an exchange not be designed to permit unfair discrimination between customers, issuers, brokers, or dealers.

In particular, the Exchange believes the proposed rule change will promote just and equitable principles of trade, foster cooperation and coordination with persons engaged in regulating, clearing, settling, processing information with respect to, and facilitating transactions in securities, remove impediments to and perfect the mechanism of a free and open market and a national market system, and, in general, protect investors and the public interest because it render the Exchange's Rules clearing agency-neutral. Specifically, the proposed rule change will accommodate the clearing of options listed for trading on the Exchange by any registered clearing agency, rather than just OCC. As noted above, the CCUS recently became temporarily registered under the Act to clear listed options, including certain options the Exchange intends to list soon. To the extent the Commission approves CCUS's application, or the application for registration as an options clearing agency under Section 17A of the Act of any other entity, the proposed rule change will update the Exchange's Rules to account for clearing of any options the Exchange lists for trading that may be issued and cleared by any such entity.

The Exchange also believes the proposed rule changes to Rule 3.61 will promote just and equitable principles of trade, foster cooperation and coordination with persons engaged in regulating, clearing, settling, processing information with respect to, and facilitating transactions in securities, remove impediments to and perfect the mechanism of a free and open market and a national market system. Specifically, the proposed rule change will allow the Exchange to take the same actions it may take against a Clearing TPH today in response to actions taken by a Clearing Corporation against the Clearing TPH but aligns the Exchange's actions with the actions of the specific Clearing Corporation that took actions against the Clearing TPH. Further, the proposed rule change ties the effectiveness of a Clearing TPH's letters of guarantee and authorization at the Exchange to the Clearing TPH's membership at the specific Clearing Corporation to which those letters apply. This ultimately results in the same action that occurs today and merely applies these rule provisions to each Clearing Corporation separately.

B. Self-Regulatory Organization's Statement on Burden on Competition

The Exchange does not believe that the proposed rule change will impose any burden on competition that is not necessary or appropriate in furtherance of the purposes of the Act. The Exchange does not believe the proposed rule change to amend the definition of Clearing Corporation (and make conforming changes) will impose any burden on intramarket competition, because it applies to all clearing agencies registered to clear options pursuant to Section 17A of the Act (including OCC) in the same manner. Any Rules referencing a Clearing Corporation or the Rules of the Clearing Corporation will apply to that entity in the same manner as they do to OCC today. Thus, any TPH that decides to become a clearing member of any Clearing Corporation other than OCC will have the same responsibilities and obligations under the Exchange's Rules applicable to Clearing TPHs as Clearing TPHs that are clearing members of OCC. The Exchange does not believe the proposed rule change to amend the definition of Clearing Corporation (and make conforming changes) will impose any burden on intermarket competition, and in fact may relieve any burden on or otherwise promote competition, because it may facilitate competition with respect to clearing listed options, which may benefit market participants.

The Exchange does not believe the proposed rule changes to Rule 3.61 will impose any burden on intramarket competition because they will apply to all Clearing TPHs in the same manner. The proposed rule change does not permit the Exchange to take action against a Clearing TPH the Rules do not already permit in response to action taken by the Clearing Corporation; rather, the proposed rule change ties these permissible Exchange actions to actions taken by the specific Clearing Corporation(s) against the Clearing TPH. Further, the Exchange does not believe the proposed rule changes to Rule 3.61 will impose any burden on intermarket competition, because it ties actions the Exchange may take against a Clearing TPH to actions a specific Clearing Corporation took action against the Clearing TPH.

[8] The additional language that if a Clearing TPH's status as a TPH is terminated or suspended, then all existing letters of guarantee and authorization from that Clearing TPH for all Clearing Corporations are invalid, is within current subparagraphs (a)(5) and (6). The proposed rule change merely separates it out, but has no substantive impact on how that authority will be applied.

[10] 15 U.S.C. 78f(b)(5).

[11] *Id.*

C. Self-Regulatory Organization's Statement on Comments on the Proposed Rule Change Received From Members, Participants, or Others

The Exchange neither solicited nor received written comments on the proposed rule change.

III. Date of Effectiveness of the Proposed Rule Change and Timing for Commission Action

The Exchange has filed the proposed rule change pursuant to Section 19(b)(3)(A)(iii) of the Act [12] and Rule 19b–4(f)(6) thereunder.[13] Because the proposed rule change does not: (i) significantly affect the protection of investors or the public interest; (ii) impose any significant burden on competition; and (iii) become operative prior to 30 days from the date on which it was filed, or such shorter time as the Commission may designate, if consistent with the protection of investors and the public interest, the proposed rule change has become effective pursuant to Section 19(b)(3)(A) of the Act [14] and Rule 19b–4(f)(6) thereunder.[15]

A proposed rule change filed under Rule 19b–4(f)(6) [16] normally does not become operative prior to 30 days after the date of the filing. However, pursuant to Rule 19b4(f)(6)(iii),[17] the Commission may designate a shorter time if such action is consistent with the protection of investors and the public interest. The Exchange has asked the Commission to waive the 30-day operative delay to immediately account for the existence of two registered clearing agencies that clear options listed on the Exchange. The proposal would render the Exchange's Rules clearing agency-neutral, and thereby accommodate the clearing of options listed for trading on the Exchange by any registered clearing agency, rather than just OCC. The Exchange states that its proposed rule will have no impact on how options currently listed for trading on the Exchange are cleared. To the extent the Exchange lists options cleared by a registered clearing agency other than OCC, such options will trade on the Exchange in the same manner as they do with other options today and the Exchange will submit options for clearing to such entity as set forth in its Rules (and thus as it currently does for OCC). For these reasons, the Commission finds that waiving the 30-day operative delay is consistent with the protection of investors and the public interest. Accordingly, the Commission hereby waives the 30-day operative delay and designates the proposed rule change as operative upon filing.[18]

At any time within 60 days of the filing of the proposed rule change, the Commission summarily may temporarily suspend such rule change if it appears to the Commission that such action is necessary or appropriate in the public interest, for the protection of investors, or otherwise in furtherance of the purposes of the Act. If the Commission takes such action, the Commission will institute proceedings under Section 19(b)(2)(B) [19] of the Act to determine whether the proposed rule change should be approved or disapproved.

IV. Solicitation of Comments

Interested persons are invited to submit written data, views and arguments concerning the foregoing, including whether the proposed rule change is consistent with the Act. Comments may be submitted by any of the following methods:

Electronic Comments

- Use the Commission's internet comment form (*https://www.sec.gov/rules/sro.shtml*); or
- Send an email to *rule-comments@sec.gov.* Please include file number SR–CBOE–2026–084 on the subject line.

Paper Comments

- Send paper comments in triplicate to Secretary, Securities and Exchange Commission, 100 F Street NE, Washington, DC 20549–1090.

All submissions should refer to file number SR–CBOE–2026–084. This file number should be included on the subject line if email is used. To help the Commission process and review your comments more efficiently, please use only one method. The Commission will post all comments on the Commission's internet website (*https://www.sec.gov/rules/sro.shtml*). Copies of the filing will be available for inspection and copying at the principal office of the Exchange. Do not include personal identifiable information in submissions; you should submit only information that you wish to make available publicly. We may redact in part or withhold entirely from publication submitted material that is obscene or subject to copyright protection. All submissions should refer to file number SR–CBOE–2026–084 and should be submitted on or before November 30, 2026.

For the Commission, by the Division of Trading and Markets, pursuant to delegated authority.[20]

Sherry R. Haywood,

Assistant Secretary.

SECURITIES AND EXCHANGE COMMISSION

[Investment Company Act Release No. IC–36320A; File No. 811–22684]

Daxor Corporation

November 4, 2026.

AGENCY: Securities and Exchange Commission (''Commission'' or ''SEC'').

ACTION: Notice.

Notice of an application for deregistration under section 8(f) of the Investment Company Act of 1940 (the ''Act'').

SUMMARY OF APPLICATION: Applicant requests an order declaring that it has ceased to be an investment company.[1]

APPLICANT: Daxor Corporation.

FILING DATES: The application was filed on February 9, 2026, and amended on May 21, 2026, June 17, 2026, September 4, 2026, and October 9, 2026.

HEARING OR NOTIFICATION OF HEARING: An order granting the request will be issued unless the Commission orders a hearing. Interested persons may request a hearing on any application by emailing the SEC's Secretary at *Secretarys-Office@sec.gov* and serving the Applicant with a copy of the request by email, if an email address is listed for the Applicant below, or personally or by mail, if a physical address is listed for the Applicant below. The email should include the file number referenced above. Hearing requests should be received by the Commission by 5:30 p.m., Eastern time, on November 30, 2026, and should be accompanied by proof of service on the Applicant, in the

[1] The Commission issued a notice of application on September 4, 2026, Release No. IC–36320. Applicant subsequently amended the application to add additional information regarding ongoing litigation to which Applicant is a party.

form of an affidavit or, for lawyers, a certificate of service. Pursuant to rule 0–5 under the Act, hearing requests should state the nature of the writer's interest, any facts bearing upon the desirability of a hearing on the matter, the reason for the request, and the issues contested. Persons who wish to be notified of a hearing may request notification by emailing the Commission's Secretary at *Secretarys-Office@sec.gov.*

ADDRESSES: The Commission: *Secretarys-Office@sec.gov.* Applicant: Robert J. Michel, Daxor Corporation, 107 Meco Lane, Oak Ridge, TN 37830; and Peter D. Fetzer, Foley & Lardner LLP, 777 East Wisconsin Avenue, Milwaukee, WI 53202.

FOR FURTHER INFORMATION CONTACT: Adam M. Large, Senior Special Counsel, or Thomas M. Ahmadifar, Branch Chief, at (202) 551–6720 or *IMOCC@sec.gov* (Division of Investment Management, Chief Counsel's Office).

SUPPLEMENTARY INFORMATION: The following is a summary of the application. The complete application may be obtained via the Commission's website by searching for the file number at the top of this document, or for the Applicant using the Company name search field on the SEC's EDGAR system. The SEC's EDGAR system may be searched at *https://www.sec.gov/search-filings.* You may also call the SEC's Office of Investor Education and Assistance at (202) 551–8090.

Applicant's Representations:

1. Applicant was originally incorporated in New York State as Iatric Corporation in May 1971 for cryobanking services and discontinued these services through its wholly-owned subsidiary, Scientific Medical Systems in 2017. In October 1971, the name Iatric Corporation was changed to Idant Corporation. In May 1973, the name Idant Corporation was changed to Daxor Corporation.

2. Applicant currently operates as a radiopharmaceutical company and medical device manufacturer selling Volumex Test Kits used with its BVA Companion Analyzer.

3. The Applicant states that it is not engaged in the business of investing, reinvesting, owning, holding or trading in securities. In the past, the Applicant was dependent upon earnings from its investment portfolio to fund operations and was required under the Act to register with the Commission as an investment company. Specifically, on March 30, 2012, the company filed a Form N–8A with the Commission to register as a closed-end management investment company under the Act.

4. Applicant states that it liquidated the remainder of its investment securities (as defined in section 3(a) of the Act) (''Investment Securities'') over the course of 2024 and 2025. As of December 31, 2024 and June 30, 2025, in aggregate, Applicant's investment securities represented approximately 3.11% and 1.10%, respectively, of Applicant's total assets measured at fair value on an unconsolidated basis (exclusive of Government securities and cash items).

5. Applicant further states that, as of December 31, 2025, Applicant held no Investment Securities, and Applicant continued to hold no Investment Securities as of the filing date of its Second Amended Application.

6. Applicant states that it is no longer dependent upon earnings from its investment portfolio to fund operations, and Applicant is and holds itself out as a radiopharmaceutical company and medical device manufacturer selling Volumex Test Kits used with its BVA Companion Analyzer.

7. Applicant expects to continue to earn a majority of its gross income from its medical device operations and expects to have no income from Investment Securities, as it will hold funds pending use in its operating business in cash items or Government securities.

8. Applicant represents that it has always conducted its business as an operating company, and that it had never primarily been in, or held itself out to be in, the business of investing, reinvesting, owning, holding or trading in securities. Applicant further represents that its registration under the Act resulted from the percentage of its total assets that at one time consisted of investment securities, and not from the nature of its business. As such, because Applicant did not change the nature of its business, Applicant states that neither the disposition of its investment securities, nor its resulting cessation of investment company status, nor the filing of the Application, required the authorization of a majority of Applicant's outstanding voting securities under Section 13(a)(4) of the Act.

9. Applicant represents that it is not currently a party to any litigation or administrative proceeding that is material to its status as an ''investment company'' under the Act. Applicant states that it is party to litigation concerning alleged misappropriation of intellectual property by a former employee and to a related employment action brought by that former employee; however, Applicant represents that neither proceeding is material to the Applicant and that neither bears upon the determination of whether the Applicant has ceased to be an investment company within the meaning of the Act. Applicant represents that it has timely complied with its obligations to file annual and other reports with the Commission.

10. Applicant represents that its common stock has continuously been traded since its initial public offering. Specifically, the company's common stock is traded on Nasdaq under the symbol DXR. As of May 19, 2025, the company's authorized securities consisted of 10,000,000 shares of common stock.

11. Further, Applicant represents that it is, and will remain, subject to the reporting requirements of Section 13(a) of the Securities Exchange Act of 1934, as amended (the ''Exchange Act. Following deregistration as an investment company under the Act, Applicant will continue to file periodic and current reports with the Commission under the Exchange Act, including reports on Forms 10–K, 10–Q and 8–K, as an operating company.

Applicant's Legal Analysis:

1. Section 8(f) of the Act provides that whenever the Commission, upon application or its own motion, finds that a registered investment company has ceased to be an investment company, the Commission shall so declare by order and upon the taking effect of such order, the registration of such company shall cease to be in effect.

2. Section 3(a)(1)(A) of the Act defines an ''investment company'' as any issuer that ''is or holds itself out as being engaged primarily, or proposes to engage primarily, in the business of investing, reinvesting, or trading in securities.'' Section 3(a)(1)(C) of the Act defines an ''investment company'' as any issuer that ''is engaged or proposes to engage in the business of investing, reinvesting, owning, holding, or trading in securities, and owns or proposes to acquire investment securities having a value exceeding 40 per centum of the value of such issuer's total assets (exclusive of Government securities and cash items) on an unconsolidated basis.'' [2]

3. Section 3(b)(1) of the Act provides that ''[n]otwithstanding paragraph (1)(C) of subsection (a), none of the following

[2] Section 3(a)(2) of the Act defines ''investment securities'' as ''all securities except (A) Government securities, (B) securities issued by employees' securities companies, and (C) securities issued by majority-owned subsidiaries of the owner which (i) are not investment companies, and (ii) are not relying on the exception from the definition of investment company in paragraph (1) or (7) of subsection (c).''

persons is an investment company within the meaning of this title: (1) any issuer primarily engaged, directly or through a wholly owned subsidiary or subsidiaries, in a business or businesses other than that of investing, reinvesting, owning, holding, or trading in securities.'' Rule 3a-1 under the Act states that ''[n]otwithstanding section 3(a)(1)(C) of the Act, an issuer will be deemed not to be an investment company under the Act, provided, that: (a) no more than 45 percent of the value (as defined in section 2(a)(41) of the Act) of such issuer's total assets (exclusive of Government securities and cash items) consists of, and no more than 45 percent of such issuer's net income after taxes (for the last four fiscal quarters combined) is derived from, securities other than: (1) Government securities; (2) securities issued by employees' securities companies; (3) securities issued by majority-owned subsidiaries of the issuer (other than subsidiaries relying on the exclusion from the definition of investment company in section 3(b)(3) or (c)(1) of the Act) which are not investment companies; and (4) securities issued by companies: (i) which are controlled primarily by such issuer; (ii) through which such issuer engages in a business other than that of investing, reinvesting, owning, holding or trading in securities; and (iii) which are not investment companies; (b) the issuer is not an investment company as defined in section 3(a)(1)(A) or 3(a)(1)(B) of the Act and is not a special situation investment company; and (c) the percentages described in paragraph (a) of this section are determined on an unconsolidated basis, except that the issuer shall consolidate its financial statements with the financial statements of any wholly-owned subsidiaries.''

4. Applicant states that it is no longer an investment company as defined in section 3(a)(1)(A) or section 3(a)(1)(C). As noted above, Applicant states that, as of December 31, 2025, as well as through the date of the filing of its Second Amended Application, it did not hold any investment securities (exclusive of Government securities and cash items). Applicant asserts that it is primarily engaged in the business of owning, operating, and managing its business as a radiopharmaceutical company and medical device manufacturer.

Applicant argues that its historical development, its public representations, the activities of its directors and officers, the nature of its present assets and the sources of its present income support this assertion. Applicant states that it is thus qualified for an order of the Commission pursuant to section 8(f) of the Act.

For the Commission, by the Division of Investment Management, under delegated authority.

Sherry R. Haywood,

Assistant Secretary.

BILLING CODE 8011–01–P

SECURITIES AND EXCHANGE COMMISSION

[Release No. 34–106811; File No. SR–IEX–2026–44]

Self-Regulatory Organizations; Investors Exchange LLC; Notice of Filing and Immediate Effectiveness of Proposed Rule Change Pursuant to IEX Rule 15.110(a) and (c) To Amend the IEX Equities Fee Schedule

November 4, 2026.

Pursuant to Section 19(b)(1) [1] of the Securities Exchange Act of 1934 (the ''Act'') [2] and Rule 19b–4 thereunder,[3] notice is hereby given that, on October 29, 2026, the Investors Exchange LLC (''IEX'' or the ''Exchange'') filed with the Securities and Exchange Commission (the ''Commission'') the proposed rule change as described in Items I, II and III below, which Items have been prepared by the self-regulatory organization. The Commission is publishing this notice to solicit comments on the proposed rule change from interested persons.

I. Self-Regulatory Organization's Statement of the Terms of Substance of the Proposed Rule Change

Pursuant to the provisions of Section 19(b)(1) of the Act,[4] and Rule 19b–4 thereunder,[5] the Exchange is filing with the Commission a proposed rule change to amend the Exchange's equities fee schedule applicable to Members [6] (the ''IEX Equities Fee Schedule''),[7] pursuant to IEX Rule 15.110(a) and (c), to introduce an additional criteria to qualify for one of its displayed liquidity adding rebate tiers. Changes to the IEX Equities Fee Schedule pursuant to this proposal are effective upon filing,[8] and will be operative on December 1, 2026.

The text of the proposed rule change is available at the Exchange's website at *https://www.iexexchange.io/resources/regulation/rule-filings* and at the principal office of the Exchange.

II. Self-Regulatory Organization's Statement of the Purpose of, and the Statutory Basis for, the Proposed Rule Change

In its filing with the Commission, the self-regulatory organization included statements concerning the purpose of and basis for the proposed rule change and discussed any comments it received on the proposed rule change. The text of these statements may be examined at the places specified in Item IV below. The self-regulatory organization has prepared summaries, set forth in Sections A, B, and C below, of the most significant aspects of such statements.

A. Self-Regulatory Organization's Statement of the Purpose of, and the Statutory Basis for, the Proposed Rule Change

1. Purpose

The Exchange proposes to modify the Transaction Fees section of its Fee Schedule, pursuant to IEX Rule 15.110(a) and (c), to introduce an additional way to qualify for one of its Displayed Liquidity Adding Rebate Tiers [9] for executions priced at or above $1.00 per share.[10] Specifically, the Exchange proposes to modify Displayed Liquidity Adding Rebate Tier 8 to introduce an additional eligibility basis, as described below. IEX is not proposing to change the amounts of any rebates or fees, or the overall tiering pricing structure in the Transaction Fees section of the Fee Schedule.

Displayed Liquidity Adding Rebate Tiers

IEX currently offers Members nine Displayed Liquidity Adding Rebate Tiers based on the Member's trading or quoting activity in the immediately preceding month.[11] These rebates,

[1] 15 U.S.C. 78s(b)(1).

[2] 15 U.S.C. 78a.

[3] 17 CFR 240.19b–4.

[4] 15 U.S.C. 78s(b)(1).

[5] 17 CFR 240.19b–4.

[6] *See* IEX Rule 1.160(s).

[7] *See* IEX Equities Fee Schedule, available at *https://www.iex.io/resources/trading/fee-schedule.*

[8] 15 U.S.C. 78s(b)(3)(A)(ii).

[9] *See* footnote 4 to the Transaction Fees, Base Rates table and Fee Code Combinations and Associated Fees table of the IEX Equities Fee Schedule, *supra* note 4.

[10] Nothing in this rule filing affects trades below $1.00 per share (''sub-dollar trades''), which will continue to receive a rebate equal to 0.15% of the total dollar value of the execution (''TDV'') for displayed liquidity adding executions. Sub-dollar trades will continue to have no impact on any of the rebate or fee tier calculations for trades with an execution price of $1.00 per share or more.

[11] IEX Equities Fee Schedule, *supra* note 4, Base Rates table (Base Fee Code ML) and Fee Code Combinations and Associated Fees table, footnote 4. Pursuant to Rule 610(d) of Regulation NMS, all IEX Equities transaction fees and rebates are determinable at the time of execution. Accordingly, all transaction fees and rebates that depend on a Member's trading or quoting activity are based on that activity in the immediately preceding month. *See* Securities Exchange Act Release No. 104541

Continued

which apply equally to executions of Tape A, Tape B, and Tape C securities, are as follows:

• Tier 1: provides Member the Exchange's base fee of FREE for all displayed liquidity adding executions priced at or above $1.00 per share (''Added Displayed Liquidity'') if the Member added less than 5,000,000 ADV [12] of displayed liquidity.

• Tier 2: provides Member a rebate of $0.0010 per share for all Added Displayed Liquidity if the Member traded at least 10,000,000 non-displayed ADV [13] and less than 20,000,000 non-displayed ADV.

• Tier 3: provides Member a rebate of $0.0014 per share for all Added Displayed Liquidity if the Member: (1) added at least 5,000,000 ADV of displayed liquidity and less than 15,000,000 ADV of displayed liquidity; or (2) traded at least 20,000,000 non-displayed ADV; or (3) had an NBBO Time [14] of at least 50% in at least 250 ETPs.[15]

• Tier 4: provides Member a rebate of $0.0016 per share for all Added Displayed Liquidity if the Member: (1) added at least 15,000,000 ADV of displayed liquidity and less than 20,000,000 ADV of displayed liquidity; or (2) had an NBBO Time of at least 50% in at least 750 ETPs.

• Tier 5: provides Member a rebate of $0.0018 per share for all Added Displayed Liquidity if the Member: (1) added at least 20,000,000 ADV of displayed liquidity and less than 25,000,000 ADV of displayed liquidity; or (2) traded at least 30,000,000 non-displayed ADV.

• Tier 6: provides Member a rebate of $0.0020 per share for all Added Displayed Liquidity if the Member: (1) added at least 25,000,000 ADV of displayed liquidity and less than 30,000,000 ADV of displayed liquidity; or (2) traded at least 40,000,000 non-displayed ADV.

• Tier 7: provides Member a rebate of $0.0021 per share for all Added Displayed Liquidity if the Member added at least 30,000,000 ADV of displayed liquidity and less than 40,000,000 ADV of displayed liquidity.

• Tier 8: provides Member a rebate of $0.0022 per share for all Added Displayed Liquidity if the Member added at least 40,000,000 ADV of displayed liquidity and less than 50,000,000 ADV of displayed liquidity.

• Tier 9: provides Member a rebate of $0.0023 per share for all Added Displayed Liquidity if the Member added at least 50,000,000 ADV of displayed liquidity.

The Exchange proposes to modify Tier 8 to add an additional means of qualifying for that rebate tier. Specifically, the Exchange proposes to extend the Tier 8 pricing incentive to Members that add at least 35,000,000 ADV of displayed liquidity, if at least 25,000,000 ADV of the Added Displayed Liquidity was in non-ETP securities. The proposed change is designed to incentivize Members to increase their non-ETP quoting. Thus, under the proposed new qualifying criteria, a Member would qualify for Tier 8 in the current month if, in the immediately preceding month, it added at least 35,000,000 ADV of displayed liquidity, of which at least 25,000,000 ADV was in non-ETP securities. If a Member qualifies for Tier 8 through the new qualification criteria, the associated rebate of $0.0022 per share will be applied to the Member's transactions in the same manner as they currently are: to the Member's executions of displayed liquidity adding orders priced at or above $1.00 per share.

Accordingly, the Exchange proposes to amend the description of Base Fee Code ML (''Add displayed liquidity'') in the Base Rates table and to amend the Tier 8 row in the Displayed Liquidity Adding Rebate Tier table in Footnote 4 to the Transaction Fees section of the IEX Equities Fee Schedule, to introduce the new alternative means of qualifying for Tier 8, which is described above.

IEX is proposing no other changes to the IEX Equities Fee Schedule. As noted above, changes to the IEX Equities Fee Schedule pursuant to this proposal are effective upon filing and will be operative on December 1, 2026.

2. Statutory Basis

IEX believes that the proposed rule change is consistent with the provisions of Section 6(b) [16] of the Act in general, and furthers the objectives of Sections 6(b)(4) [17] and 6(b)(5) [18] of the Act in particular, in that it is designed to provide for the equitable allocation of reasonable dues, fees, and other charges among its Members and other persons using its facilities, and is not designed to permit unfair discrimination between customers, issuers, brokers, or dealers. For the reasons set forth below, the Exchange believes that the proposed rule change is reasonable, equitable, and not designed to permit unfair discrimination.

The Exchange operates in a highly competitive market in which market participants can readily direct order flow to competing venues if they deem fee levels at a particular venue to be excessive. Based upon informal discussions with market participants, IEX believes that Members and other market participants may be more incentivized to send displayed orders to IEX if the proposed fee structure were adopted. Accordingly, IEX has designed the proposed changes to the rebate tier's qualification criteria to attract and incentivize displayed orders while providing a fee structure that is fair, equitable, and not designed to permit unfair discrimination because the proposed changes will apply equally to all Members who satisfy the criteria.

The Exchange believes that the proposed new criteria for qualifying for Displayed Liquidity Adding Rebate Tier 8 is reasonable because it is designed to incentivize Members to add a meaningful volume of displayed non-ETP liquidity on IEX. The proposed modification to the qualifying criteria for Displayed Liquidity Adding Rebate Tier 8 is within the range of rebates

(January 5, 2026), 91 FR 737 (January 8, 2026) (SR–IEX–2025–39) (amending the Exchange's fee schedule applicable to Members to comply with Rule 610(d) of Regulation NMS).

[12] The IEX Equities Fee Schedule defines ''ADV'' as average daily volume calculated as the number of shares added or removed (as applicable) that execute at or above $1.00 per share, per day. ADV is calculated on a monthly basis, based on trading activity in the immediately preceding month, unless otherwise indicated in the Fee Schedule. Routed shares executed away from IEX, and shares executed in auctions and the Opening Process, are not included in the ADV calculation. The Exchange also excludes from its calculation of ADV any trading day on which the Exchange's system experiences a disruption that lasts for more than 60 minutes during Regular Market Hours and any day with a scheduled early market close. With prior notice to the Exchange, a Member may aggregate its ADV with other Members with which it is affiliated pursuant to Rule 12b–2 under the Act. *See* IEX Equities Fee Schedule, *supra* note 4, Transaction Fees, Definitions and Notes.

[13] ''Non-displayed ADV'' refers to executions with the following Fee Code Combinations: MI, MIB, TI, TIB, TIY, TIYB, TIR, TLW, TLWB, and MIA. *See* IEX Equities Fee Schedule, *supra* note 4, Transaction Fees, Definitions.

[14] ''NBBO Time'' means the Member's Percent Time at NBB plus the Member's Percent Time at NBO. ''Percent Time at NBB'' and ''Percent Time at NBO'' mean, respectively, the aggregate of the percentage of time during Regular Market Hours in which a Member has a displayed order of at least one round lot at the national best bid (''NBB'') or the national best offer (''NBO''). When applied to transaction fees or rebates, NBBO Time is calculated using the Member's quoting activity in the immediately preceding month. For tiers that include NBBO Time as a required criterion, the Exchange determines on a daily basis the number of securities in which the Member met the NBBO Time threshold for that day and, at the end of the month, takes the average (rounded to the nearest whole number) of those daily counts. *See* IEX Equities Fee Schedule, *supra* note 4, Transaction Fees, Definitions and Notes.

[15] The term ''ETPs'' includes any security traded on the Exchange, under unlisted trading privileges pursuant to Rule 19b–4(e) of the Act, as a UTP Derivative Security pursuant to IEX Rule 16.160.

[16] 15 U.S.C. 78f(b).

[17] 15 U.S.C. 78f(b)(4).

[18] 15 U.S.C. 78f(b)(5).

offered by competing exchanges, and thus the Exchange does not believe that the proposal raises any new or novel issues not already considered by the Commission in the context of other exchanges' fees.

Finally, to the extent this proposed fee change is successful in incentivizing the entry and execution of displayed non-ETP orders on IEX, such greater non-ETP liquidity will benefit all market participants by increasing price discovery and price formation as well as market quality and execution opportunities in those non-ETP securities. And, as discussed above, IEX does not believe that any aspect of this proposal raises new or novel issues not already considered by the Commission.

B. Self-Regulatory Organization's Statement on Burden on Competition

IEX does not believe that the proposed rule change will result in any burden on competition that is not necessary or appropriate in furtherance of the purposes of the Act. The Exchange does not believe that the proposed rule change will impose any burden on intermarket competition that is not necessary or appropriate in furtherance of the purposes of the Act. The Exchange operates in a highly competitive market in which market participants can readily favor competing venues if fee schedules at other venues are viewed as more favorable. Consequently, the Exchange believes that the degree to which IEX fees could impose any burden on competition is extremely limited, and does not believe that such fees would burden competition between Members or competing venues. Moreover, as noted in the Statutory Basis section, the Exchange does not believe that the proposed changes raise any new or novel issues not already considered by the Commission.

The Exchange does not believe that the proposed rule change will impose any burden on intramarket competition that is not necessary or appropriate in furtherance of the purposes of the Act because, while different rebates and fees are assessed on Members, these rebate and fee tiers are not based on the type of Member entering the orders that match, but rather on the Member's own trading activity on the Exchange. Further, the proposed fee change is intended to encourage market participants to bring increased order flow to the Exchange and contribute to the public price discovery process, which benefits all market participants.

C. Self-Regulatory Organization's Statement on Comments on the Proposed Rule Change Received From Members, Participants, or Others

Written comments were neither solicited nor received.

III. Date of Effectiveness of the Proposed Rule Change and Timing for Commission Action

The foregoing rule change has become effective pursuant to Section 19(b)(3)(A)(ii) [19] of the Act.

At any time within 60 days of the filing of the proposed rule change, the Commission summarily may temporarily suspend such rule change if it appears to the Commission that such action is necessary or appropriate in the public interest, for the protection of investors, or otherwise in furtherance of the purposes of the Act. If the Commission takes such action, the Commission shall institute proceedings under Section 19(b)(2)(B) [20] of the Act to determine whether the proposed rule change should be approved or disapproved.

IV. Solicitation of Comments

Interested persons are invited to submit written data, views and arguments concerning the foregoing, including whether the proposed rule change is consistent with the Act. Comments may be submitted by any of the following methods:

Electronic Comments

- Use the Commission's internet comment form (*https://www.sec.gov/rules/sro.shtml*); or
- Send an email to *rule-comments@sec.gov.* Please include File Number SR–IEX–2026–44 on the subject line.

Paper Comments

- Send paper comments in triplicate to Secretary, Securities and Exchange Commission, 100 F Street NE, Washington, DC 20549–1090.

All submissions should refer to file number SR–IEX–2026–44. This file number should be included on the subject line if email is used. To help the Commission process and review your comments more efficiently, please use only one method. The Commission will post all comments on the Commission's internet website (*https://www.sec.gov/rules/sro.shtml*). Copies of the filing will be available for inspection and copying at the principal office of the Exchange. Do not include personal identifiable information in submissions; you should submit only information that you wish to make available publicly. We may redact in part or withhold entirely from publication submitted material that is obscene or subject to copyright protection. All submissions should refer to file number SR–IEX–2026–44 and should be submitted on or before November 30, 2026.

For the Commission, by the Division of Trading and Markets, pursuant to delegated authority.[21]

Sherry R. Haywood,

Assistant Secretary.

SECURITIES AND EXCHANGE COMMISSION

[Release No. 34–106824; File No. SR–NASDAQ–2026–095]

Self-Regulatory Organizations; The Nasdaq Stock Market LLC; Notice of Filing and Immediate Effectiveness of Proposed Rule Change to Set Fees for Nasdaq TotalView Plus and Nasdaq Basic Plus

November 4, 2026.

Pursuant to Section 19(b)(1) of the Securities Exchange Act of 1934 (''Act'') [1], and Rule 19b–4 thereunder,[2] notice is hereby given that on November 2, 2026, The Nasdaq Stock Market LLC (''Nasdaq'' or ''Exchange'') filed with the Securities and Exchange Commission (''SEC'' or ''Commission'') the proposed rule change as described in Items I, II, and III, below, which Items have been prepared by the Exchange. The Commission is publishing this notice to solicit comments on the proposed rule change from interested persons.

I. Self-Regulatory Organization's Statement of the Terms of Substance of the Proposed Rule Change

The Exchange proposes to set fees for Nasdaq TotalView Plus and Nasdaq Basic Plus at or below fees currently charged for the combined underlying Depth-of-Book and Top-of-Book products offered by the Nasdaq U.S. Equity Markets.[3]

The text of the proposed rule change is available on the Exchange's website at *https://listingcenter.nasdaq.com/*

[1] 15 U.S.C. 78s(b)(1).

[2] 17 CFR 240.19b–4.

[3] This filing replaces SR-Nasdaq-2026–091, which was withdrawn on November 2, 2026. It was previously filed as SR–Nasdaq–2026–076, which was withdrawn on October 21, 2026, SR–Nasdaq–2026–071, which was withdrawn on September 8, 2026, and SR–Nasdaq–2026–070, which was withdrawn on August 31, 2026.

rulebook/nasdaq/rulefilings, and at the principal office of the Exchange.

II. Self-Regulatory Organization's Statement of the Purpose of, and Statutory Basis for, the Proposed Rule Change

In its filing with the Commission, the Exchange included statements concerning the purpose of and basis for the proposed rule change and discussed any comments it received on the proposed rule change. The text of these statements may be examined at the places specified in Item IV below. The Exchange has prepared summaries, set forth in sections A, B, and C below, of the most significant aspects of such statements.

A. Self-Regulatory Organization's Statement of the Purpose of, and Statutory Basis for, the Proposed Rule Change

1. Purpose

The purpose of the proposed rule change is to set fees for Nasdaq TotalView Plus and Nasdaq Basic Plus [4] at or below the fees currently charged for the combined underlying Depth-of-Book and Top-of-Book products offered by the Nasdaq U.S. Equity Markets.[5]

The proposed fees will provide customers with the option of lowering market data, networking, and connectivity costs by replacing three separate feeds with one, and setting fees for these two new consolidated data products [6] at a level that is at or below current market data fees for the combined underlying products.[7]

The Exchange believes that this proposal will facilitate the transition to overnight trading in December 2026. As discussed in the product filing for Nasdaq TotalView Plus and Nasdaq Basic Plus,[8] liquidity may be limited for certain stocks in the overnight session. The two new consolidated data products will address this issue by providing investors with a broader view of the market than any of the individual underlying individual exchange feeds, thereby improving the ability of investors to analyze trading in a lower liquidity environment.

Nasdaq TotalView Plus

Nasdaq TotalView Plus includes, with respect to stocks listed on Nasdaq or on any exchange other than Nasdaq, all orders and quotes from all members of any of the Nasdaq U.S. Equity Markets and displayed on a Nasdaq U.S. Equity Market, including all information currently disseminated through Nasdaq TotalView,[9] Nasdaq Texas TotalView,[10] and PSX TotalView,[11] and the aggregate size of such orders and quotes at each price level in the execution functionality of the Nasdaq U.S. equity markets.

Nasdaq Basic Plus

Nasdaq Basic Plus offers the best bid and offer and last sale information for stocks listed on any of the Nasdaq U.S. Equity Markets or any exchange other than Nasdaq and displayed on any of the Nasdaq U.S. Equity Markets or the FINRA/Nasdaq TRF, including all information currently disseminated through Nasdaq Basic,[12] Nasdaq Texas BBO feeds,[13] Nasdaq Texas Last Sale,[14] PSX BBO Feeds,[15] and PSX Last Sale.[16]

Proposed Fees

As set forth in detail below, Nasdaq proposes to set fees for Nasdaq TotalView Plus and Nasdaq Basic Plus at or below fees currently charged for the Depth-of-Book and Top-of-Book products offered by the Nasdaq U.S. Equity Markets. This, together with the networking and connectivity savings inherent in lowering the number of data feeds, is designed to maximize the distribution of consolidated data feeds to investors throughout the 23 hour, 5 days per week schedule set to begin in December 2026.

The Exchange proposes to offer Nasdaq TotalView Plus for the same Professional and Non-Professional Subscriber and enterprise license fees as Nasdaq TotalView.[17] To ensure that market data vendors will be able to offer competing consolidated data products, any firm that certifies to Nasdaq that it will consolidate Nasdaq TotalView, Nasdaq Texas TotalView and Nasdaq PSX TotalView into a data feed solely

[4] *See* Securities Exchange Act Release No. 105997 (July 28, 2026), 81 FR 48466 (July 31, 2026) (SR–Nasdaq–2026–061) (a proposal to introduce Nasdaq TotalView Plus and Nasdaq Basic Plus, two new data feeds which will offer consolidated Top-of-Book and Depth-of-Book information currently disseminated by Nasdaq, Nasdaq Texas, and Nasdaq PSX).

[5] The Nasdaq Stock Market LLC (''Nasdaq''), Nasdaq Texas, LLC (''Nasdaq Texas''), and Nasdaq PHLX LLC equities (''Nasdaq PSX'').

[6] *See* Supra, n.4.

[7] As discussed in further detail below, the proposed fees are also structured to provide market data vendors an incentive to offer their own consolidated market data feeds in competition with Nasdaq TotalView Plus and Nasdaq Basic Plus to widespread dissemination of consolidated data to investors.

[8] *See* Supra, n.4.

[9] *See* Nasdaq Stock Market Rules, Equity 7, Section 123.

[10] Nasdaq Texas TotalView disseminates all individual Nasdaq Texas Equities System participant orders and quotes displayed in the system, the aggregate size of such orders and quotes at each price level, and the trade data for executions that occur within the Nasdaq Texas Equities System. *See* Nasdaq Texas LLC Rules, Equity 7, Section 123.

[11] PSX TotalView disseminates all individual Nasdaq PSX participant orders displayed in Nasdaq PSX, the aggregate size of such orders at each price level, and the trade data for executions that occur within Nasdaq PSX. *See* Nasdaq PHLX LLC Rules, Equity 7, Section 3, PSX TotalView.

[12] Including ''Nasdaq Basic for Nasdaq,'' ''Nasdaq Basic for NYSE,'' and ''Nasdaq Basic for NYSE American.''

[13] The Nasdaq Texas BBO Feeds consist of real-time market information from the Nasdaq Texas Market Center. *See* Nasdaq Texas, LLC, Equity 7, Section 147. ''Nasdaq Texas BBO for Nasdaq'' contains the Nasdaq Texas's best bid and offer for Nasdaq-listed securities. ''Nasdaq Texas BBO for NYSE'' contains Nasdaq Texas's best bid and offer for NYSE-listed securities. ''Nasdaq Texas BBO for Amex'' contains Nasdaq Texas's best bid and offer for Amex-listed securities.

[14] Nasdaq Texas Last Sale is a proprietary data feed containing real-time last sale information for trades executed on Nasdaq Texas. *See* Nasdaq Texas, LLC, Equity 7, Section 139(a). ''Nasdaq Texas Last Sale for Nasdaq'' contains all transaction reports for Nasdaq-listed securities. ''Nasdaq Texas Last Sale for NYSE/Amex'' contains all such transaction reports for NYSE- and Amex-listed securities. ''Nasdaq Texas Last Sale for NYSE/Amex'' also includes transaction reports from other Tape B listing venues, as set forth under Nasdaq Stock Market Rules, Equity 7, Section 139(a) ('''Nasdaq Last Sale for NYSE/NYSE American' contains all such transaction reports for NYSE-listed stocks and stocks listed on NYSE American and other Tape B listing venues.'').

[15] PSX BBO Feeds consist of real-time market information from PSX. *See* Nasdaq PHLX LLC, Equity 7, Section 3 (PSX BBO Feeds). ''PSX BBO for Nasdaq'' contains PSX's best bid and offer for Nasdaq-listed securities. ''PSX BBO for NYSE'' contains PSX's best bid and offer for NYSE-listed securities. ''PSX BBO for NYSE Amex'' contains PSX's best bid and offer for NYSE Amex-listed securities.

[16] PSX Last Sale is a proprietary data feed containing real-time last sale information for trades executed on Nasdaq PSX. *See* Nasdaq PHLX LLC, Equity 7, Section 3 (PSX Last Sale and Nasdaq Last Sale Plus Data Feeds). ''PSX Last Sale for Nasdaq'' contains all transaction reports for Nasdaq-listed securities on Nasdaq PSX. ''PSX Last Sale for NYSE/NYSE Amex'' contains all such transaction reports on Nasdaq PSX for securities listed on NYSE, NYSE Amex, and other exchanges. The phrase ''other exchanges'' refers to other Tape B listing venues, as set forth under Nasdaq Stock Market Rules, Equity 7, Section 139(a) ('''Nasdaq Last Sale for NYSE/NYSE American' contains all such transaction reports for NYSE-listed stocks and stocks listed on NYSE American and other Tape B listing venues.'').

[17] Internal and External Distributor, as well as Direct Access fees, may apply to purchasers of Nasdaq Plus products depending on the customer's use case. *See* Nasdaq Rules, Equity 7, Section 119(b). The Exchange is not proposing to change Distributor or Direct Access fees with this filing.

for external redistribution shall be exempt from Nasdaq Texas Market Data Distributor Fees [18] and Nasdaq PSX Market Data Distributor Fees,[19] and the Monthly External Distributor Fees at Equity 7, Section 119(b) shall be reduced by $350 per month.[20] These three discounts will ensure that vendors will be able to cover the cost of consolidating the underlying feeds.

The Exchange proposes to offer Nasdaq Basic Plus for the same Professional and Non-Professional Subscriber, enterprise license, and Distributor fees as Nasdaq Basic. To ensure that other market data vendors will be able to offer competing consolidated data products, Nasdaq proposes to charge the same monthly administrative and data consolidation fees for Nasdaq Basic Plus as are currently charged for Nasdaq Last Sale Plus to both Internal Distributors [21] and External Distributors [22] to cover the costs of data feed consolidation to be incurred by market data vendors.

With respect to the Market Data Enterprise License for Display Usage,[23] which currently offers both Nasdaq TotalView and Nasdaq Basic in the same enterprise license, the Exchange proposes to offer the Nasdaq TotalView Plus and Nasdaq Basic Plus feeds for the same fees currently charged for the Nasdaq TotalView and Nasdaq Basic.

Details for each of the proposed fees follow.[24]

TotalView Plus

Subscriber Fees

Nasdaq proposes to offer Nasdaq TotalView Plus for the same Professional and Non-Professional Subscriber fees as Nasdaq TotalView. This is, in effect, a waiver of Subscriber [25] and Non-Display Usage [26] fees for Texas TotalView [27] and Entitlement fees for Nasdaq PSX TotalView.[28]

Current Professional Subscriber fees for Nasdaq TotalView are $84 per month (operative January 1, 2026).[29] Non-Display Usage fees based upon Direct Access depend on the number of Subscribers: $412 per month for 1–39 Subscribers (operative January 1, 2026); $16,490 per month for 40–99 Subscribers (operative January 1, 2026); $32,990 per month for 100–249 Subscribers (operative January 1, 2026); and $75,000.00 per month per firm for over 250 Subscribers.

Non-Professional Subscriber fees for Nasdaq TotalView are $15 per month.[30]

All of these Professional and Non-Professional Subscriber fees and Non-Display Usage fees will be the same for both Nasdaq TotalView and Nasdaq TotalView Plus.

Enterprise License Fees

Nasdaq offers two monthly enterprise licenses for Nasdaq TotalView, one for $25,000,[31] and another for $500,000.[32]

The $25,000 per month enterprise license offers customers the right to provide Nasdaq TotalView for Display Usage for Internal Distribution, or for External Distribution to both Professional and Non-Professional Subscribers with whom the firm has a brokerage relationship.[33] Purchasers of this license also pay a monthly fee of $9 for each Non-Professional Subscriber and a monthly fee of $60 for each Professional Subscriber for Display Usage based upon Direct or Indirect Access.

The $500,000 per month enterprise license offers customers Nasdaq Level 2 or Nasdaq TotalView for Display Usage by Professional or Non-Professional Subscribers with whom the firm has a brokerage relationship.[34]

Nasdaq proposes to offer Nasdaq TotalView Plus with each enterprise license for the same monthly charge as Nasdaq TotalView.

Distributor Fees for Depth-of-Book Data

Nasdaq charges fees for distributors of its Depth-of-Book data.[35] Internal Distributors are charged a fee of $1,125 per month (operative January 1, 2026) for Nasdaq-listed security depth entitlements and $565 per month (operative January 1, 2026) for non-Nasdaq-listed security depth entitlements.[36] External Distributors are charged a fee of $2,820 per month (operative January 1, 2026) for Nasdaq-listed security depth entitlements and $1,410 per month (operative January 1, 2026) for non-Nasdaq-listed security depth entitlements.[37] These fees apply to all distributors of real-time Depth-of-Book data, which would include Nasdaq TotalView Plus.

Fee Waiver for Vendors of TotalView Plus

To ensure that market data vendors will be able to offer competing consolidated data products, any firm that certifies to Nasdaq that it will consolidate Nasdaq TotalView, Nasdaq Texas TotalView and Nasdaq PSX TotalView into a data feed solely for external redistribution shall be exempt from External Market Data Distributor Fees for Nasdaq Texas of $1,620 per month [38] and the Monthly External Distributor fee for PSX TotalView of $1,390,[39] and Monthly External Distributor Fees at Equity 7, Section 119(b) shall be reduced by $350 per month.[40]

[18] *See* Nasdaq Texas Rules, Equity 7, Section 119(a)

[19] *See* Nasdaq PHLX Rules, Equity 7, Section 3 (Market Data Distributor Fees).

[20] *See* Nasdaq Stock Market Rules, Equity 7, Sections 119(b) and 119(d). There are two Monthly External Distributor Fees at Section 119(b), one for Nasdaq-listed security depth entitlements and one for Non Nasdaq-listed security depth entitlements.

[21] ''Internal Distributors'' are Distributors that receive Nasdaq Last Sale Plus or Nasdaq Basic Plus data and then distribute that data to one or more Subscribers within the Distributor's own entity.

[22] ''External Distributors'' are Distributors that receive Nasdaq Last Sale Plus or Nasdaq Basic Plus data and then distribute that data to one or more Subscribers outside the Distributor's own entity.

[23] *See* Nasdaq Stock Market Rules, Equity 7, Section 132.

[24] In addition, Nasdaq is proposing to correct references to the Nasdaq NTX exchange at Equity 7, Section 139(e) as a non-substantive modification.

[25] The monthly charge for each Subscriber of Nasdaq Texas TotalView for Nasdaq is currently $22.25 (operative January 1, 2026), and $22.25 (operative January 1, 2026) for NYSE and regional issues for display usage or non-display usage not based upon Direct Access. *See* Nasdaq Texas Rules, Equity 7, Section 123(a)(1).

[26] For non-display usage of Nasdaq Texas TotalView for all issues based upon Direct Access, Distributors currently pay a monthly fee of $58.50 (operative January 1, 2026) for each Professional Subscriber. *See* Nasdaq Texas Rules, Equity 7, Section 123(a)(2).

[27] *See* Nasdaq Texas Rules, Equity 7, Section 123. Nasdaq Texas TotalView disseminates all individual Nasdaq Texas Equities System participant orders and quotes displayed in the system, the aggregate size of such orders and quotes at each price level, and the trade data for executions that occur within the Nasdaq Texas Equities System.

[28] *See* Nasdaq PHLX Rules, Equity 7, Section 3(a)(1)). The monthly charge for the PSX TotalView entitlement is $44.50 (operative January 1, 2026) for each Subscriber for display usage or for non-display usage not based upon Direct Access. The charge paid by non-professional subscribers for access to PSX TotalView Service through an authorized vendor is $1.00 per Subscriber per month. *See* Nasdaq PHLX Rules, Equity 7, Section 3(b).

[29] *See* Nasdaq Stock Market Rules, Equity 7, Section 123(b)(1)(B).

[30] *See id.* Section 123(b)(2)(A).

[31] *See id.* Section 123(c)(1).

[32] *See id.* Section 123(c)(2).

[33] *See id.* Section 123(c)(1).

[34] This license does not apply to Distributor fees.

[35] A ''distributor'' of Nasdaq data is any entity that receives a feed or data file of Nasdaq data directly from Nasdaq or indirectly through another entity and then distributes it either internally (within that entity) or externally (outside that entity). *See* Nasdaq Rules, Equity 7, Section 119(c).

[36] *See* Nasdaq Stock Market Rules, Equity 7, Section 119(b).

[37] *See id.*

[38] *See* Nasdaq Texas Rules, Equity 7, Section 119(a).

[39] *See* Nasdaq PHLX Rules, Equity 7, Section 3 (Market Data Distributor Fees).

[40] *See* Nasdaq Stock Market Rules, Equity 7, Sections 119(b) and 119(d).

The waiver of market data distributor fees for Nasdaq Texas and Nasdaq PSX, together with the proposed reduction of $350 per month in Monthly External Distributor Fees for the Nasdaq Stock Market, will cover the cost of consolidation for vendors. A vendor that seeks to create its own consolidated feed that includes Nasdaq TotalView, Nasdaq Texas TotalView and Nasdaq PSX TotalView would currently pay external distributor fees of $2,820 per month (operative January 1, 2026) for Nasdaq-listed security depth entitlements and $1,410 per month (operative January 1, 2026) for non-Nasdaq-listed security depth entitlements,[41] as well as External Market Data Distributor Fees for Nasdaq Texas of $1,620 per month,[42] and the Monthly External Distributor fee for PSX TotalView of $1,390.[43] A vendor that certifies to Nasdaq that it will consolidate these Nasdaq feeds to formulate its own product would save $350 per month in its monthly Market Data Distributor fees for the Nasdaq Stock Market, and also save $1,620 per month,[44] and $1,390 per month,[45] in external market data distributor fees for Nasdaq Texas and Nasdaq PSX, respectively. This is a total fee reduction of $3,360 per month. The same discount would not apply to non-vendors. Vendors would be able to apply these savings to cover the cost of forming their own consolidated feed, thereby allowing vendors to compete with Nasdaq in the sale of consolidated data products using the Depth-of Book data from Nasdaq affiliates.

Basic Plus

Subscriber Fees

Nasdaq proposes to offer Nasdaq Basic Plus for the same Professional and Non-Professional Subscriber fees as Nasdaq Basic. This is not a fee change, as there are currently no charges for Nasdaq Texas BBO feeds,[46] Nasdaq Texas Last Sale,[47] PSX BBO Feeds,[48] and PSX Last Sale.[49]

The current monthly per Subscriber charges for Nasdaq Basic, or Derived Data therefrom, are $14.10 for Nasdaq Basic for Nasdaq, $7.20 for Nasdaq Basic for NYSE, and $7.20 for Nasdaq Basic for NYSE American.[50]

For Non-Professional Subscribers, there currently is a monthly charge of $0.50 for Nasdaq Basic for Nasdaq, $0.25 for Nasdaq Basic for NYSE, $0.25 for Nasdaq Basic for NYSE American.[51] For Nasdaq Basic Plus, there will be a single charge of $1.00 that will cover Nasdaq Basic for Nasdaq, Nasdaq Basic for NYSE, and Nasdaq Basic for NYSE American.

Enterprise License Fees

Nasdaq offers three monthly enterprise licenses for Nasdaq Basic: a broker-dealer enterprise license for $155,000 per month,[52] another broker-dealer enterprise license for $100,000 per month,[53] and a Media Enterprise license for $100,000.[54]

The broker-dealer enterprise license for $155,000 per month offers internal Professional Subscribers access to Nasdaq Basic for Nasdaq, Nasdaq Basic for NYSE, and Nasdaq Basic for NYSE American, or Derived Data therefrom.[55] The broker-dealer must obtain a separate enterprise license for each External Distributor that controls display of the product if it wishes such External Distributor to be covered by an enterprise license rather than per-Subscriber fees. The license also offers access to Nasdaq Last Sale data for its own stock price and the stock price of up to ten of its competitors or peers, for display use on the broker-dealer's internal website.

The broker-dealer enterprise license for $100,000 per month offers any Nasdaq Basic Product, or Derived Data therefrom, through any electronic system approved by Nasdaq to an unlimited number of Professional and Non-Professional Subscribers who are natural persons and with whom the broker-dealer has a brokerage relationship.[56] This includes the right to distribute Nasdaq Last Sale data to the general investing public for Display Usage and to distribute Nasdaq Basic to the general investing public via television, websites, mobile devices, or any other unrestricted means of transmission for Display Usage.[57] A separate enterprise license is required for each discrete electronic system for distribution of Nasdaq Basic that is approved by Nasdaq and used by the broker-dealer.

The Media Enterprise License for $100,000 per month offers the right to distribute all or part of Nasdaq Basic for Display Usage to the general investing public.[58] Information may be made available via television, websites, mobile devices, or any other unrestricted means of transmission for Display Usage, to an unlimited number of Users. An External Distributor may use a Hosted Display Solution to distribute the data, provided that the External Distributor purchases a separate Media Enterprise License for each such Hosted Display Solution. Data may only be used for informational and non-trading purposes and distribution of Derived Data is not permitted.

With each enterprise license listed above, Nasdaq proposes to offer Nasdaq Basic Plus for the same fee as Nasdaq Basic.

Distributor Fees

Nasdaq proposes to offer Nasdaq Basic Plus for the same Distributor fees as Nasdaq Basic.

Each Distributor of any Nasdaq Basic product currently pays a fee of $1,680 for internal distribution or a fee of $2,140 for external, or external and internal, distribution.[59] A Distributor may also pay $1,500 per month to create and distribute Derived Data from Nasdaq Basic to an unlimited number of non-professional subscribers.[60] In addition, a Distributor that employs a Hosted Display Solution of distribute Derived Data taken from Nasdaq Basic pays a fee of $400 per month for each Hosted Display Solution.[61]

The Exchange proposes that all of these fees also apply to Nasdaq Basic Plus.

Data Consolidation Fee for Nasdaq Basic

Firms that receive Nasdaq Last Sale Plus or Nasdaq Basic Plus or both shall pay the monthly administrative fees for Nasdaq Last Sale, NTX Last Sale, and PSX Last Sale. Additionally, Internal Distributors [62] or External Distributors [63] of Nasdaq Last Sale Plus or Nasdaq Basic Plus or both shall pay a data consolidation fee of $350 per month. Firms that receive Nasdaq Last Sale Plus or Nasdaq Basic Plus would either be liable for Nasdaq Last Sale fees or Nasdaq Basic fees, but not both.

This fee is designed to cover the data consolidation costs of market data vendors to ensure that they will be able to offer competing consolidated data products.

As a conforming change, the Exchange proposes to modify Nasdaq Last Sale Plus to state that firms that receive Nasdaq Last Sale Plus or Nasdaq Basic Plus or both shall pay the monthly administrative fees for Nasdaq Last Sale, NTX Last Sale, and PSX Last Sale, as well as a data consolidation fee of $350 per month.

Market Data Enterprise License for Display Usage

Nasdaq proposes to offer both Nasdaq TotalView Plus and Nasdaq Basic Plus through its Market Data Enterprise License for Display Usage.

A Distributor that is also a broker-dealer or an investment adviser may pay a monthly enterprise license fee of $600,000 to distribute, for Display Usage only, Depth-of-Book data and Nasdaq Basic to an unlimited number of internal and external recipients, to be used only in the context of a brokerage relationship with a broker-dealer or an engagement with an investment adviser, as well as Nasdaq Basic under the terms and conditions set forth at Equity 7, Section 147(b)(6), and NLS and NLS Plus for unlimited external distribution through one of the mechanisms for the general investing public identified at Equity 7, Section 139(b). Alternatively, a Distributor eligible for the enterprise license may purchase a full twelve months of the enterprise license in advance for a monthly fee of $500,000, which may be paid in monthly installments.

Nasdaq proposes to include Nasdaq TotalView Plus and Nasdaq Basic Plus within this license for no additional fee.

2. Statutory Basis

The Exchange believes that its proposal is consistent with Section 6(b) of the Act,[64] in general, and furthers the objectives of Sections 6(b)(4) and 6(b)(5) of the Act,[65] in particular, in that it provides for the equitable allocation of reasonable dues, fees and other charges among members and issuers and other persons using any facility, and is not designed to permit unfair discrimination between customers, issuers, brokers, or dealers because the proposal: (i) offers more customer choice; (ii) prepares investors for overnight trading in potentially low-liquidity environments; (iii) protects competition by covering the data consolidation costs of market data vendors; (iv) proposes fees at or below current levels for Nasdaq and its affiliates; (v) proposes fees that are comparable to those of other exchanges; (vi) sets fees for a voluntary product, in that the Exchange is not required by any rule or regulation to make this data available and potential subscribers may purchase it only if they voluntarily choose to do so; and (vii) offers products to all market participants on a non-discriminatory basis.

1. More Customer Choice

The proposal will expand choice by allowing customers to select whether to purchase best bid and offer information through the separate data feeds of Nasdaq Basic, Nasdaq Texas BBO and PSX BBO (or any combination thereof) separately or in a single feed. Purchasing Nasdaq Basic Plus or Nasdaq TotalView Plus will allow some customers to optimize consumption by ingesting information from multiple markets in a single connection, which may result in cost savings for subscribers based on a more efficient configuration of data feeds. Nothing in this proposal will change the quantity or quality of Depth-of-Book or Top-of-Book information available in the market, as the underlying feeds will remain available, and the proposed feeds are simply amalgamations of those underlying feeds.

2. Prepare for Overnight Trading

Although the consolidation of Top-of-Book and Depth-of-Book data feeds from multiple affiliated exchanges is not new, the Exchange believes that such feeds will become more important with the commencement of overnight trading in December 2026. Because liquidity may be limited for certain stocks in the overnight session, the proposed consolidated feeds will provide investors with a broader view of the market than independent feeds, improving the ability of the investor to analyze market data in a lower liquidity environment. As such, we believe that the creation of these new feeds will facilitate the transition of investors to an overnight trading environment.

3. No Competitive Advantage Relative to Market Data Vendors

In offering Nasdaq Basic Plus and Nasdaq TotalView Plus, Nasdaq will be acting as a redistributor of Depth-of-Book [66] and Top-of-Book [67] products from Nasdaq, Nasdaq Texas, and Nasdaq PSX.

Nasdaq Basic Plus and Nasdaq TotalView Plus will be compiled from the same underlying feeds from Nasdaq, Nasdaq Texas, and Nasdaq PSX that are distributed to the purchasers of those feeds. With respect to speed, the path for the distribution of the information by the Exchange will not be faster than the path for distribution that would be used by a market data vendor to distribute similar, independently created products.

With respect to cost, the Exchange proposes to ensure that market data vendors are able to compete with the proposed fees by introducing a fee adjustment for distributors of Nasdaq TotalView Plus and a consolidation fee for Nasdaq Basic Plus. These proposals will allow vendors to cover the costs of consolidation for Depth-of-Book and Top-of-Book feeds, respectively.[68]

The proposed fee adjustment for Nasdaq TotalView Plus applies to any firm that certifies to Nasdaq that it will consolidate Nasdaq TotalView, Nasdaq Texas TotalView and Nasdaq PSX TotalView into a data feed solely for external redistribution. Such firms will receive a waiver of Nasdaq Texas Market Data Distributor Fees,[69] Nasdaq

[62] ''Internal Distributors'' are Distributors that receive Nasdaq Last Sale Plus or Nasdaq Basic Plus data and then distribute that data to one or more Subscribers within the Distributor's own entity.

[63] ''External Distributors'' are Distributors that receive Nasdaq Last Sale Plus or Nasdaq Basic Plus data and then distribute that data to one or more Subscribers outside the Distributor's own entity.

[64] 15 U.S.C. 78f(b).

[65] 15 U.S.C. 78f(b)(4) and (5).

[66] The underlying Depth-of-Book products are Nasdaq TotalView, Nasdaq Texas TotalView, and PSX TotalView.

[67] The underlying Top-of-Book products are Nasdaq Basic (which includes both best bid and offer and last sale information), Nasdaq Texas BBO, Nasdaq Texas Last Sale, PSX BBO, and PSX Last Sale.

[68] There is no consolidation fee for Nasdaq TotalView because the waiver of distributor fees for Nasdaq Texas and Nasdaq PSX, coupled with the $350 waiver of Nasdaq Stock Market distributor fees, is sufficient to cover the costs of consolidation without any additional fee.

[69] *See* Nasdaq Texas Rules, Equity 7, Section 119.

PSX Market Data Distributor Fees,[70] and a reduction of $350 per month in the Nasdaq Monthly External Distributor Fee.[71] This substantial savings—$1,620 per month for Nasdaq Texas,[72] and $1,390 per month for PSX TotalView,[73] and $350 per month for Nasdaq—will allow vendors to cover the cost of consolidation of Depth-of-Book feeds and will ensure that market data vendors will be able to offer consolidated data products that compete with Nasdaq TotalView Plus.

The proposed fee reduction of $350 per month below the price otherwise available is designed to have the same net impact on vendors as the proposed data consolidation fee of $350 for Nasdaq Basic Plus and the current $350 fee for NLS Plus. The Basic and NLS fees are designed to cover the costs of data feed consolidation. Nasdaq expects the proposed fee reduction for TotalView Plus to do the same, enabling vendors to apply some or all of that savings to consolidating the underlying feeds.

Nasdaq expects that amount of that reduction will be sufficient to cover the costs of consolidation for this Depth-of Book feed. In Nasdaq's experience, consolidating Depth-of-Book data should cost about the same, or somewhat less than, the cost of consolidating Top-of-Book data, notwithstanding the fact that Depth-of-Book products necessarily transmit more information than Top-of-Book products because they include multiple layers of bids and offers, rather than just one.

Consolidating best bid and offer information for Nasdaq Basic Plus requires continuously ''unpacking'' incoming market data, evaluating quotes across venues, determining the best bid and offer, constructing a consolidated view, and republishing that result. Consolidating last-sale data for NLS Plus requires that the provider ensure that trades are delivered in sequence across multiple sources, requiring timestamp management, gap detection, and validation logic to maintain the integrity of the combined feed. Depth-of-Book data, by contrast, is largely a pass-through; there is minimal transformation, calculation, or decision-making applied to the content. While the lower processing cost is somewhat, but not fully, offset by the amount of data being processed, Nasdaq believes that the net effect is that the cost of consolidating a Depth-of-Book feed is less than, and certainly no more than, the cost of consolidating a Top-of-Book feed. In an abundance of caution, Nasdaq proposes to set the fee reduction at $350, which will be more than sufficient to cover the vendor's cost of consolidating Depth-of-Book data.

The proposed reduction of $350 is within range of consolidation fees for competing exchange groups. It is above the NYSE Pillar Depth Consolidation Fee of $250,[74] but below the Cboe One Premium data consolidation fee of $1,000.[75]

The proposed fees for Nasdaq Basic Plus include monthly administrative fees for Nasdaq Last Sale, NTX Last Sale, and PSX Last Sale and a data consolidation fee of $350 per month for Internal Distributors and External Distributors of Nasdaq Basic Plus.[76] This is the current fee charged for Nasdaq Last Sale Plus to ensure that market data vendors will be able to offer competing feeds. The proposed fee is also within the range of similar fees charged by other exchange groups. It is above the NYSE BQT Access Fee of $250[77] but below the $1,000 data consolidation fee for the Cboe One Summary feed.[78]

The Exchange proposes a consolidation fee for both Nasdaq Basic Plus and Nasdaq Last Sale Plus because Nasdaq Basic Plus includes last sale information. Nasdaq expects vendors to use the same processes and servers to consolidate both best bid and offer and last sale information, and therefore the same consolidation fee should be sufficient to cover all data consolidation costs for both, enabling vendors to compete with the Exchange in consolidating and distributing data from multiple exchanges.

4. Proposes Fees at or Below Current Levels

All of the proposed fees are at or below the fees currently charged by Nasdaq and its affiliates for its exchange-only data feeds.

For Nasdaq Basic Plus, all subscriber fees, including both Professional and Non-Professional fees, and enterprise license fees, are exactly the same as currently charged for Nasdaq Basic alone. The proposed data consolidation fee for Nasdaq Basic Plus is exactly the same fee as currently charged for Nasdaq Last Sale Plus, and customers of Nasdaq Last Sale Plus would pay no consolidation fee for Nasdaq Basic Plus. Given that Nasdaq Basic Plus provides information for three exchanges at the same price currently charged for only the Nasdaq exchange, the proposed fees will allow customers to purchase the data of three exchanges for the fees currently charged by just one.

For Nasdaq TotalView Plus, all subscriber fees, including both Professional and Non-Professional fees, Non-Display Usage fees, and enterprise license fees are proposed to be exactly the same as currently charged for Nasdaq TotalView alone. The proposed waiver of Nasdaq Texas Market Data Distributor Fees and Nasdaq PSX Market Data Distributor Fees, as well as the $350 per month reduction of the Nasdaq Monthly External Distributor Fee, will lower fees even further. The proposed Nasdaq TotalView Plus fees therefore offer customers a discount below current fees.

5. Proposed Fees Are Comparable to Those of Other Exchanges

Exchange groups affiliated with both NYSE and Cboe offer consolidated data products comparable to Nasdaq Basic Plus and Nasdaq TotalView Plus.

For Top-of-Book products, the proposed Nasdaq Basic Plus feed is comparable to the NYSE BQT feed, which provides best bid and offer and last sale information for the New York Stock Exchange and its affiliates,[79] and the Cboe One feed, which disseminates the aggregate best bid and offer of all displayed orders traded on Cboe's affiliated exchanges.[80]

For Depth-of-Book products, the proposed Nasdaq TotalView Plus feed is comparable to the NYSE Pillar Depth feed, which provides a consolidated view of the ten best price levels on both the bid and offer sides across the NYSE Group's combined limit order books for the NYSE-affiliated exchanges,[81] and

the Cboe One Premium feed, which disseminates aggregated Depth-of-Book information for up to twelve price levels for the Cboe-affiliated exchanges.[82]

As shown below, the combined market share of the Nasdaq- NYSE- and Cboe-affiliated exchanges for the period July 2025 to June 2026 is similar, with the combined market share of the Nasdaq U.S. Equity exchanges over the past year at approximately 14.58 percent,[83] somewhat below the market share of the NYSE affiliates at 18.83 percent,[84] and above the market share of 9.59 percent for Cboe affiliates.[85]

Exchange	Market share (%)
Nasdaq	14.21
Nasdaq Texas	0.26
PSX	0.11
NYSE	8.20
ARCA	10.34
AMEX	0.29
NYSE Texas	0.35
NSX	0.33
IEX	3.43
MEMX	2.19
MIAX	0.95
LTSE	0.01
BATS	3.62
BATSY	0.65
EDGA	0.82
EDGX	4.50
24x	0.06

The Nasdaq- NYSE- and Cboe-affiliated exchange groups each offer different fee schedules, which will impact the fees paid by particular customers differently, depending on the type of customer and its use cases. Although these fee schedules are similar in many respects—all of these groups offer specific Professional and Non-Professional user fees, for example—they differ in important respects that limit the Exchange's ability to compare overall fee levels outside of the context of a particular customer and service order. The NYSE-affiliated exchanges charge access fees, for example, while the Nasdaq-affiliated exchanges do not. Therefore, the fees cannot be compared directly without knowing the details of a particular customer and its specific use cases.

With respect to Top-of-Book information, Nasdaq Basic Plus proposes subscriber fees of $14.10 for Nasdaq Basic for Nasdaq, $7.20 for Nasdaq Basic for NYSE, and $7.20 for Nasdaq Basic for NYSE American,[86] as well as Non-Professional fees of $0.50 for Nasdaq Basic for Nasdaq, $0.25 for Nasdaq Basic for NYSE, and $0.25 for Nasdaq Basic for NYSE American,[87] as discussed above. The Exchange also proposes a data consolidation fee of $350 per month and payment of monthly administrative fees for Nasdaq Last Sale, NTX Last Sale, and PSX Last Sale. There are also enterprise licenses of $100,000 per month [88] and $155,000 per month [89] for broker-dealers for various use cases, and a Media Enterprise license of $100,000.[90]

For Top-of-Book information from NYSE affiliates (Best Quotes & Trades), the per user access fee is $850, the access fee is $6,250, the redistribution fee is $2,500, the professional user fee is $18, the non-professional user fee is $1, and there is an enterprise license for Enterprise Fee: $50,000, and a digital media enterprise license for $65,000.[91]

For Top-of-Book information from Cboe affiliates (Cboe One Summary), external distribution fees are $5,000, professional user fees are $10, Non-Professional User fees are $0.25, Digital Media fees are $15,000, data consolidation fees are $1,000, and there is an enterprise license of $50,000.[92]

Although, as noted above, fees cannot be compared directly without understanding the type of customer, the number of end users, how that customer is using the data, and related information, they can be compared indirectly by analyzing overall market prices. As explained above, the proposed fees are essentially the same as those currently charged for the underlying Nasdaq products, which are, by definition, at current market prices. As the Exchange is proposing no new fees, the new products will also be at current market prices, and therefore continue to be comparable to the fees charged by other exchanges.

The same analysis holds for Depth-of-Book products.

As set forth in detail above, the Exchange proposes the following fees for Nasdaq TotalView Plus: Professional Subscriber fees of $84 per month,[93] Non-Display Usage fees based on a tiered structure,[94] and Non-Professional Subscriber fees of $15 per month.[95] The Exchange also proposes to offer enterprise licenses for $25,000 per month [96] and $500,000 per month.[97] The Exchange also proposes to waive External Market Data Distributor Fees for Nasdaq Texas and the Monthly External Distributor fee for PSX TotalView, and reduce the Nasdaq Monthly External Distributor Fee by $350 per month, for any firm that certifies to Nasdaq that it will consolidate Nasdaq TotalView, Nasdaq Texas TotalView and Nasdaq PSX TotalView into a data feed solely for external redistribution.[98]

For comparison, the NYSE Pillar Depth Feed has an Access Fee of $5,000, an Access & Redistribution Fee of $5,750, a Consolidation Fee of $250, a Multiple Datafeed Fee of $600, a Non-Display Fee of $10,000 (with $30,000 cap for Category 3), a Professional User Fee of $66, a Non-Professional User Fee of $10, a Non-Pro Enterprise User Fee Cap of $55,000 and a Professional & Non-Professional User Fee Cap: $135,550.[99]

The Cboe One Premium feed as an External Distribution fee of $12,500, a Professional User fee of $15, a Non-Professional User fee of $0.50, a Digital Media fee of $25,000, a Data Consolidation fee of $1,000, and an Enterprise license of $100,000.[100]

As is true for Top-of-Book consolidated data fees, the Depth-of-Book consolidated data fees depend on the type of customer, the number of end users, and how that customer is using the data. Nevertheless, the proposed fees are essentially the same as those currently charged for the underlying

(SR–NYSE–2024–24) (introducing the NYSE Pillar Depth feed as immediately effective pursuant to Section 19(b)(3)(A)(iii) of the Act and Rule 19b–4(f)(6) thereunder).

Nasdaq products, which are, by definition, at current market prices. As the Exchange is proposing no new fees, the new products will also be at current market prices, and therefore continue to be comparable to the fees charged by other exchanges.

6. Products Are Voluntary

Nasdaq Basic Plus and Nasdaq TotalView Plus are voluntary products, in that the Exchange is not required by any rule or regulation to make this data available and potential subscribers may purchase it only if they voluntarily choose to do so. As noted above, all of the underlying exchange Top-of-Book and Depth-of-Book products will remain available at current prices, and customers may decline to purchase Nasdaq Basic Plus and Nasdaq TotalView Plus for any reason, including cost.

7. No Unfair Discrimination

The proposal is not designed to permit unfair discrimination between customers, issuers, brokers, or dealers because the proposed feeds are optional data fees available to all market participants on a non-discriminatory basis.

In summary, the proposal provides for the equitable allocation of reasonable dues, fees and other charges among members and issuers and other persons using any facility, and is not designed to permit unfair discrimination between customers, issuers, brokers, or dealers because the proposal: (i) offers more customer choice; (ii) prepares investors for overnight trading in potentially low-liquidity environments; (iii) protects competition by covering the data consolidation costs of market data vendors; (iv) proposes fees at or below current levels; (v) proposes fees that are comparable to those of other exchanges; (vi) sets fees for a voluntary product, in that the Exchange is not required by any rule or regulation to make this data available and potential subscribers may purchase it only if they voluntarily choose to do so; and (vii) offers products to all market participants on a non-discriminatory basis.

B. Self-Regulatory Organization's Statement on Burden on Competition

The Exchange does not believe that the proposed rule change will impose any burden on competition not necessary or appropriate in furtherance of the purposes of the Act.

Nothing in the proposal burdens inter-market competition (the competition among self-regulatory organizations) because approval of the proposal does not impose any burden on the ability of other options exchanges to compete. As set forth in detail above, the proposed fees are comparable to the Depth-of-Book and Top-of-Book products offered by both NYSE-affiliated and Cboe-affiliated exchange groups, and either or both of those groups can propose fee changes to compete.

Nothing in the Proposal burdens intra-market competition (the competition among consumers of exchange data), because Nasdaq TotalView Plus and Nasdaq Basic Plus will be offered to all market participants at the same price and any market participant that elects to purchase either Nasdaq TotalView Plus or Nasdaq Basic Plus may do so on a non-discriminatory basis.

Moreover, as explained above, the proposed fees offer no competitive advantage relative to market data vendors. With respect to speed, the path for the distribution of the information by the Exchange will not be faster than the path for distribution that would be used by a market data vendor to distribute similar, independently created products. With respect to information, the same source of the market data to be used by the Exchange to create the two proposed products will also be available to any other market data vendor. With respect to cost, the Exchange proposes to ensure that market data vendors are able to compete with the proposed fees by introducing fee waivers for Nasdaq Texas External Market Data Distributor Fees and PSX TotalView Monthly External Distributor fees, and a $350 per month reduction in the Nasdaq Monthly External Distributor Fee that is exclusively available to market data vendors, as well as a consolidation fee for Nasdaq Basic Plus.

Nasdaq Basic Plus and Nasdaq TotalView Plus are completely voluntary products in that the Exchange is not required by any rule or regulation to make this data available and potential subscribers may purchase it only if they voluntarily choose to do so. Information is compiled from underlying feeds from Nasdaq, Nasdaq Texas, and Nasdaq PSX which will remain available for purchase.

C. Self-Regulatory Organization's Statement on Comments on the Proposed Rule Change Received From Members, Participants, or Others

No written comments were either solicited or received.

III. Date of Effectiveness of the Proposed Rule Change and Timing for Commission Action

The foregoing rule change has become effective pursuant to Section 19(b)(3)(A)(ii) of the Act.[101]

At any time within 60 days of the filing of the proposed rule change, the Commission summarily may temporarily suspend such rule change if it appears to the Commission that such action is: (i) necessary or appropriate in the public interest; (ii) for the protection of investors; or (iii) otherwise in furtherance of the purposes of the Act. If the Commission takes such action, the Commission shall institute proceedings to determine whether the proposed rule should be approved or disapproved.

IV. Solicitation of Comments

Interested persons are invited to submit written data, views and arguments concerning the foregoing, including whether the proposed rule change is consistent with the Act. Comments may be submitted by any of the following methods:

Electronic Comments

- Use the Commission's internet comment form (*https://www.sec.gov/rules/sro.shtml*); or
- Send an email to *rule-comments@sec.gov.* Please include file number SR–NASDAQ–2026–095 on the subject line.

Paper Comments

- Send paper comments in triplicate to Secretary, Securities and Exchange Commission, 100 F Street NE, Washington, DC 20549–1090.

All submissions should refer to file number SR–NASDAQ–2026–095. This file number should be included on the subject line if email is used. To help the Commission process and review your comments more efficiently, please use only one method. The Commission will post all comments on the Commission's internet website (*https://www.sec.gov/rules/sro.shtml*). Copies of the filing will be available for inspection and copying at the principal office of the Exchange. Do not include personal identifiable information in submissions; you should submit only information that you wish to make available publicly. We may redact in part or withhold entirely from publication submitted material that is obscene or subject to copyright protection.

All submissions should refer to file number SR–NASDAQ–2026–095 and should be submitted on or before November 30, 2026.

[101] 15 U.S.C. 78s(b)(3)(A)(ii).

For the Commission, by the Division of Trading and Markets, pursuant to delegated authority.[102]

Sherry R. Haywood,

Assistant Secretary.

[FR Doc. 2026–22759 Filed 11–6–26; 8:45 am]

BILLING CODE 8011–01–P

SECURITIES AND EXCHANGE COMMISSION

[Release No. 34–106819; File No. SR–BOX–2026–21]

Self-Regulatory Organizations; BOX Exchange LLC; Notice of Filing and Immediate Effectiveness of Proposed Rule Change To Adopt Rules To Govern the Trading of FLEX Equity Options in Electronic Auctions

November 4, 2026.

Pursuant to Section 19(b)(1) of the Securities Exchange Act of 1934 (''Act''),[1] and Rule 19b–4 thereunder,[2] notice is hereby given that on October 21, 2026, BOX Exchange LLC (the ''Exchange'') filed with the Securities and Exchange Commission (''Commission'') the proposed rule change as described in Items I and II below, which Items have been prepared by the self-regulatory organization. The Commission is publishing this notice to solicit comments on the proposed rule from interested persons.

I. Self-Regulatory Organization's Statement of the Terms of Substance of the Proposed Rule Change

The Exchange proposes to amend Rules 5055 (FLEX Equity Options) and 7240 (Complex Orders), and to add Rules 7155 (FLEX Price Improvement Period (''FLEX PIP'')) and 7275 (FLEX Solicitation Auction) to govern the trading of FLEX Equity Options in electronic auctions. The text of the proposed rule change is available from the principal office of the Exchange, and also on the Exchange's internet website at *https://rules.boxexchange.com/rulefilings.*

II. Self-Regulatory Organization's Statement of the Purpose of, and Statutory Basis for, the Proposed Rule Change

In its filing with the Commission, the self-regulatory organization included statements concerning the purpose of, and basis for, the proposed rule change and discussed any comments it received on the proposed rule change. The text of these statements may be examined at the places specified in Item IV below. The self-regulatory organization has prepared summaries, set forth in Sections A, B, and C below, of the most significant aspects of such statements.

A. Self-Regulatory Organization's Statement of the Purpose of, and Statutory Basis for, the Proposed Rule Change

1. Purpose

FLEX Equity Options are customized options contracts that allow investors to tailor contract terms for exchange-listed equity options. FLEX Equity Options are designed to meet the needs of investors for greater flexibility in selecting the terms of options within the parameters of the Exchange's rules. FLEX Equity Options are not preestablished for trading and are not listed individually for trading on BOX. Rather, investors select FLEX Equity Option terms and are limited by the parameters set forth in Rule 5055 in their selection of those terms. As a result, FLEX Equity Options allow investors to specify more specific, individualized investment objectives than may be available to them in the standardized options market.

FLEX Equity Options and FLEX Open Outcry (''FOO'') Orders were approved for trading on BOX on May 15, 2024.[3] FOO Orders are limited solely to the BOX Trading Floor.[4] The Exchange now proposes to adopt rules that will govern the listing and trading of FLEX Equity Options on the Exchange's electronic market. The Exchange notes that FLEX options trade electronically on Cboe Exchange, Inc. (''CBOE''), Nasdaq PHLX LLC (''Nasdaq PHLX''), and Nasdaq ISE, LLC (''Nasdaq ISE'').[5] The proposal allows for the trading of FLEX Equity Options in electronic auctions in a substantially similar manner as both CBOE and Nasdaq ISE's electronic markets, with certain intended differences primarily to align to current System behavior (and especially current auction behavior) to provide increased consistency for Participants trading FLEX Equity Options and Non-FLEX Equity Options on BOX, as discussed in detail below. The Exchange notes further that in Nasdaq ISE's recently approved filing to adopt FLEX options and electronic FLEX options trading, Nasdaq ISE compared its proposed rules to CBOE's established rules.[6] This proposal will also compare the Exchange's proposed rules to CBOE's established rules. Accordingly, the Exchange has omitted certain CBOE rules from the proposed rules due to differences in scope and operation of FLEX trading at CBOE compared to the proposed scope and operation of FLEX trading on BOX, each as noted below. For example, the Exchange proposes only to add price improvement and solicitation auctions and will not add Electronic FLEX Auctions as defined in CBOE Rule 5.72(c). Further, BOX does not allow prices in FLEX trading to be expressed as percentages.

The Exchange proposes amendments to Rule 5055 to accommodate FLEX Equity Option trading in electronic auctions. Specifically, the Exchange proposes to include Rules 7155 (FLEX PIP) and 7275 (FLEX Solicitation Auction) as Rules that govern FLEX Equity Options trading, in proposed Rule 5055(a), along with current Rule 7605 (FOO Orders).[7] The Exchange also proposes to remove the language from Rule 5055(b)(3), which provides that FLEX Equity Options may not be traded using any other order type than FOO Orders or other trading mechanism offered by the Exchange and add new subparagraph (3) to provide that FLEX Equity Options may only be traded as provided in proposed rules 7155 (FLEX PIP) and 7275 (FLEX Solicitation Auction), and current Rule 7605 (FOO Orders).[8]

The Exchange also proposes to provide as new subparagraphs (4) and (5) in Rule 5055(f) (Fungibility of FLEX Equity Options) that:

If a Non-FLEX Equity Option series is added intra-day for a component leg(s) of a FLEX Complex Order or FLEX Multi-Leg Order, the holder or writer of a FLEX Equity Option position in the component leg(s) resulting from such FLEX Complex Order or FLEX Multi-Leg Order would be permitted to close its position(s) under the FLEX trading procedures against another closing only FLEX Equity Option position for the balance of the trading day on which the

[8] *See* proposed Rules 5055(a)(3) and (b)(3).

Non-FLEX Equity Option series is added, and;

If a Non-FLEX Equity Option series is added for a component leg(s) of a FLEX Complex Order or FLEX Multi-Leg Order on a trading day after the FLEX Complex Order or FLEX Multi-Leg Order position is established, the holder or writer of a FLEX Equity Option position in the component leg(s) resulting from such FLEX Complex Order or FLEX Multi-Leg Order would be required to execute separate FLEX Equity Option and Non-FLEX Equity Option transactions to close its position(s), such that FLEX Equity Option component leg(s) would trade under the FLEX trading procedures and Non-FLEX Equity Option component leg(s) would trade subject to the non-FLEX trading procedures and rules.[9]

Lastly, the Exchange proposes to amend Rule 5055(l) to make the Letter of Authorization requirement for transactions in FLEX Equity Options applicable to Order Flow Providers in addition to Floor Brokers. As proposed, Rule 5055(l) will provide:

Letter of Authorization. No Floor Broker or Order Flow Provider shall effect any transaction in FLEX Equity Options unless a Letter of Authorization has been issued by a clearing member organization and filed with the Exchange specifically accepting responsibility for the clearance of FLEX Equity Option transactions of the Floor Broker or Order Flow Provider. The Letter of Authorization remains in effect until a written revocation is received by the Exchange.

The Exchange proposes to add new defined terms for ''FLEX Complex Order'' and ''FLEX Multi-Leg Order'' where the term ''FLEX Complex Order'' means an electronic Complex Order as defined in Rule 7240(a)(7) composed of FLEX Equity Options where each option leg must be for a FLEX Equity Option series authorized for FLEX trading with the same underlying security and each option leg must have the same exercise style (American or European) and the term ''FLEX Multi-Leg Order'' means an electronic Multi-Leg Order as defined in Rule 7240(a)(10) composed of FLEX Equity Options where each option leg must be for a FLEX Equity Option series authorized for FLEX trading with the same underlying security and each option leg must have the same exercise style (American or European).[10]

The Exchange proposes to establish PIP functionality for FLEX Equity Options in Rule 7155. The proposed FLEX PIP auction will be substantially similar to CBOE's FLEX AIM in CBOE Rule 5.73, except for certain intended differences as further described below. Pursuant to proposed Rule 7155, Options Participants, approved by the Exchange to trade FLEX Equity Options (''Initiating FLEX Participants'') may electronically submit for execution an order (which may be for a single FLEX Equity Option series, FLEX Complex Order, or FLEX Multi-Leg Order) it represents as agent (''FLEX PIP Order'') against principal interest or a solicited order(s) (a ''FLEX Primary Improvement Order'') provided it submits the FLEX PIP Order for electronic execution into a FLEX PIP pursuant to this Rule.[11]

Proposed Rule 7155(a) will set forth the FLEX PIP auction eligibility requirements. Specifically, the Initiating Participant may initiate a FLEX PIP auction if all of the following conditions are met:

- Class. A FLEX PIP Order must be in a FLEX Equity Option class authorized for trading by the Exchange.[12]
- FLEX Equity Option Series. The FLEX PIP Order and FLEX Primary Improvement Order must each be for a permissible FLEX Equity Option series that complies with Rule 5055. For a FLEX Complex Order or FLEX Multi-Leg Order, each leg must be in a permissible FLEX Equity Option series that complies with Rule 5055.
- Marking. The Initiating Participant must mark a FLEX PIP Order for FLEX PIP processing.
- Size. There will be no minimum size for FLEX PIP Orders. The FLEX Primary Improvement Order must be for the same size as the FLEX PIP Order.
- Minimum Increment. The price of the FLEX PIP Order and FLEX Primary Improvement Order must be in increments of one cent ($0.01) for all series. If the FLEX PIP Order and FLEX Primary Improvement Order are FLEX Complex Orders or FLEX Multi-Leg Orders, the price must be a net price for the strategy.[13]
- Time. An Initiating FLEX Participant may only submit a FLEX PIP Order to a FLEX PIP after the opening for trading of the underlying security in the primary market.

The System will reject or cancel both a FLEX PIP Order and FLEX Primary Improvement Order submitted to a FLEX PIP that do not meet the conditions in proposed paragraph (a) as described above. The proposed FLEX PIP eligibility requirements in proposed Rule 7155 are substantially similar to CBOE's FLEX AIM eligibility requirements in CBOE Rule 5.73(a), except with respect to the language related to the percentage value, as noted above.

Pursuant to proposed Rule 7155(b), the FLEX Primary Improvement Order must stop the entire FLEX PIP Order at a specified price. If the FLEX PIP Order and FLEX Primary Improvement Order are FLEX Complex Orders or FLEX Multi-Leg Orders, the price must be a net price for the strategy.[14] In particular, the Initiating Participant must specify either of the below.

- Pursuant to proposed subparagraph (b)(1), a single price at which it seeks to execute the FLEX PIP Order against the FLEX Primary Improvement Order (a ''single-price submission''), including designation of a lower amount for which it retains certain priority and trade allocation privileges upon the conclusion of the FLEX PIP (as described in proposed Rule 7155(e)(4)). This is similar to CBOE Rule 5.73(b)(1), except the Exchange is not proposing to allow Initiating Participants to elect for the FLEX Primary Improvement Order to have last priority to trade against the FLEX PIP Order, and will instead allow them to elect less than their guaranteed allocation.[15] As further discussed below, the proposed guaranteed allocation process will be based on the guaranteed allocation process available in non-FLEX PIP, and therefore the proposed rule change will provide

[9] *See* proposed Rules 5055(f)(4) and (5). The Exchange notes that these proposed rules align with current Rule 7605(d).

[10] *See* proposed Rules 7240(a)(11) and (12).

[11] *See* proposed Rule 7155, which is based on CBOE Rule 5.73. The Exchange notes the proposed rule will not incorporate the reference to FLEX SPX as this is a CBOE-specific product.

[12] Both physically settled FLEX Equity Options and those FLEX Equity Options that are permitted to have cash settlement, as provided by Rule 5050(e)(3)(i), will be permitted to trade via the FLEX PIP auction.

[13] The Exchange notes that it is not proposing order prices or minimum increments as a percentage. The Exchange notes further that one cent ($0.01) is the minimum increment for FLEX Equity Options in Rule 5055(g).

[14] *See* CBOE Rule 5.73(b) for similar provisions, except the Exchange will not allow prices to be entered as a percentage value, and therefore will not incorporate the applicable language from CBOE's rule into proposed Rule 7155(b).

[15] The Initiating FLEX Participant may designate a Surrender Quantity or lower amount for which it retains certain priority and trade allocation privileges upon the conclusion of the FLEX PIP auction than it is entitled to pursuant to the provisions of proposed Rule 7155(e)(1)(B). If the aggregate size of other FLEX Participants' responses is not equal to or greater than the Surrender Quantity, then the remaining Surrender Quantity shall be left unfilled and the FLEX Primary Improvement Order shall be allocated the remaining size of the FLEX PIP Order. CBOE's rule does not allow for the Initiating Participant to designate a specific surrender quantity rather last priority is designated. The Exchange notes that non-FLEX rules on CBOE and BOX also specify last priority and surrender quantity respectively. *See* CBOE Rule 5.37(e)(5) and BOX Rule 7150(h)(5).

further consistency across BOX's auction mechanism processes.[16]

• Pursuant to subparagraph (b)(2), an initial stop price and instruction to automatically match the price and size of all FLEX PIP responses (''auto-match'') at each price, up to a designated limit price, better than the price at which the balance of the FLEX PIP Order can be fully executed (the ''final auction price''). This is substantially similar to CBOE Rule 5.73(b)(2). The System rejects or cancels both a FLEX PIP Order and FLEX Primary Improvement Order submitted to a FLEX PIP that do not meet the conditions in this paragraph (b).

Proposed Rule 7155(c) will govern the FLEX PIP process. Specifically, upon receipt of a FLEX PIP Order that meets the conditions in paragraphs (a) and (b) as described above, the FLEX PIP process commences. Proposed subparagraph (c)(1) will provide that a FLEX PIP will not run simultaneously with another FLEX PIP in the same series, nor will FLEX PIPs interact, queue or overlap in any manner. Any request to initiate a FLEX PIP while a FLEX PIP is already in progress in the same series will be rejected.

The Exchange will accept, however, orders designated for the FLEX PIP on a single option series where a FLEX PIP on a Complex or Multi-Leg Order that includes such series may be in progress. The Exchange will also accept Complex or Multi-Leg Orders designated for the FLEX PIP where a FLEX PIP on either of the component series may be in progress. Order execution at the conclusion of such FLEX PIPs shall occur as set forth in proposed Rule 7155. The lack of concurrent FLEX PIPs is designed to align to current System behavior (and especially current auction behavior) to provide increased consistency for Participants trading FLEX Equity Options and Non-FLEX Equity Options on BOX.[17] The Exchange notes that this proposed subsection (c) differs from CBOE Rules 5.73(c)(1)(A) and (B), but again notes that the proposed functionality is consistent with BOX's current non-FLEX auction functionality.

Pursuant to proposed Rule 7155(c)(2), the System initiates the FLEX PIP process by sending a FLEX PIP notification message detailing the series or strategy, size, stop price, side of market, and when the FLEX PIP will conclude as applicable, of the FLEX PIP Order by broadcasting a message via the Exchange's data feeds. FLEX PIP notification messages are not disseminated to OPRA.[18]

Proposed Rule 7155(c)(3) will describe the ''FLEX PIP Auction period,'' and is based on CBOE Rule 5.73(c)(3). The ''FLEX PIP Auction period'' is a period of time designated by the Initiating FLEX Participant, which may be no less than three seconds and no more than five minutes.[19] The Initiating Participant will be required to identify a length of time within the specified parameters for FLEX PIP. If the Initiating Participant does not provide a length of time, the system will utilize the system default, which shall be three seconds. Further, if the designated length of the FLEX PIP Auction period exceeds the market close, then the auction will end at the market close without an execution. In doing so, the Exchange's proposal will prevent executions from occurring after the market close. Proposed Rule 7155(c)(4) will provide that an Initiating Participant may not cancel a FLEX PIP Order or FLEX Primary Improvement Order but may modify a FLEX Primary Improvement Order to improve its price after submission to a FLEX PIP. This will be similar to CBOE Rule 5.73(c)(4) except unlike CBOE, the Exchange will allow a limited exception by allowing Initiating Participants to improve the price of their FLEX Primary Improvement Orders. The Exchange notes that this will align to current non-FLEX PIP behavior, which allows entering Participants to improve their Primary Improvement Orders.[20] Similar to allowing the entering Participant of a non-FLEX PIP to improve the price of its Primary Improvement Order, the Exchange believes that it is appropriate to allow the Initiating Participant of the FLEX PIP to improve the price of its FLEX Primary Improvement Order (*i.e.,* contra-side to the FLEX PIP Order) because it would also improve the stop price of the FLEX PIP Order that came in together with the FLEX Primary Improvement Order.[21]

Proposed Rule 7155(c)(5) will govern the requirements for FLEX PIP responses.

Specifically:

• Any FLEX Participant (other than the Initiating Participant) may submit responses to a FLEX PIP that are properly marked specifying price, size, side for the FLEX PIP to which the Participant is submitting the response.[22]

• The minimum price increment for FLEX PIP responses is one-cent ($0.01) for all series. A response to a FLEX PIP of a FLEX Complex or FLEX Multi-Leg Order must have a net price. The System rejects a FLEX PIP response that is not in the applicable minimum increment or format.[23]

• A FLEX Participant may continually submit competing FLEX PIP responses for any price equal to or better than the FLEX Primary Improvement Order, and may improve the price of their response(s) at any point during the FLEX PIP. Subsequent FLEX PIP responses replace the previous response, provided that it improved the price of the previous response.[24] Responses submitted by FLEX Participants are processed by Trader

[16] *See infra* note 34 for further discussion on the guaranteed allocation process.

[17] *See* BOX IM–7150–2.

[18] *See* CBOE Rule 5.73(c)(2) for substantially similar provisions except the Exchange will not incorporate the reference to SPX as it does not list this symbol.

[19] The Exchange notes that CBOE Rule 5.73(c)(3) specifies that the designated length of the FLEX AIM Auction period may not be longer than the amount of time remaining until the market close. While this differs from BOX's proposal, BOX's System will cancel a FLEX PIP that is not over by the market close without execution.

[20] *See* BOX Rule 7150(f)(2) (providing that the Initiating Participant is not permitted to cancel or to modify the size of its Single-Priced Primary Improvement Order or the PIP Order at any time during the PIP, and may modify only the price of its Single-Priced Primary Improvement Order by improving it. The Initiating Participant is not permitted to cancel or modify the Max Improvement Primary Improvement Order, including the PIP Start Price, the designated limit price or the size). Primary Improvement Orders (*i.e.,* contra-side to the PIP Order) for PIP are functionally equivalent to FLEX Primary Improvement Orders (*i.e.,* contra-side order to the FLEX PIP Order) for FLEX PIP. *See* BOX Rule 7150(f) for a description of Primary Improvement Orders.

[21] As proposed, the Initiating Participant enters a FLEX PIP consisting of a FLEX PIP Order and a FLEX Primary Improvement Order (which is the contra-side of the FLEX PIP Order). This is identical to how non-FLEX PIP works today in that the Initiating Participant enters a paired order into non-FLEX PIP consisting of a PIP Order and a Primary Improvement Order. The Exchange notes that a PIP Improvement Order is the functional equivalent of a FLEX PIP response.

[22] *See* proposed Rule 7155(c)(5), which is based on CBOE Rule 5.73(c)(5). The Exchange notes that this proposed subsection (c)(5) differs from CBOE Rules 5.73(c)(5) because a FLEX PIP will not run simultaneously with another FLEX PIP and, therefore need not specify which response may participate in which auction. The Exchange notes further that the proposed functionality is consistent with current non-FLEX auction functionality. *See* BOX IM–7150–2.

[23] *See* proposed Rule(c)(5)(A), which is based on CBOE Rule 5.73(c)(5)(A) except the Exchange will not allow prices to be expressed as a percentage value. Further, the Exchange will not incorporate the CBOE rule portions on Index Combo Orders as the Exchange does not offer this functionality. The Exchange notes that it will not determine minimum increments on a class basis, which is consistent with established FLEX Equity Option trading on the BOX Trading Floor. *See* BOX Rule 5055(g).

[24] *See* proposed Rule 7155(c)(5)(B), which is based on CBOE Rule 5.73(c)(5)(B). The Exchange notes that it will not aggregate FLEX PIP responses from the same Participant, which aligns with current non-FLEX PIP functionality. *See* BOX Rule 7150(f).

ID.[25] If an additional FLEX PIP response is submitted for the same FLEX PIP from the same Trader ID, then that FLEX PIP response will replace the previous FLEX PIP response for that Trader ID.[26]

• Competing FLEX PIP responses may be for any size up to the size of the FLEX Primary Improvement Order.[27] The System rejects responses in excess of the size of the FLEX PIP Order when processing the FLEX PIP.

• FLEX PIP responses must be on the opposite side of the market as the FLEX PIP Order. The System rejects a FLEX PIP response on the same side of the market as the FLEX PIP Order.[28]

• FLEX PIP responses will not be visible to FLEX PIP Participants or disseminated to OPRA.[29]

• A FLEX Participant may modify or cancel its FLEX PIP responses during the FLEX PIP auction.[30]

Pursuant to proposed Rule 7155(d), a FLEX PIP concludes at the earliest to occur of the following times: (1) the end of the FLEX PIP Duration; and (2) any time the Exchange halts trading in the affected underlying, provided, however, that in such instances the FLEX PIP auction concludes without execution.[31]

Proposed Rule 7155(e) will govern how executions will occur in FLEX PIP. In particular, at the end of the FLEX PIP, the System allocates the FLEX Primary Improvement Order or FLEX PIP responses against the FLEX PIP Order at the best price(s), to the price at which the balance of the FLEX PIP Order can be fully executed (the ''final auction price''), as follows.[32] Proposed subparagraphs (e)(1)—(4) detail the FLEX PIP allocation methodology for the following scenarios:

• No Price Improvement: If the FLEX PIP results in no price improvement, the System executes the FLEX PIP Order at the stop price in the following order:

○ Public Customer responses (in time priority); [33]

○ The FLEX Primary Improvement Order for up to 50% of the FLEX PIP Order if there is a response(s) from one other Participant at the same price or up to 40% of the FLEX PIP Order if there are responses from two or more other Participants at the same price (which percentages are based on the number of contracts remaining after execution against Public Customer responses).[34] Unless there are remaining contracts after including all FLEX PIP responses, under no circumstances does the Initiating Participant receive an allocation percentage at the final auction price of more than 50% of the initial FLEX PIP Order in the event there is a response(s) from one other Participant or 40% of the initial FLEX PIP Order in the event there are responses from two or more other Participants.[35] For example, assume an Initiating Participant submitted a FLEX PIP for 20 contracts and there are 2 FLEX PIP responses (one for 3 contracts and one for 4 contracts). After the 7 FLEX PIP response contracts are allocated, the Initiating Participant would then receive the remaining 13 contracts (which is more than their 40% allocation percentage) because there are remaining contracts after all FLEX PIP responses are included.

○ All other FLEX PIP responses are allocated on a pro-rata basis. The System allocates orders proportionally according to size (*i.e.,* on a pro-rata basis). The System allocates executable quantity to the nearest whole number, with fractions rounded down. If there remains any unallocated quantity of the FLEX PIP Order, the allocation method will be to allocate one contract of the FLEX PIP Order per FLEX PIP response in sequence until each remaining response has received one contract or until the FLEX PIP Order is fully allocated. Allocation sequence among responses in this step will be in order of size with the largest remaining response allocated first. Where two or more such responses are the same size, trade allocation sequence will be by time priority; [36] and

○ The FLEX Primary Improvement Order to the extent there are any remaining contracts.[37]

• Price Improvement with Single-Price Submission: If the FLEX PIP auction results in price improvement for the FLEX PIP Order and the Initiating Participant selected a single-price submission, at each price better than the final auction price, the System executes the FLEX PIP Order in the following order:

○ Price-time priority such that responses with the lowest (highest) offer (bid) are executed in the order they are received.[38]

For example, assume a FLEX PIP Order is sent to buy 100 contracts with a price of $1.00 and the Initiating Participant selected a single-price submission. There are two FLEX PIP responses for 5 contracts each at $0.98, two FLEX PIP responses for 20 contracts each at $0.99, and two FLEX PIP responses for 40 contracts each at $1.00. The FLEX PIP responses at $0.98 and $0.99 will be executed in their entirety.[39] Then, the FLEX PIP responses at $1.00 (final auction price) will be executed on a pro-rata basis after Public Customers. At the final auction price, the System executes any remaining contracts from the FLEX PIP Order at that price in the order set forth in proposed Rule 7155(e)(1), as described above.[40] Specifically, the

[25] A Trader ID is a unique identifier created by BOX to identify each BOX Options Participant. A BOX Options Participant may be associated with multiple Trader IDs

[26] This is similar to the electronic FLEX auction functionality offered by another exchange and similar to the current PIP functionality on the Exchange. *See* ISE Options 3A, Section 11(b)(2)(D) and BOX Rule 7150, respectively.

[27] *See* proposed Rule 7155(c)(5)(C), which is based on CBOE Rule 5.73(c)(5)(C).

[28] *See* proposed Rule 7155(c)(5)(D), which is based on CBOE Rule 5.73(c)(5)(D).

[29] *See* proposed Rule 7155(c)(5)(E), which is based on CBOE Rule 5.73(c)(5)(E).

[30] *See* proposed Rule 7155(c)(5)(F), which is based on CBOE Rule 5.73(c)(5)(F).

[31] *See* CBOE Rule 5.73(d) for similar provisions, except the Exchange will make a minor clarification that this rule applies when the Exchange halts trading in the affected underlying (and not series, which is what CBOE currently has in its rule).

[32] *See* CBOE Rule 5.73(e) for similar provisions except the Exchange will not allow prices to be expressed as a percentage value.

[33] *See* proposed Rule 7155(e)(1)(A), which is based on CBOE Rule 5.73(e)(1)(A).

[34] *See* proposed Rule 7155(e)(1)(B)(ii), which is based on CBOE Rule 5.73(e)(1)(B)(ii). The Exchange notes that its proposed rules do not guarantee at least one contract. The Exchange notes further that the Initiating Participant may be allocated more than 50% of the Agency Order if there are remaining contracts after including all FLEX PIP responses.

[35] *See* proposed Rule 7155(e)(1)(B), which is based on CBOE Rule 5.73(e)(1)(B). The proposed functionality will align to current non-FLEX PIP functionality. *See* BOX Rule 7150(h)(1)–(2).

[36] *See* proposed Rule 7155(e)(1)(C), which is based on CBOE Rule 5.73(e)(1)(C).

[37] *See* proposed Rule 7155(e)(1)(D), which is based on CBOE Rule 5.73(e)(1)(D).

[38] *See* proposed Rule 7155(e)(2)(A). Unlike CBOE Rule 5.73(e)(2), which allocates contracts, at each price level better than the final auction price, Priority Customer and then pro-rata, the proposed rule allocates contracts, at each price better than the final auction price, on a price-time basis. The Exchange believes, although its proposal differs, the resulting allocations will be similar because all orders at each price level better than the final auction price will be filled. Specifically, ''at each price level better than the final auction price up to the designated limit price, the System executes the FLEX PIP Order against the FLEX Primary Improvement Order for the number of contracts equal to the aggregate size of *all* FLEX PIP responses and then executes the Agency Order against those responses . . . .'' *See* proposed Rule 7155(e)(3) (emphasis added). Because all FLEX PIP responses, at each price level better than the final auction price are executed, the application of price-time or Priority Customer and then pro-rata priority results in a similar allocation of contracts regardless of which allocation methodology is applied.

[39] The Exchange notes that, although CBOE applies Priority Customer and then pro rata priority at each price level better than the final auction price, and BOX proposes to apply price-time allocation at each price level better than the final auction price, regardless of allocation methodology, all contracts at $0.98 and $0.99 would be filled because there is sufficient FLEX PIP Order quantity.

[40] *See id.* The Exchange again notes the proposed operation of FLEX PIP is consistent with the current

FLEX Primary Improvement Order is allocated 20 contracts (40% of the remaining 50 contracts) and 15 contracts are allocated to each FLEX PIP response at $1.00 (pro rata).

• Price Improvement with Auto-Match: If the FLEX PIP results in price improvement for the FLEX PIP Order and the Initiating Participant selected auto-match, at each price better than the final auction price up to the designated limit price, the System executes the FLEX PIP Order against the FLEX Primary Improvement Order for the number of contracts equal to the aggregate size of all FLEX PIP responses and then executes the FLEX PIP Order against those responses in the order set forth in proposed Rule 7155(e)(2) described above. At the final auction price, the System executes contracts at that price in the order set forth in proposed Rule 7155(e)(1) described above.[41]

• Surrender Quantity: At its option, the Initiating FLEX Participant may designate a lower amount for which it retains certain priority and trade allocation privileges upon the conclusion of the FLEX PIP than it is entitled to pursuant to the provisions of 7155(e)(1) or 7155(e)(2), above. When starting a FLEX PIP, the Initiating FLEX Participant may designate a lower amount for which it retains certain priority and trade allocation privileges upon the conclusion of the FLEX PIP than it is entitled to pursuant to the provisions of proposed Rule 7155(e)(1)(B).[42] Upon the conclusion of the FLEX PIP, when the System determines the priority and trade allocation amounts for the Initiating FLEX Participant pursuant to proposed Rule 7155(e)(1)(B), the Trading Host will automatically adjust the trade allocations to the other FLEX PIP Participants, according to the priority set forth in proposed Rule 7155(e), up to the Surrender Quantity. The FLEX Primary Improvement Order shall be allocated the remaining size of the FLEX PIP Order above the Surrender Quantity, if any, pursuant to proposed Rule 7155(e)(1)(D). Surrender Quantity information is not available to other market participants and may not be modified after it is submitted.[43]

Pursuant to proposed Rule 7155(e)(5), the System cancels any unexecuted FLEX PIP responses (or unexecuted portions) at the conclusion of the FLEX PIP auction.[44]

The Exchange proposes a number of interpretive materials applicable to FLEX PIP. Specifically, proposed IM–7155–1 will provide that a Participant may only use a FLEX PIP where there is a genuine intention to execute a bona fide transaction.[45] Proposed IM–7155–2 will provide that it will be deemed conduct inconsistent with just and equitable principles of trade and a violation of Rule 3000 to engage in a pattern of conduct where the Initiating FLEX Participant breaks up a FLEX PIP Order into separate orders for the purpose of gaining a higher allocation percentage than the Initiating FLEX Participant would have otherwise received in accordance with the allocation procedures contained in proposed paragraph (e) above.[46] Lastly, proposed IM–7155–3 will provide that an Exchange Official may nullify a transaction following a FLEX PIP pursuant to Rule 7170.[47]

FLEX Solicitation Auction

The Exchange proposes to establish FLEX Solicitation Auction functionality for FLEX Equity Options in Rule 7275. The proposed FLEX Solicitation Auction will be substantially similar to CBOE's FLEX SAM in CBOE Rule 5.74, except for certain intended differences to align with BOX's current System functionality for Non-FLEX Equity Options, as further described below. Pursuant to proposed Rule 7275, Options Participants, approved by the Exchange to trade FLEX Equity Options (''Initiating FLEX Participants'') may electronically submit for execution an order (which may be for a single FLEX Equity Option series, FLEX Complex Order, or FLEX Multi-Leg Order) it represents as agent (''Agency Order'') against a solicited order (a ''Solicited Order'') provided it submits the Agency Order for electronic execution into a FLEX Solicitation Auction pursuant to this Rule.[48] Proposed Rules 7275(a)(1)–(6) will set forth the FLEX Solicitation Auction eligibility requirements, and will be substantially similar to CBOE Rules 5.74(a)(1)–(6) except as noted below. Specifically, Initiating FLEX Participants may initiate a FLEX Solicitation if all of the following conditions are met:

• Class. An Agency Order must be in a FLEX Equity Option class authorized for trading by the Exchange.[49]

• FLEX Option Series. The Agency Order and Solicited Order must each be for a permissible FLEX Equity Option series that complies with Rule 5055. For a FLEX Complex Order or FLEX Multi-Leg Order, each leg must be in a permissible FLEX Equity Option series that complies with Rule 5055.[50]

• Marking. The Initiating Participant must mark an Agency Order for FLEX Solicitation Auction processing.

• Size. The Agency Order must be for at least the minimum size designated by the Exchange (which may not be less than 500 contracts). The Solicited Order must be for the same size as the Agency Order. For a FLEX Complex Order or FLEX Multi-Leg Order, each leg may not be for less than 500 contracts. The System handles each of the Agency Order and the Solicited Order as all-or-none.[51]

operation of non-FLEX PIP. *See* BOX Rule 7150(g). The Exchange notes further that the proposed trade allocation at the final auction price is substantially similar to CBOE.

[41] *See* proposed Rule 7155(e)(3), which is based on CBOE Rule 5.73(e)(3).

[42] *See* proposed Rule 7155(e)(4), which is based on CBOE Rule 5.73(e)(4) except CBOE's last priority feature differs from the Exchange's surrender quantity feature that allows Participants to request a lower amount for which it retains certain priority and trade allocation privileges upon the conclusion of the FLEX PIP than it will be entitled to pursuant to the provisions of proposed Rule 7155(e). As such, the difference between CBOE's rule and BOX's rule will be that BOX Participants will be able to customize their surrender quantities for FLEX PIP (which will follow the non-FLEX PIP process in Rule 7150(h)(5)) while CBOE's rules do not appear to allow this for FLEX AIM.

[43] *See id.*

[44] *See* proposed Rule 7155(e)(5), which is based on CBOE Rule 5.73(e)(5).

[45] *See* proposed IM–7155–1, which is based on CBOE Rule 5.73 Interpretations and Policies .01.

[46] *See* proposed IM–7155–2, which is based on CBOE Rule 5.73 Interpretations and Policies .02.

[47] *See* proposed IM–7155–3, which is based on CBOE Rule 5.73 Interpretations and Policies .03.

[48] *See* CBOE Rule 5.74 for similar provisions, except the Exchange will not add CBOE's language that the Solicited Order cannot have a Capacity F (*i.e.,* Firm capacity) for the same executing firm ID (''EFID'') as the Agency Order for the following reasons. Facilitated orders cannot be entered into the FLEX Solicitation Auction (just like they cannot be entered into the non-FLEX Solicitation Auction today). Since an order with the capacity of Firm can be valid for a solicitation order, BOX will not System enforce the rejection of Firm capacity orders to avoid the rejection of contra-side orders that are entered with a Firm capacity and are, in fact, solicitations at the outset. Instead, it will monitor for compliance with the requirement that the contra-side order be a solicitation rather than a facilitation through surveillance, as it does today for non-FLEX Solicitation Auctions. The applicable rule for the foregoing requirement will be set forth in proposed IM–7275–2.

[49] Both physically settled FLEX Equity Options and those FLEX Equity Options that are permitted to have cash settlement, as provided by Rule 5050(e)(3)(i), will be permitted to trade via the FLEX Solicitation auction.

[50] *See* CBOE Rule 5.74(a)(2) for similar provisions, except the Exchange will add a provision to specify that each leg of a FLEX Complex Order or FLEX Multi-Leg Order must be in a permissible FLEX Equity Option series that complies with Rule 5055.

[51] *See* CBOE Rule 5.74(a)(4) for similar provisions except unlike CBOE, the Exchange will not allow the Solicited Order to be comprised of multiple solicited orders in the FLEX Solicitation Auction to be consistent with current non-FLEX Solicitation Auction functionality in Rule 7270. In addition, the Exchange will not incorporate CBOE's provisions relating to mini options or Micro FLEX Index

Continued

• Minimum Increment. The price of the Agency Order and Solicited Order must be in increments of one cent ($0.01) for all series. If the Agency Order and Solicited Order are FLEX Complex Orders or FLEX Multi-Leg Orders, the price must be a net price for the strategy.[52]

• Time. An Initiating FLEX Participant may only submit an Agency Order to a FLEX Solicitation after the opening for trading of the underlying security in the primary market.[53] The System rejects or cancels both an Agency Order and Solicited Order submitted to a FLEX Solicitation Auction that do not meet the conditions in this paragraph (a).

Pursuant to proposed Rule 7275(b), the Solicited Order must stop the entire Agency Order. If the Agency Order and Solicited Order are FLEX Complex or FLEX Multi-Leg Orders, the price must be a net price for the strategy. The Initiating FLEX Participant must specify a single price at which it seeks to execute the Agency Order against the Solicited Order. The System rejects or cancels both an Agency Order and Solicited Order submitted to a FLEX Solicitation Auction that does not meet this condition.[54]

Proposed Rule 7275(c) will govern the FLEX Solicitation process. Specifically, upon receipt of an Agency Order that meets the conditions in paragraphs (a) and (b) as described above, the FLEX Solicitation process commences. Pursuant to proposed subparagraph (c)(1), a FLEX Solicitation will not run simultaneously with another FLEX Solicitation in the same series, nor will FLEX Solicitations interact, queue or overlap in any manner.[55] Any request to initiate a FLEX Solicitation while a FLEX Solicitation is already in progress in the same series will be rejected. This proposal differs from CBOE Rule 5.74(c)(1) which allows concurrent auctions. The Exchange notes this is consistent with current non-FLEX Solicitation Auction functionality.

Pursuant to proposed Rule 7275(c)(2), the System initiates the FLEX Solicitation process by sending a FLEX Solicitation notification message detailing the series or strategy, size, stop price, side of market, and when the FLEX Solicitation Auction will conclude as applicable, by broadcasting a message via the Exchange's data feeds. FLEX Solicitation Auction notification messages are not disseminated to OPRA. These provisions are substantially similar to CBOE Rule 5.74(c)(2).

Proposed Rule 7275(c)(3) will describe the ''FLEX Solicitation Auction Period,'' and is based on CBOE Rule 5.74(c)(3). The FLEX Solicitation Auction Period will be defined as a period of time that must be designated by the Initiating Participant, which may be no less than three seconds and no more than five minutes, similar to the exposure interval for FLEX PIP in proposed Rule 7155 and the FOO Order announcement period in Rule 7605. The Initiating Participant will be required to identify a length of time within the specified parameters for FLEX Solicitation Auctions. If the Initiating Participant does not provide a length of time, the system will utilize the system default, which shall be three seconds. Further, if the designated length of the FLEX Solicitation Auction Period exceeds the market close, then the auction will end at the market close without an execution. The Exchange's non-FLEX auctions do not allow executions in such scenarios, so the Exchange proposes to be consistent with current System functionality in this regard.[56] In doing so, the Exchange's proposal will prevent executions in FLEX Solicitation Auctions from occurring after the market close. Proposed Rule 7275(c)(4) will provide that an Initiating FLEX Participant may cancel an Agency Order or Solicited Order after submission to a FLEX Solicitation Auction. The Initiating FLEX Participant may not modify an Agency Order or Solicited Order after submission to a FLEX Solicitation Auction. This will differ from CBOE Rule 5.74(c)(4), which does not allow cancelation or modification of the Initiating Order or Agency Order. The Exchange will allow Initiating Participants to cancel their Agency Orders and Solicited Orders upon submission into a FLEX Solicitation Auction, which will align with current non-FLEX Solicitation Auction functionality.[57] Proposed Rule 7275(c)(5) will govern the requirements for FLEX Solicitation responses. Specifically:

• Any FLEX Participant (other than the Initiating Participant) may submit responses to a FLEX Solicitation Auction that are properly marked specifying size, side, and price for the FLEX Solicitation Auction to which the FLEX Participant is submitting the response.[58]

• The minimum price increment for FLEX Solicitation Auction responses is one-cent ($0.01) for all series. A response to a FLEX Solicitation Auction of a FLEX Complex or FLEX Multi-Leg Order must have a net price. The System rejects a FLEX Solicitation Auction response that is not in the applicable minimum increment or format.[59]

• A FLEX Participant may submit FLEX Solicitation Auction responses for any price equal to or better than the stop price in paragraph (b) of proposed Rule 7275.[60] Responses submitted by FLEX Participants are processed by Trader ID. If an additional FLEX Solicitation Auction response is submitted for the same FLEX Solicitation Auction from the same Trader ID, then that FLEX Solicitation Auction response will replace the previous FLEX Solicitation Auction response for that Trader ID.[61]

• The System will cap the size of a FLEX Solicitation response at the size of

---

Options into proposed Rule 7275(a)(4) as the Exchange does not list these products today. Further, the Exchange is adding a minor clarification that the minimum size requirement will apply to each leg of a FLEX Complex Order or FLEX Multi-Leg Order.

[52] The Exchange notes that unlike CBOE, it will not allow prices to be entered as a percentage value, and therefore will not incorporate the applicable language from CBOE Rule 5.74(a)(5) into proposed Rule 7275(a)(5). Additionally, the Exchange will not specify minimum increments on a per class basis and will instead specify one cent ($0.01) for all series. This is consistent with FOO Orders on the BOX Trading Floor.

[53] *See* proposed Rule 7275(a)(6), which is based on CBOE Rule 5.74(a)(6).

[54] *See* CBOE Rule 5.74(b) for similar provisions, except the Exchange will not allow prices to be entered as a percentage value, and therefore will not incorporate the applicable language from CBOE's rule into proposed Rule 7275(b).

[55] This feature is consistent with current non-FLEX Solicitation Auction functionality. The Exchange notes that it will accept orders designated for the FLEX Solicitation on a single option series where a FLEX Solicitation on a FLEX Complex or FLEX Multi-Leg Order that includes such series may be in progress. BOX will also accept FLEX Complex or FLEX Multi-Leg Orders designated for the FLEX Solicitation Auction where a FLEX Solicitation Auction on either of the component series may be in progress. Order execution at the conclusion of such FLEX Solicitations shall occur as set forth in proposed Rule 7275.

[56] The Exchange's proposal will be consistent with current non-FLEX auction functionality, including current PIP and Solicitation Auction functionality. *See* BOX Rules 7150 and 7270(b).

[57] *See* proposed Rule 7275(c)(4). *See generally* BOX Rule 7270(b).

[58] *See* proposed Rule 7275(c)(5), which is based on CBOE Rule 5.74(c)(5).

[59] *See* proposed Rule 7275(c)(5)(A), which is based on CBOE Rule 5.74(c)(5)(A) except the Exchange will not allow prices to be expressed as a percentage value.

[60] *See* proposed Rule 7275(c)(5)(B), which is based on CBOE Rule 5.74(c)(5)(B). The Exchange notes that it will not aggregate FLEX Solicitation responses from the same Participant, which aligns with current non-FLEX Solicitation Auction functionality and is similar to the electronic FLEX auction functionality offered by another exchange. *See* BOX Rule 7270(b) and ISE Options 3A, Section 13(c)(5)(B), respectively.

[61] This is similar to the electronic FLEX auction functionality offered by another exchange and similar to the current Solicitation Auction functionality on the Exchange. *See* ISE Options 3A, Section 13(c)(5)(B), and BOX Rule 7270(b), respectively.

the Agency Order (*i.e.,* the System will ignore size in excess of the size of the Agency Order when processing the FLEX Solicitation auction).[62]

• FLEX Solicitation responses must be on the opposite side of the market as the Agency Order. The System rejects a FLEX Solicitation response on the same side of the market as the Agency Order.[63]

• FLEX Solicitation responses will not be visible to FLEX Solicitation Auction participants or disseminated to OPRA.[64]

• A FLEX Participant may modify, including decrementing the price or size, or cancel its FLEX Solicitation responses during a FLEX Solicitation Auction. Subsequent FLEX Solicitation Auction responses replace the previous response.[65]

Pursuant to proposed Rule 7275(d), a FLEX Solicitation Auction concludes at the earliest to occur of the following times: (1) the end of the FLEX Solicitation Auction Period; and (2) any time the Exchange halts trading in the affected underlying, provided, however, that in such instance the FLEX Solicitation Auction concludes without execution.[66] Proposed Rule 7275(e) will govern how executions will occur in FLEX Solicitation Auctions. In particular, at the end of the FLEX Solicitation Auction, the System will execute the Agency Order against the Solicited Order or FLEX Solicitation responses at the best price(s) as follows.[67] Proposed subparagraphs (e)(1)–(3) detail the FLEX Solicitation allocation methodology for the following scenarios:

• Execution Against Solicited Order: The System executes the Agency Order against the Solicited Order at the stop price if the aggregate size of FLEX Solicitation responses at an improved price(s) is insufficient to satisfy the Agency Order.[68]

• Execution Against FLEX Solicitation Responses: The System executes the Agency Order against FLEX Solicitation Auction responses if the aggregate size of FLEX Solicitation responses at an improved price(s) is sufficient to satisfy the Agency Order. The Agency Order executes against FLEX Solicitation responses at each price level. At the price at which the balance of the Agency Order can be fully executed, responses are executed in price and time priority.[69]

Pursuant to proposed Rule 7275(e)(4), the System cancels any unexecuted FLEX Solicitation responses (or unexecuted portions) at the conclusion of a FLEX Solicitation Auction.[70]

Lastly, the Exchange proposes a number of policies applicable to FLEX Solicitation as Interpretive Materials to Rule 7275. Specifically, proposed IM–7275–1 will provide that prior to entering Agency Orders into a FLEX Solicitation Auction on behalf of customers, Initiating Participants must deliver to the customer a written notification informing the customer that its order may be executed using the FLEX Solicitation Auction. The written notification must disclose the terms and conditions contained in this Rule 7275 and be in a form approved by the Exchange.[71] Proposed IM–7275–2 will provide that under this Rule 7275, Initiating Participants may enter contra-side orders that are solicited. FLEX Solicitation provides a facility for Participants that locate liquidity for their customer orders. Participants may not use the FLEX Solicitation auction to circumvent Rule 7140 (Customer Orders and Order Flow Providers). This may include, but is not limited to, Participants entering contra-side orders that are solicited from (1) affiliated broker-dealers, or (2) broker-dealers with which the Participant has an arrangement that allows the Participant to realize similar economic benefits from the solicited transaction as it would achieve by executing the customer order in whole or in part as principal. Lastly, proposed IM–7275–3 will provide that an Exchange Official may nullify a transaction following a FLEX Solicitation Auction pursuant to Rule 7170.[72]

Risk Protections

The Exchange proposes to amend IM–7240–1(a) Debit/Credit Check and (b) Maximum Price risk protections to include FOO Orders, FLEX PIP and FLEX Solicitation Auction.[73] FOO Orders were inadvertently omitted from these rules in a prior rule change. These risk protections are mandatory for FLEX PIP and FLEX Solicitation Auction and voluntary on a per order basis for FOO Orders. The Exchange believes that applying Debit/Credit Check and Maximum Price to FLEX PIP, FLEX Solicitation Auction, Complex and Multi-Leg FOO Orders and applying Maximum Price to FLEX PIP, FLEX Solicitation Auction, and Complex FOO Orders will help Participants manage risk and be beneficial for FLEX trading.

Additionally, the Exchange notes that Rules 7330 (Activity-Based Protections) and 7340 (Global Counter) are applicable to FOO Orders and will be applicable to FLEX PIP and FLEX Solicitation Auctions.[74]

The Exchange notes that it will announce an implementation date for the proposed changes to its Participants by Regulatory Notice.

2. *Statutory Basis*

The Exchange believes that its proposal is consistent with Section 6(b)

[62] *See* proposed Rule 7275(c)(5)(C), which is based on CBOE Rule 5.74(c)(5)(C).

[63] *See* proposed Rule 7275(c)(5)(D), which is based on CBOE Rule 5.74(c)(5)(D).

[64] *See* proposed Rule 7275(c)(5)(E), which is based on CBOE Rule 5.74(c)(5)(E).

[65] *See* proposed Rule 7275(c)(5)(F), which is based on CBOE Rule 5.74(c)(5)(F).

[66] *See* CBOE Rule 5.74(d) for similar provisions, except the Exchange will make a minor clarification that this rule applies when the Exchange halts trading in the affected underlying (and not series, which is what CBOE currently has in its rule).

[67] *See* CBOE Rule 5.74(e) for similar provisions except the Exchange will not allow prices to be expressed as a percentage value.

[68] *See* proposed Rule 7275(e)(1), which is based on CBOE Rule 5.74(e)(1).

[69] *See* proposed Rule 7275(e), which differs from CBOE Rule 5.74 because responses are executed in price time priority rather than Priority Customer and then pro-rata. Additionally, CBOE cancels the Agency Order and Solicited Order with no execution if there is a Priority Customer FLEX SAM response and the aggregate size of that response and other FLEX SAM responses is insufficient to satisfy the Agency Order. BOX is not proposing a similar provision. The Exchange notes that this FLEX Solicitation proposal is based on current non-FLEX Solicitation Auction functionality. *See* BOX Rule 7270(b). The Exchange believes that consistency between FLEX and non-FLEX Solicitation Auction functionality, where applicable, will reduce opportunities for confusion and increase efficiency.

[70] *See* proposed Rule 7275(e)(4), which is based on CBOE Rule 5.74(e)(4).

[71] *See* proposed IM–7275–1, which is based on CBOE Rule 5.74, Interpretations and Policies .01.

[72] *See* proposed IM–7275–3, which is based on CBOE Rule 5.74, Interpretations and Policies .03.

[73] The Exchange will reject an eligible Complex Order or Multi-Leg Order that is a Limit Complex Order or a Limit Multi-Leg Order for a credit strategy with a net debit price, or a Limit Complex Order or a Limit Multi-Leg Order for a debit strategy with a net credit price. In addition to the debit/credit check, the system will calculate a maximum price for true butterfly spreads, vertical spreads, and box spreads. The system will reject a Complex Limit Order that is a true butterfly spread, vertical spread, or a box spread if the absolute value of the Complex Order's limit price is greater than the maximum price. The system will reject a Complex Market Order that is a true butterfly spread, vertical spread, or a box spread if the absolute value of the execution price is greater than the maximum price. The maximum price is calculated by adding a price buffer to the absolute value of a true butterfly spread, vertical spread, or box spread.

[74] For Activity-Based Protections, when the Traded Order Protection counter (Rule 7330(a)) is triggered because it exceeds the maximum permissible value, all orders for that Participant identification number in options on that class are cancelled unless such cancelation is not permitted under other rules. When the Trade Activity Protection counter (Rule 7330(b)) is triggered because it exceeds the maximum permissible value, all orders and quotes for that Participant identification number in all classes are cancelled unless such cancelation is not permitted under other rules. When the Global Counter (Rule 7340) is triggered because it has reached or exceeded the limit for the Global Counter, the system will cancel all orders and/or quotes belonging to that Participant.

of the Act [75] in general, and furthers the objectives of Section 6(b)(5) of the Act [76] in particular, in that it is designed to promote just and equitable principles of trade, to remove impediments to and perfect the mechanism of a free and open market and a national market system, and, in general to protect investors and the public interest. Specifically, the Exchange believes that the FLEX PIP and FLEX Solicitation Auctions as described in proposed Rules 7155 and 7275, respectively, will remove impediments to and perfect the mechanism of a free and open market, and protect investors and the public interest. The proposed FLEX PIP and FLEX Solicitation Auctions will offer market participants with electronic auctions for the execution of FLEX Equity Options at potentially improved prices that are substantially similar to CBOE's FLEX AIM and FLEX SAM set forth in CBOE Rules 5.73 and 5.74, respectively, except for certain intended differences to align to the Exchange's current PIP and Solicitation Auction functionality to allow the proposed FLEX PIP and FLEX Solicitation Auctions to fit more seamlessly into BOX's market. For instance, the Exchange will not allow prices to be expressed as percentages in FLEX PIP or FLEX Solicitation Auctions as it does not have this capability today. Furthermore, the Exchange proposes to allow but not consider the quantity of FLEX Solicitation responses in excess of the size of the Agency Order in order to align to current non-FLEX PIP and Solicitation Auction functionality.[77] The Exchange will also align to current non-FLEX PIP functionality by allowing a limited exception to the proposed restriction against modifying a FLEX Primary Improvement Order by allowing Initiating Participants to improve their FLEX Primary Improvement Orders.[78] Additionally, the Exchange will also align to current non-FLEX Solicitation Auction functionality by allowing Initiating Participants to cancel their FLEX Solicitation Agency Orders and Solicited Orders.[79]

The Exchange will further align certain aspects of the proposed FLEX PIP and FLEX Solicitation Auction functionality with its current non-FLEX PIP and non-FLEX Solicitation Auction functionality. First, the Exchange will specify a scenario where the Initiating Participant could receive an allocation percentage that is greater than the Initiating Participant's guaranteed allocation (*i.e.,* when there are remaining contracts after including all PIP responses).[80] As noted above, while CBOE does not have this exception noted in CBOE Rule 5.73(e)(1)(B), this will be consistent with current non-FLEX PIP behavior.[81] Second, the Exchange's Surrender Quantity feature allows Participants to request a lower amount than their guaranteed allocation, while CBOE allows election of last priority allocation in CBOE Rule 5.73(e)(4).[82] Third, the proposal will prohibit FLEX PIP and FLEX Solicitation Auctions from occurring concurrently with other FLEX PIP and FLEX Solicitation Auctions, respectively. Although this functionality differs from CBOE FLEX AIM and FLEX SAM behavior in CBOE Rules 5.73(c)(1) and 5.74(c)(1), the Exchange is aligning FLEX PIP and FLEX Solicitation Auction functionality with BOX's current non-FLEX PIP and Solicitation Auction functionality.[83] Fourth, unlike CBOE Rule 5.73(e)(2),[84] the proposal provides that FLEX PIP responses at prices better than the final auction price will be allocated on a price-time basis.[85] The Exchange believes, although its proposal for response allocations differs from CBOE, the resulting allocations will be similar, regardless of trade allocation methodology. Specifically, the proposal differs only for response allocations at prices better than the final auction price and all responses at prices better than the final auction price will be allocated because if there is not enough FLEX PIP Order quantity to allocate all responses at a given price level then that price level becomes the final auction price. The Exchange notes that FLEX PIP responses at the final auction price are allocated in a substantially similar manner as CBOE.[86] Fifth, the FLEX Solicitation proposal provides that responses will be executed in price-time priority, while CBOE Rule 5.74(e)(2) provides for Priority Customer FLEX SAM responses to be executed first and then others on a pro-rata basis.[87] Sixth, CBOE Rule 5.74(e)(3) provides for cancellation of a FLEX SAM Auction if there is a Priority Customer FLEX SAM response and the aggregate size of that response and other FLEX SAM responses is insufficient to satisfy the Agency Order.[88] The Exchange is not proposing a similar provision. The proposal will allow the Agency Order to execute against the Solicited Order at the stop price if the aggregate size of FLEX Solicitation Auction responses at an improved price(s) is insufficient to satisfy the Agency Order. As noted above, all of the foregoing features are consistent with BOX's current PIP and Solicitation Auction functionality for non-FLEX orders, the Exchange believes that this will promote consistency for Participants across different auctions on BOX. The Exchange believes further that the proposed priority and allocation rules for both FLEX PIP and FLEX Solicitation will ensure a fair and orderly market by maintaining the priority of orders, while still affording the opportunity for price improvement during each FLEX PIP and FLEX Solicitation Auction commenced on BOX.

Otherwise, the general frameworks of the proposed FLEX PIP and FLEX Solicitation Auctions in proposed Rules 7155 and 7275 (such as the eligibility requirements, stop price requirements, auction process and conclusion, and execution provisions) are consistent with the frameworks for CBOE's FLEX AIM and FLEX SAM in CBOE Rules 5.73 and 5.74. The clarity in how FLEX PIP and FLEX Solicitation will function and their consistency with similar auctions at other exchanges will help promote a fair and orderly national options market system. For example, the proposed range for the length of each of the FLEX PIP and FLEX Solicitation Auction periods is consistent with the range for the auction periods of the CBOE's FLEX AIM and FLEX SAM Auctions in CBOE Rules 5.73(c)(3) and 5.74(c)(3). Like CBOE, the Exchange believes it is appropriate to provide a reasonable and sufficient amount of time in which market participants may submit responses because of the unique terms of FLEX Equity Options. Therefore, the Exchange proposes that the minimum length of a FLEX PIP or FLEX Solicitation Auction be three seconds. The Exchange also proposes a maximum length of an auction period to be five minutes, as the Exchange also

[75] 15 U.S.C. 78f(b).

[76] 15 U.S.C. 78f(b)(5).

[77] *See* proposed Rule 7275(c)(5)(B).

[78] *See* proposed Rules 7155(c)(4) and (5) and proposed Rules 7275(c)(4) and (5).

[79] *See* proposed Rule 7275(c)(4). *See generally* BOX Rule 7270(b).

[80] *See* proposed Rule 7155(e)(1)(B).

[81] *See supra* note 34.

[82] *See supra* note 42.

[83] *See* BOX IM–7150–2. The Exchange notes that simultaneous Solicitation Auctions are not allowed by the System.

[84] CBOE Rule 5.73(e)(2) provides at each price better than final auction price, the System executes the Agency order first against Priority Customer responses and on a pro-rata basis for others.

[85] The Exchange notes that PIP operates in a similar manner. *See* BOX Rule 7150(g).

[86] *See* proposed Rule 7155(e)(1).

[87] The Exchange notes that Solicitation Auctions operate in a similar manner. *See* BOX Rule 7270(b)(2)(v).

[88] *See* CBOE Rule 5.74(e)(3).

believes it is appropriate to provide for efficient and timely executions so that customers do not potentially miss a market. The proposed rule change also requires the Initiating Participant to establish the length of the auction period (which will be included in the auction notification message), as the Participant is in the best position to determine a reasonable period of time to provide other Participants to respond based on the complexity of the FLEX Equity Option series that is the subject of the auction, as well as based on market conditions (for example, in a volatile market, the Participant may believe it is in the best interests of a customer to have a shorter auction period given quickly changing prices).

The Exchange believes that the defined terms added in Rule 7240 (Complex Orders) will provide increased clarity to Participants by specifying definitions for ''FLEX Complex Order'' and ''FLEX Multi-Leg Order.''

Risk Protections

The Exchange believes that specifying the risk protections in IM–7240–1 apply to FLEX trading will benefit investors with additional transparency regarding the Exchange's Debit/Credit Check and Maximum Price risk protections. The Exchange also believes that applying the foregoing risk protections to FLEX PIP and FLEX Solicitation will protect investors and the public interest, and maintain fair and orderly markets, by providing market participants with more tools to manage their risk. In addition, providing Participants with more tools for managing risk facilitates transactions in FLEX PIP and FLEX Solicitation because Participants will have more confidence that risk protections are in place. As a result, the foregoing risk protections have the potential to promote just and equitable principles of trade. The Exchange is also proposing to add references to Multi-Leg and Complex FOO Orders to the risk protections in IM–7240–1, as these references were inadvertently omitted when the Exchange initially adopted FOO Orders. The Exchange believes that adding this language will provide clarity with respect to the risk protections in IM–7240–1 and Multi-Leg and Complex FOO Orders on the Exchange.

The Exchange has analyzed its capacity and represents that it believes the Exchange and the Options Price Reporting Authority (''OPRA'') have the necessary systems capacity to handle the additional message traffic associated with the addition of FLEX PIP and FLEX Solicitation.[89]

Additionally, the Exchange believes it has an adequate surveillance program in place and intends to apply the same program procedures to FLEX PIP and FLEX Solicitation that is applied to the Exchange's other options trading, as applicable. FLEX PIP and FLEX Solicitation will be integrated into the Exchange's existing surveillance system architecture and will be subject to the relevant surveillance processes. The Exchange believes that any potential risk of manipulative activity is mitigated by these existing surveillance technologies, procedures, and reporting requirements, which allow the Exchange to properly identify disruptive and/or manipulative trading activity. Additionally, taking into consideration that FLEX PIP and FLEX Solicitation have unique characteristics, the Exchange has updated its procedures to include these unique characteristics, as applicable. The Exchange will periodically review its surveillance procedures and make any changes that the Exchange believes are necessary for FLEX PIP and FLEX Solicitation.

As a self-regulatory organization, the Exchange recognizes the importance of surveillance, among other things, to detect and deter fraudulent and manipulative trading activity as well as other violations of Exchange Rules and the federal securities laws. As discussed above, the Exchange has adequate surveillance procedures in place to monitor FLEX PIP and FLEX Solicitation.[90] The Exchange further notes that under Section 19(g) of the Act, the Exchange, as a self-regulatory organization, is required to enforce compliance by its members and persons associated with its members with the Act, the rules and regulations thereunder, and the rules of the Exchange.[91] The Exchange believes its surveillance is reasonably designed to mitigate manipulation and market disruption concerns and will permit it to enforce compliance with the proposed rules and other Exchange rules in accordance with Section 19(g) of the Act. The Exchange performs ongoing evaluations of its surveillance program to ensure its continued effectiveness and will continue to review its surveillance procedures on an ongoing basis and make any necessary enhancements and/or modifications that may be needed for FLEX PIP and FLEX Solicitation Auctions.

B. Self-Regulatory Organization's Statement on Burden on Competition

The Exchange does not believe that the proposed rule change will impose any burden on competition not necessary or appropriate in furtherance of the purposes of the Act.

The Exchange does not believe that the proposed rule change will impose any burden on intra-market competition that is not necessary or appropriate in furtherance of the purposes of the Act, as all Participants who wish to utilize FLEX PIP and FLEX Solicitation will be able to trade in the same manner. The Exchange also does not believe that the proposed rule change will impose any burden on intermarket competition that is not necessary or appropriate in furtherance of the purposes of the Act. As discussed above, other options exchanges currently offer electronic FLEX auctions on their respective markets.[92] The Exchange believes that its proposal will allow BOX to compete with these other exchanges and provide an additional execution venue for these transactions for market participants. Thus, the Exchange believes that its proposal will promote intermarket competition by increasing the number of exchanges where electronic FLEX auctions will be available.

The Exchange further notes that it operates in a highly competitive market in which market participants can readily direct order flow to competing venues who offer similar functionality.

C. Self-Regulatory Organization's Statement on Comments on the Proposed Rule Change Received From Members, Participants, or Others

The Exchange has neither solicited nor received comments on the proposed rule change.

III. Date of Effectiveness of the Proposed Rule Change and Timing for Commission Action

Because the foregoing proposed rule change does not (i) significantly affect the protection of investors or the public interest; (ii) impose any significant burden on competition; and (iii) become operative for 30 days after the date of the filing, or such shorter time as the Commission may designate, it has become effective pursuant to Section

[89] The Exchange will report FLEX PIP and FLEX Solicitation trades and, if necessary, trade cancellations to OPRA.

[90] Among other things, the Exchange's regulatory program includes cross-market surveillance designed to identify manipulative and other improper trading, including spoofing, algorithm gaming, marking the close and open, as well as more general abusive behavior related to front running, wash sales, and quoting/routing, which may occur on the Exchange and other markets.

[91] 15 U.S.C. 78s(g).

[92] *See supra* notes 5 and 6.

19(b)(3)(A)(iii) of the Act[93] and subparagraph (f)(6) of Rule 19b–4 thereunder.[94]

A proposed rule change filed under Rule 19b–4(f)(6)[95] normally does not become operative prior to 30 days after the date of the filing. However, pursuant to Rule 19b–4(f)(6)(iii),[96] the Commission may designate a shorter time if such action is consistent with the protection of investors and the public interest. The Exchange requested that the Commission waive the 30-day operative delay so that the proposal may become operative immediately upon filing. Other exchanges have electronic FLEX auction rules, and providing another venue for electronic FLEX auctions would help foster competition as well as the protection of investors and the public interest. The proposed rule change also raises no new or novel legal or regulatory issues. For these reasons, the Commission finds that waiver of the operative delay is consistent with the protection of investors and the public interest. Accordingly, the Commission waives the 30-day operative delay and designates the proposed rule change to be operative upon filing.[97]

At any time within 60 days of the filing of the proposed rule change, the Commission summarily may temporarily suspend such rule change if it appears to the Commission that such action is necessary or appropriate in the public interest, for the protection of investors, or otherwise in furtherance of the purposes of the Act. If the Commission takes such action, the Commission shall institute proceedings to determine whether the proposed rule should be approved or disapproved.

IV. Solicitation of Comments

Interested persons are invited to submit written data, views and arguments concerning the foregoing, including whether the proposed rule change is consistent with the Act. Comments may be submitted by any of the following methods:

Electronic Comments

- Use the Commission's internet comment form (*http://www.sec.gov/rules/sro.shtml*); or
- Send an email to *rule-comments@sec.gov.* Please include File Number SR–BOX–2026–21 on the subject line.

Paper Comments

- Send paper comments in triplicate to Secretary, Securities and Exchange Commission, 100 F Street NE, Washington, DC 20549–1090.

All submissions should refer to file number SR–BOX–2026–21. This file number should be included on the subject line if email is used. To help the Commission process and review your comments more efficiently, please use only one method. The Commission will post all comments on the Commission's internet website (*https://www.sec.gov/rules/sro.shtml*). Copies of the filing will be available for inspection and copying at the principal office of the Exchange. Do not include personal identifiable information in submissions; you should submit only information that you wish to make available publicly. We may redact in part or withhold entirely from publication submitted material that is obscene or subject to copyright protection. All submissions should refer to file number SR–BOX–2026–21 and should be submitted on or before November 30, 2026.

For the Commission, by the Division of Trading and Markets, pursuant to delegated authority.[98]

Sherry R. Haywood,

Assistant Secretary.

[FR Doc. 2026–22756 Filed 11–6–26; 8:45 am]

BILLING CODE 8011–01–P

SECURITIES AND EXCHANGE COMMISSION

[Release No. 34–106823; File No. SR–Phlx–2026–68]

Self-Regulatory Organizations; Nasdaq PHLX LLC; Notice of Filing and Immediate Effectiveness of Proposed Rule Change To Introduce Conforming Changes to Nasdaq Phlx Rules in Connection With the Establishment of Fees for Nasdaq TotalView Plus and Nasdaq Basic Plus

November 4, 2026.

Pursuant to Section 19(b)(1) of the Securities Exchange Act of 1934 (''Act'')[1], and Rule 19b–4 thereunder,[2] notice is hereby given that on October 28, 2026, Nasdaq PHLX LLC (''Phlx'' or ''Exchange'') filed with the Securities and Exchange Commission (''SEC'' or ''Commission'') the proposed rule change as described in Items I, II, and III, below, which Items have been prepared by the Exchange. The Commission is publishing this notice to solicit comments on the proposed rule change from interested persons.

I. Self-Regulatory Organization's Statement of the Terms of Substance of the Proposed Rule Change

The Exchange proposes to introduce conforming changes to Phlx rules in connection with the establishment of fees for Nasdaq TotalView Plus and Nasdaq Basic Plus by the Nasdaq Stock Exchange. Specifically, the Exchange proposes to amend the Exchange's fees at (i) Equity 7, Section 3, Market Data Distributor Fees to waive the market data distributor fees for PSX TotalView for firms that consolidate it with certain other feeds for external redistribution; (ii) Equity 7, Section 3, PSX TotalView to waive the fees for firms purchasing PSX TotalView Plus; (iii) Equity 7, Section 3, PSX Last Sale and Nasdaq Last Sale Plus Data Feeds to reflect the addition of Nasdaq Basic Plus as a product offering subject to a consolidation fee; and (iv) Equity 7, Section 3, PSX BBO Feeds to clarify that firms that receive Nasdaq Last Sale Plus or Nasdaq Basic Plus or both shall pay monthly administrative fees and data consolidation fees, each as described further below.[3]

The text of the proposed rule change is available on the Exchange's website at *https://listingcenter.nasdaq.com/rulebook/phlx/rulefilings,* and at the principal office of the Exchange.

II. Self-Regulatory Organization's Statement of the Purpose of, and Statutory Basis for, the Proposed Rule Change

In its filing with the Commission, the Exchange included statements concerning the purpose of and basis for the proposed rule change and discussed any comments it received on the proposed rule change. The text of these statements may be examined at the places specified in Item IV below. The Exchange has prepared summaries, set forth in sections A, B, and C below, of the most significant aspects of such statements.

---

[93] 15 U.S.C. 78s(b)(3)(A).

[94] 17 CFR 240.19b–4(f)(6). In addition, Rule 19b–4(f)(6) requires a self-regulatory organization to give the Commission written notice of its intent to file the proposed rule change, along with a brief description and text of the proposed rule change, at least five business days prior to the date of filing of the proposed rule change, or such shorter time as designated by the Commission. The Exchange has satisfied this requirement.

[95] 17 CFR 240.19b–4(f)(6).

[96] 17 CFR 240.19b–4(f)(6)(iii).

[97] For purposes only of waiving the 30-day operative delay, the Commission has considered the proposed rule's impact on efficiency, competition, and capital formation. *See* 15 U.S.C. 78c(f).

[3] This filing replaces SR–Phlx–2026–55, which was withdrawn on October 28, 2026. It was previously filed as SR–Phlx–2026–54, which was withdrawn on August 31, 2026.

A. Self-Regulatory Organization's Statement of the Purpose of, and Statutory Basis for, the Proposed Rule Change

1. Purpose

The purpose of the proposed rule change is to introduce conforming changes to Phlx rules in connection with the establishment of fees for Nasdaq TotalView Plus and Nasdaq Basic Plus by the Nasdaq Stock Exchange. Specifically, the Exchange proposes to amend fees at (i) Equity 7, Section 3, Market Data Distributor Fees to waive the market data distributor fees for PSX TotalView for firms that consolidate it with certain other feeds for external redistribution; (ii) Equity 7, Section 3, PSX TotalView to waive the fees for firms purchasing PSX TotalView Plus; (iii) Equity 7, Section 3, PSX Last Sale and Nasdaq Last Sale Plus Data Feeds to reflect the addition of Nasdaq Basic Plus as a product offering subject to a consolidation fee; and (iv) Equity 7, Section 3, PSX BBO Feeds to clarify that firms that receive Nasdaq Last Sale Plus or Nasdaq Basic Plus or both shall pay monthly administrative fees and data consolidation fees, each as described further below.

Nasdaq TotalView Plus and Nasdaq Basic Plus Fees

The Nasdaq Stock Market LLC (''Nasdaq'') recently introduced two new products, Nasdaq TotalView Plus and Nasdaq Basic Plus,[4] which consolidate Depth-of-Book [5] and Top-of-Book [6] information currently disseminated by Nasdaq, Nasdaq Texas, LLC (''Nasdaq Texas''), and the Exchange. Nasdaq has submitted to the Commission a fee filing designed to set fees for Nasdaq TotalView Plus and Nasdaq Basic Plus at or below fees currently charged for the Depth-of-Book and Top-of-Book products offered by Nasdaq, Nasdaq Texas, and Phlx. This, together with the networking and connectivity savings inherent in lowering the number of data feeds, is designed to maximize the distribution of consolidated data feeds to investors throughout the 23 hour, 5 days per week schedule set to begin in December 2026.

Nasdaq will offer Nasdaq TotalView Plus for the same Professional and Non-Professional Subscriber and enterprise license fees as Nasdaq TotalView.[7] To ensure that market data vendors will be able to offer competing consolidated data products, any firm that certifies to Nasdaq that it will consolidate Nasdaq TotalView, Nasdaq Texas TotalView and Nasdaq PSX TotalView into a data feed solely for external redistribution shall be exempt from Nasdaq Texas Market Data Distributor Fees [8] and Nasdaq PSX Market Data Distributor Fees,[9] and the Monthly External Distributor Fees for the Nasdaq Stock Market LLC at Equity 7, Section 119(b) shall be reduced by $350 per month.[10] These three discounts will ensure that vendors will be able to cover the cost of consolidating the underlying fees.

Nasdaq will offer Nasdaq Basic Plus for the same Professional and Non-Professional Subscriber, enterprise license, and Distributor fees as Nasdaq Basic. To ensure that other market data vendors will be able to offer competing consolidated data products, Nasdaq proposes to charge the same monthly administrative and data consolidation fees for Nasdaq Basic Plus as are currently charged for Nasdaq Last Sale Plus to both Internal Distributors [11] and External Distributors [12] to cover the costs of data feed consolidation to be incurred by market data vendors.

With respect to the Market Data Enterprise License for Display Usage,[13] which currently offers both Nasdaq TotalView and Nasdaq Basic in the same enterprise license, Nasdaq proposes to offer the Nasdaq TotalView Plus and Nasdaq Basic Plus feeds for the same fees currently charged for the Nasdaq TotalView and Nasdaq Basic.

As a result of the introduction of Nasdaq TotalView Plus and Nasdaq Basic Plus and their related fees, the Exchange is proposing amendments to Equity 7, Section 3, Market Data Distributor Fees, PSX TotalView, PSX Last Sale and Nasdaq Last Sale Plus Data Feeds, and PSX BBO Feeds to make conforming changes to its fee schedule to align with the fees outlined in Nasdaq's Equity 7, Sections 123, 132, 139, and 147 for these new products.

Market Data Distributor Fees

The purpose of the first fee amendment is to issue a fee waiver for External Market Data Distributor Fees of $1,620 per month, in Equity 7, Section 3, Market Data Distributor Fees for vendors that certify to Nasdaq that they will consolidate Nasdaq TotalView, Nasdaq Texas TotalView and Nasdaq PSX TotalView into a data feed solely for external redistribution. The same discount would not apply to non-vendors. Vendors would be able to apply this fee reduction, together with the waiver of Nasdaq Texas Market Data Distributor Fees, and the $350 per month reduction in Monthly External Distributor Fees for the Nasdaq Stock Market, to cover the cost of forming their own consolidated feed, thereby allowing vendors to compete with Nasdaq in the sale of consolidated data products using the depth of book data from Nasdaq affiliates.

PSX TotalView Fees

The purpose of the second fee amendment is to issue a fee waiver for PSX TotalView fees in Equity 7, Section 3, PSX TotalView, to any firm that purchases Nasdaq TotalView Plus. PSX TotalView disseminates all individual Phlx Equities System participant orders and quotes displayed in the system, the aggregate size of such orders and quotes at each price level, and the trade data for executions that occur within the Phlx Equities System.[14] This will be a fee waiver of (i) monthly Subscriber fees of $ $44.50 (operative January 1, 2026) for each Subscriber for display usage or for non-display usage not based upon Direct Access; and (ii) $1.00 per Subscriber per month for each Professional Subscriber.[15]

This is to ensure that Nasdaq can offer Nasdaq TotalView Plus for the same Subscriber fees as Nasdaq TotalView.

Administrative and Consolidation Fees

The purpose of the third and fourth fee amendments is to clarify that firms that receive Nasdaq Basic Plus, in

[4] *See* Securities Exchange Act Release No. 105997 (July 28, 2026), 91 FR 48466 (July 31, 2026) (SR–Nasdaq–2026–061) (a proposal to introduce Nasdaq TotalView Plus and Nasdaq Basic Plus, two new data feeds which will offer consolidated Top-of-Book and Depth-of-Book information currently disseminated by Nasdaq, Nasdaq Texas and Nasdaq PSX).

[5] The underlying Depth-of-Book products are Nasdaq TotalView, Nasdaq Texas TotalView, and PSX TotalView.

[6] The underlying Top-of-Book products are Nasdaq Basic (which includes both best bid and offer and last sale information), Nasdaq Texas BBO, Nasdaq Texas Last Sale, PSX BBO, and PSX Last Sale.

[7] Internal and External Distributor, as well as Direct Access fees, may apply to purchasers of Nasdaq Plus products depending on the customer's use case. *See* Nasdaq Rules, Equity 7, Section 119(b).

[8] *See* Nasdaq Texas Rules, Equity 7, Section 119(a)

[9] *See* Equity 7, Section 3 (Market Data Distributor Fees).

[10] *See* Nasdaq Stock Market Rules, Equity 7, Sections 119(b) and 119(d). There are two Monthly External Distributor Fees at Section 119(b), one for Nasdaq-listed security depth entitlements and one for Non Nasdaq-listed security depth entitlements.

[11] ''Internal Distributors'' are Distributors that receive Nasdaq Last Sale Plus or Nasdaq Basic Plus data and then distribute that data to one or more Subscribers within the Distributor's own entity.

[12] ''External Distributors'' are Distributors that receive Nasdaq Last Sale Plus or Nasdaq Basic Plus data and then distribute that data to one or more Subscribers outside the Distributor's own entity.

[13] *See* Nasdaq Stock Market Rules, Equity 7, Section 132.

[14] *See* Equity 7, Section 3 (PSX TotalView).

[15] *See id.*

addition to or in lieu of Nasdaq Last Sale Plus, will also pay the monthly administrative fee applicable to PSX Last Sale, and that distributors of Nasdaq Last Sale Plus or Nasdaq Basic Plus will pay a data consolidation fee of $350 per month. Currently, firms that receive Nasdaq Last Sale Plus must pay the administrative and consolidation fees,[16] and this amendment extends the same to purchasers of Nasdaq Basic Plus,[17] as both Nasdaq Last Sale Plus and Nasdaq Basic Plus contain the same PSX Last Sale feeds.[18]

This fee is designed to cover the data consolidation costs of market data vendors to ensure that they will be able to offer competing consolidated data products to the new Nasdaq Basic Plus product, which contains PSX Last Sale.

As a conforming change, the Exchange proposes to modify both Equity 7, Section 3, PSX Last Sale and Nasdaq Last Sale and PSX BBO Feeds to state that firms that receive Nasdaq Last Sale Plus or Nasdaq Basic Plus or both shall pay the monthly administrative fees for PSX Last Sale and, as well as a data consolidation fee of $350 per month.

2. Statutory Basis

The Exchange believes that its proposal is consistent with Section 6(b) of the Act,[19] in general, and furthers the objectives of Sections 6(b)(4) and 6(b)(5) of the Act,[20] in particular, in that it provides for the equitable allocation of reasonable dues, fees and other charges among members and issuers and other persons using any facility, and is not designed to permit unfair discrimination between customers, issuers, brokers, or dealers because the proposal: (i) offers more customer choice; (ii) protects competition by covering the data consolidation costs of market data vendors; (iii) does not increase the fee for any Phlx product, but simply waives certain fees or applies consolidation costs to firms purchasing certain data feeds; (iv) conforms fees for Phlx products to the recent Nasdaq filings related to the offer of Nasdaq TotalView Plus and Nasdaq Basic Plus; and (v) offers products to all market participants on a non-discriminatory basis.

1. More Customer Choice

The proposal will expand choice by allowing customers to select whether to purchase best bid and offer information through the separate data feeds of Nasdaq Basic, Nasdaq Texas Last Sale, Nasdaq Texas BBO, and PSX Last Sale, and PSX BBO (or any combination thereof) separately or in a single feed. Purchasing Nasdaq Basic Plus or Nasdaq TotalView Plus will allow some customers to optimize consumption by ingesting information from multiple markets in a single connection, which may result in cost savings for subscribers based on a more efficient configuration of data feeds. Nothing in this proposal will change the quantity or quality of Depth-of-Book or Top-of-Book information available in the market, as the underlying feeds will remain available, and the proposed feeds are simply amalgamations of those underlying feeds.

2. No Competitive Advantage Relative To Market Data Vendors

In offering Nasdaq Basic Plus and Nasdaq TotalView Plus, Nasdaq will be acting as a redistributor of Depth-of-Book [21] and Top-of-Book [22] products from Nasdaq, Nasdaq Texas, and Phlx.[23]

Nasdaq Basic Plus and Nasdaq TotalView Plus will be compiled from the same underlying feeds from Nasdaq, Nasdaq Texas, and Phlx that are distributed to the purchasers of those feeds. With respect to speed, the path for the distribution of the information by the Exchange will not be faster than the path for distribution that would be used by a market data vendor to distribute similar, independently created products.

With respect to information, the same source of the market data to be used by the Exchange to create the two proposed products will also be available to any other market data vendor. The Nasdaq system that will create and support Nasdaq Basic Plus and Nasdaq TotalView Plus will access the underlying feeds from Nasdaq, Nasdaq Texas, and Phlx from the same point as any market data vendor.

With respect to cost, Nasdaq will ensure that market data vendors are able to compete with the proposed fees by introducing waivers of distributor fees for Nasdaq PSX and Nasdaq Texas and a reduction of $350 per month in external distributor fees for the Nasdaq Stock Market, for distributors of Nasdaq TotalView Plus and a consolidation fee for Nasdaq Basic Plus. These proposals will allow vendors to cover the costs of consolidation for Depth-of-Book and Top-of-Book feeds, respectively.[24] The Exchange is filing this proposal to implement conforming changes for a Nasdaq Stock Exchange proposal filed separately.

The proposed fee waiver for Nasdaq TotalView Plus will exempt any firm that certifies to Nasdaq that it will consolidate Nasdaq TotalView, Nasdaq Texas TotalView and PSX TotalView into a data feed solely for external redistribution from Nasdaq Texas Market Data Distributor Fees [25] and Phlx Market Data Distributor Fees,[26] and shall also receive a fee reduction of $350 per month in External Distributor fees from the Nasdaq Stock Market. This substantial savings in distributor fees offered only to external distributors—$1,620 per month for Nasdaq Texas,[27] $1,390 per month for PSX TotalView,[28] and $350 for the Nasdaq Stock Market—will allow vendors to cover the cost of consolidation of Depth-of-Book feeds and will ensure that market data vendors will be able to offer consolidated data products that compete with Nasdaq TotalView Plus.

The proposed fees for Nasdaq Basic Plus include monthly administrative fees for Nasdaq Last Sale, NTX Last Sale, and PSX Last Sale and a data consolidation fee of $350 per month for Internal Distributors and External Distributors of Nasdaq Basic Plus.[29] This is the current fee charged for Nasdaq Last Sale Plus to ensure that market data vendors will be able to offer competing feeds.

Nasdaq introduced a consolidation fee for both Nasdaq Basic Plus and Nasdaq Last Sale Plus because Nasdaq Basic Plus includes last sale information. Nasdaq expects vendors to use the same processes and servers to consolidate both best bid and offer and last sale information, and therefore the same consolidation fee should be sufficient to

[16] *See* Equity 7, Section 3 (PSX Last Sale and Nasdaq Last Sale Plus Data Feeds).

[17] Firms that receive Nasdaq Last Sale Plus or Nasdaq Basic Plus would either be liable for Nasdaq Last Sale fees or Nasdaq Basic fees, but not both. SR–NASDAQ–2026–070.

[18] They also contain PSX BBO feeds, for which there is no charge.

[19] 15 U.S.C. 78f(b).

[20] 15 U.S.C. 78f(b)(4) and (5).

[21] The underlying Depth-of-Book products are Nasdaq TotalView, Nasdaq Texas TotalView, and PSX TotalView.

[22] The underlying Top-of-Book products are Nasdaq Basic (which includes both best bid and offer and last sale information), Nasdaq Texas BBO, Nasdaq Texas Last Sale, PSX BBO, and PSX Last Sale.

[23] *See* Securities Exchange Act Release No. 105997 (July 28, 2026), 91 FR 48466 (July 31, 2026) (SR–Nasdaq–2026–061); SR–NASDAQ–2026–070.

[24] There is no consolidation fee for Nasdaq TotalView because the waiver of distributor fees is sufficient to cover the costs of consolidation without any additional fee.

[25] *See* Nasdaq Texas Rules, Equity 7, Section 119.

[26] *See* Equity 7, Section 3.

[27] *See* Nasdaq Texas Rules, Equity 7, Section 119(a).

[28] *See* Equity 7, Section 3 (Market Data Distributor Fees).

[29] Firms that receive Nasdaq Last Sale Plus or Nasdaq Basic Plus would either be liable for Nasdaq Last Sale fees or Nasdaq Basic fees, but not both.

cover all data consolidation costs, enabling vendors to compete in consolidating and distributing data from multiple exchanges. The Exchange is proposing to amend its rules to permit that competition.

3. No Fee Increases

Nothing in the proposal involves an increase to the fees currently charged by Phlx for its data feeds. Any subscriber to solely a Phlx feed will continue to pay the same fees as are currently set, without any change. The subscriber fee waivers and consolidation fees proposed herein are to ensure that any purchaser of a *compiled* product, whether it is Nasdaq TotalView Plus, Nasdaq Basic Plus, or the feeds necessary to compile a competing product containing the same information as Nasdaq TotalView Plus and/or Nasdaq Basic Plus, is not at a cost disadvantage compared to other purchasers of the same information.

The proposed data consolidation fee for Nasdaq Basic Plus is exactly the same fee as currently charged for Nasdaq Last Sale Plus, and customers of Nasdaq Last Sale Plus would pay no additional consolidation fee for Nasdaq Basic Plus. These consolidation and administrative fees are not new, but are simply being expanded to Nasdaq's new product, and do not increase the fees charged to purchasers of Phlx data.

Rather, the proposed set of fee waivers for external distributor fees of Nasdaq PSX and Nasdaq Texas and $350 reduction for the Nasdaq Stock Market for data vendors lowers fees below current fees.

The proposed waiver of all subscriber fees, including both Professional and Non-Professional fees, Non-Display Usage fees, and enterprise license fees for Phlx data for Nasdaq TotalView Plus will actually lower fees further, as purchasers of Nasdaq TotalView Plus will be charged the same fees as currently charged for Nasdaq TotalView alone. The proposed Nasdaq TotalView Plus fees therefore offer customers a discount below current fees.

4. Conforming Amendments

The proposal conforms fees for Phlx products to the recent Nasdaq filings related to the offer of Nasdaq TotalView Plus and Nasdaq Basic Plus.[30] In order for Nasdaq's proposed fees to be effective, Phlx must update its rules to ensure that they do not conflict with Nasdaq's. The proposed amendments to Equity 7, Section 3 are conforming changes made to align the Exchange's rules to Nasdaq's.

5. No Unfair Discrimination

The proposal is not designed to permit unfair discrimination between customers, issuers, brokers, or dealers because the proposed feeds are optional data fees available to all market participants on a non-discriminatory basis.

In summary, the proposal provides for the equitable allocation of reasonable dues, fees and other charges among members and issuers and other persons using any facility, and is not designed to permit unfair discrimination between customers, issuers, brokers, or dealers because the proposal: (i) offers more customer choice; (ii) protects competition by reducing fees for market data vendors; (iii) does not increase the fee for any Phlx product, but simply waives certain fees or applies consolidation costs to firms purchasing certain data feeds; (iv) conforms fees for Phlx products to the recent Nasdaq filings related to the offer of Nasdaq TotalView Plus and Nasdaq Basic Plus; and (v) offers products to all market participants on a non-discriminatory basis.

B. Self-Regulatory Organization's Statement on Burden on Competition

The Exchange does not believe that the proposed rule change will impose any burden on competition not necessary or appropriate in furtherance of the purposes of the Act.

Nothing in the proposal burdens inter-market competition (the competition among self-regulatory organizations) because approval of the proposal does not impose any burden on the ability of other exchanges to compete. The proposal merely implements fee waivers for certain purchasers and consolidation and administrative fees for others, which any other exchange could propose.

Nothing in the Proposal burdens intra-market competition (the competition among consumers of exchange data), because the products related to the fee changes—Nasdaq TotalView Plus and Nasdaq Basic Plus—will be offered to all market participants at the same price and any market participant that elects to purchase either Nasdaq TotalView Plus or Nasdaq Basic Plus may do so on a non-discriminatory basis.

Moreover, as explained above, the proposed fees offer no competitive advantage relative to market data vendors, and are in fact designed to promote competition. There is no change to (or advantage in) speed or information. With respect to cost, the Exchange proposes to ensure that market data vendors are able to compete with the proposed fees by introducing a set of fee waivers and a fee reduction for Nasdaq TotalView Plus that is exclusively available to market data vendors and a consolidation fee for Nasdaq Basic Plus. These Nasdaq feeds are completely voluntary products in that Nasdaq is not required by any rule or regulation to make this data available and potential subscribers may purchase it only if they voluntarily choose to do so. Information is compiled from underlying feeds from Nasdaq, Nasdaq Texas, and the Exchange, which will remain available for purchase.

C. Self-Regulatory Organization's Statement on Comments on the Proposed Rule Change Received From Members, Participants, or Others

No written comments were either solicited or received.

III. Date of Effectiveness of the Proposed Rule Change and Timing for Commission Action

The foregoing rule change has become effective pursuant to Section 19(b)(3)(A)(ii) of the Act.[31]

At any time within 60 days of the filing of the proposed rule change, the Commission summarily may temporarily suspend such rule change if it appears to the Commission that such action is: (i) necessary or appropriate in the public interest; (ii) for the protection of investors; or (iii) otherwise in furtherance of the purposes of the Act. If the Commission takes such action, the Commission shall institute proceedings to determine whether the proposed rule should be approved or disapproved.

IV. Solicitation of Comments

Interested persons are invited to submit written data, views and arguments concerning the foregoing, including whether the proposed rule change is consistent with the Act. Comments may be submitted by any of the following methods:

Electronic Comments

- Use the Commission's internet comment form (*https://www.sec.gov/rules/sro.shtml*); or
- Send an email to *rule-comments@sec.gov.* Please include file number SR–Phlx–2026–68 on the subject line.

Paper Comments

- Send paper comments in triplicate to Secretary, Securities and Exchange Commission, 100 F Street NE, Washington, DC 20549–1090.

[30] *See* SR–Nasdaq–2026–091.

[31] 15 U.S.C. 78s(b)(3)(A)(ii).

All submissions should refer to file number SR–Phlx–2026–68. This file number should be included on the subject line if email is used. To help the Commission process and review your comments more efficiently, please use only one method. The Commission will post all comments on the Commission's internet website (*https://www.sec.gov/rules/sro.shtml*). Copies of the filing will be available for inspection and copying at the principal office of the Exchange. Do not include personal identifiable information in submissions; you should submit only information that you wish to make available publicly. We may redact in part or withhold entirely from publication submitted material that is obscene or subject to copyright protection. All submissions should refer to file number SR–Phlx–2026–68 and should be submitted on or before November 30, 2026.

For the Commission, by the Division of Trading and Markets, pursuant to delegated authority.[32]

Sherry R. Haywood,

Assistant Secretary.

[Public Notice 13156]

60-Day Notice of Proposed Information Collection: Shrimp Exporter's/Importer's Declaration

ACTION: Notice of request for public comment.

SUMMARY: The Department of State is seeking Office of Management and Budget (OMB) approval for the information collection described below. In accordance with the Paperwork Reduction Act of 1995, we are requesting comments on this collection from all interested individuals and organizations. The purpose of this notice is to allow 60 days for public comment preceding submission of the collection to OMB.

DATES: The Department will accept comments from the public up to *January 8, 2027.*

ADDRESSES:

You may submit comments by any of the following methods:

- *Web:* Persons with access to the internet may comment on this notice by going to *www.Regulations.gov.* You can search for the document by entering ''Docket Number: DOS–2026–1189'' in the Search field. Then click the ''Comment Now'' button and complete the comment form.
- *Email: DS2031@state.gov.*
- *Regular Mail:* Send written comments to: Office of Marine Conservation (OES/OMC), Attn: Section 609 Program, 2201 C Street NW, Room 2758, Washington, DC, 20520–2758

You must include the DS form number (if applicable), information collection title, and the OMB control number in any correspondence.

FOR FURTHER INFORMATION CONTACT: Direct requests for additional information regarding the collection listed in this notice, including requests for copies of the proposed collection instrument and supporting documents, to Christopher Gosselin, Section 609 Program Manager, Office of Marine Conservation, Bureau of Oceans and International Environmental and Scientific Affairs, Department of State, Washington, DC 20520–2758, who may be reached on 202–647–3263 or at *DS2031@state.gov.*

SUPPLEMENTARY INFORMATION:

- *Title of Information Collection:* Shrimp Exporter's/Importer's Declaration.
- *OMB Control Number:* 1405–0095.
- *Type of Request:* Extension of a Currently Approved Collection.
- *Originating Office:* Bureau of Oceans and International Environmental and Scientific Affairs, Office of Marine Conservation (OES/OMC).
- *Form Number:* DS–2031.
- *Respondents:* Business or other for-profit organizations.
- *Estimated Number of Respondents:* 3,000.
- *Estimated Number of Responses:* 10,000.
- *Average Time per Response:* 10 minutes.
- *Total Estimated Burden Time:* 1,666 hours.
- *Frequency:* on occasion.
- *Obligation to Respond:* Mandatory.

We are soliciting public comments to permit the Department to:

- Evaluate whether the proposed information collection is necessary for the proper functions of the Department.
- Evaluate the accuracy of our estimate of the time and cost burden for this proposed collection, including the validity of the methodology and assumptions used.
- Enhance the quality, utility, and clarity of the information to be collected.
- Minimize the reporting burden on those who are to respond, including the use of automated collection techniques or other forms of information technology.

Please note that comments submitted in response to this Notice are public record. Before including any detailed personal information, you should be aware that your comments as submitted, including your personal information, will be available for public review.

Abstract of Proposed Collection

The DS–2031 form is necessary to document imports of shrimp and products from shrimp pursuant to the State Department's implementation of Section 609 of Public Law 101–162, which prohibits the entry into the United States of shrimp harvested in ways which are harmful to sea turtles. Respondents are exporters of shrimp and products from shrimp and government officials in countries that export shrimp and products from shrimp to the United States. The importer is required to present the DS–2031 form at the port of entry into the United States, to retain the DS–2031 form for a period of three years subsequent to entry, and during that time to make the DS–2031 form available to U.S. Customs and Border Protection or the Department of State upon request.

Methodology

The DS–2031 form is completed by the exporter, the importer, and under certain conditions a government official of the harvesting country. The DS–2031 form accompanies shipments of shrimp and shrimp product to the United States and must be made available to U.S. Customs and Border Protection at the time of entry and for three years after entry.

Alice M. Kottmyer,

Attorney-Adviser, Office of Management, Office of the Legal Adviser, U.S. Department of State.

[FR Doc. 2026–22786 Filed 11–6–26; 8:45 am]

BILLING CODE 4710–05–P

SURFACE TRANSPORTATION BOARD

[Docket No. EP 791]

Policy Statement on Jurisdiction and Preemption Under the ICC Termination Act

AGENCY: Surface Transportation Board.

ACTION: Statement of Board Policy.

SUMMARY: The Surface Transportation Board (STB or Board) is issuing this policy statement on the scope of its jurisdiction over transportation by rail carriers and on preemption of conflicting state and federal laws under the ICC Termination Act of 1995

[32] 17 CFR 200.30–3(a)(12).

(ICCTA). The policy statement provides an overview of the Board's jurisdiction and preemption through a review of existing legal precedent, discussing many commonly occurring questions. The Board intends the policy statement to serve as a useful tool for the public to review, in one place, concise explanations from the Board about its jurisdiction and application of preemption, which the Board anticipates will reduce confusion and facilitate the efficient resolution of disputes.

DATES: This policy statement will be final on November 9, 2026.

FOR FURTHER INFORMATION CONTACT: Amanda Gorski at (202) 915–8453. If you require accommodation under the Americans with Disabilities Act, please call (202) 245–0245.

SUPPLEMENTARY INFORMATION: Congress granted the Board exclusive jurisdiction over rail transportation and preempted conflicting federal or state laws in ICCTA. *See generally* 49 U.S.C. 10501. ICCTA embodies Congress's recognition of the need to regulate railroad operations at the federal level. Broadly, it provides that the Board has jurisdiction over rail transportation that is part of the interstate rail network. In ICCTA, Congress included an expansive preemption provision, the purpose of which is to ensure the free flow of interstate commerce, including by preventing patchwork regulation and eliminating unduly burdensome state laws, and by providing a nationally uniform, efficient national rail network to meet the needs of the public and national defense. On September 19, 2025, the Board received a letter from a coalition of six railroad and shipper organizations (Coalition) [1] requesting that the Board issue guidance on the scope and application of federal preemption. Coalition Letter (Sept. 19, 2025), *https://www.stb.gov/wp-content/uploads/Coalition-Letter-on-ICCTA-Preemption_FINAL.pdf.* Board members issued a joint response letter on September 24, 2025, noting the Coalition's views and stating that the Board was considering issuing a policy statement on preemption. Letter from Board Members Fuchs, Hedlund, & Schultz (Sept. 24, 2025), *https://www.stb.gov/wp-content/uploads/Preemption-Letter-Final.pdf.*

Over the 30 years since ICCTA's enactment, the Board and the courts have issued many decisions addressing the scope of the Board's jurisdiction over transportation by rail carriers and the preemptive effect of ICCTA when presented with potentially conflicting state, local, or federal regulations. While those decisions are generally consistent, they are numerous, have not always used the same terminology or analytical approaches, and may contain technical language unfamiliar to the general public. The Board therefore views it as important to set forth its considered, longstanding view of its jurisdiction over rail transportation and the application of ICCTA preemption. This policy statement is non-exhaustive but explores a significant number of questions that are frequently presented to the Board and to courts interpreting and applying ICCTA. Although any future case that comes before the Board (or a court) will be evaluated on the specific facts, circumstances, and laws presented in that case, the Board anticipates that the policy statement will serve the public by summarizing for stakeholders existing precedent. The policy statement will promote collaboration by reducing uncertainty about the scope of the Board's jurisdiction and ICCTA preemption and describing how the Board has analyzed frequently occurring questions. The Board thus aims to proactively prevent disputes regarding the Board's jurisdiction and ICCTA preemption, and when disputes do arise, for the policy statement to serve as a useful tool for the public and courts in resolving such disputes, potentially lowering litigation costs for carriers, shippers, and state and local governments. In turn, this action would, as appropriate, potentially support economic growth by better facilitating the avoidance or removal of undue or inappropriate impediments to rail transportation serving domestic manufacturing, agriculture, and energy facilities, among other critical aspects of the economy.

By addressing key concepts and authorities in one consolidated, synthesized document, the policy statement provides benefits to stakeholders and the general public. The policy statement will lower costs by reducing the time and resources necessary to process and evaluate a breadth of topics relevant to the Board's jurisdiction and preemption. It will allow a wide array of users to quickly reference and read about their individual areas of interest. And it synthesizes precedents and provides guidance on the Board's jurisdiction and preemption—including processes for rail carrier licensing and the proper forum for adjudicating disputes—in a practical way that is not necessary, or possible, when resolving individual matters before the Board. By reducing these incremental costs, the policy statement is considered a deregulatory action under Executive Order 14192, *Unleashing Prosperity Through Deregulation.*

I. Executive Summary

This policy statement explains how the Board and state and federal courts have interpreted the Board's authority over rail transportation and the preemption of state and local laws under ICCTA.[2] Congress' framework, set forth in ICCTA, has been interpreted in ways that ensure the uniform federal regulation over interstate rail transportation, which is critical to the American economy. Individual cases must be decided based on the facts, circumstances, and applicable law in each case, and this policy statement supports that endeavor by setting forth the Board's general perspective on its jurisdiction and ICCTA preemption.

The policy statement begins with an explanation of the long-recognized need for uniform rail regulation at the federal level, including under the Commerce Clause of the U.S. Constitution, the passage of the Interstate Commerce Act in 1887, and subsequent federal legislation, culminating in the passage of ICCTA and the creation of the Board in the 1990s. In enacting the statutory provision most relevant to preemption—49 U.S.C. 10501(b)—Congress included two key, interrelated components: (1) broad, exclusive jurisdiction over transportation by rail carriers (including certain related activity), and (2) that the remedies provided under ICCTA expressly preempt the remedies provided under federal and state law. The policy statement explains and analyzes numerous elements of the statute.

Regarding jurisdiction, the Board discusses the definitions of ''transportation'' and ''rail carrier'' (with attention to both freight and passenger rail carriers), and provides an explanation of three categories of track that the Board has recognized (common carrier, ancillary, and private) and how each is viewed for jurisdictional purposes. In analyzing the preemption provision, the policy statement identifies the broad scope of

[1] The Coalition consists of American Chemistry Council, American Short Line and Regional Railroad Association (ASLRRA), Association of American Railroads, Intermodal Association of North America, National Grain and Feed Association, and National Industrial Transportation League.

[2] For demonstrative purposes, the Board cites both binding and non-binding precedents in this policy statement without necessarily adopting such precedents.

''regulations'' that may be preempted—including those from both state and local authorities and those that may take the form of less-direct methods of regulation. The policy statement also explains that preemption extends beyond economic regulation and may apply when ICCTA does not provide an alternative remedy. The Board and courts may both be proper forums for disputes regarding the Board's jurisdiction and ICCTA preemption, with courts often referring preemption issues to the Board, consistent with the Board's expertise on such matters.

The policy statement next explores the analytical preemption framework that the Board applies when considering state or local regulations. The policy statement explains that what courts often call express preemption is typically analyzed, under ICCTA, as ''categorical'' preemption, and what is often called implied preemption is typically analyzed as ''as-applied'' preemption. The policy statement then explains that the categorical analysis is employed where state or local laws attempt to regulate rail transportation matters or when regulations (such as permitting) can be used to prevent rail transportation. It further explains that the ''as-applied'' analysis is used when a regulation may unreasonably burden or interfere with rail transportation or discriminate against rail carriers. The policy statement then analyzes and synthesizes precedents on complete takings of rail property by state or local governments, as well as the indirect regulation of rail transportation through regulation of shippers in ways that may limit common carrier rail service. The policy statement then addresses a number of commonly occurring preemption questions, summarizing the preemption analysis applied and the results of Board and court decisions. The non-exhaustive list of preemption fact patterns includes: (1) abandonment of rail property interests, (2) complete taking of rail carrier property, (3) utilities and pipelines within the right-of-way, (4) blocked crossings, (5) pedestrian or road crossings of rail lines, (6) locomotive idling, (7) environmental permitting, zoning ordinances, and land use laws, (8) noise, smoke, appearance, and other nuisance-related claims, (9) design, construction, or maintenance of rail infrastructure, (10) breach of contract, and (11) routing of traffic.

The policy statement also discusses the analysis that applies in considering whether a federal law is preempted by ICCTA. The Board explains the harmonization analysis that applies to give effect to both federal laws where possible. The policy statement then discusses two illustrative federal law regimes that have been the subject of harmonization analysis in past decisions—federal rail safety laws (including the Federal Railroad Safety Act (FRSA)) and federal environmental laws (including the Clean Air Act (CAA) and Clean Water Act (CWA)).

The Board is not making any binding determinations in this policy statement. Indeed, this policy statement is not exhaustive and should not be interpreted to predetermine the outcome of any particular dispute that may come before the agency, in which the Board would consider the specific facts, circumstances, and arguments presented. Instead, it compiles principles from certain existing cases to help parties understand how the Board and courts have approached frequently occurring questions concerning the Board's jurisdiction and ICCTA preemption. Where this policy statement identifies areas in which the Board provides a refinement to its prior analysis, such as complete takings and regulations directed at rail customers, the discussion below explains the basis for the refinement. The Board intends that this policy statement will serve as a reference document that can be used to promote growth in the rail industry and collaboration between rail carriers, shippers, and communities to proactively develop solutions to rail-related concerns.

Nevertheless, railroads should not use ICCTA preemption as an excuse to be unresponsive to local public officials. Consistent with the rail transportation policy of the United States government (set forth at 49 U.S.C. 10101), railroads, as regulated entities, should seek to engage in good communication, information sharing and cooperation with the communities they serve and operate within. State and local governments may have legitimate interests in the development of, among other things, passenger rail and trails within rights of way where allowed, for the benefit of both rail carriers and local communities. Local government officials who believe that a railroad has been unresponsive may seek assistance from the Board's Office of Public Assistance, Governmental Affairs, and Compliance (OPAGAC) to facilitate improved communications.

II. Historically Recognized Need for Uniform Federal Rail Regulation

The Surface Transportation Board was created on January 1, 1996 by ICCTA, Public Law 104–88, 109 Stat. 803 (1995), as the successor to the Interstate Commerce Commission (ICC) (1887–1995). The Board is the federal agency that is responsible for the economic regulation of various modes of surface transportation, primarily freight rail. Its responsibilities include oversight of railroad rates, practices, and service issues, as well as rail restructuring transactions including mergers, line sales, line construction, and line abandonments. The Board also has jurisdiction over certain passenger rail matters, the intercity bus industry, household goods carriers' tariffs, rate regulation of non-contiguous domestic water transportation (marine freight shipping involving the mainland United States, Hawaii, Alaska, Puerto Rico, and other U.S. territories and possessions), and pipeline carriers transporting commodities other than water, gas, or oil. While questions can arise regarding the scope of the Board's authority over each of these other transportation modes, this policy statement discusses rail transportation, which is the primary focus of the Board's statutory obligations.

Congress and the courts long have recognized a need to uniformly regulate rail transportation at the federal level. As an inherently interstate mode of transportation, ''[r]ailroads have been subject to comprehensive federal regulation for [more than] a century.'' *United Transp. Union* v. *Long Island R.R.,* 455 U.S. 678, 687 (1982); *see also* Interstate Commerce Act, ch. 104, 24 Stat. 379 (1887). Even before Congress enacted the Interstate Commerce Act in 1887, the Supreme Court had established that a state's regulation of railroad rates unconstitutionally interfered with interstate commerce. *See Wabash, St. Louis & Pac. Ry.* v. *Illinois,* 118 U.S. 557, 577 (1886). In 1887, Congress created the ICC to oversee a ''comprehensive regulatory regime over the rail industry.'' Paul Stephen Dempsey, *The Rise & Fall of the Interstate Com. Comm'n,* 95 Marq. L. Rev. 1151, 1161 (2012); *see also* Interstate Commerce Act Sec. 11, 24 Stat. 383. And since that time, the Supreme Court has ''frequently invalidated attempts by the States to impose on common carriers obligations that are plainly inconsistent with the plenary authority of the [ICC] or with congressional policy as reflected in the [Interstate Commerce Act].'' *Chi. & NW Transp. Co.* v. *Kalo Brick & Tile Co.,* 450 U.S. 311, 318 (1981) (citing *Tex. & Pac. Ry.* v. *Abilene Cotton Oil Co.,* 204 U.S. 426, 446 (1907); *Transit Comm'n* v. *United States,* 289 U.S. 121, 129 (1933)). Indeed, the Interstate Commerce Act is ''among the most pervasive and comprehensive federal regulatory

schemes.'' *Chi. & NW Transp. Co.,* 450 U.S. at 318.

In response to significant financial concerns experienced by the railroad industry in the 1970s, Congress substantially amended the Interstate Commerce Act by enacting ''two major pieces of legislation of a generally deregulatory thrust'': the Railroad Revitalization and Regulatory Reform Act of 1976, Public Law 94–210, and the Staggers Rail Act of 1980 (Staggers Act), Public Law 96–448. *Balt. Gas & Elec. Co.* v. *United States,* 817 F.2d 108, 112–13 (D.C. Cir. 1987). Together, these laws were intended to reduce unnecessary regulation and help restore the financial stability of the railroad industry.

Congress carried that deregulatory thrust forward in 1995, when it enacted ICCTA as a means of ''extending exclusive Federal jurisdiction'' over rail transportation. H.R. Rep. No. 104–311, at 82, 95 (1995), *as reprinted in* 1995 U.S.C.C.A.N. 793, 793–94, 807 (''There is a long history behind the termination of the [ICC] beginning with [the Staggers Act], which began the substantial economic deregulation of the surface transportation industry . . . .''). And through ICCTA, Congress further expanded federal uniformity by preempting certain areas of state authority over rail activity that previously existed. *See Fla. E. Coast Ry.* v. *City of W. Palm Beach,* 266 F.3d 1324, 1337–38 (11th Cir. 2001) (explaining that ''[t]he pre-ICCTA statute expressly authorized regulation of certain railroad activities to be undertaken concurrently by the federal and state governments, while still other regulation would be the exclusive province of state law.''). At the same time, in further deregulating the rail industry, Congress did not intend for states and local governments to replace federal regulation with a patchwork of differing state and local rail regulations. *See* S. Rep. No. 104–176, at 6 (1995) (noting that nothing in ICCTA ''should be construed to authorize States to regulate railroads in areas where Federal regulation has been repealed . . . .'').

Indeed, in ICCTA, Congress reaffirmed that ''the direct and complete pre-emption of State economic regulation of railroads'' was necessary to preserve ''the uniformity of Federal standards'' and prevent ''the balkanization and subversion of the Federal scheme of minimal regulation for this intrinsically interstate form of transportation.'' H.R. Rep. No. 104–311, at 95–96. Subjecting the interstate rail network to varying state regulations ''would greatly undermine the industry's ability to provide the 'seamless' service that is essential to its shippers,'' and would weaken the rail industry's ''efficiency and competitive viability.'' S. Rep. No. 104–176, at 6. In this way, preemption is consistent with the national rail transportation policy to promote a ''safe and efficient rail transportation system,'' 49 U.S.C. 10101(3), and ''ensure the development and continuation of a sound rail transportation system with effective competition among rail carriers and with other modes, to meet the needs of the public and the national defense,'' 49 U.S.C. 10101(4).

III. The Jurisdiction and Preemption Provisions of 49 U.S.C. 10501(b)

The scope of the Board's exclusive jurisdiction over transportation by rail carriers is set forth in 49 U.S.C. 10501(b). The statute also contains an express preemption provision. Taken together, the statutory provisions governing jurisdiction and preemption establish the framework for the Board's analysis.

The statute provides that the ''jurisdiction of the Board over (1) transportation by rail carriers, and the remedies provided in [Part A of Subtitle IV of Title 49] with respect to rates, classifications, rules (including car service, interchange, and other operating rules), practices, routes, services, and facilities of such carriers; and (2) the construction, acquisition, operation, abandonment, or discontinuance of spur, industrial, team, switching, or side tracks, or facilities, even if the tracks are located, or intended to be located, entirely in one State, is exclusive.'' 49 U.S.C. 10501(b). Furthermore, ''[e]xcept as otherwise provided in [Part A of Subtitle IV of Title 49], the remedies provided under this part with respect to regulation of rail transportation are exclusive and preempt the remedies provided under Federal or State law.'' *Id.*

These provisions of section 10501 work together to ensure the free flow of interstate commerce by preventing a patchwork of different state and local regulations. *E.g., Tenth Ave. Neighbors—Pet. for Declaratory Ord.,* FD 36654, slip op. at 3–4 (STB served May 8, 2024) (citing *Tubbs—Pet. for Declaratory Ord.,* FD 35792, slip op. at 5 (STB served Oct. 31, 2014), *aff'd sub nom. Tubbs* v. *STB,* 812 F.3d 1141 (8th Cir. 2015)); *see also Elam* v. *Kan. City S. Ry.,* 635 F.3d 796, 804 (5th Cir. 2011) (recognizing that a purpose of ICCTA was to create a ''[f]ederal scheme of minimal regulation for this intrinsically interstate form of transportation''); *Fayus Enters.* v. *BNSF Ry.,* 602 F.3d 444, 452 (D.C. Cir. 2010) (ICCTA reflected a Congressional effort to prevent the ''balkanization'' of railroad-related laws); *U.S. Env't Prot. Agency—Pet. for Declaratory Ord.* (*EPA Declaratory Ord.*), FD 35803, slip op. at 7 (STB served Dec. 30, 2014) (''The courts and the Board have emphasized the importance of national uniformity in laws governing rail transportation when interpreting [section] 10501(b).''). Since ICCTA was enacted, it has been observed that ''[i]t is difficult to imagine a broader statement of Congress' intent to preempt state regulatory authority over railroad operations.'' *City of Auburn* v. *United States,* 154 F.3d 1025, 1030 (9th Cir. 1998) (quoting *CSX Transp. Inc.* v. *Ga. Pub. Serv. Comm'n,* 944 F. Supp. 1573, 1581 (N.D. Ga. 1996)).

From this established statutory structure, disputes have arisen about both the jurisdictional and preemption aspects of ICCTA. Two preliminary jurisdictional questions have guided the analysis of whether regulation under local, state, or another federal law may be subject to ICCTA preemption. First, is the activity at issue ''transportation by rail carrier'' as part of the interstate rail network or related to the construction, acquisition, operation, abandonment or discontinuance of spur, industrial, team, switching, or side tracks (collectively, commonly referred to as ''ancillary track'' or ''excepted track''), or facilities? And second, does the local, state, or federal action constitute regulation of such activity? If the answer to both questions is yes, then the Board and courts apply a preemption analysis to determine whether ICCTA preempts such regulation.[3]

Though the steps are straightforward, the case-specific analysis required to determine preemption is often fact-intensive and detailed. Questions can arise in each stage of the inquiry: what activities constitute ''transportation''; is the actor a ''rail carrier,'' or operating on behalf of a rail carrier; are the railroad tracks or facilities part of the interstate rail network or a shipper's private facilities; what types of actions by local and state governments (or other actors) are considered ''regulation''; when does a state or local regulation ''unreasonably interfere'' with rail transportation; to what extent does preemption cover lawsuits for damages allegedly caused by rail carrier operations? The analysis below addresses these and other related questions and summarizes existing precedent on the Board's jurisdiction and ICCTA preemption.

[3] As discussed below, the test applied varies depending on whether the regulation is based on state (or local) law or federal law, and the content of the regulation.

A. Transportation by Rail Carrier or Related to Ancillary/Excepted Track or Facilities

The threshold question in any preemption analysis is whether the activity at issue falls within the Board's jurisdiction. As specified, under 49 U.S.C. 10501(b), the Board has jurisdiction over ''transportation by rail carriers.'' Whether a particular activity constitutes ''transportation by rail carrier'' is a case-by-case, fact-specific determination. *E.g., Town of Smithtown—Pet. for Declaratory Ord.,* FD 36575 (Sub-No. 1), slip op. at 3 (STB served Feb. 23, 2024) (citing *Padgett* v. *STB,* 804 F.3d 103, 108 (1st Cir. 2015); *Town of Milford—Pet. for Declaratory Ord.,* FD 34444, slip op. at 2 (STB served Aug. 12, 2004)). The same is true for determining whether railroad tracks and facilities are subject to the Board's jurisdiction. *See, e.g., Ne. La. Multimodal Dist.—Pet. for Declaratory Ord.,* FD 36809, slip op. at 5–6 (STB served Sept. 15, 2025) (describing factors considered in distinguishing between common carrier/mainline (10901) and ancillary/excepted (10906) track)); *Tri-City R.R.—Pet. for Declaratory Ord.,* FD 36037, slip op. at 5 (STB served June 1, 2017) (describing hallmarks of private track).

To determine whether a particular activity is subject to the Board's jurisdiction and, potentially, preemption under 49 U.S.C. 10501, both the ''transportation'' and ''by rail carrier'' prongs of the standard must be satisfied. The Board has held that preemption does not apply to non-transportation activities by rail carriers. *See, e.g., Grafton & Upton R.R.—Pet. for Declaratory Ord.,* FD 36696, slip op. at 10 (STB served Nov. 15, 2023) (stating that ''the taking of the [rail carrier's property] via eminent domain would likely not be preempted if it is developed for purposes unrelated to rail transportation.''). Likewise, transportation activities by non-rail carriers generally are not preempted. *See, e.g., Smithtown,* FD 36575 (Sub-No. 1), slip op. at 4–5 (holding that application of state and local regulations to transloading facility would not be preempted where the facility was owned by a non-carrier that was not affiliated with the carrier; not acting as the carrier's agent; and not subject to the carrier's exertion of control over operations).

1. Transportation

The Board has jurisdiction over transportation in the United States, including, but not limited to,[4] (1) between a place in a state and a place in another state, and (2) between a place in a state and another place in the same state, as long as that intrastate transportation is ''part of the interstate rail network.'' 49 U.S.C. 10501(a)(2). Rail carriers that operate exclusively in one state—as many short line railroads [5] often do—are thus generally subject to the Board's jurisdiction if they connect to the interstate rail network. *See Great Redwood Trail Agency—Adverse Aban.—Mendocino Ry. in Mendocino Cnty., Cal.,* AB 1305 (Sub-No. 1), slip op. at 9–10 (STB served Feb. 19, 2026) (acknowledging that a rail carrier solely transporting shipments between points within the same state could be subject to the Board's jurisdiction). As used in ICCTA, ''transportation'' includes not just the act of moving freight or passengers by rail but also broadly encompasses equipment, facilities, and services related to that movement. Specifically, transportation ''includes a locomotive, car, vehicle, vessel, warehouse, wharf, pier, dock, yard, property, facility, instrumentality, or equipment of any kind related to the movement of passengers or property, or both, by rail, regardless of ownership or an agreement concerning use; and services related to that movement, including receipt, delivery, elevation, transfer in transit, refrigeration, icing, ventilation, storage, handling, and interchange of passengers and property.'' 49 U.S.C. 10102(9). This list is non-exhaustive, as ''use of the word 'include' indicates the list is illustrative rather than comprehensive.'' *Del Grosso* v. *STB,* 898 F.3d 139, 142 (1st Cir. 2018).

Proceedings before the Board and courts have made clear that the broad definition of ''transportation'' includes transloading and related operations when performed or operated by, or under the auspices of, a rail carrier. *See, e.g., Smithtown,* FD 36575 (Sub-No. 1), slip op. at 4–5 (stating that ''the Board's jurisdiction extends to rail-related activities that take place at transload facilities if the activities are offered by a rail carrier, either directly or through its agent, or if a rail carrier exerts control over a third-party's operations''). Additionally, conducting activities such as making repairs to rail equipment and the construction and operation of excepted track constitute ''transportation'' because they involve facilities, instrumentalities, and equipment related to the movement of property (tracks and rail equipment) and services related to that movement (repairs and operation of tracks and rail equipment). *See Grafton & Upton,* FD 36696, slip op. at 10–11.

Though expansive, the definition of ''transportation'' has its limits. *Emerson* v. *Kan. City S. Ry.,* 503 F.3d 1126, 1129 (10th Cir. 2007); *see also Del Grosso* v. *STB,* 804 F.3d 110, 119 (1st Cir. 2015) (stating that courts and the Board have rejected interpretations of ''transportation'' that extend beyond activities relating to the movement of ''passengers or property'' by rail). As the courts have recognized, ''regulation of activities that occur before or after 'transportation' and are incidental to such transportation may not be preempted.'' *Delaware* v. *STB,* 859 F.3d 16, 21–22 (D.C. Cir. 2017); *see also Emerson,* 503 F.3d at 1130–32 (holding that a railroad's disposal of railway ties into a wastewater drainage ditch adjacent to its tracks was not ''transportation,'' and thus state tort claims related to the disposal were not preempted).

As one example, ''manufacturing and commercial transactions that occur on property owned by a railroad that are not part of or integral to the provision of rail service are not embraced within the term 'transportation.' '' *Del Grosso,* 898 F.3d at 142 (quoting *New England Transrail, LLC—Constr., Aquis. & Operation Exemption—in Wilmington & Woburn, Mass.* (*New England Transrail*), FD 34797, slip op. at 10 (STB served July 10, 2007)); *see also Fla. E. Coast Ry.,* 266 F.3d at 1327, 1336 (a third party's aggregate distribution business operating in a rail yard was not ''transportation''); *New England Transrail,* FD 34797, slip op. at 14–15 (shredding of construction debris at a transloading facility before loading the material onto railcars was not ''transportation''); *Town of Milford,* FD 34444, slip op. at 1–2 (cutting and welding steel in a rail yard after rail transportation had occurred but before the steel was loaded onto trucks was not ''transportation'').

[4] In full, section 10501(a)(2) provides: Jurisdiction under paragraph (1) applies only to transportation in the United States between a place in—

(A) a State and a place in the same or another State as part of the interstate rail network;

(B) a State and a place in a territory or possession of the United States;

(C) a territory or possession of the United States and a place in another such territory or possession;

(D) a territory or possession of the United States and another place in the same territory or possession;

(E) the United States and another place in the United States through a foreign country; or

(F) the United States and a place in a foreign country.

[5] Class II and III carriers are commonly referred to as ''regional'' or ''short line'' railroads. In this policy statement, the Board uses the term ''short line railroads'' to refer to these rail carriers.

2. Rail Carrier

Under ICCTA, a ''rail carrier,'' is defined as ''a person providing common carrier railroad transportation for compensation, but does not include street, suburban, or interurban electric railways not operated as part of the general system of rail transportation.'' 49 U.S.C. 10102(5). The term ''railroad'' includes ''a bridge, car float, lighter, ferry, and intermodal equipment used by or in connection with a railroad; the road used by a rail carrier and owned by it or operated under an agreement; and a switch, spur, track, terminal, terminal facility, and a freight depot, yard, and ground, used or necessary for transportation.'' 49 U.S.C. 10102(6). The common carrier obligation requires that rail carriers ''providing transportation or service subject to the jurisdiction of the Board under [Part A of Subtitle IV of Title 49] shall provide the transportation or service on reasonable request.'' 49 U.S.C. 11101(a). Thus, as the Supreme Court has recognized, rail carriers are required to provide transportation ''to any person or commodity,'' and ''cannot decline to provide [such] transport based on the product or commodity to be carried.'' *Seven Cnty. Infrastructure Coal.* v. *Eagle Cnty.,* 605 U.S. 168, 191 n.6 (2025). This includes products ranging from crude oil, *id.,* to hazardous substances, *Riffin* v. *STB,* 733 F.3d 340, 346–47 (D.C. Cir. 2013), to agricultural products, construction materials, and retail goods.

The Board and courts have also interpreted the term ''rail carrier'' broadly, such that activities do not necessarily need to be conducted directly by the rail carrier in order for preemption to apply. Rather, the transportation must be performed ''by, or under the auspices of, a rail carrier.'' *Del Grosso—Pet. for Declaratory Ord.,* FD 35652, slip op. at 2 & n.4 (STB served July 31, 2017) (collecting cases); *City of Alexandria—Pet. for Declaratory Ord.,* FD 35157, slip op. at 2 (STB served Feb. 17, 2009). The Board has stated that, for example, at transload facilities, ''the Board's jurisdiction extends to rail-related activities that take place at transload facilities if the activities are offered by a rail carrier, either directly or through its agent, or if a rail carrier exerts control over a third-party's operations.'' *Smithtown,* FD 36575 (Sub-No. 1), slip op. at 4. As discussed in more detail below, certain cases have held that indirect regulation that burdens common carrier rail service implicates preemption.

a. Freight Rail Carriers

The Board has jurisdiction over freight rail carriers engaged in interstate transportation, as well as intrastate transportation that is ''part of the interstate rail network.'' 49 U.S.C. 10501(a)(2). The Board classifies freight rail carriers into three categories based on annual operating revenues, with Class I carriers being the largest, Class II in the middle, and Class III the smallest. *See* 49 CFR 1201. Class II and III carriers are commonly referred to as short line railroads. Short line railroads frequently operate within the Board's jurisdiction because, even when they operate only within one state, they often connect with Class I carriers and serve as part of the interstate rail network by handling the first or last segment (sometimes referred to as ''first mile/last mile service'') as part of a longer journey.

Whether a freight operator is considered a rail carrier within the Board's jurisdiction is not always immediately clear. The Board (as did the ICC before it) issues decisions authorizing transactions that, if consummated, confer rail carrier status. Typically, the Board-issued document is a decision approving the potential rail carrier's authority for construction,[6] acquisition, and/or operation (under 49 U.S.C. 10901 or 10502), often in the form of a notice of exemption in the case of acquisition and operation transactions (under 49 CFR 1150.31).[7] Although these decisions are maintained in agency records, they may not be readily accessible, particularly when the agency's approval was issued decades ago. Moreover, the Board's licensing structure is permissive. Only when the entity consummates a Board-authorized acquisition or operation does it become a ''rail carrier'' under the Board's jurisdiction. *See Mendocino Ry.—Pet. for Declaratory Ord.,* FD 36868, slip op. at 3–4 (STB served Sept. 26, 2025) (citing *Middletown & N.J. R.R.—Lease & Operation Exemption—Norfolk S. Ry.,* FD 35412, slip op. at 4–5 (STB served Mar. 27, 2013)). And once the transaction is consummated, no separate notice of consummation is required to be filed with the Board. At this time, the Board does not maintain a registry, list, or website of licensed rail carriers, nor does it provide a physical or digital license document.[8]

Additionally, a rail carrier does not automatically lose its common carrier status by stopping its rail service over a line. By statute, Board authorization is needed to terminate the common carrier obligation generally through a line sale, abandonment, or discontinuance. *See, e.g., Middletown,* FD 35412, slip op. at 4; *see also Strohmeyer—Acquis. & Operation Exemption—Valstir Indus. Track in Middlesex & Union Cntys., N.J.,* FD 35527, slip op. at 2 & n.5 (STB served Oct. 20, 2011) (discussing the mechanisms a railroad may employ to excuse itself, permanently or temporarily, from its common carrier obligations) (citing *Pejepscot Indus. Park, Inc.—Pet. for Declaratory Ord.,* 6 S.T.B. 886, 898 (2003)). Therefore, regardless of how much time has passed since a shipper last requested common carrier service, a rail carrier remains within the Board's jurisdiction until the Board, in its sole authority, authorizes its removal and that authorization is consummated.

When questions concerning a rail carrier's status cannot be resolved through the review of public decisions, parties often seek assistance from the Board.[9] The Board's Rail Customer and Public Assistance (RCPA) program can assist in resolving disputes, explain the Board's jurisdiction and procedures, and informally answer questions based on the Staff's knowledge and experience.[10] Additionally, the Board has discretionary authority under 5 U.S.C. 554(e) and 49 U.S.C. 1321 to

[6] Construction authority, once consummated, confers on the constructing entity a common carrier obligation, even in cases where ''fulfillment [of that obligation] may be undertaken by operating railroads under trackage rights, leases, or similar arrangements.'' *Midwest Generation, LLC—Exemption from 49 U.S.C. 10901—for Constr. in Will Cnty., Ill.,* FD 34060 et al., slip op. at 7 n.15 (STB served Mar. 21, 2002) (quoting *Big Stone-Grant Ind. Dev. & Transp., L.L.C.—Constr. Exemption—Ortonville, Minn. & Big Stone City, S.D.,* FD 32645, slip op at 2 (ICC served Sept. 26, 1995)).

[7] As recently explained by the ASLRRA in a proceeding before the Board, ''non-carrier companies often enter the rail transportation system, and become common carriers subject to [Board] jurisdiction, through the acquisition of either a part or of the entirety of a rail line segment that is currently within the jurisdiction of the Board or otherwise would be the entirety of the line of railroad to be operated by that soon-to-be carrier.'' ASLRRA Comment 6, July 7, 2025, *Mendocino Ry.—Pet. for Declaratory Ord.,* FD 36868.

[8] Some of the Board's licensing provisions—for example, 49 U.S.C. 10901 and 10902—refer to the Board's issuance of a ''certificate'' authorizing the proposed activity. In practice, such certificates consist of a Board decision granting the authority or, in the case of class exemptions, a Board-issued notice of exemption served and published in the **Federal Register**.

[9] The Board is aware that other agencies or organizations, such as the U.S. Railroad Retirement Board, at times also make their own determinations about whether an entity is a rail carrier. The Board does not address those circumstances here and focuses solely on the Board's (and courts') determinations of the Board's jurisdiction for purposes of regulation under ICCTA.

[10] Additional information about RCPA, including contact information, can be found on the Board's website.

issue a declaratory order to eliminate controversy or remove uncertainty. *See, e.g., Bos. & Me. Corp.* v. *Town of Ayer,* 330 F.3d 12, 14 n.2 (1st Cir. 2003); *Delegation of Auth.—Declaratory Ord. Procs.,* 5 I.C.C.2d 675 (1989). For example, the Board recently received a request from a rail carrier to confirm its status as a common carrier subject to the Board's jurisdiction, which was disputed during legal challenges by local municipalities and state agencies. *See Mendocino Ry.,* FD 36868, slip op. at 1. The Board reviewed prior decisions related to the requesting rail carrier—including past Board decisions granting a common carrier obligation to the rail carrier's predecessor, and subsequently granting the rail carrier authority to purchase the line—and determined that the rail carrier was a common carrier subject to the Board's jurisdiction and therefore, if applicable, entitled to the benefits of federal preemption for its transportation activities under 49 U.S.C. 10501(b). *See id.* at 1–4.

b. Passenger Rail Carriers

The Board also has jurisdiction over certain passenger rail operations. While the Board generally has jurisdiction over ''transportation''—including equipment or services related to the movement of passengers as well as property, *see* 49 U.S.C. 10102(9)—by a ''rail carrier,'' not all passenger rail operations fall within the Board's jurisdiction. The definition of ''rail carrier'' specifically excludes ''street, suburban, or interurban electric railways not operated as part of the general system of rail transportation.'' 49 U.S.C. 10102(5). Additionally, except in limited circumstances,[11] the Board ''does not have jurisdiction under this part over . . . public transportation provided by a local government authority.'' 49 U.S.C. 10501(c)(2)(A). This exclusion generally applies to ''regular, continuing shared-ride surface transportation services that are open to the general public or open to a segment of the general public defined by age, disability, or low income,'' with certain exceptions, when provided by a local governmental authority.[12] 49 U.S.C. 5302(15). Additionally, the National Railroad Passenger Corporation (Amtrak) is treated separately under ICCTA. Although Amtrak is part of the interstate rail network, Congress limited the Board's jurisdiction over Amtrak to specific statutory provisions, including to address directed service (49 U.S.C. 11123), equipment trusts (*id.* 11301), pooling (*id.* 11322(a)), withholding taxes (*id.* 11502), and liability (*id.* 11706). *See* 49 U.S.C. 24301(c).[13]

Whether a passenger rail service solely within one state is part of the interstate rail network is a fact-specific determination based on the totality of the circumstances. *Tex. Cent. R.R. & Infrastructure, Inc.—Pet. for Exemption—Passenger Rail Line Between Dallas & Houston, Tex.,* FD 36025, slip op. at 7 (STB served July 16, 2020); *Cal. High-Speed Rail Auth.—Constr. Exemption—in Merced, Madera & Fresno Cntys., Cal.,* FD 35724, slip op. at 11–15 (STB served June 13, 2013). It has also long been the agency's position that it does not have jurisdiction over purely intrastate passenger service, even if that service is performed by a licensed rail carrier. *See, e.g., Napa Valley Wine Train, Inc.—Pet. for Declaratory Ord.,* 7 I.C.C.2d 954, 969 (1991). However, questions can arise when an intrastate passenger line connects to the interstate rail network, as such service may indeed be subject to the Board's jurisdiction. *See, e.g., Tex. Cent. R.R.,* FD 36025, slip op. at 12 (finding that a proposed intrastate passenger rail line would be subject to the Board's jurisdiction because it was connected to the interstate rail system via through-ticketing arrangements and transfer service). The Board examines multiple factors in determining whether a particular passenger service is under its jurisdiction, such as whether the proposed service has a through-ticketing arrangement or whether it shares a station with an interstate carrier, although no single factor is dispositive. *See, e.g., id.,* slip op. at 7; *Cal. High-Speed Rail Auth.,* FD 35724, slip op. at 11–15.

3. Classifications of Rail Track

Whether an activity falls within the definition of ''transportation by rail carrier'' will sometimes depend, in whole or in part, on the legal status of the rail line or track on which service is being provided. Again, the Board recognizes three categories of track: common carrier (or mainline),[14] ancillary (or excepted),[15] and private. The first two (common carrier and ancillary) are subject to the Board's jurisdiction, whereas private track is not.

a. Common Carrier/Mainline Rail Lines

The Board has exclusive jurisdiction over rail lines over which a rail carrier provides ''common carrier'' service to shippers. 49 U.S.C. 10501(a)–(b); *id.* 11101; *see Allied Erecting & Dismantling Co.* v. *STB,* 835 F.3d 548, 550 (6th Cir. 2016). No one may build an extension to a common carrier rail line, build additional lines, provide transportation over an extended or additional line, or abandon a line without Board authorization. 49 U.S.C. 10901(a), 10903; *see Allied Erecting & Dismantling Co.,* 835 F.3d at 550.[16]

b. Ancillary/Excepted Tracks

The Board often refers to spur, industrial, team, switching, or side tracks, or facilities interchangeably as ''ancillary'' or ''excepted'' tracks. ''Ancillary'' because such tracks and facilities are used for loading cars, track switching, and other activities that are incidental, or *ancillary,* to the provision of common carrier service, *see Nicholson* v. *ICC,* 711 F.2d 365, 367–68 & n.11 (D.C. Cir. 1983); ''excepted'' because under 49 U.S.C. 10906, the construction, acquisition, operation, abandonment, or discontinuance of such tracks and related facilities is *excepted* from the Board's licensing authority. Thus, while spur, industrial, team, switching, or side tracks, or facilities, are within the Board's exclusive jurisdiction, they can be added to or removed from the interstate rail network without authorization from the Board. *See N.Y.C. Econ. Dev. Corp.—Pet. for Declaratory Ord.,* FD 36467, slip op. at 5 (STB served June 11, 2021); *Tri-City R.R.,* FD 36037, slip op.

[11] These include the use of terminal facilities (49 U.S.C. 11102) and switch connections/tracks (49 U.S.C. 11103) in limited circumstances. *See* 49 U.S.C. 10501(c)(3)(B).

[12] The term ''local governmental authority'' includes ''(A) a political subdivision of a State; (B) an authority of at least 1 State or political subdivision of a State; (C) an Indian tribe; and (D) a public corporation, board, or commission established under the laws of a State.'' 49 U.S.C. 5302(11).

[13] The Board also has certain regulatory responsibilities relating to Amtrak under other statutes not relevant for purposes of this policy statement. The Board also notes that, under separate statutes, Amtrak itself may be able to invoke its own form of preemption in certain circumstances. *See* 49 U.S.C. 24902(j), 24301(g).

[14] The Board and courts regularly refer to these lines as ''mainline'' or ''main line'' track for purposes of the Board's jurisdiction under ICCTA, which is the focus of this policy statement. The Board is not herein equating, or taking any position on, these terms as they may pertain to FRA's definition of ''main line'' under 49 CFR 236.1003, or FRA's use of the term ''general railroad system of transportation'' as described in 49 CFR part 209, Appendix A.

[15] The term ''excepted track'' derives from 49 U.S.C. 10906, titled ''Exception''. The use of the term ''excepted track'' as it pertains to ICCTA is not the same as FRA's definition of ''excepted track'' under 49 CFR 213.4.

[16] When Board authorization is required for certain projects, the Board must consider, among other things, the potential environmental and historic impacts of the construction and operation of a proposed rail line pursuant to the National Environmental Policy Act of 1969, 42 U.S.C. 4321–4370m–11, Section 106 of the National Historic Preservation Act, 54 U.S.C. 300101 *et seq.,* the Board's environmental rules at 49 CFR part 1105, and related environmental laws.

at 4. Even though the Board does not license ancillary track (as it does common carrier rail lines), such track is under the Board's exclusive jurisdiction and therefore is subject to federal preemption. *See* 49 U.S.C. 10501(b)(2). There is no bright-line test to distinguish between common carrier rail lines and ancillary tracks. Instead, the Board considers various indicia when determining whether a track is excepted under section 10906, including a track's relationship to the rail system, intended use, physical characteristics, and history. *See, e.g., Oakland Glob. Rail Enter.—Pet. for Declaratory Ord.,* FD 36168, slip op. at 8 & n.8 (STB served Mar. 15, 2019).[17] A track segment that constitutes a carrier's entire rail system cannot be considered ancillary track (because it is not ''ancillary'' to other track of the carrier), and therefore is not excepted under 49 U.S.C. 10906. *Effingham R.R.—Pet. for Declaratory Ord.—Constr. at Effingham, Ill.,* FD 33468, slip op. at 5 (STB served Sept. 18, 1998).

c. Private Track

Private track is track typically built and maintained by a shipper (or for a shipper at the shipper's expense), and operated by the shipper or its contractor to serve its own operations and move its own goods. *E.g., B. Willis, C.P.A., Inc.—Pet. for Declaratory Ord.,* 6 S.T.B. 280, 281 (2002), *aff'd sub nom. B. Willis, C.P.A., Inc.* v. *STB,* 51 Fed. App'x 321 (D.C. Cir. 2002). Where the shipper does not hold out to provide common carrier railroad service over the line to other shippers for compensation, neither the construction of the track nor the operations require Board approval. *See B. Willis, C.P.A., Inc.,* 6 S.T.B. at 285; *see also Devens Recycling Ctr.—Pet. for Declaratory Ord.,* FD 34952, slip op. at 3 (STB served Jan. 10, 2007) (finding no jurisdiction over operations conducted on private track used exclusively to serve the track owner pursuant to a contractual arrangement with the owner). When track is constructed and operated in a manner that does not constitute common carriage, the agency has held that it is not subject to the Board's jurisdiction. *See B. Willis, C.P.A., Inc.,* 6 S.T.B. at 285. The agency has stated that private track need not serve only one shipper and can include private service to numerous shippers within a single location—such as an industrial park—as long as the carrier is not providing common carrier service. *Cf. TGS Cedar Port R.R.—Operation Exemption—in Chambers Cnty., Tex.,* FD 36627, slip op. at 1 (STB served Apr. 1, 2024) (noting that carrier previously operated 1.28 miles of private track within an industrial park without needing Board authority until conversion to common carrier service). Because such track is not subject to the Board's jurisdiction, construction and removal of such track is not covered by federal preemption. However, as discussed in further detail below, the Board is providing in this policy statement clarification regarding instances where state or local regulation of construction of or operations over private track may be considered to interfere with ''transportation by rail carrier'' and thus could be subject to preemption.

B. Regulation of Rail Transportation and the Preemption of Remedies

ICCTA contains an express preemption provision, providing that ''[e]xcept as otherwise provided in [Part A of Subtitle IV of Title 49], the remedies provided under this part with respect to regulation of rail transportation are exclusive and preempt the remedies provided under Federal or State law.'' 49 U.S.C. 10501(b). The plain meaning of ''regulation'' is ''managing or governing,'' *Fla. E. Coast Ry.,* 266 F.3d at 1331 (citing Black's Law Dictionary 1286 (6th ed. 1990)) (citation modified), or ''controlling by rule or restriction,'' *Union Pac. R.R.* v. *Chi. Transit Auth.,* 647 F.3d 675, 679 n.2 (7th Cir. 2011). ICCTA thus bars states from ''exercising control . . . over rail transportation as it is defined in 49 U.S.C. 10102(9).'' *Id.* (citation modified).

ICCTA's use of ''State'' encompasses both state and local law, and it is well established that ICCTA preempts local as well as state regulation. *Padgett,* 804 F.3d at 107 (citation modified). This can include, among other things, certain state or local building permits, zoning ordinances, and environmental and land use permitting requirements. *See, e.g., Wash. & Idaho Ry.—Pet. for Declaratory Ord.,* FD 36017, slip op. at 4 (STB served Mar. 17, 2017) (noting that state or local permitting or preclearance requirements, including building permits, zoning ordinances, and environmental and land use permitting requirements may be subject to preemption).

''Regulation'' does not simply mean laws passed by a legislature or rules enacted by a regulatory agency, and can, in appropriate circumstances, include common-law tort claims that similarly regulate rail transportation and certain related activity. Legal actions asserting eminent domain, adverse possession, easements, and other property rights have, as appropriate, been deemed ''regulation'' for purposes of analyzing ICCTA preemption. *See, e.g., Tri-City R.R.—Pet. for Declaratory Ord.,* FD 35915, slip op. at 7 (STB served Sept. 14, 2016) (collecting cases); *see also Edwards* v. *CSX Transp., Inc.,* 983 F.3d 112, 121 (4th Cir. 2020) (holding that ''regulation'' need not ''be by way of public rule''). Tort actions may also be considered ''regulation'' for purposes of ICCTA in certain circumstances ''because damages awarded under state tort laws can manage or regulate a railroad as effectively as the application of any other type of state statute or regulation.'' *Tubbs,* FD 35792, slip op. at 4. Thus, ICCTA's ''preemptive reach can encompass common-law tort actions, in addition to statutes and ordinances.'' *Edwards,* 983 F.3d at 121–22 (collecting cases) (recognizing that ICCTA's preemption clause ''in no way distinguishes between statutory prohibitions and common-law duties''). Indeed, the statute's ''all-encompassing language'' does not ''permit the federal statute to be circumvented by allowing liability to accrue under state common law.'' *Ezell* v. *Kan. City S. Ry.,* 866 F.3d 294, 299–300 (5th Cir. 2017). It has been noted that ''[o]f course, not *all* common-law claims against railroads are preempted.'' *Edwards,* 983 F.3d at 122. Rather, common law claims are subject to the same preemption analyses as are other forms of ''regulation,'' such as state and local laws.

While ''the core of ICCTA preemption is 'economic regulation,'' *Fayus Enters.,* 602 F.3d at 451, such as state laws governing the setting of rates and rules and practices related to rail transportation or service, ''ICCTA 'does not preempt only explicit economic regulation.'' *Id.* (quoting *N.Y. Susquehanna & W. Ry.* v. *Jackson,* 500 F.3d 238, 252 (3d Cir. 2007)); *accord City of Auburn,* 154 F.3d at 1030. And as the Board has recognized, any such limitation would be ''contrary to the statutory text and unworkable in practice.'' *Friends of the Aquifer,* 5 S.T.B. 880, 884 n.8 (2001). Additionally, given the broad language of section 10501(b)(2) (granting the Board exclusive jurisdiction over construction, acquisition, operation, abandonment, or discontinuance of rail lines), the distinction between ''economic'' and ''environmental'' regulation begins to blur. *See City of Auburn,* 154 F.3d at 1031. ''For if local authorities have the ability to impose 'environmental'

[17] Parties that are uncertain whether a particular track is considered a common carrier rail line or ancillary track (or private track) often request a determination from the Board. *See, e.g., Ne. La. Multimodal Dist.,* FD 36809; *N.Y.C. Econ. Dev. Corp.,* FD 36467.

permitting regulations on the railroad, such power will in fact amount to 'economic regulation' if the carrier is prevented from constructing, acquiring, operating, abandoning, or discontinuing a line.'' *City of Auburn,* 154 F.3d at 1031.

The remedies that the Board may impose are set forth throughout the Board's governing statute, covering issues such as competition and access (49 U.S.C. 11102), rates (*id.* 10702(1)), licensing (*id.* 10901–10910), and the economic relationship between shippers and carriers (*id.* 10702(2)). Section 10501(b) expressly states that ''the remedies provided under [49 U.S.C. 10101–11908] with respect to regulation of rail transportation are exclusive and preempt the remedies provided under Federal or State law.'' And so ICCTA preemption may apply even though a remedy may not exist under the Interstate Commerce Act for all instances where a state or local law is preempted. *14500 Ltd. LLC—Pet. for Declaratory Ord.,* FD 35788, slip op. at 5 (STB served June 5, 2014) (''Although [section] 10501(b) states that 'the remedies provided under this part with respect to rail transportation are exclusive,' that does not mean that a remedy must exist under the Interstate Commerce Act for all instances where a state or local law is preempted under [section] 10501(b)''.); *Norfolk S. Ry.—Pet. for Declaratory Ord.,* FD 35701, slip op. at 6 (STB served Nov. 4, 2013).

A notable instance where the Board does not have regulatory authority (but still has jurisdiction) is with respect to ancillary or excepted track. As noted above, Congress provided the Board with exclusive jurisdiction over the ''construction, acquisition, operation, abandonment, or discontinuance of spur, industrial, team, switching, or side tracks,'' 49 U.S.C. 10501(b)(2), while simultaneously stating that ''[t]he Board does not have authority'' over the licensing of these activities, 49 U.S.C. 10906. *See also Pace* v. *CSX Transp., Inc.,* 613 F.3d 1066, 1068–69 (11th Cir. 2010) (finding state law claims relating to side track preempted even though Board does not actively regulate such track); *Port City Props.* v. *Union Pac. R.R.,* 518 F.3d 1186, 1188 (10th Cir. 2008) (stating that Congress intended to remove Board authority over the construction, operation, and abandonment of side tracks ''while still preempting state jurisdiction over them''). Accordingly, even though the Board does not authorize construction or abandonment of ancillary track, state and local governments are prohibited from regulating such activities. *See* 49 U.S.C. 10906. For example, this means that states and localities are barred from requiring an environmental permit for construction of ancillary track, despite no environmental review being conducted by the Board.

The principle applies to other ''transportation'' activities that the Board does not directly regulate. *See Del Grosso,* 804 F.3d at 114 (''Whether or not the Board is exercising its regulatory authority over the transportation, state and local laws governing such transportation are generally preempted.''). ICCTA preemption can apply ''without regard to whether or not the Board actively regulates the particular activity involved.'' *Tubbs,* FD 35792, slip op. at 4 (holding that a state law damages claim alleging improper design, construction, and maintenance of a rail carrier's main line track was preempted even though the Board does not directly regulate these issues).[18] For example, although the Board does not regulate how long carriers may idle locomotives, a state or local law seeking to impose its own regulation on how long locomotives may idle would nonetheless be preempted. *See Pet. of Norfolk S. Ry. for Expedited Declaratory Ord.,* FD 35949, slip op. at 4–5 (STB served Feb. 25, 2016), *aff'd sub nom. Delaware,* 859 F.3d at 21–22.

ICCTA preempts not only direct regulation but may also preempt indirect regulation that affects a rail carrier's ability to provide common carrier operations to its customers. *See Smithtown,* FD 36575 (Sub-No. 1), slip op. at 4 n.7 (collecting cases); *City of Alexandria,* FD 35157, slip op. at 2 (holding that ICCTA preempted local regulation of trucks serving a transloading facility operated by rail carrier's contractor). Such laws conflict with Congress's purpose in codifying the common carrier obligation because a rail carrier's ability to provide service and a shipper's right to receive service on reasonable request are two sides of the same coin.

C. Proper Forum for Disputes Concerning Board Jurisdiction and ICCTA Preemption

The Board's exclusive ''jurisdiction'' should not be confused with traditional subject-matter jurisdiction to hear and resolve a dispute. The Board's ''jurisdiction'' essentially confers a broad and exclusive ''authority to regulate'' (except where specifically stated otherwise, *e.g.,* ancillary track). But the Board does not have exclusive ''subject-matter jurisdiction'' to resolve disputes about whether a particular activity is preempted. It is well-established that the Board and courts have concurrent jurisdiction to resolve preemption questions. *E.g., Ne. La. Multimodal Dist.,* FD 36809, slip op. at 4; *see also Adrian & Blissfield R.R.* v. *Vill. of Blissfield,* 550 F.3d 533, 539 n.4 (6th Cir. 2008). Actions implicating ICCTA preemption therefore may be originated either at the Board or in court.[19] Because jurisdiction is concurrent, the Board often has exercised its discretion not to address questions that have already been litigated by the parties and decided by a court. *See, e.g., City of N. Chi.,* FD 36619, slip op. at 4 n.3 (declining to issue declaratory order where ''the preemption question posed by [the petition for declaratory order] has already been decided by the [referring] court'').

In addition to resolving disputes filed directly with the Board, the Board generally accepts referrals from courts grappling with questions regarding the extent of the Board's jurisdiction and preemption under ICCTA. Courts have sought the Board's input in a variety of ways, including dismissing a judicial proceeding without prejudice while the Board resolves an issue, *e.g., Tri-City R.R.,* FD 35915, slip op. at 4 n.4; staying a judicial proceeding while the parties seek a determination from the Board, *e.g., Tubbs,* FD 35792, slip op. at 1; or referring a question to the Board for resolution, *e.g., Grafton & Upton,* FD 36696, slip op. at 5. And some courts have retained jurisdiction while referring a preemption determination to the Board, despite retaining concurrent jurisdiction to resolve the issue. *See, e.g., Grafton & Upton,* FD 36696, slip op. at 5. Particularly when the threshold question is whether the Board has jurisdiction at all—such as where the parties dispute whether an entity qualifies as a ''rail carrier'' under ICCTA, or whether a segment of track is excepted (jurisdictional) or private (non-jurisdictional), or whether a

[18] Although the Board's statute has a provision on ''rights and remedies of persons injured by rail carriers,'' 49 U.S.C. 11704, this provision ''only applies to claims for violations of the Interstate Commerce Act,'' and does not create a general cause of action. *See City of N. Chi.—Pet. for Declaratory Ord.,* FD 36619, slip op. at 4 n.3 (STB served May 18, 2023); *see also 14500 Ltd. LLC,* FD 35788, slip op. at 5 (explaining that section 11704 and the Interstate Commerce Act do not address or provide any remedies for state law property issues).

[19] The Board takes no position regarding whether a preemption related claim may be initiated originally in state or federal court, or whether a claim can be removed to federal court. As the Board has acknowledged, ''[t]he Board is not the proper forum for deciding the extent of a court's jurisdiction.'' *Waneck—Pet. for Declaratory Ord.,* FD 36167, slip op. at 4 (STB served May 25, 2018) (citing *Lopez-Elias* v. *Reno,* 209 F.3d 788, 791 (5th Cir. 2000) (noting that the determination of a court's jurisdiction is exclusively for the court to decide)).

jurisdictional track has been abandoned and therefore is no longer subject to the Board's jurisdiction as a matter of federal law—the Board's expertise and unique responsibility for ensuring uniform national rail standards may be utilized. *Cf. In re Metro. Transp. Auth.,* 32 A.D.3d 943, 946 (N.Y. App. Div. 2006) (When ''questions exist with regard to whether the track at issue is a spur and, if so, whether its apparent nonuse is sufficient to result in an abandonment, . . . [s]uch matters are properly addressed to the [Board]''). For example, some courts have directed the parties, during litigation, to seek guidance from the Board on the jurisdictional status of track. *See, e.g., Brookhaven Rail Terminal—Pet. for Declaratory Ord.,* FD 35819, slip op. at 4 (STB served Aug. 30, 2016) (determining Board's jurisdiction over track subject to litigation); *Pinelawn Cemetery—Pet. for Declaratory Ord.,* FD 35468, slip op. at 8 (STB served Apr. 21, 2015) (same).

IV. ICCTA Preemption Analysis for State and Local Laws

There is a well-settled framework, grounded in Supreme Court precedent, that guides the analysis of whether a federal law preempts state (or local) law. In relevant part, federal preemption of state law can either be express or implied.[20] Although courts (particularly the federal courts) regularly describe the Board's preemption framework using these established terms, the Board historically has not, electing instead to use the terms ''categorical'' and ''as-applied.'' The Board takes this opportunity to clarify where these concepts overlap: Express preemption is generally analyzed as ''categorical'' ICCTA preemption,[21] and implied preemption is generally [22] analyzed as ''as-applied'' ICCTA preemption. As described in more detail below, ''categorical'' preemption addresses state or local action that, by its nature, manages or governs rail transportation, whereas ''as-applied'' preemption addresses action that does so in its particular operation or effect. Each term is defined in more depth below.

A. Constitutional Framework for Preemption Analysis

Under our constitutional structure, the federal government is responsible for regulating interstate commerce. *See King Cnty.—Pet. for Declaratory Ord.,* 1 S.T.B. 731, 735 (1996) (citing Supreme Court precedent and stating that ''under the Commerce and Supremacy Clauses of the United States Constitution, direct regulation of interstate commerce by the states is prohibited''); *see also Mo. Pac. R.R.* v. *Stroud,* 267 U.S. 404, 408 (1925) (''It is elementary and well settled that there can be no divided authority over interstate commerce, and that the acts of Congress on that subject are supreme and exclusive.''). Federal preemption flows from the United States Constitution's Supremacy Clause, which makes federal law ''the supreme Law of the Land.'' U.S. Const., art. VI, cl. 2. The Supremacy Clause empowers Congress to enact federal laws that supersede state law by means of an express provision in a federal statute or by implication. *See id.; see also Arizona,* 567 U.S. at 398–99. Congress can show preemptive intent either expressly through the statute's language or impliedly through its purpose and structure. *Altria Grp., Inc.* v. *Good,* 555 U.S. 70, 76 (2008); *Franks Inv. Co.* v. *Union Pac. R.R.,* 593 F.3d 404, 407 (5th Cir. 2010) (en banc). Congress established a uniform federal regulatory framework governing the regulation of rail transportation through ICCTA, which both expressly and impliedly preempts state regulation. *E.g., Edwards,* 983 F.3d at 121 (recognizing that ICCTA's provisions ''produce both express and implied preemptive effects'').

ICCTA contains an express preemption provision, stating that ''[e]xcept as otherwise provided in [Part A of Subtitle IV of Title 49], the remedies provided under this part with respect to regulation of rail transportation are exclusive and preempt the remedies provided under Federal or State law.'' 49 U.S.C. 10501(b). When a ''statute contains an express pre-emption clause, [courts] do not invoke any presumption against pre-emption,'' instead following the statute's ''plain wording.'' *See Puerto Rico* v. *Franklin Cal. Tax-Free Tr.,* 579 U.S. 115, 125 (2016) (citation modified); *CSX Transp., Inc.* v. *Easterwood,* 507 U.S. 658, 664 (1993); *see also Arizona,* 567 U.S. at 399 (''There is no doubt that Congress may withdraw specified powers from the States by enacting a statute containing an express preemption provision.''). As relevant to interstate commerce, ''States are precluded from regulating conduct in a field that Congress, acting within its proper authority, has determined must be regulated by its exclusive governance.'' *Id.* ''A principal purpose of this express federal preemption is to prevent a patchwork of local and state regulations from unreasonably interfering with interstate commerce.'' *Tenth Ave. Neighbors,* FD 36654, slip op. at 3–4. In the Board's parlance, such state laws are categorically preempted. *See, e.g., Wichita Terminal Ass'n—Pet. for Declaratory Ord.,* FD 35765, slip op. at 6 (STB served June 23, 2015) (stating that certain actions are ''expressly or categorically preempted under [section] 10501(b)'').

The breadth of this grant of exclusive jurisdiction, in conjunction with the preemption provision, also forms a basis for implied preemption. Congress stated its intent to ''reflect the direct and complete pre-emption of State economic regulation of railroads,'' and ''extend[ ] exclusive Federal jurisdiction'' to areas where state jurisdiction was previously reserved. H.R. Rep. No. 104–311, at 95. And through ICCTA, Congress affirmed that ''the Federal policy of occupying the entire field of economic regulation of the interstate rail transportation system'' was ''intended to address and encompass all such regulation and to be completely exclusive.'' *Id.* The Board considers contrary state law to be preempted on an as-applied basis. *See, e.g., Franks Inv. Co.,* 593 F.3d at 414 (''We adopt the [Board's] as-applied preemption analysis as appropriate for implied preemption under the ICCTA.''). This rule also follows longstanding precedent, predating ICCTA, holding that the Interstate Commerce Act ''preempts state laws that could operate to unreasonably burden interstate commerce.'' *Tex. Dep't of Transp.—Pet. for Declaratory Ord. Regarding Highway Constr. In Tarrant Cnty, Tex.,* FD 32589, slip op. at 4 (ICC served Feb. 7, 1995); *see also Reguls. Governing Fees for Servs. Performed in Connection with Licensing & Related Servs.,* 1 I.C.C.2d 60, 81 (1984) (evaluating whether state regulatory actions were ''an unreasonable burden on interstate commerce'').

[20] The Board recognizes that federal preemption analysis involves many nuances beyond whether preemption is express or implied. For example, implied preemption can be broken down into ''field preemption'' and ''conflict preemption.'' *See Arizona* v. *United States,* 567 U.S. 387, 399 (2012). For purposes of this policy statement, the Board believes it is sufficient to analogize ''as-applied'' preemption to implied preemption without further elaboration on whether field preemption, conflict preemption, or both are the basis for the analysis.

[21] Categorical preemption is also sometimes referred to as ''per se'' or ''facial'' preemption. *See, e.g., Soo Line R.R.* v. *City of St. Paul,* 827 F. Supp. 2d 1017, 1020 (D. Minn. 2010); *CSX Transp., Inc.—Pet. for Declaratory Ord.,* FD 34662, slip op. at 4–5 (STB served May 3, 2005).

[22] It should be noted that at least one circuit court has determined that ''as-applied'' preemption is a form of express, rather than implied, preemption. *See City of Ozark,* v. *Union Pac. R.R.,* 843 F.3d 1167, 1171 (8th Cir. 2016). Numerous other circuit court cases have interpreted the Board's ''as-applied'' analysis as a form of implied preemption. *E.g., Edwards,* 983 F.3d at 121; *Ezell,* 866 F.3d at 299.

B. ICCTA Preemption Framework

When faced with a question about whether ICCTA preempts a state or local law, the Board and courts first determine whether to apply a categorical preemption analysis or an as-applied preemption analysis based on the nature of the regulation. Whether preemption is categorical or as-applied does not turn merely on whether the potentially preempted regulation is directed at rail carrier transportation specifically (such as limiting railroad operating hours) or instead is of general applicability (like zoning ordinances). Both sorts of regulations may be preempted either categorically or as-applied, depending on whether the regulation intrudes on a matter directly regulated by the Board—for example, reasonable rail rates and practices—and not on the entity subject to the regulation.[23]

It is the Board's long-established policy to analyze preemption in a way that seeks to prevent a patchwork of state and local regulation from interfering with rail transportation within the Board's jurisdiction. *See Tenth Ave. Neighbors,* FD 36654, slip op. at 3–4 (recognizing that ''[a] principal purpose of this express federal preemption is to prevent a patchwork of local and state regulations from unreasonably interfering with interstate commerce''); *CSX Transp., Inc.—Pet. for Declaratory Ord.,* FD 34662, slip op. at 11 (STB served March 14, 2005) (stating that ''[s]ection 10501(b) is intended to prevent a patchwork of local regulation from unreasonably interfering with interstate commerce,'' and that the regulation at issue ''would unreasonably interfere with interstate commerce, and if permitted to exist, would likely lead to further piecemeal attempts by other localities to regulate rail shipments'').

1. Categorical Preemption Analysis

State or local laws are preempted categorically if they may reasonably be understood to manage or govern transportation by a rail carrier or certain related activities, including by foreclosing or restricting the railroad's ability to conduct its own operations. *See Delaware,* 859 F.3d at 18 (ICCTA preempts ''all state laws that may reasonably be said to have the effect of managing or governing rail transportation.''); *Wichita Terminal Ass'n,* FD 35765, slip op. at 6. Categorical preemption typically applies to: (1) laws that directly regulate transportation by rail carriers, and (2) generally applicable permitting or preclearance laws when imposed on rail transportation.

ICCTA ''prevent[s] states or localities from intruding into matters that are directly regulated by the Board (*e.g.,* railroad rates, services, construction, and abandonment).'' *14500 Ltd. LLC,* FD 35788, slip op. at 3; *see also Ass'n of Am. R.Rs.* v. *S. Coast Air Quality Mgmt. Dist.,* No. 06–CV–1416, 2007 WL 2439499, at *7 (C.D. Cal. Apr. 30, 2007) (holding that rules directly regulating rail operations, such as idling, are preempted regardless of whether they are considered undue or unreasonable), *aff'd,* 622 F.3d 1094 (9th Cir. 2010). Categorical preemption ''also prevents states or localities from imposing requirements that, by their nature, could be used to deny a railroad's ability to conduct rail operations or proceed with activities that the Board has authorized, such as a construction or abandonment,'' or to maintain its facilities. *14500 Ltd. LLC,* FD 35788, slip op. at 3–4 & n.5. Therefore, ''state law preclearance or permitting requirements that could be used to deny or unreasonably delay a rail carrier's ability to conduct rail operations typically are categorically preempted.'' *Grafton & Upton,* FD 36696, slip op. at 7 (collecting cases). Some examples include building permits, zoning ordinances, and environmental and land use permitting requirements. *E.g., Jie Ao—Pet. for Declaratory Ord.,* FD 35539, slip op. at 5 (STB served June 6, 2012). The Board and courts have long recognized that ''[i]f local authorities have the ability to impose 'environmental' permitting regulations on the railroad, such power will in fact amount to 'economic regulation' if the carrier is prevented from constructing, acquiring, operating, abandoning, or discontinuing a line.'' *City of Auburn,* 154 F.3d at 1031 (affirming Board finding of preemption of state and local environmental permitting laws as applied to rail construction project).

Additionally, categorical preemption applies regardless of the stated purpose of the law. *See Borough of Riverdale—Pet. for Declaratory Ord.—N.Y. Susquehanna & W. Ry.,* 4 S.T.B. 380, 388 n.16 (1999) (noting that ''even health and safety regulation is preempted where Congress intended to preempt all state and local law''). Moreover, it ''does not depend on whether the practical application of the statute or regulation is narrowly tailored.'' *Delaware,* 859 F.3d at 22. The categorical ''preemption analysis is addressed not to the reasonableness of the particular state or local action, but rather to the act of regulation itself.'' *CSX Transp., Inc.,* FD 34662, slip op. at 3 (STB served May 3, 2005); *see also Green Mountain R.R.* v. *Vermont,* 404 F.3d 638, 644 (2d Cir. 2005) (stating that ''the focus is the act of regulation itself, not the effect of the state regulation in a specific factual situation'') (citation modified). Some limited fact-finding may be needed to determine ''whether the state or local action falls within a category subject to categorical preemption.'' *CSX Transp., Inc.,* FD 35832, slip op. at 5. But if it does, a regulation that has the effect of managing or governing transportation by rail carrier is preempted ''regardless of its practical effect.'' *Delaware,* 859 F.3d at 19. And state permitting or preclearance requirements are categorically preempted ''without requiring a factual analysis of their effect on transportation.'' *See, e.g., Grafton & Upton,* FD 36696, slip op. at 7 (collecting cases); *see also Green Mountain R.R.,* 404 F.3d at 644 (''[W]hat is preempted here is the permitting process itself, not the length or outcome of that process in particular cases.'').

2. As-Applied Preemption Analysis

Even when a state or local law is not categorically preempted, it may be preempted under the ''as-applied'' analysis if it either: (1) unreasonably burdens or interferes with transportation by rail carriers, or (2) discriminates against rail carriers.

a. Unreasonable Burden or Interference

State and local laws are preempted ''as applied'' if they unreasonably burden or interfere with current—or future—rail transportation. This is ''a fact-specific determination based on the circumstances of each case.'' *See, e.g., Wichita Terminal Ass'n,* FD 35765, slip op. at 6 (citation omitted). An as-applied analysis includes a comprehensive analysis of the likely impact of the proposed law's application to current rail operations. *See, e.g., Tri-City R.R.,* FD 35915, slip op. at 8 (analyzing length, location, and configuration of track, its uses, and potential alternative locations for operations). The Board and courts also consider interference with planned or potential future rail operations. Certain state actions may be preempted even when no current rail operations exist on tracks within the Board's jurisdiction, based on potential future use (for example, when a line is

[23] Moreover, a Board or court holding that a state law of general applicability is preempted, either categorically or as-applied, does not invalidate the state law. Instead, the ICCTA preemption determination means that the law is preempted only in its application to activities within the Board's exclusive jurisdiction under 49 U.S.C. 10501(b). Thus, a zoning ordinance that is categorically preempted when used to manage jurisdictional rail carrier transportation may still be applied generally to other industries.

railbanked or when a rail carrier intends to develop a property for rail use). *See, e.g., id.* (analyzing future operations and effects of increases in rail traffic); *Jie Ao,* FD 35539, slip op. at 5 (analyzing effects on future reactivation of railbanked line, even though ''there are currently no specific plans to reactivate this property,'' including impacts on potential rail-related construction, track bed stabilization, drainage, and maintenance).

Because ICCTA was established to prevent a patchwork of differing state and local regulations, the unreasonable-burden analysis also requires consideration of ripple effects across the broader interstate rail network. Accordingly, the analysis considers not only the facts of a single case, but also the potential impact on the interstate rail network as a whole, guarding against a ''patchwork'' of ''potentially differing standards'' as trains travel across the network. *See Wichita Terminal Ass'n,* FD 35765, slip op. at 10; *see also Norfolk S. Ry.,* FD 35701, slip op. at 4–6 (finding that state inverse condemnation claims based on dust, vibration, and noise were preempted and explaining that absent preemption ''all railroads on the interstate rail network could be subject to inverse condemnation actions from adjacent landowners throughout the country based on the effects of normal railroad operations''). ''The interstate rail network could not function properly if states and localities could impose their own potentially differing standards for'' rail operations, nor if state regulations could ''interfer[e] with the railroad's ability to uniformly design, construct, maintain, and repair its railroad line.'' *Tubbs,* FD 35792, slip op. at 5.

Again, ICCTA preemption has its limits. Federal law does not preempt local and state application of laws having a ''more remote or incidental effect on rail transportation.'' *N.Y. Susquehanna & W. Ry.,* 500 F.3d at 252. Therefore, ICCTA's ''preemption provision does not prevent state and local governments from imposing appropriate health and safety regulations and exercising their police powers'' in appropriate circumstances. *Smithtown,* FD 36575 (Sub-No. 1), slip op. at 4. In addition, the Board has held that condemnations of railroad property, under generally applicable state eminent domain law for ''routine non-conflicting uses, such as non-exclusive easements for at-grade road crossings . . . are not preempted so long as they would not impede rail operations or pose undue safety risks.'' *Wichita Terminal Ass'n,* FD 35765, slip op. at 6. Additionally, the enforcement of ''generally applicable, non-discriminatory regulations'' like ''[e]lectrical, plumbing and fire codes'' that have only an ''incidental'' effect on rail transportation may be permissible. *See Green Mountain R.R.,* 404 F.3d at 643, 645; *Smithtown,* FD 36575 (Sub-No. 1), slip op. at 4. And again, ICCTA preemption reaches ''transportation'' by ''rail carrier.''

But states ''cannot use their police powers to indirectly regulate matters reserved to the Board . . . .'' *Soo Line R.R.—Pet. for Declaratory Ord.,* FD 35850, slip op. at 5 (STB served Dec. 23, 2014). Although pre-ICCTA, the Interstate Commerce Act explicitly preserved the states' ''police power'' to impose ''reasonable intrastate transportation'' requirements, 49 U.S.C. 10501(c) (1994), this ''disclaimer regarding residual State police powers [was] eliminated as unnecessary [in ICCTA], in view of the Federal policy of occupying the entire field,'' H.R. Rep. No. 104–311, at 95–96. ''Although States retain the police powers reserved by the Constitution, the Federal scheme of economic regulation and deregulation is intended to address and encompass all such regulation and to be completely exclusive.'' *Id.* at 96. Thus, ''states are not free to impose any requirements they wish in the name of their police power.'' *CSX Transp., Inc.,* FD 34662, slip op. at 4–5 (STB served May 3, 2005). Although certain decisions have referred to a ''police power exception'' to ICCTA preemption, *see Grafton & Upton R.R.—Pet. for Declaratory Ord.,* FD 35752, slip op. at 9 (STB served Sept. 19, 2014), what matters is not that the state or locality is exercising ''police powers'' as such, but that it is enforcing ''generally applicable, non-discriminatory regulations'' like ''[e]lectrical, plumbing and fire codes'' that have only an ''incidental'' effect on rail transportation—and even then, such regulations ''must not have the effect of foreclosing or restricting the railroad's ability to conduct its operations or otherwise unreasonably burdening interstate commerce,'' or they may be preempted. *See Green Mountain R.R.,* 404 F.3d at 643, 645; *Smithtown,* FD 36575 (Sub-No. 1), slip op. at 4 (ICCTA ''does not prevent state and local governments from . . . exercising their police powers so long as'' they do not regulate, unreasonably burden, or discriminate against rail carriers).

b. Discrimination Against Rail Transportation.

State laws and regulations that discriminate against rail transportation may also be preempted on an as-applied basis. The ICC long held that, ''in areas not governed by [f]ederal legislation, [s]tates and their subdivisions may make reasonable regulations affecting commerce under our jurisdiction so long as they are uniformly applied and do not discriminate against or constitute an undue burden on or an obstruction of commerce, in accordance with standard preemption principles.'' *Appls. for Operating Auth.—Motor Passenger Carriers,* 133 M.C.C. 62, 86–87 (I.C.C. 1982) (discussing motor carriers); *see also City of Auburn,* 154 F.3d at 1029 n.6 (''Before 1980, the ICC was empowered to preempt state regulation of intrastate lines only when an intrastate rate set by the state unjustly discriminated against or imposed an undue burden on interstate commerce.''). Thus ''state and local entities can enforce in a non-discriminatory manner'' local laws passed under their police powers. *Riverdale,* 4 S.T.B. at 389; *see also Green Mountain R.R.,* 404 F.3d at 643 (noting that certain ''non-discriminatory regulations'' would not be preempted); *Delaware,* 859 F.3d at 18–19 (same, after conducting extensive survey of precedent); *City of Milwaukie—Pet. for Declaratory Ord.,* FD 35625, slip op. at 4 (STB served Mar. 25, 2013) (noting that such regulations can apply to rail carrier transportation ''if they are applied without discrimination'').

Courts have recognized that ''[t]he non-discriminatory prong is particularly useful in determining whether a state is regulating principally to discriminate against a specific industry.'' *N.Y. Susquehanna & W. Ry.,* 500 F.3d at 254. ''[F]or a state regulation to pass muster, it must address state concerns generally, without targeting the railroad industry.'' *Id.; see also BNSF Ry.* v. *Cal. Dep't of Tax & Fee Admin.,* 904 F.3d 755, 761, 768 (9th Cir. 2018) (concluding that ICCTA would preempt use of traditional state police powers to impose a fee on shipment of hazardous materials in California, where the fee would apply only to shipments ''by rail''). But even so, a regulation addressing state concerns generally—which may include a fee or other charge on rail carriers or transportation by rail—cannot be used ''as pretext for interfering with or curtailing rail service.'' *N.Y. Susquehanna & W. Ry.,* 500 F.3d at 254; *see also BNSF Ry.* v. *Town of Cicero, Ill.,* 592 F. Supp. 3d 716, 729 (N.D. Ill. 2022) (finding that the rail carrier adequately showed that a local sewer ordinance regulated railroad transportation because it singled out and targeted railroads for a rate higher than the rate paid by other commercial and industrial

properties).[24] To assess preemption in this context, the Board and courts look to whether the law ''is being applied in a discriminatory manner, or being used as a pretext for frustrating or preventing a particular activity.'' *Joint Pet. for Declaratory Ord.—Bos. & Me. Corp.,* 5 S.T.B. 500, 509 (2001). Though not all state regulations that apply specifically to railroads are impermissibly discriminatory, such regulations may be preempted in at least two circumstances: (1) when the regulation requires something of the railroad that it does not require of other modes of transportation or similarly situated entities, or (2) when the regulation could be used to target railroads in order to cause indefinite delays to railroad operations. *See Adrian & Blissfield R.R.,* 550 F.3d at 541–42.

As in other forms of preemption analysis, laws can be discriminatory whether or not they specifically mention rail carriers. For example, a law of general applicability passed to protect health and safety by imposing quantity, duration, and location restrictions on the storage of certain substances was found discriminatory as applied to a rail carrier's transloading facility. *See Vt. Ry.* v. *Town of Shelburne,* 287 F. Supp. 3d 493, 494 (D. Vt. 2017), *aff'd,* 918 F.3d 82 (2d Cir. 2019). In that instance, the court held that the timing of the passage of the ordinance (during litigation between the town and rail carrier), threshold limits, and commodities affected would, in practice, uniquely apply to the transload facility and not others who may be similarly situated, and as such, ''these provisions clearly target and discriminate against the [rail carrier]'s facility.'' *Id.* at 500–01. For these reasons (as well as unreasonable burden), the ordinance was preempted. *Id.* at 505. Conversely, in *Adrian & Blissfield R.R.,* an ordinance requiring rail carriers to construct, or pay for the construction of sidewalk crossings over their tracks was found non-discriminatory. *See Adrian & Blissfield R.R.,* 550 F.3d at 539. In that case, the court first held that the ordinance did not regulate rail transportation. *See id.* at 540 & n.6. It went on to ''apply the as-applied-preemption analysis,'' including the prohibition on laws that ''discriminate against railroads.'' *Id.* at 541 (citation omitted). The court deemed the ordinance was non-discriminatory because (1) it ''addresse[d] a general state concern''; (2) there was ''no evidence'' that the ordinance could be used pretextually to interfere with rail operations; and (3) the state was not ''requir[ing] something of the Railroad that it does not require of similarly situated entities.'' *Id.* at 541–42.

3. Complete Takings—Refocused Categorical Approach

When state or local law is used in an attempt to entirely dispossess a rail carrier of its property rights—such as through a private claim for adverse possession, or a state's use of eminent domain—the Board and court precedents have been unclear about whether categorical or as-applied analysis should govern.[25] *See, e.g., Jie Ao,* FD 35539, slip op. at 1 (holding that ''state law adverse possession claim is federally preempted, regardless of whether this case is analyzed as 'categorical' preemption [or] as 'as applied' preemption''). And as courts have recognized, ''[t]he more a property action excludes a rail carrier and takes a property for a conflicting use, the more likely the action will be preempted.'' *Norfolk S. Ry.* v. *Dille Rd. Recycling, LLC,* 94 F.4th 517, 524, 527 (6th Cir. 2024) (discussing a ''spectrum'' of easement claims where ''routine, nonexclusive easements . . . are generally not preempted,'' but those ''that are exclusive or deemed adverse possession by another name are often preempted''). While this policy statement is not adopting a definitive approach that resolves all cases, there are strong policy arguments that state and local law claims seeking to take exclusive possession of any portion of a validly held railroad right-of-way, or to take rail carrier property that the rail carrier uses—or plans to use—to support rail transportation (*i.e.,* property falling within the definition of ''transportation'' under 49 U.S.C. 10102(9)) would be better reviewed under the categorical preemption analysis.[26] And there are also strong policy arguments that claims involving more routine, non-conflicting uses—such as non-exclusive easements for at-grade road crossings, subterranean water or sewer lines, and related claims—are best assessed using an as-applied analysis as the Board does currently.

State or local regulation that seeks to take exclusive control of rail carrier rights-of-way or other property can take many different forms, including but not limited to claims for eminent domain, condemnation, or adverse possession, among others. ''The agency's broad and exclusive jurisdiction over railroad operations and activities prevents application of state law claims that would take rail property for another, conflicting use, including adverse possession claims that would interfere with rail use, present or future.'' *14500 Ltd. LLC,* FD 35788, slip op. at 4. Using state law for these purposes ''is exercising control—the most extreme type of control—over rail transportation as it is defined in section 10102(9).'' *Wis. Cent. Ltd.* v. *City of Marshfield,* 160 F. Supp. 2d 1009, 1013 (W.D. Wis. 2000). This type of taking ''is a permanent action, and 'it can never be stated with certainty at what time any particular part of a right of way may become necessary for railroad uses.''' *City of Lincoln* v. *STB,* 414 F.3d 858, 862 (8th Cir. 2005) (quoting *Midland Valley R.R.* v. *Jarvis,* 29 F.2d 539, 541 (8th Cir. 1928)). Further, such actions ''would foreclose [the rail carrier]'s development of the property for rail 'transportation' purposes.'' *Grafton & Upton,* FD 36696, slip op. at 11.

For rail carrier property within the Board's jurisdiction, only upon abandonment does the underlying property become ''ordinary property'' subject to the application of state law. *See, e.g., Hayfield N. R.R.* v. *Chi. & NW*

[24] In general, a fee is discriminatory if it treats railroads differently than other modes without sufficient justification. *Cf. Ala. Dept. of Revenue* v. *CSX Transp., Inc.,* 575 U.S. 21, 27, 30 (2015) (discussing discriminatory taxes under the Railroad Revitalization and Regulation Reform Act of 1976 (4R Act), 49 U.S.C. 11501(b)(4)); *Union Pac. R.R.* v. *Wis. Dep't. of Revenue,* 940 F.3d 336, 337 (7th Cir. 2019) (finding a tax ''singl[ing] out railroads as part of an isolated and targeted group'' unlawful under the 4R Act).

[25] State laws governing the acquisition of property by a rail carrier generally are not preempted. *See, e.g., Grafton & Upton R.R.* v. *STB,* 177 F.4th 1234, 1240 (D.C. Cir. 2026) (''ICCTA does not preempt generally applicable state property laws that 'do not unreasonably interfere with railroad operations or the Board's regulatory programs.'") (quoting *CSX Transp.,* FD 35832, slip op. at 4); *Great Walton R.R.—Pet. for Declaratory Ord.,* AB 1242 (Sub-No. 1), slip op. at 7, 11 (STB served June 9, 2020) (leaving it to rail carrier to establish its interest in the underlying real property under state law); *see also Allegheny Valley R.R.—Pet. for Declaratory Ord.—William Fiore,* FD 35388, slip op. at 4 & n.4 (STB served Apr. 25, 2011) (explaining that disputes over the ''size, location, and nature of property rights'' are most appropriately decided by courts applying state law and that ''[p]roof of ownership . . . cannot be inferred from our approval to acquire and operate the rail line''); *Tongue River R.R.—Constr.& Operation—W. Alignment,* FD 30186 (Sub-No. 3) et al., slip op at 16 n.50 (STB served Oct 9, 2007) (''The applicant [in rail construction cases] is responsible for acquiring the land necessary to build the line.''). Relatedly, the Board's jurisdiction generally does not preempt rail carrier efforts to acquire property under state eminent domain law, including where a state denies a carrier condemnation request. *See Great Walton R.R.,* AB 1242 (Sub-No. 1), slip op. at 7 (STB served June 9, 2020); *see also Great Redwood Trail Agency,* AB 1305 (Sub-No. 1), slip op. at 14 (''[R]ail carriers are generally responsible for acquiring the land necessary to support their operations, including to the extent permitted by condemnation.'').

[26] As noted above, limited fact-finding may be needed to determine ''whether the state or local action falls within a category subject to categorical preemption.'' *CSX Transp., Inc.,* FD 35832, slip op. at 5.

Transp. Co., 467 U.S. 622, 633–34 (1984). Rail lines under the Board's jurisdiction remain available for common carrier service upon reasonable request. 49 U.S.C. 11101(a). Even where the Board has authorized discontinuance of service over a rail line, such that there is no extant common carrier obligation, the line remains available for the reinstitution of service in the future. *See, e.g., Preseault* v. *ICC,* 494 U.S. 1, 5 n.3 (1990) (stating that ''discontinuance'' authority allows a railroad to cease operating a line for an indefinite period while preserving the rail corridor for possible reactivation of service in the future). The common carrier obligation is not permanently extinguished until the line has been removed from Board jurisdiction via Board-authorized abandonment. *See id.*

Permitting the use of state law for acquiring exclusive control of rail carrier property would contravene this statutory scheme. As the Board has explained, it would allow for the taking of ''railroad [right-of-way] all over the country for non-rail use, even though the Board has not authorized the [right-of-way] to be permanently removed from the nation's rail system under Title 49.'' *Jie Ao,* FD 35539, slip op. at 7. This is an ''untenable result [that] would undermine interstate commerce and the strong federal policy in favor of retaining rail property in the national rail network, where possible.'' *Id.* (citing 49 U.S.C. 10904, 10907 & 16 U.S.C. 1247(d)). Subjecting Board-jurisdictional rail line or excepted track to adverse possession, eminent domain, or condemnation claims under state law would thus ''have the effect of managing or governing rail transportation,'' *Skidmore* v. *Norfolk S. Ry.,* 1 F.4th 206, 215 (4th Cir. 2021), and ''would amount to regulation of rail transportation because [they] would confer exclusive control to [someone other than the rail carrier] over property that is part of the national rail network.'' *Jie Ao,* FD 35539, slip op. at 3. With this backdrop, the Board has previously observed that ''[n]either the Board nor the courts . . . have found that cities can entirely take from a railroad land the railroad has slated for present or future rail use.'' *Norfolk S. Ry.—Pet. for Declaratory Ord.* (*Ala. Great S.*), FD 35196, slip op. at 5 (STB served Mar. 1, 2010).[27] And the Board has held that ICCTA ''preempts state law eminent domain and adverse possession claims for exclusive possession of part of a railroad right-of-way or other railroad property that could affect present or future rail transportation.'' *Ohio Rail Dev. Comm'n—Pet. for Declaratory Ord.,* FD 36822, slip op. at 7 (STB served Mar. 30, 2026). As summarized by the Fourth Circuit:

> Indeed, allowing an individual landowner to wrest exclusive control of land within the national rail corridor away from a railroad could expose a rail carrier to death by a thousand cuts. Rail carriers would either have to be hyper-vigilant about fending off adverse possession claims along countless miles of tracks, or risk losing ownership interests in land that is (or might be) necessary to conduct business and comply with federal regulations. Because maintaining a unified federal mechanism for governing the national rail network is an issue of overwhelming national importance, federal law must preempt [state or local] quiet title claims.

Skidmore, 1 F.4th at 217.

One critical aspect of the Board's categorical preemption analysis is that such regulations are preempted without requiring a factual analysis of their effect on transportation and whether any interference may be unreasonable. With respect to claims for possession of rights-of-way subject to the Board's jurisdiction, once the threshold determination is made that the scope of the sought-after property right would exclude rail use, there are strong arguments that the analysis should be at its end. Such claims may be categorically preempted without a detailed inquiry into their effect on present or future operations and whether interference is unreasonable. *Cf. Green Mountain R.R.,* 404 F.3d at 644 (applying categorical preemption to permitting of transloading construction and stating that ''what is preempted here is the permitting process itself, not the length or outcome of that process in particular cases''); *see also Wis. Cent. Ltd.,* 160 F. Supp. at 1013–14 (holding that condemnation was preempted without an inquiry as to interference). The Board recognizes that condemnation claims, including those involving non-exclusive easements, have often been analyzed under the as-applied framework. *See e.g., City of Lincoln,* 414 F.3d at 860. In the Board's view, there are compelling policy considerations that the as-applied framework is ill-suited to address condemnation or similar claims that would foreclose rail use of rail property and rights-of-way (or portions thereof) that are subject to the Board's jurisdiction and must remain available for common carrier service. These types of takings are arguably more severe incursions on activities within the Board's exclusive jurisdiction than others that have been long recognized as categorically preempted. If a state entity is categorically prohibited from enforcing a zoning law or other preclearance requirement to prevent the construction of a rail carrier's facility on its property, it makes little sense to find that the state entity would be subject to a less rigorous as-applied framework if it were instead to seek to take the property outright through condemnation. Moreover, consideration of such exclusive takings under the as-applied preemption framework may result in patchwork regulation of standards concerning present and future rail service, contrary to the uniform licensing framework established in ICCTA. Parties contending that such rights-of-way no longer serve any bona fide rail purpose have historically directed that contention to the Board through an adverse abandonment proceeding.[28] In prior cases, rail carriers defending against actions to take their property have been required to set forth extensive analysis of the current and potential future uses of the property for rail operations. *See, e.g., Grafton & Upton,* FD 36696 (STB served Nov. 15, 2023); *14500 Ltd. LLC,* FD 35788 (STB served June 5, 2014); *Ala. Great S.,* FD 35196 (STB served Mar. 1, 2010). Where an action to take rail property would exclude rail use on a portion of the rail property or rights-of-way subject to the Board's jurisdiction, that consequence is ascertainable at the outset and therefore may warrant categorical treatment without further inquiry. *See Jie Ao,* FD 35539, slip op. at 5–7*; see also Wis. Cent. Ltd.,* 160 F. Supp. 2d at 1013–14 (categorically preempting condemnation of rail property and stating that ''the nature of the preempted state regulation is irrelevant''); *Soo Line R.R.,* 827 F. Supp. 2d at 1022 (same and noting that ''factual 'as applied' arguments concerning whether the proposed easement would unreasonably interfere with [the rail carrier]'s activities are not relevant'').

It may be reasonable to conclude that certain other takings claims would not be appropriate for a categorical analysis.

[27] *But see Girard* v. *Youngstown Belt Ry.,* 979 NE2d 1273, 1287 (Ohio 2012) (subsequently holding that eminent domain claim was not preempted).

[28] Although the Board has granted adverse abandonment of rail carrier property in certain limited circumstances, applicants bear a heavy burden. *See Colo. Landowners—Adverse Aban.—Great W. Ry. of Colo. in Weld Cnty, Colo.,* AB 857 (Sub-No. 2), slip op. at 5 (STB served July 30, 2025). The Board considers matters such as whether active shippers would lose service, whether there is any potential for continued rail service, whether the carrier has taken reasonable steps to attract traffic or rehabilitate or utilize an inoperable line, and the carrier's judgment about the need for, and usefulness of, the line. *See id.* at 6–7 (summarizing the state of the Board's precedent on adverse abandonments).

As noted above, there are strong arguments that non-exclusive easements, such as for crossings, warrant an as-applied preemption analysis that looks to the degree of interference with rail operations. Similarly, claims to take land under a right-of-way or under other rail property, such as for laying subterranean utility or broadband lines or similar facilities, may be analyzed under the as-applied framework. Subject to the facts and circumstances in particular cases, such non-exclusive uses may be permissible, or may unreasonably interfere with interstate rail transportation if, for example, they are placed in locations that undermine the integrity of the rail right-of-way, or are installed in a manner, or for a duration, that prevents or materially interferes with rail operations.

4. Shipper and Receiver Rights to Common Carrier Rail Service

The Board recognizes that private investment in rail infrastructure—by carriers and customers alike—is critical to maintaining and improving the expansive interstate rail network for existing customers, extending its reach to new customers, and ensuring its competitiveness with other modes of transportation. Rail transportation—unlike modes such as trucking and water carriage, which rely heavily on public infrastructure maintained by public entities (such as roads, waterways, and ports)—operates almost exclusively on privately owned and developed infrastructure. Such projects are time and labor intensive, and require high levels of coordination—and, frequently, co-investment—between rail carriers and potential customers seeking common carrier rail service.

Although the Board's jurisdiction extends only to ''transportation'' by, or under the auspices of, a ''rail carrier,'' the application of state and local regulations nominally to rail customers implicates ICCTA in certain situations.

It has been long recognized that ''ICCTA preempts both direct and indirect regulation that affects a railroad's ability to conduct common carrier operations.'' *Smithtown,* FD 36575 (Sub-No. 1), slip op. at 4 n.7 (collecting cases). Thus, for example, a local ordinance and permit restricting truck transportation ''regulate[d] 'transportation by a rail carrier,' as defined by the ICCTA,'' because they ''directly impact[ed] [the rail carrier]'s ability to move goods shipped by rail.'' *Norfolk S. Ry.* v. *City of Alexandria,* 608 F.3d 150, 158–59 (4th Cir. 2010). Preemption applied even though the ordinance and permit ''regulate[d] only the trucks leaving the [railroad's transloading] Facility, not the transloading process itself,'' and did not directly ''regulate any aspect of the movement of trains [or] the unloading or transloading of trains.'' *Id.* at 159. Likewise, ICCTA does not permit ''regulation of the interstate freight rail network under the guise of local regulations directed at the shippers who would use the network,'' which would ''create the patchwork of conflicting local regulations that Congress sought to avoid in the Interstate Commerce Act.'' *Bos. & Me. Corp.—Pet. for Declaratory Ord.,* FD 35749, slip op. at 5 (STB served July 19, 2013). Shippers have ''rights provided by federal law to ask for and receive common carrier rail service from'' rail carriers under the Board's jurisdiction, and so even regulations ''directed solely at'' a shipper would create a ''fundamental conflict between'' the shipper's right to request, and a rail carrier's right to provide, common carrier rail service under ICCTA. *Id.* at 4. Such state and local regulations conflict with Congress's purpose in codifying the common carrier obligation, because rail carriers' ability to provide service and shippers' right to receive service on reasonable request are two sides of the same coin. *Cf. Engine Mfrs. Ass'n* v. *S. Coast Air Quality Mgmt. Dist.,* 541 U.S. 246, 255 (2004) (''[T]reating sales restrictions and purchase restrictions differently for pre-emption purposes would make no sense,'' because the ''right to sell . . . is meaningless in the absence of a purchaser's right to buy . . . .'').

The point at which activities no longer constitute ''transportation by rail carrier'' and certain related activities, and thus fall outside the Board's jurisdiction, can be difficult to discern in some situations—particularly for activities involving the loading and unloading of rail cars on shipper-owned track—and the Board's precedents in this area have not always been entirely consistent. In *Boston & Maine,* FD 35749, slip op. at 4–5, the Board suggested that state regulation of a customer's private, non-jurisdictional track would be preempted if it impacted common carrier service. On the other hand, in *SEA–3, Inc.—Petition for Declaratory Order* (*SEA–3*), FD 35853, slip op. at 6–7 (STB served Mar. 17, 2015), the Board determined that a city's challenge to a zoning decision allowing an existing rail customer to increase its use of rail common carrier service by constructing additional rail berths at its transloading facility was not preempted. And, in *Valero Refining Co.—Petition for Declaratory Order* (*Valero*), FD 36036, slip op. at 2, 6 (STB served Sept. 20, 2016), the Board held that it did not have jurisdiction over an existing rail customer's construction of an off-loading facility designed to receive common carrier unit train service. In *Valero,* state and local authorities denied a permit for construction of the project, based at least in part on the impacts of increased common carrier service, as well as impacts of the commodity likely to be carried in that service. *See id.* at 2.[29]

Thus, the Board provides here a modified analytical framework that, subject to the arguments and facts presented in particular proceedings, may inform an evaluation of whether regulations nominally directed at rail customers are, in practice and in legal effect, regulations of transportation by rail carriers that are preempted by ICCTA. The potential framework begins with a fact-specific threshold inquiry consisting of two questions. First, is the facility or project at issue developed or used to receive or tender common carrier rail service—a transload, off-loading, or similar facility whose function is the interchange of traffic with a rail carrier? Second, does the state or local action restrict, condition, or dictate common carrier service to that facility, such as the volume, frequency, timing, configuration, or commodity mix of common carrier service? Where the answer to both is yes, the action may regulate transportation by rail carrier in practical effect, and the categorical or as-applied framework, as appropriate, would apply depending on the nature of the regulation. A regulation that, for

[29] The Board has been made aware that Valero abandoned the rail transload terminal project following the Board's decision and announced its intent to cease refining operations at the facility in 2026, *see* Valero, *Valero Announces Notice to the California Energy Commission Regarding its Benicia, California, Refinery* (Apr. 16, 2025), *https://investorvalero.com/news/news-details/2025/Valero-Announces-Notice-to-the-California-Energy-Commission-Regarding-its-Benicia-California-Refinery/default.aspx,* and Valero's website indicates that full idling of all processing units at this facility was completed in April 2026, *see* Valero, *Benicia Refinery, https://www.valero.com/about/locations/benicia-refinery* (last visited Sept. 30, 2026). Additionally, although the Board has not revisited *Valero* in the decade since its issuance, the Board is aware that state and local restrictions on rail-served facilities have been promulgated and upheld as beyond the Board's jurisdiction in numerous circumstances. *See, e.g., Montana* v. *City of Portland,* No. 3:23–cc–00219–YY, 2024 WL 1007865, at *1, 12 (D. Or. Feb. 26, 2024) (finding local ordinance restricting the construction of bulk fossil fuel terminals was, among other things, not preempted because plaintiffs did not allege they were rail carriers or performing activities on behalf of or under the auspices of a rail carrier), *rep. & recommendation adopted in part, rejected in part,* No. 3:23–CV–00219–YY, 2024 WL 3326230 (D. Or. July 5, 2024).

example, caps the rail traffic a facility may receive binds the carrier as surely as one addressed to the carrier by name: the carrier cannot lawfully tender the service, the shipper cannot lawfully receive it, and the common carrier obligation of 49 U.S.C. 11101(a)—and the shipper's correlative right to service on reasonable request—is displaced by local command. *See Boston & Maine,* FD 35749, slip op. at 4–5; *cf. Engine Mfrs. Ass'n,* 541 U.S. at 255. Where either answer is no—such as where the object of the regulation is the facility's non-rail activities, not the receipt or tender of rail service—section 10501(b) is not implicated (unless the action discriminates against rail transportation, which is an independent basis for analyzing preemption).

This potential framework would refine the principle recognized in *Boston & Maine*—state or local action directed at a rail customer implicates section 10501(b) where it operates, in practical effect, on the common carrier service the customer receives. *See Bos. & Me.,* FD 35749, slip op. at 4–5. The threshold inquiry clarifies the limit and scope of this principle, and its rationale is evident from the examples of *SEA–3* and *Valero.* In *SEA–3,* a city sought to use state and local regulations to prevent an already rail-served customer from increasing its facility from three to eight rail berths. If the construction was not allowed to occur, the result from the local regulation would be no different than a locality limiting or directing a rail carrier's execution of its common carrier obligations. In practice, it would dictate that only three, and not eight, cars could be sent to the customer at any given time. And to provide the same amount of product, the common carrier must make three trips, rather than one, to the customer facility, and must also change its operational schedule, yard storage, and any number of other operational decisions accordingly. Similarly, in *Valero,* the refusal by state and local officials to grant permission for construction not only dictated the number of cars and type of service (unit train vs. manifest) that the carrier could provide, but also imposed restrictions on the types of commodities that the rail carrier could tender to its customer, thus preventing the rail carrier from being able to fulfill its common carrier obligation. These types of decisions are ordinarily within the decision-making control of rail carriers in providing service to their customers, but were implicated by local regulation of rail customers in both cases. *SEA–3* and *Valero* read ''transportation by rail carrier'' to ask what is the stated object of the regulation, whereas a better reading might ask what was regulated in effect. The Board recognizes that rail service provided by a common carrier remains transportation by rail carrier even when the restriction on such service is addressed to the customer and takes this opportunity to reemphasize that principle.

To be sure, rail customers are not directly under the Board's jurisdiction. And the Board expects that much regulation of rail customers' facilities is, and should remain, beyond the Board's jurisdiction. For example, a zoning ordinance would likely be preempted if it prevented a rail carrier from developing a transload facility. By contrast, ICCTA would not prevent enforcement of that same ordinance against a private business developing a manufacturing facility with an incidental rail component, or against the portions of the facility unrelated to the receipt or tender of common carrier rail service, unless there was evidence that the ordinance was being applied in a discriminatory manner against rail transportation. Likewise, if the construction projects in *SEA–3* and *Valero* implicated local zoning or environmental ordinances, the ordinances' application to these customers would not implicate ICCTA to the extent that they apply to portions of the project unrelated to receiving common carrier rail service. And, in any event, many local ordinances—such as electrical, fire, plumbing, and others—would still apply, just as they do to rail carrier facilities.

C. Commonly Arising State and Local Preemption Issues

There are numerous types of state laws or regulations that frequently result in litigation about preemption. Below is a list of common situations, and a summary of how such issues have been analyzed for preemption purposes. It should be noted that the list is not exhaustive, and that there are additional precedents on many of the issues discussed below, that at times come to differing conclusions based on the facts of the particular case. Moreover, the Board here does not take a position on how any potential future case that may come to the Board (or a court analyzing preemption) will, or should be, resolved. Rather, this list is meant to inform the public about relevant existing precedents on certain topics, in the hopes that this information will help parties proactively resolve disputes at an early stage.

1. Abandonment of Rail Property Interests

As long as the Board retains jurisdiction over rail rights-of-way, only the Board can grant abandonment authority, and state law abandonment claims are preempted. *Grantwood Vill.* v. *Mo. Pac. R.R.,* 95 F.3d 654, 658 (8th Cir. 1996). For example, state laws providing that an easement used for rail purposes can be abandoned simply through non-use, or where the rail carrier has removed track and ties, have been found to be federally preempted. *Great Walton R.R.,* AB 1242 (Sub-No. 1), slip op. at 6–8, 13 (STB served Feb. 27, 2026) (finding that ancillary track was not abandoned and remained subject to the Board's jurisdiction and that, therefore, a prior state court ruling that the easement for the track had been abandoned under state law was preempted); *see also Ala. R.R.—Aban. Exemption—in Escambia, Conecuh, & Monroe Cntys., Ala.,* AB 1324X, slip op. at 2 n.4 (STB served Oct. 24, 2022) (stating that a state court's ''assertion of jurisdiction'' to find that railroad abandoned a rail line right-of-way as a matter of ''state law'' is ''flatly inconsistent with the Board's exclusive and plenary authority over the abandonment of rail lines''); *Jackson Cnty.—Acquis. & Operation Exemption—Union Pac. R.R.,* FD 35982, slip op. at 5, 7 (STB served July 31, 2019) (rejecting argument that rail line was ''abandoned under Missouri law when the tracks and ties were removed'' because it is ''well settled'' that the Board has exclusive jurisdiction over abandonment). Federal preemption of state abandonment laws applies both to common carrier/mainline track and ancillary/excepted track. *Great Walton R.R.,* AB 1242 (Sub-No. 1), slip op. at 6–7 (STB served Feb. 27, 2026).[30] It should be noted that preemption may apply to forestall eviction or removal of the rail carrier from rail property even in situations where a rail carrier voluntarily agreed to a time-limited property interest. *See Fillmore & W. Freight Serv., LLC—Emergency Pet. for Declaratory Ord.,* FD 35813, slip op. at 3 (STB served Mar. 12, 2015) (''It is well settled that, without abandonment or

[30] A Board determination that a state court ruling finding a rail line has been abandoned under state law is preempted does not affect the state court's ruling on who has title to the property. The Board has acknowledged that it is ''well settled that the interpretation of deeds and the determination of who owns good title to property are issues of state law'' that are most appropriately decided by state courts. *Great Walton R.R.,* AB 1242 (Sub-No. 1), slip op. at 6 n.8 (STB served Feb. 27, 2026) (citing *Cent. Kan. Ry.—Aban. Exemption—in Marion & McPherson Cntys., Kan.,* AB 406 (Sub-No. 6X), slip op. at 2 (STB served May 8, 2001)).

discontinuance authority from the Board, the enforcement of a state or local order that would prevent operation over a railroad line is precluded.''); *see also Pinelawn Cemetery,* FD 35468, slip op. at 9–11 (''[E]ven if the state court were to find that the 1904 Lease was not renewed, Pinelawn could not use that ruling to evict the Railroads from the property.'').

2. Complete Takings of Rail Carrier Property

Takings of rail property can come in many different forms, including but not limited to claims for eminent domain, condemnation, adverse possession, prescriptive easement, or quiet title, among others. The Board and courts have recognized that state law actions which ''would remove the land at issue from the national railway system and deprive [a common carrier] of the ability to use the land to support its rail transportation operations'' are typically preempted. *Skidmore,* 1 F.4th at 214–15 (holding that state actions for quiet title and an exclusive prescriptive easement were preempted); *see also City of Lincoln,* 414 F.3d at 862 (same for eminent domain claim); *Grafton & Upton,* FD 36696, slip op. at 1 (same for eminent domain claim); *14500 Ltd. LLC,* FD 35788, slip op. at 4–5 (same for claims of adverse possession and exclusive prescriptive easement); *Jie Ao,* FD 35539, slip op. at 6–7 (same for adverse possession claim). *But see Girard,* 979 N.E.2d at 1287 (holding that an eminent domain claim was not preempted where the carrier claimed a speculative future need for rail service, but the railroad property had remained vacant for 15 years, and the carrier appeared to undermine its own claim by entering into an agreement to sell the property for purposes unrelated to rail transportation).[31] Although Board and court decisions have at times reviewed such exclusive takings under the ''as-applied'' standard, others have found preemption ''regardless of whether th[e] case is analyzed as 'categorical' preemption [or] as 'as applied' preemption . . . .'' *Jie Ao,* FD 35539, slip op. at 1. Synthesizing these analyses, takings of exclusive control of rail property and rights-of-way are best understood as categorically preempted, whereas non-exclusive takings may be reviewed under an as-applied approach.

The Board and courts have recognized that removal of part of the right-of-way or a railroad's property, including of currently unused property, could foreclose or unduly restrict present or future transportation by the rail carrier. *E.g., Grafton & Upton,* FD 36696, slip op. at 7. Rail carriers defending such cases have elaborated on the operational issues that may be raised by the removal of rail property, even when it is not being used directly. For example, rail carriers have expressed the importance of the property and rail yard to their overall network (*14500 Ltd. LLC*); the necessity to conduct maintenance or handle derailments (*City of Lincoln*); maintenance of retaining walls; and the placement of signal towers (*Ala. Great S.*). Carriers have also highlighted the potential of future use, such as for the planned construction of a transload facility (*Grafton & Upton,* Docket No. FD 36696); available capacity to accommodate future traffic growth (*14500 Ltd. LLC, Ala. Great S.*); and the ability to conduct maintenance including slope stabilization (*Jie Ao*). Accordingly, a broad array of present or future transportation-related uses could support a finding that attempts to take rail property are categorically preempted.

Such cases can sometimes present complex policy issues. For example, in *Wisconsin Central Ltd.,* a city and state department of transportation sought to condemn rail property in order to realign a highway in an effort to reduce traffic accidents. 160 F. Supp. 2d at 1011. And in *City of Lincoln,* the town sought to take a strip of rail property to improve its storm drainage system and complete a commuter trail for pedestrians and bicyclists that would connect campuses at a state university. 414 F.3d at 859; *see also Ala. Great S.,* FD 35196, slip op. at 4 (condemnation for creation of a public park with amphitheater, children's playground, and other features). Notwithstanding these worthy public purposes, both actions were held to be preempted by ICCTA.

3. Utilities and Pipelines Within the Right-of-Way

The Board and courts typically view actions seeking condemnation for the purposes of constructing overhead or underground utilities, such as water or sewer lines or wire crossings, under the as-applied framework. The Board has determined that ''routine, non-conflicting uses such as non-exclusive easements for at-grade road crossings, wire crossings, sewer crossings, etc., are not preempted so long as they would not impede rail operations or pose undue safety risks.'' *Maumee & W. R.R.—Pet. for Declaratory Ord.,* FD 34354, slip op. at 2 (STB served Mar. 3, 2004); *see also City of Lincoln,* 414 F.3d at 863 (addressing storm sewer project and noting that ''it is well established that nonconflicting, nonexclusive easements across railroad property are not preempted if they do not hinder rail operations or pose safety risks''). Relevant considerations include whether the facility will be placed in a location that would impair the railroad's use of the right-of-way (such as by undermining the integrity of underlying real property) or whether the timing and duration of the activity would hinder the rail carrier's operations. The Board has also focused on whether the crossings would be on the surface level or underground, and the amount of access to the right-of-way that would be conferred. *See, e.g., City of N. Chi.,* FD 36619, slip op. at 3–4 (acknowledging that a state court had already determined that a condemnation action for a water main easement crossing under rail property was preempted but providing guidance explaining that in cases where preemption is found the state court may be able to craft a remedy that avoids unreasonable interference with rail operations and would thus not be preempted); *E. Ala. Ry.—Pet. for Declaratory Ord.,* FD 35583, slip op. at 6–7 (STB served Mar. 9, 2012) (holding that condemnation for construction of underground water and sewage lines was not preempted).

4. Blocked Crossings

State and local laws that limit a rail carrier's ability to block at-grade road crossings have been found to be preempted in the courts, regardless of whether the regulations apply to moving or stationary trains. These laws generally attempt to regulate the amount of time that a train may block a road crossing and contain a variety of terms related to the amount of time the train may block a crossing; whether the train is moving or stopped; the permissible reasons for doing so; and various penalties. Although the Board itself has not had occasion to rule on any blocked crossings law outside of the permitting process—and thus has never resolved the issue of whether ICCTA preemption or FRSA preemption should apply as it pertains to blocked crossings—courts that have applied ICCTA preemption have regularly found such laws preempted. Anti-blocking laws have been found to be preempted by ICCTA because they ''purport[ ] to regulate rail transportation by dictating how railroads conduct their operations at crossings,'' *CSX Transp., Inc.* v. *Williams,* No. 3:16CV2242, 2017 WL 1544958, at *2 (N.D. Ohio Apr. 28,

[31] In *Grafton & Upton,* FD 36696, the Board analyzed *Girard,* distinguished it on the facts presented, and for that reason, determined that ''[t]he Board need not decide whether to endorse the court's analysis in *Girard*.'' *Grafton & Upton,* FD 36696, slip op. at 8.

2017), including train speed and length, scheduling, the performance of federally mandated air brake tests, the coupling and uncoupling of cars, switching, repairs, safety checks, and waiting for tracks to clear. *See BNSF Ry.* v. *Hiett,* 22 F.4th 1190, 1194 (10th Cir. 2022) (''[M]any factors determine the time that a train will block a grade crossing, including the train's speed and length, whether the side track intersects the grade crossing, when a railroad schedules a train to pass, and the time required to comply with federally mandated tests and procedures.''), *cert. denied sub nom. City of Edmond* v. *BNSF Ry.,* 142 S. Ct. 2835 (2022); *Elam,* 635 F.3d at 807. Because such regulations dictate rail operations directly, courts have uniformly found them preempted, and their reasoning aligns with the Board's categorical framework. *See, e.g., Hiett,* 22 F.4th at 1194 (finding a blocked crossing statute preempted, explaining that ''it too effectively regulates rail operations—a task the ICCTA reserves for the STB''); *Elam,* 635 F.3d at 807 (finding a blocked crossing statute completely preempted because the statute directly attempted to manage the carrier's switching operations, including the carrier's decisions as to train speed, length, and scheduling); *Williams,* 2017 WL 1544958, at *2 (finding a blocked crossing statute categorically preempted because it purported ''to regulate rail transportation by dictating how railroads conduct their operations at crossings'').

In 2022, and again in 2024, the United States Supreme Court declined to review, respectively, a federal circuit court and a state supreme court decision invalidating state blocked-crossing laws as federally preempted, leaving those decisions in place. *See City of Edmond,* 142 S. Ct. 2835 (2022); *Ohio* v. *CSX Transp., Inc.,* 144 S. Ct. 545 (2024).

5. Pedestrian or Road Crossings of Rail Lines

State or local laws that dictate where track crossings must be constructed or closed are evaluated for preemption on an as-applied basis. Non-exclusive easements for at-grade road crossings may be considered routine, non-conflicting uses of rail carrier property. *See Wichita Terminal Ass'n,* FD 35765, slip op. at 6 (citation omitted). State actions related to such crossings are therefore permissible if the actions do not unreasonably burden or interfere with rail transportation. *Id.* at 7. Because the Board utilizes an as-applied preemption analysis, such cases require a factual analysis of the specific crossing at issue. *E.g., Franks Inv. Co.,* 593 F.3d at 415 (requiring evidence about specific crossings at issue, rather than general evidence about crossings, in denying as-applied preemption challenge to crossing case). Such evidence can include the location of the crossing, present or future operational impacts on the rail carrier, and potential alternatives. *See, e.g., Wichita Terminal Ass'n,* FD 35765, slip op. at 9 (analyzing proposed crossing's potential impacts on traffic, capacity, and operations); *Tri-City R.R.,* FD 35915, slip op. at 8–9 (same, including switching and storage operations, as well as present and future impacts). For example, in *Wichita Terminal Association,* FD 35765, the Board found that a state court order requiring construction of a road crossing over tracks at a specific location was preempted. At the same time, however, the Board noted that it did ''not conclude that any crossing . . . necessarily would be preempted,'' suggesting that an alternative location for a crossing may not impose the same burden or interference with rail transportation. *Id.* at 10–11; *see also City of Ozark—Pet. for Declaratory Ord.,* FD 36104, slip op. at 5–6 (STB served July 28, 2017) (holding that, based on facts presented, the city's effort to force reinstallation of a removed at-grade crossing would unreasonably interfere with present and future railroad operations and cause undue safety risks under an as-applied preemption analysis). And a court has found that a state statute requiring pedestrian crossings over rail tracks was not preempted where operational impacts were limited by giving the railroads discretion as to the manner of construction. *See Adrian & Blissfield R.R.,* 550 F.3d at 542.

6. Locomotive Idling

State or local laws that regulate idling trains have been found to be categorically preempted. These regulations may include restrictions on the amount of time, hours, reasons for, or location of idling, including record-keeping requirements. Unlike generally applicable building codes, such regulations specifically target railroads and directly regulate rail operations. *E.g., Ass'n of Am. R.Rs.,* 2007 WL 2439499, at *7 (holding that rules related to railroad idling were categorically preempted). These laws place the state or local regulator, rather than the railroad, in the position to ''mak[e] operational decisions about when, where, and how long locomotives could idle.'' *Delaware,* 859 F.3d at 22. Therefore, regardless of the purpose of the state or local law, and regardless of whether the state or locality has attempted to narrowly tailor the law or provide exceptions, idling-related laws have been found to be categorically preempted. For example, in *Delaware,* a state statute generally prohibiting idling in residential neighborhoods at night was categorically preempted, even though the statute only prohibited ''non-essential'' idling and contained exemptions for certain enumerated purposes, because the statute directly managed railroad operations regardless of its practical effect. *See id.*

7. Environmental Permitting, Zoning Ordinances, and Land Use Laws

State or local permitting or preclearance requirements, including building permits, zoning ordinances, and environmental and land use permitting requirements, have been found to be categorically preempted as to rail carrier transportation and related infrastructure because ICCTA ''prevents states and localities from imposing requirements that, by their nature, could be used to deny a rail carrier the ability to conduct rail operations.'' *Soo Line R.R.—Pet. for Declaratory Ord.,* FD 35850, slip op. at 4 (STB served Dec. 23, 2014). Otherwise, states or localities could interfere with interstate commerce by denying, or indefinitely delaying, approval of rail projects or operations approved by the Board and subject to its exclusive jurisdiction. *See Green Mountain R.R.,* 404 F.3d at 643; *Grafton & Upton,* FD 36696, slip op. at 7 (collecting cases); *CSX Transp., Inc.,* FD 35832, slip op. at 4 (recognizing that state or local authority to ''deny or unreasonably delay'' construction and maintenance ''would irreconcilably conflict with the Board's authorization of those facilities and operations''). For example, the Board has held that a local conservation commission's order seeking to impose environmental permitting requirements on the construction of a rail carrier's transload facility was categorically preempted. *Grafton & Upton,* FD 36696, slip op. at 12. However, state and local regulations that have a ''more remote or incidental effect on rail transportation,'' have been found not to be preempted. *N.Y. Susquehanna & W. Ry.,* 500 F.3d at 252 (internal citation omitted). Resolution of issues regarding such remote or incidental effects may require discussion and cooperation between communities and rail carriers. *See Joint Pet. for Declaratory Ord.,* 5 S.T.B. at 508 (noting that some environmental requirements, such as requiring carriers to share their plans with the community or to submit environmental monitoring or testing information for an appropriate

period of time after operations begin, may not be preempted).

8. Noise, Smoke, Appearance, and Other Nuisance-Related Claims

State or local regulation of nuisance-related issues, such as noise caused by rail operations,[32] smoke, appearance of rail property, and other related matters have been found to be categorically preempted when related to activities under the Board's jurisdiction. These issues may also arise in litigation raising state or common law claims for nuisances caused by rail operations. *See, e.g., Pace,* 613 F.3d at 1068–69 (holding that a lawsuit alleging that construction and operation of side track caused an increase in noise and smoke that made land unusable was preempted). Such state or local actions can directly regulate, and potentially provide remedies for, rail carrier operations under the Board's exclusive jurisdiction and thus may be preempted by ICCTA, even though ICCTA provides no remedy. *See, e.g., Friberg* v. *Kan. City S. Ry.,* 267 F.3d 439, 443 (5th Cir. 2001) (holding that state tort claims related to trains on a railroad's side tracks blocking access to plaintiff's property were preempted, explaining that ''it is beyond peradventure that regulation of [the railroad's] train operations, as well as the construction and operation of the [railroad's] side tracks, is under the exclusive jurisdiction of the STB . . . .''); *Lange—Pet. for Declaratory Ord.,* FD 35037, slip op. at 4 (STB served Jan. 28, 2008) (stating that remedies for nuisance claims are preempted); *Joint Pet. for Declaratory Ord.* 5 S.T.B. at 510 (holding that a local ordinance declaring an automobile unloading facility to be a ''noisome trade'' was preempted) However, such claims may not be preempted if they do not directly implicate subject matter within the Board's jurisdiction. *See Emerson,* 503 F.3d at 1130–32 (holding that a railroad's disposal of railway ties into a wastewater drainage ditch adjacent to its tracks was not ''transportation'' under ICCTA and thus state tort claims related to flooding of adjoining property were not preempted).

9. Design, Construction, or Maintenance of Rail Infrastructure

State law regulations, including tort claims, that dictate the design, construction or maintenance of rail lines and rail transportation facilities under the Board's jurisdiction have been found to be categorically preempted. *See CSX Transp. Inc.,* FD 35832, slip op. at 4–5 (collecting cases). Common cases include claims for damages caused by flooding or other events that claimants assert were caused by rail carrier infrastructure decisions, such as the design of bridges or embankments, materials used in construction, maintenance of culverts, and related operational decisions. *E.g., Edwards,* 983 F.3d at 122 (preempting flooding damage claims). *But see Emerson,* 503 F.3d at 1130–32 (holding that state tort claim related to flooding on plaintiffs' property allegedly caused by a railroad's disposal of railway ties into a wastewater drainage ditch adjacent to its tracks was not preempted because the railroad's disposal did not qualify as ''transportation'' under ICCTA); *Hatcher—Pet. for Declaratory Ord.,* FD 35581, slip op. at 5–8 (STB served Sept. 21, 2012) (holding that state tort claims related to flooding and damage to plaintiffs' property allegedly caused by defendant railroads' blocking drainage infrastructure near the rail line during salvage operations following Board-authorized abandonment of the rail line were not preempted). As the Board has recognized, such claims can ''unduly burden interstate commerce and amount to impermissible state regulation of [a rail carrier]'s operations by interfering with the railroad's ability to uniformly design, construct, maintain, and repair its railroad line. The interstate rail network could not function properly if states and localities could impose their own potentially differing standards for these important activities, which are an integral part of, and directly affect, rail transportation.'' *Tubbs—Pet. for Declaratory Ord.,* FD 35792, slip op. at 5 (STB served Oct. 31, 2014), *aff'd,* 812 F.3d 1141 (8th Cir. 2015).[33] However, claims based on violation of FRA's regulations and standards would be subject to the federal harmonization analysis. *See Tubbs,* FD 35792, slip op. at 7 (declining to preempt, under ICCTA, claims based on uniform federal regulations under the FRSA).

10. Breach of Contract

Under 49 U.S.C. 10709, Congress has expressly provided that contracts between rail carriers and purchasers of rail services to provide such services are not subject to the rail provisions of 49 U.S.C. subtitle IV (Part A). Because Part A of subtitle IV includes the preemption provision at 49 U.S.C. 10501(b), enforcement of such contracts in court is not preempted. Additionally, actions under state law for breach of a contract between a rail carrier and other parties are generally not preempted. As the Fourth Circuit has explained, ''[v]oluntary agreements between private parties,'' and the ''enforcement'' of such contracts, ''are not presumptively regulatory acts.'' *PCS Phosphate Co.* v. *Norfolk S. Corp.,* 559 F.3d 212, 218–19 (4th Cir. 2009) (explaining how the ''history and purpose of ICCTA . . . suggest that such agreements do not fall into the core of economic regulation that the ICCTA was intended to preempt.''). The Board has stated that ''voluntary agreements must be seen as reflecting the carrier's own determination and admission that the agreements would not unreasonably interfere with interstate commerce.'' *Twp. of Woodbridge, N.J.* v. *Consol. Rail Corp.,* 5 S.T.B. 336, 340 (2000); *see also Joint Pet. for Declaratory Ord.,* 5 S.T.B. at 508 (''[P]reemption provisions should not be used to shield a carrier from its own commitments . . . .''). However, depending on the facts and circumstances of a specific case and the degree to which a voluntary agreement unreasonably interferes with interstate rail operations, certain agreements may be subject to an as-applied preemption analysis. *See Woodbridge,* 5 S.T.B. at 340 (declining to find enforceable agreement preempted where, among other things, there was not evidence that enforcement of the agreement would unreasonably interfere with the railroad's operations); *see also PCS Phosphate,* 559 F.3d at 221 (''This is not to say that a voluntary agreement could never constitute an 'unreasonable interference' with rail transportation, but the facts of this case indicate that any interference is not unreasonable . . . .'').

11. Routing of Traffic

The Board and courts have found that ICCTA categorically preempts state and local laws that seek to regulate when and where particular commodities can be carried by rail. *See, e.g., CSX Transp., Inc.,* FD 34662, slip op. at 5 (STB served May 3, 2005). In one example, the District of Columbia passed a law banning transportation of certain classes of hazardous commodities within an area of the District without a permit from the DC. Department of Transportation. *CSX Transp., Inc.—Pet. for Declaratory Ord.,* FD 34662, slip op. at 2 (STB served Mar. 14, 2005). The Board found that such regulation ''plainly'' fell within the

[32] Although not enforced by the Board, the Board notes that under the Noise Control Act of 1972, other federal agencies have established and enforce standards related to railroad noise which preempt state or local standards. *See* 42 U.S.C. 4916; 40 CFR part 201; 49 CFR part 210.

[33] The Board determined in *Tubbs* that the state law claims were preempted regardless of whether they were analyzed as ''categorical'' or ''as-applied,'' *Tubbs,* FD 35792, slip op. at 4, though on appeal, the Eighth Circuit utilized the as-applied framework, *see generally Tubbs,* 812 F.3d. 1141.

types of actions categorically preempted under section 10501(b), explaining that to the extent the DC law ''would require a permit to move certain rail traffic through protected parts of the City, it is directly covered by the categorical preemption against state and local permitting processes.'' *CSX Transp., Inc.,* FD 34662, slip op. at 5 (STB served May 3, 2005). ''And to the extent that the D.C. Act would otherwise ban the specified movements, it would directly conflict with the Board's authority over rail operations, including matters such as routing over which any state action is expressly preempted by section 10501(b).'' *Id.* (noting that other federal regulatory regimes may also apply in a complementary fashion).

V. ICCTA Harmonization Analysis for Federal Law

By its terms, ICCTA's express preemption provision applies to federal, as well as state, law. 49 U.S.C. 10501(b). When, however, the question presented is the interaction between ICCTA and another federal law, the express or implied preemption framework flowing from the Supremacy Clause is inapplicable. The Board therefore does not utilize its categorical/as-applied framework in such cases, and instead follows the tests set forth in the federal courts to analyze whether the laws can be harmonized and, if not, whether the later-enacted law repealed the other by implication. These federal-federal conflicts have mostly arisen in the realms of rail safety and environmental regulation, but the Board would apply similar principles to other potentially conflicting federal laws.

A. Constitutional Framework for Harmonization Analysis

''When confronted with two Acts of Congress allegedly touching on the same topic,'' the Board [34] and courts are ''not at liberty to pick and choose among congressional enactments and must instead strive to give effect to both.'' *Epic Sys. Corp.* v. *Lewis,* 584 U.S. 497, 510 (2018) (citation modified). When there is an apparent conflict between ICCTA and another federal law, the Board or a court ''must strive to harmonize the two laws, giving effect to both laws if possible.'' *Ass'n of Am. R.R.s* v. *S. Coast Air Quality Mgmt. Dist.,* 622 F.3d 1094, 1097 (9th Cir. 2010). However, if there is a ''positive repugnancy'' or an ''irreconcilable conflict'' between the laws, the question becomes whether the later-enacted statute repealed the earlier-enacted statute to the extent of the conflict. *Matsushita Elec. Indus. Co.* v. *Epstein,* 516 U.S. 367, 381 (1996); *Radzanower* v. *Touche Ross & Co.,* 426 U.S. 148, 155 (1976); *see also Joint Pet. for Declaratory Ord.,* 5 S.T.B. at 509 n.28. Whether one law ''displaces the other'' requires ''a clearly expressed congressional intention.'' *Epic Sys. Corp.,* 584 U.S. at 510. And where ''there is no clear intention otherwise, a specific statute will not be controlled or nullified by a general one, regardless of the priority of enactment.'' *Crawford Fitting Co.* v. *J.T. Gibbons, Inc.,* 482 U.S. 437, 445 (1987) (citation modified). Thus, the statutes are harmonized by giving effect to the more specific statute. *See generally Patten* v. *District of Columbia,* 9 F. 4th 921, 926 (D.C. Cir. 2021) (''In seeking to harmonize [disparate] statutes . . . [w]e are guided by the 'old and familiar rule' that 'the specific governs the general,' which is 'particularly true' where 'Congress has enacted a comprehensive scheme and has deliberately targeted specific problems with specific solutions.''') (quoting *RadLAX Gateway Hotel, LLC* v. *Amalgamated Bank,* 566 U.S. 639, 645–46 (2012)).

The Board conducts this analysis against the backdrop of the expansive, exclusive, and specific jurisdiction that ICCTA grants over transportation by rail carriers, which is the manifestation of Congress's intent to ensure uniform federal regulation. *Ass'n of Am. R.R.s,* FD 36369, slip op. at 14 (''Congress clearly intended that [section] 10501(b) preempt laws that create an irreconcilable conflict with the free flow of interstate commerce by imposing a patchwork of regulation on interstate rail transportation.''). ICCTA will often be the more specific statute insofar as it applies specifically to the rail industry, although there are numerous other federal laws related to the rail industry, and the Board would accord appropriate weight to the specificity of those laws in any harmonization analysis.[35] *See Pittsburgh & Lake Erie R.R.* v. *Ry. Lab. Executives' Ass'n,* 491 U.S. 490, 511 (1989) (discussing harmonization of the Railway Labor Act and Interstate Commerce Act).

B. Examples of Harmonization of ICCTA and Other Federal Laws

The analytical framework for harmonization described above would apply in any Board analysis of another federal law for a determination of ICCTA preemption. There are two illustrative examples of federal laws that the Board has previously addressed—related to rail safety and environmental laws—that are discussed in more detail below. The Board could apply a similar analysis when presented with questions about the preemptive effect of ICCTA when harmonization with another federal law is required.

1. Harmonization With FRSA

Congress enacted the FRSA in 1970 ''to promote safety in every area of railroad operations.'' 49 U.S.C. 20101. FRSA instructed the Secretary of Transportation, who has delegated this power to the FRA, to ''prescribe regulations and issue orders for every area of railroad safety.'' *Id.* 20103(a); 49 CFR 1.89(a). Under the FRSA preemption provision, Congress provided that ''[l]aws, regulations, and orders related to railroad safety . . . shall be nationally uniform to the extent practicable.'' 49 U.S.C. 20106(a)(1). To ensure ''[n]ational uniformity of regulation'' in this area, FRSA preempts state law obligations aimed at a ''subject matter'' addressed in regulations issued thereunder. *Id.* 20106(a)(2); *see also Duluth, Winnipeg & Pac. Ry.* v. *City of Orr,* 529 F.3d 794, 796 (8th Cir. 2008) (FRSA ''generally preempt[s] state laws covering the same subject matter'' as Department of Transportation (DOT) or Department of Homeland Security (DHS) standards).

Nonetheless, in some limited situations, FRSA might lead to the patchwork of rail regulations that ICCTA is designed to avoid, because FRSA contains a narrow savings clause permitting states to regulate where FRA has not yet issued rail safety [36] regulations covering ''the subject matter of the State requirement.'' 49 U.S.C.

[34] The Board has previously affirmed that it, as well as the courts, can engage in this federal-federal harmonization and implied repeal analysis. *Ass'n of Am. R.R.s—Pet. for Declaratory Ord.* (*AAR Declaratory Ord.*), FD 36369, slip op. at 9, 12 (STB served Dec. 30, 2020). This is because ''[t]he statute requires, in certain circumstances, the preemption of other federal laws and does not prohibit the Board from opining on its interpretation of the other federal laws to determine where ICCTA preemption applies.'' *Id.* at 9.

[35] At the time of this writing, these include, but are not limited to, the Railroad Retirement Act of 1974 (45 U.S.C. 231 *et seq.*); the Railway Labor Act (45 U.S.C. 151 *et seq.*); the Railroad Unemployment Insurance Act (45 U.S.C. 351 *et seq.*); and the Federal Employers' Liability Act (45 U.S.C. 51 *et seq.*).

[36] Certain state and local regulations that impact rail carriers may in reality be related to public safety, rather than rail safety, which could impact the Board's analysis of its jurisdiction and harmonization with FRSA. *See* Br. for United States as Amicus Curiae, *Ohio* v. *CSX Transp., Inc.,* No. 22–459, OSG Amicus Brief, 2023 WL 8112708, at *14 (U.S. Nov. 21, 2023) [hereinafter OSG Amicus Brief] (''It is debatable whether a blocked-crossing statute . . . is 'related to *railroad* safety,' 49 U.S.C. 20106(a)(1) (emphasis added), given that [the] safety-related concerns principally involve the safety of emergency-services users and other members of the public—not the safety of railroads and railroad operations.'').

20106(a)(2); *Duluth, Winnipeg & Pac. Ry.,* 529 F.3d at 796 (stating that FRSA ''creates a narrow exception to preemption through its savings clause''). FRSA also allows states to ''adopt or continue in force an additional or more stringent'' rail safety law or regulation, but only if it ''(A) is necessary to eliminate or reduce an essentially local safety or security hazard; (B) is not incompatible with a law, regulation, or order of the United States Government; and (C) does not unreasonably burden interstate commerce.'' 49 U.S.C. 20106(a)(2). Courts have interpreted the ''essentially local'' safety hazard requirement narrowly to address ''local situations which are not statewide in character and not capable of being adequately encompassed within national uniform standards.'' *Nat'l Ass'n of Regul. Util. Comm'rs* v. *Coleman,* 542 F.2d 11, 14–15 (3d Cir. 1976); *see also Duluth, Winnipeg & Pac. Ry.,* 529 F.3d at 798 (collecting cases). And notably, the exception directly requires that such regulations must be ''not incompatible'' with federal laws.

In 2007, Congress enacted an amendment clarifying the savings clause in section 20106. *See* 49 U.S.C. 20106(b); *see also Bates* v. *Mo. & N. Ark. R.R.,* 548 F.3d 634, 637 (8th Cir. 2008). The amendment specifically provided that nothing within section 20106 ''shall be construed to preempt an action under State law seeking damages for personal injury, death, or property damage'' alleging that a party: (A) failed to comply with an applicable Federal standard of care established by DOT or DHS; (B) failed to comply with its own plan, rule, or standard that it created pursuant to an applicable DOT or DHS regulation or order; or (C) failed to comply with a State law, regulation, or order that is not incompatible with the provisions of section 20106(a)(2) described above. 49 U.S.C. 20106(b).

By contrast, ICCTA expressly overrides ''remedies provided under [other] Federal . . . law[s]'' to the extent of a conflict. 49 U.S.C. 10501(b). ICCTA was enacted more recently (1995) than the authority at section 20103 and the savings clause at section 20106(a)(2). *See In re Fed.-Mogul Global Inc.,* 684 F.3d 355, 374 (3d Cir. 2012) (citation omitted) (declining ''to limit the preemptive scope'' of a statute based on the existence of an older, narrower provision covering a closely related topic). And if there is a potential conflict with the tort law clarification to the FRSA savings clause, enacted in 2007 at section 20106(b), the Board could take note of the timing. *See Lundeen* v. *Can. Pac. R.R.,* 532 F.3d 682, 688 (8th Cir. 2008) (''This 'clarifying' amendment reflected Congress's disagreement with the manner in which the courts . . . had interpreted [section] 20106 to preempt state law causes of action whenever a federal regulation covered the same subject matter as the allegations of negligence in a state court lawsuit.'').

The Board has said that ICCTA and FRSA should be harmonized to give effect to both. *See, e.g., Tubbs,* FD 35792, slip op. at 7. ICCTA primarily applies to rail transportation and operations, and FRSA primarily applies to rail safety. Although ''the ICCTA preemption provision can be read to cover virtually everything related to rail transportation and . . . rail safety-related claims will almost always touch on rail transportation and operations,'' *Waneck—Pet. for Declaratory Ord.,* FD 36167, slip op. at 5 (STB served Oct. 31, 2018),[37] the Board has long recognized that ICCTA ''does not preempt valid safety regulation under [FRSA].'' *Green Mountain R.R.—Pet. for Declaratory Ord.,* FD 34052, slip op. at 6 n.8 (STB served May 28, 2002). The agencies have exercised their authority in complementary fashion, and when their responsibilities overlap, they have ''coordinate[d] and cooperate[d] with each other as appropriate.'' *CSX Transp., Inc.,* FD 34662, slip op. at 10 (STB served Mar. 14, 2005); *see also Tyrrell* v. *Norfolk S. Ry.,* 248 F.3d 517, 523 (6th Cir. 2001) (stating that the Board's and FRA's ''complementary exercise of their statutory authority accurately reflects Congress's intent for the ICCTA and FRSA to be construed *in pari materia*''). And the Board ''does not usurp or interfere with the role of other federal agencies in regulating railroad safety and security and hazardous materials transportation under other federal regulatory statutes.'' *CSXT Transp., Inc.,* FD 34662, slip op. at 7 (STB served May 3, 2005).

Applying these principles, the Board has determined that ICCTA applies to operation and construction-related claims, including state-law tort claims alleging that a rail line was designed, constructed, and maintained in a way that caused flooding-related property damage. *See Tubbs,* FD 35792, slip op. at 6–7. Conversely, FRSA applies to primarily safety-related claims, including state-law tort claims related to a collision between a train and a tour bus at a railroad crossing, *see Waneck,* FD 36167, slip op. at 4 (STB served May 25, 2018), and state regulation of the clearance distance between tracks, *see Tyrrell,* 248 F.3d at 522–24. The Board has stated that ''the states' ability to act with respect to railroad/highway crossings (including grade separations) remains undisturbed so long as their action does not unreasonably interfere with railroad operations or interstate commerce, and does not constitute regulation of the railroad's operations.'' Br. of Surface Transp. Bd. as Amicus Curiae, *Iowa, Chi. & E. R.R.* v. *Wash. Cnty.,* 384 F.3d 557 (8th Cir. 2004) (No. 03–3136), 2004 WL 6395939, at *21–23 (discussing whether law about redesign and replacement of bridges at crossing for safety reasons was subject to ICCTA preemption). And, as discussed above, the Board found that both ICCTA and FRSA applied to a local safety-related regulation limiting the shipment of hazardous materials because it affected both safety and the railroad's ability to carry certain commodities. *CSX Transp., Inc.,* FD 34662, slip op. at 5–7 (STB served May 3, 2005).

Thus, ICCTA and FRSA can typically be harmonized. However, issues may arise when a state or local safety-related law which may not be preempted under FRSA may still be preempted under ICCTA because such laws effectively manage or govern rail transportation and thus directly conflict with the Board's exclusive jurisdiction. Some courts have suggested that only FRSA preemption can apply to at least some safety-related issues. *See, e.g., Island Park, LLC* v. *CSX Transp.,* 559 F.3d 96, 107 (2d Cir. 2009) (stating that the ''federal statutory scheme places principal federal regulatory authority for rail safety with the FRA, not the [Board],'' and so ''FRSA provides the appropriate basis for analyzing whether a state law, regulation or order affecting rail safety is pre-empted by federal law''); *Tyrrell,* 248 F.3d at 522–23. And the Board has partially endorsed the same view in non-binding guidance. *See Waneck,* FD 36167, slip op. at 5 (STB served Oct. 31, 2018). However, as the Office of the Solicitor General recently argued to the Supreme Court in a case about whether states could regulate blocked crossings, ''FRSA cannot be read to create a loophole in the ICCTA that would permit a patchwork of state and local regulation over rail transportation simply because the regulations also happen to touch on 'safety-related' matters.'' OSG Amicus Brief, 2023 WL 8112708, at *13; *see also Ohio* v. *CSX Transp., Inc.,* 144 S. Ct. 545 (2024) (denying Ohio's certiorari petition). This is also consistent with the savings clause's requirement that state regulations that are in addition to or more stringent than DOT or DHS

[37] Note, however, that the *Waneck* opinion described itself as ''purely advisory guidance.'' *Id.* at 4.

rules governing the same subject matter must relate to an ''essentially local'' hazard, be ''not incompatible with'' other federal laws, and ''not unreasonably burden interstate commerce.'' *See* 49 U.S.C. 20106(a)(2)(B). Thus, even if FRSA alone does not preempt a state or local railroad safety regulation, ICCTA preemption may still apply if upholding the state or local regulation addresses a generally-applicable concern, would be inconsistent with ICCTA, or would otherwise unreasonably burden rail transportation.

2. Harmonization With Federal Environmental Laws

The Board has stated that ICCTA preemption is implicated when the relevant state activity was undertaken pursuant to regulations passed under the auspices of federal environmental statutes. This dynamic has arisen in two situations. First, ICCTA preemption may apply to the extent the state regulations would cause a ''patchwork of regulations'' burdening interstate commerce. *See EPA Declaratory Ord.,* FD 35803, slip op. at 8. In *EPA Declaratory Ord.,* the Board concluded that ICCTA would likely preempt a California air quality district's rules related to railroad locomotive idling and recordkeeping—even if those rules were approved by EPA under the CAA as part of California's state implementation plan ''because of the potential patchwork of regulations that could result.'' *Id.* The Board noted that it must consider ''not only the impact of the District's rules . . . but the fact that other states and local districts throughout the country could follow suit and adopt their own emission rules . . . leading to the lack of uniformity of regulation that Congress intended to preclude in [section] 10501(b).'' *EPA Declaratory Ord.,* FD 35803, slip op. at 8; *see also id.* at 10 (''[A]llowing states and localities to create a variety of complex regulations governing how an instrument of interstate commerce is operated, equipped, or kept track of (even if federalized under the CAA) would directly conflict with the goal of uniform national regulation of rail transportation.'').

The Board applied the same principle in *AAR Declaratory Order* to conclude that the CWA's National Pollutant Discharge Elimination System (NPDES) permitting program and discharge prohibition ''would likely be preempted by [ICCTA] if applied to discharges incidental to the operation of rail cars in transit.'' *AAR Declaratory Ord.,* FD 36369, slip op. at 1. Because the program was ''based on state-specific permitting requirements'' and ''individual permit writers . . . have discretion to impose [standards] more stringent than EPA guidelines,'' applying the program would be ''likely to result in a patchwork of differing regulations'' that would ''be incompatible with [ICCTA's] purpose of ensuring uniform regulation of rail transportation.'' *Id.* at 11–12; *see also id.* at 13–14 (stating that ICCTA was ''arguably the more specific statutory provision,'' and that, to the extent the NPDES permitting program was ''incompatible with the purpose'' of ICCTA, the later-enacted statute (ICCTA) should ''be given effect'').

Thus, similar to the unreasonable-burden prong of as-applied preemption, the analysis is cumulative: if applying another federal law or allowing claims thereunder would, in the aggregate, interfere with Congress's uniform regulatory scheme, ICCTA preemption is implicated. This suggests two important distinctions: between federal laws with one uniform federal standard and those that permit a patchwork of state-promulgated requirements; and between state laws passed under color of federal law that apply to instrumentalities of interstate commerce in motion [38] versus those applying to stationary structures. In *AAR Declaratory Order,* the Board asserted that ''[t]o the extent that EPA could issue a nationwide general permit for incidental discharges from rail cars in transit that includes uniform requirements for the states, such a nationwide general permit would not create a patchwork of differing regulations and could therefore potentially be harmonized with [section] 10501(b).'' *AAR Declaratory Ord.,* FD 36369, slip op. at 16. The Board also focused on the fact that ''rail cars in transit are inherently instrumentalities of interstate commerce.'' *Id.* at 15. Although ''subjecting them to differing regulatory requirements as they pass from one state to the next is likely to be incompatible with the free flow of interstate commerce that Congress envisioned when enacting [section] 10501(b)[,] . . . non-discriminatory application to . . . stationary facilities owned or operated by railroads'' may not be. *Id.* Instead, such stationary facility applications under the color of federal law ''are generally not preempted because, although they may differ from state to state, they do not typically conflict with [section] 10501(b)'s goal of preventing differing regulations from interfering with the free flow of interstate commerce.'' *Id.*

Additionally, ICCTA preemption is implicated if a federal ''statute or regulation is being applied in a discriminatory manner, or being used as a pretext for frustrating or preventing a particular activity.'' *Joint Pet. for Declaratory Ord.,* 5 S.T.B. at 509. In *Joint Petition for Declaratory Order,* the Board concluded that the local governments were ''simply using [federal environmental law] as a pretext to do what Congress expressly precluded: interfere with interstate commerce by imposing a local permitting or environmental process as a prerequisite to the railroad's ability to conduct its operations.'' *Id.* The local concerns appeared unfounded because neither EPA nor the state environmental regulator had expressed any concerns, and the record showed that substantial pollution was ''unlikely.'' *Id.* at 509–10.

This is necessarily a ''fact-bound'' analysis in which the regulator's stated concerns ''need to be reviewed individually'' to determine whether they have a reasonable basis. *Id.* at 508–09. As in the preemption context, this aspect of the analysis furthers the congressional scheme by ensuring that seemingly neutral regulatory measures are not being used to target or obstruct rail operations.

VI. Conclusion

This policy statement sets forth the Board's perspective on the state of the law as of the time of its issuance, acknowledging that new precedents from the Board and courts will further develop the law on STB jurisdiction and preemption. Although forthcoming cases will be evaluated based on their facts, circumstances, and proffered arguments, the Board intends for this policy statement to be beneficial and informative to the public about the Board's jurisdiction and ICCTA preemption, and to encourage the smooth flow of interstate commerce via the nation's rail network.

Executive Order 12866 (Regulatory Planning and Review) and Executive Order 14192 (Unleasing Prosperity Through Deregulation)

Executive Order 12866, as modified by Executive Order 14215, provides that the Office of Information and Regulatory Affairs (OIRA) will review all significant

[38] The Board notes that a significant percentage of rail cars are owned by separate leasing companies or directly by shippers, rather than the rail carriers themselves. *See* Pet. 5–7, July 26, 2021, *Pet. for Rulemaking to Adopt Rules Governing Priv. Railcar Use by R.Rs.,* EP 768. This disparate ownership structure may amplify the effects of patchwork regulation as compliance costs are imposed on many different entities, ranging from large rail carriers and manufacturers to small shippers that own their own small fleets.

regulatory actions. OIRA has determined that this policy statement is significant under section 3(f) of Executive Order 12866. For the reasons discussed above, this policy statement is considered an Executive Order 14192 deregulatory action.

Decided: November 2, 2026.

By the Board, Board Members Fuchs, Hedlund, Kloster, and Schultz.

Andrea Pope-Matheson,

Clearance Clerk.

BILLING CODE 4915–01–P

DEPARTMENT OF TRANSPORTATION

Federal Aviation Administration

Noise Compatibility Program for Seattle-Tacoma International Airport, King County, Washington

AGENCY: Federal Aviation Administration, DOT.

ACTION: Acceptance of Seattle-Tacoma International Airport noise exposure map.

SUMMARY: The Federal Aviation Administration (FAA) announces its determination that the noise exposure maps submitted by the Port of Seattle for Seattle-Tacoma International Airport are compliant with applicable statutory and regulatory requirements.

DATES: The effective date of the FAA's determination on the noise exposure map is October 26, 2026.

FOR FURTHER INFORMATION CONTACT: Sky M. Laron, Community Engagement Officer, Northwest Mountain Region, Airports Division, Federal Aviation Administration, 2200 S. 216th Street, Des Moines, WA 98198, (206) 231–4136.

SUPPLEMENTARY INFORMATION: The FAA determined the noise exposure map submitted by the Port of Seattle for Seattle-Tacoma International Airport, is in compliance with applicable statutory and regulatory requirements, effective October 26, 2026 Under title 49, United States Code (U.S.C.) section 47503, an airport operator may submit to the FAA, noise exposure maps depicting non-compatible uses as of the date such map is submitted, a description of estimated aircraft operations during a forecast period that is at least five years in the future and how those operations will affect the map. A noise exposure map must be prepared in accordance with title 14, Code of Federal Regulations (CFR) part 150, the regulations promulgated pursuant to 49 U.S.C. 47502, and developed in consultation with public agencies and planning authorities in the area surrounding the airport, state and Federal agencies, interested and affected parties in the local community, and aeronautical users of the airport. In addition, an airport operator that submitted a noise exposure map, which the FAA determined is compliant with statutory and regulatory requirements, may submit a noise compatibility program for FAA approval that sets forth measures the operator has taken or proposes to take to reduce existing non-compatible uses and prevent the introduction of additional non-compatible uses.

The FAA completed its review of the noise exposure map and supporting documentation submitted by the Port of Seattle and determined the noise exposure map and accompanying documentation are compliant with applicable requirements. The documentation that constitutes the noise exposure map includes the current and forecast noise exposure map graphics, the 2022 Existing Condition Noise Exposure Map and 2032 Future Condition Noise Exposure Map, and other narrative, graphic or tabular representations of the data required by 14 CFR A150.101 and 49 U.S.C. 47503. This determination is effective on October 26, 2026. FAA's determination on an airport's noise exposure map is limited to a finding that the noise exposure map was developed in accordance with the 49 U.S.C. 47503 and procedures contained in 14 CFR A150.101. FAA's acceptance of an NEM does not constitute approval of the applicant's data, information or plans, or a commitment to approve a noise compatibility program or to fund the implementation of that program. If questions arise concerning the precise relationship of specific properties within noise exposure contours depicted on a noise exposure map, it should be noted that the FAA is not involved in any way in determining the relative locations of specific properties with regard to the depicted noise contours or in interpreting the noise exposure maps to resolve questions concerning, for example, which properties should be covered by the provisions of 49 U.S.C. 47506. These functions are inseparable from the ultimate land use control and planning responsibilities of local government. These local responsibilities are not changed in any way under 14 CFR part 150 or through FAA review and acceptance of a noise exposure map. Therefore, the responsibility for the detailed overlaying of noise exposure contours onto the map depicting properties on the surface rests exclusively with the airport operator that submitted a noise exposure map or with those public agencies and planning authorities with which consultation is required under 49 U.S.C 47503. The FAA relied on the certification by the airport operator that the consultations and opportunity for public review required under 14 CFR 150.21 has been accomplished during the development of the noise exposure maps. Copies of the noise exposure map and supporting documentation and the FAA's evaluation of the noise exposure maps are available for examination at the following locations:

Federal Aviation Administration, Northwest Mountain Region, Airports Division, 2200 S. 216th Street, Des Moines, WA 98198.

Seattle-Tacoma International Airport, Port of Seattle, 17801 International Blvd., SeaTac, WA, 98158.

Questions may be directed to the individual listed in the **FOR FURTHER INFORMATION CONTACT** section of this notice.

Issued in Des Moines, Washington, on October 26, 2026.

Jason Ritchie,

Director (Acting), ANM Airports Division, ANM–600, Northwest Mountain Region Airports Division.

BILLING CODE 4910–13–P

DEPARTMENT OF TRANSPORTATION

Federal Highway Administration

[Docket No. FHWA–2026–1255]

Agency Information Collection Activities: Notice of Request for Extension of a Currently Approved Information Collection

AGENCY: Federal Highway Administration (FHWA), DOT.

ACTION: Notice of request for extension of currently approved information collection.

SUMMARY: The FHWA invites public comments about our intention to request the Office of Management and Budget's (OMB) approval for extension of an existing information collection that is summarized below under **SUPPLEMENTARY INFORMATION**. We are required to publish this notice in the **Federal Register** by the Paperwork Reduction Act of 1995.

DATES: Please submit comments by January 8, 2027.

ADDRESSES: You may submit comments identified by DOT Docket ID Number 1255by any of the following methods:

Website: For access to the docket to read background documents or comments received go to the Federal eRulemaking Portal: Go to *http://www.regulations.gov.* Follow the online instructions for submitting comments.

Fax: 1–202–493–2251.

Mail: Docket Management Facility, U.S. Department of Transportation, West Building Ground Floor, Room W12–140, 1200 New Jersey Avenue SE, Washington, DC 20590–0001.

Hand Delivery or Courier: U.S. Department of Transportation, West Building Ground Floor, Room W12–140, 1200 New Jersey Avenue SE, Washington, DC 20590, between 9 a.m. and 5 p.m. ET, Monday through Friday, except Federal holidays.

FOR FURTHER INFORMATION CONTACT: Wendy McAbee, (202) 366–5658, Office of Administration, Federal Highway Administration, Department of Transportation, 1200 New Jersey Avenue SE, Washington, DC 20590. Office hours are from 7 a.m. to 3:30 p.m., Monday through Friday, except Federal holidays.

SUPPLEMENTARY INFORMATION:

Title: Highway Bridge and National Bridge Inspection Programs (National Bridge Inspection Standards).

OMB Control: 2125–0501.

Background: This collection is necessary to meet legislative requirements of Title 23 United States Code section 144, and the Code of Federal Regulations, 23 Highways Part 650, Subpart C—National Bridge Inspection Standards which require States, Federal Agencies, and Tribal Governments to: (1) perform, and report inventory data from, initial, routine, non-redundant steel tension member, underwater, damage, in-depth, and special inspections as appropriate for all highway bridges on public roads, and element level inspections for highway bridges on the National Highway System; (2) report costs associated with the replacement of highway bridges; and (3) report critical findings on highway bridges. The bridge replacement unit cost information that is provided to the FHWA is on an annual basis. The critical findings information is periodically provided to the FHWA. The bridge information is used for multiple purposes, including: (1) the determination of the condition of the Nation's bridges which is included in a biennial report to Congress on the Status of the Nation's Bridges; (2) for various additional reports to Congress on Bridge Safety; (3) the data source for executing various sections of the Federal-aid program which involve highway bridges; (4) the data source for assessing the bridge penalty provisions of Title 23 United States Code section 119; (5) the data source for the evaluation of bridge performance measures established in Title 23 United States Code section 150; (6) for conducting oversight of the National Bridge Inspection Program at the State, Federal, and Tribal government level; and (7) for strategic national defense needs.

Respondents: 52 State highway agencies including the District of Columbia and Puerto Rico, Federal Agencies, Tribal Governments, and transportation departments of United States Territories of U.S Virgin Islands and Guam. The number of inspections per respondent varies in accordance with the National Bridge Inspection Standards.

Frequency: Annually.

Estimated Average Burden per Response: The estimated average burden for each routine bridge inspection on the National Highway System is 10 hours. The estimated average burden for each routine bridge inspection that is not on the National Highway System is 9 hours. The estimated average burden for each Non-redundant Steel Tension Member, Underwater, and Special inspection is 9 hours. The estimated average burden for each cost collection report is 16 hours. The estimated average burden for reporting critical findings is 40 hours.

Estimated Total Annual Burden Hours: The annual burden hours associated with this renewal are 3,179,366 hours. This estimated figure is based on 76,557 annual instances for bridge inspections on the National Highway System multiplied by 10 hours (765,570 hours); plus 73,492 annual instances for routine bridge inspection that are not on the National Highway System multiplied by 9 hours (2,235,339 hours); plus annual instances for non-redundant steel tension member, underwater, and special inspections multiplied by 9 hours (175,545 hours); plus 16 hours for each unit cost report multiplied by 52 reports (832 hours); plus 40 hours for follow up on critical findings multiplied by 52 respondents (2,080 hours) for a combined annual burden of 3,179,366 hours.

Public Comments Invited: You are asked to comment on any aspect of this information collection, including: (1) Whether the proposed collection is necessary for the FHWA's performance; (2) the accuracy of the estimated burdens; (3) ways for the FHWA to enhance the quality, usefulness, and clarity of the collected information; and (4) ways that the burden could be minimized, including the use of electronic technology, without reducing the quality of the collected information. The agency will summarize and/or include your comments in the request for OMB's clearance of this information collection.

Authority: The Paperwork Reduction Act of 1995; 44 U.S.C. chapter 35, as amended; and 49 CFR 1.48.

Issued on: November 4, 2026.

Jazmyne Lewis,

Information Collection Officer.

BILLING CODE 4910–22–P

DEPARTMENT OF TRANSPORTATION

Federal Highway Administration

Notice of Final Federal Agency Actions on Proposed Highway in Maryland

AGENCY: Federal Highway Administration (FHWA), Department of Transportation (DOT).

ACTION: Notice of limitation on claims for judicial review of actions by FHWA.

SUMMARY: This notice announces action taken by FHWA that are final. The actions relate to the proposed improvements along U.S. 50/301 and proposed replacement of the Chesapeake Bay Bridges (Bay Bridge) across the Chesapeake Bay. Those actions grant licenses, permits, or approvals for the Project. The Tier 2 Combined Final Environmental Impact Statement (FEIS) and Record of Decision (ROD) under the National Environmental Policy Act (NEPA) and other documents in the Project file provide details on the Project and FHWA's actions.

DATES: By this notice, FHWA is advising the public of final agency actions subject to 23 U.S.C. 139(*l*)(1). A claim seeking judicial review of the Federal agency actions on the highway project will be barred unless the claim is filed on or before April 8, 2027. If the Federal law that authorizes judicial review of a claim provides a time period of less than 150 days for filing such claim, then that shorter time period still applies.

FOR FURTHER INFORMATION CONTACT: For FHWA: Valeriya Remezova, Division Administrator, Federal Highway Administration, 31 Hopkins Plaza, Suite 1520, Baltimore, MD 21201, Telephone (410) 962–4440, *valerirya.remezova@dot.gov.* The FHWA Maryland Division's normal business hours are 8:00 a.m. to 4:30 p.m. (EST).

For MDTA: Bruce Gartner, Executive Director, Maryland Transportation Authority, 2310 Broening Highway Baltimore, MD 21224, Telephone (410) 537–1001, *bgartner@mdta.state.md.us.*

The MDTA's normal business hours are 8:00 a.m. to 5:00 p.m. (EST).

SUPPLEMENTARY INFORMATION: Notice is hereby given that FHWA has taken final agency actions subject to 23 U.S.C. 139(*l*)(1) by issuing approvals and initiating consultation for the proposed improvements along U.S. 50/301, the proposed replacement of the Bay Bridge, and the proposed demolition of the current Bay Bridge in Maryland.

FHWA's actions and the laws under which such actions were taken, are described in the Tier 2 Combined FEIS and ROD and other documents in the project records. The FEIS, ROD, supporting technical reports and other project records are available by contacting FHWA at the address provided above and can also be viewed and downloaded from the project website at: *https://baycrossingstudy.com/.*

This notice applies to all Federal agency decisions that are final as of the issuance date of this notice and all laws under which such actions were taken, including but not limited to:

1. *General:* National Environmental Policy Act (NEPA) [42 U.S.C. 4321 *et. seq.*]; Federal-Aid Act (FAHA) [23 U.S.C. 109, 139, and 128].

2. *Air:* Clean Air Act [42 U.S.C. 7401–7671(q)].

3. *Noise:* Noise Control Act of 1972 [42 U.S.C. 4901 *et seq.*].

4. *Land:* Section 4(f) of the Department of Transportation Act of 1966 [49 U.S.C. 303; 23 U.S.C. 138]; Land and Water Conservation Fund Act of 1965 [16 U.S.C. 4601–4604].

5. *Wildlife:* Endangered Species Act (ESA) [16 U.S.C. 1531–1544 and 1536]; Fish and Wildlife Coordination Act [16 U.S.C. 661–667(d)]; Migratory Bird Treaty Act [16 U.S.C. 703–712]; Bald and Golden Eagle Protection Act [16 U.S.C. 668–668c].

6. *Historic and Cultural Resources:* Section 106 of the National Historic Preservation Act of 1966, as amended [54 U.S.C. 306108].

7. *Social and Economic:* Farmland Protection Policy Act [7 U.S.C. 4201–4209]; Uniform Relocation Assistance and Real Property Acquisition Policies Act of 1970 [42 U.S.C. 4601 *et seq.*]; Americans with Disabilities Act of 1990, as amended (ADA) [42 U.S.C. 12101].

8. *Wetlands and Water Resources:* Clean Water Act (Section 404, Section 401, Section 402, Section 319) [33 U.S.C. 1251–1387]; Safe Drinking Water Act (SDWA) [42 U.S.C. 300(f)–300(j)(26)].

9. *Hazardous Materials:* Comprehensive Environmental Response, Compensation, and Liability Act of 1980 (CERCLA), as amended by the Superfund Amendments and Reauthorization Act of 1986 (SARA) [42 U.S.C. 9601 et. seq.]; Resource Conservation and Recovery Act (RCRA) [42 U.S.C. 6901–6992(k)].

10. *Executive Orders:* The analysis pertaining to any applicable Executive Order considered during the environmental review process to the extent such analysis may be challenged in court. Such Executive Orders may include: Executive Order 11990 Protection of Wetlands; Executive Order 11988 Floodplain Management; Executive Order 11593 Protection and Enhancement of the Cultural Environment; Executive Order 13007 Indian Sacred Sites; Executive Order 13287 Preserve America; Executive Order 13175 Consultation and Coordination with Indian Tribal Governments; Executive Order 13112 Invasive Species, as amended by Executive Order 13751 Safeguarding the Nation from the Impacts of Invasive Species.

DEPARTMENT OF TRANSPORTATION

Federal Motor Carrier Safety Administration

[Docket No. FMCSA–2026–0036]

Qualification of Drivers; Exemption Applications; Epilepsy and Seizure Disorders

AGENCY: Federal Motor Carrier Safety Administration (FMCSA), Department of Transportation (DOT).

ACTION: Notice of denials.

SUMMARY: FMCSA announces its decision to deny applications from 16 individuals who requested an exemption from the Federal Motor Carrier Safety Regulations (FMCSRs) prohibiting persons with a clinical diagnosis of epilepsy or any other condition that is likely to cause a loss of consciousness or any loss of ability to operate a commercial motor vehicle (CMV) from operating CMVs in interstate commerce.

FOR FURTHER INFORMATION CONTACT: Ms. Christine A. Hydock, Chief, Medical Programs Division, FMCSA, DOT, 1200 New Jersey Avenue SE, Washington, DC 20590–0001; (202) 366–4001; *fmcsamedical@dot.gov.* Office hours are from 8:30 a.m. to 5 p.m. ET Monday through Friday, except Federal holidays.

SUPPLEMENTARY INFORMATION:

I. Public Participation

A. Viewing Comments

To view comments, go to *www.regulations.gov.* Insert the docket number, (FMCSA–2026–0036) in the keyword box and click ''Search.'' Next, choose the only notice listed, and click ''Browse Comments.'' If you do not have access to the internet, you may view the docket online by visiting Dockets Operations in Room W58–213 of the DOT West Building, 1200 New Jersey Avenue SE, Washington, DC 20590–0001, between 9 a.m. and 5 p.m. ET Monday through Friday, except Federal holidays.

B. Privacy Act

In accordance with 49 U.S.C. 31315(b)(6), DOT solicits comments from the public on the exemption requests. DOT posts these comments, including any personal information the commenter provides, to *www.regulations.gov,* as described in the system of records notice DOT/ALL–14 FDMS (Federal Docket Management System), which can be reviewed under the ''Department Wide System of Records Notices'' link at *https://www.transportation.gov/individuals/privacy/privacy-act-system-records-notices.* The comments are posted without edit and are searchable by the name of the submitter.

II. Legal Basis

FMCSA has authority under 49 U.S.C. 31136(e) and 31315(b) to grant exemptions from the FMCSRs. FMCSA must publish a notice of each exemption request in the **Federal Register** (49 CFR 381.315(a)). The Agency must provide the public an opportunity to inspect the information relevant to the application, including the applicant's safety analysis. The Agency must provide an opportunity for public comment on the request.

The Agency reviews the application, safety analyses, and public comments submitted and determines whether granting the exemption would likely achieve a level of safety equivalent to, or greater than, the level of safety that would be achieved absent such exemption, pursuant to the standard set forth in 49 U.S.C. 31315(b)(1). The Agency must publish its decision in the **Federal Register** (49 CFR 381.315(b)). If granted, the notice will identify the regulatory provision from which the applicant will be exempt, the effective period, and all terms and conditions of

the exemption (49 CFR 381.315(c)(1)). If the exemption is denied, the notice will explain the reason for the denial (49 CFR 381.315(c)(2)). The exemption may be renewed (49 CFR 381.300(b)).

III. Background

The physical qualification standard for drivers regarding seizures and loss of consciousness provides that a person is physically qualified to drive a CMV if that person has ''no established medical history or clinical diagnosis of epilepsy or any other condition which is likely to cause the loss of consciousness or any loss of ability to control'' a CMV (49 CFR 391.41(b)(8)). To assist in applying this standard, FMCSA publishes guidance for medical examiners (MEs) in the form of medical advisory criteria in Appendix A to 49 CFR part 391.[1] In 2007, FMCSA published recommendations from a Medical Expert Panel (MEP) that FMCSA tasked to review the existing seizure disorder guidelines for MEs.[2] The MEP performed a comprehensive, systematic literature review, including evidence available at the time. The MEP issued recommended criteria to evaluate whether an individual with a history of epilepsy, a single unprovoked seizure, or a provoked seizure should be allowed to drive a CMV.

On January 15, 2013, FMCSA began granting exemptions, on a case-by-case basis, to individual drivers from the physical qualification standard regarding seizures and loss of consciousness in 49 CFR 391.41(b)(8) (78 FR 3069). The Agency considers the medical advisory criteria, the 2007 MEP recommendations, and each individual's medical information and driving record in deciding whether to grant the exemption.

On March 17, 2026, FMCSA published a notice announcing receipt of applications from 17 individuals requesting an exemption from the epilepsy and seizure disorders prohibition in 49 CFR 391.41(b)(8) and requested comments from the public (91 FR 12893). The public comment period ended on April 16, 2026, and five comments were received.

IV. Discussion of Comments

FMCSA received five comments on these exemption applications. One commenter advocated balanced and individualized regulations that prioritize both public safety and the equal opportunity for individuals to drive when their seizures are well-managed. In response to this comment, FMCSA finds that its seizure exemption process adequately balances the Agency's mission of improving public safety on the nation's roadways with the opportunity for otherwise ineligible individuals to present evidence of why they should nonetheless be permitted to drive CMVs.

Two comments were in support of granting an exemption to Mr. Sparkman and one comment was in support of granting an exemption to Donte Watkins, both listed in this notice. Although FMCSA received comments in support of Mr. Sparkman's and Mr. Watkins' Federal seizure exemption applications, FMCSA evaluates each application considering the medical advisory criteria, the 2007 MEP recommendations, and each individual's medical information and driving record in deciding whether to grant the exemption as stated above. In both cases, the information provided in the comments did not alter FMCSA's evaluation of the medical evidence the individuals submitted with their applications.

The last comment was out of scope for this notice.

V. Basis for Exemption Determination

The Agency conducted an individualized assessment of each applicant's medical information, including the root cause of the respective seizure(s) and medical information about the applicant's seizure history, the length of time that has elapsed since the individual's last seizure, the stability of each individual's treatment regimen, and the duration of time on or off of anti-seizure medication. In addition, the Agency reviewed the treating clinician's medical opinion related to the ability of the driver to safely operate a CMV with a seizure history and each applicant's certified driving record from their State Driver Licensing Agency (SDLA). The information obtained from each applicant's driving record provides the Agency with details regarding any moving violations or reported crash data, which demonstrates whether the driver has a safe driving history and is an indicator of future driving performance. If the driving record revealed a crash, FMCSA requested and reviewed the related police reports and other relevant documents, such as the citation and conviction information. A summary of each applicant's seizure history was discussed in the March 17, 2026, **Federal Register** notice (91 FR 12893) and will not be repeated in this notice.

VI. Conclusion

Based upon its evaluation of the 17 exemption applications, FMCSA has determined that the following 16 applicants do not satisfy the eligibility criteria or meet the terms and conditions of the Federal exemption and granting these exemptions would not provide a level of safety that would be equivalent to, or greater than, the level of safety that would be obtained by complying with 49 CFR 391.41(b)(8). Therefore, the 16 applicants in this notice have been denied exemptions from the physical qualification standards in 49 CFR 391.41(b)(8).

Each applicant has, prior to this notice, received a letter of final disposition regarding his or her exemption request. Those decision letters fully outlined the basis for the denial and constitute final action by the Agency. This notice summarizes the Agency's recent denials as required under 49 U.S.C. 31315(b)(6)(c) by publishing names and reasons for denial.

The following 16 applicants do not meet the minimum time requirement for being seizure-free, either on or off anti-seizure medication:

Andrew Barker (NC)
Kyle Benner (PA)
Devin Brockington (MD)
Wendy Cook (OR)
Caedmon Cunningham (KS)
Steven Ernest (ME)
Chauncy Gibson (GA)
Matthew Heller (NY)
Michael S. Miller (CA)
Michael George Murray (NY)
Brandon Petruzzi (MA)
Scott Pontious (OH)
Anthony Sanders (MO)
Ryen Seyfried (NY)
Jeffrey Sparkman (KY)
Donte Watkins (NC)

Larry W. Minor,

Associate Administrator for Policy.

DEPARTMENT OF TRANSPORTATION

Pipeline and Hazardous Materials Safety Administration

Hazardous Materials: Notice of Applications for New Special Permits

AGENCY: Pipeline and Hazardous Materials Safety Administration (PHMSA), DOT.

ACTION: List of applications for special permits.

SUMMARY: In accordance with the procedures governing the application for, and the processing of, special permits from the Department of Transportation's Hazardous Material Regulations, notice is hereby given that the Office of Hazardous Materials Safety has received the application described herein.

DATES: Comments must be received on or before December 9, 2026.

ADDRESSES: Record Center, Pipeline and Hazardous Materials Safety Administration, U.S. Department of Transportation, Washington, DC 20590.

Comments should refer to the application number and be submitted in triplicate. If confirmation of receipt of comments is desired, include a self-addressed stamped postcard showing the special permit number.

FOR FURTHER INFORMATION CONTACT: Donald Burger, Director, Office of Hazardous Materials Safety Special Permits Program, Pipeline and Hazardous Materials Safety Administration, U.S. Department of Transportation, East Building, PHH–6, 1200 New Jersey Avenue Southeast, Washington, DC 20590–0001, (202) 366–4535.

SUPPLEMENTARY INFORMATION: Each mode of transportation for which a particular special permit is requested is indicated by a number in the ''Nature of Application'' portion of the table below as follows: (1) Motor vehicle, (2) Rail freight, (3) Cargo vessel, (4) Cargo aircraft only, (5) Passenger-carrying aircraft.

Copies of the applications are available for inspection in the Records Center, East Building, PHH–6, 1200 New Jersey Avenue Southeast, Washington, DC.

This notice of receipt of applications for special permit is published in accordance with part 107 of the Federal hazardous materials transportation law (49 U.S.C. 5117(b); 49 CFR 1.53(b)).

Issued in Washington, DC, on November 2, 2026.

Donald P. Burger,

Director, Special Permits Program.

SPECIAL PERMITS DATA

Application No.	Applicant	Regulation(s) Affected	Nature of the special permits thereof
22420–N	Eastman Chemical Company	172.203(a), 172.302(c), 173.31(d)(1)(ii).	To authorize the transportation in commerce of tank cars in which the manway cover gasket has been subjected to the leak detection method(s) in lieu of a visual inspection. (mode 2)
22422–N	Busek Co., Inc	173.301(f)(1), 178.35(e)	To authorize the transportation in commerce of non-DOT specification cylinders containing xenon, compressed within the Hall Effect Thruster propulsion system (satellite component). (modes 1, 2, 3, 4, 5)
22424–N	EVE Energy Malaysia Sdn. Bhd.	173.185(b)(3)(i), 173.185(b)(6).	To authorize the transportation in commerce by motor vehicle, rail freight, and cargo vessel of lithium ion cells packaged within a UN50G fiberboard Large Packaging. (modes 1, 2, 3)
22425–N	The Battery Network, Inc	173.185(f)(1)	To authorize the manufacture, mark, sale and use of UN1A2 PGI drums containing granular thermal suppressant material for the transportation in commerce of damaged, defective, or recalled cells and batteries including those contained in or packed in equipment. (mode 1 and 2)
22428–N	Xona Space Systems Inc	171.23(a)(1), 171.23(a)(3), 172.101(j)(1), 173.301(f), 173.302a(a)(1), 173.304a(a)(2).	To authorize the transportation in commerce of spacecraft (satellite) or components of spacecraft containing toxic gas (anhydrous ammonia) in non-DOT specification containers (heat pipes), non-flammable, non-toxic gas (xenon) in non-DOT specification aluminum lined composite overwrapped pressure vessels and low production lithium ion batteries transported in a Satellite Transport Container (STC). (modes 1, 3, 4)
22429–N	LDJ Manufacturing, Inc	177.834(h), 178.705(d)	To authorize the manufacture, mark, sale and use of non-specification IBCs having a capacity less than 119 gallons which may be discharged without being removed from the vehicle. (mode 1)
22430–N	U.S. Bureau of Customs and Border Protection.	172.200, 172.300, 172.400, 173.25, 175.75(b).	To authorize the transportation in commerce of certain radiation survey devices containing Division 2.2 gases aboard commercial passenger aircraft. (mode 5)
22438–N	BIC Indiana	173.185(a)(1)	To authorize the transportation in commerce of prototype lithium ion batteries for lab testing. (mode 4)
22439–N	DGM Italia Srl	172.101(j)	To authorize the transportation in commerce of lithium ion batteries packed with equipment that exceed 35 kg net weight aboard cargo-only aircraft. (mode 4)
22443–N	Hawkeye Helicopter LLC	172.101(j), 172.101(j)(1), 172.200, 172.204(c)(3), 172.301(c), 173.27(b)(2), 175.30, 175.30(a)(1), 175.75.	To authorize the transportation in commerce of hazardous materials by rotorcraft external load in amounts that exceed the maximum net quantity in the HMR with additional hazard communication, specification packaging, and stowage exceptions. (mode 4)
22447–N	Max Wagner GmbH	107.807, 173.301(f), 173.302a(a)(1), 173.304a(a)(1), 178.35.	To authorize the manufacture, mark, sale and use of non-DOT specification composite overwrapped pressure vessels (COPV) for the transportation in commerce of compressed gases. (modes 1, 2, 3, 4, 5)

Application No.	Applicant	Regulation(s) Affected	Nature of the special permits thereof
22448–N	Luoyang Sunrui Special Equipment Co., Ltd.	180.205(g)(1)	To authorize the requalification of DOT 3AA, 3AAX, 3T cylinder or UN/ISO 11120 cylinders by utilizing 100% Ultrasonic Examination (UE) in lieu of the internal visual inspection and the hydrostatic pressure test. (modes 1, 2, 3)

Application No.	Applicant	Regulation(s) affected	Nature of the special ermits thereof
SPECIAL PERMITS DATA—Granted			
7573–M	Department of Defense (Military Surface Deployment & Distribution Command).	49 CFR Parts 172, 175	To modify the special permit to add a safety control measure to the special permit.
12532–M	Mission Systems Orchard Park Inc.	173.302a(a)	To modify the special permit to clarify the proof testing pressure when a cylinder is inspected and to update the heat treatment call out to reflect the drawing from H1025 to H1000.
15493–M	Mission Systems Orchard Park Inc.	173.302a	To modify the special permit to update the heat treatment used on the drawing from H1025 to H1000.
15493–M	Mission Systems Orchard Park Inc.	173.302a	To modify the special permit to update a drawing and to authorize each cylinder to be refilled up to five times.
21706–M	The Battery Network, Inc	172.102(c)(1), 172.303(a), 172.401(a), 173.159(f), 173.159a(c)(2), 173.159a(d)(1).	To modify the special permit to authorize cargo and ferry vessels as additional modes of transportation.
22203–N	Toyota Motor Engineering & Manufacturing North America, Inc.	173.301(a)(1), 173.302(a)(1), 178.70.	To authorize the manufacture, mark, sale and use of non-DOT specification cylinders designed, manufactured, tested and type approved in accordance with the UN Global Technical Regulation (GTR) No. 13 and UN Regulation No. 134 that are installed in a hydrogen storage module for transportation.
22206–N	Versum Materials US, LLC	171.23(a)(3), 171.23(b)(10)(ii)	To authorize the transportation in commerce of non-DOT specification pressure drums (aka: Tonners) containing anhydrous hydrogen chloride.
22246–N	Western Digital Technologies, Inc.	172.101(b)(4), 173.232(g)(3)	To authorize the transportation in commerce of certain hazardous materials in non-DOT specification packaging aboard motor vehicle, cargo vessel and cargo-only aircraft.
22290–N	Ningbo ZhengXin Fire-Fighting Equipment Co., Ltd.	173.309(c)(2), 173.309(c)(4)	To authorize the transportation in commerce of non-specification fire extinguishers that do not meet the requirements of 49 CFR 173.309(c)(2) and (4).
22319–N	Mission Systems Orchard Park Inc.	173.302(a)	To authorize the manufacture, mark, sale and use of non-DOT specification cylinders.

Application No.	Applicant	Regulation(s) affected	Nature of the special ermits thereof
22332–N	Network Access Associates Limited.	171.23(a)(1), 171.23(a)(3), 172.101(j)(1), 173.185(a)(1), 173.301(f), 173.302a(a)(1), 173.304a(a)(2).	To authorize the transportation in commerce of spacecraft (satellite) or components of spacecraft containing toxic gas (anhydrous ammonia) in non-DOT specification containers (heat pipes), non-flammable, non-toxic gas (xenon) in non-DOT specification aluminum-lined composite-overwrapped pressure vessels, and low production lithium ion batteries transported in a Satellite Transport Container (STC).
22346–N	Eve Power Co., Ltd	173.185(a)(1), 173.185(b)(3)(i), 173.185(b)(6).	To authorize the transportation in commerce by motor vehicle, rail freight, and cargo vessel of lithium cells packaged within a UN50G fiberboard Large Packaging.
22349–N	Astroforge, Inc	173.301(g)(1), 173.302(a)(1)	To authorize the transportation in commerce of xenon, compressed in non-DOT specification cylinders without pressure relief devices.
22360–N	Geogas American Samo Inc ..	180.407(c), 180.407(e)	To authorize the transportation in commerce of a DOT specification cargo tank motor vehicle with an extension of the internal visual inspection and pressure test interval periods.
22392–N	Saildrone, Inc	172.101(j)	To authorize the transportation in commerce of lithium ion batteries exceeding the 35 kg net weight per package aboard cargo-only aircraft.
22409–N	Clean Harbors Environmental Services, Inc.	173.3(d)(9)	To authorize the transportation of leaking DOT3A480 cylinder containing chlorine which has been overcharged in a salvage cylinder that has not been requalified within the period specified in 49 CFR 173.3(d)(9).
22416–N	Energy Security Agency, Inc	173.185(f)(3)	To authorize the transportation in commerce of certain damaged, defective, or recalled lithium ion batteries in alternative packaging.
22418–N	North Carolina Department of Transportation.	172.101(k)(5)	To authorize the transportation in commerce of cargo tanks containing residual amounts of gasoline on ferry vessels where the limiting number of passengers is exceeded.
22434–N	Guidance Air Service, LLC	172.101(j), 172.200, 172.301(c), 173.1, 175.75.	To authorize the transportation in commerce of certain hazardous materials only in remote areas of the U.S. by 14 CFR Part 133 cargo-only aircraft (rotorcraft external load operations) in which hazardous materials are attached to or suspended from the aircraft, and Part 135, as applicable, without being subject to certain hazard communication requirements, quantity limitations and certain loading and stowage requirements.
SPECIAL PERMITS DATA—Denied			
15343–M	Desert Air Transport, Inc	173.242	To modify the special permit to add an authorized packaging.
22170–N	Thales Alenia Space	172.300(a), 172.400(a), 173.21, 173.185(a)(1), 173.301(f)(1), 173.302a(a)(1), 173.304a(a)(2).	To authorize the transportation in commerce of certain non-DOT specification cylinders containing Division 2.2 and 2.3 compressed gases and other hazardous materials identified in the special permit for use in specialty cooling and propulsion applications for a satellite.
22340–N	EUROTRE S.r.l. Italy	172.203(a), 172.315(a)(2), 173.301b(d), 173.301b(d)(1), 173.306(a)(1).	To authorize the transportation in commerce of certain Division 2.2 gases as limited quantities when contained in a cylinder with a capacity exceeding 4 fluid ounces.
SPECIAL PERMITS DATA—Withdrawn			
16279–M	Daniels Sharpsmart, Inc	173.196(a)	To modify the special permit to authorize the transportation in commerce of an additional medical waste for disposal.
22322–N	Mission Systems Orchard Park Inc.	173.302(a)	To authorize the manufacture, mark, sale and use of non-DOT specification cylinders conforming with all regulations applicable to a DOT 39 specification cylinder for the transportation in commerce of helium, compressed.
22412–N	American Lithium Energy Corp.	173.185(a), 173.185(e)	To authorize the transportation in commerce of prototype lithium ion battery packs which have not been tested in accordance with UN Manual of Tests and Criteria, Section III, Subsection 38.3.

SUPPLEMENTARY INFORMATION:

OMB Control Number: 2105–0529.

Title: Procedures for Transportation Workplace Drug and Alcohol Testing Programs.

Form Numbers: DOT F 1385; DOT F 1380.

Type of Review: Clearance of a renewal of an information collection.

Background: Under the Omnibus Transportation Employee Testing Act of 1991, DOT is required to implement a drug and alcohol testing program in various transportation related industries. This specific requirement is elaborated in 49 CFR part 40, Procedures for Transportation Workplace Drug and Alcohol Testing Programs (Part 40). This request for a renewal of the information collection for the program includes 45 burden items related to the overall program and two official DOT forms: the U.S. Department of Transportation Alcohol Testing Form (ATF) [DOT F 1380] and the DOT Drug and Alcohol Testing Management Information System (MIS) Data Collection Form [DOT F 1385].

The ATF includes the employee's name, the type of test taken, the date of the test, and the name of the employer. Data on each test conducted, including test results, is necessary to document that the tests were conducted and is used to take action, when required, to ensure safety in the workplace.

The MIS form includes employer specific drug and alcohol testing information such as the reason for the test and the cumulative number of test results for the negative, positive, and refusal tests. No employee specific data is collected. The form has fields for data related to urine and oral fluid drug testing. The MIS data is used by each of the affected DOT Agencies (*i.e.,* Federal Aviation Administration, Federal Transit Administration, Federal Railroad Administration, Federal Motor Carrier Safety Administration, and the Pipeline and Hazardous Materials Safety Administration) and the United States Coast Guard when calculating their industry's annual random drug and/or alcohol testing rate.

DOT will request OMB approval to revise the MIS Data Collection Form. Specifically, in Section I of the form, ''Employer'', in the line for PHMSA—Pipeline, DOT will remove the text '': (Check) Gas Gathering__ Gas Transmission__ Gas Distribution__ Transport Hazardous Liquids__ Transport Carbon Dioxide__''. Because pipeline operators submit other reports to PHMSA, PHMSA already knows the types of pipelines they operate; therefore, collecting this data element on the MIS form is unnecessary. Furthermore, contractors to pipeline operators who must submit an MIS form are not operators and are confused by the options because the 'type of pipeline' does not apply to them. Removing this data element will not hinder the data collection effort or alter the form's burden estimate. In the Paperwork Reduction Act Notice section of the form, DOT will replace the text 'Suite W62–300' with 'Rm W75–211' to reflect the new office location.

Respondents: The information will be collected from transportation employers, Department representatives, and a variety of service agents. Estimated total number of respondents is 2,383,126.

Frequency: The information will be collected annually.

Estimated Total Number Burden Hours; 723,484.

Public Comments Invited: You are asked to comment on any aspect of this information collection, including (a) Whether the proposed collection of information is necessary for DOT's performance; (b) The accuracy of the estimated burden that the collection would impose on respondents; (c) Ways for the DOT to enhance the quality, utility and clarity of the information to be collected; and (d) Ways that the burden could be minimized without reducing the quality of the collected information. The agency will summarize or include your comments in the request for OMB's clearance of this information collection.

Authority: The Paperwork Reduction Act of 1995; 44 U.S.C. Chapter 35, as amended; and 49 CFR 1:48.

Issued in Washington, DC, on November 5, 2026.

Authority and Issuance.

Bohdan Baczara,

Deputy Director, DOT, Office of Drug and Alcohol Policy and Compliance.

DEPARTMENT OF THE TREASURY

Office of Foreign Assets Control

Notice of OFAC Sanctions Action

AGENCY: Office of Foreign Assets Control, Treasury.

ACTION: Notice.

SUMMARY: The U.S. Department of the Treasury's Office of Foreign Assets Control (OFAC) is publishing the names of one or more persons that have been placed on OFAC's Specially Designated Nationals and Blocked Persons List

(SDN List) based on OFAC's determination that one or more applicable legal criteria were satisfied. All property and interests in property subject to U.S. jurisdiction of these persons are blocked, and U.S. persons are generally prohibited from engaging in transactions with them.

DATES: This action was issued on November 4, 2026. See **SUPPLEMENTARY INFORMATION** for relevant dates.

FOR FURTHER INFORMATION CONTACT: OFAC: Associate Director for Global Targeting, 202–622–2420; Assistant Director for Licensing, 202–622–2480; Assistant Director for Sanctions Compliance, 202–622–2490; or *https://ofac.treasury.gov/contact-ofac.*

SUPPLEMENTARY INFORMATION:

Electronic Availability

The SDN List and additional information concerning OFAC sanctions programs are available on OFAC's website: *https://ofac.treasury.gov.*

Notice of OFAC Actions

On November 4, 2026, OFAC determined that the property and interests in property subject to U.S. jurisdiction of the following persons are blocked under the relevant sanctions authorities listed below.

Individuals

1. DHIMAN, Ashwani Kumar, Chandigarh, India; DOB 01 Mar 1980; nationality India; Gender Male; Secondary sanctions risk: See Section 2 of E.O. 13902; Registration Number 08188219 (India) (individual) [IRAN–EO13902] (Linked To: ARYAVART SHIP MANAGEMENT PRIVATE LIMITED).

Designated pursuant to section 1(a)(iv) of Executive Order 13902 of January 10, 2020, ''Imposing Sanctions With Respect to Additional Sectors of Iran,'' 85 FR 2003, 3 CFR, 2020 Comp., p. 299 (E.O. 13902), for having acted or purported to act for or on behalf of, directly or indirectly, ARYAVART SHIP MANAGEMENT PRIVATE LIMITED, a person whose property and interests in property are blocked pursuant to E.O. 13902.

2. SHAHID, Jaspreet Preeti (a.k.a. KAUR, Jaspreet), Chandigarh, India; DOB 22 Aug 1980; POB Chandigarh, India; nationality India; Gender Female; Secondary sanctions risk: See Section 2 of E.O. 13902; Registration Number 03563403 (India) (individual) [IRAN–EO13902] (Linked To: SHARMA, Suniel Kumar).

Designated pursuant to section 1(a)(iii) of E.O. 13902 for having materially assisted, sponsored, or provided financial, material, or technological support for, or goods or services to or in support of, SUNIEL KUMAR SHARMA, a person whose property and interests in property are blocked pursuant to E.O. 13902.

3. SHARMA, Suniel Kumar (a.k.a. SHARMA, Suniel; a.k.a. ''KUMAR, Suniel''), Chandigarh, India; DOB 07 Oct 1979; POB Lucknow, Uttar Pradesh, India; nationality India; website *https://amaocr.org/;* alt. Website *https://epnicaragua.org;* alt. Website *ema.org.sz;* alt. Website *msta-registry.com;* alt. Website *mstaregistry.com;* alt. Website *https://imsagregistry.wordpress.com/;* alt. Website *https://smmrm.com;* alt. Website *https://www.timorleste-registry.org;* Gender Male; Secondary sanctions risk: See Section 2 of E.O. 13902; Passport Z5925452 (India) expires 27 Jul 2030 (individual) [IRAN–EO13902].

Designated pursuant to section 1(a)(i) of E.O. 13902 for operating in the petroleum sector of the Iranian economy.

4. SINGH, Ishwinder, Chandigarh, India; DOB 01 Apr 1992; nationality India; Gender Male; Secondary sanctions risk: See Section 2 of E.O. 13902; Registration Number 08409602 (India) (individual) [IRAN–EO13902] (Linked To: ARYAVART SHIP MANAGEMENT PRIVATE LIMITED).

Designated pursuant to section 1(a)(iv) of E.O. 13902 for having acted or purported to act for or on behalf of, directly or indirectly, ARYAVART SHIP MANAGEMENT PRIVATE LIMITED, a person whose property and interests in property are blocked pursuant to E.O. 13902.

Entities

1. OCEANIEK TECHNOLOGIES INDIA, S.C.O. 86, Sector 44C, Chandigarh 160047, India; Plot No. C–205, SM Heights, Mohali, Punjab 160055, India; Secondary sanctions risk: See Section 2 of E.O. 13902; Organization Established Date 16 Dec 2022; Tax ID No. AAIFO2899P (India); Registration Number UDYAM–CH–01–0023384 (India) [IRAN–EO13902] (Linked To: SHARMA, Suniel Kumar).

Designated pursuant to section 1(a)(iv) of E.O. 13902 for being owned or controlled by, or having acted or purported to act for or on behalf of, directly or indirectly, SUNIEL KUMAR SHARMA, a person whose property and interests in property are blocked pursuant to E.O. 13902.

2. ALEXARYA FINSERV PRIVATE LIMITED, SCO–318, 2nd Floor Sector 38D, Chandigarh 160036, India; Secondary sanctions risk: See Section 2 of E.O. 13902; Organization Established Date 27 Sep 2018; Tax ID No. AARCA3945Q (India); Registration Number U67100CH2018PTC042186 (India) [IRAN–EO13902] (Linked To: SHAHID, Jaspreet Preeti).

Designated pursuant to section 1(a)(iv) of E.O. 13902 for being owned or controlled by, or having acted or purported to act for or on behalf of, directly or indirectly, JASPREET PREETI SHAHID, a person whose property and interests in property are blocked pursuant to E.O. 13902.

3. ALEXARYA MEDIA AND ENTERTAINMENT PRIVATE LIMITED, SCO–318, Sector 38–D, Chandigarh 160036, India; Secondary sanctions risk: See Section 2 of E.O. 13902; Organization Established Date 16 Jan 2018; Tax ID No. AAQCA4372G (India); Registration Number U93000CH2018PTC041837 (India) [IRAN–EO13902] (Linked To: SHAHID, Jaspreet Preeti).

Designated pursuant to section 1(a)(iv) of E.O. 13902 for being owned or controlled by, or having acted or purported to act for or on behalf of, directly or indirectly, JASPREET PREETI SHAHID, a person whose property and interests in property are blocked pursuant to E.O. 13902.

4. ARYAVART MARITIME AND EDUCATIONAL TRUST, SCO 373, Sector 37 D, Chandigarh, India; Secondary sanctions risk: See Section 2 of E.O. 13902; Organization Established Date 21 Jul 2016; Registration Number CH/2024/0406033 (India) [IRAN–EO13902] (Linked To: SHAHID, Jaspreet Preeti).

Designated pursuant to section 1(a)(iv) of E.O. 13902 for being owned or controlled by, or having acted or purported to act for or on behalf of, directly or indirectly, JASPREET PREETI SHAHID, a person whose property and interests in property are blocked pursuant to E.O. 13902.

5. ARYAVART SHIP MANAGEMENT PRIVATE LIMITED, SCO–318, 1st Floor Sector 38–D, Chandigarh 160036, India; Secondary sanctions risk: See Section 2 of E.O. 13902; Organization Established Date 27 Jul 2011; Tax ID No. AAJCA7074N (India); Registration Number U74900CH2011PTC033139 (India) [IRAN–EO13902] (Linked To: SHAHID, Jaspreet Preeti).

Designated pursuant to section 1(a)(iv) of E.O. 13902 for being owned or controlled by, or having acted or purported to act for or on behalf of, directly or indirectly, JASPREET PREETI SHAHID, a person whose property and interests in property are blocked pursuant to E.O. 13902.

6. ESWATINI MARITIME AFFAIRS AND INTERNATIONAL SHIP REGISTRY PTE. LTD., 10 Jalan Besar, #07–06 Sim Lim Tower, 208787, Singapore; Secondary sanctions risk: See Section 2 of E.O. 13902; Organization Established Date 25 Sep 2023; Registration Number 202338388W (Singapore) [IRAN–EO13902] (Linked To: SHAHID, Jaspreet Preeti).

Designated pursuant to section 1(a)(iv) of E.O. 13902 for being owned or controlled by, or having acted or purported to act for or on behalf of, directly or indirectly, JASPREET PREETI SHAHID, a person whose property and interests in property are blocked pursuant to E.O. 13902.

7. POLYNESIA MARITIME PRIVATE LIMITED, H No 3335 CHD Police Society, Sector 51 D, Chandigarh 160047, India; Secondary sanctions risk: See Section 2 of E.O. 13902; Organization Established Date 27 Jan 2015; Tax ID No. AAICP0398K (India); Registration Number U74900CH2015PTC035391 (India) [IRAN–EO13902] (Linked To: SHAHID, Jaspreet Preeti).

Designated pursuant to section 1(a)(iv) of E.O. 13902 for being owned or controlled by, or having acted or purported to act for or on behalf of, directly or indirectly, JASPREET PREETI SHAHID, a person whose property and interests in property are blocked pursuant to E.O. 13902.

8. PRECEPT TRENDS PRIVATE LIMITED, S.C.O. 86 First Floor, Sector 44C, Chandigarh 160047, India; Secondary sanctions risk: See Section 2 of E.O. 13902; Organization Established Date 12 Apr 2022; Tax ID No. AAMCP8147L (India); Registration Number U18100CH2022PTC044314 (India) [IRAN–EO13902] (Linked To: SHAHID, Jaspreet Preeti).

Designated pursuant to section 1(a)(iv) of E.O. 13902 for being owned or controlled by, or having acted or purported to act for or on behalf of, directly or indirectly, JASPREET PREETI SHAHID, a person whose property and interests in property are blocked pursuant to E.O. 13902.

9. VIHARABOATING PRIVATE LIMITED, Building No 4, Pallippuram P O, Pallippuram, Cherthala, Alappuzha, Kerala 688541, India; Secondary sanctions risk: See Section 2 of E.O. 13902; Organization Established Date 12 Feb 2026; Registration Number U55101KL2026PTC100900 (India) [IRAN–EO13902] (Linked To: SHAHID, Jaspreet Preeti).

Designated pursuant to section 1(a)(iv) of E.O. 13902 for being owned or controlled by, or having acted or purported to act for or on behalf of, directly or indirectly, JASPREET PREETI SHAHID, a person whose property and interests in property are blocked pursuant to E.O. 13902.

10. FUGO GROUND SERVICES INC (Latin: FUGO YER HİZMETLERİ ANONİM ŞİRKETİ) (a.k.a. FUGO AVIATION), Gayrettepe Mh. Vefabey Sk. No: 16 Inner Door No: 4, Besiktas, Istanbul, Turkey; website *https://www.fugoaviation.com;* Secondary sanctions risk: See Section 2 of E.O. 13902; Organization Established Date 28 Nov 2019; Tax ID No. 3881357595 (Turkey); Chamber of Commerce Number 1210423 (Turkey); Registration Number 220631–5 (Turkey); Central Registration System Number 0388135759500001 (Turkey) [IRAN–EO13902].

Designated pursuant to section 1(a)(i) of E.O. 13902 for operating in the aviation sector of the Iranian economy.

(Authority: E.O. 13902.)

DEPARTMENT OF THE TREASURY

Internal Revenue Service

Agency Information Collection Activities; Comment Request on Form 15254

AGENCY: Internal Revenue Service (IRS), Treasury.

ACTION: Notice of information collection; request for comments.

SUMMARY: In accordance with the Paperwork Reduction Act of 1995, the IRS is inviting comments on the information collection request outlined in this notice.

DATES: Written comments should be received on or before January 8, 2027 to be assured of consideration.

ADDRESSES: Direct all written comments to Andres Garcia, Internal Revenue Service, Room 6526, 1111 Constitution Avenue NW, Washington, DC 20224, or by email to *pra.comments@irs.gov.* Include ''OMB Control No. 1545–2297'' in the subject line of the message.

FOR FURTHER INFORMATION CONTACT: Requests for additional information or copies of this collection should be directed to LaNita Van Dyke, 202–317–6009.

SUPPLEMENTARY INFORMATION: The IRS, in accordance with the Paperwork Reduction Act of 1995 (PRA) (44 U.S.C. 3506(c)(2)(A)), provides the general public and Federal agencies with an opportunity to comment on proposed, revised, and continuing collections of information. This helps the IRS assess the impact and minimize the burden of its information collection requirements. Comments submitted in response to this notice will be summarized and/or included in the request for OMB approval. All comments will become a matter of public record, and viewable on relevant websites. For this reason, please do not include in your comments information of a confidential nature, such as sensitive personal information. Comments are invited on: (a) Whether the collection of information is necessary for the proper performance of the functions of the agency, including whether the information shall have practical utility; (b) the accuracy of the agency's estimate of the burden of the collection of information; (c) ways to enhance the quality, utility, and clarity of the information to be collected; (d) ways to minimize the burden of the collection of information on respondents, including through the use of automated collection techniques or other forms of information technology; and (e) estimates of capital or start-up costs and costs of operation, maintenance, and purchase of services to provide information.

Title: Request for Section 754 Revocation (Form 15254).

OMB Control Number: 1545–2297.

Form Number: 15254.

Abstract: Form 15254 is a public use form which will be submitted by partnerships to request a Section 754 Revocation. Partnerships, partners, and their representatives will need to access the form from *IRS.gov* to complete and submit the form along with the required documents.

Current Actions: There is no change to the previously approved information collection.

Type of Review: Extension of a currently approved collection.

Affected Public: Business or other for-profit organizations.

Estimated Number of Responses: 50.

Estimated Time per Response: 5 hours, 7 minutes.

Estimated Total Annual Burden Hours: 256.

Dated: November 5, 2026.

LaNita Van Dyke,

Tax Analyst.

Medicare and Medicaid Programs; CY 2027 Payment Policies Under the Physician Fee Schedule and Other Changes to Part B Payment and Coverage Policies; Medicare Shared Savings Program Requirements; and Medicare Prescription Drug Inflation Rebate Program

AGENCY: Centers for Medicare & Medicaid Services (CMS), Department of Health and Human Services (HHS).

ACTION: Final rule.

SUMMARY: This final rule addresses: changes to the physician fee schedule (PFS); other changes to Medicare Part B payment policies to ensure that payment systems are updated to reflect changes in medical practice, relative value of services, and changes in the statute; codification of establishment of new policies for: the Medicare Prescription Drug Inflation Rebate Program under the Inflation Reduction Act of 2022; limiting Medicare coverage of certain individuals; the Ambulatory Specialty Model; updates to drugs and biological products paid under Part B; Medicare Shared Savings Program requirements; updates to the Quality Payment Program; updates to policies for Rural Health Clinics and Federally Qualified Health Centers; update to the Ambulance Fee Schedule regulations; codification of the Inflation Reduction Act and Consolidated Appropriations Act, 2026 provisions; updates to Clinical Laboratory Fee Schedule regulations; updates to the Medicare Promoting Interoperability Program.

DATES: These regulations are effective on January 1, 2027.

FOR FURTHER INFORMATION CONTACT:

MedicarePhysicianFeeSchedule@cms.hhs.gov, for any issues not identified below. Please indicate the specific issue in the subject line of the email. For all questions related to reporting a service on a claim, please contact your Medicare Administrative Contractor.

Michael Soracoe, Morgan Kitzmiller, or *MedicarePhysicianFeeSchedule@cms.hhs.gov,* for issues related to practice expense, work RVUs, conversion factor, and PFS specialty-specific impacts.

Hannah Ahn, Allison Bramlett, or *MedicarePhysicianFeeSchedule@cms.hhs.gov*, for issues related to potentially misvalued services under the PFS.

Mikayla Murphy, or *MedicarePhysicianFeeSchedule@cms.hhs.gov*, for issues related to direct supervision using two-way audio/video communication technology, telehealth, and other services involving communications technology.

MedicarePhysicianFeeSchedule@cms.hhs.gov, for issues related to E/M overlap between stand-alone visits and global periods, and E/M visit complexity add-on code (B1 and B2).

Terry Simananda, or *MedicarePhysicianFeeSchedule@cms.hhs.gov*, for issues related to smoking and tobacco use cessation, screening, brief intervention, and referral to treatment, psychiatric collaborative care model, and shared medical appointments.

Sarah Leipnik, or *MedicarePhysicianFeeSchedule@cms.hhs.gov*, for issues related to global surgery payment accuracy.

Pamela West, or *MedicarePhysicianFeeSchedule@cms.hhs.gov*, for issues related to comprehensive outpatient rehabilitation facility (CORF) services and KX modifier thresholds.

Zehra Hussain, or *MedicarePhysicianFeeSchedule@cms.hhs.gov*, for issues related to payment of skin substitutes.

Laura Kennedy, (410) 786–3377, Rebecca Ray, (667) 414–0879, and Jae Ryu, (667) 414–0765 for issues related to Drugs and Biological Products Paid Under Medicare Part B.

Lisa Parker, (410) 786–4949, or *FQHC–PPS@cms.hhs.gov*, Michele Franklin, (410) 786–9226, or *RHC@cms.hhs.gov*, and Patrick Sartini, (410) 786–9252 for issues related to FQHC and RHC payments.

Patrick Sartini, (410) 786–9252, or *CLFS_Inquiries@cms.hhs.gov* for issues related to the Clinical Laboratory Fee Schedule.

Sabrina Ahmed, (410) 786–7499, or *SharedSavingsProgram@cms.hhs.gov*, for issues related to the Medicare Shared Savings Program (Shared Savings Program) quality performance standard and other quality reporting requirements.

Kimberly Spalding Bush, (410) 786–3232, or *SharedSavingsProgram@cms.hhs.gov*, for issues related to the Shared Savings Program certified electronic health record technology (CEHRT) use requirements.

Janae James, (410) 786–0801, or *SharedSavingsProgram@cms.hhs.gov*, for issues related to Shared Savings Program beneficiary assignment and financial methodology.

Lucy Bertocci, (443) 681–0762, or *SharedSavingsProgram@cms.hhs.gov*, for issues related to reducing or eliminating Part B cost sharing, prepaid shared savings, beneficiary notifications, advance investment payments or identifying ACOs experienced with performance-based risk.

Elisabeth Daniel, (667) 290–8793, for issues related to the Medicare Prescription Drug Inflation Rebate Program.

Benjamin Picillo or Genevieve Kehoe, *AmbulatorySpecialtyModel@cms.hhs.gov*, or 1–844–711–2664 (Option 4) for issues related to the Ambulatory Specialty Model.

Amy Gruber, (410) 786–1542, for issues related to Ambulance Fee Schedule.

Kati Moore, (410) 786–5471, for inquiries related to the Merit-based Incentive Payment System (MIPS) track of the Quality Payment Program (QPP).

Trevey Davis, (410) 786–6600, for inquiries related to the Advanced Alternative Payment Models (APMs) track of QPP.

Jessica Warren, (410) 786–7519, and Lisa Marie Gomez, (410) 786–1175, for inquiries related to the Medicare Promoting Interoperability Program.

Steve Manning, (410) 786–1691, for inquiries related to limiting Medicare coverage of certain individuals.

I. Executive Summary

A. Purpose

This major final rule revises payment policies under the Medicare PFS and makes other policy changes, including to the implementation of certain provisions of the Full-Year Continuing Appropriations and Extensions Act, 2025 (Pub. L. 119–4, March 15, 2025), Further Continuing Appropriations and Other Extensions Act of 2024 (Pub. L. 118–22, November 17, 2023), Consolidated Appropriations Act, 2023 (Pub. L. 117–328, December 29, 2022), Inflation Reduction Act of 2022 (IRA) (Pub. L. 117–169, August 16, 2022), Consolidated Appropriations Act, 2022 (Pub. L. 117–103, March 15, 2022), Consolidated Appropriations Act, 2021 (CAA, 2021) (Pub. L. 116–260, December 27, 2020), Bipartisan Budget Act of 2018 (BBA of 2018) (Pub. L. 115–123, February 9, 2018), the Substance Use-Disorder Prevention that Promotes Opioid Recovery and Treatment for Patients and Communities Act (SUPPORT Act) (Pub. L. 115–271, October 24, 2018) and Consolidated Appropriations Act, 2026 (Pub. L. 119–75, February 3, 2026), related to Medicare Part B payment. In addition, this final rule includes other Medicare payment and eligibility provisions described in sections III. and IV.

This final rule updates policies for the Medicare Prescription Drug Inflation Rebate Program codified at 42 CFR parts 427 and 428 consistent with sections 1847A(i) and 1860D—14B of the Social Security Act (the Act). For the Medicare Part B Drug Inflation Rebate Program, this rule describes the identification of the Consumer Price Index for all Urban Consumers (CPI–U) for the payment amount benchmark quarter and the rebate period in certain instances when CPI–U survey data are unavailable and the calculation of the Part B rebate amount in such instances; clarifies the definition of ''first marketed date''; and clarifies that certain skin substitutes would not be excluded from the definition of a Part B rebatable drug. For the Medicare Part D Drug Inflation Rebate Program, this rule describes the identification of the CPI–U for the payment amount benchmark period and applicable period in certain instances when CPI–U survey data are unavailable and the calculation of the Part D rebate amount in such instances; modifies the methodology finalized in the CY 2026 PFS final rule to account for 340B-eligible units for AIDS Drug Assistance Program (ADAP) clients for the applicable period beginning October 1, 2025; and requires Medicare providers and suppliers that are 340B covered entities to submit Part D 340B claims data to the Medicare Part D Claims Data 340B Repository beginning in 2027.

This final rule modifies policies for the Shared Savings Program, which is a voluntary program that started in 2012. The program allows groups of providers and suppliers to form or participate in Accountable Care Organizations (ACOs), and to be held accountable for the quality and total cost of care for an assigned population of Medicare fee-for-service (FFS) beneficiaries.

B. Summary of the Key Provisions

Section 1848 of the Act requires us to establish payments under the PFS, based on national uniform relative value units (RVUs) that account for the relative resources used in furnishing a service. The statute requires that RVUs be established for three categories of resources: work, practice expense (PE), and malpractice (MP) expense. In addition, the statute requires that each year we establish, by regulation, the payment amounts for physicians' services paid under the PFS, including geographic adjustments to reflect the variations in the costs of furnishing services in different geographic areas.

In this major final rule, we are finalizing RVUs for CY 2027 for the PFS to ensure that our payment systems are updated to reflect changes in medical practice and the relative value of services, as well as changes in the statute. This final rule also includes discussions and provisions regarding several other Medicare Part B payment policies, and other policies regarding programs administered by CMS.

Specifically, this final rule addresses:

- Background (section II.A.)
- Determination of PE RVUs (section II.B.)
- Payment for Medicare Telehealth Services (section II.C.)
- Valuation of Specific Codes, Including Potentially Misvalued Codes (PMVC) (section II.D.)
- Redesigning Primary Care to Make America Healthy Again (section II.E.)
- Comprehensive Outpatient Rehabilitation Facility (CORF) Services and KX Modifier Threshold, and Medical Review Threshold (section II.F.)
- Supporting Beneficiaries Planning for Future Medical Decisions (section II.G.)
- Current Procedural Terminology (CPT) Request for Information (RFI) (section II.H.)
- Drugs and Biological Products Paid Under Medicare Part B: Discarded Drugs (section III.A.)
- Rural Health Clinics (RHCs) and Federally Qualified Health Centers (FQHCs) (section III.B.)
- Clinical Laboratory Fee Schedule (CLFS): CAA, 2026 (section III.C.)
- Changes to the Ambulatory Specialty Model (ASM) (section III.D.)
- Limiting Medicare Coverage of Certain Individuals (section III.E.)
- Medicare Prescription Drug Inflation Rebate Program (section III.F.)
- Medicare Shared Savings Program (section III.G.)
- Changes to the Regulations Associated with the Ambulance Fee Schedule (section III.H.)
- Request for Information (RFI) on Duplicate Laboratory Testing, Imaging, and Result Sharing and Interoperability (section III.I)
- CY2027 Modifications to the Quality Payment Program Reporting and Data Submission (section IV.)
- Collection of Information Requirements (section V.)
- Regulatory Impact Analysis (section VI.)

C. Summary of Costs and Benefits

Based on our estimates, the Office of Information and Regulatory Affairs in the Office of Management and Budget has determined that this final rule is economically significant under section 3(f)(1) of Executive Order 12866. As required by section 1848(d)(1)(A) of the Act, beginning in 2026, there are two separate conversion factors (CFs): one for items and services furnished by a qualifying APM participant (QP) as defined in section 1833(z)(2) of the Act and 42 CFR 414.1305 (referred to as the qualifying APM conversion factor) and another for items and services furnished by clinicians who are not QPs (referred to as the nonqualifying APM conversion factor), equal to the respective conversion factor for the previous year multiplied by the update established under section 1848(d)(20) of the Act for such respective conversion factor for such year. Under these provisions, the 2027 qualifying APM conversion factor represents a projected decrease of $0.62 (−1.83 percent) from the current conversion factor of $33.5675. Similarly, the 2027 nonqualifying APM conversion factor represents a projected decrease of $0.77 (−2.31 percent) from the current conversion factor of $33.4009.

For a detailed discussion of the economic impacts, see section VI., Regulatory Impact Analysis, of this final rule.

D. Public Comments in Response on the CY 2027 PFS Proposed Rule

We received approximately 43,100 timely pieces of correspondence on the CY 2027 PFS proposed rule that appeared in the **Federal Register** on July 14, 2026 (91 FR 43842 through 44557). We received comments from individuals, providers and suppliers, practitioners, and advocacy groups. We provide summaries of the public comments, and our responses are set forth in the various sections of this final rule under the appropriate headings. We note that we received some public comments that were outside the scope of the CY 2027 PFS proposed rule.

II. Provisions of the Rule for the PFS

A. Background

In accordance with section 1848 of the Social Security Act (the Act), CMS has paid for physicians' services under the Medicare physician fee schedule (PFS) since January 1, 1992. The PFS relies on national relative values that are established for work, practice expense (PE), and malpractice (MP), which are adjusted for geographic cost variations. These values are multiplied by a conversion factor (CF) to convert the relative value units (RVUs) into payment rates. The concepts and methodology underlying the PFS were enacted as part of the Omnibus Budget Reconciliation Act of 1989 (OBRA '89) (Pub. L. 101–239, December 19, 1989), and the Omnibus Budget Reconciliation Act of 1990 (OBRA '90) (Pub. L. 101–508, November 5, 1990). The final rule published in the November 25, 1991 **Federal Register** (56 FR 59502) set forth the first fee schedule used for Medicare payment for physicians' services.

We note that throughout this final rule, unless otherwise noted, the term ''practitioner'' is used to describe both physicians and nonphysician practitioners (NPPs) who are permitted to bill Medicare under the PFS for the services they furnish to Medicare beneficiaries.

B. Determination of PE RVUs

1. Overview

Practice expense (PE) is the portion of the resources used in furnishing a service that reflects the general categories of physician and practitioner expenses, such as office rent and personnel wages, but excluding malpractice (MP) expenses, as specified in section 1848(c)(1)(B) of the Act. As required by section 1848(c)(2)(C)(ii) of the Act, we use a resource-based system for determining PE RVUs for each physicians' service. We develop PE RVUs by considering the direct and indirect practice resources involved in furnishing each service. Direct expense categories include clinical labor, medical supplies, and medical equipment. Indirect expenses include administrative labor, office expenses, and all other expenses. The sections that follow provide more detailed information about the methodology for translating the resources involved in furnishing each service into service specific PE RVUs. We refer readers to the CY 2010 Physician Fee Schedule (PFS) final rule with comment period (74 FR 61743 through 61748) for a more detailed explanation of the PE methodology.

2. Practice Expense Methodology

a. Direct Practice Expense

We determine the direct PE for a specific service by adding the costs of the direct resources (that is, the clinical staff, medical supplies, and medical equipment) typically involved with furnishing that service. The costs of the resources are calculated using the refined direct PE inputs assigned to each CPT code in our PE database, which are generally based on our review of recommendations received from the American Medical Association (AMA)/Specialty Society Relative Value Scale (RVS) Update Committee (referred to as the RUC) and those provided in response to public comment periods. For a detailed explanation of the direct PE methodology, including examples, we refer readers to the 5-year review of work RVUs under the PFS and changes to the PE methodology in the CY 2007 PFS proposed rule (71 FR 37242) and the CY 2007 PFS final rule with comment period (71 FR 69629).

b. Indirect Practice Expense per Hour Data

We use survey data on indirect PEs incurred per hour (PE/HR) worked to develop the indirect portion of the PE RVUs. Prior to CY 2010, we primarily used the PE/HR by specialty obtained from the AMA's Socioeconomic Monitoring System (SMS). The AMA administered a new survey in CY 2007 and CY 2008, the Physician Practice Information Survey (PPIS). The PPIS is a multispecialty, nationally representative, PE survey of physicians and NPPs paid under the PFS using a survey instrument and methods highly consistent with those used for the SMS and the supplemental surveys. The PPIS gathered information from 3,656 respondents across 51 physician specialty and health care professional groups. We have stated that we believe the PPIS is the most comprehensive source of PE survey information available. We used the PPIS data to update the PE/HR data for the CY 2010 PFS for almost all of the Medicare-recognized specialties that participated in the survey.

When we began using the PPIS data in CY 2010, we did not change the PE RVU methodology or how the PE/HR data are used. We only updated the PE/HR data based on the new survey. Furthermore, as we explained in the CY 2010 PFS final rule with comment period (74 FR 61751), because of the magnitude of payment reductions for some specialties resulting from the use of the PPIS data, we transitioned its use over a 4-year period from the previous PE RVUs to the PE RVUs developed using the new PPIS data. As provided in the CY 2010 PFS final rule with comment period (74 FR 61751), the transition to the PPIS data was complete for CY 2013. Therefore, PE RVUs from CY 2013 forward are developed based entirely on the PPIS data, except as noted in this section.

Section 1848(c)(2)(H)(i) of the Act requires us to use the medical oncology supplemental survey data submitted in 2003 for oncology drug administration services. Therefore, the PE/HR for medical oncology, hematology, and hematology/oncology reflects the continued use of these supplemental survey data.

Supplemental survey data on independent labs from the College of American Pathologists were implemented for payments beginning in CY 2005. Supplemental survey data from the National Coalition of Quality Diagnostic Imaging Services (NCQDIS), representing independent diagnostic testing facilities (IDTFs), were blended with supplementary survey data from the American College of Radiology (ACR) and implemented for payments beginning in CY 2007. Neither IDTFs nor independent labs participated in the PPIS. Therefore, we continue to use the PE/HR that was developed from their supplemental survey data.

Consistent with our past practice, the previous indirect PE/HR values from the supplemental surveys for these specialties were updated to CY 2006 using the Medicare Economic Index (MEI) to put them on a comparable basis with the PPIS data.

We also do not use the PPIS data for reproductive endocrinology and spine surgery since these specialties are not separately recognized by Medicare, nor

do we have a method to blend the PPIS data with Medicare-recognized specialty data.

Previously, we established PE/HR values for various specialties without SMS or supplemental survey data by crosswalking them to other similar specialties to estimate a proxy PE/HR. For specialties that were part of the PPIS for which we previously used a crosswalked PE/HR, we instead used the PPIS based PE/HR. We use crosswalks for specialties that did not participate in the PPIS. These crosswalks have been generally established through notice and comment rulemaking and are available in the file titled ''CY 2027 PFS Final Rule PE/HR'' on the CMS website under downloads for the CY 2027 PFS final rule at *https://www.cms.gov/medicare/payment/fee-schedules/physician/federal-regulation-notices*.

c. Allocation of PE to Services

To establish PE RVUs for specific services, it is necessary to establish the direct and indirect PE associated with each service.

(1) Direct Costs

The relative relationship between the direct cost portions of the PE RVUs for any two services is determined by the relative relationship between the sum of the direct cost resources (that is, the clinical staff, medical supplies, and medical equipment) typically involved with furnishing each of the services. The costs of these resources are calculated from the refined direct PE inputs in our PE database. For example, if one service has a direct cost sum of $400 from our PE database and another service has a direct cost sum of $200, the direct portion of the PE RVUs of the first service would be twice as much as the direct portion of the PE RVUs for the second service.

(2) Indirect Costs

Under current policy, we allocate the indirect costs at the code level based on the direct costs specifically associated with a code and the greater of either the clinical labor costs or the work RVUs. We also incorporate the survey data described earlier in the PE/HR discussion. The general approach to developing the indirect portion of the PE RVUs is as follows:

- For a given service, we use the direct portion of the PE RVUs calculated as previously described and the average percentage that direct costs represent of total costs (based on survey data) across the specialties that furnish the service to determine an initial indirect allocator. That is, the initial indirect allocator is calculated so that the direct costs equal the average percentage of direct costs of those specialties furnishing the service. For example, if the direct portion of the PE RVUs for a given service is 2.00 and direct costs, on average, represent 25 percent of total costs for the specialties that furnish the service, the initial indirect allocator would be calculated so that it equals 75 percent of the total PE RVUs. Thus, in this example, the initial indirect allocator would equal 6.00, resulting in a total PE RVU of 8.00 (2.00 is 25 percent of 8.00 and 6.00 is 75 percent of 8.00).
- Next, under current policy, we add the greater of the work RVUs or clinical labor portion of the direct portion of the PE RVUs to this initial indirect allocator. In our example, if this service had a work RVU of 4.00 and the clinical labor portion of the direct PE RVU was 1.50, we would add 4.00 (since the 4.00 work RVUs are greater than the 1.50 clinical labor portion) to the initial indirect allocator of 6.00 to get an indirect allocator of 10.00. In the absence of any further use of the survey data, the relative relationship between the indirect cost portions of the PE RVUs for any two services would be determined by the relative relationship between these indirect cost allocators. For example, if one service had an indirect cost allocator of 10.00 and another service had an indirect cost allocator of 5.00, the indirect portion of the PE RVUs of the first service would be twice as great as the indirect portion of the PE RVUs for the second service.
- Then, we incorporate the specialty specific indirect PE/HR data into the calculation. In our example, if, based on the survey data, the average indirect cost of the specialties furnishing the first service with an allocator of 10.00 was half of the average indirect cost of the specialties furnishing the second service with an indirect allocator of 5.00, the indirect portion of the PE RVUs of the first service would be equal to that of the second service.

In the CY 2007 PFS final rule with comment period, we implemented the ''bottom up'' methodology for the development of PE RVUs (71 FR 69630–69643). We finalized the use of the work RVU or the clinical labor portion of the direct PE RVU, whichever is greater, to allocate indirect costs. We also finalized a modified formula for a global service (that is, a service with a professional component (PC) and a technical component (TC)) to utilize both the work RVU and the clinical labor PE RVU to allocate indirect costs. As noted in the CY 2007 PFS final rule with comment period, we do this to recognize that, for the PC service, indirect PEs will be allocated using the work RVUs, and for the TC service, indirect PEs will be allocated using the direct PE RVU and the clinical labor PE RVU. This also allows the global component RVUs to equal the sum of the PC and TC RVUs.

In recent years, as we have conducted analyses aimed at improving the accuracy of payment under the PFS, we have re-examined this longstanding policy that effectively allocates a larger share of indirect PE RVUs to services that can be reported using technical, professional, and global components than to those that cannot. We refer the reader to a report by RAND Corporation, under contract with CMS, which addresses several approaches to improving the accuracy of other PFS services relative to services that have a professional and technical component. This report is available at *https://www.rand.org/pubs/research_reports/RRA4720-2.html*.

This longstanding policy inadvertently advantages services that can be reported using technical, professional, and global components, referred to as ''triplet services'' in the report by RAND Corporation, because indirect PE RVUs are allocated on the sum, whereas services that can only be reported as a global service, referred to as ''non-triplet services'' in the report, depend on the maximum (rather than sum) of clinical labor PE RVUs and physician work RVUs. This is an unintended advantage of the arithmetic required for the global component RVUs to equal the sum of the PC and TC RVUs. As we stated in the proposed rule, we believe it would be more accurate than the current PE methodology to use the same allocation methodology for all PFS services. Therefore, we proposed to allocate indirect PE using both the work RVU and the clinical labor RVU for all services, with the exception of codes with 10- and 90-day global periods, instead of just applying that methodology to those services that can be reported using technical, professional, and global components (typically diagnostic and imaging services). In the description of the calculation of the PE methodology noted later in the section, we indicate the portion of the methodology that would be calculated differently under this proposal.

We received public comments on this proposal. The following is a summary of the comments we received and our responses.

Comment: Several commenters stated that CMS did not provide a rationale for excluding 10- and 90-day global codes from the proposed revised indirect PE

allocation in the proposed rule. Some commenters stated that the RAND analysis published alongside the proposed rule did not exclude these global codes, disagreed with CMS' exclusion of 10- and 90-day global codes and requested that we finalize their inclusion in the proposal to allocate indirect PE using both the work RVU and the clinical labor RVU for all services. Some commenters supported the exclusion of the 10- and 90-day global period codes from the proposal. They reiterated our ongoing questions and concerns about the current valuation of work and clinical labor RVUs for 10- and 90-day global period codes noted elsewhere in section II.B. of this final rule, and said that the proposed change should not be extended to those codes until the other questions and concerns are addressed. Another commenter requested that the exclusion of the 10- and 90-day global period codes does not further delay the separate work needed to correct documented misvaluation within global surgical payments.

Response: We appreciate the commenters' feedback and note that we inadvertently omitted a specific rationale for their exclusion in the proposed rule. We discussed difficulties and concerns with the global period codes elsewhere in section II.B. of the proposed rule (91 FR 43861) and similarly excluded 10- and 90-day global surgery services from the new ''CY 2027 PFS Proposed Rule Display Only TC PE RVUs'' public use file discussed in the proposed rule. Specifically, the use of bundled payments for the 10- and 90-day global surgery services results in aggregated valuation for all pre-operative, intra-operative, and post-operative services furnished over a defined period (10-, or 90-day global periods), including services by both physician and clinical staff and practice expense without clear visibility into how each component contributes to the total bundled valuation. This is the rationale referenced previously that was inadvertently omitted from the proposed rule.

This unintended advantage of the arithmetic required for the global component RVUs to equal the sum of the PC and TC RVUs has led to concerns of incorrect relativities between PFS services. While the RAND report recommends allocating indirect PE using the sum of work and clinical labor as a default for all services (that is, not just those with TC/PC splits), the report also notes that strategies CMS might pursue to mitigate these concerns could interact with other aspects of Medicare payment policy, leading to unintentional or undesired effects or the need for special adjustments or other consideration for certain PFS services.

Additionally, other RAND reports [1] [2] [3] [4] and recent OIG reports [5] [6] have consistently found that substantially fewer post-operative visits are typically provided to Medicare beneficiaries as part of 10- and 90-day global periods compared to the number of assumed post-operative visits considered in surgical procedure valuation. Including the 10- and 90-day global surgery services in the proposed revised indirect PE allocation would have significantly increased the indirect PE allocated to these services and amplified the payment distortions that result from including too many post-operative visits in global packages because there is work and clinical labor bundled into the valuation associated with the post-operative visits. Similar to how we do not believe codes with technical, professional, and global components should be advantaged over other services by the indirect PE allocation using both the work RVU and clinical labor RVU, we do not believe global period services should be advantaged by the proposal because they have additional work & clinical labor RVUs bundled into their post-operative periods.

Comment: A commenter expressed concern with the proposal, stating that the proposal was aimed at addressing the assertion in RAND's report that the current indirect PE methodology may contribute to overutilization of imaging services. The commenter stated that, absent evidence demonstrating that indirect PE allocation directly affects ordering behavior or utilization patterns, they believe we should proceed cautiously before implementing significant redistributions of RVUs based on assumptions regarding imaging utilization.

Response: We appreciate the commenter's feedback. We note that, as discussed in the proposed rule, this longstanding policy inadvertently advantages services that can be reported using technical, professional, and global components, and is an unintended advantage of the arithmetic required for the global component RVUs to equal the sum of the PC and TC RVUs. We note that we did not propose this change to address any utilization patterns discussed in RAND's report, but rather, to address the longstanding and unintended advantage because we believe it would be more accurate than the current PE methodology to use the same allocation methodology for all PFS services.

Comment: A commenter stated they could not determine whether CMS incorporated this proposed modification into the calculation of PE RVUs for the proposed rule. They stated that, in the separately published Sample Calculation of PE RVUs under Methodology for Selected Codes public use file, CMS indicated that the second component of the indirect PE allocator for CPT code 99213 is based on the work RVU and does not appear to incorporate the clinical labor as proposed.

Response: We appreciate the commenter's feedback and acknowledge the concern. Because this was a proposed change, our methodology public use files, such as the Sample Calculation of PE RVUs under Methodology for Selected Codes and CY 2027 PFS Proposed Rule Practice Expense Algorithm Technical Memo, displayed information regarding the methodology in its current state for the proposed rule, so as to not presume finalization of a proposal without notice and comment rulemaking. We provided the public with Addendum B and CY 2027 PFS Proposed Rule Fully Implemented PE RVUs for full transparency into implementation of these proposals. We also acknowledge that the formula displayed in step (20) of the published Sample Calculation of PE RVUs under Methodology for Selected Codes public use file indicated that the second part of the indirect PE allocator for CPT code 99213 is based on the work RVU but we note that the calculated value displayed in step (21) of the published file is correct. For the final rule, we note that our methodology public use files reflect all finalized proposals.

After consideration of the public comments, we are finalizing our proposal to allocate indirect PE using both the work RVU and the clinical labor RVU for all services, with the exception of codes with 10- and 90-day global periods, instead of just applying that methodology to those services that can be reported using technical, professional, and global components.

(3) Facility and Non-Facility Costs

For procedures that can be furnished in a physician's office, as well as in a facility setting, where Medicare makes a separate payment to the facility for its costs in furnishing a service, we establish two PE RVUs: facility and non-facility. The methodology for calculating PE RVUs is generally the same for both the facility and non-facility RVUs but is applied independently to yield two separate PE RVUs. In calculating the PE RVUs for services furnished in a facility, we do not include resources that would generally not be provided by physicians when furnishing the service. For this reason, the facility PE RVUs are generally lower than the non-facility PE RVUs. In the CY 2026 PFS final rule (90 FR 49292 through 49296), we finalized a modification in the allocation of indirect PE to reduce the portion of the facility PE RVUs allocated based on work RVUs to half the amount allocated to non-facility PE RVUs beginning in CY 2026.

(4) Services With Technical Components and Professional Components

Diagnostic services are generally comprised of two components: a professional component (PC); and a technical component (TC). The PC and TC may be furnished independently or by different healthcare providers, or they may be furnished together as a global service. When services have separately billable PC and TC components, the payment for the global service equals the sum of the payment for the TC and PC. To achieve this, we use a weighted average of the ratio of indirect to direct costs across all the specialties that furnish the global service, TCs, and PCs; that is, we apply the same weighted average indirect percentage factor to allocate indirect expenses to the global service, PCs, and TCs for a service. (The direct PE RVUs for the TC and PC sum to the global direct PE RVUs.)

(5) PE RVU Methodology

For a more detailed description of the PE RVU methodology, we direct readers to the CY 2010 PFS final rule with comment period (74 FR 61745 through 61746). We also direct readers to the file titled ''Calculation of PE RVUs under Methodology for Selected Codes'' which is available on our website under downloads for the CY 2027 PFS final rule at *https://www.cms.gov/medicare/payment/fee-schedules/physician/federal-regulation-notices.* This file contains a table that illustrates the calculation of PE RVUs as described in this final rule for individual codes.

(a) Setup File

First, we create a setup file for the PE methodology. The setup file contains the direct cost inputs, the utilization for each procedure code at the specialty and facility/non-facility place of service level, and the specialty specific PE/HR data calculated from the surveys.

(b) Calculate the Direct Cost PE RVUs

Sum the costs of each direct input.

Step 1: Sum the direct costs of the inputs for each service.

Step 2: Calculate the aggregate pool of direct PE costs for the current year. We set the aggregate pool of PE costs equal to the product of the ratio of the current aggregate PE RVUs to current aggregate work RVUs and the projected aggregate work RVUs.

Step 3: Calculate the aggregate pool of direct PE costs for use in ratesetting. This is the product of the aggregate direct costs for all services from Step 1 and the utilization data for that service.

Step 4: Using the results of Step 2 and Step 3, use the CF to calculate a direct PE scaling adjustment to ensure that the aggregate pool of direct PE costs calculated in Step 3 does not vary from the aggregate pool of direct PE costs for the current year. Apply the scaling adjustment to the direct costs for each service (as calculated in Step 1).

Step 5: Convert the results of Step 4 to an RVU scale for each service. To do this, divide the results of Step 4 by the CF. Note that the actual value of the CF used in this calculation does not influence the final direct cost PE RVUs as long as the same CF is used in Step 4 and Step 5. Different CFs would result in different direct PE scaling adjustments, but this has no effect on the final direct cost PE RVUs since changes in the CFs and the associated direct scaling adjustments offset one another.

(c) Create the Indirect Cost PE RVUs

Create indirect allocators.

Step 6: Based on the survey data, calculate direct and indirect PE percentages for each physician specialty.

Step 7: Calculate direct and indirect PE percentages at the service level by taking a weighted average of the results of Step 6 for the specialties that furnish the service. Note that for services with TCs and PCs, the direct and indirect percentages for a given service do not vary by the PC, TC, and global service.

We generally use an average of the 3 most recent years of available Medicare claims data to determine the specialty mix assigned to each code. Codes with low Medicare service volume require special attention since billing or enrollment irregularities for a given year can result in significant changes in specialty mix assignment. We finalized a policy in the CY 2018 PFS final rule (82 FR 52982 through 52983) to use the most recent year of claims data to determine which codes are low volume for the coming year (those that have fewer than 100 allowed services in the Medicare claims data). For codes that fall into this category, instead of assigning a specialty mix based on the specialties of the practitioners reporting the services in the claims data, we use the expected specialty that we identify on a list developed based on medical review and input from expert interested parties. We display this list of expected specialty assignments as part of the annual set of data files we make available as part of notice and comment rulemaking and consider recommendations from the RUC and other interested parties on changes to this list annually. Services for which the specialty is automatically assigned based on previously finalized policies under our established methodology (for example, ''always therapy'' services) are unaffected by the list of expected specialty assignments. We also finalized in the CY 2018 PFS final rule (82 FR 52982 through 52983) a policy to apply these service-level overrides for both PE and MP, rather than one or the other category.

In prior years, we reviewed information submitted during the proposed rule comment period regarding potential additions to the list of expected specialty assignments, to determine whether the specialty assignments commenters recommended were appropriate for the services in question. Our review process has been based on determining if the recommended specialty matched the dominant specialty in the claims data. However, we have long held reservations on whether this was the most accurate method for implementing updates to the expected specialty assignments list. Since these updates to the list were never formally proposed in the proposed rule of each calendar year, there was never an opportunity for interested parties to comment and provide feedback before the assignments were finalized in the final rule. We believe that it would provide greater transparency and more opportunities for public comment if additions to the expected specialty assignments list were instead proposed in each year's proposed rule.

Therefore, we did not finalize any additions to the expected specialty assignments list in the CY 2026 PFS final rule (90 FR 49270). We stated that we would instead review the list of approximately 75 low volume HCPCS codes submitted by commenters and propose additions to the list in this year's CY 2027 PFS proposed rule. We will also review any submissions for inclusion to the expected specialty assignments list by the same February 10th deadline that we have finalized in the past for consideration of RUC recommendations and invoice-based updates to supply and equipment pricing. We believe that synchronizing submissions to the expected specialty assignments list for low volume services with the same annual date used for RUC recommendations and invoice submissions will help standardize the process, while also providing more opportunities for feedback from interested parties by going through the annual comment process.

During the comment period for the CY 2026 PFS rule, several commenters stated that they had performed an analysis to identify all codes that meet the criteria to receive a specialty override under this CMS policy and drafted updated recommendations for codes that meet these criteria. Commenters stated that the purpose of assigning a specialty to these codes was to avoid the significant adverse impact on MP RVUs that results from errors in specialty utilization data magnified in representation (percentage) by small sample size. These commenters submitted a list of approximately 75 low volume HCPCS codes with recommended expected specialty assignments.

After reviewing the information provided by the commenters to determine whether the specialty assignments they recommended were appropriate for the services in question, based on determining if the recommended specialty matches the dominant specialty in the claims data, we proposed the additions to the list of expected specialty assignments for low volume services identified in Table A–B1. We agree with the commenters that, based on claims data, CPT codes 33277 through 33281 and 33287 through 33288 should be crosswalked to the Cardiac Electrophysiology specialty and that CPT codes 93584 through 93588 should be crosswalked to the Interventional Cardiology specialty. We also agree with commenters that CPT code 23077 should be crosswalked to the Surgical Oncology specialty. However, we do not have PE/HR data for these specialties as they were not part of the PPIS when it was conducted in 2007; therefore, we are crosswalking these CPT codes to the closest available specialties (Cardiology for the first two groups of codes and All Physicians for CPT code 23077), as listed on Table A–B1.

We disagree with the commenters on a series of additional suggested assigned specialties. In each case, there was another specialty which was reported more than twice as often in the claims data as the specialty suggested by commenters and in some cases reported as much as five times as often. Therefore, we proposed to crosswalk CPT codes 15135 and 41000 to the Otolaryngology specialty, CPT codes 26118 and 26650 to the Orthopedic Surgery specialty, CPT codes 93025 and 93150 to the Cardiology specialty, and CPT codes 93152 and 93153 to the Pulmonary Disease specialty as these were the dominant specialties in the claims data. These crosswalks are included in Table A–B1.

BILLING CODE 4169–69–P

TABLE A-B1: PROPOSED NEW ADDITIONS TO THE EXPECTED SPECIALTY ASSIGNMENT LIST

* Recommended specialty assignment crosswalked.

BILLING CODE 4169–69–C

Comment: Several commenters stated that they concurred with CMS that synchronizing submissions to the expected specialty assignments list for low volume services with the same annual date used for RUC recommendations and invoice submissions will help standardize the process, while also providing additional opportunities for feedback through annual rulemaking. Commenters stated that they would submit additional recommendations for CY 2028 rulemaking before the February 10, 2027 deadline.

Response: We appreciate the support for our proposed policy from the commenters.

Comment: Several commenters disagreed with the CMS proposed specialty assignment for the 21 codes where CMS diverged from the RUC's recommended specialty. For CPT codes 15135, 26118, 26650, 93152, and 93153,

commenters stated that, based on the description of work, the list of specialty societies that participated in the RUC survey process, and with respect to the whole population of patients who might receive this service, CMS should use the RUC's recommended specialty assignments even though they were not the top reported specialty in 2024 Medicare claims data.

Response: We disagree with the commenters and continue to believe that the proposed specialty assignments are the more accurate choice for these CPT codes. As we stated in the CY 2018 PFS final rule, we agree that the use of service-level overrides for low volume services would help mitigate annual fluctuations and provide greater stability in the valuation of these services (82 FR 52982). We finalized the creation of this list of assigned specialty for low volume services at this time with the intention of minimizing these annual fluctuations in valuation, not with the goal of matching each CPT code to its idealized specialty. We believe that it is more accurate to assign specialties based on the actual billing practices for each CPT code as reflected in the claims data, not what might have been intended by the CPT Editorial Panel at the time of the code's creation. All five of the CPT codes listed by commenters were reported twice as often by the assigned specialty that we proposed as compared with the RUC's recommended specialty; in the case of CPT code 93152, Pulmonary Disease was reported roughly five times more often than the recommended Cardiac Electrophysiology. We therefore continue to believe that the proposed specialty assignments are the most accurate choices for these codes.

Comment: Several commenters stated that for the approximately 15 CPT codes in Table A–B1 that did not have PE/HR data, CMS should use the available MP premium data and crosswalk the assigned specialty for these codes as recommended by the RUC for MP purposes. The commenters stated that the proposed CMS crosswalks could still be used for PE purposes due to the lack of PE/HR data. Commenters made this request for CPT codes 23077, 33277–33281, 33287, 33288, 93025, 93150, and 93584–93588.

Response: We disagree with the commenters that CMS should establish separate PE and MP crosswalks for the specialty assignment in these cases where there is no PE/HR data available. We specifically finalized this policy in the CY 2018 PFS final rule that we would apply these service-level overrides for both PE and MP, rather than one or the other category. We provided rationale at that time, stating that this would simplify the implementation of service-level overrides for PE and MP, and would continue to address stakeholder concerns about the year-to-year variability for low volume services (82 FR 52982–52983). Our rationale from the CY 2018 PFS final rule continues to apply, but we will continue to address stakeholder concerns as they arise.

Comment: A commenter asked CMS to confirm that low-volume echocardiographic services are assigned to cardiology or pediatric cardiology rather than to a specialty with a materially different cost structure. The commenter requested that CMS provide the underlying utilization crosswalk for these assignments so societies can verify them.

Response: As we noted in the proposed rule, the CPT codes associated with the Cardiac Electrophysiology specialty were all crosswalked to the Cardiology specialty due to a lack of PE/HR data. All of the proposed and finalized expected specialty assignments are included in the CY 2027 public use files associated with the PFS proposed and final rules as detailed previously.

Comment: A commenter requested that CMS add several codes to the expected specialty assignment for low volume services list as part of CY 2028 rulemaking and assign thoracic surgery as their expected specialty.

Response: We appreciate the feedback from the commenter, however we will consider these additional codes for inclusion to the expected specialty assignment list in next year's CY 2028 PFS proposed rule to allow for public comment.

After consideration of the comments, we are finalizing the new additions to the expected specialty assignment list as proposed in Table A–B1.

As noted in the proposed rule, the full list of expected specialty assignments is included in the CY 2027 public use files, which are available on the CMS website under downloads for the CY 2027 PFS final rule at *https://www.cms.gov/medicare/payment/fee-schedules/physician/federal-regulation-notices.*

Step 8: Calculate the service level allocators for the indirect PEs based on the percentages calculated in Step 7. The indirect PEs are allocated based on the three components: the direct PE RVUs; the clinical labor PE RVUs; and the work RVUs.

Under current policy, for most services the indirect allocator is: indirect PE percentage * (direct PE RVUs/direct percentage) + work RVUs.

There are two situations where this formula is modified:

- If the service is a global service (that is, a service with global, professional, and technical components), then the indirect PE allocator is: indirect percentage (direct PE RVUs/direct percentage) + clinical labor PE RVUs + work RVUs.
- If the clinical labor PE RVUs exceed the work RVUs (and the service is not a global service), then the indirect allocator is: indirect PE percentage (direct PE RVUs/direct percentage) + clinical labor PE RVUs.

(*Note:* Under current policy, for global services, the indirect PE allocator is based on both the work RVUs and the clinical labor PE RVUs. We do this to recognize that, for the PC service, indirect PEs would be allocated using the work RVUs, and for the TC service, indirect PEs would be allocated using the direct PE RVUs and the clinical labor PE RVUs. This also allows the global component RVUs to equal the sum of the PC and TC RVUs.)

For presentation purposes, in the examples in the download file titled ''Calculation of PE RVUs under Methodology for Selected Codes'', the formulas were divided into two parts for each service.

- The first part does not vary by service and is the indirect percentage (direct PE RVUs/direct percentage).
- Under current policy, the second part is either the work RVU, clinical labor PE RVU, or both depending on whether the service is a global service and whether the clinical PE RVUs exceed the work RVUs (as described earlier in this step).

We note that for CY 2026, we finalized a change to the methodology so that when work RVUs are used to allocate indirect PE to the facility RVUs, they are assigned at one-half the amount allocated to the non-facility PE RVUs for that same service. These PE methodology changes are discussed in greater detail in the CY 2026 PFS final rule (90 FR 49292 through 49296).

Proposed Step 8: Calculate the service level allocators for the indirect PEs based on the percentages calculated in Step 7. The indirect PEs are allocated based on the three components: the direct PE RVUs; the clinical labor PE RVUs; and the work RVUs.

The proposed indirect allocator is: indirect PE percentage *(direct PE RVUs/direct percentage) + work RVUs + clinical labor RVUs. The proposed change, as detailed in the proposed rule (91 FR 43842 through 44557), is to include both the work RVUs and clinical labor RVUs in the indirect allocator for all services, except for

codes with 10- and 90-day global periods, as opposed to including the work RVUs and clinical labor RVUs only for global services.

We stated that, if this proposed policy were to be finalized, this Proposed Step 8 would replace the Step 8 listed in the proposed rule (91 FR 43842 through 44557). We note that step was also listed earlier in this final rule. For presentation purposes, in the examples in the download file titled ''Calculation of PE RVUs under Methodology for Selected Codes,'' the formulas were divided into two parts for each service.

- The first part is the indirect percentage (direct PE RVUs/direct percentage).
- The second part is the sum of the work RVU and the clinical labor PE RVU, including the methodology change finalized in CY 2026 for services performed in the facility setting (when work RVUs are used to allocate indirect PE to the facility RVUs, they are assigned at one-half the amount allocated to the non-facility PE RVUs for that same service).

Apply a scaling adjustment to the indirect allocators.

Step 9: Calculate the current aggregate pool of indirect PE RVUs by multiplying the result of step 8 by the average indirect PE percentage from the survey data.

Step 10: Calculate an aggregate pool of indirect PE RVUs for all PFS services by adding the product of the indirect PE allocators for a service from Step 8 and the utilization data for that service.

Step 11: Using the results of Step 9 and Step 10, calculate an indirect PE adjustment so that the aggregate indirect allocation does not exceed the available aggregate indirect PE RVUs and apply it to indirect allocators calculated in Step 8.

Under current policy, calculate the indirect practice cost index (IPCI). We refer readers to the CY 2007 PFS final rule with comment period (71 FR 69633) for more information about the establishment of the IPCI.

Step 12: Using the results of Step 11, calculate aggregate pools of specialty specific adjusted indirect PE allocators for all PFS services for a specialty by adding the product of the adjusted indirect PE allocator for each service and the utilization data for that service.

Step 13: Using the specialty specific indirect PE/HR data, calculate specialty specific aggregate pools of indirect PE for all PFS services for that specialty by adding the product of the indirect PE/HR for the specialty, the work time for the service, and the specialty's utilization for the service across all services furnished by the specialty.

Step 14: Using the results of Step 12 as the denominator and Step 13 as the numerator, calculate the specialty specific indirect PE scaling factors.

Step 15: Using the results of Step 14, calculate an indirect practice cost index at the specialty level by dividing each specialty specific indirect scaling factor by the average indirect scaling factor for the entire PFS.

Step 16: Calculate the indirect practice cost index at the service level to ensure the capture of all indirect costs. Calculate a weighted average of the practice cost index values for the specialties that furnish the service. (Note: For services with TCs and PCs, we calculate the indirect practice cost index across the global service, PCs, and TCs. Under this method, the indirect practice cost index for a given service (for example, echocardiogram) does not vary by the PC, TC, and global service.)

Step 17: Apply the service level indirect practice cost index calculated in Step 16 to the service level adjusted indirect allocators calculated in Step 11 to get the indirect PE RVUs.

Proposal regarding Steps 12 through 17: We develop the indirect practice expense (PE) RVUs under the PFS to reflect the relative resources involved in furnishing the services. Since the implementation of the resource-based PE RVUs, we have assumed that aggregate specialty level practice costs derived primarily from the 2007 PE/HR survey data are a reasonable way to help establish the resource-based indirect PE RVUs. We have historically used that data both to allocate indirect costs to each code and to re-scale the resulting PE RVUs for each code at the end of the established methodology to ensure that the overall allocation of PE RVUs for each specialty across the PFS approximates those expected based on the index derived from the PE/HR survey data. Over time, however, we have identified various limitations of the survey data, especially as the data we use has become increasingly dated and are intrinsically limited to small, selective samples based on pre-determined assumptions about where costs are likely to differ, and, as we addressed in CY 2026 PFS rulemaking, have not been adequately updated. (We refer readers to an extended discussion of our concerns with and decision not to update this data in the CY 2026 PFS final rule at 90 FR 49286 through 49292.) This has resulted in a PE methodology that privileges the historic survey data over incorporation of more recent data about specific services and produces unpredictable and counterintuitive results that are not transparent to the public.

Because we have taken various steps to improve the data used in the pricing inputs and the indirect allocation methodologies, we are proposing to remove the steps of the current methodology that rely on the indirect practice cost index (IPCI) from the calculation of the PE RVUs. We proposed this change because the steps of the current methodology that rely on the IPCI calculation effectively favor the aggregate specialty-level survey data over the code level inputs and allocators and consequently limit the influence of improvements to inputs and allocation methodologies. We proposed to implement this change over a 2-year transition period. Specifically, in the first year, only half of the measured variation in the IPCI will be applied to the indirect allocator. In the second year, CY 2028, the IPCI will no longer be applied.

The steps of the current methodology that rely on the IPCI calculation are steps 12 through 17. Thus, under this proposal, steps 12 through 17 would no longer be a part of the calculation, starting for CY 2028, and the total PE RVU, prior to the calculation of final PE RVUs described at Step 18, would be the sum of step 5 (Direct Cost PE RVUs) and step 11 (Indirect Cost PE RVUs).

We received public comments on this proposal. The following is a summary of the comments we received and our responses.

Comment: Many commenters supported removing the IPCI from the PE methodology and agreed with CMS that the underlying data are nearly two decades old and no longer representative of current practice costs. Several commenters agreed that eliminating the IPCI reduces unintended and opaque effects on PE RVUs, and supported the 2-year transition as an appropriate way to mitigate disruption while implementing a more accurate methodology. Multiple commenters strongly supported removal, explaining that the IPCI has historically amplified payment advantages for specialties with higher aggregate indirect costs, such as those tied to expensive equipment, while disadvantaging specialties whose costs are driven primarily by clinical labor activities. A commenter cited its own analysis of the CY 2026 facility-based payment change, finding that specialties with very low facility utilization saw an average 12.4 percent decrease in their IPCI values while specialties with very high facility utilization saw an average 32.2 percent increase. The commenter stated that some specialties experienced PE RVU decreases as a result of how facility-based services were paid that were

opposite of CMS's stated policy intentions and highlighted that the counterintuitive and seemingly unintended decrease in PE RVUs for some specialties as a result of the CY 2026 rule demonstrates that the IPCI can create winners and losers based on unrelated policy changes, rather than actual practice expenses. Other commenters expressed disappointment that CMS did not instead update the underlying PPI Survey data using more recent survey efforts, but supported removing the IPCI in the absence of adoption of the updated survey data because the current methodology privileges antiquated, aggregate specialty-level survey data over code-level inputs and limits the influence of improvements to those inputs.

The Medicare Payment Advisory Commission (MedPAC) also supported eliminating the IPCI, citing its June 2025 report to Congress recommending that CMS improve the accuracy of Medicare's relative payment rates by using timely data that reflect the costs of delivering care, and noting that the IPCI is calculated using PE/HR survey data collected nearly two decades ago. MedPAC further encouraged CMS to seek additional ways to reduce reliance on that survey data, observing that even after IPCI removal, direct PE RVUs would still be multiplied by a ratio of indirect-to-direct PE costs drawn from the specialties billing a service, meaning indirect PE RVUs would remain adjusted based on decades-old, specialty-reported data. MedPAC stated that forgoing specialty-specific practice expense data has the potential to improve payment accuracy and make routine updates more practicable, and cited the AMA's updated PPI and CPI Survey efforts as examples of the difficulty of collecting representative specialty-level data: low response rates led to data based on a small number of practices for some specialties, acceptance of practices that volunteered or were recruited to report data, and inconsistent consolidation of specialty categories. MedPAC stated that these concerns led them to support CMS's decision not to incorporate that updated survey data into the ratesetting process.

Response: We appreciate the commenters' support and feedback on the proposal. We agree with the commenters that the CY 2026 facility indirect PE example illustrates precisely the type of unexpected effect that motivated CMS's proposal to remove the IPCI and believe that this is one of many examples that support removing the IPCI rather than preserving it. We also acknowledge that, while an updated survey may be preferable in principle, the data quality concerns with the available updated survey data support proceeding with removal of the IPCI now . We thank MedPAC for its support and its analysis of the continued role of PE/HR survey data in the indirect PE allocation. We agree with MedPAC that removing the IPCI does not fully eliminate CMS's reliance on this outdated survey data, as discussed further in the section. We may consider, in future rulemaking, additional approaches to reduce reliance on specialty-specific PE/HR data, consistent with the direction of the policies we are finalizing this year.

Comment: Some commenters stated the belief that the IPCI was used to allocate indirect PE and expressed concern that the specialty-specific differences in indirect costs continue to exist, but noted that CMS proposed to eliminate the IPCI without offering a reasonable, empirically supported alternative. Some commenters stated that CMS should not assume indirect costs are similar or equal across specialties without supporting data, citing certain specialties that have indirect costs exceeding what would be expected under a code-level-only approach, and recommended that CMS instead conduct its own updated survey of indirect costs rather than eliminate the IPCI.

Response: Some commenters seem to be confused that we proposed to remove all specialty-specific PE/HR data and we want to clarify that is not the case. As described previously, we still use the specialty-specific data to allocate indirect PE, but removing the IPCI means we would no longer re-scale the resulting PE RVUs to an index derived from the outdated survey data. The IPCI functions to force changes that would otherwise occur in indirect PE (that is payments for office overhead such as administrative staff and rent that cannot be directly attributed to individual services) back to the status quo, which is currently based on the physician overhead contained in the 2007 AMA Physician Practice Information (PPI) Survey. However, the continued use of the IPCI has resulted in a PE methodology that privileges the historic survey data over incorporation of more recent data about specific services, limits the influence of improvements to inputs and allocation methodologies, and produces unpredictable and counterintuitive results that are not transparent to the public. We proposed to remove the IPCI from our methodology for CY 2027 over a 2-year transition period, though for now we would retain the use of the survey data in other places in the methodology, as discussed previously. We continue to believe this proposed change will improve the transparency and stability of PE RVUs over time and better position us to make necessary refinements to the PE methodology to improve the accuracy of valuation of the PE portion of services paid under the PFS.

In the proposed rule, we acknowledged that the IPCI, because it is rooted in static PE/HR data, effectively resulted in stabilizing year-to-year changes in PE RVUs, especially due to changes in input valuations and changes to allocation methodologies, which is why we proposed the PE stabilization adjustment to further improve predictability and reduce volatility within the PE RVUs. We note that our proposal to eliminate the IPCI was not solely based on the age of the survey data, but also based on the fact that the IPCI can result in counter-intuitive payment outcomes and is a barrier to broader payment changes.

We do not agree that CMS should instead conduct a new survey of specialty-level indirect costs before removing the IPCI. As discussed previously in connection with MedPAC's comment, recent efforts to collect updated, representative specialty-level practice expense data encountered low response rates, relied on practices that volunteered or were recruited rather than being randomly sampled, and inconsistently consolidated specialty categories. We do not believe commissioning another specialty-level survey would resolve these structural difficulties, and we do not believe it is appropriate to delay improvements to the current methodology. We also do not agree that removing the IPCI assumes indirect costs are identical across specialties. Rather, our proposal reflects the conclusion that the IPCI is not a reliable means of capturing any genuine specialty specific variation in indirect costs that may exist, because it re-scales a code's indirect PE based on the mix of specialties that happen to bill it in claims data, not based on a direct measurement or acceptable proxy for the indirect costs those specialties incur in furnishing that specific service. We continue to believe that removing the IPCI results in PE RVUs that more accurately reflect the indirect resources a service requires.

Comment: Many commenters opposed removal of the IPCI or asked CMS to delay finalizing the proposal. Several commenters asked CMS to explain why a 2-year transition is sufficient given the scale of redistribution among specialties, and asked CMS to compare

payment trajectories under 2-year and 4-year transitions, noting that CMS has historically used four-year transitions for significant PE methodology changes, including the CY 2007 transition to the bottom-up PE methodology and the CY 2010 incorporation of Physician Practice Information Survey data. A commenter, while not opposing removal of the IPCI outright, stated that CMS should publish detailed impact analyses and supporting data before finalizing the proposal, and that if CMS proceeds, a stabilization mechanism is essential to prevent disruptions in PE that could jeopardize practice stability and patient access to care. Other commenters stated that CMS has not published code- and specialty-level impact analyses of the IPCI removal in isolation from the other proposed PE changes, making it difficult for stakeholders to evaluate the proposal's actual effects, and requested that CMS delay finalization until it demonstrates, through empirical validation and transparent impact analyses, that removing the IPCI produces more accurate resource-based relativity rather than assuming that eliminating an older data source necessarily improves accuracy.

Response: We recognize that the aggregate specialty impact tables published with the proposed rule do not isolate the effect of IPCI removal from our other PE proposals because all three policies affect PE RVUs concurrently. We agree with commenters that these proposals are interconnected and interact with one another, and therefore, we could not publish disaggregated specialty impact tables of each proposal individually without misconstruing their combined impact when they are implemented together. We note that, in the past, we have published impact tables for different alternatives considered, but we do not typically publish disaggregated policy impacts because of how these policies may interact.

We note that we published code-level impacts in the CY 2027 PFS Proposed Rule Fully Implemented PE RVUs public use file. While we have used 4-year transitions in the past to temper impacts over time, the proposed 5% PE stabilization adjustment proposed for CY 2027 already functions to phase in the changes to the PE RVUs and temper impacts over time. For example, for codes that experience large increases or decreases as a result of our PE methodology proposals, and are not the result of a revaluation, the PE stabilization adjustment effectively serves to phase in those changes over many years, often exceeding the 4-year transition we have used in the past. We acknowledge that this may not be the desired implementation for specialties that benefit from the proposed PE methodology changes, but we believe this results in a reasonable balance between safeguarding against significant, unintended payment volatility while still allowing meaningful progress toward more accurate PE valuations within a reasonable timeframe. We note that this 2-year transition, which phases in the removal of steps 12 through 17, is a distinct mechanism from the PE stabilization adjustment discussed later in the section, which separately caps the year-to-year change in any code's PE RVU. The two mechanisms work together: the 2-year transition sets the pace at which the IPCI's influence is phased out of the methodology, while the PE stabilization adjustment independently moderates how quickly any resulting change reaches a given code's final PE RVU.

Comment: A commenter requested that CMS detail how we would treat Non-Physician Practitioners (NPPs) under this new methodology. They stated that NPPs' specialty is obscured in the claims data because they are not able to be associated with their specialty when they enroll.

Response: As stated later in the section, to calculate the PE and MP RVUs, we exclude certain specialties, such as NPPs paid at a percentage of the PFS and low volume specialties, from the calculation. However, these specialties are still included to calculate the BN adjustment.

After consideration of public comments, we are finalizing the proposal to remove steps 12 through 17 that rely on the IPCI from the calculation of the PE RVUs over a 2-year transition period, as proposed.

(d) Calculate the Final PE RVUs

Step 18: Under current policy, add the direct PE RVUs from Step 5 to the indirect PE RVUs from Step 17 and apply the final PE budget neutrality (BN) adjustment. The final PE BN adjustment is calculated by comparing the sum of steps 5 and 17 to the aggregate work RVUs scaled by the ratio of current aggregate PE and work RVUs. This adjustment ensures that all PE RVUs in the PFS account for the fact that certain specialties are excluded from the calculation of PE RVUs but included in maintaining overall PFS BN. (See ''Specialties excluded from ratesetting calculation'' later in this final rule). Under the proposed policy, add the direct cost PE RVUs from Step 5 to the indirect cost PE RVUs from Step 11 and apply the final PE BN adjustment.

Proposed Step 19: Calculate and apply the PE stabilization adjustment for each PE RVU by comparing the result of step 18 with the results of the prior year's PE RVUs from step 18. As described in the proposed rule, we proposed to remove the IPCI from the PE methodology, which we believe will improve the transparency and stability of PE RVUs over time. However, we recognize that the IPCI, because it is rooted in static PE/HR data, effectively resulted in stabilizing year-to-year changes in PE RVUs, especially due to changes in input valuations and changes to allocation methodologies. We have long noted that extreme volatility in PE RVUs can have unintended consequences and distortions. To mitigate volatility that could otherwise occur, we proposed a PE stabilization adjustment to further improve predictability and reduce volatility within the PE RVUs. Specifically, we proposed that the PE RVU calculated after the application of the cognitive services floor and any adjustments that occur outside of the PE methodology will be subject to a cap and will not increase or decrease by more than 5 percent each year. In the proposed Step 19 we would compare the PE RVU after the application of the cognitive services floor and any code-level adjustments in the current ratesetting year to the allocation methodology from the prior year and then apply the 5 percent cap. We note that the proposed PE stabilization adjustment in Proposed Step 19 will be applied prior to the statutory phase-in of significant RVU reductions required by Section 1848(c)(7) of the Act, discussed in more detail later in this section, which limits all codes that are not new or revised to a 19 percent decrease in total RVU in an individual calendar year. Therefore, a code may be impacted by both the PE stabilization adjustment and the statutory phase-in, meaning a code's PE RVU may ultimately differ by greater than the PE stabilization adjustment detailed in proposed Step 19.

This proposed adjustment would not apply to new and revised codes or codes formerly contractor priced that are newly nationally priced, because it is not clear what the comparison PE RVU would be for those codes. Because we believe the benefits of the PE stabilization adjustment would ideally apply to new and revised codes and newly nationally priced codes, we sought comment on an approach that would allow us to expand the PE stabilization adjustment to these categories of codes.

Additionally, the proposed PE stabilization adjustment would not

apply to revalued codes because we believe the statutory phase-in sufficiently limits large reductions to individual codes undergoing review and/or revaluation, and limits the amount of time a revalued code would remain under or overvalued by being significantly constrained from reductions found to be appropriate through revaluation.

We received public comments on this proposal. The following is a summary of the comments we received and our responses.

Comment: Many commenters stated that CMS should identify the codes subject to the PE stabilization adjustment and the codes' final PE RVUs, similar to our published public use file of codes subject to the statutory phase-in of significant RVU reductions.

Response: We appreciate commenters' feedback and note that we are publishing this list as a public use file with this final rule, which can be found under the Downloads section for this rule at *https://www.cms.gov/medicare/payment/fee-schedules/physician/federal-regulation-notices*.

Comment: A commenter stated that they support the idea of adding a PE stabilization adjustment to the PE RVU methodology to mitigate volatility in PE RVUs and avoid unintended consequences. The commenter requested further explanation of how the proposed adjustment would operate and its relationship to the existing phase-in of significant RVU reductions. Multiple commenters requested that we exempt increases to direct PE inputs from the PE stabilization adjustment when supported by higher supply or equipment prices validated through the invoice submission process to ensure that direct PE resource costs are fully reflected in PE RVUs. Another commenter supported the proposal to establish a PE stabilization adjustment to safeguard against unintended payment swings while allowing CMS to continue modernizing the PE methodology, but stated that a 2 to 3 percent adjustment would be more appropriate, particularly for CY 2027 because CMS proposed multiple changes to the PE methodology. The commenter also supported CMS' consideration of extending the PE stabilization adjustment to new and revised codes and codes that are newly nationally priced and encouraged CMS to develop an appropriate methodology for providing comparable protection to newly established services without compromising the accuracy of their initial valuations. Another commenter requested that CMS extend the proposed PE stabilization adjustment to revalued codes, or at a minimum, to codes revalued on a single direct PE input cost change rather than a full RUC survey, and stated that the statutory phase-in of significant RVU reductions is not a sufficient cushion. Another commenter stated that we should modify the PE stabilization adjustment to either have a fixed duration or larger percentage because, as proposed, limiting annual changes to 5 percent would mean that, for the commenter's most commonly billed codes, it would take nearly a decade of phase-in before the RVUs fully reflected their current, updated valuation. The commenter recommends a 4-year, 5 percent PE stabilization adjustment that allows providers to prepare for the updated code values.

Response: We agree with the commenters that changes due to revaluation, such as changes to a code's direct PE prices, should be exempt from the PE stabilization adjustment. As noted previously, the PE stabilization adjustment will not apply to revalued codes, such as the commenter's example of PE input changes, because we believe the statutory phase-in sufficiently limits large reductions in total RVUs to individual codes undergoing review and/or revaluation. This exemption also limits the amount of time a revalued code would remain under- or overvalued by being significantly constrained from increases or reductions found to be appropriate through revaluation. Although revalued codes are excluded from the PE stabilization adjustment, significant decreases in total RVUs are statutorily phased-in for codes that are not new or revised. As the commenter mentioned, for CY 2027, we proposed changes to the supply code SA119's price, which decreased the PE RVU for CPT code 97610 (*Low frequency, non-contact, non-thermal ultrasound, including topical application(s), when performed, wound assessment, and instruction(s) for ongoing care, per day*). Because this reduction was the result of revaluation of the code's supply input, CPT code 97610 is exempt from the PE stabilization adjustment, but the statutory phase-in of significant total RVU decreases does apply because it is an existing code, not new or revised, whose total RVU decrease is greater than 19 percent. We do not agree with the commenter that we should apply the PE stabilization adjustment in these instances because it would extend the amount of time that a code would remain constrained from increases or reductions found to be appropriate through revaluation. Conversely, the PE RVU for CPT code 99285 (*Emergency department visit for the evaluation and management of a patient, which requires a medically appropriate history and/or examination and high level of medical decision making*) will increase as the result of our proposed PE methodology changes (that is, removal of IPCI). It is not subject to the 19 percent statutory phase-in of significant RVU decreases because it is an increase, but it is subject to the 5 percent PE stabilization adjustment and the increase will be effectively phased-in by that policy. We encourage interested parties to review the additional public use file provided with this final rule that details the codes subject to the PE stabilization adjustment.

We appreciate the commenters' request for further explanation of how the PE stabilization adjustment interacts with the existing statutory phase-in of significant RVU reductions. As illustrated by the examples noted previously, the two policies operate independently and apply to different sources of RVU change: the statutory phase-in applies to a code's total RVU decrease, and is implemented on the PE RVU, while the PE stabilization adjustment applies specifically to changes in PE RVUs, typically resulting from methodological changes rather than code-by-code changes (that is, the sum-based indirect PE allocation and removal of the IPCI proposed for CY 2027), and does not apply when the change results from revaluation. A code may therefore be subject to one, both, or neither policy depending on the source and magnitude of its RVU changes for a given year, although we note that it is unlikely for a code to be subject to both since revalued codes are exempt from the PE stabilization adjustment, which is the most likely source of significant decreases in total RVUs greater than 19 percent. The PE stabilization adjustment is primarily intended to mitigate volatility and improve predictability of the PE RVUs that result from changes to the PE methodology.

We appreciate the commenters' feedback about considering alternative higher and lower percentages and a fixed duration of the PE stabilization adjustment. However, as discussed previously, we believe 5 percent is a reasonable balance between safeguarding against significant, unintended payment volatility while still allowing meaningful progress toward more accurate PE valuations within a reasonable timeframe, and we are finalizing the PE stabilization adjustment at 5 percent as proposed. We are not extending the PE stabilization adjustment to new, revised, or newly nationally priced codes at this time

because it is not clear what the comparison PE RVU would be for those codes. However, we remain interested in a methodology that would extend the PE stabilization adjustment to these services and invite stakeholders to share methodological approaches for us to consider in future rulemaking.

After consideration of public comments, we are finalizing the proposals to remove steps 12 through 17 that rely on the IPCI from the calculation of the PE RVUs over a 2-year transition period, and to add a new step to the PE methodology to apply a 5 percent PE stabilization adjustment to the PE RVUs, as proposed.

Step 20: Apply the phase-in of significant RVU reductions and its associated adjustment. Section 1848(c)(7) of the Act specifies that for services that are not new or revised codes, if the total RVUs for a service for a year would otherwise be decreased by an estimated 20 percent or more as compared to the total RVUs for the previous year, the applicable adjustments in work, PE, and MP RVUs must be phased in over a 2-year period. In implementing the phase-in, we consider a 19 percent reduction as the maximum 1-year reduction for any service not described by a new or revised code. This approach limits the year 1 reduction for the service to the maximum allowed amount (that is, 19 percent) and then phases in the remainder of the reduction. To comply with section 1848(c)(7) of the Act, we adjust the PE RVUs to ensure that the total RVUs for all services that are not new or revised codes decrease by no more than 19 percent, and then apply a relativity adjustment to ensure that the total pool of aggregate PE RVUs remains relative to the pool of work and MP RVUs. For a more detailed description of the methodology for the phase-in of significant RVU changes, we refer readers to the CY 2016 PFS final rule with comment period (80 FR 70927 through 70931).

In summary, for CY 2027, we proposed, and have now finalized our proposals to:

- Modify step 8 to calculate indirect PE based on both work RVUs and clinical labor RVUs for all services except 10- and 90-day global period codes;
- Remove steps 12 through 17 that rely on the IPCI from the calculation of the PE RVUs over a 2-year transition period, and;
- Add a new step to apply a PE stabilization adjustment to the PE RVUs (new step 19).

(e) Setup File Information

- Specialties excluded from ratesetting calculation: To calculate the PE and MP RVUs, we exclude certain specialties, such as NPPs paid at a percentage of the PFS and low volume specialties, from the calculation. These specialties are included to calculate the BN adjustment. They are displayed in Table A–B2.

BILLING CODE 4169–69–P

TABLE A-B2: SPECIALTIES EXCLUDED FROM RATESETTING CALCULATION

Specialty Code	Specialty Description
49	Ambulatory surgical center
50	Nurse practitioner
51	Medical supply company with certified orthotist
52	Medical supply company with certified prosthetist
53	Medical supply company with certified prosthetist-orthotist
54	Medical supply company not included in 51, 52, or 53.
55	Individual certified orthotist
56	Individual certified prosthetist
57	Individual certified prosthetist-orthotist
58	Medical supply company with registered pharmacist
59	Ambulance service supplier, for example, private ambulance companies, funeral homes, etc.
60	Public health or welfare agencies
61	Voluntary health or charitable agencies
73	Mass immunization roster biller
74	Radiation therapy centers
87	All other suppliers (for example, drug and department stores)
88	Unknown supplier/provider specialty
89	Certified clinical nurse specialist
96	Optician
97	Physician assistant
A0	Hospital
A1	Skilled nursing facility
A2	Intermediate care nursing facility
A3	Nursing facility, other
A4	HHA
A5	Pharmacy
A6	Medical supply company with respiratory therapist
A7	Department store
A8	Grocery store
B1	Supplier of oxygen and/or oxygen related equipment (eff. 10/2/2007)
B2	Pedorthic personnel
B3	Medical supply company with pedorthic personnel
B4	Rehabilitation Agency
B5	Ocularist
C1	Centralized Flu
C2	Indirect Payment Procedure
C5	Dentistry

BILLING CODE 4169–69–C

- *Crosswalk certain low volume physician specialties:* Crosswalk the utilization of certain specialties with relatively low PFS utilization to the associated specialties.
- *Physical therapy utilization:* Crosswalk the utilization associated with all physical therapy services to the specialty of physical therapy.
- *Identify professional and technical services not identified under the usual technical component (TC) and professional component (PC or 26) modifiers:* Flag the services that are PC and TC services but do not use TC and PC/26 modifiers (for example, electrocardiograms). This flag associates the PC and TC with the associated global code for use in creating the indirect PE RVUs. For example, the professional service, CPT code 93010 (Electrocardiogram, routine ECG with at least 12 leads; interpretation and report only), is associated with the global service, CPT code 93000 (Electrocardiogram, routine ECG with at least 12 leads; with interpretation and report).
- *Payment modifiers:* In the CY 2013 PFS final rule with comment period (77 FR 68901), we introduced a more detailed methodology for adjusting volume and time to account for payment modifiers and other special payment rules, such as multiple procedure payment reductions, in the utilization data. We proposed that, beginning in CY 2027, we would utilize a new approach to account for payment modifiers and other special payment rules. For each paid claim line, we would calculate the ratio of allowed charges to the national PFS payment amount. This would account for differences resulting from payment modifiers and other special payment rules, as well as differences in geography. We proposed to use the same ratio to adjust time, rather than a separate calculation under our current methodology, with the exception of anesthesia, for which we calculate time using only procedures with modifiers indicating they are personally

performed. These proposed changes will allow us to more accurately capture any combination of modifiers and special payment rules and automatically account for updates in modifiers and/or special payment rules in future years. These proposed changes have a very minimal impact on the resulting PE RVUs but will produce a more accurate result. As under our current methodology, the adjusted volume will be displayed in the utilization public use file that is posted in conjunction with each PFS rule.

Comment: Several commenters identified large declines in the total allowed charges displayed for certain specialties, such as Pathology Independent Laboratories, and Physical and Occupational Therapy, in Table D–B5 ''Estimated Impact on Total Allowed Charges by Specialty'' of the CY 2027 PFS proposed rule (91 FR 44244–44248). Commenters stated that nothing in the PFS proposed rule appeared to explain declines of this scale and the figures seemed inconsistent with the considerably smaller percentage payment effects reported elsewhere in the table. Commenters asked whether these estimates arose from a reporting error or resulted from a change in data or methodology in the proposed rule.

Response: We appreciate commenters raising this issue. We identified and corrected a minor technical error that impacted the adjusted utilization of codes that are frequently furnished in multiple MTUS (miles, time, units), such as codes reported in time or square centimeter increments. This technical error in the adjusted utilization resulted in erroneous decreased allowed charges in Table D–B5 of the proposed rule for specialties that bill these types of codes like the specialties that commenters raised concerns about. We appreciate the feedback from interested parties in identifying this error, which has been corrected in the adjusted utilization for the final rule.

Comment: Some commenters noted that CMS has published detailed modifier-specific utilization data in the public use files with each proposed and final PFS rule for decades. Commenters expressed concern that CMS excluded all modifiers except for -26, -TC, and -53 in the utilization data public use file for this proposed rule, which commenters say is particularly challenging when CMS proposed changes to modifier 25 and for HCPCS code G2211 to instead be reported with modifiers. Commenters recommend that CMS change the ''CY 2027 2025 Utilization Data Crosswalked to 2027'' to include all modifiers to maintain a sufficient level of transparency for interested parties. Several commenters requested that CMS consider providing additional supporting materials such as utilization crosswalk files between the current and previous years. The commenters also requested the restoration of utilization file fields (such as undiscounted allowed services, PE, MP, and work discounted allowed services, and complete modifier columns).

Response: We no longer display the work, PE, and MP adjusted allowed services columns in the Utilization Data file because of our proposed changes to the adjusted utilization process, described previously. The proposed approach to calculate the ratio of allowed charges to the national PFS payment amount to adjust utilization means that all current payment modifiers, special payment rules, and geographic adjustments are accounted for in column G of the utilization data public use file. Additionally, the new columns H and I are discussed in the proposed rule at 91 FR 44248. Because the modifier -25 (column H) and modifier B1 (referred to as MOD1 in the proposed rule) and modifier B2 (referred to as MOD2 in the proposed rule) (column I) proposals impact adjusted utilization, they are also accounted for in the utilization data public use file, but we believed it would be best to publish these new columns separately to help commenters understand the impact of the proposals. As a result, Column J is the cumulative adjusted utilization of columns G, H, and I that was used in CY 2027 PFS ratesetting, effectively accounting for our proposed new approach to adjust utilization for current payment modifiers, geographic adjustments, and special payment rules, plus our proposed changes to modifier 25, modifier B1 (referred to as MOD1 in the proposed rule) and modifier B2 (referred to as MOD2 in the proposed rule). As the commenter mentioned, modifiers -26, -TC, and -53 (for select services) remain in the utilization data file because codes with these modifiers are listed with separate base RVUs in the payment files (that is, Addendum B) before any modifiers are applied, which distinguishes them from all other payment modifiers and geographic adjustments which typically impact payment for a claim at the time of processing.

We appreciate the commenters' feedback about the additional supporting materials that would be helpful for interested parties and may consider for future rulemaking. In an effort to improve transparency, we are including both allowed services and MTUS in the file for the final rule. We note that, for the proposed rule, the unadjusted and adjusted allowed services columns were inadvertently mislabeled and actually represented unadjusted and adjusted MTUS. For the purposes of ratesetting, for non-anesthesia services, MTUS represent the unit for which PFS rates are established and are the correct measure of service utilization. For the final rule, we have added allowed services to the file for reference since it reflects the number of times the service was provided, regardless of the number of units reported for each service, although it is not used in ratesetting. Anesthesia services do not have RVUs or payment amounts listed in our payment files but are included in the total RVU pool used to establish budget neutrality. To accomplish this, we use allowed services and calculate RVUs based on average allowed charges by service to capture anesthesia spending within the ratesetting process. Therefore, the file does not report MTUS for anesthesia services, only allowed services, which are reflected in the value in Column J of adjusted utilization file, which is used in ratesetting.

Comment: A commenter did not support the proposed new approach to account for payment modifiers and other special payment rules and requested that CMS eliminate all geographic adjustments from the PFS except for those designed to achieve a specific public policy goal (for example, to encourage physicians to practice in underserved areas). To the extent the proposed new approach to accounting for payment modifiers and other special payment rules also accounts for and potentially adjusts RVUs based on geography, the commenter opposed the proposal and would, instead, recommend that CMS continue to use its current approach or otherwise find an approach that does not further geographically adjust Medicare payments.

Response: Section 1848(e)(1)(A) of the Act requires us to develop Geographic Practice Cost Indices (GPCIs) to measure relative cost differences among localities compared to the national average for each of the three fee schedule components (that is, work, practice expense (PE), and malpractice (MP)), therefore, we do not have the statutory authority to eliminate all geographic adjustments from the PFS. Additionally, utilization at the geographic level has always been used in PFS ratesetting, but the new proposed approach allows us to more accurately capture any combination of modifiers, geographic adjustments, and special payment rules in the claims data that underpins PFS ratesetting.

Comment: A commenter stated that, when CMS transitioned to the PE methodology in CY 2007, utilization was assigned exclusively to physical therapy, not to the previously combined ''physical and occupational therapy practice expense pool.'' All prior crosswalks had been to PT and OT, and no policy rationale was given for dropping OT from the crosswalk in 2007. The commenter stated that this methodology resulted in all therapy treatment codes where OT or speech language pathology (SLP) account for the majority of billing volume, receiving PT's IPCI, which is the lowest of the three therapy disciplines. The commenter stated that even under the CY 2027 proposal to remove the IPCI over 2 years, the crosswalk continues to matter during the transition year as half the IPCI will still be applied, and the utilization crosswalk ensures that it will be applied at PT's lower index rather than the actual specialty blend, and requested for CMS to remove the following step when establishing the final CY 2027 setup file: ''Physical therapy utilization: Crosswalk the utilization associated with all physical therapy services to the specialty of physical therapy''.

Response: We did not propose to change how utilization is assigned to the therapy specialties for IPCI purposes, a policy which was finalized in CY 2007 rulemaking (71 FR 69635), and we are not finalizing a change since CY 2027 will be the only transition year before the elimination of the IPCI for CY 2028. We believe that this issue identified by the commenter provides an example of the public confusion and counterintuitive results associated with the IPCI which is why we proposed to transition away from its use.

After consideration of the comments, we are finalizing the new approach to account for payment modifiers and other special payment rules, as proposed, with the minor technical error identified corrected for the final rule.

- *Work RVUs:* The setup file contains the work RVUs from this final rule.

(6) Equipment Cost Per Minute

The equipment cost per minute is calculated as:

(1/(minutes per year * usage)) * price * ((interest rate/(1 − (1/((1 + interest rate) − life of equipment)))) + maintenance)

Where:

minutes per year = maximum minutes per year if usage were continuous (that is, usage = 1); generally, 150,000 minutes.
usage = variable, see discussion later in this final rule.
price = price of the particular piece of equipment.
life of equipment = useful life of the particular piece of equipment.
maintenance = factor for maintenance; 0.05.
interest rate = variable, see discussion later in this proposed rule.

Usage: We currently use an equipment utilization rate assumption of 50 percent for most equipment, with the exception of expensive diagnostic imaging equipment, for which we use a 90 percent assumption as required by section 1848(b)(4)(C) of the Act.

Useful Life: In the CY 2005 PFS final rule we stated that we updated the useful life for equipment items primarily based on the AHA's ''Estimated Useful Lives of Depreciable Hospital Assets'' guidelines (69 FR 66246). The most recent edition of these guidelines was published in 2018. This reference material provides an estimated useful life for hundreds of different types of equipment, the vast majority of which fall in the range of 5 to 10 years, and none of which are lower than 2 years in duration. We believe that the updated editions of this reference material remain the most accurate source for estimating the useful life of depreciable medical equipment.

In the CY 2021 PFS final rule, (85 FR 84482 through 84483) we finalized a proposal to treat equipment life durations of less than 1 year as having a duration of 1 year for the purpose of our equipment price per minute formula. In the rare cases where items are replaced every few months, we noted that we believe it is more accurate to treat these items as disposable supplies with a fractional supply quantity as opposed to equipment items with very short equipment life durations. For a more detailed discussion of the methodology associated with very short equipment life durations, we refer readers to the CY 2021 PFS final rule (85 FR 84482 through 84483).

- *Maintenance:* We finalized the 5 percent factor for annual maintenance in the CY 1998 PFS final rule with comment period (62 FR 33164). As we previously stated in the CY 2016 PFS final rule with comment period (80 FR 70897), we do not believe the annual maintenance factor for all equipment is precisely 5 percent, and we concur that the current rate likely understates the true cost of maintaining some equipment. We also noted that we believe it likely overstates the maintenance costs for other equipment. When we solicited comments regarding data sources containing equipment maintenance rates, commenters could not identify an auditable, robust data source that CMS could use on a wide scale. We noted that we did not believe voluntary submissions regarding the maintenance costs of individual equipment items would be an appropriate methodology for determining costs. As a result, in the absence of publicly available datasets regarding equipment maintenance costs or another systematic data collection methodology for determining a different maintenance factor, in the proposed rule, we did not propose a variable maintenance factor for equipment cost per minute pricing as we did not believe that we have sufficient information at present. We noted in the CY 2026 PFS proposed rule (90 FR 32593) that we would continue to investigate potential avenues for determining equipment maintenance costs across a broad range of equipment items.

- *Interest Rate:* In the CY 2013 PFS final rule with comment period (77 FR 68902), we updated the interest rates used in developing an equipment cost per minute calculation (see 77 FR 68902 for a thorough discussion of this issue). The interest rate was based on the Small Business Administration (SBA) maximum interest rates for different categories of loan size (equipment cost) and maturity (useful life). The interest rates are listed in Table A–B3.

TABLE A-B3: SBA MAXIMUM INTEREST RATES

Price	Useful Life	Interest Rate
<$25K	<7 Years	7.50%
$25K to $50K	<7 Years	6.50%
>$50K	<7 Years	5.50%
<$25K	7+ Years	8.00%
$25K to $50K	7+ Years	7.00%
>$50K	7+ Years	6.00%

We did not propose and we are not finalizing any changes to the equipment interest rates for CY 2027.

3. Adjusting RVUs To Match the PE Share of the Medicare Economic Index (MEI)

We have long stated that we believe that the MEI is the best measure available to determine the relative weights of the three components in payments under the PFS—work, practice expense (PE), and malpractice (MP). Accordingly, we believe that to ensure that the PFS payments reflect the relative resources in each of these PFS components as required by section 1848(c)(3) of the Act, the RVUs used in developing rates should reflect the same weights in each component as the cost share weights in the Medicare Economic Index (MEI). Accordingly, we have finalized to accomplish this (78 FR 74241 through 74242) by holding the work RVUs constant and adjusting the PE RVUs, MP RVUs, and conversion factor (CF) to produce the appropriate balance in RVUs among the three PFS components and payment rates for individual services, that is, that the total RVUs on the PFS are proportioned to approximately 51 percent work RVUs, 45 percent PE RVUs, and 4 percent MP RVUs. Historically, as the MEI cost shares are updated, we have proposed to modify steps 3 and 10 to adjust the aggregate pools of PE costs (direct PE in step 3 and indirect PE in step 10) in proportion to the change in the PE share in the MEI cost share weights, and to recalibrate the relativity adjustment that we apply in step 18 as described in the CY 2023 PFS final rule (87 FR 69414 and 69415) and CY 2014 PFS final rule (78 FR 74236 and 74237). The most recent recalibration was done for the CY 2014 RVUs.

However, due to overarching concerns with the data as described in the CY 2026 PFS final rule (90 FR 49287 through 49293) and our previously described policy goal to balance PFS payment stability and predictability with incorporating new data through routine updates to the MEI, we finalized our proposal to maintain the current PE/HR and 2006-based MEI cost shares (rather than transitioning to the 2017-based MEI cost shares). Additionally, for CY 2027, we proposed to continue to use the current PE/HR and 2006-based MEI cost shares for CY 2027 PFS ratesetting. We received public comments on this proposal. The following is a summary of the comments we received and our responses.

Comment: Few commenters requested that we implement the 2024 PPI and CPI Survey PE/HR data and cost shares in PFS ratesetting for CY 2027. Several commenters requested that we update the cost shares to the most currently available MEI. Several commenters supported our proposal to continue using the current PE/HR and 2006-based MEI cost shares for CY 2027 PFS ratesetting, or until the 2024 PPI Survey data may be considered. Some commenters stated that we should not implement the PPI and CPI Survey data until the issues discussed in the CY 2026 final rule have been addressed.

Response: We agree with commenters that we should continue using the current PE/HR and 2006-based MEI cost shares for CY 2027 PFS ratesetting, and may consider the commenters' feedback in future rulemaking as we consider data to update the cost shares.

After consideration of the public comments, we are finalizing our proposal to continue to use the current PE/HR and 2006-based MEI cost shares for CY 2027 PFS ratesetting.

4. Changes to Direct PE Inputs for Specific Services

This section focuses on specific PE inputs. The direct PE inputs are included in the CY 2027 direct PE input public use files, which are available on the CMS website under downloads for the CY 2027 PFS final rule at *https://www.cms.gov/medicare/payment/fee-schedules/physician/federal-regulation-notices*.

a. Standardization of Clinical Labor Tasks

As we noted in the CY 2015 PFS final rule with comment period (79 FR 67640 through 67641), we continue to make improvements to the direct PE input database to provide the number of clinical labor minutes assigned for each task for every code in the database instead of only including the number of clinical labor minutes for the preservice, service, and post service periods for each code. In addition to increasing the transparency of the information used to set PE RVUs, this level of detail would allow us to compare clinical labor times for activities associated with services across the PFS, which we believe is important to maintaining the relativity of the direct PE inputs. This information would facilitate the identification of the usual numbers of minutes for clinical labor tasks and the identification of exceptions to the usual values. It would also allow for greater transparency and consistency in the assignment of equipment minutes based on clinical labor times. Finally, we believe that the detailed information can be useful in maintaining standard times for particular clinical labor tasks that can be applied consistently to many codes as they are valued over several years, similar in principle to physician preservice time packages. We believe that setting and maintaining such standards would provide greater consistency among codes that share the same clinical labor tasks and could improve the relativity of values among codes. For example, as medical practice and technologies change over time, standards could be updated simultaneously for all codes with the applicable clinical labor tasks instead of waiting for individual codes to be reviewed.

In the CY 2016 PFS final rule with comment period (80 FR 70901), we solicited comments on the appropriate standard minutes for the clinical labor tasks associated with services that use digital technology. After consideration of comments received, we finalized standard times for clinical labor tasks associated with digital imaging at 2 minutes for ''Availability of prior images confirmed'', 2 minutes for ''Patient clinical information and questionnaire reviewed by technologist, order from physician confirmed and

exam protocoled by radiologist'', 2 minutes for ''Review examination with interpreting MD'', and 1 minute for ''Exam documents scanned into PACS'' and ''Exam completed in RIS system to generate billing process and to populate images into Radiologist work queue.'' In the CY 2017 PFS final rule (81 FR 80184 through 80186), we finalized a policy to establish a range of appropriate standard minutes for the clinical labor activity, ''Technologist QCs images in PACS, checking for all images, reformats, and dose page.'' These standard minutes will be applied to new and revised codes that make use of this clinical labor activity when they are reviewed by us for valuation. We finalized a policy to establish 2 minutes as the standard for the simple case, 3 minutes as the standard for the intermediate case, 4 minutes as the standard for the complex case, and 5 minutes as the standard for the highly complex case. These values were based upon a review of the existing minutes assigned for this clinical labor activity; we determined that 2 minutes is the duration for most services and a small number of codes with more complex forms of digital imaging have higher values. We also finalized standard times for a series of clinical labor tasks associated with pathology services in the CY 2016 PFS final rule with comment period (80 FR 70902). We do not believe these activities would be dependent on the number of blocks or batch size, and we believe that the finalized standard values accurately reflect the typical time it takes to perform these clinical labor tasks.

In reviewing the RUC-recommended direct PE inputs for CY 2019, we noticed that the 3 minutes of clinical labor time traditionally assigned to the ''Prepare room, equipment and supplies'' (CA013) clinical labor activity were split into 2 minutes for the ''Prepare room, equipment and supplies'' activity and 1 minute for the ''Confirm order, protocol exam'' (CA014) activity. We proposed to maintain the 3 minutes of clinical labor time for the ''Prepare room, equipment and supplies'' activity and remove the clinical labor time for the ''Confirm order, protocol exam'' activity wherever we observed this pattern in the RUC-recommended direct PE inputs. Commenters explained in response that when the new version of the PE worksheet introduced the activity codes for clinical labor, there was a need to translate old clinical labor tasks into the new activity codes, and that a prior clinical labor task was split into two of the new clinical labor activity codes: CA007 (*Review patient clinical extant information and questionnaire*) in the preservice period, and CA014 (*Confirm order, protocol exam*) in the service period. Commenters stated that the same clinical labor from the old PE worksheet was now divided into the CA007 and CA014 activity codes, with a standard of 1 minute for each activity. We agreed with commenters that we would finalize the RUC-recommended 2 minutes of clinical labor time for the CA007 activity code and 1 minute for the CA014 activity code in situations where this was the case. However, when reviewing the clinical labor for the reviewed codes affected by this issue, we found that several of the codes did not include this old clinical labor task, and we also noted that several of the reviewed codes that contained the CA014 clinical labor activity code did not contain any clinical labor for the CA007 activity. In these situations, we believe that the three total minutes of clinical staff time would be more accurately described by the CA013 ''Prepare room, equipment and supplies'' activity code, and we finalized these clinical labor refinements. We direct readers to the discussion in the CY 2019 PFS final rule (83 FR 59463 through 59464) for additional details.

Following the publication of the CY 2020 PFS proposed rule, a commenter expressed concern with the published list of common refinements to equipment time. The commenter stated that these refinements were the formulaic result of applying refinements to the clinical labor time and did not constitute separate refinements; the commenter requested that CMS no longer include these refinements in the table published each year. In the CY 2020 PFS final rule, we agreed with the commenter that these equipment time refinements did not reflect errors in the equipment recommendations or policy discrepancies with the RUC's equipment time recommendations. However, we believed it was important to publish the specific equipment times that we were proposing (or finalizing in the case of the final rule) when they differed from the recommended values due to the effect these changes can have on the direct costs associated with equipment time. Therefore, we finalized the separation of the equipment time refinements associated with changes in clinical labor into a separate table of refinements. We direct readers to the discussion in the CY 2020 PFS final rule (84 FR 62584) for additional details.

Historically, the RUC has submitted a ''PE worksheet'' that details the recommended direct PE inputs for our use in developing PE RVUs. The format of the PE worksheet has varied over time, and among the medical specialties developing the recommendations. These variations have made it difficult for the RUC's development and our review of code values for individual codes. Beginning with its recommendations for CY 2019, the RUC mandated the use of a new PE worksheet for its recommendation development process that standardizes the clinical labor tasks and assigns them a clinical labor activity code. We believe the RUC's use of the new PE worksheet in developing and submitting recommendations helps us simplify and standardize the hundreds of clinical labor tasks currently listed in our direct PE database. To facilitate rulemaking for CY 2027, we are displaying the Labor Task Detail public use file that contains the current listing of clinical labor activity codes. This file is available on the CMS website under downloads for the CY 2027 PFS final rule at *https://www.cms.gov/medicare/payment/fee-schedules/physician/federal-regulation-notices*.

b. Updates to Prices for Existing Direct PE Inputs

In the CY 2011 PFS final rule with comment period (75 FR 73205), we finalized a process to act on public requests to update equipment and supply price and equipment useful life inputs through annual rulemaking, beginning with the CY 2012 PFS proposed rule. Beginning in CY 2019 and continuing through CY 2022, we conducted a market-based supply and equipment pricing update using information developed by our contractor which updated pricing recommendations for approximately 1300 supplies and 750 equipment items currently used as direct PE inputs. Given the potentially significant changes in payment that would occur, in the CY 2019 PFS final rule, we finalized a policy to phase in our use of the new direct PE input pricing over a 4-year period using a 25/75 percent (CY PFS 2019), 50/50 percent (CY PFS 2020), 75/25 percent (CY PFS 2021), and 100/0 percent (CY PFS 2022) split between new and old pricing. We believe that implementing the proposed updated prices with a 4-year phase-in would improve payment accuracy while maintaining stability and allowing interested parties to address potential concerns about changes in payment for particular items. This 4-year transition period to update supply and equipment pricing concluded in CY 2022; for a more detailed discussion, we refer readers to the CY 2019 PFS final rule

with comment period (83 FR 59473 through 59480).

For CY 2027, we proposed to update the price of nine supplies and two equipment items in response to the public submission of invoices following the publication of the CY 2026 PFS final rule. These supply and equipment items with updated prices are listed in the valuation of specific codes section of the final rule under Table A–D9, CY 2027 Invoices Received for Existing Direct PE Inputs.

These proposed pricing updates included a request from the RUC to update the pricing of the moderate sedation pack (SA044) to more accurately reflect its components. The RUC determined that a sterile gown is not needed as part of the moderate sedation pack, however, a regular staff gown should be included to protect the sedation provider from all body fluids, substance, and excretions. The RUC also requested that a mask would be an appropriate addition in the sedation pack, resulting in a price change from the current $19.20, minus the $5.13 sterile gown, plus the $1.19 staff gown and $0.43 mask, for a new total price of $15.69. We proposed this $15.69 price for the SA044 moderate sedation pack which is reflected in Table A–D9, CY 2027 Invoices Received for Existing Direct PE Inputs.

Additionally, we received a potentially misvalued code (PMVC) nomination for SA119 kit, low frequency ultrasound wound therapy (MIST) and proposed an updated supply cost from $320.18 to $100 for SA119. We refer readers to section II.D. of this final rule for more information about this proposal.

Comment: Many commenters stated that they approved of the proposed pricing changes included in the CY 2027 PFS proposed rule. Different commenters stated their approval for the proposed change in pricing for the aquatic therapy pool (EQ050), the liposorber system (EQ174), the Universal Detection Kit (SA117), the Varithena admin pack (SA125), the Varithena (foam) (SD324), the Dorsal SI Joint Arthrodesis Implant (SD356), and the Esketamine (56 mg vial) (SH109) and Esketamine (84 mg vial) (SH110) supplies.

Response: We appreciate the support for our proposed pricing from the commenters.

Comment: A commenter stated that the existing supply cost for the purified protein derivative (SH059) supply falls short of covering the cost of the product, leading many pediatric practices to stop purchasing the product and potentially reducing patient access to tuberculosis skin testing. The commenter requested that CMS increase the supply cost for the SH059 purified protein derivative supply to better reflect the actual cost paid by practices and align payment with current market pricing; to this effect, the commenter submitted five invoices with updated pricing information.

Response: We appreciate the submission of these invoices from the commenter to assist in updating the price of the SH059 supply. In reviewing these invoices, we determined that they averaged out to a price of $138.60 by selling 10 doses in 1 mL vials, a substantial increase over the current $26.11 price for the SH059 supply. We were able to find unit prices of $36.70 and $51.44 when the product was sold in 50 doses of 5 mL vials which average together for a price of $44.07. Since we believe it would be more typical to purchase the SH059 in larger batch sizes given the considerable cost savings, we are finalizing an update in the price at the averaged $44.07 rate, which we note still constitutes a pricing increase of roughly 70% for the SH059 supply.

Comment: A commenter submitted invoices reflecting the costs associated with furnishing the SleepioRx product, together with a request to create a new direct PE supply code that refers to validated pricing for SleepioRx. The commenter stated that there was a lack of consistent contractor pricing for HCPCS code G0552 (*Supply of digital mental health treatment device and initial education and onboarding, per course of treatment that augments a behavioral therapy plan*) which uses this supply item and therefore creates an access barrier to Medicare beneficiaries with insomnia. The commenter urged CMS to establish a direct PE input supply code for SleepioRx, based on the submitted invoices and provide billing guidance to the Medicare Administrative Contractors (MACs).

Response: We appreciate the submission of these invoices from the commenter. We note that a supply code for this product was finalized last year in the CY 2026 PFS final rule, using the name ''Digital mental health device (insomnia)'' and using the supply code SD386 (90 FR 49460). This supply is currently not assigned to any CPT codes since HCPCS code G0552 is contractor priced and therefore cannot include any direct PE inputs; we did not propose to establish national pricing for HCPCS code G0552 and we are not finalizing a change in its contractor priced status at this time. However, we will update the price of the SD386 supply based on the invoices submitted by the commenters at a new price of $400.00. The SD386 supply is listed along with the other updated supply and equipment prices under Table A–D9, CY 2027 Invoices Received for Existing Direct PE Inputs.

Comment: A commenter requested that CMS establish new direct PE supply and equipment codes for the TearCare System, a technology that is used to perform the interventional procedure reported with CPT code 0563T (*Evacuation of meibomian glands, using heat delivered through wearable, open-eye eyelid treatment devices and manual gland expression, bilateral*) to treat dry eye disease (DED) due to meibomian gland dysfunction (MGD). The commenter specified that they were not requesting that CMS establish national pricing for CPT code 0563T, instead stating that establishing supply and equipment codes for these devices would provide greater transparency and consistency in valuation, support more uniform reimbursement policies nationwide, and better align payment with the resources associated with performing the procedure among the Medicare Administrative Contractors (MACs). The commenter submitted 16 invoices to support the establishment of these new supply and equipment codes associated with the resources used to furnish CPT code 0563T.

Response: We appreciate the submission of these invoices from the commenter with additional pricing information. After reviewing the invoices, we are finalizing the establishment of a new supply code for Smart Lids (SD397) at a price of $1000 and a new equipment code for a Smart Hub (EQ423) at a price of $6583.33 based on an average of the submitted invoices. As the commenter noted, these new direct PE inputs are currently not assigned to any CPT codes since CPT code 0563T is contractor priced and therefore cannot include any direct PE inputs. However, we have added them to the ratesetting database as requested by the commenter and they will appear in Table A–D10: CY 2027 Invoices Received for New Direct PE Inputs.

Comment: Several commenters submitted a series of invoices in support of establishing nonfacility pricing for CPT code 66984 (*Extracapsular cataract removal with insertion of intraocular lens prosthesis (1 stage procedure), manual or mechanical technique (eg, irrigation and aspiration or phacoemulsification); without endoscopic cyclophotocoagulation*) along with related CPT codes 65820, 66174, 66982, 66989, and 66991. Commenters stated that these invoices substantiated the direct PE costs of

performing cataract surgery and requested that CMS use them to develop nonfacility pricing for these codes.

Response: Although we appreciate the submission of these invoices from the commenters, we did not propose to establish nonfacility pricing for CPT code 66984 or any of the other related codes listed by the commenters. The submitted invoices included pricing for several dozen supply and equipment items, including some costs which are considered to be indirect under the current PE methodology such as building construction costs and service/licensing fees. It is unclear whether these invoices were intended to update the pricing for current supply and equipment items or establish new supply/equipment codes, as well as which items were intended to be associated with cataract surgery. We are not finalizing the creation of nonfacility pricing for CPT code 66984 or any of the other related codes listed by the commenters at this time; we remind interested parties that if they have reason to believe that individually services are inaccurately priced, we encourage them to submit a request under the potentially misvalued code initiative discussed elsewhere in this rule.

(1) Invoice Submission

We remind readers that we routinely accept public submissions of invoices as part of our process for developing payment rates for new, revised, and potentially misvalued codes. Often, these invoices are submitted in conjunction with the RUC-recommended values for the codes. To be included in a given year's proposed rule, we generally need to receive invoices by the same February 10th deadline we noted for consideration of RUC recommendations. However, as noted in the proposed rule we considered invoices submitted as public comments during the comment period following the publication of the CY 2027 PFS proposed rule and will consider any invoices received after February 10th or outside of the public comment process as part of our established annual process for requests to update supply and equipment prices. Interested parties are encouraged to submit invoices with their public comments or, if outside the notice and comment rulemaking process, via email at *PE_Price_Input_Update@cms.hhs.gov*.

(2) Supply Pack Pricing Update

Interested parties previously notified CMS that they identified numerous discrepancies between the aggregated cost of some supply packs and the individual item components contained within. The interested parties indicated that CMS should rectify these mathematical errors as soon as possible to ensure that the sum correctly matches the totals from the individual items, and they recommended that we resolve these pricing discrepancies in the supply packs during CY 2024 rule. The AMA RUC convened a workgroup on this subject and submitted recommendations to update pricing for a series of supply packs along with the RUC's comment letter for the CY 2024 rule cycle.

We appreciated the additional information and RUC workgroup recommendations regarding discrepancies in the aggregated cost of some supply packs. However, due to the projected significant cost revisions in the pricing of supply packs and because we did not propose to address supply pack pricing in the CY 2024 proposed rule, we stated in the CY 2024 final rule that this issue would be better addressed in future rulemaking. For example, the cleaning and disinfecting endoscope pack (SA042) is included as a supply input in more than 300 HCPCS codes, which could have a sizable impact on the overall valuation of these services, and which was not incorporated into the proposed RVUs published for the CY 2024 proposed rule. We stated that interested parties would be better served if we comprehensively addressed this topic during future rulemaking in which commenters could provide feedback in response to proposed pricing updates (88 FR 78833 through 78834).

For CY 2025, we proposed implementing the supply pack pricing update and associated revisions as recommended by the RUC's workgroup (89 FR 97726 through 97727). We proposed to update the pricing of the ''pack, cleaning and disinfecting, endoscope'' (SA042) supply from $19.43 to $31.29, to update the pricing of the ''pack, drapes, cystoscopy'' (SA045) supply from $17.33 to $14.99, to update the pricing of the ''pack, ocular photodynamic therapy'' (SA049) supply from $16.35 to $26.35, to update the pricing of the ''pack, urology cystoscopy visit'' (SA058) supply from $113.70 to $37.63, and to update the pricing of the ''pack, ophthalmology visit (w-dilation)'' (SA082) supply from $3.91 to $2.33. As recommended by the RUC workgroup, we also proposed to delete the ''pack, drapes, laparotomy (chest-abdomen)'' (SA046) supply entirely. The updated prices for these supply packs were listed in the valuation of specific codes section of this rule under Table A–B5, CY 2025 Invoices Received for Existing Direct PE Inputs (89 FR 97852).

In accordance with the RUC workgroup's recommendations, we also proposed to create eight new supply codes, including components contained within previously existing supply packs. Aside from the SB056 supply, which is a replacement in several HCPCS codes for the deleted SA046 supply pack, all of these new supplies are not included as standalone direct PE inputs in any current HCPCS codes, as they are, again, components contained within previously existing supply packs. We proposed to add:

- The kit, ocular photodynamic therapy (PDT) (SA137) supply at a price of $26.00 as a component of the SA049 supply pack;
- The Abdominal Drape Laparotomy Drape Sterile (100 in x 72 in x 124 in) (SB056) supply at a price of $8.049 as a replacement for the SA046 supply pack;
- The drape, surgical, legging (SB057) supply at a price of $3.284 as a component of the SA045 supply pack;
- The drape, surgical, split, impervious, absorbent (SB058) supply at a price of $8.424 as a component of the SA045 supply pack;
- The post-mydriatic spectacles (SB059) supply at a price of $0.328 as a component of the SA082 supply pack;
- The y-adapter cap (SD367) supply at a price of $0.352 as a component of the SA049 supply pack;
- The ortho-phthalaldehyde 0.55 percent (for example, Cidex OPA) (SM030) supply at a price of $0.554 as a component of the SA042 supply pack; and
- The ortho-phthalaldehyde test strips (SM031) supply at a price of $1.556 as a component of the SA042 supply pack.

The new supply pack component items were listed in the valuation of specific codes section of the rule under Table A–B8, CY 2025 PFS (89 FR 97722) New Invoices (89 FR 97853).

We also proposed the following additional supply substitutions based on the recommendations of the RUC workgroup. We proposed to remove the deleted SA046 supply pack and replace it with the drape, sterile, fenestrated 16in x 29in (SB011) supply for CPT codes 19020, 19101, 19110, 19112, 20101, and 20102. We proposed to remove the deleted SA046 supply pack and replace it with two supplies—the drape, sterile, three-quarter sheet (SB014) and the drape, towel, sterile 18in x 26in (SB019)—for CPT codes 19000 and 60300. We proposed to remove the deleted SA046 supply pack

and replace it with 2 supplies—the drape, towel, sterile 18in x 26in (SB019) and the newly created Abdominal Drape Laparotomy Drape Sterile (100 in x 72 in x 124 in) (SB056) supply—for CPT codes 22510, 22511, 22513, and 22514. We proposed to remove the deleted SA046 supply pack without replacing it with anything for CPT code 22526; the RUC workgroup did not make a recommendation on what to do with CPT code 27278, which also previously contained the SA046 supply pack. Therefore, we also proposed not to replace the SA046 supply pack with any supplies for this code. The RUC workgroup also recommended removing the SA046 supply pack from CPT code 64595 with no replacement; however, this code was recently reviewed at the April 2022 RUC meeting and it no longer includes the SA046 supply.

In the comments on the CY 2025 PFS proposed rule (89 FR 97727), several commenters supported the proposed supply pack pricing update as recommended by the RUC workgroup, however they indicated concern over the proposed decrease in the price of the urology cystoscopy visit pack (SA058) from $113.70 to $37.63. The commenters stated that the proposed pricing reduction in the SA058 supply could result in drastic payment rate cuts for physicians performing cystoscopy services in the office setting. The commenters requested that CMS either delay the pricing update or phase-in the supply pack changes over a 4-year period like it has done for other PE changes with significant redistributive effects, allowing independent urology practices to better prepare for the negative financial impact this change will have.

After considering these comments, we agreed that the use of a phased-in transition period would be appropriate to allow practitioners to adjust to the updated pricing of these supplies. During our previous supply and equipment pricing update in the CY 2019 PFS final rule (83 FR 59475), we finalized a policy to phase in any updated pricing that we established during the 4-year transition period for very commonly used supplies and equipment, such as sterile gloves (SB024) or exam tables (EF023), even if invoices were provided as part of the formal review of a code family. Based on this previously established policy, we finalized the use of a pricing transition for three supply packs in Table A–B4.

TABLE A-B4: CY 2025 SUPPLY PACK PRICING TRANSITION

CMS_ CODE	HCPCS Codes	CMS_2024 Price	Recommended Price	Year 1 (CY 2025) Price	Year 2 (CY 2026) Price	Year 3 (CY 2027) Price	Final (CY 2028) Price
SA042	306	$19.43	$31.29	$22.40	$25.36	$28.33	$31.29
SA058	38	$113.70	$37.63	$94.68	$75.67	$56.65	$37.63
SA082	145	$3.91	$2.33	$3.52	$3.12	$2.73	$2.33

Following the same pattern as our previous supply/equipment and clinical labor pricing updates, we finalized the implementation of this pricing transition over 4 years such that one-quarter of the difference between the current price and the fully phased-in price is implemented for CY 2025 PFS (89 FR 97722), one-third of the difference between the CY 2025 PFS (89 FR 97722) price and the final price is implemented for CY 2026 PFS, and one-half of the difference between the CY 2026 price and the final price is implemented for CY 2027, with the new direct PE prices fully implemented for CY 2028. For the other proposed supply packs, the cystoscopy drapes pack (SA045) is only included in seven HCPCS codes and the ocular photodynamic therapy pack (SA049) is only included in a single HCPCS code which do not meet these criteria established in previous rulemaking and described previously in this section. Therefore, we finalized each of them at their updated pricing for CY 2025 PFS (89 FR 97722) as proposed in the proposed rule. We believe that the use of this pricing transition will minimize any potential disruptive effects during the 4-year transition period that could be caused by other sudden shifts in RVUs due to the high number of services that make use of these very common supply packs.

Several commenters also stated that although five incomplete packs would have their pricing updated in the proposed rule, mathematical errors still remained for a number of additional supply packs. Commenters stated that only 3 of the 18 affirmed packs were priced correctly to match their components and provided tables showing the pricing of an additional 15 packs that needed mathematical correction by deconstructing the packs to determine the correct price through summing their individual components. Commenters requested that CMS initiate a correction of the packs pricing such that the sum of the individual components match the price of the corresponding pack as detailed in Table A–B5.

TABLE A-B5: SUPPLY PACK PRICING REQUESTED BY CY 2025 COMMENTERS

HCPCS Codes	Item Name	CMS Code	Current Price	New Price	% Change
111 codes	pack, basic injection	SA041	$10.45	$17.28	65%
560 codes	pack, cleaning, surgical instruments	SA043	$12.61	$11.09	-12%
3 codes	pack, moderate sedation	SA044	$18.55	$19.20	4%
4568 codes	pack, minimum multi-specialty visit	SA048	$5.02	$1.98	-61%
168 codes	pack, ophthalmology visit (no dilation)	SA050	$2.72	$1.35	-50%
239 codes	pack, pelvic exam	SA051	$20.16	$2.81	-86%
1079 codes	pack, post-op incision care (staple)	SA052	$4.80	$9.90	106%
469 codes	pack, post-op incision care (suture & staple)	SA053	$5.47	$11.54	111%
1708 codes	pack, post-op incision care (suture)	SA054	$4.62	$10.34	124%
12 codes	pack, post-op incision care, craniotomy	SA055	$7.30	$18.18	149%
24 codes	pack, post-op incision care, neurosurgical	SA056	$6.20	$16.05	159%
120 codes	pack, drapes, ortho, large	SA080	$37.30	$25.38	-32%
29 codes	pack, drapes, ortho, small	SA081	$2.25	$1.88	-16%
119 codes	pack, protective, ortho, large	SA083	$10.86	$14.75	36%
27 codes	pack, protective, ortho, small	SA084	$5.99	$8.15	36%

While we shared the concerns of the commenters regarding the need for accuracy in the pricing of these supply packs, we had reservations about their potential for pricing disruptions. Ten of these supply packs are included in the direct PE inputs for at least 100 HCPCS codes, and three of the packs are included in more than 1000 HCPCS codes. Many of these pricing updates would lead to drastic changes in pricing for these supply packs which are included in hundreds of HCPCS codes, such as the SA051 pelvic exam pack decreasing in price from $20.16 to $2.81 (−86 percent) and the SA048 minimum multi-specialty visit pack decreasing in price from $5.02 to $1.98 (−61 percent). We were particularly concerned that these changes in supply pack pricing could lead to significant shifts in the overall PE RVU for affected HCPCS codes, without these proposed rates appearing in the proposed rule or allowing any opportunity for public comment.

Therefore, we did not finalize pricing updates for these additional 15 supply packs as requested by commenters. We anticipated returning to this subject in future rulemaking to allow any changes in associated pricing for HCPCS codes to appear in the proposed rule and provide an opportunity for the public to comment. Should these supply pack pricing updates be proposed in future rulemaking, we anticipated that we might propose the same pricing transition described previously due to the number of potentially affected HCPCS codes. We finalized all of the other supply pack pricing changes as proposed, with the exception of the 4—year pricing transition for three supply packs as described previously in this section.

For CY 2026, we proposed to continue implementing the supply pack pricing update and associated revisions as previously recommended by the RUC's workgroup. We proposed to update the price of the 15 supply packs detailed in Table A–B5 which were received too late in CY 2025 PFS (89 FR 97722) to allow for proposed pricing or public comment. In the case of the surgical instruments cleaning pack (SA043), the moderate sedation pack (SA044) and the small ortho drapes pack (SA081), the proposed pricing update is modest enough that we proposed these supplies move immediately to their final prices for CY 2026.

For the 12 other supply packs, we proposed that they be incorporated into the muti-year supply pack pricing transition finalized in CY 2025 rulemaking. Rather than having two separate 4-year pricing transitions associated with supply packs, we proposed that these 12 additional supply packs fold into the previous pricing transition using the same methodology, such that one-third of the difference between the CY 2025 PFS (89 FR 97722) price and the final price is implemented for CY 2026, and one-half of the difference between the CY 2026 price and the final price is implemented for CY 2027, with the new direct PE prices fully implemented for CY 2028 (89 FR 97728). With the inclusion of the SA042, SA058, and SA082 supply packs which began their pricing transition for CY 2025, we proposed the total supply pack pricing update detailed in Table A–B6.

TABLE A-B6: SUPPLY PACK PRICING TRANSITION

CMS_ CODE	HCPCS Codes	CMS_2024 Price	Recommended Price	Year 1 (CY 2025) Price	Year 2 (CY 2026) Price	Year 3 (CY 2027) Price	Final (CY 2028) Price
SA042	306	$19.43	$31.29	$22.40	$25.36	$28.33	$31.29
SA058	38	$113.70	$37.63	$94.68	$75.67	$56.65	$37.63
SA082	145	$3.91	$2.33	$3.52	$3.12	$2.73	$2.33
SA041	111	$10.45	$17.28	-	$12.73	$15.00	$17.28
SA048	4568	$5.02	$1.98	-	$4.01	$2.99	$1.98
SA050	168	$2.72	$1.35	-	$2.26	$1.81	$1.35
SA051	239	$20.16	$2.81	-	$14.38	$8.59	$2.81
SA052	1079	$4.80	$9.90	-	$6.50	$8.20	$9.90
SA053	469	$5.47	$11.54	-	$7.49	$9.52	$11.54
SA054	1708	$4.62	$10.34	-	$6.53	$8.43	$10.34
SA055	12	$7.30	$18.18	-	$10.93	$14.55	$18.18
SA056	24	$6.20	$16.05	-	$9.48	$12.77	$16.05
SA080	120	$37.30	$25.38	-	$33.33	$29.35	$25.38
SA083	119	$10.86	$14.75	-	$12.16	$13.45	$14.75
SA084	27	$5.99	$8.15	-	$6.71	$7.43	$8.15
SD089	100	$20.56	$41.15	-	$27.42	$34.29	$41.15

Table A–B6 also includes the hydrophilic guidewire (SD089) supply which we proposed to transition in pricing over 3 years given its inclusion in approximately 100 HCPCS codes. We continue to believe that the use of this pricing transition will minimize any potential disruptive effects during the transition period that could be caused by other sudden shifts in RVUs due to the high number of services that make use of these very common supply items. After consideration of the public comments, we finalized our supply pack pricing policies as proposed in the CY 2026 PFS final rule (90 FR 49284).

For CY 2027, as stated in the proposed rule, these supply packs will continue with the third year of the previously finalized 4-year transition process as detailed in Table A–B6. In the proposed rule we noted that as is the case with other supply and equipment pricing, we would consider invoices associated with these supply packs which were submitted as public comments during the comment period following the publication of the CY 2027 PFS proposed rule as part of our established annual process for requests to update supply and equipment prices. We also encouraged interested parties to submit invoices with their public comments or, if outside the notice and comment rulemaking process, via email at *PE_Price_Input_Update@cms.hhs.gov*.

Comment: A commenter stated that they supported the continuing phase-in transition of supply pack pricing, specifically mentioning the SA041, SA042, SA048, SA052, SA053, and SA054 supply packs.

Response: We appreciate the support for our previously finalized policy from the commenter.

Comment: Several commenters stated that CMS should stop the continued pricing transition for the pelvic exam supply pack (SA051) and the cystoscopy visit supply pack (SA058). Commenters stated that these supply reductions were disconnected from actual practice costs and reductions in payment could create access barriers and push procedures into hospital outpatient departments where Medicare and patients generally pay more. Commenters requested that CMS freeze the price for these supply packs at their CY 2026 values and reconsider documentation of invoice pricing for these supplies.

Response: We share the concerns of the commenters regarding the large decreases in pricing associated with the SA051 and SA058 supply packs, which is why we finalized the use of a phased-in transition period in the CY 2025 PFS final rule (89 FR 97722). We note that the pricing of these supply packs was already finalized in the CY 2025 PFS final rule, with the four-year implementation continuing to take place in CY 2027. However, we also believe in the importance of valuing supply items at the most accurate market-based pricing available, and therefore we cannot continue to price these supply packs at rates much higher than the cost of the individual components that make up the total packs. We welcome the submission of updated invoices and other cost data associated with these supply packs for potential inclusion in future rulemaking; we note that we did not receive any invoices from commenters supporting different pricing for the SA051 and SA058 supply packs.

c. Technical Corrections to Direct PE Input Database and Supporting Files

Following the publication of the CY 2026 PFS final rule, the RUC submitted a potential technical correction issue related to global period assignment for approximately three dozen codes. The RUC stated that these codes had long descriptors which indicated that they were add-on codes ''(List separately in addition to code for primary procedure)''; however, these codes were assigned the XXX global period instead of the ZZZ global period. The RUC requested that CMS consider assigning the ZZZ global period for these codes as a technical correction.

We reviewed the list of codes submitted by the RUC and we agree that there appears to be a technical error in the global period assignment for these codes. Most of the affected codes have non-payable status codes and no RVUs, while the handful of affected HCPCS codes that do have RVUs specifically state in their descriptors that they were intended to be add-on codes, such as CPT code 88332 (Pathology consultation during surgery; each additional tissue block with frozen section(s)). We therefore proposed to change the following codes to the ZZZ global period:

TABLE A-B7: PROPOSED ZZZ GLOBAL PERIOD CODES

HCPCS	Short Descriptor
20930	Sp bone algrft morsel add-on
20936	Sp bone agrft local add-on
22841	Insert spine fixation device
81266	Str markers spec anal addl
81416	Exome sequence analysis
81426	Genome sequence analysis
81536	Oncology gynecologic
82952	Gtt-added samples
87187	Sc std microdil/agar mlc
87503	Influenza dna amp prob addl
87904	Phenotype dna hiv w/clt add
88314	Histochemical stains add-on
88332	Path consltj surg ea add blk
94645	Cont inhlj tx each addl hour
95940	Ionm in operatng room 15 min
95941	Ionm remote/>1 pt or per hr
99486	Suprv interfac trnsport addl
99602	Home nfs visit each addl hr
0054T	Bone srgry cmptr fluor image
0055T	Bone srgry cmptr ct/mri imag
0076T	S&i stent/chest vert art
0095T	Rmvl artific disc addl crvcl
0098T	Rev artific disc addl
0174T	Cad cxr with interp
0397T	Ercp w/optical endomicroscpy
G1028	Take home supply 8mg per 0.1
G2078	Take-home meth
G2079	Take-hom buprenorphine
G2080	Add 30 mins counsel
G2215	Home supply nasal naloxone
G2216	Home supply inject naloxon
S2351	Diskectomy, anterior, with d
S2900	Robotic surgical system

The RUC also requested assigning the ZZZ global period to three anesthesia codes: CPT codes 01953, 01968, and 01969. However, currently all anesthesia codes use the XXX global period, and it is unclear whether the concept of an add-on global period would apply to anesthesia coding given that they are valued using base units and time units, unlike all other PFS services. As noted in the proposed rule, we did not propose the ZZZ global period for these three codes at this time. We solicited comments from interested parties regarding the global period assignment for these three anesthesia codes, as well as the other codes listed in Table A–B7.

We received public comments on these proposals. The following is a summary of the comments we received and our responses.

Comment: Several commenters stated that they did not support assigning a ZZZ global period to CPT codes 01953, 01968, and 01969 and questioned the necessity and potential negative consequences of doing so. The commenters stated that although they understood the RUC's rationale for requesting a ZZZ global period assignment for CPT codes 01953, 01968, and 01969, they believed this would be an inappropriate policy change that could have unintended negative consequences. The commenters stated that the anesthesia code set does not currently utilize global periods beyond the perceived global period defined by the anesthesia start and stop times of an anesthesia service and establishing any structure that would appear to assign an anesthesia global period could lay the groundwork to establishing a defined generic or average global period that could impact the unique recognition and utilization of an actual case's unique start and stop times. The commenters stated that the administrative burden of ensuring that these downstream impacts would not occur would far outweigh any perceived benefit of unnecessarily assigning a ZZZ global period to these codes.

Response: We appreciate the feedback from the commenters; we agree that there are unique aspects to the anesthesia codes and therefore continue to believe that CPT codes 01953, 01968, and 01969 should retain the same XXX global period used by all other anesthesia codes.

After consideration of public comments, we are finalizing the change to a ZZZ global period for the codes listed in Table A–B7 as proposed. We are not finalizing a change in the global period for anesthesia CPT codes 01953, 01968, and 01969.

Comment: Several commenters, including the RUC, requested that CMS separately identify and pay for high-cost

disposable supplies. Commenters highlighted the outsized impact that high-cost disposable supplies have within the current practice expense RVU methodology, which not only accounts for a large amount of direct practice expense for these supplies but also allocates a large amount of indirect practice expense into the PE RVU for the procedure codes that include these supplies. Commenters stated that if high-cost supplies were paid separately with appropriate HCPCS codes, the disproportionate indirect expense would no longer be associated with that service, with the result that indirect PE RVUs would be redistributed throughout the specialty practice expense pool and the practice expense for all other services. Commenters requested that CMS separately identify and pay for high-cost disposable supplies priced more than $500 using appropriate HCPCS codes. Commenters stated that they had anticipated a response from CMS on this issue and argued that the pricing of these supplies should be based on a transparent process whereby items are reviewed and updated on an annual basis.

Response: We have received a number of prior requests from interested parties, including the RUC, to implement these separately billable alpha-numeric Level II HCPCS codes to allow practitioners to be paid the cost of high cost disposable supplies per patient encounter instead of per CPT code. We stated at the time, and we continue to believe, that this option presents a series of potential problems that we have addressed previously in the context of the broader challenges regarding our ability to price high cost disposable supply items. We did not propose and are not finalizing the implementation of standalone Level II HCPCS codes for high cost disposable supplies at this time. For further discussion of this issue, we direct the reader to our discussion in the CY 2011 PFS final rule with comment period (75 FR 73251).

This is a subject that we may consider for future rulemaking alongside other updates to the PE methodology. We appreciate the continued feedback from commenters as we consider potential approaches to this complicated topic.

d. Updates to Practice Expense (PE) Methodology—Site of Service Payment Differential

We proposed a significant refinement to our PE methodology to better reflect trends in physician practice settings in the CY 2026 PFS final rule (90 FR 49292 through 49297). Under the finalized policy, we allocate half the amount of indirect PE RVUs per work RVU for services furnished in the facility setting compared to those allocated to services furnished in the non-facility setting. We noted in the CY 2026 PFS proposed rule (90 FR 32374) that this change to the indirect cost allocation methodology was intended to better recognize the relative resources involved in furnishing services paid under the PFS in facility and non-facility settings. We compared this change to our current methodology prior to CY 2026, which functionally presumed approximately equal indirect costs incurred by physicians across sites of service. This presumption was initially made in the context of most practitioners maintaining office practices independent of the facilities in which they provided care, and as we discussed in the CY 2026 PFS proposed and final rules, appears to be inconsistent with contemporary trends in physician practice where some significant portion of services furnished in facility settings are performed by medical practitioners who do not maintain fully independent practices and are less likely to incur a comparable amount of indirect costs.

Since finalizing the proposal in the CY 2026 PFS final rule, we have heard from interested parties that the implementation of this policy resulted in an unintended, but significant, site of service differential for physician visits in nursing facility settings based solely on whether the beneficiary's stay is covered under Part A. For purposes of PFS payment, a service furnished to a patient in a skilled nursing facility during a Part A hospital stay (place of service 31) is considered to be in the ''facility'' setting, while a service furnished to a patient in a Part B stay (place of service 32) is considered to be in the ''non-facility'' setting, per the Medicare Claims Processing Manual (MCPM), Chapter 12, Section 20.4.2 at *http://www.cms.gov/Regulations-and-Guidance/Guidance/Manuals/Downloads/clm104c12.pdf*. Prior to CY 2026, the payment rate for these E/M services furnished in a skilled nursing facility (''facility'') and a nursing facility (''non-facility'') were equal. As intended, the 50 percent reduction to the allocation of indirect PE based on work RVUs that we finalized for CY 2026 shifted PE RVUs from the facility setting to the non-facility setting. However, for nursing facility and skilled nursing facility visits, the current site of service differential is determined based on the status of the beneficiary (that is, a Part A versus Part B stay) in that setting, rather than in the setting of care itself. Given that the resource costs for the professional involved in furnishing an E/M service would not be expected to differ based on whether the patient is in a Part A stay or not, we believe it is more accurate for these E/M services to be paid the same amount without regard to the beneficiary's Part A status.

Therefore, we proposed to address this anomaly for CY 2027 by equalizing the rate for nursing facility visits without regard to the beneficiary's status by setting the facility PE RVU equal to the non-facility PE RVU for CPT codes 99304 (*Initial nursing facility care, per day, for the evaluation and management of a patient, which requires a medically appropriate history and/or examination and straightforward or low level of medical decision making. When using total time on the date of the encounter for code selection, 25 minutes must be met or exceeded.*), 99305 (*Initial nursing facility care, per day, for the evaluation and management of a patient, which requires a medically appropriate history and/or examination and moderate level of medical decision making. When using total time on the date of the encounter for code selection, 35 minutes must be met or exceeded.*), 99306 (*Initial nursing facility care, per day, for the evaluation and management of a patient, which requires a medically appropriate history and/or examination and high level of medical decision making. When using total time on the date of the encounter for code selection, 50 minutes must be met or exceeded.*), 99307 (*Subsequent nursing facility care, per day, for the evaluation and management of a patient, which requires a medically appropriate history and/or examination and straightforward medical decision making. When using total time on the date of the encounter for code selection, 10 minutes must be met or exceeded.*), 99308 (*Subsequent nursing facility care, per day, for the evaluation and management of a patient, which requires a medically appropriate history and/or examination and low level of medical decision making. When using total time on the date of the encounter for code selection, 20 minutes must be met or exceeded.*), 99309 *(Subsequent nursing facility care, per day, for the evaluation and management of a patient, which requires a medically appropriate history and/or examination and moderate level of medical decision making. When using total time on the date of the encounter for code selection, 30 minutes must be met or exceeded.*), 99310 *(Subsequent nursing facility care, per day, for the evaluation and management of a patient, which requires a medically appropriate history and/or examination and high level of medical decision*

making. When using total time on the date of the encounter for code selection, 45 minutes must be met or exceeded.), 99315 *(Nursing facility discharge management; 30 minutes or less total time on the date of the encounter*), and 99316 *(Nursing facility discharge management; more than 30 minutes total time on the date of the encounter*).

This particular situation illuminates ongoing concerns regarding the current site of service differential. For example, interested parties have suggested that the current binary of facility and non-facility does not account for the range of employment models associated with physician services that drive significant differences in actual practice expenses. Interested parties have encouraged us to refine our previously finalized policy to ensure it is more empirically grounded and narrowly tailored to independent physicians, consistent with the policy's original intent. Interested parties have also stated that the facility PE reductions have had a disparate effect on hospital medicine groups and hospitalists, particularly those that operate independently from their hospital or health systems. Interested parties have stated that independent hospital medicine groups account for approximately one-third to one-half of the hospital medicine groups nationwide, and they are unable to cut administrative and overhead costs enough to absorb our CY 2026 facility PE reductions. As a result, some interested parties have stated that the reductions are accelerating the insolvency of independent physician practices and leading to an increase in hospital consolidation. We note that we have heard no general consensus among interested parties to this effect, and we have received feedback that this policy supports independent practices.

In the CY 2026 PFS proposed rule, we sought comments on whether our proposal to reduce the portion of the facility PE RVUs allocated based on work RVUs to half the amount allocated to non-facility PE RVUs was an appropriate reduction or whether we should consider a different percentage reduction for CY 2026 or in future years. In finalizing the proposal, we noted that, while our change to the methodology for CY 2026 represented a starting point to correcting historic distortions in the allocation of indirect PE costs across settings of care, we intended to further examine our methodology and consider additional refinements based upon feedback received and any studies or data sources identified.

For CY 2027, we remained open to more specific data that addresses the variability, as well as feedback on how to update the valuation and payment methodologies to better reflect the relative resources involved in furnishing the services, both across settings of care, and within the context of an evolving ecosystem of care models and business arrangements. Historically, we have relied extensively on specialty-specific PE/HR survey data and the binary site of service differential to best reflect variable PE costs.

To better inform our consideration of how to account for practice expenses under the PFS methodologies, including the current differentials that are effectuated based on the binary facility/non-facility settings of care, we sought comment on how PE costs vary for physicians and other professionals, not only based on whether they practice in part or exclusively in a facility setting but also based on how their costs vary when they are employed by health systems, hospitals, or other entities. We noted in the CY 2026 PFS final rule that (90 FR 49292) that the AMA has stated that physician practices maintain some indirect PE costs for physicians who are solely facility-based such as coding, billing, and scheduling. That being said, we generally agree with the concerns presented by MedPAC on the growth of exclusively facility-based physicians and agree that potential overpayments for indirect practice expense costs could be a driver of clinician movement to higher cost settings without creating commensurate clinical value. This is why we lowered indirect PE for facility-based physician to 50 percent in the CY 2026 PFS final rule.

Moving forward, we remain interested in ensuring indirect PE RVUs are appropriately accounting for indirect PE costs. As such, we sought information that will help illuminate to what extent these costs are truly incurred when the professionals are employed by the hospital and/or practice primarily in the hospital and are not already accounted for in the existing OPPS payments. For example, when a physician is employed by and practicing in a hospital, what portion of the indirect PE is associated with the PFS service, versus costs that are associated with the payment to the hospital, such as those paid under the OPPS?

We sought comment on the amount of indirect PE hospital-employed physicians incur when they furnish care within a facility. For these physicians, is the 50 percent indirect PE allocation accurate or could it possibly be less than 50 percent, such as 0 percent? In the case that there are little to no indirect costs incurred by the physician or other professionals, and these costs are borne by the hospital, we believe that these costs are not appropriately accounted for under the PFS and we may well be overestimating the relative resource costs compared to other PFS services. In consideration of the accuracy of the current 50 percent indirect PE allocation for services furnished in the facility setting, we are also seeking comment on whether and how we might, alternatively or additionally, define and identify physicians and professionals who are employed by hospitals, health systems, or other entities to ensure the services they furnish are not inappropriately consuming PE RVUs that would be more appropriately assigned to services furnished by professionals incurring comparatively greater practice expenses. Specifically, we sought comment on whether a new HCPCS modifier for employed physicians would be a reasonable way to identify and reduce facility PE from the services they perform in the facility setting, or whether there are other methods we could consider.

We sought comment on what are the primary variables we should consider to continue to improve our data sources, allocation methodologies, and payment rates across settings of care, to best reflect the resources involved in furnishing PFS services by professionals and suppliers operating in a complex marketplace, across settings of care. We remain interested in objective data regarding payment arrangements between hospitals, health systems, other employers and physicians, including which costs are incurred and whether the full range of costs are truly incurred by physicians and other professionals in these kinds of employment relationships. This would help us understand and improve how PE is allocated across settings of care, both in general and for specific kinds of services.

We received public comments on this proposal and comment solicitation. The following is a summary of the comments we received and our responses.

Comment: Commenters were unanimously supportive of our proposal to set the facility PE RVU equal to the non-facility PE RVU for nursing facility E/M codes (CPT codes 99304 through 99310, 99315 and 99316). We also received feedback in response to our comment solicitation on the current site of service differential finalized in the CY 2026 PFS final rule.

Response: We appreciate the commenters' support on our proposal. We received many comments on our comment solicitation regarding the site of service differential. Commenters agreed that using facility place-of-

service as a proxy for physician employment is imprecise, though they were divided on how to structure the differential going forward, with some supporting refinements such as additional specialty-specific adjustments and more detailed impact data. Most recommended replacing or supplementing this proxy with a more direct method of identifying hospital-employed physicians, with several suggesting independent practices self-identify given their incentive to do so. However, many commenters cautioned that employment status alone is not a reliable indicator of who bears indirect costs, noting that practices often continue to incur substantial administrative costs regardless of employment or site of service, and that the variety of employment arrangements makes any binary classification difficult to administer and prone to disputes. Commenters broadly urged CMS to take a more data-driven approach, including easing the impact on independent practices and reconsidering the reduction until better evidence is available. They also raised specialty-specific concerns and warned the policy could accelerate practice consolidation into hospital employment or acquisition by other entities. After consideration of public comments, we are finalizing to set the facility PE RVU equal to the non-facility PE RVU for nursing facility E/M codes (CPT codes 99304 through 99310, 99315 and 99316), as proposed. We may consider comments about the site-of-service differential in future rulemaking.

6. Strategies To Improve Payment Transparency, Accuracy, and Congruency Across Payment Systems

a. Professional and Technical Components

Because PFS services are paid across settings of care, and are the primary way that Medicare pays medical professionals, understanding the structure of PFS payment is a critical part of price transparency for Medicare, other payers, and consumers. Likewise, misunderstanding or confusion about what relative resources are incorporated in specific PFS payment rates can be a significant obstacle for payers and consumers navigating the health care market. For example, approximately 4,100 services paid as ''global surgical packages,'' (herein 'globals') are valued as bundled payments that aggregate multiple components of care into a single payment amount, including post-operative visits that are presumed to occur in particular settings (for example, inpatient hospital, outpatient hospital, office) regardless of where the services actually take place. Most PFS services are valued with a site of service binary, where the non-facility setting is the aggregation of all relative resources involved in furnishing the professional and technical aspects of the service, and the facility setting, where the rate generally excludes the facility costs involved in the service since those costs are addressed through separately reported facility fees. In contrast to these two constructs, there are other codes (mainly describing diagnostic and imaging services) that may be billed with professional component (PC, or modifier 26) and technical component (TC) modifiers, or without modifiers (global codes) that are paid for the complete global service. These differences in how payments are constructed and displayed can make it difficult for interested parties and CMS to evaluate relative payment rates, underlying resource costs, and value across settings of care.

These challenges are further compounded by differences across Medicare payment systems in how similar services are defined, bundled, and paid. For example, some payment systems incorporate technical inputs and facility resources into a single payment. This variation can obscure meaningful comparisons across sites of care and may complicate efforts to advance site-neutral payment policies aimed at reducing incentives for hospitals to acquire physician practices and limit site-of-care decisions based on financial considerations. As CMS continues to consider approaches that remove obstacles from market competition across settings of care, especially by improving transparency, comparability of PFS payments is an important foundational step.

We noted in the proposed rule, to facilitate more consistent comparisons across services and settings, we have developed a public use file that displays, for services that are not currently billable with TC/26 modifiers, RVUs amounts that reflect the relative resources involved in furnishing professional and technical aspects of the services, which is available on the CMS website under downloads for the CY 2027 PFS proposed rule at *https://www.cms.gov/medicare/payment/fee-schedules/physician/federal-regulation-notices*. This file is intended to improve transparency regarding how PFS payments may be conceptually divided between physician professional and technical components of the services, especially to illuminate the differences in fees between technical aspects of PFS services compared to facility fees across settings of care. We believe that making these components more visible, where feasible, may help interested parties better understand the structure of PFS payments and support more informed comparisons across settings of care. We noted that we have excluded 10- and 90-day global surgery services from display in this public use file since there are numerous ways to consider how the structure of payment for those codes may be best understood. The use of bundled payments for the 10- and 90-day global surgery services results in aggregated valuation for all pre-operative, intra-operative, and post-operative services furnished over a defined period (0-, 10-, or 90-day global periods), including services by both physician and clinical staff and practice expense without clear visibility into how each component contributes to the total bundled valuation. While we noted that the current structure of global surgery services has effectively obscured how the components of care are individually valued and limited our ability to disaggregate them for purposes of this public use file, we sought comment on how to address this problem, either in possible improvements to the global surgery packages or, at least, in the best way to make their component pieces transparent.

Additionally, we noted that there is a subset of additional exclusions from this public use file, such as codes subject to the cognitive services floor and the statutory phase-in of significant RVU reductions, due to technical challenges with how these policies are implemented that hinder the disaggregation of their component parts.

We emphasized in the proposed rule that we did not propose any changes to existing payment or billing policies, including the use of the 10- and 90-day globals. Rather, this effort is intended to improve transparency and provide a foundation for future rulemaking. We believe that greater visibility into how the professional and technical aspects of PFS services are valued and paid, where feasible, may enhance the ability of consumers, and payers (including CMS) to assess relativity across services, may enhance CMS's efforts to improve valuation over time, and support broader efforts to align payments across settings of care. We sought comment on several aspects of this approach. First, we sought comment on the utility of displaying RVUs associated with professional and technical aspects of services that are not currently billable with TC/26 modifiers, including how we may use this information to assess payment differences across settings. Again, we also sought comment on

potential approaches CMS could consider in future rulemaking to improve transparency for services currently paid as globals. Specifically, we were interested in feedback on how CMS could develop methodologies to more clearly identify and, where appropriate, disaggregate the underlying components of these services. We were also interested in comments on how CMS could ''right-size'' payments for the globals over time to ensure they remain aligned with current clinical practice and resource costs, are more readily updated based on empirical data, and do not obscure differences in cost and value across settings of care.

We received public comments on this comment solicitation. The following is a summary of the comments we received and our responses.

Comment: Some commenters were supportive of the CMS goal of improving transparency and developing more consistent information about the resources used to furnish services across different settings, but disagreed with our methodology of developing component-level values for services that the commenters say were not designed or valued as separately billable professional and technical components. Commenters stated that the display-only file raises significant methodological and policy questions, and that these values should not be treated as directly comparable, or used to support future payment changes, until CMS has completed further analysis and engaged affected interested parties. Another commenter stated that the proposed approach to create the file appears to be arbitrary and does not reflect allocations based on a thorough review of each service, and discouraged us from advancing future payment policy that relies on the public use file. The commenter stated that there are often justifiable reasons for cost variation between different sites of care and expressed concern that we intend to use the file in future years to equalize rates across sites of care that could result in hospitals being underpaid for care.

Response: We appreciate the commenters' support of our efforts to make available transparent information about the resources required to furnish services across settings. With respect to commenters who stated that the file's methodology was arbitrary or lacked utility, we note that estimating component-level resource use for display purposes does not require that those components be separately billable, and we believe such estimates can serve the transparency goals described in the proposed rule. We are open to alternative approaches to advancing comparisons across sites of care and may take any such suggestions into account in future rulemaking. We did not propose to use the file for payment comparisons in this rule. The display is intended only to begin building a transparency foundation, as described in the comment solicitation. We will consider commenters' methodological concerns before any future proposal that relies on cross-setting comparisons.

Comment: Some commenters stated that the re-presentation is more understandable to interested parties, but it would be more useful if CMS confirmed the systemic approach used or explained in greater detail how CMS developed the resource with sample calculations. Another commenter stated that they strongly support the establishment of this public use file because the AMA has historically been the gatekeeper of the relevant information utilized when determining RVU amounts. The commenter stated that the process is secretive and monetized access to databases has prevented interested parties from accessing and understanding the structure of PFS payments. Another commenter requested the addition of the code descriptors to the file to improve the readability and data analytics of the public use file.

Response: We appreciate the feedback from interested parties and may consider expanding the scope of the file in future rulemaking.

Comment: A commenter suggested that this file allows the opportunity for TC services under the MPFS to use the OPPS relativity data (excluding the packaged services) to assess the PE RVUs, rather than survey data. The commenter said that this would be similar to what CMS proposed for radiation oncology and proton beam treatment delivery services. They stated that they believe the public use file would provide greater accuracy to tie the RVUs to the audited hospital cost report data for the PE component, rather than survey data. The commenter also requested that we consider publishing the direct and indirect PE RVUs for facility and non-facility for all codes, and stated that this information available across services would provide valuable information and would increase transparency associated with RVUs and the PFS.

Response: We appreciate the feedback from interested parties. We may consider publishing the direct and indirect PE RVUs in future rulemaking.

b. Global Surgical Packages

We finalized a policy in the CY 2015 PFS final rule (79 FR 67582 through 67591) to transition all 10-day and 90-day globals to 0-day globals, allowing any post-operative visits furnished after the day of the procedure to be billed as a standalone visit. CMS was prohibited from implementing this policy through section 523(a) of the Medicare Access and CHIP Reauthorization Act (MACRA) and was required to collect data on how to best value globals. CMS did so through a research contract with RAND and a data-collection process over several years to develop data to improve the payment rates for these services. Data collection has been based on reporting of CPT code 99024 (*Postoperative follow-up visit, normally included in the surgical package, to indicate that an evaluation and management service was performed during a postoperative period for a reason(s) related to the original procedure*), which is limited to practices with 10 practitioners or more, limited to nine States, and is used solely for data collection so it has no associated payment with reporting the code. In the CY 2019 PFS final rule (83 FR 59503), we released findings that only 4 percent of reviewed 10-day globals and 67 percent of reviewed 90-day globals had one or more post-operative visit which occurred during the global period and sought comment on potential approaches for revaluing the globals based on these findings (83 FR 59504). In the CY 2023 PFS proposed rule (87 FR 45877 through 45880), CMS reviewed the prior work and conversations around global valuations, solicited feedback from the public, and has continued to explore ways over the years to address valuation of the globals that would be minimally disruptive to the PFS.

Over the past several years, CMS has taken several iterative steps to improve payment accuracy for the globals. In the CY 2025 PFS final rule (89 FR 97964 through 97968), CMS expanded the applicability of the transfer of care modifiers to address instances where separate practitioners are billing for standalone E/M visits during the global period more directly with mandatory reporting of payment modifiers in clinical cases when there is both a formal or informal transfer of care between practitioners furnishing distinct portions of a global service. CMS also created a post-operative care services add-on code to more appropriately reflect the time and resources involved for practitioners who were not involved in furnishing the surgical procedure. CMS is continuing to explore further steps to improve accountability and more accurate

payment and what additional next steps CMS could take to improve the payment rates for global services.

In keeping with the administration priorities and aligning spending and value, we proposed to pause the data collection required by MACRA based on RAND's findings over the past several years. We remain interested in how best to use and collect this data going forward and ways we might consider improving this data collection. We currently have several years of data that have continued to illustrate what we believe is the issue with the post-operative visits during the global period and how these visits are not occurring, yet providers are still being paid for these visits under the current global payment policy. Additionally, we believe that the current data collection may be causing undo burden to providers and we believe that pausing the data collection will aid in burden reduction for practitioners. We do however question whether a more robust data collection would be appropriate and if we should have all providers report CPT code 99024.

We also sought comment on the question, as to whether CMS should have all providers report CPT code 99024, and also other data sources we might consider to more accurately value the globals.

We received public comments on these proposals. The following is a summary of the comments we received and our responses.

Comment: Commenters were generally in support of the CMS proposal to pause the data collection required by MACRA to report CPT code 99024. Most commenters were not in support of CMS using that data for the revaluation process. Commenters were overall in agreement that expanding the data collection would pose undo administrative burden to providers and urged CMS to not expand the reporting. Commenters were not in support of using the information presented in the Public Use File (PUF), in particular the purely ''arithmetic approach'' to understand the valuation of the services based on the data that was analyzed. Many commenters were opposed to CMS using the reported data in the process of revaluation. Commenters stated that the underreporting of CPT code 99024 does not indicate or capture the post-operative work that was furnished even though a visit was not actually reported. Commenters noted that pausing the data collection allows for opportunity to evaluate the data limitations and develop a more accurate approach. Several commenters suggested CMS spend time understanding post operative care, how it is organized, as well as non-visit post-operative work that takes place even when a visit is not furnished as care extends beyond the post-operative visits.

Response: We appreciate the commenters' feedback and support of pausing the data collection of CPT code 99024. We understand the commenters' concerns that data collection may impose administrative burden and understand this concern with expanding the data collection beyond the sample that was required. We believe that a pause in the data collection allows CMS an opportunity to evaluate the data limitations and further refine our approach to data collection on the global surgical packages.

After consideration of public comments on our proposal, we are finalizing pausing the data collection as proposed. CMS remains interested in how to best capture post operative data to better inform valuation of post-operative services under the PFS.

As noted in the proposed rule, we posted a public use file with the proposed rule to display the imputed RVUs associated with both the 10- and 90-day post-operative visits based on a purely arithmetic approach to understand the valuation of the services based on the data that was analyzed. The public use file shows the current work RVUs, the number of post-operative visits that are reported to CMS using no-pay HCPCS code 99024, and the work RVUs remaining if all post-operative visits are removed. The public use file is available on the CMS website under downloads for the CY 2027 PFS final rule at *https://www.cms.gov/medicare/payment/fee-schedules/physician/federal-regulation-notices*. We solicited comments on potential revaluation strategies that we may consider through future rulemaking. We received public comments on these proposals. The following is a summary of the comments we received and our responses.

Comment: As stated previously, many commenters were not in support of using the information in the public use file to help inform revaluation of the global surgical packages. Other commenters thought it was a good first step toward the revaluation process. A few commenters supported aligning payment for global surgical services with services actually furnished, while others noted the reporting of CPT code 99024 did not specify the visit level or level of physician work. Other commenters supported the publication of the imputed post-operative visit RVU public use file while other commenters did not think CMS should use missing postoperative visit claims as proof that postoperative care is not being furnished.

Response: We thank the commenters for their feedback.

After consideration of public comments, we express appreciation for the feedback from commenters and will take the comments into consideration for possible future rulemaking.

C. Payment for Medicare Telehealth Services

As discussed in prior rulemaking, several conditions must be met for Medicare to make payment for telehealth services under the PFS. See further details and full discussion of the scope of Medicare telehealth services in the CY 2018 PFS final rule (82 FR 53006), the CY 2021 PFS final rule (85 FR 84502), the CY 2024 PFS final rule (88 FR 78861 through 78866), the CY 2026 PFS final rule (90 FR 49316 through 49320), and in 42 CFR 410.78 and 414.65. Our current 3-step review process reflects the stepwise method by which we consider requests to add services to or remove services from the Medicare Telehealth Services List, beginning with the CY 2026 Medicare Telehealth Services List:

Step 1. Determine whether the service is separately payable under the PFS.

Step 2. Determine whether the service is subject to the provisions of section 1834(m) of the Act.

Step 3. Review the elements of the service as described by the HCPCS code and determine whether each of them is capable of being furnished using an interactive telecommunications system as defined in § 410.78(a)(3).

1. Changes to the Medicare Telehealth Services List

a. Requests To Add Services to the Medicare Telehealth Services List for CY 2027

We did not receive any requests to add or remove services from the Medicare Telehealth Services List for CY 2027.

Consistent with the deadline for our receipt of code valuation recommendations from the American Medical Association's Relative Value Scale Update Committee (AMA RUC) and other interested parties established in the CY 2019 PFS final rule (83 FR 59491) and with the process set forth in prior calendar years, for CY 2027, requests to add services to the Medicare Telehealth Services List must have been submitted to and received by CMS by February 10, 2026. Consistent with the deadline for our receipt of code

valuation recommendations from the AMA RUC and other interested parties established in the CY 2019 PFS final rule (83 FR 59491) and with the process set forth in prior calendar years, for CY 2028, requests to add services to the Medicare Telehealth Services List must be submitted to and received by CMS by February 10, 2027. Each request submitted by the deadline to add a service to the Medicare Telehealth Services List must include any supporting documentation the requester wishes CMS to consider. Because we use the annual PFS rulemaking process to make changes to the Medicare Telehealth Services List, requesters are advised that any information submitted as part of a request is subject to public disclosure for this purpose. For more information on submitting a request to add services to the Medicare Telehealth Services List, including where to send these requests, and to view the current Medicare Telehealth Service List, see our website at *https://www.cms.gov/Medicare/Medicare-General-Information/Telehealth/index.html*.

We did not receive any requests to add or remove services from the Medicare Telehealth Services List for CY 2027 by the February 10, 2026 deadline. However we received public comments on this topic from interested parties. The following is a summary of the comments we received and our responses.

Comment: We received comments requesting services to be added to the Medicare Telehealth Services List during the public comment period for the CY 2027 proposed rule.

Response: For consideration in the CY 2027 PFS rulemaking, requests to add services to the Medicare Telehealth Services List for CY 2027 must have been received by February 10, 2026. For CY 2028, requests to add services to the Medicare Telehealth Services List must be submitted to and received by CMS by February 10, 2027.

Comment: Commenters highlighted that we did not align certain services on the Medicare Telehealth List with services being deleted for CY 2027. As discussed in section II.D under Adaptive Behavior Services, at the September 2025 CPT Editorial Panel meeting, the CPT Editorial Panel deleted CPT codes 0362T and 0373T. These codes are being replaced with CPT codes 97148, 97149, 97159, 97160, and 97173. As discussed in section II.D. under Speech-Language Pathology Services, at the September 2025 CPT Editorial Panel meeting, CPT code 92507 was replaced with 10 new codes (92654, 92655, 92656, 92657, 92658, 92659, 92660, 92661, 92662, and 92663).

Response: We thank commenters for this information. We inadvertently maintained these codes on the Medicare Telehealth Services List. We believe that these codes represent replacements for the codes currently describing these services on the Medicare Telehealth Services List. As such, we are finalizing the deletion of CPT codes 92507, 0362T, and 0373T and the addition of CPT codes 97148, 97149, 97159, 97160, 97173, 92654, 92655, 92656, 92657, 92658, 92659, 92660, 92661, 92662, and 92663 to the Medicare Telehealth Services List.

In accordance with our longstanding policy, requests to add services to the Medicare Telehealth Services List must be submitted to and received by CMS by February 10, 2026. We will not consider requests to add services submitted during the public comment period for the CY 2027 proposed rule. That said, CPT codes 92507, 0362T, and 0373T will be removed from the Medicare Telehealth Service List as they were inadvertently maintained. We will be replacing deleted CPT code 92507 with CPT codes 92654, 92655, 92656, 92657, 92658, 92659, 92660, 92661, 92662, and 92663. We will be replacing deleted CPT codes 0362T and 0373T with 97148, 97149, 97159, 97160, and 97173.

b. CMS Requirement To Add New Codes to the List

In the CY 2027 PFS proposed rule, we proposed to add HCPCS G-codes G0572 (*Advance care planning including the explanation and discussion of advance directives such as standard forms (with completion of such forms, when performed), first 20 minutes of clinical staff time with the patient, family member(s), directed by a treating physician or other treating qualified health care professional*), G0573 (*Advance care planning including the explanation and discussion of advance directives such as standard forms (with completion of such forms, when performed), each additional 20 minutes with the patient, family member(s), directed by a treating physician or other treating qualified health care professional (List separately in addition to code for primary procedure*)), G0686 (*Voluntary, group-based medical session involving multiple patients with common medical condition(s), receiving medical care in a group setting; billed and led by a physician or qualified nonphysician practitioner and may include services provided by other qualified healthcare professionals, clinical staff, or auxiliary personnel under the direction of the supervising physician or other practitioner. Session integrates group education, counseling, and peer support with individualized patient clinical assessment and care, 2–10 patients, billed once per patient, per session.*), G0903 (*Treatment of speech, language, voice, communication, and/or auditory processing disorder; individual; for the pediatric population age 21 and under*), and G0576 (*Office or other outpatient evaluation and management service(s) for the diagnosis and treatment of vaccine adverse effects, new or established patient; each 15 minutes personally performed by the physician or qualified healthcare professional (list separately in addition to CPT codes 99202, 99203, 99204, 99205, 99211, 99212, 99213, 99214, 99215, 99341, 99342, 99344, 99345, 99347, 99348, 99349, 99350))* to the Medicare Telehealth Services List. In the CY 2027 PFS proposed rule, we stated that these services, if finalized, will be separately payable under the PFS and will subject to the provisions of section 1834(m) of the Act, as they are inherently face-to-face services and would serve as a substitute for an in-person encounter. We also stated that we believe that the elements of these services as described by the HCPCS codes are capable of being furnished using an interactive telecommunications system as defined in § 410.78(a)(3). We refer readers to the relevant requirements in section II.D. of this final rule for further background on these codes.

We received public comments on our proposal to add G0572 and G0573 to the Medicare Telehealth Services List. The following is a summary of the comments we received and our responses.

Comment: Commenters generally supported our proposal to add these services to the Medicare Telehealth Services List. Many of these commenters supported our proposal to add the services to the Medicare Telehealth Services List if the codes are finalized.

Response: We appreciate the feedback from the commenters.

After consideration of public comments, we are finalizing as proposed to add GACP1 and G0573 2 to the Medicare Telehealth Services List, beginning in CY 2027.

We received public comments on our proposal to add G0686 to the Medicare Telehealth Services List. The following is a summary of the comments we received and our responses.

Comment: Commenters generally supported our proposal to add this service to the Medicare Telehealth Services List.

Response: We appreciate the feedback from the commenters. As discussed in section II.D of this rule, we are finalizing an add-on code for shared medical appointments, G0687.

After consideration of public comments, we are finalizing as proposed to add G0686 and G0687 to the Medicare Telehealth Services List, beginning in CY 2027.

We received public comments on our proposal to add G0903 to the Medicare Telehealth Services List. The following is a summary of the comments we received and our responses.

Comment: Commenters pointed out a discrepancy between the code descriptor for HCPCS code G0903 described in sections of the NPRM, which we described as ''pediatric population up to 18 or 21''. The finalized code descriptor, as described in II.D, is ''Treatment of speech, language, voice, communication, and/or auditory processing disorder; individual; for the pediatric population age 21 and under''.

Response: We thank commenters for pointing out the discrepancy. The corrected code descriptor for HCPCS code G0903 is ''Treatment of speech, language, voice, communication, and/or auditory processing disorder; individual; for the pediatric population up to age 21.''

Comment: Commenters generally supported our proposal to add these services to the Medicare Telehealth Services List.

Response: We appreciate the commenters for their feedback. After consideration of public comments, we are finalizing as proposed to add HCPCS code G0903 to the Medicare Telehealth Services List, beginning in CY 2027.

We received public comments on our proposal to add HCPCS code G0576 to the Medicare Telehealth Services List. The following is a summary of the comments we received and our responses.

Comment: Commenters generally supported our proposal to add these services to the Medicare Telehealth Services List.

Response: We appreciate the commenters for their feedback. After consideration of public comments, we are finalizing as proposed to add HCPCS code G0576 to the Medicare Telehealth Services List, beginning in CY 2027.

We are finalizing the addition of HCPCS codes G0576, G0572, G0573, G0686, G0687, and G0903 to the Medicare Telehealth Services List.

2. Telehealth Flexibilities and Modifiers

As discussed in the CY 2021 PFS final rule (85 FR 84506), legislation enacted to address the PHE for COVID–19 provided the Secretary with new authorities under section 1135(b)(8) of the Act, as added by section 102 of the Coronavirus Preparedness and Response Supplemental Appropriations Act, 2020 (Pub. L. 116–123, March 6, 2020) and subsequently amended by section 6010 of the Families First Coronavirus Response Act (Pub. L. 116–127, March 18, 2020) and section 3703 of the Coronavirus Aid, Relief, and Economic Security Act (CARES Act) (Pub. L. 116–136, March 27, 2020), to waive or modify Medicare telehealth payment requirements during the PHE for COVID–19.

We used these authorities to establish several flexibilities to accommodate changes in the delivery of care during the PHE. Through waiver authority under section 1135(b)(8) of the Act, in response to the PHE for COVID–19, we removed the geographic and site of service originating site restrictions in section 1834(m)(4)(C) of the Act, as well as restrictions in section 1834(m)(4)(E) of the Act on the types of practitioners who may furnish telehealth services, for the duration of the PHE for COVID–19. We also used waiver authority to allow certain telehealth services to be furnished via audio-only communication technology. At the end of the PHE for COVID–19, these waivers and interim policies were set to expire, and payment for Medicare telehealth services would have once again been limited by the requirements of section 1834(m) of the Act. These flexibilities have been extended by Congress numerous times since, most recently in the Consolidated Appropriations Act, 2026 (CAA, 2026) (Pub. L. 119—75, February 3, 2026).

Section 6209(a) and (b) of the CAA, 2026 extends the flexibilities for Medicare telehealth services to remove the geographic restrictions, extends the expanded list of acceptable originating sites, and extends the expanded array of practitioners eligible to furnish telehealth services from January 30, 2026 to the extended date of December 31, 2027. Section 6209(d) of the CAA, 2026 delays the in-person visit requirements for mental health services furnished through telehealth from January 30, 2026 to the extended date of January 1, 2028. Section 6209(e) of the CAA, 2026 extends the flexibilities to allow audio-only Medicare telehealth services from January 30, 2026 to the extended date of January 1, 2028. To align with these extensions, § 410.78 has been revised, detailed later in this final rule.

Additionally, section 6209(g) of the CAA, 2026, requires CMS to establish modifiers for telehealth services in certain instances, effective January 1, 2027. These modifiers do not affect payment and are required for claims for telehealth services that are furnished through a virtual telehealth platform by a physician or practitioner that contracts with an entity that owns such virtual platform; or for which a physician or practitioner has a payment arrangement with an entity for use of such virtual platform; and for claims for telehealth services that are furnished incident to a physician's or practitioner's professional service.

In accordance with section 6209(g) of CAA, 2026, we are creating modifiers BB and BC. Guidance on use of these modifiers will be available on the CMS website. Any updates to this policy will be issued via subregulatory guidance in accordance with section 6209(h) of the CAA, 2026, which authorizes the Secretary to implement section 6209 via program instruction or otherwise.

We did not solicit comments on creating modifiers BB and BC, however we received public comments on this topic from interested parties. The following is a summary of the comments we received and our responses.

Comment: Commenters requested additional information and clarifications on the use of these modifiers.

Response: Telehealth modifiers BB (*Claims for telehealth services that are furnished through a telehealth virtual platform by a physician or practitioner that contracts with an entity that owns such virtual platform, or for which a physician or practitioner has a payment arrangement with an entity for use of such virtual platform.*) and BC (*Telehealth services that are furnished incident to a physician's or practitioner's professional service.*) are required beginning January 1, 2027. These modifiers do not have payment implications. Information on these modifiers is available on the CMS website here: *https://www.cms.gov/medicare/coverage/telehealth*.

3. Telehealth Critical Care Consultations

In the CY 2017 PFS final rule (81 FR 80352 through 80353), we established HCPCS codes G0508 (*Telehealth consultation, critical care, initial, physicians typically spend 60 minutes communicating with the patient and providers via telehealth*) and G0509 (*Telehealth consultation, critical care, subsequent, physicians typically spend 50 minutes communicating with the patient and providers via telehealth*) to report telehealth consultations for a patient requiring critical care services. These services were modeled after CPT

codes 99291 (*Critical care, evaluation and management of the critically ill or critically injured patient; first 30 to 74 minutes*) and 99292 (*Critical care, evaluation and management of the critically ill or critically injured patient; each additional 30 minutes (list separately in addition to code for primary service*)).

When adding some services to the Medicare Telehealth Services List in the past, we have included certain frequency restrictions on how often physicians and other practitioners may furnish the service via telehealth. These include a limitation of one critical care consultation service furnished via telehealth per day, added in the CY 2017 final rule (81 FR 80198). In the CY 2026 PFS final rule, we finalized permanently removing frequency limitations on furnishing these services via telehealth (90 FR 49324 through 49325).

We continue to believe that physicians and other practitioners, who have the greatest familiarity and insight into the needs of individual beneficiaries, can use their complex professional judgment to determine whether they can safely furnish a service via telehealth, given the entirety of the circumstances, including the clinical profile and needs of the beneficiary, to determine the appropriate service modality. We strive to balance the goals of increasing physician or practitioner and patient choice of service modality with consideration of patient safety for all Medicare beneficiaries. As technology advances and more services may be safely furnished via telehealth and paid under the PFS, it is increasingly important for physicians and other practitioners to exercise their professional judgment in determining the generally appropriate service modality for their patients to receive a service.

Since the permanent removal of the frequency limitation of one critical care consultation service furnished via telehealth per day, we have received questions about language in the code descriptors for HCPCS codes G0508 *(Telehealth consultation, critical care, initial , physicians typically spend 60 minutes communicating with the patient and providers via telehealth*) and G0509 (*Telehealth consultation, critical care, subsequent, physicians typically spend 50 minutes communicating with the patient and providers via telehealth*) describing ''initial'' and ''subsequent'' consultations, as well as questions regarding the language about the typical time spent on the service. To clarify the requirements for billing these services, we proposed the following revised code descriptors:

- G0508: *Telehealth consultation, critical care; first 30 to 74 minutes.*
- G0509: *Telehealth consultation, critical care; each additional 30 minutes (List separately in addition to code for primary service*).

The following is a summary of the comments we received and our responses.

Comment: The majority of commenters supported our proposal to revise the code descriptors for HCPCS codes G0508 and G0509, as these revisions would clarify and streamline billing requirements. Commenters who did not support our proposal believed that the proposed code descriptors too closely mirror the code descriptors for CPT codes 99291 and 99292 and may cause more confusion, and that in practice, these codes may be used interchangeably. A few commenters suggested that we delete HCPCS codes G0508 and G0509 and only use CPT codes 99291 and 99292. One commenter stated that they are submitting CPT proposals to revise many CPT codes 99291 and 99292, and requested that we do not adopt any time increment changes for critical care until that CPT code proposal has been reviewed.

Response: We thank commenters for their feedback. After further review of claims data, we disagree that HCPCS codes G0508 and G0509 and CPT codes 99291 and 99292 are used entirely interchangeably, and we see a programmatic need to maintain both sets of codes. After consideration of public comments, we are finalizing as proposed.

4. Changes to Teaching Physicians' Billing for Services Involving Residents or Teaching Physicians With Virtual Presence

In the CY 2021 PFS final rule (85 FR 84577 through 84585), we finalized a temporary policy that allowed the teaching physician to have a virtual presence in all teaching settings, but only in clinical instances when the service was furnished virtually (for example, a three-way telehealth visit, with all parties in separate locations). This permitted teaching physicians to have a virtual presence during the key portion of the Medicare telehealth service for which payment was sought, through audio/video real-time communications technology, in all residency training locations through December 31, 2024.

As summarized in the CY 2025 PFS final rule (89 FR 97764 through 97765), commenters encouraged CMS to establish this policy permanently and include in-person services to promote access to care, and stated that teaching physicians should be allowed to determine when their virtual presence would be clinically appropriate based on their assessment of the patient's needs and the competency level of the resident. In the CY 2026 PFS final rule, we finalized a policy to permanently allow teaching physicians to have a virtual presence in all teaching settings, and in clinical instances only when the service is a three-way telehealth visit, with the teaching physician, resident, and patient in different locations.

We have received feedback from interested parties that indicates that our current policy for teaching physicians and residents can, in somewhat rare cases, cause logistical complexities in scenarios where either the teaching physician or resident is already in the same physical location as the beneficiary. For CY 2027, we proposed a modification to our previously finalized policy. Rather than requiring the teaching physician, resident, and patient to each be in a different location, we proposed to allow teaching physicians to bill for services involving residents when either the teaching physician or resident is in the same physical location as the beneficiary. We will generally interpret physical presence to be defined as either the teaching physician or resident in the same room as the beneficiary, but we sought comment on other scenarios in which this may be appropriate. We also proposed that this would only be applicable to services that are on the Medicare Telehealth Services List. As always, documentation in the medical record must continue to demonstrate whether the teaching physician was physically present or present through audio/video real-time communications technology at the time of the Medicare telehealth service, which includes documenting the specific portion of the service for which the teaching physician was present through audio/video real-time communications technology. In accordance with section 1842(b)(7)(A)(i)(I) of the Act, the teaching physician must have personal oversight and involvement over the management of the portion of the case for which the payment is sought. We sought comments on this proposal.

The following is a summary of the comments we received and our responses.

Comment: Many commenters supported our proposal, stating that the requirements finalized in the CY 2026 PFS final rule create unnecessary barriers to care and do not reflect

modern clinical practice. Commenters believed our proposed policy would provide flexibility and eliminate unnecessary barriers to care.

Response: We thank commenters for their feedback.

Comment: Commenters requested clarification regarding this policy. Specifically, commenters asked if clinical instances when the service is a three-way telehealth visit, with the teaching physician, resident, and patient all in different locations, would still be permitted.

Response: Yes, this proposal was intended to be additive to the policy finalized in the CY 2026 Final Rule.

Comment: Commenters requested confirmation that teaching physicians may bill for services involving residents when either the teaching physician or resident is in the same physical location as the beneficiary.

Response: As stated in the CY 2027 proposed rule (91 FR 43864), either the teaching physician or resident may be in the same physical location as the beneficiary.

Comment: Commenters requested that we allow for the teaching physician and resident to be in the same location, with the beneficiary being present remotely. Another commenter requested that we define these services based on the location of the patient, not of the teaching physician and/or resident.

Response: We thank commenters for their feedback and may consider this for future rulemaking.

Comment: Commenters requested information about the use of telehealth restrictions/guidance for teaching physicians billing for services involving residents or teaching physicians with virtual presence.

Response: All requirements for telehealth services would apply to these services, such as place of service codes and modifiers.

After consideration of public comments, we are finalizing as proposed and amending § 415.172.

5. Telehealth Originating Site Facility Fee Payment Amount Update

Section 1834(m)(2)(B) of the Act established the Medicare telehealth originating site facility fee for telehealth services furnished from October 1, 2001 through December 31, 2002 at $20.00, and specifies that, for telehealth services furnished on or after January 1 of each subsequent calendar year, the telehealth originating site facility fee is increased by the percentage increase in the Medicare Economic Index (MEI) as defined in section 1842(i)(3) of the Act. The proposed MEI percentage increase for CY 2027 was 2.5 percent and was based on the expected historical percentage increase of the 2017-based MEI. We proposed incorporating historical data through the second quarter of 2026 to determine the final CY 2027 MEI percentage increase. The final MEI update for CY 2027 is 2.6 percent reflecting historical data through the second quarter of 2026.

We received public comments on these proposals. The following is a summary of the comments we received and our responses.

Comment: Commenters generally supported the proposed update. A commenter requested that CMS assess whether the statutory update adequately accounts for the actual cost of supporting a telehealth encounter.

Response: We appreciate the feedback from commenters. As noted above, the payment amount and annal updates to the telehealth originating site facility fee are set in statute. Specifically, the telehealth originating site facility fee is increased by the percentage increase in the Medicare Economic Index (MEI) as defined in section 1842(i)(3) of the Act. It is not subject to recalculation based on additional external cost information.

After consideration of public comments, we are finalizing the CY 2027 increase to the telehealth originating site facility fee based on the most recent percentage increase in the 2017-based MEI of 2.6 percent, reflecting historical data through the second quarter of 2026 and shown in Table A–C1.

TABLE A-C1: THE MEDICARE TELEHEALTH ORIGINATING SITE FACILITY FEE

Time Period	MEI (%)	Facility Fee for Q3014
Oct. 1, 2001 to Dec. 31, 2002	n/a	$20.00
2003	3.0	$20.60
2004	2.9	$21.20
2005	3.1	$21.86
2006	2.8	$22.47
2007	2.1	$22.94
2008	1.8	$23.35
2009	1.6	$23.72
2010	1.2	$24.00
2011	0.4	$24.10
2012	0.6	$24.24
2013	0.8	$24.43
2014	0.8	$24.63
2015	0.8	$24.83
2016	1.1	$25.10
2017	1.2	$25.40
2018	1.4	$25.76
2019	1.5	$26.15
2020	1.9	$26.65
2021	1.4	$27.02
2022	2.1	$27.59
2023	3.8	$28.64
2024	4.6	$29.96
2025	3.5	$31.01
2026	2.7	$31.85
2027*	2.6	$32.68

*Reflects the most recent estimate of the CY 2027 MEI percentage increase, based on historical data through the second quarter of 2026.

D. Valuation of Specific Codes Including Potentially Misvalued Services Under the PFS

1. Background: Process for Valuing New, Revised, and Potentially Misvalued Codes

Establishing valuations for newly created and revised CPT codes is a routine part of maintaining the PFS. Since the inception of the PFS, it has also been a priority to revalue services regularly to make sure that the payment rates reflect the changing trends in the practice of medicine and current prices for inputs used in the PE calculations. Initially, this was accomplished primarily through the 5-year review process, which resulted in revised work RVUs for CY 1997, CY 2002, CY 2007, and CY 2012, and revised PE RVUs in CY 2001, CY 2006, and CY 2011, and revised MP RVUs in CY 2010, CY 2015, and CY 2020. Under the 5-year review process, revisions in RVUs were proposed and finalized via rulemaking. In addition to the 5-year reviews, beginning with CY 2009, CMS and the AMA's Relative Value Unit Update Committee (RUC) identified a number of potentially misvalued codes each year using various identification screens, as outlined in section II.C. of this final rule, Potentially Misvalued Services under the PFS. Historically, when we received RUC recommendations, our process had been to establish interim final RVUs for the potentially misvalued codes, new codes, and any other codes for which there were coding changes in the final rule with comment period for a year. Then, during the 60-day period following the publication of the final rule with comment period, we accepted public comments about those valuations. For services furnished during the calendar year following the publication of interim final rates, we paid for services based upon the interim final values established in the final rule. In the final rule with comment period for the subsequent year, we considered and responded to public comments received on the interim final values and typically made any appropriate adjustments and finalized those values.

In the CY 2015 PFS final rule with comment period (79 FR 67547), we finalized a new process for establishing values for new, revised and potentially misvalued codes. Under the new process, we include proposed values for these services in the proposed rule, rather than establishing them as interim final in the final rule with comment period. Beginning with the CY 2017 PFS proposed rule (81 FR 46162), the new process was applicable to all codes, except for new codes that describe truly new services. For CY 2017, we proposed new values in the CY 2017 PFS proposed rule for the vast majority of new, revised, and potentially misvalued codes for which we received complete RUC recommendations by February 10, 2016. To complete the transition to this new process, for codes for which we established interim final values in the CY 2016 PFS final rule with comment period (81 FR 80170), we reviewed the comments received during the 60-day public comment period following release of the CY 2016 PFS final rule with comment period (80 FR 70886),

and re-proposed values for those codes in the CY 2017 PFS proposed rule. We considered public comments received during the 60-day public comment period for the proposed rule before establishing final values in the CY 2017 PFS final rule. As part of our established process, we will adopt interim final values only in the case of wholly new services for which there are no predecessor codes or values and for which we do not receive recommendations in time to propose values.

As part of our obligation to establish RVUs for the PFS, we thoroughly review and consider available information including recommendations and supporting information from the RUC, the Health Care Professionals Advisory Committee (HCPAC), public commenters, medical literature, Medicare claims data, comparative databases, comparison with other codes within the PFS, as well as consultation with other physicians and healthcare professionals within CMS and the Federal Government as part of our process for establishing valuations. Where we concur that the RUC's recommendations, or recommendations from other commenters, are reasonable and appropriate and are consistent with the time and intensity paradigm of physician work, we proposed those values as recommended. Additionally, we continually engage with interested parties, including the RUC, regarding our approach for accurately valuing codes, and as we prioritize our obligation to value new, revised, and potentially misvalued codes. We continue to welcome feedback from all interested parties regarding valuation of services for consideration through our rulemaking process.

2. Methodology for Establishing Work RVUs

a. Background

For each code identified in this section, we conduct a review that includes the current work RVU (if any), RUC-recommended work RVU, intensity, time to furnish the preservice, intraservice, and postservice activities, as well as other components of the service that contribute to the value. Our reviews of recommended work RVUs and time inputs generally include, but have not been limited to, a review of information provided by the RUC, the HCPAC, and other public commenters, medical literature, and comparative databases, as well as a comparison with other codes within the PFS, consultation with other physicians and health care professionals within CMS and the Federal Government, as well as Medicare claims data. We also assess the methodology and data used to develop the recommendations submitted to us by the RUC and other public commenters and the rationale for the recommendations. In the CY 2011 PFS final rule with comment period (75 FR 73328 through 73329), we discussed a variety of methodologies and approaches used to develop work RVUs, including survey data, building blocks, crosswalks to key reference or similar codes, and magnitude estimation (see the CY 2011 PFS final rule with comment period (75 FR 73328 through 73329) for more information). When referring to a survey, unless otherwise noted, we mean the surveys conducted by specialty societies as part of the formal RUC process.

Components that we use in the building block approach may include preservice, intraservice, or postservice time and post-procedure visits. When referring to a bundled CPT code, the building block components could include the CPT codes that make up the bundled code and the inputs associated with those codes. We use the building block methodology to construct, or deconstruct, the work RVU for a CPT code based on component pieces of the code. Magnitude estimation refers to a methodology for valuing work that determines the appropriate work RVU for a service by gauging the total amount of work for that service relative to the work for a similar service across the PFS without explicitly valuing the components of that work. In addition to these methodologies, we frequently utilize an incremental methodology in which we value a code based upon its incremental difference between another code and another family of codes. Section 1848(c)(1)(A) of the Act specifically defines the work component as the resources that reflect time and intensity in furnishing the service. Also, the published literature on valuing work has recognized the key role of time in overall work. For particular codes, we refine the work RVUs in direct proportion to the changes in the best information regarding the time resources involved in furnishing particular services, either considering the total time or the intraservice time.

Several years ago, to aid in the development of preservice time recommendations for new and revised CPT codes, the RUC created standardized preservice time packages. The packages include preservice evaluation time, preservice positioning time, and preservice scrub, dress and wait time. Currently, there are preservice time packages for services typically furnished in the facility setting (for example, preservice time packages reflecting the different combinations of straightforward or difficult procedure, and straightforward or difficult patient). Currently, there are three preservice time packages for services typically furnished in the non-facility setting.

We have developed several standard building block methodologies to value services appropriately when they have common billing patterns. For example, in cases where a service is typically furnished to a beneficiary on the same day as an E/M service, we believe that there is overlap between the two services in some of the activities furnished during the preservice evaluation and postservice time. Our longstanding adjustments have reflected a broad assumption that at least one-third of the work time in both the preservice evaluation and postservice period is duplicative of work furnished during the E/M visit.

Accordingly, in cases where we believe that the RUC has not adequately accounted for the overlapping activities in the recommended work RVU and/or times, we adjust the work RVU and/or times to account for the overlap. The work RVU for a service is the product of the time involved in furnishing the service multiplied by the intensity of the work. Preservice evaluation time and postservice time both have a long-established intensity of work per unit of time (IWPUT) of 0.0224, which means that 1 minute of preservice evaluation or postservice time equates to 0.0224 of a work RVU.

Therefore, in many cases when we remove 2 minutes of preservice time and 2 minutes of postservice time from a procedure to account for the overlap with the same day E/M service, we also remove a work RVU of 0.09 (4 minutes $\times$ 0.0224 IWPUT) if we do not believe the overlap in time had already been accounted for in the work RVU. The RUC has recognized this valuation policy and, in many cases, now addresses the overlap in time and work when a service is typically furnished on the same day as an E/M service.

The following paragraphs discuss our approach to reviewing RUC recommendations and developing proposed values for specific codes. When they exist, we also include a summary of interested party reactions to our approach. We noted that many commenters and interested parties have expressed concern over the years with our ongoing adjustment of work RVUs based on changes in the best information we had regarding the time resources involved in furnishing individual services. We have been

particularly concerned with the RUC's and various specialty societies' objections to our approach given the significance of their recommendations to our process for valuing services and since much of the information we use to make the adjustments is derived from their survey process. We note that we are obligated under the statute to consider both time and intensity in establishing work RVUs for PFS services. As explained in the CY 2016 PFS final rule with comment period (80 FR 70933), we recognize that adjusting work RVUs for changes in time is not always a straightforward process, so we have applied various methodologies to identify several potential work values for individual codes.

We observed that for many codes reviewed by the RUC, recommended work RVUs have appeared to be incongruous with recommended assumptions regarding the resource costs in time. This has been the case for a significant portion of codes for which we recently established or proposed work RVUs that are based on refinements to the RUC-recommended values. When we adjusted work RVUs to account for significant changes in time, we started by looking at the change in the time in the context of the RUC-recommended work RVU. When the recommended work RVUs do not appear to account for significant changes in time, we employed different approaches (including survey data, building blocks, crosswalks to key reference or similar codes, and magnitude estimation) to identify potential values that reconcile the recommended work RVUs with the recommended time values. Many of these methodologies, such as survey data, building block, crosswalks to key reference or similar codes, and magnitude estimation have long been used in developing work RVUs under the PFS. In addition to these, we sometimes use the relationship between the old time values and the new time values for particular services to identify alternative work RVUs based on changes in time components.

In so doing, rather than ignoring the RUC-recommended value, we used the recommended values as a starting reference and then applied one of these several methodologies to account for the reductions in time that we believe were not otherwise reflected in the RUC-recommended value. If we believe that such changes in time are already accounted for in the RUC's recommendation, then we do not make such adjustments. Likewise, we do not arbitrarily apply time ratios to current work RVUs to calculate proposed work RVUs. We use the ratios to identify potential work RVUs and consider these work RVUs as potential options relative to the values developed through other options.

While we do not believe that the decrease in time as reflected in survey values should always equate to a one-to-one or linear decrease in newly valued work RVUs, we do believe that, since the two components of work are time and intensity, absent an obvious or explicitly stated rationale for why the relative intensity of a given procedure has increased, significant decreases in time should be reflected in decreases to work RVUs although not necessarily in a linear manner. If the RUC's recommendation has appeared to disregard or dismiss the changes in time, without a persuasive explanation of why such a change should not be accounted for in the overall work of the service, then we generally used one of the aforementioned methodologies to identify potential work RVUs, including the methodologies intended to account for the changes in the resources involved in furnishing the procedure (such as building blocks or crosswalks to key reference or similar codes).

Several interested parties, including the RUC, have expressed general objections to our use of these methodologies and suggested that our actions in adjusting the recommended work RVUs are inappropriate; other interested parties have also expressed general concerns with CMS refinements to RUC-recommended values in general. In the CY 2017 PFS final rule (81 FR 80272 through 80277), we responded in detail to several comments that we received regarding this issue. In the CY 2017 PFS proposed rule (81 FR 46162), we requested comments regarding potential alternatives to making adjustments that would recognize overall estimates of work in the context of changes in the resource of time for particular services; however, we did not receive any specific potential alternatives. As described earlier in this section, crosswalks to key reference or similar codes are one of the many methodological approaches we employed to identify potential values that reconcile the RUC-recommended work RVUs with the recommended time values when the RUC-recommended work RVUs did not appear to account for significant changes in time.

We received several comments regarding our methodologies for work valuation in response to the CY 2027 PFS proposed rule (91 FR 43865 through 43929) and the following is a summary of the comments we received and our responses.

Comment: Several commenters disagreed with CMS' reference to older work time sources and stated that their use led to the proposal of work RVUs based on flawed assumptions. Commenters stated that codes with ''CMS/Other'' or ''Harvard'' work time sources, used in the original valuation of certain older services, were not surveyed, and therefore, were not resource based. Commenters also stated that it was invalid to draw comparisons between the current work times and work RVUs of these services to the newly surveyed work time and work RVUs as recommended by the RUC.

Response: We agree that it is important to use the recent data available regarding work times and note that when many years have passed since work time has been measured, significant discrepancies can occur. However, we also believe that our operating assumption regarding the validity of the existing values as a point of comparison is critical to the integrity of the relative value system as currently constructed. The work times currently associated with codes play a very important role in PFS ratesetting, both as points of comparison in establishing work RVUs and in the allocation of indirect PE RVUs by specialty. If we were to operate under the assumption that previously recommended work times had been routinely overestimated, this would undermine the relativity of the work RVUs on the PFS in general, in light of the fact that codes are often valued based on comparisons to other codes with similar work times. Such an assumption would also undermine the validity of the allocation of indirect PE RVUs to physician specialties across the PFS.

Instead, we believe that it is crucial that the code valuation process take place with the understanding that the existing work times that have been used in PFS ratesetting are accurate. We recognize that adjusting work RVUs for changes in time is not always a straightforward process and that the intensity associated with changes in time is not necessarily always linear, which is why we apply various methodologies to identify several potential work values for individual codes. However, we reiterate that we believe it would be irresponsible to ignore changes in time based on the best data available, and that we are statutorily obligated to consider both time and intensity in establishing work RVUs for PFS services. For additional information regarding the use of old work time values that were established many years ago and have not since been reviewed in our methodology, we refer

readers to our discussion of the subject in the CY 2017 PFS final rule (81 FR 80273 through 80274).

Comment: Several commenters disagreed with the use of time ratio methodologies for work valuation. Commenters stated that this use of time ratios is not a valid methodology for valuation of physician services. Commenters stated that treating all components of physician time (preservice, intraservice, postservice and post-operative visits) as having identical intensity is incorrect and inconsistently applying it to only certain services under review creates inherent payment disparities in a payment system, which is based on relative valuation. Commenters stated that in many scenarios, CMS selects an arbitrary combination of inputs to apply rather than seeking a valid clinically relevant relationship that would preserve relativity. Commenters suggested that CMS determine the work valuation for each code based not only on surveyed work times, but also the intensity and complexity of the service and relativity to other similar services, rather than basing the work value entirely on time. Commenters recommended that CMS embrace the clinical input from practicing physicians when valid surveys were conducted and provide a clinical rationale when proposing crosswalks for valuation of services.

Response: We disagree and continue to believe that the use of time ratios is one of several appropriate methods for identifying potential work RVUs for particular PFS services, particularly when the alternative values recommended by the RUC and other commenters do not account for survey information that suggests the amount of time involved in furnishing the service has changed significantly. We reiterate that, consistent with the statute, we are required to value the work RVU based on the relative resources involved in furnishing the service, which include time and intensity. In accordance with the statute, we believe that changes in time and intensity must be accounted for when developing work RVUs. When our review of recommended values reveals that changes in time are not accounted for in a RUC-recommended work RVU, the obligation to account for that change when establishing proposed and final work RVUs remains.

We recognize that it would not be appropriate to develop work RVUs solely based on time, given that intensity is also an element of work, but in applying the time ratios, we are using derived intensity measures based on current work RVUs for individual procedures. We clarify that we do not treat all components of physician time as having identical intensity. If we were to disregard intensity altogether, the work RVUs for all services would be developed based solely on time values and this would not be accurate, as indicated by the many services that share the same time values but have different work RVUs. For example, among the codes reviewed in this CY 2027 PFS final rule, the following all share the same total work time of 45 minutes: CPT codes 55705, 61783, 63048, and 92527. However, these codes had very different proposed work RVUs of 1.88, 3.66, 3.38, and 0.92, respectively. These examples demonstrate that we do not value services purely based on work time; instead, we incorporate time as one of multiple different factors in our review process. Furthermore, we reiterate that we use time ratios to identify potentially appropriate work RVUs and then use other methods (including estimates of work from CMS medical personnel and crosswalks to key references or similar codes) to validate these RVUs. For more details on our methodology for developing work RVUs, we direct readers to the discussion in the CY 2017 PFS final rule (81 FR 80272 through 80277).

We do not believe that our review process is arbitrary in nature. Our reviews of recommended work RVUs and time inputs generally include, but have not been limited to, a review of information provided by the RUC, the HCPAC, and other public commenters, medical literature, and comparative databases, as well as a comparison with other codes within the PFS, consultation with other physicians and health care professionals within CMS and the Federal Government, as well as Medicare claims data. We also assess the methodology and data used to develop the recommendations submitted to us by the RUC and other public commenters and the rationale for the recommendations. In the CY 2011 PFS final rule with comment period (75 FR 73328 through 73329), we discussed a variety of methodologies and approaches used to develop work RVUs, including survey data, building blocks, crosswalks to key reference or similar codes, and magnitude estimation (see the CY 2011 PFS final rule with comment period (75 FR 73328 through 73329) for more information). Regarding the commenter's concerns regarding clinically relevant relationships, we emphasize that we continue to believe that the nature of the PFS relative value system is such that all services are appropriately subject to comparisons to one another. Although codes that describe clinically similar services are sometimes stronger comparator codes, we do not agree that codes must share the same site of service, patient population, or utilization level to serve as an appropriate crosswalk.

We have historically relied on survey data provided by the American Medical Association (AMA)/Specialty Society Relative Value Scale (RVS) Update Committee (referred to as the RUC) to estimate practitioner time, work intensity, and practice expense for the purpose of establishing RVUs for the codes used for payment under the PFS. As described in section II.D. of this final rule, CMS regularly revalues codes as part of its potentially misvalued codes initiative, as required by section 1848(c)(2)(K) of the Act, using RUC survey data that shows clinicians' estimates of how long a particular service takes to complete. In the CY 2025 PFS final rule, we summarized public comments that we had received expressing concerns with using RUC data as a source of valuation and identifying a need for empirical data in the context of valuing advanced primary care management services (89 FR 97898). In response to these comments, we indicated that we were open to alternative recommendations for how to price these and other services, and that we would consider all options presented to us with a preference for information with empirical evidence behind it. We also reminded commenters that we do not exclusively rely on RUC recommendations and can receive data and recommendations from other outside sources as well.

In the CY 2019 PFS final rule (83 FR 59515), in response to comments, we clarified that terms ''reference services,'' ''key reference services,'' and ''crosswalks'' as described by the commenters are part of the RUC's process for code valuation. These are not terms that we created, and we do not agree that we necessarily must employ them in the identical fashion for the purpose of discussing our valuation of individual services that come up for review. However, in the interest of minimizing confusion and providing clear language to facilitate feedback from interested parties, we stated that we would seek to limit the use of the term, ''crosswalk,'' to those cases where we made a comparison to a CPT code with the identical work RVU (83 FR 59515). We noted that we also occasionally make use of a ''bracket'' for code valuation. A ''bracket'' refers to when a work RVU falls between the values of two CPT codes, one at a higher

work RVU and one at a lower work RVU.

We look forward to continuing to engage with interested parties and commenters, including the RUC, as we prioritize our obligation to value new, revised, and potentially misvalued codes; and we will continue to welcome feedback from all interested parties regarding valuation of services for consideration through our rulemaking process. We refer readers to the detailed discussion in this section of the valuation considered for specific codes. Table A–DX contains a list of codes and descriptors for which we finalized work RVUs for CY 2027; this includes all codes for which we received RUC recommendations by February 10, 2026. The finalized work RVUs, work time and other payment information for all CY 2027 payable codes are available on the CMS website under downloads for the CY 2027 PFS final rule at *https://www.cms.gov/medicare/payment/fee-schedules/physician/federal-regulation-notices*.

b. Efficiency Adjustment

In the CY 2026 final rule, we finalized the establishment of an efficiency adjustment to the work RVUs, as well as corresponding updates to the intraservice portion of physician time inputs for non-time-based services, with refinements (90 FR 49334 through 49345). We finalized a policy to apply this efficiency adjustment to the intraservice portion of physician time and work RVUs every 3 years. To calculate the efficiency adjustment, we finalized the use of the MEI productivity adjustment over a 5-year look back period from CY 2022 to CY 2026. We noted that using more recent historical data from the BLS yielded an efficiency adjustment of 3.6 percent. As we discussed in the CY 2026 PFS proposed rule, our approach in applying an efficiency adjustment was to take into account changes in medical practice and to better reflect resources involved, and it was designed to be conservative in nature, as we were concerned about making too many changes at once to the current methodology. Therefore, we finalized the proposed efficiency adjustment of 2.5 percent. We also exempted additional codes, specifically time-based codes, services on the CMS telehealth list, and new codes for CY 2026, as reflected in the Codes Subject to Efficiency Adjustment file. We stated in the proposed rule that this file with efficiency adjustment exemptions would be issued annually and could be found in the public use files for CY 2027 but we note that this language was inadvertently included in the proposed rule. We plan to post the Codes Subject to Efficiency Adjustment file for each year that the efficiency adjustment is applied, therefore the file will be posted again for CY 2029 rulemaking. For a full discussion of the efficiency adjustment, we directed readers to the CY 2026 PFS final rule (90 FR 49334 through 49345).

For CY 2027 rulemaking, the RUC made a number of work RVU recommendations prior to the finalization of the efficiency adjustment in the CY 2026 PFS final rule. In these cases, where the RUC's work RVU recommendation was based on a pre-adjusted work RVU, we have treated the recommendation as though the RUC had recommended the efficiency adjusted valuation. For example, the RUC initially recommended a work RVU of 0.35 for CPT code 95944 based on a crosswalk to the pre-adjusted work RVU of CPT code 95885. The work RVU of this crosswalk code became 0.34 after applying the efficiency adjustment, which we have used as the recommended valuation for CPT code 95944. This policy affected a relatively small number of the codes reviewed for CY 2027, and we have noted in the preamble where the efficiency adjustment affected a work valuation.

3. Methodology for the Direct PE Inputs To Develop PE RVUs

a. Background

On an annual basis, the RUC provides us with recommendations regarding PE inputs for new, revised, and potentially misvalued codes. We review the RUC-recommended direct PE inputs on a code-by-code basis. Like our review of recommended work RVUs, our review of recommended direct PE inputs generally includes, but is not limited to, a review of information provided by the RUC, HCPAC, and other public commenters, medical literature, and comparative databases, as well as a comparison with other codes within the PFS, and consultation with physicians and health care professionals within CMS and the Federal Government, as well as Medicare claims data. We also assess the methodology and data used to develop the recommendations submitted to us by the RUC and other public commenters and the rationale for the recommendations. When we determine that the RUC's recommendations appropriately estimate the direct PE inputs (clinical labor, disposable supplies, and medical equipment) required for the typical service, are consistent with the principles of relativity, and reflect our payment policies, we use those direct PE inputs to value a service. If not, we refine the recommended PE inputs to better reflect our estimate of the PE resources required for the service. We also confirm whether CPT codes should have facility and/or non-facility direct PE inputs and refine the inputs accordingly.

Our review and refinement of the RUC-recommended direct PE inputs includes many refinements that are common across codes, as well as refinements that are specific to particular services. Table A–D11 details our refinements of the RUC's direct PE recommendations at the code-specific level. In section II.B. of this final rule, Determination of Practice Expense Relative Value Units (PE RVUs), we address certain refinements that will be common across codes. Refinements to particular codes are addressed in the portions of that section that are dedicated to particular codes. We note that for each refinement, we indicate the impact on direct costs for that service. We note that, on average, in any case where the impact on the direct cost for a particular refinement is $0.35 or less, the refinement has no impact on the PE RVUs. This calculation considers both the impact on the direct portion of the PE RVU, as well as the impact on the indirect allocator for the average service. In this final rule, we also note that many of the refinements listed in Table A–D11 result in changes under the $0.35 threshold and would be unlikely to result in a change to the RVUs.

We note that the finalized direct PE inputs for CY 2027 are displayed in the CY 2027 direct PE input files, available on the CMS website under the downloads for the CY 2027 PFS final rule at *https://www.cms.gov/medicare/payment/fee-schedules/physician/federal-regulation-notices*. The inputs displayed there have been used in developing the CY 2027 PE RVUs as displayed in Addendum B (see *https://www.cms.gov/medicare/payment/prospective-payment-systems/hospital-outpatient/addendum-a-b-updates*).

b. Common Refinements

(1) Changes in Work Time

Some direct PE inputs are directly affected by revisions in work time. Specifically, changes in the intraservice portions of the work time and changes in the number or level of postoperative visits associated with the global periods result in corresponding changes to direct PE inputs. The direct PE input recommendations generally correspond to the work time values associated with services. We believe that inadvertent discrepancies between work time values and direct PE inputs should be refined

or adjusted in the establishment of proposed direct PE inputs to resolve the discrepancies.

(2) Equipment Time

Prior to CY 2010, the RUC did not generally provide CMS with recommendations regarding equipment time inputs. In CY 2010, in the interest of ensuring the greatest possible degree of accuracy in allocating equipment minutes, we requested that the RUC provide equipment times along with the other direct PE recommendations, and we provided the RUC with general guidelines regarding appropriate equipment time inputs. We appreciate the RUC's willingness to provide us with these additional inputs as part of its PE recommendations.

In general, the equipment time inputs correspond to the service period portion of the clinical labor times. We clarified this principle over several years of rulemaking, indicating that we consider equipment time as the time within the intraservice period when a clinician is using the piece of equipment plus any additional time that the piece of equipment is not available for use for another patient due to its use during the designated procedure. For those services for which we allocate cleaning time to portable equipment items, because the portable equipment does not need to be cleaned in the room where the service is furnished, we do not include that cleaning time for the remaining equipment items, as those items and the room are both available for use for other patients during that time. In addition, when a piece of equipment is typically used during follow-up postoperative visits included in the global period for a service, the equipment time will also reflect that use.

We believe that certain highly technical pieces of equipment and equipment rooms are less likely to be used during all of the preservice or postservice tasks performed by clinical labor staff on the day of the procedure (the clinical labor service period) and are typically available for other patients even when one member of the clinical staff may be occupied with a preservice or postservice task related to the procedure. We also noted that we believe these same assumptions will apply to inexpensive equipment items that are used in conjunction with and located in a room with non-portable highly technical equipment items since any items in the room in question will be available if the room is not being occupied by a particular patient. For additional information, in that rule we referred readers to our discussion of these issues in the CY 2012 PFS final rule with comment period (76 FR 73182) and the CY 2015 PFS final rule with comment period (79 FR 67639).

(3) Standard Tasks and Minutes for Clinical Labor Tasks

In general, the preservice, intraservice, and postservice clinical labor minutes associated with clinical labor inputs in the direct PE input database reflect the sum of particular tasks described in the information that accompanies the RUC-recommended direct PE inputs, commonly called the ''PE worksheets.'' For most of these described tasks, there is a standardized number of minutes, depending on the type of procedure, its typical setting, its global period, and the other procedures with which it is typically reported. The RUC sometimes recommends a number of minutes either greater than or less than the time typically allotted for certain tasks. In those cases, we review the deviations from the standards and any rationale provided for the deviations. When we do not accept the RUC-recommended exceptions, we refine the proposed direct PE inputs to conform to the standard times for those tasks. In addition, in cases when a service is typically billed with an E/M service, we remove the preservice clinical labor tasks to avoid duplicative inputs and to reflect the resource costs of furnishing the typical service.

We refer readers to section II.B. of this final rule, Determination of Practice Expense Relative Value Units (PE RVUs), for more information regarding the collaborative work of CMS and the RUC in improvements in standardizing clinical labor tasks.

(4) Recommended Items That Are Not Direct PE Inputs

In some cases, the PE worksheets included with the RUC's recommendations include items that are not clinical labor, disposable supplies, or medical equipment or that cannot be allocated to individual services or patients. We addressed these kinds of recommendations in previous rulemaking (78 FR 74242), and we do not use items included in these recommendations as direct PE inputs in the calculation of PE RVUs.

(5) New Supply and Equipment Items

The RUC generally recommends the use of supply and equipment items that already exist in the direct PE input database for new, revised, and potentially misvalued codes. However, some recommendations include supply or equipment items that are not currently in the direct PE input database. In these cases, the RUC has historically recommended that a new item be created and has facilitated our pricing of that item by working with the specialty societies to provide us copies of sales invoices. For CY 2027 we received invoices for several new supply and equipment items. Tables A–D11 and A–D12 detail the invoices received for new and existing items in the direct PE database. As discussed in section II.B. of this final rule, Determination of Practice Expense Relative Value Units, we encourage interested parties to review the prices associated with these new and existing items to determine whether these prices appear to be accurate. Where prices appear inaccurate, we encourage interested parties to submit invoices or other information to improve the accuracy of pricing for these items in the direct PE database by February 10th of the following year for consideration in future rulemaking, similar to our process for consideration of RUC recommendations.

We remind interested parties that due to the relativity inherent in the development of RVUs, reductions in existing prices for any items in the direct PE database increase the pool of direct PE RVUs available to all other PFS services. Tables A–D11 and A–D12 also include the number of invoices received and the number of non-facility allowed services for procedures that use these equipment items. We provide the non-facility allowed services so that interested parties will note the impact the particular price may have on PE relativity, as well as to identify items that are used frequently, since we believe that interested parties are more likely to have better pricing information for items used more frequently. A single invoice may not be reflective of typical costs, and we encourage interested parties to provide additional invoices so that we may identify and use accurate prices in the development of PE RVUs.

In some cases, we do not use the price listed on the invoice that accompanies the recommendation because we identify publicly available alternative prices or information that suggests a different price is more accurate. In these cases, we include this in the discussion of these codes. In other cases, we cannot adequately price a newly recommended item due to inadequate information. Sometimes, no supporting information regarding the price of the item has been included in the recommendation. In other cases, the supporting information does not demonstrate that the item has been purchased at the listed price (for example, vendor price quotes instead of paid invoices). In cases where the information provided on the item allows

us to identify clinically appropriate proxy items, we may use existing items as proxies for the newly recommended items. In other cases, we include the item in the direct PE input database without any associated price. Although including the item without an associated price means that the item does not contribute to the calculation of the proposed PE RVU for particular services, it facilitates our ability to incorporate a price once we obtain information and are able to do so.

(6) Service Period Clinical Labor Time in the Facility Setting

Generally speaking, our direct PE inputs do not include clinical labor minutes assigned to the service period because the cost of clinical labor during the service period for a procedure in the facility setting is not considered a resource cost to the practitioner since Medicare makes separate payment to the facility for these costs. We address code-specific refinements to clinical labor in the individual code sections.

(7) Procedures Subject to the Multiple Procedure Payment Reduction (MPPR) and the Outpatient Prospective Payment System (OPPS) Cap

We noted in the proposed rule that the list of services for the upcoming calendar year that are subject to the MPPR for diagnostic cardiovascular services, diagnostic imaging services, diagnostic ophthalmology services, and therapy services are displayed in the public use files for the PFS proposed and final rules for each year. In addition, the list of procedures that meet the definition of imaging under section 1848(b)(4)(B) of the Act, and therefore, are subject to the OPPS cap, are also displayed in the public use files for the PFS proposed and final rules for each year. The public use files for CY 2027 are available on the CMS website under downloads for the CY 2027 PFS final rule at *https://www.cms.gov/medicare/payment/fee-schedules/physician/federal-regulation-notices*. For more information regarding the history of the MPPR policy, we referred readers to the CY 2014 PFS final rule with comment period (78 FR 74261 through 74263).

Effective January 1, 2007, section 5102(b)(1) of the Deficit Reduction Act of 2005 (DRA) (Pub. L. 109–171, enacted on February 8, 2006) amended section 1848(b)(4) of the Act to require that, for imaging services, if—(i) The technical component (TC) (including the TC portion of a global fee) of the service established for a year under the fee schedule without application of the geographic adjustment factor, exceeds (ii) The Medicare outpatient department (OPD) fee schedule amount established under the prospective payment system (PPS) for hospital OPD services under section 1833(t)(3)(D) of the Act for such service for such year, determined without regard to geographic adjustment under section 1833(t)(2)(D) of the Act, the Secretary shall substitute the amount described in clause (ii), adjusted by the geographic adjustment factor under the PFS, for the fee schedule amount for such TC for such year. As required by section 1848(b)(4)(A) of the Act, for imaging services furnished on or after January 1, 2007, we cap the TC of the PFS payment amount for the year (prior to geographic adjustment) by the Outpatient Prospective Payment System (OPPS) payment amount for the service (prior to geographic adjustment). We then apply the PFS geographic adjustment to the capped payment amount. Section 1848(b)(4)(B) of the Act defines imaging services as ''imaging and computer-assisted imaging services, including X-ray, ultrasound (including echocardiography), nuclear medicine (including PET), magnetic resonance imaging (MRI), computed tomography (CT), and fluoroscopy, but excluding diagnostic and screening mammography.'' For more information regarding the history of the cap on the TC of the PFS payment amount under the DRA (the ''OPPS cap''), we referred readers to the CY 2007 PFS final rule with comment period (71 FR 69659 through 69662).

For CY 2027, we identified new and revised codes to determine which services meet the definition of ''imaging services'' as defined at section 1848(b)(4)(B) of the Act for purposes of this cap. Beginning for CY 2027, we proposed to include the following services in Table A–D1 on the list of codes to which the OPPS cap applies:

TABLE A-D1: CY 2027 CODE ADDITIONS TO THE OPPS CAP LIST

CPT Code	CPT Long Descriptor
70560	*Magnetic resonance angiography, head and neck, including image postprocessing; without contrast material(s)*
70561	*Magnetic resonance angiography, head and neck, including image postprocessing; with contrast material(s)*
70562	*Magnetic resonance angiography, head and neck; without contrast material(s) in one or both body regions, followed by contrast material(s) and further sequences in one or both body regions, including image postprocessing*
97611	*Real-time fluorescence wound imaging with clinical darkness to identify presence, location, load of bacteria and measur wound size, per day*
92978	*Endoluminal imaging of coronary vessel or graft using intravascular ultrasound (IVUS) or optical coherence tomography (OCT) during diagnostic evaluation and/or therapeutic intervention including imaging supervision, interpretation and report; initial vessel (List separately in addition to code for primary procedure)*
92979	*Endoluminal imaging of coronary vessel or graft using intravascular ultrasound (IVUS) or optical coherence tomography (OCT) during diagnostic evaluation and/or therapeutic intervention including imaging supervision, interpretation and report; each additional vessel (List separately in addition to code for primary procedure)*

We received public comments on these proposals. The following is a summary of the comments we received and our responses.

Comment: Commenters supported the addition of CPT codes 70560, 70561, and 70562 to the OPPS cap list.

Response: We thank the commenters for their support.

We are finalizing the addition of the services listed in Table A–D1 to the list of codes subject to the OPPS cap as proposed.

c. Valuation of Specific Codes for CY 2027

(1) Fine Needle Aspiration (CPT codes 10005 and 10006)

The RUC received notification of interest from a specialty society to re-

review CPT codes 10005 (*Fine needle aspiration biopsy, including ultrasound guidance; first lesion*) and 10006 (*Fine needle aspiration biopsy, including ultrasound guidance; each additional lesion*) at the January 2026 meeting.

We proposed the RUC-recommended work RVUs of 1.35 for CPT code 10005 and 1.00 for 10006.

We proposed the RUC recommended direct PE inputs for CPT codes 10005 and 10006 with one modification. The RUC submitted an invoice associated with this code family for an update in the price of the portable ultrasound (EQ250) equipment from its current price of $41,612.53 to $83,750.00. However, based on our review of current market pricing for portable ultrasounds, it appears that this type of equipment is becoming less expensive, not doubling in price over current. We also have reason to believe that the type of portable ultrasound listed on the submitted invoice represented the upper end of the market as opposed to the typical case. This invoice stated that the product in question constitutes ''a high-performance diagnostic ultrasound system'' including a 23-inch flat panel monitor. It is also not clear from the submitted invoice that the product in question is even a portable version of an ultrasound system.

Given that the price on this invoice was significantly higher than other portable ultrasounds available for purchase, we did not propose to update the price of the EQ250 portable ultrasound which is used in many other HCPCS codes. Instead, we proposed to create a new equipment item that describes a ''Fine Needle Aspiration portable ultrasound'' (ER130) which we proposed to price at the submitted $83,750.00 price. The ER130 equipment is proposed to replace the previous EQ250 portable ultrasound at the same 37 minutes for CPT code 10005 and 17 minutes for CPT code 10006 as recommended by the RUC.

Comment: A few commenters expressed concern that the proposed work RVU for CPT code 10005 would result in nearly a 5 percent reduction in reimbursement, which would significantly affect interventional radiology and procedural services. These commenters reiterated that fine needle aspiration (FNA) is essential for prompt diagnosis of cancer and other serious illness and frequently helps patients avoid more invasive surgery, and cautioned that reduced reimbursement could jeopardize access to this high-value, cost-effective care. Commenters stated that FNA procedures were undervalued prior to the resurvey and stressed the importance of continued collaboration among specialty societies, the RUC, and CMS to preserve beneficiary access.

Response: We appreciate commenters' concerns regarding the magnitude of the change in reimbursement for CPT code 10005. However, absent additional data or an alternative survey-based valuation from commenters, we believe the survey 25th percentile work RVU of 1.35 (based on 268 responses) represents the best available information for valuing this service at this time. We did not receive an alternative survey-based valuation or additional data in the comments that would support a different work RVU for CPT code 10005. We will continue to work with the RUC and specialty societies, including interventional radiology, on the ongoing valuation of these services in future rulemaking cycles.

Comment: The majority of commenters supported the proposed work RVUs and modified direct PE inputs for CPT codes 10005 and 10006 and urged CMS to finalize them as proposed. Several commenters also supported creation of the new ER130 equipment item for portable ultrasound used in image-guided FNA, noting that equipment pricing has not kept pace with the cost of the technology needed to safely localize target lesions, and urged CMS to finalize the item as proposed.

Response: We appreciate commenters' support. We are finalizing the work RVUs of 1.35 for CPT code 10005 and 1.00 for CPT code 10006 as proposed. We also appreciate commenters' support for the new ER130 equipment item. We did not receive comments disputing this approach or the $83,750.00 price and therefore we are finalizing the ER130 equipment item, along with the other direct PE inputs, as proposed.

(2) Skin Cell Suspension Autograft (CPT codes 15006, 15007, 15008, and 15009)

In September 2025, the CPT Editorial Panel created four codes to report skin cell suspension autograft (SCSA): CPT code 15006 *(Skin cell suspension autograft (SCSA), trunk, arms, and/or legs; first 100 sq cm or less, or 1% of body area of infants and children),* CPT code 15007 *(Skin cell suspension autograft (SCSA), trunk, arms, and/or legs; each additional 100 sq cm, or each additional 1% of body area of infants and children, or part thereof (List separately in addition to code for primary procedure)),* CPT code 15008 *(Skin cell suspension autograft (SCSA), face, scalp, eyelids, mouth, neck, ears, orbits, genitalia, hands, feet, and/or multiple digits; first 100 sq cm or less, or 1% of body area of infants and children),* and CPT code 15009 *(Skin cell suspension autograft (SCSA), face, scalp, eyelids, mouth, neck, ears, orbits, genitalia, hands, feet, and/or multiple digits; each additional 100 sq cm, or each additional 1% of body area of infants and children, or part thereof (List separately in addition to code for primary procedure)).* The existing eight skin cell suspension autograft CPT codes (CPT codes 15011–15018) were deleted, and the ''Skin Cell Suspension Autograft'' guidelines were revised. The four new codes were surveyed for the January 2026 RUC meeting.

For CY 2027, we proposed the RUC-recommended work RVUs of 10.97 for CPT code 15006, 0.59 for CPT code 15007, 11.28 for CPT code 15008, and 0.98 for CPT code 15009. We proposed the RUC-recommended direct PE inputs for CPT codes 15006, 15007, 15008, and 15009 without refinement.

Comment: Commenters supported CMS' proposal of the RUC-recommended work RVUs and direct PE inputs for CPT codes 15006, 15007, 15008, and 15009. A commenter stated that two surgeons may perform distinct portions of the procedure simultaneously, which can reduce overall operative and anesthesia time and benefit the patient. The commenter stated that co-surgeon payment should be limited to circumstances where the surgeons' involvement is medically necessary and the documentation supports the distinct work performed by each surgeon, consistent with Medicare's existing co-surgery requirements. The commenter encouraged CMS to allow co-surgeon payment for the new SCSA codes when these requirements are met rather than creating a payment limitation that could discourage the most efficient surgical approach.

Response: We appreciate the commenters' support and feedback about the co-surgeon payment. We agree that co-surgeon payment may be appropriate for this service and are finalizing a co-surgery indicator of ''1'' for CPT codes 15006, 15007, 15008, and 15009.

After reviewing the comments, we are finalizing the work RVUs and direct PE inputs for CPT codes 15006, 15007, 15008, and 15009, as proposed, with the clarification that we are finalizing a co-surgery indicator of ''1'' for these services.

(3) Computer Assisted Surgical Navigation (CPT code 20985)

CPT code 20985 *(Computer-assisted surgical navigational procedure for musculoskeletal procedures, image-less (List separately in addition to code for*

primary procedure)) was first identified via the high-volume growth screen in April 2024.[7] The RUC's Relativity Assessment Workgroup (RAW) reviewed the action plan for 20985 and recommended that the RUC refer CPT code 20985 to the CPT Editorial Panel for revision, to modify the descriptor and address overlap with codes 0054T and 0055T. At the February 2025 CPT Editorial Panel meeting, CPT code 20985 was revised to remove ''image-less'' for reporting computer-assisted surgical navigational procedures for musculoskeletal procedures.

We proposed the RUC-recommended work RVU of 2.44, which is the current work RVU of CPT code 20985 after the efficiency adjustment was applied at the start of CY 2026. The RUC did not recommend and we did not propose direct PE inputs for CPT code 20985.

We did not receive any public comments on this policy, and therefore, we are finalizing as proposed.

(4) Ablation Therapy—Bone Tumors (CPT code 20994)

In February 2025, the CPT Editorial Panel approved new Category I add-on code 20994 (*Ablation therapy for reduction or eradication of bone tumor, including adjacent soft tissue when involved by tumor extension, cryoablation, open*) to describe and report cryoablation during an open surgical procedure where the bone is frozen after a tumor resection. CPT code 20994 was surveyed for the April 2025 meeting where the specialty recommended an interim value; the code was resurveyed at the September 2025 RUC meeting and recommendations submitted to CMS.

We proposed the RUC-recommended work RVU of 2.70 for CPT code 20994. The RUC did not recommend and we did not propose any direct PE inputs for this code.

Comment: A commenter stated that they supported the CMS proposal of the RUC-recommended work RVU for CPT code 20994.

Response: We appreciate the support for our proposed valuation from the commenter.

After consideration of the comments, we are finalizing the proposed work RVU of 2.70 for CPT code 20994.

(5) Intraosseous Fiducial Marker Placement (CPT codes 20988 and 20989)

At the May 2025 CPT Editorial Panel Meeting, CPT approved the addition of two codes and guidelines to report percutaneous intraosseous fiducial marker placement for the first target site and each additional target site, respectively: CPT codes 20988 (*Placement of localization marker(s) (e.g., fiducial marker[s]), intraosseous, percutaneous, including imaging guidance, when performed; first target site)* and 20989 *(Placement of localization marker(s) (e.g., fiducial marker[s]), intraosseous, percutaneous, including imaging guidance, when performed; each additional target site).* The specialties clarified that these codes are not new technology but are new codes to more accurately describe existing technology. These codes were surveyed for the October 2025 RUC meeting.

We proposed the RUC-recommended work RVU of 3.00 for CPT code 20988 and the RUC-recommended work RVU of 1.76 for CPT code 20989. We proposed the RUC-recommended direct PE inputs for both codes in the family without refinement.

Comment: Commenters supported our proposed values for the Intraosseous Fiducial Marker Placement codes.

Response: We appreciate the comments and after consideration of public comments, we are finalizing the work RVUs and direct PE inputs for the codes in the Intraosseous Fiducial Marker Placement family as proposed.

(6) Osteotomy—Spine (CPT codes 22210, 22212, 22214, and 22216)

In CY 2025 rulemaking, CPT codes 22210 (*Osteotomy of spine, posterior or posterolateral approach, 1 vertebral segment; cervical*), 22212 (*Osteotomy of spine, posterior or posterolateral approach, 1 vertebral segment; thoracic*), 22214 (*Osteotomy of spine, posterior or posterolateral approach, 1 vertebral segment; lumbar*), and 22216 (*Osteotomy of spine, posterior or posterolateral approach, 1 vertebral segment; each additional vertebral segment (List separately in addition to primary procedure)*) were nominated as potentially misvalued services.

At the September 2025 CPT Editorial Panel Meeting, CPT revised the existing codes and guidelines to clarify that the codes include complete resection of the interspinous ligament and the entirety of the ligamentum flavum (ie, laminar and subarticular) to allow deformity correction through spinal column realignment. The osteotomy includes resection of the inferior portion of the lamina, the inferior facet of the cranial vertebra, the superior portion of the lamina, and the superior facet of the caudal vertebra. Following the revisions to the CPT guidelines and parentheticals for the code family, CPT codes 22210, 22212, 22214, and 22216 were surveyed for the January 2026 RUC meeting.

We disagree with the RUC's recommended work RVU for CPT codes 22210, 22212, and 22214 and we proposed lower work RVUs in all three cases. We reviewed the RUC's recommended work valuations and found them to be high, relative to other codes with the same or similar times. We noted that although the surveyed intraservice work time decreased substantially for all three of these codes, the RUC recommended either maintaining the current work RVU (for CPT code 22210) or increasing the work RVU (for CPT codes 22212 and 22214), stating that there was compelling evidence for increased work valuation based on a change in the patient population and a change in technology. However, these services maintained the same code descriptors, with only minor changes to their billing guidelines, indicating that despite the changes in technology and patient population the underlying procedure remains significantly similar. Therefore, we do not agree with the RUC that there has been an increase in intensity which would account for these recommended work RVUs. While we do not believe that the decrease in time as reflected in survey values should always equate to a one-to-one or linear decrease in newly valued work RVUs, we do believe that since the two components of work are time and intensity, absent an obvious or explicitly stated rationale why the relative intensity of a given procedure has increased, significant decreases in time should be reflected in decreases to work RVUs although not necessarily in a linear manner.

In the case of CPT codes 22210, 22212, and 22214, we believe that the work RVUs should be reduced to account for the significant decreases in surveyed intraservice work time.

Additionally, the postoperative office visit levels in this code family are increasing from three level 2 evaluation and management visits to one level 4 and two level 3 office visits. The shifting of the post-operative visits in this code family to higher level office visit codes that require more time, maintains the total time and thus reflects a higher intensity and can contribute to a higher work RVU which highlights our overall concerns with visits during the global period and how we believe that all of these visits are not typically occurring. We refer readers to section II.B. of this final rule under ''b. Global Surgical Packages'' for that discussion.

We disagree with the RUC recommended value of 24.75 for CPT

[7] *https://www.ama-assn.org/system/files/raw-progress-report.pdf.*

code 22210 and we instead proposed a work RVU of 23.12 based on a crosswalk to CPT code 34701 (*Endovascular repair of infrarenal aorta by deployment of an aorto-aortic tube endograft including pre-procedure sizing and device selection, all nonselective catheterization(s), all associated radiological supervision and interpretation, all endograft extension(s) placed in the aorta from the level of the renal arteries to the aortic bifurcation, and all angioplasty/stenting performed from the level of the renal arteries to the aortic bifurcation; for other than rupture (e.g., for aneurysm, pseudoaneurysm, dissection, penetrating ulcer)*). This code has a lower intraservice time and a similar total time. We noticed that the surveyed intraservice time for CPT code 22210 is decreasing by nearly an hour, from 170 minutes to 120 minutes, indicating that the procedure typically takes much less time to perform than it did at the time of last review. Although the RUC has recommended significantly more postoperative time in the inpatient and outpatient visits, which has caused the total time of the procedure to increase slightly, we noted that this postoperative care should take place at a significantly lower intensity than the 50 minutes of intraservice time being removed from the code. We are concerned that, while the intraservice time for CPT code 22210 is decreasing from 170 to 120 minutes, this intraservice work time is being replaced with higher levels of post operative care to result in the total time being maintained similar to the current time. We believe that with the intraservice time going down, this reflects that the procedure has a lesser intensity than before and therefore it does not makes sense that the intensity of the post operative visit levels would increase. Separately, we continue to have concern with the post-operative visits in general and we do not believe the post-operative visits are happening and therefore would not justify the higher value.

We believe that it better serves relativity to propose a work RVU of 23.12, which maintains the current intensity of CPT code 22210, as opposed to proposing the RUC's recommended work RVU of 24.75 which results in an intensity increase for this code. We are supporting this proposed work RVU of 23.12 with a pair of other 90-day global codes with similar work time values: CPT code 34718 *(Endovascular repair of iliac artery, not associated with placement of an aorto-iliac artery endograft at the same session, by deployment of an iliac branched endograft, including pre-procedure sizing and device selection, all ipsilateral selective iliac artery catheterization(s), all associated radiological supervision and interpretation, and all endograft extension(s) proximally to the aortic bifurcation and distally in the internal iliac, external iliac, and common femoral artery(ies), and treatment zone angioplasty/stenting, when performed, for other than rupture (e.g., for aneurysm, pseudoaneurysm, dissection, arteriovenous malformation, penetrating ulcer), unilateral),* valued at a work RVU of 23.40 with an intraservice time of 120 minutes, and CPT code 34707 *(Endovascular repair of iliac artery by deployment of an ilio-iliac tube endograft including pre-procedure sizing and device selection, all nonselective catheterization(s), all associated radiological supervision and interpretation, and all endograft extension(s) proximally to the aortic bifurcation and distally to the iliac bifurcation, and treatment zone angioplasty/stenting, when performed, unilateral; for other than rupture (e.g., for aneurysm, pseudoaneurysm, dissection, arteriovenous malformation)),* valued at a work RVU of 21.72 with an intraservice time of 120 minutes.

We disagree with the RUC recommended value of 23.20 for CPT code 22212 and we instead proposed a work RVU of 21.72 based on a crosswalk to CPT code 34707. This code has a lower intraservice time and a slightly lower total time. We noticed that the surveyed intraservice time for CPT code 22212 is also decreasing significantly, from 147 minutes to 120 minutes, which is offset by the RUC's recommendation of significantly more time in the postoperative visits. We do not agree with the RUC that the work RVU should be increasing by nearly 3.00 RVUs for a procedure where the intraservice time, which is likely to be the most difficult and dangerous part of the procedure, is going down by approximately half an hour. We believe that the RUC's recommended work RVU of 23.20 results in an intensity increase for this code and therefore it better serves relativity to propose a work RVU of 21.72, which maintains the current intensity of CPT code 22212. This proposed work RVU of 21.72 accounts for the decrease in intraservice time and change in the level of the postoperative office visits and is well bracketed by CPT code 34701, valued at a work RVU of 23.12 work with an intraservice time of 120 minutes, and CPT code 38115 *(Repair of ruptured spleen (splenorrhaphy) with or without partial splenectomy),* valued at a work RVU of 21.33 with an intraservice time of 120 minutes.

We disagree with the RUC recommended value of 21.72 for CPT code 22214 and we instead proposed a work RVU of 19.53 based on a crosswalk to CPT code 44125 (*Enterectomy, resection of small intestine; with enterostomy*). This code has a lower intraservice time and a higher total time and its use as a crosswalk code maintains the current intensity of CPT code 22214. As was the case with the first two codes, we noticed that the surveyed intraservice time for CPT code 22214 is decreasing significantly, from 163 minutes to 120 minutes, which is offset by the RUC's recommendation of significantly more time in the postoperative visits. We do not agree with the RUC that the work RVU should be increasing for a procedure where the intraservice time, the most difficult and dangerous part of the procedure, is going down by more than half an hour. We believe that it better serves relativity to propose a work RVU of 19.53, which maintains the current intensity of CPT code 22214, as opposed to proposing the RUC's recommended work RVU of 21.72 which results in an intensity increase for this code. This proposed work RVU of 19.53 accounts for the decrease in intraservice time and change in the level of the postoperative office visits and is well bracketed by CPT code 38115, valued at a work RVU of 21.33 with an intraservice time of 120 minutes, and CPT code 42890 *(Limited pharyngectomy),* valued at a work RVU of 18.65 with an intraservice time of 120 minutes.

We proposed the RUC recommended work RVU of 3.00 for CPT code 22216, as this code maintains its current intensity at the RUC's recommended valuation and maintains relativity with other similar add-on codes.

We proposed the RUC recommended direct PE inputs for all the codes in this family without refinement.

Comment: For CPT code 22210 commenters disagreed with CMS's crosswalk proposal because it does not accurately account for the full amount of physician work or capture the overall intensity/complexity of the service. Commenters recommended more post-operative time in both the inpatient and outpatient visits.

Response: We continue to believe that the proposed work RVU of 23.12 for CPT code 22210 is the most accurate valuation for this service. In our review of this code, we compared CPT code 22210 to other similar 90-day global codes with 90 minutes of intraservice time and found that the RUC's

recommended work RVU of 24.75 was higher than other codes with similar time values.

The surveyed intraservice time for CPT code 22210 decreased by 50 minutes, from 170 to 120 minutes, indicating that the procedure typically takes less time to perform than it did when it was last reviewed by the RUC. The RUC recommended significantly more post-operative time in the inpatient and outpatient visits which caused the total time to increase for this service. The decrease in intraservice time directly relates to the intensity and we continue to believe that the decrease in intensity would lead to a decrease in work RVU. Looking at the time ratios based on the existing times for CPT code 22210 (170 minutes of total time) to the new proposed time values (120 minutes of total time), that further points to the RUC recommendation for this code as being too high. In addition, we do not believe that the post-operative visits contributing to the increase in total time are happening. We continue to believe that the two 90-day crosswalk codes selected fully capture the same time and intensity of the service.

Comment: For CPT code 22212 some commenters disagreed with the crosswalk codes selected by CMS. Some commenters believe that the physician work was underestimated. Commenters disagreed and stated that a significant decrease in intra-operative time does not necessarily reflect a decrease in intra-operative work but rather an increase in efficiency and intensity and that is captured by the RUC process. We note that the intraservice time ratio provided by the RUC does not support a higher work RVU for this code. Commenters stated that this procedure is often done with other procedures at the same time and would be subject to the MPPR policies and also note changes in the patient population who undergo these procedures and thus require higher level of postoperative care.

Response: We continue to believe that the proposed work RVU of 21.72 for CPT code 22212 is the most accurate valuation for this service. In our review of this code, we compared CPT code 22212 to other similar 90-day global codes with 90 minutes of intraservice time and found that the RUC's recommended work RVU of 23.20 was higher than other codes with similar time values based on our searches.

We continue to believe that the two determining factors of the work RVU are time and intensity and continue to believe that these elements were reflected in the 90-day codes selected as crosswalks. Looking at the time ratios based on the crosswalk code selected by the RUC, the time ratio suggests that the work RVU should be lower than the RUC recommendation. We believe that the work RVUs selected based on the crosswalks selected by CMS continue to maintain relativity within the family of codes. Given the roughly half hour decrease for this code in intraservice time based on the RUC survey, we believe that the crosswalk codes selected with similar time values accurately capture the time and intensity for the service.

Comment: For CPT code 22214 commenters disagreed with the crosswalk codes selected by CMS stating that they did not accurately account for the full breadth of work, intensity and complexity necessary to perform the services. Commenters noted that this procedure is often performed with other spine procedures and that there has been a change in the complexity of the patient population and it should be therefore cross walked to a code with higher post-operative care.

Response: We continue to believe that the proposed work RVU of 19.53 for CPT code 22214 is the most accurate valuation for this service. In our review of this code, we compared CPT code 22214 to other similar 90-day global codes with 90 minutes of intraservice time and found that the RUC's recommended work RVU of 21.72 was higher than other codes with similar time values.

We continue to believe that the time and intensity was accurately captured in the crosswalk codes selected by CMS. There was a decrease of 43 minutes of intraservice time for this code and that would directly correlate to a linear decrease in the work RVU. We believe the two other 90-day global codes selected accurately represent the same time and intensity and maintain relativity of the codes in this family.

We continue to believe that the determining factors of valuation are time and intensity and this is reflected in our proposed crosswalks. We understand that while the intra-time went down, the increase in total time resulted from a change in the level of post operative visits. Additionally, we want to note that the shifting of the post-operative visits in this code family to higher level office visit codes that require more time, maintains the total time and thus reflects a higher intensity and can contribute to a higher work RVU which highlights our overall concerns with visits during the global period and how we believe that all of these visits are not typically occurring.

After consideration of public comments, we are finalizing the work RVUs and direct PE inputs for CPT codes 22210, 22212, 22214, and 22216 as proposed.

(7) Arthroplasty—Shoulder (CPT Codes 23470 and 23472)

In April 2025, the RAW identified CPT code 23472 as having a site of service anomaly where Medicare data from 2021–2023 indicated it was performed less than 50 percent of the time in the inpatient setting yet included inpatient hospital E/M services within the global period. The RAW concluded that CPT code 23472 represented a site of service anomaly and identified CPT code 23470 as part of this family of services. The RUC therefore surveyed CPT codes 23470 (*Arthroplasty, glenohumeral joint; hemiarthroplasty*) and 23742 (*Arthroplasty, glenohumeral joint; total shoulder (glenoid and proximal humeral replacement (e.g., total shoulder))*) for the September 2025 meeting.

We disagreed with the RUC's recommended work RVU of 15.60 for CPT code 23470 and we instead proposed a work RVU of 13.81 based on a crosswalk to CPT code 27416 (*Osteochondral autograft(s), knee, open (e.g., mosaicplasty) (includes harvesting of autograft[s])*). The RUC recommended a work RVU of 15.60, which is the current work RVU of the RUC's crosswalk code 67107 (*Repair of retinal detachment; scleral buckling (such as lamellar scleral dissection, imbrication or encircling procedure), including, when performed, implant, cryotherapy, photocoagulation, and drainage of subretinal fluid*) after the efficiency adjustment was applied at the start of CY 2026. In reviewing CPT code 23470, we noted that the recommended intraservice time is decreasing from 113 minutes to 90 minutes (20 percent reduction), and the recommended total time is decreasing from 390 minutes to 330 minutes (22 percent reduction); however, the RUC-recommended work RVU is only decreasing from 17.44 to 15.60, which is a reduction of just over 10 percent. While we do not believe that the decrease in time as reflected in survey values should always equate to a one-to-one or linear decrease in newly valued work RVUs we do believe that, since the two components of work are time and intensity, absent an obvious or explicitly stated rationale for why the relative intensity of a given procedure has increased, significant decreases in time should be reflected in decreases to work RVUs although not necessarily in a linear manner.

More specifically, CPT code 23470 was identified by the RAW as having a

site of service anomaly in which the service was performed less than 50 percent of the time in the inpatient setting yet included inpatient hospital Evaluation and Management services within the global period. The RUC has recommended the removal of five inpatient hospital visits along with recommending a decrease of 23 minutes to the intraservice work time based on the survey. We stated in the proposed rule, that we did not believe that the RUC's recommended work decrease of fewer than two RVUs appropriately captures this decrease in procedure time and physician work for CPT code 23470. We also noticed that the RUC's recommended work RVU of 15.60 results in an intensity increase for CPT code 23470. We stated in the proposed rule that we disagreed that an increase in intensity for this code is warranted, particularly given that the typical case for the procedure is moving from the inpatient to outpatient setting. The code descriptor for CPT code 23470 also remains unchanged which suggests that there has been no significant change in the procedure's performance or intensity. Furthermore, we also found that the recommended work RVU of 15.60 was higher than nearly all of the other 90-day global codes with similar time values, and we noted in the proposed rule that we did not believe that this type of shoulder arthroplasty procedure, which is typically done on a routine and elective basis, would warrant an intensity and work valuation at the very top of the scale relative to other 90-day globals with similar time values. Because the PFS uses a relative value system, we noted that we believed it is important to highlight that these codes fail to maintain relativity with related surgical services. We therefore proposed a work RVU of 13.81 based on a crosswalk to CPT code 27416 which we stated in the proposed rule preserves the current intensity of CPT code 23470 and better maintains relativity with the rest of the PFS.

We disagreed with the RUC's recommended work RVU of 19.35 for CPT code 23472 and we instead proposed a work RVU of 17.49 based on a crosswalk to CPT code 67414 (*Orbitotomy without bone flap (frontal or transconjunctival approach); with removal of bone for decompression*). The RUC recommended a work RVU of 19.35, which is the current work RVU of the RUC's crosswalk code 61798 (*Stereotactic radiosurgery (particle beam, gamma ray, or linear accelerator); 1 complex cranial lesion*) after the efficiency adjustment was applied at the start of CY 2026. In reviewing CPT code 23472, we note that the recommended intraservice time is decreasing from 140 minutes to 120 minutes (15 percent reduction), and the recommended total time is decreasing from 448 minutes to 348 minutes (24 percent reduction); however, the RUC-recommended work RVU is only decreasing from 21.58 to 19.35, which is a reduction of just over 10 percent. While we do not believe that the decrease in time as reflected in survey values should always equate to a one-to-one or linear decrease in newly valued work RVUs we do believe that, since the two components of work are time and intensity, absent an obvious or explicitly stated rationale for why the relative intensity of a given procedure has increased, significant decreases in time should be reflected in decreases to work RVUs although not necessarily in a linear manner.

More specifically, CPT code 23472 was identified by the RAW as having a site of service anomaly in which the service was performed less than 50 percent of the time in the inpatient setting yet included inpatient hospital Evaluation and Management services within the global period. The RUC has recommended the removal of 3 inpatient hospital visits, one outpatient E/M visit, a decrease from a full to a half discharge visit, along with recommending a decrease of 20 minutes to the intraservice work time based on the survey. We stated in the proposed rule that we did not believe that the RUC's recommended work decrease of just over two RVUs appropriately captures this decrease in procedure time and practitioner work for CPT code 23472. We also noticed that the RUC's recommended work RVU of 19.35 results in an intensity increase for CPT code 23472. We stated in the proposed rule that we disagreed that an increase in intensity for this code is warranted, particularly given that the typical case for the procedure is moving from the inpatient to outpatient setting. We noted that the code descriptor for CPT code 23472 also remains unchanged which suggests that there has been no significant change in the procedure's performance or intensity. Furthermore, we also found that the recommended work RVU of 19.35 was higher than nearly all of the other 90-day global codes with similar time values, and we stated in the proposed rule that we did not believe that this type of total shoulder arthroplasty procedure, which is typically done on a routine and elective basis, would warrant an intensity and work valuation at the very top of the scale relative to other 90-day globals with similar time values. We therefore proposed a work RVU of 17.49 based on a crosswalk to CPT code 67414 which we stated in the proposed rule preserves the current intensity of CPT code 23472 and better maintains relativity with the rest of the PFS.

We proposed the RUC-recommended direct PE inputs for CPT codes 23470 and 23472 without refinement.

We received a large volume of comments disagreeing with the proposed valuations for CPT codes 23470 and 23472, as well as the related codes in the Arthroplasty—Hip (CPT code 27130) and Arthroplasty—Knee (CPT code 27447) code families. We will first address the general comments regarding this group of arthroplasty codes before addressing the comments specifically regarding valuation of each CPT code in their respective sections.

Comment: Many commenters detailed the clinical benefits of joint replacement procedures, stating that these were among the most successful procedures in modern medicine, restoring mobility, relieving pain, reducing disability, and allowing millions of Medicare beneficiaries to maintain their independence. Commenters stated that payment for the arthroplasty codes should accurately reflect the work, technical skill, clinical judgment, and risk required to perform these complex operations.

Response: We appreciate the additional detail provided by the commenters regarding the clinical benefits of these procedures. We agree with the commenters that these are important services that can restore mobility and improve quality of life for Medicare beneficiaries.

Comment: Many commenters stated that the proposed valuations for these arthroplasty procedures constituted unsustainable payment reductions and threatened the ability of independent orthopedic practices to continue caring for Medicare patients. Commenters stated that practices would have no choice but to limit Medicare volume, leaving local seniors to face significant delays in accessing surgical care, resulting in prolonged pain, loss of autonomy, and a higher demand for non-surgical interventions. Commenters stated that this would lead to delays in treatment and other barriers to accessing care as well as accelerating the acquisition of independent physician practices by hospitals and national health insurers.

Response: We share the concern of commenters regarding the importance of access to care for these services. We have factored these access concerns into the finalized work RVUs for these codes; see later in this section.

Comment: Many commenters disagreed that the shift in the typical site of service from inpatient to outpatient for the arthroplasty codes constituted less work. Commenters stated that what changed with the site of service was not whether postoperative work occurred, but how efficiently it could be delivered, stating that when a patient is discharged within hours of surgery, caregiver surveillance does not disappear but converts into a diffuse and less efficient set of activities. Commenters stated that the practitioner and the practitioner's staff absorb the care coordination that inpatient nursing and hospitalist services previously provided: same-day discharge planning, home health and durable medical equipment arrangement, anticoagulation management, wound and drainage monitoring by telephone and portal, early physical therapy coordination, and rapid triage of the complications that previously surfaced on an inpatient ward. Commenters stated that the practitioner's work does not decrease but actually increases when the patient leaves the hospital sooner.

Response: We clarify for commenters that we do not believe the movement of these procedures from typically inpatient to typically outpatient site of service has necessarily resulted in less work, or that the same postoperative care is no longer being provided by practitioners and clinical staff. Our proposed valuations recognize that longer and more complex outpatient E/M visits are now taking place for these procedures, such as CPT code 23470 changing from Level 2 outpatient E/M visits to Level 3 and Level 4 outpatient E/M visits in its global period. We believe that the removal of the inpatient hospital visits, combined with the increase in the visit level of the outpatient E/M visits, accurately reflects how the postoperative care has shifted along with the typical site of service. Our proposed valuations for the arthroplasty codes are largely based on the surveyed changes in work time, not the shift in site of service. We discussed the change in site of service since it reinforced our belief that there has been no significant change in the performance or intensity of these services. We agree with the commenters that merely changing the typical site of service has not necessarily reduced the work of these procedures; however, we disagree that changing the site of service has made the procedures *more* intense as the RUC recommended and some commenters suggested. We can also clarify for commenters that these services can still be provided in the inpatient setting, even if it is not the typical case, just as they previously could be provided in the outpatient setting when inpatient was typical.

Comment: Several commenters stated that some of the services for the arthroplasty codes continue to take place in the inpatient setting. Commenters stated that the arthroplasty codes were valued identically whether the patient was discharged within hours of surgery or remained hospitalized for several days, with the proposed valuations containing no stratification by site of service, no adjustment for length of stay, and no severity tier. Commenters stated that CMS should restore the inpatient hospital visits and full discharge visit to account for the resource cost of these services.

Response: We remind commenters that the PFS values services based on the typical case. Although some of these arthroplasty services will continue to be provided in the inpatient setting, it is clear that this is no longer the typical site of service. We therefore agree with the RUC's recommendation to remove the inpatient hospital visits and full discharge visit from the global period of these codes.

Comment: Several commenters stated that practitioners of these arthroplasty procedures have been at the forefront of the transition to value-based care as high-volume, high-value procedures present significant opportunities for improvements in quality and efficiency. Commenters stated that much of the effectiveness of these programs, however, has come from the shift from reactive, hospital-based postoperative work to proactive, office-based preoperative work which fall outside of the global surgical bundle because they are not included in the traditional RUC survey definition of ''pre-service activities,'' nor the time clinical staff spent providing certain pre-service activities for the patient and family. Commenters stated that penalizing surgeons for this successful collaboration, by eliminating valuation for postoperative visits while not reimbursing preservice optimization time, does not lead to more accurate payments.

Response: We appreciate these efforts by practitioners to deliver care for arthroplasty services which is both more proactive and more efficient, which we believe has been reflected in the decreased intraoperative survey times for these procedures. However, we believe that this additional work has been accurately captured in the updated survey times for the procedures, which include higher preservice and immediate postservice work times, as well as more complex postoperative E/M visits within the global period. For example, CPT code 23470 was recommended by the RUC and proposed by CMS in the proposed rule with 15 additional minutes of preservice work time (58 to 73 minutes) and 16 additional minutes of immediate postservice work time (19 to 35 minutes), along with the upcoding of the outpatient E/M visits described previously.

Comment: Several commenters stated that the proposed valuations for the arthroplasty codes were especially difficult to justify given their ongoing increase in utilization. Commenters stated that annual primary total knee arthroplasty volume among Medicare beneficiaries grew from roughly 604,000 in 2013 to over 1 million in 2022, and was projected to reach nearly 2.8 million by 2040, a further 176 percent increase from current levels. Primary total hip arthroplasty volume was projected to grow even faster, from roughly 595,000 in 2022 to over 2.1 million by 2040, an increase of roughly 265 percent. Commenters stated that reducing payment for hip, knee, and shoulder replacement at the same time demand for these procedures was rising sharply risked discouraging the workforce capacity needed to meet that demand.

Response: As stated previously, we share the concern of commenters regarding the clinical benefits and importance of access to care for these services. However, rapid utilization growth of these services only further emphasizes the need for accurate, resource-based valuation of the arthroplasty codes. We continue to believe that the updated work time data from the most recent surveys supports our proposed valuations for these codes.

Comment: Several commenters stated that the arthroplasty codes had been repeatedly reviewed over the past two decades. Commenters stated that CPT code 27130 has been reviewed five times, CPT code 27447 has been reviewed six times, and CPT code 23472 has been reviewed five times, with every review of all three codes since 2013 reducing their work RVUs. Commenters stated that a valuation process that produces a further reduction at every review for more than a decade is not converging on an accurate value.

Response: We disagree with the commenters that frequent review of the arthroplasty codes has produced inaccurate valuations. Since these are high volume services with rapidly increasing utilization, we believe that frequent reviews of these codes have

been warranted to ensure accurate valuations. These reviews have repeatedly produced surveys with reduced work times which have then been reflected in reduced work RVUs for the arthroplasty codes; this has been reflected in both the RUC's recommendations and CMS' finalized values. We believe that these updated valuations reflect the improved efficiencies in the arthroplasty codes, which no longer require the same time and effort that they did two decades earlier.

Comment: Several commenters cited a 2018 study published in the Journal of the American Medical Association which found that total hip arthroplasty took 5% longer than the PFS valued time, while total knee arthroplasty had an equal duration. Commenters stated that when the authors made these conclusions in 2018, the arthroplasty procedures had higher work RVUs than what CMS was proposing for CY 2027.

Response: While we appreciate this additional study provided by the commenters, it dates back to 2018 prior to the current review of these procedures. We believe that it is more accurate to base valuation on the most recent work and time surveys that took place in 2025.

The following comments were specifically directed at the proposed work RVUs for the shoulder arthroplasty (CPT codes 23470 and 23472).

Comment: Several commenters disagreed with the proposed work RVU of 13.81 for CPT code 23470. Commenters stated that the current valuation for CPT code 23470 was based on a review during the Harvard study that included responses from only 11 general orthopedic surgeons for intraservice time. Commenters stated that the existing Harvard times were not valid for relative comparison to the current survey or to other codes.

Response: We agree that it is important to use the recent data available regarding time, and we note that when many years have passed between when time is measured, significant discrepancies can occur. However, we also believe that our operating assumption regarding the validity of the existing values as a point of comparison is critical to the integrity of the relative value system as currently constructed. The times currently associated with codes play a very important element in PFS ratesetting, both as points of comparison in establishing work RVUs and in the allocation of indirect PE RVUs by specialty. If we were to operate under the assumption that previously recommended work times had routinely been overestimated, this would undermine the relativity of the work RVUs on the PFS in general, given the process under which codes are often valued by comparisons to codes with similar times and it would undermine the validity of the allocation of indirect PE RVUs to physician specialties across the PFS.

Instead, we believe that it is crucial that the code valuation process take place with the understanding that the existing work times, used in the PFS ratesetting processes, are accurate. We recognize that adjusting work RVUs for changes in time is not always a straightforward process and that the intensity associated with changes in time is not necessarily always linear, which is why we apply various methodologies to identify several potential work values for individual codes. However, we reiterate that we believe it would be irresponsible to ignore changes in time based on the best data available and that we are statutorily obligated to consider both time and intensity in establishing work RVUs for PFS services. For additional information regarding the use of old work time values in our methodology, we refer readers to our discussion of the subject in the CY 2017 final rule (81 FR 80273 through 80274).

Comment: Several commenters stated that they disagreed with the proposed crosswalk to CPT code 27416 at a work RVU of 13.81 to value CPT code 23470, and suggested that CMS should instead use the RUC's recommended crosswalk to CPT code 67107 at a work RVU of 15.60. Commenters stated that CPT code 27416 was not a valid crosswalk code because it is less intense due to lower neurovascular risk and lower risk of positioning complications. Commenters stated that CPT code 67107 was a more appropriate crosswalk, as its most recent survey was in 2016, whereas CPT code 27416 was last surveyed in 2008. Commenters stated that the intensity and risk of impact on vision in CPT code 67107 hold a risk that more closely approximates the risk of functional loss with neurovascular or infection complications that can be associated with CPT code 23470.

Response: We continue to have concerns regarding the increased intensity of CPT code 23470 as valued at the RUC's recommended work RVU of 15.60. As we discussed in the proposed rule, we also have concerns that the RUC's valuation does not adequately capture the changes in surveyed work time. However, we were persuaded by commenters that finalizing the proposed work RVU of 13.81 for CPT code 23470 could significantly affect providers, create barriers to accessing care for Medicare patients, and does not fully capture the resource costs of these procedures. For these specific codes, we were persuaded that the RUC-recommended work RVU of 15.60 reflected the associated time and intensity described by the commenters. We continue to remain concerned regarding the overall accuracy of these values and welcome additional information that we could consider for future rulemaking. We are therefore finalizing the RUC's recommended work RVU of 15.60 for CPT code 23470.

Comment: Several commenters disagreed with the proposed work RVU of 17.49 for CPT code 23472. Commenters stated that the typical operative technique for a total shoulder arthroplasty has changed since the last review 10 years ago to a ''reverse total shoulder arthroplasty'' (RTSA), under which the normal ''ball-and-socket'' structure of the shoulder is reversed. Commenters stated that this is the opposite of standard (anatomic) shoulder arthroplasty (ATSA) and that over the past decade, both the technology and indications for reverse procedures have expanded, making the surgery significantly more complex due to broader application, more challenging patient anatomy, and the need for specialized surgical skill and implant design. Commenters stated that comparison of current survey data for CPT code 23472 with older 2012 data reveals less intraoperative time but at a higher complexity and intensity, along with fewer hospital visits but higher-level office work. Commenter stated that the RUC's recommended work RVU of 19.35 reflected the increased intensity of the more complex procedure while also recognizing a decrease in total time.

Response: We appreciate the additional clinical details regarding CPT code 23472 provided by the commenters. We concur with the commenters that the clinical description of work for CPT code 23472 has undergone modest changes since the time of last review, which may account for a modest increase in the intensity of the procedure.

Comment: Several commenters stated that they disagreed with the proposed crosswalk to CPT code 67414 at a work RVU of 17.49 to value CPT code 23472, and suggested that CMS should instead use the RUC's recommended crosswalk to CPT code 61798 at a work RVU of 19.35. Commenters stated that CPT code 67414 has consequential risk with injury to the muscles or nerves of the orbital region but involves debridement or removal of structures with no

reconstruction. Commenters stated that CPT code 23472 has greater intensity than the CMS crosswalk code based on the need for approach, preparation, and critically extensive reconstruction using metal implants and polyethylene, along with moderate neurovascular risk due to retraction or direct injury during approach and implantation, risk of fracture, risk of injection, and risk of dislocation. Commenters stated that CPT code 23472 was most appropriately valued based on a direct work RVU crosswalk to CPT code 61798.

Response: We continue to have some concerns regarding the increased intensity of CPT code 23472 as valued at the RUC's recommended work RVU of 19.35. As we discussed in the proposed rule, we also have concerns that the RUC's valuation does not adequately capture the changes in surveyed work time. However, we were persuaded by commenters that finalizing the proposed work RVU of 17.49 for CPT code 23472 could significantly affect providers and create barriers to accessing care for Medicare patients, and does not fully capture the resource cost of these procedures. For these specific codes, we were persuaded that the RUC-recommended work RVU of 19.35 reflected the associated time and intensity described by the commenters. We continue to remain concerned regarding the overall accuracy of these values and welcome additional information that we could consider for future rulemaking. We are therefore finalizing the RUC's recommended work RVU of 19.35 for CPT code 23472.

After consideration of the comments, we are not finalizing our proposed work RVUs and are instead finalizing the RUC's recommended work RVUs for CPT codes 23470 and 23472. We are finalizing the direct PE inputs for these CPT codes as proposed.

(8) Arthroplasty—Hip (CPT Code 27130)

In April 2025, the RAW identified CPT code 27130 as having a site of service anomaly where Medicare data from 2021 through 2023 indicated it was performed less than 50 percent of the time in the inpatient setting yet included inpatient hospital Evaluation and Management services within the global period. The RAW concluded that the code represented a site of service anomaly, and the RUC therefore surveyed CPT code 27130 (*Arthroplasty, acetabular and proximal femoral prosthetic replacement (total hip arthroplasty), with or without autograft or allograft*) for the September 2025 meeting.

We stated in the proposed rule that we disagreed with the RUC's recommended work RVU of 16.70 for CPT code 27130 and we instead proposed a work RVU of 15.37 based on a crosswalk to CPT code 43774 (*Laparoscopy, surgical, gastric restrictive procedure; removal of adjustable gastric restrictive device and subcutaneous port components*). The RUC recommended a work RVU of 16.70, which is the current work RVU of the RUC's crosswalk code 67108 (*Repair of retinal detachment; with vitrectomy, any method, including, when performed, air or gas tamponade, focal endolaser photocoagulation, cryotherapy, drainage of subretinal fluid, scleral buckling, and/or removal of lens by same technique*) after the efficiency adjustment was applied at the start of CY 2026. In reviewing CPT code 27130, we noted that the recommended total time is decreasing from 377 minutes to 305 minutes (19 percent reduction); however, the RUC-recommended work RVU is only decreasing from 19.11 to 16.70, which is a reduction of 13 percent. While we do not believe that the decrease in time as reflected in survey values should always equate to a one-to-one or linear decrease in newly valued work RVUs we do believe that, since the two components of work are time and intensity, absent an obvious or explicitly stated rationale for why the relative intensity of a given procedure has increased, significant decreases in time should be reflected in decreases to work RVUs although not necessarily in a linear manner.

More specifically, CPT code 27130 was identified by the RAW as having a site of service anomaly in which the service was performed less than 50 percent of the time in the inpatient setting yet included inpatient hospital Evaluation and Management services within the global period. The RUC has recommended the removal of 2 inpatient hospital visits, a decrease from a full to a half discharge visit, along with recommending a decrease of 10 minutes to the intraservice work time based on the survey. We stated in the proposed rule that we do not believe that the RUC's recommended work decrease of just over two RVUs appropriately captures this decrease in procedure time and practitioner work for CPT code 27130. We also noticed that the RUC's recommended work RVU of 16.70 results in an intensity increase for CPT code 27130. We stated in the proposed rule that we disagreed that an increase in intensity for this code is warranted, particularly given that the typical case for the procedure is moving from the inpatient to outpatient setting. The code descriptor for CPT code 27130 also remains unchanged which suggests that there has been no significant change in the procedure's performance or intensity. Furthermore, we also found that the recommended work RVU of 16.70 was higher than nearly all of the other 90-day global codes with similar time values, and we stated in the proposed rule that we did not believe that this type of total hip arthroplasty procedure, which is typically done on a routine and elective basis, would warrant an intensity and work valuation at the very top of the scale relative to other 90-day globals with similar time values. We therefore proposed a work RVU of 15.37 based on a crosswalk to CPT code 43774 which we stated in the proposed rule preserves the current intensity of CPT code 27130 and better maintains relativity with the rest of the PFS.

We proposed the RUC-recommended direct PE inputs for CPT code 27130 without refinement.

Comment: A commenter stated that CMS cited a reduction in time for total hip arthroplasty from 377 minutes to 305 minutes, an approximately 19 percent decrease, as support for the proposed work value. The commenter requested that CMS clarify in the final rule precisely which time component this figure represents and how it was derived.

Response: We can clarify for the commenter that these updated work times for CPT code 27130 were recommended by the RUC based on new survey data. The work times for CPT code 27130, and all other CPT codes listed on the PFS, are included in the ''CY 2027 PFS Final Rule Physician Work Time'' public use file available on the CMS website under downloads for the CY 2027 PFS final rule at *https://www.cms.gov/medicare/payment/fee-schedules/physician/federal-regulation-notices*.

Comment: Several commenters disagreed with the proposed work RVU of 15.37 for CPT code 27130. Commenters stated that the work for CPT code 27130 has remained the same and is performed in less time, as captured by the RUC process, which accounts for an increase in intensity. Commenters stated that by definition the same work performed in less time is more intense; since CPT code 27130 still involves the same basic steps since its inception, an increase in efficiency should not be conflated with less work or less intensity.

Response: We remain unconvinced that there has been a significant increase in intensity for this code. Intensity of

work under the Physician Fee Schedule reflects skill, expertise, effort, stress, and other factors that influence the assessed relative value of time spent. We disagree with the commenters that performing the same work in less time inherently means that the intensity of a procedure has increased; changes in practice patterns, improvements in technology, or greater efficiencies in the delivery of care can all account for shorter procedure times without a corresponding increase in intensity. Commenters agreed with our statement in the proposed rule that CPT code 27130 had undergone no significant change in the procedure's performance as reflected by its unaltered code descriptor. Under our methodology for work valuation, if the surveyed work times are decreasing and there is general agreement that the procedure itself has remained unchanged, this supports a decrease in the work RVU, not a conclusion that the intensity of the procedure has increased to match the decrease in surveyed work time. However, we do note that the RUC's recommended work RVU of 16.70 for CPT code 27130 already constitutes a reduction from the current work RVU of 19.11 which we have concluded is more appropriate than the proposed work RVU of 15.37.

Comment: Several commenters stated that they disagreed with the proposed crosswalk to CPT code 43774 at a work RVU of 15.37 to value CPT code 27130, and suggested that CMS should instead use the RUC's recommended crosswalk to CPT code 67108 at a work RVU of 16.70. Commenters stated that CPT code 27130 has greater intensity/complexity than the CMS crosswalk code based on the need for approach, preparation, and critically extensive reconstruction using metal implants and polyethylene. Commenters stated that CPT code 27130 requires significantly more perioperative work, including management of pain/opioid medications, anticoagulation, dressing/closure, and perioperative services such as physical therapy and that total hip arthroplasty is performed standing, often with a lead apron, and involves significant soft tissue manipulation and limb support. Commenters stated that the proposed work RVU of 15.37 for CPT code 27130 creates a rank order anomaly when compared to CPT codes 27236 and 27125, which are less intense, of shorter duration, and typically performed for a fracture, implying less pre-operative work. Commenters stated that CPT code 27130 was most appropriately valued based on a direct work RVU crosswalk to CPT code 67108.

Response: We continue to have concerns regarding the increased intensity of CPT code 27130 as valued at the RUC's recommended work RVU of 16.70. As we discussed in the proposed rule, we also have concerns that the RUC's valuation does not adequately capture the changes in surveyed work time. However, we were persuaded by commenters that finalizing the proposed work RVU of 15.37 for CPT code 27130 could significantly affect providers and create barriers to accessing care for Medicare patients and does not fully capture the resource cost of these procedures. For these specific codes, we were persuaded that the RUC-recommended work RVU of 16.70 reflected the associated time and intensity described by the commenters. We continue to remain concerned regarding the overall accuracy of these values and welcome additional information that we could consider for future rulemaking. We are therefore finalizing the RUC's recommended work RVU of 16.70 for CPT code 27130.

After consideration of the commenters, we are finalizing the RUC's recommended work RVU of 16.70 for CPT code 27130. We are finalizing the direct PE inputs as proposed.

(9) Sacroiliac Joint Arthrodesis (CPT codes 27278 and 27279)

At the May 2025 CPT Editorial Panel meeting. CPT code 27278 (*Arthrodesis, sacroiliac joint, percutaneous or minimally invasive, including imaging guidance, unilateral; placement of intra-articular structural bone graft, metal and/or synthetic device(s) without cortical piercing, including use of osteopromotive material and/or obtaining bone graft, when performed*) was revised to include imaging guidance, placement of intra-articular structural bone graft, metal, and/or synthetic device(s) without cortical piercing and CPT code 27279 (*Arthrodesis, sacroiliac joint, percutaneous or minimally invasive, including imaging guidance, unilateral; placement of transarticular and/or intra-articular device(s) that engage bone with intrinsic fixation (e.g., screw[s], flange[s], blade[s]) piercing the lateral cortex of the sacrum and the medial cortex of the ilium (with or without piercing the lateral cortex of the ilium), including use of osteopromotive material and/or obtaining bone graft, when performed*) was revised to include placement of transarticular and/or intra-articular device(s) that engage bone with intrinsic fixation (*e.g.,* screw(s), flange(s), blade(s)) piercing the lateral cortex of the sacrum and the medial cortex of the ilium. CPT codes 27278 and 27279 were surveyed for the September 2025 RUC meeting.

We proposed the RUC-recommended work RVUs of 7.66 for CPT code 27278 (which is the current work RVU of the code after the efficiency adjustment was applied at the start of CY 2026) and 11.00 for CPT code 27279. We also proposed the RUC-recommended direct PE inputs for CPT codes 27278 and 27279 without refinement.

Comment: Commenters supported CMS's proposal of the RUC-recommended work RVUs and direct PE inputs for CPT codes 27278 and 27279 without refinements

Response: We thank the commenters for their support. After consideration of the public comment, we are finalizing as proposed.

(10) Arthroplasty—Knee (CPT code 27447)

In April 2025, the RAW identified CPT code 27447 as having a site of service anomaly where Medicare data from 2021–2023 indicated it was performed less than 50 percent of the time in the inpatient setting yet included inpatient hospital Evaluation and Management services within the global period. The RAW concluded that the code represented a site of service anomaly, and the RUC therefore surveyed CPT code 27447 (*Arthroplasty, knee, condyle and plateau; medial AND lateral compartments with or without patella resurfacing (total knee arthroplasty)*) for the September 2025 meeting.

We stated in the proposed rule that we disagreed with the RUC's recommended work RVU of 16.70 for CPT code 27447 and we instead proposed a work RVU of 15.94 based on a crosswalk to CPT code 65730 (*Keratoplasty (corneal transplant); penetrating (except in aphakia or pseudophakia)*). The RUC recommended a work RVU of 16.70, which is the current work RVU of the RUC's crosswalk code 67108 (R*epair of retinal detachment; with vitrectomy, any method, including, when performed, air or gas tamponade, focal endolaser photocoagulation, cryotherapy, drainage of subretinal fluid, scleral buckling, and/or removal of lens by same technique*) after the efficiency adjustment was applied at the start of CY 2026. In reviewing CPT code 27447, we noted that the recommended total time is decreasing from 374 minutes to 305 minutes (19 percent reduction); however, the RUC-recommended work RVU is only decreasing from 19.11 to

16.70, which is a reduction of 13 percent. While we do not believe that the decrease in time as reflected in survey values should always equate to a one-to-one or linear decrease in newly valued work RVUs we do believe that, since the two components of work are time and intensity, absent an obvious or explicitly stated rationale for why the relative intensity of a given procedure has increased, significant decreases in time should be reflected in decreases to work RVUs although not necessarily in a linear manner.

More specifically, CPT code 27447 was identified by the RAW as having a site of service anomaly in which the service was performed less than 50 percent of the time in the inpatient setting yet included inpatient hospital Evaluation and Management services within the global period. The RUC has recommended the removal of two inpatient hospital visits, a decrease from a full to a half discharge visit, along with recommending a decrease of 7 minutes to the intraservice work time based on the survey. We stated in the proposed rule that we did not believe that the RUC's recommended work decrease of just over two RVUs appropriately captures this decrease in procedure time and practitioner work for CPT code 27447. We also noticed that the RUC's recommended work RVU of 16.70 results in an intensity increase for CPT code 27447. We stated in the proposed rule that we disagreed that an increase in intensity for this code is warranted, particularly given that the typical case for the procedure is moving from the inpatient to outpatient setting. We further noted that the code descriptor for CPT code 27447 also remains unchanged which suggests that there has been no significant change in the procedure's performance or intensity. Furthermore, we also found that the recommended work RVU of 16.70 was higher than nearly all of the other 90 day global codes with similar time values, and we stated in the proposed rule that we did not believe that this type of total knee arthroplasty procedure, which is typically done on a routine and elective basis, would warrant an intensity and work valuation at the very top of the scale relative to other 90 day globals with similar time values. We therefore proposed a work RVU of 15.94 based on a crosswalk to CPT code 65730 which we noted preserves the current intensity of CPT code 27447 and better maintains relativity with the rest of the PFS.

We proposed the RUC-recommended direct PE inputs for CPT code 27447 without refinement.

Comment: Several commenters disagreed with the proposed work RVU of 15.94 for CPT code 27447. Commenters stated that the work for CPT code 27447 has remained the same and is performed in less time, as captured by the RUC process, which accounts for an increase in intensity. Commenters stated that by definition the same work performed in less time is more intense; since CPT code 27447 still involves the same basic steps since its inception, an increase in efficiency should not be conflated with less work or less intensity.

Response: As we stated for CPT code 27130, we remain unconvinced that there has been a significant increase in intensity for this code. Intensity of work under the Physician Fee Schedule reflects skill, expertise, effort, stress, and other factors that influence the assessed relative value of time spent. We disagree with the commenters that performing the same work in less time inherently means that the intensity of a procedure has increased; changes in practice patterns, improvements in technology, or greater efficiencies in the delivery of care can all account for shorter procedure times without a corresponding increase in intensity. Commenters agreed that with our statement in the proposed rule that CPT code 27447 had undergone no significant change in the procedure's performance as reflected by its unaltered code descriptor. Under our methodology for work valuation, if the surveyed work times are decreasing and there is general agreement that the procedure itself has remained unchanged, this supports a decrease in the work RVU, not a conclusion that the intensity of the procedure has increased to match the decrease in surveyed work time. However, we do note that the RUC's recommended work RVU of 16.70 for CPT code 27447 already constitutes a reduction from the current work RVU of 19.11 which we have concluded is more appropriate than the proposed work RVU of 15.94.

Comment: Several commenters stated that they disagreed with the proposed crosswalk to CPT code 65730 at a work RVU of 15.94 to value CPT code 27447, and suggested that CMS should instead use the RUC's recommended crosswalk to CPT code 67108 at a work RVU of 16.70. Commenters stated that CPT code 27447 has greater intensity/complexity than the CMS crosswalk code based on the need for approach, preparation, and critically extensive reconstruction using metal implants and polyethylene. Commenters stated that CPT code 27447 also has moderate neurovascular risk due to retraction or direct injury during approach and implantation, risk of fracture, risk of infection, and risk of dislocation, as well as total knee arthroplasty is performed standing, often with a lead apron, and involves significant soft tissue manipulation and limb support. Commenters stated that CPT code 27447 was most appropriately valued based on a direct work RVU crosswalk to CPT code 67108.

Several commenters stated that the RUC affirmed its April 2021 work RVU recommendation of 16.70 for CPT code 27446 (*Arthroplasty, knee, condyle and plateau; medial OR lateral compartment*). Commenters stated that CPT codes 27446 and 27447 should be valued similarly to preserve relativity with the other arthroplasty codes and requested that CPT code 27447 should be finalized at the RUC's recommended work RVU of 16.70 to match CPT code 27446.

Response: We continue to have concerns regarding the increased intensity of CPT code 27447 as valued at the RUC's recommended work RVU of 16.70. As we discussed in the proposed rule, we also have concerns that the RUC's valuation does not adequately capture the changes in surveyed work time. However, we were persuaded by commenters that finalizing the proposed work RVU of 15.94 for CPT code 27447 could significantly affect providers and create barriers to accessing care for Medicare patients and does not fully capture the resource cost of these procedures. For these specific codes, we were persuaded that the RUC-recommended work RVU of 16.70 reflected the associated time and intensity described by the commenters. We also concur that this code should be valued comparably to CPT code 27446 as identified by commenters. We are therefore finalizing the RUC's recommended work RVU of 16.70 for CPT code 27447. We continue to remain concerned regarding the overall accuracy of these values and welcome additional information that we could consider for future rulemaking.

After consideration of the comments, we are finalizing the RUC's recommended work RVU of 16.70 for CPT code 27447. We are finalizing the direct PE inputs as proposed.

(11) Implantation of Extra-Articular Shock Absorber—Medial Knee (CPT Code 27494)

At the September 2025 CPT Editorial Panel Meeting, CPT created a new Category I code to describe the implantation of a medial knee extra-articular shock absorber. CPT code 27494 (*Implantation of medial knee extra-articular shock absorber,*

including fluoroscopic guidance) was surveyed at the January 2026 RUC meeting.

We proposed the RUC-recommended work RVU of 13.16 for CPT code 27494. We proposed the RUC-recommended direct PE inputs for CPT code 27494 without refinement.

Comment: Commenters were generally not in support of our proposed values for Implantation of Extra-articular Shock Absorber—Medial Knee. Commenters disagreed with the proposed work RVU which was lower than the survey 25th percentile. Many commenters argued that the proposed work RVU did not account for the time and intensity needed to perform the service along with the cognitive load, demanding precision, and lack of margin for error with placement of the device under fluoroscopy. Several commenters noted that the RUC survey did not include other codes for joint replacements or neutral comparators such as knee arthroplasty or medial compartment orthopedic procedures. Several commenters noted that if the joint-sparing option is valued below the joint-replacing option, practitioners may not offer the procedure to beneficiaries which would decrease access to this less invasive option.

Response: We continue to believe that the proposed work RVU of 13.16 for CPT code 27494, based on the RUC recommendation, is the most accurate valuation for this service. In our review of this code, we compared CPT code 27494 to other similar 90-day global codes with 90 minutes of intraservice time and found that the RUC's recommended work RVU of 13.16 matched other codes with similar time values. The RUC looked at two key reference codes and compared the surveyed code to the top key reference code, CPT code 29916 (*Arthroscopy, hip, surgical; with labral repair)* which has a work RVU of 14.63 and intraservice time of 90 minutes, and CPT code 29888 (*Arthroscopically aided anterior cruciate ligament repair/ augmentation or reconstruction)* which has a work RVU of 13.94 and intraservice time of 98 minutes. The RUC noted that both services typically involve the same amount or slightly higher intraservice time as compared with CPT code 27494. Ninety percent of the survey respondents indicated the surveyed CPT code 27494 was more intense and complex to perform than these key references, making them relative to one another. We do not believe that other codes for joint replacements or neutral comparators such as knee arthroplasty procedures would necessarily be appropriate comparator codes solely based on clinical similarity, or that it would maintain relativity for CPT code 27494 to be valued significantly higher than every other 90-day global code in this range of time values. We continue to believe that the PFS is a relative value based system and we do not base valuation only on things that are clinically related but rather on time and intensity.

After consideration of the public comments, we are finalizing the work RVU and direct PE inputs for CPT code 27494 as proposed.

(12) Osteochondral Acellular Scaffold Implantation, Knee (CPT Code 27417)

At the September 2025 CPT Editorial Panel Meeting, CPT created a new Category I CPT code 27417 (*Acellular scaffold(s) (e.g., aragonite) implant(s), for osteochondral lesion(s), knee, open*), which describes open cartilage knee repair procedures with an acellular scaffold implant. Based on the inorganic nature of these implants, the CPT Editorial Panel included the term ''acellular scaffold'' in the code descriptor for 27417, as it is a more comprehensive term and further defines the types of regenerative implants being used that are neither autologous nor allogenic. The CPT Editorial Panel did not request deletion for existing Category III code 0737T, which is currently being reported for this procedure, since it may appropriately describe procedures with this type of implant joints other than the knee. CPT code 27417 was surveyed for the January 2026 RUC meeting.

We proposed the RUC-recommended work RVU of 9.53 for CPT code 27417. We proposed the RUC-recommended direct PE inputs for CPT code 27417 without refinement.

Comment: Commenters were not in support of our proposed values for CPT code 27417. Commenters recommended that CMS assign a work RVU of 12.00 which corresponds to the survey median result and would better reflect the procedure's complexity and required technical skill.

Response: We continue to believe that the proposed work RVU of 9.53 for CPT code 27417, based on the RUC recommendation, is the most accurate valuation for this service. The RUC based its recommendation on a crosswalk to CPT code 50590 *(Lithotripsy, extracorporeal shock wave*) which shares the same 60 minutes of intraservice time as CPT code 27417 and has a comparable total time. When we reviewed this code, we found that the RUC's recommended work RVU of 9.53 was already above the median valuation when compared to other 90-day global procedures with similar time values. Although we believed that this was appropriate given the open incision and implantation of an acellular scaffold implant device taking place in CPT code 27417, we disagree with the commenters that a work RVU of 12.00 based on the median survey result would appropriately preserve relativity. A work RVU of 12.00 would value CPT code 27417 higher than all other 90-day global codes with similar time values and create a rank order anomaly in terms of intensity. We continue to believe that the proposed work RVU of 9.53 is a more accurate valuation.

After consideration of public comments, we are finalizing the work RVU and direct PE inputs for CPT code 27417 as proposed.

(13) Cardiac Contractility Modulation (CPT Codes 33290, 33291, 33292, 33293, 33294, 33295, 33296, 33297, 33307, 33308, 33309, 93154, 93155, 93156, and 93157)

In May 2025, the CPT Editorial Panel approved a new family of 11 Category I CPT codes for insertion, removal, and replacement of cardiac contractility modulation (CCM) systems, generators, and leads in several combinations. A separate set of four codes was created to describe the corresponding CCM programming, interrogation, and remote interrogation services. All 11 of the insertion, removal, and replacement/ repositioning/revision CCM codes, as well as three programming, interrogation, and remote interrogation CCM services that involve physician work, were surveyed for the September 2025 RUC meeting.

The specialty societies detailed the four code subsets within the CCM code family. These include CCM insertion services: CPT codes 33290 (*Insertion of permanent cardiac contractility modulation system, including fluoroscopic guidance and programming of sensing and therapeutic parameters, with evaluation when performed; pulse generator and transvenous electrodes*), 33291 (*Insertion of permanent cardiac contractility modulation system, including fluoroscopic guidance and programming of sensing and therapeutic parameters, with evaluation when performed; pulse generator only*), 33292 (*Insertion of permanent cardiac contractility modulation system, including fluoroscopic guidance and programming of sensing and therapeutic parameters, with evaluation when performed; transvenous electrode, single*), and 33293 (*Insertion of permanent cardiac contractility*

modulation system, including fluoroscopic guidance and programming of sensing and therapeutic parameters, with evaluation when performed; transvenous electrode, dual); CCM removal services: CPT code 33294 (*Removal of a permanent cardiac contractility modulation system; pulse generator and transvenous electrodes*), 33295 (*Removal of a permanent cardiac contractility modulation system; pulse generator only*), 33296 (*Removal of a permanent cardiac contractility modulation system; transvenous electrode, single*), and 33297 (*Removal of a permanent cardiac contractility modulation system; transvenous electrode, dual*); CCM replacement, repositioning, and revision services: CPT code 33307 (*Removal and replacement of permanent cardiac contractility modulation system, pulse generator only*), 33308 (*Repositioning of previously implanted cardiac contractility modulation transvenous electrode(s), including fluoroscopic guidance and programming of sensing and therapeutic parameters*), and 33309 (*Relocation or revision of skin pocket for implanted cardiac contractility modulation pulse generator*); and CCM programming, interrogation, and remote interrogation services: CPT code 93154 (*Programming of the cardiac contractility modulation system (in person) with iterative adjustment of the implantable device to test the function of the device and select optimal permanent programmed values with analysis, including review and report by a physician or other qualified health care professional*), 93155 (*Interrogation device evaluation (in person) with analysis, review and report by a physician or other qualified healthcare professional, includes connection, recording and disconnection per patient encounter, implantable cardiac contractility modulation system*), 93156 (*Interrogation device evaluation (remote), up to 90 days, cardiac contractility modulation system with interim analysis, review and report(s) by a physician or other qualified health care professional*), and 93157 (*Interrogation device evaluation (remote), up to 90 days, cardiac contractility modulation system, remote data acquisition(s), receipt of transmissions, technician review, technical support, and distribution of results*).

We proposed the RUC-recommended work RVU for all of the codes in this family. We proposed a work RVU of 8.83 for CPT code 33290, work RVU of 5.66 for CPT 33291, work RVU of 6.00 for CPT 33292, work RVU of 6.23 for CPT 33293, work RVU of 9.90 for CPT 33294, work RVU of 4.79 for CPT 33295, work RVU of 7.30 for CPT 33296, work RVU of 8.39 for CPT 33297, work RVU of 6.00 for CPT 33307, work RVU of 5.00 for CPT 33308, work RVU of 5.12 for CPT 33309, work RVU of 0.90 for CPT 93154, work RVU of 0.80 for CPT 93155, and work RVU of 0.59 for CPT 93156. We note that several of these work RVUs were affected by the efficiency adjustment which was applied at the start of CY 2026, as the RUC recommendations were based on pre-adjustment work valuations. The RUC did not recommend, and we did not propose, a work RVU for CPT code 93157.

We proposed the RUC-recommended direct PE inputs for CPT codes 33290–33309 as well as for CPT codes 93154–93157 without refinement.

Comment: All commenters were in support of our proposal of the RUC-recommended work RVU and direct PE inputs for this code family.

After consideration of public comments, we are finalizing the RUC-recommended work RVU for CPT codes 33290–33297, 33307, 33308, 33309, 93154, 93155, 93156 as well as the RUC-recommended direct PE inputs for CPT codes 33290, 33309, 93154 and 93157 without refinement, as proposed.

(14) Insertion and Removal of Surgical Ventricular Assist Device (CPT Codes 33996, 33998, and 33994)

At the September 2025 CPT Editorial Panel meeting, the CPT Editorial Panel created three new category I CPT codes to describe the insertion and removal of a left heart ventricular assist device (VAD), specifically using an open arterial with conduit surgical approach. These new category I CPT codes include the insertion CPT codes 33994 *(Insertion of left heart ventricular assist device, including radiological supervision and interpretation, open; axillary, subclavian or innominate artery exposure with creation of conduit by infraclavicular or supraclavicular incision, unilateral)* and 33996 *(Insertion of left heart ventricular assist device, including radiological supervision and interpretation, open; aorta exposure with creation of conduit by transthoracic (e.g., median sternotomy, thoracotomy) incision)* as well as the removal CPT code 33998 *(Removal of left heart ventricular assist device with resection and stapling of graft conduit and skin closure (e.g., infraclavicular, supraclavicular).*

We proposed the RUC-recommended work RVU of 13.65 for CPT code 33994, work RVU of 17.52 for CPT 33996, and work RVU of 6.58 for CPT 33998.

We proposed the RUC-recommended direct PE inputs for CPT codes 33994, 33996, and 33998 without refinement.

Comment: All commenters were in support of our proposal of the RUC-recommended work RVU and direct PE inputs for this code family.

After consideration of public comments, we are finalizing the RUC-recommended work RVUs and direct PE inputs for CPT codes 33994, 33996, and 33998 without refinement, as proposed.

(15) Transcatheter Tricuspid Valve Implant, Edge-to-Edge Repair (CPT Codes 33469, 33466, and 33467)

In September 2025, the CPT Editorial Panel approved the addition of CPT codes 33469 *(Transcatheter tricuspid valve implantation (TTVI)/replacement with prosthetic valve, percutaneous approach, including right heart catheterization, temporary pacemaker insertion, and selective right ventricular or right atrial angiography, when performed),* CPT code 33466 *(Transcatheter tricuspid valve edge-to-edge repair (T–TEER), percutaneous approach; initial clip),* and CPT code 33467 *(Transcatheter tricuspid valve edge-to-edge repair (T–TEER), percutaneous approach; each additional clip during same session).* These codes were surveyed for the January 2026 RUC meeting.

The RUC recommended the inclusion of an inpatient hospital visit (CPT code 99233) within the global period of CPT codes 33469 and 33466, despite the fact that both codes were recommended with 0 day global periods. We disagree that this inpatient hospital visit should be included within the valuation of these services, as 0 day global periods are specifically defined to include only postoperative care that takes place on the day of the procedure itself without incorporating any postoperative days. We therefore proposed to remove the inpatient hospital visit (CPT code 99233) from both CPT codes 33469 and 33466, including the removal of 55 minutes of associated work time from each procedure.

We disagree with the RUC-recommended work RVU of 24.38 for CPT code 33469 and we instead proposed a work RVU of 17.52 based on a crosswalk to CPT code 95391 *(Percutaneous transcatheter closure of paravalvular leak; initial occlusion device, aortic valve).* Our review of CPT code 33469 found that the RUC's recommended work RVU of 24.38 placed it far higher than any other 0-day global code with similar time values on the PFS, especially after accounting for the removal of the work time associated with the inpatient hospital visit

described earlier in this section. Most codes with 120 minutes of intraservice time and approximately 220 minutes of total time were valued around a work RVU of 13.00–15.00 and there were zero codes valued higher than a work RVU of 17.52. While we concur that CPT code 33469 is a difficult and intensive procedure to perform, we do not believe it is accurately valued at 7 RVUs higher than any other code with comparable time values. We instead proposed a work RVU of 17.52 based on a crosswalk to CPT code 95391, the highest 0-day global valuation with comparable work times, as this will avoid distorting relativity with other services on the PFS. We also note that CPT code 33469 has comparable intensity at our proposed work RVU to the top reference code from the survey, CPT code 33477, which we believe better serves relativity than the RUC's recommended work RVU. The RUC's recommended work RVU of 24.38 would result in an intensity for CPT code 33469 nearly 50 percent higher than the already complex and difficult transcatheter pulmonary valve implantation procedure described in the reference code, which we do not believe would be typical.

For CPT code 33466, we disagree with the RUC's recommended work RVU of 23.92 and we instead proposed a work RVU of 17.06. Although we disagree with the RUC-recommended work RVU for CPT 33466, we concurred that the relative difference in work between CPT codes 33469 and 33466 is equivalent to the recommended interval of 0.46 RVUs. Therefore, we proposed a work RVU of 17.06 for CPT code 33466, based on the recommended interval of 0.46 below our proposed work RVU of 17.52 for CPT code 33469.

For CPT code 33467, we disagree with the RUC-recommended work RVU of 8.00 and we instead proposed a work RVU of 6.34 based on a crosswalk to CPT 22552 *(Arthrodesis, anterior interbody, including disc space preparation, discectomy, osteophytectomy and decompression of spinal cord and/or nerve roots; cervical below C2, each additional interspace (List separately in addition to code for primary procedure).* Our review of CPT code 33467 found that the RUC's recommended work RVU of 8.00 placed it far higher than almost any other add-on code with similar time values on the PFS, with the sole exception of CPT code 61642 (Balloon dilatation of intracranial vasospasm, percutaneous; each additional vessel in different vascular territory) which is an outlier valuation at a work RVU of 8.66. Most add-on codes with approximately 50 minutes of total time were valued around a work RVU of 3.00–5.00 and there was only a single code valued higher than a work RVU of 6.34. While we concur that CPT code 33467 is a difficult and intensive procedure to perform, we do not believe it is accurately valued at nearly two RVUs higher than other codes with comparable time values. We instead proposed a work RVU of 6.34 based on a crosswalk to CPT code 22522, the highest non-outlier add-on code valuation with comparable work times, as this will avoid distorting relativity with other services on the PFS. We note that this valuation will also maintain relative intensity between CPT code 33467 and the first two codes in the family at our proposed work RVUs.

The RUC did not recommend and we did not propose any direct PE inputs for the three codes in this family.

Comment: The majority of commenters disagreed with our proposal to exclude the inpatient hospital visit (CPT code 99233) from both CPT codes 33469 and 33466, including the removal of 55 minutes of associated work time from each procedure. These commenters believe the inpatient hospital visit should be included based on a survey for TTVR and T–TEER where the specialty societies requested, and the Research Subcommittee approved, use of the 000-day Global with visit survey template for the 000-day codes. Commenters also mentioned the TTVR codes are similar to the TAVR codes, which include a same-day post-operative visit. For CPT code 33469 many commenters disagreed with our crosswalk to CPT 95391 and recommended CMS to retain the RUC-recommended value. For CPT code 33466, many commenters disagreed with our proposal to adjust the relative difference through the usage of a recommended interval of 0.46 RVUs. These commenters stated that while they support a slightly higher value for this code, they do not believe any formulaic approach should be used as the primary methodology and rather CMS should rely on clinical inputs and specialty society committees to value services. Lastly, for CPT code 33467, many commenters disagree with our valuation based on the crosswalk to CPT code 22522 stating that it falls below the survey 25th percentile and is less intense than the surveyed code. A commenter also stated that CPT code 61642 is not an outlier, explaining that its high intensity as an add-on code reflects the significant inherent risk throughout the procedure.

Response: We thank the commenters for their feedback. We wish to clarify that our proposal to exclude an inpatient hospital visit (CPT code 99233) from both CPT codes 33469 and 33466 does not suggest that TTVR or T–TEER patients do not require inpatient postoperative care but rather, because 33469 and 33466 have 0-day global periods, we determined that a subsequent-day hospital visit (99233) and its associated 55 minutes should not be incorporated into the procedural work RVU. Accordingly, the exclusion of the inpatient visit is accounting for whether that subsequent-day visit represents physician work intrinsic to the typical tricuspid procedure, rather than considering whether TAVR codes historically included such a visit.

Additionally, for CPT code 33466, we stated in our proposal that we established the recommended interval of 0.46 based on the difference in work values between CPT codes 33469 and 33466. We believe the use of an incremental difference between codes is a valid methodology for setting values, especially in valuing services within a family of revised codes where it is important to maintain appropriate intra-family relativity. Historically, we have frequently utilized an incremental methodology in which we value a code based upon its incremental difference between another code or another family of codes. For example, in the CY 2025 PFS Final Rule, CMS concurred that the relative difference in work between CPT codes 66682 and 66683 is equivalent to the recommended interval of 1.93 RVUs (89 FR 97710). We note that the RUC has also used the same incremental methodology on occasion when it was unable to produce valid survey data for a service. Lastly, regarding CPT code 33467, we recognized in our proposal that CPT code 33467 is a difficult and intensive procedure to perform. As a result, we finalized a crosswalk to the highest add-on codes with comparable work times, CPT code 22522, the highest non-outlier add-on code to have a similar level of valuation.

After consideration of public comments, CMS will finalize as proposed (1) removal of the inpatient hospital visit (CPT code 99233) from both CPT codes 33469 and 33466, including the removal of 55 minutes of associated work time from each procedure; (2) a work RVU of 17.52 for CPT code 33469; (3) a work RVU of 17.06 for CPT code 33466; and (4) a work RVU of 6.34 for CPT code 33467. We are also finalizing no direct PE inputs for the three codes in this family as proposed.

(16) Percutaneous Transcatheter Closure (CPT Code 33340)

In April 2025, the RAW identified CPT code 33340 (*Percutaneous transcatheter closure of the left atrial appendage with endocardial implant, including fluoroscopy, transseptal puncture, catheter placement(s), left atrial angiography, left atrial appendage angiography, when performed, and radiological supervision and interpretation)* as a code that has Medicare utilization of 10,000 or more that has increased by at least 100 percent from 2018 through 2023. The specialty societies indicated and the RUC agreed that CPT code 33340 be surveyed for the January 2026 RUC meeting.

We disagree with the RUC's recommendation of the current work RVU of 9.99 for CPT code 33340 and we instead proposed a work RVU of 9.00 based on crosswalk to CPT code 37271 *(Revascularization, endovascular, open or percutaneous, femoral and popliteal vascular territory, with transluminal atherectomy, including transluminal angioplasty when performed, including all maneuvers necessary for accessing and selectively catheterizing the artery and crossing the lesion, including all imaging guidance and radiological supervision and interpretation necessary to perform the atherectomy and angioplasty when performed, within the same artery, unilateral; straightforward lesion, initial vessel).* The RUC survey indicated that the typical time needed to perform CPT code 33340 has decreased, with the intraservice time decreasing from 70 minutes to 62 minutes and the total time decreasing from 165 minutes to 154 minutes. While we do not believe that the decrease in time as reflected in survey values should always equate to a one-to-one or linear decrease in newly valued work RVUs we do believe that, since the two components of work are time and intensity, absent an obvious or explicitly stated rationale for why the relative intensity of a given procedure has increased, significant decreases in time should be reflected in decreases to work RVUs although not necessarily in a linear manner. The RUC's recommendation to maintain the current work RVU of 9.99 for CPT code 33340 can only be justified if the intensity to perform the service has increased over time. However, there has been no change to the code descriptor for CPT code 33340 and no apparent change in clinical practice which would warrant the roughly 15 percent increase in intensity as recommended by the RUC. Since we do not believe that there is evidence indicating that CPT code 33340 has typically become more intense to perform, we therefore proposed a work RVU of 9.00 which maintains the current intensity of the service. This valuation is based on a crosswalk to CPT code 37271, a recently reviewed service from CY 2026 that has a higher intraservice time and nearly identical total time.

We proposed the direct PE inputs for CPT code 33340 as recommended by the RUC without refinement.

Comment: The majority of commenters disagreed with our proposal due to what they stated was an underestimation of intensity for CPT 33340, significant cuts in the overall payment for CPT code 33340 in preceding years, and the belief that the proposed crosswalk does not reflect the clinical procedure and complications that can arise with CPT 33340. These commenters requested CMS to maintain the current value of the work RVU of 9.99 for this code.

Response: We thank commenters for their feedback. We continue to believe our proposed work RVU of 9.00 for CPT code 33340 is the most accurate valuation for this service based on a crosswalk to CPT 37271, which maintains the current intensity. Differences in clinical procedures alone do not establish that the crosswalk is inappropriate or that a different valuation is warranted. Additionally, as mentioned in our proposal, the recommendation to maintain the current work RVU of 9.99 for CPT code 33340 can only be justified if the intensity to perform the service has increased over time. However, there was no evidence to suggest the intensity has increased. Furthermore, CPT code 33340 was surveyed and because physician work reflects both the time and intensity required to furnish a service, a decrease in intensity supports a corresponding decrease in the work RVU.

In consideration of public comments, we are finalizing the work RVU and direct PE inputs for CPT code 33340 as proposed.

(17) Treatment of Incompetent Veins (CPT Codes 36470, 36471, 36465, 36466, 36473, and 36474)

In April 2025, the RAW identified CPT code 36465 (*Injection of non-compounded foam sclerosant with ultrasound compression maneuvers to guide dispersion of the injectate, inclusive of all imaging guidance and monitoring; single incompetent extremity truncal vein (e.g., great saphenous vein, accessory saphenous vein*), as a code that has Medicare utilization of 10,000 or more that has increased by at least 100 percent from 2018 through 2023. The RAW reviewed the action plan and the RUC recommended CPT code 36465 along with the family of services be surveyed for the January 2026 RUC meeting.

The RUC reviewed this family of services at the January 2026 meeting including all sclerosant treatment of incompetent veins. These services are: CPT code 36465; CPT code 36466 (*Injection of non-compounded foam sclerosant with ultrasound compression maneuvers to guide dispersion of the injectate, inclusive of all imaging guidance and monitoring; multiple incompetent truncal veins (e.g., great saphenous vein, accessory saphenous vein), same leg*); CPT code 36470 (*Injection of sclerosant; single incompetent vein (other than telangiectasia)*); CPT code 36471 (*Injection of sclerosant; multiple incompetent veins (other than telangiectasia), same leg*); CPT code 36473 (*Endovenous ablation therapy of incompetent vein, extremity, inclusive of all imaging guidance and monitoring, percutaneous, mechanochemical; first vein treated*); and CPT code 36474 (*Endovenous ablation therapy of incompetent vein, extremity, inclusive of all imaging guidance and monitoring, percutaneous, mechanochemical; subsequent vein(s) treated in a single extremity, each through separate access sites (List separately in addition to code for primary procedure)*).

For CY 2027, we proposed the RUC-recommended work RVUs for five of the six codes in this family. We proposed the RUC-recommended work RVU of 2.29 for CPT code 36465, 0.73 for CPT code 36470, 1.18 for CPT code 36471, 3.41 for CPT code 36473, and 1.71 for CPT code 36474.

We disagree with the RUC recommended work RVU of 2.93 for CPT code 36466. Instead, we proposed a work RVU of 2.62 based on a crosswalk to CPT code 57156 (*Insertion of a vaginal radiation afterloading apparatus for clinical brachytherapy*). In reviewing CPT code 36466, we noted that the recommended intraservice time is decreasing from 35 minutes to 30 minutes (14 percent reduction), and the recommended total time is decreasing from 76 minutes to 68 minutes (11 percent reduction); however, the RUC recommended maintaining the current work RVU of 2.93. While we do not believe that the decrease in time as reflected in survey values should always equate to a one-to-one or linear decrease in newly valued work RVUs we do believe that, since the two components of work are time and intensity, absent an obvious or explicitly stated rationale

for why the relative intensity of a given procedure has increased, significant decreases in time should be reflected in decreases to work RVUs although not necessarily in a linear manner. The RUC's recommendation to maintain the current work RVU of 2.93 for CPT code 36466 can only be justified if the intensity to perform the service has increased over time. However, there has been no change to the code descriptor for CPT code 36466 and no apparent change in clinical practice which would warrant the roughly 17 percent increase in intensity as recommended by the RUC. Since we do not believe that there is evidence indicating that CPT code 36466 has typically become more intense to perform, we therefore proposed a work RVU of 2.62 which maintains the current intensity of the service. This valuation is based on a crosswalk to CPT code 57156, which has the same intraservice work time of 30 minutes and higher total time.

Comment: We received a small number of comments. All commenters supported finalizing the proposed work RVU values that had been recommended by the RUC for CPT codes 36470, 36471, 36465, 36473, and 36474.

Response: We thank all the commenters for their feedback. After consideration of the comments received, we are finalizing as proposed the RUC-recommended work RVUs for five of the six codes in this family. We are finalizing the RUC-recommended work RVU of 2.29 for CPT code 36465, 0.73 for CPT code 36470, 1.18 for CPT code 36471, 3.41 for CPT code 36473, and 1.71 for CPT code 36474.

Comment: Most commenters disagreed with our proposed value for CPT code 36466. Commenters felt that CPT code 36466 was in fact more intense than had been represented in the prior RUC survey. They felt the RUC survey in 2016 was ambiguous about which veins were typically being treated. They asserted that CPT code 36466 typically involves more time treating the small saphenous and is more intense to perform.

Response: We do not believe that the decrease in time as reflected in survey values should always equate to a one-to-one or linear decrease in newly valued work RVUs, but we do believe that, since the two components of work are time and intensity, absent an obvious or explicitly stated rationale for why the relative intensity of a given procedure has increased, significant decreases in time should be reflected in decreases to work RVUs although not necessarily in a linear manner. In the proposed rule we said that the RUC's recommendation to maintain the current work RVU of 2.93 for CPT code 36466 can only be justified if the intensity to perform the service has increased over time. In light of the RUC's own survey showing a reduction in time for CPT code 36466 with intraservice time decreasing from 35 minutes to 30 minutes (14 percent reduction), we are not persuaded by commenters' assertions that the service had previously been reported for procedures that were actually less intense. We recognize that the clinical vignette has been updated but note that the code descriptor has not changed.

Comment: A commenter questioned how many CPT 36465/36466 treatment sessions are actually obtained, on average, from the Varithena product represented by the SD324 direct practice expense input.

Response: We do not have a way of independently verifying the supply quantity associated with the use of SD324. However, we are open to revisiting this in the future if an interested party can supply alternate data indicating that the 0.33 supply quantity is not typical for the procedures.

After consideration of the comments, we are finalizing the work RVU for CPT code 36466 as proposed. This value, maintaining the current intensity of the service, is based on a crosswalk to CPT code 57156 (Insertion of a vaginal radiation after loading apparatus for clinical brachytherapy) which has the same intraservice work time of 30 minutes and higher total time.

We are finalizing the direct PE inputs for all CPT codes in this family as proposed.

(18) Microvascular Bypass, Lymphatic Vessels (CPT Codes 38800 and 38801)

In September 2025, the CPT Editorial Panel approved two new Category I codes to describe microvascular bypass of lymphatic vessels, a microsurgical procedure. This newly created Category I CPT code family describes two services: a base code for the initial anastomosis, CPT code 38800 (*Microvascular anastomosis between a single vein opening and any number of lymphatic vessels, per limb; initial anastomosis*), and the add-on code for each additional anastomosis, CPT code 38801 (*Microvascular anastomosis between a single vein opening and any number of lymphatic vessels, per limb; initial anastomosis; each additional anastomosis (List separately in addition to code for primary procedure)*). CPT codes 38800 and 38801 were surveyed for the January 2026 RUC meeting.

We reviewed the RUC's recommended work valuations and found the RUC's recommended work RVU of 16.00 for CPT code 38800 to be high, based on a search of similarly timed codes in the RUC database. For CY 2027 we proposed a work RVU of 14.00, based on the RUC survey 25th percentile, for CPT code 38800. We proposed the RUC recommended work RVU of 6.00 for CPT code 38801. We proposed the RUC-recommended direct PE inputs for both CPT codes without refinement.

Comment: We received a handful of comments. A commenter asked that CMS ensure that payment for this procedure be adequate but did not opine as to what amount of work RVUs that would be. The rest opposed the proposed work RVU of 14.00, based on the RUC survey 25th percentile, for CPT code 38800 stating that the proposed work RVU did not accurately account for the physician work's intensity and complexity. A commenter described the physician work as almost entirely under an operating microscope at 10–30x magnification, suturing lymphatic channels of 0.2 to 1 millimeter with 10–0 and 11–0 suture far finer than a human hair. Another commenter stated that while ophthalmologic procedures use similar magnification and 10–0 or 11–0 sutures, they do not entail the complexity of CPT code 38800 which creates a patent lymphatic-to-venous anastomosis, a connection between a blocked lymphatic vessel and a small vein to bypass the blockage and drain trapped fluid back into the bloodstream. Commenters stated that CMS should finalize the RUC-recommended work RVU of 16.00 based on the median value from the survey.

Response: We continue to disagree with the commenters and believe that the proposed work RVU of 14.00 is a more accurate valuation for CPT code 38800. While we appreciate the additional clinical details associated with CPT code 38800 provided by the commenters, we continue to disagree that the intensity of this procedure would warrant a work valuation higher than approximately 95 percent of 90-day global codes with comparable time values. We note that the RUC recommended removing 17 minutes of preoperative work time, one CPT code 99231 inpatient hospital visit, and half of the CPT code 99238 discharge visit from the surveyed work time of CPT code 38800, a total of 56 minutes, which suggests that the survey respondents overestimated the work time and the work RVU for this code at the median value of 16.00. It is for this very reason that the RUC recommends the survey 25th percentile work RVU for most newly created codes that have no direct predecessor code. Although we do not

believe that the survey 25th percentile is always the most accurate valuation in these cases, we do believe that it best describes the work RVU of CPT code 38800 at 14.00.

After consideration of the comments, we are finalizing the work and direct PE inputs as proposed for CPT code 38800 and CPT code 38801.

(19) Diaphragmatic Hernia Repair (CPT Codes 39540, 39541, 39542, 39543, 39544, 39571, 39572, 39573, 39581, 39582, and 39590)

At the September 2025 CPT Editorial Panel, the committee revised two existing CPT codes, CPT code 39540 *(Repair, diaphragmatic hernia (other than neonatal), via laparotomy; traumatic, acute)* and CPT code 39541 *(Repair, diaphragmatic hernia (other than neonatal), via laparotomy; traumatic, chronic),* describing diaphragmatic hernia repair. They also created nine new Category I codes, CPT codes 39542 *(Repair, diaphragmatic hernia (other than neonatal), via laparotomy; nontraumatic (i.e., Bochdalek, Morgagni*)), 39543 *(Repair, diaphragmatic hernia (other than neonatal), via thoracotomy; traumatic, chronic),* 39544 *(Repair, diaphragmatic hernia (other than neonatal), via thoracotomy; nontraumatic (i.e., Bochdalek, Morgagni)),* 39571 *(Laparoscopy, surgical, with repair of diaphragmatic hernia (other than neonatal); traumatic, acute),* 39572 *(Laparoscopy, surgical, with repair of diaphragmatic hernia (other than neonatal); traumatic, chronic),* 39573 *(Laparoscopy, surgical, with repair of diaphragmatic hernia (other than neonatal); nontraumatic (i.e., Bochdalek, Morgagni)),* 39581 *(Thoracoscopy surgical, with repair of diaphragmatic hernia (other than neonatal); traumatic, chronic),* 39582 *(Thoracoscopy surgical, with repair of diaphragmatic hernia (other than neonatal); nontraumatic (i.e., Bochdalek, Morgagni)),* and 39590 *(Implantation of mesh or other prosthesis with open, laparoscopic, or thoracoscopic diaphragmatic hernia repair (List separately in addition to code for primary procedure))* that expanded the range of surgical interventions included in this code family. The RUC reviewed these services at the January 2026 meeting.

For CY 2027, we proposed the RUC recommended work RVUs of 24.00 for CPT code 39540, 26.00 for CPT code 39541, 25.75 for CPT code 39542, 26.41 for CPT code 39543, 25.94 for CPT code 39544, 22.04 for CPT code 39571, 26.60 for CPT code 39572, 27.00 for CPT code 39573, 25.44 for CPT code 39581, 25.94 for CPT code 39582, and 3.00 for CPT code 39590.

We proposed the RUC-recommended direct PE inputs for all CPT codes in this family without refinement.

Comment: Commenters were supportive of CMS' proposed work RVUs and direct PE inputs for this code family.

Response: We thank the commenters for their support. After consideration of the public comments, we are finalizing the work RVU and direct PE inputs as proposed.

(20) Diaphragm Repair (CPT Codes 39545 and 39580)

In May 2025, the CPT Editorial Panel revised CPT code 39545 (*Plication of diaphragm for eventration or paralysis, via thoracotomy*) to specify plication of the diaphragm for eventration or paralysis, via thoracotomy, and created CPT code 39580 (*Thoracoscopy, surgical, with plication of diaphragm for eventration or paralysis*) to report thoracoscopic plication of the diaphragm for eventration or paralysis.

For CY 2027, we proposed the RUC recommended work RVUs of 18.45 for CPT code 39545 and 20.00 for CPT code 39580. We proposed the RUC-recommended direct PE inputs for both CPT codes without refinement.

Comment: We received a couple of comments in support of CMS' proposed work RVUs and direct PE inputs for both CPT codes.

Response: We thank the commenters and appreciate their support for the proposal. After consideration of the comments received, we are finalizing the work and direct PE inputs as proposed for CPT code 39545 and CPT code 39580.

(21) Division of Median Arcuate Ligament (CPT codes 39562 and 39570)

In February 2025, the CPT Editorial Panel created two new codes to report open and laparoscopic median arcuate ligament syndrome (MALS) treatment: CPT code 39562 (*Division of median arcuate ligament and release of celiac trunk, with ganglionectomy, when performed*) and CPT code 39570 (*Laparoscopy, surgical, with division of median arcuate ligament and release of celiac trunk, with ganglionectomy, when performed*). The two new codes were surveyed for the April 2025 RUC meeting.

We proposed the RUC-recommended efficiency adjusted work RVUs of 26.41 for CPT code 39562 and 25.94 for CPT code 39570. We proposed the RUC-recommended direct PE inputs for CPT codes 39562 and 39570 without refinement.

Comment: A few commenters supported the proposed direct PE inputs for CPT codes 39562 and 39570. A commenter disagreed with the efficiency adjustment due to new services whose physician work was recently surveyed and evaluated through the valuation process. The commenter stated that CMS has not demonstrated that the physician time or intensity required for these specific procedures is reduced by the economy-wide productivity assumption underlying the efficiency adjustment.

Response: We appreciate the commenters' support of the proposed direct PE inputs for CPT codes 39562 and 39570. Regarding the comment on the efficiency adjustment, we clarify that we did not apply the efficiency adjustment directly to CPT codes 39562 or 39570. Rather, the RUC's recommended valuations for these new codes were based on crosswalks to existing codes, and the efficiency adjustment had previously been applied to those crosswalk codes as part of their own valuation. Because the crosswalk methodology relies on the current, adjusted work RVUs of the reference codes, it would not be appropriate to instead use the pre-adjustment values of those codes as the basis for crosswalking. We therefore believe it is appropriate that the valuations for CPT codes 39562 and 39570, derived from these crosswalks, reflect the adjustment as it applies to the source codes.

After consideration of the comments, we are finalizing as proposed the work RVUs of 26.41 for CPT code 39562 and 25.94 for CPT code 39570, and the direct PE inputs.

(22) Endoscopic Submucosal Dissection (CPT codes 4349843498 and 4599145991)

At the May 2025 CPT Editorial Panel Meeting, two new CPT codes were created for reporting endoscopic submucosal dissection (ESD) of both the upper and lower GI tract, including mucosal closure: CPT codes 4349843498 (*Endoscopic submucosal dissection (ESD) of upper gastrointestinal tract, including mucosal closure, when performed*) and 4599145991 (*Endoscopic submucosal dissection (ESD) of lower gastrointestinal tract, including mucosal closure, when performed*). These new CPT codes were surveyed at the September 2025 AMA RUC meeting.

For CY 2027, we proposed the RUC-recommended work RVUs of 15.00 for CPT code 4349843498 and 16.38 for CPT code 4599145991. We proposed the RUC-recommended direct PE inputs for

CPT codes 4349843498 and 4599145991 without refinement.

Comment: Several commenters stated that they supported the CMS proposal of the RUC-recommended work RVUs and work times for the new endoscopic submucosal dissection codes. Commenters stated that they appreciated CMS' recognition of the substantial practitioner time, skill, intensity, and clinical complexity involved in performing endoscopic submucosal dissection (ESD) of the upper and lower gastrointestinal tract.

Response: We appreciate the support from the commenters for our proposed valuations.

After consideration of the comments, we are finalizing the proposed work RVUs and direct PE inputs for the codes in the Endoscopic Submucosal Dissection family.

(23) Transoral Oropharyngeal Procedures (CPT codes 42808, 42985, and 42986)

In February 2025, the CPT Editorial Panel approved two new Category I codes that describe transoral endoscopic surgery under magnification for the removal of tumors in the oropharynx, including robotic assistance when performed: CPT code 42985 (*Transoral removal of oropharyngeal and/or pharyngeal neoplasm under magnification (e.g., microscope or telescope), includes robotic assistance, when performed, tongue base*) and CPT code 42986 (*Transoral removal of oropharyngeal and/or pharyngeal neoplasm under magnification (e.g., microscope or telescope), includes robotic assistance, when performed; tongue base; lateral pharyngeal wall, including tonsil*). CPT code 42808 (*Excision or destruction of lesion of pharynx, without magnification, any method*) was revised to clarify that it is done without magnification, and it was surveyed along with the two new codes at the April 2025 RUC meeting.

We proposed the RUC-recommended work RVU for all three codes in this family. We proposed a work RVU of 2.29 for CPT code 42808 (which is the current work RVU of the code after the efficiency adjustment was applied at the start of CY 2026), a work RVU of 20.00 for CPT code 42985, and a work RVU of 20.05 for CPT code 42986. We note that the RUC's recommended work RVU of 2.29 for CPT code 42808 assigns an intensity value of zero for this service; we sought comment from interested parties as to whether an alternate work valuation, such as the survey 25th percentile work RVU of 2.70, would be more appropriate.

We proposed the RUC-recommended direct PE inputs for all three codes without refinement.

Comment: Several commenters stated that they appreciated CMS proposing the RUC recommended work RVUs and direct PE inputs for CPT codes 42808, 42985 and 42986 without refinement.

Response: We appreciate the support for our proposals from the commenters.

Comment: Several commenters stated that maintaining the current work RVU of 2.29 as proposed was appropriate for CPT code 42808, which is lower than the survey 25th percentile work RVU of 2.70. Commenters stated that this recommendation maintained relativity with other similar otolaryngology codes in the 10-day global period in this work RVU range. Commenters stated that they did not believe there was compelling evidence to justify an increased work RVU for this service, even though the RUC recommended and CMS proposed work RVU of 2.29 for CPT code 42808 assigned an intensity value of zero for this service. The commenters urged CMS to finalize its proposal of the current work RVU of 2.29 for CPT code 42808.

Response: We appreciate the support for our proposals from the commenters.

After consideration of the comments, we are finalizing the work RVUs and direct PE inputs as proposed for the codes in the Transoral Oropharyngeal Procedures family.

(24) Congenital Duodenal Obstruction Repair (CPT codes 44011 and 44181)

At the May 2025 CPT Editorial Panel Meeting, two new CPT codes were created for reporting surgical treatment for congenital duodenal obstruction via an open or laparoscopic approach, that were previously reported using unlisted codes: CPT codes 44011 (*Duodenoduodenostomy or duodenojejunostomy for congenital duodenal obstruction*) and 44181 (*Laparoscopy, surgical; duodenoduodenostomy or duodenojejunostomy for congenital duodenal obstruction*). These new CPT codes were surveyed at the September 2025 AMA RUC meeting.

For CY 2027, we proposed the RUC-recommended work RVUs of 50.00 for CPT code 44011 and 52.60 for CPT code 44181. We proposed the RUC-recommended direct PE inputs for CPT codes 44011 and 44181 without refinement.

Comment: A commenter stated that they supported the CMS proposal of the RUC's recommended work RVUs and direct PE inputs.

Response: We appreciate the support for our proposals.

After consideration of the comments, we are finalizing the work RVUs and direct PE inputs as proposed for the codes in the Congenital Duodenal Obstruction Repair family.

(25) Irreversible Electroporation of Tumor, Pancreas (CPT code 48990)

In May 2025, the CPT Editorial Panel approved the addition of a new CPT code 48990 (*Ablation, irreversible electroporation of tumor(s) of the pancreas, open, including imaging guidance*) to report open irreversible electroporation (IRE) ablation of tumors of the pancreas.

We proposed the RUC-recommended work RVU of 25.19 for CPT code 48990, and the RUC-recommended direct PE inputs without refinement.

Comment: A commenter supported our proposal of the RUC recommendations.

Response: We thank the commenter for their support. After consideration of the public comments, we are finalizing as proposed.

(26) Prostate Biopsy Services (CPT codes 55705, 55707, 55708, 55709, 55710, 55711, 55714, 55715, and 55716)

This service was identified via the April 2022 RAW review of services performed by the same physician on the same date of service 75 percent of the time or more and was surveyed for the September 2024 RUC meeting. The data from the September 2024 survey indicated that the long descriptors did not adequately describe these services. While the codes were valued for the CPT 2026 cycle, the specialties and the RUC agreed that a new coding change application should be developed for the CPT Editorial Panel for restructuring in the CPT 2027 cycle. CPT revised the prostate biopsy code family in 2026 and it was surveyed for the January 2026 RUC meeting. The revisions to the family are as follows: CPT codes 55705 (*Biopsy, prostate, any approach, non-imaging guided*), 55707 (*Biopsy, prostate, transrectal, including imaging guidance, regional*), 55708 (*Biopsy, prostate, transrectal, including imaging guidance, regional and fusion-targeted lesion(s)*), 55709 (*Biopsy, prostate, transperineal, including imaging guidance, regional*), 55710 (*Biopsy, prostate, transperineal, including imaging guidance, regional and of fusion-targeted lesion(s)*), 76872 (*ultrasound, transrectal*), and 55714 (*Biopsy, prostate, including imaging guidance, in-bore-CT-or-MRI-guided; first targeted lesion*) have work RVUs that were reaffirmed from CY 2026 by the RUC. CPT codes 55711 (*Biopsy, prostate, transrectal or transperineal,*

including imaging guidance, fusion), 55716 (*Biopsy, prostate, transrectal or transperineal, including imaging guidance, fusion-targeted lesion(s) without regional; each additional targeted lesion (List separately in addition to code for primary procedure)*) and 55715 (*Biopsy, prostate, including imaging guidance, in-bore CT- or MRI-guided; each additional targeted lesion (List separately in addition to code for primary procedure)*) are new and/or revised codes for CY2027.

For CY 2027, we proposed the RUC-recommended work RVU for eight of the nine codes in the family. We proposed the RUC-recommended work RVUs of 1.88 for CPT code 55705, 2.63 for CPT code 55707, 3.39 for CPT code 55708, 3.23 for CPT code 55709, 3.81 for CPT code 55710, 2.37 for CPT code 55711, 3.62 for CPT code 55714, and 1.80 for CPT 55715.

For CPT code 55716, we disagree with the RUC-recommended work RVU of 0.80. In the interest of maintaining relativity with similarly timed codes, we instead proposed a work RVU of 0.68 based on a crosswalk to CPT code 93567 (*Injection procedure during cardiac catheterization including imaging supervision, interpretation, and report; for supravalvular aortography (List separately in addition to code for primary procedure)*). CPT code 55716 was surveyed with only 6 minutes of intraservice and total work time, yet the RUC recommended a work RVU of 0.80. We compared this recommended valuation against CPT code 55715, another add-on code within this same family, which was surveyed at 35 minutes of intraservice and total work time but with a recommended work RVU of 1.80. This results in CPT code 55716 having an intensity nearly triple that of CPT code 55715 which we do not believe would be typical. We also found that there were no other add-on codes in the RUC database with comparable time values to CPT code 55716 which had a work RVU approaching 0.80. The closest was CPT code 77063 (*Screening digital breast tomosynthesis, bilateral*) at a work RVU of 0.59, with that code having 8 minutes of work time instead of 6 minutes, and all other comparable add-on codes had a work RVU of 0.37 or lower. Although we agree that CPT code 55716 is a difficult and intensive procedure, we believe that the RUC's recommended work RVU of 0.80 assigns too much work valuation and intensity to the service, and does not maintain relativity with other related codes on the PFS.

We instead proposed a work RVU of 0.68 for CPT code 55716 based on a crosswalk to CPT code 93567. Our proposed work RVU of 0.68 is also supported with add-on CPT codes with similar work time values. CPT code 93566 (*Injection procedure during cardiac catheterization including imaging supervision, interpretation, and report; for selective right ventricular or right atrial angiography (List separately in addition to code for primary procedure)*) is valued at a work RVU of 0.49 with an intraservice time of 10 minutes and CPT code 64484 (*Injection(s), anesthetic agent(s) and/or steroid; transforaminal epidural, with imaging guidance (fluoroscopy or CT), lumbar or sacral, each additional level (List separately in addition to code for primary procedure)*) is valued at a work RVU of 0.98 with an intraservice time of 10 minutes.

We proposed the RUC-recommended direct PE inputs for all CPT codes in this family without refinement.

Comment: Several commenters supported the proposed work RVUs for CPT codes 55705, 55707, 55708, 55709, 55710, 55711, 55714, and 55715.

Response: We appreciate the support for our proposed valuations from the commenters.

Comment: Some commenters disagreed with the proposed work RVU of 0.68 for CPT code 55716. Commenters requested the RUC's recommended work RVU of 0.80 for the add-on CPT code 55716 rather than the proposed work RVU of 0.68. Commenters stated that the proposed valuation for CPT code 55716 understates the work involved and a work RVU of 0.68 would create a rank order anomaly with CPT code 76872. Commenters argued that the proposed crosswalk code for CPT code 55716 (CPT code 93567) does not accurately reflect the physician work or the intensity of this service being performed. Commenters stated that CPT code 55716 needs to be valued higher than CPT code 76872 because the former code has imaging and biopsy work while the later code is only an imaging code. Commenters felt the proposed work RVU of 0.80 would not maintain relativity within the family. Commenters felt the proposed work valuation of 0.68 would also be compounded by the effect of the conversion factor.

Response: We continue to believe CPT code 55716 is less intense compared to the predecessor CPT code 55715 which has a work RVU of 1.05 and included imaging in the code's valuation. Additionally, a work RVU of 0.80 would be vastly higher than any other comparable add on code in this range of time values. We also disagree with commenters that a work RVU of 0.68 would create a work order anomaly within the code family as compared with the imaging code CPT code 76872. However, CPT code 76872 is significantly longer than CPT code 55716, nearly quadruple the time with a total time of 23 minutes as compared to 6 minutes in duration for CPT code 55716. We agree with commenters that CPT code 55716 is significantly more intense but disagree that it is inappropriate for these codes to be valued similarly given the large discrepancy in their work times. We disagree with commenters that a work RVU of 0.68 would pose a rank order anomaly in this family as the greater intensity of CPT code 55716 is offset by the far greater time of CPT code 76872.

After consideration of the comments, we are finalizing a work RVU of 0.68 for CPT code 55716. We are also finalizing the work RVUs and direct PE inputs for the remaining codes in the Prostate Biopsy family as proposed.

(27) Maternity Care Services (CPT codes 59320, 59325, 59412, 59871, 59080, 59081, 59082, 59083, 59030, 59051, 59431, 59432, 59414, 59300, 59502, 59503, 59504, 59623, 59433, 59434, and 59160)

a. Background and Update

At the January 2026 AMA RUC meeting, the maternity global codes were revised to delete 17 legacy CPT codes, create 12 new CPT codes, and revise 9 CPT codes describing maternity care services. See Table A–D2 for a summary of the codes and their long descriptors. These codes were restructured from the maternity (MMM) global period to individual codes to reflect changes in practice. The previous MMM global period included 12 prenatal E/M visits bundled into CPT codes 59400, 59510, 59610, and 59618. In May 2025, the American College of Obstetricians and Gynecologists (ACOG) published new clinical guidelines, recommending that obstetrician-gynecologists and other maternity care professionals tailor the visit frequency and monitoring schedule to the needs of the pregnant woman. These new clinical guidelines provide a sample schedule for prenatal care services and visit frequency, which describes 8 visits for average-risk pregnant women without medical or pregnancy complications, and 13 visits for pregnant women with greater-than-average risk. This sample schedule specifies that additional services may be offered as needed throughout the pregnancy.

When the RUC reviewed these codes, they included 12 prenatal E/M visits (two level 2 established patient office

visits, eight level 3 established patient office visits, and two level 4 established patient office visits) in the calculations to make these changes budget-neutral despite the revisions to the clinical guidelines suggesting that 12 visits would no longer be typical. As the clinical guidelines have changed to reflect a revised assumption about the typical number of visits, estimating work neutrality based on the assumption that all 12 prenatal E/M visits in the base year would be reported in the predictive year overestimates the total utilization and as a result, undervalues the work RVUs as recommended by the RUC. To improve payment accuracy of the new codes, we proposed to refine the RUC's recommended utilization crosswalk to remove four E/M visits (two level 2 established patient office visits and two level 4 established patient office visits) from the utilization estimate calculation and reallocate those RVUs within the code family to the new labor and delivery codes. This would mean reallocating 11,810 additional work RVUs to the new labor and delivery codes (CPT codes 59080–594503). Since the RUC provided a utilization estimate of 12,791 for CPT codes 59080–594503, this would result in a 15 percent increase in work RVUs for each labor and delivery code. We would like to emphasize that we are not endorsing a reduced number of prenatal visits for pregnant women. Our recalculation of the utilization estimates in the valuation of these services should not be used to determine the appropriate number of visits to provide reasonable and necessary care to beneficiaries. As with all PFS services, maternity services should be furnished when medically reasonable and necessary.

There are no RUC-recommended direct PE inputs for these CPT codes. Table A–D2 also shows the RUC-recommended and CMS proposed work RVUs for the 21 CPT codes.

BILLING CODE 4169–69–P

TABLE A-D2: CPT LONG DESCRIPTORS AND WORK RVUS FOR MATERNITY SERVICES

CPT Code	Long Descriptors	RUC Recommended Work RVUs	CMS Work RVUs
Antepartum Care			
59320	*Cerclage of cervix, during pregnancy; vaginal*	3.02	3.02
59325	*Cerclage of cervix, during pregnancy; abdominal*	6.34	6.34
59412	*External cephalic version*	2.63	2.63
59871	*Removal of cerclage suture under anesthesia (other than local)*	2.15	2.15
Labor Management and Delivery			
59080	*Initial day labor management; straightforward, per day*	3.50	4.03
59081	*Initial day labor management; complex, per day*	4.50	5.18
59082	*Subsequent day labor management; straightforward, per day*	3.00	3.45
59083	*Subsequent day labor management; complex, per day*	4.20	4.83
59431	*Vaginal delivery, with or without episiotomy;*	8.00	9.20
59432	*Vaginal delivery, with or without episiotomy; after previous cesarean delivery*	9.00	10.35
59450 2	*Cesarean delivery; primary*	12.00	13.80
59450 3	*Cesarean delivery; repeat*	14.66	16.86
Labor Procedures, Other Procedures, and Postpartum			
59030	*Fetal scalp blood sampling*	0.90	0.90
59051	*Fetal monitoring during labor by consulting physician (ie, non-attending physician) or other qualified health care professional, with interpretation and report*	0.93	0.93
59414	*Delivery of placenta only (separate procedure)*	1.61	1.61
59300	*Repair of first or second-degree episiotomy or laceration, by other than attending physician or other qualified health care professional performing vaginal delivery care (separate procedure)*	1.76	1.76
59433	*Repair of episiotomy or laceration; third-degree laceration*	2.47	2.47
59434	*Repair of episiotomy or laceration; fourth-degree laceration*	4.14	4.14
59504	*Subtotal or total hysterectomy after cesarean delivery*	15.56	15.56
59623	*Uterine tamponade (eg, balloon, catheter, vacuum, packing material)*	2.15	2.15
59160	*Curettage, postpartum*	2.93	2.93

BILLING CODE 4169–69–C

We received public comments on these proposals. The following is a summary of the comments we received and our responses.

Comment: Many commenters supported our proposals to adopt CPT codes 59320, 59325, 59412, 59871,

59080, 59081, 59082, 59083, 59030, 59051, 59431, 59432, 59414, 59300, 594502, 594503, 59504, 59623, 59X1159433, 59434, and 59160. Commenters stated that these revised codes would create a uniform system between payors, as many other payors and payment systems such as the OPPS, have already adopted or proposed to adopt the revised coding structure. Additionally, commenters discussed that these codes would increase the transparency of antepartum and postpartum visits performed. Commenters also believed that the updated codes better reflect modern, personalized maternity care. Many commenters supported our proposed work RVU increases to the labor and delivery codes, as these services have become increasingly complex and require significant clinical decision-making, care coordination, and clinician work. A few commenters did not support our proposed increases to the labor and delivery codes, and requested us to finalize the RUC recommendations, because they believed that the RUC's recommendations account for the number of E/M visits increasing for some patients and decreasing for others. Some commenters believed that we should increase the work RVUs for all of the CPT codes, since in some clinical scenarios, the new codes could pay less than the current maternity codes. We also received several questions seeking coding guidance for the new maternity CPT codes.

Response: We appreciate the commenters for this information and will consider additional refinements in future rulemaking. Although we are not specifying a maximum number of antepartum or postpartum visits that can be billed, we expect that ACOG's guidelines will be followed, and that, as with all services paid under the PFS, all services furnished must be reasonable and necessary. We will also continue to consider methods of bundling under the PFS, including information on the range of antepartum or postpartum visits as stakeholders develop more familiarity with the new code set. We defer to CPT and/or the billing practitioner's MAC for clarification on coding guidance for the new maternity CPT codes.

After consideration of public comments, we are finalizing as proposed.

b. Comment Solicitation on Maintaining Current Coding Through Creation of HCPCS G-Codes

We were interested in thinking about different approaches to how maternity care codes are valued and paid under the PFS. Although the RUC asserts that these proposed coding changes discussed previously reflect clinical consensus, we had concerns that our adoption of the new codes would be disruptive based on how the longstanding existing code structure is currently accounted for in clinical practice patterns. We sought comment on whether CMS should create HCPCS G-codes that would maintain the current coding and payment for maternity services to ameliorate this concern, while we continue to consider the potential impact that changes in the maternity care code family have on clinical outcomes for maternal care. These codes would be used in lieu of adoption of the new CPT codes for purposes of Medicare payment. We were specifically interested in additional information to support or oppose this concern, as well as additional information to support or oppose the use of the creation of HCPCS G-codes in lieu of adoption of the new CPT codes.

Specifically, for payment for maternity care services under the PFS, we were considering, and sought comment on, the creation of 15 new HCPCS G-Codes for CY 2027 that reflect the previous MMM global code structure, with the code descriptors and work RVUs detailed in Table A–D3, as an alternative to the revaluation of the codes as discussed in section (a), of the proposed rule (91 FR 43842 through 44557). We sought public comment on these HCPCS G-codes and, after consideration of public comment, could finalize payment for these codes. We sought comment on these HCPCS G-codes and also sought comment on any other HCPCS G-codes that may be needed to reflect the necessary service elements for this code family. These HCPCS G-codes would adopt all current conditions of payment for the MMM global codes, as well as maintain the MMM global period, if finalized.

TABLE A-D3: POTENTIAL G CODES TO MAINTAIN PREVIOUS CODE SET

HCPCS G-Code	Long Descriptors	G-Code Work RVUs
GMAT1	Routine obstetric care including antepartum care, vaginal delivery (with or without episiotomy, and/or forceps) and postpartum care	37.00
GMAT2	Vaginal delivery only (with or without episiotomy and/or forceps);	14.37
GMAT3	Vaginal delivery only (with or without episiotomy and/or forceps); including postpartum care	18.76
GMAT4	Antepartum care only; 4-6 visits	7.8
GMAT5	Antepartum care only; 7 or more visits	14.3
GMAT6	Postpartum care only (separate procedure)	3.22
GMAT7	Routine obstetric care including antepartum care, cesarean delivery, and postpartum care	41.05
GMAT8	Cesarean delivery only;	16.13
GMAT9	Cesarean delivery only; including postpartum care	22.79
GMA10	Routine obstetric care including antepartum care, vaginal delivery (with or without episiotomy, and/or forceps) and postpartum care, after previous cesarean delivery	38.71
GMA11	Vaginal delivery only, after previous cesarean delivery (with or without episiotomy and/or forceps);	16.09
GMA12	Vaginal delivery only, after previous cesarean delivery (with or without episiotomy and/or forceps); including postpartum care	20.48
GMA13	Routine obstetric care including antepartum care, cesarean delivery, and postpartum care, following attempted vaginal delivery after previous cesarean delivery	41.57
GMA14	Cesarean delivery only, following attempted vaginal delivery after previous cesarean delivery;	16.66
GMA15	Cesarean delivery only, following attempted vaginal delivery after previous cesarean delivery; including postpartum care	23.32

We received public comments on these proposals. The following is a summary of the comments we received and our responses.

Comment: Almost all commenters were opposed to maintaining current coding through the creation of HCPCS G-codes. Commenters stated that the creation of these codes for Medicare would increase administrative burden and market confusion, as well as not representing some of the services described in the proposed CPT codes (including tamponade and 3rd and 4th degree laceration repair). Many commenters believed that the structure of these codes no longer reflect health care delivery, and the proposed CPT codes allow information gathering about the services performed and encourage patient-centered care that these HCPCS G-codes do not. Some commenters did not support finalizing these codes since we did not publish the Practice Expense (PE) and Malpractice RVUs associated with these HCPCS G-codes.

A few commenters supported the creation of these HCPCS G-codes. These commenters expressed concerns about potential cost-sharing, claims denials, more complex billing, and the additional resources needed to adopt the new CPT codes. Some commenters supported a set payment that the HCPCS G codes would provide, and not having payments that vary patient to patient when services are performed with the CPT codes. A few commenters stated that E/M coding does not specifically describe antepartum or postpartum care.

Response: We appreciate the commenters for this information. We disagree with commenters that any change in maternity coding discussed in this rule, whether the new CPT codes or the proposed HCPCS G-codes, would change any policies impacting cost-sharing or claims denials. While we understand that additional resources may be needed for the higher overall number of codes being billed, we believe that this provides valuable utilization information that cannot be obtained with the continued use of bundled codes. Although E/M coding does not specifically describe antepartum or postpartum care, these codes are used by many specialties to describe professional services that may not explicitly be stated in the E/M code descriptor.

Comment: Most commenters who requested the adoption of the HCPCS G-codes requested that we adopt both the CPT codes and the HCPCS G-codes for CY 2027. Some commenters requested adopting both codes, but having a defined sunset date and limiting the use of both code sets to Medicare. One of the primary reasons why commenters requested both code sets for CY 2027 was due to concerns about billing guidance for pregnancies that begin in CY 2026 and continue into CY 2027.

Response: We defer to AMA and ACOG guidance on the correct billing structure for pregnancies that begin in CY 2026 and continue into CY 2027.We also understand that there may be cases in which the prior CPT codes may be needed when billing and paying for episodes of care with service start dates in 2026. CMS published an enforcement discretion under 45 CFR 162.1101 allowing HIPAA covered entities to temporarily use CPT 2026 Maternity Care Services codes for billing and

payment purposes after January 1, 2027. Payers and health plans may issue business rules in advance of January 1, 2027 instructing providers, clearinghouses and other trading partners regarding CPT code use when billing for Maternal Care Service episodes of care in which services begin in 2026 and end in 2027. Questions can be sent to *AdministrativeSimplification@cms.hhs.gov* with the subject line: Enforcement Discretion.

After consideration of public comments, we are not finalizing the creation of these HCPCS G-codes, although we may consider the creation of bundled codes describing maternity care services in future rulemaking using the information on the billing patterns associated with the unbundled visit codes.

(28) Stereotactic Computer-Assisted Volumetric Navigation (CPT Codes 61781, 61782, and 61783)

In April 2024, CPT code 61783 (*Stereotactic computer-assisted (navigational) procedure; spinal (List separately in addition to code for primary procedure)*) was identified via the high-volume growth screen. In January 2025, the RAW reviewed the action plan for CPT code 61783 and determined that this service should be surveyed with the appropriate family of codes. The RUC recommended that CPT code 61781 be surveyed with CPT codes 61782 (*Stereotactic computer-assisted (navigational) procedure; cranial, extradural (List separately in addition to code for primary procedure)*) and 61783 (*Stereotactic computer-assisted (navigational) procedure; spinal (List separately in addition to code for primary procedure)*) for September 2025.

We proposed the RUC-recommended work RVU of 3.66 for CPT codes 61781 and 61783, and the RUC-recommended RVU of 2.06 for CPT code 61782. We note that all three of these RUC-recommended RVUs reflect the application of the CY 2026 efficiency adjustment described in the CY 2026 PFS final rule (90 FR 49334 through 49345).

We proposed the RUC's recommended direct PE inputs for CPT code 61782. Since CPT codes 61781 and 61783 are performed in the facility setting only, the RUC did not recommend, and we did not propose, any direct PE inputs for these two codes.

Comment: A commenter stated that this code describes an important service in rhinologic practice, including use in complex sinonasal and skull-base procedures, and expressed concern about the magnitude of the proposed reduction from the current value of 3.10 to the RUC-recommended RVU of 2.06 for CPT code 61782. They noted image-guided navigation requires significant physician time, technical skill, and mental effort, since surgeons must constantly integrate navigation data with live anatomy while working near critical structures.

Response: We thank the commenters for their feedback. After consideration of the public comments and re-review of this code family, we believe that the proposed work RVUs for these codes are appropriately valued; thus, we are finalizing the work RVUs for the codes as proposed.

(29) Percutaneous Lumbar Decompression (CPT Code 62287)

At the January 2025 RUC meeting, the surveying societies requested deletion of CPT code 62287 *(Decompression, percutaneous, of nucleus pulposus of intervertebral disc, any method utilizing needle-based technique to remove disc material under fluoroscopic imaging or other form of indirect visualization, with discography and/or epidural injection(s) at the treated level(s), when performed, single or multiple levels, lumbar)* due to declining Medicare utilization. At the May 2025 CPT Editorial Panel meeting, CPT reviewed additional utilization estimates, and requests from neurosurgery and radiology were received to resurvey and retain the code. CPT code 62287 was surveyed at the September 2025 AMA RUC meeting since it was not deleted in January 2025 with the other codes in the family.

We disagree with the RUC's recommended work RVU of 7.06 for CPT code 62287 and we instead proposed a work RVU of 6.23 based on a crosswalk to CPT code 46707 *(Repair of anorectal fistula with plug (e.g., porcine small intestine submucosa [SIS]))*. We believe that the RUC's recommended work RVU of 7.06 is an overestimation based on a comparison to other codes with similar time values, particularly the key reference code CPT code 22869 (*Insertion of interlaminar/interspinous process stabilization/distraction device, without open decompression or fusion, including image guidance when performed, lumbar; single level*). There was a decrease in the surveyed work times, such as the intraservice time decreasing from 60 minutes to 37 minutes, which was not fully accounted for in the RUC's recommended work RVU of 7.06. We also note that the procedure does not seem to have become more intense, as the code descriptor did not change.

In the interest of maintaining relativity with similarly timed codes, we instead proposed a work RVU of 6.23 based on a crosswalk to CPT code 46707. This code has an almost identical intraservice time and similar total time. The proposed work RVU accounts for the decrease in both intraservice time and total time and is well bracketed by CPT code 67912 *(Correction of lagophthalmos, with implantation of upper eyelid lid load (e.g., gold weight))*, valued at a work RVU of 6.20 with an intraservice time of 40 minutes, and CPT code 24358 *(Tenotomy, elbow, lateral or medial (e.g., epicondylitis, tennis elbow, golfer's elbow); debridement, soft tissue and/or bone, open)*, valued at a work RVU of 6.49 with an intraservice time of 40 minutes.

We proposed the RUC-recommended direct PE inputs for all of the codes in this family.

Comment: Commenters disagreed with the proposed work RVU of 6.23 for CPT 62287 stating that the complexity of the surveyed code's physician work was not adequately represented and was below the surveyed 25th percentile. Commenters also stated that the crosswalk does not maintain relativity within the code family and is not clinically related to the proposed code. Commenters stated that the proposed valuation does not adequately account for the technical precision, imaging interpretation, anatomical localization, clinical judgment, mental effort, procedural intensity, and risks associated with percutaneous lumbar decompression. Commenters disagreed that a time reduction alone deserves a lower value when the work is unchanged and that the valuation methodology should account for this shift in complexity rather than treat the reduced time alone as justification for a proportionally reduced work RVU.

Commenters stated that the RUC-recommended work RVU of 7.06 would be more appropriate for CPT code 62287 and cited CPT codes 62330 (*Decompression, percutaneous, with partial removal of the ligamentum flavum, including laminotomy for access, epidurography, and imaging guidance (i.e., CT or fluoroscopy), bilateral; one interspace, lumbar*) and 62331 (*Decompression, percutaneous, with partial removal of the ligamentum flavum, including laminotomy for access, epidurography, and imaging guidance (i.e., CT or fluoroscopy), bilateral; additional interspace(s), lumbar (List separately in addition to code for primary procedure)*) as relevant comparators within the lumbar decompression family. A commenter

identified CPT code 22869 (*Insertion of interlaminar/interspinous process stabilization/distraction device, without open decompression or fusion, including image guidance when performed, lumbar; single level*), the RUC's key reference service, as an appropriate crosswalk because it similarly involves invasive lumbar spine intervention, image guidance, spatial judgment, and spinal procedural risk.

Response: We thank the commenters for their feedback. We are not compelled by the arguments that a work RVU of 6.23 would not maintain relativity in the family. CPT code 62330 has a higher intraservice time and total time which accounts for why it has a higher work RVU as compared with our proposed valuation of CPT code 62287. We also note that CPT code 62330 has historically had a higher intensity than CPT code 62287, which would be reversed by the RUC's recommended work RVU of 7.06; we do not believe that this reversal of their relative intensities would be the case given that there was agreement from the commenters that the clinical practice of CPT code 62287 had not changed. We also do not believe that the work RVUs of CPT codes 62287 and 62331 are directly comparable since the latter code is an add-on procedure with only 43 minutes of total time. We disagree with the comment that identified CPT code 22869 as an appropriate crosswalk because it similarly involves invasive lumbar spine intervention, image guidance, spatial judgment, and spinal procedural risk. We want to reiterate that the PFS is a relative value-based system and not all reference codes are necessarily clinically related.

We continue to believe that since there was a decrease in the surveyed work times which was not fully accounted for in the RUC's recommended work RVU of 7.06, the work RVU should decrease correspondingly since valuation is based on time and intensity. We also continue to disagree that there has been a significant increase in intensity for this code which would warrant the work RVU recommended by the RUC. Intensity of work under the Physician Fee Schedule reflects skill, expertise, effort, stress, and other factors that influence the assessed relative value of time spent. We disagree with the commenters that performing the same work in less time inherently means that the intensity of a procedure has increased; changes in practice patterns, improvements in technology, or greater efficiencies in the delivery of care can all account for shorter procedure times without a corresponding increase in intensity. Commenters agreed that CPT code 62287 had undergone no significant change in the procedure's performance as reflected by its unaltered code descriptor. Under our methodology for work valuation, if the surveyed work times are decreasing and there is general agreement that the procedure itself has remained unchanged, this supports a decrease in the work RVU, not a conclusion that the intensity of the procedure has increased to match the decrease in surveyed work time. We believe that the agreement from the commenters that there has been no significant change in the clinical performance of CPT code 62287 supports our proposed work RVU of 6.23, not undermines it.

After consideration of the comments, we are finalizing the work RVU and direct PE inputs for CPT code 62287 as proposed.

(30) Laminectomy (CPT Codes 63045, 63046, 63047, and 63048)

In April 2025, the RAW identified CPT code 63047 (*Laminectomy, facetectomy and foraminotomy (unilateral or bilateral with decompression of spinal cord, cauda equina and/or nerve root[s], [e.g., spinal or lateral recess stenosis]), single vertebral segment; lumbar*) as a site of service anomaly where Medicare data from 2021 to 2023 indicated it was performed less than 50 percent of the time in the inpatient setting yet included inpatient hospital Evaluation and Management services within the global period with 2023 Medicare utilization over 10,000. The RAW also worked with the specialty societies and identified other codes 63045 (*Laminectomy, facetectomy and foraminotomy (unilateral or bilateral with decompression of spinal cord, cauda equina and/or nerve root[s], [e.g., spinal or lateral recess stenosis]), single vertebral segment; cervical*), 63046 (*Laminectomy, facetectomy and foraminotomy (unilateral or bilateral with decompression of spinal cord, cauda equina and/or nerve root[s], [e.g., spinal or lateral recess stenosis]), single vertebral segment; thoracic*) and 63048 (*Laminectomy, facetectomy and foraminotomy (unilateral or bilateral with decompression of spinal cord, cauda equina and/or nerve root[s], [e.g., spinal or lateral recess stenosis]), single vertebral segment; each additional vertebral segment, cervical, thoracic, or lumbar (List separately in addition to code for primary procedure)*) as part of this family of services. These services were surveyed for September 2025.

We proposed the RUC-recommended work RVUs for all four CPT codes in this family. We proposed a work RVU of 17.25 for CPT code 63045, a work RVU of 16.71 for CPT code 63046, a work RVU of 14.99 for CPT code 63047, and a work RVU of 3.38 for CPT code 63048. We note that several of these work RVUs were affected by the efficiency adjustment which was applied at the start of CY 2026, as the RUC recommendations were based on pre-adjustment work valuations.

We proposed the RUC recommended direct PE inputs for CPT codes 63045, 63046, 63047, and 63048 without refinement.

Comment: A commenter asked that the efficiency adjustment not be applied to these codes. We received other comments on this code family that were overall not in scope for CMS's proposal.

Response: We can clarify for the commenters that the efficiency adjustment was not directly applied to the review of these codes since their work and time survey data was newly produced for CY 2027. However, CPT codes 63045 and 63046 had their work valuations recommended by the RUC using crosswalks to other CPT codes, 22554 and 46710 respectively, which were subject to the efficiency adjustment. The proposed valuation for CPT code 63045 was therefore based on the adjusted work RVU of 17.25, the current work RVU of code 22554, rather than the pre-adjusted work RVU of 17.69 for that code. We do not agree that it would be appropriate to use crosswalks to pre-adjusted work RVUs as it would fail to maintain relativity and create significant confusion.

We are clarifying that the other comments received on this code family were overall not in scope for CMS's proposal.

After consideration of the public comments, we are finalizing the work RVUs and direct PE inputs for CPT codes 63045, 63046, 63047, and 63048 as proposed.

(31) Injection Anesthetic Agent (CPT Codes 64400 and 64405)

The RUC identified CPT code 64400 *(Injection(s), anesthetic agent(s) and/or steroid; trigeminal nerve, each branch (i.e., ophthalmic, maxillary, mandibular))* via their database flag, ''Do not use to validate physician work'', and recommended to survey this CPT code and the related CPT code 64405 *(Injection(s), anesthetic agent(s) and/or steroid; greater occipital nerve)* for the September 2025 meeting.

For CY 2027, we proposed the RUC-recommended work RVUs of 0.73 for CPT code 64400 (which is the current

work RVU of the code after the efficiency adjustment was applied at the start of CY 2026) and 0.84 for CPT code 64405.

We proposed the RUC-recommended direct PE inputs for both CPT codes without refinement.

Comment: Commenters were supportive of CMS' proposed work RVUs and direct PE inputs for this code family.

Response: We thank the commenters for their support. After consideration of the public comments, we are finalizing the work RVUs and direct PE inputs as proposed.

(32) MRA—Head, Neck (CPT Codes 70544, 70545, 70546, 70547, 70548, 70549, 70560, 70561, and 70562)

In April 2024, the RAW noted that the rate at which CPT codes 70547 (currently described as *Magnetic resonance angiography, neck; without contrast material(s)*) and 70544 (currently described as *Magnetic resonance angiography, head; without contrast material(s)*) are reported together continued to increase after the initial identification of the trend in April 2022 and a 2-year delay in review to allow practice patterns in the inpatient and outpatient setting go back to how they were prior to the COVID–19 pandemic. At the September 2025 CPT Editorial Panel, six CPT codes were revised to include ''image postprocessing'': CPT codes 70544 (*Magnetic resonance angiography, head, including image postprocessing; without contrast material(s)*), 70545 (*Magnetic resonance angiography, head, including image postprocessing; with contrast material(s)*), 70546 (*Magnetic resonance angiography, head, including image postprocessing; without contrast material(s), followed by contrast material(s) and further sequences*), 70547 (*Magnetic resonance angiography, neck, including image postprocessing; without contrast material(s)*), 70548 (*Magnetic resonance angiography, neck, including image postprocessing; with contrast material(s)*), and 70549 (*Magnetic resonance angiography, neck, including image postprocessing; without contrast material(s), followed by contrast material(s) and further sequences*). Three additional codes were created to bundle magnetic resonance angiography (MRA) head and neck with/without contrast: CPT codes 70560 (*Magnetic resonance angiography, head and neck, including image postprocessing; without contrast material(s)*), 70561 (*Magnetic resonance angiography, head and neck, including image postprocessing; with contrast material(s)*), and 70562 (*Magnetic resonance angiography, head and neck; without contrast material(s) in one or both body regions, followed by contrast material(s) and further sequences in one or both body regions, including image postprocessing*). The code family was surveyed for the January 2026 RUC meeting.

We proposed the RUC-recommended work RVU for all nine codes in the family. We proposed the RUC-recommended work RVUs of 1.17, 1.17, 1.44, 1.17, 1.46, 1.76, 1.77, 2.10, and 2.23 for CPT codes 70544, 70545, 70546, 70547, 70548, 70549, 70560, 70561, and 70562, respectively. We proposed the RUC recommended direct PE inputs for CPT codes 70544, 70545, 70546, 70547, 70548, 70549, 70560, 70561, and 70562 without refinement.

We received public comments on these proposals. The following is a summary of the comments we received and our responses.

Comment: The majority of commenters appreciated our proposal of the RUC-recommended work RVUs and direct PE inputs for the MRA Head and Neck code family (CPT codes 70544, 70545, 70546, 70547, 70548, 70549, 70560, 70561, and 70562) without refinement.

Response: We thank the commenters for their support.

Comment: A commenter disagreed with the proposed work RVUs for CPT codes 70560, 70561, and 70562, and requested that CMS value these codes at the sum of the components. The commenter noted, for example, the current work RVUs for CPT codes 70546 for the head (1.44) plus 70549 for the neck (1.76) equals 3.20. Therefore, they recommended the RVU for bundled CPT code 70562 for the head and neck combined should also equal 3.20 instead of the RUC-recommended RVU of 2.23 proposed by CMS. The commenter stated that this is the steepest cut (30.3 percent) of the three new bundled MRA codes, compared to billing separately, even though this is the most complex interpretation of the three new MRA codes performed without contrast materials, followed by the study with contrast materials. The commenter stated that the physician work, intensity, and complexity associated with interpreting these procedures did not decrease because the codes have been bundled.

Response: We continue to believe that the proposed RUC-recommended work RVUs for CPT codes 70560, 70561, and 70562 are appropriate. It is reasonable to expect that these three new bundled codes will achieve savings via elimination of duplicative assumptions of the resources involved in furnishing particular servicers. We believe the new bundled coding assigns more accurate work times, and thus, reflects efficiencies in resource costs that exist but are not reflected when these services are reported separately. The proposed RVUs for these codes maintain relativity within the MRA Head and Neck code family and appropriately account for the physician work required for these services.

After consideration of the public comments, we are finalizing the work RVUs and direct PE inputs for the codes in the MRA Head and Neck code family (CPT codes 70544, 70545, 70546, 70547, 70548, 70549, 70560, 70561, and 70562) as proposed.

(33) Computed Tomography-Upper Extremity With Contrast (CPT Codes 73200, 73201, and 73202)

In April 2025, the RAW identified CPT code 73201 (*Computed tomography, upper extremity; with contrast material(s)*) via the CMS/Other source and 2023 Medicare utilization over 20,000 screen. The family of services was surveyed for the January 2026 RUC meeting, including CPT codes 73200 *(Computed tomography, upper extremity; without contrast material*) and 73202 *(Computed tomography, upper extremity; without contrast material, followed by contrast material(s) and further sections).*

We proposed the RUC-recommended work RVUs of 1.00, 1.16, and 1.24 for CPT codes 73200, 73201, and 73202, respectively. We proposed the RUC recommended direct PE inputs for CPT codes 73200, 73201, and 73202 without refinement.

We received public comments on these proposals. The following is a summary of the comments we received and our responses.

Comment: Commenters supported our proposal of the RUC-recommended work RVUs and direct PE inputs for the Computed Tomography-Upper Extremity with Contrast (CPT codes 73200, 73201, and 73202) code family.

Response: We appreciate the support for our proposed values from the commenters.

After consideration of the comments, we are finalizing the work RVUs and direct PE inputs for the codes in the Computed Tomography-Upper Extremity with Contrast code family as proposed.

(34) Radiation Oncology Treatment Delivery (CPT Codes 77402, 77407, and 77412)

In the CY 2026 PFS final rule (90 FR 49379 through 49383), we finalized our proposal to utilize the relationship

between the Hospital Outpatient Prospective Payment System (OPPS) Ambulatory Payment Classifications (APC) relative weights for APCs 5621, 5622, and 5623 to inform the valuation of PE-only CPT codes 77402 (*Radiation treatment delivery; Level 1 (e.g., single-electron field, multiple-electron fields, or 2D photons), including imaging guidance, when performed*), 77407 (*Radiation treatment delivery; Level 2, single-isocenter (e.g., 3D or IMRT), photons, including imaging guidance, when performed*), and 77412 (*Radiation treatment delivery; Level 3, multiple isocenters with photon therapy (e.g., 2D, 3D, or IMRT) or a single-isocenter photon therapy (e.g., 3D or IMRT) with active motion management, or total skin electrons, or mixed-electron/photon field(s), including imaging guidance, when performed*) when paid under the PFS. We also stated that we calculated the RVUs for these codes so that the overall PE and MP RVUs for these services represent the same share of total PE and MP RVUs in CY 2025 and CY 2026. To accomplish this, we developed PE and MP RVUs using the assumed distribution of services indicated in the utilization crosswalk.

We proposed to utilize the RUC-recommended crosswalk for these services, which assumed that 45 percent of the billed charges would be reported with CPT code 77412. Some commenters stated that CPT code 77412 would represent only 15 percent of the volume for these services. We stated in the CY 2026 PFS final rule that it is difficult to ascertain how services furnished in the past would be most accurately reported using a future code set (90 FR 49385). In response to comments and considering the disparate information we received, we finalized a modified crosswalk that adjusted downward the estimated portion that CPT code 77412 would be reported compared to CPT code 77407 based on commenters who represent those who provide care in the non-facility setting. Specifically, we modified the utilization crosswalk to crosswalk 35 percent of the utilization to CPT code 77412 and 55 percent of the utilization to CPT code 77407. Since the publication of the CY 2026 PFS final rule, interested parties have reported that the 35 percent utilization assumption for CPT code 77412 was still overstated despite our downward adjustment in the CY 2026 PFS final rule, and that the actual utilization for CPT code 77412 is approximately 18 percent. Given the importance of the assumed distribution of services in ensuring that we achieved our target of maintaining the same share of total PE and MP RVUs, we reviewed the claims data to evaluate the actual distribution of utilization among CPT codes 77402, 77407, and 77412. We noted that during the first 3 months of 2026, CPT code 77412 comprised approximately 18 of the total volume of these services.

Given that we valued these services by utilizing the relative relationship between the OPPS APC relative weights rather than our standard PE methodology, shifts in utilization over time are not automatically incorporated into the annual development of PE RVUs for these services over time. Consequently, we proposed to refine the relativity within this family of codes for CY 2027 based on available claim data that corroborates the information submitted to us by outside parties. We did not propose to change the assumptions about the total number of services, but rather, to revalue the PE RVUs using the observed distribution of services, such that the PE and MP RVUs for these services represent the same share of total PE and MP RVUs as they did in CY 2025.

We received public comments on these proposals. The following is a summary of the comments we received and our responses.

Comment: Commenters generally supported recalibrating this family of codes but urged CMS to use both Q1 and Q2 CY 2026 claims data, not Q1 alone, for a more reliable utilization basis before finalizing CY 2027 values. One specialty society called the correction necessary, noting that OPPS-derived APC weights import hospital rate-setting anomalies into the PFS and that the restructured code set selects codes by clinical complexity, treatment area, target number, and dose rather than technique. This commenter said correcting the utilization assumption frees existing radiation oncology PE-pool RVUs to recalibrate CPT code 77407 without affecting overall PFS budget neutrality.
